THE PRICE OF INCREASING BANK DEPOSITS

IMPACT ON THE PRIVATE SECTOR

The most encouraging feature of the Indian banking system in 1957 was a substantial improvement of its liquidity position: a less fortunate one was the fall in private economic activity which accompanied it. In the annual report, *Trend and Progress of Banking in India*, covering the year 1957, the Reserve Bank claims altogether too much credit for the monetary authorities in bringing about the general easing of the banks' position. It is true that at the end of the year they were considerably better placed than at the beginning, and that this was partly due to deliberate measures taken such as the introduction of selective credit restraint, the tightening of interest rates and the policy of "moral suasion". But the fact which stands out from this report is that such steps would probably have had little effect had it not been for a number of factors quite beyond the authorities' control; where the impact of their actions has been felt is in perhaps the least welcome field of all—in private industrial investment and output. Like Britain, India has had to pay a high price in

price by other agents, no doubt the Government in its own economic activities. This is a depressing state of affairs. Instead of representing a healthy expansion of the savings instinct, it is in fact evidence of the declining growth of the private sector, and therefore of a slowing down of output generally. There is certainly no cause for jubilation in this. What has been the banks' gain has undoubtedly been the country's loss. And it would scarcely be realistic to accept the present state of affairs as a satisfactory solution of the problem of credit stringency in an expanding economy.

Some of the fall in activity which the improvement in liquidity represents is probably in agricultural output and is, therefore, something over which there can be little control in the short run. Another large portion of the accretion of deposits may be due to the shortage of foreign exchange; money which cannot be spent on imports is more than likely to find its way into a time deposit with some bank. How important this factor

is, though it is probably one of the details in precise terms, is of the moment. It is contradicted by the made by industrial improvement. It comes about the long-term, relatively un- of course, a bit at the same. The factors extremely com- feelings and ngs. They are is only one human sub-

other influences. Bank rate was increased. But the move was largely an administrative one; there was no attempt to follow the Bank rate manipulations of the U.K. and some other western countries in circumstances which were entirely different. There is no doubt that the policy of selective credit restraint was the correct one, although its impact appears to have been reserved entirely to the private sector. Certainly it was most useful in controlling the threat of food scarcity without resort to the dangerous expedient of rationing. The fact that it helped kill the stock markets is one of the few detailed criticisms which can be levelled against it. The general complaint is a simple one—it did not even attempt to tackle the main source of inflation, Government spending. The idea that there is one set of rules for the private sector and another for the public is no doubt in perfect tune with modern socialistic ideology. But the picture of it in action is a most disquieting one. It appears that if inflation is threatened, all the adjustments must fall on private industry even if that means a serious drop in industrial production—and thus another inflationary factor created—and a permanent increase in the country's cost structure. One is left to wonder what will be done to curb inflation when the private sector does not occupy the position of relative importance in the industrial set-up that it does now. The effect of this policy is obvious enough in India today. Dams are going up and so are steel plants; but elsewhere workers are losing their jobs and standards of living are not rising at all, or are going up much slower than they could. To vary Lord Keynes's famous comment on Britain's adherence to the gold standard, it looks as if the Indian economy is being crucified on a cross of steel.

There is some consolation in the fact that the ambitions of the public sector are likely in future to be related more strictly to the availability of foreign exchange than they have in the past. This will considerably reduce its inflationary potential, and may relieve some of the unbearable pressure under which the private sector is at present struggling. Less steel and more food and cloth might be a good slogan to bear in mind for the third five year plan. In the meantime, the lesson to be learned from the performance of the banking system in 1957 is that the respite it is at present enjoying is likely to be only temporary if the 1956 rate of economic expansion is ever to be resumed. There is no real evidence in the figures quoted by this report to suggest that the growth of the banking habit will in future always keep pace with economic advance. That is something which must wait on a radical change in the public attitude towards banking and there are few signs of this yet.

That two new non-scheduled banks were included in the Second Schedule of the Reserve Bank of India Act. The second is the accumulation of counterpart funds against the sale of American foodgrains in this country. This increment has accrued to the State Bank only, and the subsequent effect on the average for the improvement in the liquidity of the scheduled banks as a whole, is distinctly unfair to the remainder. The third factor is what the report calls the "long-term" causes of the increase in deposits. This is by far the most important and significant of the three. An analysis of it can throw a good deal of light on the health of the economic and social structure of this country, and on the practicability of such vital elements as the savings targets in the present and future five year plans.

It is probably true that a fair proportion of the increase in bank deposits is due to the higher price offered for them. The fact that time deposits have improved so much more than demand suggests such a factor has been at work. But it is impossible to say that this represents a growth of a savings habit without a detailed analysis of the deposits themselves. Are they in the name of individuals or firms? The report does not answer this question. Judging from the recent boom in the bullion markets and the lack of activity on the stock exchanges—in which a good deal of privately-owned capital is at the moment immobilised—it seems most unlikely that a large proportion of the new deposits are held by individuals. Even if the existence of the money in the first place is due to deficit financing, as the report admits, it is still more likely that private-sector firms are chiefly responsible for accumulating it in the form of bank deposits. If this is true it can only mean one thing—businesses are finding it more profitable to keep their resources idle in this way than to use them in productive activity. The fact that most of the deposits are of the "time" variety also points to this conclusion. The money is no longer usable for holding stocks or buying productive equipment; it has to be held for use at a

The mention of these largely accidental factors is not to say that the measures taken by the authorities were not soundly conceived, carefully implemented, and extremely effective in the limited sense of taking up slack already created through

WEST BENGAL IN INDIAN POLITICS

WHETHER or not every third man in Calcutta has fountain pens for sale, as *Time* recently suggested in its usual all-knowing style, political conferences have been a frequent occurrence with the Bengalis ever since the Swadeshi days of 1905. That most recent jamborees of this kind have been of non-Congress inspiration, is a measure of the extent to which India's premier political party has lost ground in West Bengal (in spite of electoral successes) and also of the extent to which the Left has filled the vacuum left by it. The conference concluded on Tuesday last was organised by the Congress and, aided by the absence of bigger news from elsewhere, received more space in the news-

papers than it might have done with its moderate attendance, the mediocrity of the speeches made, and a procession which bore greater evidence of party organisation than of popular enthusiasm.

All this is indeed no conclusive reason for despair. Mr. Atulya Ghosh was perhaps right in accusing Congress men of defeatism. Mr. Patil was probably not unduly optimistic in holding that for the next twenty-five years at least there would be no democratic party in India to challenge the Congress. Mr. Pant, the chief speaker, dwelt more on national problems than on those of the party, but did not omit to mention Imre Nagy—a reference more to Kerala than to eastern Europe. All the speakers in fact made some reference or other to the tragic case of Imre Nagy, which tended to suggest that the Congress had already begun to see in the communists their most immediate and formidable rival. This is not entirely unrelated to experience, but it should not be forgotten that it is the kind of polarisation the communists have been working very hard for. It is not the fault of the Congress, but it remains a pity that non-Congress democratic forces have failed so utterly to offer the country a democratic alternative to the Congress party.

Although some will have discerned in the current Congress posture of suave confidence an effort or two to suppress a sense of inner insecurity, which is undoubtedly true of many individual Congress men, it would be strange if Bengalis with a sense of the past failed to look deeper for the source of this newly-gained, partly-feigned con-

idence. A leader had to come from the west coast to preside over the deliberations of the conference, another from the north to inaugurate it. If this were evidence of a new upsurge of Indianness in the West Bengal Congress, it would indeed be a happy thing: far too long and too often has this State rebelled against the all-India body, and these spirits did not always do good to the people of this State. Other interpretations may be nearer the truth, including the one that the West Bengal Congress has need of imported strength and vitality from outside. It is needless to add that this can scarcely galvanise an organisation for any appreciable length of time; for all the stir the recent conference created, even on the first day the proceedings tended to pall more than once.

It is not fair to blame the present State Congress leadership for all the weaknesses of the party. Some are inherited from past squabbles, from which politics in this part of the world have rarely been wholly free. Others are derived from a natural tendency to look to New Delhi for everything, for that is where real authority rests. Thirdly, with a majority of leaders in the Government the party is bound to attract less attention. The fourth may, however, be the most important reason: the awful truth that in the political map of India today the position occupied by West Bengal is not among the most important. The decline set in some decades ago, and it may have gone further than would justify hopes of a revival.

It would be no serious criticism of the proceedings of the recent conference that not many new ideas issued from them. Most of the problems are old, and they have all been discussed threadbare by the Congress and the other parties. It is not, therefore, the lack of originality which points to the futility, or limited usefulness, of these political conferences. They seem to fail even to enthuse the people, even to generate in the participants and the public a new sense of urgency. The only respite from boredom came when Mr. Patil and Mr. Atulya Ghosh turned their guns on Kerala and the Kremlin—a perfectly legitimate pastime but no permanent stimulant to the Bengali mind which appears to have outlived, at least so far as the Congress is concerned, its traditional obsession with politics and political conferences.

The Bengali appetite for conferences has been reduced by a collection of circumstances that await sociological examination. Meanwhile, as the ruling party the Congress must take note of the spirit of cynicism, almost amounting to resignation, which has seized the Bengali mind. Only on a superficial view can this be held a "safe" thing for the party in power. Political nature abhors a vacuum, and there are others only too eager to fill it—if the Congress will not. There is a tendency in some Congress quarters to rest on the laurels of electoral victories, and to leave it to popular apathy to see to it that the Congress again comes to power. Both are impermanent and unreliable factors.

In the final analysis, it is the Congress Government of West Bengal which will determine the fate of the Congress here, and the former will be judged by its performance rather than by the latter's propaganda (which, to tell the truth, was all the recent conference was). The success of the West Bengal Government, again, in solving the many problems confronting it will turn on how the Centre helps the State; and this is what invested the presence of Messrs Pant and Patil—sort of guest artistes in an otherwise less than top-bill cast—with a measure of potential usefulness. Although there was no clear indication of this during the actual conference, it may be that these two influential Ministers of the Union Cabinet have now returned to the capital with an increased, or intensified, awareness of the problems facing this State. It is hardly necessary to add that this will be a good thing.

Such psychological factors as whether the Bengali now feels his unimportance in the Indian scheme of things or whether there is a tendency anywhere to supplant West Bengal as the natural political leader of the country are susceptible of no sure analysis, far less of remedy. It is, however, important and feasible that the material, tangible and concrete grievances of West Bengal and its people should receive more urgent attention in New Delhi. Everyone at the conference spoke of the partition of eleven years ago and of the problems arising out of that. This itself is no insignificant indictment of the Government, both at the Centre and in the State, that an event of so long

ago should be used as an excuse by Authority. It is not true that the Bengali has always done everything to help himself. It is equally not true that the Centre has done all it could.

MOOD OF THE LONDON STOCK EXCHANGE

John Braitwaite, lately re-elected chairman of the Council of the London Stock Exchange, has announced that he will be his last in this office. In ten years as chairman he will have witnessed, and partly initiated, many important changes in the institution. He has already achieved his main purpose to raise it to the status appropriate to its essential function as intermediary between those who provide savings and those who require them; and he has made the working of the Stock Exchange better known and understood among the general public. Nonetheless, the recent elections to the Stock Exchange Council were more controversial than ever before, with a body of "reformers" campaigning for more thorough modernisation of the whole institution: a new building, new equipment, new methods. It happened that the two chief officers of the Toronto Stock Exchange were in London when the new Council held its first meeting, and Mr. A. J. Trebilcock, Toronto's president, surprised many London members with a description of his institution, better equipped than its New York counterpart, with the latest electronic devices, and with plans for centralised automation to be carried out within the next few years. In London the "reformers" did not gain any key positions on the Council, but the trend seems to be in their favour. It is likely that the London Stock Exchange, like Toronto's, will be a fully efficient, completely modernised, institution before long.

What concerns the business community more generally at present is whether the trend of prices on the London Stock Exchange—and, indeed, on the stock exchanges of Toronto and New York—represents an accurate forecast of the trend of trade. It is an accepted fact that the stock markets anticipate by some months changes in the trend of the economy generally. Sometimes they have made false moves and had to correct themselves; and they cannot be expected to anticipate unpredictable changes in governmental policy. But industrial ordinary shares have normally moved downward before a recession in business and upward before a recovery in business. For months past the broad trend of industrial shares has been upward. This relation between shares and the economic trend has been explained by the fact that the business men who decide that it is time to extend or to curtail activities are mainly the same ones who decide that it is time to buy or to sell shares. Yet in the latter part of June, when the broad rise on the London market had been in progress nearly four months (within which period there was a moderate setback between mid-April and mid-May), the Federation of British Industries published the results of a recent questionnaire to business men which showed that they expected a decided deterioration in industrial activity later in the year.

Publication of this report made the London stock market hesitate. It seemed, temporarily, that the market, having assessed the economic position incorrectly, might suffer a relapse. Some people recalled that it was in mid-year 1957, in mid-year 1955, in mid-year 1947, that industrial share prices plunged into a downward phase. Yet no significant selling developed on this occasion, and the market showed its powers of recovery. In one respect the London market may have been deceiving itself. It has seen evidence that the authorities are troubled by the recession in business. It has seen last September's big increase in Bank rate completely rescinded, and it believes that the whole structure of financial restraint will soon be dismantled. It imagines that business, unrestrained, will resume its advance. In fact, however, there is no reason to suppose that in recent months the restraints have been generally effective. They performed their deflationary task late last year and early this year and have since stood like a dyke after the flood-waters have receded. Dismantling the structure will not necessarily have any effect on business generally. The important question is whether the authorities will proceed to a more positive policy, pumping activity into the system. The market has been inclined to assume that it will do so, but the assumption may be wrong. Anyway, between action and the results of it, many months can elapse.

There is, however, another, and on the whole a more convincing, explanation of the independent behaviour of the stock exchanges of Britain and north America and other countries. The character of investment has been gradually changing over the years, as an increasing proportion of savings has come into the hands of big institutions such as insurance companies, pension funds, and banks.

The banks' investment managers are concerned mainly with a somewhat restricted range of Government stocks, but managers of the funds of insurance companies and pension schemes can take a broader view of the investment scene. They can disregard short-term fluctuations in the market, and in the economy generally, and if they foresee long-term expansion they may look beyond short-term recession. They will not sell them merely because the prospect a few months hence looks rather gloomy. A recession that lasted a few years, and reduced profits and dividends, would inevitably have a more serious effect on the stock markets. But most British industrial shares will probably receive at least their present rates of dividend throughout the present recession, and yields on the basis of these dividends are generous. Dividends are generally covered two or three times by available earnings, and there are many companies that are still operating profitably enough to increase their dividends.

The institutional investors have lately been inclined towards ordinary shares because the differential between yields on good ordinary shares and yields on long-dated Government stocks has been of the order of 1½ percent in favour of the latter. Government stocks have risen and are likely to rise further as the level of interest rates—a world-wide phenomenon—declines. But the recession that causes this phenomenon is not affecting industrial shares in the traditional way.

EXPANDING U.N. TECHNICAL AID EVALUATION OF PROGRESS

THE U.N. technical assistance programme, whatever might be the current jokes about it, is indeed a valuable source of aid for under-developed countries. These all too often find their development programmes held up for want of the necessary technical expertise and personnel, and it is not always easy to procure these items from foreign countries for a variety of reasons. The U.N. assistance programme thus fills a vital gap. The D.D.T. plant in India, the penicillin factory in Yugoslavia, and the enlarged phosphate industry of Jordan, are no doubt the products of local capital and enterprise. But the expert knowledge which these countries obtained from the United Nations helped them considerably in the planning and execution of the projects. Similarly, Ceylon successfully runs its new central dairy with the help of an F.A.O. expert who helped in the overall planning and direction of the scheme from the beginning. The machinery was supplied from New Zealand under the Colombo Plan, and the plant, which produces 15,000 pints of milk a day for the Colombo area, is the first of its kind in Asia. Many more examples can be added. As individual schemes, these are not perhaps spectacular, but considering the problems of health and nutrition for land and men in such under-developed economies, their value is considerable.

Seeing the matter in this perspective, it becomes easy to appreciate the valuable service which the U.N. thus renders. And it is gratifying to find that the scope of the programme has been increasing steadily over the years. A U.N. hand-out just released, which summarises the comments of the U.N. Technical Assistance Board in its introduction to the tenth annual report to the Technical Assistance Committee of the Economic and Social Council, shows 'new levels of achievement' by its expanded programme of technical assistance and the seven allied specialised agencies. In terms of money, says the hand-out, the large amount was spent since the expanded programme started in 1950. The quality, too, showed a definite improvement because of the experience gained in previous years. Further expansion of assistance is in prospect, it adds.

In absolute terms, the expenditure incurred on the programme amounted to \$31.5 million, \$1 million more than that expended in 1956. The number of contributing governments increased to 84 from 71 in 1956, and the number of the countries and territories served increased from 103 to 132. The number of experts provided rose to 2,513, up 7 percent on 1956. The most important event of the year was the institution of the Special Fund, in accordance with the decision of the U.N. General Assembly taken in December 1956. The exact relationship of the Fund to the Technical Assistance Administration, which is the special body now carrying out the programme in co-operation with other U.N. agencies such as I.L.O., F.A.O., U.N.E.S.C.O., W.H.O., I.C.A.O., the International Telecommunication Union and World Meteorological Organisation, is still to be determined. Whether they are to operate independently will depend upon the decision of the U.N. Economic and Social Council which will shortly go into the matter, but there is no doubt that they will complement each other's activities.

There was a decline in the number of fellowships during the year—from 2,128 to 2,061. This

is among the unhappy features in the report, but it is not considered serious, although a continuation of the trend, says the hand-out, will be a matter of concern. The reason for the fall has not been explained, but it is mentioned in another connection that the salaries paid to experts were considered unattractive in many cases. The best experts are not always attracted by financial inducements

Current News and Comment

Better Results for Sen-Raleigh

Sales of the Sen-Raleigh Industries of India, Ltd. for the year ended September 1957 recorded a further rise of approximately Rs. 30 lakhs, and the profit at Rs. 15,91,546.60 compares favourably with Rs. 14,36,292.23 earned in the previous year. In his address from the chair at the annual general meeting of the company, Mr. S. K. Sen has said that the improved turnover was achieved solely through an expansion in output in the component section of the factory. (A fuller version of the speech appears elsewhere in this issue of Capital.) By the end of the year, the component section met the needs of most of the bicycle manufacturers in the country and thereby contributed largely towards saving foreign exchange. But the production of bicycles could not be increased as expected due to the difficulties in maintaining a continuous supply of imported materials. The introduction of a large manufacturing programme, with a view to reducing the imported components used in a bicycle to a figure below Rs. 5, by 1958, had also affected the production programme. New components always need some time for proving and testing, and while in earlier periods of easier licensing there had always been some buffer stocks to tide over an emergency, "the position in 1957 was often a race between manufacture of new items ahead of schedule against stocks of imported components running out on a given date." The plant required for the expansion and for manufacturing components has arrived and is being installed. But no great progress can be made in expanding production unless the Government can afford to release foreign exchange for raw materials which are not yet produced in this country. "Although it is realised that the situation facing the country and its Government in relation to foreign exchange is critical, with restricted licences and diminishing buffers, a state of emergency dominates industry. Emergency measures are necessary to tackle such a situation and only a more dynamic approach on the part of the licensing authorities in dealing with the limited licence applications now reaching them, can keep the wheels of industry turning, without a break." The bicycle industry was confronted with a few paradoxes during the last few months. On the one hand, manufacturers have been exhorted to increase their production capacity and have even been asked to consider an upward revision of the targets. On the other hand, they have noted with concern the various pronouncements on the dwindling foreign exchange reserve which has greatly aggravated the difficulties in obtaining import licences for components. Some time ago, the Government of India asked the company to explore the possibilities of developing export markets. The company's request to Raleigh Industries Ltd. in this connection was received in a spirit of accommodation and rights of export of Raleigh products to Russia, Czechoslovakia, Poland, Rumania, Bulgaria and communist China have been vested in the Indian company. Mr. Sen says that measures have already been taken to explore the possibilities of sales in these markets.

Bengal Coal Raises Output

The working results of the Bengal Coal Company, Mr. D. F. Macmillan, chairman, has stated at the latest annual general meeting, were better during the year ended 31st October, 1957, than in the previous period. (A fuller version of his speech appears elsewhere in this issue.) Raisings were 2,801,164 tons, compared with 2,509,787 tons in 1955, which was the last year of the first five year plan. Mr. Macmillan has added that the output of the company has improved by 11.6 percent during the first two years of the second five year plan "in spite of the serious handicaps imposed by the delays by the Government in defining its policy towards the private sector in the coal industry, to which have been added more recently the restrictions on the imports of essential equipment." This contribution to the economic development of India has been made possible by the company's own development programme which started as early as 1945. The chairman has pointed out that the private sector of the coal industry as a whole is more than keeping pace with the rate of increased output required to achieve its target of 45 million tons annually by 1961, while "one sees reports from time to time which give the impression that there may

be a further downward revision of the public sector's target." Mr. Macmillan, therefore, suggests that instead of allowing this uncertainty to continue it would be in the best interests of all concerned if the Government could reach a definite decision whether or not to raise the target for the private sector. But if such a decision is to be taken, it has to be taken soon so that private collieries will have sufficient time to make the necessary preparations.

Dealing with the current problems of the industry, Mr. Macmillan refers first to the import restrictions which have been adversely affecting the coal industry. He appreciates the Government's difficulties and says that the industry must try to do without as many items of its imports as possible, but there are certain products such as steel wire ropes which are absolutely essential, because without them coal cannot be raised. The transport situation, if anything, has worsened. Wagon supplies improved in 1957, but since the beginning of the current year, they have been less than the guaranteed figure of 950 wagons daily. During May, they were as low as 412 wagons. Consequently, pithead stocks at present have been higher than "they have been for a considerable time." On the question of increasing coal exports, Mr. Macmillan expresses the surprise that the Government attaches so little importance to it as a foreign exchange earner. He refers to the history of these exports and says if only the level of 1938 exports were resumed, the country, at today's price, could earn Rs. 54 crores. But as India permits the export of only her low-grade coals, it would be difficult to recapture the markets. Even otherwise, and assuming that the Government gave the greatest possible encouragement, "it would be some time before the old markets and the old reputation could be regained," Mr. Macmillan says.

Orissa Cement's Rights Issue

The company, Orissa Cement Ltd., announces on another page of this issue of Capital, a rights issue of 500,000 ordinary shares of Rs. 10 each at par. Existing ordinary shareholders are to be given the opportunity of subscribing to this new issue in the proportion of one new ordinary share for every two already held. This issue of ordinary shares will go to supplement a total of one million already subscribed and paid up. The authorised capital of the company, which totals Rs. 5 crores, is divided into 4 million ordinary shares of Rs. 10 each and 100,000 preference shares of Rs. 100 each. Of the preference shares, 40,000, 4½ percent cumulative, each of Rs. 100, have already been subscribed and paid up. The company is a national enterprise under the patronage of the Government of Orissa. It owns a 500-ton wet process cement plant at Raigangpur which went into production at the end of December 1951. This was later supplemented by a second unit of 600 tons daily capacity which was commissioned early in 1957. At the same time, the company undertook the establishment of a modern refractory works with an annual capacity of 80,000 tons of firebricks of various kinds, including basic bricks. The firebrick and silica brick plant went into production early in 1958. The construction of a basic brick plant is still in progress and is expected to be completed by the end of this year. The working results of the company show a steady expansion of output and of gross profits. The ordinary dividend increased from 7½ percent in 1954 to a proposed 15 percent in 1957. The new shares will rank along with the existing ones for participation in the dividend for the accounting year 1958. At the current price of Rs. 14.06 a share, the yield would work out at 10.7 percent with a dividend of 15 percent, if this is maintained. The managing agents of the company are Dalmia Agencies Private Ltd., Scindia House, New Delhi.

Exporting Engineering Goods

The foreign exchange crisis has made it imperative to increase exports, and the engineering industry is doing all it can to earn the much-needed foreign currency. A Press note issued by the Engineering Export Promotion Council says that there has been a steady improvement in the

export of engineering goods during the past two and a half years. The items which exports have shown a considerable increase are diesel engines, oil mill and rice mill machinery, tea, sugar and textile machinery, electric fans, sewing machines, cast iron and G I products, etcetera. The value of machinery exports, for example, increased from Rs. 36.17 lakhs in 1956 to Rs. 37.23 lakhs in 1957, that of diesel engines rose from Rs. 2.2 lakhs to Rs. 10 lakhs and electric fans from Rs. 12.71 lakhs to Rs. 18.09 lakhs. The total exports during the first five months of the current year have also recorded some increase compared with the corresponding period of last year. West Asia has been India's biggest customer with purchases worth Rs. 62.2 lakhs in 1958. The industry also found a large market in south-east Asian countries and in Africa. The value of exports of electric fans has increased to Rs. 11.9 lakhs during the first five months of 1958 compared with Rs. 5.9 lakhs during the corresponding period of last year. Kuwait alone has purchased 61,09 fans valued at Rs. 5.9 lakhs during this year. A noteworthy feature of the export trade in engineering goods is that even the most industrially advanced countries such as the United Kingdom, the United States, Canada and west European countries have purchased Indian engineering goods. Orders for about 5,000 sewing machines have been secured from these countries during the last five months. An order for 47,500 sewing machines has also recently been secured from Yugoslavia, and the credit for this goes to Messrs Jay Engineering Works Ltd., the Council says.

Promoting Exports to West Germany

India can double her exports to West Germany provided certain basic steps are taken, Dr. Karl Pracht, secretary of the Indo-German Chamber of Commerce, has said in a recent address to the Indian Council of Foreign Trade. The starting point, he says, is to convince West German business interests that India has a wide range of goods to offer. During his recent visit to West Germany Dr. Pracht gained the impression that there is little understanding there of India's export potential. This perhaps accounts for the fact that of that country's total imports of Rs. 3,569 crores each year, India hardly provides 1 percent. On the other hand, West Germany is India's third biggest supplier. He has further pointed out that approximately 55 percent of Indian goods reaches West Germany through third countries such as the United Kingdom and Holland. This is particularly true of tea, minerals and oilseeds. In addition to participating in trade fairs there and the rest of Europe, Dr. Pracht suggests the formation of a marketing organisation by private merchant interests in India which may help in stimulating exports to West Germany. "It is so to say a first investment which is necessary and for which the risk should be incurred," he has said. India has been having an adverse trade balance with West Germany. Last year, it amounted to Rs. 88 crores. If "the exporters, their organisations, the export promotion councils and the competent authorities of the Government are aware of the reasons for this uneven and unbalanced development, they might and should be able to bring about some change." He has added that the export policy and the policy relating to export duties should remain stable over a period of time to facilitate long-term commitments. If necessary, priority should be given to the export market over home consumption. If India is to do business with West Germany, her products should compete in quality and price with those of other countries; the quality must conform to samples and remain constant; delivery terms must be strictly adhered to; and in the case of disputes, these must be dealt with in a fair and businesslike manner, Dr. Pracht has advised.

Interim Report on Textile Industry

The Cotton Textile Enquiry Committee has been meeting in Bombay for the last few days to draw up an interim report for submission to the Government of India. This follows a request from the industry that if immediate steps are not taken to give relief, some marginal mills may be forced to close down in the face of the "crisis of accumulated stocks." The interim report will be submitted very shortly, and it is expected that the Government will promptly announce ad hoc measures. The committee will submit its final report on 15th July. It is expected that the internal and export demand will be reassessed. The Bombay Government has also appointed a cabinet sub-committee to watch the textile situation in the State. Mr. Francis G. Hickman, Editor and Publisher of the Cotton Trade Journal of Memphis, Tennessee, United States, recently addressed members of the cotton trade in Bombay. He is on a tour of south east Asia and the Far East studying the textile industry of these countries. He has already visited Japan, Formosa, Hongkong, Viet-Nam, Thailand, Malaya, Indonesia and Ceylon. Mr. Hickman has said that most textile producing countries

of the world are faced with the problem of accumulation of stock. Japanese manufacturers are allowing some 30 percent of their spindles to remain idle. American mills were now working only one or two shifts. He has suggested that the Indian industry might consider similar steps to avoid the total closure of some mills. All the newly independent countries of south-east Asia are installing new mills in order to produce their entire cloth requirements, although some of them do not have the advantage of domestically grown cottons. Communist China, he has said, is offering stiff competition in these markets both in quantity and quality. Mr. Hickman has, however, complimented the Indian industry on its past achievements, and hopes that the present crisis is only of a temporary nature. By cutting production costs through better management and labour productivity and by abolishing certain taxes, India could regain some of her lost markets, he said.

Ahmedabad Concern to Expand Activity

The Ahmedabad Manufacturing and Calico Printing Company Ltd. is to expand its chemicals manufacturing department at its Bombay unit. The production of caustic soda and chlorine was started in March this year after an initial delay. It is now proposed to produce polyvinyl chloride and calcium carbide. These projects are estimated to cost Rs. 2 crores, and negotiations are now in progress with the Government-sponsored financial organisations for a loan in various currencies. The necessary licences under the Industries Development and Regulation Act are being awaited. The company, including its textile unit in Ahmedabad, made net sales amounting to Rs. 849 crores last year, against Rs. 852 crores in the previous year. The gross profit declined from Rs. 1.86 crores to Rs. 1.28 crores. Fixed capital expenditure increased by Rs. 1.08 crores to Rs. 6.22 crores. Depreciation provided for amounts to Rs. 2.74 crores leaving a net block of Rs. 3.47 crores. The subscribed capital has increased to Rs. 2.35 crores from Rs. 1.66 crores because of a bonus issue in the ratio of one to two. Of this, Rs. 29 lakhs is in preference shares and Rs. 2.06 crores in 165,000 ordinary shares of Rs. 125 each. Reserves and surplus amount to Rs. 2.68 crores. In spite of a difficult year, the directors say that sales of cloth were well maintained and that stocks were not abnormally high at the end of March.

Road Transport Reorganisation

The Road Transport Reorganisation Committee's questionnaire includes a query about the performance of nationalised road transport. In Madras city, the inadequacy of bus transport persisting for a long time even after nationalisation is certainly not a point in its favour. Complaints about ticket rates, overcrowding during peak hours and the absence of shuttle services have been regular, but the Government is seemingly keener on developing some rural routes and running regular services to Kerala towns than attending to these. The restrictions on the use of trailers and limits set to loads for lorries and buses also find a place in the questionnaire. Road interests say that since modern roads are better and the engines more dependable, the existing rules are obsolete. The owners have been asked for their views about the running costs of vehicles. The users have been asked to express their opinion about the punctuality, fares and freights as well as malpractices in road transport. A great deal is likely to be heard from Madras against the progressive nationalisation of services soon approaching a monopoly, and against the high rates of taxes which discourage expansion.

Hotel Rates and Costs

The hotel industry is opposed to any official control of its tariffs. This was made clear by the South Indian Hotels and Restaurants Association at its meeting held in Madras on 27th June. It has been pointed out that competition keeps rates at a reasonable level which is quite acceptable to tourists. It is far more important to maintain high standards of service than to reduce rates, which cannot be done due to the rising prices and wages. The Madras Government has taken measures to regulate work and wages in hotels, but the industry, especially the larger establishments, feel that a Central enactment would be preferable in the matter. In view of what the Estimates Committee has said about better hotels in relation to the promotion of tourism, it is regrettable that no school for training hotel staff has so far been set up. The committee has pointed out that Indian hotels must cater well to suit foreign visitors' tastes. Many south Indian hotels and restaurants require some essential imports of tableware, cutlery, glass, etcetera, which they cannot obtain at present. The industry has often complained that higher standards are difficult to attain for a variety of reasons. The high cost of liquor and Prohibition rules have been an obstacle to the enlargement of its business.

Exports of Leather Goods

The Leather Export Promotion Council has just expressed the view that the exports of leather goods have not been disappointing in the course of the past 17 months, which is the period the Council has been functioning. Shipments have been maintained at a steady level. Although raw skins still continue to be exported, the exports of leather manufactures have slightly risen. Credit facilities for tanners and exporters need to be increased so that stocks can be held until the seasonal demand revives. The Leather Research Institute also has indicated its willingness to help in the making of suede and industrial leather which will meet U.S. demand. Fluctuations in overseas demand create problems. The shortage of tanning extracts has to be overcome and the Government has only lately agreed to permit essential imports. The proposals for controlling the quality of tannery wool and hair required for the drugget industry in Madras and Mysore have been dropped. But a scheme for general quality control is taking shape, and that for sampling and analysis has been approved. This is meant to ensure proper standards.

In the latest annual report of the Council, it has been estimated that the total footwear production amounted to 93.95 million pairs in 1957 of which 16 to 17.5 million pairs were of the western type. The large-scale factories have raised their output in the past few years. There are a few factories in the U.P., but all of them produce less than a single big factory in West Bengal. The output of Indian-style footwear has been rising since 1950. Imports are negligible because of the high duty and strict control regulations. The 12 tanning units in U.P. have a large capacity for both chrome and vegetable tanning. The place of the Punjab comes far behind West Bengal and Bombay. The exports of goatskins and sheepskins continue to exceed those of cowhides. So the pattern of the

hides and skins trade has undergone no substantial change in recent years; although the export of raw hides and sheepskins has been restricted. Capital invested in the large-scale units of the leather industry is estimated at Rs. 10 crores. Another point emphasised in the report relates to the fact that there is a surplus capacity in the tanneries. The village tanneries use only barks, and this practice the report disapproves. Hides and skins shipments from Madras have been placed at a higher level. Japan has reappeared as a fairly big buyer, although the U.K. is still the main customer.

L.I.C. Service Changes

Thorough changes in the cadre of officials of the Life Insurance Corporation are now being made. These follow the recommendations of the reconstituted Senior Services Committee, which was headed by Mr. S. Lall, formerly of the Indian Civil Service. The changes involve mainly promotions, demotions and transfers the idea being to fill the posts appropriately. Senior appointments in the Life Insurance Corporation of India have an interesting history. The question was first taken up by a Committee under the chairmanship of Mr. M. C. Shah, a former Deputy Finance Minister of the Central Government. That Committee made its recommendations which were apparently disregarded. The Senior Services Committee was constituted, with Mr. S. Lall as the chairman. It interviewed a large number of persons and made many appointments. When these were announced, their peculiarities and oddities surprised many. It was contended in knowledgeable circles that seniority, past record of service, status position and merit had not been seriously considered. The appointments were not approved, and the Senior Services Committee was reconstituted with the inclusion of two public men, namely, Mr. T. C. Kapoor and Mr. B. C. Ghose, M.P. This re-constituted body, it is reported, has made recommendations concerning as many as 561 persons. The Implementation Committee of the Life Insurance Corporation, it is understood, has given effect to changes concerning 261 persons, as against the recommended 561. In view of the insistent demand that the recommendations of the Committee should be implemented fully, it is now understood that the Corporation is considering introducing all the changes suggested. Even then public criticism is not likely to stop. The appointments announced show a certain bias in favour of the professional technicians, such as actuaries, being given priority in top positions in the development sector, whereas the claims of grit, initiative and business acumen have been overlooked. The "steel-frame" of the Corporation has to realise that the success of this vast undertaking will largely depend upon the confidence, trust and goodwill of the officials who have been called upon to mould its future. The uncertainty hanging over their fate for many months should be ended as quickly as possible. That has seriously undermined the efficiency and the morale of the personnel.

Development of the Middle East

The formation of a Middle East Industrial Development Corporation—a group of bankers and business men from nine middle eastern and ten west European countries, and the United States, to which a reference was made in these columns recently—has just been announced from New York. Fifty-seven business and banking firms in the Middle East have purchased voting shares and each group has elected a representative to the board of directors. Mr. Paul Rykens, the Chairman, has recently said: "The quick action and support we have received from Middle East enterprises indicates that this new concept for the economic development of less developed countries has been enthusiastically endorsed in the region itself." The programme calls for the establishment of operating companies in the Middle East, with the majority of equity shares held by local investors and the minority by European and U.S. investors. The current capital amounts to 1,610,000 Swiss francs (£134,000). The funds will be used to finance preliminary investigation activities.

Spreading Recession in Textiles

It has been evident for some time that a recession of varying intensity has affected trade in both cotton and rayon textiles. Hitherto this has not been extended to wool textiles, but recent indications suggest that production here also is showing a downward trend this year in a number of countries. According to Wool Intelligence, the output of all wool textiles in most of the principal manufacturing countries was smaller in the first quarter of this year than in the previous quarter, and compared with the first quarter of last year, there were some heavy falls. For all the countries together the output of tops was 12 percent lower in the March quarter than a year previously. That of yarns was 15 percent lower, and that of fabrics 10 percent less. Only France and Italy, with in-

creases of 3 percent, and 5 percent, respectively, did not share the reduction in combing activity, while France showed only a small fall in spinning and no change in weaving. Combing activity was 37 percent lower than a year previously in the United States, and 20 percent less in Japan. All the countries, except France, showed falls in yarn production, the Belgian figure being down by 28 percent, the Netherlands by 23 percent, and the United States by 20 percent. Belgian cloth production was 38 percent lower than a year previously, and there were falls of about 20 percent in Italy, the Netherlands, and the United States. Lack of confidence in raw material prices has no doubt been an important adverse influence, but it seems unlikely that it can have accounted for all the heavy decline in activity.

One More Year for E.P.U.

After several months of heated controversy, the Managing Board of the European Payments Union recently recommended to the 17-member Governments that the Union should be renewed in its present form for a further year. The agreement expired on 30th June and the decision to continue was formally taken by the Council of the O.E.E.C. before the expiry date. The Swiss Government, which had been strongly opposed to any renewal for more than six months, has accepted a compromise formula: Switzerland will stay in the E.P.U. until 1st January, 1959, and notify the Board a month earlier whether she will continue to be a member. Switzerland is not alone in having doubts, for these are certainly shared by others, particularly by prospective members of the Free Trade area outside the Common Market group. That the E.P.U. has been given a new lease of life is due to the fact that the alternative would have been to return to a series of bilateral payments arrangements, and without the E.P.U. it would have soon become difficult to keep up the liberalisation of trade among west European countries. The dispute, which has been suspended, has

"A SURVEY OF INDIA'S FOREIGN TRADE 1958"

With the edition of CAPITAL, dated 10th July, will be published "A Survey of India's Foreign Trade 1958", containing articles discussing all aspects of the country's export and import trade. It reviews a field of activity which is vital to the existence and progress of a modern industrial economy, and one which is of more than usual interest at this critical juncture in the second five year plan. The supplement will be supplied free to registered subscribers and will be available to others at Rs. 5 a copy (postage extra). Enquiries may be addressed to the Manager, CAPITAL, 5, Mission Row, Calcutta 1.

given a foretaste of the trouble which will arise if the Common Market starts in January without some form of a tariff agreement with the rest of the O.E.E.C. members. Whether it will start then is open to some doubt in view of the recent developments in France, and on this subject General de Gaulle has not yet expressed any opinion. Meanwhile, several alternatives are being canvassed, including the granting of a loan to France by the five other members to enable her to participate, her exemption from some obligations for a limited period of time, and lastly, the postponement of introduction of the scheme as a whole, until, say, the middle of next year.

Land Rovers and Jeeps

Discussions are taking place on the possibilities of a link-up between America's Jeep and Britain's Land Rover production and sales organisations, the Rover Company announced in London. "The Rover Company, Limited, have commenced discussions with Willys Motors, Incorporated, to see if there are mutual advantages in an association between these two companies in certain fields of production and distribution of four-wheeled drive vehicles," said the statement.

Progress of Co-ops in Madras

The progress of the co-operative movement in Madras has been remarkable. It controlled funds exceeding Rs. 10.3 crores in the year ended June 1957. Reliance on loans, instead of deposits, persisted and co-operators had to get money from outside in competition with commercial banks. The type of loans made by co-operative banks and societies differs from that made by other agencies. The co-operative milk societies showed satisfactory progress as usual. Housing for the middle class has been stimulated by the aid given by the co-operative department for the construction of new colonies near towns. The growth of garden suburbs has obviously been promoted by the acceptance of town planning requirements by municipal councils.

GOVERNMENT LOANS

THE luck, the extraordinary luck, which has attended the issue of rupee loans during Sir James Westland's tenure of office may have emboldened him to believe that he is proof against failure and may venture yet another Rs. 2 or Rs. 3 crores again this year. We sincerely trust, however, that he will scrutinise carefully the time and opportunity before risk-taking chances which at present stand at 50 to 1 on failure. Between October 1896 and the present date the return of Rupee Paper from London has amounted to Rs. 5 crores on balance, and in addition, India holds the greater part of the Rs. 4 crores 3 percent loan of 1896 and of the Rs. 3 crores 3 percent loan of 1897, so that practically we hold in India Rs. 12 crores more rupee loan paper than we did two years ago. When we consider that contemporaneously we have experienced famine, plague and financial restrictions, and that London, which has relinquished so much of this security, exhibits up to the present no desire to re-invest, we are constrained to ask who are likely to tender for a new rupee loan this year? We may confidently state that the feeling in Calcutta is that, if a new rupee loan is offered, the price of 34 percent paper, which now stands at 95-4, will decline to 92 or lower, and that even if the Government elect to accept that or a lower price they will not get it either from the Banks or the bazar. The financial capabilities of the commercial community, here and elsewhere, will not at present admit of further holdings of this security, more especially so long as the Government must remain supinely indifferent to the injury they inflict by the issue of Rs. 4 crores 3 percent loan of 1896. The absolute indifference with which Government have regarded holders of that unmarketable security, notwithstanding numerous protests and representations, is enough to disgust the whole commercial community of India. We are not likely again to be tricked by the temporary appearance of cheap money into investing in a security, which is so ostensibly served up as a bait to the unwary.

A PORTRAIT OF Perfection

Human search for perfection is endless. Here you find the fruit of the combined efforts of many highly skilled people such as, designers, tool engineers and technicians whose minds and hands transform raw materials into the best possible components of an Orient fan. The fan that bears testimony to man's never-ending endeavour for perfection.

In Orient's factory much thought goes into planning and research—planning the kind of fan that will serve you most and the search for ways and means to make it. New methods are constantly being replaced by newer methods resulting in fans of remarkable performance and incomparable finish.

Years ahead in look and performance

Without Prejudice

THE RIGHT TO SUSPEND AN EMPLOYEE

ONE BAD FEATURE OF LEGAL DELAYS

(FROM OUR LEGAL CORRESPONDENT)

WE wish to consider, so far as the limits of a short article will allow, the right, if it exists, of an employer to suspend from service an employee, and whether the employer can withhold payment of salary or wages to that employee during the period of suspension. Of course, if the agreement of service expressly provides for such a right, or the standing orders by which the employee has agreed to be bound similarly vest the power to suspend without pay, there is an end of the matter under the law of contract. We need not waste time and space over that aspect. We are concerned here with two other aspects. Firstly, the common law of the land where there is no written contract providing for such an event, and, secondly, how far the position is altered, if at all, by the Payment of Wages Act and the Industrial Disputes Act.

Mr. Barwell, in his standard work on the law of service, devotes a good deal of space to the first aspect, and is in grave doubt as to whether, apart from express contractual provision for it, any right of suspension subsists at all. Says he: "Broadly stated it seems to be thought by a large number—perhaps the majority—of employers that when one of their servants falls under suspicion of wrong-doing, a servant so circumstanced may lawfully be 'suspended', by which they mean may be ordered to desist from working till an investigation into the action giving rise to such suspicion shall have been completed the result of which is to exhibit the servant either as innocent or as guilty; and that a master who has so purported to 'suspend' his servant may, at his unfettered discretion, withhold payment of all or of such part of that servant's salary or wages as the master chooses to withhold in respect of the period during which the servant

has been compelled to remain idle.....In India..... many employers suppose themselves to possess an inherent right to suspend a servant under circumstances which they consider make it just or at least expedient to do so, or imagine that when the contract of service between the parties is silent on the subject, a power to suspend a servant is to be implied therein." And after citing a large number of cases, both English and Indian, on the point, the learned author comes to the conclusion that there is no authority for the assumption that a power to suspend both service and payment of salary is implied in a contract of service. The writer respectfully agrees to the following extent. An employee's duty is to obey his master's orders. His master may order him to cease work. Thereupon he would have to cease work. But the contract of service is not in any way suspended. He is still in his employer's service and at the latter's disposal. He is merely on leave; on leave with full pay; liable to be called back to work at any moment. An employee willing to work is prevented from working by his master's orders. But the man is not really "suspended" at all. The contract of service is still subsisting though no work is being actually done because the employee has to obey his master's order to stop work. The master has excused the servant from performing his duties and is not discharged from his obligation to pay salary or wages.

The matter becomes one of much more practical importance when the so-called suspension has taken place in a case to which the Industrial Disputes Act applies. It is a fact so customary and commonplace that it has ceased to be in the least shocking that it may be a matter of years before a simple issue as to whether a particular workman can be dismissed or not is finally decided; and if he has been suspended pending the decision, and eventually permission to dismiss is refused, the question of back pay for the years during which he has been doing no work will arise. It did so arise in the case we will now discuss. It was an appeal in the Madras High Court by the Gnanambikal Mills Ltd. from an order under the Payment of Wages Act that the company should pay a workman wages notwithstanding that he was under suspension ordered by the management of the mills. These were the facts. The respondent Ramachandra was an employee of the company. An industrial dispute between the company and its workmen was

referred to the industrial tribunal for adjudication under the Industrial Disputes Act. During the pendency of these proceedings, the management took disciplinary action against a particular workman, Ramachandra. The management held an enquiry and came to the conclusion that the workman should be dismissed for proved misconduct. On 16th June, 1954 (as a matter of mild interest you might note the year and the fact that some three years later the question of the management's right or otherwise to dismiss had not been disposed of), the management directed suspension of the workman pending the contemplated dismissal for which the sanction of the industrial tribunal was necessary under Section 33 of the Industrial Disputes Act. On 29th June, 1954, the company appealed to the tribunal for the requisite sanction. On 21st October, 1954, the workman preferred an application to the prescribed statutory authority under the Payment of Wages Act, for a direction under Section 15(3) of the Act that the management should pay the workman the wages due to him for the period 16th June, 1954 to 19th October, 1954. The Additional Commissioner for Workmen's Compensation, Madras, disposed of that application. He upheld the workman's claim, that despite the suspension ordered by the management, the workman was entitled to payment of wages during that period. The company applied under Article 227 of the Constitution to set aside the order of the Additional Commissioner.

Here, with due modesty, the writer begs leave to obtrude his own views. They are based on the observations with which this note began and are that on the law as it was or appeared to be on 23rd October, 1956, the date when the Assistant Commissioner made his award, that award was perfectly right. There was no specific provision in the standing orders (except clause 20(1) not applicable to this case) for the suspension of an employee, and in the absence of any such provision, assuming that which is very doubtful, an inherent right to suspend, the suspension did not terminate the relationship of master and servant as between the company and the workman. We have not space here to set out the definition of "wages" in Section 2(vi) of the Payment of Wages Act 1936 nor Section 3, "Responsibility for payment of wages", but they make it clear that the whole foundation of the relationship of master and servant rests upon the right of the workman to get his wages and the obligation of the master to pay them, in return for the servant's work. And unless the servant is himself unwilling to work, the power to suspend, i.e., to put it out of the workman's power to work, if such power exists at all, does not entitle the master to withhold payment of wages.

That then appears to have been the law in June 1956.

But in 1957 came an important judgment of the Supreme Court and in the appellant company's petition before the Madras High Court, they relied on it as supporting their contention that when an employee is kept under suspension pending disposal of an application to dismiss him under Section 33 of the Industrial Disputes Act, the right to receive wages and the liability to pay them also remain suspended. In the course of his judgment in that case, Bhagwati J. observed: "..... suspension without pay pending enquiry, as also pending permission of the tribunal under the relevant section, could not be considered as punishment, as such suspension without payment would only be an interim measure and would last till the application for permission to punish the workman was made and the tribunal had passed orders thereon. If the permission was accorded, the workman would not be paid during the period of suspension, but if the permission was refused he would have to be paid for the whole period of suspension."

So whatever the common law is, it seems clear that in cases in which Section 33 of the Industrial Disputes Act is invoked the right to suspend exists and that payment of wages need not be made pending the decision on the application for permission to dismiss.

That sounds fair enough in theory. But it appears to the writer to be based on the assumption that such applications are disposed of with reasonable speed, and we all know that disposal often takes years. In this Madras case, for instance, between the date of the application for permission to dismiss and the hearing of the case in the High Court, three years had elapsed and even then the application had not been disposed of. Scandalous delay is the accepted fate of litigants in India. It is the badge of their tribe. So there is nothing particularly noteworthy in the fact that a batch of labourers, say, a hundred or so, may be rendered destitute with their families during a period of years while they are suspended without pay pending the hearing of, and decision on, an application to dismiss them for some disciplinary offence. Of course it cuts both ways. If the employer has to pay wages during the period of suspension and permission to dismiss is at long last granted, he has no chance of getting his money back.

Returning to the Madras case, the High Court allowed the employers' petition, holding that the workman was "not entitled to any immediate payment of wages during the period of suspension indefinite though it has turned out to be."

A Ditcher's Diary

THE DOCK STRIKE ENDED MUCH AFTER THE FASHION I thought it would. Of course, it was called off ostensibly at the Prime Minister's intervention, but that was by no means the whole story. The way it was precipitated in the first place left little doubt in the public mind that the workers' leaders were guided at least in part by political motives. When they found that the general feeling was against them, they hurriedly looked for a face-saver, and fortunately for them, Mr. Nehru was prepared to supply it. But what hastened the leaders' scamper for cover was the firmness of the port authorities and the determination of, among others, Mr. S. K. Patil. The Prime Minister has, therefore, served the country's interests in two ways: by getting the workers back to their jobs and by reminding the strike leaders that in a democracy even trade union power entails responsibility. Now it remains to be seen whether the Government has learned its own lessons from this experience. It is certainly true it realised that its "socialistic" (there is nothing socialist about it really, as any good Marxist will confirm) labour policy is doing nobody any good, least of all itself. Mr. Asoka Mehta, for whom my admiration is usually unbounded, has suggested somewhere that the port workers' leaders are all patriotic men, but were not told what serious effect their action would have on the country's balance of payments. I think Mr. Mehta is quite unfairly trying to shift the blame on to the Government's shoulders. If the port workers and their leaders are not interested enough in what is being done for them to consider the consequences of their own pursuit of narrow, parochial and political interests, then their claim to patriotism is not readily proved. The Government would do well to take special precautions in future against patriotism of this kind.

If Mr. KHRUSHCHEV WAS PLEASED WITH THE performance his demonstrators put up outside the West German and Danish embassies in Moscow the other day, he is not as shrewd as we are apt to give him credit for being. This is the first time since the revolution that the world has seen a Moscow mob in action, and a startling experience it was. Such savagery suggests deep frustrations eager for an outlet, and when a monster of this kind has tasted blood and felt its strength, it must be expected to look for fresh victims. I do not know whether the Kremlin has any windows, but Mr. Khrushchev would be well advised to see that their shutters are in good repair. Mobs are notoriously dangerous playthings as any old Bolshevik will tell him, and his own Praetorian Guard may eventually turn out to be no more reliable than Nicholas's Cossacks were. All this is assuming that the demonstrations were not spontaneous. The world will never be convinced, but if by some chance they were not a put-up job, then we have an even more interesting phenomenon on our hands. An outburst such as this, especially against the embassy of a tiny and harmless nation like Denmark, could only mean that the Russians resent mark, could only mean that the Russians resent other people objecting to their barbarism. It is, perhaps, not so much that they reserve the right to set their own standards of moral behaviour, as that in spite of the technical and economic achievements about which they boast so liberally, they are still obsessed with their own personal feelings of inferiority among decent human beings. It was

this apparent inability of the Russians to behave in a civilised manner which impressed me most about the Nagy affair. First there was the point that a solemn promise had been broken, then there was the underhand way in which the trial—if indeed there was one—and the executions, were conducted. This kind of thing is mediæval. It may be that the Russians have been isolated from the civilised world too long to know what is or is not accepted as decent behaviour these days. If so, it might be in Mr. Khrushchev's personal interests to acquaint them without delay, because the dark ages were notorious for the interesting ways in which they disposed of some of their more unpopular personalities.

THERE HAVE BEEN SEVERAL MISINTERPRETATIONS already of Mr. Namboodiripad's recent statement. One came from Mr. Namboodiripad himself, which is neither wholly surprising nor entirely unmotivated. I have not the time to look up the original statement, but I am inclined to think that even the Chief Minister of Kerala could not be so careless with his words as to suggest or threaten a civil war just because the parties in opposition to his Government were thinking of getting together. It is not communists alone who bring out the China parallel, forgetting (in hope or in fear) that Nehru is no Chiang and Namboodiripad no Mao. There are so many other differences. Where, for instance, are the warlords of China in India? Or the corruption of the Kuomintang? Or, for that matter, the men who made the Long March? I have always been sceptical of the complacent famous last words: "It can never happen here", but Mr. Namboodiripad is foolish, and the others morbid, in imagining that any armed challenge (itself no easy thing) from Trivandrum or anywhere else within the country will find the Indian armed forces either unprepared or inactive. Nor did the much-discussed statement speak of any of these possibilities, although there was an irrelevant reference to China all right. What Mr. Namboodiripad did was to express his intense disapproval of his adversaries trying to form a united front against the communists—a not very unexpected reaction, I should think. What the speech revealed was a glimpse of the post-Amritsar communist mind. The parliamentary game is accepted, but not its basic assumption that all attempts to secure power must be parliamentary too. I am not saying that Mr. Namboodiripad is looking forward to a civil war; very probably he is not, for he knows that there is no law of nature guaranteeing a communist victory. All I say is that he does not rule out the possibility of a civil war—should Devicolams decline to oblige him by repeating the victory of the last by-election. This is not a very great discovery for me, but judging from the belated horror expressed by some recently, I rather suspect that they had taken the Amritsar stance of the C.P.I. as a permanent posture. I didn't and said so here.

I AM A GREAT BELIEVER IN SECONDARY INTERESTS humanising obsessions—a statesman choosing painting as a pastime, a President taking time off for golf (although this as we know can be overdone), a tense editor relaxing with a crime novel, or a politician practising an aria in the bath. Politics as a pastime, however, is a different proposition; and,

from Picasso to Paul Robeson, it is a long story of the exploitation of a reputation made in one sphere for purposes belonging entirely to another. Having been one of the most vexatious in the world in the matter of passports and visas, the American Government has now been forced by the Supreme Court to be one of the most liberal. A triumph of justice over bureaucratic arbitrariness, and any American pretending to be liberal would rejoice over it. Mr. Paul Robeson, a great singer and an American, must be rejoicing too, for he has been among the first to benefit. And how and where does he propose to celebrate the event? He is going to Moscow where, I have no doubt, he will say how wonderful the Soviet system is and how rotten the American. People who rave about Little Rock, the Rosenbergs and McCarthy—each representing something I heartily loathe—somehow manage to forget that while these are in the main exceptions or individual aberrations, on the other side of the Iron Curtain they are the rule. If the People's Supreme Court has ever given a judgment curbing executive tyranny, I have never heard of it. Not as though these courts never do anything at all. Why, only the other day one was reported to have tried Nagy and others and sentenced them to death. I shall not repeat the argument, unanswered though it remains, that while the capitalist system made the rise of Marxism possible, the communist system has permitted no rivals. But before Mr. Paul Robeson begins to sing the praises of Russia, let him ask himself whether a Robeson has ever gone to the United States under comparable conditions.

IT IS WITH CONSIDERABLE PRIDE THAT I CLAIM not to be among the regular readers of Time. But after Dr. B. C. Roy's allegations about a certain article which, among other things, calls Calcutta a "Packed and Pestilential Town", I sent for a copy to see for myself. Dr. Roy considers it to be "slander" and "vicious propaganda". I am still wondering why. Apart from the fact that the author has got a number of his facts wrong, I consider the general picture he presents to be not far from the truth. Calcutta is packed and pestilential, although it is something rather more than a mere town. It does "shock the eye with its misery". "Death and destruction" have long been its lot. "Malnutrition, cholera, smallpox, plague" do pay regular calls. It is no use denying these facts, even when one is as fond of Calcutta as Dr. Roy no doubt is. Compared with any of the world's cities I have ever been in, Calcutta is undoubtedly the most hideous, uncomfortable, unhealthy and badly run. Which is not, of course to say that I do not like living in it or would be elsewhere if I had the chance. And that probably goes for the majority of Ditchers as well. There is no denying that to visitors Calcutta gives exactly the impression conveyed in this article; if it does not then they must be completely devoid of all sense of sight, hearing and smell. Calcutta does "suffocate under the weight of its people"; the communists do dominate its life and the Victoria Memorial is a monstrosity—although certainly no worse than the White House in Washington. Perhaps not "every third man has fountain pens for sale" and the fact that only "eight toilet seats serve 400 people" betrays an unfortunate ignorance of the way such facilities are designed in this part of Asia. But in spite of its inaccuracies, the main point of this article still stands. If we would have it differently, then the best thing is to do something with our city, not condemn those who remind us of the mess it is in.

BENGAL COAL COMPANY, LIMITED

HIGHER RAISINGS DURING PAST TWO YEARS

MR. D. F. MACMILLAN ON PROBLEMS OF INCREASING PRODUCTION

Addressing the Shareholders of the Bengal Coal Company, Limited, at the Annual General Meeting held on 26th June, 1958, the Chairman, Mr. D. F. Macmillan, said:

The Accounts for the year ended 31st October, 1957, which have been in your hands for the statutory period, reflect another year of successful operation. Raisings were 2,801,164 tons and compared with 2,509,787 tons in the year 1955 which was the last year of the First Five Year Plan. The raisings of this Company in the first two years of the Second Five Year Plan have increased by 11.6% in spite of the serious handicaps imposed by the delays by Government in defining their policy towards the private sector in the coal industry, to which have been added more recently the restrictions on the imports of essential equipment. Your Company is therefore making its full contribution to the economic planning of the country, and this has been made possible by its own far-sighted development plan which started as early as 1945.

Leaving aside the capital levy of Rs. 34 lacs called Wealth Tax, which has absorbed the Company's small Capital Reserve and the surplus built up in past years on realisation of investments, as well as digging into the Company's taxation reserve, the profit for the year after all charges including depreciation and ordinary forms of taxation, is in fact lower than the previous year. But your Directors are able to recommend a final dividend which will maintain the annual distribution on the ordinary nominal capital of the Company at Rs. 17.50 per share, which is the equivalent of 5.96% on the capital employed in the undertaking. Against the drain of Rs. 34 lacs on the equity of the Company by payment of Wealth Tax, the Board have been able to place Rs. 7 lacs to General Reserve out of taxed profits.

Before dealing more generally with the affairs of the Company and of the coal mining industry during 1957, I wish to refer to the disaster and tragedy which overtook Chinakuri Colliery on 19th February last, when an underground explosion followed by fire resulted in the loss of 176 lives. As soon as it was possible—in fact within three days of this disaster—I issued a statement to all shareholders on the occurrence and there is little more that I can add today. After the evidence of underground rescue parties made it clear that there was no possibility of further survivors, it was decided, in view of the rapidly worsening conditions underground, to bring the fire under control as quickly as possible. Dewatering was begun on 7th March and is still continuing. A Court of Enquiry has now finished taking evidence from the Company's officials and workers and all other parties who wished to appear before it, and has adjourned until dewatering is completed and detailed examination can be made underground. I would remind you that the Company worked ten years to sink over 2,000 feet to the Dishergarh seam at this colliery, that all the knowledge and experience gained in working this seam had been applied to the planning and equipment of the colliery with a view to maximum safety and efficiency in working, and that it started raising coal only three years ago. It will be the hope of all of us and of the whole of the mining industry that the evidence as finally accumulated by the Court of Enquiry will enable the actual cause of the explosion to be definitely determined. I would now ask the meeting to stand in silence in sympathy and respect for those who lost their lives and for the distress of the wives and families they left behind. On behalf of the bereaved families, I must thank the Governor of West Bengal, Miss Padmaja Naidu, for opening a fund through which the general public could express their sympathy in a practical way. A

total of just over Rs. 1 lakh was contributed to this fund and the first distribution was made by the Governor during a personal visit to the colliery on 26th March. The balance of the fund is to be made over to the families concerned in the form of National Savings Certificates. The generous response of the public has thus materially supplemented the compensation and other measures of relief provided by the Company. A very practical way of helping the families has also been the arrangement sponsored through the Indian Mining Association for the employment in the industry of an adult member of each family.

I have already mentioned the Company's contribution in increasing raisings of coal so urgently required for the Second Plan. Whilst the private sector of the industry is more than keeping pace with the rate of increased output required to achieve its target of 45 million tons annually by 1961, one sees reports from time to time which give the impression that there may have to be a further downward revision of the public sector's target. It is in the best interests of all that some definite decision should be reached as soon as possible since, if the privately owned collieries are going to be asked to raise their target further, they should be given as much time as possible to prepare for the further task which, by the results already achieved, they have shown their ability to attain.

Some encouragement has been given to the private sector by excluding coal from the harmful provisions of the Mines & Minerals (Regulation & Development) Act, 1957, which would have had far-reaching effects on existing leases and royalties. Even though this may only be a temporary relief, it is nevertheless appreciated, and the industry is now endeavouring to obtain from Government fair and reasonable amendments of the proposed Mineral Concession Rules, 1958.

I have stated above that the private sector is doing everything possible to attain the targets set for it by Government, but here I must sound a note of warning as regards the limiting factors of imported materials and transport.

Imported Materials

We fully realise the serious foreign exchange position and it is apparent that for some time to come licences will only be given for the very highest priority of imports. In view of this, we must adapt ourselves, if necessary, to doing without certain items of stores, plant and machinery required for the progressive mechanisation and expansion of your collieries. However, there are some items, the most important of which is Steel Wire Ropes, without which coal cannot be raised.

Transport

As regards transport, although during 1957 the railways were able to make greatly increased wagon offerings for coal movement, the position has deteriorated since the beginning of the current year and pithead stocks are now higher than they have been for some considerable time. The performance of the South Eastern Railway has been particularly disappointing: against a guaranteed minimum of 950 wagons daily for coal movement, during the past month daily offerings have been as low as 412 wagons. It is perhaps superfluous to comment that the best laid plans to meet the country's coal requirements are vitally dependent on the performance of the railways, and the railways' task will be greatly increased when the requirements of the expanded Steel industry have to be moved.

Exports

It has always been a surprise to me and to other speakers from this chair in the past that our Government attaches so little importance to coal as an earner

of foreign exchange. In the early 1920's steps were taken to ensure a good reputation amongst overseas customers for Indian coal by the setting up of the Coal Grading Board, whose inspection staff and certificates of quality ensured that the overseas customer got the quality which he had contracted for. Encouragement was also given to the export of Indian coal by allowing a rebate on rail freight on coal shipped to foreign markets. With these encouragements to the overseas customers and to the coal exporters a good connection with the Far Eastern markets was built up and exports reached a figure of 1,413,000 tons in 1938. The Second World War intervened and when India emerged from it, official policy became obsessed with the need to conserve India's resources, particularly of the higher grades of coal, for future internal requirements. Assistance by way of rail freight rebates disappeared and there was an insistence that exports must mainly comprise the lower qualities of coal. As a result the reputation of Indian coal in these export markets has been severely prejudiced and China has recently been gaining a foothold in India's closest coal markets of Ceylon and Pakistan. In 1957 less than 1 million tons were exported—apart from just under 1 million tons supplied to Pakistan—and this earned about Rs. 24 crores worth of foreign exchange. The coal exports of 1958 at today's values would have earned Rs. 54 crores. Today with India's capacity to earn greater foreign exchange having assumed topmost priority, coal could be making a very useful contribution if a policy of encouragement of exports had been maintained and there is undoubtedly a case for renewed encouragement being given in the present economic difficulties. But unfortunately even if the greatest encouragement were to be extended to coal exports today it would be sometime before the old markets and the old reputation could be regained.

Sandstowing

We hope shortly to receive the report of the Price Revision Committee constituted by Government to assess a fair price structure for the Coal Industry. One matter which is, however, outside the purview of this investigation is the burden of sandstowing. You will notice from the Accounts that the Company has had to bear a sum of almost Rs. 9 lacs, being the difference between the cost of sandstowing at our collieries and the quantum of assistance received from the Coal Board. This is the equivalent of about Rs. 1.50 per ton of coal raised from our sandstowed collieries. At a time when Government are making every effort to encourage additional collieries to instal arrangements for sandstowing, in the interests of both safety and conservation, it seems wrong that collieries which do undertake stowing should be placed at such a disadvantage by reason of this financial burden.

Labour

As a result of a Tri-partite meeting held in New Delhi, the Appellate Tribunal Award, to which I referred in my speech last year, was implemented in July 1957 and labour have received the benefit of this Award made retrospective to 26th May, 1956. Since the end of the period under review, in fact with effect from 1st January, 1958, workers throughout the coal industry have been granted an increased D.A. of Rs. 4.87 per month. There is no doubt that workers in the industry have benefited very considerably as a result of these Awards and one still looks to labour to give greater productivity in return. Relations between the Company and its employees have generally been satisfactory throughout the year, but it is to be earnestly hoped that the miner will not fall prey to inter-Union rivalry and that he will realise that a full shift's work is his best personal contribution to the national interests.

I have had an interesting analysis made of what has happened to each rupee received by the Company during the year under review from its customers in return for coal supplied. I will not weary you with the complete breakdown, but you will be interested to know that 42 nP of every rupee earned goes to the labour, 9 nP goes to Government in taxes and cesses, 5 nP is applied to meet depreciation of the Company's buildings and machinery, while your shareholders get 3 nP and 2 nP have been retained in the business for future development. If anyone suggests to you that you do not deserve your 3 nP, just remind him that without the capital provided by the shareholders through joint stock enterprise, there would be no undertaking to give employment to twenty-four thousand labourers, each of whom gets 42 nP out of every gross rupee earned by the undertaking.

Welfare

It has been the Company's policy progressively to provide amenities for employees at collieries, and, in addition to the statutory requirements of pithead baths, crèches and canteens, we have a programme for the provision of co-operative stores, playing fields and many other amenities. In addition to the considerable capital cost incurred in providing for the welfare of our employees, the maintenance of these facilities, including the expert medical attention provided, is costing us about Rs. 7 lacs per annum.

The provision of housing is one for which we were carrying out a planned programme until two and a half years ago when a new scheme was instituted under the auspices of the Coal Mines Welfare Fund whose resources come from a cess on coal; briefly, this scheme provides for the capital cost of, briefly, quarters to be borne by the Welfare Fund, and thereafter the maintenance charges and a rental of Rs. 2/- per month are to be paid by the Company, whilst the Company provides the land together with water supply, lighting connection and approach roads. Although we are very keen indeed to construct the 849 quarters sanctioned at our collieries for 1958-59, it has been impossible to achieve anything as yet owing to various procedural delays on the part of the authorities concerned. This matter is being followed up and it is our desire to give the fullest possible encouragement for the provision of increased accommodation for our miners.

Staff

Before concluding, I would like to pay a well merited tribute to Mr. Rosser, your Chief Mining Engineer, and his staff who have worked so magnificently through another year which has produced many and varied problems such as must always be attendant in the technical control of your 17 collieries.

NOTE: This does not purport to be a report of the proceedings of the Annual General Meeting.

SEN-RALEIGH INDUSTRIES OF INDIA LIMITED

IMPORT RESTRICTIONS AFFECT PRODUCTION

CHAIRMAN MR. S. K. SEN'S REVIEW

Addressing the Eighth Annual General Meeting of Sen-Raleigh Industries of India Ltd., held in Calcutta on the 27th June, 1958, Mr. S. K. Sen, Chairman, said:

It gives me pleasure to welcome you to the Eighth Annual General Meeting of the Company. The Directors' Report and the Accounts of the Company for the period ending 30th September, 1957 have been with you for some time and with your approval I shall take these as read.

Sales for the year recorded a further expansion of approximately Rs. 30 lacs and the profit at Rs. 15,91,546/60 compares favourably with Rs. 14,36,292/23 earned in the previous year. This result has allowed your Directors to recommend payment of the same dividend on the Preference and Ordinary Shares of the Company as in the last year, as in the past your Company has followed a policy of strengthening reserves.

The improvement in turnover was achieved solely through an expansion in production in the component section of the factory. By the end of the year, this section was supplying components to most of the other bicycle manufacturers in the country thereby contributing largely in saving foreign exchange. Bicycle production however could not be raised as anticipated owing to the difficulties experienced on more than one occasion in the year in maintaining a continuous supply of imported materials.

The introduction of a large number of new items into our manufacturing programme in order to reduce the imported components used in a cycle to a figure below Rs. 5/- by 1958 also had repercussions to some degree on production. Introduction of new components always requires some time for proving and testing, and whilst in earlier periods of easier licensing there had always been sufficient buffers to tide over the transition period, the position in 1957 was often a race between manufacture of new items ahead of schedule against stocks of imported components running out on a given date. The reaction of a section of workers to the rapid introduction of a large number of new components was not always as co-operative as could be expected in such a crisis, and some time was also lost on this account in developing full production of the new components. A power failure in the D.V.C. System too was instrumental in affecting production for over a week in the year under review.

In my last report I had mentioned that the demand for our products justified the Company's undertaking a major expansion and had outlined the steps taken by the Company to double its turnover and bring the Company nearer self-sufficiency. This demand for our products still persists, and I am glad to be able to inform you that the plant required for the expansion as well as for manufacturing all such components as had been planned to be made at Kanyapur, has now mostly arrived in India and is in the course of

installation. No great progress however can be made in expanding production, until and unless the Government can afford to release foreign exchange for raw materials which are not as yet manufactured within the country. Although it is realised that the situation facing the country and its Government in relation to foreign exchange is critical, with restricted licences, and diminishing buffers, a state of emergency dominates industry. Emergency measures are necessary to tackle such a situation and only a more dynamic approach on the part of licensing authorities in dealing with the limited licence applications now reaching them, can keep the wheels of industry turning without a break. With marginal stocks with which the light engineering industry is endeavouring to maintain production programmes, long delays in disposal of licence applications may well lead to disruption in production—so costly to the Company and the country.

Outside suppliers of components both in the large and the small scale sector have been affected in the same manner as we have by the foreign exchange shortages, and although it is still hoped that supplies from ancillary units mentioned in my last report would still be available within the year, so far it has not been possible for them to deliver any materials. In most cases, however, we are covered for some time on imported components so our production would not be affected immediately.

Supplies of Indian made tubing have in most cases replaced imported tubing without much difficulty during the change over. In steel strip, a beginning has also been made in using Indian supplies, but with quotas in this material running to only 10% of requirements, we have still to go a long way before being independent of imports.

Period of Paradoxes

The last few months had been a period of paradoxes for the bicycle industry. On the one hand, at the highest level we have been exhorted to increase capacities to meet Plan targets and have even been asked to consider an upward revision of the targets on the other hand, we have noted with concern the

3. ISSUE OF FURTHER CAPITAL

The Directors have decided to offer for subscription further 5,00,000 Ordinary Shares of Rs. 10/- each at par to the registered holders of the Ordinary Shares whose names would appear in the Register of Members on 15th August, 1958, in the proportion of one new Ordinary Share for every two existing Ordinary Shares then held with right of renunciation. THE SHARE TRANSFER REGISTER SHALL REMAIN CLOSED FOR THIS PURPOSE FROM 21st JULY TO 15th AUGUST, 1958 BOTH DAYS INCLUSIVE. The shareholders are also given the right to apply for additional

shares, the allotment of which will be at the absolute discretion of Directors. A circular explaining full details has been posted to all the shareholders on 24th June, 1958. Those who do not receive the circular latest by end of June, 1958 should make a reference to the Registered Office of the Company.

4. CAPITAL ISSUE CONSENT

The consent of the Central Government has been obtained to this issue by an Order of which a complete copy is open to public inspection at the Registered Office of the Company at Rajgangpur, Orissa. IT MUST BE DISTINCTLY UNDERSTOOD THAT IN GIVING THIS CONSENT THE GOVERNMENT OF INDIA DO NOT TAKE ANY RESPONSIBILITY FOR THE FINANCIAL SOUNDNESS OF ANY SCHEME OR FOR THE CORRECTNESS OF ANY OF THE STATEMENTS MADE OR OPINIONS EXPRESSED WITH REGARD TO THEM.

5. COMPANY'S ACTIVITIES

The Company first installed a 500 ton wet process cement plant at Rajgangpur which went into production in the end of December, 1951. The production at the Cement Works was later expanded by installation of a second unit of 600 ton daily capacity which was commissioned early in 1957. Simultaneously, the Company undertook establishment of a modern Refractory Works having an annual capacity of 80,000 tons of firebricks of various kinds including basic bricks. The firebricks and silica bricks plant went into production early in 1958. Construction of basic

bricks plant is in progress and is expected to be completed by the end of current year.

6. WORKING RESULTS

The Company's working results for the last six years are given below:

Year	Gross Block at cost.	Cement Production.	Gross Profit before providing depreciation and Managing Agents' Commission.	Depreciation provided.	Dividend on ordinary shares.
	Rs.	Tons	Rs.	Rs.	—
1952	1,67,71,676	1,32,711	24,93,933	63,87,124	—
1953	1,72,86,316	1,31,273	30,43,423	27,30,259	—
1954	1,75,23,216	2,02,723	59,97,465	21,04,179	7½%
1955	1,83,18,046	1,90,033	60,06,191	9,77,629	12½%
1956	2,09,81,096	1,54,707	47,73,356	8,96,339	12½%
1957	3,23,68,708*	2,36,571	64,99,479	19,48,649	15½%**

* The figures of gross block for 1957 do not include expenses on construction in progress amounting to Rs. 1,16,29,249 not yet capitalised.

** Recommended by the Directors to the shareholders.

7. PROSPECTS

With the expanded output of cement and with the working of the newly established Refractory Works, working results for the year 1958 are expected to be much better.

8. DIVIDEND AND RIGHTS

The new shares shall also be entitled pari passu with existing paid up capital to participate in dividend for the accounting year 1958 and thereafter.

PRICES RECEDE ON THE LONDON STOCK MARKET

INDUSTRIALS LOWER: GILT-EDGED SUBDUED

London, 2nd July.

THE recent firm trend in the London stock market was reversed during the past week, and virtually all sections, apart from gold shares, recorded losses compared with previous levels. A combination of factors was responsible for the reaction. Industrials were the main sufferers and were often appreciably lower but elsewhere losses were usually small. The main reason for the setback in industrials was the publication of the findings of the F.B.I. survey on industrial trends. This has confirmed that business men generally are less optimistic on economic prospects. A further unsettling influence was the fall in output disclosed in the May index of industrial production. Gilt-edged securities were subdued due to the seasonal fall in sterling in the foreign exchange market and the levelling up operations prior to the end of the half-year. The effects of the recent reduction in the British Bank rate to 5 percent soon evaporated as this was largely discounted in advance. Factors operating in the market as a whole to dampen interest and activity included the international situation, particularly the Middle East, and the activity in the new issue market. In addition, economic prospects in the United States were giving rise to renewed nervousness and uncertainty. Business in the gilt-edged market was small throughout the week but prices tended to harden after earlier dullness, and there was very little change on balance. The failure of the Liverpool 5½ percent issue, 82 percent of which was left with the under-writers, was an adverse factor in this section. Foreign bonds and rails attracted very little attention and recorded only small changes while dollar stocks were slightly better in response to higher Wall Street values. Gold shares were generally firm on a selective demand. Base metals, however, were uncertain and easier. Oil shares receded under the influence of the Middle East situation. Ceylon tea issues were an erratic market after last week's setback and recorded small mixed changes on balance. Indian issues were also irregular. Rubber shares were quiet and irregular. The main features were pro-

vided by Tebruan and Tremelbye following Easter buying.

The Money Market

For the first three days of the past week, short loan conditions in the London money market were comfortable with supplies of credit swollen by Government disbursements. This enabled borrowers to secure their requirements at cheaper rates ranging from 4 percent down to 3 percent. However, on the approach of the end of the half-year with banks making early preparations, the market encountered less comfortable conditions. Money was in short supply and the market had to rely on the authorities to bridge the gap between supply and demand. On the last day of the past month with a very large turnover of funds on the move in connection with foreign exchange settlements and the preparation of the half-yearly balance-sheets, there was an acute shortage of credit, and the rate for money moved up to 4½ percent under pressure and the market was forced to borrow a moderate amount from the Bank of England at the penal rate of 5 percent for the week. Business in bills remained on a fair scale throughout the week with September and "hots" changing hands at 4½ percent. The tender for the weekly offering of Treasury bills was rather featureless. The average rate for bills was quoted at £4 5s 10½d percent which meant a decline from the previous week.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: "The Bank rate cut raised London gilt-edged securities narrowly above the April high. Industrials rose strongly, aided by the easing of general restrictions. Kaffirs' overall pattern is favourable with some good features. After a broad advance in copper, lead and zinc for over six months base metal shares have reacted in New York. Wall Street reached a new high for the current movement before reacting, probably to consolidate recent gains. Bank rate is still high by most standards but the authorities are expected to wait and see sterling's behaviour during early autumn before acting again. Meanwhile, the U.K. Chancellor of the Exchequer has slightly eased his brake on industrial expansion. Both gilts and industrials should continue a gentle uptrend. In February 1957 just after Bank rate was cut to 5½ percent, the average yield, according to the *Financial Times* index, was 5.85 percent against 6.33 now."

U.S. Federal Reserve Return

The U.S. Federal return for the week ended 25th June shows that the gold stock declined by

\$100 million to \$21,356 million. Foreign deposits fell by \$21 million to \$288 million and foreign investments were \$113 million lower at \$2,999 million. The Federal Reserve bought \$292 million worth of bills, but sold \$78 million of securities under repurchase agreements, making total Government security holdings \$214 million higher at \$24,999 million. Total discounts and advances fell by \$26 million to \$128 million, while the aggregate excess reserves of member banks fell by \$391 million to \$344 million. The daily average excess reserves of member banks rose by \$44 million to \$710 million, while their daily average borrowings fell by \$76 million to \$99 million. Business loans of New York city banks fell by \$3 million to \$11,051 million, compared with a rise of \$29 million to \$12,110 million in the corresponding week a year ago. Gold certificates on hand and dues from the U.S. Treasury were \$99 million lower at \$19,934 million. Notes in actual circulation were \$9 million lower at \$26,569 million. The deposit member banks reserve account was \$396 million down at \$18,568 million.

Activity on Wall Street

Long-term U.S. Government obligations fluctuated irregularly during the past week. Prices fell sharply in brisk trading early in the period due to the liquidation of speculative holdings of securities obtained in the recent Treasury financing operation. The selling pressure eventually subsided, however, and the market staged a good recovery with the upturn which was regarded as a technical reaction following the steep declines during the recent weeks. Investment quality corporates were also easier early in the week but turned firmer with the Treasury list. Speculative rails were mostly higher on small volume. Convertibles fluctuated with the security market. In a slow moving market for foreign dollar bonds, German Nationals were mostly higher with several Municipal issues being firm. Italians were fractionally mixed while Norwegian issues were unchanged. Amsterdam 5½ percents regained most of an early fractional loss. Greek issues were shaded slightly with Serb 8 percents moving up more than two points on a single sale. Australians were mostly unchanged although they were occasionally slightly lower. Union of South Africa 5½ percents advanced fractionally with the 4½ percents a little lower. Japanese Government bonds were neglected. In the South American list, Colombians were a weak spot, dropping a couple of points or more with 3 percents of 1970 selling at 550 to equal the year's low. Chile 3 percents were unchanged on the week at \$37.

Paris Gold Active

The Paris gold market was very active during the past week. The Bank of France absorbed all offers at 3,600 francs for the Napolean and at 1,514,000 francs for the ingot, so price fluctuations took place only for secondary coins. Sales of ingots and Napoleans tended to decrease gradually, but bank quarters expect an early revival of turnover when the repatriation of undeclared foreign assets abroad through the gold market is effected. These are expected to be heavy and are estimated to yield the equivalent of a 5 percent premium over the official dollar rate.

Vegetable Oils Featureless

Featureless trading persisted in most sections of the oils and oilseeds market during the past week although technical oils and oilseeds retained a steady price structure, while edible varieties continued to weaken. Crude linseed oil, offered ex-tank U.K., remained unchanged in a slow market, but Canadian linseed opening firm, gave ground slightly on easier advices from Winnipeg. The main interest concerned projected offers of linseed from the U.S. Commodity Credit Corporation, assessed at 20,000 bushels, which will be shipped via the Great Lakes from Montreal within the next six weeks. Offers based on this release included August shipments to the United Kingdom at £52½ c.i.f. and to Continental ports at £51½, all on 10 percent dockage terms. An unconfirmed report said that 1,250 tons of U.S. linseed was sold for 15th July-August shipment to an unconfirmed Continental port at £52½ c.i.f. ex-Duluth. Both copra and coconut oil displayed a steady price trend. Indian castor oil, for shipment, was reduced around £1 a ton but failed to attract improved enquiries. The main interest from U.K. buyers centred on near deliveries of commercial grade with buyers located at £122 a ton ex-tank Liverpool for July collections. Groundnut oil was pressed for sale and July-August shipments of Nigerian were obtainable £1 a ton cheaper at £96½ c.i.f. Groundnuts were neglected and were unchanged. The Nigerian Board lowered July-August shipments of palm oil by £2 a ton to £80 a ton c.i.f. but speculative sellers of September-October shipments were prepared to take down to £78 c.i.f.

Manganese Ore Freight Down

The manganese ore shipment market remains in the doldrums, and trade quarters now suggest a price range of 80d to 90d a long ton unit, c.i.f. Europe for a 48 percent material, compared with 90d to 95d recently. Part of the latest decline is a reflection of a further fall in freight rates. This wide range mentioned underlines the uncertain state of the market. Even so, some quarters feel that the lower end is a truer picture of the market, especially in view of the reported business in Russian 48 percent material to Japan at the equivalent of about 82d c.i.f. Moreover it is believed that Indian 48 percent ore has been offered to the United Kingdom at 81d c.i.f.

Stocks and Shares

ANOTHER CHEERFUL WEEK IN THE SHARE MARKET

INDIAN IRON BONUS RUMOURS

Wednesday Evening.

THE buying spree has continued on the Calcutta Stock Exchange for another week, and widespread gains have been recorded in most sections of the market. Indian Irons crossed Rs. 23 during the long week-end holiday, for the first time since March 1957. Tata Iron & Steel were also firm at Rs. 164 ex-rights. The recovery during the past week was undoubtedly the best witnessed since the last Budget. The view is once again being heard that the long bearish phase is ending and that a bull market is being established. This is probably too optimistic on present evidence. It will take time to prove whether or not the recovery is warranted in view of the economic situation facing the country. Shortages of raw materials, as a result of the foreign exchange crisis, are bound to affect those industries which are dependent on such imports. Rumours of a possible bonus issue of shares by the Indian Iron & Steel Company also appear to be somewhat premature.

If Indian goods can compete successfully in world markets, then it may be agreed that the prospects of exporting industries are reasonably bright, but the unsatisfactory labour situation is still causing doubt. For example, it is reported that about 45,000 tons of steel, worth more than Rs. 2.7 crores, were lost in the recent strike at the works of the Tata Iron & Steel Co. Ltd. The stoppage on the docks too must have deprived the country of a considerable amount of valuable foreign exchange.

Taking all factors into consideration, therefore, it would appear that the present bull market has been built upon a shaky foundation. Unless genuine investors follow in the wake of the speculative element, it is difficult to believe that recent gains will be consolidated. The middle classes are already suffering from the steady rise in the prices of essential foodstuffs and consumer goods, so that investment support from this important section is likely to be limited.

The news that cement factories will get a higher price for the commodity from 1st July, was well received and prices of cement scrip advanced further.

Government securities ruled very firm and prices of most loans recorded gains over the week, as will be seen from the following table. Buying orders were difficult to execute in the absence of scrip:

	Opening 26th June	Closing 2nd July
	Rs.	Rs.
3 % Loan 1959-61	99.61	99.30
3½ % Loan 1963	98.85	98.90
3½ % Loan 1964	98.55	98.63
3½ % Loan 1967	97.65	97.70
3 % Loan 1970-75	97.40	97.45

High-calibre preference issues continued to be well supported but in the absence of sellers, business was difficult to complete. Even certain selected jute preference shares were enquired for. Buyers took the view that, as a result of the improvement in the outlook for the jute industry the prospects of payments of arrears of preference dividends were reasonably bright at least in the case of certain companies.

In the banking section, Punjab National were unchanged at Rs. 61 but Hind Bank improved further to Rs. 54.

In cotton, Bowreah spurted from Rs. 104 to Rs. 110 and Kesoram improved to Rs. 11.25. Elgins were better at Rs. 12.12.

In the coal section, Bengal were marked at Rs. 233 x.d. and Panch Valley were steady at Rs. 20.56. Raneegunge were slightly better at Rs. 12.31 and there were buyers of Katras Jherriah at Rs. 57.50. New Beerbhoom were placed at Rs. 14.81.

The end of the dock strike and the re-appearance of the Argentine as a buyer of jute goods, helped jute shares. Prices continued their advance, as will be seen from the following table:

	Opening 26th June	Closing 2nd July
	Rs.	Rs.
Auckland	90	95
Agarpara	8.31	8.50
Bally	160	167
Barnagore	96	103
Cheviot	145	150
Howrah	15.69	16.94
Alexandra	105	118

Some of the shares which had advanced in the previous week, however, met with slight profit-taking; for example, Anglo-India receded from Rs. 163 to Rs. 160, Megna from Rs. 130 to Rs. 126 and Union from Rs. 142 to Rs. 139.

With the exception of Calcutta Electric, which were better at Rs. 14.44, other issues in this section were unchanged.

In sugar, the outstanding feature was Balrampur, which advanced from Rs. 7.06 to Rs. 8.06. Dyer Meakin Breweries hardened to Rs. 10.37 and

Ramnugger Cane to Rs. 19.12. Cawnpore rose from Rs. 9.50 to Rs. 11.

In the engineering section, Indian Iron & Steel improved steadily from Rs. 22.60 to Rs. 23.06, to close at Rs. 22.80, which was tonight's settlement rate. Other engineering issues showed little or no change over the week.

Paper shares were steady with Orient at Rs. 31.75. Sirpur at Rs. 11.50 and Titaghar at Rs. 39.25.

For the reason given earlier, cement shares recorded widespread gains, as will be seen from the following table:

	Opening 26th June	Closing 2nd July
	Rs.	Rs.
Ashoka Cement	9.87	10.25
Jaipur Udyog	13.87	14
Orissa Cement	13.87	14
Sone Valley	5.44	5.56

In shipping, India General Navigation were better at Rs. 49, as were India Steamship at Rs. 11.62.

Among miscellaneous industrials, Alkali & Chemical Corporation were easier at Rs. 15.12, as were Aluminium Corporation at Rs. 11.87. Balmer Lawrie continued to be enquired for at the higher rate of Rs. 165 and Anglo Brothers were taken at Rs. 18.75. British Burmah Petroleum provided a good feature, improving from Rs. 2.12 to Rs. 2.46. Dunlop Rubber advanced from Rs. 26.87 to Rs. 27.56 and Eastern Investments from Rs. 108 to Rs. 110. Hindustan Motors were in demand at Rs. 7.87 and Imperial Tobacco were higher at Rs. 13. Indian Oxygen were absorbed at Rs. 19.50 and Metal Box were taken at Rs. 29.25. National Tobacco were firms at Rs. 13 as were Philips at Rs. 15.31. Rohtas Industries were wanted at Rs. 21.12 and Shaw Wallace at the higher rate of Rs. 12.19.

In the mining section, Indian Copper spurted

from Rs. 3.40 to Rs. 3.66 to close slightly easier on settlement considerations at Rs. 3.54.

Business in tea shares was on a very restricted scale and price fluctuations were negligible.

THE PROFIT EARNED BY THE METAL BOX COMPANY of India Ltd has increased by Rs. 7.07 lakhs to Rs. 73.12 lakhs for the year ended 31st March, 1958. The ordinary dividend has been maintained at 17½ percent, including a final of 11½ percent. General reserve is allocated at Rs. 10 lakhs (Rs. 6.50 lakhs). Depreciation receives Rs. 13.04 lakhs (Rs. 12.47 lakhs). The provision for taxation absorbs Rs. 39 lakhs (Rs. 38 lakhs) and development rebate reserve gets Rs. 2 lakhs against nil. After various adjustments, there is a balance of Rs. 16,62,798 which it is proposed to carry forward, compared with Rs. 16,33,569 brought in. Sales increased from Rs. 5.67 crores to Rs. 6.12 crores. The directors state that they have had record sales, but these have been achieved at the expense of a substantial reduction in stocks of raw materials. They further add that the new Calcutta factory has been completed and the transfer of plant and machinery is in progress.

THE PROFIT EARNED BY SEN-RALEIGH INDUSTRIES of India Ltd has improved from Rs. 14.36 lakhs to Rs. 15.92 lakhs for the year ended last September. The ordinary dividend has been maintained at 6 percent. Allocations include general reserve Rs. 1½ lakhs (same), reserve for repayment of loan Rs. 2 lakhs (same), reserve for machinery replacement and rehabilitation Rs. 4 lakhs (same), reserve for depreciation on investment Rs. 35,000 (Rs. 1.60 lakhs) and wealth tax provision Rs. 63,443 (Rs. 45,000). After necessary adjustments, there is a balance of Rs. 66,321, which it is proposed to carry forward against Rs. 29,112 brought in. During the year, the capital of the company was fully paid up and an instalment of Rs. 10 lakhs, out of a total of Rs. 15 lakhs additional loan sanctioned by the Industrial Finance Corporation, was received. These additions materially assisted the implementation of manufacturing schemes for achieving self-sufficiency, the directors mention.

THE PROFIT MADE BY THE BOWREAH COTTON MILLS Co. Ltd has been pruned by Rs. 1.09 lakhs to Rs. 1.17 lakhs for the year ended last December, without providing for depreciation. The dividend has been passed over again. After making various adjust-

ments, a sum of Rs. 117,244 is carried forward against Rs. 742 brought in. The directors say that looking to the extremely difficult trading conditions in which the Indian cotton textile industry is working, the working results for the year under review are not very unsatisfactory. They further add that the heavy excise duty on cloth created excessive stocks of manufactured goods within the industry. Although a reduction in the excise duty on cloth has been effected, this has not yet been followed by any substantial improvement in the offtake of cloth from the mills.

THE CALEDONIAN JUTE MILLS CO., LTD., HAS incurred a loss of Rs. 50,051 for the year ended 30th November, 1957. After paying usual dividend on preference shares, the ordinary dividend has been passed over. Depreciation is allocated Rs. 3.12 lakhs and provision for wealth tax absorbs Rs. 25,000. A sum of Rs. 529 has been carried forward. Gunny sales declined from Rs. 1.11 crores to Rs. 1.09 crores. Stocks were valued at Rs. 7.63 lakhs against Rs. 4.50 lakhs. The directors say that trading during the period continued to be difficult due to the disparity between prices of raw jute and those of manufactured goods.

The Story of Oil—II

Pipe lines for oil

Pipe lines are the lifelines of every full-scale petroleum industry. Day and night, they carry the oil from where it is found and refined to the places where it is needed.

The work of laying a pipe line to move crude oil from the wells of an oilfield to the tanks, columns and towers of a refinery begins with the mapping of a suitable route by surveyors and engineers. Then right-of-way men travel the route securing permission to lay the line across the land, and close on their heels come bulldozers and trucks to clear the right-of-way of trees, rocks and other obstructions.

Now the ditchers work on the line, digging out a trench of the correct depth and width and dredging a channel in the beds of rivers. Trailers haul the pipe from the nearest rail head, and when the sections are strung out along the

ditch welding crews move along the line to join them together.

Next a mechanical wrapper bandages the pipe from end to end with protective bitumen, glass fibre and felt, and when this is done tractors swing the line into the ditch. Bulldozers shovel the earth back into the ditch, and in a short time you would never have guessed the line was there.

The oil is pushed through the pipe line by powerful pumps in stations built at various points on the route. And once on the move (at a steady three miles per hour) the flow does not stop.

When the explorers and drilling crews find another oilfield, the bulldozers, ditchers and wrapping machines roll out again and a new line is added to the map.

BONUS ISSUE NEWS HELPS SENTIMENT

STEELS LEAD RISE

Wednesday Evening.

THE Bombay stock market was buoyant last week and turnover increased to a considerable extent. Reports of free bonus share issues by a number of companies added strength. The hope that the Textile Enquiry Committee would recommend credit facilities as well as fiscal relief for the industry was considered helpful. Steels highlighted last week's trading and showed a substantial rise on short-covering, as bears were scared by the fact that Tata Steel were to be quoted ex-rights from Monday.

Tata Steel improved to Rs. 162.75 ex-rights and Indian Iron rose to Rs. 22.90 on hectic support from Lyons Range because of rumours of a free scrip issue. Alcock Ashdown were higher at Rs. 268.75 and Premier Construction were bought at Rs. 206.50. Tata Locomotive gained at Rs. 179 on expectations of a higher dividend. Among automobile shares, Hindustan Motor recovered to Rs. 8 on short-covering and Premier Automobile were transacted at Rs. 93.50.

Textile shares scored scattered gains all-round. Bombay Dyeing came to hand at Rs. 58.10 and Century changed hands up to Rs. 458.50. Simplex were taken at Rs. 180 and Swadeshi were transacted at Rs. 187 x d. Kohinoor were bought up to Rs. 271.50. India United Ordinary came to hand at Rs. 10 and Apollo were available at Rs. 1.82.

There were a number of gains in the miscellaneous group. An increase in the domestic price of the commodity, combined with export prospects, generated support in the sugar section. Belapur rose to Rs. 265 and Phalton were higher at Rs. 161 on talks of fresh capital issue. Mining shares were supported on improved metal outlook. Shivrajpur Syndicate were done at Rs. 93.20. Steamship company shares were firm on prospects of higher earnings. Scindia Steam were taken at Rs. 18.88 and Great Eastern Shipping changed hands at Rs. 25. Bombay-Burmah Old jumped to Rs. 595 on replacement buying and Tata Chemical were supported at Rs. 17.08 on hopes of expansion in activity. National Rayon recovered to Rs. 235.25.

Banking shares were quietly steady in routine turnover. Bank of Baroda came to hand at Rs. 118 and United Commercial Bank realised Rs. 62. Insurance shares were selectively supported. New India Assurance were transacted at Rs. 48.

Scattered investment interest was taken in electricity supply company shares. Ahmedabad Electric made Rs. 95.40 and Tata Hydro were bought at Rs. 118.25.

ROLE AND RESPONSIBILITIES OF PLANNING COMMISSION

SUGGESTIONS OF ESTIMATES COMMITTEE

(BY A SPECIAL CORRESPONDENT)

THE Government of India set up the Planning Commission in March 1950. The first plan was completed in 1956 and the second is in its third year. Preparations are now in progress for the third. These developments indicate that planning for development in underdeveloped countries is a prolonged and integrated process. Once it commences, there can be no stopping or going back.

Experience of the past eight years shows the strong and the weak points of Indian planning and the techniques adopted. It also shows the weak and the strong points of the Constitution, and the working of the Planning Commission itself. Some pertinent questions, too, have been posed. They are: what should be the relation of the Planning Commission with the Central Government Ministries, as well as with State Governments? What should be the future rôle of the Commission itself? What are the changes necessary in the technique of planning? What are the directions in which the Commission should concentrate its labours so that its important rôle in the development of the economy will prove to be of maximum advantage?

On some of these issues the Estimates Committee of Parliament has made some weighty recommendations. The primary rôle of the Planning Commission, it considers, is that of an advisory body, to assist in the formulation of development plans and schemes after taking into account the available resources and other relevant factors. The Commission, in the Committee's opinion, should also engage itself in an independent assessment and evaluation of the results achieved in the execution of schemes. In order to be able to discharge these functions, the Commission, the Committee recommends, should be reorganised. It does not appreciate the presence on the Commission, in the key position of chairman, of the Prime Minister, and of the Planning and Finance Ministers. In the formative stages of planning, it was necessary to lend to the Commission the prestige and authority of the Prime Minister's name. That stage has passed. Planning is now a process taken for granted, the objectives and goals have been firmly laid down and the Commission has established itself in the scheme of things.

Prime Minister as Chairman

In these circumstances, the continued association of the Prime Minister with the Commission, the Estimates Committee thinks, is not conducive to the Commission playing its part well. The "inhibiting presence of the head of the Executive Government" tramples the Commission's thinking on important issues which merit objective and independent consideration, it points out. As things stand at present, it cannot effectively discharge its second most important function of making a cor-

rect evaluation of the results of developmental efforts where Government Ministries and departments are concerned. By the same token, the Finance Minister and Planning Minister's membership of the Commission is undesirable. When their advice is needed, they could always be invited specially for it, the Committee says.

The Estimates Committee's reasoning is based on sound premises. It would seem that a stage has been reached when the Planning Commission should be in a position to function independently of the powerful support of Central Ministers, and its individual members with the assistance of the various divisions and sections of the Commission, should be able to perform their tasks with reasonable impartiality and efficiency. Having no executive functions as such, the Planning Commission even then would have to depend on the administrative ministries for the implementation of its advice and its proposals. A view has gained ground, however, that under the existing arrangement, politics determine more the policies and schemes which emerge under the Planning Commission's imprimatur than strict economic considerations.

On the question of the relationship between the Commission and the Central Ministries and State Governments, the Estimates Committee has pointed to the "feeling" among the Ministries that the Planning Commission, far from being the advisory body it is supposed to be, has assumed the status of a super-Ministry, that "it is an additional authority to be reckoned with, which although not part of the ordinary machinery of the Government, decides every programme of work and whose decisions are to be carried out by all." The Committee politely and indirectly suggests that the interpositioning of this "additional authority" with undefined executive functions, is occasioning delays in the functioning of the administrative Ministries and in the implementation of programmes.

The basic issue is whether these complaints are correct and, if they are, how to remove them. The Planning Commission is at present more concerned with the scrutiny of the annual plans of State Governments and Central Ministries, suggesting modifications here and alterations there, which in a measure interfere with the initiative of these authorities to go ahead with the execution of their schemes and with their plans for the training of personnel, securing necessary equipment and so on. Nor can the State Governments, under India's federal Constitution, be pushed too much one way or the other in the matter of economic planning or otherwise without producing in them a tendency to recalcitrance. The Estimates Committee recommends that the annual phasing of the plan and the fixing of ceilings, the pruning of schemes and the re-allocation of resources among different schemes are matters which the Commission could conveniently leave to the Government of India Ministries to be decided as between themselves and between them and the States. Differences in viewpoints among Central Ministries, whenever they arise, could be resolved by the Cabinet, while differences between the Central Ministries and States could be resolved through the National Development Council. One exception to the rule could, however, be the schemes involving foreign exchange, the solution or the adjustment of claims concerning which should continue to be the responsibility of the Planning Commission.

Main Functions

Provided this function of formulating annual plans of the Central and State Governments, which at present is a pre-occupation of the Commission, and which involves delays in procedures and in the issue of sanctions of expenditure, is left to the normal administrative machinery, the Planning Commission would be in a position to concentrate on its main and more important functions of long-term planning, on questions involving the mobilisation and augmentation of resources, the collection, classification and analyses of data and information on various problems of vital significance to streamlined planning and the evaluation of results.

In other words, the Planning Commission would be performing an entirely legitimate function and would be making itself specially useful as an instrument in promoting progress, if it devotes its attention more and more to the long-term planning or perspective planning. The Commission has accepted the importance of switching its attention to this aspect of planning and work in that connection has already been put in hand. But, as the Estimates Committee says, the Commission has touched only the fringe of the problem so far and it is not happy that the latter had hitherto not been devoting its thought to what was "one of its major tasks."

Much exacting and extensive effort has to be put in so that schemes of industrial development, transport and communication facilities, irrigation schemes and other measures, which are demanded in terms of long-term requirements of the country can be properly drawn up. They have to be prepared not in isolation, but in close inter-relationship with short-term schemes under annual and five-year plans, and with reference to the needs of different regions and areas. The imperative nature of the problems implicit in perspective planning is illustrated by the need for master plans for the development of big cities such as Delhi, which would effectively prevent their haphazard growth and which would provide for such complex needs as water supply, housing, transport and electricity for rapidly expanding populations. The expeditious translation of the perspective plan idea into concrete terms

of master plans for diverse purposes and different regions should be the task of the Planning Commission. Not only need the section concerned of the Commission to be appropriately strengthened, but the entire machinery of the Commission—except, administrative and advisory—has to be geared to this work.

Perspective Planning

Intimately associated with perspective planning is the need to streamline procedures and methods as well as the agencies for the collection of statistical data and information on various subjects. A plethora of statistics collection agencies no doubt exist, with the Central Statistical Organisation attached to the Cabinet Secretariat at the top, and the statistical sections attached to different ministries and in State Governments at the bottom, with a number of other agencies in between such as the Reserve Bank of India, the National Sample Survey Organisation, and others. But at various times and occasions the inadequacy of these organisations and the unco-ordinated nature of the work carried on by them have painfully come to light. Data on matters such as food production, are not always accurate, and no worthwhile planning can be done without complete and accurate data. There should be an uninterrupted flow of these into the Planning Commission from the Central Ministries, the State Governments, local bodies and, if possible, from private sector organisations concerned with the execution of developmental projects. The data should be subjected to continuous scrutiny and analysis by the respective divisions in the Commission.

The cardinal importance of correct and up-to-date data as a necessary basis for effective planning has induced the Estimates Committee to suggest the appointment of a committee of experts, in consultation with the Cabinet Secretariat, to enquire into the position, and to suggest the rationalisation of the methods of collection of statistics and the co-ordination of the work of the various agencies engaged in the task, to avoid overlapping and to ensure a proper division of labour among them.

Evaluation of Progress

Besides giving its earnest attention to the need for perspective planning, another legitimate and important function of the Planning Commission should be to engage itself in a continuous assessment or evaluation of the progress of plan projects. This evaluation has its internal and external aspects. The internal evaluation machinery at present consists of the team of advisers on Programme Administration, who are experienced administrators, and the Committee on Plan Projects, working through the agency of a number of sub-committees. The advisers play an important rôle by keeping themselves in constant touch with State Governments and clarifying complicated issues. The sub-committees of the Committee on Plan Projects are designed to scrutinise the working of Community Development and National Extension Service schemes and other plan projects under Central direction and supervision. This internal machinery can make itself more useful, particularly the advisers, if they are posted in the different regions to which their work pertains, instead of in Delhi. The valuable report on democratic decentralisation prepared by the sub-committee on Community Development, N.E.S. and rural welfare schemes has evoked much commendation. To what implement the recommendations of the sub-committee depends, of course, on various factors and on the political pulls and counter-pulls to which they are susceptible. But no State Government can ignore them altogether, without laying itself open to the charge of not playing its part.

External Assessment

The question of external evaluation is important, firstly, to obtain a co-ordinated picture of the results achieved over the whole field of plan projects and secondly to avoid the deficiencies in each field being treated separately for evaluation purposes. The Estimates Committee's recommendation that an external evaluation organisation should be established, which would continuously and independently evaluate progress of various subjects, and in whose work the Planning Commission Members would more effectively and directly participate, has much to commend it. The existing Programme Evaluation Organisation's scope could very profitably be extended for this purpose, so that instead of only C.D. and N.E.S. projects, it could cover all other projects also.

One more important suggestion of the Estimates Committee's report deserves commendation. It suggests that the Commission should devote special attention to the problem of unemployment and the measures to be taken to mitigate its incidence. Indirect references to the unreliability of the target set for employment during the second plan Minister. Justify the Committee's comment that the unemployment problem need no emphasis. The problem should be tackled in a bold and energetic manner and there should be a continuous assessment of the progress made. At the end of admitted that unemployment and under-employment were so deeply rooted in the economy that scant impression. It would be a bad thing if the rent plan again, although anything different is difficult to visualise.

New Delhi

CENTRAL CABINET CONSIDERING EXPORT PROMOTION PLAN

INDUSTRIALISTS TO BE INVITED FOR CONSULTATION

(FROM OUR NEW DELHI CORRESPONDENT)

IMMEDIATELY after the Prime Minister's return from his holiday last week, the Central Cabinet took up for consideration the export promotion plan, which has been prepared by the Ministry of Commerce and Industry. The chief points of this plan have already been reported. The proposed incentives include freedom from taxation of income from exports, retention of 20 percent by the industry concerned of the foreign exchange earned, a provision of, say, 10 percent from the foreign exchange earnings for the import of raw materials and the refund of excise duty. Steps have also been recommended to make the price of exportable goods competitive in world markets. One of the suggestions is to reduce certain railway freights and the other is to increase the home price of a commodity in order to subsidise exports. In this connection, industrial leaders, industry by industry, will shortly be called to New Delhi for consultations. Two or three representatives, for example, of the cotton industry will soon be invited to the capital to explain the causes of the recent decline in textile exports, and suggest ways and means of stepping them up. The third set of suggestions relates to the modification or lifting of the ban on some exports. Definite quotas, for example, will shortly be announced for the export of linseed and groundnut oils. The ban on cow slaughter has seriously affected the export trade in hides and skins, without improving either the breed of cattle or the yield of milk. In parts of India, useless and stray cows are a menace to crops. The protection of wild life has gone to extremes by banning the killing even of lizards. The Government's decision on the plan, it is expected, will be available in the early part of this month.

Memorandum to London

The Secretary, to the Central Economic Affairs Ministry, Mr. B. K. Nehru, while in London, had an interview with the British Chancellor of Exchequer to whom he submitted a memorandum, detailing India's needs of foreign exchange. It is being carefully examined by London, it is learned here. This examination may lead to financial assistance almost immediately, and in any case, not later than December 1958, it is reported. It may be a combined Anglo-American-German aid offer.

State Trading to Expand

The State Trading Corporation is expanding its activities. Firstly, it is amending its articles of association in order to acquire power to start subsidiary companies, or to acquire shares in other companies. This is in accordance with the practice followed by companies in the private sector. In order to step up the export of handloom cloth, the Government has decided to set up a separate organisation, which will be a subsidiary of the State Trading Corporation. Some other developments have also been reported. The Corporation proposes to procure the maximum amount of articles and commodities required for the core of the plan or for sustaining the economy of the country. This it proposes to do by a system of "linked transactions", that is, making imports in exchange of Indian goods. Negotiations, for example, are in an advanced stage with the United States for such an arrangement under which India will exchange 500,000 tons of manganese ore or ferro-manganese for wheat. For this purpose, a joint marketing programme is being organised in consultation with the trade. Non-ferrous metals, particularly copper and aluminium, are similarly being imported from east European countries, which on accept payment in rupees or in Indian goods. On the model of chemicals, the distribution of non-ferrous metals will be made through existing trade channels, the Corporation appointing distributors.

Demand and Supply of Petroleum Products

The Government of India has asked for suggestions from the three oil companies for reducing the foreign exchange expenditure on petroleum product imports. The annual oil import bill is in the neighbourhood of Rs. 90 crores. The allocations for nine months ending December 1958 for import of petroleum products are as follows (figures in crores of rupees):

Crude	30.10
Kerosene	14.50
High-speed diesel	2.67
Light diesel	0.85

It seems that reductions, if any, can be made only in the import of kerosene or diesel oil. So far as the former is concerned, it will have to be a political rather than a financial decision. Kerosene is mostly used in the villages. So any reduction in its availability will affect the rural people adversely.

The demand for high-speed diesel has been rapidly increasing, while that for motor spirit has remained stationary. Over the period 1948-57, the compound growth of motor spirit demand was 6.3 percent a year, compared with 30.5 percent for high-speed diesel. Taking the position from 1951, when the rationing was withdrawn, to 1957, motor spirit consumption has been virtually static while

that of high-speed diesel has expanded by 169 percent. It is estimated on the basis of the prevailing trends, that over the period 1958-63, motor spirit demand will decline by about 9 percent, whereas that for high-speed diesel is expected to increase more than double. Although the consumption of high-speed diesel has risen in all its forms, a major increase has been in the field of road transport. Not only has the diesel vehicle been chosen for its expansion, but a large number of petrol-engine vehicles have been converted to diesel.

AVAILABILITY AND DEMAND OF PETROLEUM PRODUCTS

	Figures in tons	
1958:	Estimated consumption	Estimated refinery production
Motor spirit (excluding power alcohol-benzol)	810,000	1,082,000
High-speed diesel	955,000	674,000
Motor spirit surplus	272,000	
High-speed diesel deficit	281,000	
1963:		
Motor spirit (excluding power alcohol-benzol)	736,500	1,831,000
High-speed diesel	2,089,300	1,079,000
Motor spirit surplus	1,094,500	
High-speed diesel deficit	1,010,300	

It will be seen on the basis of these figures that by 1963, there will be an estimated surplus of over 1 million tons of motor spirit and a deficit of over 1 million tons of high-speed diesel. It must be appreciated that in spite of the flexibility of a modern refinery the situation relating to motor spirit would be worse with additional refining capacity. While reducing the high-speed diesel deficit, that would inevitably raise motor spirit production and thus, judging from the present demand trends, increase the surplus of this product. The imbalance, therefore, tends to set a limit to the quantity of crude oil which could be economically refined in the country and this in turn means that as the demand for other petroleum products expands it may be necessary to resort to substantial imports of the latter. Consumption can be broadly divided into two categories—private cars and commercial vehicles. Among the latter are buses, goods vehicles and taxis. Private cars in India number more than the commercial vehicles. The bulk of the motor spirit sold—about 70 percent—is consumed by the latter. Private cars account for about 27 percent of the total motor spirit demand. In India, pleasure-motoring is on a substantially lower scale than it is in the United Kingdom, in view of the longer distances in this country between centres of urban population, and the limitations imposed by distance on the use of a car for a short pleasure trip. Pleasure-motoring is unlikely to consume one-half of the quantity used by private cars and probably accounts for one quarter or less. In that event, pleasure-motoring may be consuming about one-sixteenth (6 percent to 8 percent) of the total motor spirit demand. Motor spirit is used in the main by commercial vehicles, and with the present levels of personal taxation, there appears to be little prospect of an increase in the number of private cars or the amount of pleasure-motoring to offset the conversion of commercial transport to diesel.

Increase in Diesel Vehicles

According to available figures, the number of petrol-engine commercial vehicles in India increased by about 113 percent over the period 1948 to 1956, compared with 5,416 percent in diesel engine vehicles. Over the period 1951 to 1956, the corresponding increases were of the order of 21 percent and 605 percent, respectively. It is obvious that the petrol vehicle is giving way rapidly to the diesel in the commercial field.

Statistics relating to the commercial vehicles produced in India by the approved manufacturers from 1953 to 1957 are as follows:

1953	2,464	252
1954	4,213	824
1955	4,832	4,549
1956	4,399	9,934
1957	3,176	12,473

It has been estimated that in 1957, there were more than 50,000 Perkins P6V engines in operation in India.

On the basis of recent experience, it is possible to give a broad indication of the pattern of high-speed diesel demand, which is as follows:

Road transport	65 percent
Agriculture	15 percent
Industry and development projects	15 percent
Rail diesel	2 percent
Miscellaneous	3 percent

No Relief for Petrol Consumers

The Government has decided not to give any relief to the consumer from the price reduction in petroleum products, resulting from the agreement with the oil companies. Apart from other considerations, any reduction in prices will lead to higher consumption and higher expenditure of foreign exchange, it is thought. The Government has, therefore, decided to use the amount of about Rs. 80 lakhs a month to finance its general expenditure.

Foreign Engineers for Steel Works

The Hindustan Steel Ltd. has decided to employ 200 Russian engineers, initially, and another 100 in due course to operate the Bhilai steel plant. It has also entered the West German employment market to recruit engineers for the Rourkela works. There is a paucity of trained personnel in India for the purpose. Let alone the men for key positions, even ordinary operators are not available. They are being trained in the U.K., the United States, West Germany, Australia and Russia. But these trainees, after completing their courses, cannot be expected to take charge of key positions, immediately on their return. They will have to acquire further practical experience. Meanwhile, the works in Rourkela and Bhilai are expected to go into production next cold weather. Hindustan Steel has, therefore, planned to keep a Russian or a German for every key position. They will be on duty on the first day when the plants go into production. The Russians are being appointed on the condition that they will have to leave as soon as their Indian substitutes are trained up, but the same condition will not attract the Germans. They will have to be recruited for a fixed period of service.

Non-Plan Expenditure

It was reported last week that the allocation of Rs. 14 crores for the Central Education Ministry was outside the plan. Yet another case has come to light. The State Trading Corporation has made a couple of crores on cement trading. The Government has decided to use the amount for constructing wide roads for high-speed traffic in Bihar. The plan is being pruned because of the inadequacy of internal resources. Side by side, such non-plan expenditure, running into crores, is being incurred.

Sugar for Export

The Government of India has issued an Ordinance for permitting the export of sugar. Power has been taken to release specified quantities of sugar for export and to fix export quotas for individual mills in proportion to their production. Provision has also been made for channelling the export through a single organisation with a view to avoiding competition among the sellers, and to earn the best available price for the sugar exported. After considering the trends of production and consumption and the supply position of sugar, the Government has decided to release a quantity of 50,000 tons for export during the current season. All sugar factories in the country will be required to deliver their export quotas to the Indian Sugar Mills Association, Calcutta, which is being appointed as the export agency for the purpose. Any factory which fails to deliver its quota in whole or part will have to pay an additional excise duty of Rs. 17 a maund on the quantity of sugar on which it defaults, before the same is released for sale in the internal market. The sugar factories will be paid for the quantity delivered by them to the export agency at a uniform rate, based on the net price realised by the agency from the sale of sugar.

The average loss on the export of the declared quota may not be more than annas 8 a maund, on the quantity of sugar now in stock with the factories. As prices of sugar have already risen in various parts of the country by Re. 1 and more a maund, there can be no justification for any further rise in prices on account of exports—in fact, the prices ought to stabilise at a lower level, the Government feels. The supply position of sugar is satisfactory. The season started with a carry-over of 430,000 tons. The production during the year will be 1,975,000 tons. Taking into consideration the rise in prices and also the fact that the production of khandasari sugar during this season is larger than in the previous season, it is expected that the year will close with a substantial carry-over. If, nevertheless, there is any undue rise in prices, the Government will take measures to bring down the prices to a reasonable level, it has been announced.

Another Agreement on U.S. Credit

The Governments of India and the United States signed during last week a \$20-million loan agreement for the Orissa iron ore project in the Rourkela area. The multi-purpose project is designed to provide yearly 2 million tons of iron ore for export to Japan and to help in the development of the mining area. The total cost of the project is estimated at \$67 million of which \$32.5 million represents the foreign exchange cost. The balance of \$34.5 million represents expenditure in local currency. The \$20 million will be made available from the Asian Economic Development Fund through the International Co-operation Administration which is represented in India by the U.S. Technical Co-operation Mission to India.

Under the terms of the agreement, the Government of India will meet all internal expenditure, and the Government of Japan will provide the equi-

General Manager.

valent of \$8 million in the form of yen credit towards meeting the foreign exchange cost. The \$20-million loan will be used for the acquisition of commodities and services required for the improvement and expansion of railway and port facilities linked with the ore project. It is anticipated that a 111-mile rail link between Sambalpur and Titlagarh will be constructed, a rail line of approximately 25 miles will be laid down to connect the site with the South Eastern Railway, and wagons and engines will be provided to permit rail movement of the ore from Kiriburu to the port of Visakhapatnam. The port and harbour facilities in Visakhapatnam will also be expanded. The improvement and expansion of the port facilities will be determined on the basis of engineering designs and cost estimates to be submitted by the Indian Government within six months. The \$20-million loan is repayable in rupees in 31 half-

yearly instalments, beginning three years after the disbursement of the loan. It will carry an interest of 3½ percent a year.

Asian Economic Development Fund

The Asian Economic Development Fund was established by the U.S. Congress in 1955, to assist projects for economic development in Asia in which more than one country would be interested. The Orissa iron ore project has been under discussion between the representatives of the Government of India, Japan, and the United States since the Colombo Plan Conference in Singapore in October 1955. After discussions and examinations of the feasibility of railway construction in the area by a firm of U.S. consultants, detailed negotiations were undertaken with the representatives of the Japanese steel industry last year. An agreement

to undertake the multi-purpose project was reached in March 1958, between the Indian negotiating team and the Japanese steel mission.

Avoiding Double Taxation

Discussions for the avoidance of double taxation between Switzerland and India took place in Berne recently. The delegations representing the two Governments have reached an agreement in the matter relating to civil aviation enterprises. It will be signed as soon as possible in New Delhi and will be applicable to taxes payable for aircraft operation as from the financial year 1957-58. Preliminary discussions on other points were concluded, and further discussions are likely to be held later in the year.

Adoption of the Metric System

The Central Government has decided, in consultation with State Governments and other interests concerned, to introduce the metric system this year. It will start with the jute industry on 1st July, 1958, and in trade generally in certain selected areas, and then for certain limited purposes it will be introduced in Government Departments on 1st October, 1958, when also all major industries will begin to come within its scope. The application of the Standards of Weights and Measures Act, 1956, to the jute industry, has been notified already. A separate notification for this industry became necessary, as jute interests insisted that the date for the change-over should be 1st July, 1958, when the new jute year begins, and not 1st October, 1958.

From 1st July, jute mills have been authorised to use the metric system in buying raw jute and selling their goods. Metric weights and measures might also be used in forward transactions in jute, raw or manufactured. During the first two years, that is until 1st July, 1960, the use of the new weights and measures will not be compulsory, and the use of the present weights and measures will be permitted.

Three further notifications are being issued to widen the metric system area, from 1st October, 1958. The first will authorise the use of metric weights, for all purposes in specified areas: these, which were chosen in consultation with State Governments, comprise whole districts in some States, and selected urban areas in others. The notification will affect only the trades in which transactions are by weight. Retail trade in cloth, for instance, will continue to be done in the old system, although a second notification will permit the mills to sell cloth to their customers in metric units. In States such as Madras and Kerala, where foodgrains are sold by measures, their use will continue. Elsewhere, where grains are sold by weight, traders will have the option of selling them in metric units. The retail sale of petrol will continue to be in gallons. The notification will also permit the use of the metric system in regulated markets in the States which have established them by law.

Government Undertakings

The second notification will be in two parts—A and B. Part A refers to Government departments and undertakings. Metric weights and measures will be introduced in the bookings of cargo and luggage by the Indian Airlines Corporation and Air-India International. These corporations will not, however, use metric units for recording air distances and speeds. These will continue to be in the present units, namely, nautical miles and knots, which are the units recognised by the International Civil Aviation Organisation. These units are universally current, and are used by air transport operators even in countries on the metric system. Government departments and undertakings may use the metric system in the purchase and supply of stores. Quantities and prices of stores tendered in metric units in tenders and contracts will be expressed in metric units in tenders and contracts. New surveys of land and mines will be by metric scales. Suitable scales for topographical, cadastral and forest maps have been prepared. Existing maps will, however, continue to be used with conversion tables drawn on them. Metric units will also be used in technical, statistical, scientific and marketing data collected and published by Government departments. Part B of the notification relates to major industries. Firms will be permitted to use metric units in the purchase of raw materials and the sale of their products. They will be allowed, if they so choose, to express prices and quantities in metric units in all transactions connected with the purchase of raw materials or the sale of products. The change will be limited to transactions between mills and their suppliers and customers. The retail trade in the products of these industries will not be affected. The industries to be covered by this notification are cotton textiles, iron and steel, engineering, heavy chemicals, cement, salt, paper, pulp and paper board, refractories, coffee, non-ferrous metals and rubber. The Coffee Board will adopt metric units in the sale of coffee from the surplus pool. Sales of raw rubber, whether by growers or traders, may be in metric units. The notification will also cover forward trade in cotton by recognised associations.

The purpose of the third notification will be to permit the use of existing units for a period of two years, namely, until 30th September, 1960. The introduction of the metric system will also cost the money. Provision is being made to advance loans to the States to meet this expenditure, which may be Rs. 60 lakhs during 1958-59, or Rs. 2 crores during the plan period ending 31st March, 1961. This will be in addition to the expenditure to be incurred by the Central Ministries, the estimates for which are being worked out.

London

MR. MACMILLAN CLARIFIES U.K. ECONOMIC POLICY

ASSISTANCE FOR BRITISH SHIPPING ANNOUNCED

(FROM OUR LONDON CORRESPONDENT)

THE Prime Minister achieved a minor triumph last week when he appeared on an unrehearsed interview on television in a party political broadcast, answering the questions of Kenneth Harris, a London journalist, who had made it a condition that he could ask any question he liked without consultation. Mr. Macmillan must have found the questions almost a child's play after his successful overcoming of much more serious "grilling" during his recent U.S. visit, but the fact remains that he turned in a performance which, even his opponents are prepared to admit somewhat ruefully, must have done both him and his party considerable good. Economic policy featured prominently, and the Prime Minister endeavoured to set his questioner and the viewers right on such matters as the steps being taken to steady prices—in which aspect he claimed some success—to meet legitimate wage claims out of savings produced by productivity increases, and the fact that real wealth can only be doubled by a co-operative effort aimed at expansion without running the risks of inflation, something which it has been demonstrated cannot be achieved by direct controls.

Though the Prime Minister made no specific mention of any move towards easing the credit squeeze, it is being felt more generally that deflation is in this direction will be a feature of the next Budget. Meantime, industry may expect such assistance as is possible within the limits imposed by the fight against inflation. Following the Chancellor's concessions in the Finance Bill on investment allowances, steps to help British shipping have been outlined by Mr. Watkinson, Minister of Transport, in the House of Commons. They include removal of restrictions on sources from which the industry may raise capital. The Minister has announced that the Government will do all it can this year to start world trade on an upward move. In that lies the greatest hope. At home they will do what they can to make the industry more competitive. There is a "hopeful possibility" of international agreement about flags of convenience in the Law of the Sea Conference. Removal of disabilities imposed by the transfer of Restrictions Act, 1939, and Voyage Licence regulations is also being considered.

Trade Holding Up Well

Even without the dock strike, which reduced May's trade gap to the artificially low level of £6½ million, there is every indication that the improvement in Britain's overseas trade balance would have been fully maintained that month. With work in the London docks reduced to only about one-fifth of normal from the last days of May until mid-June, the June figures are bound to be much more severely disturbed. The £22-million rise in exports in May to £287.3 million, the highest for a year, is probably no more than the seasonal and thus, according to the Board of Trade, scarcely implies trend. But for the strike imports slightly downward trend. The fall in commodity prices and freight charges has slackened, and indications are that the value of imports is levelling out at around one-eighth less than in the first half of last year.

Britain is still benefiting from the lower prices of imported raw materials. The index for export of imported raw materials, as in March and April, prices in May stayed at 110, as in March and April, but that for imports fell to 98 (1954 equals 100). The "terms of trade," the ratio of import to export prices, moved one point in Britain's favour to 89, the March level.

Dependence on Motor-car Exports

In the last few months, the most buoyant section of exports has been the engineering group in which includes motor-cars. The marked rise in which includes motor-cars and other engineering products has been offset by a decline in textile, coal and other exports. The number of passenger cars exported in May was nearly 48,000, the highest in any month so far, and their value was also a record at £18 million. Motor-cars now account for over 6 percent of total British exports and nearly a quarter of all shipments to the United States, which has become much the biggest export market for the British motor-car industry. In the last five months, the United States has taken over 60,000 British cars, against 35,000 in the same period of last year. Since the beginning of 1958, Britain of last year. Since the beginning of 1958, Britain has once again become the largest supplier of foreign passenger cars to the United States, having regained the top position from West Germany.

With motor-cars now representing over 6 percent of total exports, and nearly a quarter of all exports to the United States during the first five months of 1958, any setback in this highly specialised trade will completely change Britain's external position. It is to be hoped the engineering unions will not wage claim by the engineering unions will not result in any stoppage. The claim was made as soon as the standstill period associated with the last rise came to an end.

Enquiry into Industrial Trends

Inadvertently, the Federation of British Industries has helped emphasise the need for the display

of some caution as far as the future of British industry is concerned. The F.B.I., in releasing the results of its second survey of industrial trends, sums up cautiously that "on balance business men appear rather less optimistic than they were three months ago." Nevertheless, a considerable percentage (about one quarter) of the firms asked, has reported an increase in the inflow of new orders and in some deliveries. A smaller proportion (18 percent) has reported that export deliveries have increased. Of the 554 firms which are described as reasonably representative of British industry as a whole, 76 percent have stated that their present output is below capacity, and only 23 percent that it is not. Capital expenditure authorised in the current year is expected to be less than last year, particularly on buildings. This points to an actual drop in capital spending in 1959, when current authorisations are due to come to a head. Three-fifths of the replies report that the labour situation is easier. During the last three months, both total employment and hours worked have tended to decline. Output has remained more or less steady, reductions (30 percent) being nearly balanced by increases (25 percent). Raw material stocks have been reduced and stocks of finished goods are tending slightly to rise. In spite of rising costs, there has been a number of price reductions. According to the replies received, 30 percent of the firms have reported lower selling prices, 66 percent unchanged, and 3 percent higher prices than three months ago. Over half the replies state that profit margins are being reduced, while nearly one-half report them as unchanged. Only 5 percent report rising profit margins.

After analysing the replies the F.B.I. states that the smaller firms are "more bullish" than the larger ones in relation to the last three months. This applies to output, workers employed and hours of work, and "most markedly" to orders. The same trend was noticed in the first enquiry. On questions of costs, selling prices, and profit margins, there is little difference in the replies from large and small firms. As for particular industries the survey shows that output and orders are rising strongly in the food, drink, and tobacco trades, and slackening in the textile, clothing, and footwear group. The first of the 16 questions submitted to the F.B.I. member firms runs like this: "Do you feel more or less optimistic about the general business situation than you did three months ago?" The replies are 19 percent "more" optimistic, 49 percent "unchanged," and 31 percent "less" optimistic. This is the basis for the general statement that business opinion is "rather less optimistic on balance." One gathers that tentative enquiries about trade over the next three months suggest only a slight falling off in new orders, particularly in the export trade, though profits are expected to be squeezed.

Britain and Free Trade Area

A committee of leading personalities from industry, trade unions, banking and transport has been formed to stimulate interest in Britain's participation in the proposed European free trade area. It is called "The Britain in Europe Committee" and its main function will be to promote research on European economic integration. In particular, the committee is to inform industrial organisations and trade unions on European developments and to promote understanding of issues likely to arise from British participation in the European free trade area. The committee also intends to undertake "initiatives in the political sphere" which may be necessary to secure ratification of a treaty or convention embodying the free trade area plan.

Sir David Kelly is chairman and Mr. Lawrence Robson, an industrialist, is chairman of the executive committee, with Mr. Ernest Jones, president of the National Union of Mineworkers, as vice-chairman. Among the fifty-odd members of the committee is Mr. Frank Cousins, one of the trade union members. Industry is represented by, among others, Lord Cornwallis (chairman of Albert E. Reed and Company), Sir Harry Jephcott (chairman of Glaxo), and Sir Andrew McCance (chairman of Colvilles). Banking members include the chairmen of Barclays Bank, the National Provincial Bank, the National Bank, Royal Bank of Scotland, and Glyn Mills. Transport is represented by Lord Douglas (chairman of B.E.A.) and Sir Ernest Murrant (chairman of Furness Withy). The director of the committee is Mr. Eric Lingeman.

City Reactions to Ceylon Troubles

The latest threats to British interests in Ceylon came as no surprise to the City. Economic developments there have been watched for some time with growing misgivings. The bulk of British assets, estimated at about £200 million, is in tea and rubber plantations. Periodic threats of nationalisation and the doubtful economic outlook have resulted in a substantial running down of British investment in recent years. Ceylon's position is precarious. She is facing a balance of payments deficit and is anxious to raise money abroad. Only last month, in an attempt to attract foreign capital,

the Government gave an undertaking that new private foreign enterprise would not be nationalised for ten years. It was also stated that foreign investors would be permitted eventual repatriation of capital including appreciation and remittance of dividends. The latest nationalistic outburst will scarcely help attract private foreign capital to Ceylon.

Whatever may happen in day-to-day transactions in Ceylon shares on the market, informed opinion in the City attaches more importance to the generally difficult outlook for common tea in 1958, following a poor season in 1957, than to political threats in Ceylon. It is believed, in fact, that the recent serious riots may have helped provide a stimulus towards greater stability in the future. The high-yield basis on which most of the equities are valued discounts a good deal, although there may be some small selling. The position can change very quickly, but quality-tea producers should be able to continue to give a reasonable account of themselves although short-term prospects for common tea equities are more clouded.

Commonwealth Conferences

The conference of Commonwealth officials, which has been preparing the way at Treasury meetings over the past three weeks for the Ministerial Commonwealth Economic Conference in Montreal in September, has ended. A whole range of subjects on trade and finance has been covered. They include the proposal for the Commonwealth Bank, assessment of resources, commodity prices and the supply of raw materials. Members will now report to their Governments and an agenda will be prepared.

The Prime Minister announced in the House of Commons that all Commonwealth Governments had been invited to send delegates to an informal meeting of Commonwealth nuclear scientists to be held in Britain in September.

Scrap Metal Exports

The U.K. Board of Trade has announced that open general licences authorising the export of certain aluminium, copper, and iron and steel goods valued at more than £240, £350, (and of certain copper alloy goods valued at £240 a ton) and £35 a ton, respectively, are being revoked and replaced by new open general licences. These lower the value limit as follows: aluminium goods to £220 a ton; copper goods to £300 a ton and the value of any alloy mainly of copper in any goods to £200 a ton; iron and steel goods to £25 a ton. The Board states that the move is to bring licences in line with falling world prices of aluminium, copper, and iron and steel.

Brevities

Subject to shareholders' approval, the Board of Puket Tin Dredging has accepted a £107,000 offer by Tronoh Mines for the purchase of the company's mining leases, buildings, dredge, spares and stores, with the assessment under the tin control regulations. The company is to be wound up.

A new anti-submarine frigate being built for the Indian Navy, I.N.S. Trishul, has been launched from the yard of Harland and Wolff Ltd. I.N.S. Trishul will be the first frigate of her type to be acquired by the Indian Navy and the third to be launched under the new construction programme. The ship is 370 feet in extreme length and has a beam of 41 feet.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains eight cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in

- consumer market surveys
- industrial prospecting
- readership analysis
- economic indices
- business research

Calcutta Markets

STRONG GENERAL DEMAND AT
TEA EXPORT SALE

LOWER PRICES FOR DUSTS

At Sale No. 2, held on 1st and 2nd July, offerings at the Export auction amounted to 17,189 packages. There was a strong general demand. The better orthodox Assams and brighter liquoring Doars Fannings sold readily at dearer rates, while C.T.C. grades with few exceptions were the strongest feature of the sale, generally selling well above valuations. Non-wither Legg-cut Doars teas, however, were about 10nP easier. The comparatively small quantity of clean plain tea sold well at or above valuations, but a few of the less attractive kinds tended easier. Stylish whole leaf grades and well-made B.P.S.'s came in for keen competition at dearer rates. There was a fair enquiry for tippy teas at irregular rates, but a few of the best of these sold well. Buyers of Darjeeling teas were selective and their prices showed some irregularity, frequently falling below valuations where quality showed a decline, while a few of the higher-priced teas were withdrawn.

Quotations	1958	1957
Clean Black Pekoe	2.35 to 2.45	2.50 to 2.60
Plain B.P.	1.82 to 1.88	1.95
Plain Fannings	1.90 to 2.00	1.75
Medium B.P.	2.10 to 2.20 (nom.)	2.20
Medium Fannings	2.30 to 2.50	2.20 to 2.30
Best Assam C.T.C. B.P.	3.50 to 4.00	3.50 to 4.00
Best Assam C.T.C. Fannings	4.00 to 4.50	4.00 to 4.20

At the Internal Sale, a total of 19,887 chests of Dust was on offer out of which 12,201 chests were of new season's manufacture. There was a fair general demand for the new season teas although the prices fetched were sometimes below valuations. C.T.C. Assams were a particularly strong feature except for a few early invoices. Darjeelings were irregular although some lines realised attractive prices. There was a very strong general demand for the 7,686 chests of old season's manufacture. Middle East buyers operated freely and prices for all exportable types rose considerably. The best kinds sometimes advanced by 8nP while the poorer kinds were up to 14nP dearer. C.T.C. Assams were an irregular feature and were generally easier.

Quotations	1958	1957
Medium Doary Dust	1.74 to 1.78	1.80 to 1.70
Medium Assam Grainy Dust	1.80 to 1.90 (Nom.)	1.70 to 1.80
Medium Assam C.T.C. Dust	2.30 to 2.40	2.30 to 2.70
Best Assam C.T.C. Dust	3 to 3.30	2.90 to 3.15

A total of 420 chests of Leaf was offered for sale, of which 323 chests were of new season's manufacture.

FREIGHT MARKETS DULL

The freight markets continued dull during the past week, and operators see little prospect of improvement. A few cargoes were fixed from the U.S.A. to India with wheat and 70s was paid from U.S. Gulf to the west coast and 61s 3d from north Pacific to the east coast. The rate for ore from Mormugao to the Continent declined still further to 39s. Some interesting ship sales took place. Some of these are: (1) s.s. *Barton Grange*, 9,414 d.w., built in 1944, to Hongkong buyers for £116,000. (2) s.s. *Herminius*, 10,490 d.w., built in 1942, to Hongkong buyers for £112,000. (3) s.s. *Twickenham*, 8,910 d.w., built in 1940, to Indian buyers for £130,000. (4) s.s. *La Costa*, 10,050 d.w., built in 1943, to Hongkong buyers for £115,000. (5) m.s. *Master Nicos*, 12,500 d.w., built in 1953, to Greek interests for £535,000. Unless markets change rapidly for the better, the new owners of the ships will be hard put to find profitable employment for them.

LINSEED RISES

A very firm tendency prevailed last week and a rise was recorded in all sections. The main causes were the shortage of supplies, and firmness in mustard and groundnut markets. The movement of new crop seeds was very slow in the centres and local offerings were very meagre, while ready supplies were negligible. An advance of Re. 1 in the price of seeds resulted in a disproportionate advance of only annas 8 in the price of oil, further upsetting crushers' parties. Linseed oil overseas improved slightly to £110 with Indian shippers coming nearer into line. Latest quotations were as follows: Ready Rs. 24 a maund, and July-August Rs. 24.4 a maund.

HIDES AND SKINS STEADY

The market in skins ruled steady, while that of hides was easy. Stocks were higher than in the previous week.

Bazaar Sales

(Between 24th June and 26th June, 1958)
Cowhides: Wet salted (Slaughtered) 8,600 pcs. on the basis of Rs 11 to Rs 20.50.

Goatskins: Wet salted (Patna, Daissee, Kustia) 52,200 pcs. on the basis of Rs 325 to Rs 335, Rs. 350 to Rs. 370 and Rs. 410 to Rs. 415. Wet salted (he-killed) on the basis of Rs. 4 and (she-killed) on the basis of Rs. 3.50 a piece; Assam-Dinajpur 19,000 pcs. on the basis of Rs 345 to Rs. 370; Purneah-Kissanganj 19,000 pcs. on the basis of Rs. 350 to Rs. 360; Patna (Ord.) 7,000 pcs. on the basis of Rs. 315 to Rs. 320; Muzafferpore 2,000 pcs. on the basis of Rs. 320.

THE BIRLA JUTE MANUFACTURING
CO. LIMITED

NOTICE is hereby given that the Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at 8, India Exchange Place, Calcutta, on Wednesday the 13th August, 1958 at 3-30 P.M. for the following purposes:—

- (1) To receive and consider the Report of the Directors and to pass the audited accounts of the Company for the year ended 31st March, 1958
- (2) To declare dividends on Preference, Second Preference and Ordinary Shares.
- (3) To elect Directors in place of Messrs. P. D. Himatsingka and G. D. Kothari, who retire by rotation.

Mr. P. D. Himatsingka has attained the age of 68 years and as it is desirable to avail of his valuable advice by retaining him as a Director of the Company, the following resolution will be proposed as Ordinary Resolution under Section 281 of the Act, a special notice of which has been received by the Company and is also hereby given to the shareholders.

