PARKINSON'S LAW AND THE BUSINESS WORLD

A JOKE AND THE TRUTH

ON a Friday morning in November about two years ago, an unsigned article in the *Economist* introduced the world to Parkinson's Law, and the phrase now seems assured of a place in the dictionary. The Law's entry into the world was tentative in the extreme: only a footnote said: "Why Parkinson's Law? Why not?" The impact was immediate. Everyone had noticed that government agencies have a tendency to expand, and then came a man from faraway Malaya to say that this was a law of nature. The discoverer's identity has since been established. This name is C. Northcote Parkinson, a professor of history who was a part of the bureaucracy during the war. The essay in the *Economist* together with nine others on allied subjects has now been published in book form by James Murray, and for 12s 6d the reader is guaranteed full value in terms of fun and instruction. As will be suggested later, other organisations may be deluding themselves in thinking that the Law operates only in governments.

For the few still unfamiliar with Parkinson's Law it is stated simply enough. "Work expands so as to fill the time available for its completion." "There need be little or no relationship between the work to be done and the size of the staff to which it may be assigned." and thirdly, "an official wants to multiply subordinates, not rivals" and "officials make work for each other." It must be the common experience of every taxpayer to see with varying degrees of distress that in public departments the staff increases daily with no visible addition to duties or noticeable expedition in their performance. The question is rarely asked whether some of the duties performed at considerable expense of time and money need doing at all. Organisations, says Professor Parkinson, are organisations subject to their own law of growth. Unpleasantly funny as the book is, Parkinson's Law has been doing one very good thing and another not quite so good.

Welcome and useful though Parkinson's Law may be for beating governments with—and they need regular beating like gongs and, according to a Chinese proverb, wives—it should not be forgotten that there has in fact been a considerable increase in governmental activity in recent decades. Whether governments are wise to take on so much of the work hitherto done, and rather well, by other agencies is another matter, although questions on this must constantly be asked and debated. Expenditure on "welfare" and "development"—the worst two confusers in our time—should be subject to ceaseless and relentless examination as to whose welfare and whose development is the pretext for assuming so much power and imposing so many taxes. If governments themselves cannot find out which of their officials contribute no more than delay and signatures to the deliberations on a file, it is the duty of the Press and the public to expose such cases of waste. It should be remembered still that the bureaucracy—nothing peculiar to democracies for totalitarian regimes have worse systems—often has very good reasons for circumlocution and delay.

Arbitrariness, often a contributor of efficiency and despatch, is all right in a business house. A sub-divisional officer with no checks and balances can make all the difference between efficiency and justice. Routine and precedents are rightly derided, but they have their place in public administration. It would be a matter of personal complaint alone if a certain company stopped buying something from a particular supplier, it would be a matter affecting public policy if an official discriminated between one citizen and another. Democracy's curse, delay, is thus also its protector. And this is where laughing with Professor Parkinson should be restrained, especially in countries where democracy as a form of government or a way of life is of relatively recent adoption. Red-tape strangles democracy and justice no more frequently than it stands in the way of arbitrariness and authoritarianism.

No comparative study has yet been attempted, but it may be true that in the under-developed

countries the bureaucracy multiplies faster than elsewhere. The reason for this is not far to seek. A great deal is sought to be accomplished in a hurry, and the appointment of a certain number of officials is often equated with achievement. A writer in the *Eastern Economist* in May last analysed the incredible expansion of the Press Information Bureau of the Government of India since 1939. Mr Parkinson's estimate of the average rate of bureaucratic growth was 5.75 percent a year. The score of this establishment is six times that. There has in fact been a very considerable increase in the volume of work done by this particular Ministry, and the criticism is unjust to the extent that a free country's need for publicity and self-assertion is not taken into account. Two questions remain unanswered still: (a) whether all questions remain unanswered still, and (b) whether the increase in staff has not been far beyond that really needed for the additional work. The story is well known in Delhi that every time the question of economy is raised, a certain bureaucrat simply "sacrifices" sanctioned and unfilled vacancies—men who were never needed at all.

The instance of the Press Information Bureau is significant for one or two other reasons. Closer analysis will show that a considerable part of the post-war inflation of staff in governments—and this is where the business world comes in too—has been under the head "public relations." Cutting out the cult they have made of it in the United States it is still necessary to recognise that there is now greater compulsion to "tell the people." In the newly independent countries, the compulsion is political, elsewhere it is commercial. A vast industry has thus been built up, and it is late in the day to complain that it is an artificial demand artfully created. Much of public relations, official and commercial, is probably wasteful, but here again it contributes something to the content of democracy in these parts of the world. The fact that governments need to explain their policies to the people for obtaining their consent to them

THE WAR ON INDIA'S FRONTIER

IT is not surprising that few people are aware of the extent of the differences between Tibet and China, because normally very little information penetrates this country. Nevertheless, it is remarkable that the fighting apparently in progress so near India's frontier has attracted so little attention. What is even more surprising is the silence of the daily Press in this country. The British Press, on the other hand, appears to take the matter more seriously, and although any reports must necessarily be somewhat speculative, the Tibetan revolt against Chinese suzerainty has received considerable attention. The American Press does not appear to have commented. This is strange, when one considers the communistic factors involved. But possibly the Middle Eastern situation has demanded too much attention and certainly there is little chance of the Tibetan dis-

under them for years. China's claim was merely a formula for imposing the communist will.

So far as can be discovered, the Chinese demagogues and puppet officials have made little headway in impressing the mass of the people. Indeed, their inept handling of the Dalai Lama has probably served to stiffen public opinion against them, for totalitarianism has never appreciated that it cannot entirely break down ingrained tradition and the teachings of generations, especially in countries as steeped in mysticism as Tibet. The picture of the fighting (if it exists) is confused, but it seems highly probable that casualties on both sides are heavy and, if reports arriving in Darjeeling and Kalimpong are to be believed, the Chinese are having to exert themselves considerably in their attempts to overcome the guerrillas in eastern Tibet. Reports estimate Chinese casualties at 50,000 killed and Tibetan at 15,000.

As far as India is concerned, it is not necessarily the fighting or its outcome that is important. Communist China has been perched on her frontier for eight years. Nevertheless, it is something she should not choose to ignore and is an example of circumstances where her moderating intervention might well contribute something material to the peace of Asia and, at the same time, benefit her own interests. Obviously she cannot side with Tibet, for India has taken care to cultivate friendly relations with communist China. Equally, she cannot approve of Chinese action, neither in the initial invasion nor the present heavy-handed domination. Here is India's dilemma, and its horns are very sharp. No doubt she would prefer to watch through her observers already there and not

to interfere, but it is doubtful whether she can afford to. Her interests are becoming directly involved, and, unless some positive steps are taken, she will be placing herself in an awkward situation.

India's direct involvement arises because it appears that the revolt is instigated and mainly directed by the exiled Tibetan officials now in India. Delegates from the Chulka Sum, as the guerrilla organisation is called, are reported to have arrived in this country seeking help. The guerrilla leaders are alleged to have declared that all Tibetans in India who do not join will be dubbed "traitors". Already Tibetans from among the 10,000 to 20,000 living in the region around Darjeeling are said to be on their way to Tibet in response to the call of the guerrillas. The part played by the Kashag (Tibetan Parliament) is not clear but, at the moment, it would seem to be firmly under Chinese control for, in an apparent attempt to counter the guerrilla influence and to placate the exiles, it has called on the exiles to return to Tibet, backed by Chinese promises of pardon and senior official posts: presumably, the Kashag has little choice. There have apparently been three official appeals for help from the guerrillas to India, all of which seem to have been ignored. At one time, they threatened armed excursions into Sikkim and Bhutan, with uprisings in sympathy in Darjeeling and Kalimpong, to make their cause known to the world. In face of all this, India remains apparently apathetic, although the latest reports indicate that the guerrillas intend to make one more appeal before attempting to recruit the aid of the western powers and the United Nations.

Any individual country, any regional group, can make an effective contribution to international liquidity, for any expansive action multiplies its effects. If Europe adopts an expansive policy, as proposed in Paris in July, and if that policy reverses the downtrend of production, Europe will import more commodities and additional purchasing power will be widely distributed. The same broad effect (not confined to commodities) would result from increasing investment in the Commonwealth. But there is an important distinction between these groups. European countries can, presumably, revive their trade by adapting their internal policies to the changed requirements, but the primary producing countries (whose internal policies are already variously adapted, but not all in favour of expansion) cannot safely increase their imports unless they receive external credits. Britain cannot easily provide finance, either by granting credit or by releasing sterling balances, but she can certainly afford to lose some reserves in the interest of expanding trade—which is also her interest. If she exports goods for the Commonwealth's development, she will have to import some materials to make those goods, and her balance of payments will be reduced; but a similar effect would result from a policy of internal expansion, which would not have the same broadly beneficial purpose.

A Commonwealth Bank to gather and distribute funds within the Commonwealth is one idea for the mechanism of financing, and in the United States Senator Monroney has proposed another, international organ, independent of the International Bank, for advancing capital—primarily but not exclusively American—to needy countries, on terms and for purposes that would not be fitting for the International Bank. This idea, now being considered by a body of experts in America, will evidently not have matured by the time of the Fund and Bank meetings in October, but it is an obvious subject for discussion there. Plans for increasing the Fund's capacity to lend will probably claim priority, but all constructive ideas are worthy subjects. However, exchanging ideas, necessary though it may be, is no substitute for action. What is required from the deliberations of these crucial months, through one agency or through various agencies, is readily usable finance.

RAPID EXPANSION IN WORLD SHIPBUILDING CAPACITY

THERE has been a rapid expansion in world shipbuilding capacity in the post-war era. Output from the world's yards has also increased. According to one expert, this is partly due to the emphasis placed on large oil carriers in recent years and partly to prosperous trading which has enabled owners of dry cargo ships to expand their fleets. Major shipbuilding countries have very large orders on hand. It is therefore likely that the rate of output in most cases will continue to rise until world demand is satisfied. British yards have orders for 6.3 million tons gross and those of Germany for 5 million tons gross. Japan has been building most of her ships for selling to other countries, while the U.K. and Germany are catering largely for domestic demand. According to the latest Lloyd's Register of Shipping, covering the second quarter of the current year, the total number of ships under construction was 1,651 steamships and motorships of 10,133,497 tons gross, or an increase of 68,038 tons gross over the previous quarter. This says the return, is the highest ever recorded. The U.K.'s share of the total is 22.6 per cent. The total does not include Russia and China, figures for which are not available.

The total tonnage under construction in the world for countries other than the country building, amounted to 4,072,596 tons, of which 20.4 per cent was being built in Japan, 14.5 per cent in Germany, 10.7 per cent in Italy, 9.6 per cent in the United States, 9.3 per cent in the Netherlands, 8.5 per cent in Great Britain and Northern Ireland and 8.1 per cent in Sweden. The countries "importing" the largest tonnage were Liberia (1,135,832 tons), Norway (765,096 tons) and Panama (511,660 tons). A reasonable explanation for this huge import figure by countries, the first and third of which are at an under-developed stage, is that the imports really represent flags of convenience registrations by shipping companies of some of the leading maritime nations designed to escape penal rates of taxation by their own respective Governments. When the Suez Canal was closed two years ago, it became known that the second largest fleet of ships using the Canal flew the Panamanian flag. Oil tankers under construction during the quarter amounted to 359 ships of 5,257,975 tons gross. A few of them were between 52,600 and 62,000 tons: one of them was the largest tanker so far laid down. This was 205,173 tons more than in the previous quarter. Here also, Liberia and Panama claimed fairly big shares of the total. While 78 ships were being built for the U.K. and 37 for Norway 35 tankers were under construction for registration in Liberia and 17 for Panama. The United States of America claimed 19, Italy 17, France 12 and Sweden 14.

Of the leading individual countries, the U.K., Germany, Italy, the U.S.A., the Netherlands, Swe-

den, France, Poland and Yugoslavia increased the size of their output, the last-named country showing the largest rise of all. Its increase was also the highest ever recorded, and according to the statistics in the returns, it is building ships for an unusual number of countries. The U.K. was building a total of 336 ships of 2,395,371 tons gross, which showed an increase of 31,517 tons compared with the previous quarter. The total comprised 86 ships afloat and 250 still to be launched. Britain's output has been maintained at about the quarterly average of 350,000 tons. But when some of the modernisation programmes are completed, it is expected that the rate of output will increase further. Of those countries showing falls, the biggest was that of Japan at 202,228 tons. Norway, Spain,

Denmark and Belgium were the other countries where the rate of output declined. Japan's fall was due to the decline in foreign orders. The rated capacity in that country has been placed at 2.5 million tons, compared with the U.K.'s 1.75 million tons and West Germany's 1.25 million tons. France, Holland, Sweden and Italy have important shipbuilding industries, but their capacities are well below one million tons. The decline in Japan's overseas orders perhaps signifies an era of greater competition in the world shipping market. Labour is cheaper in Japan than it is in the U.K. or West Germany and the shipbuilding yards are more up-to-date. Moreover, Japan has been offering very liberal credit terms; the one offered to India recently is typical.

Current News and Comment

Growth of General Insurance

The Insurance Year Book 1957, published by the Controller of Insurance, Government of India, contains no reference to life insurance now nationalised, but it provides a comprehensive analysis of the 1956 figures relating to general insurance in the country. For comparison purposes, the figures of previous years have been given in appropriate places. A study of the figures on the growth of this business in India is instructive. The gross premium written direct by the Indian insurers in the year 1951 was a little over Rs. 13 crores. It came down to a little over Rs. 12 crores in 1952 and the same figure was more or less maintained until 1954. From 1955 again, the upward trend was noticed, the figure in that year amounting to Rs. 13.77 crores. In 1956, the increase was remarkable when the figure exceeded Rs. 16 crores. The non-Indian insurers had the highest premium income in 1951, they having secured a little over Rs. 10 crores in that year. Thereafter, their business declined to Rs. 9.52 crores in 1952 and, with small fluctuations, more or less the same figure has been so far maintained—it was Rs. 9.58 crores in 1956. The Indian insurers thus participated to the extent of 62.7 per cent of the gross premium written direct in India, compared with 37.3 per cent obtained by their non-Indian counterparts in 1956.

So far as the net premium income in India is concerned, non-Indian insurers were almost at a level with the Indian insurers in 1951. In 1956, the share of the Indian insurers increased to a little over Rs. 9 crores, compared with Rs. 6.94 crores of the non-Indian houses, but the former's net premium was against Rs. 16 crores of gross premium written direct in India, while it was Rs. 6.94 crores of the latter against Rs. 9.58 crores of gross. The ratio of the net premium income to the gross written direct tilts heavily in favour of the non-Indian insurers. In the year 1951, the ratio was 57.4 per cent for the Indian insurers as against 68.9 per cent for the non-Indians. The Indian ratio showed no appreciable progress in the subsequent years and, in fact, showed a fall at 56.5 per cent in 1956. The non-Indian ratio maintained its steady progress throughout, the highest being in 1955 when it reached 73.1 per cent. In 1956, this figure stood at 72.5 per cent.

The wide disparity in the net and gross premium written direct for the Indian insurers shows their lesser holding power, compared with their foreign counterparts. The Indian insurers convert a large part of their gross premium written direct in India into net by elaborate arrangements made overseas whereby they obtain sizeable reciprocity against their reinsurances. The larger staying power of the non-Indian insurers is due largely to their long standing in the business and their world income which Indian insurers have yet to reach. The former's underwriting experience is also superior to that of the Indian insurers. A higher claims ratio for the Indian insurers was 35 per cent as against 22 per cent for the companies registered in the U.K. In marine, it was 70 per cent as against 41 per cent. In miscellaneous insurance, the Indian percentage was 49 (42). The claims outgo is the index of selective underwriting, and since U.K. companies represent almost 90 per cent of foreign insurance interests operating in India, their experience is representative of the foreign insurers as a whole. The latter's saving in claims was, however, largely offset by higher management expenses, it being 45 per cent as against 29 per cent of the Indian houses in fire insurance. The percentages in marine and miscellaneous insurances of British companies were 29 and 32 as against 27 and 26 of the Indian insurers. It does not matter if the gross direct premium income is low if the profit ratio is high and the staff has incentives for more efficient work because of good service conditions. Yet the question of gross direct premium income in India cannot be overlooked or treated lightly. On it depends the permissible ratio of expenses. In the year 1956, 36 non-Indian concerns contra-

vened Section 40 C of the Insurance Act, as against 21 Indian. It was the other way round in 1951 when the Indian concerns contravening were 35 as against only 11 non-Indian. Thereafter, the position for non-Indian insurers steadily worsened until the peak year was reached in 1956. This is largely due to their steadily declining gross direct premium written in India, although, paradoxically, with declining premiums they could offer better amenities to staff and could earn higher profits. This paradox emphasises the case for a re-examination of the standards adopted by Section 40 C.

Strikes and Lock-outs

A comparison of the labour situation in nine States of the Indian Union exchanging information on the subject, shows that West Bengal had the highest number of strikes, 44, in the month of May last. Kerala comes next with 22. Both these States suffered a loss of 181,598 and 17,914 man-days, respectively. Uttar Pradesh had nine strikes. Bihar had 14, Mysore 10, and Madras 12. According to a Press note issued by the U.P. Government, West Bengal and U.P. figure prominently in the matter of retrenchment. West Bengal retrenched 223 workers in eight factories and U.P. retrenched 183 factory workers during the month. The highest number of closures in May occurred in Kerala with 68 closed factories throwing out of employment 3,798 workers. There were eight closures in Bihar and six in U.P. There were 75 cases of lay-off in Uttar Pradesh involving 5,116 workers, and resulting in the loss of 189,636 man-days. The only other two States which reported lay-offs during the month were West Bengal and Bihar with five and three cases, respectively.

Tata Power Dividend

The chairman of the Tata Power Company Ltd., Mr. J. D. Choksi, in addressing the latest annual general meeting, referred to the plea made by shareholders at the previous meeting for the maintenance of dividends at such a level as would enable them to retain a net dividend comparable to what had been paid in the past. He assured the shareholders that the directors and the managing agents had carefully considered how far it was possible for the company to alleviate the tax burden on its shareholders, and, at the same time, fulfil the company's obligations for the payment of interest on loans and debentures and for the amortisation of the large sums borrowed from the World Bank and local institutions for meeting the cost of expansion. The board had, therefore, recommended a total dividend of 8 per cent on ordinary shares, or an increase of 1 per cent over what the company paid in the past years. Although this would be regarded by some as disappointing because the dividend was not tax free, Mr. Choksi assured the shareholders that the directors would keep this matter in mind and as and when finances permitted, the board would be requested to recommend increases in the dividend. Mr. Choksi explained that the company's inability to provide a tax-free dividend to the ordinary shareholders comparable to the dividends paid in the past, might be traced to the limited return and to the restrictive conditions contained in the financial provisions of the Electricity (Supply) Act, 1948.

"During recent years, the company has had to resort to heavy borrowings to finance the large-scale expansion programmes undertaken to meet the very large increases in the demand for electricity in our areas of supply. An industry, if it is to exist and develop must be able to provide in the returns, which it is allowed to earn, an element for expansion. With the return limited as it was in the year that has closed to 51 per cent, now increased to 6 per cent, there is no such margin provided," Mr. Choksi said. He added that were

it not for the resources built up before the coming into force of the Act, it would not have been possible to undertake the Trombay project and he affirmed that for some time now, the industry was suffering from a lack of capital which was continuously required to meet growing demands. Even in the matter of development rebate, the company was deprived of the substantial concessions allowed to industries in general under the existing tax laws. Another unfortunate feature against equity capital, said Mr. Choksi, was the treatment of dividends by the present tax laws because of the difference between the depreciation allowances under the Electricity (Supply) Act and the Income Tax Act. "The Federation of Electricity Undertakings has constantly urged the Government to improve the financial provisions of the Electricity Supply Act with a view to attract the much needed capital to the industry. A representation is before the Government at the present moment and it is hoped that some of the very reasonable suggestions made by the Federation will be put into effect," Mr. Choksi said.

Recovery in Textile Output

The textile industry was able to step up its output last month. The production of cloth came to an estimated 420 million yards, against 388 million yards in the previous month and that of yarn to 146 million lbs in June. In spite of this recovery, output is running at a lower level than last year. Output for the first five months of 1957 came to 3,169 million yards of cloth and 1,040 million lbs of yarn. The figures for the same period of this year are 2,871 million yards and 965 million lbs, respectively. Cotton consumption at 367,519 bales touched a new low during June. This consisted of 324,759 bales of Indian cotton and 42,762 bales of foreign growths. The total consumption of Indian cottons during the ten months ended 30th June, 1958, amounted to 3,685,317 bales and that of foreign cottons to 473,004 bales. This compares with 3,896,441 bales and 471,819 bales, respectively, for the corresponding period of the previous year. Stocks of Indian cottons with mills as on 30th June, 1958, amounted to 1,286,312 bales and those of foreign growths to 160,969 bales. Stocks at this time last year came to 1,432,980 bales and 220,796 bales, respectively. The Japan Cotton Spinners Association reports that the July output of cotton yarn in that country came to 186,093 bales or 1,440 bales less than in the previous month.

Madras Electricity Board Loan

A 41 per cent loan for Rs. 2 crores by the Madras State Electricity Board has been announced to finance the Board's capital operations. The Board stock is a trustee security, approved under the Insurance Act. It has been guaranteed by the State Government, and the issue price will be Rs. 99 per cent. Its assets now exceed the liabilities and its regular revenue is running at over 5 per cent of the capital at charge. The State Bank of India is in charge of the loan operation, which comes after the swift success of the Bombay Corporation's loan and the gradual increase in the Treasury bill tender.

An increase in rural power supply has been promised along with the completion of the Periyar and Kundah projects by 1960, which have been undertaken to ensure smooth power supply during the summer months to Madras city. The electricity stock, issued at a discount of 1 per cent, may appear more attractive than the land mortgage bank debentures floated also with Government guarantee. It is possible that the redemption arrangements made by the Board will make it particularly attractive to institutional investors to whom a ten-year loan will be preferable to a 4 per cent State loan quoting over Rs. 98 at present. The loan will perhaps encourage other statutory authorities in Mysore and Kerala to attempt such borrowing, and give relief to the Governments there which have to meet the cost of other development schemes. Power supply is more or less a State monopoly in Madras, private distributing companies having a limited field of activity, and a take-over of these in the future by the Government under the law passed in 1951 is not unlikely. The issue may help raise the prices for joint-stock company debentures which offer 5 per cent or more.

Taxation by Panchayats

In its chapter on panchayat taxation, the Taxation Enquiry Commission, which submitted its report four years ago, posed the query whether the emphasis should from the beginning be so much on the conferment and exercise of tax powers—rather than, for example, on voluntary contributions and grants-in-aid—as to invest the panchayats with an initial handicap. That such conferment of taxation powers, which creates the illu-

Without Prejudice

A GROUND FOR DIVORCE

THE OBLIGATION OF BANKERS

(FROM OUR LEGAL CORRESPONDENT)

WE do not wish to use the language of exaggeration, but this case from Scotland poses what is about the most remarkable legal question which has been our lot to consider for a great many years. It is this. Can a woman commit adultery with a man after that man is dead? If you lay Capital aside at this stage, we would be prepared to wager that you might turn this question over in your mind on and off all day without coming to any other conclusion than that it is a preposterous one and waste of time to consider it. But it is not; and the first few lines following will supply the clue. A gentleman in Scotland filed a suit in that country for divorce against his wife who lived in New York. Grounds: his wife's adultery. The husband and wife had lived apart since March 1954. Nevertheless, in July 1955 the wife gave birth to a child. It was common ground that the husband was not the father of the child. *Prima facie*, therefore, a clear case of adultery. But the wife's claim was that she, being a virtuous woman desirous of issue, had, through a donor, undergone the operation or process of artificial insemination. That, she said, did not constitute adultery.

The case came on for hearing before Lord Wheatley in the Court of Session, Edinburgh, and aroused

enormous interest. We have always regarded it as obvious that adultery involves sexual intercourse; but we are not so sure about that now. Lord Wheatley came to the conclusion that in Scots law, artificial insemination was not sexual intercourse and, therefore, even if administered without the husband's consent, was not adultery. The husband's contention was that even if the treatment had taken place, which he did not admit, it was no defence, being adultery. As has been said, his lordship held that artificial insemination was not adultery, but put the wife to strict proof that she had, in fact, undergone the treatment by supplying full details as to where and when it had taken place, who administered it and who was the donor. The case was adjourned, but at the resumed hearing the wife by her counsel declined to supply the information. So the case was put in the list of undefended suits. But if the wife had proved the fact of artificial insemination, then the husband, subject to his right of appeal, would have lost his case by Scots law. Scotland, however, has her own laws which do not extend to or bind the English courts and vice versa. The case has aroused a great deal of discussion in England where the preponderance of opinion seems to be that if administered without the husband's consent, artificial insemination is adultery. If it is, we have a surprising answer to the question with which we opened this note. As in the case of donated blood, the donor may die in the interval between donation and the actual insemination. If he does so, then a woman may commit adultery with, and conceive a child by, a man after that man is dead. In short, she may commit adultery with a test tube.

Here is a case on negligence, the decision in which may or may not be a clue to the quiz which follows it. G was employed by a firm of builders

and repairers in London as a storekeeper, and the plaintiff was also in their employment. The defendants' manager instructed G and the plaintiff to proceed to Hurley and carry out some repair work. G owned a motor-cycle combination, and the manager told him to use this for the journey and take the plaintiff with him. After several hours' work, G found it necessary to go some five miles into Maidenhead to procure further materials and tools, taking the plaintiff with him in the side car and while there, they both had a meal. On the return journey from Maidenhead, an accident occurred due, in fact, to G's negligence. G was killed and the plaintiff was injured. (1) Are the defendants liable to the plaintiff? (2) If so, can they claim indemnity against G's estate concerning which a grant of administration was obtained more than six months before the start of third party proceedings against the administrators?

Yes, said McNair J. to both questions. As to (1), G was acting in the course of his employment. Even if the journey to Maidenhead had been only for the purpose of a meal, and no question of tools had arisen, it was fairly incidental, since the job was an all-day job, to the work which both servants were instructed to do. As to (2), there was no implied term in G's contract as a storekeeper, that he would indemnify his employers for his negligence when assisting them by using his own motor-cycle for their purposes. So far as there, as McNair J. held that the employers could claim indemnity against G's estate for their liability to the plaintiff on grounds provided by a 1935 Act, which has not been reproduced by the Indian legislature. So we think that in India no right to such an indemnity could be claimed.

[Harvey v. R. G. O'Dell Ltd. and another. Galway (third party). 1958. 77. Law Notes. 89.]

As for the quiz which follows for which we are again indebted to the learned editors of *Law Notes*, the reader should not have much difficulty about it as we have discussed the principles involved in recent articles.

WHAT IS WRONG HERE? The business man was bitter. "You don't expect men to run amuck on bicycles. What's that? No, it was only a pedal cycle, but this wretched employee of mine was in a hurry to get home to his dinner and knocked somebody down in the process. What makes it worse, he wasn't even at work at the time. He had finished for the morning and was cycling home when he knocked his victim down. As the cyclist is my servant and it was my cycle and he had my permission, I suppose I shall have to pay the victim and look pleasant about it. It isn't a big claim, mercifully. What, consult my solicitor first? Why on earth should I? He will only tell me what I know already, namely, that I have got to foot the bill, and then send me another bill for his advice." But his listener disagreed. "I am not so sure about it. I should have thought that legal advice on the claim might be helpful." Who was wrong on this point? Answer at end of this note.

Sellers contracted to deliver to buyers in Jordan a large quantity of steel bars in two instalments, payment to be made by two confirmed letters of credit with an English bank, one for each instalment. If the buyers allege that the first instalment is defective, can they obtain an injunction restraining the sellers, who had realised the first letter of credit from drawing on the second one?

"No," said the Court of Appeal (Jenkins, Sellers and Pearce L.J.J.). "Although the Court had jurisdiction to interfere, an elaborate commercial system had been built up on the footing that a banker's confirmed credit imposed on the banker an absolute obligation to pay, irrespective of disputes between the parties as to whether the goods were up to contract or not. It would be wrong in the present case to interfere with the established practice." One would like to see a full report of this judgment, though the above is the crux of it. The Court accepted the universal practice that the banker's obligation to pay is absolute. But how can it be absolute if the Court has "jurisdiction to interfere" and prevent payment though in particular case before it, it decided not to do so?

[Hamzeh Malas and Sons v. British Imex Industries Ltd. 1958. 77. Law Notes. 56.]

Answer to "What is wrong here?" In *Higbid v. R. C. Hammett Ltd.* (1932). 49. T.L.R. 104, the Court of Appeal held that the employers were not liable when a boy, riding his employers' bicycle home to dinner with the permission of the employers' manager, negligently rode into a pedestrian. There was no evidence on which the jury could find that the accident occurred in the course of the boy's employment. Thus the business man may well not be liable for the injuries in question. A slight difference in the facts, however, might lead to a contrary result, e.g., if the employee's journey was partly for the employers' purposes as well as for his own, the negligence might be in the course of the boy's employment. The reader may remember that we dealt with this contingency fully in a recent article describing a supposititious journey from Ranchi to Calcutta in a borrowed car. In *Lister v. Romford Ice and Cold Storage Co. Ltd.* (1957. A.C. 555), the House of Lords held (by a majority) that a master negligence when he, the master, is morally blameless, has a right to indemnity from his servant. But the law in England appears to be different causing injury for which his master is liable, is in England seek indemnity from the employer, could servant's estate, but not in India. So legal advice was certainly worth while.

[77. Law Notes. 1958. 78.]

A Ditcher's Diary

THE BEST THING IS TO STATE IT QUITE PLAINLY that this instalment of the Diary is being written a whole week in advance of publication. I am sure I cannot always have succeeded in concealing that sometimes it is hard to find enough subjects from the events of the previous week. When it comes to a week unborn, well, even a prophet such as I often appear to claim to be is wise to hesitate. I wonder whether ever before in man's history, it has been so difficult to see a short week ahead. What is there that cannot happen during my visit away to a country I propose to name only on my return? It is unlikely that the economic policies of the Government of India will be noticeably more sensible in the coming seven days. It is highly improbable that the stuffed dove of peace flown so often from the Kremlin will come to life and shed its claws. It is just about impossible that Mr. Dulles will in a matter of seven days live down his fondness for what he calls the brink. My list is exhausted, and outside it anything is possible. Calcutta's tramwaymen may go on with their folly in callous disregard for the convenience of the public. Mr. Nehru may go on being undecided about the real nature of the communist Government in Kerala. The Lok Sabha may go on asking the Government what has gone wrong with the second plan, and Mr. Morarji Desai and others may go on saying that "basically", whatever that means, the Indian economy is entirely sound. It will be seen that none of my prophecies, such as they may be, are strikingly original. And this makes me wonder whether, in spite of our grave forebodings on the unknown future, we do not all really and fundamentally believe in the continuity of human life. It is foolish to say that the world has not undergone great changes; so has man's nature in some ways. And yet, for all the atom and hydrogen bombs and *sputniks* and what have you or have you not, the faith lingers on that—somehow, through some force or another, by some merciful intervention of some unknown, unseeable hand—life's glory will continue. Old-fashioned? Human nature is a pretty old thing.

THE BAGHDAD PACT NEVER HAD MANY FRIENDS in this part of the world, and now that it has added to its other shortcomings the unpardonable sin of failure, I suppose people will be less inclined than ever to hear anything said in its favour. I do not, therefore, propose to say much, except to recall that it did have an "Economic Commission" which, naturally got less publicity than its military bodies, but which nevertheless did work that cannot all have been out-dated by recent events. The tangible achievements of the Baghdad Pact on this side were, admittedly, uninspiring and I daresay not one Muslim from the Hellespont to Chittagong noticed any improvement in his standard of living during its three years of activity. But the same can be said of most other regional plans for economic development. The point is rather that a devoted and competent team of economists—Muslim, British and American (for the Americans were full members of this part of the show)—did a few years' very useful work surveying the economic problems of the immense region concerned, and preparing plans for co-operative development. They studied, and draughted realistic plans for agriculture, communications, hygiene, soil conservation, malaria control, education and so on in Turkey, Persia, Iraq and Pakistan. Their most spectacular achievement was the foundation—in Baghdad—of a nuclear research centre where

Middle Eastern technicians have been working under a British director. Some of their plans were rather woolly, such as the proposal for a "common market". Others were bold but not impossible, such as plans for a road from Karachi to Ankara. Of course, the vice of most of these projects was that they were based on the supposition of extensive American financial aid, which was never forthcoming. And in general they had the weakness of trying to cover a region that could never form an economic unit because it was conceived as a strategic one. In other words, you cannot make a military pact look peaceful by tacking on to it an economic co-operation plan, because a region that hangs together strategically might make no sense economically. All these faults notwithstanding, I cannot believe that the very creditable effort at preliminary planning accomplished by the Baghdad economists is going to be washed out by the current political upheaval.

"THERE ARE AN AWFUL LOT OF LAWYERS IN THE American State Department," I find Earl Attlee quoted, "and I do not think that they are awfully good in foreign affairs." If you believe no more in international law, the existence thereof, that is, than I do, you too would be inclined to disbelieve in the indispensability of lawyers in foreign affairs. But then, it is easier to say which intellectual equipment is not suitable for conducting relations between nations than to say what is. One Mr. Dulles cannot make a whole argument. Earl Attlee himself chose the late Ernest Bevin as his Foreign Secretary, and although the latter proved something of a success with the Russians, I would not say that he was obviously the best choice to begin with. Mr. Herbert Morrison, another of Earl Attlee's choices, was a near-disaster. India has had only one Foreign Minister so far, and that Mr. Nehru was once called to the bar as neither here nor there. As a journalist, I can hardly forget that Mr. Shepilov, a former editor of *Pravda*, was made Foreign Minister. That he is no longer in that office proves neither my profession's fitness nor otherwise in foreign affairs; the Kremlin goes by other criteria. Although I believe that there are not many things a good journalist cannot do as well as anybody, I do not know that a good journalist generally cares to do anything but journalism. Would a doctor do? Or a philosopher? Modern diplomacy has very little to do with what is called the bedside manner; a professional pugilist would have done better in some debates I've heard of. It is only in the universities that there is still a faculty called political philosophy; for the rest, philosophy is not much use with men like Mr. Khrushchev. I would say that, despite all its complexities, excessive specialisation is a dangerous hindrance; here I would accept Mr. Dulles as a whole argument. What's wrong with the old idea that a liberal education, a clear head and some hard common sense will make you a good Foreign Minister—as it will make you a good anything-else?

I CONFESS TO HAVING FELT SOME SURPRISE WHEN I saw India placed third in a list showing the number of book-titles published last year throughout the world. Russia came first with 37,500 titles, Britain second with 18,741 and India next with 17,400, before (in this order) Japan, West Germany, the United States, France and China. The recent

U.N.E.S.C.O. publication in which I found these statistics provides the answer when it notes that "titles" included all Government brochures. Any one who is on the receiving end of the publicity and educational efforts of the various Indian administrations will know that if you count every pamphlet, titles soon add up. The same fact certainly accounts in part for Russia's apparent advantage. Moreover, I presume that the same book published in six regional languages counts as six titles in this calculation; this would further explain some part of India's performance and probably most of Russia's—for the Russians publish in 85 languages. You have to remember the relatively small populations of Britain and France, the fact that their publishing industries print mostly in only one language and that their governments make quite a modest propaganda effort, before you can see that their 18,741 and 10,410 titles, respectively, are vastly more significant than Russia's 37,500. As for the copies of books per head of population printed last year, the U.K. leads far and away with over five, the U.S.S.R. next with just over three, then France with just under three, with the U.S.A. lagging badly with just one book per head. India of course would not appear in this list because most of the "titles" put out by Ministries have a negligible circulation. The only other figure in this compilation that might have any cultural significance refers to translations. English is by far the most translated language: 4,400 English books were last year translated into 16 languages. Second was Russian, with 2,800 books rendered into 15 languages, but most of them into Czech. French was third—but rather than quote more statistics about that I shall lapse thankfully into anecdote and report that Mademoiselle Sagan's *Bonjour Tristesse* has found its way into the Oriya tongue!

FOR THE FIRST TIME IN TEN YEARS, highly skilled clerks have caught up with manual workers in the national wage stakes in Britain. Both now average around £13 a week. In some large businesses a few senior men have broken into the £1,000-a-year class. These are among the interesting facts brought out in the latest two-yearly survey of clerical salaries published by the Office Management Association, *Clerical Salaries Analysis*, 1958. Average weekly earnings on the final survey date, 1st March, were: Men: for general skill and experience, just over £11; highly skilled £13; very senior grades, £15 to £16. Women: under 30, routine workers, such as a copy typist, £6 10s; over 30, £7 12s; private secretaries, £9 4s; very senior posts, £11 7s. The survey, the eighth in 16 years, covered 1,000 private commercial, industrial and professional offices employing 89,977 clerks, 64 percent of them women. Since 1956, male clerks' salaries have, generally speaking, risen between 12 and 16 percent. Those of women clerks between 11 and 13 percent. The increases were equal to about twice the rise in the cost of living, 7 percent in the last two years. Wage rates for adult manual workers have increased by just over 11 percent in the same period. The survey demolishes the long-accepted belief that "there's always more money in London." Merseyside, West Midlands and Clydeside all pay higher salaries for men than does the metropolis. Merseyside pays more than any area in Britain Heavy staff demands from prosperous firms there have pushed men's earnings up to as much as £2 a week above the average. Only one small district of London—the West End—competes with Merseyside pay. Women, however, can still earn more in London than anywhere else.

ORISSA CEMENT LIMITED

TEMPO OF EXPANSION WELL MAINTAINED

CHAIRMAN, MR. J. DALMIA REVIEWS PROGRESS

Speech of Mr. J. DALMIA, Chairman Board of Directors of Messrs. ORISSA CEMENT LIMITED, delivered at the Eighth Annual General Meeting of the Company held at Rajgangpur on Saturday, the 16th August, 1958.

Ladies & Gentlemen,

I have much pleasure in welcoming you to this Eighth Annual General Meeting of your Company. The Audited Accounts and the Directors' Report for the year ended 31st December, 1957 have been with you for sometime now, and I will, with your permission, take them as read.

In my address to you last year, I had made certain references to your company's expanding activities. I am happy to report that the tempo of this expansion continues to be well maintained. The rate of production from the extended plant which was commissioned early in 1957 has improved steadily. Satisfactory progress has been made in the setting up of your company's new Refractories Plant which, when completed, will be the largest and one of the most modern composite units of its kind in India. The fireclay and silica sections of this project went into production in April, 1958 and orders for firebricks and for silica refractories have been received from various consumers including the Steel Industry. Work on the basic plant is being pressed ahead and it is hoped that this third stage of the composite project will be commissioned towards the end of the year when your company would also be in a position to supply basic refractories such as magnesite and chrome-magnesite bricks etc. to among others, the steel plants in the public and private sectors. I am sure that you will share with me a sense of satisfaction in this and in the potential savings to the country of foreign exchange to the extent of about Rs. 2 crores per annum, presently expended on the imports of refractories which your company's new project will be able to supply.

I had also referred last year to a provision for further expansion of the company's Refractories Plant. This was done in anticipation of the growing demand for refractories in line with the rising tempo of industrialisation in the country, and particularly in view of the rapid development of the Steel Industry. It is understood that the target for steel production in India may be raised further by more than 4 million tons to about 11 million tons per annum, which alone must call for a greater output from the Refractory Industry. It is to be hoped that your company will be able to play its part creditably in any such further expansion that the Refractory Industry may be called upon to undertake.

Fair Selling Price

Government of India's decision on the recommendations of the Tariff Commission in regard to fair selling price to cement producers has been announced at last, and has been given effect for a period of

three years from 1st July, 1958. The Tariff Commission has this time made a significant departure from the principles they had adopted in their 1953 report for the determination of profits and for the fixation of fair prices to the producers. The profit margin that has been allowed to the producers is inadequate and entirely inconsistent with their needs and with the present money market conditions as illustrated by the high rate of interest on borrowings and the high yield on Government securities. It is disappointing to find that your company has been allowed an increase of only Re 1/- per ton. Moreover, whereas the Tariff Commission had recommended the introduction of the new prices with effect from 1st January, 1958, the Government of India have decided to introduce the new rates only from the 1st July, 1958, thus depriving the producers of the benefit for six months of whatever price increase the producers might have been allowed. Government have explained that giving retrospective effect to the Tariff Commission's recommendations would involve administrative and financial complications. It is difficult to appreciate this argument as the industry would have to submit its supplementary claims arising out of the price increase and to adjust its accounts with only one party, the State Trading Corporation, which could not have proved such an unsurmountable obstacle as could justify this somewhat arbitrary decision of the Government at the cost of the industry. On the basis of the Tariff Commission's recommendations, the Government of India have also prohibited the use of secondhand gunny bags for the packing of cement after the 30th September, 1958, on the plea that the use of secondhand gunny bags has not benefited the consumer and that the Jute Industry was in a position to meet the requirements of the Cement Industry for new bags. It is incorrect to say that the use of secondhand gunny bags has not benefited the consumer. The use of secondhand gunny bags for cement packing had created a ready market for them and the consumer had so far been able to sell his used bags, not readily disposable elsewhere, to the producers, a facility which he will now be deprived of. The fact that the Jute Industry may be in a position to meet the Cement Industry's entire requirements for new bags is, I submit, no reason why bags which are good and serviceable should not be used. This in fact would run contrary to the policy of conserving the country's resources and of generating a maximum effort for export.

I would turn now to the setting up by the Government of India of a Central Wage Board for the Cement Industry in April, 1958, composed of six members, two independent, two representing the employers and two representing workers, under the Chairmanship of Mr. M. R. Meher, I.C.S. (Retd.). It may interest you to know that Mr. V. H. Dalmia, a Director of your company, is one of the members representing the employers on the Board. Under its terms of reference the Board has to determine a

suitable wage structure for the industry and to recommend the principles that should govern the grant of bonus to the industry's workers. The majority of industrial disputes stem from these two items of worker-demands and the importance of the work of the Wage Board becomes immediately apparent. While the Board would doubtless subject these problems to a very careful examination, I would like to refer here briefly to a few of the important issues which must weigh strongly with the Board in their deliberations. The national effort, the Five Year Plans and the industrial development in the public and private sectors have all a common goal, the raising of the standard of living of our people. Measured by the per capita consumption of cement, an accepted indicator of national achievement, our standard of living leaves much to be desired and considerable progress is still to be made before we may claim having achieved one of the fundamental aims of our Independence, the eleventh anniversary of which we have celebrated only yesterday. Cement is required not only for industrial growth but to bring to the people the essential amenities of life, better and adequate housing, sewage, drainage, roads and other conveniences. It is, therefore, essential that cement is not only made available in adequate quantity but also as cheaply as possible. Already with the high level of Excise Duty and transportation expenses the selling price of cement has placed this essential commodity beyond the reach of many. This is to be borne in mind in any wage fixation as any variation in wages, which form a substantial element in the production cost of cement, will reflect in the selling price of cement, which is a controlled commodity. It is pertinent to refer here to the increasing benefits to the workers, direct and indirect, such as Provident Fund, Gratuity, Housing & Medical facilities etc., in which the Cement Industry is in the forefront, and which already constitute a heavy charge on the industry. The Board will also undoubtedly bear in mind the cardinal principle that wage scales for the several units of the industry should be in line with those prevailing in their respective neighbouring localities. I earnestly hope that through a careful consideration of these and other relevant matters the Board will in their wisdom avoid the lacunae and errors of the Joint Industrial Wage Board Award. I am sure that you will join me in the hope that the recommendations of the Board will lead to a satisfactory and permanent solution of the wage and bonus questions and thus pave the way for a lasting industrial peace in the Cement Industry.

Steel Casting Plant

You will be happy to learn that the steel casting plant of Messrs. Dalmia Iron & Steel Limited, in which your company has a large interest, has gone into production and has a large media and steel castings are now available to the Cement Industry and to others at considerable savings of foreign exchange. Their spun cast iron pipe plant is due to be commissioned before the end of the year and will go far towards meeting the large demand for such pipes. Perhaps of even greater importance will be the news that the deadburnt magnesite plant at Salem of Dalmia Magnesite Corporation, in which your company has a substantial interest, is also expected to go into production before the end of the year. Apart from markets, this would assure your company of regular and adequate supplies of deadburnt magnesite for the manufacture of basic refractories.

Rapid industrial expansion has subjected to a very considerable strain the transport system throughout the country. This has been particularly so in certain areas served by the Eastern and South Eastern Railways as a result of traffic generated in connection with the large steel works which are coming up in the public sector and the expansion of certain existing plants. Situated in what may be termed one of the most important centres of industrial development in the country, your company has had to encounter considerable difficulties in moving capital goods and finished products. The Railway Administrations concerned and the Railway Board are fully seized of the problem and efforts are being made to augment the track capacity in that region. It is to be hoped that with the doubling of the track between Tatanagar and Rourkela, the position will ease appreciably.

The gap between the rapid pace of industrial development and the training of technical personnel, on which I had commented last year, has grown wider. Skilled technicians are not available either in quality or in quantity to meet the demand of industrial India. We hope that the measures which the Government of India have introduced or will introduce will eventually meet the situation adequately.

Last year I remarked on the grave deterioration in the national standards of discipline and on the hardly any improvement and we see with dismay the spread of the trouble even to the Universities and other public institutions. I earnestly hope that urgent and effective remedial measures will be taken to contain and improve the situation before it becomes catastrophic. During the year under review illegal strikes were resorted to by the workers which had affected our goal of round the clock production, so fulfilment of the targets placed before the industry however, a distinct improvement since then in our growing goodwill and trust which may augur well for the future.

I would like to take this opportunity of expressing my thanks to the large number of shareholders who have written to me to convey their appreciation of the rapid progress which your company has made in the brief span of its existence, and their satisfaction at the results achieved in the year under review. I am greatly heartened by these messages of appreciation and confidence.

Before I conclude, I would like, on your behalf and on my own, to thank all the executives, staff and workers for their keen interest and hard work which have not only led to the good results achieved by your company for the year under review, but also contributed materially towards the setting up of the new Refractories Project which it is hoped will be completed shortly.

N.B. The above extract of the speech does not purport to be the report of the proceedings of the Eighth Annual General Meeting of the Company held on 16th August, 1958.

WATCHMAKERS SINCE 1928

Money

THE CALCUTTA MONEY MARKET

CONDITIONS EASIER

Wednesday, 20th August.

EASIER conditions have prevailed in the Calcutta money market over the past week, with the demand for advances having fallen slightly from all major sources. The interbank market has remained practically unchanged, the call rate quotation varying between 3 and 3½ percent.

A fair number of tea bills provided the main feature of the exchange market. Gunny bills were scarce, and the demand for remittance has been poor. The latest U.K. Bank rate cut was well received in foreign exchange markets, and sterling has remained steady against the dollar over the week. It has firmed against major Continental currencies after a weak start.

THE CALCUTTA SILVER MARKET MAINTAINED A steady tone on better demand last week, and the price showed an advance to Rs. 183, quoted today for ready delivery, and the price for forward delivery was quoted at Rs. 182.62. The London and New York prices remained unchanged at 74½d and 84 cents, respectively.

In sympathy with the rise in silver, gold was steady and the price rose to Rs. 109. The sovereign was higher at Rs. 71.75.

TENDERS FOR Rs. 4,00,00,000 OF 91 DAYS' GOVERNMENT OF INDIA Treasury bills were opened on 19th August. Total amount offered was Rs. 5,29,50,000. Tenders at Rs. 99.360 and above were accepted in full and those at Rs. 99.355 were accepted 50 percent. Lower tenders were rejected. Total amount accepted was Rs. 4,00,00,000, the average rate of accepted tenders being Rs. 2.561 percent a year.

Tenders for Rs. 3,00,00,000 of 91 days' Government of India Treasury bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on 25th August. Successful tenderers should make payment on 29th August, or on 30th August, where Friday is a holiday. Other conditions are as usual.

During the week ended 15th August, Government of India Treasury bills for Rs. 16,05,75,000 were sold in favour of the Reserve Bank.

THE STATEMENT OF THE RESERVE BANK OF INDIA for the week ended 15th August, 1958, shows a decline of Rs. 8.44 crores to Rs. 1,550.72 crores in active notes, but the total note issue was Rs. 92 lakhs higher at Rs. 1,572.24 crores. Deposits of the Government of India declined by Rs. 1.20 crores, 63.59 crores while other Government accounts were Rs. 80 lakhs higher at Rs. 16.82 crores. Balances of commercial banks improved by Rs. 70 lakhs to Rs. 95.28 crores. Balances held abroad by the Reserve Bank increased by Rs. 4.27 crores to Rs. 14.86 crores, but investments were Rs. 8.36 crores lower at Rs. 339.05 crores. Other loans and advances fell from Rs. 53.45 crores to Rs. 51.52 crores, while advances to scheduled banks against usance bills amounted to Rs. 3.28 crores (Rs. 5.54 crores). Ways and means advances stood at Rs. 15.44 crores against Rs. 15.19 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR the week ended 8th August, 1958, shows a drop of Rs. 5.27 crores to Rs. 436.09 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 1.27 crores and Rs. 11 lakhs to Rs. 217.69 crores and Rs. 11.15 crores, respectively. Advances including loans, cash credits, overdrafts and bills discounted and purchased have dropped by Rs. 14 lakhs to Rs. 173.79 crores. Cash and balances are, in consequence, shown at Rs. 44.55 crores or Rs. 9.83 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 8th August, 1958, shows Demand and Time liabilities at Rs. 750.34 crores (Rs. 35.34 crores on account of borrowings from banks) and Rs. 847.47 crores (Rs. 37.57 crores) compared with Rs. 752.67 crores (Rs. 31.70 crores) and Rs. 847.11 crores (Rs. 38.04 crores) respectively in the previous week. Cash and balances with the Reserve Bank have decreased by Rs. 25 lakhs and Rs. 13.45 crores to Rs. 37.51 crores and Rs. 90.89 crores, respectively. There is a rise of Rs. 5 crores to Rs. 546.03 crores in investments. Advances and bills discounted at Rs. 880.26 crores show a drop of Rs. 2.83 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.0 percent and 55.1 percent against 8.9 percent and 55.2 percent.

THE DIRECTORS OF THE BANK OF BARODA LTD HAVE decided to declare an interim dividend of 12 percent a year to the shareholders of the bank as well as to the shareholders of the Hind Bank Ltd when as to the allotment letters for ordinary B shares of the Baroda Bank will be issued in terms of the scheme of amalgamation. This will absorb Rs. 7,50,000, leaving a balance of Rs. 10,00,228.85 to be carried forward.

THE NATIONAL OVERSEAS AND GRINDLAYS BANK Ltd has declared an interim dividend, for the year 1958, of 7½ percent less income tax at 8s 6d in the £1 payable on 18th September.

Your Reference

Dear Bhai Sahib,

It was nice to hear from you... after all the interesting discussions we had a few months ago. I am glad that you are well, and that you have a job which allows you to travel.

In the years I have spent in Brooke Bond, I have seen many places in India, from remote villages to crowded towns and cities. In my travels I have never failed to be amazed at the immense diversity of our country. There are few things which are common between two villages situated at two ends of our sub-continent—unless perhaps they are our familiar Brooke Bond packets, which of course go everywhere!

You mention that the people you meet show a lively curiosity about the tea industry. It is natural that they should, because tea is an essential part of the lives of so many millions. And I am not surprised that they often ask you questions which you cannot immediately answer.

Please do write to me whenever you are in doubt, Bhai Sahib. There are many interesting things about the tea industry which, I think, people should know.

I shall look forward to hearing from you again, Bhai Sahib; and through you, I hope to be able to speak to our millions of consumer-friends who have made tea one of the world's most popular beverages.

Yours truly,

(G. V. Krishnamurthy)
Chairman,
BROOKE BOND INDIA PRIVATE LIMITED

Stocks and Shares

MARKED IMPROVEMENT IN GILT-EDGED PRICES

INVESTMENT SUPPORT FOR COAL SHARES

Wednesday Evening.

THE past week witnessed a marked improvement in gilt-edged prices which was motivated by the weight of excess funds seeking investment, as a result of the repayment of the 3% 1958 Loan on 15th August, and strong rumours of a possible reduction in Bank rate. The narrowing of gilt-edged yields and the resultant change in the pattern of interest rates have made investors revise their ideas on the return which they should expect on other types of securities; consequently, prices of selected equities have maintained their upward trend by way of adjustment to the new situation which has been created under the influence of the present inflationary conditions in the country.

Indian Iron and Steel started the new account on last Thursday on a buoyant note. The price touched a new high level at Rs. 24.85 x.d., but some profit-taking at the higher levels brought a slight reaction today, and the shares closed at 24.56. Factors which have aided market sentiment are the slight reduction in estate duty rates announced in the Lok Sabha on Monday. Reports that the United States is prepared to make a substantial contribution to help solve India's balance of payments problem when this question is discussed in Washington at the next week's meeting which the World Bank has convened of the major creditor nations, were another. The prospects of a £100 million loan from the U.K. are also considered bright. The expected announcement of an increase in steel retention prices is viewed as yet another potential bull factor.

The following table illustrates the remarkable improvement in gilt-edged prices:

	Opening 14th August	Closing 20th August
3 % Loan 1986	Rs. 71.55	71.75
2 1/2 % " 1961	97	97.15
2 1/2 % " 1960	98.85	98.95
3 % " 1963-65	96.18	96.35
3 % " 1970-75	88.25	88.40
3 1/2 % " 1964	99.70	99.95
3 1/2 % " 1965	99.25	99.60
3 1/2 % " 1967	98.20	98.65
3 1/2 % " 1967	99.95	100.15

Preference shares were well sought after, but offerings were disappointing in spite of the fact that buyers were prepared to pay Re. 1 to Rs. 2 above last quotation rates.

In the banking section, Punjab National were crossed at Rs. 60.75 while United Commercial rose from Rs. 60.50 to Rs. 63.00.

The only share dealt in the railway section was Dehri-Rohas at the higher rate of Rs. 12.

In cotton textiles, Jay Shree were crossed at Rs. 7.50 and Kesoram were better at Rs. 11.50 as were Dunbar at Rs. 13.00.

Coal shares attracted investment support because of the improved prospects for the industry, and widespread gains were recorded. Here is a chart showing representative price movements:

	Opening 14th August	Closing 20th August
Amalgamated	Rs. 20.50	20.87
Bengal	262.00	266.00
East Indian	22.50	23.25
Pench Valley	25.00	26.25
Bharat	6.94	7.50

The decline in jute goods prices during the week halted the recovery movement in the jute section and quotations where changed were slightly lower than those prevailing last week.

In electrics, U.P. were a steady feature with buyers at the higher rate of Rs. 135.

In sugar, Belsund improved to Rs. 11.12, Dyer Meakin were steady at Rs. 12.75. S.K.G. were better at Rs. 10.37 as were United Provinces at Rs. 15.25.

In the engineering section, Bhartiya Steel were better at Rs. 16.00 and Braithwaite were wanted at the higher rate of Rs. 29.25. Burn and Company recovered from Rs. 360 to Rs. 362 and Guest, Keen, Williams rose from Rs. 32 to Rs. 32.31. There was some enquiry for Jessops at Rs. 20.25 and Textile Machinery hardened to Rs. 20.85.

In paper, India Paper Pulp continued to meet with enquiry and improved further to Rs. 23.31. Orient were firm at Rs. 35.60 and Sirpur were taken at Rs. 13.12.

In cement, the outstanding feature was Jaipur Udyog which spurted from Rs. 14.75 to Rs. 15.62 (after Rs. 16.25). Dalmia were better at Rs. 12.25 and Orissa were called at Rs. 13.25 ex-dividend, ex rights.

In insurance, Triton were wanted at Rs. 142 and there were buyers of Hercules at Rs. 21 ex-dividend.

In shipping, Calcutta Landing were taken at the higher rate of Rs. 14.75, and there were quite a few investment orders for India Steamship which improved to Rs. 13.75 and stood at Rs. 14

at one time. India General Navigation were Re. 1 better at Rs. 60.

Among miscellaneous industrials, Angelo Brothers were steady at Rs. 20.12 and there were keen buyers of Birds Investments at the higher rate of Rs. 11.87. Dunlop Rubber were steady at Rs. 28.25, but Indian Aluminium were subdued at Rs. 15.56. Indian Oxygen were steady at Rs. 20.12 and Jardine Henderson improved further to Rs. 76. National Insulated Cable provided a bright spot with the quotation advancing from Rs. 29 to Rs. 30.50.

National Carbon were shaded at Rs. 26.00 as were Philips India at Rs. 15.62. Rallis were better at Rs. 42.00 and Rohtas Industries met with profit-taking to close at Rs. 24.62. Shaw Wallace were in keen demand and the price improved to Rs. 12.25.

In the mining group, Indian Copper fluctuated narrowly around Rs. 3.94 and Chrestien Mica Industries were better at Rs. 10.50. Orissa Minerals were firm at Rs. 26.50.

Tea shares were on the whole neglected, and prices tended to lower levels with the possible exception of Dhekkhat which, on the announcement of a final dividend of Rs. 2, making a total of 25 percent for 1957 (same as 1956), recovered from Rs. 23.35 to Rs. 24.62.

THE PROFIT OF THE METTUR CHEMICAL AND Industrial Corporation has increased by Rs. 4.08 lakhs to Rs. 17.04 lakhs for the year ended last March. The ordinary dividend is raised from 7 1/2 percent to 8 1/2 percent. Taxation provision absorbs Rs. 9.48 lakhs (Rs. 7 lakhs), and development rebate Rs. 88.740. General reserve is allocated Rs. 60,500 (same), leaving a carry-forward of Rs. 30,413 (Rs. 1,11,081). The directors propose to increase the output capacities of the bleaching powder and caustic soda plants.

THE GROUP PROFIT OF THE ATTOCK OIL COMPANY has amounted to £1,433,552 for the year ended last December. Depreciation absorbs £225,510 and the taxation provision is allocated £784,820. An interim dividend of 1s 4d unit of stock was paid and a final dividend of 1s 8d unit of stock has been declared. General reserve is allocated £100,000, leaving a carry-forward of £37,832, against £51,287 brought in.

THE AMALGAMATED COALFIELDS, LTD. HAS EARNED a profit of Rs. 9.47 lakhs for the year ended last March, against Rs. 8.69 lakhs. Providing Rs. 5.56 lakhs (Rs. 1.28 lakhs) for taxation provision, bringing in Rs. 29,730 and making other adjustments, there is a balance of Rs. 7,89,498. The ordinary dividend has been maintained at 1 1/2 percent. General reserve is allocated Rs. 1,70 lakhs and development reserve Rs. 30,000, leaving a carry-forward of Rs. 40,639. Raisings rose from 853,379 tons to 861,267 tons and despatches improved from 855,632 tons to 859,453 tons.

THE PROFIT OF DALMIA CEMENT (BHARAT) LTD. has improved by Rs. 5 lakhs to Rs. 47.63 lakhs for the year ended last December. The ordinary dividend is reduced from 1 1/2 percent to 12 percent. Rehabilitation and expansion reserve is allocated Rs. 5.43 lakhs. Taxation absorbs Rs. 26 1/2 lakhs (Rs. 26 lakhs), leaving a carry-forward of Rs. 7,58,924 against Rs. 2,84,608 brought in. The ceramic industries department has done well while the

profit of the cement department has declined because of an unremunerative price for the commodity, the directors mention. "The profit margin allowed to the industry is very low and is in complete disregard of the conditions obtaining in the capital market. A representation has been submitted to the Government of India to review the case of your company and allow a reasonable increase in the cement price."

Bombay Market

STOCK MARKET IN CHEERFUL MOOD

NEW HIGH LEVEL FOR EQUITIES

Wednesday Evening.

THE Bombay stock market closed in a cheerful mood last week, and equity share prices were boosted to new high levels on a fresh buying spree. Contributing to the improved sentiment were pros-

pects of an early rise in the retention prices of steel. The increased flow of floating money, combined with a downward trend in interest rates, was interpreted bullishly. It is believed that the pressure of funds could bring down dividend yields to more realistic levels in line with market standards.

An encouraging feature is that the Controller of Capital Issues appears to have relaxed the rule that new issues for established companies are to be floated at a premium. It is, therefore, foreseen that a number of companies might come to the market for obtaining finance.

Tata Steel improved to Rs. 171.75 and Indian Iron were lifted to Rs. 25.60 on keen support from Calcutta interests. Tata Locomotive were taken higher to Rs. 191.50 in the expectation of a rights share issue. It is also believed that the company might increase the ordinary distribution because of improved working. Alcock Ashdown were steady at Rs. 263.75 and Premier Construction were bought at Rs. 203.50. Among motor-car shares, Premier Automobile were steady at Rs. 87 and Hindustan Motor were taken at Rs. 7.76 by knowledgeable quarters.

There were minor gains in the cotton mill group. Bombay Dyeing were higher at Rs. 59.80 and

Svadeshi improved to Rs. 202.50 on prospects of improved results. Kohinoor were bought at Rs. 281.50 and Simplex were transacted at Rs. 175. Century recovered to Rs. 454 on short-covering. India United Ordinary improved to Rs. 10.08 on interested support and Apollo were bought at Rs. 1.72.

Miscellaneous industrials improved all-round. Export prospects for cement helped lift prices of shares in the group. Associated Cement were higher at Rs. 158.50 and Digvijay Cement increased to Rs. 154. Sugar shares were steady, and Belapur were transacted at Rs. 289. Phalton were taken at Rs. 166.50. Steamship company shares met with a fair amount of support in the expectation of an increase in tonnage. Scindia Steam were bought up to Rs. 20.48, and Great Eastern Shipping were dealt in at Rs. 27.20. Mining shares were firm on steady metal prices, and Shivrampur Syndicate improved to Rs. 109. Tata Chemical were transacted at Rs. 16.68 and National Rayon improved to Rs. 233 on replacement buying. Bombay-Burmah recovered to Rs. 599 on bear-covering. W.I.M.C.O. were transacted at Rs. 174.

Scattered interest was shown in banking shares, but fluctuations were narrow. Punjab National Bank came to hand at Rs. 60 and Bank of India

The Story of Oil—10

Pipe lines for oil

Pipe lines are the lifelines of every full-scale petroleum industry. Day and night, they carry the oil from where it is found and refined to the places where it is needed.

The work of laying a pipe line to move crude oil from the wells of an oilfield to the tanks, columns and towers of a refinery begins with the mapping of a suitable route by surveyors and engineers. Then right-of-way men travel the route securing permission to lay the line across the land, and close on their heels come bulldozers and trucks to clear the right-of-way of trees, rocks and other obstructions.

Now the ditchers work on the line, digging out a trench of the correct depth and width and dredging a channel in the beds of rivers. Trailers haul the pipe from the nearest rail head, and when the sections are strung out along the

ditch welding crews move along the line to join them together.

Next a mechanical wrapper bandages the pipe from end to end with protective bitumen, glass fibre and felt, and when this is done tractors swing the line into the ditch. Bulldozers shovel the earth back into the ditch, and in a short time you would never have guessed the line was there.

The oil is pushed through the pipe line by powerful pumps in stations built at various points on the route. And once on the move (at a steady three miles per hour) the flow does not stop.

When the explorers and drilling crews find another oilfield, the bulldozers, ditchers and wrapping machines roll out again and a new line is added to the map.

Assam Oil

A full-scale petroleum industry

This is one of a series of informative advertisements about the petroleum industry.

were transacted at Rs. 132.50. Insurance shares were selectively bought, and New India Assurance were in demand around Rs. 45.50.

There was good investment support in electricity supply company shares, and Ahmedabad Electric were fractionally higher at Rs. 95.90. Tata Power were indicated around Rs. 1,242.50.

WIDESPREAD GAINS ON THE LONDON STOCK MARKET

RISE IN GILT-EDGED AND INDUSTRIALS

London, 20th August.

FURTHER widespread and often substantial gains were recorded on the London stock market during the past week with gilt-edged securities, industrial equities and gold shares all advancing sharply on a persistent and broadening demand. The improvement was based on expectations of a reduction in the British Bank rate which were fulfilled when the rate was cut from 5 percent to 4½ percent, the lowest level since early 1955. No great excitement was noticeable in markets as the reduction was largely discounted in advance, but the upward movement continued in spite of profit-taking. There was, however, some reaction subsequently under the influence of a lower trend on Wall Street, notwithstanding the growing confidence in the U. S. economic outlook, and renewed profit-taking at the end of the account. However, the bulk of the gains was maintained. Active conditions prevailed particularly in the industrial market. In addition to the Bank rate cut, markets were helped by the continued firmness of sterling in the foreign exchange market, the July overseas trade figures and the latest public opinion poll indicating that the Conservative Government's popularity in the country is increasing. Steel shares, which are highly sensitive to the domestic political situation, responded to this news. Gilt-edged securities went steadily ahead on persistent investment buying and recorded an all-round advance extending to about half a point. In the foreign bonds market, German and Japanese issues improved but Greek were dull on the latest Cyprus developments. Dollar stocks were easier in sympathy with Wall Street. Banking and hire-

purchase shares were higher, partly on the Bank rate news and partly due to further deals being reported between the banks and hire-purchase finance houses. Property shares continued active and were selectively firm. Industrials generally recorded a widespread improvement. Gold shares also advanced sharply on the announcement that the American-South African Investment Trust had received approval to make a 30-million dollar share issue in the United States. Base metal shares were quiet and were narrowly irregular. Leading oil shares were lower but, among others, there were one or two firm spots. Rubber shares tended higher on a broadening demand and recorded numerous small gains. Tea shares tended higher on a selective demand. There was some good improvement among Indian issues while Ceylon issues were generally quiet.

The Money Market

The feature of the London money market during the past week was the reduction in the U. K. Bank rate on Thursday last from 5 percent to 4½ percent. This was confidently expected in view of the decline in the Treasury bill rate which was interrupted by the Middle East crisis. The official reason for the reduction was that the move was in step with recent credit relaxations and was justified by internal trends and the continuing strength of sterling. The cut in the Bank rate was a welcome relief. Market circles hope that the pressure on the Treasury bill rate will ease. At the weekly tender, however, the bill rate continued to fall with competition for the bills remaining very keen and declined to just over 3½ percent. Credit conditions during the past week remained stringent and rates for money ranged from 4 percent down to 3½ percent, the latter rate being established after the Bank rate change. Demand for bills remained good but the volume of business was checked by the cash position.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 13th August shows that the gold stock declined by \$14 million to \$21,146 million. Foreign deposits were \$40 million higher at \$327 million and foreign investments rose by \$86 million to \$5,312 million. The Federal Reserve bought \$161 million worth of bills making the total holdings of Government securities \$25,519 million. Total discounts and advances declined by \$84 million to \$182 million, while the aggregate excess reserves of member banks fell by \$306 million to \$517 million. The daily average excess reserves of member banks rose by \$134 million to \$694 million, while their daily average borrowings increased by \$117 million to \$229 million. Business loans of the New York city banks declined by \$18 million to \$10,579 million compared with a rise of \$144 million to \$11,781 million in the corresponding week of last year. Gold certificates on hand and dues from the U.S. Treasury fell by \$17 million to \$19,692 million. Federal Reserve notes in actual circulation rose by \$44 million to \$26,881 million. The deposit member banks reserve account was \$38 million higher at \$18,587 million.

Vegetable Oils Dull

Slow trading characterised most sections of the vegetable oil and oilseeds market during the past week although copra, palm kernels and coconut oil ruled steady due to improved demand. Prompt parcels of Philippines copra were wanted at around \$205 a ton, c.i.f., but few sellers quoted less than \$207, while August-September shipments were reported to have been traded at \$202 c.i.f. on stamped document terms. Nigerian palm kernels were sold up to \$25½ c.i.f. full terms for October-November shipment with the Board latterly quoting \$25½. Only a few resale parcels were located, few of which were priced at less than \$54½ c.i.f. net terms. Advices from the origin for coconut oil were fully steady and sellers in London were reluctant to price first-hand rates. As a result, shipment buying interest was virtually confined to prompt shipments which were sparingly offered. Opening levels for linseed and linseed oil showed little change but a sharp drop in recent advices from Winnipeg cut back seed prices around 15s a ton while linseed oil tended sympathetically lower towards the close. Edible oils made little progress, and again sellers of groundnut oil were asking for lower bids with parcels of Nigerian oil nearing arrival in Liverpool being available down to £92 c.i.f. Forward shipments were, however, reduced by about 10s a ton. East African castorseed was slightly dearer at the origin but there was no incentive to change prices on the market in London. The market for castor oil was dull with resellers discounting origin levels to the tune of £2 a ton to little avail.

Rise in Rubber

Rubber prices rallied on covering purchases and the squaring of accounts after a small decline moved narrowly with a steady undertone. In affoot and August shipment parcels. Traders later reported fair sales to the Continent and to Scandinavian countries. The market, however, relapsed into dullness. Towards the close, U.K. sheet rubber but in the market for lower grades of market was not affected by the reduction in Bank rate. Traders reported that current shipment parcels to open ports were relatively difficult to obtain compared with ample offers to the United Kingdom. Values finally were 4d a lb higher on moderate offtake for sole crepe encouraged sellers to maintain its prices at recent levels based on 29½d a lb for ordinary 1in. smooth No. 1 on the spot.

New Delhi

GOVERNMENT NOT TO SET UP FOOD PRICE STABILISATION BODIES

LATEST ESTIMATE OF FOREIGN EXCHANGE REQUIREMENTS FOR SECOND PLAN

(FROM OUR NEW DELHI CORRESPONDENT)

THE White Paper on the food situation in the country and the Finance Minister's statement on the foreign exchange problem were the highlights of the opening week of the monsoon session of Parliament, which began on 11th August. While reviewing the situation in relation to food supplies in different parts of the country, the White Paper announced the Government's decision on two important recommendations of the Foodgrains Enquiry Committee which relate to the creation of a price stabilisation board and a foodgrains stabilisation organisation, the latter to undertake "open market purchases and sale, procurement of foodgrains and maintenance of stocks." The Government has expressed its inability to accept either of these recommendations, because in its view "the problem of price is a complex one and admits no easy solution. It is basic to the economy of the country and the Government cannot leave the policy decision to any official or non-official body." So far as a foodgrains stabilisation organisation is concerned, "it has been seen from actual experience that open market purchases by the Government or by any organisation set up by the Government is bound to push up the prices and is, therefore, not a practical proposition."

The Finance Minister, Mr. Morarji Desai's review of the foreign exchange situation was for the best part factual, but it showed some welcome signs of realism. At the outset, he set at rest all speculations relating to the drain on the sterling balances. During the first seven months of the year, he said, the average weekly withdrawal from the balances was of the order of Rs. 4.09 crores, compared with Rs. 7.2 crores in the corresponding period of 1957. He added: "Taking the period April to July 1958, India's foreign exchange reserves at the end of March 1958 comprised, in addition to a gold holding of Rs. 118 crores, sterling reserves dropped to Rs. 193 crores at the end of July 1958, notwithstanding a payment by the U.K. Government of Rs. 22 crores early in April 1958, which included an advance repayment of three instalments under the excess pension repayment agreement. The net fall was thus approximately Rs. 74 crores in the four months April to July inclusive. It has been estimated that such commitments in the public and private sectors together, yet to be paid for, amounted to Rs. 887 crores approximately as on the 1st April, 1958, the bulk of this representing capital goods. Added to this, India has suffered in recent weeks a fall in exports on account of the recessionary trend in foreign markets."

In the Planning Commission's paper, "Appraisal and Prospects of the Second Five Year Plan", it has been estimated that for the period April 1958 to March 1961, the gap in India's balance of payments might approximate to Rs. 500 crores. The latest estimate, taking account of the current unfavourable trend in exports, shows that for the last three years of the current plan, India's requirements of foreign exchange will be of the order of Rs. 560 crores. "This is on the assumption," Mr. Desai further said, "that any food imports found to be necessary, in addition to the normal marketing obligations for wheat and the agreement for importing Burma rice, would be procured under P.L. 480 arrangements. The basis for the estimate is that the core of the plan which, including existing commitments, requires a further expenditure of Rs. 619 crores for completion, will be completed and that needs for the maintenance of the economy and for security will be provided. It also assumes that the sterling reserves will stand at Rs. 200 crores at the end of the plan period. This does not, however, mean that the reserves would not fall below Rs. 200 crores at any time. As a matter of fact, they are below Rs. 200 crores today. It is considered necessary, however, that India should begin the third plan with a reserve of not less than 200 crores, rebuilding it up to this level, if it is possible to do so. In estimating the deficit at Rs. 500 crores, as on 1st April, 1958, the foreign aid already promised which amounts to about Rs. 513 crores, was fully taken into account. Since then, a further loan of Rs. 12 crores has been authorised by the International Bank for Reconstruction and Development in July 1958 for the Damodar Valley Corporation Project."

The Finance Minister said that the Government had been keeping the international institutions and friendly foreign governments fully informed about India's current situation and "it will be our endeavour to secure further foreign assistance in an appropriate way." In this connection, the Finance Minister made particular reference to the conference of the major creditor countries convened by the World Bank to meet in Washington on 25th August, to discuss the Indian problem. The Governments of the United States, the United Kingdom, West Germany and Japan have agreed to participate in it. The International Monetary Fund will also be represented at the conference.

India will not participate, but will be prepared to give all factual data necessary. "We naturally cannot expect that the results of the conference will be announced immediately it is over; the Governments concerned will have to take appropriate decisions. We can only at this stage express our sincere appreciation of the interest that is being taken for India's economic betterment by the World Bank and by friendly Governments and institutions," Mr. Desai added. He went on: "With a view to ensuring full and proper exchange of information and expediting negotiations with international institutions and interested foreign Governments, India has decided to strengthen the economic representation abroad by the appointment of a special officer of the Department of Economic Affairs who will be posted in Washington and by enlarging the functions of the Economic Minister in the United Kingdom."

As already reported, Mr. B. K. Nehru has been appointed for Washington and Mr. T. Swaminathan for the U.K. Both will have the rank of an ambassador. Mr. B. K. Nehru left for Washington on 15th August.

Agreement on U.S. Film Imports

A special agreement has been concluded by the Government of India with the Motion Picture Export Association of America which has been in force since 1st January, 1958. The main features of the agreement are: (1) licences for exposed cinematograph films to the member companies of the Association are issued on a 75 percent quota. (2) the import duty on films exposed has been reduced from annas 8 a linear foot to 2½n a linear foot (3) for the import of films under this agreement, exchange remittances have been permitted for a value not exceeding 12½ percent of the net remittable earnings of the films and the applications for remittances are being made accordingly by the member companies concerned. The balance will be held over under a blocked account in India, subject to withdrawal for certain permissible purposes as agreed upon. This agreement will be effective up to 31st March, 1960. At present, there is no proposal to revise the agreement.

No Change in Oil Refinery Decision

The earlier decision to have two oil refineries, a smaller one of 75,000 tons capacity in Assam and a bigger one of 2 million tons capacity in Barauni, Bihar, has been reaffirmed. There will be a 16-inch crude oil pipeline connecting the oilfields with the Assam refinery in the first stage and the two new refineries in the second stage. This means that the Government has rejected the U.S. consultants' recommendation for one refinery near the oilfields and a products pipeline to the consuming centres. It will be recalled that the Assam Oil Company, which is a partner with the Government of India in the rupee company to be floated shortly for exploiting the oil resources in the leased areas of Assam, has undertaken to finance the foreign exchange component of the first stage of the crude pipeline through a £10 million loan to the Government. The latter has also received an offer from the Rumanian Government to finance the foreign exchange component of the first 75,000-ton refinery in Assam through a credit of Rs. 6.44 crores, repayable in seven years and carrying 2.5 percent interest, in addition to the technical know-how. This offer is being accepted. As both refineries will be in the public sector, the Government, due course, will set up a distribution organisation of its own. There is also a plan to manufacture the pipes in this country. In order to expand the operations of the Government-owned Oil and Gas Commission, decision, it is believed, has been taken to purchase three deep drilling rigs at an estimated cost of Rs. 3 crores in terms of foreign exchange.

Double Tax Avoidance Pacts

An agreement for the avoidance of double taxation with Sweden has been signed at Government level. A similar agreement with West Germany has also been initiated. Another agreement for the avoidance of double taxation of aircraft enterprises of one country operating in the other has been concluded at the official level with Switzerland. The formalities necessary for giving these agreements the force of law in the respective countries (which in the case of agreements with Sweden and West Germany include their approval by the Parliaments of those countries) are expected to be completed in the next few months. Negotiations with France and Greece have resulted in the drawing of *aide-memoires*, covering a wide field of agreement. These are expected to be followed up and to lead to the conclusion of final agreements in the coming cold weather. Negotiations have taken place with the U.K. and certain other countries, but they are so far inconclusive and are expected to be followed up. As for the agreements which have been signed or initiated with Sweden, West Germany and Switzerland, certain formalities have yet to be completed by

both sides. So the terms of the agreements at this stage cannot be disclosed.

No Public Sector Nylon Unit

The Government has no plans to start a nylon manufacturing unit in the public sector. In the private sector, Messrs J. K. Investment Trust, Kanpur, have been licensed for producing of 480,000 lbs of nylon a year, and the scheme of Messrs Nanubhai Industries, Bombay, for the manufacture of 1.6 million lbs of nylon a year has also been approved.

Lime Export from U.S.A.

The Government has entered into an agreement with the International Co-operation Administration, U.S.A., under which the services of an expert are to be made available for a period of six months, for the development of lime (including dolomitic lime).

India-China Trade

A Chinese trade delegation visited India in April 1958, to explore the possibilities of increasing trade between China and this country. An agreement was concluded by the China National Trading Corporation with State Trading Corporation providing for payment for the commodities imported and exported by India. Cotton was one of the items included in the list of exports from this country. It is understood that the Chinese have negotiated the purchase of approximately 14,150 bales of raw cotton from different exporters. No special quota for the export of cotton to China has been given. Whatever quantity of raw cotton is exported from India to China will be out of the overall export quota which will be released from time to time.

Steel Plant Costs

The estimates of the cost of the steel plants in the public sector still continue to be the subject of controversy. The question was raised in Parliament last week. It is explained that as in December 1955, the initial estimates on the basis of the project reports of the three steel plants were as follows:

Rourkela	Rs. 128 crores
Bhilai	Rs. 110 crores
Durgapur	Rs. 115 crores
Total	Rs. 353 crores

These estimates did not include the cost of townships, ore mines and quarries, land, prospecting and designing, development of the sources of water supply, power supply facilities up to the perimeter of the plant, personnel required for operation including cost of training, railway works outside the perimeter of the plant, personnel employed directly by the project, Customs duty, office and other ancillary expenditure. The estimates were for the steel plants proper and were based on the estimates given in:

- (i) the detailed project report for the Rourkela steel plant submitted by Indian-Gemeinschaft in October-November 1955;
- (ii) the detailed project report for the Bhilai steel plant submitted by the Russians in December 1955;
- (iii) the preliminary specifications and summary of prices submitted by the Indian Steelworks Construction Company in January 1956;

The detailed estimates thereafter, as on October 1956, raised the cost of the plans as follows:

Rourkela	Rs. 170 crores
Bhilai	Rs. 131 crores
Durgapur	Rs. 138 crores
Total	Rs. 439 crores

The difference in the original and revised estimates are primarily due to:

- a. additions and improvements made to the project reports;
- b. purchase abroad of structural steel work, refractories and such stores, which it was, originally thought could be procured from India. Prices abroad of these items are generally higher than in India;
- c. under-estimating by the consultants and increases of prices and wages in Europe between the time the estimates were made and the time when contracts were concluded. This applies mainly to Rourkela; and
- d. under-estimating by the Indian Steelworks Construction Company of the cost of civil engineering and erection charges in India.

The significance of the original project estimates differs and is not the same in the case of the three projects. The Russian project estimate for the Bhilai steel plant was virtually the suppliers' quotation for such machinery and equipment as was proposed, in the report, for supply from that country.

In Durgapur, the initial estimate for plant and machinery to be imported from the U.K., was to be subject to an increase of not more than 5 percent in certain sections, in the final quotation. The figures for erection, civil engineering, shipping and transportation given in the original estimates were with contractors' preliminary estimates and I.S.C.O.N. had said that it was not possible to estimate these costs, in detail, in the time available.

In the case of Rourkela, the estimate of expenditure both on plant and equipment and on civil engineering and erection costs was merely the consultants' opinion of the likely costs and did not represent the offer of any suppliers. Although it is difficult to make at this stage any accurate

CALCUTTA BOX 585 BOMBAY BOX 522 BANGALORE BOX 697

estimates, but it is thought reasonable to estimate that the other items would cost as follows:

Three townships	Rs. 42 crores
Iron ore mines and limestone quarries	Rs. 20 crores
Fees to consultants	Rs. 9.25 crores
Cost of Russian staff	Rs. 4.5 crores
Water supply arrangements	Rs. 4.5 crores
Other expenditures on prospecting, electrical and railway works outside the perimeter of the plant, the cost of project staff, training schemes, office expenditure and Customs duty	Rs. 40 crores.

Cheapest in the Long Run

In none of these estimates, has any provision been made for likely increases in cost on account of the "escalation" clauses. These are difficult to determine particularly in the present context when after a series of increases, there is a tendency for some prices to fall. Although the Russian-supplied Bhilai steel plant appears to be the cheapest of the three, the other facilities offered to India should make the British plant for Durgapur the cheapest in the long run. This should be evident from the following statement on the fees paid to consultants:

Name of the project	Total amount of technical fees paid	Balance payable	When payable
Rourkela	Rs. 2,23,64,000	Rs. 61,66,000	Rs. 2,11,360 by October 1958, and the balance on commissioning of the extended works and on proof of the contracted performance and the capacity of the works
Bhilai	Rs. 1,40,00,000	Rs. 1,10,00,000	March 1959 March 1960 On commissioning the plant and on completion of the guarantee Rs. 30,00,000 Rs. 30,00,000 Rs. 50,00,000 Rs. 1,10,00,000
Durgapur	Rs. 78,40,000	Rs. 1,08,26,000	Payments due every quarter, namely, January, April, July and October until October 1961.

The figures given above are the fixed fees payable to the three principal consultants. In addition, a actual expenses, not exceeding Rs. 70 lakhs, of the resident engineer and his assistants of Indian-Gemeinschaft in Rourkela are to be borne by the Hindustan Steel Private Limited; b. in Bhilai, the salaries of the Russian Chief Engineer and experts engaged in the supervision of the construction are to be borne by the Hindustan Steel Private Limited; c. in Durgapur, Hindustan Steel Private Limited is to make available the necessary number of Indian technical staff to assist the consulting engineers in their work; and d. although, generally, the three consultants are to carry out work usually required of technical consultants, the difference in the nature of the arrangements for the supply and erection of the plant accounts for some differences in the detailed work expected of the three consultants.

As laid down in the agreement, the International Construction Company Limited for Durgapur Works are to render the services which are detailed below:

1. plan the general lay-out of the works in Durgapur complete in all respects;
2. plan the lay-out of each main and ancillary department with the requisite plant and machinery and their details;
3. prepare tender documents, issue enquiries, examine and scrutinise tenders and specifications received, and advise the Government as to their merits in fulfilling the production specified and give their opinion to the Government as to the suitability of the plant offered and as to the reasonableness of the prices submitted, as compared with the prices ruling at the time in the world market;

4. approve the design and supervise the manufacture of all plant and machinery ordered and test and inspect the same, where required, before despatch to the site;

5. supervise the co-ordination of manufacture and despatch to the site using Indian shipping to the maximum extent where such ships are available, of all imported materials, plant, machinery and equipment in accordance with the plan of progress for the construction of the works; the necessary time schedule covering all stages of the work to be prepared as soon as possible;

6. supervise the co-ordination of manufacture and despatch to the site of such materials as are supplied from India in accordance with the plan of progress for the construction of the works.

7. supervise the construction and erection at the site and with a view to these being carried out in the order and at the speed required, to complete the plant and put it in commission at the intended date.

8. prepare and issue to the Government the appropriate certificates of satisfactory completion of each section of the works, and of the works as a whole and that the complete iron and steel works

is capable of achieving the output specified in this agreement;

9. advise generally and co-operate with the Government in arranging the services outside the boundary of the works;

10. submit three-monthly reports to the Government on the progress of manufacture of all plant, machinery and equipment, ordered by the Government on the advice of the consulting engineers, and on work carried out at the site, at the same time pointing out such items as appear likely to be late and take steps to remedy the position. Interim reports will, in addition, be issued as and when justifiably required;

11. scrutinise claims for progress payments, issue certificates for work done overseas and in India, and issue certificates for payments due on shipment and submit monthly statements of all certificates of payments issued up to date;

12. in view of the importance of having a sufficient supply of adequately trained men available to start the works, the consulting engineers will use their best endeavours to assist the Government in formulating suitable training schemes and to secure practical experience in works overseas for selected trainees.

It is understood that the work covered by this clause does not include the preparation of such design and detailed working drawings for manufacturing purposes as are usually provided by the manufacturers. These will be provided by the contractors appointed for the work in question to the satisfaction of the consulting engineers. They will, subject to otherwise provided in the agree-

ment, act generally as the representatives of the Government during the construction of the works as well as after its completion, until the works is ready to begin operations on an efficient basis to the satisfaction of the Government (the decision of the Government in this behalf being final and conclusive) for a period of six years from the 1st day of December 1955.

Training of Indian Personnel

So far as the training of Indian technicians is concerned, Indian-Gemeinschaft Krupp-Demag, G.M.B.H., West Germany, who are technical consultants for the Rourkela steel project, are to arrange, under the contract, for the training in West Germany of an adequate number of Indians to be mutually agreed upon. Accordingly, 109 engineers of the Rourkela project have so far been sent to West Germany of whom 63 trainees have already returned after completing their training. Under the contract, 27 Indian engineers were also associated with the planning and designing of the Rourkela steel plant in West Germany. A number of Indian engineers are associated with the supervision and construction at the site.

According to the agreement with the Russian Government, it has been agreed to arrange for training 686 engineers and technicians of the Bhilai steel project in the steel works, mines and quarries in Russia. Some 240 engineers and 187 technicians of the Bhilai steel project have so far been sent to that country. Of these, 121 engineers have returned after completing their training.

The International Construction Company Limited, who are the consulting engineers for the Durgapur steel project, have to maintain up to five members of their technical staff in India. The remaining personnel for assisting and enabling the consulting engineers to carry out their duties, has to be provided by the Government of India. Such Indian engineers as are deputed to work with the consultants get necessary training under the latter. The contractual obligations of the consultants are being implemented satisfactorily.

It is also explained that British banks have so far advanced £500,000 towards the financing of the Durgapur project. The Government is likely to draw £7 million from British banks and £15 million of the U.K. Government credit during the current year. The total amount of interest paid for the period ended 30th June, 1958, is £28,876 14s. 2d.

For the loan from the syndicate of British banks, interest is payable at 1 percent above the Bank of England official discount rate ruling from time to time subject to a minimum of 4½ percent. For the U.K. Government loan, the rate of interest payable is the interest at the rates applicable at the time of each drawing from the loan for a comparable period from the Consolidated Fund under Section 3(2) of the Export Guarantee Act 1949 plus 1 percent a year for administrative charges.

The contract for the foundation and civil engineering work of the hot and cold rolling mills of the Rourkela steel plant has been awarded to the Hochtief Gammon of Bombay. The contract is a cost contract, with a target sum. The Hindustan Steel Private Limited has to pay to the contractor all costs of construction incurred and proved by the contractor and in addition, pay him certain fixed amounts for the overhead expenses and fees. The total value of the contract is estimated at Rs. 7.78 crores. The target amount is made up of the following items:

	(in crores of rupees)
a. Cost of material and labour	5.06
b. Site supervision and equipment	1.57
c. Overheads of the head offices	.53
d. Fees	.62
	7.78

The target sum is liable to adjustment for the variations in the price of materials and for rates of labour. It is also to be adjusted if the quantities of work vary from those given at the time when the contract was negotiated. In case the contract expenditure of the completed work falls below Rs. 6,62,94,000 with such adjustments as are provided in the contract, the contractor will be entitled to a payment of the third of the saving effected, subject to a maximum of Rs. 15,50,000. If the contract expenditure exceeds the target or adjusted cost, the contractor will be penalised and will pay the company a third of the excess, subject to a maximum of Rs. 15,50,000. If he completes the work prior to 30th September, 1960, he will be paid a bonus equivalent to Rs. 2,00,000 for every month between the actual completion of the work and this target date. The contractor will be given an amount of Rs. 30,00,000 against a bank guarantee bond, to cover the day-to-day expenditure on the work. It can be increased or decreased from time to time according to the requirements of the contractor for the work. He has to bring equipment to the site and use for the work, the plant and equipment required.

Foreign Exchange Budget

The Finance Minister, replying to a question in Parliament whether it is proposed to extend the foreign exchange budget for the first half of the current financial year by another three months, said: "The House is generally aware of the difficult foreign exchange situation that we are facing which makes it necessary for us to stretch our existing resources to the utmost extent. It has been decided, therefore, that for many purposes

we shall have to carry on for nine months with the foreign exchange allocation made originally for six months. But the question is to what extent and for what purposes we should, and we can afford to, make some supplementary allocations is a matter which will have to be decided in September in the light of all the circumstances. In view of the world economic situation affecting both the demand for and the prices of our principal exports, it may be difficult to maintain our export earnings, but we are trying by special promotional efforts to offset, if possible, the decline."

Cotton Textile Output and Export Fall

During January-June 1958, as compared with the same period of 1957, the production of cotton piecegoods fell from 2,709 million yards to 2,453 million yards, or by 256 million yards. The decline may be attributed to closures of certain mills, reduction in shift working, accumulation of heavy stocks with mills and the withdrawal of the rebate of excise duty given as incentive for production. The drop in exports during the first six months of 1958 in so far as it relates to the exports of mill-made cotton piecegoods, reckoned on the basis of exports from the port of Bombay (which represent above 95 percent of the total exports from India), has been about 153.95 million yards, compared with a bigger figure during the corresponding period in 1957. The fall in exports may be attributed to the following: (1) intense competition in the world markets from supplying countries like Japan, the U.K., Hongkong, Pakistan, etcetera, as well as from China and other communist countries; (2) the setting up of textile industries in some of the countries which have been traditional buyers of textiles from India and the imposition of tariff by certain Governments to afford protection to the local textile industry; and (3) increased competition from such synthetic fabrics as artificial silk, rayon, nylon, etcetera.

No Statutory Enquiry on Jute Mills

The Government has not ordered any statutory enquiry into the working of the jute mills in Calcutta, but the Jute Commissioner has, at the instance of the Government, undertaken a study of the industry, particularly in view of the losses reported to have been incurred by some of the units.

New Schemes of Foreign Collaboration

The Government of India has approved three schemes of foreign collaboration with Indian undertakings for the manufacture of certain specialised varieties of dairy products. Messrs Glaxo Laboratories of the United Kingdom have entered into an agreement to manufacture 400 tons of milk powder a year. The cost of the scheme has been estimated at Rs. 18 lakhs of which Rs. 12 lakhs represents the amount of foreign exchange needed for the import of plant and equipment, which Messrs Glaxo Laboratories have agreed to finance.

Messrs Horlicks Limited of the United Kingdom have plans to manufacture the following products: (1) powdered milk—19 tons a month; (2) butter and ghee—17 tons a month; (3) milkose baby food—19 tons a month; (4) Horlicks malted foods—4 tons a month and (5) other health foods—4 tons a month. Out of the initial issue of Rs. 12 lakhs, Rs. 2 lakhs will be contributed by Indians. A token royalty of Rs. 100 a year will be paid to the parent company in the U.K.

Nestle Montana Company of Switzerland, in collaboration with an Indian concern, proposes to manufacture 4,000 tons of sweetened full cream condensed milk a year. Under the plan, the Swiss company will charge 4 percent commission on sales, to be paid to the Central Fundamental Research Institution of the Nestle group.

Indo-British Trade

Figures for six months ended June 1958, on Indo-British trade, which are now available, show a decline in India's exports to Britain by £28,865,000 to £50,303,000 compared with the corresponding figures for 1957. With the exception of tobacco, the exports of which were nearly doubled, there was a general decline under all categories, as is evident from the following table:

	Six Months: Jan.-June 1957 (£ 000)	1958
Tea	47,616	26,427
Leather, leather manufactures and dressed furs	6,806	4,510
Wool and other animal hair and tops	2,549	1,368
Cotton	1,599	713
Miscellaneous textile fibres and waste	724	380
Crude fertilisers and crude minerals, excluding fuels	1,160	932
Metalliferous ores and metal scrap	2,172	1,802
Miscellaneous animal and vegetable crude materials	2,632	1,360
Animal and vegetable oils, fats, greases and derivatives	2,335	1,339
Cotton yarns and woven fabrics	5,582	3,860
Miscellaneous textile manufactures	7,067	5,416

U.K. exports to India also declined from £94,463,000 to £78,029,000. Here again, there was a general decline under all categories with the exception of road vehicles and aircraft, imports of which increased from £9,146,000 to £14,643,000 in value.

Production Target for Cement Industry

There are, at present 29 cement factories in India with an annual production capacity of 6.83

million tons. The entire industry, except for two units—one in Churk in Uttar Pradesh and the other in Bhadravati in Mysore—is in the private sector. In order to meet effectively the growing demand for cement, a target capacity of 16 million tons has been fixed. This is to be achieved by the end of the second plan period. With this end in view the establishment of 22 new units and the expansion of 28 existing schemes have so far been approved. If all these schemes fructify, the total installed capacity will be 14,743 million tons a year by 1960-61.

The steady and gradual increase in the indigenous output will be evident from the following table:

Year	Number of factories	Rated capacity (million tons)	Actual production (million tons)
1953	24	4.3	3.8
1954	25	4.5	4.4
1955	27	4.9	4.5
1956	28	5.7	4.9
1957	29	6.6	5.6
1958	32	9.8(8.17)*	—
1959	36	12.3(9.48)*	—
1960	51	14.7(9.95)*	—

*Capacities actually covered by import licences.

In view of the present foreign exchange difficulties and, to a certain extent, the difficulty in arranging adequate internal finance, it is likely that some of the schemes will not materialise according to schedule.

Orders for Machinery

It may, however, be mentioned that foreign exchange difficulties, involved in importing cement-making machinery, have to a certain extent been reduced through the assistance received under the Technical Co-operation Mission programme. Foreign exchange amounting to \$ (U.S.) 7.5 million was provided by the Mission. Orders for cement-making machinery of a total value of about \$4.972 million, have already been finalised and proposals for using the balance of \$2.528 million are being considered. From the U.S. Economic Development Loan Fund, a sum of \$5 million has been earmarked for importing cement plant and machinery. It will be possible to create more production capacity by taking advantage of this assistance. Steps are also being taken to manufacture slag cement through the inter-grinding mixture of portland cement clinker and granulated blast furnace slags.

Small Exports

As for exports, it has been possible in the past to export small quantities of cement, more particularly from factories located near the ports. The figures of exports are as follows:

Years	Tons
1952-53	48,000
1953-54	77,000
1954-55	101,000
1955-56	51,000
1956-57	2,500
1957-58	35,300

In order, however, to establish a market outside India as a long-term measure, small exports are being allowed and, for the present, it has been decided to export 200,000 tons of cement which will also earn some foreign exchange. Already export orders, which have been firmly entered into, amount to 67,500 tons and offers to the extent of 65,000 tons are still being negotiated. It might be possible to export this quantity without affecting domestic supplies.

Annual Report of the Coal Corporation

The first annual report of the National Coal Development Corporation Limited for the period 5th September, 1956 to 31st March, 1957, has recently been published. The Central Government says in its review: "The directors' report contains a brief survey of the activities of the Corporation during the first seven months of its working. This period was largely one of exploration, investigation and preparatory planning in order to enable the Corporation to build up the necessary organisation and otherwise equip itself for the task entrusted to it. Barring 500,000 tons, which the existing 11 State collieries are expected to yield additional 1.2 ly through the expansion of production, and 1.2 million tons through new working in the areas adjacent to these collieries in Kurasia and Bhurkunda, the rest of the current plan period has to be realised entirely by the exploitation of virgin areas. For this, land and mineral rights have to be acquired, adequate drilling data gathered, mine plans drawn up and machinery ordered and the requisite technical personnel recruited and trained. This is apart from the planning of new railway lines, sidings and bridges to facilitate transport of the coal which will be produced. All these processes consume a great deal of time. On the whole, the Corporation has proceeded with energy and determination." The Government has little else to add by way of comments on the present directors' report. It, however, mentions a few developments as a measure of the progress achieved by the Corporation subsequent to the period covered by the report.

Production Estimates

"The latest estimates of production to make up the target of 10.5 million tons are as follows:

	Million tons
"1. Expansion of production from existing State collieries	0.5
"2. Korba	1.6

"3. Kathara	1.5
"4. Central India coalfields	0.5
(a) Korba	—
(b) Kurasia (through a new working adjacent to the existing colliery)	0.5 1.0
(c) Kotma	0.5 provisional
"5. Karanpura	1.5
(a) Gidi	1.2
(b) Saunda	0.6
(c) Bachra	—
(d) Bhurkunda (through a new working adjacent to the existing colliery)	0.7
(e) Chordhara	0.3
(f) Sayal and Gidi A	0.5 5.0
"6. Orissa	10.6
Balanda	0.5 provisional

"The more important of the railway projects connected with the above programme and with the opening up of the Bismampur-Jhillimi area, which is now expected to take place in 1961-62 with a production of 2 million tons a year, are: a new railway line about 50 miles in length from Bijuri to Karonji in the central India coalfields, extension of the Champa-Korba branch line, including a bridge across the Hasdeo river, and extension of the Patratu-Damodar branch line, including a bridge across the Damodar river. These have already been sanctioned by the railways for execution on a priority basis. Some of these works will take two working seasons and certain others as many as three working seasons to be completed.

Increased Output

"By the end of 1957, production from the existing State collieries had improved to 3.38 million tons, representing an increase of 21 percent over the figure for 1955. Significant progress has also been noticed in the areas to be newly developed by the Corporation. In Kathara, for example, more than 1 million tons of coal has been exposed and regular despatches on a commercial scale are only waiting for the completion of the railway siding scheduled for December 1958. In Saunda, where eight inclines are being driven, in addition to a quarry, about 6,000 tons of coal have been extracted already and further production and despatches are expected to increase sharply with the completion of the railway siding. In Gidi, six inclines are being driven, but raisings on a commercial scale, though possible earlier, will have to wait till the completion of the bridge across the Damodar river. Three inclines are being driven in Bachra and raisings are expected during the last quarter of 1958. In the new quarry in Bhurkunda, despatches will begin from September 1958; two inclines are also being driven in the same area. The quarry in Korba is already in a position to produce 1,000 tons of coal a day; in addition, four inclines are being driven in the Ghordewa thin seams. In Kurasia, work was begun in June 1958, and production is expected very shortly."

The Government observes in this connection that the development of a new underground mine to its full capacity takes anything from four to five years and, by the very nature of the project, an even tempo of production cannot be maintained from the very start. In the case of open-cast mines, which will account for roughly 50 percent of the additional production during the current plan period, the results can be felt much more quickly. Nevertheless, the increase of production to the maximum depends ultimately on the availability of transport facilities. With the progress which has already been recorded the Government is reasonably confident that the Corporation will be able to attain, in the last three months or so of the current plan period, at least a level of production commensurate with the overall target of 10.5 million tons.

Ceiling on Expenditure

"Out of a ceiling of expenditure of Rs. 40 crores in relation to the target output of 10.5 million tons, foreign exchange accounts for Rs. 15 crores, exclusive of the requirements of spares and other items of maintenance. So far, the value of orders placed by the Corporation abroad for machinery and equipment is in the region of Rs. 7 crores. Some of this machinery has already arrived and the rest will be arriving within a few months. Further tender notices will be put out by the Corporation to meet the balance of its requirements. In fact, a team of engineers is already in the United States to investigate to what extent the Corporation can avail itself of the credit offered by the U.S. Export-Import Bank.

"The Corporation has also achieved a marked degree of success with its recruitment and training programmes. An adequate staff of higher technical personnel has been built up, and proposals are under examination for deputation of a fair proportion of these to receive specialised courses of training abroad. As for subordinate supervisory and technical personnel, the question of expanding the four training centres, already started by the Corporation, and of opening new centres has been taken up. Categorisation of workers and staff, initiation and prosecution of productivity studies with a view to improving the output a manshift and reducing costs, improvement of labour-management relations in the collieries and the provision of hospital facilities and other amenities to the workers are some of the matters which are currently engaging the special attention of the Corporation."

Efficiency on your mind?

Naturally! Better lighting means less eye-strain, less danger of accidents, and an increased output in the long run. RADIO Lamps and Fluorescent Tubes are a buy with a premium—they burn brighter, they last longer. Yes 'RADIO' is indeed the answer to your problem!

Agents for The Royal Exchange Assurance

Recent relaxations of credit restrictions make the latest figures relating to the working of the Capital Issues Committee of smaller interest than would otherwise have been the case. They show that in the second quarter of 1958, the C.I.C. allowed 780 out of the 870 applications received. In money terms the amount allowed was £245.4 million, while refusals involved only £33.6 million. In the first quarter of this year, applications allow-

Last year, Britain exported almost one and a half times as many tractors as the combined totals of her two major rivals—West Germany and the United States. The Agricultural Engineers Association which has given the figures, states that Britain exported 115,000—a world record.

Raw Jute: Calcutta mills showed little interest in raw jute and only small quantities were

CALCUTTA TEA AUCTIONS IN JULY

UNCERTAIN TREND IN DEMAND

FIVE sales were held during July, at which a total of about 154,700 chests of tea were offered. In the first two sales, there was a very strong demand for all types. C.T.C. Assams with bright liquors were a particularly strong feature, but buyers were more selective in their purchases of Darjeelings and non-wither Dooras teas, say Messrs Carritt Moran and Co. Private Ltd. in their monthly tea market review. In the third sale of the month, there was a less active demand for C.T.C. Assams which receded slightly from their previous high levels, but all other teas sold well, particularly bright liquoring orthodox Assams. In the last two sales, there was a general decline in rates for all teas except the best bright liquoring orthodox Assams. C.T.C. teas were particularly weak, closing around the rates quoted at the beginning of the month in the last sale, there was much less demand and withdrawals were heavy. Tippy teas sold well throughout the month and some improvement in prices were recorded.

Quotations	1958-59	1957-58
Rs. nP	Rs. nP	Rs. nP
Sale No. 2 Plain B.P.	1.85	1.77
Sale No. 3 "	1.86	1.85
Sale No. 4 "	1.86	1.85
Sale No. 5 "	1.80	1.98
Sale No. 6 "	1.72	1.94

The standard of leaf appearance from Darjeeling was very satisfactory, and some attractive F.O.P. and B.O.P. grades were catalogued. A number of useful second flush teas with attractive flavour were seen, but although some estates showed improvement compared with last year, the general standard of second flush quality has not been up to last year's rather exceptional level due to unfavourable weather conditions. Some useful liquoring teas from Assam were on offer, both of orthodox and C.T.C. manufacture, and a number of estates showed improvement compared with last year. Leaf appearance was generally satisfactory, and some attractive tippy grades were catalogued. Teas of orthodox manufacture from Dooras were generally satisfactory in appearance, and some bright liquoring invoices were seen, but others tended to be plainish in cup. There was quite a useful selection of non-wither Legg-cut teas, most of which were commendably free from fibre and had bright liquors. The standard of teas from Cachar was barely average, and although some teas were seen with excellent appearance and with clean, sweet liquors, in many cases cup quality was rather plain, and stalk and fibre were present in the lower grades.

Internal Market

There was a total of 1,757 chests of Leaf on offer. This slightly increased number of chests met with a fair demand, but prices generally moved in buyers' favour. The selection was usually only of a rather fibrous description. There was a total of 75,756 chests of Dust on offer, of which 12,824 chests were of old season's manufacture. The quality of

the new season's invoices, though not outstanding, was quite useful. There was a fair general demand in Sale No. 3—the first sale of the month. Prices of orthodox descriptions did not always realise valuations, but C.T.C. Assams met with strong competition and were considerably dearer. In the following three sales, there was only a fair demand and prices declined. The large quantity of C.T.C. Assams were a particularly weak feature and prices fell appreciably each week. There was a good demand for invoices from Darjeeling, which sold well. Those with attractive flavour frequently realised satisfactory prices.

Quotations	1958-59	1957-58
Rs. nP	Rs. nP	Rs. nP
Sale No. 3 Clean Common Dust	1.75	1.60
Sale No. 4 "	1.86	1.85
Sale No. 5 "	1.81	1.57
Sale No. 6 "	1.61	1.54

Export sales up to and including Sale No. 6 totalled 187,478 chests at an average price of Rs. 2.96, compared with 124,765 chests at an average price of Rs. 2.53. Internal sales at 2,208 chests of Leaf and 57,722 chests of Dust at the average prices of Rs. 1.90 and Rs. 2.06 go against 1,760 chests and 29,687 chests (Rs. 2.07 and Rs. 1.89), respectively.

The estimated north-Indian crop to the end of June 1958, was 107,944,120 lbs. compared with 111,401,676 lbs to the same date of last year. The average figure at this date for the three years 1955-57 was 118,081,033 lbs. The price of Export quota during the first half of the month declined from 12½p to 10½p a lb. Prices recovered thereafter, however, and business at the close on 31st July was transacted at 11½p a lb.

Arrivals (in chests) in Calcutta warehouses from 24th June, 1958 to 23rd July, 1958 with the corresponding figures in parentheses, were: by steamer 297,713 (318,050), by rail 70,580 (99,122) and by air 12,007 (17,036) totalling 380,300 (434,208) chests. Arrivals since the beginning of the season, 1st April, 1958 to 23rd July, 1958, have been: by steamer 424,063 (401,788), by rail 123,115 (152,420) and by air 31,824 (36,119), making a total of 579,002 (590,327) chests.

ADVERTISING CAMPAIGN FOR ICED TEA IN UNITED STATES

About 40 percent of annual U.S. tea consumption occurs in the three summer months when temperature soars over 70 degrees and people start drinking iced tea. Iced tea has many virtues quickly recognised by the public—tastes clean and fresh; not too sweet or sticky; non-filling; non-fatening; economical; goes well with food; cooling and refreshing; really quenches thirst.

But it has one drawback—it is not as convenient to make, to have available to serve—as most of its competitors. Ease and convenience of preparation and service must be built into new products if they are to succeed. Here are just a few of the brand new products that have been introduced into the hot weather beverage picture within the last two years: Kool-Shake: a powder you mix with milk for a chocolate drink: Moo Gay: comes in a can, it's milk in three flavours: Ovalmix: a powder you add to water to produce a chocolate milk drink: Lucky Pop: a tablet you drop in water to make a carbonated soda pop: Fizz-Adel and Magic Pop Drops: same idea as Lucky Pop: Hi-C: a 46-ounce can of ready-to-drink orange, grape, or party punch cooler: Presto: a bottled soft drink mixed in five flavours: it is pre-sweetened, you just add it to water. Quiky: a citrus carbonated drink: Real Kool: a fruit beverage concentrate in seven flavours: you push a button and it spurts from the can under pressure. Flav-R-Straws: sip milk through them and the milk is chocolate or strawberry flavoured instantly. Those are only a few of the new competitors, and the entrenched products such as Coca-Cola, Pepsi-Cola, Seven-Up, and all the beers are increasing their efforts to keep these newcomers from making headway. Through advertising, packaging, pricing and dealing they are going all out to sell the ease, convenience and pleasure of their own products to the consumer.

Why is iced tea able to stand up? First, because it is a product superior to and completely different from everything else. Secondly, because the consumer has invested special social connotations into iced tea which make it more acceptable as a drink for entertaining and relaxing. Thirdly, because the Tea Council's campaign and the individual U.S. tea firms advertise and publicise iced tea vigorously. As for facts about the 1958 iced tea campaign. The job of industry advertising for iced tea is to get people to prepare and serve iced tea more often. Every piece of research on the product for the past eight years reveals that everybody likes and drinks some iced tea. They would like to drink more—and would drink more—if it were more readily available. The advertising objective, then, is to put iced tea into the consciousness of millions of people—get them thinking about it and making more of it so that it will be available more often. Radio is the medium for industry iced tea advertising again in 1958. The campaign will run in 29 markets for ten weeks, the basic idea being to reach housewives in large numbers.

COCHIN TEA SALES

At Sale No. 26, 750,000 lbs of tea were on offer. There was a strong general demand. Low mediums and medium broken were irregularly dearer; fannings were 10½p dearer. Best liquorings were considerably dearer with the quality whole leafs better than last week.

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES RISE

AT Sale No. 9, held on 18th and 19th August, the offerings at the Export auction amounted to 52,868 chests for which there was a good general demand. Plain broken sold well and advanced by about 4½p, while similar Fannings were well supported and were generally fully firm to dearer. Commonest Fannings, however, were dearer. Medium orthodox Assams with bright liquors were a strong feature and were often dearer while those with more ordinary liquors declined by about 10½p. C.T.C. teas again eased by 10½p or 30½p apart from the few very best which were keenly competed for and sold well. Orthodox Dooras were well supported but at rather irregular prices, while Legg-cut descriptions met with a fair demand and were about 5½p to 10½p easier. Whole leaf grades met with a good enquiry and tippy teas were a strong feature. Darjeelings received better support than last week and generally sold well.

Quotations	1958	1957
Rs.	Rs.	Rs.
Clean Black Pekoe	2.10 to 2.15	2.20
Plain B.P.	1.70 to 1.74	1.78
Plain Fannings	1.84 to 1.88	1.70
Medium B.P.	1.90 to 2.00	1.90
Medium Fannings	2.00 to 2.15	1.90
Best Assam C.T.C. B.P.	3.30 to 3.60	4.00
Best Assam C.T.C. Fgs	3.80 to 4.00	4.50 to 5.00

At the Internal Sale, 18,495 chests of Dust were on offer and there was a much improved general demand for all descriptions, the commons and mediums being generally firm to dearer. C.T.C. Assams were an irregular feature but prices were sometimes dearer. The smaller powdery kinds met with a stronger demand. Darjeelings met with only a limited support.

Quotations	1958	1957
Rs.	Rs.	Rs.
Medium Dooras Dust	1.70 to 1.74	1.55 to 1.60
Medium Assam Grainy Dust	1.72 to 1.78	1.90 to 1.70
Medium Assam C.T.C. Dust	2.20 to 2.40	2.15 to 2.30
Best Assam C.T.C. Dust	2.60 to 2.90	2.50 to 2.90

There was a total of 736 chests of Leaf on offer, for which there was a good general demand. Prices were sometimes dearer.

FREIGHT MARKETS FEATURELESS

THERE has been little of interest to record in the freight markets during the past week, although several grain fixtures to India were done at the unchanged rate of 65s from U.S.N.H. and 67s 6d from U.S. Gulf. Interest has now been switched to the Pacific Coast where charterers are offering 57s 6d against the previous rate of 60s paid in July. A handy-sized vessel was taken for coals Calcutta-East Pakistan at 20s f.i.o. and a few ore cargoes were arranged at 37s East Coast-Rijeka and 33s Bombay-Black Sea, 43s Bombay-Poland.

LINSEED DULL

The market was dull during the past week, and prices have shown little movement either way. The general undertone remains firm, but trading has been very limited. Stocks of seed are small and sellers are reserved. Crushers, many of whom are temporarily idle, have shown a meagre interest at lower rates. The oil market is stagnant; although prices have been firmly held, business is almost at a standstill with both shippers and local buyers out of the market. Indian price levels continue to be £4 to £5 higher than values prevailing overseas. Latest quotations were as follows: Ready Rs. 26 a maund and August Rs. 26 a maund.

HIDES AND SKINS STEADY

The market ruled quietly steady. Stocks were less than in the previous week.

Bazaar Sales
(Between 12th August and 18th August, 1958)
Cowhides: Wet salted (Ord.) 21,000 pcs. on the basis of Rs. 7 to Rs. 10.50. Wet salted 9,500 pcs. on the basis of 69½p to 75½p a lb. Wet salted (Slaughtered) 17,000 pcs. on the basis of Rs. 12 to Rs. 20.
Goatskins: Wet salted (Patna Daissee, Kustia) 39,200 pcs. on the basis of Rs. 285 to Rs. 280; Rs. 330 to Rs. 350 and Rs. 370 to Rs. 380. Wet salted (he-killed) on the basis of Rs. 4 and (she-killed) on the basis of Rs. 3.50 a piece; Dinajpur 4,500 pcs. on the basis of Rs. 325.

Bazaar Stocks
(18th August, 1958)
Cowhides: Wet salted 1,05,500 pcs.
Goatskins: Wet salted (Daissee, Patna, Killed) 38,200 pcs. Assam-Dinajpur 53,000 pcs.; Muzaffarpore-Patna-Pakur-Purneah-Kissenganj 2,00,500 pcs.

SUGAR FIRM

During the week ended 20th August, sugar sales in the Calcutta market averaged 4,500 bags daily. Arrivals a day were 500 bags and stocks totalled 100,000 bags. Rates for ready local market delivery were Rs. 38-8 to Rs. 38-14 for ordinary grain and Rs. 41-8 to Rs. 42 for bold grain. The market was firm.

Commodity Markets

WHOLESALE PRICE INDEX UNCHANGED

THE official wholesale price index (base: year ended March 1953=100) during the week ended 2nd August, 1958, remained stationary at the previous week's revised level of 116.2. The index was higher by 2.6 percent and 2.7 percent, respectively, when compared with the corresponding week of the earlier month and that of last year. The index for Food Articles rose further by 0.2 percent to 120.0 due to an advance in the prices of rice in Tirunelveli (+21%) and in Balasore (+9%), fish (Cat fish) in Bombay (+19%), barley in Motihare (+10%), eggs in Delhi (+8%), ragi in Bangalore (+7%), chillies (+6%), wheat in Saugar, milk and cummin (+5% each), maize (+3%) and gur and salt (+1% each) although the prices of eggs in Madras (-17%), onions in Delhi (-12%), jowar in Rohtak (-9%) and in Mohal (-6%), urad in Delhi and oranges in Calcutta (-8% each), ragi in Ghoti (-7%), wheat in Kanpur, mung in Patna, bananas in Bombay and cloves (-6% each), rice in Nizamabad and tea (-5% each), arhar, potatoes and gingelly oil (-2% each) and bajra, gram, masur, groundnut oil, mustard oil, coconut oil and black pepper (-1% each) showed declines. The index for Tobacco fell by 3.3 percent to 88.1 as a result of a decline in the prices of tobacco (Polah F.A.Q.) in Calcutta (-11%). The index for the Fuel, Power, Light and Lubricants group remained stationary at the previous week's level of 115.9; there was a fall in the price of castor oil (-1%). The prices of gahuts in Salem (-11%), linseed in Calcutta (-6%), raw jute in Barachakia (-5%), castorseed and rapeseed (-2% each) and raw cotton and raw wool (-1% each) moved down while linseed in Sahibganj (+11%), konam bark in Madras (+10%), groundnuts (+2%) and lac (+1%) showed advances and the index for Industrial Raw Materials stood at 119.3 against 119.4 for the earlier week. The index for Intermediate Products rose by 0.2 percent to 112.7 during the week. Items which showed noticeable variations were: brass in Bombay (+8%), aluminium (circles) (+6%), zinc (-3%) and linseed oil and tin (-2% each). Higher prices of linseed cake in Bombay (+5%) and jute manufactures and general chemicals (+2% each) raised the index for Finished Products by 0.3 percent to 109.6.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: 1952-53=100)

INCREASED ELECTRICITY OUTPUT IN APRIL

The total electricity produced in April 1958 by public utility power-stations in India amounted to 996.4 million kWh, of which 810.5 million kWh were sold to ultimate consumers. Corresponding figures for April 1957 were 899.4 million kWh and 754.5 million kWh, and for April 1956, 204.7 million kWh and 172.0 million kWh, respectively. These statistics cover 841 public electricity supply undertakings with seven generating undertakings as new inclusions during the month. The generating undertakings are situated in Chintapalle, Palvancha, Burgampad, Suryapet in Andhra Pradesh, Parli-Vajinath in Bombay Theog in Himachal Pradesh and Kuldih in Orissa.

Engineering and Transport

NEW MODELS AT FARNBOROUGH AIR DISPLAY

GREAT IMPROVEMENT IN DESIGN AND SPEED

THIS year's flying display, to be held during the first full week of September in Farnborough, will feature established aircraft for which there exists a steady demand, the next generation of civil and military aircraft, and glimpses into the future. Aircraft which have never been seen at an S.B.A.C. display before will include the Short S.C. 1 vertical take off research aircraft (in the static park)—an aircraft which points the way to future supersonic airliners, the Fairey Rotodyne, the Saunders Roe P. 531 five-seat turbine-powered helicopter, the Westland Westminster Utility, the Blackburn N.A. 39 naval strike bomber, the Bristol 192 twin-engine turbine helicopter, the de Havilland Comet IV jet airliner and Comet IIIB. Handley Page Dart-Herald, Avro Vulcan M.K. 2 English Electric Canberra T. 11 and a new engine test bed—the Rolls-Royce Tyne-Ambassador.

The flying programme, which will begin at 2-30 p.m. on private, and 3 p.m. on public days, will start with a Gannet adapted to carry Air Early Warning radar, followed by the latest mark of Canberra to be announced, the M.K. 11 Trainer. The Conquest-Vulcan engine test bed—a remarkably quiet aeroplane considering its power—will then fly over. The Tyne-Ambassador and Scorpion-Canberra, both engine test beds—the latter an ex-holder of the world's height record for aircraft—will conclude group A.

New Types of Helicopters

Nine helicopters, three of them new types, will comprise the next group. The Bristol 192, fitted with two turbine Gazelle engines and intended to carry up to 25 troops, will fly first followed by the SR. P. 531, a new general-purpose turbine helicopter, and two two-seater Skeeters. A tiny Ultralight will be followed by the new Westminster Utility, a "flying crane" which weighs nearly 14 tons and has a rotor diameter of 72 feet (22 metre). The transport version will carry 46 passengers at 150 miles an hour (241 kilometre an hour) and is the largest helicopter project ever undertaken as a private venture by a British aircraft constructor.

Other Westland aircraft, the Widgeon, Whirlwind and turbine Wessex (first seen at last year's display) will conclude a significant demonstration of Britain's range of helicopters.

Next, a Viscount 812, the new Comet IV and the Comet IIIB will take off, fly past and land. The IIIB, prototype of the clipped wing short-range IVB will show the application of reverse thrust on landing, the first airliner in the world to be equipped with this device. The President 12-seater aircraft will be demonstrated next, to be followed by a Twin Pioneer which will take off carrying passengers and land at a later stage in the programme. Next will follow a series of individual demonstrations: first an Alpha, which will give a crop-spraying demonstration, and an Aiglet trainer. The recently-announced agricultural version of the Chipmunk and a Leonides-powered Beaver, representing a Commonwealth member of the Society, will follow. A Jet Provost of the type which returned recently from a successful South American tour will fly next to be followed by the latest Herald powered by Darts.

NEW DIESEL-HYDRAULIC LOCOMOTIVES FOR BRITISH RAILWAYS

Britain's newest main line locomotive, a 22,000 horse-power diesel-hydraulic engine, went on a demonstration run from Paddington to Reading and back recently. It seemed almost silent, averaged more than 60 miles an hour and did a top speed of 74, and can reach 90 miles an hour hauling a full-sized main line train, according to our London correspondent. In other regions where diesel-electric locomotives are being introduced, the final drive is by electric motors, but the Western Region system uses hydraulic units rather like the torque converters in the automatic transmission of a motor-car. Western Region experts claim that their system is easier to cool and provides better continuous low-speed running. "As other regions are using electric transmission, we are taking this chance to compare the two," they said. Based on a German design which has had a great success on the West German railways, the new engine is the first of 33 to be built in the British Railways' workshops in Swindon. The diesel-hydraulic could run from Paddington to Plymouth and back on one tankful of fuel—800 gallons; do a non-stop run to anywhere in the Western Region or from London to Glasgow or Edinburgh. It weighs 78 tons, two-thirds of the weight of a comparable steam locomotive—a saving in weight equal to one laden coach.

COMPANY AND PUBLIC NOTICES

THE SENDRA COAL COMPANY, LIMITED

NOTICE is hereby given that an Annual General Meeting of The Sendra Coal Company Ltd. will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Thursday the 18th September, 1958 at 10-50 A.M., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1957, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividend recommended by the Directors.
3. To appoint a Director in place of Mr. S. B. Bose, who retires by rotation and being 70 years of age is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that the age limit shall not apply to him.

And in this connection to consider and, if thought fit, to pass the following resolution of which special notice as required under Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act is appended below.

To be Proposed as an Ordinary Resolution

"That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Mr. S. B. Bose and that he be and is hereby re-elected as a Director of the Company, whose period of office as such director would be liable to termination by retirement of directors by rotation."

4. To appoint Auditors and fix their remuneration.

The Share Transfer Register of the Company will be closed from the 4th to the 18th September, 1958, both days inclusive.

By Order of the Board,

F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

Calcutta, 14th August, 1958.

NOTE:—

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after 25th September, 1958 to those shareholders so entitled whose names appear in the Company's books on the 18th September, 1958, or to their mandates. No application for Dividend Warrants will be necessary.

Explanatory Statement

In the special notice given to the Company of the resolution under Item No. 3 of the above notice it has been stated that the services of Mr. S. B. Bose have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

THE CHURULIA COAL COMPANY LIMITED

NOTICE is hereby given that an Annual General Meeting of The Churulia Coal Company Limited will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Thursday, the 18th September, 1958, at 10-40 A.M., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1957, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividend recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Register of the Company will be closed from the 4th to the 18th September, 1958, both days inclusive.

By Order of the Board,

F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

Calcutta, 14th August, 1958.

NOTE:—

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after 25th September 1958, to those Shareholders so entitled whose names appear in the Company's books on the 18th September, 1958, or to their mandates. No application for Dividend Warrants will be necessary.

THE ONDAL COAL COMPANY, LIMITED

NOTICE is hereby given that an Annual General Meeting of The Ondal Coal Company Ltd. will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Thursday, the 18th September, 1958, at 10-30 A.M., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1957, and to receive the Directors' and the Auditors' Reports thereon.
2. To declare the Dividends recommended by the Directors.
3. To appoint a Director in place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 4th to the 18th September 1958, both days inclusive.

By Order of the Board,

F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

Calcutta, 14th August, 1958.

NOTE:—

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after 25th September, 1958 to those shareholders so entitled whose names appear in the Company's books on the 18th September, 1958, or to their mandates. No application for Dividend Warrants will be necessary.

THE METHONI TEA COMPANY, LIMITED.

The Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Friday, the 19th day of September, 1958, at 3 p.m., for the following purposes:—

- (1) To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1957.
- (2) To declare a dividend.
- (3) To elect a Director in place of the retiring Director. In this connection, Special Notice is hereby given of the intention to move the Special Resolution at the meeting, that is to say—

"That Mr. I. P. Goenka who retires by rotation be and is hereby re-appointed a Director of the Company."

- (4) To elect Auditors for the ensuing year, and to fix their remuneration.

The Share Transfer Book of the Company will be closed from 12th September, 1958 to 19th September, 1958, both days inclusive.

OCTAVIUS STEEL & CO. LTD.,

A. H. GALLOWAY,

Managing Director,

Managing Agents.

Calcutta, 18th August, 1958.

NOTE:—

(i) A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and on a poll to vote instead of himself and the proxy need not be a member.

(ii) In connection with the business to be transacted under Item 3 of this Notice please see the undernoted Explanatory Statement.

EXPLANATORY STATEMENT

In the Special Notice given by the Company to the shareholders, under Item 3 of the annexed notice for the Annual General Meeting, intimation has been given of the intention to move a Special Resolution for the re-appointment to a Board of Directors of Mr. I. P. Goenka. Special Notice of such intention has also been given to the Company Under the provisions of Section 261(1)(f) of the Companies Act, 1956, Mr. Goenka, who is an officer of the Managing Agents of the Company, can be appointed to the Board only by Special Resolution. Since he will retire in rotation at the meeting, his re-appointment for compliance with those provisions, will therefore have to be by Special Resolution.

COAL COMPANIES

O. Po. F and Dd indicate Ordinary Preferred Ordinary Founders and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

AGENDA FOR THE DELHI MEETING OF THE WORLD BANK AND I.M.F.

THREE PROPOSALS FOR A WESTERN REPLY TO THE RUSSIAN ECONOMIC OFFENSIVE

WHEN New Delhi has the honour of receiving for the first time the members of the World Bank and the International Monetary Fund this autumn for their annual session, it will also have the advantage of having virtually the whole financial administration of this country "in the wings" for an uncommonly important discussion. These two institutions, born at Bretton Woods in 1944, and the American Government which naturally dominates them, are preoccupied this year with the problem of finding an adequate reply to the Russian campaign of economic aid for under-developed countries. It is suitable that their efforts in that direction should be placed in New Delhi, capital of a nation whose economic problems are precisely typical of the sort that the West has to help resolve, of a country whose present difficulties can only be solved by increased financial aid from abroad, and incidentally of one that has accepted just enough Russian assistance to emphasise the political urgency of the question. The two international financial institutions have disappointed many

AN INVESTMENT POLICY FOR THE LIFE INSURANCE CORPORATION

THE DANGERS OF BACK-DOOR NATIONALISATION

THE stock markets' reactions to the Life Insurance Corporation's investment policy seem, up to now, to have been mixed. The fact is that the policy has been carefully thought out, and, with luck, should work reasonably efficiently in practice. There is little that is novel or unexpected about it, a feature for which investors have to be thankful these days. How it will operate under practical conditions is something only the future will show, but the least that can be said is that the final formulation of almost any reasonable policy is bound to be an improvement on the present uncertainty. The decision to adhere closely to the provisions already laid down in Section 27A of the Insurance Act is undoubtedly the right one. As Mr. Morarji Desai remarked, these have stood the test of time. It was the fact that the general principles on which these provisions are based were ignored after nationalisation, in spite of Ministerial promises, which made the Mundhra scandal possible. There seems little reason now why the Life Insurance Corporation should not go forward to a respectable maturity, with much reduced risk of falling a victim of official bungling in future.

The provision that 50 percent of the Corporation's investment resources should be reserved for "Government and approved" securities, is undoubtedly sound. In the insurance business, security must be the first criterion and there will be few who will quarrel with a regulation obviously designed to serve that end. This particular provision is quite unexceptionable. The apportioning of the remaining half of the Corporation's resources between "approved investments" and "other investments" calls for closer examination. In the Insurance Act, the definition of "approved" investments is fairly wide, and includes good quality equity shares—the "blue chips" about which so much has been heard lately. Under the heading "other investments" can be included not only equity shares in public companies, but now, also, shares in private limited companies as well. This means, therefore, that getting on for 50 percent of the investment resources of the Life Insurance Corporation will in future be available for the purchase of various categories of ordinary shares. When this fact is considered alongside the modification which permits the holding of shares of particular companies beyond the former maximum of 10 percent to a new maximum of 30 percent—which itself can be extended in particular cases—we find the first and only incidence of what appears to be "social" bias in the new policy. It is clear that there will be considerable scope in future for the Life Insurance Corporation to become the largest single share-holder in a company, a fact which inevitably

involves some responsibility for management, even if restricted to interference when things go wrong. Whether the Corporation likes it or not, therefore, it is going to find itself increasingly caught up in the general field of company management, sometimes, no doubt, for reasons which have more to do with politics than with economic realities. This is the point in the new policy where the Government's ambition for "back-door nationalisation" reveals itself.

The portion of Mr. Desai's statement which deals with the Corporation's relations with the stock markets is by no means as clear as it might be. It is true enough that, as the country's largest investor, the Corporation has a duty to the community as well as to its policy holders. But the proceedings during the enquiry into the Mundhra affair showed all too clearly how this responsibility can be abused. The restrictions imposed by Section 27A of the Insurance Act may be quite enough to prevent this excuse ever being used again by a Minister eager to cover up his Budget mistakes. But with nearly 50 percent of the Corporation's resources available for the purchase of equities, this is doubtful. The Corporation is still free to operate so as to protect the value of its own holdings—thus obeying the two rules of safeguarding its policy holders' money and acting in the interests of the economy—and this is a freedom which can readily be used for other purposes, as the Mundhra affair proved. It is easier to indicate this danger than to suggest a remedy. With an investor of such size, it is inevitable that it should have to act like a speculator when its own holdings are threatened, and by so doing help cushion the effects of Government policy on the one sure indicator of public economic opinion. Mr. Desai is right when he points out that the Corporation's influence in the market is likely to be a steady one. But it is important to realise that circumstances may arise when this could be far from a virtue in a Government-controlled corporation.