"RESOLVED that Mr. P. D. Himatsingka who has attained the age of 68 years be and is hereby re-elected a Director of the Company and that the age limit prescribed under Section 280 of the Companies Act, 1956 shall not apply to him."

Mr. G. D. Kothari is an Associate of the Managing Agents and as it is desirable to avail of his valuable advice by retaining him as a Director of the Company, the following resolution will be proposed as Special Resolution under Section 261 of the Act, a special notice of which has been received by the Company and is also hereby given to the shareholders.

"RESOLVED that Mr. G. D. Kothari, an Associate of the Managing Agents under the Companies Act, 1956 be and is hereby re-elected a Director of the Company."

- (4) To appoint Auditors and to fix their remuneration.
- (5) As special business, to consider and if thought fit, to pass with or without modification, the following resolutions which will be proposed as Special Resolutions:

(a) "RESOLVED that the Company do hereby approve of the contract with Messrs. Birla Bros. Private Ltd., the Managing Agents of the Company, for the supply of money by the said Managing Agents to the Company by way of short-term credits with or without security, made or to be made over a period of five years with effect from the 1st March, 1958, bearing interest at the rate mutually agreed upon from time to time. Provided, however, that any interest received by Messrs. Birla Bros. Private Ltd. from the Company on or in respect of money lent pursuant to this resolution shall not be deemed to be remuneration paid by the Company to them as Managing Agents of the Company within the meaning of Secs. 198 & 348 of the Companies Act, 1956 and that Messrs. Birla Bros. Private Ltd., shall not

be accountable therefor under the provisions of Section 363 of the Act."

- (b) "RESOLVED that the Company do hereby approve of the Contract being entered into with Messrs. Jayshree Textiles Ltd., Rishra, an associate of the Managing Agents, Messrs. Birla Bros. Private Ltd., for the sale of staple fibre yarn to them as per the Draft Contract placed on the table and subscribed for identification by the Chairman thereof and which Draft Contract among other terms provides that:

(i) the quantity of goods sold shall not exceed 4,00,000 lbs. in any one financial year;

(ii) the price of the goods shall be determined at the rate prevailing at the time of placing each individual order and shall be paid to the Company within one month from the date of the supply of the goods; and

(iii) the Contract shall be valid for a period of three years, and shall be deemed to have come into force on and from 1st June, 1958."

The Register of Members and Share Transfer Books of the Company will remain closed from 21st July, 1958 to 13th August, 1958, both days inclusive.

By Order of the Board.

BIRLA BROTHERS PRIVATE LTD.,

Managing Agents.

Calcutta.

Dated, the 27th June, 1958.

N.B. (1) The Directors have recommended the following Dividends:

On Preference Shares @ 7½% less Income-tax.

On Second Preference Shares @ 5½% free of Income-tax.

On Ordinary Shares @ Re. 1 per share free of Income-tax.

If dividends on shares as recommended by the Directors are approved at the Meeting THE DIVIDENDS WILL BE PAYABLE ONLY TO THE REGISTERED SHAREHOLDERS whose names are on the Company's Register on the 13th August, 1958 or to their order or to their bankers. No application need be sent for dividends, as relative Dividend Warrants will be posted to such shareholders by the 6th September, 1958.

- (ii) A member entitled to attend and vote at the above Meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

- (iii) Explanatory Statement in regard to special business to be transacted at the Meeting.

(a) To meet the short-term financial requirements of the Company, money has sometimes to be borrowed from the Managing Agents, Messrs. Birla Bros. Private Ltd. The rate of interest on such borrowing is at present 6% per annum which is quite reasonable. The amount of such borrowing as on the 31st March, 1958 is Rs. 1,00,000. The said contract is required to be approved by a Special Resolution under the provisions of Sec. 360 of the Companies Act, 1956.

(b) The Jayshree Textiles Ltd., Rishra, an associate of the Managing Agents, Messrs. Birla Bros. Private Ltd., require staple fibre yarn which this Company manufactures. Your Board of Directors consider that the contract to be entered into with them shall be in the interest and for the benefit of the Company. The said contract, the principal terms of which have been mentioned in the resolution itself, is required to be approved by a Special Resolution under the provisions of Sec. 360 of the Companies Act, 1956. The Draft of the Contract may be inspected at the Registered Office of the Company at 8, India Exchange Place, Calcutta, at any time during business hours.

Shri L. N. Birla, Chairman of the Board of Directors and nominee of the Managing Agents is Ltd. Shri M. P. Birla, a Director of the Company and a nominee of the Managing Agents is a member and a Director of Messrs. Birla Bros. Private Ltd. Shri P. D. Himatsingka, a Director of this Company, is a Director and member of Messrs. Jayshree Textiles Ltd.

To the extent indicated above, the Directors and the Managing Agents, Messrs. Birla Bros. Private Ltd., may be deemed to be interested in the above special business.

BALLY JUTE COMPANY LIMITED

NOTICE is hereby given that the Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at 8, India Exchange Place, Calcutta, on Wednesday the 13th August, 1958, at 2-30 P.M. for the following purposes:—

- (1) To receive and consider the Report of the Directors and to pass the audited accounts of the Company for the year ended 31st March, 1958.
- (2) To declare Dividends on Preference and Ordinary Shares.
- (3) To elect a Director in place of the retiring Director.
- (4) To appoint Auditors and to fix their remuneration.
- (5) As special business to consider and if thought fit to pass with or without modifications the following Special Resolution:

"RESOLVED that the Company do hereby consent to the Managing Agents, Messrs. Birla Brothers Private Ltd., serving in capacities otherwise than as Managing Agents and undertaking such schemes in association with other concerns of inter-connection or otherwise as may be mutually beneficial and in which schemes the Company do intend to participate or become a contributory, and in particular of maintaining a Central Engineering Organisation for rendering technical, engineering and other services, provided the Managing Agents charge proportionate expenses and do not make any profits or charge commission and provided further that record of such schemes is maintained in the Register under Sec. 360 of the Act."

The Register of Members and Share Transfer Books of the Company will remain closed from the 21st July, 1958 to 13th August, 1958, both days inclusive.

By Order of the Board.

BIRLA BROTHERS PRIVATE LTD.,

Managing Agents.

Calcutta.

Dated, the 27th June, 1958.

N.B.—(i) The Directors have recommended the following Dividends:

On Preference Shares @ 7% free of Income-tax.

On Ordinary Shares Rs. 6/- per share free of Income-tax.

If dividends on shares as recommended by the Directors are approved at the meeting THE DIVIDENDS WILL BE PAYABLE ONLY TO THE REGISTERED SHAREHOLDERS whose names are on the Company's Register on the 13th August, 1958 or to their order or to their bankers. No application need be sent for dividends as relative Dividend Warrants will be posted to such shareholders by the 6th September, 1958.

- (ii) A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

- (iii) Explanatory Statement in regard to the special business to be transacted at the meeting:

Messrs. Birla Brothers Private Ltd. have organised a scheme of Central Engineering Organisation for the mutual benefit of their managed companies and other of their managed companies and other concerns. Only proportionate expenses are payable and the organisations do not make any profits or charge commission. This company intends to take full advantage of such beneficial schemes as may be organised by the Managing Agents from time to time. But as this Agents amount to a service other than that of managing agents, Sec. 360 of the Act is attracted. The approval of the shareholders by a Special Resolution is accordingly sought under the provisions of the Act.

Shri M. P. Birla, the Chairman of the Board of Directors and nominee of the Managing Agents is a member and Managing Agents may be deemed to be interested in the above business.

KANKARRAH COMPANY, LIMITED.

NELLIMARLA JUTE MILLS COMPANY,
LIMITED.

NOTICE is hereby given that the Thirty-fifth Annual General Meeting of the Members of NELLIMARLA JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Wednesday, the 30th day of July, 1958, at 3 o'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the 13 months ended 31st July, 1957, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare Dividends.
3. To appoint a Director in place of Mr. B. L. Bajoria, the Director retiring by rotation at the Meeting.

And in this connection to consider and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act 1956:—

"That Mr. B. L. Bajoria be and is hereby reappointed a Director of the Company liable to retirement by rotation."

Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. B. L. Bajoria is an "Associate" of the Managing Agents within the meaning of the Act and that, therefore, he can only be re-appointed by special resolution as a Director of the Company liable to retirement by rotation.

4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

5. To consider and, if thought fit, to pass the following resolution:—

"That Mr. S. K. Mukherjee be and is hereby reappointed a Director whose period of office is liable to determination by retirement of Directors by rotation."

The Share Transfer Books of the Company will be closed from 16th to 30th July, 1958, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,

MCLEOD & CO., LTD.,

C. HOCKLEY,

Secretary,

Managing Agents.

3, Netaji Subhas Road,

Calcutta, 27th June, 1958.

NOTE:—

Payment of the proposed dividends, if declared, will be made on or after 11th August, 1958, only to those members whose names are registered in the Books of the Company on 30th July, 1958, or to their Mandatees.

Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT:

Mr. S. K. Mukherjee was appointed by the Board as an Additional Director in August 1957 and vacates office at this Annual General Meeting under Article No. 114 of the Company's Articles of Association and Section 260 of the Companies Act, 1956. The resolution mentioned in Item No. 5 of the above Notice is intended to effect the re-appointment of Mr. Mukherjee as a Director liable to retirement by rotation.

CHOONABHUTTI TEA COMPANY LTD.

THE Board of Directors have decided to recommend to the forthcoming Annual General Meeting of Shareholders, a dividend of Rs. 6/50nP per Preference Share and a dividend of Rs. 20/- per Ordinary Share, in respect of the year ended 31st December, 1957, without any deduction in respect of taxation payable by the Company.

By Order of the Board,

ANDREW YULE & CO. LTD.,

Managing Agents.

Calcutta, 25th June 1958.

BASMATIA TEA COMPANY LTD.

THE Board of Directors have decided to recommend to the forthcoming Annual General Meeting of Shareholders, a Dividend of Rs. 1.75 per share in respect of the year ended 31st December, 1957, without any deduction in respect of taxation payable by the Company.

By Order of the Board,

ANDREW YULE & CO. LTD.,

Managing Agents.

Calcutta, 26th June, 1958.

FORT GLOSTER INDUSTRIES LTD.

NOTICE is hereby given that the Annual General Meeting of the Company will be held at the Registered Office No. 21, Strand Road, Calcutta-1, on Tuesday the 29th July, 1958 at 4 P.M. for the following purposes:—

- (1) To receive the Report of the Directors and to pass the audited accounts for the year ended 31st March 1958.
- (2) To declare dividends.
- (3) To elect a Director in the place of Sri P. D. Bangur who retires by rotation and also under Section 261 of the Companies Act, 1956, being an Associate of Messrs. Kettlewell Bullen & Co. Ltd., the Managing Agents of the Company and to consider and if thought fit, to pass the following resolution as a special Resolution in respect of which special notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative Explanatory statement is annexed hereto:—

"RESOLVED that pursuant to Section 261 of the Companies Act, 1956, Sri P. D. Bangur, an Associate of Messrs. Kettlewell Bullen & Co. Ltd., the Managing Agents of the Company be and is hereby re-elected a Director of the Company."

- (4) To elect Auditors for the current year and to fix their remuneration.
- (5) To transact any other ordinary business of the Annual General Meeting.

The Share Transfer Books of the Company will be closed from the 21st July to 29th July, 1958, both days inclusive.

By Order of the Board,

KETTLEWELL BULLEN & CO. LTD.,

Managing Agents.

Calcutta, 26th June, 1958.

Note:—A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

Explanatory Statement under Section 173 of
Companies Act 1956, in regard to item No. 3.

The Company has received a Special Notice, as required by Section 261 of the Companies Act, 1956, of intention to propose the resolution set out under this item as a special resolution for the reason that Sri P. D. Bangur, a Director of the Company, who retires by rotation at this Annual General Meeting is also a Director and Member of Messrs. Kettlewell Bullen & Co. Ltd., the Managing Agents of the Company and such an associate of the Managing Agents' and hence he can only be appointed a director of the Company by a special resolution of the Company under the said Section 261 of the said Act and that it is in the interest of the Company that it should continue to avail of the benefit of the valuable advice and guidance of the said Sri P. D. Bangur by appointing him as a Director of the Company.

COMMUNIST CHINA QUICKENS THE PACE

TO SURPASS U.K. BY 1962

NOBODY will have failed to notice the particular vehemence with which Peking has been condemning Titoism in recent weeks. The most scurrilous attacks on Yugoslavia published in the communist Press have been in the Chinese newspapers. There, the Marshal and all his works have been denounced with a vigour not exceeded by Stalin in 1948. Borba has noticed that the most hysterical allegations of "revisionism" and anti-Leninist heresy have come from much further east than Moscow, and in many of its replies it has spoken over Mr. Khrushchev's head to Yugoslavia's most violent critics, those in Peking. Similarly, the most complacent observations on the judicial assassination of Imre Nagy were published in the same place. Many western communists, gravely embarrassed by this execution, which apart from being a crime was a serious diplomatic error on Russia's part, are saying that the real responsibility for it lies with Peking, which is pushing Moscow into the most illiberal courses. True or not, that would be consistent with what anyone can see in the communist newspapers, that the "tough" faction in Moscow has unlimited support in China, where any deviation towards liberalism or tenderness is uncompromisingly rejected.

Now, even within the nightmare world of communist logic, this is really a very curious situation. Why should the biggest nation on earth so much concern itself with the domestic policies of a small and distant country which, after all is said in Tito's favour, remains intolerantly communist? Why should a regime that already has formidable problems on its hands find time to bully its tiny Hungarian ally into the absurd, unnecessary and useless execution of a defeated politician? The blanket answer "Marxist orthodoxy" will not serve, for the Chinese are no sticklers for dogma and advertise some of their own departures from the traditional "line". Plainly, these actions are meant to have symbolic value within China itself. Commentary on them provides the occasion for warning the Chinese people of renewed ruthless political pressure. As always in a communist regime, the reasons for such increase in political pressure are to be found in the imposition of new and heavier economic burdens.

China, in fact, is today on the threshold of a fresh period of forced economic expansion. The slogan for the present phase of effort is copied from the motto that Mr. Khrushchev took over from Stalin: "Equal and surpass the United States". But in the Chinese version this becomes "Equal and surpass the United Kingdom". The theme of the second Chinese plan, now being drafted, is the intention to catch up with British output of certain products (coal, cement, fertilisers and machine tools) by 1962. Peking does not of course aspire to equal British output of these things *per head*, which is what the Russians mean when they talk of catching up with the U.S. (Russia and the U.S. having comparable populations). But they seriously aim to equal total British output of several basic products, and this means doubling the production of heavy industry between 1958 and 1962. What this ambitious project will entail in the shape of economic control and political regimentation one can guess by imagining for a moment the likely results of India setting herself such targets. Hence no doubt the necessity to clear the decks completely of any form of political dissidence, to liquidate the least opposition to monolithic totalitarianism, and to dispel the lingering perfumes of the period of the "hundred blossoms". Hence in turn the savage repudiation of laxer doctrines at the other end of the communist world.

But one cannot grasp the full impact of this new orientation on the Chinese economy without recalling the difficulties into which China had fallen earlier this year. On this page on 10th April last, a comparison was made of the Indian and Chinese situations, emphasising their essential similarity and pointing out that the Chinese plan had been cut back as much as India's, that India probably retained a lead in the rate of expansion and finally that China's embarrassments would last throughout 1958. Few of the facts on which

that comparison was based have been altered since—if anything, they have changed in India's favour, for this country has recently received an appreciable measure of foreign aid whereas China has received nothing. But the conclusions that the Peking planners have drawn from it differ very widely from those that we, in our capitalist innocence, thought to be indicated. Faced with very similar problems to those now causing so much worry in Delhi, the Chinese regime has reacted by pushing the accelerator down to the floorboard.

To those who are familiar with the dangers and complexities of the Indian situation, such a decision at first will seem folly. But what is impossible in a democracy is feasible in a dictatorship that is ready to pay the price. Nevertheless, even if the political screw is tightened as the anti-revisionist campaign suggests it is to be, Peking is taking a considerable risk. This can be seen by reference to the question of food supplies, which is the key to forced industrialisation. The last grain crop, in 1957, totalled 185 million tons whereas the plan had called for an output of 200 million tons, this being later revised downwards to 191 million. The result achieved was only very slightly better than in 1956 and because of the intervening increase in population the supply of grain per head was actually less. "Self-criticism meetings" were held up and down the country to explain this relative failure, which was (refreshingly) frankly admitted by the authorities. For 1958 the cautious but still high target of 196 million tons has been set, and a really admirable effort is being made to ensure that it is attained, and exceeded in the immediately subsequent years. There is to be a determined extension of small-scale irrigation works, promotion of the agricultural-machine industry and a staggering expansion of fertiliser production—twenty new nitrogenous fertiliser plants in the next five years, a target output of 15 million tons by 1967. But even if these projects succeed, the fact stands that China is gambling against drought and flood. There is very little margin of error—and the population grows by 12 million a year.

Thanks to a rigorous limitation of consumption, the risks are slightly less on other fronts. For example, last year the annual cloth ration was increased from 5.3 metres to 6 metres a head—whereupon the planners ruled that sufficiency had been attained, and started stocking cotton. A store of 100,000 tons of fibre was laid aside as reserve against future penury. The readiness to impose strict rationing at the subsistence level permits inflationary investment that would be ruinous in a freer economy. Moreover, drastic economies are being made in administration and defence. The budget for the administrative services this year is only 86 percent of last year's, the defence budget only 90 percent. This latter cut is made possible by the repatriation of "volunteers" from North Korea, no doubt; in giving Peking the credit for having cut defence

outlays, one must remember that the country was lately at war, or on a war footing.

The economic dangers are, on the other hand, much increased by the continuation of an expansionist foreign policy, which had led communist China to become a fairly substantial foreign lender. The absurdity of this expensive propaganda does not require to be underlined in India where we know how heavily this country today relies on borrowing abroad. It was shown in the April article already referred to that China has been receiving much less assistance from Russia than is commonly thought, and is in fact now in the phase of repaying earlier Russian loans. Since then, economists who specialise in penetrating the labyrinthine mysteries of Chinese statistics have calculated that for several years past China has been lending abroad more than she received from Russia. Until the end of last year, this aid went mainly to the two neighbouring communist States, North Korea and North Vietnam. The former, a virtual puppet regime, was largely subsidised from Peking. Assistance to these two countries has just been reduced and this explains why China can now afford to assist Egypt, Cambodia, Nepal, Burma, Ceylon and the Yemen; aid has been offered to Laos and Thailand though not, as far as we know, accepted. The conditions on which this aid is vouchsafed are in most cases unknown (as are the conditions and extent of Chinese aid to Mongolia and Albania) but it is sure that in the case of Ceylon and Nepal there are "no strings attached" and that Chinese aid is an unrequited gift. The intention, of course, remains political, and the economic burden this imposes on the donor—who is naturally suffering the same foreign exchange difficulties as India—must be considerable.

Foreign exchange difficulties account for the intensity of the Chinese export effort in south and south-east Asia. The effects of this competition have already been felt by Indian exporters seeking to direct their goods to the same markets. Peking continues to follow the trading policy that was described here last year: very considerable trade surpluses are acquired in exchanges with the countries of south Asia, and these enable China to incur a heavy deficit in its trade with Europe. Thus no attempt is made to vary, widen or improve the range of exports offered; there is a single-minded concentration on the traditional export lines absorbed by such countries as Malaya and Indonesia. Even when China has bought from these countries the commodities, such as rubber, that she needs, she has a surplus of sterling adequate to finance her imports of capital equipment from the West, and of course the assistance programme just mentioned.

Thus, from roughly similar situations at the beginning of this year, India and China have diverged on to lines of economic policy even more contrasting than they were before. The whole political and moral approach to comparable problems is so radically different in the two countries that isolated comparisons of economic performances in this or that field would be almost meaningless. All questions of humanity and democracy aside, it remains to be shown that in terms of brute efficiency the course the Chinese communists are now choosing is superior; for the moment the risks and dangers are as evident as the possible advantages.

BULWARKS AGAINST U.S. RECESSION

OFTEN this year Britain's Chancellor of the Exchequer has been accused of complacency, but by mid-year even he had to admit that the European economy was following the downward course of the American. Mr. Heathcoat Amory warned that the end of the boom in Europe would be the background to the Commonwealth Conference in September, and he added: "We cannot look at present to rising European demand to counteract the downturn in the U.S., as we could in the last recession." That thought is not new, but it ought to be repeated. In the post-war era moderate recessions have occurred in both America and Europe, but not, until now, simultaneously. If the American recession is now at its lowest point, as some observers believe, we may yet be spared a full-scale recession in both these major industrial areas simultaneously: for the European recession has not proceeded far, and the American economy

may be moving upward when the European economy reaches its lowest point. But if both recessions proceed together the position of the commodity-exporting countries will become more difficult, and recession will be truly a world-wide phenomenon, requiring forceful counter-action.

So far, however, the American recession has had relatively little effect on international finance. The recessions of 1948-49 and 1953-54 caused a serious shortage of dollars, but a characteristic of the present recession is a persistent outflow of American gold. The decline in internal trade has had surprisingly little effect on American imports where—as American exports have declined substantially. The balance of payments has turned against America. Some of the factors involved in this development have been investigated by the Economic Commission for Europe, and its recent report is not altogether confident that the improvement in

the financial position of the non-dollar world vis-à-vis the dollar area will be maintained. It expects a decline in U.S. imports in the second half of 1958 and suggests that some of the causes of the decline in U.S. exports are temporary.

However, in one important respect one can perceive a possible long-term factor in this improvement. It may be true that the demand for American exports has been reduced by the decline in the internal trade of non-American countries—particularly the primary-producing countries, which were affected by the decline in commodity prices even before the American recession began. Yet the European countries' exports have not been reduced to the same extent as America's, if at all. Is it possible that America's exports are no longer fully competitive? Such a deduction would be too superficial without an enquiry into the categories of American exports in decline; and such an enquiry (as undertaken by the Economic Commission for Europe) shows that it is in the primary rather than in the manufactured category that American exports have declined. This fact is surprising if one considers that outside of north America the recession has occurred, so far, mainly among potential customers in the primary-producing countries; but it can be explained by the fall in prices of primary goods while prices of manufactured goods have been held or raised.

To discuss these matters in terms of diminishing trade is not very cheering, but in a strictly financial sense it is comforting to feel that recession outside of America will reduce demand for American goods and so ease the problem of dollar scarcity if American imports are reduced and American companies export less capital. These

two factors together, operating while the outside world's demand for dollar goods was maintained, could reduce the available supply of dollars to an extent that, though moderate in relation to the total of international transactions, would be substantial in relation to the world's reserves and therefore damaging to world trade in general—not merely to dollar trade in particular. It may therefore be considered necessary to reduce expenditure of dollars approximately to the same extent as the supply of dollars is reduced. Doubtless with this thought in mind, the American Administration has seemed recently more liberal in its attitude towards foreign grants and credits. But they relate to big capital goods rather than to ordinary manufactures, and it is not certain that they will fully counteract the effect on export trade of America's rising costs. The "built-in stabilisers" which have kept the American recession within relatively moderate proportions have certainly been a factor in the upward trend of American manufactured prices, and the various methods of supporting prices of primary goods, for the benefit of domestic producers, have denied American manufacturers some of the benefits of the lowering of primary prices in the world in general. It is possible, therefore, that many American manufacturers will in the future be less successful in selling their goods abroad, even if more public money is made available to improve the non-dollar world's liquidity and to strengthen its demand for American goods.

If, despite these various influences, the "dollar gap" widens again, the non-dollar world will not stand idly watching this development and bemoaning its effect on international trade. Mr. Heathcoat Amory has rightly insisted that Britain is not

strong enough to reverse a downward trend of international trade by liberal spending; but western Europe as a whole would be a very powerful unit, and this area and the overseas sterling area combined could certainly protect themselves from the backwash of the American recession if they adopted appropriate policies—which would necessarily be co-ordinated. It is distressing to observe that disharmonies in European policies and payments are at present supplementing rather than counteracting the effects of the American recession. At least, the fatalistic idea that if America is in recession the whole "free world" must suffer is no longer popular. Last year the United States absorbed only about 12½ percent of the world's imports, while western Europe absorbed about 45 percent, and the dominions and colonies associated with it about 15 percent. In the light of such figures, an American recession does not appear so intimidating.

DEVELOPMENT WITH INSTABILITY

THE talk which Mr. H. V. R. Ienger, Governor of the Reserve Bank, gave before a discussion group in Bombay last week was a frank enough statement of facts, but it was also a clever and calculated defence of some of the Government's economic errors—many of which are quite indefensible. Mr. Ienger is perhaps correct in saying that basically the economy is still sound and that its foundations have been strengthened by planned measures, but he omitted to mention the painful repercussions which some of these are now having. For instance, Mr. Ienger quotes the import figures for 1955-56, 1956-57 and 1957-58 and says that a substantial part of the Rs. 1,174 crores of imports in 1957-58 (which compared with Rs. 1,077 crores and Rs. 757 crores in the two previous years) went into machinery and metals. There is nothing in his speech to suggest that the present acute scarcity of foreign exchange is almost wholly due to the excessive imports of the year in question, and that in order to make way for Government projects, many vital branches of private industry have had to cut production, thus leading to shut-downs and large-scale unemployment. He did not mention that residential building in urban areas has practically ceased, construction activity in general all over the country has slowed down with increased rural under-employment, and the consumer is being fobbed off with expensive goods of indifferent quality because imports are forbidden.

In fact, reading through Mr. Ienger's address, one does not get the impression that the present economic crisis is indeed grave, and that India is being forced to raise fresh long-term foreign loans to maintain the existing production level of her economy and finance the "hard core" of the plan. Instead, one is treated to a theoretical discourse on the dispensability of foreign exchange or gold reserves as backing for a modern currency, and the need for large foreign aid for the development of a backward economy, duly substantiated by appropriate examples from history. But the question has never been answered whether the planners of India should have framed such a gigantic plan without adequate thought of the external finances which were obviously going to be necessary. There was even a tendency among the planners at the beginning to play down the importance of foreign aid. Mr. Ienger however says: "It would have required an enormous accumulation of external reserves to enable us, on our own, to finance a development programme of the magnitude that we have undertaken. Given the basic facts of the Indian economy, a low per capita income, a very limited margin of saving and the rising pressure of population, there is no escape from the conclusion that large-scale industrial development would require, for some years, a good deal of external assistance,—which was also historically the experience of countries which are now highly developed.....I am mentioning these well known facts because their significance has not always been fully recognised in our country. There has been some tendency to think that we could achieve progress with our own strength and that it somehow involves some loss of prestige to ask for international assistance for our development programme." It is not clear at whom this criticism is directed, but Mr. Ienger perhaps would find more people who think like this in Government circles than outside, and if some among the public believe likewise it is largely because the Government has never made the position wholly clear. In any case, all countries in the world have their share of cranks and fools.

Given the present standards of management, one cannot assume an over-optimistic view of the future of the economy, especially of the results of the second five year plan, simply because a certain U.S. official has stated to Congress that the Indian rupee may within 10 or 15 years become a hard currency. One is not so sure that "the rupee is as sound as it ever was," because its purchasing power is declining rapidly, and its position in foreign exchanges does not appear to

be particularly strong. It will not become a sound currency until India puts her economic house in order—by substantially increasing food production, by maintaining the present level of industrial production in all branches, and finally, by pruning the

plan to more realistic proportions. Mr. Ienger knows that India has got to do these things in order to overcome the crisis, and it is to be hoped that he is a little more frank in his advice to the Government.

Current News and Comment

Metal Box Sales Rise

In a statement circulated to shareholders on the occasion of the forthcoming annual general meeting, Mr. H. Chiswell Jones, chairman, the Metal Box Company of India Ltd., says that the sales during the past year improved to Rs. 612 lakhs from Rs. 567 lakhs in the previous year, or a rise of a little less than Rs. 50 lakhs. (A fuller version of the statement appears elsewhere in this issue of *Capital*). The increase is principally due to the company's ability to meet, as far as the raw material availability made it possible, the growing demand within the country. A noteworthy success was achieved in the sale of those goods which are not made from tinplate, a scarce material, and these were rigid and collapsible tubes for toilet and pharmaceutical packs, roll seal pilferproof and other closures for bottles, industrial components, diethylene bags, closing machinery and advertising media. Their sales increased by as much as 38 percent, and they now constitute a significant proportion of the company's total output.

It has had to face the raw material headache in common with most other industries. The current supply of tinplate, the principal raw material for the company's manufactures, says Mr. Chiswell Jones, has been adversely affected by the country's foreign exchange scarcity, as a substantial share of its requirements has to be imported. The imports of many subsidiary but important materials, "which, while largely manufactured or processed in the country, have basic constituents which are not produced indigenously," have also been cut down. The company's stocks of tinplates plus the limited import licences granted enabled it to meet all requirements up to the end of March. Since then there has been a deterioration in the indigenous supply position due to the shortage of tinplate bars. As a result, stocks are now well below normal levels and the company is passing through a critical phase involving the loss of operational efficiency at the factories, so the it has been unable to supply all its customers' requirements in time. The company has asked for additional import licences and it expects that the position will be less critical later in the year. The indigenous supply position of this raw material is also likely to improve with the completion of Tatas' expansion programme. Tinplate has, however, been made freely available for export goods, so the company has continued to make its export promotion efforts. But the high cost of the local tinplate often prices its products out of the more severely competitive markets of south east and west Asia.

The development programme of the company is progressing well. The Government has given its approval to the terms of the long-term credit offered by the company's consultants to cover the import of plant and machinery for plastics development and plant, machinery and spares for its metal container manufacturing equipment. Licences have also been obtained to cover the operations in the plastics field embracing injection moulding and polyethylene extrusion and printing. Additional plant has been ordered and will be installed this year. A new factory, it is proposed, will be built in Faridabad to replace the existing Delhi factory which is too small for its requirements. The range of machinery manufacture has been expanded to include double seaming machines for the canning industry, which have hitherto been imported.

Gas Supply for Calcutta

In his address from the chair at the annual general meeting of the Calcutta Gas Co. (Proprietary) Ltd., Mr. M. L. Jalan reviewed the activities of the Oriental Gas Company Ltd., a subsidiary. (A fuller version of the speech appeared in last week's issue of *Capital*). A great deal of adverse criticism has appeared in the Press about the decline in the standard of service provided by the company to gas consumers in Calcutta. Consumers have occasionally complained that they have not received their money's worth, and that the standard of service provided by an essential public utility has not come up to expectations. It is clear that their allegations have not been baseless, clear that Mr. Jalan himself has indirectly admitted "the falling off from the earlier high standard of performance" which was the result of circumstances beyond the company's control. From 1952 onwards there were reports that the Government of West Bengal was considering a scheme for meeting the gas requirements of Calcutta from the

Durgapur coke oven plant, and it was reported in 1954 that global tenders were invited for laying a pipeline for that purpose. "You will appreciate that, in a situation where even the survival of the company was uncertain, there was no incentive for the company to undertake an expansion programme involving heavy capital outlay." It was not till March 1957 that the company knew definitely that the Durgapur gas project would be subjected to great delay on account of the shortage of foreign exchange. It then drew up an expansion programme involving an expenditure of Rs. 35 lakhs. The plant has been shipped from England, and if things go according to schedule, the company hopes to have it in commission by this winter.

Mr. Jalan says that with the installation of this plant, the capacity will increase by 20 percent to 6.7 million cubic feet a day. He maintains that the company's standard of service could have been better had it not been facing a difficult labour situation. "Agreements entered into by unions on behalf of workers are flouted, party politics is rampant and indiscipline has assumed serious proportions. Orders of officers are disregarded and normal factory routine is disrupted as a consequence. You will appreciate that, in such conditions, it is extremely difficult to maintain normal supply of gas." Because labourers do not work as they should, the throughput of coal in the retorts and the temperature have fallen, causing a decrease of 33 percent in production in 1957 compared with 1953. Mr. Jalan says that if workers were willing to give a full day's work for a full day's wage, the company could produce 50 percent more gas, with the same number of settings as are running today, or 5 million cubic feet a day against the present rate of a little over 3 million cubic feet. The Government of West Bengal has set up a committee to investigate the working of the gas company. Mr. Jalan hopes that some assurances will eventually be given concerning the Government's intentions about the future of the company.

Incentives for Exporters

The Central Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, has said that the Government is considering a scheme under which exporters will be allowed to use some percentage of their foreign exchange earnings to import certain essential raw materials required for the production of articles meant for export. He has said that he will ask the Director of Export Promotion and the Chief Controller of Imports to see whether an adjustment to include the import of allied items could be made in the scheme now being considered by the Government. Mr. Shastri has also announced that his Ministry has taken up with the Reserve Bank and the State Bank of India the question of providing credit facilities to exporters at relatively easy terms. In view of the foreign exchange crisis, the Government, the people and business men must make concerted efforts to increase exports. "So far as the Government is concerned, it may have to give up some portion of its revenue by scaling down some of the export duties and cesses, and methods will have to be devised for reducing the transport and other intermediary charges so as to provide incentives to exports. Similarly, the business man and the shipper will also have to take risks and willingly make adjustments even at some personal sacrifice." Mr. Shastri says that if the country wants to build up its exports in a relatively short period, a part of its production will have to be diverted from the internal to the external market, and this might

naturally create some shortages within the country. India is unable to compete in the world market because of the high prices for her goods. Therefore, it might be necessary to sell Indian goods at a higher price inside the country and at a lower price abroad. "This phenomenon should not deter us, as it is obvious that we cannot build up our exports unless we tread this line. Japan and many other countries in Europe have built up their exports in this very way." Mr. Shastri has appealed to the business community not to hoard commodities which are to be exported. The prospect for exporting any commodity at present leads to hoarding and thus a condition of artificial scarcity is created resulting in a rise in prices. The Government will not put up for long with any situation of this kind. Because of various factors, a downward trend is noticeable in India's export trade. The average annual figure for exports has, therefore, to be pushed up. "In fact, foreign exchange has to be earned not only in crores but even in lakhs and thousands," Mr. Shastri says.

U.S. Business Trends

The U.S. economy at mid-year is marking time, with the downturn arrested, but no indication as yet of a vigorous recovery, says the latest newsletter of the First National City Bank of New York. A sufficient number of the basic economic indicators now show moderate gains over the low points reached in late winter or early spring to provide assurance that the expected "bottoming out" has in fact occurred. On a seasonally adjusted basis, small but encouraging increases were registered during May in industrial production, personal income, retail sales, housing starts, and total employment. Preliminary data indicate that these advanced levels were at least maintained in June. The temptation to take a rosy view of imminent recovery is strong, but a more likely prospect as described by the Presidential Assistant, Mr. Gabriel Hauge, is that the economy "will mill around in the summer". The hope aroused by recent favourable developments is moderated by the prospect that seasonal declines will be accentuated in steel, motor-vehicles, and other lines, that liquidation of inventories will continue, and that business men will cut plant and equipment expenditures further.

The Federal Reserve index of industrial production (seasonally adjusted 1947-49=100), which had declined from a peak of 146 to 126 in April 1958, picked up a point in May to 127. It is encouraging that this rise came about from recovery in the two lines that had been the hardest hit in the recession—steel and motor-cars. In June, steel mill operations have averaged about 20 percent above May, and motor-car assemblies held steady. Weekly output in early June was steady or rising in the petroleum, paper-board, coal, and lumber industries. An attitude of caution is counselled by the fact that none of these industries expects uninterrupted recovery. The rapid rise in steel mill operations from 47 percent of capacity in late April to 65 percent in mid-June was attributable in part to hedging against the possibility of higher prices following the automatic wage boost on 1st July. Customers whose steel inventories had been worked down to a low level felt they had little to lose by replenishing stocks, and steel mills themselves reportedly did some rebuilding of stocks of semi-finished steel before 1st July, when their employment costs increased approximately 20 cents an hour. Lower operations are being scheduled for the early summer. The first motor-car plant shutdowns are already occurring as the 1958 model year draws to an end. The dealers are expected to enter the second half with stocks somewhat less than 100,000 cars, which at current rates are equal to roughly seven weeks' sales. With some new models scheduled for introduction in mid-September, this does not leave room for much additional production of the 1958 models. It would not be unusual for industrial production to fall back again after a brief advance from the recession lows. This has happened in a number of previous recessions. In 1954, the industrial production index hit bottom in March at 123, rose to 125 in May, but dropped back to 123 in July and August. The real recovery did not start until six months after the low point had first been reached.

Throughout the business decline, the relatively steady flow of personal income has been a powerful stabilising influence. In spite of the sizeable contraction in general economic activity, disposable personal income in the first quarter was down only \$4 billion, or 1 percent, from its peak annual rate and was probably off even less in the second quarter. Increased Government transfer payments—unemployment insurance, social security and veterans' benefits—have offset the \$5-billion decline in the annual rate of labour income and have been largely responsible for the advance in personal income in March, April, and May. A further rise in personal income is likely when expanded unemployment insurance goes into effect in many States and the Federal Government increases salaries nearly \$1½ billion a year for post office employees, civil service workers,

4½ PER CENT BOMBAY STATE DEVELOPMENT LOAN, 1970 ISSUED AT PAR AND 4½ PER CENT BOMBAY STATE DEVELOPMENT LOAN, 1971 ISSUED AT Rs. 99.75 PER CENT OPEN ON THE 15TH JULY, 1958.

The loans will be closed as soon as total amount of approximately Rs. 1,000 lakhs has been subscribed, and in any case not later than the close of business on the 19th July, 1958.

The applications for the loans will be received at—

- the office of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras, Nagpur and Bangalore
- the branches of the State Bank of India within the State of Bombay except at Bombay and Nagpur and at places mentioned in (c) below
- the branches and treasury pay offices of the State Bank of Hyderabad within the State of Bombay
- the Government treasuries and sub-treasuries in the State of Bombay at places where there is no branch or treasury pay office of the aforesaid banks
- Applications will also be collected by the State Bank of Saurashtra at Bhavnagar and its Branches within the Saurashtra area of Bombay State and forwarded to the nearest receiving office.

Full particulars can be obtained at any of the receiving offices mentioned above.

and the armed forces. The stability of income more than anything else appears to be responsible for the continued high rate of consumer spending.

Grievances of Rice Millers

In a memorandum submitted to the Central Minister of State for Revenue, Mr. B. Gopala Reddy, in Guntur, the Andhra Pradesh Rice Millers Association has complained that no provision for the payment of Central sales tax on exports of rice ex-mill from the State has been made in the relevant Act, but the tax is nevertheless being imposed. As the millers have been paying a heavy purchase tax of 3 percent on paddy, a tax on rice is a double taxation, opposed to all principles of equity. The memorandum also points out that the policy adopted by income tax officers of basing assessment on bank statements showing the consumption of fuel, oil and electricity and on the mere assumption of the outturn of gross profits, would undermine the financial stability of the rice milling industry. Moreover, it is unjust to proceed on a sweeping generalisation that the accounts of all rice millers are unreliable. A further grievance is that clear instructions have not been issued up to now in spite of the fact that Mr. Reddy, as a member of the Andhra Cabinet, had stated in March 1958 that muster rolls alone would not be taken as the basis of assessment for rice mills and that if any assessment of the kind was made it would be revised. In his reply, Mr. Reddy said that the Government had been compelled to adopt the present pattern of taxation, and under present circumstances, it was out of the question to expect the abolition or reduction of taxes. Referring to income tax, the Minister said that it was the only tax which fetched nearly Rs. 217 crores, the other taxes such as those on wealth and gifts, realising only about Rs. 20 crores. It could easily be inferred from this that except for income tax, all other taxes affected the wealthy only. It was not possible and would not be right to reduce taxes, both direct and indirect, he added. The Central Sales Tax Act, the Minister disclosed, would be implemented at as early a date as possible, to suit the conveniences of trade and industry. Turning to the point raised in the memorandum about the income tax officers making their calculations on the hypothesis that the rice millers were anti-social and that their accounts were misleading, Mr. Reddy suggested that millers as a whole should be careful in the maintenance of their accounts so as not to give ground for suspicion. If every miller scrupulously avoided maintaining false and misleading accounts, there would be no room for suspicion and that would benefit the entire trade.

Textile Problems

The Indian Cotton Mills Federation has submitted a memorandum to the Textile Enquiry Committee drawing the latter's attention to some of the problems facing the industry. The Federation considers that the most important problem is the steep fall in the offtake of cloth in both the domestic and foreign markets. This, it is contended, has resulted in the heavy accumulation of stocks with the mills. Sales have had to be made at unremunerative prices over a period of 21 months. Funds with the mills have diminished at a time when a larger working capital is required to meet increased charges for cotton, wages, stores and power. Many mills have reached the limit of their borrowing capacity and now find themselves in a position of having to make distress sales. The Federation points out that the per capita availability of cloth increased from 9.7 yards in 1950 to 16.5 yards in 1956. Consumption also increased proportionately, largely because of the rise in the national income following the implementation of the first five year plan, and the generally satisfactory food situation as shown by the trend in grain prices. But a sudden fall in offtake came about in September 1956, and there has been no improvement since. It says that a fall in consumer purchasing capacity accounts for the loss in cotton textile demand. In support of its argument, the Federation points out that the index number for wholesale prices of food articles increased from 86.6 in 1955-1956 to 102.3 in 1956-57 and to 106.4 in 1957-58. It is further pointed out that almost 60 to 70 percent of the budget of the common man consists of expenditure on food and the rise in grain prices has compelled him to reduce his spending on other items. Simultaneously with the reduction in consumer spending capacity, several factors have combined to raise the cost of manufacturing cloth. These, the Federation states, are the fiscal policies of the Union and State Governments; a continuous rise in labour costs; a rise in the price of fuel, stores, colours, chemicals and spare parts; and the inability of the mills for various reasons to obtain new machinery for rehabilitation and modernisation on the required scale. The Federation considers that it would be necessary to remedy all these disabilities simultaneously if the textile industry is to be saved from its present crisis and its working on an economic basis is to be restored. Meanwhile, the concession announced by the Govern-

ment of India concerning the excise duty on cloth, has had little effect on the local Bombay market. It is, however, conceded that the lowering of the levy on medium counts will help clear accumulated stocks with mills. There was no adverse reaction following the increase of the duty on fine and superfine qualities because these account for only 5 and 10 percent, respectively, of the total production. Mills specialising in these varieties are always booked far ahead and efficient units in this section of the industry should be able to bear the impact of the new policy.

Violent Strike in Motor-car Plant

The chairman of Premier Automobiles Ltd., Mr. Lalchand Hirachand has said the present strike at the company's factory means a production loss of Rs. 700,000 a day. The daily normal output at the plant is 35 to 40 vehicles. He says there is no question of resuming production unless the management is assured that there will be no further outbreaks of violence. Mr. Hirachand has urged the Bombay Government to take "a little stronger action" against the strike which has been dragging on for a long time. He is convinced that if personal safety is guaranteed, at least 90 percent of the 4,000 workers on strike will resume normal duty. If the Government had taken action similar to that in Jamshedpur, the strike, in his view, would have ended by now. The Government has not responded to the plea for protection with the result that even the loyal workers of the company cannot attend at the plant. The chairman has indicated that the management may be forced to issue notice to the workers to resume work or to face disciplinary action. But such a step would depend on the attitude the Bombay Government decides to take. He denied allegations that dismissal notices have been served on 500 workers and says that only 120 workers suspected of having taken part in violence have been charge-sheeted by the management. Detailing the various acts of violence, Mr. Hirachand says that over 100 persons, including policemen, have suffered severe injuries and burns from acid bulbs, while at least one person has been completely blinded. The management has no objection to peaceful picketing as "industrialists of today have come to accept the basic principles of trade unionism", but it cannot tolerate violence.

Industry in U.P.

In his address to the U.P. Merchants Chamber in Kanpur last week, Dr. Sampurnanand, the Chief Minister of the State, made a passing reference to the terms of the Bombay loan which are rather better than those offered by U.P. This, in his view, means that Bombay enjoys a higher credit in the eyes of the Reserve Bank. From the tale of woes narrated by the president of the Chamber, Mr. Sitaram Jaipuria, U.P.'s credit cannot possibly be as high as Bombay's in the eyes of others as well. Speaking with particular reference to the textile industry, Mr. Jaipuria said that out of a total of 29 mills in the State, 16 have already "succumbed to the strain on their limited resources" and have suspended operations. "With the persistence of this trend any further," he said, "there is the likelihood of a few more mills which are on the top of efficiency, falling on the marginal line of production in Uttar Pradesh. There are also possibilities of a further unit or two closing, and another couple of units being able to work only intermittently if the present state of affairs continues." Seven mills in Kanpur, he disclosed, have five months' production in stock and the urgent problem is how to dispose of them.

Dr. Sampurnanand, unfortunately, did not have any answer to the specific issues raised by the merchant community. He only exhorted them to hold their heads high and have faith in U.P.'s industrial future. He also deprecated the defeatist talk about shifting the sugar industry to other States. In Ranikhet, he complimented the workers and the millowners for making the 1957-58 season "a year of peace" in the sugar industry. In spite of the peaceful conditions obtaining in the industry, the State's output of sugar for 1957-58 was only 25.6 lakh maunds compared with 29.4 lakh maunds in 1956-57. The drop in production has been attributed principally to the year's poor cane crop. The crushing figures for 1957-58 and 1956-57 are 258 million maunds and 303.5 million maunds, respectively. Although the factories crushed less cane during the year, the growers did not suffer any loss in their earnings. The crushing season being shorter, the cane price did not have to be linked at any stage with recovery, and the growers thus got the full price for the cane they supplied to the factories.

Labour in Management

Inaugurating the experiment in labour participation in management at the Hindustan Machine Tool factory, Bangalore, the Union Minister for

Industry, Mr. Manubhai Shah, referred some time ago to the legitimate apprehensions in some quarters that this experiment would not prove a success in an under-developed country like India. "I beseech you to make the experiment a success," he told the 3,000-odd workers of the factory. It is necessary to point out that the doubting Thomases are not all on the employers' side of the fence. For example, U.P.'s Governor, Mr. V. V. Giri than whom there can be few more sincere friends of labour. Even he has had to admit that he is not very optimistic about the future of labour participation in management in this country. Inaugurating an industrial workers' camp in Ranikhet last week, Mr. Giri has said that the conditions precedent to a success of the experiment are lacking in India. These conditions are a strong and well-knit trade union organisation willing and ready to take a responsible view of matters, and the presence, on the staff of these unions, of a full complement of technical experts who understand the technique and finances of industry, and "who are in a position to evaluate scientifically the demands of workers and who are ready and willing to discuss on equal terms with the technical advisers of employers the solution of problems," Mr. Giri has explained. Otherwise, he said, "all talk of workers' participation in management will be moonshine and not in the best interest of workers."

Mistakes of a Monolith

Addressing a Press conference recently, Mr. P. A. Gopalakrishnan, the new chairman of the Life Insurance Corporation of India, said that the Corporation proposes to introduce a large degree of decentralisation of powers. He appeared emphatic in his intention to cut out the red tape which is hampering administration. A large organisation like the Corporation, employing about 30,000 persons, could function successfully, stressed Mr. Gopalakrishnan, only if there were a large degree of decentralisation of powers which would enable the officers at various levels to transact business more expeditiously. His thesis is nothing new. It was anticipated by Mr. T. T. Krishnamachari, the former Central Finance Minister, when, after a factual study, he characterised the whole set-up of the Corporation as wrong. He called it a "hierarchy without the division of responsibility." Mr. Nehru endorsed this view during the last Lok Sabha debate on the "Mundhra deal", when he also stated that he was prepared to consider several corporations to end the present monolithic structure. A former president of the Federation of Indian Chambers of Commerce and Industry, Mr. Babubhai Chinai, has expressed the same view and has suggested the creation of a number of corporations. When Mr. Deshmukh introduced the Corporation Bill, Mr. Asoka Mehta anticipated the muddle which would arise from a monolithic organisation and suggested five corporations instead of one, which the Bill envisaged. Events have upheld Mr. Mehta.

Decentralisation of authority and a monolithic and unitary structure go ill together. The Corporation is already burdened with too many manuals and guide books. It is to be hoped that Mr. Gopalakrishnan will not add to the list by introducing one on decentralisation. What he should realise is that the very conception of the Life Insurance Corporation Act centres round a unitary base with a high degree of concentration of power in the top hierarchy. That has been the bane of the Corporation from its very beginning, and has robbed its officials of all initiative and drive. The need for infusing them with strength has long been felt, but neither has the Finance Ministry looked upon the Corporation as more than a department of its own, nor has the top hierarchy regarded the vast insurance empire as anything but its close preserve. The resulting administrative failures and very lop-sided service to life insurance clientele have led to the view that service cannot be properly rendered unless the monolithic structure is broken up into a number of independent corporations. By a different thought process, the spokesmen of the public and private sectors have come to the same view.

Export Promotion of Sports Goods

The sports goods industry had a special history of its own even before partition. The enterprise and initiative shown by the pioneers in Punjab for its development is commendable, and even now the people of that State are trying to maintain the industry's progress in spite of heavy odds. In his inaugural address at the Sports Goods Export Promotion Council in New Delhi, the Central Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, said that the Government would consider the question of approaching the Kashmir Government for the supply of willow and mulberry wood at least for one year in order that new necessary to plant mulberry trees on a big scale and the Minister has assured the Council that he will request the Central Food and Agriculture Ministry to take up this task in earnest. "I won-

der if it would be right to suggest that some research students in this line might as well try to study if there is any other tree and its wood which could replace the willow and mulberry wood." As for the suggestion that the import duty on nylon girths should be abolished altogether, Mr. Shastri says that a guarantee would have to be given that the imported nylon will be used only in articles meant for export.

Forward Trading in Shares

Forward trading has been tried once before in the Madras Stock Exchange, but it is now being handled on a more definite basis. Business on Friday last showed that greater activity is likely to develop in the shares which are now traded for a fortnightly settlement. The first clearing will take place on 23rd July and the list of closing prices showed that higher levels were touched in forward trading for selected planting shares. The textile group was not initially active since the latest report of the Lakshmi Mills has revealed that the 12 percent dividend declared on the enlarged capital is about the best to hope for—only Rs. 30,000 has been allocated to development rebate and no addition to reserves has been made in spite of a decline in the provision for taxation. However, a strong balance-sheet helped raise the quotation for the fifty-rupee shares to Rs. 104 c.d. during the past week. Market circles think that excise relief means little to spinning mills in Madras and they are likely to concentrate on low counts mainly to increase the output of coarse cloth to suit the Ministerial prescription. The long depression in textiles has, however, lifted.

Game without Rules

The problems which private enterprise in this country is facing are not to be disposed of by the tiresome platitudes which Ministers are accustomed to utter. A heavy load of taxation, pro-labour legislation and the constant threat of nationalisation are real difficulties which have bred a deep sense of insecurity in the minds of business men.

"A SURVEY OF INDIA'S FOREIGN TRADE 1958"

With this week's edition of CAPITAL is published a 84-page Survey of India's Foreign Trade 1958, containing articles discussing all aspects of the country's export and import trade. It reviews a field of activity which is vital to the existence and progress of a modern industrial economy, and one which is of more than usual interest at this critical juncture in the second five year plan. The supplement is being supplied free to registered subscribers and will be available to others at Rs. 5 copy (postage extra). Enquiries may be addressed to the Manager, CAPITAL, 5, Mission Row, Calcutta 1.

The foreign exchange scarcity has not only put temporarily a stop to expansion in many cases, but has even made it impossible to maintain the current level of production in those manufacturing industries which have to depend on imported raw materials and equipment. If the private sector is to exist and play its rôle within the framework of the mixed economy to which the Government is committed, then the game must be played according to some well-defined rules. Mr. P. N. Talukdar, president of the Bengal National Chamber of Commerce, pointed out in the course of his address at the latest annual general meeting (which had the benefit of Mr. Morarji Desai's lecture on the aims of economic planning) that more than 80 percent of the total economic activity of the country would always remain outside the direct responsibility of the Government. "Such being the case, the rôle which industrialists and business men play becomes particularly important and in the context of the policy of planned development, a full appreciation of our position by the Government also becomes important, for we have all to work in such a way that we fulfil the broad objectives of national economic policy in a climate of mutual trust and confidence." In the same speech Mr. Talukdar gave examples of Government action which have had a seriously corroding effect on the confidence of business men. He referred to the discussions on the investment policy of the Life Insurance Corporation, in the course of which the Prime Minister is reported to have said that the L.I.C. funds could be used for purposes other than earning the highest yields for the benefit of its policyholders and protecting the investments of the Corporation itself. "The Corporation might very well tend to develop into a monitor of private industries with the vast investment resources available at its disposal" Mr. Talukdar pointed out. The activities of the State Trading Corporation keep expanding and it has gone beyond its original purpose of establishing trade links with communist countries, and is now actually displacing long-established channels of the trade. This, Mr. Talukdar said, has created a sense of uncertainty

and insecurity among established traders, and he urged that a clear demarcation of the Corporation's field of activities should be made. Referring to new taxation for the plan, Mr. Talukdar said that against the original target of Rs. 450 crores for the entire plan period, the Centre and the States have been levying new taxes which over the five year period will amount to about Rs. 900 crores. But at least half of this new revenue, ostensibly raised for the plan, is being spent for financing schemes outside it and even for non-development expenditure for reasons left unexplained. And now Rs. 100 crores more in taxes has to be raised. This heavy rate of levies has had the effect of drying up the capital market for private industry and "it is constrained to live constantly on aids and loans from the Government." In the circumstances the dynamic energy of free enterprise has been bottled up, and business men feel that the rôle they have been assigned in the plan is merely a matter of expediency, and that they are existing only on sufferance. The game of the mixed economy appears to be without any rules.

FIRST JUTE CROP FORECAST

WE publish in another column the first Government forecast of the coming jute crop. It will be observed that taking a hundred to be the normal outturn, or what is known as a sixteen-anna crop, the Director of Land Records estimates the coming crop at ninety, or say 14 annas. The Government estimates of last year's crop was 106 only, or say a seventeen-anna crop. This seems an under-estimate, because last year's crop was the largest on record, the shipments only up to the 31st May having totalled 41½ lakhs of bales. If therefore, last year's crop was a seventeen-anna one and this year's crop is a fourteen-and-a-half-anna one, it follows that the Government estimate of the gross outturn at 48 lakhs of bales is below the mark; but without going into a labyrinth of figures, which indeed can prove anything, it seems certain that the coming crop will be far in excess of actual requirements; and, this being so, we do trust that our local mills and shippers will not tumble over each other in their haste to rush up prices. Dundee and the Continent have very large stocks on hand, and if our local mills only act with caution, they should be able to secure all they need at the same modest prices as obtained during the last season.

Without Prejudice

CLAIMING NON-DELIVERY OF
CONSIGNED GOODS

THE RIGHT OF REFUSAL

(FROM OUR LEGAL CORRESPONDENT)

HERE is another of those tricky little practical conundrums, the facts of which might face the reader at any time in the course of his private or commercial life. You are temporarily in, say, Bombay. From that city you consign to yourself by rail goods, your property, to your office or residence in Calcutta. The goods are not delivered. After waiting a reasonable time and serving the prescribed statutory notices you file a suit against the railway administration claiming as damages the value of the goods. Later the railway administration finds the goods in its possession. They had been lost and are now found. The railway therefore tenders to you your goods intact and asks upon you to withdraw your suit. But you no longer want the goods. You have replaced them by purchases in the open market and the original consignment is no use to you. You want to proceed with your suit for damages for the loss of goods caused by the negligence of the administration or its servants. Can you do so now that the goods are no longer lost and have been actually tendered to you for acceptance? The goods were sent at owner's risk.

Now the loss of goods in transit by rail is not in the least a rare occurrence. It happens every day. And one would have expected to find the

answer to the above problem conclusively decided one way or the other on ample judicial authority. It is odd therefore that there appears to be very little in the way of such authority and what there is seems dubious. So we may be grateful for a definite decision which comes to us from the Bombay High Court.

A firm had consigned to themselves 381 Kattas of gur from Meerut to Itwari station, Nagpur. When delivery was asked for, the railway delivered only 361 Kattas and was unable to deliver the balance of 20 Kattas of gur. This was on 8th January, 1954. The firm then served the usual notices and filed a suit on 3rd March, 1955. The trial court passed a decree against the defendant railway administration for Rs. 440 and costs. The administration appealed to the Bombay High Court (at Nagpur).

The trial court had come to the conclusion that the non-delivery was due to negligence and misconduct on the part of the Northern and Central Railways. This finding was not challenged in the High Court. But on behalf of the railways, Mr. Bhawe, their counsel, raised this point. This was that the railway administration had managed to find the missing consignment of 20 Kattas and therefore made an offer to the plaintiff firm to deliver the goods in specie on 25th March 1955.

The railways' contention was that the plaintiff firm was bound to accept this offer and even though the goods might be in a damaged condition the only remedy of the plaintiff firm was to sue the railway administration for damage to the goods but not for non-delivery. The defendant railway administration relied on two cases of the Nagpur High Court. They were: *Fazalibhai v Dominion of India A.I.R. 1951 Nag. 245* and *Jusaf and Ismail Co. v Governor General. I.L.R. 1947 Nag. 335*. No

other cases were cited by the railways in support of their contention for the sufficient though remarkable reason that no other authorities appear to exist on the point one way or the other. A simple point it was too. It is also worth noting that in both these cases the judges themselves were dubious as to what the law on the point actually was and as to whether they were enunciating it correctly. However, they did lay down a principle and it was thus expounded by S. P. Kotwal J. in the case we are now discussing. Said his lordship: ".....These cases are authorities for the proposition that if delivery of the consignment is offered to the consignee, in whatever condition the goods may be, the consignee must take delivery though he may give notice to the Administration of the condition of the goods and then sue the railway for damages. The principle itself was adopted by my learned Brother Mudholkar J. in the first of the two cases mentioned above with some hesitation and at page 247, column 2, of the A.I.R. report the learned Judge observed: 'I can find no direct authority in support of what I say but the following observations in *Hiori v L & N.W. Ry Co. (1879)*.....lend support to my view.' Then he quoted the observations of Bramwell L.J. that 'a return of the goods undoubtedly might be shown to reduce the damages in the case of a conversion not only where the owner voluntarily received back the goods but where he took them back against his will.'"

Here the reader is invited to stop and answer for himself this simple question, the answer to which is by no means simple or easy. Assuming the principle as above laid down to be correct, was the plaintiff's claim in the case we are now considering defeated by its application; and, if not, why not? Kotwal J. was himself extremely doubtful about accepting the correctness of the principle as enunciated. Nevertheless, his lordship did not go so far as to repudiate it. He accepted in a qualified way but held that it was not applicable to the facts in the present case. Why? Assuming the reader to be defeated, we will give him a clue which may enable him to give the correct answer. The plaintiff filed his suit on 3rd March, 1955. The offer to return the goods was made on 25th March 1955. Those two dates completely bowled that part of the defence out. It is one thing to offer to return goods after a claim for their return has been made. It is quite another to offer their return after a suit for damages for their non-return has been actually filed.

Personally, not being bound by judicial protocol under which learned judges are reluctant to dissent *in toto* from decisions of their brethren of equal standing and prefer to "distinguish" them, the writer may respectfully submit that the principle does not need "distinguishing" but overruling. It makes nonsense. Assume that I live in a moderate-sized flat. I am a teacher of the pianoforte and the "goods" of mine which the railway has negligently lost or allowed to be purloined in transit to me are a grand piano. Having waited some time, during which I have not been able through its absence to earn my living, I buy another and then instruct my solicitor to file a suit for damages. Before he can do so my original piano is recovered and the railway tenders it to me in full settlement. Am I obliged to accept it and encumber my flat with two grand pianos, one entirely useless to me? We throw not. To hold so would make nonsense, and the law is not non-., but commonsense.

In the Nagpur case, Kotwal J. thus dealt with the principle said to be laid down in the two cases we have cited that where, through the negligence or misconduct of a railway administration, goods have been stolen or lost, the consignee, if the goods are later discovered or recovered by the railway, must accept an offer of their return in all circumstances. ".....The principle was derived from the right of the defendant in a suit to show that the damages have, in fact, been mitigated. I do not see how that principle can be extended to a case where the cause of action accruing to the plaintiff has once been put in Court. In the present case the offer was made pending the plaintiff's suit (i.e. after it had been commenced) and the result of the acceptance of the offer could only have been that the plaintiff's right to carry on the suit would have been defeated. As I have said, the principle itself, as adumbrated in the two rulings cited above, was a principle which normally one would hesitate to accept. I see no reason for extending the application of the principle to a case where the rights of the parties have been taken out of the domain of the contract and become the subject matter of litigation. I therefore hold that though, ordinarily, the plaintiff cannot refuse to accept delivery even if the goods are damaged, he need not accept an offer after he has once filed a suit for damages for non-delivery."

You will have noted the hesitancy with which the original principle was laid down and the obvious reluctance with which Kotwal J. accepted it while qualifying its application.

Personally, and with due respect, we think that sooner or later the principle will be "qualified" out of existence. In the simple supposititious case of the grand piano cited above, we do not believe the plaintiff would have been obliged to accept the return of his piano whether the offer of its return had been made before or after he had filed his suit. In either event, the offer could be urged in mitigation of the amount of damages to be eventually awarded but that, we think, is all. In the Bombay High Court case the railway administration's appeal failed and the original award of damages was up-

A Ditcher's Diary

LITERATE, YES; INSTRUCTED, CERTAINLY; BUT EDUCATED, I do not think, pace Mr. Nehru, that the Russian people can be so described without important reservations. As it is understood in the free world, which includes India, education is not the sum total of certain categories of information on a particular subject. It is, rather, a state of mind achieved by cultivation in which the most worthwhile faculty is a spirit of questioning. It would be foolish to deny the many technological achievements of the Soviet Union, although it is necessary to remember too that even under the Czars, Russian scientists' contributions were considerable. Even in fundamental research the Russians are well advanced. And yet, the generalisation of the Russian people may not be entitled to be called educated. Unanimity, as we know, is the feature of primitive life. Discrimination and difference are the essence of a liberal civilisation, of which a fine product is Mr. Nehru himself. How little of these two qualities is encouraged in the Soviet Union can be seen as soon as we turn our attention away from the sputnik. The poverty of Soviet literature is something the Russian themselves admit. In art and music socialist realism has produced only massive junk of a soullessly mechanistic kind. Painters were reduced only to discovering the non-existent beauties of Stalin's pock-marked visage. Educated minds ask questions, and a friend who was in Russia about a year ago, tells me that when he asked one about Trotsky he met only horrified stares as though he had uttered an obscene word. Would an educated people ever have taken without question the two versions of Stalin Mr. Khrushchev gave in a matter of weeks? How could the same people, supposedly educated, think yesterday that Beria and Nagy (the list could be lengthened indefinitely) were people's heroes and today accept without demur that they were enemies of the people and agents of Anglo-American imperialism? The communists have produced competent hands, even some efficient minds—but no educated ones.

THE MOST DISAPPOINTING FEATURE OF MR. MORARJI Desai's address to the Bengal National Chamber of Commerce last week, or so it seemed to me, was his apparent failure to recognise that the aims of the Government and those of private industrialists are identical. Both want to raise the country's standard of living, and neither wishes to take too long doing it. The only difference between them concerns means, not ends. That is why I found Mr. Desai's attitude so difficult to understand. Surely he does not believe that business men are only happy when people are too poor to buy their products. Yet he spoke as if it were the ambition of private industry to restrict employment and impede the rate of economic growth—the very things by which business men live and prosper. Mr. Desai seems to be falling into the error of his predecessor and so many of his colleagues: that the Government's good intentions are an adequate substitute for effective policies. Perhaps Mr. Talukdar did not present his case as well as he might have done, but Mr. Desai would be deluding himself if he did not accept it as representing the views of the vast majority of business men in the views of the vast majority of business men in this part of India. And the reason they feel this way is because the Government is making it so difficult for them to achieve the very thing they are being urged to do—that is co-operate in the expanding of employment and the increasing of the standard

of living. Churchill's famous words about "Give us the tools..." would be a most appropriate cry for the private sector today. How can it increase employment when imported equipment and raw materials are limited, equity capital is almost impossible to raise, labour is undisciplined and work-shy, the bureaucracy is stifling, the Government is often unsympathetic and taxes are too high to make profits worth earning? It would require a magician, not a business man, to increase employment and production at anything more than a snail's pace under conditions like these. If Mr. Desai really wants to ensure prosperity in the next twenty or thirty years then why does he not do something to make it possible? The business man is only asking for his co-operation in securing what he claims are the Government's aims.

A FOURTH LOAN IN FOUR MONTHS WAS TOO MUCH, and I demanded an explanation of a former cook of mine who was, I soon found out, a little fonder of alcohol than Mr. Khrushchev appears to approve. He said he was sorry but saw the divine hand and the law of karma at work in his vice. "You see, sir," he said, "In my previous birth I must have borrowed a lot of money from that dholi who supplies me the hooch. I am only paying the debt back." The fourth loan was not granted and we soon had to part company, but that is not because I thought his explanation of addiction any more absurd than some others I had heard. Engels, Marx's closest collaborator, was satisfied that "the weary, disheartened worker comes back home from work. He enters his drab, dreary, uncomfortable and filthy lodging. He desperately needs something to cheer him up. Something to compensate for his work, something to make his drudgery seem worth while.....he takes to drink.....to forget for a few hours the misery of life.....Under such circumstances one cannot blame the alcoholic. One must blame those who made him that way." Engels wrote of Victoria's England, and I do not know how many of the objective conditions enumerated by him are today to be found in Mr. Khrushchev's Russia. I do know that the economic interpretation of alcoholism is as incomplete as that of history and only slightly more scientific-sounding than the law of karma which determined my cook's drinking habits. A largely unknown complex of mental and physical conditions drive men to drink in a big way, and an important factor is boredom. To the removal of this, Mr. Khrushchev, with all his parables, may have made a lesser contribution than a Polish cartoonist I have just read of. The Polish Government had tried making a surcharge of one zloty on every pint of vodka. To be used in a campaign against drinking. This cartoonist thereupon depicted a drunk hanging to a lamp post surrounded by empty bottles, the caption reading: "Today I contributed ten zlotys to the fight against alcohol."

THE WORDS OF MR. DOUGLAS DILLON—that "distinguished member of the American Administration" as the Governor of the Reserve Bank has described him—must have been a tonic to the Indian Government, worried as it is by the rapid deterioration of the sterling balances. Personally, when Mr. Dillon says that the rupee may become a hard currency within ten or fifteen years, I think he is talking through his hat. The rupee is not likely to become a hard currency for as long as

development lasts; and the Government would be failing in its duty to expand the economy as quickly as possible if it were to let it. What is more, there is no particular virtue in any currency being hard, and I for one hope that India never allows herself to join the ranks of the world's bad creditors. With so much popular talk about reserves these days, it is not surprising that thinking on the subject is confused. A country is not an individual. Large reserves do not indicate national wealth, only bad trading practice. When a nation earns a surplus on its combined current and capital accounts, then that is a sign it should be importing more and putting the resources back into circulation. Unless it does this, some other country is going to find its trading unnecessarily restricted. It is, of course, entitled to pile up sufficient reserves to handle current payments and have enough left for an emergency. But the sort of thing the United States has been doing for the past half century—that is draining off the world's gold and burying away in Fort Knox—is indefensible, and may well be found by historians to be one of the great economic and political disasters of the twentieth century. If it were not for the dollars which were disbursed in aid programmes, the funds invested abroad on private account and the loans America has granted to almost every free country in the world, the effects of such a practice could have been catastrophic in the early post-war period. Only now that the American public is developing an appetite for imported consumer goods does this ridiculous set-up promise to end. The trouble is that West Germany now looks like falling a victim of the same kind of thinking that it has taken fifty years to cure America of. No, I am as eager to see the rupee a sound currency as the next man. But I would not like to think that India is just aching for the day she can join the ranks of those nations who deliberately make things difficult for their neighbours by keeping their currencies too hard.

ARTISTES CAN BE TEMPERAMENTAL PEOPLE, AS WE all know, and often the more renowned they become the more difficult they are to handle. But that is not surprising; their lives are so full of new faces and circumstances that what we may take to be unnecessary eccentricities are probably nothing more than a desire to uphold to the world the dignity of their art. I have heard that Miss Ida Haendel is a woman of strong personal predictions, as well as being one of the world's leading violinists. But the patience she showed during her concert on Tuesday evening when a rat ran across her feet from one side of the New Empire stage to the other was something one could not help admiring—when the laughter died down that is. Not many women would have survived such an incident with no more show of emotion than a look of gentle reproach at the audience. As for affecting the rest of her performance, nothing of the sort. It is so seldom that really celebrated artistes bother to come to Calcutta these days that we are probably in no danger of forgetting that the facilities we have to offer them are less than they are used to. But the presence of that rat should remind us all that artistes may have rather more to put up with here than we who are used to Calcutta might imagine. All the more thanks are due therefore to the Calcutta School of Music for enticing them out in the first place and for its efforts to make their stay as comfortable and convenient as humanly possible. The enthusiasm and appreciation of Tuesday evening's audience for Miss Haendel's admirable performance must have provided some considerable consolation.

THE DITCHER

GOVERNMENT OF UTTAR PRADESH

FINANCE DEPARTMENT

Dated Lucknow June 24, 1958.

PRESS NOTE

4½ PER CENT UTTAR PRADESH STATE DEVELOPMENT LOAN, 1970

The Government of Uttar Pradesh are floating a loan of Rs. 7 crores in order to finance their irrigation works, electricity projects and other State development schemes. The terms of the loan are that the issue price will be Rs. 99.50 for every Rs. 100 of the loan applied for. The loan will have a currency of 12 years from 15th July, 1958 and will be repaid at par on 15th July, 1970, will bear interest at the rate of 4½ per cent per annum from 15th July, 1958 payable half-yearly on 15th January and 15th July and is subject to income-tax. Subscriptions for the loan can be made in the form of cash or cheque or of securities of 3 per cent U.P. Loan, 1958 and will be received at the branches of the State Bank of India in Uttar Pradesh, the Government treasuries and sub-treasuries in the State of Uttar Pradesh where there is no branch of the State Bank of India and at the offices of the Reserve Bank of India at Bombay, Calcutta, New Delhi, Madras and Bangalore.

Full details of the terms of the loan are contained in Finance Department Notification No. B-4604/X-88-1958, dated June 24, 1958, copies of which, along with the application form, are obtainable at the receiving offices mentioned above.

2. Financial position of the Government of Uttar Pradesh—

Revenue Position—The revenue receipts and expenditure and the surpluses for the last fourteen years are as follows:

(Figures are in lakhs of rupees)

	Revenue receipts	Revenue expenditure	Surplus (+)
1944-45	2,747	2,330	+417
1945-46	2,995	2,551	+444
1946-47	3,265	3,061	+204
1947-48	3,876	3,771	+105
1948-49	4,920	4,729	+191
1949-50	5,626	5,626	...
1950-51	5,189	5,184	+5
1951-52	5,556	5,550	+6
1952-53	6,483	6,483	...
1953-54	7,564	7,281	+283
1954-55	7,819	7,713	+106
1955-56	8,553	8,422	+131
1956-57	8,996	8,984	+12
1957-58	10,171	9,751	+420

The major portion of the revenue surpluses was put into various reserve funds. During 1949-50 and 1952-53, revenue expenditure exceeded revenue receipts because of large expenditure on development schemes and the gap in those years was covered by withdrawals from the Revenue Reserve Fund.

Balances in the Reserve Funds—The balances at the credit of the various reserve funds at the end of 1957-58 were 116 lakhs in the U.P. Road Fund, 49 lakhs in the Hospital Fund, 102 lakhs in the Famine Relief Fund, 1,144 lakhs in the Revenue Reserve Fund, 9 lakhs in the Sugar Research and Labour Housing Fund, 2,607 lakhs in the Zamindari Abolition Fund, 59 lakhs in the Depreciation Reserve Fund—Irrigation, 170 lakhs in the Depreciation Reserve Fund—Government Bus Services, 392 lakhs in the Depreciation Reserve Fund—Electricity, 19 lakhs in the Contingency Reserve Fund—Electricity and 76 lakhs in the Depreciation Reserve Fund—Cement Factory. Some of these are invested in Government of India Securities. The total balance in these Reserve Funds amounts to 4,743 lakhs.

Debt Position—On March 31, 1958 the debt of Uttar Pradesh Government amounted to 18,821 lakhs consisting of 1,005 lakhs representing the consolidated debt due to the Central Government and 12,863 lakhs taken from that Government for development purposes and 681 lakhs for Relief and Rehabilitation Schemes plus 4,029 lakhs representing the amount of public loans floated by this Government from time to time plus 151 lakhs as Uttar Pradesh Encumbered Estates Act Bonds, 73 lakhs from the Reserve Bank of India and 19 lakhs from the National Co-operative Development and Warehousing Board for expansion of Co-operative Institutions and Marketing Societies. Apart from this, the State Government have also issued Zamindari Abolition Compensation Bonds of the face value of Rs. 4,539 lakhs and Rehabilitation Grant Bonds of the value of Rs. 452 lakhs, the liability on account of which will be met, by annual instalments, from the extra revenue from Zamindari Abolition over a period of 40 years and 25 years respectively. Sinking Funds have been constituted for all the public loans and the balances at the credit of these funds are invested in Government of India Securities.

Assets of the Government—Against the outstanding debt of 18,821 lakhs there are assets in the form of the Ganga, Yamuna and Sarda Canals, various other small canals and the State Tubewells and Hydro-Electric Grid, Electric Supply Undertakings, Cement Factory, and Government Bus Services, in which about 16,374 lakhs have been invested. Another asset is the balance due to Uttar Pradesh Government on account of loans and advances amounting to Rs. 4,016 lakhs. Besides these there are a large number of buildings and roads for which no separate capital accounts are maintained.

Foot Note—The accounts for 1957-58 have not yet been closed finally. The figures for 1957-58 mentioned in the Press Note are based on the March (Preliminary) 1958 Accounts.

VOLTAS VOLTAS LIMITED

THE METAL BOX COMPANY OF INDIA LIMITED

REVIEW BY THE CHAIRMAN—MR. H.
CHISWELL JONES, O.B.E.

The Twenty-fifth Annual General Meeting of The Metal Box Company of India Limited will be held on Thursday, 17th July, at 59C Chowringhee Road, Calcutta.

The following is a copy of the Review by the Chairman, Mr. H. Chiswell Jones, O.B.E., which has already been circulated to members:—

SALES

Sales for the year improved by just under half a crore, to Rs. 612 lakhs compared with Rs. 567 lakhs last year. The increase is partly due to a rise in the price of tinsplate early in the year but principally to our ability to attract to the full extent permitted by raw material availability, the new demand growing within the country.

Particularly noteworthy, in view of the tinsplate situation, is our success in selling products not made from this scarce material, e.g. rigid and collapsible tubes for toilet and pharmaceutical packs, Roll Seal pilferproof and other closures for bottles, industrial components, Dithene bags, closing machinery and advertising media. Sales of these products increased by 38% and now constitute a significant portion of our total output.

As tinsplate has been made freely available for export goods, it has been possible to continue our export promotion efforts. In this context we must comment on the valuable co-operation we have had from the Government of India and the Engineering Export Promotion Council. This should be reflected in our performance in the current year, albeit not spectacularly, since the high cost of tinsplate in India prices our products out of the more severely competitive markets of South-East and West Asia.

In the current year, under the stimulus of continuing national investment in development and the

shortage of imported goods, consumer demand for indigenous products will increase. Whilst it is certain that raw material scarcity will prevent us meeting market requirements in full, we have been convinced, in the course of the many representations we have made in Delhi, that the Government of India appreciates the importance of maintaining steady supplies of packaging materials, which are a key factor in ensuring the ready supply of consumer goods so essential for the achievement of price stability.

RAW MATERIALS

The foreign exchange crisis adversely affected not only our principal material tinsplate, of which a substantial percentage has to be imported, but also many subsidiary but important materials which, while largely manufactured or processed here, have important basic constituents which are not produced indigenously.

Our stocks of tinsplate plus the limited import licences granted enabled us to meet all requirements up to the end of March. Since then there has been a deterioration in the indigenous supply position due to shortage of tinsplate bars. As a result our stocks are now well below normal levels and we are passing through a critical phase involving loss of operational efficiency at our factories and affecting our ability to supply all our customers' requirements on time.

We have asked for additional import licences to make good the shortfall in local supplies and we anticipate that the position will be less critical later in the year. So far as indigenous production is concerned it is expected that the tinsplate bar position will improve when Tata's expansion programme is completed.

Apart from the increase in the price of tinsplate already mentioned, the prices of many other raw materials have substantially increased.

Aluminium for the manufacture of Roll Seal pilferproof closures is now being produced in India and we should be able to secure adequate supplies to meet the growing demands for these closures. The price however is substantially higher than the material we have hitherto imported.

DEVELOPMENTS

The Government of India have approved the long term credit offered by our Consultants to cover the supply of plant and machinery required for plastics development and plant, machinery and spares for our metal container manufacturing equipment.

Licences have been granted by Government to cover our operations in the plastics field embracing injection moulding and polyethylene extrusion and printing. Additional plant has been ordered and will be installed this year.

The new offices for the Calcutta Branch have been completed and occupied. The new factory is nearing completion. We propose, subject to Government permission, to build a new factory at Faridabad to replace the present Delhi factory which is on a short term lease and has proved to be too small for our requirements.

Our range of machinery manufacture has been expanded to include Double Seaming Machines for the Canning Industry which have hitherto been imported.

BOARD CHANGES

Since 1942 I have held the combined office of Chairman and Managing Director. I have been feeling for sometime that the increasing complexities of business in a planned economy, the economic problems and the difficulty of raw material shortages demand more and more time and study. A responsibility of this character is incompatible with the day to day operations of the Company and, from the 1st April this year, I have resigned the office of Managing Director in order to concentrate my attention on the office of full-time Chairman.

The Board have appointed Mr. R. W. Westbrook as Managing Director and Mr. H. K. S. Lindsay as Deputy Managing Director. Both gentlemen have wide knowledge and experience of the Company's affairs having served the Indian Company for more than 20 years. Mr. Westbrook has been a Director since 1946 and Mr. Lindsay since 1951.

Mr. W. R. Davis, M.B.E., retired in April 1958 after 25 years service. He served the Company from its inception with enthusiasm, great loyalty and remarkable engineering skill. We owe much to his outstanding work and he will be missed.

The Board has been greatly strengthened by two new Directors who have joined us since our last Meeting. Sardar H. S. Malik, C.I.E., O.B.E., has had an outstanding record in the Government, serving over a long period in many countries overseas and, lately, before his recent retirement, as Ambassador to France.

Mr. K. C. Mahindra joined the Board in January this year. As one of India's leading industrialists, he needs little introduction and we are fortunate indeed to have secured his services.

Their wide experience and mature judgment will be of the utmost value to the Board.

EMPLOYEE RELATIONS

Our joint consultation arrangements through our Works' Committees have continued to develop most satisfactorily. We believe that this is of importance,

in the context of the currently much discussed question of employee participation in management. In certain publicised instances participation is apparently to be superimposed from the top downwards. We have been building, on a broad base, a real body of knowledge and experience which, it is increasingly evident, is making consideration of the Company's problem by our employees a meaningful instead of a superficial matter.

To help our employees to realise the extent of the progress made on the vast Government Projects initiated under the Second Five-Year Plan we arranged, as an experiment, a number of three day sight-seeing tours of Government Projects in Eastern and Western India. Those participating were drawn from all sections of our factories and offices and the tours have been most successful not only educationally but in providing the opportunity for executives, staff and workers to get better acquainted.

STAFF

The problems involved in the successful operation of an industrial enterprise to-day are manifold and the task of officers and staff is made more difficult with shortages, controls, the search for and development of substitute materials, the unremitting fight against rising costs and other factors of a frustrating nature. This has been an arduous year for them all and I thank each one most warmly for their loyal support and the contribution they have made to another successful year.

25th YEAR

This year marks our 25th anniversary and on such occasions it is customary to look back, although, at the present time with India engaged in a breathtaking struggle to raise the living standards of her vast population, the future holds greater significance than the past.

Nevertheless, I think it is appropriate briefly to review our achievements and the policy which has inspired them since your Company's modest beginning in 1933. Then, such packers of consumer goods as existed, welcomed us warmly for hitherto their products had been at a heavy disadvantage as imported goods packed in superior containers. The availability of high class lithographed packages, equal to those available elsewhere in the world, enabled many Indian manufacturers' products to obtain proper recognition for the first time. Our enterprise did more than help the few existing packers, it greatly stimulated demand and made it possible for many new suppliers of consumer goods to compete successfully in a market previously dominated by imported goods. Subsequently many world famous manufacturers sent their products to India in bulk for re-packing and later, under the stimulus of import restrictions, undertook local manufacture. We can, I feel, claim quite fairly that our enterprise was the instrument which made possible the creation and subsequent growth of a wide range of new industries. To-day we serve more than 1,000 factories employing an estimated 80,000 people and marketing goods to the value of over Rs. 100 crores. Adequately to serve and service this great industry—in the development of which we have played a major part—our own activities have expanded from one small factory employing 35 people to five factories and six ancillary establishments employing over 5,000 people.

In the field of Industrial relations we have sought to provide the finest possible working conditions and have developed a successful system of joint consultation. We have instituted Welfare and Benevolent schemes and have provided extensive recreational facilities. We are one of the few industrial establishments in India with a scale of pay for every occupation. All operatives participate in our Production Bonus Scheme and all employees share in our annual Prosperity Bonus.

Our personnel policy has been to promote from within the organisation and, through our training schemes in India and abroad, to provide every opportunity for advancement at all levels. We have, as a result, over the years been well served by a loyal and hardworking team of outstanding men, many of whom have risen from modest beginnings to positions of high responsibility.

Our sales policy has been to keep prices low and obtain a satisfactory return on our investment by a high volume of turnover. For the last decade we have kept constantly before us the need to combat rising costs by increased volume and improved production methods which we have financed principally by retained profits until high taxation rendered this well nigh impossible.

Thus we have not only provided facilities to meet growing demand but have played an active part in stimulating that demand. In all this we have been supremely well served by our Consultants, The Metal Box Company Limited, and through them, by our out to the world. We were very happy in February to receive a visit from Mr. D. Ducat, Managing Director of The Metal Box Company Limited, London, and plans for even more extensive collaboration in the future.

We have passed through many vicissitudes but at all times we have been sustained and encouraged by the appreciation shown by our customers for the service provided and also by the confidence shown by staff and workers that their interests would be safeguarded.

India's problems are on a vast scale and she is facing grave economic difficulties but I am confident that she has the resources and the will to overcome them and that the goal of industrial expansion and an improved standard of living for the masses will be attained. I believe, therefore, that the future will open up increasing opportunities to share in the development of a great and growing consumer goods industry.

I look back over this quarter of a century with a sense of real pride in our achievement which I believe is the outcome of initiative, endeavour and integrity. We shall continue to work to these same and will, I am confident, do so in the future.

Money

THE CALCUTTA MONEY MARKET

INTERBANK RATE EASES

Wednesday, 9th July.

ONCE again, there has been a moderate fall in total credit outstanding in the Calcutta money market. Advances to all major sources of demand, including jute and sugar mills and grain storage, show a slight fall. There has been little activity in the interbank market this week. Call money is easier and the rate has declined to 3 percent.

It has been a quiet week in the exchange market, with very few bills coming to hand. Those reported were chiefly on account of tea shipments. Remittance has been poor. Sterling has improved in terms of both the American and Canadian dollars, but is slightly easier against the leading Continental currencies.

BULLION RULED EASY LAST WEEK. LONG LIQUIDATION by bulls coupled with higher arrivals of Tibetan coins depressed silver. Its price declined further from Rs 179 to Rs 178, quoted today for ready delivery, and the rate for forward delivery was Rs. 177.25. The London price was at 74½ and the New York quotation stood at 88½ cents.

Gold ruled quiet in sympathy with silver and due to arrivals of contraband gold. The price fell from the last week's level of Rs. 109 to Rs. 108. The sovereign at Rs 72.25 showed a fall of 25nP.

RISES OF Rs. 7.08 CRORES TO Rs. 1,584.18 CRORES in active notes and of Rs. 1.31 crores to Rs. 1,617.63 crores in the total note issue were the outstanding features of the return of the Reserve Bank of India for the week ended 4th July, 1958. Notes held in the Banking Department consequently dropped by Rs. 5.77 crores to Rs. 33.45 crores. National Agricultural Credit (Long-term) Fund and National Agricultural Credit (Stabilisation) Fund have increased by Rs. 5 crores and Rs. 1 crore to Rs. 25 crores and Rs. 3 crores, respectively. Deposits of the Government of India fell by Rs. 8.17 crores to Rs. 50.52 crores, while other Government accounts rose by Rs. 7 crores to Rs. 21.17 crores. Balances of commercial banks at Rs. 91.78 crores showed a drop of Rs. 6.75 crores. Balances held abroad fell by Rs. 7.02 crores to Rs. 292.52 crores. Other loans and advances diminished from Rs. 60.51 crores to Rs. 58.78 crores, of which advances to scheduled banks against usance bills amounted to Rs. 12.28 crores (Rs. 14.22 crores). Ways and means advances stood at Rs. 31 crores against Rs. 26.66 crores.

DURING THE WEEK ENDED 4TH JULY, GOVERNMENT of India Treasury bills for Rs. 24,80,00,000 were sold in favour of the Reserve Bank.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 27th June, 1958, shows a rise of Rs. 6.31 lakhs to Rs. 424.12 crores in total deposits. Investments in Government securities are down by Rs. 6 lakhs to Rs. 196.21 crores, while other authorised investments remain unchanged at Rs. 10.63 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have dropped by Rs. 2.62 crores to Rs. 183.95 crores. Cash and balances are, in consequence, shown at Rs. 42.04 crores or Rs. 8.87 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 27th June, 1958, shows Demand and Time liabilities at Rs. 753.07 crores (Rs. 24.77 crores on account of borrowings from banks) and Rs. 807.83 crores (Rs. 25.86 crores) compared with Rs. 743.20 crores (Rs. 25.86 crores) and Rs. 806.47 crores (Rs. 30.01 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 3.34 crores and Rs. 4.23 crores to Rs. 42.32 crores and Rs. 94.47 crores, respectively. There is a rise of Rs. 2.75 crores, respectively. Advances in investments. Advances and bills discounted at Rs. 901.43 crores vances and bills discounted at Rs. 901.43 crores show a fall of Rs. 2.23 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.8 percent and 57.8 percent against 8.4 percent and 58.4 percent.

COTTON CONSUMPTION AND EXPORTS DECLINE

Many non-communist countries are consuming less cotton this year, according to the latest review of the International Cotton Advisory Committee. International trade in the commodity also declined from last season's record world exports of 15.8 million bales. In Britain, an increase in short time working had become more evident since the beginning of 1958, the review says. In the United States, consumption is running about 5 percent under last season's rate and a full season's consumption of less than 8 million bales is expected, compared with 8.6 million bales in 1956-57. Canadian consumption is down by more than 10 percent compared with 1956-57. Consumption during the first half of the season in European countries during that the situation will not but there are indications that the Japanese spinners be so favourable in the future. Japanese spinners plan to stop 30 percent of their spindles, and this will hasten the decline in consumption. In India, mill stocks of cloth are high and consumption has declined.

NEW U.K. O.G.L. FOR IMPORTS

COFFEE FUTURES TRADING STARTS

London, 9th July.

THE U.K. Board of Trade has announced that the Open General Imports Licence which was issued on 3rd June, 1955, has been revoked. It has been replaced by a simplified form of Open General Licence which came into effect on 7th July. The main change is that for the relaxation area and Japan, the Open General Licence will list the items for which individual import licences are required instead of those which are free from specific control. A separate amendment is being made continuing the restrictions on butter imports from Belgium.

Business on the London coffee futures market, which began operating from 1st July, after the lapse of 31 years, mainly reflected the fixing of a realistic basis for business. There were no overt signs of any outside factor affecting the market. Attendance was very heavy at the morning call and after a hesitant start interest was particularly evident in the first trading position, that is, November, which changed hands from £287 a cwt. down to £285 a cwt. with sellers over at the end of the call. After the call, it was noted that differentials were narrowing between the months since a more realistic basis for business was uncovered and subsequent dealings showed that interest was developing in the more distant positions. A total of 285 tons changed hands during the day. Towards the close, nearby months

were fairly active and showed a decline of approximately 6s a cwt. on the opening levels.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 2nd July shows that the gold stock declined by \$50 million to \$21,306 million. Foreign deposits fell by \$12 million to \$256 million and foreign investments were \$53 million lower at \$2,946 million. The Federal Reserve bought \$503 million worth of bills but sold \$44 million worth of securities held under repurchase agreements, making the total Government security holdings \$459 million higher at \$25,458 million. Total discounts and advances fell by \$48 million to \$80 million, while the aggregate excess reserves of member banks rose by \$190 million to \$534 million. The daily average excess reserves of member banks fell by \$27 million to \$683 million, while their daily average borrowings declined by \$2 million to \$97 million. Business loans of New York City banks rose by \$14 million to \$11,065 million compared with a fall of \$190 million to \$11,949 million in the corresponding week of last year. Gold certificates on hand and dues from the U.S. Treasury were \$45 million lower at \$19,889 million. Federal Reserve notes in actual circulation were \$281 million higher at \$26,850 million. The deposit member banks reserve account was \$169 million higher at \$18,737 million.

Paris Gold Active

The Paris gold market continued active during the past week. A notable feature of the dealings was the offer of imported gold repatriated under the special rules to facilitate loan subscriptions. So far, however, arrivals of this gold have been relatively small, but this is believed to be due to technical reasons and banking circles think that the volume of gold imports will shortly rise. The

price of the ingot, therefore, remained pegged at 514,000 francs. In contrast, the price of the Napoleon declined.

Decline in Rubber

Rubber prices rose further during the early part of the past week but an easier tendency developed later and prices finally were about 1d lower on balance. The recent rise led to some profit-taking and the liquidation of stocks which met with limited support. Dealers were nervous about the continued lack of demand and the uncertainty whether Russia and China would continue to extend support to the market. The unsettled economic outlook was also responsible for many dealers being reluctant to extend their commitments. The sole crepe market was a little steadier. Spot supplies were still restricted and most dealers were asking 29d for 4in. smooth crepe. Forward shipments ranging up to October met with modest enquiry.

Mixed Trend in Vegetable Oils

Canadian linseed again moved to higher levels during the past week with the market none too sure of what the production of linseed would be in the Dominion this year. Groundnuts were standing up well to the limitation in demand, while the demand for castorseed remained slow. In spite of this, sellers made no further concessions in prices. Consumer demand for linseed oil appeared to be a little better than it was before. A considerable switching of positions is now going on, and although India has removed the export duties on castor and groundnut oils, the prices of the latter are still above international values, and there has been little real pressure to sell.

Rubber Statistics

Advance statistics issued by the International Study Group shows that the world production of natural rubber in April totalled 130,000 tons. Consumption amounted to 165,000 tons including estimated imports into Russia of 22,500 tons and into China of 13,000 tons. Stocks at the end of the period totalled 690,000 tons of which in producing areas were 275,000 tons, consuming areas 262,500 tons and afloats 152,500 tons. The stock figures exclude those not available to the industry in the United Kingdom, the United States and France. The production of synthetic rubber during the month amounted to 85,000 tons and consumption to 95,000, while stocks held at the end of the period were 262,500 tons. The Group estimates the exports from Indonesia during the month at 39,275 long tons.

NEW AND QUIETER COMET TO MAKE DEMONSTRATION FLIGHTS AT NEW YORK

The "lightweight" Comet 2E airliner is to make demonstration flights under controlled conditions at New York international airport. The de Havilland Aircraft Company announced in London that about seven flights would shortly be made. Permission for the flights has been granted by the Port of New York Authority after it had been advised by the company that the aircraft's "noise level" was below that of the Comet IV prototype. The 2E, which weighs 120,000 lbs reaches an altitude of 1,300 feet about two miles from the start of the take-off compared with a height of 900 feet by the heavier Comet IV prototype, which weighs 145,000 lbs. The 2E is equipped with two Rolls-Royce RA 29 Avon engines fitted with noise suppressors and two smaller Avon-117 unsuppressed engines. Since 1951 the New York Authority has ruled that "no jet or turbo-prop aircraft may land or take off without permission." The authority has stated that permission for flights by the 2E, to be operated by B.O.A.C., has been granted subject to the conditions governing flights by the Comet IV. One of these is that the plane will land and take off only during daylight.

NEW ANTI-SKID DEVICE FOR MOTOR-CARS

The Dunlop company has devised a new anti-skid device which it claims, makes it possible for a driver to apply to maximum braking effort without any fear of wheel lock and resultant skid. The new device has been developed for cars from the company's anti-skid gear for aircraft. The device is interposed between the driver's control valve and the brake in such a way that it relays the effort applied by the driver and immediately relieves the pressure in the brakes when an increase in angular wheel deceleration gives warning of an impending wheel skid. Such is its degree of sensitivity, say the makers, that the driver can apply the full braking effort in the knowledge that the anti-skid units will hold a delicate pressure balance at the brakes at near optimum braking effort. The operating principle of the new device is quite simple. A small flywheel is driven from each braked wheel and when a wheel decelerates the flywheel is also decelerated by a spring. If the deceleration of the wheel is normal and there is no tendency to skid the energy given up by the flywheel is not sufficient to collapse the spring. But excessive deceleration of the wheel, such as will occur if a skid is developing, causes the flywheel to collapse the spring, and a small hydraulic valve mechanism is operated to relieve its normal position until the flywheel returns to slip speed.

Stocks and Shares

HIGHER PRICE LEVELS ATTRACT PROFIT-TAKING

UNDERTONE REMAINS STEADY

Wednesday Evening.

THE bull market which started a few weeks ago reached its peak on Saturday last when Indian Irons touched Rs. 23.60. At that point, the most tenacious bull unloaded his holding of about 200,000 shares and the price fell to Rs. 23.16. The driving force behind the recent revival now appears to have spent itself. The recent rise in share prices presents an interesting problem in market interpretation. On the face of it, there seemed little in the general economic situation, as mentioned in this column last week, to warrant such a remarkable upsurge of confidence. The second plan is struggling through another foreign exchange crisis. Import restrictions have created an acute shortage of industrial raw materials, particularly steel, and some concerns in the engineering group have already cut production. Retard prices continue to rise making it steadily harder for consumers in the middle and low income groups. The food and labour situation still gives cause for anxiety and unemployment seems to be increasing.

The recent improvement in prices has been mainly on account of speculative activity. Genuine investment business is still almost absent, but it would be unrealistic to dismiss, as of no importance, a speculative rise of the magnitude and range that has occurred in recent weeks. It is common stock market experience that speculators often prepare the way for investors, and it would be only reasonable to expect that if the present speculative rise is resumed a revival of investment interest will soon follow. That, of course, depends on whether or not there are sound reasons for the transformation of market sentiment of which the recent wave of speculative activity is a reflection.

The profit-taking in Indian Irons may have resulted from the company's discouraging production figures for the quarter ended June 1958. Output of steel ingots declined by 11,575 tons to 121,988 tons. Production of finished steel fell by 4,480 tons to 75,734 tons. In the case of saleable steel, there was a fall of 1,007 tons to 25,280 tons. Operators' thoughts are now turned to the company's results for the year ended March 1958.

Under the influence of easy money conditions, gilt-edged securities have ruled steady throughout, and it is expected that the new State loans will meet with a good response when the lists open on 15th July.

Preference shares of selected companies continued to meet with enquiry, but sellers were scarce. In the banking section, Punjab National were easier at Rs. 59.50 while other issues were unchanged, though steady.

The only share transacted in the railway section was Dehri-Rohas at around Rs. 11.12.

Conditions in the cotton textile section were cheerful and most shares met with buying enquiry. Bowreah advanced from Rs. 110 to Rs. 115. Cawnpore from Rs. 4.08 to Rs. 4.94, Dunbar from Rs. 11.5 to Rs. 12.5, Elgin from Rs. 12.12 to Rs. 13.50, and Kesoram from Rs. 11.31 to Rs. 11.50. Operators take the view that the recent concessions granted to the industry are likely to make working conditions more profitable for mills.

Coal shares were fairly steady, with enquiry centred on Amalgamated which improved from Rs. 18.12 to Rs. 18.75. New Beerboom also rose from Rs. 14.81 to Rs. 15.25 and Pench Valley from Rs. 18.12 to Rs. 20.44 to Rs. 20.75. There was some investment demand for Bengal at around Rs. 233.

Despite the increase in jute goods stocks at the end of June by 21,900 tons, jute shares were well maintained and, on the whole, closing prices were higher than those at the opening. Here is a chart showing representative price movements:

	Opening	Closing
	Rs.	Rs.
Agarpara	8.50	9.25
Anglo India	160	167
Cheviot	150	161
Birla	17.50	18
Kamarhatti	98	100
Kinnison	118	122
Nuddea	40	42.50

In the electric supply section, Calcutta were steady at Rs. 14.50 as were United Provinces at Rs. 122.

Sugar shares were active with Balrampore improving from Rs. 8.06 to Rs. 8.37, Cawnpore from Rs. 11 to Rs. 12, Dyer Meakin Bhoweries from Rs. 10.37 to Rs. 11 and Ramnagar Cane from Rs. 19.12 to Rs. 19.37.

In the engineering section, Indian Iron & Steel fluctuated between Rs. 23.07 and Rs. 23.60 to close at Rs. 23.12. Textile Machinery were a good feature on rumours of a higher dividend distribution; the quotation advanced from Rs. 19.30 to Rs. 19.60. Bhartiya Steel were steady at Rs. 16.12, as were Braithwaite at Rs. 27.69 and Burn & Co. at Rs. 34.1. Guest Keens were shaded at Rs. 30.62 while there was some enquiry for Indian Galvanizing at the higher rate of Rs. 15.37.

(v) At the branches of the Bank of Mysore Ltd. except at Bangalore, the State Bank of India, the State Bank of Hyderabad and at Government Taluk treasuries in the case of Mysore loan.

Copies of Notifications and Application Forms may be obtained at any Receiving Office.

TEXMACO-HOWA

Manufactured in technical collaboration with Howa Machinery Limited, Japan, to their designs and specifications, and incorporating the latest innovations.

Totally enclosed head stock

Electric stop motion with signal

Silent gear for intermediate wheel

Synthetic resin bearing for helical tube wheels

Centralised lubrication.

SALIENT FEATURES

TEXTILE MACHINERY CORPORATION LTD.

Hopes that the long awaited tax relief would be announced for the tea industry in the near future, led to some enquiry for tea shares and prices advanced on a broad front, as will be seen from the following table:

	Opening Rs.	Closing Rs.
Banarhat	307	318
Basmatia	22	22.50
Betjan	22.50	22.25
Dhelakhaf	22.12	22.37
Hantapara	112	121
Hasimara	23.50	22.50
Huldbari	21.50	22.50

THE ORDINARY DIVIDEND OF THE NEW BEERHOOM Coal Co. Ltd. has been maintained at 7½ percent for the year ended last October. The profit has increased by Rs. 2.81 lakhs to Rs. 5.03 lakhs. Depreciation absorbs Rs. 3.59 lakhs (Rs. 3.31 lakhs). The provision for taxation receives Rs. 2.90 lakhs (Rs. 1.17 lakhs). Capital reserve gets Rs. 36.209 (nil) and the reserve for bad and doubtful debts claims Rs. 50.051 (nil). Wealth tax for the last two years is estimated at Rs. 44,000 and this has been provided for by a transfer from capital reserve. After sundry adjustments, there is a sum of Rs. 83,316, which it is proposed to carry forward compared with Rs. 53,598 brought in. Raisings were increased from 448,242 tons to 530,672 tons. Despatches, including purchased coal, amounted to 529,938 tons against 455,573 tons in the previous year.

THE DIVIDEND OF THE PHASKOWA Tea Co. Ltd., has been passed over for the year ended 31st December, 1957, compared with 7½ percent in the previous year. There is a loss of Rs. 27,149 against the revenue profit of Rs. 54,028. Depreciation is shown at Rs. 13,366 (Rs. 14,190). Development reserve absorbs Rs. 5,000 (nil). Having transferred a sum of Rs. 15,000 from revenue reserve and making necessary adjustments, there is Rs. 1,220, which has been carried forward against Rs. 8,949. The crops have increased from 241,653 lbs to 250,404 lbs. The average sale price realised was Rs. 1.75 a lb against Rs. 2.23 a lb. Estimates for

the current year have provided for a crop of 256,000 lbs to cost Rs. 4.58 lakhs.

THE REVENUE PROFIT OF THE DARBHANGA SUGAR Company Ltd. has declined from Rs. 20.72 lakhs to Rs. 19.07 lakhs for the year ended last August. The dividend has been maintained at 20 percent. Depreciation absorbs Rs. 1.55 lakhs (Rs. 1.57 lakhs). The provision for taxation is allocated Rs. 9.36 lakhs (Rs. 8.65 lakhs). The provision for wealth tax claims Rs. 74,000 against nil. After necessary adjustments, there is a balance of Rs. 4,57,229, which it is proposed to carry forward against 5,77,814 brought in. The directors state that the excise duty on sugar amounts to Rs. 10.70 a maund. The cane cess at 3 as. a maund of cane and based on a recovery of 9.37 percent, takes Rs. 2 a maund, thus bringing the direct taxes on sugar to Rs. 12.70 out of a price of Rs. 35 a maund. The high tax on vacuum pan sugar is pricing it beyond the purchasing capacity of the people who are reverting to gur and khandari sugar which are immune from such taxes. Total sugar produced amounted to 686,222 maunds compared with 640,035 maunds. The recovery was 9.37 percent against 9.91 percent.

THE ORDINARY DIVIDEND OF NELLIMARLA JUTE Co. Ltd. has been declared at 90p a share, including an interim of 53p a share for the 13 months ended 31st July, 1957. The profit has been shown at Rs. 5,47,021. Depreciation absorbs Rs. 1,20,586 and the provision for taxation, including wealth tax, receives Rs. 3,30 lakhs. The development rebate reserve claims Rs. 55,572. After necessary adjustments, there is a balance of Rs. 43,512 which has been carried forward. Gunny sales totalled Rs. 1.19 crores and stocks were valued at Rs. 34.84 lakhs. The directors state that trading conditions were fair during the period under report. Labour relations affected the working efficiency of the mill.

THE OUTPUT OF THE INDIAN IRON AND STEEL Company for the quarter ended last June shows declines compared with that of the previous quarter in all categories except pig iron. Production of pig iron improved by 14,630 tons to 214,469 tons, while steel ingots diminished from 133,563 tons to 121,988 tons. Semi-finished steel for sale was 25,280 tons against 26,287 tons. Finished steel declined by 4,490 tons to 75,734 tons. The latter two together are shown at 101,014 tons (106,501 tons).

Bombay Market

SHARE PRICES IMPROVE IN HECTIC TRADING NEW HIGH LEVELS FOR THE YEAR

Wednesday Evening.

THERE was hectic trading in the Bombay stock market last week and share prices improved on a broad front. The reduction in the cloth excise duty, combined with an increase in the retention price of cement, generated a buying spree which pushed equity share prices to new highs for this year.

Steel shares were boosted on higher production figures of the Tata Iron and Steel Company during June. Calcutta interests supported Indian Iron to Rs. 165 and Indian Iron were taken at Rs. 23.16. Other engineering shares were steady in sympathy. Alcock Ashdown were bought at Rs. 262.50 by knowledgeable quarters. Tata Locomotive were supported at Rs. 174.75 but sellers predominated at the close on fears that prices of locomotives would be reduced. Among automobile shares, Hindustan Motors rallied to Rs. 7.92 on interested support and Premier Automobile were offered at Rs. 91.50.

Cotton mill shares improved all-round on reliefs in excise duty. Central India jumped to Rs. 103 as it was thought that upcountry mills would benefit substantially from the excise duty cut. Bombay Dyeing were transacted at Rs. 58.10 and Century were bought at Rs. 357.50. Kohinoor changed hands at Rs. 267.50 and Swadeshi realised Rs. 188. Simplex were transacted at Rs. 176.50. India United Ordinary were sold at Rs. 10.04 and Apollo came to hand at Rs. 1.92.

There were a number of bright features in the miscellaneous group on the expectation that domestic industries would benefit from import restrictions. Cement shares were firm on higher

retention prices. Associated Cement were bought at Rs. 156 and Digvijay were done at Rs. 157. Ashoke Cement rose to Rs. 10.12 on replacement buying. Sugar shares were steady, and Belapur gained at Rs. 259 on prospects of higher earnings. Phalton rose to Rs. 157. Steamship company shares improved on hopes of increased tonnage. India Steamship rose to Rs. 11.96 on increased earning prospects. Scindia Steam improved to Rs. 18.64 and Great Eastern Shipping changed hands at Rs. 24.64. Mining shares were quietly steady, but turnover was limited. Shivrampur Syndicate realised Rs. 92.50. National Rayon recovered to Rs. 237.50 and Bombay-Burmah Old were higher at Rs. 586. Tata Chemical gained at Rs. 16.76 on possibilities of import restrictions on heavy chemicals. Wimco were transacted at Rs. 181.

Banking shares were steady. United Commercial were bought at Rs. 61.30 and Central Bank were taken at Rs. 53.60. There was selective support in insurance shares, and New India Assurance were wanted at Rs. 46.25 on a good report.

Electricity supply company shares were steady and prices were higher where changed. Ahmedabad Electric were dealt in at Rs. 95.70 and Tata Power came to hand at Rs. 1.235.

RAPID EXPANSION OF THE CEMENT INDUSTRY IN INDIA

A STUDY OF STRUCTURE AND PRODUCTIVITY

By Harish Chandra

NEITHER the growth of large cities nor the spread of modern transport systems would have been possible without the use of a strong construction material such as cement. Together with steel and glass, cement has indeed helped create a new and distinctive type of civilisation. The spread of the industrial system into less developed countries, as history shows, has been accompanied, and in fact in most cases preceded, by the use of cement. The United States, Russia, West Germany, Japan and the U.K. are the biggest manufacturers of cement. There are no close competitors of these five nations, although France and Italy are the nearest. Among other important manufacturers of cement are India, Belgium, Canada, Poland, Spain and East Germany. The average monthly production of cement, during 1956, in these countries was as follows:

Country	Metric Tons (in '000)
U.S.A.	4,438
Russia	2,072
West Germany	1,638
Japan	1,085
U.K.	1,081
France	949
Italy	945
India	417
Belgium	389
Canada	386
Poland	336
Spain	323
East Germany	272

Source: United Nations Monthly Bulletin of Statistics, January 1958, pp. 48-50.

The above figures bring out a fairly close relationship between the industrial status of a country and the development of its cement industry. They also highlight the position of importance attained by India in the field of cement production. It has been observed (Vide *Encyclopaedia of the Social Sciences*, Vols. 3-4, p. 288) that the organisation of the cement industry in all countries has been dependent on (1) the widely distributed sources of raw materials, (2) their deposits having of themselves no great value, and (3) the manufactured product, i.e., cement, being sold at a comparatively low price a unit of quantity, so that transport charges weigh heavily. These factors, quite naturally, have prevented the formation of concentrated centres of manufacture such as are common in other industries. Maximum dispersion is, therefore, a usual feature of the cement industry. Unlike the concentration of sugar, textile and engineering industries in India, the cement industry has been dispersed over a wide area. The distribution of the cement factories is shown below:

State	Units
1. Madhya Pradesh	2
2. Bihar	6
3. Punjab	2
4. Rajasthan	2
5. Bombay	5
6. Andhra	3
7. Madras	4
8. Orissa	1
9. West Bengal	1
10. Mysore	1
11. U.P.	1
	28

Types of Ownership

Because of the heavy outlay and other factors peculiar to this industry, it is interesting to observe that of the 28 cement factories, 14 belong to the A.C.C. group, five to the Dalmia group and the remaining nine to others, including the Government. Precise information about the types of

ownership is available concerning only 21 factories covered by the *Census of Indian Manufactures*. According to this source, 20 out of 21 are owned by public limited companies; only one is owned by a private limited company. In other words, not a single cement factory is owned by an individual proprietor or a partnership firm.

In recent years, the Indian cement industry has made phenomenal progress. In 1946, there were only 11 cement factories. Their total productive capacity was Rs. 4.86 crores, employment 10,231 persons and gross ex-factory value of output Rs. 3.85 crores. The present number is 28. According to the latest census data available from the report of the *Ninth Census of Indian Manufactures, 1954*, the cement factories in 1954 employed 18,103 persons; their total productive capacity exceeded Rs. 25 crores and the gross ex-factory value of their output was over Rs. 26 crores. These figures relate to only 21 of the 28 existing units. The remaining seven were not covered by the Census, so that the position of the cement industry as a whole would be still better than the available figures show. Even so, it is evident that the capital outlay during 1946-54 increased a little over five times and the value of output nearly seven times. The employment figures also show improvement during this period, but not to the same extent. This is because the cement industry is on the whole highly mechanised.

The magnificent record of the industry is further shown by its physical output. During 1947 to 1957, the quantity of cement manufactured registered an increase of nearly four times, as will be evident from the data given below:

Year	Average monthly production of cement (in '000) Tons
1947	120.6
1949	175.2
1951	266.3
1953	315.0
1955	373.9
1957	466.8

Source: Monthly Statistics of the Production of Selected Industries of India, January, 1958.

Low Per Capita Consumption

In spite of the laudable efforts on the part of the industry to increase the production of cement, the per capita consumption of cement in India, compared with other countries, is low. It is only 27 lbs against 90 lbs in Japan, 460 lbs in Denmark, 716 lbs in Belgium, 740 lbs in Sweden, 411 lbs in the U.K. and 516 lbs in Russia. And yet, the shortage of cement in the country has been felt acutely in recent years. The five year plans have greatly accelerated the tempo of economic and social progress, and considerable constructional activity has been going on in the country in connection with the river valley and various industrial projects. With a view to meeting the shortage of cement, the Government of India, therefore, decided in March 1956 to import 400,000 tons from the east European countries such as Russia and Rumania. Further, with effect from 1st April, 1956, both the import trade and internal distribution of cement have been taken over by the State Trading Cor-

Years	Imports		Exports	
	Quantity	Value (Rs.)	Quantity	Value (Rs.)
1952-53	...	5,056	14,73,028	57,441
1953-54	...	7,976	21,88,347	86,116
1954-55	...	9,318	25,20,192	107,705
1955-56	...	16,735	35,82,675	57,067
Nine months April to December 1956	...	114,660	1,40,37,083	5,320

Source: Department of Commercial Intelligence and Statistics.

poration. Because of the large domestic demand, there is not much export of cement from India. In fact, it is on the decline. Import has, however, been steadily rising. The imports into and exports from India of cement during the last few years have been as shown by the table on this page.

Having regard to the great potentiality of the market for cement, the Standing Committee of the Central Advisory Council of Industries at a recent meeting discussed the development programme of the cement industry. According to Press reports, proposals for the establishment of 26 new factories and expansion of existing units were approved. If these schemes materialise, the total installed capacity of the cement industry, it is estimated, will expand from 6.6 million tons at present to 15.3 million tons in 1960-61. This is very near the target of 16 million tons set in the second five year plan. It is also estimated that the capacity of the industry will go up to 8.4 million tons by the end of this year and to 10.5 million tons by the end of the next.

In the context of this large development programme, a study of the structure of the Indian cement industry is both interesting and instructive. According to the Census data, the range of employment and size-grouping of 21 factories is as follows: (Information concerning the other seven factories is not available.)

Range of employment	Factories classified according to size (as denoted by the total number of persons employed)	
	Number	Percentage
Below 250	—	—
250-499	5	23.8
500-999	10	47.6
1,000-1,999	5	23.8
2,000-4,999	1	4.8
5,000-and above	—	—
	21	100

Economic Significance

There is no cement factory whose average daily employment is below 250. Nearly half the factories belong to the employment range of 500-999. Small-scale units are thus non-existent in the cement industry. The economic significance of the units in different size groups is generally measured by the yardsticks of (i) the value of fixed capital, (ii) the number of employees and (iii) the value of gross output. The percentage of these three items accounted for by units in each of the size groups out of the totals for the industry is shown below:

Size group	Value of fixed capital percentage	Number of employees percentage	Value of gross output percentage
Below 250	—	—	—
250-499	9.6	11.4	7.2
500-999	53.4	41.9	51.9
1,000-1,999	34.2	35.3	33.9
2,000-4,999	2.8	11.4	7.0
5,000 and over	—	—	—
Total	100	100	100

The predominant size group is evidently 500-999. It accounts for the highest capital, employment and output vis-à-vis other size groups. It is possible that the optimum size factory lies in the size group of greatest importance in a particular industry. But the assumption needs verification in this particular case. It may be observed in passing that the largest size group of 2,000-4,999, accounts for only 2.8 percent of the total capital as against 9.6 percent of the smallest size

group of 250-499. And yet, its share of employment and output is practically identical with that of the latter size group. This would suggest, up to a point, a positive correlation between the size and employment and production capacity. The degree of mechanisation, the levels of earnings and the rates of productivity in the cement industry, according to different size groups of factories, are shown by the following table:

Size group	Amount of fixed capital for each worker	Average rate of earnings	Value added by each worker
(1)	(2) Rs.	(3) Rs.	(4) Rs.
Below 250	—	—	—
250-499	9,201	1,690	4,342
500-999	13,822	1,584	8,525
1,000-1,999	10,322	1,552	6,264
2,000-4,999	2,628	1,652	5,263
5,000-and above	—	—	—

Degree of Mechanisation

Quite interesting results emanate from the above table. The degree of mechanisation, as measured by the amount of capital for each worker, is highest in the most predominant size group of 500-999. In the same group, also occurs the highest productivity as measured by the value added by each worker. By the same criteria, the degree of mechanisation is the lowest in the largest size group. Although the degree of mechanisation is greater in the lowest size group, namely, 250-499, than in the largest size group, the rate of productivity is higher in the latter. After the most predominant size group viz., 500-499, the size group of 1,000-1,999 has both a higher degree of mechanisation and productivity rate. The level of earnings as indicated by the average rate of wages and salaries is highest in the lowest size group, which is rather contrary to the popular notion. In the largest size group, the level of earnings is higher than in the other size groups of 500-999 and 1,000-1,999. It is thus clear that in the cement industry, neither mechanisation nor productivity nor even earnings have any direct relation with the variations in size. At the same time, a valuable fact emerging from the foregoing analysis is that the typical size group for this industry is 500-999, which combines highest productivity rate with maximum mechanisation at a given point of time.

Typical Size Factory

The characteristics of the typical size factory in relation to those in other size groups may also be examined. The relevant data are given below:

Size group	Productive capital per factory	Employment per factory	Value added per factory
	Rs.	Rs.	Rs.
Below 250	—	—	—
250-499	50,13,572	413	14,65,943
500-999	1,29,41,790	758	53,83,190
1,000-1,999	1,71,95,045	1,277	67,84,688
2,000-4,999	1,08,09,184	2,068	91,89,810
5,000 and over	—	—	—

The above table shows the following salient features of a cement factory in each of the size groups. (i) As is to be expected, there is a marked concurrence between employment and value added in relation to the size of factories. The largest size factory has the highest employment and value added, while the smallest has the lowest share of each. (ii) The largest size factory is, however, not the most capital intensive. The most capital intensive factory occurs in the size group of 1,000-1,999 and is followed by the factory in the predominant size group of 500-999. (iii) The employment and value added are lower in the case of the factory in the most predominant size group than in a factory in either of the higher size groups.

Earlier it has been observed that the factories in the most predominant group viz., 500-999, have the highest degree of mechanisation and productivity rate per worker. The same is not true for the factories. The factory in the largest size group gives better opportunities for employment and higher earnings. It secures greater technical efficiency and internal and external economies, and thereby achieves the maximum productivity. This is borne out by the lower ratio of the value of input to the value of output in the largest size group, viz., 2,000-4,999 (i.e. 50.2 percent) than in the other size groups of 1,000-1,999 (61.8 percent) or 500-999 (60.4 percent) or 250-499 (60.9 percent).

Important Conclusions

Two important conclusions emerge from the foregoing analysis of the structure of the cement industry: (1) the factory in the largest size group has the lowest degree of mechanisation, but highest employment. It seems to be over-manned so that its rate of productivity per worker is lower, although on the per factory basis it has the highest; (2) the factory in the most predominant size group employs a larger productive capital, is highly mechanised and has the highest rate of productivity per worker, but not the highest amount of value added on the per factory basis. It seems probable that the higher ratio of the value of input to the value of output in this and other size groups is a factor responsible for a comparatively lower productivity on the per factory basis than in the largest size group.

In either case, there is need for further scientific and technical investigation into their cost and

price structure with a view to widening the scope of their productivity.

The chief object of this study of the present position and structure of the cement industry in India is to bring together such relevant factual data as are likely to assist in the future expansion and development programme of this industry. It is one of the most stable industries in India. The country has embarked on gigantic nation-building tasks of hydro-electricity generation, constructing new ports, townships, airfields, roads, bridges, factories, hospitals, schools, etcetera, all of which require enormous quantities of cement. The future of the industry is, therefore, bright and assured, and its projected growth is a matter of

certainty. But it must be achieved in such a planned and systematic manner that the highest productivity is ensured and the new factories are of appropriate size and mechanised so as to secure the maximum technical efficiency and largest economies, external and internal, in production.

Employers Please!

Provident Funds no longer entirely meet modern needs. In western countries particularly a more effective provision has been found in Group Insurance Schemes. With little cost to the employer, these schemes can work wonders in safeguarding thousands of homes and augmenting old age pensions.

In the United States, by the end of 1956 3.5 crores of certificates had been granted under Group Schemes with a total value in Life Insurance cover of Rs. 55,000 crores. This is truly impressive when one considers that the total extent of Life Insurance written in India, individual and Group, stands at about Rs. 1,200 crores only.

An attempt was made three years ago to introduce Staff Insurance Schemes in India. It was greeted with enthusiasm by employer and employee alike. But certain defects in the implementation of these schemes demanded their withdrawal. The Life Insurance Corporation has now introduced new Group Schemes which do away with the shortcomings of previous attempts.

These Group Schemes are now available to employees of industrial concerns, business houses commercial establishments and other similar institutions. They apply to a homogeneous group of individuals and are available at lower rates of premium. Ordinarily, no individual medical examination is required. The Group Insurance Schemes broadly afford two distinct benefits:

BENEFITS ON RETIREMENT

This category includes the Superannuation Schemes. These provide for pensions on retirement. Experience has shown that the lump sum Provident Fund is soon frittered away. The employee has often to depend on relatives

and others for financial assistance or to seek work. The Superannuation Scheme is designed to solve this predicament.

BENEFITS DURING SERVICE

The plans under this category are called Group Insurance Schemes. They provide the employee with an insurance umbrella during his working years. Provident Funds, so popular in this country, are inadequate in the event of early death. This contingency is covered with the Group Insurance Schemes; but one can also take these Schemes under the Endowment Plan, thus serving a two-in-one purpose of security during AND after service.

Both these schemes may be instituted in replacement of or in addition to an existing Provident Fund.

There are two ways of looking at these Group Schemes. To the employer they mean greater staff loyalty and an attraction to the best in new personnel. To the employee they are an inducement to stay with the organization and give of his best.

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to March 1958. Compared with February, the March index for Government securities shows a rise of 2.1 points, while that for preference shares discloses a drop of

0.5 points.

There were increases in cottons 15.7 points, coals 6.6 points, jutes 4.7 points, minings and oils 10.4 points, cements 20.4 points, engineering 9.4 points, papers 112.7 points and sugars 36.4 points, while de-

creases occurred in banks 0.3 points, teas 4.7 points and miscellaneous 1 point.

Correlating all the factors, the Capital variable yield securities index advanced by 11 points during March 1958.

Weights.	Index of Govt. Securities	Index of Preference shares	Variable-Yield Securities.												Combined Index.

New Delhi

SHORT-TERM U.K. LOAN TO INDIA EXPECTED

TOP PRIORITY FOR DYESTUFFS AND PHARMACEUTICALS PROJECTS

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government seems to have every hope of obtaining a short-term loan from the U.K. to meet the immediate needs of the economy, while possibilities are being explored for long-term credits. This loan, which may be in the nature of a banker's overdraft, is likely to be available to India before September, when the new import policy will be formulated. Such accommodation would enable India to maintain the inflow of her essential imports sufficient to keep production at the 1957 level. But if no such loan is granted, the banning of all commercial imports for the three months, October, November and December, is considered most likely. But in the nature of things, all such imports cannot be stopped. Take the case of petroleum products, for instance. The Government cannot ask the oil companies to meet the demands of India's economy for nine months with only six months' supply in hand. India needs to import at least 500,000 tons more steel to meet the essential requirements of her economy. The overall demand during 1958-59 is placed at 2.4 million tons. The indigenous production in the current year is placed at 1.2 million tons. Imported steel will include 200,000 tons from Russia and other purchases financed by the loan from the World Bank for the railways. It may be added that neither indigenous production nor most of the imports include alloy and tool steels, the consumption of which has considerably increased on account of the expansion in indigenous engineering capacity. Such categories of steel are regarded as a very high priority industrial raw material. Their demand is placed at 100,000 tons a year. It may further be added that the railways have been included in the core of the plan, and if the World Bank loan cannot meet all their demand, the balance has to be met by the Ministry of Steel from the common pool. It is calculated that to implement the core of the plan and to supply the other users of steel with their minimum requirements, will require 2.4 million tons of steel in 1958-59. After adding up domestic output and the total of prospective imports, there will still be a gap of 500,000 tons.

Ban on Liquor Imports

Foreign liquor imports in general, and those of whisky in particular, it is understood, are going to be among the first casualties of the baffling foreign exchange crisis. As both the Finance Minister and the Commerce Minister are confirmed prohibitionists, they are apparently determined to enforce Prohibition, for which the foreign exchange scarcity seems to have provided them with a ready excuse. It is considered certain in well-informed circles that the import of foreign liquors will be banned for three months ending December 1958, and only an optimist can hope for the resumption of their imports from the new year. It is also believed that there will be no foreign liquors on sale at this time next year. Of course, this ban cannot apply to foreign diplomatic missions in New Delhi. Drastic cuts in imports and the export promotion concessions are affecting the Central revenues adversely. But no noteworthy attempt has yet been made to reduce Government spending, which has been on the increase.

Pharmaceutical and Dyestuff Schemes

A Russian team is expected here soon to finalise a scheme to manufacture pharmaceutical intermediates. It will be recalled that Russia has offered long-term credits amounting to 100 million roubles as well as technical know-how to implement the project. Negotiations are also in an advanced stage with the West German firm of Bayers for setting up a dyestuff intermediates factory. Enquiries reveal that both these projects have been accorded top priority and will be treated on par with the hard core of the plan for the purpose of implementation. The National Development Council, at its last meeting, decided to reduce the size of the plan by dividing the projects into two categories, namely, those which are to be implemented during the plan period, and those which can be taken up only if resources become available.

Effect on the Budget

There is a financial side to the measures now contemplated to meet the foreign exchange crisis. The continued restriction on imports leading to a total ban on them, will have repercussions on the budgetary position of the Central Government. The Finance Minister had this year budgeted for Rs. 140.57 crores on account of import duties and the following figures show the importance of this item to Central revenues.

REVENUE FROM DUTY

1951-52 (Actuals)	Rs. 141.59 crores.
1955-56 (Actuals)	Rs. 127.98 crores.
1956-57 (Actuals)	Rs. 140.52 crores.
1957-58 (Budget)	Rs. 133.70 crores.
1957-58 (Revised)	Rs. 153.76 crores.
1958-59 (Budget)	Rs. 140.57 crores.

The budget figures for 1958-59, it will be seen, are nearly equal to the actuals for 1956-57, which

was a normal year. In 1957, all imports were stopped for three months, June, July and August. They have since been on a very restricted scale. The actual receipts for 1957-58 and those during the current financial year are likely to be much less than expected.

Conference on Motor-car Industry

Questions affecting the development of the motor-car industry were discussed at a meeting convened by the Central Ministry of Commerce and Industry in New Delhi during last week. Mr. L. K. Jha, Special Secretary to the Ministry, presided over the meeting, which was attended by the representatives of motor-car manufacturers as well as those of ancillary trades. The present position of the industry was reviewed in the light of the foreign exchange shortage and the need to develop domestic production of the maximum number of components of cars and lorries. It was agreed that two committees would be set up to study and report on all important problems. The first committee, of which the Industrial Adviser (Automobiles), Ministry of Commerce and Industry, will be the convenor, will be a technical body, and will recommend ways of developing the manufacture of the specialised components of cars and lorries in India, which are not being produced at present. It was suggested that the manufacture could be undertaken either on a joint basis by the existing firms or by an independent producer. It was felt that this would go a considerable way towards saving the foreign exchange now spent on the import of these components.

The other committee, which will be set up by the industry itself, will study the present supply and price position of cars and suggest to the Government what arrangements should be made to ensure a reasonable return to the manufacturers and a fair deal to the consumers. It was pointed out that while the demand for cars had gone up appreciably, production had not kept pace because of the foreign exchange scarcity. This had created a shortage of passenger cars, and there were cases of sales being effected at prices higher than the fixed rates. Mr. Jha explained the present foreign exchange difficulties to the manufacturers' representatives, and urged them to make the best use of the available resources for maintaining production. As for cars, he said that for the next 12 months, import licences would be given to each of the three licensed manufacturers for the import of c.k.d. packs for one type of car only—the one which would cost the least in terms of foreign exchange. As for lorries, efforts would be made to find the foreign exchange for maintaining the present level of production. A decision has been taken to encourage the export of motor-cars, which was communicated to the manufacturers' representatives by Mr. Jha. He said that 90 percent of the foreign exchange earned by such exports would be given to the manufacturers for additional imports of raw materials, components, etcetera. It has been stated on behalf of the representatives of the industry that an association of motor-vehicle and ancillary manufacturers is being formed.

Manufacture of Special Steels

Sardar Swaran Singh, Central Minister for Steel, Mines and Fuel, has announced that plans are in a "fairly advanced stage" for the manufacture of tool, alloy and special steels, and that "we shall be ready to proceed within a few months on the project." The Minister, who was presiding over the annual general meeting of the Steel Rolling Mills Association of India, has added that "unless we go ahead with this fairly quickly, we shall be depending, even at the end of the plan, on imports for these steels. It would be wrong to import something that we can make ourselves. The progress of the plants has been so far satisfactory. There have been some delays here and there, but these delays have been inevitable and are insignificant in relation to the size of the problems we have encountered."

Report by Pipeline Consultants

Further details are now available of the project report, submitted to the Government of India by the U.S. consultants, on the capital and operational costs of the projected pipeline in Assam. In their report six schemes have been given four of which are on the basis of two refineries, one in Assam and the other in Bihar, and the remaining two on the basis of only one refinery in Assam. Scheme No. 1 will enable the transport of crude oil through a pipeline from Nahorkatiya to Calcutta (Diamond Harbour) which can handle 2.5 million tons a year of crude with provision for later expansion to 4.5 million tons a year. The route of the pipeline will be entirely through Indian territory. The total cost of the pipeline from Nahorkatiya to Diamond Harbour including all engineering, design construction and land costs, pump stations, tankage and auxiliary equipment, is placed at £58,911,000. Its expansion to handle 4½ million tons of crude a year will cost £25,212,000. The total operating costs for 2½ million tons of crude a year are placed at £9,700,000 a year and for 4½ million tons at £10,660,000 a year. "This produces a transmission cost of £3.88 a ton for 2½ million tons a year and

£2.37 a ton for 4½ million tons a year." Scheme No. 2 provides for a crude oil pipeline from Nahorkatiya to Barauni to handle initially 2½ million tons of crude oil a year with provision to expand it to 4½ million tons a year and also an extension from Barauni to Diamond Harbour via Burdwan to handle 2½ million tons of crude a year. The capital cost of this scheme is estimated at £65,495,000. If it were expanded to handle 4½ million tons of crude a year, the increase in cost would be £4,620,000. These estimates do not include any reservoir tankage at Barauni or Diamond Harbour. The total annual cost of operating this pipeline system, including depreciation, is placed at £10,909,000. This gives for a 2.5-million-ton-a-year pipeline, a transmission cost of £3.30 a ton

Penguins in Iceland need it . . .

... what about
the workers in your factory ?

PROVIDE THEM WITH AN ACCOOLER FOR CONSTANT
SUPPLY OF HYGIENICALLY COOLED DRINKING WATER

Accooler advantages :

- All parts coming in contact with water are made of stainless steel.
- Stove-enamel finish makes cleaning easy and helps retain newness for years.
- Reliable, efficient hermetic type compressor eliminates V belts and noise and reduces wear and tear.
- Simplicity of mechanism makes installation easy.
- Compact construction saves floor space.

ECONOMIC RESEARCH

- is an essential part of modern commerce. But it is
- not always easy to obtain. The ordinary business
- house does not usually possess the records, statistics
- and archives which are the raw material of research.
- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has a long record of service to Chambers of Commerce,
- Industrial Associations and private business concerns.
- It does not undertake trade inquiries, but its facilities
- and advice are available for all kinds of research
- proper into the problems of Indian commerce
- and industry.

- CAPITAL'S RESEARCH & STATISTICAL DEPARTMENT
- has constructed and maintains eight cost of living
- indices for various classes and communities in India
- and Pakistan. It offers the industrialist and business
- house its experience in

- consumer market surveys
- industrial prospecting
- readership analysis
- economic indices
- business research

P. O. Box 14, Calcutta, or 5, Mission Row, Calcutta, India

of which, as crude oil, would otherwise require a much more costly 20in. pipeline. With this thought in mind, additional information was supplied in the appropriate sections of scheme Nos. 5 and 6 on the feasibility and desirability of installing a 12in. products line. Depending on where the refining is done, there could be a substantial saving in the capital cost of pipelines; there would be a further substantial saving both in capital and operating costs by having one refinery instead of two. It appears that the best location for a refinery to process this crude oil would be one lying near the railway and the Brahmaputra river and at a site that has a stable ghat. It should also be west of the westerly limits of the probable future extent of the oilfield area. It is believed that a site near Silghat would best meet these requirements. The cost of a 20in. crude oil pipeline to carry 2½ million t.p.a. (tons per annum) from the oilfields to Silghat, plus a 12in. products pipeline from Silghat to Barauni, for 1,235 million t.p.a., would be of the order of £36 million. Compared with this, the cost of a 20in. crude oil pipeline from the oilfields to Barauni is £49,881,000. Both these systems, if and when required, could be economically expanded to dispose of 4½ million t.p.a. The cost of such expansion for crude with a products line system, with a refinery in Silghat, is estimated to be £5,500,000, compared with £4,620,000 for the crude oil system only. These figures indicate that a crude products line for 4½ million t.p.a. crude throughput, to a refinery in Silghat and 3,705 million t.p.a. products to Barauni could be built at a substantial saving. Roughly, £14 million less would be spent than for a 20in. crude oil line for 4½ million t.p.a. from Nahorkatiya to Barauni."

Oil India Agreement

The agreement between the Government of India on the one hand, and the Burnah Oil Company and the Assam Oil Company on the other, for the formation of a rupee company to be called Oil India Private Ltd provides that prior to the registration of the rupee company "a committee shall be appointed to determine and assess the assets to be transferred to the rupee company." This committee has now made its report. The total amount to be reimbursed by Oil India to the Assam Oil Company is estimated by the committee at Rs. 1,047.17 lakhs. There are some issues still under dispute. The Assam Oil Company has demanded Rs. 29.07 lakhs for rental charges on two steam drilling outfits. As there was a difference of opinion between the members of the committee representing the Government and the Assam Oil Company, neither the cost of the two steam drilling outfits amounting to Rs. 39.03 lakhs nor their rental charges amounting to Rs. 29.07 lakhs have been included in the assessed value of the assets. Adjustments will also have to be made in the amount of bonus paid to the Assam Oil Company's employees. The total amount of bonus paid to them and charged to Oil India amount to Rs. 13.32 lakhs for the period 1954 to 1957.

It is explained that one of the concessions enjoyed by these Assam Oil Company's employees is the payment of an annual bonus. During 1957, lengthy negotiations with the Assam Oil Company Labour Union were concluded with an agreement that the Assam Oil Company would pay bonus equalling three months' basic pay for the years 1954, 1955, 1956, 1957 and 1958, plus a single payment of a further one month's basic pay to mark the signing of the agreement. These bonuses have been paid to labour and clerical staff who have worked in Assam Oil Company areas. Bonus amounting in all to Rs. 13,32,874 has been charged to Oil India. This includes liability for the bonus payment for 1957 which must be made by Puja time in 1958.

Points at Issue

The important points at issue are: (i) Should the Assam Oil Company be reimbursed by Oil India the amount of the bonus paid to labour and clerical staff, which has been charged to the Oil India account by the Assam Oil Company? (ii) Should Oil India pay or reimburse the Assam Oil Company for payment to these men of bonus from 1958 onwards? The Assam Oil Company's contention is that it should be reimbursed the amount which it has paid as bonus to the men who have been working in Oil India areas. As for reimbursing the Assam Oil Company by Oil India for the payment of bonus in 1958 and onwards, if Oil India wishes to continue to have the benefit of the Assam Oil Company's experienced men for its areas, it seems probable that these men should continue to be treated as Assam Oil Company men for all purposes including bonus. If not, then these men, or an equivalent number, will become surplus to the Assam Oil Company's requirements and will have to be discharged. This is likely to create serious labour trouble both in Oil India areas and Assam Oil Company areas, the consequences of which may be very serious. The committee, after careful consideration of the Assam Oil Company's statement, is of the opinion that, placed as it is in the circumstances, the Assam Oil Company has no option but to pay this bonus to its employees working in Oil India areas. It is also recommended that the Assam Oil Company may examine the possibility of obtaining income tax relief on this expenditure and should this relief be obtained, necessary financial adjustment should be made. However, the Government members of the committee consider that the matter must be left to the decision of the Government in view of the fact that this bonus payment is a policy issue.

London

CITY EXPECTS EARLY CHANGE IN OFFICIAL POLICY

RELAXATION OF CREDIT SQUEEZE OPPOSED IN COMMONS DEBATE

(FROM OUR LONDON CORRESPONDENT)

THE Chancellor of the Exchequer did not lack opportunities last week to elucidate the Government's ultimate intentions as far as its economic policy is concerned. The Committee stage of the Finance Bill occupied the House of Commons most nights, with the Treasury spokesmen resolutely resisting all attempts from all quarters to "ease the squeeze" while reaffirming the fact that Government's policy is flexible and readily adjustable to meet the requirements of any eventuality. The Commons also debated the state of the cotton industry, and in spite of the abstention of seven of its own Lancashire backbenchers, the Government's maintenance of its attitude on the question of restricting imports from the Commonwealth countries was carried by a substantial majority. Mr. Heathcoat Amory himself paid a visit to Manchester and addressed business men there, but without adding much to the country's knowledge of economic developments.

In spite of all this apparently intentional discouragement of inflationary thinking, the City has been counting on an early change in the Government's policy and some return to industrial expansion. The current *Bulletin for Industry* is not very reassuring. "Developments in 1958", it says, "have not changed the assessment made in the Economic Survey. So far there has probably not been any significant change in total demand." The *Bulletin's* only concession to the public demands for a new policy was the cautious remark that "much depends on the world economic situation and on the outcome of wage settlements at home in the next few months." Mr. Amory himself was more encouraging in the House when he referred to hopeful trends in prices and wages. He claimed that the price level had reached a higher degree of balance than at any time since the war. Reductions were working gradually through the economy but had not fully reached consumers. On wages, the signs were that "if everybody behaves sensibly" greater stability would be achieved in relation to production than ever before. None of these moves really supported the City's anticipations. Once again, however, it demonstrated its perspicacity, for on Thursday last came the announcement of the new directives, to the banks and the Capital Issues Committee, which, taken in conjunction with the Finance Bill concessions on profits tax and investment allowances certainly represent a change of policy, even though it may not, as it was contended officially, represent a full-scale reversal of the squeeze.

Sterling Better Placed

There will inevitably be a conflict of opinion whether this relaxation is justified by the circumstances, for it must be remembered that Britain is just approaching another "crisis" period as far as sterling is concerned. The gradual rebuilding of the gold reserves continued during last month, but at a much reduced pace. The gain of \$37 million lifted the reserves to \$3,076 million—\$700 million more than a year ago, and \$1,227 million more than at the end of September. There were two special payments in June which affected the net addition. An instalment of \$7½ million was paid off the Canadian interest-free loan—two similar payments will fall due at the end of September and December—and \$6 million was paid as half-yearly service on the U.S. Marshall Aid loans. In addition, \$265 million was paid to the European Payments Union for May and \$25 million went to creditors of the Union in bilateral settlements.

Even if the rise in the reserves should now stop for a time, having risen for the past nine months, it will have taken place simultaneously with a considerable paying off of the sterling debt. The reductions of sterling balances is almost certainly still going on and may even be accelerating. The overseas sterling area, and especially India, has been selling less raw material to the Continent and other non-dollar countries, while large payments continue to fall due for purchases made in West Germany and other countries. The trend is reflected in the E.P.U. deficit, which for June amounted to £25 million, against £13 million in May, and represents a drain of \$52 million in gold or dollars in July. It is good to know, therefore, that sterling is better placed today to meet the usual autumn strain than it has been since September 1951, when the reserves last stood as high as they are now.

Domestic Indicators

On the domestic front, also the indicators are more encouraging or perhaps it would be more accurate to say that they are less discouraging than they ought to be if criticisms of the Government's policy are really justified. Industrial activity continues to run at a steady level. The Central Statistical Office estimates the index figure for May, after seasonal correction, at 137 to 138 or only a fraction less than the April figure of 138. Comparisons with last year are rather misleading because the engineering and shipbuilding strikes reduced output in March and April 1957, while in

May there was a sharp rise after the end of the strikes. The best comparison to make is that for the first five months of 1958. The index has averaged 140, against 141 in the same period of 1957.

Comparisons based on the latest official index of wage rates have encouraged the Government to believe that its policy of wage restraint is succeeding. During the 12 months to the end of May 1957, the index rose by six points, from 105 to 111. During the subsequent 12 months, it rose by only two points. The rise since the anti-inflationary measures were announced last September has been only one point, from 112 to 113. This compares with a rise of five points, from 106 to 111, during the corresponding eight months of 1956-57. These figures hold good for manufacturing industries alone and for industries and services as a whole.

This trend should persist, for Mr. Amory, replying to a question in the Commons recently gave figures showing that pay increases are keeping ahead of price rises. He said: "Average weekly money wage rates rose by 76 percent between June 1947 and May 1958, while the index of retail prices rose over the same period by 68 percent. Average weekly earnings rose by 96 percent between October 1947 and October 1957, compared with a rise of 63 percent in the index of retail prices." It is true that although the cost of imported food has fallen by about 7 percent in the last 12 months, retail prices have risen nearly 6 percent, but a Treasury report says that the cost of eating should be reduced later in the year, for it takes time for retail prices to react to the fall in import prices, and many increases are purely seasonal in character.

Bigger Revenue Deficit

All these factors no doubt have had their influence on the Chancellor, but he cannot quite ignore the increasing number of adverse comments on trading conditions generally, specially the company chairmen. Nearer home, he is faced by the unsatisfactory working results of the nationalised industries—the railways have just reported a £27-million deficit for last year—and of course, a worsening in the Government's own financial position. National revenue returns for the first quarter of the financial year were £130 million less than expenditure and compare with a deficit of £120 million at the same time last year. Ordinary revenue rose from £1,013.7 million to £1,043.8 million, but expenditure also was higher at £1,173.8 million against £1,113.9 million. Expenditure "below the line," which consists chiefly of loans to the nationalised industries totalled £319.4 million, against £275.9 million. Receipts, mainly repayments of loans made in the past, at £199 million,

compare with £207.4 million. The deficit here has increased from £68.5 million to £120.4 million. The ordinary and "below-the-line" figures combined show a deficit of £250.4 million. The figure a year ago was £188.7 million.

Cotton Imports Agreement

There has been general satisfaction at the Cotton Board's announcement that the Indian and Pakistani cotton industries are prepared to reach an agreement on the limitation of exports to the United Kingdom, provided that satisfactory limiting arrangements are made with the Hongkong industry. It is expected that a document embodying the understanding will be signed in the near future. Although the time for an approach to Hongkong has yet to be decided, and the form of the approach has yet to be prepared, the cotton industry is not likely to lose much time in making a start. There is no indication in the Board's statement of the category of cloth which will be covered by any agreement, but it is known that the discussions have been limited to grey cloth and that efforts to have finished goods brought into the scope of any agreement have been resisted.

The cotton debate in the Commons has made it clear that the Government cannot be expected to do much more than bring such pressure as it can through the Colonial Office to persuade Hongkong to adhere to such an agreement. Meantime, an official is being sent to the colony to study and report on working conditions. It is questionable whether this attitude can be altered, but at the moment a campaign to get some 3 million signatures to a petition asking Parliament to give "first aid" to the cotton industry is to be launched in Lancashire.

Coffee Terminal Market

Last week has seen the opening of a coffee terminal market at the Commodity Exchange, Plantation House, E.C.3. The City's last coffee futures market was closed in 1927, when Brazilian prices collapsed. The contract will be in five-ton units, and the basic grade is Uganda Native Robusta C.T.M.A.L. Type No. 2 Standard. The price is based on delivery of U.K. preferential duty Robusta in bond at an approved warehouse. Trading will normally be in six calendar-month positions up to 13 months ahead. There will be three 10-minute calls a day, five days a week. Rapidly increasing production of Robusta coffees in east and west Africa explains the opening of a London terminal market. Robusta has proved highly suitable for the instant coffee mix, which is gaining ground, and it is also considerably cheaper than Latin American coffees. Overseas interest in the new market is already reported.

Brevities

The Dundee mills of Don Bros. Buist and Co., which has been producing flax and jute products since the 18th century, is to close because of the reduced protection against cheaply produced Asiatic hessians.

A contract worth £250,000 has been secured by Crompton Parkinson from the Government of Ceylon, covering the supply of three large transformer sub-stations which will be incorporated into a 33 kV distribution system for the city of Colombo.

New capital issues in June amounted to £39.4 million according to the Midland Bank record. This brings the amount raised in the first half of 1958 to £205.6 million, against £211.5 million in the first half of 1957 and £171.8 million in the second half.

Plantation Topics

LAW AND ORDER IN KERALA PLANTATIONS

U.P.A.S.I. DEPLORES LACK OF PREVENTIVE MEASURES

(FROM A SOUTH INDIAN CORRESPONDENT)

THE law and order situation in Kerala plantations is still far from satisfactory, although there has lately been a welcome change in the attitude of the police. The United Planters Association of Southern India says in a review that the police are more frequently present after an incident than was the case a year ago. It says that convictions have been secured in certain cases involving violence although violent incidents still continue to occur. Police action usually takes place following an incident, but very little or nothing is done to prevent it.

The U.P.A.S.I. review describes a few incidents which occurred in Kerala plantations during the past five months including the hacking of a conductor's arm when he was supervising the work in the field, mob attack on a group of watchers which resulted in the death of two and manhandling the manager of an estate. The U.P.A.S.I. says that it does not matter which estate or managers were involved in as much as any manager on any estate could be involved. Long before violence erupts, "a process of conditioning the workers" takes place. Workers are initiated to insubordination, criminal trespass, intimidation, unauthorised meetings, demonstrations, insult to management and unrestrained incitement to violence. Long before the conductor's arm was cut off on Arnakal Estate, threats were freely made at meetings of labour that so-and-so was going to get his arm or leg cut off. "Violence can of course erupt without any such preparation but most estates go through a softening process before a serious incident takes place", the review says.

Largest Employers

The plantation industry is labour intensive and it is, therefore, the largest employers of labour. Being away from the settled, populous areas, estates are at times 15 to 20 or more miles away from police outposts. The right of entry enjoyed by outsiders wishing to contact workers, who reside within the plantations, have led to the holding of demonstrations, meetings and various forms of agitations within the premises of the plantations. The review says in conclusion: "The delay in securing police help, the difficulty of finding reliable and courageous witnesses, and the protracted court procedure to secure convictions tend to make complaints worthless."

Lack of Discipline

The chairman of the South Travancore Planters Association has also given a depressing account of the labour situation in estates in his address at the annual meeting of the Association. He says that discipline has been so completely lost on estates that the standard of work and production is being severely affected. "There are many operations on the plantations where it is not possible

to introduce piece rates, and in all these, the quantum has fallen in an inverse ratio to the wage increase. At a time when the call is for increased production in all spheres, it is a pity that the efforts of the individual planter to contribute towards the success of India's second five year plan are thwarted by self-seeking labour leaders. We are all professional planters, whose only ambition is to produce as much tea, India's biggest foreign exchange earner, and rubber, the most vitally needed industrial raw material in India, and such other plantation crops.

"We have no stakes in politics and yet we are made the pawns of a political game, with the result that our aims are frustrated. A sense of insecurity prevails in the plantation industry today, brought about by unhealthy trade unionism. The workers in many estates in our districts carry on their industrial disputes by encircling offices and residences of staff, by intimidating and even assaulting members of staff. We can only sympathise with the poor misguided worker, who is made the cat's paw of the people with aims and objects other than those for his welfare. This is evident from the lowering of the economic standard of the worker in spite of the enhanced wages", the chairman says. He adds that the planters in Kerala are placed in a situation when gentlemen's agreements are signed presumably in good faith, and then they are violated when it pleases the whims and fancies of the labour leader who himself is usually a party to such agreements. The South Travancore Planters Association has been liquidated with the latest meeting to give way to the South Kerala Planters Association, the creation of which has been necessitated by the formation of the Kerala State.

No Floor Price for Coconut Oil

It is understood that the Central Government has turned down the recommendation of the Coconut Committee to fix a floor price for coconut oil for two reasons. First, in the absence of a ceiling price, it will not be proper to fix a floor price and secondly, the coconut oil price is so intimately connected with the prices of other edible oils that it will not be possible to single out coconut oil and fix a minimum price for it.

Import Licensing for Copra

The procedure prescribed by the Central Government for the issue of licences for importing copra during the half-year period April-September 1958, announced through a Gazette notification early in June, has been found unworkable as far as it affects the non-scheduled soap manufacturers and the oil millers. The opportunity to import is restricted to actual users. In the case of those who are not on the books of the Development Wing of the Central Ministry of Commerce and Industry, the procedure suggested is as follows. They have to submit their applications to the licensing authorities at the ports. They will be granted licences to the extent of half the copra imported by them during 1955 or 25 percent of the total quantity of copra used for making coconut oil, whichever is more favourable. Licences will be restricted to those units, subject to excise control. Applicants should furnish additional information about the total production of coconut oil during 1955, 1956 and 1957 and the consumption of imported copra, and indigenous copra, purchased from the internal market, during the three years. They

should also indicate the excise duty they paid during the last three financial years.

The essentiality certificate has to be obtained from the Central excise authorities by the non-scheduled soap manufacturers and oil millers. The Central excise authorities, it is reported, say that they do not have sufficient figures to check the accuracy of the figures furnished by the applicants concerning their actual use of copra, etcetera, refer the applications to the Central Coconut Committee. It is understood that the latter has addressed a communication to the Central Government asking it to vest the Committee with necessary powers to issue essentiality certificates in order to solve the present procedural tangle. Coconut oil prices have been ruling high ever since the Government announced import restrictions. The latest quotation from Cochin is Rs. 2,100 a ton compared with the world price of Rs. 1,387 a ton. The supply of coconut oil has been reduced considerably by import restrictions, a smaller crop in India as a result of the large-scale attack on coconut trees in Kerala by pests and diseases, and the heavy monsoon which has temporarily dislocated the manufacture of copra.

Coir Board to Organise Marketing Section

The Coir Board, at its 17th meeting, has decided to organise a marketing section in its office in Ernakulam. The section will be fully equipped with competent and qualified technical staff. It has also decided to appoint technical assistants at the various coir showrooms and sales depôts which have been opened by it at different centres in India. Mr. T. M. B. Nedungadi, chairman of the Coir Board, in his address at the meeting, said that the Board has so far registered 171 firms as exporters of coir goods since the implementation of licensing and registration rules with effect from 22nd May. He adds that between 22nd May and 28th June last, 56,943 licences have been issued from the Cochin port alone for the export of 115,307 cwt. of coir goods. The licence fee collected on this account amounted to Rs. 5,76,850. He has further announced that the Central Coir Research Institute of the Board, to be established in Kalavoor near Alleppey, will start working in full swing with effect from October this year and that the Director of this Institute has been appointed.

Pepper Market Active

The pepper market on the west coast has been active for the past few days with prices registering smart increases on short-covering and speculative buying by exporters. Recently, there had been an increase in price to the extent of Rs. 57.50 a candy of 6 cwt. The recent quotation from Cochin was Rs. 637.50 a candy. This compares with Rs. 575 a month ago. New York has reacted to the firm advances from Cochin and Singapore and there too prices showed some improvement. Still the New York quotation is below the Indian parity which makes transaction difficult. Grinders are reported to be unwilling to follow up the firm advances from the markets of origin. But the Indian exporters are hopeful that U.S. demand will soon revive.

The supply position in the United States, on a long-term basis, is uncomfortable, although for immediate needs the buyers might be able to cover from afloat consignments. But the demand for August-September shipments is likely to be heavy since stocks have been allowed to run down to the bottom. Buyers there might be testing the holding capacity of sellers in the producing countries as usual and awaiting the impact of the new Sarawak arrivals on the world market. The Sarawak crop has started to move into the markets but its size is far below expectations, according to Singapore reports. The new crop is now estimated at 12,000 tons against last season's 18,000 tons. Arrivals in Singapore markets are small enough to confirm this estimate. Prices are consequently rising.

The supply of black pepper from the Far East is likely to be further reduced in view of the possibilities of being converted into white pepper which enjoy a handsome premium over black varieties. The Indonesian crop may take a little more time to reach the market but here again the supply is likely to be reduced due to the disturbed political conditions in that country. Under the circumstances, the foreign buyers might have to rely more on Indian pepper, the supply of which is also limited by many factors such as increasing home demand and larger offtake by new buyers. Stocks are comparatively low at present, and this is another advantageous factor. Next season begins by November.

COCHIN TEA SALES

At Sale No. 20, 1,200,000 lbs of tea were on offer. There was an improved general demand for low mediums and medium broken and fannings were irregularly 5 to 10nP dearer. Highgrowns were in less demand, and were 10 to 15nP lower. There was a better enquiry for fannings grades.

AGREEMENT ON DOUBLE TAXATION REACHED WITH SWEDEN

As a result of discussions between a delegation from the Government of India and representatives of the Government of Sweden, an agreement has been reached for the avoidance of double taxation between the two countries. The agreement will now have to be ratified by both. On such ratification, the agreement will become effective in India for the assessment year 1959-60 and in Sweden for the taxes payable for the year 1958.

Jute

SPECULATIVE RISE IN GUNNIES DESPITE HIGHER STOCK FIGURES

FIBRE BUSINESS CONTINUES TO BE RESTRICTED

THE results of the recent dock strike were fully reflected in the publication this week of the jute goods stock figures, as at the end of June. These showed an increase over the previous month of 21,900 tons, bringing the stock figure up to 134,000 tons, the highest since July 1956. Sacking stocks showed the largest rise (16,000 tons). At 87,900 tons they were the highest since September 1956, and constituted 654 percent of the total. The rise in hessian stocks was expected due to the non-shipment of large quantities of goods destined for Argentina, and an increase of 6,000 tons to 31,000 tons was not considered excessive in the circumstances. Mill stocks always tend to rise at this time of year due to the seasonal fall in burlap consumption in all consuming countries. At the present moment, stocks are standing at one-and-a-half month's production, whereas in the last quarter of the year, i.e., October to December, the stock figures are invariably well below the production rate. It is unfortunate, therefore, that the dock strike came at a time when an increase in stocks had more than normal significance.

The market reacted strongly to this news and the initial tendency was to weaken, but this was promptly counteracted by heavy speculative activity. Once again, overseas buyers displayed little interest and only limited business was transacted. The placing of a fresh steamer for Argentina, however, caused a flurry of activity among local shippers, and a heavy covering for early shipment forced prices up at one stage. The gap between forward and near shipment hessian goods widened during the week, emphasising the complete lack of interest in long shipment. Towards the close, October-December shipment 40in. 10oz. Hessians stood at a discount of 50 to 55nP over July and August shipments. The sacking section, compared with Hessians, was relatively firm, and prices tended to rise throughout the period. However, in this section also, sentiment was controlled by speculative activity due to the lack of overseas interest. As a result, the near section recorded a rise of about 65nP during the week, while forward shipment goods remained almost stationary. This narrowed the gap between the two delivery periods and forward shipment commanded a smaller premium of Rs. 1.65. Two weeks ago, this premium was in the region of Rs. 2.50.

Calcutta mills continued to neglect the fibre markets, and only small business was reported, mainly by the Indian-controlled units. In spite of the lack of business, the market in general remained firm and towards the close, prices strengthened, chiefly on account of the high prices being paid for early delivery new crop jute, both for ready bills of lading and shipment. Sellers' ideas were very reserved, and the quantities on offer were remarkably small for the time of year. Most of the mills still have large quantities of new crop jute to buy and the undertone is very strong in anticipation. New crop reports continue to be favourable in most districts, and in the northern Bengal and Assam areas, harvesting of the lowland crop is well in hand. In all districts, sowings have been completed. In western areas, the rainfall has been adequate for the standing crop, but lack of steeping water is hampering operations. Similar conditions exist in the Daissee areas where the recent drought has been most prolonged. The standing crop, however, has not been affected, and provided there is adequate rainfall within the near future, the predictions of a healthy bumper crop should be fulfilled. In these areas the question of steeping water is still causing severe anxiety. Tanks and ditches are dry in many areas whereas in previous seasons at this stage, there were ample steeping facilities. This is due to the late monsoon and the poor rainfall since it broke.

THE JUTE MARKETS

Prices in the futures market moved through narrow limits last week, and rates as given by the East India Jute and Hessian Exchange Ltd. for the period 2nd July to 8th July were as follows:

	Hessians 40in. 10oz. August	Sacking B Twills August	Raw Jute Upper Assam August
Opening	40.76	97.80	25.78
Highest	41.40	98.80	26.42
Lowest	40.64	97.50	25.70
Closing	40.80	98.10	26.34

Manufactured Goods: The market opened last week on a steady note with sacking, as represented by B Twills, showing a rise in the near position of 70nP to record Rs. 97.20. Forward shipment at this stage was quoted at a premium of Rs. 2.30 over the ready position. Hessians also recorded a rise at the opening and 40in. 10oz. improved by 50nP to be called over at Rs. 41.25 with forward shipment at a discount of 40nP. This is the highest quotation for 10oz. since 17th May. Sacking continued to improve under speculative influences, but by the week-end, heavy goods rates were back to opening levels. Due to the lack of overseas in-

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 25th June, 1958	1,726.3	11,358.7	13,085.0
1st to 25th May, 1958	969.5	18,687.5	19,657.0
1st to 25th April, 1958	3,510.2	11,953.7	15,463.9
	Sacking		
1st to 25th June, 1958	12,615.2	240.9	12,856.1
1st to 25th May, 1958	17,970.9	697.9	18,668.8
1st to 25th April, 1958	18,109.5	549.8	18,659.3

THE FOREIGN JUTE MARKETS

FIBRE FALLS BUT GOODS UNCHANGED

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute prices have shown a falling tendency during the past week, but the decline is still slow, and the change is not very noticeable. Nevertheless, fibre values are sufficiently down to make a difference in the rates for yarns and cloth, but those responsible for making the changes are dilatory in effecting the reduction which all the trade is expecting. Consumers are holding off, and there is no doubt that when the change is finally made there will be a good business done. The reduction or enhancement, when changes are made, are usually £5 a ton, and this means a good lot to a consumer these days. A slight improvement in business reported during the past week, however, is due to the approaching holidays, when all the works in Dundee and district will be closed down for two weeks. They will close from 25th July until 11th August. There are some who believe that there will be an improvement in business generally after the holidays.

Offers of raw jute are being more freely made at the lower terms. Mill Firsts can be bought at from £107 for both old and new crop, Mill Lightnings at £94 and Mill Hearts at £84 July-August, and one or two sellers are prepared to take £1 less for September, c.i.f. the U.K. and Continent. Strangely enough, there is no change in prices for Daissee and Tossa. These are being very sparingly offered at £104 for crack Daissee-4 and £96 for grade, with grade Tossa-4 from £115 and grade Tossa-4 from £105 c.i.f. U.K., July-August. There are still no offers of new crop dark jute.

Calcutta goods are very irregular, some shippers quoting an increase and others less. The general value of 40in. 10oz. Hessians is 62s 6d and of 74oz. 46s 9d July to September, with B Twills at 148s July, 148s 9d and 149s 9d September, all f.o.b. Calcutta. Business is reported to have been done here at 61s 9d for 10oz. July f.o.b. Jute yarns and cloth are still firm but spinners and manufacturers will not change their fixed rates. They, like other consumers, are expecting a fall in the near future.

I.J.M.A. STOCK FIGURES FOR JUNE

The Indian Jute Mills Association reports the total stocks of jute goods at the end of June, as follows:

Description	30th June, 1958. Lakh Yds. 000 Tons	31st May, 1958. Lakh Yds. 000 Tons	Increase over (+) or decrease from (-) last month Lakh Yds. 000 Tons	30th June, 1957. Lakh Yds. 000 Tons
Hessian Cloth and Bag	11.53	31.0	+2.02	15.57
Sacking Cloth and Bag	20.97	87.9	+3.68	15.73
Others		15.1	-0.2	8.8
Grand Total (000 Tons only)	134.0	112.1	+21.9	116.0

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

jute. Wagon arrivals totalled 300 which was 43 more than last week, but 180 less than during the corresponding week last year. At the close, Kishanganj jute was quoted at Rs. 23.25.

On Wednesday morning, the opening quotations were as follows:

Indian Jute:	Landed at Mills Rs. a md. Rs. a 100 Kilos Basis Bottoms	Shipment

RECESSION THREATENS COTTON TEXTILE INDUSTRY

WIDESPREAD OUTPUT CUTS IN PRODUCING COUNTRIES

TOWARDS the end of 1957, it was increasingly evident that production of cotton yarn in the non-communist countries was running ahead of off-take and stocks of cotton goods were mounting rapidly in many countries. Production figures for the first quarter of 1958 for those non-communist countries for which regular data are available, as published in the U.K. Cotton Board's latest Quarterly Statistical Review, show the consequences of this situation. The quarter's total indicates a drop of about 2 percent in comparison with the preceding quarter and one of about 5 percent with the first quarter of 1957. Output in the United Kingdom, the U.S.A., India, Japan, West Germany, Italy, Holland, Belgium and Canada was well below the level of the first quarter of 1957. France was the only major producer whose production increased over a year previously.

It appears probable that the comparatively high level of world trade in cotton fabrics in 1957 was in part attributable to a stocking-up movement in import markets. If this was the case, the inevitable reaction has now set in. Exports of cotton piecegoods from non-communist countries in the first quarter were about 10 percent less than in the preceding quarter and as much as 12 percent less than in the similar period of 1957. Compared with a year earlier, Japanese exports were only slightly lower, but were well below the postwar record reached in the preceding quarter. Exports from the United Kingdom, the U.S.A., India, Hongkong, Belgium, France, the Netherlands, Portugal and Spain were all below the levels attained in the first three months of 1957. Italy and Switzerland were the only two important exporters to increase their trade over this period. Exports of fabrics of man-made fibres from non-communist countries in the quarter under review were about 16 percent below the record level of the final quarter of 1957, but about 7 percent above the total for the cor-

responding period a year previously. Compared with a year previously, exports from Japan, France and Switzerland were appreciably greater. Exports from the United Kingdom, the U.S.A., West Germany, Italy and the Netherlands were all down in comparison with shipments in the first quarter of last year.

Unhealthy Outlook in U.K.

The unhealthy state of the order books of firms in the producing sections of the U.K. cotton industry reflects the continuance of those unfavourable conditions which have been affecting the industry for some time. Domestic demand has been slack with the unseasonable weather adversely affecting sales of summer garments. Export shipments so far this year have been well below the previous year's level and there is no reason to expect any improvement in the near future. Imports have remained at a high level, and merchants and distributors have been reducing their stocks. It is possible that the recent reduction of Bank rate to 5 percent may lead to a halting, or even a reversal of this tendency. Extended holidays have been taken at Easter and Whitsuntide, short-time working is becoming more widespread and more mills have closed down permanently. Yarn output in May, allowing for working days lost through normal holidays, was 14 percent less than in November. The output of spun man-made fibre yarn and mixtures was maintained but production of cotton and cotton waste yarns has fallen by 17 percent since November, the decrease in Egyptian-type yarns being exceptionally marked. Again allowing for holidays, cloth output in April was 12 percent less than in November, and the rate of contraction was appreciably more for cotton cloth than for cloths of man-made fibres.

Exports of cotton piecegoods totalled 116 million square yards in the first quarter, higher than in the final quarter of 1957 but less than in the corresponding quarter of that year. In April and May, shipments amounted to only 66 million square yards. Compared with a year ago, the principal reductions in the first quarter's figures were in shipments to British East and West Africa, India, Ceylon, Canada, Scandinavia and Burma. In contrast, there were increases in exports to the Union of South Africa, Australia, New Zealand, Eire, the Belgian Congo and French West and Equatorial Africa. Exports of man-made fibre piecegoods in the first quarter of 1958 were much

the same as in the last quarter of 1957, but considerably less than in the first quarter of 1957. Exports of cotton yarn declined considerably in the first three months of this year and were 20 percent lower than the relatively high shipments of the corresponding period of 1957.

Imports of cotton piecegoods increased from 105 million square yards in the last quarter of 1957 to 117 million square yards in the first three months of 1958 and totalled 59 million square yards in April and May. Imports during the first quarter were, in fact, slightly in excess of exports, but this can be attributed in part to the extremely heavy imports of Chinese cloth which, due to quota restrictions, will not be repeated. Imports of piecegoods of man-made fibres declined considerably from the high level of the preceding quarter and were much the same as in the first quarter of 1957. The decline from the preceding quarter's level was due almost to a sharp drop in imports from Japan which are virtually all intended for processing and subsequent re-export. Total imports of piecegoods of man-made fibres amounted to 7 million square yards in April and May against 10 million in the corresponding two months of 1957.

The U.S. Recession

The U.S. industry remained in a depressed state during the first quarter of this year. In terms of current week's production, unfilled orders for cotton cloth in March exceeded mill stocks by only 24 weeks' production, compared with 3.6 weeks in March 1957. These large stocks and the lack of confidence of buyers in future economic conditions have held fabric prices at a low level. In April, the average price of 17 grey cloth constructions was the lowest since August 1946. As a consequence, mill margins have declined and in April they were 10 percent lower than a year ago. In the first quarter of 1958, the consumption of raw cotton was 7 percent lower than in the similar quarter of 1957 while that of man-made staple was 6 percent lower. The latest figures of cloth production relate to the fourth quarter of last year when cotton cloth production was 8 percent lower than in the corresponding quarter of 1956. The output of rayon cloth was 3 percent lower while cloths of synthetic fibres (especially nylon cloths) registered large increases. In harmony with conditions in the motor-car industry, the total output of tyre cord and fabrics in the first quarter of 1958 was 25 percent lower than in the corresponding quarter of 1957.

Exports of cotton piecegoods from the United States in the first quarter of this year were over 14 percent less in the preceding quarter and as much as 18 percent less than the level of the corresponding period of 1957. Considerable declines, compared with the preceding quarter's shipment, took place in exports to the Philippines, Mexico and Venezuela. Exports of man-made fibre piecegoods were well below the levels of the preceding quarter and of the first quarter of 1957. The decline was due almost entirely to a decrease in shipments of cellulosic fabrics; the level of shipments of synthetic fibre piecegoods being more or less maintained.

Japan Cuts Production

Production of cotton yarn in Japan in the first quarter was 13 percent lower than in the similar quarter of 1957 and the output of spun man-made fibre yarns was 18 percent lower. With the exception of synthetic fibre cloth, cloth production was also lower—the output of continuous filament rayon cloth being as much as 14 percent less. In spite of this curtailment of production, however, the reduction in surplus stocks has not progressed at the rate generally expected. Stocks of cotton goods at the end of April were the equivalent of 217 million lbs of cotton yarn, against 218 million lbs at the end of 1957. Domestic off-take has been slack due partly to unfavourable weather conditions. There have also been recent signs of a decline in the export trade. Export contracts for cotton cloth, booked during May at 93 million yards were the smallest for any month since November 1933, while actual shipments in May totalled only 95 million square yards. Considerable concern has been expressed at the growing Chinese competition in many traditional Japanese markets. With this situation in mind, it has been decided to extend the present rate of production curtailment into the July-September period.

Japanese exports of cotton piecegoods amounted to 331 million square yards in the quarter under review compared with 405 million square yards in the preceding quarter and 334 million in the corresponding quarter of 1957. With the exception of Ceylon, Syria, Iran, Siam, Indonesia and the Philippines, shipments to the more important markets were less than in the preceding quarter. Exports of man-made fibre piecegoods from Japan amounted to 332 million square yards in the first quarter, being slightly in excess of exports of cotton piecegoods. A sharp increase in shipments to Singapore failed to counter-balance considerable declines in trade with British East and West Africa, the Union of South Africa, Hongkong, Iraq and West Germany and total shipments were well below the record figures of the final quarter of 1957.

Indian Output Declines

Activity in the Indian cotton textile industry was at a low level in the first quarter of this year. Production of cotton yarn was 7 percent less and of mill-made cotton cloth 10 percent less than in the corresponding period of 1957. Production in April amounted to 135 million lbs of yarn and 407 million yards of mill-made cloth, against 154 million lbs and 464 million yards in April 1957—reductions of 12 percent in both cases. In spite of the cut in the excise duties on cloth announced in March, little improvement has taken place in the domestic off-take. One of the effects of the reduction

has been to encourage the production of fine goods at the expense of coarse and medium constructions. Thus in April, while the mill consumption of Indian cotton was 15 percent less than in April 1957, consumption of foreign cotton increased by 5 percent.

An aggravating influence has been the recent low level of export demand. Detailed figures of exports of cotton piecegoods from India do not extend beyond September last but it would appear that shipments in the first quarter were appreciably less than in the final quarter of 1957 and considerably below the high level reached in the first quarter of that year.

West European Setback

The Continental cotton industries appear to be experiencing a period of lower activity. Cotton yarn output in these countries, taken as a whole, was about 1 percent below the level of the corresponding quarter of 1957. Output in West Germany, Italy, Holland and Belgium was below the level of the first three months of last year. In Belgium, where some mills have been closing every other week and others operating only three days out of five, the decline was of the order of 20 percent. Short-time working has been reported from the other three countries though the situation in West Germany is expected to improve due to the recently announced Government intention to restrict imports. In France, where the only really significant increase in production took place over last year's level, fears have been expressed that the recent steady contraction of orders is the prelude to a textile recession.

Western European exports of cotton piecegoods were about 4 percent below the level of the last quarter of 1957 and about 8 percent below that of the first quarter of 1957. Exports from Belgium, France, the Netherlands, Portugal and Spain declined compared with a year ago while Italy was the only country to register a major increase in shipments. This was due mainly to increased shipments to Turkey, Australia and the United States. The decline in Dutch exports was due almost entirely to the dwindling of trade with Indonesia, which was offset to some extent by increased trade with Sweden, Belgium, West Germany and French West Africa. Decreased trade with Algeria, Tunisia, Madagascar and Indo-China were the main factors responsible for the decline in French exports compared with 12 months previously. Shipments of man-made fibre piecegoods from western Europe in the first quarter of this year were lower than the levels of both the preceding quarter and the corresponding quarter of 1957. Exports from West Germany, Italy, the Netherlands and Spain declined compared with a year ago while shipments from France and Switzerland rose.

RESTRICTION OF TIN EXPORTS UNDER INTERNATIONAL AGREEMENT

Although the International Tin Council's export restriction scheme has been in force for almost six months, the London price of tin has yet to move clear of the buffer stock support price of £730 a ton. One reason is that Russia and China are outside the agreement. In his review with the accounts of the Siamese Tin Syndicate, Mr. W. R. B. Foster, chairman, says that increasing quantities of Russian and perhaps some Chinese tin are reaching world markets. On the other hand, the United States, for many months, has sharply reduced its off-take from current production. The burden of correcting this imbalance falls on the producing signatories to the International Tin Agreement who already contribute to the buffer pool. Mr. Foster believes they may have to bear with tin restriction to a greater or lesser degree for some years. Of Siamese Tin's own experience, he says that his companies have done their utmost both in Siam

and Malaya to share the available work fairly, but unemployment seems inevitable while severe restriction lasts. Profits will be marginal in 1958 and this situation may continue into 1959. Because of the current difficulties, aggravated by the constant upward pressure on costs, he can see no escape from reduced profits in the next few years. The company has decided not to declare a first interim dividend for 1958. The question of Russian and Chinese tin sales is also mentioned by Strauss and Co., the London metal merchants, in their latest monthly review. They claim that without these exports, which may amount to 15,000 tons this year, either a smaller export cut would be needed, or the price level would have risen sufficiently to enable some mines which have ceased production to continue operating. They suggest that the International Tin Council should, if it has not already done so, seek the co-operation of the Russian authorities. In their view, a request for such co-operation would be so incontrovertibly fair that it could not be assumed that it would be rejected.

RAW COTTON OUTPUT RISES IN EIGHT COUNTRIES

At the annual meeting in Manchester of the Empire Cotton Growing Corporation, Lord Derby, president, said that cotton production in the eight territories served by the Corporation had shown a "truly remarkable" increase. In the 1947-48 season, the total crop was just over 500,000 bales. At present, it is nearly 1.5 million bales—a threefold increase in the short space of ten years. It should perhaps be mentioned that the Corporation is still responsible for the cotton breeding work in the Sudan.

Reviewing crop prospects for the current season, Mr. James Littlewood, chairman, said that in Uganda the total production is expected to be 350,000 bales. This is considerably better than expected after the autumn drought of 1957. He felt sure that it would not be many years before the Uganda crop broke the previous record of 417,000 bales. Uganda cotton is in great demand and its reputation will be strengthened by new strains now being produced. Because of unfavourable weather and pests, the Sudan crop will be less than half the 1956-57 record of more than 700,000 bales. Mr. Littlewood, however, regards this as only a temporary setback. A slight reduction to about 150,000 bales is also expected in Tanganyika after four record-breaking seasons. The Kenya crop will be around 11,000 bales, but efforts to persuade growers to plant early and farm well are sure to bring about higher production in the long run. Experiments are also being carried out with cotton growing under irrigation.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base year ended March 1953=100) showed a substantial rise of 2.0 percent to 112.9 during the week ended 21st June, 1958, compared with 110.7 (revised) for the earlier week. The index was higher by 3.9 percent and 2.2 percent, respectively, when compared with the corresponding week of the previous month and that of last year. Higher prices of onions in Nagpur (+25%), tea internal consumptions in Calcutta (+24%), each, black tea and betelnuts in Calcutta (+24%), each, black pepper (+19%), chillies and turmeric both in Calcutta (+18% each), maize in Ludhiana (+12%), potatoes and cummin (+13% each), milk in Ludhiana (+12%), eggs in Madras and barley in Moga (+10% each), mung in Hissar (+8%), arhar in Madras (+7%), wheat in Kanpur and gur (+5% each), coconut oil (+4%), jowar (+3%), gram and groundnut oil (+2% each) raised the index for Food Articles by 3.5 percent to 115.7 compared with 111.8 (revised) for the earlier week. The prices of meat in Ludhiana (-6%), cardamoms (-2%) of meat in Ludhiana (-1%), however, showed and ragi and coffee (-1% each), however, showed declines. An increase of 2 percent in the price of raw tobacco (Motihar medium) in Calcutta was responsible for a rise in the index for Tobacco by 0.4 percent to 90.4. The index for the Fuel, Power, Light and Lubricants group remained stationary at the previous week's revised level of 115.6 in spite of a fall in the price of castor oil (-1%). The index for Industrial Raw Materials rose by 0.8 percent to 115.9 due to an advance in the prices of rapeseed, cottonseed in Hyderabad and raw lute at Barpeta Road (+5% each), copra (+4%), raw silk (+3%) and groundnuts and lac (+1% each) although the prices of tanning materials (Kenam bark in Madras and raw hides (-5% each), raw wool (-4%) and raw cotton and raw hemp (-1% each) moved down. The index for Intermediate Products rose by 0.5 percent to 109.8 items which showed noticeable variations were zinc (+12%), tin (+8%), German silver (+5%) and lead (+4%). The index for Finished Products also advanced by 0.2 percent to 107.4 compared with 107.2 (revised) for the earlier week as a result of an increase in the prices of silk and rayon manufactures (Taffeta kore) in Bombay and oilcakes (+4% each).

INDEX NUMBERS BY GROUPS AND SUB-GROUPS				
(Base: 1952-53=100)				
Groups and Sub-Groups	21-6-58	14-6-58	24-5-58	22-6-57

A wider world for fabrics

In many countries, the subtle influences of past traditions and customs have been combined with modern materials and design to create new trends in fashion. This resurgence-in-textiles on the part of European and other nations has broadened their panorama of progress, created a wider world for fabrics through expanded production, employment and opportunity. The textile industry is just one of many nourished by Caltex quality fuels and lubricants. Through the power of petroleum, Caltex keeps industry and every segment of society expanding, aiding the prosperity of today and holding forth the promise of an even brighter tomorrow to over 70 countries—partner in progress in Europe, Africa, Asia, Australia and New Zealand.

Calcutta Markets

STRONG GENERAL DEMAND
AT EXPORT TEA SALEKEEN COMPETITION FOR
GOOD GRADES

AT Sale No. 3, held on 7th July, the offerings at the Export auction amounted to 29,399 chests out of which 36 chests were old season's teas. The market opened on an irregular note with plainest sorts showing an easier tendency but demand improved as the sale progressed and all teas met with a strong general demand except for a few poorer types. C.T.C. grades were the strongest feature, and with a few exceptions sold well above valuations. Orthodox Assams were fully firm to dearer, especially those with quality which advanced considerably. Non-wither Doars received more attention than last week and prices appreciated accordingly. Clean and well-made whole leaf grades met with keen competition and were sometimes dearer while the less attractive sorts were about steady. Darjeelings sold readily, although at slightly irregular rates, the better flavour kinds being often dearer, while the poorer types sometimes failed to realise valuations. Tippy teas met with very fair demand.

Quotations	1958	1957
Clean Black Pekoe	2.40 to 2.50	2.60
Plain B.P.	1.84 to 1.88	1.98
Plain Fannings	1.94 to 2.00	1.80
Medium B.P.	2.20 to 2.30	2.25 to 2.30
Medium Fannings	2.40 to 2.50	2.30 to 2.40
Best Assam C.T.C. B.P.	4.50 to 5.00	4.00 (Nominal)
Best Assam C.T.C. Fgs.	5.00 to 5.50	4.50 to 5.00

LINSEED FIRM

The general tone of the linseed market remained firm during the past week. The main cause was the shortage of supplies from upcountry centres. Crushers were still showing a very meagre interest due to the lack of parity with oil prices; trading was rather dull on the whole. In the oil section, offtake continued to be dull and sellers were hesitant. Shippers were not showing much interest at prevailing rates as markets in the U.K. were still dull. Latest quotations were as follows: Rs. 24 a maund and July-August Rs. 24-2 a maund.

HIDES AND SKINS QUIET

The hides and skins market ruled quiet during the past week. Stocks were higher than in the previous week.

Bazaar Sales

(Between 1st July and 7th July, 1958)
Cowhides: Wet salted (Ord) 9,600 pcs. on the basis of Rs. 9.75 to Rs. 10.75; Wet salted (Slaughtered) 15,000 pcs. on the basis of Rs. 12.75 to Rs. 20.
Goatskins: Wet salted (Patna, Daissee, Kustia) 54,550 pcs. on the basis of Rs. 285 to Rs. 295; Rs. 350 to Rs. 365 and Rs. 390 to Rs. 400; Wet salted (the-killed) on the basis of Rs. 4 a share and (she-killed) on the basis of Rs. 3.50 a share; Assam-Dinajpur 6,000 pcs. on the basis of Rs. 315 to Rs. 355; Purneah-Kissanganj 38,800 pcs. on the basis of Rs. 340 to Rs. 350; Pakur 33,000 pcs. on the basis of Rs. 330 to Rs. 335.

Bazaar Stocks
(7th July, 1958)

Cowhides: Wet salted 116,000 pcs.
Goatskins: Wet salted (Daissee, Patna, Kustia and Killed) 28,700 pcs.; Assam-Dinajpur 81,000 pcs.; Muzafferpore-Patna - Pakur-Purneah - Kissanganj 1,57,500 pcs.

SUGAR QUIET

During the week ended 9th July, sugar sales in the Calcutta market averaged 2,500 bags daily. Arrivals a day were 2,500 bags and stocks totalled 35,000 bags. Rates for ready sugar ex-godown delivery were Rs. 39-2 to Rs. 39-6 for ordinary grain and Rs. 41 to Rs. 41-8 for big grain. The market was quiet.

SHELLAC QUIET

During the week ended 8th July, the market was quiet. The range of quotations was as follows:

Pure Buttonlac	Rs. 82.50 value.
Lemon No. 1 Shellac	Rs. 82.50, 85, 88 buyers.
Lemon No. 2 Shellac	Rs. 81.50, 82, 81, 80 buyers.
F.O. Std. 1 Shellac	Rs. 77.50 buyers; 78 done and buyers; 77 buyers.
Pure TN Shellac	Rs. 66.50, 67 buyers.

Chartered Bank Buildings,
Calcutta 27th June, 1958.

NOTE: (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividend if declared will be paid on or after 11th August, 1958, to those shareholders so entitled whose names appear in the Company's books on the 4th August, 1958, or to their mandatees. No application for Dividend Warrants will be necessary.

INDIAN COPPER CORPORATION LIMITED.

(Incorporated in England)
DIVIDEND NO. 32.

NOTICE is hereby given that at the Thirty-fourth Annual General Meeting to be held at the Royal Exchange Hall, Royal Exchange, Calcutta on Wednesday, the 24th September, 1958 at 11-30 A.M. the Directors will recommend payment of a Dividend (No. 32) for the year ended 31st December, 1957 of 18% (4.32 pence i.e. 24 Naye Paise per unit of stock) free of Income Tax payable by the Company in respect of the Issued Capital of £1,371,300/-. Subject to confirmation of members, the dividend will be paid on the 6th October, 1958 to all members registered in the books of the Company at the close of business on the 6th August, 1958.

The Registers of Members will be closed from the 7th August to the 23rd August, 1958, both days inclusive.

The net profit for the year ended 31st December, 1957 was £252,215/- (against £272,157/- for previous year) after providing £175,000/- for depreciation (£175,000/- last year), £522,534/- for taxation (against £885,027/-) £175,000/- for General Reserve (against £175,000/-). With £114,980/- brought in from 1956, there is an available balance of £367,195/- (against £389,240/-). After providing £246,834/- for proposed Dividend of 18% free of Income Tax payable by the Company (Dividends No. 30 (Int.) of 6½% and No. 31 (Final) of 13½% free of tax last year—£274,260/-) the balance carried forward is £120,361/- (against £114,980/- brought in from previous year).

By Order of the Board,
G. A. CARVER,
Secretary.

TEA COMPANIES

O. Po. and Dd. indicate Ordinary Preferred Ordinary and Deferred Shares respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE CURIOUS RECOVERY ON STOCK MARKETS

SLENDER JUSTIFICATION FOR EXAGGERATED HOPES

A STOCK market subject to continuous bearish influences over a period of years is apt to attach exaggerated importance to any sign, however misleading, that better times lie ahead. Investors who have seen something like a quarter of their capital wiped out in a year and a half, would be less than human if they did not, sometimes, give way to wishful thinking. It is a long lane that has no turning, they argue. But prudence should warn them against the tendency to mistake blind alleys for the turnings that lead on to prosperity. It is possible to discern an element of this "prosperity is just round the corner" mentality in the remarkable recovery of share prices which has occurred since the end of May. Both in magnitude and range, this revival marks the first sustained bull phase since the Korean war. Every section has shared in the rise and, with a few exceptions, every scrip has been marked up at least a point or two. In jute shares, the rise has been spectacular and, on the average, should be not far short of 20 percent. In engineering, selected miscellaneous, cement, paper and sugar, performance has been only slightly less striking. Lyons Range has shaken off the gloom in which it has been enshrouded for so long, and is once more humming with activity. Even brokers are cheerful, and some are reported to be having second thoughts about seeking other employment.

Is the stock exchange performing its function as the country's economic barometer? Has the outlook for investment improved to an extent which justifies the rise in share prices? It is not a sufficient answer to such questions to dismiss the rise as predominantly speculative and, therefore, of no consequence. It is true that the main driving force behind it has come from speculators, but the fact that every section, and virtually every share, has participated, suggests that investment interest is not entirely lacking. Furthermore, it is a common stock market experience that an investment boom may begin with speculators in the rôle of trail blazers, preparing the ground for genuine investors to follow. Whether this will prove to be the case in the present situation depends on two factors: first, whether there exists a sufficient volume of investible resources or new savings to sustain a stock market recovery; and second, whether there has been an improvement in the general economic situation, sufficient to warrant a change of outlook on the part of private investors. Judged by these tests, the present stock market recovery appears to rest on somewhat insecure foundations. There are no signs of any marked increase in savings which could be drawn into investment. Neither the restoration of the target for deficit financing under the second plan, to the original figure of Rs. 1,200 crores, nor the recent increase in bank deposits, appears to hold promise of substantial new funds for the stock market. The old investing classes, the princes and the zemindars, have disappeared; the middle classes, impoverished by heavy taxation and inflation, are in no position to support the market, and the agriculturists and industrial workers are still ignorant of the ways of stock exchanges.

The life insurance companies, once an important bulwark of private investment, have passed under Government control. The investment policy of their successor, the Life Insurance Corporation, appears to be slowly taking shape after the long interruption caused by the Mundhra affair, and although it has not played a decisive rôle in the current rise, it remains the largest single controller of investible funds. While support for the share market is welcome, wherever it comes from, the growing domination of the stock exchanges by the L.I.C. has disturbing implications for private enterprise. The use of life funds for this purpose amounts to an insidious extension of public ownership, which has been aptly described as nationalisation by the backdoor.

If things go on at their present rate, the L.I.C. is likely in time, to find itself in full control of the major portion of what was, at one time, the private industrial sector. While this may be socialistic, it is scarcely democratic, because the nationalisation measures will be carried out behind the back of Parliament, without its explicit approval and sanction. It is not suggested that the investment operations of the L.I.C. are influenced by any such motive. But whatever the intentions, that is likely to be the end result.

Turning from the availability of investible savings to the general economic outlook, the stock exchange revival appears to have even less justification. The recovery has coincided with a deterioration of the external payments position, a serious drain on foreign exchange reserves and a frantic search for more foreign aid, which will involve even heavier repayment commitments, and will seriously restrict the scope for industrial development in the third five year plan. It is reported that anxious thought is being given to a proposal for abolishing the legal minimum currency reserve, as a desperate expedient to stave off national bankruptcy, at least for the time being. It is argued that the foreign exchange crisis itself may be considered a bull factor, on the ground that it has awakened the authorities to the urgency of export promotion and that, therefore, export industries are now assured of assistance, by way of tax remission and in such other forms as are necessary to equip them to increase their contribution to the nation's foreign exchange resources. This is how things ought to be, but the inordinate delay in granting the long-promised tax relief to the tea industry suggests that bureaucratic sluggishness remains a formidable obstacle to the present export drive.

Import restrictions, intended to conserve foreign exchange, have been carried to the point where they tend to defeat their purpose of saving foreign exchange and encouraging indigenous development, by starving industries, particularly in the engineering group, of essential raw materials, especially steel. The tempo of industrial expansion slowed down in 1957, and these developments may accentuate the trend in 1958. It is reported that the planners are reconciled to a 10 percent fall in import-based industrial production. The shortage of raw materials, added to labour intransigence in some cases and a lack of consumer demand in others, has brought about the closure of a number of industrial establishments, with consequent increase in unemployment. The mood of labour as shown in the recent activities of steel workers and dock workers, does not suggest an awareness of the need to subordinate sectional to national interests in a drive to step up production and exports. Opposition to rationalisation, an essential step in raising efficiency and lowering costs, remains as strong as ever. In the face of all this, it is questionable whether indigenous industries will be able to take full ad-

vantage of the opportunities afforded by the virtual ban on consumer goods imports.

The economy is already showing signs of a resurgence of inflation on account of the continuing food shortage, the increased scale of deficit financing, the scarcity of imported consumer goods, as well as raw materials, components, accessories and spares, the slackening off in the rate of expansion of industrial production and the acceptance of the principle, in the case of sugar, for instance, that goods may be diverted from domestic consumption to exports, even if the exports have to be subsidised by the home consumer. The sort of reasoning which associates inflation with rising industrial profits and welcomes it as favourable for share prices is typical of the short-sighted speculator. For investors, whose interests are bound up with the long-term stability and growth of the economy, inflation is an unmitigated evil. Export industries will find themselves being priced out of export markets because of rising costs. The foreign exchange crisis will, as a result, deepen. Domestic industries are likely to find that rising raw material prices and spiralling wages will wipe out the profit on account of higher selling prices. The erosion of savings, the hardship of fixed income groups, the social unrest, the aggravation of economic inequality and the general psychology of economic and even political instability, all continue to make inflation a menace to investment prospects.

It is said that since Mr. Morarji Desai and Pandit Pant joined the Union Cabinet, the Government is more sympathetic to the private sector. Fears of nationalisation have receded and, on the whole, Ministers seem a little more moderate nowadays in the tone of their speeches. The dressing down administered to business men by the Finance Minister, at the meeting of the Bengal National Chamber of Commerce, has been taken in good part. For all his sternness, Mr. Desai is regarded in business circles, as a pragmatist, who does not believe in socialist dogmas. The abolition of compulsory deposits, the tax relief for cotton textiles, the increase in the retention prices of cement, the promise (not yet redeemed) of tax concessions for tea, are all cited as evidence of the new spirit of conciliation towards the private sector. While these steps are welcome, their importance for investment prospects is diminished by the fact that, at best, they amount to only a shifting of emphasis, not to any basic alteration in the overall objective of a socialist pattern of society. The burden of taxation remains crushing and it has been made abundantly clear that, apart from marginal adjustments, there will be no change in the integrated structure of direct taxation which makes India, in some respects, the heaviest taxed country in the world. It is feared that circumstances may even compel a further increase in the burden of taxation in next year's Budget. The repaid second plan requires additional taxation of Rs. 100 crores, in spite of the outlay having been reduced to Rs. 4,500 crores. The drastic import restrictions must have resulted in a heavy loss of revenue from import duties. The tax concessions on textiles and (when it comes) on tea, will involve further loss of revenue. Deficit financing is already at or perhaps even beyond the safety limit. If more resources are to be raised through taxation, investment prospects are bound to be adversely affected, whether the new tax measures take the form of direct or indirect levies.

It is to be hoped that the categorical rejection of devaluation by the Prime Minister as a "fantastic measure" will end the spate of periodical rumours that the Government is about to take such a step. From every point of view, it is certain to make matters worse. It is doubtful whether its stimulating influence on exports would improve foreign exchange earnings. It would certainly increase the value of essential imports in terms of rupees when no further cut in the volume of imports is practicable. It is almost certain that it would aggravate the domestic inflationary pressure and, to that extent, nullify the stimulating effect on exports. It would also increase the rupee burden of the nation's large and growing external debt. It would be a blow to foreign confidence in the soundness and stability of the Indian rupee and would reduce the prospects of attracting foreign private investment. In short, it would be no more than a piece of financial quackery which is not being and ought not to be seriously considered. In so far as the stock market revival

has been fed by rumours of imminent devaluation, it is baseless and illusory.

The upshot of this examination of the present rise in the stock markets seems to be that the recovery movement has gone beyond the limits that could be justified on a detached appraisal of the investment outlook. The prolonged fall in share prices which preceded the present upturn has brought the prices of first-class equities to levels

A POTENTIAL RESTRAINT ON CREDIT

BRITISH bankers have been wondering whether the system of "special deposits" that the Chancellor of the Exchequer and the Bank of England introduced when the credit-squeeze was relaxed represents anything significantly new in the technique of managing money. The method adopted for possible future use is the segregation in the Bank of England of a proportion of the banks' resources, so that—if nothing else is changed—they will have to curtail their credit. This system is new in Britain, but it has its counterpart, in various forms, in other countries, where it seems to have been, on the whole, both flexible and effective. The ostensible purpose of the system is to regulate the supply of money, but there is a strong suspicion that it is used in some countries as a cheap mode of finance for the government. However, in its proper form, the system requires that the compulsory deposits be kept idle in the central bank; and so far as monetary management is concerned, it is immaterial whether the depositors receive interest on the money or not.

What has surprised British bankers is not so much that some such system has been adopted in their country, as that it has been adopted when there is probably less immediate need for it than there has been at any other time since the beginning of the war. The authorities have no intention of calling for "special deposits" in the foreseeable future. If they had felt restrictive action was still necessary, they would not have withdrawn the directives that had controlled the banks' advances since July 1955—reinforced since September 1957 by control of the quantity as well as the quality of advances. The British authorities have withdrawn an actual restraint and imposed a potential one, thus seeming to imply that methods, not policies, are changing. This impression was doubtless intended, so that the banks and their customers at home would realise that they must still be temperate in their financial behaviour and opinion abroad would not become apprehensive of laxity. It is difficult to find any other important reason for adopting the new technique when it is not immediately required and in advance of the recommendations of the Radcliffe Committee, which is at present thoroughly investigating all the methods of monetary control used now or recently and the possible alternatives to them.

Anyway, the change is a tacit admission on the part of the British authorities that the methods of regulation used in recent years have been either inadequate or unsatisfactory in effect. The hint that some method other than control of advances would be used in the future if control were needed was doubtless intended to appease the

which are undoubtedly attractive on a yield basis. There are certainly bargains waiting to be picked up by the shrewd investor. But for anything more than such guarded, selective purchases of under-valued scrip to become worth while, an all-round improvement in the investment climate would be needed. And, at least up to the present, there seems to be no evidence of such a welcome change.

banks, which were increasingly resentful against a method that curtailed their activities while leaving other financial institutions free. The relative importance of the orthodox banking system was declining, and the long-term implications of this decline could be serious. It may be doubted, however, that the same effect could be prevented if the method of control by "special deposits" were used. Of more general interest, perhaps, is the implication that the somewhat unsatisfactory performance of advances control has not converted the British authorities to a pure faith in Bank rate. The financially orthodox, instinctively suspicious of fallible human judgment, have argued that these "special deposits" are a form of financial manipulation that can achieve nothing which cannot be done better by means of Bank rate and "open market" operations to regulate the supply of money. But these orthodox methods, brought into use again in Britain in 1951 after being in abeyance for many years, have not been conspicuously successful.

It may be that these orthodox methods (which are not, of course, abandoned now) have been badly used in recent years; but most people in the City of London feel that, however they had been used, they would not have been appropriate to the special problems of the postwar inflation, unless supplemented by the direct restraints of the credit-squeeze. Some people feel that not just a phase, but a whole era of inflation has ended, and that the future tasks of monetary regulation will be relatively simple; but the authorities are wise to prepare themselves to deal with onerous tasks. It is necessary to recall that the credit-squeeze was ineffective until the banks' advances were controlled. In the first half of 1955, the authorities were manipulating the liquidity of the banking system by orthodox means, but the banks were supplementing their liquid resources by selling securities and were thereby enabled to continue increasing their advances. If Bank rate had been raised high enough to cut off the excess demand for credit, the cost of servicing the national debt—including the substantial proportion of the floating debt in which the overseas sterling balances were largely invested—would have risen inordinately. So the banks were firmly informed that the credit-squeeze must not be evaded by selling securities.

The same method of evasion could be used by the banks if their liquidity were curtailed by "special deposits". But it is intended that these "special deposits" (if ever required) will be arranged by consultation between the central bank and the commercial banks, and it can reasonably be assumed that the discussions would cover such subjects as investment policy, so that the "mis-

take" would not be repeated. It may be wondered if this new device is materially better than the old directives, if its main purpose is to regulate the banks' advances by means of their liquidity; or it may be argued that a straightforward system of variable liquidity ratios (the British banks must maintain a 30 percent ratio between liquid assets and deposits) would be easier to operate. Fundamentally, however, all these devices are open to the same objection, that they depend on a particular authority's ideas, not on the interplay of forces in the market. Of course, the whole problem would be much simpler if Governments did not overspend.

MUDDLE IN THE TEXTILE MILLS

THE Indian textile industry is a gold mine of foreign exchange, but unsympathetic official policy and a craze for regimentation have created major worries for millowners. The industry has fallen on evil days, confronted as it is with the growing accumulation of stocks and the widespread threat of closures. It is a travesty of the truth that the industry's present plight is attributable to the inefficiency and mismanagement of millowners, a contention which is nowadays reiterated by a section of labour threatened with unemployment. The facts say otherwise, and any discerning observer cannot fail to see that an irrational taxation policy—aimed at fleecing the industry of its profits and reducing its competitive capacity to enable the handloom sector to expand—has brought on an acute depression. This story of an ungenerous official approach and a callous disregard for the industry's future has been ably told in a memorandum submitted by the Employers Association of Northern India to the Textile Enquiry Committee.

The disease is deep-rooted, and no palliatives in the shape of intermittent excise duty concessions will serve any worthwhile purpose. The diagnosis of the disease from which the industry is suffering has been wrong from the inception of the crisis, and measures, whenever announced, have been half-hearted all along. The immediate problem, no doubt, is the disposal of heavy stocks which mills are unable to carry any longer. But to appreciate the critical position of the mills, one has to probe into the heart of the problem. During the last 12 years, due to the continuous rise in the cost structure on the one hand, and an absolute rigidity in the production pattern on the other, mills have been confronted with an altogether unenviable situation. Prices of cloth are high due to the imposition of exorbitant imposts; the real income of consumers is low and the widespread drought and the lack of purchasing power of the peasantry have encouraged consumer resistance. The plight of the coarse-count mills has been accentuated because they cater mostly for poor consumers to whom it is difficult to shift the incidence of the excise duty. These mills usually use indigenous cotton, the prices of which have risen during the last few years. Those of foreign cotton, on the other hand, have declined, and mills using higher counts have not had to face an equally difficult situation.

True, the import of foreign cotton, mainly used by fine and superfine count mills, has now been restricted due to the foreign exchange crisis. As it is, the Government allots licences to those who used foreign cotton in the past. "The medium and coarse-count mills are thus denied this privilege, even though it is the medium and coarse-count mills which labour to earn foreign exchange through the exports of their production. It is absolutely necessary that licences for importing foreign cotton are issued only to such mills as have corresponding export commitments or as can undertake to earn foreign exchange in return." The mills manufacturing coarse cloth are unable to modify their production programme or even to adjust their equipment to produce finer counts, for which consumer resistance is less, because they are unable to import foreign cotton. The memorandum contends that whatever burden the fine and super-fine count mills have had to shoulder in the form of excise duty, has been more than counter-balanced by the fall in the price of imported cotton. On the other hand, the medium and coarse-count mills have to bear the 300-percent increase in excise duty and have also to pay increasingly higher prices for Indian cotton. Yet, a large amount of foreign exchange has still to be spent in importing cotton to cater to the needs of fine and super-fine count mills.

The threat of widespread closure of textile mills in U.P., as elsewhere, is no less due to the preponderance of medium and coarse-count mills which are now, through no fault of their own, in serious difficulty. Official policies have been framed and dictated from an ivory tower. The mills in U.P. have to bear additional costs, and the Kanpur Cotton Mills Rationalisation Enquiry Committee appointed by the State Government, spared no pains to point out that mills there have to face certain competitive disadvantages compared with their counterparts in Bombay and Ahmedabad. To add to this, the imposition of sales tax on cot-

ton textiles at an abnormally high rate, without the least consideration of its baneful effects, did a serious injury to mills in the State. As against the basic wage of Rs. 30 in Kanpur, it is interesting to note that Ahmedabad pays a basic wage of Rs. 28, Madras Rs. 26 and Calcutta Rs. 20-2-5—a strange anomaly of facts which is indeed difficult to reconcile.

Out of the total of 29 mills in U.P., as many as 16 have already suspended operations. The profits of the Kanpur mills are dwindling fast, and should this trend continue, the mills will find it hard to exist in the face of mounting losses. They have been forced to mortgage their fixed assets, and most of the finance they secured on stringent terms of credit have been used for the payment of excise

duty, sales tax, handloom cess, etcetera. The incidence of which could not be passed on to consumers of medium and coarse counts, especially due to the prevalence of a sellers' market. In view of the critical condition facing textile mills, the memorandum of the Association rightly pleads that the combined Government levy on the medium and coarse-count cloth must immediately be reduced to half of its present burden. Two of its other recommendations are that the assessment of the excise duty on cotton cloth should be on the basis of *ad valorem* duty and that the handloom and powerloom production should be uniformly brought under the scope of the levy of excise duty and sales tax. The Government can ignore these recommendations only at the risk of aggravating the crisis facing the textile mills today.

of the Federation is the reinstatement of all the inspectors retrenched during the period January to September 1956, when the Custodians held charge of the life insurance companies and since September 1956, when the Corporation was set up. Another important demand is that there should be no reduction in total emoluments as on 19th January, 1956 or 30th September, 1957, whichever is higher, and there should be regular automatic increments whether a field officer has produced any business or not. This latter demand seems to be motivated by the fact that life insurance is now a nationalised concern run by a single centralised administration, and as such much more vulnerable to organised pressure. Formerly, such staff used to be engaged only when they produced sufficient business or showed promise of doing so, which is the right principle for a business organisation to follow. The Corporation, while accepting the principle of business production, has redefined the rôle these workers have to play. "They are now expected not only to stimulate business but also to recruit and train new agents, to develop new territories and generally to supervise policyholders' servicing." Moreover, provident fund facilities, leave rules and other amenities of service have been granted in all cases. Only the field officers with an unsatisfactory record of work have been placed at lower salary levels, all others getting increments ranging from one to seven. These benefits are substantial enough, and if the field officers want their demands to be fulfilled in entirety, they are merely using their trade union power to force the employer's hands. The Corporation could concede their demands only at the expense of the policyholder, as well as by introducing an element of rise in its cost structure, both of which will not be good for its working.

Current News and Comment

Textile Mills Close

The entire textile industry of the Vidarbha region in Bombay is drawing down its shutters. All the nine mills operating in this area will cease production with effect from 11th August, 1958. Mr. R. V. Deshmukh, chairman of the Nagpur Textile Mills Association, said that the workers had been served with a formal notice. Some 31,000 workers will be thrown out of employment. It was stated that these 11 units had 23,355 bales of cloth and 11,253 bales of yarn valued at Rs. 2.38 crores in stock at the end of April. Mr. Deshmukh said the textile industry in this region had incurred losses amounting to Rs. 3.23 crores during the last five years, while its paid-up capital was only Rs. 4.32 crores. The crisis is hitting the Bombay city textile industry also. Three mills have closed down completely, while one or more shifts have been cancelled in a dozen others. A majority of the mills had curtailed operations by sealing a part of their loomage. The Mill Mazdoor Union claimed that more than 40,000 of the city's 250,000 textile workers had been thrown out of employment.

Aid to Small Industries

A review of activities of the Small Industries Service Institute, Calcutta, shows that the number of cases of technical assistance rendered by it has registered a rise by 1,613 during last one year. It rendered such assistance to 5,731 cases in 1957-58, against 4,118 in 1956-57. A large number of small industrialists usually take its advice on the methods of modernising their machinery and tools in order to increase their output. The Institute has secured the services of three foreign consultants who have visited small units and have rendered assistance to them. Nine extension service centres will be set up in West Bengal for the development of particular industries such as chrome tanning, footwear and leather goods, ceramics and glass. A workshop will be constructed in each centre for the demonstration and instruction on the use of improved machinery. Furthermore, metallurgical and chemical testing laboratories have been set up in a hired premises in Cossipore near Calcutta to provide testing facilities for raw materials and finished products in the small-scale sector. The Institute asked for the co-operation of three State-owned concerns and seven private manufacturers during 1957-58 in order to develop collaboration between large-scale and small-scale industrial units. It has also prepared training schemes to overcome the shortage of trained personnel. For finance, the State Bank of India, in consultation with the Reserve Bank, has initiated a pilot programme to provide credit facilities to small units in selected areas. "It has been attempted by the Institute to evolve a procedure for co-ordinating the credit facilities offered by various agencies, including the State Bank of India, State Financial Corporations, the directors of Industries of various State Governments, to small industrialists. Applications for loan are referred to the Institute by the State Bank for inspection and recommendation on the technical ability, performance, and marketability of products." A small industrial unit can get loans up to Rs. 1,000 on a personal bond, up to Rs. 5,000 on the security of one or more personal sureties, and higher amounts up to 75 percent of the value of security which may include land, building, equipment, and stock-in-trade and other assets created out of loans subject to a limit of Rs. 25,000. The rate of interest for these loans is 3 percent for individual entrepreneurs, and 24 percent for industrial co-operatives of actual workers with a limit of Rs. 50,000 to any single party.

Wise after the Event

The retiring chairman of the Tariff Committee of the Insurance Association of India, Mr. B. K. Setalvad, has made a strong plea at the latest

annual general meeting against the proposition to reduce fire insurance rates, now being finalised by the Regional Councils all over India. The time-table for reductions has been drawn up with the approval of the Government for a progressive scaling down of rates in three yearly periods, but it has been found in actual practice to be inadequate for the purpose. The last reduction was made, more or less on an *ad hoc* basis, in the year 1954. Thereafter, the Tariff Committee tried to evolve a suitable machinery for the collection of necessary statistics, but no comprehensive system could be found until 1956. According to the agreement, the rates have now to be revised this year, but the Tariff Committee has, to all practical purposes, statistics for one year only, i.e., for 1957, which are inadequate to form the basis of a comprehensive revision. Mr. Setalvad particularly stressed this point to maintain that if a reduction were to be made on such a basis, it would have a crippling effect on the economies of small and middle-sized units, especially when it is remembered that they have to work within a Government-prescribed limit of expenditure. He has, therefore, suggested that at least five years' data are necessary for effecting a proper revision of rates.

While Mr. Setalvad's advice is based on sound common sense, the Tariff Committee cannot escape the blame for the present unhappy position. Composed as it is of senior general insurance executives, it should have been able to foresee the difficulties when it reached that agreement with the Government. A man of Mr. Setalvad's experience (who has been the chairman of the Committee for the last several years), cannot now get away by saying that the Committee lost sight of the fact that rate revisions every three years would mean relying on the experience of the previous two years only. It is again odd that the chairman should be opposing reductions in rates, while his Committee has been continually prodding the regional councils to take steps in this very direction. The facts which Mr. Setalvad refers to in his case against reductions, are well known, and there is no reason to presume that the Committee was unaware of them. For instance, the rising cost of administration in insurance offices, increasing prices and the higher cost of claims are common problems. Moreover, marine and miscellaneous portfolios, as Mr. Setalvad himself has pointed out, are notoriously unremunerative and have to be subsidised from the profits of the fire section, which will not be possible if the fire rates are to be reduced. Whether the agreement can be revised to reduce fire rates every six years instead of three is not so certain, but the case for it is a strong one. The Committee, which apparently has become wise after the event, should take it up with the authorities with the minimum loss of time.

Strike Threat to L.I.C.

Since the inception of the Life Insurance Corporation, strike threats by the one or the other section of its employees have become a regular feature of its working. The latest to be given is that by the salaried field staff, who have all rallied under the pompous banner of an organisation called the National Federation of Salaried Field Workers Association. The members are mostly insurance inspectors. They have presented the Corporation with a long list of grievances, demanding their fulfilment. It is this which the Corporation is not willing to do, but if no settlement is reached in the meantime, they will go on strike from 2nd September. The Corporation has just issued a Press *communiqué* explaining its stand in the matter. The move, it says, is unjustified because its categorisation formula, under which the terms and conditions of service of its field officers have been stabilised, has met all their legitimate demands. The present main demand

Export-Import Policy

The Bharat Chamber of Commerce has issued a Press *communiqué* concerning the suggestion it has prepared for the consideration at the ensuing meetings of the Export and Import Advisory Councils. It welcomes the measures taken by the Government to promote exports, and refers to the recessionary trends in most of the traditional foreign markets for Indian goods. The cost-price structure within the country is out of the international parity in relation to many of India's exportable commodities. The monthly average of exports during the first quarter of 1958 worked out to Rs. 46.97 crores against an average monthly export of Rs. 53.14 crores during 1957. Short-term measures should, therefore, be immediately taken to boost exports so as to reach at least the level of exports of 1957. The Government will be well advised to declare its policy on a long-term basis and grant concessional railway freight rates and income tax relief to give an incentive to exporters. As for jute goods, the Chamber suggests the abolition of the licensing system and the reduction of freights. Referring to the import policy, it says that imports on Government account should be reduced to the minimum. The share of the Government in the total import of the country has gone up from 18.5 percent in 1955-56 to 26.1 percent in 1956-57 and to 40.4 percent in 1957-58. The Chamber suggests that services of the established importers should be used in handling the increased imports of the Government and the State Trading Corporation. The ban or a reduction in the established importers' quotas has made raw materials and spares extremely scarce, and smaller units relying on such supplies find their costs going up in comparison with the bigger units who have been able to import directly by taking advantage of the actual users' quotas. The Chamber suggests that "the basic period for the allocation of import quotas should be brought as near as possible to the actual year of import as it will assist Indian importers."

Food Scarcity in Eastern U.P.

The three-man P.S.P. team which toured the eastern districts of Uttar Pradesh to investigate the scarcity conditions has produced its report. Mr. Asoka Mehta was among the three. The report has not erred on the side of gross exaggeration, and on the whole, it has received a good Press. Mr. Mehta is no stranger to these chronically deficit districts, and as chairman of the Foodgrains Enquiry Committee of the Government of India he devoted a separate chapter to their problem. With a density of population next only to that of Kerala and West Bengal and with a progressive decline in both the cultivated area and the yield, this is so vulnerably placed that a little drought or flood could literally bring disaster to it. The suggestions made in the P.S.P. report could not, of course, be much different from those made by the Foodgrains Enquiry Committee. The suggestion to cordon off this part of the State so that the movement of foodgrains to outside areas can be stopped was made then as now.

It has been reported that the Union Government has rejected the State Government's request for the creation of coarse grain zones, but the State Government has banned the export of wheat from U.P. and of rice from 13 eastern districts. What baffles understanding is why the Government did wait until scarcity conditions developed to ban the exports from eastern U.P. The Food-grains Enquiry Committee drew attention to the paradox that although eastern U.P. is chronically in deficit, "the region is a substantial exporter of foodgrains." It is not only rice which is exported, but wheat, too, not to mention gram and maize. They are exported to Bihar, West Bengal and even to Bombay. There has been much talk of industrialising the region or of starting a river valley project. What is not realised is that such a thing is not so easily accomplished. In so far as the P.-S.P. leaders' object was to force the Government to take the situation seriously, they may be said to have succeeded. The visits to these districts by the Prime Minister, the Union Food Minister and the State Food Minister have been arranged, as a result of the disclosures of the P.-S.P. report.

Power Supply in Madras

There will be no power cuts in Madras in future, an official statement has announced. The seasonal cut for this year has just been restored. The official announcement is based on the fact that the Periyar power projects will soon be able to provide supply for the Madras grid. The progress or rural electrification will also be assured. It has been pointed out that the consumption of energy in Madras has risen rapidly since 1951; moreover, the recurring failure of the south east monsoon has been causing a curtailment in supply, usually for three months in the year. Coal supplies for the Madras Electricity system will continue to be brought by the sea. The nationalisation of electricity supply companies has not interfered with development, for more than 97 percent of energy was generated by the Government even ten years ago, and the practice of selling power in bulk to existing private companies for distributing is continuing.

The increase in electric consumption in Madras city is largely due to the industrial growth in the suburbs, and the higher revenue from the sales of energy has helped the growth of power production capacity, especially in Madras city. The power supply from Periyar to be made available by an agreement with the Kerala Government will give cheap power to the southern districts and permit expansion of industry. It should also help in the development of Tuticorin, which has been recommended by some for the location of the second shipyard, although the Kerala Assembly has gone lately on record in favour of Cochin. The rationalisation of electric charges is expected to follow the concessions given recently to agriculturists.

Fair Price Shops

The opening of fair price shops is one of the stock weapons in the armoury of the Government to defeat the black-market in food. In actual practice, it would appear that many of the shops only go to swell black-market stocks. The shops usually open about 7.30 a.m., but people start queuing before them many hours ahead. Some reach the shop near about midnight and sleep at the doorstep. Latecomers have no chance whatever of getting their rations, unless they happen to be in league with the organised "gangs" of bogus purchasers. These "gangs" are usually led by mohalla bullies, who have taken to the lucrative profession of buying and selling the grains on their own. In some instances, the complaint has been made that the fair price shopkeepers are themselves in league with these bullies. In the public eye, the charges are confirmed because most of the licences for fair price shops have been given either to the old ration shopkeepers or to foodgrain dealers. The question is: how can they be expected to observe a double standard of morality—one at their own shop in the free market where they charge maximum prices and the other at the fair price shops? In such a situation, the diversion of supplies from fair price shops to foodgrain dealers would be the most natural thing to happen, although the Government could not anticipate it and even now shows no sign of correcting its error.

Compensation Delays in U.P.

Behind the *satyagraha* at the Matatila dam site by a number of farmers, lies a long story of procedural delays, if not violations of procedure. U.P.'s Minister for Irrigation, Mr. Ram Murti has assured the *satyagrahis* in a Press statement that prompt payment will be made to them for the land acquired, but the record of the State's Irrigation Department does not inspire much confidence. Thousands of cultivators all over the State, whose land has been acquired for canals, tube wells and dams have not been paid their compensation for as many as four years. The department, it would now appear, did not strictly follow the procedure prescribed by the Land Acquisition Act, so legally, the Government is a trespasser. The department has sought to defend itself by the plea that the procedure under the Land Acquisition Act is cumbersome and is calculated to delay the plan projects. It has, therefore, entered into direct negotiations with the farmers, but the payment has to be made through the Revenue Department. Since the Irrigation Department has not in many cases been able to supply the Revenue Department with a list of persons to whom compensation is due, payment has been held up. The non-compliance with the procedure, laid down by the Land Acquisition Act, has resulted in the farmers having to pay land revenue for land which has already been taken away from them by the Irrigation Department. This happened because the revenue staff was not posted with the details of the land acquired. The Government has, however, instructed its *Lakhpals* to find out on their own the amounts the cultivators have had to pay on this account, and to set those off against future revenue dues.

Trade Prospects with Spain

The opening of an Indian diplomatic mission in Madrid has commercial possibilities. The Indian *Chargé d'Affaires* is credited with the view that Latin America can be reached through that country. Spain is regarded as a possible market for coffee, tea and vegetable oils, although U.S. gifts of soyabean oil and cottonseed oil to many countries including Spain may affect India's export prospects. The U.S. aid however may enable Spain to buy other Indian goods. India, too, must buy Spanish minerals if she has to build a stable export trade with that country. Spain is also an exporter of iron ore and has an economy which in many ways resembles India's. The present inflation in Spain and labour troubles may act as deterrents to trade. On balance, however, there seems to be good prospects for selling short-staple cotton,

hessian and coffee to Spain and earning a useful quantity of foreign exchange.

Technical Education

The Madras Government last year effected some changes in the system of technical education in the State. Consequently, the rush to the colleges was minimised by establishing new polytechnics and helping the old ones to expand. These now admit over 1,900 students to take a three-year diploma course. There is no mining school yet, and the absence is being keenly felt. The recent change in the mining concession rules may help Madras to secure facilities for practical training, and it is expected that in both the mica mines in Nellore and in the Singareni collieries the usual facilities will be offered to those studying in the Central Polytechnic. The aim is to teach students all about open-cast mining in order to let them qualify for jobs in the Neyveli lignite field in the future. The increase in ore exports from Andhra and Mysore may also make it necessary for training supervisory staff in Madras. It is also clear that in the south, mining will become an important activity. The magnesite deposits in Salem are going to be developed by Burn and Company for its new refractories plant. The Madras Government, it is reported, has dropped its objections to the transfer of the lease by the Salem Magnesite Syndicate, a sterling concern, to Burn and Company. In spite of an expert pronouncement against any aluminium reduction plant in Madras, the State Industries Minister hopes to get French technical aid. Raising the necessary capital is a separate and bigger problem, to which not much thought seems to have been given so far.

CORRESPONDENCE

MONETARY ANAEMIA IN LAC TRADE

(TO THE EDITOR OF "CAPITAL")

Sir,

While your special correspondent writing in your Foreign Trade Survey issue, has admirably highlighted the monetary anaemia in the lac trade, his characterisation of this deficiency as the root of all evils amounts to over-simplifying a complex issue. The lac trade has always been bedevilled with many problems, some of which are peculiarly its own. While fiscal measures have indeed their value, they are not enough to correct a complex malady. Such prescription would, in fact, amount to tinkering with credit controls while a depression rolls on. I further submit that the present dearth of finance is an accumulated resultant of a cumulative chain of causes operating for long.

It beats me what makes your correspondent opine that the problem of price stabilisation has recently lost relevance. The lac trade has just undergone one of the gravest crises in its history, with prices sagging to Rs. 58 for T.N. on 28th April, 1953, and a further major decline being averted only due to the determined efforts of the Shellac Export Promotion Council. The problem of stabilisation is very much alive and kicking. Your correspondent's reference to the dangers of alleged Government interference, is also wide of the mark. The correct position is that the lac trade is in the unique position of soliciting near-unanimously Government intervention for putting its house in order with the Government refusing to oblige and continuing to advise self-reliance and self-correction. In my opinion, sir, there has been too long and too great a neglect of this trade by the Government.

Your correspondent quotes approvingly from Dr. Louis A. Jordon's 1956 report on lac on the subject of statutorily fixing maximum and minimum prices. He has, however, significantly omitted to mention that while opposing statutory controls, Dr. Jordon does advocate in paras 166 to 177 of his report, the stabilisation of prices by establishing floors and ceilings voluntarily by the trade. A recent notable development has been the formation of a strong and compact association of exporters at Government prodding (but not intervention). The association has laid down minimum export selling prices of all grades of lac and the Government has assisted its task by introducing export licensing and ensuring canalisation of exports through members of the association. Though prices have no doubt been stabilised for the time being, the task seems to have only begun and a great deal remains to be done. Reference to all this is necessary in order to impart a proper perspective to the situation, which, unfortunately, is lacking in the article.

H. P. LOHIA,
Vice-President,
Indian Lac
Exporters Association.

Calcutta, 12th July.

PEASANT INDEBTEDNESS

WHILE Lord George Hamilton and Sir H. Fowler are of opinion that the finances of India are in a satisfactory condition, though, it is true, we have to borrow a trifle of £10,000,000, or so, to pay off old loans, to provide for railway expansion, and to furnish the Secretary of State with a reserve for emergencies, it is none the less admitted that agricultural indebtedness is a factor of poverty in our midst which continues to tax the energies of a benevolent Government. This being so, it is perhaps, worth while asking if any signs are yet visible that the wisdom of to-day knows how to deal with the problem. At the bottom of it all may lie, and doubtless does lie, some failing of poor human nature, something of what we call "improvidence," useful for pointing out a moral or adorning a tale, but of no effect in helping either the Government of India or the *ryotwari* to prosperity. It is so easy to talk of debts lightly incurred, of marriage expenses and of general improvidence, and to forget the various other factors that too often place the Indian peasant under the harrow of hopeless indebtedness. Apart from the attitude of Government in this matter it is not without interest to note how the *ryot* himself deals with the problem. He finds the personal embodiment of the difficulties to be only too often represented by the *hunnis* or moneylender; and taking the ethical issues of the situation into his own hands, he not infrequently places himself within the grip of the law. On no other supposition can we account for the connection that evidently exists between dacoity and money-lending, as largely evidenced by certain phases of agrarian crime in the Bombay Presidency and the Native State of Hyderabad, Deccan.

MAY SHRINK

WON'T SHRINK

How banking serves the PLYWOOD INDUSTRY

TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the complete banking service we offer.

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investments—
Letters of Credit—Bill Collection—
Deposits—Loans & Overdrafts—
Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

A LEADING BANK IN SOUTH INDIA

Without Prejudice

ISSUING DISCIPLINARY NOTICE
TO AN EMPLOYEE

SUIT FOR DEFAMATION

(FROM OUR LEGAL CORRESPONDENT)

THE time seems to be approaching when every prospective assistant in any commercial undertaking will have to produce as a qualification for the post which he seeks, a certificate that he has undergone a course in commercial and common law; and at the present time it is not very much in the way of an overstatement to say about the relationship of master and servant where that relationship is strained, a master, or perhaps we had better say an employer, hardly dares publish a notice or even a letter concerning the dispute without previously having it "vetted" by an expert lawyer. Not that the latter precaution would have been of any benefit in the way of avoiding litigation, concerning the particular notice we are going to discuss; for we believe that the said lawyer would unhesitatingly have passed it as legally unobjectionable. This was it: "The directors take a very serious view of the whole affair and you are hereby warned that any incident of the type in future will lead to your dismissal." What was wrong with that? "Defamation," said the employee. "My character has been assailed in the eyes of my fellow workers and right thinking men," and he filed a suit for a mandatory injunction and for damages.

Now this is just the sort of problem which we like the non-legal reader to think out for himself, so we will leave our recital of the facts in the particular case for the moment in favour of a few hints on the law of defamation. To begin with, what is defamation in law? Defamation is the

publication concerning a person or matter which is untrue and tends to lower him in the estimation of right thinking men or causes him to be shunned or avoided, or exposes him to hatred, contempt, or ridicule. Such imputation, if written or printed, is called libel; if spoken, slander. Words apparently innocent may with reference to certain circumstances and to persons knowing those circumstances be, by innuendo, understood in a secondary and defamatory meaning. For instance, if I write or say of Smith that "Smith is of the same financial probity as his father", that, on the face of it, is a perfectly innocent remark. Smith's father may be an Archbishop or someone of like probity. But if I publish the same statement to persons who know that Smith's father is in jail for embezzlement after serving several other terms for the like offences, my seemingly innocent words would convey to them the meaning that Smith also is a criminal and would constitute defamation. But remember—and it is important in the particular case we are to discuss—that in such cases the plaintiff must make the defamatory sense clear by an averment in his pleading called an innuendo and must prove the facts necessary, including in Smith's case his father's sojourns in jail for embezzlement to satisfy the court that the words were understood not in an innocent but in a defamatory sense. Nor would it be any defence—although it might lessen the amount of damages—for me to show that I did not intend to defame Smith although his father was the revered vicar of Assesmlk-cum-Worter, and that I intended to pay Smith a compliment; for I have, however innocently, used language which reasonable men knowing that Smith's father was a crook would consider defamatory to Smith, and which consequently has injured him. There is the striking Scottish case of *Morrison v Ritchie and Co.* (1902) 4 Fraser 64. Mrs. Morrison was the respected young wife of Mr. Morrison, equally respected and an elder of the Kirk. A newspaper had in its "Births" column announced her as having given birth to twins. The matron

had not given birth to twins or any other issue. What was worse at the date on which the announcement was printed, she had been married only a month. The newspaper urged that it acted in all innocence and had no intention to defame a lady of whom it had never even heard. No use. It was a clear libel. Damages were awarded and, 1902 not being 1958, thumping damages at that.

You may libel a man when you are referring to a non-existent being, a figment of your own imagination; for example, a novelist referring to his own creation, a character in his novel. The question the court has to consider is not to whom you were in actual fact referring, but whether your words would be understood by reasonable people who knew the plaintiff, to refer to him. Charles Dickens sailed very close to the wind in that way several times and so did Thackeray. In fact, Dickens escaped a libel suit for his ungenerous portrayal of Leigh Hunt in the character of Mr. Skimpole only because Leigh Hunt died and his relatives could do nothing since one cannot libel a dead man. It was the same with Walter Savage Landor not so unkindly satirised as a blustering bully in *Bleak House*. But Dickens, who had a mean streak, knew what he was doing and intentionally portrayed Hunt and Landor. The middle-aged reader will remember the case which caused consternation in the publishing world and which decided that intention is quite immaterial. A well-known journalist wrote a humorous article for his weekly column in a newspaper with a large circulation. In it he described the indecorous adventures of a fictitious Britisher on a seaside holiday in France. This character was represented as a married man on vacation alone disporting himself in the waves with a frivolous and amenable young French lady. The writer gave this gay character the safe surname of Jones and having been reading the works of the American writer, Artemus Ward, casually gave him Mr. Jones the Christian name of Artemus. "Mr. Artemus Jones." Safe enough you might think. But in a country district in Wales—and country districts in Wales as the writer well knows are absolute hotbeds of outward and, perhaps, inward respectability and of gossip—lived and practised one Mr. Artemus Jones, barrister-at-law, just beginning to get on in the world. It was sheer bad luck for the journalist and the paper neither of whom had the faintest idea of the young lawyer's existence. Mr. Artemus Jones's practice began to fall off. He could not understand why until some of his pious solicitor clients hinted that learning was no good without respectability and having regard to his goings on in France they could not give him the briefs. They showed him the article. He denied the allegations of improper or any dalliance with demoiselles and that he had set foot in France at all. It was no use. The country chapel deacons refused to believe him. There it was in print. So he filed a suit against Messrs Hulton and Co. for damages for libel. To the amazement of the legal world, he won it and the verdict was upheld on appeal. The rehabilitated young man eventually became Sir Artemus Jones, K.C. and a judge; and it is on account of Hulton and Co. v Jones (1920) A.C. 20 that you read in the forefront of novels and films the intimation that any reference to the names of living persons is purely coincidental. But, of course, it is a *sine qua non* that the statement complained of should be defamatory, otherwise it discloses no cause of action. And that brings us back to the Alipore case.

These were the allegations that the aggrieved employee made. (1) That he was an old employee holding a responsible post under Messrs Mackintosh Burn Ltd. of which the defendants were directors. (2) That the plaintiff was the secretary of the (workers') union and, on account of his efforts to improve the lot of the workers, he had incurred the displeasure of his employers, and (3) That actuated by malice, the defendants, on a false pretext, issued a warning order to the opposite party threatening him with dismissal; and they also had it circulated among the plaintiff's co-workers through their agents and lowered him in their estimation and injured his reputation.

We have already set out the warning order and the employee claimed that it was wrongful, mischievous and defamatory and prayed for a mandatory injunction directing withdrawal of the order and also claiming damages on account of loss of reputation, etcetera. This is the first time that the writer has come across or seen in the law reports a claim of this kind and you may think that if such a warning is defamatory, no employer in future would dare to publish any disciplinary warning at all. The defendant employers petitioned that the plaintiff should be rejected on the ground that it disclosed no cause of action but that, although whether the averments could eventually be proved or not was a different matter, yet the plaintiff, as it stood, disclosed a good cause of action and hence could not be rejected for want of cause of action and accordingly refused the employers' application. The employers appealed to the Calcutta High Court and the appeal was allowed. P. N. Mookerjee J. holding that the words of the warning, as quoted above, were not defamatory either *per se* or *prima facie* and that the plaintiff must be rejected as not disclosing any cause of action. Sarkar J. concurred. So much for that particular warning notice. But the case discloses a new trap for employers who from now on will have to keep a wary eye on the wording and implications of every published disciplinary notice referring to individuals adversely.

[W. Hay and others v Aswini Kumar, A.I.R. 1958 (June) Cal. 271.]

A Ditcher's Diary

TO QUOTE A REMARK I ONCE SAW IN *Time*—IT MAY well have originated elsewhere—in the matter of modern poetry, I am afraid I am "Pound foolish". I am, however, quite prepared to take the word of poets nearer my comprehension, that Mr. Ezra Pound has been a great and beneficial influence on them. Immediately after the war, there was such a revulsion against the Fascists and everybody who ever so remotely collaborated with them, that justice was summary and sometimes drastic. Mr. P. G. Wodehouse, for instance, was under a cloud for a long time simply on the basis of some unproven suspicions. The fate of that lovable comedian, Maurice Chevalier, was not far different—to say nothing of the common prostitutes whose heads were shaved for plying their trade in the usual indiscriminate fashion. Mr. Pound may have got no more justice, and at his age the belated transfer from a prison to a lunatic asylum can hardly have been much comfort. Now, on his release, he has taken the first opportunity of getting out of the United States, and in Italy, the country of his love and alleged collaboration with Mussolini, he now proposes to retire. Nobody will grudge him this repose, and I don't see why anyone should take too seriously his recent characteristic remark that there are more mad men at large than ever went into mental hospitals. Statistically, that's how it should be. After all, there are more men at large than inside the lunatic asylums of the world put together, and on the law of averages the position would be as described by Mr. Pound. I do not want to get into an argument with him on general semantics, but I do think we require an acceptable definition of sanity before we can go round making these reckless generalisations. I think we are all more or less sane about most things—and nearly all mad about others. The case of Mr. Pound himself may be very similar. And out of those one or two insanities—obsessions may be a better term—have been born some of the best achievements in art and literature. This seems, at least to me, a saner view of the matter than Mr. Pound's, although it may well be that he knows more about insanity than I even want to. Was it not Charles Lamb, another experienced man in this department, who once wrote to his friend: "Dream not, Coleridge, of having tasted all the grandeur and wildness of fancy till you have gone mad?"

TALKING OF POETS, I WAS PLEASED TO READ OF Dom Moraes getting the Hawthornden Prize; and the *New Statesman* gave me an early and welcome acquaintance with his work. The poem, called "French Lesson," has this as its fourth line: "I wonder why poets are born to tell lies," against which his first line "Rain drones on outside like a business-man's stories" seemed a forgivable piece of poetic fantasy. It is partly the business world's fault that most literary and other folk have the oddest notions on what is business, and these tribes have this in their favour that no less ignorant ideas often have big politicians in their grip—some of them, alas, economic policy-makers. It is easy enough to complain against the monotony of business men's complaints. I wonder if it has occurred to the complainers, including Mr. Morarji Desai, that there is a certain amount of repetition in Ministerial exhortations also. To get back to Dom Moraes, just what has he in mind when he

speaks of business men's stories? Some speak only of losses, business being always bad. Has he never met the other kind, for whom it is always sunshine? They are most pathetic objects you will find near every stock exchange everywhere in the world—the hopefuls, who not only do not drone like Mr. Moraes's rains, but speak only of profits rolling in. As for story-telling, I know business men who are full of all sorts of plots for masterpieces they would write if only they had the time. (Talent is rarely mentioned, understandably.) If I am not mistaken, Mr. Somerset Maugham must have got the material for many of his finest stories from the sources young Moraes considers so unpromising. Believe it or not, business men are men and are partakers of the same joys and sorrows as any other class of people. There are a large number of philistines among them, admittedly. But artists are seldom the subject of works of art; and even Mr. Moraes may enrich his poetic experience by occasional intercourses with men and women outside the sadly inbreeding artistic circles. There may be McAndrews here and there waiting with a hymn for Mr. Moraes. Or, perhaps, he doesn't like Kipling?

MESSRS. TITO AND NASSER HAVE ASKED UNNAMED parties to call off the cold war, and, of course, I could not agree more. But something very like a cold war could start the moment we begin to look more closely into Colonel Nasser's title to make such a request, or into the contributions certain agencies of his have made to the present multitude of the world's tensions. In case he has forgotten, it was his ostentatious acceptance of communist arms which first started the crisis in the Middle East. It may have been foolish of a part of the British Press to present Nasser as being a menace as big as Hitler and Mussolini, although he has one or two things in common with both these characters. But the kind of extreme nationalism he has been preaching, not merely in his own country but throughout the area, can scarcely be called a contribution to peace. Nobody need endorse all of French policy towards Algeria to see still that the Government in Cairo has in fact been interfering heavily in other people's affairs. Cairo has not yet made up its mind whether it is at war with Israel; it is when it comes to obstructing Israeli ships, and it isn't when it's a question of recognising that country; but the relations between Nasser's Egypt and Israel could only mildly be described as cold war, if only because it has not always been cold. Not as though it is necessary in the field of international diplomacy today to relate words to deeds, but President Nasser's appeal for putting an end to the cold war, of which he is among the chief begetters and beneficiaries, represents a new low in unashamed hypocrisy. The colonel's rantings in the bazaars of Cairo and Alexandria, one had got used to; his cooing I find even more disagreeable. But then what is to be expected of a man who is reported not to have blushed when, during his recent visit to the Soviet Union, somebody congratulated him on the great Egyptian victory over Rommel in 1942?

IF IT IS A SIN TO EARN ONE'S LIVING BY COMMERCE and industry, as the pronouncements of some of our political leaders would have us suppose, then

Calcutta is certainly a city of sinners. It is also one where poverty, pestilence, misery and starvation are very much in evidence—a fact which has recently been brought home to us by an article in a foreign journal to which I referred a week or two ago. Such a city is an ideal breeding ground for communists. It is also a challenge to saints. And if Calcutta has the one it also has the others—or at any rate one saint. I have no doubt the name of Mother Theresa is known to most of my readers; less familiar, perhaps, will be the nature of work which she actually does. Some ten years ago, Mother Theresa started a home for dying destitutes whose condition was beyond hope. She cleaned them, clothed, fed and housed them to give that spark of dignity and self-respect which would enable them to die in some sort of peace. Subsequently, she extended her activities to include the provision of food and milk to destitute children and expectant mothers. Today, Mother Theresa feeds and takes care of several thousands of the most miserable of our fellow citizens in a number of homes, schools and dispensaries all founded by herself. She carries on this magnificent work with slight means—a small subsidy plus a trickle of contributions. The money is not sufficient, of course, and every day she has to face the bitter experience of turning away hundreds of desperately needy people. To help raise the funds for this eminently worthy cause, the Dramatic Club of Calcutta is presenting Patrick Hamilton's *Gas Light* at the New Empire Theatre on 24th, 25th and 26th July. Here is a chance to enjoy a good evening's entertainment—which can always be relied upon from the Dramatic Club—and to offer our support to one of Calcutta's saints, whose work is a shining example of human charity at its best.

BEFORE I WENT TO SEE BOHURUPEE'S *Putul Khela*—a Bengali adaptation of the famous Ibsenian play, *A Doll's House*—I had a feeling that the force and beauty of that great playwright's dialogue must have suffered in the translation. I had previously seen *Macbeth* in Bengali done by another group, and it was a disappointing experience for a variety of reasons, one of which was that the translation did not appear to do Shakespeare justice. I consider myself no competent judge of this, as my knowledge of the Bengali language is far from perfect. But a friend who was with me, and who knows his Bengali as well as his Ibsen, assured me that the translation was as satisfactory as it could be. On the other hand, the dramatic impact of the play has been enhanced by transforming the characters and the locale into their Bengali settings, and I found almost the entire audience, most of which I imagine came from the middle classes, enjoying the witty and often devastating Ibsenian shafts aimed at middle class notions of respectability. As for the acting, it was, as far as I could judge, polished and flawless. Both Sambhu Mitra and Tripti Mitra (husband and wife in the play as well as in real life) deserve a mention, the latter a special one. Hers was the difficult rôle of a middle class matron with a terrible secret to hide from her husband, and she played it with remarkable competence. Mrs. Mitra indeed rose to heights which I am told have so far not been equalled by anyone else on the modern Bengali stage. She far surpassed her own brilliant performances in all previous Bohurupee plays, including *Rakta Karabi* of Tagore. If all future productions of this, as well as those of other dramatic groups, are going to reach the standards of *Putul Khela*, the stage-loving people of this State will have something to be proud of.

NEW TAX REGULATIONS IN COMMUNIST CHINA

STEPS TO IMPROVE FINANCIAL ADMINISTRATION

(FROM A CORRESPONDENT)

THE following regulations have been issued by the Chinese Government to improve its system of taxation: 1. Seven taxes—stamp duty, income tax on bank interests, slaughter tax, tax on cattle transactions, land and building taxes, entertainment tax and licences for vehicles and ships—have been earmarked to be controlled locally and to provide revenue to local governments in accordance with the regulations to improve the financial administration. The powers to control these taxes are to be delegated to the provinces, autonomous regions and municipalities under the Central Government, on the basis of the latter's regulations for unified collection of taxes. In the light of the local conditions, the provinces, autonomous regions and municipalities are authorised to effect tax reduction, and to allow exemptions or to increase the rates and to make the necessary adjustments in these taxes.

2. Revenue from four taxes—those on commodity circulation, goods, business and income tax on industry and commerce—will be divided between the Central and local governments according to fixed proportions in accordance with the regulations to improve the financial administration. These four taxes still remain under the Central management but the provinces, autonomous regions and municipalities under the Central Government are allowed to effect tax reductions, and to initiate measures to increase their rates or to exempt commodities from their scope within the defined limits and according to specific local conditions.

Tax Reductions and Exemptions

(A) The provinces, autonomous regions and municipalities may effect tax reductions and allow exemptions under the following conditions: (i) Loss will be incurred if new products trial-produced by industrial and handicraft establishments and the products produced by new enterprises are subject to taxation according to regulations during the period of trial-production and the early period of production. (ii) Encouragement in the shape of a tax concession is necessary for finished products produced by industrial and handicraft establishments, using substitutes, rejected products or damaged products as raw materials. (iii) Special consideration for a tax concession is necessary to the industrial and handicraft establishments which make spare parts and accessories to help another enterprise in production. (iv) Special consideration is also necessary for those enterprises which cultivate and supply seeds, pedigree livestock, young animals and fish to aid agriculture or do processing jobs and carry on operations in mountainous areas to help their development. (v) Special consideration, as for tax, is necessary for those agricultural producers' co-operatives, members of agricultural producers' co-operatives, and individual peasants who produce farm products or subsidiary products (liable to taxation according to regulations) for their own use or for sale on the free market. (vi) Special consideration concerning tax is necessary for those handicraft producers' co-operatives and co-operative stores whose annual business income, for special reasons, is not enough to cover wages for their employees. (vii) Special consideration for tax concessions is necessary for the agricultural producers' co-operatives, members of agricultural producers' co-operatives and individual peasants facing a calamity—those who are temporarily engaged in industrial, handicraft and other avenues of self-employment where the commercial enterprises of calamity-stricken areas carry on certain non-profitable business in co-ordination with famine relief, or where the social relief departments organise the dependents of martyrs, dependents of servicemen, disabled servicemen and the aged, the weak and the disabled to carry on self-support production and industrial, handicraft and trading activities.

Conditions for Increased Taxes

(B) The provinces, autonomous regions and municipalities under the Central Government may increase the taxes under the following conditions: 1. An additional 10 percent to 50 percent (for instance, an additional 1 to 5 yuan be collected if the amount of income tax payable is 10 yuan) may be levied, according to the amount of income tax payable, on a small number of individual handicraftsmen and small pedlars and dealers who earn more income. This limit may be exceeded in the case of those handicraftsmen and small pedlars and dealers who make exceptionally large profits. (i) An additional amount of tax may also be appropriately imposed, according to the amount of income tax payable, on those co-operative organisations of handicrafts and those doing business which make exceptionally large profits. (ii) An additional 10 percent to 100 percent of the income tax payable may be imposed on remaining capitalist industrialists and merchants and travelling merchants. This limit may be exceeded in the case of those who make exceptionally high profits.

2. As for agricultural tax, the provinces, autonomous regions and municipalities under the Central Government should, on the basis of the Agricultural Tax Regulations of the People's Republic of China and in the light of the actual conditions, make the necessary tax adjustments between the different areas under their jurisdiction, between grain crops and industrial crops, and

between the agricultural producers' co-operatives and the individual peasants.

3. The provinces, autonomous regions and municipalities under the Central Government are allowed to make the necessary adjustment of the salt tax on the basis of the original tax regulations and according to actual conditions.

4. In order to regulate the income of producers, balance their burden and to open sources of revenue or in order to organise production according to plan, the people's councils of provinces, autonomous regions and municipalities under the Central Government may, if necessary, include certain native and special products and subsidiary products (including the products of both the collectivist economy and the individual economy), which are more profitable, in the category of tax on goods as a new tax and collect tax on goods; or else they may draw up separate tax measures and collect a regional tax.

Greater Flexibility

5. Autonomous regions should be provided with even greater flexibility in the tax administration. If in their view the nationwide tax law is not in keeping with the actual state of affairs in their regions, the people's councils of autonomous regions may work out tax regulations themselves and register them with the State Council.

6. If in their view the collection links industrial and commercial taxes and the starting points of taxation are really irrational and might adversely affect production, the people's councils of provinces, autonomous regions and municipalities under the Central Government may deal with them flexibly for the sake of developing production, boosting the economy and increasing the accumulation of the State.

7. The people's councils of provinces, autonomous regions and municipalities under the Central Government should pay attention to the following points in implementing these regulations: (a) Both the need to develop production and to accumulate funds for the State should be taken into consideration when they effect tax reduction and allow exemptions. (b) Care should be taken not to hinder the normal development of production and the stability of commodity prices when adjusting the rate of tax or increasing the tax. (c) Where the tax measures have a close bearing on the neighbouring regions, consultations should be held and mutual co-ordination achieved beforehand. (d) Tax measures which have a great effect on unified plans and national equilibrium or involve foreign relations should be subject to the approval of the State Council.

Banking Targets

Writing on "Some Problems Connected with the Leap Forward in Banking Work," Ta Kung Pao of Peking says: "Banking work has its political aim, namely, the successful building of socialism in our country as soon as possible. To realise this aim, banking work must thoroughly follow the general line for building socialism by exerting utmost efforts and pressing forward consistently to achieve greater, faster, better and more economical results. Both in the acceptance of deposits and in the issue of loans, the basic consideration should be the development of production, the promotion of economic prosperity, and the provision of facilities for the masses. There must be no further adherence to the absolute conventions and rules and abstract principles. To deliver ourselves from the small narrow circle within which we were enclosed, banking workers must establish, under the unified leadership of the local Party and government organs, the ideology which principally seeks to serve production, to serve the masses, and to develop the free market. They must also support the development of the socialist economy, resolutely fight usury; provide facilities to the masses and not provide only for themselves, for this constitutes the difference in nature between socialist banking work and capitalist banking work."

Provincial Branches

"We may take a look at the conditions of the three provincial branches of the (government) bank of Shantung, Chekiang and Shensi respectively, and conditions in certain other areas. These various units have pointed out the following: work should be centred on support of industrial and agricultural production, support of socialist economy and support of the circulation of commodities; reliance should be placed on the Party committee, reliance should be placed on the masses, and reliance should be placed on the co-operation of different departments in making a good job of banking work; production should be promoted through commercial purchases, cash payments should be effected on the spot and payments should be made in full for purchases; a guarantee must be furnished that in the acceptance of deposits, production should not be forgotten, and in the promotion of production, the encouragement of deposits should not be forgotten, so that all measures are carried out in support of the big leap forward in industrial and agricultural production. These are held as targets and they are all entirely correct. Their experience has proved that only with the resolute overcoming of conservatism, the simple business viewpoint and the capitalist management ideology, may we truly establish our political viewpoint, our production viewpoint and our mass viewpoint, and may we lay firm the ideological foundation for the big leap forward in banking work."

Money

THE CALCUTTA MONEY MARKET

CALL RATE RISES

Wednesday, 16th July.

SLIGHTLY easier conditions have prevailed this past week in the Calcutta money market. Advances to all major sources of demand, including sugar and cotton textiles, again show a moderate fall, while those to jute have remained at the previous week's level. The interbank market has been tight, with the call money rate up to 34 percent. Money has been difficult to get even at this higher rate because of the latest State loans.

The exchange market has been more active with a fair number of gunny bills passing. Those on account of tea shipments, although still small, were an improvement on the previous week. Remittances have been few and scattered. Sterling has weakened in foreign exchanges against the U.S. dollar as well as leading Continental currencies on account of the new crisis in the Middle East and the prospect of fresh labour troubles in the U.K.

BULLION WAS QUIETLY STEADY LAST WEEK and fluctuations were narrow. Demand was slow while arrivals continued at rather high levels. The price of silver improved from Rs. 178 to Rs. 179.12, quoted today for ready delivery, and the rate for forward delivery was Rs. 179.12. The London silver and New York prices remained unchanged.

The price of gold was Rs. 108 and the sovereign at Rs. 71.75 showed a rise of 50nP.

DURING THE WEEK ENDED 11TH JULY, GOVERNMENT of India Treasury bills for Rs. 10,02,50,000 were sold in favour of the Reserve Bank.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 4th July, 1958, shows a drop of Rs. 4.09 crores to Rs. 420.03 crores in total deposits. Investments in Government securities are up by Rs. 7.38 crores to Rs. 203.59 crores, while other authorised investments are down by Rs. 10 lakhs to Rs. 10.53 crores. Advances including loans, cash credits, overdrafts, and bills discounted and purchased have decreased by Rs. 2 lakhs to Rs. 183.93 crores. Cash and balances are, in consequence, shown at Rs. 30.40 crores, or Rs. 12 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 4th July, 1958, shows Demand and Time liabilities at Rs. 749.27 crores (Rs. 27.80 crores on account of borrowings from banks) and Rs. 812.59 crores (Rs. 35.91 crores), compared with Rs. 753.07 crores (Rs. 24.77 crores) and Rs. 807.83 crores (Rs. 32.95 crores), respectively, in the previous week. Cash has increased by Rs. 38 lakhs to Rs. 42.70 crores while balances with the Reserve Bank have decreased by Rs. 6.23 crores to Rs. 88.24 crores. There is a rise of Rs. 12.13 crores to Rs. 499.68 crores in investments. Advances and bills discounted at Rs. 901.94 crores show an increase of Rs. 51 lakhs. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.4 percent and 57.8 percent against 8.8 percent and 57.8 percent.

PROVISIONAL FIGURES OF FOREIGN TRADE OF INDIA by all routes, that is, sea, air and land, on private and Government accounts during March 1958, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: Merchandise, excluding cutta, are as follows: Merchandise, excluding transit trade of Pakistan and other overland foreign countries, viz., Nepal, Tibet, Sikkim and Bhutan: Exports Rs. 46.26 lakhs, re-exports Rs. 47 lakhs, imports Rs. 70.56 lakhs; total trade Rs. 117.29 lakhs. Treasure: Exports (including re-exports) of currency notes Rs. 30 lakhs, gold, nil, current coins (excluding gold coins) negligible; imports of currency notes Rs. 266 lakhs, gold Rs. 4 lakhs, current coins (excluding gold coins) Rs. 0.4 lakhs. Balance of Trade: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures, the total value of exports (including re-exports) of merchandise and gold fell short of imports by Rs. 23.87 lakhs.

THE PROFIT OF THE BANK OF BARODA LTD FOR THE half-year ended 30th June, 1958, subject to audit, including Rs. 4,10,730.69nP brought forward, amounts to Rs. 17,50,228.85nP. The directors are considering the question of paying an *ad interim* dividend, decision on which will be announced early in August 1958.

U.K. AVIATION EXPORTS RISE

"Britain's aircraft soar to new records—in the export market," states a *Daily Express* editorial. "In the first five months of this year more aircraft and engines were sold abroad than in the whole of 1955. Exports were 50 percent higher than in the same period of last year. Four years ago, a Minister, Jack Profumo, said: 'On the success of the British aircraft industry depends our national prestige, employment, foreign currency, and our whole standard of living.' It is no coincidence that Britain enjoys prosperity at a time of high achievement by the aircraft industry." Since 1946, the value of aviation exports have risen by almost 1,000 percent, while aero-engine sales have increased 25-fold. During the past three years alone, total exports have risen by 134 percent and aero-engines by 116 percent.

SHARP FALL ON LONDON STOCK MARKET

OIL SHARES CRASH AFTER IRAQI NEWS

London, 16th July.

EVENTS in Iraq had a somewhat devastating effect on the London Stock Exchange during the past week. They completely overshadowed the many favourable factors which were making themselves felt prior to the new and extremely serious situation. The market was changed overnight due to the revolt in Iraq and share values plunged from the 1958 peak. The chief sufferers were oil shares, especially those of companies with Middle East connections and the hardest hit was British Petroleum which in two days fell 15s and the loan stock declined by more than 10 points. Shell Transport and Burmah also suffered severely. Hopes of an early Bank rate reduction receded into the background and the speculative selling of gilt-edged securities caused prices to tumble. The one bright spot was provided by German and Japanese bonds where steady buying persisted. Dollar stocks which had earlier reached a new 1958 peak immediately declined in sympathy with Wall Street. There was a fairly widespread reaction in the industrial market but the volume of sales was small and price movements, to a large extent, were the result of precautionary marking down. South African gold shares were no exception to the general trend and prices were generally lower. Base metal shares eased in spite of small rises in the commodities. Diamond shares

showed very little reaction to the statements and counter-statements concerning the Williamsons' diamond deal. Interest in rubber shares was confined to the shares where dividends were due and to those where mergers were reported, although price movements were small. Tea shares were quiet and were generally irregular.

The Money Market

Stringent conditions prevailed on the money market during the past week. The supply of loanable funds was restricted due to the lack of maturities. With another reduction in the British Bank rate anticipated in the very near future, there was again quite a good demand for bills with the rate for September "hots" easing from 4-1/16 percent to 4-1/32 percent prior to last Friday's tender.

Stock Market Prospects

The Investors' Chronicle market newsletter writes: "The steady rise in London gilt-edged securities has gained momentum. Industrials have consolidated their position and have rallied while favourable conditions continue for gold shares. After resisting at lower levels, copper shares improved with the metal. Wall Street investors remained unwilling to sell equities even though defensive buying of utilities continued. The recent setback in London industrials was only a normal pause for consolidation. Market reaction to the ending of the credit squeeze was subdued. This step has been taken because the danger now is not inflation but recession. The average yield on blue chips discounts this factor, but ignores the real possibility of a further Bank rate cut before long. Lower interest rates may predominate over disappointing company results."

Activity on Wall Street

Foreign dollar bonds were mixed in slow trading during the past week. German Nationals

improved by fractions to a point or more while among municipal issues the inactive Cologne 6 1/2 percents of 1950 advanced nearly 47 points on a single sale. Italian issues were easy with the Republic 3 percents of 1977 giving up about 3 points. Amsterdam 5 1/2 percents moved up one point. Among the Japanese issues Oriental Development was a firm spot. Chile 3 percents were unchanged and Colombia 3 percents were a couple of points higher. Treasury bonds dropped sharply but later recovered. Investment quality corporates followed the same trend while speculative rail issues were dull.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 9th July shows that the gold stock rose by \$1 million to \$21,307 million. Foreign deposits rose by \$8 million to \$264 million and foreign investments declined by \$46 million to \$2,992 million. The Federal Reserve sold \$18 million worth of bills making the total Government security holdings \$25,440 million. Total discounts and advances rose by \$49 million to \$1,299 million while the aggregate excess reserves of member banks fell by \$19 million to \$515 million. The daily average excess reserves of member banks rose by \$107 million to \$790 million, while their daily average borrowings rose by \$46 million to \$143 million. Business loans of New York city banks declined by \$197 million to \$10,868 million compared with a fall of \$103 million to \$11,846 million in the corresponding week of last year. Gold certificates on hand and dues from the U.S. Treasury were \$4 million lower at \$19,885 million. Federal Reserve notes in actual circulation were \$39 million higher at \$26,889 million. The deposit member banks reserve account was \$224 million lower at \$18,513 million.

Uncertain Trends in Vegetable Oils

Developments in Iraq created an air of uncertainty in most sections of the vegetable oils and oilseeds market during the past week although good trading was noted in groundnuts and palm kernels. The Nigerian Board reported a brisk business in groundnuts for September-November shipment up to £561 a ton, c.i.f. and September-October shipments of Nigerian palm kernels were sold up to £52 c.i.f. with the Board now wanting £52. Meanwhile, re-sellers handled a limited business around £511 c.i.f. net terms for August-September and September-October shipments. Linseed oil opened firm and moved around £11 a ton higher with a broader demand noted in the region of £118 a ton, ex-tank U.K. for deliveries ahead to the end of the year. Near afloat parcels of Indian oil were transacted at £117 c.i.f. and July-August shipments at £118 c.i.f. Linseed also showed a firm opening but unexpected weakness in opening advices from Winnipeg caused a late reaction and the market closed around 10s a ton cheaper with buyers holding off. Palm kernels tended to be easier following the news of the lower price taken for Norwegian whale oil. Castor oil moved firmer on Bombay advices with shipments in bulk raised up to £2 a ton in spite of a poor response from buyers in London. Continental buyers made more enquiries for edible oils but bids were ineffective and few deals came to the surface. Copra lacked feature and dealers were hesitant to alter prices to encourage business. Coconut oil prices remained steady but the market was generally inactive.

Paris Gold Unchanged

Business in the Paris gold market remained at a relatively high level during the past week, although trading was less active than recently. Most prices were unchanged as the Bank of France continued to pay 3,600 francs for the Napoleon and 514,000 francs for the one-kilo ingot. Trade quarters say that there are increased offerings of ingots imported from abroad. This indicates that French investors are taking advantage of the Government's facilities for capital repatriation. It is believed that the Bank of France will shortly withdraw its support from the market following the closing of the State loan.

Quicksilver Price Raised

For the second time, the London ex-warehouse quicksilver price has been raised. Dealers recently quoted a price of £78 a flask—an advance of £1 from the previous level. The general background to the market has undergone no significant change. Dealers say that supplies of physical metal on the spot are not readily available, while offerings of Mexican metals to the U.K. market have been reduced because of the sales to the U.S. General Administrative Services. The Spanish and Italian producers are still holding at £80 a flask.

U.K. Rubber Statistics

Statistics issued by the International Rubber Study Group show the U.K. rubber position for April as follows: the consumption of natural rubber was 13,397 long tons compared with 16,909 long tons in March; imports of natural rubber were 16,852 long tons against 9,582 in March; re-exports of natural rubber were 12,361 long tons against 20,842 long tons in March; and stocks of natural rubber held in warehouses (exclusive of U.K. Government stocks) at the end of April were 44,905 long tons against 48,638 long tons in March.

World Production of Synthetic Rubber

Advance statistics issued by the International Rubber Study Group show that the world output of synthetic rubber in April amounted to 85,945 long tons.

Stocks and Shares

SHARP SETBACK IN SPECULATIVES FOLLOWING IRAQI COUP

NINE STATE LOANS FULLY SUBSCRIBED

Wednesday Evening.

THE higher trend in share prices was resumed on last Thursday with Indian Irons climbing gradually from Rs. 23.12 to Rs. 23.63, but on following Monday, profit-taking was again in evidence, showing that certain operators were still somewhat sceptical about the real character of the recent recovery in stock exchanges. The market opened steady today, but within half an hour of trading, Indian Irons collapsed from Rs. 23.64 to Rs. 22.82 following the serious political developments in Iraq and the Lebanon. The selling started from Bombay on the view that cotton textile exports to the Middle East are likely to be seriously affected. A small recovery at the close brought the price of this share up to Rs. 23.

The general view held by several economists in the U.S.A. that the recession is levelling off and that better business is in store for the autumn, gave encouragement to bulls. It was felt that this might improve the prospects for exports to the U.S.A., which hitherto has been buying on a hand-to-mouth basis. Another favourable development was the report that there were hopes of a two-million ton steel loan from the U.S.A. on a long-term basis. If the proposed negotiations result in success, the indigenous processing industries which are at present feeling the effects of the steel shortage, stand to benefit. The Finance Minister's proposed visit to the U.K. next month, and later to the U.S.A. is regarded with hope. It is generally believed that he will not return empty-handed.

During the week, there was some evidence of genuine investment buying, but until the volume of such business increases, it is doubtful whether the recovery, which started at the end of May, will continue. Prices of most shares appear to have already risen sufficiently high and the short-term economic outlook is not at all encouraging.

The latest report and balance-sheet of Howrah Mills Co. Ltd. for the year ended 31st March, 1958, reflected the improved trading conditions in the jute industry. Against a manufacturing loss for the previous year of Rs. 10,70,781, the company made a manufacturing profit of Rs. 28,84,736 and the brought in debit balance of Rs. 24,66,402 was converted into a carry-forward credit balance of Rs. 32,775. The arrears of the preference dividend are also being paid to shareholders.

The news that nine State development loans, namely, Bombay, Mysore, Madras, Madhya Pradesh, Kerala, Andhra, Uttar Pradesh, Rajasthan and West Bengal were fully subscribed on the first day the list opened, was well received by the gilt-edged market, and the prices of existing securities were fully steady.

High calibre preference issues continued to meet with good demand, but it was not possible to satisfy buying orders in full due to a scarcity of scrip.

Bank, railway, engineering and electric shares were more or less unchanged.

In cotton textiles, Dunbar improved to Rs. 130 from Rs. 125, while Elgins were shaded at Rs. 13.50. Kesoram were slightly better at Rs. 11.50, and there was a good enquiry for Jayshree at the improved rate of Rs. 7.94.

Coal shares met with some investment enquiry, particularly Bengal, which improved from Rs. 234 to Rs. 237, Bharat from Rs. 6.12 to Rs. 6.31, Central India from Rs. 7.69 to Rs. 8.06, East Indian from Rs. 20 to Rs. 21, New Beerbhoom from Rs. 15.12 to Rs. 15.62 and Pench Valley from Rs. 21.62 to Rs. 23. South Karanpura were in demand at the higher rate of Rs. 11.75.

Jute shares continued to meet with enquiry following the improvement in jute goods prices after the political crisis in the Middle East. Here is a chart showing representative price movements:

	Opening 16th July	Closing 16th July
Alliance	Rs. 80	Rs. 86
Anglo-India	166	177
Birla	18.12	18.75
Budge-Budge	94.50	97
National	24.12	24.25
Northbrook	16.56	17.50

In the sugar section, Carews were better at Rs. 8.25 as were Cawnpore at Rs. 12.25, Ramnugger at Rs. 19.62 and S.K.G. at Rs. 10.

In the paper section, Bengal receded from Rs. 88 to Rs. 82, while India Paper Pulp recovered to Rs. 20.75 and Orient were steady at Rs. 32.30. Sirpur advanced from Rs. 11.37 to Rs. 11.50 and Titagur from Rs. 39.62 to Rs. 40.37.

Among miscellaneous industrials, Alkali and Chemical were easier at Rs. 14.87, while Angelo Brothers were better at Rs. 20. Balmer Lawrie were steady at Rs. 174 and Clive Row Investment improved to Rs. 8.90. Dunlop Rubber were better at Rs. 27.25 as were Hindustan Lever at Rs. 24. Imperial Tobacco met with some profit-taking and eased to Rs. 12.62 as did Indian Aluminium, to

Rs. 15.25. Indian Oxygen hardened to Rs. 20.25, and India General Navigation rose to Rs. 59. India Steamship met with investment enquiry and improved to Rs. 12.25. Jardine Henderson provided a good feature, recovering from Rs. 59.50 to Rs. 64. Orissa Cement were better at Rs. 15.25 cum-dividend, cum-rights as were Rallis at Rs. 34. Shaw Wallace were taken at Rs. 11.62 ex-dividend, and Triton were firm at Rs. 140.

In the mining group, Karanpura Development were higher at Rs. 13.37 as were Orissa Minerals at Rs. 25.87. Indian Copper were a good feature at Rs. 3.76 (after 3.84).

Tea shares moved from strength to strength and widespread gains were recorded as will be seen from the following table:

	Opening 16th July	Closing 16th July
Basmatia	Rs. 23	Rs. 25.50
Betjan	23	24.62
Brooke Bond	18.87	19.31
Dhelakhat	22.75	24
Huldibari	23.50	24.12
New Doars	278	286

PRESENTING THE 46TH ANNUAL ADMINISTRATION report for the year ended 30th June, 1957, of the Bombay State Co-operative Bank Ltd., the managing director states that the reorganisation of the State and the launching of the second five year plan presented fresh opportunities for co-operation to strengthen the economy of the State and for co-operative banking institutions to meet its credit needs. Seventeen State co-operative banks were sanctioned credit limits amounting to Rs. 35.25 crores in 1956-57, against Rs. 29.61 crores to 19 banks in the previous year. The resources of the State Co-operative Bank increased by 14.5 percent, compared with a rise of 17.8 percent of commercial banks in the same period. The working capi-

Head Office: 12 MISSION ROW, CALCUTTA
Branches at NEW DELHI BOMBAY KANPUR

M89C-10

PACT FOR POWER

KIRLOSKAR ELECTRIC
ON THE ONE HAND AND
INDUSTRY ON THE OTHER

Indian Industries, large and small, are rapidly
developing both in the public and private sectors and
are depending on BRUSH-KIRLOSKAR Motors and
Transformers for their source of Power and Power Drives.

Range. Motors - upto 200 H.P. Transformers - From 15 to 3000 kVA, 33 kV.

Kapur PT-8

tal of the bank rose from Rs. 15.4 crores to Rs. 17.64 crores. Deposits dropped from Rs. 11.68 crores to Rs. 10.71 crores, and this led to increased reliance on borrowing from the Reserve Bank and the State Government. The closure of seven well-established branches contributed to the fall in deposits.

THE ORDINARY DIVIDEND OF THE BURN AND CO LTD has been maintained at 20 percent for the year ended last April. The profit has fallen from Rs. 1.24 crores to Rs. 1.11 crores. Depreciation is shown Rs. 4.02 lakhs higher at Rs. 17.36 lakhs and taxation provision amounts to Rs. 59 lakhs against Rs. 70.65 lakhs. Other allocations include taxation contingency reserve Rs. 2.15 lakhs (Rs. 9.68 lakhs), general development reserve Rs. 1.19 lakhs (nil), development rebate statutory reserve Rs. 68.447 (nil), reserve for works reconstruction and expansion Rs. 3.25 lakhs (Rs. 10.50 lakhs), reserve for Niwar project Rs. 6 lakhs (Rs. 14 lakhs). After making various adjustments, there is a carry-forward in Rs. 1,30,345 compared with Rs. 1,09,676 brought in. The directors say that the Government of Madras has agreed to allow the Magnesite Syndicate Ltd to transfer its mining leases to Burn and Company, and that legal formalities are in the process of finalisation to conclude the purchase from the Syndicate.

THE ORDINARY DIVIDEND OF FORT GLOSTER INDUSTRIES Ltd has been doubled to 20 percent for the year ended last March. The profit has improved from Rs. 4.08 lakhs to Rs. 10.11 lakhs. Depreciation absorbs Rs. 7.49 lakhs (Rs. 5.65 lakhs) and the debentures sinking fund claims Rs. 1.75 lakhs

(same). Development rebate reserve fund receives Rs. 2.70 lakhs, wealth tax gets Rs. 1.08 lakhs, against nil in the previous year. After making necessary adjustments, there is a carry-forward of Rs. 2,53,663 against Rs. 2,45,413 brought in. The directors state that the electrification of the mills was completed, and the modernisation scheme was partially carried out. The company has benefited by the schemes.

THERE IS A DECLINE OF Rs. 4.04 LAKHS to Rs. 1.50 lakhs in the profit made by Port Shipping Co. Ltd for the year ended last December. The dividend has been declared at 12 percent (15 percent). Depreciation is allocated Rs. 1.69 lakhs (Rs. 1.23 lakhs). The provision for taxation is shown at Rs. 74,000 (Rs. 2.65 lakhs). The profits on the sale of block assets is Rs. 25,551, and this has been transferred to capital reserve. The sum of Rs. 1,971 is also transferred from investment realisation surplus to meet a small loss on the sale of investments. Having transferred Rs. 50,000 from reserve for repairs and after meeting all other charges, there is a balance of Rs. 19,790, which it is proposed to carry forward against Rs. 62,822 brought in. The directors say that freight earned was satisfactory, but expenses, particularly on repairs, showed a considerable increase compared with the previous year.

THE ORDINARY DIVIDEND OF THE BENGAL ASSAM Steamship Co. Ltd has been reduced by 24 percent to 5 percent for the year ended last October. The profit has declined by Rs. 47,827 to Rs. 47,367. Depreciation absorbs Rs. 1.86 lakhs (Rs. 2.73 lakhs). Capital reserve receives Rs. 6,989 (nil). After making necessary adjustments, there remains a

balance of Rs. 36,387, which it is proposed to carry forward, compared with Rs. 110,020 brought in. The directors state that the amount of jute exported to India from Pakistan again decreased and, in spite of increases in freight rates, the company's earnings from the carriage of jute were considerably less than in previous years.

Bombay Market

SHARES RECOVER AFTER PROFIT-TAKING STEEL RETENTION PRICE INCREASE EXPECTED

Wednesday Evening.

THE Bombay stock market was steady last week after intermittent profit-taking because of end-account considerations. At mid-week, there was long liquidation in steels due to weaker advices from Lyons Range on suggestions that the rumoured bonus share issue by the Indian Iron and Steel Company Ltd is likely to be postponed until the expansion programme of the company is completed next year. Towards the close, sentiment recovered on second thoughts relating to the possibility of a rise in steel retention prices. Operators were encouraged by the prospects of the Government giving further fiscal reliefs to export industries. Good corporate news also aided recovery.

Tata Steel ended at Rs. 168.50 on hopes of a satisfactory dividend and Indian Iron recovered to Rs. 23.64 after an initial setback. Other engineering firms were fractionally shaded. Alcock Ashdown were lowered to Rs. 258.75. Tata Locomotive declined to Rs. 174, and Premier Construction were bought at Rs. 203.50. Automobile scrip were steady, and Hindustan Motor closed higher at Rs. 8.12. Premier Automobile came to hand at Rs. 9.50. Cotton mill shares were maintained. Centary improved to Rs. 472 on knowledgeable buying and Bombay Dyeing gained at Rs. 59.60. Kohinoor changed hands at Rs. 283 and Simplex were bought at Rs. 182. Svadeshi were transacted at Rs. 192, and Apollo were dealt in at Rs. 192. India United Ordinary were sold at Rs. 9.92.

Miscellaneous shares followed the general trend. Cement shares backed away on realising. Associated Cement were transacted at Rs. 147, as were Digvijay Cement at Rs. 157. Sugar shares were quietly steady, and Belapur came to hand at Rs. 261.50. Phalton were done at Rs. 187. Steamship company shares were favoured on hopes of higher dividends. Scindia Steamship were better at Rs. 192.00, and Great Eastern Shipping gained at Rs. 25. Mining shares were steady, and Shivrampur Syndicate were transacted at Rs. 93. Tata Chemical reacted to Rs. 16.86 on profit-taking and National Rayon changed hands at Rs. 236. Bombay-Burmah Old were done at Rs. 601. Mahindra and Mahindra realised Rs. 19.28, and Hindustan Lever were done at Rs. 23.64. Larsen and Toubro made Rs. 17.76 and Gwalior Rayon improved to Rs. 14.

Banking shares met with investment support. Hopes of interim dividends lifted Bank of Baroda to Rs. 122, and Central Bank rose to Rs. 53.30. United Commercial were taken at Rs. 61. The insurance group, New India reacted to Rs. 46.25 on profit-taking. British India General rose to Rs. 15.84.

Electricity supply company shares were steady. Ahmedabad were maintained at Rs. 96, and Bombay Suburban were transacted at Rs. 106. S. S. factory dividend announcements helped maintain Tata group of shares. Tata Hydro were done at Rs. 121.25.

THE WEEK'S TRANSACTIONS

DEVELOPMENT OF THE DRUGS AND PHARMACEUTICAL INDUSTRY

NEED TO INCREASE PRODUCTION

CAPACITY

By G. B. Ramasarma

ALTHOUGH the modern system of medicine was introduced in India soon after the British had established themselves, the indigenous manufacture of modern drugs (as distinguished from *Ayurvedic* and *Unani* drugs) commenced only towards the end of the 19th century. The Indian pharmaceutical industry has grown very slowly during the first four decades of the 20th century, but showed a sudden spurt during the years of the second world war. Subsequently, it has maintained a fairly rapid rate of growth. But through all these years, the country's requirements of drugs and pharmaceuticals were largely met through imports from foreign countries. It is the purpose of this article to review briefly the changing pattern of these imports.

TABLE 1
IMPORTS AND INDIGENOUS PRODUCTION OF DRUGS DURING THE SECOND WORLD WAR

Year	Total purchases in India (Rs. lakhs)	Purchases in India (Rs. lakhs)	Imported from foreign countries (Rs. lakhs)	Percentage of Indian-made drugs to total requirements
1938-39	237	16	221	7
1939-40	296	25	271	9
1940-41	325	104	219	32
1941-42	557	279	278	50
1942-43	495	348	147	70

Source : Indian Chemical and Pharmaceutical Industry—1954 Survey by I.C.M.A., pp. 97

The main difficulty in a study of this nature is the lack of reliable statistics on drug imports. Until very recently, their imports were shown in official sea-borne trade statistics under such broad categories that it is impossible to estimate the quantities of individual drugs which were imported; nor is it possible to differentiate between the imports of bulk drugs and of finished pharmaceutical preparations in retail packings. Another criticism levelled against the early official statistics is that some of the items included under "Drugs and Medicines" went largely into non-drug uses (see Tables 2 and 7). Two of the examples are: asafoetida, a commonly used condiment in Indian cookery, and camphor which is burned at religious functions. Presumably, there are several other errors in the available statistics due to improper classification or insufficient scrutiny (for example, see footnote to Table 8). Therefore, the statistical data presented in this article should not be taken literally. They, however, serve to give broad indications of the trends in imports. In comparing the cost data for several periods, due allowance should also be made for factors such as inflation. On many questions, it is possible to make only rough estimates and general statements because of the unsatisfactory nature of the available statistics.

TABLE 2
IMPORTS OF DRUGS AND MEDICINES DURING 1949-52 (in Rs. lakhs)

Products	1949-50	1950-51	1951-52	1952 (Apr.-Dec.)
Asafoetida	5.5	2.9	12.6	10.7
Camphor	24.0	29.5	86.1	6.5
Cocaine	0.3	0.1	0.6	1.0
Cod liver oil	9.7	2.3	3.0	1.6
Opium preparations	0.4	—	0.6	0.1
Patent medicines	46.1	20.1	11.1	13.6

Saccharin	3.7	22.4	23.1	7.3
Other drugs and medicines	666.8	916.0	1362.6	824.8
Total	786.0	993.6	1515.1	880.2

Source : A. K. Madan, *The Economics of Chemical Production*, p. 115.

Prewar Years

For purposes of this review, it is sufficient to start with 1938, that is, just before the second world war. As can be seen from Table 1, the drugs made in India accounted for only 7 percent of the total purchases during 1938-39, and this may be taken as being representative of the preceding years. There was hardly any change in 1939-40, but the indigenous component rose to 32 percent in 1940-41, to 50 percent in 1941-42 and to 70 percent in 1942-43. By the time the war ended, about 80 percent of the requirements of drugs were produced within the country.

What is worthy of note, more than the figures given above, is the change in the pattern of imports brought about by the exigencies of the war. Commercial navigation was severely curtailed, imports were drastically cut, and every effort had to be made to conserve shipping space. Several foreign firms, which were hitherto importing finished preparations in their final retail packings, started carrying out in this country, at first, the bottling and packing operations and later, the pharmaceutical processing (for example, tableting, ampouling, etcetera). Alongside this development,

a number of new indigenous enterprises also sprang up. Auxiliary industries for the supply of glassware, cardboard boxes, etcetera, were also established. The result was that India had a nearly adequate capacity to process bulk drugs into final dosage forms. Therefore, the imports during this period must have consisted largely of basic drugs and bulk pharmaceuticals.

Postwar Period

But this situation did not last long. After the cessation of hostilities, the normal channels of international trade were re-opened and the volume of drug imports increased steadily with the rehabilitation of the war-damaged economies of the western countries and of Japan. Import statistics for the period 1943-49 were, unfortunately, not available to the author. But it was obvious that the pattern of imports took a swing in the opposite direction, that is, the proportion of finished pharmaceutical preparations increased. This trend was viewed with alarm by the infant indigenous industry. After the country's attainment of independence, frantic appeals were made by manufacturers for a total ban on all finished preparations on the plea that the local industry was adequately equipped to do all the pharmaceutical processing, provided basic drugs and pharmaceutical chemicals, which were not made in India, were allowed to be imported freely. It was indeed a sad commentary on the Government's import policy during this period that all these appeals went unheeded until very recently. But then it may seem uncharitable to say so, for the recent ban on finished preparations and restrictions on imports of raw materials and machinery which are being made in India, was primarily due to an acute shortage of foreign exchange.

Coming back to the question of statistics, the values of imports of drugs and medicines during 1949-52 are shown in Table 2. It will be noted that the total value of annual imports, which stood at Rs. 2 crores to Rs. 3 crores during 1938-43 rose steadily to about Rs. 8 crores in 1949-50, to about Rs. 10 crores in 1950-51 and soared to Rs. 15 crores in 1951-52. According to Mr. P. M. Natar (presidential address, the tenth session of the Indian Pharmaceutical Congress, Bombay, December 1957), the value of pharmaceuticals produced within the country also increased from about Rs. 4½ crores in

1942-43 (see Table 1) to Rs. 34 crores in 1953 and Rs. 45 crores in 1956-57. These increases in the value of imports and indigenous production were in no small measure due to inflation. An equally important factor was that a number of newly discovered life-saving drugs, such as antibiotics and chemotherapeutics, had to be imported in large quantities. Thus the products of the indigenous industry were soon rendered obsolete, and again the country became dependent on imports.

Enquiry Committee

In February 1953, the Central Ministry of Commerce and Industry appointed the Pharmaceutical Enquiry Committee "to make a comprehensive enquiry into the working of the pharmaceutical industry as a preliminary to considering what steps the Government should take to establish it on sound lines". In its report, published in September 1954, the Committee noted that "there is an overwhelming feeling among the members of the medical profession, public health authorities and medical educationists that a large number of superfluous and unessential preparations of foreign origin are being flooded into the Indian market". In the absence of reliable statistics, the Committee sent out comprehensive questionnaires to important importers and manufacturers asking for information about their imports of essential drugs and raw materials. The data thus collected are summarised in Tables 3 and 4. This information was by no means complete but it gave a rough idea of the quantities of basic drugs that the country had to import and served as the basis for making recommendations on the lines on which the indigenous industry should develop. It may be noted from Table 4 that the large-scale private enterprise under foreign control and/or collaboration has drawn nearly 80 percent of its raw material requirements from foreign sources. Apart from a preference for imported raw materials, this may have been primarily due to the fact that most of the newer drugs are covered by patents and are manufactured only in the principals' laboratories abroad.

The most important recommendation made by the Committee was in relation to the urgent need for the indigenous manufacture of basic drugs. In the absence of such a firm foundation, the position of the industry, consisting merely of pharmaceutical processing units, is extremely precarious. The Committee also made the following recommendations on the subject of drug imports:

"3.2.6. Imports of vitamin preparations under the Open General Licence (O.G.L.) should be stopped, and put on a separate quota basis, which should be gradually reduced as the indigenous production increases. Only the import of vitamins in bulk should be allowed on the O.G.L. till such time as their manufacture develops in the country."

"3.2.8. Drug, whose indigenous production is deemed to be adequate, should not be allowed to be imported except to the extent of token imports considered necessary to act as an incentive for maintenance of standards and further development of the products."

TABLE 3
IMPORTS OF ESSENTIAL DRUGS IN 1952

Name of the product	Quantity	Value (Rs. lakhs)	Name of the product	Quantity	Value (Rs. lakhs)
Antibiotics			Anti-syphilitics		
Penicillin	12.6 million mega units	104.6	Neo-arsphenamine B.P.		
Streptomycin	9,061 kg.	145.1	Sulpharsphenamine B.P.	2135 lbs	7.1

Value of Drug Imports

The recommendations were only partially put into force during the first five year plan period during which the emphasis was more on agriculture rather than on industry. Statistics on the total volume of drug imports and the imports of a few selected items are presented in Tables 5 and 6. The data indicate that the rupee value of imports remained substantially unaltered during this period. In 1956, the first year of the second five year plan period, the value of drug imports again rose to Rs. 16½ crores as can be seen from Table 7. The imports of vitamins during January-March 1957 are shown in Table 8.