The new policy for life insurance investment, therefore, is seen to possess two main weaknesses. These are: the tendency it may have to involve the Corporation increasingly in a field which is not its true concern, namely, business management; and the fact that it still leaves the Corporation as the main speculator on the stock markets. These are dangers which are inherent in the circumstances of a large publicly-owned corporation functioning in depressed and moribund stock markets. Only imagination and care, not further regulation, will offset them. It now remains for the Corporation to implement the new investment policy with as much independence of the Government as possible.

Not all the rules now laid down will protect the interests of policy holders and the general public if Ministers and senior civil servants are allowed to interfere too freely with the working of the Corporation. It was this factor which made the Mundhra affair possible; the new investment policy does not rule it out completely for the future.

FALL IN THE BRITISH BANK RATE

A POSSIBLE PRELUDE TO CHEAP MONEY

MID-AUGUST is not a time of year when one would normally expect a reduction in the British Bank rate. Indeed, some critics were arguing earlier in the year that the rate should be reduced more at that time so that it could be conveniently raised again in the third quarter of the year, when sterling would be subject to seasonal pressure. That the British Bank rate was in fact reduced—from 5 percent to 4½ percent—in the last favourable period of the year has been seen as conclusive evidence that the trend of interest-rates, in Britain at least, is firmly downward. But it is wise to investigate the evidence rather more carefully. The reduction in Bank rate on this occasion (as on many previous occasions) represented a change that had already occurred in the market, rather than a new move downward. It was certainly a gesture of confidence in sterling; but it was not made in defiance of the seasonal trend of sterling, for the normal seasonal factors have not been perceptibly operative this year.

It may be argued that the technical question whether Bank rate leads or follows the market is not really important when the market expects a lower Bank rate, for the market will be inclined to adjust its rates to the lower rate before the reduction has been announced. In this latest case, the market was satisfied that the conditions appropriate to a lower Bank rate existed. Sterling was strong, and trade was rather weak. The weakness in trade—the "recession"—is the reason for assuming that interest-rates are still inclined downward. Historically-minded observers have pointed out that in the last year when the British Bank rate was reduced in August it was reduced again in October. But that was as long as 33 years ago, and the conditions of 1958 are not those of 1925. Officials of the Bank of England and the Treasury do not consider the reductions in Bank rate that began last March as part of a policy to stimulate trade. They point out that a rate of 5 percent or more is abnormal and that the circumstances do not now require an abnormal rate.

At this stage various questions arise. What rate do the British authorities regard as "normal"? Is it their intention merely to establish short-term money-rates on a "normal" level, or do they envisage a period of "cheap money"? If so, would long-term as well as short-term rates be permitted to decline? The British authorities cannot consider these problems in the abstract. Much more than the American authorities, they must take account of other countries' rates. American rates have been rising, but on the continent of Europe the general trend has been the same as in Britain—downward. The cut in the British Bank rate to 4½ percent did not eliminate the differential between London and other centres. There is still some advantage in keeping short-term money in London, even allowing for the cost of covering the exchange risk by forward purchases of other currencies at a premium; and—significantly—there is now a considerable amount of foreign money in London whose owners have not considered it necessary to cover this risk.

The British authorities must watch the differential for an appreciable outflow of funds from London would directly weaken sterling and then, by weakening confidence in sterling, cause further withdrawals. But the authorities have been more concerned with the idea that foreign confidence will be disturbed by signs of monetary laxity, and with the possibility that the inflation that monetary stringency suppressed (with some other factors helping) will break out again if borrowing becomes much cheaper. Foreign opinion was more impressed by the authorities' display of confidence in reducing Bank rate "out of season" than disturbed by any suggestion of laxity. The threat of inflation, however, cannot be ignored. It may seem remote when the steel industry's figures of production and stocks, the machine-tool industry's figures of new orders, and various other indicators, provide ample evidence of recession in the capital trades. But the British economy as a whole is still not much less active than it has been in recent years, its wage-price structure is still rising (though not so fast as in recent years), and its mood (most noticeably in dealings on the London Stock Exchange this year) seems confident enough to become quite buoyant with a little more encouragement.

The effects of the lowering of interest-rates in Britain have been reinforced, since the beginning of August, by free demand for bank credit.

And it should be noted that the position is now more favourable to borrowers than it was in 1955, when the authorities raised Bank rate from 4½ percent and imposed restraints on the banks' lending. The change since the crisis of 1957, when Bank rate was raised to 7 percent and restraints on the banks' lending were tightened, is, of course, more marked. We do not know in detail how such changes affect trade, but there is no doubt that they affect stock-holding (though less, it seems, among big firms than among small ones). Cheap and plentiful credit could stimulate buying for stock, and could thereby considerably increase imports. In Britain, credit is not yet cheap by normal standards, and it will not be regarded as cheap unless Bank rate is reduced below, say, 4 percent. Whether the authorities will proceed beyond "normalisation" to "cheap money" depends,

probably, on the trend of business; though we cannot be sure that they would use "cheap money" as an instrument of "re-expansion"—they might prefer more direct, and thus more controllable, methods. The American revival, if it develops, will be relevant; but the British Government believes that the recession in Britain will deepen irrespective of the American trend. On the other hand, a rise in American interest-rates must limit a fall in British interest-rates. Government bonds continued to rise in London while their counterparts were falling heavily in New York; but the British authorities do not believe that the relation between the supply of and the demand for permanent capital justifies an appreciable decline in the long-term rate of interest. It would be helpful if the capital market were freer to establish its own rates.

and writing off Rs. 40.12 lakhs, covering the expenses incurred in the search for oil in West Bengal under the Indo-Stanvac project. Standard-Vacuum Oil Company in India, excluding refinery operations, earned a net profit of Rs. 106.5 lakhs during the year ended 31st December, 1957. The accounts of the company show that the net profit resulted from a gross turnover of Rs. 5,621.9 lakhs which includes inter-company transactions of Rs. 27 lakhs. The net profit for 1957 represents a return of 2.1 percent on the total sales. 3.4 percent on the total assets and 4.1 percent on gross block plus working capital. The sales volume increased from 33.33 crores of imperial gallons achieved in 1956 to 38.04 crores of imperial gallons representing an increase of 14.13 percent. Trading results, however, reflect the fact that the company was unable to recover fully increased costs for the most part caused by the continued closure of the Suez Canal early in the year 1957, and higher operating costs for supplying upcountry markets. The value of the company's total assets at cost increased by Rs. 3.49 crores from Rs. 30.27 crores in 1956 to Rs. 33.76 crores in 1957. The total value of its inventories in India at cost stood at Rs. 12.21 crores compared with Rs. 10.47 crores in the previous year. The value of its investments in fixed assets at cost increased by Rs. 1.48 crores, and stood at the end of the year at Rs. 13.31 crores.

During the year, the company maintained full levels of employment in spite of unfavourable returns and paid out Rs. 2.71 crores in wages and salaries as against Rs. 2.60 crores in 1956. Its programme of Indianisation made further progress; the number of overseas employees was reduced from 48 at the end of 1956 to 32 at the end of 1957. The company's operations for the year were a large source of revenue to the Government, and the accounts show that Rs. 1.55 lakhs are reflected under the heading import duties and excise taxes including amounts paid to Standard-Vacuum Refining Company of India Ltd. and Rs. 36.8 lakhs in property and other taxes in addition to income and wealth taxes reported above. The company also collected on behalf of and paid to the various State Governments a total of Rs. 159.57 lakhs in sales taxes.

Polychem Does Well

Polychem Ltd appears to have done well last year with its new venture of producing raw materials for the plastics industry. Mr. Ramdas Kilachand, chairman, says that the plant has been working satisfactorily since it came into operation in May 1957. Polychem has an agreement with the Dow Chemical Company of the United States under which all Styron products are to be manufactured in this country. The polystyrene moulding compounds plant worked at between 50 percent and 60 percent of its rated capacity last year. A higher output could not be achieved because large stocks of the imported material were still available in the market. Now that the Government has banned such imports, the company looks forward to increased production and larger sales. It is said that the "high impact polystyrene" manufactured by Polychem at its Bombay plant has been well received by the industry because of its unusual properties and efforts were being made to step up the production of this material. This will be achieved by augmenting the existing facilities at the plant. Mr. Kilachand also says that the company proposes to install a Styron sheet extrusion plant in view of the great demand for plastic sheeting. This plant will use high impact polystyrene as its raw material. The chairman discloses that the company is in close contact with the Export Promotion Council for the Plastics Industry and has undertaken to offer its products at competitive prices to Indian moulding plants so that the latter can hold their own in foreign markets. Efforts are also being made to sell the company's raw materials abroad.

Tea Prices and Consumption

The chairman of the Central Tea Board, who recently visited Madras, was asked questions relating to tea prices and consumption. Some traders have expressed anxiety that tea may displace coffee in south India. But sample surveys in many towns have shown that tea is not half as popular as coffee in that area. The chairman said little about the auction and retail prices, but he assured traders that municipalities would be helped to undertake inspection and that the Board would assist local authorities in checking the adulteration of teas. As for export prospects, he declined to say anything definitely. The U.P.A.S.I. president has recently made it clear that Indian tea is dearer than African tea and that many foreign buyers are asking for cheaper tea from India's competitors. The outlook for the industry might have been more clouded had not the London tea sales recently recorded a better undertone. The reduction in excise duty does not seem to have produced favourable effects so far, and it is extremely necessary to increase exports for earning

Current News and Comment

Gunny Price Stability

In his address from the chair at the latest annual general meeting of the Gunny Trades Association, Mr. Hari Lal Mehta stressed the importance of price stability in the jute goods market. This is necessary to increase their exports, said Mr. Mehta. He pointed out that "a foreign buyer is prepared to pay even a little more for a commodity the price of which is likely to be stable." Analysing the causes of wide fluctuations "to the embarrassment of both the buyer and the seller", Mr. Mehta said that the attainment of self-sufficiency in raw jute would "go a long way" towards removing a major cause of speculation which is based mainly on the crop reports which are received from time to time. He welcomed the step taken by the Indian Jute Mills Association in fixing minimum prices for jute goods, and was of the view that such interventions will always prove effective against undue speculation. "It helped to avert a crisis, which at that time looked like developing in our market. The response by the industry, in general, has been satisfactory, except for some broken periods when trading in sacking became difficult." Over-production in sacking in the past months has been another cause of price instability, and the I.J.M.A., Mr. Mehta hoped, would keep a constant check on its production position. The creation of the East India Jute and Hessian Exchange, which provides a suitable hedge market for trading in jute and jute goods, would, Mr. Mehta felt, curb unbridled speculation. "Speculators, by irresponsible manipulation and operation, cause erratic fluctuation in prices which is resented both in India and abroad." The value of this institution, he pointed out, must not be judged merely on the basis of six months' working and more time must be allowed properly to assess its "function and scope".

Discussing the current positions of production and stocks, and overseas and internal consumption prospects for the goods, Mr. Mehta said that the level of production had been satisfactory for the last three years. The performance of the mills, judging from the trend so far, is likely to be even better in 1958. As for stocks, they were at a satisfactory level in 1957 as well during the first quarter of this year; but from April last, they began to rise rapidly and by the end of June, stood at 134,000 tons. This abnormal increase was due largely to the dock strike in that month. Foreign demands have recently improved. This, and the fact that the seasonal months when internal demand increases have arrived, the stocks might soon be reduced. The prospects of increasing exports will depend upon the many experiments which the I.J.M.A. is making here and abroad on the new uses of jute. One special product is the jute-backed tufted carpeting, the production of which has increased from a bare 3 million square yards before the second world war to 50 million square yards in 1957. The internal market shrank a little in 1957, but Mr. Mehta said that with further increases in domestic industrial and agricultural production in prospect, the home use of jute goods for packing and wrapping purposes "is bound to increase."

Expansion of Orissa Cement

In his address from the chair at the annual general meeting of the Orissa Cement Ltd., Mr. J. Dalmia has reviewed the expansion programmes of the company. (A fuller version of the speech appeared in last week's issue of *Capital*). The production from the expanded plant, which was commissioned early last year, has improved steadily. Progress has been satisfactory in setting up the new refractories plant which, when completed, "will be the largest and one of the most modern composite units of its kind in India." The fireclay and silica sections of the project began production in April this year, and orders

have been received from various consumers including the steel industry. "Work on the basic plant is being pressed ahead and it is hoped that this third stage of the composite project will be commissioned towards the end of the year when your company will also be in a position to supply basic refractories such as magnesite and chrome-magnesite bricks to, among others, the steel plants in the public and private sectors." This will save foreign exchange to the extent of Rs. 2 crores a year, an amount which is being spent at present in importing refractories. The project for the expansion of the company's refractories plant was prepared in anticipation of the growing demand for refractories and the rapid development of the steel industry. The steel-casting plant of the Dalmia Iron and Steel Ltd., in which Orissa Cement has a large interest, has begun production. Furthermore, the deadburnt magnesite plant in Salem of the Dalmia Magnesite Corporation, in which Orissa Cement has also a substantial interest, is expected to begin production before the end of the year. Mr. Dalmia says that apart from catering to the large demand from Indian and foreign markets, this will assure the company regular and adequate supplies of deadburnt magnesite for the manufacture of basic refractories.

The Government has announced its decision on the recommendations of the Tariff Commission on the fair selling price, which has been brought into effect for a period of three years from 1st July, 1958. The Commission made a significant departure from the principles it adopted in its 1953 report for the determination of profits and for fixing fair prices. The profit margin which has been allowed to producers is inadequate and is entirely inconsistent with their needs. "It is disappointing to find that your company has been allowed an increase of only Re. 1 a ton. Moreover, whereas the Tariff Commission has recommended the introduction of the new prices with effect from 1st January, 1958, the Government of India has decided to introduce the new rates only from 1st July, 1958, thus depriving the producers of the benefit for six months of whatever price increase the producers might have been allowed." Referring to the setting up of a wage board for the cement industry, Mr. Dalmia says that it is necessary to bear in mind that any variation in production costs, which form a substantial part in production costs, will be reflected in the selling price for cement, which is a controlled commodity.

Guest, Keen, Williams Debentures

The offer of debenture stock worth Rs. 1½ crores by Guest, Keen, Williams, Ltd is expected to meet with a warm response. It will carry interest at the rate of 6½ percent, taxable, and is redeemable between 1966 and 1971. The yield is considered attractive by market standards. The directors state that firm applications for stock worth Rs. 75 lakhs have been received and the balance of Rs. 75 lakhs is offered for public subscription.

Guest, Keen, Williams is a first-class engineering concern and the company earned a profit of Rs. 1.52 crores during the year ended 28th December, 1957. The company may redeem the whole or any portion of the debenture stock on 1st January, 1966, or at any time thereafter, at par, plus accrued interest, on giving three calendar months' notice to the stockholders. A sinking fund will be established to which annual contributions will commence in 1961, with a contribution in respect of the calendar year ended 31st December, 1961. Such contributions will be payable only out of the distributable profits of the company. Details of the issue are published elsewhere in this issue of *Capital*.

After providing Rs. 184.1 lakhs for income and wealth taxes, Rs. 64.9 lakhs against depreciation

AN INVESTMENT POLICY FOR THE LIFE INSURANCE CORPORATION

THE DANGERS OF BACK-DOOR NATIONALISATION

THE stock markets' reactions to the Life Insurance Corporation's investment policy seem, up to now, to have been mixed. The fact is that the policy has been carefully thought out, and, with luck, should work reasonably efficiently in practice. There is little that is novel or unexpected about it, a feature for which investors have to be thankful these days. How it will operate under practical conditions is something only the future will show, but the least that can be said is that the final formulation of almost any reasonable policy is bound to be an improvement on the present uncertainty. The decision to adhere closely to the provisions already laid down in Section 27A of the Insurance Act is undoubtedly the right one. As Mr. Morarji Desai remarked, these have stood the test of time. It was the fact that the general principles on which these provisions are based were ignored after nationalisation, in spite of Ministerial promises, which made the Mundhra scandal possible. There seems little reason now why the Life Insurance Corporation should not go forward to a respectable maturity, with much reduced risk of falling a victim of official bungling in future.

The provision that 50 percent of the Corporation's investment resources should be reserved for "Government and approved" securities, is undoubtedly sound. In the insurance business, security must be the first criterion and there will be few who will quarrel with a regulation obviously designed to serve that end. This particular provision is quite unexceptionable. The apportioning of the remaining half of the Corporation's resources between "approved investments" and "other investments" calls for closer examination. In the Insurance Act, the definition of "approved" investments is fairly wide, and includes good quality equity shares—the "blue chips" about which so much has been heard lately. Under the heading "other investments" can be included not only equity shares in public companies, but now, also, shares in private limited companies as well. This means, therefore, that getting on for 50 percent of the investment resources of the Life Insurance Corporation will in future be available for the purchase of various categories of ordinary shares. When this fact is considered alongside the modification which permits the holding of shares of particular companies beyond the former maximum of 10 percent to a new maximum of 30 percent—which itself can be extended in particular cases—we find the first and only incidence of what appears to be "social" bias in the new policy. It is clear that there will be considerable scope in future for the Life Insurance Corporation to become the largest single share-holder in a company, a fact which inevitably

involves some responsibility for management, even if restricted to interference when things go wrong. Whether the Corporation likes it or not, therefore, it is going to find itself increasingly caught up in the general field of company management, sometimes, no doubt, for reasons which have more to do with politics than with economic realities. This is the point in the new policy where the Government's ambition for "back-door nationalisation" reveals itself.

The portion of Mr. Desai's statement which deals with the Corporation's relations with the stock markets is by no means as clear as it might be. It is true enough that, as the country's largest investor, the Corporation has a duty to the community as well as to its policy holders. But the proceedings during the enquiry into the Mundhra affair showed all too clearly how this responsibility can be abused. The restrictions imposed by Section 27A of the Insurance Act may be quite enough to prevent this excuse ever being used again by a Minister eager to cover up his Budget mistakes. But with nearly 50 percent of the Corporation's resources available for the purchase of equities, this is doubtful. The Corporation is still free to operate so as to protect the value of its own holdings—thus obeying the two rules of safeguarding its policy holders' money and acting in the interests of the economy—and this is a freedom which can readily be used for other purposes, as the Mundhra affair proved. It is easier to indicate this danger than to suggest a remedy. With an investor of such size, it is inevitable that it should have to act like a speculator when its own holdings are threatened, and by so doing help cushion the effects of Government policy on the one sure indicator of public economic opinion. Mr. Desai is right when he points out that the Corporation's influence in the market is likely to be a steady one. But it is important to realise that circumstances may arise when this could be far from a virtue in a Government-controlled corporation.

The new policy for life insurance investment, therefore, is seen to possess two main weaknesses. These are: the tendency it may have to involve the Corporation increasingly in a field which is not its true concern, namely, business management; and the fact that it still leaves the Corporation as the main speculator on the stock markets. These are dangers which are inherent in the circumstances of a large publicly-owned corporation functioning in depressed and moribund stock markets. Only imagination and care, not further regulation, will offset them. It now remains for the Corporation to implement the new investment policy with as much independence of the Government as possible.

Not all the rules now laid down will protect the interests of policy holders and the general public if Ministers and senior civil servants are allowed to interfere too freely with the working of the Corporation. It was this factor which made the Mundhra affair possible; the new investment policy does not rule it out completely for the future.

FALL IN THE BRITISH BANK RATE

A POSSIBLE PRELUDE TO CHEAP MONEY

MID-AUGUST is not a time of year when one would normally expect a reduction in the British Bank rate. Indeed, some critics were arguing earlier in the year that the rate should be reduced more at that time so that it could be conveniently raised again in the third quarter of the year, when sterling would be subject to seasonal pressure. That the British Bank rate was in fact reduced—from 5 percent to 4½ percent—in the last favourable period of the year has been seen as conclusive evidence that the trend of interest-rates, in Britain at least, is firmly downward. But it is wise to investigate the evidence rather more carefully. The reduction in Bank rate on this occasion (as on many previous occasions) represented a change that had already occurred in the market, rather than a new move downward. It was certainly a gesture of confidence in sterling; but it was not made in defiance of the seasonal trend of sterling, for the normal seasonal factors have not been perceptibly operative this year.

It may be argued that the technical question whether Bank rate leads or follows the market is not really important when the market expects a lower Bank rate: for the market will be inclined to adjust its rates to the lower rate before the reduction has been announced. In this latest case, the market was satisfied that the conditions appropriate to a lower Bank rate existed. Sterling was strong, and trade was rather weak. The weakness in trade—"the recession"—is the reason for assuming that interest-rates are still inclined downward. Historically-minded observers have pointed out that in the last year when the British Bank rate was reduced in August it was reduced again in October. But that was as long as 33 years ago, and the conditions of 1958 are not those of 1925. Officials of the Bank of England and the Treasury do not consider the reductions in Bank rate that began last March as part of a policy to stimulate trade. They point out that a rate of 5 percent or more is abnormal and that the circumstances do not now require an abnormal rate.

At this stage various questions arise. What rate do the British authorities regard as "normal"? Is it their intention merely to establish short-term money-rates on a "normal" level, or do they envisage a period of "cheap money"? If so, would long-term as well as short-term rates be permitted to decline. The British authorities cannot consider these problems in the abstract. Much more than the American authorities, they must take account of other countries' rates. American rates have been rising, but on the continent of Europe the general trend has been the same as in Britain—downward. The cut in the British Bank rate to 4½ percent did not eliminate the differential between London and other centres. There is still some advantage in keeping short-term money in London, even allowing for the cost of covering the exchange risk by forward purchases of other currencies at a premium; and—significantly—there is now a considerable amount of foreign money in London whose owners have not considered it necessary to cover this risk.

The British authorities must watch the differential, for an appreciable outflow of funds from London would directly weaken sterling and then, by weakening confidence in sterling, cause further withdrawals. But the authorities have been more concerned with the idea that foreign confidence will be disturbed by signs of monetary laxity, and with the possibility that the inflation that monetary stringency suppressed (with some other factors helping) will break out again if borrowing becomes much cheaper. Foreign opinion was more impressed by the authorities' display of confidence in reducing Bank rate "out of season" than disturbed by any suggestion of laxity. The threat of inflation, however, cannot be ignored. It may seem remote when the steel industry's figures of production and stocks, the machine-tool industry's figures of new orders, and various other indicators, provide ample evidence of recession in the capital trades. But the British economy as a whole is still not much less active than it has been in recent years. Its wage-price structure is still rising (though not so fast as in recent years), and its mood (most noticeably in dealings on the London Stock Exchange this year) seems confident enough to become quite buoyant with a little more encouragement.

The effects of the lowering of interest-rates in Britain have been reinforced, since the beginning of August, by free demand for bank-credit.

And it should be noted that the position is now more favourable to borrowers than it was in 1955, when the authorities raised Bank rate from 4½ percent and imposed restraints on the banks' lending. The change since the crisis of 1957, when Bank rate was raised to 7 percent and restraints on the banks' lending were tightened, is, of course, more marked. We do not know in detail how such changes affect trade, but there is no doubt that they affect stock-holding (though less, it seems, among big firms than among small ones). Cheap and plentiful credit could stimulate buying for stock, and could thereby considerably increase imports. In Britain, credit is not yet cheap by normal standards, and it will not be regarded as cheap unless Bank rate is reduced below, say, 4 percent. Whether the authorities will proceed beyond "normalisation" to "cheap money" depends,

probably, on the trend of business; though we cannot be sure that they would use "cheap money" as an instrument of "re-expansion"—they might prefer more direct, and thus more controllable, methods. The American revival, if it develops, will be relevant; but the British Government believes that the recession in Britain will deepen irrespective of the American trend. On the other hand, a rise in American interest-rates must limit a fall in British interest-rates. Government bonds continued to rise in London while their counterparts were falling heavily in New York; but the British authorities do not believe that the relation between the supply of and the demand for permanent capital justifies an appreciable decline in the long-term rate of interest. It would be helpful if the capital market were freer to establish its own rates.

and writing off Rs. 40.12 lakhs, covering the expenses incurred in the search for oil in West Bengal under the Indo-Stanvac project, Standard-Vacuum Oil Company in India, excluding refinery operations, earned a net profit of Rs. 106.5 lakhs during the year ended 31st December, 1957. The accounts of the company show that the net profit resulted from a gross turnover of Rs. 5,621.9 lakhs which includes inter-company transactions of Rs. 27 lakhs. The net profit for 1957 represents a return of 2.1 percent on the total sales, 3.4 percent on the total assets and 4.1 percent on gross block plus working capital. The sales volume increased from 33.33 crores of imperial gallons achieved in 1956 to 38.04 crores of imperial gallons representing an increase of 14.13 percent. Trading results, however, reflect the fact that the company was unable to recover fully increased costs for the most part caused by the continued closure of the Suez Canal early in the year 1957, and higher operating costs for supplying upcountry markets. The value of the company's total assets at cost increased by Rs. 3.49 crores from Rs. 30.27 crores in 1956 to Rs. 33.76 crores in 1957. The total value of its inventories in India at cost stood at Rs. 12.21 crores compared with Rs. 10.47 crores in the previous year. The value of its investments in fixed assets at cost increased by Rs. 1.48 crores, and stood at the end of the year at Rs. 13.31 crores.

During the year, the company maintained full levels of employment in spite of unfavourable returns and paid out Rs. 2.71 crores in wages and salaries as against Rs. 2.60 crores in 1956. Its programme of Indianisation made further progress; the number of overseas employees was reduced from 48 at the end of 1956 to 32 at the end of 1957. The company's operations for the year were a large source of revenue to the Government, and the accounts show that Rs. 1,556 lakhs are reflected under the heading import duties and excise taxes including amounts paid to Standard-Vacuum Refining Company of India Ltd. and Rs. 36.8 lakhs in property and other taxes in addition to income and wealth taxes reported above. The company also collected on behalf of and paid to the various State Governments a total of Rs. 159.57 lakhs in sales taxes.

Polychem Does Well

Polychem Ltd appears to have done well last year with its new venture of producing raw materials for the plastics industry. Mr. Ramdas Kilachand, chairman, says that the plant has been working satisfactorily since it came into operation in May 1957. Polychem has an agreement with the Dow Chemical Company of the United States under which all Styron products are to be manufactured in this country. The polystyrene moulding compounds plant worked at between 50 percent and 60 percent of its rated capacity last year. A higher output could not be achieved because large stocks of the imported material were still available in the market. Now that the Government has banned such imports, the company looks forward to increased production and larger sales. It is said that the "high impact polystyrene" manufactured by Polychem at its Bombay plant has been well received by the industry because of its unusual properties and efforts were being made to step up the production of this material. This will be achieved by augmenting the existing facilities at the plant. Mr. Kilachand also says that the company proposes to install a Styron sheet extrusion plant in view of the great demand for plastic sheeting. This plant will use high impact polystyrene as its raw material. The chairman discloses that the company is in close contact with the Export Promotion Council for the Plastics Industry and has undertaken to offer its products at competitive prices to Indian moulding plants so that the latter can hold their own in foreign markets. Efforts are also being made to sell the company's raw materials abroad.

Tea Prices and Consumption

The chairman of the Central Tea Board, who recently visited Madras, was asked questions relating to tea prices and consumption. Some traders have expressed anxiety that tea may displace coffee in south India. But sample surveys in many towns have shown that tea is not half as popular as coffee in that area. The chairman said little about the auction and retail prices, but he assured traders that municipalities would be helped undertake inspection and that the Board would assist local authorities in checking the adulteration of teas. As for export prospects, he declined to say anything definitely. The U.P.A.S.I. president has recently made it clear that Indian tea is dearer than African tea and that many foreign buyers are asking for cheaper tea from India's competitors. The outlook for the industry might have been more clouded had not the London tea sales recently recorded a better undertone. The reduction in excise duty does not seem to have produced favourable effects so far, and it is extremely necessary to increase exports for earning

Current News and Comment

Gunny Price Stability

In his address from the chair at the latest annual general meeting of the Gunny Trades Association, Mr. Hari Lal Mehta stressed the importance of price stability in the jute goods market. This is necessary to increase their exports, said Mr. Mehta. He pointed out that "a foreign buyer is prepared to pay even a little more for a commodity the price of which is likely to be stable." Analysing the causes of wide fluctuations "to the embarrassment of both the buyer and the seller," Mr. Mehta said that the attainment of self-sufficiency in raw jute would "go a long way" towards removing a major cause of speculation which is based mainly on the crop of jute which is received from time to time. He welcomed the step taken by the Indian Jute Mills Association in fixing minimum prices for jute goods, and was of the view that such interventions will always prove effective against undue speculation. "It helped to avert a crisis, which at that time looked like developing in our market. The response by the industry, in general, has been satisfactory, except for some broken periods when trading in sacking became difficult." Over-production in sacking in the past months has been another cause of price instability, and the I.J.M.A. Mr. Mehta hoped, would keep a constant check on its production position. The creation of the East India Jute and Hessian Exchange, which provides a suitable hedge market for trading in jute and jute goods, would, Mr. Mehta felt, curb unbridled speculation. "Speculators, by irresponsible manipulation and operation, cause erratic fluctuation in prices which is resented both in India and abroad." The value of this institution, he pointed out, must not be judged merely on the basis of six months' working and more time must be allowed properly to assess its "function and scope".

Discussing the current positions of production and stocks, and overseas and internal consumption prospects for the goods, Mr. Mehta said that the level of production had been satisfactory for the last three years. The performance of the mills, judging from the trend so far, is likely to be even better in 1958. As for stocks, they were at a satisfactory level in 1957 as well during the first quarter of this year; but from April last, they began to rise rapidly and by the end of June, stood at 134,000 tons. This abnormal increase was due largely to the dock strike in that month. Foreign demands have recently improved. This, and the fact that the seasonal months when internal demand increases have arrived, the stocks might soon be reduced. The prospects of increasing exports will depend upon the many experiments which the I.J.M.A. is making here and abroad on the new uses of jute. One special product is the jute-backed tufted carpeting, the production of which has increased from a bare 3 million square yards before the second world war to 50 million square yards in 1957. The internal market shrank a little in 1957, but Mr. Mehta said that with further increases in domestic industrial and agricultural production in prospect, the home use of jute goods for packing and wrapping purposes "is bound to increase."

Expansion of Orissa Cement

In his address from the chair at the annual general meeting of the Orissa Cement Ltd., Mr. J. Dalmia has reviewed the expansion programmes of the company. (A fuller version of the speech appeared in last week's issue of Capital). The production from the expanded plant, which was commissioned early last year, has improved steadily. Progress has been satisfactory in setting up the new refractories plant which, when completed, "will be the largest and one of the most modern composite units of its kind in India." The fireclay and silica sections of the project began production in April this year, and orders

have been received from various consumers including the steel industry. "Work on the basic plant is being pressed ahead and it is hoped that this third stage of the composite project will be commissioned towards the end of the year when your company will also be in a position to supply basic refractories such as magnesite and chrome-magnesite bricks to, among others, the steel plants in the public and private sectors." This will save foreign exchange to the extent of Rs. 2 crores a year, an amount which is being spent at present in importing refractories. The project for the expansion of the company's refractories plant was prepared in anticipation of the growing demand for refractories and the rapid development of the steel industry. The steel-casting plant of the Dalmia Iron and Steel Ltd., in which Orissa Cement has a large interest, has begun production. Furthermore, the deadburnt magnesite plant in Salem of the Dalmia Magnesite Corporation, in which Orissa Cement has also a substantial interest, is expected to begin production before the end of the year. Mr. Dalmia says that apart from catering to the large demand from Indian and foreign markets, this will assure the company regular and adequate supplies of deadburnt magnesite for the manufacture of basic refractories.

The Government has announced its decision on the recommendations of the Tariff Commission on the fair selling price, which has been brought into effect for a period of three years from 1st July, 1958. The Commission made a significant departure from the principles it adopted in its 1953 report for the determination of profits and for fixing fair prices. The profit margin which has been allowed to producers is inadequate and is entirely inconsistent with their needs. "It is disappointing to find that your company has been allowed an increase of only Re. 1 a ton. Moreover, whereas the Tariff Commission has recommended the introduction of the new prices with effect from 1st January, 1958, the Government of India has decided to introduce the new rates only from 1st July, 1958, thus depriving the producers of the benefit for six months of whatever price increase the producers might have been allowed." Referring to the setting up of a wage board for the cement industry, Mr. Dalmia says that it is necessary to bear in mind that any variation in production costs, will be reflected in the selling price for cement, which is a controlled commodity.

Guest, Keen, Williams Debentures

The offer of debenture stock worth Rs. 1½ crores by Guest, Keen, Williams, Ltd is expected to meet with a warm response. It will carry interest at the rate of 6½ percent, taxable, and is redeemable between 1966 and 1971. The yield is considered attractive by market standards. The directors state that firm applications for stock worth Rs. 75 lakhs have been received and the balance of Rs. 75 lakhs is offered for public subscription.

Guest, Keen, Williams is a first-class engineering concern and the company earned a profit of Rs. 1.52 crores during the year ended 28th December, 1957. The company may redeem the whole or any portion of the debenture stock on 1st January, 1966, or at any time thereafter, at par, plus accrued interest, on giving three calendar months' notice to the stock holders. A sinking fund will be established to which annual contributions will be commenced in 1961, with a contribution in respect of the calendar year ended 31st December, 1961. Such contributions will be payable only out of the distributable profits of the company. Details of the issue are published elsewhere in this issue of Capital.

Standard-Vacuum Results

After providing Rs. 184.1 lakhs for income and wealth taxes, Rs. 64.9 lakhs against depreciation

a larger amount of foreign exchange. The Government's reluctance to announce any immediate relief has already reduced the demand for tea shares. The report of the Periakaramalai tea company, whose profit has declined from Rs. 30.88 lakhs to Rs. 17.14 lakhs for 1957-58, suggests the difficulties of producers who are facing hard times due to high wages and increased taxes.

British Insurance Results

British insurance results for the year 1957 have been given in a separate brochure issued with the text of the speech of Mr. C. F. Trustam, chairman of the British Insurance Association, which has some 250 British insurance companies as its members. The statistics contain interesting information. Some two-thirds of the premiums of the companies come from overseas, about one-third from the United States and 10 percent from Canada—proportions which are of great significance in relation to the annual underwriting reports of the companies. Last year saw an increase of £116,717,000, or 9.5 percent, in the world premium income of the B.I.A. members, and as they transact 80 percent of the home and overseas business, the whole British market would have a world premium income of some £1,677,944,000. The 1957 increase is somewhat smaller than the 1956 increase (11.6 percent), but larger than the increases of the three previous years (7.4 percent, 5.9 percent and 4.4 percent, respectively). Over the last five years together, the premium income of the member companies has increased by £416,887,000 or 45 percent. Some 42 percent of the new premium came from non-life business and 58 percent from life, and representing a five-year increase in non-life premiums of 44.6 percent and in life premiums of 45.7 percent. The £241,771,000 increase in non-life premiums in the five years between 1952 and 1957 was 74 percent from accident business, 23 1/2 percent from fire and 3 percent from marine, representing a rise of 66.8 percent in accident premiums, an increase of 27.4 percent in fire and of 9.7 percent in marine. Some 84 percent of the total increase in life business came, not surprisingly, from ordinary business, only 16 percent from industrial life. Ordinary life premiums increased by 56.2 percent and industrial life by 23.3 percent. With minor variations, the developments in 1957 are in line with the five-year pattern. The new premiums came more from non-life than from life business (non-life 59 percent, life 41 percent). The new life premiums came overwhelmingly from the ordinary branch (88 percent, industrial branch 12 percent). The new non-life premiums came in the greatest measure from accident (71 percent) and the increases in the various branches during the year were: life £47,597,000 (9.3 percent), non-life £69,120,000 (9.6 percent), ordinary life premiums 11.45 percent, industrial life premiums 4.0 percent, fire premiums 4.75 percent, accident 12.4 percent and marine 12.4 percent.

Bank of England Report

As a record of what has happened in financial matters, the annual report of the Bank of England is no doubt an excellent document, but as a guide to monetary developments and policy it has always left much to be desired. The preparation of evidence for the Radcliffe Committee, allied with the new policy of less mystery and more information, has encouraged the "Old Lady" this year to hint that future reports may well prove more useful. The latest report, for the year ended 28th February, 1958, says that almost throughout the period the Bank was engaged in the preparation and submission of evidence to the Radcliffe Committee, including a survey of monetary experience in Britain in recent years. It is hoped that, subject to the recommendations of the Radcliffe Committee, this survey may, when published, provide a background and a basis for more detailed annual reviews of the monetary situation.

Among the mass of statistics assembled in the report, most of which have been published before, there are some new figures, notably in the field of overseas finance. The report discloses that last year, British merchanting transactions with non-sterling area countries, carried through on a sterling basis, rose to £264 million. This compares with a revised figure of £206 million in 1956 and £178 million in 1955. The Bank report also continues the series of estimates begun in 1950 of Britain's overseas investments. The total nominal value of these investments at the end of 1956 was £2,110 million, compared with revised figures of £2,144 million at the end of 1955 and £2,132 million at the end of 1954. Interest and dividends from these investments in 1956 totalled £283.1 million, as against revised figures of £207.8 million in 1955 and £187 million in 1954. On more domestic matters, the report clearly shows the popularity of the new £5 notes, whose proportion of total circulation has risen from 14.5 percent to 21.4 percent in the year ended 28th February, 1958. In money

terms, £5 notes then accounted for £421.4 million, exceeded only by £1 notes of which £1,337.9 million were in circulation.

Adulteration All Round

The latest annual report of the King Institute, Guindy, is interesting for the light it throws on the standards of food preparation by shopkeepers. It begins with ice cream. If prepared under laboratory conditions, it is free from bacteria, the report says, but vessels even cleaned with hot water are not always free from contamination. Ice cream kept in cold storage up to seven days attains a higher degree of purity. The sections in the report on ice cream preparation will be of some value to all health authorities in big towns where soda fountains have sprung up in great numbers, and the sale of ice cream by street-vendors is widespread. A disturbing revelation in the analyst's report is that about food adulteration.

Coffee powder is being mixed up with Bengal gram and *Nathachori* seed. Adulteration is specially serious in Tuticorin and Coimbatore and the report warns against misleading labels. The mixture of tapioca and lead with turmeric has also been noticed. Tea, too, is subject to adulteration and exhausted tea and artificial coal tar are used with tea stalks. The seed of the wild date is commonly sold as Indian chicory, for imported chicory is costly and hard to get. The report will perhaps shock those who expect municipal inspection of shops to have some results. The best thing seems to be to go to reputable shops and buy the products of only reputable manufacturers even if one has to pay a little more.

Metric System in Madras

The Madras Government has appointed an official to accelerate the change-over to the metric system in two districts of the State for a start. But few are inclined to give up conventional weights and measures. Chemists usually pack their medicines in cartons, showing the metric equivalents, but others are still hesitant in accepting the metric measures. It is said that cloth dealers will find it hard to convert length and width to metres. The attitude of oil companies is that an immediate change-over is impossible and that nothing can be done till June 1962, since the tanks, gauges and equipment have to be altered. Furthermore, they contend that they will need to import their essential equipment for the purpose of the change-over and that the cost of conversion to the new system will be high. The Standard Vacuum Oil Company, therefore, still reviews its annual results in terms of imperial gallons, and not in litres. With the adoption of the metric measures, filling stations will have to keep conversion tables in order to convince lorry drivers that they are getting good measures for their money. It is doubtful whether the Government is equipped for the change-over, for traders point out that vegetable oils are at present sold abroad in terms of tons and cwt. They add that the objective of abolishing export duties on vegetable oils will not be realised if a new system is adopted which is unfamiliar to suppliers as well as to customers. This view is shared by other trade interests. They point out that the Government is permitting sugar exports in maunds and tons, and not in terms of metric measures. It is not surprising, therefore, that commercial organisations should insist on appointing market committees, which must be well equipped for the change-over, before dealers and customers can master the conversion tables on the new system of measures.

Tariff Barriers in Ceylon

The Ceylon Government has adopted Mr. Kal-dor's proposals for taxes on wealth and expenditure in its last Budget. But the most important decision is to levy increased import duties on goods exported to that country. Although preferential rates have been retained, Ceylon has clearly created tariff barriers against the exports of many Indian goods. Imitation jewellery, whether exported from south India or from West Germany, will be liable to duty at 150 percent. Even tea machinery has been subjected to a preferential duty of 33-1/3 percent; this is a warning to the Indian engineering industry, but it will get some consolation because of the levy of import duty of 24 percent only on iron and steel. As for motor-cars, the import duty on big, expensive used vehicles has been fixed at 125 percent and that on engines and chassis at 90 percent. The high duty of 50 percent on fountain pens will probably end the smuggling of these from Ceylon into India. Sports goods have to bear a duty of 25 percent while duties on petrol, tobacco and other goods, which are not being produced in Ceylon, have been increased. Only

chemicals have been let off rather lightly in the Ceylon Budget. Indian exporters of glass, jams and cardboard will also find the new Ceylon tariffs on these goods fairly low. No curbs have been placed on the import of oils, pulses, flour or condiments required by the people of that country.

Export Policy for Vegetable Oils

India's share of world exports of vegetable oils is not comparable with her pre-eminence during the year ended 31st March, 1956, amounted to 284,000 tons compared with 6.8 million tons exported by all the producing countries of the world in 1955. During 1955-56, India exported 287,000 tons, although exports substantially declined during 1956-57. During the 12 months ended March 1958, the foreign exchange earnings from vegetable oils and oilseeds were relatively small, being only Rs. 16 crores, a decline of 40 percent and 53 percent compared with that of 1956-57 and 1955-56, respectively. Speaking at the annual general meeting of the Calcutta Grain, Oilseed and Rice Association, Rai Bahadur G. V. Swaika, president, said that the vacillating policy of the Government and frequent changes in duties have led to the decline in exports. "The export policy for vegetable oils and oilseeds is primarily intended to hold the domestic price line, and foreign exchange earnings and international prices have played little part in the determination of such a policy. This is the reason why there has been so much fluctuations in exports." The frequent changes in duties seriously affect the confidence of foreign buyers. It also encourages competing countries to capture India's traditional markets. Rai Bahadur Swaika said that Brazil, backed by a fixed special exchange rate to maintain the continuity of her exports, has captured the market for castor oil in the United States. The international price of groundnut oil, c.i.f. U.K., is £97 a ton, while the quotation for the Indian oil is about £115 a ton, even without the export duty. Although the Government has lately declared some changes in its export policy, it is necessary to announce a long-term policy, at least up to the end of the second plan. This will restore the confidence of foreign buyers and will also enable Indian shippers to get better prices for their products. In order to increase the exports of oils and oilseeds to earn the much-needed foreign exchange, Rai Bahadur Swaika suggests that Central and State sales taxes on oilseeds and oils should be merged with the Central excise duty, as has been done in the case of sugar, tobacco and cloth, and a full refund of excise duty should be allowed on all kinds of oils for export. A substantial reduction in railway and shipping freights should also be announced to render an incentive to exporters. Referring to the difficulties of oil mills in West Bengal, he pointed out that these still employ old and antiquated machines which add to their production costs. Furthermore, more than 60 percent of the installed capacity of the mills in the State remains idle due to the inadequate supply of oilseeds.

Workmen on Contract

The question whether compensation is payable by an employer to temporary workmen after the termination of their services has been decided in the negative by the Allahabad High Court in a recent appeal filed by the J. K. Cotton Manufacturers Ltd., Kanpur. The appeal was against the award of the adjudicator directing the company to pay compensation to 159 such workmen for the period of their employment. These men had been employed as temporary hands after signing written contracts for a specified period of service. When there was no work for them due to the shortage of raw material, they were discharged. The State Government referred the dispute to an industrial tribunal and the company won an appeal against the award of that tribunal. Therefore, the Government issued a notification referring the dispute for adjudication to the Deputy Labour Commissioner. The Commissioner gave his award holding that the workmen in question were permanent employees and directed the company to pay them compensation. On appeal, the High Court held that each of the 159 workmen had signed the prescribed form before joining service, and that this amounted to a contract of employment. In spite of Act XX of 1946 and Standing Orders framed under it, it was open to employers and employees to enter into special contract. In the judgment of the Court, since the discharge of these workmen was in accordance with the special agreement, the adjudicator should not award any compensation to them.

Floods in U.P.

Over two million people in about 10,000 villages of Uttar Pradesh have been affected by the recent floods which the Revenue Minister, Mr. Charan Singh, has described as "unprecedented." About two million acres of cultivated area have also been

devastated. In 1954 and 1955, there were floods of a greater magnitude and then too, they were described as "unprecedented." It was after the 1955 floods that the State Government announced a Rs. 35-crore flood control scheme. A committee was also appointed at the time to work out a scheme of crop insurance. Although Press notes issued by the Government have claimed that the level of thousands of villages has been raised, present experience shows that as many villages have been hit by the floods of this year as were in 1955. Severe criticism has been voiced both in the State Legislature and outside against the faulty system of flood warning. Even if no Government can prevent cloudbursts or the melting of snow, it is surely not beyond human ingenuity to devise an adequate system of warning against these calamities. Innumerable families, it has been reported, had to flee in the dead of night from onrushing waters. What is still more disturbing is that the Government's failure to warn the people is matched by its refusal to heed the warning when given by them. For instance, a memorandum was sent on behalf of the people of Gorakhpore to the State Government, detailing the faults of construction in the Moloney bund. The bund was breached once in 1955 because of the lack of repairs and the Government should have learnt from that experience. But no action was taken on the memorandum, with the result that the bund has been breached again almost exactly at the same place where the breach occurred in 1955. This is not a solitary instance. The Lalgiddi bund in Azamgarh district, the Khataud bund in Ballia, the Chitauri bund in Deoria and the Arora dam were all breached in 1955. Enquiries were ordered in every case, but they are of no use if the findings lead to no action.

Bullock Power for Irrigation

If the much-publicised Ford Foundation village reconstruction project in Khanpur near Delhi has helped rehabilitate the much-deprecated Indian bullock, there are other signs as well that he is coming into his own. The U. P. Government, it is reported, has abandoned its scheme to help co-operatives sink tubewells for irrigation, and has replaced it instead by another, costing initially Rs. 1 crore, for the construction of masonry wells fitted with Persian wheels to be run by bullock power. It is stated that the 400-odd co-operative tubewells which have already been sunk have proved a complete failure. The Government has been requested to take them over, but investigations have shown that only about 125 of them would be worth the value which has been estimated at Rs. 66 lakhs. This includes the replacement cost of the diesel engines by which these wells are worked. The remaining 375 tubewells are to be written off as a dead loss.

The 7,000 masonry wells now envisaged will be owned co-operatively by small farmers or by individuals with ten acres or more. The bricks are to be supplied by the District Co-operative Federations which own their own kilns. Other materials will be supplied by the Government which will also advance a loan repayable over a period of years. According to official circles, these wells will be sunk only in areas where the consolidation of holdings is in progress and they may thus indirectly encourage this movement. The farmers will be at liberty to use their own bullocks for running the wheels. There will be no water rates payable and the hope has been expressed that this would prove to be yet another inducement to the farmer to make more liberal use of the well water. Much canal and tubewell irrigation potential has remained unused because of the cultivators' reluctance to pay for the water.

Oil Danger to Life-jackets

The British Ministry of Transport and Civil Aviation has recently announced that one of its special sub-committees has recommended that statutory rules be made requiring kapok-filled life-jackets to be enclosed in envelopes made of polyvinylchloride. This follows experiments carried out by the Ministry, the Shirley Institute, and Shell Research Ltd, which have shown that the buoyancy of kapok-filled life-jackets may be affected when used in oil-covered water. The idea of using a plastic envelope instead of one made of cotton came from a member of the sub-committee representing the life-jacket manufacturers. He contacted Storeys of Lancaster which has carried out continuous research into new application of P.V.C. This plastic is impervious to most corrosives, does not crack in shortage, and is waterproof, so that the kapok which gives the life-jacket its buoyancy is completely protected. Last year the Danish authorities condemned all life-jackets using kapok. The South African Master Mariners Association asked the Ministry of Transport to make enquiries to see if the Danish action was justified. The Ministry has satisfied itself that kapok is still the best means of providing buoyancy for life-

MORE NEWS OF "THE LADY IN THE LADIES"

"NOT A LEG TO STAND ON"

(FROM OUR LEGAL CORRESPONDENT)

SOME months ago we commented on the odd case of "The Lady in the Ladies," for a report of which we were indebted to a correspondent in Bombay. Now the case has gone a stage further to the Court of Appeal; and it might not rest there. The lady, who was intending to travel to London by bus with her husband, visited a public lavatory owned by the Harlow Urban District Council. She left her husband, who knew where she was going, by the bus adjoining the convenience. Securing admission by putting a penny in the slot and opening the door and thus becoming an "invitee" of the Council and entitled to use the lavatory for the purposes for which it was made and provided, she did so and then discovered that she could not get out again, there being no means of re-opening the door from the inside because the handle was missing. In such circumstances what is a lady or, for that matter a gentleman, to do? You may think that she should wait for the next prospective "invitee", or for the attendant, or for the arrival of her husband who, knowing where she was, would certainly have come across to investigate if her return was unreasonably delayed, meanwhile banging on the door and creating a din. What this lady, in fact, did was to try to climb over a seven-foot door. To accomplish this acrobatic feat she placed her left foot on the lavatory seat, her right foot on the toilet roll and its fixture, one hand on the top of the door and the other on the pipe from the cistern. When thus splayed

aloft she realised that the feat was beyond her athletic powers and started to come down again. But it is the function of a rotating toilet roll to rotate. This one did while the lady's foot was on it and down she fell sustaining serious injuries. On recovery, she sued the Harlow Urban District Council for damages. The trial judge found for the defendant Council. The damage, said he, was too remote. True the Council had been guilty of negligence in providing a door which would not open from the inside. But that negligence was not the proximate cause of the accident. The direct cause was the lady's recklessness in trying to clamber over the door relying for support on a revolving roll and a cistern pipe instead of waiting till assistance arrived. Well, we are all entitled to our own opinions; and the writer has seldom read a decision with which he is in more complete agreement. He would have said that the lady was in law in the same position as that in which she was perched in the lavatory, namely without a leg to stand on. But that is all wrong. The Court of Appeal, consisting of three of the most learned judges in the land, (Lord Evershed, Master of the Rolls, and Lord Justices Morris and Onmerod) reversed this decision and held that the damage was not too remote. "The plaintiff's inconvenience was appreciable and in exploring the possibility of escaping over the top of the door she was not taking a risk that was disproportionate to the necessities of her situation. Her conduct was the natural and probable consequence of the Council's negligence." True she was guilty of contributing negligence and must bear one quarter of the blame. So the Council were liable in seventy-five percent of the damage sustained. Presumably the Council are insured, so the case may go to the House of Lords by way of further appeal. We shall look out for that. It is not so very unusual to see a decision, even a unanimous one, of the Court of Appeal reversed and that of the trial judge restored; and that is precisely what the writer expects to see in this case.¹

A goodly number of workmen involved in accidents arising out of and in the course of their employment, attracted by the lure of a large lump-sum, seek the latter uncertain remedy in a suit for damages against their employers instead of the periodical payment assured to them by the Workmen's Compensation Act. Here is an interesting borderline case and in order to enable the non-legal reader to come to a correct conclusion on it before he reads the result, we will remind him of a few general principles. At common law a duty rests upon the employer to take reasonable care for the safety of his workmen. This obligation is threefold. It consists of (1) the provision of a competent staff of men, (2) adequate material, and (3) a proper system including effective supervision. An employer does not warrant the safety of his servant, he is only bound to take reasonable precautions to protect the servant against accident; and it follows from the latter obligation and was laid down by Lord Cranworth exactly a hundred years ago that "when a master employs his servant in a work of danger he is bound to exercise due care in order to have his tackle and machinery in a safe and proper condition, so as to protect the servant against unnecessary risk." In the above, and especially in the words in inverted commas, lie, if they and their limitations are considered with care, the solution to the claim of Mr. Wilson against the Tyneside Window Cleaning Company.

Mr. Wilson was 56 years of age and had spent all his working life as a window cleaner, often acting as a chargehand and teaching others their trade. In the course of his employment he was sent to clean the windows of a brewery. While standing on a ladder for the purpose of cleaning a window some twelve feet from the ground he tried to open the window by means of an outside handle, although to his knowledge the woodwork was rotten. The handle came away and he fell to the ground. In the 14 years he had worked for the defendant company he had never received any special instruction on safety precautions, but he well knew the dangers of trusting to handles and of a standing order that if in doubt as to the safety of cleaning window he should leave it uncleaned, report and await instructions. Was the workman entitled to damages as against his employers? "No," said the trial judge, and the injured window cleaner appealed. The Court of Appeal upheld the decision holding that "although it is convenient to divide the master's duty to his servant into a number of categories, covering separately tools and premises and systems of work, it is really one duty applicable in all circumstances, namely, to take reasonable care so to carry out his operations as not to subject those employed by him to unnecessary risk. The duty exists whether the premises in question are occupied by the master or by a third party, but its application must differ. The defendants were under no duty to make premises not in their own occupation safe, nor were they under a duty to warn, so experienced a servant of a danger of which he so well knew."

We will conclude this note with a neat little problem to which we are pretty certain the reader will give a wrong answer, as the writer also did.

What is "a single woman?"

Under S. 3 of the Bastardy Act a "single woman," (and only a "single woman") may apply to a Police Court for the support of her illegitimate child by the father thereof. A woman married the father of her illegitimate child in circumstances that the child was not legitimated. Subsequently she obtained a separation order, (note, not a divorce). Then she applied for a summons against her husband under the Bastardy Act in respect of the child. Was this married woman a "single woman" within S. 3? You may think that a married woman cannot be a single woman within S. 3, or within any other section, or in any other circumstances whatsoever. But she can. The married spinster, Mrs. or Miss. Kruhlak, obtained her order. Said the Divisional Court (Lord Goddard, C.J. Devlin and Pearson J.J.): "The Court must consider the de facto position of the woman rather than her legal status, and this would permit her, on the facts of this case to assert that she was a 'single woman' even as against her husband," which may strike you as sheer merciful nonsense though, no doubt, good law withal.²

INTERNATIONAL SISAL CONFERENCE TO BE HELD IN RIO DE JANEIRO

Sisal is the latest commodity to become the subject of an international conference and possibly a price support plan. A conference of the sisal-producing countries is to be held in Rio de Janeiro in October. Sir Eldred Hitchcock, for the East African sisal industry, has made a direct approach to the Brazilian Government. The coming meeting will not attempt any artificial raising of the price, nor output restrictions. It is felt, however, that by agreement with other producers a sound price may encourage investment in sisal development elsewhere or substitution by other fibres. The choice of Rio de Janeiro for the conference suggests the importance of Brazil in the production of sisal. The country produced no sisal before the war, but the output last year at 115,000 tons represented 19 percent of the total world production. British East Africa's share has gone up from 34 percent to 37 percent.

A Ditcher's Diary

BACK AT MY DESK AGAIN AFTER ALL TOO BRIEF A respite, I shall no longer make a secret of where I have been—just in case there are some of my readers who have not already guessed. It was my good luck to be invited by Air-India International on the inaugural flight of their new Delhi-Moscow service. So there we are: I have been taking my first peep behind the Iron Curtain. It is not a trip I would recommend to those who are not either eaten by curiosity, or making a pilgrimage. The fact must be faced that the Soviet Union is no tourists' paradise. Air-India did its best—against the kind of pressure which only a Government monopoly can afford not to resist—to make the occasion a first-class advertisement for its services. If it did not altogether succeed, then it must not be accounted entirely to blame, and I for one would not care to run the risk of being accused of ignoring the difficulties which industrious and well-meaning employees of nationalised industries are apt to encounter when dealing with those upon whose decisions their jobs and salaries depend. I will reserve myself to the comment that this particular inaugural flight was utterly unlike any other that I, as a representative of the Press, have ever been on, and that some investigation into the reasons why might contribute to the success of Air-India's next venture in this field. But perhaps the opportunity of a trip to the Soviet Union at somebody else's expense is the kind of inaugural which should be put in a class of its own. For example, it seemed to attract a surprisingly large number of junior Members of Parliament whose enthusiasm for what they were shown, in some cases suggested, first, a predisposition towards communist totalitarianism rather than to social democracy, and second, a complete ignorance of conditions in other advanced countries. If Air-India is considering extending its European services to the United States at any time, it would be doing India's democratic future a favour by correcting this latter factor, although, as in this particular case, I cannot myself see what good it will do them in obtaining the kind of newspaper publicity which their efforts and enterprise deserve. It may have been the size of the party—also swollen by a number of assorted official nominees—which accounted for the over-crowded condition of the aircraft. But it was its diverse character which threw the original *Intourist* arrangements—which I was told were admirable—into confusion, and accounted for the less-than-priority attention which was given the peculiar needs of a party of visiting journalists. Once again this is a matter in which my sympathies are reserved for my hosts; and it is obviously not one with which future Air-India passengers to and from Moscow will have to contend.

IN ANSWER TO THE QUERIES OF ANXIOUS FRIENDS, I must say that what I was shown in Moscow and Leningrad has not converted me to communism, although it has left me more aware of some of its commendable aspects. Among these I might mention the cleanliness of everything, which comes, I presume, of having a plentiful supply of industrious workers who might otherwise be providing an embarrassing bulge in official unemployment statistics; the obvious discipline of workers who have quietly forgone what in India would be considered their fundamental rights in order to sustain the sacrifices their leaders have forced upon them ostensibly in their own interests; and the advantages of wide roads in avoiding traffic

problems—a feature made possible I was told by the ability of the authorities simply to remove whole rows of buildings without being forced to pay much attention to the wishes or convenience of the occupants. I cannot foresee the day when the U.S.S.R. will surpass the *per capita* output of the U.S.A., or even western Europe—not under the present economic system, that is. There is evidence everywhere that now the phase of massive investment and rebuilding is tailing off, the new emphasis on consumer goods is causing present commercial facilities to bulge at the seams. It is certainly calling for new economic measures which, in my opinion, will lead to a progressive liberalisation of the old inflexible system. And this process is going to absorb resources which are at present being devoted to activities in which it is comparatively easy to show impressive rises in productivity. It is my guess that the Soviet Union is only beginning to face the problems of a modern, mature economy, and that she is likely to find them more difficult to solve than she thinks with her present cumbersome, cost-absorbing methods. What did strike me is the fact that the Soviet people do not appear to be fundamentally dissatisfied with the regime—it probably suits their temperament. I cannot now, therefore, any more than I could before, see any sense in the view that Soviet communism will collapse if only it is opposed strongly enough. Better to work on the assumption that it will liberalise itself of its own accord if only it is left alone to do so. A distressing feature was the complete ignorance of almost everybody one met of conditions in the outside world. I can see now the logic of isolating a country which must first be starved before it can be feasted. By the way, when I say that the Soviet Union is likely to lag behind the West when it finally embarks on the second stage of its economic development, I do not take account of the stupidity and short-sightedness which is all too often a feature of the West's handling of economic matters.

TO SAY THAT RUSSIA IS STILL NO TOURISTS' paradise is, I suppose, a sweeping statement: it all depends on the tourists. If their interest lies in listening to the solemn recital of statistics—such as the fact that the Kremlin's spires have ten red stars (or was it nine?) and that each is three metres seven centimetres (that is bound to be wrong) across—they should be quite happy. If they like the sight of endless blocks of flats under construction, and being told with maddening smugness that whatever they have noted is not there now, will be in the next seven-year plan, then they will enjoy themselves thoroughly. If, however, they are of a critical turn of mind, or if they happen to believe that man does not live by bread, statistics and officially-inspired culture alone, then they are in for a thin time. To ask a silly question is to get a humiliateingly serious answer. To suggest that perhaps there might be faults to be found somewhere is to be treated with irritating patience and a flow of irrelevant facts. But it is when it comes to looking for an evening's amusement that the great disappointment arises. There is the opera, when it is in season, and the puppet show, which is excellent, and there is even the ballet, when it is not on tour. But look for a late restaurant, a cabaret, or dancing, and one is apt to find oneself going to bed at 10-30 p.m. in disgust. That I submit, is not the thing for attracting tourists. Hotel service is another item which is

calculated to lose the Soviet Union its visitors. Whether it is the absence of tipping, or the general socialistic attitude that "at least if I do not feel as good as you are, I am certainly going to show you I do", I just do not know. But the fact remains that at table one can starve to death between courses and should one be so uppish as to press a bell one is apt to wind up feeling rather like a leper. To make matters worse, there is nothing to buy. Those tourists who delight in picking up useless nicknacks—just to prove they have been—will spend their time waiting in queues or being buffeted about in Moscow's one large departmental store, and are likely to come away with nothing in the end. They should enjoy the University; they may, depending on their sensibilities, appreciate the grizzly sight of Lenin and Stalin lying side by side in embalmed state. There is even the Moscow Metro, obviously built to impress regardless of expense, with stations that differ in design from a Victorian public lavatory to a museum of sculpture. But everything is so dedicated and austere; even in a society where television sets are cheaper than a good suit of clothes. And then there is the weather. No, if anybody is considering going to Russia for a holiday I would urge him to consider the south of France.

ON MY WAY BACK THROUGH DELHI I WAS LUCKY enough not to be inconvenienced by the water shortage there. But arriving in Calcutta I found that the same thing is threatened here, and this time it will not be possible to blame the perversity of a river. As usual, it will be the fault of the human element—something of which Calcutta always appears to have more than most cities—or at least that part of it which has been responsible for the care and maintenance of the 32-year old, 60-inch steel water mains. I suppose the foreign exchange shortage provides an excellent excuse for not doing anything now; and all questions about why nothing was done earlier will no doubt be regarded by the authorities as in extremely bad taste. It is circumstances like these which make me wonder whether the responsibilities of living together in a large city are really understood by the majority of Calcutta's citizens, and a story I read in a newspaper the other day confirmed the fear. It concerned an incident at the Shambhunath Pandit Hospital which, apparently, has been suffering a water shortage for years even for such essential purposes as swilling down blood-stained tables. According to the report, on one occasion the Surgeon-Superintendent of the hospital asked the P.W.D. employee in charge of the pumping machine whether there was any water in the hospital's reservoir. He was told there was not, but when he went to look for himself he found it half full. A few days later the pump attendant operated his pump only once in the morning, then disappeared for the rest of the day, leaving the labour and other wards acutely short of water. He was found later in the evening but refused to operate the pump because, as he put it, he had no orders to do so before the next morning. On being hauled off by a doctor to make his explanations to the Resident Surgeon, the man called for help and was joined by some members of the hospital staff. Something in the nature of a riot ensued: a large crowd gathered armed with lathis and shouting: "Beat the doctors and the nurses". It is thought that the crowd was joined by the passengers of a local bus. There is nothing unusual about this incident; similar examples of indiscipline occur every day. But it did strike me as one of the worst stories I have yet heard of the complete disregard which exists in this city for the duties of citizenship.

THE DITCHER

PACKAGED IN

Polyethylene FILM

THEY ARE WELL PROTECTED

POLYETHYLENE film affords protection for the contents and also enables easy inspection of the products. And because POLYETHYLENE film is pliable, won't crack, and can be easily and efficiently heat-sealed, there are no problems in keeping the contents well protected.

POLYETHYLENE will shortly be manufactured in India by National Carbon Company (India) Limited at their plant which will be located at Trombay Island, Bombay.

SPECIAL STEELS FOR ALL INDUSTRIAL PURPOSE:

The products of the Steel Industry are more varied than ever—and vital to our economy. The industrial enterprises that are making history in our times depend largely on Steel. Steel for aircraft and guided rockets, steel for Atomic Power Stations and for the vast river Valley Projects, steel for railway locomotives, motor cars and diesel engines—is supplied from the furnaces and mills of the United Steel Group.

United Steel have been well to the front in introducing new steels to withstand high stresses and high temperature. The latest scientific techniques are in practical use. Television Cameras, Photo-electric cells and radio active isotopes are all helping to improve efficiency. United Steel contributes by employing such modern methods for better steels in the march of Indian progress.

Offer.

The Debenture Stock now offered for subscription was created by a Resolution of the Directors of the Company passed on the 29th day of May, 1958 and will be constituted and secured by a Trust Deed in favour of Kenneth John Harold Hartley and Basil Gill as Trustees for the stockholders. Interest at the rate of 6½ per cent per annum will be payable half yearly on the 1st January and 1st July except that the initial payment of interest will be made on 1st July, 1958 and will amount to Rupees 52 Naye Paise 72 (less Income Tax at the appropriate rate) per Rupees 1,000/- of Stock.

Objects of Issue.

Considerable sums have been spent in the past two years on development plans involving the extension and modernisation of property, plant and machinery, the cost of which has been borne by existing resources. The purpose of this issue is to provide, by means other than short term bank borrowings, a substantial part of the finance required for the fulfilment of these development plans and also the developments planned for the immediate future.

Trust Deed.

The Trust Deed will provide, inter alia, as follows:—

1. Security—
(a) Payment of principal and interest will be secured by a first fixed and specific charge on the Company's immovable properties and fixed plant and machinery and a floating charge on the whole of the undertakings and assets of the Company.

(b) The Company shall, however, be at liberty to hypothecate, to pledge and create mortgages or charges over its raw materials, manufactured goods and goods in process of manufacture and book debts ranking in priority to the said floating charge to secure sums borrowed from Banks or obligations incurred in the ordinary course of business of the Company and for the purpose of carrying on the same but save as aforesaid and save as mentioned below the Company may not create any hypothecation, pledge, mortgage or charge over or permit any lien to arise or priority to or pass with the floating charge and/or the fixed charge. The existing hypothecation and any hypothecation supplemental thereto in favour of the National Overseas & Grindlays Bank Ltd., will take

priority over the floating charge to be created by the Trust Deed.

(c) In respect of leasehold property (if any) for which the consent of the landlord is required and in respect of land acquired for which the consent of the Government of India is required for the creation of the charge thereon but which has not been obtained when the Trust Deed is executed, the charge created effect but will be postponed until such consent has been obtained.

(d) The principal amount of the Stock to be issued pursuant to the Trust Deed is limited to Rs. 1,50,00,000/- but the Company is to be at liberty from time to time to issue further with (but not in priority to) the said Rs. 1,50,00,000/- Stock carrying such rights as to interest, redemption and otherwise as provided that:—

(i) the amount outstanding of the Stock and of any Stock ranking pari passu therewith (including such further issues) shall not exceed 50 per cent of the value of the specifically mortgaged premises comprised in the Trust Deed as certified by the Company's Auditors.

(ii) The average of the combined profits of the Company and its subsidiaries (if any) calculated before charging depreciation and taxes on income but after charging all expenses of working and management, including maintenance and repairs for accounts have been audited last preceding date of any such further issue was sufficient to cover twice the amount required to pay the aggregate of one year's interest and the contribution (if any) to the sinking fund on the total sum outstanding in respect of the Stock and all Stock ranking pari passu therewith, including any such further issues.

2. Redemption—

(a) Such part of the Stock as has not been previously purchased or redeemed will mature for payment at par plus accrued interest on the 1st January, 1971. The Company may on the 1st January, 1966 or at any time giving three calendar months' notice to the Stockholders in that behalf.

(b) A Sinking Fund will be established, to which annual contributions will commence in 1961 with a contribution in respect of the calendar year ending 31st December 1961. Such contributions will be payable only out of the distributable profits (as defined in the Trust

GUEST, KEEN, WILLIAMS, LIMITED.—Cont'd.

Deed) of the Company's relevant financial year as certified by the Company's Auditors. Where such profits exceed Rs. 5,00,000/- it will be obligatory on the Company to contribute to the Sinking Fund a minimum of Rs. 5,00,000/- but the amount by which the contribution exceeds Rs. 5,00,000/- may be applied in reduction of the Company's obligations in any later year or years. In a financial year in which the distributable profits are less than Rs. 5,00,000/- the Company will be obliged, unless it exercises its right to apply any excess of a previous financial year in reduction of such obligations, to contribute the whole of such profits to the Sinking Fund but it will be under no obligation to make in the amount of by which such profits fall short of Rs. 5,00,000/- in any subsequent financial year or out of any excess of a previous financial year. The Fund may be utilised in the purchase of the Stock in the market at a price not exceeding par plus accrued interest or may be invested in trustee securities or deposited with a bank until required for purposes of redemption. Stock purchased or redeemed out of the Sinking Fund is not to be re-issued. "Financial Year" will be defined in the Trust Deed as meaning a period in respect of which any Profit and Loss Account of the Company laid or to be laid before it in annual general meeting is or is to be made up.

(c) In addition to purchases out of the Sinking Fund the Company may at any time purchase any of the Stock at a price not exceeding par plus accrued interest out of current profits.

3. Trustees—Included among various provisions designed to indemnify and limit the liability of the Trustees are the following:—

(a) The Trustees shall not be bound to take any steps to ascertain whether any event has happened upon the happening of which the security constituted under the Trust Deed becomes enforceable or to give notice to any person of the execution thereof.

(b) The Trustees shall not be bound or concerned to examine or enquire into nor be liable for any defect in or insufficiency of the Trust Deed or in the title of the Company to the mortgaged premises or any part thereof.

(c) No Trustee shall be liable for anything whatsoever except a breach of trust fraudulently committed by such Trustee provided nevertheless that nothing in any of the foregoing shall exempt a Trustee from or indemnify him against any liability for breach of trust where such Trustee has failed to show, the duty of diligence and care required of him as a Trustee having regard to the provisions of the Trust Deed conferring on him any powers, authorities or discretions.

4. Additional Provisions—

(a) The rights of Stockholders may be modified or compromised by an extraordinary resolution passed at a meeting of the Stockholders

in accordance with the Trust Deed a quorum for this purpose being the holders present in person or by proxy of a majority in value of the total amount of the Stock then outstanding or, in the case of an adjourned meeting, those present and entitled to vote. On a show of hands, each Stockholder present in person will have one vote and on a poll each Stockholder present in person or by proxy (who need not himself be a Stockholder) will have one vote for each Rs. 1,000/- of Stock held by him.

(b) A register of the Stock will be kept at the registered office of the Company and may be closed for any period not exceeding forty-five days in any year.

(c) The Stockholders will be entitled to their Stock free from equities and cross claims by the Company against the original or any intermediate holder.

(d) The Stock will be transferable in amounts and multiples of Rs. 1,000/-.

History and Business.

The Company was incorporated in Bengal on the 17th February, 1931 as a Private Limited Company under the name Henry Williams India (1931) Ltd. and was formed inter alia with the object of acquiring and carrying on the business of Henry Williams (India) Limited, an earlier Company incorporated in Bengal in the year 1922 which founded the Company's manufacturing Works at Calcutta. The other main objects of the Company will be found set out below in this Prospectus. The change to the Company's present name was made on the 19th December 1934 consequent upon the purchase of a large interest by Guest, Keen & Nettlefolds Ltd. of Birmingham, England.

On the 29th January 1953 the Company formed a wholly owned subsidiary Nettlefolds of India Private Ltd., incorporated under the Indian Companies Act, 1913 for the purpose of connecting the name "Nettlefolds" with the Company's project for manufacturing wood screws and kindred fastenings in India. This subsidiary as well as the Company has the right to use wood screw and kindred trade marks and labels, including the name "Nettlefolds" which is famous throughout the world for these products under user agreements with the proprietors. The Company has also entered into a user agreement with George Goodman Ltd., of Birmingham, England, in respect of the latter's trade mark and labels relating to safety-pins and kindred products manufactured by the Company and kindred products manufactured by Exors of James Mills Limited, in consideration of which the Company pays a royalty based on the selling price of the products subject to a minimum payment of £500 per annum. The said Agreement contains provisions whereby the user of the Trade Marks undertakes that the goods to be manufactured shall be up to specification and that the Owners of the Trade Marks shall have a right of access to the place where the goods are manufactured for the purpose of inspecting all stages of manufacture.

The main business of the Company is manufacturing in India but an Agency section importing and

selling a wide range of mechanical and electrical products of well known overseas manufacturers makes a useful contribution to the profits of the Company.

Land, Premises and Plant.

The Company has its main office at Calcutta and offices at Bombay, Madras, New Delhi and at London, England, and manufacturing Works at Calcutta and at Bhandup near Bombay.

The Calcutta Works is situated at Shalimar, Howrah, West Bengal, on two sites owned by the Company each of which is within its own ring fence, the older site containing an area of approximately 33 acres and a site recently acquired for future development and taking an area of approximately 20 acres. The two sites are joined by railway sidings and are readily accessible to Andul Road. Erected on this land is a modern, well-equipped manufacturing Works with a covered floor area totalling approximately 11,05,800 sq. ft. The Works is well served by internal railway sidings, adequate to handle incoming raw materials and outgoing finished goods and ample water is available from deep borewells and surface tanks. The Plant and Machinery is well maintained in efficient condition.

The Bhandup Works, approximately 18 miles from Bombay on the main Agra Road, is served by its own siding from the Central Railway, and is now the largest employer in the country of high-class steel and brass Wood Screws. As additional lines this Works started manufacturing Safety-pins in the latter half of 1954. Cotter Pins in the first half of 1955. Hypocotermic Needles in January 1956. Timmer's Rivets in June 1956 and Meta's Thread Screws in July 1956. The property on which the Works is situated comprises a residential area of approximately 15 acres on the West side of the Agra Road and an industrial area of approximately 53 acres on the East side of the Agra Road which latter accommodates the Works proper. Approximately 12 acres of the industrial area are rented on a 50 years lease to Sanjeev Electrical, Stamping Private Ltd. The industrial area has its own electric generating station, water is taken both from the main supply and from wells on the Estate. This Works has a covered floor area of approximately 81,500 sq. ft. and all the Plant and Machinery is well maintained in efficient condition.

The Company's Head Office at Calcutta is held on lease and a written undertaking has been received for an extension of this lease until the 30th June, 1973. The Offices at Bombay, Madras, New Delhi and at London, England, are all held under tenancy agreements on reasonable terms.

It is estimated that at the end of the current financial period the written down value of the Fixed Assets will exceed Rs. 3,25,00,000/-.

Management and Staff.

Of the Directors the Chairman, Mr. R. Catlow has for most of his working life been connected with Guest, Keen & Nettlefolds Ltd., England, and has since August 1952 been a member of the Board of that Company. There are three full-time Working Directors, all of whom have been in the employment of the Company for many years either as Executives or Directors and have considerable practical experience as engineers and commercial men. There are three non-Executive Directors in India, whose experience and guidance form a valuable contribution to the efficient running of the Company.

FINANCIAL INFORMATION.

Auditors' Report.

The following is a copy of the Report of the Company's Auditors, Messrs. Price Waterhouse Peat & Co., Chartered Accountants.

The Directors,

Messrs. GUEST, KEEN, WILLIAMS, LTD., 41, Chowringhee Road, Calcutta 16.

B-4, Gillander House, Calcutta-1.
28th August, 1958.

Dear Sirs,

We have examined the books and accounts of GUEST, KEEN, WILLIAMS LTD., as kept in Calcutta in which are incorporated the certified returns from the Calcutta Works Bhandup Works (which started production in 1953) and Bombay and Madras Branches for the five years ended 28th December, 1957 and from the five accounts of NETTLEFOLDS OF INDIA PRIVATE LTD., as kept in Bombay for the five years ended 28th December, 1957 and report that the profits or losses of the Companies are as set forth below. These profits or losses have been arrived at after charging all expenses of working, management and consultant's fees including provision for normal depreciation on the basis as allowable for taxation and after making such adjustments as in our opinion are appropriate.

	12 % per annum without deduction of tax	24,00,000
		40,00,000

No dividend has been declared by Nettlefolds of India Private Ltd. since the date of its incorporation on 29th January, 1953.

Profits and Prospects.

The report by the Auditors of the Company shows that the average profits for the four financial periods 1954/1957 after charging depreciation, maintenance and repairs but before charging bank interest or taxes on income was Rs 1,00,00,000/-, approximately equivalent to more than 10 times the annual interest charge of Rs 9,75,000/-.

STATUTORY AND GENERAL INFORMATION.

Underwriting.

The Debenture Stock now intended to be issued is underwritten in full for a commission of 2% on the issue price making a total commission of Rs 3,00,000/-, by the Life Insurance Corporation of India Messrs. Place Siddons & Gough Messrs Lewis & Jones and Messrs Bativala & Karani pursuant to Contracts Nos. 20(a) to 20(d) hereinafter mentioned under the heading "Contracts". In the opinion of the Directors the resources of the Underwriters are sufficient to discharge their obligations.

Licences.

A scheme for the expansion of the Company's Rolling Mills has been approved by the Government of India under the Industries (Development & Regulation) Act 1951 and the Registration and Licensing of Industrial Undertakings Rules 1952 as follows:—

"A Licence (No L/4/75/55 dated 3rd December, 1955 for the manufacture of Bars and Rods) has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking, a copy of this Licence is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the correctness of any of the statements made or opinions expressed in regard to it."

"A Licence (No L/1/2(2)/N/1/57 dated 6th March 1957 for the manufacture of Tungsten Carbide Rock Drill Inserts and Coal Cutter Picks) has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking, a copy of this Licence is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the correctness of any of the statements made or opinions expressed in regard to it."

It is also proposed to effect a substantial expansion to our existing industrial undertaking for the manufacture of Tungsten Carbide Rock Drill Inserts and Coal Cutter Picks. This development has received the approval of the Government of India under the Industries (Development & Regulation) Act 1951 and the Registration and Licensing of Industrial Undertakings Rules 1952 as follows:—

"A Licence (No L/12(2)/N/1/57 dated 6th March 1957 for the manufacture of Tungsten Carbide Rock Drill Inserts and Coal Cutter Picks) has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking, a copy of this Licence is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the correctness of any of the statements made or opinions expressed in regard to it."

At the Company's Bhandup Works a considerable expansion in the productive capacity of Wood Screws and Metal Thread Screws has been completed and the resultant increase in production is already being experienced. At the same time this Works is now manufacturing Cotter Pins, Screw Eyes and Hypodermic Needles as new lines. The proposal for a substantial expansion to the capacity for Finmen's Rivets has received the approval of the Government of India under the Industries (Development & Regulation) Act 1951 and the Registration and Licensing of Industrial Undertakings Rules 1952 as follows:—

"A Licence (No. L/1-A/71/N/27/57 dated 30th December 1957 for the manufacture of Finmen's Rivets) has been obtained from the Central Government for effecting a substantial expansion to this industrial undertaking, a copy of this Licence is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the correctness of any of the statements made or opinions expressed in regard to it."

PRICE WATERHOUSE PEAT & CO.

The Company. It must be distinctly understood that in granting this Licence the Government of India do not take any responsibility for the correctness of any of the statements made or opinions expressed in regard to it."

Option to Subscribe.

Save as provided by the Underwriting Agreements hereinafter referred to the Company has not entered into any Contract or arrangement and does not at present propose to enter into any contract or arrangement whereby any option or preferential right of any kind has been or is proposed to be given to any person to subscribe for any shares in or debentures of the Company.

Purchase of Property.

Save as respects property purchased or acquired under Items Nos. 7 to 19 both inclusive referred to below under the heading "Contracts" wherein are given the particulars required by Clause 12 of Part I of Schedule II to the Companies Act 1956 any property which the Company has purchased or acquired or proposes to purchase or acquire which is to be paid for out of the proceeds of the present issue or the purchase or acquisition of the issue of the Prospectus is property:

- the contract for the purchase or acquisition of property which has been entered into in the ordinary course of business of the Company, the contract not being made in contemplation of this issue or this issue in consequence of the contract or
- as respects which the amount of the purchase money is not material.

The property purchased or acquired or to be purchased or acquired under Contracts Nos. 7 to 19 both

GUEST, KEEN, WILLIAMS, LIMITED.—Cont'd.

inclusive aforesaid has vested or will vest absolutely in the Company and there have been no other transactions relating to such property within the two years preceding the date of this Prospectus.

Contracts.

The following Contracts, not being Contracts in the ordinary course of business, which are or may be material, have been entered into by the Company during the two years preceding the date hereof:—

(1) Dated the 20th September 1956 between the Company and Sankey Electrical Stampings Private Ltd. whereby the former Company leased to the latter certain pieces or parcels of land situate at Bhandup, near Bombay, together with several structures buildings and erections standing thereon and other rights and privileges appertaining thereto for a period of 50 years commencing from 1st January, 1956 at a monthly rental of Rs 1,641/-.

(2) Dated the 28th September 1956 between the Company and Jardine Henderson Limited appointing the latter Registrars and Share Transfer Agents to the Company for a period of 5 years at Rs 30,000/- per annum.

(3) Dated the 27th September 1957 between the Company and Compton Parkinson Ltd. England, whereby the latter granted to the former the exclusive licence to make use and sell within India Electric Arc Stud Welding products embodying the inventions disclosed by the Licensed Patents subject to the terms and conditions of the Agreement.

(4) Dated the 1st January 1956 between the Company and Henry Morton Leach Williams appointing the latter Managing Director of the Company for a period of five years at a salary of Rs. 6,000/- per

month and such other benefits privileges and amenities granted to Senior Staff by the Board of Directors. In addition Mr. H. M. L. Williams is paid a commission of 1% of the Net Profits of the Company.

(5) Various orders numbered 5/1 to 5/6 dated between 29th March 1957 and 9th April 1958 on various suppliers for the supply of plant and machinery. The cost of these orders is estimated to be £66,953 (Rs. 8,92,707/-).

(6) Various orders numbered 6/1 to 6/4 dated between 26th April 1957 and 12th June 1958 on various suppliers for the supply of plant machinery and equipment the cost of which is estimated to be Rs 13,79,502/-.

(7) On the 12th March 1957 an order on Taylor Woodrow (Building & Exports) Ltd. London England, for the supply of Structural Steel Work for buildings. The cost of this order and the supplemental one dated 24th June 1958 is estimated to be £129,699 (Rs 17,29,320/-).

(8) Various orders numbered 8/1 to 8/5 dated between 9th July 1956 and 14th September 1957 on Brightside Foundry & Engineering Co. Ltd. Sheffield England for the supply of Rolling Mill equipment the cost of which is estimated to be £986,659 (Rs 13,55,453/-).

(9) Orders numbered 9/1 and 9/2 dated 12th November 1956 and 13th December 1957 on Stein & Atkinson Ltd., London England for the supply of furnaces and the ancillary equipment the cost of which is estimated to be £89,463 (Rs 11,92,840/-).

(10) On the 25th February 1958 an order on Ceretti e Tanfani, S.p.A., Milan Italy for the supply

of Cranes, the cost of which is estimated to be £59,990 (Rs. 7,99,867/-).

(11) On the 19th November, 1957 an order on Jessop & Co Ltd. Calcutta for the supply of Cranes, the cost of which is estimated to be Rs 2,51,400/-.

(12) On the 1st November 1957 an order on Guest Keen & Nettlefolds (Midlands) Ltd., Birmingham England for the supply of plant and machinery the cost of which is estimated to be £32,864 (Rs. 4,38,187/-).

(13) On the 11th March 1958 an order on Ateliers de Constructions Electriques de Charleroi, London, England for the supply of equipment for industrial heating the cost of which is estimated to be £130,000 Belgian francs (Rs 4,95,652/-).

(14) Various orders numbered 14/1 to 14/3 dated between 5th April 1957 and 21st February, 1958 on A & J Main & Co Ltd Calcutta for the supply and erection of buildings. The cost of these orders is estimated to be Rs 6,58,455/-.

(15) Various orders numbered 15/1 to 15/3 dated between 15th May 1957 and 8th January, 1958 on Associated Engineers Private Ltd., Calcutta for civil engineering works and buildings. The cost of these orders is estimated to be Rs 21,87,321/-.

(16) On the 7th January 1958 an order on Simplex Concrete Piles (India) Private Ltd. Calcutta for concrete piling the cost of which is estimated to be Rs 4,29,800/-.

(17) Various orders numbered 17/1 to 17/3 dated between 24th May, 1958 and 20th June 1958 on Indian Cable Co Ltd. Calcutta for the supply of cables. The cost of these orders is estimated to be Rs. 6,81,384/-.

Note: With the exception of item No. 18(r), all the lands and buildings contracted to be sold as above have since the above mentioned dates of contracts been conveyed to the Company.

(19) Agreement dated 25th July, 1958 between the Company and Mangatram Nandram, Bombay, to purchase at a cost of Rs 9/- per square yard, a plot of land situate at Kanjur, on the Bombo-Agra Road at Bhandup and measuring about 19,538 square yards.

(20) Underwriting Agreements—

(a) Dated 22nd August, 1958 between the Company and the Life Insurance Corporation of India and under which the latter agreed to underwrite the present issue of Debenture Stock to the extent of Rupees Forty Lakhs thereof.

(b) Dated 22nd August, 1958 between the Company and Messrs. Place, Siddons & Gough under which the latter agreed to underwrite the present issue of Debenture Stock to the extent of Rupees Seventy Lakhs thereof.

(c) Dated 22nd August, 1958 between the Company and Messrs. Lewis & Jones under which the latter agreed to underwrite the present issue of Debenture Stock to the extent of Rupees Twenty Lakhs thereof.

(d) Dated 22nd August 1958 between the Company and Messrs Bativala & Karani under which the latter agreed to underwrite the present issue of Debenture Stock to the extent of Rupees Twenty Lakhs thereof.

Redeemable Preference Shares.

The Company has not issued and does not at present intend to issue any Redeemable Preference Shares.

Previous Issues.

In November 1956 there were offered for public subscription 5,89,400 Ordinary Shares at a premium of Rs 10/- per share payable in full on application. This issue was fully subscribed and the shares were allotted on 21st November 1956 against payment in full totalling Rs 1,17,84,000/-.

Save as aforesaid, no Shares or Debentures have been issued or agreed to be issued within the two years preceding the date hereof either for cash or as fully or partly paid up otherwise than in cash.

Commission.

Save for brokerage amounting to Rs. 1,41,165/- on the issue referred to in the previous paragraph and save for underwriting commission and brokerage payable in respect of the present issue of Debenture Stock, no sums have been paid within the two years preceding the date hereof or are payable as commission for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for any Shares or Debentures of the Company or as discount in respect of Shares issued.

Expenses of the Issue.

The expenses of this issue including underwriting commission, brokerage legal charges, stamp duty and registration fees are estimated to amount to Rs. 7,00,000/- and are payable by the Company.

Payment to Promoter.

No amount or benefit has been paid or given within the two years preceding the date hereof or is intended to be paid or given to any promoter or to any

officer of the Company apart from normal remuneration and reimbursement paid to such officers.

Capitalisation of Profits.

On 29th August 1947 the Company issued 11,75,500 fully paid B-nus Shares of Rs. 10/- each by capitalising the sum of Rs 1,17,55,000/- standing to the credit of Capital Reserve Account.

Directors.

The Articles of Association of the Company provide that:—

"The number of Directors shall not be less than three (unless otherwise determined by the Company in General Meeting) more than nine. The Company (see reference below) has the right to appoint up to one third of the total number of Directors and to nominate the Chairman. A Director does not require any share qualification. Each of the Directors of the Company shall (unless otherwise determined by the Company in General Meeting) be paid out of the funds of the Company as remuneration for his services as a Director the sum of Rs. 200/- in respect of each of the Directors which he attends. If any Director being willing shall be called upon to perform extra services or to make any special exertions in going or residing away from his usual place of business or in giving special attention to the business of the Company as a member of a Committee of Directors, the Company may remunerate the Director so doing either by a fixed sum or by a percentage of profits or otherwise as may be determined by the Directors and such remuneration may be either in addition to or in substitution for his share in the remuneration from time to time provided for the Directors. The Articles provide that the business of the Company shall be managed by the Directors who may exercise all such powers of the Company as are by law or by the Articles required to be exercised by the Company in General Meeting. The powers of the Directors are, however, subject to any regulations which may be made by the Company in General Meeting not being inconsistent with the Articles or the provisions of any law."

Interest of Directors.

Mr. R. Catlow is interested to the extent that he is a Director of Messrs. Guest, Keen & Nettlefolds, Ltd. England the Principal Shareholders and Technical Consultant and as a Director of Exors of James Mills Limited, England, a subsidiary of Guest, Keen & Nettlefolds Limited.

Mr. H. M. L. Williams is the Managing Director of the Company and receives remuneration for his services as such.

Mr. J. F. Healy and Mr. W. Morris are salaried employees of the Company in connection with the Commission based on the net profits of the Company.

Other than Mr. R. Catlow all Directors are interested as shareholders.

Mr. R. Catlow, Mr. H. M. L. Williams and Mr. J. F. Healy are shareholders (each holding less than

Indemnity.

The Articles provide that every Director, Manager or Officer of the Company, or any person (whether an employee of the Company or not) employed by the Company as Auditor shall be indemnified out of the funds of the Company against all liability incurred by him as such Director, Manager, Officer or Auditor in defending any proceedings, whether civil or criminal, in which judgement is given in his favour, or in which he is acquitted or in connection with any application in which relief is granted to him by the Court.

Management.

The Management of the Company is vested in and exercised by the Directors. The Company has no Managing Agents.

Consultant.

Guest, Keen & Nettlefolds, Ltd., a Company incorporated in England was appointed the Technical Consultant of the Company by virtue of an Agreement dated the 17th September, 1948, effective from the 1st January 1948 and terminating on the 31st December, 1967. In accordance with the terms of the said Agreement, inter alia, the Consultant undertook to furnish the Company with technical assistance in regard to manufacture and details of plant processes and methods for the production of engineering products (

City Cable

SUBSTANTIAL ADVANCE ON THE LONDON STOCK MARKET

INDUSTRIALS RISE: GILT-EDGED FALL

London, 27th August.

A substantial advance was recorded in the London stock market during the past week, and business, particularly in industrials, was at a very high level. The one notable exception to the upward movement was provided by gilt-edged securities which drifted lower due to the lack of interest. There was a modest reaction in industrials after the week-end, but the bulk of the earlier gains was well maintained. The advance appeared to be based on two main factors, namely the current trend towards lower interest rates and the growing confidence in the U.S. business outlook. In addition, there was a number of contributory factors including the rising popularity of the Government, the favourable developments in the Middle East situation, the firmness of sterling in the foreign exchange market and the firm trend on Wall Street. After the week-end, enthusiasm was dampened by the second report of the Cohen Council on prices, productivity and incomes and the unsettling turn of events in the Far East. The outstanding feature of the past week was the very large business transacted at rising prices in the industrial market. Widespread and substantial gains were, therefore, recorded, accentuated by a shortage of stocks. Two London bank shares were outstanding features of the market and established substantial gains helped by the news of a one-for-four free scrip issue and the higher dividend forecast announced by the Barclays Bank supplemented later by a new personal loan scheme announced by the Midland Bank. Insurance shares also advanced sharply. Gilt-edged suffered losses extending to about half a point due to the competition from new issues. Among foreigners Germans and Japanese bonds improved; otherwise conditions in this section of the market were very quiet. Gold shares continued their advance, but suffered only a temporary setback on news of the death of the South African Premier. Base metal shares were quiet and were narrowly irregular. Oil shares rose assisted by the improvement in the Middle East situation. Rubber shares advanced on a selective demand and recorded extensive gains. Tea shares tended higher.

The Money Market

In spite of smaller requirements, there was no change in the general tightness which has now

become the common feature of the London money market. The daily supply of funds was barely sufficient to cover market needs in spite of assistance given by the authorities, and small penal borrowings were undertaken on one or two occasions. The money rate ruled throughout the past week at $\frac{3}{4}$ percent with $\frac{3}{8}$ percent being paid during the most difficult phases. Bill business was restricted by the cash position with the recent keen demand having subsided to some extent on the view that there would be no further reduction in the British Bank rate for some time. This idea was given strength by the fact that there was no further downward movement in the Treasury bill rate at last Friday's tender, the rate being fractionally higher at $\frac{1}{2}$ percent.

Activity on Wall Street

Foreign dollar bonds came into prominence due to the renewed strength in German Nationals where gains of 1 to 3 points were recorded for some issues during the past week. Among the Italian issues, the Republic 3 percents fluctuated over a range of more than 10 points. Amsterdam 5 percents were a shade lower while Norwegian issues improved slightly. Denmark and Serbs were mostly unchanged while Japanese issues showed only minor changes. Chile 3 percents were a shade better on a moderate turnover. Long-dated U.S. Government obligations fluctuated in light dealings. They occasionally scored fractional gains on professional short-covering based on technical considerations following the sharp declines in the previous weeks, but reacted when the demands were satisfied. The market was described as thin with dealers reporting a general lack of investment support. Investment quality corporates drifted lower throughout the past week. Convertibles continued to follow the trend in the stock market.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 20th August shows that the gold stock declined by \$60 million to \$21,086 million. Foreign deposits were \$74 million lower at \$253 million, while foreign investments rose by \$60 million to \$3,372 million. The Federal Reserve sold \$206 million worth of bills making the total holdings of Government securities \$25,313 million. Total discounts and advances rose by \$58 million to \$240 million while the aggregate excess reserves of member banks rose by \$60 million to \$577 million. The daily average excess reserves of member banks declined by \$73 million to \$619 million, while their daily average borrowings fell by \$13 million to \$216 million. Business loans of the New York city banks by \$84 million to \$10,663 million compared with a rise of \$763 million to \$11,944 million in the corresponding week of last year. Gold certificates on hand and dues from

the U.S. Treasury fell by \$61 million to \$19,631 million. Federal Reserve notes in actual circulation declined by \$26 million to \$26,855 million. The deposit member banks reserve account was \$9 million lower at \$18,578 million.

Vegetable Oils Quiet

Very quiet conditions were noted in most sections of the vegetable oils and oilseeds markets during the past week. Linseed oil was quoted in a wide range of prices but early offers at around £2 a ton below last Friday's rate were difficult to substantiate, and following the receipt of steadier opening advices on Winnipeg linseed, general ex-tank U.K. offers of oil closed around £1 a ton cheaper. Initially, Canadian linseed was offered around £15 a ton under pre-week-end levels, but recovered most of the loss to finish steady but rather idle. Philippines copra was a shade cheaper with Scandinavia said to have bought September shipments down to \$201 c.i.f. stamped document terms, with sellers prepared to go on at that level. First-hand ideas for coconut oil showed little movement in prices but occasional second-hand offers came on to the market around £1 a ton cheaper for Straits bulk oil. North European buyers rarely offered more than £107 to £107½ c.i.f. for parcels on September vessels. A fair demand was noted for Nigerian groundnut oil although U.K. interest was concentrated on the more forward shipments with October-November parcels reported to have been sold from £92 to £92½ c.i.f. U.K. At the same time buyers failed to contact oil nearing arrival in Liverpool. North Continental buyers were said to be seeking near shipments of Nigerian oil but practically no offers were reported. Groundnuts were featureless and were unchanged. Castor oil remained a dull feature while castorseed made little progress. U.S. and Canadian soyabbeans were reduced around 12½ a ton for the new crop shipments but trade comments were confined to rumours of business in Chinese yellow soyabbeans to Continental ports down to £31½ c.i.f. for November-December shipments.

U.S. Plan to Stockpile Copper Falls

Strong opposition in the U.S. Senate has frustrated an attempt by Senator Murray, chairman of the Senate Interior Committee, to introduce a \$125-million one-year programme to stockpile 100,000 tons of copper and pay production subsidies to domestic producers of lead, tungsten, zinc, acid grade fluorspar and tungsten. The Bill was introduced after the House defeated the Senator's minerals plan. Senator Murray and other prominent Senate leaders had planned to add to this provision some other legislation, but decided to drop the plan after strong protests were made by members.

Money

THE CALCUTTA MONEY MARKET

STERLING RULES STRONG

Wednesday, 27th August.

THE seasonal decline in advances continues in the Calcutta money market. During the past week, the total of funds outstanding has fallen by a moderate amount, chiefly accounted for by a reduction in advances to the jute industry. The requirement of the cotton and sugar mills have declined slightly and accommodation against grain and seeds storage in upcountry areas also shows a moderate fall. Conditions are considerably easier in the interbank call market, and the call rate is down to 2 percent.

There has been a fair number of tea bills in the exchange market during the past week. A few gunny bills have also come to hand. Remittance has been moderate. In spite of the recent cut in the U.K. Bank rate, sterling has strengthened against all the leading currencies, except the U.S. dollar. Against the dollar, there has been a fractional decline.

BULLION WAS STEADY ON GOOD OFFTAKE. SILVER ended at Rs. 182.69. The London quotations stood at 74½d and the price in New York was quoted at 88½ cents.

Gold was steady at Rs. 110.50 on good upcountry demand.

DURING THE WEEK ENDED 22ND AUGUST, Government of India Treasury bills for Rs. 9,00,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 3 CRORES OF 91 DAYS' Government of India Treasury bills were opened on 26th August. Total amount offered was Rs. 6,00,00,000. Tenders at Rs. 99.365 and above were accepted in full and those at Rs. 99.364 allotted were approximately 20 percent. Lower tenders were rejected. Total amount accepted was Rs. 3,00,00,000, the average rate of accepted tenders being Rs. 2.520 percent a year.

Tenders for Rs. 3 crores of 91 days' Government of India Treasury bills will be received in Bombay and Nagpur on 2nd September up to 11.00 a.m. and at other centres (Bangalore, Calcutta, Kanpur, Madras and New Delhi) up to the close of business on 1st September. Successful tenderers should make payment on 5th September, or 6th September, where Friday is a holiday. Other conditions will be as usual.

DECLINES OF RS. 20.71 CRORES TO RS. 1,530.91 crores in active notes and of Rs. 13.25 crores to Rs. 1,558.99 crores in the total note issue were notable features of the return of the Reserve Bank of India for the week ended 22nd August, 1958. The currency contraction was adjusted by reducing rupee securities by Rs. 14.91 crores to Rs. 1,124.32 crores. Deposits of the Government of India were Rs. 90 lakhs lower at Rs. 62.69 crores while other Government accounts improved by Rs. 8.49 crores to Rs. 25.31 crores. Balances of commercial banks increased by Rs. 11.88 crores to Rs. 106.36 crores. Balances held abroad declined by Rs. 4.76 crores to Rs. 10.10 crores. Investments were Rs. 10.30 crores lower at Rs. 328.75 crores. Other loans and advances declined from Rs. 51.52 crores to Rs. 49.89 crores, of which advances to scheduled banks amounted to Rs. 1.93 crores against Rs. 3.28 crores. Ways and means advances stood at Rs. 12.78 crores (Rs. 15.44 crores).

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 15th August, 1958, shows a drop of Rs. 8 lakhs to Rs. 436.01 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 4.89 crores and Rs. 1 lakh to Rs. 222.58 crores and Rs. 11.16 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have dropped by Rs. 3.23 crores to Rs. 170.56 crores. Cash and balances are, in consequence, shown at Rs. 42.74 crores or Rs. 1.81 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 15th August, 1958, shows Demand and Time liabilities at Rs. 751.43 crores (Rs. 34.01 crores on account of borrowings from (Rs. 34.01 crores) and Rs. 853.15 crores (Rs. 35.34 crores) compared with Rs. 750.34 crores (Rs. 35.34 crores) and Rs. 847.47 crores (Rs. 37.57 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 1.63 crores and Rs. 2.07 crores to Rs. 39.14 crores and Rs. 92.96 crores, respectively. There is a rise of Rs. 7.78 crores to Rs. 553.81 crores in investments. Advances and bills discounted at Rs. 871.33 crores show a drop of Rs. 8.93 crores. The ratios to total liabilities of cash and balances, shown at 8.2 percent and 54.3 percent against 8 percent and 55.1 percent.

ACCORDING TO THE RETURNS RECEIVED IN THE Department of Commercial Intelligence and Statistics, the total gross sea land and air Customs revenue collected in the Indian Union during March 1958, amounted to Rs. 1,308 lakhs compared with Rs. 1,767 lakhs in the corresponding month of the

LONDON FINANCIAL LETTER

IMPLICATIONS OF BANK RATE CUT

By Air Mail.
SOME implications of the reduction in the British Bank rate are discussed elsewhere in this issue. Although such a reduction in the month of August is unprecedented in modern times, no change in Bank rate in recent years had been so widely expected. The expectation and the event were sufficient proof of the ephemeral character of the Middle East crisis of July. Before the crisis, money rates in London were moving downwards. During the crisis, the trend was in abeyance. The crisis subsided, and the trend was resumed. It might be supposed that the interruption would have allowed time for the general economic trend to establish itself and for the Government to evolve an appropriate policy. Yet the situation in late summer is not much different from the situation in early spring, when Bank rate had just begun its decline from the level to which it was raised in the crisis of last September.

By last March the financial crisis was overcome and there were clear signs of an economic recession. The special measures devised for the crisis have since been dismantled, and Bank rate has now been reduced below the rate from which it was raised last September; but the recession, though proceeding, is not yet clearly defined. Changes in overseas trade are similarly slow; which is fortunate, for the forecasts in the spring were pessimistic. Almost all observers believed that the low level of commodity prices and the U.S. recession would reduce British export trade about mid-year, but the figures for May, June and July, were consistently good. If one can judge by its leaders' statements, organised labour is very apprehensive, and it is certainly exercising more restraint in its wage demands than in any recent year. If only for this reason, inflationary pressures are eased. But the Government is not yet responsive to demands for a "policy of re-expansion". The reduction in Bank rate this month though widely interpreted as a move against recession, seems to be attributable to nothing more profound than a desire to keep the cost of the national debt no higher than is necessary; and what is necessary is determined by the condition of the currency and—somewhat vaguely—the supply-demand relation in the capital market.

Demand for Credit

Anyone looking for financial excitement in Britain must have found this year, so far, disappointing, but the remaining months of the year will certainly be interesting—though, mercifully,

GUEST, KEEN, WILLIAMS, LIMITED.—Cont'd.

By an Agreement dated the 30th May, 1950 between the same parties as aforesaid, the said Agreement dated the 17th September, 1948, the Company has agreed to accept performance of the obligations contained in the last mentioned Agreement by G. K. N. Group Services Ltd., a wholly owned subsidiary of Guest, Keen & Nettletons Ltd.

Borrowing Powers.

The Articles provide that the Directors may from time to time raise or borrow any sum or sums of money for the purposes of the Company and may secure the repayment of any sum or sums of money so borrowed in such manner and upon such terms and conditions in all respects as they think fit. The Directors' borrowing powers are now limited by Section 293(1)(d) of the Companies Act, 1956.

Voting Rights.

The Articles provide that, subject to any special rights or restrictions affecting any particular class of shares on a show of hands every member present in person or by proxy shall have one vote, and on a poll every member present in person or by proxy shall have one vote for every Ordinary Share held by him. There are no special rights or restrictions attaching to the present Ordinary Share Capital of the Company.

Restriction on the Right to Transfer Shares and Vote.

The Articles provide that the Directors may decline to register any transfer of shares upon which the Company has a lien, and in the case of shares not fully paid up may refuse to register a transfer to a transferee of whom they do not approve. No member shall be entitled to be present or to vote on any question either personally or by proxy or as proxy for another member at any General Meeting or upon a poll or be reckoned in a quorum whilst any call or other sum shall be due and payable to the Company in respect of any of the shares of such member.

Auditors' Consent.

Messrs. Price Waterhouse Pext & Co. have given and have not before delivery of this Prospectus for registration withdrawn their written consent to the issue of this Prospectus with the inclusion therein of their Report set out above, in the form and context in which it is included.

Main Objects.

The Main Objects of the Company, as set out in sub-clauses (a), (b) and (c) of Clause 3 of its Memorandum of Association, are as follows:—

- (a) To acquire and take over as a going concern the undertaking and certain assets of Henry Williams (India) Limited, and with a view thereto to enter into and carry into effect, with or without modifications or alterations as may be agreed upon, whether before or

after the execution thereof, an agreement already prepared and expressed to be made between Henry Williams (India) Limited and the Liquidators thereof of the one part, and the Company of the other part, a draft whereof has been submitted with a view to identification by A. H. Bishop, a Director of the Company.

- (b) To carry on the business of iron-founders, mechanical and railway engineers, and manufacturers of railway appliances, agricultural implements and other machinery, toolmakers, brass-founders, metal-workers, boiler-makers, mill-wrights, colliery owners, ship owners and ship-builders, machinists, iron and steel casters, smiths, wood-workers, builders, painters, metallurgists, electrical engineers, water supply engineers, gas-makers, farmers, printers, carriers and merchants and to buy, sell, manufacture, repair, convert, alter, let on hire, and deal in machinery, implements, rolling-stock, and hardware of all kinds, and to carry on any other business (manufacturing or otherwise) which may seem to the Company capable of being conveniently carried on in connection with the above or otherwise calculated directly or indirectly to enhance the value of any of the Company's property and rights for the time being.

- (c) To carry on any business relating to the winning and working of coal and other minerals, the production and working of metals and the production, manufacture, and preparation of any other material which may be usefully or conveniently combined with the engineering or manufacturing business of the Company or any contracts undertaken by the Company, and either for the purpose only of such contracts or as an independent business.

Inspection of Documents.

Copies of the Memorandum and Articles of Association of the Company, the draft (subject to modification) of the Trust Deed to be entered into for the purpose of constituting the stock, the Consent Order of the Controller of Capital Issues, the Licences issued by the Central Government referred to above, the Contracts or memoranda thereof referred to above as being material contracts, and/or copies thereof, the abovementioned Auditors' Report and copies of the balance sheets and profit and loss accounts upon which the Report is based, can be inspected at any time during the usual business hours at the Registered Office of the Company for a period of fourteen days from the date of publication of this Prospectus or until the Subscription List closes whichever is earlier.

Application and Allotment.

Applications for the Stock which must be for a minimum of Rs. 1,000/- or multiples thereof must be made on the accompanying official form and will be refused if not so made. The application form together with a remittance for the full amount payable on

application must be sent to a branch of the National Overseas & Grindlays Bank Ltd., in India, the remittance being made by cheque or draft which, if it is desired to avoid payment of bank charges must be & Grindlays Bank Ltd. in India, to which the application form and cheque or draft are being sent, or upon a bank situated in a town in which there is a Ltd. If drawn upon a bank elsewhere the appropriate bank charges must be included in the remittance, otherwise the application will be refused.

Cheques or Drafts should be made payable to the "National Overseas & Grindlays Bank Ltd., Account Guest, Keen Williams Ltd. Debenture Issue," and should, for the applicants' protection be crossed "A/c Payee only." A separate cheque or draft must accompany each application form.

Allotment will be notified by the despatch of an Allotment Letter, but the Directors reserve the full control in whole or in part where an application is rejected or not accepted in full the whole or any value of the application money received will be refunded to the applicant through the post at his risk, in which event Bank's commission, if any, will be payable by the applicant.

Stock Certificates are expected to be available for issue in exchange for Letters of Allotment on and after 15th October 1958.

Brokerage.

Brokerage at the rate of one half of one per cent will be paid by the Company on allotments made in respect of applications bearing the stamp of a certified member of a recognised Stock Exchange.

Copies of this Prospectus and forms of applications may be obtained from the Brokers at the addresses given above and from the Bankers named above, at any of their branches in India.

Keep quality consistently high with
Honeywell
Electronik
INSTRUMENTATION

Prestige and profits go hand-in-hand with product quality. The way to keep quality standards consistently high is to put engineered instrumentation to work. Today's methods of process measurement and control also hold production costs in line by reducing rejects and raising output. If you're thinking of modernizing your plant facilities, consider the many proved economies of Honeywell instrumentation.

Honeywell, the largest maker of automatic controls in the world, offers the most comprehensive line in the industry, engineered and serviced in India by BLUE STAR. Ask a Blue Star representative to advise you on Honeywell instrumentation for quality control in your plant.

Lacking the excitement of 1957. The pressure of opinion, if not of events, will compel the Government to formulate an economic policy, which seems at present to be lacking. Britain will then see whether she is willing to take the risks of applying stimulants and, if so, which stimulants she prefers. Reducing interest rates has various advantages. It saves interest on the national debt and reduces the external cost of the sterling balances. It reduces the working costs and the capital costs of industry and trade and so, indirectly, the cost of living. It aids home-buyers—if the reluctance of building societies to reduce their rates can be overcome. It reduces the cost of financing international trade, so stimulates trade and at the same time, helps London maintain its position as a centre of international finance.

Yet the authorities seem scared of any suggestion of "cheap money". They cannot be accused of undue haste in reducing Bank rate towards a normal level (at 4½ percent it is still rather high), and, in spite of circumstances which seem to need an expansive policy, many people in the City are predicting that the next move in Bank rate will be upwards; because it is by no means certain—indeed quite unlikely—that the favourable balance of payments achieved in the first half-year will be repeated in the second.

Policy of Dear Money

One reason for the authorities' caution is the apparent success of the policy of "dear money". If high interest rates can so effectively subdue inflation, it is argued, low interest rates would presumably stimulate it. This argument does not stand up to careful scrutiny. The authorities themselves—if one may judge by the latest report of the Bank of England, which covers the period of the crisis and the recovery from it—are reluctant to admit the leading part played by the terms of trade in the strengthening of sterling. Nor are

they anxious to point out that the period of high interest rates and restricted credit, from 1955 to 1958, was a period during which Britain's economic activity compared very unfavourably with that of continental Europe.

It is too early to see whether unrestricted credit at lower rates will act as a strong stimulant in present conditions. If it reverses a tendency to run down stocks—most noticeable for many months in the textile trade but now obvious in the steel trade—its effects will be far-reaching. But industrial development requires cheaper long-term borrowing; whereas the authorities are still convinced that long-term capital will remain scarce for many years and that the long-term rate of interest, therefore, should remain high. One regrettable effect of high rates is the reluctance of overseas borrowers to come to the London market: as in short-term financing, London has not been performing its traditional function satisfactorily.

Finance for Home and Abroad

One fact which is not yet adequately recognised is that the sterling balances that have been freely used to finance purchases in Britain, an important factor in the maintenance of export trade—are not now so readily available for the purpose. India is not the only country whose balances in London have been run down, and finance for exports will undoubtedly be a major problem in the coming months. British observers are confident that a satisfactory solution of India's problem will be worked out in Washington this month; and some widely-applicable system of finance will naturally be discussed, if not agreed, at the Commonwealth Conference in Montreal in September. With British industry under-employed, there is some urgency on the part of the main supplier of goods, as well as on the part of the recipients.

Stocks and Shares

PRICES RISE IN BUOYANT TRADING

NEW L.I.C. INVESTMENT POLICY WELCOMED

Wednesday Evening.

BUOYANT conditions have prevailed in the Calcutta Stock Exchange during the past week and Indian Iron shares have touched a high of Rs. 25.56 in today's trading session. The bulls have been jubilant because the difference in their favour between the last settlement rate and the quotation at the close of business today was no less than Rs. 1.25 a share. The Finance Minister's long-awaited statement on the Life Insurance Corporation's investment policy was well received. Under the revised investment scheme, Life Insurance Corporation investments will be divided into three broad categories: Firstly, Government and approved securities, which generally mean gilt-edged securities; secondly, investments approved under Section 27A of the Insurance Act; and thirdly, other investments. The limitations are that at least 50% of the total funds should be held in Government and approved securities and not more than 15% in the form of other investments. The results of the three-day Washington talks between financial experts from Britain, the U.S.A., West Germany and Japan are keenly awaited. The general feeling is one of optimism.

The Government of India's decision to float a new loan of 3½% 1968 for Rs. 30 crores at Rs. 98.50% and to create a further issue of 3½% National Plan Bonds 1967, third series, for Rs. 30 crores at Rs. 98.80% was more or less anticipated as it was well known that the authorities had been rigging the market in recent weeks by their operations in medium-dated issues and that yields on such securities had narrowed. Subsequently, sales of medium-dated issues were stopped and only long-dated loans were offered. In view of the fact that all existing 3½% medium-dated loans are standing at or above par, the success of the new issues seems assured—particularly as money is freely available.

Details of a Rs. 14-crore 6½% Debenture Stock 1966-71 issue at par by Guest, Keen, Williams Ltd., appears elsewhere in this issue of Capital. Considering the excellent prospects of the company and the attractive terms of issue, there can be little doubt that it will be over-subscribed.

Preference shares have continued in strong demand and even though buyers were prepared to pay one to two rupees above last quotations, they were unable to obtain their requirements.

In the banking section, Punjab National advanced by Rs. 1.50 to Rs. 62 and United Commercial were steady at Rs. 62.50.

In coal, there was a good enquiry for selected issues—particularly Amalgamated at Rs. 21.12, Bengal at Rs. 26.8, Equitable at Rs. 28.75 and New Beerboom at Rs. 19.25. The outstanding feature was Katras Jheriah which spurred from Rs. 59.50 to Rs. 65 following the publication of a satisfactory report and the company's announcement that it has applied to the Controller of Capital Issues for permission to issue bonus shares.

In cotton, Dunbar were better at Rs. 135 and in electric U.P. were wanted at Rs. 142.

Engineering shares were steady, particularly Braithwaite which were taken at the higher rate of Rs. 30 and Burn & Co. at Rs. 375. Jessops spurted from Rs. 20.50 to Rs. 22.62 and Textile Machinery were strong at Rs. 22.60. Indian Iron closed tonight at Rs. 25.20, but recovered after hours to Rs. 25.45.

Less interest was shown in the jute section, but prices showed little variation.

In paper, Titagur were strong at Rs. 42.25 and Orient were taken at the higher rate of Rs. 35.90. Sirpur were steady at Rs. 13.12.

In sugar, Belsund were done at the higher rate of Rs. 11.37, but Dyer Meakin met with some profit-taking and receded at the close to Rs. 12.44.

In cement, Jaipur Udyog were marked down to Rs. 15.87 and Orissa to Rs. 13.37 ex-dividend ex-rights. Dalmia were unchanged at Rs. 12.12.

Among miscellaneous industrials, Alkali & Chemical spurted to Rs. 16.12 and Angelo Brothers were wanted at the higher rate of Rs. 22. Balmer Lawrie met with some profit-taking and eased to Rs. 169. Clive Row Investments were steady at Rs. 9.31 as were Dunlop Rubber at Rs. 128 to 129. Investment advanced sharply from Rs. 128 to Rs. 147 and Hercules Insurance were better at Rs. 22.50. Indian Aluminium fluctuated between Rs. 16.75 and Rs. 16.25 to close at the latter rate. Indian Oxygen were wanted at Rs. 20.37 and Indian Cables at Rs. 30.50. Indo-Burma Petroleum were easier at Rs. 26.94, as were Jardine Henderson at Rs. 73. Indian Steamship, on rumours of a higher dividend, advanced further to Rs. 14.25. Metal Box were steady at Rs. 30.12 and National Insulated Cables were taken at Rs. 32.62. Shaw Wallace were bought on investment account at the higher rate of Rs. 12.87 and Tide Water Oil moved up from Rs. 14.25 to Rs. 15.50.

In the mining group, Indian Copper were weak at Rs. 3.81 as were Orissa Minerals at the higher rate of Rs. 27.87.

Contrary to the general trend, tea shares were dull and neglected.

THERE IS A FALL OF Rs. 7.05 LAKHS TO Rs. 28.09 lakhs in the profit of Balmer Lawrie and Company for the year ended last December. Providing Rs. 12.37 lakhs (Rs. 17.38 lakhs) for taxation provision and Rs. 4.19 lakhs (Rs. 3.48 lakhs) for depreciation, there is a balance of Rs. 15,71,721. Bringing in Rs. 5,03,375, there is Rs. 20,75,375. The dividend has been maintained at 15 percent, including 2½ percent, relating to 1955 because of the Income Tax Act provision. General reserve is allocated Rs. 2 lakhs (Rs. 10 lakhs), leaving a carry-forward of Rs. 5,00,886. The directors say that future prospects for many interests in the group are governed by the import position. There will be a falling off in trading business for the current year and "the engineering companies must sooner or later also be affected by the shortage of steel."

THE PROFIT OF THE INDIAN COPPER CORPORATION has declined from Rs. 1,507,184 to Rs. 1,237,749 for the year ended last December. The dividend is cut by 2 percent to 18 percent. General reserve is allocated Rs. 1,75,000 (same) and depreciation Rs. 1,75,000 (same). The taxation provision is lower at Rs. 252,534 against Rs. 280,783. The carry-forward is Rs. 1,210,361 against Rs. 1,114,980 brought in. Sales of copper ingots rose from 9,787 tons to 10,301 tons. Despatches of Kyanite increased by 1,335 tons to 17,952 tons.

THE PROFIT OF THE RAJGARH TEA COMPANY HAS declined from Rs. 3.24 lakhs to Rs. 77,143 for the year ended last December. The dividend is lowered by 15 percent to 25 percent, leaving a carry-forward of Rs. 41,480 against Rs. 41,025 brought in. The crop fell from 6,013 maunds to 5,597 maunds, and the average price declined from Rs. 2.65 to Rs. 2.16 a lb. Estimates for 1958 have

PROVIDING Rs. 5,000 FOR TAXATION (NIL) AND Rs. 3,300 for wealth tax, the profit of the Churulia Coal Company has amounted to Rs. 29,620 for the year ended last December, against Rs. 11,111. The dividend is higher at 5 percent against 1½ percent, leaving a carry-forward of Rs. 10,537 (Rs. 4,240). The Karanpura Syndicate raised 1,88,747 tons and despatched 1,88,067 tons. A managing contractor continues to raise and sell coal from the Religara colliery and this arrangement works satisfactorily.

PROFIT-TAKING FOLLOWS EARLY BULL PHASE

OPTIMISTIC VIEW OF FOREIGN AID PROSPECTS

Wednesday Evening.

THE Bombay stock market was steady last week and share prices improved further on a broad front, although prices were fractionally shaded at the close on profit-taking. There were a number of favourable developments contributing to the improved sentiment. The reduction in the rate of estate duty for certain slabs was interpreted bullishly. Optimism prevailed about India's prospects for obtaining foreign financial assistance and it is now believed that she will be able to tide over the present difficult external payments position.

The investment policy for the Life Insurance Corporation of India, as announced by the Union Finance Minister, Mr. Morarji Desai, in the Lok Sabha on Monday, was cautiously studied, and it is expected that prices of selected scrip would be maintained at a reasonable level on support from the Life Insurance Corporation. Meanwhile, good corporate reports continue to flow in.

Tata Steel improved to Rs. 174.25 on a favourable report and Indian Iron were higher at Rs. 26.40. Among engineering scrip, Alcock Ashdown were taken at Rs. 263.75 and Premier Construction changed hands at Rs. 209.50. Tata Locomotive were supported around Rs. 191 on an increased ordinary dividend of Rs. 9 against Rs. 8 a share. The proposal of the company to issue rights shares at par was welcome. Motor shares were steady, and Hindustan Motor improved to Rs. 7.68 on a good report. Premier Automobile were transacted at Rs. 88. Mahindra and Mahindra were dealt in at Rs. 15.56 ex-rights.

Cotton mill shares showed gains on balance. Bombay Dyeing were transacted at Rs. 60.50. Century Simplex came to hand at Rs. 175.50. Century recovered to Rs. 459 on short-covering and Svadeshi were bought at Rs. 20.66. Kichinor declined to Rs. 287 on pressure, because of a lower interim dividend. India United Ordinary were bought at Rs. 10 and Apollo were indicated around Rs. 1.68.

There were a number of bright features in the miscellaneous group. Among sugar shares, Belapur improved to Rs. 287.50 on prospects of a higher dividend. Phalton were taken at Rs. 168.25. Steamship company shares were active on hopes of increased earnings. Scindia Steamship were bought at Rs. 21.96 and Great Eastern Shipping came to hand at Rs. 27.30. Mining shares were steady, and Shivrampur Syndicate were taken at Rs. 105.50. Cement shares were steady, and Associated Cement improved to Rs. 164 on reports that the company's heavy engineering project might be started at an early date. Digvijay Cement were higher at Rs. 154.25. Bombay-Burmah recovered to Rs. 606.50 on a report that the company's application for the issue of bonus shares has been sanctioned. National Rayon improved to Rs. 244 on talks of a higher duty on imports. Tata Chemicals were steady at Rs. 17 and Wimco were transacted at Rs. 182.25.

Banking shares disclosed minor gains. Bank of Baroda were transacted at Rs. 123.25 and Bank of India were bought at Rs. 134.25. Insurance shares were steady, and British India General came to hand at Rs. 15.75. New India Assurance were available at Rs. 46.

There was good support in electricity supply company shares and prices improved. Bombay Suburban Electric came to hand at Rs. 113.25 and Ahmedabad Electric increased to Rs. 99.50. Tata Hydro were indicated at Rs. 129.

Do. (1st Pref.)—

COMPLICATIONS OF THE SALES TAX LEVIES

NEED FOR A SIMPLER AND UNIFORM SYSTEM

By G. P. Agarwal

NO other legislation in this country has attracted as much attention as that concerning sales tax and excise duty. Different views are held by different people on the subject, and some advocate that one system should take the place of both. Some say that the system of sales tax should be abolished and replaced by an excise levy. No responsible person has yet suggested or demanded a total abolition of sales tax. It is, however, admitted that the process of realising sales tax is too cumbersome and puts the public in general to a lot of trouble and worry.

The question and the method of levying sales tax was referred to the Taxation Enquiry Commission. According to it, all sales of goods can be divided into two categories, namely, (i) those in the course of inter-State trade and commerce; and (ii) those not in the course of inter-State trade and commerce. The recommendation was that the taxation of sales in the course of inter-State trade and commerce should be the sphere of the Union and the taxation of all other sales should fall under the jurisdiction of the States. It also recommended that there should be two systems of sales tax in operation simultaneously—one for inter-State sales for the whole of India, the legislation for which should be undertaken by the Union but the administration of which should be delegated to the respective States, and the other for intra-State sales enacted by each State according to its own needs. Many other recommendations were made by the Commission, suggesting what Parliament should provide in matters relating to inter-State deals and what State Governments should provide in matters concerning intra-State transactions.

Legal Uncertainty

A history of sales tax legislation in India would show the deterrent effect it has had on the business community particularly because of the uncertainty of the legal position. Before 1950, the question of levying sales tax on inter-State transactions was never taken up seriously by State Governments. But after the Constitution came into force, Article 286, which specifically deals with inter-State transactions was, in fact, wrongly interpreted by different States resulting in hasty legislation on the assumption of jurisdiction for levying sales tax on inter-State transactions. The question of the jurisdiction of State Governments to levy sales tax on such transactions was not free from difficulty, and after the decision of the Supreme Court in the United Motors' case, a vigorous campaign for this levy was launched. Doubts still remained in the minds of many lawyers and jurists, and ultimately when the matter came up again before the Supreme Court in the case of Bengal Immunity Company, the previous view was over-ruled and it was held that State Governments had no power to impose or authorise the levy of the tax on the sales and purchases of any goods where they took place in the course of inter-State trade and commerce, unless Parliament by law provided otherwise. This was an historic pronouncement made by the highest judiciary of the country. But it had a mixed reception and was received with coldness by State Governments, as this virtually paralysed their budgets. The Centre was, therefore, approached to make a validation act in order to legalise the

collections made by them. Even after the enactment of the Sales Tax Laws Validation Act, 1956, doubts were expressed about its constitutional validity, and as a matter of fact, the Act was challenged before a High Court, and ultimately before the Supreme Court, as in the case of the Tata Iron and Steel Company. It was decided by a majority judgment of the latter, Bose J. differing, that the Act is constitutionally valid. Different points were raised and the nexus theory was also discussed. It is needless to emphasise the burden of uncertainty in the public mind because of these enactments. Each State Government has its own system of levying taxes, which makes the process too cumbersome from an all-India point of view. Before a system of sales tax is introduced in a particular State, its effects on local industries must be duly considered. As sales tax remains a State subject, a certain amount of variations in the mode of the levy is unavoidable. There are bound to be differences in the rates of taxation which may hamper the free flow of inter-State trade and commerce. If the tax is centralised and its proceeds distributed among different States on the basis of collection or on some other formula, it may provide an effective solution of the various problems with which different State Governments are now confronted. From a reading of their sales tax laws, and the exemptions which have been granted to some of the goods, it cannot but be concluded that the incidence of the tax on manufacturing enterprises has not so far received the attention it deserves. The system of sales tax should be such as would not hamper improvement in productivity and must apply uniformly to all factors of production. This is a very important source of income and provides 20 percent of the revenues of the States. Hence it is doubtful whether any of the Governments would agree to its abolition and replacement by excise duty.

Central Sales Tax Act

After the recommendations made by the Commission, and after the judgment of the Supreme Court in the case of Bengal Immunity Company, the Central Sales Tax Act, 1956, was enacted and was brought into force in 1957. Many of the recommendations made by the Commission about the imposition of sales tax by the Centre and the delegation of power to State Governments have been accepted and implemented. Even then, instances are not wanting in which difficulties have been experienced by dealers in matters of administration and the imposition of sales tax by different State Governments on inter-State transactions. It is not possible for me to point out in this short article the various day-to-day difficulties, but I must point out by way of illustration one confusion created by this legislation.

Section 8 of the Act prescribes conditions under which exemptions can be claimed by dealers. Section 8 (5) runs as follows: "Notwithstanding anything contained in this Section (the State Government) may, if it is satisfied that it is necessary so to do in the public interest, by notification in the official Gazette, direct that in respect of such goods or classes of goods as may be mentioned in the notification and subject to such conditions as it may think fit to impose, no tax under this Act shall be payable by any dealer having his place of business in (the State) in res-

pect of the sale by him from any such place of business of any such goods in the course of inter-State trade or commerce or that tax on such sales shall be calculated at such lower rates than those specified in sub-section (1) or sub-section (2) as may be mentioned in the notification."

The words (the State Government) have been substituted for the words "Central Government" by the Amending Act 15 of 1957. Now in exercise of the powers under Section 8 (5) of the Act, State Governments are authorised to impose or restrict the levy of the tax on sales made by a dealer having his place of business in the State in the course of inter-State trade or commerce and such restrictions may be concerning such classes of goods as may be mentioned in the notification. Actually, the State of West Bengal has exercised the powers under this Act and has made the following notification:

NOTIFICATION

No. 3061 F T.—10th December, 1957—Whereas the Governor is satisfied that it is necessary so to do in the public interest:

Now, therefore, in exercise of the power conferred by sub-section (5) of Section 8 of the Central Sales Tax Act, 1956 (74 of 1956), the Governor is pleased hereby to direct that in respect of the goods specified below, hereinafter referred to as, the said goods, the tax payable under the said Act by any dealer having his place of business in West Bengal on sales by him from his place of business of any of the said goods in the course of inter-State trade or commerce, shall be calculated at the rate of 2 percent of his turnover on such sales, subject to the conditions that the goods are purchased by a registered dealer in the importing State for use by him in the execution of any contract or in the manufacture of goods for sales: Goods referred to above:

- (i) Coal, including coke in all its forms;
- (ii) Hides and skins, whether in a raw or dressed state;
- (iii) Iron and steel, that is to say, (a) pig iron and iron scrap; (b) iron plates sold in the same form in which they are directly produced by the rolling mill; (c) steel scrap, steel ingots, steel billets, steel bars and rods; (d) (i) steel plates, (ii) steel sheets, (iii) sheet bars and tin bars, (iv) rolled steel sections, (v) tool alloy steel.

* Sold in the same form in which they are directly produced by the rolling mill;

- (iv) Oilseeds, that is to say, seeds yielding non-volatile oils used for human consumption or in industry, or in the manufacture of varnishes, soaps and the like, or in lubrication, and volatile oils used chiefly in medicines, perfumes, cosmetics and the like.

By order of the Governor

B. Dasgupta, Secretary."

According to this notification, a purchasing dealer from another State has to issue a certificate in the prescribed form mentioning when the goods have been purchased by him for use in the execution of any contract or in the manufacture of goods for sale. If these conditions are not fulfilled, the purchasing dealer is not entitled to buy the goods on the concessional rate from the State of West Bengal. The question then arises: why should his State consider these articles as equally essential within its jurisdiction? These are matters of policy which may differ from State to State and certainly one State is not bound by acts done, action taken and notification made by another.

Excise Duty

The excise duty, on the other hand, fills the coffers of the Central Government to the extent of 30 percent. It has been frequently opposed for the simple reason that the Central Government has been unable to resist the temptation to increase the duty from time to time. It has been represented to the Government by different organisations that although it is not possible to replace the sales tax by excise duty, still some of the commodities which are essential for the life of the community should have a uniform rate of tax in almost all the States. In the other commodities, the sales tax can be conveniently replaced by the levy of excise duty. This move has received the Union Government's due consideration, and it has agreed to a uniform rate of sales tax for at least 15 commodities: while for some other commodities, namely, sugar, tobacco, etcetera, the Government has decided to replace sales tax by excise duty. If the pattern suggested by several organisations in the country is also given due consideration by the Government, perhaps the system of sales tax would be gradually replaced by excise duty. The only question which troubles the State Government is about the distribution of that excise duty among themselves. For instance, on what percentage basis should this be done? The Finance Commission and the Taxation Enquiry Commission have already made suggestions on this issue and in view of the importance which these two tax measures have assumed in recent years, it is necessary that the entire subject should be examined from the point of view of the country as a whole. In some European countries, it has been found necessary to get the sales tax system examined by a team of independent experts. The need for a similar examination in this country is much greater. It is widely expected that the Government will come forward with a scheme for a uniform system of commodity taxation. In that case, a lot of unnecessary harassment and inconvenience to the people, and to the business community in particular, can be avoided.