By this time India's sterling balances had dropped to a dangerously low level and the rate of withdrawal from these reserves to meet the heavy demand of the second plan caused great alarm to the planners. The result was a programme of austerity as far as imports were concerned. It was soon realised that a rigid control should be maintained on the imports of raw materials and machinery required by the industry. The import control policy for the licensing period January-June 1957, stated that "the trend towards reduction of quotas introduced during the last period has been carried a step further in view of the foreign exchange requirements of the second five year plan". While the quotas for established importers were reduced, attempts were made to meet the raw material requirements of the industry by the issue of actual users' licences. It was around this period that applicants for capital goods imports and stores were asked to ensure that their requirements could not be met from indigenous production. Import licences were denied for those articles which were being manufactured in the country. The applications were being screened from this point of view by the Development Wing of the Central Ministry of Commerce and Industry under the guidance of the Development Councils established under the Industries (Development and Regulation) Act of 1951. This marks a beginning of the proper planning of imports for the promotion of indigenous industries and the maintenance of their productivity. The Development Council for the scheduled industries engaged in the manufacture of drugs and pharmaceuticals was constituted in February 1955.

Policy of Austerity

With the licensing period of July-September 1957, the import trade control policy took a sharp turn towards austerity. The Open General Licences XLIV and XLV were allowed to lapse on 30th June, 1957, and were not renewed thereafter. These O.G.L. items were made licensable to actual users, and reduced quotas were fixed for established importers. The option given earlier permitting imports of other drugs or patent and proprietary medicines up to 10 percent of the face value of licences for drugs, medicines and pharmaceuticals, was abolished.

The import trade control policy for the next licensing period (October 1957-March 1958) was summarised as follows: "The policy is, of necessity, restrictive on account of foreign exchange considerations. An attempt has, however, been made to use the available foreign exchange to the

best advantage to maintain, so far as practicable, the level of internal production by allowing imports of raw materials and machine parts required by industries either through established importers or against actual users' licences. Small value quotas have also been permitted for a few essential consumer items."

Import Classification

One of the results of this import policy was that during 1957, the imports of patent and proprietary medicines and other finished preparations came to a virtual stop. For issuing licences to established importers, drugs, medicines and pharmaceutical chemicals falling under Serial Numbers 87 and 109 are divided into three lists. List I represents drugs not manufactured in India, and these are subject to liberal licensing. List II contains drugs for which indigenous production is considered adequate and, therefore, their imports are not permitted. It is worth noting that the number of items in this list increased from 30 to 44 during the licensing periods January-June 1957 and April-September 1958. List III contains items which are being made in India but not in sufficient quantities; in this case imports are restricted. This classification, however, does not apply in the case of actual users to whom *ad hoc* licences may be issued irrespective of the list in which the item falls.

The Government's industrial policy, aimed at encouraging the manufacture of basic drugs and even forcing the foreign firms to undertake such manufacture, has also shown signs of bearing fruit. Several of the latter have drawn up plans for the manufacture of vitamins, hormones and synthetic drugs. The public sector has also finalised its plans for increasing the production of penicillin and commencing the manufacture of streptomycin. Another momentous decision is to set up, under the public sector, a plant to manufacture important intermediates required by the drug and dyestuff

TABLE 8
IMPORTS OF VITAMINS DURING JANUARY-MARCH 1957

Name of vitamin	Quantity (lbs)	Value (in '000 Rs.)
Folic acid	176	162
Nicotinic acid	5,770	122
Vitamin A	14,127	1,304
Vitamin B-complex	12,869	266
Vitamin B ₁	3,648	292

(Some of the above data are obviously wrong. For example, the quantity of 1,785 lbs is too large for the value of Rs. 621,000.)

But the present situation is not entirely satisfactory for the existing industrial units. One of the grievances frequently voiced by them is the inadequacy of raw materials which are permitted to be imported. They complain that they receive licences for their half-yearly requirements of raw materials less existing stocks at the time of applying and expected arrivals on licences already issued.

LEYLAND COMET THE BIG CHASSIS FOR THE BIG JOB

The LEYLAND COMET is the longest wheel-base passenger chassis made in India. Its large body space accommodates at least six more passengers in every trip than any other make. Its low fuel consumption and easy

maintenance have made it the ideal passenger transport vehicle everywhere. No wonder LEYLAND is the first choice in passenger transport in over 50 countries around the world.

It is pointed out that all these quantities are exhausted long before fresh stocks arrive on the new licences. As a result, production has to be stopped for a considerable period of time. Another complaint is that the licensing authorities have failed to make due allowance for an increased demand for indigenous products—a direct result of the restricted imports of consumer goods—and the consequent need for increased quantities of raw materials. The problem is particularly acute in the case of products whose manufacture commenced recently, since the authorities permit only a 10 per cent increase over the actual consumption of raw materials in the preceding year. To the extent that the available foreign exchange falls short of requirements, such grievances are obviously un-

avoidable. That the planners have recognised the situation is evident from the introduction to the Red Book for the current licensing period (April-September 1958) which reads as follows: "The need to conserve foreign exchange continues, but in framing the policy an attempt has been made to overcome the shortages which were impeding production." Accordingly, it was announced that an extra allotment of the value of roughly Rs. 10 crores has been made (for all industries) for meeting the threat posed by an acute shortage of imported raw materials.

Future Prospects

The prospects for the near future are that the imports of finished pharmaceutical preparations

will not be permitted and that occasional shortages of raw materials will continue to hamper production. Addressing the Import Advisory Council, Mr. Morarji Desai, the Central Minister for Commerce and Industry, urged "industrialists to find ways and means of using indigenous substitutes for imported raw materials and to undertake the fabrication of spares which are by no means a negligible item in our import bill". He added that "the import of capital goods for new development has necessarily had to be given a lower priority than the import of raw materials. It is obviously undesirable to aim at expanding capacity if we are not able to get the utmost out of the existing installed capacity in the country."

The Story of Oil 10

Pipe lines for oil

Pipe lines are the lifelines of every full-scale petroleum industry. Day and night, they carry the oil from where it is found and refined to the places where it is needed.

The work of laying a pipe line to move crude oil from the wells of an oilfield to the tanks, columns and towers of a refinery begins with the mapping of a suitable route by surveyors and engineers. Then right-of-way men travel the route securing permission to lay the line across the land, and close on their heels come bulldozers and trucks to clear the right-of-way of trees, rocks and other obstructions.

Now the ditchers work on the line, digging out a trench of the correct depth and width and dredging a channel in the beds of rivers. Trailers haul the pipe from the nearest rail head, and when the sections are strung out along the

ditch welding crews move along the line to join them together.

Next a mechanical wrapper bandages the pipe from end to end with protective bitumen, glass fibre and felt, and when this is done tractors swing the line into the ditch. Bulldozers shovel the earth back into the ditch, and in a short time you would never have guessed the line was there.

The oil is pushed through the pipe line by powerful pumps in stations built at various points on the route. And once on the move (at a steady three miles per hour) the flow does not stop.

When the explorers and drilling crews find another oilfield, the bulldozers, ditchers and wrapping machines roll out again and a new line is added to the map.

TENTATIVE COAL TARGET FOR THIRD FIVE YEAR PLAN

EXPORT DUTY ON VEGETABLE OILS AND SEEDS ABOLISHED

(FROM OUR NEW DELHI CORRESPONDENT)

A TENTATIVE production target of 100 million tons of coal for the third five year plan has been approved by the Coal Council of India, which met here during last week. According to the Council, this target is the minimum, having regard to the estimated requirements of coal between now and the end of that plan. Sardar Swaran Singh, Central Minister for Steel, Mines and Fuel, presided over the meeting. Initiating the proceedings, the Minister laid stress on the fact that for a long time to come, coal would continue to be the major factor in the power development of the country and in order that the available resources might be used to the best advantage and national and industrial development might be promoted, the numerous problems connected with the production, conservation, treatment, transport and efficient use of coal should receive very careful attention. The Minister also reviewed the work done by the various committees of the Council since the last December meeting and referred, in particular, to the standard procedures for qualitative and quantitative estimates of coal resources in the country, manpower requirements and a plan for the training of technicians and subordinate personnel drawn up by these committees.

The Council accepted generally the assessment of manpower requirements for the investigation, planning and development stages, made by the committee on production and preparation. It is realised that the demand for the holders of mining degrees and diplomas and of subordinate ranks of technical personnel will be of a very large order. This requirement cannot be met unless the existing facilities in schools and colleges are expanded, and in addition, the enrolment for the evening mining classes run in the coalfields of the State Governments, is made on a much higher scale than at present. As for training the subordinate categories of technical personnel, it is felt that an integrated approach is necessary so that the needs not only of the coal industry, but also of other mining industries can be covered. The Council emphasised that the training schemes should cater to the needs of both the private and public sectors. Stress was also laid on the importance of integrating practical field training with theoretical instruction. Increased number of stipends and the provision for more hostel facilities are the other steps suggested, in order to increase the output of these technicians. In view of the urgency of the problem and the extent of advance planning necessary, a small committee of officers has been set up by the Council. An order of priorities for geological surveys, mapping and drilling of coal-bearing areas was broadly fixed. These priorities are related to those areas which are *prima facie* suitable for development during the third plan period. Another important matter considered by the Council was the region-wise break-up of the tentative 100-million-ton target. It was recognised that the Central India coalfields would increasingly contribute to the future coal production in the country by way of new development. The final region-wise allocation would, however, depend on such factors as the probable centres of consumption, the overall requirements of these centres, the grades of coal which can be mined and the pattern of rail transport. The question of productivity was another important item discussed. It was felt that the present output a manshift needed considerable improvement. This increase in output is closely linked with the cost of production and manpower requirements, and unless an improvement is effected, both by increased mechanisation and better efforts by labour, the most economical use of resources will not be achieved. In winding up the proceedings, the Minister emphasised that the broad conclusions reached at the meeting should be pursued energetically by the various administrative units concerned, so that "we may go forward steadily towards the achievement of the ultimate objective."

Exporting Iron Ore to Japan

An official delegation, headed by Mr. D. Sandilya, Joint Secretary, Central Ministry of Commerce and Industry and Managing Director of the State Trading Corporation, has left for Tokyo for discussions with the Japanese steel industry on the supply of Indian iron ore during 1958-59. During the discussions, the prices for the supplies to be made in the year as well as the schedule of deliveries and shipments will be finalised. Under a five-year agreement entered into between the State Trading Corporation of India and the Japanese steel industry, the former has undertaken to export 7.2 million tons of iron ore to Japan during the period April 1957 to March 1962. The contract for the first year, namely 1957-58, was for a total quantity of 1.3 million tons, whereas during the present year, the supplies will amount to 1.4 million tons. During his stay in Tokyo, Mr. Sandilya, it is expected, will have discussions with the Japanese Textile Machinery Manufacturers Association with which the State Trading Corporation has an agreement for the import of Japanese textile machinery on a deferred payment basis. Last year, out of India's total exports of about Rs. 27.2 crores to

Japan, iron ore accounted for slightly over Rs. 7 crores. The quantity was 1,347,000 tons, out of a total export volume of 2,216,000 tons.

No Export Duty on Vegetable Oils

The Government of India has abolished the export duty of Rs. 75 a ton on sesamum oil Rs. 50 a ton on nigerseed, Rs. 150 a ton on sesamum and kardseds, Rs. 25 a ton on linseed and Rs. 300 a ton on groundnuts, Rs. 150 a ton on groundnut oil and Rs. 100 a ton on castor oil. The export duties have already ceased to be a major source of revenue. The yield from export duties has declined from Rs. 90.74 crores in 1951-52 (actuals) to Rs. 26.33 crores in 1958-59 (Budget). The actual receipts from export duties during the last five months have been as follows:

January 1958	Rs. 2.48 crores
February 1958	Rs. 1.83 crores
March 1958	Rs. 1.65 crores
Total of the first quarter of 1958	Rs. 5.96 crores.
April 1958	Rs. 1.86 crores
May 1958	Rs. 1.74 crores.

With the abolition of export duties on oils and seeds, the receipts from these sources may be further affected. It may be added here that the revenue from import duties has already commenced to decline as will be evident from the following figures:

January 1958	Rs. 10.22 crores
February 1958	Rs. 11.30 crores
March 1958	Rs. 11.03 crores
Total of the first quarter of 1958	Rs. 32.55 crores
April 1958	Rs. 9.95 crores
May 1958	Rs. 9.75 crores

Figures are also available of India's exports to the U.K. for the five months ended May 1958. They are:

1957	£77,044,478
1958	£52,302,104
or a decline of	£24,742,374.

Export promotion, however, has become a slogan. It is fast passing out into the hands of quacks. An expert on export promotion, for instance, had interviews during last week from the Prime Minister downwards. He, however, kept away from the officials who have devoted a lifetime to the study of these problems. It may look strange that while the Government has been announcing one concession after another in order to stimulate exports, the export trade has maintained a studied silence. Meanwhile, loud thinking in responsible quarters has blurred the distinction between facts and fancy. The prices of most exportable commodities have shown a rising tendency in recent weeks, while an appearance of scarcity is being fostered at home. This could increase internal demand and enlarge profits. But it would be a drag on exports. So far as imports are concerned a scrutiny of commodities, the imports of which could be further curtailed, is in progress. The effect of the import cuts of raw material it is explained, should be felt by the end of the year. Import cuts also are already beginning to affect social services, and in particular, medical services. A black market is developing in X-ray films. There is a shortage of surgical instruments. They have also affected baby food preparations.

U.K. Credit for India

Thanks to the untiring efforts of the Secretary of Economic Affairs, Mr. B. K. Nehru, and of the many friends which India has abroad, the U.K.

Putting electricity to work

We can supply all the electrical equipment required for use with electricity supplies becoming available under the Second Five Year Plan.

GREAVES COTTON & CROMPTON PARKINSON PRIVATE LIMITED.

Post Box No. 91, Bombay 1
Post Box No. 166, Calcutta 1
Post Box No. 197, New Delhi 1

has been showing a keen appreciation of India's needs for foreign assistance to purchase raw material in order to sustain the 1957 level of production in her economy. Indications are that U.K. credit in the shape of an overdraft is being arranged. This will enable India to meet her obligations without drawing on the sterling balances beyond the latest statutory limit. The suggested figure is £75 million. The communist States, it is reported, have stated that their credit is usable for purchases only from their own countries. It is presumed that the U.K. overdraft now being suggested will be used in that country also. No announcement, however, is expected before September, but it must be mentioned that the sterling area goods are generally cheaper than those of the dollar area as well as of the communist countries.

Import Licences for Raw Materials

Two announcements further liberalising the provisions and scope of the export promotion scheme under which special import licences are granted for the import of raw materials used in the manufacture of specified articles for export have been made. Under one, it will be possible for exporters registered under the scheme to apply for import licences every month on the basis of exports made during the previous month. Hitherto, such applications were entertained once in every three months. The number of items for which the special import licences will be granted under the second announcement. The new items for which special import licences will be given are zip fasteners used in hosiery, plastic and leather handbags and brief cases for export; full cream sweetened condensed milk and printed toffee wrapping

paper, backed with aluminium foil, used in toffees for export; enamelled copper wire used in chokes for fluorescent tubes; natural essential oils, adhesive cello tape, citric acid and food colours for unwrapped boiled sweets for export. Moisture-proof unprinted plain cellophane paper will be allowed, in addition to the four items permitted for unwrapped boiled sweets, if these are used in the export of boiled sweets wrapped in moisture-proof cellophane paper. The import of real pearls, unset, will also be permitted under the scheme if these are used in the export of drilled, processed and polished real pearls either loose or set in jewellery.

Inter-State Transport Body Chief

Mr. K. P. Bhargava, until recently Chief Commissioner, Tripura, has just taken over as chairman of the Inter-State Transport Commission, during the week. The Government of India announced, early in March this year, the appointment of the Inter-State Transport Commission for the purpose of developing, co-ordinating and regulating the operation of transport vehicles in any area or route common to two or more States and performing such other functions as may be prescribed by the Central Government. The Commission will prepare schemes for the development, co-ordination or regulation of the operation of transport vehicles and in particular of goods vehicles in an inter-State region. It will settle all disputes and decide all matters on which differences of opinion arise in connection with the development, co-ordination or regulation of the operation of transport vehicles in an inter-State region. The Commission will issue directions to State transport authorities or regional transport authorities

concerned about the grant, revocation and suspension of permits and of counter-signatures of permits for the operation of transport vehicles for any route or area common to two or more States.

Under the Motor Vehicles Act, the Commission will perform all or such of the following functions as it may be authorised to do by the Central Government by notification in the official Gazette: (a) to prepare schemes for the development, co-ordination or regulation of the operation of transport vehicles, and in particular, of goods vehicles, in an inter-State region; (b) to settle all disputes and decide all matters on which differences of opinion arise in connection with the development, co-ordination or regulation of the operation of transport vehicles in an inter-State region; (c) to issue directions to the State transport authorities or regional transport authorities concerned about the grant, revocation and suspension of permits and of counter-signatures of permits for the operation of transport vehicles in any route or area common to two or more States; (d) to grant, revoke or suspend any permit or counter-sign any permit for the operation of any transport vehicle in such route or area common to two or more States as may be specified in this behalf by the Central Government; and (e) to perform such other functions as may be prescribed by the Central Government under Section 63C. For the present, the Commission has been authorised to perform only the functions specified in items a, b and c.

Effort to Increase Tea Export

The Government of India has invited Sir Percival Griffiths for consultations about tea exports, which have been falling, particularly to Britain. There is also a move to revive the international agreement with like-minded countries such as Ceylon, East and West Africa. Concerted efforts are also being made to regain the position of Indian tea in the U.K. for which purpose bulk purchasers and blenders are being approached. The following are the figures of imports of tea into the U.K. for five months ended May 1958, compared with the corresponding period of 1957:

	£	£
Rhodesia and Nyasaland	2,643,051	1,610,593
Tanganyika	213,665	356,396
Kenya	1,086,065	814,969
Uganda	343,542	316,415
India	45,065,583	24,095,474
Pakistan	2,916,802	484,362
Singapore	27,640	136,532
Federation of Malaya	174,890	169,977
Ceylon	16,166,170	12,651,648

It will be seen that India has been and still is the major supplier of tea to the U.K. For 1957, India exported £84,342,222 worth of tea to the U.K., nearly half of which was during the first five months. Quantitatively, the decline in India's exports of tea to that country amounts to 62,379,487 lbs during the first five months of this year, compared with the same period of last year. It can scarcely be a consolation that there has been a general decline in the intake of tea by the U.K. during these five months. Pakistan's exports of tea has declined by 2,432,440 lbs during this period.

Marketing Procedure for Manganese Ore

The streamlining of the marketing procedure for manganese ore is being considered actively. As a result of a series of conferences, the trade has begun to realise that chaotic selling and cut-throat competition is harmful to itself, and that some co-operation among the quota holders is necessary. A better understanding between the State Trading Corporation and the trade is, therefore, likely.

Planning Body not to be Reorganised

The Planning Commission at its latest meeting, under the chairmanship of the Prime Minister, has, it is believed, rejected the recommendations of the Estimates Committee recently made for its reorganisation. The Committee, it will be recalled, has suggested that Central Ministers should not be members of the Commission, and the Prime Minister should not be its chairman. The recommendations are unacceptable to the Planning Commission and to the Government. As already reported, the Government has written to the Speaker of the Lok Sabha pointing out to him the constitutional impropriety of the Estimates Committee's questioning the policy of the Government, and demanding an explanation why some of its recommendations have not been implemented. The Government, it is pointed out, is responsible to Parliament, but the latter cannot delegate its authority, in this matter to one of its committees. A resolution, correctly defining the powers of the Estimates Committee, it is expected, will be brought up before the August session of Parliament.

Pharmaceutical Raw Materials

The vice-president and director of the American Cynamid Company, Mr. Robert C. Swain, has arrived in New Delhi for a four-day stay, during which he will discuss with the officials of the Lederle Laboratories, the Indian pharmaceutical subsidiary of the American Cynamid, the possibility of manufacturing basic pharmaceutical raw materials in this country which are being imported.

Higher Price for Shellac

The floor prices of shellac have risen by 25 percent, it is learnt. This is due to the arrangement by the shellac dealers who have formed themselves into an association. This latter body enforces a code of conduct among its members. The Government also issues export licences to the members of the association only. In this manner, the chaotic selling in the shellac trade has been stopped, which has led to the improvement in prices.

London

SIGNIFICANCE OF THE RELAXATION OF CREDIT SQUEEZE IN U. K.

BANKERS UNEASY ABOUT NEW SCHEME FOR COMPULSORY DEPOSITS

(FROM OUR LONDON CORRESPONDENT)

IT is still far too early to pass judgment on the Chancellor of the Exchequer's recent announcement relaxing the credit squeeze so as to revitalise the economy while at the same time introducing fresh measures to ensure that the new privileges are not abused to endanger the strength of sterling and price stability—the achievement of which has proved so hard a struggle. On the whole, the measures have been well received. The majority view seems to be that easy credit makes a good background for expansion but does not in itself provide a stimulus. Industrial profits have so far benefited from low raw material prices but they are now beginning to suffer from working below economic capacity—a condition which is spreading. Many bankers are uneasy about the new scheme for compulsory deposits with the Bank of England. They feel that the scheme is untried and may have to be brought into force in an arbitrary and disturbing manner.

The fear is that the credit relaxations now announced, though desirable in themselves, may be insufficient stimulus to industrial activity. In Labour's view, they should certainly be strengthened by relaxations on capital expenditure by the nationalised industries and by local authorities. The Government, on the other hand, hopes that the change announced will have a psychological effect on industry and will thus sustain or increase output during a difficult period. It has made a limited advance, no doubt keeping in reserve certain other measures in case the full effects of the U.S. recession hit Britain harder than they have done so far, or are yet to be felt, and the most extreme measures of all if this country itself should run into major trouble.

Credit Squeeze Relaxation

The main points of Mr. Heathcoat Amory's announcement in the House of Commons on the relaxation of the credit squeeze, and of the Treasury and Bank of England statements connected therewith are as follows:

From 1st August, the banks will be under no obligation to restrict the total level of their advances.

The limit of exemption from the control of the Capital Issues Committee, which has stood at £10,000 since March 1956, is raised to the original 1947 level of £50,000.

Instead of confining its consent to urgent transactions, the Committee will be free to assent to applications which anticipate future needs.

Bonus issues or capitalisation of reserves will be exempt from the Committee's control, but Treasury consent will be needed if they take the form of issues of redeemable securities.

A new scheme is to be introduced to control credit supplies through the banks in addition to the normal market machinery. When it appears necessary to restrict the liquidity of the banking system and the bank's ability to extend credit, the Bank of England will call for special deposits to be made with them by the clearing and Scottish banks. These deposits will not qualify for inclusion among the banks' liquid assets. They will carry interest based on the current Treasury bill rate. The Bank of England's ability to call for them will operate as a general control of credit in much the same way as Bank rate.

The new directive to the Capital Issues Committee makes it clear that though it will now be lawful to raise up to £50,000 without Treasury consent, the Chancellor is tightening his control in some directions. By maintaining the Treasury check on issues involving redeemable securities, he will prevent operations designed to reduce tax liabilities.

He is also bringing within the control various transactions, exempt since April 1955, which certain companies have been using to evade scrutiny by the Capital Issues Committee. A favourite device of this kind was to acquire, in consideration of an issue of shares, the assets of another company consisting largely of cash or securities that could be easily realised.

From now on this sort of transaction will be covered by statutory control. So will.

Transactions between associated companies;

Transactions by which the price of property or of an undertaking is left unpaid;

Issues of shares in settlement of existing indebtedness; and

Issues of securities otherwise than for securing a bank overdraft or refinancing a maturing loan.

The Capital Issues Committee will no longer be concerned with the appropriateness of bank finance for capital purposes; it will leave to the

discretion of the banks themselves the terms as to period and repayment of such advances. Where commercial and industrial advances are concerned, the Chancellor is hoping that the banks will continue to discourage speculative investment. Because production is showing a slight downward trend here and there, he wants them to give high priority to loans intended to stimulate export business. He also wants credit for development projects in areas of above-average unemployment.

Economy Slows Down

The economy may be running down but it is not doing so very fast. The latest report of the U.K. Ministry of Labour shows that the number of unemployed actually fell by 18,000 between 12th May and 16th June, when it was 429,000 or exactly 2 percent of the employed population. The trouble, of course, is that the incidence varies so widely, being well below the average in some areas and industries and well above it in others, for instance, in northern Ireland, Scotland and Wales, and in the textile industry. After all, bank advances would not be rising and industrial production would not continue on a more or less even keel, month by month, if a recession was in full swing. Britain is still concerned mainly with the danger of a severe export decline over the next 12 months rather than with any immediate emergency. But the fear of export difficulties is aggravated by the increasing demands for higher wages, accompanied last week by threats of strike action if they are not met.

On the other hand, there was another fall in steel production in June. The U.K. Iron and Steel Board has announced that output was at the rate of 373,600 tons a week, or 19,27,000 tons a year. This compared with a weekly rate in May of 379,000 tons or an annual one of 19,710,000 tons. The corresponding figures for April were 407,600 tons and 21,204,000 tons. Deliveries for export and the home trade continued at a lower level than that of a year ago. The reduction at home was caused partly by a decline in demand for steel, mainly for constructional purposes and partly by a fall in consumers' holdings of finished steel.

Industrial Building

If proof were needed to show that the credit squeeze had done its work and the time has come to think as much of re-expansion as of retrenchment, it is contained in the latest figures of industrial building plans. Provisional figures of new factory building schemes and extensions issued by the U.K. Board of Trade show that in the April-June period 511 applications for 10.9 million square feet were approved. This is the lowest quarterly figure since the third quarter of 1953, when approvals totalled 9.8 million square feet. The latest figure compares with 12.1 million square feet in the first three months of this year and with 18.7 million square feet in the second quarter of last year. For the whole of 1957, the Board of Trade approved 2,422 schemes for 64 million square feet, against 2,470 schemes for 71.6 million square feet in 1956 and 3,322 schemes for 91.8 million square feet in 1955.

Too much emphasis should not be placed on a single quarter's figures as they can be distorted by one or two large applications. But the latest return confirms the general impression that the rate of capital investment in industry has been declining fairly rapidly. It remains to be seen how quickly the Chancellor's moves in raising the initial allowances for industrial buildings will bear fruit. The first increase came in his Budget, when they were raised from 10 percent to 12 percent. Last month, as the first of his steps to stimulate industry, the initial allowances were raised again to 15 percent.

Retail Trade in May

The slowing-down process is gradually spreading right through the economy, but at varying speeds in different sectors. For instance, the quieter trend in retail sales continued in May, when the rise in value on last year was only 3 percent higher, prices accounting for all of it. This increase was the same as the average for the four months, January-April, but May included Whitsun, which suggests a further slackening in trade. The earlier Whitsun was reflected in the sales of clothing and footwear shoes, which increased by 4 percent on last year. Prices in May were about 1 percent higher than a year earlier leaving a modest increase in volume.

Sales by household goods shops again showed little change, the value in May being the same as last year, against a 1-percent increase for the first four months. In food shop sales, too, higher prices probably more than outweighed a 3-percent rise in value. It is likely that the figures for June will show a good seasonal improvement. The ending of the bus strike coinciding with the beginning

of the summer sales will have meant brisker trade, especially for the Central London department stores.

Free Trade Area Delay

The next meeting of the committee of the Organisation for European Economic Co-operation, which is considering means by which the proposed European free trade area could be set up and linked with the common market, is to be held in Paris at the end of the month—if there is any hope of reaching agreement even on a limited agenda. The British Government takes the view that it might be necessary to suggest cancelling the meeting if the French still find themselves unable to start negotiating.

It is suggested in London that unless some progress can be made, the impetus towards the establishment of a free trade area will abate. On the other hand, the British Government has not yet taken up the position that failure to make a start with the agreement this month would end the project; failure will, however, make it impossible, as the Government sees it, to hope for a complete European free trade area scheme by the beginning of next year, when the common market is to start. What the consequences of this might be seem not yet to have been considered in detail. The subject will be discussed at the Commonwealth Conference in Montreal in September.

Suez Agreement Endorsed

No serious opposition to the compensation agreement with the United Arab Republic was encountered at the recent Paris meeting of the Suez Canal Company. Formal signing of the agreement is expected to take place at a meeting in Geneva shortly. Mr. Jacques Georges-Picot, chairman, told the meeting that he hoped the full £(E)23 million to be received from the U.A.R. as compensation for the seizure of the Canal undertaking two years ago would be shared between the shareholders. The new company (Compagnie Financière de Suez) will retain only its present holding—equal to about £40 million.

Distribution of the Egyptian settlement to shareholders will be made within the year after receipt of the funds, so as to leave it exempt from taxes. Plans for the company's future will be discussed soon with prominent shareholders, and another shareholders' meeting will be held in October.

Brevities

The board of General Ceylon Rubber and Tea Estates has deferred any scheme for a return of capital, in view of conditions in Ceylon, until either the Hatale or Goomera estate has been sold. Permission is being sought to pay a dividend of 6d a 10s unit.

Will there be a flurry in tea with prices rising sharply when the new season's auctions start a month or so hence? It could be. Stocks of tea in Britain are now down to 118 million lbs against 158 million lbs a year ago. This is partly due to the troubles in Ceylon which have held up shipments.

The Hongkong and Shanghai Banking Corporation is paying an interim dividend of £1 2s 6d, an effective increase of 2s 6d a share, after allowing for a 100-percent scrip issue. A year ago, £2 a share was paid on the old capital.

The second shipment of 12 Commonwealth-built diesel railcars, which are being supplied to India by Australia under the Colombo Plan, left Fremantle on 30th June. The railcars are fitted with diesel engines, transmission equipment, and control gear supplied by British United Traction.

Rates for the insurance of cargo against war risks in Indonesian waters have been reduced to 2s a £100. Underwriters have now returned to the rate current before the unrest in Indonesia led to a sharp increase to 5s a £100 last December.

Lower copper prices are reflected in the latest results of the Indian Copper Corporation, which owns 24,000 acres of mining leases in the State of Bihar. In spite of the reduction of £362,493 to £522,534 in the tax charge, net profit fell last year from £447,157 to £427,215. The year's tax-free dividend is to be 18 percent although no interim was paid, whereas for 1957 there was a 6½-percent interim followed by a final of 13½. Transfer to general reserve is maintained at £175,000.

A-I.L. TO INAUGURATE TRANSCONTINENTAL JET PASSENGER SERVICE

PLANS FOR INCREASED FREQUENCIES

(FROM OUR NEW DELHI CORRESPONDENT)

AIR-INDIA International expects to inaugurate a transcontinental jet passenger service towards the end of 1959. The airline will operate a third frequency to Tokyo via Calcutta in October this year. Simultaneously, it will operate a fourth frequency to London, the flight terminating at Calcutta. The Delhi-Moscow service, operated by Super-Constellations, will be inaugurated during the autumn of this year. Although the exact date has not been finalised, Air-India International has asked Moscow to confirm whether the particular grade of fuel needed for these aircraft, is available in Moscow. Unless the airline gets this assurance, the opening of the service will be held up.

The management of the Indian Airlines Corporation is reported to be anxious to dispose of its two-year-old fleet of eight *Herons* on the ground that these aircraft have proved "uneconomical". In reply to a Parliamentary question on the Corporation's plans, the Central Deputy Minister for Civil Aviation, Mr. Ahmed Mohiuddin, has recently said that operational costs for the *Herons* have been high, and although this was realised at the time of their purchase, it was hoped that their four-engine design would permit high load factors to be achieved. Unfortunately, traffic was not forthcoming as expected. One of the *Herons* has already been sold.

According to *Flight*, the Indonesian airline, Garuda, is in the same position. With 13 *Herons*, the Indonesian national carrier has the world's largest fleet of these aircraft. The airline has recently introduced DC-3s and *Convairs* in all its services, both international and domestic, and the *Herons* are presumably to be disposed of. "New Zealand National's fleet of *Herons* has now been run down from four to one aircraft, and this is soon expected to be sold abroad. The other few *Herons* in the eastern hemisphere have also been changed. The three at one time owned by Japan Air Lines, and leased to Far Eastern Airlines, have now been purchased by All Nippon Airways (the successor to Far Eastern and Japan Helicopter). T.A.I.P., operating from Goa, has now only one of the two *Herons* previously registered under its name, the remaining aircraft not being used on scheduled services. The final change involves Transpac, a small French airline based in New Caledonia, which has recently added a single ex-U.A.T. *Heron* to the fleet of three *Rapides* used on feeder services in and out of Noumea."

Controversy on Territorial Waters

Discussing the controversy on territorial waters, *Flight* says: "Already the effects of the recent Geneva conference on the extension of territorial waters are beginning to be felt in the air transport world. In one way, this extension of sovereignty is likely to promote civil aviation activities; whereas a three-mile limit allows a considerable amount of patrol work to be conducted conveniently from the shore, a twelve-mile limit provides greater scope for the use of aircraft. It has already been reported that the Irish Government may review its policy towards the use of helicopters for fishery-protection duties round the coasts of the Republic. Other countries, such as Iceland and Norway, might also find increased possibilities for this sort of operation. An extension of sovereignty would not only be felt in the fishing industry, but in other offshore activities, such as oil exploration and development. The helicopter is already being

widely used in this field, particularly in the Gulf of Mexico.

"In another way any extension of territorial waters could act to the detriment of air transport. Governments will have as much control over these waters as over their land surfaces and so their power to withhold first freedom rights (namely, overlying a foreign territory) will be correspondingly increased. Where a nation comprises scattered islands—Indonesia is an example—it would be possible to inflict a severe hardship on airlines flying an unpopular flag. The problems of small enclave territories, hedged around by unco-operative neighbours, could also be heightened by the developments in Geneva. Air services in and out of Goa have for some years been prejudiced by the restriction enforced by the Indian Government. The Baltic, the Adriatic and the eastern Mediterranean are other obvious zones of potential difficulty. Large, inter-continental carriers using long-range equipment are less affected by these diversions than airlines such as Goa's T.A.I.P."

Proposal for a European Airlines Community

Western European airlines are preparing to set up a "European Airlines Community" on the lines of the European steel and coal pool. The airlines will pursue common purchasing and marketing policies while maintaining policies of individual direction and profits. The purpose of the association is to meet the keen competition from the U.S. airlines operating jets on the European Continent. Flight schedules will be co-ordinated to cut down expenses resulting from overlapping services, and fares will be lowered on flights within Europe and between Europe and overseas points. A Lufthansa official has said that the move is not directed primarily at the overseas business of the Pan American Airways and Trans World Airlines, but is an attempt to eliminate "wild scrambling" among European carriers.

Rise in Intra-European Traffic

Airline members of the Air Research Bureau carried 3,730 million passenger miles of intra-European traffic in 1957, an 18 percent rise above the 3,162 million figure for 1956, it has been disclosed at a recent meeting of the Bureau. Airline members are Aer Lingus, Air France, Alitalia, B.E.A., Lufthansa, Aero o/Y, Iberia, Icelandair, K.L.M., S.A.S., Sabena, and Swissair. Intra-European traffic is defined as that which is carried on international routes originating and terminating within the geographical area covered by the European Continent and countries bordering the Mediterranean. The 18 percent rise in the European traffic above 1956 compared with a 16 percent increase for international air traffic.

Air France Claims Fifth Freedom Rights

Air France has asked Canada for "Fifth Freedom" rights, that is, permission to carry passengers from Montreal to countries other than France. It is now authorised to take up passengers at Montreal for France. Air France serves Montreal on a route from Paris which continues up to Chicago.

Reports on Airlines Merger

Reports on the merger of the Syrian Airways and Missair have received further confirmation in a recent issue of *Flight*. Cairo radio has announced that "final talks" to settle details have begun in the Egyptian capital. A Tu-104 jet order

by the combined airlines is considered "highly likely," and according to unofficial Egyptian Press reports, three of the Russian jets, in fact, have already been ordered. Missair operates two Viscounts and has two more on order. The Syrian Airways flies DC-3s and DC-4s.

T.C.A. Annual Report

T.C.A. added 14 Viscounts and two Super G Constellations to its fleet in 1957, the airline's annual report has disclosed. At the year-end, its fleet consisted of 11 Super Constellations, 32 Viscounts, 21 North Stars and 18 DC-3s. In 1958, 15 more Viscounts will be delivered, bringing the airline's total of these aircraft to 47. Six DC-8s will be introduced in the service in early 1960 and 20 Vanguard in 1961. On the basis of the published information about the equipment plans of other airlines, T.C.A. "will be the first international airline in the world to be completely equipped with turbine-powered aircraft," the report says. The airline will serve Edmonton on its Toronto-Vancouver Super Constellation schedule starting from 1st June next year. On 15th May a direct Edmonton-Winnipeg Viscount service was opened, and starting from 30th May, T.C.A. was to operate a direct Vancouver-Winnipeg-London service via Gander with Super G Constellations. This will be its only direct service from western Canada to the United Kingdom.

P.A.A. to Inaugurate Transatlantic Jet Service

Confirming earlier reports, President Juan Trippie has told stockholders of the Pan American Airways that the airline "anticipates inaugurating" a transatlantic jet service late this year. The airline's first three Boeing 707s are now undergoing C.A.A. certification flight tests, and indications are that they have met, and probably exceeded the required specifications. The C.A.B. is considering a request from the Pan American Airways for an authorisation to fly one of the jets on an interim cargo schedule to enable it to gather experience in flight and ground handling prior to placing the jet on a passenger service. If the request is approved P.A.A. will start the jet cargo service in mid-July, probably between Baltimore and San Juan.

At a cruising speed of 575 miles an hour, the jets will be scheduled for transatlantic flights of less than seven hours, some five hours under that required for the fastest piston-engine aircraft. P.A.A. is preparing a schedule for a record 170 transatlantic flights each week during this summer, an increase of 16 percent over last year. Atlantic flight bookings for June increased by 10 percent over a year ago. The economy service is taking about 45 percent of all transatlantic traffic and is expected to take 65 percent to 70 percent of the total by the end of the summer. Mr. Trippie has also announced that the airline's new \$15-million maintenance base at the New York international airport will be ready for use next month.

Comet IV Service of B.O.A.C.

If deliveries and development flying go according to schedule, B.O.A.C. will begin its weekly Comet IV service across the Atlantic on 1st December. The Aeroplane says. The South American services, using Comets, are expected to be resumed in the spring of 1960, the U.K. Ministry of Transport has announced. The target date is the earliest the Comets will be available for these operations, it is said. B.O.A.C. will replace Britannia 102s with 312s on the Johannesburg-London service at the end of July. The 102s will then replace Argonauts on the service to Nairobi and the service operated by the Corporation for C.A.A. between Salisbury and London.

New Non-stop Services of T.W.A.

Trans World Airlines has informed the C.A.B. that it plans to operate non-stop services between Cairo and Bombay, Cairo and Bangkok, Gander and Paris, Athens and Milan, Zurich and Athens, Frankfurt and Milan and Shannon and Frankfurt on its foreign air transport route.

Press Comments on Economy Class Meals

The inter-airline quarrel with reference to north Atlantic Economy Class meals, has been widely and wittily commented on in the French Press. *L'Information* says: "A special I.A.T.A. two-day session was called upon to solve the difficult question of Air France's received absolution, and sandwiches can remain tastily French." Commenting on the economy meals, *Le Monde* says: "Air France sandwiches may be good without fear of punishment, now that I.A.T.A. has granted its permission." In *Paris Press*, war has now been raging as fierce as the atom war. A charge has been made by two American airlines against Air France, in particular, and Europeans in general, and the International Air Transport Association has been called upon to judge the case. The case? Yes, sandwiches are too good to be served. For it had been decreed that Economy Class seats were to be uncomfortable and Economy Class meals uneatable. If on one British air service sandwiches are some kind of dry bread and a pickle or two—the French and the Scandinavians also resented the rule; they clientele: tongue, beef, chicken, lettuce, wholemeal bread, butter, even jam. The British then went one better with scrambled eggs on bread; and the Swiss took to serving ham and cheese. I.A.T.A. London for luncheon. Yes, they admitted, our sandwiches are good. Our sandwiches always services, they have a friendly smile for tourists. Our sandwiches are our ambassadors."

GUNNIES AND FIBRE FIRM ON NEW MIDDLE EAST CRISIS

RAW JUTE CONSUMPTION BY MILLS IN 1957-58 SEASON INCREASES

DURING the past few weeks, raw jute sellers in Calcutta have again brought to the fore the question of the unusually long delays on the part of certain mills in making their payment of bills against jute shipped or delivered to them. Previously, sellers demanded, and in many cases received, interest of a fixed percentage after a period of about 21 days, but even this did not ensure prompt payment of dues. In most cases, the interest only covered a similar charge by brokers or banks who had advanced money against shipping documents or mill receipts. So, not only was the seller's money blocked, but any profit which he may have made on the deal was practically lost. As a result of this, a meeting of sellers' representatives was called on 9th July to consider the situation. A resolution was put forward to the effect that sellers enter into a gentlemen's agreement, enforceable immediately, that in the case of a mill failing to pay bills according to the stipulations of the reimbursement clause of the contract, the seller will after ten working days of presenting the bills and documents, take legal action and refer cases to arbitration for the realisation of the proceeds of the bill with interest and cost. It is understood, however, that of the 300 sellers purported to be represented, only about half the number put their signatures. There has not yet been time for the resolution to be tested, but it is the opinion of the trade in general that these conditions will not be put into practice. In recent months, due to the tightness of money, the majority of mills have been taking longer than usual to meet their commitments, and it is rare now, even with those who make quickest payments, for bills to be honoured on presentation according to the terms of the contract, or even within ten days. A sore point with the sellers is that some mills who regularly buy jute over the jetty or through their own agents or agencies, pay for the jute so received within one or two days, but hold up bills against jute received under contract.

In the past ten days, it is reported, not less than 80,000 bales of cuttings have been contracted for by mills for delivery up to the end of the year. As they have not yet been issued with import licences for cuttings for this period, it is obvious that these purchases are of a speculative nature. Many of them carry penalty clauses to cover the possibility of the non-receipt of licences, and also market difference terms in the event of the contract being cancelled. Apart from this business, Calcutta mills showed very little interest in the purchase of raw jute. Yet prices have remained firm which is surprising in view of the very favourable new crop reports.

Business in the gunny market was also very limited, especially in the sacking section where prices continued to rule below the L.J.M.A. minima. In the hessian section, prices were very firm, however, and business was reported both by local shippers and overseas consumers. The opening of more letters of credit for Argentina boosted those fabrics in which that country is interested. Towards the close, the political situation in the Middle East caused rates in all sections of the market to harden, and speculative activity increased. Operators were very bullish in their outlook, and rumours concerning the situation in the Arab countries played a large part in the market fluctuations, and Hessians recorded new high levels.

Raw Jute Consumption

During June 1958, the estimated consumption of raw jute and mesta by mills reporting to the L.J.M.A. was 480,400 bales bringing the total consumption for the 1957-58 season to 6,256,600 bales. During the previous season, mills consumed 5,977,600 bales.

L.J.M.A. Production Figures

The total output of mills during June 1958, amounted to 82,400 tons for a 195-hour working month, which was a drop of 12,500 tons, compared with the preceding month (which had 214) working hours. The total production for the entire 1957-58 season was 1,056,200 tons, consisting of 391,700 tons of hessian (constituting 37.1 percent), 596,700 tons of sacking (56.3 percent) and 67,800 tons of other goods (6.4 percent). These figures are 31,000 tons higher than the output of the 1956-57 season, and this is due to a bigger sacking production, yielding a greater tonnage. Last season's distribution among hessian, sacking and other goods was 41.8 percent, 51.4 percent and 6.8 percent.

THE JUTE MARKETS

There was a fair amount of activity in the futures market last week, especially towards the close, and the rates as given by the East India Jute and Hessian Exchange Ltd for the period 9th July to 15th July, were as follows:

	Hessians 40in. 10oz.	Sacking B Twills	Raw Jute Upper Assam
Opening	40.84	98.15	26.34
Highest	41.74	98.25	26.36
Lowest	40.38	98.80	25.52
Closing	41.74	98.25	26.02

Manufactured Goods: There was little change at the opening of the market last week, the undertone being quiet. The effect of the higher stock figures had not yet worn off, and opening quotations were based on July B Twills at Rs. 97.85 with the forward shipment at a premium of Rs. 1.80. There was no interest from overseas at this stage for July shipment, but in this section, forward goods were at a discount of 45nP. Heavy speculative activity caused a slump in prices on Thursday and heavy goods dropped 75nP and Hessians 25nP. Before the week-end, however, these losses were made up in Hessians due to the opening of further letters of credit for Argentina. Sacking moved up in sympathy, but the previous losses were only partially recovered. Mills sold cautiously on the rise, but local shippers were active and heavy covering was reported. Over the week-end, quiet conditions prevailed due to the absence of any foreign enquiries, and prices in all sections fell back. On Tuesday, however, prices advanced sharply as a result of the political situation in the Middle East which prompted heavy speculative activity. Hessians improved by 45nP to Rs. 41.30 which was the highest since the middle of May, while sacking made up the previous days' losses at Rs. 97.25. The market continued to rule steady, and covering business in fatka caused a steady rise in rates. Towards the close, the advance slowed down on the publication of American burlap consumption figures, which dropped 5 million yards to 60 million yards. At the close, the market was very firm due to speculative activity in fatka, and the serious situation in the Middle East. Opening quotations on Wednesday morning were as follows:

	July	August	September	Oct.-Dec.
40in. 8oz.	32.85 (38.88)	33.70 (38.73)	33.60 (36.62)	33.40 (36.40)
40in. 10oz.	43.65 (46.62)	42.30 (46.76)	42.50 (46.32)	41.75 (45.50)
B Twills	99.45	100	101.50	101
Heavy Cees				
(Plain)	100	100	100.50	101
A Twills	119.50	120.50	121	122
Liverpools	111	112	112.50	113.50
Cornsecs	99.75	100.50	101	101.75

(Figures in brackets indicate the value per 100 metres).

Raw Jute: The main interest in the fibre markets during the past week was in Pakisani cuttings for varying shipping periods right up to the end of the year. It is estimated that about 60,000 bales were contracted for during the week, and in the past ten days, the figure is put as high as at 80,000 bales. Prices varied between Rs. 67 to Rs. 72 a bale, according to shipment and quality, but as no licences have been issued against these purchases, they may be regarded as of a speculative nature. There was little interest in loose jute except towards the close, and quotations up to the week-end were unchanged at Rs. 25.50 a maund for old crop Assam-Northern jute. After the week-end, following the unsettled situation in the Middle East, prices hardened and rose by 25nP. Sellers were very bullish in their outlook in sympathy with the goods market, and offers were small. New crop reports continue to be very favourable from all areas, but mills are showing little interest as prices continue to rule about 75nP higher than old crop. During the week, business was reported in old crop northern-Assam jute at Rs. 25.50 to Rs. 25.75 a maund, basis Bottoms, and at Rs. 28.75 to Rs. 29 a maund for Middles only. Small lots of Desal and northern Mesta were also done at Rs. 24 and Agar-tala mesta at the same price. In new crop jute, prices paid for northern-Assam fibres ranged from Rs. 26 to Rs. 27 a maund for July-August and July shipments, respectively. Desal White was done at Rs. 24.50 to Rs. 25 for July-September shipment and junghi white at Rs. 23 for August-September. Northern and Assam mesta passed at Rs. 24 for September-November shipment. Pakisani cuttings were done at prices between Rs. 67 and Rs. 69 for N.C.'s and Rs. 70 to Rs. 72 for T.C.'s.

The Cossipore markets were again firm, in spite of an increase in wagon arrivals to 345, which was 45 more than last week, but 55 less than during the corresponding week last year. At the close, Kishanganj jute was quoted at Rs. 24 to Rs. 24.25 for average quality.

At the close on Wednesday morning, the market was very steady in sympathy with the improved goods market, and the opening quotations were as follows:

Indian Jute:	Landed at Mills Rs. a md. Rs. a 100 kilos	Shipment Basis Bottoms	July-Aug 1958
Assam Northern	25.75	69.01	"
Purnea Desal	24.50	65.66	"
Daissee	29.25	78.39	"
Assam Tossa	28.75	77.05	"
Murshidabad Tossa	28.50	76.38	"
Northern ex Calcutta	25.25	67.67	"
Mesta:			
Assam-Northern	24.75	66.33	"
Desal	24.75	66.33	"
Daissee	24.50	65.66	"
Junghi	22.75	60.97	"
Bimli F.A.Q.	22.25	59.63	"

Pakistani N. C.'s a bale	69.00	184.92	"
T. C.'s	71.00	190.28	"
New Crop:			
Assam-Northern	26.50	71.02	July-Aug. 1958
Purnea Desal	25.00	67.00	"
Daissee	29.75	79.73	Sept.-Oct. 1958
Daissee White	25.50	68.34	July-Aug. 1958

L.J.M.A. PRODUCTION FIGURES FOR JUNE

The Indian Jute Mills Association reports the total production of jute goods for June, as follows:

Description	Quantity	Summary (00,000 Yds.)	June 1958	May 1958	June 1957
1. Gunny Bags					
(a) Hessian	5,032 tons				
	1,659 lakh yds.				
(b) Sacking	44,566 tons				
	10,722 lakh yds.				
	4,732 lakh Nos.				
2. Gunny Cloth					
(a) Hessian	26,248 tons				
	10,150 lakh yds.				
(b) Sacking	1,376 tons				
	30.3 lakh yds.				
3. Other Manufactures	5,190 tons				
4. Total production (above figures combined)					
(a) All kinds	82,412 tons				
(b) Hessian (Both bags and cloth)	11,809 lakh yds.				
(c) Sacking	11,025 lakh yds.				
Summary					
(00,000 Yds.)					
June 1958	11,81	13.23	12.34	31.3	34.2
May 1958	11.03	12.89	10.13	45.9	53.7
June 1957				5.2	7.0
Grand Total	82.4	94.9	80.1		
Hours worked	195.0	214.5	197.5		

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipments relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian	Cloth	Total
Bags (Tons)	(Tons)	(Tons)	(Tons)
1st to 5th July, 1958	1,500.3	8,221.7	9,722.0
1st to 5th June, 1958	122.4	6,550.1	6,672.5
1st to 5th May, 1958	356.7	12,607.6	12,964.3
Sacking			
1st to 5th July, 1958	4,875.3	816.5	5,691.8
1st to 5th June, 1958	3,762.2	66.0	3,828.2
1st to 5th May, 1958	6,087.1	289.5	6,376.6

THE FOREIGN JUTE MARKETS

GOODS PRICES REDUCED

(FROM OUR DUNDEE CORRESPONDENT)

ON 5th July, the U.K. jute trade was advised that prices for jute yarns and cloth had been reduced by the usual £5 a ton. This was followed by a fair amount of business, mainly for delivery over the next few weeks. This will keep spinners and manufacturers busy over the holidays, which will commence in Dundee and the district on 25th July, and extend up to 11th August. It is understood that some firms will suspend production for about three weeks instead of the statutory fortnight. Meanwhile, producers are unable to build up satisfactory order books for delivery any distance ahead.

The raw jute market continued more or less unchanged and values were not lower during the past week. Mill Firsts were offered quite freely at £107, Mill Lightnings at £94 and Mill Hearts at £84. A fair amount of business is reported to have been done in new crop Lightnings and Hearts at these rates for July-August shipment. In the case of September, shippers are indicating that they will accept 20s a ton less. Dark jute is not freely offered; indeed, in many cases prices are nominal in the absence of offers. Crack marks of Daissee-2/3 are quoted at £104 and grade from £96, with grade Tossa-2/3 from £115 and grade Tossa-4 from £105, all c.i.f., U.K. Spinners in Dundee are not much interested in dark jute these days, as buyers prefer light coloured yarns.

Most jute yarn prices are reduced. Hessian qualities are down from 15.44d to 14.87d a lb. for 8 lbs C.H.W. cops, and from 16.59d to 16.02d for 8 lbs spools with 3 ply 8 lbs twist down from 18.44d to 17.86d a lb. Rove has remained unchanged, but the Rio yarns are down 21.75d to 21.17d for J.C.2.R. and 19.46d to 18.88d a lb for J.C.3.R. Hessian cloth now rules at 13.26d from 13.64d a yarn, for 40in. 10oz. and 8oz. is down from 11.62d to 11.32d a yard, with 14 port. 36in. 18oz. tarpauling reduced from 27.04d to 26.34d. Calcutta goods are displaying a good deal of irregularity around 61s 6d for 40in. 10oz. Hessians and 46s 3d for 70oz. July to September, with B Twills at 146s 6d July and 147s 9d August and 149s September, all f.o.b., Calcutta.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) advanced further by 0.4 percent to 113.5 during the week ended 28th June, 1958, compared with 113.0 (revised) for the earlier week. The index was higher by 4.1 percent and 2.4 percent, respectively, when compared with the corresponding week of the previous month and that of last year. The monthly average for June 1958 stood at 111.8 against 108.2 for the previous month and 110.7 for June 1957. The index for Food Articles rose by 0.6 percent to 116.5 against 115.8 (revised) for the previous week due to an advance in the prices of masur in Patna (+20%), eggs in Delhi (+16%), cummin (+11%), bajra in Anakapali (+7%), wheat in Delhi, chillies in Calcutta and gram (+6% each), ragi in Bangalore (+5%), potatoes (+3%), betelnuts (+2%) and rice, groundnut oil, mustard oil and coconut oil (+1% each), although the prices of bajra in Erode (-15%), mung in Patna (-14%), wheat in Dhanduka (-10%) and in Bombay city (-6%), bananas in Nagpur and turmeric in Calcutta (-6% each), jowar (-2%) and coffee (-1%) showed declines. A rise in the prices of raw tobacco (Mothier medium) in Calcutta (+2%) was responsible for an increase in the index for Tobacco by 0.4 percent to 90.8. The index for the Fuel, Power, Light and Lubricants group stood at 115.5, compared with 115.6 for the previous week. There was a fall in the price of castor oil (-1%). The prices of groundnuts (+2%) and raw cotton, lac and linseed (+1% each) showed advances while raw skins in Kanpur (-6%) and copra and raw hides (-1% each) moved down and the index for Industrial Raw Materials rose by 0.4 percent to 116.2, compared with 115.7 (revised) for the earlier week. The index for Intermediate Products moved up by 0.3 percent to 110.9, against 110.6 (revised) for the earlier week due to a rise in the prices of tin and German silver (+3% each), linseed oil (+2%) and rayon yarn and lead (+1% each). The price of brass (-1%), however, showed a fall. The index for Finished Products stood at 107.8, against 107.7 (revised) for the previous week. The prices of castor cake in Kanpur (+5%), drugs and medicines and glass (+2% each), jute manufactures (+%), sesamum cake in Salem

(-6%) and handloom cloth (-1%) showed variations.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS
(Base: 1952-53=100)

Groups and Sub-Groups	28-6-58	21-6-58	31-5-58	29-6-57
I Food Articles:	116.5	115.8(R)	108.7(R)	109.6

IRON ORE PRODUCTION IN INDIA FALLS IN APRIL

The total output of iron ore during April 1958 in India was estimated at 485,000 tons, against 510,000 tons in the preceding month, according to the Indian Bureau of Mines. The largest output was reported from Orissa and Bihar with 195,000 tons and 174,000 tons, respectively. Among the minor producing States, Mysore, Andhra Pradesh and Bombay accounted for 57,000, 15,000 and 14,000 tons, respectively. During the month, 28,000 tons of iron ore were despatched to the iron and steel plants, and 155,000 tons to the export market.

SUGAR PRODUCTION AND STOCKS

Production and despatches of indigenous sugar amounted to 1,907,000 tons and 1,259,000 tons, respectively, up to 15th June, 1958, in the current season against 2,092,000 tons and 1,322,000 tons, respectively, during the corresponding period of the previous year. Stocks with factories on 15th June, 1958, stood at 1,131,000 tons.

CALCUTTA TEA AUCTIONS IN JUNE

FAIR GENERAL DEMAND

SALE No. 1, for which 26,716 packages were catalogued including 132 chests of old season's tea, was held on 9th June. Sale No. 2, scheduled for 16th June, was postponed on account of the dock strike. There was a fair general demand, and a better tone was noticeable than in the first sale of 1957, but buyers followed quality closely, say Messrs. Caritt Moran and Co. Private Ltd. in their monthly tea market review. Orthodox Dooras B.O.P.'s and O.F.'s with early flavour were the strongest feature, and the brighter liquoring C.T.C. Assams came in for strong competition, realising prices frequently well above expectations. The more ordinary C.T.C. teas, however, were not so well supported and sold irregularly in the region of valuations. Plain black B.O.P.'s without liquor were the weakest feature of the sale, but there was a fair demand for plain B.P. and Fannings grades from internal buyers and these sold readily, although occasionally below valuations. Non-wither Legg-cut Dooras attracted fair attention, but some of the higher priced ones failed to realise valuations. Stylish whole leaf grades were in demand. Darjeelings sold quite well, although the demand for these was not as strong as in the previous two sales, and prices were irregular and frequently lower. Because of the comparative lack of representative teas, no quotations are given.

Both leaf appearance and cup quality of Darjeeling teas were of an unusually high standard for late first flush teas. Although there was some seasonal decline, this was less marked than usual and some invoices with good leaf appearance and quite attractive flavour, were catalogued. The quality of Assam teas was fully average for early arrivals, and leaf appearance was satisfactory. A few useful C.T.C. teas were on offer, but others in this category were rather "green" and of an ordinary first flush description. A few quite attractive tippy grades were also on offer. Both leaf appearance and cup quality of Dooras teas were up to the expected standard, and a number of useful invoices of non-wither Legg-cut manufacture were available. Very little tea from Cachar was catalogued. Leaf appearance was on the whole satisfactory, but cup quality varied considerably, and while some of the offerings had clean, sweet liquors, others were rather plain in cup.

Internal Market

The recent strike by the dock labour resulted in the Internal Sale of Sale No. 2 being postponed by a day, but this did not suffer the same delay as the Export Sale, and consequently three sales were held as originally published. A small total of 960 chests of Leaf was catalogued for sale, of which 166 chests were of new season's manufacture. Quality of the old season's tea was of a typical end-of-season description and demand was irregular. There was a total of 58,141 chests of Dust offered for sale. The last sale of the month, Sale No. 2, still consisted entirely of old season's tea, but the offerings in the next sale will be made up of a considerable quantity of new season's manufacture. Quality was of a very ordinary description and in the case of C.T.C. Assams showed a further decline. All orthodox grades suitable for export were in strong demand and sold well. In the earlier sale, prices showed a further decline, but thereafter made some recovery. C.T.C. Assams were an irregular feature but prices were generally easier following the further decline in quality.

Quotations	1957-58 Rs. nP.	1956-57 Rs. nP.
Sale No. 48 Clean Common Dust	1.40	1.44
Sale No. 1 Clean Common Dust	1.54	1.39
Sale No. 2 Clean Common Dust	1.51	1.37

In Sales 1 and 2 of the season 1957-58, no tea of new season's manufacture was catalogued while there was a considerable proportion of new season's tea in the corresponding sales of 1956-57.

Export sales up to and including Sale No. 1 totalled 38,017 chests at an average price of Rs. 2.91, compared with 34,963 chests at an average price of Rs. 2.48. Internal sales at 284 chests of Leaf and 81 chests of Dust at the average prices of Rs. 2.14 and Rs. 2.37 go against 422 chests and 4,125 chests (Rs. 2.31 and Rs. 1.55), respectively. The estimated north-Indian crop to the end of May 1958, was 54.7 million lbs, compared with 46.2 million lbs to the same date last year. The average figure at this date for the three years 1955-57 was 51,114,834 lbs.

Special export licence declined gradually in price from 8nP to 5nP a lb in the first half of the month. In the following week, prices recovered slightly, business being transacted at 7nP a lb on the 20th of the month, but thereafter declined, business being transacted at the close on the 27th at 2nP a lb. The validity of the special export licence expired at the end of June. Shipping licences similarly showed an irregular decline throughout the month, business opening at 8nP a lb, with the price being 3nP a lb at the close. Business for new season's quota opened at 16nP a lb, declining to 10nP on the 16th. On the 13th, an announcement was made in the Press that the Government of India had sanctioned a second interim release of export quota for tea estates, to the extent of 10 percent of their crop basis. This brings the total allotment to date

up to 60 percent. In the last two weeks of the month, the price of new season's quota fluctuated at between 12nP and 13nP a lb.

Arrivals (in chests) in Calcutta warehouses from 24th May, 1958 to 23rd June, 1958 with the corresponding figures in parentheses, were: by steamer 111,794 (72,653), by rail 28,952 (25,304) and by air 8,843 (6,632) totalling 149,589 (104,589) chests. Arrivals since the beginning of the season, 1st April, 1958 to 23rd June, 1958, have been: by steamer 126,350 (83,738), by rail 52,535 (53,298) and by air 19,817 (19,083), making a total of 198,702 (156,119) chests.

CENTRAL TRADING CORPORATION FOR COIR INDUSTRY PROPOSED

PLEA FOR PRICE CONTROL ON COCONUT HUSKS

(FROM A SOUTH INDIAN CORRESPONDENT)

KERALA's Industries Minister, Mr. K. P. Gopalan, recently initiated a two-hour discussion in the State legislature on the coir industry by moving a resolution which recommends, among other things, the setting up of a central trading corporation to take over the export trade of and to introduce price control on coconut husks to stabilise the coir industry. Measures for this purpose, outlined in the resolution, are as follows:

1. Efforts should be made to bring into the co-operative fold all workers and small producers engaged in the industry in the various stages from the collection of green husks to the manufacture and marketing of finished products.

2. The composition and area of operation of the existing societies should be reviewed immediately with a view to re-organising and rehabilitating the industry on sound lines.

3. New societies should be established in places where the industry is concentrated, according to the requirements of each locality.

4. Husks should be declared as an essential commodity and their prices should be controlled.

THE INDIAN OVERSEAS BANK LIMITED

SPECIAL SAVINGS CERTIFICATES

Invest in I. O. B.'s three-year Special Savings Certificates for security to self and service to country

Special Features:

- Interest on the certificates is payable half-yearly.
- Repayment may be obtained at the end of 1st, 2nd, 3rd, 4th, 5th or 6th half-year at the option of the depositor without loss of accrued interest.
- Loans may be taken on the security of the certificates at a nominal rate of interest.
- Certificates are available in denominations of Rs 50, Rs 100, Rs 500 and Rs 1000.
- Interest is allowed at progressively increasing attractive rates.

5. Retting facilities should be given to co-operative societies by the introduction of licences for retting places and exempting co-operative societies from the payment of any fee for a licence.

6. An all-out effort should be made for the development of both internal and external markets.

7. Steps should be taken immediately to remove the discrimination shown by shipping companies against the finished products in the allotment of shipping space and in the matter of freights in comparison with coir yarn.

8. Steps should be taken immediately to get a substantial reduction in the prohibitive duties now imposed in foreign countries on finished coir goods.

9. A price support policy should be prepared with the approval and assistance of the Government of India.

10. A central trading corporation should be established to handle the export trade in this industry, so as to ensure standardisation of goods, diversification of the industry, steady and remunerative prices, and equal opportunities to all producers in the industry.

11. Industries, other than coir, should be organised in the coastal area to absorb the surplus labour and thus provide the latter with alternative employment.

12. Pending action on these lies, relief measures should be started at once by the State Government in areas where there is acute unemployment, particularly in the lean months of the year and steps should be taken to secure substantial assistance from the Government of India.

13. A committee should be set up to advise the Government on the re-organisation and rehabilitation of the industry.

Discouraging Exports

The Minister for Industries and the Minister for Labour, who participated in the debate, were highly critical of the foreign interests associated with the coir industry. They have said that coir being an export commodity, foreign buyers are in a position to dictate prices. The foreign firms on the west coast who still enjoy a near-monopoly in the export trade are trying to export more of coir yarn to feed the manufacturing industry abroad. The shipping lines operating between the Malabar coast and Europe have reduced the shipping space for coir manufactures from the Malabar coast and have imposed prohibitive freight on them with the intention of discouraging their exports. They are collecting from the manufactured products a freight rate eight times higher than that on coir yarn. The foreign countries, which have their coir manufacturing industry, have imposed a prohibitive import duty on the finished coir goods from India, the Ministers say. They also expressed dissatisfaction on the measures taken by the Central Government to rehabilitate the industry.

Central Jurisdiction

The resolution was characterised by some members of the Opposition as a stupid move. They questioned the propriety of the State Government moving a resolution to demand action in matters affecting the Central Government and even foreign countries. A senior member of the Opposition asked how could the State legislature demand that immediate steps be taken to reduce the prohibitive duties levied in foreign countries. Most of the steps suggested in the resolution have to be taken by the Central Government, and the State legislature has no authority to dictate what the Centre should do. He has also accused the State Government of mixing coir with politics. The Government has turned the coir co-operatives into a political battle field. He further says that recently many co-operatives have been proceeded against by the Government to help the communists. Another member has doubted the advisability of entrusting the export trade to a State Trading Corporation.

The State Labour Minister has argued that it is only to strengthen the hands of the State Government in its endeavour to rehabilitate the industry that this resolution was moved in the House. He says that he cannot see any impropriety in it. The State Government, in his view, is entitled to ask the Centre to take action to save an industry which provides employment to tens of thousands of people in Kerala. The Centre could very well ask the foreign countries to reduce the import duty on coir manufactures when it makes trade pacts with them. He also feels that it is the Central Government's duty to ask for reductions in import duties and shipping charges and to demand more shipping space, and it is quite within the powers of the State Government to request the Centre to take action along these lines. The resolution was eventually passed by the House.

Rubber Planting Programme

In reply to a question in the State Assembly, Kerala's Minister for Forests has said that the State Government has already sent a request to the Rubber Board to prepare a scheme for implementing its rubber planting programme. The Government has set aside a sum of Rs. 1 lakh in the current Budget for planting rubber on a few thousand acres of its forest lands.

Trade Corporation for Cashew Industry

The Cashew Advisory Board, recently constituted by the Kerala Government with representatives of the Government, management and labour, has recommended the setting up of a trading corporation to undertake the export trade of cashew kernels and cashew shell liquid and for the collection and distribution of raw nuts among the processors on an equitable basis. On the basis of this recommendation, the State Government has ap-

pointed an officer to prepare a scheme for this purpose. The setting up of the corporation is one of the measures the State Government has in mind for stabilising the cashew processing industry.

The recent strike of dock workers has dislocated the industry. Steamers carrying raw nuts from Africa could not unload their cargo for a few days and certain factories were on the verge of closure. Some of them actually issued notices to their workers. The workers' unions threatened an industry-wide agitation. The State Government later intervened and on its instructions, the Cochin port authorities made special arrangements for the unloading of raw nuts from the vessels. This averted the threatened closure of factories.

Pepper Exports Decline

India's pepper exports have recorded a sharp decline during the first seven months of the season, November 1957 to May 1958. Only 15,763 cwt. were exported during May this year compared with 22,599 cwt. during the same month of last year. The total exports during the first seven months of the season amounted to only 182,520 cwt. against 221,776 cwt. in the corresponding period of the last season, showing a decline to the tune of 39,256 cwt. In May, Russia was the main destination of exports, having taken more than 50 percent of the total exports during that month. But for the whole seven-month period, the United States leads the list as usual although her import of pepper from India has declined to a certain extent. India had to surrender her position of being the largest pepper supplier to the United States to Indonesia last year, and this position is not likely to change this year also. Figures available so far show that the United States has increased its imports of Indonesian and Sarawak pepper.

POOL RECEIPTS OF COFFEE INCREASE

RISE IN INTERNAL OFFTAKE

THE coffee pool has received 42,980 tons (21,137 tons of Plantation, 7,883 tons of Arabica Cherry and 13,960 tons of Robusta) of the 1957-58 coffee crop up to 30th June, 1958. Comparable receipts for last year were 41,053 tons (21,792 tons of Plantation, 7,077 tons of Arabica Cherry and 12,184 tons of Robusta). The receipts for a similar period a decade ago, in 1948, were 15,103 tons only—a little more than a third of the current figure. The upward trend in the offtake of coffee for the internal market is being maintained. 2,615 tons of coffee (1,180 tons of Plantation, 338 tons of Arabica Cherry and 1,097 tons of Robusta) having been released in June, compared with 1,938 tons released in the same month of last year. This brings the total releases for the first half of this year to 13,233 tons against 12,462 tons during the first half of 1957.

The export sales from the 1957-58 crop through registered exporters up to the end of June amounted to 8,130 tons. The prices have been steady during the month. Out of the nine ten-ton lots sent to London for testing market reaction, 59 tons have been sold in auction up to the end of June. The prices fetched in April ranged from 468s to 504s, and those in May from 460s to 488s a cwt. Tenders have been invited for the sale of 1,833 tons (1,071 tons of Plantation, 635 tons of Arabica Cherry and 127 tons of Robusta Parchment) during the month. The balance for export is 2,887 tons, which includes 696 tons of Arabica Cherry retained for "monsooning" and for release in October-November. Negotiations are in progress for a trial sale of ten tons of Plantation Triage and 25 tons each of Plantation A and B in Japan.

Distribution Arrangements

Arrangements have been made for the distribution of raw coffee to the general public through approved roasters and retailers in Secunderabad, Bombay, Delhi, Calcutta and Allahabad. The coffee houses in Allahabad and Kakinada were closed down with effect from 1st July. A distribution centre for coffee powder has replaced the Coffee House in Allahabad. The Board will participate in the St. Eriks Fair Stockholm, Sweden; Indian Commercial Showroom, Port Louis (Mauritius); Zagreb Fair and Canadian National Exhibition, Toronto.

Development Schemes

Loans under the development plan totalling Rs. 1,12,280 were sanctioned to 14 applicants during June 1958, bringing the total amount to date to Rs. 8,04,824 for 164 applicants. A meeting of the curing agents of the Board was convened on 15th July, 1958, to review the programme for curing 1957-58 season's coffee. A committee of the Board has been set up to examine the Kerala Agrarian Relations Bill, 1957, in so far as it relates to coffee plantations. It met in Bangalore on 16th July, 1958. Preliminary discussion have been held concerning the setting up of a curing house in Mysore, by the Coorg Coffee Growers Co-operative Society.

COCHIN TEA SALES

At Sale No. 21, 1,100,000 lbs of tea were on offer. Low mediums and mediums of slightly improved quality advanced by 5nP or 15nP. High-grown of poor quality were about steady while others were dearer. Whole leaf grades were strong.

Calcutta Markets

GOOD GENERAL DEMAND AT EXPORT TEA SALE

DUST PRICES DECLINE

AT Sale No. 4, held on 14th and 15th July, the offerings at the Export auction amounted to 23,380 packages. There was a good general demand, bright liquoring Assams and orthodox fannings grades being the strongest features of the sale. The demand for C.T.C. grades however, was less pronounced and these teas came to an irregular market being often easier, especially the higher-priced teas. The limited quantity of non-with Doars on offer met with a strong demand and showed a dearer tendency. Clean plain teas were steady while 'teas for price' were well supported and were generally sold above valuations. Stylish whole leaf grades met with keen competition while tippy teas sold well. There was a fair but irregular enquiry for Darjeelings.

Quotations	1958	1957
Clean Black Pekoe	2.40 to 2.50	2.50
Plain B. P.	1.84 to 1.88	1.94
Plain Fannings	2.00 to 2.10	1.78
Medium B. P.	2.20 to 2.50	2.20 to 2.30
Medium Fannings	2.30 to 2.70	3.80
Best Assam C.T.C. B. P.	4.30 to 4.80	
Best Assam C.T.C. Fgs.	4.80 to 5.30	4.50

At the Internal Sale, 18,190 chests were on offer, 623 chests of which were 1957-58 season teas. There was a fair but irregular demand when the market opened but this eased as the sale progressed. There was a considerable weight of C.T.C. Assams on offer and although quality showed improvement, prices were irregular and except for the grainy sorts suitable for export, all became easier as the sale progressed and occasional offerings were selling 25nP below valuations. Prices for the remainder of the offerings were from 4nP to 6nP easier at the start, but eased further and at the close of the sale were up to 10nP easier. Darjeeling invoices, however, sold well and the flavoury kinds were often appreciably dearer.

Quotations	1958	1957
Medium Doars Dust	1.66 to 1.70	1.80 to 1.70
Medium Assam Grainy Dust	1.74 to 1.80	1.70 to 1.80
Medium Assam C.T.C. Dust	2.20 to 2.50	2.40 to 2.70
Best Assam C.T.C. Dust	2.80 to 3.20	3.00 to 3.10

Of the 192 chests of Leaf on offer only 51 chests were of 1958-59 manufacture.

FREIGHT MARKETS UNCHANGED

THERE has been little change in freight market conditions during the past week. The most interesting development has been the acquisition of three local vessels by Pakistani interests. Wheat from Pacific to east coast India was fixed at the unchanged rate of 60s for August loading and manganese ore from Calcutta-Visakhapatnam-Madras to Antwerp-Hamburg range at 55s, two ports loading. Liner operators are credited with the spot fixture of *M.S. Silverfell* at \$ (U.S.) 1.60 on 11,700 d.w. delivery Calcutta, re-delivery U.S.A. The three vessels reported to have been sold by the B.I.S.N. Co. to Pakistan are the *Ismaila*, *Itola* and *Itria*, all built in 1940, at a figure of £150,000 each. Buyers are said to be Pan Islamic, Karachi Steam and United Oriental, respectively. Other vessels are being negotiated although foreign exchange facilities may not be available. The wisdom of spending £150,000 for a vessel of 18 years of age is another matter.

LINSEED ADVANCES

There was considerable advance in the price of seeds and oils during the last week, following the removal of export duties on linseed, groundnut and other edible seeds and oils. Seed prices locally advanced by Re. 1 a maund, while oil prices also advanced by Re. 1 a maund; in addition, there was quite a sharp advance in the price of linseed oilcake from Rs. 13 a maund to Rs. 14 a maund. At present, immediate prospects of export are poor as the current advance in prices has put Indian values out of parity with those of other producing countries. Some business, however, was put through by Calcutta shippers to Australia crushers were very active and there was an appreciable increase in the volume of business with less than neither shippers nor local consumers following the present rise. Latest quotations were as follows: Ready Rs. 25-2 a maund and July-August Rs. 25-4 a maund.

SUGAR QUIET

During the week ended 16th July, sugar arrivals in the Calcutta market averaged 6,000 bags daily. Stocks totalled 50,000 bags. Rates for ready sugar grain and Rs. 41-8 for bold grain. The market was quiet.

BANKS

H indicates that Share capital is half paid. O. C. and Dd indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

INDIA'S DEFENCE BILL AND THE NEW FORMS OF WAR

PROTECTION IN AN AGE OF SUBVERSION

INDIA'S defence budget in the current year forecasts expenditure of Rs 278 crores. This is an immense sum of money, the transfer of even a part of which to civil development would completely transform the prospects of the plan. Moreover, a good deal of this sum is spent in the form of foreign currencies, and this is one of the factors in the foreign exchange crisis that no rationing, no quotas, no controls have succeeded in mitigating. Not only is this large and growing defence budget virtually beyond the control of the economic planners, but it is also, to an amazing extent, beyond the range of public criticism. When one considers the vast amount of free discussion and lobbying that precedes relatively minor civil expenditures and plan allocations, one must be surprised at the lack of curiosity that both public and politicians show about the size of arms expenditure. Outlay on the armed services has increased in every budget for a decade—it was Rs 196 crores in 1953-54—without attracting anything like the attention one would have expected in a country at grips with serious economic problems, let alone a country where the Mahatma's teachings on a variety of other subjects are regularly and faithfully recalled. Acharya Kripalani's original, but misguided, analysis of the defence budget last March remains almost a lone performance.

None of these things proves that the defence budget is basically unsound—neither its size, nor its rate of growth, nor its freedom from public criticism. It might be possible in theory to make out a case that Indian preoccupation with armaments is disproportionate. But if it were, it would not be for this newspaper to argue it. In any case, this is not the view held. It would seem rather that those responsible for the large increase in the defence budget show a realistic awareness of the dangers that face this country in an insecure world, whereas the few critics of the defence bill too often base their views on a sentimental and moralistic blindness to harsh realities. But even granting, for the moment and in this place, that the need for a large defence effort is established, it is still possible to ask whether this burdensome expenditure is producing armed forces suitable for the sort of wars that—God forbid—this country may one day have to fight. The thought that armed forces more suitable for this purpose might be obtainable at less expense, and particularly at a lower expense in foreign currencies, would stimulate discussion once the question were opened. Here, the aim is to do no more than broach the subject.

The nature of war is changing. It always has been changing, which is why generals and defence Ministers have so often been caught ardently preparing for the last one. But it is clear that warfare is changing very rapidly in our day—so much so that many of the lessons learnt at such cost between 1939 and 1945 are now virtually irrelevant. The authorities on contemporary warfare are Oppenheimer and Mao Tse-tung, or von Braun and Lenin. That is to say, warfare today assumes one of two forms: atomic or revolutionary. Lenin foresaw the second of these forms when he wrote forty years ago: "In fifty years armies will not make any sense. We will have corrupted our enemies so much before the fighting starts that the military machine cannot be used when it is needed." His disciple, Mao, has written a detailed handbook on the art of carrying on war without armies, an art which was practised successfully first in China and then in Indo-China, and which the French after their lesson in the latter country, are now seeking to practise in north Africa. Colonel Nasser has not only been applying it for years in north Africa but is using it at this very moment throughout the Middle East. Having proved itself against regular armies trained in conventional warfare, the new revolutionary technique is being urged as the only effective (as well as the cheapest) answer even to atomic-backed attacks. Thus Mr. George Kennan told the Europeans this year that their only counter to the Russian military machine was a system of revolutionary defence that cer-

tainly could not prevent invasion, but would make occupation impossible.

Suggestions of this kind are apt to make the conventionally trained soldier reply sarcastically that one is proposing that men fight with sticks and stones against mechanised, scientific power. But Mao is not talking about sticks and stones but about a detailed and scientific technique of check-mating superior mechanical force by the use of methods in which political and psychological weapons play a large rôle. The French Army, which whatever its weaknesses, is by Asian and African standards an excellent fighting force, has once been decisively defeated and a second time decisively stalemated by the application of these methods. An alternative criticism is that Britain realised the error of neglecting conventional force when faced with the Suez crisis. Having concentrated on revolutionary warfare in Malaya and Kenya, and on atomic warfare in her domestic preparations, Britain was left without the type of force needed to conquer the Suez isthmus quickly. But even if Britain had been much better prepared for the invasion of Egypt, it is still almost certain that the war would have been lost where it was in fact lost—at the U.N. The victor of the Suez and Sinai campaigns was the colonel whose army has twice revealed its total military incompetence, but who is today practising with impunity the art of subversive warfare from Algiers to Beyrouth.

The Suez war showed what the complete failure of the Eisenhower doctrine in the Middle East has since confirmed, that the existence of the U.N. today makes open, outright, declared war next to impossible—while the perfection of the techniques of subversive warfare makes it unnecessary. This is the prime fact on which India's defence policy ought to be based. It is almost unthinkable that this country will in the future have to meet the challenge of direct attack by conventional armies. Reference to Kashmir in 1948 does not invalidate this; on the contrary it supports it. All the time there was active fighting in Kashmir, the Indian Army's ostensible opponents were the so-called "tribals". The notorious fact that these tribals were led, staffed and equipped by the Pakistani armed forces was admitted only after fighting had ceased and the matter had gone before the U.N. The concealment of Pakistan's official rôle in the aggression was indeed very thin and amateurish—but it need not be so next time, if there were a next time. In 1948, after all, Pakistan was only a few months old and her soldiers' ideas about subversive warfare were certainly no clearer than the Indian Army's are today. Besides, in ten years of effort, the Indian Government has not yet succeeded in getting the mere fact of Pakistan's aggression unequivocally admitted by the U.N. from whom quick moral and military support would be required in the event of another similar attack. Nor does reference to the Korean incident show that the U.N. can lend its aid in cases of disguised attack, because, after all, the U.N. forces under General MacArthur lost all their gains in Korea

once China sent in the few hundred thousand "volunteers" that decided the affair. If these facts suggest that the purposes for which the Indian Army is designed need to be constantly reconsidered, they show even more forcefully the stupidity of the argument that India need not spend anything substantial on arms because in the event of attack one or other of the power blocs will fly to her aid.

The Indian armed forces are today prepared for two sorts of task: conventional warfare of the sort taught in British military academies between the wars (modernised somewhat by the lessons of 1939-45), and the auxiliary rôle in regional defence for which the British first shaped them under the Raj. The latter purpose is now presumably outdated because India is a member of no military alliances and one cannot conceive, for instance, her navy playing in active war the sort of rôle for which it is trained in its occasional joint exercises in the Indian Ocean. A new world war, one might say, would change all that. But then, a new world war will be fought with techniques that would make the auxiliary rôle of the Indian forces quite irrelevant.

In what sort of situation are the Indian armed forces liable to be actively engaged in the foreseeable future? In order of likelihood one would mention the following possibilities. First and foremost, a police action or pacification in a neighbouring State where subversion and anarchy had reached proportions that threatened Indian security and required Indian intervention. Such cases would be the total collapse of organised government in Pakistan or Nepal or Ceylon, or disguised Chinese communist subversion in Nepal or Burma. Intervention in such affairs requires special military techniques (e.g., 'quadrillage' or the laying down of a grid or network of force over a large area) but above all it takes place in very special *political circumstances*—a dispersed and invisible enemy, a skeletal puppet authority for whose supposed protection intervention is undertaken, etc. All communist countries' armies receive special training in these matters, and western armies today do the same. The strictly military equipment involved is relatively small, the political and psychological knowledge needed is considerable—and of a sort distasteful to the traditional soldier. Secondly, the Indian forces could be called upon to meet disruption on Indian territory, controlled from abroad. This would most probably take the form of foreign support and participation in revolutionary or secessionist disorder anywhere along the immense and undefendable Himalayan frontier from Kashmir to Assam. The sort of foreign 'invasion' that the Army has to prepare for would be something like the recent dissidence of the Assam hill tribes complicated and magnified by Chinese, Pakistani, Russian or other intervention. This is the classic pattern of mid-twentieth century warfare.

Only thirdly, and a poor third at that, would one mention the possibility of an attempted occupation of the country by a major power in the course of a world war in which India sought to remain neutral but was not permitted to do so. (Surely even the most passionate neutralists realise that nations today do not choose to be neutral: they are allowed to be, if they are lucky.) For this sort of offensive war, as for the previous case mentioned, the conventional armaments, such as India has spent so much money acquiring in recent years, would be of very dubious value, whereas an army, and a people, trained for revolutionary resistance could be highly effective. Are the Indian Services being trained for this sort of war? The concentration of expenditure on such expensive acquisitions as warships and jet planes would not suggest so. It is said that just before the police action in Hyderabad, when armed Pakistani reaction was for a moment feared, the Indian authorities were preparing for classic pitched battles on the Punjab plains, entailing the evacuation of New Delhi etc. The Indian Army is no doubt excellently well equipped and trained to meet such eventualities, but if they were improbable then they are inconceivable now. To what extent is India too getting ready for the last war, or at any rate a war that will never be fought?

These are questions that lie well within the public domain and on which there should be, at least in informed quarters, more discussion than the present hypocritical indifference to the nature of the

defence budget allows. War is too serious to be left to generals—or to civilian defence Ministers with a pacifist past. Any war that India became involved in would be a people's war, a revolutionary war of subversion and counter-subversion, not

a classic professional soldiers' war. All the more reason for public discussion of defence, especially if there exists, as is believed, the possibility of lightening the relative burden of arms on a hard-pressed economy.

IMPROVED WORKING IN THE JUTE MILLS

THE Calcutta jute mills are reported to have been doing considerably better recently. Some of the improvement is due to increased raw material supplies from Indian sources; a further portion of it must be ascribed to the mills' own efforts in overcoming their raw jute buying problems. But perhaps the chief reasons for the improved working are the programmes of modernisation and rationalisation which many of the mills started some years ago and which are now having effect. The full importance of this factor will only be adequately assessed when accounts are available for all the mills during the past eighteen months or so, but it is possible already to get some idea from those results which are just now coming to hand. For example, one of the mill groups seriously hit by the adverse trading conditions of the past two years has been the Jardine Henderson group. The largest of its mills, Howrah, incurred a heavy loss of Rs. 25,23,437 for the year ended 31st March, 1957. This figure included depreciation at Rs. 10,33,000 and a sum of Rs. 4,91,603 as compensation for workers retrenched when the mill's modern spinning machinery came into operation. Other mills in the same group, Kankarnah and Kamarhaty, incurred losses of similar proportions, while the Reliance mill had to be shut down altogether in September 1957 to stop the drain.

The latest results of all these four companies have now become available with the publication of the balance sheets of the Howrah and Reliance mills for the year ended 31st March, 1958. The loss incurred by the Howrah Mills Company Limited has been transformed into a modest profit of Rs. 9,01,267, net of the very large allocation for depreciation of Rs. 14,10,000. The size of this sum is, of course, a reflection of the heavy charges in-

currer when working new machinery on a triple shift basis, and can be expected to be reduced after a year or two when the full advantages of the modernisation and rationalisation programmes accrue. This performance is a considerable improvement on the previous year's. The directors explain it in the following words: "The revised system of mill working and the increased efficiency resulting from the improvement in the quality of raw jute reaching the mills,....coupled with a more stable market situation, are mainly responsible for the improvement in the working results for the year. Substantial cost reductions have been achieved in consequence....." It is clear that the directors are still cautious in their assessment of the causes of the improvement, but this is probably only wise when the new methods of working are still largely at the experimental stage.

The position of the Reliance Jute Mills Company is, of course, an exceptional one. The mill was closed down last September in order to stop further losses. The accounts show that these amounted to Rs. 7,31,403 for the year ended 31st March, 1958. The figure was arrived at after providing Rs. 2,03,000 for depreciation and Rs. 2,30,859 as retrenchment compensation for workers. The total loss was certainly a large one, but most of it was incurred before the closure. In fact, the mill is now working at a small profit, earned from the sale of its loom hours to other mills in the same group. This policy is to continue, and it is hoped by this effort of reorganisation eventually to reconstruct the company and possibly restart operations. The directors have summed the position up as follows: "The company's indebtedness to its bankers has been repaid with the liquidation of stocks of raw jute, finished goods and material in

process and it is meanwhile being financed by the managing agents, to whom the company's indebtedness amounted as at 31st March last to Rs. 19,95,000 exclusive of accrued interest. While this indebtedness has meanwhile been slightly reduced by repayments out of subsequent profits, it will be clear that some considerable time must elapse before the company's finances are sufficiently restored to justify the submission to shareholders of any scheme for reconstruction of the company's capital...." Once again, the improvement is clear, although the keynote for the future is caution.

Results for the Kamarhaty Company Limited and the Kankarnah Company Limited are available only up to 31st December, 1957. They show losses of Rs. 9,22,115 (after providing Rs. 4,24,000 for depreciation and Rs. 5,55,980 for retrenchment compensation) and Rs. 20,21,635 (after providing Rs. 10,00,800 for depreciation and Rs. 1,65,655 for retrenchment compensation), respectively. These are substantial figures. But the greater part of them was incurred in the period January-June 1957; almost all in the first three months of that year. It is not known accurately how these companies are at present faring. But if the trends established in the latter half of 1957 have continued, they may by now have transformed their losses into modest profits. Commenting on the Kankarnah mill's losses, the directors state in their report that these "...continued to be incurred until the end of March 1957, after which they have been much reduced but...unfortunately the full economies to be expected from the installation of modern spinning machinery had not at that date (31st December, 1957) so far been achieved."

When it does become possible to gauge the full effects of reorganisation, modernisation and rationalisation on these mills in the Jardine Henderson group, it would appear that a substantial improvement might confidently be expected. How true this is of other Calcutta mills which have lately been through the same process is something which will only become clear when the results for the companies concerned are available. It is certainly too early yet for unreserved optimism, but not perhaps to appreciate that recent efforts to put some of the sicker companies back on their feet have not been entirely unsuccessful. Among others, this single factor has no doubt been responsible for much of the improvement which has recently taken place on the Calcutta market in the prices of jute mill shares.

ADVERTISING IN INDIA

ADVERTISING, some economists say, is one of those things which makes capitalist competition imperfect: a few ultra-moralists have even characterised it as a sort of confidence trick. But whatever individuals may think, there is no denying the important social rôle advertising plays. Firstly, it helps the consumer exercise his choice. Secondly, it promotes a higher standard of living and so stimulates economic growth. Even in Soviet Russia, the merits of advertising have lately begun to be realised. No less a person than Mr. Mikoyan has spoken publicly in its favour as "one of the desirable features of the capitalist system which the socialist society need usefully adopt." India is among those countries where the potentialities of advertising have not even partially been realised. Barring a few leading and enlightened houses, business men in general are still what, for want of a better term, might be called "advertisement-shy." To them advertising does not yet appeal as a business proposition. Now that the virtual ban on imports has made the domestic market even safer, they are unlikely to appreciate its merits any quicker, notwithstanding. Dr. B. V. Keskar's advice to them to advertise more and more.

In such a context, the campaign "advertising advertising" which the Indian Society of Advertisers is shortly to promote, is a wholly welcome move. Speaking about its necessity at the latest annual general meeting of the Indian Society of Advertisers, Mr. Chinubhai Kilachand did well to stress the many-sided benefits which advertising confers on consumers and producers alike. He started with the premise that "advertising is pre-eminently a part and a significant part of the economic activity of a country"—which was the point his predecessor, Mr. Dharmsey M. Khatau, had made at the previous meeting—and went on to detail the specific rôle advertising could play in the economy's various spheres. In export promotion for instance, the Society had offered the services of experts who are qualified to advise on such matters. The study of consumer preferences is more important in overseas markets than at home, and while good quality and competitive prices are generally the best advertisement for any goods, in these days of keen competition, a closer study of local peculiarities of taste and requirement needs to be thoroughly carried out. In the domestic market, in spite of the exclusive protection granted to the producers by import restrictions, there is still a good deal for the sales promotion and market research enterprises to do. It is still the impression of the Indian manufacturer that

since his goods will sell anyhow, he need not add to his expenditure by advertising. In fact, this idea seems to be prevalent over a considerable field of Indian industrial endeavour today. Mr. Kilachand has indeed done well to refer to the Ford Foundation experts' opinion that potentially India has one of the largest consumer markets in the world. New lines of consumption can always be discovered through modern market research techniques, and once these lines have been established, they will have to be maintained through sustained advertisement campaigns.

The Society's campaign "Buy Indian Goods", however, invites some comment. While it is desirable that the people of a particular country pat-

ronise its home industries, an appeal to their economic nationalism, such as is implicit in this slogan, is not always likely to produce desirable results. In practice, economic nationalism does not work. Otherwise, there would be no need for the elaborate tariff walls which almost all industrial economies have built for themselves. In the context of the Indian situation today, such a slogan is superfluous, because the consumer has no choice. The Society must also do something to promote a quality consciousness among consumers; and that will not harm producers in the least. On the other hand, it will provide an indirect incentive for higher efficiency in industry. The Society will thereby be rendering a service to the economy as a whole, of which it rightly claims to be a significant part.

Current News and Comment

Index of Industrial Activity

Corrected for seasonal fluctuations, *Capital's* Index of Industrial Activity shows a drop of 1.4 points during December 1957. Contributing to this were declines in tea, finished steel and tyres. The output of sugar, jute, yarn, cloth, cement, coal, pig iron, paper, motor-cars, bicycles, electricity and railway ton-miles however increased.

Happy News for U.P.

Uttar Pradesh, which has been alleging discrimination against her in the matter of new industries, should feel happy now that the Government of India has decided to locate the State optical glass factory in Naini near Allahabad. Durgapur in West Bengal, which was earlier favoured as a more suitable site, has been passed over in deference to claims for a regional balance in industrial location and development. The optical glass factory project has been sponsored by the National Industrial and Development Corporation in collaboration with Russia. Thanks to the achievement of the Central Glass and Ceramic Research Institute, Calcutta, it might be possible to dispense with Russian expert assistance for this factory altogether. Described by the Minister of Scientific Research and Cultural Affairs, Mr. Humayun Kabir, as the "Institute's crowning achievement", the optical glass produced by the Institute is reported to have successfully passed the tests conducted by the Defence Ministry's Research and Development Organisation in Dehra Dun. Its achievement, according to Mr. Kabir, is all the more remarkable because even the equipment necessary to produce the glass has been manufactured by it. The production of optical glass which has not so far been undertaken in any Asian country except Japan, is expected to give an impetus to the manufacture of microscopes, telescopes, cameras, binoculars and magnifying glass. Such articles are not manufactured in India in any appreciable quantity and even the little that is being manufactured depends on the availability of imported optical glass.

The Industries Development Board of the U.P. Government at its meeting last week, has decided to set up a committee consisting of eminent scientists in the State, so that their talents can be used for the industrial development of the State. The Board also has decided to extend facilities to the private sector to set up three cement factories in Dehra Dun and one in Mirzapur. An official survey of the Mirzapur district is also to be conducted shortly to explore the possibilities for a paper factory.

Strikes and Fasts

The All-India Salaried Field Workers Association, which apparently has a different identity from that of the National Federation of Salaried Field Workers Association, has done one better in trying to realise its demands concerning the service conditions of life insurance field workers. It has launched "direct action" against the Life Insurance Corporation, whereas the latter has given a mere strike call. As part of its "action", the Association has organised fasts. The first to participate was Mr. S. L. Roy, who is its chief. He fasted for five days at the steps of the main entrance to the L.I.C. office in Calcutta, and was succeeded by two other important office-bearers of the Association. It is understood that more batches will follow. The grievances of the Association have been put down in the form of "basic demands". They are: (a) no retrenchment, (b) no cut in basic salary, (c) immediate categorisation of non-categorised workers, (d) no categorisation on the basis of 1957 performances, (e) upgrading of low-paid workers, (f) due weightage to seniority and past records and (g) increment in the rates of commission to agents and the ensuring of regular and immediate payments. But the

main grievances relate to retrenchment and categorisation.

In the former regime, competitive existence forced the private companies to recruit their field force on a "free for all" basis. That enabled casual, and even inefficient, field workers to move from company to company and eke out for themselves quite a comfortable existence, without producing commensurate business for the employing company. From the strictly business point of view, this was not a desirable practice for the companies to follow, but under the circumstances they could not dispense with it altogether. The Life Insurance Corporation of India has been refusing to provide berth to these elements. It has introduced what is called the categorisation scheme. In its essence, the scheme means fitting the field force on the basis of business produced in 1957, into various grades. The Association contends, apparently without much justification, that with only one employer to deal with, the opportunity of finding alternative employment is now lost, with the result that quite a large number of its members are likely to face unemployment. It demands the absorption of such staff in alternative office jobs with their previous basic pay unaltered. It argues that, as a nationalised undertaking, the Corporation is duty-bound to provide employment to all concerned, even if a number of them are failures in business. But the Corporation, unfortunately, is not in a position to take a strictly humanistic view of the matter, since it has to satisfy the claims of other interests as well, the policyholders first.

State Enterprises in Mysore

The Gorwala report on the Mysore administration, which was submitted in May 1958, refers to the investments of the Government in State enterprises. Some major investments, including those in Hindustan Aircraft, have not so far yielded any return. The report suggests that the holdings in the Hindustan Aircraft and the Indian Telephone Industries should be sold to the Central Government and the sum of Rs. 91.38 lakhs realised thereby be used to develop industries owned by the State Government. Of the 11 concerns now managed departmentally, only six show a profit, while the silk mills and the porcelain factory have failed to show satisfactory results. Mr. Gorwala says that the State factories are not efficiently managed and suggests the reconstitution of the management boards. He recommends the creation of an autonomous board of non-officials, who will not be exposed to the influence of the legislature. A full-time chairman and four directors will be able to get good results with a competent and disciplined staff. The Kolar goldfield could also be placed under an independent board. Mr. Gorwala suggests that the rule about the payment of 1/12th of the total earnings as bonus, when a 5-per cent profit is earned, should be modified, as otherwise profits might be swallowed up in bonus. Investment in new industries should be avoided since the Government's resources are fully stretched. In every Budget memorandum of the Mysore Government, the point is made clear that the State as a shareholder in companies has not done well and that the sale of the minority interest at a profit will help the Government make up the losses sustained in other investments. The Gorwala report suggests that State investments must be occasionally reviewed and that the Government should reduce the extent of its losses. A policy of disinvestment may lead to a healthier position in the long run, and the State Government will then be able to improve further the working of its profitable enterprises.

Quality Control for Leather

The voluntary scheme for quality control on leather, organised by the Leather Export Promotion Council, is reported to have been wel-

comed by U.K. buyers because the procedure for registration, sampling and analysis will safeguard their interests. The code of conduct which has been devised for this purpose is a measure of discipline for traders. But some in the trade feel that moisture will inevitably persist in exportable leather. They further say that the salts used for tanning will add to the weight of the leather goods. Traders think that the selection of marks will have to be stricter. During the war, the U.K. Board of Trade operated a leather control scheme which put the E.I. kips trade on a firm footing since it stabilised prices and improved quality. Under the quality control scheme, sampling of leather will be carried out at the port of embarkation on behalf of the Leather Export Promotion Council. The analysis of leather will be made in case the Council receives any complaint and for this a fee not exceeding Rs. 80 will be charged. Exporters have to pay a fee of Re. 1 a bale of skins and half a rupee for cow or buffalo hides to the Council. The European exporting houses, which handle a considerable portion of the export trade in hides and skins, have accepted the quality control scheme.

Textile Crisis and Solutions

The Indian Cotton Mills Federation has made certain suggestions about the crisis which is now facing the textile industry. First of all, it suggests that import licences for foreign cottons should be issued only at the recommendation of the Federation. In making recommendations, it will take into account the average consumption of the applying mill over the past three years. It is suggested that a charge of Rs. 300 a candy be levied on Egyptian, Sudanese and Peruvian growths. In the case of other imported cottons, the charge should be Rs. 100 a candy. The sums so collected should be used for the promotion of textile exports. These charges should be subject to change according to the exigencies of the situation. It is believed that some 600,000 bales of foreign cottons will be imported during the new season and on this basis, about Rs. 4 to Rs. 5 crores will become available for promoting exports, if this suggestion is accepted. It is further suggested that mills should be allowed to retain 10 percent of their foreign exchange earnings over a period of five years to import the latest machinery and plant to rehabilitate the industry. In this connection, the Federation says: "Compared with our competitors such as China, Japan, Hongkong and Pakistan, our machinery is old and antiquated. In many of the foreign mills, the number of operatives employed for every 1,000 spindles is as low as two, compared with 10, 12 or even more operatives employed in India. Almost 100 percent of the looms of our foreign competitors are automatic, compared with only 7 percent in India. Because of this grave disparity in the matter of equipment, India suffers both in quality and price as compared with her competitors. As international trade in cotton textiles is shrinking fast, competition is becoming more fierce and every effort must be made to enable the exporting mills to modernise their equipment. It is for this reason that the All-India Cotton Mills Federation has made the suggestion of allowing mills to utilise 10 percent of the foreign exchange for buying machinery abroad. Furthermore, if it is accepted that the scheme will remain in force for five years, it would be possible for mills to arrange much larger and quicker imports of machinery, the payment for which would be spread over a period of five years. This will also compel mills entering into such arrangements to maintain and expand their exports so that they should be in a position to make the stipulated payments to foreign machinery manufacturers. As for yarn, apart from allowing imports of machinery on the scale suggested, it may also be necessary to provide higher incentives in view of the greater difficulty in exporting yarn. It might be suggested that a certain percentage of the export earnings on yarn may be allowed to be used for the import of rayon yarn."

Cotton Waste Export Duty

Certain sections of the cotton waste export trade have taken up with the Government of India the advisability of immediately removing the export duty on the commodity, as suggested by the All-India Cotton Waste Exporters Association. The Association has pointed out that since the duty was reduced from 30 percent ad valorem to 15 percent ad valorem on 29th November, 1957, exports have increased by about 25 percent and it believes that if the duty were to be abolished entirely, sales abroad would expand still further. The dissident elements of the trade do not challenge the statement, but maintain that the present is not the opportune time to abolish the duty. They base their case on the fact that business around 30,000 bales has already been placed by Japanese buyers and letters of credit are to be opened by the end of this month. An essential condition of these contracts is that any increase or decrease in the export duty is on buyers' account.

Penguins in Iceland need it . . .

. . . what about
the workers in your factory?

PROVIDE THEM WITH AN ACCOOLER FOR CONSTANT
SUPPLY OF HYGIENICALLY COOLED DRINKING WATER

Accooler advantages:

- All parts coming in contact with water are made of stainless steel.
- Stove-enamel finish makes cleaning easy and helps retain newness for years.
- Reliable, efficient hermetic type compressor eliminates V belts and noise and reduces wear and tear.
- Simplicity of mechanism makes installation easy.
- Compact construction saves floor space.

ACCOOLER WATER COOLER

AIR CONDITIONING CORPORATION PRIVATE LTD.

DISTRIBUTORS:

AUTO ENTERPRISES, 25-B, Park Street, Calcutta. ***BALIERINA**, 30-G, Chowringhee Road, Calcutta. ***CUMBERLAND & MARTIN PRIVATE LTD.**, 1A, Elgin Road, Calcutta-20. ***NU-BILT FURNITURE CO.**, 57, Park Street, Calcutta. ***N. B. SEN & BROS.**, 11, Esplanade East, Calcutta-13. ***B. P. AGARWAL & SON**, Dhansar Dhanbad.

If the export duty is abolished now, the Indian exchequer will stand to lose around Rs. 15 lakhs and that, too, in terms of foreign exchange. The dissidents, therefore, believe that the question of abolition should be postponed and a final decision taken at a later stage in view of the conditions then prevailing. As for hard cotton waste, the dissidents, contrary to the demand of the Association, suggest that the present export duty of 50 percent *ad valorem* on this quality be maintained. It is explained that hard cotton waste is urgently needed for domestic consumption, particularly by the railways and the defence services. Supplies are limited and there is hardly any exportable surplus. It is estimated that nearly 80 percent of the available supplies are consumed locally, mostly by Government departments. No substitute in quantity has been found for hard cotton waste in terms of suitability and price.

Move against Dumping

It is reported from Montreal that clothing and textile manufacturers in Canada have got together to set up a new organisation which will fight for restrictions on goods coming in from Asia, with Japan as their main target. Firms manufacturing household textiles as well as those on the clothing side of the industry are among the members. So are the producers of basic fabrics. Calling itself the Canadian Apparel and Textile Manufacturers Organisation, the group says that it will act upon matters of common interest. "The clothing and textile industries of Canada provide direct employment for more than 180,000 people," says the statement introducing the new body. "It is on matters of common interest to these workers and their dependants that C.A.T.M.A. will act. There are many areas in which these industries share an interest, but undoubtedly the most pressing matter at the moment is the alarming increase in the volume of imports of clothing and textiles from low-wage Asian countries, particularly Japan. C.A.T.M.A. intends to examine the problems caused by these imports and make their consequences known in every way possible. No reasonable Canadian denies the necessity of continued Canadian-Japanese trade, but our industries feel that they are being asked to bear an unusually large portion of Japanese shipments to this country." Preliminary surveys have already

been carried out to establish the seriousness of the problems involved.

Outlook for British Exports

The June 1958 issue of the *G.E.C. Export Guide* (published by the Economic and Marketing Research Unit of the General Electric Company Limited, Magnet House, Kingsway, London, W.C.2.) registers for the first time a marked deterioration of export prospects in some of Britain's best overseas markets. However, the favourable outlook in several overseas countries continues, and in a few of them export opportunities for British manufacturers and traders have improved. The latest information available in Britain, on the export prospects for 36 major groups of manufactured goods in 34 major export markets is found in the *Guide*, together with an indication of current economic and commercial conditions in those countries. Current prospects, according to the *G.E.C. Export Guide*, are "good" in all countries, "improving" in seven, "deteriorating" in ten and "bad" in six as follows: Good in Canada, Hong-kong, Egypt, Iraq, Italy, Malaya and Singapore, Nigeria, Portugal, Switzerland, Russia and Venezuela. Improving in Denmark, Finland, Kenya, the Netherlands, Spain, Sweden and Trinidad. Deteriorating in Australia, Belgium, Burma, Ceylon, Ghana, Norway, Pakistan, Union of South Africa, the U.S.A. and West Germany. Bad in Argentina, the Federation of Rhodesia and Nyasaland, France, India, Irish Republic and New Zealand. Changes in trading opportunities for British exporters during the second quarter of 1958 (April-May-June) have been considerable. Export opportunities are better in Denmark and the Netherlands and they have further improved in Trinidad. The outlook has deteriorated in Argentina, Burma, Ceylon, the Irish Republic, Norway, Pakistan, the Union of South Africa and West Germany.

Competitive Evaluation

When U.P.'s Chief Minister, Dr. Sampurnanand, announced the setting up of a committee to evaluate the community development work in the State, it seemed to many a wholly unnecessary step. No less than five evaluation reports have so far come from the experts concerned. Every

year, the National Development Council also meets and assesses the situation. The mass of literature available on the subject is truly impressive, and it is not likely that the U.P. Government's committee can bring to light new facts and circumstances. Perhaps the decision to set up a committee of its own was taken by the State Government as a retort to the criticism contained in a survey of community development programmes there, conducted by some officers of the Central Government.

According to their report: "The method of reporting information has been unsatisfactory in every block." They also found, among other things, that there had been efforts to inflate figures. While some blocks dealt correctly with improved seeds, taking into account only the quantity distributed by the depots, others included the seeds accounted for by the "natural spread", thereby adding to their figures what the farmers themselves raised. Another device was the inclusion of sugarcane cuttings which added to the weight of the seed distributed. Additional area irrigated was shown against the net area irrigated, and new and old co-operative societies were lumped together. The method of assessing people's contribution, as they found it, was "wholly empirical," varying from item to item and with no fixed yardsticks to assess it. "Although the extension officers are technically responsible for the accuracy of the figures concerning their subjects," the survey team said, "they seem hardly to bother about it." Although demonstrations in farmers' fields were carried out at different parts of the year, they were all entered in the register at the same time. The agricultural demonstration centres, as envisaged by the I.C.A.R., had not been established. Commenting on the insufficient length of field channels for irrigation, the officers said: "The State Government had initiated a *shramdam* drive for construction of these channels, but very little appears to have been achieved." *Kutch* roads built by the villagers were not properly maintained, nor were some of the metalled link roads acquired by the P.W.D., they added.

Rise in West German Exports

Considering that West German economic recovery did not start until the 1950's it is all the more remarkable that within a comparatively few years, West Germany should find herself as the third largest world exporter—after the U.S.A. and the U.K. Between 1950 and 1956, her export earnings rose by almost two and three-quarter times. The upsurge in exports was accompanied by a change in their composition—a shift in the importance of exporting more expensive goods. A further change has also been noticed—in the direction of exports, particularly since 1954. West Germany's export drive has been recently directed at Asian and African markets, some of them British Commonwealth countries. To Asian countries, West German exports, as a percentage of their total, have risen from 5.4 percent in 1950 to 10.5 percent in 1956, and to African countries from 3.4 percent to 4.7 percent during the same period. In fact, all parts of the world, excepting O.E.E.C. and east European countries, had a larger share of West German exports in 1956 than in 1950. While West German exports in general will doubtless continue to expand, her share of trade with O.E.E.C. part of Europe, at least, will increase more rapidly in the future. This will be due to the establishment of the Common Market which commences on 1st January, 1959, when the first tariff reductions come into force. While O.E.E.C. countries absorbed 68.1 percent of all West German exports in 1950 and only 60.2 percent in 1956, in the near future this percentage promises to increase again.

Prospects for East-West Trade

When the trading conditions within the western world become difficult, renewed attention is paid to the siren voices from Moscow and Peking promising new markets for western goods. Recently, communist leaders have repeatedly emphasised their desire to buy more from the west. The outlook for increased trade between the western countries and the Russian bloc is moderately favourable at present, but a really vast upswing is unlikely. Good omens for business have been the recently signed three-year West German-Russian £268 million mutual trade agreement, Mr. Khrushchev's recent indication to enter into a trade agreement with the U.S.A., and the Chinese and Czechoslovak trading delegations visit to Britain to place orders. However, one has only to remember the abortive £1,000-million "shopping list" presented to Sir Anthony Eden by Mr. Khrushchev in 1956, and the more recent rebuff to leaders of the Confederation of Shipbuilding and Engineering Unions to explore the possibilities of a major increase in east-west trade, to take a more cautious attitude to increased trading prospects with Russia. Bearing in mind that the communist bloc aims at self-sufficiency, there are still ample op-

portunities to expand trade with the west—even if the communist countries only wish to fill marginal gaps in their home production. The opportunities for increased business are at present hampered by the strategic embargo list of N.A.T.O. member countries, but current negotiations to prune it should make mutual trade easier. To what degree the present embargo list is restraining trade in scheduled items will not be known until after the controls have been relaxed and orders are placed from the communist bloc. Britain's most important three trading partners in that group of countries are Russia, Poland and China, in that order of importance. In 1957, British exports to Russia declined, to China increased and to Poland remained level. But the export-import trade between Britain and the bloc rose during 1957. U.K. imports at £123.7 million were £12.3 million higher, and exports at £89.6 million were £1.4 million higher in 1957. During the first four months of 1958, both exports and imports have again risen slightly.

Agricultural Income Tax in Madras

The Madras agricultural income tax, which is applicable to plantations producing tea, coffee, rubber, cardamoms and cinchona, was collected on incomes earned before the accounting year. The coffee estates were, therefore, called upon to pay tax on their receipts from the pool. According to the report of the Board of Revenue, the average yield of income tax from estates is over Rs. 92 lakhs. Tax evasion was rare, but enquiries had sometimes to be made in cases of reported losses. Because of the transfer of Malabar to Kerala and South Kanara to Mysore, the State's receipts declined in 1956-57, but estates in the Kanya Kumari district, which was added to Madras on re-organisation, provided Rs. 4 lakhs by way of agricultural income tax. The cost of administration was below 2.5 percent and the Board of Revenue feels satisfied with the results. The number of assesses in the largest in Coonoor although many companies now find it convenient to pay through the tax officers in Coimbatore. It has been found that companies paid over Rs. 74.35 lakhs, whereas individuals liable to the tax contributed Rs. 14.78 lakhs only. An analysis of assesses suggests that many getting less than Rs. 10,000 a year have to pay the tax whereas 37 large companies with an estimated income of Rs. 2.74 crores in 1956 were assessed to Rs. 75.92 lakhs. According to the report, the area under tea exceeded 64,745 acres while that under rubber, mainly in Kanya Kumari, was far smaller at 6,191 acres. Coffee grown in the Yercaud hills accounted for 8,957 acres. The area under Robusta coffee on the Shevaroy hills is increasing in recent years, and the increased outturn from estates has attracted the attention of outside entrepreneurs who have acquired small estates of 100 acres to 200 acres as a safe and profitable investment.

CORRESPONDENCE LATEST DEVELOPMENTS IN LAC

(TO THE EDITOR OF "CAPITAL")

Sir,

The time-lag between submission and publication in your mid-year Supplement of my contribution "Monetary Anaemia in Lac Trade" having made the article out-of-date in some respects, you may like to have this brief note on recent developments. Mr. K. B. Lal, Joint Secretary to the Union Ministry of Commerce & Industry, Director-General of Foreign Trade, Chairman of the State Trading Corporation (Private) Ltd., met lac traders in Calcutta on 5th May to warn them that if the trade did not take effective action to enhance and stabilise export prices, the Government would do whatever it thought best to that end. Consequently, an Indian Lac Exporters Association came into being and directed its members not to close export sales under certain minima, generally a few rupees over the then prevailing rates, as from 23rd June. The Government notified that lac exports would come within the mischief of the Exports (Control) Order, 1958, with effect from 21st June and that its policy would be to issue export licences "on merits". That order gives Government the power "to canalise exports through special or specialised agencies or channels" and the Indian Lac Exporters Association assumes that as soon as it has been able to complete the legal requirements for its registration, the Government will announce that the issue of export licences is confined to members of I.L.E.A.

Whether these measures result in lac's earnings of foreign exchange being promoted or demoted remains to be seen but exporters realise, no doubt, that having been induced to impose minimum export prices, they must make every effort to enforce them successfully, because "it were better not to try at all, than to try and fail". Meantime, American bleachers of seedlac have reported that in "no rub" polishes their product is being in-

Who wants *more* food ?

My basic job is to assist in raising this country's food production from its present low level—so low that we have to buy abroad.

The extent to which I can help is very often not realised—it certainly is not realised enough.

Whether it is wheat or rice—gram or grass—sugar or groundnuts—whatever it is, only I can reliably and economically:

- Move the soil ready for the rains or water,
- Prepare the best tith to suit the crop,
- Sow quickly and well on the right day,
- Give the crop attention whilst it grows,
- Harvest at the right time,
- Do, in time, all those never-ending duties such as agricultural haulage, soil conservation, water distribution and so on— which mean the difference between shortage and enough.

Without Prejudice

THE RIGHT TO DISMISS AN EMPLOYEE

MEANING OF MISCONDUCT

(FROM OUR LEGAL CORRESPONDENT)

WE will state the facts in this case and the reasoned judgment; then you are invited to consider whether you deem the latter a sound presentment of the law or whether you view it, as the writer does, with considerable misgiving. The whole case turns on the meaning and interpretation of one word "misconduct" and concerns the right of an employer to dismiss an employee on account of it. First, we will offer a few general observations by way of guidance. They may be taken as authoritative, not being the writer's own, but those of Lord Esher made some 70 years ago and accepted to this day as indisputably correct so far as the general law of the land is concerned. "Where a person has entered into the position of a servant, if he does anything incompatible with the due or faithful discharge of his duty to his master, the latter has a right to dismiss him;.... if a servant is guilty of such a crime outside his service as to make unsafe for a master to keep him in his employ, the servant may be dismissed by his master; and, if the servant's conduct is so grossly immoral that all reasonable men would say that he cannot be trusted, the master may dismiss him."

We must bear in mind two qualifications or rather elaborations of this doctrine. To justify dismissal, the misconduct must be serious, not trifling, and each case has to be decided on its own facts and circumstances. What would be miscon-

duct justifying dismissal in one case might not be so in another. For instance, if I am the paid secretary of a temperance association and on even one solitary occasion get drunk in public and am locked up and eventually convicted of being drunk and disorderly that would certainly justify my dismissal. But if I am a brewer's traveller and after a successful day's work beat it up with one of my firm's customers in my own time and am similarly convicted, I could not be incontinentally sacked for it. *De minimis lex non curat*. Again, if I am a practising communist employed by, say, a dentist, he could not dismiss me summarily on discovering the fact. But if I am employed by the Central Conservative Office as a clerk with access to its files, the office could certainly dismiss me for I am working directly against its interest and am in breach of the duty of fidelity and obedience. If we bear in mind the fact that the primary duties of an employee are obedience, fidelity, care, honesty and punctuality, we have cleared the way now for the case from Nagpur, with which we will now deal.

Mr. Gulab Ramchandra Nekale, to whom we will refer as "the applicant" from now on, was employed as a motor driver by the Loksera Transport Co. Ltd. whom we will style "the company". The applicant was transferred to Anjangaon, a small town in Amravati district, from Amravati. He could not get a house in Anjangaon and had, therefore, to keep his family in Amravati. When off duty he used to visit Amravati more or less every day. The company charged him with what the learned judge later described as "the misconduct of travelling to Amravati daily in its bus without payment of the necessary fare" and for this the employers dismissed him. He, therefore, applied to the Labour Commissioner for reinstatement. He did this under Section 16 of the C.P. and Berar Industrial Disputes Settlement Act, but for our more general purposes we will consider the subsequent appellate judgment as if it were

one in a suit arising out of alleged wrongful dismissal.

The Assistant Labour Commissioner held that the misconduct had been admitted by the applicant since he had admitted that he had travelled without ticket and he, therefore, dismissed the application. Against this order, the applicant appealed to the State Industrial Court, Nagpur. Well, we are entitled to our own opinions as individuals and your opinion may be, as certainly the writer's is, that the Labour Commissioner's rejection of the application for reinstatement was entirely right. However, this was not the view of the State Industrial Court. It allowed the employee's appeal saying that "the order of the learned Assistant Labour Commissioner was, in my opinion, quite wrong and must be set aside.... The applicant shall be reinstated forthwith and shall be paid his wages from the date of his dismissal till he is taken back in service. The non-applicant (i.e., the company) shall bear applicant's costs in addition to his own."

The writer considers the appellate judgment worth setting out in full. It is as follows: "The real question to be decided in this revision is whether the applicant was guilty of misconduct. Misconduct does not really mean misbehaviour or any act which may give rise to an actionable claim. But it would mean such act or conduct as adversely affects (an) employee's duty towards his employer. The misconduct complained of must have some relation with the employee's duty or the work entrusted to him by the employer. Any breach of an express or implied duty on the part of the servant, unless it is of a trifling nature, would amount to misconduct. In this case the applicant's travelling without ticket would not amount to such a misconduct as would give his master a right to dismiss him. It would hardly amount to misconduct when he had travelled outside his duty hours. Had the applicant travelled in someone else's bus, would not (sic) it have amounted to a misconduct for which the non-applicant could claim a right to dismiss him? If he could not, then merely because outside his duty hours the applicant travelled in the non-applicant's bus without ticket would not give the non-applicant a right to dismiss him (the applicant)."

"Assuming that the non-applicant also had been running another business, say, cinema business and the applicant had attended a cinema show without ticket, would that amount to misconduct connected with the applicant's duty as a driver? In my opinion, such a misconduct which has nothing to do with the applicant's relationship with the non-applicant or with the applicant's duty or the work as an employee of the non-applicant would not be a misconduct under the standing order for which action to be taken (sic) by the non-applicant under the standing order so as to affect the terms and conditions of the applicant. At the most, the non-applicant could ask the applicant to pay the fare or he could even deduct it from the wages due to the applicant. But he could not dismiss him nor could he take any other disciplinary action against him for such conduct...."

While loyally accepting the above as the law, wherever the jurisdiction of the State Industrial Court extends, we do not accept as such elsewhere. You will have noticed that in the form of a rhetorical question and answer the court assumes as if it were an axiomatic, self-evident truth that if the non-farepaying motor driver had been travelling in someone else's bus, instead of his employer's, that would certainly not have been misconduct justifying dismissal. We are not at all sure even about that. In fact, there is a leading case to exactly the contrary effect. In *Parsons v London County Council*, Mr. Parsons, a district surveyor employed by the Council, had been convicted of travelling on a railway without a ticket (i.e., in effect he had "travelled in someone else's bus"). Whereupon the Council dismissed him for misconduct in that he was guilty of the offence charged. Mr. Parsons sued the Council for damages for wrongful dismissal. He won his case but only because he was able to prove that notwithstanding his conviction, he was, in fact, totally innocent of the offence. Messrs. Barwell and Kay in their monumental work on *Master and Servant* add this comment: ".....Consequently, the dismissal was held wrongful. Had the dishonesty charge been proved....there would have been an end of the matter because a master may justifiably refuse to employ a dishonest person." However, in the present case the motor driver had not "been travelling in someone else's bus." He had been travelling in his employer's; and that fact to the writer seems conclusive. It was not an isolated occurrence but frequent in the words of the court "perhaps daily." So it was not a trifling offence.

Any substantial breach of duty by an employee affords ground for dismissal. We have recited the primary duties. They include fidelity and honesty. "Honesty means absence of fraud and of any kind of deceitfulness by which his (i.e., employee's) master is, or might be, injured in person or in property" and "if a servant is guilty of such a crime outside his service as to make it unsafe for a master to keep him in his employ, the servant may be dismissed by his master."

Travelling regularly in his master's bus without payment of fare is dishonest; also it "injures" the master and renders it unsafe to continue the servant in his service. It is a flagrant offence and justifies dismissal. That is what we would have thought. It seems we are quite wrong.

A Ditcher's Diary

BIRTHDAYS AND ANNIVERSARIES ARE NOT MY strong point. If I forget to make a careful note of them, which I invariably do, they usually slip my mind; and that has led to many a situation I have been sorry for afterwards. So it is not surprising I missed the second anniversary of the Forum of Free Enterprise on 19th July. Which does not mean I think any less of the Forum: in my opinion it has become, in the space of its short life, one of the most important institutions in modern India. On this side of the country, we do not see as much of its activities as we ought to. But that is our fault rather than the Forum's; in fact, it deserves far more support than we give it. In western India, it is now a powerful organ of democratic opinion in the fight against State economic encroachment. Two years ago, when it looked as if the cause of the private sector would go by default, the Forum did excellent work in presenting the case for free enterprise. It was also able to put the record straight on a number of facts and figures which, in their enthusiasm, the advocates of public sector activity had somehow managed to get confused. Nowadays, anybody who tries to condemn private enterprise with false facts has the Forum to deal with—and a good thing too. Personally I shall feel that one of the more commendable characteristics of the Forum has been its fearless exercise of the democratic right to criticize the Government and all its works. It has had to face many a spiteful outburst from New Delhi, but the Forum has never allowed itself to be stifled by that insidious piece of nonsense which some Ministers work so hard to cultivate—that in India criticism is reserved for the unpatriotic. This is a strong feeling even today, and it is still carefully fostered by people who would regard themselves as bitterly maligned if they were to be accused of being undemocratic. I think the Forum deserves an important place in the history of India's democratic institutions for this reason. More strength to its elbow.

SUMMIT CONFERENCES ARE NOT SOMETHING in which I have much faith. But I can understand Mr. Nehru's eagerness to accept Mr. Khrushchev's invitation to one to discuss the Middle Eastern situation; anything is welcome which might serve the cause of world peace. The doubts arise when Mr. Khrushchev's enthusiasm for a summit disquisitions of American and British intervention in Lebanon and Jordan is contrasted with his reluctance to permit any debate at all on Russian interference in Hungary. Not that I am comparing the two incidents; there is a great deal of difference between going to the aid of a country's legal Government, at its express invitation, and replacing the legal Government with a puppet of one's own choosing and then going to the aid of that. And why should the British and American Governments agree to a summit meeting? Nothing they have done yet is outside international law, and they have already expressed their willingness to abide by whatever the United Nations should rule on the matter. This, again, is in sharp contrast to Russia's refusal to accept any U.N. action on Hungary. It is not difficult to see what Mr. Khrushchev hopes to gain by a summit meeting, but I cannot see that having any relevance for India in her quest for peace. In fact, this country will have to be very careful indeed if it is to avoid becoming simply Mr. Khrushchev's pawn. Already, I notice, Russia was able to say, when announcing

her own disapproval of the Anglo-American action, that the other countries of the "socialist camp, eastern Europe, China, India and Indonesia" agreed with her. I have not yet heard any comment from New Delhi on this piece of impertinence, although I am sure there is no wish to see India included in the cold-war line-up to suit Mr. Khrushchev's convenience. This country would stand less chance of playing the Russian game if, for example, Mr. Nehru insisted that any summit conference called to discuss the armed intervention of some powers in the internal affairs of others, should include a full debate on the Hungarian incident, the classic of them all. If the Hungarian Government objected on the grounds that this would be interfering in its own domestic matters, then it could always be pointed out that the legal Governments of Lebanon and Jordan can do the same thing, and with far more moral justification.

IF PUNCTUALITY IS AMONG THE CRITERIA FOR a transport system's efficiency, Indian Railways do not seem to be bothering much about their reputation these days. Trains are more likely to run late than on time, and passengers simply have to get used to it. But what really has become objectionable is this State-owned monopoly's indifference to the other, and perhaps more important, criterion of efficiency—standards of service. A friend, who recently had to travel by night express a distance of about 250 miles, not only reached his destination two and three quarter hours late, but had some pretty dismal experiences of low service standards to relate when he arrived. The first-class compartment in which he travelled was smelly; the walls appeared unclean and the lavatory had no toilet paper. But that was not all. The roof leaked. As it rained heavily during a good part of the journey, it became impossible to sleep on the berths he had reserved for himself and his family—which included two small children—and they had literally to sit the best part of the night huddled in a corner. The railway administration maintains a sizable staff for looking after the maintenance and repair of its rolling stock, but the benefit is not, apparently, something to be enjoyed by mere passengers. There may be little truth in the rumour that the railways are practising socialism a trifle too seriously these days and are lavishing all their care and attention on third-class travellers. But even that would be no excuse for ignoring those who pay more for their seats. If the railway administration is all that keen on socialism the fairest thing would be to do away with the "class system" altogether rather than take good money and not give value for it. A private commercial organisation could not do such a thing without risking its own existence.

IT IS NOT REALLY A VERY NEW ARGUMENT AT ALL in this country. The debate around 1835 must have been very similar, when Macaulay with his foolish arrogance said that he would sacrifice the whole of the Sanskrit literature for a good book in English (or words to that effect, with which some Indians were then in agreement). Mr. Rajagopalachari, no mean scholar in Sanskrit and a writer of eminence in Tamil, has now come forward with the view that a government by the Hindi-speaking will be a government by the uneducated. This is probably unnecessarily harsh,

and not necessarily true either. I do not believe that the administration in India can be run only through the English language. If Burmese can do it (how well is another matter) and Singalese can do it, why can't Hindi? It is largely a question of getting used to an alternative medium, to which the only tenable objection could be whether a change-over with the delay involved is necessary or desirable. Where Mr. Rajagopalachari is on stronger ground is in asking whether the kind of knowledge Hindi in its present state of development carries, whatever its other values which may well be considerable, is the one required most for a modern administration. Going back to 1835 again, the Sanskrit pundits undoubtedly knew a great deal; many are the European scholars who devoted all their lives to learning what the venerable pundits had just about forgotten. Alas, what the latter knew was not strictly relevant to what India required at that time of transition. The country is going through another now, perhaps a more exacting one; and India does herself less than justice in equipping herself with anything but the best available instrument of thought and expression. The apprehension, partly feigned in some quarters, that the continuance of English will put a discount on the development of the modern Indian languages seems difficult to sustain against the authoritative view I have heard from writers in Bengali and Hindi that their languages came into their own and produced their best works as a direct result of the impact of English on them.

NBODY KNOWS EXACTLY HOW MANY MEN, WOMEN and children lost their lives when the launch *Partha-Sarathi* ran aground somewhere on the Rupnarayan between Ghatal and Kolaghat. Perhaps a hundred, perhaps more; and nobody knows just why or how. It is possible, as reports say, that the *serang* was forced to start the craft against his judgment. Such pressure from passengers would then appear to be as common on the rivers as it notoriously is on the railways. The chief reason, it is obvious, was overcrowding—about three hundred got on to the launch when its maximum capacity was apparently 175. This is only the tragic climax of a process which has been going on for some years now, of which too little is known by the public not directly affected and even less understood by the authorities. The pattern is somewhat like this. An organised company runs a river service for years safely and profitably. The latter fact is frowned upon by labour and the Government alike. Come restrictive practices from both, and soon enough there is no profit. And not long after no service either. Steamers and launches have not meanwhile been replaced by turbine or jet craft, despite our living in the *sputnik* age, and people still need to negotiate long distances by water. Some petty contractor comes along, runs the service at a profit (for here there is no nonsense about trade unions, for there is no big company any longer) and the loss now sustained is only in passenger lives. It happened in Bihar, and now West Bengal knows the tragedy at first hand. This State has catastrophes enough about which nothing much can be done by man. The Rupnarayan tragedy was an avoidable one. Perhaps it is too much to hope still that the Government will realise the value of organised business, to punish which its zeal seems endless. The story of Calcutta Tramways is not basically different on a long view—a view everyone in West Bengal appears disinclined to take. Here there may be no loss of life when the tracks carry no more trams, but it is difficult to believe that the people of this city will enjoy their long walks to work every hot morning.

DULL TRENDS ON LONDON STOCK MARKET

OIL SHARES STAGE PARTIAL RECOVERY

London, 23rd July.

THE current events in the Middle East continued to dominate the London stock market throughout the past week. All other developments were pushed into the background and the course of the market was dictated solely by the day-to-day news concerning the Middle East crisis. Prices tumbled following the news of the entry of British troops into Jordan, after having rallied on the news that U.S. troops had landed in the Lebanon. The subsequent Russian warning made for renewed weakness but a more hopeful feeling developed later although the market ended an eventful week on a dull note. This feeling continued till the week-end following the Russian proposal for a summit meeting and a further improvement from the previous week's low levels was recorded. The rally was assisted by renewed firmness on Wall Street but was based mainly on a calmer view of the Middle East situation and rising hopes that an eventual settlement would be achieved. The volume of business contracted sharply during the week and once the initial selling, which followed the news of the revolution in Iraq, had been absorbed the market became very quiet. Most operators seemed to be content to adopt a wait-and-see attitude on the view that if the situation deteriorated most prices would fall whereas if the crisis was resolved it should not take long for the market to regain its equilibrium. Oil shares were the main sufferers after the sharp falls which followed the news of the coup. Prices, although moving erratically, were comparatively steady and further changes on balance were small. British petroleum were around their lowest level but the other leaders staged a partial recovery. Western hemisphere issues were supported. Further losses were recorded in the gilt-edged securities but the market eventually became steadier pending fresh developments. In the foreign bonds market, German issues rallied after losing further ground but Japanese bonds remained dull. Dollar stocks advanced in sympathy with Wall Street following favourable business news and the more hopeful

THE STERLING GENERAL INSURANCE CO. LTD., NEW DELHI.

ANOTHER YEAR OF REMARKABLE PROGRESS

The fourteenth Annual General Meeting of the Sterling General Insurance Company Limited was held on July 18, 1958, when the Accounts of the Company for the year ended December 31, 1957 were passed. The following is an extract from the Directors' Report.

The gross premium booked during the year amounted to Rs. 1,04,36,280 (Rs. 88,22,136 in 1956) and the net premium amounted to Rs. 55,01,062 (Rs. 47,64,124 in 1956) registering an increase of about 18.3% and 15.5% respectively.

Reserves Exceed Rs. 25 Lakhs

The reserve for unexpired risks at the end of the year amounted to Rs. 25,04,427 showing an increase of about 16.6% over the figures at the end of the previous year, namely, Rs. 21,47,916.

Increase in Profit and Dividend

After increasing the various reserves, the working of the year resulted in a net profit of Rs. 1,20,620. Adding to this Rs. 1,589 brought forward from the previous year the total profit came to Rs. 1,22,209 which has been appropriated as follows: Rs. 56,000 as provision for income tax and Rs. 62,113 as provision for dividend to shareholders. The balance of Rs. 4,096 has been carried forward to next year.

All-round Progress

The working of the Company during the year under report resulted in all-round progress in business development and financial strength of the Company. The gross premium increased by over Rs. 16 lakhs and the net premium by over Rs. 7 lakhs over the figures of the previous year. The Reserve have increased by over Rs. 3.5 lakhs and the Company has been able to declare a dividend to the shareholders at 5% free of income tax.

Assets Exceed Rs. 83 Lakhs

The total assets of the Company amounted to Rs. 33,39,640 at the end of the year.

view of the Middle East situation. The effect on the industrial market was limited and there was little change following the initial decline. Gold shares receded sharply but later rallied. Copper shares improved with a rise in the metal prices but other base metal shares showed very little change. Rubber shares showed early firmness in response to a rise in the price of the commodity but interest was very small. Tea shares were generally dull although the further ministerial statement on nationalisation had very little direct effect on Ceylon issues.

The Money Market

The feature of the money market during the past week was the raising of the Treasury bill rate by a 1/4 percent to just under 4 1/4 percent at last Friday's tender. This was the result of the unsettled conditions arising from the Middle East developments with sterling weakening. The international political crisis put off all thoughts of a change in the British Bank rate. A change in the latter now depends on how events mature in the Middle East and to the behaviour of sterling which currently is holding up quite well and shows signs of a recovery. As for the short loan position during the past week, money was tight and borrowers had to pay higher rates—those prior to the higher Treasury bill rate being 3 1/2 percent to 4 1/4 percent with supplies of credit still being barely sufficient for market requirements. Business in bills was conducted on the basis of 4 1/4 percent for October and "hots" after being conducted at 3 1/2 percent.

Platinum Price Reduced

Baker Platinum, one of the two leading precious metal refiners in the United Kingdom, has reduced its price of platinum from £25 to £23 1/2 a troy ounce with immediate effect. The company last changed its price on 12th May when it was reduced from £26 1/2 to £25 a troy ounce. Baker's U.S. price has also been reduced by \$5 to \$62.65 an ounce. The top end of the range is about in line with the latest London quotation of £23 1/2 a troy ounce. In addition to continued offerings of Russian metal at competitive prices, trade circles say that the reduced demand for the metal, especially from the petroleum industry, also contributed towards the decline. Furthermore open market prices have generally ruled at a considerable discount to the refiner's price. Dealers' quotation recently ranged between £20 and £21. It is not known yet what action Johnson Matthey and Company will take though it is hoped that their selling policy will be clarified shortly.

Copper Consumption

The domestic consumption of copper by brass and wire mills and foundries, based on their shipments of fabricated output during June, totalled 108,510 short tons. New business booked by fabricators, in terms of refined copper to be used, were 115,482 short tons. Unfilled orders on fabricators' books were 145,162 short tons. Their stock of refined copper amounted to 433,526 short tons, their orders on hand with producers were 72,385 short tons. Fabricators' receipts from producers were 100,296 short tons, their gross reserves were 505,911 short tons and their working stocks were 330,301 short tons.

Shipment Risk Rates Changed

The War Risk Rating Committee of the Institute of London Underwriters has announced that with effect from 16th July, war and strike, riot and civil commotion shipping risk rates for voyages to, from or between Iraqi ports should be quoted at 5s a £100. Interior destinations of Iraq carry an additional £1 a £100. Before 16th July, Iraq as a whole was quoted at the basic rate of 9d a £100. The rate for the Lebanon ports remains unchanged at 5s a £100 and an additional £1 a £100 for interior destinations in the Lebanon and other countries via the Lebanon also shows no change. The rates for Syrian ports and Jordan (the Akaba port only) remain at 2s 6d and 9d a £100, respectively. The Committee has also announced that the rate for voyages to, from or between Ceylon ports reverts to the basic rate of 9d a £100 from 1st 3d.

New York Cotton Grey Goods Market

The long stalemate in the New York cotton grey goods market was finally broken during the past week. After a slow start with buyers trying to obtain goods at lower than mill rates brisk trading conditions developed in the print cloth section towards the end of the past week with substantial quantities moving for deliveries. The bulk of the transactions, running into several million yards, centred on the popular 80-square prints. While the activity was not general involving only a couple of large buyers, observers were of the view that further covering on print cloth numbers is expected shortly as the interest in forward delivery is high.

Rubber Statistics

Advance statistics issued by the International Rubber Study Group shows that the world output of natural rubber in May totalled 127,500 tons. Consumption amounted to 150,000 tons including estimated imports into Russia of 16,500 tons and into China of 5,750 tons. Stocks at the end of the period totalled 690,000 tons of which in producing areas were 275,000 tons, consuming areas 255,000 tons and floats 160,000 tons. The stock figures exclude those not available to the industry in the United Kingdom, the United States and France. The production of synthetic rubber during the month amounted to 87,500 tons and consumption to 95,000 tons while stocks held at the end of the period were 260,000 tons. The Group estimates the exports from Indonesia during the month at 36,279 long tons.

Money

THE CALCUTTA MONEY MARKET

DECLINE IN STERLING HALTED

Wednesday, 23rd July.

THE seasonal decline in the money market has continued throughout the past week. All the main sources of demand have required less accommodation, although the total fall has not been large. The interbank call market has continued tighter since the announcement of the State loans. The call rate has increased from 3 1/4 percent last week to 3 1/2 percent.

There has been more activity in the exchange market this week. A considerable number of gunny bills have come to hand and there has been a fair supply of tea documents. Remittance has been sparse. The pound is reported to be weaker against all the main Continental currencies, but an early deterioration against the Canadian and U.S. dollars has been reversed and sterling is now showing considerably more resilience in view of the more favourable prospects in the Middle East.

BULLION REACTED LAST WEEK AFTER AN INITIAL rise because of the Middle East situation. But later, sentiment improved. The price of silver advanced from Rs. 178.75 to Rs. 180 being quoted today for ready delivery, and the rate for forward delivery was Rs. 179.50. The London and New York silver prices remained almost unchanged.