New Delhi

THE FINANCE MINISTER LEAVES FOR LONDON

GOVERNMENT ANNOUNCES NEW L.I.C. INVESTMENT POLICY

(FROM OUR NEW DELHI CORRESPONDENT)

THE Central Finance Minister, Mr. Morarji Desai, left for London en route to Washington and Montreal, on 27th August. He is accompanied, among others, by the Special Secretary, Central Ministry of Industry, Mr. L. K. Jha. While in London, Mr. Desai will have discussions with the Chancellor of the Exchequer and will meet important British bankers.

The meeting which was convened in Washington by the Chairman of the World Bank, Mr. Eugene Black, on 25th, 26th and 27th August, was attended by the representatives of the Governments of the U.K., the U.S.A., West Germany, Canada and Japan. The task of this conference was three-fold. First, to devise ways and means of meeting India's external obligations between now and June 1959, estimated at £200 million. India has only a little over £80 million to meet a commitment of this magnitude. Second, to mobilise credit to finance the hard core of the second five year plan, for which the deficit in terms of foreign exchange is placed at £460 million. Of this, nearly 50 percent is due to the U.K., about 20 percent to West Germany, 10 percent to Japan and the remainder to a number of countries, including the U.S.A. As far as the U.K. is concerned, the bulk of the payments are guaranteed by the Export Credits Guarantee Department. According to New Delhi reports, most of the Governments will prefer to channel their aid to India through an international organisation. India not only needs finances, but also guidance so that mistakes such as have now brought her to the verge of bankruptcy will not be repeated. Such guidance, if offered by any individual country, is likely to be misunderstood and even resented.

The Finance Minister has outlined in Parliament the investment policy for the nationalised Life Insurance Corporation, under which 50 percent of its total funds will be invested in gilt-edged securities, 35 percent in "approved" securities and 15 percent in the form of other investments. The Corporation will keep before it the interests of the community as a whole while making its investments, and those ventures will be chosen which further the social advancement of the country. While the corporation should not indulge in speculation, it should enter the stock market as a steady force, selling during periods of boom and buying during those of depression. The total amount of investments made by the Life Insurance Corporation in Government securities, shares, loans, and debentures, etcetera, since its inception and up to 30th June, 1958, amounted to Rs. 67,34,70,184. The total investment of funds in the approved security of Government or semi-Government bodies in the same period was Rs. 51,02,18,195, and the total investment in industries in the private sector up to 31st July, 1958, was Rs. 17,42,13,559.

Optical Glass Project

Early in 1957, a team of Russian experts prepared and submitted a preliminary report on a project for the manufacture of optical and ophthalmic glass. A committee was appointed to scrutinise the report and advise on the economic and technical problems relating to the project. After this committee had discussed the matter thoroughly, a contract was awarded to Messrs Technoexport of Moscow for the preparation of a detailed project report. The capacity of the factory will be 200 tons of ophthalmic glass and 10 tons of optical glass a year. The foreign exchange expenditure on this project will be met from the credit offered by the Russian Government. The National Industrial Development Corporation is currently making the necessary arrangements for the work relating to the project, pending a decision on the specific agency for the implementation of this project.

Tungsten Carbide Manufacture

Proposals for the setting up of a unit for the manufacture of tungsten carbide have been received from a Swedish firm. The scheme envisages the manufacture of finished products of tungsten carbide for use in mining, engineering and other applications. Negotiations were subsequently started to get the firm to revise its proposals to meet India's requirements. New proposals have just been received, and are under scrutiny. Another proposal has been received from a Japanese firm which is also being separately pursued. The British firm which has also made similar proposals has been investigating the possibility of using indigenous ore with a view ultimately to manufacture tungsten carbide. In view of the difficulties in finding resources for public sector projects outside the core of the plan, it may be necessary for the National Industrial Development Corporation to bring the economics of this scheme to the notice of the private sector so that parties interested can take it up with suitable foreign collaborators.

Elemental Phosphorus Scheme

A scheme for the manufacture of elemental phosphorus and compounds of phosphorus has been under consideration for some time. Phosphatic

rock is not available in the country, but since phosphorus and phosphoric acid are required by a number of industries already established, and the demand for phosphatic fertilisers is rising, production will be based on imported phosphatic rock. The proposal was taken up with some leading foreign manufacturers and organisations with a view to enlisting their co-operation. The T.V.A. in the U.S.A. has agreed to assist India and to train up Indian engineers. Arrangements have, therefore, been made for recruiting a team composed of a chemical engineer, a mechanical engineer, and an electrical engineer, and to send it to the U.S.A. for training in the phosphorus and related plants at Wilson Dam in the U.S.A. The team will, on completion of its training, prepare the designs and specifications for a plant to be set up in India. Proposals have been made to the Technical Cooperation Mission for the inclusion of the training arrangements in its programme of technical assistance for the ensuing year.

Producing Carbon Black

A proposal for the production of carbon black from petroleum products was discussed some time ago with a firm in the U.S.A., and negotiations have now started between it and an Indian private firm for the setting up of a factory in collaboration with the latter. Meanwhile, attention has been concentrated on the use of coal tar distillation products as a raw material, and tests in this connection are being carried out in West Germany. The possibility of using natural gas is also being explored. The main aim is to base the production in the proposed carbon black factory on raw materials available in the country. The Rumanian Government has offered its assistance in these investigations, and a team of experts from that country has recently visited India, and has made a study of the raw materials available as well as of the requirements of the industries which make use of the end-products. It will be preparing a technical and economic report about the best use of the Indian materials for the production of carbon black in the required varieties.

Cinematographic and X-ray Films

The proposal of the National Industrial Development Corporation to establish a factory for the manufacture of cinematographic and X-ray films in India, in collaboration with an East German firm, has been approved by the Government. The approval of the Government has been given to one Indian firm to manufacture synchro box cameras in collaboration with a West German firm. This firm will also be taking up the manufacture of 35 m.m. slide projectors and folding cameras at a later stage.

Streptomycin Manufacture

A preliminary project estimate has been prepared for the manufacture of streptomycin, and tentative plans for the lay-out of the roads, buildings, etcetera, for the plant have been drawn up. An engineer of Hindustan Antibiotics is at present in the U.S.A. working out the detailed specifications of the machinery required as well as the lay-out of the plant, with the assistance of foreign consultants. The streptomycin plant can be accommodated in the existing premises of the Pimpri factory.

Heavy Electrical Equipment Project

The work on the first phase of the heavy electrical equipment project in Bhopal has now reached the first stage of construction with the placing of a contract with a Calcutta firm for the building of three factory blocks at a cost of Rs. 1.25 crores. The first orders for machinery and equipments for the project, under the deferred payment arrangements reached with the technical consultants, Associated Electrical Industries of the U.K., have also been placed. The Government of India has decided to execute the project in a phased manner so that with the minimum outlay of foreign exchange, the production of items which would give a larger output over a short period would be taken up first. The execution of the first phase of the project, now under way, is expected to cost about Rs. 21 crores during the second plan period. The execution will be completed by 1960 when the production of transformers, switchgears, controlgears and capacitors will begin. Under the revised programme, the production of these four items has been considerably advanced. Whereas in the original project, the production of switchgear and controlgear was to begin in 1961, under the revised programme, the production of these two items will begin by 1960. Similarly, the production of capacitors under the revised programme will begin in 1960, while under the original scheme, it would not have started before 1963.

In reaching the full production of these items, under the new schedule, there will be a further gain of time. The full production of transformers, controlgears and capacitors will be reached in 1964 and that of switchgears in 1965. Under the original scheme, the full production of these items would not have been reached before 1966 except in the case of transformers. The production of switchgear and controlgear would have taken one

and two years more to reach full capacity. The expenditure of foreign exchange in the first phase of the revised programme will be about Rs. 9 crores, Rs. 4 crores less than under the original programme. At the same time, by the deferred payment arrangements, the net foreign exchange expenditure will be reduced to Rs. 1.22 crores, the remaining amount being paid in instalments after 1960.

A formal agreement between the Government of India, the Heavy Electricals (Private) Limited and the Associated Electrical Industries was signed last week.

The Secretary to the Ministry of Commerce and Industry, Mr. S. Ranganathan, signed on behalf of the Government of India, Mr. L. K. Jha, Chairman, signed on behalf of Heavy Electricals (Private) Ltd, and Mr. W. L. Beeby, Director of Associated Electrical Industries, on behalf of that company. Deferred payment terms have been arranged to cover the entire foreign exchange cost of the first phase of the project, estimated at Rs. 5 crores for the purchase of machine tools and other equipment. The purchases will be made by Associated Electrical Industries who will act as purchasing agents for the project in the U.K. and, to a limited extent, in European countries which are members of the European Payments Union. Credit arrangements have been made with a syndicate of British banks for this purpose. Work on the second and third phases of the project will be taken in hand as soon as circumstances permit. Under the second phase, the manufacture of traction motors, industrial motors, and heavy rotating plant will be undertaken. The production of water turbines and rectifiers will be taken up under the third phase. Considerable work has been carried out already at the factory site in Bhopal. The levelling of the site is almost complete and the foundation work is to be taken in hand shortly. The construction of the training school and workshop, the foundation of which was laid about a year ago, is expected to be completed in the next few months. The programme of training will begin in January 1959, when the first batch of 900 trainees will be admitted to the school. Already 50 trainees, who will occupy higher directional posts in the factory, are undergoing training in the factories of Associated Electrical Industries in the U.K. Work has already begun on the railway siding for the project. Machinery worth about Rs. 98 lakhs for the training school and workshop is expected to be delivered this year.

Foundry-forge Project

Following the understanding reached between the Government of India and Technoexport of Czechoslovakia in January this year, for the supply of machinery and equipment required for the foundry-forge project on deferred payment terms, a contract was signed last week between the Government of India and Technoexport. Under the contract, the latter has undertaken to prepare a detailed project report and supply machinery and equipment required for the first stage of the plant. It will also supervise the erection of the machinery and equipment and provide consulting and technical services. The contract provides for payment of Rs. 10 crores to Technoexport, the payment being made in instalments. Additional payments will be made for the preparation of the detailed project report and for technical know-how and erection, supervision and establishment of the plant.

During the first stage of the project, designed to meet the requirements of the heavy machine building plant which is being set up in collaboration with Russia, the annual production capacity of the factory will provide for 25,000 tons of grey iron castings of a maximum weight of 50 tons a piece, 14,000 tons of steel castings, also of a maximum weight of 50 tons a piece, 300 tons of non-ferrous castings, maximum piece weight one-tenth of a ton, and 13,950 tons of forgings, with a maximum weight of 17 tons a piece. There is also provision for a 2,600-ton press to be installed in the first stage, which will raise the capacity for the manufacture of forgings to 18,500 tons with a maximum piece weight of 30 tons. Provision has also been made for a rough machining shop. Details of a machining shop for rolls are, however, still under negotiation. Technoexport has undertaken to provide training facilities for Indian technicians for the foundry-forge plant in Czechoslovakia. The plant, which will be located in Hatia, near Ranchi in Bihar, is expected to start production by the middle of 1962. During the further stages of the project, the planning of which has also been provided for, the capacity of the plant, both in terms of total output and sizes, will be raised to meet fully the requirements of the heavy machine building plant.

Cement Machinery Plants

Five firms have been registered or licensed under the Industries (Development and Regulation) Act, 1951, for the manufacture of cement machinery and parts.

Tax Concessions for Stanvac

The Government of India has not, so far, granted any special income tax concessions not authorised by law, to any individual company or concern. However, certain tax concessions will be given to Standard-Vacuum Oil Company, which is at present engaged in oil exploration and production in West Bengal in collaboration with the Government of India. The assurances given to Standard Vacuum in matters relating to Indian income tax are mentioned in the memorandum of agreement dated 24th December, 1953, between that company and the Government of India. Broadly speaking, the promised tax concessions are:

1. a part of the losses of every kind, whether revenue or capital, sustained by Standard Vacuum

Regular cargo service between INDIA-U.K.-CONTINENT and also INDIAN COASTAL service

Managing Agents: LIONEL EDWARDS (PRIVATE) LIMITED, 10, RIVER STREET, CALCUTTA.

an infructuous exploration will be allowed as a deduction from its marketing income; and

2. after the commencement of commercial production, an additional allowance ranging from 25 percent to 45 percent of the net income derived from oil production will be granted every year. Standard Vacuum has agreed to forgo the concession which would have been admissible to it under Section 15C of the Income Tax Act. These concessions, it is said, are dictated by national interests. Their granting will require an amendment of the existing law and an amendment Bill will be introduced in Parliament in due course.

Rumanian Oil Offer

The Government of Rumania has offered to supply kerosene oil and high-speed diesel oil, and this is under examination.

Promoting Mica Exports

Some 445,169 cwt. of mica, valued at Rs. 9.68 crores, were exported in 1957 and 237,888 cwt., valued at Rs. 5.53 crores, have been exported during January to June 1958. The following are the more important measures which are being taken by the Export Promotion Council set up by the Government to increase the exports of mica: 1. fixing export targets for mica exporters and giving them necessary incentives under the export promotion scheme to fulfil these targets; 2. developing exports to new buyers by surveying foreign markets, sending out trade delegations, participating in exhibitions, arranging for publicity, etcetera; 3. increasing exports to new customers; 4. devising ways and means of increasing production of mica and mica manufactures; 5. suggesting measures for some processing of mica before export which will secure increased value for mica exported from India; and 6. drawing up a comprehensive pre-shipment inspection scheme for mica.

Lac Exports

The Government has assisted the exporters of lac to organise themselves into an exporters' association, which is headed by the chairman of the Lac Export Promotion Council. Exports are permitted only through the members of the Association, who have succeeded in eliminating unfair trade practices and maintaining export prices at remunerative levels, consistent with the demand and price situation in foreign markets. The Government has also set up a lac working group to suggest protective and developmental measures to be taken up by the Lac Cess Committee and the Lac Export Promotion Council. The prices of shellac and other kinds of lac have gone down steadily during the last two years, and it is feared that the fall in prices might render the cultivation of lac uneconomical.

Machine-heads to Yugoslavia

A contract has been concluded for the supply of 47,500 machine-heads to Yugoslavia. The deliveries are to be completed by December 1959. Payments will be made through the special rupee account maintained by the Yugoslav Trading Organisation in India.

Foreign Exchange Commitment

The total amount of foreign exchange commitment under the outstanding import licences as on 1st March, 1958, is Rs. 534 crores.

Recession Affects Exports

The Government of India has made an appraisal of the effects of the recession in the U.S. economy on India's own. It shows a decline in India's export earnings. For the period January-May 1958, these earnings were lower by Rs. 28 crores compared with those of the corresponding period of 1957. There was a decline of Rs. 2.5 crores in exports to the dollar area and of Rs. 25.5 crores to the rest of the world. A large part of this latter decline was due to special factors, such as earlier overstocking as in the case of tea in the U.K. But the recessionary trends abroad have adversely affected India's exports of manganese ore, pepper, etcetera.

Help for Khadi and Handlooms

The proceeds of the duty levied under the Khadi and other Handloom Industries Development (Additional Excise Duty on Cloth) Act, 1953, are being used for the development of the khadi and the handloom industries. The amount placed at the disposal of the Khadi and Village Industries Commission is used by it for giving financial assistance to registered institutions, co-operative societies, State Boards and State Governments, etcetera, for the development of the khadi industry including the promotion of the sale of its products. The Commission was allotted Rs. 635.45 lakhs as grant, and Rs. 486.80 lakhs as loan out of this fund during 1956-57, and Rs. 292.10 lakhs as grant and Rs. 136 lakhs as loan during 1957-58. For the development of the handloom industry, sanctions were issued for Rs. 336.41 lakhs (approximately) as grants and Rs. 352.04 lakhs (approximately) as loans during 1956-57, and Rs. 308.41 lakhs (approximately) as grants and Rs. 160.71 lakhs as loans during 1957-58. The amount of handloom cess collected during the last two years is as under:

1956-57	Rs. 6,26,43,000 net.
1957-58	Rs. 6,59,07,000 net.

Plan Allocation for Railways

The Planning Commission has not applied any cut to the total financial provision of Rs. 1,125 crores (including Rs. 225 crores from the Depreciation Reserve Fund) made for railways in the second five year plan. The programme, however, was reviewed with a view to economising foreign exchange expenditure (estimated earlier at Rs. 425 crores), and reductions to the extent of Rs. 34 crores have already been agreed to. Some further savings are under consideration. The following

schemes, it has been agreed, could be postponed or staggered on account of this reduction in the foreign exchange allotment for the railways:

	(Rs. crores)
1. Cut in the purchase of certain equipment, namely, wheel sets, electrical equipment for coaches, other electrical equipment and non-identifiable steel.	5
2. Postponing the purchase of certain items of equipment including 108 diesel locos, 62 cranes, signalling and C.T.C. equipment.	11.50
3. Rephasing the electrification programme.	9
4. Reduction of Rs. 8.5 crores in imported steel due to improved supplies of indigenous steel.	8.50
	34

Management of State Concerns

The Government of India has decided that the present managerial structure of public enterprises should be tried for a few more years. There are 20 officers placed as directors of more than one enterprise, of whom 14 are in two enterprises each, two in three enterprises each, and four in more than three enterprises each. Of these, seven are Secretaries, one Special Secretary and ten Joint Secretaries. The following are the public undertakings in which they have been placed: the National Coal Development Corporation (Private) Ltd., the Orissa Mining Corporation, the National Projects Construction Corporation (Private) Ltd., National Instruments (Private) Ltd., Hindustan Antibiotics (Private) Ltd., Hindustan Cables (Private) Ltd., Hindustan Insecticides (Private) Ltd., Heavy Electricals (Private) Ltd., Nahan Foundry (Private) Ltd., State Trading Corporation of India (Private) Ltd., National Small Industries Corporation (Private) Ltd., Hindustan Aircraft (Private) Ltd., Bharat Electronics (Private) Ltd., Indian Telephone Industries (Private) Ltd., Central Warehousing Corporation, Ashoka Hotel's Ltd., Hindustan Housing Factory (Private) Ltd., the Eastern Shipping Corporation (Private) Ltd.

The Central Minister, Mr. K. D. Malaviya, is the chairman of Oil and Gas Commission. Mr. Feroz Gandhi, M.P., is being appointed chairman of the board of directors of Oil India Limited to be registered shortly, with Mr. Srinagesh, of the Indian Civil Service as the special director. Mr. G. L. Mehta is being appointed chairman of the board of directors of the Hindustan Shipbuilding Yard, and Mr. K. C. Neogy of the State Trading Corporation.

Washed Coal for Steel Works

The requirements of washed coal for the three new steel plants in the public sector and the expanded steel plants in the private sector are estimated at about 9 million tons. Of this, the 500-ton washery, which is being set up in Kargali by the National Coal Development Corporation, is to supply 1.1 million tons to Rourkela and 500,000 tons to Bhilai. Tatas have two washeries, one in West Bokaro and another in Jamadoba, which, with certain improvements, will supply 1.5 million tons of washed coals. The washery in Lodna, which supplies the Indian Iron and Steel Works, has an output of 220,000 tons. With the improvements to the Tata washeries, capacity has to be set up only for the balance of about 54 million tons. In the contract for the steel plant in Durgapur is included a washery to treat Jharia coals to meet the requirements of that steel plant. These coals would be mixed with unwashed Barakar and Dishergarh coals, which, by themselves, are not suitable for metallurgical purposes. The balance of about 4.8 million tons, it is proposed, will be provided from the three washeries to be put up—one in Dugda, another in Bhojudih and the third in Patherdih. The washery in Dugda will supply washed Jharia coals generally to Bhilai and Rourkela, the Bhojudih to the Tata Iron and Steel Works and that in Patherdih to the Indian Iron and Steel Works. Global quotations received for the Dugda washery for the supply of plant and equipment, have been examined and a decision is expected to be taken in the next few days. The washery will have a capacity of about 500 tons an hour and is likely to be commissioned by the end of 1960. The estimated cost of the plant for this washery is placed at Rs. 10 crores. Until then, Jharia unwashed coal, mixed with washed Kargali coals, will be used in the blast furnaces of the Bhilai and Rourkela steel plants. Specifications for the Bhojudih washery have been finalised, and tenders for the supply of plant and equipment will be invited shortly. Washability tests on the coals to be supplied to Patherdih are being carried out in the Central Fuel Research Institute, Jeel-gora.

Export Risks Insurance

The Export Risks Insurance Corporation began its operations on 14th October, 1957. Up to 8th July, it issued 108 policies carrying a maximum liability of Rs. 6,24,80,000. These policies are mainly in favour of small and medium-sized exporters. Big exporters have not so far taken advantage of the facilities which the Corporation offers. It covers the following risks:

- (1) the insolvency of the buyer;
- (2) the failure of the buyer to pay to the exporter within six months after the due date of payment the gross invoice value of the goods delivered and accepted by the buyer;
- (3) the operation of a law or of an order, decree, or regulation having the force of law, which, in circumstances outside the

control of the exporter and/or of the buyer, prevents, restricts or control the transfer of payment from the buyer's country to India,

- (4) the occurrence of war between the buyer's country and India,
- (5) the occurrence of war, hostilities, civil war, rebellion, revolution, insurrection, or other disturbance in the buyer's country,
- (6) the imposition of any law or of an order, decree or regulation having the force of law, which, in circumstances outside the control of both the exporter and/or the buyer, prevents the import of the goods into the buyer's country,
- (7) the cancellation or non-renewal in circumstances outside the control of both the exporter and the buyer, of a previously issued and currently valid authority to import the goods,
- (8) concerning goods shipped from India, the incurring of any additional handling, transport or insurance charges which are occasioned by an interruption or diversion of voyage outside India and which it is impracticable to recover from the buyer,
- (9) any other cause not being inherent in the nature of the goods and not being within the control of the exporter and/or of the buyer which arises from an event occurring outside India; or

where the Corporation states in writing concerning any contract that it is satisfied that the buyer under that contract is an overseas Government or that the performance of the contract has been guaranteed by an overseas Government and elect in writing that sub-clause (x) will apply either unconditionally or upon such conditions as the Corporation will think fit,

- (x) the failure or refusal on the part of the buyer to fulfil the terms of the contract, such failure or refusal not arising from any breach of contract or warranty on the part of the exporter nor from any other cause within the control of the exporter.

Where pre-shipment risks are covered, apart from the above-mentioned risks, the risk of export control is also covered. At the option of the exporter, the risks of increase in the rates of insurance and freights can also be covered. The Corporation covers risks up to 80 percent in the case of (1) and (2) and up to 85 percent for the rest.

Writing Off Income-tax Arrears

The Finance Minister, Mr. Morarji Desai, made the following statement in the Lok Sabha last week, on the procedure for writing off income-tax arrears. When the Income-tax Officer finds that the tax arrears cannot be recovered and the various processes available under the Act for the enforcement of recovery have proved fruitless, he can take action for writing off the arrears. Officers of the Income-tax Department have powers to write off irrecoverable balances of income tax as shown below.

	Unlimited powers
a. Commissioners of Income Tax	Up to Rs. 2,000 in each case
b. Inspecting Assistant Commissioners of Income Tax	
c. All Income Tax Officers (Class I, Grade I, if empowered by Commissioners of Income Tax)	Up to Rs. 250 in each case
d. All Income Tax Officers (Class I, Grade II) (if empowered by Commissioners of Income Tax.)	Up to Rs. 150 in each case
e. All Income Tax Officers (Class II if empowered by Commissioners of Income Tax.	Up to Rs. 100 in each case.

Although the Commissioners of Income Tax have unlimited powers to write off, in view of the large amounts involved both in the aggregate and for individual items, it has been recently decided that before the write-off of an amount exceeding Rs. 1 lakh, the case should be reviewed by a committee consisting of three members, each not below the rank of a Commissioner of Income Tax, one of them at least being the Director of Income Tax (Special Investigation). On reviewing each such case, the Committee submits a report after, the Board, after satisfying itself that the demand in question is irrecoverable, approves of the writing off. On the basis of the Board's approval, such demands are written off. Where the irrecoverable demand involved does not exceed Rs. 1 lakh, and where the officers below the Commissioners are not empowered to write off such demands, the same is written off by the Commissioner of Income Tax concerned.

A statement showing the amounts written off by Income Tax Officers and Inspecting Assistant and addresses of the assesses, the demand for each recovery year and the steps taken for the recovery of the same, is to be furnished to the Commissioner of Income Tax together with a brief note indicating the reasons for the write off. In the case of amounts written off under the sanction of the Commissioner of Income Tax, the statement is to be furnished to the Central Board of Revenue.

The amounts written off for the three years are as under:

1953-54	Rs. 10.53 lakhs
1954-55	Rs. 12.12 lakhs
1955-56	Rs. 15.63 lakhs

For the financial year 1956-57, the figure, as reported by the Commissioners of Income Tax, is Rs. 52.35 lakhs. For the financial year 1957-58, the figures are not yet available.

Debate on Food

The Lok Sabha had a full-dress debate on the food situation last week. It was a futile and unrealistic discussion. The Food Minister correctly posed the question whether the difficult food situation was "man made" or due to causes beyond the control of man. He showed that in 1957-58, there was a big drop of the order of 6.7 million tons in food production. India's supply position, in 1957-58, was as follows: stocks on 1st January, 1957, stood at 290,000 tons, production in 1956-57 was 68.7 million tons and imports were 3.38 million tons, making a total of 72.57 million tons. In 1957-58, the opening stock was 1.29 million tons, production was 62 million tons and imports were 1.86 million tons making a total of 65.15 million tons. India has entered into firm contracts for the import of 1.1 million tons. The total availability of foodgrains, therefore, was 66.25 million tons or 6.32 million tons less than in 1956-57. So far as wheat is concerned, in the three wheat-growing States of Uttar Pradesh, Rajasthan and Madhya Pradesh, the shortage was of the order of 24.6 percent. In other words, as against the production of 6.1 million tons in 1956-57, the production in 1957-58 was 4.6 million tons. As for rice, in the three principal rice-growing States which have suffered on account of drought, that is West Bengal, Bihar and Madhya Pradesh, the production has been 8.5 million tons as against 11.5 million tons, that is, 26.8 percent. This is what primarily accounts for the high prices. While the price index of the cereals in May was 99.4 with 1953-54 as the base year, in June it was 105.5 and July 109.9. In the second week of August, the price index was 112.6. In other words, there has been a rise of 13 percent. During this time of year, there is normally a rise. It is 6.13 percent for cereals this year compared with 3 percent last year.

The pulses have also shown some rise. In May, the price index was 82.4, compared with 100 in 1953-54. In June it went up to 91.1 and in July, it was 100. In the second week of August, it has come down to 99.8. So, this year, the rise in the price of both cereals and pulses has been much higher than in other years. It is also a fact that the prices are higher than last year, both of pulses and cereals. Mr. Jain said: "On the last occasion, I said that the Government hereafter proposes to lay major emphasis on minor irrigation works. We have divided India into regions and we are holding a conference, a businesslike conference of the representatives of the States. One such conference was held in the south and there we found that in the four States—rather five States, because Bombay was also invited to that conference—Andhra, Bombay, Madras, Mysore and Kerala—as many as 25,000 tanks, which at one time used to irrigate lands, were lying dry. There is an excellent system of tanks in the south, and they are built on the basis of the catchment area. They are of all sizes, varying from tanks capable of cultivating five to ten acres to tanks capable of cultivating 1,000 or 2,000 or more acres of land. There will be a whole chain of tanks; when the smaller tank overflows, it goes to the next tank and so on and so forth. We decided that a full survey should be made and the work of the renovation of these tanks must be given high priority and must be undertaken at once. We found that at present about 1,500 tanks are being renovated every year. Now we have decided that all these tanks—I do not say all, may be 50 percent, or 60 to 75 percent—are capable of being renovated and should be renovated in five years' time and the Government of India will make sufficient funds available for it."

Food and Cash Crops

Referring to the question of food versus cash crops, the Food Minister said: "An examination of the area under foodgrains between the years 1953-54 and 1957-58 will show that the fluctuations in the area, that is the maximum and minimum, during the five years has been within 2 percent of the average. That is to say, the total fluctuation has not exceeded 4 percent, as far as the foodgrains are concerned. The area under cash crops, on the other hand, has been rather steadily going up. In the case of sugarcane, cotton and oilseeds, particularly in the case of sugarcane it has gone up during these five years. I shall come to it presently. So far as sugarcane is concerned, the increase in area has been 45 percent. In 1957-58, 1953-54 it was 3.5 million acres; in 1957-58, it is 30.4 million acres. The area under cotton was 17.27 million acres in 1953-54 and it is 20.16 million acres in 1957-58. The proper policy for the Agricultural Department to follow would be, to see we have indicated the opinion accordingly, to see that the production of cash crops should be increased through intensive cultivation and that no area from foodgrains should be allowed to be diverted to cash crops."

Unused Irrigation Potential

There has been an appreciable lag between the potential created by irrigation projects which have already been completed and the area actually irrigated by them. For example, an irrigation potential of 6.3 million acres was created during the first five year plan period. The total outlay on a number of major and medium irrigation projects

and some multi-purpose projects during that plan was Rs. 340 crores. The actual use at the end of the plan was, however, of the order of 4 million acres only. The second five year plan envisages the creation of an irrigation potential of 12 million acres from major and medium irrigation projects at an outlay of Rs. 381 crores.

Out of these 12 million acres, 9 million acres will be the additional irrigation from projects started in the first plan and completed in the second. The actual use during the first two years of the plan was 670,000 and 1.15 million acres, respectively, against an estimated average target of 2 million acres a year. This shortfall in irrigation development is considered serious in view of the food shortage in the country, and the expenditure of valuable foreign exchange, not only for importing foodgrains but also on the capital invested in these projects. The Government of India, therefore, attaches the greatest importance to taking steps to ensure the use of irrigation facilities in as large an area as possible and remove any bottlenecks which might hamper this work. It is also considered essential to bridge the gap between the potential created by irrigation projects and the area irrigated from them.

Special Officers

A team of two special officers has been appointed by the Government of India to collect information on the irrigation potential created by multi-tion, major and medium irrigation projects, purpose, major and medium irrigation projects, and the area actually irrigated, or to be irrigated by them during the first and second plan periods. The team, consisting of Messrs Dildar Hussain and D. V. Rao, retired chief engineers of Hyderabad, who have wide experience of irrigation projects, will submit reports relating to each project to the Central Water and Power Commission of the Ministry of Irrigation and Power, by the end of November. The decisions taken by the Government on the proposals of these special officers are expected to be implemented during the working season before March 1959. This step has been taken with a view to devising measures for the full use of irrigation potential, which has been created, or will be created, by irrigation projects during the two plans.

For the purpose of collecting information, the country has been divided into two regions. The northern region comprises Punjab, Rajasthan, northern region comprises Punjab, Rajasthan, Jammu and Kashmir, Uttar Pradesh, Bihar, West Bengal and Madhya Pradesh, and the southern region Andhra Pradesh, Bombay, Orissa, Mysore, Madras and Kerala. The special officers will visit the State and project authorities in their respective regions, and assist them in obtaining such information as is essential for this work. They will also discuss with the authorities concerned the pattern of distribution system and field channels in the command areas, and the manner in which the irrigation facilities could be fully used. The Planning Commission has also written to the State Governments for accurate information on all projects. This will include information on the irrigation potential created and the area actually irrigated and the reasons for not using the available irrigation facilities. Data on the total mileage of irrigation facilities, distribution channels and main canals, branches, constructed or to be constructed, already collected, along with information on whether they are taking, or will take, the discharge of water for which they have been designed. The State Governments will further be requested to inform the officers what steps have been taken by them to make up the shortfall, by adopting legislative measures, such as making it compulsory for villagers to construct field channels on a co-operative basis and empowering panchayats to enforce it. The State Governments will also collect information about the setting up of community development organisations of village panchayats and co-operatives, which help in the

construction and linking of field channels and ensure their efficient maintenance. Information is also required on the improvement of agricultural techniques, including the creation of demonstration farms and the supply of fertilisers and improved agricultural implements to cultivators. It may also be added that the four advisers to the Planning Commission have already submitted their reports, a summary of which was published in these columns recently, pointing out not only the reasons for such a large irrigation potential not being used but recommending steps which could lead to better results. One of these steps was to make a compulsory levy on cultivators irrespective of whether or not they make use of the irrigation facilities provided for them. Instead of accepting the recommendations of the advisers to the Planning Commission, which covered minor and major irrigation projects, the Government, as usual, has instituted a fresh enquiry. This proves the oft-repeated claim that while elsewhere committees are a prelude to action, in India, they are a substitute for action.

Oil India Ltd

Oil India Private Ltd will shortly be incorporated as a limited liability concern with the Government of India and the Assam Oil Company as co-partners. This company will be responsible for the production and transport of crude oil to the two new refineries—a smaller one of 750,000 tons capacity to be located in Assam and a bigger one to be located at Barauni in Bihar. As already known the two refineries will be in the public sector and will be managed by Refineries India, another limited liability company, wholly owned by the Government, which will be registered shortly. The finances for the first 750,000-ton refinery, as far as its foreign exchange component amounting to Rs. 6.44 crores is concerned, is being made available to India by the Rumanian Government in the form of plant, equipment and technical aid. An Indian delegation, which recently visited Bucharest, has finalised the terms on which this loan will be given to India. The Minister in charge, Mr. K. D. Malaviya, who is going to Bucharest early next month, will be directed to sign the agreement.

Mr. Feroz Gandhi, M.P., has been appointed chairman of the board of directors of oil India and Mr. Srinagesh its special director. Under the agreement, the board of directors will consist of not less than six and not more than 12 directors to be nominated by the Burmah Oil Company and the Government of India on the basis that for every two directors of Burmah Oil, there will be one nominee of the Government of India. The Government of India will be entitled to designate one of its nominees as special director who, in his discretion, can reserve for the consideration of the Government any proposal or decision of the board in certain specified matters.

Co-operative Sugar Factories

A decision, it is believed, has been taken on 13 co-operative sugar factories. According to reports, no foreign exchange for these factories will be allotted during the second plan period, after which foreign exchange worth Rs. 20 lakhs will be allotted to each factory to cover the portions of machinery which cannot be manufactured in India. Meanwhile, the applicants will be asked to mobilise their resources to enable the Indian consortium for the production of sugar mill machinery to undertake the manufacturing programme. In this connection, the Central Industry Minister, Mr. Manubhai Shah, told Parliament last week that by 1961, the Indian consortium would be able to manufacture 13 complete sugar mills. Six firms have been licensed to manufacture complete sugar plants in collaboration with foreign concerns in addition to eight to manufacture parts of sugar mill machinery against specific orders.

REPORTS ON U. K. LOAN OFFER TO INDIA NOT YET CONFIRMED

OPTIMISM ON THE OUTCOME OF WASHINGTON CONFERENCE

(FROM OUR LONDON CORRESPONDENT)

NO official confirmation has been forthcoming of reports that Britain, in advance of this week's Washington talks, has given an undertaking to lend up to £100 million to India. This figure, however, does not differ greatly from the £75 million which has been recently suggested in New Delhi as Britain's likely contribution. The revised estimate of India's foreign exchange needs until the end of the second five year plan in March 1961, is about £380 million, but about £200 million of this sum falls due to be met by June 1959, reflecting the hump in India's payments problem. The most urgent task at the Washington talks will be to devise means of helping India out of her most pressing difficulty. If, as is suggested, Britain, by far the largest creditor, agrees to lend up to £100 million, West Germany, Japan and the United States—the other participants in the talks—are likely to agree to play their part.

Trade with the Soviet Bloc

Release of the details of the outcome of the protracted discussions of the Co-ordinating Committee on East-West Trade (cocom), has been the outstanding economic event recently. The embargo list on exports to Russian countries and China has been substantially reduced with the freeing from control of a large range of industrial products while the second list of goods controlled by quantity has been abolished. The banned goods list has been reduced from 181 to 118 types with the addition of a small number of goods used in electronics or the chemical industry which will be of potential military value, but the list has been "cut to the bone" in the words of the President of the U.K. Board of Trade. Among articles completely freed are tankers, designed for 18 knots or less; fishing vessels, less than 17 knots; other vessels, less than 20 knots; floating docks; all non-military vehicles; aircraft and aero-engines in normal civil use; most machine tools, except those used in making weapons; all electric generating machinery, except mobile generators of more than 5,000 kW; industrial diamonds and diamond tools; all tyres for civilian use; petrol and lubricating oils—all items of genuine value to the communist countries and of particular interest to British industry.

The next stage is to test whether the strategic restrictions have really frustrated any substantial amount of trade; it is up to those industrialists who have complained to get the orders. The value of Britain's trade with eastern Europe and China was £213 million for 1957. This included imports of £124 million, compared with £73 million in 1950, and exports and re-exports of £90 million, against £36 million in 1950. But this is less than 3 percent of Britain's foreign trade, compared with about 7 percent during the immediate prewar years. A feature of the trade is the spasmodic timing of Russia's orders. The large possibilities of the latter's purchasing programme, published in 1956, have not been realised. By the end of 1957, exports of machinery and equipment had shown no signs of any increase. In fact, in some cases, such as textile, power-generating and electric machinery, the 1957 figures showed a decrease which has continued even more markedly in the first part of 1958. At the same time, a number of firms, new to this market, have been negotiating with Russian importing organisations, some with conspicuous success. Cases in point are the recent orders for a tyre factory and synthetic fibre plants. The increase of about £11 million in direct exports to Russia in 1957 was largely due to purchases of refined sugar.

Hopes of Lancashire

This easing of restrictions on exports to Iron Curtain countries is one of the reasons for a slightly better outlook for Lancashire, which hopes for the best while preparing for the worst. The new arrangements, it is felt, even if it does not help directly, will maintain employment in the industries directly concerned, and thus help maintain the purchasing power available in the home market for buying textiles and any goods. Some of the industries concerned, moreover, probably use textiles of some kinds in their manufacturing machinery or processes, and perhaps also in their products, so that there might be favourable effects on the demand for cotton goods from this source. Furthermore, the cheaper and easier credit now available reduces the cost of carrying stocks and it may be that distributors will now be ready to consider increasing their commitments.

The main hope, however, still centres on an agreed reduction in cheap imports, to which some encouragement has been given by the statement made by Colonel J. B. Whitehead that a delegation is to visit Hongkong within the next three or four weeks, and that he is confident it will bring back an agreement on imports of textiles into Britain. If Hongkong joins India and Pakistan in agreeing to limit its trade with the United Kingdom, a scheme for the three countries can be brought into operation, and U.K. producers and distributors will be better able, in the light of the quantities fixed

for those suppliers, to assess the probable home demand for goods spun, woven, and finished in Lancashire. In case, however, the expectations about Hongkong prove not to be well founded, the employers' and operatives' organisations in the producing sections, it now appears, have drawn up some new plans for dealing with the situation.

Scottish Banking Merger

The Commercial Bank of Scotland and the National Bank of Scotland have agreed on terms for the merger which they have been discussing since last year. The new combined bank, to be called the National Commercial Bank of Scotland, will have well over 400 branches and will be the largest in Scotland. The merger will take the form of an offer by the Commercial Bank for the stock of the National Bank. Lloyds Bank holds over 98 percent of the capital stock of the National Bank of Scotland and the merger will give it a dominant (although not officially controlling) holding of over 37 percent of the "A" shares of the new combined bank. Lloyds has said that it does not intend to increase this holding any further.

National Commercial Bank will have the most diversified, if not the biggest single stake, in hire-purchase finance. Commercial's subsidiary, the Scottish Midland Guarantee Trust, is among the first five British hire-purchase companies. On its behalf, Lazards have made a cash offer for the entire ordinary capital of Olds Discount. Lloyds, who will have a substantial interest in both S.M.G.T. and Olds, is also to acquire a 25-percent stake in Bowmaker. Thus, Lloyds will have a foothold in three hire-purchase units, while there will also be some hire-purchase competition within the group.

Cheaper Basic Materials

After the first rise for 15 months in June, the basic materials index fell again in July. Last month's decrease of 0.3 percent has offset the June rise, and the index (1954 equals 100) at 93.7 is back to the May level. The July fall was due chiefly to lower prices for raw wool and to slight decreases in manganese, tungsten ore, lead and zinc. These more than offset higher prices for raw rubber, copper, hides and skins. The indices for materials used in the mechanical engineering and electrical machinery industries rose by 0.2 percent to 123.5 and 114.6, respectively. This was due to minor rises in some copper and brass items, rubber and tin.

The U.K. Board of Trade's wholesale price index for manufactured products also shows a small fall from 112.3 to 112.2 (1954 equals 100). Textiles were partly responsible for this, but general chemicals, drugs and fertilisers were also cheaper.

Halifax Cuts Mortgage Rates

The Halifax Building Society, the largest in Britain, will reduce interest rates charged on mortgages by 1 percent—from 6 percent to 5½ percent—from 1st December. On that date, the lower interest rate will apply both to new and to existing borrowers where the security is a private house occupied by the owner. The rate to be paid to investing shareholders and depositors will be reduced by 1 percent. This will bring the rates on Class I shares to 3½ percent, on Class II shares to 3½ percent, and on deposit accounts to 3 percent. Three months' notice is being given to existing shareholders and depositors, but all new accounts will receive the lower rates from 18th August. The Halifax is not a member of the Building Societies Association, which does not at present anticipate any reduction in rates, though its Council is meeting on 12th September to review the general trend of interest rates. Most societies will probably await the Council's suggestions, but some smaller ones will probably follow the move of the Halifax.

Training for Accountancy

A committee of 12 is to consider whether any changes should be made in the education and training programme for entrants into the accountancy profession, so as to ensure provision of an adequate supply of trained candidates. The committee was appointed by the Council of the Institute of Chartered Accountants after it had considered recent developments in education, the increasing scope of the profession, and the enlarged responsibilities of the Institute. In an extensive enquiry, the committee will seek the co-operation of members of the profession and representatives of other professions, of the universities and educational authorities, and of industry and commerce.

Ships at Bargain Prices

Shipbreakers throughout Britain and on the Continent are working overtime due to the shipping slump. A record number of shipping lines are selling their older vessels for scrap because there are no cargoes. Scrap prices have fallen—they are only half what they were a year ago. In recent weeks five Thames colliers have been sold at prices which officials describe as "give-away." Some storage hulks, cashing in on the low prices are Arab countries building up their small merchant fleets. One London cargo-liner has just been sold to four sheiks.

REVISED FREIGHT STRUCTURE FOR THE RAILWAYS

THE Railway Freight Structure Enquiry Committee, which was appointed in 1955 and which submitted its report in April 1957, had to face a complicated task of immense magnitude as the freight structure embraces some 3,000 different commodities, and the committee had to recommend a general revision of the rates structure and selective increases in the rates for each of these commodities, bearing in mind the needs of India's developing economy and the revenue position of the railways. At the outset, the committee evolved and recommended a new rate structure which it considered would be suitable and also prescribed the "corresponding rates" in the new structure for the existing "class rates" and "wagon-load scales". In the case of 109 commodities, the committee has recommended rates lower than the "corresponding rates". The recommendations concerning these commodities have generally been made on the considerations: (i) that the commodities enter substantially in the cost of living of the masses; (ii) that classification lower than the "corresponding" percentage class will be in public interests, as in the case of the products of cottage industries, etcetera, (iii) that the existing classifications of certain commodities are anomalous in the light of the prevailing classifications of other similar commodities; and (iv) that the existing classifications of certain commodities impose too great a burden having regard to the value of the commodity and its other transportation characteristics. The Government has accepted these recommendations. The new rates will come into force from 1st October, 1958. The average freight rate a ton mile is expected to be 11.8 pies, as against 5.8 pies in 1938-39.

In the case of 28 other commodities, the committee had suggested rates higher than the "corresponding rates", on the ground that in the changed circumstances, those commodities could afford to bear higher charges. The Government has accepted the higher rates in the case of 15 of them. The Government has accepted a new basis for coal rates, which would maintain the present level of rates for short distance traffic and limit the increases for long distance movements to Rs. 2 a ton.

Effect of New Rates

The revised rate structure may be summarised as follows:

- (1) the overall freight burden on foodgrains will be reduced;
- (2) there will be no overall increase in the freight on fruits, vegetables, kerosene oil and salt;
- (3) special treatment will continue to be accorded to handloom products, khadi, books, newspaper, newspapers and milk which are at present exempt from the levy of the 12½ percent supplementary cargo;
- (4) the structure has been made simpler and substantially easier of application, by the elimination of separate items of charges, such as terminal charges, short-distance charges, transhipment charges, etcetera;
- (5) the overall increases generally are moderate and the minimum necessary to give the extra revenue required for the development of the railways;
- (6) there will be somewhat higher percentage increases in rates for shorter hauls, so as to encourage road transport over such hauls;
- (7) any substantial shift in the relative rates between the rates for short and long distance traffic, which may hamper the regional development of industries, has been avoided.

Additional Revenue

Under the committee's recommendations, there would have been an additional revenue yield of 12.9 percent of the goods earnings at existing rates, bringing the railways additional revenue of approximately Rs. 32 crores annually. According to the Government's final decision, the increases have been limited only to 4 percent, and the additional yield will be of the order of Rs. 9.6 crores a year only, at the existing volume of traffic.

Parcel traffic: The committee was not asked to consider rates for parcel traffic, as distinct from goods traffic. However, the Government has availed of this occasion to review the parcel rates as well. An additional revenue yield of Rs. 2 crores is expected to accrue from their revision.

Consignments of smalls: At present there is a surcharge of 61 percent on all consignments weighing less than 20 maunds. The Government has now decided that this surcharge should in future be 10 percent, but it will apply only in the case of consignments weighing less than 10 maunds (as against 20 maunds at present). The object is to reduce to the minimum traffic moving in "smalls", in order to use better the wagon capacity.

Most rates at railway risk: The Government has accepted the Committee's recommendation that for most commodities the rates should be quoted only at railway risk, and that the quotation of alternative owner's risk rate should be confined only to a few commodities moving in a loose condition and to perishables.

Jute

FALLING TREND IN GUNNIES CONTINUES

PROSPECTS OF A BIGGER AND BETTER CROP THIS YEAR

THERE has been a general slump in trading conditions in the fibre and gunny markets in recent weeks, not only in Calcutta but in other jute manufacturing countries also. Continental mills blame competition from India for their present plight, and maintain that they cannot compete with the prices at which India sells her goods. In the U.K. also, some old and established mills have had to close down, as a result of which other manufacturers are reporting better order books than a year ago, and the jute industry in general shows less short-time working than during the early part of the year. This is an isolated instance however, and does not conform to the conditions prevailing in Continental mills. There the competition from substitutes, as well as from India, is the great indeed, and one of the main reasons is the high prices manufacturers there have to pay for Pakistani jute. Their raw jute imports have been cut to one third of previous years, and although prices have fallen recently by as much as £2 a ton, the trading deficit is still very large.

The general opinion in the trade, both in India and overseas, appears to be that fibre prices should be falling further. This is based on good reports from nearly all agencies, both in India and Pakistan. In spite of rumours to the contrary, there has been very little damage to the crop by flooding, and it is anticipated that the current crop will show a fairly large increase in quantity, and with recent rains providing adequate and good steeping facilities, the industry is hoping for a vast improvement in quality as well. Recent reports of arrivals in Calcutta, and imports into the up-country agencies have indicated excellent quality, although moisture is very prevalent, but this is normal for this time of year. Purchases by Indian mills over the past few months have been very small, and this, combined with favourable crop reports, has resulted in a very weak fibre market.

Raw jute has derived no support from gunnies; in fact, the opposite has been the case. Overseas buyers have been conspicuous by their absence and goods prices, especially sacking, have shown a gradual deterioration. Prospects for hessian are now very much brighter, as mills' stocks are at a low level, and the recent increase in American burlap consumption during the month of July has instilled a little confidence into this section. The transfer of looms to hessian production has already become evident in a small way, and is expected to increase again during the current month, and there are hopes that American interest will be forthcoming in the not-too-distant future.

Raw Jute Arrivals

The fibre arrival statistics for the month of July 1958 are of little significance. In all cases, arrivals were slightly smaller than last year, but that was the general trend throughout the whole of 1957. Arrivals from Pakistan amounted to 53,100 bales, which was 3,250 bales less than last year, while arrivals from India dropped by 7,900 bales to 271,350 bales. This gave an overall drop of 11,050 bales on a total of 324,450 bales. This total fell short of July's consumption of raw jute by 199,050 bales. This deficit between arrivals and consumption is always very large in the early months of the new season, but is emphasised more this year because of the larger quantity of sacking being produced which should entail a heavier consumption of raw jute.

THE JUTE MARKETS

The forward market last week met with mixed fortunes, but on the whole, activity was on a restricted scale. Rates as given by the East India Jute and Hessian Exchange Ltd. for the period 20th to 26th August, were as follows:

	Hessian 40in. 10oz.	Sacking B Twills	Upper Assam
Opening	40.62	99.75	25.18
Highest	40.62	99.95	25.28
Lowest	40.16	98.50	24.82
Closing	40.44	99.05	25.00

Manufactured Goods: Overseas consumers showed very little interest in the Calcutta goods markets last week, and consequently, prices again showed a tendency to decline. The approach of *fakda* due date brought some selling pressure from a prominent bull operator and the general undertone of the market was weak. Mills were reported to have sold limited quantities, mainly for near delivery against covering by local shorts, but genuine business was scarce. On Thursday last, markets opened quietly, and the near positions of B Twills and 40in. 10oz. hessians were unchanged at Rs. 97.75 and Rs. 42, respectively. The forward positions in both cases showed a drop of about 25p on former rates. On Friday, hessians staged a recovery and ready goods jumped to Rs. 42.40 and by the week-end reached Rs. 42.65. This was mainly due to reports of some buying support from overseas, but the reaction in the market was rather disproportionate to the quantities involved. During this time, sacking goods fell rapidly through lack of support, and by the week-end, August B Twills trailed at Rs. 97.05. After the week-end, losses were recorded in all sections of

the market, and as far as hessians were concerned, the previous gains were completely nullified, and by Tuesday, 40in. 10oz. stood at 5p below the week's opening level. B Twills at Rs. 96.85 were 90p below those ruling at the beginning of the week.

At the close on Wednesday morning, prices were as follows:

	August	September	Oct.-Dec.	Jan.-Mar.
40in. 8oz.	33.40 (36.41)	33.20 (36.18)	32.65 (35.58)	32.35 (35.06)
40in. 10oz.	42.10 (45.89)	41.25 (44.95)	40.60 (44.25)	40.25 (43.87)
B Twills	97.10	97.50	99.25	99.75
Heavy Cees (Plain)	98.50	98.50	99.00	99.50
A Twills	118.50	119.75	120.50	120.50
Liverpools	109.50	110.75	112.00	112.25
Cornsacks	96.50	99.75	100.00	100.75

(Figures in brackets indicate the value per 100 metres)

Raw Jute: The Calcutta fibre markets were very quiet throughout the week, and once again business was on a small scale. The new crop continues to make satisfactory progress, and harvesting in all areas is well in hand with adequate steeping water for retting. In spite of the recent floods in many jute-growing districts, damage to the crop has been slight, and prospects of a bumper crop of good quality are bright. Sellers in general are keen for business, but mills have shown a lack of interest in contract jute. Consequently, prices have taken on a lowering tendency. A fair amount of inter-seller covering was reported both in the local markets and upcountry, and mill representatives continue to take an active interest in all grades of fibre.

Business last week was reported in Assam-Northern new crop jute at Rs. 25 to Rs. 25.75 for August-September and August delivery, respectively. Desal White was also done at Rs. 24 a maund for August-September shipment, and jungle white at Rs. 21.50 for the same shipment. Some mills showed an interest in Mesta, and Daissee Mesta passed at Rs. 23 for October-November shipment. Small lots of new crop Daissee were also done at Rs. 27.75 to Rs. 28 for September-October shipment.

The Cossipore markets were very active last week as a result of heavy inter-seller covering business. Imports were smaller than of late and wagon arrivals dropped to 420, which was 125 less than in the previous week and 125 less than during the corresponding week of last year. At the close, Kishenganj jute was quoted at Rs. 24.50 a maund basis bottoms.

At the close on Wednesday morning, quotations were as follows:

	Landed at Mills Rs. a maund	Rs. a 100 lbs	Shipment
Assam-Northern	25.25	67.67	Aug.-Sept.
Purnea Desal	24.25	64.99	"

THE FOREIGN JUTE MARKETS

YARN AND CLOTH PRICES REDUCED

(FROM OUR DUNDEE CORRESPONDENT)

THE declining tendency in raw jute prices has brought about yet another change in the fixed rates for jute yarn and cloth in the United Kingdom. The unexpected alteration was effective from 20th August. But it has made no difference to the position, and there is just as little business to be done as there has been since prices for yarns being done as there was raised from 19th July. Of course, and cloth have been the two weeks' holidays in between, but so much business was placed in the third week of July that consumers of both yarns and cloth have adequate stocks in hand. They feel that prices are likely to be reduced even further. About this time last year, values were at about their lowest for the year, before advancing again at the end of the year. At that time, however, conditions were different compared with those prevailing now. By all accounts, the jute crop of the season is progressing well and a bumper yield of good quality fibre is expected, whereas last year reports were unsatisfactory.

Raw jute shippers are experiencing a great difficulty in getting spinners interested in making further purchases. Buyers are willing to risk a firmer tendency in prices, and so they continue to hold off, although they still need to purchase their requirements during this season. Mills have orders in their books for the delivery of yarns

over the next two months, but consumers are not inclined to buy for forward delivery. The market in Dundee is, therefore, dull at the moment.

Mill Firsts are offered at £110. Mill Lightnings from £95. Mill Hearts from £85 and grade Hearts £88, August-September, c.i.f. U.K. or Continent. Good marks of Daissee-2/3 are quoted at £100 and grade at £94, and grade Tossa-2/3 from £110 and grade Tossa-4 from £100. September-October, c.i.f. Large quantities of jute are being offered and sellers are anxious to make contracts. They dare not quote less than the E.P.C. terms. Calcutta goods have weakened somewhat and offers are now made at 63s for 40in. 10oz. and 47s 9d for 7½oz., August, 62s 6d and 47s 3d, September and 61s and 46s 3d October-December, with B Twills at 147s, 147s 9d and 149s 6d for the respective positions of shipment, all l.o.b. Calcutta. Jute yarn and cloth prices have been reduced to the level ruling prior to 19th July.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 15th August 1958	3,414.4	17,743.1	21,157.5
1st to 15th July 1958	4,219.6	20,835.5	25,055.1
1st to 15th June 1958	901.8	9,692.6	10,594.4
1st to 15th August 1958	16,143.7	217.3	16,361.0
1st to 15th July 1958	13,729.1	1,144.0	14,873.1
1st to 15th June 1958	9,368.6	147.2	9,515.8

SOUTH EASTERN RAILWAY

TENDERS.

Sealed tenders are invited for supply of the following items:—Tender No. PC/COS/41/WSP/1702.B/F2/58 for supply of Stake wire Pulley 2400 Nos. To IRS Drg. No. S3065.

Tender forms are obtainable from the undermentioned at Garden Reach, Calcutta-23, (P. C. Section) on remittance of Rs. 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, South Eastern Ry., Garden Reach, Calcutta-23, by local firms. Earnest money against the tender is Rs. 215/-. Closing date of the tender is 25.9.58 at 12 noon. Firms not on the Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate along with the Earnest money receipt with the Tender.

BRITISH TEXTILE REVIEW

THE CHANGING TREND IN DESIGN

THE London fashion trade, having adapted itself to short skirts, did not react favourably to the long skirts decreed by M. Yves St. Laurent, of the House of Dior. Mr. Norman Hartnell, the Queen's dressmaker, described the confusion among Parisian designers as a danger to haute couture in general, but also as an opportunity for London, where the trend of design is undivided. It is unlikely that the women of Britain will accept the Dior length. The fashion trade had been gradually adopting soft-handling cloths with good draping qualities, and short skirts emphasised this trend. Fine single and twofold yarns have, therefore, come into favour for this trade, and the trend has also benefited strong rayon staple, whose experience previously had been somewhat disappointing. Some firms are compromising between the stiff-handling cloths which will evidently be fashionable next year, but good progress is being made with soft-handling satin made with strong staple yarns of the finer counts, similar in effect to fine continuous filament rayon cloth.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to July 1958. As compared with June, the July Indices for Food, Clothing and Miscellaneous show rises of 11 points, 2 points and 1 point, respectively.

Middle Class Cost of Living Index Number for Calcutta. Prices in August, 1939=100.

Groups	Weights	GRUPP INDICES											
		July, 1957	Aug. 1957	Sept. 1957	Oct. 1957	Nov. 1957	Dec. 1957	Jan. 1958	Feb. 1958	Mar. 1958	April 1958	May 1958	June, 1958

Compiled and constructed by the Statistical Department of "Capital"

Change in fashion and technique help maintain some vitality in the somewhat languishing rayon trade, but they are unpredictable and can bring new complications. Drip-dry shirtings are a case in point. The prospect for strong rayon staple in the fine-spinning section of the industry had seemed excellent; but just as this fibre was becoming readily available, the makers of shirtings transferred their interest from counts of 60s and upwards—where strong rayon staple has advantages of both quality and price in the doubling trade—to singles of counts 40s and under, suitable for drip-dry material. Medium counts of rayon staple, in blends with cotton, are used, of course, with very satisfactory results, for drip-dry shirtings. Changes in fashion and developments in man-made fibres have certainly reduced demand for longer-staple cottons in the last few years, and most firms—there are a few notable exceptions—have, therefore, suffered little inconvenience from the British authorities' refusal to provide means of payment for Egyptian cotton.

Recessionary Phase

At the meeting of the ministerial council of the Organisation for European Economic Co-operation in Paris in July, Britain's President of the Board of Trade, Sir David Eccles, singled out textiles as one of the few sectors of trade already hit by the recession. In Britain, certainly, the recession is at its deepest point in this sector, seemingly because a cyclical downturn—the textile trade is notoriously subject to individual fluctuations—has coincided with a general weakening of the eco-

while Fuel & Lighting remained unchanged at 281 points.

Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living advanced by 6 points during July 1958.

nomy. No broad section of the industry has escaped the trend; but the cotton industry, which was already depressed last year, did not suffer as much in the first half of this year as the wool industry, which was generally buoyant last year. It might have been supposed that the man-made fibre industry, supported by increasing outputs of the newer fibres, would have fared better than the average, but in fact its experience in the first half of this year was rather worse than the wool industry's.

Rationalisation Programme

The announcement by Courtaulds that two of its factories—both in the British Celanese sector of the group—would soon be closed was particularly disturbing as the decision was stated to have been made "in the light of potentialities in the home and export markets". Previous closures in the group were part of a policy of eliminating the relatively inefficient units, but the wording of this announcement suggested that the efficiency of the mills in question (a warp-knitting plant in Jarrow and a weaving plant in Blyth) was sub-standard but that it was necessary to curtail capacity for producing fabrics because prospective demand did not justify maintaining all the existing plants.

Night-shift Working

This action by Courtaulds is an example of the rationalisation which is now familiar in the British textile industry, particularly in the cotton sector. The best that can be said of it is that it strengthens the industry's foundations and prepares it for vigorous trading in more favourable conditions. Meantime, the expansion of the synthetic fibre sector proceeds against a background of hesitant demand even for the newer fibres, and it is possible that even they will suffer a period of surplus capacity.

Yet the mood of the industry in the second half of this year so far has been rather more hopeful than it was in the first half-year. Each main sector is still troubled by its particular problems: the cotton sector, and to some extent the rayon sector, by duty-free imports from India, Pakistan, and Hongkong; the man-made fibre sector generally by competition from West Germany and Austria; the wool sector by competition from Italy and by higher tariffs on its export to North America. But within the home trade, demand shows signs of a revival. In the textile trade, more probably than in any other, high interest rates and restrictions on bank credit have caused severe de-stocking; now, when stocks are low, interest rates are reduced and restrictions on bank credit are removed. Mr. William T. Winterbottom, chairman of Fine Spinners and Doublers Association, expressed a general feeling when he said at the company's annual meeting in July that cotton and allied trades should improve later in the year, in the relaxed state of credit.

The decision by the Cardroom Workers Association, one of the "big three" cotton workers' unions, to invite applications from employers for night-shift working by its members was specifically related (in a statement by Sir Alfred Roberts, the union's general secretary) to the problem of foreign competition. Full and flexible use of equipment has long been recognised by employers, and by independent investigators, as essential to the survival of the industry in anything like its present form, and acceptance by operatives of the principle of multiple shifts is an important, if belated, step forward. But night work applies only to men—it is not legal for women; and this union still insists that shift working must be linked with re-equipment, whereas employers naturally wish to be free to use any equipment, new or old, as efficiently as competitors abroad can use theirs.

In a general sense, everyone recognises the importance of modern technology. There is particular interest in the news that the "Shirley loom", devised at the Shirley Institute of the British Cotton Industry Research Association, is now being produced commercially by Wilson and Longbottom Ltd. in Barnsley and is likely to be displayed at the International Textile Machinery Exhibition in Belle Vue, Manchester, in October. This loom for weaving man-made fibres is unique in various respects, notably in that it is the first in Britain to be produced by the combined activities of an industrial research association and a commercial manufacturer. The machine, which is uncommonly versatile, was designed on the basis of information on irregularities and faults painstakingly gathered by the institute, and it seems to have overcome the problems that they presented.

EXPORTS OF FERRO-MANGANESE

Ferro-manganese will be licensed freely on shipping bills for export by manufacturers only, says a notice issued by the Joint Chief Controller of Imports and Exports, Calcutta. The shipping bills should be submitted along with an application in the prescribed form quoting therein the valid income tax verification certificate, the registration-exemption number as the case may be, requisite treasury receipt and an undertaking that the manufacturers or exporters will always maintain a buffer stock of 200 tons for catering to the needs of consumers in India.

EXPORT DUTY ON OILSEEDS AND OILS ABOLISHED

The Government of India has decided to abolish, with immediate effect, the export duty of Rs. 150 a ton leviable on all oilseeds specified in Item 14 of the Second Schedule of the Indian Tariff Act and of Rs. 300 a ton leviable on all vegetable oils specified in Item 15 of the Schedule.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) fell by 0.4 percent to 115.8 during the week ended 9th August, 1958, compared with 116.3 (revised) for the previous week. The index was higher by 1.1 percent and 2.9 percent, respectively, when compared with the corresponding week of the earlier month and that of last year. The index for Food Articles receded by 0.6 percent to 119.3 due to a fall in the prices of fish in Bombay (-13%), mung in Hissar and milk in Bombay (-10% each), orange in Calcutta (-9%), betelnuts in Mangalore (8%), tea (-7%), barley in Jaipur, ragi in Bangalore, gram in Patna, bananas in Bombay, meat in Ludhiana and gur in Muzaffarnagar (-6% each), rice in Jagdalpur and wheat in Bombay (-5% each), masur (-3%), cashewnuts (-2%) and bajra, masur, coffee, black pepper and salt (-1% each) although the prices of fish in Calcutta (+29%), eggs (+13%), potatoes (+11%), arhar in Delhi (+10%), rice in Balurghat (+9%) and in Nizamabad (+6%), ghee in Madras (+9%), maize in Khageria and bananas in Nagpur (+6% each), betelnuts in Bangalore and onions (+5% each) and groundnut oil, gingelly oil, chillies and cardamoms (+1% each) showed advances. A fall in the price of raw tobacco (Moihar medium) in Calcutta (-3%) was responsible for bringing down the index for Tobacco by 0.8 percent to 87.4 during the week. The index for the Fuel, Power, Light and Lubricants group remained stationary at the previous week's revised level of 116.5 in spite of a rise in the price of castor oil (+1%). The index for Industrial Raw Materials recorded a fall of 0.3 percent to 119.0 compared with 119.4 (revised) for the earlier week as a result of a decline in the prices of raw skins in Delhi (-6%), groundnuts (-4%), cottonseed (-3%), castorseed (-2%) and raw wool (-1%). The prices of linseed in Nagpur (+20%), rapeseed in Purnea (+7%) and raw jute, gingellyseed and copra (+1% each), however, moved up. Coir yarn, brass and lead (-1% each) showed a fall while tin (+1%) moved up and the index for Intermediate Products receded by 0.2 percent to 112.6 compared with 112.8 (revised) for the earlier week. The index for Finished Products stood at 109.5 against 109.6 for the previous week. The prices of oilcakes (-2%) and general chemicals (-1%) showed variations.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS

(Base: 1952-53=100)

Groups and Sub-Groups	2-8-58	2-8-58	12-7-58	10-8-57

IMPORT QUOTA FOR SULPHATE OF POTASH RAISED

The import quota for sulphate of potash, a fertiliser, has been raised from 66-2/3 percent to 100 percent during the current licensing period, that is, from April to September 1958. The Government has taken this decision in response to representations on the need for a larger consumption of potassic fertilisers. Applications for additional licences by established importers, on the basis of the enhanced quota now announced, should be made in the prescribed form to the licensing authorities at the ports not later than 5th September, 1958.

SHARP FALL IN INDIAN PEPPER EXPORTS

LABOUR TROUBLES IN KERALA PLANTATIONS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

INDIA is fast losing ground to Singapore in the pepper trade. While the former's pepper exports have fallen steeply, those of Singapore have steadily increased. Exports from India in June were as low as 225 tons, compared with 849 tons in June 1957. Total exports during this season in the eight months ended June 1958, at 9,351 tons, compare with 11,838 tons during the first eight months of the last season, showing a decline of 2,587 tons. On the other hand, exports from Singapore amounted to 2,187 tons in June, showing an increase of 170 tons compared with those of the corresponding month of last year. For the first six months of the current year, Singapore exported 15,579 tons; this was 53 per cent higher than those in the same period of last year.

Singapore receives its pepper supplies from Sarawak, Borneo, Sumatra, Banka and Billiton. During the six months ended June 1958, it imported 14,326 tons of black and white pepper against 7,528 tons during the corresponding period of 1957. The largest buyer of pepper, that is, the United States, took 903 tons from Singapore in June 1958, compared with its purchase of 130 tons during the corresponding month in 1957. Its offtake from India was only 47 tons in June this year. This has been taken as an indication of a change in the attitude of U.S. buyers in certain quarters. They think that the former are increasing their purchases from Singapore. It is doubtful how far this view is correct since seasonal factors might have been responsible for the heavy U.S. purchases in the Singapore market in June. It was a lean month for India whereas the new Sarawak crop increased the supplies in Singapore. The availability of the new pepper crop might have attracted buyers to Singapore. But there is no denying that the competition from Singapore is increasing.

The remaining months of the season, that is, from August to October, are usually lean months as far as India's exports are concerned. The new season begins in India by November and picking continues up to January. With the beginning of the season, exports also rise.

Labour Relations

The major problem with which the planters in Kerala are confronted at present stems from labour troubles. It is an issue which has attracted much of their attention in the past year and still remains one of their most crucial problems. This opinion has been expressed by Mr. K. L. Kershaw, chairman, at the annual general meeting of the Association of Planters of Kerala. He has said that lawlessness in Kerala plantations was widespread only a year ago. The situation is different today. Although the position has recently improved, he says that full confidence has yet to be restored.

Planters are still experiencing the after-effects of the unhappy conditions which prevailed some time ago. A sense of security has yet to be created. Mr. Kershaw is not satisfied with the situation prevailing in Kerala plantations. A recent but dangerous development which has been noticeable in some districts is the unruly behaviour and interference with the purely managerial function of regulating and directing labour. This has resulted in a slow but steady demoralisation of staff. Added to this, rowdiness, the illegal confinement of staff, intimidation and abuse, threats of violence continue to occur in scattered incidents but with deplorable frequency, according to the chairman. The remedy for this lies with the Government and union leadership. The Government should maintain peace and protect the liberty of the citizen as guaranteed under the Constitution. The union leaders have a responsibility to denounce publicly the manifestations of violence for the redress of their grievances.

Politics in Trade Unionism

Kerala continues to dominate the political scene, and politics continue to dominate the trade union movement in plantations. The leadership of trade unions remains in the hands of politicians. The existence of various political parties, vying with one another to get the support of the working class for political ends, has delayed the development of the genuine trade union leadership. Mr. Kershaw says that plantation workers are the pawns in the game of party politics. The existence of many unions in the industry, more often than not on the same estate, has led to complications.

Mr. Kershaw says that a new and more dangerous pattern of strikes has been evolved by workers through the use of go-slow tactics and the mounting degree of daily absenteeism. In the plantations of Kerala today, there exists at best a four-hour day and a five-day week, with the solitary exception of the woman plucker. It is forgotten by the union leaders that the dignity of an honest day's work is the worker's main asset. Discipline, hard work and higher productivity are the surest means of increasing the economic well-being of the worker. It is necessary that the latter should first understand his duties and responsibilities and then his rights and

privileges, the chairman says. He has deprecated the formation of the communist-sponsored union of the plantation staff as a parallel organisation to the Estate Staff Union of South India which has existed since 1947 and with which the Association of Planters has maintained cordial relations. The idea of one union for one industry has thus been disregarded.

Burden of Taxation

Referring to taxation, Mr. Kershaw has said that various fiscal impositions have been introduced in the form of cesses, excise and export duties, tax on income and sales, panchayat and municipal taxes, licence fees, etcetera, to impose additional burdens on the plantation industry. It is evident that the Government likes to make further inroads into the industry. The level of taxation has now been enhanced to such an extent that plantation companies are no longer in a position to meet their tax liabilities from current revenues. At the same time, they have to meet the many other inescapable demands on their resources. In effect, therefore, the direct taxes have assumed the nature of taxation on capital. The net result must be the gradual deterioration of the plantation industry and the ultimate destruction of Kerala's most valuable asset, Mr. Kershaw says.

Disquiet in Cashew Factories

The cashew processing industry in Kerala has again been faced with a disquiet. Recently, there was a case of police firing in the State in which two workers of a cashew factory near Quilon died and a few others were injured. It was the result of a labour dispute in a factory. On the previous day of the firing, the South India Cashewnut Manufacturers Association and the Kerala Cashewnut Manufacturers Association passed a joint resolution expressing anxiety over the "lawlessness unleashed in and around Quilon for some time past by certain trade unionists and the helpless situation in which the industrialists of the area found themselves on account of the failure of the authorities to afford timely protection to their person and property." The associations complained that the owner of a cashew factory and his assistant were assaulted by workers. Factory-owners have threatened that they will be compelled to close their factories if the labour situation does not improve.

On the other hand, the workers under the I.N.T.U.C. and R.S.P. leadership have threatened an industrywide strike as a pretext against the non-implementation of a tribunal award, according to which they are entitled to get a general increment and standardisation of wages and other benefits. They complain that the State Labour Minister has shown an indifferent attitude towards this issue. The workers are also agitating for a bonus for 1957.

Tripartite Conference

The Government recently convened a tripartite conference with a view to settling the disputes between the management and labour. An agreement was reached on the question of bonus, and it was decided, on mutual consent, that 61 per cent of the annual earnings of workers should be given as a bonus for 1957. As for the implementation of the tribunal award, no agreement could be reached. This was presumably due to the opposition of a large group of cashew factories. The Government later issued a Press note announcing its decision to take prosecution measure against it for its refusal to fall in line. But it is unlikely to precipitate a crisis immediately. Chances are at present brighter for a peaceful settlement of the industry.

Good Export Demand

In spite of this disquiet, the cashew processing industry is otherwise enjoying a fine time. The export demand for cashew kernel is good. Reports from New York indicate that the United States is likely to import 1 million to 1.25 million cases of cashewnuts this year. U.S. purchases of cashewnuts in 1956 and 1957 amounted to about 1.25 million cases. Importers are currently paying 49 cents a lb and the average price this year has been 48 cents a lb. The United States imports nearly 80 per cent of cashewnuts processed in India. Furthermore, raw nut supplies are abundant this season. The annual requirement of the cashew factories in India is estimated at about 200,000 tons. The current season's African crop has been over 100,000 tons. The Indian crop has been above average at about 70,000 tons.

The production of cashew kernel also is likely to touch a new high this year because of the abundant raw nut supplies. The production of kernel has been estimated at 1.5 million cases against last year's 1.2 million cases of 50 lbs each.

Probe into Coffee Marketing System

The Central Government has appointed an expert committee to review the marketing system adopted by the Coffee Board in the light of the steadily increasing production and to suggest suitable changes. Mr. S. N. Sattanathan is the chairman of the committee and Messrs. R. Ramamurthy, Radcliffe and G. S. Srinivasan are its other members. The committee has been asked to report within six months. Some of its other terms of reference are to recommend on the nature of propaganda to be employed by the Board to capture new markets, the system of marketing to be adopted for exports and to increase consumption in northern India.

Engineering and Transport

EXPANSION OF THE STORAGE BATTERY INDUSTRY

PROSPECTS FOR EXPORTS

THE second plan target for motor-vehicle battery production is a little over 400,000 units a year to be reached by 1961. Before the war, almost all of India's battery requirements were imported. A remarkable rate of progress has been achieved in the postwar period which has been made possible, said Mr. Peter Aspinall, Export Manager of Chloride Batteries, London, an associate of Chloride and Exide Batteries (Eastern) Private Ltd. Calcutta, by the heavy investment undertaken in India by this industry. Mr. Aspinall was on the last leg of a business tour covering first the Middle East and then the countries of south-east Asia, which he started in mid-April last, and he was giving the Press some of the facts he had come to gather.

The Exide factory, established in Shamnagar, near Calcutta, in 1944, and the largest of the firms in the industry, has made considerable advance towards its aim of complete self-sufficiency in a very wide range of products in the shortest possible time, with the result that India now permits only certain special types of batteries to be imported, such as batteries for jet aircraft and others which cannot be economically made here. The lead recovery plant at the Exide factory is an other important measure towards lessening the country's dependence on imports. Given sufficient scrap batteries for the lead recovery plant to be worked efficiently, stated Mr. Aspinall, Exide could bring about a very substantial saving in lead imports. At the present moment, the Exide factory is installing new plant to manufacture the well-known tubular positive plate. Exide-Ironclad battery of the type used by the railways throughout India and most of the world for train lighting and air-conditioning. Further developments are well under way.

Until recently, Indian storage battery exports were negligible. Mr. Aspinall continued, but the Exide factory in India had already made bulk supplies to Egypt and was currently executing further orders from that country. The prospect of exporting these batteries to Afghanistan and Syria is being actively investigated. In the case of Afghanistan, Mr. Aspinall was hopeful of success in view of the recent trade agreement which provided, among others, for the export of storage batteries from India. Mr. Aspinall said that there was a considerable demand for batteries in most of the countries within India's reach in view of increasing vehicle populations. But they did not all represent promising export markets for Indian batteries because the respective Governments were anxious to promote indigenous manufacture and were actively considering the establishment of local battery factories.

U.K. CAR MANUFACTURERS PREPARE FOR MOTOR SHOW

At a time when the demand for British motor-cars is greater than ever before and production is running at record levels, British manufacturers are preparing for one of the most celebrated events in the international motoring calendar—the Motor Show at Earls Court in London, from 22nd October to 1st November. The show, which will be opened by the Home Secretary, Mr. R. A. Butler, will bring together a vast range of motor products of about 530 exhibitors. Attendance at this year's show is expected to equal, if not exceed, the figures of 1957, when paid attendance amounted to 483,500. In addition to nearly 17,000 overseas visitors, Countries which will exhibit include Britain, Canada, Czechoslovakia, France, West Germany, Italy, Sweden, and the United States. For the first time, models from a Netherlands factory will be on show. By the end of June this year, more than 250,000 British motor-cars had been exported—over 40,000 more than in the previous record half-year of 1955, representing an all-time record value of £95 million. Joining the motor-car exhibitors at the show will be Caravan, motor-boat and equipment manufacturers, making a bid for home and overseas business. A special service is being organised for overseas visitors to the show. On production of passports, they will obtain free admission to it.

RECORD TRANSATLANTIC FLIGHT TIME ESTABLISHED BY COMET IV

Some 88 minutes were knocked off the record transatlantic flight time for civilian aircraft when transatlantic flight time for New York to London by the Havilland Comet IV returned from New York to Hatfield in England, on 12th August. The four-to-five jet plane did the trip in 6 hours 16 minutes—1 hour 28 minutes less than the previous record which was set up by a Bristol Britannia prop-jet. The flight, at an average speed of 558 miles an hour, was made to normal B.O.A.C. rules, with a load equivalent to 76 passengers and full reserves of fuel. Actual air speed was 490 miles an hour. De Havilland claim that this Comet type—the result of ten years' continuous design development—is the most completely tested aircraft of any type now available to airlines. The company is to give it the pride of place among its exhibits at the Farnborough air show in September, when the Comet IV on display will be the first of the 19 ordered by B.O.A.C. They are expected to be in service on the New York-London route by the end of this year.

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES IRREGULAR

AT Sale No. 10, held on 25th and 26th August, the offerings at the Export auction amounted to 54,660 chests for which there was a good general demand. Plain broken opened at an easier note but firmed up as the sale progressed, while Fannings of this category were generally fully firm to dearer. Medium orthodox Assams with bright liquors were again a strong feature of the sale and sold well but the poorer liquoring descriptions were irregular with B.O.P.'s and O.F.s about 10nP to 15nP easier. The very few best C.T.C.'s on offer were well supported, while the others in this category declined by 10nP or 30nP buyers closely following quality. Leg-cut descriptions were 5nP to 10nP easier. Whole leaf grades and tippy sorts met with fair enquiry but at prices which were irregular and sometimes easier. Darjeelings received quite a fair support but prices were generally easier.

Quotations	1958	1957
	Rs.	Rs.
Clean Black Pekoe	2.10	2.20
Plain B.P.	1.75 to 1.74	1.74
Plain Fannings	1.84 to 1.90	1.70
Medium B.P.	1.84 to 1.95	1.90
Medium Fannings	2.05 to 2.15	1.90
Best Assam C.T.C. B.P.	3.20 to 3.40	4.00
Best Assam C.T.C. Fgs.	3.56 to 3.80	4.50 to 5.00

At the Internal Sale, 18,106 chests of Dust were on offer. There was a good general demand and orthodox descriptions sold readily at about valuations. Darjeeling Dusts, however, continued to be a weak feature of the market and were again easier. C.T.C. Assams were irregular although generally the brighter liquoring descriptions sold well and were firm and sometimes dearer but the remainder met with less competition and were up to 10nP easier.

Quotations	1958	1957
	Rs.	Rs.
Medium Doars Dust	1.72 to 1.74	1.50 to 1.60
Medium Assam Grainy Dust	1.74 to 1.76	1.60 to 1.70
Medium Assam C.T.C. Dust	2.20 to 2.40	2.15 to 2.30
Best Assam C.T.C. Fgs.	2.50 to 2.80	2.50 to 2.80

There were 1,184 chests of Leaf on offer. There was a good general demand and prices were generally firm to dearer.

FREIGHT MARKETS QUIET

THE freight markets remained lifeless over the past week, and there is little of interest to report. Various fixtures for grain to India were noted at unchanged rates. Three American tankers were taken at \$ (U.S.) 18 from Gulf-Bombay which contrasts with the rate for free tonnage, of 67s 6d. A ship was fixed from Visakhapatnam to Northern Range at \$ (U.S.) 6.50 for September-October loading which shows a decline of 25 cents on the last business done in May. Chinese charterers took a number of vessels on time charter at around the current rates.

LINSEED WEAKENS

There has been very little activity during the past weeks, and towards the close there was a slight weakening in prices. Supplies are very scarce. Very few crushers are operating at present and they are working on a restricted scale and unable to cover their crushing costs. With sellers of seeds reserved and buyers for oil pausing, business has declined to wider further. Latest quotations are as follows: Ready-August Rs. 25-12 a maund and September Rs. 25-8 a maund.

HIDES AND SKINS DULL

The market was dull. Stocks were higher than in the previous week.

Bazaar Sales

(Between 19th August and 25th August, 1958)
Cowhides: Wet salted (Ord.) 17,170 pcs. on the basis of Rs. 7.50 to Rs. 10.50; Wet salted (Ord.) 7,000 pcs. on the basis of 74nP a lb; Wet salted (Slaughtered) 21,500 pcs. on the basis of Rs. 12.
Goatskins: Wet salted (Patna, Daissee, Kustia) 58,770 pcs. on the basis of Rs. 250 to Rs. 270, Rs. 315 to Rs. 340 and Rs. 370 to Rs. 380; Wet salted (he-killed) on the basis of Rs. 4 and (she-killed) on the basis of Rs. 3.50 a piece; Dinajpur-Assam on the basis of Rs. 270 to Rs. 340; Purneah-Maldah-Kissanganj 17,660 pcs. on the basis of Rs. 340 to Rs. 350; Patna (Ord.) 15,700 pcs. on the basis of Rs. 275 to Rs. 290; Purneah-Assam-Kissanganj 1,880 pcs. on the basis of Rs. 400 to Rs. 425.

Bazaar Stocks

(25th August, 1958)

Cowhides: Wet salted 1,12,000 pcs.

Goatskins: Wet salted (Daissee, Killed and Kustia) 30,000 pcs. Assam-Dinajpur 60,000 pcs.; Muzafferpore-Patna-Kissanganj 2,06,000 pcs.

Books

CENTENARY NUMBERS

Hundred Years of the University of Calcutta. Chairman of the Board of Editors: Professor Pramathanath Bannerjee. (Published by the Registrar, University of Calcutta. Price Rs. 25, pages 539).

Hundred Years of the University of Calcutta. Supplement. Editor in Chief: Professor Pramathanath Bannerjee. (Published by the Registrar, University of Calcutta. Pages 732).

The two bulky volumes, with detailed facts and figures, cover the story of the oldest university in India. Its growth and development has been comprehensively discussed by a band of competent scholars whose account must be regarded as authentic. The establishment of the University of Calcutta marks the beginning of modern higher education in India. It kindled a spirit of new national consciousness which was no doubt the contribution of western education. During the last century, the ideals before the university have changed. It is no longer required to produce only minor civil servants, but has taken up the task of moulding the leaders of a democratic society. The lofty ideals which the founders of the university envisaged 100 years ago, are now being gradually realised. The two centenary volumes study the university's activities in retrospect and give an outline of the glorious history associated with this premier university in India.

SPECIAL NUMBER

The Economic Weekly Special Number. Edited by Sachin Chaudhuri. (Published by Asian New Age Publishers Private Limited, 104, Apollo Street, Fort, Bombay 1. Price Rs. 2.50, pages 125).

The latest special number of the *Economic Weekly* maintains its usual high standard. It contains many topical articles of varied interests, some of which have been contributed by well-known experts. Apart from discussions on intricate economic theories, there are a number of articles on current affairs; this has made the special number well balanced and comprehensive. Policy makers, too, will find food for thought from such articles as "Import Control and the Plan," "Gold Deposit Certificates," "Central Issues in Rural Planning," and "Evaluation of Community Development." Because of its wide range and lucid analysis, the publication should be welcomed by readers.

REFERENCE BOOK

Investors' Encyclopaedia 1957-58. Compiled by Kothari and Sons. (Published by same. Price Rs. 20; foreign £2 3s, pages 2,483).

The latest issue of this well-known publication has incorporated many new features. Each section has been made more comprehensive with the latest information, and the publication, by and large, gives a good coverage of various industries, both in public and private sectors. Particulars about almost all new floatations have been included, and the introduction to each section has been brought up to date. As a standard reference book to investors, the publication should fulfil the expectations of all those connected with India's trade, industry and commerce.

BANKS

H indicates that Share capital is half paid. O., C. and Dd. indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O. Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Stock Account	Reserve & other Funds	Acreage under Tea	Outturn and Average Price per lb realised for crop				Estimate 1956	NAMES	Accounts closed	Managing Agents	Net Profit including taxation	Dividend per cent			Paid-up per Share	Latest Market Quotations as available until

THE NEW PRIORITY POLICY FOR EXPORTS

IMPACT ON THE ECONOMY

DISCUSSION about imports is apt to be unrealistic with Mr. Morarji Desai still in the process of negotiating the foreign exchange to buy them. Certain principles can be laid down, but decisions are going to depend on the Finance Minister's powers of persuasion and although these are probably considerable, they still lack the distinction of proof. Last week-end's meeting of the Import Advisory Council was, therefore, a somewhat fruitless affair, without even a policy to debate. The impression given by the deliberations of the Export Promotion Advisory Council, however, was entirely different. There is no doubt that the problems of increasing exports are receiving considerable attention in the country at the moment, although Government policy is still lagging seriously behind reality. The latest move to free over 200 items from export control will certainly help. But this is no substitute for action on, say, the tea export duty, or the cost problem in the cotton textile industry. It remains apparent that the fact has not yet been squarely faced in New Delhi that export prospects still depend on the three main staples, tea, cotton textiles and jute goods. Other items are important, especially in the task of winning new markets. But these three products are far and away the largest earners of foreign exchange and are likely to remain so. Expanding earnings depend upon exporting more of them, and it is here that the main effort should be concentrated. The unfortunate fact is that they have rarely faced less promising prospects. The world is moving into a period of intense international competition, and of these three industries only jute goods seems in a reasonable condition to meet it. This is a serious matter for a country seeking to expand its exports so as to pay for an increasing volume of imports for development. Yet it still lacks the sympathy and action from Government circles which it demands.

The most obvious shortcoming at the moment is the delay in announcing relief for common teas. Finding a formula has not proved to be easy, but the Government has at no time lacked expert advice on the subject. The subsequent hold-up can be attributable only to the absence of a sense of urgency. The recent meeting of the United Planters Association of Southern India has emphasised the problem again; the guest Minister, Mr. Lal Bahadur Shastri, admitted the fairness of the industry's claim for lower export duties on common teas. Yet nothing has so far been done about it. In the meantime, Indian tea is suffering competitively on world markets and the country's earning capacity is deteriorating. Statements from New Delhi designed to reassure the industry that relief is on the way are poor consolation when every day lost makes the situation worse. It is difficult to avoid the conclusion that if, as the Government maintains, the question of revenue is of such paramount importance and the future of India's largest foreign exchange earner must be jeopardised for it, then more vigorous efforts should be made to ensure that other sources, including the States, contribute their share.

The position of the cotton textile industry is no less critical than that of tea. Whatever the causes of the mills' present difficulties at home, it is quite clear that the reason they are losing their markets outside India is to be found in their inflated cost structure. Export capacity is best built on a healthy domestic market, and this condition is not being fulfilled at the moment. But there would still be ample scope for the expansion of cotton textile exports in future if the mills had not been saddled in the past few years with unnecessarily high cost burdens. Not only is the traditional competitor, Japan, gaining ground in India's expense, but a new one is threatening even more serious encroachment. The communist Government of China has undoubtedly grasped the fact that a country which does not have to worry about the wages and conditions of its labour can gain immense advantages in world export markets. It appears to be on this assumption that its

future as a cotton textile exporter is going to be based; it seems well placed for success. The importance of holding markets now cannot be exaggerated. Present unfavourable world trade conditions will not last for ever; there are already distinct signs of revival in the world economy and these are likely to increase. If India is to secure her share of expanding cotton textile markets, now is the time to be staking fresh claims. But the industry's difficulties go much deeper than can be dealt with on the superficial level. It would be dangerous to prescribe a course of treatment yet because opinions on the cause of the trouble are still conflicting—except to propose that the mills be allowed to keep their costs at more competitive levels—but it may be that cotton textiles have arrived at the stage the jute industry found itself some years ago when it started its programme of modernisation and rationalisation.

Alone among the three principal foreign exchange earners, the jute industry seems fairly well placed to maintain its position in a competitive world. This is because its problems have been tackled with foresight and energy. It remains chiefly to complete the programme for self-sufficiency in raw jute, for the authorities to resist the temptation to fasten fresh tax and labour burdens on the mills, and for the consolidation and amalgamation process to be completed. The trouble with the jute industry as a foreign exchange earner is that its markets are unlikely to expand to any great extent in coming years. A slow and steady progress can reasonably be expected, but the emphasis is likely to be on maintaining the present position and securing a modest improvement, rather than on any spectacular expansion. In our New Delhi letter this week is quoted an extract from the letter written two years ago by Mr. Eugene Black, President of the World Bank, in which he recommended "a determined effort to strengthen the competitive power of India's traditional export industries..." This advice is as relevant today as it was then. It is to be hoped that it is receiving renewed attention in these more desperate circumstances than it has done up to now. The point is doubly important in the case of the jute industry, because here is an exporter which has largely solved its more serious problems and seems set fair for a period of useful prosperity, subject, of course, to the unpredictable fluctuations of world markets. It would be disappointing indeed if it were to be interfered with for the sake of local revenue or social needs.

MISSION TO BHUTAN

LATER this month, Mr. Nehru will pay a visit to Bhutan, his first in eleven years of Indian Independence. The two factors mentioned are related more closely than is generally realised, for the withdrawal of the British from New Delhi called for a whole series of readjustments in inter-

nal and external relations. The great statesmanship with which the late Sardar Patel accomplished the integration of the Indian States in the Indian Union will be acknowledged in history with gratitude and appreciation. Although the most urgent and important, this was only a part of the task facing India on the morrow of Independence. There remained the work of re-defining India's relations with her neighbours, and re-defining was inescapable. A New Delhi with Mr. Nehru at the helm would, of necessity, speak in different accents with a Rangoon under U. Nu. Tibet, Nepal, Sikkim and Bhutan—these four belong to another category, with important differences among themselves. That the first-named has been somewhat arbitrarily taken over by communist China does not simplify the problems of the other three. Indeed, this is an additionally complicating factor and it is not surprising that Mr. Nehru has, rather belatedly, realised the need for a personal visit to Bhutan.

There is no reason at all for exaggerated concern. After some uncertainties in Nepal, not all of which were wholly avoidable, Kathmandu now has a more or less stable government. Although New Delhi's relations with Kathmandu may still have to be watched by both, apparently there is

greater realisation in the two capitals that each has need of the other. As for Sikkim and Bhutan, there has been little trouble that the people know of. But Mr. Nehru's coming visit is a reminder that, even if the placidity on the surface is not wholly deceptive, there is warrant for constant vigilance. The heavy guns booming on Quemoy and Matsu have messages for people outside those tiny offshore islands.

Indian Independence called for a change; this much is conceded readily enough. The extent and nature of the change required may, however, have been exaggerated in some quarters. There was a tendency, in those early days of freedom, to ignore realities in favour of ideologies. It was assumed all too hastily that ideas good and practicable for this country would be as good for its neighbours. Only an access of idealism in New Delhi could explain some of the unofficial actions initiated or encouraged in Nepal, which led to the overthrow of the unlamented Ranas but also had considerable unsettling effects in the area. Democracy was what India wanted to see in Nepal, a wish still unfulfilled. A measure of stability has since been restored, to which India's contribution was positive, but the experience had a lesson. It was found, but should have been foreseen, that illiberal régimes are removed more easily than democratic governments are established.

Bhutan and Sikkim saw no comparable display of impetuous political experiments, and they are none the worse for it. Under treaties, the foreign affairs of these regions are taken care of by New Delhi, and, so far as is known, there has been no Dr. K. N. Singh with a Peking past and an unclear present. Internal progress towards self-government, such as it is, has been unspectacular; and economic assistance from India has been received in the spirit in which it was offered. Faint echoes from the royal palaces have on occasion been heard indistinctly and in some quarters they have even been interpreted as mild resentment, but this need not be taken too seriously. The sound may have been no more than sighs for days gone by, the significance of which is more sentimental than political.

Because this distinction between the sentimental and the political has not always been clearly borne in mind even in Delhi, it is necessary to re-state some of the fundamental conditions on which alone power is wielded—no matter who it is that

does the wielding, and no matter what his political persuasion may be. It is entirely proper that in important respects New Delhi's attitude towards its neighbours in the Himalayas should be different from that of the British. Co-existence had another meaning in those days, and India is avowedly anti-imperialist. On the other hand, the so-called "white man's burden" does not become necessarily lighter for being shifted to shoulders of another complexion. As the experience of Nepal amply showed, suspicions and resentments grow even in the changed circumstances and, once grown, they can feed upon themselves. There is little reason to exaggerate the phenomenon, but once or twice anti-Indian feelings have been expressed in Nepal. That New Delhi's intentions were ever of the best did nothing to assuage the consequent Indian distress; indeed, that enhanced it.

Mr. Nehru, it may be assumed, is going to Bhutan as much to study the results of Chinese-occupied Tibet's proximity as to persuade the Bhutanese ruler and his subjects that India is a friendly neighbour. Both are necessary tasks, but it will be erroneous to imagine that only sentiments and their sincere expression are enough for the job. It has been suggested earlier that, even without wishing to be treated so, India has been regarded sometimes as the Big Brother. It may be as well to be prepared for such reactions, produced more by the physical size of India than by anything done or not done by her. After all, India is big in relation to these mountain kingdoms. It is a fact, to be neither resented nor bemoaned, that she is considered even a Big Power by some of her neighbours. Relatively, she is one.

And India must remain one, without necessarily seeming so all the time. This is what makes a sentimental approach wholly inappropriate, and is where the British experience merits study. Nepal, Bhutan and Sikkim—they are all entitled to their freedom; and India has little desire to interfere with any of them. This country's traditions and declared foreign policy dictate no other course. At the same time, India's geography and the same foreign policy place upon her certain obligations, and it should not be necessary to remind her neighbours that their sovereignty cannot but accept certain limitations. Pakistan's alignment with the West's military pacts has, according to Mr. Nehru, made the pursuit of a neutralist foreign policy doubly difficult for India.

Whatever the truth of this contention, and there is some, it is possible to think of another kind of alignment which would make India's neutralism just about impossible to adhere to.

Very little is known about what or how China has been doing in Tibet. There have been signs now and then that consolidation of Chinese power is far from complete. With considerable disquiet the world has watched of late a perceptible hardening of the Chinese attitude, and it has been held by some that perhaps China is now going through an intensely Stalinist phase. The abrupt transition from "a hundred flowers" to the savage attack on Titoist revisionism certainly indicates no obvious progress towards positive co-existence, and the internal stresses may well be such as often lead to adventure abroad. Quemoy and Matsu have been mentioned before, but that may not be the full list. It has been said sometimes a trifle glibly, that Asia will go either the China way or the India way. On the latter will certainly depend a great deal of the future of democracy in this part of the world and this means that, even if Mr. Nehru is not personally an aspirant of Asian leadership, India will have to accept the leadership of at least some of her smaller neighbours. This is an obligation she cannot shirk, and it will not be discharged only by handing out economic aid in the form of roads and bags of salt. Pitted against China's determination, India may well need a more positive attitude towards the facts of international life today.

A SOLUTION FOR THE FOOD CRISIS

THE F.I.C.C.I. PLAN FOR MORE PRODUCTION

THE latest debate in the Lok Sabha on the Government's food policy and the rumoured offer of his resignation by the Central Food Minister (because of the severe criticism of his handling of affairs) will have been wasted if some vigorous action is not taken promptly on the food front. The situation is bad, and it is growing worse every day. The official Wholesale Food Price Index is showing a dangerous uptrend which must be halted if widespread unrest is to be avoided. Reports of food riots in Uttar Pradesh are disturbing enough, and to say that they are politically-inspired, as the Government there maintains, does not absolve the State from the responsibility to ensure adequate and timely supplies of food in every part of its territory. The Centre has often been blamed by State Governments for failing to provide sufficient supplies to deficit areas, and the Centre, in its turn, has been blaming the State Governments for various shortcomings. But the fact remains that, whatever the division of administrative responsibility, there has been a serious maldistribution of food supplies, resulting in high prices in several areas. As for raising food production within the country, the much-publicised drive to increase output by impressive percentages has apparently not been successful, for which, of course, the primary responsibility should lie with the States. But the time has come when no delay can be brooked: no dilly-dallying or producing excuses for inaction can be passed off as the substitute for an efficient food policy.

The crisis, of course, has originated with the second five year plan. The enthusiasm for steel plants as against fertilisers which the planners have displayed, threatens to throw the entire development programme out of balance. So the need for correcting a grave error becomes doubly urgent now. In a neat little brochure which the Federation of Indian Chambers of Commerce and Industry has just brought out to emphasise the gravity of the problem, the matter is placed in its correct perspective. The second plan envisaged, it points out, a total of only 6 million tons of foodgrains as its import target, but during the first half of the plan period, food imports have exceeded 5 million tons. The population goes on increasing at the rate of about 5 million a year. The brochure quotes the Foodgrains Enquiry Committee's calculations of food demand to say that by 1960-61, the country will be needing approximately 79 million tons, that is, 15 percent more than the 1955-56 production. It is unlikely, at least on present showing, that such a level of production will be attained by then. Moreover, in less than two decades from now, i.e., by 1975, the population, at the present rate of growth, will have increased by 120 million. The prospect is disturbing. The Federation does take note of the argument that the people's requirements of cereals could be reduced by diversifying their diet, but that, it points out, is not going to solve the whole problem. It also indicates that several measures have been taken, although in a belated fashion, to raise food production during the second plan period by nearly 24 percent over the 1955-56 level, but side by side, some "socialistic measures" have been introduced which have had the effect of putting the cart before the horse. The prospects of production for 1957-58 are not bright, and the output including the falls in rice as well as wheat and

barley, seems to have declined by 6 million tons, compared with the previous year.

The trouble seems to lie in the emphasis on welfare as against increased production even in the agricultural plan. Out of the provision of Rs. 341 crores for agriculture, only Rs. 170 crores has been earmarked for schemes which will directly increase farm production. "In the massive provision of Rs. 200 crores made for the National Extension Service and community projects, the sum proposed to be spent on agricultural schemes is merely Rs. 55 crores", it adds. The recent report of the Team for the Study of Community Projects and N.E.S. has pointed out that the preoccupation with secondary social service schemes "without a corresponding concern for production has brought these plans out of perspective with the real needs of the country". The Federation has therefore little difficulty in arguing its case for switching the emphasis over to production. "The policy", it urges, "should be production-oriented and the various targets should have corresponding official organisations and Ministries directly responsible for their fulfilment. This allocation of responsibility should extend to every grade of administration and to every administrative unit. All these responsibilities and services should be co-ordinated and brought to a focus at specific short-term and long-term targets of production."

Current News and Comment

Industrial Activity Index

Corrected for seasonal fluctuations, Capital's Index of Industrial Activity shows a drop of 2.2 points during February 1958. Contributing to this were declines in sugar, tea, jute, yarn, cloth, cement, coal, pig iron, finished steel, paper, tyres, motor-cars, electricity and railway ton-miles; bicycles however increased.

Report on Texmaco

In his address from the chair to the shareholders of the Textile Machinery Corporation Ltd. at the latest annual general meeting (a fuller version of the speech appears on another page of this week's issue of Capital), Mr. K. K. Birla reviewed the prospects of the country's engineering industry as a whole with specific reference to the manufacture of machinery and producer goods in which his concern is engaged. Mr. Birla has given a completely balanced picture placing the problems side by side with the prospects against the perspective of the country's developmental efforts and the many awkward problems which have arisen from them. He has referred to the present foreign exchange crisis, and the consequent restriction on the import of capital equipment and the shortage of essential raw materials such as steel, which have arrested the rate of output in many important engineering lines. Steel supply totalled only 3.07 million tons in 1957 compared with 3.12 million tons in the previous year, and this happened when the requirements of steel were almost daily increasing due to the impact of plan activities. Mr. Birla thinks it likely that the steel shortage in the economy will be over by the end of the current plan when the three new State plants will have gone into production, and the expansion programmes of the private sector units will have been completed. Meanwhile, the current scarcity has been hitting a number of industries adversely, including electric fans and steel castings. The rolling mill industry, in particular, is in a bad plight, and a good deal of installed capacity for bars and rods has been rendered idle. Mr. Birla points out that the Indian steel prices have been raised while the landed cost of the imported metal has fallen by about Rs. 100 to Rs. 700 a ton which is about the same as the price prevailing internally. "India has thus lost the distinction which it so far had of having the lowest prices for steel in the world," Mr. Birla says.

The chairman discusses the export possibilities for Indian engineering goods and says that as the trade delegation concerned has pointed out, the countries of the Middle and Far East are "very good potential markets" and every effort should be made to develop them. In this connection, he makes a suggestion for the Reserve Bank to provide better credit facilities for exporters, as is done by the monetary authorities of most exporting nations. "If Indian exporters of machinery want to compete in the international market, they must be able to offer the same credit facilities to their customers as other foreign suppliers do. It appears, therefore, that unless the Reserve Bank of India Act is suitably amended so as to permit the rediscount of bills of more than three months' maturity, there would be no satisfactory or lasting solution to the problem."

The development programme of the company has made good progress, although the textile

machinery division has been adversely affected by the recession in the textile industry and trade. Development work on drawing and speed frames has been taken up with the help of Messrs Howa Machinery Ltd of Japan, which is collaborating in the project. More and more components of carding engines are being manufactured and it is hoped to produce by the end of 1958 all the components here. The special purposes machine tools required for these components are also being designed and manufactured in the works. The scheme to manufacture water tube, boilers, sugar machinery and railway rolling stock have suffered a temporary setback due to the restrictions on the import of capital equipment, but efforts are being made to obtain the equipment from abroad. Machine tool manufacture will be an important new line of production which the company is going to undertake in collaboration with one of the leading U.K. manufacturers.

Spare Parts for Tractors

The Government has totally banned the import of heavy tractors and earthmoving equipment by established importers since last year. This decision appears to contradict its declared policy to go ahead with constructional activity under the second plan. The drastic cut in imports of spare parts has further aggravated the situation, and a large number of machines, which have been imported in the past, are lying idle due to the lack of necessary spare parts. Speaking at the latest annual general meeting of the Tractor and Allied Equipment Manufacturers and Importers Association Limited, Mr. L. R. Patel, chairman, said that during 1957-58, equipment valued at about Rs. 15 crores was imported by established importers on previously granted licences and by actual users, the latter having been accorded a high priority in the granting of licences by the Government. The total c.i.f. value of earth-moving and construction equipment in India in all the river valley projects, mines and important industries exceeds Rs. 140.47 crores. To recondition the equipment which is now lying immobilised and to keep the rest of the equipment workable, spare parts exceeding the value of Rs. 3.73 crores will be required. "We are aware that foreign exchange to this extent will not be available from the country's resources and since it is imperative that machines in the country should be kept working, the Association has suggested a solution to this difficulty in the form of an allocation from out of the U.S. Export-Import Bank loan of \$175 million to the Government of India." Although the members of the Association have not been granted adequate licences for spare parts, the Government has sanctioned a large number of licences to actual users, who primarily are the various Government departments. Mr. Patel says that the indenting and stocking of spare parts is a highly technical and specialised job which cannot be done satisfactorily by actual users. Another difficulty is the short period of validity of import licences. Overseas manufacturers often need more than nine months to supply spare parts against an indent. Even if an importer places an order for the full value of the licence immediately it is granted, it will take about nine months for the parts to be shipped by the manufacturer. But it is not possible to use an import licence fully as soon as it is received, because the value of some licences has to be kept free to cater to customers'

emergency demands which cannot be met from ready stocks. In such cases, the present validity period proves to be an unnecessary obstruction. "I, therefore, strongly recommend that the validity period of a licence should be at least 12 months from the date of issue," Mr. Patel says.

Foreign Exchange Crisis

The foreign exchange shortage has caused anxiety to the Government as well as the business community in recent months. The problem is one of development, and should not cause too much scare in the country. It is necessary to remember that other nations were faced with similar difficulties in the process of economic development. Speaking at the quarterly general meeting of the Indian Chamber of Commerce, Mr. D. N. Jalan, president, said that with sympathy and understanding from people abroad, it might be possible to get more loans not only from the United States but also from other countries. The economically developed India with higher living standards will be a much better potential market for the industrialised countries than an agricultural economy where the majority of people live around subsistence levels. The Government's import policy has become greatly restrictive, and the country is reaching a stage when any further cut in imports may not be possible. "As it is, there have been difficulties in obtaining even essential equipment, machine tools and raw materials for the day-to-day working of industry and maintenance of production at current levels, not to speak of the expansion of industry. The import policy has to eliminate all inessential imports into the country and at the same time succeed in maintaining the supplies of essential commodities for industrial production." As for the question of earning more foreign exchange, Mr. Jalan says that a greater emphasis on export of traditional items is necessary. Simultaneously, exports of other commodities which offer new openings should be expanded, although they may not bring about the desired results immediately. Furthermore, burdens on export industries have to be reduced as much as possible. These include taxation, export duties, freight rates, wages, etcetera. There are possibilities of exporting many types of Indian engineering goods in south-east and west Asia, Africa, Australia and New Zealand and even to some of the European countries, provided manufacturers are given steel and pig iron at retention prices. The price at which steel is now available to manufacturers is higher than even the imported price, in spite of the fact that the cost of production of steel is low in this country. Referring to the activities of the State Trading Corporation, Mr. Jalan said that it has only succeeded in replacing the normal channels instead of contributing materially to supplement the country's trade. This has not been helpful to the economy as it has caused unemployment among a large section of business men who were engaged in the export trade. The volume of exports could be increased if private traders were allowed to work along with the State Trading Corporation.

Relief for the Tea Industry

The speakers at the U.P.A.S.I. meeting have urged the Government to announce expeditious relief for the tea industry. Mr. D. F. Macmillan has cogently argued that the level of taxation on the industry is high and that it is faced with keen competition abroad. Due to the need to earn more foreign exchange, a scheme is reported to have been prepared to abolish the export duty and to replace it by a uniform levy of excise duty. This will promptly yield revenue to the Centre like tobacco. The Government will not seek to tax the foreign buyer by means of an ad valorem duty based on the prices realised according to the averages for districts. The idea might not appeal to many, though it appears that the plantation industry favours such a scheme. The overriding need to earn more foreign exchange may even compel the Government to raise the excise duty and to cut the export duty in order to meet competition from Ceylon in the Australian markets. The way in which the proceeds of the excise duty will be used to meet any decline in Customs revenue is obvious, since excise duty replaced the import duty on sugar after 1935, and it is likely that, as in the case of petrol, the Government may try to introduce a parity of excise and export duties for tea as well. If exports rise due to the adoption of the scheme, the domestic consumer will have little cause for complaint.

First Accounts of L.I.C. Results

For the first time since the nationalisation of life insurance in India, the Life Insurance Corporation has brought out the audited statement of accounts and balance sheet of the "controlled business" of various insurers, covering the period 1st January to 31st August, 1956. It will be noticed

Who wants more food ?

My basic job is to assist in raising this country's food production from its present low level—so low that we have to buy abroad.

The extent to which I can help is very often not realised—it certainly is not realised enough.

Whether it is wheat or rice—gram or grass—sugar or groundnuts—whatever it is, only I can reliably and economically;

- Have the soil ready for the rains or water,
- Prepare the best tilth to suit the crop,
- Sow quickly and well on the right day,
- Give the crop attention whilst it grows,
- Harvest at the right time,
- Do, in time, all those never-ending duties such as agricultural drainage, soil conservation, water distribution and so on—which mean the difference between shortage and enough.

that these relate only to the period when the Government took over the management of the "controlled business". It was transacted through the nominees of the Central Government acting as Custodians, while each of the companies continued to retain its separate identity. The Custodians should have prepared the accounts for the period of eight months ended 31st August, 1956, separately, so that a consolidated balance sheet could have been prepared by the amalgamation of the audited balance sheets of the various insurers. This consolidated balance sheet would have been, so to say, the starting point for the Life Insurance Corporation. It was not, however, found practicable for the Custodians to prepare the accounts and balance sheet due to various transfers to new posts in the newly created divisional and zonal offices which came into being from 1st September, 1956. The Corporation, therefore, undertook the responsibility of preparing these accounts, which have been submitted to the Central Ministry of Finance by Mr. P. A. Gopalakrishnan, chairman of the Life Insurance Corporation.

In his report, the chairman has enumerated various difficulties which the Corporation had to face in the preparation of accounts of the 243 units, resulting in delay. There were difficulties in ascertaining the values of shares of the companies which were not quoted on the Stock Exchange or of properties in out-of-the-way places and of properties where the "titles" were not clear. During the company days, these valuations were usually declared and certified by the respective boards of directors. With the change in management, it was necessary to ensure that a proper valuation was made. There again, as a result of complaints lodged by some Custodians, possession of accounts books of some companies had been taken by the police who retained them for a long time in the course of their investigation. In his report, the chairman states that during the period, policies assuring Rs. 145.51 crores were issued. The total income and outgo of all insurers and provident societies during this period was Rs. 46.92 lakhs and Rs. 31.35 lakhs, respectively. Claims inclusive of bonus for the eight-month period amounted to Rs. 12.35 crores. Out of this, Rs. 3.75 crores were claims by death and Rs. 8.60 crores were claims by maturity. Claims for the whole year of 1955 inclusive of bonus amounted to Rs. 18.80 crores, of which Rs. 5.26 crores were by death and Rs. 13.54 crores by maturity.

The total expenses of management for the eight months were Rs. 12.67 crores, compared with Rs. 18.5 crores for the whole year of 1955. The ratio of the total expenses of management to premium income was 33.7 percent during this period, compared with 31.8 percent for the whole year of 1955. The chairman goes on to explain that the percentage of expenses of management to premium income for the first eight months of any year will ordinarily be higher than the percentage for the whole year, since the average monthly premiums receivable in the last four months of the year will always be much higher than the average monthly premiums of the first eight months of the year, whereas the average monthly figure of expenses of management for the last four months of the year will approximately be the same as the average monthly figure of expenses during the first eight months of the year.

There is an increase in the life fund of over Rs. 15.5 crores as at 31st August, 1956, compared with 31st December, 1955. This increase would have been much larger but for the fact that assets, which were fictitious or overvalued, have been written off or reserves provided against them. The assets of life business of Indian and non-Indian insurers and provident societies amounted to Rs. 414.22 crores on 31st August, 1956. The average rate of interest realised on the mean life assurance funds for the eight months was 2.14 percent, compared with 3.51 percent for the whole year of 1955. The chairman goes on to add that the addition to the life fund during the remaining four months of 1956 was expected to be about Rs. 9 crores. The interest-income during the last four months of 1956 was expected to be about Rs. 5 crores. The interest yield for the year as a whole based on the above figures would then be approximately 3.5 percent.

L.I.C. after Mundhra Enquiry

The adverse publicity given to the Life Insurance Corporation following the recent enquiry had the "temporary effect of slowing down business development in 1957," says Mr. P. A. Gopalakrishnan, the L. I. C. chairman. The volume of business last year came to Rs. 283 crores, but the chairman forecasts that 1958 may well see a new record established. Among other points, Mr. Gopalakrishnan has stressed the need for setting up a centralised foreign department which would compare in efficiency with other insurers abroad. The chairman has re-iterated the objectives of nationalising life insurance. The first, he says, is to protect the assured from those companies

which were unable to settle claims because of inefficiency and mismanagement. Nationalisation has obviated such a contingency. In addition to the assets of the Corporation, which exceed Rs. 470 crores, the Government of India has also guaranteed each claim. Nobody, therefore, either at home or abroad, need have any fear of insuring with the Corporation. The second objective is to spread insurance as a means of security to the remotest village. Mr. Gopalakrishnan blames the employees for inefficiency, although assurances of the security of service and standardised scales of pay, have been given. The average output of employees has fallen as a whole but, he says, defects in the organisational system partly account for this. For the future, the Chairman says: "I hope that in the coming years the Corporation would work as one team of public servants whose main objective would be to develop the Corporation's business to the best advantage of the community, to provide the most efficient service to policyholders and to keep on widening insurance protection to larger and larger areas from year to year."

Mr. Gopalakrishnan believes that it will take at least another two years to complete the integration of former life insurance units into the 33 divisional offices envisaged by the Corporation. This work involves the redistribution of over 5 million policies and connected papers and the re-assignment of thousands of employees. Referring to the finances of the Corporation, the Chairman says that premium income rose from Rs. 4.6 crores a month during the first year since nationalisation to Rs. 5.4 crores a month during the first 11 months of the second year. The average claims paid rose from Rs. 1.3 crores a month to Rs. 1.4 crores a month over the same period. The investible surplus has increased from Rs. 30.2 crores to Rs. 34.7 crores. Speaking of the employees' demand for a bonus equivalent to two months' pay, Mr. Gopalakrishnan has pointed out that the Government of India has decided against bonus payments, but the Corporation has decided to extend a scheme of free insurance for its employees and to contribute a lump-sum each year for providing staff amenities. A sum of Rs. 12 crores has also been sanctioned for a staff housing scheme.

U. P. Food Riots

The looting of foodgrains, which has been reported from different parts of Uttar Pradesh, has been attributed by Government spokesmen to the work of some political parties. Sabotage has also been suspected in the breach of the Maloney bund in Gorakhpore. How one or all the opposition parties in the State together could resort to such suicidal tactics in order to put the Government in the wrong is more than imagination can cope with. But it is a fact that while specific charges of connivance have been denied by all the political parties, some of them have "congratulated" the people on "asserting" themselves. It is also said, by way of extenuation, that no revolution can be set on foot without some disobedience of the law. Nothing could be more damaging to the prosperity of agriculture than a general break-down of law and order in the countryside. It is true that the looting has been more of Government fair-price shops than of private godowns, but the latter might be attacked soon if the existing acute conditions of scarcity continue.

Incidentally, it is rather curious that while the U.P. Government points to hoarding as the greatest single cause of food scarcity in the State, the Central Government does not share the view at all. The U.P.'s Food Minister, Mr. Aly Zabeer, said at a Press conference that Mr. A. P. Jain, the Union Food Minister, does not believe that there is hoarding on any considerable scale in the State. Mr. Jain's contention seems to be partially borne out by the fact that the State Government, in spite of its active drive for seizing hoarded grain, has not been able to procure it in any significant quantities. Obviously, there is difficulty in getting at hoards, especially if, as Mr. Aly Zabeer says, the dealers are arranging to keep their stocks with the peasants. It is highly unlikely that speculators are resorting to such devices on any appreciable scale. So long, however, as the State Government maintains that there is large-scale hoarding, its demand for lifting the ban on the movement of wheat from the Punjab to the U.P. will remain weak. The Centre would appear to have rightly rejected the demand, because the arrivals from the Punjab could also be seized by hoarders.

Plea for Family Planning

Though Roman Catholics object to official propaganda on birth control, the prevalence of improvident maternity, which was stressed in the last census report, has led the public to appreciate that any plea for family planning has its importance. The Madras Corporation's scheme, which provides for offering advice on planned parenthood at its

child welfare and maternity centres, has been successful. The Government hospitals in the State, too, are encouraged to advise mothers who wish to limit their families. Enlightened parents are not usually reluctant to take steps to reduce the number of children, and religious scruples are nowadays not formidable barriers. The success of voluntary guidance given in Bombay by women doctors has inspired a belief among the latter that in special areas, including villages, the benefits of family planning will be gradually appreciated. The end of popular prejudices might mean that the warnings given by Sir John Megaw and Sir Alexander Russell about 20 years ago on the increase in India's population are now being heeded. The middle class realises today that the task of bringing up too many children is not easy, especially in these days of high cost of living. If the living standards are to be maintained, it is necessary to practise family planning on a wide scale. The enforced postponement of marriages has not led to any positive results so far, though it is widely believed that the spread of education will go a long way to help accelerate the progress in family planning.

Finances of Madras Corporation

When the Madras Government appointed a departmental committee in July to review the City Corporation's finances, it contemplated going beyond the scope set out last year in a white paper on local self government. It was then suggested that the posts of the Revenue Officer and the Accounts Officer should be upgraded soon. A suggestion has now been put forward that there should be limits to overdrafts arranged with banks and that the repayment of short-term loans by the Corporation should be completed except when stocks and stores are carried. The State Government thinks that earmarked funds should not be used for general purposes since it feels that autonomous bodies like the Corporation should exercise more caution on their expenditure. Whether the expert committee, which might consult Sir Cyril Gurner's report on the Calcutta Corporation's finances, will venture to increase taxes, accelerate collection or curtail outlay on superfluous schemes, cannot yet be definitely said. But it is likely that it will recommend the raising of additional revenue from the markets. Licence fees might also be raised to help the Corporation meet its increasing expenditure. The committee has appreciated the need to restrict expenditure, and it is unlikely that the Corporation will undertake independent borrowing for slum clearance in the future, for it is felt that the City Council may ask for grants from the Harijan welfare fund to satisfy the demands for cheap housing. It is also probable that the committee will suggest the radical alteration of the assessment procedure. An increase of water rates might be attempted if the property tax is pegged at present levels, and the City Council, which has already enhanced the profession tax, might be inclined to raise the charges for lighting and conservancy.

Raw Cotton Surplus

The need for a concentrated drive to boost raw cotton exports has been stressed by Mr. Madan-mohan Ruia. Speaking from the chair at the annual general meeting of the Cotton Buyers Association, he said the country would have a carry-over of about 2.2 million bales on 1st September, 1958, when the new season officially begins. The new crop is estimated at 5.5 million bales which would bring available supplies to 7.7 million bales. If mill consumption is maintained at the expected rate, the carry-over at the end of the 1958-1959 season will be even higher than what it is now. Mr. Ruia points out that the only way to dispose of this surplus is to stimulate exports. He said that the question of exports had to be considered not only from the point of view of earning foreign exchange, but also from the equally important angle of reducing the surplus so that the equilibrium between supply and demand is maintained, otherwise it would have a disastrous effect on the prospects for the 1959-1960 season. Mr. Ruia advocated comprehensive export policy to be announced immediately and suggested that it should envisage 100,000 bales of Bengal Deshi and another 100,000 bales consisting of cottons stapling up to 23/32in. and 4in. A further quota, he said, could be announced when the exact quantity of the 1958-1959 season crop was determined. This, he maintained, would offer a continuity of supply to foreign buyers and also help stabilise the domestic market. Export prospects would be greatly affected by the policy Pakistan has chosen to follow, Mr. Ruia said.

Nylon Filament for Carpets

In the carpet industry, man-made fibres have hitherto been used much more extensively in the

form of staple than in that of filament. This may have been partly because staple fibres emphasise much more strongly than filament yarns do the financial advantages of making carpets from materials other than wool. It may also have been partly because in the range of fibres hitherto available, the staples were better adapted technically for carpet manufacture than the filament yarns. A development now reported from the United States may cause some changes. Limited production of a new filament nylon yarn—Type 501—for carpets has been announced by the Du Pont Company. The latter has said that the new yarn is available only in limited quantities, and will be introduced in all-nylon carpeting in the autumn by two U.S. carpet manufacturers. The new filament carpet nylon is an additional product for the carpet trade and is a supplement to nylon staple for this purpose. It is expected to permit the production of a broader range of styles and textures, particularly in woven and tufted loop pile constructions. The company has said that in many constructions, Type 501 yarns will need further processing in the form of twisting, plying, and heat setting, in order to achieve various styling effects. The new product is being produced at first in 1,300 denier and 3,900 denier, experimentally priced at \$1.53 and \$1.47 a lb, respectively.

Fewer Cotton Looms in Use

Latest returns of the International Federation of Cotton and Allied Textile Industries show the world total of cotton powerlooms, as on 31st January last, at 2,640,876. This is a fall of 25,898 on the revised figure for January 1957. The number of automatic looms increased by 23,694, but this was more than offset by a decrease in ordinary looms. The main decreases are in Europe and North America. Totals for Asia, South America and Africa increased. Returns reaching the Federation in Manchester show that, apart from replacements, Asia has increased the number of her looms by 8,452 in 1958, which is 58 percent of all new additional looms, and South America has added 3,000. In 1959-60, both these continents and Africa have a considerable programme for expansion in their weaving capacity. In the next two years, Asia plans to install an additional 15,992 looms, of which 15,330 looms will be automatic. Against these figures, the Federation's statistics show the number of additional looms in course of erection in Europe at only 1,135 (including 533 in Britain), and the number to be erected in 1959-60 at 1,036. The number of idle looms in Europe, as on 31st January last, is given as 106,210 (including 51,164 in Britain), against 28,576 in Asia. The Federation has also drawn up a table of the average hours worked each week. This shows that "loom-hours" in Asia, as on 31st January, averaged 124.9 on the basis of active looms, compared with 71.2 in Europe, 107.8 in North America and 93.8 in South America. Britain had the lowest average of any major textile manufacturing country with 48.8 "loom-hours" a week. In Hongkong, where shift working is the rule, the figure was 156.3. The Federation admits that some of its statistics are based on estimates and should be treated with reserve. But there is no doubt that the Asian textile producers are continuing to gain ground in relation to Britain and other European countries. Nor is there any clear sign of this trend being reversed.

A CASE OF SMOKE NUISANCE

WE see that the authorities of Howrah have apparently commenced a campaign against jute mills and that the Manager of the Howrah Jute Mills was prosecuted on the 24th ultimo under section 1 of Bengal Act II of 1883 for causing a nuisance by allowing smoke to escape from the mill chimney; and that he was fined Rs. 25. If Calcutta, and especially Howrah were in a sanitary state, we could understand the Magistrate turning his attention to a smoke nuisance alibi with Bengal coal. Juteopolis must necessarily suffer somewhat from the effects of smoke. But in view of the filthy spots in Calcutta and Howrah it is a great waste of power to be prosecuting jute mills while there are such frightful slums in our midst. We would even go to the length of saying that the smoke is a deodorizer. It is generally supposed that these periodical persecutions to which local mills are subjected are inspired from Belvedere, that the inhabitants of that quasi-regal abode will not allow the smoke to come between the wind and their nobility. We think that if Sir John Woodburn were to issue an order directing the police to turn their attention to real nuisance instead of worrying the local industries, he would be very well advised. Picnics to jute mills are all very well, and an intelligent interest when full of affability and luncheon is no doubt excellent, but these senseless prosecutions do not harmonize with them.

'SANFORIZED'
means
better sales
for you!

EXPERIENCE is teaching your customers to always look for the label 'Sanforized'. They know this label is their guarantee that garments will not shrink out of fit...even after many, many washings. What they don't know is the 'behind the scenes story' which ensures the complete reliability of all cloth labelled 'Sanforized'. Anytime, unannounced...our expert visits a mill licenced to use the trade mark 'Sanforized'. Selecting samples of cloth at random, he subjects them to a rigorous international wash-test, reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized'. It's this kind of care plus our advertising plus experience which makes cloth with the label 'Sanforized' such a sure seller—such a profit-maker for you!

Look for **'SANFORIZED'**
on the label

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

TRENDS OF FOOD SUPPLY AND CONSUMPTION IN INDIA

POPULATION INCREASES FASTER THAN PRODUCTION

By J. P. Bhattacharjee

HISTORY has demonstrated time and again that Malthus was, at least, partly right in drawing attention to the basic danger which could arise from the relative inelasticity of food supply in a closed economy. The Malthusian doctrine is no longer accepted as an absolute proposition, even though nearly two-thirds of the world's population are now engaged in a serious fight with hunger. India is among the countries fighting the Malthusian dogma rather hard. The nature of this fight and the outcome so far constitute an interesting field of study. An attempt is made in this article to provide a historical picture of the trend of food consumption in India since the beginning of this century. The analysis is based on the author's paper, "Trend of Consumption of Food and Foodgrains in India", which is included in the forthcoming publication, *Studies in Indian Agricultural Economics*, of the Indian Society of Agricultural Economics. The statistical material is, however, being excluded from this article for the sake of readability.

If the figures of the net per capita availability of foodgrains in India before Partition, are computed for each of the years, 1900-1945, they will show that the level of foodgrain consumption (equating consumption with net supply) has passed through three stages during these 45 years. The first stage, which lasted until the early 'twenties was one of a slight increase (from 17.8 ozs. to 19.7 ozs. per capita a day). The second stage, marking the beginning of the course of the decline, showed, however, a temporary stability at a lower level (17.0 ozs. per capita a day) during the decade lasting until mid 'thirties. The third stage is practically a continuation of the second and shows a further decline (to 14.7 ozs. during 1940-45). The main reasons for these movements in the level of foodgrain consumption are easily understood and will be briefly indicated in this article.

Production Level

An examination of the trend of production shows that during the first decade of the present century, the level in undivided India was more or less steady, between 62 and 63 million tons. From 1910 to 1920, however, foodgrain production seems to have reached a slightly higher level around 70 million tons. During the 25 years since 1920, the level was somewhat lower than in the second decade, but did not show any tendency either to rise or fall. The quinquennial average of gross production fluctuated between 63.4 and 66.5 million tons. In general, however, production during this period showed much less of the sharp fluctuations which marked it during preceding years. On the whole, production from 1920 to 1945 has been

around the level which prevailed between 1900 and 1910.

The estimates, therefore, show that over these 45 years, there has not been any sustained growth in foodgrain output. The small increase noticed during the decade, 1910 to 1920, was not due to any changes in the basic characteristics of Indian agriculture. In other words, there was no growth factor associated with it. There has, however, been one significant change in the behaviour of production, namely, that after 1920, its level showed much more stability than it did before. The explanation lies in the significant decrease in the incidence of floods and droughts during this period, as has been clearly pointed out in the 1951 Census Report.

An examination of the figures of net movement into or out of the country shows three distinct phases. Between 1900 and 1919, undivided India was a net exporter of foodgrains. The amount was a net exporter of foodgrains. The amount exported, however, fluctuated sharply from year to year, depending largely on the preceding harvest. Net exports during this period varied from a minimum of 100,000 tons in 1914-15 and 1915-16 to 3 million tons in 1911-12, rising to its peak of 3.2 million tons in 1912-13. If the years 1911-12 and 1912-13 are excluded, it would appear that the trend of net exports has been generally downward all through this period. The second phase starts with the year, 1919-20, when India for the first time became a net importer of foodgrains. This phase continued until 1939-40 (in fact, it still continues today). During this phase, the level of net imports showed a rising trend and reached a peak figure of 2.2 million tons in 1939-40. In the next phase which covers the years of the second world war, the level of net imports declined sharply mainly because of war conditions and the consequent stoppage of imports from countries such as Burma. This was, however, a temporary break because imports increased substantially again after the war. The result of the two trends of production and net exports or imports has been that the total quantity available for consumption in the country shows a slightly higher level after 1910 than in the earlier period. On the whole, it seems that the net availability has not increased significantly over the whole of the period, and, in fact, has remained more or less at the same level since 1920.

Population Growth

The trend of population shows again a sharp change after 1920. During the first decade of the century, the rate of population growth was very slow, and in the second decade there was, in fact, a decline. The result is that the population in 1921 shows only a small increase over that in 1901. The position, however, changed greatly after 1921.

The decennial growth rate during this period increased from 10.6 percent in 1921-30 to 15 percent in 1931-40. It is now possible to understand, at least in part, the reasons for the decline in the level of foodgrain consumption over the period 1900-1945. During 1900-1920, both production as well as population remained more or less static. If these increased at all, the rises in them were in the same direction. This explains the reason why the level of consumption seems to show an upward trend until 1920. The stagnation of agricultural output in the subsequent years along with an increasing reliance on imports and a progressive rise in population, combined to depress the consumption level steadily. The most important factors responsible for the long-term changes in the consumption of foodgrains in undivided India seem, therefore, to have been the population growth on the one side, and the stagnation of production on the other.

Trend of Consumption

Figures relating to the area that now comprises the Indian Union show that over the period covered by the series, the level of consumption suffered a steady decline from 17.25 ozs. (1,725 calories) during 1934-39 to 13.3 ozs. (1,330 calories) in 1951-52. The year, 1951-52, seems, however, to mark a turning point, because during the next five years the level shows a sustained increase. An examination of the different factors shows that the level of production between 1945-46 and 1951-52 was perceptibly lower than during the war and the immediate pre-war years. Since 1952-53, however, production has increased significantly and has reached the pre-partition level. Secondly, net imports were much smaller during the war years than in the pre-war period. Since 1945-46, however, they have vastly increased and the record figure of 4.7 million tons was reached in 1950-51. Then imports declined until 1956-57. Thirdly, the population has grown steadily all through this period. The rate of growth since 1951 seems, according to available evidence, to have gone up to 1.5 percent a year.

The net result of all these factors has been that until 1951-52, the level of consumption was going down because net imports could not match the progressive growth of population, and production remained stagnant. The crucial rôle that the imports of foodgrains have been playing in the economy of India during the past two decades was fully demonstrated during the famine of 1942-43 in Bengal. The initiation of the five year plans has, however, succeeded, whatever may be the extent, in re-vitalising agricultural production. Against the background of a continuous rise in population, the growth in foodgrain output may not seem spectacular; but it should not be doubted that the economy has arrived at a new dynamic phase. It seems, therefore, that until the planning era, India was caught in what could be called a Malthusian spiral. Even though the spiral now seems to have been broken, the bogey will continue to haunt.