Gold was quoted at Rs. 108 and the price of sovereign remained unchanged at Rs. 72.25.

DURING THE WEEK ENDED 18TH JULY, GOVERNMENT of India Treasury bills for Rs. 89,08,50,000 were sold in favour of the Reserve Bank.

Tenders for Rs. 1 crore of 91 days' Government of India Treasury bills will be received at offices of the Reserve Bank of India in Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi up to 11 a.m. on 29th July. Successful tenderers should make payment in Bombay on 2nd August, and at other centres on 1st August. In view of the introduction of decimal coinage, the price offered for Treasury bills should be expressed on the basis of 100, with not more than three decimals, e.g., 99.477. Other conditions will be as usual.

SHARP DECLINES OF Rs. 19.78 CRORES TO Rs. 1,557.66 crores in active notes and of Rs. 23.11 crores to Rs. 1,585.38 crores in the total note issue were outstanding features of the return of the Reserve Bank of India for the week ended 18th July, 1958. Notes held in the Banking Department consequently dropped by Rs. 3.33 crores to Rs. 27.72 crores. The currency contraction was covered by reducing rupee securities by Rs. 25 crores to Rs. 1,144.59 crores. Deposits of Rs. 51.07 crores, while other Government accounts were Rs. 28.95 crores higher at Rs. 41.79 crores. Balances of commercial banks at Rs. 94.46 crores showed a fall of Rs. 3.70 crores. Balances held abroad fell by Rs. 3.70 crores to Rs. 10.51 crores. Investments increased by Rs. 71.64 crores to Rs. 363.15 crores. Other loans and advances rose from Rs. 57.14 crores to Rs. 61.68 crores, of which advances to scheduled banks against usance bills amounted to Rs. 12.63 crores (Rs. 10.86 crores). Ways and means advances stood at Rs. 19.25 crores against Rs. 30.12 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 11th July, 1958, shows a rise of Rs. 74 lakhs to Rs. 420.77 crores in total deposits. Investments in Government securities and other authorised investments remained unchanged at Rs. 203.59 crores and Rs. 10.53 crores, respectively. Advances including loans, cash credits, overdrafts and bills discounted and purchased have dropped by Rs. 1.93 crores to Rs. 182 crores. Cash and balances are, in consequence, shown at Rs. 32.08 crores, or Rs. 1.68 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 11th July, 1958, shows Demand and Time liabilities at Rs. 754.46 crores (Rs. 3.72 crores on account of borrowings from banks) and Rs. 814.93 crores (Rs. 37.36 crores), compared with Rs. 749.27 crores (Rs. 27.80 crores) and Rs. 812.59 crores (Rs. 35.91 crores), respectively, in the previous week. Cash has declined by Rs. 3.18 crores to Rs. 39.52 crores, while balances with the Reserve Bank have increased by Rs. 7.43 crores to Rs. 95.67 crores. There is a rise of Rs. 3.37 crores to Rs. 503.05 crores in investments. Advances and bills discounted at Rs. 893.96 crores show a drop of Rs. 7.98 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.6 percent and 57.0 percent against 8.4 percent and 57.8 percent.

THE NET PROFIT OF THE INDIAN OVERSEAS BANK for the half-year ended 30th June, 1958, including the amount brought forward from last year's account, amounts to Rs. 16,33,733.

THE NET PROFIT OF THE PUNJAB NATIONAL BANK for the half-year ended 30th June, 1958, after providing Rs. 5.35 lakhs for payment to the Gratuity Fund Trust and making necessary provision for contingencies, amounts to Rs. 46.19 lakhs, including Rs. 4.52 lakhs brought in. The directors have declared an ad interim dividend of Rs. 2.50 a share.

Deposits have increased from Rs. 124 crores to Rs. 131 crores, compared with the previous half-year.

THE PROFIT (SUBJECT TO TAXATION) OF THE BANK of India for the half-year ended 30th June, 1958, after making usual provision for contingencies, amounts to Rs. 49,16,472, including Rs. 16,02,381 brought forward from the last account. The directors have announced an interim dividend at the rate of 12 percent a year (Rs. 3 a share), leaving a carry-forward of Rs. 31,16,472 (subject to taxation) to the next half-year.

U.K. MAINTAINS ITS SHARE OF WORLD STEEL TRADE

Although deliveries of steel to both the export and the home trade continue at a lower level than a year ago, as has just been announced by the Iron and Steel Board in London, the United Kingdom has maintained its share in a declining world market. The main decline in exports in the first five months of this year has been in sheet, tinplate and light sections, but exports of some forms of tube have been higher. Imports of scrap and pig iron and steel, excepting sheet and strip steel, have been greatly reduced, so that the margin between the value of imports and exports of steel and steel-making materials is wider now than it was a year ago. (Whereas in the first five months of last year the margin—representing excess of exports over imports—was £15.5 million, in the same period this year it was £19.5 million. To get a true picture of a "balance of trade" for the industry, it is thus necessary to offset the reduction in imports against the fall in exports. Over the postwar period as a whole, the value of steel exports has been approximately equal to the value of steel imports together with imports of steel-making raw materials. But to complete the picture, it will be necessary to take account of indirect steel exports, in the form of articles made from steel. If these are included, a large export surplus is shown. The decline in international trade during the first quarter of 1958 was specially marked in tinplate and in steel sections, but the United Kingdom improved its share of trade in these products somewhat, and also in tubes and pipes.

LONDON INSURANCE LETTER

INCREASED PREMIUM INCOME FOR U.K. COMPANIES

It was well enough known that British insurance companies' underwriting results had not been in harmony with their premium income in 1957. The facts and comments presented by Mr. C. F. Truham, chairman of the British Insurance Association, at the Association's annual meeting at the end of June were needed, however, to put the whole problem in perspective. The growth of insurance business is certainly gratifying. In last year's restricted circumstances many observers doubted whether premium income could increase as much as it did in fact: nearly 10 percent, to £1,342 million. The companies' net premiums increased in all the main categories, but more in ordinary life than in industrial life business, more in accident than in fire business. The accident departments figures are the largest, £445 million, compared with £407 million for ordinary life; the marine departments' figures are the smallest, £74 million. Satisfaction with these figures is tempered by the very bad underwriting experience in the United States. The American market had already in 1956 deteriorated enough to cause a small loss on the British companies' underwriting, but there was still an overall profit when investment earnings were included. In 1957, investment earnings increased slightly, but underwriting losses increased greatly, with the result that—as only once before in the past 25 years—the American business as a whole showed a loss.

Heavy Claims

Heavy claims on account of fire and accident are the obvious explanation of last year's unfavourable experience in the United States, but the adverse trend of claims would not cause losses if premiums were properly adjusted. The London market is frankly critical of the tardy procedure of the U.S. Insurance Commissioners for reviving rates. But that problem, again, leads to another. The underlying cause of the disharmony is inflation of values, which are always some distance ahead of premium rates. This problem has been particularly acute in America, but it is relevant to most of the hundred or so countries where British insurance operates.

It may be said that inflation has now given way to deflation, and it is possible that insurers' experience will soon change accordingly. But a peculiarity of this deflationary phase is the continuing rise in values of goods and services, apart from primary goods and shipping services. Insurers are not expecting much relief from deflation—which does not, for instance, prevent ship-repairing costs from rising while values of the ships themselves decline. Indeed, many insurers are expecting some benefit from an economic revival in the United States, although it would presumably mark the end of the deflationary phase. There are various anomalies in the present situation and they do not indicate an early improvement in insurers' profits.

The Worst Offender

"Undoubtedly... the most troublesome section of our business" was Mr. Truham's comment on motor insurance. "It is clearly inevitable," he said, "that when underwriting losses persist the necessary adjustment of rates can only be a matter of time." There are however some people, both insurers and insured, who believe that some more drastic remedy than raising rates is needed to put this business into proper order. The whole system of motor insurance, they argue, should be reorganised, in this country at least—and changes seem desirable in others.

Mr. Truham seemed to be getting near to the critics' solution of the problem when he blamed "the inconsiderate, inexperienced, careless or over-confident driver", and when he suggested that more drivers' licences should be suspended or withdrawn. Why should a sports car handled by an expert be subject to a much higher premium than a family car handled by an incompetent or careless driver? A good driver is a good risk, a bad driver a bad risk, in any vehicle. Why should not the driver, instead of the car, be insured against accidents, paying a premium according to his record? A driver with a really bad record would probably be refused by every company—and would then be, as he should be, kept off the roads. If the present system continues at least it should be more discriminating. (Indeed, broadly similar systems are more discriminating in some other countries.) Average annual distances driven, and the conditions in which a motor-car is mostly used, could surely be taken into account.

Strike-bound Goods

The long strike at London docks has aroused interest in such types of insurance against such contingencies as can be negotiated. Tentative negotiations, last year to arrange normal insurance cover for vessels kept idle by dock-workers' strikes did not reach a satisfactory conclusion, but shipowners have some protection in the Shipowners' Mutual Strike Insurance Association and it is hoped that the big shipping companies which have hitherto held aloof from the scheme (started early last year), will participate and make the cover more effective. This scheme operates by contributions, based on each ship's daily running cost, into a common fund, from which compensation, similarly based, can be claimed within specified limits.

Stocks and Shares

MIDDLE EASTERN NEWS HITS MARKET SENTIMENT

JUTES STILL POPULAR: STATE LOANS GO WELL

Wednesday Evening.

THE stock market wore a worried look during the earlier part of the past week due to the political situation in the Middle East. But later, the Russian proposal for a summit conference between the big powers helped sentiment and the downtrend was halted. The Finance Minister's speech at the meeting of the Nag-Vidarbha Chamber of Commerce in Nagpur was bearishly interpreted—particularly his remark that the present plight of the cotton textile industry was due to the distribution of large profits to shareholders at the expense of rationalisation and modernisation. His further statement that the attempts being made by industrialists to gain tax reliefs were unreasonable, has raised doubts whether in fact there has been a change for the better in the Government's attitude towards the private sector. The little investment support that was noticeable last week appears to have been withdrawn and speculators are now operating on a much reduced scale. Obviously, if the situation in the Middle East should worsen, India's second five year plan will be seriously jeopardised at a time when raw material shortages are already acute.

Jute shares have held up well on the view that the demand for jute goods should increase if the international crisis is prolonged. Coal shares, too, have met with some enquiry following confirmation that the third plan target for production is to be raised from 60 million to 100 million tons. Increased output should help bring down working costs and thereby increase the profitability of the companies.

Full details are now available of the results of the ten State loans which were launched recently. The response was greater than expected. Subscriptions totalled (including conversions) Rs. 62.47 crores as against Rs. 47.50 crores asked for. Of these, cash subscriptions amounted to Rs. 56.23 crores and the share of conversion was Rs. 6.24 crores out of Rs. 8.62 crores outstanding. The proportion of allotment for the Bombay issue was 76%, Madhya Pradesh 66%, Madras 83%, Mysore 77%, Rajasthan 92%, Andhra 83%, Kerala 75%, U.P. 61%, West Bengal 100% and Orissa 100%. The U.P. loan, therefore, was the most successful, while West Bengal and Orissa attracted the least support. All these issues, with the exception of Bombay, appear to have more sellers than buyers at the time of writing.

Government securities were steady throughout and there was good enquiry for selected preference shares, including Jutes.

In railways, the only share dealt in was Dehri-Rohas at around Rs. 11.

Bank shares were softer, with Punjab National being marked down to Rs. 58 and United Commercial to Rs. 60.

Cotton textile shares were quiet with Elgin being marked down to Rs. 13.25 and Kesoram to Rs. 10.81. Jay Shree Textiles changed hands freely around Rs. 7.62.

In coal, Bengal were easier at Rs. 232 but New Beerbhoom improved to Rs. 16. Raneegunge were better at Rs. 12.62, while most other issues were unchanged.

Jute shares continued to rule steady and prices improved further, as will be seen from the following table:

	Opening 17th July, 1958	Closing 23rd July, 1958
Anglo-India	Rs. 170	Rs. 175
Barnagore	97	103
Bally	168	176
Birla	19	19.50
Delta	119	126
Fort Gloster	350	370
Megna	121	130
New Central	15.50	16.25
Howrah	17.06	17.87
Union	131	140

Electric supply shares were more or less unchanged, with the exception of Jubbulpore which improved from Rs. 11.75 to Rs. 12.

In sugar, Cawnpore eased to Rs. 12 while Ramnugger were better at Rs. 19.75. Shree Krishna Gyanoday rose from Rs. 9.94 to Rs. 10.31. Darbhanga spurted today from Rs. 20.37 to Rs. 22.25.

In the engineering section, Indian Iron & Steel fluctuated between Rs. 22.88 and Rs. 23.49 to close at Rs. 23.26. Braithwaites were better at Rs. 27.87 as were Burn & Co., at Rs. 360. Textile Machinery rose to Rs. 20.75 from an opening price of Rs. 20.10, following the announcement of a higher dividend of Rs. 1.50 a share.

In paper, Orient were steady at Rs. 33 while Titagur were shaded at Rs. 39.75. Sirpur were marked at Rs. 11.56.

The recent enquiry for cement shares appears to have spent itself and prices in most cases were slightly easier.

Among miscellaneous industrials, Alkali & Chemical were unchanged at Rs. 14.75 while Angelo Brothers met with some enquiry and improved to Rs. 19.87. Britannia Biscuits were wanted at Rs. 14.75 and Dunlops were higher at Rs. 27. Indian Aluminium were quiet at Rs. 14.81 while Indian Oxygen were unchanged at Rs. 20. Rallis India provided the outstanding feature and spurted from Rs. 34.50 to Rs. 38.75. Rohtas Industries were popular at Rs. 22.37 and National Tobacco rose from Rs. 12.62 to Rs. 13.25. National Carbon were offered at the lower rate of Rs. 25. National Insulated Cables were better at Rs. 28.75 and Metal Box were marked at Rs. 28.56 ex-dividend. Shaw Wallace met with profit-taking and closed easier at Rs. 11.50.

In the mining group, Karanpura Development improved to Rs. 14.50 and Indian Copper were firm at Rs. 3.67 ex-dividend.

In the tea section, profit-taking was noticeable at the higher levels and prices generally were trimmed down.

THE WORKING OF THE HOWRAH MILLS COMPANY has improved for the year ended last March. Providing Rs. 14.10 lakhs for depreciation, the profit has amounted to Rs. 9.10 lakhs. Transferring Rs. 344 lakhs from machinery renewal reserve on completion of the modernisation programme, allocating Rs. 14.24 lakhs to general reserve and Rs. 60.385 to wealth tax and bringing in a debit balance of Rs. 24.66,402, there is a balance of Rs. 4,00,275. Pre-ference dividends have been paid up to date, but the ordinary dividend has again been passed over, leaving a carry-forward of Rs. 32,775. The directors say that against the industry's vulnerability to a general recession in world trade, can be set the favourable effects of the increased availability

**How to get
the most out of
your Bank**

Do not regard your bank merely as a convenience for depositing and withdrawing money. There are extra services available to you.

When you have a current account with State Bank, you can ask that commercial bills and pay or pension bills be collected and credited to your account; you can also instruct the Bank to pay periodically on your behalf house rent, school fees, club subscriptions, insurance premia, etc. and thus save yourself a lot of bother.

A savings bank account enables you to earn interest. It permits the facility of withdrawal once a week; at some offices the system of withdrawal by cheque is already in force.

For full particulars of these and many other facilities State Bank provides, please consult or write to the nearest office.

The State Bank with its background of years of sound banking traditions is waiting to solve your problems. Why not have them solved for you?

**STATE BANK OF INDIA
INDIA'S LEADING BANK**

within India of raw jute of adequate quality and, provided the fibre is available during the coming season in the quantity and of the quality forecast by the satisfactory crop reports, there seems to be no reason why the mills should not continue to operate on a reasonably profitable basis.

They further comment that although the overall hessian stock position is sound, the gradual rise in stocks of sacking which have been taking place for some months as a result of increased production of these qualities points to a measure of present overproduction, and the necessity of finding new outlets for these goods. Stocks of sacking qualities are higher than they were a year ago, "but they do not appear as yet to have approached a level at which they are likely to constitute a danger to the price structure of the market."

THE LOSS OF THE RELIANCE JUTE MILLS COMPANY has amounted to Rs. 7.31 lakhs for the year ended last March, after providing Rs. 2.03 lakhs for depreciation and making other adjustments. A debit balance of Rs. 46,26,693 has been carried forward. The dividends have again been passed over. The mill's ceased production from 4th September, 1957, and the move, the directors say, has effectively stopped the losses which had been incurred up to that date and, in spite of the incidence of compensation payments to workers whose employment could not be continued, the company, by the end of the year under report, has been earning profits from the sale of loom hours to other companies under the management of Jardine Henderson Ltd. The company's indebtedness to its bankers has been repaid with the liquidation of stocks of raw

jute, finished goods and material in process and it is meanwhile being financed by the managing agents, to whom the company's indebtedness amounted, as at 31st March last, to Rs. 19,95,000 exclusive of accrued interest. "While this indebtedness has meanwhile been slightly reduced by repayments out of subsequent profits, it will be clear that some considerable time must elapse before the company's finances are sufficiently restored to justify the submission to shareholders of any scheme for the reconstruction of the company's capital".

The directors continue to keep before them the feasibility of a resumption of work in the company's own mill, but the financial position presents a formidable impediment, "unless the manufacturing profits are likely to be substantial. Since this is not the case on the basis of present prices and potential working costs, it seems probable that further sales of loom hours must be contemplated unless market conditions improved substantially in the near future, which seems an unlikely contingency".

PROVIDING Rs. 60,500 (Rs. 80,000) FOR DEPRECIATION, the profit of the Seepore Coal Company has declined from Rs. 3.31 lakhs to Rs. 3.16 lakhs for the year ended last December. Bringing in Rs. 52,200 and providing Rs. 2.10 lakhs (Rs. 1.58 lakhs) for taxation provision, there is Rs. 1,58,188. General reserve is allocated Rs. 20,000 (Rs. 75,000). An interim ordinary dividend of 75pP a share was paid and the final dividend has been declared at Re. 1 a share. The carry-forward is Rs. 48,188. Raisings fell from 81,904 tons to 78,937 tons and

despatches were lower at 76,326 tons against 85,142 tons.

THE STANDARD COAL COMPANY HAS EARNED A PROFIT OF Rs. 47,379 for the year ended last December, after providing Rs. 1,000 (same) for depreciation and Rs. 33,505 for taxation. Bringing in Rs. 17,411 and transferring Rs. 25,000 from general reserve, there is a balance of Rs. 89,790. The dividend is the same at 10 percent, leaving a carry-forward of Rs. 9,790. The directors say that the company's portfolio is representative of investments which are quoted on the Calcutta Stock Exchange with the exception of certain shares costing Rs. 1,50,000 for which no quotation is available. The total of the market value of investments, as at 31st December, 1957, for which quotations are available together with unquoted investments, as valued by the directors, amounts to Rs. 17,80,649.

Bombay Market

OPERATORS RESIST PRICE FALLS

MARKET SENSITIVE TO MIDDLE EAST NEWS

Wednesday Evening.

THERE have been wide fluctuations in share prices in the Bombay stock market during the past week. At first they slumped heavily on nervous liquidation as a result of political developments in the Middle East. Later, prices recovered to a certain extent on short-covering and replacement buying.

Holders were inclined to avoid selling in panic because of excellent company reports. In spite of the absence of pressure at the close, the closing undertone was hesitant and the short-term trend is likely to be influenced by the turn of events in west Asia. If the situation there were to worsen, India's economy, it is feared, would suffer badly. Not only imports of equipment, spares and essential raw materials would be hampered, but exports would suffer a serious setback.

Tata Steel closed at Rs. 165.50 and Indian Iron were maintained at Rs. 23.12. Among other engineering, Alcock Ashdown came to hand at Rs. 250 and Premier Construction were bought up to Rs. 200.50 by knowledgeable quarters. Tata Locomotive were supported at Rs. 170 on hopes of a higher dividend. Motor-car shares were quietly steady. Premier Automobile were taken up to Rs. 90.20 and Hindustan Motor were maintained at Rs. 7.72.

Cotton mill shares were lowered all-round on fears of decline in exports. Bombay Dyeing declined to Rs. 58.80 and Kohinoor were down at Rs. 280. Century changed hands at Rs. 464.50 and Swadeshi were dealt in at Rs. 192.50. Simplex changed hands at Rs. 180 and India United Ordinary were bought up to Rs. 10.08. Apollo were sold at Rs. 188.

Miscellaneous industrials declined in sympathy with the general trend. Among cement shares, Associated Cement were lowered to Rs. 154.75 and Digvijay Cement were available at Rs. 155. In the sugar group, Belapur were maintained at Rs. 262 on prospects of increased earnings. Phalton were done at Rs. 154. Steamship company shares were steady on hopes of expansion in activity. Scindia Steamship were transacted at Rs. 19.20 and Great Eastern Shipping came to hand at Rs. 24.60. Mining shares were favoured on improved metal prices. Shivraipur Syndicate were taken at Rs. 92. Tata Chemical reacted to Rs. 16.56 and Gwalior Rayon were lower at Rs. 13.85. Larsen and Toubro were bought at Rs. 17.76 but Mahindra and Mahindra gained to Rs. 19.32 on rights share issue prospects. Bombay-Burmah Old declined to Rs. 575 on fears of a lower dividend and National Rayon declined to Rs. 231.50 on profit-taking. Hindustan Lever were bought at Rs. 23.84.

Banking shares were fractionally shaded. United Commercial were done at Rs. 61 and Central Bank were taken at Rs. 54 on maintaining the interim dividend. Insurance scrip showed little change in restricted turnover. British India General were absorbed at Rs. 15.94 and New India gained to Rs. 46.25 on replacement buying.

Small changes took place in electricity supply shares. Bombay Suburban closed at Rs. 106.75 and Andhra Valley were higher at Rs. 1,157.50. Ahmedabad Electric changed hands at Rs. 96.60.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations (highest) for the week (lowest) for the week. Closing Quotations (highest) for the week (lowest) for the week. A Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available. Figures given after a stroke (/) mean 'Save Face']

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The Capital Index of Indian Industrial Activity (base: 1953) has now been brought up to December 1957. Compared with the preceding month, there were decreases in tea 74.36 points, finished steel 1.99 points and tyres 5.23 points, while in-

creases occurred in sugar 234.11 points, jute 1.24 points, yarn 2.87 points, cloth 1.65 points, cement 24.50 points, coal 4.05 points, pig iron 3.71 points, paper 5.18 points, automobiles 0.51 points, bicycles 57.27 points, electricity 6.21 points and railway ton-

miles 10.46 points.

Combining all the factors, the Capital Index of Indian Industrial Activity declined by 1.4 points during December 1957.

	Cotton Textiles				Iron & Steel				Paper & Board				Automobiles				Electricity				Railways net ton miles				General Index		General Index Adjusted for variations

New Delhi

GOVERNMENT UNLIKELY TO ALTER OIL REFINERIES DECISION

JAPANESE FIRM ARRANGES U.S. CREDIT FOR INDIAN SHIPPING

(FROM OUR NEW DELHI CORRESPONDENT)

THE Chief Minister of Assam, Mr. B. P. Chaliha, with three of his colleagues recently had a two-day discussion with the Central Minister for Oil, Mr. K. D. Malaviya, in the course of which, it was believed, the former urged the acceptance of the U.S. consultants' report on the pipeline project. The consultants have suggested the establishment of only one refinery to be located near the oilfields and a multi-purpose pipeline, which would save £15 million for India. The Assam Chief Minister, according to reports, has not succeeded in persuading the Central Government to alter its original decision for two refineries—one in Assam and the other in Bihar. It is obvious that even a single refinery would entail an outlay, the foreign exchange cost of which at present is beyond the capacity of this country. Would it then be possible to meet the capital cost of two? One explanation of the Government for sticking to its latest decision is that "the negotiations with the Rumanians, who have offered financial assistance and technical collaboration for the 750,000-ton refinery near Gauhati, have reached a fairly advanced stage and any reopening of the question would have serious repercussions". According to one Press report, "the practical difficulties in changing over to a product pipeline and a single large refinery in Assam are so great that there is very little chance of the scheme being accepted. The Union Government, therefore, is expected to go ahead with the schemes as already approved, namely, a crude pipeline from Nahorkatiya to a small refinery in Gauhati and then to a bigger refinery in Barauni, Bihar." This report should not create any surprise, considering the past performances of the Central Ministry concerned. Oil was struck in Assam some four years ago. It would have saved a great deal of foreign exchange had its exploitation been expedited. Even the rupee company, which is to undertake oil production from this source, has yet to be registered.

tion has been nationalised. Air-India International is stabilised and has made itself commercially sound. The Indian Airlines Corporation has been suffering increasing losses.

"Road transport—34,000 passenger vehicles and 90,000 goods transport vehicles are operating in the country. Till 1956, more than 20 crores were invested by the Central and State Governments (except Andhra and Madras) in nationalised transport, the number of passenger vehicles being 6,000. If all road transport services were to be nationalised, we would need a capital of more than Rs. 100 crores. In most of the States, goods transport is left entirely to the private sector.

"Gold mines—the Kolar goldfields have made a net profit of Rs. 19.40 lakhs for the year ended March 1958. Gold worth Rs. 4.74 crores was sold which is Rs. 26 lakhs less than last year. This was because the percentage of gold present in the ore mined this year was less. Thus the total amount of gold extracted was 163.123 ozs."

Food Processing Industries

The Central Minister for Industries, Mr. Manubhai Shah, inaugurated the Development Council for Food Processing Industries last week. These industries include fruit and vegetable preservation, biscuits, confectionery, glucose, aerated water, flour milling and milk powder. The question of adding more food industries, such as meat and fish products, cereal products, etcetera, will be considered by the Government in due course, the Minister has added. Mr. Shah has explained some of the steps the Government had taken or proposes to take to assist these industries. A rebate of excise duty on sugar contained in the exported fruit products is being given and a simplified procedure has been worked out in that connection. The fruit and vegetable preservation industry is also being offered a drawback of Rs. 60 a ton of the tins used in exported canned fruit products. A replenishment quota of 133½ percent is also being sanctioned on the quantity of tins consumed in the process of the export of preserved fruits and vegetables. There is also a scheme for the supply of equipment and machinery through the National Small-Scale Industries Development Board. A list of equipment, as finalised by the Central Fruit Products Advisory Committee, has

been sent to the National Small-Scale Industries Development Corporation with a request to make it available to the industry under the scheme.

In the field of fruit preservation, there is considerable scope to develop bottling of different types of fresh fruit juices and the manufacture of fruit concentrates, the Minister says. A scheme of subsidy relating to tinplate consumption has been brought into operation with effect from 19th June, 1958. The supply of cans to the canners will be at a net price after deducting the subsidy. The Metal Box Company of India had also agreed to give an additional reduction of Rs. 100 a ton. The net reduction in price of cans will thus be to the extent of Rs. 87 a thousand cans which will bring down the price of open-top cans to the level in some other countries. As for financial assistance, the Government, Mr. Shah has said, is taking up the question with the State Bank of India and the scheduled banks. There is also a scheme for granting loans to the fruit preservation industry during the second plan period for which purpose, an allocation of Rs. 55 lakhs has been made.

The annual installed capacity of organised units of food industries other than fruit and vegetable preservation and their strength are as follows:

Name of the industry	Existing number of units	Annual installed capacity (tons)
Biscuit industry	39	30,347
Confectionery industry	42	50,277
Chocolate industry	3	1,362
Cocoa powder industry	2	438
Flour milling industry	62	1,858,308
Liquid glucose industry	3	12,400
Dextrose powder industry	3	6,200
Milk powder industry	1	1,500
Aerated waters industry	41	2,464,248

At present, hardly 45 percent of the installed flour milling capacity is being used. The policy of the Government is to discourage the setting up of new flour mills in view of the substantial foreign exchange required for the import of machinery and also due to the idle capacity in the country as a whole. There are 62 flour mills in the country, distributed over various States as follows:

State	Number of units	Annual installed capacity in terms of wheat (tons)
West Bengal	13	375,828
Bombay	6	272,112
Delhi	7	249,552
Madhya Pradesh	4	74,400
Madras	4	62,700
Punjab	13	404,616
Bihar	5	78,216
Uttar Pradesh	9	330,084
Assam	1	10,800

The Government is paying special attention to the domestic production of milk products. India was importing approximately Rs. 7 crores worth of these until 1957. Due to the foreign exchange shortage, imports by the trade have been extremely restricted.

Motor-vehicle Tyres

Four schemes for the manufacture of 859,200 motor-vehicle tyres a year, having received the approval of the Government, are now being im-

plemented. It is expected, however, that the actual production of tyres by the end of the second plan will be of the order of 559,200. The present installed capacity is 1,050,000 a year. Of the four schemes under implementation, two are for the expansion of the existing units in Shah-ganj and Bombay. The expansion of these two factories will between them increase production by 274,800 tyres a year. The other two schemes envisage the setting up of new undertakings, one in Madras and the other in Bombay, their total annual capacity being 594,400 tyres. Before the end of the second plan, only one phase of production of the Bombay factory will be completed. Its full capacity will be reached after 1961. In addition, two other schemes, which have received the approval of the Government, will when implemented raise the total production capacity for these tyres by 420,000. The estimated domestic requirement by 1960-61 is placed at 1,800,000 a year. So the possibility of exporting 150,000 tyres annually is also being considered.

Advisory Council of Industries

The ninth meeting of the Central Advisory Council of Industries, which was originally fixed for 21st July will be held here on 7th August. Mr. Lal Bahadur Shastri, the Central Minister for Commerce and Industry, who is the chairman of the Council, will preside. The present economic situation in relation to industrial development, production and price trends, the foreign exchange position and the working of the motor-car, cement, jute and sugar industries will be reviewed at this meeting.

Newly Registered Companies

During April 1958, 91 companies with a total authorised capital of Rs. 10.98 crores were registered in various States. Of these, three are public companies with an authorised capital of Rs. 1.1 crores, the remaining 88 being private ones with an authorised capital of Rs. 9.88 crores. During the month, three Government companies, namely, Hindustan Salt Co. (Private) Ltd., Kerala Water Transport Corporation (Private) Ltd. and Indian Handicrafts Developments Corporation (Private) Ltd., each with an authorised capital of Rs. 1 crore, were incorporated in the States of Rajasthan, Kerala and Delhi, respectively. One company, namely, Parke Davies (India) Private Ltd. was registered in the State of Bombay with an authorised capital of Rs. 2 crores. This is said to be a subsidiary of Parke Davies and Company, which is a foreign concern. Also, two other giant companies, namely, Roche Products Private Ltd. and Orion Chemical Ltd., registered in the States of Bombay and West Bengal, with an authorised capital of Rs. 2 crores and Rs. 1 crore, respectively, were formed during the same month. In all, six big companies, having an authorised capital of Rs. 1 crore and above, were registered during April, accounting for about 73 percent of the total authorised capital. State-wise, West Bengal tops the list in number, while Bombay has the leading place in authorised capital, the amount being Rs. 553 crores, which is more than the total capital registered by all the other States. Next in order are the States of Delhi, Madras and Mysore, which registered 18 and four companies, with an authorised capital of Rs. 138 crores, Rs. 10 lakhs and Rs. 12 lakhs, respectively.

Sugar Price Rises

Two announcements made during last week indicated the shape of things to come in the sugar trade. By the one, forward trading in khandasari has been banned on the ground that "the prices of khandasari sugar have shown an upward trend." By the other the Reserve Bank of India has directed commercial banks to impose further restrictions on credit to be granted against stocks of sugar so that a margin of not less than 45 percent of the value of the stocks is maintained. The announcement says that the price has shown a rising trend in spite of the fairly comfortable supply position. Even before the announcement of the sugar export policy, the price had started rising. It continues that trend in spite of the assurances of the sugar interests to the contrary. Another sugar famine about the time of the Durga Puja and Deepawali festivals is possible unless the Government takes timely steps to prevent it. Mere warnings to hoarders and speculators will be of little avail. The directive by the Reserve Bank is welcome but it should be followed up by other measures.

India-Italy Air Agreement

An Italian delegation has arrived in New Delhi to negotiate an India-Italy air agreement. A representative of Alitalia, the Italian airline, came out to India a few months ago to negotiate a commercial agreement with Air-India International. The Italian delegation is headed by the Vice-Chairman of that country's Civil Aviation Directorate and consists of four others, including two representatives of Alitalia.

No Second Airport for Delhi Now

In view of the paucity of resources, external as well as internal, it has been decided to maintain the status quo at Palam airport, whereby the civil aviation authorities will continue to use its facilities. The plan to have two separate airports, one for civil and the other for military use, has been postponed. A new airport will cost at least Rs. 10 crores. Meanwhile, the modernisation of the airport to suit the requirements of jet aircraft will be undertaken forthwith. Civil aviation authorities, for example, will shortly begin the construction of a separate air strip at an estimated cost of Rs. 1½ crores. Work has already begun on the modernisation of the airport in Bombay at an estimated cost of Rs. 4½ crores.

London

CITY REACTIONS TO MIDDLE EAST DEVELOPMENTS

INSURANCE RATES FOR SHIPMENTS TO IRAQ RAISED

(FROM OUR LONDON CORRESPONDENT)

DEVELOPMENTS in the Middle East have inevitably had repercussions on the City, engendering a certain amount of nervousness and a precautionary marking down (and up, in the case of commodities) of prices. On the whole, the impact so far has been less serious than might have been the case had the uncertainty of the situation in that part of the world not been with Britain so long, now that a measure of discounting what has transpired has been in evidence for some time. The potential dangers of a more widespread upheaval are not being ignored, but for the present it is not felt that oil supplies will reach shortage levels, and although nervousness caused a certain amount of strain for sterling and most rates moved against the pound, the turnover has hitherto been so moderate as not to impose any really adverse effect on the balance of payments. The Government must be glad that the reserves are as strong as they are, and that it resisted the temptation to relax the severity of its economic policy earlier.

The Stock Exchange has fluctuated almost daily, moving down or up in accordance with the interpretation of each new development, with oil shares, naturally enough, showing the widest fluctuations, and shipping shares actually gaining a bit in case there may be need for more tankers to be brought back into service. Actually, however, the only real change has been a sharp rise in insurance rates for shipments to Iraq by the War Risks Rating Committee of the Institute of London Underwriters. The basic rate was 9d a £100 for cover against war, strike, riot and civil commotion risks. Now it is 5s a £100 for shipments as far as Iraqi ports, and a further £1 a £100 if the goods are going inland there. These rates are the same for shipments to the Lebanon. Otherwise, it is just a case of waiting on developments. Other events, however, are attracting very little attention, by comparison, so it will suffice just to describe them here briefly.

Commonwealth Trade

A move in the House of Commons by the Expanding Commonwealth Group urging the development of inter-Commonwealth trade, is receiving strong Conservative back-bench support. So far 80 M.P.s have supported a motion by Mr. Patrick Maitland. The motion calls for the Government to give "an inspiring lead" at the Montreal Conference of Commonwealth Finance Ministers in September. Concern is expressed at the decline of the Commonwealth share of world trade in recent years. It urges an increase in Commonwealth trade, the use of Commonwealth agricultural surpluses to raise living standards, and an improved machinery for investment and consultation. The group will shortly announce detailed proposals.

Trade Gap Widens

U.K. exports in June dropped by £64 million to £223.7 million and the trade gap (the surplus of imports over exports and re-exports) widened from £64 million in May to £68.5 million. Imports were £8 million lower at £300.6 million and re-exports fell from £14.6 million to £8.4 million. All the figures have been affected by the London dock strike. Delays in unloading imports in May dock strike. The interference with exports, because of the way the figures are compiled, has had a much greater impact on the June returns. The U.K. Board of Trade estimates that about £40 million of the drop in exports is explained by disputes in the docks. For seasonal reasons, exports usually decline between May and June.

Exports to the United States in June were £21.2 million or £1.5 million lower than in May. Shipments to Canada declined by £5 million to £16.2 million. In the first six months of this year, exports to the United States have risen by 8 percent (excluding silver and bullion payments from the 1957 figures) but as shipments to Canada were almost unchanged, the increase in sales in North America was only 4 percent. The average trade deficit in the first six months of 1958 was £29.3 million, compared with a deficit of £57 million last year. In terms of foreign currencies earned, these figures are misleading, as a part of the cost of imports is paid to U.K. shipping and insurance companies. Nor do they take account of the large surplus that Britain earns from investment income, tourism, and other "invisible" items. If the import charges paid in sterling are deducted, visible trade probably yielded a payments surplus in the first half of this year to be added to the favourable balance of "invisible" trade.

Machine Tool Orders Fall

Orders received by the machine tool industry in April at £5.2 million compared with £6.4 million in March and £6.5 million in April last year. Deliveries also continued to fall and total orders at the end of the month, according to the Machine Tool Trades Association, was £68.6 million against £70.5 million in March and £93.2 million a year earlier. Home market orders declined from £4,593,000 in March, and £4,144,000 a year earlier, to

£3,932,000. Export orders amounted to £1,246,000, against £1,832,000 in March and £2,324,000 in April 1957. Total deliveries were £6,641,000, compared with £7,688,000 in the same month of last year. The big decline from the March delivery total of £8,314,000 is apparently only seasonal. Recent reports suggest that the situation has improved considerably since April. More orders have been received from the home market, and aggressive selling and the shorter delivery dates, now available, have more than offset new quotas imposed in some overseas markets.

Cost of Living Rises

Part of a rise of 1 point in the retail price index between May and June was due to higher charges for meat through the unofficial strikes at Smithfield Market and in the London docks. This was stated by the Ministry of Labour, which reported that on 17th June the index figure, which measures changes in the average level of retail prices, was 110 compared with 109 on 13th May and 105 in June last year. Calculated to one decimal, the June index was 110.2 against 109.2 in May and 105.7 in June 1957. The index of 110 (109.6) was last reached in April.

Bank Deposits Higher

Between 21st May and the end of June, gross deposits of the 11 clearing banks showed the sharp increase of £257.6 million. This compares with a rise of £205 million in the corresponding weeks of last year. Thus, the rise is substantially seasonal. Taking net deposits, however, the index compiled by Lloyds Bank, which iron out seasonal variations, has risen from 109.3 to a new record of 110.7.

Some of the factors operative in the increase in deposits are discernible in the other items. For example, the latest figures show an increase of £67.9 million in advances, as well as a rise of £78.3 million in bill portfolios and an increase of £18 million in investments. The increase in advances must be judged as largely seasonal. It can be deduced that the expansion in the private sector was £60.3 million, since the borrowings of the nationalised industries from the clearing banks during the six weeks under review rose by £7.6 million to £70.7 million.

Cheaper Local Loans

Reductions became effective last week in the interest charges made by the Local Loans Fund on loans advanced to local authorities. The rate for not more than five years has been reduced from 6½ percent to 5½ percent. Interest on loans for more than five years but not over 15 has been cut from 6½ percent to 6¼ percent. There is to be no change in the interest charged on loans for more than 15 years, which stays at 6½ percent. The new rates apply only to future ones. Interest on existing loans is not affected.

Stock Exchange Film

Shooting began the other day of the film being made by Puritan Films to explain the history and working of the London Stock Exchange. It is to be shown in the cinema adjoining the visitors' gallery there. Although the crowd scenes are to be played by members of the Stock Exchange and their clerks, professional actors will take the lead-

ing rôles. Mr. Richard Dimpleby is the executive producer.

Brevities

The directors of Whiteway, Laidlaw and Co. announce that, with the co-operation of the Government of Ceylon, negotiations are expected to be concluded in the near future for the disposal of the company's interests in Ceylon.

Mr. Oliver Poole, is to assume the title of Baron Poole, of Aldgate in the City of London.

The Chamber of Shipping's index of tramp shipping rates rose in June from 64.6 to 66.5, the first time the downward movement has been reversed since the end of 1956. The main reasons were rises in coal and ore freights.

Sir Edmund Gerald Compton, Third Secretary at the Treasury, has been appointed Comptroller and Auditor-General in succession to the late Sir Frank Newton Tribe, and will take up the appointment on 1st October. Sir Edmund, who is 51, had a large share in the organisation of the Premium Bonds scheme.

Crown Zellerbach Corporation, the U.S. pulp and paper group, and the Hawaiian Sugar Planters Association are to test the commercial feasibility of using bagasse as a raw material for paper manufacturing in the Hawaiian Islands.

The anti-submarine frigate Khukri was commissioned and accepted for service in the Indian Navy in Coves last week. Commanded by Commander S. H. Sharma, the Khukri has a complement of nine officers and 131 ratings. She is armed with three Bofors guns and two three-barrelled anti-submarine mortars which can be set to explode at a pre-determined depth.

Brooke, Bond and Company now has a large stake in the Australian and New Zealand market. The group has agreed to put £625,000 into Bushels, Ltd., of Sydney, the largest packers and distributors of tea in Australia with a substantial coffee business, with a large-share of the New Zealand business in these commodities. The deal gives Brooke, Bond a 20-percent share in the capital of Bushels, and is a further important expansion of the group's interests in the Commonwealth, for it already has subsidiaries in India, Pakistan, Ceylon, East Africa and Canada.

For INFORMATION

SOUTH EASTERN RAILWAY TENDERS.

Sealed tenders are invited for tender No. Com/GM/23/F2/58 for supply of signal mechanism lower quadrant pull-pull coupled D.W. Lock bar clip inside 90 lbs. Rails. Interlocking key Box 5 way etc. Tenders will be opened at 12 noon on 21.8.58.

Tenders with full particulars are obtainable from the office of the Controller of Stores (Construction Section), S.E.Rly., Garden Reach, Calcutta—23 on remittance of Rs. 5/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from this Railway's Chief Cashier by local firms.

Tenders should accompany the receipt for depositing Rs. 1000/- as earnest money with this Railway's Chief Cashier without which the tender is liable to be rejected. Approved contractors having permanent deposit of Rs. 1000/- with the Controller of Stores are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

GENERAL MANAGER

Plantation Topics

MODIFICATION OF KERALA LAND BILL DEMANDED

NEW DEFINITION OF PLANTATIONS

(FROM A SOUTH INDIAN CORRESPONDENT)

THE sub-committee appointed by the Coffee Board to examine the Kerala Land Reforms Bill thinks that certain clauses of the Bill have to be suitably amended to remove doubts and ambiguities about the exemptions granted to plantations. The sub-committee has recently decided at its meeting that the definition of a plantation, as given in the Bill, should be modified as follows: "Plantation means any land planted with or reserved for being planted with tea, coffee, rubber, cardamom or other special crops, and includes all lands within or contiguous to the plantations and which is used or reserved (a) for the sustenance of the employers and employees on the plantation, (b) for the maintenance of roads, buildings, factories and pastures (c) or for timber and fuel trees (d) or for any other purpose which is incidental or ancillary to the business and undertaking of planting and (e) water sources necessary for the plantation." The definition of a plantation in the draft Bill, which was published by the Government, is as follows: "Plantation means any land used immediately before 18th December, 1957, principally for growing tea, coffee, rubber or cardamom or such other kind of special crops as may be specified by the Government by a notification in the Gazette". Clause 61(2). The Rubber Board, too, has taken up this Bill for its consideration and has come to the conclusion that amendments are necessary for removing any ambiguities about the exemptions granted to plantations.

Handicaps to Expansion

Planters feel that the acceptance of the definition of a plantation, as suggested in the Bill, will create handicaps for the expansion of the industry. Replacement and expansion of plantations, a vital process in the healthy maintenance and growth of the industry, has been excluded from the scope of the definition. It takes away the benefit of exemption provided under Clause 62(2) which says: "Nothing contained in sub-section (1) shall prevent a person from holding plantations admeasuring more than a ceiling area provided he does not hold any other land except the site of his dwelling house and the land acquired for the convenient enjoyment of the dwelling house." In the explanatory clause attached to this, it has been stated that for the purpose of this section "a person" shall include a family. Nothing is said about the company-owned plantations, and this might lead to troubles later. There is no guarantee of a fixity of tenure for plantation holdings although it has been specifically provided for in the Bill for various forms of tenancies.

Good Coffee Crop

India's coffee crop for the 1957-58 season, which is now drawing to a close, is astonishingly good, beating even the most liberal forecast on actual pool receipts of the Coffee Board. The crop amounted to 42,980 tons to the end of June. Pool receipts for the corresponding period during the last season were only 41,053 tons, although it was thought that the crop harvested during the last season was a record. The industry has been getting handsome yields during the past ten years. The rising trend in production is still predominant and the prospects for larger crops in the years ahead are bright. The current year's crop is nearly three times higher than the yield in 1948. Crop prospects for the next season are very good and growers expect a crop of nothing less than 50,000 tons. The internal release figures show a welcome increase in the offtake of coffee in the home market. The latest figures are for June. A quantity of 2,650 tons of coffee was absorbed from the Coffee Board's pool depots in June 1958, compared with 1,938 tons in the corresponding period of last year. The total release for

the half-year ended June 1958 amounted to 13,233 tons, showing an increase of 771 tons over that of the corresponding period in 1957.

With an unexpectedly large harvest this season, India is now in a position to export more than 15,000 tons. But the export allocations, which have so far been allowed by the Coffee Board, amount to only 12,930 tons. Out of the allotted quantity, 8,130 tons have been sold up to the end of June. Another 1,883 tons are due for sale during this month, leaving a balance of 2,887 tons. It is almost definite that the Board will raise the export allocations in keeping with the larger receipts in the pools.

Coffee Cultivation in the Andamans

The Government of India has sanctioned a scheme involving an expenditure of over Rs. 1 lakh for exploring the possibilities of coffee cultivation in the Andamans. The scheme is to be implemented during the last three years of the second plan. Trial plots of three to four acres each are to be opened at three representative parts of the island. A coffee development officer will be in charge of the scheme. It is the outcome of the report which was submitted about a year ago by a team sent out for a survey and assessment of the prospects of coffee cultivation in the Andamans. As early as 1925-26, effort was made to carry on coffee cultivation in that island but it failed. The present scheme is expected to be started before the end of this year. However, the planting of coffee on a commercial scale in the Andamans will depend on the results of the proposed experimental planting.

Bumper Tea Harvest in S. India

South India had yet another bumper tea harvest in May. According to official figures, just released, the production during the month amounted to 20.6 million lbs. Kerala contributing 10.8 million lbs, Madras 9.2 million lbs and Mysore 0.6 million lbs. The figure for the corresponding period of last year was 16.7 million lbs. For the first five months of the year, south India harvested a crop of 71.7 million lbs against 57.4 million lbs during the corresponding period of 1957. A decline in production is expected in June due to the heavy monsoon showers which occurred during the month in Kerala plantations. Trade circles estimate the June crop at 13 million lbs compared with 15 million lbs in 1957.

Market Reactions to the Middle East Crisis

The Middle East crisis has had its repercussions on the markets on the west coast. There was a very strong demand for all types of teas at the Cochin auction sale last week. Market circles feel that unless shipping services are held up due to the crisis in the Middle East, the tea market might not be seriously affected. In the forward market, pepper prices are jumping and heavy transactions have been reported. The Middle East is an important market for Indian ginger and it also offers an expanding market for pepper and cashew. For the dust types of teas, too, it is an important market.

Promoting Coir Trade with Spain

The chairman of the Coir Board has had a discussion with the new Indian Ambassador-designate to Spain concerning the possibilities of further promoting India's coir trade with Spain. The former is understood to have told the latter that the Board will welcome a market study for coir in Spain, including information about the use of the exported coir yarn in that country. Suggestions will also be welcomed for increasing the export of coir yarn as well as of finished products. India's exports of coir yarn to Spain have considerably increased during the last three years. The exports during 1957 totalled more than 2,000 bales against 66 bales in 1954.

New Advisory Committee

The Kerala Government has started implementing the provisions of the controversial coir resolution which was introduced by the Industries Minister in the State legislature in its monsoon session. It has appointed a nine-man coir advisory committee with the Minister for Industries as chairman and seven members of the State legislature as its members. It has recently issued a Press note announcing its decisions to declare coconut husks (raw and retted) and coconut fibre as essential commodities under the Essential Articles Control and Requisitioning Act of 1949, as amended in the Kerala Essential Articles Control and Requisitioning Act of 1958. It has also decided to appoint a committee for formulating proposals for fixing prices in relation to the different varieties of husks and fibre based on their quality, place of origin, market conditions and other relevant factors. The Press note claims that the Government has examined the legal aspect of the issue and feels that it is competent to take these decisions. This claim has been questioned in certain circles. It will be recalled that the State Industries Minister himself admitted in the Kerala legislature that the Government of India holds an unfavourable view on the demand for declaring coconut husks and fibre as essential commodities.

COCHIN TEA SALES

At Sale No. 22, 1,500,000 lbs of tea were on offer. There was a good general demand. Low mediums were fully firm and dearer, with the good mediums easier in spite of an improvement in quality. Highgrowns were 10 to 15nP dearer.

Jute

GUNNY RATES LIFTED BY SPECULATIVE BUYING

FIBRE FIRM ON HEAVY MILL PURCHASES

EVENTS in the Middle East have given rise to increased speculation in the Calcutta jute markets. Fluctuations last week were erratic and new high levels were recorded in both the sacking and hessian sections. Mills came out as sellers at the higher levels and sold moderate quantities, but overseas buyers were not anxious to follow the rise, although several firm offers at lower levels were received at the beginning of the week. The hessian section was particularly steady, and prices were well maintained even after the speculative B Twills counter weakened following heavy selling pressure in the fatka. It is understood that shipments to Argentina have of late been good, and local shipper covering against steamers loading in port has been the prime factor in the rapid rise of hessian near-shipment rates. Last week, 9-porter and 11-porter fabrics commanded a premium in the near position of 45nP and Rs. 1.30, respectively. By Tuesday, these premiums had risen to Rs. 1.25 and Rs. 2.25. This is a marked change for hessians, for right up to the end of the first week of May, the forward shipment in these fabrics had been consistently quoted at a premium over the near positions. This obviously reflects a change in the overseas consumer's outlook and emphasises the trend towards a hand-to-mouth purchasing policy on his part.

Activity in the fibre markets last week also showed a marked increase and heavy purchases were made daily at rising prices. Sellers were inclined to be reserved throughout, and in order to get their requirements, buyers usually had to meet sellers' terms. The spate of buying had long been anticipated by sellers as mill purchases of new crop jute to-date have been insignificant compared with previous years. The mills did not sell gunnies because many constructions were quoted below the I.J.M.A. minima, but they took advantage of the rise in the market last week when these rates were exceeded, and naturally, had to cover their raw jute requirements. New crop reports continue to be favourable from nearly all areas, and the difficulty created by the lack of steeping water which was holding up harvesting in some districts, has been largely overcome by recent rains. However, the air of confidence prompted by these reports sustained a setback when the raw jute arrival figures were published for June. These indicated that the total arrivals last month were 131,650 bales less than those of the previous month, and showed a drop of 50,850 bales on the corresponding month of last year. At 233,700 bales, arrivals from India were not only the smallest for the season just completed, but the smallest since August 1955. Arrivals from Pakistan, on the other hand, were well up on last month and also the corresponding month of last season. Imports from Pakistan totalled 70,550 bales, the third highest figure of the 1957-58 season. The big fall in arrivals from India in June was a serious setback to the aim of self-sufficiency in raw jute, and resulted in a total drop over the season of 124,450 bales compared with last year's figures. Thus total arrivals fell short of the estimated consumption by 70,200 bales in spite of an increase of 56,950 bales in the total imports from Pakistan. In the 1956-57 season, total arrivals exceeded consumption by 276,300 bales.

THE JUTE MARKETS

Activity in the fatka market increased last week and violent fluctuations were recorded in all sections. Rates, as given by the East India Jute and Hessian Exchange Ltd. for the period 16th July to 22nd July were as follows:

	Hessians 40in. 10oz. August	Sacking B Twills August	Raw Jute Upper Assam August
Opening	41.96	98.20	26.22
Highest	44.06	101.80	27.60
Lowest	41.96	98.70	26.18
Closing	42.70	99.25	26.62

Manufactured Goods: The market was very steady at the opening last Thursday as far as the sacking section was concerned, but there was a slight reaction in hessians. Heavy speculative activity was reported from the fatka market because of the political situation in the Middle East. Only small mill business was reported at this stage and B Twills opened at Rs. 99.50 for July shipment and Rs. 101.30 for October-December shipment. July hessians dropped to Rs. 42.59 and forward shipment to Rs. 41.40. On Friday, mills sold heavily and backed by continued speculative buying, prices rose considerably, sacking rising by Re 1 and hessians by 30nP in the near positions and 70nP for the forward shipment. Events in the Middle East were again responsible for the very steady market, but some overseas purchases and local shipper covering for near shipment hessians caused 11-porter rates to increase on Saturday, and 10oz recorded an increase of Re 1.10 to be called over at Rs. 44.35. The sacking section was unchanged, but over the week-end fell back due to heavy speculative selling pressure, B Twills standing at Rs. 100.25.

Near delivery hessians, on the other hand, continued to advance and a new high of Rs. 44.50 for July 40in. 10oz. was reached. The premium over forward shipment at this stage was Rs. 2.40. The market in general eased after this, and a general decline saw sacking and hessians falling by Re 1. The undertone of the market was easier, and only small activity was reported in both real goods and in the fatka market.

Opening quotations on Wednesday morning showed a considerable drop, and were as follows:

	July	August	September	Oct.-Dec.
40in. 8oz.	34.80 (37.93)	34.25 (37.33)	34.00 (37.06)	33.25 (36.24)
40in. 10oz.	43.15 (47.03)	42.75 (46.59)	42.10 (45.88)	41.15 (44.85)
B Twills	98.40	99.30	100	100.75
Heavy Cees (Plain)	96.75	99.50	100	100.75
A Twills	118.50	119.75	120.50	121.75
Liverpools	111	111.75	112.50	113.75
Cornsacks	99.60	100	100.75	101.50

(Figures in brackets indicate the value per 100 metres).

Raw Jute: The fibre markets sprang to life last week and good business was done every day. The emphasis was on new crop jute, much of it for early shipment. Consequently, high prices were paid, and this, coupled with the improved goods market, caused very firm conditions to prevail. Over the week, it is estimated that not less than 400,000 maunds of jute was purchased by mills under contract. On top of this, their representatives were active in upcountry agencies and in Cossipore. During this time, the prices quoted in Calcutta rose from Rs. 25.75 to Rs. 27.50 a maund for old crop Assam-Northern jute. New crop quotations were Re 1 higher than old crop in this category. Sellers held very reserved ideas, and in

most cases were unwilling to consider anything below the quoted rates. For early shipment, a premium of 50nP was reported which indicated that some mills were feeling the effect of their long absence from the raw jute market. On the other hand, business was also done in mesta for forward shipment in the October-November-December period at discount prices. Arrivals from upcountry were small, but there was an improvement in arrivals at Cossipore.

During the week, business was reported in old crop Assam-Northern jute at Rs. 26 to Rs. 27 a maund and in new crop at Rs. 26.50 to Rs. 28 for July-August and July shipments. Desal White was done at Rs. 25.75 to Rs. 26.50. Good business was reported in Daissee, Northern and Assam mesta, and prices paid ranged between Rs. 24.50 for October-November-December shipment to Rs. 25.25 to Rs. 26 for September-October shipment. Jungli mesta passed at Rs. 24.50. Small lots of Daissee White passed at Rs. 25.75 a maund.

Increased activity by mill agents in Cossipore kept that market very firm. Sellers were reserved in spite of the increase in arrivals. Wagon arrivals amounted to 644, against 345 in the previous week, and only 295 during the corresponding week of last year. Quotations at the close were based on Kishanganj jute at Rs. 24.50 for average quality.

THE FOREIGN JUTE MARKETS

YARN AND CLOTH PRICES FIRM
(FROM OUR DUNDEE CORRESPONDENT).

A BIG change has come over the jute markets in Dundee due to the trouble in the Middle East. Consumers of jute goods have allowed their stocks to dwindle to rock bottom levels, and the advance in prices has almost created a scare. Sellers of raw jute have raised their terms by about £3 a ton recently. Some shippers had been quoting lately but subsequently they withdrew their offer. Spinners in Dundee have jumped in for a fair quantity of raw material, paying from £106 10s to £109 for Mill Firsts, £94 to £97 for Mill Lightnings and £94 to £97 for Mill Hearts, while grade Hearts have been raised to £70, all August-September. It is now difficult to purchase for August because shippers are afraid that they may not be able to secure their jute from Pakistan. The position has been helped by the fact that arrivals from upcountry markets in that country have been very small, and it is reported that the local mills, which have been buying very sparingly during this season so far, have bought up any jute that was available. The business in dark jute is entirely nominal in the absence of offers. During the earlier part of last week, business was done in new crop Daisies-2/3 at £101 for crack marks and £94 for grade, with grade Tossa-2/3 from £110 and four £100, c.i.f. U.K. It is said that Continental spinners have also purchased fairly freely of late and now they are better covered in their requirements over the next several months.

A really good business has recently been done in jute yarns and cloth. Buyers could anticipate the developments and it has been a case similar to that which occurred over Suez, when a large business was done. But it is unfortunate that the threat of a war should bring about an improvement in the trade. Prices are all very firm but unchanged. An advance of another £2 a ton in jute will see a rise in goods prices by £5 a ton. Calcutta goods are very irregular and quoted from 65s for 40in. 10oz. and 48s 9d for 70oz. July, 65s 3d and 48s 6d August and September and 65s 6d and 47s 6d October-December, with B Twills at 151s 6d, 153s and 154s 3d for the respective positions, all f.o.b., Calcutta.

U. S. BURLAP CONSUMPTION
AND STOCKS

U.S. burlap consumption in June was quite disappointing being 5 million yards less than in May and 11 million yards below June last year. A continuing decline in demand for piecegoods for industrial uses seems to have been responsible

for much of the unexpectedly poor performance although consumption during June in the past three years has shown a tendency to fall off. U.S. burlap stocks at the end of the month were off 8 million yards. At 232 million yards, 139 million yards were spots and 93 million yards were floats. Appearing below are two tables which include the June figures—(1) based on menber reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry.

SLIGHT RISE IN WHOLESALE
PRICE INDEX

THE official wholesale price index (base: year ended March 1953=100) worked out to 113.4 during the week ended 5th July, 1958, compared with 113.3 (revised) for the earlier week. The index was higher by 3.3 percent and 1.5 percent, respectively, when compared with the corresponding week of the previous month and that of last year. The index for Food Articles remained stationary at the previous week's revised level of 116.1. The prices of onions in Delhi (+24%), potatoes in Delhi (+16%), fish in Quilandy (+13%), mung in Bombay (+12%), rice in Madras city and in Mercara (+7% each) and in Jeyore (+5%), wheat in Bombay (+7%) and in Chandausi (+6%), gram in Delhi, urad, bananas in Nagpur, milk and mustard oil both in Calcutta and gram in Muzaffarnagar (+6% each), eggs, black pepper in Cochin and turmeric in Calcutta (+5% each), barley (+4%), chillies (+3%), jowar, maize, ghee, sugar and cloves (+2% each) and cardamoms (+1%) showed advances while milk in Ludhiana (-11%), rice in Tihu, mung in Cuttack, potatoes in Furrukhabad and salt in Tuticorin (-9% each), wheat in Dhanduka (-8%), masur in Bombay (-7%), ragi in Bangalore and gram in Patna (-5% each), arhar, cashewnuts and coconut oil (-2% each) and groundnut oil and coffee (-1% each) moved down during the week. The prices of tea also declined considerably when compared with those a fortnight ago. The index for Tobacco fell by 0.2 percent to 90.6 due to a decline in the price of raw tobacco (Pollah F.A.Q.) in Calcutta (-2%). The price of raw tobacco (Mother medium) in Calcutta (+1%), however, showed a rise. The index for the Fuel, Power, Light and Lubricants group stood at 115.6 against 115.5 during the previous week. The price of castor oil in Madras (+7%) showed a rise. The index for Industrial Raw Materials worked out to 116.1 compared with 116.2 for the earlier week. Items which showed noticeable variations were: raw silk in Malda (+9%), cottonseed (+3%), raw wool and tanning materials (+2% each) and lac (-3%). The prices of brass (+2%) and lined oil, coir yarn and lead (+1% each) moved up while tin (-3%) and rayon yarn (-1%) showed declines and the index for Intermediate Products stood at 111.0 against 110.9 for the previous week. The index for Finished Products rose by 0.3 percent to 108.1 due to an increase in the prices of silk and rayon manufacture and machinery (+1% each), the price of quinine sulphate (foreign) in Bombay (-5%) showed a decline.

SUGAR PRODUCTION AND STOCKS

According to the Indian Sugar Mills Association, sugar production during June 1958 was 3,600 tons bringing the total production up to 30th June, 1958, to 1,967,000 tons. The corresponding figures for the 1956-57 season were 39,000 tons and 2,014,000 tons, respectively. The offtake of sugar from factories during June 1958, was 176,000 tons against 202,000 tons (including despatches for exports) during the corresponding period of last season.

Calcutta Markets

FAIR GENERAL DEMAND AT
EXPORT TEA SALE
DUST PRICES EASIER

AT Sale No. 5, held on 21st and 22nd July, the offerings at the Export auction amounted to 40,711 chests. After a hesitant start, the market developed a better tone. There was a fair general demand but prices were easier for all sorts except bright liquoring Assams of orthodox manufacture which were firm to dearer and were the strongest feature of the sale. Bright liquoring Doars of orthodox manufacture were a weak feature and declined considerably while commons were easier by 6nP to 8nP. Non-wither leggs-cut Doars teas showed a decline of 10nP to 15nP with the exception of the few best liquoring invoices on offer. C.T.C. teas were in much less demand and the best were about 50nP easier while others were irregularly 20nP to 30nP easier and towards the end of the sale were frequently difficult to sell. Whole leaf grades met with rather less demand but tippy teas, although being irregular, sold at about last rates, and a few offerings of the best grade realised extremely attractive prices. Darjeelings were well supported and the best realised satisfactory prices but others were a little irregular and sometimes sold below valuations.

Quotations	1958	1957
Clean Black Pekoe	2.30 to 2.40	2.50
Plain B.P.	1.78 to 1.82	1.90
Plain Fannings	1.94 to 1.98	1.74
Medium B.P.	2.20 to 2.30	2.10
Medium Fannings	2.35 to 2.50	2.15 to 2.20
Best Assam C.T.C. B.P.	4.00 to 4.10	3.90 to 3.80
Best Assam C.T.C. Fgs	4.40 to 4.80	4.00 to 4.50

At the Internal Sale, a total of 17,353 chests of Dust was on offer. Quality was of a useful standard and showed an improvement. The sale opened on a quiet note with only fair general demand and the tendency was again easier. Orthodox teas were 6nP to 10nP easier, Assams often showing the greatest decline. The best liquoring types in this category, however, did not show the same decline, and often met with competition. Non-wither Doars were up to 10nP easier with the exception of some of the brighter liquoring invoices which were only 2nP to 4nP easier. C.T.C. Assams which constituted the major portion of the sale were the weakest feature. At the start, they were up to 20nP easier but showed a slightly firmer tendency as the sale progressed. Towards the close, however, demand again weakened considerably and prices declined by as much as 35nP with fairly heavy withdrawals.

The 325 chests of Leaf on offer consisted of mainly residual descriptions.

RISE IN GRAIN AND COAL
FREIGHT RATES

THE Middle East crisis has produced very little reaction in the freight markets except in transatlantic trades where grain charterers paid up to \$ (U.S.) 1 above previous rates for U.S. Gulf-up to Antwerp-Hamburg range. Coal was arranged at an increase of 1s a ton only. Earlier, grain was arranged from Pacific Coast to India at the unarranged 45s from Pacific Coast and a 9,000-ton ship which changed rate of 60s and a 9,000-ton ship China for obtained 45s from Pacific Coast to the voyage wheat was fixed on time charter for the voyage to the Continent at the very low rate of 8s 6d a d.w. ton, delivery north China. Further activity was noted in the sale and purchase section with Great Eastern Shipping Company being credited with the purchase of the Caledonian Monarch, built 1948, of 10,037 d.w. tons for £230,000.

LINSEED RISES

There were wild fluctuations in the linseed market during the past week. The general trend however was bullish because of the critical Middle East situation. Prices of seed advanced steadily from Rs. 25-2 to Rs. 27-4 a maund. Sellers, attracted by the rises occurring daily, offered an increasingly large volume of supplies for July-August delivery. Crushers were keenly interested, and the turnover averaged 350 to 400 tons a day. Oilcake prices rose from Rs. 14 to Rs. 15 a maund. The oil section, was again firm, influenced mostly by the recent rise in overseas prices, which have brought the Indian oil prices into parity. Local prices advanced from Rs. 55 to Rs. 58, later to react by 8 annas a maund. Bids from the U.K. opened at £116 and rose to £122, at which prices some business was transacted. Latest quotations were as follows: Ready-July Rs. 26-10 a maund and August Rs. 26-12 a maund.

COMPANY AND PUBLIC NOTICES

THE TEEN ALI TEA CO. LTD.

THE Directors have decided to recommend to the forthcoming Annual General Meeting of the Shareholders a Dividend of 25% in respect of Season 1957 payable without deduction for Income Tax payable by the Company.

OCTAVIUS STEEL & CO. LTD.

THIS BOY HAS

A LOVING MOTHER

Mother knows that children's dresses are more than mere clothing; they are a measure of a mother's care. She takes no chances—they have got to be lovely, comfy and durable. Dressing a child well is a family tradition.

When BINNY'S started manufacturing their quality cloth nearly eighty years ago, young mothers in India discovered a new standard in textiles for their sons, for here was variety in colour, design and texture undreamt of before. As the years passed, BINNY'S continued to pioneer new materials, including antiseptic suitings and union fabrics. Soon BINNY became a household word and buying BINNY'S a family tradition.

Today, more people are able to buy more cloth, but discerning people look for the reassuring BINNY'S trade marks on the cloth they buy.

BINNY'S

a great name in textiles

THE PRINCIPLES OF ECONOMIC WISDOM

RESERVE BANK REPORTS ON STRAINS

OFFICIAL reports comprise one of the few items of which there is still no scarcity in India. Taken together, they must provide by now a wealth of information such as few countries at a comparable stage of development can boast. Their main faults are two in number: they are generally complacent documents, and they usually ask to be ignored. The Reserve Bank's Report on Currency and Finance for the year 1957-58 is no exception. Anybody who read last year's report is apt to wonder why the same comments are made on the same faults with exactly the same lack of emphasis, and how it is possible to draw exactly similar conclusions time after time as if no changes at all had taken place in the economic facts on which India's development plans are based. There is plenty of material here for the statistician; but if he wants to understand the economy's true position he will be forced to ascertain it for himself and not from the interpretations in the Report. For the planner, there is no guidance and little food for thought, while the general reader can flounder through these pages to his heart's content without finding a single clue as to the real extent of the difficulties in which the economy is at present placed.

The Report states, with some claim to accuracy, that the year 1957-58 "witnessed an accentuation of some of the conspicuous stresses and strains to which the Indian economy has been subjected in recent years on account of the high tempo of activity in pursuance of the five year plans". In fact, the real reasons for the stresses and strains are that the second plan was badly conceived in the first place, that it has been consistently mismanaged, and that there still exists a strong disinclination to adjust it to reality. The general slackening in the economy, which the Report says featured the second half of the period, is treated with remarkable complacency. There is no suggestion of the extent to which the private sector has been called on to absorb the strains created by the mistaken and inefficient planning, or the consequences this may have for India's economic and political future. It is pointed out that the main tasks now are those of "mobilising adequate resources, both internal and external"; much the same, in fact, as was said in the Report for the previous year. But no comment is made on the extent to which Government policy, that the Bank itself is forced to carry out, stands in the way of these objectives. That is save for a passing mention of the effect of the 1957 Budget on the urge to invest. It can be argued that it is not the Reserve Bank's job to criticise official policy in public. That is true; and it is also a fact that the figures put forward in this Report are comment enough for those who are prepared to understand their real meaning. The fault, therefore, lies in the present relationship between the Bank and the Government, not with the Bank itself. But if the Bank is not to comment, then who is? Nobody is better placed. In other countries the Central Banking institution is usually the Government's guide to economic behaviour, and even if it refrains from putting its views in reports of this kind, it is not always averse from airing them in public. In India, however, the Reserve Bank's rôle seems to be reserved for presenting the facts, putting a departmental gloss on them, and then waiting complacently for the next mistake to be made. The result is characterless reports of this kind. A supine attitude is characteristic of most Government institutions in India. Its dangers are obvious, and at least in the case of the Reserve Bank, it is a serious loss to the country as well. Whatever the shortcomings of this Report, it does show that the Government is losing an excellent opportunity of having the facts of economic life interpreted as well as simply presented.

There are three points the Report makes which are substantially the same as those made last time. They are that foodgrains output should be increased; that exports should be stepped up; and that

savings and investment should be expanded. In the past year, the Government has had an admirable opportunity of tackling the food problem. The publication of the Foodgrains Enquiry Committee's Report, while holding out little hope that shortage would be permanently overcome, did at least indicate how it might be mitigated. Scarcely a word has been heard about the Report since it was published last November. It is difficult to think of a single one of its recommendations which has been implemented, or even seriously discussed. The Government's answer to the food problem has been the defeatist one of still larger imports. There has been no attempt to go to the root of the matter since the output target for foodgrains was increased by a stroke of the pen during the final discussions on the second plan draft-frame. It can be argued that to increase production would cost additional resources which cannot be spared from other projects; but if it must now be accepted that steel plants take precedence over food requirements, there is still no excuse for the lack of any constructive thinking on the subject. It is possible only to recommend the Reserve Bank's words to the Government so that when they appear again in next year's Report, it will not be quite so obvious as it is this year that they have so far been wasted.

In contrast to its apparent indifference to the problem of growing more food, the Government is at least aware of the need to increase exports, even if it has come to the conclusion rather belatedly. It would be easier to comment on the measures taken if, in fact, they were more numerous. Those already announced go some way towards meeting the need. But there is still only limited official interest in the fundamental problem of high costs and low productivity. Quite apart from imaginative export-promotional techniques, what is wanted is a policy for keeping costs down—which means some attention to labour problems and to lower taxes. Up to now, the first question has largely been ignored for political reasons, while the second appears still unaccountably mixed up with ideological considerations. The fact that the economy is completely hamstrung by an impracticable and over-burdening tax system is one which has not yet apparently been accepted by the planners. The same point can be made when discussing the last of the Reserve Bank's main recommendations—the expansion of savings and investment. The disparity between these two items may not have been as obvious in the period 1957-58 as during the previous year. But it is likely to appear again in the near future, as recent inflationary trends prove. When the Government

itself is so

to do all they can to further the group's aims. This does not seem to be an attempt to form another political Party, but an effort to band together the anti-socialist elements in all Parties with the object, not necessarily of increasing Conservative or Liberal representation, but of reducing that of the Labour Party. On the surface, the objects of the group are attractive to those who wish to prevent a socialist victory and it may be interesting to examine them to see how they seek to achieve their ends.

The movement has three aims: first, to bring home to the general public what it claims to be the disastrous consequences of any further nationalisation or re-nationalisation; second, to prevent Conservatives and Liberals from splitting the anti-socialist vote in marginal constituencies; third, to persuade the present Government to include the alternative vote in its election programme. The campaign will be conducted by raising sufficient funds through public subscription, issuing large space advertisements in the Press and building up public pressure on the Conservative and Liberal Party leaders, through propaganda and direct mail, to give their consent and approval to the application of a formula in marginal constituencies.

The first aim is based on economic conceptions drawn from the country's previous experiences of nationalisation and the group's opinion that another socialist Government would kill what remaining influence the U.K. has in international affairs. The second is based on the proposal that in Conservative-held marginal seats, no Liberal candidate should stand at the next election, while in Labour-held marginal seats the Conservatives should leave the field free for the Liberals. At first sight, this appears to be an attempt to get the two Parties concerned to reach a firm electoral pact, but the announcement is quick to say that the respective Party headquarters should only give the formula their tacit blessing, and thereafter leave matters to the Constituency Association, although there is no indication of how this is to work in practice without a firm lead from above. It is not intended to ask the opinion of either of the Parties concerned until the pressure from the constituencies builds up, but the Front believes that both Party headquarters favour the proposal, although the Liberal Party has declared that it will have nothing to do with such pacts. It is claimed that this formula would prevent a

socialist being returned on a minority vote because of a split vote between Conservatives and Liberals. This may be true, but what is not made clear is how questions of policy are reconciled after the elections are over, and whether it is considered possible, having brought the two Parties together, to prevent their further integration.

It is the third aim which raises the most interesting problem. The Liberal Party has been agitating for proportional representation for some years, not so much because of its value to the country, but because it continues to regard it as its only hope of regaining some of its past glory. Lord Hailsham, the Conservative Party chairman, has not vetoed the idea, but has been content to say that his Party cannot introduce it immediately (as has been suggested) since it has no mandate from the country to do so. Several M.P.'s on the Conservative side of the House have spoken in favour of the proposal and even the *Economist* has questioned whether the Conservatives are wise to pay it so little attention. Lastly, the announcement says that the group believes that there are many Liberals who would support a Conservative candidate in preference to a Labour one if the alternative vote were included in the former's programme at the next election.

The alternative vote is practised in several other countries, including Australia, and there is certainly something to be said for the results it achieves. As the *Economist* says: "The alternative vote... would seem to give them (the Conservatives)... an assurance that thumping Labour majorities in the House of Commons will not again be built on a minority Labour vote in the country". The present system has stood the test of time and the results that it has achieved have been satisfactory. This does not prevent a change, if that change is to be of permanent benefit, but doubts must arise as to the effect of this system of voting on the balance of political power. It might well be that the alternative vote would produce more balanced representation, but that balance itself might make it impossible to govern the country, no Party having the over-all majority which is necessary for a strong government. The country might experience the same difficulties as those that have beset France for so long, and to which General de Gaulle has promised an answer in the form of a changed constitution.

The new Front is quick to deny that it is seeking to further Liberal ambitions, and it may be

pure coincidence that its aims appear to further the interest of the Liberal Party more than those of the Conservatives. But nevertheless, any proposal on these lines must be regarded as a possible Liberal attempt to gain the balance of power under an attractive cloak. It is an interesting experiment, with much to be said in its favour. If its objects can be achieved, it may well contribute a great deal to the country's economic stability and influence overseas. That is a matter of opinion, but the danger still remains that in seeking to attain these ends the Front may be storing up for the future trouble more fundamental in the shape of political instability. It remains to be seen whether the new movement finds public favour and which course the good sense of the British voter accepts.

DOING WITHOUT IRAQI OIL

IT happened that the upheaval in Iraq occurred soon after a strike had deprived London of omnibuses for almost seven weeks. Most people would have said that it was impossible for the widespread capital to function for that length of time lacking an essential transport service. In the event, London functioned almost normally, and the strike revealed not that the buses were indispensable but that many of them were superfluous. The number of passengers has been permanently reduced by the strike, and the number of buses is being reduced accordingly; the number of operatives, of course, likewise. About the same time the London dockworkers were on strike. The flow of traffic through the port was reduced to a trickle, and it cannot be said that Britain's overseas trade continued normally. But when the strike was over it was necessary to inform the men that some users of the port's facilities had permanently transferred their trade to other ports and that the port of London could probably not maintain its existing labour force.

With such experiences in mind, London viewed the crisis in Iraq more calmly than it had viewed other Middle Eastern crises in the past. Nobody foretold a shortage of oil. Even when it seemed that a much wider area of the Middle East might be involved, few people imagined that the economy of Europe was seriously threatened. The principle seems to be that no stoppage is catastrophic so long as it is localised. If all public transport in and around London had ceased working the economic life of this major commercial and industrial region would have been severely restricted. If labour had been withdrawn from all Britain's ports, the whole nation, dependent on its overseas trade, would have been thrown into confusion. Similarly, if from all major sources simultaneously oil ceased to flow to Europe this economically-developed area would face catastrophe. But even the Middle East's oil, though certainly desirable, is not absolutely necessary while supplies from the western hemisphere and the East continue to flow, and can be substantially and to some extent rapidly increased.

The lesson of former crises in the Middle East is that there are always alternative supplies of oil. Early in the present decade nationalisation of the Abadan refinery caused a psychological crisis in countries both west and east of Persia, but in the material sense Persia suffered more than her customers. The problems of Abadan were eventually solved, but in the meantime, attention had been diverted to other points, notably Kuwait, and their production, especially Kuwait's, soared. The closing of the Suez Canal, while affecting many commodities besides oil, raised the question whether movement of oil from the Middle East could be assured even if production flowed smoothly, but the world managed without the canal and would probably have adapted itself permanently if it had remained closed a long time. At the time of the Suez crisis, industry and transport were expanding over most of the world and demand for oil was rising. The subsequent recession has curtailed, and in some areas reversed, this rise in demand. But in the meantime new oil-carrying capacity has become available and there is a large surplus of tankers. We can now see that a reserve is necessary, so that oil can be brought, if required, over longer distances. While that reserve exists it diminishes the impact of any crisis in the Middle East.

Any crisis anywhere that threatens supplies is immediately important only in proportion to the urgency of demand for the threatened supplies. In the present economic phase no commodity is scarce; so we can take a broad view of developments. The recession in business, principally in the U.S.A., that preceded the Korean war, was merely an interruption in the long post-war expansion, whereas now, it is widely believed, that whole era of expansion is finished. Many false assessments of demand for commodities and shipping services were made early in the Korean war, and shipowners were equally unrealistic in the Suez crisis. Experience of these mistakes has moderated reactions to crises. Previous reactions were too strong, even for a period of expansion. Similar reactions would obviously be inappropriate to a period of consolidation.

What concerns us now is not so much the physical as the financial effects of such developments as an upheaval in the Middle East. If supplies of Middle Eastern oil were seriously reduced, Europe would not be starved of oil, and it would not necessarily have to pay greatly increased prices; but to provide itself adequately it would have to spend more dollars, and, unless special arrangements were made, its financial liquidity would deteriorate. Sterling as a currency would suffer not only for this reason but also because sales of oil originating in the sterling area would be restricted—indeed, the sterling area itself, which includes Iraq and Kuwait, might diminish.

In the changed state of trade, however, these hypothetical possibilities are not unduly alarming. The economy of Europe could adapt itself to the loss of Middle Eastern oil more easily than the Middle East could adapt itself to the loss of the

European market for its oil. And the sterling earned by the oil-producing countries of the Middle East is now easily convertible, so that membership of the sterling area is a convenience for those countries. Division of the profits from oil is a more complex matter, but it does not affect the basic economic realities. The world is now, in the main, a buyers' market, and in that state it is more relaxed and stable than it was in the long period of the sellers' market. Even then curtailing supplies or raising prices unduly was hazardous. In Britain the rise in the price of coal has caused permanent substitution of coal by oil, and in the world generally the substitution of aluminium for copper when the price of copper was high has not been completely reversed by the fall in the price of copper. Not even high wages are an unqualified benefit to the recipients, for they hasten substitution of machines for men.

crores payable in five instalments. The Corporation would exercise control on the units which seek help. The millowners in their memorandum, have further stated that it is not within the power of the mills in U.P. to reduce the present cost structure. Between 1938-39 and the current year, costs have risen by about 500 percent, and the Indian cotton-using section of the industry especially has been driven to the wall. Mr. P. D. Singhan, voicing the feelings of this section, recently told a meeting of the Rotary Club in Kanpur that "foreign cotton worth Rs. 60 crores was imported for the benefit of a few respectable people while the needs of the masses were ignored." The prices of imported cotton, he said, have gone down by 33 percent while prices of Indian cotton have gone up by 33 percent. The Suti Mill Mazdoor Union's remedy for this state of affairs is for the mills to shift production to finer counts, but this would not be possible without better equipment. According to the millowners, the prospect for medium and coarse count mills is rendered even more bleak by a difference of as much as 40 percent to 50 percent in the selling price of mill cloth and handloom cloth of the same quality. The textile industry in Kanpur has a fixed capital of Rs. 5 crores, but arrears of income tax alone exceed that amount, leaving out other arrears on account of sales tax, excise duty and provident fund contributions.

Current News and Comment

Textile Mills in Trouble

The textile industry is passing through a serious crisis. No less than 26 mills have closed down completely while 37 mills have announced partial closures. The number of casualties—the total or partial closure of mills—tells only half the story. Speaking at the annual general meeting of the Indore Malwa United Mills Ltd. Mr. Kudilal Govindram Seksaria, chairman, has said that many mills are incurring huge losses. In Baroda, seven mills are still incurring losses, the average loss being Rs. 1-8 a loom shift. The loss sustained by 11 mills in the Nagpur area works out to Rs. 2 to Rs. 5 a loom shift. The chairman of the Textile Mills Association, Nagpur, has, therefore, recently announced that all the nine textile mills of Vidarbha region and two of Mahakoshal area, Madhya Pradesh, are to close down from 11th August. Furthermore, the mills in Saurashtra, Madhya Pradesh, Rajasthan and West Bengal have reported heavy losses. The position is not otherwise even in Bombay. About 30 mills in the latter State and ten mills in Ahmedabad are working at a loss. Apart from the heavy taxation imposed by the Central Government, the State and local authorities imposed additional burdens on the industry. They increased the existing levies or imposed fresh ones at a time when textile mills were passing through a phase of crisis. Following the replacement of sales tax on cloth by additional excise duty, the State Governments, including Madhya Pradesh, have withdrawn the concessions which were available to the industry for the purchase of machinery, raw materials and stores. "The Madhya Pradesh Electricity Board forced an increase of 5 percent in the Tariff Schedule for power supply to the mills. The State Government also increased additional excise duty on power generated or consumed by the mills. The municipalities too came forward with an increase in various octroi and property duties." The Government has substantially reduced the excise duty on coarse and medium varieties of cloth. Mr. Seksaria says that the revision will ensure a fair and equitable incidence of the levy on different varieties of cloth, "bringing it as close as practicable to an ad valorem basis." But the reduction in the duty alone is not enough, and other concerted measures are necessary. Some of these are: the reduction in labour cost, suitable amendment of the provisions of the Industrial Disputes Act, positive assistance to mills in introducing efficient methods of work, the grant of liberal loans to the industry by the National Industrial Development Corporation and the Industrial Finance Corporation, etcetera. Mr. Seksaria hopes that the recommendations of the Textile Enquiry Committee will be favourably considered by the Government.

Textile Industry in Bombay

Mr. Kasturbhai Lalbahai, President of the Indian Cotton Mills Federation, has warned the country that its textile exports will fall to 600 million yards from the current level of 800 million yards. He says that keen competition has developed in international markets, which so far India had found difficult to meet. Mr. Kasturbhai Lalbahai thinks that Indian goods do not come up to the standards required by overseas markets. The President says that the industry's costs of production have risen mainly because of the increase in wages which is disproportionate in relation to output. The output of the Indian worker is the lowest in the world, he says. Mr. Kasturbhai Lalbahai has pointed out that 65 percent of the machinery installed in Indian mills is now more than 30 years old and that about Rs. 400 crores will be needed to renovate the industry. Unless the mills are rationalised, India will not be able to compete in foreign markets. He disagrees with the Government's policy of laying undue emphasis on the

production of handloom cloth. He contends that workers in this section of the industry earn less than unskilled labour in the villages. Meanwhile, a deputation of workers of the now closed Seksaria Mills waited on Bombay State's Minister of Industries and urged that the Government should take over and re-start the mills as it did in the case of the Sholapur Mills. The Seksaria Mills have been closed for the last three months and the company has gone into liquidation. The Minister is reported to have told the deputation that since the concern was in the possession of the Court Receiver, the Government could take no action.

Insurance Business Pool

The Insurance Companies Association Pool was formed to transact general insurance business emanating from the Government and semi-government organisations and public bodies such as municipalities, etcetera. It is a common body for the acceptance and issue of policies on behalf of the Indian companies. Prior to the formation of this Pool, Government business was not properly canalised. It went to the companies in an irregular manner—there being no machinery to ensure its equitable distribution. It is now the medium through which all member companies participate directly for their proportionate share of Government business. This is of considerable significance in the present context of the economy when the activities of the public sector have been steadily expanding. After the nationalisation of life insurance, the Government of India has come to acquire control over a few general insurance companies. It has, therefore, stipulated, somewhat discreetly though, that 50 percent of the business should be given to these Government-controlled companies; and the balance should be distributed among the private units. At the fifth annual general meeting of the Pool, the chairman, Mr. M. S. Dastur, has given the latest working results excluding aviation insurance, for which a separate machinery is in existence. Total net premiums in all departments (excluding aviation) have gone up from Rs. 38,70,066 in 1956 to Rs. 56,36,832 in 1958. The claims ratio has, however, increased from 24.57 percent to 30.56 percent. The total outgo in all departments amounted to Rs. 31,39,541, leaving an underwriting surplus of Rs. 24,97,291, representing 44.30 percent of the premium income, against 57.70 percent in 1956. After adding interest to it of Rs. 1,73,459, the total amount at the disposal of the Pool for distribution among its members is Rs. 26,70,75. The commission and expense ratio has, however, gone down from 12.82 percent in 1956 to 9.45 percent in 1957.

Memo from Kanpur

Hardly less original than the Union Minister for Revenue, Mr. Gopal Reddy, who has suggested that English should be written in the Devnagari script, is U.P.'s Minister for Local Self-Government, Mr. Vichitra Narain Sharma, who has said that "under the present dispensation, the use of mill-made cloth is a crime equivalent to eating beef." Happily, even in his own State, there is no general movement yet to equate the closure of textile mills with the ban on cow slaughter. In separate memoranda submitted to the Textile Enquiry Committee, both employers and labour in Kanpur have stressed the need for adequate financial assistance to the industry. In its memorandum, the Suti Mill Mazdoor Union, for example, takes the view that "the millowners should be helped where help is genuinely needed." The special committee of the millowners would like the help to be canalised through a State-sponsored financial corporation. To begin with, the corporation would require a capital of Rs. 10 crores, and it should be brought into being by the Government making provision for a contribution of Rs. 2

Motor Cycle Manufacture

The motor cycle industry in India, although limited to a single factory near Madras city, has in the last two years made good progress, thanks to the help received from Royal Enfield. The development programme authorised for the factory by the Government provides for a total output of 9,200 vehicles. The manufacturers propose to increase their capital to Rs. 75 lakhs from the present figure of Rs. 56 lakhs. When the programme is completed, the imported parts will then be only 50 percent of the material used. The factory expects to employ after 1958 about 1,000 persons. The latest thing to be produced by this factory is a three-wheeled vehicle for use as local delivery vans. With a 3.5-h.p. engine, the three-wheeler should serve many trades which rely on quick delivery. Cigarettes, tea and even aerated water are carried in small vans. This is yet another example of valuable British help to an Indian enterprise. The preference for the 1.5-h.p. machine in India is a sign that the light-weight British motor-cycle (on which also pillion riding is allowed) is very popular, in spite of the fact that the Scooter of Italian origin is being used on a progressively increasing scale.

Credit against Sugar Stocks

The Bombay Sugar Merchants Association has protested against the recent directive of the Reserve Bank of India restricting credit against sugar stocks. In a telegram to the Central Food and Finance Ministers and to the Governor of the Reserve Bank, the Association points out that the Reserve Bank directive to banks to maintain the margin of 45 percent applies to stocks held by merchants and not by manufacturers. This, the Association says, is unfair because it is the manufacturers who hold stocks and not the merchants. Sugar mills, the Association says, keep on raising their selling prices according to market trends which means that merchants have to incur additional outlays. Unless adequate credit facilities are available, merchants will not be able to maintain sufficient stocks at consuming centres and this, says the Association, will create conditions of artificial scarcity. In addition to relaxing credit, the Association has urged the Government to compel sugar mills to sell and despatch their allotted quota within four weeks and to ask the railway authorities to provide the necessary wagons for this purpose. Since the 50,000-ton export quota was announced, prices have shown a tendency to rise and the Forward Markets Commission has issued a stern warning against speculation in sugar under the guise of business in delivery contracts.

Industrial Progress in Andhra

Taking stock of the progress made on various economic fronts since the last Independence Day, the Government of Andhra Pradesh says that the State has made appreciable progress. A sum of Rs. 87.80 lakhs has been provided in the 1958-59 Budget for industrial development, and Rs. 45.6 lakhs has been earmarked for implementing schemes for promoting the growth of major and medium industries. An important scheme is the expansion of the Andhra Paper Mills, Rajahmundry. It is designed to increase the present production capacity of the mills from 2,000 tons to 15,000 tons of paper a year at an estimated cost of Rs. 1.9 crores. There is also a scheme for starting a

There are few organisations in the World capable of providing every type of system needed for modern telecommunications networks on a continental or inter-continental scale. S.T.C. is just such an organisation. During three-quarters of a century S.T.C. has developed its resources to embrace every aspect of the art of telecommunications. Radio broadcasting, communication, navigation, line transmission, television transmission, submarine communications, telephony, telegraphy — these are but some examples of S.T.C. activity in research, development and manufacture. Nothing pleases S.T.C. more than to assist in solving new problems in telecommunications. So please remember S.T.C. is at your service for consultation.

strawboard and paper mills in Tirupathi with a production capacity of 10 tons of strawboard a day at an estimated cost of Rs. 10.35 lakhs. Another scheme aims at establishing no fewer than five co-operative sugar factories, each with a crushing capacity of 600 tons to 700 tons a day, in the Andhra area of the State. The necessary machinery and equipment required for the implementation of all these schemes has been ordered, and it is expected it will be received shortly. Construction of the factory buildings is now under way. The Government spent a sum of Rs. 24 lakhs during the year in purchasing shares of the proposed sugar factories. Some forty schemes for the development of the most important among the small-scale industries, at a total cost of Rs. 66,68,717, have been implemented. For the development of handicrafts in the State, 13 schemes were implemented at a cost of Rs. 1.83 lakhs. Two industrial estates, one in Hyderabad and the other in Visakhapatnam, have been established.

Sugarcane Prices

The U.P. Legislative Assembly has, by a voice vote, passed an Opposition motion asking the Central Government to fix the price of sugarcane at Rs. 1-12 a maund instead of at Rs. 1-7 as at present. The fact that the Bihar Assembly had passed a similar resolution earlier seemed to be a conclusive argument with many speakers who also pointed out that full justice would not be done to the growers until the price is raised to Rs. 2. The State's Minister for Agriculture, Mr. Mohanlal Gautam, opposed the resolution on the ground that besides its being unjustified in view of the low sucrose content of U.P.'s cane, it would bring about a further imbalance in the economy of the State by encouraging kisans to grow more sugarcane. Mr. Gautam also said that already the average acre yield of cane in U.P. is only 10 maunds, against 50 maunds in the south. The recovery percentage in the State was 9.7 (1957-58) against 12 to 13 in the south. If a division had been pressed on the motion the Government could of course have won by a comfortable majority. But by allowing the motion to be passed by a voice vote, the Government has exposed itself to the charge of playing politics just as much as the Opposition. Cane-growers in U.P. have a considerable voting power in the general elections and no party in the State dare displease them. A recent official census of the sugar industry in India revealed that about 60 percent of the total value of the production of sugar and its by-products, estimated at Rs. 118.73 crores, is paid out as cane price to the growers. The figure includes the value of cane grown by some factories on their own farms, but it does not materially affect the net share of the growers at the receiving end. In so far as the cess on cane is fixed at 15 percent of the minimum price of the cane, a further upward revision of prices of the raw material cannot but make sugar costs prohibitively high for the consumer. In U.P., the Government is reported to be toying with the idea of merging the Cane Development and Co-operative Departments, but it may worsen the situation if the experiment results in shifting the entire emphasis to the supply and marketing of sugarcane from the main task of improving sugarcane cultivation.

Rise in Pencil Output

The ban on pencil imports has helped raise the output of the indigenous product considerably. According to the President of the Indian Pencil Manufacturers Association, there are now 18 factories in the country, which in 1957 produced 7,151,000 gross. There is still a good deal of idle capacity. The Madras Pencil Factory, started in 1920, is the oldest unit, but it does not wish to expand its capacity at present. As stocks of foreign pencils are falling and prices are already high, the manufacturers may raise their output further. A promise that domestic pencils will be adequate in quality has been made. The I.S.S. specification for pencils also may contribute to the achievement of a higher standard. Wooden slats from Himalayan timbers are to be made in the Hindustan Housing Factory, Delhi, but for some time imported wood will be required. Relief from import duty on raw materials has again been demanded, since shuttle and bobbin makers get their imports of foreign timber duty free.

Whether exports are possible is not quite definite yet. Indian pencils are still not up to the mark, and prices must be made competitive with those offered in Asian markets by Japan. The Government is the biggest buyer of pencils, but its inspection procedure is dilatory. The payment of bills also is so slow that State patronage has not proved an unmixed blessing. It has been said that a higher quality can be attained as the home creates a permanent demand for both pencils and paper. Foreign experts can help in the improvement of quality, but as the President of the Association has pointed out, it is hard to get help in

processes which are usually kept as trade secrets. Both Calcutta and Madras have old, well-established industries, and Bombay is a growing centre of pencil manufacture.

CORRESPONDENCE

U.S. TRADING PRACTICE

(TO THE EDITOR OF "CAPITAL")

Sir,

As a regular reader of *Capital* and of a "Ditcher's Diary", I would like to comment on the Ditcher's implied criticism of United States foreign trade policy which appeared in your issue of 10th July. While the precise application of the Ditcher's comments is ambiguous in view of the reference by him to another country "falling a victim" of the same kind of thinking that it has taken "fifty years to cure America of", there is a clear implication that the Ditcher's remark that if it were not for the substantial American aid, private investment and loan programmes, the rest of the world would be in a very bad way indeed. Surely, this does less than justice to the persistent attempts by the United States since World War II to reduce national tariffs, quantitative restrictions on imports, and unnecessary administrative barriers disturbing commerce between nations.

The United States has played a leading rôle in more than half a dozen tariff negotiations under the General Agreement on Tariffs and Trade (G.A.T.T.), including those which brought Japan back into the world trade community. As a result, the United States is no longer a high tariff country. Experts in tariff matters, while conceding the difficulty of measuring the protective incidence of a tariff, now rank the American tariff midway between the highest and the lowest in the world. In fact, one expert, after a careful and exhaustive study, concluded in 1954 that if the American tariff rates were entirely suspended the increase in imports would range only from a minimum of 8 percent to a probable maximum of 17 percent. The United States has also made substantial efforts through the International Monetary Fund and the G.A.T.T. to obtain the removal of quantitative restrictions on imports when such restrictions clearly were no longer justified on balance-of-payments grounds. The United States has not been the sole beneficiary of these efforts.

British, French, Italian, Swiss, and Austrian suppliers of heavy electrical equipment are, of course, well acquainted with the liberalisation of United States Government procurement policy which has reduced preferences on government contracts generally from 25 percent to 6 percent. United States Government contracts worth many millions of dollars have been won by foreign suppliers under the new procedures. In fact, any firm that sells to the United States today and that sold to it before 1955 knows the changes that have been made to simplify customs and other administrative procedures in order to facilitate the task of penetrating the American market. Finally, one need perhaps note only in passing the strong support the United States has given to such important European economic integration projects as the Benelux Economic Union, the European Payments Union, the European Coal and Steel Community, the European Economic Community, and the proposed European free trade area. While supporting these projects, it has sought safeguards for the trade interests of other countries outside the Continent, including the economically less developed ones.

There is no need to describe in detail these manifestations of a bipartisan foreign economic policy over the past ten years because the record is there for anyone to read. Perhaps it is not a perfect record and perhaps the United States could and should do more, but surely this is not a record of deliberately making things difficult for one's neighbours. It is significant, for example, that many industrial groups in the United States regard the much-publicised "escape clause" affecting United States tariff concessions as virtually a dead letter because of the manner in which it has been applied. The reasons for the imbalance in world trade, of which the flow of gold to the United States is only a manifestation and not a cause, are many and must be sought elsewhere. They have been recited many times in *Capital* itself. It is important that foreign governments and potential foreign exporters to the United States should understand this and that they should know the effects that have deliberately been made by the United States Government to facilitate the task of selling to the American people. Otherwise, they may fail to take the steps which only they can take to expand their exports to the American market. It is gratifying to note that many foreign governments and industries have taken those steps, as shown by the 13.2 billion dollars of foreign

merchandise purchased by the United States last year.

Yours etc.,
JAMES J. BLAKE,
AMERICAN CONSUL.

Calcutta, 22nd July, 1958.

A CASE OF FIRE INSURANCE

WE published in our issue of the 12th May an interesting case regarding Fire Insurance, in which, as it appeared to us, the Royal Insurance Company had paid a claim which in strict law could not have been enforced against them. It appeared that a Mr. Marshall had stored certain goods with Messrs. Maple & Co., and had insured them for the sum of £800. Messrs. Maple & Co. intimated that the goods were stored in a certain warehouse, and the policy was issued against loss by fire on goods stored in that particular warehouse. It turned out, however, that through some inadvertence the goods were placed in another warehouse, which warehouse was subsequently burned. It seems clear that the Royal Insurance Company had no risk upon this particular warehouse, but they paid the money to Mr. Marshall on the understanding that he would bring a suit against "Maple's" for damages. At the trial of the suit, the jury were unable to agree, but the matter has now been settled by Messrs. Maple & Co. paying £1,500 to the Royal Insurance Company for damages and costs—admitting that the policies were invalidated by reason of the goods being stored as stated. Commenting on the above, the Review remarks: "It is satisfactory to know that the Royal has succeeded in this action in establishing the principle that we have continuously contended for, namely, that no insurance company would dream of insuring goods unless they knew where these goods were. It seems such an obvious proposition that it is astonishing that any discussion should have arisen. The case is now settled, and without any further observations we may congratulate the Royal Insurance Company on having definitely brought home to the minds both of warehousemen and the public the sense (to the former) of their liability, and (to the latter) of the liberality with which insurance companies treat bona fide policy holders. The Royal was not bound to pay this claim at all, but it did so, and took upon itself the trouble and expense of protecting its client."

Without Prejudice

THE MODERN DOCTRINE OF
"AUTOMATISM"A CASE OF AGENCY AND
MONEY

(FROM OUR LEGAL CORRESPONDENT)

OUR stock of 1958 English cases and matters legal is accumulating, so in this and succeeding issues we will release some of them, instead of waiting until the end of the year as is our usual custom. We will begin with a case of interest to motorists and to those who insure them; and it may be a clue or it may be a trap in regard to the moot which follows it and which the reader is invited to think out for himself.

In *Hill v Baxter* (1958) 102, *Solicitors Journal*, 53. The facts were that a motorist was charged with dangerous driving and with failing to conform to a traffic sign. The defence was "automatism"; and here we will halt and make our customary protest against what we consider the misuse of the English language simply to secure brevity. The modern so-called doctrine of "automatism" as a defence to criminal charges relates to attempts to show that the accused was not responsible for the natural and probable consequences of his act because he was at the material time unconscious or insane or helplessly drunk or drugged, etcetera. This is not automatism. There is nothing automatic about it. Automatism refers primarily to animals and attributes their doing apparently human acts to involuntary mechanical routine action. However, let that pass and forgive us for digressing. The accused claimed that he must have been overcome by sudden illness and must have been in a state of automatism at the time. He swore that he could not remember anything about the incident and he put in two medical reports—the prosecution, strange to say, not objecting—which were inconclusive but lent some colour to his version of what had happened. The magistrates acquitted and the prosecution appealed to the High Court (Lord Goddard, C.J., Devlin and Pearson, JJ.) against the acquittal.

The Lord Chief Justice and his colleagues sent the case back to the magistrates ordering them to convict, holding that there was no evidence in support of the defence that was fit for their consideration. They said—and it is worth noting in India,

where magistrates constantly accept medical certificates not even sworn to—that "in a criminal case medical reports may not be put in evidence, even with the consent of the other side unless some statutory provision permits that to be done." Lord Goddard added: "The onus of proving that he was in a state of automatism rests on the accused, subject no doubt to the qualification that where an onus is on the defence the burden is not as high as it is on a prosecutor; not only is such a defence akin to a defence of insanity but it is a rule of the law of evidence that the onus of proving a fact which must be exclusively within knowledge of a party lies on him who asserts it." It rather looks as if the result might have been different if the two doctors had gone into the witness box and supported the accused's version on oath.

And that brings us to the moot set by the learned editors of *Law Notes* for debate and decision by law debating societies throughout England. This is it: "At about 11 a.m. on Thursday, 23rd January, 1958, James was driving his loaded motor-van at a proper speed along a public road at Placebank when, suddenly and without apparent reason, he felt faint and ill. He stopped the engine, slowed down the van to walking pace and drew it leftwards to the side of the road. But before the van stopped, James became unconscious through being overcome by sudden illness and collapsed over the steering wheel on which both his hands rested. The road was on a gradual decline and the van went on at a slightly increasing pace until it collided with the back of a motor-car properly parked 50 yards in front of it, damaging the car and slightly injuring a person in the back seat. James remembered nothing from the time he was bringing the van to the side of the road until he recovered consciousness a minute or two after the collision as he was being taken from the van. Evidence of pedestrians on the path on the opposite side of the road, establishes that immediately before the collision James lay over the steering wheel as already described.

"Is James guilty of driving the motor-van in a manner which was dangerous to the public, contrary to Section 11(1) of the Road Traffic Act, 1930?"

Do not be carried away, as every instinct of fairplay and "natural justice" will incline you to be, by the idea that to convict James in such circumstances would be preposterous. These statutory offences, which are multiplying daily, often produce unjust results. In fact, the moot is a highly debatable one and the Coventry and Leicester Societies which debated it jointly, Coventry taking the side of the prosecution and Leicester defending James, came to a conclusion by one vote

only with one abstention, a member who was unable to come to a definite conclusion. If the writer had been present he would have joined the "abstentionist". We will give the reader two clues, one for the prosecution and the other for James. They are laconic, and relate back to articles on this subject written a few months ago in this column. For the prosecution, the clue consists of one word and for the defence two. They are respectively "diabetes" and *mens rea*. The majority decision of the Societies appears at the end of this note.

Shamia v Joory (1958), 77, *Law Notes*, 35, is an interesting case on the law of agency and money had and received which may not be followed in India. Y was J's representative in Iraq for the purpose of collecting rents and dealing with J's property there. J, who was on a visit from England to Iraq, agreed with Y that on the state of account between them J owed Y 1,300 dinars. Y asked J to give to the plaintiff £500 out of this sum on his return to England and wrote to the plaintiff in England telling him of this arrangement. In correspondence between the plaintiff and J, J promised to send the money "at the end of this month," and then sent a cheque for £500. This had to be sent back to J as it was incorrectly drawn and J promised to send a fresh cheque, but never did so. Can the plaintiff sue J for £500? "Yes," said Barry J. in the Queen's Bench Division. Where a person transfers to a creditor an account of a debt, whether due or not, a fund actually existing or accruing in the hands of a third person, and notifies the transfer to the holder of the fund, then if the holder of the fund promises to pay the transferee, an action for money had and received lies at the suit of the transferee against the holder of the fund. It makes no difference that the transferee is a donee and not a creditor, or that the "fund" is a mere temporary balance in a running account. J was not bound until he promised to pay the plaintiff, but, if he chose to promise, the plaintiff could sue him for money had and received.

The above, though we shall look out for any future developments of the case with interest is, no doubt, the law in England. But we doubt its application to India. True it is that J temporarily owed Y £500 and more on the then balance of a running account; true also that J voluntarily promised to pay S £500 out of the sum he owed Y. But J, in respect of the £500 and the proposed payment of it to S, was acting as the agent of Y and S knew that he was so acting. By Section 230 of the Indian Contract Act it is provided that "in the absence of any contract to that effect, an agent cannot personally enforce contracts entered into by him on behalf of his principal nor is he personally bound by them."

Solution to the case of the "automatic" van driver. First, as to the two clues we supplied. The regular reader may remember an astonishing case on which we commented some time ago. A gentleman was suffering from diabetes and knew he was so suffering. He proposed to drive his car into Guildford to visit a cinema. Before setting out he took the precaution of administering to himself the treatment prescribed by his doctor for his complaint. He drove into the town and while doing so was overcome by diabetic coma and was found by the police outside the cinema in his car, collapsed and unconscious over the steering wheel. He was prosecuted for driving to the danger of the public. The magistrates acquitted. Grounds, "automatism". On appeal the High Court directed that he must be convicted. The case is strongly against James in the moot. Please stop here and consider on the facts what is the very important distinction between the Guildford case and that of James. The clue we supplied for the defence was *mens rea*. It means a guilty mind directed to the performance of a guilty act. Normally a man cannot perform a guilty act and incur criminal responsibility for it without intending to do the criminal act or at least acting with such complete recklessness as to amount to intention, e.g., manslaughter. The essential constituent element of a criminal offence is this guilty intent. The commission of the act without the intent is not, as a general rule, sufficient to constitute a crime.

The majority of the Societies—Durham and North Yorkshire winning the first prize—decided that James should be acquitted. How did they get round the Guildford decision? Well, the report in *Law Notes* gives no reasons but the writer's guess would be this. James suddenly collapsed "without any apparent reason". He had no reason to anticipate that he would faint. But the Guildford motorist knew that he had diabetes and knew or must be presumed to know that a sufferer from that disease is liable to sudden blackouts by way of coma. He drove into Guildford knowing and intentionally disregarding the risk. Implied intention amounting to *mens rea*.

NEW REFRACTORIES PLANT IN MADRAS
The well-known engineering firm, Burn and Magnesia Syndicate Limited, Salem, a firm which has been mining crude magnesite ore and making a light calcined product for chemical industries for over 50 years. With this change, Burn and Magnesia has undertaken to put up in Salem a refractory works manufacturing high-grade work the existing mines and the calcining plant Limited. With the starting of the new plant in Salem, Burn's refractory works in West Bengal will concentrate wholly on the manufacture of increase refractory production and save the country a considerable amount of foreign exchange. After the Salem plant goes into production, refractory and ceramic works will be operating in the States of West Bengal, Bihar, Madhya Pradesh and Madras.

A Ditcher's Diary

NEUTRALISM AND NON-COMMITMENT BECOME HABITS of mind if one isn't careful, although I am quite prepared to believe that Mr. Nehru was being careful in saying what he did about Mr. Atulya Ghosh on his recent welcome visit to Calcutta. Mr. Ghosh, he said, is a fine organiser and a tower of strength to the West Bengal Congress. Did some people want him to resign as near-permanent President of the State Congress? Mr. Nehru had an answer for them too. He prefers the rotation system whereby no individual or group holds office indefinitely. My own bewilderment at this kind of approach may not be shared by Bengalis a friend among whom tells me that this is nothing unprecedented in Mr. Nehru. He took more or less the same stand (if that is the word) when a dispute arose between the Congress High Command and Subhas Chandra Bose in the late 'thirties. I know nothing at all about the intricacies of West Bengal's Congress politics, which must be labyrinthine indeed, and as professional writers of character-certificates say in this country, I know nothing against Mr. Ghosh. I am only thinking of the possible consequences of Mr. Nehru's internal or domestic neutralism which may be a good deal less wise than it is believed to be in foreign policy. I may be too simple-minded to think so, but it seems to me that both Mr. Ghosh and his critics cannot be equally right at the same time; and if that is so, the leader is under an obligation to say which side he is on. One reason why he should do so is that otherwise disputes continue, for he alone seems to have the power and the popularity to resolve them. Congressmen themselves bemoan everyday that their organisation is getting weaker and weaker. The only cause may not be, as Mr. Nehru once suggested, the rottenness of the rank and file. Another may be the failure, or disinclination, of the leadership to—well, lead.

IN THIS WEEK'S CURRENT NEWS AND COMMENT columns of *Capital* is published a letter from Mr. James Blake, American Consul, commenting on some of the things I said a few weeks ago about his country's trading practices. My thanks are due to him for the trouble he has taken, and my congratulations for the flattering way he has represented U.S. intentions. But his attempt to explain away American tariffs reminds me of the young serving maid's excuse for her illegitimate child: "Well anyway, it is only a very small baby". My point was that the world's largest trading nation must have no tariffs at all if its partners are to earn enough to buy its goods without having to sustain an unnecessary drain on their liquid resources. To use only the figures Mr. Blake has given, if the post-war world had been able to expand its dollar earnings by a mere 8 percent—as it could have done had there been no tariffs—it is unlikely there would have been a dollar gap at all to plague balances of payments. An increase as high as 17 percent would probably have made American dollar aid to the free world quite unnecessary as well. If such an increment could be secured even now, the present strain on the sterling area, which finances over 50 percent of world trade, would be entirely relieved. When he quotes such figures as 17 percent Mr. Blake forgets the size of the American import bill and how important this marginal figure can be to smaller trading nations. Besides, if the present tariffs are as insignificant as Mr. Blake would have us believe, why is the U.S. maintaining them at all? I appreciate the

point about America's efforts to promote improved trading practices through such institutions as G.A.T.T. Mr. Blake puts this forward as a virtue to his country's credit, but that is not exactly the word I would use to describe the action of one party in urging on another a form of behaviour which it has not yet adopted itself. I will not deny the progress that has been made since the war in the U.S. attitude towards its trading responsibilities, only that this is still inadequate for the world's leading trading nation, and that the accumulation of such a large proportion of the world's gold in the U.S. is an index of that inadequacy. Whether the damage American trading policy is doing is deliberate is surely irrelevant so long as there is something the U.S. can do about it. I agree with Mr. Blake that the imbalance of world trade is not America's fault. My submission is only that it must shoulder the lion's share of the blame for the fact that this imbalance still persists, or did until the present slump, to the free world's undoubted embarrassment.

IS TODDY AN "INVIGORATING AND HEALTH PROMOTING drink?"—asked somebody at a recent meeting of the Corporation of Bombay. Frankly, I don't know the answer. The suggestion was then made that the "dry law" should be relaxed in favour of toddy and beer. And this has my whole-hearted approval. The pretence has long worn out that there is not large-scale illicit distillation in the "dry" regions of India. The police themselves recently discovered in the Fort area of Bombay a huge automatic still (this machine age!) producing enormous quantities of liquor which was being sold as "foreign-made stuff". It is time for Congressmen to ask themselves whether this is the kind of *swadeshi* industrialisation they have in mind. As a Finance Minister, Mr. Morarji Desai might be expected to see that this is an industry which is tax-free; and nobody will suggest that he has left it so because he thinks toddy and beer are invigorating and health promoting. So far as I am concerned, Mr. Desai is entitled to his views about the merits, or otherwise, of alcohol. It's lesser men I am thinking of, and they, in spite of all the hopes of social reformers to the contrary, still find harmless solace in an occasional drink. They pay for it too and, where there is no Prohibition, much of the money goes to the Government. While I am on the subject I might as well ask what "dry" days mean, such as the one we have in West Bengal. Not as though the serious drinker is worried. I am told constables on certain thoroughfares are admirably helpful in showing the way to establishments where liquor (of a sort) is available (at a price) whether the day is wet or dry.

THERE CANNOT BE MANY SUBJECTS ON WHICH Mr. Nehru and the British Press are in complete agreement, but one of them would seem to be the "horrors" of subliminal advertising. Both maintain that it ought to be banned. It should, therefore, be a matter of some satisfaction in India that the British Institute of Practitioners in Advertising has done just that. It expresses itself thus: ".....the use of subliminal communication in whatever form for advertising or sales promotion is professionally unacceptable. The free choice by the public to accept or reject is an integral part of all forms of acceptable advertising and does not appear to be available to recipients of subliminal communication." An admirable point of view, if somewhat

inelegantly put. There is no doubt that the subliminal technique is less blatant and more subtle than most other forms of acceptable advertising and propaganda. But whether it is less ethical or as dangerous as people seem to think, is another matter. A recent report of a panel of advertising investigators on the subject has come to some rather unexpected conclusions. It states that present evidence shows little if any effect from subliminal communication in selling and persuasion, and that the dangers of the method are not proved by evidence. Indeed, experiments by one London advertising agency showed that audiences subjected to subliminal suggestion are apt to react by doing the opposite. During the screening of a film thriller, a group of housewives was given fifty subliminal messages, each lasting 1-200th of a second, telling them: "Have an ice". But only half as many of them bought ices as would have done in a similar audience which had not had the message at all. Whether this proves anything other than the well-known fact that women can be thoroughly stubborn and perverse when they want to be, is a point I will leave to the investigators. In another experiment, each member of audiences leaving a cinema was invited to take a sample box of soap. The boxes were labelled "B", "F", and "M". One audience was urged, in thirty subliminal messages flashed on the screen during the show: "Choose M". But the proportion of those who did choose "M" was only half as big as it was among those who had not been subjected to any subliminal suggestion at all. There is an obvious answer to this difficulty. But the fact remains that subliminal techniques may not be as powerful as we seem to think they are.

ON A RECENT TRIP BY ROAD BETWEEN BURDWAN and Asansol I was glad to see so much of the new Durgapur steel plant already visible above ground level. What was not so pleasing, however, was the complete absence of any sign that the road traffic it will attract is going to be adequately catered for. No doubt the railway will handle most of the comings and goings. But there is bound to be a big increase in the number of lorries and private cars coming to and from the plant both up and down the Grand Trunk Road. If the stretch between Calcutta and Asansol was bad before, it promises to be considerably worse when the plant begins operations. Yet there appear to be no plans afoot for widening it generally and for removing such hazards as narrow bridges, level crossings and bustee areas. The stretch between Calcutta and Chandanagore is a notorious death-trap now. It is going to be a good more dangerous soon. I know that good roads cost money. But I should be sorry to see India make Britain's mistake of considering that they are a good subject for penny-pinching economy. The fact is they are not. In terms of time and fuel wasted, lives lost and vehicles worn out or wrecked, bad roads are a serious charge on a poor nation's resources. India cannot afford them, especially on a stretch which promises to be the busiest in the country, if indeed it is not already so.

"I SAY COHEN, IS IT TRUE YOU APPLIED FOR A JOB with the B.B.C. as a radio announcer?"

"Y-yes, and they gave me a t-t-t-t-t, they gave me a t-t-t-t-t, they gave me a test. And I p-p-p-p-p, and I p-p-p-p-p, and I passed."

"Good Lord! Do you mean to tell me that you're going to get a position as an announcer?"

"N-no! They're a lot of b-b-b-blessed anti-semites down there."

CLEAN
COAL

India's expanding steel industry needs huge quantities of blast furnace coke, yet precious reserves of coking coal must be carefully conserved. Millions of tons of coal a year must therefore be scientifically washed and blended for steelworks coke ovens.

Simon-Carves have half a century's world-wide experience of the complete design and construction of large-scale plants for coal washing, grading, blending, storage and handling. In conjunction with The Automatic Coal Cleaning Company they offer the most advanced range of mechanical equipment for Baum jig washing and for two-product and three-product dense medium separation. These great resources are being applied to the construction of the complete coal preparation and blending plant for the new Durgapur steelworks — where Simon-Carves are also building the new coke ovens, by-product plant, sulphuric acid plant and power station.

WIDESPREAD GAINS ON LONDON STOCK MARKET

INDUSTRIALS RISE: RECOVERY IN GILT-EDGED

London, 30th July.

THE London stock market continued its recovery during the past week, although it became quieter and less confident towards the week-end. The market recorded widespread and often appreciable gains on balance and the one section which failed to participate to any great extent in the recovery was the oil share market which remained uncertain and staged only a modest rally. Certain western hemisphere issues were the exception and advanced sharply. The recovery in markets reflected a more optimistic view on the Middle East situation and operators hoped that a summit meeting would be held to achieve a settlement. If a settlement was reached, it was hoped that this would open the way for a resumption of the cheaper money trend which was interrupted by the Iraqi crisis. The consequent hopes of a further reduction in the British Bank rate had a stimulating effect on the gilt-edged market which staged a good recovery from the recent sharp fall and recorded gains extending to over one full point. The sustained advance on Wall Street also contributed materially to the market's recovery. There was less confidence later as hopes of an early summit meeting began to fade while the President of the U.K. Board of Trade warned that the effects of the U.S. recession were likely to hit Europe in the near future; this created some uncertainty. Business which had expanded prior to the week-end contracted afterwards, but this partly reflected the approach of the peak holiday season of the year. German and Japanese bonds were occasionally supported but other foreign bonds were neglected. Dollar stocks advanced in response to Wall Street. Insurance shares tended higher and bank shares advanced sharply following the news that the Barclays Bank was to take a more direct interest in hire-purchase business by the acquisition of a 25-per cent share interest in the United Dominion Trust. Hire-purchase finance shares were generally firm while shares with interests in commercial television were prominent. Industrials generally went strongly ahead. Gold shares staged a good recovery while base metals showed very little change. Rubber shares tended higher on small investment buying. Tea shares were selectively firm and there were some particularly bright spots among Indian and Ceylon issues.

The Money Market

The London money market has now reached that point in the year when the main holiday season affects the banks' cash resources as a result of the heavy outflow of currency. During the past week, the amount of money which went into the hands of holiday makers was running at a very high level and consequently, with the strain on their cash balances, the banks had very little fresh money to spare for the requirements of the money market and conditions on most days of the past week were difficult. The shortage was not very acute in view of the smaller needs of the market but borrowers had difficulty in satisfying

their requirements and had to pay higher rates for accommodation with the range for non-regular money between 3½ and 4½ percent. The authorities were often able to help the market overcome difficulties but some penal borrowings were necessary. Bill business was restricted by the cash position for October and sold in the early part of the week at 4½ percent, and 4½ percent, but in the latter part of the week, after a drop in the Treasury bill rate at last Friday's tender the same bills were subsequently sold on the basis of 4½ percent.

Stock Market Prospects

The *Investors' Chronicle* market newsletter writes: "After reacting to the lowest level for three months, London gilt-edged securities rallied cautiously. The general pattern of industrials is remarkably good but they were swayed more by daily Middle East developments than business news. After reacting to resistance areas, gold shares rallied but the market is still very thin. Copper shares improved with the metal. Wall Street industrials moved high but bonds dipped to the lowest level since April. With the threat of war receding, Wall Street had witnessed a sharp advance in prices, and London sentiment also improved rapidly but with little business. Prices remain sensitive. Sterling is always vulnerable in international crisis and no strong movement can be expected until the attitude of Egypt, Russia and Kuwait became clearer. Eventually the cheaper monetary trend will be re-established bringing more solid gains in industrials."

Activity on Wall Street

The bond market was highlighted by the strength in long-term U.S. Government obligations. Active buying in Treasury issues was triggered by an announcement by the Federal Reserve Board of New York promising to buy other than short-term Government securities in its open market operations although the lessening of international tension was also a factor. Demands, however, tapered off and prices moved away from the best levels. High-grade corporate issues were dominated by the action of the Governments. Speculative rails were mostly steady. Convertibles generally showed an improvement in keeping with the rising stock market. Foreign bonds were mixed in quiet dealings. Most German Nationals showed only fractional changes. Japan 6½ percents gained at the outset but later receded. Chile 3 percents were fractionally higher, while among Italian issues the 3 percents of 1977 fluctuated over a range of a point.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 23rd July, shows that the gold stock declined by \$24 million to \$21,259 million. Foreign deposits fell by \$63 million to \$255 million but foreign investments rose by \$90 million to \$3,144 million. The Federal Reserve sold \$217 million worth of bills, bought \$10 million worth of notes and purchased \$115 million worth of bonds, making the total holdings of Government securities \$92 million lower at \$25,223 million. Total discounts and advances declined by \$39 million to \$74 million, while the aggregate excess reserves of member banks fell by \$84 million to \$746 million. The daily average excess reserves of member banks rose by \$226 million to \$788 million, while their daily average borrowings fell by \$30 million to \$85 million. Business loans of the New York City banks declined by \$162 million to \$10,608 million compared with a fall of \$181 million to \$11,580 million in the corresponding week of last year. Gold certificates on hand and dues from the U.S. Treasury fell by \$27 million to \$19,809 million. Federal Reserve notes in actual circulation declined by \$103 million to \$26,758 million. The deposit member banks reserve account was \$117 million lower at \$18,634 million.

Mixed Trend in Vegetable Oils

Only a modest interest was noted for vegetable oils and oilseeds during the past week and in several sections, prices sank lower as dealers attempted to revive activity. Depressed by the week-end reductions in linseed, ex-tank U.K. supplies of linseed oil dropped down to £114 a ton. But rallying advices from Winnipeg tended to arrest selling pressure at the close. Canadian linseed prices recovered some of the 25s a ton loss and the improvement was attributed to reported buying enquiries from France for 12,000 tons. On the other hand, unconfirmed private forecasts now put Canada's crop at well over 12 million bushels, a figure which was officially forecast before the improved weather of late. Coconut oils ruled steady with Colombo sellers claiming a better market although European interest appeared to be confined to early shipments for Genoa. Copra was inactive with Philippines around \$1 a ton cheaper but arousing no support from buyers. Groundnut oil continued to display a weak undertone with the report of a decline to £97 c.i.f. being accepted for South African crude bulk oil, causing sharp reductions in buyers' valuations of other grades.

Reduced Export Quota for Tin

The International Tin Council has fixed the total permissible export quota for the fourth control period beginning from 1st October to 31st December, 1958, at 20,000 tons against 23,000 tons in the third control period. This represents an overall reduction of 48 percent for the fourth control period against a 40-percent reduction in exports in the third control period. The buffer stock amounted to 22,440 long tons of tin at 31st March this year. This compared with at least 15,000 tons at the end of last December. The announcement was made on 24th July by the International Tin Council Secretariat.

Money

THE CALCUTTA MONEY MARKET

CALL RATE FALLS

Wednesday, 30th July

THE slow decline in outstanding advances has continued in the Calcutta money market during the past week. All the main sources of demand, jute, cotton, sugar and foodgrains, show slight decreases. So far this year the seasonal decline has been unusually slow. This is probably accounted for by the fact that the increase in demand up to the peak of the busy season was itself less than that for the past year or two. Conditions are easier in the call market and the rate is down to 3½ percent, with business being done at 3 percent.

The exchange market has been quiet during the past week. Most of the bills seen have been on account of tea shipments. Remittance has been poor. The pound has ruled steady throughout the past week, probably due to the improved news from the Middle East; the parity has been maintained against both the Canadian and U.S. dollars.

BULLION RULED EASY LAST WEEK ON LACK OF support, coupled with increased arrivals of coins from upcountry. The price of silver registered a slight fall from the previous week's level of Rs. 180 to Rs. 179.50, which is today's rate for ready delivery. The rate for forward delivery stood at Rs. 179. The London and New York silver prices remained almost unchanged.

Gold was quiet in sympathy with silver as well as because of the developments in the Middle East situation. The price declined from Rs. 108 to Rs. 107.50. The sovereign at Rs. 72 showed a fall of 25nP.

During the week ended 25th July, Government of India Treasury bills for Rs. 129,53,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 1 CRORE OF 91 DAYS GOVERNMENT OF India Treasury bills were opened on 29th July. The total amount offered was Rs. 1,60,00,000. Tenders at Rs. 99.484 and above were accepted in full and those at Rs. 99.275 allotted approximately 80 percent. Lower tenders were rejected. The total amount accepted was Rs. 1 crore, the average rate of accepted tenders being Rs. 2.726 percent a year.

Tenders for Rs. 2 crores of 91 days Government of India Treasury bills will be received on 5th August in Bombay up to 11 A.M. and up to the close of business on Monday, 4th August, at other centres (Bangalore, Calcutta, Kanpur, Madras, Nagpur, and New Delhi). Successful tenderers should make payment on 8th August. Other conditions are as usual.

Further drops of Rs. 15.83 crores to Rs. 1,541.83 crores in active notes and of Rs. 18.21 crores to Rs. 1,567.17 crores in the total note issue were main features of the return of the Reserve Bank of India for the week ended 25th July, 1958. Notes of India for the week ended 25th July, 1958, fell by Rs. 2.38 crores to Rs. 25.34 crores. The currency contraction was covered by diminishing rupee securities by Rs. 15 crores to Rs. 1,129.59 crores. Foreign securities also declined by Rs. 5 crores to Rs. 184.68 crores. Deposits of the Government of India increased by Rs. 19.07 crores to Rs. 70.14 crores, while other Government accounts were Rs. 13.13 crores less at Rs. 286.66 crores. Balances of commercial banks at Rs. 107.85 crores showed a rise of Rs. 13.39 crores. Balances held abroad rose by Rs. 2.02 crores to Rs. 12.53 crores. Investments improved by Rs. 2 lakhs to Rs. 363.17 crores. Other loans and advances dropped from Rs. 61.68 crores to Rs. 55.06 crores, of which advances to scheduled banks against usance bills amounted to Rs. 7.80 crores (Rs. 12.63 crores). Ways and means advances stood at Rs. 14.76 crores against Rs. 19.25 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR the week ended 18th July, 1958, shows a rise of Rs. 26 lakhs to Rs. 421.03 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 39 lakhs and Rs. 56 lakhs to Rs. 203.98 crores and Rs. 11.09 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 72 lakhs to Rs. 182.72 crores. Cash and balances are, in consequence, shown at Rs. 38.13 crores, or Rs. 6.05 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 18th July, 1958, shows Demand and Time liabilities at Rs. 750.48 crores (Rs. 29.38 crores on account of borrowings from banks) and Rs. 815.23 crores (Rs. 34.32 crores), compared with Rs. 754.46 crores (Rs. 31.72 crores) and Rs. 814.93 crores (Rs. 37.36 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 1.16 crores and Rs. 11.48 crores to Rs. 38.36 crores and Rs. 84.19 crores, respectively. There is a rise of Rs. 11.46 crores to Rs. 514.51 crores in investments. Advances and bills discounted at Rs. 896.23 crores show an increase of Rs. 2.27 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 7.8 percent and 57.2 percent against 8.6 percent and 57.0 percent.

Provisional figures of foreign trade of India by all routes, that is, sea, air and land, on private and

Government accounts during May 1958, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows: *Merchandise*: excluding transit trade of Pakistan and other overland foreign countries viz., Nepal, Tibet, Sikkim and Bhutan: Exports Rs. 44.08 lakhs, re-exports Rs. 63 lakhs, imports Rs. 63.29 lakhs; total trade Rs. 108 lakhs. *Treasure*: export (including re-exports) of currency notes Rs. 57 lakhs, gold nil, current coins (excluding gold coins) negligible; imports of currency notes Rs. 771 lakhs, gold Rs. 4 lakhs, current coins (excluding gold coins) negligible. *Balance of Trade*: the merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures, the total value of exports (including re-exports) or merchandise and gold fell short of imports by Rs. 18.62 lakhs.

The following is a statement of the cash balances of the Central Government on the last day of April 1958:

	Rs.
(1) At the Reserve Bank of India in India	10,75,93,000
(2) At treasuries in India	20,94,000
(3) In England (sterling converted at 18d the rupee)	62,45,000
Total	11,59,32,000

LONDON FINANCIAL LETTER

PROSPECTS FOR MONETARY RESTRAINTS

By Air Mail.

ON 3rd July, the credit squeeze in Britain was lifted, and immediately the business community began to calculate how soon the Government would proceed to a policy of active expansion and how quickly that policy could take effect. On 14th July, the crisis in the Middle East began, and all ideas of economic policy were thrown back into the melting pot. The sharp reversal of the upward trend of prices on the London Stock Exchange must be viewed in this perspective. It reflected not only apprehension concerning the possible development of the political and military situation but also disappointment that plans for further reducing Bank rate and for relaxing restraints on public spending had, presumably, to be shelved indefinitely. The implications of this economic change are not yet clear, but they appear to be broadly adverse.

It might be thought that political events which had inflationary implications would strengthen the tone of business, when many people had been worried by the deflationary trend. The broad rise in prices of commodities after the crisis had broken out represented one aspect of the potential reflation; and some people thought that the Government would revert to a costly policy of conventional military "preparedness", on the assumption that crisis would be localised, as in Korea and the Middle East, rather than be broadly international like the world wars. It is now recognised, however, that inflation has a discriminating influence. If prices tend to rise, or spending on defence is increased, the Government will certainly not apply a policy of general expansion but it may apply a policy of general restraint. But the effects of inflation will be confined to particular industries and services, and spending on other goods and services will tend further to diminish. That is the general significance of the check to the policy of expansion.

Recession in Orders

These crises have a way of fading out and leaving everything—superficially, at least—much as it was before. It is conceivable that a few months, even a few weeks, hence the Government will proceed with the plans which have had to be put in abeyance. But the loss of even a few months, or weeks, could be quite serious in the particular circumstances of this year. The recession in orders for construction projects and capital goods has been gathering momentum disturbingly, and a recession of this kind cannot be quickly reversed. Economists as well as industrialists have been saying in recent months that the Government has already waited too long. If it must now add to the delay, the recession will probably go deeper than had been imagined. But the removal of all quantitative and most qualitative control on the banks' lending, announced on 3rd July, cannot be written off as insignificant. At the same time, restrictions on raising capital have been relaxed, so that already the financial, if not the psychological, potentialities for re-expansion in the private sector exist.

It will be necessary to wait for some months to see whether these relaxations have any significant effect on finance and trade. Some observers believe that a strong demand for finance had been latent, because many who would borrow if credit were freely available knew that a request for finance would be rejected. Others believed that demand for finance had withered in the deflationary atmosphere, and they believe now that it will not revive until trade is seen to be expanding. It is possible that the banks will receive, and in many cases grant, a considerable aggregate of requests for personal advances but will not find much increased interest on the part of industrialists and traders. Then, contrary to the Government's intentions,

sales of consumer goods will be stimulated more than exports.

Rise in Advances

It may be questioned whether the authorities would have favoured much further reduction in interest rates in the near future, even if no international crisis had broken the trend; for, in a mood still cautious, they might have feared the consequences of making borrowing cheaper at the same time as it was freed. The latest combined statement of the London clearing banks, covering the period mid-May to end-June, shows a substantial increase in advances, which, though attributable mainly to seasonal causes, shows that demand for finance is not lethargic; and a considerably larger increase in deposits in the same period, though not so simply interpreted, implies an inflationary potential. It should be mentioned, however, that the weekly returns of the Bank of England show much less than the normal seasonal increase in the note circulation towards the annual peak about the beginning of August.

At the same time as the restraints were relaxed, the authorities introduced a new technique for controlling the banks' liquidity. The commercial banks can be required to deposit a specified proportion of their liquid resources with the central bank, and this proportion must be excluded from their calculations of liquidity ratios. The new device was obviously intended as a precaution, and bankers thought at the time that it might be replaced by some better method before the occasion arose when it could suitably be used. There is not yet any reason to adjust that view; but the authorities are probably congratulating themselves on having provided a supplementary method of control, for the subsequent unforeseen developments may necessitate firmer control of money than was intended. The new device could imply, however, that the authorities would not force the funding of liquid assets, having an alternative means of dealing with them. If so, one of the weights on the gilt-edged market would be lifted, and, in more favourable general circumstances, long-dated stocks could rise faster than they were rising "before Iraq".

RESERVE BANK'S REPORT ON THE INDIAN ECONOMY

PRICE AND PAYMENTS SITUATIONS DETERIORATE

THE Reserve Bank's *Report on Currency and Finance* for the financial year 1957-58, published last week, presents a review of the economic situation in India after giving a brief account of international economic and monetary trends. The Report, as usual, contains a wealth of statistical material in the form of tables and graphs. According to it, the year 1957-58, as a whole, witnessed an accentuation of the stresses and strains to which the Indian economy has been subjected in recent years on account of the high tempo of activity in pursuance of the five year plans. This was particularly so in the first half of the year during which the price situation as well as the balance of payments recorded further setbacks. In the latter part of the year, however, mainly in response to various corrective measures taken earlier on the fiscal, monetary and foreign exchange fronts, there was some easing off of the strain. In recent

world trade and industrial expansion, a break in primary commodity prices and a sharp fall in external reserves of most countries. With the aggregate demand continuing to outpace resources in many countries, inflation continued to be a problem during much of the year, but in the closing months, with the turn in economic trend, the situation became further complicated calling for prompt readjustments essential to the resumption of economic expansion without, however, reviving inflationary pressures. In this connection, the Report refers to the action taken in many countries towards credit restrictions during the greater part of 1957 and the subsequent easing of these restrictions, which has been pronounced in 1958, there being a series of discount rate reductions. As a result, there has been a revival of confidence lately and it is possible that recession would soon begin to lift.

Slow-down in Industry

In India, during 1957, industrial production continued to rise, but the rate of increase slowed down, the rise in the average index of industrial production (base: 1951=100) at 137.2, being only 3.5 percent, compared with 8.6 percent in 1956 and 8.1 percent in 1955. The slowing down was due to a number of factors which included (i) shortages of raw materials following the drastic import cuts and (ii) slackening of demand in certain sectors of industry, particularly textiles. A number of measures to promote production have been taken and others are under consideration. As for agricultural production, while the overall output during the agricultural year 1956-57, for which firm data are available, increased by 6 percent, the output in 1957-58 does not appear to be encouraging. Kharif cereals, particularly rice, suffered considerable damage due to drought in large areas. The output of bajra, jowar and maize is, however, estimated to have increased.

The price situation, which had caused much concern during the years 1955-56 and 1956-57, showed some signs of improvement during 1957-58, although the outlook latterly has been again one of some uncertainty and even anxiety. However, over the year, the Economic Adviser's weekly index number of wholesale prices (base: 1952-53=100) showed a rise of 1.0 percent, compared with a rise of 5.9 percent during 1956-57. In the context of a substantial rise in plan outlay and budgetary deficits and drastic import cuts, the Report states, the trend of prices as a whole during the year should be regarded as not altogether unsatisfactory. The index showed a rise during the early part of the year, touching 113.1 for the week ended 3rd August, the highest level for the year—after which the trend was reversed. The index declined steadily thereafter until February 1958, and stood at 106.1 at the end of March. The decline during August-February would appear to have been due, among other factors, to the substantial increase in agricultural output in 1956-57, disinflationary fiscal and credit measures, larger imports of foodgrains, the adoption of food control measures, the general belief in the inevitability of a cut in the plan outlay, and recessionary trends abroad. The upward

tendency in prices since February 1958 perhaps reflects the anticipated shortfall in food production during 1957-58 as well as a more optimistic outlook regarding plan outlay.

Monetary and Banking Trend

Monetary and banking trends underwent a radical change during the year, the acute stringency of the preceding year giving place to easy money conditions. This change was the result of several measures adopted on the foreign exchange, fiscal and credit spheres to alleviate the strains on the economy as also of the phenomenal increase in the resources of banks. The expansion of money supply with the public and bank credit was modest. Money supply increased by Rs. 75 crores, compared with Rs. 129 crores in 1956-57, the smaller rise being largely due to an unprecedented rise in time deposits. Scheduled bank credit recorded a rise of Rs. 63 crores, compared with an expansion of Rs. 139 crores in 1956-57. The increase in deposit resources of the scheduled banks was exceptionally large at Rs. 276 crores, a part of the rise being due to a special factor, namely, the accumulation of counterpart funds of imports from the U.S.A. under P.L.480. The increase in deposit resources was applied by banks primarily to reduce their borrowings from the Reserve Bank (Rs. 61 crores) and also to augment their gilt-edged portfolio (Rs. 93 crores). The credit-deposit ratio declined from 76.6 to 66.3 percent over the year.

During the year, the Bank continued to pursue a policy of controlled expansion of credit as before. In this task, as in the previous year, the Bank had recourse to general and selective credit controls as well as to moral suasion. Bank rate was raised from 3½ to 4 percent with effect from 16th May. Controls on advances against foodgrains and sugar were initiated or further tightened. The Governor of the Reserve Bank, in his letter to the banks towards the end of June 1957, enjoined on them to pursue a cautious lending policy in the general interest of containing inflationary pressures and also emphasised the need to reduce the outstanding bank credit during the slack season and work down their advances-deposits ratio to lower levels without at the same time diminishing their assistance to the essential sectors of the economy and, in particular, without affecting the rising trend of industrial production. The need for achieving a reduction in total bank credit was again reiterated by the Governor in his conferences with the representatives of banks in Bombay and Calcutta in July and August when he indicated that banks as a whole should bring down their advances to about Rs. 800 crores by the middle of October—a more manageable credit base for banks at the start of the next busy season. The banks substantially achieved this reduction.