Changing Levels of Offtake

The Directorate of Economics and Statistics compiles and maintains the annual food balance sheet of the country. The figures, also published by the F.A.O., show some interesting trends. First, the level of total food supply has gone down since the pre-war days, from an average of 1,970 calories a head a day to the lowest level of 1,590 calories a head in 1951-52. Since then, it has been increasing again. Secondly, the composition of food in the period, 1948-56, has been poorer than in the pre-war period. There has been a deterioration in the level of net supplies per capita of cereals, meat and fish, and milk and milk products. Improvement is noticed only in pulses, potatoes and other roots, and fats and oils, while there is no change in the position of sugar and gur. The post-war composition of food consumption, has, therefore, suffered, as compared with the pre-war days in both the protective (animal protein) and the energy-giving (cereals) items of food. The worst part of the picture is the decrease in the supplies of milk and milk products. Thirdly, except for 1951-52 (which was a famine year), the trend since 1948-49 has not been for the worse in all items. In fact, the position shows a steady improvement in the case of cereals, pulses and marked after 1951-52. The improvement is specially in the level of food consumption during the period, 1938-56, were mainly the result of fluctuations in the supplies of foodgrains (cereals and pulses). It would not, therefore, be wrong to conclude that the food supply in India improves or deteriorates according to the availability of foodgrains. On the basis of data referred to earlier, it is to be concluded that the level of food consumption in India was in the neighbourhood of 2,500 calories a person a day in the 1920's after registering a slight increase over the level of 1900-1910. After 1925, it began to decrease steadily until it was round about 2,000 calories in the pre-war period.

The picture that emerges from this discussion is that even though the country has turned the corner since 1951-52, the position is by no means reassuring. The rate of population growth seems to have registered further increases in the second five year plan period. If this rate comes up to 2 percent a year, as has been assumed by the Foodgrains Enquiry Committee (1957), improvement in the level of food consumption in India will depend on whether the country can attain a sustained growth of food production at an annual rate of at least 3 percent. It is not impossible to achieve such a rate of growth, and, in fact, it can even be exceeded. But this calls for an all-out national effort as the planners and administrators of the country are now beginning to realise.

A Ditcher's Diary

OUR DISTINGUISHED CONTEMPORARY, *The Hindu*, has, I see, issued a booklet giving the reasons why its management decided to suspend publication on 5th August. It makes dismal reading. Whatever the rights and wrongs of the original dispute, there can be no excuse for the workers' eagerness to use violence or the supine attitude of the police in refusing to deal with it. Like so many of these incidents nowadays, it arose because one worker had to be disciplined. The process was reasonable and legal enough: the outburst was simply another example of the present conviction of labour about its right to do as it pleases. Picketing led to stone-throwing and assaults on loyal workers; distribution was interfered with; the nights were kept alive with jeering and slogan-shouting and the strike was joined by other workers who had absolutely nothing to do with the dispute. The pattern is a familiar one, and is not without its recent parallels here in Calcutta. What was perhaps the most significant feature of this incident was the reluctance of the police to protect the lives and property of those subjected to attack; the list of those injured reads like an army casualty roll. Finally, the police were forced to escort the besieged persons off the premises because, in the words of the booklet, they "were forcibly confined without food or refreshment". I suppose it is not possible these days entirely to blame the police. If they had been assured of Government support for their actions, they would probably have done something to quieten the disturbance. The fault lies with the triumph of the popular belief that the only thing that has rights and privileges is a mob strong enough to enforce them. In this case, the mob was able to put *The Hindu* out of commission for a whole week, and apart from a voluntary one day's break in 1942, it was the first time in eighty years. In a telegram to the Prime Minister, the Vice-President, Pandit Pant and other prominent members of the Central Government, the editor of *The Hindu*, Mr. Kasturi Srinivasan, said: "It will be impossible to resume publication until effective protection is vouchsafed for the normal conduct of the paper. Is this asking too much?" Well, is it?

THE TRIBE THE AMERICANS SO IRREVERENTLY call "egg-heads" has never been excessively popular with men in business, and the contempt has been reciprocated often enough by intellectuals. Sir Alexander Fleck of Imperial Chemical Industries reminded the British Association last week that the estrangement had better end. "Science and Business: A Balanced Partnership" was Sir Alexander's theme, and he defined the functions of both with admirable precision. Science, he said, is an approach to "an understanding of the universe along a broad highway of organised knowledge firmly founded on observation and experiment embedded in a matrix of theory." And he spoke of business—"a more comprehensive term than industry." Speaking both as a scientist and a business man, Sir Alexander pointed out how many business houses, where specialised scientific knowledge is necessary, still do without it, and how this has led to the decline of many industries. On the other hand, to produce the requisite number of scientists costs money, and in this context "it is easy to see the importance and responsibility of business, which produces and distributes most of our national wealth. Our capacity to extend our science and education largely depends on our

ability to run business successfully." Sir Alexander was speaking primarily of Britain, but the inter-relation of business and education that he laid down is valid everywhere. And in all my years in India I have not once heard the two mentioned in the same breath. Rather the assumption is that the world of business is in some unexplained way inimical to the universe of learning. That the first condition of progress in any sphere is national prosperity is rarely mentioned by any of the leaders who daily tell us what is good for us. That the country cannot pay for the education it needs, and wants, unless wealth is produced—and this is done more in farms and factories than in secretariats—has not even begun to be recognised in India. And it should surprise nobody if it ends up with very little of education—and perhaps less of prosperity.

TO AGREE WITH SIR ALEXANDER THAT SCIENTISTS have a place in modern business is not to deny that these prophets of our time are still capable of making utter fools of themselves outside their own specialised fields. What reminded me of this fact were the proceedings of the annual general meeting of the British Association for the Advancement of Science, which was held last week in Edinburgh. The prevailing opinion among the scientists present seemed to be that the world was lost unless we were all prepared to think the same way as they do. It was good to see so horny a realist as Lord Boyd-Orr refute such specious nonsense. I do not necessarily agree with him that the world has had "an overdose of science". But I do believe it has had too much of the kind of scientist who combines a surfeit of factual knowledge with a tendency towards the most elementary mistakes of the uneducated ignoramus. The most fatuous view expressed at the meeting came, I regret to say, from a member of my own profession—if indeed the editor of a boys' comic paper can be considered a journalist. It was his amazing contention that Kipling's "Just So" stories could damage a child's outlook. So, no doubt, could his own paper; it is apt to depend on the child. I cannot myself accept that contact with literary talent and imagination of the highest order can bring lasting harm to the young. Childhood is surely the one period of our lives when we can develop the necessary human capacity for dreams and fancies without having to pay too great a heed to the dictates of reality. Besides, does anybody really know why the giraffe has a long neck or the rhinoceros a loose skin? There are certainly theories on the subject, but to attempt to explain all these to a child is to run the risk of leaving him with a life-long contempt for all things scientific, to say nothing of a collection of facts which may turn out to be no nearer the truth than Kipling's. Next we shall hear that Lewis Carroll (a mathematician, by the way) is a menace to children because he made animals talk; or that Shakespeare should be banned from the nursery because one of his plays features a ghost and another one fairies. No, I cannot agree that we should deprive the young of the beauties of imaginative literature in exchange for a mess of scientific pottage.

I DON'T KNOW ABOUT THE DAY OF THE LORD, BUT encroachments on freedom certainly come as a thief in the night. And I wonder how many have

noticed the dangerous clause Mr. G. L. Nanda almost smuggled into his Bill on working journalists last week. Somebody who was present in Parliament on the occasion tells me that the amendment asking income-tax authorities to disclose to the Journalists' Wages Committee information supplied them by assesses in confidence came towards the end of the debate. He also picked up the gossip, by no means improbable, that this provision had been permitted by the Finance Ministry and the Prime Minister after some hesitation. Both should have hesitated longer, to the point of refusing it. One of the elementary decencies of a democratic society is that it allows certain privacies and confidence is honoured. This applies as much to doctors and lawyers as to income-tax officers, although the latter are a Government department. Apparently the present Government, inspired no doubt by undefined social justice, has decided to shed this restraint. Tyranny is round the corner and no less. The Bill on journalists does make it clear that the income-tax officers' secrets are not to be published or used for any other purpose. But then, all tyrannies begin this way. A small concession is made for a specific purpose, and soon all rules seem easily breakable. Before long, breaches are advertised as "the thing" for progressives—and a free society is no more. Once the Labour Ministry has shown the way, I can see the Health Ministry requiring doctors to report secretly on their patients and the Home Ministry demanding of lawyers confidential reports on their clients. Successive Finance Ministers have bemoaned the extent of concealment of income in this country. From here on, I think, not telling your I.T.O. the truth would be as respectable as fighting for freedom. Mr. Nehru can take my word for it. I have not exaggerated the implications of the amendment he has allowed Mr. Nanda to move.

A FORTNIGHT IN THE UNITED STATES NEVER DID anybody any harm, and I wish the overworked Chief Minister of West Bengal a very restful holiday. The two Secretaries who will accompany him must also need a respite from their onerous duties, and I am certainly no believer in all work and no play. It is, to use the quaint American phrase, the public validation of the visits which I find mildly puzzling. The agricultural universities of the United States are justly famous, but it is hardly a compliment to them that a team of three, however brilliant their mental equipment, can master all they have to teach in a matter of fifteen days or so. Then there is the question of what Indian agriculture may, or may not, have in common with the same enterprise in the United States. I raise this question, even at the risk of seeming churlish, because I think this travel business is being overdone in this country. Admittedly, there is nothing like foreign travel to broaden one's mind, refresh one's outlook. As for learning specific subjects, it is doubted whether, thanks to the printed word, knowledge is not today available to almost everybody anywhere in the world. Some of my travel companions on the recent trip to Moscow were agreeably curious; hungry for knowledge, they asked many questions, took copious notes and demanded and got a mass of literature on various aspects of the progress the Soviet Union has made. I had a look at those volumes on the plane and each one of them I had seen on sale on the pavements of Calcutta for a few naye paise. Coming back to Dr. Roy's impending visit to the United States, some will have been reminded that certain earlier effects of foreign travel on his highly receptive mind translated themselves in West Bengal rather expensively.

THE DITCHER

Construction of Industrial Sidings

DO NOT COMMIT YOURSELF BEFORE CONSULTING THE RAILWAYS

In your own interest, please consult the railway authorities before you acquire land etc. for the purpose of building factories or for such other projects as may require the construction of special sidings.

The Railways will extend to you all possible help and advise you in advance whether or not it will be practicable to construct a siding on such a site. Each case will be examined by the Railway experts. This will save you any unnecessary delay and possible loss of Capital.

CHAIRMAN, MR. K. K. BIRLA SURVEYS PROBLEMS AND PROSPECTS

Addressing the Eighteenth Annual General Meeting of the Shareholders of the Textile Machinery Corporation, Limited held on the 28th August, 1958, Mr. K. K. Birla, Chairman, said—

Ladies and Gentlemen,

It gives me great pleasure to welcome you to the 18th Annual General Meeting of your Company. The directors' Report and the audited statement of accounts for the year ended 31st December 1957 have already been with you for some time and with your permission I propose to take them as read.

An event of considerable importance since we met last was the resignation of Mr. T. T. Krishnamachari from the post of Finance Minister. His was a towering personality and during his tenure of office, first as Commerce & Industry Minister and then as the Minister for Finance, he made a valuable contribution towards the industrialisation of the country. It was a matter of both regret and disappointment that a man of his unassailable integrity and ability had to resign to uphold constitutional propriety. I, however, welcome the appointment of Mr. Morarji Desai to this post of high responsibility. He is renowned as a man of great sagacity and wisdom. The economy of the country has been put to a great strain in recent years and the very fulfilment of the Second Five Year Plan is in peril. In the circumstances, it is reassuring to find a man of his calibre at the helm of affairs and it is the duty of the industrialists to co-operate and make concerted efforts in strengthening his hands and in attempting to save the Five Year Plan from the mire in which it has fallen.

The biggest single factor threatening to jeopardise the Plan is the shortage of foreign currency. Our foreign exchange reserves at the beginning of the First Five Year Plan stood at about Rs. 800 crores. There was no appreciable decline in these reserves till about March 1956 when the figure stood at Rs. 742 crores. Thereafter owing to the increase in the tempo of the Second Five Year Plan, as also owing to unplanned imports, our foreign exchange reserves dwindled away in an alarming manner. By 1st January 1958 they were reduced to Rs. 293 crores only. This means that in 91 weeks our foreign currency reserves declined by Rs. 449 crores or at the rate of roughly Rs. 5 crores per week. It was a painful situation for the country but it had to be faced. The momentum of decline has now been controlled but even then we are losing foreign currency at the rate of Rs. 34 crores per week after 1st January 1958. If this rate continues unchecked, the entire foreign currency reserves would vanish in about 14 months. Whereas the efforts made by the Government of India to stop the decline are commendable, it is feared that unless substantial assistance comes from external sources, our position would hardly improve.

But besides depending on foreign resources, we must rely on our own efforts to improve the situation. Proper steps have already been taken by the Government of India to control imports. There may be further scope for improvement in that direction. But that apart, we have to concentrate on exports. It is disappointing to note that the quarterly ending March 1958 and June 1958 there was a decline of Rs. 25 crores and Rs. 28 crores respectively in exports as compared with the corresponding quarters last year. Thus, in the half-yearly period ending June 1958, the country has lost over Rs. 50 crores in exports. This indicates an annual rate of decline of Rs. 100 crores. The situation could be improved only by a careful consideration of the problems of each individual industry and making attempts to solve the same. The Engineering Industry too must play its role in the export drive. But before it could do so, it has to develop on sound lines so that it may be in a position to export its production in the face of competition from foreign countries.

Export Possibilities

At present the export of engineering goods from India is insignificant, being only about Rs. 4 crores out of a total export trade of about Rs. 600 crores. But as the reports of the recent Engineering Trade Delegations to foreign countries reveal, the Middle and Far East countries are very good potential markets for engineering goods and we should endeavour to take advantage of these markets. Much, however, would depend upon our quality, reputation and price. Regarding the first two, we shall be able to establish a reputation only in course of time. So far, India has occupied a very insignificant place in the world map in the export of capital goods. To export consumer goods is not difficult but the export of capital equipment which has a life of twenty years or more cannot be accomplished unless the necessary confidence about quality is inspired in the minds of the customers. Towards this end, the engineering industries in this country should not doubt make their best endeavours. But the third and a very important factor is regarding the cost of our products. Although at present labour in India is comparatively cheap, the wages will certainly go up if the standard of living has to be improved in this country, as is planned. But unless that is accompanied by a pro rata increase in the productivity of labour, the cost of production would rise and the industry would be unable to export. Therefore, a rise in wages should be commensurate with increase in productivity. The two are inseparable. In this connection, mention may also be made of the growing demand of labour for higher bonuses. Workmen are no doubt entitled to a reasonable bonus if by their hard and sincere work they bring about a reduction in the cost of production and an improvement in resultant prosperity. But at the same time it has to be realised that the award of bonus must be subject to an appropriate ceiling. In the textile industry, for instance, such ceilings have been fixed in many important centres by agreement with labour. Some sort of a similar understanding is needed in the Engineering Industries too. After all, bonus is not the only liability on profits.

A much more important item is the expansion of the industry itself and since fresh capital is not readily available, a major portion of the profits must be ploughed back into the industry for the purpose.

While I am not sounding a note of over-optimism, I should like to mention that enquiries from foreign countries have been received for goods manufactured by your Company and there are fair prospects of sales for exports materialising in the near future. I do hope that in course of time we shall be able to build up this business which would not only be of some assistance to your Company but would also earn valuable foreign exchange for our country.

A vital factor affecting exports is our capacity to grant credit facilities. As is well known, other countries like Germany and Japan are in a position to grant credit facilities for periods extending up to five years or in certain cases even more. India too is getting goods on credit from these countries as also from other countries in the West. If, therefore, we have to export, we too must be in a position to grant credit facilities. According to the present practice, banks in this country discount bills for a maximum period of only six months because they themselves get credit facilities from the Reserve Bank of India for bills of only three months' maturity. The Reserve Bank however is unable to do anything in the matter because it is tied down by Section 17 of the Reserve Bank of India Act. According to the provisions of that Section, only bills maturing within ninety days from the date of their discounting are eligible for

rediscount by the Reserve Bank or for being held by it as security for advances. In other countries, the exporters of machinery are in a position to grant long term credit to their customers because they, in turn, themselves receive similar discount facilities from banks of their respective Governments. If Indian exporters of machinery want to compete in the international market, they must be able to offer the same credit facilities to their customers as other foreign suppliers do. It appears, therefore, that unless the Reserve Bank of India Act is suitably amended so as to permit the rediscount of bills of more than three months' maturity, there would be no satisfactory or lasting solution to the problem.

Achievements of Private Sector

With the imposition, since we last met, of the Gift Tax, the chain of various taxes—some of them novel—has been completed. No country is as heavily taxed as India is and in no other country are there taxes of such varied nature as in India. It may be pertinent to mention that such heavy taxes have not been imposed even in Western countries many of whom have social democratic governments. In the United Kingdom, for instance, even when the Labour Party was in power, such taxes were not imposed. Nor are they likely to be imposed in future if the speeches of the leaders of the Labour Party are any indication of things to come. It is being argued that India is experimenting with these taxes to achieve a socialist society in this country. But to experiment with finances is like playing with fire and should be undertaken with the greatest caution. Two things in particular have to be borne in mind. In the first place, the taxes should leave adequate incentive to individuals to improve their condition, and secondly, they should not be such that capital becomes dry. It is with these two objectives in view that the pattern of taxes should be revised.

In this depressing gloom, it is heartening to note the strides which have been made by private enterprise. With the exception of those items where demand is not likely to come up to expectations, there has been a general improvement in the production of the private sector. In fact, in many sections of the industry, it is expected that even the capacity earmarked for them under the Second Five Year Plan would be exceeded. To cite a few examples, some of the industries in which the targets of capacity are expected to be exceeded are mentioned below:

Name of Industry	Unit	Plan target	Capacity at the end of 1957	Capacity achieved by 1960-61
1. Soda Ash ...	(000 tons)	253	108	320
2. Plastics and synthetic moulding powders ...	(tons)	12810	3730	13200
3. Rubber manufacture (automobile tyres) ...	(000 Nos.)	1450	1062	1774
4. Automobiles ...	(Nos.)	57000	36000	60000
5. Bicycles ...	(000 Nos.)	895	627	1350
6. Radio Receivers ...	(000 Nos.)	213	213	300
7. Staple Fibre ...	(million lbs.)	32	32	40
8. Glass ...	(000 tons)	335	295	343

Special mention may be made of the Iron and Steel Industry which is one of the key industries in the private sector. The target of capacity under the Second Five Year Plan for the private sector has been placed at 2.3 million tons. It is expected that this target would be realised much earlier than the end of the Plan period.

The Engineering industries in the country in particular have made appreciable advancement since 1951. As I had mentioned last year, their progress has been more marked than that of the other industries. The latest indices of production are:

Name of Industry	Index of production in 1957 (Base 1951=100)
1. Cotton textiles ...	115.6
2. Jute textiles ...	120.5
3. Cement ...	175.3
4. Iron and Steel ...	119.3
5. Sugar ...	185.4
6. Paper ...	159.3
7. Engineering Industries ...	240.1
8. General Index ...	137.1

Apart from the general development of the organised sector of the Engineering Industry as pointed out above, there has been a considerable growth of Engineering Industry on a smaller scale, particularly in West Bengal and the Punjab. Spare parts of machinery, Railway equipment, lathe chucks and umbrella parts of high standard are being manufactured in good quantities in West Bengal by these Small Scale Industries. Likewise, the Punjab is witnessing a welcome growth of small scale manufacturers of cycle parts, small machine tools, sewing machines, rice and flour mill machinery, rivets and screws, etc. All these enterprises are mostly proprietary or partnership concerns.

I am happy to say that during the year under review, the progress of Engineering industries has not only been maintained but has been further improved upon in a majority of the cases. The improvement would be evident from a comparison of the indices:

Item	Unit	1951	1956	1957	Index of production (Base : 1951=100)
1. Machine Tools ...	Rs Lacs	47.3	82.0	250.0	173
2. Transformers ...	000 KVA	196	911	1219	467
3. Bicycles ...	Lac Nos.	1.14	6.64	8.01	574
4. Electric Fans ...	Lac Nos.	1.94	3.38	5.24	622
5. Ring Frames ...	Nos.	276	1116	1368	405
6. Carding Engines ...	Nos.	—	732	1020	496
7. Sewing Machines ...	000 Nos.	44.5	130.4	166.6	293
8. Radio Receivers ...	000 Nos.	49.1	150.6	190.3	307
9. Electric Motors ...	000 HP	143	360	469	251
10. Railway Wagons ...	000 Nos.	3.7	16.0	16.8	432
11. Diesel Engines ...	000 Nos.	7.2	11.9	16.5	164
12. Automobiles ...	000 Nos.	22.2	32.1	31.9	144

Machine Tool Production Rises

The improvement, as the above indices show, has been most marked in the case of machine tools where the production in 1957 increased to more than three times of what it was in 1956. As the machine tool industry is one of the most important among engineering industries, this development is particularly welcome. The development, it may be stated, was possible mainly as a result of the improvement in production of the Hindustan Machine Tools Factory at Bangalore which accounted for as much as 64% of the total machine tool production in the country.

In the textile machinery industry also, the improvement has been quite satisfactory. In 1956, the index of production of Ring Frames, for instance, was vanced by 305 during the base. The index had thus advanced by 1951 as the base. In 1957, the index stood at 496 which means an advance of 91 over 1956. Similarly, the production of Carding Engines which was nil in 1951 and 732 in 1956, rose to 1020 that is to say by 39%, in 1957. Taking an overall picture of the Heavy Machinery industry, which perhaps is the most important among engineering industries, the production in 1956, as I stated last year, was about Rs. 23 crores. In 1957, the figure increased to about Rs. 35 crores. Since the present annual requirement of machinery is estimated at Rs. 150 crores, it is evident that there is still much scope for expansion in this direction. The value of all the engineering goods imported during 1957 stood at a figure of about Rs. 300 crores which is quite a big order of Rs. 1,000 crores. This gives some indication of the long way we have yet to cover. But perhaps a clearer perception of how far we really lag behind will be obtained only when we compare the position of our Engineering Industries with that in the other countries of the world. The per capita consumption of steel which faithfully reflects the advancement of engineering industries in a country is painfully low in India. The figures for some of the important countries are as given below:

Name of country	Annual per capita consumption of steel in lbs.
1. U.S.A. ...	1178
2. U.K. ...	837
3. Japan ...	243
4. India ...	19

Name of Industry	Unit	Plan target	Capacity at the end of 1957	Capacity achieved by 1960-61
1. Soda Ash ...	(000 tons)	253	108	320
2. Plastics and synthetic moulding powders ...	(tons)	12810	3730	13200
3. Rubber manufacture (automobile tyres) ...	(000 Nos.)	1450	1062	1774
4. Automobiles ...	(Nos.)	57000	36000	60000
5. Bicycles ...	(000 Nos.)	895	627	1350
6. Radio Receivers ...	(000 Nos.)	213	213	300
7. Staple Fibre ...	(million lbs.)	32	32	40
8. Glass ...	(000 tons)	335	295	343

The figures of actual production of some engineering goods in these countries would also be of interest in this connection:

Item	Unit	U.S.A.	U.K.	Japan	India
1. Crude Steel ...	Million Tons	104.5	20.9	11.1	1.7
2. Aluminium ...	000 Tons	1850	128	80	7.5
3. Motor Vehicles ...	000 Nos.	6920	1004	102	32
4. Vessels launched ...	000 Tons	169	1383	1746	11.7
5. Radios ...	Lac Nos.	139.8	16.8	30.6	1.5
6. Textile Machinery ...	Rs. Crores	N.A.	102.0	86.6	4.0
7. Machine Tools ...	Rs. Crores	N.A.	114.0	N.A.	0.82

Although the picture which the above figures give is rather disappointing, it is no doubt to be hoped that the position of the engineering industries would improve in time to come. Private Sector, as has been shown above, has been marking fairly good progress and in the Public Sector too projects like the steel plants at Rourkela, Bhilai and Durgapur, the Heavy Machinery plant and the Foundry and Forge plant at Ranchi and the Heavy Electric plant at Bhopal will start bearing fruit in course of time. All the same, it would not be out of place to examine the difficulties which stand in the way of a more rapid expansion of the Engineering industries in our country.

To my mind, there are three such difficulties which deserve special mention. First is the lack of adequate capital equipment required for the engineering industries. We are not able to import the necessary capital equipment because we do not have the required foreign exchange. Reference to this difficulty has already been made above.

The second difficulty is the non-availability of adequate supplies of necessary raw materials like steel. The figures for the availability of steel during the years 1956 and 1957 were as follows:

	1956 million tons	1957 million tons
Indigenous production ...	1.33	1.44
Imports ...	1.79	1.63
Total availability ...	3.12	3.07

Thus although the requirements of steel are obviously increasing day by day due to our expanding economy, the availability of this most important raw material actually decreased in 1957 as compared with 1956.

Shortage of Raw Materials

The shortage of raw materials has led to the lowering down of the production of units engaged in steel casting and the manufacture of items like electric fans, building materials, etc. In fact, some of the units had even to close down. The Rolling Mill Industry particularly is in a bad plight and the shortage of scrap and billets rendered idle a good deal of the installed capacity for bars and rods.

Apart from shortage, the prices of steel also have not remained stationary during the year under review. Towards the middle of 1957, the price of indigenous steel was raised by Rs. 70 per ton with the result that since then the prices of different categories of steel have ranged between Rs. 650 to Rs. 700 roughly. But the curious fact is that while prices of steel in India rose, those in foreign countries fell. Imported steel rose to cost about Rs. 800 per ton. Now it costs round about Rs. 700 which means a reduction of about Rs. 100 per ton. India has thus lost the distinction which it so far had of having the lowest prices for steel in the world.

The third difficulty which faces the engineering industries is the lack of prosperity and purchasing power in the country. The purchasing power is improved, increased production will have no outlet. On account of these three difficulties, the engineering industries in the country are not making the progress which they otherwise could. In fact, it is becoming apparent that in certain cases even the targets of capacity fixed under the Second Five Year Plan are not likely to be realised. On a rough estimate, the short-falls in the targets of capacity in some of the Engineering Industries in the private sector are expected to be as indicated below:

Industry	Unit	Target of Capacity under Second Plan	Capacity likely to be achieved by 1960-61
1. Cotton Textile Machinery ...	Rs. Crores	17	10
2. Jute Textile Machinery ...	-do-	2.5	1.0
3. Paper Machinery ...	-do-	4.0	Nil
4. Cement Machinery ...	-do-	2.0	0.75
5. Structural Fabrication ...	000 Tons	500	289
6. Motors ...	000 H.P.	1200	736

Of the three difficulties mentioned above which prevent a rapid expansion of engineering industries, the one regarding the shortage of steel is expected to be solved in the near future. With the functioning of the three steel plants in the Public Sector and the expansion of capacity for steel in the private sector, the production of steel by the end of the Second Plan is expected to reach the figure of 4.3 million tons which would more than meet the requirements of the country. Likewise, the position of foreign exchange is likely to improve in course of time. The only major difficulty that will remain is about purchasing power which is linked up with the general prosperity of the country and it is in this direction that efforts have to be made.

Gentlemen, I would now deal briefly with the developments that have taken place in the different divisions of your Company during the year under review.

Cotton Textile Machinery Division

You will perhaps recollect that in my last year's address I had expressed an apprehension that the recession which had set in the Textile industry from

the latter half of 1957 might continue for some time and might adversely affect the targets of production and consumption of cloth and consequently those of

Item	Unit	U.S.A.	U.K.	Japan	India
1. Crude Steel ...	Million Tons	104.5	20.9	11.1	1.7
2. Aluminium ...	000 Tons	1850	128	80	7.5
3. Motor Vehicles ...	000 Nos.	6920	1004	102	32
4. Vessels launched ...	000 Tons	169	1383	1746	11.7
5. Radios ...	Lac Nos.	139.8	16.8	30.6	1.5
6. Textile Machinery ...	Rs. Crores	N.A.	102.0	86.6	4.0
7. Machine Tools ...	Rs. Crores	N.A.	114.0	N.A.	0.82

the installed capacities and production in the Textile Machinery Industry also. I am sorry to say that my apprehensions have come true. Till today there is no sign of any improvement in the conditions. Accumulation of stocks in the Textile Mills continues. Several Mills have closed down while many others are working shorter hours. Orders for new machinery have almost ceased. In fact in certain cases even orders placed have been cancelled. In several cases, mills are not in a position to accept delivery of materials manufactured by us on order and have requested for a postponement of deliveries.

Realising these difficulties of the textile industry, the Government of India recently appointed a Committee with the Textile Commissioner as the Chairman to investigate the present condition of the industry and to suggest remedial measures. One of the recommendations of the Committee was to lower the rate of excise duty. The Government have accepted this recommendation as a result of which the situation is expected to improve. The Committee's recommendation about the installation of additional automatic looms for the purpose of turning out exportable products is also welcome. It is to be hoped that the steps taken by the Government will assist the industry in tiding over the crisis and recovering from the recession which had lately set in.

I regret to say that on account of the adverse circumstances pointed out above, not only had the production in your factory to be curtailed but our scheme for increasing the capacity for Ring Frames and Carding Engines had also to be postponed till more favourable times. However, during this lull in business we have been able to devote greater attention to the development side. Development work on Drawing and Speed Frames has been taken up and is progressing with the help of our collaborators, Messrs. Howa Machinery Ltd. of Japan. We are also trying to manufacture more and more components of Carding Engines than hitherto and hope that by the end of 1958 we shall be able to produce all the components. The Special Purpose Machine Tools required for these components are also being designed and manufactured in our own Works.

Boiler and Heavy Engineering Division

In this division, as in the previous year, we can look back with satisfaction on a fairly well-filled order book and some really substantial work executed. Considerable extensions have taken place in our shop areas during the year and more extensions are under way. We also see bright prospects for new lines of expansion.

Our schemes for the manufacture of Water Tube Boilers, Sugar Machinery and Railway Rolling Stock no doubt received a temporary set back due to the restrictions on the import of capital equipment. But we are making strenuous efforts to have the equipment imported and we do hope that our efforts will succeed. The completion of the Water Tube Boiler Project has, for this reason, been delayed a bit. In the meanwhile, we have made an intensive survey of the internal market for Water Tube Boilers. The data gathered has enabled us, in conjunction with our collaborators, Messrs. Combustion Engineering Inc., of New York, to plan the production of new types and sizes of Water Tube Boilers in demand in this country. These plans we hope to put into execution at the earliest. Orders for Lancashire and Vertical Boilers, however, continue to be received from various industrial users including the Government for whom tenders are placed through the Directorate General of Supplies and Disposals. I am glad to report that now we have sufficient capacity to meet the entire demand within the country for these types of Boilers.

During the year under review, we got fairly good orders for the supply of locomotive Boilers and Fire-bricks. Previously, we were manufacturing locomotive Boilers of only one type. Now we have widened the scope of production to include other types also so that capacity does not remain idle. Thermic Syphons—standard equipment for the classes of Boilers now under manufacture by us—are also proposed to be made in our Works. These are usually imported from abroad by even established Locomotive Builders. In view of our proposal to manufacture them locally, the two Indian Locomotive Manufacturers, Telco and Chittaranjan, have placed orders on us for their requirements of this item.

Items of Sugar Machinery like Evaporators, Vacuum Pans, Crystallisers, etc., have been manufactured by us for quite a long time and we are getting repeat orders for them. We have now also taken up the manufacture of Milling Plant. An order for a complete Sugar Plant has been secured and part of it with a view to help new Sugar Factories in obtaining their complete equipment from indigenous sources within a short period, the Government of India have proposed that the leading manufacturing concerns should form consortia to canvass and execute orders jointly. Details of this scheme are being worked out by the Government in consultation with the licensed manufacturers including ourselves. We have offered our full co-operation in the scheme.

In our Structural Shops, we are working on a good variety of jobs, namely, vessels and equipment of various descriptions, Overhead Cranes and Hydraulic Dam Gates.

Last year we had undertaken and executed a good amount of work on equipment required by the Indian Iron & Steel Co. for their expansion scheme. This year we are doing similar work for the Bhilai Steel Plant. We have capacity for a considerable amount of work of this kind in our Steel Plants but also for other heavy installations such as Fertilizer Plants, Oil Refineries, Chemical Plants and the like. Contracts for big projects like these are being made with foreign

firms who generally form a consortium for the supply of specialised equipment from various sources. The Government of India are trying to ensure that a substantial portion of the work also comes to indigenous manufacturers. This will not only help the country to save foreign exchange but will also provide a way for easy flow of know-how. Coke Ovens, By-product Plants, Blast Furnaces, Steel Melting Furnaces, Ore Crushing and Grinding Equipment, Plate Work and Pressure Vessels for Fertilizer and other plants are some of the items which the indigenous manufacturer will have the opportunity to handle in this way.

On Hydraulic Dam equipment our work in collaboration with VOEST of Austria has so far been very successful. In the past we made Sluice Gates. We are now making Radial Crest Gates for the Panchet Hill Dam of the Damodar Valley Corporation. Gates of this type are being made in India for the first time. Part of the work of fabrication and erection has been completed. Orders for similar Gates for the Kangsabati Scheme have also been secured and we hope that for some considerable time, we shall be having continuous orders for Hydraulic Dam Gates.

Overhead Electric Cranes is yet another line which we are developing in collaboration with VOEST. Manufacture of certain standard sizes is under planning and in due course of time we expect to be able to put them in the market.

Railway Rolling Stock production during the year under review has been satisfactory. We are now making Metre Gauge Tank Wagons, Metre Gauge Passenger Coaching Underframes and Broad Gauge Wagons.

Steel Foundry Division

In this division the progress achieved last year has been fully maintained and even improved upon. We were able to meet more or less all our own requirements of steel castings as well as those of several other concerns. Starting with Mill Steel Castings we have advanced appreciably in making Alloy Steel Castings. We have been successful in making High Manganese and Nickel Chrome Castings required by various industrial users.

Machine Tool Division

An important new line of production we shall be taking up shortly is Machine Tool manufacture. We have come to an agreement with one of the leading Machine Tool Manufacturers in the U.K. about the scheme which is now under examination by the Government of India. We hope to be able to put it into execution at an early date.

Gentlemen, the progress which is being achieved by your Company has been made possible only by the sustained efforts and unflinching devotion of the officers, members of the staff and the workers and I conclude I wish to place on record my deep sense of appreciation for the same.

(This does not purport to be a record of the proceedings of the Annual General Meeting).

LET ME TELL YOU Thermocole

Is an all-purpose building material used for:

- COLD INSULATION
- ACOUSTICS
- BUILDING BOARDS
- ROOF INSULATION

Selling Agent:
BALMER LAWRIE & CO. LTD.
21 Netaji Subhas Rd. Calcutta

COMPTOMETER

is available on **HIRE**

COMPTOMETER — the world's fastest adding calculating machine—does the work of more than four people! You can now hire a comptometer for only Rs. 75/- a month. Trained operators are available on a monthly salary of around Rs. 150/-.

Complete Comptometer Service: If you already have a comptometer get the best out of it by careful maintenance. We are equipped to give you comptometer service.

PLANS TO RAISE FOOD OUTPUT IN CHINA

MAJOR PRODUCTION TARGETS FIXED

(FROM A SPECIAL CORRESPONDENT)

NORTH-WEST China plans to increase its output of food crops to 1 ton per capita next year and more than 1.5 tons per capita by 1962. The target was recently fixed at a conference. It was pointed out that north-west China was being swiftly transformed from a low-yielding into a high-yielding region. It has been decided to take a series of measures to achieve good harvests during this autumn and next year. The irrigated acreage in north-west China, which covers the most arid parts of the country, has already been doubled since last winter and will be further increased. Other measures include the use of more manure, the setting up of small fertiliser plants and agricultural co-operatives, intensive field work, exchange of pioneering experiences, seed selection, deep ploughing, improving the livestock breeding work and developing the farm implements innovation campaign. The conference set the target of replacing most of the old farm implements in north-west China with improved ones by the end of this year. Next year, further improvement in farm tools will lead to a five-fold increase in efficiency, compared with now. The conference also decided to extend the system of cultivating experimental farm plots by Government agencies in charge of agricultural work at various levels.

Major agricultural targets to be reached by 1962—the final year of the second five year plan—were also fixed at the meeting. By 1962, the total output of food crops in north-west China has been planned to be raised by seven times, cotton, 12 times and oil-bearing crops, eight times. The per capita output of foodgrains will then rise to more than 1.5 tons. The conference also stressed the importance of strengthening the co-operative movement in all provinces and autonomous regions in north-west China.

Development of the Foodgrain Industry

The Chinese Ministry of Food recently convened a conference on the foodgrain industry in Tsingtao. It examined and criticised the previous policy which, it was said, did not handle the work in the full interest of the 600-million people. The conference prepared outlines for a "leap forward" in the foodgrain industry. It was pointed out that in order to cope with the new situation arising from the progress in agricultural and industrial production, it would be necessary to mobilise the foodgrain industry and help agricultural co-operatives set up grain processing factories. The conference emphasised, in particular, the necessity of discarding unscientific methods and to bring about an all-round technical revolution with a view to improving equipment and tools and for promoting new techniques to replace manual by mechanical labour as much as possible. This is necessary to achieve the objective of mechanisation within two or three years and to improve rapidly the prospects for the foodgrain industry. Efforts are to be made, meanwhile, to change the single-type to multiple-type management by creating, after taking into consideration raw material supplies and requirements of the masses, joint enterprises for hulling rice, milling flour, pulverising potatoes, crushing oilseeds and for processing fodder. Attention will also be paid to making mixed feeds and to help agricultural co-operatives solve the technical problems of food processing. The conference demanded that foodgrain processing factories in the cities and in the countryside should adopt measures to simplify procedures in the interest of the masses and develop foodgrain and feed processing enterprises.

The conference suggested that the processing factories in all areas should try hard for six months, for effecting "five goods" (good in the rate of output, good in the reduction of costs, good in safety and health provisions, good in equipment and maintenance and good in the use of by-products) and "four no's" (no dross, no metallic admixture, no insects and no mildew in flour mills and no tares, no sand-stones, no insects and no mildew in rice-hulling factories) for factories. It was suggested that the rate of flour yield from wheat be raised within two or three years to 83.5 percent with no sacrifice of quality. The conference also recommended that the output of finished rice from paddy be raised to 73.5 percent and the cost of production be reduced by 30 percent against that in 1957.

Rational Distribution

The conference advised to effect a rational distribution of foodgrain processing factories in the country and to raise the percentage of the use of equipment to over 85 in the next two or three years. Factories in cities should generally be removed to the rural districts, and new factories to be built should generally be concentrated in the producing areas: such factories are to be small and should operate in close co-ordination with granaries, shops and stations. If appropriate conditions exist, steps should immediately be taken to co-ordinate the operations of these granaries, shops and stations. To develop the grain industry, it will be necessary to take effective measures to train technical personnel so that within the next three years, there will be technicians in all factories and engineers in all plants. It will also be necessary to strengthen co-operatives among the relevant

partments in order that within the next two to three years, machines built in provinces could be repaired and assembled in the hsien for the benefit of the foodgrain industry.

Reclamation of Waste Land

China's State farms have opened up more than 280,000 hectares of wasteland since the beginning of 1958, according to the Ministry of Land Reclamation. This is equivalent to the total area of reclamation in the whole of last year. State farm workers planned to open up a total of 1.3 million hectares of wasteland this year, surpassing the total reclaimed areas by State farms in the previous eight years. Most of the reclaimed areas will be cultivated by 500 new State farms which are to be set up with the aid of the existing ones. The new State farms will be set up in Sinkiang, Heilungkiang and other areas with large tracts of wasteland and also in uncultivated areas near rivers and lakes. Many of the existing State farms have built water conservancy projects and farm-processing mills since the beginning of 1958. They have also opened schools and training classes. In the Heilungkiang province alone, the State farms are training 4,300 tractor drivers for agricultural co-operatives in the province to help the latter achieve its goal of mechanising its agriculture within the period of the second five year plan ending in 1962.

Renovation of Irrigation Canals

Sinkiang has decided to renovate all its old, chaotic irrigation systems between now and the next spring. The old system provide water to a total of 1.5 million hectares, or 85 percent of all the farmland in Sinkiang. With some of the most arid parts of China in its territory, Sinkiang can have no agriculture without irrigation. But the old irrigation canals there are not useful, since some of them were constructed several hundred years ago. In many cases, there are no sluice gates to control the amount of water going to the irrigation systems. The farmlands served by irrigation canals suffer from water-logging when there is abundant water and from drought when the weather is dry. As a result, many fields have suffered damage because of over-irrigation, and crop yields have been reduced.

In addition, old irrigation canals have a serious water seepage. It is estimated that these canals draw 50,000 million cubic metres of water annually from the rivers on which they are located, but only one-third reaches the fields. The renovation of the canals is, therefore, the only solution to the expansion of irrigated areas in Sinkiang. This will solve the alkaline problem and will increase crop yields. Between now and the next spring, all the old irrigation canals will be renovated and unnecessary ones will be abandoned. Water-regulating sluice gates will be built on the canals. It is estimated that this will save more than 20,000 million cubic metres of water from going to waste annually. It will also enable to use the water to expand the total irrigated acreage from 1.8 million hectares to 4 million hectares. The drainage system will also be built to reduce gradually the alkaline content in the land.

Progress in Karmu

More than 20 types of crops have been successfully grown in Karmu along the Tsinghai-Tibet highway, 2,900 metres above the sea level. Three years ago, the place was a vast expanse of sand, and only wild grass was found here and there. Two thousand and six hundred hectares of this land have been turned into fertile soil. Furthermore, three big farms have been set up. They yield thousands of tons of foodgrains and vegetables annually. Karmu, on the edge of the Tsaidam basin, gets very little rain. In some places, the alkaline content of the soil comes to as much as 50 percent.

Agents and workers of the Transport and Communications Department on the highway have helped reduce the alkalinity of the soil. Sowing was carried out for the first time in 1954. The harvest of what came to only 53 kilograms a hectare the following year or less than half the amount of seed planted. The second wheat harvest came to 600 kilograms a hectare and last year, an output of 1,125 kilograms a hectare was reaped on an area of 1,300 hectares. The workers expect to harvest an output of 3,750 kilograms a hectare this year.

The Working Committee of the Chinese Communist Party of Karmu and the Transport and Communications Bureau of the Tsinghai-Tibet highway have jointly planned to open up a total of 66,000 hectares during the second five year plan to enable Karmu to be a granary along the highway.

Mechanised Irrigation in Kansu

Kansu province's biggest power-operated, mechanised irrigation system has gone into partial operation. Located in Tsingyuan hsien to the north-east of Lanchow, the irrigation system syphons off water from the nearby Yellow river and leads it up to land from 70 to 82 metres above the river level. New water pumps, equipped with three electric motors with a total capacity of 500 horse-power, are in operation. When entirely completed next year, the irrigation system will have 54 big and medium-sized motors and will irrigate a total of 8,000 hectares of uplands. Pumping stations, power transmission sub-stations, irrigation canals, culverts, reservoirs and sluice gates will be built under the irrigation project, which is being undertaken by the local agricultural co-operatives with the financial help of the Tsingyuan Hsien Government.

Money

THE CALCUTTA MONEY MARKET

CALL RATE UP

Wednesday, 3rd September.

THERE has been another slight fall in the level of advances outstanding in the Calcutta money market during the past week. Most of the main sources of demand show a slight decline, with the exception of grain storage. This item has recorded a moderate increase. Conditions have become somewhat tighter in the interbank market and the call rate has moved up from 2 percent to 2½ percent.

Once again, there has been a fair quantity of tea bills in the exchange market during the past week. Gunny bills have been fewer. Remittance has been poor. Sterling is slightly weaker against the U.S. dollar and a few Continental currencies, but has been marked up against the Canadian dollar. The pound is still exceptionally strong for the time of year, and the parity shows no real sign of serious weakening.

BULLION WAS STEADY ON GOOD DEMAND IN THE face of restricted supply. The price of silver advanced from the last week's level of Rs. 182.50 to Rs. 184.24, being quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 184. Prices in London and New York were unchanged at 74½d and 88½ cents, respectively.

In sympathy with silver, gold rose from Rs. 109 to Rs. 110. The sovereign at Rs. 71.50 showed a gain of 25 cents.

DURING THE WEEK ENDED 29TH AUGUST, GOVERNMENT of India Treasury bills for Rs. 9,49,00,000 were sold in favour of the Reserve Bank.

Tenders for Rs. 3,00,00,000 of 91 days' Government of India Treasury bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on 8th September. Successful tenderers should make payment on 12th September. Other conditions will be as usual.

DECLINES OF Rs. 13.90 CRORES TO Rs. 1,558.99 crores in the total note issue and of Rs. 8.21 crores to Rs. 1,530.01 crores in active notes were notable features of the return of the Reserve Bank of India for the week ended 29th August, 1958. The currency contraction was covered by reducing foreign securities by Rs. 5 crores to Rs. 174.68 crores and rupee securities by Rs. 9.93 crores to Rs. 1,114.39 crores. Deposits of the Government of India were Rs. 10.37 crores higher at Rs. 73.06 crores and other Government accounts rose by Rs. 21 lakhs to Rs. 20.52 crores. Balances of commercial banks at Rs. 101.39 crores showed a decline of Rs. 4.97 crores. Balances held abroad increased by Rs. 2.44 crores to Rs. 12.54 crores, presumably due to a transfer of securities from the issue department. Investments fell by Rs. 58 lakhs to Rs. 328.75 crores. Other loans and advances rose from Rs. 49.89 crores to Rs. 50.03 crores, of which advances to scheduled banks against usance bills amounted to Rs. 1.91 crores against Rs. 1.93 crores. Ways and means advances stood at Rs. 12.90 crores (Rs. 12.78 crores).

THE RETURN OF THE STATE BANK OF INDIA for the week ended 22nd August, 1958, shows a rise of Rs. 2.13 crores to Rs. 438.14 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 4.19 crores and Rs. 5 lakhs to Rs. 226.77 crores and Rs. 11.21 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have decreased by Rs. 2.11 crores to Rs. 168.45 crores. Cash and balances are, in consequence, shown at Rs. 44.33 crores, or Rs. 1.59 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 22nd August, 1958, shows Demand and Time liabilities at Rs. 747.28 crores (Rs. 26.55 crores on account of borrowings from banks) and Rs. 855.96 crores (Rs. 38.56 crores) compared with Rs. 751.43 crores (Rs. 34.01 crores) and Rs. 853.15 crores (Rs. 36.83 crores), respectively, in the previous week. Cash has declined by Rs. 1.37 crores to Rs. 37.77 crores, while balances with the Reserve Bank have increased by Rs. 8.13 crores to Rs. 101.09 crores. There is a rise of Rs. 10.06 crores to Rs. 503.87 crores in investments. Advances and bills discounted at Rs. 859.62 crores show a drop of Rs. 1.71 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.7 percent and 53.6 percent against 8.2 percent and 54.3 percent.

PRICES DROP SHARPLY ON LONDON STOCK MARKET

FALL IN HIRE-PURCHASE SHARES

London, 3rd September.

THE previous week's strong advance in the London stock market was reversed during the past week. Prices dropped sharply on Friday last to record widespread and appreciable losses compared with previous levels. Although a steadier tendency developed after the week-end, only a small part of the falls was recovered. A fair amount of profit-taking developed after the previous week's substantial rise while the strong buying which was responsible for the advance was not maintained. The easier trend earlier in the past week was the result of a period of consolidation after the broad advance but selling increased later following a number of adverse developments. The main factor was the deterioration in the Far East situation but contributory reasons included the rejection of the engineering employers' wages offer, the July industrial production figures, the failure of the Kent County Councils £12-million offer and the less confident trend in U.S. markets. The outstanding feature of the past week was the activity which developed in banking and hire-purchase finance issues following the Midland Bank's statement that it was introducing "personal loans". The repercussions of this move—most banks have followed the Midland Bank's lead—brought heavy losses in hire-purchase finance shares which might suffer from the growing competition for consumer credit business. Banking shares also lost ground while stores shares, a number of which lately announced lower hire-purchase charges, also receded. Gilt-edged securities declined and losses extended to about half a point but the market became steadier after the week-end. Foreign bonds and rails held steady but dollar stocks were mainly lower on balance. Industrials reacted sharply, and although steadying after the week-end, they recorded appreciable losses. Gold shares recovered after falling with the rest of the market and recorded very little change on balance. Tin shares advanced sharply on the restrictions placed on imports from Russia. Copper shares were dull. Rubber shares continued to improve on a selective demand. Tea shares were generally irregular with Ceylon issues unaffected by the ban on capital withdrawals from that country. Oil shares tended lower.

The Money Market

Although the past week was uneventful, stringent conditions persisted in the London money market for most of the period. Market houses experienced difficulty, and there were only occasional periods of relief. Some houses were occasionally compelled to borrow direct from the Bank of England at full Bank rate terms. The clearing banks were reluctant lenders. When light loans were arranged, rates averaged between 3½ percent and 3½ percent and when the

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The Capital Index of Indian Industrial Activity (base: 1953) has now been brought up to February 1958. Compared with the preceding month, there were decreases in sugar 17.01 points, tea 2.56 points, jute 17.96 points, yarn 12.60 points, cloth 11.09 points,

cement 31.59 points, coal 7.86 points, pig iron 3.45 points, finished steel 9.61 points, paper 21.07 points, tyres 6.39 points, automobiles 35 points, electricity 10.36 points and railway ton-miles 11.61 points,

while bicycles increased by 1.36 points.

Correlating all the factors, the Capital Index of Indian Industrial Activity declined by 2.2 points during February 1958.

Stocks and Shares

HIGHER PRICE LEVELS ATTRACT PROFIT-TAKING

BOND MARKET RULES FIRM

Wednesday Evening.

THE bull market, which began on 17th July when Indian Irons were quoted at Rs. 22.80 c.d., showed signs of crumbling on 29th August. This followed the publication in the Press of a circular from the Reserve Bank to Scheduled banks advising them to exercise vigilance when making advances against big blocks of shares, so as to prevent a purely speculative boom. This directive had a tonic effect on the bears, who thereupon started making heavy sales of shares. Several weaker bulls followed in their wake and by the close of business today, the price of Irons had dropped to Rs. 24.32 from a high point of Rs. 25.20. The fact that the stock market was over-bought cannot be denied and this shake-out has at least improved the technical position. The news that India may soon obtain a \$350-million loan from the U.K., U.S.A., West Germany, Canada and Japan, to tide her over till the

An agreement between India and Switzerland for the avoidance of double taxation of the income of enterprises operating aircraft, was last week signed between the Governments here. Under the agreement, both will retain the tax levied on the earnings of their airlines. In other words, profits earned by Air-India International in Switzerland will not be subject to taxation by the Swiss Government, nor will the profits earned by Swissair

in India be taxed by the Indian Government.

Expenditure Tax on Ex-rulers

The expenditure tax payable by ex-rulers was the subject of a question asked in the Lok Sabha during last week. Replying, the Minister for Revenue and Civil Expenditure, Mr. Gopal Reddi, said: "In cases of settlement under section 20 of the Act for the assessment year 1958-59, the estimated amount of expenditure tax payable by persons in receipt of the privy purse, has been expressed at certain percentages of their privy purse with an adjustment for the net income from all other sources. The percentages are as follows:

"On the first Rs. 5 lakhs of the privy purse amount:	72 percent.
"On the next Rs. 5 lakhs of the privy purse amount:	12½ percent.
"On the next Rs. 5 lakhs of the privy purse amount:	20 percent.
"On the next Rs. 5 lakhs of the privy purse amount:	25 percent.
"On the balance of the privy purse:	33½ percent.

"If all persons in receipt of the privy purse opt for settlement, the revenue expected from them will be of the order of Rs. 60 to Rs. 70 lakhs", the Minister added.

Rupee Accounts

The following countries have agreed to open rupee accounts in India:

Name of the country	Date of signing the agreement	Date up to which valid
Russia	2-12-53	2-12-58
Rumania	23-3-54	30-9-58
Hungary	17-6-54	31-12-59
China	14-10-54	31-12-58
Yugoslavia	31-3-56	31-12-59
Poland	3-4-56	31-12-59
Bulgaria	18-4-56	31-12-59
North Viet-Nam	22-9-56	21-9-59
East Germany	8-10-56	8-10-59
Egypt	8-3-57	Indefinitely
Afghanistan	14-6-57	20-7-59
Czechoslovakia	1-10-57	31-12-60

It may be added that the balance of payments, in all cases, has to be settled in sterling. Of what precise use will be the rupee resources after the purchase of Indian commodities, is not disclosed.

Restrictions on Russian Tin

According to London reports, restrictions on the imports of tin from Russia are being imposed to approximately the same extent as producer members of the International Tin Agreement are at present restricting their exports. Russia was informed on 29th August that the U.K. Government

has decided (1) to impose import licensing restrictions on tin (unwrought) and tin alloys originating in or consigned from Russia and (2) to introduce a quota of 750 tons for the three months beginning 30th August, 1958. The figure of 750 tons represents an annual rate of about 60 percent of total imports of tin into the United Kingdom from Russia during the year ended 30th June, 1958.

Holland and Denmark, who, with the United Kingdom, have been the chief importers of Russian tin, have also imposed controls since 30th August. Dutch imports have been restricted to 60 percent of the imports during the period July 1957 to June 1958, and will allow imports of only 1,125 tons in the first three months of 1959. Danish control is for 60 percent of the imports in the first quarter of 1957 and total imports of only 150 tons in the first three months of 1959. In order to prevent Russia evading these controls by diverting tin through other countries of its bloc, import licences will also be required with effect from 30th August for imports of tin into the United Kingdom from China and the satellite countries. New licences will be granted freely as long as trade remains at present levels. According to the *Financial Times*, tin production in Russia is believed to have risen sharply in the last ten years. Western sources put production in 1953 at between 12,000 and 15,000 tons and by 1960 at anywhere between 25,000 and 50,000 tons. The International Tin Council's estimates of Russian sales to western Europe in 1957 were between 8,000 and 9,000 tons. British imports of the tin are continuing at a high rate. For the first half of this year, they totalled 3,351 tons, compared with 2,209 tons and 315 tons in the whole of 1957 and 1956, respectively.

The *Financial Times* Singapore correspondent says: "With the local tin price falling to the lowest level for a month, Malayan tin miners' anger continues to grow at what they describe as Russia's sabotage of the International Tin Agreement." After falling on 10 consecutive trading days, the price was quoted at \$M368, the lowest since mid-July. Estimated offerings in a recent week were nearly 15 percent down compared with 690 tons by the previous week." Malaya is expected to demand that the Soviet Union state clearly whether it will join the International Tin Agreement at the next meeting of the Council in London on 14th October. This was stated in Kuala Lumpur by Mr. Chong Khoo Lin, president of the All-Malaya Chinese Miners Association, and a member of the Federation of Malaya Tin Advisory Council. Mr. Chong accused Russia of being insincere and said that its moves must be watched closely. "Malaya's tin industry is in a desperate position and we expect the situation to deteriorate in the fourth control period beginning in September."

He thought it was unlikely that Russia would become a member of the agreement.

Malayan Shipments Fall

The Straits Trading Company figures of Malayan tin shipments in the first half of August was 1,867 tons, up 22½ percent on the first half of July. So far as India is concerned, she will buy as much tin from Malaya as it is possible for her. She is, however, on the horns of a dilemma. On the one side, she is opposed to big powers using commercial pressure to dislocate the economy of an underdeveloped or developing country. On the other side, India's tin needs have to be measured in terms of foreign exchange. Russia gives her an advantage by accepting payments in rupees. India, however, is in favour of international commodity controls.

Aid for Shipping

The following measures have been taken to encourage Indian shipping. (i) A sum of £5 million has been earmarked for the acquisition of ships by the companies, both in the public and private sectors, from out of the yen credit negotiated with the Government of Japan. (ii) A small amount of Rs. 15 lakhs has been made available from free foreign exchange resources during the current half-year for the acquisition of second-hand ships. (iii) Indian shipping companies have been permitted to acquire ships for overseas trade on a self-financing basis by which the cost of the ship is met out of its net foreign exchange earning. They have also been permitted to obtain overdrafts from foreign banks to meet the first instalment of the cost of acquisition where necessary. In this way, nine vessels totalling approximately 51,000 G.R.T. have been purchased so far.

The following statement will show the amount of Government loans sanctioned and used by the shipping companies from 1955-56 to 1958-59.

Name of company	(Rs. in lakhs) Amount of loan sanctioned	Amount of loan used
1. Scindia Steam Navigation Company Ltd, Bombay	1,20.22	8,31.02
2. India Steamship Company Ltd, Calcutta	12.65.41	6,22.68
3. Great Eastern Shipping Company Ltd, Bombay	3,92.66	2,67.41
4. Malabar Steamship Company Ltd, Bombay	1,17.20	1,02.00
5. New Dholera Steamships Ltd, Bombay	54.00	5.40
6. African Company Ltd, Bombay	19.55	19.55
	29,69.04	18,48.06

Help for Small Vessel Owners

The Central Government has decided to grant financial assistance to the owners of sailing vessels with limited financial resources for mechanising vessels of 100 tons and above. The loans will be granted up to a maximum of 75 percent of the cost of machinery repayable in a period of five to six years. Interest will be charged at the ordinary Government rate. With the help of a subsidy by the Government, the effective rate of interest will be brought to 3 percent a year. Loans can be obtained against adequate security and hypothecation of the vessels and the machinery to the Government.

Silting of Hooghly

The problem of the silting in the Hooghly is a very old one. There are several bars in the lower Hooghly, each of which affects the navigability of the river in varying degrees depending on the season and the tide. The rivers Damodar and Rup Narain have also deteriorated, but the extent to which this deterioration affects the Hooghly is not accurately known. One of the important reasons of the silting in the Hooghly is that it now gets its head-water supply only for about three months in the year. The Calcutta Port Commissioners and the Government of India are fully seized of the problem and river training works are being undertaken to improve the channel as far as possible. The question of improving the head-water supply is also under consideration. The Hooghly near the jetties has silted heavily during the past few years and with a view to taking advantage of the upland discharge of water which is at its peak during this period, it has been decided to keep this part of the channel clear of shipping from 10th August to 15th September this year. Simultaneously, intensive dredging will be undertaken. It is hoped that these measures will improve the channel considerably.

Shoe Sales to Communist Countries

The National Small Industries Corporation had 54,594 pairs of surplus shoes out of the quantity produced against the order received from Russia and about 14,000 pairs produced against the order from Poland. The surplus production in the case of the Russian order was due to anticipation of repeat orders from that country. So far as the Polish order is concerned, the 14,000 pairs were produced according to the original samples accepted by the buyers. On arrival of the Polish buyers' inspector in India, certain basic alterations were suggested which could not be made in the shoes already produced. In the interest of business, therefore, it was considered advisable to concentrate on fresh production according to the suggestions of the buyers' representative rather than to insist on the acceptance of what had been produced earlier. It may be added that steps have already been taken by the National Small Industries Corporation to dispose of these shoes. Negotiations are going on with the Russian author-

ities, who have started the inspection of them. Negotiations are also proceeding with other east European countries for their sale. They are of good quality. The balance, if any, which may be left after these sales, will be sold in the internal market. No financial loss is expected in the whole transaction.

High Grade Coal Export

It is proposed to export an additional 500,000 tons of high grade coal during 1958 and up to 1 million tons during each of the next three years. These quantities include 200,000 tons and 500,000 tons, respectively, of metallurgical or coking coal.

Value of Cotton Imports

The total cost of cotton imported during the current season up to 30th June, 1958, is approximately Rs. 28½ crores. (The cotton year is from 1st September to 31st August).

Report on Bauxite Resources

A geological expert deputed by Messrs Penchinery of France has submitted a report on the bauxite resources of India, including those located in the Shevroy hills near Mettur in Madras State. This is in addition to a general preliminary report by Messrs Penchinery of France on the establishment of additional aluminium production capacity, including that in Mettur. Private parties are taking interest in the setting up of the aluminium plant in Mettur. No concrete proposals have so far been received by the Government.

Re-constitution of Export Body

The Export Promotion Committee which submitted its report to the Government in August 1957, about ways and means of stepping up exports, suggested, among other things, the constitution of a standing committee of representatives of trade and industry to advise the Government on the day-to-day problems relating to export promotion. In accordance with this recommendation, the Government has decided to re-constitute the Export Advisory Council and designate it as the Export Promotion Advisory Council. The membership of the Council has been enlarged from 19 to 25 in order to give better representation to export promotion interests. The chairman of the Council will invite other persons, who are connected with India's export trade or are interested in commodities with an export potential, to participate in the deliberations of the Council. It has further been decided to set up a standing committee of the Council, consisting of not more than ten members. It is to meet frequently to advise the Government on day-to-day export problems. The first meeting of the newly-constituted Council was held in Delhi on 31st August, 1958.

Amalgamation of Collieries

The Government has accepted the principle of amalgamation of collieries and has decided to proceed with the scheme on the lines suggested by the Balwantrai Mehta Committee. A committee has already been set up to promote voluntary amalgamations among collieries. It consists of the following members: Coal Controller, Calcutta, chairman; Chief Inspector of Mines in India; Chief Mining Engineer, Coal Board; a representative of the Government of West Bengal; a representative of the Government of Bihar; a mining engineer from the private sector.

Terms of Reference

The terms of reference of the committee are as follows:

1. To invite and initiate proposals for the voluntary amalgamation of collieries, particularly in West Bengal and Bihar, which between them have a total minimum production of 6,000 tons a month, provided that in the course of a year, the output of each amalgamated unit can be stepped up to 10,000 tons a month.
2. To invite proposals from collieries for voluntary adjustments of boundaries in the interest of avoidance of loss of coal locked up in barriers and of difficulties in extraction.
3. To examine all schemes for voluntary amalgamation and adjustment of boundaries received from collieries, to modify them where necessary and to communicate them to the collieries for further processing.
4. To lay down, with the consent of the parties concerned, the terms and conditions of amalgamation.
5. To render, where necessary, technical advice to the amalgamated units in such matters as adjustment of boundaries, removal of barriers, enforcement of safety measures, procedural formalities, etcetera.
6. To frame tentative schemes for particular groups of collieries which are willing to amalgamate by themselves according to the committee's advice, but are unable to draw up proper schemes speedily.
7. Where a particular scheme of amalgamation has been agreed to by the parties concerned and also approved by the committee, it should take necessary steps to make the scheme legally enforceable under the existing law.
8. To take such other steps as may be necessary to promote voluntary amalgamation.

The committee has been appointed for one year. The period may be extended, if necessary. The drafting of suitable legislation to deal with the various aspects of amalgamation has been taken up, and the details are being worked out.

Loans to Jute Mills

The National Industrial Development Corpora-

tion has sanctioned rehabilitation loans to the following jute mills:

Name of the company	Amount approved (in rupees) (approximately)	Amount paid (in rupees)
* 1. Khardah Co. Ltd, Calcutta	29,00,000	24,91,685
† do (second loan)	19,04,662	7,57,390
† 2. Fort Gloster Industries Ltd, Calcutta	26,00,000	26,00,000
3. Nuddea Mills Co. Ltd, Calcutta	24,50,000	24,50,000
† do (second loan)	7,00,000	Nil
4. Shree Gouri Shankar Jute Mills Private Ltd, Calcutta	15,11,000	15,11,000

* Since then a sum of Rs. 3,32,247 and Rs. 91,250 were refunded by Messrs Khardah Co. Ltd, Calcutta, and Rs. 3,907 by Messrs Fort Gloster Industries Ltd, Calcutta, as surplus to their requirements.

† In these cases, the companies have not asked for payment of further instalments because no further payment seems to have been due to the machinery suppliers.

‡ These cases await the finalisation of documents.

Estate Duty Amendment Bill

The Central Minister for Revenue and Civil Expenditure, Mr. B. Gopal Reddi, while moving in the Lok Sabha during the past week the Bill to amend further the Estate Duty Act, 1953, as reported by the Select Committee, explained that "during the discussion on the motion for reference to the Select Committee, a point of order was raised that Parliament was not competent to consider the Bill in the absence of resolutions passed by the legislatures of at least two States as envisaged in clause (2) of Article 252 of the Constitution. After a full discussion of the constitutional position, the Speaker ruled that clause (2) of Article 252 of the Constitution did apply to the Bill but that it did not act as a bar to the consideration of the Bill by the House and its reference to a Select Committee. The Bill was accordingly referred to the latter. Meanwhile, the Government had consulted the Attorney-General concerning the particular form of the resolutions which should be passed by the State Legislatures. Following his advice, a new clause has been added to the amendment Bill by the Select Committee in order to make it clear that the provisions of this Bill do not apply to the levy of estate duty on any estate which consists wholly or in part of agricultural land.

"Clause 1 of the amendment Bill has also been amended so as to make it possible for the Central Government to bring the Act into force from a suitable date to be notified by the Government instead of from 1st April, 1958. The intention is that after this Bill is passed in its present form by Parliament, steps will be taken to consult State Governments with a view to getting resolutions passed by the State legislatures requesting the application of the amending Act to agricultural land in their States. After the resolutions are passed by the State Legislatures, the Government will again bring before the House a short Bill which would make the amending Act applicable to estate duty on agricultural land in the States concerned. It is only thereafter that the amendment Act will be brought into force for non-agricultural property as well as agricultural property in the States which pass the resolution. This procedure will also ensure that the State Legislatures know definitely what changes in the principal Act they are being asked to agree to and there would be no possibility of different States suggesting the adoption of varying and possibly contradictory amendments.

Rates of Duty

"Another important change made by the Select Committee relates to the rates of estate duty prescribed under clause 30 of the amendment Bill. No estate duty is at present leviable on an estate, the principal value of which does not exceed Rs. 1

lakh and which does not include coparcenary interest in the property of a Hindu joint family. The amendment Bill seeks to reduce this limit to Rs. 50,000. Thus an estate of the principal value of Rs. 1 lakh would have had to pay an estate duty of Rs. 3,000 according to the rates originally proposed in the Bill, whereas nothing is payable under the existing Act. An estate of the value of Rs. 1.50 lakhs would have had to pay a duty of Rs. 7,000 under the rates proposed in the original Bill whereas the duty leviable at present is only Rs. 3,750. Members of the Select Committee felt that the increase in duty on estates of the value of Rs. 1.50 lakhs and less was rather steep and that some concession should be shown in such cases. The committee has accordingly recommended that the duty on the second slab of Rs. 50,000 should be reduced from 6 percent to 4 percent and that the duty on the third slab of Rs. 50,000 should be reduced from 8 percent to 6 percent. With the change suggested by the Select Committee, the duty payable will be Rs. 400 in the case of an estate of the value of Rs. 60,000; Rs. 1,200 if the value is Rs. 80,000 and Rs. 2,000 if the value is Rs. 1 lakh. As the reductions are in the lowest slabs, the effect of this reduction in rates will be felt not only in the case of the small estates, but also the bigger ones.

Avoiding Double Taxation

"It has been proposed that the period within which gifts are charged to estate duty should be raised from the present two years to five years. At the same time, to prevent double taxation of gifts, first under the Gift Tax Act and later under the Estate Duty Act, it was provided in clause 22 of the amendment Bill that no estate duty would be levied on any property which had been gifted and on which gift tax had been paid. On a careful consideration of this clause, the Select Committee felt that it would lead to large-scale tax avoidance by the making of large gifts just before death. At the same time, the committee noted that the proposed extension of the two-year period to five years had also been criticised on the ground that it would lead to hardship in genuine cases and that in any case, it amounted to giving retrospective effect to legislation. It was also argued that now that the Gift Tax Act has been enacted, it would itself be a check on attempts at avoidance of estate duty through the making of gifts and hence there was no need to extend the two-year period to five years."

The Select Committee also felt that it would be better to retain the two-year period for chargeable gifts. At the same time, the Committee recommended that clause 22 of the Bill be amended so as to provide that any gifts made within the two-year limit should be included in the principal value of the estate and subjected to estate duty, a rebate being given for the amount of gift tax actually paid on such property.

New Members of I.L.C.

The Central Government has appointed the following 15 persons as members of the Life Insurance Corporation for a period of two years, with effect from 1st September, 1958. (1) Mr. P. A. Gopalakrishnan, I.C.S., Chairman, Life Insurance Corporation of India; (2) Mr. Mohammed Hasham Premji, Bombay; (3) Prof. D. G. Karve, Poona; (4) Mr. Dhiren Mitra, Calcutta; (5) Mr. S. M. Ramakrishna Rao, Bangalore; (6) Mr. Vadiyal Lalubhai Mehta, Ahmedabad; (7) Lala Raghuveer Swarup, Muzaffarnagar; (8) Mr. L. K. Jha, I.C.S., Special Secretary, Ministry of Commerce and Industry; (9) Mr. B. K. Kaul, I.C.S., Joint Secretary, Ministry of Finance, Department of Economic Affairs; (10) Mr. P. C. Bhattacharyya, Bombay; (11) Prof. B. N. Das Gupta, (Late of Lucknow University) Lucknow; (12) Mr. C. S. Desai, New Delhi; (13) Mr. N. K. Petigara, Bombay; (14) Mr. T. S. Krishna, Madurai; (15) Sardar Ujjal Singh, New Delhi. Mr. P. A. Gopalakrishnan, I.C.S., has been re-appointed as the chairman of the Corporation.

New Scheme of Incentive Bonus

According to a Government hand-out, a new scheme of incentive bonus for oil exploration workers was announced by Mr. K. D. Malaviya, Central Minister of Mines and Oil, during the past week. The Minister, who was addressing the officers of the Oil and Natural Gas Commission, outlined the scheme under which a meritorious group of technicians engaged in the oil exploration work would be awarded bonuses out of the savings accruing from the expeditious work done by them. He said that there was no room for indolence in an organisation like the Oil and Natural Gas Commission and the procedure of promotion by seniority alone, which was a legacy of the past, had got to be done away with. "Merit must not only be noticed but also recognised in the form of accelerated promotions."

Public Sector Appointments

A slight inaccuracy crept into these columns last week, for which deep regrets are expressed. Mr. K. C. Neogy, contrary to earlier reports, has not accepted the chairmanship of the State Trading Corporation. Mr. Feroze Gandhi, M.P., likewise has not been appointed chairman of Oil India a limited liability company to be floated shortly for the production and transport of oil found in Assam. A private limited company under the Companies Act, 1956, under the name and style of "Indian Refineries Private Limited" has been registered in Delhi on 22nd August, 1958, with an authorised capital of Rs. 30 crores to control and manage the two oil refineries to be established by the Government. The company will be managed through a board of directors to be appointed by the President. The number of directors will, for the present, be ten. Mr. Feroze Gandhi, M.P., has been appointed as the chairman and Mr. J. M. Shrinagesh, I.C.S., as the managing director of the company.

Not just THE RIGHT SIZE but THE RIGHT BEARING

When a bearing replacement is necessary, it is not sufficient to fit just a bearing of the "right size"—it must be the right bearing for the purpose. SKF provides a bearing for practically every position in motor vehicles running in this country.

SECOND REPORT OF THE COHEN COUNCIL NEED TO MAINTAIN PRICE STABILITY STRESSED

(FROM OUR LONDON CORRESPONDENT)

THE second report of the Cohen Council, although it has already been condemned by the T.U.C. and cannot be expected to produce any good in that quarter, serves a useful purpose by furnishing the common man with a realistic picture of the economic situation as it developed over the first half of this year. By and large, the "three wise men" see little justification for altering the basic verdict of their initial report. All the measures taken so far have been justified by the results achieved, but Britain is not out of the wood yet and she must now proceed with great caution in the change-over from recession to expansion. The dangers she faces are both over-optimism at her success, or extreme pessimism at the inevitable setbacks to which the adjustment must give rise. The healthy realism of the report does much to counter both these unfortunate reactions, besides offering some salutary advice to the Government in the process.

The Council's view of the present economic situation, after studying events since it issued its first report six months ago, is that the dangers of inflation have only been scotched, not killed, by the slackening of tempo over the last year. "We must not suppose that we have solved the problems of getting the growth of income into line with that of productivity, merely because in the year 1958 increases in income look like being distinctly lower than in previous years. Our balance of payments is in a healthy state and our foreign reserves have been rising very satisfactorily; but neither of these conditions is bound to last. Past experience suggests that any substantial revival of demand may well be accompanied by renewed threats to price stability, to the balance of payments and the gold and dollar reserves. In these circumstances, while it is right that policy should aim at an expansion of demand, it must proceed gradually and with caution towards that end. The dangers of recession are not so drastic and so imminent, nor those of inflation so remote, as to justify an all out encouragement of expenditure."

Future Prospects

Dealing with "prospects for the near future", the Council believes that the trend of prices is likely to be nearer to stability in the next few months than it has been in any comparable period in the last few years. This forecast, it says, of course leaves out of account any drastic changes in world markets, and assumes that industries where costs are falling will pass the benefit on to the consumer. It also gives a warning about the retail prices index, which "as a whole may not fall. At the worst, however, it seems likely to be stable, or nearly so, for some time to come. Since any such plateau will partly be due to the adventitious factor of the food prices, we should not cheer too loudly about it. Nevertheless, it might help pave the way for a more firmly rounded stability next year."

On the industrial front, however, the report is less guardedly cheerful. There is more likely to be a fall in economic activity than an increase, and "we cannot expect a quick return to a phase of growing out, indeed a decline is not impossible." Finally, the report gives a warning that there may be a certain deterioration in the current balance of payments position, and a less favourable trend in gold and dollar reserves.

Re-expansion Problems

The section on "The Problems of Re-expansion" is cautious in tone. After stating that there is evidence that a number of industries are working below their productive capacity, and that unless demand increases this "unused capacity" will grow, the Council says that the Government's recent measures to stimulate a revival of demand are not certain to give enough encouragement to "business confidence" and private investment. The Government, however, still has a "few shots in its locker" and "there is no insuperable difficulty about raising the level of home demand."

The report then points out that the expansion of demand and production will not have to go very far before it begins to raise the "pressure of demand in the labour market." This in turn will fairly quickly begin to raise labour costs by encouraging employers to work more overtime and to bid up wages above the agreed rates. If this pressure for goods and labour equals that of the peak years—such as 1951 or 1955—"the return of inflation will be practically inevitable. For this reason, it must, in our view, be the definite aim of Government policy not to allow the pressure of demand on productive resources to be built up to these levels. This is by no means an easy aim to achieve, for once expansion is under way it tends to build up cumulatively, and the Government's means of action to control it are uncertain both in effect and timing." To maintain high and stable employment while avoiding inflation, if it is possible at all, will certainly

call for a rather delicate regulation of the general level of activity.

Wages and Profits

After pointing out that so far this year the average wage increases have been about 3½ per cent—which may continue—the Council says that although this is distinctly a change for the better, "it will be wrong to suppose that this is an exceptional year, after which we will cheerfully return to the happy days when annual wage increases typically run at the rate of 5 per cent 6 per cent, or 7 per cent. Indeed, the contrary is the case: next year such wage increases, as are granted, should be lower than this year's. For annual increases of 3½ per cent are not merely higher than the present rate of productivity increase: they are higher than any rate of productivity increase which can reasonably be forecast over any long period of future years. It is virtually certain that a continuance of wage increases on this scale, year after year, would lead to price inflation. We should, therefore, think of this year's relatively low level of increases, not as an exceptional event, nor as an acceptable long-term minimum, but as a stage in the process of getting the trend of wages better into line with the trend of productivity. It is highly desirable that the process should continue next year."

Dealing with the possibility that the Government may soon wish the economy to expand a little, the report sounds a note of warning. "Consumer demand" should be stimulated by tax remissions or by relaxing hire-purchase restrictions, rather than by large wage increases. A limitation of the growth of profits is still required, says the Council. But it believes that this can be achieved most effectively by "indirect means," if the pressure of demand is kept within reasonable bounds; if there is no inflationary wage pressure, "profits in total will tend to limit themselves."

Personal Loans from the Banks

The easing of the credit squeeze appears to have gone to the heads of the banks. Having monopolised the City headlines by their entry into the hire-purchase business—the District Bank joined the queue last by acquiring a one-third interest in Astley Industrial Trust—the Midland Bank ensured a continuance of that state of affairs by setting in train last week another "follow-my-leader" movement in its decision to introduce a system of personal loans to those with accounts, on the U.S. model. Unsecured loans of £50 to £500 are available to all customers with a current or deposit account for financing the purchase of motor-cars, refrigerators and other household or professional equipment. These loans can be repaid over six 12, 18 or 24 months by equal monthly instalments. The rate of interest will be 5 per cent a year of the amount borrowed. Since capital as well as interest will be repaid each month, the actual interest works out at about 9½ per cent. The interest charges under hire-purchase agreements with finance houses range between 16 per cent and 25 per cent on a similar basis, so we may look forward to a general improvement in hire-purchase rates. But there are further advantages for the borrower in that the loan is automatically discharged in the event of his death, the bank has no lien on the article purchased, and interest payments may be included in claims for tax allowances.

As was to be expected, the other leading banks are losing no time in offering similar facilities, while the hire-purchase finance firms are busy revising their rates and conditions so as to meet this new competition. As to what effect the new move will have on consumer demand inflation time alone will show, but it is worth pointing out that the liquidity ratio now laid down for the banks leaves them with about £200 million to spare for such loans, and the Bank of England is well placed to limit excessive lending if the economic situation should need it. Meantime, the loans could aid the gradual expansion which now seems desirable.

Finance for Development

India's Finance Minister, Mr. Morarji Desai, is now in London on a week's visit, during which he will have discussions with the U.K. Prime Minister, the Chancellor of the Exchequer and other members of the Government, as well as the Bank of England, on India's serious financial difficulties as a follow-up to the Washington Conference on India's foreign exchange crisis. The latter's sterling balances in London have now dropped to a little more than £140 million, and the country is seeking a British loan of at least £75 million so as to avoid having to spend the last of the balances. President Eisenhower's international development association proposal—conceived by British Treasury officials and "sold" to the President by Mr. Macmillan on his last visit to Washington—should help in this connection.

Purchase of Industrial Shares

With the banks moving into the hire-purchase business in a big way, and departing so much from

tradition, less surprise than usual will be occasioned by Sir Edward Wilshaw's interesting proposal for their next adventure. Speaking at the annual meeting of the Globe Telegraph and Trust Company, he has suggested that they should extend their newly-acquired hire-purchase interests to cover the buying of investment trust and leading industrial ordinary shares by instalments. The scheme has obvious attractions as well as difficulties. Without by-passing the Stock Exchange, it is suggested that the purchase of shares could be made over bank counters.

The shares will be offered at a price calculated to cover normal commission and stamp duty plus, probably, the bank or its hire-purchase subsidiary's charge for financing the purchase. Some banks have already had experience of "over-the-counter" arrangements with unit trusts, but the hire-purchase element will be a new and radical departure. Sir Edward Wilshaw's long experience with investment trust companies, one of which has a useful investment in Lombard Banking, has always made him a strong advocate of wider share ownership. The technique he proposes is well established in the United States.

Hire-purchase Debt Still Rising

With all eyes focussed on hire-purchase, the U.K. Board of Trade has announced a rise of £4 million in Britain's hire-purchase debt during June to £503 million, a record. Of this total, £293 million was owing directly to finance houses and £210 million to household goods shops. On a commodity basis, £237 million was for private and commercial motor-vehicles and caravans, entirely owing to finance houses. Furniture and furnishings instalments outstanding were £228 million, with £119 million owing to household goods shops and £19 million to finance houses. The latest figures also show the still relatively small amount of hire-purchase financing for industrial plant. This, with farm equipment, accounts for only £27 million of the total debt, or less than 5½ per cent.

Heavier Wool Clip

Last year's British wool clip of 75.1 million lbs was the heaviest for 18 years and 11 per cent above 1956, says the British Wool Marketing Board's report for the year ended 30th April. In spite of the world recession in wool prices, 82 per cent of the 1957 clip was sold by 30th April, realising £12.2 million, and nearly all the rest has been sold since. The average price for the clip was 48d a lb. 7d a lb less than in 1956. The Government had settled the overall guarantee for the 1957 clip at 56.25d a lb. For the 1958 clip, the guarantee remains at 56.25d a lb. Producers' price schedules have been based on an average of 50.85d, leaving 5.4d a lb for marketing costs. Wool is now British agriculture's main foreign currency earner, and exports of fleece wool last year reached 33.7 million lbs, earning £8.4 million. This means that 49 per cent of the sales was for export.

Record Profit of B.E.A.

British European Airways made a record profit of £1,054,807 (before taxation) in 1957-58—a year in which B.O.A.C. and other world airlines have had disappointing results. The net profit was more than four times that of the previous year and it is the fourth consecutive year in which a profit has been shown. The annual report shows that revenue rose by 18 per cent to £28.3 million while expenditure rose by 14 per cent to £27.2 million. The profit before charging interest on capital was £1.8 million. It also shows that B.E.A. had 58 per cent of the passengers on the routes it serves, a rise of 1 per cent over the previous year. The rising share of the British independent companies in inclusive tours and car ferries has, however, reduced its share of total traffic from Britain to the Continent from 44 per cent to 42 per cent. Rises of one-fifth have been shown in flights between London and Scotland and in flights to the Channel Islands; but the Northern Scottish lines contribute heavily to the loss of £1.6 million on domestic operations, and will continue to do so.

Lord Douglas of Kirtleside, chairman, hopes that some form of a fare differential will be introduced for the new high-speed aircraft. He likes to see the jets charge a supplement of about 10 per cent of the ordinary fare. Fares during the coming year will, however, stay at about the same level, apart from special reductions on some routes; but the Corporation hopes that its competitors will agree to a fare differential at the coming Cannes meeting. To bring down fares, it is necessary to bring down the cost of each seat-mile. B.E.A. proposes to achieve this in two ways. It proposes to increase passenger accommodation and eliminate frills. Passengers will be prepared to accept a lower standard of comfort with new and faster aircraft.

Brevities

Commenting on the tea outlook, the chairman of the Tea Corporation says that prospects are favourable. He does, however, envisage a period of lower prices until excessive quantities of tea now available for auction are cleared. When they are cleared, better prices are expected.

As a sequel to the cut in Bank rate, the Local Loans Fund is reducing interest on future advances to local authorities. On loans for more than five years, but not over 15 years, interest has been reduced from 6 per cent to 6 per cent. Interest has also been reduced from 6½ per cent to 6 per cent on loans for more than 15 years. Interest on loans for not more than five years stays at 5½ per cent.

Jute

NO IMPROVEMENT IN GUNNY RATES GROWERS' MOVE AGAINST FIBRE PRICE FALLS

THE recession in jute goods over the past few weeks has shown no signs of slackening. For a while during the past week, there were slight indications of a recovery when prices made nominal advances, but this was mainly because of speculative activity, and was not backed up by genuine business in any great strength. U.S. buyers appear disinterested in jute goods with the result that hessians, although continuing to rule above the I.J.M.A. minimum in all deliveries, lack support and quotations can be considered as nominal. Operators showed confidence, however, backed by reports of higher American consumption combined with smaller burlap stocks, and it is the general opinion that business from that country cannot long be delayed. The only support for heavy goods actually tended to depress the market, as it was reported that Australia took up small quantities of cornsacks for near delivery at well below the quoted rates. Thus sacking continued to lag well behind the I.J.M.A. minimum rates in all deliveries. Local shipper covering at various times during the week only brought temporary fractional gains, and the general undertone of the heavy goods market was weak.

The Indian raw jute crop continues to make good progress, and harvesting is proceeding according to plan in nearly all areas, with the highland crop now being gathered. Reports of flooding in the jute-growing areas are disconcerting and have caused some operators to pause and withdraw offers, but there has been very little damage to the crop. If transport is dislocated for a time, there might be some delays in arrivals, but those it is considered will not be long. The possibilities of a bumper crop has naturally a lowering effect on fibre prices, and growers have expressed their dissatisfaction on this point. A plea to the Government to ensure an economic price for them was made recently by the secretary of the Bihar Jute Growers Association. It was pointed out that many growers were facing ruin as a result of the recent fall in jute prices. In the past fortnight, rates in the villages have dropped Rs. 7 a maund, while the price of rice, which normally in this district is at par with jute, has doubled. Reports from Pakistan appear to be calculated to counteract any recessionary tendencies there. It was indicated from Dacca that jute production in East Pakistan, based on a survey at the end of July, falls short of the target by 100,000 bales. Production is now said to be in the region of 5,400,000 bales, with an estimated carry-over from last season of 700,000 bales, giving a total of 6,100,000 bales. This exceeds the estimated internal and external demand by about 400,000 bales. It is anticipated, however, that the final figure will be higher than this.

THE JUTE MARKETS

A fair amount of activity was reported in the futures market last week, but the movement in general was downwards. Rates as given by the East India Jute and Hessian Exchange Ltd for the period 27th August to 2nd September, were as follows:

	Hessian 40in. 10oz. November	Sacking B Twills November	Raw Jute Upper Assam September
Opening	40.30	99.10	24.86
Highest	40.46	99.10	24.86
Lowest	39.70	97.45	23.80
Closing	40.00	98.15	24.24

Manufactured Goods: The gunny market was weak at the opening and price indications for all fabrics were lower. In the absence of business or any overseas interest, all quotations could be regarded as nominal. B Twills opened at Rs. 97 for ready shipment and Rs. 99.65 for January-March shipment, while 40in. 10oz. hessians showed little change at Rs. 42.10 and Rs. 40.25, respectively, for the same shipments. During the day, prices slumped badly through lack of support, and heavy goods dropped Re. 1 and hessians 35nP. The decline continued with ready hessians leading the way after the week-end. The decline in heavy goods was not so pronounced due to some small buying in cornsacks reported to be on account of Australia, and on Tuesday, rates showed a slight rise, but were still about Re. 1 below opening prices in both hessians and sacking. Towards the close, activity in the futures market brought some support and the undertone improved.

At the close on Wednesday morning, prices were as follows:

	Ready	September	Oct.-Dec.	Jan.-Mar.
40in. 10oz.	33.00 (35.97)	32.80 (35.75)	32.20 (35.10)	32.00 (34.88)
40in. 10oz.	41.25 (44.96)	40.60 (44.25)	40.15 (43.76)	40.00 (43.60)
B Twills	96.75	97.35	98.40	99.00
Heavy Cees (Plain)	96.00	96.30	96.40	99.00
A Twills	112.75	119.50	120.00	120.00
Liverpools	108.75	110.50	111.25	111.50
Cornsacks	100.00	101.25	100.25	100.00

Raw Jute: There was more activity in the fibre markets last week, and business was conducted almost daily. In spite of this, raw jute rates fell rapidly in sympathy with the gunny market.

Opening at Rs. 25.25 for Assam-Northern bottoms, prices dropped to Rs. 24 and a fair amount of business was conducted at the lower levels. Inter-seller covering also accounted for a large percentage of the activity, both in local markets and upcountry, and the favourable crop reports made arrivals upcountry are small for the time of year, but this holds no special significance as transport conditions have been poor due to flooding.

During the week, business was reported in Assam-Northern jute at Rs. 24 to Rs. 25 a maund for September and September-October shipments, and also Desal white at Rs. 23 to Rs. 23.25 a maund for the same deliveries, and jungli at Rs. 20.50 to Rs. 21. Murshidabad selected districts passed at Rs. 22 a maund. A fair quantity of Mesta was purchased and prices paid were Rs. 22 to Rs. 23 for Desal Mesta, Rs. 22.50 for Daissee Mesta and Rs. 21.50 to Rs. 21.75 for jungli Mesta. A small lot of Daissee White was also reported at Rs. 23 a maund.

In Cossipore, heavy covering business was reported, and all arrivals found ready buyers in mill agents. Wagon arrivals showed a drop of nearly 100 and only 330 wagons were recorded. During the corresponding week of last year, arrivals totalled 520 wagons. Quotations at the close were based on Kishenganj jute at Rs. 23 a maund, average basis.

At the close on Wednesday morning, quotations were as follows:

	Landed at Mills Rs. a maund	Rs. a 100 kilos	Shipment
Assam Northern	24.50	65.66	Sept.-Oct.
Purnea Desal	23.25	62.31	"
Daissee	27.00	72.36	Oct.-Nov.
Daissee White	23.50	62.98	Sept.-Oct.
Assam Jussa	27.06	72.36	Oct.-Nov.
Murshidabad Tossa	26.75	71.69	"
Northern Ex. Calcutta	24.00	64.32	Sept.-Oct.
Mesta:			
Assam-Northern	22.75	60.97	Oct.-Nov.
Desal	22.75	60.97	"
Daissee	22.25	58.63	"
Jungli	21.25	56.95	"
Biml F.A.Q.	21.00	56.28	"
Pakistan N.C.'s a bale	55.90	147.40	"

THE FOREIGN JUTE MARKETS

DECLINE IN FIBRE PRICES ARRESTED

(FROM OUR DUNDEE CORRESPONDENT)

THE weakness in raw jute prices was very marked in the earlier part of the past week, when a drop of £3 to £4 a ton took place. It certainly came as a surprise, and everybody connected with the industry was looking for a further fall. This expectation, however, did not materialise, and it looks as if the decline has been arrested, at least for the time being. Consumers of jute goods have been inclined to hold off to await further developments. Due to the business transacted at the time when the Middle East crisis developed in July, buyers at present are all fairly well bought in their requirements over the next four to six weeks. They are content to purchase anything else in a hand-to-mouth manner. Indeed, the whole industry is getting used to making purchases as and when the raw material is required. Unfortunately, sellers are usually in the position to deliver raw jute at any time the buyers ask for it. Even spinners are restricting their buying of raw jute just sufficient to meet their potential needs, keeping, of course, sufficient in stock to tide them over the period it takes the jute to come from Pakistan to the United Kingdom or the Continent.

Prices of raw jute have been reduced to £108 for Mill Firsts, £91 for Mill Lightnings, £81 for Mill Hearts and £66 for Grade Hearts. September-October c.i.f. Good marks of Daissee-2/3 have also declined and quotations now range from £97 with grade at from £91 Grade Tossa-2/3 at £107 and Grade Tossa-4 from £97. September-October or October-November. The rates are 20s a ton below the E.P.C. prices in Pakistan. Reports concerning the crop this season suggest that there might be a plentiful yield but it is said that much rain is falling in the east and some people think that the Pakistanis will find some excuse to restore the loss which prices have sustained recently.

Calcutta goods have ruled quiet and the tendency in prices has been easier. Hessians are down to 62s 3d for 40in. 10oz. and 48s 9d for 7½oz., September, and 60s 9d and 45s 9d October-December, with B Twills at 146s 6d and 147s 5d for the respective positions of shipment all f.o.b. Calcutta. Dundee spinners and manufacturers are quite busy and their big difficulty is to get workers to enable them to maintain their full-time production.

GOOD GENERAL DEMAND AT
TEA EXPORT SALE

DUST PRICES FIRM

AT Sale No. 11, held on 1st and 2nd September, the offerings at the Export auction amounted to 56,516 chests for which there was a good general demand. Plain broken were from 4nP to 8nP easier, while similar Fannings opened fully firm to dealer, but declined irregularly by 4nP or 6nP as the sale progressed. All bright liquoring descriptions of orthodox manufacture sold well, particularly good medium Assam B.P.'s and P.Fg's. Orthodox B.O.P.'s and O.Fg's with more ordinary liquors, however, declined by about 10nP or 20nP according to quality. B.P.S. met with a good enquiry and were a strong feature of the sale. C.T.C. teas were about 20nP to 30nP easier apart from the best descriptions. Whole leaf grades were generally easier while tippy teas met with a fair support but at rather irregular and sometimes easier rates. There was a fair enquiry for Darjeelings but prices were easier according to quality.

Quotations	1958	1957
Clean Black Pekoe	2.05 to 2.10	2.20 to 2.25
Plain B.P.	1.60 to 1.72	1.60 to 1.70
Plain Fannings	1.78 to 1.86	1.70
Medium B.P.	1.85 to 1.95	1.86
Medium Fannings	2.05 to 2.15	1.90
Best Assam C.T.C. B.P.	2.20 to 2.40	2.30 to 4.00
Best Assam C.T.C. Pgs	3.50 to 3.80	4.50 to 5.00

At the Internal Sale, there was a good general demand for the 20,886 chests of Dust on offer. Commons and orthodox Assams were firm, particularly the useful liquoring powdery kinds from Assam. There was a better demand for Darjeelings and these were often dearer. C.T.C. Assams were again irregular but medium descriptions met with better competition. Although occasional lines of the best liquoring kinds were dearer, the tendency was generally easier.

Quotations	1958	1957
Medium Doore Dust	1.72 to 1.74	1.52 to 1.58
Medium Assam Grainy Dust	1.74 to 1.78	1.58 to 1.66
Medium Assam C.T.C. Dust	2.20 to 2.40	2.10 to 2.30
Best Assam C.T.C. Dust	2.50 to 2.75	2.40 to 2.80

There were 857 chests of Leaf on offer. Prices were generally at about valuations.

FREIGHT MARKETS DULL

THERE has been little to enthuse over in the freight markets this past week, and conditions remain very dull. Chinese charterers provided a substantial time charter business taking a number of vessels for round voyages China-Continent and also on a six-month basis. Local business included two handy-sized vessels taken for coal to East Pakistan and one to Colombo. In the light of the much publicised export drive, it is somewhat surprising that Bombay should be the venue chosen for a meeting of coal interests to examine the possibilities of increasing coal exports and regaining markets lost to Australia and China. Surely, Calcutta is a more logical choice where exporters and charterers of many years standing would be readily available for consultations. Factors which have had a decisive influence on this trade are the increasing costs of loading and the crippling income tax on freight earnings to which of course, must be added the uncertainty of turn-around and of quantity of cargo able to be carried due to river drafts.

HIDES AND SKINS QUIET

The market continued to be quiet. Stocks were higher than in the previous week.

Bazaar Sales

(Between 26th August and 1st September, 1958)

Cowhides: Wet salted (Ord.) 16,500 pcs. on the basis of Rs. 7.50 to Rs. 10.75; Wet salted (Slaughtered) 15,800 pcs. on the basis of Rs. 12 to Rs. 18.50.

Goatskins: Wet salted (Patna, Daisee, Kustia) 65,300 pcs. on the basis of Rs. 265 to Rs. 275. Rs. 315 to Rs. 340 and Rs. 365 to Rs. 375; Wet salted (he-killed) on the basis of Rs. 4 and (she-killed) on the basis of Rs. 3.50 a piece; Assam-Dinajpur-Murshidabad 38,500 pcs. on the basis of Rs. 270 to Rs. 345; Purneah-Kissanganj-Rampurhat 16,400 pcs. on the basis of Rs. 315 to Rs. 335; Patna-Pakur 3,500 pcs. on the basis of Rs. 275 to Rs. 290; Patna 2,000 pcs. on the basis of Rs. 300; Purneah-Kissanganj 800 pcs. on the basis of Rs. 420.

Bazaar Stocks

(1st September, 1958)

Cowhides: Wet salted 1,29,000 pcs.

Goatskins: Wet salted (Patna, Daisee, Kustia, Killed) 27,100 pcs.; Assam-Dinajpur 93,500 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissanganj 2,25,500 pcs.

Commodity Markets

SLIGHT RISE IN WHOLESALE
PRICE INDEX

THE official wholesale price index (base: year ended March 1953=100) stood at 115.7 during the week ended 16th August, 1958, compared with 115.6 (revised) for the previous week. The index was almost at the same level as in the corresponding week of last month but was higher by 3.3 percent when compared with that of a year ago. Higher prices of barley in Jaipur (+15%), fish (Pomfret) (+10%) and arhar in Bombay, potatoes in Mandi (+7% each), onions in Nagpur (+6%), gram, eggs in Bombay and gur in Muzaffarnagar (+5% each), maize (+4%), bananas (+3%), wheat, tea, chillies (+2% each) and bajra and ghee (+1% each) raised the index for Food Articles by 0.3 percent to 119.7 compared with 119.4 (revised) for the earlier week. The prices of mung in Bombay and cummin (-10% each), eggs in Delhi (-7%), milk in Bombay (-6%), rice in Nizamabad (-5%), ragi and cashewnuts (-2% each) and masur, urad, groundnut oil, gingelly oil, mustard oil and coffee (-1% each), however, showed declines. The index for Tobacco rose by 1.6 percent to 88.8 due to an increase in the price of raw tobacco (Mother medium) in Calcutta (+7%). In spite of a fall in the prices of castor oil (-1%), the index for the Fuel, Power, Light and Lubricants group stood unchanged at the previous week's level of 116.5. The index for Industrial Raw Materials receded by 0.3 percent to 118.7 compared with 119.0 for the earlier week. Items which showed noticeable variations during the week were: tanning materials (Konam bark) (-11%), raw hides (-4%), castorseed (+6%), and gingellyseed (+2%). The prices of lead (-2%) and rayon yarn and aluminium (-1% each) moved down while those of zinc and brass (+1% each) showed advances, and the index for Intermediate Products fell by 0.2 percent to 112.4. The index for Finished Products advanced by 0.2 percent to 108.5 compared with 108.3 (revised) for the earlier week, mainly due to the fractional rise in the prices of cotton manufactures supported by an increase in the prices of soap (+4%).

U.S. CERTIFICATE OF AIRWORTHINESS FOR
CONVAIR AIRLINER

The aero-engine firm of D. Napier and Son has announced that a U.S. certificate of airworthiness has been given to the Convair airliner using the Napier Eland engine. This is the third turbine-powered airliner to be approved by the U.S. authorities for the carriage of passengers. The first were the Viscount and Britannia—British aircraft with British engines. The Eland-powered Convair is a U.S. aircraft with British engines. The certificate has been obtained by the Napier company as an essential part of its campaign to sell Eland engines to the operators of Convairst all over the world. The piston-engined Convair 240, 340, and 440 series have been very successful and more than 500 are operating in many countries. With Eland turbo-prop engines they offer an increase of about 50 miles an hour in speed, much longer range, a better payload, and the smoothness and silence which are associated with the turbo-prop.

COMPANY AND PUBLIC NOTICES

THE NILPUR TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of The Nilpur Tea Co., Ltd., will be held at the Registered Office at No. 4, Mangoe Lane, Calcutta, at 11-15 A.M. on the 29th day of September, 1958, for the following purposes:—

AS ORDINARY BUSINESS:

- (1) To consider the Revenue and Profit and Loss Accounts for the year ended 31st December, 1957, the Balance Sheet as at that date and the Reports of the Directors and Auditors.
- (2) To declare a Dividend.
- (3) To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS:

- (4) To consider and if thought fit to pass with or without modification the following Resolution which will be proposed as an Ordinary Resolution:—
"That Mr. M. R. Das be and is hereby reappointed a Director of the Company."
- (5) To consider and if thought fit to pass with or without modification the following Resolution which will be proposed as a Special Resolution:—
"That Mr. A. B. Kingsley be and is hereby reappointed a Director of the Company."

Special Notice dated 14th August, 1958, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that the Notice is given to satisfy the requirements of Sections 190 and 257 of the Companies Act, 1956, for the reason that Mr. M. R. Das vacates office at the forthcoming Annual General Meeting under the provisions of Section 260 of the Companies Act, 1956, and it is proposed to re-appoint him a Director of the Company.

Special Notice dated 14th August, 1958, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that the Notice is given to satisfy the requirements of Sections 190 and 261 (1) (c), (2) and (3) of the Companies Act, 1956, for the reason that Mr. A. B. Kingsley, a Director and Member of the Company (who retires by rotation at this Meeting) is a Managing Director and a Member of J. Thomas & Co., Private Ltd., which customarily acts as Brokers for the teas produced by the Company which may be construed as an office or place of profit under the Company. Having regard to the fact that the Managing Agents have a right to appoint a Director to the Company and to the provisions of Sections 261 and 314 of the Act, a Special Resolution reappointing him as a Director of the Company is considered requisite.

The Share Transfer Books and Register of Members of the Company will be closed from the 25th September to the 29th September, 1958, both days inclusive.

THE NILPUR TEA COMPANY, LIMITED.

By Order of the Board,
WILLIAMSON MAGOR & CO., LTD.,
V. S. VIJI,
Secretary,
Managing Agents.

Calcutta, 29th August, 1958.

Note.—A Member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a Member of the Company.

THE ORISSA MINERALS DEVELOPMENT
CO. LTD.

Notice of Interim Dividend.

THE Board of Directors has sanctioned payment of an Interim Dividend on the Ordinary Shares @ 10% per annum in respect of the year ending 30th June, 1958, without deduction of Income Tax paid by the Company. This dividend will be paid on or after 1st October, 1958, to those who will be paid on or after 1st October, 1958, to those Shareholders (or their mandatories) whose names appear in the Company's books on the 25th September, 1958, as the registered holders of these shares.

The Share Transfer Register of the Company will be closed from 12th September, 1958 to 25th September, 1958, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 29th August, 1958.

MARGARET'S HOPE TEA COMPANY,
LIMITED

NOTICE is hereby given that the Annual General Meeting of the Shareholders of Margaret's Hope Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Tuesday, the 30th September, 1958 at 3-00 P.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1957, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. F. S. Mitchell, the Director retiring by rotation at the Meeting.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS:

5. To consider, and if thought fit, to pass the following Resolution which will be proposed as a Special Resolution as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which as required by Section 173 of the said Act, is annexed hereto:—
"That Mr. D. N. Kapur be and is hereby appointed a Director of the Company liable to retirement by rotation."

The Share Transfer Books of the Company will be closed from 20th September, 1958 to 30th September, 1958, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

By Order of the Board,

MCLEOD & CO.,
C. HOCKLEY,
Secretary,
Managing Agents.

3, Netaji Subhas Road,
Calcutta,
1st September, 1958.

NOTE:—

Payment of the proposed Dividend, if declared, will be made on or after 13th October, 1958, only to those members whose names are registered in the Books of the Company on 30th September, 1958, or to their Mandatories.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT IN RESPECT OF
SPECIAL BUSINESS.

Mr. D. N. Kapur was appointed an Additional Director of the Company in November, 1957 and vacates Office at this Annual General Meeting. A Special Notice has been received from a member of the Company notifying his intention to propose a Special Resolution as set out in item 5 of the above Notice appointing Mr. D. N. Kapur as a Director of the Company liable to retirement by rotation. In the said Special Notice it has been pointed out that Mr. D. N. Kapur is an "associate" of the Managing Agents within the meaning of the Companies Act, 1956 and that, in view thereof, it will be necessary for the members to pass a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956, if they desire to appoint him as a Director of the Company liable to retirement by rotation, since McLeod & Co., Ltd., the Managing Agents of the Company are authorised by the Articles to appoint a Director or Directors on the Board of the Company.

JESSOP AND COMPANY, LIMITED

NOTICE is hereby given that the Twenty-sixth Annual General Meeting of the Members of Jessop & Co., Ltd., will be held at the Registered Office of the Company on Monday, the Twenty-ninth day of September, 1958, at 11-00 O'clock in the forenoon, for the transaction of the following business:—

1. To receive and consider the Accounts, together with the Reports of the Board of Management and Auditors, for the year ended 31st October, 1957.
2. To re-appoint the Auditors.
3. To transact any other business of an Ordinary General meeting.

The Ordinary Share Transfer Registers of the Company will be closed from 13th to 29th September, 1958, both days inclusive.

By Order of the Board,

D. D. MARKAN,
Secretary.

63, Netaji Subhas Road,
Calcutta, 26th August, 1958.

Note: A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

RAZA BULAND SUGAR COMPANY LIMITED, RAMPUR, U.P.

NOTICE is hereby given that the 23rd Annual General Meeting of the Shareholders of the Company will be held at Raza-e-Raza, Rampur, the Registered Office of the Company on Tuesday the 30th September, 1958, at 10 a.m. to transact the following business:—

1. To receive and consider the report of the Board of Directors and the Auditors and the Audited Statement of Accounts of the Company for the financial year ended 31st October, 1957.
2. To declare dividend.
3. To appoint a Director in place of Raizada Jagmohan Lal, who retires by rotation at the Meeting, and is eligible for re-appointment.
4. To appoint a Director in place of Shri Chundi Lal who retires by rotation at the Meeting, and is eligible for re-appointment.
5. To appoint Auditors for the financial year 1957-58 and fix their remuneration. Messrs. V. Sankar Aiyar & Co., Chartered Accountants, the retiring Auditors, are eligible for re-appointment.
6. To consider any other business that can be transacted at an Annual General Meeting with the permission of the Chairman.

SPECIAL BUSINESS

To consider and if thought fit, to pass with or without modification, the following resolutions:—

7. As Special Resolutions:—

(i) "Resolved that the provisions of clause 3 of the Memorandum of Association of the Company with respect to the objects of the Company be and are hereby altered by omitting sub-clause 28 and by substituting therefor the following sub-clause:—

"28. To build or contribute to the building of huts, houses, etc., to grant pensions, allowances, gratuities and houses or other payments to employees or ex-employees of the Company or the dependents or connections of such persons, and to establish and support or to aid in the establishment and support of any schools and any educational, scientific literary, religious, national, charitable philanthropic, medical and other institutions, places of recreation, hospitals, dispensaries, societies, clubs, provident or other funds, medical and other attendance and other assistance as the Company shall think fit, trusts, trade unions, etc., and conveniences calculated to benefit not only employees or ex-employees or the dependents and connections of such persons but the public generally or any particular section thereof and to make payment towards insurance and to subscribe, contribute or guarantee money for any national, charitable, benevolent, political, public, general or useful object or other funds not directly relating to the business of the Company or the welfare of its employees, or for any exhibition."

(ii) "RESOLVED that the provisions of clause 3 of the Memorandum of Association of the Company with respect to the objects of the Company be and are hereby altered by inserting therein, immediately after clause 36 the following new clauses:—

"37. To carry on business as financiers, concessionaries and merchants and to undertake and carry on and execute all kinds of financial, commercial, trading and other operations.

"38. To amalgamate with any other Company having objects altogether or in part similar to those of this Company.

"39. To carry on the business of hotel, restaurant, cafe, tavern, beer-house, refreshment-room, and lodging-house keepers, licensed victuallers, wine, beer, and spirit merchants, brewers, distillers, importers, and manufacturers of aerated, mineral and artificial waters and other drinks, purveyors, caterers for public amusements, generally proprietors of motor vehicles, garage proprietors, livery-stable keepers, jobmasters, farmers, dairymen, ice merchants, importers and brokers of food, live and dead stock, and colonial and foreign produce of all descriptions, hairdressers, perfumers, chemists, proprietors of clubs, baths, dressing rooms, laundries, reading, writing and newspaper rooms, libraries, grounds, and places of amusement, recreation, sport, entertainment, and instruction of all kinds, tobacco and cigar merchants, agents for railway, shipping and air-plane companies and carriers, theatrical and opera box office proprietors, entrepreneurs and general agents, and any other business which can be conveniently carried on in connection therewith.

"40. To develop and turn to account any land acquired by the Company or in which it is interested, and in particular by laying out and preparing the same for building purposes, constructing, altering, pulling down, decorating, maintaining, fitting up, and improving buildings, and by planting, paving, draining, farming, cultivating and letting on building lease or building agreement, and by advancing money to and entering into contracts and arrangements of all kinds with builders and others."

8. As a Special Resolution.

"RESOLVED that pursuant to Section 31 of the Companies Act, 1956, the regulations contained in the document submitted to this meeting and for the purpose of identification subscribed by the Chairman thereof, be and are hereby adopted as the Articles of Association of the Company within the meaning of the Companies Act, 1956, with effect from the date of adoption, in substitution for and to the exclusion of the existing Articles of Association of the Company."

9. As an Ordinary Resolution.

"RESOLVED that the approval of the Central Government having been obtained, vide Ministry of Commerce & Industry, Department of Company Law Administration letter No. 1(79)-CMN/53 dated 15th April 1958 for variation in the Managing Agency Agreement dated 14th March, 1957, between the Company and the Managing Agents, Messrs. Govan Bros. (Rampur) Private Ltd., the Company does hereby approve of and consent to the amendment of the existing clause No. 3(a) of the said Agreement to read as under:—

"3(a). The remuneration of the Managing Agents, until otherwise revised with mutual consent, in accordance with the provisions of the Companies Act, 1956, or any amendment thereof, shall be a commission of 10% on the net profits of the Company for each financial year to be calculated in accordance with the provisions contained in Sections 349, 350 and 351 of the Companies Act, 1956 and/or any other provisions of the said Act subject to a minimum remuneration of Rupees Fifty thousand per year payable at the rate of Rs. 4,000/- per month at the close of each calendar month and the remaining sum of Rs. 2,000/- being paid along with the last instalment relating to the last month of the Company's financial year. The difference, if any payable to the Managing Agents after the ascertainment of 10% of the net profit will be paid after the accounts of the Company for such financial year have been audited and laid before the Company in general meeting."

and the Board of Directors be and are hereby authorised to execute the necessary supplementary agreement to give effect to this decision."

Explanatory statements with regard to the items of special business to be transacted at this meeting are annexed in terms of Section 173(2) of the Companies Act, 1956.

The Share Transfer Books of the Company will remain closed from 19th September, 1958 to 4th October, 1958, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint one or more proxies to attend and vote instead of himself, who need not necessarily be a member. Such proxies should reach the Company at least 48 hours before the meeting.

By Order of the Board,

FOR RAZA BULAND SUGAR CO. LTD.,

S. K. KAUL,

Secretary.

New Delhi.

Dated: 14th August, 1958.

Note: (1) The dividend as proposed by the Directors, if declared, will be paid on or after the 16th October, 1958, to those members whose names appear in the books of the Company on the 30th September, 1958, or to their Mandatees. No applications for dividend warrants will be necessary.

(2) Members or other persons holding shares of the Company on blank transfer should submit such shares for transfer with stamped and completed transfer deeds and the registration fee before the closure of the Transfer Books so as to be entitled to the despatch of the dividend warrants in respect of those shares to them. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

(3) Members should immediately notify any change that may have occurred in their addresses as the Dividend Warrants will be sent at the addresses of members registered in the books of the Company on 30th September, 1958.

Explanatory statement under Section 173(2) of the Companies Act, 1956 in respect of the items of Special Business to be transacted at the Twenty-third Annual General Meeting.

Item No. 7.

Directors of the Company have decided at a meeting held on the 19th day of May, 1958, to revise and amend the Memorandum of Association as stated in the resolutions.

Existing Sub-clause 28 of Clause 3 of the Memorandum of Association stands as under:—

"(28) To establish and support, or aid in the establishment and support of associations, institutions, funds, trusts and conveniences calculated to benefit employees or ex-employees of the Company or its predecessors in business or the dependents or connections of such persons and to grant pensions and allowances and to make payments towards insurance and to subscribe or guarantee money for charitable or benevolent objects or for any exhibition for any public, general or useful objects."

The proposed modification in the said Sub-clause 28 enlarges the scope of the existing clause to better suit the purpose it is intended to serve.

The proposed additional clauses have been considered necessary with a view to making the provisions of the Memorandum of Association wide enough to cover such other business as may be conveniently and/or advantageously combined with the present business of the Company.

Item No. 8.

The existing Articles of Association of the Company were adopted at the time of incorporation of the Company and have been amended in certain respects from time to time. Companies Act, 1956 which came into force as from 1st April, 1956 effected revolutionary changes in the Law and procedure relating to joint stock Companies. Several of the

changes have made various provisions in the existing Articles of Association of the Company either obsolete, or inadequate, or over-ridden or affected, with the result that a thorough revision and complete substitution of the existing Articles of Association has become necessary so as to bring them in line with the provisions of the Act of 1956.

It has, therefore, been considered desirable to substitute a new set of Articles for the existing Articles of Association of the Company. A copy of the new proposed set of Articles of Association of the Company is sent herewith marked 'A' for the information of the shareholders of the Company.

The Managing Agents of the Company have no interest in any of the amended Articles. The Directors may be considered to be interested only in Articles 107 and 109 which replace existing Articles 110 and 143 quoted below, and Article 108 which is a new Article.

Existing Article 110.

"Until otherwise determined by the Company in General Meeting each Director shall be paid out of the funds of the Company by way of remuneration for his services the sum of Rs. 600/- per year. The Directors may allow and pay to any Director who for the time being is resident out of the place at which any meeting of the Directors may be held and who shall come to that place for the purpose of attending such meeting such sum as the Directors may consider fair and reasonable for his expenses and loss of time in connection with his attending at the meeting in addition to his remuneration as above specified."

Existing Article 143.

"If any Director being willing shall be called upon to perform extra service or to take any special exertions in going or residing away from the district in which the office is for the time being situate for any of the purposes of the Company or in giving special attention to the business of the Company as a member of a Committee of Directors the Company may remunerate the Director so doing either by a fixed sum or by a percentage of profits or otherwise as may be determined by the Directors, and such remuneration may be either in addition to or in substitution for his or their share in the remuneration above provided for the Directors."

Item No. 9.

The Managing Agency agreement dated 14th March, 1957 executed by the Company in favour of the Managing Agents, M/s. Govan Bros. (Rampur) Private Ltd., pursuant to their re-appointment for a period of 10 years with effect from 15th January, 1957, provides for the Managing Agents a remuneration of 10% of the net profits of the Company computed as per Sections 349, 350 and 351 of the Companies Act, 1956, with a minimum remuneration of Rs. 35,000/- per annum payable in the financial year. This minimum remuneration is payable in instalments of Rs. 2,500/- per month and the balance of Rs. 5,000/- being paid along with the last instalment payable in the last month of the financial year.

The Managing Agents had represented after the implementation of the scheme of amalgamation of The Raza Sugar Co. Ltd. with this Company (formerly The Buland Sugar Co. Ltd.) that as they were to be paid a minimum remuneration of Rs. 30,000/- per annum in The Raza Sugar Company Ltd., working a total of Rs. 65,000/-, they would now receive as per their Managing Agency The Buland Sugar Company Ltd., a minimum remuneration of only Rs. 35,000/- in the event of absence or inadequacy of profits in any financial year. They had, therefore, requested the Board of Directors to increase their minimum remuneration from Rs. 35,000/- to Rs. 50,000/- per annum which is permissible under Section 198 of the Companies Act, 1956. The Board had considered the matter at their meeting held on 19th May, 1958 and decided to approach the Central Government pursuant to Section 329 of the Companies Act, 1956 to approve the variation in the terms of the aforesaid Managing Agency agreement to provide for a minimum remuneration of Rs. 50,000/- per annum in place of Rs. 35,000/-. The Central Government has approved the proposed variation vide Ministry of Commerce and Industry, Department of Company Law Administration letter No. 1(79)-CMN/53 dated 15th April, 1958, a copy of which is attached herewith marked Annexure 'B'.

As required by Section 329 of the Companies Act, 1956 the variation sought to be made in the Managing Agency Agreement is now placed before the shareholders for their approval.

The existing Memorandum and Articles of Association, the Managing Agency Agreement dated 14th March, 1957 and the original letter No. 1(79)-CMN/58 dated 15th April, 1958 of the Government of India, Ministry of Commerce and Industry, Department of Company Law Administration, referred to in the explanatory statements of Meeting can be inspected by any shareholder at (U.P.) between the hours of 10 a.m. and 4 p.m. on any working day except Saturday, and the hours of 10 a.m. and 12 noon on Saturdays.

By Order of the Board,

FOR RAZA BULAND SUGAR CO. LTD.,

S. K. KAUL,

Secretary.

New Delhi,

Dated 14th August, 1958.

*Sent to the Shareholders individually.

PUSIMBING TEA COMPANY, LIMITED

NOTICE is hereby given that the Forty-first Annual General Meeting of the Members of Pusimbing Tea Company Ltd., will be held at the Registered Office of the Company at 85, Netaji Subhas Road, Calcutta, on Tuesday the 30th September 1958 at 11 a.m., for the following purposes:—

1. To consider and adopt the Profit and Loss Account for the period ended the 30th November and 31st December 1957 and the Balance Sheets as at those dates and the reports of the Directors and Auditors.
2. To appoint a Director in place of Mr. S. Mitra who retires by rotation and who, being eligible, offers himself for re-election.
3. To appoint Auditors for the year ending 31st December 1958 and to fix their remuneration.
4. To consider and if thought fit to pass the following Resolutions with or without modifications:—

As ordinary Resolutions

- (a) Resolved that the resignation of Messrs. Davenport & Co. Private Ltd from the Office of Managing Agents of the Company vide their letter 30th November '57 be accepted with effect from the date of resignation.
- (b) Pursuant to the provision of Sec. 228(1) of the Companies Act 1956, it is resolved that the Accounts maintained in the Gardens of the Company need not be audited by a qualified Auditor, but the Directors may appoint such person or persons in their discretion to audit the Garden Accounts, if and when they deem necessary and to fix his or their remuneration.
- (c) Resolved that the Books, Registers and other documents required to be kept by the Company under Companies Act 1956 be made available for inspection at the Registered Office of the Company by persons respectively referred to in Sections 49, 144, 163, 196, 301, 304, 307 and 372 of the Companies Act as being entitled to inspection between the hours 11 a.m. to 1 p.m., on each business day, upon a twenty-four hours written notice of intention to inspect indicating what Books, Documents and Registers are intended to be inspected.

To consider and pass the following Resolutions with or without modifications as Special Resolutions:—

- (d) In view of the limitation imposed by Section 309(4) of the Companies Act 1956, it is hereby resolved that SRI N. K. BOSE and SRI S. MITRA Directors of the Company shall be entitled for 5 years with effect from 1st January 1958 so long they shall act as Directors to Commission not exceeding 3% of the Annual Net Profits of the Company and in case of loss or inadequacy of Profit a sum of Rs. 1000/- per month payable in such proportion as the said Directors may mutually agree upon.

Explanatory Notes:

With the resignation of the Managing Agents the services of the Director SRI N. K. BOSE and SRI S. MITRA have become essential and necessary as they have to devote some of their time for the affairs of this Company, and it is proposed to move the above resolution so as to authorise the payment of remunerations to them in accordance with the provisions of the Act.

- (e) Resolved that the Company do hereby approve of and consent to the appointment of Messrs. P. K. BOSE & BROS. PRIVATE LTD. for the purchase, for the Company, and supply to the Company of such Engineering, Electrical, Machine Stores, Tea Chests etc., and such other requirements and services in which P. K. Bose & Bros Private Ltd regularly trade or do business and which the Company may require for the purpose of its business. It being a term of the above arrangement that the prices at which the transactions take place shall be at rates which are not less favourable to the Company than market rates or which are otherwise reasonable.

Explanatory Notes:

Messrs. P. K. Bose & Bros. Private Ltd. is a prominent and established house of Suppliers and Contractors in which Sri S. Mitra a Director of the Company is interested as a Member and Director and the arrangement with the Company requires your approval.

The Share Transfer books of the Company will be closed from 17th September 1958 to 30th September 1958 both days inclusive.

By Order of the Board,

N. K. BOSE,

Director.

3rd September 1958.

NOTES: A Member of the Company entitled to attend and Vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a Member of the Company.

THE ALEXANDRA JUTE MILLS LTD.

NOTICE is hereby given that the Annual General Meeting of the Members of THE ALEXANDRA JUTE MILLS, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Monday, the 29th September, 1958, at 3 O'clock in the afternoon, for the following purposes:—

1. To receive and consider the Profit and Loss Account for the year ended 31st December, 1957, the Balance Sheet as at that date and Reports of the Directors and Auditors.
2. To declare Dividends.
3. To appoint a Director in place of Mr. A. B. Kingsley, the Director retiring by rotation at the Meeting.

And in this connection to consider and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956.

"That Mr. A. B. Kingsley be and is hereby re-appointed a Director of the Company liable to retirement by rotation."

Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. A. B. Kingsley is an "Associate" of the Managing Agents within the meaning of the Act and that, therefore, he can only be re-appointed by a special resolution as a Director of the Company liable to retirement by rotation.

4. To appoint Auditors and fix their remuneration.

As Special Business.

5. To appoint a Director in place of Mr. R. G. Edwards who resigned from the Board in March, 1958, and in this connection, to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution of which Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is annexed hereto:—

"That Mr. D. N. Kapur be and is hereby appointed a Director of the Company liable to retirement by rotation in place of Mr. R. G. Edwards."

The Share Transfer Books of the Company will be closed from 15th September to 29th September, 1958, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,

MCLEOD & CO. LTD.,

C. HOCKLEY,

Secretary,

Managing Agents.

3, Netaji Subhas Road,
Calcutta, 27th August, 1958.

NOTE.

Payment of the proposed Dividends, if declared, will be made on or after 4th October, 1958, only to those members whose names are registered in the Books of the Company on 29th September, 1958, or to their Mandatees.

Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT IN RESPECT OF SPECIAL BUSINESS

Mr. R. G. Edwards resigned from the Board at the end of March, 1958, and a Special Notice has been received from a member of the Company notifying his intention to propose a special resolution as set out in item 5 of the above notice appointing Mr. D. N. Kapur as a Director of the Company liable to retirement by rotation, in the place of Mr. R. G. Edwards. In the said Special Notice it has been pointed out that Mr. D. N. Kapur is an "Associate" of the Managing Agents within the meaning of the Companies Act, 1956, and that, in view thereof, it will be necessary for the members to pass a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956, if they decide to appoint him as a Director of the Company liable to retirement by rotation, since McLeod & Co. Ltd., the Managing Agents of the Company are authorised by the Articles to appoint a Director or Directors on the Board of the Company.

NEW CHUMTA TEA COMPANY, LIMITED

NOTICE is hereby given that the Annual General Meeting of the Members of New Chumta Tea Company, Limited will be held at the Registered Office of the Company at No. 6, Church Lane, Calcutta, on Friday, the 26th September, 1958 at 12-15 P.M. for the following purposes:—

1. To consider and adopt the Profit and Loss Account for the year ended the 31st December, 1957, and the Balance Sheet as at that date, and the Reports of the Directors and Auditors.
2. To declare a dividend.
3. To appoint Auditors for the year ending the 31st December, 1958, and to fix their remuneration.
4. To elect a Director in the place of Mr. G. T. Routledge who retires by rotation but, being eligible, offers himself for re-election and to consider and, if thought fit, to pass the following resolution which will be proposed as a Special Resolution.

"That Mr. G. T. Routledge who retires from his office as a Director and who is a Member and Director of J. Thomas & Co. Private Limited, which Company may be deemed to hold an office or place of profit under the Company, be and he is hereby appointed a Director of the Company."

Special Notice dated the 14th August, 1958 of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that the notice is given to satisfy the requirements of Sections 190 and 261(1)(c), (2) and (3) of the Companies Act, 1956, for the reason that Mr. G. T. Routledge, a Director of the Company who retires by rotation of directors at this meeting is a Director and Member of Messrs. J. Thomas & Company, Private Limited which customarily acts as brokers of the teas produced by the

Company, which may be construed as an office or place of profit under the Company. Having regard to the fact the Managing Agents have a right to appoint a director to the Company, and to the provisions of Section 261 and 314 of the Act, a special resolution re-appointing him as a director of the Company is considered requisite.

The Share Transfer Books and Register of Members of the Company will be closed from the 13th September to the 26th September, 1958, both days inclusive.

By Order of the Directors,
DAVENPORT & CO. PRIVATE LTD.,
Managing Agents.

Calcutta, 30th August, 1958.

Note:—A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead and a proxy need not be a member of the Company.

EXPLANATORY STATEMENT.

Mr. G. T. Routledge retires by rotation from the office of Director of the Company but offers himself for re-election. As Mr. Routledge is a Member and Director of J. Thomas & Co. Private Limited, which Company may be deemed to hold an office or place of profit under the Company, according to the provisions of Section 261(1)(c) of the Companies Act, 1956, if Mr. Routledge is to be appointed as a Director, a Special Resolution is necessary for that purpose of which Special Notice must be given to the Company under section 190 (1) of the said Act read with Section 261 (2) thereof not less than twenty-eight days before the meeting at which the resolution is to be moved. Such Special Notice of intention to move the Special Resolution relating to Mr. Routledge's appointment has been duly received by the Company. It is desirable that the Board should have the benefit of Mr. Routledge's knowledge and experience and it is recommended that he be re-elected as a Director. Mr. Routledge may be deemed to be interested in the proposed Special Resolution to the extent indicated above.

THE PREMCHAND JUTE MILLS LTD.**NOTICE.**

To
The Shareholders,
Dear Sirs,

NOTICE is hereby given that an Extraordinary General Meeting of the Shareholders of the Premchand Jute Mills Ltd. will be held at the Registered Office of the Company at 81, Sovabazar Street, Calcutta, on Monday the 29th September, 1958, at 4 p.m. to consider, and if thought fit to pass, with or without modification, the following Resolution as a Special Resolution.

RESOLUTION:

RESOLVED that the Mill and Factory of the Company be leased out to Messrs. Kanoria Co. Ltd. of 18, Mullick Street, Calcutta, for a period of 5 years with option on the part of the Lessee for a further period of 5 years on the terms and conditions set out in the draft lease approved by the said Kanoria Co. Ltd. and by the Directors and signed by the Chairman of the Board of Directors for identification with liberty to the Directors to make additions and alterations in the said draft lease as may be considered necessary in the interest of the Company.

Any Member of the Company entitled to attend and vote at the Meeting is entitled to appoint another person (whether a Member or not) as his proxy to attend and vote instead of himself.

EXPLANATORY STATEMENT:

The Mill has been running at a loss of a very big amount from a considerable time. The Managing Agents find it difficult to procure raw jute owing to their not having a purchasing Agency at Mofussil. Therefore, the Managing Agents as well as the Directors of the Company consider it best in the interest of the Company to let out the Mill for 5 years with option on the part of the Lessee for a further period up to 5 years. The draft lease which has been approved by the Directors and signed for identification by the Chairman of the Board of Directors and also approved by Sri Radha Kissen Kanoria on behalf of Messrs. Kanoria Co. Ltd. may be inspected by the Members at the Head Office at any time during Office Hours.

By Order of the Board,
Sd/- P. N. ROY,
Director.

Dated, Calcutta,
The 30th August, 1958.

CAPITAL (PRIVATE) LIMITED

NOTICE is hereby given that an Annual General Meeting of Capital (Private) Limited, will be held at the Bengal Chamber of Commerce & Industry, Calcutta, on Monday, the 29th September, 1958 at 10-25 A.M. to transact the following business:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1957 and to receive the Directors' and Auditors' Reports thereon.
2. To elect a Director.
3. To appoint Auditors and fix their remuneration.

By Order of the Board,
CAPITAL (Private) LTD.,
K. F. L. HARRIS,
Secretary.

Calcutta, 21st August, 1958.

W. H. TARGETT & CO., LTD.

NOTICE is hereby given that an Annual General Meeting of W. H. TARGETT & CO., LIMITED will be held at the Bengal Chamber of Commerce & Industry, Calcutta, on Monday, the 29th September, 1958 at 10-30 A.M. to transact the following business:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1957, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividend recommended by the Directors.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 16th September to 29th September, 1958, both days inclusive.

By Order of the Board,
W. H. TARGETT & CO., LIMITED,
K. F. L. HARRIS,
Secretary.

Note:—

- (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.
- (b) The dividend, if declared, will be paid on or after 5th October, 1958 to those shareholders so entitled whose names appear in the Company's books on the 29th September, 1958 or to their mandatees. No application for Dividend Warrants will be necessary.

THE MEGNA MILLS COMPANY, LIMITED

NOTICE is hereby given that an Annual General Meeting of the Members of The Megna Mills Company Limited, will be held at 16, Strand Road, Calcutta-1, the Registered Office of the Company, on Monday, the 29th day of September, 1958, at 3 O'clock in the afternoon for the following purposes:—

1. To consider the Profit & Loss Account of the Company for the year ended 31st March, 1958, the Balance Sheet as at that date and the Reports of the Directors and Auditors.
2. To declare a dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and if thought fit to pass with or without modification the following resolutions:—

As Ordinary Resolutions:

- 5.(a) That the conditions of the Memorandum of the Company be altered in manner following, that is to say—
That each of the existing Ordinary Shares of Rs 100/- each in the authorised capital of the Company be sub-divided into 10 shares of Rs 10/- each and that the 8,16,520 issued Ordinary Shares of Rs 10/- each resulting from such sub-division be credited as fully paid up.
- (b) That the existing Certificates of Shares be called in by the Directors and cancelled and that new Certificates be issued subject to the terms and conditions of the Articles of Association.

As a Special Resolution:

6. That the Articles of Association of the Company be altered in manner following:—
Article 4 shall be deleted and the following new Article substituted therefor:—
"4. At the date of adoption of this Article, the Capital of the Company is Rs. 1,50,00,000 divided into 15,00,000 Ordinary Shares of Rs. 10/- each."

The Share Transfer Books of the Company will be closed from 19th September, 1958 to 29th September, 1958, both days inclusive.

By Order of the Board,
A. D. A. ALEXANDER,
Secretary.

16, Strand Road,
Calcutta, 1st September, 1958.

Note: A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

EXPLANATORY STATEMENT

(Pursuant to Section 173(2) of the Companies Act, 1956)

Your Directors have been considering the desirability of sub-dividing the shares in the capital of the Company to a more manageable denomination and have come to the conclusion that a nominal value of Rs. 10/- per share would permit of greater freedom in transmission and transferability of the shares.

Your Directors accordingly propose that each of the existing Ordinary Shares of Rs. 100/- each should be sub-divided into 10 shares of Rs. 10/- each.

The proposed sub-division is in accordance with Section 94(1) of the Companies Act, 1956, and your Directors recommend that the Resolutions for the purpose set out in the notice should be passed.

The Directors other than as shareholders have no interest in the proposed resolution.