Capital Market Less Active

The capital market was less active than in 1956-57, with signs of slowing down in the rate of investment in the private sector as well as in the supply of investible funds. The downtrend in share prices, which commenced in September 1956,

continued during the greater part of the year, the index falling by 13 percent, compared with 9 percent in 1956-57. Since the beginning of 1958, however, there has been a revival of confidence reflecting mainly the optimistic view taken by the market of the Government's attitude towards the private sector. The gilt-edged market ruled relatively steady. Net borrowing by the Central and State Governments amounted to Rs. 71 crores; besides, the Reserve Bank's open market operations resulted in net sales of Rs. 67 crores, as against purchases of Rs. 19 crores in the preceding year. The operations of the various finance corporations recorded a further marked expansion, many of them raising additional resources during the year through the issue of bonds. Bullion prices in 1957-58 showed a further rise, both gold and silver touching their highest levels of recent years.

Reviewing Government finances, the Report avers that severe strains were experienced during the year due to a marked increase in expenditure on the one hand, and a shortfall in resources, on the other. In the result, the magnitude of budgetary deficit of the Centre and States together at about Rs. 500 crores was twice as large as that of 1956-57. The rise in expenditure was mainly due to higher plan outlay, estimated at Rs. 861 crores, as well as to a marked increase in non-developmental expenditure. Loan receipts were smaller than in 1956-57; small savings receipts, while being somewhat higher than those in 1956-57, fell short of the target. But recently they have begun to do well. Plan outlay for 1958-59 is placed at Rs. 960 crores, but the budgetary deficit is estimated lower at Rs. 215 crores. The tax proposals of the Centre for the year 1958-59 were minor in character.

Balance of Payments Crisis

India's balance of payments in 1957-58 showed in a more pronounced form the pattern of deficits which emerged in the first year of the second plan. Payments for imports rose to a yet higher level and, coinciding with a fall in exports and invisible receipts, brought about a larger current account deficit at Rs. 451 crores, compared with a deficit of Rs. 307 crores in 1956-57. In spite of further use of the International Monetary Fund's resources and an appreciable increase in foreign assistance, the draft on the country's foreign exchange reserves was heavier at Rs. 260 crores compared with Rs. 221 crores in 1956-57. The widening of the current account deficit stemmed from a substantial increase in imports and a slight decline in exports. The increase in the former was mainly on account of Government imports which were largely meant for expanded developmental activity. The scale of foreign assistance which has been playing an important rôle in India's economic development has considerably been stepped up, the total of such assistance received during the first two years of the second plan amounting to as much as Rs. 812 crores. External assistance received during the whole of the first plan was Rs. 378 crores of which Rs. 130 crores remained unused and was available for the second plan.

Stocks and Shares

HIGHER PRICE LEVELS ATTRACT PROFIT-TAKING FRESH T.I.S.C.O. LABOUR TROUBLE RUMOURED

Wednesday Evening

THE week under review witnessed a keen tussle between the bulls and bears in the speculative ring. The bear squeeze ultimately took the price of Indian Irons, in unofficial trading, to Rs. 24.14, a new high level for the year. This was last Saturday. Afterwards profit-taking developed and over the long week-end the price of the shares slithered down to Rs. 23.69. When the stock market reopened yesterday, speculators appeared to be in a more cautious mood and the bulls were less aggressive. Bear covering today lifted the price of Irons to Rs. 24.02, but towards the close rumours (hitherto unconfirmed) that a fresh ultimatum had been given to the T.I.S.C.O. management by its labour force, brought the price back to Rs. 23.86 at the end of the session.

At a meeting held on Tuesday, the Board of Directors of the Indian Iron & Steel Company decided that the ordinary share register and transfer books will remain closed from 18th August 1958 to 27th August 1958, both days inclusive, for the purpose of payment, in due course, of the dividend on the ordinary shares for the year ended 31st March 1958. The Directors also stated that the recommendation of the dividend for the year ended 31st March 1958, and the date of the annual general meeting, will be announced later. As a result, speculation is now rife about the distribution which is likely to be made. In the past it was customary for the company to declare the dividend and then announce the dates of the closing of the share transfer books. Reading between the lines of the chairman's speech it seems possible that the distribution on the increased capital will be maintained at Rs. 1 a share, but one section of opinion considers that this departure from tradition might mean that the dividend is to be reduced.

So far as the rest of the market is concerned, business has been on a much reduced scale and the general feeling is that the recent improvement in share prices has brought the market to a level where scope for further capital appreciation is limited, particularly as there was little economic justification for the recovery of the past few weeks.

The Government security market was fully steady and there were buyers of most of the recently floated State loans, with the 4½% Bombay issue at a premium of 20aP over the issue price. Meanwhile, the Bombay Municipal Corporation has announced an issue of new loans totalling Rs. 4 crores carrying interest at 4½% redeemable in 1970 at an issue price of Rs. 99.25. The success of the issue appears to be assured as the terms are in keeping with the present pattern of interest rates.

Preference shares continued to meet with good enquiry, particularly selected jute preference shares in the hope that as a result of the improved working of the industry, several companies will be able to pay off their arrears of preference dividend.

Among bank shares, Punjab National recovered to Rs. 59 following the announcement of an interim dividend of Rs. 2.50.

In railways, a small lot of Arrah-Sasaram changed hands at Rs. 53.50 and Dehri-Rohtas were taken at the higher rate of Rs. 11.50. Howrah-Amta were marked at Rs. 53 and Shahdara (Delhi) at Rs. 107.

Cotton textile shares were weak, particularly Cawnpore Textiles which dropped to Rs. 4.62; Kesoram fell to Rs. 10.87.

In coals, Bengal improved from Rs. 232 to Rs. 236, and East Indian from Rs. 20.25 to Rs. 21.25. New Beerbhoom were steady at Rs. 16 ex-dividend and Pench Valley recovered from Rs. 22.12 to Rs. 22.87. Bharat Collieries were steady at Rs. 6.69 as were South Karanpura at Rs. 12.25.

The steady enquiry for jute shares during the past few weeks showed signs of slackening off, except in a few cases. Here is a chart showing price movements of a representative list of shares:

	Opening 24th July 1958	Closing 30th July 1958
Rs.	Rs.	Rs.
Anglo-India	180	178
Birla	19.50	19.56
Cheviot	170	172
Howrah	18.12	17.87
Megna	131	137
Northbrook	17.50	17.75
Union	143	142
Kamarhatti	103	107

In electrics, the only change was in Calcutta which improved slightly to Rs. 14.62.

Sugar shares were devoid of interest with the exception of United Provinces which improved from Rs. 14.12 to Rs. 14.37.

In the engineering section, Bhartia Steel improved from Rs. 15.12 to Rs. 15.25 and Guest, Keen, Williams from Rs. 30.87 to Rs. 31.12. Braithwaites were wanted at Rs. 28 and Burn spurted today from Rs. 365.00 to Rs. 395. Indian Standard Wagon were better at Rs. 96. Textile Machinery were a steady feature with buyers at the close at Rs. 21.30. Tonight's settlement rate for Indian Iron & Steel is

Rs. 23.86, against the previous settlement price of Rs. 23.

In cements, the only steady feature was Jaipur Udyog which improved from Rs. 14.31 to Rs. 14.81. In insurance, New Asiatic improved from Rs. 3.65 to Rs. 3.75 while Ruby General were shaded at Rs. 7.44. Hercules and Triton had buyers at Rs. 22.50 and Rs. 140, respectively.

In shipping, Indian General Navigation were slightly better at Rs. 58.50 and India Steamship met with investment enquiry at the previous rate of Rs. 12.19.

Among miscellaneous industrials, Alkali & Chemical were steady at Rs. 14.75 as were Angelo Brothers at Rs. 20.12. Balmer Lawrie were taken at the higher rate of Rs. 176 and Clive Row Investment improved from Rs. 8.90 to Rs. 9.06 (after Rs. 9.15). Indian Aluminium were softer at Rs. 14.81 and there were sellers of Godfrey Phillips at the lower rate of Rs. 19.12. Dunlop Rubber were steady at Rs. 27.81 and Indian Cables were done at the higher rate of Rs. 29.25. Indian Oxygen were quiet at Rs. 19.87 and National Rubber were offered at Rs. 14.25. Metal Box were higher at Rs. 28.87 as were National Insulated Cables at Rs. 28.75. Philips India improved from Rs. 15.25 to Rs. 15.62 and Rallis from Rs. 38.50 to Rs. 39. Shaw Wallace were steady at Rs. 11.75.

In paper, India Paper Pulp improved from Rs. 20.87 to Rs. 21.50 and Bengal from Rs. 81.50 to Rs. 83.50. Titagur were better at Rs. 39.87 as were Orient at Rs. 34.20.

In the mining group, Indian Copper were at one time done up to Rs. 3.78, but closed slightly easier at Rs. 3.74. Karanpura Development, after being taken up to Rs. 16, reacted at the close to Rs. 15. Tea shares were quietly steady, as will be seen from the following table of price movements:

	Opening 24th July 1958	Closing 30th July 1958
Rs.	Rs.	Rs.
Betjan	23.75	24
Brooke Bond	18.75	19
Bishnauth	20.75	21
Grob 'A'	27.25	27.50
Dhelakhat	23.25	23.75
Hasimara	25.25	25.75

JUST OUT INVESTORS' ENCYCLOPAEDIA 1957-58 EDITION

AN USEFUL HANDY GUIDE AND REFERENCE BOOK
ON MATTERS PERTAINING TO PUBLIC LIMITED
COMPANIES

Contains exhaustive details on past financial records of more than 2000 companies comprising of all classes of Industries. Contains useful information regarding various state and Central Government and Local Bodies Loans, Income Tax, Agricultural Income Tax, Capital Gains Tax, Wealth Tax, Gift Tax, Estate Duty and other Taxes. Contains review of almost all industries with Statistical information.

A book most useful for company executives, economists, investors and those connected with commerce and trade.

Contains provision of Thumb Index to make reference easily, available.

More than 2000 companies—More than 2500 pages
Price Rs. 20/00 (Postage Rs. 5/00 extra)

R. V. BRIGGS & CO. PRIVATE LTD.
16, Old Court House Street,
(West End Watch Co., Top Floor).

Teapora Tea had sellers today at Rs. 16.75 following the news that the ordinary dividend for the year 1957 had been passed.

PROVIDING Rs. 1.12 LAKHS FOR TAXATION, Rs. 1.01 lakhs for depreciation and Rs. 25,000 for wealth tax, the profit of the South Karanpura Coal Company has amounted to Rs. 2.10 lakhs for the year ended last August. Bringing in Rs. 10,407, transferring Rs. 70,000 from general reserve and making other adjustments, there is Rs. 2,89,927. The dividend has been increased from 3½ percent to 7½ percent. Tax contingency reserve is allocated Rs. 15,300. The carry-forward is Rs. 8,739. Raisings increased from 168,281 tons to 187,703 tons and despatches were higher at 186,382 tons against 181,663 tons.

THE PROFIT OF STRAW PRODUCTS LTD HAS amounted to Rs. 3.96 lakhs for the year ended last December, against Rs. 12.79 lakhs, after increasing depreciation from Rs. 1.58 lakhs to Rs. 7.65 lakhs. The dividend has been maintained at 12½ percent. The taxation provision amounts to Rs. 2.88 lakhs (Rs. 3.75 lakhs), leaving a carry-forward of Rs. 3.21 (Rs. 82,405).

THE BALLY JUTE COMPANY HAS INCREASED ITS profit by Rs. 9.64 lakhs to Rs. 11.41 lakhs for the year ended last March. Including Rs. 66,674 brought in, there is Rs. 13,23,681. Providing Rs. 1.18 lakhs for depreciation, Rs. 6.75 lakhs for taxation (nil), transferring Rs. 1½ lakhs to general reserve and making other adjustments, there is a balance of Rs. 3,78,223. The ordinary dividend has been increased from 2 percent to 6 percent to absorb Rs. 1.20 lakhs, leaving a carry-forward of Rs. 1,18,223. The company has applied to the

National Industrial Development Corporation for financial assistance to modernise the mill equipment.

THE RAMESHWAR JUTE MILLS LTD HAS MADE A profit of Rs. 1.74 lakhs for the year ended last March, after providing Rs. 85,575 for depreciation. The debit balance is, therefore, reduced to Rs. 7,07,557. The dividend has been passed over.

THE LOSS OF THE NAGAISURREE TEA COMPANY HAS amounted to Rs. 42,707 for the year ended last March. A dividend of 7½ percent has been declared, after transferring Rs. 55,223 for buildings and machinery reserve, Rs. 18,000 for taxation provision and bringing in Rs. 39,250. The carry-forward is Rs. 37,054. The crop fell from 903,942 lbs to 845,223 lbs and the average sale price declined from Rs. 2.02 a lb to Rs. 1.82 a lb. Estimates for 1958 provide for a crop of 1,000,000 lbs at a cost of Rs. 17.60 lakhs.

THE PROFIT OF THE HOOGHLY DOCKING AND Engineering Company has declined by Rs. 76,000 to Rs. 42.22 lakhs for the year ended last December. A dividend of 10 percent has been declared to absorb Rs. 1.25 lakhs. Taxation provision amounts to Rs. 2.55 lakhs and wealth tax is allocated Rs. 38,181. Development reserve receives Rs. 50,000 against Rs. 1 lakh. The carry-forward is Rs. 5,810, compared with Rs. 13,963 brought in. The value of work billed increased from Rs. 1.25 crores to Rs. 1.44 crores.

PROVIDING Rs. 64,134 FOR DEPRECIATION AND Rs. 5.18 lakhs for taxation provision, the profit of the Walford Transport Ltd has amounted to Rs.

4,28,336, including Rs. 1,66,813 brought in, for the year ended last December. The ordinary dividend has been declared at 14 percent to absorb Rs. 1.18 lakhs. Contingency reserve is allocated Rs. 1½ lakhs, leaving a carry-forward of Rs. 1,35,400.

THE ENGO TEA COMPANY HAS MADE A LOSS OF Rs. 37,721 for the year ended last December. Making other adjustments, a debit balance of Rs. 63,469 is carried forward. There is no dividend. The crop rose from 2,454 maunds to 2,944 maunds and the average sale price fell from Rs. 1.96 a lb to Rs. 1.67 a lb. Estimates for the current year provide for a crop of 3,250 maunds at a cost of Rs. 5.07 lakhs.

Bombay Market

PRICES REACT ON PROFIT TAKING

MIDDLE EAST SITUATION STILL RULES SENTIMENT

Wednesday Evening.

THE Bombay stock market closed in an easier mood this week and speculative stocks, in particular, reacted on profit-taking. The decline was expected after the previous week's rapid rise. Operators were cautious because of uncertainties in the Middle Eastern situation.

There was, however, no selling pressure and optimism prevailed about India's getting foreign financial assistance for meeting external payments difficulties. Good corporate news was regarded as a helpful factor.

Tata Steel closed at Rs. 167.50 and Indian Iron were quiet at Rs. 23.75 on talks of imposition of margins in Calcutta. Tata Locomotive were maintained at Rs. 172.25 on prospects of a higher distribution. Alcock Ashdown were taken at Rs. 257.50 and Premier Construction were bought at Rs. 201.00 by knowledgeable quarters. Automobile shares were steady, and Premier Automobile changed hands at Rs. 93 on talks of an end of the strike at the works. Hindustan Motor were transacted at Rs. 7.88.

Century, in the cotton mill group, were steady at Rs. 450.50 on reports of a tight share issue. Elsewhere conditions were quiet on uncertainty about cloth sales. Bombay Dyeing were done at Rs. 59.30 and Kohinoor realised Rs. 283. Swadeshi came to hand at Rs. 180.50 and Simplex were offered at Rs. 179. India United Ordinary improved to Rs. 10.24 and Apollo were bought at Rs. 1.92.

Miscellaneous industrials followed the general pattern. On good working reports, Belapur Sugar were in demand at Rs. 262 and Phaltan were transacted at Rs. 154. Steamship company shares were steady and Scindia Steam rose to Rs. 19.60 on replacement buying induced by prospects of an increase in activity. Great Eastern Shipping were done at Rs. 24.80. Mining shares reacted at the Chemicals. Shrivastava Syndicate realised Rs. 92. Tata Chemical were in demand at Rs. 165.20 on reports of increased output. National Rayon were dealt in at Rs. 231.50 and Winceo came to hand at Rs. 176.50. Reports of exports of cement, combined with higher output, helped sentiment in the group. Associated Cement were taken at Rs. 155.50 and Digvijay Cement changed hands at Rs. 154.25.

Banking shares were quietly steady in limited turnover. Bank of Baroda were taken at Rs. 123 and United Commercial were done at Rs. 61.50. Insurance shares were selectively bought, and New India came to hand at Rs. 46.50.

There was scattered selling in electricity supply company shares. Ahmedabad were bought up to Rs. 95.80 and Tata Hydro were transacted at Rs. 122.25.

THE WEEK'S TRANSACTIONS

FOREIGN EXCHANGE PROBLEM OF THE SECOND PLAN

NEED FOR REALISTIC RESHAPING

By R. M. Mitra

THERE is again a sudden note of seriousness, and even nervousness, in both official and public discussions about the foreign exchange position of this country. The call for action, echoing throughout the business world, creates the impression that the problem has taken an unsuspected turn and poses an unforeseen obstacle to the progress of the second five year plan. The fact of the matter is, however, that the existence of the problem has been known to the economists, administrators and planners alike, and it would be extraordinary if it were not. The plan enthusiasts are understandably impatient at the slow, if sure, process of negotiating each step between the lowest and top-most rungs of the ladder. The continuing controversy over capital-intensive and labour-intensive methods is perhaps a manifestation of this impatience. Although the Planning Commission has sought a practical compromise between the initial step of labour-intensive enterprises and the ultimate step of capital-intensive operations, the rôle assigned to top level technology is too big to be managed with the internal resources likely to be available in the near future.

The Planning Commission could not have been unaware of the need to acquire substantial foreign assistance in order to be able to work the capital-intensive projects of the second plan. The Commission estimated that there would be an adverse trade balance of Rs. 1,120 crores over this five-year period because of the plan purchases of capital goods. It also anticipated that a large part of this deficit would occur in the second and third years of the plan. The "hump" in the middle of the plan was measured at Rs. 595 crores. The total deficit for the first three years was calculated at Rs. 743 crores. These calculations were based on the assumption that exports, imports and net earnings on "invisibles" over the five-year period would average Rs. 533 crores, Rs. 868 crores and Rs. 51 crores, respectively, a year, and that the approximate position of exports for the first three years would be Rs. 573 crores, Rs. 583 crores and Rs. 592 crores, respectively, of imports Rs. 783 crores, Rs. 886 crores and Rs. 990 crores and of net invisibles Rs. 62 crores, Rs. 55 crores and Rs. 51 crores, in that order. The Commission considered the various ways of meeting the total gap of Rs. 1,120 crores in foreign exchange resources. It allowed for a withdrawal of Rs. 200 crores from the sterling balances, and reached the tentative conclusion that in view of the enormously increased foreign exchange requirements, compared with those of the first plan (which used only Rs. 204 crores of foreign exchange in the public sector), it would be necessary to explore the various sources of foreign assistance so that the public sector might raise Rs. 800 crores and the private sector Rs. 100 crores in the form of aids, grants, credits and loans. Although the Commission was unable to make firm estimates of the available foreign finance at more than Rs. 170 crores for the public sector and Rs. 22 crores for the private sector, it expected that the new trends of institutionalisation in international finance would make for a greater flow of foreign aid. It was also presumed that foreign bank and trade credits, foreign private investment, loans and grants from foreign governments, and even public issues in foreign markets, would make significant contribution.

Trend of Exports

Exports in 1956-57 amounted to Rs. 637 crores, imports Rs. 1,076.5 crores, net earnings on invisibles

Rs. 107.2 crores, leaving a gap of Rs. 332.3 crores as against Rs. 148 crores calculated in the plan report. The first half of 1957-58 (April-September 1957) records imports at Rs. 622.2 crores, exports at Rs. 267.1 crores and net invisibles at Rs. 50.9 crores, resulting in a deficit of 304.2 crores, compared with Rs. 240 crores assumed for the full year, 1957-58. Figures available for the three-month period October-December 1957, might be interpreted to show a slight improvement. Exports are registered at Rs. 177.7 crores and imports Rs. 288.6 crores, compared with Rs. 171.5 crores and Rs. 294 crores, respectively, in October-December 1956. But net earnings from invisibles were higher in the third quarter of 1956 at Rs. 30.1 crores compared with Rs. 22.1 crores in the same period of 1957, with the result that the deficit of Rs. 88.8 crores in the latter period is only Rs. 3.6 crores smaller than the Rs. 92.4 crores in the former period.

The current account deficit in 1956-57 was partly met by official donations, official loans and other capital transactions (including the I.M.F. credit, P. L. 480 receipts and some private capital inflow) which together amounted to Rs. 117.9 crores net, after providing for all capital payments including a loan to Burma and the payment of instalments falling due against World Bank loans. Similar net capital receipts amounted to Rs. 114.4 crores in April-September 1957, and Rs. 53 crores in October-December 1957. Foreign exchange used out of the reserves during the first 21 months of the second plan, therefore, comes to Rs. 285.3 crores. This performance would lend encouragement to the hope that the frantic efforts now being made to secure longer-term and more of foreign assistance would succeed in reaching the plan target of Rs. 900 crores. The total exports of Rs. 1,081.8 crores for these 21 months represent more than the proportionate share of Rs. 1,156 crores for the first two years as assumed in the plan, and the net receipts from invisibles totalling Rs. 180.2 crores, also exceed the estimates. The big shortfall in foreign exchange resources, therefore, is attributable entirely to imports, which totalled Rs. 1,937.3 crores during the above 21-month period, compared with Rs. 1,669 crores assumed for the first two years and Rs. 4,340 crores for the full five years of the plan. (Figures since available indicate that the imports during the first two full years aggregate Rs. 2,251 crores).

Machinery and Metal Imports

It is reported that the import of machinery and metals went up from Rs. 299 crores in 1955-56 to Rs. 442 crores in 1956-57 and Rs. 534 crores in 1957-58. The plan provides for the import of machinery and vehicles and metals at an average annual rate of Rs. 430 crores. It is not clear whether the reported figures and the corresponding heads in the plan comprise identical items. In any event, the import of capital goods in the first two years exceeded the plan estimates by not less than Rs. 116 crores. It is interesting to note, however, that the import of raw materials (including oils, raw cotton, raw jute and dyes and colours) on private account, amounted to Rs. 155.5 crores in 1956-57 and Rs. 87.6 crores in the first nine months of 1957-58, against the overall annual average of Rs. 171 crores provided in the plan. It becomes evident, therefore, that the import of capital goods, consumer goods and food articles accounts for the excess of about Rs. 600 crores during the first two years. The inevitable consequence of these enormously increased imports has been a drain on the sterling balances of Rs. 480 crores between April 1956 and March 1958, while the plan was formulated on the basis of a total withdrawal of only Rs. 200 crores over the full period of five years. Further withdrawals during the period April-June 1958 have reduced these balances by Rs. 49 crores, from Rs. 267 crores to

Rs. 218 crores. The rate of depletion of the reserves, therefore, though slightly reduced, still continues at a little over Rs. 16 crores a month, or more than Rs. 50 lakhs a day.

Although the actuals of exports and imports and the latest estimates of foreign exchange show a much larger requirement of external finance than the plan envisaged, the experience of the first two years, however, does not represent any essential departure from the initial postulates. The foreign exchange budget was prepared on the basis of an import of 6 million tons of food-grains although the plan report qualified it by saying that "with an increasing population and rising incomes, the consumption of foodgrains is certain to go up in the coming years". Again, it was fully understood that the emphasis "on the development of basic industries" would strain the balance of payments position in the short run. The report also makes it clear that the Planning Commission is fully alive to the uncertainties of the assumptions made in its foreign exchange budget. The report lays particular stress on "the fact that the extent to which development programmes can rely upon resources from abroad can hardly be determined in advance".

Risks and Uncertainties

In fact, the fundamental defect of the plan is that sufficient attention has not been given to the necessity of insuring the plan against the risks and uncertainties which were anticipated, and are unavoidably associated with a developing economy, because of increasing consumption demand on the one hand, and hypothetical calculations of the requirements of, and the phasing of the import of capital goods, on the other. It was perhaps basically wrong to prepare an ambitious capital-intensive development programme on some very unsound assumptions and inaccurate estimates.

The history of foreign exchange and the gold standard over the last 40 years shows that international trade, like international diplomacy, is a perilous pursuit in the present imperfectly-constituted world. Sir Robert Boothby reputed to be a free-thinker in the British Conservative Party, has described free trade as a "purely negative 19th century doctrine". He has suggested that a comprehensive plan should be devised to secure an "assured market" for both import and export by forging "closer links between the economies of the sterling area and western Europe, with Canada acting as a bridge to the dollar area", and by associating the proposed Commonwealth Central Bank "with a revised and expanded European Payments Union". This suggestion seems to be a practical elaboration of the idea introduced in Professor G. D. H. Cole's book on *Money, Trade and Investment*. Professor Cole believes that "stable economic progress in the world" will have a fairer chance if "countries which have close economic relations based on complementary needs" make "mutual arrangements both for the exchange of goods and for the settlement of their currency problems", and not unthinkingly swear by a universal and common system of trade and exchange subject to uncertainties often leading to "speculative excesses and economic fluctuations of the most extreme and illogical nature". The uncertainties of international trade have been further aggravated, on the one hand, by rapid technological developments which render costly productive installations obsolete before adequate depreciation funds can be built, and on the other, by quick industrialisation of the traditional agricultural economies which tends to upset the familiar pattern of markets.

Reshaping not Rephrasing

It would, therefore, seem a highly speculative undertaking to plan the economic progress of a country on the basis of importing capital equipment which may outgrow its usefulness even before it comes into full production, and again, in the expectation of expanded exports which will have to struggle their way through the erratic course of international commerce. There is considerable talk of rephrasing the plan. But the real necessity seems to be a reshaping. It would appear, that it is required so to plan economic development of the country that the import of capital goods is limited to direct and dependable arrangements for external finance relating to each project separately, and containing such provisions as will enable the repayment to be made out of the foreign-exchange savings or earnings resulting from the working of the project. There is also enough scope for the development of the country on the basis of internal resources and talent; the process may be slow, but the structure will be stable and the operation will be subject to reasonable control and direction. It is not to be concluded, however, that the Indian economy should grow into an autarky. It is only contended that while the methods of orderly international trade should be devised either at the U. N. level or through bilateral or group arrangements, no large-scale development programme should be undertaken which is likely to get bogged down in the uncertain course of international trade, especially when India is endowed with resources, both in men and materials, sufficiently large and varied to support planning of India's economic progress is re-oriented in so far as the import of capital goods is concerned, foreign exchange may cease to be the Achilles' heel of the five year plans. It is necessary to stress that repeated exhortations for the curbing of consumption and diversion of production to the channels of export, are most likely to eke out a proper response in an economy where a level of consumption is reached, or, unless totalitarian methods are adopted.

New Delhi

PLANNING COMMISSION SEEKS ADDITIONAL RESOURCES

REDUCTION IN OUTLAY ON STATE SCHEMES

(FROM OUR NEW DELHI CORRESPONDENT)

THE Planning Commission is now engaged in finding some face-saving devices. In its appraisal of the prospects for the second five year plan, the Commission, it will be recalled, has estimated internal resources at Rs. 1,804 crores, against the original requirement of Rs. 2,344 crores. In the circumstances, the logical thing to do would have been to reduce the total outlay to Rs. 4,260 crores from Rs. 4,800 crores. But the Planning Commission holds that "at a minimum, the level of outlays to be actually incurred must not be allowed to fall below Rs. 4,500 crores." It is, therefore, faced with the problem of Rs. 240 further internal resources of the order of Rs. 240 crores. The following are the main lines along which, in the Commission's view, "this effort can and has to be undertaken, namely":

	(Rs. crores)
Additional taxation	100
Loans and small savings	60
Economies in expenditure	80
	240

It has been suggested that the States should agree to raise Rs. 60 crores by way of additional taxation in the remaining period of the plan, in spite of their refusal to levy additional taxation, not only in the second plan, but also in the first plan period. For example, as against an estimated increase of Rs. 48 crores under land revenue and irrigation rates, the actual increase over the five-year period may not be more than Rs. 9.6 crores. The yield from betterment levies was expected to be Rs. 47 crores; of which Rs. 31 crores was to be repaid to the Centre for loans, but the likely yield over the plan period is now estimated at Rs. 6 crores. In fact, from the measures taken so far, only Rs. 2 crores has been realised. It may be added that the average of Central assistance as a percentage of State development expenditure comes to 53.5. The following figures show the percentage of Central assistance to various States:

Andhra Pradesh	58.3
Bihar	56.1
Madhya Pradesh	64.3
Madras	53
Mysore	61.5
Orissa	69.9
Punjab	57.6
Rajasthan	57.8
West Bengal	52.5
Kashmir	75.9
Bombay	39.3
Kerala	43.4
Uttar Pradesh	50

According to latest estimates, the expected outlay on the State plans will be reduced by Rs. 87 crores under the following heads:

	(in crores of rupees)
Agriculture and allied subjects	26
Community development	3
Education	17
Health	20
Other social services	7
Industry	10
Miscellaneous	4
	87

The following estimates of the resources which it is still thought the States can raise are not based on realistic assumptions:

	(Rs. crores)
Balance from the current resources	170
Additional taxation	60
Economies in the non-plan expenditure	20
Loans from public	60
Small savings	156
Deficit financing	23
Additional resources from the Centre	74

It may be added that the full picture of the revenue from Customs and excise duties is yet to be known. Then again, there are certain items which have been indicated in the plan, but the exact expenditure for which has not been included in the outlay. Investment in the rupee company to be floated for exploiting the oil resources of Assam, and the outlay on refineries and the pipeline, are a case in point.

The position may be summarised as follows. On the one hand, certain assumptions on the basis of which the plan outlay of Rs. 4,500 crores has been retained are not likely to be fulfilled by the States and collections from small savings will scarcely reach the target. On the other hand, there are certain items of expenditure, which were not included in the total outlay of Rs. 4,500 crores, but which have to be provided for during the plan period.

No Interest in Swiss Credit

The Government of India appears to show no interest in the credit offered by Switzerland. In November 1957, the Swiss Government was ap-

proached by India for credit on trade transactions. Under the scheme, India would have been permitted to postpone payment in Swiss francs of all purchases for three years. The Indian firms, however, would have paid the Government of India in rupees for all imports from that country. The Indian Government, after the moratorium of three years, would have repaid the credit in Swiss francs from 1st April, 1961. The credit was to be for 60 million Swiss francs, details of which were subject to negotiation. According to reports, the Swiss Government has accepted the scheme in principle. Meanwhile, the Government of India found that 1961, 1962 and 1963 would be the peak years for repayment of the loans it has already taken. It is, therefore, not possible for it to enter into fresh commitments, particularly for consumer goods.

Refund to Companies

Following the withdrawal of the current profits deposit scheme from 1st April, 1958, the Central Government has laid down the procedure for obtaining the refund of the balance of deposits made by companies. A company will apply for refund to the particular office of the Reserve Bank of India, or its agency, where the deposit was originally made. It will furnish full particulars concerning the date of deposit, amount deposited, refund due, etcetera, along with the latest memorandum of deposit obtained from the Bank. In case the memorandum is not available due to loss, etcetera, a duplicate memorandum has to be obtained. On receipt of the application, the Bank will verify that the securities or cash deposits claimed by a company are actually held in Government account. On being satisfied, the Bank will allow the refund with due interest up to the date of refund. The securities will be returned in physical form duly endorsed in favour of the companies. For further information, applicants may contact the offices of the Reserve Bank concerned, or the agency bank. No reference to the Secretary, Board of Referees, should be made on matters relating to these refunds. If a company has made a deposit under Section 10(E) of the Income Tax Act with any bank, Treasury, or Sub-Treasury in contravention of the provisions of Rule 2(3) of the Income Tax Allowances (Current Profits Deposit) Rules, 1957, it should take steps to get the amount transferred to the nearest branch or agency of the Reserve Bank, from which alone a refund can be obtained on the production of a memorandum of deposit.

Finance Ministry Delegation Returns

The four-member Ministry of Finance delegation, headed by Mr. A. K. Roy, Chairman of the Central Board of Revenue, has returned to New Delhi after a seven weeks' tour of nine European countries. Apart from the leader, it consisted of Mr. V. V. Chari, Member of the Central Board of Revenue for Income Tax, Mr. N. H. Naqvi, Secretary of the Board and Mr. M. S. Sivaramakrishnan, Under-Secretary. The delegation visited West Germany, Switzerland, the United Kingdom, Sweden, Norway, Denmark, France, Holland and Greece, where it had discussions with the taxation authorities. The delegation studied the taxation systems of these countries. It also reached appropriate agreements with some of them for the avoidance of double taxation. It explained in each country the special features of tax agreements that alone would suit India. It is reported that in most countries, there was a genuine appreciation of India's point of view. It was, therefore, possible for the delegation to sign agreements, at the official level, with West Germany and Sweden. With the latter country, the agreement was negotiated, drafted and signed in what is perhaps a record time of two and half days. In Greece also, an agreement was reached, but due to lack of time, the draft could not be put into its legal form. An aide memoire has, therefore, been drawn up and will be put into legal form very shortly. With France, an aide memoire has been drafted, according to which there is complete agreement on all basic points, although certain points of detail still remain to be negotiated. A delegation from that country is expected to visit India before the end of the year to finalise the agreement. With Switzerland, an agreement relating to air traffic has been signed; but the Swiss authorities have expressed a desire to continue negotiations on other matters in India during the coming cold weather.

Under the laws of most of the countries, these agreements require to be ratified by their Parliaments. The contents cannot, therefore, be disclosed at present. It may, however, be said that, in the agreements already finalised, India's point of view has been substantially, if not wholly, met. The problem of double taxation arises when residents of one country do business in another. In such cases, the country of residence charges tax on the world income of the resident including that in the other country, and the country in which the business is done also charges tax on the profits made in that country. Taxation rates in most countries being quite high, business of this kind would become difficult unless remedial action is taken by Governments. This consists in entering into appropriate agreements with other countries which

Western Model

Most western countries have such agreements with countries in which their residents have businesses. Although, all these agreements naturally differ in detail, there is one basic principle on which they are based: and that is that except where the resident of one country maintains what is known as a "permanent establishment" in another country, such as a branch, workshop, etcetera, that country alone keeps the tax of which the taxpayer is resident and the other country, where the profit is earned, exempts such income from taxation. Thus, if the resident of country A earns royalties from country B, the agreements generally provide that country B will not charge this to tax and country A alone will charge it. The task of the Indian delegation was difficult because this basic principle is unsuited to Indian conditions. For some years to come at least, India is likely to pay much more by way of interest, dividend and royalties to western countries than she is likely to receive from them. If, therefore, India were to follow the basic principle of the European agreements, there would be a substantial loss of revenue. Moreover, under the Indian tax system, large concessions are given on profits earned from industries, especially newly established industries. If, therefore, on the income earned by a foreign investor from an industry in this country, he is charged full tax by the country of his residence, this will frustrate the incentives that the Indian tax system gives. From India's point of view, therefore, it is important that, instead of following the western model, India should adopt the principle that the country in which the profit is earned, or which is the source of income, charges and retains the tax. The Indian delegation had, therefore, to explain in each country the special features of the tax agreements that alone would suit India.

Hoarding and Higher Prices

The premature publicity about import policy for the three months ending December 1958 has led to hoardings and a rise in prices of all categories of goods. The Middle East crisis has made the position worse. Industry has made it clear that a ban on essential raw material imports would slow down production, and thereby create unemployment. In fact, due to drastic import cuts, there has been a noticeable increase in unemployment in the trade sector. The industrial sector has made the weight of its organised opinion felt. This should explain the statement of the Central Commerce and Industry Minister, Mr. Lal Bahadur Shastri, in Bombay last week, that no final decision on the import policy for October, November and December 1958, has yet been reached and that the Government will make utmost efforts to sustain production on the 1957 level.

So far as exports are concerned, any improvement on a short-term basis, can only be made in traditional exports. The story of tea is well known. High export duties, competition and lately a recession in demand have damaged jute export prospects. The export trade in hides and skins has suffered because of the ban on cow slaughter in some States.

Posts and Telegraphs Board

A tentative decision to reorganise the Posts and Telegraphs Board has been reached. The new board, it is claimed, will be self-contained. By reducing red tape, it will enhance efficiency. The existing Posts and Telegraphs Board was created in 1930. The Director-General, Posts and Telegraphs, is its chairman and the Chief Engineer, the Senior Deputy Director-General, Posts and Telegraphs and the Finance Officer, are its members. According to one report, interference, particularly by the Ministry of Finance, is resented by the board. As all staff questions are handled by the postal officers, the Telegraph and Telephone staff has been demanding a separate board for them. Another proposal is to give the status of a Government Secretary to all the members of the board.

Flood by Rain

New Delhi had rain-water floods last week. The fire brigade did not play its part properly. The firemen are supposed to be on 24-hour duty, yet nothing was done to save the fire engines from being submerged. By the side of the fire station, the Telephone Exchange was allowed to be flooded. Apart from the damage to telephone equipment, running into lakhs of rupees, a considerable loss of revenue must have been caused. An enquiry would seem to be called for to find out why no steps were taken to protect the fire engines and the Telephone Exchange.

U.S. Aid to Small Industries

An agreement between India and the U.S.A., has been signed, under which the latter will provide Rs. 26 crores to be lent to medium-sized industries in the private sector through the recently-floated Refinance Corporation. This sum is part of the proceeds of the sale of U.S. agricultural commodities received by India under U.S. Public Law No. 480. The loan is to be for periods of three to seven years, and will be extended primarily to such projects in the private sector as are included in the second five year plan.

U.K. CABINET CONSIDERS REPERCUSSIONS OF MIDDLE EAST DEVELOPMENTS

UNCERTAINTIES CONCERNING EUROPEAN FREE TRADE AREA

(FROM OUR LONDON CORRESPONDENT)

THE outstanding feature of recent weeks has been the calm, unruffled manner in which the Prime Minister and his Cabinet colleagues have gone about dealing with routine matters in between dealing with all the alarms and excursions resulting from developments in the Middle East and their inevitable repercussions, both political and economic. The Cabinet has been under considerable pressure, and Mr. Macmillan most of all, but the response has been admirable. So much so, in fact, that it will not be far from the truth to ascribe to this fact the confidence shown generally that not only will Britain surmount the difficulties lying ahead, but that she will do so with colours flying and prestige enhanced. Any doubts which remain are confined to the internal labour front—where recent welcome indications of co-operation are showing alarming signs of being reversed—and to uncertainties concerning the outcome of final negotiations on the establishment of the European free trade area. Failure to succeed in either of these directions could mean a severe setback to Britain's economic policies and involve major alterations.

Prices and Employment

The Chancellor of the Exchequer maintains his optimism that the battle against inflation is still being won. He holds, as his remarks to the National Production Advisory Council on Industry the other day go to show, that the outlook for prices during 1958 is more encouraging than in previous post-war years and that a widespread reduction in retail prices in the next six months or so might be expected. The main reason for this is the big fall in the prices of imports of raw materials, but Britain will have to ensure that sensible policies are pursued by the Government. Both sides of industry should have to ensure that the demand for Britain's exports by the primary-producing countries, which has so far been well maintained, is continued by enforcing general price stability. This has not yet meant the severe unemployment which some people think is an inescapable condition of price stability. Mr. Amory sees no sign of any drastic change in the employment situation, but agrees that it is something which has to be watched. The clearest result of disinflation has been to reduce the unsatisfied demand for labour, as the figures of unfilled vacancies show. In June these were a third lower than a year earlier. It is also likely that employers have not kept workers on their books, when there is insufficient work immediately at hand, to the same extent as formerly. As a result, it has been possible for productivity a man employed to rise slightly.

This optimism is not shared by the T.U.C. General Council. Apprehensive about the possibilities

of more unemployment during the autumn, they have decided to seek a meeting with Mr. Heathcoat Amory to discuss the economic situation. Among the suggestions which the union leaders hope to make is one to the effect that the Government should restore fully capital investment in the State-owned industries. They are also likely to question the Chancellor about his statement that "there may be some widespread price reductions in the shops over the next six months or so." They feel that retail prices have not kept pace with the fall in import prices. It is hoped that the meeting will be arranged before the annual congress starts in Bournemouth on 1st September.

Changing Trends in Exports

Another aspect of the economic situation which calls for constant surveillance is the progress, or otherwise, of Britain's exports. An analysis of foreign trade in the first half of this year, just issued by the Board of Trade, brings out some significant facts. The volume of imports was much the same as in the first half of 1957, after discounting the effects of Suez last year and the dock strike this year, but the value of imports was 12 percent less, because of lower prices. Exports were about 2½ percent down, both in value and in volume. As a result, the "trade gap" has fallen by half, from £342 million to £172 million and now represents a large payments surplus on visible trade alone. These trends have been clear for some time. What is brought out clearly now is a change in the pattern of Britain's overseas trade.

While the value of Britain's imports from the primary-producing countries has fallen steeply, her exports to them have so far kept up well. The decline has been mainly in exports to western Europe. A new trend is now disclosed. Commodity prices have become steadier, but a number of primary-producing countries have started to reduce their imports for one reason or another. The change is noticeable in an easing of Britain's exports to the sterling area. Exports to the dollar area have been 3½ percent higher in value this year than last, and are still doing well. The change in trade with western Europe, where British imports have remained on the same level but exports have fallen by 12 percent, is fairly widespread, with West Germany almost alone in taking more of Britain's manufactures. As for the outlook for the rest of this year, exports must become more difficult unless there is an unexpected upturn in activity either in the United States or in Europe.

Terms of Trade

Prices of Britain's imports, which on average had fallen by 12 percent between April 1957 and March of this year, are now levelling off. A drop of one point in the Board of Trade's index number to 98 in May has been followed by a one-point rise in June. Since export prices have held steady, the terms of trade moved slightly against this country. The index measuring the ratio between Britain's import and export prices (1954 equals 100) moved up in June from 89 to 90. As far as Britain's balance of payments is concerned, a prospective mild worsening of the recently favourable terms of trade gives no cause for anxiety. Britain is at present earning a large surplus, probably in the neighbourhood of £450 million a year. From the standpoint of the sterling area as a whole, a steadier level of prices of primary products is greatly to be desired.

Last month, too, prices of basic materials used in British industry showed the first check to the downward movement which has been continuous since the spring of 1957. The Board of Trade index (1954 equals 100) rose in June from 93.7 to 94.1. At this level, it was still nearly 13 percent lower than in June of last year. The rise was due to increases for copper, rubber, wool, lead and zinc, which more than offset decreases for raw jute, hides and skins, and imported plywood.

Commonwealth Trade Debate

If the Opposition expected any dramatic results from the Commons debate on Commonwealth trade, they must have been disappointed. It was based on a motion calling for the stabilisation of prices of primary products and the grant of more economic aid to which the Government amendment subscribed with the deletion of the demand for "further economic aid" and welcomed the opportunity to be provided by the forthcoming Commonwealth Economic Conference for the discussion of these and wider issues. The amendment was carried by 219 votes to 181. The Government's policy was explained as the promotion of world demand. It was suggested that other aid, apart from maintaining the demand for Commonwealth raw materials, might be made available. It was mentioned that the Government was considering India's difficulties and seeing what could be done.

No Orders for Ships

According to the Shipbuilding Conference, U.K. shipyards in the second quarter were given con-

tracts for only 28 vessels of 63,000 gross tons. In six months, the total shipbuilding order-book has shrunk from 812 ships, aggregating 6,828,000 tons and worth about £1,000 million, to 695 ships of 5,970,000 tons, worth about £860 million. The Conference comments that the "virtual absence of new ordering must give rise to some concern for the future."

In the second quarter, orders for nine ships of 100,000 tons were cancelled (against 14 of 183,000 tons in the first quarter), bringing the total cancelled in the 12 months up to 30th June, to 37. Cancellations here have been few compared with other countries because the bulk of the tanker orders have come from the main oil groups, which take a long view, and not from independent tanker owners who stand to lose more in a recession. British shipyards are still booked up with work to keep them busy for the next few years, but if the future is to be safeguarded, profit margins will have to be cut still further in an effort to get orders. Work for foreign owners in British shipyards is very low.

War Risks and Middle East Ports

Lloyd's underwriters have decided to exclude ports in Iraq, Israel, Syria, Lebanon, and the Gulf of Akaba, from the worldwide war-risks cover given on ships' hulls in normal marine insurances. Shipowners must now negotiate separate war-risks cover for ships proposing to enter the excluded ports. Normal rate for hulls is 1s percent, but rates of 5s percent or more may be charged for troubled areas. The new exclusions are precautionary and do not necessarily indicate considerable increases in war-risk rates. Tanker fleets under foreign flags are chiefly affected by the revisions. British ships are normally covered against war risks through shipowners' "protection and indemnity" clubs which are run on a subscription basis. These revisions relate only to hulls and do not affect cargoes, amended rates for which have already been announced.

Fairbairn Lawson Prospects

Mr. W. Walker, chairman of Fairbairn Lawson Combe Barbour, the textile machinery makers, warns shareholders that the final result for the year ended 31st March will probably be a loss of £150,000 to £160,000. Vigorous efforts to achieve economies have been particularly effective at the Leeds works, where the rate of loss showed a marked decline in the last three months of the financial year. This tendency is continuing in the current year, but losses are mounting again in Dundee. Consequently, the directors have decided to concentrate production at the Leeds works, which of the fixed assets in Dundee are to be sold. Efforts are being made to find a purchaser of the works as it is hoped to reduce bank indebtedness by some £350,000 to £400,000, and create in Leeds an efficient operating unit with an order-book not less than at present in the two companies, excluding still further development, and if the order-book remains at the 1957-58 level, the company should become profit-earning by the end of this year.

Mawchi Mines Setback

The board of Mawchi Mines says that because of the recent destruction of the storehouse, staff resignations and continually falling prices for wolfram, there is no early prospect of reaching profitable production. It has advised the joint venture company in Burma that operations should be curtailed. The shareholders' committee invited by the chairman to study the company's position has not submitted a report, but in a letter says that it separately such steps as it considers necessary. Mr. Sydney F. Taylor, senior partner in John Taylor and Sons, has joined the Mawchi board. Mr. N. F. H. Railing has resigned to provide a vacancy.

Brevities

The World Bank has approved a loan equivalent to \$7.4 million to Ceylon, to help finance a thermal power project to increase power supplies in south-eastern Ceylon. The loan carries interest at 5½ percent and is for 20 years. The Manufacturers Trust Company and the Bank of America are participating in the loan.

Mr. P. S. Beale has been appointed a director of the British Oxygen Company. He was formerly Chief Cashier, Bank of England, and recently General Manager of the Industrial Credit and Investment Corporation of India.

Ordinary shareholders in Braithwaite and Co. Engineers, are to receive a special tax-free capital profits distribution of 2 percent in addition to a repetition of last year's 8 percent dividend. The extra comes from a £277,639 capital surplus arising from the sale of 200,000 shares in the Indian subsidiary to Jardine Henderson. Group profit, £133,458 against £123,451 previously. Dividend on £23,173 gross, against £61,770. The tax charge was £85,650 against £104,400.

For the second quarter of this year, the Midland Bank's index of business turnover (1950 equals 100) is 159. This compares with 161 in the first quarter of 1957. The index is derived from figures of the total drawings on current accounts with the Midland Bank, excluding those at certain City branches, where turnover is dominated by money market and other financial transactions.

A Commonwealth conference of nuclear scientists will be held in Britain from 15th September to 20th September. One of its purposes will be to discuss the particular requirements of Commonwealth countries and the recent developments in the atomic energy field relevant to their needs.

Jute

GUNNIES STILL UNDER SPECULATIVE INFLUENCE

RESTRICTED BUSINESS IN FIBRE

THE bearish reaction towards inflated prices, which became apparent towards the close of the market last week, was again evident at the opening on Thursday. Selling pressure in the fatka, and by mills for certain constructions, caused an easier tendency. The only exceptions were wool packs and cotton packs which appreciated due to a report of small interest from Australia. The general undertone of the market, however, contained an air of expectancy, mainly on account of the continuing tension in the Middle East. Operators were poised for action. The squeeze on near shipment hessian goods was considerably relieved shortly after the opening by reports that shipping dates for this fabric had been extended. Local shippers withdrew from the market causing an easier tendency; as prices fell back mills lost interest and relaxed their selling pressure. Later in the week brisk speculative activity forced rates above the opening levels, and the sentiment of the market improved. Overseas buyers show no signs of departing from their hand-to-mouth buying policy, and indeed the latest burlap stock and consumption figures from America are apt to emphasise this point. Stocks have fallen to 232 million yards, the lowest this year, while consumption dropped to 60 million yards, which is the lowest since July 1955. There was little incentive for mills to sell heavy goods as most of the time, prices, with the exception of end-of-the-year shipment, were well below the L.I.M.A. minima. This state of affairs improved towards the close, but only under speculative promptings.

Calcutta mills showed little interest in buying jute last week, and in sympathy with the weaker goods market prices fell back. Crop reports for Assam and Northern Bengal continue to be favourable, but other areas have suffered setbacks of a varying degree. In some Daissee districts there have been reports of damage to the crop from insects, but it is understood that this has been confined to a very small area. In Bihar, the late monsoon this year has caused stunted growth and the immediate worry is whether the crop will be mature enough for harvesting before flooding starts. On the whole, however, prospects for the new crop are better than they have been for several years, and reports of initial imports, which are mainly in the category of weedings, are very favourable. Raw jute sellers were reserved throughout the week, in spite of the lack of interest and recession in rates, and offers were limited. When buyers did show interest at slightly below the quoted rates sellers withdrew, and only small business was reported when buyers' rates were advanced.

After the week-end holiday, the fibre markets firmed up considerably, partly in sympathy with finished goods, but also on account of a rumour concerning the possibility of the Indian Government allowing limited export of mesta overseas. This is most unlikely at present time when India is striving for self-sufficiency in jute. But the stories appear to have backing, because for some time overseas consumers have been pressing for at least a token shipment of jute from India, presumably in an attempt to force Pakistan to reduce her prices. The last time this subject was brought up the emphasis lay on bimli, but no shipments were made. The only jute that India has an abundance of is low quality jungli fibres, and these are not the types to interest foreign buyers. This season the mesta crop is reported to be much smaller than last, so it is doubtful if there will be any surplus for export.

THE JUTE MARKETS

Prices in the fatka markets fluctuated within narrow limits during the early part of the period, but heavy activity was recorded towards the close. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 23rd July to 29th July, were as follows:

	Hessian 40in. 10oz.	Sacking B Twills August	Raw Jute Upper Assam August
Opening	42.58	98.35	25.56
Highest	43.12	100.75	25.56
Lowest	42.04	98.15	25.02
Closing	43.12	100.70	25.50

Manufactured Goods: The market opened on a quiet note last week, and keen selling pressure in the fatka market depressed rates. B Twills showed a drop in the opening price of 50p to be called over at Rs. 97.90. The forward section was even more depressed over near shipment down to Rs. 2.10. The movement in Hessians was less pronounced and July 40in. 10oz. lost 20nP to rule at Rs. 42.95 which was Rs. 1.85 over the forward shipment. Some small enquiries from Australia for wool packs and cotton packs combined with speculative buying in fatka by a prominent bull operator caused a slight rising tendency over the next two days, and rates fluctuated within narrow limits. The political situation in the Middle East was being carefully watched and the general activity of the speculative markets was conducted with that in mind. Towards the week-end, heavy goods rates were about 40 to 50nP over opening levels, while

Hessians were more or less unchanged, due to the fact that pressure on near shipment Hessians had been relieved by the extension of shipping dates. Monday was an official holiday when all markets were closed, and at the opening on Tuesday morning, the market was firm. This was the result of heavy speculative buying in fatka and reports of small overseas enquiries. B Twills moved up to Rs. 99.10 and Hessians to Rs. 43, and during the day a rising tendency developed.

	Ready	August	September	Oct.-Dec.
40in. 8oz.	35.10 (38.25)	34.80 (37.93)	31.35 (37.44)	33.50 (36.51)
40in. 10oz.	43.80 (47.74)	43.60 (47.2)	42.90 (46.76)	41.80 (45.56)
B Twills	100.60	101.50	102.10	102.85
Heavy Cees (Plain)	100.75	101.75	102.10	102.75

(Figures in brackets indicate the value per 100 metres).

Raw Jute: There was very little activity in the fibre markets last week, and it is estimated that purchases were under 100,000 maunds. Sellers were reserved as imports both in the local markets and upcountry were much lower than the previous week. Covering against higher-priced contracts was reported from many agencies and this tended to give quotations a false outlook. Any indications below the quoted rate were ignored and the question of length of time it would take to make payment was invariably brought forward at the time of closing a contract. Quotations opened at Rs. 26.50 for new crop Assam-Northern jute for July-August shipment and remained at that level until after the holiday when rates began to rise in sympathy with the goods market. Mill agents were still very active in the agencies and in Cossipore, but they found stronger resistance to their activities than of late.

Small business was reported in old crop jute and Assam-Northern was done at Rs. 26.25 basis Bottoms for July-August shipment. New crop jute from the same agencies was reported at prices varying between Rs. 26.50 and Rs. 27 for August shipment. Desal White was done at Rs. 25.25 and jungli white at Rs. 23. There was some interest in mesta, and Daissee and selected Murshidabad Districts fetched Rs. 24.50 basis Bottoms and Northern-Assam at Rs. 25 basis for equal quantities in October-November-December.

Arrivals in Cossipore last week were very poor compared with the previous week. A total of 256 wagons arrived against 644. During the corresponding period last year, arrivals were 340 wagons. The majority of sellers are very reserved and at the close quotations of Kishanganj jute had advanced to Rs. 25 for average quality.

At the close on Wednesday morning, quotations were as follows:

Indian Jute:	Landed at Mills Rs. a md.	Rs. a 100 kilos	Shipment August
Assam-Northern	26.75	71.69	"
Purnea Desal	25.25	67.67	"

THE FOREIGN JUTE MARKETS

YARN AND CLOTH PRICES RAISED

(FROM OUR DUNDEE CORRESPONDENT)

WITH the steady rise in prices for raw jute recently, it has been found necessary to raise prices of yarns and cloth in Dundee by about £5 a ton. This came into effect from 19th July, exactly two weeks after a reduction to that extent had taken place. The change can be ascribed mainly to the acute situation in the Middle East, but it brought out numerous buyers of raw jute, yarns and cloth and bags. Jute rose by £5 to £6 a ton, with sellers asking £114 for Mill Firsts, £100 for Mill Lightnings and £90 for Mill Hearts, while Daissee and Tossa were for a time more or less nominal in the absence of offers. Last week, the position had gone easier and offers of Mill Firsts were made at £112. Mill Lightnings from £97, Mill Hearts from £87 and grade Hearts were available at £70, August-September. It should be pointed out that sellers of good marks are not reducing their prices to the same extent as those who are offering short or long groups. The value of crack Daissee-2/3 is £104 and grade £97, with grade Tossa-2/3 from £112 and grade Tossa-4 £102, a drop in Tossa from £115 and £105, respectively, for September-October shipment, c.i.f. U.K. or Continent.

Calcutta goods have also weakened and sellers are now asking 65s 6d for 40in. 10oz. and 49s for 7½oz. July, compared with 67s and 50s recently, 64s 3d (66s) and 48s 6d (49s 9d), respectively, August, 63s 9d (65s 6d) and 48s (49s 6d), September, and 62s 3d (63s 9d) and 47s (48s 6d) October-December, all f.o.b., Calcutta. (Figures in brackets are those ruling on Monday of last week.)

Jute yarns were raised from 14.87d to 15.44d a lb for 8 lbs cops and from 16.02d to 16.59d for 8 lbs J.C.H. spools, and indeed most prices reverted to the level ruling prior to 5th July, the date on which they had been reduced. Rove was unchanged last time but 48 lbs is now £104 (£101 10s) and 200 lbs £81 15s (£79 5s) a ton, while 40in. 10oz. Hessians were raised from 13.26d to 13.64d a yard and 8oz. from 11.32d to 11.62d.

IMPORTANCE OF TOBACCO AS A CASH CROP

Commercial Importance

COCHIN TEA SALES

At Sale No. 23, 1,250,000 lbs of tea were on offer. There was a fair general demand at easier rates. Low mediums and mediums declined by 5nP or 10nP while good mediums met with limited demand and were 10nP to 15nP lower. High-growns were barely steady.

**PLAN TO START
IMMEDIATELY**

(FROM OUR NEW DELHI CORRESPONDENT)

MORE ORDERS FOR COMET AIRCRAFT

Aerolineas Argentinas will put the first of their Comets into service early next year, and the delivery of all the six aircraft is due to be completed in 1960. These airliners—inter-Continental Comets—will carry up to 60 first-class or 76 tourist-class passengers and will be used on the main inter-Continental routes from Buenos Aires. Their cruising speed of 510 miles an hour (821 kilometre an hour) will halve existing schedules. For example, on the Buenos Aires-New York route (present schedule 30 to 40 hours), the time will be cut to 14 to 15 hours; the Buenos Aires-London service will be scheduled at 21 to 22 hours compared with 37 to 38 hours by today's airliners, while the short Buenos Aires-Santiago trip will be cut from three to one hour.

Short-range Comets

B.E.A. has ordered shorter-range Comet IVBs which will bring European cities to within an hour or two of London. Nice will be reached in one and a half hours, Rome in two hours, and Moscow in less than three and a half hours' flying time. Past history suggests that the Comets will not only skim the cream of airline traffic but will create a fresh demand. (B.O.A.C.'s Comet Is are operated at load factors of up to 95 percent.) The Comet's Avon engines have a present overhaul life of 750 hours with the prospect of attaining 1,000 hours soon after their entry into service. This is equivalent to a 1,500-hour life on a piston-engine (a speed not often achieved) because of the high engine with Rolls-Royce silencers, the success of which can be judged by the fact that the Comet is the first four-jet airliner in the world to be allowed to use Idlewild airport in the United States.

USE OF STEEL TUBES IN GENERAL BUILDING CONSTRUCTION

The Indian standard code of practice for the use of steel tubes in general building construction (IS: 806-1957) has been issued by the Indian Standards Institution. The code deals with the use of structural steel tubes in general building construction and includes provisions which are of special application to construction using steel tubes. This being published under the I.S.I. steel economy programme. The object of this programme is to achieve economy in the use of structural steel by establishing rational, efficient and optimum standards for structural sections; to formulate standard codes of practice for the design and fabrication of steel structures; to popularise welding in steel construction; and to co-ordinate and sponsor extensive research relating to the production and use of structural steel which will enable the formulation and revision of standard specifications and codes of practice. This code is complementary to (IS: 800-1956) the code of practice for the use of structural steel in general practice for construction. The use of tubular steel in structural work will result in considerable savings, particularly in the case of roof trusses, latticed girders and compression members in general. It is, therefore, recognised that the large-scale use of tubular steel in structural work is of considerable importance in the interest of steel economy. Copies of the code, which have been published in English in a handy book form, can be had from the Indian Standards Institution, New Delhi, as well as from its branch offices in Bombay, Calcutta, and Madras.

HIGHER CANADIAN TARIFFS ON U.K. WOOL GOODS

It must be said that the British industry was not entirely deaf to the other side of the argument. The Canadian Government's intention to deal likewise with non-British competition had a demoralizing effect in Yorkshire; and it had to be admitted that the increases in the duties were not large and that they still allowed British goods much freer access to the Canadian than to the U.S. market. The fact remains, however, that the Canadian Trade Mission, which was in Bradford while representatives of the British wool industry were in Ottawa arguing their case, presented a special bouquet to the Canadian tariff, remarking that it had "remained in the vanguard of progress" and had "greatly helped to create and meet the demand for new clothes, designs and fabrics". The British industry was reasonably hopeful that this complimentary report would weigh in its favour when the question of the tariff was decided.

U.S. Regulations

Within a week or two of the adjustment, the U.S. duty was automatically raised from 25 percent to 45 percent for the second half-year, the quota having been filled in the first half. In 1957, when imports took about a month longer to fill the quota, exports of wool cloth from the U.K. to the U.S.A. were 17 percent less than in 1956, and the chairman of the Wool Export Corporation, Mr. J. D. Hood, has forecast a further reduction this year. These U.S. regulations are resented not only because they restrict trade (in this case, too, against the general policy declared by the Government) but also because they thoroughly disorganise it. However, the British industry may adapt itself; it tends to fall behind in "the race to beat the quota", because it is not a competitive in routine lines as in its traditional specialties. These troubles in North America have not unduly discouraged the Yorkshire industry, but they have raised the question whether the main weight of the industry's export drive should be directed towards the North American markets. In recent years, the U.S.A. and Canada, roughly equal in importance and both taking more than any other export market, have together absorbed nearly 40 percent of U.K. exports of wool cloth valued at approximately £75 million a year. Such trade will not be relinquished without a struggle; but it would be a mistake to struggle so hard that other export markets were missed.

There is not at present much optimism in Yorkshire concerning the prospects in Australia, New Zealand, India, and other markets of the British Commonwealth, but the outlook in western Europe is quite promising. West Germany, one of the few countries with a liberal import policy, was last year second only to Canada as an importer of British wool goods—Canada and the U.S.A. rank equally only on an average of a longer period. As the Benelux countries have also been willing customers of the British industry in the past year or two, Yorkshire will be distressed if negotiations to expand the European common market into a European free trade area are unsuccessful; for British exporters would then have to surmount a substantial tariff to gain access to the common market, and other European markets such as the Scandinavian countries and Austria, though expanding, do not offer such wide scope for trade. However, the British industry is still insistent that a proper definition of origin of goods must be a condition of the free trade area, if it materialises; otherwise, the industry might lose more in competition with low-cost (or subsidised) goods from South America and countries of the East than it gained in exports to Europe. One fact which has emerged more clearly in discussion of the North American problem is that, strong though the position of wool may be, the long-term trend of demand does not favour this fibre. The languishing of the Canadian wool industry seems to be attributable not so much to the competition of other suppliers of wool goods as to the competition of other fab-

Frustration in Lancashire

The cotton industry's trade is being likewise eroded by the newer fibres—indeed, more so (though cotton goods return to favour quite spectacularly at times); and it is significant that the huge rayon combine, Courtaulds, has now to rely on its interest in British Nylon Spinners for an increasing proportion of its profits. But the problem which obsesses the cotton industry is the competition of imported cloth—and, increasingly, made-up textiles—from India, Pakistan, and Hongkong. The industry feels that the recent parliamentary debate on this problem has done nothing but harm; for the Government's refusal to restrict imports from other Commonwealth countries, because it aspires to expand the whole of Commonwealth trade, seems to have assured the exporters of cheap textiles that they will have nothing to fear if they refuse to limit their exports voluntarily. To have achieved provisional agreement with India and Pakistan on voluntary limitation is encouraging as far as it goes, but the industry is not as hopeful as the Government seems to be that the participation of Hongkong, needed to make this agreement effective, can be negotiated, *even in relation to cloth*—and the limitation of exports of finished textiles will evidently be still more difficult. Most Lancashire millowners are convinced that the competition of Hongkong is unfair, but some of them admit that the colony's success is at least partly attributable to modern equipment, efficiently used. The British Government believes that Lancashire should redouble its efforts to manufacture its special high-quality products more cheaply and to expand its export trade in these lines.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953-100) advanced by 0.9 per cent to 114.4 during the week ended 12th July, 1958, compared with 113.4 for the previous week. The index was higher by 3.2 per cent and 2.6 per cent, respectively, when compared with the corresponding week of last month and that of a year ago. The index for Food Articles rose by 1.6 per cent to 117.9 during an increase in the prices of cummin (+12%), seed in Batala (+9%), jowar in Akola (+8%), bajra in Jodhpur and Agra, bananas in Bombay, gram in Madras, potatoes and meat (+1% each), gram and arhar (+6% each), onions in Delhi and cashewnuts (African) in Qu'lon (+5% each), wheat (+3%), mung, milk, tea for export and chillies (+2% each) and rice, groundnut oil, eggs and sugar (+1% each) although the prices of maize in Khagaria (-7%), jowar in Hyderabad (-6%) and gingelly oil (-1%) showed declines. The index for Tobacco remained stationary at the previous week's level of 93.6. A rise in the price of castor oil in Calcutta (+6%) was responsible for raising the index for the Fuel, Power, Light and Lubricants group from 115.6 to 115.7. Higher prices of lac in Balarampur (+13%), tanning materials (Avram bark) (+10%), cottonseed (+2%), raw silk, groundnuts and castorseed (+1% each) raised the index for Industrial Raw Materials by 0.3 per cent to 116.5 although the prices of tanning materials (Galmuts) in Salem (-11%), raw wool (-2%) and ginnellyseed (-1%), showed declines. The index for Intermediate Products indicated a fall of 0.3 per cent to 110.7 due to a decline in the prices of rayon yarn (-4%) supported by a fractional fall in cotton yarn, zinc (+4%), linseed oil and brass (+2% each) although prices of tin (+1%) showed advances during the week. The index for Finished Products stood at 108.2 against 108.1 for the earlier week. The prices of jute manufactures,

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base : August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to June 1958. As compared with May, the June Index for Food shows an increase of 10 points, while those for Clothing, Fuel & Lighting and Miscellaneous re-

NEW PROCESS FOR PRODUCING WET GROUND MICA DEVELOPED

The Central Glass and Ceramic Research Institute, Calcutta, has recently developed a process for the utilisation of waste mica which is available in large quantities in mica mining centres in Bihar, Rajasthan and Andhra Pradesh. Under the new process, the know-how for obtaining wet ground mica, comparable in properties and performance to imported material, has been developed. In the new process, scrap mica is washed free from clay and other adhering impurities, if present, and then ground in a specially designed wood-lined edge runner type mill in water for 8 to 12 hours. The ground material is subjected to water floatation and is allowed to settle. The shiny flakes of mica are finally screened to different mesh sizes. The mica powder thus prepared possesses all the chemical and other properties which are comparable with those of imported material. The Indian paint and rubber industries have extensively tested this powder and have found it suitable to their needs. These industries are now interested in assured sources of supply. An export market can also be developed. According to the information available, the price of imported mica powder is nearly Rs. 1,100 a ton, c.i.f. The equipment required, consisting of trommel washer, grinding unit, filter-press, drier and settling tanks, can be fabricated in India. The capital investment involved in a minimum economic unit (capacity 1,000 tons a year) is estimated at Rs. 3.5 lakhs.

main unchanged at 549, 281 and 286 points, respectively.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living advanced by 5 points during June 1958.

Books

LAW ON INCOME TAX

The Law and Practice of Income Tax. By Sir Jamshedji B. Kanga and N. A. Palkhivala. (Published by N. M. Tripathi (Private) Ltd., Princess Street, Bombay. Two volumes, pages 987 and 524, respectively; price Rs. 47.50).

This is the fourth edition of a monumental work by two of the most distinguished authorities on the subject in India: and has been rendered necessary by the introduction of new taxes and what the learned authors tartly describe as "amendments making the complicated laws still more complicated and progressive abridgment of individual freedom." In their outspoken introductions to the various editions the authors make no secret of the fact that they strongly disapprove of "the tangled confusion" of the income tax law and "grimly observe that the recent tax laws march with the hypothesis that the citizen exists for the State and not the State for the citizen and that man is made for the law and not the law for man." Be that as it may—and we must not be taken to subscribe to the saturnine hypothesis—Sir Jamshedji and Mr. Kanga cloak their discontent with flashes of wit which as one reviewer put it "almost makes an odious tax amiable." When one comes across these occasional passages one almost imagines that Bernard Shaw and G. K. Chesterton had embarked on a joint treatise on this sombre subject. Nevertheless one thing is clear, and this reviewer ventured to predict that it would be so when eight years ago he reviewed the first edition. This great work involving tremendous research and practical experience is the authority on the law of income tax in India.

INDUSTRIAL DISPUTES

Law Relating to Industrial Disputes. By N. Barwell and S. S. Kar. (Published by Orient Longmans, Calcutta. Pages 164; price Rs. 7.)

The only criticism one has to make of this book is about its title. There is no more complicated baffling and confusing subject than the 11-year old legislation relating to industrial disputes. It is impossible to cover this in a treatise consisting of 87 pages plus an appendix reproducing the various statutes and rules. The title, therefore, is an overstatement of what the work offers, which is in fact a longish practical and useful essay on the general scope of the principal Act and its working. What is really needed—and, if one may say so, for our careful study of his previous joint works the surviving co-author is the very man for the task—is a book covering the whole gamut of case and common law on the subject something on the same lines of the first edition of Ruegg's *Workmen's Compensation* when Mr. Joseph Chamberlain's similar bungling Act was inflicted on startled employers in 1906. It will occupy 870 pages, not 87 only.

LAW OF CONTRACT

The Indian Contract Act. By the Right Honourable Sir Dinshah F. Mulla. Edited by Kaikobad S. Shavaksha. (Published by N. M. Tripathi (Private) Ltd., Princess Street, Bombay 2, Pages 297; price Rs. 10).

When one of India's most famous lawyers, a member of the Judicial Committee of the Privy Council goes out of his way to write a book on a

subject largely commercial, expressly for the benefit of students, he is likely to produce one of value to the business world also. And that is what the great judge did as is indicated by the fact that the work is now in its sixth edition. Unlike some of their successors of the present day, parliamentary draftsmen in 1872 took trouble about their work. They had to because they had served their apprenticeship in the India Office under the very critical eye of the greatest master of clear English prose, Thomas Babington Macaulay. So we have in the Indian Contract Act a model of succinct, precise language. The scheme of the present work is simple and it is incomprehensible why so many legal authors do not follow it, but prefer to plant the Act they are discussing at the end of their book and a series of random comments at the beginning. Sir Dinshah and the present edition take the Act section by section with their practical comments and illustrative cases after each section and sub-section, and the result is that the law on any particular matter of contract can be easily investigated by reference to an excellent index and then the appropriate section and commentary. The price is low for these days.

GUIDE TO INVESTORS

Investment for the Ordinary Man. By Mortimer Langton Warren. (Published by MacGibbon and Kee Ltd., London. Price 15s, pages 135. Review copy received from Rupa and Co., 15, Bankim Chatterjee Street, Calcutta 12).

There is no dearth of books on investment institutions, but most of them are written by professionals who use technical jargons to explain even simple things. The layman, who is nowadays eager to learn the mechanism of investment, cannot always find a lucid explanation of how capital might be profitably invested. Men of modest means, both in the United States and Britain, now show a great interest in Stock Exchange investment. Their interest grows unabated in spite of all the gloomy forecasts made from time to time by professional experts. The growth of this spirit of investment among common men indicates a nation's prosperity, and the existence of a sound stock market system helps a capitalist democracy canalise available savings into profitable investment opportunities. But it is unfortunate that there is still a great deal of misconception about the utility of Stock Exchanges. Even responsible people regard them as a gamblers' paradise, not being of any use to the common man but of great importance to the wealthy and the privileged. The sooner this misconception is allayed, the better, and Mr. Warren spares no pain to enlighten the ordinary reader about the usefulness of a Stock Exchange in a free market mechanism. He discusses elaborately, but lucidly, the technicalities about the major institutional investors in Britain and leaves a lasting impress of how even difficult things can be expressed in the simplest of language. The lay reader will find helpful indications in the book as to how he can arrive at a prudent decision on investment.

Investor's Progress. By A. G. Ellinger. (Published by Bowes and Bowes Publishers Ltd., London. Price 10s 6d; pages 158. Review copy received from Rupa and Co., 15, Bankim Chatterjee Street, Calcutta 12).

This is not a technical publication for the advanced investor, but mainly meant for those who are thinking how best to invest their savings. Being an introductory work on the subject, it explains, in comprehensible language, the pros and cons of available investment opportunities. The author endeavours to explore the investors' world and acquaints the reader with procedural formalities of Post Office Savings Bank and other such institutions, and various small savings schemes. Finally, there is a lucid discussion on stocks and shares. The chapter on how to interpret balance sheets will prove particularly useful to the lay reader who is unaware of the intricacies of company financing. Written particularly with reference to Britain's money and capital markets, the book is full of examples relating to that country. Nonetheless, the average Indian investor will get valuable clues about the best use of his savings.

PLANTATION ANNUAL

Annual Number, Planting and Commerce. Edited by V. I. George. (Published by same. Price Rs. 2, pages 73).

The latest annual number of the *Planting and Commerce* contains a number of articles on the plantation industry in Kerala. The latter is the smallest State in the Indian Union but is the largest earner of foreign exchange. The plantation industry there, as elsewhere in India, is in the throes of a crisis, mainly due to the exorbitant fiscal burden and welfare legislation imposed on it by the Government. The planters are therefore, confronted with the crucial problem as to how to maintain plantation assets, let alone to expand and develop their estates. Tea, coffee and rubber are the three most important commodities in international trade, but their prospects have been dimmed by over-production in the producing countries. Brazil has had a bumper crop of coffee, India and Ceylon have produced a record output of tea while the total output of natural rubber is estimated at over 1.9 million tons, the highest ever. The annual number discusses all these problems in a broad perspective, and much of the information contained in it is up to date and useful.

Calcutta Markets

POOR DEMAND AT EXPORT TEA SALE

DUST PRICES DEARER

At Sale No. 6, held on 29th and 30th July, the offerings at the Export auction amounted to 49,230 packages, for which demand was comparatively poor and buyers were more selective than of late. Common teas were 8nP to 12nP easier although "teas for price" declined by 6nP only. Orthodox medium Assams were 10nP to 15nP below last rates and B.O.P.'s and O.F.s. were sometimes as much as 30nP lower, although some of the brightest in this category sold well at about valuations. C.T.C. Assams were the weakest feature and declined by 20nP to 40nP and sometimes more, while there were very heavy withdrawals of this type of tea. Orthodox Doosars with bright liquors were about 20nP down, while non-wither Leg-cut teas were about 20nP to 25nP easier. Whole leaf grades, particularly the higher priced ones met with less competition and were 15nP to 20nP easier but tippy teas and Darjeelings sold well although frequently below last rates.

Quotations	1958		1957	
	Rs.		Rs.	
Clean Black Pekoe	2.15	to 2.25	2.40	
Plain B. P.	1.70	to 1.74	1.80	
Plain Fannings	1.84	to 1.88	1.68	
Medium B. P.	2.05	to 2.15	2.00	
Medium Fannings	2.20	to 2.40	2.05	
Best Assam C.T.C. B. P.	3.80	to 4.00	3.50 (Nominal)	
Best Assam C.T.C. Fgs.	4.10	to 4.50	4.00 to 4.25	

At the Internal Sale, offerings amounted to 20,326 chests of Dust. There was a good general demand for non-wither Doosars and orthodox descriptions. Commons and Doosars were a strong feature of the sale and were frequently dearer while prices for Assams closely followed quality. Those with improving liquors were firm and sometimes dearer while the plainer ones were 6nP to 10nP easier. There was a fair general demand for the large weight of C.T.C. Assams on offer and prices for all except certain selected offerings of best liquoring invoices were between 25nP to 35nP easier, and towards the close withdrawals were frequent. Darjeeling invoices sold well although demand was irregular.

Quotations	1958		1957	
	Rs.		Rs.	
Medium Doosars Dust	1.66	to 1.68	1.50 to 1.60	
Medium Assam Grainy Dust	1.68	to 1.72	1.60 to 1.70	
Medium Assam C.T.C. Dust	2.00	to 2.20	2.10 to 2.40	
Best Assam C.T.C. Dust	2.35	to 2.85	2.60 to 3.00	

There was a total of 820 chests of Leaf on offer. Quality was generally of a residue description and prices moved in buyers' favour.

FREIGHT MARKETS QUIET

With the easing of the situation in the Middle East, the freight markets were quieter during the past week but recent gains were not maintained and most owners preferred to wait in case of further trouble. Charterers booked a grain cargo from the Gulf to Avonmouth and London at 48s 9d which was 3s 9d down on the previous week and Churchill to the U.K. was booked at 47s 6d—5s less than last week. Charterers are still quoting for a contract for 60,000 tons of sugar from the Philippines to Northern Range with ideas of \$6.25 for one cargo monthly from November onwards. Otherwise, there is little to report in eastern trades or Australia. In the time charter market, a motorship was fixed for two or three months trading with delivery and re-delivery in Singapore at 16s, and there were rumours that the Ministry of Transport in London had taken several vessels at rates said to be between 15s and 17s 6d.

LINSEED SOFTENS

The excitement of the previous week was followed by a reaction in the linseed market during the past week. There was a gradual decline in prices, and trading was somewhat dull. The price of seeds dropped by about Re. 1 a maund; the daily turnover was small. Oilcake prices also declined to the extent of about Re. 1 a maund. In the oil market, although prices lost little ground, trading was very limited with shippers practically at around £115. Latest quotations were as follows: Ready-July Rs. 25-12 a maund and August Rs. 25-12 a maund.

SUGAR EASIER

During the week ended 30th July, sugar sales in the Calcutta market averaged 3,500 bags daily. Arrivals a day were 7,000 bags and stocks totalled 115,000 bags. Rates for ready sugar ex-Kantapukur delivery were Rs. 38-4 to Rs. 38-12 for ordinary grain and Rs. 41 to Rs. 41-4 for bold grain. The market was easier.

COMPANY AND PUBLIC NOTICES

THE CHAMONG TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of The Chamong Tea Co., Ltd., will be held at the Registered Office at No. 4, Mangoe Lane, Calcutta, at 11 o'clock in the forenoon on the 21st day of August, 1958, for the following purposes:—

AS ORDINARY BUSINESS:

- (1) To consider the Revenue and Profit and Loss Accounts for the year ended 31st December, 1957, the Balance Sheet as at that date and the Reports of the Directors and Auditors.
- (2) To appoint Auditors and to fix their remuneration.
- (3) To consider and if thought fit to pass with or without modification the following Resolution which will be proposed as a Special Resolution:—

AS SPECIAL BUSINESS:

"That Mr. A. B. Kingsley be and is hereby reappointed a Director of the Company."

Special Notice dated 14th July, 1958, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company where-in it is stated that the notice is given to satisfy the requirements of Sections 190 and 261 (1) (c), (2) and (3) of the Companies Act, 1956, for the reason that Mr. A. B. Kingsley, a Director and Member of the Company (who retires by rotation at this Meeting) is a Managing Director and a Member of J. Thomas & Co., Private Ltd., which customarily acts as Brokers for the teas produced by the Company which may be construed as an office or place of profit under the Company. Having regard to the fact that the Managing Agents have a right to appoint a Director to the Company, and to the provisions of Sections 261 and 314 of the Act, a Special Resolution reappointing him as a Director of the Company is considered requisite.

The Share Transfer Books and Register of Members of the Company will be closed from the 18th August to the 21st August, 1958, both days inclusive.

THE CHAMONG TEA COMPANY, LIMITED.

By Order of the Board,

WILLIAMSON MAGOR & CO., LTD.,

V. S. VIJI,

Secretary,
Managing Agents.

Calcutta, 22nd July, 1958.

Note.—A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a Member of the Company.

THE TEEN ALI TEA COMPANY, LIMITED.

The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Friday, the 22nd day of August, 1958, at 3-15 p.m., for the following purposes:—

- (1) To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1957.
- (2) To declare a dividend.
- (3) To elect Directors in place of the retiring Directors.
- (4) To elect Auditors for the ensuing year, and to fix their remuneration.

The Share Transfer Book of the Company will be closed from 15th August, 1958 to 22nd August, 1958, both days inclusive.

OCTAVIUS STEEL & CO. LTD.,

A. H. GALLOWAY,

Managing Director,
Managing Agents.

Calcutta, 30th July, 1958.

NOTE.—A Member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and on a poll to vote instead of himself and the proxy need not be a member.

PLACE, SIDONS & GOUGH

Stock and Share Brokers

Mr. William Archibald Russell will be retiring from this firm on 31st July, 1958. From 1st August, 1958 the Constitution of the Firm will be as follows:—

James Leslie Esplen
Robert George Edwards
Durga Narain Kapur
Placid (Private) Limited.

DUNCAN BROTHERS & COMPANY, LD.

NOTICE is hereby given that the Fiftyninth Ordinary General Meeting of Shareholders will be held at the Registered Office of the Company, No. 31, Netaji Subhas Road, Calcutta on Friday, 22nd August, 1958 at 11-00 A.M. for the following purposes:—

1. To receive and adopt the Directors' Report, and to pass the Audited Accounts for the year ended 31st December, 1957.
2. To confirm the interim dividend paid on the Preference shares and to declare a dividend on the Ordinary shares and a final dividend on the Preference shares.
3. To elect a Director.
4. To appoint Auditors for the current year and to fix their remuneration.

AS SPECIAL BUSINESS.

AS ORDINARY RESOLUTIONS.

5. "That the consent of the Central Government having been received, with effect from 1st October, 1958 Mr. J. A. Duncan, a Managing Director of the Company, be and is hereby authorised to receive remuneration for his services as such in accordance with the terms specified in the Agreement dated 16th September 1957 made between the Company of the one part and Mr. Duncan of the other part as purported to be modified and amended by a Supplemental Agreement to be entered into between the Company and Mr. Duncan, a draft whereof has been submitted to this Meeting and for the purposes of identification signed by the Chairman thereof and that accordingly the directors be and are hereby authorised to enter into the Supplemental Agreement with Mr. Duncan in terms of the said draft."

6. "That Mr. L. T. Carmichael be and is hereby appointed a Director of the Company with effect from 1st October, 1958."

The Share Transfer books of the Company will be closed from 14th to 22nd August, 1958 both days inclusive.

Warrants for dividends, when declared, will be forwarded in accordance with registered instructions, or if no such instructions have been received, to the registered addresses of all shareholders whose names appear on the Company's Register at the date of declaration. No application for payment is necessary and holders on blank transfer are therefore recommended to submit their shares for registration immediately.

By Order of the Board,

DUNCAN BROTHERS & CO., LD.,

S. H. DAVIES,
Director.

Calcutta, 24th July, 1958.

Note.—A member of the Company who is entitled to attend and vote at the above Meeting may appoint one or more proxies to attend and vote instead of himself. A proxy need not be a member of the Company.

A blank form of proxy is enclosed which should reach the Company not later than 19th August, 1958.

The Company Meetings and Dividends Table appears on page 149

COAL COMPANIES

O, Po, F and Dd indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Account	Reserve & Other Funds Premiums & Forfeited Shares if any	Cash & Securities	NAMES	Accounts closed	Managing Agents	Net Profits including taxation	Carry forward	Dividends per cent			Paid-up Per Share	Latest Market Quotations as available until

TEA COMPANIES

O., P. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

LABOUR PROBLEMS IN THE JUTE INDUSTRY

INDUSTRIAL COMMITTEE MEETS IN CALCUTTA

THE foreign exchange crisis has so far been responsible for more realism in Government thinking on industrial problems than any other single economic factor. The principle has at last been grasped that export industries must be permitted to contract out of the socialistic, cost-inflating burdens which have been fastened on suppliers of the home market; or at least to the extent which leaves them competitive. There is no doubt that the official delegates to last week-end's meeting of the Industrial Committee on Jute had this point firmly in mind. That is what made the Committee's deliberations something of a landmark in the recent history of the industry's wage and labour problems. For once the impression was created that the difficulties facing the mills are appreciated in New Delhi, and that sympathy exists for them. This is reassuring for an industry which has had more than its share of troubles during the past few years, and whose long-term position in the world's packaging market is probably more precarious than is generally realised. The Union Minister for Planning, Labour and Employment, Mr. Gulzarilal Nanda, who inaugurated the meeting, did little more than reaffirm the principle of rationalisation as set out in the second five year plan. But the official attitude to this principle in practice, especially at the State Government level, has often been so lamentably behind the theory, that it was refreshing for once to have a Minister discuss it as if he really believed in it. Even the qualifications with which his advocacy had to be hedged—made for reasons easy enough to understand in an elected politician—did not spoil the impression that the Government may have at last accepted that predominantly export industries are in a class by themselves where the need for efficiency and a low level of costs are concerned. If the same realistic sympathy could be shown for the problems of the tea industry and the cotton textile mills, India's foreign exchange position would be helped substantially.

logical deficiencies in their arguments against rationalisation. The Committee appears to have been content for the time being with the further protection of the mill labour's interests when transfer is ordered. Six weeks' notice for workers and eight for the State Government should be practicable in normal circumstances, although why the difference in the length of the notice is difficult to understand. The closing of the *Badli* list is merely another example of the present habit of favouring workers already in jobs at the expense of those on the outside.

The question of instituting a Wage Board for the industry has been wisely left until another time. There is no doubt that this is the correct decision. The wage structure of the mills has been thoroughly examined by three successive Omnibus Tribunals, the last award having been published in 1955. These Tribunals, in the words of the I.J.M.A. chairman, Mr. J. I. Jamieson, "gave close attention to such matters as workload, job re-allocation following rationalisation, differentials, etcetera, and it was particularly emphasised in the last award that the increase in wages granted to the workers should be considered satisfactory and should endure for a considerable period of time." It scarcely seems likely that a Wage Board would be able to add to this work without in some way damaging the industry. It is essential at this juncture to avoid the impression that the industry can sustain a further rise in wages. It is true that profits are being made—in some cases the first for several years—but these are still not large enough to make up past losses, and in many cases they must absorb large depreciation commitments for some years to come. It would be foolish as well as unfair to burden the industry with a higher wage bill when it is still struggling to make up the losses of the past. Besides, its present moderate prosperity is by no means a factor to be taken for granted in a world in recession. Mr. Jamieson also drew the Committee's attention to the necessity of maintaining the basic principles of wage determination without frequent alterations—a point which cannot be ignored.

The problem of women workers in the mills seems to have occupied a quite disproportionate amount of the Committee's time. Whatever the reason for the decline in the numbers, there does not seem to be much that can be done about it, short of fixing a quota for each mill according to the size of its labour force, and nobody, fortunately, has suggested anything so ridiculous. The Committee's conclusion that an enquiry should be instituted by the West Bengal Government into the reasons for the fall in the numbers of women in the industry, seems reasonable enough. It is, however, difficult to see the wisdom in its directive that there should be no further reduction. This attitude seems based on the suspicion that women are being squeezed out of the industry because of the legal financial obligations imposed on the mills. It is probably impossible to judge the strength of this plea: but whether it is true or not, there is no escaping the fact that the employment of women will always depend on whether or not it pays the employer. The more obvious reasons are, of course, that women are nowadays legally disqualified from most jobs in jute mills. They are unable to handle heavy loads; modern processing methods involve some operations which women are simply not capable of performing. The introduction of triple shift working in the modernised mills has meant that the operation of the second and third shifts on the basis of 48 hours a week for each shift entails working within hours during which women cannot legally be employed. This is probably the most important single factor in the situation; and it must be accepted that the industry cannot afford to operate on less than three shifts if it is to get the best from its new machinery. It may be necessary, therefore, to face the fact that the scope for the employment of women in the modernised industry is going to be permanently limited.

While this is no doubt unfortunate, it has to be remembered that the industry is still one of the largest employers in India. As an export industry, its flexibility is essential. The mills themselves have done a great deal to ensure their future and deserve the sympathy and co-operation of authority in their efforts to re-establish their prosperity. This has not always been forthcoming in the past; cost burdens have often been imposed without any regard for the special circumstances under which the industry has to operate. Last week-end's proceedings were a fair indication that more realism can be expected in future. If that is the case, the gain will accrue to all, not least the community itself in its efforts to earn more foreign exchange. The industry deserves a spell of prosperity and it is in the interests of all to see that it gets it.

A VIEW FROM THE BRIDGE

NEW DELHI and Calcutta could have been good vantage points from which to see, clearly and with the minimum of passion, all that is happening in the Middle East and elsewhere. Unfortunately, there has been more passion than clarity—chiefly because the Soviet Union has robbed India of her rôle as an observer by inviting her to a summit conference, on the desirability and nature of which there are sharp differences of opinion. The involvement and the consequent uncertainties have not affected the Government alone, but also writers and commentators for whom the question somehow got mixed up with that of national prestige. This latter, it may be assumed, has been

a relatively subordinate consideration with New Delhi, which is transparently anxious for the preservation of peace and is rightly willing to do everything possible in a good cause. It is also true that, in certain circumstances, India can in fact do a great deal. Whether or not a summit conference takes place, with or without this country's participation, India's rôle as a contributor to the insuring of peace will be played effectively only if the complex configuration of international affairs is analysed with realism and objectivity.

The Prime Minister's prompt and positive response to Mr. Khrushchev's call for talks at the top was indicative of his love for peace. London's reaction was not fundamentally different, and Washington has been foolish to let itself appear more unwilling than it probably is. Reluctance to participate on the part of any big power delays and complicates issues, but eagerness to attend hardly removes the inherent complexities; and it may be useful to examine the reasons and objectives for which the Soviet Union wanted a summit conference when it did. Preservation of peace in the Middle East can have been only a secondary factor, if only because it is clearly observable that, in anything, the landings of U.S. marines in the Lebanon and British paratroops in Jordan have led to a diminution of actual tension in those areas. This statement is made without any reference to the ethics of intervention by invitation. The facts of the case are that, if the West had not responded to the calls of King Hussein and President Chamoun, Jordan and the Lebanon would certainly have passed into the hands of politically uncertain (to put it no more strongly, elements; and some

commentators may be wrong in thinking that in New Delhi's view such an eventuality would have been a contribution to stability in the Middle East.

Even if it is accepted that summit conferences are sure solvents of all tensions, it is not to be taken for granted that by-passing the United Nations, which is what these *ad hoc* conferences in effect mean, is in the long run either good for peace or is in consonance with the interests of the Afro-Asian members of the world organisation. Moscow's invitation to India—an inspired idea calculated to cause the maximum inconvenience and embarrassment to Washington—was welcome; but it is not to be forgotten that, if it had not suited Moscow's book at this particular juncture, it would never have been sent. And there are good reasons why smaller or less powerful nations should be associated with decisions on war or peace. These decisions affect all mankind, and they should not be the monopoly of the big powers. Nations such as India are wise to recognise, as at least India does, that indirect erosion of the authority and prestige of the United Nations is direct erosion of the smaller nations' influence on world affairs. This is one of the reasons why the invitation to India has caused so much unhappiness in several Asian capitals. Washington's sensitivity to which may not have been merely diabolical.

If only it would be remembered that, for her own reasons, which are not weak at all in the context of national interest, India's response to the idea of a U.N. force has never been enthusiastic. Similar considerations apply to other countries too, and a summit conference on Soviet terms was fraught with difficulties for Britain and the United States which the latter need not be blamed for not hugging readily. These countries could justifiably point out that in the matter of Hungary, the United Nations was ignored by the Soviet Union with cynical contempt. The attitude then was like Stalin's, who is said to have asked once the number of divisions the Vatican could command. The West is to be forgiven for not presenting itself in the dock to be attacked by a prosecutor whose record in the matter of international and human decency is by no means without serious blemish.

Not a little of the West's present discomfiture before opinion in this part of the world proceeds from its own publicised differences, which are in sharp contrast with the "absolute accords" Moscow

has been able to advertise. Just what Mr. Khrushchev and President Nasser agreed upon during the latter's recent secret visit to Moscow nobody knows; perhaps nothing more than a joint endeavour to embarrass the West without involving the Kremlin more than verbally. The more recent *parley in Peking* has been followed by a *long communiqué*, which must be concealing more than it expresses. Yet, on the surface, this too is an advertisement for communist unity. The relevance of these meetings to the attractive proposal for a summit conference is that this unity is not for peace—except on communist terms. Anyone familiar with the problems of landing in foreign territory a large army of soldiers or volunteers will know that the Chinese threat to despatch such help to the Middle East is hardly to be taken seriously. But knowledge on military matters is very limited in these areas, which made it possible for Peking to reap the utmost propaganda advantage from an announcement of no military value whatsoever.

Discernible through the facade of communist propaganda is a tendency for hardening attitudes in Moscow and Peking, as much to the West as to Marshal Tito. Not all of this change, more real perhaps than apparent, is attributable to Mr. Dulles and his obviously obstructionist tactics. There is a view, necessarily speculative, that the tension in the Middle East, which the Soviet Union and China are doing their best to keep up, could conceivably be taken advantage of and used as a cover by the latter for undisclosed adventures elsewhere. In a famous cabaret show in Calcutta, where any approach to strip-tease is frowned upon by authorities, the producer used to fix the spotlight elsewhere when the lady was pretending to undress. The exaggerated noise over the Middle East, where the recognition of Iraq and the containment of nationalist and other rebels, and the election of General Chhab have done not a little to stabilise the situation for the present, may well be the preparation for something else, or so it is permissible to guess from trends below the surface. What or where it will be, the Kremlin and Peking will decide without taking the world (or their own people) into prior confidence. Not even the most glibly believe that it will be a contribution to peace. With the eyes of the world glued on a snowy and obscure summit, some very base things indeed could be attempted at the base.

reign of terror was, therefore, let loose in Jamshedpur when loyal workers were threatened that "their legs would be broken if they did not join the strike."

The strike that was declared so unnecessarily achieved the result it deserved—it proved a dismal failure. Its lesson is that communist trade unionists will willingly sacrifice the workers' interests in an open bid for power. The strike was apparently declared with a view to gaining official recognition for the Jamshedpur Mazdoor Union, and this was frankly confirmed by a prominent spokesman of the Party. But for whose benefit was it called? Obviously not for the workers; it was they who suffered most. Nor could it have been of benefit to the country, which sustained the loss of 45,000 tons of steel. And it was no gain to its sponsors either.

GENERAL INSURANCE IN INDIA

NOT ENOUGH BUSINESS TO GO ROUND

GENERAL insurance in India normally receives scant attention, presumably because it is not directly included in the second plan. The fact may also be due to the widely-held view that the trade represents only sectional interests. This latter view is erroneous, as it is usually forgotten that general insurance provides cover for the various industrial projects in the plan, from the time the components leave the warehouse of the consignee until they are finally installed, and indefinitely thereafter. It acts as a stabiliser by keeping the fabric of India's industrial economy in a state of constant repair. Its problems, difficulties and ramifications, should, therefore, deserve the same attention as other national issues. The outgoing chairman of the Indian Insurance Companies Association, Bombay, Mr. P. U. Patel, in his presidential address, has brought some of the outstanding issues to the fore. They deserve consideration by all those who are interested in the welfare of this industry.

One of the most controversial regulations in the general insurance trade is the "Code of Conduct", devised some 18 months ago, primarily to arrest the drift towards uneconomic expenses finding expression in unauthorised rebates and illegal inducements. These malpractices are designed to lure business to the books of the companies. Mr. Patel regrets that the Code of Conduct has failed to bring the industry any nearer to the cherished goal, and ascribes the "root cause" of the trouble to the institution "going by the name of inspectors", which he calls pernicious. There may be some truth in Mr. Patel's statement, but he seems to have overlooked the fact that the Executive Committee of the General Insurance Council is trying hard to impart to the field force an institutional and professional character. The Executive Committee has set up machinery for the screening of all inspectors and has already introduced a system of examination which all of them are now required to pass. The screening and the examination together are expected to weed out the casual, *benami* and other undesirable types of inspectors. Furthermore, their salary scales are now controlled, with the result that it is no longer possible to pay unduly high salaries. The abuses of which Mr. Patel complains are thus being steadily eliminated. Besides, in a vast country like India with a widely dispersed population, it is neither possible nor practicable to render adequate service, unless the insurers have field officers, professionally trained, and posted on a regional basis in different parts of India.

Mr. Patel has spotted a real "root cause" of the illegal inducements in the disparity between the demand and supply of this business. He states that it is not a fact that the number of companies is too large, but there is not enough business to round. The total direct gross annual premium income in the general insurance department, according to Mr. Patel, is roughly Rs. 23 crores. This amount is too small compared with the volume of premium income available in countries very much smaller than India. This disparity between supply and demand inevitably leads to cut-throat and unhealthy competition. His advice, therefore, to creating the premium income and for starting the modern industry. To achieve this end, an adequately trained personnel at all levels will be necessary. Mr. Patel hopes that the Federation of Insurance Institutes will be able to turn out technically qualified people in larger numbers and it is, therefore, essential that the Federation is rendered all co-operation in its valuable effort.

Expenses of general insurers, as is well known, are limited, and controlled by a predetermined formula. Briefly, they are allowed on the basis of specified percentages of gross direct premium income written in India. This inevitably leads to a scramble for business, for the more is the direct premium income, the more the expenses allowed.

Mr. Patel questions the validity of this criterion. Whether a particular unit is economically run or not, and whether a company which complies with the regulations is more economically managed than another, which for various reasons fails to comply with the provisions, says Mr. Patel, is not so obvious as it looks. He knows of no other country which treats direct gross premium income as a criterion. The Executive Committee of the General Insurance Council has failed so far to suggest an alternative, nor has the Indian Insurance Companies Association, Bombay, of which Mr. Patel was chairman. The inequities of the present criterion are well known, but unless the trade can produce an acceptable alternative, it is futile to criticise the present regulations.

On the subject of taxation, Mr. Patel has urged re-examination on the ground of increasing resources. For a long time, the insurers in the country have pleaded with the income tax authorities for some relief in the taxation of reserves. Mr. Patel points out that what the companies require is the facility to build up reserves and, therefore, some relief in taxation is earned although it might mean some loss to the national Exchequer. That will be offset by the long-term gain resulting

from the increased capacity of Indian insurers to retain business on their own account because of strengthened resources. This will also enable them to operate more successfully overseas. Mr. Patel is of the view that this may ultimately not only reduce the strain on the foreign exchange resources, but can also help India by earning foreign exchange through increased overseas operations.

On the subject of the currently contemplated reduction in the fire rates, Mr. Patel has endorsed the views of Mr. Setalvad that it will be premature to consider a revision in the rate structure on the basis of the very limited experience of two years. He goes on to say that there are definite cycles in business. In fire business, bad years are regularly followed by good. He, therefore, urges that a revision in rates should be based on a correct appraisal of all the factors involved. The very small size of the Indian market is an additional argument against the continuous reduction in rates, particularly when there is no insistent clamour from the insuring public for such reduction. He, for one, is convinced that the public has not received a raw deal at the hands of the insurers.

Current News and Comment

Expansion of Singareni Collieries

The Government of Andhra Pradesh recently applied to the Central Government for a loan of Rs. 4 crores to develop the Singareni collieries in order to raise the output of coal from 2 million to 3 million tons a year by the end of the second five year plan. The Centre was prepared to grant financial assistance on the condition that the State Government allowed the former to have majority shares in the enterprise. The State Government at that time refused to part with its controlling interest, which stood at 88 percent of the share capital. The Centre has now agreed in principle to extend financial assistance without insisting on a controlling interest. The Central Minister for Steel, Mines and Fuel, Sardar Swaran Singh has recently said that "the Centre, while participating in the equity capital, will no longer insist on having the majority share capital." He adds that it is difficult to say categorically as to what is going to be the size of Central assistance. But he has made it clear that whatever financial assistance the Centre agrees to grant, after coming to a mutual agreement with the State Government concerning the capital structure bearing some relation to the proposed loan, part of it will go into the equity capital and the rest will be advanced in the form of a loan. The Minister says that it will be in the interest of both the collieries and the State Government not to ask for any specific figure, because when the needs of development arise, they can surely be met by way of assistance from the Centre from time to time. Sardar Swaran Singh is of the opinion that the production of the Singareni collieries can be easily stepped up to the target of 3 million tons by the end of the second plan. The increased production is intended to meet the needs of south India, which is situated at a considerable distance from the coal-producing areas of northern India. The expansion of the Singareni collieries will be welcomed by all those who are interested in the development of south India's fuel resources. The Minister says that there will be no difficulty in obtaining foreign exchange for importing plant and machinery required for the expansion of the collieries.

Singareni coal is suitable for steam-raising but is non-caking, and on analysis it has been found to contain fixed carbon to the extent of 56 percent, volatiles 24 percent, ash 14 percent, and moisture 6 percent. Although its calorific value is lower than Bengal coals, it does not clinker. Singareni coal has low sulphur and phosphorus contents. But the mines have been provided with modern machinery and are being worked on quite modern methods. It is stated that when in full production, the Singareni collieries will be able to meet most of the requirements of the railways and industries in south India, and will enable these enterprises to save Rs. 3 crores annually in the form of freights.

Indo-British Trade Declines

The declining trend in Indo-British trade, noticed since the first quarter of this year, has been continuing. According to the latest statistics available from the U.K. Trade and Navigation Accounts, the U.K.'s imports from India have fallen sharply over the five-month period January-May 1958, compared with the same period of last year, from £77 million to £52 million, while India's imports from the U.K. have gone down from £79.2 million to £66.3 million over the same five monthly period. In the full year 1957, the value of all U.K. exports to India totalled £176.4 million while that of all imports

from the increased capacity of Indian insurers to retain business on their own account because of strengthened resources. This will also enable them to operate more successfully overseas. Mr. Patel is of the view that this may ultimately not only reduce the strain on the foreign exchange resources, but can also help India by earning foreign exchange through increased overseas operations.

Too Many Chief Engineers

The Planning Commission's review of the second plan's progress in the States points out that the actual irrigated area in Uttar Pradesh in 1957-58 was only 987,000 acres, against a total potential of 2,180,000 acres. But this has not prevented an immense expansion of the engineering and other staff in the State's Irrigation Department. According to the report of the U. P. Economy Committee, the Department, which had only one chief engineer until 1929, now has five chief engineers. Discussing the arguments of the Department for retaining all of them in service, the Committee has recorded its "irresistible conclusion" that the posts were not created for the exigencies of public service. Since the difference between the salaries of a chief engineer and a superintending engineer ranges from Rs. 600 to Rs. 1,000 a month, all superintending engineers aspire for chief engineership. All the four additional posts of chief engineers, the Committee says, were created to satisfy the ambitions of superintending engineers, so it has recommended their abolition.

A large number of engineers of different cadres, including one chief engineer, have been posted at the Rihand Dam site, although the actual construction of the dam has been entrusted to a responsible private firm. The Economy Committee rightly observes that if the Government was so keen on maintaining such a large supervisory staff at the dam site, then the Irrigation Department itself might have undertaken the construction. But, strangely enough, the Department has gone on record before the Committee that its own work could not be as good as that of the private firm. Even conceding this argument, the Committee fails to appreciate the need for posting such a large and heavily paid staff to supervise the work of an admittedly more competent firm. The Department has at its disposal 496 heavy vehicles besides 109 staff cars, and this huge fleet is put to no better use, according to the Committee, than repeated inspections of the same site by the same officers or by a different set. The Committee has also stated that many contractors would gladly take a 5-percent cut in payment "if they did not have to wait long for payment or grease the palms of officials taking measurements and making payments." As a final commentary on the affairs of the Irrigation Department in the State, the Committee mentions the construction of a dam on the borders of Nepal and Deoria district as an anti-flood measure which resulted in devastating floods in the low-lying areas of Nepal Terai.

Setback for Indian Cotton Mills

In the six months ended June, British imports of grey cotton cloth, at 178 million square yards, were 17 million square yards less than in the corresponding period of 1957. Imports from Hongkong, however, were 20 million square yards greater at 50 million square yards, while India's share fell from 104 million square yards to 63 million square yards, and that of "other Commonwealth countries"—presumably Pakistan—fell from 5.5 million square yards to less than 500,000 square yards. Imports from China were 31 million square yards, against 8 million square yards in the first half of last year. India's export trade in cloth has also suffered a setback in other directions; shipment figures for the first four months of this year showed a decline of about 30 percent compared with the same period of 1957. The outlook is not encouraging as increasing competition from communist countries, as well as Hongkong, Japan, and Pakistan, is causing growing concern to cloth exporters. Furthermore, the Sudan has now withdrawn its open general licence for imports of cloth and Uganda has raised its import duty. According to the July review of the National Overseas and Grindlay's Bank, 26 Indian mills ceased production in the second quarter of this year and 37 units closed down partially. In the first eight months of this season, cotton consumption was substantially smaller than a year previously, consumption in April being some 61,000 bales less than in the same month of last year. In an effort to assist the mills to increase their sales in

TERROR TACTICS AT T.I.S.C.O.

COMMUNIST trade unions have an established habit of fishing in troubled waters, and their success is generally complete. But the violence and vandalism of the Tisco strike, obviously called to disrupt the two-million-ton output programme, has earned them merely an ignominious loss of face. A group of fanatics ventured to sabotage the ambitious expansion programme by staging unnecessary strikes in Burnpur and Jamshedpur. Their aim, no doubt, was to establish a firm hold on labour in these important centres. But in the trial of strength with the democratic trade unionism, they became deeply bogged in a morass of their own making. The flexibility in their ideology, and their obvious double standards, allow them to profess sympathy for the narrow interests of the workers at the same time as showing support for national programmes. Nowhere has this divergence between precepts and practices been so flagrantly obvious as in the stand the communists were eventually forced to take to cover up their true designs. This account of a strike so unscrupulously called, and which so miserably failed, is discussed at length in a booklet entitled *The Story of a Strike*, published by the Tata Iron and Steel Company.

At a time when the company is busy completing its two-million-ton programme, on which the prosperity of the workers as well as the country depends, any strike called to thwart the progress of production and to incite workers to agitate, is a crime against society. The strike at Tisco, as elsewhere, was a well-laid conspiracy. It was part of a pre-determined plan to thwart the progress of India's premier steel enterprise, the success of which will automatically establish the virtues of the private sector. The objective of the communists was summed up by Mr. J. R. D. Tata, chairman, at the company's annual general meeting held in August 1957, as follows: "Jamshedpur is one of their obvious and principal targets.... for control of the growing steel and heavy engineering industries there would provide them with a stranglehold on one of the most vital and sensitive sectors of the economy. In their eyes, success in achieving prosperity through a mixed economy and by democratic means would be a severe setback to their plans, and must, therefore, be thwarted at all costs. Progress and happiness must be achieved the communist way or not at all...."

Tisco had enjoyed 30 years of uninterrupted industrial peace. But for some time the clouds of unrest had been gathering. The communists have been making a sustained bid to control the Tisco

workers. This was clearly no easy task, in view of the enlightened labour policy pursued by the company, to which the former Central Labour Minister, Mr. Khandubhai Desai, paid a glowing tribute at the time of initiating the tripartite studies of industrial peace. It was this enviable record of mutual trust and co-operation that made it possible to negotiate a long-term agreement with the workers in 1956. The company was eager to share its prosperity on the completion of the two-million-ton programme, and the agreement, therefore, stipulated a revised wage structure. The fact that the company was generous enough is more than evident from its general attitude to the workers. It was of the opinion that since the revision was likely to take time, certain immediate benefits, mainly for low-paid labour, should be granted at a cost of about Rs. 22 lakhs.

There are usually two ways of inducing a donkey to work: the stick method, which is undemocratic and is favoured only in totalitarian countries, and the carrot method, which is universally practised by all free democracies. The latter is designed to generate spontaneous goodwill between workers and managements. If the company did not genuinely hold this view, it had been at liberty to practise an entirely different labour policy. The fact is that it did not do so. The communists, on the other hand, ever since they succeeded in winning a seat in the Bihar Assembly from the Jamshedpur area, have instigated terror tactics to establish their hold. Barely a month after the election, they made serious attempts to dislodge the I.N.T.U.C.-affiliated union in the Gua mining settlement and these involved serious cases of violence.

This must now be regarded as having been a significant portent for the future. The Jamshedpur Mazdoor Union made an open bid to gain the support of the workers by instituting the demand that dearness allowance be linked with the cost of living. Strangely enough, it did not appear to strike the agitators that the cost of living in Jamshedpur was one point lower in 1957 than in 1951 and that two increases in wages and emoluments had been granted to lower-paid workers between the two years. In spite of the revision of the wage structure stipulated in the 1956 agreement, the union demanded a 25-percent increase in the basic wage and the revision of grades, a proposal which even Mr. Nanda, the Central Labour Minister, regarded as unjustifiable. When the union was unable to secure any benefits for the workers, it used the strike call as a face-saving device. The

Foreign Trade...

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service. With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Foreign Agencies

ENGLAND, U.S.A., AUSTRALIA, CANADA, FRANCE, BELGIUM, HOLLAND, GERMANY, NORWAY, SWEDEN, SWITZERLAND, ITALY, AND JAPAN.

the home market, the Indian Government made further reductions in excise duty on coarse and medium varieties of cloth from 4th July. At the same time raising the rates slightly for fine and superfine cloth.

Cold Reception to Textile Report

Far from imparting optimism, the report of the Joshi Committee on the cotton mill industry has caused gloom in south India. Leading mill-owners have been quick to comment that the report holds no hope for the spinning mills in the region, which are hamstrung by high wages imposed chiefly by labour tribunal awards. A brake on further expansion of spindles will leave some units to uneconomic working, and expansion is necessary to help the handloom industry. The hint in the report that the rebate on handloom cloth should be given for a full year and not according to the state of the trade is considered a good suggestion. Efforts to cut shifts, to reduce working hours and hence the wages of workers are not likely to find favour. Since export prospects do not appear bright, a reduction in the dearness allowance and a curtailment of working hours appear to be necessary. But the workers in Madurai have opposed this move which, it may be mentioned, had the approval of Mr. S. R. Vasavada in the relevant sections of the report.

The continued neglect of mill shares is reflected in their prices. Composite mills are preferred for the stability of earnings and for their chances of obtaining concessions on textile exports. They, in fact, easily find use for their spinning output and are not exposed to fluctuations in demand and prices. The cloth trade in Madras has joined hands with the millowners and has urged that the reform of sales tax and the changes in excise duty have not produced any relief from the glut which is forcing shops to carry large stocks for months on end, although mills can dispose of their output fairly quickly. The increase in coarse cloth production, to which Mr. E. J. M. Leigh referred some months ago, is a feature that does not promise well for any export revival. The Joshi report also indicates that the mills in West Bengal produced in 1957 more fine goods than the older units in Madras, al-

though the output of coarse stuff there also increased.

Conditions for Cloth Exports

The chairman of the Cotton Textiles Export Promotion Council, Mr. Neville N. Wadia, has said that international trade in cotton piecegoods showed a slight recovery last year when it amounted to 5,400 million yards. India continued to hold her share in this trade which has been consistently between 15½ percent and 16½ percent of the total. But Mr. Wadia, who was addressing the annual general meeting of the Council, pointed out that there was no room for complacency. Each succeeding quarter since the beginning of 1957 has shown a steady decline in Indian exports. In detailing the reasons for this, Mr. Wadia said that the recession in the United States had adversely affected trading conditions throughout the world. In addition, Indian textile exports were hit by the removal of piecegoods from the Open General Licence in the Sudan, the serious effect of the low copper prices in Rhodesia, the introduction of severe quota restrictions in New Zealand and the cessation of purchases by Burma. Political disturbances have also had serious repercussions, particularly in the case of Ceylon and Indonesia. But the most serious difficulty is the growing competition from Japan, Hongkong and communist China, particularly the latter. While the prices of Indian exports fell by 10 percent to 15 percent last year, communist China, according to him, is now under-quoting India by as much as another 15 percent which makes it impossible for her to sell in open competition with that country. Mr. Wadia said that the Indian industry was too poorly equipped to meet competition from these countries and urged that automatic machinery be allowed to be installed in the Indian industry.

The Council in its representations to the Government had made it clear that it would be unrealistic to expect anything but a decline in textile exports until the industry had been able to re-equip itself. "Our first suggestion, therefore, which I repeat with all the emphasis at my command, is that in order to re-equip the industry, those mills which manufacture for export should be allowed to retain 10 percent of the foreign exchange thus earned for the purchase of plant and machinery from abroad. The licence should be issued for machines which are not made in either sufficient quantity or quality within the country. Very important was also the recommendation that this policy should be adopted and declared effective for at least five years. This would enable mills willing to take advantage of this opportunity, to make arrangements for the immediate supply of their requirements of machinery with terms of payment spread over the years in which they earn the necessary foreign exchange. Mills, which would thus commit themselves, would be obliged to continue to export in an even greater volume in order to make sure of living up to their contractual obligations with the machinery makers abroad. Neither the Government nor labour need have any misgivings about this proposal. Our total earnings of foreign exchange have been, on the average, Rs. 60 crores; therefore, 10 percent would mean only Rs. 6 crores of imported machinery. However, if our exports increased, the Government would get Rs. 90 lakhs out of every Rs. 1 crore earned by the industry. As it is, textile machinery imports have been, on an average, Rs. 9 crores and, therefore, the amount now recommended can be deemed to be most reasonable. As far as labour is concerned, if the entire sum of Rs. 6 crores is used for importing automatic looms, at the most 9,000 to 10,000 automatic looms could be imported a year. The total number of workers displaced would be roughly 8,000 to 10,000 at the most which is far less than those who have been thrown out of work by the weaker mills closing down. On the other hand, those retained to work the new looms will be earning much better wages than before," Mr. Wadia said.

New Loom for Man-made Fibres

Details of a new loom which, it is claimed, will enable the British textile industry to produce the world's finest synthetic materials have just been released. The loom is being produced at the Barnsley foundry of Messrs Wilson and Longbottom. It has been designed and developed by the Shirley Institute and is being made available to British manufacturers before overseas buyers. Mr. O. Porter, chairman and managing director of Wilson and Longbottom, has said that one major difference between this loom and others is that shuttle and the picking stick—all other parts number of light alloy. The object of reducing the number of wooden parts is to prevent warping and rotting when subjected to atmospheric changes. Although the loom has only just come on to the production line, the Shirley Institute has been running it since 1952 and regarded it as the best machine of its type in the world. Enquiries have been received by Wilson and Longbottom from the

United States, the Continent, and from Japan. It was partly because the Shirley Institute, in its work for the industry, had accumulated a great mass of data about weaving faults and cloth irregularities that it decided to try to design a loom which would overcome defects inherent in existing looms—defects responsible for many cloth faults. The basic factors influencing the design are: the ability to produce flat and crepe filament cloths free from barriness and other defects; a minimum number of working parts; the elimination as far as possible of leather and wooden components; and easy operation and maintenance. The loom incorporates a positive dobby, an electric stop motion, an undeviantly placed handwheel which can turn back the dobby alone or turn back the entire loom, and an extremely sensitive centre weft fork. A device gives air control of the weft tails to avoid lashing-in. It is possible to vary the length of the fabric between fell and take-up roller to ensure even pick spacing. The picking motion is strapless, and the automatic pirn change is of the magazine type. Quiet and almost vibrationless running are among the other valuable characteristics of the new loom which, it is claimed, compares favourably with the best U.S. and Continental productions. The price of the loom is around £1,200 or £1,300 and it is highly versatile. It was designed primarily for man-made continuous filament yarns. It runs at a speed of 184 picks a minute, and in trials has woven yarns as coarse as 2-fold, 210-denier nylon and as fine as 900's glass yarn. It could be modified to weave cotton.

Rubber Bonded Fabrics

Non-woven textiles are finding an increasing use as their production develops, and it behoves all interested to keep abreast of developments in this, as in other spheres of textile technology. The annual report for 1957 of the Rubber Technical Developments, Ltd. gives some account of the progress made in efforts to improve the quality of the fabrics in which rubber is employed as a binder. Discolouration, resistance to washing and dry-cleaning, and delamination are among the problems to which attention has been paid. Sunlight exposure tests have established that the inclusion of a non-staining anti-oxidant has a marked effect in preventing a discolouration, and the value of anti-oxidants has been further established by washing and dry-cleaning tests carried out on fabrics which have been exposed to sunlight. Fabrics which are resistant to dry-cleaning and detergent solutions before exposure to sunlight will disintegrate unless an anti-oxidant is incorporated. Delamination can be overcome to some extent by the use of a flocculated latex. Great care has to be exercised in preparing and using these latices, but work is now being done with a heat sensitised latex which obviates some of the difficulties. By heavy consolidation of bonded fabrics highly resilient, dense materials have been produced which have found outlets in the shoe industry. These materials, which are made from mixed fibre blends, must retain surface smoothness even after prolonged flexing. The possibility of using bonded fabrics as a base for leather cloth is also arousing considerable interest. For this purpose, the bonding agent must be able to withstand the high processing temperatures required to gel the P.V.C. coating, so that the conventional heat-resistant latex compounds are not suitable. Fabrics prepared with the use of new compounds are now undergoing trials. After investigations and development work, the continuous production of a "lofty" material of the bonded wadding type is likely to begin in the near future. A superior crease-resisting material with an attractive appearance has been produced by using a crimped Terylene fibre.

High Prices for Wheat Products

The seizure of wheat stocks from a flour mill in Lucknow has been followed by a lay-off of its workers by the management on the plea that it was left without any supplies to keep the workers employed. Several other mills, it is reported, are contemplating a similar step. If this behaviour pattern is followed by the sugar factories also, the Government of India's decision to requisition sugar stocks in U.P. and other centres in north India may prove difficult to implement. The price of maida in Lucknow has shot up from Rs. 44 to Rs. 66 a bag of two maunds and of atta from Rs. 34 to Rs. 46 a bag of two maunds. On 21st July, all the flour mills in the State numbering over 20 were telegraphically informed of the Central Government's order prohibiting them from buying wheat from the open market. They were also asked to submit their purchase figures for the past six months so that the Centre could fix the monthly quota of foreign wheat for each mill. None of the mills, it is said, has so far submitted any returns and most of them have continued to indulge in bulk buying in the open market. The flour mills generally are against using foreign wheat for the production of atta and maida as their profit margins would then be reduced.

...no fury like a woman scorned

Just a simple housewife... yet her wishes are of prime importance to us. We know better than to scorn her opinions, ideas, suggestions—for she knows best the needs and requirements of the home.

To find out just what she wants, we carry out marketing research surveys all over the country. Thus, it is the housewife who sets many of the standards that Hindustan Lever products must measure up to.

To ensure that these standards are rigidly maintained, quality is checked and controlled at every stage of manufacture. In this way, we are able to supply your home with the quality products that you need.

HINDUSTAN LEVER SERVES THE HOME

Without Prejudice

A CASE OF TRADE MARK INFRINGEMENT

THE RIGHTS OF A MINOR

(FROM OUR LEGAL CORRESPONDENT)

CONTINUING this short series of recent English cases, we come to an interesting decision on trade marks. The plaintiff company, Messrs Baume and Co. Ltd. had been, since 1878, the registered proprietor of the trade mark "Baume" for watches, and had traded as a distributor and seller of watches in England for well over a hundred years, in fact since 1834. The defendants, Messrs A. H. Moore Ltd, imported and distributed in England watches manufactured in Switzerland by Baume and Mercier S. A. bearing on the outside of the box and on the dial of the watches the words "Baume & Mercier, Geneva" (or in some cases "Genève"). The plaintiff company claimed that this constituted an infringement of the trade mark and a passing off of the goods as those of the company. You will have noticed that the defendants had distributed watches not bearing the full and accurate name of the manufacturers. They left out the letters "S.A." Was there an infringement of trade mark?

Danekwerts J. held: (1) That although the use of the name as a mark would be likely to cause confusion, the defendants had a defence under

Section 8, Trade Marks Act, 1938, since the use of the name "Baume & Mercier" (in spite of the omission of the letters "S.A.") was a bona fide use of the makers' own name; and (2) that a defence of honest user of the makers' own name was also available in respect of the passing-off action.

The test then is bona fide user of own name, and in this particular case it was satisfied in respect of excellent watches on both sides. All the same, one finds it a bit disquieting. Say, I, in England, am an honest but inefficient engineer named Ford, or a worthy but incapable chemist named Pears. I get together a syndicate to finance the manufacture of an inferior car I have designed or a cheap soap for export to India. Can I, honestly using my own name, describe my goods as "Ford Cars" or "Pears Soap"?

WHAT IS WRONG HERE? "It looks as if Joan is going to be unlucky over inheriting her young brother's money," said her business friend. "Did you hear that her brother, who is only 19, is very ill indeed? He is the one who won that lump-sum of £500 not long ago. If he dies without making a will, his money will have to go to his parents; that is the intestacy rule. He would much prefer it in the event of his death to go to his sister who has left home, but, as he is under 21 years of age he can't make a will." The listener was thoughtful. "I don't see why a youth of 19 shouldn't make a will if he has money of his own, especially where the amount is quite small. Has a solicitor been consulted?" The business friend was scornful. "No need for a solicitor: I looked it up in an encyclopaedia and the law is plain that anyone under 21 years of age is an infant and cannot dispose of

his money on his death unless he is a soldier or sailor." Who was wrong on this point? Answer appears at the end of this note.

The past year saw some interesting matrimonial decisions.

Last week we discussed the modern so-called doctrine of "automatism" as a defence to a charge of dangerous driving by a motorist. It was contended that if a man is overcome by sudden illness so as not to be aware or to be only very incompletely aware of what he is doing, he is not criminally responsible for the act he commits. In February, one was amazed to read of the doctrine of "automatism" invoked by a husband in regard to sexual intercourse between himself and his wife. The husband was the petitioner in a suit for divorce against his wife on the grounds of his wife's cruelty. Now the reader will probably be aware of the fact that once a spouse has begun divorce proceedings for a matrimonial offence, he or she must not have marital relations with the other spouse. If he or she does so, the matrimonial offence is condoned and the remedy of divorce is gone. In this particular case, the husband, after the filing of his petition, visited his wife for the innocent purpose of seeing his children. He had taken, and while on the visit was under the influence of "an extra dose" of a "tranquilliser" drug, the effect of which would be comparable with drunkenness of causing diminished responsibility and of producing a lack of restraint as to actions which persons of normal sensitivity would not otherwise commit. The "tranquilliser" did not make the husband tranquil. It made him amorous; and he had sexual intercourse with his wife who consented thereto and then informed her solicitor of it who thereupon added a plea of condonation to the wife's defence. At the trial, the judge granted the husband a decree nisi and held that the intercourse did not amount to condonation because the husband was not in a state fully to appreciate what was happening, a finding which one ventures to suggest will appeal to the average married man or woman as being complete and absolute bosh. It is not the established custom in matrimonial circles for the two parties methodically to see to it that they are "in a state fully to appreciate what is happening." The point is they know what they are doing. The wife appealed on the issue of condonation and the Court of Appeal (Hodson, Morris and Sellers, L.J.J.) set aside the decree holding that the intercourse was a voluntary act by the husband and though his self-control might have been affected his reasoning power was not; he knew quite well what he was doing and he had therefore condoned his wife's offence. (*Benton v Benton*: 224. L.T. 304.)

There was also during the year a case of interest to mothers-in-law or such of them as butt in on the matrimonial squabbles of their issue. Actions for enticement and harbouring—among the oldest remedies known to the law—are becoming much more rare nowadays, since divorce has been allowed for desertion. But a considerable number of people do not believe in divorce and Roman Catholics are forbidden to seek it. If a husband's wife is enticed away from him by another man and maintained by him, a suit for damages will lie by the husband against the wife's paramour and likewise, in reverse, a suit by a wife against her husband's mistress if the latter has enticed the husband away and maintained him. This remedy is still available to an injured spouse not desiring a divorce. But is it available against a mother-in-law? Suppose a wife says: "I'm going to pack up and go to mother" and does so having been invited so to do by her mother. Can the husband sue his mother-in-law for "having enticed his wife to withdraw herself from married life and received and harboured her against his will?"

"No", said Denning, L.J. in *Gottlieb v Gletter*, 77. Law Notes, (1958). 37. "Such an action has never been extended so as to enable a husband to sue his mother-in-law and should not be so extended now. The action had in the past been brought only against the wife's paramour or against the husband's mistress, and it was unseemly that a husband who had taken his wife's parents to be his parents-in-law and had become part of their family should bring family troubles of this kind into a court of law." The fact is that this ancient remedy whereby a spouse, often actuated by motives of revenge and the desire to expose the consort and paramour by a suit for enticement and harbouring, is nowadays out of favour with, and discouraged by, courts. In another case reported during the year where a wife, unable to prove enticement, brought an action for harbouring her husband against her will, Devlin J. dismissed the suit which he said "was repugnant to modern ideas", adding that "the tort of harbouring should be kept strictly within the limits established by authority." Harbouring without enticement is not actionable. (*Winchester v Fleming*, 101. Solicitors Journal, 976.)

That brings us to the answer to "What is wrong here?" The business friend was wrong. True it is that an infant who is not a soldier in actual valid will, but he may be able to defeat the laws holds National Savings Certificates or is a depositor in the Post Office Savings Bank, he may make a written nomination during his lifetime of any person to receive the sum due to him at his death. There are other assets to which the system of nomination applies. (*Law Notes*, Vol. 77, 1958, pp. 44 and 52.)

A Ditcher's Diary

THE SHOOTING DOWN OF STUDENTS, POLITICAL agitators and even workers is only the latest evidence Kerala has given us that the process of exercising authority has very little relevance to the political ideology of the wielder of power. It is the same for everyone in that covetable yet unenviable position, and anti-communists did not have to wait long before Lucknow brought along its own tragic story with so many points in common. Everything, or almost everything, is fair game in hate and politics, I suppose; and it is not very surprising that, as an occasion offers itself, both the Congress and the Communist Parties are exploiting the misdeeds of each other to prove their respective political villainy. This line of thinking, attractive to political cynics, can be carried too far—and the beneficiary is the Communist Party. In addition to the old and fallacious analogy of the surgeon's knife and the assassin's, communists can immediately exploit the other differentials between themselves and the democratic parties. Inadequately honest (I'm being inadequately frank, I know) though the Kerala Congress's criticism of the State Government is, there is in fact a great deal of fundamental difference between the attitude of the communists to the taking of human lives and that of the Congress to drastic police methods. The Congress resorts to them in desperate conditions, knowing it is doing something better not done. On the other hand, the communists consider it legitimate to have recourse to any means and, of course, they never have any doubt that their end is always the best. Even in non-communist circles, I find, the Opposition in Kerala has been accused of adopting extra-parliamentary means for unseating the communist Government. Quite apart from my ignorance of the actual conditions prevailing in Kerala, I would not care to pronounce on this. There is no absolute answer to the question whether it is right, or even tactically prudent, to adopt one's adversary's ways for defeating him.

THE DEVELOPMENT OF TWENTIETH CENTURY civilisation seems to be carrying man steadily away from his old religions. Economic progress and technical efficiency are what he holds sacred these days, and it is to them that he looks for salvation. The trend has its advantages as well as its drawbacks; one of the more important being the gradual easing of conflict between the adherents of various faiths. In India this is a true gain, and I must have been only one of many who found pleasure in the news from Bombay the other day that a temple is to be built in that city where peoples of all religions can offer prayers to their respective gods or prophets, all under the same roof. For the idea, thanks are due to the Ramkrishna Mission. And for the money too, because the project is to cost Rs. 5 lakhs. This is a wholly commendable scheme, and the people of Bombay—Hindus, Muslims, Christians and Parsis—will now have the opportunity of setting an example in religious tolerance to the whole country, if not to the rest of the entire world. It is to be hoped that the kind of tolerant thinking which is responsible for this conception is some evidence that an end is in sight to the days when the most inhuman crimes, ranging from simple persecution, through individual inquisition, to outright genocide, can be justified in the name of religion. It cide, can be justified in the name of religion. It must never be forgotten that some of the darkest chapters in the world's history have been written

by religious zealots: witness, for instance, the killings that attended the partition of India, the mass conversions and massacres which followed the discovery of the New World, the incursions of Islam into Europe during the Dark Ages, and even today, the hatred of Judaism which seems to be as necessary to the expansionary policies of President Nasser as it was to those of Adolf Hitler. The world would be a better place for more spiritual toleration; it has enough problems to cope with in an atomic age. So, all efforts to set an example in religious synthesis are, in my opinion, a contribution to the welfare of mankind. Prophets, messiahs and teachers of all kinds have always preached the gospel of universal brotherhood; it is high time somebody put it into practice.

UNABLE TO CLAIM THAT I LISTEN REGULARLY TO the programmes of All India Radio in Calcutta—or even occasionally—I do not think I have a right to comment on the possibility or otherwise of the premises being haunted. Some of my Bengali friends tell me that the quality of many items strongly suggests the probability of such presence in the house, but this is hardly conclusive evidence. But then, few testimonies on apparitions are conclusive in the legal sense of the word; and I am inclined to think that this elusiveness is a very charming trait in ghosts with whom the closest acquaintance I have so far made is in books of a popular genre to which I was addicted in an earlier period of my life. We have heard of haunting music. Why, then, then, not haunted music for a change? Deathlessness, I imagine, has been claimed for some broadcasts by All India Radio's public relations staff, although there is hardly a medium with so brief a life. This would, other things being equal, indicate a considerable plurality of ghosts in most broadcasting houses. A lady announcer is once said to have resigned after being chased by a tall, well-dressed man (a ghost, of course, or she might have asked for extensions) but this could well be an aspiring broadcaster found wanting even by the standards of All India Radio, Calcutta. The broadcaster—a telecaster is different—was always an invisible man, another concept in common with the world of fantasy. This world of fantasy is, however, fast merging with that of reality and A.I.R., which was recently said to have recorded the blip-blop of Sputnik I, should be able to give us some evidence of the prevalence of ghosts in No. 1, Garstin Place. I find that the name of the East India Company has been mentioned as one of the occupants of the building before All India Radio took over. There are other successors to that amazing commercial venture, and a closer enquiry into the possibility of similar apparitions ruling these might produce some very surprising revelations.

A FRIEND HAS SENT ME A COPY OF AN OFFICIAL form entitled: "Application for grant of lift attendant's authorisation". I must confess it is a remarkable document; it certainly never occurred to me that even in this bureaucratic age a mere lift attendant needed any authorisation at all, especially one that requires the submission of so many details. At the head of the form is the instruction: "See regulation 10 (2)". Further down comes the warning: "Read the notes overleaf before filling in this form". Then the name, address (home and local) and age of the applicant are re-

quired, followed by details of experience, including "the type and class of lifts operated". It warns that: "Testimonials or other evidence in support of the experience are to be produced". The next two questions concern previous applications and authorisations, together with dates and names of authorities which issued them. After that, the prospective attendant is asked for his nationality, his religion or caste, his height, complexion and his identification marks. Then comes the inevitable clause about the fee. Rs. 4 in this case—although I suspect it will turn out to be more than that in the long run—followed by the signature or thumb print. I am left wondering why all this information is considered necessary just to work a lift. What possible relevance, for instance, can the nationality of the applicant have? What dark design lurks behind that question: are India's lifts to be reserved for Indian attendants? What is the idea of asking about a man's religion and caste in a secular State? What has his height to do with his qualification, or more insidiously than ever, his complexion? I appreciate that the really important part of the application is the Rs. 4 fee, but why should a Government department go to such trouble to disguise its tax measures under so much red tape? Isn't enough time and expense wasted already? But even this is not all. The application must be accompanied by a "Certificate of the sponsoring authority". This document requires the owner of the lift to state how long the attendant has been with him, whether he has operated the lift satisfactorily in the past, whether he is considered a "suitable" person to operate a lift, and whether facilities will be provided for what is obviously intended to be a form of "driving test". At the bottom of this form is a series of notes of which the two most interesting state that all applications must be accompanied by two copies of a recent photograph of the applicant (the size is stated) together with his signature or thumb impression on the back of each copy; and (inevitably this) a certificate from a "registered medical practitioner" of the applicant's physical fitness. I have no comment to offer. But I would like to ask what happens when the lift is passenger operated—does everybody have to apply?

THE RECEPTION IN BRITAIN TO THE FIRST LIST of life candidates for the House of Lords has been less than overwhelming. The reason, though, is the doubts which still exist about the wisdom of trying to revitalise the Lords at all, rather than any controversy over the choice of personalities. At its worst, the reaction has been one of complete indifference, which is surprising because the list does embody two important departures from tradition. The first, of course, is the appointment of women Peers; the lack of excitement which this has caused is merely a reflection on how completely accepted the theory of women's political rights has become in the past thirty-five years. The other is the appearance of a spokesman (though not an official representative) of the Church of Scotland. He is Mr. Noel-Paton, a personality well known to the business community here in India as the first chairman of Killick Industries Ltd. and a former President of the Bombay Chamber of Commerce. The rules of the Church prevent clergy from becoming members of Parliament, so a distinguished layman is the only alternative. Life in the House of Lords should be much to Mr. Noel-Paton's liking. The debates there are on a higher level altogether than those in the Commons and church affairs are still discussed without any of the political bias which pervades the lower House. A seat in the new Lords is a fine climax to a distinguished Indian career; Mr. Noel-Paton has our congratulations.

SCOPE FOR CONTINUED EXPANSION

MR. K. R. SUNDARAM IYER'S REVIEW

Presiding over the Second Annual General Meeting of the Company held on Thursday, the 31st July, 1958, at Tiruvottiyur, Madras, Mr. K. R. Sundaram Iyer, Chairman, said:

Gentlemen: I have great pleasure in extending to you a cordial welcome to this Second Annual General Meeting of the Company. The Directors' Report and the Statement of Accounts for the year ended 31-12-1957 have been with you for some time and with your approval, I shall take them as read.

While the progress so far made in the indigenous manufacture of components under the phased programme has been quite satisfactory, the Directors have, keeping in view the foreign exchange position, taken steps to accelerate the pace. Items taken up for indigenous manufacture are nearing 50% in value and include, apart from frame, petrol tank, seat, silencer, exhaust pipe, etc., other major and precision components of engine clutch, fork and wheels. Every effort is being made to attain self-sufficiency in indigenous manufacture of almost the entire motor cycle, barring, of course, the proprietary items. In 1959 as against the original schedule of 1960. With this objective in view, acquisition of further plant and machinery has been expedited and steps are being taken to obtain the necessary finances.

Issue of Additional Capital

In this context, I am happy to say that the issue of capital of Rs. 6 lacs made in February 1958 was fully subscribed. As the shareholders are aware, it was decided at the Extraordinary General Meeting held on the 25th June, 1958, that Rs. 9 lacs of capital be issued, out of which Rs. 4 lacs of Preference Capital (7% tax free redeemable cumulative preference shares of Rs. 100/- each) is being offered to the existing shareholders, as arrangements were made for subscription of the balance of Rs. 5 lacs. This brings the total Subscribed Capital to Rs. 25 lacs.

Progress of Building Construction

I made a reference at the last meeting to the factory building space then available and the con-

struction in progress of further factory buildings and administrative offices. We are now operating with an area of nearly sixty thousand sq. ft. in the Workshops and of ten thousand sq. ft. in the Administrative Offices.

Satisfactory Progress

In an industry of this type, where progressive manufacturing is involved, during the first few years, sizeable expenditure has to be incurred ahead of production in the preparation of designs, drawings and production planning. It is gratifying to note, therefore, that the profit earned during this year has enabled your Company to write-off fully the revenue loss and deferred revenue expenditure carried forward from the previous year, brokerage on shares and a good portion of the preliminary expenses, and to provide for the dividend on preference shares.

Unsatisfied Demand

Production during the year was nearly twice that of the previous year. Imported motor cycles of competitive makes were also available in large numbers. Nevertheless, your Company was not able to fully meet the demand but had to carry pending orders to be supplied in the early months of 1958.

The rate of increase in production is being maintained and production during 1958 is expected to be about 50% over that of 1957. But even this will be considerably below the quantity your Company is presently licensed by Government under the Industries (Development & Regulation) Act. Your Directors do not under-estimate the problems and the efforts involved in building an industry of the magnitude your Company has undertaken, particularly in view of the shortage of materials and skilled man-power. Until all the components of the vehicles are made indigenously—your Company as I have indicated earlier is endeavouring its best to expedite it—further increase in production has to depend upon the allotment we receive from Government in the way of foreign exchange for importing components that for the time being are not available from indigenous sources. I must mention here that we have had sympathetic consideration and understand-

ing from our Government, particularly in the context of the prevailing acute foreign exchange stringency. Your Directors are looking forward to the Government to ensure that imported materials are made available to enable production being stepped up at least to the present licensed annual quantity which will facilitate manufacture on an economic basis.

Motor cycles and three wheelers are the most economical form of personal and goods transport. It is not surprising, therefore, that the demand for your Company's products is increasing with the rising tempo of industrial and economic activities in the country. To cope up with the increasing demand, your Company has made an application, to the Government to increase the licensed annual quantity of production, particularly as this is possible with the Company's current capacity. While stepping up the production of motor cycles, consideration of the quality of the components manufactured has always been kept in view and rigid standards of inspection are being adhered to.