THE LINGIA TEA COMPANY, LIMITED

NOTICE is hereby given that the Annual General Meeting of the Members of The Lingia Tea Co., Ltd. will be held at the Registered Office, at No. 4, Mangoe Lane, Calcutta, at 12-15 p.m., on the 29th September, 1958, for the following purposes:—

- (1) To consider the Revenue and Profit & Loss Accounts for the year ended 31st December, 1957, the Balance Sheet as at that date and the Report of the Directors and Auditors.
- (2) To declare Dividends.
- (3) To re-appoint a Director who retires by rotation.
- (4) To appoint Auditors and to fix their remuneration.

The Share Transfer Books and Register of Members of the Company will be closed from the 22nd September to the 29th September, 1958, both days inclusive.

By Order of the Board,
WILLIAMSON MAGOR & CO., LTD.,

V. S. VIJI,
Secretary,
Managers.

Calcutta, 27th August, 1958.

Note.—A Member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a Member of the Company.

THE INDIA JUTE COMPANY, LIMITED

NOTICE is hereby given that an Annual General Meeting of the Members of The India Jute Company Limited, will be held at 16, Strand Road, Calcutta-1, the Registered Office of the Company, on Monday, the 29th day of September, 1958, at 3-15 O'clock in the afternoon for the following purposes:—

1. To consider the Profit & Loss Account of the Company for the year ended 31st March, 1958, the Balance Sheet as at that date and the Reports of the Directors and Auditors.
2. To declare a dividend.
3. To elect Directors.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and if thought fit to pass with or without modification the following resolutions:—

As Ordinary Resolutions:

5. (a) That the conditions of the Memorandum of the Company be altered in manner following, that is to say—
That each of the existing Ordinary Shares of Rs 125/- each in the authorised capital of the Company be sub-divided into 10 shares of Rs. 12/50 nP each and that the 6,98,400 issued Ordinary Shares of Rs. 12/50 nP each resulting from such sub-division be credited as fully paid up.
- (b) That the existing Certificates of Shares be called in by the Directors and cancelled and that new Certificates be issued subject to the terms and conditions of the Articles of Association.

As a Special Resolution:

6. That the Articles of Association of the Company be altered in manner following:—
Article 4 shall be deleted and the following new Article substituted therefor:—
"4. At the date of adoption of this Article, the Capital of the Company is Rs. 150,00,000 divided into 12,00,000 Ordinary Shares of Rs. 12/50 nP each."

The Share Transfer Books of the Company will be closed from 19th September, 1958 to 29th September, 1958, both days inclusive.

By Order of the Board,
A. D. A. ALEXANDER,
Secretary.

16, Strand Road,
Calcutta, 1st September, 1958.

Note: A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

EXPLANATORY STATEMENT

(Pursuant to Section 173(2) of the Companies Act, 1956)

Your Directors have been considering the desirability of sub-dividing the shares in the capital of the Company to a more manageable denomination and have come to the conclusion that a nominal value of Rs. 12/50 nP per share would permit of greater freedom in transmission and transferability of the shares.

Your Directors accordingly propose that each of the existing Ordinary Shares of Rs. 125/- each should be sub-divided into 10 shares of Rs. 12/50 nP each.

The proposed sub-division is in accordance with Section 94(1) of the Companies Act, 1956, and your Directors recommend that the Resolutions for the purpose set out in the notice should be passed.

The Directors other than as shareholders have no interest in the proposed resolution.

**SOUTH EASTERN RAILWAY
TENDERS.**

BUYING TIME FOR MORE ECONOMIC REALISM

INDIA'S RESPONSIBILITY TO HER CREDITORS

THANKS to her friends, India will not now be forced to default on her current trading debts. A total of \$350 million has been sanctioned by the World Bank, the U.S.A., Britain, West Germany, Japan and Canada to meet India's essential need up to 31st March, 1959. Of this, Britain has been able to contribute almost one-third, largely because the same circumstances which, in some small measure, precipitated this country's balance-of-payments difficulties, have eased Britain's own. This has been a fortunate coincidence. The main problem now is the period between March 1959 and the end of the second five year plan. After that, of course, there will be the third plan, on which a great deal of new thinking is obviously going to have to be done. There is still scope for marginal adjustments in the second plan, especially those necessary to increase the output of food, but short of scrapping the greater part of its foreign exchange is going to have to be found from somewhere. No doubt the talks Mr. Morarji Desai has had in London and Washington included this topic, it has certainly not escaped comment in the world Press, in British newspapers especially. Whether any decisions, even tentative ones, have been reached, is more doubtful; so much depends on India's willingness to help herself.

If such is the case, most observers would conclude that the test has already been passed. India has shown tremendous determination to develop. There has been no hesitation in imposing the tax burdens required—although it could be argued that the choice of those who have had to bear them is merely evidence of political cowardice in a democracy. There is much truth in all such claims, but this is probably not what India's benefactors would mean by "willingness to help herself". Reliable Press comment in Britain, for instance, has been unanimous in condemning the fact that the second plan was launched with an uncovered foreign exchange gap of Rs. 800 crores. When all the excuses are made about the weather, about import prices being increased by the Suez incident, and recession in the United States causing a fall in export values, the point still stands that India threw herself on the world's charity to the tune of Rs. 800 crores. The full significance of this has not yet been accepted in New Delhi, much less in the rest of the country where the spirit of "the world owes us an improved standard of living" is still supreme. For proof of this there is no need to go further than the untimely statement made by the Auditor General Mr. Chanda, in a recent article appearing in *The Hindu*. And perhaps the least fortunate feature of Mr. Chanda's remarks is that they represent the views of all too large a number of officials and Government members. It is likely that Mr. Desai will have ideas of his own on this subject when he gets back. Radically changed ones will be needed because whatever the truth about India's right to assistance, such an attitude is not calculated to coax it out of cautious donors. While this country needs foreign exchange over and above the earnings from her exports, therefore, it would be wise to accept the point that those who are to supply it are also entitled to their opinions.

Whether the view is held according to Mr. Chanda, or to Mr. Nehru—whose flattering references to the strength of the economy seem designed to convince prospective creditors that assistance is scarcely needed—it has to be accepted that outside this country India's difficulties are put down chiefly to bad planning and serious economic mismanagement. To grant an indefinite supply of loans under such circumstances would be for India's benefactors an admission either of political interest (something India wishes to avoid) or of their own financial stupidity. Unless a way can be found for other countries to grant assistance without their being made to feel that they are—as the Americans might say—being played for suckers, they stand an excellent chance of meeting opposition from their own electorates. After all, the Indian Government is not the only one which has a public opinion to answer to. The path of mutual interest would seem to be for all future aid to be channelled through some international institution.

such as the World Bank. This should be satisfactory for India because the major part of the assistance which has arrived so far has come from this source. It will be acceptable to India's creditors so long as the Bank is allowed to exercise the normal rights of a banker in dealings with its clients. Two years ago, when the President of the World Bank, Mr. Eugene Black, advised India by letter that her economic policies would lead her precisely to the point at which she has now arrived, his interest was resented. It was even criticised by such esteemed organs of western liberal opinion as the *Manchester Guardian* as being unwarranted interference in India's internal affairs. The critics might have been right: it is possible such advice can be given in a better way. But the truth must be faced that had India taken notice of what Mr. Black said, she would not have been in the difficulties she is in today.

The new thinking which will have to be done on future planning amounts to no more than the belated introduction of realism. It will no longer do to present the world with the *fait accompli*. As British newspapers have been calling the second five year plan with its uncovered foreign exchange gap. Next time, the world is likely to see India coming. A threat to go communist is not going to work every time either, and Mr. Desai is to be congratulated on rejecting this old trick of Mr. Krishnamachari. It will be quite sufficient, other things being equal, to convince creditors that the money is going to finance a workable plan based on realistic premises. What these are is not difficult to decide. Food should be the first priority of the next plan, and not prestige projects like steel plants. After that can come any project which promotes exports or saves foreign exchange. These two priorities established, it should be possible to spare resources for the many other desirable purposes, of which there is probably no limit. But it cannot be too firmly stated that any future plan not based on these two essential premises is likely to be pronounced unrealistic by those whom India will have to approach to provide her foreign exchange requirements.

The second plan has now reached the half-way mark and it is quite clear to anyone with an eye to see that the original doubts expressed about it

(many of them in these pages of *Capital*) have proved to be depressingly correct. To make mistakes once is pardonable enough. To make them a second time would be disastrous. India's creditors now have a considerable investment in the future of this country. It would be unfair to them as well as being a catastrophe for India, if the dictates of ordinary economic common sense are ignored a second time. For one thing, it may not be quite so easy to raise credits in future; the coincidence of generosity and self-interest that has occurred, for instance, in Britain's case, is the kind of thing on which a project as important as India's third five year plan should not have to rely. For another, too many Indian politicians still insist on making it difficult for the U.S. Government to help their country. If a period of greater co-operation between India and her creditors is approaching, then so much the better. If not, then it is difficult to see how a third five year plan can be managed at all, much less one which Mr. Nehru has already announced is once again going to be over-ambitious. A good deal will depend on the views Mr. Desai has formed on his tour abroad. When Mr. Krishnamachari returned from a similar mission last year, there was too little of his period of office left for the ideas he had accumulated to make themselves felt. It is to be hoped for India's sake that Mr. Desai is more fortunate.

The appearance of more credit at this crucial stage should not lead to complacency about the mistakes that have been made and the need to avoid them in future. A new attitude towards economic planning, based on reality rather than idealism, is the natural companion of foreign aid on this scale. There is no avoiding such realism if the country is ever to become independent of a form of aid which, whatever the spirit in which it is given, inevitably depends on political factors that can easily change from year to year. It is one of the most unfortunate features of economic policy so far that the only assistance India is now capable of raising is political in character. Foreign capital on private account could still make a radical difference to this country's exchange earnings in future. Policies designed to attract such capital now would be a great asset to ambition in the next plan. But the chief requirements for future planning are that the limitations of economic development in a democracy are faced squarely. That means ambition must come after the provision of adequate food and clothing for the people, not before. This necessity is likely to be irritating for the planners, but it will be more comfortable for the electorate, sounder progress for the economy, and more reassuring for India's friends. Mr. Desai has a big job ahead of him when he arrives back in India.

NOTTINGHAM AND WHY

THERE is only one civilised view possible to take of the recent race riots in Nottingham and Notting Dale, which is that they were uncivilised. Although in some cases the condemnation of these incidents may have seemed somewhat qualified, no responsible Briton, at home or abroad, has supported or indeed could support the excesses committed by a strictly limited number of his countrymen in a few still unrepresentative parts of Britain. Un-British is a term not everyone cares for, but that is what these acts were in the eye of the majority of the British people. It is gratifying to note that in this country, which is

understandably sensitive on racial questions. there has been, by and large, a correct assessment of the British attitude to racial discrimination—and not merely because hardly any Indians were involved in the recent unfortunate incidents, and certainly not because incidents of a similar character are not wholly unknown in this country.

If condemnation were enough, there would be little need to add much to what spokesmen of Her Majesty's Government and the British Press have already said. If, however, the recent events have something of a portent in them, which must not be considered an impossibility, it is necessary to go into the reasons for race riots in order to devise the right remedies. To observers of the British social scene, the riots did not come as a total surprise. The objective conditions leading to such outbursts had been rather ominous for some time, for it was facile to believe that "it couldn't happen here." And now it has happened.

It is not true that what may be called the British character is a complete stranger to all racial feeling. A people with a long imperial past,—and it was a very multi-racial empire indeed—would be more than human if it never felt a sense of superiority over men with different skins. It could be argued that no people in the world has ever been wholly free from some very quaint suspicions about foreigners, about people different from themselves. In the case of the British we have had more to do with diverse peoples than almost any nation. It is agreeably surprising, then, in the British Isles themselves there has been very

little racial prejudice, if only because there has never been, until the years since the end of World War II, any very substantial coloured community in Britain. Full employment and the benefits a welfare State offers, changed all that, and in the past ten years or so there has been a steady and sizable flow of West Indians and Pakistanis into Britain.

It has never happened in recorded history that two peoples with very different ways of life have come to live together without, at least initially, a large and complex variety of conflicts and frictions. Elemental prejudices apart, day-to-day life throws up a hundred and more fruitful sources of dispute. With some limited unemployment showing up in the economy, the newcomer inevitably wears the look of a potential rival, especially when the latter would very probably agree to work on lower wages. Many of the West Indians in Britain live there without their womenfolk, and history and literature provide not a few instances of violence over women, even among men of the same race. Living habits are different, and when they exist between close neighbours they do not always peacefully co-exist. Irritation is mutual, and one or the other party may be impatient. Finally, there are the so-called Teddy boys. For them, and they are no monopoly of any community or colour, any excuse for trouble is good enough.

Even as it is sheer hypocrisy to pretend that only "other people" have racial prejudices, and never oneself, it is dangerously easy to exaggerate their incidence in Britain. Doing so deepens and widens the disease, and soon unreason takes charge and sanity disappears. It is equally easy, and equally dangerous, to be unctuous and patronising towards coloured men. Intelligent and sensitive coloured men resent this even more than the overbearing manner. What is necessary is for each to recognise the very real differences between the two—without being excessively proud, or ashamed, of them. Economic differences account for some social differences, not all. Only in some people is toleration a virtue from birth; to others it comes with education and a measure of sophistication, qualities not always found in every immigrant or in every native of Britain for that matter.

It is understanding of the points of view of both parties to racial tension, that will some day remove it. Ignorance is not abolished by rebuke any more than a disease is cured by harsh words or the baton, and the same is true of prejudice. In the United States, where in the south racism is the accepted thing, many liberals think that extreme opponents of discrimination do their cause much harm by adding to the intransigence of the whites. There is certainly justification for impatience with the gradualness of inevitability. Positive action is needed in many spheres, and this is not begun without a degree of gentle aggressiveness against curses like segregation. On the other hand, there may be another approach and perhaps a more practical one.

Not a few of the inequalities are the product of economic disparities, and it is possible that elevation of the economic level of the coloured peoples of the world will by itself bury the ugly prejudices of today. It is common experience to see men and women of different races mix freely when they come from peasant stock—or are old aristocrats. The maximum tension is to be found in industrial and middle-class and lower-middle-class communities, although, as again is the experience of the United States, industry itself is a great smoother of inter-racial relations. A real rise in the standard of living of every race, wider education, and the human relations an industrial society evolves after initial difficulties will make racialism out of date much faster than propaganda one way or the other. Men break bread together only when there is enough bread on the table; they drink toasts of friendship only when the cellar is reasonably full. Neither of bread nor of wine is abundance now evenly spread over countries and races. Best friendships are unconscious, by-products of joint efforts or leisure; and inter-racial friendship is not in this respect materially different from personal good relations. Neither can be forced, and forcing often defeats the object.

TRADING WITH THE SOVIET BLOC

THE BENEFITS AND RISKS INVOLVED

POTENTIAL Soviet buyers were welcome at Britain's annual display of aircraft at Farnborough this September, after the restrictions on exports of civil aircraft (among many other items) had been lifted in the preceding month. At the same time, however, the imposition of restrictions on imports of tin from the Soviet Union into the United Kingdom and the Netherlands showed that Soviet sellers were not equally welcome in international trade—at least, not if they disturbed established prices. The most serious impediment to trade between the Soviet bloc and the rest of the world is the recurrence of political crises such as that at present in the Far East. Despite these setbacks, this trade has been expanding over the years; and it has also been changing its character. At the present stage the whole trade should be reassessed, for many of our ideas on it are out of date, and wrong ideas lead to muddled policies.

Early in the existence of the Soviet Union, Lenin said: "It is necessary for us to trade with the capitalist States so long as they exist as such." As it seems that the capitalist States intend to exist as such for a long time, it can be assumed that the Soviet Union is willing, in principle, to establish trade with them on a permanent basis. The capitalist States are now inclined to the opinion that they can benefit from such permanent trade, though they are not all equally enthusiastic about it. One complication resulting from the two-way character of trade is that a big increase in sales to the Soviet bloc implies a big increase in purchases from the Soviet bloc, which in turn implies Soviet competition with established suppliers. The recent trouble in the tin trade is not, perhaps, the best example of this difficulty, as the ostensible reason for the restrictions on imports was the predicament of the International Tin Agreement, which has few counterparts in other trades; but Britain's underlying interest was certainly the economy of Malaya. If we envisage a substantial increase in trade with the Soviet bloc, we must envisage also a substantial increase in imports of Soviet materials—and we must expect objections such as those of the other tin-exporting countries, and of Canadian interests in the case of aluminium.

The minds of the Soviet policy-makers are not easy to read, and we cannot be sure whether the intensive selling of tin was intended to weaken the economies of the under-developed countries or was simply a commercial policy intended to take advantage of favourable prices. One may think that if the purpose was political it was peculiarly stupid, for it could only alienate opinion in the affected countries when in other respects the Soviet Government has been trying to win the confidence of those countries. Similar intensive selling of aluminium cannot endanger the economy of Canada, which is not scheduled as an under-developed country. Nor can the increasing Soviet exports of oil have much effect on the Middle East or the Caribbean, being still trifling in relation to those areas' exports. That there is some political motive in some Soviet trade is evident, but if the principle of trading with the capitalist world is accepted there is obviously a strong commercial element in the trade. The expansion of this trade and the changes in its character were discussed by Mikhail Nesterov, President of the USSR Chamber of Commerce, in a recent article in *Promyshlennno-Ekonomicheskaya Gazeta* ("Industrial and Economic Gazette"). Nesterov pointed out that the turnover of the Soviet Union's trade with the capitalist countries last year was approximately double that of 1938, at comparable prices. He had previously mentioned, however, that the increase in trade with all countries last year, compared with 1938, likewise at comparable prices, was more than sixfold. Not surprisingly, the expansion has been most marked in trade with other members of the Soviet bloc. Nesterov mentioned also that the proportion of machinery and equipment in Soviet exports, which was only 5 percent in 1938, was as much as 17 percent—of a much larger total trade—in 1956.

Nesterov listed various categories and items of trade where there was scope for considerable expansion. Raw materials for heavy and light industries and fuel, are prominent in both the import and the export trades. The Soviet Union is the principal exporter of manganese ore and pig iron, ranks fourth as exporter of iron-ore, fifth as exporter of chromium-ore. At the same time it imports large quantities of ores, non-ferrous-metal concentrates, ferrous and non-ferrous metals, chemicals, natural rubber, building materials, raw materials for the textile industry, and other goods. Grain and other agricultural products are mentioned as traditional Soviet exports, but almost as an afterthought. This authority states that the Soviet Union can exchange not only commodities but also machinery on an increasing scale.

One of the arguments against increasing trade with the Soviet bloc is that the market is imper-

manent, because eventually the bloc will itself produce almost all that it requires; Mr. Khrushchev, in Britain some years ago, told an audience in Birmingham: "Our country could buy machine-tools from you. This would be of advantage both to you and to us. Instead of exerting efforts on producing some of the machine-tools we need, we could buy them from you." And he spoke regretfully of the "additional outlays for the organisation of their manufacture". Nesterov insists that the trade envisaged by the Soviet Union is permanent, and that there is always scope for exchanging equipment between countries that are both advanced in technique. This latter point he could, indeed, support by reference to the trade within western Europe. Deeds speak louder than words, and in the relaxed state of trade the Soviet Union has an opportunity to show that it is really willing to buy. The capitalist countries, for the most part, are certainly willing to sell. But we must not be surprised if we find in return, a strange variety of goods from the Soviet bloc in the capitalist markets.

THE WORLD IN RECESSION

THE U.N. survey of the international economy in 1957 is a study of world in recession, especially the industrial world. It is also a study of another strange economic phenomenon—the persistence of inflationary pressures in these economies in the teeth of falling demand due both to a decline in the rate of expansion in fixed investment and a slowing down of personal consumption. While text-book economic theories would be an inadequate guide to a proper understanding of this paradox, the U.N. survey's analysis of the relevant factors leads to the conclusion that it was mainly the result of the interaction between wage increases and prices. The other main element was the rise in the prices of the products of the basic metal and metal-using industries which at certain points failed to meet rising demands, the increases exerting "an upward pressure on the general level of prices through their impact upon the costs and prices of other sectors." Yet another was represented by those autonomous increases in the cost of living which arise from factors like the realignment of rents and so on. International trade does provide a safety valve through which inflationary pressures within countries are mitigated by increasing imports relative to exports, but due to the pull of home demand of the exporting nations and insufficient international liquidity of those needing to import, the operation of this safety valve was not completely effective.

This recession in demand and the consequent decline in industrial production in developed economies had their inevitable impact on the economies of the primary exporting countries. The market availability of primary commodities was generally larger in 1957 than in the previous year, and that was another reason for the weakening of prices. Apart from the loss in terms of export earnings, the primary exporting countries had to pay a higher price for their manufacture imports, which meant that there was a serious deterioration in their terms of trade. Most of them naturally had an adverse balance of payments, yet domestic inflationary pressures, if anything, increased. This was because in many of these countries higher expenditures on development led to pressure of demand on consumer goods, the supplies of which were not only limited but the volume even decreased due to badly depleted foreign exchange reserves and the rigidity of the productive apparatus in these countries. Inadequate supplies of food where the climate was unfavourable were another major reason for general price increases. It is interesting to find from the survey that even in some communist countries which should have had no difficulty in controlling prices, inflation was largely the result of the failure of agricultural plans. The lesson for the under-developed countries would thus seem to be that food production should be given the highest priority in their schemes of economic growth. Otherwise, economic instability will frustrate their development plans by creating the problems which are India's today.

The communist countries made a better showing in industrial production, the rate of the increase being higher in 1957 than in the previous year. In Russia and Rumania however, the rate was lower. Plan targets for the year were exceeded in all, but the U.N. survey points out that those in most cases were moderate. In all the countries excepting Russia there was a shift towards consumer goods production, the rate of which was proportionately greater than that of producer goods, while in Russia the preoccupation with "socialist accumulation" continued. As for producer goods industries in these countries, chemicals and building materials showed impressive increases, while the output of electricity, coal, crude oil and ferrous metals was of a lower rate in 1956. A significant feature of the economies of these countries, barring Poland, was that there was a general slowing down in investment activities as fixed investment generally declined. In Russia the rate of increase fell from 17 percent to 12 percent in 1957, in China the 62 percent increase in 1956 was followed by a 11 percent decline in 1957 and in

Bulgaria, Hungary and Rumania, fixed investment declined in absolute amounts. Another important feature was a striking increase in the foreign trade of these countries. According to the survey, the aggregate output increased by no more than 7 percent and industrial production by some 9 percent, but the value of their foreign trade increased by 12 percent compared with 8 percent in 1956.

Discussing the economic prospects for 1958, the survey sounds distinctly pessimistic and does not foresee any great chance of recovery. But on this

point it is probably not on correct grounds. In fact, there are distinct signs of a recovery all round. What is more significant from the point of view of under-developed countries is that the better-off nations of the world have begun to realise that economic development in the retarded economies could provide another safety valve against cyclical fluctuations in their own, and accordingly a ready willingness to be found on the part of the developed countries to come to the aid of the under-developed world struggling with the pains and problems of economic growth.

that the higher the manufacturing cost, "the more has been the return allowed to the producers. This method of determining the profit margin can barely be regarded as satisfactory or fair. There is no incentive to reduce production costs. If anything, units with lower production costs have been placed at a distinct disadvantage."

I.C.I. Scholarships for Graduates

Imperial Chemical Industries (India) Private Ltd. have instituted a scheme of scholarships by which two Indian graduates may be selected every year for post-graduate education in the U.K. The subjects in which these scholarships may be awarded annually for five years are organic chemistry, physical chemistry, physics, chemical engineering and mechanical engineering. Both the annual scholarships are tenable at universities and colleges in the United Kingdom which will be selected by Imperial Chemical Industries (India) Private Ltd. and as they are intended for post-graduate studies, their tenure will not exceed three years. The value of the scholarships is about £600 a year. The requirements which a candidate must satisfy are that he must hold at least a first-class Master's degree in Science or a Bachelor's degree in Engineering, obtained from any of the recognised universities of India, and a booklet which I.C.I. have brought out giving the details of these technical scholarships provides the list of universities and technical educational institutions graduates from which will be eligible for the award. Women are not eligible. A candidate should be below 25 years of age, preferably unmarried, and should he wish to marry during the tenure of his scholarship he must obtain sanction from the administrators of the I.C.I. scheme, failing which he will lose the scholarship. Although the candidate has to return to India within 12 months of the completion of the scholarship, there will be no obligation on his part to accept employment under the company. Nor does the company undertake to offer him employment. The candidate must be a citizen of India. In case he has migrated from Pakistan with the intention of settling permanently in this country or is a subject of Nepal or of Sikkim or of a Portuguese possession in India, he has to acquire a certificate of eligibility from the Central Ministry of Home Affairs, which he must produce before the Selection Committee.

This committee will consist of the Educational Adviser (Technical) to the Government of India, the Director-General, Council of Scientific and Industrial Research or his nominee, the Chief Industrial Adviser to the Government of India, Ministry of Commerce and Industry, the Technical Managing Director, I.C.I. (India) Private Ltd. or his nominee and two other technical experts. It will meet in Delhi in April every year. Graduates who wish to take advantage of the scheme this year and have the requisite qualifications must apply with the necessary papers to the Secretary, the Technical Scholarship Committee, I.C.I. House, 34, Chowringhee, Calcutta, not later than 30th November, 1958.

Pace of U.S. Recovery

The summer now closing has been a heartening period for business. Extended vacation shutdowns in industry had been widely expected, and the improvement in May and June had not wholly relieved fears that the trend would turn downward again and the recession deepen, says the latest monthly newsletter of the First National City Bank of New York. In spite of these doubts, July and August have brought signs of continuing vigour. Industrial production as a whole has advanced further. Recovery in steel operations has shown that the late spring rise was something more than an anticipation of price advances. Home building has moved ahead. The work week in manufacturing has lengthened steadily. Personal income, which has been a strong sustaining force in the recovery, has advanced to a new record high. Gross national product—the most comprehensive of business measures and thus one of the most sluggish—moved up to an annual rate of \$429 billion in the second quarter, erasing about one-sixth of its decline. This performance leaves little doubt that the bottom of the recession was reached in April. The problem now is how far and how fast will the recovery go. The turnaround has been so abrupt that questions arise as to how long the fast rate of climb can be maintained in the months ahead. In just three months—May, June and July—industrial production (seasonally adjusted) rose 6 percent, recovering over one third of the preceding drop. Some further advance may have been registered in August, although sharp seasonal fluctuations during the summer months obscure the extent of the improvement. The possibility of a strike in the motor-car industry in itself poses a threat to a sustained advance. In 1949 a budding upswing was slowed by strikes in the bituminous coal and steel industries, and recovery was delayed for at least three or four months.

The upturn in production is noteworthy, not only for the sharpness of the initial rebound, but

Current News and Comment

Dunlop Rubber's Loan Offer

The Dunlop Rubber Company (India) Ltd offers a 6½ percent registered debenture stock 1968-73 amounting to Rs. 1 crore at par for public subscription. This offer has been made out of a total debenture stock worth Rs. 2.05 crores which is secured by a floating charge on the assets of the company. Out of it, debentures worth Rs. 1.05 crores are at present outstanding. The new issue is expected to meet with a warm response. Apart from the attractive yield which the debenture stock offers, it is adequately covered. The net assets of the company at written down values amount to Rs. 8.33 crores, or more than four times the aggregate nominal amount of the existing debenture stock, including the present issue. The average annual net profit of the company for the five years ended last December amounts to Rs. 1.23 crores which is equivalent to over nine times the aggregate annual interest charge of Rs. 13.30 lakhs on the existing debenture stock as well as the present issue. Provision has been made for a redemption fund to be made by transfers from the annual profits of the company for the purpose of redeeming the debentures between 1968 and 1973. It is stated that an application is being made to the Calcutta Stock Exchange for permission to deal in the debenture stock which is now being offered. The company has been advised that the said debenture stock is an approved investment within the meaning of Section 27A of the Insurance Act, 1938. The proceeds of the issue will be utilised for financing expansion of the company's existing factory at Sahagunj as well as the setting up of a new factory at Ambattur, near Madras. The company has also on hand a considerable plant replacement and improvement programme at the Sahagunj factory. The directors hope that the new factory at Ambattur will go into production by the beginning of 1959, and it is considered that developments, as programmed, will give sufficient overall capacity to the company for meeting the increased demand for rubber products. Details of the issue are published elsewhere in this issue of Capital.

Progress of India Cements

In his address from the chair at the annual general meeting of India Cements Ltd., Mr. P. Suryanarayana reviewed the progress of the company. (A fuller version of the speech appears elsewhere in this issue of Capital). The company obtained a licence for the installation of an additional plant of 200,000 tons a year in order to raise output to 400,000 tons a year. The directors have been able to negotiate successfully for a plant of a larger capacity than the one originally planned for. The company has now ordered a plant with a capacity of 750 tons a day, instead of, as previously planned, one for 600 tons a day. "I am also glad to inform you that though we have secured a bigger plant, it has been done without any additional foreign exchange. Credit for this entirely goes to the managing agents. When this plant goes into production, your factory will have an annual output of 500,000 tons a year." The Government has agreed to the installation of the bigger plant and licences have been amended accordingly. Furthermore, the suppliers have agreed to the deferred payment terms as suggested by the company with the approval of the Government. Licences under the Technical Co-operation Mission aid for electrical motors and other equipment have been obtained; orders have been placed with the suppliers and letters of credit have been opened. The new machinery is expected to be shipped within a couple of months, and the additional plant is likely to go into production by about September next year. Mr. Suryanarayana said that the preliminary work connected with the starting of the cement factory in Visakhapatnam is progressing satisfactorily. The detailed survey and prospecting have been completed. The survey on the aerial transport of limestone from the Borra Cave region has been carried out. Import licences for the cement-making machinery, electrical motors and auxiliary equipment have all been obtained, and it is

Check to Cement Expansion

The expansion programme of the cement industry, it is feared, will not be realised in full, because the import of the necessary capital equipment from abroad is being restricted due to the foreign exchange scarcity. The inadequacy of the internal finance has also checked progress. The chairman of Dalmia Cement (Bharat) Ltd., Mr. V. H. Dalmia (whose address at the latest annual general meeting of this week's Capital), says that the another page of this week's Capital, says that the plan target of 14.7 million tons of installed capacity by 1960-61 is unlikely to be fulfilled because of these difficulties. The capacity which is likely to be reached will be 9.95 million tons, although by the end of 1958 it should have risen to more than 8 million tons from 6.83 million tons and by the end of 1959 it might have gone up to 9.5 million tons. A surplus of cement is however developing in the market. Because of improved supplies, 12 States are now permitting the free sale of cement. Mr. Dalmia says that the Government's efforts to export part of the surplus has not met with any appreciable success. So he suggests a stepping up of the road construction programme to maintain the cement consumption. He points out that in his 1958-59 Budget speech, the Finance Minister referred to a surplus of Rs. 7.34 crores with the State Trading Corporation, which was to be used for the development of national highways. The Finance Minister also announced an increase in the excise duty of Rs. 4 a ton, expected to yield an additional revenue of Rs. 2.24 crores a year, which is to be used for the same purpose. "The Government of India should, therefore, press on with the road building programmes and also urge the State Government to do likewise", Mr. Dalmia urges.

Referring to the recent recommendation of the Tariff Commission that the basis of the price at which cement is made available to the consumer needs to be reassessed, Mr. Dalmia says that the excise duty of Rs. 24 a ton of cement accounts for nearly 20 percent of the wholesale f.o.r. destination price, and amounts to about 50 percent of the cost of production. When a steep rise in excise duty in the Budget proposals of 1957 was announced, one of the main objectives, as the then Finance Minister claimed, was the need to restrict its consumption. At that time, supply fell short of demand, but now the opposite is the case. Therefore, Mr. Dalmia urges the Government to revise its policy on cement consumption. He complains that one result of the latest retention price formula, which has come into effect from 1st July, 1958, is

United Nations

WORLD ECONOMIC SURVEY, 1957

Analysis of inflationary developments throughout the world during the present decade is presented in this tenth issue in the annual series. Includes an examination of recent events in the world economy thus providing assessment of the current outlook. 244 pages Rs. 11.87

ECONOMIC DEVELOPMENTS IN THE MIDDLE EAST, 1956-1957

Economic forces in the Middle East giving rise to inflationary or deflationary pressures are analyzed in this study which is issued as a supplement to the WORLD ECONOMIC SURVEY, 1957. 163 pages Rs. 8.31

ECONOMIC DEVELOPMENTS IN AFRICA, 1956-1957

This study deals with the commodity structure of trade in Africa and the effect of volume and value changes on the balance of payments in individual countries. A supplement to the WORLD ECONOMIC SURVEY, 1957. 84 pages Rs. 3.80

From: Orient Longmans (Calcutta, Bombay, Madras, New Delhi)
Oxford Book and Stationery Co. (New Delhi, Calcutta)
P. Varadachary and Co. (Madras)

also for its breadth. Every major industry covered by the seasonally adjusted Federal Reserve index has increased output from its low point last spring. The unanimity of this rise is in contrast to the "rolling readjustments" characteristic of recent years, in which the swings of the business cycle were moderated by advances in some industries offsetting downward adjustments in others. The contrast between the behaviour of industrial output in this and the two previous postwar recessions has been apparent in both the decline and recovery; neither 1949 nor 1954 had a V-shaped trough like the one currently developing. In both previous recessions, the decline tended to slow down before bottom was reached and the recovery was at first more gradual.

Schedule of L.I.C. Investments

Rules for the investment of "controlled funds" of the Life Insurance Corporation have now been published. They are, in fact, an elaboration of the principles which Mr. Desai, the Central Finance Minister, enunciated in Parliament recently. Mr. Desai did not make clear what would constitute "approved investments" for the Corporation in which a large percentage of its funds will be invested. This has been clarified now. The relevant schedule is rather elaborate and includes all the salient features of Section 27A of the Insurance Act. Of immediate interest to the public are the provisions on the investment on immovable properties situated in India or in any other country where the Corporation is carrying on insurance business. Provided the property is free from all encumbrances, investment will be made on first mortgages of immovable property other than leasehold with an outstanding term of less than 30 years, and the amount of mortgage money will not exceed 50 percent of the value of the property. Loans will be granted to any authority or any registered co-operative society or any other body operating a housing or building scheme in India, and in any case, the repayment of principal and interest will have to be guaranteed by the Centre or a State Government. Another approved investment is the first mortgage of immovable property situated in India under any housing or building scheme of a public limited company or a co-operative society registered under the Co-operative Societies Act, 1912, or under any other law for the time being in force.

It will be seen that the provisions have been designed to stimulate building societies as now exist in the U.K. The Corporation envisages a housing or building society of its own where loans will be granted on the first mortgage for the benefit of policy holders. Some of these provisions, particularly the Corporation's own scheme, are in some ways innovations not originally contained in Section 27A of the Insurance Act. Other "approved investments" are debentures, cumulative preference shares and equity shares of any company. In each of these cases, the overriding considerations which are to guide the Corporation's investment decisions have been set down, the reason obviously being to secure the maximum security for investments.

Apart from these, the Corporation may invest or keep invested any part of the balance in schemes outside the "approved categories" if the total of such investments does not exceed 15 percent of the amount of its "controlled funds". The investments will be made when the recommendation of the Investment Committee is unanimous or alternatively, when a resolution has been adopted by a majority of not less than three quarters of the Corporation's members present at the meeting. The provisions are intended presumably to regulate the Life Insurance Corporation's activities in relation to the stock markets. Mr. Desai has categorically stated that there is not the slightest intention that the Corporation should indulge in speculation, and thus take advantage of temporary fluctuations in prices, but he has qualified the statement by saying that the Corporation should not be precluded from certain buying and selling operations when circumstances so warrant. This, in effect, would mean that the Corporation is free to carry on open market operations. Considering that 15 percent of its funds is a colossal amount, it is to be hoped that such operations will be conducted with a reasonable measure of judiciousness and prudence.

Canteen Workers in Mills

In an industrial dispute between the Muir Mills, Kanpur, and its workmen, the Industrial Tribunal (Textiles), U.P., has held that the workmen employed by the canteen are workmen of the concern and not of the contractor who runs it, and therefore, they should be paid the minimum basic wages with dearness allowance. It was contended by the workmen that under the provisions of the Factory Act, the employers were under a statutory obligation to provide and maintain a canteen. The management of the Muir Mills had a canteen but was not paying minimum wages to the employees.

as a contractor was running it, and it was of the view that no employer-employee relationship existed between it and the workmen of the canteen. It was also contended that the employees of the canteen were not workmen within the meaning of the Industrial Disputes Act, nor were they "industrial or clerical employees".

The tribunal held that whereas an industrial establishment employed a contractor to carry out a part of its work which was enjoined on it by law, the workmen engaged by the contractor for the work would be deemed to be employees of the establishment. In terms of this decision, many industrial establishments which are in the habit of giving contracts for their canteens may now have to revise their policy. When the canteen is given on contract, it is naturally the contractor who recruits workers for it and he also pays them. In future, it will have to be stipulated with the contractor that minimum wages will have to be paid to his employees; or, alternatively, the companies themselves will have to run canteens. In the first case, the question of the company's liability in the event of the contractor retrenching or dismissing his employees will have to be decided. If the contractor's workmen are deemed to be the employees of the company, then, obviously, the company will be held liable. If, on the other hand, the company were itself to run a canteen, the scope for friction between the management and employees may well be increased. Dr. P. J. Thomas said in Parliament during the recent debate on industrial unrest that strikes were staged because less sugar was served in tea to workers. Strikes could well occur on even more frivolous grounds.

Cotton Textile Exports Fall

The fall in cotton textile exports is causing concern in trade circles. Shipments from the Bombay port during August came to 38.75 million yards which is 4.35 million yards less than in the previous month and 11.43 million yards down on August of 1957. Exports during the first eight months of this year have totalled 374.70 million yards, compared with 545.84 million yards in the corresponding period of last year. Communist China has been a formidable competitor. In addition to reduced prices, China has been offering extended credits and has also permitted buyers to take advantage of a fall in prices for forward commitments. It is believed that the Government of India will soon offer export incentives largely on the basis of the recommendations made by the Textile Enquiry Committee.

Great Eastern Shipping Dividends

The Great Eastern Shipping Company Ltd has just concluded an extremely satisfactory year. The gross profit set an all-time record of Rs. 1,21,35,380 before providing for depreciation, taxation and managing agents' commission. After these three items have been allowed for, the net profit comes to Rs. 64,96,923. The directors have, therefore, recommended a dividend of 18 percent, against 15 percent in the previous year. Four second-hand vessels totalling 36,627 deadweight tons were purchased during the year at a cost of Rs. 1 crore. The company has two new ships on order, one at Visakhapatnam of 6,000 deadweight tons and another with a West German shipyard of about 14,000 deadweight tons.

U.P. Demands a Drug Factory

The Director of the Central Drug Research Institute, Lucknow, Dr. B. Mukerji, says that with Russian help, India would soon be able to manufacture almost all essential drugs with domestic raw materials. The Russians have made a round credit offer of about Rs. 9 crores which, it is expected, will suffice for the five projects for producing, among other things, synthetic drugs, plant extracts, glandular products and antibiotics. Although the location of the various projects has yet to be decided, Uttar Pradesh has put forward a strong claim for at least one unit for the manufacture of vegetable drugs. The State produces about the largest number of plants used in such drugs and they grow at various heights in the Himalayas. Besides the National Botanical Gardens and the Central Drug Research Institute, U.P. has also got a Government Precision Instruments Factory. The State-owned opium factory in Ghazipur, it is stated, is the only alkaloid-producing unit of any size in the whole country. Besides, it could also supply skilled labour. Another advantage is provided by the surplus alcohol products. Out of 20 million gallons produced in the country, U.P. accounts for 12 million gallons.

The production of drugs and pharmaceuticals in the country as a whole has somewhat increased since 1954 when the Pharmaceuticals Enquiry Committee reported. Some new lines of production have also been established, but the supply still lags far behind demand. Imports of drugs

and pharmaceuticals increased from about Rs. 8 crores in 1948-49 to Rs. 14 crores in 1956-57 while indigenous production capacity has increased in value from Rs. 12 crores to Rs. 40 crores during this period. The dependence of the industry on imports of chemicals is a handicap. Fine chemicals are not available in adequate quantities and their production calls for great technical skill. Drugs and pharmaceuticals come under Schedule B of the Industries (Development and Regulation) Act, that is, the industries which are likely to be increasingly taken over by the State.

THE METRIC SYSTEM

If anything were wanting to demonstrate the phlegmatic nature of the Englishman, our studied neglect of the metric system would, possibly, meet the occasion. Perhaps it is because we associate it with French Revolution, or, perhaps, it is that the Anglo-Saxon is by nature intensely conservative; but, anyhow, the fact remains that though the use of the system was sanctioned in England so long ago as 1864, we are no nearer to its adoption now than we were then. And yet we are continually being assured from all quarters that it is just the use of the system which has proved of such immense value to our commercial rivals. Germany, in particular, if we are to believe Her Wm. Von Brennerberg, sees in the metric system the springs of much of her trade expansion, and in a letter which, extract from the Times, appeared in Capital of the 7th July, the correspondent referred to does his best to bring the virtues of litres and metres and grammes to the respectful notice of the obstinate Briton. And besides the metric system of weights and measures, the Times' correspondent urges the decimal standard of money and compulsory military service as being cogent factors in commercial advancement. These suggestions are of course not new, though it is only recently that the commercial benefits of conscription have been insisted on as determining causes in the Teuton's capture of new markets—or, what amounts to much the same thing—a superiority in many of the old ones.

*The hard iron lay dead in slumber deep
And we stirred it to life, ho !
In the dark depths of a million years it lay hid
And we stirred it to life, ho !
Tamed by our strong hands
It sings to the tune we call.
Its silence of long years have we broken, ho !
The dead doth stir with new life today
And rushes forth the wide world to conquer.
Fearless with our two hands today
Its reins we hold strong, ho !*

Men and Oil ... 7

THE GEOLOGIST

Geologists are people whose main business in life is to know rocks, to work and live among them. In the oil industry they look for certain types of rocks that hold oil.

In 1865, a Government geologist was sent to the coal areas of Assam. He reported the presence of several oil shows south of the Dihing river and advised testing, by experimental boring, those near Makum. A well was drilled there in 1867, followed by more wells at Makum and Jaipur. Several of these wells yielded a little oil but went dry in a

short time. But in 1889 the first well at Digboi was drilled and the Assam Oil industry was born.

Geologists still play an important role in the Assam Oil industry. They decide the new locations, examine the rock cuttings during drilling and guide the industry in its search for more oil.

At present, the Geological Department of the Assam Oil Company is manned entirely by a number of well qualified and highly experienced Indian geologists.

A Ditcher's Diary

MR. MORARJI DESAI'S VISIT WAS IN SOME WAYS the most important yet paid to London by an Indian Finance Minister and I asked an old friend who is fairly close to affairs in Whitehall and the City for his impressions of the Minister's impact upon the British public. The report he has sent me shows that in all important respects the Finance Minister has "gone over big". To the general public, which subsists on snippets from T. V. and the gossip columns of the popular Press, Mr. Desai's austere mode of life was a matter of some curiosity. Ministers and officials with whom he had dealings were impressed by his forthright manner and the clear exposition of his problems, while he proved a ready conversationalist at the succession of lunches and dinners at which he was the chief guest. Apart from a luncheon given by the president of the India, Pakistan and Burma Association prior to a closed meeting of its members, one of the Finance Minister's chief engagements was a Grosvenor House dinner party for over fifty people at which Mr. G. D. Birla was the host. The guests included such City figures as Lord Chandos, Lord Monckton and Sir George Nelson, while at the other end of the political spectrum were Lord Attlee, Mr. Aneurin Bevan, Mr. Kingsley Martin and the next socialist Chancellor of the Exchequer, Mr. Harold Wilson. Perhaps the public relations highlight of the visit was Mr. Desai's appearance on television in the B.B.C.'s weekly "Press Conference". The Finance Minister faced a battery of journalists with considerable aplomb—considering that this was his first appearance in a medium that sometimes plays strange tricks on its victims. Although it is now an essential part of the Western politician's equipment, television has not yet infected the political life of the East: but when it is adopted here Mr. Desai may well be found to be one of its ready-made personalities: my information is that his Press conference performance revealed a considerable natural skill. Inevitably a high proportion of questions were directed at Mr. Desai's well-known idiosyncrasies—Prohibition, khaddar and the like. If he did not emerge as exactly a gay personality, he answered his interrogators with good humour and in the result showed himself to be anything but a kill-joy.

A SENIOR SECRETARY I SPOKE TO IN NEW DELHI a year ago told me that import cuts would be a blessing to Europeans. They would no longer, he maintained, be forced by convention to buy high-priced foreign products, but instead could spend their money on equally good local manufactures and show a saving on the deal. I thought at the time this was yet another example of the kind of unreality which life in New Delhi is apt to engender. I did not press the point myself, but any child might have told him that where there was an alternative for the imported article at all, it would soon match it in price if not in quality. And that, of course, is precisely what has happened. Being at the moment in the unfortunate position of having to keep my own cook's book, I have had an opportunity of going into this food problem for myself. What I found startled me; for many of the things on which Europeans live there is no local substitute yet, and where there is the price is easily comparable. The only exception seems to be razor blades. Imported cheese, which used to be Rs. 5 a pound, is now between Rs. 9 and

Rs. 13, when you can get it; in Bombay it is Rs. 18. Local cheese is already Rs. 8-8 a pound, but its price is going up daily because there is not enough to go round. A 5-lb tin of Nesprey, I discovered, is now Rs. 35 or would be if it were available. I have not been concerned with baby foods, but I am told they are the worst racket of all. Nescafe has disappeared from the market, if not from the hoarder's shelves. I have no need to recall what has happened to whisky; and anybody who maintains that the local brand is as good ought to be made to drink it. Such items as olives, glaze cherries, cosmetics, pipes, Christmas puddings, herrings, cake mixes, foreign jams and marmalades, tinned salmon, tinned salted nuts and luncheon meats, will soon be gone altogether. What supplies remain are being hoarded by local dealers against the day when they can be sold as unheard-of luxuries for the appropriate financial reward. Until the smuggling starts in real earnest, local manufacturers and dealers seem in for a field day, and unless every European in Calcutta is prepared to change his traditional diet completely, he is booked for the doubtful pleasure of providing it. Indeed, he is already doing so. I think I can claim that nobody is more aware of India's foreign exchange difficulties than I am, and I doubt if anybody has more sympathy for them. I only wish I could believe that New Delhi reciprocated with sympathy for the plight of India's European residents. I know the Secretary I mentioned earlier did not; but then he is no longer stationed in this country and can no doubt live as he pleases.

TWO, TWELVE, TWO HUNDRED—THE NUMBER OF miles to be designated as territorial waters is apparently what a country decides it can get away with. The laws of the sea are part of that very vague, almost non-existent code called international law, and the last conference at Geneva on the subject left things pretty nearly where they had been. In a world faithful to few laws, it could hardly be otherwise. It is to be doubted, however, whether the chief interest of what has been going on in and near China is legal. As Mr. Walter Lippmann put it the other day, the game of Quemoy is being played with neither party showing his hand. Were it not fraught with so many hazards for the precarious peace of the world, I would say that neither Mr. Dulles nor Mr. Chou En-lai is under any obligation, diplomacy being what it is, to disclose his precise intentions to the world in advance of the hour he chooses for himself. In the Formosa Strait, this secrecy may be concealing more than intended: it may be that neither Mr. Dulles nor Mr. Chou has quite made up his mind. And may the indecision continue. It is not true that Quemoy and Matsu are essential for the defence of Formosa, to which the United States is committed although to which her allies are, and it is true that the presence of hostile forces on islands only four miles away is a source of annoyance to any country. Irritation, however, is a dangerous inspiration for framing a country's foreign policy, so that how-ever deplorable Mr. Dulles's fondness for irritation may be, Mr. Chou will be wise to take it easy. Unless Marshal Chiang Kai-shek is more senile than I think, he is unlikely to launch an attack on the mainland, which he has no hope of controlling

again, and Peking's fear of it may well be more feigned than real. One interpretation is that Red China is only working for her entry into the United Nations. The methods she has chosen for it are open to question, her right is not. The United States must really make up her mind on this one of these days, or she will find herself without any allies. And the lesson of "going it alone" she once taught others and should now begin to learn herself.

THE MOST FASCINATING THING ABOUT LIFE, I always feel, is its contradictions—the Prohibition policy which increases drinking, the too-loving parent who alienates his children's affections, and so on. That is why I regard Oliver Cromwell, who died 300 years ago last week, as perhaps the most interesting character in all English history. He led a civil war against the Crown and eventually beheaded the king. Yet by destroying the theory of "divine right", and because he was unable to devise an alternative form of constitutional government, he is undoubtedly responsible for the fact that, as an institution, the monarchy is stronger and healthier in Britain today than in any other country in the world. He was a humane and noble man; but the circumstances he himself shaped led him into excesses of tyranny and suppression such as England had never experienced under her kings. And although a fine soldier and gentleman, the depredations of his armies in Scotland and Ireland are still considered among the darkest episodes in England's long association with those two countries. Cromwell was a staunch churchman; yet his soldiers desecrated more altars than did the Vikings, while during his period as Protector the puritanical interference with the established customs of worship was so severe as to damage the prestige of the church and its place in the life of the community. He believed in the supremacy of Parliament, but he himself had to rule as a despot. He dreamed of constitutional progress, and yet his deeds inevitably set the scene for the restoration of a monarchy which, had it not been for the intelligence of Charles II, would have probably been as absolute as it was under Charles I. He killed his own reputation at home at the same time as it was growing in Europe. He loved his country, yet his idealistic reforms strained its resources to breaking point. Cromwell even died on the anniversary of his two most resounding victories—over the Scottish Presbyterians at Dunbar and over the Royalists at Worcester; and although he was given one of the most impressive funerals in English history, within a few years his remains were disinterred and exposed on the public gallows. It is little wonder that, with all these remarkable contradictions weighing on his soul, Oliver Cromwell was glad to accept death lamely at the early age of fifty-nine after a life distinguished by its drive and indomitable purpose. I suppose there is a lesson or two we can all learn from such a career. If given my choice I would indicate the one which could be summed up in the old tag that, especially in politics, "The way to hell is paved with good intentions". Yet it must have been his own personal hell, because England's was soon over and there is no doubt the Cromwell episode saved her from the revolutionary upsets from which Europe suffered in the 18th century.

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED.—Cont'd.

In 1950 an issue of Rs. 1,30,00,000 5% Debenture Stock was made, redeemable in 1961/71. This Stock was secured by a Trust Deed dated 10th August, 1950 executed by the Company in favour of Guardian Assurance Company Limited as Trustees. Out of this issue Debenture Stock as to Rs. 1,04,55,000 is at present outstanding. The holders of this existing Debenture Stock have agreed by a special resolution passed on the 4th day of September, 1958, in accordance with the provisions of the Trust Deed to increase the amount of the Debenture Stock secured by the Trust Deed by the creation and issue of Rs. 1,00,00,000 additional Stock to alter the rate of interest from 5% to 6½% per annum and to postpone the date of redemption from 1961/71 to 1968/73. The additional Rs. 1,00,00,000 Debenture Stock is now being issued under a resolution of the Board of Directors passed on 4th September, 1958, in accordance with the special resolution aforementioned. The entire Stock (both the existing and present issue) will be secured by the Trust Deed aforesaid as modified by the Supplemental Trust Deed to be executed by the Company also in favour of Guardian Assurance Company Limited. Interest will be payable on 1st January and 1st July in respect of the half-yearly periods ending on the previous day. Interest on the present issue of Stock will commence from 1st October, 1958 and the first payment will be made on 1st January, 1959 amounting to Rs. 16.25 less income-tax per Rs. 1,000 of Stock. The Trust Deed and Supplemental Trust Deed will contain *inter alia* the following provisions:—

1. **Security:** (a) Payment of principal and interest will be secured by a floating charge upon the whole of the Company's undertaking and assets, present and future, including uncalled capital but excluding only leasehold properties.

(b) The Company will be at liberty at any time after 31st December 1959 to create and issue further Stock ranking *pari passu* in point of security with (but not in priority to) the existing Stock and the present issue of Stock, on such conditions as to price of issue, rate of interest and term for repayment as may be determined by the Company but subject to the provision that the total amount of the Stock for the time being ranking *pari passu* and entitled to participate in the benefit conferred by the Trust Deed and the Supplemental Trust Deed shall not at any time exceed fifty per cent of the aggregate of (i) the Company's paid-up share capital, (ii) its reserves including share premium account and (iii) the amount standing to the credit of its profit and loss account. Every prospectus issued generally in connection with the issue of such further Stock shall provide that applications from the holders of the Stock standing registered in the books of the Company one month prior to the date of such prospectus shall have preference in allotment.

(c) The Company may create charges on its raw materials and stock-in-trade ranking in priority to the floating charge thereon created by the Trust Deed as modified by the Supplemental Trust Deed to secure sums borrowed from or obligations incurred to bankers in the ordinary course of its business and when any part of the existing and present issue of Stock has been redeemed or purchased and cancelled, subsidiary companies may issue and secure debentures or debenture stock not exceeding in the aggregate the amount of the Stock which has been redeemed or purchased and cancelled, but save as aforesaid the Company will procure that no mortgage or company shall create any other mortgage or charge on its properties or assets otherwise than in favour of the Company and such mortgage or charge shall be retained by the Company. The Company has no subsidiaries at present.

(d) Any subsidiary company of the Company may create charges on its raw materials and stock-in-trade to secure sums borrowed from or obligations incurred to bankers in the ordinary course of its business and when any part of the existing and present issue of Stock has been redeemed or purchased and cancelled, subsidiary companies may issue and secure debentures or debenture stock not exceeding in the aggregate the amount of the Stock which has been redeemed or purchased and cancelled, but save as aforesaid the Company will procure that no mortgage or company shall create any other mortgage or charge on its properties or assets otherwise than in favour of the Company and such mortgage or charge shall be retained by the Company. The Company has no subsidiaries at present.

(e) The Company will keep its property adequately insured against loss or damage by fire, riot and civil commotion in so far as it is practicable to do so.

2. **Redemption:** (a) Such part of the Stock as has not been previously purchased or redeemed will mature for repayment on 31st December, 1973 at par plus accrued interest.

(b) During the year ending 31st December, 1958 and during each succeeding year, the Company will transfer to a Redemption Fund not less than Rs. 8,00,000 but any excess which may be so set aside in any year may be applied in reduction of the obligation for any later year. The amount of the time being standing to the credit of the Redemption Fund may be (i) used in the purchase of Stock or on 31st December, 1968 or thereafter, in the redemption of Stock, accrued interest and expenses being paid by the Company other than out of the Fund; (ii) placed on deposit at a bank; or (iii) used for the purchase, net proceeds of the sale and income accruing from such investments being borne by and belonging to the Fund.

(c) Before 31st December, 1968, the Company will not be entitled to redeem or redeem any part of the Stock other than by voluntary sale and purchase. On that date and at six monthly intervals thereafter on giving six months' previous notice the Company will be entitled to redeem the whole or any part of the Stock remaining outstanding at par plus accrued interest, and in the case of redemption of part only the particular

Stock to be redeemed will be determined by drawings. Stock purchased or redeemed out of the Redemption Fund will be cancelled and may not be re-issued.

(d) Purchases of Stock made out of the Redemption Fund will be at a price not exceeding Rs. 102 per Rs. 100 of Stock plus accrued interest, exclusive of expenses.

(e) In addition to any purchases out of the Redemption Fund the Company may at any time purchase with other funds any of the Stock at a price not exceeding Rs. 102 per Rs. 100 of Stock plus accrued interest exclusive of expenses or at a higher price with the consent of the Trustees, which consent is not to be unreasonably withheld, and such Stock can be re-issued. The nominal value of any Stock purchased by the Company otherwise than out of the Redemption Fund may, after cancellation of such Stock, be treated as a transfer to the Redemption Fund in any future year.

3. **Additional Provisions:** (a) The rights of Stockholders may be modified or compromised by a special resolution passed at a meeting of Stockholders in accordance with the holders present quorum for this purpose being the holders present in person or by proxy of a clear majority in value of the total amount of the Stock then outstanding or in the case of an adjourned meeting those present and entitled to vote. On a show of hands each Stockholder present in person will have one vote and on a poll each Stockholder shall have one vote and on a poll each Stockholder shall be a Shareholder and will have one vote for each Rs. 500 of Stock held.

(b) A register of the Stock will be kept at the Registered Office of the Company. It may be closed for any periods not exceeding forty-five days in any year and not exceeding thirty days at any one time.

(c) Stockholders will be entitled to their Stock free from equities or cross-claims by the Company against the original or any intermediate holder.

(d) The Stock will be transferable in amounts and multiples of Rs. 500.

PROSPECTUS

HISTORY AND BUSINESS:

The Company was incorporated as a public Company in Bombay on the 19th August, 1926 for the purpose of acquiring the undertaking and assets of the business in the Indian sub-continent previously carried on by Dunlop Rubber Co., Ltd., which is referred to below as "the English Company". The Company imported and distributed the products of the English Company up to the year 1936, when it established the first pneumatic tyre factory in India at Sahagun, near Calcutta. At that time the registered office and head office were transferred from Bombay to Calcutta.

Since then the Company has progressively expanded both its volume of production and range of products. Its present business consists chiefly of the manufacture and sale of pneumatic tyres for bicycles, motorcycles, scooters, cars, trucks, buses, tractors, earthmoving vehicles, animal drawn vehicles, hand carts, barrows and aircraft; cushion tyres for trolleys; tyre repair materials and accessories; bicycle rims; latex foam cushion-belt; fan and vee belts; braided hose.

The business is carried on in India at the Company's Head Office in Calcutta, factory at Sahagun, selling branches at Calcutta, Madras, Bangalore, Ernakulam, Hyderabad, Bombay, Nagpur, Ahmedabad, Lucknow, New Delhi, Jalandhar and Gauhati and a rubber purchasing branch at Cochin.

MANAGEMENT, STAFF AND TECHNICAL FACILITIES:

Of the Directors, Messrs Luckham, Gillespie, Haksar, Jackson and Morris are in the whole-time employment of the Company and have had many years of service with it or with associated companies. A large number of experienced and highly qualified technicians and executives are also employed and continuity of management is assured.

The training of Indian employees for the higher technical and administrative posts has always been a feature of the Company's policy and many of the Indian staff have been sent to the United Kingdom for courses of instruction in the factories of associated companies. Approximately 6,000 staff and operatives are employed by the Company, of whom about 6,000 are located at Sahagun factory. The new Ambattur factory initially will provide employment for 600 people.

The Company has always had the benefit of the valuable technical advice and assistance of the English Company which includes all the advantages derived from the research and development work in the Dunlop group. The present working arrangements between the two Companies are contained in an agreement dated 29th January, 1957 (referred to as item 3 under the heading "Contracts") which provides *inter alia* that the English Company will upon request make available to the Company all information, processes and inventions relative to the manufacture of goods made by the Company upon payment by the Company of the costs of communication of such

information and a proportionate part of the costs incurred by the English Company in the acquisition, discovery and development of such information, processes and inventions.

DEVELOPMENT:

From an initial area of 94 acres in 1935, the Company's Sahagun factory and residential estate now occupy 237 acres. Manufacturing capacity is now approximately seven times greater than that of the original 1936 installation and the following figures indicate the progressive and substantial growth of total sales turnover:—

	Rs.
1937	1.22.00.000
1947	6.14.00.000
1954	13.70.00.000
1955	15.09.00.000
1956	17.00.00.000
1957	19.97.00.000

The emphasis on industry in the Second Five-Year Plan and the development of mechanisation on the land are expected to create further increases in the demand for the Company's products. In particular the expanding use of road transport tractor and earthmoving vehicles is causing a marked increase in the demand for rubber tyres which as far as can be foreseen will continue to grow with the further expansion of India's economy.

The Company has always endeavoured to play a part commensurate with its position in the industry in meeting the requirements of the country. In furtherance of this progressive policy, licences were obtained in 1956 under the Industries (Development and Regulation) Act for (i) the establishment of a new industrial undertaking in the shape of a second factory for the manufacture of giant tyres, cycle tyres and repair materials and (ii) a substantial expansion of the existing factory at Sahagun to provide additional capacity for various products mainly tyres, cycle rims and repair materials. A site for the new factory was later selected at Ambattur near Madras and work on this and also the Sahagun expansion has reached an advanced stage. Production from both is expected by the beginning of 1959 and it is considered that these developments will give sufficient overall capacity to meet the demands for the Company's products for some time to come.

The Company has also on hand a considerable plant replacement and improvement programme at Sahagun factory where additions to the housing and welfare estate are also in progress.

FINANCE:

The total estimated cost of the expansion and replacement programme outlined above over the period 1956/60 was Rs. 4,67,00,000. To finance this capital expenditure the sum of Rs. 2,03,00,000 (the net proceeds) has already been raised by the issue in July, 1957 of 14,00,000 Ordinary Shares of Rs. 10 each at a premium of Rs. 5 and the net proceeds of the present issue of Debenture Stock are expected to amount to Rs. 95,00,000. The balance of the capital cost will be financed by retained profits and depreciation provisions which already amount to Rs. 1,14,00,000 from 1956 and 1957 appropriations. Of the total cost of Rs. 4,67,00,000, expenditure of approximately Rs. 2,21,00,000 had already been incurred up to 31st May 1958, leaving a balance of Rs. 2,46,00,000 to be expended by the end of 1960. Taking into account bank facilities the Directors consider that the Company has and will have adequate working capital for its requirements at present and during the remaining period of the expansion and replacement programme.

The following report by the Auditors of the Company shows that at 31st December, 1957 the net assets at written-down values excluding goodwill, patents and trademarks, amounted to Rs. 8,32,52,249 or more than four times the aggregate nominal amount of the existing Debenture Stock and the present issue. If to this figure are added the estimated net proceeds of the present issue, Rs. 95,00,000, the resulting total is Rs. 9,27,52,249.

The report by the Auditors also shows that at 31st December, 1957 the written-down value of the Fixed Assets amounted to Rs. 3,82,24,827 and that the capital expenditure incurred between 1st January and 31st May, 1958 amounted to Rs. 81,96,076. The resulting total representing Fixed Assets at 31st May, 1958 is Rs. 4,64,20,703 or more than twice the aggregate nominal amount of the existing Debenture Stock and the present issue. The total Fixed Assets are expected to increase to over Rs. 6 crores by the end of 1959. The Fixed Assets have been conservatively written-down, as indicated by the fact that the total depreciation provided amounts to Rs. 2,68,24,548 or 42% of the total cost of the assets, excluding Land. There has been no valuation of any of the assets at any time in the history of the Company.

The report also shows that for the five years ended 31st December, 1957 the average annual net profits of the Company arrived at after charging all expenses, normal depreciation and all interest except interest on the existing Debenture Stock but before charging taxes on income was Rs. 1,22,88,691, equivalent to more than 9 times the aggregate annual interest charge of Rs. 13,29,575 on the existing Debenture Stock and the present issue.

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED.—Cont'd.

AUDITORS' REPORT

The following is a copy of a Report which has been received from Messrs. Ford, Rhodes, Parks & Company, Chartered Accountants:—

The Directors,
The Dunlop Rubber Company (India) Limited,
"Dunlop House",
57B Free School Street, Calcutta.

Stephen House,
Dalhousie Square,
Calcutta 1,
18th August, 1958.

Gentlemen,

We have examined the Accounts of The Dunlop Rubber Company (India) Limited, as audited by us for the five years ended 31st December, 1957, and report as follows:—

I. PROFITS:

The Profits of the Company arrived at on the basis set out below were:—

	Year ended 31st Dec. 1953.	Year ended 31st Dec. 1954.	Year ended 31st Dec. 1955.	Year ended 31st Dec. 1956.	Year ended 31st Dec. 1957.
	Rs.	Rs.	Rs.	Rs.	Rs.
Sales	12,59,29,862	13,71,76,069	15,11,60,338	16,99,60,530	19,97,00,490
Miscellaneous Income	5,87,502	4,40,387	3,45,491	4,28,231	4,66,394
	12,65,17,364	13,76,16,456	15,15,05,829	17,03,88,761	20,01,66,884
Cost of Materials	7,41,79,283	8,06,84,541	9,11,28,653	10,72,13,547	12,18,97,627
Excise Duty	1,27,26,906	1,45,62,689	1,55,95,529	1,69,61,244	2,15,20,859
Salaries, Wages and Incidental Expenses	1,49,10,552	1,61,25,921	1,77,51,526	1,92,41,821	2,14,97,810
Expenses	1,19,84,193	1,29,35,596	1,44,56,490	1,30,23,124	1,51,89,899
Depreciation	17,76,884	19,45,801	22,78,275	23,94,568	27,68,551
	11,56,77,818	12,62,54,548	14,12,10,473	15,88,34,304	18,28,74,746
Net Profit before Taxation	1,09,39,546	1,13,61,908	1,02,95,356	1,15,54,457	1,72,92,138
	12,65,17,364	13,76,16,456	15,15,05,829	17,03,88,761	20,01,66,884
Net Profit before Taxation	1,09,39,546	1,13,61,908	1,02,95,356	1,15,54,457	1,72,92,138
Provision for Taxation	37,49,935	37,74,857	42,32,360	47,34,548	86,51,561
Net Profit after Taxation	71,89,611	75,87,051	60,62,996	68,19,909	86,40,577

The above profits have been arrived at before charging interest on the existing Debenture Stock and the depreciation that was provided at higher than normal rates and subsequently transferred to a Special Depreciation Reserve in 1955 and 1957.

II. DIVIDENDS:

Full Dividends have been paid on the 6% (tax free) Guaranteed Cumulative Preference Shares and on the 6% (taxable) Second Cumulative Preference Shares in respect of each of the five years ended 31st December 1957. Dividends paid (tax free) on the Ordinary Shares in respect of such years were as follows:—

1953	...	15% on the Paid Up Ordinary Share Capital of Rs 1,60,00,000
1954	...	15% —do— —do— —do—
1955	...	15% —do— —do— —do—
1956	...	15% —do— —do— —do—
1957 Interim	...	7½% —do— —do— —do—
Final	...	8½% on the Paid Up Ordinary Share Capital of Rs 3,00,00,000

III. ASSETS AND LIABILITIES:

IV. FIXED CAPITAL EXPENDITURE:

We also report that we have verified that expenditure on Fixed Assets during the period 1st January, 1958 to 31st May, 1958 amounted to Rs. 81,96,076.

V. ACCOUNTS:

No audited accounts have been made up in respect of any period since 31st December, 1957.

Yours faithfully,
FORD RHODES PARKS & COMPANY,
Chartered Accountants.

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED.—Cont'd.

STATUTORY AND GENERAL INFORMATION:

The main objects specified in the Company's Memorandum, apart from the taking over of the business of Dunlop Rubber Company, Limited in India referred to above, are:—

"To carry on all or any of the following businesses, namely manufacturers of articles in India Rubber or other like gums, or the same in combination with any metallic or non-metallic substance, dealers, agents, factors and merchants in the same manufactures; and to sell, manufacture and deal in commodities of all kinds which can be conveniently dealt in or manufactured by the Company in connection with any of its objects, and to carry on any other business, whether manufacturing or otherwise, which can be conveniently carried on in connection with any of the Company's objects.

To carry on the trade or business of General India Rubber, Gutta Percha, Asbestos, Waterproofing, Textile, Leather and Canvas Manufacturers or the combination of the same and of articles to be manufactured from such commodities and to factor, sell or otherwise deal with the same.

To buy and sell Raw Rubber, as factors, merchants or otherwise either on account of the Company, or any other company, person, or firm."

No share or loan capital is under option or agreed to be put under option.

The Company has not issued any redeemable preference shares and does not at the present time intend to do so.

No shares or debentures have been issued or agreed to be issued within the two years preceding the date of this prospectus as fully or partly paid up otherwise than in cash.

In July, 1957 the Company issued 14,00,000 Ordinary Shares of Rs 10 at a premium of Rs 5. The whole of this issue was underwritten by Messrs. Place, Siddons & Gough, Stockbrokers, 6, Lyons Range, Calcutta, to whom the Company paid the sum of Rs. 7,00,000 by way of underwriting commission at the rate of 50 paise per share. No officer of the Company was directly or indirectly interested in the said firm of Messrs. Place, Siddons & Gough. No other shares have been issued at a premium within the two years preceding the date of this prospectus nor are any shares presently intended to be issued at a premium. No other consideration for subscribing or agreeing to subscribe or procuring or agreeing to procure subscriptions for any shares in or debentures of the Company have been paid within the said two years, nor is any such consideration intended to be paid other than the underwriting commission on the present issue of Debenture Stock referred to under the heading "Underwriting".

No amount or benefit has been paid or given within the two years preceding the date of this prospectus or is intended to be paid or given to any promoter or officer of the Company save as remuneration for services as a managing director, deputy managing director, director or employee of the Company.

No director of the Company is directly or indirectly interested in any property acquired by the Company within two years of the date of this prospectus or in any property proposed to be acquired by it.

The qualification of a director fixed by the Company's Articles of Association is the holding of shares in the Company of the nominal value of Rs. 1,000.

The Articles of Association provide that unless otherwise determined by the Company in General Meeting each director other than a salaried official of the Company shall receive remuneration for his services at the rate of Rs. 2,000 per annum and in addition a sum of Rs 300 in respect of each directors' meeting which he attends.

Subject to the provisions of sections 267, 268, 269, 316 and 317 of the Act the Board may from time to time appoint one or more directors, deputy managing director, managing directors, subject to the provisions of sections 309, 310 and 311 of the Act a managing director or deputy managing director shall receive such remuneration as may be determined by the Company.

The share capital of the Company consists of Rs. 5,00,00,000 divided into 43,00,000 Ordinary Shares of Rs 10 each and 40,000 Second Preference Shares of Rs 100 each. The Cumulative Preference Shares confer the right to a fixed cumulative dividend at such rate as after deduction of Indian income-tax therefrom at the then current will leave a clear dividend at the rate of 6 per cent per annum and rank for dividend in priority to all other shares of the Company and are in a winding-up entitled to repayment of and are in a winding-up dividend in priority to all capital and arrears of dividend next after the Cumulative Preference Shares and one vote for each Ordinary Share but do not confer any further right to participate in profits or assets.

At any General Meeting of the Company on a show of hands every member present in person has one vote and upon a poll every member present in person or by proxy has ten votes for each Cumulative Preference Share, ten votes for each Second Preference Share and one vote for each Ordinary Share held by him, subject however to the following restrictions:—

(i) No member may exercise any voting rights either personally or by proxy in respect of any shares registered in his name on which

any calls or other sums presently payable by him have not been paid.

(ii) The Cumulative Preference Shares and the Second Cumulative Preference Shares do not confer any voting rights unless the fixed dividend on such shares is in arrear for six calendar months or any resolution is proposed for reducing the capital of the Company or winding up the Company or directly affecting the interest of the holders of such shares as a class as regards dividend, return of capital or voting.

The Board are authorised to borrow and secure the payment of any sums of money for the purposes of the Company but they may not without the sanction of a General Meeting so borrow any sum of money which will make the amount borrowed by the Company (exclusive of temporary loans obtained from the Company's bankers in the ordinary course of business) and then outstanding exceed the aggregate for the time being of the paid-up capital of the Company and its free reserves, that is to say, reserves not set aside for any specific purpose.

The Articles of Association provide that every director, officer and auditor of the Company shall be indemnified out of the funds of the Company against all liability incurred by him in such office in defending proceedings whether civil or criminal, in which judgment is given in his favour or in which he is acquitted or in connection with any application under section 663 of the Companies Act in which relief is granted to him by the Court.

The Trust Deed contains provisions to the following effect, among other provisions, for the indemnification of the Trustees and their relief from the consequences of the exercise of their powers, as otherwise expressly provided have absolute and uncontrolled discretion as regards the exercise of all trusts, powers, authorities and discretions vested in them and in the absence of fraud shall not be responsible for any loss, costs, damages, expenses or non-exercise thereof; (ii) not be responsible for the moneys subscribed by applicants for the Stock or be bound to see to the application thereof; (iii) accept without inspection enquiry or requisition such title as the Company may have to the mortgage premises; provided nevertheless that nothing in any of the foregoing shall exempt the Trustees from or indemnify them against any liability for breach of trust where the Trustees fail to show the degree of care and diligence required of them having regard to the provisions of the Trust Deed nor any liability which by virtue of any rule of law would otherwise attach to them in respect of any negligence, default, breach of duty or breach of trust of which they may be guilty in relation to their duties.

The following capitalisations of reserves or profits of the Company have taken place:—

Bonus issue of 5,00,000 fully paid Ordinary Shares of Rs 10 each in April, 1949.

Bonus issue of 600,000 fully paid Ordinary Shares of Rs 10 each in April, 1951.

CONTRACTS:

The following Contracts (not being contracts entered into in the ordinary course of business) which are, or may be material have been entered into within the last two years:—

- (1) 25th September, 1956 between the Governor of West Bengal and the Company for the construction of a drain and outfall on the foreshore of the river Hooghly.
- (2) 28th September 1956 between the Commissioners of Banberia Municipality and the Company for the construction of a sewer under the Chinsura Tribeni road.
- (3) 29th January 1957 between Dunlop Rubber Co., Ltd. England and the Company being the agreement referred to above.

Haksar Deputy Managing Director dated 9th November 1955 Rs. 3,200 P. G. W. Jackson Deputy Managing Director dated 24th October 1957 Rs. 3,350 E. H. Morris Deputy Managing Director dated 25th March 1958 Rs. 3,000.
- (9) Agreements for Underwriting, being the agreements referred to below:
(a) Letter dated 2nd September 1958, from The Industrial Credit and Investment Corporation of India Ltd. making an offer to underwrite and the Company's acceptance thereto dated 4th September 1958.
(b) Letter dated 2nd September 1958, from The Investment Corporation of India Ltd. making an offer to underwrite and the Company's acceptance thereto dated 4th September 1958.
(c) Letter dated 2nd September 1958, from The Life Insurance Corporation of India making an offer to underwrite and the Company's acceptance thereto dated 4th September 1958.

of India making an offer to underwrite and the Company's acceptance thereto dated 4th September 1958.

(10) On various dates between 14th November 1956 and 12th May 1958, nine orders (subject to alteration) for plant, machinery and electrical and building fittings and installations with David Bridge & Co. Ltd., Dunlop Rim & Wheel Co. Ltd., Lightfoot Refrigeration Co. Ltd., F. H. Lloyd & Co. Ltd., Mather & Platt, Ltd., John Thompson (Wolverhampton) Ltd. and Tubewrights Ltd. of an aggregate value of Rs. 2,96,678 and one order for the supply of pipes and fittings with Stewart & Lloyds of India (Private), Ltd. of an aggregate value of Rs. 3,39,725.

UNDERWRITING:

Underwriting Commission at the rate of 2% of the total amount of the Debenture Stock is payable to the Underwriters. The Industrial Credit and Investment Corporation of India, Limited, The Investment Corporation of India, Limited, and the Life Insurance Corporation of India respectively, in accordance with the terms and agreement contained in letters dated 2nd September, 1958 from the said Underwriters and the Company's acceptance of each of them dated 4th September, 1958. In the opinion of the Directors the resources of the Underwriters are sufficient to discharge their obligations.

BROKERAGE:

A brokerage at the rate of ¼% will be paid on acceptance in respect of applications bearing the stamp of a recognised stockbroker or banker. Brokerage on the same basis will be payable to the Underwriters, in addition to the underwriting commission, on such amount of the Stock as is taken up by them or has been allotted through them including the amount applied for by their sub-underwriters unless such applications bear the stamp of a recognised stockbroker or bank.

EXPENSES:

The expenses of the issue payable by the Company, inclusive of underwriting commission, brokerage, stamp duty registration fees and legal and other charges are estimated at Rs. 5,00,000.

APPLICATION FOR DEBENTURE STOCK:

Application should be made on the accompanying Application Form and must be for multiples of Rs. 1,000 with a minimum of Rs. 1,000. All application forms, properly completed, must be lodged, together with the full amount, with the principal office of National Overseas & Grindlays Bank, Limited, in Calcutta, or State Bank of India, Calcutta, Bombay, Madras or Delhi. Payment should be made by cheque or draft in favour of "National Overseas & Grindlays Bank, Limited or Bearer" or "State Bank of India or Bearer" and crossed "Not negotiable". Any alteration from "order" to "bearer" must be signed by the drawer. A separate cheque must accompany each application form. Cheques or drafts drawn on National Overseas & Grindlays Bank Limited or State Bank of India, or drawn on any bank in the same town as that in which the bank with which the application is lodged is situated, need include no allowance for collection charges. All other cheques or drafts must include bank charges at the rate of 25 p. per Rs. 100.

Applications from persons resident outside India will be considered.

If no allotment is made, the amount received on application will be returned in full. If allotment is made for a lesser amount of Stock than the amount applied for the balance of the application money received will be refunded to the applicant by post at his risk. Stock certificates will be ready on or after 1st November, 1958 at the registered office of the Company in exchange for Letters of Allotment. The Company will register transfers prior to 25th October, 1958 against Letters of Allotment accompanied by duly completed forms of transfer.

PAYMENT OF INTEREST:

Interest on Stock will be paid by cheques or warrants that may be collected at par through any branch in India of National Overseas & Grindlays Bank, Ltd.

INSPECTION:

Copies of the Memorandum and Articles of Association of the Company, the Trust Deed, the draft Supplement Trust Deed (subject to modification), the material contracts above referred to, the Report of the Auditors and their Statement of Adjustments and the audited Accounts of the Company for the last five financial years may be inspected at the registered office of the Company during usual business hours (Saturdays excepted) for a period of fourteen days from the date of publication of this prospectus or until the closing of the application list, whichever is earlier.

Messrs. Ford, Rhodes, Parks & Company have given and have not withdrawn their written consent to the issue of this prospectus with a copy of their Report included therein in the form and context in which it is included. A copy of such consent, together with a statement of the adjustments made by that firm in arriving at the profits and assets and liabilities shown in the Report and giving the reasons therefor, copies of the consents of the auditors, solicitors, bankers and brokers to the Company to act in those capacities and copies of the material contracts specified above have been attached to the copy of this prospectus which has been delivered to the Registrar of Companies for registration.

Copies of this prospectus and forms of application can be obtained from the principal offices of National Overseas & Grindlays Bank, Limited and State Bank of India in Calcutta, Bombay, Madras and Delhi, or from any of the Brokers or Underwriters specified above.

PRICES IMPROVE ON LONDON STOCK MARKET

INDUSTRIALS AND GILT-EDGED RISE

London, 10th September.

THE stock markets established an all-round improvement during the past week in marked contrast to the previous week when a widespread reaction was recorded. The fall of the previous week appeared to have gone too far and the market quickly recovered from the attack of nerves which was mainly responsible for the fall. The return of buyers brought a sharp response in prices, and shares remained in short supply. A less serious view was being taken of the Far East situation—although this continued to make for a cautious approach—while several encouraging factors developed. These included the highly satisfactory August gold reserve figures, the firm trend on Wall Street, the British Chancellor of the Exchequer's remarks on the bank loan schemes and talk of a relaxation of hire-purchase controls and cheaper money. The gilt-edged market advanced on a broad front and recovered from the previous week's fall and showed an all-round improvement on balance. Foreign bonds attracted very little attention, although Chinese issues improved and Peruvian issues were supported. Rails were featureless. Dollar stocks were higher in response to Wall Street. London banking and hire-purchase finance shares were

quieter. The former recovered most of the previous week's falls, while the recent losses in hire-purchase shares were reduced. Industrials attracted a strong demand and widespread, often appreciable, gains were recorded on investment buying. Gold shares were firm. Tin shares improved on the restrictions placed on imports of tin from Russia, although profit-taking reduced earlier gains. Other base metal shares recorded very little change. Oil shares were subdued but firmer. Rubber shares advanced on a selective demand with eastern buying. Tea shares were quietly irregular, but Ceylon issues tended to improve on dividend prospects.

The Money Market

The credit situation in money market remained difficult on most days during the past week, and market houses experienced considerable discomfort in their efforts to balance books. Although calling by the banks was heavy on some occasions, the main reason for the scarcity of funds was the unwillingness of the banks to provide fresh accommodation. Some market houses took their full privilege money on more than one occasion, and in one instance, some houses were obliged to borrow from the Bank of England at the full Bank rate of 4½ percent. The general rate for money from the banks ranged between 3½ and 3¾ percent, with considerable amounts borrowed at the latter rate. At the weekly Treasury bill tender, the Government was able to borrow on cheaper terms with the discount market raising its bid to £99 1s 6d so that the average rate fell to £31 14s 0.93d percent, its lowest level for three and half years. The market obtained a quota of 64 percent which was the best percentage since mid-June. Business in bills was rather limited and rates before the Treasury bill result were usually 3-11/16 percent for November dates and

"hots". Rates eased after the new average rate was known.

Stock Market Prospects

The Investors' Chronicle market newsletter writes: "With relaxation of selling pressure, recent reaction in gilt-edged securities appears to have ended. The industrial market is now technically sounder. With fresh buying in evidence, the gold share market has resumed its upward course. In spite of tighter credit conditions, prices in Wall Street were maintained. Bonds remained weak. It was said last week that industrial shares had outgrown their strength and a phase of consolidation was likely to rule in the market. In fact, it later reacted quite sharply. It is felt that the market will emerge from this shake-out in good shape for a further advance in spite of the warning signs of lower earnings from Monanto and Shell."

Activity on Wall Street

Foreign dollar bonds recorded a mixed trend in a small volume. German Nationals showed only minor changes either way, while among Italian issues, the Republic 3 percents and Consols 7 percents, both of 1977, were higher by a fraction and a point, respectively. Norwegians declined by fractions to a point with Denmark issues while Greeks and Serbs were neglected. Amsterdam 5½ percents fluctuated to finish with a small loss. Japanese Government issues showed a mixed trend. Chile 3 percents were firm early, moving up to a new 1958 high but eventually gave up most of the gains. U.S. Government obligations moved higher. Dealings were light and largely professional in character with dealers reporting little investment in the market. The upturn was attributed largely to technical considerations following the recent decline. High-grade corporate issues generally displayed an easy trend. Speculative rail lines were lower in dull trading.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 3rd September shows that the gold stock fell by \$75 million to \$21,011 million. Foreign deposits were \$58 million higher at \$314 million, while foreign investments declined by \$20 million to \$3,369 million. The Federal Reserve bought \$169 million worth of bills making the total holdings of Government securities \$25,386 million. Total discounts and advances fell by \$4 million to \$185 million, while the aggregate excess reserves of member banks rose by \$43 million to \$343 million. The daily average excess reserves of member banks improved by \$13 million to \$58 million, while the daily average borrowings rose by \$251 million to \$461 million. Business loans of the New York City banks declined by \$60 million to \$10,534 million compared with a rise of \$34 million to \$11,282 million in the corresponding week of last year. Gold certificates on hand and dues from the U.S. Treasury were \$80 million lower at \$19,551 million. Federal Reserve notes in actual circulation were \$27,007 million. The deposit member banks reserve account was \$52 million lower at \$18,188 million.

Paris Gold Steady

Steady conditions ruled on the Paris gold market during the past week although business was restricted in the absence of investment support. The market trend was controlled by traders acting on behalf of the Bank of France to keep the kilo within a narrow range. Far Eastern developments had a minor influence but helped nevertheless stage a modest rally. Later, however, some selling pressure brought prices back to previous levels.

Decline in Hongkong Gold

The Hongkong gold market again failed to react to the increased tension in the Formosa Straits and was mainly affected by the movements in sterling during the past week. It rose higher early in the week but eased towards the close. The official offtake was 8,900 taels and the unofficial 6,950 taels. Carry-over charges were 97 cents a 10 taels in sellers' favour. Arrivals totalled 35,000 ounces. Forward contracts were done at \$38.02 c.i.f. Macao.

Rubber Quiet

Rubber futures were quiet during the past week with the trend steadier after early eases. Dealers said that the situation in Quenoy tended to steady the market although traders were mostly sitting back, obviously waiting for more overt action there. The uncertain labour situation in the motor-car industry continued to induce caution, and the climax in negotiations between the Union United Auto Workers' chiefs have served a notice shortly fix a strike date if a deadlock in negotiations is not broken. Mr. Walter P. Reuther, the U.A.W. president, summoned the Union's 23-man meeting in Detroit. Some observers believe that General Motors, rather than Ford or Chrysler, will be the strike target, and that the date, if the Union deems it necessary, will fall within two weeks.

Revised Contract for Standard Tin

A revised contract for standard tin has been approved by the board of the London Metal Exchange. It will become operative for prompt maturing on and after 1st January, 1959. The main difference from the old contract is that only registered brands will be allowed to be delivered on the London market thus bringing tin into line with the contracts for other metals. Hitherto certain brands of tin not registered, such as those from China, could be delivered on the market. Chinese Tin will now have to be registered to qualify for delivery against the revised standard contract.

Money

THE CALCUTTA MONEY MARKET

FALL IN ADVANCES CONTINUES

Wednesday, 10th September.

THE downward trend of demand in the Calcutta money market has continued during the past week. The main decline in requirements has been shown by the sugar and jute mills. Other sources show slight falls or have remained fairly steady. Conditions are somewhat easier in the interbank call market but the rate remains unchanged at 24 percent.

There has been a fair quantity of bills in the exchange market during the past week. Most of them have been on account of tea shipments. Gunny bills continue scarce. Remittance has been poor. After weakening in terms of all leading currencies except the French franc, sterling has rallied in the last two days and is now quoted firm against the two dollars and against most Continental currencies. There has been very little sign of seasonal weakness in the pound up to the present.

BULLION WAS STEADY IN THE FACE OF LIMITED offer. Silver ended at Rs. 183.62. The price was quoted at 74½d in London and the New York quotation stood at 88½ cents.

Gold recovered to Rs. 110.50 on good upcountry offtake.

DURING THE WEEK ENDED 5TH SEPTEMBER, 1958 Government of India Treasury bills for Rs. 26,67,75,000 were sold in favour of the Reserve Bank.

RISES OF RS. 19.90 CRORES TO RS. 1,541.70 crores in active notes and of Rs. 8.24 crores to Rs. 1,553.33 crores in the total note issue were notable features of the return of the Reserve Bank of India for the week ended 5th September, 1958. The currency expansion was adjusted by reducing foreign securities by Rs. 5 crores to Rs. 169.68 crores and increasing rupee securities by Rs. 15 crores and increasing rupee securities held abroad crores to Rs. 1,129.39 crores. Balances held abroad rose by Rs. 1.16 crores to Rs. 13.70 crores due to a transfer of securities from the Issue Department. Deposits of the Government of India declined by Rs. 20.81 crores to Rs. 52.4 crores and other Government accounts were lower by Rs. 5.80 crores to Rs. 14.72 crores. Balances of commercial banks at Rs. 93.44 crores were Rs. 7.95 crores lower. Investments fell by Rs. 23.39 crores to Rs. 305.94 crores. Other loans and advances rose from Rs. 50.03 crores to Rs. 53.51 crores, of which advances to scheduled banks against usance bills amounted to Rs. 4.52 crores against Rs. 1.91 crores. Ways and means advances stood at Rs. 14.43 crores (Rs. 12.90 crores).

THE RETURN OF THE STATE BANK OF INDIA for the week ended 29th August, shows a drop of Rs. 31 lakhs to Rs. 437.83 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 2.03 crores and Rs. 5 lakhs to Rs. 228.80 crores and Rs. 11.26 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have dropped by Rs. 2.22 crores to Rs. 166.24 crores. Cash and balances are, in consequence, shown at Rs. 45.65 crores or Rs. 1.33 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 29th August, discloses Demand and Time liabilities at Rs. 746.88 crores (Rs. 26.69 crores on account of borrowings from banks) and Rs. 857.95 crores (Rs. 39.64 crores), compared with Rs. 747.28 crores (Rs. 26.55 crores), and Rs. 855.96 crores (Rs. 38.56 crores), respectively, in the previous week. Cash has increased by Rs. 1.03 crores to Rs. 38.80 crores, while balances with the Reserve Bank have dropped by Rs. 3.04 crores to Rs. 98.05 crores. There is a rise of Rs. 8.12 crores to Rs. 571.99 crores in investments. Advances and bills discounted at Rs. 856.40 crores show a drop of Rs. 3.22 crores. The ratios to total liabilities of cash and balances, of advances and discounts are, in consequence, shown at 8.5 percent and 53.4 percent against 8.7 percent and 53.6 percent.

THE MERCANTILE BANK LIMITED HAS DECLARED AN interim dividend of 64 percent less tax.

TREASURY BILL MATURITIES

T. R. LALWANI,

General Manager.

Aristotle had once described his pupil, Alexander the Great, as many in one: man of action, man of logic, romantic dreamer, believer in magic and so on. Like Alexander, we too have become many in one. At birth, we were christened Textile Machinery Corporation Limited, or makers of textile machinery, and over the years we have made many such machines. But we did not stop here. The 4,500 strong Texmaco, today manufactures a wide range of engineering products—cotton and jute textile machinery, industrial and locomotive boilers, pressure vessels, steel structurals, railway rolling stock, sugar mill machinery steel castings and so on. With the implementation of our new projects, now under way, we would become yet many more in one. Whatever Alexander did, he was inspired by the thought of adding fresh glory to the name

LONDON INSURANCE LETTER

HAZARDS OF INTERNAL COVER FOR RISKS

THE principle of internal cover for insurable risks has come to notice again, in distressing circumstances in the case of the K.L.M. airliner *Hugo de Groot* which disappeared into the Atlantic; in more cheerful circumstances in the case of the British banks' new system of personal loans. Until about a year ago, K.L.M. insured its fleet with a group of companies, which spread the cover on the London market. It is understood that payments to the companies represented up to 3 percent of the cost of each aircraft insured. At the same time as it was paying premiums to the group, K.L.M. was building up its own risk fund. Last year, it supplemented this fund by transferring the premiums previously paid to the group, so assuming the risks itself. Thus the loss of the *Hugo de Groot* represents a loss to the airline of the order of £2 million. However, personal accident and dependants claims could amount to an even larger sum, and, as the passengers were insured in the normal way through companies, the London market will not be free of commitments.

Self-insurance in the case of the banks involves a form of life cover. Competing in the market for hire-purchase business (though they do not admit the fact in so many words), the banks have offered to their customers personal loans for such purposes as buying durable consumer goods. If such transactions take the form of hire-purchase, the purchaser does not legally own the goods until payments are completed, and in case of default the goods can be claimed and sold to cover the deficiency. The banks are offering straight loans, and they have no direct interest in the goods purchased with their money. If the borrower dies before repayment is completed, the lender writes off the balance. Thus the banks assume in each case the risk which the borrower may not live long enough to repay in full. (Some big stores, not to be outdone, are offering the same facilities—and cheaper.) This is, of course, an insurable risk, which will

involve a premium of, say, 10s to £1 a £100 loan a year but if the borrower is more than, say, 55 years old, this cover will not normally be obtainable through a company. The banks' risk is by no means negligible, and some insurance people feel that in charging only £5 a £100 loan (though it represents considerably more than 5 percent interest, as capital is being repaid every month), the banks are giving away too much.

Importance of Interest Rates

Insurance funds are rather like the world's gold in one way. Just as newly-mined gold is always small in relation to the accumulated stock, so new premium income is always small in relation to accumulated funds. Therefore, when interest rates change, one is inclined to think first of the effects of the change on capital values of investments. Each year, Savory's *Insurance Share Annual* makes its welcome appearance, and this year's edition (the 40th consecutive issue) reminds one that interest rates can appreciably affect current income. Because interest rates were unusually high last year, and new money could, therefore, be invested profitably, the year was very favourable to the life offices. It follows that the present year, when interest rates have declined considerably, is decidedly less favourable in this aspect.

When the British Bank rate was further reduced to 4½ percent in August, many people in the City said that short-term interest rates had been restored approximately to normal. It cannot, however, be said that long-term rates, as represented by yields above 5 percent on relevant Government stocks, are anywhere near normal, in the historical sense. Perhaps after a few more years of high yields and low prices for Government stocks, Britain will adjust her ideas and no longer regard the present pattern as abnormal. Alternatively, the logic of industrial recession may adjust the pattern.

Investment Opportunities

Anyway, insurance companies have been active buyers of both gilt-edged stocks and industrial shares this year. Their interest was first obvious late in February and it was hesitant late in August; in the meantime, prices had risen considerably over most of the Stock Exchange list.

Earlier in the year, there seemed little risk of capital loss. Interest rates were obviously destined to come down, as that emergency which caused their final rise was past. Industrial activity and profits seemed likely to decline, but dealers in industrial shares made ample provision for this contingency.

After the rise in prices, favourable opportunities for investment are no longer so obvious, but yields above 5 percent on gilt-edged stocks and of the order of 6 percent on good industrial shares still provide generous incomes on newly-invested funds. However, though insurance companies invest for income, not for capital profit, they need reasonable assurance that capital values will be maintained, and to some observers this assurance seems now to be inadequate, so far, at least, as ordinary shares are concerned. It is now recognised that this country's recession may continue many more months, and prices of shares already adjusted to pre-depression levels, may need some new impetus to sustain their rise.

A Dismal Summer

Statisticians of the weather have asked before why (apart from the mistiming of school holidays) more people take their annual holiday in August than in any other month, for the records show that it has more than the average rainfall. August this year was a fitting culmination to the worst summer in living memory, for which insurance claims were abnormally large.

Claims due to storm, flood and tempest in this country have already involved payments of some millions of pounds. The amount may seem trifling in countries more regularly and much more severely afflicted, but in the normally equable British climate such misfortunes as this year's are rare. The localised disasters have perhaps, made less impression than the persistent wet over most of the spring and summer, and heavy rain has given a remarkable impetus to "pluvius" insurance, covering the risk of loss as a consequence of rain. The premiums on "pluvius" insurance are relatively high, and it does not appear that the departments which write this business have fared at all badly even in this dismal summer.

SHARE PRICES HOLD BUT BUSINESS DECLINES

JUTE SCRIP IMPROVES: DUNLOP'S NEW DEBENTURE ISSUE

Wednesday Evening.

THE beginning of the week found the stock market in a healthier condition following the recent shake-out. Both Bombay and Calcutta are reported still to be in a fairly heavy bear position and under the impetus of fresh buying and bear covering, today's settlement saw the price of Irons move up again to Rs. 25.22. The stock market has given further thought to the Life Insurance Corporation's new investment policy during the past few days, and the general reaction now is one of quiet satisfaction. If the "open market" operations of the Life Insurance Corporation are carried out tactfully, the Stock Exchange can look forward to fairly stable conditions, and genuine investors is likely, import restrictions continue for some time, fresh funds may also find their way into the stock market both for investment and speculative purposes.

Reports that China has not only successfully cut into the traditional Indian markets for textiles in south east Asia, Africa, and the Middle East, but has also sold large quantities of cloth to the U.K. which normally buys textiles from India, Hong-kong, and Japan, failed to affect market sentiment. The view is taken that the challenge will force the Indian Government to consider a further reduction in cloth export duties. An announcement about steel retention prices is still awaited, and until this has been made, the bear-bull tussle is likely to continue.

The Dunlop Rubber Co. (India) Ltd., will be in the market on 23rd September with an issue of Rs. 1 crore 64½ debenture stock at par, redeemable at the same rate on 31st December 1973 with the option of the company to redeem in whole or part at any time on or after 31st December 1968. In view of the company's excellent reputation and considering the attractive terms of the offer, the issue is expected to be over-subscribed. Further details appear elsewhere in this issue of Capital.

The gilt-edged market moved from strength to strength with 3% Conversion Loan 1986 advancing further from Rs. 73.85 to Rs. 74.45. Most other dated loans recorded advances, as will be seen from the following table:

	Opening 4-9-58	Closing 10-9-58
	Rs.	Rs.
3 % Loan 1963-65	96.65	96.70
3 % Loan 1964	96.70	96.75
3 % Loan 1970-75	89.50	89.70
3½ % Loan 1967	98.80	98.85

First-class preference shares were once again in strong demand, but there were few sellers to meet the enquiry and many buyers were disappointed.

In the banking section, Punjab National met with good enquiry and improved from Rs. 62.50 to Rs. 65, as did United Commercial from Rs. 62.50 to Rs. 63.

In railways, a small lot of Bukhtiarpur-Bihar was placed at Rs. 11.25 and Dehri-Rohas changed hands freely at around Rs. 11.87.

In cotton textiles, Bowreah were better at Rs. 130 and Dunbar recorded a gain of Rs. 15 from Rs. 135 to Rs. 150. Elgin Mills were better at Rs. 13.50 as were Kesoram at Rs. 11.50.

In coal, Bharat recovered to Rs. 7.37 and there was some enquiry for Borrea at the higher rate of Rs. 20.75. East Indian were steady at Rs. 23.75 and Katras Jheriah were wanted at Rs. 65. New Beerbhoom improved to Rs. 19.37.

A further batch of excellent jute companies' balance sheets, and the slight reduction in jute goods stocks at the end of August compared with the previous month, caused a revival of interest in jute shares. Here is a chart showing representative price movements:

	Opening 4-9-58	Closing 10-9-58
	Rs.	Rs.
Barnagore	112	131
Auckland	109	112
Birla	18.25	19.50
Howrah	18.37	19.50
India	140	155
Megna	140	151
Union	165	173

In electrics, Agra improved from Rs. 135 to Rs. 140 and there were buyers of Calcutta Electric at Rs. 15.06. United Provinces were wanted at Rs. 143, but sellers were scarce.

With the exception of Samastipur Sugar, which improved from Rs. 13 to Rs. 13.75, prices of most other shares in the sugar section were unchanged and interest was limited.

In the engineering group, Braithwaite and Company rose further to Rs. 31.12 and there were buyers of Burn & Co., at the higher rate of Rs. 377. Jessops recovered from Rs. 21 to Rs. 22.25. Textile Machinery were firm at Rs. 22.80.

In paper, Bengal were better at Rs. 92.50 as were Orient which moved up from Rs. 34 to Rs. 35.10. Sirpur recovered from Rs. 12.50 to Rs. 13.25 and Titagur were taken at the higher rate of Rs. 42.25.

In cement, Dalmia were marked at Rs. 12.44 ex-dividend and Jaipur Udyog improved from Rs. 15.62 to Rs. 15.87. Orissa were better at Rs. 13.25, while Sone Valley met with some selling pressure at Rs. 6.

In insurance, Hercules were wanted at Rs. 22.50 and Triton at Rs. 142. Concord changed hands at Rs. 12.12. Standard General were crossed at Rs. 4.90.

In shipping, Calcutta Landing were shaded at Rs. 16 while India Steamship recovered from Rs. 13.87 to Rs. 14. India General Navigation were marked down by Rs. 2 to Rs. 57.

Among miscellaneous industrials, Angelo Brothers were easier at Rs. 21.56 while Britannia Biscuits were taken at Rs. 15. Dunlop Rubber were unchanged at around Rs. 28.12 while Indian Cables recovered to Rs. 30. Indian Aluminium were better at Rs. 16.12. Metal Box were steady at Rs. 30.25 as were Martin Burn at the higher rate of Rs. 27.25. Philips recovered from Rs. 14.62 to Rs. 14.75 and National Tobacco on the publication of an excellent report, moved up from Rs. 13.25 to Rs. 14.06. Shaw Wallace were better at Rs. 13.75. In the mining group, Indian Copper were better at Rs. 3.83 and there was some enquiry for Orissa Minerals at Rs. 27.87.

Tea shares on the whole were slightly better with some enquiry for selected issues like Grob "A", which improved to Rs. 28.75, Jutlibari to Rs. 20.50 and Tezpur to Rs. 15.25.

THE TATA IRON AND STEEL COMPANY HAS EARNED a profit of Rs. 2.41 crores for the year ended last

New Delhi

JAPANESE OFFER FOR SECOND SHIPYARD

BILATERAL DISCUSSION ON DETAILS OF THE U.K. LOAN TO INDIA

(FROM OUR NEW DELHI CORRESPONDENT)

THE Shipbuilders Association of Japan has intimated to the Government of India that it is prepared to send a technical team here to study local conditions and to explore ways and means of possible collaboration in the construction of a second shipbuilding yard. The association has indicated that it is prepared to contribute up to Rs. 2 crores towards the capital cost of the project which will manufacture small passenger ships and other craft. It is prepared to take a minority share in the equity capital amounting to between 45 percent and 49 percent.

The British mission, it will be recalled, has submitted a report on the second shipbuilding yard which is under examination here. Although none of the sites was found to be ideally suited for development, the British mission has suggested the following five for further consideration, namely, Cochin (Ernakulam), Mazagon Dock, Kandla, Trombay and Geonkhali. Its report says: "Cochin offers more at the Ernakulam site than any other site examined towards the successful development of a shipyard. It is an expanding port; a number of industries subsidiary to shipbuilding are already established there; rail transport and other services are good and there is a working force of labour familiar with industrial processes. The site in Cochin is not perfect from the civil engineering viewpoint. However, the problems in this connection are not insuperable as may be instanced by the extensive works already carried out by the port authorities. As a general principle, it is desirable that shipbuilding should be located near the source of steel supply. Cochin does not have this advantage but, having regard to all the circumstances, the merits of the Ernakulam site far outweigh the disadvantages and it is accordingly strongly recommended for development."

"Mazagon Dock is a recognised ship repair centre and redevelopment of part of the present establishment for the building of cargo ships of up to 12,000 tons deadweight is a practicable proposition. However, only four ships of this tonnage could be built a year and the output would thus fall substantially short of the target laid down for the second shipyard. The main advantage is that Mazagon Dock could be redeveloped quickly and at a reasonable cost. Further, the present organisation is experienced both in the building of ships and in repairs."

"Kandla would be a suitable site for shipbuilding if it were not so remote from other industrial areas. In all probability, there would be difficulty in recruiting and retaining technicians and specialist labour. Trombay is advantageous from the civil engineering construction point of view, but the initial dredging of the yard frontage and of a channel connecting the site with existing deep water would be costly. Also maintenance dredging would be a heavy recurring annual charge."

"Geonkhali is the better of the two sites near Calcutta. It is near the steel making districts. The river Hooghly is, however, considered too unreliable for safe launching and the continuous heavy dredging might, in time, endanger the foundation works. The area required for the full development of the shipyard and its approaches would not be substantially less than 100 acres. This is in excess of the area of similar establishments in western Europe but, having regard to the rapid changes in methods of construction of ships experienced over the past 15 years, it is considered prudent to have adequate space so that the lay-out may be sufficiently flexible to allow for later departures from this first concept."

"The estimated costs may be summarised as follows:

	Rs.
"Cochin (Ernakulam)	19,16,00,000
"Kandla	20,31,00,000
"Trombay	17,38,50,000
"Geonkhali	20,88,50,000

"For the somewhat different proposals for the redevelopment of Mazagon Dock, the costs are estimated at Rs. 7,04,50,000. These estimates have been made on the assumption that the complete shipyard including the dry dock and repair facilities would be ready and in full use in a period of about three years. Items external to the main proposal, namely, railway and road connections, township, etc., have been excluded, as has the cost of acquiring the site. The total payments necessary for the purchase of equipment abroad would be Rs. 2,06,75,000 (Rs. 2,75,66,000). These payments would be for the purchase of equipment abroad would be Rs. 2,06,75,000 (Rs. 2,75,66,000). Consideration might be given to a development of the full shipyard in three stages over an extended period. The three stages concerning Cochin are as follows:

	Rs.
"Phase No. 1.	
"Civil engineering works	3,47,00,000
"Buildings	4,45,00,000
"Services and equipment	3,46,00,000
"Total for phase No. 1.	11,38,00,000

will similarly be willing to take action. Her Majesty's Government will inform the President of the International Bank accordingly, and thereafter will enter into bilateral negotiations with the Government of India about the detailed terms of the assistance to be made available from the U.K."

Officials of the British Treasury and the Board of Trade have already begun bilateral negotiations with the Indian officials led by Mr. B. K. Nehru, it is learnt. The talks with the Treasury relate to the rate of interest that India will have to pay for the £40-million loan, for the next seven months. According to well-informed circles, it is believed that the rate of interest would be slightly higher than the current Bank rate of 5 percent. The U.K. Board of Trade representatives and Indian officials have also been discussing a plan for the payment of bills which India will soon be receiving from British exporters for the supply of capital goods. These payments have been guaranteed by the Board of Trade under the Exports Guarantees Act and the loan of £40 million is being advanced by the British Government under that Act for meeting these bills. The Indian Finance Minister has taken steps to advise the British Treasury on how he proposes to draw upon the sterling balances to enable India to meet her commitments in the next seven months.

Negotiations with West Germany

India's Commissioner-General for Economic Affairs, Mr. Swaminathan, is shortly flying to Bonn for talks with the West German Government in connection with its offer of a loan to India. Negotiations also will shortly begin for more long-term credit to cover the second plan period.

Import of Rigs

Reference is made to a recent decision of the Government to import three additional drilling rigs at an estimated cost of Rs. 3 to Rs. 5 crores. In the nature of things, this additional commitment is unnecessary. India has drilling rigs. They are already in operation. The additional rigs are being ordered as a safeguard against possible failures of the existing oil exploration machinery. It is thought that such failures might discredit the Oil and Natural Gas Commission. Hence the decision to expand the area of exploration. It may be added here that a proposal to set up five atomic energy stations in India at an estimated cost of Rs. 350 crores has been postponed.

Neyveli Thermal Power Station

The Neyveli thermal power station will be set up with the aid of the 500-million rouble credit, offered by Russia and the detailed project report in this connection is due to be received by the end of this month. According to the progress report of the integrated Neyveli project, tenders for the Neyveli fertiliser plant are due in November 1958. Other connected preliminary work on these schemes, such as land acquisition, the collection of technical data, training of technical officers and staff, has already commenced. The Government expects that these schemes will be implemented according to the present time schedule. As for the briquetting and carbonising scheme, tests on a pilot scale are already in progress.

Machinery for Nangal Fertilisers

The Government of India has so far approved four major proposals of the Nangal Fertilisers and Chemicals Private Ltd. for the purchase of machinery for the fertiliser-heavy water project. The

Twenty-five years ago . . .

Nineteen hundred and thirty-three . . . the world is still reeling from the shock of the great economic depression . . . everywhere industrialists are on the defensive, playing safe . . . and yet The Metal Box Company Ltd., London, decide to establish their first overseas company, The Metal Box Company of India Ltd . . . "What foolhardy daring is this?" ask all good and cautious businessmen.

It was foresight and faith that helped Metal Box to take this decision. Foresight that the depression would not last forever . . . faith in the emergence of India from economic torpor into an industrial nation holding out enormous prospects for the packaging industry.

Today twenty-five years later that faith and

foresight have been vindicated. Over 5,000 workers are employed in five up-to-date Metal Box factories strategically located in different parts of India. More than 1,000 packers and manufacturers sell over 100 crores of products every year protected by Metal Box cans, tubes, closures and polyethylene bags. The Metal Box Company of India Ltd. have earned a place of importance in India's economy.

As India's resurgent economy expands rapidly, an increasingly greater, more complex burden will have to be borne by the packaging industry. As leaders in the field, Metal Box are ready to meet this challenge of the future with all their resources and all their experience.

total cost involved is Rs. 14,95.16 lakhs. The following are the details:

Equipment to be supplied	Names of the suppliers	Contract price (in lakhs) Rs.
Electrolyser plant	Messrs Oronzio De Nora, Italy	363.70
Fertiliser group of plants	Messrs Saint Gobain, Paris	849.49
Electrical equipment	Messrs English Electric Company, U.K.	223.79
Accessories and auxiliaries for electrolysis plant	Messrs Oronzio De Nora, Italy	56.18
		14,95.16

Sheet Glass Output and Demand

The present demand of sheet glass in the country amounts to about 60 million square feet. Production during 1957 was 54.21 million square feet and during January-June 1958, it was 36.21 million square feet. The following are the sheet glass units in the country with their installed capacities noted against them.

Name of the firm	Installed capacity
Messrs Serakella Glass Works, P.O. Kandra, District Singbhum	28.8 million square feet
Messrs Indo-Asahi Glass Company Limited, P.O. Badaninagar	36 million square feet
Messrs Hindustan Pilkington Glass Works Limited, Asansol	30 million square feet
U.P. Glass Works Limited, Bahjoi, District Moradabad	11.8 million square feet
	106.6 million square feet

The Government proposes to appoint shortly a textile advisory board. The functions of the board will be to advise the Government on the development of the textile industry in general, and on any problems relating to the industry which might be referred to the board from time to time.

Iron Ore Purchase Offer by Italy

A proposal to buy iron ore on a long-term basis from the west coast has been received from Italy. The matter is being examined in consultation with the Planning Commission and the Ministries concerned.

Expansion of Refractories

Several schemes involving the expansion of existing factories as well as the setting up of new units for the production of refractories have been licensed under the Industries (Development and Regulation) Act, 1951. Additional capacity of 966,410 tons a year has been approved in this connection, in addition to the existing capacity of 498,240 tons. In order to quicken the implementation of these schemes, the Government has also set up a panel for refractories.

Plastic Powders

The following plastic powders are manufactured in the country: (Resins are also being produced in the same factories). (1) Phenol formaldehyde moulding powder, (2) Urea formaldehyde moulding powder and (3) Polystyrene. The first item has been in production for the last ten years. The output of urea formaldehyde moulding powder was started early this year and polystyrene in May 1957. The annual capacity for phenol formaldehyde moulding powder is of the order of 1,200 tons and that of polystyrene 2,700 tons. Urea formaldehyde moulding powder production has recently been started with a capacity of 800 lbs a day on a single shift basis. Two schemes have also been sanctioned for the manufacture of polythene moulding powder with an initial aggregate capacity of 5,100 tons a year. One of the plants is expected to start production by early 1959.

Recently, a scheme has been sanctioned for the manufacture of polyvinyl chloride resins and compositions, with an initial capacity of 2,880 tons a year. It is expected that the production in the second plan for polythene as well as the one sanctioned for P.V.C. resins and compositions will commence before the end of the second plan period.

The following figures give a rough indication of the consumption in 1957-58:

1. Phenol formaldehyde moulding powder	1,200 tons
2. Urea formaldehyde moulding powder	300 tons
3. Polystyrene moulding powder	1,700 tons
4. Polythene moulding powder	1,800 tons
5. P.V.C. resins and compositions	1,200 tons

In addition to the above, cellulose acetate, acetate butyrate and celluloid as also nylon moulding powder and bristles have been consumed. The consumption of these plastics in that year was of the following order:

1. Cellulose acetate	600 tons
2. Acetate butyrate	300 tons
3. Celluloid	120 tons
4. Nylon bristles for brushes	30 tons

Enquiry into Coffee Marketing

The Government of India has appointed an expert committee to review the marketing system of the Coffee Board. The committee has been asked: (1) to study and examine all aspects of the present system of marketing followed by the Coffee Board, and (2) to make recommendations on improving or changing the marketing system in view of the trends of increased production and more especially on: (a) the kind and nature of propaganda or publicity to be employed by the Coffee Board to gain new markets; (b) the system of marketing to be adopted for the export of coffee, such as by "open auctions" or by "tenders" on sample basis, forward sales on f.a.q. basis, or estates or district marks, direct sales by the Board on commission basis or otherwise; (c) the types and grades of coffee to be exported; (d) the achievement of regularity of supplies; (e) world price trends and times at which coffee may be more profitably sold; (f) the mechanics to be adopted for safeguarding the Board's interests in a falling market; (g) the speeding up of curing and disposals of coffee on the west coast to arrest deterioration in quality; and (h) the stepping up of consumption generally.

The following persons are the members of the committee: Mr. S. N. Sattanathan, chairman, Mr. R. Radcliffe, Mr. R. Ramaswamy, members and Mr. G. S. Srinivasan, member-secretary.

Free Trade Zone in Kandla Scheme

A scheme prepared by the Development Commissioner, Kandla, for the setting up of a "free trade zone" in that port has been received and is under scrutiny and consideration. It is explained that free ports, such as Hongkong and Singapore, are ports into which foreign merchandise can be freely imported and also moved into inland destinations for sale, etcetera, to consumers without the payment of Customs duty. On the other hand, free trade zones or areas are spaces specially segregated by Customs cordons in seaports and airports. Foreign merchandise can be freely imported into these segregated areas for purposes of re-export to foreign destinations with or without processing and/or manufacture. Such goods cannot, however, be taken out of the Customs cordons without the payment of duties and other charges imposed by the Government of the country concerned.

Silting in Hooghly

The Government of India is most concerned over the progressive deterioration of the navigable route of the port of Calcutta due to the heavy silting occurring in the river Hooghly, especially since 1919. The Port Commissioners have been tackling this problem by intensive dredging and costly training works, but these measures are not proving adequate for maintaining the navigable depths to the extent necessary. The question of a permanent or long-term solution of the problem has, therefore, been re-engaging the attention of the Government. Recently, Dr. W. Hansen, a German expert, made a comprehensive investigation, among other things, of the problems of the port of Calcutta, the Hooghly and the Bhagirathi.

There is a general consensus of opinion that the channels of the Hooghly and the Bhagirathi will progressively deteriorate, if they are left to themselves, and that the most effective method of stopping the long-term deterioration is by the regulation of upland supplies to the Hooghly through the Bhagirathi, by the construction of a barrage on the Ganga at Farakka. Such a barrage would also reduce the frequency and intensity of the bores which have noticeably affected the handling capacity of the port. The increased upland supplies would, besides improving navigation, reduce the salinity of water in Calcutta for drinking and industrial purposes, flush out the drying channels, improve sanitation, reduce flood hazards and improve the communication facilities. The navigational facilities in the Ganga which is a vital line of communication both for India and Pakistan.

The Government is fully seized of the problem of the deterioration of the port of Calcutta which, apart from being an important international link,

is vital not only to the economy of West Bengal but also to the whole of India. The surveys and investigations in connection with the Ganga barrage project have been in progress for some years and are now in an advanced stage. A decision on an undertaking, which is estimated to cost over Rs. 56 crores, however, has to be preceded by the collection of the necessary data and a comprehensive examination of the technical, financial and other aspects of the project. Such an examination naturally takes time.

Facilities for Tourists

In view of the difficulties experienced by foreign tourists in obtaining their additional requirements of films for cameras, pipe-tobacco and alcoholic drinks, because of the import restrictions imposed by the Government of India, a proposal is under consideration by the Tourist Department in consultation with the Chief Controller of Imports, to issue coupons to foreign tourists on arrival in India through the various tourist offices so as to enable them to purchase these goods up to Rs. 250 from shops recognised for this purpose by the Tourist Department. These shops will sell the above goods to tourists on production of the coupons and will keep a proper account of the goods sold. Unused coupons will be surrendered by tourists to the Customs authorities and suitable entries will be made in passports. Special import quotas will be allowed to approved dealers in the three commodities referred to above, on the strength of the tourist coupons collected by them. The necessary foreign exchange has also been allocated for this purpose with the concurrence of the Economic Affairs Department. The scheme is not likely to come into effect before the end of the year.

Production Cost in New Steel Plants

Sardar Swaran Singh, Central Minister for Steel, Mines and Fuel, made a statement in the Lok Sabha during last week on the cost of a ton of steel manufactured in the three State-owned steel plants. He said: "The cost of production has been worked out by Indian-Gemeinschaft for the Rourkela steel plant, in the final project report submitted towards the end of 1956. The Russians have given their estimates of production costs in the case of detailed project report for Bhilai. In the case of Durgapur, production costs have been calculated by the Coates's Mission in the report which it submitted in July 1955. In each of the reports, the assumptions made with regard to the prices of raw materials, cost of power and water have all been given. All of them give also the depreciation charges assumed. There are, however, differences in the rate of depreciation and the methods of calculating depreciation. Certain charges have been taken as part of depreciation in one case and part of working expenses in another. There are also differences in carrying over costs from one department to the next.

"Besides changes in the capital costs, prices of raw materials and such known factors, there have also been changes, since these reports were prepared, in the technical features of the plants. For instance, in Bhilai, there is an additional stand-by power station which will affect not only the cost of power, but the operating expenses of the blast furnaces. In Rourkela, there have been changes in the water supply arrangements and in the drives for rolling mills. In Durgapur, the process of steel-making has been altogether altered. Instead of the Duplex process, we shall have a fairly modern method of producing steel with open hearth furnaces. We are now in the process of analysing these differences. We shall then ask the consultants to work out operating costs once more on the figures of capital costs, prices of raw materials and the cost of power and water to be given to them. They will also be told how the depreciation and interest charges should be worked out and in what manner should costs be allocated among departments.

"The costs of production of ingot steel (exclusive of depreciation and interest charges) as worked out in the respective project reports were:

"Rourkela: Open hearth steel	Rs. 117 a ton
L. D. steel	Rs. 98 a ton
"Bhilai: Open hearth steel	Rs. 112 a ton
"Durgapur: Duplex steel	Rs. 104 a ton

"Generally, as the capital investment in the new steel plants is more than those on the plants in Jamshedpur and Burnpur, the cost of production must, to that extent, be higher in the new steel plants. But it is expected that this will be offset by lower operating costs. It is difficult to estimate how much lower they will be. The plants essentially on the ability to organise the plants as efficient production units. In the U.S.S.R., Germany and the U.K., generally with about 5,000 steel plant is said to be manned with about 6,000 workers. There is no reason to believe that the Indian worker is any less efficient than a foreign worker. Except, therefore, in very few instances where because of a high degree of physical strength and endurance required, it might be necessary to have a few more workers in the plants should be no need to have more workers in plants of new steel plants than are employed in plants of about the same size in other countries. Direct costs have also been rising during the recent years and continue to increase as we increased the price of coal, the railway freight, wages, etcetera. If, therefore, the plants in the public sector are managed and organised efficiently, there is no reason why, in spite of the higher capital costs, the cost of production in these plants should be any more

than the cost of production in the plants in Jamshedpur and Burnpur."

Promoting Indo-West German Trade

India is setting up a trade promotion organisation in West Germany to provide liaison between Indian exporters and West German business men. Centres for the sale of Indian handicrafts in West German towns are also being established. The Government there is being approached to grant an additional import quota for Indian goods, particularly jute and cotton textiles. Simultaneously, arrangements are being made for pre-shipment inspection, and suitable machinery for the settlement of commercial disputes. Lastly, a West German trade mission is being invited to visit India to make a survey of exportable goods and build up direct contact with Indian business men.

Mr. Nehru Resents Comments

The Prime Minister, Mr. Nehru, while expressing his gratitude for financial assistance by friendly countries, told his latest monthly Press conference that foreign Press comments depicting India as hovering on the verge of bankruptcy made disagreeable reading and displayed a gross ignorance about India. India, he said, had been punctually meeting her commitments while some of the western countries had defaulted and even repudiated their foreign liabilities. India's economy is basically sound, he maintained. As for the third five year plan, Mr. Nehru declared India proposes to be over-ambitious as well. "We may fail but will make an all-out attempt," he said. Mr. Nehru ruled out the suggestion that India should request the friendly Asian and African countries to ban the imports of Chinese goods with which Indian goods are now at a disadvantage to compete.

World Bank Mission Reports

The two-man World Bank mission which visited India last June, in the course of its report, says: "The point is now reached when India should concentrate on consolidating the investment already in progress before embarking on new undertakings. India has already heavily mortgaged her foreign exchange earnings even before account is taken of the additional loans which may be sought for the completion of the second five year plan and the execution of the third plan. If account is taken of the loans made prior to the second plan and also of credits extended to the Government of India by private suppliers, India's total external public debt, excluding I.M.F. credits and loans repayable in rupees, now amounts to \$(U.S.)1,300 million, in addition to the \$(U.S.)100

million the private sector has been authorised to negotiate with the suppliers of credit. As part of any realistic programme, it is necessary that all imports of capital goods and defence equipment for which firm offers have not yet been placed and which are not covered by specific credits, should be closely re-examined. Plans for future development must be based on a realistic assessment of resources likely to be available, particularly of foreign exchange."

The report continues: "Not least among the dangers to be guarded against in the present stage of development is the pursuit of welfare at the expense of efficiency. The tendency in this direction has been reflected in the emphasis initially placed on welfare in the community development programme, in lavish social amenities usually with new Government factories, in recent talks of introducing a system of unemployment insurance and for the protection of cottage industries. Nor is it always realised that the policies designed directly to protect the interests of a particular group may work indirectly to the disadvantage of the community as a whole. In particular, if industrial costs are overloaded with social overheads, India will find it increasingly difficult to compete abroad, and the resulting loss of exports may lead to a slowing down of investment and to industrial unemployment. Again, the Government's policy of progressively reducing the inequalities of income and wealth, if carried beyond a certain point, may be difficult to reconcile with the aim of rapid economic development. The experience of the past two years has revealed serious difficulties in the organisation for planning at the Centre, spending departments have not always been properly supervised, and economic decisions at times have been unduly influenced by pressures from State Governments. At the same time, the Central Government has assumed so many additional tasks and responsibilities in the economic field that the administrative machine is becoming dangerously overstrained. For example, the increasingly complex system of taxation and the administration of the company law are imposing heavy demands on the civil service, while more and more senior officials are being drawn into the management of Government undertakings. The State has played a vital rôle in stimulating progress of economic development, but now that this progress is well under way, the Government would be well advised to avoid assuming new responsibilities, especially so far as investment in industry and mining is concerned."

Putting electricity to work

We can supply all the electrical equipment required for use with electricity supplies becoming available under the Second Five Year Plan.

Calcutta Markets

GOOD GENERAL DEMAND AT EXPORT TEA SALE

RISING TREND IN DUSTS

AT Sale No. 12, held on 8th and 9th September, the offerings at the Export auction amounted to 62,411 chests for which there was a good general demand, but at rather irregular and often easier rates. A strong feature of the sale were the teas for price which were fully firm to dearer. Plain liquoring brokeners were about steady, while similar Fannings received fair support although at prices which were sometimes easier. Orthodox Assam and Doosars B.O.P.'s and O. Fgs. with bright liquors sold well but those with more ordinary liquors were up to 20nP easier. C.T.C. teas which comprised the majority of the withdrawals were irregularly 30nP and sometimes 50nP easier. Legg-cut descriptions met with a fair demand at prices which were 5nP to 10nP easier. Whole leaf grades received fair support at rates which were often easier for the higher priced sorts. Tippy teas were well supported but at rather irregular prices while Darjeelings received a fair enquiry but at prices which were again easier depending on quality.

Quotations	1958	1957
	Rs.	Rs.
Clean Black Pekoe	2.05 to 2.10	2.30
Plain B.P.	1.70 to 1.74	1.90 to 1.94
Plain Fannings	1.76 to 1.84	1.94
Medium B.P.	1.85 to 1.95	1.76
Medium Fannings	2.00 to 2.15	1.90
Best Assam CTC BP	2.90 to 3.10	3.40 to 3.50
Best Assam CTC Fgs	3.20 to 3.40	4.00 to 4.50

At the Internal Sale, 19,740 chests of Dust were on offer. Orthodox descriptions were well supported and were fully firm to dearer. Occasional lines of the stronger liquoring powdery kinds were up to 6nP dearer. C.T.C. teas continued to be an irregular feature, but prices were frequently up to 15nP below valuations, although there was some improvement towards the close.

Quotations	1958	1957
	Rs.	Rs.
Medium Doosars Dust	1.74 to 1.76	1.50 to 1.56
Medium Assam Grainy Dust	1.76 to 1.78	1.56 to 1.62
Medium Assam C.T.C. Dust	2.15 to 2.35	2.00 to 2.29
Best Assam C.T.C. Dust	2.45 to 2.70	2.30 to 2.66

There were 1,430 chests of Leaf on offer. Demand was generally good and prices were often above valuations, although C.T.C. Assams were a weak feature.

LINSEED FIRM

Although there was very little business to report, firm prices were maintained last week, and slight advances were recorded for both seeds and oil. Fresh offers for seeds from the centres continued to be scarce, but deliveries against previous higher-priced purchases have shown an increase. Crushers were operating on a very restricted scale, with production costs still uneconomic. Oil business has been confined to retail sales in the Calcutta market where demand has improved due to higher prices prevailing for mustard and groundnut oil. Latest quotations were as follows: Ready Rs. 26-2 a maund and September Rs. 26 a maund.

HIDES AND SKINS QUIET

The market ruled quietly steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 2nd September and 8th September, 1958)
Cowhides: Wet salted (Slaughtered) 16,600 pcs. on the basis of Rs. 12 to Rs. 18.50.

Goatskins: Wet salted (Patna, Daissee, Kustia) 31,820 pcs. on the basis of Rs. 250 to Rs. 260. Rs. 320 to Rs. 345 and Rs. 365 to Rs. 375; Wet salted (he-killed) on the basis of Rs. 4 and (she-killed) on the basis of Rs. 3.50 a share; Muzafferpore 1,350 pcs. on the basis of Rs. 320.

Bazaar Stocks

(8th September, 1958)

Cowhides: Wet salted 1,12,200 pcs.
Goatskins: Wet salted (Daissee, Kustia, Patna and Killed) 28,000 pcs.; Assam-Dinajpur 1,39,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissen-ganj 2,25,000 pcs.

SUGAR QUIET

During the week ended 10th September, sugar sales in the Calcutta market averaged 4,500 bags daily. Arrivals a day were 6,000 bags and stocks totalled 90,000 bags. Rates in the local market were Rs. 40-8 to Rs. 40-12 for big grain and Rs. 38-3 to Rs. 38-8 for ordinary grain. The market was quiet.

COMPANY AND PUBLIC NOTICES

SUNGMA TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Shareholders of Sungma Tea Company Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Tuesday, the 30th September, 1958, at 3-40 P.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1957, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. P. Banyard, the Director retiring by rotation at the Meeting.

And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

"That Mr. P. Banyard be and is hereby re-appointed a Director of the Company liable to retirement by rotation."

Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Section 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. P. Banyard is an "associate" of the Managing Agents within the meaning of the Act, and that therefore, he can only be re-appointed by a Special Resolution as a Director of the Company liable to retirement by rotation.

The Share Transfer Books of the Company will be closed from 20th September, 1958 to 30th September, 1958, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

By Order of the Board,
MCLEOD & CO. LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3, Netaji Subhas Road,

Calcutta, 4th September, 1958.

NOTE: Payment of the Proposed Dividend, if declared, will be made on or after 13th October, 1958, only to those members whose names are registered in the Books of the Company on 30th September, 1958, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

TIRRIHANNAH COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Shareholders of Tirrihan-nah Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Tuesday, the 30th September, 1958, at 4-20 P.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December, 1957, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
2. To declare Dividends.

12, Mission Row,
Calcutta 1.
10th September, 1958.

that's why people look for the label **SANFORIZED.**

ALL over the world, people choose fabrics trade marked "Sanforized"—because they know the label "Sanforized" means: *this garment will never shrink out of fit...even after many, many washings!*

The name "Sanforized" means extra value and prestige for your label—it assures your customers that you take trouble to give them the best value for their money.

People rely on you to serve them well—so serve them cloth labelled "Sanforized"

Look for **SANFORIZED** on the label

Issued by Cluett, Peabody & Co. Inc., (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark "Sanforized". The use of the trade mark "Sanforized" is permitted only on fabrics that meet the Company's rigid anti-shrinkage requirements.

For information: "Sanforized" Service,
93, Marine Drive, Bombay 2.

In the matter of the Companies Act, 1956
AND
In the matter of sections 397, 398, 399,
404 and 403 of the Companies Act, 1956,
AND
In the matter of Richardson & Cruddas Ltd.

By an order of the Calcutta High Court in the above matter, dated the 23rd April, 1958, the undersigned has been confirmed as Special Officer to take charge of the affairs of the Company and manage the same.

The Special Officer is collecting materials for a report to the Calcutta High Court as to the shareholding in the above company. He will be grateful if parties holding share scrips will please notify to him the following particulars by the 31st October, 1958:—

PARTICULARS

1. Face value of scrips.
2. Serial number of scrips and distinctive numbers of the shares.
3. Date and signature of Directors on scrips.
4. Any letter or document or evidence showing when the shares were registered or purported to be registered by the company.
5. The title of the holder to the scrip, the name of the last transferor, date of acquisition by the present holder, and any other material particulars regarding the devolution of the shares.

A true copy of the scrip, together with any endorsement thereon, certified by the party applying should accompany the particulars. Original scrips should not be sent. It is proposed to arrange for inspection of the original scrips on behalf of the Special Officer at a later date.

The statement of particulars should be addressed to:—

"The Special Officer, Richardson & Cruddas Limited, Hindustan Buildings, 4, Chittaranjan Avenue, Calcutta-13"

and superscribed "SHARES".

Dated this 26th day of August, 1958.

D. N. MITRA,
Special Officer.

THE GOHUR TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of The Gohur Tea Co., Ltd., will be held at the Registered Office at No. 4, Mangoe Lane, Calcutta, at 12 o'clock in the forenoon on the 29th day of September, 1958, for the following purposes:—

AS ORDINARY BUSINESS:

- (1) To consider the Revenue and Profit and Loss Accounts for the year ended 31st December, 1957, the Balance Sheet as at that date and the Reports of the Directors and Auditors.
- (2) To declare a Dividend.
- (3) To re-appoint a Director who retires by rotation.
- (4) To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS:

- (5) To consider and if thought fit to pass with or without modification the following Resolution which will be proposed as an Ordinary Resolution:—

"That Mr. H. Mackay Tallack be and is hereby reappointed a Director of the Company."

Special Notice dated 25th August, 1958, of intention to propose the foregoing Resolution has been received by the Company wherein it is stated that the notice is given to satisfy the requirements of Sections 190 and 257 of the Companies Act, 1956. Mr. H. Mackay Tallack vacates office under Section 260 of the Companies Act, 1956, and as he may not be deemed to be a retiring Director within the meaning of Section 257 of the Companies Act, 1956, Special Notice of the intention to propose the foregoing Resolution is considered advisable to satisfy the provisions of Sections 190 and 257 of the Companies Act, 1956.

The Share Transfer Books and Register of Members of the Company will be closed from the 19th September to the 29th September, 1958, both days inclusive.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

TEA COMPANIES

O. Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE PROBLEM OF ATTRACTING FOREIGN INVESTMENT

MR. DESAI DANGLES THE CARROT

THE Finance Minister, Mr. Morarji Desai, has said some extremely sensible things in New York, although for that matter he has been doing much the same in the other places he has visited. Indeed, it is doubtful whether any Indian statesman since Independence has made anything like the same impression abroad of realism and commonsense—two virtues which, unfortunately, are seldom held in as high esteem inside India as they are outside. What Mr. Desai said about foreign capital should have a favourable impact on the minds of the usually impressionable American business man. If it does, and if the result is an increased flow of private capital into this country, then quite apart from what other uses it has had, Mr. Desai's trip abroad has been well worth the foreign exchange spent on it. The difference a heavy and prolonged flow of private capital into India could make to the foreign exchange problem, is all too seldom appreciated in Government circles. Official approaches to the subject in the past have always varied from almost open hostility to the off-hand, take-it-or-leave-it attitude of Mr. Krishnamachari. If Mr. Desai's frank statements represent the dawn of greater realism, then the benefits will be enormous. But if, however, they are to be followed up by the same lack of positive action which has already made India one of the most discouraging countries in the world into which to put money, then the subsequent disillusion is likely to be even greater.

It is probably better to take Mr. Desai at his word instead of raking up all the points which would seem to contradict what he says. It is too easy to disagree with him on some of the arguments he brought forward. It may, for instance, be true that India's approach to the problem is essentially pragmatic. But can it be claimed on all occasions that this has been the only principle on which policy and action have been based? And is it really a fact that, as Mr. Desai says, "India is determined to achieve the right political and economic atmosphere to attract foreign capital"? What, for instance, has happened to the recommendations made some months ago by the National Council of Applied Economic Research in an excellent publication on taxation and foreign investment? Does Mr. Desai really believe that profits in India depend solely "upon the skill, judgment and efficiency of the investor"? There must be many business men, both Indian and foreign, who would be prepared to take that point up with him. It also seems to have escaped Mr. Desai that profitability is a comparative term. If he seriously believes that investment in India is as tempting as, say, in Canada, then his frankness has been wasted because no business man who cares to go into the matter will substantiate such a claim. No, the chief value of Mr. Desai's words lies in their promise for the future, not in any fresh light they may be attempting to throw on the past or the present. As Finance Minister, it is his power to make a substantial contribution to this country's attractions for the foreign investor when he presents his Budget next February. From the realism he has shown in his various statements abroad, Mr. Desai can be expected to agree that deeds are more important than words, and if India is to find the private investors she needs, then it is action that is required. And this is true even after conceding Mr. Desai's important and wholly correct point that India should take more pains to explain herself to her friends.

The Finance Minister's invitation to American business men to come to India and see for themselves, was a fair one. It is a fact that the British investor, who generally has a more detailed knowledge of this country, is more inclined to put his money here than his American counterpart. There are, of course, other reasons. A British firm which already has substantial assets in India is more likely to take the risk of enlarging them as an alternative to losing its place in a growing market. Once established a foreign company is usually reluctant to give up and go home.

as long as there is a hope of covering costs and earning some margin of profit. Besides, the centuries-old connections of British business with this country have facilitated the ties with Indian capital designed to protect it from nationalistic discrimination if and when that arises—a form of safeguard which it may well have cause to value should a left-wing Government come to power at the Centre. This is not meant to suggest that British business has solved to its complete satisfaction the problem of living in an independent foreign country. The difficulties at present being experienced by plantation owners in Kerala, for instance, are something which could permanently discourage any visiting American capitalist, even if planting were not his particular line of business. What is at present happening to Kerala's plantations would certainly be repeated with large-scale foreign-owned industry, if such existed in the State. And it does exist in West Bengal, which may well have a communist Government itself after the next election. While such risks arise, foreign business men considering investment in this country for the first time are unlikely to show themselves too eager, especially if, as is true with most American business, they prefer to hold the majority interest in their own hands.

This is not to say that the Central Government can do much about these difficulties. It has already prevented the Kerala communists from nationalising foreign plantations openly, although it has not been able to prevent them from imposing extra taxes, harassing their managements, and so reducing their value that, like the British-owned Calcutta Tramways, they may soon be asking for nationalisation. When Mr. Desai invited American business men to come and see for themselves, he was hoping no doubt that such behaviour towards old-established foreign business would be ignored in favour of the impression created by the much more contented, newly-founded, industrial enterprises. He may be lucky; a visiting business man is likely to see chiefly what he wants to see, and if he comes to India in the first place it can usually be taken for granted that he has a predisposition towards investing here. But it would be unwise to separate foreign enterprise into different compartments; it is the attitude towards foreigners in business in India generally, rather than the type of concern or the length of time it has been established, which is the determining factor. While the country is moving towards the left, that attitude will remain a vaguely antagonistic one, and

KERALA AND THE CONGRESS

"BORN under one law, to another bound," the communist Government of Kerala let itself in for at least as many conflicts and frustrations as the Congress Centre when the latter let in the former. Co-existence as a creed in international affairs was one thing, whatever its risks; as a policy in internal affairs it was outside

all logic. (And yet, the President of India once hailed it as a great triumph of liberalism.) The communists' assumption of limited power and the consequent Amritsar resolution promising good behaviour within the democratic structure, were also received with equally short-sighted enthusiasm by some Congress men. (It was the President of the Congress Party who thought the Amritsar resolution a victory for Gandhism.) Political realists cannot be surprised that there have been anxious second thoughts since, and the latest resolution of the Congress Party may be only the beginning of a process of awakening and painful disillusionment.

It should not be forgotten that the Communist Party of India itself took a considerable risk in agreeing—whatever the degree of sincerity or otherwise—to work within the Constitution of India. Communism produces results, but not through democratic methods; and it was easily foreseeable that the C.P.I. record of achievements in Kerala could not possibly be impressive, even to the converted. So far, the Nambudiripad Government has wisely desisted from taking any dispute with the Centre to the breaking point—the boiling point is only beginning to be reached—but there is little doubt that it will quit office

as soon as it suits its convenience. What sustains it, more than any other factor, is the hope that in the next elections there will be similar successes elsewhere—once the Party has been able to fool enough voters that it is now as democratic as any other. For the Congress, its leadership also made a bargain; it is not fanciful to think that Mr. Nehru wanted to show the world how he could tame communism through non-violent means; for him it may well have been a continuation of external diplomacy through internal policies.

A bargain of this nature is of necessity temporary, and it inevitably produces a number of strains within and without. If the Congress is feeling them more acutely than the other party, it is chiefly because Congress men have a measure of freedom of speech. It may never be known whether the Communist Party has already been labouring under the same and other strains. First, not every Congress man is as interested in the co-existence experiment as the Prime Minister. This must be especially true of Congress men in Kerala, who do not enjoy being out of power and almost certainly suffer from not a few disabilities under a communist Government. Secondly, Congress men in Kerala cannot see why they should be prevented from adopting the same tactics the communists use in the States where the Congress is in power. Pressure from these quarters must have been a powerful factor in the recent and continuing re-orientation of Congress thinking on Kerala.

Much less is known of communist reactions, but it would be surprising if there were not considerable pressure on Mr. Nambodiripad too from the militants in his own Party. Revolution is what they have been taught to expect, and patience has rarely been their strong point. The present parliamentary experiment they must view either as disgusting hypocrisy or a gross betrayal—in either case a waste of time. As for the Congress so for the communists; a decision resolving the inherent contradiction cannot be put off immediately. Both bargainers (which not wholly apt term is used with reservations that need not be stated) may well be biding the appropriate moment at which to call off the shadow play, the moment when doing so will yield the maximum political advantages, chiefly in terms of propaganda and preparation for the next elections.

While these doubtless interesting plays in gamesmanship go on, the ruling party has more fundamental and pressing problems to contend with. First among these, if only because it is the most urgent, must be placed the well-being of the people of Kerala. In spite of the much-advertised, much-criticised, Kerala-Birla agreement, there has been virtually no industrialisation in the State. Indeed, the very fact that this extraordinary pact was necessary is evidence enough that, under the

present Government, Kerala will attract little or no investment. As the U.P.A.S.I. has made abundantly clear in successive statements, even existing industries (which produce wealth, employ men and women) are fast being driven to a point at which they will be obliged to sell out or close down. This latter may in fact be the secret intention of the communists, who will not otherwise be able to nationalise the plantations. All these factors taken together, there is little doubt that, far from improving the economy of the State, the Nambodiripad Government has done and is doing irreparable harm to it, thus adding to the hardship of the people. This cannot be a matter of unconcern to the Centre.

It is obviously possible to define a breakdown in law and order in more than one way. How many murders a day would be the norm? How is one to distinguish between an ordinary rowdy and a political one? To what extent are any excesses attributable to the communist character of the Government in Kerala? It is interesting to seek answers to these questions, but not absolutely necessary. The number of incidents would be a pointer, but even if these were not many it might still be valid that life and work have been rendered impossible by the Government in collaboration with the Party. The Government of India knows the chief reason for the exodus of Hindus from East Pakistan. There were comparatively few incidents of a communal nature. And yet so many have come away from their homes to camps or streets in India. A meaningful look from a neighbour in the evening, a stare from the cop on the beat, even an uninvited smile from a Muslim boy directed at a Hindu girl—anything could be enough for leaving the land of one's birth. New Delhi should not think the parallel far-fetched. An atmosphere of fear can be created—and the communists are very good at this—in which it is not possible for the employer to do his work without fear, or for the worker to go to his factory or field in the assured belief that he will return home safely. The result is paralysis of community life, of the economy, of all free institutions. Whether or not there has been or is fast approaching a breakdown of law and order, has to be viewed from this disruption of the social order, and not merely from police statistics.

Finally, there is the long-term aspect of the matter. The precarious nature of this kind of internal co-existence has already been made clear. On the other hand, there should be no illusion that the communists will not try their utmost so to dry up the democratic processes in Kerala, so to frighten the democratic elements and so to indoctrinate the younger generations, as to make a change by a free choice again impossible in practice—while maintaining the facade as long as it is necessary. This is what makes the delay in taking a decision so dangerous.

FINDING OUT MORE ABOUT BRITISH FINANCE

NEED TO FILL THE GAPS IN STATISTICS

IT becomes clear from time to time that ideas on British finance are sometimes based on rather flimsy information. The authorities are gradually improving their statistical services—although the Bank of England is still much more reticent than some other major central banks. Some official calculations are never published—and are anyway not necessarily more accurate than private calculations with which they are often, apparently, at variance. One subject that is frequently disputed is the value to the British economy of the international financial services of the City of London. There are various methods of calculating this, and none of them is statistically perfect; but the latest estimates, in "The City's Invisible Earnings", by Mr. William M. Clarks (who is City Editor of the London Times), published by the Institute of Economic Affairs, are recognised as a valuable contribution to the discussion.

To estimate how much London earns on overseas account by banking, insurance, trading in commodities, and so on, involves much complicated research, and the results are naturally not quite up to date when published. But what we want is an approximate annual figure, that will serve as a guide when matters of high policy are considered. One such approximate figure, from an academic source, provoked controversy last year, for it suggested that the net contribution of these financial and commercial services was only about £30 million a year. In the midst of the ensuing discussion whether British financial policy should be adapted to preserve such a relatively modest item in the nation's "invisible account" an official estimate was released, indicating that the authorities regarded £125 million as an appropriate figure. Mr. Clarks, working on the facts available for 1956, makes a further advance, with an estimate of £150 million. The breakdown of this figure is interesting. Nearly half of the total, £70 million, is attributed to insurance; while banking accounts for £30 million, merchanting also for £30 million, broking (on deals ranging from securities to ships) for £20 million. It may be that the distressing experience of insurance companies in the American market last year would somewhat modify these proportions, and that the cheapening of finance and the slackening of trade this year have reduced earnings from some financial services. (It is noteworthy that the August issue of the official publication *Economic Trends* showed an appreciable reduction in the total of acceptances in the second quarter of this year, which presumably reflects the decline in international trade.) But Mr. Clarks has made out a good case for £150 million as the average annual value of the City's services, in so far as they relate directly to the overseas account.

The true value of these services is, however, much more than any statistics can reveal. For the City's services facilitate the export trade of many British manufacturers and merchants; and they help to maintain in difficult times, and to expand in more favourable times, the volume of world trade in general, which is a vital factor in Britain's prosperity. How much of this international trade is financed with sterling? This is another question that has been variously answered. It has become almost customary to say that "roughly a half", or "more than a half", of the world's trade between countries is sterling-financed; but we should have to be evasive if asked to support such a statement with statistics. It is impossible to obtain statistics on all international transactions involving sterling. Instead we must use intelligent deductions.

The figure of approximately one-half originated, so far as anyone can recall, in British Ministers' efforts soon after the war to show how necessary it was to restore, and thereafter to maintain, the former position of sterling; but the basis of the Ministers' estimate was never revealed. More recently, in his *Currency Yearbook 1958*, the American expert on currencies, Mr. Franz Pick, remarked: "At present, sterling directly and indirectly, accounts for about 65 percent of the world's trade." But an independent British estimate, published almost at the same time (about the middle of this year) in the *London Financial Times*, put the figure at only 40 percent or less. This estimate appeared in the financial column of that newspaper written under the pen-name "Lombard". This writer based his calculations on the "broad patterns" of finance in international trade. For instance, the export trade of the Central-American group of the Latin-American countries is largely dollar-financed, whereas much of the export trade of South America outside of the Caribbean area is financed with European currencies, principally sterling.

"Lombard" put the value of goods moving from country to country at approximately \$110,000 million a year. Exports of the countries of the

sterling area he put at 20 percent of total international trade, and these exports are, of course, financed in sterling. Exports from the dollar area he put at 30 percent of the total; and of one-fifth of those exports destined for the sterling area he assumed that a half might be sterling-financed, adding, perhaps, 5 percent to the total of trade financed with sterling. Calculating the sterling portion of western Europe's 30 percent of world exports is more complex. "Lombard" pointed out that the European Payments Union provided for these countries an efficient clearing mechanism, so that they could use their own currencies to finance trade among themselves; and that such trade

accounted for half their exports. Much of their exports to other non-dollar countries, especially their exports to sterling countries, is sterling-financed. So one-third of their exports—10 percent of international trade—might be put in the category financed with sterling. Of the export trade of the Soviet bloc, the Middle East, the Far East, he allowed that the sterling portion might exceed one-half, representing, say, 8 percent of world trade. These statistical gaps in the picture of sterling ought to be filled in as well as possible. Yet even while they remain, it is apparent that the currency is important to the rest of the world as well as to the sterling area.

It is worth noting that while in fire and miscellaneous departments, the premium reserves have been maintained at 50 percent, in marine, the proportion has been raised to 60 percent. The profit and loss account, after accounting for income from other sources and allowing for expenditure under various heads not for allocation to any revenue account, showed a balance of Rs. 6,34,239. This was, however, accounted for by an underwriting profit of Rs. 4,80,125 plus income from investment and other sources of Rs. 1,94,029 less a miscellaneous outgo of Rs. 39,915. After allocating Rs. 1,50,000 to general reserve, Rs. 3,65,000 for taxation, and after taking into account the profit and loss balance brought forward from 1956, the amount available for dividends and to be carried forward was Rs. 1,51,213. A dividend of 5 percent has been recommended for the shareholders. The recent amendments to the Pakistan Insurance Corporation Act has increased the proportion of business compulsorily insurable with this body from 10 percent to 30 percent as from 1st January, 1958. The Directors state that in order to save the maximum amount of foreign exchange and strengthen the net accounts of the companies operating in Pakistan, "the bulk of the additional 20 percent cessations is being retroceded to them within the country."

Current News and Comment

Prospects for Contin Finance

In his statement to shareholders, circulated for the annual general meeting of the Contin Finance and Mining Co. Ltd., Mr. W. J. C. Richards, chairman, said that the company had its origin in the reconstruction of the Consolidated Tin Mines of Burma, Ltd. (A fuller version appears elsewhere in this issue of *Capital*.) The reconstruction was made necessary by the damage the mines suffered during the war and from subsequent civil disturbances. The company acquired the liquid assets outside Burma of the Mining Company, and since the reconstruction, the former has financed the operations of the latter. Due to continued lawlessness in that country, the Mining Company has been unable to operate any of its mines to capacity and some have ceased to be under its control. It produces a mixed concentrate of wolfram and tin, and the output of the former has fallen to a level when it cannot be produced profitably. "As a consequence, the ability of the Consolidated Tin Mines of Burma, Ltd. to repay its debt of £66,988 to the subsidiary company must be regarded as doubtful. Your directors no longer feel justified in financing the Mining Company, whose future is at present being discussed with the Government of the Union of Burma." Mr. Richards says that with security and peaceful possession of the mines, and with the Government as partners, the production of the Consolidated Tin Mines of Burma, Ltd. could be restored to its prewar level of 1,000 tons of mixed concentrates a year.

Food and Gold

Heavier food imports and rising food prices at home have been having their inevitable adverse effect on industrial development, first, by starving several industries of their much-needed raw materials and capital equipment, and second, by raising costs indirectly. Mr. N. D. Sahukar, chairman, addressing the latest quarterly meeting of the All-India Manufacturers Organisation, has pointed out that as much as Rs. 1,360 crores has been spent on food imports during the past ten years, and although Rs. 350 crores of this huge sum has come by way of assistance from the U.S. Government and under the Colombo Plan, still the figure of Rs. 1,000 crores spent for this purpose alone amounts to a serious drain on the country's foreign exchange reserves. "Under the Constitution, the primary responsibility for developing food production in the country is that of State Governments, though we have in the Union Government a Food Minister with a complete paraphernalia of other Ministries like Irrigation and Power to advise the States. I make bold to assert that if our plan fails or if we get into an economic morass, it will be entirely due to the failure of the States in realising the gravity of our food problem." Mr. Sahukar makes the plea that the problem has to be viewed in the overall context of demographic studies, and with the problem of food, that of population has got to be faced with equal seriousness. As the U.N. study group has worked out, Mr. Sahukar adds, there should be an annual improvement of 2.5 percent in the people's living standard to be able to achieve anything worth while, and this will not be possible if the population increase continues at the rate of 1.3 percent a year.

Referring to the country's foreign exchange problem, Mr. Sahukar says that if part of the hoarded gold in the country could be mobilised by offering suitable inducements, then that would make an appreciable difference to this situation. He estimates the value at Rs. 5,000 crores as against Rs. 3,500 crores estimated by some competent economists, and suggests that the Government has to act suitably if the people are to be induced to part with an appreciating asset. He does realise the enormity of the problem of tapping this hoarded gold which exists mostly in the form of ornaments spread all over the country, but a target of 10 percent is not an impossible proposition. He recalls the recent example of the French gold loan which has met with the success it did because of the French

Government's realistic approach. Mr. Sahukar draws attention to a serious lacuna in the country's industrial plan. While new steel mills are being set up to produce 4.5 million tons of finished steel, no plans appear to have been made to produce tool and alloy steels. "The more mild steel we produce in the country, the more we shall need tool and alloy steels. I for one am unable to understand why either in the private sector or in the public sector, no thought has been given to the production of this vitally strategic item."

Reinsurance in Pakistan

The Pakistan Insurance Corporation has brought out its fifth annual profit and loss account for the year ended 31st December, 1957. The corporation is a statutory body devoted to reinsurance business only. Its Indian counterpart is the India Reinsurance Corporation Ltd., which is in the private sector. The Indian body started much later than its Pakistani counterpart and it completed its first full financial year on 31st December, 1957. As in India, prior to the inception of the reinsurance body, Pakistan, too, lacked the services of indigenous professional reinsurers. Professional reinsurance is a highly specialised business. Many such institutions flourish in the U.K. and the Continent. The Pakistan Insurance Corporation could be formed earlier as it is a statutory body, whereas it took much preliminary work to organise the Indian concern by private interests; moreover, arrangements had to be made for the acceptance of reinsurance on a professional basis.

The latest report of the Pakistan Insurance Corporation shows a gross premium of over Rs. 59 lakhs in fire, the net premium coming to Rs. 27 lakhs. Net claims totalled over Rs. 10 lakhs and commissions over Rs. 10 lakhs. Management expenses were Rs. 2 lakhs and after making a premium reserve adjustment amounting to a little over Rs. 59,019, the underwriting profit amounted to Rs. 3,48,901. In marine insurance, the gross premium amounted to over Rs. 22 lakhs, while the net premium was over Rs. 18 lakhs. Net claims met were Rs. 8 lakhs and commissions totalled about Rs. 5,35,000. The expenses of management accounted for a little over Rs. 88,000, and after making a premium reserve adjustment of Rs. 3,70,000, the account showed a loss of Rs. 2,576. In miscellaneous business, the gross premium amounted to over Rs. 12 lakhs, and the net premium came to over Rs. 11 lakhs. Claims totalled over Rs. 3 lakhs, and commissions over Rs. 4 lakhs. Management expenses exceeded Rs. 49,000, and after making a premium reserve adjustment of Rs. 1,80,000, the account showed a profit of Rs. 1,33,800.

The Eighth Round of the National Sample Survey on landholdings, recently published, has thrown valuable light on the problem of land redistribution by which the Planning Commission seems to set much store. According to Professor Mahalanobis himself, if it is decided that every household must have some land, say, two acres, the total area of land required for the purpose would be 60 million acres. If the ceiling is fixed at 20 acres, the amount of land which would thus be made available for distribution out of the total land under cultivation, would be 63 million acres. In other words, even with a low ceiling of 20 acres the surplus land would only be just enough to provide tiny holdings of two acres for each family.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE, Transacting Fire, Marine, Motor, Accident and all other classes of non-life business, ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

which is an uneconomic unit. Besides, agricultural production would suffer if every one having over 20 acres were dispossessed of the surplus. Agricultural economy can be rebuilt not by a mere arithmetical re-distribution of land, but by exploring possibilities of alternative sources of fruitful employment for those now depending solely on land for a living.

New Roles for Banks

Traditional banking practices have undergone so many adaptations of late, especially in Britain, that it is no surprise to find other fresh rôles being prescribed for these formerly conservative organisations. Bank advances for periods of up to ten years were proposed at a recent session of the International Banking Summer School, by Professor A. D. Campbell, of St. Andrews. He applauded the suitability of instalment credit finance as a vehicle for bank advances, and made a strong case for further extension of lending policy. He pointed particularly to the need for medium and long-term credit facilities. The banks could aim to play a greater part in providing medium-term export credits. Medium-term loans, for ten years or so, on a term-loan basis, might come to be recognised as a proper form of bank credit and provide a significant part of total advances. Liquidity need not be endangered, as Professor Campbell contended that medium-term advances could be just as flexible as the more traditional short-term lending. Much bank lending now is only nominally short-term. How far bankers will be prepared to absorb these suggestions is uncertain. But there is little doubt that if they are prepared to lend longer they will, as Professor Campbell suggests, be offered the "cream of the market."

Raw Cotton Exceeds Target

The country's cotton production will exceed the 570,000-bale target set for the 1958-1959 season because of favourable weather conditions. This is the opinion expressed by Dr. M. S. Randhawa, president of the Indian Central Cotton Committee. Dr. Randhawa has said that the consumption of cotton textiles will increase to 9,600 million yards by the end of the third plan and to 11,500 million yards at the end of the fourth plan period. The annual per capita consumption is expected to rise

to 22 yards at the end of the third plan period, against 14 yards when the first plan came into operation. On this basis, he said, a provisional target of 8 million bales of cotton is proposed for the third plan period. The president observed that the area under cotton at present works out to about 20 million acres and it would not be possible to increase this substantially because land is urgently required for food production. It may, however, be possible to add another one million acres in areas covered by the Bhakra-Nangal, Chambal, Hirakud and the Nagarjuna Sagar projects. Dr. Randhawa added: "We would have to place reliance on intensive cultivation measures, including the provision of extra irrigational facilities, increased application of fertilisers, plant protection measures and improved seed to the existing acreage. It is anticipated that during the third five year plan period, about 1.4 million acres of additional area would be brought under irrigation providing an additional production of 700,000 bales. If an additional 200,000 tons of fertilisers are made available, it would provide an extra production of 200,000 bales. It is anticipated that an additional area of 1.6 million acres may be available yielding the production of 560,000 bales more. If an additional area of 2.5 million acres is covered with seed of improved varieties, it would further give an extra production of 50,000 bales. Plant protection measures, which are targeted to cover an area of 2 million acres, are likely to give an additional production of 27,000 bales."

Forward Trading in Madras Stocks

At the latest annual meeting of the Madras Stock Exchange, reference was made to the initial success of forward trading. Clearing house arrangements are working well, according to Mr. H. C. Kothari. But he made the point that in the absence of jobbers, the market is apt to get thin and outside support is generally influenced by the carry-forward charges which are occasionally heavy. The cure cannot be found easily, but if the L. I. C. becomes a big investor that may well become a stabilising force in the market. The revival in tea shares in Madras has reassured investors, and the defeatist mood of last year has given place to a quiet confidence that quality producers will make good profits. United Nilgiri Tea has risen within a fortnight from Rs. 16.50 to Rs. 19.50, and Nonsuch also is up from Rs. 22.50 to Rs. 24.62. A particular feature of the activity

in tea shares is that the estates with coffee areas are generally preferred, in view of the big coffee harvest this season and the prospects of a still bigger one next. Rubber shares, too, are now in the forefront. In spite of the 10 percent paid for 1957-58, Cochin-Malabar shares have appreciated to Rs. 5.80, and the new shares of the company are now quoting well above par.

Bad Days for Textile Mills

The textile industry in south India seems to have fallen on bad days. Some companies have paid only token dividends, even by drawing on reserves. As the State Industries Minister told the Madras Assembly, the demand for coarse cloth is falling and yarn below 20 counts is now difficult to sell. Some mills have curtailed shifts. A bonus award relating to 1956, and in one case to 1957 which was a year without profit, throws a heavy burden on the mills that are already short of working capital. Steps taken to avert the closure of mills and to ensure the payment of wages of workers have led to a demand for short-term wage agreements. The fact that mills have avoided large-scale retrenchment of their working force has been wrongly interpreted as indicating that the financial conditions of the industry are not as bad as is made out. The fall in profits has made local investors keep off mill shares, and the only mill shares to improve in the past month have been those of Bangalore, Buckingham and Mettur. One solution suggested is that there should be mergers wherever possible to create large, composite units as was done in Lancashire during the last depression.

Local Self-Government in Madras

While municipal elections have been put off in Madras, a comprehensive reorganisation of local self-government is being undertaken. District boards are being replaced by development councils which will be largely run by officials. The *panchayats* and unions will have more to do, and education councils will manage the schools. The State Ministry concerned feels that a dynamic village economy can be created only by such purposeful councils. The White Paper issued by the State Government explains the various measures that are being taken.

Madras city has been divided into 100 wards. It is generally assumed that the working class vote will become a major factor in future municipal elections. The abolition of representation for trade organisations has been criticised, but the Government has decided that provision for special interests should be eliminated under adult suffrage. It is feared that these reorganisations may be followed by increases in local taxes and rates, and some of the Madras local bodies may follow the example of Andhra Pradesh which has imposed octroi in all towns. Excises on local products may also come in the wake of demands for welfare. It is also possible that in order to broaden the tax base, the local bodies may be inclined to impose terminal taxes, especially on building materials like cement and timber.

Scientific Research in Silk Industry

The need for scientific research in industry was stressed by Mr. Shantilal M. Mehta, vice-president of the Silk and Art Silk Mills Research Association at the latest annual general meeting. "The skill and aptitude of the technologists and technicians who will in future man our laboratories and mills, their approach to basic problems, their dedication to work—these are all the essential elements for a healthy development of science and technology in the country," he said. Mr. Mehta announced that the construction of the main building of the new Technical Institute, which the Association is putting up and which started in January last year, was nearing completion. This will provide, in one cohesive and compact area, adequate room for basic and applied research, scientific testing under up-to-date laboratory conditions, and technical training facilities. Meanwhile, the nucleus of a textile testing laboratory was started in January this year. A unit for the physical and chemical testing of natural silk fabrics was set up at the request of the Silk and Rayon Textiles Export Promotion Council. Up to the end of August, the laboratory tested and certified natural silk piece-goods valued at about Rs. 20 lakhs. On an average, goods of a value of Rs. 10,000 are examined and tested each day. The Association issued 640 inspection certificates to various exporters. The goods received for inspection included saris, both printed and Jari-embroidered, scarves, blouse pieces, tussah silk, coarse lining fabrics, spun silk, and multi-coloured check and striped dress fabrics. Mr. Mehta said: "The inspection and testing work done by the laboratory has been greatly appreciated by exporters since it has enabled them to assess the true contents of the goods bought by them for export purposes. Exporters had to rely previously

on such information as was given to them by their suppliers. The Association put its 'tested' mark on the goods examined and confirmed it, where true, as natural silk. Overseas buyers of silk goods, too, had a guarantee of quality. It is a pleasure to mention that this testing unit set up by the Association is the first of its kind in India."

In addition, members and others also took advantage of the laboratory in ascertaining the characteristics of yarns and fabrics. The laboratory will soon enlarge its activities as latest instruments for testing the various physical and chemical properties of fibres, yarns and fabrics have already been received from abroad and are in the process of installation. The vice-president said: "The Association, in collaboration with the Indian Standards Institution, has prepared draft Indian standards for various types of rayon fabrics such as taffetas or shozie, plain sari cloth, rayon half crepe, half crepe sari, cloth, rayon crepe, rayon satin, georgette and crinkle georgette, voiles, nilons, chiffons, linen, jacquard fabrics, sharkskins and baby sharkskins. These are now being circulated by the Indian Standards Institution for eliciting comment. These standards will soon be published as the Indian standards for rayon fabrics. The Association is also exploring possibilities of recruiting suitable technical personnel as well as obtaining machinery and scientific equipment required for the Research Institute under the various technical aid programmes. Our president, Mr. D. N. Shroff is at present in Japan where he is to discuss the extent of technical assistance which can be had from the Government of Japan. Also, efforts are being made to obtain machinery suitable for our purposes from the Technical Co-operation Mission."

The Inflationary Recession

Now that it is apparently over, the inquest has started on the paradoxical features which are likely to make it go down in history as the first "inflationary recession". Some of these paradoxes are brought to light by Professor Brinley Thomas writing from Washington in the latest issue of the *District Bank Review*. There were two distinct sides to American economic behaviour. A rapid downswing in producer durable goods took place from the peak in July-August 1957, to a trough in April-May this year. Gross private domestic investment fell by 28 percent from the second quarter of 1957 to the second quarter of this year; output of producers' durable equipment fell by 20 percent in the same period. The index for steel production fell from 138 in May 1957, to 80 in April this year. Business expenditure on new plant and equipment for manufacturing durable goods fell by 30 percent between the second quarters of 1957 and 1958. Stocks were run down, and corporate profits fell. The consumption picture was quite different. In the downswing, aggregate disposable income rose, as did personal consumption expenditure. Consumer prices advanced by 3 percent, and hourly earnings from \$2.07 to \$2.12. In spite of falling corporate profits dividends remained steady, at the expense of ploughed-back profits. In the first part of the recession, residential construction increased.

No less remarkable has been Wall Street's behaviour. The Dow Jones industrial average index fell from a peak of 521 in the summer of 1957 to a low point of 420 last December. Then all through the early months this year, at the height of the recession, industrials rose steadily until they reached 479 in mid-June. By early August, the average was up to 510. Nor was the institutional investor, who always has to find an outlet for his funds, the main support of the market. The small investor making up the buying public emerged as a net buyer of over 13½ million shares, but the institutions were net sellers of some 13 million shares. The broad conclusion is that the American economy has shown great resilience, and that the "built-in stabilisers" did their job. Government expenditure has been rising sharply, and is continuing to do so. For this reason the United States monetary authorities are now concerned lest the recession should give way to an immediate new burst of inflation. While construction is now recovering and most indices have shown an upturn, orders for plant and equipment are still falling. Professor Thomas feels that another reaction is still possible before a genuine recovery breaks through. Much will depend on how quickly Government spending on public works can offset the contraction in the producer durable sector.

Acrlan for Carpets

Two British carpet manufacturers will shortly introduce carpets containing "Acrlan" to the home market. It will be the first time that this fibre has been used commercially in the British carpet industry. One range of woven carpets produced by Wm. C. Gray and Sons of Ayr, will be of 100 percent Acrlan. The other will be of tufted carpets, manufactured by Rivington Carpets of

Horwich Junction, containing 70 percent Acrlan and 30 percent nylon. The good dyeing qualities of acrylic fibre has enabled a wide range of colours to be obtained in both ranges. Other advantages claimed for the use of Acrlan include hard and long wear, excellent resilience, and a high resistance to soiling. Both ranges will use the 15-denier Acrlan staple yarn specially developed for use in carpets. This fibre has a round cross-section, which is claimed to improve stain resistance. The use of Acrlan has increased in the tufted and woven carpet industries of the United States during the past two years. The fibre used by the British manufacturers will be imported from the United States until the plant now under construction by Chemstrand, Ltd., in Coleraine, Northern Ireland, comes into operation at the end of this year.

COMMERCIAL PIRACY

A WELL known German newspaper which finds its way to Calcutta writes in its last issue: "Concerning one of these swindling firms in Calcutta, it seems to us that its speciality consists in getting hold of rubbish in the shape of tamarinds, myrabolams, tallow, etc. etc. and then to induce its correspondents by dint of made-up (falsified) samples to accept the drafts and take their choice. According to the information from our Calcutta agent the said firm bought again lately a large parcel of tamarinds which had been refused by our firms owing to its vile quality, and intends no doubt favouring the Hamburg market with it." It is very bad that such practices can be carried on with perfect impunity, since the injured parties in Europe cannot take the necessary steps to obtain redress; but it does not seem right that the commercial community, ever ready to defend its special interests, should be so utterly indifferent about similar dishonest tricks by bogus firms, throwing discredit on the entire body, whilst there ought to be ways and means to eliminate such black sheep. Some firms in Bombay sporting their own Telegraph Codes—which they send broadcast to all importers in Europe in order to provoke business—are trying to introduce another and rather novel mode of trickery, since these codes are made up in such an artful manner that, like the oracle of Delphi, they can be made to express anything, but generally to the advantage of the sellers. Here, too the buyer in Europe has no redress. We dare say this procedure will find imitators in Bengal ere long.

RESERVE BANK REPORT ON THE INDIAN ECONOMY POLICY OF RESTRAINING CREDIT EXPANSION

"THE economic situation in India during the year under review was characterised, on the one hand, by an accentuation of the serious stresses in the economy which have been in evidence since the launching of the second plan, and, on the other, by signs of a slackening of economic activity in certain sectors. Prices, which took a welcome downturn early in the year (from August), once again moved up, particularly of foodgrains, as a result mainly of a reduction in output. Likewise, the drain on foreign exchange reserves, which had eased in the second and third quarters, again worsened from April, partly due to the fall in export earnings. In the context of the above economic trends, the keynote of credit policy was vigilance in operation directed at maintaining the general restraint which was dictated by the basic inflationary trend of the economy and, simultaneously, selective encouragement to sectors where development was constricted by lack of credit." Thus observes the Central Board of Directors of the Reserve Bank of India in its report on the Bank's working for the year ended 30th June, 1958. The report contains, as usual, a brief survey of major economic developments during the year and a detailed account of the measures taken in the fields of credit policy, banking development and legislation, and supervision of banks.

Agricultural production in 1956-57 recorded an increase of 6 percent but in 1957-58, according to the provisional estimates, it shows a decline in cereals and jute. Industrial production was characterised by a slowing down in the rate of increase, the general index (base: 1951=100) advancing only by 3.5 percent to 137.2 during 1957, compared with over 8 percent in each of the previous two years. This may be largely ascribed to two reasons: the fact that spare capacity having been largely used, there is less of it now available, and smaller additions to plant and machinery and shortages of raw materials and components on account of import cuts.

Rise in Prices

As for commodity prices, in contrast to the rising trend throughout the year 1956-57, the year 1957-58 witnessed three phases—a rise in prices till August 1957, a continued fall till February 1958 and a rise again thereafter, the net rise during the year being 2.3 percent. The recent increase is largely accounted for by the rise in food articles and to a lesser extent in industrial raw materials. The element of vulnerability in the present price situation arises from the rise in prices of cereals, particularly rice, mainly on account of the estimated decline in output during the year, rather than a rise in demand.

The diminished tempo of economic activity also reflected itself in the sphere of money and credit. The expansion in money supply with the public was considerably smaller at Rs. 34 crores, compared with Rs. 155 crores in the previous year. This sharp decline in the rate of increase occurred in spite of the much larger budgetary deficit, due mainly to a contraction in bank credit, as against its considerable increase in 1956-57, and a remarkable rise in time deposits of banks. The balance of payments deficit continued to be the main contractionist factor. There was a substantial increase (Rs. 241 crores) in the deposit liabilities of banks, the bulk of it in time deposits. The growth in these deposits was due partly to the accrual of rupee balances of the U.S. Government with banks arising from the payments for imports of foodgrains under P.L. 480 and partly to a shift from demand deposits as a result of higher interest rates. There was a decline of Rs. 16 crores in scheduled bank credit, compared with an expansion of Rs. 147 crores in 1956-57. The easing of the strain on the banking system enabled banks to have a higher level of investment in Government securities and to liquidate borrowings from the Reserve Bank.

The increase in the plan outlay from Rs. 635 crores in 1956-57 to Rs. 861 crores in 1957-58 is reflected in an increase in the combined budgetary deficit of the Centre and the States from about Rs. 250 crores in 1956-57 to about Rs. 500 crores. For 1958-59, plan outlay is placed at Rs. 960 crores,

while the budgetary deficit is placed much lower at Rs. 220 crores because of anticipated improvement in loan receipts (including small savings) and foreign aid. The report also refers to the recent scaling down of the target of plan expenditure from Rs. 4,800 crores to Rs. 4,500 crores, and remarks that the reappraisal is in keeping with the flexible character of the plan.

Government Borrowing

Net borrowing of the Centre and States during 1957-58 amounted to Rs. 71 crores, compared with Rs. 141 crores in 1956-57. However, if account is taken of the substantial sales of Government securities from the Reserve Bank's portfolio (as against net purchases made by the Bank in 1956-57), absorption of Government securities by the public during the year was larger than in 1956-57. For 1958-59, the subscriptions to the loans floated in May 1958 by the Central Government amounted to Rs. 141.9 crores (including Rs. 9.5 crores on account of conversion) while subscriptions to the loans issued by ten State Governments amounted to Rs. 63 crores, of which Rs. 51.7 crores were accepted. Thus, market borrowing in 1958-59 would be much larger than in 1957-58 or 1956-57. The collection of small savings during 1957-58 at Rs. 69 crores was below expectations, compared with the Budget estimate of Rs. 80 crores, although it was higher than the receipts of Rs. 62 crores in 1956-57. There has been a marked improvement in collections in 1958 and, with the intensified small savings drive and the several organisational measures taken during the year, the report observes, it is not unlikely that the target of Rs. 100 crores set for 1958-59 will be attained.

The capital market was generally sluggish in the first half of the year but in the second half, the tone recorded a distinct improvement, suggestive of a generally optimistic turn in the assessment of the economic outlook on the part of the investing public. The Reserve Bank's index of variable dividend securities (base: 1949-50=100), which had declined from 103.8 at the end of June 1957 to 95.4 early in January 1958, moved up to 100.9 at the end of June, the recovery being assisted by the protectionist impact of import restrictions, tax concessions, export promotion proposals and the generally optimistic reports of the outlook for foreign aid. The volume of new capital issues appears to have been smaller. The gilt-edged market displayed a relatively firm undertone, on the whole, in contrast to the slight weakness in the previous year. During the year, the Reserve Bank made substantial net sales of Government securities amounting to Rs. 70 crores as against net purchases of Rs. 331 crores in the preceding year.

Balance of Payments Deficit

The high and continuing deficit in balance of payments, noticed in 1956-57, persisted during the year also, the foreign assets of the Reserve Bank declining by Rs. 242 crores (Rs. 230 crores in 1956-57); the foreign exchange reserves, including gold, stood at Rs. 372 crores at the end of June 1958. The average weekly rate of loss of foreign exchange assets progressively declined from Rs. 7.93 crores in the quarter July-September 1957 to Rs. 5.9 crores in January-March 1958, but rose to Rs. 5.9 crores (excluding an extraordinary receipt under U.K. Pension's Annuity Scheme) in April-June 1958. The deficit in balance of payments was due partly to lower receipts from exports and invisibles and partly to the higher level of investment in the public sector. A number of steps have been taken during the year to stimulate exports.

The Bank's monetary and credit policy continued to be one of general restraint, but there was a continuous adaptation to the changing economic context, and the needs of development have continued to temper the policy of restraint. It is, however, emphasised that the monetary policy is not in general very restrictive. The report observes that the working of the selective credit controls which have been mostly operative in the field of advances against foodgrains has been flexible enough not to hinder genuine requirements of marketing of crops, industrial requirements and branch expansion. Nor have interest rates risen to disincentive levels as in many other countries. The report states that the character of slackness in the economy has been such that there was not much that monetary policy could mitigate. However, consistently with the maintenance of general restraint in credit policy, liberal extension of credit facilities to particular sectors which have been relatively hard hit by recession has been encouraged by the Bank.

Credit Restraint

As for the measures of credit restraint, the Bank used both general and selective controls. Towards the close of June 1957, the Governor advised the banks to pursue a cautious lending policy. In July and August, the Governor indicated in his conferences with bankers that banks as a whole should bring down their outstanding credit to a level of about Rs. 800 crores by the middle of October 1957, without diminishing the flow of credit to essential sectors; bank credit was subsequently brought down to Rs. 840 crores by the middle of November, from a level of Rs. 938 crores in early June. The operation of selective credit controls for foodgrains and sugar was continued and was marked by flexibility.

Discussing the future prospects, the report refers to the fact that altogether the economic situation presents many complex and apparently contradictory features, but behind these developments lies the impressive advance of plan expenditure in the public sector which should make possible a fresh increase in private investment and industrial activity. For the present, however, while the meagre foreign exchange reserves are being conserved for

the completion of "core" projects of the plan, austerity including some restraint of growth in consumer goods industries is inevitable. The claims of further expansion or investment in new directions have to be carefully balanced with those of the maintenance of current economic activity. As for the central issue of resources for planned development, the report states that, while the immediate stepping up of the rate of foreign assistance is imperative, the problem of resources must be considered in its fundamental aspect of increasing the rate of savings in the community to match the higher rate of investment. The recent improved performance indicates a possible direction of increasing savings effort. A satisfactory rate of increase in food production is a basic requirement of economic development and this calls for the maximisation of agricultural production, particularly foodgrains, through intensive application of resources and high priority of development of agriculture in the organisational and administrative effort of the States.

As for the credit policy, it is stated that during a phase when the balance of payments position will remain a source of grave concern, the tenor of monetary and credit policy would have to be absorption of the available liquid assets for urgent financing of the plan projects and the maintenance of stringent control on expansion of credit facilities in general. In the context of Indian conditions, under planned expansion, what is called for in the field of credit policy is selective expansion in spheres where development is held up for inadequacy of credit.

Banking Legislation

In the field of banking legislation, on account of the continued large drain on foreign securities of the Bank and in keeping with the general trend of central banking legislation in recent times, the provisions relating to currency reserve requirements were further amended during the year. Under the revised arrangements, the aggregate value of gold coin, gold bullion and foreign securities held in the Issue Department of the Bank should not at any time be less than Rs. 200 crores, of which the value of gold coin and gold bullion should not be less than Rs. 115 crores; the stipulation of a floor limit on the value of foreign securities to be held in the Issue Department at Rs. 300 crores was deleted.

The development of commercial and co-operative banking and of the institutional machinery of industrial finance continued to receive close attention, and progress was made in all these directions. During 1957-58, the State Bank opened 115 branches, compared with 102 in the previous two years put together. During the year, the remuneration to be paid by the Reserve Bank to the State Bank for the quinquennium 1st April, 1955 to 31st March, 1960, for the conduct of Government business was revised. Two State-owned banks have been included in the second schedule to the Reserve Bank of India Act; all the major State-associated banks are now scheduled banks.

In the sphere of industrial finance, an important development was the registration, on 5th June, 1958, of the Refinance Corporation for Industries, to provide relending facilities against medium-term loans given by selected scheduled banks to medium-sized industrial concerns. The paid-up capital of the Corporation for the time being is Rs. 250 crores. An organisational change in the Reserve Bank during the year was the splitting up of the Department of Banking Development in September 1957, into the Department of Banking Development and the Industrial Finance Department, in view of the considerable increase that has taken place in this Department's activities. The Industrial Finance Department will also attend to the affairs of the Refinance Corporation for Industries.

Co-operative Credit

The Reserve Bank continued to pursue its programme of strengthening the organisation and increasing the volume of co-operative credit through the exercise of its supervisory and regulatory functions and through the provision of financial assistance. As at the end of June 1958, loans amounting to Rs. 6.04 crores were sanctioned from the National Agricultural Credit (Long-term Operations) Fund to State Governments, of which Rs. 5.83 crores were availed of by State Governments. There was a further increase in the volume of finance provided by the Reserve Bank to State co-operative banks for seasonal agricultural operations and marketing of crops; the outstanding lendings as at the end of the year amounted to Rs. 40.47 crores, compared with Rs. 23.32 crores at the end of 1956-57. The outstandings of medium-term loans at the end of the year under review were Rs. 3.42 crores, against Rs. 1.58 crores a year earlier. The Bank also subscribed, as in the previous years, to the debentures issued by land mortgage banks.

The Reserve Bank continued its efforts towards strengthening the banking system through supervision and regulation of commercial and co-operative banks. During the year, 46 scheduled and 122 non-scheduled banks were inspected. Inspection of co-operative banks on a voluntary basis was continued, as many as 240 being inspected during 1957-58. The number of offices of scheduled banks rose during the year by 410 to 3,455; of the new offices, 57 were opened at places not formerly served by commercial banks.

During the year, the Reserve Bank's income, after making statutory and other appropriations, amounted to Rs. 37.09 crores and expenditure to Rs. 7.09 crores; the net profit available for payment to the Central Government in terms of Section 47 of the Reserve Bank of India Act at Rs. 30 crores was the same as in the preceding year.

A Ditcher's Diary

WHAT A BRILLIANT MOVE OF THE CALCUTTA Tramways' directors to suggest that the West Bengal Government nationalise the company. I may be wrong, but this is probably the first time such a thing has happened anywhere in the world. It is difficult to see what else the directors could do. After running the company efficiently, and in a financially sound state for years, it is only natural that they should be reluctant to see the whole concern go to the dogs for the sake of an extra naya paisa on the fares. As the Tramways' chairman, Mr. D. C. Webb, said at a Press lunch last Monday: "If the Government want us to run at a loss, then they must take us over and subsidise the company in a proper business-like manner". I could not agree with him more. But it would be surprising if the invitation to nationalise is accepted—the Government is hard-up enough as it is. Besides, it would only be buying a new rod for its own back, as Dr. Roy well knows. Now the fare increase—which one distinguished representative of the Calcutta financial Press described at the luncheon as already ten years too late—along with the proposed benefits to labour, are to be deferred for independent opinion, the question is when can the public have its tramcars back? One answer is that it would have been all the sooner had the unions not suddenly changed their stand from a simple wage demand to one of opposing the fare increase as well. Such consideration for the general public is touching after it has been deprived of its tramcars for over a month and put to serious expense and inconvenience by a strike which was illegal in the first place. It is clear that the object of calling the strike was primarily to embarrass the company and the West Bengal Government, and only to a strictly limited extent to serve the interests of the workers. And to achieve this end, the all-important question of public convenience—because after all the Tramways are a public utility—does not appear to have entered into the calculation. Now a new formula has been agreed, perhaps the tramcars will be permitted to run again soon. That is unless a few communist and fellow-travelling politicians decide that they have something further to gain by carrying the strike on. Such, I suppose is the way things are done in Calcutta.

IF THE INTENTION OF THE ORGANISERS OF THE threatened law-defiance campaign was to frighten everyone, it did not quite succeed with me. As I read the report with a measure of boredom, I wondered how the situation can be vastly different with one movement more or less. A strike declared "illegal" by the Government of West Bengal itself has been going on merrily for over a month now, and the latter has done and said things which might easily be interpreted as active encouragement to the strikers. When this is the attitude of a State Government to the laws of the land, on which alone can the foundation of democracy be laid, it is hardly surprising that they are treated with no greater respect by the generality of the people, to say nothing of professional agitators and leaders of labour. Sensitive, almost touchy, by temperament, the people of Calcutta get very indignant when there is the slightest criticism of the many deficiencies of life in the city today, but they should now and then ask themselves whether they are not in fact the most pitiable victims of a number of tyrannies passing for other things. The way of normal life is brought to a standstill, and kept that

way, by a small band of hooligans or a larger number of workers or a small number of so-called leaders would be incredible if it were not the daily experience of every citizen of Calcutta. Not as though I ever credit all the popular leaders of West Bengal with a sense of responsibility, but even they should consider how campaigns involving defiance of law defeat the very objects they publicly advertise and perhaps secretly desire. Movements of this kind inevitably divert the attention and energies of the Government away from its many problems, and the real job of governing is neglected to an even greater extent than hitherto. While the Government and the Opposition play their little political game, the former with policemen and tear gas and the latter with innocent students and refugees, the people suffer. This is the more serious aspect of current movements in Calcutta—they provide the Government with an excuse for not doing the essential things because it is too busy dealing with the symptoms to bother about the causes.

I WOULD NOT KNOW WHERE MR. B. N. DATAR, Minister in the Ministry of Home Affairs, got his statistics to the effect that "50 lakh people in the South know Hindi while about 10 lakh know English." Far less would I know the justification for Seth Govind Das's facile optimism that the opposition to Hindi in Bengal and Madras is "only momentary" and "would wither away in the course of time." While I could argue with Seth Das that my own observation here in Bengal is different, I would concede Mr. Datar's point for argument's sake—and then proceed to argue that this is the danger of a switch-over to Hindi. It is not necessary to hold any kind of survey to imagine the sort of Hindi Mr. Datar's 50 lakhs in the South have learnt. Without any undue conceit I think that I might easily be included in them if I lived there, and my Hindi is not something I am particularly proud of. Oh yes, I can ask for a glass of water and I can ask the driver to turn right; but that's about all, and I suspect this to be true of not a few lakhs of the much-vaunted fifty. Then let us see what it leads to. I have heard it suggested that even with considerable mastery of the Hindi language abstract thinking in the upper reaches of the mind is not easy; some say it is not possible. With such imperfect knowledge of Hindi as the South must have, what is being done in effect is to bring down the level of thinking of a very large number of people—and the effect of this on the country as a whole can hardly be beneficial. Statements such as Messrs Datar, Gadgil and Das recently made in Delhi tend to confirm the uncharitable interpretations of the Congress Pragjyotishpur resolution on the subject. It was said by some that the champions of Hindi had only staged a strategic retreat and would advance again aggressively the moment its opponents relaxed their resistance. English is not Hindi's most formidable rival; the former can look after itself. Hindi's future is challenged by the more developed regional languages.

ONE ANNUAL PUBLICATION I ALWAYS WELCOME is that of Pick's *Currency Yearbook*: I find it helps me get my ideas about money into reasonable perspective and leaves me less enamoured of the stuff than I might be otherwise. For the same reason that the ant cannot see the pattern on the carpet, I often forget, for instance, what a world-wide conspiracy of organised banditry modern govern-

ment currency management has become. Mr. Pick never fails to remind me. His solemn warning that: "Those who look for justice and humanity in monetary matters should give up . . . currencies are made to be devalued", is calculated to bring the most complacent up with a jerk. And the trouble with Mr. Pick is that it is so difficult to disagree with him, even if one believes, as I do, that it would probably be impossible for the modern world to exist at all under the rigorous and puritanical currency discipline he appears to advocate. I especially like his austere but picturesque description of government bond buying as "masochistic acquisition of certificates of guaranteed confiscation." His remedy for this particular brand of official dishonesty is to replace the revenue of bonds by "increased taxation or debt certificates of guaranteed purchasing power." I found the section on the Indian rupee, in this year's Report, rather more optimistic than I expected. There is no attempt to ignore the mismanagement which wrecked this country's "rather classic and successful" pre-1956 currency policy, but Mr. Pick considers the outlook for India "justifies a limited optimism", provided the supply of foreign loan assistance can be maintained. I hope he is right. The view seems to have been shared because, as Mr. Pick points out, the premium on dollar banknotes in Bombay's black market at the end of March was down to 14 percent and the rupee showed signs of improving. All the same, his estimates of the extent of the rupee black market in 1957 are surprising, and seem calculated to discomfort all those who stick complacently to the view that India can never be forced to devalue. During last year, illegal imports of gold amounted to Rs. 1.5 crores a month. Financial transfers are estimated to have totalled Rs. 50 crores for the year. Trading of Indian banknotes in New York averaged Rs. 5,000 a day. Last summer's devaluation rumours brought "huge offers of rupees, up to many millions" to the world's principal trading centres for unlicensed payments into India.

THIS IS NOT USUALLY THE TIME OF YEAR FOR retirements from India: after sweating out a Calcutta summer, the cold weather is generally regarded as too great an attraction. Nowadays, it would seem to be about the last spell of protracted sunshine anybody returning to the U.K. can expect to enjoy. But autumn retirements do happen, and this week Calcutta will be saying its farewells to Mr. Stanley H. Davies, chairman of Duncan Brothers. Mr. Davies came to Calcutta in 1933, and apart from a break of nearly six years' war service, has been with his present company continuously since then. A keen rugby and football player in his youth, his military service in the 3/2nd Punjab Regiment took him to the Sudan, Eritrea, Abyssinia, Egypt, the Western Desert and to Italy as a prisoner of war in 1941. After escaping two years later, he rejoined his regiment in Burma where he was awarded the M. C. and was mentioned in despatches. Since he returned to civilian business life in 1946, Mr. Davies has been chairman of the Indian Tea Association, has served on the Tea Board and other numerous committees connected with the tea industry. He has also been a member of the committees of the Calcutta Football Club and the Saturday Club, and was Governor of the East India Clinic for over two years. His wife, Mrs. Wendy Davies, has recently served for nearly five months as chairman of the British Women's Club. These two have earned our sincere good wishes in their retirement from India, although, as so often happens these days, this does not mean leaving business life altogether; Mr. Davies will be joining Duncan Brothers' London board.

COMMONWEALTH COMMERCIAL TRENDS

HALTING RECESSION IN CANADA

(FROM A SPECIAL CORRESPONDENT)

THE Canadian Premier, Mr. John Diefenbaker, has said that his Government will continue to combat the recession with comprehensive measures regardless of deficits in the Budget. He has called on Canadian business men and industrialists to create "a new era of expansion." The Premier has said this while addressing the annual banquet of the Canadian Manufacturers Association. He has exhorted Canadian free enterprise to create new industries to "produce things we have never seen before." The Government proposes to take steps to facilitate the development and exploitation of natural resources, especially in the northern areas, and to encourage a greater use of those resources within Canada. Mr. Diefenbaker has said that the continuing health and vigour of the free enterprise system depends more on the business community than it does on the Government.

Diversion of Trade

The retiring president of the Canadian Manufacturers Association, Mr. H. V. Lush, has told the annual meeting of the association in Montreal that the Government's programme of promoting a diversion of trade from the United States to the United Kingdom has resulted in a reduction of purchases from some U.S.-owned subsidiaries operating in Canada. Mr. Lush says: "Incredible though this may seem, it has happened, though I would not wish to exaggerate its extent. Much as we would like to trim our trade deficit with the United States, in the interest of economic commonsense I suggest that cutting our buying from Canadian-based companies, whatever their parent nationally or whatever their financial backing, is not what was meant when we subscribed to the diversion programme."

Higher Tariffs on U.K. Wool Fabrics

The Canadian Finance Minister, Mr. Donald Fleming, has tabled a report of the Tariff Board

in the House of Commons. It recommends increased protection for the Canadian wool fabrics industry. The Board has suggested that tariffs on most imported U.K. worsteds and suitings be increased by about 20 percent. The most important of its recommendations is to increase 50 cents to 60 cents in the maximum duty a lb weight on fabrics weighing up to 12 ounces a square yard—mostly suitings and fabrics other than overcoats. Some of its other important recommendations are: (1) The specific duty for the aforesaid category be increased from 12 cents to 20 cents a lb. (2) The ceiling on cloths weighing more than 12 ounces a square yard should be increased from 50 cents to 55 cents, and the specific duty should be raised from 12 cents to 15 cents a lb. Mr. Fleming has said that the increase in actual duties applicable to most U.K. worsteds and other suitings will be raised from the present 15 percent to about 18 percent.

Australian Trade Policy Liberalised

The Government of Australia has decided to maintain the import licensing level at its present annual ceiling of £(A)800 million for the next four months. It has removed the restrictions on the import of certain capital equipment from the dollar area. Equipment from that area will, therefore, be more readily accessible to Australian manufacturers. A number of items will be exempt from import licensing regulations in line with the Government's policy of simplifying the administration. These will include resin, bromine salts, and a number of metals which account for £(A) 1.25 million worth of trade a year.

Goods from the dollar area, the licensing of which will be liberalised are: capital equipment other than electrical, including parts; electrical machine apparatus and appliances including parts; television transmission and studio equipment and parts. Goods to be exempt from import licensing are: annatto piezo electric quartz plates, bars, rods, bromine salts, various cyanide and hydro-sulphites, resin, cobalt metal, magnesium metal, vanadium metal, arsenic metal, chrome silicide, calcium silicide, molybdenum metal, chromium metal, fashion plates and books, maps, charts, globes, oil and water colour paintings. Goods for which quota levels are to be raised are: desiccated coconut, white flannelette, olive oil, wall and floor tiles, crockery,

chinaware, porcelain ware, brushes of types ordinarily used in schools and artists' brushes, and laundry clothing used in laundry equipment. Goods involved in other changes are: musical instruments, window holland, cameras and photographic equipment, sanitary earthenware.

Larger Wheat Acreage

The total area under the new season's wheat in Australia is likely to be 10 million acres, compared with 7.5 million acres last year, according to Sir John Teasdale, chairman of the Australian Wheat Board. Newly-sown wheat in New South Wales and Queensland is making good progress, but the prospects for the wheat crop in south Australia and Victoria are far from good. Rain is badly needed in those States, and in south Australia the situation is worse than last year. Between 20 percent and 25 percent of the crop have either not been sown or have not germinated. Sir John says that sales to Britain and Japan are making steady progress but they are by no means excessive. Prices are still about 14s to 14s 6d a bushel f.o.b. and shipping freights are still at a very low level. The Minister of Agriculture, Mr. R. Nott, has said in Sydney, that he hopes that the New South Wales harvest will at least equal the average of 50 million to 60 million bushels for a good season, but the soil is dry and the growth is at a standstill for the time being.

Credit for New Zealand

The Australian Prime Minister has announced that the Federal Government has asked the Commonwealth Bank to provide £10-million credit for New Zealand during the financial year ended 30th June, 1959. The credit will be repayable in instalments over a short term. The Australian Government has indicated that the credit will be used to help finance New Zealand's payments to Australia, and is the result of an appeal to Australia for aid in overcoming the financial difficulties of New Zealand caused by a serious decline in her export earnings.

Lower World Wool Clip Likely

The world wool output is expected to be lower during the next season, mainly because of the drought in Australia and South Africa. The Commonwealth Economic Committee says that while it is still too early for any detailed appraisal of the season's wool prospects, it is now clear that for the second year the world production will be lower than that in the preceding season. A drop of about 2 percent in the world output may well occur in 1958-59, following the 3-percent reduction in the season which has just ended. The first estimate of the Australian Council of Wool Selling Brokers indicates that the clip in that country is expected to fall by some 3 percent to a total of about 1,386 million lbs of greasy wool. Due to a widespread drought, the new clip has been grown during one of the most difficult seasons experienced by Australian graziers for many years, and much of the early-shorn wool has a large proportion of short fibres.

In South Africa, too, drought has been widespread over a large part of the wool-producing area of the Cape province, but how seriously this will affect production is not yet known. The situation in New Zealand has been less affected by the adverse weather, so a further increase in that country's wool output may occur during the next season. In South America, the main problem relates to the disposal of the large quantities of unsold stocks. These are now reported to amount to nearly 350 million lbs, or over half the season's output in Argentina and Uruguay. Producers in the two countries are requesting their Governments to grant more favourable export rates in order to counteract the effects of the decline in the world prices of wool and to enable them to resume overseas sales.

Trade Problems of New Zealand

New Zealand's trade problems will take at least four to five years to solve. This opinion has been expressed by New Zealand's Minister of Industries and Commerce, Mr. Holloway, during his reply to a debate in the House of Representatives. He has told the House that the Government is trying to ensure that the import of raw materials to be processed will have preference to the import of the finished commodity; that no encouragement will be given to the establishment of industries which will flourish only during a period of shortage; that most of the new factories to come into production with the assistance of overseas capital, will start to produce in a limited way only in the middle of next year; that such new manufacturers have been told that they will receive no guarantee of protection; that manufacturers should trim their productive requirements in keeping with the almost certain decline in the demand for consumer goods; and that the country has no complicated problems which cannot be solved by prudent management to meet the changes brought about in its economy.

Outlining the causes of the difficulties which now face New Zealand, the Minister has said that he feels they are part and parcel of normal developments in a developing economy. Another problem has been the high rate of demand for imported goods, and large orders were placed early in 1957 and late in 1956. These goods began to arrive in New Zealand in May and June of last year. From May and June until December last year and January and February of this year there was a big increase in the amount of imports every month.

Higher Prices for Consumer Goods

There is also the point that while there has been a decline in demand there has not been a reduction in prices. New Zealand continues to pay higher prices for consumer goods in spite of a fall in commodity prices. There is also the problem of increased shipping freight rates which have retarded the country's exports.

Stocks and Shares

SPECULATIVE PRICES RISE ON FRESH BUYING WAVE

JUTES IMPROVE FURTHER

Wednesday Evening.

THE Planning Commission's note, presented last week to Parliament's Consultative Commission on Planning, pointing out that the irreducible minimum outlay on the core of the second five year plan would now be Rs. 150 crores more than the Rs. 4,500 crores estimated four months ago, initially caused some concern among market operators and raised fears of increased taxation. Indian Iron fell from Rs. 25.50 to Rs. 25.05, but recovered shortly afterwards to rise steadily to Rs. 26.00 indicating once again that the market is in a sound state of health. Tonight's closing quotation is Rs. 25.81. The good job being done abroad by India's Finance Minister, and particularly his address to the Foreign Policy Association in New York on 11th September in which he explained how India was determined to achieve the right political and economic climate to attract foreign capital, was welcomed in market circles. The Guest, Keen William debenture was an outstanding success and the unofficial quotation is now Rs. 103 against the issue price of Rs. 100. It is believed that the issue was approximately four times over-subscribed.

The gilt-edged market was slightly easier, because the sharp rise which had taken place in securities over the past month or so attracted some profit-taking. Another reason for the market for that banks are holding off the market for the present because of the approaching busy season in the money market. Three percent Conversion Loan was marked down from Rs. 74.45 to Rs. 74.10 ex-voucher. Prices of most other securities were either slightly trimmed down, or unchanged from last week's levels.

Preference shares continued to meet with good enquiry and very few holders were prepared to part with their holdings, even though buyers offered slightly higher rates than the actual prevailing prices.

Bank shares were firm, particularly United Commercial, which advanced further from Rs. 66 to Rs. 68.

In coal, Amalgamated improved from Rs. 20 to Rs. 20.75 and Bengal from Rs. 265 to Rs. 277. East Indian were taken at the higher rate of Rs. 25.25 and interested buying lifted the price of Kalapahari from Rs. 18 to Rs. 22.

In cotton textiles, Elgins were better at Rs. 13.44 as were Kesoram at Rs. 12.

In electronics, there were buyers of Benares, Jubbulpore and U.P. but no declared sellers.

In the engineering group, Braithwaites were steady at Rs. 31.50 as were Burn & Co., at the higher rate of Rs. 38.1 and Guest, Keen, Williams at Rs. 31.58. Jessops continued to improve and closed tonight at Rs. 23. Textile Machinery were firm at Rs. 23.

Jute shares continued to attract attention, particularly the undermentioned:

	Opening 11th September	Closing 17th September
Alliance	86.50	96
Auckland	112	118
Barnagore	130	132
Howrah	19.56	20
India	155	166
Kinnison	145	161
Megna	150	18.25
Northbrook	17.19	180
Union	177	Rs.

In sugar, Ramnugger were better at Rs. 21.25, as were Darbhanga at Rs. 21.65.

In paper, Bengal improved further to Rs. 93.50 and Shree Gopal were taken at the higher rate of Rs. 17.90. Sirpur met with enquiry and rose from Rs. 13.06 to Rs. 13.75.

In cement, Dalmia were easier at Rs. 10.12, but Sone Valley improved from Rs. 6 to Rs. 6.25. Orissa Cement were shaded at Rs. 13.06 and Jaipur Udyog were marked at Rs. 12.75 ex-rights, ex-dividend.

In shipping, India Steamship were steady at Rs. 14.09, but India General Navigation were softer at Rs. 56.

Among miscellaneous industrials, Bengal Flour were wanted at Rs. 31.50 and Clive Row were better at Rs. 9.40. Dunlop Rubber were more or less unchanged at Rs. 28 and there were buyers of Hercules Insurance at Rs. 23. Imperial Tobacco were better at Rs. 12.37 as were Indian Aluminium at Rs. 18.31. Indian Cables were steady sharply 30.12 and Jardine Henderson improved from Rs. 74.50 to Rs. 81.50. Martin Burn were better at Rs. 27.44 and National Tobacco were steady at Rs. 14.12. Phillips recovered to Rs. 14.75, but Rallis were easier at Rs. 38. Shaw Wallace moved up further to Rs. 14.

In the mining group, Indian Copper were 10nP better at Rs. 3.90 and Orissa Minerals were slightly easier at Rs. 27.62.

Tea shares were quiet and prices generally were a shade easier.

machinery to be received against the loan will be installed during the current year.

THE BANARHAT TEA COMPANY HAS MADE A PROFIT of Rs. 4.89 lakhs for the year ended last December, against Rs. 26.77 lakhs. Taxation absorbs Rs. 2.86 lakhs. Bringing in Rs. 4,50,485 and making other adjustments, there is Rs. 7,03,198. The ordinary dividend has been halved to 20 percent, leaving a carry-forward of Rs. 1,37,198. The crop fell from 40,648 maunds to 37,127 maunds, and the average sale price was lower at Rs. 1.84 a lb against Rs. 2.47 a lb. Estimates for the current season have been framed for a crop of 41,000 maunds to cost Rs. 51,92,520 and by 14th August this year, 15,776 maunds had been manufactured, compared with 14,930 maunds on the same date last year.

PROVIDING Rs. 29,085 (Rs. 98,343) for TAXATION, Rs. 26,100 for wealth tax and Rs. 60,626 (Rs. 57,095) for depreciation, the profit of the Borra Coal Company has amounted to Rs. 1.24 lakhs for the year ended last December. Bringing in Rs. 19,553, there is Rs. 1,43,568. The ordinary dividend is halved to 7½ percent. Tax contingency reserve is allocated Rs. 18,725, and development rebate reserve Rs. 12,975. The carry-forward to Rs. 26,931. Raisings increased from 146,056 tons to 152,270 tons, and despatches went up from 144,202 tons to 151,308 tons.

Bombay Market

STEEL SHARES LEAD HECTIC BUYING

EARLY ANNOUNCEMENT EXPECTED ON RETENTION PRICES

Wednesday Evening.

NEAR-boom conditions prevailed in the Bombay stock market last week on a fresh buying spree, particularly in steel shares. Higher output figures of the Tata Iron and Steel Company during August, coupled with the expectation that an increased output would soon flow from the company's expansion programme which is nearing completion, added to bullishness. The prospect of an early increase in the retention price of steel was considered an additional stimulating factor. Easy money conditions, combined with a warm response to a number of industrial issues in recent weeks, induced fresh support. The stock market was closed on Tuesday and Wednesday.

Tata Steel soared to Rs. 183.75 and India Iron were marked higher at Rs. 25.65 on strong support from Calcutta interests. Other engineering gains in sympathy, and Premier Construction came to hand at Rs. 240. Alcock Ashdown were sold at Rs. 263.75. Tata Locomotive touched a new high level of Rs. 196 on prospects of a new share issue. Motor shares were quietly steady, and Premier Automobile came to hand at Rs. 88. Hindustan Motor were transacted at Rs. 7.48 on expansion in engineering activity.

Cotton mill shares disclosed gains on balance. Bombay Dyeing changed hands at Rs. 62.50 and Century were taken at Rs. 460.50. Kohinoor were bought at Rs. 278.50 on investment account and Syadeshi improved to Rs. 204 on reports of better working. Simplex were done at Rs. 179 and Central realised Rs. 96.50. India United Ordinary were bought at Rs. 9.88 and Apollo were indicated around Rs. 1.66.

Belapur Sugar were a bright feature in the miscellaneous group and the price of the scrip increased to Rs. 315 on prospects of a free bonus share issue. Dhalton were transacted at Rs. 176.50. Cement shares were steady, and Associated Cement were done at the higher price of Rs. 163.75. Digvijay Cement made Rs. 152. Mining shares were steady in the belief that the international price for copper would be maintained at the present level. Shivrajpur Syndicate were bought at Rs. 90. Steamship company shares were firm in the expectation of increased earnings. Scindia Steam came to hand at Rs. 22.52 and Great Eastern Shipping were transacted at Rs. 26.85. Wide fluctuations in Bombay Burmah were seen on alternate rumours relating to the dividend; at the close the price ended at Rs. 523.50 on a lower interim dividend, but sentiment was maintained because of the hope that the company would issue free bonus shares. National Rayon recovered to Rs. 244.50 on short-covering and Tata Chemical were wanted at Rs. 17.80 on expansion prospects.

Turnover in banking shares was restricted and fluctuations were narrow. United Commercial Bank were done at Rs. 64.50 and Punjab National came to hand at Rs. 65.50. Insurance scrip were steady, and British India General were transacted at Rs. 15.72. New India Assurance were placed around Rs. 46.

Scattered interest was taken in electricity supply company shares, and Bombay Suburban Electric were bought at Rs. 112.50. Tata Hydro were transacted at Rs. 121 and Ahmedabad Electric were offered at Rs. 98.70.

For INFORMATION

ON
AUSTRALIA,
NEW
ZEALAND,
and FIJI

Business men requiring up-to-date information and a complete banking service are invited to use the facilities of the Bank of New South Wales, the oldest and largest commercial bank operating in Australia, New Zealand, Fiji, Papua and New Guinea, with over 1,000 branches and agencies.

The services include trade and industrial introductions, economic and market information, and assistance with travel requirements.

Enquiries may be made through your own bankers or direct to:—

WIDESPREAD GAINS ON LONDON STOCK MARKET

GILT-EDGED AND INDUSTRIALS RISE

London, 17th September.

THERE was a quiet note of confidence in the London stock market during the past week and nearly all sections recorded useful gains. Business showed no marked expansion but there was very little selling and a selective demand was sufficient to raise prices over a broad front. The Far East situation restrained the market but there were a number of encouraging developments to account for the improvement. First and foremost were the expectations of another reduction in the British Bank rate, in spite of the dearer money trend in the United States. The gilt-edged market particularly responded to these expectations and steadily advanced, and industrial equities were sympathetically higher. Other encouraging developments included the relaxation in hire-purchase controls, which was widely expected, the British Prime Minister's statement referring to economic expansion and Mr. Butler's reference in his policy statement that steps would be taken if unemployment increased. In addition, the sustained advance on Wall Street, which reached a new all-time peak during the past week, contributed to the firmness of the market. Foreign bonds attracted a selective demand and were often firmer but rails were featureless. Dollar stocks advanced and recorded extensive gains on the week. Selective buying accounted for a steady improvement in the indus-

trial market and widespread gains were established. The relaxation of hire-purchase controls had only a modest effect on prices as this news was largely discounted before. The gold share market fluctuated within narrow limits and recorded very little change on balance. Base metal shares generally were irregular but tin shares advanced on hopes that the International Tin Council would maintain the floor price for the metal. The feature of oil shares was the sharp advance in British Petroleum following the scrip issue news. Rubber shares were firm on a selective demand. Interest in tea shares was small and price movements were irregular.

The Money Market

Although there was a brief spell of easier credit conditions prior to the week-end, there were very few signs of any general easing up of the tight monetary position which has persisted in the London money market for some time now. The amount of available funds for short loan purposes continued to be in restricted supply and the balance of the market's requirements, not obtainable from normal sources, was made good by assistance given by the authorities. There was also the weekly small amount of penal borrowing from the Bank of England. On Thursday last conditions took a turn for the better which lasted for about two days but the market is still stringent. The general rate for money was 3½ percent and 3½ percent with lower rates down to 2½ percent being obtained during the short spell of easier conditions. Business in bills was fair with November and December maturities changing hands at 3½ percent. At the weekly tender, the Government again borrowed on more favourable terms, the average rate falling just over 6d to £3 13s 6.81d percent.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 10th September shows that the gold stock rose by \$1 million to \$21,012 million. Foreign deposits were \$68 million higher at \$382 million while foreign investments improved by \$49 million to \$3,418 million. The Federal Reserve sold \$305 million worth of bills making the total holdings of Government securities \$25,081 million. Total discounts and advances rose by \$279 million to \$464 million, while the aggregate excess reserves of member banks remained unchanged at \$343 million. The daily average excess reserves of member banks improved by \$90 million to \$679 million, while their daily average borrowings rose by \$53 million to \$514 million. Business loans of the New York city banks rose by \$61 million to \$10,595 million compared with a rise of \$105 million to \$11,933 million in the corresponding week of last year. Gold certificates on hand and dues from the U.S. Treasury were \$5 million lower at \$19,546 million. Federal Reserve notes in actual circulation were \$1 million lower at \$27,006 million. The deposit member banks reserve account declined by \$17 million to \$18,171 million.

Decline in Paris Gold

The Paris gold market recorded idle conditions during the past week. Prices tended to decline as international developments, particularly in the Far East, were considered less gloomy. Price movements remained restricted. Some sales were reported due to new repatriations of undeclared foreign exchange holdings abroad.

Oilseeds Lower

In most sections of the oilseed and oil markets, more active trading conditions were noticeable during the earlier part of the past week, but as the Far East political situation was favourably interpreted, buying interest declined. Linseed, however, was not markedly affected, but the closing tendency appeared to be easier. Prices of groundnuts declined on some resale pressure, and there was little buying interest to support those of castorseed. While consumer demand for linseed oil was reasonable, the interest in new year's deliveries received a fillip each day from the professional side with the result that dealers transacting positions ahead widened their discounts still further as against near months. Castor oil, although firmer, did not receive fresh support. Coconut oil was a quiet market so far as European trading was concerned. Nevertheless, steady to firm conditions were recorded.

Relaxation in U.K. Hire-purchase Controls

The U.K. Board of Trade has recently announced a substantial easing in hire-purchase restrictions. With effect from 16th September, a wide range of goods has been released from hire-purchase control. They include industrial plant and agricultural equipment, lorries, buses and heavy vans, caravans, motor-cycles and bicycles, furniture, carpets and other items for which a statutory deposit of 20 percent was formerly payable. The minimum deposit on all goods remaining under control will stand at 33½ percent. These goods include radio and television sets, domestic appliances and motor-cars. The maximum repayment period for agreements for all these goods will be two years.

Stabilising World Coffee Prices

Belgian, French and Portuguese coffee experts have recently agreed on a new project for stabilising international coffee prices. This was announced in a communiqué which was issued at the end of a two-day meeting of experts in Paris. U.K. and Ethiopian representatives expressed reservations on the project, the communiqué said. Negotiations on the project are to be shortly resumed in Washington at a meeting of the Coffee Study Group. The parties to the talks refused to divulge details of the new project, and said that negotiations were still in progress.

New Delhi

PARLIAMENT TO DISCUSS THE SECOND PLAN

PROGRESS OF WORK IN STATE STEEL PROJECTS

(FROM OUR NEW DELHI CORRESPONDENT)

PARLIAMENT will soon discuss the second five year plan as it has been re-adjusted in the light of the recommendations of the National Development Council. The Council, it will be recalled, has directed the division of the plan into two parts—A and B—the latter to be taken up only if adequate finances are available to implement it. Part A has been limited to a total outlay of Rs. 4,500 crores, on the distinct understanding that an additional Rs. 240 crores must be raised to finance it, that deficit financing of Rs. 1,200 crores is undertaken, and that Rs. 1,038 crore worth of external aid is forthcoming. The National Development Council has, however, advised that no new commitments without specific reference to the Planning Commission should be accepted either by the Centre or by the States. It has been further recommended that in order to raise the additional Rs. 240 crores, State Governments should work out fresh estimates of the financial resources likely to be available for their plans for the remainder of the current quinquennium. The Planning Commission's discussions, since the meeting of the National Development Council, have led to an increase in the Central outlay by Rs. 129 crores to Rs. 2,581 crores during the remainder of the plan period. Rs. 92 crores of this increase being under industries and minerals. There are, in addition, some proposals for the expansion of technical education, which will raise the commitments of the Centre by Rs. 21 crores to Rs. 150 crores.

Larg-scale Industries

In the second plan, the total investment contemplated for large-scale industries has been placed at Rs. 1,094 crores including Rs. 524 crores in the public sector. In addition, Rs. 60 to Rs. 65 crores has been provided for the schemes under investigation by the National Industrial Development Corporation, of which Rs. 35 crores has been earmarked for new basic and heavy industries. As against the provision of Rs. 690 crores for industrial and mineral development and Rs. 790 crores indicated in the Planning Commission's memorandum on its re-appraisal of the plan, the Commission, in the light of its recent discussions, has now provided Rs. 882 crores, of which Rs. 15 crores is for schemes in the States. On the mineral development projects, the revised provision is Rs. 110 crores, against Rs. 85.5 crores indicated in the Planning Commission's memorandum. Of the principal additions, the allocation for coal has been raised from Rs. 234 crores to Rs. 40 crores, and for oil exploration from Rs. 11.3 crores to Rs. 20 crores. Discussing the internal resources position, the Planning Commission notes the improvement in receipts from market loans. But it does not find collections under small savings very encouraging.

The maintenance of State plans at the level indicated in the memorandum, will require additional resources of Rs. 140 crores which will have to be raised by the States as follows: additional taxation—Rs. 60 crores; loans and small savings—Rs. 50 crores; and economies in the non-plan expenditure—Rs. 30 crores. The States have been asked to enlarge their receipts from land revenue fees; special assessment on agricultural land used for non-agricultural purposes; sales taxes and excise duties; and from the recovery of arrears of taccavi and other loans. It is understood that the discussions which the Planning Commission has had with Mysore and West Bengal, do not encourage the hope that these two States will be able to raise any additional resources. The Bombay Government, too, is believed to be of the view that it will be very difficult for it to raise more funds.

As for external commitments, the Planning Commission states that the foreign exchange allocations for April-September 1958 are, with some limited exceptions, being extended to cover the period up to December 1958.

The effect of the reduction of the size of the plan to an outlay of Rs. 4,500 crores, is likely to reduce the target for additional irrigation from larger and medium projects, from 12 million acres to 10.4 million acres, and the target for additional power generation from 3.55 million kW to 3 million kW. The shortage of power severely than others, affect some regions more severely than others, and it will be necessary from now on "to regulate the non-industrial consumption of power in every urban area much more carefully than in the past."

Indo-U.S. Talks on Double Taxation

Indo-U.S. talks on the avoidance of double taxation are expected to commence in Washington in November next. A delegation headed by Mr. A. K. Roy, Economic Affairs Secretary, in the Ministry of Finance, will represent India at the talks.

U.S. Food Aid to India

Under its aid programme to India under the Public Law 480, the U.S. Government will pay, in addition, 50 percent of the shipping charges

for the carriage of agricultural produce to this country. According to the Cooley Amendment, 25 percent of the loan will be available to U.S. investors to start industrial units in India. As India's repayment of the loan will be in rupees, the U.S. investor could make use of the amount to finance expenditure to be incurred in India for starting an industrial concern.

Foreign Engagements of Industries Minister

The Indian Minister for Industries, Mr. Manubhai Shah, on his homeward journey from Canada, is expected to visit England, France and West Germany. While in the U.S.A., he negotiated deferred payment arrangements for carbon black and synthetic rubber projects. In England, he is expected to have talks with British firms interested in starting in India shops for the manufacture of heavy structural and vessel plates. A project to develop industries for the by-products of salt will be negotiated in France. In West Germany, Mr. Shah is due to finalise a deal with the firm of Bayers for starting a dyestuff intermediate plant in India. Bayers need Rs. 30 lakhs worth of foreign exchange as an initial payment towards this project. A *via media* is under discussion. The East German collaboration for a raw film industry in India will also be discussed by Mr. Shah when he visits Berlin.

Construction Difficulties in Steel Projects

The Central Minister for Iron and Steel, Sardar Swaran Singh, reviewing the progress of the three State steel plants in the Rajya Sabha last week said that "a number of difficulties have been met with in the construction of the steel plants. In Rourkela, rocky soil was encountered to a greater extent than was visualised. Both in Rourkela and in Bhilai there have been difficulties in finding suitable contractors with adequate organisation and equipment to undertake these works, which are relatively new to this country. During the months of June and July, the dock strike and the unusually heavy rains also contributed to some delay. Judging by the progress of work so far in Rourkela, it is expected that the first blast furnace will be ready by the end of December 1958, the second by August 1959 and the third by November 1959. The open hearth furnaces will be ready between May and July 1959, and the L.D. converters by October or November 1959. In the blooming and slabbing mill there will be a delay of about three months; they will be ready by about September 1959. The plate mill, the strip mill and the cold rolling mill are to be ready in 1960. In Bhilai, it is expected that the first coke oven battery will be commissioned by the end of December 1958 with the first blast furnace closely following it. The second and third blast furnaces will be ready in the second and third quarters of 1959. The open hearth furnaces, the blooming mill and the rail and structural mill are scheduled to be commissioned towards the end of the third quarter of 1959. The continuous billet mill and the merchant mill are to be ready for operation by the end of December 1959. In Durgapur, the progress of work encourages the belief that the plant will be commissioned according to schedule—the first blast furnace in October 1959 and the third blast furnace with the rolling mills by the end of April 1961.

"Progress was satisfactory in the work of construction of the Barsua iron ore mines for Rourkela. General arrangement drawings have been received, as also design works. Earth work is going on and concreting has been taken up. In the township for the iron ore mines, contracts have been awarded for the construction of residential buildings. The Chief Mining Engineer's quarters and a storage shed have been completed and work is in progress on an office building, hospital buildings and a hostel. For the construction of the Rajhara mines for Bhilai, there has been difficulty in getting suitable contractors. There has been no response to tenders. Selected contractors have been invited to a meeting to discuss ways and means of getting the work done. Meanwhile, the manual raising of ore continues. So far about 32,000 tons of ore have been collected. Preliminary survey and lay-out of the mines end in Bolani to supply Durgapur have been completed. Bolani Ores Ltd., a private limited company with Government having a controlling interest, has selected the plant and equipment. Orders are expected to be placed shortly. It does not appear that there will be any difficulty in getting ore in time for the Durgapur steel plant.

Limestone Supplies

"In the limestone quarries for Rourkela, nearly 35,000 cubic feet of overburden have been removed. Blasting operations are going on and 2,700 tons of limestone have been raised. A number of samples were collected and analysed. The Ministry of Railways will construct a portion of the future Bondamunda-Ranchi line to connect the limestone quarries with Rourkela. Work on the limestone quarries in Nandini, for Bhilai, came to a standstill due to the outbreak of cholera.

It is hoped that work will be resumed as soon as the rains abate. For Durgapur, limestone will be obtained initially from Birmatrapur and Hathibari. Hindustan Steel Private Ltd reports that the firm which is now supplying the works in Jamshedpur and Burnpur has agreed to supply enough limestone for the operation of the first blast furnace of Durgapur. The investigation of alternative sources of supply continues.

"The Mandira dam which is being built across the river Sankh to provide an unfailing supply of water to the Rourkela steel plant is very nearly completed. The foundation work on a pick-up weir across the river Brahmani has been completed, and excavation has commenced on the right bank of the river. Work on the system of reservoirs which will supply industrial water to Bhilai is almost completed and water is being collected. A new coagulation tank connected with the permanent drinking water supply was brought into use in August, relieving considerably the water works in Durg which will supply the new steel township and the old town of Durg. The construction of the water works for Durgapur is presenting difficulties which were not anticipated. The Damodar Valley Corporation, which had undertaken the construction of a channel to bring water from the river to a reservoir, has reported that it has met with loose soil, and protective works have to be put up which might delay the supply of water to the steel plant. The Hindustan Steel Private Ltd is examining whether a system of tubewells might be necessary to ensure adequate supplies for the operation of the first blast furnace.

Power for Steel Plants

"The construction of the transmission lines from Hirakud to Rourkela is reported to be almost completed. Plant and equipment, at the receiving station, is under erection. The 75,000 kW thermal station which is being put up as a part of the steel works is under erection. Although some difficulty has been encountered in moving material from Calcutta, it is hoped that the power plant would be ready in time to commission the first blast furnace by the end of December 1958. The Madhya Pradesh Electricity Board, which is constructing a 90,000 kW thermal station in Korta, primarily to supply the Bhilai steel works, has reported that work is going on well and power will be available to the steel works in Bhilai in time—by December 1958—to commission the first stage of the steel plant. Work on the 24,000 kW thermal station within the steel works is in progress. There have been difficulties in getting structural steel work which had been ordered in India. Some of the switch gear and cables are still to come from Russia, but the Soviet chief engineer is confident of commissioning the plant in time. The Damodar Valley Corporation, which is putting up a 150,000 kW thermal station in Durgapur, primarily to supply the steel works, has reported that the station will be ready in time for the first blast furnace to be commissioned by October 1959.

"Some 2,179 houses had been completed by the end of July in Rourkela and 3,517 houses were under construction. Work on the community centre, the guest house and the main hospital was in progress. In Bhilai, 1,500 houses had been completed and 2,500 were under construction. Work on the construction of a hospital, a hotel, the personnel training centre and welfare buildings has been reported to be satisfactory. In Durgapur, 468 houses have been built and 1,161 are under construction. At the end of July, there were 7,000 workers employed by the Rourkela project direct and 34,500 employed by the contractors. At the end of July, there were about 18,000 workers employed by the project and 32,000 employed by the contractors in Bhilai. In Durgapur, about 1,900 workers were in the employ of

the project and 16,000 workers under the contractors.

Employment in the Works

"For each of the steel plants it is estimated that, on an average, about 670 engineers and higher supervisory staff and 6,300 skilled workers and operatives will be required. Training has been so arranged that the engineers and operatives required for each section will be ready to take over as that section is commissioned. Some 241 engineers were sent for training to Russia. Of these, 124 have returned after the completion of training this year and no difficulty is anticipated in completing the training of a total of 686 men according to schedule. A large number of engineers of the Rourkela and Durgapur steel projects will be trained in the U.S.A. through the good offices of the Ford Foundation. Two batches of engineers totalling 198 were sent for training in the U.S.A. The first batch of 113 is due to return in a few days. The third batch of 300 is to leave shortly for the U.S.A. Arrangements

have been made, under the Colombo Plan, for the training of 300 engineers of the Durgapur steel project in the U.K. and 67 engineers are now in that country. One has returned after training. Five engineers have returned after training in Australia and one from Canada. Canada and Australia have agreed to provide further training facilities. Sixty-three engineers of the Rourkela steel project have been trained in West Germany. Another 46 are under training in that country. A large training establishment is being run in Jamshedpur at which every young engineer is first given preliminary training before going abroad. A certain number of highly skilled operatives who have to have specialist experience of steel plants, are also to be trained abroad. So far 299 operatives have gone to Russia and 32 to West Germany. Arrangements have been made with the existing steel works in India to train 1,800 operatives in about four years. Seventy-four engineering firms have agreed to train 1,600 skilled workers at a time. It is hoped that by the time all the three steel plants go into full production,

about 13,000 skilled workers will have been trained at these centres."

Foreign Employees

In another statement he made during last week in the Lok Sabha, Sardar Swaran Singh said that no foreigners were employed by the Indian Government in the Durgapur steel plant as against three foreigners—a technical adviser, a mining expert and an assistant to him—employed in the Rourkela steel plant and 370 foreigners employed in the Bhilai steel plant. The non-nationals employed in Rourkela were Germans. The technical adviser was paid \$ (U.S.) 12,500 a year, while the mining expert and his assistant were paid \$800 and \$330 a month, respectively. The combined pay bill of the three German employees till the end of June amounted to Rs. 2,47,688. On an assessment of the suitability of the engineers and workers so far recruited and of those likely to be recruited in the next few months, it is estimated that 279 posts might require to be manned by Russian experts, who will guide and assist

their Indian counterparts. Of these, 21 engineers will be of the higher supervisory category, each in charge of a section of the plant. The arrangement with the Russian organisation is that these experts will come out as and when required and will be sent back when no longer required. The duration of their stay will depend on the time taken by the Indian counterpart in each case, to acquire the requisite skill and experience. Hindustan Steel Private Ltd. estimates that generally the Russian experts will be required from six to 24 months. Briefly, the experts will get salaries ranging from Rs. 1,500 to Rs. 2,850 free of income tax and will be entitled to first-class travelling expenses, leave salary at the rate of one day's salary for eleven days' work, and living accommodation, transport, medical attention and insurance against accidents or death, all at the expense of the Hindustan Steel Private Ltd.

Salary of Russian Chief Engineer

The Russian Chief Engineer is paid Rs. 4,500 a month, income tax free. The total amount paid to Russian employees of Bhilai steel plants up to the end of June amounted to Rs. 52,52,199. In the matter of training of the Indian personnel for the three steel plants, that under the Colombo Plan and through Ford Foundation is free of all costs. The Government of India has to pay 50 percent of the cost of training of the Indian technicians in Russia.

Site for Fourth State Steel Plant

A preliminary survey of the site for yet another steel plant in Bokaro has been made by the International Construction Company, India's steel consultants. On the basis of a visual investigation and judgment of the ground conditions, the consulting engineers have selected approximate locations of the steel plant and the township. A broad lay-out has been prepared so as to permit further planning of a weir across the river Damodar for water. The construction of the weir is being pursued by the Hindustan Steel Ltd. as a part of the Dugda coal washery and it has framed a proposal for it. It has also made a rapid reconnaissance survey of the area and is preparing estimates for the five-foot contour survey, for the construction of temporary offices and quarters and a landing ground for the company's plane.

New Re-rolling Mills

The Government has approved the setting up of one new unit of steel re-rolling mills each in Assam, Andhra, Kerala and Bihar (north of the Ganges). The unit for Andhra in Visakhapatnam and that for Assam have already been sanctioned. The applications from Bihar and Kerala are under consideration.

Progress of Coal Plan

In a statement made last week in the Lok Sabha, Sardar Swaran Singh, the Central Minister for Steel, Mines and Power, said: "The target of additional coal production was fixed at 22 million tons a year for the second five year plan. Of this, 10 million tons were allocated to the private sector and 12 million tons to the public sector. All possible facilities have been given by the Government to the private sector to import coal-mining machinery. Suitable quotas of iron and steel and other raw materials have also been made available to them. Satisfactory progress has been made by that sector towards the achievement of their target. In the public sector, apart from 1.5 million tons a year to be raised additionally by the Singareni collieries, the National Coal Development Corporation Private Ltd. has been entrusted with the task of raising 10.5 million tons a year mainly from virgin areas. The various stages required for the achievement of this target include the acquiring of land and mining rights, collection of the adequate drilling data, drawing up of the mine plans, ordering of the requisite machinery from abroad and the recruitment and training of the required technical personnel, in addition to the planning and laying of the new railway lines, sidings and bridges. The progress of these items is briefly as follows: in new coal-fields like Kathara, Gidi and Saunda, the necessary land and mining rights have already been acquired under the Coal Bearing Areas (Acquisition and Development) Act of 1957. As for the remaining areas, necessary steps are afoot. Drilling and prospecting have been completed in certain areas and work in the remaining areas is being done by the units of the Geological Survey of India, the Indian Bureau of Mines and the National Coal Development Corporation. Plant and machinery worth Rs. 7 crores have already been ordered. A large portion of it has already arrived and is being used in the new coalfields. The action is being taken to obtain the balance of the requirements under the U.S. Export-Import Bank credit allocation.

"The Government has already sanctioned the 50-mile Bijuri-Karonji line in the Central India coalfields, the extension of the Champa-Korba line including a bridge across the Hasdeo river, and extension of the Patratu-Damodar line including a bridge across the Damodar river. The question of building a ten-mile-long railway line to link the Korba blocks with the proposed Chirimiri Road is being considered. Four training centres have already been opened to train the junior technical personnel. For the training of mining engineers, provision has been made for additional seats in the Dhanbad School of Mines and the other engineering colleges of the country. Facilities under the foreign aid programmes are also being availed of. In the case of mines like Kathara, parts of Gidi, Saunda and Bachra, which it is proposed to be developed by open-cut methods, the overburden is being re-

moved with the help of machinery. As for the under-ground mines, the driving of the inclines is progressing satisfactorily. The requisite action concerning the various complementary steps for the fulfilment of the target is being vigorously pursued."

Promoting Engineering Goods Exports

The following are the recommendations of the delegation of the Engineering Export Promotion Council to south east Asian countries:

1. The possibility of India entering into bilateral agreements with south east Asian countries should be examined.
2. The trade centres and showrooms maintained by the Government of India in south east Asian countries should be reorganised to give due prominence to engineering goods exported from India.
3. Arrangements should be made for the setting up of local assembly units, for engineering goods exported from India, in south east Asian countries.
4. Arrangements should be made for after-sales service for engineering goods exported from India.
5. Indian manufacturers should keep themselves abreast of the latest developments in designs, finish and salesmanship.
6. The existing export houses should organise exports on the lines of American and Continental interests, some of whom have established import houses in south east Asian countries.
7. The rôle of Indian Government trade organisations should be further widened and they should make available to the business and industrial community in India proper information which will help expand exports from India.

8. Arrangements should be made for well-planned publicity for the engineering goods exported from India.

9. Some of the other steps which are considered likely to increase exports of engineering goods from India are: (a) availability of steel at concessional prices; (b) special railway and shipping freights; (c) relief from income tax on earnings from export; (d) retention by the trade of a portion of the foreign exchange earned by it for import of raw materials and expansion of the industry.

Before the publication of the delegation's report, the major recommendations were intimated to the Ministry of Commerce and Industry by the chairman of the Engineering Export Promotion Council. These were discussed at an inter-departmental meeting held on 10th July to which the representatives of the Engineering Export Promotion Council were invited.

Increasing Exports to West Germany

A number of measures have been adopted by the Government for expanding India's exports to West Germany for reducing the gap in India's trade balance with that country. A trade promotion organisation is being set up in West Germany. The organisation will help establish contacts and commercial relations between Indian exporters and West German business men. A team of representatives of West German business houses is to be invited to visit India and make a survey of the goods available for export and build up direct contacts with Indian exporters. The West German market for various Indian commodities is being surveyed to enable Indian exporters to make full use of the opportunities. The Government of West Germany has been approached for the grant of additional import quotas for Indian goods including jute and cotton textiles. Arrangements are being made for pre-shipment inspection of goods and for setting up suitable machinery for the settlement of commercial disputes. The All-India Handicrafts Board is establishing centres for the sale of handicraft products in West German cities. An offer by the West German Government to send experts to assist India in the export of handloom goods, tobacco and other commodities to West Germany has been accepted. During the first five months of 1958, India's imports from West Germany were valued at Rs. 42.79 crores and her exports at Rs. 6.42 crores. In 1957, India's imports from West Germany were valued at Rs. 122.82 crores, compared with her exports of Rs. 16.22 crores.

Control of Staple Fibre Supply and Prices

The Government of India has decided to bring under control, with immediate effect, the acquisition, distribution and prices of staple fibre. The Textile Commissioner is the controller. An Order published in the Gazette of India Extraordinary requires every producer of staple fibre to furnish within a week to the Textile Commissioner information about the quantity and description of staple fibre held in stock and the quantity sold by him during the period from 1st January, 1958 till today. Details of the prices at which sales were made and the names of purchasers will also have to be furnished. No person can acquire staple fibre from a producer except under a permit issued by the Textile Commissioner. When permits have been issued, it will be obligatory for every producer to sell staple fibre produced or held in stock by him to permit-holders. No sales can be made otherwise. The price at which a producer may sell staple fibre has been laid down in a schedule attached to the Order. Details of the procedure to be followed in the purchase and sale of staple fibre have been set out.

Finance for Tea Industry

The Minister for Commerce has made a statement in the Lok Sabha on the tea industry's

finances. He said: "The Conference convened by the Ministry of Commerce and Industry in Calcutta on 12th April, 1957, was only an exploratory conference and was not intended to take definite decisions on the question of finance for the tea industry. Its object was to find out from banks and other specialised financing agencies represented at the conference to what extent they were in a position to meet the financial requirements of the tea industry. The conference appointed a working group which, after a study of the various requirements of the tea plantations for finance, came to the conclusion that the study of methods of easing the problem of supply of capital to tea plantations should be confined to their requirements under two heads—working capital for meeting the annual requirements and block capital required to meet the long-term requirements of the industry. The working group was also in favour of a single financing agency which would meet the requirements of the tea plantations both of working and block capital.

"For various reasons, the financing institutions represented both at the conference and on the working group pleaded that their operations and their liabilities were such that they could not afford to tie up their funds in block finance. The State Financial Corporation stated that the provision of working capital would be contrary to its statutory functions. It was the general sense of the working group that of all the financing agencies that are at present in existence, the State Bank of India would be the most suitable to undertake the provision of both working and block finance. The Government has since consulted the State Bank of India which is willing to advance working capital to the industry, but it has stated that it could consider the question of lending for block capital if and when the proposed Refinance Corporation is in a position to provide relending facilities to banks against block loans to the tea industry. The Government is now approaching the Refinance Corporation for the inclusion of the tea industry in the list of industries eligible for its refinancing facilities. In order to render advice to the banks on loans to the tea industry, the Tea Board proposes to constitute an ad hoc plantation finance committee. This committee will consist of representatives of producers and banks. Apart from tendering advice to banks on individual request for financial assistance, the committee will also formulate schemes in consultation with the banking institutions in the country for financing the tea industry in general."

Wage Demand by Petroleum Workers

The Central Deputy Minister for Labour, Mr. Abid Ali, in a statement made in the Lok Sabha during last week on the demands of the All-India Petroleum Workers Federation and the steps taken in the matter said: "The representatives of the All-India Petroleum Workers Federation met the Labour Minister on 16th August, 1958. They put forward their demands concerning the fixing of bonus for 1957 and the revision of wages and urged that these be referred to a national tribunal for adjudication. On 26th August, 1958, the representatives of the four oil companies also met the Labour Minister. They stated that, as in the past, they were negotiating long-term agreements with the local unions on a regional basis and in some places agreements on bonus had already been reached. They were, therefore, afraid that the constitution of a tribunal at this stage would upset the agreements already arrived at and hamper negotiations. On 3rd September, 1958, the representatives of the Petroleum Employees Union, Bombay, which is not affiliated to the All-India Petroleum Workers Federation, also met the Labour Minister. Their stand was that various unions not affiliated to the Federation had already started negotiations in Bombay, Calcutta and Madras with all the four oil companies, and if a national tribunal were set up, these negotiations would be disturbed. According to the Vice-President of the All-India Petroleum Workers Federation, their union in Madras is also at present engaged in negotiations with the oil companies. Thus, while on the one hand the oil industry is at present engaged in negotiations with individual regional unions, on the other, the Government of India has asked the State Governments for their views. Industrial relations in the oil distributing industry fall within the State sphere."

Export of Woollen Goods

Woollen and worsted fabrics, including blankets, are among the several items the export of which has been fully decontrolled by the Government, but a licence is still required for the export of woollen yarn, woollen hosiery knitting yarn and hand knitting wool. The Government has freed these items from control with a view to encouraging exports consistent with the requirements of the country's economy. Partly due to the rains, but mainly to the absence of foreign demand, the domestic wool markets have maintained a weak tone during the past fortnight.

Orders for Wagons

The following are the new firms with which "educational" orders for the manufacture of 250 railway wagons each, have been placed. Messrs Raymon Engineering Works, Calcutta. Messrs Singh Engineering Works Ltd., Kanpur. Messrs Central India Manufacturing Company Ltd., Bharatpur. Messrs D. C. Dhiman and Brothers, Calcutta. Messrs Southern Structural Ltd., Madras. Messrs Modern Industries, Shahabad, Ghaziabad. Messrs Iron and Steel Company, Kanpur. Messrs Britannia Engineering Company, Titagarh. Messrs Hindustan General Industries, New Delhi, and Messrs National Bearing Company, Jaipur.

Your Reference:.....

Dear Bhai Sahib,

In your last letter you have asked whether the tea estates make easy money. I know many people think they do, but I can assure you there's more to the production of tea than meets the eye.

To start a tea estate, virgin land must be cleared, drained and planted—none of them simple operations in isolated, mountain areas. At the same time, living quarters, water supply, medical facilities and other amenities must be provided for the employees who will live on the estate to look after the young tea plants. And, mark you, these plants have to be tended for five to seven years before they are ready for plucking.

Even so, the estate doesn't start earning money as soon as the tea leaves are plucked. There is more work to be done, more costs incurred. The green leaves have to be processed in the estate factory—using expensive machinery, electrical power and labour—before they can be sent to Calcutta or Cochin for sale by auction.

Isn't it only fair, then, that the tea planter should be entitled to an adequate return? I think he is, just as we at Brooke Bond believe that the consumer is entitled to a fair deal... good tea at a reasonable price, which we constantly strive to give him.

I hope I have answered your question satisfactorily and look forward to your next letter.

Yours truly,

G. V. Krishnamurthy

Chairman,

BROOKE BOND INDIA PRIVATE LIMITED

During his travels around India, Bhai Sahib reads out to his friends the Chairman's answer to one of their questions.

Some Salient Facts About Indian Tea

Number of tea gardens in India in 1956/57 ..	7,144
Total garden employees in 1955 ...	10,17,483
Annual production of manufactured tea per bush (average) ...	1 lb.
Green leaf necessary to produce 1 lb. of manufactured tea ...	4 lbs.

_____ TURBO-PROP 10:30 HRS. ✈

_____ PISTON 12:00 HRS. ✈

Fastest across the Atlantic!

Pan American's Jets are the fastest transatlantic airliners. They are *pure jets*, a major advance over turbo-props. Four massive jet engines give you beautifully quiet, vibration-free comfort at 600 m.p.h.

The fuselage of the Jet Clipper* is 144 feet in length, actually longer than the Wright Brothers' first 120-foot flight at Kitty Hawk

*Trade-Mark, Reg. U.S. Pat. Off.
*Subject to Government Approval

Cruising altitudes are between 25,000 and 40,000 feet—high above the bother of weather; where your Clipper provides a 200-mile view.

No increase in minimum fares! Fly the finest, fastest transatlantic service including new *economy-class*. Coming: Jet service to Latin America, across the Pacific and 'round the world.

Reservations can be made now! Call your Travel Agent or Pan American—over 800 offices around the world for your convenience.

POSSIBILITIES OF FURTHER U.K. AID TO INDIA

LONDON IMPRESSED WITH THE CASE FOR HELP

(FROM OUR LONDON CORRESPONDENT)

INDIA's Finance Minister, Mr. Morarji Desai, has left the U.K. fully satisfied with the outcome of his discussions in London. Indeed, it seems most satisfactory from all points of view. Under the agreement reached in Washington between India's main creditors, the British Government will provide financial aid of nearly £40 million before 31st March, 1959, and will consider giving further aid towards Indian development during the rest of the second five year plan, which ends in March 1961. Present ideas are that another £35 million or so may be involved. The Washington meeting seems to have been successful in so far as it will see India through till next March. The World Bank, the United States, Canadian, British, West German, and Japanese Governments are all contributing to the bridging of the big deficit, the U.S. to the extent of about £26,785,000; West Germany, £14,285,000; Canada, £6,070,000; and Japan, £3,570,000. Plans for aid during the following two years are less definite, but the figures so far mentioned fall short of what the Indians had hoped for, but no doubt their needs had been slightly over-estimated to cover "bar-gaining."

It does not mean that the planned development has to be cut down. What it does mean is that India will have to adjust her fiscal and financial policies. It was a failure of domestic policy as much as the recession in world markets which led to the present financial difficulties. The success of the second five year plan, and of the third plan after that, will largely depend on the efforts which the Indians themselves are prepared to make. Both in Washington and in London, Indian explanations have made a good impression and there is every desire to help. Now that the Indian sterling balances have been reduced to about £140 million, much further drain from this source is not expected. It is, therefore, less onerous to extend loans or aid to India than it would have been while these balances were still being drawn down.

All future negotiations will be on a bilateral basis between the respective Governments and India.

Progress of Banking Innovations

The personal loans schemes of the banks are apparently going satisfactorily. The Midland reported several thousand loans having been made during the first week, averaging about £170 a loan. About half the successful applicants wanted money to buy cars, about a fifth to buy household goods, and another fifth to pay for household repairs and "things of that kind." Lord Monckton, who disclosed these facts at a Press conference, did not know how many customers had been refused a personal loan. It is also reported that the personal cheque account scheme has started well, and quite a substantial amount of additional business is expected as a result of the innovations. On the other hand, it is obvious that there will be increasing competition in both hire-purchase and banking business, not only between the banks themselves, but with hire-purchase firms and the savings banks—the personal cheque scheme competes directly with the services they have to offer. In the process, the public may well hope to benefit.

It is much too early to see any effect on consumer spending of the banks' willingness to lend freely both through overdrafts and unsecured loans. One economist thinks that by wider lending, the banks may help substantially in giving the fillip to the economy which, in his view, is urgently needed. The official reaction to the new situation came from Mr. Amory in a speech in Devon the other day. He said he would not expect recent banking developments to lead to "such an expansion in consumer demand as would at all endanger the Government's policy of preventing inflation and keeping prices stable." Neither, he said, should they interfere with the priorities for exports and investment projects which the banks had

already been asked to give. In the stock market, however, the talk is once more of cheaper money.

Capital Spending Plans

Latest Board of Trade estimates forecast a fall of nearly 17 percent in total fixed capital expenditure by manufacturing industry for 1959. Except for 1953, when capital spending fell fractionally below that of the previous year, every other post-war year has shown an increase. Capital outlays this year are now expected almost to reach last year's record level of £926 million, itself an increase of 7 percent on 1956. In both the two previous years capital spending rose by 19 percent. In the first quarter this year, the figure was £227.9 million, or over £5 million higher than in the first three months of 1957. While there was a sharp increase in spending on vehicles, artificially depressed early last year by the effects of Suez, there was a sharp fall in building work. A projected fall of around 25 percent in capital spending on building is likely to be largely responsible for next year's sharp decline. Spending plans on plant, machinery and vehicles show a fall of 10 percent. Revised total estimates for this year show only a small change for the worse on previous forecasts, as the Board of Trade now estimates a 2 percent drop against an expected 2 percent increase earlier. A movement of this size either way can be considered insignificant, especially as these forecasts are based on a limited sample. While the latest figures are clear evidence that the Government's ending of the "credit squeeze" has come none too soon, and that its new policy of stimulating industrial re-expansion is fully justified, they should also be treated with some caution. Previous experience has shown that there is a frequently marked divergence between early estimates and actual spending figures. There will be a further enquiry later this year on 1959 spending plans which may already reflect the easier credit situation.

The Way the Money Goes

Trade in the shops in July remained steady, with the same moderate increase on the 1957 figures as in the first half-year. Board of Trade statistics show that retail sales were, on average, 3 percent higher than in July 1957. They were also about 3 percent higher than in June, though prices were lower. For goods sold in the retail trade, prices were also probably below the level of a year earlier, so the whole of the increase in sales in July can, it is thought, be traced to a greater volume of trade. In the first half-year, all the increase was accounted for by higher prices. Expenditure on tobacco rose to £258 million in the second quarter of this year, says the *Monthly Digest of Statistics* for August. This compares with £241 million for the same quarter last year; the highest previous quarterly figure was £255 million for the last quarter of 1957. Expenditure on beer, at £148 million, was £5 million less than in the second quarter of 1957. On other alcoholic drink it was £6 million more at £79 million. Housing expenditure reached £349 million in the second quarter of the year—the previous highest figure was £322 million in the first quarter. On the other hand, figures issued by the Radio and Television Retailers Association show a sharp fall in average sales of both radio and television receivers in the three months May, June and July.

Unemployment Rises

Unemployment rose by 34,000 to 446,000 between 14th July and 11th August. Announcing this the Ministry of Labour said the number wholly unemployed rose by 41,000 and those temporarily stopped fell by 7,000. The August figure was 2 percent of the estimated number of employees, compared with 1.9 percent in July and 1.2 percent in August 1957. There were 195,000 people who had been unemployed for more than eight weeks. Employment exchanges filled 130,000 vacancies in the four weeks ended 6th August. The number of vacancies notified but remaining unfilled was 203,000—11,000 fewer than in July. The number on short-time in manufacturing industries in the week ended 26th July was 156,000—31,000 fewer than in June.

Ship Sales Abroad

Restrictions on the sale abroad of United Kingdom and colonial ships have now been almost entirely relaxed. A general sanction which comes into effect forthwith permits the free transfer or mortgage of United Kingdom and colonial ships, other than sales abroad of former naval craft, and all sales to countries of the Soviet block and China. Individual sanction will still be needed before former naval craft may be sold abroad. Sanction will also still be needed for the time being for all sales of ships to countries of the Soviet block and China, but a further general sanction will in due course be issued permitting the sale to these countries of certain categories of ships.

Aircraft for Empire Airlines

Airlines in the Commonwealth have complained that British airlines are often "tailored" too closely to the requirements of British Overseas Airways or British European Airways to be useful to other Commonwealth operators. This criticism was raised again at a conference in London last week. It was attended by representatives of the airlines, the Ministries of Supply and of Transport and Civil Aviation and the aircraft industry. The Government departments are considering the criticism with concern. This is because of the relatively small sales of the more recent types of the Vickers Vanguard and Vickers VC-10. Although there are orders for all these types for the total for each is insufficient to pay production costs. Another meeting of the representatives is expected to be held soon.

Jute

I. J. M. A. DECIDES AGAINST CHANGE IN MINIMUM PRICE POLICY

SLIGHT INCREASE IN CONFIDENCE

It was reported during the week that the I.J.M.A. had decided not to change its minimum prices for jute goods. This means that there will be no reduction in the levels fixed at the end of February. The move was a necessary one, especially for sacking, and the market gained in confidence. Heavy goods prices are now about Rs. 2.50 below the level fixed by the I.J.M.A. in the near positions, and about 85p below in forward shipment. They have been consistently running below the minima since the beginning of August. Lack of overseas interest combined with over-production of sacking has been the main stumbling block to higher prices. The only centre taking any interest in recent weeks has been Australia, and here the quantities have been so small as to be of little significance. Within the past few months, however, there has been a slow change, and since about March-April, when heavy goods output reached its peak, the percentage of sacking produced has dropped from 58 percent to 52 percent, with a corresponding rise in hessian from 35 percent to 41 percent. During the period, total hourly production fell from 460 tons to 430 tons, due to the lighter fabrics under construction. This naturally had the tendency to lower hessian prices, which, however, still continue to rule above the minima in all deliveries, although forward shipment is a border-line case.

The main outlet for hessian goods is the American market, but there has been little interest shown from this source lately. Indeed, recent consumption figures have been most disappointing. Shipping statistics over the past few months have been poor, and have aggravated the increase in stocks. It is reported that there has been an improvement over the past few weeks, as a result of which the market anticipates a fall in the stock figures for the current month; although August stock figures showed little percentage change in spite of the transfer of production from sacking to hessian.

During August, mills' total production amounted to 85,200 tons, made up of 35,400 tons hessian (41.5 percent), 44,300 tons sacking (51.9 percent) and 5,500 tons other goods (6.6 percent). Total working hours during August were 197.5 compared with 209 in July when total production stood at 89,800 tons in a ratio of 39.3 percent hessian, 54.5 percent sacking and 6.6 percent other goods. In August 1957, production was 81,900 tons for a 189-hour working month in the ratio 42:52:6.

The raw jute markets ruled steady last week due to the continued interest shown by mills in all grades of fibre. Indian mills were the main buyers, not only in contract jute, but also through their own agents, both in the local markets and in the mofussil. The present low price of jute has permitted large covering business, mainly inter-seller, and as most of the contracts being covered were entered into earlier in the season, they are at a much higher price than present levels. Consequently, with a margin in hand, business has been put through at full market rates, a fact which has tended to keep prices steady. Imports, although on a par with last year, are smaller than the average for this time of year, which is another factor keeping fibre prices from falling. As a result of this, sellers are inclined to be reserved and only small business has been reported against mill indications below the quoted rate. Crop reports continue to be favourable and the quality of imports good. In the daissee areas reports are conflicting, and sellers' ideas are above the general indications for this type of fibre. Small imports are reported from some agencies but these, in general, are very immature. Mesta reports are good, and large quantities are again expected from most of the main agencies, although the quantity estimated this season is smaller than last.

Raw Jute Consumption

During August 1958, the estimated consumption of raw jute and mesta by mills reporting to the I.J.M.A. was 496,700 bales. This was a decrease of 26,800 bales, due to a shorter working season. During the corresponding month of last year, consumption was 477,500 bales. Total consumption so far in the two months of the current season now amounts to 1,020,200 bales, compared with 978,300 bales during the corresponding two months of last season.

THE JUTE MARKETS

Once again, movement in the futures markets was on a restricted scale, and rates as given by the East India Jute and Hessian Exchange Ltd., for the period 10th September to 16th September, were as follows:

	Hessian 40in. 10oz.	Sacking B Twills 40in. 10oz.	Raw Jute Upper Assam December
Opening	40	97.80	23.92
Highest	40.22	98.20	23.94
Lowest	39.64	97.10	23.46
Closing	40.16	98.05	23.74

Manufactured Goods: The gunny markets opened on a quiet note last Thursday with a general lowering of prices due to the lack of overseas interest. B Twill rates dropped 55p, to be quoted at Rs. 96.45, while 40in. 10oz. hes-

sians lost 25p to Rs. 40.40. During the day it was reported that the I.J.M.A. had decided at their meeting not to make any alteration in the minimum prices placed on jute goods in February, and on this news there was an improvement in the sentiment. On Friday, the previous day's losses were made up, and the market further improved on Saturday due to shipper covering and small mill interest. There was a slight recession after the week-end, but sales by mills and some buying support in the futures market caused a steadier undertone to develop. The placing of fresh steamers for West African ports caused prices to advance, and the market closed fully steady.

On Wednesday morning, opening quotations were as follows:

	September	October	Oct.-Dec.	Jan.-Mar.
40in. 8oz.	32.85 (35.81)	32.50 (35.43)	32.20 (35.10)	31.90 (34.77)
40in. 10oz.	41.26 (44.91)	40.85 (44.31)	40.40 (44.04)	39.25 (43.60)
B Twills	97.45	98.15	98.50	99.25
Heavy Cees (Plain)	99	98.50	99.25	99
A Twills	118.75	118.75	119	119
Liverpools	110.25	111.35	111.25	111.50
Cornasacks	101.50	101.00	100.50	100.50

Raw Jute: Business last week was on a restricted scale compared with previous weeks as sellers were inclined to be reserved. Mills met with more resistance than of late, but in spite of this the majority of business was carried out at just below the quoted rates. Imports in all areas were smaller than normal for the time of year, and all arrivals found ready buyers in year, and also sellers anxious to cover mill agents, and also sellers anxious to cover higher priced commitments. Throughout the week, prices remained steady and recorded small fluctuations between Rs. 24.25 and Rs. 24.50 for Northern-Assam bottoms. Most of the shipping periods were for September and October, but some interest was also shown in quick shipment jute, and ready Bills of Lading.

Business was reported in Northern-Assam jute at Rs. 24.25 to Rs. 24.50 a maund basis bottoms for September-October shipment, and also Rs. 24.75 for ready Bills of Lading. Small lots of a maund White were also reported at Rs. 23.25 and Desal White at Rs. 21.25. Daissee and Tossa Jungli at Rs. 21.25. Daissee and Tossa were also confirmed at Rs. 26.25 to Rs. 27 a maund for October-November shipment, and Daissee White at Rs. 23.25. Daissee and desal mesta changed hands at Rs. 22.25 to Rs. 22.50.

In Cossipore, all arrivals found ready buyers and the fact that imports were small caused the market to rule very steady. Wagon arrivals amounted to 384, which was practically the same as in the previous week. During the corresponding week last year, 420 wagons were re-reported. Quotations at the close were based on Kishenganj jute at Rs. 24 a maund for bottoms.

On Wednesday morning, opening quotations were as follows:

	Landed at Mills Rs. a maund	Rs. a 100 kilos	Sept-Oct.
Assam-Northern	24.50	65.66	
Purnea Desal	23.50	62.98	
Daissee	26.75	71.69	Oct.-Nov.
Daissee White	23.50	62.98	Sept-Oct.
Assam Tossa	26.75	71.69	Oct.-Nov.
Murshidabad Tossa	26	69.68	
Northern Ex Calcutta	24	64.32	Sept-Oct.
Mesta:			
Assam-Northern	22.75	60.97	Oct.-Nov.
Desal	22.50	60.30	
Daissee	21.50	57.62	
Jungli	21	56.28	
Bimal F.A.Q.	58	155.44	
Pakistan N.C.'s a bale	58	155.44	

Raw Jute Arrivals

Total fibre arrival statistics for the month of August show an improvement over July. Arrivals from Pakistan, however, show a sharp drop, and at 30,250 bales, are 22,850 bales less than the previous month. Arrivals from India increased by 54,300 bales to 325,650 bales, making an overall increase of 31,450 bales in a total of 355,900 bales. Total arrivals for July-August 1958, are now 680,350 bales, made up of 83,350 bales from Pakistan and 597,000 bales from India. During the corresponding period last season, total arrivals were 632,350 bales, being 108,200 bales from Pakistan and 524,150 bales from India. Thus, in the current season arrivals are 48,000 bales ahead of the corresponding period of last season.

I.J.M.A. PRODUCTION FIGURES FOR AUGUST

The Indian Jute Mills Association reports the total production of jute goods for August 1958, as follows:

Description	Quantity
1. Gunny Bags (1) Hessian	4,137 tons (4,203 metric tons)
	1,317 lakh yds. (1,20,39 kilometres)
	88.1 lakh Nos.
(2) Sacking	43,374 tons (44,070 metric tons)
	10,530 lakh yds. (9,68,34 kilometres)
	4,69.5 lakh Nos.

2. Gunny Cloth (1) Hessian	31,214 tons (31,715 metric tons)
	11,95.0 lakh yds. (10,92.69 kilometres)
(2) Sacking	956 tons (971 metric tons)
	24.8 lakh yds. (22.65 kilometres)
3. Other Manufactures	5,507 tons (5,596 metric tons)
4. Total Production	
(1) All kinds	85,188 tons (86,555 metric tons)
(2) Hessian (Both bags and cloth)	13,26.7 lakh yds. (12,13.08 kilometres)
(3) Sacking (Both bags and cloth)	10,77.8 lakh yds. (9,85.49 kilometres)

	Summary (00,000 Yds. and Kilometres)	Aug. 1958	July 1958	Aug. 1957	Aug. 1958	July 1958	Aug. 1957
Hessian	13.27 (12,13.08)	13.26 (12,12.72)	12.81 (11,71.00)	35.4 (35.9)	35.3 (35.9)	33.9 (34.5)	43.1 (43.1)
Sacking	10.78 (9,85.49)	11.82 (10,80.41)	10.10 (9,23.10)	44.3 (45.0)	49.0 (49.7)	43.1 (43.8)	43.1 (43.8)
Others				5.5 (5.6)	5.5 (5.6)	4.9 (4.9)	4.9 (4.9)
Grand Total				85.2 (86.2)	89.8 (91.2)	81.9 (83.2)	81.9 (83.2)
Hours worked				197.5	209.0	189.0	189.0

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills.

The figures in brackets are metric measures and those of length, being based on the actual (detailed) figures, are more precise.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 10th September, 1958	649.3	16,239.3	16,888.6
1st to 10th August, 1958	3,282.2	15,335.9	18,618.1
1st to 10th July, 1958	3,718.5	16,652.0	20,370.5
1st to 10th September, 1958	13,853.3	428.7	14,282.0
1st to 10th August, 1958	10,825.7	94.4	10,920.1
1st to 10th July, 1958	10,353.9	1,118.4	11,472.3

THE FOREIGN JUTE MARKETS

FIBRE PRICES STEADY

(FROM OUR DUNDEE CORRESPONDENT)

DUNDEE spinners have been buying raw jute very quietly lately, but Continental spinners have been operating much more freely. In spite of this, fibre values have remained more or less unchanged, although with a very steady undertone. Shippers are still offering quite freely at £105 lowest for Mill Firsts, £89 for Mill Lightnings, £79 for Mill Hearts and £65 for grade Hearts, September-October, c.i.f., U.K. Good marks of Daissee-4 are again named at from £94 and grade is obtainable at from £87, while grade Tossa-4 is still at £104 and grade Tossa-4 from £94, c.i.f., October-November, c.i.f. Only a few sales have been reported here at the prices mentioned.

According to reports from Pakistan, a bumper crop is expected this season and the quality of the jute arriving from upcountry markets is said to be a lot better than for the past two seasons. An estimate of the size of the crop has been made at 7.5 million bales, which should be more than ample to meet the requirements of the world. With India becoming almost self-sufficient in raw jute, Pakistani exports to the mills there should be confined to about 500,000 bales. A good average consumption by other buyers in export markets is 4 million bales, while internal consumption in Pakistan is estimated at approximately 1.5 million bales. It is thought that the estimate of the total crop will be exceeded, so that there should be a fairly substantial carry-over to next season. The growers, like their counterparts in India, complain of price falls for their fibre. Naturally, the Pakistani Government is anxious to secure as much as possible for the growers, and there will be reluctance to reduce the E.P.C. prices further. Pakistan requires foreign exchange, but the Government is fully aware that by reducing prices for its jute it will not be earning much, if any, of an increase in its sales.

Calcutta goods are very irregular at 61s for 40in. 10oz. and 45s 9d for 40in. 7½oz., September, 60s 6d and 45s 6d October and 60s and 45s 3d November-December, with B Twills at 144s 9d, 145s 6d and 146s 3d for the respective positions of shipment, all f.o.b., Calcutta.

Jute yarns and cloth in the Dundee market are very steady and spinners and manufacturers are quite busy with orders on hand. A steady business is being done from day to day.

GOOD GENERAL DEMAND AT
EXPORT TEA SALE
QUALITY DUSTS FIRM

AT Sale No. 13, held on 15th and 16th September, the offerings at the Export auction amounted to 61,447 packages. There was a good general demand. Plain liquoring brokers were fully firm while similar Fannings often tended dearer. Bright liquoring orthodox Assams continued to sell well but the B.O.P.'s and O. Fgs. in this category with more ordinary liquors declined irregularly by 20nP. There was a better enquiry for C.T.C. teas, particularly the lower priced sorts. The better liquoring descriptions received fair support but prices were often 10nP to 30nP easier with buyers following quality. Legg-cut teas opened at rates which declined by about 5nP to 10nP but demand slackened as the sale progressed. Whole leaf grades sold well although at sometimes easier rates. There was again a good demand for tippy teas while the rather limited number of Darjeeling teas on offer received a fair enquiry at prices which generally showed an easier tendency.

	Quotations	
	1958	1957
	Rs.	Rs.
Clean Black Pekoe	2.05 to 2.10	2.16
Plain B.P.	1.70 to 1.74	1.60 to 1.62
Plain Fannings	1.78 to 1.86	1.64 to 1.68
Medium B.P.	1.90 to 1.95	1.70
Medium Fannings	2.00 to 2.15	1.74
Best Assam C.T.C. B.P.	2.80 to 3.00	3.10 to 3.20
Best Assam C.T.C. Fgs.	3.10 to 3.30	3.50 to 4.00

At the Internal Sale, the offerings amounted to 20,186 chests of Dust. There was a good general demand for orthodox descriptions from all districts and these received good support at firm to dearer rates. There was a better enquiry for Legg-cut Doosars and these were sometimes up to 4nP dearer. C.T.C. Assams were rather irregular. The few best liquoring kinds were well supported and were often dearer while exportable grainy teas and the plainer powdery types also received good support. The poorer medium kinds, however, generally declined by 10nP.

	Quotations	
	1958	1957
	Rs.	Rs.
Medium Doosars Dust	1.74 to 1.76	1.50
Medium Assam Grainy Dust	1.76 to 1.78	1.54 to 1.58
Medium Assam C.T.C. Dust	2.15 to 2.35	2.00 to 2.10
Best Assam C.T.C. Dust	2.50 to 3.00	2.20 to 2.80

There were 1,365 chests of Leaf on offer. There was a good general demand at slightly easier rates.

FREIGHT MARKETS QUIET

THERE has been very little of interest to report in the freight markets. Chinese charterers continue to be prominent in generally lifeless circumstances. Good class motorships have been taken at 17s for four to seven months' trading, and 18s 6d for 12 months. The limonite season from west coast India will commence shortly, and charterers indicate \$US.675. A few fixtures were arranged from South Australia with barley done at 77s 6d to the U.K. from South Australia and wheat at 70s. West Australia-London direct was done at 57s 6d. A new cross trade was observed in the fixture of rice from Shanghai to South Africa at 46s 3d. Sugar from Sourabaya to Colombo was fixed at 30s f.i.o., and from Fiji to the U.K. at 77s 6d in bulk. Recife or Santos loading was arranged at 77s 6d f.i.o. to Colombo.

LINSEED DULL

There was no change in the market during the past week; prices moved within narrow limits and dull conditions generally prevailed. With availability limited, seeds prices continued to be firm, but millers showed little interest. Business in the oil market was slow with buyers and sellers pausing. With overseas markets unchanged, export prospects were still remote. Latest quotations were as follows: Ready Rs. 26-2 a maund and September Rs. 26 a maund.

HIDES AND SKINS

The market was quietly steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 9th September and 15th September, 1958)

Cowhides: Wet salted 12,300 pcs. on the basis of Rs. 6.50 to Rs. 10.50; Wet salted (Ord.) 5,000 pcs. on the basis of 66nP to 78nP a lb; Wet salted (Slaughtered) 14,000 pcs. on the basis of Rs. 11.50 to Rs. 25.