Service after Sales

Your Company attaches the greatest importance to service-after-sales. It is gratifying that your Company's Selling Agents, The Madras Motors Private Limited, have organised further points of sales and service. There are now in India over 63 points as against 48 in the previous year. This augmented number of service points should make for more easy and speedier service to the users of Royal Enfield motor cycles and three wheelers. The personnel at these service stations are trained at the Tiruvottiyur factory.

Prospects for Exports

Your Company's products were exhibited at the China exhibition and well appreciated by the Chinese trade circles. There are also enquiries for supplies of motor cycles from some of the West Asian and South East Asian countries, exports to which have now been approved by our U.K. Collaborators. Your Directors hope to fully utilise the prospects for export of motor cycles and three wheelers. It may be too early to assess the prospects of export business. However, your Directors are alive to this need and are making the preliminary surveys and securing the necessary contacts in these countries.

New Activities

One way to reduce the country's foreign exchange requirements is by pooling the plant, machinery and equipment resources of the various industrial units in the country in order to secure their fullest use for the common good of the various industries and the country. Though this has contributed in a large measure to economies in production in advanced Western countries, it has not so far taken practical shape in our country. Any effort in this direction involves a detailed exchange of views among the industrialists themselves for the common good of all. The All-India Ancillary Industries Exhibition has contributed a good deal to the dissemination of knowledge in this direction. I hope there will be active co-operation between various units in the automobile industry and that the response to undertake sub-contracting work will be encouraging, so that, the facilities available are effectively and fully used. Your Company started a General Engineering Department and is accepting work from its sister concerns in the Engineering industry to keep the plant and equipment facilities fully employed. We are receiving encouraging response from the State undertakings and also from the private sector. I hope in the years to come this department will prove to be a remunerative and stabilizing source of business.

Your Directors are doing everything possible to maintain cordial relations with the staff and workers of this Company and towards this objective are developing a scheme for management and labour consultation on important matters affecting the Company's production and also the day-to-day welfare of the employees.

The Board of Directors convey on behalf of the Company, their gratitude to the Government of India and the Madras State Government for all the assistance and guidance which they have extended to us. We have drawn substantially on the loan sanctioned by the Industrial Finance Corporation of India during the year and needless to say, this timely assistance has enabled us to keep up to our capital programme. I take this opportunity to express our gratitude to your Company's U.K. Collaborators, The Enfield Cycle Company Ltd. Redditch, for the co-operation extended by them during the year. Your Company's Selling Agents The Madras Motors Private Limited are putting forth commendable efforts to popularise the use, sales and service of motor cycles and three wheelers in the country and I convey our thanks to the Selling Agents and the dealers and sub-dealers all over the country. Before I conclude, I thank my colleagues, staff and workers without whose efforts, the results achieved during this year would not have been possible.

NOTE:—This does not purport to be a record of the proceedings of the Annual General Meeting.

Ship, Marine, General Engineering and Foundry work of all descriptions is undertaken at competitive rates at the RAJABAGAN DOCKYARD of INDIA GENERAL NAVIGATION & RAILWAY CO., LTD. FOR ESTIMATES AND FURTHER DETAILS apply to KILBURN & CO., PRIVATE LTD. Managing Agents, 2, Fairlie Place, CALCUTTA.

Money

THE CALCUTTA MONEY MARKET

STERLING RULES FIRM

Wednesday, 6th August.

DEMAND for advances has continued to fall in the Calcutta money market during the past week. All the main sources of demand show a steady decline. Once again, it has been noted that the fall in demand is continuing at an unusually slow rate. Conditions continue easy in the call market and the rate is now quoting 3 percent.

There has been a sharp revival in activity in the exchange market. A fair quantity of both tea and gunny bills has come to hand. Remittance continues poor. Sterling rules steady on world markets after an initial tendency to slacken. The pound is holding up well, even at this seasonally weak period, against both dollars and Continental currencies.

BULLION WAS STEADY LAST WEEK. TECHNICAL considerations, the uncertain political situation in the Middle East and the report that no heavy duty has been paid on Tibetan silver coin imports induced bear-covering. The price of silver advanced from the previous week's level of Rs. 179.50 to Rs. 182, which is today's rate for ready delivery. The rate for forward delivery stood at Rs. 181.50. The London and New York silver prices were 74½ and 88½ cents, respectively.

Gold recovered from Rs. 107.50 to Rs. 108 in sympathy with silver. The sovereign at Rs. 72 showed a gain of 25nP.

DURING THE WEEK ENDED 1ST AUGUST, GOVERNMENT of India Treasury bills for Rs. 148,23,50,000 were sold in favour of the Reserve Bank.

TENDERS for Rs. 2,00,00,000 of 91 DAYS GOVERNMENT of India Treasury bills were opened on 5th August. The total amount offered was Rs. 3,55,73,000. Tenders at Rs. 99.35 and above were accepted in full and those at Rs. 99.319 allotted approximately 62 percent. Lower tenders were rejected. The total amount accepted was Rs. 2,00,00,000, the average rate of accepted tenders being Rs. 2.651 percent a year.

Tenders for Rs. 3,00,00,000 of 91 days GOVERNMENT of India Treasury bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on 11th August. Successful tenderers should make payment on 16th August. Other conditions are as usual.

FURTHER DECLINES of Rs. 1.92 CRORES TO Rs. 1,539.91 crores in active notes and of Rs. 4.85 crores to Rs. 1,562.32 crores in the total note issue were outstanding features of the return of the Reserve Bank of India for the week ended 1st August, 1958. Notes held in the Banking Department consequently fell by Rs. 2.93 crores to Rs. 22.41 crores. The currency contraction was covered by reducing foreign securities by Rs. 5 crores to Rs. 179.68 crores. Deposits of Government of India and other Government accounts dropped by Rs. 9.89 crores and Rs. 4.26 crores to Rs. 60.25 crores and Rs. 24.40 crores, respectively. Balances of commercial banks at Rs. 109.73 crores showed a rise of Rs. 1.88 crores. Balances held abroad improved by Rs. 53 lakhs to Rs. 13.06 crores. Investments declined by Rs. 2.02 crores to Rs. 361.15 crores. Other loans and advances increased from Rs. 55.06 crores to Rs. 55.52 crores, of which advances to scheduled banks against usance bills amounted to Rs. 6.94 crores (Rs. 7.80 crores). Ways and means advances stood at Rs. 11.22 crores against Rs. 14.76 crores.

THE RETURN OF THE STATE BANK OF INDIA for the week ended 25th July, 1958, shows a rise of Rs. 24.70 crores to Rs. 445.73 crores in total deposits. Investments in Government securities are up by Rs. 10.64 crores to Rs. 214.62 crores, while other authorised investments remain unchanged at Rs. 11.09 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have decreased by Rs. 5.38 crores to Rs. 177.34 crores. Cash and balances are, in consequence, shown at Rs. 50.35 crores, or Rs. 12.22 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 25th July, 1958, shows Demand and Time liabilities at Rs. 769.09 crores (Rs. 31.40 crores on account of borrowings from banks) and Rs. 825.27 crores (Rs. 35.14 crores) compared with Rs. 750.48 crores (Rs. 29.38 crores) and Rs. 815.23 crores (Rs. 34.32 crores), respectively, in the previous week. Cash has declined by Rs. 24 lakhs to Rs. 38.12 crores, while balances with the Reserve Bank have increased by Rs. 18.51 crores to Rs. 102.70 crores. There is a rise of Rs. 22.42 crores to Rs. 536.93 crores in investments. Advances and bills discounted at Rs. 886.57 crores show a drop of Rs. 9.66 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.8 percent and 55.6 percent against 7.8 percent and 57.2 percent.

IDET-10

The Powerful New Detergent and Wetting Agent for All Textile Processes

In the Textile Industry, IDET-10 with its uniform efficacy and neutral character, can be used for all wet processes. It is indispensable in scouring, bleaching, dyeing and soaping processes.

IDET-10 is a synthetic organic surface-active agent, possessing powerful wetting action and detergency. It can be used in all processes which require wetting out, dispersing, emulsification, penetrating and cleaning. It is equally effective in hard water, alkaline or acid solutions.

In other industries, IDET-10 can be used for degreasing, tanning, wetting back and dyeing of leather; in the paper industry: for cooking of rag-stock, de-inking of waste-paper, washing and conditioning of felts. Also for various operations of metal processing such as corrosion inhibition, electroplating and emulsion-cutting.

Manufactured in India by **Swastik Oil Mills Ltd., Bombay**

FIRM TREND ON LONDON STOCK MARKET

INDUSTRIALS STEADY: RISE IN GILT-EDGED

London, 6th August.

BUSINESS in the stock markets was at a low level during the past week, being a holiday period of the year, but the general tone was very satisfactory. Prices fluctuated within narrow limits early in the week, and at one time were mainly easier where changed, but the trend improved later and markets ended a pre-holiday week on a firm note. The firm tendency was resumed after the holiday week-end, and in some instances, prices have been somewhat higher on balance. The slow progress towards a summit meeting and the uncertainty over the current industrial prospects, coupled with the President of the Board of Trade's warning that the effects of the U.S. recession were quite likely to hit Europe in the near future which created some uncertainty at one time. The better trend developed under the influence of the sustained advance on Wall Street, and news that the Government is to assist areas where unemployment is high and a more hopeful view of the international situation. In addition, hopes were rising of an early reduction in the British Bank rate and a resumption of the cheaper money trend which has been interrupted by the Middle East crisis. The gilt-edged market particularly responded to these hopes and after tending easier at the beginning of the week, resumed their advance and closed slightly higher on balance. The feature of the foreign market was the firmness of Greek bonds on hopes of peace in Cyprus. Dollar stocks advanced in response to the sustained advance on Wall Street. Bank shares were firm on the move to take a more direct interest in hire-purchase finance, the shares of which also showed useful gains. Commercial television shares were quieter, but property shares continued to attract a selective demand. Industrials generally moved within narrow limits and showed very little change on balance. Gold shares were firm on a selective demand. Copper shares were slightly firmer, but other base metal shares were lower. Oil shares had an erratic week and showed no marked change. Rubber shares continued to improve and a number of bright spots developed. Tea shares were also firm with a number of improvements in both Indian and Ceylon issues.

The Money Market

The seasonal holiday demand for currency kept the volume of money to the London money market on a very restricted scale and borrowers, in spite of reduced requirements, had to pay firm rates for their day-to-day accommodation. The lack of maturities through recent official operations was a further drawback, and for most of the week, the rate for loans generally ruled at 4 percent, with 4½ percent paid under pressure. In bills, Octobers and "hots" changed hands at 4½ percent and 4½ percent, but following a sharp reduction in the Treasury bill rate on Friday, the rate for the same bills was 3½ percent. The fall in the Treasury bill rate was not unexpected in view of the easier Middle East situation. An eventual further reduction in the British Bank rate has always been in the background and with competition at the weekly tender very keen, the money market was obliged to make a sharp revision in its main effective bid on Friday with the result that the average rate for the bills fell to its pre-Iraqi crisis level of just over 4 percent.

Activity on Wall Street

U.S. Government obligations suffered a sharp setback during the first two days of the past week, with many securities dropping into new lows for the year. Long-term issues were the hardest hit. The selling pressure was attributed to renewed speculative dealings along with the lack of support from the Federal Reserve System. The pressure, however, eventually eased and the treasury scored a moderate recovery over improved buying interest with part of the demands evenly based on technical considerations. German Nationals were firm but Italian issues were mostly lower. Australian and Norwegian issues showed little change either way with Denmarks largely neglected. Amsterdam 5½ percents finished unchanged. Among the Japanese issues, the Government 6½ percents of 1964 eased to a new low for the year.

Mixed Trend in Vegetable Oils

Vegetable oils and oilseeds encountered slow trading in characteristically pre-holiday market in London during the past week. Linseed oil narrowed around 10s a ton but only isolated deals tank London at £114½ a ton. A firmer market was noted for early shipments of Philippines copra from origin. Coconut oils steered a steady course but once again European buyers were difficult to contact. More enquiry was noted for groundnut oils and several deals were arranged in Nigerian bulk oil including September-October shipments at £94½ c.i.f. and October-November at £94 Ground-nut. Because of the market holiday, no castor oil were generally repeated. Firm offers crop shipments which were difficult to locate prior to new definite offers of Chinese soya beans could be still at £35 c.i.f.

Stocks and Shares

SPECULATIVE PRICES FALL AS TECHNICAL POSITION WEAKENS

SHARP CONTRACTION IN TURNOVER

Wednesday Evening.

THE deterioration in the Middle Eastern political situation over the week-end, following the disclosure of Mr. Khrushchev's secret visit to Peking, has dampened the enthusiasm of the bulls. Indian Iron & Steel, after being done up to Rs. 24.86, has tumbled to Rs. 24.12. It is reported that a prominent bear operator in Calcutta has covered his sales of approximately 250,000 shares and as a result the technical position of the market has been weakened. Market pundits are now becoming sceptical about the possible trend of share prices in the coming weeks. Unless new bulls appear on the scene, it is felt that it will be difficult to maintain the existing price level, particularly as the recent recovery has been too swift and not justified on current earnings and dividend prospects. The steady rise in the wholesale price index is also giving cause for concern. Commodity markets, too, have displayed an easier trend, except in the case of jute goods. The bulls who had made large-scale purchases soon after the Middle East crisis have been busy during the past few days unloading some of their stocks.

The one section that has moved from strength to strength since the bull market began in June last, is jute. Recent company results have pleased shareholders and the outlook for the industry as a whole is still encouraging. On a rough estimate, jute share prices have risen by about 40 percent in the past two months. If this trend continues, a widening of investor interest in other sections of the market may follow. It is well known that large sums of money have been blocked in jute shares ever since the days of partition and holders of such shares might, in the not too distant future, decide to cut their losses and re-invest the proceeds in blue chips to ensure maximum stability of capital.

The gilt-edged market was very firm under the influence of easy money conditions, and yesterday the Reserve Bank raised its selling price for 3½ percent loan 1967 from Rs. 97.90 to Rs. 98.05 and the 3½ percent loan 1968 from Rs. 99.60 to Rs. 99.70.

First-class preference shares were eagerly sought after but demand could not be satisfied owing to the absence of sellers. Even the Life Insurance Corporation has been showing some interest in selected jute preference shares.

Bank shares were unchanged, but in the railway section, Dehri Rohas was better at Rs. 11.75.

In cotton textiles, Elgins were easier at Rs. 13.12 but Kesoram recovered from Rs. 11.12 to Rs. 11.37.

Coal shares met with investment enquiry during the week, particularly Bengal which improved from Rs. 235 to Rs. 244. Anagamat from Rs. 19.25 to Rs. 19.62, and Panch Valley from Rs. 22.87 to Rs. 24. Other steady features were Bharat at Rs. 7, East India at Rs. 22, Equitable at Rs. 26.37, Rewa at Rs. 17.50, Kabray Jheriah at Rs. 60, Raneeunge at Rs. 13 and South Karanpura at Rs. 13. Karanpura Collieries jumped today from Rs. 112 to Rs. 118.

Jute shares were, on the whole, steady as will be seen from the following table:

	Opening 31st July, 1958	Closing 6th Aug., 1958
Rs.	Rs.	Rs.
Anglo-India	181	178
Barnagore	107	110
Birla	19.75	19.37
Chandpary	108	107
Delta	134	137
Kinnison	132	134
Northbrook	19	18.50
Chitavalsah	15.50	16.37
Orient	122	132

In electric, the only share dealt in was Calcutta at the higher rate of Rs. 14.81.

The outstanding feature in the sugar section was Dyer Meakin which spurred from Rs. 10.87 to Rs. 12.12.

In the engineering group, Burn & Co. were marked at Rs. 352 ex-dividend. Braithwaites were steady at Rs. 28.50 and Guest, Keen, Williams at Rs. 31.25. Kumardhubi Engineering receded from Rs. 9.62 to 9.25. Textile Machinery were shaded at Rs. 20.35 and Indian Iron, after opening at Rs. 24.34 closed lower at Rs. 24.27; later in kerb trading the shares dropped further to Rs. 24.20.

In paper, Bengal were outstanding and the price rose from Rs. 83.50 to Rs. 91. Similarly, India Paper Pulp moved up from Rs. 21.62 to Rs. 22.50. Another good feature was Sirpur which spurred from Rs. 11.56 to Rs. 13.25, but closed easier at Rs. 12.50. Star Paper were better at Rs. 12 and Orient were steady at Rs. 35 on bonus rumours.

In cement, Dalmia were steady at Rs. 11.50 as were Sone Valley at Rs. 6.

In shipping, India Steamship met with investment enquiry at the higher rate of Rs. 12.37.

Among miscellaneous industrials, Alkali & Chemical were steady at Rs. 14.94 and there were buyers of Britannia Biscuits at Rs. 14.75. Clive Row Investment was marked at Rs. 9. Eastern Investments were better at Rs. 120 as were Birds

Investment at Rs. 10.37. Indian Aluminium were dealt in freely at around Rs. 15.19 and Indian Cables, after being done up to Rs. 13.50, turned easy at the close to Rs. 29.62. Jardine Henderson improved by Rs. 6 to Rs. 71 and Martin Burn were higher at Rs. 27. National Carbon were slightly higher at Rs. 25.75 and National Tobacco were steady at Rs. 13.50. Philips India were marked at Rs. 15.75 and there was a good enquiry for Rallis at the higher rate of Rs. 43.

In the mining group, the Life Insurance Corporation was reported to have purchased a fair block of Indian Copper shares during the week at around Rs. 3.90; tonight's closing quotation is Rs. 3.83. Karanpura Development receded from Rs. 14.87 to Rs. 13.25.

Tea shares displayed a mixed trend, as will be seen from the following table:

	Opening 31st July, 1958	Closing 6th Aug., 1958
Rs.	Rs.	Rs.
Banarhat	322	326
Betjan	23.75	23.50
Huldbari	24	23.75
New Doonars	293	295
Tezpur	16	15.25

THE PROFIT OF DUNCAN BROTHERS AND COMPANY has declined by Rs. 10.03 lakhs to Rs. 36.73 lakhs for the year ended last December. Bringing in Rs. 5,36,233, providing Rs. 19 lakhs (Rs. 24 lakhs) for taxation provision, transferring Rs. 6 lakhs (Rs. 3 lakhs) to investment reserve and making other adjustments, there is a balance of Rs. 17,09,022. The ordinary dividend has been maintained at 11 percent, leaving a carry-forward of Rs. 5,39,022.

WE PUBLISH BELOW THE REPORTS OF THE TATA Hydro companies for the year ended last March. The profit of the Tata Hydro-Electric Power Supply Company has amounted to Rs. 34.48 lakhs. An ordinary dividend of Rs. 3.50 a share has been declared, including an interim of 50nP a share, leaving a carry-forward of Rs. 28,951.

The Tata Power Company has earned a profit of Rs. 77.04 lakhs and an ordinary dividend of Rs. 80 a share has been declared, including an interim of Rs. 30 a share and a bonus of Rs. 5 a share. The carry-forward is Rs. 29,701.

The Andhra Valley Power Supply Company's profit has amounted to Rs. 44.25 lakhs. An ordinary dividend of Rs. 80 a share has been declared, including an interim of Rs. 30 a share and a bonus of Rs. 5 a share. A balance of Rs. 32,105 is carried forward.

THE DHUNSERI TEA COMPANY HAS MADE A PROFIT of Rs. 3.46 lakhs for the year ended last December. Bringing in Rs. 1,485, and making other adjustments, there is a balance of Rs. 3,50,076. A dividend of 20 percent has been declared. General reserve is allocated Rs. 30,000 and rehabilitation reserve Rs. 25,000, leaving a carry-forward of Rs. 24,897.

The crop increased from 7,500 maunds to 9,210 maunds and the average sale price fell from Rs. 2.26 to Rs. 2.14 a lb. Estimates for 1958 provide for a crop of 9,700 maunds at a cost of Rs. 1.42 a lb.

THE PROFIT OF THE SOOM TEA COMPANY HAS amounted to Rs. 2.66 lakhs for the year ended last December. A dividend of 35 percent has been declared, including an interim of 15 percent. The carry-forward is Rs. 1,69,219 against Rs. 1,26,359 brought in.

Output rose from 297,850 lbs to 301,467 lbs and the average sale price declined from Rs. 3.41 to Rs. 3.26 a lb. Estimates for 1958 have been framed for a crop of 288,000 lbs at a cost of Rs. 2.53 a lb.

THE CHAMONG TEA COMPANY HAS INCURRED A LOSS of Rs. 18,548 for the year ended last December. The dividend has been passed over (7½ percent). Making all adjustments, a credit balance of Rs. 22,108 is carried forward (Rs. 33,357).

The crop fell from 176,418 lbs to 157,514 lbs and the average sale price declined from Rs. 3.58 to Rs. 3.30 a lb. Estimates for 1958 made for a crop of 168,000 lbs at a cost of Rs. 3.23 a lb.

THE PROFIT OF THE CLEVENDON TEA COMPANY HAS amounted to Rs. 2.05 lakhs for the year ended last December. A dividend at the rate of 10 percent is provided for, subject to availability of funds in India. A balance of Rs. 39,452 is carried forward, against Rs. 42,277 brought in.

Output declined from 485,200 lbs to 442,960 lbs. The average sale price fell from Rs. 2.08 to Rs. 2 a lb. Estimates for the current year are for a crop of 480,000 lbs at a cost of Rs. 6.43 lakhs.

THE PROFIT OF THE BIRLA JUTE MANUFACTURING Company has increased by Rs. 11.17 lakhs to Rs. 27.94 lakhs for the year ended last March. Providing Rs. 13.57 lakhs for depreciation, Rs. 8.02 lakhs (Rs. 4 lakhs) for taxation, transferring Rs. 6 lakhs to dividend equalisation fund and Rs. 63,795

INADEQUACIES OF THE INDIAN PORTS

RECOMMENDATIONS FOR IMPROVING WORKING CONDITIONS

(FROM OUR NEW DELHI CORRESPONDENT)

THE Chaudhury Report on port and dock workers, along with the resolution announcing the Government's decisions on it, have recently been published. The Central Minister for Transport and Communications, Mr. S. K. Patil, has lucidly explained the implications of the Government's decision. He has made it clear that there can be no question of bonus or share in the profits of State undertakings, more particularly such undertakings in which the Government enjoys a monopoly. It may be added that profits of even commercial undertakings are used in financing administrative expenditure of the Government, which, by and large, is designed to promote welfare of the masses and in particular of the weaker sections of society. The Chaudhury Report says, among other things, that India's major ports do not have a "cushion or reserve capacity." Taking all the six ports, their total capacity is 24.31 million tons. On the completion of the works in progress, an additional total capacity of 6.7 million tons will have been added by February 1958. Excluding mineral oil, the total dockside cargo of all the major ports, handled in 1955-56, did not amount to more than 14 million tons; about 10 million tons below the present overall capacity.

Port Congestion

Mr. Chaudhury has made some important observations on port congestion with special reference to the State Trading Corporation. This is what he says: "The clearance of iron and steel and the loading of mineral ores, which are important items of imports and exports in the second five year plan period, have also raised certain problems. The State Trading Corporation has planned to export about 2.5 million tons of iron ore in 1957. The contracts for export have been made after ascertaining the extent to which railway wagons would be available for the movement of ores, through different sections, to the various ports. The obligation, however, cannot be met if the railways and the ports are unable to handle the traffic. As for the shipments planned from the various ports, 1.1 million tons are to be exported from Calcutta; it was hoped that some quantities could be shipped through Kakinada and Masulipatam but this has not been possible. The waiting period in Calcutta of 10 to 12 days has made the position somewhat serious as delays involve the payment of demurrage. Calcutta is ideally situated, but the present facilities offered by the port for the export of iron ore are, according to the Corporation, only sufficient for the shipment of about 600,000 tons a year. Some relief has been available by the reservation of special berths.

"The position at Visakhapatnam is worse, the waiting periods for ships being over one month in certain cases. Two berths have been reserved for the handling of manganese ore, but the loading of iron ore has to take its turn with general cargo. It is doubtful whether the target of 150,000 tons of iron ore export through this port will be reached. According to the Corporation, the reservation of another berth for iron ores of an adjoining plot for dumping, together with a sufficient number of lighters and barges, might meet the requirements. A particular handicap at this port is that no night navigation is possible. In Madras, through which the Corporation has earmarked the export of

345,000 tons of iron ore and 135,000 tons of manganese, no separate berth is reserved for mineral ores and no priority is given to the vessels. The waiting period is sometimes even 28 days. Of the new berths under construction, one may be reserved for mineral ores, but these are not now expected to be ready till the end of 1958. The handling capacity of the Cochin port has not, however, been fully utilised; if there are more railway and weighing facilities, the port can receive more ships as the requisite draught, berths, barges and stacking places are already available and can deal with 200,000 tons of iron and manganese ores.

Conditions in Bombay Port

"Bombay which is expected to handle the export of 850,000 tons of ore needs more locomotives and wagons, regular services from the hinterland to carry ores to the port and facilities for lorries to come from the manganese dumps to the quay. The chronic congestion in the port makes matters more difficult. The alternative is to utilise the minor ports of Karwar, Tadri, Honavar, Bhatkal and Malpe, which the Corporation has in view, but these cannot be of much use until rail or road communications are available. The Kandla port is still a development project and does not have weighing facilities, but it is close to Rajasthan, a source of iron ore, and can render more economical service.

"The above gives a full picture of the difficulties experienced in the shipment of bulk cargoes of important Government imports and exports of foodgrains and mineral ores.

"The ability of the State Trading Corporation to meet the obligations will largely depend on the capacity of the railways to handle the traffic in iron ore. In Calcutta, the Corporation has requested the port to release one of the coal berths for iron ore loading. Berth No. 21, which it has suggested, is mechanised and can handle complete rakes. The Corporation intends to feed this berth with one complete rake every day augmented by one complete rake every third day. This may be well within the capacity of the railways, if they agree to assemble complete rakes of open wagons. As for the Cochin port, if more railway transport is available, it should be possible for the State Trading Corporation to ship about 200,000 tons of iron and manganese ore from Mysore State.

Railway Programmes

"As already indicated, the railways in their programme have realised the need for more wagons. Besides the laying of new lines and of double tracks, provision has been made for additional wagons. But the actual provision for 1957 for types of wagons, other than those for general services, which may be required by the ports, is only 835 for the broad gauge and 380 for the metre gauge. This is not likely to be adequate. As the programme of the railways is subject to review periodically, this aspect of the question will no doubt be considered in due course."

Problems of Mechanisation

The problems of mechanisation have been discussed by Mr. Chaudhury in his report as follows:

"According to shipowners, the state of mechanisation at the major ports is very poor; there is a serious shortage of properly-equipped berths. One ship, it was remarked, grew moss around it waiting for a berth for more than a month. Referring to port charges, shipowners were emphatic that it must be related to more and better turnaround of ships; the port charges could not be increased without at the same time improving the efficiency of the ports. Without mechanised loading and unloading, delays will continue to occur. The point of view of labour, as expressed by their representatives, appears to be that normally the workers do their best to load and unload cargo as expeditiously as possible but they are handicapped by the congestion in the docks, sheds and warehouses. Labour has criticised any insistence on mechanisation as an aim merely to lessen cost per ton and earn more profit. According to one representative, the Bombay port is as advanced as the port of London except in the case of bulk cargo. Another representative was definitely of the opinion that there was no need for mechanisation; all that was necessary was to make some innovations. He stated that though the hand trucks in the Calcutta port were primitive and he had suggested the provision of ball-bearings, tyres and the improvement of flooring, no effective action had resulted. The labour representatives have declared unequivocally that workers will be opposed to mechanisation which will displace labour, without finding alternative employment for them, but would be prepared to accept the aid of mechanical appliances which will lessen the fatigue of the worker and not throw him out of employment.

"Generally speaking, the quays, transit sheds and warehouses at the older ports, which were constructed decades ago, do not lend themselves easily to the full use of modern handling machinery. While the overall need for the replacement of out-of-date machinery and appliances cannot be denied, the condition in the ports, especially in the transit sheds, cannot be conveniently altered to suit the installation of the latest types of equipment.

Elimination of Time Waste

"There is scope for the elimination of wasted time and effort both by the improvement in the organisation of the work and by the introduction of mechanical aids. Disproportionate efforts now incurred by moving cargo solely by manual labour could be effectively reduced and labour could be employed more productively by moving traffic from point to point at the dock and in the transit shed and warehouse by mechanical means. It should be borne in mind that most of the ships calling at our ports are foreign-owned and many of them are equipped with the latest machinery for the handling of cargoes; to enable our shore labour to keep pace with the work on the hatches of such ships, it is necessary to provide our workers with correspondingly efficient mechanical aids. Cargo handling in our major ports can be greatly improved by the more frequent use of fork lifts, mobile cranes and similar appliances.

Bulk Cargoes

"The secret of successful working of our major ports must eventually depend on the provision, at each port, of berths which have sufficient mechanical aids. In most modern ports, there has been an increasing use of fork lifts, as also of tracking trailers, towing tractors and other equipment. In the Singapore port, there were as many as 26,000 fork lift pallets in use at the end of 1954. The use of pallets, extensively followed in the United States, is now being generally recognised in most transport fields. Ports in Britain, which have been using fork-lift trucks for some time, have increasingly realised their potentialities. Though the use of mechanical devices sometimes raises the problems of port economics, it should not be difficult, in consultation with trade and labour interests, and with due regard to the volume and pattern of traffic, local conditions and other circumstances, to introduce or extend the use of specialised equipment to facilitate handling operations.

"The present trend of traffic in the form of bulk cargoes makes it increasingly important that there should be adequate mechanical means of handling such shipments. Reference must be made in this connection to the Buhler plant which was brought to Bombay to expedite the discharge of foodgrains; the capacity of the plant is 2,880 tons a day. Having regard to the importance of obviating any delays in clearing food ships, it is depressing to find that it has not been possible to utilise this useful equipment, because labour had objected to its installation on the ground that its use would displace workers engaged in manual handling.

"The problem of capital expenditure and working cost will also have to be faced. So far as labour is concerned, there seems to be a tendency to adhere to traditional methods evolved by custom, however antiquated these might be in the context of modern developments. Workers are, however, beginning to appreciate the great potentiality of mechanical aids which can improve their output and reduce physical strain. It is, however, desirable that shipowners and labour representatives should have prior intimation and also be consulted in planning and introducing new mechanical appliances in the port. Some aids have already been tried and welcomed by workers as was apparent in the case of fork lifts in Bombay. This appliance definitely increases efficiency and fatigue. The introduction of the fork lift, already in use in Bombay, in the other major ports would be a step in the right direction. There are also obvious advantages in mechanising berths. It has been estimated that at a well-equipped berth approximately 100,000 tons of import cargo or 70,000 tons of export cargo can be handled in a year."

New Delhi

WORLD BANK MOVE TO SECURE LONG-TERM CREDIT FOR INDIA

THE MAHALANOBIS APPROACH TO EXTERNAL FINANCE

(FROM OUR NEW DELHI CORRESPONDENT)

ACCORDING to the latest information, the conference which the President of the World Bank, Mr. Eugene Black, has summoned of the representatives of the U.S.A., the U.K., West Germany, Canada and Japan to discuss long-term credit for India, begins in Washington on 25th August. The Secretary of the Central Ministry of Economic Affairs, Mr. B. K. Nehru, will leave for Washington on or about 15th August. The friends of India on both sides of the Atlantic appear to be determined to lift her out of her financial difficulties. Indications are not wanting that, in addition to the advance payment of the instalments relating to the arrears of the sterling pensions fund, Britain will give an overdraft of £75 million, which should enable India to meet her obligations until the end of March 1959. For longer-term credit, the President of the World Bank, Mr. Eugene Black, has convened the above conference to devise ways and means of helping India with a loan of \$500 million. India will not participate in the proposed conference, but the Secretary to the Central Ministry of Economic Affairs, Mr. B. K. Nehru, will be in Washington before it meets. A consortium to lend the requisite finance to India by diverting the European Recovery Programme payments now falling due, is one of the methods suggested. But U.S. Congressional approval will be needed even for this diversion.

Mr. B. K. Nehru has made his report to the Central Cabinet on the discussions he has had with the British Treasury and the World Bank. The next stage will be for the Finance Minister, Mr. Morarji Desai, to begin negotiations during his forthcoming visit to London towards the end of this month. Confirmation is also available that Mr. B. K. Nehru is being appointed a roving Ambassador for Economic Affairs in the U.S.A., with his headquarters in Washington. The Minister for Economic Affairs in London, Mr. T. Swaminathan, is being appointed the roving Ambassador for Economic Affairs in Europe. Mr. Swaminathan will be succeeded by the Secretary for Economic Affairs in Washington, Mr. Govindan Nair. These appointments will become effective after the annual meeting of the World Bank, which is scheduled to be held in New Delhi in October.

Foreign Exchange Problem

Professor P. C. Mahalanobis has explained his views on the foreign exchange problem. He has recently said: "We are aware that difficulties have been created by the shortage of foreign exchange. A new approach was adopted in the second five year plan, and the size of the second plan was intentionally made much bigger than that of the first. It is not surprising that mistakes have been made at the stage of transition from a small to a much bigger scale of planned economy. Techniques and tools of planning are not yet adequate and would have to be improved; and these questions are receiving the attention of the Government and the Planning Commission. It would be appropriate, however, for us to examine the question of foreign exchange from the point of view of long-term planning.

"I shall give a numerical example. Consider the question of foodgrains about which India is in a precarious position. From 1948 to 1953, we imported 10.3 million tons of cereals at a cost of about Rs. 867 crores in six years, that is, at the average rate of about 3.2 million tons at a cost of Rs. 145 crores a year. The average price paid was about Rs. 450 a ton. The population of India is growing at the rate of, possibly, 5 million persons a year. It takes roughly one ton of cereals to feed seven persons. At this rate, an additional supply of 700,000 tons of foodgrains every year would be required to keep pace with the growth of population. If we decide to purchase this quantity from abroad, we would require every year an additional Rs. 30 crores of foreign exchange which would amount to Rs. 450 crores in the course of one five year plan (and this, also, only at the present rate of growth of population).

"Consider the alternative method of using imported fertilisers to increase the production of cereals. One ton of ammonium sulphate, at a cost of about Rs. 250 a ton, should normally give an additional yield of two or 2.2 tons of foodgrains. To give 700,000 tons more of foodgrains, the quantity of ammonium sulphate required would be 350,000 tons of which the price would be Rs. 8.75 crores or, say, Rs. 9 crores. This would be the additional amount required every year; in the course of five years, the total amount required would be Rs. 135 crores. A still better way would be to install every year a new fertiliser factory to produce 350,000 tons of ammonium sulphate (roughly, like the factory in Sindri). The fixed investment would be about Rs. 20 crores of which the foreign exchange component would be only Rs. 12 crores. After the period of construction is over, each such factory would supply enough fertilisers to take care of the increase in population of one year. The total expenditure in five years would be

Rs. 100 crores with, however, a total foreign exchange component of only Rs. 60 crores. It is possible to go one step further, and establish immediately a heavy machine-building factory in India, and when this plant is constructed, to manufacture in India the machinery required to set up a fertiliser factory. Of course, it is neither possible nor necessary to set up a machine-building plant exclusively for the manufacture of machinery for fertiliser factories; the work can be done in big plants which would manufacture machinery for other industries as well. It is, however, possible to make rough calculations of cost because, in the case of heavy machine-building plants, the value of output is roughly equal to the value of fixed investments. To produce machinery worth Rs. 12 crores (the value of imports required to set up a Sindri-type plant) would thus call for an investment of about Rs. 12 crores or, say, Rs. 15 crores with a foreign exchange component of possibly Rs. 8 or Rs. 10 crores. This would be the (apportioned) cost in the first instance. The actual cost of setting up a fertiliser factory would be Rs. 20 crores a year or Rs. 100 crores in five years, but this would not involve any expenditure of foreign exchange. In practice, a large machine-building plant unit would be established, a point I shall consider a little later.

Growing Population

"To sum up, in order to feed the fresh additions to the population at the rate of 5 million persons a year, it would be necessary to provide an additional quantity of 700,000 tons of foodgrains every year which would require Rs. 450 crores of foreign exchange over a period of five years. The cost can be reduced to Rs. 135 crores of foreign exchange in a five-year period if an additional quantity of 350,000 tons of ammonium sulphate is ordered from abroad every year, at least two years in advance of the crop season. The cost can be further reduced to Rs. 100 crores (out of which the foreign exchange component would be Rs. 60 crores) over a five-year period, if a new fertiliser factory of 350,000-ton capacity is started every year; this would call for decisions four or five years ahead of the crop season concerned. The apportioned cost of a heavy machine-building factory which would manufacture machinery in India to install every year a new fertiliser factory of 350,000-ton capacity would be, however, so small as Rs. 12 crores or Rs. 15 crores with a foreign exchange component of perhaps Rs. 8 or 10 crores. Such a decision would have to be made only once, but eight or ten years in advance of the season in which the fertilisers would be used.

"Similar considerations hold good in other crucial sectors. An investment of Rs. 150 crores, including Rs. 80 crores of imported machinery, would be required to install a million-ton steel plant with a product value of Rs. 40 crores or Rs. 45 crores. A heavy machine-building factory with an investment of Rs. 80 crores, with foreign imports worth about Rs. 50 crores, would produce every year machinery worth roughly Rs. 80 crores or the equivalent of the imported machinery needed to set up a million-ton steel plant. Once such a heavy machinery factory goes into production, it would be possible to start a new million-ton steel plant every year out of our own resources. An investment of Rs. 30 crores in a plant to manufacture mining machinery would produce goods worth about Rs. 30 crores a year. An investment of Rs. 70 crores in heavy electrical equipment (generators, switchgear, heavy motor rectifiers, transformers, etcetera) would give products of the value of about Rs. 45 crores a year; and so on.

"From the point of view of industrial development over a period of 15 or 20 years, there cannot be any doubt that the correct policy would be to establish the heavy machinery industries. Consider purely for purposes of illustration, the following programme of investments with a rough value of the product within brackets in each case: heavy machinery Rs. 150 crores (Rs. 150 crores), heavy electrical equipment Rs. 100 crores (Rs. 60 crores), turbines Rs. 20 crores (Rs. 12 crores), mining machinery and drilling equipment Rs. 30 crores (Rs. 30 crores), machinery for chemical engineering Rs. 25 crores (Rs. 25 crores), machine tools Rs. 30 crores (Rs. 20 crores), aluminium Rs. 25 crores (Rs. 5 crores), and, say, another Rs. 70 crores for other basic industries giving a total investment of about Rs. 450 crores with foreign exchange requirements of the order of Rs. 300 crores over a period of five years. I am aware that foreign exchange would also be needed to expand transport and other facilities, but provision has been made for this and for steel and other investments in the second plan. The point I am emphasising is that Rs. 300 crores of foreign exchange invested in suitable basic industries over a period of five years would establish a sound foundation for future industrial development and would enable us to manufacture essential capital

goods within the country. After the factories come into operation, there would be a saving of Rs. 300 crores or Rs. 350 crores of foreign exchange in the import of capital goods. This is the crucial issue of planning in India.

"Finance and balance of payments are important aspects of planning, and there is no conflict between financial planning and physical planning. But it must be kept in mind that, in an underdeveloped country, the physical view is of basic importance. In one single year, 1956-57, our imports suddenly exceeded exports by Rs. 440 crores. If, by some happy chance, Rs. 300 crores out of this amount had been used to purchase capital goods required for basic industries, then in five years' time we would have won our economic independence and would have overcome difficulties of foreign exchange permanently. Although the accounting position would have been the same, the real position would have been entirely different and ever so much better. This is the essential logic of planning in India which we must follow in future."

Taxation of Tea

Plans are under examination for adjusting the pattern of taxation on the tea industry, with a view to making the cultivation of common teas profitable. An early announcement is expected.

Fall in Foodgrain Acreage

The latest all-India crop estimates provide an interesting study. In food crops, with the exception of jowar, maize and ragi, there has been a general decline in acreage compared with last year, the fall under rice being 0.4 percent, under wheat 2.3 percent, under barley 10 percent, under gram 6 percent, under other kharif pulses 4 percent and under other rabi pulses 16 percent. As against this, the acreage under sugarcane has risen by 6.9 percent and under groundnut by 7.5 percent.

The latest report of the Reserve Bank on currency and finance says that "the production of sugarcane, in terms of *gur*, increased from 5.98 million tons in 1956 to 6.75 million tons in 1956-57 or by 12.8 percent." This rise was due to an increase in the acreage of 6.9 percent. The area under sugarcane has gone up from 4,056,000 acres in 1947-48 to 5,019,000 acres in 1956-57 and 6.9 percent more in 1957-58. The 1956-57 report of the Indian Sugarcane Committee says:

"Although the importance of sugarcane cultivation to the country cannot be under-estimated, the acute shortage of food in India, resulting in its heavy imports to meet domestic requirements, has also to be borne in mind. Whatever contributions the sugarcane industry can make towards mitigating the food shortage by releasing more and more land hitherto under cane cultivation at the same time maintaining the targets of cane production by way of intensive cultivation, is to be resorted to by the sugarcane community of the country. The present trend in sugarcane area shows an upward tendency, which has to be curbed in favour of a rise in the yield from a smaller area." The following figures show the average yield to an acre from sugarcane during 1956-57 from various States (in tons):

Andhra	...	...	29
Madras	...	...	26.4
Mysore	...	...	25.2
Bombay	...	...	24.5
West Bengal	...	...	19.5
Orissa	...	...	16.4
U.P.	...	...	11.4
Punjab	...	...	11.1
Assam	...	...	10.6
Bihar	...	...	10.1
Rajasthan	...	...	7

Uttar Pradesh has asked for a further rise in the price of sugarcane. It is also having an acute shortage of foodgrains at present. What effect the rise in prices of sugarcane, if agreed to, would have on food production in the State can be easily imagined.

Control of Ex-Mill Sugar Prices

Much is being made of sugar as a foreign exchange earner these days. First, as indicated in these columns, the Government had to control the ex-mill price of sugar, because it was continuously rising, in spite of the promises made to the Government by the sugar industry. So far as foreign exchange is concerned, imports of foodgrains totalled 3.6 million tons, during 1957, compared with the total of 1.4 million tons in 1956. The imports of cereals into India from January to the end of April 1958 were 1.2 million tons. It can thus be established that the increase in the acreage under sugarcane, largely due to its high prices, is partly responsible for the foreign exchange expenditure on imports of food. There has also been expenditure of foreign exchange on imports of sugar mill machinery.

Planning does not mean mere setting up of production targets. In agriculture, it primarily means a careful allocation of land between food and cash crops. But as it happens, the acreage under food crops has declined, while that under sugarcane and groundnuts has gone up. In the very first appraisal of the grow-more-food campaign, it was pointed out that the cultivator largely regulated his acreage under various crops by the price factor of those crops. It is preferable to save foreign exchange on the imports of foodgrains rather than to earn a few lakhs of rupees by exporting sugar. It is, therefore, necessary to curtail the acreage under sugarcane. This can easily be done by reducing the price of sugarcane to Re. 1 a maund.

A Press note says: "When the sugar export policy was announced on 27th June, 1958, the sugar prices had already risen in the expectation

of a large export quota. To ensure that the prices did not go up further, the industry had assured the Government that mills would offer to sell their released stocks freely at prices prevailing immediately before the export policy was announced. There has, however, been a general rise in prices during the last four weeks and this rise has been particularly marked in northern India. The Government has, therefore, decided to control the ex-factory price of sugar in the Punjab, Uttar Pradesh and north Bihar. The controlled ex-factory price (f.o.r. factory station) fixed for U.P. and north Bihar factories is Rs. 36 a maund and for the factories in Punjab Rs. 36.50 a maund for L.S.S. D-29 grade with the prescribed price differentials for other grades. The controlled price will apply to all the stocks with the mills. Sugar mills are not allowed to sell their released stocks at prices higher than the controlled price. The Government has also decided to requisition and distribute sugar at fixed prices on the ex-factory basis as also for despatch to outstation centres on a freight-to-pay basis. Allotment to the following important centres will be made at fixed f.o.r. destination prices as indicated against each:

Delhi	...	Rs. 36.50 a maund
Kanpur	...	Rs. 36.75 a maund
Calcutta	...	Rs. 38 a maund
Bombay	...	Rs. 39 a maund

Sugar will be allotted to applicants according to the terms and conditions prescribed for the purpose.

Modernisation of Jute Mills

For the modernisation of the jute mills in India, the National Industrial Development Corporation has so far approved loans amounting to about Rs. 2.94 crores to 15 jute mill companies. Seven of these have already drawn about Rs. 1.36 crores. Applications for loans from some other mills are under consideration. The process of modernisation undertaken by the jute mills for attaining competitive efficiency in foreign markets has resulted in the replacement of about 50 percent of the old spindles. Efforts have also been made for the development of manufacture of modern jute mill machinery in the country to reduce dependence on imports. At present there are three units which make modern high-speed silver spinning frames. These units are working in collaboration with jute mill machinery manufacturers in the United Kingdom.

As the industry felt that modernisation alone was not sufficient to reduce the cost of production and to cut losses, it has set afoot a move to close down uneconomic units and to concentrate production in the more efficient units. Following this decision, five mills have been closed since the beginning of 1957. The main object of these closures is the rationalisation of production. All permanent workers affected by the closure of the five mills have been given alternative employment with continuity of service and no loss of pay, in concerns to which the production has been transferred. Workers, who left voluntarily on resignation, were given full retrenchment benefits. These closures have not affected total production, because the working hours and looms are transferred to the more economic units. Nor have they resulted in any loss of employment. An *ad hoc* tripartite committee, representing the workers, employers and the State Government, has been set up by the West Bengal Government to formulate a phased programme of rationalisation without retrenchment. This committee has

already secured an agreement between the employers and the employees that the workers displaced by rationalisation are to be given alternative employment with continuity of service.

Production and Exports

The production of jute goods in the first ten months of the last jute year, that is, July 1957 to June 1958, was about 974,000 tons, compared with 1,025,000 tons in the complete jute year 1956-57. Exports during 1956-57 have shown a monthly average of 71,600 tons, against 72,600 tons during the previous year. The monthly average of internal consumption for the corresponding periods is 15,000 tons and 15,800 tons, respectively. So far the production and disposal of jute goods has been satisfactory. Greater attention is being paid by the mills to the need for the diversification of their products. Some of the specialities, which are manufactured now in India, are cotton bagging for the packing of raw cotton in the U.S.A., wide hessians used as carpet packing in the U.S.A., jute tarpauline, jute carpets, etcetera. These fetch better prices than the ordinary varieties.

There are 112 jute mills of which 101 are in West Bengal, four in Andhra Pradesh, three each in Bihar and Uttar Pradesh and one in Madhya Pradesh. These mills are managed by 82 jute mill companies. The Indian jute industry has over 72,000 looms which represent about 53 percent of the total loomage in the world. Most of the jute mills are members of the Indian Jute Mills Association. They are at present working 48 hours a week with 123 percent of their looms sealed. There has been no Government control on production and distribution of jute goods.

Industrial Production

In a number of industries, the production capacity of new industrial schemes licensed under the Industries Act, together with the capacity of the existing units, now covers or even exceeds the targets of capacity laid down under the second plan. By the middle of June 1958, the total capacity licensed for electric fans was 871,800 a year, against the target of 600,000. For electric lamps, the capacity licensed was 55.54 million against a target of 50 million. Against the original target of 85,000 sewing machines, the capacity now approved is 137,700. For storage batteries, the production capacity already approved exceeds 500,000 numbers, against the target of 350,000. The target of 225 million dry batteries has been almost reached. In the case of radio receivers, the capacity target of 300,000 sets has been exceeded by 70,000. The capacity licensed for bicycles is nearly 1.59 million, ahead of the original as well as the revised targets of capacity.

In the cement industry, the revised target of 16 million tons is about to be reached, the licensed capacity so far being 15.2 million tons. The capacity targets for grinding wheels (4,726,000 lbs) has been covered. So is the case of coated abrasives where the target of 255,000 reams has been reached. While the capacity licensed for ring spinning frames is in excess of the target, the target for carding engines is yet to be covered. There is scope for reaching the capacity target for electric motors also. With a capacity of nearly 76,000 power-driven pumps already licensed, there is scope for another 10,000 pumps before the target is covered. In the case of steel structural, the difference between the target of 500,000 tons and the

actual capacity licensed, i.e., 281,000 tons, is considerable.

Among chemical industries, the targets for caustic soda, dyestuffs, paper and paperboard, industrial and power alcohol, soda ash, sulphuric acid, staple fibre, and vanaspathi have been fully reached. In some cases, extra capacity has also been licensed. The capacity licensed for motor-car tyres and tubes is slightly short of the target. In the case of sugar, full capacity has been licensed, while there is a gap between the licensed capacity and the target for superphosphates. The figures of capacity relate to the schemes approved and licensed and not to installed capacity. After a licence is issued, steps to install the capacity are taken by the entrepreneur. A watch is kept on action taken to implement licensed schemes.

Transport Development Council

For a proper and planned development of transport and to ensure co-ordination between the various modes of transport on the one hand and the Central and State transport policies on the other, the Government of India has decided to set up three new transport bodies. They are the Transport Development Council, the Road and Inland Water Transport Advisory Committee, and the Central Transport Co-ordination Committee. These are to replace the Transport Advisory Council constituted in 1935, the Central Board of Transport and the Standing Committee of the Central Board of Transport.

The Transport Development Council will be a high-level body to advise the Government of India on all matters of policy relating to roads, road transport as well as inland water transport. It will also advise on problems relating to co-ordination between different forms of transport which may be referred to it by the Government of India. The membership of this Council will be restricted to Transport Ministers of the States, Lieutenant Governor and Chief Commissioners of the Union territories. From the Centre, the Ministers of Transport and Communications, Commerce and Industry and Railways, the Minister of State in the Ministry of Transport and Communications, the Deputy Minister of Transport and Communications, and Member-in-charge of transport in the Planning Commission will be its members. The Central Minister of Transport and Communications will be the chairman of the Council, and the Transport Secretary to the Government of India will act as its Secretary. The Council will meet at least once a year.

The Road and Inland Water Transport Advisory Committee will be set up to discuss problems relating to roads, road transport and inland water transport and to make recommendations to the Transport Development Council for final decisions. The Committee will consist of official and non-official members and the Minister of State in the Ministry of Transport and Communications will be its chairman. The Central Transport Co-ordination Committee will be constituted in place of the Standing Committee of the Central Board of Transport and will deal with the day-to-day transport problems confronting the different ministries of the Government of India. The Transport Secretary to the Government of India will be the chairman of this Committee.

Working Groups for Food Plan

The Central Ministry of Food and Agriculture

has set up a number of working groups, containing technical advisers besides administrative officers, to work out sufficiently early the basis of agricultural development in the third plan. It is understood that an argument which may influence the working groups' discussions is that there should be greater concentration on the cultivation of crops best suited to particular areas. If cultivators will concentrate on crops specially adapted to soil and climatic conditions, it is felt this would help towards higher production. Specialised farming is usually more intensive than general agriculture. Some of the subjects to be dealt with by the working groups are land use, agricultural research, plant protection, local manurial resources, fertilisers, cashewnut and spices, fruit and vegetable development, minor irrigation and tubewells, land reclamation, fisheries, commodities, forests, marketing, agricultural education and plantation crops. The group will report to the Secretary of the Ministry of Agriculture in September.

While the working groups will be concerned with advance planning for raising agricultural production, the Government at the highest level, as is already known, is intending to promote, as an immediate measure, a vigorous drive for stepping up agricultural production in the coming rabi season. It is understood that one of the principal features of the scheme which is now being worked out by the Central Ministry of Food and Agriculture is that technical institutions under the Central and State Governments—such as the departments of agriculture, research institutions, experimental stations and agricultural colleges—will be mobilised to move in teams and supplement the efforts of extension workers on the field to assist farmers in the treatment of seed before sowing, adopting improved methods of sowing and other cultural practices from time to time. The plan is expected to include the organising of groups of technical people who would be given specific responsibilities in particular areas and who would more or less "adopt" those areas for bringing about technological improvements and higher production.

Supplies of improved seed, and using available agricultural implements, including seed drills, in the various institutions for the specific purpose of assisting the farmer at the appropriate time till harvesting is completed, will be another feature of the campaign. Some sort of a link with the crop to competition scheme might also be attempted to provide the necessary incentives to both the farmers and the technical groups mobilised for the drive. The scheme, when formulated, will be discussed with State Governments and put into execution considerably in advance of the rabi season.

Improved Cement Supply

The permit system of distribution of cement to the public has now been abolished in most of the States. In others, the control on the supply of cement has been greatly relaxed. This follows the suggestion made to the States by the Central Government early this year. The suggestion was made on account of a steady improvement in the supply position. Complete free sale of cement without permit has been introduced in nine States—Andhra Pradesh, Bihar, Bombay, Jammu and Kashmir, Kerala, Mysore, Punjab, Rajasthan and West Bengal and in the Union territories of Delhi, Himachal Pradesh, Manipur and Pondicherry. In Himachal Pradesh, Manipur and Pondicherry, in the mitted subject to a maximum of 75 percent of the total quantity available. In other States, free sale has been introduced subject to a maximum quantity. While it is 80 percent in Uttar Pradesh, it is 75 percent in Madhya Pradesh and Madras and 50 percent in Orissa. In view of the peculiar geographical position and transport facilities, Assam has not introduced free sale of cement. For the same reasons in Tripura also, no change has been made.

To establish a market for Indian cement outside, as a long-term measure, small exports are also being allowed. For the present, it has been decided to allow the export of 200,000 tons of cement. Firm orders for the export of 67,550 tons of cement have been booked and offers to the extent of 65,000 tons are being negotiated.

The production of cement in India in 1957 increased to 5.6 million tons, against 4.9 million tons in the previous year. At present, there are 29 cement factories in the country with an annual rated capacity of 6.23 million tons. With a view to achieving the target of 16 million tons by the end of the second plan period, schemes to establish 22 more units have been approved so far, besides an expansion of capacity in the existing factories. If all the expansion and new schemes fructify, the total installed capacity by 1960-61 would be over 14.7 million tons a year. A further capacity of 735,000 tons has also been provisionally approved. On the basis of import licences for plant and machinery issued already, it is expected that by the end of the current year the installed capacity will go up to 8.17 million tons and by the end of 1959, to 9.48 million tons. Assistance received under the Technical Co-operation Mission Programme has reduced somewhat the foreign exchange difficulties. External finance to the tune of \$7.5 million has been provided by the Technical Co-operation Mission for the purchase of cement-making machinery. Orders of a total value of about \$5 million have been finalised and proposals for using the balance are under consideration. In addition, \$5 million have been earmarked from the U.S. Economic Development Loan Fund for the purpose. It is hoped that it will be possible

to cover some further capacity by using the assistance.

Import and Export Advisory Councils

The Import Advisory Council will meet in New Delhi on 30th August. The Export Advisory Council will meet on 31st August.

Textile Enquiry Report

The report of the Textile Enquiry Committee was published recently. It is an important document which, among other things, emphasises the importance of consumer preference. The committee says that "it was unanimously pointed out by the trade and industry that the consumer preference has gone for finer and processed goods. The present imbalance, which, in the opinion of the committee, is the cumulative result of several factors, namely, (a) consumer preference for finer varieties of cotton textiles; (2) a tendency on the part of some of the less efficient mills to produce better quality goods manufactured by more efficient units without having the basic equipment in technical and managerial efficiency and resources to produce up to the standard; (3) the manufacture of varieties without any consideration to the marketability and quality but in anticipation of greater profits; and (4) lowering of quality by using fewer picks to get higher production and secure the benefit of rebate of six pias a square yard allowed by the Government for production in excess of the normal production from September 1956."

The committee has found that low duties, coupled with the rebate on extra production, has led to a phenomenal increase in the output of coarse dhoties and sarees. In other words, the consumer's preference having shifted to finer varieties of cloth, the coarse cloth manufactured for him remained unsold and has resulted in the accumulation of stocks. The question is: what about khadi? Will the consumer purchase the latter, if he is not willing to purchase coarse mill-made cloth? Here the issue is not one of consumer's preference, but that of ideology and to provide more employment opportunities. Khadi has to be manufactured in keeping with the Gandhian ideology, and because it has employment potential. The consumer's preference is for finer varieties of mill-made cloth, so that sale of khadi has to be pushed into Government departments, such as railways, Defence installations and the Rashtrapati Bhawan.

Per Capita Consumption

Since the rate of economic development is not according to that envisaged in the second plan, the Textile Enquiry Committee does not anticipate that the per capita consumption will exceed 17.5 yards. It says that "the rated capacity of the textile industry can be fixed at 5,100 to 5,200 million yards. It is recommended that further installation of spindles even already licensed should be stopped, after examining each case." But it does not consider the extra production of khadi, on which taxpayer's money is being so lavishly spent. The committee says: "The question of marketing of cloth forms an important field which guides producers on changing tastes and preferences of consumers. There is need for more continuous and sustained study in this field which may be undertaken by the industry and the Textile Commissioner's organisation."

This is important, as far as exports are concerned. It should be a matter for concern that, unlike foreign sales agents, Indian exporters hardly study the change in consumer preference. In the west and particularly in the United States, salesmanship lies in the art of making the consumer sick, say, of his existing motor-car, clothes, household goods and so on. No such effort is being made by Indian units in India which, like labour, have developed the psychology of a welfare State, by leaving everything to the Government to enable them to earn the largest margin of profit at the minimum cost and risk.

Important Recommendations

The following are the other important recommendations of the committee: Subject to the normal precautions being taken by banks in lending to the industry and trade, the committee would recommend liberal financing by the banks. It feels strongly that the introduction of changes in excise duty in the middle of financial years should normally be avoided. The overwhelming evidence before the committee was in favour of a change-over of duties to an *ad valorem* basis. The committee considers that the present structure of duties is weighted more heavily on plain cloth and unprocessed cloth compared with processed cloth of various descriptions. Both on the grounds of equity and fairness to the mills without processing equipment, it is essential that the pattern of excise duty is changed to provide for a closer approximation to *ad valorem* duties.

A uniform or standard costing system should be introduced in the textile industry. The committee urges that larger funds should be made available to the Cotton Textiles Export Promotion Council to open offices in other countries so that the demand in those countries could be properly assessed and stimulated. The committee recommends that as an experimental measure, additional automatic looms up to 3,000 should be allowed to be installed on condition that the entire production of such looms is exported.

Closure of Mills

The main reasons for the closure of textile mills seem to be old condition of machinery which in many cases, have been neglected continuously without proper attendance and repairs and replacements. Inefficient management has also been

one of the main reasons. The problem of rationalisation in the textile industry has to be solved adequately if the latter is to progress and make full use of the results of technological advancement. The industry cannot be expected to modernise unless it is allowed to rationalise simultaneously. The committee has used the term "rationalisation" to mean a re-organisation in a unit of the industry to ensure elimination of wastages and the most scientific utilisation of men, material and machinery. Rationalisation without the co-operation of labour results in strained relations between labour and management which lead to a breach of industrial peace.

The committee suggests the setting up of a rationalisation sub-committee for the industry as a whole to consider and lay down policies and principles governing rationalisation from time to time. In view of the large majority of machines in existence today having outlived their usefulness, the need for rehabilitation is urgent. Non-replacement of such machinery will result in low production, bad quality of products, the engagement of a large number of workers and high production costs. The rate at which rehabilitation could be effectively undertaken is limited by the availability of foreign exchange, paucity of funds with the mills, non-availability of certain essential items of machinery from indigenous sources, etcetera. At present, adequate machinery is not available, which might be used by mills for rehabilitation.

Consultative Sub-committee

The committee feels that a small consultative sub-committee should be set up to advise the Government on the principles and procedures to be followed in this connection. "We still find that a number of marginal and sub-marginal units which are not making the best use of their resources and thereby are causing avoidable losses to the community in general are creating a situation which leads to closures or threatened closures." Mills with inadequate and dilapidated machinery, which have been reported by experts as beyond redemption, should definitely not be allowed to restart in the same conditions. It will be better to allow them to be scrapped and to be replaced, if necessary, by better equipped units.

There is no machinery in existence today which will ensure a timely survey of the operations of individual mills, particularly of those found to be operating on an unsound or inefficient basis. The committee feels that an advisory committee consisting of all interests and Government representatives from all the important centres should be set up. This committee should advise the Textile Commissioner on all important matters affecting the working of the units of the industry. In order that this advisory committee can be adequately furnished with up-to-date information about the working of mills, the Special Survey Wing of the Textile Commissioner's organisation should be strengthened with adequate staff.

Government Control

Where the management is unresponsive, or the weaknesses have taken deeper roots, it will be necessary to invoke the relevant provisions of the Industries (Development and Regulation) Act, not only to institute formal enquiries but also ultimately to take over the management of such mills.

The committee does not feel that it will be advisable for the Government either to manage or own mills taken over under the Act as a department of the Government. It recommends that an autonomous corporation, functioning independently of the Government, should be constituted for this purpose with adequate capital. The board of management of the corporation should be so constituted as to attract experienced and public spirited millowners, responsible leaders of labour, technicians and managers. The committee is firmly of the opinion that the Government should give the greatest weight to the advice rendered by the advisory committee not only on the proposals of taking over the management of mills but also to all items which have been placed before it for advice. It is of the opinion that the corporation should not enjoy any discriminatory advantages compared with well-run mills under private management.

India-Italy Air Agreement Signed

An India-Italy air agreement was signed in New Delhi on 2nd August. It provides for twice-a-week stop at Bombay by the Italian airline, Alitalia. Air-India International will continue its thrice-a-week service, which can later be increased to four, via Rome. If and when Alitalia decides to convert its stop at Bombay into a transit-through-Bombay service, its weekly frequency will not exceed three. The agreement enables India to operate a freighter service through Rome.

Inauguration of Moscow-Delhi Service

The inaugural flight to Moscow of Air-India International is now fixed for 14th August, and that of the Russian airline, Aeroflot, for 18th August. As a large number of people are waiting in Russia to be brought out to India for employment at the Bhilai steel works, Air-India International will, in the initial stages, operate two services a week. Normally it will operate one service weekly leaving New Delhi on Thursdays and returning from Moscow on Saturdays. Air-India International will take 12 hours to reach Moscow, while Aeroflot will take seven hours because of its faster jet planes. Air-India International will operate Super-Constellations carrying first and tourist classes, the first-class single fare being Rs. 1,858 and that for the tourist class, Rs. 1,484.

"Less speed

—more waste"

SLOWCOACH methods get you no-where fast these days—the great big markets of the West want their goods quickly, and 'cargo by air means first on the market' is the proverb of today!

Send your goods to London by Air-India International—for we offer you no fewer than seven flights a week, take such good care of your cargo! And remember, cargo by air cuts transit costs and risks to the minimum—helps you save money while you make money!

London

GROWING U.K. ANXIETY ON INDIAN FOREIGN EXCHANGE CRISIS

CONFERENCE OF CHIEF CREDITOR COUNTRIES PLANNED

(FROM OUR LONDON CORRESPONDENT)

MUCH of the interest, and practically all the anxiety, shown in the question of financing Commonwealth development recently, has been occasioned by the serious situation which faces the Indian authorities if they are unable to secure the assistance for which they have been carrying on negotiations for some time. As far as Britain is concerned, the position has been kept in the forefront by a more or less regular series of references in various organs of the Press, and no doubt in official circles much more directly. The latest development in the situation suggests that as a result of all the discussions, it has now been decided to hold a meeting of the chief creditor countries towards the end of August. It will take place in Washington under the auspices of the World Bank, and senior officials from Britain, the United States, Canada, West Germany, and Japan are expected to take part. In all these countries, there is a desire to help India over the financial difficulties of the next few years, but the amounts involved are too large to be tackled piecemeal, and the problem cannot be solved by short-term credits.

Between now and March 1961, the Government expects to have a foreign exchange deficit of \$1,050 million. The bulk of this will arise from payments for orders already placed abroad in connection with the second five year plan. No less than \$670 million are needed to bridge the external gap during the next 12 months, from July 1958 to June 1959. These deficits arise after allowing for the various loans and credits already obtained. India's sterling balances have now been drawn down to £150 million, and the Government of India regards this as the essential minimum reserve in the long run. But it may be temporarily drawn down by another £40 million or so in the next few months. In round figures, this will leave about \$540 million to be found in the next 12 months, and another \$510 million in the following 21 months. Even the amounts of this order could be raised by any normal procedure—and it must be remembered that the entire lending activity of the World Bank produces about \$600 million a year—it would be useless to offer credits for short periods because India has substantial debts falling due in the years after 1961. Long-term development loans amounting to \$1,000 million or so can only be raised by Government action.

On 1st April, India had outstanding orders and contracts worth about £650 million, or \$1,800 million. Roughly 40 percent of this, or £250 million, had been ordered in the United Kingdom and it is a fair guess that considerably more than half of it was insured with the Export Credits Guarantee Department, which would have to make good to manufacturers losses sustained through the failure of India to pay. The balance of the contracts is mainly with West German and Japanese suppliers. For some time, India has ordered very little in the United States because prices have been uncompetitive. It will be September before it is known whether India can avoid a default.

Export Cover Still Wanted

Medium-term business underwritten during the last quarter by the Export Credits Guarantee Department, at £7.7 million, was above the unusually low figure of £4.9 million done a year earlier. It

was well below the quarterly average of £40 million for the financial year ended 31st March last, but, says the Department, there has been no decline in the amount of business coming forward. Short-term policies increased in face value in the quarter by about £20 million to £564.6 million. The total insured business shipped, short term and medium term, was £111.8 million, compared with £138.7 million in the previous quarter. Thanks partly to the dock strike, Britain's total exports in April-June, at £776.5 million, were £44.7 million below January-March.

Economic Trends

Production rose by 1 percent in the first quarter of this year compared with the same period of 1957, but company profits in real terms fell slightly. Wages and salaries rose by 6 percent, personal incomes as a whole increased by 7 percent, and consumers spent 7 percent more on goods and services, but because of inflation they got only 3½ percent more for their money in real terms. These figures are given in the latest quarterly estimates of national income and expenditure, and in new reports of company profits, which are published in *Economic Trends* by the U.K. Treasury. The fall of 1 percent in company profits conceals an actual rise in the aggregate earnings of manufacturing companies. The gross trading surpluses of the nationalised industries declined by 13 percent, partly because several profitable steel companies were returned to private ownership during the year.

During the post-Suez petrol rationing, few people bought motor-cars, so that the 1958 figures show a big rebound. More than twice as much was spent on motor-cars and motor-cycles as in the first three months of 1957, and about half the extra 7 percent of consumer expenditure went this way. Britain also spent more on food, drink, and tobacco, but about the same on clothing and on durable goods other than motor-cars. Personal saving continued at a high level. In real terms—that is, allowing for price changes—Government and local authority spending on goods and services dropped between 1 and 2 percent. Fixed investment—in plant, machinery, factories, and houses—rose by 3 percent in real terms or fully 7 percent if house-building, which fell by 12 percent, is excluded. A fall of 3 percent in investment by manufacturers was offset by the larger numbers of ships and vehicles bought by the rest of industry. Much less had to be invested in stocks because of the fall in import prices.

Commonwealth Trade Plan

An attempt to define the objectives of the Commonwealth Trade and Economic Conference, to be held in Montreal in September, has been made by the Conservative Expanding Commonwealth Group, of which Mr. Patrick Maitland is chairman and Mr. Robin Turton vice-chairman. It has just published some suggestions for Montreal, of which copies have been sent to Commonwealth Prime Ministers and to their High Commissioners in London and which have been discussed at some length with members of the British Government. The group proposes the establishment of a Commonwealth Economic Secretariat in London on the lines of the management of the Colombo Plan,

and responsible to a Commonwealth Executive Committee. There should be an annual consultative conference attended by Ministers to receive reports from the secretary and to issue directives to him. Membership should be open to all Commonwealth countries with associate membership for colonies approaching self-government.

The proposed secretariat should take over the duties of the Commonwealth Economic Committee and very largely increase the services provided. Proposals from members for negotiations on the disposal of surpluses, marketing agreements, adjustments of tariffs and quotas, and other matters should be submitted to the secretary, who will be authorised to approach other members and to start multilateral or bilateral discussions. The group suggests that Britain and the other members of the Commonwealth should plan to switch trade from foreign sources to minimise the effects on their economies of the European common market and gives a list of £300-million worth of British imports which might be so switched. Such a major switch of trade, the group states, should be carried out by discriminatory methods. Existing preferences should be replaced by *ad valorem* preferences.

The group urges the establishment of a Commonwealth price stabilisation corporation prepared to buy each year up to 10 percent of Commonwealth exports "at prices, say, 12 percent below world prices," and to hold them until the price should rise to 20 percent over the purchase price. The group also recommends that the Bank of England, which at present acts as the Commonwealth Central Bank, should "cultivate Commonwealth associations" and appoint Commonwealth staff as a matter of course. A Commonwealth Investment Fund or Bank should also, in the group's view, be set up.

Establishment of Foreign Firms

The Treasury's consent will in future not be required for the establishment of any new enterprise in Britain by foreign interests. The Chancellor of the Exchequer has announced in a written reply in the Commons that the procedure under the Exchange Control Act, which had in the past discouraged some kinds of foreign investment in Britain, is being relaxed. This means that the Treasury no longer has to be satisfied in advance that a new enterprise financed by foreign capital is "not prejudicial to the British economy." The only control which such plans will have to pass is a "technical scrutiny" by the Bank of England. The relaxation of this restriction will be widely welcomed.

Delegation for Hongkong

Four members of the House of Commons and Lord Rea, the leader of the Liberal peers, are to visit Hongkong for 12 days in November as guests of the Hongkong branch of the Commonwealth Parliamentary Association. The selection of the British delegates, which has been made by the Speaker's Committee, could not have been better in view of Parliament's present interest in Commonwealth trade and Lancashire's special interest in imports from Hongkong. The party will include Mr. Alan Green, the Conservative member for Preston South, who makes textile machinery and industrial cloth, and Mr. Hervey Rhodes, the Labour member for Ashton-under-Lyne, who is a woollen manufacturer. Lord Rea is a merchant banker, and the leader of the deputation is Mr. Robin Turton, vice chairman of the Expanding Commonwealth Group. The party is completed by Mr. Sydney Irving, a school master. The British delegates have already met to make a rough plan for informing themselves about affairs in Hongkong.

Shipping Risk Rates Reduced

War and strike, riot and civil commotion, shipping risk rates to, from, or between Iraq (ports only) have been reduced to 2s 6d a £100. On 16th July, the rate was quoted at 5s, and remained at that level until 31st July. At the same time, the Institute of London Underwriters announced that the rate for the Lebanon (ports only) was also reduced from 5s to 2s 6d a £100. The additional charge of £1 a £100 for interior destinations of Iraq is reduced to 2s 6d, while the additional charge for interior destinations of the Lebanon, and other countries via the Lebanon, is now 5s, compared with £1 a £100 previously.

Brevities

Whiteaway, Laidlaw and Co., a subsidiary of Great Universal Stores, and formerly well known in the East, has bought the £180,000-share capital of Art Wallpapers for cash. Art Wallpapers are multiple retailers of paints, wallpaper and household appliances and operate a chain of 24 shops in London and the Home Counties.

From 18th August, import licensing restrictions will be removed from a wide range of chemicals and allied products imported from the dollar area, with certain exceptions, such as dyestuffs, licences will no longer be required for most chemicals used as industrial materials.

Deep-mined coal production in the first 30 weeks of the year was 5,701,700 tons below that of the same period in 1957. Open-cast coal output compared was better at 8,119,700 tons, against 7,876,900.

The number of British ships laid up at home ports for reasons other than repair has risen again, according to figures published by the Chamber of Shipping. At 1st July there were 187, totalling 1,075,085 tons, compared with 183 and 1,033,622 tons on 1st June, and 21 and 81,917 tons on 1st July last year.

REDUCTION IN THE RAILWAY EQUIPMENT IMPORTS

CASE FOR WAGON EXPORTS

(FROM A SPECIAL CORRESPONDENT)

THE railways, the variety of whose purchases ranges from a pin to a locomotive, and covers over 75,000-odd items of stores and equipment, are the largest single buyers in the country. Their purchases were only Rs. 16.8 crores in 1938-39, but these now stand at about Rs. 175 crores a year. The railways' stores bill, both for plan works and for maintenance, during the current plan period is estimated at almost Rs. 1,000 crores. An idea of how the railways' purchases have been steadily rising since 1938-39 can be had from the following figures:

Year	Indigenous	Imported	Total
1938-39	10.28	6.51	16.79
1944-45	32.56	12.84	45.40
1951-52	68.33	29.32	97.65
1952-53	64.15	28.00	92.15
1953-54	64.43	25.60	90.03
1954-55	83.64	24.03	107.67
1955-56	93.65	32.63	126.28
1956-57	125.82	45.56	171.38

These figures relate to purchases made by them from the open market and do not include the value of the items manufactured in the railways' own workshops. This increase in the volume of the railways' purchase (after making due allowance for price rises) may be attributed to the impact of the first and the second five year plans, particularly on account of the replacements and additions made to the rolling stock. Out of Rs. 513.78 crores worth of purchases made by them during the first plan period as much as Rs. 164 crores went for the rolling stock. Of this sum, Rs. 70 crores was spent abroad for acquiring rolling stock; the balance was expended within the country. In terms of numbers the railways purchased 1,562 locomotives, 4,760 coaches and 61,256 wagons during the first plan, the breakdown between the imported and the indigenous purchases being as given in the table below:

Year	Locomotives		Coaches		Wagons	
	Imported	Indigenous	Imported	Indigenous	Imported	Indigenous
1951-52	83	27	98	673	2,459	3,707
1952-53	150	63	191	791	5,248	6,388
1953-54	91	86	125	657	1,504	6,882
1954-55	247	145	20	1,223	5,538	14,316
1955-56	481	179	12	970	4,525	10,689
Total	1,062	500	446	4,314	19,274	41,982

Second Plan Purchases

Of over Rs. 1,000-crore worth of railway purchases which it is estimated will be made in the second plan period, the imported element is placed at about Rs. 425 crores. The rolling stock itself is estimated to cost about Rs. 380 crores, out of which imports are likely to account for about Rs. 160 crores. The purchases will represent 2,364 locomotives, 10,419 coaches, 485 E.M.U. stock and 107,247 wagons, the breakdown in terms of the gauge being as follows:

	B.G.	M.G.	N.G.	Total
Locos	1,430	853	81	2,364
Wagons (four-wheelers)	81,454	21,772	4,021	107,247
Carriages	5,000	4,786	633	10,419
E.M.U. Stock	368	97	..	465

The railways are the biggest consumer of steel, timber, non-ferrous metals, lubricating oils and greases in the country. Also, they are responsible for employing a major portion of the engineering capacity available in India. This is apart from the about 100,000 men employed by the railways in their workshops. All items of rolling stock—e.g. locomotives, boilers, coaches, electrical multiple units, underframes, wagons, wheelsets and axle assemblies and transportation cranes, as also cast break-down and specialised equipment, iron sleepers and items of specialised equipment—are purchased by the Railway Board. The Board has since last year also taken over the purchase of imported track materials such as rails, fish-plates, steel sleepers and bearing plates, etcetera, from the Iron and Steel Controller. The procurement of wooden sleepers is also being done by the railways direct. Coal is, however, being arranged through the Central Ministry of Mines and Fuel.

Global Tender System

Purchases overseas are made through global tenders, which are given wide publicity all over the world. Copies of the tenders are circulated to the foreign embassies in India as also to Indian embassies abroad to attract widest possible interest. In earlier years the requirements of rolling stock were being met from a few countries, but the global tender system of today has attracted quotations from many more. Of the various countries which have been successful in obtaining orders in the recent past mention may be made of the U.K., France, West Germany, East

Germany, Italy, Belgium, Poland, Czechoslovakia, Austria, Yugoslavia, Russia, Japan and the U.S.A., and lately, Burma, Australia and a few countries in the south-east Asia. One of the main principles of the railways' stores purchase policy has all along been the encouragement of Indian industry.

The railways' endeavours to encourage the local manufacture of their needs may be studied separately in relation to the items of major railway equipment such as the rolling stock and other general items of stores needed by the railways for day-to-day maintenance and operation. As for the items of railway equipment, the first step in that direction was towards setting up the manufacture of steam locomotives in the country. TELCO was entrusted in 1947 with the manufacture of metre-gauge steam locomotives. Later in 1949, it was decided to set up the locomotive works in Chittaranjan to manufacture broad-gauge steam locomotives. Both these units have already attained the production targets set for them. TELCO at present is turning out 85 locomotives a year (and it is expected that this figure will go up to 100 locomotives a year by 1959-60), and it has already delivered over 300 locomotives since its inception. The Chittaranjan Locomotive Works, on the other hand, is now turning out at the rate of 180 W.G. locomotives a year, which is the equivalent of over 200 average-sized broad-gauge locomotives a year and has already delivered about 670 broad-gauge locomotives since it went into production.

Self-sufficiency in Steam Locomotives

The Indian railways have, therefore, already acquired self-sufficiency in their requirements of steam locomotives. In fact, the import of steam locomotives has been stopped since 1957. Should the requirements of steam locomotives go up at any time during the third or the fourth plan period, this can be met from these indigenous sources. But it is still necessary to import electric and diesel locomotives. The Railway Board placed orders for 100 diesel and 110 A.C. electric locomotives last year for main line use. The order

In the year 1949, the Railway Board decided to set up an integral coach factory in Perambur, Madras, with an ultimate target of 350 coaches a year. The first coach was turned out in October 1955, and this factory is already producing coaches at the rate of a little over 300 coaches a year. In addition to this, the Board has recently decided to set up an auxiliary furnishing unit so that this factory could turn out fully furnished coaches. The Board is also contemplating to introduce night shifts in this factory in order to double up production. In addition to this, the Board has asked the Hindustan Aircraft Ltd to develop and manufacture integral design coaches. At present, H.A.L. is turning out 180 conventional type of coaches a year. This capacity would be switched over to 200 integral design coaches a year to begin with and it will be raised to 300 coaches a year towards the beginning of the third five year plan.

These two units, when they go into full production, are likely to meet the requirements of the railways of broad-gauge passenger coaches. Meanwhile, capacity has been developed in the country to build underframes on which coach bodies are being erected by private and railway workshops. Imports of railway coaches have been stopped for some time. In addition, the Railway Board is placing orders in the country for electrical multiple unit stock for suburban services in Calcutta, Bombay and Madras. To begin with, these are being partly assembled and partly manufactured in the country. The development of the electrical portion of the E.M.U. stock is, however, linked up with the heavy electrical equipment project in Bhopal.

The indigenous wagon-building capacity, which stood at 3,700 wagons a year in 1950-51, has now risen to nearly 20,000 wagons a year. This is not only enough for the current requirements of the railways, but can permit the export of a couple of thousand wagons to other countries. As a result of a steady build-up of capacity wagon imports have been stopped since the second plan period began excepting a few special types which have had to be imported because of some urgency.

Development of Wagon-building

Indigenous wagon-builders have now come to a level when they can build almost all types of wagons required by the railways including the special types which have had to be imported hitherto. They have now been entrusted with the development of the broad-gauge bogie wagon in welded design fitted with roller-bearing and centre buffer couplers specifically built for hauling heavy loads. This heavy-capacity wagon will be put in service in 1959 in the steel-belt area. Wagons and underframes are now being completely built in the country with indigenous materials. But indigenous capacity is limited for wheelsets

and some steel, specially plates which have to be imported due to their limited indigenous supply.

The Tata Iron and Steel Co. is the only source for the supply of wheelsets. But its production is only 9,000 wheelsets a year against the railway requirements of about 40,000 wheelsets a year. This dependence on imports will continue until the T.I.S.C.O. capacity expands, and the wheelset plant in Durgapur comes up. The present level of imports of wheelsets, at any rate, is going to continue for the next two to three years.

As for steel for wagons, particularly plates, this also is linked with T.I.S.C.O.'s expansion programme and also with the new State steel plant projects. Self-sufficiency in steel supplies for both maintenance and manufacturing requirements of the railways is likely to be achieved by 1960-61, and till then, the import of plates and structural will continue to be necessary. The future needs of speed and the nature of service on the railways necessitate an increasing use of roller-bearing axle boxes on their wagons and coaching stock in the years to come. The indigenous capacity is at present extremely limited, but steps have been taken to undertake substantial expansion by the end of 1959. The immediate needs, however, may have to be imported, but the quantity is not likely to exceed 6,000 to 8,000 boxes. As for other wagon components such as steel castings, forgings, screw couplings, etcetera, there is sufficient capacity in the country to meet the railways' requirements for the same. Some of the other major items which deserve to be mentioned specially are steel (including track materials), timber (including wooden sleepers) and non-ferrous metals.

Overall Steel Requirements

The railways' overall requirements of steel (including track materials) during the second five year plan period have been assessed at about 5.5 million tons. Of this quantity, about 2.8 million tons, it is expected, will be met from within the country and the balance will have to be imported. The requirements of steel rails have more or less been covered, and excepting a few thousand tons of fishplates and turnout sleepers, no further import of steel track material is now envisaged. But as mentioned earlier, some amount of steel plates and structural will still require to be imported during 1958 and 1959. The requirements of timber for coach building (other than sleepers) are placed in the neighbourhood of 60,000 tons a year. This consists of about 37,000 to 38,000 tons of a number of various species of teak (Burma, Malabar, C.P., Andaman Padauk), and the balance mostly in hardwoods and partly in softwoods. The hardwoods and softwoods requirements can be mostly met from within the country, but the domestic supply of teak is limited to not more than 10,000 tons, so the balance of 27,000 to 28,000 tons has to be imported from Burma every year. The imports are likely to continue for the next two to three years.

As for the railways' requirements of timber sleepers, this was until now being met entirely from indigenous resources. Large-scale programmes under the second plan and the scarcity of pig iron and steel (for alternative steel sleepers) have, however, necessitated their imports. The imports during the second plan have been assessed at about 4.5 million sleepers, of which 3.5 million have either been arranged or are in the process of being arranged, thus leaving a balance of about 1 million sleepers (valued at about Rs. 3 crores) yet to be imported. As for non-ferrous metals, the railways are the biggest consumers in the country. Efforts are being made by them to conserve as much of the non-ferrous scrap as possible, and also at finding substitute materials and mixtures to curtail the consumption of virgin metals.

One of the main end-uses of non-ferrous metals on the railways is as bearings in the axle boxes for wagons, coaches and locomotives. With the introduction of roller-bearing axle boxes in future, more and more stock is expected to be fitted with the same. As a result of this development, the requirements of non-ferrous metals for bearings in axle boxes may be expected gradually to taper off. But, of course, it would take some years before the effect is felt.

Future Outlook

Summing up, India is now more or less self-sufficient in steam locomotives, wagons and coaches and in their components. Wheelsets are, however, an exception and until the new steel plants go into production, their import will continue. Electric and diesel locomotives, in part or full, will continue to be imported in the near future, but the emphasis, in their future procurement, would be on the maximum utilisation of indigenous talent and capacity. In steel in general, and in particular, steel for the track, and in special steels required for rolling stock, the railways will be self-sufficient by the end of the second plan. All this may perhaps give the impression that the railways will soon be shutting themselves off from the world market, but in actual fact, this is not likely to happen as it has not happened in other industrially advanced countries. Only a few years ago, the railways would not have thought of placing large-scale orders for diesel and electric locomotives such as they have now done. Industrial advancement in a country leads to increased and closer collaboration and co-operation between that country and others. This and the ever-developing technological knowledge in the field of locomotion, signalling and transport in general will, one feels sure, continue to sustain the trading channels to India in one form or the other, and in both directions.

MEASURES TO STABILISE COIR INDUSTRY

UNILATERAL DECISION BY KERALA GOVERNMENT

(FROM OUR SOUTH INDIAN CORRESPONDENT)

IN the name of stabilising the coir industry, the Government of Kerala has taken some highly controversial decisions without even consulting the Coir Board or the Central Government. The State Minister for Industries introduced a resolution in the Kerala legislature. This included many strange proposals to remove the difficulties facing the industry and the Minister obtained the mandate of the House for implementing them. The State Government has not obviously taken into consideration that there is the Central Government and the Coir Board which have been given wide powers and responsibilities in handling the problems of the industry through an Act of Parliament, known as the Coir Industries Act, 1953. As in the case of tea, coffee and rubber-growing industries, the powers ceded to the State Government for controlling the coir industry are limited. But the very wording of the Industries Minister's resolution ignores this basic fact. The resolution among other things, states: "This House resolves that action be taken on the following lines".

Proposed Measures

The measures that have been prescribed are: declaring coconut husks and fibre as essential commodities to fix their prices, constituting a central marketing organisation to undertake the entire export trade in coir, taking immediate measures to persuade certain foreign countries to reduce the "prohibitive" import duties on finished coir goods, to provide more shipping space for manufactured goods from India and to get the high freight rates reduced and so on. Half the measures included in the 13-point resolution of the Minister are those which the State Government is incompetent to take, and even the practicability of the proposals is seriously doubted. For example, it is doubtful whether the State Government has any authority to declare coconut husks as an essential commodity under the Indian Essential Articles Control and Requisition Act of 1949. Even if it has to be admitted that the State Government has authority to take such a decision, the question remains how far the Government will be able to keep its price under control. The minimum time required for retting coconut husks is six months. They can be kept in the retting pool safely for another six months or more. Retting is usually done by people who are financially strong. If the Government introduces price control, they will naturally try to evade it by keeping the husks underground. The poor spinners who buy husks almost daily for their immediate requirements will have to go to the black market to get their supplies. Besides, it is not easy to regulate the price of a commodity collected at random from all types of producers. This will create more difficulties for the spinner for whose benefit the Government proposes to take this measure.

Trading Corporation

The setting up of a trading corporation for coir is yet another ill-conceived proposal. The coir export trade is now in the hands of well-established firms on the west coast. One has to admit that the coir export trade developed to its present position largely because of the efforts of these firms. They have well-established business connections abroad. Any attempt to oust them will result in complete dislocation of the trade. Furthermore, India's contacts abroad might be lost to a certain extent. In the present circumstances, any such development will aggravate the misery of those who earn a living from the coir industry. The Minister himself admitted in the course of his speech in the State Assembly that it is the buyers who have the control on prices. Therefore, if an attempt is made to block the established channels of trade and divert the export trade through a fresh organisation, which does not have the experience and contacts of well-established business houses, the consequences will certainly be serious.

Declining Coir Yarn Exports

The allegations against the present exporters are that they are conniving at with the manufacturing interests abroad to wreck the coir industry in India and are trying to export more coir yarn to feed the manufacturing industry in Europe. But the share of old-established exporting firms of coir yarn has declined from over 95 percent to 50 percent within the last ten years, giving way to the export more and more of manufactured goods. For some time past, official thinking has been governed by a notion that the coir manufacturing industry in Europe can be wrecked if India stops the supply of its raw material that is, coir yarn. This is a wrong notion. The industry in Europe is not so helpless as the politicians think. It has started using sisal and other fibres along with coir yarn and if the Indian supply of coir yarn is stopped, it will switch over to other fibres or will seek the possibilities of getting coir yarn from Ceylon or the Philippines. They have of late started extracting fibre from coconut husks which were previously wasted. The outcome will, therefore, be contrary to the expectations of those who plead for stopping the exports of coir yarn.

Industrial Relations

The chairman of the Association of Planters of Kerala, Mr. K. L. Kershaw, has issued a Press

note explaining that his association has no responsibility for the decisions taken by the Kerala Industrial Relations Board. His association is the principal body of the Kerala plantation industry, but it is not represented in the Industrial Relations Board which was set up by the State Government in September 1957. "With a view to promoting healthy labour-management relations which would ensure industrial peace and create the proper climate for industrial progress in the State".

In August 1957, the State Government constituted a committee "with a view to evolving a wage structure and a formula for the payment of future bonus for plantation workers". The committee has three representatives of the Association of Planters of Kerala and is at present engaged in preparing a wage structure for plantation labour. It will shortly begin to examine the answers to the voluminous questionnaire which it issued lately. In December 1957, the State Labour Minister constituted another committee to prepare a conciliation agreement concerning an interim increase in wages. The Association of Planters of Kerala was represented on that committee as well. On 5th January, 1958, it reached an agreement involving an increase in wages. Paragraph 8 of the agreement reads as follows: "This agreement will be subject to any decision which may be taken by a tripartite conference to be called by the Government after the receipt of the report of the Wage Revision Committee or subject to the findings of any Wage Board appointed by the Government of India." The Wage Revision Committee referred to here is the committee specially appointed for plantations in August 1957.

Minimum Wages

Meanwhile, the Press published a report to the effect that Kerala's Minister for Labour has said that the Industrial Relations Board has decided to fix a State minimum wage of Rs. 1.75 a day. The association has protested to the Government for the latter's intention to bypass the authority of the association's own special committee which was set up last August.

Law and Order

Law and order is still a matter which engages most of the time and energy of the planters in Kerala. In spite of all the assurances given by the State Government, the law and order situation has not shown any appreciable improvement, according to Mr. A. V. John, president of the Mundakayam Planters Association, who has made this observation while addressing the latest annual meeting of the Association. He has said that it was on 26th September of last year that his Association went on a deputation to the Central Minister for Labour and made representations to him concerning the serious deterioration of law and order in his district. The Minister assured him that necessary steps would be taken to establish peaceful conditions on the estates. "But we are still having unrest and labour indiscipline. There are instances of destruction of property and persecution of the estate staff".

Mr. John continues: "Even while we were representing our grievances to the Minister, one of the Assistant Superintendents of a member estate was manhandled brutally by workers, while carrying out his duties. Also during the period under review, two strikes were staged, one on the Chittadi estate and the other on Kutikul, resulting in an enormous loss, not only to the estates, but to the labour by way of wages and also to the country. And I now hear that there were troubles on the Mundakayam and Peruvanthanam estates, details of which have not reached me so far. The repeated appeals by responsible leaders of our country, emphasising the need for increasing production, has become a cry in the wilderness. On the other hand, 'go-slow' tactics are encouraged, and work of poor quality is approved by local labour leaders. Since this is a matter vitally affecting the country's economy, it is our fond hope that the Government will do everything in its power to restore peaceful working conditions."

Burden of Taxation

Referring to taxes, the chairman says: "While the planter is most anxious to contribute his mite to the success of the Government's second five year plan, it is a pity that a succession of taxation measures under the various heads, especially those adopted by the Kerala Government, are undermining the industry's economy."

COCHIN TEA SALES

At Dust Sale P. 1,050,000 lbs of tea were on offer. There was a good general demand. Coloury Others were firm and were occasionally dearer. Mediums were irregular and were sometimes 5nP to 8nP easier.

At Sale No. 24, 875,000 lbs of tea were on offer. There was a fair general demand, although the market was irregular. Low mediums and mediums were 5 to 10nP easier, good mediums were firm and quality highgrowns were strong. Clear coloury lannings were the strongest feature.

U.S. CABLE RATES RAISED

The U.S. Federal Communications Commission, Washington, has authorised rate increases from 2 cents to 4 cents a word on out-bound international radio and cable messages from 1st August. They are designed to give cable and wireless companies the rate for out-bound messages to U.S. territories and possessions, Great Britain, Ireland, the Continent of Europe and the West Indies will go up by 2 cents a word. Messages to other points will be raised by 4 cents a word.

Jute

FALSE RUMOURS OF HEAVY DAMAGE TO DAISSEE CROP

OVER-PRODUCTION IN HEAVY GOODS

DURING the past week false rumours have been spread throughout the market concerning damage to the current Daissee crop. These said that heavy damage had been done by insects, and hinted that because of the drought at the beginning of the monsoon, the crop would be a partial failure. The news, not unnaturally, had a very bullish effect on the market, and prices reacted strongly. This perhaps was the result hoped for by the rumour-mongers. Nothing could be farther from the truth. As pointed out in these columns last week, there has been some damage to the Daissee crop by pests, but this has been confined to a very small area, mainly Chinsurah. The main Daissee-growing areas of Sheoraphuli, Tarakeswar, Midnapore and districts east of the Ganges are unaffected, and the crops there are reported to be in a healthy condition. In most areas, the only complaint has been the lack of steeping water but this was alleviated by recent rains. In the Ranaghat, Chakdaha, Baduria and Bongaon districts, the harvesting of Daissee crop is in full swing, and prospects for the Daissee crop are good. In Assam and northern Bengal there have been some reports of flooding in the jute-growing areas, but the damage is not expected to be extensive as the crop is well advanced. Reports of flooding are usually prevalent at this time of year and are invariably construed as a bullish factor by *fatka* operators.

It is generally agreed that over the past season Calcutta mills have been over-producing sacking goods. This has resulted in heavy goods prices lagging behind hessian, and has been one of the main reasons for the fixing of minimum prices. Sacking production during the 12 months ended June 1958, amounted to 56.5 percent of the whole, with Hessians at 37.0 percent and other goods at 6.5 percent. Compared with last year, sacking production was up by 5 percent with a corresponding drop in hessian. It is more than likely that over the next few months, mills will transfer a large percentage of their looms to hessian to take advantage of the current attractive prices ruling in that section. This has encouraged a number of local operators to buy forward shipment heavy goods in the hope that prices may be higher at the time of delivery due to reduced production. The current premium for forward shipment B Twills is about Rs. 2 a 100 bags. The position is reversed in the hessian section however, and the ready shipment of 11-porter fabrics commands a premium of about Rs. 2.25 a 100 yards over forward goods. This is the result of the policy adopted by the hessian-consuming countries who appear to ignore forward shipment completely and only purchase their immediate requirements. This was emphasised by the U.S. "afloat stocks" figure,

which at 93 million yards in June was at a new low level.

Calcutta mills still appear to be reluctant to buy large quantities of new crop jute, although small purchases were made almost daily last week, mainly by Indian mills. Indications were given frequently, however, at 25 to 50nP below the quoted levels, but these met with no response from the sellers. Upcountry markets were firm due to reports of flooding in some agencies, and imports were small for the time of year. In Cossipore, however, arrivals were better, but even local sellers were reserved. This would appear to be the result of increased activity over the week by mill agents. Initial reports of new crop jute are conflicting, but as much of this comes under the category of weedings, they should be disregarded.

THE JUTE MARKETS

There was a fair amount of activity in the *fatka* market and prices showed a steady tendency to rise. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 30th July to 5th August, were as follows:

	Hessian 40in. 10oz. August	Sacking B Twills August	Raw Jute Upper Assam August
Opening	43.18	101.10	26.60
Highest	43.96	101.60	27.14
Lowest	42.96	100.00	26.32
Closing	43.4	100.40	26.66

Manufactured Goods: At the opening of the market last Thursday, quiet conditions prevailed due to heavy speculative selling pressure in *fatka*. Prices showed a slight drop with B Twills recording Rs. 100 in the near position and 40in. 10oz. at Rs. 43.75. No fresh business was reported, although it was known that mills were keen sellers for forward heavy goods. Overseas buyers continued to stay out of the market and conditions in general were idle. It was reported that *fatka* and due date settlements passed off satisfactorily, and August opened with a little more confidence, mainly due to reports of enquiries from the U.K. A bullish sentiment developed which weakened later in the day on the lack of confirmation of any interest from overseas. There was very little activity over the week-end, but on Monday, firmer conditions developed due to the report that Pakistan had sealed her border with Tripura. B Twills were now quoted at Rs. 101.90 in the near position and at Rs. 103.90 for October-December shipment, while 40in. 10oz. hessian stood at Rs. 44.35 and Rs. 42.15 for the same shipping periods. Towards the close, prices declined sharply due to heavy selling pressure in *fatka*, and with overseas buyers

showing no interest, the market was quiet. B Twills dropped back to Rs. 100 and Hessians to Rs. 43.95, and even local shipper covering in near goods at the lower level failed to instil any confidence.

	Ready	August	September	Oct.-Dec.
40in. 8oz.	34.95 (38.10)	34.90 (38.04)	34.35 (37.44)	33.35 (36.35)
40in. 10oz.	42.95 (47.90)	42.90 (47.85)	42.70 (46.54)	41.10 (44.80)
B Twills	99.85	100.65	101.30	102.35
Heavy Cees (Plain)	100.00	100.75	101.50	101.75

Cornsocks	101.75	102.00	102.40	103.00

(Figures in brackets indicate the value per 100 metres).

Raw Jute: Although business was conducted almost daily last week, the quantities involved in each transaction were not large, and the total business done was about 200,000 maunds. Prices varied between Rs. 27 and Rs. 27.50 for new crop Assam and Northern jute, but most indications from buyers were at 25nP below these rates. Arrivals in the upcountry markets have improved recently, but are much smaller than normal for the time of year. Consequently, sellers are inclined to be reserved as buying interest from mill agents and other interested parties is very strong. Mills still have large quantities of new crop jute to purchase before they reach the average of previous years, and this has proved to be a further bullish factor in sellers' eyes.

Only a small quantity of Assam old crop jute was purchased last week on the basis of Rs. 26.75 for Bottoms, and also Daissee mesta at Rs. 24.75. In new crop Assam-Northern jute, prices varied between Rs. 27 and Rs. 27.50 for August-September shipment and Rs. 27.75 for ready bills of lading. Deal White was reported at Rs. 26 to Rs. 26.50, and Daissee mesta at Rs. 25 basis Bottoms and Rs. 27.50 for Middles only.

Arrivals in the Cossipore market showed a distinct improvement last week, and wagon arrivals rose to 597 which was 341 more than the previous week. During the corresponding week of last year, arrivals totalled 365 wagons. Towards the close, sellers were easier in their ideas, and quotations of Kishanganj jute were on the basis of Rs. 27 basis Bottoms.

At the close on Wednesday morning, quotations were as follows:

Indian Jute:	Landed at Mills Rs. a md.	Rs. a 100 kilos	Shipment Aug.-Sept 1958
Old Crop:			
Assam-Northern	26.75	71.69	"

Daissee White	26.50	71.02	Aug.-Sept. 1958
Daissee Mesta	24.75	66.33	Sept.-Oct. 1958

It's a Steep Climb

India's Plan target is a steep climb. Steel is the core of the Plan for industrial development and the South Eastern Railway serves all the five Steel Plants. If the basic industries like Steel, Cement, Coal etc., do not develop, our country's overall progress will be checked. We are putting forth our best to meet this challenge.

It is estimated that the Second Plan is likely to create an additional goods traffic of 61 million tons. This highly accelerated economic activity will also increase demand for passenger space.

We are trying to solve this problem through maximum operational efficiency. But complete solution of the problem has necessarily to await availability of adequate rolling stock and line capacity. In the meantime, priority for space during the Plan period obviously goes to goods traffic for development purposes.

SOUTH EASTERN RAILWAY

South Eastern Railway will carry nearly fifty per cent of the overall increase in goods traffic over the Indian Railways by the end of the Second Plan period.

RADICAL CHANGE IN SOVIET ATTITUDE

In an article discussing airport requirements of jet aircraft, the B.E.A. Traffic Director, Mr. E. P. Whitfield, says: "There is a good case for preferring

Commercial jets employed in U.S. domestic services will be consuming about 23.8 million barrels of turbine fuel by 1980 and 59.5 million barrels annually by 1985. N.W.A. North-West Airlines' official has estimated five D-C-8s and ten Electras. Mr. Paul A. Lethert, N.W.A. administrative assistant, has pointed out that while jets will fly much faster than current piston planes, they will consume more fuel and, therefore, total fuel costs will be higher.

Growing pressure within Italy may force the British European Airways to sell its holdings in Alitalia, the *Aviation Daily* reports. Charges have been made that although the Italian airline has the second largest Viscount fleet (ten 785s) on the European Continent, it offers only "inferior" service between Rome and London.

New Services

Meanwhile, additional information is available on Alitalia's route and equipment plans. The airline may again increase its DC-8 order to a total of eight aircraft, all to be powered by Rolls Royce Conways, and will acquire 12 medium-haul jets of a type not yet specified. Alitalia is thinking of introducing a service to Canada and is carrying on talks with U.S. authorities on the establishment of links to a number of U.S. cities. Services to South and Central America and the Middle East are to be improved, and the frequency will be increased between Milan and London. An agreement has been reached with Aeroflot on the establishment of connecting services to link Italy and Russia, although direct flights between the two countries are not being contemplated. Alitalia will inaugurate two flights a week to Karachi and Bombay on 1st November, one via Athens and another via Teheran. Mr. Renato Cappelletti, Alitalia's Commercial Manager, has announced in New York. Australia next on the list and is negotiating with the U.S. State Department for additional routes to the United States.

K.L.M. will have a round-the-world service when it opens its polar route from Amsterdam to Tokyo via Anchorage on 1st November. Flights will link up there with K.L.M.'s Far East network through Europe to Tokyo. The airline is considering Bodo and Stavanger in Norway or Lulea in Sweden as intermediates on the polar route. Earlier plans to use Reykjavik have been abandoned. Bodo appears to be the likely choice since the Swedish authorities have indicated that it would be difficult to obtain landing rights in Lulea.

B.O.A.C. is to operate one more Britannia service through Delhi with effect from 4th August. This will increase the frequency of jet-prop flights through the capital to three a week in each direction. The new service, providing first and tourist accommodation, will fly to London via Rome. The other two services will continue to call at Zurich and Frankfurt. When the third service starts operating B.O.A.C. Britannias will leave Delhi for Europe and the United Kingdom on Mondays, Thursdays and Saturdays. Departures for Tokyo will be on Thursdays and Saturdays, and for Singapore on Tuesdays.

Daily Jet Clipper flights between both New York and London and New York and Paris will be included in Pan American World Airways' transatlantic jet schedules during this spring and winter, Mr. Willis G. Lipscomb, vice-president of Traffic and Sales of the airline has announced. The 575-mile-an-hour Boeing 707 aircraft will fly to London in six and a half hours and to Paris in seven hours, cutting the time taken by the best piston-engined plane almost by half. Pan American World Airways expects to receive the first six of a total order remaining 707's before the end of the year. The Pan American also will take delivery next year—the first of a total order of 21 Douglas DC-8 jets.

PRICE TRENDS SHOW MARKED DIVERGENCIES

Price trends of the different industrial fibres exhibited quite marked divergencies during the 1956-57 season, but on balance world prices of cotton, silk, flax and sisal were lower than in the previous season, while those of wool, jute and manila hemp were noticeably higher. In the closing months of 1957, however, the movement towards lower prices became more widespread.

The total production of fibres in the free world in 1956-57 was a shade higher than in the previous season. The overall output of natural fibres showed a slight decline but the production of man-made fibres rose by 5 percent, which caused their share of aggregate output to increase from 17 to 18 percent. The Commonwealth produced a larger proportion of the world output of cotton, wool and the newer man-made fibres than in the previous season. Commonwealth production of rayon and hard hemp also registered an increase, but its proportion of the world total was somewhat lower, since output in the rest of the world expanded even more rapidly.

The review summarises the developments in cotton production during 1956-57, when the total crop in the non-communist world was 3 percent lower than in the previous season, chiefly accounted for by a reduction in the United States, where acreage restriction brought about a 5 percent cut in output. Wool production, on a clean basis, was 6 percent greater than in 1955-56, while there was an increase of 5 percent in the output of man-made fibres, (including the use of 16 percent in that of nylon, and the fewer non-cellulosic types). Production of non-apparel fibres rose by about 2 percent over the previous season's total, primarily as a result of a 5 percent increase in sisal and other hemps, since the world jute crop was virtually unchanged compared with 1955-56.

During the second half of 1956 and the first half of 1957, prices of cotton, silk, flax and sisal were of balance, lower than in the earlier years, but those of wool, jute and Manila hemp were all higher. Rayon yarn prices in the United Kingdom were raised by about 10 percent in January 1957—the first general increase for several years. Cotton prices tended downwards until March 1957, following the first disposals programme of U.S. surplus stocks for export at competitive prices, but throughout the remainder of the year they held firm on a new, lower basis. The upward trend in wool prices continued until May 1957, but a decline then set in and in the first half of the 1957-58 season values were on a substantially lower basis. The downward trend in flax prices continued throughout 1957, which was chiefly the result of heavy sales of Russian flax at competitive prices. As a result of the Suez crisis, prices of both jute and sisal had risen at the end of 1956, but from February 1957, until the end of the year the trend was downward.

The Commonwealth is an important supplier of industrial fibres to the rest of the world. Almost all the world's jute entering international trade is of Commonwealth origin, together with over three-quarters of the wool, nearly two-fifths of the hemp, a sixth of the cotton and a tenth of the man-made fibres. Overall, the Commonwealth has a substantial export balance in fibres, since its net exports of wool, jute and hemp outweighs its net imports of cotton, flax, rayon and silk. The export balance in wool rose steadily from just over 1,000 million lbs in 1953 to 1,275 million lbs three years later, and net exports of hemp in 1956 at 100,000 tons were half as great again as in the previous year and the highest since 1949. New exports of jute were again very high at 528,000 tons, and only 2 percent short of the previous year's record. Net imports of cotton rose sharply in 1956 to nearly 600 million lbs following increased Commonwealth purchases of U.S. growths, while the import balance in man-made fibres also rose sharply to 114 million lbs or over twice as much as in the previous year, due mainly to a doubling of Indian imports and a fall in U.K. exports. Commonwealth countries provide a substantial proportion of the United Kingdom's imports of the chief industrial fibres. Be-

A special section in the review describes changes in the position of the six European common market countries as markets for Commonwealth fibres. Nearly the whole of western Europe's supplies of raw lute natural fibres comes from Commonwealth sources, together with over 80 percent of its wool imports and nearly 40 percent of its hemp. Western Europe's imports of Commonwealth wool have increased both absolutely and relatively in recent years and there has also been a marked rise in imports of Commonwealth hemp (sisal). By contrast, fairly small quantities of Commonwealth cotton are imported, and the six common market countries are themselves substantial producers of man-made

fibres and also of jute manufactures, which are both protected by relatively high import duties.

At the present time, many of the most significant developments in the whole textile field are those affecting the newer, non-cellulosic man-made fibres. Production of the newer fibres continues to increase rapidly; in 1956 (the latest year for which full figures are available), there was a 16 percent rise in world output to about 650,000 lbs although the rate of increase was somewhat less than in the previous year. The United States remained the largest single producer, followed by Japan, which has now replaced the United Kingdom as the second largest manufacturer. Nylon still accounts for the bulk of the total, but its proportion has declined with the development of the newer polyester and acrylic fibres such as Terylene, Orlon and Acrilan. The capacity of the industry is being further expanded in all major producing countries and by the end of 1958 it is expected to be at least 1,400 million lbs or twice as great as in 1958.

	Prewar average	1952-53	1953-54	1954-55	1955-56	1956-57

THE official wholesale price index (base : year ended March 1953-100) advanced further by 1.2 percent to 115.7 during the week ended 19th July, 1958, compared with 114.5 (revised) for the earlier week. The index was higher by 2.7 percent and 3.5 percent, respectively, when compared with the corresponding week of the previous month and that of last year. Higher prices of potatoes (+14%), fish (+11%), barley in Moga and arhar in Delhi (+10% each), cashewnuts in Mangalore, gur in Patna and tea (+8% each), bananas in Bombay (+6%), black pepper in Cochín (+5%), gram and groundnut oil (+4% each), jowar and mustard oil (+3% each), wheat, masur, sugar and cloves (+2% each) and rice, ragi, urad and coconut oil (+1% each) raised the index for Food Articles by 1.3 percent to 119.7 compared with 118.2 (revised) for the previous week. The prices of meat (+13%) and eggs in Bombay (-18%), oranges in Madras (-8%), milk (-3%), maize (-2%) and mung, gingelly oil and betelnut (-1% each), however, showed a fall. An increase in the price of raw tobacco (Pollat) in A. R. in Calcutta (+2%) was responsible for a rise in the index for Tobacco by 0.6 percent to 91.1. The index for the Fuel, Power, Light and Lubricants group stood at 115.8 compared with 115.7 for the earlier week. Castor oil (+2%) showed a rise during the week. The index for Industrial Raw Materials rose by 2.0 percent to 118.6 compared with 116.3 (revised) for the previous week due to a rise in the prices of manganese ore (+22%), raw skins (sheep, north India) in Kanpur (+10%), cottonseed (+9%), castorseed in Bombay and gingellyseed in Jhansi (+6% each), groundnuts (+5%), linseed and rapeseed (+4% each), and raw jute, raw wool, raw silk and copra (+1% each) although the prices of bamboos (-12%), gingellyseed in Nagpur (-10%), tanning materials (-5%), lac (-3%), raw hemp (-2%) and Showed declines. The index for Intermediate Products moved up by 1.3 percent to 112.1 as a result of an increase in the prices of linseed oil and cotton yarn (40S) in Madras (+6% each), zinc (+2%) in (+2%) and brass and lead (+1% each). The index for Finished Products was also higher by 0.9 percent at 109.2 due to a rise in the prices of jute manufactures and oilcakes (+3% each) and cotton cloth (both mills and handloom) and silk and rayon manufactures (+1% each). The prices

of drugs, medicines and bicycles (-1% each), however, moved down.

EXPERIENCE is teaching your customers to always look for the label 'Sanforized'. They know this label is their guarantee that garments will not shrink out of fit...even after many, many washings.

What they don't know is the 'behind the scenes story' which ensures the complete reliability of all cloth labelled 'Sanforized'. Anytime, unannounced...our expert visits a mill licenced, to use the trade mark 'Sanforized'. There he selects samples of cloth at random, subjects them to a rigorous international wash-test, reports on his findings. *Only cloth which passes the strictest anti-shrinkage test can carry the trade mark "Sanforized"*

'SANFORIZED' on the label

means better sales for you!

It's this kind of care plus our advertising plus experience which makes cloth with the label 'Sanforized' such a sure seller—such a profit-maker for you!

Look for

• SANFORIZED •
REGD. TR. Mkt.
on the label

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) Proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

Calcutta Markets

BETTER DEMAND AT TEA
EXPORT SALE

DUST PRICES IRREGULAR

AT Sale No. 7, held on 4th and 5th August, the offerings at the Export auction amounted to 48,741 packages. There was slightly better demand at lower rates and prices showed a further general decline. Commons were 4nP to 8nP easier but the commonest grades were about steady and a few of the best black-leaved plain teas showed little change. Medium Assams were 10nP to 20nP easier, while the B.O.P.'s and O.F.s. in this category frequently sold as much as 30nP below valuations. The best bright liquoring orthodox Assams, however, were fully firm and were occasionally dearer. C.T.C. teas were again a weak feature and were 30nP or more below last week's levels, and there were fairly heavy withdrawals of medium sorts. A few of the best grades, however, sold well although generally below valuations. Non-wither Legg-cut Dooars were 10nP to 20nP easier, and there were some withdrawals. Whole leaf grades came in for less competition and prices declined by about 10nP while some of the higher priced sorts were about 20nP down. Darjeelings and tippy teas sold readily at or below valuations.

Quotations	1958	1957
	Rs.	Rs.
Clean Black Pekoe	2.10 to 2.15	2.30
Plain B.P.	1.66 to 1.70	1.75
Plain Fgs.	1.74 to 1.82	1.56
Medium B.P.	1.96 to 2.00	1.90
Medium Fgs.	2.10 to 2.20	1.90
Best C.T.C. Assam B.P.	3.80 to 3.70	3.80 to 4.00
Best C.T.C. Assam Fgs.	3.90 to 4.10	4.00 to 4.50

At the Internal Sale, there was a total of 20,027 packages of Dust on offer. Orthodox exportable grades with a black leaf appearance met with competition and prices for these descriptions were often dearer. The useful liquoring powdery kinds sold well but were often below valuations. The remaining orthodox types met with a fair demand but were sometimes 4nP to 8nP easier. There was a better, though irregular, demand for C.T.C. Assams and stronger liquoring kinds were often dearer but the thinner liquoring mediums were up to 20nP easier. Some selected lines of the better exportable descriptions sold well and frequently realised prices above valuations. Darjeeling Dusts with flavour again sold well.

Quotations	1958	1957
	Rs.	Rs.
Medium Dooars Dust	1.68	1.50 to 1.52
Medium Assam Grainy Dust	1.68 to 1.72	1.58 to 1.56
Medium Assam C.T.C. Dust	2.10 to 2.20	2.10 to 2.20
Best Assam C.T.C. Dust	2.56 to 2.85	2.50 to 2.90

There was a total of 367 chests of Leaf on offer.

DEMAND FOR TIME CHARTER
IN FREIGHT MARKETS

THERE was a very slight move of the American grain market in owners' favour during the past week in the freight markets and 77s 6d was conceded for August loading from U.S. Gulf to west coast India. There was also a good demand for time charter, and one charterer is credited with taking three vessels of the same company, all 9,800 d.w. at 25s for the trip across, delivery, Sydney C.B., redelivery India. A 12,000-ton motorship secured 22s 6d, delivery Hamburg, redelivery Melbourne via South Africa and a fast 9,000-ton motorship obtained 16s 9d for a west African round voyage with delivery and redelivery the Continent. Coal is quoted from Gladstone, Australia to Saigon from which it may be presumed that the recent f.o.b. tender for Saigon has gone to that country. In view of the very superior loading conditions, compared with Calcutta, this is not surprising.

LINSEED DULL

Prices moved within narrow limits during the past week, and conditions were generally dull, although the undertone of the market remained steady. A somewhat easier opening was short-lived, and an initial loss of about 8 annas a maund in the price of seeds was gradually recovered at the close. Only small quantities changed hands and crushers on the whole did not show much interest. The local oil market remained firm mainly due to a shortage of stocks; but enquiries were scarce. There was a small demand from shippers covering against previous sales. The overseas market was inactive and prices were more or less unchanged at around £115. Latest quotations were as follows: Ready Rs. 25-12 a maund and August Rs. 25-12 a maund.

SUGAR UNCHANGED

During the week ended 6th August, sugar sales in the Calcutta market averaged 4,500 bags daily. Arrivals a day were 3,500 bags and stocks totalled 110,000 bags. Rates for ordinary grain were Rs. 38-8 to Rs. 38-14 and Rs. 41 to Rs. 41-8 for bold grain. The Government of India has recently controlled ex-mill sugar prices. The controlled price for D29 grade is Rs. 36 a maund. The Government has also reserved 25 percent of the total stocks with mills. It is also inviting tenders on the f.o.r. basis, and the rates are: Rs. 38 a maund for Calcutta, Rs. 39 a maund for Bombay and Rs. 36-50 for Delhi and Rs. 36-75 for Kanpur. The rest of the stocks will be sold by mills on the basis of Rs. 36 a maund for D29 grade. There was no effect of these controlled prices on the Calcutta market.

COMPANY AND PUBLIC NOTICES

THE HOWRAH-SHEAKHALLA LIGHT RAILWAY
COMPANY, LIMITED.

NOTICE is hereby given that the one hundred and twenty fourth Ordinary General Meeting (not being an Annual General Meeting) of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta-1, on Monday, the 1st September, 1958 at 11-40 a.m. for the following purposes:

1. To receive and consider the audited Accounts for the half-year ended 30th September, 1957, the Balance Sheet as at that date, and the Report of the Board of Directors and the Auditors thereon.
2. To declare a dividend on the Ordinary Shares.
3. As special business to consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as special resolution:

That the Articles of Association be altered in the manner following:—

- (a) Articles 82 and 83 shall be deleted and the following new Articles substituted therefor:

"82. In addition to any other meetings, general meetings of the Company shall be held within such intervals as are notified in Section 166(1) of the Companies Act, 1956, and subject to the provision of Section 166(2) of that Act, at such times and places as may be determined by the Director."

"83. The General Meetings referred to in the last preceding Article shall be called Annual General Meetings; all other meetings of the Company shall be called Extraordinary General Meetings".

- (b) Article 87 shall be deleted and the following Article substituted therefor:

"87. The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring by rotation, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business."

- (c) In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor.

- (d) Article 176 shall be deleted and the following new Article be substituted therefor:—

176. At every Annual General Meeting the Directors shall lay before the Company a Balance Sheet and a Profit and Loss Account made up in accordance with the provisions of Section 210 of the Companies Act, 1956, and such Balance Sheet and Profit & Loss Account shall comply with the requirements of Sections 210, 211, 212 and 215 and of the Schedule VI to the said Act, so far as they are applicable to the Company."

- (e) In Article 180, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor.

- (f) In Article 181, lines 1, 2 and 3 the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing shall be deleted and the words "Annual General" substituted therefor.

The Register of Ordinary Shareholders of the Company and the Transfer Books will be closed from the 21st August, 1958 to the 1st September, 1958 both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member.

By Order of the Board,

NEW INDIA INVESTMENT CORPORATION LTD.

NOTICE is hereby given that the Twenty-first Ordinary General Meeting of the shareholders of New India Investment Corporation Ltd. will be held at the registered office of the Company at 9, Brabourne Road, Calcutta, at 4 P.M. on Monday, the 15th September 1958, to transact the following business:-

- (1) To receive and adopt the Directors' Report and audited Profit & Loss Account and Balance Sheet for the year ended 31st December, 1957.
- (2) To declare dividend recommended by the Directors.
- (3) (a) To appoint a Director in place of Mr. K. P. Goenka, who retires by rotation and being eligible offers himself for re-election.
- (b) To appoint a Director in place of Rai Bahadur Moongtial Tapuriah, who retires by rotation and having attained the age of 71 years, is not eligible for re-election, unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit shall not apply to him.

In this connection to consider and if thought fit to pass the following resolution of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed separately as required by Section 173 of the said Act.

To be proposed as an Ordinary Resolution.

"That the restrictions as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Rai Bahadur Moongtial Tapuriah who has attained the age of 71 years and that he be and is hereby re-elected as a Director of the Company whose period of office as such Director would be liable to determination by retirement of Directors by rotation."

- (4) To appoint Auditors and fix their remuneration.
- (5) To transact any other ordinary business of the Company.

The Share Transfer Register of the Company will be closed from 6th September to 15th September, 1958, both days inclusive.

By Order of the Board.
RAMDUTT RAMKISSENDASS,
Secretaries & Treasurers.
Calcutta, 31st July, 1958.

Note—(a) A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(b) The dividends if declared will be paid on or after 1st October 1958, to those shareholders whose names appear on the Company's Books on 15th September 1958 or to their mandatees. No application for dividend warrants will be necessary.

Explanatory Statement under Section 173.

In the special notice given to the Company of the resolution under Item No. 3(b) of the above notice it has been stated that the services of Rai Bahadur Moongtial Tapuriah have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company being associated with it since the inception, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

By Order of the Board,
RAMDUTT RAMKISSENDASS,
Secretaries & Treasurers.

NOTICE.
STANDARD JUTE CO. LTD.
and
KINNISON JUTE MILLS CO. LTD.
Scheme of Arrangement.

IT is notified for the information of the shareholders of Standard Jute Co. Ltd. and of Kinnison Jute Mills Co. Ltd. that a scheme of arrangement is proposed to be entered into between the Companies the material terms of which are as follows:-

- (a) Dividend on the Preference Shares of Standard Jute Co. Ltd. up to the 31st March 1958 and proportionate dividend up to the date of repayment of the Preference capital will be paid by Standard Jute Co. Ltd.
- (b) Standard Jute Co. Ltd. will return to its Preference Shareholders the entire amount of their Preference capital.
- (c) The nominal value of the Ordinary Shares of Standard Jute Co. Ltd. of Rs. 100/- each will be reduced to Rs. 70/- by returning to the Ordinary Shareholders a sum of Rs. 30/- per share.
- (d) The Ordinary Shareholders of Standard Jute Co. Ltd. will be offered one Ordinary Share of Kinnison Jute Mills Co. Ltd. of Rs. 100/- each for two Ordinary Shares of Standard Jute Co. Ltd. of Rs. 70/- each held by such Shareholders.

Standard Jute Co. Ltd. will in due course make an application to the Calcutta High Court for sanctioning the above scheme.

A General Meeting of Standard Jute Co. Ltd. and that of Kinnison Jute Mills Co. Ltd. has been convened for Tuesday the 12th August, 1958 at 10-30 A.M. and 10-35 A.M. respectively at Chartered Bank Buildings, Calcutta, in connection with the above.

TEA COMPANIES

O. Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

PRICE PROSPECTS UNDER DEFICIT FINANCING

A HARBINGER OF INFLATION

THE rise in current prices is so obvious to the individual who has to pay them that it was fast becoming a matter for concern that so little notice is being taken in Government circles. Ministers have appeared to be too interested in the foreign exchange crisis, or in riding their own particular hobby-horses of production or exports to focus any attention on the point where economic affairs actually touch the ordinary man. There is a reasonable chance that this will now be changed. The Governor of the Reserve Bank, Mr. H. V. R. Iengar, mentioned the problem in his presidential address to the Indian Institute of Bankers, and it is now clear that it is being studied at the right level. Mr. Iengar's analysis of the situation is as clear and accurate as his suggested remedies are necessarily vague; unfortunately, most of the factors are beyond his control. In fact, they seem to be outside the influence of Government Ministers as well, especially where the increasing food deficit is concerned.

The explanation Mr. Iengar has put forward for the rise in prices seems to conform fairly closely with the causes of inflation as set out in the Quantity Theory of money. This approach is probably correct, although it does not sufficiently take into account the consequences of hoarding at the retail level. It is correct, that is, provided it is recognised that the shortage of goods in the economy is the main factor behind inflation rather than an increasing volume of money. According to the Reserve Bank's own statistics, the increase in money supply was only Rs. 76.6 crores in the financial year 1957-58 compared with Rs. 128.57 crores in 1956-57 and Rs. 263.69 crores in 1955-56. In the half-year ended 30th June, 1958, the increase was only Rs. 59.72 crores, suggesting a current rate of increase in the money supply of about Rs. 120 crores. This figure may be an under-estimate seeing that deficit financing is to be expanded to cover plan requirements which it was at one time intended should be raised by other means. But it is not a large figure compared with that for 1955-56, when inflation appeared to be relatively dormant. Now, in spite of a relatively small rise in the official Index of Wholesale Prices, consumer prices are moving up swiftly. The Reserve Bank's measures are likely to go only part way towards correcting this. For one thing, a good deal of the rise in food prices is taking place in the non-monetised sector of the economy, as Mr. Iengar points out. For another, it is almost impossible to squeeze every hoarder and blackmarketeer without interfering drastically with the health of the economy. It is from the supply side that the main correctives must come, and as Mr. Iengar rightly stressed, the food position is critical. Economic commentators are coming back to this point in increasing numbers; on another page of this issue of *Capital* are reprinted excerpts from a letter written by Mr. C. D. Deshmukh, a former Finance Minister of the Government of India, which, among other things, regrets the fact that the second plan put steel production before food. It is becoming more than ever true to say that until the food problem is tackled energetically—some say on a war footing—economic progress will remain illusory.

The prospects of holding prices in check depend, therefore, partly on monetary control, but chiefly on being able to increase the supply of goods. It requires no expert knowledge of economics to appreciate that India is not in a favourable position for doing that at the moment. Apart from food, the raising of production is only possible if enough foreign exchange can be secured to carry the economy after the exhaustion of the sterling balances. There is no point in commenting on this now, except to say that the problem of attracting private foreign capital is still being tackled as if India had enough foreign exchange and to burn. The main truth to be appreciated is that unless spending on imports is maintained at its present rate, or preferably higher, the country will lose a valuable short-term protection against inflation as well as the key factor in future industrial expansion. The situation might not be quite so bad if the present fall

in export values was releasing more goods for the home market. This is not what is happening however; India is simply losing valuable foreign exchange without any compensating anti-inflationary gain. The export drive, ineffective as it is likely to be, can only make the internal situation worse. This is no argument against the move to increase exports, only a reminder that it will not be without its effect on the internal economy. Industrial stoppages, too, will make their contribution to inflation whether they are caused by a shortage of imported raw materials or strikes for high pay to meet rising costs of living. The present course of the Indian economy is, therefore, set straight for inflation; the surprising feature is that there is not more of it than in fact there is.

Apart from retail prices, which are rising steeply for all those above the subsistence level whatever Ministerial pronouncements would have us believe, the main impact of the surplus money released by deficit financing seems to be making itself felt in the bullion and gilt-edged markets. Equities too have risen, although their relative lack of popularity is a dismal commentary on Government policy towards the private sector in the past few years. This rise in equity values is still restricted chiefly to the speculative. Investment counters have improved, but the impetus seems to have come mainly from the buying of the Life Insurance Corporation; the true private investor is probably too busy filling in his Expenditure Tax return to find time for making even the minimum study of the market. What is more, the high rates of interest which banks are still offering for time deposits make investment in these a more attractive proposition than the

Zonal Councils, is difficult to say. What the observant cannot have missed is that there has of late been a growing tendency to think in terms of zones. The many differences between the Tamils and the Telugus are no secret. Between the Assamese and the Bengalis or Biharis there are one or two points on which they do not always see eye to eye. Indeed, these disputes have sometimes reached disquieting proportions. Against this background of differences, of extreme individuality, this new zonal feeling can scarcely have come in the natural course, although it should be added immediately that there is no strong evidence yet that the feeling has in fact come with any great force, certainly not such as will withstand the inevitable pressure of continuing rivalries. It would be a fair deduction then that some individuals or agencies, by no means easy to identify, think it necessary to generate and foster what may be called a zonal feeling.

Since the feeling, should it appear and grow, will have an obvious bearing on the still unfinished task of national cohesion, the phenomenon and its causes would appear to warrant closer study than they have received so far. It is obvious that the Congress Members of Parliament who met recently were not thinking of their respective constituencies, not even of the States that elected them. They were thinking, or trying to think, of the eastern zone: a very ill-defined entity. Mr. Nehru and other leaders have been heard before to decry provincialism, communalism, caste-ism and the other fissiparous forces in the country. It is perhaps too early to treat zonalism on the same basis; it may never be necessary to treat it so. On the other hand, should it be found that growing out of the provincial frame of mind and getting into the zonal is not an obvious leap towards greater national unity, it would certainly need closer examination and firmer remedial measures at the hands of those concerned with strengthening the unity and integrity of the country and its people.

Even if the promoters of the zonal idea never said so, it is not an unfair assumption that at its root lies a feeling that this limited "unity in diversity" is required for a place in the all-India sun. At this stage, it is necessary to make one distinction and to dismiss another. To say that a zonal line-up is held necessary for self-preservation is not to concede that there is complete justification for this sense of injury. It is equally true that so far as the Centre is concerned it is not enough to disregard the feeling as only a feeling. This feeling is a political fact, and a factor in the determination of India's destiny, and has to be treated as such. Those condemning any suggestion of a southern or

eastern line-up—and there are aspects of the tendency that need to be watched with concern if not immediate denunciation—will have to be prepared with an answer to the very probable argument that, in the view of the champions of these new regional formations, there already exist similar undeclared groups and it is against these latter that the other zones have to defend themselves.

The avoidance hitherto of the pejorative term "pressure group" does not mean that the concept is altogether absent in the minds of the organisers of the recent meeting in Calcutta. Rightly or wrongly, they feel that, individually, they would make less of an impression on New Delhi than they may on the basis of regional unity. Those who watched the movement around the question of an official language for the entire country can hardly have omitted to see that what was considered the threat of Hindi brought together many disparate and discrete elements in different parts of India in their common opposition to the language of the North. It would be an error to be sure that all the grievance is exhausted with the question of language, which itself has not a few political and economic implications.

Plain speaking on the various political forces working in the country and its capital must not lead anyone to imagine that New Delhi is peculiar in this respect or that some terrible threat to the unity of the country is just round the corner. Far from it. A part of the situation is inherent in a democracy of the federal type. New Delhi does not know a tittle of the intrigue and other things constantly going on in Washington, D. C. After all, New Delhi, meaning the centre of political power in the country (and all power in our time is political), is composed of men sent thither by the different regions and States, and it is not at all surprising that a part of the regional or statal loyalty and personality survives the journey to the nation's capital. It is only human that a Minister from Malabar should have closer social intercourse with another from the same area than with one from the east or the west. Language, food habits, common interests—all these things determine a man's (and a Minister is a man) ways of life and thought, and these latter are the invisible sources from which national policies spring.

It may be found in the event that the zonal personality is no more laden with danger to national unity than provincial autonomy has proved to be. Nobody need be alarmed by the incipient effort of certain regions to constitute identities transcending the boundaries fixed by the States Reorganisation Commission, although the grievances of particular areas should certainly be removed or

shown to be baseless. The only difference, which may or may not be important in the immediate or early future, is that by virtue of size and numbers alone regions are necessarily stronger units than individual States can be. Regional contribution to national unity, or otherwise, must in proportion be bigger—or smaller.

A MARRIAGE HAS BEEN ARRANGED

BRITISH BANKS MOVE INTO H.P.

THE participation, in July this year, of Britain's biggest bank in Britain's biggest hire-purchase finance house has been described as the most important event in British banking since the war. The British banks are among the most conservative financial institutions in the world, and the formal association between Barclays Bank and United Dominions Trust (the bank is acquiring 25 percent of the trust's ordinary capital) represents, as it were, a formal acceptance of the finance houses into the exalted position of the banks and the insurance companies, and also a recognition by the banks that they must adapt their interests to changes in financial habits. The broader economic effects of this development may be profound. In such countries as America and Australia, where the association between banking and hire-purchase is well established, there may be less surprise in the fact that this development has occurred than in the fact that it has been so long delayed. Even in Britain it is not unprecedented. Some four years earlier the Commercial Bank of Scotland acquired not merely an interest in but the entire share capital of two hire-purchase finance companies. Indeed, back in 1930 the Bank of England itself put money into United Dominions Trust, to assist a policy of increasing consumption. But an association between one of the "Big Five" banks and one of the big finance houses is much more significant.

In due time, no doubt, a large proportion of Britain's hire-purchase financing will be indirectly related to banking, and the banks will increasingly supply resources for the purpose. But the "secondary" financial institutions cannot all be merged into the "primary" financing system—not, anyway, in their present form. There are in Britain more than 1,300 hire-purchase finance companies, but only a few of them are worth the banks' attention. The Board of Trade made a survey of these companies recently and found that more than 1,000 of them had outstanding debts less than £100,000, only eight outstanding debts as large as £5 million. The big companies enjoy substantial advantages already, for they command more confidence and, therefore, attract more of the public's deposits than the smaller ones. Naturally, these advantages are enhanced when a finance company is associated with a bank. Not only does the company appear (as, indeed, one may suppose it is) a safer proposition for depositors, but also it is favourably placed to obtain advances from the banking system—and the associated bank will naturally recommend the finance company to clients who wish to deposit money or to obtain hire-purchase facilities. Moreover, a big finance company can prudently maintain a much larger ratio of loan capital to share capital plus reserves than would be safe for a smaller company. Barclays' investment in United Dominions Trust, amounting to £4 million, would probably justify an increase in the trust's commitments by at least ten times that amount.

The increased potentialities for advances and deposits are probably more important than the banks' contributions to the finance houses' share capital, for the leading finance houses would have no difficulty in getting new capital from their present shareholders. Anyway, the banks do not necessarily put additional money into these institutions: soon after the Barclays-U.D.T. deal (which, incidentally, was criticised by U.D.T. shareholders on the ground that it admitted the bank into the Trust on unreasonably favourable terms, and also because shareholders were not consulted on this important move), another of the "Big Five" the National Provincial Bank, made an offer for all the ordinary capital of another leading finance house, North Central Wagon and Finance Company, and this offer implied, of course, no direct increase in the finance company's resources but only a change of ownership—and the acquisition by a leading bank of a leading finance company entire, not only an interest in such a company. This is a particularly interesting case, because the finance company was controlled by the leading insurance company, Prudential Assurance, which agreed to accept the offer—perhaps because insurance companies do not in principle like controlling other businesses, and because the Prudential felt that hire-purchase finance was appropriate to banking rather than to insurance.

However the financial and organisational details of these developments may be worked out it is evident that the hire-purchase movement is

Britain is now associated with a major source of additional finance, and that selling goods on the deferred-payment system is likely to increase substantially in Britain. The amount of hire-purchase debt outstanding at present is of the order of £500 million (mostly owed to finance companies, either directly or through arrangements with traders), and by far the greater part of this finance relates to consumer goods in one particular category (a broad one), durable goods—particularly vehicles, furniture, radio and television sets, and domestic appliances. The amount of debt outstanding is a much smaller proportion of consumers' total spending in Britain than in America or Australia, and with additional resources available—and therefore, presumably, extra pressure in offering the service—a considerable increase in trade by this means is evidently possible in Britain. Whether such extra spending on durable goods is desirable in present economic circumstances is

debatable, but at least the change will be opportunistically timed if it coincides with a general recession in trade. When hire-purchase trading was increasing rapidly in Britain in the first half of the present decade the expenditure on durable goods that was financed with credit was a potent cause of inflation. A similar increase in the changed circumstances might be in some respects beneficial, in that economic activity generally would be enlivened and the enlarged scale of operations in mass-producing industries would presumably enable prices (including, of course, export prices) to be reduced; but commitments to repay can reduce expenditure on other goods. It is possible that British hire-purchase finance can be extended abroad and can directly assist British export trade. Some people envisage that, if a European Free Trade Area is formed, Britain's bank-backed finance houses might establish themselves in, say, Amsterdam, and serve a wide area of Europe.

to the factories, but there is no doubt that it runs into lakhs of rupees.

Signs of U.S. Recovery

The business news has been dominated by a steady flow of reports of growing business strength. Most important indicators show improvement in May and June over the low points reached earlier this year. While it is questionable how much this improvement can be extended during the summer vacation lull, evidence is becoming steadily more impressive that the downturn has been arrested and that an upturn is in the making, says the latest monthly letter of the First National City Bank of New York. The crisis in the Middle East, raising the spectre of "another Korea" combined with "another Suez", gave a temporary fillip to prices of commodities important in international trade and caused some restirring of interest in ship chartering. While these fears have not materialised, they have left a legacy of stimulation to inflation psychology and prompted many business men to give a second thought to policies of deferred ordering and piling inventories to the bone. It is clear, however, that these developments are not the key to the improvement in business. This was under way well before American troops landed in Lebanon. The improvement, even in its early stages, has not been confined to a limited group of producers or buyers, but has spread through a broad cross-section of the economy. The advances, however, have been quite moderate.

Industrial activity advanced on a broad front in June. The Federal Reserve production index (seasonally adjusted, 1947-49=100) recovered to 130 in June from the April low of 126. Not a single major manufacturing or mining industry for which seasonally adjusted June data were available showed a decline. The increase in steel and motor-car output alone accounted for nearly a third of the rise between April and June, but the extent to which the advance was shared by other industries emphasised that this was no fluke of anticipatory inventory building in steel or changing seasonal patterns in motor vehicles. In July, actual output has dropped as is usual because of vacation shutdowns in numerous industries. Preliminary production reports are insufficient to tell if plant closings this year were more than seasonal, but it is doubtful that the seasonally adjusted indexes advanced much further, if at all, in July. The steel industry reports that orders and shipments held up better in July than previously anticipated—partly because price increases were deferred until the closing days of the month. Even so, steel output in July averaged about 11 percent less than the daily rate in June. Passenger car production in July was scheduled at 325,300, a decline of about 8 percent from the June daily rate, and in August it will drop considerably further as major companies prepare for model changes. In both these industries, however, the summer curtailment may be regarded as preparing a firmer base for recovery later in the year. The upturn in industrial production, starting from an April low, was preceded, as in most business cycles, by an improved showing in new orders received by manufacturers and by lengthening of the factory work week. Both of these series hit their low in February and the strength they showed in May and June is a good omen for further improvement in production.

Textile Mills not to Close

The textile crisis in Vidarbha is over, at least for the time being. Seven of the nine mills which had earlier announced their intention of ceasing operations from 11th August, have withdrawn closure notices following talks with the Bombay Government. The labour union concerned was also represented at these talks. The remaining two mills are also expected to take similar action shortly. The original decision to close the mills was based on the claim that the industry in this region was incurring heavy losses. One of the mills, the Model Mills, while deciding to accept the Government's advice to continue in production has said in a statement to its workers: "The management is trying its best for additional resources. If, unfortunately, it does not succeed, the management will have no other alternative but to close the mills any day without further notice." Some 26,000 workers would have been unemployed had the mills in Vidarbha closed down.