Goatskins: Wet salted (Patna, Daissee, Kustia) 51,200 pcs. on the basis of Rs. 260 to Rs. 275, Rs. 320 to Rs. 340 and Rs. 340 to Rs. 380; Wet salted (he-killed) on the basis of Rs. 4 and (she-killed) on the basis of Rs. 4.50 a piece; Assam-Dinajpur-Rampurhat 31,500 pcs. on the basis of Rs. 230 to Rs. 350; Purneah 17,000 pcs. on the basis of Rs. 330 to Rs. 350; Muzafferpore 3,000 pcs. on the basis of Rs. 315.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O, Po, F and Dd indicate Ordinary Preferred Ordinary Founders and Deferred Shares respectively. P next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE DANGER TO DEMOCRACY IN INDIA

MR. TATA URGES REALISM

ONE of the more important arguments against over-ambitious planning is that by inviting failure it endangers the whole fabric of democratic government. It is probably too early to say that such a threat exists in the present phase of disillusion over the second five year plan, but it is more than likely it will arise if the same mistakes are made again. In the Lok Sabha the other day, a member showed his exasperation by suggesting that the present Planning Commission be scrapped, because its members are not "experts". It is only one step from this to recommending that the whole theory of planning in a democracy be rejected and the country's economic future be placed in the hands of a few statistically-minded visionaries with power to enforce their proposals. This search for scapegoats is politically dangerous, although perfectly understandable. The Planning Commission has its faults. But the real culprit is the national attitude towards economic progress generally—the firm conviction that wealth can be distributed before it is created, that to desire is to have, and that it is perfectly possible to get a quart out of a pint pot provided one's thirst is great enough. If the Lok Sabha member referred to above had suggested scrapping these impracticable ideas instead of the unfortunate body called on to carry them out, he would have been prescribing a much more reliable recipe for future economic success. The view that planning of any kind is impossible in a democracy is not difficult to argue. But at least in India, the impression of determination which planning gives is probably indispensable politically. It is better planning that is the answer to the country's problems, not no planning at all. This is the lesson taught by the second plan; it would be disastrous to disregard it in formulating the third. Influential voices are already being raised counselling caution, and the latest addition to the list is that of Mr. J. R. D. Tata in his speech from the chair at the annual general meeting of the Tata Iron and Steel Company, a full version of which is published elsewhere in this issue of *Capital*.

plants while their people go hungry and inadequately clothed. But in the long run it is impossible for a democracy. The priorities for the next plan should be food, consumer goods and shelter, and the earning and saving of foreign exchange; when these items are provided for in reasonable measure, it will be time enough to think of raising steel production to fifteen million tons a year. In fact, if steel production is allowed simply to keep up with home requirements, that will be all that is needed. Mr. Tata is not the only one who doubts the wisdom of making steel for export to a world which already has more than it wants.

The question of raising resources is another matter which, so Mr. Tata points out, will need a complete change of approach. Public investment, based on a tax system which is completely stifling private enterprise, should play a proportionately smaller part. Private investment, based on individual savings, must play a larger one. This will not only relieve the economic system of burdens which it is at present quite unable to carry without impossible strain, it will also ensure that capital goes into manufacturing fields where it is most wanted—in providing consumer goods and housing, for instance. More use should be made of the savings of foreign nationals—in other words, more foreign capital must be attracted. Mr. Tata devoted a large proportion of his remarks to this single factor, and he by no means exaggerated it. It is too often forgotten that what the foreigner provides, the struggling Indian does not need to. The indictment of the present planning motives is to be found in the estimates Mr. Tata puts forward for the cost of building the additional capacity needed for making a further nine million tons of steel a year. The same arguments apply equally to the concentration on Government-sponsored heavy industry generally. The time has come for a change to the kind of activity which shows a quicker return in consumption goods for the outlay involved. Where large-scale heavy industrial investment is required, then foreign capital could be used and the additional strain on the people of this country avoided. There is nothing like the political risk in this that was feared soon after Independence; the Government has long since mastered the technique of safeguarding the national interest from the pressures sometimes exerted by foreign capital, even if it has not yet learned how to attract it.

The plea for realism which Mr. Tata makes is one which will only be ignored in future at great risk to democracy in India. The words....."it is supremely important that in our development plans priorities are based not on prestige but on

a down-to-earth assessment of all relevant factors including the annual output and return per rupee of investment, foreign exchange earned or saved, value to the economy as a whole and employment" are a sound enough guide for the future. Mr. Tata has also added a plea for more realism in labour policy and taxation, because both these matters have made a substantial contribution to the difficulties of the second plan. The best example in many years of the damage which undisciplined and badly-led workers can do to plan targets was provided only a short time ago at the Tata Iron and Steel plant itself. It cannot have escaped the Government's notice that all this happened in an establishment which practises perhaps the most modern and enlightened labour policy in India. The lesson should by now have been learned that the behaviour of labour in this country is precisely what the communists decide it shall be, and bears little relation to the amount of welfare, wage payments, or participation in management which the workers enjoy. One of the best contributions to successful planning in future would be a less sentimental attitude towards communist-inspired labour disputes. There is no case to be made out for the kind of ruthless labour discipline practised in China and the U.S.S.R.—India after all is a democracy. But there is an excellent one for a firmer application of the law in all industrial relations and for a less tolerant handling of the instigators of trouble. Can there be any doubt about what is in the workers' true interests when Mr. Tata's estimates of the loss of output and earnings caused by the recent strike are read and understood? What Mr. Tata said about taxation and regulation is already well enough known. But coming from the head of one of the largest and most important business concentrations in the country, his words carry more than the usual weight. The views of those who have to work under the present muddle of taxes, excises, controls and enactments have up to now been given far too little consideration in the formulation of policy. Unless realism is applied here also, the chances of success in future planning will be correspondingly reduced.

The test of India's ability to preserve her democratic institutions under the strains of rapid economic development will be her Government's ability to learn from past experience. There are two ways in which the human mind reacts to difficulties and emergencies. One is to settle down resolutely to solving all problems on a practical and realistic assessment of experiences already accumulated. That way lies eventual success. The other is to reject reality and take refuge in any idealistic dream which offers consolation. There is no need to point out in which direction that kind of behaviour leads. There is a great danger now that disillusion is growing, that the real lessons of experience will be lost and that the country will start a feverish search for scapegoats among both institutions and individuals. This would be wholly wrong; it must be remembered that failure was implicit in the original principles underlying the plan. It is on these that attention should be concentrated.

THE GHOST OF MALTHUS

MUCH as the modern world may claim, with the resources which science and technology have been putting increasingly at its disposal, that

it has successfully laid the ghost of Malthus, the spectre seems to be haunting mankind again. Although the world need not fear an increase in population and food resources in the ratios which the old cleric visualised, it has nevertheless to be thankful to him for focussing attention on a problem which it seems is going to be with us at least for a very long time. Experts who have been studying this problem of world population and resources invariably suggest that unless something is done either to bring birth rates in the populous countries down or to step up world resources of food and energy to meet ever increasing requirements, the world, at least the under-developed part of it, will some day face a catastrophe. Even the Marxists of China recognise the force of this argument, all the preachings of the Master notwithstanding. Their earlier move to raise the population on the wholly nonsensical argument that "the more the pairs of hands, the greater the output from fields and factories", has now been completely abandoned, and a serious effort is being made to reduce the number of births. In India, another under-developed country and the second most populous in

earning foreign exchange among the more important of its principles. The Government could have allowed private insurers to function overseas as independent companies, or at least, as its agents. The nationalisation of life insurance does not impair the position of the companies as legal entities, in so far as their overseas business is concerned. Private insurers, who have established connections abroad, may still be willing to make a fresh effort. There is no certainty that the Life Insurance Corporation will be permitted for all time to come to transact business even in the areas in which it is reported to have established itself. Whether it ought to retrieve the position by permitting private insurers to write business overseas in their own names is a question which deserves to be considered seriously.

Madurai Mills in Trouble

Recent troubles in some of the Coimbatore cotton mills caused by retrenchment, as well as due to the arrears of wages not being paid, are likely to be overshadowed by the labour dispute with which the Madurai Mills have been threatened. The proposal of the Madras Government that an expert committee should examine the working of the four mills under Messrs A. and F. Harvey's management, mainly to suggest economies, has been turned down. The idea of arbitration in the matter of changes in working conditions for operatives has also been rejected. The only course left is adjudication over the management's claim that due to difficult trading conditions, the amount of dearness allowance paid should be cut by one-third and that working hours should be curtailed from eight to six a day.

Curtailement of production has also been advocated by many other millowners because of the yarn glut. The power cut helped reduce textile output, but difficulties persist and the costs continue to be unmanageable. The poor trading results for 1957 explain the cut in the Madurai Mills' dividend to 15 percent, made possible only by the sum carried forward from the good profits earned in 1956. The Minister for Labour has argued that the crisis in the Madurai Mills is due to "some peculiar conditions": the machinery is said to be old, the cost of production high, and the management is pursuing old business methods, as it is alleged to be still engaging commission agents, selling agents and buying agents, he says. The importance of goodwill in trade connections seems to have been overlooked by the Minister. The Government should have learnt from its own unhappy experience of investment in the vanaspati industry that these things really matter in business.

Rise in Singareni Shares

The expansion of the Singareni collieries has created a strong market interest in the shares of this concern, especially because of the announcement of a 15 percent dividend for 1957 against 10 percent paid for 1956. The market quotation in Madras has risen to Rs. 16.37. The news that the Andhra Pradesh Government will retain full control and the Centre will only provide loan capital for increasing output, has created confidence. The State Government holds 88 percent of the paid-up capital of the company, acquired from the Hyderabad-Deccan Trust after the war. It is not so much the prospect of a higher price for coal as the chance of a new issue at par that has suddenly led to the disappearance of sellers who are awaiting the company's report and accounts to see how the large depreciation funds have been put to good use to raise earnings. The size of the company is one reason for the steady mark-up. Although the connection of Best and Company was terminated when the former Hyderabad Government acquired full control of the company, chiefly to meet the State Railway's needs, Madras investors have always rated the Singareni shares high.

Indo-U.S. Economic Relations

A former president of the All-India Manufacturers Organisation and the present president of the Indo-Pan American Association, Mr. Murarji Vaidya has stressed the need for closer relations between India and the United States. He thinks it is odd that there is no financial or commercial treaty between the two countries. Mr. Vaidya believes that the many official and non-official delegations which have recently visited the United States have helped create a friendly atmosphere. In particular, he has stressed the importance of Mr. Morarji Desai's recent visit to Washington and New York. Mr. Vaidya also believes that there is confidence in the United States that India is sound financially and politically in spite of her present difficulties, but this is not enough to attract private American capital to this country. He says it is necessary to offer some tax reliefs. Such measures, Mr. Vaidya

points out, have been adopted by some European and Latin American countries with good results. He is of the opinion that more Indian business men should travel abroad and make personal export contacts. This is necessary in view of the highly competitive world markets today. Mr. Vaidya appeals to the Government to make foreign travel facilities available even for the small business man. This is one way of stimulating exports and earning foreign exchange, he says. During the three-week tour of the United States which he is about to undertake, Mr. Vaidya will investigate the possibility of increased capital participation in India, particularly in the light and electrical engineering industries and the export of silk and spices from India.

Raw Cotton Export Quota

The Cotton Advisory Board has recommended to the Government of India that it allow an export quota of 275,000 bales of raw cotton. It has been further suggested that this export quota should consist of 150,000 bales of Bengal Deshi, 50,000 bales of cotton stapling not above 3/4in. to be supplemented by a further quota of the same quantity on or about 15th October, 1958, and 25,000 bales of cotton stapling not above 1 1/4in. from the Punjab from the 1957-1958 or earlier crops. It has also been recommended that the present export duty of Rs. 50 a bale be totally abolished. There is, however, a difference of opinion within the Board on this point. Some members feel that the present is not the opportune moment for such a step. The decision to make the recommendation was arrived at by a majority of one. It has been requested that the Government may announce the export quotas and the abolition of the duty as expeditiously as possible. A trade plea that a barter agreement be concluded with Japan under which cotton exports would be paid for in yen and the yen so earned be used for the import of modern Japanese textile machinery is under consideration, the Board says. But another suggestion from the trade, that it should be allowed to retain 10 percent of the foreign exchange earnings from cotton exports for the import of raw cotton staple lengths not for the 1958-59 season consisting of 200,000 bales of Sudanese and Egyptian growths and the remainder of American and East African cottons. Half of the total import quota is to be licensed on the usual basis and the balance of 50 percent will be imported under the incentive scheme which has been proposed to stimulate the export of cotton textiles. Import licences will be issued to the mills only and not to the trade.

CORRESPONDENCE

MANAGEMENTS' DESPAIR

(TO THE EDITOR OF "CAPITAL")

Sir,

"Ditcher" in the issue of Capital of 18th September has referred to the move of the Calcutta Tramways directors' suggestion that the West Bengal Government might nationalise the company as being "probably the first time such a thing has happened anywhere". The issue in relation to Calcutta Tramways may, because of the finance in Calcutta, merit greater public interest, but it is not generally realised that some of the units of another branch of public utility—the electric supply industry—have had to face such an unenviable position from time to time. In the case of such units the pitch is generally queered by mis-informed consumer opposition, and in many instances, the authorites concerned have not been able to resist the temptation to tilt the balance against the struggling undertaking. Calcutta, with its accentuated labour problems, has its own pattern of trouble, but whether it is labour agitation, exceeding all bounds of propriety, or consumer "discontent" generally fostered by interested parties, the cup is full, which leads to managements throwing up their hands in despair. This trend, if not arrested in time, might well lead to the State being saddled with uneconomic units with benefits accruing to none. It is, therefore, high time that all concerned realised that it is against national interests to force a utility to continue rendering service at costs below the levels required to ensure the proper performance of its public duties.

Yours etc.,

R. P. AIYER,

SECRETARY, THE FEDERATION OF ELECTRICITY UNDERTAKINGS OF INDIA

Bombay,

ILLICIT COINAGE

MR. J. E. O'Connor, in his examination before the Currency Committee, was very emphatic on the subject of illicit coinage. He said that they had no evidence whatever that there had been the slightest increase since the closing of the mints, and that it is practically certain that the Government would have known if such coinage had been going on. Turning to the report of Mr. E. R. Henry, C.S.I., on the Administration of the Police of Bengal for the year 1897, we find on page 44 the following paragraph:—"During last year, over 1,000 tons of silver were imported and distributed throughout the country, and having regard to the fact that there is a very large number of persons competent to manufacture from silver of the value of eleven pence, rupees which have a fictitious value of sixteen pence, the possibility of the counterfeit coining of silver rupees being carried on extensively should not be lost sight of. Many of the specimens of counterfeit rupees which came into our hands are of excellent workmanship; were it not that they are of base metal, their genuineness as Queen's coin would in all probability never have been challenged." This entirely bears out what we have written on the subject, and as the Pioneer truly observes: "The evidence of the Director-General of Statistics and that of the Inspector-General of Police are almost diametrically opposed on this point." The evidence we should say of the statistician in the light of the practical experience of the police is worthless. This, we suppose, is how history is made.

How banking serves the PLYWOOD INDUSTRY

TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the complete banking service we offer.

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investments—
Letters of Credit—Bill Collection—
Deposits—Loans & Overdrafts—
Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

Keep operating costs down with

Honeywell Electronik INSTRUMENTATION

It's time to go modern the low-cost way...
with Honeywell instrumentation.

Full use of today's instrumentation gives you the newest methods of production and process measurement, recording and controlling. And that adds up to increased production, improved quality and lowered operating costs.

Instrumentation is being put to work in practically every known industry... from steelmaking to cosmetics preparations... from processing chemicals to imprinting bottle caps.

Honeywell instrumentation can be a profitable investment for you. Call in a Blue Star representative to advise you on modern instrumentation in your plant.

Without Prejudice

ON THE TRUE MEANING OF PERMISSION

WHEN LAW AND DICTIONARY DISAGREE

(FROM OUR LEGAL CORRESPONDENT)

THIS is another of those cases the result of which depended largely on the precise meaning of one ordinary everyday English word. The word is "permit", used as a verb, and the case was an important one under the Factories Act. The writer has just turned up the dictionary meaning. The verb "to permit" means "to give leave for without command", "to consent to". But the definition does not cover the point with which we are concerned, which is this. Does giving leave to do a thing imply a conscious act on the part of the giver? Before I can be said to consent to the performance of an act, is it requisite that I should know beforehand what the act is that it is proposed shall be done? If a man walks across my land without my knowing anything about his having done so, but when my gamekeeper reports the act to me I do nothing about it, can the intruder claim to have entered my land with my permission? "No," you may reply with considerable confidence. Well, let us see.

The Gopal Mills Company, Broach, within the jurisdiction of the Bombay High Court, is a factory as defined by the Factories Act. On 5th July, 1955, at 9-30 o'clock in the morning when the factory was working, an accident occurred in the valve pit of the purification plant. As a result of the accident five workers died. The names of the workers were Chotalal Nathubhai, Fakirji Dhanjisha, Melia Dadla, Maganlal Gordhanbhai and

Chunilal Bechar. The accident occurred in this way. As the valve for pit No. 2 could not be operated on that day, "Melia Dadla was asked to go down into the pit to attend to it."

The inverted commas indicate that we are quoting the subsequent High Court judgment in which—and this is rather odd—it does not appear by whom the worker was "asked" to go down. But whoever it was, it was not the occupier or manager of the factory who was not even present in Broach at the time of the accident and knew nothing about it till afterwards.

Melia went down into the pit without wearing suitable breathing apparatus and a belt securely attached to a rope the free end of which should have been held by a person standing outside the confined space. "He was made"—we quote the judgment again—to go down into this confined space without taking all practicable measures to remove any dangerous fumes that were likely to be present to such an extent as to involve risk of his being overcome by them. In fact, he was so overcome and died. Subsequently, Fakirji, Maganlal, Chunilal and Chotubhai were also "made to go down into the pit." They too went down without wearing suitable breathing apparatus. They also were overcome with poisonous gas and died. Mr. Tanna, the Superintendent of the Municipal Fire Brigade, went to the spot with breathing apparatus and other appliance and courageously entered the pit to try to save the dying men, but when inside was himself attacked by the poisoned gas, rendered unconscious and his eyes damaged. Two doctors arrived in time to save Mr. Tanna's life, but too late to do anything for the five men who were already dead, beyond certifying that they had died through carbon dioxide poisoning. Later, the Inspector of Factories visited the factory and found that suitable breathing apparatus, reviving apparatus, bells and ropes were not available and were not kept ready for instant use beside the confined space. The Inspector visited the factory again on 18th July, 1955, and 6th August,

1955, and even then none of the above appliances was kept ready beside the valve pit, nor were they available anywhere in the factory. A deplorable state of affairs with most tragic consequences. Clearly a prosecution was inevitable against somebody. But against whom?

Under Section 92 of the Factories Act, criminal liability is imposed on the occupier and manager (as to each one of them) for contravention of any of the provisions of the Act, with a few exceptions not applicable to this case. The State of Bombay therefore prosecuted the occupier of the factory for alleged contraventions of sub-sections (3) and (4) of Section 36 of the Act.

This is sub-section (3): "No person in any factory shall enter or be permitted (italics ours) to enter any confined space such as is referred to in sub-section (1) until all practical measures have been taken to remove any fumes which may be present and to prevent any ingress of fumes and unless either (a) a certificate in writing has been given by a competent person based on a test carried out by himself, that the space is free from dangerous fumes and fit for persons to enter or (b) the worker is wearing suitable breathing apparatus and a belt securely attached to a rope, the free end of which is held by a person standing outside the confined space."

Sub-section (4) specifies that such apparatus, etcetera, must be kept ready for instant use and shall be periodically examined and certified fit for use.

After the complaint was filed against the manager-occupier, he himself filed a complaint under Section 101 of the Factories Act against two persons alleging that it was their duty to maintain the apparatus specified in sub-section (4) and therefore he was not guilty of the offences with which he was charged. In his defence, he further claimed that he did not "permit" the workers to enter the valve pit, that the pit was to be worked from outside and that he was not even present in Broach on the date of the accident.

Now there was no dispute that the five men did go down into "a confined space", namely, the valve pit, and that they died as a result of being overcome by poisonous fumes which were present in the valve pit; further, that they were not wearing a breathing apparatus and that in fact no breathing apparatus, no reviving apparatus, no belts and no ropes were kept ready for instant use beside the valve pit.

But did the accused "permit" the entry of the five men into the "confined space"? "No," said the Joint Civil Judge at Broach and acquitted the accused.

The learned judge held that as the pit was to be worked by a contrivance from outside, it was not necessary for anyone to enter the pit so long as the machinery outside was in order and no permission was given to anybody to enter it. His honour said that "no permission was given, express or implied, to Fakirji or any of them to enter the pit" and therefore there was no contravention of sub-section (3) of Section 36 and as for the charge under sub-section (4) as to keeping breathing apparatus etcetera, "ready for instant use," the judge held that "the liability to keep the apparatus specified in sub-section (4) arose only when the permission to enter the pit was granted or when a person had entered the pit consequent upon that permission." He took the view that for a liability to maintain the apparatus to arise, the person must enter the pit lawfully, i.e., after obtaining permission. As the five men who died had entered the valve pit without permission, the learned judge held that the provisions of sub-section (4) of Section 36 were not attracted; and upon the above construction of the meaning of the verb "to permit," he acquitted the accused.

So we come back to the question with which we began this note. What is the meaning of the verb "to permit"? The trial judge was obviously of the opinion that the granting of permission to do a thing implies a positive act on the part of the grantor. The person wishing to be granted the favour must ask for it and silence does not mean consent. If no answer is given, it means that permission is not granted.

The State appealed against the acquittal and the Bombay High Court took an exactly opposite view from that of the trial judge.

Said Vyas J. (Palmitear J. concurring): "For attracting the application of sub-section (3), it is not necessary that a positive act of obtaining permission must be done by a worker or a positive act of granting permission must be done by the occupier or manager. If the occupier or manager acquiesces with the entry he permits the entry. If he connives at the entry then also he permits the entry. If he fails to prevent the entry then also he permits the entry." The High Court set aside the acquittal and ordered a retrial to take place after the complaint filed by the accused against the two persons alleged by him to be under a duty to maintain the prescribed apparatus and whose alleged failure to do so, he claimed, rendered him not guilty, had been decided.

You may view this decision, as the writer does, with some disquiet. Admitting and believing that "acquiescence" in or "connivance" at entry constitutes permission to enter, nevertheless, if the accused was at the material time not only not in the factory but not even in the town, how could he be said to permit or refuse to permit anything? And if, in such circumstances, permission is to be implied, what becomes of the factor, generally speaking, essential to establish criminal liability: mens rea, a guilty mind directed to the performance of a guilty act?

(State v Chinubhai. A.I.R. 1958. Bom. 257.)

A Ditcher's Diary

THERE SEEMS LITTLE DOUBT THAT THE WORST OF the American recession is now over and that the upturn which began in May will continue. At least, that is the official view. A writer in the current issue of the *Westminster Bank Review* gives some interesting historical data about business depressions in the U.S.A. It appears that in the past 100 years America has experienced twenty-four business slumps and that the one now ending is the twenty-fifth. Of the previous twenty-four recessions and depressions, only four lasted longer than two years. Of these four only one—the Great Depression which lasted forty-five months, from June 1929 to March 1933—came after 1885. Since that year, four out of the five slumps were terminated in eighteen months or less. The trouble about using this tempting historical analogy is that nobody seems to be agreed when the present U.S. recession began. According to some, it started in January 1957; others (including the National Bureau of Economic Research) contend that it began in the August of that year. What set the recession in motion is equally in dispute, although it is agreed that in the last quarter of 1957 all the major sectors of the economy, for the first time since the war, seemed to have reached near-exhaustion point simultaneously. The capital goods boom came to a halt; business inventories were reduced; government spending was cut and the usually avid American consumer appeared to be sated and to have realised all his war-deferred requirements. The *Westminster Bank Review* writer declares that whatever the statistics may suggest, there is no doubt that the U.S. is living through a profound internal crisis. For the first time there is a distinct tendency "to keep down with the Joneses." Failure to grow is in itself enough to cause a recession in the second half of the 20th century.

WHATEVER HAPPENED AT THE ASHOKA HOTEL WHEN a certain Indian gentleman felt he had been treated with discourtesy because of his dress, the Government's explanation of the affair seemed altogether clumsy. It is still not established whether the hotel staff acted according to its instructions; my own suspicion is that it did, and is now being let down by a discomfited Government. Some official spokesman said that the dress restrictions were meant only for those in western attire. Well, I shall not press the point that this too is discrimination of a kind or that it is an odd sort of hospitalisation which requires of foreign visitors standards to which one is not prepared to adhere oneself. But, without claiming to know more than I do about the intricacies of Indian sartorial styles, I still think that in this country too there are degrees of formality and informality. Extreme rigidity is out of date everywhere in the world today, but I should be surprised if it is permissible in India to go to a funeral and a marriage in the same clothes. After one has exhausted all one's invective on Victorian prudishness, one must still confess that some of those *de rigueur* regulations imparted elegance to and restrained excesses in assemblies of men and women. The popular belief that the recent decline in social manners and costumes is attributable to the charmingly informal Americans is only partially true. In Boston and in San Francisco, I have been told on good authority, many Americans are ridiculously sticky about dress and behaviour. I do not believe that in India it was all entirely different even before the British came. The Moghuls must have been great

sticklers about form, and the Hindu kings before them are unlikely to have been of the opinion that what was good for the beach was good for the court. I have seen the dhoti worn most elegantly and gracefully, and it cannot be *per se* debarred from entry into dining halls. The more important point is that there should be some rules about dress; and, even more important, these rules should be obeyed by all wishing to dine or dance in public hotels. After all, the Ashoka Hotel doesn't compel anyone to eat there.

WHETHER OR NOT ONE AGREES WITH Mr. J. P. Narain that India is the scene of "an inglorious struggle for power between the political parties" depends, I imagine, on what one means by inglorious. The point seems to have escaped Mr. Narain that jockeying for power by political parties is what keeps democracy going; or perhaps this simply irritates the socialist in him. I should have thought that the real test of whether India "was ripe for dictatorship" was the attitude of the various parties towards the exercise of power through democratic institutions. There have been occasional signs of disillusion on this point. I admit, but they are not by any means serious yet. The real test will arrive if the governing party, whichever it might be, insists on the kind of theoretical approach to economic and social affairs which Mr. Narain so obviously favours. That, I imagine, is what Mr. Narain means; and neither in India nor elsewhere, is democracy suited to it. The main thing really is what one intends to do with one's democracy. If the idea is to use it to twist society into some impracticable pattern dreamt up a century ago by a second-rate German philosopher excessively imbued with the national obsession for discipline and order, then no doubt democracy is inadequate. It is partly the result of trying to do this in India—and failing—which is threatening to bring about the situation which Mr. Narain, not without justification, considers "ripe for dictatorship." I suspect that like most socialists Mr. Narain does not particularly care for democracy, and one of the reasons is the difficulty which India is encountering in trying to mix it with socialism. The point which he, along with so many other humanistic socialists, perhaps forgets is that the real struggle is not between their system and capitalism, but between authoritarianism and liberalism. Either one organises society according to some theoretical ideal, in which case the pattern has to be ruthlessly imposed from above, or one permits it to organise itself according to the general criteria of individual freedom and human rights. I for one would hate to see India choose the former.

THE PURELY COINCIDENTAL ABSENCE OF THE PRIME Minister from the capital gives New Delhi the necessary and welcome pause before announcing its attitude to the so-called Free Government of Algeria as proclaimed from Cairo. Very rightly, India opposes the recognition of the Chiang Government—because it is not in control of the mainland. As far as I can see, Ferhat Abbas is no more the master of a single square inch of Algeria. Neither *de jure* nor *de facto*, the Abbas set-up has still been recognised in unseemly haste by the so-called Arab Governments, and this is a measure of the dangerous spell Colonel Nasser has cast over the whole area. There is time yet for India to ponder whether she really wishes to see this power

increased and widened. The present pause also provides an opportunity for a reappraisal of the nature of what is too glibly called Arab nationalism. For her own reasons, ideological and practical, which need not be elaborated here, India has so far aided this nationalism considerably. It is not for me to question the short-term wisdom of this policy, but it is becoming increasingly clear that India's support for every kind of adventure is being taken for granted by certain parties. And this is hardly a position India can accept indefinitely. It is no secret that President Nasser did not consider it necessary, before the seizure of the Suez Canal, to consult any of his friends, on whose support his decision relied. I should be surprised if there has been any consultation this time either, and I am certain that the proclamation of the "free" Government was as big and unpleasant a surprise to New Delhi as it must have been to other capitals. I would not know how, or even whether, India will tell her friends not to embarrass her so in the future. I do know that something in the nature of a warning is badly needed. Finally, India cannot ignore the point that a plethora of illegitimate governments all over the world would render civilised international intercourse just about impossible. Manners between nations are bad enough already; a multiplicity of pretender governments will, as in the unprintable limerick, make it difficult to know who is saying what, to whom and on whose behalf.

LIKE MOST PEOPLE, I WOULD PREFER TO SEE communist China in possession of the offshore islands if only because they seem to me to be indefensible without a major war, and none of us wants that. I cannot, however, agree with those who consider her entitled to them; because the present Chinese Government succeeded in establishing itself on the mainland by force of arms, does not give it the right to claim on moral grounds what it has not been able to capture by military means. Besides, the constant threats from both China and Russia are enough to scare any democratic government into deciding that this is another Munich. The stage has now arrived where if the Americans do not regard it as such, the communists obviously intend to. Mr. Khrushchev's abusive note has not improved the situation. One expects bad diplomatic manners from the Russians, but this missive was obviously intended to inflame tempers. Those who ask what next, might well address the question to Mr. Mao because the choice of peace or war does seem to lie with him. Anybody who supports the communist claim because he regards it as just, would do well to reflect what the consequences of pressing it will be. It is no consolation that China should get her rights—assuming she has a right to the offshore islands—if she starts a war which leads to worldwide destruction in the process. The Peking Government tells us that the Chinese people are not afraid of war. In that case they ought to be—although nobody believes for a moment that they have been consulted. But if the Chinese people are not, everybody else is and the Peking Government would do well to remember that. I still think the soundest view on communist China's claim to the islands was expressed by Mr. Morarji Desai in New York where he compared the position with that of India's over Goa. I can find a world of difference between the two claims; India has a representative government and that makes a world of difference where rights and wrongs are concerned. But the principles are the same; either one rejects force as an instrument of national policy or one does not. And if one does not, then no matter what the justice of the claim, one is a public enemy and deserves to be treated as such.

THE DITCHER

Coke for Steel

India's new steelworks and steelworks extensions require the building of great new coke oven plants—plants demanding an immense variety of specialised skills in civil, mechanical, chemical and electrical engineering and in well-planned and efficient contracting.

Simon-Carves have built coke ovens in India for fifty years. Simon-Carves coking plants ordered for Indian steelworks in the past twelve years alone represent nearly 700 ovens with a carbonising capacity of over 5½ million tons of coal a year. Simon-Carves coke ovens are at work and under construction at the great Jamshedpur and Hirapur steelworks, and in due course they will be at work at the new Durgapur steelworks too—where Simon-Carves are also building the coal washing and blending plant, sulphuric acid plant and power station.

CALCUTTA-1.

SPECIAL STEELS FOR ALL INDUSTRIAL PURPOSE:

The products of the Steel Industry are more varied than ever—and vital to our economy. The industrial enterprises that are making history in our times depend largely on Steel. Steel for aircraft and guided rockets, steel for Atomic Power Stations and for the vast river Valley Projects, steel for railway locomotives, motor cars and diesel engines—is supplied from the furnaces and mills of the United Steel Group.

United Steel have been well to the front in introducing new steels to withstand high stresses and high temperature. The latest scientific techniques are in practical use. Television Cameras, Photo-electric cells and radio active isotopes are all helping to improve efficiency. United Steel contributes by employing such modern methods for better steels in the march of Indian progress.

TO SAIL...OR TO FLY?

Is that what you are asking yourself? Well, you do not really have to choose between the two. In fact, as a result of agreements concluded between KLM and various Steamship Lines, you can commence your journey by air and return by sea (or the other way round) and still have the benefit of the return fare reduction on both the stretches!

For details, contact any recognized Travel Agent or ring up 23-3962.

THE TATA IRON AND STEEL COMPANY LIMITED

CHAIRMAN, MR. J. R. D. TATA'S SURVEY OF EXPANSION PROGRAMME

The following is the speech of the Chairman, Mr. J. R. D. Tata, delivered at the Fifty-first Annual General Meeting of the Shareholders of The Tata Iron and Steel Company Limited, on Thursday, September 18, 1958:—

Ladies and Gentlemen,

Before I tell you something about matters of direct concern to us, I shall, as usual, take a little of your time to refer to one or two subjects of general interest in the economic sphere, for our destinies are affected just as much by economic developments and trends in the country and by Government policies, as by events in our own backyard.

Foreign Exchange Crisis

By far the most serious development in the country's economic life in the past year has been the accelerated depletion of our foreign exchange balances which, standing at Rs. 746 crores in March 1956, are, today, below Rs. 185 crores. How serious the situation is can be judged from the fact that we need some Rs. 560 crores merely to meet our known commitments upto the end of the Second Plan. Allowing for a minimum reserve against the note issue and taking Rs. 50 crores as the minimum practical working balance, we must somehow raise an additional Rs. 425 crores between now and March 1961 to honour our commitments.

It is easy to be wise after the event and much could therefore be said, and has in fact been said, about this crisis, but to me the most surprising thing about it is not so much that it happened at all but that it was not foreseen at least two years ago. Little purpose, however, would be served by adding to the spate of comment and criticism already voiced on the subject in the last few months. Our Finance Minister is now ably engaged in official discussions with the World Bank and the Governments of a number of countries. Our sincere wishes accompany him on his mission.

Even assuming that all our commitments under the Second Plan are fully met, the position thereafter will remain a grim one. Having used up practically the whole of our foreign reserves accumulated at such sacrifice in the war years, and having in addition drawn heavily upon the future, any surplus we may be able to earn in the next few years will be absorbed in the servicing of our foreign debt. Unless, therefore, we can greatly increase our earnings in foreign exchange and also attract long-term foreign investments, we shall not only be unable to finance the foreign component of new development projects but will also have to exercise such a tight control over current imports that industries depending on imported raw materials and components will be hard put to it to maintain normal operations. The present plight of many steel-consuming industries whose allotments of steel have been slashed to a fraction of their requirements shows how stony the road to further industrialisation may be in the future.

Never before has it been more necessary for us to be practical and realistic in our approach to economic problems and, in the process, to be willing to shed some of the prejudices and dogmas which have so heavily coloured some of our thinking in the past.

The basic ingredients of further progress should be clear by now. First, it is imperative that we become self-sufficient in food. How vital that is can be judged from the fact that since 1946 we have had to spend Rs. 1,000 crores of precious foreign exchange to buy food in addition to the Rs. 300 crores worth generously gifted to us by the U.S. and others over the same period. There would be no foreign exchange crisis today if we still had that Rs. 1,000 crores in hand. Second, we must generate a sufficient annual surplus in our total balance of trade to pay for essential imports and to service our foreign debt.

Any further major expansion of our economy thereafter, particularly in the industrial field, will depend mainly on our ability to ensure a continuous flow of fresh capital. Except for such success as we may achieve in bringing into use some of the accumulated and hidden wealth in our country, the amount of fresh savings from within India will clearly not be adequate to finance development of the magnitude, and at the rate, required. It must be supplemented by investments and loans from abroad which would, in any case, be required to provide foreign exchange for imports of new capital equipment.

One of our main tasks, therefore, will be to induce our own people and people in foreign countries to invest in productive enterprise in India. This cannot be achieved unless we realise that capital flows most readily in directions where safety and opportunities of a good return and appreciation are greatest. If Puerto Rico has made such astounding progress in the last ten years and if Canada and other countries in the American Continent can attract all the capital and all the constructive enterprise they need, it is for the simple and obvious reason, constantly ignored or misunderstood in our own country, that it is made welcome and allowed both a safe harbour and an attractive return.

If our Government and our Parliament, while by all means protecting the under-privileged, providing the maximum welfare services within our means and ensuring equal opportunities for all, were to let it be known that India was a land of opportunity for constructive and honest enterprise, where those who risked their savings or their surplus capital could reap a fair reward, we would see such a flow of capital from within and from abroad and such an upsurge of economic activity as would transform our land and our people's way of life in a few decades.

The surest way, on the other hand, to drive Indian capital out of sight and to discourage foreign investment is to continue with those elements in our economic philosophy and policies which have done so much in the last ten years so to inhibit or penalise enterprise and initiative. I would mention

in particular the excessively complex and rigid controls imposed on industry under various enactments, the crushing burden of individual and corporate taxes, excise duties and other imposts, often of a discriminatory character, which we choose to call an integrated system of taxation but which in fact merely saps the will to work and the willingness to take risks and, finally, the ideological attitude of hostility and mistrust towards private enterprise.

Future Steel Capacity

One matter of future economic policy of special interest to us is the question of the further expansion of the steel industry under the Third Five Year Plan, which, I understand, is at present under the consideration of the Planning Commission. While the matter still seems to be at an exploratory stage, it is probable that decisions will be taken in the course of the next twelve months and I therefore think it appropriate to record my views on the subject here today.

With India's large reserves of raw materials for steel making and her plans for rapid industrialisation, there is obvious scope as well as need for the continued expansion of the steel industry. There could be no disagreement on that but the question at issue is the rate of such expansion and its order of priority in relation to other industries. Over-emphasis on steel production in our future Plans would prove a costly mistake, and I wish to sound a note of warning against allowing the steel industry to run away with too great a proportion of whatever total resources will be available in future plan periods. That this note of alarm is not unjustified may be judged from the fact that in the Explanatory Memorandum on the 1958-59 Budget laid before Parliament as recently as March this year, the Third Plan target for steel production was stated to be of the order of 15 million tons per annum involving an increase in annual capacity of 9 million tons.

Even assuming a substantially lower expenditure for the expansion of existing plants than that incurred on the three Government steel plants, the total cost of such additional capacity would not be far from Rs. 1,500 crores, of which something like Rs. 700 crores would be required in foreign exchange, as the heavy machine building plant to be put up by Government at Ranchi will not be ready in time to fabricate any substantial part of the new steel-making equipment.

We may rely on our strong and realistic Finance Minister to support only those schemes of industrial development that can be justified on such practical considerations as availability of finance, demand in India and abroad and a sound order of priority as between one industry and another, but as some of these factors seem to have been consistently overlooked upto now in regard to plans for the expansion of steel capacity, it may be appropriate for me to draw attention to the fact that of all engineering industries steel manufacture requires the largest capital investment per rupee's worth of output and per worker employed. Put in another way, its annual output and the number of men it employs are the lowest per rupee of capital invested.

If it is suggested that surplus steel capacity could be profitably used to earn foreign exchange from exports, I would reply that there is already a surplus of steel capacity in the world, so that there is not likely to be an export market at all. But even if there were, all that could be earned in foreign exchange on steel exports would be about Rs. 500 per ton, whereas we could earn or save three to four times that much per ton of products made from steel.

In view of my life-long association with the Steel Industry, no one would be more pleased than I to see India one of the great producers of steel in the world, but a little practical thinking makes it clear that we would be better off, for a while, we had less steel plants but more secondary and finishing industries using steel and if we made more trucks, cars, machine tools and capital and consumer goods of all sorts in preference to making raw steel, for, in return for the same amount of capital investment, we would thereby create much more wealth, earn and save more in foreign exchange, provide more employment and generally build up a more balanced and productive economy.

In the context of the continued shortages of financial, technical and managerial resources which we must assume will exist for the next ten or fifteen years, it is supremely important that in our development plans priorities are based not on prestige but on a down to earth assessment of all relevant factors including the annual output and return per rupee of investment, foreign exchange earned or saved, value to the economy as a whole and employment.

Accounts

Coming to our own affairs, and to begin with, to the results for the year embodied in the report in your hands, I must apologise to the shareholders for the difficulty they must have had in following the accounts. Apart from the shock some of you may have suffered at the staggering increase in capital expenditure you may well have been bewildered by some of the entries in the balance sheet and in the profit and loss and appropriation accounts, and by the unexplained disparity between some of the 1957-58 figures and those of the previous year. I shall do my best to make matters clear to you when answering your questions, but at the outset I should like to explain that if company accounts in India have become the most complicated and the most unintelligible in the world, our thanks are due to the Indian Companies Act (1956), to our much vaunted integrated tax structure, and to its interpretation by the authorities concerned.

Apart, however, from these unnecessary complications imposed on us, comparisons between many of the figures for the two years have been vitiated by

such factors as a change in the mode of valuation of stocks and by the effect of the enormous expenditure on the expansion and modernisation programmes, on allocations to taxation, depreciation and rehabilitation reserves.

Discounting these special factors, the essential fact to be noted from the accounts is that our operations for the year have resulted in a profit which is about Rs. 13 crores lower than in the previous year, due almost wholly to the lower production and despatches of saleable steel and other products, and that this reduction in profit was compensated by a large reduction in taxation, an upward revaluation of the stocks of raw materials and semi-finished and finished products, and by the writing back to profit of excess provisions made in previous years.

While the set-back in our profits is naturally to be deplored, there is no cause for alarm. The situation will retrieve itself automatically when the new plant goes into full production which, barring unforeseen troubles, should be by the end of the current financial year. In the meantime, taxed reserves are adequate to ensure that the shareholders' dividend will not be affected.

Golden Jubilee

A happy event for us during this year was the celebration at Jamshedpur on the 1st of March of the Golden Jubilee of the Indian Steel Industry and the town of Jamshedpur. The Government of India were good enough to issue a special postage stamp on that day bearing upon it the portrait of Jamsetji Tata superimposed on a view of the Works, and Prime Minister Jawaharlal Nehru, busy as he is, made the great gesture of coming himself and taking a prominent part in the celebration. He dedicated the 200-acre Jubilee Park created by the Company for the benefit and pleasure of the workers and people of Jamshedpur, and unveiled the statue of Jamsetji Tata presented by the employees, associates and friends of the Company. In the course of his speech that afternoon and again at a mass meeting of the citizens of Jamshedpur later the same day, the Prime Minister paid a heart-warming tribute to the memory of J. N. Tata and said some kind things about the services rendered by our Company to India. We are deeply grateful to him both for his presence and for his words of appreciation and encouragement.

All told, the celebrations were a great success, enlivened by the presence of the Governor and the Chief Minister of Bihar, the present Union Finance Minister and many other distinguished guests from far and near, and by the enthusiasm and gay spirit with which the citizens of Jamshedpur, consisting principally of our employees and their families participated in, and reacted to, the occasion.

The special warmth and sincerity of their traditional homage to J. N. Tata two days later, on Founder's Day, was in striking contrast to the hatred, violence and hooliganism stirred up a few weeks later by the Communists during the serious labour disturbances of last May to which I shall now refer.

Labour

When I addressed you last year, I referred at some length to the worsening labour situation at Jamshedpur and the neighbouring areas, in particular to the signs of a well-laid Communist plan to acquire control over labour in the whole of the area which I called the industrial heart of India. The fast-moving events of subsequent months, culminating in the strikes and mob violence at Jamshedpur in May 1958, confirmed the correctness of the picture I had drawn of the situation.

I shall not take your time with a detailed review of the events that led to the strike and of the strike itself. The facts are well known and have been ventilated in the press and in Parliament. In addition, we have brought out a brochure called "The Story of a Strike" which gives a full and documented account of this sad chapter in our Company's history. If any shareholder is interested, we shall gladly send him a copy in either the English or the Hindi version. Today I shall only draw attention to some of the highlights of the drama which overtook Jamshedpur last May, the ultimate result of which was that 4 men were killed, 114 persons were injured, over 400 men were dismissed or discharged, Rs. 25 lakhs of wages were lost to our employees, while 335,000 man days of work and 45,000 tons of steel valued at Rs. 22 crores were lost to the country.

The essential fact about this strike was that it was not a dispute between the Company and its employees. It was, in my view, a determined and pre-meditated attempt by the Communist Party to acquire power by force at Jamshedpur as part of a bigger plan to control the whole of the labour field in the Indian heavy industry. Jamshedpur, with its great complex of engineering industries grouped around India's biggest steel plant, was a bastion which must be conquered at all cost for, without it, control over other industries in that part of the country would be precarious.

As a first step, the existing recognised INTUC Union had to be ousted. The Communist leadership probably thought that the preliminary process of agitation and localised action which they had carried on at Jamshedpur during the previous year had so softened the opposition that one hard push would be sufficient to topple the whole edifice of relationship between the Company and its employees and their Union founded on years of good will, negotiation and successive agreements.

If this well-prepared plot failed utterly, it is because the Company stood firm and the Government of Bihar which, from the start, had a clear understanding of the issues at stake, dealt with lawlessness, important contributory cause was the good sense of the Communist leadership who wasted no time in rejecting its true significance.

A notable feature of the strike, which need surprise only those who refuse to recognise the consistent nature and pattern of Communist action in democratic countries, was the cold-blooded resort to violence and mob action. If it had not been for the firm stand taken by the Government of Bihar many more lives would have been lost in the wave of terror and crime unleashed on Jamshedpur to break down all opposition.

In this connection, it may be pertinent to recall the tragic events which took place only a year previously at Gua, centre of the neighbouring mines of

the Indian Iron and Steel Company. By a coincidence the judgment in the criminal case that followed was delivered by the Sessions Judge of Dhanbad only a few days after the abortive assault on Jamshedpur had been launched. As reported in the newspapers at the time, the Judge sentenced the Communist leader of the Action Committee to transportation for life and twenty-one of his colleagues and followers to terms of imprisonment ranging from five years to life for their alleged part in an attack by a mob armed with deadly weapons against the office of the recognised Union resulting in the death of some of its office-bearers and wounding of others.

Another notable feature of the Jamshedpur struggle needs to be stressed. When events began to go against them at Jamshedpur, the strikers did not hesitate to interfere with certain operational measures—the lack of which would have caused such serious damage to the coke ovens and blast furnaces as to have required up to a year to repair. This was nothing less than sabotage which was countered only in the nick of time and which, if successful, would have resulted in prolonged unemployment for thousands of workers and in the loss of hundreds of thousands of tons of steel to the country, apart from immense financial loss to the Company. I may say that, since the strike, a number of individual cases of attempted sabotage of the new plant have been discovered. The high degree of technical knowledge and skill displayed and a certain similarity of pattern make it clear that these were not isolated acts of disgruntled individuals but part of a well-conceived and executed plan.

The pattern is too clear for those who are not blinded by the unending stream of literature and propaganda, most of it imported, to which the people of this country are subjected. While the Communists profess adherence to constitutional and non-violent means, love for the Five Year Plan and support for all-out production, their relentless pursuit of power continues unabated, under a cloak of respectability, and, when it suits their immediate objective, whether in the political or labour arena, they do not hesitate to use and provoke violence, and to sabotage industrial production.

As is to be expected, the Communists leadership has not taken kindly to the reverse to their plans for Jamshedpur, as can be seen from the strident campaign of vilification against the Company, and Tatas generally, in the communists and pro-communists press. Since May there has been a continuous stream of party leaders from various States visiting Jamshedpur and they have reported that considerable funds have been made available to the Jamshedpur Mazdoor Union. They may be expected, therefore, to continue their efforts at causing trouble at Jamshedpur and there is no room for complacency either on the part of the Company or the Tata Workers' Union or the State Government.

Thirty years of labour peace at Jamshedpur had perhaps dimmed to some extent the realisation that sound labour relations and enduring co-operation need unremitting vigilance and effort, particularly on the Shop floor, as well as the maintenance of constant use of good channels of communication between management, supervisory staff and labour. The recent events, tragic as they were, will have served a useful purpose if they have helped to clear away the weeds of habit and complacency and exposed some of the underlying deficiencies previously concealed.

The task of establishing and maintaining good industrial relations is particularly difficult in India, in comparison with highly industrialised countries where the workers are well-educated and disciplined and where unions are strong and responsible. With fifty years of industrialisation behind us, however, I feel it is time for the trade union movement in India to mature and organise itself on the lines of finance and retains a primarily agitational character. Instead of concentrating on constructive work within the union membership and at the conference table, union activity in India still takes mainly the form of provocative speeches at mass meetings, the movement has been further weakened, and in fact almost destroyed by the endless struggle and in fact almost destroyed by the endless struggle for power between three politically affiliated groups.

A heavy responsibility devolves on Indian trade union leaders who, helped by the striking change in the attitude of management to labour problems throughout Indian industry in recent years, and by the consistently pro-labour attitude of the Central and State Governments, have a great opportunity of service to the growing mass of India's industrial workers. There is, unfortunately, no way as yet of an improvement in the situation, and we may rely upon the militant AITUC group at Jamshedpur cauldron boiling, for, as we have seen at Jamshedpur and elsewhere, labour unrest and disruption of industrial production are essential weapons in the armoury of the Party to which the AITUC is affiliated and from which it derives its financial resources.

Two Million Ton Programme

I regret to say our hopes of completing the Two Million Ton Programme substantially by the 31st May have not been fulfilled. In retrospect, it would now seem that the original completion target dates were somewhat optimistic. The position today is that the Coke Ovens came into operation in January 1958; the new Blast Furnace, one of the biggest and most modern in the world, will be blown by the middle of next month. All the seven new Open Hearth Furnaces of S.M.S. 3 which formed part of both the M.E.P. (Modernisation and Expansion Programme) and the T.M.P. (Two Million Ton Programme) are in production. The first two started operations in March 1957 and the last one in July this year. Two of the three Bessemer Converter process S.M.S. 3, which under the steel making process adopted, are essential to the achievement of the full rated output of about 1.3 million tons of ingots per year, will be commissioned in October. Of the three third will be commissioned in October. Of the three new Rolling Mills, the 46" Blooming Mill rolled its first ingot on the 18th of August. The Sheet Bar and Billet Mill is expected to be in operation in November and the Medium and Light Structural Mill by the end of December.

Although it will have taken us quite a few months longer than the thirty in which we originally hoped to complete the project, the addition in three years of a million tons of capacity under Indian conditions

and taking into account the many unforeseen difficulties and set-backs encountered is not an inconsiderable achievement. Our thanks are due to Messrs. Kaiser Engineers for the great effort they have put, and are putting, into the job and in particular to Mr. Edgar Kaiser, President of the Kaiser Group of Companies, who took the trouble to come out personally to India earlier this month and spent a week at Jamshedpur to help solve some current problems and ensure the earliest possible completion of the project.

Apart from the delay in completing the programme and in fact to some extent because of it, we are unfortunately faced with a substantial increase in capital cost. A year ago, the revised estimate of the total capital expenditure to be incurred over the quinquennium 1955-60 on the Modernisation and Expansion Programme, the Two Million Ton Programme, ancillary projects such as the Ferro Manganese Plant at Joda, normal replacements and renewals and on the Company's investments in subsidiary or associated projects such as the Indian Tube Company and Belcher's Fire Bricks, was Rs. 118.7 crores. Today the figure has risen to as much as about Rs. 133 crores, the increase being due to a number of factors including: the addition of new items or improvements to existing ones, the operation of escalation clauses in respect of purchased plant, the delay of six months or so in construction involving the maintenance at Jamshedpur, at Company's cost, of many thousands of men, and increases in prices of our own steel, freight and the like.

These increases in capital costs have put a severe strain on our financial resources, already burdened by the additional taxation introduced in the 1956-57 Budget, by the labour troubles of May, and aggravated by the much lower output of steel in the last two years as compared to the original estimate. All these factors have adversely affected our ways and means position either by increasing our expenditure or decreasing our revenues. Because of the easier conditions in the money market, and the high credit worthiness of your Company, we hope to secure our increased requirements of finance from short-term borrowings. It is a sobering thought that we are likely to end the current financial year with total long and short-term borrowings of about Rs. 75 crores, excluding Government's Rs. 10 crore special advance.

Ever since the completion of the greater extensions at Jamshedpur after the First World War, your Company had, over the years, painstakingly built up its financial position notwithstanding continuous capital expenditure on its plant, until, on the eve of the present programme of expansion, its liquid assets exceeded its current liabilities by about Rs. 8 crores. Within four years we shall have got into debt again to an extent which would have frightened us out of our wits twenty years ago. Times have no doubt changed, but your Directors' and Managing Agents' conservative instincts in matters of finance have remained, and it will be their endeavour over the

coming years to reduce as rapidly as possible the heavy burden of debt incurred in our expansion and modernisation schemes.

One aspect of the problem which will have to be faced by the Directors and by yourselves from time to time is the relationship between the share capital of the Company and the capital invested in the business. There is an unduly wide disparity between the share capital of Rs. 30 crores and the total amount of about Rs. 135 crores invested in the business. The disparity will be still wider next year when our expansion projects are completed. From many points of view, it is desirable that the share capital of the Company should not lag too far behind the figure of its nett bloc. If we are to bring down our load of debt to manageable proportions in the course of the next few years, it is clear that we must make fresh issues of capital as suitable opportunities arise. If and when proposals for an issue of capital are made to you, your Directors will bear it in mind that in these difficult days the capacity of shareholders to produce additional money is limited, and also that any fresh issue should from the start be assured of a fair return based on current equity yields.

While we shall be carrying for some time an uncomfortable large load of debt, the servicing of which will put us to considerable strain for some years, there is little doubt of our ability to bear it, as our capacity to earn will have grown in proportion. At the same time, it would be prudent to temper optimism with caution and to conserve our resources as best we can, for our increased revenue potential will, for some time, be subject to a number of uncertainties.

For instance, we do not know as yet how much the new wage structure is going to cost us annually, nor how long the new plant will take to settle down, nor how the labour situation will develop. So long, however, as Government continue to fix prices on a basis which includes adequate provisions for replacements and expansion and for a fair return on capital employed, I see no reason why we should not continue to make steel as cheaply as anyone in India and why, therefore, shareholders should not continue to look to the future with confidence.

Before closing, I would like, on your behalf, to offer a special word of thanks to the members of the Management and the Supervisory Staff at Jamshedpur who met a most difficult and, at times, dangerous situation with fortitude and devotion to duty, working round the clock in their efforts at first to keep the plant running and then to close it down without damage. Our thanks are also due to the thousands of workers who resisted the campaign of threats and violence directed at them and at their families and who worked steadfastly during the strike or tried to do so as long as they could, often at great personal risk. I am sure the shareholders will join me in expressing our warm appreciation of the exceptional services these officers and men rendered to the Company at a critical juncture in its history.

Note: This is not a report of the proceedings at the above Annual General Meeting.

Deep tread pattern for long life

Broken shoulder bars for better grip on rough ground

Strong casing to withstand abuse

For fitment to Cars, Jeeps, Land Rovers and Station Wagons

INDIAN COPPER CORPORATION LTD.

CHAIRMAN, MR. S. M. PETRIE'S REVIEW OF PROGRESS

Address delivered by Mr. Stewart M. Petrie, Chairman of the Indian Copper Corporation Ltd., at the Annual General Meeting of the Company for the year ended 31st December, 1957 held on the 24th September, 1958.

Gentlemen, I have continued the precedent which your Chairman initiated last year of giving my statement on the Corporation's affairs at the Annual General Meeting in preference to sending it out with the Accounts, which were published a month ago.

General Review
You will have seen from your Directors' Report together with the Accounts for the year 1957, that following the decline in the world price of copper the profit of your Company is appreciably less than that recorded in the previous year. As your Chairman rightly pointed out a year ago, the spectacular results for 1955 and 1956 could not be expected to continue. As the prices of your Company's copper and brass products must bear a close relationship to the world price of copper, I consider it desirable to give you a short account of the trends in world copper markets over the last year or so.

From the high peak reached in March 1956 of £436.10, per ton on the L.M.E., the price of Copper fell to £267 per ton at the beginning of 1957. There followed almost immediately a slight improvement, but this was not maintained and thereafter through-out the year the price of copper continued downward until at the close of the year L.M.E. quoted £182 per ton.

The basic reason for this marked decline was over-production and the market throughout the year was struggling against a growing weight of supplies. Certain of the larger producers announced cuts in production, but the slight bullish effect which this produced was quickly discounted on the realisation that the hoped for revival of American business in the autumn of that year could not be realised.

In the year 1958 there has been an upward trend in price, which might be attributed to an improvement in business conditions in America, a strengthening of demand in Europe and the political situation in the Near East. For some time the price has remained fairly steady around £207 per ton. The net indications seem to point to a more stable market in the not too distant future. Meanwhile fluctuations below today's level will not be surprising and even likely, as it is impossible to predict future copper market developments owing to its sensitivity to speculative influences.

During the year 1958 the Indian Government imposed a price and distribution control over the sale of imported copper in India.

Working Review
You will, I am sure, be gratified to see from your Directors' Report that the ore milled amounted to 440,671 short tons and the copper produced at 7,848 long tons constituted another record in the annals of the Company. Furthermore, the ore reserves increased by 426,163 short tons to a total of 3,850,757 short tons at the end of the year, which, of course, adds to the life of the Company.

You will further see from the Directors' Report that the production of rolled products increased. The market for our Flag brand sheets continues to be firm, but we are somewhat apprehensive as to the future in view of the fact that the complementary metal—zinc—must be imported and the import policy of the Government concerning this metal has not yet been announced.

Your Company, over the past few years, has undertaken an extensive prospecting programme throughout the whole of your leasehold property in an endeavour to find new copper lodes to supplement those now approaching exhaustion and with the ultimate object of increasing production.

Our efforts in this direction have so far met with only limited success, but in 1957 the ore obtained from prospecting development has materially assisted towards increasing production as compared with the previous year. Although this increase in production is not spectacular, we have, it will be noted, added appreciably to our ore reserves, which now stand at 3,850,757 short tons as compared to 3,424,594 short tons at the end of the previous year. At Mosaboni—the main producing mine—we are now working at a depth approaching 3,000 feet from the surface and provided the ore persists, the working depth will progressively increase. I mention this to illustrate

that even to maintain production numerous technical problems of considerable magnitude have to be overcome and the prospect of increasing costs for the extraction of the copper ore must be faced.

In January 1957 a tripartite agreement was signed by the Management on the one hand and the Mines and Works Unions on the other, whereby it was affirmed that the terms will be binding on all the parties for a period of three years. By virtue of that agreement there appeared to be every prospect that the Management and the recognised Unions representing the Mines and Works would have been able to carry on in a spirit of mutual harmony and goodwill for at least that period. Unfortunately, peace was disrupted by a fresh outbreak of restiveness on the part of employees of our Mouthandar Works, due to the sudden emergence of an outside unregistered and unrecognised labour union who promised fulfilment of new demands in direct opposition to the three year agreement. The result of this intrusion has created a split between the workmen at Mouthandar and resulted in a number of strikes of short duration during the year. Fortunately these did not have any appreciable effect on production.

Your Company has not been alone in the spread of industrial unrest caused by the infiltration of similar unrecognised unions in other large industrial concerns in Bihar and Bengal.

As you are aware, the copper produced by the Corporation is fire-refined, containing a comparatively high nickel content making it unsuitable for industries requiring copper for electrical purposes. The Company has had under consideration for some time, in consultation with their technical consultants, a project to manufacture electrolytic copper. There is an increasing demand for copper of this grade in India which, at present, has to be imported from abroad, involving high foreign exchange expenditure. Last year the Company was granted a licence by the Government of India for the manufacture of electrolytic copper, and our proposals have now been submitted to Government for a refinery at Ghatsila with a capacity for 8,400 tons of electrolytic copper and wire bar programmed for completion by 1961.

Kyanite
The production and despatch of kyanite mined at your Kharswan property were fully maintained and the price at £23 per ton F.O.B. Calcutta remained steady throughout the year. The main markets abroad continued to be the European Continent, including the U.K., with limited quantities to the U.S.A. and Australia. Kyanite again enjoyed a free export market with total exports throughout the year increased by 955 tons over the previous year to 17,399 tons. I have nothing further to report on the two civil suits concerning the Kyanite Lease decreed in the Company's favour in the Subordinate Judges Court during 1956, which are still pending under appeal in the Patna High Court.

Every endeavour is being made to increase exports by finding new markets, as, for some time now there has been considerable buying resistance from abroad for this ore due largely to the manufacture of indigenous synthetic substitutes necessitated by the high landed cost of Indian Kyanite.

Accounts
I shall now turn to the Accounts which disclose that the profit, before providing for taxation, depreciation and reserves, amounts to £1,123,749.

Depreciation at £175,000, the same as the previous year, has been provided in view of the large capital expenditure required for prospecting and maintaining production. You will observe from the Balance Sheet that the addition to fixed assets during 1957 was £305,330.

Your Directors have transferred £175,000 to General Reserve.

The decrease in the provision for taxation, however, coupled with the reduced charge for dividend tax and the absence of any charge similar to the additional taxation on the Bonus Share issue in the previous year has largely offset the decrease in profits and the net disposable surplus is lower by only £22,045.

Staff
On behalf of you all I extend our thanks to the General Manager, Mr. N. A. B. Hill, to the Staff both at the Mines and at the Works, and to all workers for the excellent services they have rendered to the Corporation throughout the year.

Money

THE CALCUTTA MONEY MARKET

CALL RATE INCREASES

Wednesday, 24th September.

THERE has been a further slight fall in the total of advances outstanding in the Calcutta money market. Three of the main sources of demand, cotton mills, the jute industry and the sugar industry, are all showing slight falls; others remain at about the same level. Conditions have become somewhat tighter in the interbank market during the past week and the call rate has moved up from 2½ percent to 3 percent.

The pattern of the exchange market has been very much the same as in the past few weeks. A fair quantity of bills has come to hand, most of which have been on account of tea shipments. Remittance has continued poor. Sterling has moved up sharply against the twin dollars and all leading Continental currencies following the announcement that certain restrictions against the import of goods from the dollar area into the United Kingdom, were to be removed.

SILVER WAS STEADY ON RENEWED BULL SUPPORT. The price has advanced from the previous week's level of Rs. 183.50 to Rs. 185, quoted for ready delivery and the rate for forward was quoted at Rs. 184.50. The London and New York silver prices remained unchanged at 76½d and 88½ cents, respectively.

In sympathy with a rise in silver, gold was steady but the price was the same at Rs. 109.50. The sovereign at Rs. 71.25 showed little change.

DURING THE WEEK ENDED 19TH SEPTEMBER, Government of India Treasury bills for Rs. 89,50,00,000 were sold in favour of the Reserve Bank.

Tenders for Rs. 2 crores of 91 days' Government of India Treasury bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on 29th September. Successful tenderers should make payment on 3rd October. Other conditions will be as usual.

THERE WAS A DECLINE OF Rs. 12.72 CRORES TO Rs. 1,529.73 crores in active notes, according to the return of the Reserve Bank of India during the week ended 19th September. The total note issue rose by Rs. 1.40 crores to Rs. 1,555.34 crores. Notes held in the Banking Department consequently increased by Rs. 14.12 crores to Rs. 25.61 crores. Deposits of the Central Government were Rs. 7.35 crores lower at Rs. 53.18 crores, while other Government accounts rose by Rs. 9.33 crores to Rs. 20.33 crores. Balances of commercial banks at Rs. 98.18 crores showed a rise of Rs. 6.02 crores. Balances held abroad by the Reserve Bank improved by Rs. 63 lakhs to Rs. 15.31 crores. Other proved by Rs. 63 lakhs to Rs. 15.31 crores. Other loans and advances increased from Rs. 56.54 crores to Rs. 54.69 crores, of which advances to scheduled banks against usance bills amounted to Rs. 3.43 crores against Rs. 1.71 crores. Investments were slightly lower at Rs. 301.07 crores. Ways and means advances stood at Rs. 13.08 crores (Rs. 17.44 crores).

THE RETURN OF THE STATE BANK OF INDIA FOR the week ended 12th September, 1958, shows a rise of Rs. 5.59 crores to Rs. 438.83 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 8.06 crores and Rs. 5 lakhs to Rs. 234.12 crores and Rs. 11.11 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounting, cash advances have increased by Rs. 17 crores to Rs. 185.13 crores. Cash and balances are, in consequence, shown at Rs. 40.72 crores or Rs. 58 lakhs higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 12th September, 1958, shows Demand and Time liabilities at Rs. 755.76 crores (Rs. 26.49 crores on account of borrowings from banks) and Rs. 845.93 crores (Rs. 36.77 crores), compared with Rs. 743.56 crores (Rs. 27.85 crores) and Rs. 850.30 crores (Rs. 37.10 crores), respectively, in the previous week. Cash has increased by Rs. 2.44 crores to Rs. 39.92 crores, created by Rs. 7.56 crores to Rs. 86.37 crores. There is a rise of Rs. 6.58 crores to Rs. 584.59 crores in while balances with the Reserve Bank have decreased total investments. Advances and bills discounted at Rs. 851.25 crores show a decline of Rs. 3.86 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8 percent and 54.2 percent and 8.2 percent and 53.7 percent.

PRICES ADVANCE ON LONDON STOCK MARKET

RISE IN GILT-EDGED AND INDUSTRIALS

London, 24th September.

THE past week was eventful for the London stock market. With sentiment helped by many factors, buyers were out with the result that prices advanced over a broad front. Prices improved in spite of the uncertainties centred on the Far East, although this factor was viewed with some concern towards the week-end. The remarkable buoyancy of Wall Street was a stimulating influence while locally, there was increasing optimism on a possible fresh cut in Bank rate. In this direction, a major move was initiated during the middle of the past week when hire-purchase restrictions were eased and this helped increase the demand for hire-purchase shares. Industrial equities were the centre of attraction and some substantial gains were recorded. In the case of dollar stocks, prices improved although towards the week-end some hesitancy developed. Gilt-edged securities rose under investment demand although best prices were not held. In the foreign bond section, the feature was the strong upward

movement of Peruvian issues following some professional buying. Greek bonds improved while rails were neglected. The outstanding spot in the mining section was the sharp break in tins following the sensational decision by the buffer pool manager of the Tin Council to withdraw his support for the metal prices which caused dealings to be suspended. However, there was an equally smart recovery in share prices, when the metal price rallied following U.S. buying. Gold shares, which looked quite promising at the beginning of the past week, had fallen away. The new U.S. and South African investment issues made a dull start and lost up to two points since dealings began. Platinum shares were depressed following a decline in the metal price. Coppers ruled inactive throughout the past week. Oil shares fluctuated and generally showed an irregular tendency. Rubbers tended to improve while teas were steady.

The Money Market

In the London money market last week, the ebb and flow of funds between the revenue department and the banks resulted in a net outflow of resources from the market, and stringent credit conditions were recorded for most part of the week. Money was in keen demand with 3½ percent paid for fresh overnight accommodation during the most acute phases with 3½ percent the general rate. With banks unable to provide the necessary funds for the market's acquisition of bills, the authorities stepped in and bridged the gap. Business in bills was restricted by the cash position with 3½ percent being quoted for December and not maturities. There was a sharper fall in the Treasury bill rate at last Friday's tender to £3 11s 9.20d percent. In view of the popularity of these bills, the market raised the main bid sharply and it was expected that a further fall might occur at next Friday's tender.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 17th September shows that the gold stock fell by \$113 million to \$20,899 million. Foreign deposits were \$26 million lower at \$356 million, while foreign investments rose by \$8 million to \$3,426 million. The Federal Reserve sold \$166 million worth of bills making the total holdings of Government securities \$24,915 million. Total discounts and advances declined by \$257 million to \$207 million while the aggregate excess reserves of member banks rose by \$188 million to \$531 million. The daily average excess reserves of member banks were \$8 million higher at \$687 million, while their daily average borrowings rose by \$49 million to \$563 million. Business loans of the New York city banks improved by \$202 million to \$10,797 million compared with a rise of \$105 million to \$12,038 million in the corresponding week of last year. Gold certificates on hand and dues from the U.S. Treasury were \$114 million lower at \$19,432 million. Federal Reserve notes in actual circulation were \$55 million lower at \$26,951 million. The deposit member banks reserve account was \$276 million higher at \$18,447 million.

Activity on Wall Street

Foreign dollar bonds were mixed in light trading. German Nationals were steady to a shade higher, while among the Italian issues, the Republic 3 percents gave up a dollar. Amsterdam 5½ percents declined by more than a dollar to a new low for the year. Norwegian issues showed little price variations with Denmarks and Serbs largely neglected. Chile 3 percents were firm, moving up more than a dollar to a new 1958 high. Long-term U.S. Government obligations fluctuated in sluggish dealings but top grade corporate issues displayed a firm undertone. However, activity in the latter section was at a much slower pace as traders awaited the outcome of the new \$200-million Standard Oil of Indiana debentures, which were placed on the market on Thursday last and was a quick success. Speculative rail lines generally improved with some issues having improved by more than a dollar. Convertibles worked substantially higher in line with the soaring stock market, but backed away when securities faltered.

Rise in Rubber

A hardening trend in the rubber market during the past week reflected a gradual advance in Singapore. Although trading was moderately active, the market was occasionally quiet for the most part with interest largely centred on covering against recent sales of low-grade sheet rubber. The advance was kept in check by surplus offers of early shipment parcels of No. 1 R.S.S. A Polish order and a South American enquiry contributed to the steadiness although no follow-up support was reported on Polish account. Towards the close, a further advance occurred but there was insufficient demand to sustain it fully. A trader said that the quiet tone latterly showed not so much a decline as a partial consolidation of the gradual advance. Prices recorded an advance of 4d a lb on the week. The sole crepe market remained dull with sellers quoting on the slightly lower basis of 29½d a lb for 4in. smooth No. 1 on the spot, but showing willingness to consider bids at a little less.

U.S. Import Quotas for Lead and Zinc

There is a definite possibility that the U.S. Administration will clamp import quotas on lead and zinc, a Government official has recently said. But he adds that the final decision will be the President's. The official has said that the inter-departmental trade policy committee has agreed on recommendations to the President but he has not said whether these recommendations include quotas. The imposition of the quotas will mark the first U.S. use of this import restriction on non-agricultural products, with the exception of voluntary quotas for foreign oil.

Stocks and Shares

BULLS REMAIN IN FULL CONTROL OF SPECULATIVE PRICES

JUTES FORGE AHEAD: COALS IMPROVE

Wednesday Evening.

THE buying spree in the Calcutta share market reached its peak on Saturday last, when Indian Irons touched a new high of Rs. 26.13. At that point, most of the large bulls decided to take their profits and the shares steadily receded to Rs. 25.66. It was not long before the bulls returned to the market, however, and tonight's closing quotation was steady at Rs. 26.02.

The event of the week was the speech made by the chairman of the Tata Iron & Steel Co., at the annual general meeting held on Thursday last. It was received with general enthusiasm and Tata Iron & Steel ordinary shares touched a new high of Rs. 188.50 in kerb dealings. The Calcutta market is now anxiously awaiting an announcement from Delhi about steel retention prices. It is rumoured that the increase might be anything between Rs. 54 and Rs. 63 a ton. Once this announcement is made, it is believed that the annual general meeting of the Indian Iron & Steel Co. will follow soon after.

The market is still displaying remarkable resiliency and it looks as if the traditional pre-puja quietness may fail to develop this year. Jute shares have continued to forge ahead and some of the buying has been on investment account. Yesterday, the Investment Committee of the Life Insurance Corporation held its first meeting since the announcement of its new policy, and it is reported that some offers of approved securities made by Calcutta and Bombay brokers have been accepted.

There were no startling developments in the gilt-edged market during the period under review, but prices on the whole were slightly steadier than last week. It is believed that the L.I.C. decided on some large purchases of State loans at the meeting held yesterday. Three percent Conversion Loan 1986 recovered from Rs. 74 to Rs. 74.10.

There was a keen enquiry for selected jute preference shares and prices improved, in some cases by two to three rupees.

In the banking section, both Punjab National and United Commercial were steady at Rs. 65 and Rs. 69, respectively.

In railway, Dehri-Rohtas changed hands freely at around Rs. 11.85.

Cotton textiles were dull and neglected. The Government's decision in the Lok Sabha yesterday to permit the export of 200,000 tons of metallurgical coal was well received and coal shares met with keen enquiry. Bengal rose from Rs. 280 to Rs. 290 and Equitable were wanted at Rs. 23.75. Amalgamated rose from Rs. 20.75 to Rs. 21.50 and there were buyers of Pench Valley at Rs. 24.50. Katras Jheriah were enquired for at Rs. 70 (Rs. 5 above the previous quotation) but sellers were scarce.

Jute shares moved from strength to strength, as will be seen from the following table:

	Opening 18th Sept., 1958	Closing 24th Sept., 1958
Anglo-India	193	200
Auckland	118	137
Howrah	19.87	21
Chitavalasah	15.75	16.25
India	166	168
Megna	155	157
Union	180	182
Kamarhatti	141	150

Good business was done in Calcutta Electric at around Rs. 15.12. There were buyers of Agra at Rs. 142, Benares at Rs. 14.37, and U.P. at Rs. 143, but sellers were scarce.

Little interest was shown in sugar shares, and in paper, Sirpur were steady at Rs. 13.75. Orient, on the other hand, were slightly easier at Rs. 34.60 while Titagur were unchanged at around Rs. 42.25.

In shipping, India Steamship were easier at Rs. 13.94, but India General Navigation moved up smartly from Rs. 57 to Rs. 60.

In cement, Sone Valley were at one time done up to Rs. 6.25, but reacted at the close to Rs. 6.06.

In the engineering group, Jessops were out-standing at Rs. 24. Braithwaite were easier at Rs. 31.37 and Burn & Co. were steady at Rs. 382. Textile Machinery changed hands freely and were steady at around Rs. 23.10. Guest, Keen, Williams were steady today at Rs. 31.50.

Among miscellaneous industrials, Angelo Brothers were easier at Rs. 21.25 as were Britannia Biscuits at Rs. 15. Clive Row Investment were steady at Rs. 9.12 ex-dividend as were Dunlop Rubber at Rs. 28.25. Hindustan Aluminium were wanted at Rs. 8.06 while Indian Aluminium recovered softer at Rs. 16.12. Imperial Tobacco recovered from Rs. 12.37 to Rs. 12.62. Indian Oxygen were easier at Rs. 29.50 while Indian Oxygen were well steady at Rs. 20.06. Jardine Henderson were maintained at Rs. 82 as were Metal Box at Rs. 30.25. National Carbon met with good enquiry and rose from Rs. 27 to 28.25. Philips India were better at Rs. 15 and Shaw Wallace were wanted at Rs. 14.

In the mining group, Indian Copper were weak at Rs. 3.80 and Karanpura Development were better at Rs. 14.50. Orissa Minerals were unchanged at Rs. 27.62.

Except for a few scattered enquiries, tea shares were, on the whole, dull and neglected.

THE UNION JUTE COMPANY HAS EARNED A PROFIT of Rs. 35.29 lakhs for the year ended last March. Depreciation absorbs Rs. 4.92 lakhs (Rs. 3.11 lakhs). Other notable allocations include tax contingency Rs. 2 lakhs, development rebate reserve Rs. 1 lakh, jute stock reserve Rs. 1 lakh, stores reserve Rs. 2 lakhs and general reserve Rs. 4 lakhs. Bringing in a loss of Rs. 13.51,940, there is a balance of Rs. 6,38,627. An ordinary dividend of Rs. 15 a share has been declared, leaving a carry-forward of Rs. 58,837.

The directors state that the Union South mill was closed down on 22nd June, 1957. By working treble-shift in the mill and double-shift in the factory, it has proved possible, with the purchase of certain additional modern machinery to absorb the South Mill's loom hours at the Union North mill. The objective of combining the two small units, one of which was steam-driven and non-modernised, into one economic-sized and fully modernised unit has thus been successfully achieved.

They further add that the main redeeming feature concerning future prospects is the increased availability and quality of raw jute in India, and a stage has been reached whereby approximately 90 percent of the needs of the mills are now available from sources within the Union. Reports of the current jute crop are most satisfactory and the directors feel that, unless something untoward happens, virtual self-sufficiency in long jute should be achieved this year.

THE PROFIT OF THE HASTINGS (JUTE) MILL HAS increased by Rs. 3.34 lakhs to Rs. 10.44 lakhs for the year ended last March. The ordinary dividend has been maintained at 5 percent. The taxation provision amounts to Rs. 1.25 lakhs (Rs. 6.53 lakhs). The carry-forward is Rs. 3,19,473 against Rs. 3,00,036 brought in.

THE NEW DOOARS TEA COMPANY HAS MADE A PROFIT of Rs. 3.48 lakhs for the year ended last December, of which taxation provision requires Rs. 2.15 lakhs. Bringing in Rs. 1,98,116 and making other adjustments, there is Rs. 3,80,697. An ordinary dividend of Rs. 20 a share is declared, leaving a balance of Rs. 73,709 to be carried forward. The crop rose from 19,225 maunds to 19,432 maunds, but the average sale price fell from Rs. 2.36 a lb to Rs. 1.94 a lb. Estimates for 1958 provide for a crop of 19,000 maunds at a cost of Rs. 24.68 lakhs.

PROVIDING Rs. 25,169 FOR DEPRECIATION, THE profit of the Union Coal Company has amounted to Rs. 1.38 lakhs for the year ended last December. A dividend of 6 annas a share has been declared, leaving a carry-forward of Rs. 1,77,952. Raisings increased from 75,546 tons to 83,604 tons and despatches rose from 69,728 tons to 81,964 tons.

THE NEW DOOARS TEA COMPANY HAS MADE A PROFIT of Rs. 3.48 lakhs for the year ended last December, against Rs. 10.70 lakhs. Bringing in Rs. 1,98,116 and making other adjustments, there is a balance of Rs. 3,80,697. The ordinary dividend is lowered from 35 percent to 20 percent, leaving a carry-forward of Rs. 73,709. The crop rose from 19,225 maunds to 19,432 maunds, and the average sale price was lower at Rs. 1.84 a lb against Rs. 2.36 a lb. Estimates for 1958 place the crop at 19,000 maunds at a cost of Rs. 24.68 lakhs.

THE PROFIT OF THE CHOONASHUTTI TEA COMPANY has declined by Rs. 3.44 lakhs to Rs. 4.31 lakhs for the year ended last December. The dividend is cut from 35 percent to 20 percent. Output increased from 13,052 maunds to 14,951 maunds, and the average sale price fell from Rs. 2.40 a lb to Rs. 1.91 a lb. Estimates for 1958 provide for a crop of 14,000 maunds at a cost of Rs. 17.93 lakhs.

Bombay Market

PRICES IMPROVE IN LIMITED TURNOVER

INCREASE IN STEEL RETENTION PRICE EXPECTED

Wednesday Evening.

THE Bombay stock market closed on a firm note. Equity share prices improved all round, although turnover was restricted. The prospect of an increase in the retention price of steel continued to boost sentiment. Reports that a number of companies would issue rights shares in the near future were considered bullish.

Tata Steel improved to Rs. 188.75 and Indian Iron closed higher at Rs. 26.05 on rumours of a free bonus share issue. Tata Locomotive touched a new record high level of Rs. 206.50 on good working re-

FLYING ?

Phone 34-4815

Why not ask for an attractive Expanding Fibre Suitcase—comfortable to carry

BENGAL MERCANTILE CO.
71, CANNING ST., CALCUTTA-1

Fly to London by B.O.A.C. Britannia

and see EUROPE on the way

Take advantage of BOAC's special stop-over facilities en route and break your journey in Europe at no extra air fare. From Rome, for example, you can fly by connecting services to such European centres as Milan, Frankfurt, Zurich, Geneva, Basle, Nice, Paris before continuing your journey to London.

Fly there by BOAC Britannia, the world's largest, fastest, jet-prop airliner. De Luxe First Class or Tourist Class services.

For further details, consult your local Travel Agent or BOAC, 41, Chowringhee (entrance Middleton Street), Calcutta-16. Phone: 44-3671/76.

Remember—it costs no more to fly by BOAC

World leader in air travel

takes good care of you

BRITISH OVERSEAS AIRWAYS CORPORATION

ports. Premier Construction were bought at Rs. 237.50 by knowledgeable quarters and Alcock Ash-down were indicated around Rs. 275. Motor shares were steady on prospects of expansion in activity. Hindustan Motor reacted to Rs. 8.04 at the close on profit-taking and Premier Automobile were taken at Rs. 93.80.

Cotton mill shares were selectively bought, and Bombay Dyeing rose to Rs. 62.20 on suggestions of fresh share issues. Century recovered to Rs. 468.50 on short-covering and Swadeshi were bought at Rs. 198. Simplex came to hand at Rs. 183 and Kohinoor were dealt in at Rs. 285. India United Ordinary were transacted at Rs. 9.92 and Apollo were offered at Rs. 1.64.

There were a number of bright features in the miscellaneous group. Among sugars, Belapur improved to Rs. 319.50 on prospects of a bonus share issue. Phalton were indicated around Rs. 185.50. In the mining group, Shivrajpur Syndicate were taken higher at Rs. 94.50 on hopes of a bonus share issue. Steamship company shares were firm, and Scindia Steam were bought at Rs. 22.16. Great Eastern Shipping were transacted at Rs. 27. Cement shares were steady and Associated Cement were maintained at Rs. 162.50. Digvijay Cement were taken at Rs. 151. Bombay Burmah recovered to Rs. 514 on short-covering, as it was believed that the company's application for the issue of a bonus share has been sanctioned. Tata Chemical were steady at Rs. 17.96 and National Rayon improved to Rs. 245.75. Gwalior Rayon were higher at Rs. 14.56.

There was scattered investment interest in bank and insurance shares. United Commercial Bank were transacted at Rs. 67.50 and Central Bank changed hands at Rs. 58.30. New India Assurance were done at Rs. 47 and British India General were dealt in at Rs. 15.72.

Minor gains were seen in electric supply company shares. Ahmedabad Electric were done at the higher price of Rs. 98.50 and Bombay Suburban Electric came to hand at Rs. 113. Tata Hydro were taken at Rs. 122.

New Delhi

GOVERNMENT DEFENDS THE PLAN IN LOK SABHA

UNCERTAINTY ABOUT EXTERNAL FINANCE FOR SECOND STATE OIL REFINERY

(FROM OUR NEW DELHI CORRESPONDENT)

THE Lok Sabha last week began its debate on the re-phased second five year plan. The fact that both the Prime Minister, who is also the chairman of the Planning Commission, and the Finance Minister were absent detracted from its importance. The debate was opened by the Planning Minister, Mr. Gulzarilal Nanda. He got into difficulties by trying to maintain that the plan was not over-ambitious. "I personally believe that the pattern that has been incorporated in the plan is the very minimum because if we do not do that much, the consequences will not be very pleasant", Mr. Nanda added.

It may be added that in the original plan of Rs. 4,800 crores, external assistance was placed at Rs. 800 crores, deficit financing at Rs. 1,200 crores and the gap left uncovered was Rs. 400 crores. The Planning Commission has retained deficit financing at the original level but has raised its anticipations of external aid from Rs. 800 crores to Rs. 1,038 crores. This, added to a carry-over of Rs. 132 crores from the first plan, gives a total of Rs. 1,170 crores for external aid. It very nearly wipes out the uncovered deficit of Rs. 400 crores. The failure to implement the plan, therefore, should be the sole responsibility of the Central and State Governments, more particularly the latter for their inability to raise internal resources.

Mr. Nanda, after indulging in the well-known platitudes about small savings and "the duty of everyone to pay his taxes", referred to the economies in expenditure. He cited the case of construction costs and said that "we have about Rs. 1,000 crores for construction in the course of the second five year plan. My own assessment, or at any rate this is the advice that is being given by competent people, is that 20 percent can easily be saved under that head." Questions such as these arise. Firstly, who is standing between Mr. Nanda and the saving of Rs. 200 crores in construction costs? Certainly not those who are called upon to pay their taxes. Secondly, what is the Production Ministry's contribution to raising construction costs? It was pointed out, for example, by the official spokesman in the Lok Sabha what while the offtake of cement by the Government in the current year has gone down, the total expenditure on cement has gone up largely on account of higher wages. It was, however, refreshing to hear Mr. Nanda on the topic of productivity. This is what he said: "Then there is the level of productivity, which is very important, particularly in relation to our foreign exchange resources. It is important for our internal resources, certainly. A new for our awareness is required now. Since we are piling up debts, it calls for much greater effort here in this country to see that the cost per unit goes down so that we can compete with other countries, so that we can supply ourselves with the wherewithal to meet the various obligations that are being created. Agricultural yield that. We must have great deal; everyone knows that. We must have good performance, as compared with average performance, because we have to do what is done in other countries in similar conditions in the matter of industrial production.

"Now we are being told that productivity is low in this country and for that labour who has I must very quickly disabuse anybody who has that impression, that kind of wrong belief. In this country, as far as I have been able to gather from whatever statistics are available, judging from whatever statistics are available, the increased from the situation I can say that the increased costs are not in any way traceable to lack of effort on the part of labour so far. It is also not true that productivity has lagged behind real wages; it is not so. But it is also true that very much more is possible for labour to do, because the level at which things stand will not enable the working classes to have more wages and more welfare. They will have to put in much greater effort, and that will help in creating surpluses in the economy and also in dealing with the problem of foreign exchange resources."

Yet Mr. Nanda has no yardstick to measure the productivity of labour, whether it has gone up or down since 15th August, 1947. What he says is mere guesswork.

Mr. Masani's Criticism

Mr. M. R. Masani stole the show. He made the best and most realistic speech of the day. He said that just as every human body needed time for rest to recuperate after going through a violent exertion or after a surgical operation, so did the economy. "You cannot flog the horse all the time. You cannot make the army march all the time. You have got to give our people, who have been made breathless with the advance of the second plan, a little time to relax and to enjoy the fruits of what they have already invested or saved." Consolidation was the keynote of Mr. Masani's speech.

As already reported, the re-phased plan will need Rs. 4,650 crores or Rs. 150 crores more than indicated by the Planning Commission in May

last. The break-down of projects for which the outlay has had to be raised by Rs. 91.33 crores is as follows:

		(Rs. crores)		
(1)	(2)	(3)		
Project	Revised plan provision originally suggested (Break-up of Rs. 790 Ministries crores).	Provision now proposed on the basis of discussions with the Rs. 790 Ministries	Increase of (3) over (2)

indications, the Assam refinery will be completed by early 1961.

It is estimated that the rupee expenditure of Rs. 4 crores for the Assam refinery will be spent in two years—Rs. 1 crore during the current financial year and Rs. 3 crores in the next financial year. Machinery and equipment for the refineries will be procured from abroad on a long-term credit basis. Negotiations for this purpose are in progress. Pending complete examination of the consultants' reports, it is, however, not possible to give the estimated cost.

Rupee Expenditure

The probable rupee expenditure of Rs. 4 crores for the refinery to be set up in Assam will be split up between the current and the next financial years. The balance of about Rs. 6.5 crores, representing the element of foreign exchange, will be met from the credit facilities or deferred payment terms that might be offered by Rumania or any other foreign sources. Like most of the State-owned industrial undertakings, the management of both the refineries, it is proposed, will be vested in a private limited company to be called Indian Refineries Private Ltd, which will have a common board of directors. To handle all the technical work relating to the examination of project reports, and enquiries from suppliers of plant and machinery etcetera, a project division is being set up in the Department of Mines and Fuel. This division will consist of an officer on special duty and the Managing Director-designate of the company assisted by a team of about half a dozen senior and junior technical officers who will be transferred to the company as soon as it is registered. The details of the staff, immediately required, are given below:

Designation of the post	Number of hands	Scale of pay Rs.
1. Managing Director	1	4,000
2. Officer on Special Duty (General Manager-designate)	1	2,750
3. Chief Civil Engineer	1	2,000=125-2,250
4. Chief Mechanical and Electrical Engineer	1	-do-
5. Chief Process Engineer	1	-do-
6. Plant Manager (Lubricating Oil)	1	-do-

The whole scheme, as will be seen, is based on assumptions. Finances are available for Oil India Limited, and for the first section of the pipeline

from the oilfields to the small Rumanian-aided refinery in Assam, thanks to the accommodation provided by the Assam Oil Company. It is presumed that the Assam Oil Company will also finance the second section of the pipeline connecting the bigger refinery in Bihar, although the company, in its agreement with the Government, has made it clear that it has no such obligations. But if the company does not do it, it is not yet certain who else will.

The U.S. and British interests who were approached have declined to finance the project. In a Press report, regarded as a "calculated leakage", it was stated that the Minister for Oil would go to Rumania via Moscow in order to negotiate for finance for the second refinery. The British firm, Headwrightson's decision against financial participation in the second refinery project, shows that the British interests have not been perturbed by the likely communist aid to India's oil industry. It matters little if the second refinery is also installed and operated with communist assistance after India's decision to have communist collaboration in one of the refineries in an area which is practically next door to the troubled Nagaland. In other words, the finances for the second refinery are uncertain. It appears to have become a familiar policy of this country to start projects on the

Men and Oil . . .

THE GEOLOGIST

Geologists are people whose main business in life is to know rocks, to work and live among them. In the oil industry they look for certain types of rocks that hold oil.

In 1865, a Government geologist was sent to the coal areas of Assam. He reported the presence of several oil shows south of the Dihing river and advised testing, by experimental boring, those near Makum. A well was drilled there in 1867, followed by more wells at Makum and Jaipur. Several of these wells yielded a little oil but went dry in a

short time. But in 1889 the first well at Digboi was drilled and the Assam Oil industry was born.

Geologists still play an important role in the Assam Oil industry. They decide the new locations, examine the rock cuttings during drilling and guide the industry in its search for more oil.

At present, the Geological Department of the Assam Oil Company is manned entirely by a number of well qualified and highly experienced Indian geologists.

assumption that some friendly foreign country will eventually come to her aid. The policy may not work in the case of the second oil refinery.

Refinance Corporation Capital

The issued capital of the Refinance Corporation for Industry Private Ltd is Rs. 12.5 crores, divided into 1,250 shares of Rs. 1 lakh each, of which 20 percent has been called. The value of shares allotted to the participating institutions is as follows:

Name of institution	Value of shares Rs. crores
1. Reserve Bank of India	5
2. Life Insurance Corporation	2.50
3. State Bank of India	2.30
4. Central Bank of India	0.25
5. Punjab National Bank	0.25
6. Bank of India	0.22
7. Bank of Baroda	0.22
8. National Overseas and Grindlays Bank	0.22
9. United Commercial Bank	0.22
10. Lloyds Bank	0.20
11. Allahabad Bank	0.20
12. Chartered Bank	0.20
13. Indian Bank	0.20
14. United Bank of India	0.20
15. Mercantile Bank	0.10
16. Devkaran Nanjee Banking Company	0.10
17. State Bank of Hyderabad	0.10

Order for Ships

The Government-owned Western Shipping Corporation Private Ltd, Bombay, has placed an order for one tanker with the Harima Shipbuilding Yard in Japan. The Scindia Steam Navigation Company Ltd, Bombay has also recently finalised the contract for placing an order for a cargo ship on a Japanese shipbuilding yard. The total tonnage of these two ships will be about 14,500 g.r.t. In addition, it is possible that orders for two or three more ships will be placed in Japan.

Transport Co-operative Societies

The scheme to set up transport co-operative societies has been finalised. To start with, it is proposed to introduce a pilot scheme in five States, namely, West Bengal, Bombay, Kerala, Madras and Delhi, under which five co-operative societies, each owning ten vehicles, will operate on intra-State as well as inter-State routes. The actual routes will be selected by the State Governments concerned. The membership of these co-operative societies will be restricted to workers like drivers, mechanics, booking clerks, depot managers, etcetera, who will be recruited from among the educated unemployed, the minimum educational qualification being matriculation. Each society will have 50 members, each member contributing Rs. 1,000 towards the capital of the society. There will be a board of directors headed by the Transport Commissioner of the State concerned, with the Registrar of Co-operative Societies and the officer-in-charge of the Employment Directorate as members. Two more members of the board may be selected from among the members of society. The selection will be made by the board, which will give preference to those who already know driving possess experience of operating goods transport services or are qualified mechanics. Each member of the society will be given the same wages, and the training will be so arranged that any member will be able to perform the duties of any other member.

Paper Price Enquiry

The question of determining the fair ex-works prices and selling prices for different varieties of paper manufactured in India has been referred to the Tariff Commission by the Government of India for enquiry. The Commission has also been asked to recommend fair prices to be charged by the wholesalers as well as retailers so that the consumer may get a fair deal. Paper-board is excluded from the terms of reference. The decision to refer the question to the Tariff Commission was taken by the Government after a series of meetings with the representatives of paper manufacturers—the two associations of paper manufacturers, the Indian Paper Mills Association and the Indian Paper Mills Association as well as individual manufacturing units.

The last enquiry into the question of these prices was conducted by the Tariff Commission in 1948. The rates then fixed were in force until the withdrawal of control on the price of paper in July 1950. There has, however, been an informal understanding with the industry that it will not raise the price of paper without first informing the Government. Recently, the manufacturers increased the prices of writing paper by 3.5p a lb to 83.5p a lb. The prices of other varieties are related to the prices of writing paper. When it was pointed out to the representatives of the industry that the prices charged until 1st April, 1958, covered recent increases in the cost of raw materials, labour wages and other elements in the cost of production, they maintained that the increases in the cost of production made it necessary for them to raise the prices from that date. Since the last Tariff Board enquiry in 1948, the production of paper in India has increased by 100 percent. In 1957, it was 210,125 tons. Fifteen schemes for setting up new units and several schemes for the expansion of existing concerns have also been sanctioned and are in various stages of execution.

Cost Structure of Sugar Industry

The Government of India has requested the Tariff Commission to make a fresh examination of the cost structure of sugar manufactured in India and submit a report on the fair price payable to the sugar industry. In its report on protection to the sugar industry, the former Tariff Board recommended the preparation of a new schedule for

working out the cost of production. A schedule was accordingly prepared by an expert committee. This was further examined by another committee which suggested amendments to the schedule. The second committee also suggested that a fresh schedule should be prepared on the basis of recent data and the amended schedule should be used in the meantime. The sugar industry has represented that the manufacturing expenses allowed under the schedule prepared by the first committee, even after the additions suggested by the second, do not fully cover the increases in the cost which have been allowed during the past few years. The industry has also represented that the allowances provided for rehabilitation charges and profits are inadequate. On the other hand, the representatives of sugarcane growers have a feeling that the costs provided for in the schedule are on the high side. The Government is, therefore, of the view that a fresh examination of the cost structure of the sugar industry is necessary. The Tariff Commission has been requested to conduct the necessary enquiry. It has been asked to submit a preliminary report within three months on the allowances for rehabilitation charges and profits, and thereafter a final report covering the other items as early as possible.

Matching Grants to States

The Government of India has written to State Governments to say that it will not sponsor any fresh scheme on a matching basis. The Finance Commission, it will be recalled, has recommended that "for the future, no scheme outside the plan should be formulated on a matching basis. Except to a small marginal extent or when the scheme itself is related to the raising of a specific additional item of fresh revenue such as by the levy of a special tax or cess, there is, in our opinion, no room in present circumstances for matching grants. We think it unwise to encourage States to run into revenue deficits by accepting such schemes as all their resources have already been fully committed."

Important Visitors

The West German Minister of Economic Affairs, Dr. Erhard, will be the guest of the Indian Government for four days, 11th October to 15th October, during which he is expected to visit the Rourkela steel plant under installation with West German assistance. He will be accompanied by German parliamentarians who are coming out on a goodwill mission, visiting also Burma, Thailand, Japan, Korea, Ceylon and Pakistan. The President of the World Bank, Mr. Eugene Black, arrives here on 26th September on his way to Kashmir. He will return to Delhi on 4th October.

Swiss Credit Offer

Switzerland is prepared to offer credit facilities to the tune of 300 million Swiss francs, at the

rate of 100 million Swiss francs a year, it is learned. The facilities, among other things, will include credit for three years. There will thus be no payment for three years, say, until 1st April, 1961, after which the money will be repaid to Swiss banks in annual instalments in three years. India may consider this offer, provided no repayments are to be made until 1964, and thereafter, in yearly instalments for seven years ending 1971.

French Bank Representative

The French Bank, the Comptoir National d'Escompte de Paris has posted its permanent representative in New Delhi. He is M. Telling, who has been in India for some years. The bank, it may be recalled, has been operating in India for nearly 100 years, the first branch being opened in Calcutta in 1860 and the second in Bombay in 1862. The permanent representation of the bank is calculated to promote commercial relations between the two countries.

Concession for Japanese Bank

The Government of India has accorded approval to the Export-Import Bank of Japan, Tokyo, for the purposes of exemption from Indian income tax of the interest payable by any industrial undertaking in India on moneys borrowed, under a loan agreement entered into with this foreign financial institution.

British Delegates to World Bank Meeting

The leaders of the British mercantile community, headed by the president of the Associated Chambers of Commerce, Mr. MacMillan, will be in New Delhi during the week beginning 6th October, when the World Bank and International Monetary Fund will hold their annual meetings. They will, it is expected, meet the British Chancellor of the Exchequer, who will lead the British delegation to the World Bank and Fund meetings.

Manufacture of Tractors

The Ministry of Defence has entered into an agreement with the Japanese firm, Komatsu Manufacturing Company, to manufacture earth-moving equipment, tractors and bulldozers and with the West German firm, Man, to manufacture lorries.

In this connection, reference is necessary to the statement which the Commerce Minister, Mr. Lal Bahadur Shastri, made in Lok Sabha during last week, in the course of which he said that the import policy for tractors in the second half of 1958-59 had not yet been formulated nor was it possible to indicate the number of tractors and bulldozers likely to be imported during 1958-59. Licenses for Rs. 106 lakhs worth of tractors, below 50 d.b. h.p., however have been issued up to 9th August, 1958. It is estimated that about 600 to 650 tractors might be imported.

TEXMACO

serves India's basic industries

Limestone and dolomite from the dusty quarries of Katni, steel and pig iron from the roaring furnaces in Asansol and Jamshedpur, coal from the dark depths of the earth in Bihar... each year, from all over this vast land a stream of materials worth about Rs. 3 crores, pours into our shopping bag. Out flows from Texmaco's production lines another stream, a stream of finished products manufactured to international standards—sugar, cotton and jute mill machinery, rolling stock, industrial and locomotive boilers, hydraulic dam equipment and other steel structures. Thus playing its part in the complex pattern of India's developing economy, Texmaco is linked with a multitude of other enterprises, large and small. As Texmaco grows so too the other industries prosper.

of the defence forces, or the weapons and equipment ordered by the Defence Ministry since this might be prejudicial to national security. But there is no harm in furnishing fuller details of the essential components of expenditure in the defence estimates. Complaints are frequently made that information concerning the purchase of defence equipment is more easily available in some foreign countries than in India. The Estimates Committee expresses the view that "the form of the Defence Service estimates requires to be completely reviewed, so as to show separately expenditure relating to various units, institutions and inter-State service organisations" and that they "should contain more information than at present, consistent with the security of the country."

Control on Public Corporations

The question of Parliamentary control on public corporations is a complex one and has engaged the attention of the Government ever since the Life Insurance Corporation affair. It is difficult to evolve a common or uniform pattern of management for all such corporations, the number of which is increasing. Much depends on the nature of the project and the purpose for which a corporation is set up and the degree of autonomy which is possible to grant it. On the vital issue of its accountability to Parliament, and on the need for its satisfying itself about the soundness of its organisation, hardly any controversy can arise. Though on the extent of Parliament's competence to hold the administrative Ministry responsible for all that an undertaking does, there might arise differences of opinion. About Rs. 500 crores of public funds are expected to be invested in these undertakings in the public sector during the second plan period. The impact of the accomplishments or failures of these undertakings on the economy as a whole is thus likely to be of crucial significance. Parliament is, therefore, justified in being anxious to take into account the activities of these enterprises at Budget time. For this purpose, two things are important. First, as the Estimates Committee has suggested, public undertakings, like Central Ministries, should prepare a statement on performance and a programme for the Budget year which, together with the statement of their working during the previous year, should be presented to Parliament at the time of the annual Budget. It would be more desirable if the Ministry concerned with particular corporations or undertakings prepares a consolidated statement of the results of their working and incorporates it in its annual report. Secondly, the financial year of these undertakings should correspond to that of the Central Government to ensure that their audit and annual reports are available to Parliament simultaneously with the Budget.

With significant developments taking place in the economy, the pattern for the preparation of Budget estimates is also changing. But we are still far away from the ideal when the annual Budgets of the Central and State Governments will not only be a mere résumé of income and expenditure under different heads and a statement of taxation proposals, but will also contain authoritative statements on the principal trends in the economy, such as the pace of production, cost of living, price trends and an assessment of future trends. In other words, the Government must move as quickly as possible towards the stage when Budget estimates will contain a functional and economic classification of its various proposals and schemes.

Financial Autonomy

Due to the persistent demand for the modifications in the Budget-making procedures to facilitate the execution of development schemes, there has recently been some relaxation in the rigid control which the Finance Ministry was exercising over expenditure. The most recent of these is the appointment of internal financial advisers in each of the administrative Ministries. They will assist and advise the latter in the implementation of schemes for which Parliamentary approval is obtained, without constant reference to the Finance Ministry. This "financial autonomy" of the Ministries is subject to two limitations, namely, that they cannot reallocate funds sanctioned for one scheme to another and that the Finance Ministry will still have to be consulted on questions of pay scales, appointment of additional staff, creation of new posts, etcetera. Secondly, there is the revised procedure under which funds appropriated in the Budgets of Central Ministries for extending assistance to State Governments for various schemes under education, health, social services small-scale industries, etcetera, will be channelled to the States in the form of lump-sum advances, after the latter's schemes are scrutinised by the Central Ministry concerned in consultation with the Planning Commission and State Governments, the expenditure actually incurred being adjusted towards the end of the financial year. While providing the "go ahead" signal to State Governments concerning such schemes, the procedure imposes on them the responsibility for formulating new schemes after a careful consideration of the extent of their own commitments and their capacity to implement them.

To what extent these improvements in the financial control will yield dividends in the form of transforming what used to be called, acerbic term, "guesstimates" into realistic indicators of progress in plan and development projects remains to be seen. There is no doubt, however, that the Estimates Committee has made some important recommendations.

Jute

PRICES SLUMP IN BOTH GOODS AND FIBRE MARKETS

Cornacks	101.50	101.25	99.50	99

THE Calcutta jute and goods markets registered severe setbacks last week, and prices in all sections fell rapidly. The reports of good shipments of jute goods during the first half of the current month, which caused a firmness towards the end of last week, were nullified by a strike of crewmen on the launches plying between mills and steamers. This caused a depression to set in, and market sentiment became weak. Overseas buyers continued to stay out, and the response from the Americas was particularly disappointing because over the past few years consumption during August and September has reached a peak during August and September in America during figures. Burlap consumption in America during August was only 67 million yards, the lowest for six years in that particular month; stocks rose to 230 million yards. The current season is normally good for trading. But it is thought that the arrival within the last few weeks of goods bought at higher prices during the recent Middle East crisis, has put an effective brake on any trading tendencies. The goods markets have been influenced to a great extent by the fibre market, which has been very weak throughout the period. Mills have shown less interest than of late, and the possibilities of a bumper crop are having a bearish influence.

A feature of the current jute season has been the lack of any attempt to influence the markets with reports of flood damage to the crop. The opportunity has been there, because many districts have been reported as inundated. But the floods this year were much later than normal, and many of the low-lying areas were harvested before any damage could be done. Consequently, without any of the customary props to lean on, the jute market has slumped to new low levels. Over the past ten years the lowest price during the month of September for Assam Bottoms was Rs. 25 a maund, and at one stage (1951) it was over Rs. 100. Today the price is about Rs. 23 a maund, which is Rs. 7 lower than the price ruling during September in the previous two years. That represents a drop of Rs. 189 a ton, whereas heavy goods prices have only dropped Rs. 110 a ton and Hessians only Rs. 35 a ton from September last. Thus the advantage is in the mills' favour, but prices of heavy goods are still below the minima as laid down by the I.J.M.A. and under the gentleman's agreement in force, members are not at liberty to sell at the current heavy goods prices.

Fibre sellers are going through an anxious time. With little or no interest being displayed by the mills, prices over the past week have slumped by about Rs. 1.50 a maund. Operators are keen for business and the selling pressure for all types of fibre has depressed the market. Although arrivals have been small, fairly large stocks have been built up due to the shortage of business, blocking sellers' money. Interseller covering against higher-priced contracts, mostly constituted the bulk of business reported, mostly for quick shipment. At the current rates, very little interest has been displayed for forward shipment, except by mills, and even this has been limited due to the difficulty in finding a market for manufactures. Most mills appear to be fairly well satisfied with the quality and conditions of imports, except Daissee White. In this category, there seems to have been a considerable drop in standards. The moisture content is not nearly so high as in previous years and general indications point to a good season. This has been one of the principal factors in depressing the market, along with the easy availability of all types of fibre.

THE JUTE MARKETS

Movement in the futures market last week was generally in a downward direction, and rates as given by the East India Jute and Hessian Exchange Ltd., for the period 17th September to 23rd September, were as follows:

	Hessians 40in. 10oz. November	Sacking B Twills November	Raw Jute Upper Assam December
Opening	40.36	96.25	23.82
Highest	40.36	96.30	23.84
Lowest	39.80	96.50	22.70
Closing	39.80	96.50	22.70

Manufactured Goods. Calcutta markets were steady at the opening last Thursday and prices recorded a general increase. September B Twills rose to Rs. 97.60 and 40in. 10oz. Hessians jumped 35p at Rs. 41.55 on account of local covering. The rise was short-lived, however, and on reports of a strike by crews of launches at the port, prices, especially of heavy goods, fell away rapidly. No fresh business was reported from overseas, but the local covering continued to lend support to the hessian section, while the sacking section slumped. Mills showed no interest at the lower levels, and on Saturday, B Twills stood at Rs. 96.80 and Hessians at Rs. 41.60. Over the week-end the heavy goods market weakened and on Monday and Tuesday a drop of nearly Re. 1 was recorded. Speculative covering at low rates arrested the fall, and a slow recovery developed but the general undertone of the market was weak.

about 50 less than during the corresponding week last year. All arrivals found ready buyers, but prices in general were much lower than in the previous week. Quotations at the close were based on Kishenganj jute at Rs. 23 a maund for bottoms.

On Wednesday morning, opening quotations were as follows:

	Landed at Mills—Basis Bottoms Rs. a maund	Rs. a 100 kilos	Shipment
Assam-Northern	23	61.64	Sept.-Oct.

THE FOREIGN JUTE MARKETS

STEADY TREND IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

PRICES for raw jute in Pakistan have ruled unchanged now for two weeks and sellers here have been unable to make any alteration in their quotations. They have been soliciting bids again, which always gives the impression of anxiety to sell, with the possibility of something less being accepted. However, the position appears to be quite firm and there are even some shippers quoting 20s a ton above the E.P.C. rates, especially from those shippers from whom spinners could be sure to receive good quality jute. This sometimes is worth more than a £1 or £2 to spinners who usually supply decent quality yarns to their customers. Mill Firsts are quoted at from £105 a ton. Mill Lightnings from £89, Mill Hearts from £79 and grade Hearts £65, September-October, c.i.f., U.K., or Continent. Dark jute has continued at £94 for crack marks of Daissee-2/3 and £87 for grade, with grade Tossa-2/3 from £104 and four from £94, c.i.f., October-November. Spinners have been buying only small quantities at these rates. There has been little incentive to purchase raw jute due to the small

INDIGENOUSLY MANUFACTURED BY

business that is passing in jute yarns. There may be a big increase in buying operations for carpet yarns. Manufacturers are anticipating many new orders on account of the relaxation in hire-purchase terms, and already there are signs of improvement in trade.

Hessian yarns are very firm on the basis of 14.30d a lb for 8 lbs C.H.W. cops and 15.44d for 8 lbs J.C.H. warp, on spools. Some spinners of the better quality yarns of these spins are refusing to accept further orders for delivery over the next two months, but others can still give delivery within the next two or three weeks. Twist is in steady request at 17.28d a lb for 3 ply 8 lbs, and there are some orders for rove in small lots at £98 10s for 48 lbs and £79 5s for 200 lbs. Dundee goods are firm, but orders are mainly for small lots at unchanged rates. Calcutta goods are very irregular at around 62s 9d for 40in. 100z. Hessians and 46s 9d for 70z., September, 61s 9d and 46s 6d October, and 60s 9d and 45s 9d November-December, with B Twills at 146s 3d, 147s and 147s 6d for the respective positions of shipment, all f.o.b., Calcutta.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian (Tons)	Cloth (Tons)	Total (Tons)
1st to 15th September, 1958	734.0	17,712.1	18,446.1
1st to 15th August, 1958	3,414.4	17,743.1	21,157.5
1st to 15th July, 1958	4,219.6	20,835.5	25,055.1
	Sacking		
1st to 15th September, 1958	18,419.7	459.1	18,878.8
1st to 15th August, 1958	16,143.7	217.3	16,361.0
1st to 15th July, 1958	13,729	1,144.0	14,873.1

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in August was only fair. There seems to have been a slight improvement in piecegoods business at the expense of bag cut-up. U.S. burlap stocks at the end of August increased by 1 million yards. At 230 million yards, 127 million yards were spots and 103 million yards were afloats. Appearing below are two tables which include the August figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

PLANTERS OPTIMISTIC ABOUT THE NEXT COFFEE CROP

RECORD PRODUCTION ACHIEVED DURING CURRENT SEASON

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE coffee planters, whom this correspondent met in Coonoor during the U.P.A.S.I. week, were optimistic about the next season's crop. In their estimate, the 1958-59 crop will exceed 50,000 tons. According to latest figures the current season's production amounted approximately to 44,000 tons. This is the largest crop ever harvested in India. The planters say that for the next few years, the crop will continue to show similar increases. This is because the new plantings of high-yielding strains are becoming matured and the cultural care of the plants, to which the growers have paid much attention, has yielded encouraging results. Coffee plantations generally have an impressive appearance now. Last year, one of the estates belonging to India's largest coffee planting company harvested a record crop of 2,000 lbs an acre against the national average of less than 350 lbs. Some other estates, too, are showing spectacular results and the overall picture is encouraging. It will be no wonder, therefore, if the production of coffee in India reaches the 60,000-ton mark within the next five years.

The production of coffee is thus increasing at a greater pace than could be anticipated. In fact, it has reached a figure which was not expected for another decade. There is at present a considerable surplus over internal consumption, for which a steady export market has to be found. The growers are of the opinion that a larger crop which is now being produced needs a different method of marketing. The present marketing policy was adopted at a time when crops were low and were hardly sufficient for the internal market and when various expedients had to be resorted to in an effort to control prices in the internal market.

Need for Larger Exports

It is necessary to export the maximum amount which India can spare in order to earn the much-needed foreign exchange. Unlike a few years ago, the world market for coffee is at present overloaded with a surplus and consequently, a recession has set in. In a declining market, it is on the basis of quality that the Indian coffee can hold its own. The foreign markets should, therefore, be assured of steady supplies of the superior grades. The chairman of the United Planters Association of Southern India dealt with this point in his address at the recent annual conference of the Association and the Central Minister for Commerce and Industry, who inaugurated it, said in reply that the Government would abide by the recommendations of the expert committee, which was appointed recently, to review the marketing policy of the Coffee Board.

International Agreement

The draft of an international coffee agreement is now being studied by the producing countries. It aims to adjust the supply to demand and to bring about an orderly marketing of the produce in world markets. The world coffee trade has lately been faced with marked fluctuations in prices, accompanied by wide variations in prices which have affected both producers and consumers. A large increase in output results in burdensome surpluses which create serious problems for the economy of producing countries. A period of low price will be followed by one of low production with the consequent danger of inadequate world supplies and high prices which affect the consumer. An international agreement will help obtain the desired stability in the world coffee market.

It has been proposed that the agreement should be effective for an indefinite period and that no country should denounce it until after the first year. The withdrawal of membership should be effective one year after the board of directors has been notified. The agreement should be administered by a board composed of members of signatory countries and the board, during May each year, should estimate the world demand during the ensuing year and fix the retention quota for each country. The retained coffee under the quotas fixed by the board could be used to increase local consumption in producing areas, or meet the deficit in production of any country or of the world market; but this should be done only if demand is greater than had been estimated. For the 1958-59 season, a retention quota of 10 percent of the exportable output has been proposed, and Brazil and Columbia are likely to be assigned an additional retention quota of 30 percent and 5 percent, respectively. It is proposed that the agreement will be effective from 1st October, 1958. India's attitude to this proposed agreement is one of wait and see. The Central Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, said at the U.P.A.S.I. conference that this country's participation will depend on the ultimate benefit to the industry.

Larger Tea Output

South India produced 7.4 million lbs of tea in July 1958, compared with 9.5 million lbs in the same month of last year. This was the first time in the seven months of the year that the region's tea output showed a decline. Heavy rains during the month are stated to have been responsible for the

decline in production in July this year. But the region's production of tea during the first seven months of the year amounted to 95 million lbs compared with 82 million lbs during the same period of last year. In spite of the smaller production in July, the 1958 crop is expected to show an improvement on last year's record output of 144.7 million lbs.

Producers in south India do not share the view that the output might be reduced by a voluntary regulation of crops to meet the challenge posed by competition in the world markets. They are satisfied with the regulation which can be attained through finer plucking. There is a section which opposes any form of regulation since this might raise production costs. The U.P.A.S.I. president thinks that the restriction for the purpose of maintaining prices is at best a negative step.

Fall in Lemongrass Oil Prices

India's lemongrass oil industry is facing the threat of extinction on account of the steeply falling prices for the commodity. A prominent grower in north Travancore, the main centre of production, told this correspondent that present prices are not at all remunerative and quoted certain figures in support of his contention. According to this grower, the cultivator has to invest Rs. 50 to produce 12 bottles of lemongrass oil which now command a price of Rs. 54 in the Cochin market. The Agmark Centre in Cochin has fixed 82 percent to 83 percent of citral content for passing the oil for export. The citral content in lemongrass oil will ordinarily be 75 percent except in the case of oil produced in the Kuruppampady area. After making allowances for the smaller percentage of citral, the grower is paid only Rs. 50 or so. To get 12 quarters of oil, distillation will have to be done 36 times which will need at least six days' continuous work. The growers are, therefore, losing heart and they are switching over to other crops wherever the land is suitable for their cultivation.

The reason for the decline in prices in May was that shippers were generally cautious in making forward commitments, as a result of which the usual buying interest from shippers in Cochin was absent when new crop lemongrass oil came into the market. Overseas buyers took full advantage of this situation and were steadily reducing their quotations. They had a comfortable stock position because they bought heavily during the second half of 1957. The price movement since the beginning of June was rather erratic and selling pressure, especially at lower levels, disappeared. Buyers abroad, on the other hand, showed interest only at lower prices and did not respond whenever prices rose.

Crop Prospects

As a result of the steep decline in prices, the 1958 output is generally expected to be smaller than that of 1957, the year in which the record volume of 1,400 tons was produced. Demand also is likely to be lower because lemongrass oil is reported to have been partly replaced by synthetic substitutes in the manufacture of Vitamin A abroad. There are also reports that China is offering a similar oil on the world markets. The lemongrass oil is most essential for India since it is an important export commodity with annual earnings of over Rs. 1 crore. It is used mainly in the synthesis of Vitamin A and the manufacture of perfumes. The starting of a new factory in India for the manufacture of Vitamin A and other pharmaceutical preparations by Voltas in collaboration with a Swiss firm is likely to open an internal market for the oil.

NEW TEA ESTATE TO BE ESTABLISHED IN NYASALAND

A tea-growing centre is to be established in the northern province of Nyasaland in the Central African Federation. First steps are already being taken by a London and Blantyre (Nyasaland) company, which is clearing 3,200 acres for a tea estate. A report from Salisbury, the federal capital, says that thousands of young trees have been planted in nurseries and will be ready for planting when the ground is cleared. Analysis of soil shows that it will help the growth of tea. It is expected that the first plucking will take place in 1961. The scheme, expected to cost anything up to £200,000, includes the setting up of a factory for processing tea for export.

MR P. E. WARNEFORD RETURNS

The Indian and Far Eastern Manager of Benger Laboratories Limited, Mr. P. E. Warneford, has just returned to India. Mr. Warneford was in England to attend his firm's annual sales conference last month. There he was able to confer with Benger representatives from many of the Commonwealth countries as well as his colleagues from Britain. At the conference, two new Benger discoveries were announced. They are still on the secret list, but Mr. Warneford said on his arrival that "the products are a tremendous advance in their particular field and I hope to be able to obtain licences to allow them to be imported into India early in 1959". The new products are the result of more than five years' work at the Benger Research Laboratories, Holmes Chapel, Cheshire. They will not be marketed in England until later this year. Mr. Warneford will be spending the next two months in India consulting Government officials. He will then travel to Burma, Malaya, Singapore, Hongkong and Thailand before returning to India early next year.

Commodity Markets

WORLD OUTPUT OF VEGETABLE OILS INCREASES

LOWER EXPORTS FROM THE COMMONWEALTH

WORLD production of vegetable oils in 1956-57, according to Vegetable Oils and Oilseeds Committee, was approximately 6 percent greater than in 1955-56 and the heaviest yet recorded. The increased production of oilseeds in 1956-57 was mainly the result of heavier harvests in North America, but larger crops in India and China also contributed. Commonwealth countries again accounted for nearly one-quarter of the world output, but their share of the 1956 world net exports at 29 percent, though only slightly below average, was smaller than in the previous year. Preliminary reports for 1957-58 indicated large harvests of most of the different oilseed crops except cottonseed, copra and linseed. Prices of most vegetable oils and oilseeds fell sharply in the first part of 1957, and in spite of some recovery late in the year were, on average, lower than in 1956.

There was an expansion of 8 percent in world net exports of vegetable oils and oilseeds in 1956, these amounting, in oil equivalent, to some 4.8 million tons. Although world trade has expanded more rapidly than production since 1953, the volume of supplies entering international trade in 1956 still showed a smaller increase compared with prewar years than did production. Larger exports of soyabean and oil from the United States accounted for some five-sixths of the increase in the world in 1956, while heavier shipments from Canada, Nigeria, French West Africa, the Philippines and China made up much of the remainder. Preliminary figures for 1957 indicated a small decline in world trade, lower shipments being made by Ceylon, Nigeria and China.

Commonwealth Exports

Although the total Commonwealth exports in 1956 were about 100,000 tons lower than in 1955, largely due to a decline in Indian shipments, they were still the second heaviest of the postwar period; larger exports of linseed and rapeseed from Canada, groundnuts and coconut oil from Nigeria and South Africa, and coconut oil from Malaya, all helped maintain Commonwealth exports at a high level. The Commonwealth was the net exporter of vegetable oils and oilseeds for the fourth successive year, and although in 1955, it was surplus was somewhat lower than in 1954. During the war and early postwar years, the Commonwealth was a net importer of vegetable oils due to the high level of consumption in the U.K. and to the reduction in shipments from India, which was a reduction in shipments from domestic consumption. In addition due to increased domestic consumption. In more recent years, the lower level of Indian exports has been offset to a considerable extent by increased shipments from Nigeria and the emerging South Africa and Canada as net exporters. With some decline in U.K. net imports in recent years, larger quantities of Commonwealth oilseeds have been made available for shipment to other western European countries, and in 1956 the six countries of the European Economic Community imported 18 percent of their requirements, in oil equivalent, from Commonwealth countries.

The publication, mentioned above, contains in addition to numerous production, trade and price tables, detailed appendices showing for each of the main consuming countries the annual supplies of vegetable oils, production figures for fat, and the margarine and compound oils and fats used in the quantities of the various commodities. A new appendix of these commodities, a new appendix deals with the European common market, and the present import duties of the six countries and the present import duties with those of the United Kingdom and the United States. In addition, there is a summary of the world production of, and trade in, whale oil.

Prominent Position of India

India occupies a prominent position both as a producer and consumer of vegetable oils and oilseeds, and Pakistan and Ceylon also feature often in the review, though not as frequently as India. It is of interest to examine the publication from this point of view and study the progress which has been made, towards achieving the basic purpose of the country's main object in its agricultural development, namely, to achieve self-sufficiency. In spite of the fact that India is probably the Commonwealth's leading producer in this sphere she continues on balance to be a net importer of Government and vegetable oils. The measures of Government to promote oilseed cultivation are of considerable importance in India where the second five year plan aims to increase output of the five main oilseeds to 7.6 million tons by 1960-61; the first oilseeds to 7.6 million tons by 1955-56 and by some 500,000 tons in 1956-57. As the possibilities of expanding the acreage under the proposed increase in it is clear that most of the increase in higher yields, production will have to come from higher yields. The introduction of more efficient crushing machinery is being assisted by an older model, and village ghani replacing an older model, and measures are being taken to extend the crushing of cottonseed. The Indian Coconut Committee has assisted extensive new plantings of selected palms,

the aim being to attain complete self-sufficiency in coconut products by 1960. Export controls in India are intended to ensure sufficient supplies at reasonable prices for internal consumption and to promote the export of oil rather than seed. It is hoped that by 1960-61 annual exports of vegetable oils in terms of seed will total 700,000 tons, of which 500,000 tons will be groundnuts.

The Government of Pakistan has encouraged the expansion of domestic cottonseed production in order to increase the supply of edible oils a head while the establishment of a copra industry in East Bengal has been recommended with a view to reducing the dependence of the local soap industry on imported supplies. In Ceylon, Government approval has been given to an important ten-year coconut replanting programme. Among other Commonwealth countries, official policy is of primary importance only in South Africa where the Oilseeds Control Board is responsible for the marketing of groundnuts and sunflower seed. There exist a number of Government-sponsored research stations in many of the colonial territories, while in certain of them local grain marketing authorities also purchase oilseeds on a small scale.

Production of Groundnuts

The Commonwealth is an important producer of groundnuts accounting, in the quinquennium 1952-53 to 1956-57, for no less than 45 percent of the world output compared with 47 percent in 1938. India remains the leading producer of groundnuts, although the proportion of her crop entering international trade has generally been very small since the war. The Indian groundnut harvest in 1956-57 showed some recovery from the lower level of the previous year and was not greatly below the record crop harvested in 1954-55. Although yields were higher—a 6-percent increase in output being combined with an expansion in acreage of some 3 percent—the 1956-57 harvest did not fulfil its early expectations of being a record crop due to heavy rains in the growing period in many parts of the country. The smaller harvests since 1954-55 have had the effect of restricting exports of groundnut oil to a low level, and it appears that the increase in population and the growing consumption of vegetable oils have absorbed the excess of the last two crops over the average of the preceding five years, leaving little available for export in spite of the urgent need for increased foreign exchange earnings from agricultural exports. The official plans for agriculture place great emphasis on the increased production of groundnuts, and the second five year plan has set a target of 4.7 million tons by 1960-61 for groundnut production, stressing that heavier crops must be achieved by increasing yields an acre rather than by expanding the cultivation of oilseeds at the expense of other foodgrains. In Pakistan, groundnuts have been experimentally cultivated in Rawalpindi with some success.

Restriction on Exports

India, which provided the great bulk of groundnut exports in prewar years, is now only of minor importance, the small quantities of kernels shipped in recent years consisting almost entirely of selected produce for direct consumption in the Indian Government on exports of both kernels and oil in order to ensure adequate supplies for domestic consumption, and the official policy is to prevent the export of crushing nuts, surpluses, if any, being exported in the form of oil. The record oil shipments in 1955 were followed by a sharp contraction in exports in 1956 to less than one-fifth of those in the previous year, the decline being attributable not only to the exhaustion of oil stocks late in 1955 but also to the growing internal demand and the continued rise in prices which followed the lower production in 1955-56. Italy (13,900 tons), the Netherlands (6,900 tons) and Burma (2,300 tons) were the main markets for Indian groundnut oil in 1956. Although the 1956-57 crop showed some increase over that in the previous year, the Indian authorities would absorb the whole of the crop, and consequently, no export quotas for oil were issued in 1957, exports in the first six months of the year being very small, amounting to less than 3,000 tons. In the average prewar season, over a third of the total Indian harvest was sold abroad, mainly in the form of kernels, but the rise in internal demand has been

so great that in 1956, for example, exports represented only 3 percent of the 1955-56 crop.

Increased Output of Cottonseed

The Commonwealth has in recent years accounted for about 15 percent of the world production of cottonseed, the output in the 1956-57 season totalling 2.5 million tons, or a slightly greater proportion than that of the preceding five years. India and Pakistan together usually account for over three-quarters of the total Commonwealth harvest, production in the former country being far more important than in Pakistan. There was a considerable expansion in the 1956 Indian cotton crop following increased plantings and higher yields an acre, and the output was the highest for many years. Indian cottonseed is not yet of great importance commercially as the quantity of cottonseed crushed in India is very small. In Pakistan, there was little change in the size of the 1956-57 crop, which remained large, although below the level of the peak crop of 1952-53.

The greater part of India's cottonseed output is still used as fodder or fuel, in spite of the low consumption of edible oil a head; this is partly attributable to the unsuitability of village mills for cottonseed crushing, while much of the seed has, in any case, a very low oil content. The production of cottonseed in 1955-56 was estimated at only 10,000 tons, but, given suitable crushing capacity, a potential output of over 200,000 tons of oil yearly could be achieved. The second five year plan has fixed a production target for 1960-61 of only 30,000 tons, and this figure, although representing a great improvement over present production largely appears to minimise the contribution which substantial cottonseed oil supplies could make to India's overall needs of edible oil. The quantities processed in modern mills have nevertheless increased significantly since 1948, when only 2,400 tons were crushed, and in 1951 it was estimated that some 50,000 tons of cottonseed were handled by both large and small mills. It has recently been decided to use cottonseed oil to cover about 10 percent of the estimated total requirements of oils used in vanaspati manufacture, although it will probably take several years to accomplish this. Development has been more rapid in Pakistan where the capacity of the crushing industry has been assessed at some 60,000 tons a year.

Lower Production of Sesameseed

India is the second largest producer of sesame seed, and the largest Commonwealth producer; output prior to 1955-56 showed a marked upward trend as increasing areas were brought under cultivation, but both the area and production have been reduced in the last two seasons as the result of poor weather. The second five year plan aims at a production target of 651,000 tons by 1961 through the use of new strains of seed and improved methods of cultivation; little further expansion in the areas cultivated is envisaged. It is officially estimated that in the triennium ended with the 1954-55 season, 77 percent of the Indian crop was crushed for oil, mainly in village ghans, while the bulk of the remaining quantities (the retention for seed being only slightly more than 2 percent of the total crop) was used for direct edible purposes usually in the form of a sweet confection. The use varies greatly between States; in the two major producing areas of Uttar Pradesh and Madras, the proportions used for oil extraction are 35 percent and 95 percent, respectively.

Pakistan, Uganda, Tanganyika and Nigeria are the other main sesameseed producing countries within the Commonwealth. In Pakistan, cultivation is confined chiefly to East Bengal. In most postwar years, the Commonwealth has been a small net importer of sesameseed and oil, the average receipts in 1946-54 amounting to some 1,500 tons, in oil equivalent. In 1955, however, there was an export surplus of some 8,000 tons because of a reduction in U.K. imports of sesame seed, and fair-sized oil exports from India. The further increase in sesameseed in 1956, together with the absence of U.K. imports, engendered a further rise in the export surplus to no less than 15,000 tons in oil equivalent.

Copra Output in Ceylon

The output of copra in Ceylon—the leading Commonwealth copra producer—showed some decline from the record level of production attained in the previous year but still equalled the

Foreign Trade...

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service. With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Foreign Agencies

ENGLAND, U.S.A., AUSTRALIA, CANADA, FRANCE, BELGIUM, HOLLAND, GERMANY, NORWAY, SWEDEN, SWITZERLAND, ITALY, AND JAPAN.

average level of production in 1951-55; drought in the latter part of 1955 and early in 1956 was the major cause of the decline in production. Coconut cultivation in Ceylon is largely in the hands of small landholders, and the area under the crop, estimated at 1.1 million acres, is the largest under any crop, comprising almost one-third of the total cultivated area of some 3.6 million acres. This shows the importance of copra in the economy of Ceylon. Fears have been expressed for some time that an unduly large proportion of the coconut palms is approaching the non-bearing age, and accordingly the Government has approved a ten-year plan which aims at the replanting of 15,000 acres annually. It is the official view that the rehabilitation of coconut growing has not made the same progress as that of tea and rubber. It is hoped, however, through the efforts of the Ceylon Coconut Board and the Coconut Research Institute to improve coconut yields, while great stress is being laid on the development of co-operative agricultural methods and improved methods of cultivation. Preliminary reports of the 1957 output indicated that the production had sharply declined in the face of further drought conditions.

Indian output of milling copra has risen steadily since 1946; high local prices have encouraged increased production and have lent impetus to the planting schemes introduced by the Central Coconut Committee. At present, the deficiency in copra production is estimated at about 40,000 tons, in oil equivalent, but this deficit is expected to increase to about 80,000 tons of oil by 1961, after allowing for the increase in population and a rise in consumption standards. The target for oil production in 1961 under the second five year plan is 210,000 tons of oil, and it is hoped that the short and long-term measures initiated under the plan will lead to self-sufficiency in coconuts for all purposes. Demonstration services for growers are being introduced, and suitable waste land is being brought under cultivation wherever possible. In East Pakistan, where at present a large part of the coconut crop is going to waste due to the lack of facilities for drying coconuts, studies on the possibilities of copra production have recently been undertaken. The Pakistan five year plan provides for the setting up of five copra-drying plants each with a production capacity of 3,000 tons a year.

Rapeseed Production in the Commonwealth

If China is excluded from among the world producers of rapeseed, the Commonwealth at present accounts for nearly two-thirds of the remaining output. Hitherto India and Pakistan have been the only Commonwealth countries producing large quantities of rapeseed, but in 1956 there was also an exceedingly heavy rapeseed crop in Canada. The Indian 1956-57 rapeseed crop showed marked recovery over the small harvest of the previous year, and was a record one; cultivation has shown a general upward trend in postwar years. Output has also tended to rise in Pakistan, where rapeseed is the most important

source of edible oil, but the 1956-57 harvest showed some contraction compared with the previous year. India's second five year plan envisages an output of 1,060,000 tons of rapeseed by 1960-61. But as this level of output was almost attained in 1956-57, this figure is perhaps somewhat low.