Duty on Vanaspati and Soap

The chairman of the Tata Oil Mills Company Ltd., Mr. J. R. D. Tata, in his speech at the latest annual general meeting, has pointed out that the vanaspati and soap industries have to bear an unfair burden of heavy excise duties on raw materials and finished products. The company's share of this burden increased by Rs. 5

Current News and Comment

Enfield India Doubles Output

The production of motor-cycles in 1957 by Enfield India Ltd was nearly double that of 1956. Vehicles of many competitive makes are available, yet the demand in the market for the company's products remains unsatisfied. Referring to this happy state of affairs, Mr. K. R. Sundaram Iyer, chairman, Enfield India Ltd, tells shareholders at the latest annual general meeting (a fuller version of the speech appeared in last week's Capital) that the company is doing its best to maintain the increasing rate of output. It is expected that production during 1958 will be about 50 percent more than it was in the previous year. "But even this," says Mr. Iyer, "will be considerably below the quantity your company is presently licensed by the Government under the Industries (Development and Regulation) Act."

The foreign exchange shortage is the main obstacle to stepping up output as the import of components has been restricted. The progress of their indigenous manufacture under the phased programme has been satisfactory, says Mr. Iyer. The directors have, keeping in view the foreign exchange position, taken steps "to accelerate the pace." Items produced indigenously are nearing 50 percent in value and include, apart from frame, petrol tank, seat, silencer, exhaust pipe, etcetera, other major and precision components of engine, clutch, fork and wheels. The management has been making every effort to attain self-sufficiency in domestic manufacture of almost the entire motor-cycle, "barring, of course, the proprietary items, in 1959 as against the original schedule of 1960." Further plant and machinery are being obtained and steps are being taken to raise the necessary finances. The capital issue for Rs. 6 lakhs made by the company last February was fully subscribed. A further capital issue of Rs. 9 lakhs is to be made, of which Rs. 4 lakhs will be in 7 percent tax-free redeemable cumulative preference shares of Rs. 100 each, to be offered to existing shareholders. The new issue will bring the company's total capital to Rs. 25 lakhs.

Export prospects for Indian motor-cycles seem good, but they need further assessment. The company's products were exhibited at a trade fair in China, and the "trade circles" of that country have appreciated their quality. Also, some of the west Asian and south-east Asian countries have been making enquiries for supplies and the company has already taken preliminary measures for availing itself of this opportunity. The approval for this purpose of the British collaborators, the Enfield Cycle Company Ltd., Redditch, has been obtained.

Feather-bedding a Few

In his address at the latest annual general meeting of the New India Assurance Company Ltd., Mr. A. D. Shroff, chairman, has criticised State discrimination in favour of the few Government-controlled general insurance companies to the detriment of the rest. Referring to the reported directive of the Central and State Governments to the institutions under their control to patronise these Government-owned general insurance units and the pressure which is being exercised by Government institutions or corporations as and when they are providing financial assistance, Mr. Shroff says that as the Government has the responsibility for promoting the progress and strength of all insurance units, it should not discriminate against the companies in the private sector. He has also criticised the arbitrary distribution of the insurance business originating from Government sources and handled by the Indian Insurance Companies' Association Pool. It would be more

appropriate to define on a long-term basis certain equitable standards for the distribution of the "Pool" business, Mr. Shroff suggests. According to current arrangements, 50 percent of this business is given to Government-owned companies, the balance being divided equally among all others. This is another instance of an unfair policy which undermines the stability of private companies. The Government-owned units have passed under its control rather accidentally. This was not the result of any proper evaluation of facts, nor is this the beginning of nationalisation of general insurance which the Government is committed not to do. This is only incidental to the nationalisation of certain life companies, which owned the bulk of the shares of the few companies concerned. In view of the Government's policy not to nationalise general insurance, it is highly improper that these few should be so completely and permanently feather-bedded. If it is intended to prove that struggling companies become prosperous overnight by the touch of nationalisation magic-wand, then the fairest way to do this would be to allow a reasonable measure of competition between them and the purely private companies without any kind of special prop for the former.

Burden on Plantations

There is a misconceived idea that the plantation industry has vast financial resources which can be tapped without an end, and that profits are indicated by the high dividends declared. But it is not appreciated by those who refer to these matters so glibly that there is, in fact, little reserve of liquid capital available to plantations and that the assets of a company mainly represent the capital value of the estates together with their stock in trade. Speaking at the annual general meeting of the Anamallai Planters Association, Mr. W. J. Stansfeld has said that a high dividend based on the value of shares issued at parity in no way represents the return obtained on the current market rate of such shares. Furthermore, profits made in the past have been largely used in effecting improvements and additions to the capital value of the properties in the form of machinery, buildings, new extensions, etcetera. The cost of production continues to rise steadily and is now about four and a half times greater than it was 20 years ago. The increased competition is likely to affect world demand, and, therefore, it is necessary to produce good quality tea which will always find a ready market. "If the increase in production could be absorbed in the home market without affecting our present capacity for earning foreign exchange and if the standard of our teas is maintained to the satisfaction of our foreign customers, we might be able to keep pace with the ever increasing cost of production." Great burdens have been imposed on planters under the Plantations Labour Act and they are hard pressed to find the capital needed to carry out the commitments demanded of them. In the past, finance for capital improvements was made available from profits, but little now is left after taxation. Mr. Stansfeld says that a memorandum was submitted to the Madras Finance Ministry by the Association of Planters explaining the actual details of tax incidence on current profits. It showed that State taxation was almost on par with that of the Central Government on other industries "with the disadvantage that no depreciation allowance was made on their main asset, the tea bush itself." A select committee has been appointed to consider a Bill to amend the Agricultural Income Tax Act, and Mr. Stansfeld hopes that the Government will grant substantial reliefs to the industry in order to enable it to earn more foreign exchange for the country. Referring to the recent power cut, he says that it is difficult to assess the loss to which the estates have been subjected due to the curtailment of current supplies

In particular, MONSANTO makes a major contribution to the following industries:

rubber	disinfectants
textiles	food
pharmaceuticals	perfume and cosmetics
plastics	soap and detergents
paint	timber
petroleum	dyestuffs
preservatives	leather
printing inks	paper
adhesives

kh last year to a total of Rs. 38 lakhs. Although the turnover increased by 10 percent, the final profit remained approximately the same as in the previous year. The company's increased revenues were absorbed by increases in excise duty on vegetable oils, in the cost of oils and in higher wages. Mr. Tata found it difficult to understand the Government's policy on excise duties. For instance, the excise duty on oils, Mr. Tata said, was driving power-driven mills out of production. The company's crushing mills at Tata-uram remained idle for most of the year, while the number of small *ghanis* has doubled since 1956. As a result, the total crushing capacity in Kerala State is now about three times the available capacity. If the intention of the Government is to encourage village industries at the expense of the organised sector, it had, Mr. Tata added, failed to realise that the closing down of power-driven mills was leading to increasing unemployment of factory labour. The chairman pointed out that crushing by small *ghanis* resulted in a serious waste of oil which a country like India, already short of edible fats and oils, could ill afford. The amount of oil left in *ghani* cake is about twice as much as in mill cake and also twice as much as can be absorbed by cattle which is fed on it. In this way, thousands of tons of edible fats and oils are wasted each year. He said that both the Industrial Relations Committee set up by the Kerala Government and the Indian Central Oilseeds Committee had recommended to the Government of India that the exemption of the excise duty granted to the smaller units should be withdrawn, or that it should be applied uniformly to all producers, large and small, as a percentage of total production.

The chairman also referred to the need for doing away with the imposition of excise duties at both ends of manufacture, namely, on raw materials as well as the finished products. Although the company's vanaspati sales increased last year, this department remained largely unremunerative. It has, therefore, been decided to restrict sales only to the areas near the company's factories so as to minimise expenditure on freight. Another problem facing the vanaspati industry is the current shortage of tinplate. If imports are not allowed or tinplate diverted from other less essential uses, the industry will have to curtail production drastically because no other substitute packing material is available. Mr. Tata said that the total output of soap by the organised sector of the industry was 112,000 tons, or an increase of only 1 percent over the previous year. The second plan envisages a production target of 200,000 tons a year. Mr. Tata said that in view of the satisfactory operation of the solvent extraction plant, an order had been placed for a second unit of larger capacity which was now under delivery. It was originally intended to erect it in Tatapuram, but because of the deplorable state of the oil crushing industry in Kerala, it would now be erected in Bombay. The company has also obtained an import licence for a fat splitting and fatty acid distillation plant which will come into operation towards the end of next year. This will yield additional quantities of glycerine. The possibility of installing a synthetic detergent plant is also being considered. Mr. Tata said that the Calcutta factory was now working to full capacity and was producing crude glycerine. It is propos-

ed to manufacture toilet articles at the Calcutta factory if space and other facilities are available.

Power Alcohol in U.P.

The expansion of the power alcohol industry has brought in its train the problem of the disposal of the finished product. In Uttar Pradesh, which has the largest concentration of power alcohol manufacturing units, the situation has become acute. The State has at present 12 distilleries with a production capacity of 10,680,000 gallons a year. The Government of India has issued licences for four more distilleries in the districts of Saharanpur, Muzaffarnagar, Bijnor and Meerut, all in Uttar Pradesh. The production capacity of the new units has been estimated at 3,900,000 gallons a year. If the existing units are to go ahead with their plans for expanding production and the new ones also come into being as expected, then the total power alcohol production in the State will be about 18,050,000 gallons by the end of 1959. The various expansion schemes, it would appear, were completed in the hope that the project for the manufacture of synthetic rubber would materialise and that it would become the best customer for the surplus alcohol. According to present indications, the prospect for synthetic rubber manufacture is rather remote and the power alcohol industry is stuck with its surplus production capacity which cannot be put to use. The difficulty has been aggravated by the increased consumption of diesel oil by heavy motor-vehicles. The year 1957-58 has been a bad one for the power alcohol producers. Against a production of 7,920,721 gallons, they could sell only 6,485,119 gallons, leaving a surplus of 1,435,602 gallons.

Efficiency of Income Tax Staff

While Mr. Morarji Desai, Central Finance Minister, spoke in Nagpur on the need for courtesy to income tax assesses, Mr. B. Gopala Reddi, Minister of State for Revenue, while addressing income tax officials in Madras, asked them to use their powers correctly and fairly. The Income Tax Commissioner, Mr. Singh, admitted that the department is not so efficient as it was 15 years ago because of the increase in staff and the changes in law. But he also pointed out that the loss of efficiency was due to the rising cost of living. This is the first time that an official attributed delays and negligence of work to the high cost of living. Those in the private sector, affected by the same increase in prices, can hardly put forth this excuse as sufficient for the failure to reach reasonable working standards.

The plea that assesses must make allowances for the personal and professional deficiencies of the income tax staff will be described as novel, to say the least, and Mr. Gopala Reddi's advice to the officials to be aware of public opinion might make those conscious of their imperfections sensitive. Mr. Singh's argument that the present scales of pay are too low for the officers to have what he called "a social life" may have some justification, but it cannot be a good enough reason for doing their work in a half-hearted fashion in

the present circumstances of the country, and surely no excuse for not being courteous to the assesses.

Madras Revenue from Sales Tax

The sales tax revenue of Madras State continues to rise, in spite of the transfer of some areas to other States. The last report of the State Board of Revenue shows that both demand and collection increased in 1956-57. From the sales of luxury articles, curiously, the tax yielded little, and while the high tax on the sale of cars and lorries from the two motor-car factories brought in an appreciable amount of revenue, the same tax on fountain pens costing Rs. 20 and more provided practically nothing. This may not be wholly due to the increasing sale of cheap pens, but to the unfailing supply of expensive pens from Pondicherry and Singapore. It is significant that while dwindling stocks of clocks and timepieces have pushed up prices in Madras, the prices of watches have scarcely risen and dealers find that outside supplies have been adequately supplementing local stocks. The yield of the tax realised on the sales of cameras, films, etcetera was a fair amount.

From the revenue angle, the best showing is made by Madras city. The concentration of trade there has not been affected by the separation of Andhra, and the inclusion of new assesses, liable to the tax on a turnover exceeding Rs. 20,000 a year, continues to sustain the State's revenue from this source. Before the reorganisation of tax rules and rates last year, it was found that only in the case of sugar, subject to an additional tax, was revenue likely to decline. Many articles and institutions have been made exempt from the tax by the State Government, including the sales of medical stores, transactions between wholesale co-operative stores and primary societies as well as woollen blankets and palm gum products. The expenditure on collection amounted to Rs. 44.58 lakhs while the revenue obtained (Rs. 6.68 crores for the first five months of 1956-57) was substantial. The official review indicates that within two decades, sales tax has more than taken the place of land revenue as the largest single source of the State's income.

Southern Demand for Industries

The chambers of commerce in the south propose to hold a conference in Bangalore soon, which will discuss the region's potentialities for industry and what can be done by planning on a common basis. In his address in Hyderabad recently, the Governor of Andhra, Mr. Bhimsen Sachar, also referred to the lack of major industries in the south and the region's retarded economic growth. The complaint that the south is neglected while Bengal, Bihar and other States are steadily moving ahead is familiar, but these interests have made no effort to find out how much of business enterprise has developed since 1946 in Madras State itself and how the power supply has led to the growth of industries in and near Madras city. It is also a matter of complaint that with four ports including Cochin, the peninsula has not made the same advance industrially as Bombay. But it is never considered that there has been a considerable influx of Sindhi capital into Bombay and that disturbed conditions prevailed in Hyderabad for over five years.

The idea that the mineral resources in Andhra and Mysore should justify rapid industrial growth is widely held. Commercial organisations have been demanding something big on the scale of the Neyveli lignite project. There has been some increase in the capacity for sugar production, but industrial development generally, it is pointed out, is much too slow. Certain facts are conveniently overlooked. First, the shortage of capital is largely the result of the local financiers' preference for the trade which yields quick profits. Secondly, the share of Indian capital in the plantations is increasing and third, the tradition of the former State Governments of Mysore and Hyderabad in building new industries is not being kept up.

Claims for Handlooms

The claim that the exports of hand-spun cloth brought in about Rs. 10 crores of foreign exchange last year was made in Madras, when the Chief Controller of Exports and Imports visited the office of the handloom trade association recently. West Germany, too, it is said, is showing interest in handloom fabrics, so the exporters seek concessions in order to hold their own against foreign competition. Handloom interests want to import rayon yarn, dyes and chemicals on the basis of actual user licences, and it has been urged that a trade association can act as an authorised agency for distributing imports while promoting exports. Mr. Bilgrami however indicated that the handloom industry must try to use domestic rayon yarn, although the prices have been raised because of the contraction of imports in recent months.

CORRESPONDENCE

SUGGESTED SOLUTION FOR COTTON TEXTILE

(TO THE EDITOR OF "CAPITAL")

Sir,

It is not surprising that the Textile Enquiry Committee's report has been received by many with coldness. The Committee's diagnosis of the ills afflicting the industry are incorrect and therefore its prescriptions are unlikely to produce good results. The problems of the Indian cotton textile industry can only be correctly studied in an international setting, for many of these are more or less common to all nations exporting cotton goods. The Joshi Committee makes it appear that the problem which cries for the most urgent solution is that of machinery units which need to be replaced. If I am not misinformed altogether, the crisis facing the industry has been created mainly by falling demand and by the resultant limit that has had to be imposed on production. In view of this, it passes understanding how replacing obsolete production machinery can solve the crisis. In fact, will it not directly exacerbate the problem? It is pretended that the fall in demand for Indian cotton goods is due to high prices, and that liberal export regulations and concessions on excise duties will end the problem. I feel that no lasting solution can be found unless the fact is faced that it is not impossible that trade in any commodity has a limit beyond which it cannot be pushed. The insurmountable difficulties which the cotton textile trade has come up against seem to indicate that fact. If one reviews the experience of all cotton trading countries in the past two or three years, one will be satisfied that the current problems are rooted in over-production, taking into account world production and world needs. We are presented with statistics regarding per capita consumption of cloth in various countries, and are told that what is needed is only to take measures to increase the consumption where it is low. Such steps will bring relief to Britain and such other countries where consumption is already high, but the position of India will be mainly as a buyer.

It is possible to take a proper perspective of such of the problems as are peculiar to India, only in combination with the problems of the handloom industry. A gradual, but complete, change-over to the handloom is perhaps the most enduring solution one can think of. It is no philosophical or doctrinaire proposition. As long as the transition is judicious and cautious, no serious risk of unemployment is involved. (Further, unemployment on a scale will have to be faced in any case.) After all, if the whole of India depended on the handloom for its requirements, several times the present number of mill workers will be occupied in cloth production. One of the phases of the programme of transition, of course, should be to train mill workers to operate handlooms. My suggestion, if adopted, will not lead us back to the Stone Age. On the other hand, abandoning heavy mechanised methods of cloth production will release resources and energy which can be used for building up our basic industries like steel. Vision, courage and freedom from the tyranny of dogmas are the needs of the hour.

Yours etc.,
R. MANI

Calcutta, 11th August, 1958.

AN ADMIRABLE CRICHTON

A MYSTERIOUS paragraph has been going the round of the press stating that Mr. Babington Smith, the Viceroy's Private Secretary, who, like the industrious apprentice, is to marry master's daughter next month, is thirty-five years of age; that his forte has always been finance; that he was principal Private Secretary to Mr. Goschen when Chancellor of the Exchequer; that he acted as Secretary to the British Delegates at the Brussels Monetary Conference; that he is very clever!! that he is likely to attain a high position some day!!! We now see it stated that it is on the cards that this admirable Crichton of a Private Secretary is likely to be our Finance Minister, and the mystery of this log-rolling is at once unravelled. There is, of course, a precedent for this proposal. Lord Northbrook's Private Secretary the present Lord Cromer, afterwards became our Finance Minister, and he made one of the best then both he and Lord Northbrook were. But born in the atmosphere of finance and responsibility called clever, extremely able and responsible men. Lord Northbrook was noted for his devotion to duty. It is related to him that he spent the summer of 1874 in Calcutta so that he might be on the spot to deal with the famine that was then in the land. His careful and economic administration of the finances was such as would have compelled the admiration of his bitterest opponent. Of Lord Elgin's administration all that can be said is that it has been a triumph of extravagance.

Who wants more food ?

My basic job is to assist in raising this country's food production from its present low level—so low that we have to buy abroad.

The extent to which I can help is very often not realised—it certainly is not realised enough.

Whether it is wheat or rice—gram or grass—sugar or groundnuts—whatever it is, only I can reliably and economically:

- Have the soil ready for the rains or water,
- Prepare the best till to suit the crop,
- Sow quickly and well on the right day,
- Give the crop attention whilst it grows,
- Harvest at the right time,
- Do, in time, all those never-ending duties such as agricultural haulage, soil conservation, water distribution and so on— which mean the difference between shortage and enough.

(FROM OUR LEGAL CORRESPONDENT)

Now this week comes the report of the result of the appeal. The Court of Appeal (Jenkins, Romer and Ormerod, L.J.J.) reversed the decision of Danckwerts J. and held: (1) as regards the claim for passing off, although a man may carry on a business under his own name, he has no right to mark his goods with a name (although it be his own name) which may have the effect of passing off those goods as the goods of another. There is no exception to this rule and it is no defence that there is no intention to deceive. It was established that the marking of the defendants' watches as "Baume & Mercier" watches was reasonably likely to cause confusion and the plaintiff's claim for passing off therefore succeeded. (2) As to the claim under the Trades Mark Act, 1938, the defence succeeded on grounds provided by Section 8, with which the reader in India is not interested. (*Baume & Co.*

It is useful to remember that the contract of service between employer and employee may cut both ways; that whereas an employer will be liable in damages to an employee whom he wrongfully dismisses, the employee may be equally liable to his employer if he wrongfully abstains from work and causes damage to his employer by so doing. The latter remedy is seldom exercised but here is a practical reminder of England that it exists. The defendant, one Mr. Galley, was a colliery deputy working under a contract of service regulated by an ancient agreement with the National Coal Board (the "Nacud Agreement") requiring him to work "such days or parts of days in each week as may reasonably be required." Mr. Galley, with other deputies of his colliery, gave notice to the management on 14th June, 1956, that they would not be turning coal on Saturdays in future, with the result that no productive work in that pit was possible on Saturday, 16th June or on Saturdays up to and including 18th August. On 25th August, arrangements were made for substitute deputies at a cost of £3.18.10 for each Saturday and the Saturday voluntary shift was resumed. On 21st June, 1956, the employers, the National Coal Board, issued a writ against Mr. Galley, claiming damages for breach of contract. At this point we will halt and invite the business reader, bearing in mind three dates, 16th June when Mr. Galley stopped work, 25th August when work was resumed and 21st June when the employers filed their suit, to consider where it was that the employers partially slipped up having the advice of expert Government lawyers on a point where, one believes, that the most junior country court practitioner in England would not have done so. The dates and the italicised words following supply the clue. The court had to decide two questions. (1) Was the defendant Mr. Galley bound by the agreement to work on Saturdays or was it too vague? (2) If bound, *how should the damages be calculated?* The Court of Appeal (Jenkins, Parker and Evers L.J.J.) held that the Nacud Agreement was intended by both parties to have binding effect and that the clause in question was not so vague as to make the whole agreement void. The parties had agreed that reasonableness should be the test and on the facts the Board had been reasonable in requiring the defendant to work on Saturdays. Therefore, the Court held that the employers were entitled to damages. But how much? The time of three Lord Justices of Appeal, to say nothing of that of the Law Officers of the Crown, was occupied in deciding whether or

not the Coal Board was entitled to be reimbursed by Mr. Galley in the sum of £3,18.10, the cost of providing a deputy for one Saturday. When the defendant notified his employers that he would not work on Saturdays, the ensuing cessation of work might have been for many months. They could have waited while the *quantum* of damages accumulated. Instead, the Coal Board filed their suit within a few days of 16th June, the first Saturday on which Mr. Galley absented himself. So the Court held that the damages must be limited to 16th June and could not cover breaches on other Saturdays after the issue of the writ. An attempt made with some hardihood, if one may say so, by the Coal Board to saddle Mr. Galley with the whole loss of profit on 16th June (£535) on the ground that when he broke his contract he knew that other deputies intended to do the same, was rejected by their lordships. That knowledge standing by itself was not relevant. Nevertheless—and the fact is worth noting in India—if the employers could have proved that Mr. Galley not only knew that the other deputies intended to break their contracts but also that he had induced them to do so, he might have been liable for the whole loss of profit. [*National Coal Board v Galley*. (1958. June). 77. *Law Notes*. 32.]

Whenever we come across a case in a Court of Appeal wherein the judges differ and decide it by a majority, we have to be wary about accepting it as final. It may go further by way of another appeal. So we present the result of this case, which is of importance to occupants of furnished or partly furnished flats, with diffidence, especially as the writer, with due modesty, would have come to a different conclusion from that of the majority. The facts were that a flat was let "with the use of the fixtures and fittings therein belonging to the landlord." The tenancy agreement contained a covenant for quiet enjoyment in the usual form. The flat contained no larder but did contain a large refrigerator which depended for its operation on power supplied from apparatus under the sole control of the landlords. Is there an obligation on the landlords' part to supply power or maintain the plant to operate the refrigerator?

"No," said the Court of Appeal (Lord Evershed, M. R. and Parker L.J., but with Sellers L.J. dissenting). The position might have been different if the agreement had contained express reference to the use of the refrigerator, but no covenant could be inferred from the general words "fixtures and fittings." The condensed report in *Law Notes* does time. The writer's view, for what little it is worth, is: (1) "Fittings" mean the necessary equipment of a house or flat other than furniture, ornaments, etcetera. (2) The refrigerator was undoubtedly let with the flat. (3) When you let out a refrigerator you do so as you would a piano, for use. (4) The operation of this refrigerator is under the control of the landlords. (5) The tenant cannot exercise his right to use it without the landlords' co-operation. (6) Therefore, there is an implied term that the landlords will co-operate.

(Penn v Gatenex Co. Ltd. 1958. 77. Law Notes. 110.)

THERE WILL CERTAINLY BE NO FIRING BY THE police if the police have no fire-arms, and to this extent Mr. Nehru has obviously hit on the only sure way of averting such incidents, of which there have been several cases recently. It would be interesting to know how the country's police forces may have reacted to the Prime Minister's perhaps rather casual suggestion that disarmament should begin with them. I deplore firing as much as anyone else, and I don't imagine that any but the most perverse among policemen ever enjoy having to open up on an unarmed mob. On the other hand, I can think of situations in which the balance of strength between an armed posse of policemen and a numerically vastly superior and unruly crowd is not necessarily in favour of the former. Anyone with any experience of a mob knows that to possess a pistol is only a provocation and no protection at all. I know I will be told of the unarmed London police, although the cosh boys once became outrageous enough to cause rethinking on that subject. Here I will refer to the difference in the objective conditions obtaining in the two countries. The British are by and large a law-abiding people, quiet and uninterfering except when roused. Their tiny little island has known stability much longer than almost any country. To take the British experience as the pattern for administration in every country and for every people is simply childish. There are parts of Europe and the United States where the British system wouldn't work for a single afternoon. Whatever may happen to the police force in this country after the Prime Minister's remark—I don't think anything much will—the habit of thought which wants to apply the experience of Britain everywhere indiscriminately (and British administrators are by no means alone in being prey to this habit) is perhaps the worst legacy of British rule in India. There is a dimensional difference between Britain and countries with turbulent histories, and however liberal certain ideas may be, their application should be based on a realistic study of the circumstances and men they are meant for.

IF THE INDIAN PEOPLE WERE NOT BY NATURE generous and forgiving, Brendan Bracken, who died last week after a protracted illness, would have been a very unpopular man indeed in this part of the world. He it was who, when it was scarcely any of his business, said some rather offensive things about this country. The phrase best (or worst) remembered hereabouts is that India would be "in the cold storage for the duration". This kind of outspokenness, often unintendedly wounding, was continued after the war in his column in the *Financial Times*, of which he was chairman. He was a Conservative with a capital C, and never thought it necessary to pretend otherwise. My disagreements with him far outnumber the subjects on which I would ever come at all close to his views. But then, I was brought up to know that somebody I differed from was not necessarily the embodiment of the devil. Viscount Bracken, together with Lord Beaverbrook, was one of the closest associates of Sir Winston Churchill during the war, and such confidence is not extended to men without some qualities. There is no reason why anyone should ever have to be uncivil in speech and writing, but I rather admire people who are not ashamed of holding strong opinions on men and affairs. On India, for ins-

ance, I would have preferred Bracken to be liberal and sympathetic. But so little time have I for the kind of me-tooism all too prevalent in the politics of today—at which Labour Party politicians are especially adept—that the man who speaks up is far to be preferred. You know where you are with him. Financial journalism is so close to business and industry that a practitioner of the former often slips into the latter almost naturally. Such was certainly the case with Brendan Bracken, who, I gather from *Who's Who*, was a director of Associated Electrical Industries and Managing Director of the *Economist*. Whether he ever wrote anything for the latter weekly, I would not know. I don't think anonymous writing was up his street, so prickly and assertive a personality was he.

THE ALPS, I SEE, ARE TAKING THEIR USUAL SUMMER toll of adventurous lives, and since the beginning of July there has been about one death a day among climbers in Bavaria, Austria, Switzerland, France and Italy. This can be expected to continue until well into September. Mountaineering techniques, equipment, knowledge and guidance have vastly improved in recent decades in Europe, but the numbers of climbers have multiplied too, and it is among these that the present, apparently heavy, fatalities occur. I am a firm believer in men's right to risk their necks, and am happy to think that Himalayan climbing, which is still largely professional and military, may one day soon become really popular in India. But I wonder if the scope exists in this country for another equally grand and dangerous sport that is gaining ground in Europe, speleology. This consists (to save you reaching for the dictionary) in the exploration of the earth in the opposite direction, that is, in exploring subterranean cave systems, underground rivers and the like. The Pyrenees offer great scope for this, which is why speleology has caught on mainly among the Spanish and French since the war. Only recently an intrepid party of Spaniards discovered near Bilbao, at a depth of over 1,000 feet, the largest underground "room" known in Europe—1,500 feet long, 900 feet wide and varying between 250 and 500 feet high. On the other side of the range a 30-man French party is at this moment bivouacking at a depth of 1,500 feet; they are equipped with climbing ropes, telephones, lighting gear and inflatable canoes for the exploration of subterranean rivers. But these are only the boldest and best-equipped stars of a popular sport; hundreds of parties of speleologists are this summer venturing into natural cavities in Europe's crust, some of which offer the possibility of miles and miles of exploration. South India probably has openings for this sport, but we won't know till someone goes far enough in to see.

MY MENTION OF SUBLIMINAL ADVERTISING TWO weeks ago prompted a friend to send me a copy of an American magazine containing an article which discusses the new technique more fully than I have seen hitherto. Its conclusions are not quite so negative as those I related, although it does admit that people have been known to act completely contrary to the direction in which they were being urged. It seems that subliminal advertising, like hypnotism, cannot make a person do something which is contrary to his nature. It can-

not, for instance, persuade him to jump off a cliff if it is not his conscious will to do so. What it can do, however, is suggest to him that jumping off a cliff might not be such a bad thing after all should he care to give the matter his consideration. In other words, it can only influence choice, it cannot dictate it. That may limit the technique's usefulness when it comes to choosing X's toothpaste rather than Y's, but still leaves it a potent factor in conditioning people to clean their teeth with some sort of toothpaste rather than, say, to use a dry brush. And that, after all, is half the purpose of advertising—to put an idea into the mind so that it can later be acted upon to the benefit of those who put it there. It is also the purpose of political propaganda, and it seemed to me from the conclusions the article draws that subliminal techniques have a big future in this field—a fact which may have accounted for Mr. Nehru's disapproval. I am not so sure that Mr. Nehru need worry too much just yet. All the examples I can think of at the moment do nothing more than supplement what is already being done on the conscious level. Take the chubby, cheerful faces one sees on the front of communist propaganda literature these days. They are intended to create an impression through an association, and they do not necessarily explain their purpose for the appreciation of the conscious mind. If they are not considered insidious, why then should a subliminal flash of, say, "communism" across a cinema screen showing a film dealing with wealth and happiness, be considered so? One has only to see the unreasoned reactions of an Asian audience today to such words as "imperialism" to realise that this technique has already been in use for some decades. On a more sophisticated level, what are political satires if not attempts to condition conscious feelings by creating unconscious impressions? The scope for subliminal techniques in propaganda is likely to broaden with the increase in the use of television. But in this respect, as in so many others, I suspect it will be quite safe to recall the old dictum that really there is nothing new under the sun.

THIS QUESTION OF WHETHER SUBLIMINAL TECHNIQUES must always be outlawed is going to crop up fairly soon in India. I see that a pilot television station is to be established in Delhi by October 1959. It is to be used for providing community development centres nearby with educational programmes (which will no doubt be fifty percent Government propaganda, whether intended or not). Presumably what All India Radio has in mind is to show some of those excellent films, urging people to boil their water or arrive on time at the office, which are used in some cinemas as a welcome change from the newsreels. If so, then why not use subliminal methods to put the points over more forcibly? To reject the best techniques known to science for emphasising arguments is clearly a waste. And when the intention is educational anyway, what objection can anybody have, especially when it is accepted that freedom of choice is not affected? I am not myself suggesting that subliminal advertising (and advertising is exactly what this kind of educational programme is) should be made a feature of Indian television, when it arrives. I am merely pointing out the dilemma which will face the "educating" authority when it realises that it could make its points much better if it wanted to. It is my guess we will eventually hear a small voice pleading that subliminal techniques cannot possibly be harmful when used in such an excellent cause. And then, of course, the floodgates will open.

COMMERCIAL TRENDS IN EUROPE

THE THREAT TO MARITIME NATIONS

(FROM A SPECIAL CORRESPONDENT)

THE question of ships sailing under so-called "flags-of-convenience", otherwise known as the "Pan-Lib-Hon fleet", will be taken up with the British Government through the British-Scandinavian joint co-operative committee, Uniscan, at its next meeting in July, according to a statement recently made by the Norwegian Foreign Minister, Mr. Halvard Lange, in the Storting (Parliament). The rapidly increasing number of "Stateless" or non-national ships over the last ten years is extremely disturbing, says Mr. Lange. Because of the various advantages which non-national ships enjoy, they have been able to encroach more and more on the markets of the traditional shipping countries. The "Pan-Lib-Hon fleet" enjoys some important competitive advantages compared with the fleets of maritime countries. The former is not affected by taxation legislation, and international shipping agreements. At the same time it can take advantage of the legal apparatus and controlling institutions of maritime countries and can even employ their trained seamen.

The largest group of non-national ships consists of the so-called "exile owners." The motive prompting them to register under "Pan-Lib-Hon flags" is a desire to avoid national control and obligations. But they undoubtedly represent the principal danger to world shipping. Considered in a somewhat broader perspective, the expansion of the "Pan-Lib-Hon fleet" means a relative reduction in the foreign currency earnings of all the west European shipping countries. It also means a reduction in west European trade with other countries, Mr. Lange continues. The shipping income of the west European countries constituted a part of the revenue which helps them finance their cultural, economic, and military programmes. This will be significantly affected if the expansion of the fleet is allowed to continue.

Free Competition

Mr. Lange has emphasised that neither Norwegian owners and seamen, nor the Government fear free competition in world shipping. On the contrary, such competition helps consolidate Norway's position as a maritime nation. Nor is it at all unreasonable that countries which formerly were not shipping nations should develop fleets of their own in accordance with their national requirements. But when an important segment of Norway's economy is threatened by a limited number of big exile shipowners, who through flag manipulations develop gigantic fleets without any national affiliation or control, she must—without giving up the principle of free competition—reserve the right to take such steps as are found necessary to protect her interests. The Foreign

Minister adds that he believes that in the long run opinion against *pro forma* registration may become sufficiently strong to reduce the damage which is being caused to international shipping. According to Press reports, the "flag-of-convenience" question was mentioned by the U.K. Prime Minister, Mr. Macmillan, when he received the Norwegian Prime Minister, Mr. Gerhardsen, during the latter's visit to Britain last May.

Bank Rate Reduction in Sweden

The Swedish Riksbank's recent decision to lower Bank rate by 1 percent to 4½ percent is a natural and cautious readjustment to the changed business climate at home and abroad, according to Mr. Per Asbrink, Governor of the Bank. He says that when it became clear that U.S. anti-recession measures were less dramatic than expected, and after the Swedish unemployment figures for April had been published, there was no reason to delay a moderate cut in the Swedish Bank rate. The cut coincided with the Government's move to lift quantitative restrictions on house construction and to grant credits for housing starts to stimulate employment in the building industry.

More Private Investment Needed in Holland

The restoration of the investment rebate is the main feature of a note on industry recently submitted to the Dutch Parliament. It stresses the need for more private investment in Holland, and estimates a fall of 10 percent to 15 percent in industrial investment in 1958. The Minister of Economic Affairs intends to allocate more funds for the country's participation in foreign trade fairs and for improving its economic information services in the United States. The Minister is thinking of granting fiscal concessions to encourage mergers of industrial enterprises in view of the European common market. He has also expressed the hope that more foreign enterprises will establish themselves in Holland.

During the period 1952-57, industrial investment totalled 9,000 million florins. The number of industrial workers rose from 1,565,000 to 1,780,000. Industrial production increased by 40 percent and exports of industrial goods by 50 percent. During 1952-57, 78 foreign enterprises established themselves in Holland, while 46 were parties to participation agreements. One hundred and five of these were U.S. companies and 41 were British enterprises. For the period 1957-62, the Minister estimates an increase in the employed industrial population of 140,000. This means that industrial production should be raised from 41,000 million florins to 49,500 million florins. This will need an investment of at least 11,000 million florins or equal to annual savings of 4 percent of the national income.

Finally, in his note, the Minister declares that the establishment of a European free trade area will be of primary importance to the Netherlands, but he gives a warning against the disparities in external tariffs. The restoration of the investment rebate—4 percent a year for four years—is greatly welcomed. It is expected that many investments which had been postponed, will now be realised. The rebate will start operating on fiscal profits for 1959, but will hold good for investments effected after 21st May.

Textile Imports into West Germany

West Germany has changed from a net exporter of textiles to a net importer. In the first quarter of 1958, foreign trade in textiles, excluding raw materials, showed a deficit of £7.5 million. This compares with a surplus of £12 million in the corresponding period of last year, and of £32 million in the first quarter of 1956. The output of textiles is about 4.5 percent below last year's level. As a measure of help to the West German cotton and staple fibre industries, the Government has decided not to issue any additional import licences over and above the half-yearly global quotas. The quasi-liberalisation of quotas for grey cloth and staple fabrics granted to Yugoslavia has recently been withdrawn.

In addition, stricter frontier checks are to be instituted to prevent what is called "criminal imports," that is, imports from non-liberalised areas coming in under false declarations from European countries. All this, however, is considered inadequate by West German textile industrialists who are alarmed due to the rapid increase of textile imports from Asian countries and some "cheap labour" countries in Europe. Manufacturers are, therefore, demanding some measure of protection. Imports from "cheap labour" countries have increased remarkably within the last three years. For example, 1,471 tons of grey cloth were imported from Japan in 1955 and last year imports rose to 3,156 tons. Imports of staple fibre fabrics from Japan rose from 2,687 tons to 6,170 tons during the same period.

Decontrol of Capital Imports

The Federal Gazette has announced the abolition of liberalised capital marks and a general decontrol of capital imports with effect from 1st July. Existing accounts in liberalised capital marks will be converted optionally into foreign exchange accounts or into freely or limited convertible mark accounts. Controls on capital imports into West Germany have been lifted as a matter of principle. Purchases of land and other real estates, participation in German companies, the establishment of factories or branch offices—these, and, in fact, all direct investments, are entirely free—and payments can be made according to the currency control laws of the country in which the foreign investor resides. As for portfolio investments, the following restrictions still apply: deutsche-mark securities and loans and credits to West

German residents must be paid in freely convertible currency, unless a specific permit is obtained; credits in deutsche-marks are free if they are granted for a period of at least five years. If securities held by foreign residents are sold in West Germany, the sales proceeds and other revenue can be transferred to soft currency countries in freely convertible currency. The same applies to the payment of interest and repayment of loans and credits.

New Financial Proposals for Switzerland

The finance of the Swiss Confederation have been re-organised and put on a constitutional basis. In the past 30 years, various efforts have unsuccessfully been made to reach a permanent solution to this problem and in the meantime the fiscal system has been operated by emergency decrees and regulations. After prolonged discussions with the Cantonal Governments, the political parties and the various economic organisations, the proposals for a new tax law which were elaborated by Mr. Hans Streuli, the Federal Finance Minister, were submitted to a national referendum, as is required by the Constitution. The new financial regime was approved by the male electorate by 418,960 votes to 348,361. It will come into force on 1st January, 1959. The main feature of Mr. Streuli's proposals, now endorsed by the Swiss electorate, is that Switzerland can reckon on a balanced Budget in the next six years, from 1959 to 1964. It is also said that in years of high economic activity, a surplus of between 250 million francs and 300 million francs (£20.5 million and £24.6 million) can be expected and will be used for debt redemption.

Switzerland and Free Trade Area

The importance of the European free trade area to Switzerland has been emphasised by Dr. Franz Aschinger, the financial editor of the *Neue Zürcher Zeitung*, in the course of a lecture recently given at Zurich. The failure of the project, he says, will result in trade discrimination against Switzerland by the six European common market partners. One of the problems which particularly concerns Switzerland, Dr. Aschinger points out, relates to the rules about the withdrawal of tariffs and the abolition of quotas as laid down by the Common Market Treaty. The free trade area could only prevent the threatened tariff discrimination, implied in the Rome Treaty, by timing its own tariff reductions in such a way as to make them coincide with the coming into force of the tariff regulations of the Rome Treaty.

Another problem of the utmost importance for Switzerland is the fixing of the base date as the starting point for the tariff reductions under the free trade area. The choice of 1st January, 1959, which is the base date under the Common Market Treaty, simply means that Switzerland will not be in a position to apply her new Customs tariff during the transition period. For this reason, Switzerland can only join the free trade area if she is allowed to apply, under the free trade area plan, the new Customs tariff which is still being elaborated.

Renewal of the E.P.U.

The Council of the O.E.E.C. has approved the renewal of the European Payments Union for a further year from 30th June. Thus the creditor countries among the 17 members will continue to offer facilities for the settlement of 25 percent of monthly deficits in credit and debtors will continue to pay 75 percent of monthly deficits in gold. At the same time, the Union has deferred a decision about the renewal of the French special credit facilities and the E.P.U. loan until July. This decision will have to be taken before the third week of the month, or the French will be constrained to pay the whole of their June deficit—the size of which will be shortly known—in gold. A French memorandum on the credit and payments position is expected shortly and will be studied by the Union and the O.E.E.C. before any decision about the renewal of the French credit is taken.

Position of France

Thus, apart from the special proviso entered by the Swiss, and France's position, the E.P.U. has been renewed on the same basis as last year. France was granted \$100 million special additional credit facilities and a \$150-million loan from members through the Union last January. What remains of these credits—\$70 million of the loan and about one-third of the additional credit facilities—now has to be reviewed. The Pfimlin Government submitted a report on France's position to the O.E.E.C. at the end of May, and on the import restrictions it intended to impose. After the latter had aroused the strong opposition of France's partners, the memorandum was withdrawn by the de Gaulle Government.

Italian Economic Trends

The president of the Bank of Italy, Dr. Menichello, has described the Italian financial situation with cautious optimism at the Bank's annual meeting. He says that the current trend suggests a slowing down of progress, but not a setback. So far Italy has adopted no special measures. National income has increased in real terms, by 5.6 percent last year, compared with only 4 percent in 1956. In the first quarter of the current year, industrial output was 2.1 percent higher than in the same period of last year. Foreign currency reserves had increased. In the course of 1957—mainly in the second half of the year—they had gone up by \$286 million. The upward trend appears to be continuing this year. At the end of March, bank liquidity amounted to 8.9 percent of total deposits, compared with 5.4 percent in March 1957.

Money

THE CALCUTTA MONEY MARKET

SLOWER RETURN OF FUNDS

Wednesday, 13th August.

THERE has been very little change indeed in the demand for advances in the Calcutta money market during the past week. Indications are that the bottom of the seasonal decline has now been reached. Of the main sources of demand, the only ones showing any change in offtake were the sugar mills, to which advances have fallen, and grain and seeds storage, against which there has been a slight rise in demand for accommodation. Conditions in the call market have remained easy and the rate is unchanged at 3 percent.

The revival of activity in the exchange market has proved short-lived. During the past week, very little business was done and few bills, either tea or gunny, have come to hand. Remittance has been fair. Sterling opened firm against the twin dollars, but weakened later. The pound is now marked down fractionally against the dollars, but remains strong against Continental currencies. There are signs that the seasonal weakening of sterling might have at last begun.

BULLION WAS STEADY, ALTHOUGH PROFIT-TAKING was seen towards the close. There was good up-country support. Silver closed at Rs. 182. The price was quoted at 74½ in London and the New York quotation stood at 88½ cents.

Gold ended at Rs. 108.75 and arrivals were restricted.

DURING THE WEEK ENDED 8TH AUGUST, GOVERNMENT of India Treasury bills for Rs. 59,62,50,000 were sold in favour of the Reserve Bank.

Tenders for Rs. 4 crores of 91 days' Government of India Treasury bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on 18th August. Successful tenderers should make payment on 22nd August.

THE RESERVE BANK RETURN FOR THE WEEK ENDED 8th August shows that there were increases of Rs. 19.25 crores to Rs. 1,559.16 crores in active notes and of Rs. 9 crores to Rs. 1,571.32 crores in the total note issue. The currency expansion was covered by an increase of Rs. 10.03 crores to Rs. 1,139.23 crores in rupee securities. In the Banking Department, deposits of the Central Government rose by Rs. 4.54 crores to Rs. 64.79 crores while other Government accounts fell by Rs. 8.38 crores. Balances held abroad declined further by Rs. 16.02 crores. Balances of commercial banks were Rs. 15.16 crores lower at Rs. 10.45 crores. Balances held abroad declined further by Rs. 2.61 crores to Rs. 10.45 crores. Investments at Rs. 347.40 crores showed a decline of Rs. 13.75 crores. Other loans and advances fell from Rs. 55.52 crores to Rs. 53.45 crores, of which advances to scheduled banks against usance bills amounted to Rs. 5.54 crores (Rs. 6.94 crores).

THE RETURN OF THE STATE BANK OF INDIA FOR the week ended 1st August, 1958, shows a drop of Rs. 4.37 crores to Rs. 441.36 crores in total deposits. Investments in Government securities are up by Rs. 1.30 crores to Rs. 216.42 crores, while other authorised investments are down by Rs. 5 lakhs to Rs. 11.04 crores. Advances including loans, cash credits, overdrafts and bills discounted and purchased have diminished by Rs. 3.40 crores to Rs. 173.94 crores. Cash and balances are, in consequence, shown at Rs. 54.38 crores or Rs. 4.03 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 1st August, 1958, shows Demand and Time liabilities at Rs. 752.67 crores (Rs. 31.70 crores on account of borrowings from banks) and Rs. 847.11 crores (Rs. 38.04 crores) compared with Rs. 769.09 crores (Rs. 31.40 crores) and Rs. 825.25 crores (Rs. 35.14 crores), respectively, in the previous week. Cash has declined by Rs. 36 lakhs to Rs. 37.76 crores, while balances with the Reserve Bank has increased by Rs. 1.64 crores to Rs. 104.34 crores. There is a rise of Rs. 4.10 crores to Rs. 541.03 crores in investments. Advances and bills discounted at Rs. 883.09 crores show a drop of Rs. 3.48 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.8 percent and 55.2 percent against 8.8 percent and 55.6 percent.

THE INDIAN BANKS ASSOCIATION AND THE EXCHANGE BANKS ASSOCIATIONS have formed a new association called "Foreign Exchange Dealers Association of India" to regulate the conduct of foreign exchange business within the framework of the exchange control regulations. Until now, foreign exchange business has been regulated by the Exchange Banks Associations in India (in Bombay, Calcutta, Delhi, Madras and Amritsar), whose membership consists entirely of foreign banks. In view of the active participation of Indian banks in financing the country's foreign trade and the considerable expansion of their foreign exchange business, it was considered desirable to form a composite association of all authorised dealers in foreign exchange. The new association has applied to the Reserve Bank of India for recognition and will start functioning as soon as its approval is received, and in the meantime, all authorised dealers are being invited to join. The headquarters of the association will be in Bombay, and local offices will be established in Calcutta, Delhi and Madras.

FIRM CONDITIONS ON THE LONDON STOCK MARKET

RISE IN GILT-EDGED AND INDUSTRIALS

London, 13th August.

DISTINCTLY firm conditions developed in stock markets during the past week following the bank holiday, and a broad advance was recorded in most sections under the lead of gilt-edged securities and industrial equities, the buoyancy of the latter providing the outstanding feature of the week. The advance was based on growing expectations of an early reduction in the British Bank rate, strengthened by the further sharp fall in the Treasury bill rate of last Friday to around 3½ percent. The improvement on Wall Street and the optimistic interpretation of economic prospects in the United States contributed to the firmness of the market which took adverse developments in its stride. The adverse developments included the Russian retreat from a "summit" meeting at the Security Council and the latest industrial production figures which confirmed that industrial output is well below last year's level. These caused only short-lived periods of hesitancy, the market quickly resuming its upward movement subsequently. The gilt-edged market steadily improved on Bank rate hopes and recorded extensive gains on the week.

Greek bonds advanced on the latest Cyprus developments, but other foreign bonds and rails attracted very little attention. Dollar stocks were mainly higher in response to the advance on Wall Street. Banking shares improved on news of fur-

ther links between the banks and hire-purchase finance houses, but hire-purchase shares were somewhat irregular. Property shares continued to attract selective buying and established some useful gains. But commercial television shares were quieter after their recent flurry. The general trend of industrials was firm and many good features developed assisted by some satisfactory company news. There was very little interest in gold shares which drifted slightly lower in the absence of support, while diamond shares were dull under the influence of reported Russian diamond finds. Base metal shares advanced although prices were below the best. Oil shares were not very active, but prices recorded small gains in many instances. Rubber shares improved on a selective demand with Bertram firmer on news of a bid. Gula Kalumpung, however, eased on the lower dividend. Indian tea shares were selectively better, but Ceylon issues moved within narrow limits.

The Money Market

Money was in keen demand during the past week, with the position affected by quarterly purchase tax transfers to the Revenue Department, and a certain amount of disruption in the flow of credit caused by the August bank holiday. The firm rates of 3½ percent and 4 percent ruled throughout, while several times the market had to borrow small amounts from the Bank of England. Demand for bills was good, but the turnover was limited by the cash position. There was a further sharp fall in the Treasury bill rate at last Friday's tender with the money market paying 9d more for its bills at £99 0s 8d with the result that the average rate declined by approximately 3s to £3 17s 3½d percent.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 6th August shows that the gold stock declined by \$49 million to \$21,160 million. Foreign deposits were unchanged at \$287 million, but

foreign investments rose by \$69 million to \$3,226 million. The Federal Reserve sold \$648 million worth of bills and \$471 million worth of bonds but bought \$1,561 million worth of certificates, making the total holdings of Government securities \$442 million higher at \$25,358 million. Total discounts and advances rose by \$140 million to \$266 million, while the aggregate excess reserves of member banks rose by \$421 million to \$822 million. The daily average excess reserves of member banks declined by \$78 million to \$560 million, while their daily average borrowings rose by \$4 million to \$112 million. Gold certificates on hand and dues from the U.S. Treasury fell by \$50 million to \$19,709 million. Federal Reserve notes in actual circulation rose by \$63 million to \$26,837 million. The deposit member banks' reserve account was \$338 million higher at \$18,549 million.

Vegetable Oils Dull

Dull conditions prevailed during the past week for most vegetable oils and seeds with prices showing little change from pre-week-end levels. Linseed oil picked up in the closing stages, backed by a sharp opening rally on the Winnipeg linseed market and ex-tank U.K. offers of oil finished around £1 to £16 a ton higher on balance. A modest inter-trade was noted involving October and November deliveries at £114 a ton ex-tank. Coconut oil was featureless with some dealers inviting lower bids, but after the week-end firmness, copra presented a steady although inactive market. Shipment rates of Indian castor oil were barely steady, reflecting some shading in origin levels, but U.K. interest was again concentrated on ex-tank U.K. offers with business including the October delivery of British Standard Specification grade oil at £121½ a ton. Marseilles buyers secured August-September shipments of British East African castorseed at down to £91½ c.i.f., but further attempts to buy at that figure proved unsuccessful. The same buyers were trying to get October-November shipments at £50½ c.i.f., but most sellers wanted 15s a ton more. Palm oil received scant interest at unchanged levels, but following some week-end business, Dutch palm kernel oil was a shade higher. Palm kernels were steady with the Nigerian Board said to have refused bids at £53½ c.i.f. full terms for October-November shipments. Together with most edible oils, groundnut oil attracted few enquiries and prices continued to give way as dealers invited bids. The only interest located in Nigerian oil was an occasional bid at £93 c.i.f. for October-November shipment.

Quicksilver Steady

The London ex-warehouse price of quicksilver continued to be indicated at £79 a flask during the past week. Currently there is nothing in the news to disturb the price, trade sources say, although most observers admit that prior to and since the August bank holiday, demand has been quiet. More buying interest has, however, been reported from overseas, and in this connection, it is learned that Spain has sold some 3,000 flasks of quicksilver to the United States where it is to be converted into mercurial salts. Shipments are to be spread over the next four months. Spain usually carries substantial stocks. Shipment prices for quicksilver, other than Spanish and Italian, are quoted at about £77 a flask c.i.f. for late September or early October arrival.

Recovery of Sterling

In relaxing its financial policies, the British Government is preparing the way for a renewed economic growth, especially in the field of industrial investment, the Federal Reserve Bank of New York has commented in a recent monthly review. In a review entitled "Sterling: A year of Recovery", the bank says that "sterling has recovered from the difficulties of 1957 and has weathered the U.S. recession in a manner which few would have dared to predict a year ago." The improvement in Britain's position is more remarkable when an account is taken of the overseas sterling area countries' continuing difficulties, which have been reflected in sharp declines in their sterling exchange reserves. The bank outlines the steps which have been taken so far to safeguard the currency and to restore confidence in sterling. Commenting favourably on the measures, it concludes that "with gold and dollar reserves now standing at \$3,084 million and with another \$1,000 million available on a stand-by basis from the International Monetary Fund and the U.S. Export-Import Bank, Britain is now in a much improved position to meet the uncertainties of future."

Hides and Skins Unchanged

The market for kips and calf skins remained without any change during the past week according to a leading firm of kips merchants in London. There was only moderate business transacted as leather dressers in Britain were all closed for the annual holidays. However, there were offers in fair quantities from Madras at firm rates. Buffalo calf continues in very short supply.

SHIPS ON U.K.-ASIA RUN TO BE AIR-CONDITIONED

Full air-conditioning is to be installed in seven liners of the P and O, and Orient lines which call regularly at Bombay or Colombo on East. The ships concerned are the *Chusan*, *Orcades*, *Orsova* and *Oronsay* (P & O), and the *ing* this in London on 6th August (Orient). Announcement said that the first to be air-conditioned would be the *Orcades*, which would be withdrawn from service for the purpose between December 1958 and March 1959. The six other ships would be air-conditioned at intervals yet to be settled.

Stocks and Shares

INDIAN IRON DIVIDEND WELL RECEIVED

BETTER ENQUIRY FOR COAL SHARES

Wednesday Evening.

THE chief event in the Calcutta Stock Exchange was the announcement yesterday by the directors of the Indian Iron and Steel Company of a 10 percent tax-free dividend on the increased ordinary capital. From an opening quotation of Rs. 24.36, the shares improved steadily to Rs. 25.10; tonight's settlement rate was Rs. 24.95 c.d. The announcement was well received by market operators and there was a general improvement in sentiment. The report and balance-sheet for the year ended 31st March, 1958, is now eagerly awaited, as well as an early announcement on steel retention prices. Market reports suggest that the chairman of the company is likely to make a reference to the possibility of a bonus issue before long by the capitalisation of the share premium account. After the dividend announcement, the bears rushed in to cover and under the impetus of fresh buying by new bulls, the undertone of the market was firm at the close of business today.

In the past week, the spotlight shifted from the iron and steel section, where quite a few investment orders were put through at rising prices. It is felt that prospects for the industry are steadily improving under the growing demand of increasing industrialisation in the country. A random selection of nine first-class equities in this section shows that the average net return obtainable on the basis of current prices is in the neighbourhood of 7.25 percent which is considered quite attractive.

The reduction in jute goods, especially in hessian stocks at the end of July, helped maintain jute share prices, although the driving force behind jute shares noticeable in recent weeks appears to be gradually spending itself out.

Conditions in the money market are still very comfortable and with the scarcity of floating stocks, the prices of Government securities have shown a remarkable improvement during the period under review as will be seen from the following table:

	Opening 7th August, 1958 Rs.	Closing 13th August, 1958 Rs.
3% Conversion	71.25	71.55
Loan 1986	96.00	96.95
2½% Loan 1961	95.70	96.55
2½% Loan 1962	88.00	88.25
3% Loan 1970-75		

Preference shares were keenly sought after, but sellers were very scarce; even though buyers were prepared to pay higher prices, they were unable to obtain their total requirements.

In the bank section, United Commercial improved to Rs. 61.50, while other issues were unchanged.

Prices of cotton shares were unchanged and little interest was shown in this section.

In electric, the outstanding feature was U.P. which advanced from Rs. 128 to Rs. 135.

As mentioned earlier, coal shares were in good demand and this is illustrated in the following table:

	Opening 7th August, 1958 Rs.	Closing 13th August, 1958 Rs.
Bengal	248	265
Equitable	26.37	125
Karanpura Collieries	118	18.12
New Beerbhoom	17	24.87
Pench Valley	24	22.62
East Indian	22	12.87 x.d.
South Karanpura	13 c.d.	

There was somewhat less enquiry for jute shares during the week, but prices, on the whole, were fairly steady, as will be seen from the following table:

	Opening 7th August, 1958 Rs.	Closing 13th August, 1958 Rs.
Auckland	106	112
Barnagore	109	106
Howrah	17.87	18.75
India	135	137
Lansdowne	116	120

Contrary to the general trend, there was a keen enquiry for Fort Gloster which spurred from Rs. 355 to Rs. 367.

In sugar, Balrampur improved to Rs. 9 and Dyer Meakin Breweries were taken at the higher rate of Rs. 12.25.

In engineering, Braithwaites were better at Rs. 28.75 as were Guest, Keen, Williams at Rs. 31.75. Jessops were shaded at Rs. 19.87, while Textile Machinery were fairly well maintained at around Rs. 20.55.

In paper, Bengal were steady at Rs. 91 and there was a good enquiry for India Paper Pulp at Rs. 22.31. Orient were firm at Rs. 35.05. Sirpur recovered to Rs. 12.87 and Titagur were wanted at Rs. 40.25.

Cement and Insurance shares were unchanged. Among miscellaneous industrials, Alkali and Chemical were taken at Rs. 15 and British India Corporation were better at Rs. 4.06. Dunlop Rub-

ber were better at Rs. 28.25 but Rallis were shaded at Rs. 41.50. Indian Aluminium met with renewed enquiry and recovered to Rs. 15.50, while Indian Cables were unchanged at Rs. 29.62. India Steamship were in good demand and improved to Rs. 13.56 as did Martin Burn to Rs. 27.12. National Insulated Cables to Rs. 28.75 and National Carbon to Rs. 26.12. Rohas Industries were better at Rs. 25 and Shaw Wallace at Rs. 11.94. Jardine Henderson were taken at the higher rate of Rs. 22.50.

In the mining group, Indian Coppers were firm at Rs. 3.98 and there was some enquiry for Western Stockholders Investment at 92½p.

Tea shares were dull and neglected and prices showed little variation.

THE PROFIT OF THE TEZPORE TEA COMPANY HAS declined from Rs. 7.67 lakhs to Rs. 2.712 for the year ended last December. The usual preference dividends have been paid, but the ordinary dividends have been passed over. A balance of Rs. 36,041 is carried forward, against Rs. 72,154 brought in. Production amounted to 30,000 maunds and the average sale price declined from Rs. 2.29 to Rs. 1.81 a lb. Estimates for the current year have been framed for a crop of 30,000 maunds at a cost of Rs. 41.08 lakhs.

THE PENCH VALLEY COAL COMPANY HAS EARNED a profit of Rs. 7.35 lakhs for the year ended last March, against Rs. 8.82 lakhs. Providing Rs. 4.50 lakhs (Rs. 2.63 lakhs) for taxation, bringing in Rs. 46,383 and making other adjustments, there is a balance of Rs. 5,00,401. General reserve is allocated Rs. 70,000. The dividend has been maintained at 20 percent, leaving a carry-forward of Rs. 36,465. Raisings were higher at 463,751 tons, compared with 480,042 tons, and despatches increased from 463,237 tons to 474,880 tons.

THE HANSQUA TEA COMPANY HAS MADE A PROFIT of Rs. 51,840 for the year ended last December. Transferring Rs. 20,000 from taxation provision, bringing in Rs. 16,584 and making other adjustments, there is Rs. 75,882. The dividend has been maintained at 10 percent. Development reserve is

TRADE MARK

On this eleventh anniversary of our
Independence we look around with pride
on matchless deeds achieved—stormy
rivers curbed by mighty dams, chimneys
and pylons in virgin regions, eager faces
in school rooms, green fields, white
hospital walls, and a criss-cross of lines
of communications linking vast distances.
But let us not linger to look back
today. Let us strive ever onwards to
make our tomorrows sing.

TEXMACO

allocated Rs. 10,000, leaving a carry-forward of Rs. 15,882. The crop increased from 461,865 lbs to 507,667 lbs and the average sale price fell from Rs. 1.84 to Rs. 1.71 a lb. Estimates for the current year are for a crop of 520,000 lbs at a cost of Rs. 8.46 lakhs.

THE BUSINESS OF THE STERLING GENERAL INSURANCE Co. Ltd has increased for the year ended last December. The net premium improved from Rs. 47.64 lakhs to Rs. 55.01 lakhs. The profit of the fire department has amounted to Rs. 3.03 lakhs and that of the marine department to Rs. 5,288, while the accident and miscellaneous department has incurred a loss of Rs. 2.60 lakhs. After making all adjustments, the net profit has amounted to Rs. 1,20,620. A dividend of 5 percent has been declared, leaving a carry-forward of Rs. 4,096 against Rs. 1,589 brought in.

PROVIDING Rs. 8.67 LAKHS (Rs. 3.95 LAKHS) FOR taxation provision, the profit of the Bengal Paper Mill Company has amounted to Rs. 8.87 lakhs for the year ended last December, against Rs. 4.15 lakhs. Bringing in Rs. 4,805 and making other adjustments, there is a balance of Rs. 9,01,340. General reserve is allocated Rs. 1 lakh (nil) and capital reserve Rs. 10,000 (same). The ordinary dividend has been increased from 10 percent to 12 1/2 percent, including an interim of 6 percent, leaving a carry-forward of Rs. 66,840.

By appointment of the board of directors, Messrs Balmer Lawrie and Co. Ltd carried on the day-to-day affairs of the company from 15th January, 1957. Members have recently been advised of this company's intention to apply to the Central Government for approval to the appointment of Balmer Lawrie and Co. Ltd as Secretaries and Treasurers of the company for a period of five years from 1st January, 1958.

THE ELLENBARRIE TEA COMPANY HAS INCURRED A loss of Rs. 59,156 for the year ended last December. Transferring Rs. 40,000 from buildings and machinery reserve, bringing in Rs. 13,976 and making other adjustments, a balance of Rs. 12,348 is carried forward. The dividends have been passed over. The crop amounted to 459,628 lbs against 448,913 lbs and the average sale price fell from Rs. 1.59 to Rs. 1.74 a lb. Estimates for 1959 provide for a crop of 448,000 lbs at a cost of Rs. 8.42 lakhs.

Bombay Market

WIDE FLUCTUATIONS IN STOCK VALUES

STEEL DIVIDENDS AID SENTIMENT

Wednesday Evening.

THERE were wide fluctuations in the Bombay stock market last week on alternate good and bad news, especially relating to political developments in west Asia. Earlier in the week, share prices declined on profit-taking although there was no selling pressure. Later, sentiment improved on encouraging dividend news from the two leading steel companies. The payment of an ordinary dividend of Rs. 8.25 a share by the Tata Iron and Steel Company, and the maintenance of a 10 percent ordinary dividend by the Indian Iron and Steel Company, encouraged fresh support.

Tata Steel improved to Rs. 169.50 and Indian Iron were higher at Rs. 24.56, on keen support from Calcutta interests. Hopes of an early increase in steel retention prices helped maintain steadiness in the group. Alcock Ashdown improved to Rs. 262.50 on a report that the Scindia Steam Navigation Company has bought a large parcel of shares in Alcock Ashdown. Premier Construction were shaded at Rs. 199, on selling from knowledgeable quarters. Motor shares showed little variation. Hindustan Motors were taken at Rs. 7.68, and Premier Automobiles came to hand at Rs. 87.50. Tata Locomotive met with demand at the increased price of Rs. 186 in the expectation of a higher dividend.

In the cotton mill group, Svadeshi improved to Rs. 200 on hopes of good working during the first six months of the current year. Century, however, declined to Rs. 447.50 on suggestions of a preference issue. Bombay Dyeing were maintained at Rs. 59.50 on the payment of an interim dividend at the rate of 75p a share. Simplex were transacted at Rs. 175 and Kohinoor were dealt in at Rs. 281. Apollo were sold at Rs. 174 and India United Ordinary were offered at Rs. 10.12.

Miscellaneous industrials were steady in sympathy with the general trend. Belapur Sugar were a shade higher at Rs. 266.50 and Phalton were bought at Rs. 160. Steamship company shares attracted support on the Government's decision to reserve the registration of ships in India for vessels exclusively owned and managed by Indian shipowners. Scindia Steam were taken higher to Rs. 20.12 and India Steamship improved to Rs. 13.04 on hopes of a higher distribution. Mining shares were quietly steady, and Shivrajpur Syndicate were done at Rs. 96.50. Among cement shares, Associated Cement were bought at Rs. 156.50 and Digvijay Cement were transacted at Rs. 155. Tata Chemical were steady at Rs. 16.22 and National Rayon rose to Rs. 229.50.

Business in banking shares was restricted and fluctuations were narrow. Bank of Baroda came to hand at Rs. 122.50 and Bank of India were dealt in at Rs. 132. Insurance shares were neglected.

Electricity supply company shares were steady and scattered investment support was seen. Ahmedabad Electric were bought at Rs. 95.50 and Tata Hydro were offered at Rs. 124.

THE WEEK'S TRANSACTIONS

Kinnison - Rs. 129/00-136/00-129/00-136/00 (118/00 (65/00)).
Lansdowne - Rs. 108/00-108/00-108/00-108/00 (78/00).
Do. (Pref.) - Rs. 78/00-78/00-78/00-78/00 (81/00).
Lawrence - Rs. 101/00-107/00-101/00-107/00 (83/00).
Megna - Rs. 134/00-136/00-133/00-135/00 (83/00).
National - Rs. 24/25-24/25-23/84-24/25 (17/90).
New Central - Rs. 16/19-16/44-16/12-16/37 (12/06).
Naihati - Rs. 68/00-68/00-68/00-68/00 (54/00).
Do. (2nd Pref.) - Rs. 53/50-56/00-53/50-56/00 (57/50).

Nellimaria - Rs. 12/69-12/75-12/69-12/75 (11/37).
Nuddea - Rs. 44/50-46/00-44/50-46/00 (32/50).
Orient - Rs. 133/50-133/50-131/00-132/00 (98/00).
Presidency - Rs. 5/37-5/56-5/25-5/56 (4/06).
Rameshwara - Rs. 6/31-6/31-6/12-6/12 (6/50).
Reliance - Rs. 6/94-7/12-6/94-7/12 (6/50).
Do. (Pref.) - Rs. 62/50-62/50-62/50-62/50 (72/50).
Soorah - Rs. 18/25-18/31-18/12-18/19 (13/12).
Union - Rs. 151/00-151/00-151/00-151/00.

MININGS

Burma Mines - Rs. 1/62-1/66-1/62-1/64 (2/24).
Chrestien Mica - Rs. 10/19-10/25-10/19-10/25 (14/25).
Consolidated Tin - NP 0/85-0/85-0/85-0/85 (Rs. 1/53).
Indian Copper - Rs. 3/85-4/03-3/84-3/97 (3/26).
Karanpura Development - Rs. 13/00-14/56-13/00-14/25 (10/75).
Metal Corp. - Rs. 7/37-7/81-7/34-7/06 (8/12).
Orissa - Rs. 25/75-25/75-25/75-25/75 (19/75).

CEMENTS

Asoka - Rs. 9/75-9/75-9/62-9/69.
Bengal Potteries - Rs. 3/69-3/87-3/56-3/81 (3/37).
Dalmia (Bharat) - Rs. 11/50-11/50-11/25-11/41 (11/44).
Do. (Pref. Rs. 40 paid) - Rs. 33/00-33/00-33/00-33/00 (35/00).
Jaipur Udyog - Rs. 14/44-14/75-14/37-14/75.
Orissa - Rs. 15/37-15/50-14/37-15/50.
Sone Valley - Rs. 5/77-6/09-5/77-6/09 (5/72).

CHEMICAL

Alkali & Chemical - Rs. 14/81-15/19-14/75-15/19 (13/56).

ELECTRICS

Agra - Rs. 140/00-140/00-140/00-140/00 (125/00).

Calcutta - Rs. 14/81-14/87-14/75-14/81 (12/50).
Do. (Pref.) - Rs. 11/31-11/31-11/31-11/31 (9/69).

ENGINEERING

Arthur Butler (Pref.) - Rs. 9/50-9/50-9/50-9/50 (7/25).
Braithwaite & Co. - Rs. 28/56-29/12-28/50-28/96 (27/50).
Britannia Building & Iron - Rs. 6/44-6/50-6/44-6/50 (5/75).
Britannia Engineering - Rs. 12/31-12/37-12/31-12/37 (13/56).
Burn & Co. - Rs. 351/00-354/00-350/00-354/00 (321/00).
Guest, Keen, Williams & Co. - Rs. 31/75-32/00-31/75-32/00 (135/00).
Hooghly Docking - Rs. 105/00-105/00-103/00-103/00 x.d. (35/00).
Indian Galvanizing - Rs. 15/62-15/69-15/62-15/69 (19/06).
Indian Iron - Rs. 24/03-25/15-24/00-24/95 (19/17).
Do. (Pref.) - Rs. 99/00-100/00-99/00-100/00.
Indian Steel & Wire - Rs. 71/50-71/50-71/50-71/50 (56/75).

Jessop & Co. - Rs. 19/87-20/12-19/87-20/00 (22/37).
Jay Engineering - Rs. 184/00-184/00-184/00-184/00.
Kumardhubi - Rs. 9/25-9/50-9/25-9/44 (9/56).
Marshall's - Rs. 5/37-5/37-5/12-5/25 (5/25).
National Iron & Steel - Rs. 7/44-7/56-7/37-7/56 (7/06).
Steel Products (Pref.) - Rs. 3/62-3/69-3/62-3/69.
Textile Machinery - Rs. 20/20-20/65-20/15-20/65 (17/40).

INSURANCES

Concord of India - Rs. 13/06-13/12-13/06-13/12 (10/87).

Indian Aluminium - Rs. 15/00-15/69-15/00-15/56 (13/31).
Do. (Pref.) - Rs. 68/50-69/00-68/50-69/00 (65/50).

Indian Cables - Rs. 29/37-30/12-29/31-29/75 (24/82).
Indian Oxygen - Rs. 19/62-19/94-19/50-19/94.
Imperial Tobacco - Rs. 12/44-12/62-12/44-12/50 (14/12).
Indian Wood Products - Rs. 44/50-44/62-44/50-44/62 (38/50).

Ivan Jones - Rs. 1/75-1/75-1/75-1/75 (1/87).
Jardine Henderson - Rs. 70/00-73/50-70/00-72/50 (72/50).
Do. (Pref.) - Rs. 58/00-58/50-57/50-58/00 (58/00).
McLeod & Co. (1st Pref.) - Rs. 51/00-51/50-51/00-51/00 (52/00).

Do. (2nd Pref.) - Rs. 71/00-71/00-71/00-71/00.
Metal Box - Rs. 29/25-29/25-29/25-29/25 (27/37).
Martin Burn - Rs. 27/25-27/25-27/00-27/12 (23/25).
National Insulated Cable - Rs. 28/50-28/12-28/37-28/75 (24/75).

National Rolling & Ropes - Rs. 11/00-11/12-11/00-11/00 (10/44).
National Carbon - Rs. 25/62-26/12-25/62-26/06 (27/37).
National Rubber Mfg. - Rs. 14/00-14/06-14/00-14/00 (10/56).
National Tobacco - Rs. 13/12-13/37-13/12-13/37 (13/56).

Philips India - Rs. 15/25-15/87-15/25-15/87.
Rallis India - Rs. 42/75-42/75-42/00-42/00 (32/50).
Rohtas Industries - Rs. 23/50-25/12-23/50-25/12 (18/12).

Do. (Pref.) - Rs. 117/00-117/00-117/00-117/00 (122/00).
Do. (B' Pref.) - Rs. 58/50-58/75-58/50-58/75 (63/50).
Shaw Wallace - Rs. 11/95-12/00-11/87-11/87 (10/06).
Do. (Pref.) - Rs. 62/50-62/50-62/50-62/50.
Western Stockholders - NP 0/87-0/87-0/87-0/87.
Walford Transport - Rs. 1/97-1/97-1/94-1/94 (1/72).

OIL SHARES

British Burma Petroleum - Rs. 2/19-2/27-2/19-2/25.
Indo-Burma - Rs. 27/37-27/37-27/25-27/25.
Northern India - Rs. 1/69-1/69-1/69-1/69 (1/62).
Tide Water - Rs. 14/25-14/25-14/25-14/25 (13/75).

PAPER MILLS

Bengal - Rs. 91/00-91/50-91/00-91/50 (100/00).
Do. (A Pref.) - Rs. 105/00-106/00-105/00-106/00 (117/00).
India Paper Pulp - Rs. 22/37-23/25-22/12-23/25 (19/75).
Orient - Rs. 34/70-35/20-34/70-35/20 (24/45).
Do. (Pref.) - Rs. 88/00-89/00-88/00-89/00.
Sirpur - Rs. 12/56-13/00-12/44-13/00.
Star - Rs. 12/00-12/56-12/00-12/56 (10/75).
Do. (2nd Pref.) - Rs. 93/00-93/00-93/00-93/00 (98/00).

Shree Gopal - Rs. 16/25-16/50-16/25-16/37 (15/12).
Titaghat - Rs. 40/12-40/31-39/87-40/31 (33/62).

REAL PROPERTY

Hindustan Building - Rs. 4/19-4/19-4/19-4/19.

SHIPPINGS

Fraser & Co. - Rs. 11/25-11/25-11/25-11/25 (17/50).

India Steamship - Rs. 12/00-14/00-12/00-14/00 (10/40).

Port Shipping - Rs. 13/75-13/75-13/75-13/75.

SUGAR SHARES

Balrampur - Rs. 8/62-9/00-8/62-9/00 (5/37).
Carew & Co. - Rs. 8/50-8/50-8/37-8/37 (7/44).
Dyer Meakin Breweries - Rs. 12/37-12/50-12/37-12/50 (6/44).
Gwalior - Rs. 80/00-80/00-80/00-80/00 (69/25).
Hartabpore - Rs. 10/87-11/69-10/87-11/69 (13/50).
New Sagar - Rs. 4/50-4/50-4/50-4/50 (4/50).
Ramnagar Cane - Rs. 19/50-19/75-19/50-19/62 (20/87).
Raza Buland - Rs. 16/8

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (base: 939) has now been brought up to April 1958. Compared with March, the April indices for Government securities and preference shares show

drops of 1.8 points and 1.6 points, respectively. There were increases in banks 0.5 points, jute 5.2 points, minings and oils 1 point, cements 0.9 points, engineering 3.4 points, tea 16.1 points and miscellaneous 1 point, while decreases occurred

in cottons 10.4 points, coals 0.5 points, papers 4.7 points and sugars 2.4 points. Combining all the factors, the Capital variable securities index advanced by 0.4 points during April 1958.

MR. DESHMUKH ON THE FOREIGN EXCHANGE CRISIS

PREFERENCE FOR STEEL WORKS TO FERTILISER PLANTS CRITICISED

(FROM OUR NEW DELHI CORRESPONDENT)

THE former Finance Minister, Mr. Chintaman Deshmukh, has expressed his views rather candidly on the foreign exchange and other difficulties of the second five year plan in a letter he has written to the editor of a Tamil newspaper, Kalki. Mr. Deshmukh says: "It is probably correct to say that when the second five year plan was formulated, its foreign exchange component was not calculated very precisely. In the nature of things, this was a very difficult task for the Planning Commission, since the basic calculations were not made by it, but by the officers of the administrative Ministries and other bodies concerned. Perhaps the most inaccurate estimation by a Central Ministry was in connection with the iron and steel plants, the cost, and, therefore, the foreign exchange content of which has gone up by about 25 per cent. It is possible that there were similar under-estimates about the requirements of the railways. I refer to the public sector because the bulk of the foreign exchange required for the plan was to be for the public sector. There was also some kind of idea in the mind of the Planning Commission that so far as the private sector was concerned, its needs would be met by the proceeds out of the foreign exchange equivalent to our export surplus, supplemented by private investment to the extent of perhaps Rs. 100 crores. The Planning Commission has stated in some place that it has not been possible for it to set out precisely where and to what extent in each case this sort of under-estimation took place. But it seems to me that it has not even attempted this task seriously."

"Apart from this question of under-estimating foreign exchange requirements, there are, of course, the causes, by now well known, of the increases either in the foreign exchange cost of the various projects or the excesses over the original estimates. It is possible that on account of the rising trend of prices during the first two years of the plan, some projects cost about 10 to 15 per cent more in terms of foreign exchange than was taken into account for the purposes of calculation by the Planning Commission."

"As for the excesses, there was in the first place the need for diverting a considerable portion of our sterling balances towards additional capital requirements for our defence forces. During the first two years of the plan, the cost must have been about Rs. 100 crores, and there is no doubt this ratio will be maintained or exceeded during the remaining three years. A disquieting feature of the foreign exchange expenditure is that we seem to be buying up, in competition with a luckier Pakistan obtaining such supplies gratis, obsolete weapons of the conventional kind no longer required by the U.K. and other western countries."

Principal Excesses

"But the principal excesses were in two other directions both indicating failure of prudent or efficient management on our part. The first was over the import of foodgrains, which obviously reflected our failure to increase the production of foodgrains in the country to an adequate extent. The other was the by now admitted imprudent licensing of imports for the private sector not only of consumer goods, but also of producer goods and capital goods. Each of these calls for a little more detailed treatment."

"As for food production, I believe that even the statistical system for our estimation of crop yield is unsatisfactory. There is no all-India system, comprehensive enough to give results, accurate for the determination of Government policy, and estimates are made separately in each State. Although these estimates are professionally made in accordance with the most modern and technical methods, as for example, the random sampling method, there is reason to believe that the final results are influenced by the States' anxiety to avoid certain calculations likely to be unfavourable to them, such as the emergence of surpluses which might be purchased by the Central Government for feeding the people of the other States and thereby increasing prices in the supplying States. Some sort of indirect estimates, it is true, are made by the National Samples Survey organisation, but these are on the basis of a very small number of samples and are not, therefore, adequate for drawing conclusions in the determination of policy. It seems obvious that unless our system of measurement and estimates is correct, we shall not be able either to formulate plans for food production nor to find out whether these plans are being implemented from time to time."

The Crying Need

"This appears to me to be the crying need of the hour. There is also the need for reorganising the whole machinery for the food production. It seems to me that the time has come for setting up a National Food Production Council which would take charge of the execution of the work of implementing plans for food production out of the hands of apathetic or inefficient Ministries, and handing it over to a technically and administratively strong body not diverted by political

events. The calibre of agricultural Ministers in the States is none too high and yet there is probably a great deal of unwarranted interference in connection with the work of technical and administrative experts. There does not appear to be organised machinery at the lowest ground level for the purpose of distributing targets and fixing responsibility for each village or family for the increase of food production and for arranging the supply of various prerequisites for the purpose, such as fertilisers, finance, good seeds, implements, etcetera. The neglect to follow up the construction of major and minor irrigation works is by now well established. There are numerous areas where even when the reservoir is ready, hundreds and thousands of acres remain unirrigated, mainly because the field channels have not been dug by the tenants, either out of apathy, or the lack of necessary organisation of work by the officers in charge."

Lethargic Peasantry

"In considering this matter of food production, one is often struck by the failure of the assumption that each man is fully alive to his interests and will be willing to exert himself to the maximum extent if only the necessary assistance was offered to him. Experience on the contrary would seem to show that many peasants have neither the desire nor the initiative to put themselves to trouble even if it were for advancing their own interests and increasing resources for maintaining their families. But perhaps even more important than irrigation is the fertilisers. A careful analysis of the correlation of yield from an acre of cultivated land and the quantity of fertilisers applied to land would show that increased agricultural production is above all the function of the quantity of manure or fertiliser. Production is more powerfully influenced by this factor than all the other factors put together. As compared with other countries in the world, we in India use neither manure nor fertiliser except in an insignificant quantity; peasants buying the former and not being supplied or persuaded to use the latter. It follows that our planning was probably more inadequate in this single respect than in any other respect in not having provided for ten more fertiliser factories like Sindri. Had we done so instead of deciding to have a fourth iron and steel plant, I think we should have been well on the way to the solution of increased agricultural production."

"The importance of increased agricultural production in the context of foreign exchange will be realised when we remember that one million tons of grain surplus would mean a saving of about Rs. 50 crores worth of foreign exchange. Since our total foodgrain production is in the neighbourhood of 66 million tons a year, a 3 per cent increase would be equivalent to 2 million tons of the value of Rs. 100 crores. In other words, if we wished to be able to discharge our short-term foreign indebtedness, which we have built up somewhat hysterically during the last 18 months, all that we have to do is to raise the surplus of about 3 per cent more, over and above what is required for our expanding or developing economy in order to match by additional supply of these most essential consumer goods the additional investment and development expenditure undertaken on account of the implementation of the plan."

Use of Sterling Balances

"As for the imprudent use of our sterling balances for the private sector, it is my firm opinion that the recent note circulated by the Planning Commission hides more than it reveals. Had it gone into sufficient detail it would have disclosed that at least Rs. 100-crore worth of exchange was wasted in things that we do not want or do not want in such a hurry. This must be obvious from the fact that within six months of the discovery that sterling balances were running low, we were able to institute strict regulation of import licences. Obviously, had this matter been foreseen earlier, regulatory measures could have been taken earlier. If a correction was required and was found possible within such a short period, then the grant of import licences and their use towards the end of 1955 and middle of 1956 was somewhat unplanned and imprudent? It is not necessary now to enter into the question of how this happened, because that is a matter of administration at the Centre. Nevertheless, I feel it necessary to mention that the use of the foreign exchange resources by the private sector was a sort of hoarding on its part when it realised towards the end of 1955 that the second five year plan was going to be short by some Rs. 800 crores of foreign exchange. Our business men would not be what they are had they not promptly taken notice of this gap much earlier than public authorities and immediately set about to stock their larder. This they were able to do by a sympathetic Ministry, and before even the plan had been fully approved by the Governments and the Planning Commission, import licences had already been secured for a large variety of imports, building up the total sum of Rs. 500-600 crores in excess of the norms over

the last two years of the first five year plan. This was certainly very smart work on the part of the private sector."

Delay in Requests for Aid

"There is another matter to which some reference is necessary in the present context, and that is the delay of one year that took place in our endeavouring to secure foreign aid. By March 1956, the final shape of the plan was well known including the gap of Rs. 800 crores worth of foreign exchange, with perhaps an additional Rs. 400 crores in the offing. Although one-sixth of the plan was taken up for implementation in the first year in the budget framed by me instead of one-fifth according to a proper phasing, it was clear that even apart from adventitious circumstances foreign exchange would be tight and there would be a significant draught on our sterling balance resources. It was, therefore, the duty of the Government to have taken up this matter of endeavouring to secure assistance in September 1956 that is, as soon as the immediate business of planning and budget-making was over and as soon as the season was favourable for going out to foreign countries. By that time, the reasons of the draught on sterling balances on account of unregulated import licences towards 1955 and in the middle of 1956 had been well realised both by the public sector and the private sector, more particularly the latter."

"So far as the current plan is concerned, it is my belief that not more than Rs. 4,200 crores worth will be completed by the end of the second five year plan period and towards this, perhaps, we shall receive foreign assistance to

down the use of water. During my discussions with the Chief Minister, a view was expressed that the construction and maintenance of field channels should be the responsibility of the cultivators themselves. Under the West Bengal Panchayat Act, it is possible to make over this work to village panchayats."

In his report on Orissa, he says: "Under the Orissa Irrigation Bill, which is now before the State Legislature, the State Government has undertaken the construction of field channels, not only when there is default on the part of the panchayats, but also in all cases where it is considered expedient."

Unaccountable Indifference

It should be a matter for some concern that no effort has yet been made to ascertain the reasons for the general indifference of State Governments and the cultivators to raise the country's food production. As pointed out in these columns last week, no scheme for regulation of the cultivation of various crops, either by legislation or through price manipulation has yet been attempted. In the interest of food production, jute cultivation in pre-independence days was controlled and regulated. Why a similar plan has not been enforced in the case of cash crops, such as groundnuts and sugarcane, has never been explained. Then again, on political grounds, an uneconomically high price for sugarcane has been fixed leading to diversion of acreage from food to sugarcane.

Then again, where is the compulsion for the States to grow more food, when the Centre is always ready to supply all their needs? The Central Ministry of Food has to justify its existence. The grow more food campaign was faultily devised, and now it has become a vested interest. If every other thing fails, the organisation can justify its continuation on the ground of its employment potential. So far as the community development organisation is concerned, it has the backing of the high in the land. For instance, the Prime Minister said the following about it recently: "Much of the criticism against it may well be justified, but it is the most revolutionary thing we have undertaken in India and the results so far achieved, are truly astonishing."

Russian Aid for Pharmaceuticals

A Russian expert team has arrived in New Delhi from Moscow to hold technical discussions with its Indian counterparts on the development and expansion of the drugs and pharmaceuticals industry in India. Russia has shown willingness to provide financial and technical assistance for the development of this industry in India. These include an offer of a loan of 80 million roubles for the procurement of machinery and equipment. Welcoming the experts, the Secretary to the Central Industry Ministry, Mr. L. K. Jha, explained that a team under Dr. A. Nagaraja Rao, has been set up to study the technical aspects of the projects for the manufacture of synthetic drugs and other pharmaceuticals which are still being imported. He says that in the technical examination, the capacity already created in India for the manufacture of drugs and pharmaceuticals and the pattern of consumption in this country will have to be taken into account. The economic implications of the projects which might be taken up would also have to be examined in the context of funds available.

The Minister for Industry, Mr. Manubhai Shah, has told the Russian team that during the current

year, the Government of India wishes to complete the plans for the production of the entire range of drugs and pharmaceuticals, from the primary to the finished stage. India has a large population and to cater to its health requirements, the Government intends to develop capacity for the manufacture of high quality drugs on a mass scale and at as low a cost as possible. Explaining the present development of the Indian pharmaceutical industry, Mr. Shah has said that considerable progress has already been made, but efforts have to be made to fill the gaps in the production of synthetic drugs, alkaloids from Indian medicinal plants, hormones and other vital drugs and medicines. Perhaps some additional capacity for antibiotics might also be required over the present production in Pimpri and elsewhere. However, this is a matter for experts to estimate and recommend. The Minister has said that India is also anxious to develop the manufacture of medical instruments and equipment.

Reminder to States

The Planning Commission has urgently reminded State Governments for their estimates of financial resources for 1959-61 and the lists of projects which have not yet been begun or on which comparatively small outlays have been incurred, arranged in a broad order of priority. The outlays in the States for the last two years of the plan have to be worked out with reference to the distribution between the different sectors and heads of development, resources which each State can provide and progress made in each State in implementing its plan. The Planning Commission informed the States in May last that it was essential that each State should make sure that the resources which it had agreed to provide were forthcoming as far as the 1958-59 programme was concerned and that the States should explore how far they could raise their resources beyond the level agreed to when the second plan was drawn up, in estimating the financial resources for the plan for 1959-61. Only a very few States have sent in their estimates. The Commission has also informed the States that, in view of the fact that Part A of the plan has to be limited to the total outlay of Rs. 4,500 crores, no new commitments should be accepted concerning any project which has not yet been begun, without specific reference to the Planning Commission. Lists of projects on which only comparatively small outlays have been incurred and of those which have not been begun were called for by the middle of last July, but it is understood that so far information on this matter has not yet been received from any State.

Livestock Statistics

The third issue of the Central Ministry of Food and Agriculture's Indian Livestock Statistics covering the 1955-56 season includes a break-down by States of the sheep number figures obtained from the March-April 1956 Livestock Census, together with comparable figures for 1951, recalculated according to the new State boundaries after the re-organisation of November 1956. Out of the total sheep population of 38.7 million, 19 million or nearly 50 percent were in the four southern States, just over a third were in the north-west (including Bombay and Rajasthan) and the remainder were widely scattered over the rest of the country. Between 1951 and 1956, the numbers in the north-west appear to have risen by nearly 3 million, while those in the south fell by 4 million. Tentative estimates of wool production in the years 1951 and 1956 are also given in Indian

Livestock Statistics. These show a total of 65 million lbs. actual weight, for 1956, compared with 59.3 million lbs in 1951, or an increase of 10 percent. The figures are broken down as follows (in 1,000 lbs of actual weight):

	1951	1956
Fleece wool from adult sheep	45,346	55,315
Fleece wool from lambs	3,835	4,694
Pulled wool	4,981	5,041
Unspecified	5,100	—
	59,262	65,050

In 1956, over 42 million lbs or 65 percent of the total came from the north-western States, while only 21 percent came from the southern States in spite of the greater number of sheep in that area.

Agricultural Studies

The Indian Agricultural Research Institute, New Delhi, has been declared a university under Section (3) of the University Grants Commission Act. The Associate of Indian Agricultural Research Institute diploma will now be replaced by courses leading to the award of M.Sc. and Ph.D. degrees in agricultural science. Thus, the higher training for which Indian students have been going to foreign countries will now be available within the country.

A post-graduate School of Agriculture is being established in the Institute by the Government of India with the aid of the Rockefeller Foundation of the U.S.A. The Foundation will make available the services of experts for developing this post-graduate school. Among the first to be assigned by the Foundation will be Dr. E. K. Stakman, a mycologist of international repute. Candidates for the M.Sc. and Ph.D. degrees will be required to take up minor and subsidiary courses of closely related subjects, in addition to their major courses of studies. The maximum number of students to be admitted in a year will be 100 for the M.Sc. and 50 for the Ph.D. courses.

The calendar of the Indian Agricultural Research Institute states that the school is being developed to provide training and the granting of degrees of Master of Science and Doctor of Philosophy in the various fields of agriculture "on a level of quality, breadth and intensity comparable to those of the best institutions in the world." It continues: "The one aim is to train leaders who will be dedicated to the improvement of Indian agricultural technology and who have the competence in the scientific disciplines concerned to lead these programmes effectively."

The academic year will begin from 1st October, 1958, and will be divided into three trimesters: October-December, January-April, July-September. The programme of post-graduate education in agriculture will be under the overall supervision of the Dean of Post-graduate Studies, who will be responsible to the Director of the Indian Agricultural Research Institute, Dr. B. P. Pal.

The Indian Agricultural Research Institute was founded in 1905 in Pusa, Bihar, by the Government of India. It was then known as the Imperial Agricultural Research Institute. It was transferred to New Delhi in 1936. Throughout its career, the Institute has striven to bring science to the service of Indian agriculture, and it is today recognised as the premier institution in the country "where basic problems relating to the various disciplines of agricultural science are investigated."

London

BUSINESS CONDITIONS IN U.K. CONTINUE TO SLACKEN

T. U.C. SUGGESTS MEASURES TO AVERT RECESSION

(FROM OUR LONDON CORRESPONDENT)

BUSINESS conditions, both in Britain and abroad, continue to slacken, and the warnings to this effect recently provided by the Federation of British Industries' survey of working in industry and the call for re-expansion in western Europe to counter recessionary tendencies made by the O.E.E.C. meeting, have been reinforced by further evidence last week. The Midland Bank Review for August contains a valuable analysis of unemployment and short-time working in Britain. Summary of the current situation, the writers suggest that the facts indicate "a slackening of tension rather than definite turn to recession," and comment: "Yet this must be recognised as a condition which calls for unremitting watchfulness on the part of the authorities, for clearly the economy is now finely balanced, in a position from which it may respond quickly to either depressing or stimulating influences." The Bank goes on: "Quite apart from these general inferences, moreover, a survey of the facts emphasises yet again the seriousness of the longstanding difficulties of areas of relatively high unemployment, where the situation tends to worsen with even a minor slackening of tension, and where a recession, should it come, could so easily pass into depression."

These are the fears which have been causing anxiety in T.U.C. circles, and the Economic Committee has recently presented them to the Chancellor of the Exchequer, together with suggestions as to what should be done to avert the anticipated recession. Mr. Heathcoat Amory is believed to have assured them that the position is continually under review and that he will adapt his measures to the needs of the situation as it develops or as it could be foreseen. He does not, however, envisage an autumn Budget at present. The committee has said that Britain's economy will be helped by an autumn Budget with relaxation in taxation, cuts in Government spending, and encouragement to industrial investment programmes.

Production Still Declining

Since then, however, still further evidence of the recessionary trend has made its appearance. The index of industrial production for June, just issued by the U.K. Treasury, is again a point or so down. In the first six months of the year, it has been about 11 percent below the first half of 1957; but in May and June alone, it has been nearly 4 percent down on the year. These are not only major movements, but they support the idea that further official steps may soon have to be taken to counter a larger decline. The index for June is expected to be 137 to 138, compared with 141 in June last year, a period which included the Whitsun holiday. For the first half of this year, the index averaged 139 against 141 in the corresponding period of 1957 (1948 equals 100).

The report of the Iron and Steel Board, issued simultaneously, fits into the same pattern. The Board considers the recent decline in the demand for steel as a "short-term influence" and believes that the development programme of the steel industry should be pursued without change. But it points out that industrial production has not expanded for some time and that it will have to increase very steeply in the next four years to reach the level which was assumed for 1962 when the last steel expansion plan was prepared. The report suggests that heavy expenditure on new plant and equipment will continue, but not perhaps on the full-scale foreseen a year or two ago. Also, it is evident the Board has not as yet had any advice concerning any change in official policy.

Unexpected Rise in Reserves

Without the advantage of being able to see the economic picture as a whole, apart from just the facts of it, one is handicapped in deciding whether the Government is being unduly complacent over the more reassuring factors. The July gold figures showed a further \$8-million rise to \$3,084 million. This is the tenth successive increase and the reserves are now at their best level since September 1951. Considering the events of the month and the time of year, this outturn has been judged to be a poor month for sterling. It marks the beginning of the period when the pattern of payments and receipts makes for pressure on the reserves, especially in the face of the Middle East developments, which clearly shows no lack of confidence. Last month's gold surplus was struck after paying \$521 million to the European Payments Union for June and \$24 million to creditors of the Union in bilateral settlements. The July E.P.U. deficit was settled at £18½ million, which falls to be settled as to 75 percent in gold or dollars later this month, was also no worse than expected. Indeed, it was £61 million smaller than the June deficit and about the same level as a year ago.

Hire-purchase Boom

The continuing boom in hire-purchase sales goes far to explain the investment which leading

banks are now making in finance houses, the bulk of whose business is to finance vehicle sales. According to figures supplied by Hire Purchase Information, the number of vehicles bought on hire-purchase or by credit sales last month was 127,708, a total exceeded only in May this year and in May 1957, when a record of 130,190 was set up. More second-hand motor-cars were sold on credit in July than in any previous month, the number being 66,518. The number of new motor-cars sold, that is, 12,366, has only once been bettered. Credit sales of new and used commercial vehicles and motor-cycles all improved compared with the June figures and, excepting new motor-cycles, July sales were higher than in July last year.

The interest of the banks in this form of business, first shown in Scotland some time ago but not then felt likely to spread much in view of the obvious risks attaching to hire-purchase finance—so divorced from normal banking practice—suddenly developed a fortnight ago. It was obviously only a start and more was likely to follow, which is why reference to the development in these despatches was delayed. In the event, it is now possible to describe a whole host of moves instead of only one.

Interest of the Banks

Barclays were the first to take advantage of the relaxation of the credit squeeze and the more lenient attitude of the Bank of England towards associations between the banks and finance houses by acquiring a 25-percent stake in the United Dominions Trust by purchasing, at a discount of about 20 percent compared with the market quotation, a rights issue of 1 million £1 shares at £4 each. A similar procedure was adopted by the Westminster and Martins, who each acquired a 20-percent holding in Mercantile Credit, again by purchasing a rights issue of about 5 million ordinary 5s shares at 16s each, but unlike the first merger not undertaking to provide any additional loan capital to the finance house. The third development, however, broke fresh ground. It was made by the National Provincial Bank and was more or less a straight take-over bid, an offer of £9½ million in cash for the capital of North Central Wagon and Finance Company. The offer is 90s for each of North Central Wagon's 2,105,333 ordinary £1 shares. Prudential Assurance holds 55 percent of North Central's capital and has agreed to accept the offer, so the bank will acquire control. For North Central stockholders the bid means "jam today" rather than having to wait for the obvious longer-term benefits of closer association with a powerful bank. In all these cases managements are unchanged.

With Lloyds and the Midland—of the "Big Five" still uncommitted—the number of "available" hire-purchase houses of this size was reduced more or less to Olds Discount and Bowmaker. The next move, however, provided perhaps the biggest surprise and the greatest departure, for it took the form of an announcement that Samuel Montagu and Co. and Guinness, Mahon and Co. are partnering Olds Discount, in the development of a jointly-owned venture for which Olds will provide the management. For this purpose, the Industrial Banking Corporation—a finance company formerly owned by Guinness Mahon—has been re-created under a new board of directors, with headquarters at Olds Discount's offices in Nottingham. The company has an initial capital of £200,000, already subscribed, with Olds owning about a half share, and the merchant banks each holding a quarter interest. An important difference between this scheme and the others is that it does not involve the purchase either by Samuel Montagu or Guinness Mahon of shares in Olds Discount. Olds, with assets of over £17 million, are one of the largest units in the hire-purchase field. Initially the venture will be small in comparison with established credit banking businesses, but the possibilities of expansion are great.

Demand for Capital Growing

Figures for new capital issues in July, published by the Midland Bank, emphasise the continuing demand for new money. Last month's new issues totalled £33.2 million compared with only £14.1 million in July 1957. This excludes all borrowing by the Government and brings the total for the first seven months of 1958 up to £238.7 million against £225.6 million for the corresponding period of 1957. Larger issues made in July include those of the Mersey Docks and Harbour Board, Jamaica, A. F. Reed and Pressed Steel; the £4-million subscription by Barclays Bank to United Dominions Trust does not fall within the scope of the figures. Accidents of dating may distort the figure for any single month but the general trend is unmistakable. In only two of the first seven months of 1958 has the total of new money raised fallen below the corresponding figures for 1957. The amount of overseas issues included in the total

for the first seven months of this year was £39.5 million, the largest for some years.

New Aircraft for B.E.A.

Mr. H. Watkinson, U.K. Minister of Transport and Civil Aviation, has confirmed that the Government has approved the proposal of the British European Airways to conclude a contract with the Aircraft Manufacturing Company, Ltd. (Aircro), for 24 D.H. 121 aircraft. These will cost about £28 million and will be delivered between 1964 and 1966. A spokesman of B.E.A. has said that it is hoped that the D.H. 121 will be in service in 1964 on routes of between 500 miles and 1,000 miles. It will cruise at 600 miles an hour and, unlike other jet aircraft of that speed is designed for shorter routes. "Our hopes are to make it another Viscount in terms of export success", he adds. The plane will land on runways of 6,000 feet, which means that it is suitable for existing airports. The number of passengers is between 80 and 100.

Brevities

Sir Geoffrey Crowther has joined the board of Eastern International Investment Trust.

Mr. F. A. Bourke has been elected chairman and managing director of Dimbulia Valley Tea. Lt.-Col. J. R. P. Williams and Mr. J. A. Downes have joined the board.

A multiple company is distributing 2 million leaflets in campaign urging shoppers to buy only British-produced cotton goods.

Announcing a cut in the interim dividend from 5 percent to 3 percent, the directors of Jute Industries say that manufacturing profits for the year ending 30th September are likely to be markedly below those of the previous year.

Pathini Tea, whose estates are in Cachar, reports a net loss of £13,572 for 1957, against a net profit of £16,709 for 1956. The 6-percent Preference dividend is being paid, but there is to be no Ordinary distribution against 10 percent net for 1953.

Seven liners of the P. and O. and Orient lines built since the war, already partially air-conditioned, are to be fully air-conditioned. The companies have decided on this costly programme because of growing demands for air-conditioning on routes to the Far East.

The Iron and Steel Scrap Order is to be revoked from 1st November. The Government has decided that the public interest no longer needs control of the price and distribution. The control over export of scrap continues.

The United Nations is to call inter-governmental meetings in London in September to consider problems arising in international trade in copper, lead and zinc. The meetings are mere y to be "exploratory," to decide whether further action is desirable.

IMPROVED PROSPECTS FOR THE JUTE INDUSTRY

PROGRESS OF RATIONALISATION IN MILLS

By R. P. Goenka

THE fact that jute shares on the Calcutta Stock Exchange have risen, on the average, by 40 percent since May signifies something of a transformation in the outlook for this industry. After years of unprofitable working, most mills on the river are now in a position to earn reasonable profits. Fears that jute is destined to share the fate of the once prosperous, but now extinct indigo industry, appear to have been dispelled for the time being.

The most important factor in bringing about this change is the vigour with which modernisation and rationalisation have been put in hand. This fact was emphasised in the leading article in last week's *Capital*. About 50 percent of the mills are now equipped with up-to-date spinning and preparing machinery and the process is continuing, though the tempo may be slowed down because foreign exchange difficulties are likely to hold up imports of the necessary equipment. Besides making possible a considerable saving in labour costs, the new machinery permits the use of a high percentage of low-quality jute and, to this extent, reduces the dependence on expensive good quality strains. Nine mills, Standard, Union North, Waverley, Luxmi, Victory, Reliance, Lawrence and two of Anglo-India's units have been closed down, but as the loom hours have been transferred to other mills, production has not been affected. The resulting economies, through the spread of overheads over a larger output, have helped reduce costs further and strengthen the competitive power of the industry. For the 1957-58 season, production amounted to 1,056,200 tons, which is 31,000 tons higher than for the 1956-57 season.

This process of streamlining the industry through modernisation of the more efficient units and the closure of uneconomic ones has been accomplished while adhering strictly to the principle that there should be no retrenchment of permanent workers. Those permanent workers rendered surplus by rationalisation and closure have

been absorbed in other mills to which the loom hours have been transferred or have been provided with alternative employment. Those who left voluntarily were paid full retrenchment benefits. The second reason for the more optimistic outlook for the industry is the progress towards self-sufficiency in raw jute. At the time of partition, India was left with only about a quarter of the raw material required by the mills; 75 percent had to come from Pakistan. At present, about 90 percent of raw jute requirements are obtained from domestic sources. Further progress has been hampered by unfavourable weather conditions. Drought and pests are reported to have affected this year's crop. But it is no mean achievement that dependence on Pakistan is now only marginal and, with favourable weather, self-sufficiency could be attained. Pakistani cuttings are still eagerly sought after, but the industry is no longer at the mercy of the vagaries of Pakistani Government policy.

Competition from Pakistan

Dread of competition from the jute manufacturing industry in Pakistan has virtually disappeared. With modern machinery and an assured supply of domestic raw material, the Indian industry is confident that its experience, skill and capacity for organisation will enable it to hold its own against all comers. Pakistan's advantages in raw jute and up-to-date machinery, it is now realised, are more than offset by power shortage, unskilled labour, lack of experience in organisation and the absence of ancillary industries to maintain and service the complicated new machinery. The prospect of a large and growing internal market for goods is yet another factor that helps to brighten the outlook for the jute industry. Since 1954, the internal off-take has been rising, except for what will perhaps prove to be a temporary interruption in 1957 when home consumption fell by 14,000 tons. Over the years, as agricultural and industrial production increases under the stimulus of planned economic development, the industry can

reasonably expect a rising demand for jute bags for packing foodgrains, sugar, cement, fertilisers and other products.

Turning to the short-term outlook, it is probable that, as a result of the Middle Eastern crisis, there will be an intensification of the cold war and increased stockpiling purchases of jute goods, particularly by the U.S.A. American burlap consumption for the first six months of 1958 amounted to 406 million yards, as against 421 million yards in the same period of 1957—a monthly average of 68 million yards against 70 million yards in the first six months of 1957. The U.S. recession, which may have contributed to this fall, is now almost over, and the coming months usually witness a seasonal increase in exports to the U.S.A. any way, as well as to Argentina. Australia has not bought on any scale so far and, in the normal course of things, further orders from this source can be expected in the remaining months of the year. By and large, overseas buyers appear to have been living from hand to mouth and may soon feel the need for building up stocks.

The Futures Market

Jute goods prices are notoriously dominated by *fatka* operators and, though the reorganised futures market, since April, has succeeded in reducing, to some extent, the gyrations of prices, it is perhaps too much to claim that they correctly reflect the supply and demand position. It may be questioned whether the present big discount on forward positions of hessian is justified by the statistical position of the industry. Credit is due to those responsible for introducing the scheme of minimum prices for jute goods, which is still in operation. Unduly low prices, created by bear pressure in the *fatka* market, are a disservice both to the industry, which is thereby denied the true worth of its products, and to the nation, which loses valuable foreign exchange.

While the outlook for the industry is reasonably bright, there are still dangers that have to be vigilantly watched. The most serious of these is that demands for increased wages will undo the good work that has been accomplished through reorganisation and careful attention to efficiency. It is to be hoped that the proposed Wage Board, when and if it is appointed, will not lose sight of the fact that the health of the industry depends on its ability to sell its goods cheaply in a highly competitive world market.

However, the speech of the Union Labour Minister at the recent meeting of the Industrial Committee on Jute, is heartening as it assures that no extra wages will be imposed on the industry unless it can bear the burden reasonably well. Another danger is that inadequate attention to quality may lose valuable customers. The Australian complaints about the poor quality of Indian jute goods deserve the most urgent corrective action. Shoddy goods, produced at low cost, may be profitable in the short period, but from the long-term point of view of the industry as a whole, they are suicidal, besides being a national disservice.

Experiment in Uses

The development of new uses for jute goods is being carried out with commendable vigour. It is good that the industry should not rely on the traditional products, but should explore new fields where jute can be used. While this is being done in the overseas markets, adequate attention is not being paid to the application of these new uses in India itself. A case in point is the use of jute for lining irrigation canals. It might be worth considering whether this could be done in India. It is already being tried in the U.S.A.

For the promotion of exports, the feasibility of some variety of subsidy might be considered. An excise duty could be imposed on jute goods for internal consumption, the proceeds of which would be used for reducing the prices of those exported. Some sort of price stabilisation machinery for jute goods would also be worth considering. The I.J.M.A. minimum prices are not always completely effective as recent experience has shown. The revenue from an excise duty or cess on jute goods could be used, alternatively, for financing a price stabilisation organisation, which would buy at a minimum price all the surplus of ready goods offered for sale and liquidate all its non-position at the fixed higher rate without exception. This would work as a buffer during a period of panic or crisis. Such an organisation cannot be formed overnight, but a start might be made as soon as possible. The resulting stability would be of inestimable value both to the mills and to overseas buyers, who are often disconcerted and repelled by the violent price fluctuations in the jute goods market.

Speculation in raw jute thrives on contradictory and wildly unreal rumours and estimates about the size of the jute crop. Authoritative estimates by some official agency could perhaps help to reduce this uncertainty and leave less scope for exaggerated rumours circulated by interested speculators. Finally, in regard to labour relations, there is perhaps scope for agreements negotiated between the employers' organisation in the industry—the Indian Jute Mills Association—on the one side, and a national labour organisation, like the I.N.T.U.C. or the A.I.T.U.C., on the other. This would avoid the difficulties and the frustrations resulting from piecemeal agreements between individual mills and trade unions. Last but not least, the point is that all mills should become members of the Association. Unless this is done, the industry is likely to meet the fate which eventually awaits all who refuse to co-operate in their own interests.

Jute

GENUINE TURNOVER IN GOODS NEGLIGIBLE

MILL STOCKS OF HESSIANS FALL TO NEW LOW LEVEL

THE publication of jute goods stocks with the mills at the end of July was eagerly awaited in the Calcutta market. Good shipments of hessians during that month had given rise to the expectations of a large drop in stocks in this category, which proved to be the case. The category, which showed that hessian stocks, falling by 11,100 cords showed that hessian stocks, falling by 11,100 tons from the previous month, were the second lowest figure in recent years at 19,900 tons, which created a new low-level record of only 16.3 percent of the total stocks of all goods. Sacking stocks, on the other hand, amounted to 89,900 tons, and have only been surpassed once within recent years, in the corresponding month of 1956. The percentage of sacking stocks, however, created a new high level, and consisted of 73.6 percent of the whole—8 percent more than the previous month. Since October of last year, when sacking stocks stood at only 49 percent, there has been a steady increase, and in these ten months, stocks in this category have more than doubled.

This once again brought home to the market the extent to which sacking goods are being over-produced, and re-emphasised the fact—if it were necessary—that heavy goods production needs to be curtailed. Sacking stocks are now nearly twice the monthly production, and as such, are a constant bearish influence in a speculative market of this nature. In hessian, almost the opposite is the case, and over recent weeks, the market has been maintained by the strength of this section. The goods market saw some rapid fluctuations during the week, mainly on account of speculative operations. Speculators were very active, but real goods business was scarce. Overseas consumers showed no interest, and mills were only sellers for ready hessians or forward heavy goods, the near sections of sacking having again fallen below the I.J.M.A. minimum price. In general, the tone of the market was quiet, and the boost that Middle East events gave it earlier on had outlived its usefulness. Domestic events in the form of border incidents between India and Pakistan had more effect on the market than the international tension.

The fibre markets were very quiet, with mills taking only a limited interest. Prices declined, but in general, sellers continued to be reserved. Their attitude was governed by several factors, one of the main being the increased activity by mill agents in the mofussil, who are willing to pay higher prices than those quoted in Calcutta for similar grades. Secondly, the imports from upcountry are very small, and this has been reflected in the past week's arrivals in Cossipore. Sellers are still clinging to the hope that since mill purchases so far this season have been so small, there will be a general rush for jute in the near future. New crop reports continue to be favourable in most districts, and flooding in some areas has not been so serious as anticipated. Covering in the upcountry markets against August shipment contracts has been fairly heavy. In the Daissee-growing districts, the crop has been lately making good progress with alternate rain and sunshine. The outturn is expected to be much the same as last year, i.e., about 1,200,000 bales, with a much larger percentage of Daissee—as against Daissee Mesta and Daissee White—than previous years.

THE JUTE MARKETS

The forward markets showed a general downward tendency last week, and rates as given by the East India Jute and Hessian Exchange Ltd for the period 6th August to 12th August, were as follows:

	Hessian 40in. 80z. August	Sacking B Twills August	Raw Jute Upper Assam August
Opening	43.36	100.35	26.60
Highest	43.76	100.50	25.56
Lowest	42.40	98.75	25.88
Closing	42.68	99.35	

The market was steady at the opening on Thursday, and 40in. 100z. showed an improvement to Rs. 44.15 for ready shipment and Rs. 41.80 for October-December shipment. B Twills were unchanged at Rs. 99.85 and Rs. 102.35 for the same shipments. Heavy selling pressure in *fatka*, however, and the lack of fresh overseas interest caused a setback, and on Friday, hessians dropped 15nP and sacking 50nP. Mills showed no interest at this stage for any shipping period or any construction, and the main movement in prices was the result of speculative activity. Prices moved erratically with alternate gains and losses, but the general tendency was for prices to fall. After the week-end, further speculative selling in *fatka* reduced B Twills to Rs. 99.50 and 40in. 100z. to Rs. 43.35. Hessians were neglected and were particularly weak on Tuesday, falling to Rs. 42.40 in *fatka* at one stage. Towards the close, however, a steadier undertone developed on reports of small overseas enquiries.

	August	September	Oct.-Dec.	Jan.-Mar.
40in. 80z.	34.65 (37.77)	34.00 (37.06)	33.30 (36.30)	33.00 (35.97)
40in. 100z.	43.39 (47.20)	42.32 (46.43)	41.45 (45.18)	41.10 (44.80)
B Twills	100.00	100.65	101.75	102.00
Heavy Cees (Plain)	101.10	101.10	101.50	101.75
A Twills	120.25	121.25	122.25	122.25
Liverpools	113.00	113.75	114.75	115.00
Cornacks	102.00	102.25	102.75	102.75

(Figures in brackets indicate the value per 100 metres)

Raw Jute: Quiet conditions prevailed in the fibre markets throughout the week, and although business was again reported almost every day, the quantities involved were small, and confined to Indian mills. Sellers were inclined to be reserved in spite of the lack of interest, and offers were small. Any indications from mills were invariably at about 25nP below the quoted price. Most of the business transacted was for forward shipment, near delivery being almost completely neglected. New crop quotations opened at Rs. 27 a maund basis Bottoms for Assam-Northern jute for August-September shipment, but over the week fell 50nP. Upcountry markets were much steadier than local markets due to small imports and heavy covering for contracts due on 15th August. Old crop business was small, and consisted of Northern-Assam jute at Rs. 26 to Rs. 26.25 a maund. New crop jute from the same districts was reported at Rs. 26 for September-October shipment, Rs. 26.50 to Rs. 26.75 for August-September shipment and Rs. 27 for ready bills of lading. Desal White was also done at Rs. 25.75 to Rs. 26.25 according to shipment. Small lots of jute white were also reported at Rs. 23.25 to Rs. 23.50.

Arrivals in Cossipore last week dropped to 375 wagons from nearly 600 wagons in the previous week. During the corresponding week last year, arrivals were only 250 wagons due to a disruption

of transport by floods. A fair amount of business was transacted during the week, but quotations eased in sympathy with the quieter goods market. At the close, Kishanganj jute was quoted on the basis of Rs. 26 a maund basis Bottoms.

At the close on Wednesday morning, quotations were as follows:

Indian Jute:	Landed at mills Rs. a md.	Rs. a 100 kilos	Shipment Aug.-Sept.
Old Crop:			
Assam-Northern	26.00	69.68	"
Purnea Desal	24.75	66.33	"

Daissee White	26.00	69.68	Aug.-Sept.
Daissee Mesta	24.50	65.66	Sept.-Oct.

GUNNY SHIPMENTS IN JUNE

The following are the total net figures of manufactured jute goods shipped from Calcutta during the month of June, after providing for short shipments. These figures include shipments to coastal ports.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
Gross	2,081.3	18,331.8	20,413.1
Short Shipped	373.7	760.2	1,133.9
June 1958 (Net)	1,707.6	17,571.6	19,279.2
May 1958 (Net)	2,416.2	26,772.9	29,189.1
April 1958 (Net)	3,131.8	18,755.0	21,886.8
Sacking			
Gross	17,038.7	274.7	17,313.4
Short Shipped	561.1	11.7	572.8
June 1958 (Net)	16,477.6	263.0	16,740.6
May 1958 (Net)	25,110.1	868.2	25,978.2
April 1958 (Net)	24,953.6	878.2	25,831.8

I.J.M.A. PRODUCTION FIGURES FOR JULY

The Indian Jute Mills Association reports the total production of jute goods during July, as follows:

Description	Quantity
1. Gunny Bags	
(1) Hessian	5,335 tons (5,421 metric tons)
	1,69.8 lakh yds. (1,35.25 kilometres)
(2) Sacking	96.5 lakh Nos. (47,780 tons) (48,547 metric tons)
	11,54.9 lakh yds. (10,56.07 kilometres)
2. Gunny Cloth	
(1) Hessian	30,003 tons (30,484 metric tons)
	11,56.5 lakh yds. (10,57.47 kilometres)
(2) Sacking	1,172 tons (1,191 metric tons)
	26.6 lakh yds. (24.34 kilometres)

I.J.M.A. STOCK FIGURES FOR JULY

The Indian Jute Mills Association reports the total stocks of jute goods at the end of July, as follows:

Description	31st July, 1958 Lakh Yds. 000 Tons	30th June 1958 Lakh Yds. 000 Tons	Increase over (+) or decrease from (-) last month Lakh Yds. 000 Tons	31st July, 1957 Lakh Yds. 000 Tons
	(kilometres) (000 Metric Tons)	(kilometres) (000 Metric Tons)	(kilometres) (000 Metric Tons)	(kilometres) (000 Metric Tons)
Hessian Cloth and Bag	7.40 (6.76.34)	18.9 (10.53.91)	-11.1 (-3,77.57)	13.96 (12,76.16)
Sacking Cloth and Bag	21.47 (19,08.39)	89.9 (81.3)	+40 (+45,00)	15.30 (13,98.61)
Others	12.4 (15.3)	15.1 (15.3)	-2.7 (-2.7)	6.8 (6.7)
Grand Total (000 Tons only)	122.2 (124.1)	134.0 (136.1)	-11.8 (-12.0)	108.4 (110.1)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills. The figures in brackets are metric measures, based on the actual (detailed) figures, and are more precise.

LADY, YOU'RE LATE!

Who cares! She knows that the occasion demands the most careful selection—saree—chole—jewellery. And she spares no pains in making the right choice, for charm and refinement are a family tradition.

Nearly eighty years ago when BINNY'S started manufacturing their quality cloth, it was mainly suitable for men's wear. When ladies noticed how smart and handsome their men folk looked in BINNY'S cloth, they wished they too could obtain the same variety and quality in women's wear, and they were not disappointed. BINNY'S introduced silks and union fabrics designed to suit the taste of the most fastidious women. Soon BINNY became a household word and buying BINNY'S a family tradition.

Today, more people are able to buy more cloth, but discerning people look for these reassuring BINNY'S trade marks on the cloth they buy.

LONDON INSURANCE LETTER

RISK PREMIUM RATES REDUCED

WHEN the revolution broke out in Iraq, the immediate reaction of the War Risks Rating Committee of the Institute of London Underwriters was to raise the relevant premium rates very steeply. For insurance against the risk of war and strike, riot and civil commotion, on cargo to, from, or between, Iraqi ports was raised from 9d to 5s a £100. The rate of 9d had previously applied to Iraq indiscriminately, but in mid-July a rate as high as £1 a £100, additional to the increased port rate, was quoted on cargo for interior destinations in Iraq. These high rates were already applicable to Lebanon and were not changed for Lebanese destinations in mid-July. But standard risk hull insurance cover for ships using Iraqi or Lebanese ports was removed by Lloyd's marine underwriters, so that separate cover would have to be negotiated for any ships routed for those ports. Standard cover was soon removed from all Middle East oil-loading ports. In times of a disturbance, marine insurance rates fluctuate sharply. But it was soon recognised that the situation did not require such high rates as the War Risks Rating Committee had imposed; so the rate for ports only was cut from 5s to 2s 6d a £100, and the additional premium for interior destinations was cut from £1 to 5s for Lebanon and from £1 2s 6d for Iraq.

There are no "post-crisis" figures for export-credit insurance, as the Export Credits Guarantee Department's latest quarterly return relates to the period ended 30th June, but information from commercial quarters suggests that interest in this form of cover has been stimulated by the political crisis in the Middle East, and also by the financial difficulties of India—which, in the extreme case of default on commercial obligations, could evidently involve E.C.G.D. in claims aggregating £150 million to 200 million. In the June quarter, the Department transacted short-term business which increased the number of policies current from 4,288 at the end of March to 4,304 and the corresponding face value from £544.5 million to £564.6 million but the value of new medium-term business fell sharply from the high levels established in the preceding quarter—from £36.3 million in the first quarter of this year to £7.7 million in the second quarter.

Investment Prospects

The crisis affected investment of insurance funds to some extent; but it is difficult to disentangle this cause from the general reassessment of economic prospects. In the preceding months, insurance companies had been buying gilt-edged stocks and ordinary shares in substantial quantities, and by mid-July their uninvested resources were evidently not large. When the crisis broke out, when it seemed (temporarily) doubtful that the course of interest rates would continue downwards, when the British and other European Governments admitted that the trading recession was spreading to Europe, they withdrew their support from the stock market, but they did not appear as sellers. The investment position has since been "fluid", and it is likely that investment managers will proceed cautiously for some time though the basic assumptions underlying their more positive policies of the first half-year do not appear to be altered.

Lower Marine Insurance Profits

Year after year, marine underwriters have uttered dire warnings on the state of their market and on the profits—or lack of them—accruing from their business, but no big financial change has been obvious to justify their warnings. Now the accounts of Lloyd's not only provide the justification but also remind the doubters why the evidence has not been forthcoming earlier. The explanation is, of course, that the succession of claims requires that Lloyd's accounts be kept open for three years, so that the latest complete statistics are always a long way out of date. These accounts cover all of Lloyd's business and are not classified in fine detail. The most important individual category is marine insurance—nearly individual, anyway, though it is merged with aviation and transit insurance. This section is not the least profitable, in proportion to premium income, but it was a sharp decline in its proportional profit which caused a severe deterioration in the total 1955 account (closed in 1957). The figures presented to the U.K. Board of Trade and published late last month show that premium income in the whole 1955 account totalled £235.6 million, on which the profit was £12.8 million. The profit ratio was thus 5.44 per cent, and it compares with 6.78 per cent on the 1954 account—which itself was much less than normal. Business, showed in the 1955 account a larger profit on a slightly smaller income, but marine, aviation and transit insurance suffered a sharp fall in profit on a slightly larger income. In this category, the premium and other income in the 1955 account was £107.2 million, the profit £5.81 million, and the profit ratio, therefore, 5.42 per cent, whereas the preceding account showed a profit of 11.09 per cent.

There are two main causes of the deterioration in the marine market. In the first place, the size of the market—that is, the number of underwriters—has increased while the business available to underwrite has been virtually static; competition has, therefore, pressed down rates. Secondly, it was in the early years of this decade. However, heavy claims on marine underwriters. The thought that haunts some of them is that a success-market a heavier strain than it can comfortably bear.

Dispersal of Offices

Not all the problems of insurance companies are concerned with their business; in this era especially, organisational problems may involve big changes. The most interesting change now under discussion, or in the case of some insurance companies already carried out, is moving from London to a neighbouring county. At a conference of the Town and Country Planning Association in London recently, the problem of congestion in the capital city was discussed. After Mr. Dame Evelyn Sharp, Permanent Secretary to the Ministry of Housing, had emphasised the urgency of persuading commercial firms to follow the example of industrial firms which had moved out, representatives of some which had already moved described the effects of the change. It was conceded that a head office might have to be maintained in London but the need to do ordinary office routine on the same premises, when the telephone, telecommunication easy, was disputed. Mr. P. R. Cahill, Assistant General Manager of the Legal and General Assurance Society, said that his company's staff of some 700 in Kingswood, Surrey, was working "in complete integration" with the staff of rather more than 1,000 at the head office in London.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) showed a further rise of 0.2 percent to 116.1 during the week ended 26th July, 1958, compared with 115.9 for the previous week. The index was higher by 2.5 percent and 3.3 percent, respectively, when compared with the corresponding week of the previous month and that of last year. The monthly average for July this year stood at 115.0 against 111.7 (revised) for June 1958 and 111.9 for July 1957. The index for Food Articles advanced by 0.2 percent to 119.8 compared with 119.6 (revised) for the earlier week as a result of an increase in the prices of potatoes in Kanpur (+25%), milk in Bombay (+21%), onions in Delhi (+14%), meat in Bombay (+12%), bananas in Calcutta (+11%), fish (Pomfret) in Bombay (+10%), gingelly oil in Bombay (+8%), wheat in Raikot (+6%), gur (+5%), ragi, arhar and salt (+4% each), masur, groundnut oil and cloves (+3% each) and rice, jowar, bajra, barley, gram, mustard oil and coconut oil (+1% each) although the prices of milk in Calcutta (-37%) and in Ludhiana (-12%), potatoes in Patna and Delhi (-10% each), fish (Rohu) in Calcutta (-9%), eggs in Madras (-8%), mung in Bombay (-7%), meat in Ludhiana (-6%), urad in Bombay and tea (-5% each), sugar (-2%) and maize, cashewnuts and black pepper (-1% each) showed declines. The index for Tobacco remained stationary at the previous week's level of 91.1. The price of castor oil showed an increase (+3%) and in consequence, the index for the Fuel, Power, Light and Lubricants group advanced from 115.8 to 115.9 during the week. Higher prices of gingellyseed in Nagpur (+13%), bamboos (dry) (+9%), linseed in Calcutta (+8%), manganese ore (+4%) and raw jute, raw wool, groundnuts and castorseed (+2% each), raised the index for the Industrial Raw Materials group by 0.6 percent to 119.4 compared with 118.7 (revised) for the earlier week. The prices of rapeseed in Kanpur and raw skins (-6% each) and raw hides (-5%), however, moved down. The index for Intermediate Products rose by 0.3 percent to 112.3 compared with 112.2 (revised) for the previous week due to an advance in the prices of lead (+5%), aluminium sheets (Indian) (+4%), German silver (+3%), and brass and tin (+1% each) although the price of zinc in Bombay (-6%) indicated a fall. The index for Finished Products stood at 109.3 against 109.2 for the previous week. The prices of castor cake in Kanpur (+12%), sodium hydro-sulphate (foreign) in Bombay (+8%), groundnut cake in Kanpur (+7%) and in Bombay (-6%), linseed cake in Calcutta (-6%) and bricks (A. quality) in Delhi (-3%) showed variations.

COMPANY AND PUBLIC NOTICES

DALMIA CEMENT (BHARAT) LIMITED DALMIAPURAM

NOTICE is hereby given that the SIXTH ANNUAL GENERAL MEETING OF THE SHAREHOLDERS OF THE COMPANY WILL BE HELD AT DALMIAPURAM, (DIST. TIRUCHIRAPALLI, MADRAS STATE) on Thursday the 4th day of September, 1958 at 11-00 A.M. to transact the following business:—

1. To receive and adopt the audited Balance Sheet and Profit & Loss Account and Appropriation Account for the year ended 31st December 1957, the Report of the Directors and the Auditors thereon, and to declare dividend. (The Directors have recommended a dividend of 7% on Preference Shares, 12% on Ordinary Shares and 12% on Deferred Shares free of Income-tax).
2. To elect a Director in place of retiring Director Shri Kamalnayan Bajaj.
3. To appoint Auditors for the current year and to fix their remuneration. Messrs. V. Sankar Aiyar & Co., retiring Auditors are eligible for re-appointment.
4. To consider, and if thought fit to pass, with or without modification, the following Ordinary Resolution:—
"RESOLVED that the number of Directors on the Board of the Company be increased to Six".
5. To elect two Directors in case the Ordinary Resolution increasing the number of Directors on the Board is passed.
6. Any other business that may ordinarily be transacted at an Annual General Meeting.

The Share Transfer Books of the Company will remain closed from 18th August to 4th September, 1958, both days inclusive. The dividend when sanctioned, will be paid to those shareholders whose names would appear in the Register of Members on 4th September, 1958.

Every Shareholder entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of him/her and such proxy need not be a Shareholder. The proxies should however, be deposited at the Registered Office of the Company not later than 48 hours before the commencement of the Meeting.

By Order of the Board of Directors,
For DALMIA CEMENT (BHARAT) LIMITED,
S. C. AGGARWAL,
Secretary.

Dated, 1st August, 1958.

EXPLANATORY STATEMENT

Item No. 4 & 5 of the Agenda:

Sarvaswari Raja J. Rameshwar Rao and N. Ramasami Ayyar were appointed by the Board last year as additional Directors and under Section 260 of the Companies Act, 1956, they hold office only upto the date of the ensuing Annual General Meeting. The Directors have felt the need to strengthen the Board by a permanent increase in the number of Directors from four to six. A formal Resolution is, therefore, being placed for consideration of the Shareholders. If the proposal is agreed to, the Meeting will proceed to elect two Directors to make up the increased strength of the Board.

THE GENERAL INVESTMENT & TRUST CO. LTD.

NOTICE is hereby given to the members of the abovementioned Company that the Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Tuesday the 9th September, 1958, at 11-05 A.M. for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 28th February, 1958, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 26th August, 1958 to 9th September, 1958, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries.

Chartered Bank Buildings,
Calcutta, 5th August, 1958.

NOTE:—

- (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.
- (b) The Dividends, if declared, will be paid on or after 15th September, 1958, to those shareholders so entitled whose names appear in the Company's books on the 9th September, 1958 or to their mandatories. No application for Dividend Warrants will be necessary.

LODNA COLLIERY COMPANY (1920) LIMITED

NOTICE is hereby given that the Thirty-seventh Annual General Meeting of the Members of Lodna Colliery Company (1920) Limited will be held at the Registered Office of the Company, No. 6, Lyons Range, Calcutta, on Thursday, the 11th day of September, 1958, at 3-15 p.m. for the following purposes:—

1. To receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors.
2. To consider and declare a dividend in respect of the year ended 31st December, 1957.
3. To appoint a Director in place of Mr. H. J. Silverston who retires in accordance with the provisions of Article 120 of the Company's Articles of Association and, being eligible, offers himself for re-election.
4. To appoint Auditors and to fix their remuneration.

The Share Transfer Register of the Company will be closed from the 3rd September, 1958 to 11th September, 1958, both days inclusive.

Warrants for the dividend, when declared, will be forwarded in accordance with the registered instructions, but if no such instructions have been received, to the registered address of the Shareholders whose names appear on the Company's Register at the date of declaration.

By Order of the Board,
For and on behalf of

LODNA COLLIERY COMPANY (1920) LIMITED,
C. O. FOUNTAIN,
Director.

Calcutta, 13th August, 1958.

Note: A member entitled to attend and vote at the Meeting is entitled to appoint a proxy, who need not be a member of the Company, to attend and vote in his stead.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

AT a Meeting of the Directors held on the 6th August 1958, it was decided to recommend to the shareholders at the Annual General Meeting, which was fixed to be held on the 25th September 1958, the payment of a final dividend for the year ended 31st March 1958, of 3% (free of Income Tax) on the issued Ordinary shares, payable on the 27th September 1958.

The net profit for the year, after deducting all charges and expenses of management and providing for taxation, is Rs. 1,32,12,486.

Two interim dividends, each of 2% (free of Income Tax) amounting in total to Rs. 60,64,000 in respect of the year to 31st March 1958, were paid on the 28th September 1957 and the 8th April 1958 respectively.

After paying the final dividend amounting to Rs. 45,48,000 and allocating Rs. 2,64,566 to Capital Reserve, Rs. 3,03,239 to Development Rebate Reserve, Rs. 20,00,000 to Fixed Asset and Stock Replacement Reserve and Rs. 1,32,282 to General Reserve, the amount carried forward will be Rs. 24,04,558.

The Directors also declared a first interim dividend of 2% (free of Income Tax) in respect of the year to 31st March 1959, payable on the 27th September 1958.

The final dividend, if approved, and the interim dividend will be paid to the shareholders whose names appear on the register on the 25th September 1958 and dividend warrants in respect thereof will be despatched to such shareholders or their mandatories on the 27th September 1958. The share transfer books of the Company will be closed from the 8th September to the 25th September 1958, both days inclusive, and transfers received in order at the registered office of the Company up to the 6th September 1958 will be in time to be passed for the payment of the dividends to the transferees.

By Order of the Board,
J. R. BLAIKIE
Secretary.

Virginia House,
37 Chowringhee,
Calcutta.
7th August 1958.

NEW DOOARS TEA COMPANY LTD.

THE Board of Directors have decided to recommend to the forthcoming Annual General Meeting of Shareholders, a dividend of Rs. 6/50p per Preference Share and a dividend of Rs. 20/- per Ordinary Share, in respect of the year ended 31st December, 1957, without any deduction in respect of taxation payable by the Company.

By Order of the Board,
ANDREW YULE & CO. LTD.,
Managing Agents,
Calcutta, 8th August, 1958.

THE INDIAN IRON & STEEL COMPANY LIMITED

12, Mission Row,
Calcutta.

AT a Meeting of the Board of Directors of The Indian Iron & Steel Co. Ltd., held on the 12th August 1958, the Directors have declared an interim dividend of One Rupee per share on the Ordinary share capital in respect of the year ended 31st March 1958, being at the rate of 10% per annum without deduction of Indian income-tax payable by the Company. This action has been taken in order that shareholders shall not be kept waiting for their dividend in view of the closing of the Accounts for the year being delayed pending notification by Government of the revised sales retention prices of steel.

The Directors wish to make it clear in this connection that this dividend although termed "interim" will in fact be the final dividend for the year and that no further distribution in respect of the year ended 31st March 1958 will be recommended for consideration at the Annual General Meeting to be convened in due course.

As already notified the Ordinary Share Register and the Transfer Books of the Company will be closed from the 18th August 1958 to the 27th August 1958. Payment of this interim dividend will be made on or after the 15th September 1958 to those shareholders whose names appear on the Company's Register of Members for Ordinary Shares on the 27th August 1958 or to their mandatories.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDEGE,
Managing Director,
Managing Agents.

Calcutta.
12th August, 1958.

AS ORDINARY BUSINESS:

- (1) To consider the Revenue and Profit and Loss Accounts for the year ended 31st December, 1957, the Balance Sheet as at that date and the Report of the Directors and Auditors and to declare a Dividend.
- (2) To re-elect a Director who retires by rotation.
- (3) To appoint Auditors and to fix their remuneration.

The Share Transfer Books and Register of Members of the Company will be closed from the 29th August to the 8th September, 1958, both days inclusive.

By Order of the Board,
WILLIAMSON MAGOR & CO., LTD.,
V. S. VIJI,
Secretary,
Managing Agents.

Calcutta, 9th August, 1958.

Note.—A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a Member of the Company.

THE INVESTMENT & FINANCE CO. LTD.

NOTICE is hereby given to the members of the abovementioned Company that the Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Tuesday the 9th September, 1958, at 11-00 A.M. for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 28th February, 1958, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 26th August, 1958 to 9th September, 1958, both days inclusive.

By Order of the Board,
BIRD & COMPANY (PRIVATE) LIMITED,
Secretaries.

Chartered Bank Buildings,
Calcutta, 5th August, 1958.

NOTE:—

- (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.
- (b) The Dividends, if declared, will be paid on or after 15th September, 1958, to those shareholders so entitled whose names appear in the Company's books on the 9th September, 1958, or to their mandatories. No application for Dividend Warrants will be necessary.

THE HOWRAH-AMTA LIGHT RAILWAY COMPANY LTD.

NOTICE is hereby given that the One hundred and twenty-fourth Ordinary General Meeting (not being an Annual General Meeting) of the abovementioned Company will be held at the Registered Office, No. 12, Mission Row, Calcutta-1, on Monday, the 8th September, 1958 at 11-0 a.m. for the following purposes:—

1. To receive and consider the audited Accounts for the half-year ended 30th September, 1957, the Balance Sheet as at that date, and the Report of the Board of Directors and the Auditors thereon.
2. To declare a dividend on the Ordinary Shares.
3. As special business to consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as special resolution:—

"That the Articles of Association be altered in the manner following:—

- (a) Articles 82 and 83 shall be deleted and the following new Articles substituted therefor:—

"82. In addition to any other meetings, general meetings of the Company shall be held within such intervals as are notified in Section 166(1) of the Companies Act, 1956, and subject to the provision of Section 166(2) of that Act, at such times and places as may be determined by the Director".

"83. The General Meetings referred to in the last preceding Article shall be called Annual General Meetings; all other meetings of the Company shall be called Extraordinary General Meetings".

- (b) Article 87 shall be deleted and the following Article substituted therefor:—

"87. The ordinary business of an Annual General Meeting shall be to receive and consider the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring by rotation, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special business.

- (c) In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor.

- (d) Article 176 shall be deleted and the following new Article be substituted therefor:—

176. At every Annual General Meeting the Directors shall lay before the Company a Balance Sheet and a Profit and Loss Account made up in accordance with the provisions of Section 210 of the Companies Act, 1956, and such Balance Sheet and Profit and Loss Account shall comply with the requirements of Sections 210, 211, 212 and 215 and of the Schedule VI to the said Act, so far as they are applicable to the Company.

- (e) In article 180, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor.

- (f) In Article 181, lines 1, 2 and 3 the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor.

The Register of Ordinary Shareholders of the Company and the Transfer Books will be closed from the 30th August, 1958 to the 8th September, 1958, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member.

These notes refer to the Debentures on the next page.

Option to repay at par on 6 months notice—

(a) after 5 years from date of issue.

(b) at any time

(c) on or after 1-1-61.

(d) after 14-11-53.

Option to repay on 6 months' notice—

(e) at any time after 30-6-61 at 101%.

(f) at 101% between 1-1-60 & 31-12-64.

(g) at 102% after 30-6-56 but before 30-6-64.

(h) on or after 31st July 1950 at Rs. 102% or at par on or after 31st July 1955.

Option to repay on 3 months' notice—

(i) at any time at 3% Premium.

(j) at 1% Prem after 1-2-54 but before 1-3-51 and 1% Prem on or after 1-3-51.

(k) at any time at par.

(l) at any time after 31-3-62 at the rate of 1% Premium.

(m) Redeemable at 103% on 21-12-64 with option to redeem on any interest date at same premium after 30-6-59.

(n) at any time on two months' notice.

(o) to be redeemed at a premium of 10% Rs. 70,000 to be redeemed annually by drawing on 3 months' notice with option to redeem all after 5 years from date of issue or 6 months' notice. Option not exercised re-payment to be made after full term.

Option to repay

(p) at par after September 1956.

(q) at par on or after 1-12-56.

(r) on 30-6-57 on subsequent interest payment date on one month's notice.

(s) Rs. 100,000 Debentures to be redeemed annually by drawing from 1-6-56 with option to redeem at 100% between 1-

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.