Indian Linseed Output Declines

Although linseed acreage in India is more stable than that in Canada, it has shown a downward trend in postwar years, due, in part, to the high level of domestic demand for competitive foodgrains. The sharp reduction in the 1956-57 harvest, however, was mainly attributable to extremely adverse climatic conditions at the growing time, the crop being produced mainly in Madhya Pradesh and Uttar Pradesh. The second five year plan envisages linseed production of 428,000 tons by 1960-61, but the achievements of this aim will necessitate a considerable expansion in yields an acre, as there is little or no additional land available for linseed cultivation. About one-third of the linseed oil consumed in India is for edible purposes, so exports depend largely on the availability of other edible oils and the level of world prices; the heavy exports of linseed oil in 1955 and 1956 were, therefore, somewhat unusual, and in most other postwar years, the proportion of the total crop exported either as seed or oil has been very small, in contrast to before the war when there were normally heavy exports of linseed. Although Indian linseed oil production in 1953-54 was estimated at some 110,000 tons, its use in the paints and varnish industries in 1954, according to the census of manufacturing industries for that year, amounted to only 7,500 tons.

Linseed exports from India have been forbidden since 1952, while oil shipments were lower in 1953 and 1954. But the recovery in 1955 in world prices permitted Indian linseed oil to be sold competitively in the world market, and while exports in 1956 were a good deal lower than the record quantities shipped in 1955, they were over three times greater than the 1950-54 average of 13,800 tons. As in the preceding year, the bulk of the oil was shipped to the United Kingdom with smaller sales to Australia and New Zealand. The decline in world prices of linseed oil in the early part of 1957 led to some decrease in Indian shipments of the oil in 1957, shipments in the first ten months of the year amounting to only 14,200 tons.

Production of Castorseed

India, in addition to being the leading Commonwealth producer of castorseed, is also the world's second largest producer; more than half of the crop is normally grown in Hyderabad. Although there was some decrease in the acreage under castorseed in 1956-57, this was accompanied by a further expansion in output by more than 15 per cent than that in 1955-56. Actual production of castorseed in India is greatly under-estimated by the present system of crop reporting, many returns excluding the cultivation of castorseed which is inter-mixed with other crops. If this is true, then India is the world's largest producer of castorseed, the total output being substantially

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

greater than that of Brazil. The first five year plan made provision for only a relatively minor rise in the output of castorseed, but the production target for 1960-61 of 161,000 tons under the second plan envisages a rather larger increase, although emphasis in the plan is still mainly on edible oils. A substantial part of the castor oil produced in India is exported, the remainder being used for the lubrication of machinery and bullock carts; illumination is an important secondary outlet. Exports of castorseed from India have been banned since 1952, but shipments of castor oil in 1956 were only slightly less than the record amounts exported in the previous year. In January-October 1957, exports totalled 42,800 tons.

SLIGHT RISE IN WHOLESALE PRICE INDEX

THE official wholesale price index (base: year ended March 1953=100) stood at 116.4 during the week ended 6th September, 1958, against 116.3 (revised) for the earlier week. The index was higher by 0.7 percent and 5.8 percent, respectively, when compared with the corresponding week of the previous month and that of last year. The prices of rice in Imphal (+9%), in Cooch Behar (Sadar) (+7%), and in Kotma (+6%), wheat in Bombay (+8%), coconut oil in Calcutta (+5%), barley (+7% each), groundnut oil (+3% each), bajra and chillies (+2% each) and arhar, masur and black pepper (+1% each) showed advances while jowar in Coimbatore (-11%), rice in Nandgarh (-9%), in Trivandrum (-7%), in Nellore (-6%) and in Mathat (-5%), mung in Madras and maize (-7% each), bananas (-8%), wheat in Bahraich (-5%), ragi and eggs (-4% each), fish (-3%), cashewnuts (-2%), and urad, gingelly oil, mustard oil and tea for export (-1% each) witnessed a fall and the index for Food Articles receded by 0.2 percent to 121.1 compared with 121.4 (revised) for the earlier week. The index for Tobacco moved down by 0.2 percent to 88.6 during the week. The index for the Fuel, Power, Light and Lubricants group remained unchanged at the previous week's level of 115.9. The price of castor oil (+1%) witnessed a rise. Higher prices of groundnuts in Cuddalore (+11%), castorseed in Bombay (+7%), raw cotton and copra (+2% each) and raw silk, linseed, rapeseed and cottonseed (+1% each) raised the index for Industrial Raw Materials by 0.9 percent to 118.8 compared with 117.7 for the previous week although the prices of hides in Kanpur (-3%), bamboos (dry) (-7%), lac in Balrampur (-5%), raw jute (-3%), raw skins (-2%) and gingellyseed (-1%) showed a fall. The index for Intermediate Products advanced by 0.4 percent to 111.4 compared with 111.0 for the previous week due to a rise in the prices of linseed oil (+2%) and rayon yarn and zinc (+1% each). The prices of Brass (+2%) and aluminium each, and lead (-1% each), however, moved down. The index for Finished Products stood at 108.4 during the week against 108.3 (revised) for the previous week. The prices of glass (+5%), general chemicals (+2%), oilcakes and cycles (+1% each) and jute manufactures and bricks and tiles (-1% each) showed variations.

Books

BANKING THEORY

A Survey of Contemporary Banking Trends. By S. K. Basu. (Published by the Book Exchange, 217, Cornwallis Street, Calcutta. Price Rs. 16, pages 574).

The outstanding feature of this book is its comprehensive coverage. It attempts to make a comparative study of the current trends in banking theory and practice with occasional references to the legislation which has been enacted in both developed and under-developed economies. Advanced students on the subject, who often find it difficult to collect information from a large number of papers and periodicals, will undoubtedly regard it as a handy volume with an authoritative analysis on contemporary banking developments. In Part I of the book, Dr. Basu takes up the controversial question of the relation of the Central bank vis-à-vis the Treasury, and discusses the issue in the light of the suggestions of the Douglas Committee in relation to the U.S. Federal Reserve System. The merits and defects of Bank rate have been discussed in detail with particular reference to its revival as a technique of monetary management. Experts have argued that the Bank rate policy should be supplemented by Budgetary policy if it is to produce favourable effects on an economy. The author explains "the bills only doctrine" of open market operations and makes a searching scrutiny of its validity under different conditions. There is a useful chapter on the problem of variable reserve ratio, which has been discussed with special reference to conditions in under-developed economies. Part II, which attempts to make an analysis of commercial banking trends, shows, among other things, the limitations of the traditional theories on bank liquidity. There are frequent references to Indian banking problems in this section, especially in the context of developments under the second plan. But the discussion in Part III on the World Bank and I.M.F. is not conclusive; it is necessary to incorporate the main features of the Monetary plan for an "International Development Association" and the Javits plan for a "World Investment Company." The book is a scholarly analysis on current banking theory and practice, and should be welcomed as a rich contribution to the subject.

CIVIC RIGHTS AND DUTIES

The Changing Concept of Citizenship. By Gurmukh Nihal Singh. (Published by Orient Longmans Private Ltd. 17, Chittaranjan Avenue, Calcutta 13. Price Rs. 675, pages 318).

At a time when people show their lack of knowledge of the first lesson of civics, it is good to be told by a well-known scholar what rights and duties citizenship involves. Although written as a textbook, the book contains much interesting information in the context of developments in India, and even a lay reader will gain by reading it. The author frequently quotes the notable authorities on the subject, but keeps a close watch that his discussion does not lose lucidity. The book will not fail to establish its superiority over the numerous under-graduate textbooks on the subject.

GOOD GENERAL DEMAND AT
EXPORT TEA SALE

DUST PRICES RISE

At Sale No. 14, held on 22nd and 23rd September, 63,773 chests were on offer at the Export auction which met with a good general demand. Prices were rather irregular and often showed an easier tendency. "Teas for price" showed little change; plain broken were barely steady while Fannings in this category were fully firm and were occasionally dearer. Bright liquoring orthodox Assam B.O.P.'s and O. Fgs. sold well, while those with ordinary liquors were in fair demand but irregularly 10nP to 30nP easier. B.P.'s in this category were generally easier, particularly the plainer types but P.F.'s showed a less marked decline. Stylish B.P.'s were in much less demand than in recent weeks and were considerably easier. C.T.C. teas with bright useful liquors sold well and at times realised prices above valuations. Those with ordinary liquors, however, were irregularly 10nP to 30nP easier with buyers following quality closely. The better Legg-cut teas declined by 5nP to 10nP but the lower priced sorts showed hardly any change. Whole leaf grades were easier, the cheaper sorts showing the least decline. Tippy teas were in good demand but at lower rates. Prices for Darjeeling teas were also generally easier.

Best C.T.C. Assam B. P.	2.70 to 3.10 (Nom.)	3.00 to 3.10
Best C.T.C. Fannings	3.00 to 3.40 (Nom.)	2.30 to 3.50

At the Internal Tea Sale, 19,386 chests of Dust were on offer. There was a good general demand, especially for orthodox descriptions from all districts which generally sold at firm to dearer rates. Stronger liquoring powdery types were keenly sought after and often sold above valuations. Legg-cut Doars were well supported, although prices were somewhat irregular. C.T.C. Assams were up to 15nP easier, the plainer liquoring medium kinds mainly sharing the decline. There was again good demand for the few best C.T.C. teas on offer and these often sold at above valuations.

Quotations	1958	1957
	Rs.	Rs.
Medium Doars Dust	1.76 to 1.78	1.54 to 1.58
Medium Assam Ginseng Dust	1.78 to 1.80	1.58 to 1.62
Medium Assam C.T.C. Dust	2.10 to 2.30	2.00 to 2.10
Best Assam C.T.C. Dust	2.50 to 3.00 (Nom.)	2.30 to 2.90

The offerings amounted to 1,810 chests of Leaf. There was a good general demand, and prices were generally firm or dearer.

LITTLE IMPROVEMENT IN
FREIGHT MARKETS

CHARTERING in the freight markets is still moving very slowly, and owners' only hope of improvement at present seems to lie in a deterioration in the international situation with all eyes on the Chinese front. There has been a fair amount of business concluded in the time charter section with a number of American vessels taken at around \$10,000 a day for 15 knot, 10,000 tonners. A liner company has again been forced to charter to meet the end-month Calcutta shipment position and it is understood the *Diamantis Pateras* has been taken by Central Gulf with spot delivery. Details are still unknown, but the vessel is reported due 27th September to discharge about 8,000 tons of grain. The last Pakistani coal tender is now believed to be covered by Pakistani flag tonnage, and there is no other local news of interest.

HIDES AND SKINS QUIET

The market was quiet. Stocks were higher than in the previous week.

Bazaar Sales

(Between 16th September and 22nd September, 1958)

Cowhides: Wet salted (Ord.) 16,100 pcs. on the basis of Rs. 6.50 to Rs. 10.50; Wet salted (Ord.) 4,300 pcs. on the basis of 75nP a lb; Wet salted (Slaughtered) 15,500 pcs. on the basis of Rs. 7.50 to Rs. 12.50 and Rs. 15.50 to Rs. 25.

22nd September, 1958.

In the matter of the Companies Act, 1956

AND

In the matter of sections 397, 398, 399,
404 and 403 of the Companies Act, 1956,

AND

In the matter of Richardson & Cruddas Ltd.

By an order of the Calcutta High Court in the above matter, dated the 23rd April, 1958, the undersigned has been confirmed as Special Officer to take charge of the affairs of the Company and manage the same.

The Special Officer is collecting materials for a report to the Calcutta High Court as to the shareholding in the above company. He will be grateful if parties holding share scrips will please notify to him the following particulars by the 31st October, 1958:—

PARTICULARS

1. Face value of scrips.
2. Serial number of scrips and distinctive numbers of the shares.
3. Date and signature of Directors on scrips.
4. Any letter or document or evidence showing when the shares were registered or purported to be registered by the company.
5. The title of the holder to the scrip, the name of the last transferor, date of acquisition by the present holder, and any other material particulars regarding the devolution of the shares.

A true copy of the scrip, together with any endorsement thereon, certified by the party applying should accompany the particulars. Original scrips should not be sent. It is proposed to arrange for inspection of the original scrips on behalf of the Special Officer at a later date.

The statement of particulars should be addressed to:—

"The Special Officer, Richardson & Cruddas Limited, Post Box No. 968, Calcutta" and superscribed "SHARES".

Dated this 26th day of August, 1958.

D. N. MITRA,
Special Officer.

THE METHONI TEA CO. LTD.

A Dividend at the rate of 15 per cent per annum for the year ended 31st December 1957 without any deduction for Income Tax payable by this Company has been declared payable to the Shareholders.

OCTAVIUS STEEL & CO. LTD.,
Managing Agents.

Calcutta, 19th September 1958.

When the Banshee wailed

*The banshee wailed,
The mermaids cried with delight:
"There'll be music and feasting
With the Sea King tonight!"*

And there was! The wind raged and the seas roared—and the furs and the silks and the sugar and the tea got wet and salty and spoiled by the sea!

Don't let your goods be ruined to make a mermaids' holiday! Remember, cargo by air is so quick and convenient—cuts transit costs and risks to the minimum. And we fly to Tokyo every Thursday and Sunday...offer you direct connections to important cities all over the Far East!

To Tokyo every Thursday and Sunday, via Hong Kong and Bangkok

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

TEA COMPANIES

O. Po. and Dd. indicate Ordinary Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

GOLD AND DOLLAR RESERVES IN INTERNATIONAL TRADE BACKGROUND TO THE DELHI TALKS

THE dispute about whether international liquidities, that is, the total reserves of gold and dollars held by members of the world trading community, are adequate to the growing volume and value of international commerce, has raged all this year and will probably reach its climax at next week's meeting in New Delhi of the International Monetary Fund. When carried on in technical language, this discussion seems to many laymen fantastically complex, and even informed business men are apt to feel lost when a financier seeks to demonstrate that an increase in the price of gold would reduce all countries' balance-of-payments difficulties. This bewilderment is not lessened by the public contradiction of the leading authorities: the Bank for International Settlements has a different opinion about the adequacy of reserves from that of the I.M.F., while *The Economist* is accused of simple error on the gold-price issue by the monthly bulletin of the First National City Bank of New York.

Yet the essence of the problem is clear and it is not hard to grasp enough of the outlines of the argument to take an intelligent interest in the forthcoming talks. Besides, it is a matter of vital concern to India, who has just had the experience of nearly exhausting her reserves; any reasonable plan for increasing reserves or for redistributing them is relevant to our current difficulties. Consider four card players, playing a game of poker, not for money but for matchsticks. How long they can go on playing depends, in part, on the number of matchsticks they have between them. If they have few matches, there is the danger that the strongest or luckiest player will soon corner the lot, so that the others must stop playing. But if, when that danger threatens, they break their matches in two and thereafter count each half as a whole stick, their game can continue longer, even though the player richest in matches is benefitted as much as the weakest player. This would be parallel to doubling the price of gold, where reserves consisted only of that metal. Alternatively, some fifth person might be persuaded to give each player a few extra matches, and that too would prolong the game. This would be parallel to increasing gold production or encouraging its transfer from private hoards to central banks. Finally, the player or players with most matches might consent to put their surplus in a central kitty, whence the weaker players could borrow, and repay when their luck changed. This would be parallel to strengthening such institutions as the I.M.F. or the E.R.R. One or other of these stratagems would be all the more necessary if the players started playing harder and bidding higher, i.e., if world trade increased and prices rose.

This homely simile could be developed further, but already there is an objection from the player with an American accent and a big pile of matches in the corner. International trade, he says, is not a game of chance where "your luck might change"; there are good reasons for the drift of sticks to one corner, and simply to increase the number of matches will not stop them drifting that way. What is needed is that the weak players change their style of play—in fact, that they abandon over-ambitious economic planning and root out inflation. Now it is true that if you give the weakest player more matches, he will be encouraged in his folly and go on over-estimating his hand. But it is also true, in poker and more so in economic life, that some of the wildest moves are made by the player who has only one or two sticks left, and who, therefore, adopts courses that he would eschew if he were more comfortably supplied with reserves. The Bank for International Settlements said this in these words in its last report: "It has often happened in recent years that certain countries have been obliged to impose restrictions on their economic expansion for balance-of-payments reasons. More than once, this was the consequence of domestic inflation, but it has also happened because of a deficit in external capital transactions which was, in turn, due to the inadequacy of reserves. Thus, in certain cases, temporary or relatively minor deficits have caused capital movements which have

obliged those countries to change their policy to an extent that would not have been necessary if they had disposed of ampler reserves." The Bank admitted the danger that comfortable reserves might permit a foolish government to postpone remedial measures at home, until its domestic prices were right out of line with the rest of the world. Indeed this happened with the Fourth Republic which lived on the Bank of France's gold stocks in an inflationary paradise—until the bell tolled. But the Bank added: "Nevertheless it cannot be doubted that increased international liquidity . . . would allow numerous countries to apply more supple policies".

So the abrupt argument so often heard in the U.S.A. that there is nothing in the liquidities problem except that foreign governments must stop inflating, is inaccurate, especially in a world where several important countries such as India and France are living on the verge of international bankruptcy. That inflation brought them there does not at all prove that deflation is going to get them out of their trouble. But the debunkers of the liquidities problem go much further and seek to prove that in reality the total of central reserves has not declined in proportion to the value of world trade in our time. They produce statistics to prove this—which happen to be the same statistics as their adversaries use to prove the contrary. So this is dangerous ground, on to which we will not venture. Those who are interested may contrast the last monthly letter of the First National City Bank and the recent I.M.F. report called *International Reserves and Liquidities*, on the one hand, with the last report of the Bank for International Settlements, the 5th March issue of the *Times Review of Industry*, the statement of the British Chancellor of the Exchequer on 15th April and almost any recent issue of *The Economist*, on the other hand. The former set of authorities show that the ratio of reserves to world trade is as healthy today as it was before the war, or even before the first world war; the latter set show equally conclusively that this ratio has fallen sharply in the past decade. Someone is right and someone is wrong, no doubt, but meantime it is better not to base arguments in favour of an increase in reserves on ratios between central currency-and-gold pools and the value of external commerce.

The total of central gold and dollar reserves is increasing yearly in any event by natural processes, without any special measures being taken to revalue them. This is because of such factors as the sustained increase in the output of gold mines, the sales of Russian gold in the West, the de-hoarding of private gold stocks in favour of central banks, the normal multiplication of the number of dollars issued by the U.S.A. and finally the appearance of new hard currencies, like the West German mark. The painfully slow but quite real return of sterling towards convertibility over the past decade has a similar effect, since because that currency is freer more central banks are ready to hold it as part of their reserves. During last year central stocks of gold alone rose by \$740 million in value, to a total of \$39,000 million. This significant rise

is in itself an answer to the case for a higher gold price, a case that was once again presented by South Africa at the Montreal conference last month; if gold is "too cheap" why is so much more of it being mined? And why can governments that make a real effort to restore confidence in their currency succeed in persuading hoarders to sell their gold, as General de Gaulle's government did this summer and as India should try to do?

All economic reasons apart, the fate of the dearer gold campaign was sealed the day an American economist pointed out that Russia was one of the world's biggest producers of the metal, and to raise its price would mean making a gift to Moscow of increased buying power throughout the free world. It would mean no benefit to America's allies who did not produce gold or who had negligible stocks of it in their central reserves, while it would penalise those of her allies who had so far trusted the dollar as to use it as the substance of their reserves. For it is clear that a rise in the price of gold means a devaluation of the dollar, not only in terms of gold but in terms of many goods and services—if only because holders of revalued gold stocks would be able to pay more dollars for American goods. The slump danger now having passed in the U.S.A., this would not do America any good and it would, as has been shown, affect her allies and enemies very unequally. So the gold-price question is as good as dead, even if the South Africans bring it up again in New Delhi from force of habit. Since a revaluation of gold is the only way to increase everybody's central reserves at one blow, this is another reason for not discussing the international liquidities question in terms of *total* reserves, but in terms of unequal distribution.

Here we are on stronger and less disputable ground. Gold and dollar reserves are distributed between various countries in grossly unequal fashion, whether or not their total bears or does not bear a certain "healthy" relation to the level of world trade. The villain of the piece here is not the U.S.A.; this is not the beginning of one of those declamations about the iniquity of Fort Worth. For the fact is that the U.S.A., from time to time, loses quite substantial amounts of gold to foreign governments, as during the recent recession. That it could afford to lose a lot more and would if its trading and investing practices were different is not of such immediate interest as the fact that when it does export gold, it flows to a small number of countries. They are five to be exact: West Germany, Switzerland, Italy, Venezuela and Canada. From 1952 to 1957 the rest of the world outside the U.S.A. increased its gold and dollar reserves by \$9,704 million, but of that amount these five countries alone claimed an increase of \$7,405 million.

There is no question of blaming them for this. Venezuela has oil, Canada has oil and a lot besides, and the three western European countries are hard-working, abstemious and well-governed financially. But thought can be given to ways of mitigating the imbalance in world trade produced by (a) the U.S.A.'s disproportionately large reserves, and (b) the fact that a small group of countries are the only ones able to win any significant part of those reserves. This could be done by the last method we gave in our card game metaphor: the strengthening of the central kitty from which weak players might borrow. The U.S. Government has just suggested exactly that, and this will be one of the main subjects at the New Delhi meeting of the I.M.F. Washington is proposing a 50 percent increase in national quotas to the Fund. One might object that since everyone has to make a 50 percent extra contribution, this will strain the weaker members unduly (though even if strained they would still be better off afterwards, as the only borrowers). In fact, certain adjustments might well be decided in New Delhi, whereby certain countries put up a bit more and certain others a bit less. One quarter of the extra quota (like the original quota) will have to be put in gold, the rest in national currency or bonds. This gold might be hard to find for some countries, but the I.M.F. has for years past allowed members to draw one quarter of their quotas again without any special justification: in other words, gold deposited with the I.M.F. can still be used by those who need it, the stronger members leaving their gold in for good. We are warranted, then, in thinking that there will be no notable opposition at the Delhi meeting to the U.S. proposal. If it is adopted, some months will elapse before the I.M.F. actually receives the extra funds, but by the summer of 1959 this useful contribution to international liquidities should have become a reality.

INDIA GOES OVER TO THE METRIC SYSTEM

THE PROBLEMS AND DIFFICULTIES INVOLVED

ON 1st October this year, India officially changed over to the metric system of weights and measures; the jute industry introduced it from 1st July, 1958, so as to synchronise with its financial year. It has come into force in certain specified areas of all the States, in some Government departments and in important industries such as cotton textiles, iron and steel, engineering industries and plants manufacturing heavy chemicals, cement, salt, paper pulp and board, refractories, copper, aluminium, etcetera. Institutions such as the Coffee Board and the external and internal air services of India have also adopted it. The Process of change, as the Standards of Weights and Measures Act of the Indian Parliament lays down, will be completed over a period of ten years from 1956 (when the Act was passed), but in the areas or industries in which the Act has come into force, the simultaneous use of the old system will be permitted only for a maximum period of three years.

There is little public curiosity about this new system which has now begun to affect the daily life of everybody. Not much discussion about the advantages and disadvantages of applying it at this particular time seems to have taken place. Perhaps the relatively smooth change-over to the decimal system of currency has induced the public to believe that this change-over, too, will be accomplished without much friction. That, unfortunately, is not likely to be the case. The metric measures and weights do not replace any single indigenous system, but some 143 different ones now prevailing in various parts of the country, and it will be no easy job to have all of them replaced in the time prescribed. But this multiplicity of systems constitutes the best argument in favour of metric weights and measures. The former not only differs in name, but even weights and measures of the same name differ in the units they indicate. For example, there are more than 100 kinds of maunds in use ranging from 280 tolas to 8,320 tolas, and the seer also varies between 8 tolas and 160 tolas. The weights differ not only from place to place, but also sometimes from commodity to commodity in the same place. It is unnecessary to point out that the old system has been the cause of widespread frauds and malpractices, and was responsible, to a considerable extent, for preventing the free flow of commerce between one region and another. When the new weights and measures have been brought fully into use over the entire economy, the scope for such practices will be eliminated completely.

In this transitional phase, it is manufacturing industry which is likely to face the greatest difficulty of all. Apart from the adjustments in machines and equipment which will be necessary—and there is no doubt that a great many changes will be needed—the markets or the consuming points of their products must accordingly be prepared to take goods, the weight, capacity, volume and length of which will be expressed in metric terms. The most serious problem in this connection is likely to be posed by the supply of the new weights and measures in the requisite quantity as well as the familiarity of the dealers, and the people as a whole, with them. For instance, the cotton textile industry, in which the system has just been introduced, will forthwith have to sell its goods not only according to the existing foot-pound system, but also in decimetres, metres and decametres, and higher denominations wherever needed. It is an industry whose products are consumed by everybody in the country, and the unlettered peasantry is its biggest market. It is extraordinary that while the Government has started with industries which produce goods essential to the common people, remarkably little has been done to educate consumers in the technique and the arithmetic of the new system in relation to the one it is replacing. Similarly, salt is another essential commodity, the sale of which will have to be expressed in kilograms and the lower and higher denominations of the metric weight. The same difficulty of making it understandable to the common people will most certainly arise in this case. A pertinent criticism of the manner in which the beginning has been made is that the railways have not been included among the "first". Being the principal means of internal transport, the railways will be carrying the raw materials as well as the finished products of the industries which have already been put on the new system. It is a legitimate fear that unless the railways also begin to publish their tariffs on the basis of the metric system, these industries will experience difficulty not only in transporting their raw materials and goods, but also when making their claims for discrepancies in the weight of their consignments. The Government should rectify this omission.

These problems do not exhaust the list; they are simply the most obvious ones. Another easily foreseeable difficulty is over the manufacture of the weights, some 40 million of which will have to be produced to meet the demand at all levels of trade and industry. It is a safe bet to say that the capacity of the domestic engineering industries will be taxed to the utmost. The procurement of machines and equipment from abroad will also be a serious problem. Most of India's trade is done with the United Kingdom, which does not work on the metric system. Nor do the United States and Canada. So the procurement of the machines from the countries which do follow the metric system and which have sufficiently developed industries to meet India's demand, will pose the foreign exchange problem immediately. For the same reason, India's foreign trade will be exposed to some risks if a satisfactory arrangement is not made with her best customers, a list which has the U.K. in the first place.

To state these problems is, however, not to overlook the advantages which India stands to gain in the long run. To begin with, the teaching of arithmetic to children in schools will be made incomparably easier; the present system is something of a torture. The fact that nearly three quarters of the world is now following the system based on simple decimal calculations is evidence enough that it provides considerable benefit. All

calculation work can indeed become speedy and easy. Another argument in favour of introducing the system now is that India is still in an early stage of her industrial development. It is almost inconceivable that the advanced economies of the U.S.A. and the U.K. could easily change over to it, were they ever to make the attempt.

RELIEF FOR COMMON TEAS

THE Government of India, after spending so long in labour, might have been expected to bring forth a better plan of tax relief for common tea producers than the one announced last Saturday. Not only is the total concession of Rs. 15 crores much less than the industry had asked for as a bare minimum, but the method chosen for distributing it is unlikely to benefit any but a favoured few producers and will probably prove positively harmful to some. It is little wonder that the reaction from tea interests in Calcutta is unanimously unfavourable, after so much patience and effort has been spent in acquainting the Government with the facts. How it is expected the new scheme will encourage exports is difficult to see, because the gardens likely to benefit most are those which play a small part in the export market anyway. In fact, if the burden on the gardens in the new 10 nP excise duty group is actually increased, as it appears it will be, there seems a fair chance that exports of good quality tea will be cut because some units of the industry—notably those in the Darjeeling area where costs are already high—may be forced out of business. Of the industry's plea for a simplification of the tax structure, a step from which all gardens would have benefited, no notice whatever seems to have been taken.

The Government has clearly jumped upon the idea of fixing excise duties according to regions as a compromise between its own need for revenue and the common tea producers' need for tax reliefs. If this is so, then it would have done better had it taken even longer to think the matter over. If quality of output varies with the region in which it is produced, it is certainly true that the cost of it does. But in fact, the scheme takes account of the one fact and ignores the other, and this is the first major anomaly to strike the eye. If the scheme gave some concessions which all producers could enjoy, it would not be a serious matter, and high-cost gardens (not all costs are high due to low efficiency) would be in no worse position than they were before. But this is not the case with the third of the new zones in which, incidentally, the largest proportion of exporting gardens is included. The total of export plus excise duty which gardens in the group must now pay is 36 nP compared with 38 nP before. But this latter sum included 3.125 nP excise duty, which was refundable when the tea was exported. It can be seen, therefore, that under the new scheme the tax burden on export teas produced by gardens in the third group will actually be increased. Another imposition for such gardens will be the need to keep about three times as much cash available for the payment of excise duty than was necessary before. The Darjeeling companies, already financially embarrassed, will find this especially inconvenient. For the other two groups, the apparent relief of 8 nP in the case of the 4 nP excise duty zone, and

of 10 nP in the case of the 2 nP zone, will be reduced by the non-refundable element in the new excise duty. Only gardens in the last-mentioned of the three zones, therefore, stand to benefit substantially and although these no doubt have the largest proportion of common tea in their output, they are unlikely to be among the industry's major exporters.

An interesting point of discussion about the new scheme is the question who will benefit most from the cut in export duty. Where a producer exports his tea direct, he will, of course, gain the remission for himself. But where he exports through a shipper, the benefit of the duty cut will go to the shipper and not to the producer. As the amount of tea exported direct is only about one-third of the total, it is clear that it will be the shipper and not the producer who will get most of the benefit from the scheme as a whole. Whether the middleman will eventually consent to share his windfall gain with the grower or the consumer appears to be something only he can decide, but this can scarcely have been the Government's intention when drawing up the scheme. It is possible that the direct export of tea will now be encouraged, but it has to be remembered that the middlemen play an important part in financing the tea in

transit from this country, and one which could not easily be taken over by producers, many of whom are already seriously embarrassed financially. This means, therefore, that the gardens which are most in need of the cut in export duty are unlikely to get the chief benefit of it, while those that are not can probably afford to make the adjustments needed to get it. Once again, this could not have been the Government's intention. Teas sold at the Calcutta auctions will not attract the revision of export duty at all, and as the industry is forced to market a fixed proportion of its output in Calcutta anyway, this seems an unnecessary restriction on the gardens' ability to benefit from the export duty revision.

There are a number of other points in this complicated system which can be shown as extremely unpredictable in their effect on the industry they are designed to benefit. The final verdict seems to be that the concessions are so limited, and so badly distributed, that it is doubtful if they will help any but a small proportion of low-quality producers and probably neither the industry as a whole or the country's export trade in tea. It might, in fact, have been better had the Government left things as they were.

little doubt the company will get its full share of whatever materials are available."

High Taxes on Tobacco

The replacement of sales taxes by additional excise duties, which the Central Government imposed in December last year, has placed a heavy burden on tobacco manufacturers. In his address from the chair at the annual general meeting of the Imperial Tobacco Company of India Ltd., Mr. G. H. J. Clarke said that although the centralisation of taxes was welcomed with the hope that it would help stabilise prices throughout the country, the overall increase in the tax burden had forced the company to increase the prices of some of its leading brands. (A fuller version of the speech appears elsewhere in this week's issue of *Capital*). The company has had to make a price revision three times during the past year. Such frequent changes in prices naturally have an adverse effect on the trade and, consequently, on Government revenue, as the consumer, faced with the rising costs everywhere, finds it necessary to re-adjust the pattern of his personal expenditure. The adverse trend in the industry cannot be held in check unless it is exempted from the upward revision of taxes. Many municipalities have hitherto tried to enhance their revenues by introducing or increasing octrois on tobacco products and raw materials. "We maintain that our raw materials, and their products, on which the Centre levies excise duty, and now additional excise duty, should be kept outside the taxable scope not only of the States but also of municipalities. If this is not done, an inevitable effect must be a reduction in Central revenue because of distribution difficulties brought about by these barriers raised to trade and the free movement of goods." As for direct taxation on companies, the burden is too heavy, especially for a country which wants to stimulate capital formation and attract foreign investment. Mr. Clarke says that it is difficult to justify wealth tax on companies. Furthermore, the imposition of super tax "on the capitalisation of retained profits" discourages capital formation. The aim to increase capital investment will not be realised if companies paying dividends on issued capital in excess of 6 percent are penalised.

Referring to the company's business, Mr. Clarke says that sales rose by Rs. 50 lakhs, but higher costs and duties have fully offset this increase. The company at present not only meets its requirements from its own printing factories in Tiruvottiyur and Monghyr, but relies entirely on India's resources for the supplies of cigarette paper, printing board and papers, aluminium foil and packet wrappings. Although the long-term policy of promoting the production of raw materials inside India is now being realised, there remain some vital items which it is neither practicable nor economic to produce in this country at present. "I refer in particular to elaborate spare parts for machinery. Although the shortage of foreign exchange is severe, we feel sure the Government appreciates that the benefits of the large imports of capital goods which have been permitted during the last few years must be much diminished if exchange cannot be found for importing essential spare parts to maintain those capital goods," Mr. Clarke says.

Self-sufficiency in Raw Jute

India's self-sufficiency in raw jute was among the first points which Mr. Bimal Kuthari, president, stressed in his speech at the latest annual general meeting of the Jute Brokers Association, Calcutta. In 1957-58, the drive in this direction actually had a setback, the acreage sown to jute declining to 1.75 million acres from 1.9 million acres in the previous year. This was a fall of 8.1 percent in area, and correspondingly, there was a fall in output from 4.29 million bales to a little over 4 million bales, or a decline of 4.7 percent. Mesta production also decreased sharply due chiefly to unfavourable weather conditions. There was a slight increase in imports from Pakistan—to 695,000 bales during the year ended 30th June, 1958, from 646,000 bales in the previous year. The first estimates for the 1958-59 crop, however, are quite encouraging and according to these, the actual area is 11.8 percent larger than that of the previous year. Mr. Kuthari suggests that adequate steps be taken to "stimulate jute cultivation" in the country both by the Centre and the States. One way of doing this, according to him, is to check unusual price falls in raw jute in the upcountry markets.

Discussing some of the problems faced by the members of the Association, Mr. Kuthari says that the difficulties which have been experienced in securing business from jute mills still continue, and the various requests of the Association have met with no positive response from the mills. He also referred to the complaints that certain mills have been delaying the payment for raw jute supplied to them. Such practices are often "in contravention of the clear stipulations laid under the 'Reimbursement Clause' of the Indian Jute Mills

Current News and Comment

Progress of Telco

Telco has made considerable progress towards implementing its construction programmes. All the buildings have been completed and most of the plant and equipment has been installed. In his address from the chair at the annual general meeting of the Tata Locomotive and Engineering Co. Ltd., Mr. J. R. D. Tata said that the total output of locomotives and diesel commercial vehicles and their indigenous content, have both exceeded the targets. (A fuller version of the speech appears elsewhere in this week's issue of *Capital*). The steel foundry is steadily building up production and the alloy iron foundry "is just coming into operation." The company's improved results have enabled the directors to recommend an increased dividend on ordinary shares, from Rs. 8 to Rs. 9 a share. Its profits for the year were wholly accounted for by the automobile division. "In spite of several adverse factors, including shortages and delays resulting from the acute scarcity of foreign exchange, the phased programme of indigenous manufacture has not only been fully maintained, but has been exceeded by a significant margin. The parts and components which are now being made at Jamshedpur and for which we shall not have to depend on imports hereafter, include the complete frames with springs, all sheet-metal parts, the front and rear axles and the complete transmission including the gear box." The foundry division started making castings in June last year. Although the operations of the locomotive division yielded no profit, Mr. Tata said that, in addition to bearing in full its legitimate share of plant and general overheads, it earned full depreciation and development rebate. He also said that the progress made by the company and the improvement in the investment market have made it both possible and desirable to make a fresh issue of equity capital. It is proposed, subject to the sanction of the Controller of Capital Issues, to raise Rs. 3 crores additional capital by the issue at par of 300,000 new ordinary shares of Rs. 100 each in the ratio of three new ordinary shares to five existing ordinary shares.

Referring to locomotive prices, the chairman pointed out that the prices fixed by the Tariff Commission covered deliveries only up to 31st March this year. The price for those after that date had to be fixed by negotiation with the Government. Although the company's present offer represents a reduction in price of over Rs. 52,000 a unit compared with that of the previous period, no agreement could be reached and it has been mutually agreed to refer the matter to arbitration. Mr. Tata mentioned in this context the Lok Sabha debate in September last year. Its most regrettable feature, he said, was an attack on the Tariff Commission, which made an exhaustive enquiry into the operations and costs of the company, with the assistance of a foreign expert selected by the Railway Board. "Their findings were challenged and the members of the Commission were charged with partiality in favour of the company. The preservation of public confidence in such statutory bodies as the Tariff Commission is almost as vital to the stability of a democratic State as the preservation of public faith in Parliament and courts of law." It is a matter for regret that the Public Accounts Committee of the Lok Sabha repeated some of the old charges against the company. Mr. Tata did not deny that the railways paid higher prices for locomotives and boilers which they purchased in the initial years. But with the improvement in effici-

ency and output, costs have declined, and "the railways will get the full benefit of such reduction in the current and coming years."

No Dividend from Jessops

There will be no dividends this year from Jessop and Company, now under the control of the Central Government. This has been announced by Sir B. P. Singh Roy, chairman of the Government-appointed board of directors, at the latest annual general meeting. (A fuller version of the chairman's speech appears on another page of *Capital* this week). The company, however, has achieved record results during the past working year ended 31st October, 1957. Although its agency business virtually ceased, works sales rose by 40 percent, compared with the previous year, from Rs. 380 lakhs to Rs. 534 lakhs. "The board of management, however, regrets that in spite of these extremely satisfactory working results and the high net profits earned by your company, it is not possible for it to declare a dividend because of the serious financial loss suffered by the mismanagement during the financial years 1955-56 and 1956-57. The shareholders, therefore, are once again being called upon to agree to sacrifice their dividend in the interest of the financial rehabilitation of the company," Sir B. P. Singh Roy says. The chairman, however, has little doubt that this is only a "temporary deferment".

The chairman also refers to the rapid rise in the assets of the company. Neglecting the figures for "block in progress" which are those for plant and buildings still in the course of construction or installation, the value of the assets, which was Rs. 46 lakhs in October 1955, has steadily risen to Rs. 62 lakhs in October 1956, to Rs. 109 lakhs in October 1957, and by the end of this October, the value may well have reached the figure of Rs. 170 lakhs. Thus in three years, says the chairman, the fixed assets will have been multiplied over three-and-a-half times. Almost all these extensions are now in active use, and provided raw material supply improves of which there is now some hope, their output should add very materially to the company's turnover during the years to come, adds Sir B. P. Singh Roy. The new coach works, which is by far the most important of these latest additions to the company's assets, is now manufacturing metre-gauge passenger coaches and is also engaged in the production of electric multiple unit broad-gauge coaches for the Calcutta electrification project. The manufacture of diesel road rollers is the second new project. But the acute steel shortage in the economy has adversely affected its working as it has of the entire engineering industry. Foreign exchange scarcity and the Government's peculiar import policy have combined to hamper the operations of other lines of Jessop's manufactures, such as overhead travelling cranes. But the chairman hopes that a change for the better in Government policy towards these imports is likely, in view of Mr. Lal Bahadur Shastri's indications at the latest meetings of the Export and Import Advisory Councils. The order book of the company is very satisfactory, and almost all its contracts, which mostly come from government and quasi-government bodies such as the Railway Board and the port trusts and important industrial concerns like the Tata Iron and Steel Company and the Indian Iron and Steel Company, carry a very high priority. The raw material shortage is critical, but Sir B. P. Singh Roy has

Association contracts." This was brought to the I.J.M.A.'s notice by all sections of the jute trade and the former has given a definite assurance that "such complaints would not arise in future." Despite the assurance, the inordinate delay on the part of some of the jute mills in making payment "has put the sellers of raw jute to considerable difficulties and monetary loss," Mr. Kuthari adds.

Reinsurance Corporation Loses

The second annual report issued by the directors of the India Reinsurance Corporation Ltd., which reviews its working for a full year, shows that the corporation has yet to arrive at the profit-making stage. This Indian body, unlike its Pakistani counterpart, is not statutory, and although the cessions are according to the agreement with its members, there is naturally no legal binding either in floatations or on its operations. The net premium income in the fire department was over Rs. 35 lakhs, but claims came to 45.9 percent, commission and other charges totalling 36.1 percent, the expenses of management amounted to 3.7 percent and the increase in reserves was 14.3 percent, resulting in a credit balance of Rs. 475. In the marine department, the net premium exceeded Rs. 26 lakhs. But as much as 48.9 percent of this went in claims, 27.5 percent in commission and other charges, 1.8 percent in the expenses of management, 41 percent went towards the increase in reserves, resulting in a loss of 19.2 percent, that is, over Rs. 5 lakhs. In the miscellaneous department, net premiums amounted to over Rs. 32 lakhs, of which net claims were 28.9 percent, commission and other charges 34.2 percent, management expenses 2.7 percent, and the increase in reserves 39.6 percent; there was thus a loss of 5.4 percent amounting to Rs. 1,74,895. The reserve for unexpired risks has been maintained at 40 percent in all the departments with a slightly bigger ratio for marine. After crediting the interest, dividends, etcetera, and other miscellaneous receipts to profit and loss account, and after crediting the profit of the fire department and debiting the loss transferred from the marine and miscellaneous departments and the expenses of management not applicable to any particular fund, the balance of Rs. 451,608 has been shown as a loss in the profit and loss appropriation account. This amount, together with the losses brought forward from last year, totalling in all Rs. 5,07,639, has been transferred to the balance-sheet.

World Bank Loans

The manner in which India has used the loans granted by the World Bank is beyond criticism, says Mr. Eugene Black, President of the World Bank. Speaking in Bombay, he said the Bank had advanced India \$507 million and this sum was "properly and satisfactorily used by India." Mr. Black also said that this was the highest amount the Bank had lent to any single country. The Bank, he said, fully recognised the urgency of India's problems with her huge population and was anxious to offer further assistance. The World Bank President thought India's second five year plan was over-ambitious in relation to the resources available, but not so in relation to the country's needs. Mr. Black explained that the Bank, because of its limitations, was forced to take a short-term point of view when considering loans. He stressed the need for increasing the capital of the World Bank if it was to serve adequately its 68 members. This question, Mr. Black said, might be discussed at the forthcoming New Delhi meeting. The World Bank President was of the opinion that the worst of the United States recession was over, the stock markets were gaining strength and steel output was showing a tendency to rise. As for the U.S. proposal to establish a multilateral lending agency, Mr. Black said that this might also be discussed at the New Delhi conference.

Foodgrain Trading Regulation

The Bombay Government is to take on additional powers to regulate trading in foodgrains including paddy, rice, jowar, bajra and maize. The Bombay Foodgrains Licensing Order comes into force with effect from 1st November, 1958. The Order provides that no dealer, which term includes a rice miller, who is engaged in the business of purchase, sale or storage for sale of any one or more of the main foodgrains, including their broken and flour, in quantities of 100 maunds or more at any one time, can carry on business as a dealer except under, and in accordance with, the terms and conditions of a licence issued by the competent authority.

Cotton Mill Take-over

The Bombay High Court has given formal sanction to the State Government to take over and

run the Seksaria Cotton Mills Ltd which went into liquidation some time ago. According to the proposal, the Bombay Government will take over the mill from the official liquidator on lease for a minimum period of six months and a maximum period of 11 months, but the State will have the right to terminate the lease on serving a month's notice after an initial period of six months. The Government will pay a nominal rent of Re. 1 a year in addition to rates and taxes leviable during the lease period, but there will be no obligation for arrears. Depreciation on building and plant will be paid in accordance with the provisions of the Indian Income Tax Act, and the State Government will be entitled to set off against such amounts expenditure incurred on extraordinary repairs and replacements to the extent of Rs. 100,000. As for employees, the State Government is not bound to pay retrenchment compensation. If the liquidator is able to find a purchaser, the Government will hand over the mill on a six-week notice. The primary objective is to offer relief on a temporary basis to workers who were thrown out of employment when the mill closed down.

Heavy Cloth Stocks with Mills

Stocks of cotton textiles are mounting with the mills in Ahmedabad. It is estimated that these represent four months' production and are valued at Rs. 20 crores. It is feared that if the position does not improve within the immediate future, the Ahmedabad industry will face a serious crisis. The Bombay piecegoods market, however, is slightly better than it has been in recent weeks. Fair enquiries have been received from Uttar Pradesh and Rajasthan for a wide range of varieties, but at lower prices. In the export markets, Africa showed some interest while moderate business has been done with Hongkong, Singapore and Indonesia. Trade circles fear that it may be some time before business will result with Burma because of the political changes in that country. Meanwhile, the Cotton Textiles Export Promotion Council has sponsored a trade delegation to visit east and central Africa.

Protest Closure of Rice Mills

A statement released by Mr. Yeleti Narayana-murthy, vice-president, Andhra Pradesh Rice Millers Association, says that the Association's Executive Committee has, at an emergency meeting held on 19th September, passed a resolution calling upon all the rice mills in Andhra Pradesh to close down their business completely. The statement sets forth a number of grievances, the chief among which is that the Central Government's Food Ministry, through its Special Director and Joint Director, has passed "arbitrary orders requisitioning all paddy and rice that is lying with all the millers in the surplus districts of Andhra, and has launched a coercive measure to get possession of them." The resolution passed by the Association complains of the harassment and "autocratic methods" which have compelled them to take the drastic action of closing down the mills. They say that after controls on foodgrains were removed, they carried on free trade in rice and satisfied the needs of Andhra Pradesh as well as of other States. Some varieties of their rice were sent to Bombay, Saurashtra and Calcutta. Apart from this, they exported considerable quantities to Europe. But in July 1957, on the ground of controlling rising prices of both paddy and rice, zonal divisions were introduced and they were deprived of a free market. As some fine varieties of rice are not consumed in the Andhra zone, they were assured by the authorities that they would be allowed to export it to West Bengal, Bombay and Saurashtra, but in August 1957, their exports were stopped by the Central Government, and their Special Officer, Mr. K. S. Krishnan requisitioned all stocks of paddy and rice in the Godavary and Kistna districts. As a result of the low prices fixed by him, they suffered heavy losses. They made a representation to the Central Food Minister, but that was ignored. The millers say that they have still been co-operating with the authorities and supplying rice on the basis of f.o.r. railroad instead of the usual ex-mill rates. From November 1957 to July 1958, they have exported by rail about 476,650 tons, as against 372,500 tons in the preceding 12 months. In spite of this, they have now been asked to surrender all their stocks of paddy and rice. So they feel compelled to close down their mills.

Sugar Cost Structure

Reaction to the Government of India's decision to order a fresh probe into the cost structure of the sugar industry has been mixed. The problem itself is a vexed one. On the past occasion, the Tariff Commission recommended the preparation of a

new schedule for working out the costs of production. Accordingly an expert committee prepared a schedule which was again vetted by another committee. But the industry was not satisfied with it, particularly with the manufacturing expenses allowed. Neither could it reconcile itself to the allowances provided for rehabilitation charges. The cane-growers, on the other hand, have been contending that the costs allowed in the schedule are unduly high. They now fear that the present enquiry may be used by the factories to scale down the price of cane, as the Government is not expected to forgo any part of its takings by way of levies and taxes. According to one calculation, the price of one lb of sugar at present is 50p. Of this, excise duty accounts for 21p and cane cess for 18p, making a total of 39p or 78 percent of the entire value. The balance of 22 percent includes wages of workers, salaries of staff, prices of stores, interest on borrowings, marketing expenses, depreciation on plant, reserves for contingencies and manufacturers' profits. On the basis of these figures, there would appear to be a clear case for lowering the tax burden and reducing the price of cane. The Tariff Commission has been asked to submit a preliminary report within three months, that is, before next season's sugar starts arriving in the market. Whatever may be the Commission's findings, it is doubtful whether the Government would find it politic to order a reduction of cane prices, particularly after the Uttar Pradesh Legislative Assembly has passed a unanimous resolution, demanding an increase.

New Ideas for Co-operatives

Inaugurating a three-day seminar on co-operative marketing in Lucknow, Dr. Punjabrao Deshmukh, of the Ministry of Food, has revealed that the Government is considering the setting up of a national co-operative marketing federation. There can scarcely be any objection to such a federation, in principle, but when Dr. Deshmukh invites the co-operative societies increasingly to enter the export trade of the country, he is surely not on safe grounds. On his own admission, co-operatives have not made a success of even the little business that had been allotted to them. Special quotas are given to co-operatives for commodities which are subject to export control. Dr. Deshmukh also says that "there are complaints against them that they are not doing the work properly as they have no direct contact with foreign markets and that they often fail to use in full the quotas given to them." At a time when there is the greatest need to maximise the country's export earnings, it would be extremely foolish to entrust co-operatives with export business. Dr. Deshmukh has said that it will be one of the functions of the proposed federation to help individual societies establish contact with foreign markets. But even so, it would be prudent to hasten slowly. This is what Sir Malcolm Darling, the Colombo Plan consultant, urged in his report submitted to the Government in February this year. Sir Malcolm, who knows his India well, has questioned "the wisdom of attempting so much in so short a time", and has stressed the necessity for making the old ones work before new societies are attempted. The Planning Commission, too, has not slurred over the difficulties of co-operation because of the complex factors involved in it. "In some ways," the Commission has admitted, "it is much more difficult for the co-operative form of organisation to succeed than it is for a completely socialised form of enterprise or for the individual entrepreneur." Yet the U. P. Minister for Co-operatives, Mr. M. L. Gautam, instead of frankly recognising the failure of the human element, attributes the responsibility for the deficiencies to "organised" opposition from vested interests. Most of the societies in India, Sir Malcolm Darling said, "are not genuine co-operatives, but have been formed to further personal interests and to get more financial assistance."

Madras Electricity Board

There is a possibility that the Madras Electricity Board might revise its tariffs. Since 1936, private licensees buying power in bulk have been obliged to pay more. A rise in reserves has permitted the Board to make some capital investment and it is said that on 12th October the Periyar Madras thermal system will provide a great relief to consumers. The Board has assured the latter that cuts in power supply in the hot weather will not occur in the future. Supplies from Kundah will provide supplementary power for industrial consumers, and it is likely that rural power supply will be considerably increased. The Board's operations during 1957-58 produced a revenue surplus, although in the current year, a deficit is expected. But revenue is likely to increase steadily in future years, and, therefore, the Board will be able to meet its debt charges. Its report says that as a measure of assistance to Harijans, their

colonies in panchayat areas are to be provided with free lighting facilities.

Agricultural Income Tax

In justifying the proposed agricultural income tax, applying to individuals, the Revenue Minister of Madras has referred to the need for a progressive tax on land and has said that the revision of the ryotwari settlement rates has not yet been carried out. Experts have emphasised the need for distinguishing between cultivating owners and bigger landlords. A proposal has been made that the option to compound the tax should be offered to bigger assesses. The Minister has rejected the theory that agricultural income tax represents double taxation. He says the fact that land revenue yields Rs. 6 crores a year is a good reason for increasing the tax. But there is a possibility that stiff taxation may lead to a redistribution of holdings and make the ceilings on land superfluous. This was said by the State Revenue Minister in replying to a suggestion that the maximum holding should be as small as 12.5 acres.

Food Crisis in the South

The decision of Andhra rice millers and wholesale traders to stop supplies for official procurement has been followed by the State Chief Minister's complaint that the Centre is making excessive demands on the rice surplus available in Andhra. A delayed monsoon in Madras has affected the summer crop. Prices in Tanjore have risen to a record level due to the keen buying by Kerala traders. Supplies to Madras City from Andhra have rapidly declined and there might be a clamour for fair price shops during the months before the harvest. Furthermore, recent events in Burma may adversely affect the rice trade. People think that the judicial enquiry into the Kerala rice deal is not likely to deter Andhra traders from raising prices. The partial failure of the Kuruvai crop in Tanjore has already affected landless labourers there. Meanwhile, little importance is attached to official assurances. A rise in wheat prices in Madras has led to a keen demand from consumers who are eager to stock the commodity. It is commonly assumed that in the absence of price controls, the rise in the prices of rice, oils and pulses cannot be arrested.

Expansion of Madras Forests

The forests in Madras appear to have grown in size, according to the various estimates which have recently been made. The surplus of revenue from this source over expenditure has increased. The Estimates Committee of the Madras Assembly has advocated that prompt provision of jeeps for officers and the grant of special allowances for those posted in unhealthy areas should be made. An important suggestion of the committee relates to the extensive cultivation of wattle for bark required by the tanning industry in the south. The growing of bluegum trees for the sake of wood pulp is also recommended on the score that a new rayon plant will have to find its raw material from the region itself. The Coimbatore Cotton Mills are providing capital for a new viscose plant to be launched soon with Italian technical aid.

The State monopoly of sandalwood requires to be tightened up, the Committee says. The acquisition of trees growing on private land with compensation has also been suggested. Smuggling of this wood has to be checked. There is also the need to provide better storage facilities before sandalwood is transported to selling centres. The Committee does not share the trade view that a new sandalwood oil distillation plant is not required. It is felt that what Mysore has done can be emulated by Madras, which can get a bigger revenue by selling oil instead of wood. The State Government's afforestation programmes include the culture of softwood. It has been urged that the pottage match industry in Ramnad must find a steady supply of splints for the manufacture of matches and should not depend on Kerala or the Andamans for its raw material.

Developing the South

The idea of planning for south India as a whole to remove the present economic disparities within the region was advocated by the president of the Andhra Chamber of Commerce in his address at the latest annual general meeting. The constitution of an economic council has also been urged. Leading business men in Bangalore seem to think in some such terms. At a recent conference, they reviewed the needs of development of the south and pleaded for a zonal council which would encourage south Indian exports. They also asked for an early improvement of the minor ports. They were highly critical of the State Trading Corporation, and com-

INCOME TAX COLLECTION

WE notice from the report on the financial results of the administration of the income-tax in the presidency of Bengal, that the tax realised Rs. 42,81,995, which appears to be the highest amount since the Act of 1886 was passed. Of this sum Calcutta contributed Rs. 21,22,938, and the rest of the province Rs. 21,59,057. The number of persons assessed to the tax were in Calcutta 21,281, and the rest of the province 87,152, or a total of 108,433; that is to say that in the whole of Bengal there are only 108,433 persons with incomes of Rs. 500 per annum and over. We find that the number of persons in Bengal whose income is returned as under Rs. 2,000 per annum, is 94,955 and that only 13,478 persons have incomes of Rs. 2,000 and upwards. Coming to higher figures only 294 persons in all Bengal have incomes of between Rs. 20,000 and Rs. 30,000. Only 140 have incomes between Rs. 30,000 and Rs. 40,000. Only 78 have incomes between Rs. 40,000 and Rs. 50,000. Only 149 have incomes ranging from Rs. 50,000 to Rs. 1,00,000; and only 112 have incomes exceeding Rs. 1,00,000. In the above figures public companies are included and no less than 142 have incomes ranging from Rs. 2,000 upwards. Taking Calcutta 168 persons have incomes ranging between Rs. 20,000 to Rs. 30,000; 93 persons Rs. 30,000 to Rs. 40,000; 55 persons Rs. 40,000 to Rs. 50,000; 93 persons Rs. 50,000 to Rs. 1,00,000; and 60 persons only have incomes of Rs. 1,00,000 and upward, so that the incomes of a lakh and upwards may be put down thus:—

12 companies;
60 firms or individuals in Calcutta; and
12 persons in the province.

It seems difficult to believe this. Some income tax collectors must be doing well we imagine. Of course incomes from agriculture are exempted but still!

Without Prejudice

SLOW DEATH OF A JUDICIAL PREJUDICE

NEGLIGENCE AND THE MOTORIST

(FROM OUR LEGAL CORRESPONDENT)

SOME months ago we wrote a note in this column on the almost traditional judicial prejudice, now slowly dying, against drivers of motor-cars in regard to accidents in which they were involved; and we traced the history of it back to the earlier prejudice against railways and in favour of the stage coach. Within living memory a motor-car was looked upon as something in the nature of an animal *ferae naturae*. You had to have—and for that matter you still have to possess—a Government licence to own and drive the ferocious monster which was regarded by judges, with the full support of the general public, as likely at any time to get out of hand and run amuck, wherefore its owner was allowed to drive it only at a fairly smart walking pace and it had to be preceded by a custodian carrying a red flag to warn the unwary pedestrian or driver of a horse-drawn vehicle of the fact that it was at large.

The case on which we comment is a healthy one because it shows that the judges are taking a more enlightened view. But it also shows that the general prejudice is by no means dead. It seems barely believable that a State in India could be found at this time of day to prosecute a man on the extremely grave charge of manslaughter in regard to a road accident on the ground (*inter alia*) that there is an irresistible presumption that he was driving an automobile rashly or recklessly if he drove it without a driving licence. Yet, so it was, and moreover the State, when a learned magistrate acquitted the driver, appealed to the High Court asking that the acquittal be set aside. There were some other points of interest to motorists in general on which we get some guidance from the case. If a man is a professional expert, a tester both of the roadworthiness of cars and of the ability of potential drivers to drive them properly and with due care, is a greater degree of care to be expected from him when he is himself driving than would be the case with a non-professional driver of just average skill?

If a driver of average skill and caution is suddenly faced with an emergency in which he has to make a split-second decision and he makes a wrong decision, as a result of which another person is killed or injured, is the driver criminally liable? Is there any difference between the degree of negligence required to establish criminal liability in the driver guilty of it and that required to establish civil liability in a suit for damages, and, if so, what degree of difference?

And now for a brief summary of the facts. The accused was an official. He was a Sub-Divisional Officer (Electrical and Mechanical). As part of his official duty he had to attend to and test all motor-vehicles, both heavy and light, and to maintain them in proper running condition within his area. No driver was appointed without being tested by him. He was an experienced motor driver. But he held no driving licence. Nevertheless, at the time of the accident which subsequently occurred he was driving a motor-truck. He was not driving it at an excessive speed. His speed was about 15 to 20 miles an hour. He saw in front of him a bullock cart. The road had big and small pits in it. The bullock cart was in the middle of the road, but when the accused wishing to overtake it, blew his horn, the bullock cart swerved towards the right side, so the accused tried to pass it on the left side. (That is where you may think and where the writer does think he went wrong and might have been held criminally responsible for what subsequently happened. One thinks he should have pulled up, in spite of the delay and nuisance. However, we shall see). The buffaloes got frightened and swerved back towards the truck. There were some persons in the cart and to save them he had to go off the road on to a slope where the truck got tilted. To avoid going into the ditch, the accused put on the brakes, the truck turned turtle and two persons were killed.

Later the S.D.O. was charged with causing the deaths of the two men by doing a rash and negligent act not amounting to homicide (i.e., not murder but manslaughter) by driving the vehicle rashly and negligently and without a licence. Secondly, he was charged with doing grievous hurt in the same accident and in the same circumstances to another man who was injured but recovered. Note that expression "and without a licence" inserted in the charge as if it were a component part of the offence of driving rashly and negligently. You may agree with the writer that it is a first-class specimen of a red herring. Yet the State seriously contended "that from the fact that the accused did not possess a driving licence, the inference was irresistible that in driving a heavy vehicle like a truck his conduct was rash and negligent." This is the first time we have read of this contention being raised and it is submitted that it is preposterous. Nevertheless, the State not only raised it but went to appeal on it when it was rejected by the trial court. The High Court made short work of it. "We are clear that from the mere fact that the accused respondent did not possess a driving licence, it cannot be positively inferred that he was guilty of rashness or negligence in driving a heavy vehicle like a truck." Of course it cannot. A man may be a most skilful driver. He may have had his driving licence withdrawn for driving while drunk. Later he may chance it and drive a car without a licence. That is an offence in itself. But if he runs into and kills someone, it would be no evidence one way or the other as to whether he was driving negligently.

As to the question of whether a greater degree of skill and competence is exacted by the law from an expert, such as a tester of cars, and a teacher or tester of novice drivers, let us forget automobiles for a moment and consider the ordinary principle of law. If a man rides a horse along the highway, he warrants that he is an ordinarily competent rider and if he through not being such, gets involved in an accident and kills or injures a member of the public negligently, he will be liable in damages and it may be criminally too. If the most skilful expert rider-trainer and breaker in of horses in the land, say Miss Pat Smythe, is similarly involved, the law requires of her no greater degree of skill. She warrants the reasonable competence of an ordinary everyday rider, that and no more. Naturally she will be more skilful in avoiding trouble than the average rider; but the law does not require her to be so.

It is the same with automobile drivers at long last; and in this particular case their lordships said: "The law expects (the driver) to be neither rash nor negligent in the performance of his task and we will judge his conduct in the matter as if he were the most qualified driver who brings to his task the ordinary reasonable competency of persons driving heavy motor-vehicles."

That brings us to the matter of split-second decisions in sudden emergencies. Sooner or later every motorist has to face one of these and the result of a mistake may be death.

The first thing we have to bear in mind is that there is a definite distinction between civil and criminal liability for death by negligence. A more culpable, more flagrant degree of negligence, is required to establish the latter. As one judge put it: "The principle to be observed is that cases of manslaughter in driving motor-cars are but instances of the general rule applicable to all charges of homicide by negligence. Simple lack of care such as will constitute civil liability is not enough; for purposes of the criminal law there are degrees of negligence, and a very high degree of negligence is required to be proved before the felony is established. Probably of all the epithets that can be applied 'reckless' most nearly covers the case."

In another English case, the then Lord Chief Justice, Lord Hewart, suggested some further adjectival requisites to justify criminal as distinct from civil liability: "In the civil action if it is proved that A (the driver) fell short of the standard of reasonable care required by law, it matters not how far he fell short of that standard. The extent of his liability depends not on the degree of negligence but on the amount of damage done. In the criminal court on the contrary, the amount and degree of negligence are the determining questions. There must be *mens rea*. . . . In explaining to juries the test which they should apply to determine whether the negligence in the particular case amounted or did not amount to a crime, judges have used epithets such as 'culpable', 'criminal', 'gross', 'wicked', 'clear', 'complete'. But whatever epithet be used, and whether an epithet be used or not, in order to establish criminal liability the facts must be such that . . . the negligence of the accused went beyond a mere matter of compensation between subjects and showed such disregard for the life and safety of others as to amount to a crime against the State and conduct deserving punishment. It is a question of degree. . . . and it is for the jury (in there is a difference in kind between the negligence which gives a right to compensation and the destructive words these: and having digested them of the reader who wrote to him about the misfortune of 'James' who, while unconscious, 'drove' his truck into a stationary car and was criminally prosecuted for so doing, would take this opportunity of admitting that the reader was right and the writer wrong. 'James' could not be convicted.

As to the driver who has to take a decision in a split-second, we have only space enough left to say that it is his duty to anticipate generally what the other user of the road is intending to do and regulate his conduct accordingly; but he is to be judged only by the standard of an ordinary, reasonably competent careful driver. The law does not expect him in an unexpected emergency to bring to bear upon it the cool calculated unemotional judgment of a chess player.

The acquittal of the accused was upheld. (State Government v Bhawanesh Kumar. A.I.R. 1958. M.P. 205.)

1 House of Lords in *Andrews v Director of Public Prosecutors*, 1937, A.C. 583.
2 *R v Bateman*, (19, Cr. App. Rep. p 10).

The thud of the pile-driver and the swish of the cement-mixer are the sounds of a growing India. All over the country, dams and bridges, roads and buildings are changing the face of the nation. And **cement** is making it possible.

The cement industry is one of the country's most dynamic. It produces over 5 million tons of cement annually—four times its 1947 output. Cement factories, spread all over the country, provide employment to thousands of skilled and unskilled workers.

By channelling the investments of the average policyholder into cement and other prime-moving industries, the Life Insurance Corporation is laying the bed-rock of tomorrow's prosperity.

Life Insurance Corporation of India

A Ditcher's Diary

LIKE SO MANY OTHER DITCHERS WHO HAVE PASSED that corrugated-iron enclosure at the Park Street-Chowringhee junction every day, I am curious to see what is inside. I have little hope that the new statue will prove to be as fine a work of art as the one it replaces. But the choice of such things usually has little to do with artistic merit, as the West Bengal Government has found out since the old statue went. And anyway, comparisons will scarcely be possible because styles in statuary, like styles in patriotism, change drastically in the space of a century or so. It has struck me as odd that of all the eulogistic adjectives which have been used to describe Raja Rammohan Roy on his 125th death anniversary, I have not seen the word patriot among them. Yet it is doubtful if any single Indian did more for his future country than this far-sighted and progressive-minded Bengali. Freedom from foreign domination may have played no significant part in his thinking, as it certainly would have done had he lived a century later, but that does not mean the reforms he pressed for were not as essential to the establishment of a modern self-governing nation as were those sought by the Mahatma himself. When I read last week of some of the deeds and words of this remarkable man, I was struck by the contrast between his enlightened patriotism and the kind one sees so much of today, which appears to regard independence as just another word for atavism. I would be as distressed to see any harm come to the statue of the Mahatma as I was to see the disappearance of its predecessor, although for entirely different reasons. At the same time I cannot see the people who have already shown such determined maliciousness towards it, changing their attitude simply because it is a fait accompli. And to have to maintain a permanent police guard on a statue of the founder of the modern Indian nation is the kind of indignity which is best avoided. How much better it might have been had a statue of Raja Rammohan Roy been chosen, if indeed the one of Outram had to go in the first place, that way honour would have been done to one of the most enlightened patriots that ever lived and to a man who was undoubtedly the most illustrious reformer Bengal ever produced.

THAT BURMA HAD BEEN GOING TO PIECES, AND fast, had been foreseen long ago by business interests in that country. Some of the most informative documents on the Burmese situation were the speeches by presidents of chambers of commerce, although for obvious reasons they dealt with politics only at second remove. U Nu, I am sure, is a man of peace, but it did seem curious to me that he remained Prime Minister, and in that capacity thought it more urgent to build a very expensive Peace Pagoda rather than a couple of factories. This may be my own standard of base, material values; and if I now proceed to ascribe the breakdown of the Burmese economy to the Government's excessive enthusiasm for State trading I will probably be accused of giving a boost to greedy capitalism. I may be right though in holding that socialism ruined the economy, and made it impossible to restore political stability. And now democracy is so thoroughly discredited that the army has taken over. The sort of disgust which ushered in de Gaulle in France is understandable when the performance of democracy is so palpably poor. On the other hand, nobody should pretend or delude himself that these take-

overs are progress in the direction of a democratic order. Those who thought, and there are far too many of them in every country, that military coups were a monopoly of Latin America and the Middle East should think again. Of no tyranny and of no country can it any more be said that it can't happen here. My Indian friends, who often underestimate the value of the political stability this country has been able to preserve so far, should take heart—and a warning—from the latest developments in Burma. I am not suggesting that Mr. Nehru should now begin to look over his shoulder every five minutes to see what the army may be up to. The loyalty of the services to Mr. Nehru and his Government is beyond question. What I am more concerned with is that the economy may not be so handled as to produce conditions in which democracy cannot survive.

IT WAS ONLY TO BE EXPECTED THE COMMUNISTS would be alarmed at anything designed to curb their mischief-making among industrial workers. I am not surprised that four communist members moved an adjournment motion in the Orissa Assembly about the letter alleged to have been written by the Superintendent of Police of Keonjhar calling for contributions from certain mine owners to maintain a platoon of the Orissa Military Police at Barbil. In fact, I felt alarm too, although not for the same reasons. Reports from south India suggest that this sort of thing is on the increase and it seems to me that once the principle of paying special rates for police protection is accepted, the way will be open for all kinds of abuses. It is already difficult enough to interest the police in protecting lives and property from mob violence, especially if it has the least flavour of labour unrest about it; if this habit catches on, it will become impossible without paying the appropriate fee. I am not necessarily blaming the police for being less than enthusiastic about doing their duty when they cannot rely on political support if their actions are criticised. But the question arises why, if they are prepared, and presumably able, to protect life and property after the payment of a fee, were they not capable of doing so before? This is the kind of legalised protection racket which should be sat on right at the start. The police may point out that it is cheaper to hire them than to maintain the kind of private army of goondas which, so I am told, is beginning to make its appearance in Kerala and other areas plagued by serious labour indiscipline. But the industrialist can rightly claim that he pays too much in taxes already, and gets little enough in return for them; besides, if the police were doing their duty, there would be no need for the goondas in the first place.

THE MUNICH AGREEMENT WAS SIGNED TWENTY years ago this week, and I have been using some of the all-too-brief spare time offered by a world in which the pace of living seems to have increased immensely since those days, to read a few of the comments made on the occasion. The one conclusion I have been able to draw is that time makes fools of us all, even the wisest. The only man close to events who seemed to grasp the real significance of what was happening, and its possible bearing on the future, was Mr. Anthony Eden, who

thereby acquired a reputation his subsequent career was unable to support. Certainly Mr. Chamberlain was wrong, and so were all those who said Munich was necessary because Britain and France could not have sustained a war in 1938—when they finally did choose to fight they were little better prepared whereas Hitler had acquired the whole of Czechoslovakia and a considerably enhanced reputation besides. But perhaps the most interesting feature of the Munich business for us today is the impact it has had on all western thinking on international affairs. Its lesson was used to justify the attack on Egypt in 1956, for example, and is being quoted today as one of the main reasons the United States might be willing to go to war over the Chinese off-shore islands. It provided the background to the "containment" policies of Secretaries of State George Marshall and Dean Acheson and in fact it is now as much a set feature of the popular western outlook as hatred of colonialism is of the eastern. And with much the same unfortunate results at times. Somehow the appeasement of Munich has become confused with the kind of conciliatory approach to all problems which is so indispensable in international negotiations, and the result has been a serious loss of flexibility in western diplomatic attitudes. I say serious because it has not only impeded progressive thinking on the most efficient ways of combating communism, it has also alienated a fair proportion of the goodwill which the uncommitted democracies of Asia might otherwise have felt for the democratic West. It would be foolish to forget the lesson of Munich altogether if only because it proved such an expensive one to learn, but I often feel that the western cause would benefit, especially in Asia, if it were not remembered quite so vividly all the time.

I AM NOT A MEMBER OF THE INFORMATION AND Broadcasting Ministry's Consultative Committee of M.P.s, but if I were asked whether the existing system of film censorship in this country is unduly lenient or unnecessarily strict, I would not require a moment's thought to answer that it is strict and absurdly so. There is, of course, no limit to the amount of elementary freedom puritans will gladly take away in the name of something or other—and in India today the prigs are having a field day simply because liberal-minded people won't speak up. The number of foreign films reduced to non-sense by the scissors of the censor is legion, and more than once I have come away from the cinema with a feeling that it would have been kinder to the director not to have shown the film at all. The trouble is that a man with a grudge against his fellows will always find the time to write lengthy letters to editors and Ministers, whereas the opponents of censorship, meaning the lovers of liberty, will often only swear and do nothing more about it. Thus is the impression, utterly false, created that the majority of the people like their films and books cut by ignorant and/or insensitive policemen and civil servants. That I have not introduced the question of individual liberty without reason will be evident from the news item before me which says: "Tamil, Telugu and Bengali films, though unexceptionable on moral grounds, subtly preach class hatred and subversion." What these complainers probably mean is that these films tell the truth, and what they have in mind is political censorship. The bigots who now advocate moral censoring so passionately need to be reminded that once you have allowed any kind of censorship at all you have given away your right to ensure which kind it will be when it is eventually exercised.

TATA LOCOMOTIVE AND ENGINEERING COMPANY LIMITED

CHAIRMAN, MR. J. R. D. TATA SURVEYS
PROGRESS AND PROSPECTS

The following is the speech of the Chairman, Mr. J. R. D. Tata, delivered at the thirteenth Annual General Meeting of the shareholders of the Tata Locomotive & Engineering Company Limited, on Wednesday, September 24, 1958.

Ladies and Gentlemen,

The Annual Report and Accounts before you reflect the progress which the Company continued to make during the year under review. The construction programmes have proceeded apace. All the buildings have been completed and most of the plant and equipment installed. The total output of locomotives and diesel commercial vehicles and their indigenous content have both exceeded targets. The Steel Foundry is steadily building up production and the Alloy Iron Foundry is just coming into operation. The improved results of the year's operations have enabled your Directors to recommend an increase in the dividend on ordinary shares from Rs. 8 to Rs. 9 per share. Even with the increased rate of dividend paid this year, the average return of 2.7% to the ordinary shareholders over the whole period of their investment is still well below what they are entitled to expect. The annual bonus to the employees has been raised from one-and-a-half months' to two months' basic wages, an increase of 33.1/3%.

For the benefit of members who may not be aware of it, I may explain that the somewhat involved procedure followed in disposing of the profits for the year and in declaring the dividends has been adopted because the income-tax authorities do not treat dividends as free of tax unless they are expressly shown in the accounts as paid out of taxed profits, whether of the year of account or of previous years.

As stated in the Directors' Report, the profits for the year were wholly accounted for by the Automobile Division. The Foundry Division started making castings in June 1957, initially for our own use, and production began to build up only towards the end of the year. The new Welding and Fabricating Division was hardly in production during the year. As regards the Locomotive Division, about which I shall have something more to say later in my speech, while its operations yielded no profit, it may be noted that, in addition to bearing in full its legitimate share of plant and general overheads, it earned full depreciation and development rebate.

Issue of Capital

I had indicated in my speech last year the need for raising additional finance to meet the heavy commitments for capital as well as operating purposes. Since

then, the progress made by the Company and the improvement in the investment market have rendered it both possible and desirable to make a fresh issue of equity capital. As you will see from the Notice of the Meeting and the Directors' Report, it is proposed, subject to the sanction of the Controller of Capital Issues, to raise Rs. 3 crores of additional capital by the issue at par of 300,000 new ordinary shares of Rs. 100 each in the ratio of three new ordinary shares to five existing ordinary shares.

Locomotive Prices

As mentioned in the Report, the expansion of the Locomotive Division of the Company was completed well ahead of schedule and production at the rate of 100 locomotives per year is being maintained. The prices fixed by the Tariff Commission covered deliveries only upto 31st March, 1958. The price for locomotives delivered after that date had to be fixed by negotiation with Government. Although the Company's present offer represents a reduction in price of Rs. 52,000 per unit as compared with the price of the previous period, no agreement could be reached and it has been mutually agreed to refer the matter to the arbitration of Mr. J. N. Majumdar, ex-Judge of the Calcutta High Court, as Sole Arbitrator.

Lok Sabha Debate

As the shareholders are aware, the prices paid to us for locomotives under our Agreement with the Railways was the subject of an important debate in the Lok Sabha in September last year. The debate took the form mainly of an attack on our Company, although the Railway Board were also criticised for terms allegedly favourable to the Company and for being too lenient in its implementation. The Company was charged with low production, high costs and even with taking unfair advantage of the Agreement to the detriment of the Railways. Facts and figures were quoted in respect of an earlier period when operations were still hampered by construction and development activities. The progress subsequently made towards achieving full production and reducing costs, notwithstanding many unforeseen difficulties and obstacles, was totally ignored.

Perhaps the most regrettable feature of the debate was an attack on the Tariff Commission, who had made an exhaustive inquiry into the operations and costs of the Company, with the assistance of a foreign expert selected by the Railway Board, and had come to conclusions different from those sought to be drawn by the movers of the debate. Their findings were challenged and the members of the Commission were charged with partiality in favour of the Company. The preservation of public confidence in such statutory bodies as the Tariff Commission is almost as vital to the stability of a Democratic State as the preservation of public faith in Parliament and Courts of Law. Up to now their competence and integrity have rightly been unquestioned in our country, and I hope it will be appreciated that an attack on the integrity of the Tariff Commission and similar institutions undermines Democracy itself, almost as much as would an attack on Law Courts and Legislative bodies.

In order to correct the one-sided picture which this debate might have created in the public mind about our operations under the Agreement with the Railway Board, we published a booklet in December 1957 giving the full facts about Telco and also issued press statements. I have no wish to reopen this controversy now, but I must express regret that subsequent to the debate the Public Accounts Committee of the Lok Sabha has, in its report on Railway Appropriation Accounts for the year 1954-55, repeated some of the old charges against the Company based on the production and costs of years ago without recognition of the vastly different situation prevalent at the time the report was issued.

It is perfectly true that the Railways have paid higher prices for locomotives and boilers purchased from us in the initial years when production was low and manufacturing costs high than those at which they could have been imported; similarly, costs at Chittaranjan in the first years of production were also higher than the corresponding import prices. As output rose and efficiency improved, costs have come down in both factories to a level which today compares favourably with import prices other than the subsidised prices quoted by some countries. The Chittaranjan Works were completed about two years earlier than the Telco Works and it is natural correspondingly earlier. While, according to a recent statement of the Ministry of Railways and Transport, their costs have risen since 1956-57, Telco costs are still declining and the Railways will get the full benefit of such reduction in the current and coming years.

For anyone to find fault with the inability of newly established industries to supply their products from the very start of their operations at prices equal to or lower than the lowest import prices, particularly where, as in the case of the dying steam locomotive industry, its prices are clearly uneconomic or subsidised, is to ignore elementary industrial realities. The principle of protection to essential young industries and the consequential acceptance for some years of higher indigenous costs has been so well recognised and approved a part of our country's economic policies for the last thirty years or more that I am surprised such an uproar should have been created over the normal working of this same principle in the case of locomotive manufacture.

While it may not be possible to convince all our critics, the fact that, contrary to the complaint that the Company has made large profits out of the Railways, it is actually supplying locomotives at no profit

or even at a loss, will, I hope, at least convince some of them that the Agreement is not so favourable to the Company and unfavourable to the Railways as it is alleged to be.

Automobile Division

As indicated in the Report, the progress of the Automobile Division has been most satisfactory. Despite several adverse factors including shortages and delays resulting from the acute scarcity of foreign exchange, the phased programme of indigenous manufacture has not only been fully maintained, but has been exceeded by a significant margin. The parts and components which are now being made at Jamshedpur and for which we shall not have to depend on imports hereafter, include the complete frames with springs, all sheet metal parts, the front and rear axles and the complete transmission including the gear box. The only important item left now is the diesel engine for the manufacture of which preparations are well advanced. With the arrival on site of most of the machine tools and equipment for the Engine Shop and the completion of the Alloy Iron Foundry which has just started operation, the final stage of our programme of manufacture should be completed according to plan, by the end of October 1959, or even earlier.

Already, within four years, we have achieved both the highest indigenous content as well as the highest output of all manufacturers of commercial vehicles in the country, despite the fact that we were the last to enter the field. This striking and gratifying progress has been made possible by a number of factors. We have not only invested in the most modern plant and highly specialised machine tools but we have built up a team of engineers and workers to use the equipment to the best advantage. We have made sure that our processes and techniques will be equal in every way to the best found in the most modern factories abroad and that the productivity of our labour will be high. We have had the benefit of splendid collaboration from our Messrs. Daimler-Benz A.G., who have made available to us a large number of highly competent German engineers and technicians under the fine leadership of Mr. Hans Stoehr.

Housing

As mentioned in the Report, over 40% of the Company's staff are now housed in Company-owned quarters; but since the Company's Works are situated in an area where other suitable housing is scarce, we shall have to continue enlarging our township to provide adequate accommodation for the majority of our staff. Substantial additional housing will be required also for the additional staff we shall be engaging for the expansion of the Works in the next few years. Therefore, to the extent that our resources will permit, the growth of the colony must go hand in hand with the growth of the Works. To meet the additional expenditure, we have requested the Government of India for assistance under the Subsidised Housing Scheme for Industrial Workers.

Labour

At the end of my speech last year I had referred to the deteriorating labour situation at Jamshedpur and to the illegal strike accompanied by violence, in August 1957, organised by the communist-led Jamshedpur Mazdoor Union as part of a campaign of disruption in most of the industrial establishments in Jamshedpur in preparation for the assault on the main target, namely, the Tata Iron and Steel Works.

As most of you are aware, this campaign came to a head in May this year in the Steel Works and violence. Thanks to the firmness of the Steel Company's Management, the strong action taken by the Government of Bihar to re-establish law and order and to the good sense of the men themselves, the communists failed to achieve their main purpose which was to oust the long-established INTUC leadership and to place themselves in full control of all concerned at Jamshedpur. So far as our Company is concerned, we suffered only one day's stoppage as part of the backwash of the main struggle in the neighbouring Steel Works. In view of the illegality of the strike which took place in our Works during pendency of adjudication proceedings, the Company had no option but to take deterrent disciplinary action against the principal offenders. The labour situation in our Works returned to normal immediately and is better today than it has ever been. Discipline is being maintained, the men are working well and their morale is high.

Unfortunately, we have not up to now been able to re-establish as good relations as we would like to have with the Telco Workers' Union. After the failure of the Jamshedpur Mazdoor Union to capture the Labour Movement at Jamshedpur, the Telco Workers' Union has made special efforts to re-establish its leadership and control amongst our workers. I must confess I am disappointed at some aspects of this effort on their part as I feel that the way to sustained constructive work and not by keeping them in a state of agitation through the maintenance of points. I hope, however, that with mutual understanding we shall in due course re-establish cordial relations and co-operation with the Union. Our men are amongst the highest paid in the industry. Besides in a factory equipped with the best of modern machinery they live in a beautiful township which provides them with high standards of housing, medical facilities and other amenities. They have a fine and further training and advancement opportunities for them between them and Management have, on the whole, been excellent. Despite the intensive agitation to which they have been subjected during the last independent outlook and a high morale.

In closing, I should like, on your behalf, to welcome our new General Manager, Mr. R. G. da Costa, and to offer our thanks to him and the able team of our officers and workers whose initiative and efforts were mainly responsible for the year's excellent results.

Note: This is not a report of the proceedings at the above Annual General Meeting.

THE IMPERIAL TOBACCO COMPANY OF INDIA LIMITED

CHAIRMAN, MR. G. H. J. CLARKE'S
REVIEW

Speech by the Chairman, Mr. G. H. J. Clarke, at the Forty-seventh Annual General Meeting of the Company on the 25th September, 1958.

Ladies and Gentlemen:

I have much pleasure in welcoming you to this the Forty-seventh Annual General Meeting of the Company.

With your approval, we shall take the Notice convening this Meeting, the Report of the Directors and the Accounts, which have been circulated, as read and the Secretary will now read the Auditors' Report.

Early this year Mr. J. L. Bowring and Mr. P. Graham resigned from the Board of Directors. Mr. Bowring had served the Company for over 31 years, having been a member of the Board for 10 years, and we wish him health and happiness in a well-earned retirement. Mr. Graham's service with the Company was for 22 years, four of them on the Board, and it is regretted that his services are no longer available to us.

Net Profit

You will see from the accounts in your possession that the net profit this year is slightly less than last year, this being mainly due to increasing cost and greater taxation on tobacco products, which I envisaged when I addressed you last year. Before giving you a review of the Company's activities, I shall make one or two comments on the accounts.

Referring first to the Liabilities side of the Balance Sheet, you will have seen that in addition to the transfer to Development Reserve a further Rs. 20 lakhs has been appropriated to Fixed Asset and Stock Replacement Reserve. The Board makes periodical surveys of the replacement cost of both Fixed and Current Assets, and considers it essential to retain this additional amount in the business as a measure of protection against the pressure of rising prices and costs on the Company's resources.

Under the heading of Unsecured Loans, Security Deposits from Dealers and Contractors (Cash) show a further reduction. This is a consequence of the further implementation of our policy of carrying widely spread stocks of manufactured goods, thus reducing the need for Dealers to carry such stocks on secured credit.

On the Assets side, although the net value of Fixed Assets after depreciation shows an increase of only Rs. 33 lakhs, a reference to the Schedule of Fixed Assets reveals additions and transfers during the year of Rs. 115 lakhs. A large part of the expenditure on Fixed Assets was incurred in equipping the Company's cigarette and printing factories with plant necessary to increase existing production capacity to its highest potential, and as a result of this action an improvement in overall output was attained without difficulty. Plans for a new factory have had to be deferred.

Advances, etc.—unsecured show a very large increase over last year, and in the main represent earlier payments made to our suppliers of leaf tobacco because in Andhra Pradesh, the principal source of cigarette tobaccos, the harvesting and curing of the crop was earlier than last year.

Loans and Advances

Also under the heading of Loans and Advances a new item this year is Current Profits Deposit. This deposit was required to be made in accordance with Section 10 (2B) of the Income-tax Act, and Minister announced that no deposit would be required in respect of the current year and secondly when a notification was issued that deposits already made would be refunded. The amount of Rs. 43 lakhs was returned to us in July this year, and it is hoped that this item will not again have to appear in the Company's accounts, though it should be noted that the provisions of Section 10(2B) have not been removed from the Act.

Cash and Bank Balances show a considerable reduction this year, mainly because of the two items of Advances referred to earlier. The introduction of additional Excise Duties, to which I shall refer later, also made it necessary to invest more money in stocks of Manufactured Goods.

From the Profit and Loss Account you will see that Sales have increased by Rs. 50 lakhs, but higher costs and duties have fully offset this increase. Incidentally this Account shows a decrease of Rs. 2 lakhs under the heading of Workmen and Staff Welfare Expenses; this is attributable to certain benefits previously given to workers having now been absorbed in the wage.

The Company now not only meets its full printing requirements from its own printing factories at Tiruvottiyur and Monghyr, but relies entirely on India's resources for its general requirements of cigarette paper, printing board and papers, aluminium foil and packet wrappings. Our encouragement of the growth of leaf tobacco in India, which has become a major export industry, is well known.

Raw Materials

Although our long term policy of promoting the production of our raw materials inside India has now come to fulfilment there remain some vital items which it is neither practicable nor economic to produce in this country at present. I refer in particular to elaborate spare parts for machinery. Although the shortage of foreign exchange is severe, we feel sure that Government appreciate that the benefits of the large imports of capital goods which have been permitted during the last few years must be much diminished if exchange cannot be found for the importation of essential spare parts to maintain those capital goods.

The Board would like your Company to contribute more directly to the country's export trade, but import

barriers and long established protected local industries in many overseas countries impede efforts to export cigarettes or smoking tobaccos. Our main contribution in this field therefore continues to be the conservation of foreign exchange, not only by reducing imports to the barest minimum but also by the encouragement of local industries, some of which, having been largely brought into being to meet our requirements, have already grown to the point where they are themselves substantial exporters.

Excise Duties

When I last addressed you I made a reference to the proposal to centralise the Sales Taxes levied by State Governments on tobacco products. Since then, at the request of the Government of India, the various States agreed to withdraw their Sales Taxes on tobacco products, but the additional Excise Duties imposed by the Centre in December, 1957, placed an even heavier burden on the industry than had been the effect of the Sales Taxes which were framed to replace. While we welcomed this centralisation of taxation as a contribution to the stabilisation of prices throughout the country, the consequent overall increase in the burden of tax forced us to increase the prices of some of our leading brands, with consequent loss of sales volume, and to accept a lower return for others. This was the third occasion during the year on which we had to make a price revision, the first having been necessitated by the introduction of the decimal coinage on 1st April, and the second by an increase in the Tobacco Excise Duty on air-cured tobaccos in the Budget of May, 1957. Such frequent changes in prices naturally have an adverse effect on the buoyancy of our trade, and consequently on Government revenue, as the consumer faced with rising costs everywhere finds it necessary to re-adjust the pattern of his personal expenditure.

Your Board is of the opinion that these adverse trends cannot be held in check unless the industry is given a period of freedom from upward revision of taxation, whether in the form of increased rates of tax or through, for example, any simplification of the tax structure or the application of the metric system. The Budget of 1958 was a welcome one in that it gives us an opportunity to start to consolidate our position, and we must most sincerely hope that expressed intention will result in substantial savings by further taxation will not lead to additional imposts on the tobacco industry.

I have already referred to the imposition of additional Excise Duties in replacement of State Sales Taxes, as a measure of simplification both wise and welcome, but there has been a noticeable attempt by various Municipalities throughout the country to endeavour to enhance their revenues by introducing or increasing octrois on tobacco products and even on the raw materials for our factories. We maintain that our raw materials, and their products, on which the Centre levies Excise Duty, and now additional Excise Duty, should be kept outside the taxable scope not only of the States but also of Municipalities. If this is not done, an inevitable effect must be a reduction in Central revenue because of distribution difficulties brought about by these barriers raised to trade and the free movement of goods.

Direct Taxation

In the field of direct taxation on companies, your Board believes that the total weight of company taxation is too high, especially for a country which seeks to stimulate capital formation and attract foreign investment. Even if the present level of taxation could be justified, there would be scope for the structure of company taxation to be remodelled and simplified. It is surely difficult to justify wealth tax on companies, nor can the imposition of super tax on the capitalization of retained profits fail to discourage capital formation. Moreover, desirable though it undoubtedly is to increase capital investment, this end will not be achieved by penalising companies which pay dividends at a rate higher than the modest figure of 6% on issued capital which normally means an even lower percentage on the real capital invested in the business.

I should like now to turn to an aspect of our

business which receives more and more attention each year; that of the development and training of personnel. On the management side, the Company conducts its own planned training courses and members of the staff regularly participate in the courses recently, and most successfully, inaugurated at the Administrative Staff College of India. On the workers' side, Training Within Industry is already established, while certain other schemes, including Job Evaluation, calculated to increase production and benefit the worker, are in an experimental stage. We believe that such measures are important to the maintenance of good relations between employer and worker, but success is equally dependent on the attitude of the Trade Unions.

There is, however, one factor which your Board views most seriously; the high degree of absenteeism in industrial concerns. This is not an evil which is confined to our business, but is being experienced by industry throughout the country. The number of man-hours lost through high absenteeism during the year must have been astronomical, and this is a matter which a well organised Trade Union can and should help to deal with in the firmest possible way.

Labour Relations

The management's relations with workers during the year under review have been reasonably happy; there have been stoppages of work, there have been differences of opinion, but on the whole the management and workers have been able to work together to the common good and I should like to thank them for their co-operation.

I must now make reference to the Employees' Provident Funds Scheme and the Employees' State Insurance Scheme. At a recent conference at Nainital it was proposed that employers' contributions to the two Schemes should be substantially increased. Your Board welcomed these Schemes when they were first applied to this industry, and they remain welcome, but any betterment of the benefits accruing to workers should be accompanied by a greater productive effort on the part of workers themselves.

Further, the benefits of the Insurance Scheme are at present given only to industrial workers in certain areas, a small percentage of the working population. We believe that benefits should be given to all workers throughout the country before they are extended to families of workers now insured, since otherwise the advantages enjoyed by those now insured over other workers will be still further accentuated.

Housing for Workers

It was suggested also that industry should be given the responsibility for housing its workers, and while such a course might be possible and even desirable when new factories are installed in remote rural areas, it is quite beyond the resources of existing industry, particularly when in urban areas. The task of housing workers is one of such magnitude that it should of necessity be the responsibility of the Government and we would recommend that the Government extends its policy of providing loans and subsidies through co-operatives, thus enabling the worker to own his house in due course, and so provide him later in life with adequate and rent-free accommodation acquired largely at his own expense and not at the expense of consumers as a whole.

Industry must be prepared to play its full part, but it must not be burdened with much more than its fair share of taxation if it is to survive, still less if it is to thrive and expand to the benefit of the country's economy. The strength of industry is being eroded on two sides; on the one hand it is subject to ever increasing taxation and on the other to the unending demands for greater rewards for workers whether in wages, welfare or amenity measures frequently unrelated to higher productivity or even to regular attendance.

During the first five months of the current financial year sales volume has been held to last year's levels despite increased competitive activity and the realigned prices resulting from the additional Excise Duties introduced in December. Your Board therefore felt justified in declaring an unchanged interim dividend of 2% free of Income-tax, in respect of the year to 31st March, 1959. Nevertheless, the two-pronged attack on profits even at the reasonable level which your Company attains, must make the future less certain.

I now formally move the adoption of the Report and Accounts for the year ended 31st March, 1958, including the proposal for payment on 27th September next of a Final Dividend of 3% free of Income-tax, on the issued Ordinary Shares of the Company.

I shall now ask a member to second the Resolution and when that has been done, if anyone has any question to put or comment to make on the accounts, it will be a convenient time to do so.

Note.—This is not a report of the proceedings of the Annual General Meeting.

JESSOP AND COMPANY LIMITED

CHAIRMAN'S REVIEW OF DEVELOPMENTS SINCE MANAGEMENT CHANGES

Addressing the 26th Annual General Meeting of the Shareholders of Jessop & Company Limited, held on 29th September, 1958, the Chairman, Sir B. P. Singh Roy referred to the appointment of the present Board of Management by a Government Notification dated 15th May, 1958 under the Industries (Development and Regulation) Act, 1951, and said:—

The effect of Government's action is, that your Company has been protected from further harm and has been placed under the control of a body whose sole duty it is to restore it to full strength as soon as possible. As a further result of this action Government has been able to take effective measures to strengthen the financial resources of your Company so that its proper working is now assured and thus there is now no reason why it should not be fully rehabilitated in a reasonably short period of time.

You will note that I have been using the phrase "your Company," and I have done so deliberately, for the ownership of the Company has not changed, though your rights as Shareholders are somewhat curtailed during the period of office of the Board of Management, in that, you may not propose or pass any resolution nominating or appointing any person to be a Director. Further, any other resolution you may think fit to pass shall be given effect to, only after its approval by the Central Government. Accordingly, should you, within these limitations, desire to pass any resolutions to-day or to make any suggestions for the Company's well being, it will be submitted to Government for its consideration.

I regret that for the second year running our Annual General Meeting has been held later than usual, but I am sure that, knowing the circumstances, you will excuse the delay. In the first place, your then Directors had requested the Company's Auditors to make a very special check of the Company's Books in the light of the disclosures at the last Annual General Meeting so that all could be satisfied that no further unknown factors existed and this naturally caused some delay in finalising the Accounts. The findings of the Auditors after their investigation are given in their Report.

Secondly, there was the appointment of the Board of Management in mid-May. You will appreciate that it took some time for the new Board to acquaint itself thoroughly with the position and to decide on what action should be taken in each case after taking any necessary legal and financial advice.

All this took time and as a result we were not able to hold the Annual General Meeting any earlier than to-day, but in future years we can hope that such unusual factors will not be present and that your Company will be able to revert to its old practice of holding its Annual General Meeting about the middle of the year.

I believe there will be some among you who will wish to enquire what action the Board is taking in respect of the losses your Company has sustained. As you will see we have, from the Accounts point of view, made full provision for all known losses and we have had and are still having discussions with our legal advisers on what steps can be taken to safeguard the Company's interests. Some have already been taken in this matter and other steps

will doubtless follow, but I do not consider it would be in the Company's best interests to divulge more at this juncture and so I will ask for your forbearance in this matter to-day. At the same time I assure you that everything that can properly be done will be done.

As you will see from the Report and Accounts already with you, the results of the Company's working for the year ending 31st October, 1957, constituted an all-time record. As previously forecast, the Company's Agency business continued to dwindle and in fact it has now virtually ceased but the Works Sales rose by over 40 per cent. as compared with the previous year, from Rs. 380 to Rs. 534 lakhs, so that the total Sales figure is still a record at 594 lakhs.

The Board of Management, however, regrets that in spite of these extremely satisfactory working results and the high net profits earned by your Company, it is not possible for it to declare a dividend because of the serious financial loss suffered by the Company as a result of mis-management during the financial years 1955/56 and 1956/57. Shareholders, therefore, are once again being called upon to agree to sacrifice their dividend in the interest of the financial rehabilitation of the Company. I have no doubt that this is only a temporary deferment of your participation in the profits of the Company and I hope that you will accept this decision in a proper spirit.

During the present year we could well have expected the improvement registered last year to continue but, unfortunately, your Company is no exception in the Engineering Industry which, over the last six months or so, has increasingly felt the growing shortage of its principal raw material, steel. It is expected, in fact, that this year's working will be satisfactory but it certainly cannot be as good as it would have been, had not production been hampered by shortage of raw materials.

Rise in Fixed Assets

I am sure that you will have noticed the rapid increase in the value of your Company's Fixed Assets as shown by the Accounts for the last few years. Neglecting the figures for "Block in Progress" which are those for Plant and Buildings still in course of construction or installation, the values are about 46 lakhs in October 1955, 62 lakhs in October 1956 and 109 lakhs in October 1957. By the end of October 1958, this figure will be about 170 lakhs so that, in three years your Fixed Assets will have been multiplied over three-and-a-half times. While these increases represent a very considerable addition to your Company's earning capacity, they have also been a heavy drain on its financial resources during the period of their installation. You will be glad, therefore, to know that almost all these extensions are now in active use as far as the raw material situation permits. Provided the supply of materials improves, of which there is now some hope, their output should add very materially to the Company's turnover during the years to come.

Of the extensions now virtually complete, by far the most important, is your Company's new Coach Works which in size and scope is larger than any of the three previously existing units. Those of you

who travel by air cannot have failed to see these new Works which lie along the Jessore Road to the North of our older Works. The photographs reproduced on the end covers of the Report in your hands will give you some idea of their size. They consist of four bays, each 84 feet by 640 feet, giving a single covered area under heavy cranes of over two hundred thousand square feet while paint shops, stores, canteens, offices, etc., cover another eighty thousand square feet of floor space.

New Extensions

These new Works, which are exceedingly fine by any standard, are now actively engaged in the manufacture of Metro Gauge Passenger Coaches and they are also busy on Electric Multiple Unit Broad Gauge Coaches for the Calcutta Electrification Project. In this latter case, I am afraid, we are still severely hampered by shortages of steel, but there is some hope that missing supplies will be received within a few months.

The second of your Company's new projects, the manufacture of Diesel Road Rollers, has been very badly affected by shortages of steel. We started well in January 1957 and rapidly built up production to 12 rollers a month with the intention of raising this figure to our target of 18 to 20 a month. Unfortunately, we very soon were affected by shortage of steel, with the result, that this Department was completely closed during October to December 1957, and since then has limped along at an average of six machines a month, entirely, I must emphasise because of shortage of steel and also due to subsequent restrictions on the quantum of imported components. As a result, we have up to date completed only some 150 rollers whereas we could, if given supplies, have completed about 300.

From a Government publication entitled "Directory of Government Purchases during the year 1956-57" it appears that Government imported Road Rollers from abroad to the value of Rs. 32 lakhs 41 thousand, over double that for this expenditure abroad Government procured about 100 Rollers. On the other hand, if we had been granted the same amount of foreign exchange, we could have imported all the components and—this is important—all the steel to allow us to make an additional 140 Rollers besides those we actually turned out. We could have provided India with 40 per cent. more Rollers for the same foreign exchange and we could have kept our Works fully occupied instead of half employed.

I might add that the foreign exchange that we require for our Rollers has dropped from about 65 per cent. of our selling price to Government, on the first batch, to less than 40 per cent. to-day. This excludes exchange required for any items we purchase locally but the total effect of these can only be small.

The sales from your Company's Works are almost entirely to such Government or quasi Government bodies as the Railway Board, Port Trusts and various Irrigation Projects, or else to such Institutions of national importance as the Tata Iron & Steel Co. or the Indian Iron & Steel Co. Thus, it may be said that whatever the Company produces, by and large, a saving in foreign exchange is effected, and I assume that the requirements of these customers are of such importance that if they were not obtainable from indigenous sources they would have to be imported.

In the case of your Company's standard Overhead Travelling Cranes, the indigenous content is now about 90 per cent. The balance 10 per cent., or less, covers such items as electrical equipment and ball or roller bearings not yet made in India and such minor items as oil seals which we should be able to do very little. Is it not better that we should be granted import licences for 10 per cent. or so of any given value, so that, we can then add 90 per cent. locally rather than that the article should be 100 per cent. imported? Yet import is still sometimes preferred, on the grounds that foreign prices are a little cheaper, or more often, that delivery is better. Yet our delivery, and for that matter our capacity, and to some extent our ability to reduce prices are all governed by the rate at which we can secure materials, including this proportion of imported components.

I appreciate that I have chosen a good example for my case, but even in your Company's Wharf Cranes imported, the indigenous content is very special and mostly thirds, while on such items, as Sluice Gates for Irrigation Projects, it will again be well over the 90 per cent.

We fully realise the difficulties of the foreign exchange situation of our Country. This situation can be eased only in two ways, by exporting more and by importing less. In a heavy industry such as ours, export is extremely difficult and takes many years of patient work to achieve but our ability to save foreign exchange by reducing imports by making things here has never been fully exploited. We, therefore, expect a change in Government's policy in this regard as outlined by the Hon'ble Sri Lal Bahadur Shastri, the Commerce and Industry Minister, at the Meetings of the Export and Import Advisory Councils held in New Delhi last month.

Returning to our own affairs, you will be pleased to know that your Company still has a very satisfactory Order Book though one must remember that of not much use. However, as I have already indicated, and there is no doubt that we shall get our full share of whatever materials are available. As regards this indigenous steel supplies will improve and in the meantime, I hope and trust that Government will keep factories such as ours supplied to the fullest possible extent, as in doing so, they will not only be reducing over-foreign dependence, but they will also be building up an important industry for the future.

Gentlemen I feel that I have said enough for this occasion, but before I sit down I am sure that you the Company's employees who have contributed to the excellent results shown in the Accounts now before you. These results have been achieved during a period when a great deal of time and energy was also being spent on major extensions and amidst the disruptions that such extensions always bring in their train so that such extensions always bring in their train so that they are even more commendable than they appear at the first sight. I feel you would all wish that this should be recognised.

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

Money

THE CALCUTTA MONEY MARKET

CALL RATE DECLINES

Wednesday, 1st October.

THE total of advances outstanding in the Calcutta money market during the past week has once again fallen. The requirements of the cotton, woollen and sugar mills have all declined. Credit to the jute industry and against grain and seeds storage is about the same. The interbank market has become considerably easier and the call rate is now quoting 1½ percent.

There has been a fall in the number of bills appearing in the exchange market during the past week. Those that have come to hand have been chiefly on account of tea shipments. Gunny bills have been few and far between. Remittance has been fair. Sterling has gained slightly against the D-mark and other Continental currencies and against the Canadian dollar, but is fractionally lower against the American dollar. The present buoyancy of the pound is possibly due to continued rumours that convertibility is imminent, and likely to be announced at next week's I.M.F. and World Bank's meetings in New Delhi.

BULLION WAS STEADY LAST WEEK BUT TURNOVER was restricted. The price of silver advanced from the previous week's level of Rs. 185 to Rs. 185.50 today for ready delivery, and the rate of forward delivery was quoted at Rs. 184.75. The London price stood at 76½d and the New York quotation was 88½ cents.

Gold, in sympathy with silver, was steady and the price rose from Rs. 109.25 to Rs. 109.50. The sovereign at Rs. 71.50 showed a gain of 25 nP.

DURING THE WEEK ENDED 26TH SEPTEMBER, Government of India Treasury bills for Rs. 173,96,75,000 were sold in favour of the Reserve Bank of India.

TENDERS FOR RS. 2 CRORES OF 91 DAYS' Government of India Treasury bills were opened on 30th September. Total amount offered was Rs. 55,00,000. Tenders at Rs. 99.370 and above were accepted in full and those at Rs. 99.365 were allotted approximately 68 percent. Lower tenders were rejected. Total amount accepted was Rs. 2 crores, the average rate of accepted tenders being Rs. 2.527 percent a year. Tenders for Rs. 2 crores of 91 days' Government of India Treasury bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on 6th October. Successful tenderers should make payment on 10th October. Other conditions are as usual.

THE STATEMENT OF THE RESERVE BANK OF INDIA during the week ended 26th September, 1958, showed a decline of Rs. 13.75 crores to Rs. 1,529.73 crores in active notes, while the total note issue was Rs. 1.44 crores higher at Rs. 1,556.78 crores. Notes held in the Banking Department consequently rose by Rs. 15.19 crores to Rs. 40.80 crores. Deposits of the Government of India fell by Rs. 4.64 crores to Rs. 48.54 crores but other Government accounts increased by Rs. 5.23 crores to Rs. 26.11 crores, presumably because of transfers of money from the Central Government. Balances of commercial banks at Rs. 104.50 crores disclosed an increase of Rs. 6.42 crores. Balances held abroad declined by Rs. 1.10 crores to Rs. 14.21 crores. Investments fell fractionally to Rs. 300.71 crores. Other loans and advances declined from Rs. 54.69 crores to Rs. 51.74 crores, of which advances to scheduled banks against usance bills amounted to Rs. 1.08 crores (Rs. 3.43 crores). Ways and means advances stood at Rs. 13.67 crores against Rs. 13.08 crores.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 19th September, 1958, shows Demand and Time liabilities at Rs. 758.46 crores (Rs. 24.77 crores on account of borrowings from banks) and Rs. 843.04 crores (Rs. 37.79 crores), compared with Rs. 755.76 crores (Rs. 26.49 crores) and Rs. 845.93 crores (Rs. 36.77 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 94 lakhs and Rs. 3.47 crores to Rs. 40.86 crores and Rs. 89.84 crores.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 3-10-58.				
Issue Date	Maturity Date	Amount (000's Rs.)	Average Rate	Acceptance
3-10-58	4-1-59	2,00,00	Rs. 2.527%	
26-9-58	27-12-58	2,00,00	Rs. 2.528%	
19-9-58	20-12-58	2,00,00	Rs. 2.524%	
12-9-58	13-12-58	3,00,00	Rs. 2.523%	
5-9-58	6-12-58	3,00,00	Rs. 2.518%	
29-8-58	30-11-58	3,00,00	Rs. 2.520%	
22-8-58	23-11-58	4,00,00	Rs. 2.561%	
14-8-58	15-11-58	3,00,00	Rs. 2.513%	
8-8-58	9-11-58	2,00,00	Rs. 2.651%	
1-8-58	2-11-58	1,00,00	Rs. 2.726%	
(Monthly Maturities 000's omitted)				
November 1958		13,00,00		
December 1958		10,00,00		
January 1959		2,00,00		
Total		25,00,00		

crores, respectively. There is a rise of Rs. 3.55 crores to Rs. 588.14 crores in investments. Advances and bills discounted at Rs. 850.82 crores show a drop of Rs. 43 lakhs. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 8.2 percent and 53.1 percent against 8 percent and 54.2 percent.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 19th September, 1958, shows a rise of Rs. 3.95 crores to Rs. 442.78 crores in total deposits. Investments in Government securities are up by Rs. 1.42 crores to Rs. 235.54 crores, while other authorised investments remain unchanged at Rs. 11.11 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have declined by Rs. 70 lakhs to Rs. 164.43 crores. Cash and balances are, in consequence, shown at Rs. 48.29 crores or Rs. 7.57 crores higher.

THE FOLLOWING IS A STATEMENT OF THE CASH balances of the Central Government on the last day of June 1958:

(1) At the Reserve Bank of India in India	44,03,16,000
(2) At treasuries in India	19,41,000
(3) In England (sterling converted at 18d the rupee)	91,28,000
Total	45,13,85,000

LONDON FINANCIAL LETTER

STEADY RECOVERY OF STERLING

By Air Mail.

A YEAR ago, at the peak of sterling's crisis of 1957, Britain's Bank rate was raised from 5 percent to 7 percent and other restraints were imposed. Within the year, the process of relaxation was complete. Bank rate was reduced below 5 percent; bank credit was released not only from the restrictions imposed in 1957 but also from those imposed in 1955; restraints on hire-purchase were relaxed—just before the anniversary of 7 percent. At this time the City of London is looking both backwards and forwards, trying to relate the experience of the past to the probabilities of the future. There are figures to prove that the recovery is real. In the first half of 1958 (later figures are available for gold and dollars but not for sterling balances), the reserves increased by £287 million, the U.K.'s sterling liabilities to other countries were on balance unchanged, E.P.U. credits amounting to £17 million were repaid. But the figures do not prove that "the September measures" effected this recovery. Certainly, they were an important factor in it—and they can take credit (if that is the right word) for drawing some "hot" money into London and so swelling the reserve, but some people argue that favourable terms of trade were even more important. Looking ahead, they are a little apprehensive lest the authorities make inadequate allowance for this factor (official statements have sometimes under-emphasised it), and for the fact that the terms of trade are no longer moving in favour of Britain.

The Government policy can only slightly affect the terms of trade; policy must, on the contrary, be adapted to the terms of trade. If a major element in the improvement in the balance of payments is being withdrawn, the full benefits of the financial recovery cannot be dispensed with. Yet there are signs that the Government is now moving beyond the stage of withdrawing restrictions to the stage of positive re-expansion. The Government could plausibly argue that it had so far done no more than withdraw restrictions, mainly restrictions on credit—including instalment credit. (A high Bank rate is not a restriction in this sense, but a lower Bank rate is in present circumstances an acknowledgment of the circumstances rather than a stimulant.) But the Conservative Party's latest statement of policy and plans, *Forward in Freedom*, suggests a more expansive outlook than the statements made by Ministers hitherto. The Conservative Party is not the Government, but the leaders of the Government are leading members of the Party and it must be assumed that they approve the document. Particularly significant, therefore, is the warning in this document that Britain must not be so obsessed with the dangers of inflation to allow deflation to "creep upon us unawares".

Policy of Re-expansion

There is probably now, even in the City, a majority in favour of a policy of re-expansion, but there is still in some minds a lurking fear that the British economy will expand internally before the rest of the world is ready for expansion and will thereby increase imports before it can increase exports. And there is now in some minds a lurking suspicion that, in the period of preparation for a general election, politics may be as strong a factor as economics in the shaping of policy.

The important fact that these apprehensive observers overlook (or perhaps they dispute it) is that the British economy is now genuinely strong enough to advance. There could be no clearer evidence of the Government's belief in that fact than the relaxation of controls on a wide range of imports from the dollar area announced at the Montreal

Conference. Though the Canadian delegation's demand for full convertibility of sterling was rejected, this further progress in the policy of non-discrimination represents a practical advance towards that objective.

Some ideas on convertibility are, indeed, too rigid. Transferable sterling, with which a large volume of international payments is transacted, is effectively convertible at only a slight discount in the free markets. It is formally inconvertible only in the sense that it cannot be exchanged in the London market; and there is no guarantee that the discount will always be slight, for the British authorities might, in an emergency, withdraw their support from the free markets. In practice, however, the authorities have continued to support transferable sterling, even in an emergency, because a slump in unofficial rates will be psychologically harmful, and also for the practical reason that supporting the rate will rarely be more expensive of gold and dollars than "commodity shunting", which will divert gold and dollars from the reserve if the discount widened appreciably. So for general purposes "non-resident" sterling is virtually convertible. It is the "resident" variety that troubles the Canadians and Americans.

RESERVE BANK REPORT ON THE CO-OPERATIVE MOVEMENT

INCREASED WORKING CAPITAL FOR SOCIETIES

THE Statistical Statements Relating to the Co-operative Movement in India for the Year 1956-57 has recently been published by the Agricultural Credit Department of the Reserve Bank of India. It says that the expansion in the activities of the co-operative movement, as witnessed during the earlier years, continued unabated during the year under review. Though the number of co-operative societies of all types functioning in the country increased only by 1.8 percent from 240,000 to 245,000, their working capital went up from Rs. 469 crores to Rs. 568 crores or by 21 percent. The members of primary societies recorded an increase of about 10 percent from 176,000 to 194,000 during the year. This increase is noticed in spite of about 300,000 policyholders in the erstwhile co-operative life insurance societies going out of the co-operative fold consequent on the integration of the societies with the Life Insurance Corporation of India. The advances made during 1956-57 by primary societies were 23 percent higher than during 1955-56. Bombay alone accounted for Rs. 63.20 crores or 33.5 percent of the aggregate advances.

State Co-operative Banks

Following the re-organisation of States, the Manipur and Tripura State Co-operative Banks were newly formed, the Madhya Pradesh State Co-operative Bank was re-constituted into the Vidarbha and the Mahakoshal State Co-operative Banks while the Ajmer, Bhopal, Coorg and Vinodhy Pradesh State Co-operative Banks ceased to be apex agencies. Consequently, the number of State co-operative banks at the end of June 1957, stood at 23 compared with 24 a year ago, and their membership also declined from 36,394 to 33,447. However, their working capital rose by a little over 25 percent to Rs. 79.54 crores and this was achieved by an increase of 15 percent in their owned funds and about 70 percent in their borrowings. The average working capital a bank more than doubled itself during the period 1951 to 1957. Their advances to their member banks and societies at Rs. 113.77 crores recorded an impressive rise of Rs. 55.67 crores from Rs. 58.10 crores during the previous year.

The declining trend in the number of central co-operative banks and banking unions continued during the year under review and the number of banks fell from 478 to 451, the smaller banks merging with adjacent larger banks. In spite of this decline, their membership rose from 300,000 to 311,000 and their working capital of Rs. 92.67 crores to Rs. 110.26 crores during the year. Loans advanced to banks and societies during 1957-58 amounted to Rs. 84.84 crores representing an increase of 20.5 percent over the previous year. Of this amount, Rs. 25.20 crores were advanced by the central co-operative banks in Bombay. At the end of 1956-57, the overdues amounted to Rs. 9.34 crores compared with Rs. 7.88 crores at the beginning of the year and constituted nearly 13 percent of the outstanding loans compared with about 15 percent in the previous year. The position of the overdues was the heaviest in the case of central banks in Bihar, where they constituted over 44 percent of the outstandings on 30th June, 1957.

Agricultural Credit Societies

Agricultural credit societies constituted the most important sector of the co-operative movement in the country. At the end of 1956-57, there were 161,510 such societies with a membership of 9,120,000 and working capital of Rs. 98.30 crores. Borrowings from State or central banks, which stood at Rs. 55.90 crores on 30th June, 1957, formed the main component of working capital. Loans advanced by them during the year amounted to Rs. 67.33 crores while the year-end outstandings of loans stood at Rs. 76.82 crores. Overdues constituted about 22 percent of the outstandings on 30th June, 1957, against 25 percent at the end of 1955-56.

The non-agricultural credit societies numbered 10,150 at the end of June 1957, compared with 10,063

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business, ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.

Head Office: Oriental Building, BOMBAY-1.

at the beginning of the year. More than 50 percent of these societies were concentrated in Punjab, Bombay and Mysore. Their membership rose by 166,000 to 3,239,000 during 1956-57. Their working capital recorded a fairly large increase from Rs. 85.74 crores at the beginning of the year to Rs. 100.41 crores at the end of June 1957. Loans advanced by them during 1956-57 amounted to Rs. 82.07 crores and represented an increase of Rs. 10.01 crores over the amount advanced during the preceding year. On 30th June, 1957, the loans due by individuals amounted to Rs. 74.99 crores and overdues formed 8.2 percent of this amount.

Land Mortgage Banks

There were 12 central land mortgage banks with a membership of 116,142 individuals and 419 banks at the end of 1956-57. Their paid-up capital and reserves amounted to Rs. 109 lakhs and Rs. 62 lakhs, respectively. The loans advanced by the banks during 1956-57 amounted to Rs. 3.80 crores, while outstandings on 30th June, 1957, stood at Rs. 14.94 crores. During the year, the number of primary land mortgage banks went up by 24 to 326, their membership by 19,759 to 334,000, and their paid-up capital from Rs. 85.64 lakhs to Rs. 98.70 lakhs. Borrowings from central land mortgage banks and loans due by individuals stood at Rs. 10.94 crores and Rs. 11.51 crores, respectively, on 30th June, 1957.

At the end of June 1957, the total contribution of State Governments towards the share capital of co-operative societies of all types amounted to Rs. 7.74 lakhs. Of this amount, Rs. 328 lakhs or 42 percent is accounted for by primary agricultural societies (both credit and non-credit) Rs. 220 lakhs by State co-operative banks and Rs. 126 lakhs by central co-operative banks. Nearly 85 percent of the contribution to primary agricultural societies was made by the States of Bombay (Rs. 191 lakhs) and Punjab (Rs. 88 lakhs). Over 72 percent of the State contribution to central co-operative banks was accounted for by Bombay, Madhya Pradesh and Bihar. Bombay is the only State which had contributed to the share capital of many types of co-operative societies and in most cases the contributions have been larger than those in any other State. Consequently, about 45 percent of the total

contribution by all the State Governments is accounted for by this single State. Only five States have contributed to the share capital of central land mortgage banks, the total contribution being Rs. 18.75 lakhs.

Non-credit Societies

The number and membership of the State non-credit societies declined from 82 and 22,894 at the end of June 1956 to 56 and 15,644 at the close of 1956-57. On 30th June, 1957, their paid-up share capital was also less at Rs. 1.70 crores compared with Rs. 1.82 crores at the end of the preceding year. The turnover of these societies during the year was of the value of Rs. 14.52 crores which was more or less of the same order as during 1955-56. On 30th June, 1957, the central non-credit societies numbered 2,947 and their membership consisted of 2,049,000 lakhs of individuals and 74,024 societies. Their turnover for the year 1956-57 aggregated Rs. 71.46 crores which exceeded the turnover for the preceding year by Rs. 13.61 crores. At the end of June 1957, there were 31,905 agricultural non-credit societies of all types with a membership of 2,758,000 and a working capital of Rs. 44.73 crores. Their turnover during 1956-57 was of the value of Rs. 43.96 crores compared with Rs. 31.16 crores during the preceding year. Of these, 9,731 were agricultural marketing societies. The sales effected by these societies during 1956-57 were valued at Rs. 24.51 crores against Rs. 15.23 crores during the preceding year. The number, membership and working capital of the non-agricultural non-credit societies at the end of the year stood at 28,522, 3,164,000 and Rs. 60.89 crores, respectively. Their turnover was of the value of Rs. 61.69 crores compared with Rs. 44.73 crores during 1955-56.

Increased Profits

There was an all-round improvement in the profits made by co-operative societies during 1956-57 compared with the previous year. The increase was, however, not uniform as between the different types of societies. The largest increase was noticed in the case of primary agricultural non-credit societies whose profits rose from Rs. 69 lakhs in 1955-56 to Rs. 165 lakhs in the current year.

Picked in April . . .

what will
this mango
taste like
in December?

MANGO segments preserved in 'open-top' cans taste just as delicious in December as in April . . . months after the luscious, ripe fruit is picked. This is an example of how special containers can erase time. Equally effectively they shorten distances; 'open-top' cans today carry Malabar prawns to the Punjab, Nagpur oranges to the South.

Scientific packaging enables efficient distribution of goods, finds new markets for them. And, by helping to consolidate these markets, scientific packaging generates the necessary incentive for still greater production. That is why modern packaging occupies a position of vital importance in India's expanding economy.

The designing and manufacture of functional

packages—efficient and attractive—is the business of The Metal Box Company of India Ltd., who in 15 years have become India's largest manufacturers of containers and closures. Metal Box closures and containers today carry consumer goods made by over a thousand manufacturers—goods that once might have rotted, perished or not been produced at all—to millions of consumers who spend Rs. 100 crores buying them.

As India's economy expands rapidly, an increasingly greater, more complex burden will have to be borne by the packaging industry. As leaders in the field, Metal Box are ready to meet this challenge of the future with all their resources and all their experience.

Stocks and Shares

INDIAN IRONS FALL AFTER BONUS ISSUE ANNOUNCEMENT

NO CHANGE IN TEA SHARES: DUNLOP DEBENTURES OVER-SUBSCRIBED

Wednesday Evening.
THE outstanding event of the week was the decision of the Indian Iron & Steel Company to issue bonus ordinary shares in the proportion of one for five, subject to the sanction of the Central Government. The bonus shares will not, of course, rank for dividend in the year ended 31st March, 1959. Strangely enough, when the bonus was announced some of the prominent bull operators who had earlier bought heavily in anticipation, started liquidating their holdings, and the quotation for Irons receded from Rs. 27.10 to Rs. 26.36. Fresh buying soon followed, and the shares quickly recovered to Rs. 26.88; tonight's closing quotation is Rs. 26.83.

The relief granted to the tea industry failed to stimulate the tea section, because the general view among tea interests was that the concessions were quite inadequate. Jute shares, which have hitherto kept remarkably firm, displayed an easier trend yesterday because genuine investors were disinclined to make purchases at the current level of prices. However, fresh buying today brought a recovery. The stock market is in a sound technical position. The attention of operators is now likely to shift from Calcutta to New Delhi, where the International Monetary Fund and World Bank meetings are to be held next week.

The Dunlop Rubber Debenture issue was, as expected, heavily over-subscribed on 26th September and details of allotments are now awaited.

First class preference shares continued to attract investment support, but sellers were not prepared to part with their holdings.

In the banking section, United Commercial were steady at Rs. 69 but Punjab National were a shade easier at Rs. 63.50.

A solitary transaction was reported in Dehri-Rohtas Railway at Rs. 11.27.

In cotton textiles, Kesoram were slightly easier at Rs. 11.50 and Jay Shree were done at Rs. 7.87.

Coal shares met with some profit-taking, with Amalgamated being marked down to Rs. 21.75 and Bengal to Rs. 283. Equitable were lower at Rs. 28.50 and there were sellers of New Manbhoom at Rs. 12.50. Raneegeunge reacted from Rs. 13.62 to Rs. 13.50.

As mentioned earlier, jute shares initially tended towards slightly lower levels but at the close of business today, the earlier losses were in most cases wiped out. The following table illustrates the trend in this section:

	Opening 25-9-58 Rs.	Closing 1-10-58 Rs.
Agarpara	10.69	10.56
Anglo-India	202	200
Auckland	145	139
Barnagore	135	129
Howrah	21.37	21.25
Budge Budge	113	122

Prices of electric supply shares were unchanged. In sugar, Cawnpore were better at Rs. 12 and Champaran improved sharply from Rs. 18.25 to Rs. 19.50.

In the engineering group, Braithwaites were easier at Rs. 31.25, but Guest, Keen, Williams were better at Rs. 31.75. Indian Standard Wagon were taken at the higher rate of Rs. 96 while Jessops met with some profit-taking and receded from Rs. 24.25 to Rs. 24.12. Marshalls were higher at Rs. 5.31 but Kumardhubi Engineering were lower at Rs. 9.19. Textile Machinery were marked down sharply from Rs. 23.15 to Rs. 22.55.

In paper, Orient met with profit-taking and receded from Rs. 34.85 to Rs. 34.50. Sirpur were lower at Rs. 13.37 while Titagur were unchanged at Rs. 42.25.

Cement shares were generally easier. Dalmia were marked down from Rs. 10 to Rs. 9.81, and Sone Valley from Rs. 6.12 to Rs. 6. Jaipur Udyog, in contrast, recovered from Rs. 11.56 to Rs. 12.00.

In insurance, Concord of India changed hands at Rs. 12.12 and Ruby General at Rs. 7.06.

In shipping, Fraser & Co. were marked at Rs. 10.50 and India Steamship were lower at Rs. 13.61. India General Navigation were unchanged at Rs. 60.

Among miscellaneous industrials, Alkali & Chemical were lower at Rs. 15.81, while Angelo Brothers recovered from Rs. 21.25 to Rs. 21.37. Britannia Biscuits met with investment enquiry, following the announcement of a higher dividend (12% against 10%). Clive Row Investment were steady at Rs. 9.06 and Dunlop Rubber were wanted at Rs. 28.25. Imperial Tobacco were quoted at Rs. 12 ex-dividend and Indian Aluminium were easier at Rs. 16. Indian Cables met with profit-taking and eased from Rs. 30.50 to Rs. 29.50, while Indian

Oxygen were firm at Rs. 20.62. Jardine Henderson were shaded at Rs. 80.50 and Metal Box were taken at Rs. 30.12. National Carbon were wanted at Rs. 28 and Philips improved from Rs. 15 to Rs. 15.37 ex-dividend. Rohtas Industries were better today at Rs. 24.50.

In the mining group, Indian Copper were quiet at Rs. 3.78 and Orissa Minerals were marked at Rs. 26.87 ex-dividend.

Tea shares failed to attract interest and prices showed little variation.

THE WORKING OF THE BIRD-HEILGERS GROUP of jute mills has produced satisfactory results for the year ended March 1958. The profit of the UNION JUTE COMPANY has amounted to Rs. 35.29 lakhs. Depreciation absorbs Rs. 4.92 lakhs. The wealth tax provision is Rs. 46,000. Reserve for tax contingencies receives Rs. 2 lakhs. Other notable allocations include development rebate Rs. 1 lakh, jute stock reserve Rs. 1 lakh and stores reserve Rs. 2 lakhs. An ordinary dividend of 15 percent has been declared, leaving a carry-forward of Rs. 56,837. The directors state that the Union South mill was closed down on 22nd June, 1957. By working treble shift in the mill and double shift in the factory, it has proved possible, with the purchase of certain additional modern machinery, to absorb the South Mill's loom hours at the Union North mill. "The objective of combining the two small units, one of which was steam-driven and non-modernised, into one economic sized and fully modernised unit has thus been successfully achieved."

There is a profit of Rs. 15.38 lakhs for the AUCLAND JUTE COMPANY. An ordinary dividend of Rs. 5 a share has been declared. Depreciation absorbs Rs. 7.83 lakhs and wealth tax Rs. 48,000. An amount of Rs. 1.20 lakhs is transferred from general reserve, leaving a balance of Rs. 3,215 to be carried forward, against a loss of Rs. 3,79,016 brought in. The directors mention that in order to absorb the loom hours pertaining to 317 looms of the Lawrence Jute Co. Ltd. triple-shift working of the mill and double-shift working of the factory was introduced from 7th April, 1958. A reduction in overhead costs will result from the increased production obtained from this arrangement, and prospects for the current year appear favourable.

THE LANSLOWNE JUTE COMPANY has made a profit of Rs. 5.05 lakhs, of which depreciation absorbs Rs. 5.29 lakhs. Bringing in a loss of Rs. 9,08,440, there is a debit balance of Rs. 9,32,635. An amount of Rs. 52,500 is transferred from general reserve. The usual preference dividends for the half-year ended March 1956, have been paid, leaving a debit balance of Rs. 9,32,635 to be carried forward. The ordinary dividends have been passed over. The directors state: "In order to enable the loom hours of 317 looms of the Lawrence Jute Co. Ltd to be worked at the mill from 5th May, 1958, double-shift working in the factory and treble-shift working in the mill have been introduced. It has also been necessary to hire certain additional spinning and ancillary machinery from the Lawrence Jute Co. Ltd to cater for the increased loom complement. A considerable reduction in overhead costs has been obtained due to the higher tonnage of goods produced and it is therefore hoped that results for the current year will show a considerable improvement." The directors of the three mills say that the main redeeming feature with regard to future prospects is the increased availability and quality of raw jute in India and a stage has been reached whereby approximately 90 percent of the needs of the mills are now available from sources within the country. Reports of the current jute crop are most satisfactory and the directors feel that, unless something untoward happens, virtual self-sufficiency in long jute should be achieved this year.

THE SONE VALLEY PORTLAND CEMENT COMPANY has made a gross profit of Rs. 11.84 lakhs for the year ended last December. Depreciation absorbs Rs. 4.85 lakhs. The wealth tax provision amounts to Rs. 89,000. Bringing in Rs. 4,287, there is Rs. 4,68,726. The dividend is doubled to 6 percent. A balance of Rs. 18,726 is carried forward. Output rose from 174,630 tons to 177,210 tons and despatches increased from 173,187 tons to 173,640 tons.

THE PROFIT OF THE RAZA BULAND SUGAR COMPANY has declined by Rs. 10.54 lakhs to Rs. 22.56 lakhs for the year ended October 1957. The dividend has been maintained at 15 percent. The taxation provision is Rs. 5 lakhs lower at Rs. 124 lakhs. The carry-forward is Rs. 89,543 against Rs. 27,711 brought in.

IT IS RELIABLY LEARNT THAT THE ISSUE BY THE DUNLOP RUBBER CO. (INDIA) LTD. of Rs. 10,00,000 64 percent debenture stock 1968-73 at par has been substantially over-subscribed. The company is considering the basis of allotment to be adopted.

THE PUBLIC SUBSCRIPTION FOR THE RECENT DEBENTURE offer by GUEST, KEEN, WILLIAMS, has amounted to Rs. 3.39 crores, representing an over-subscription by three and a half times. About 6,665 applications were received and of this number, 3,975 were for one debenture each, 749 for two debentures each and 312 for three debentures each. It is reliably learnt that all allotment letters, refund pay orders and reject letters have been despatched by registered post.

Bombay Market

BOMBAY MARKET TURNS QUIET

CALCUTTA INTERESTS DEPRESS IRONS

Wednesday Evening.

THE quiet undertone in the Bombay stock market during the past week is understandable considering that the recent rise, especially in speculative stocks, was based mainly on speculative support and a reaction had become overdue. There has been a substantial amount of long liquidation, and as a result equity share prices were lowered all round. In spite of mid-week rallies because of bargain-hunting purchases, closing prices were about the lowest.

Tata Steel declined to Rs. 175.50 and Indian Iron dipped to Rs. 26.75 on selling pressure from Calcutta interests. It appeared that the latter company's move to issue free ordinary bonus shares in the ratio of one for five shares held, by capitalising the share premium reserve account, had already been discounted. It is, nevertheless, expected that prices are unlikely to be pushed down very much lower than present levels in view of an imminent increase in retention prices of steel. Alcock Ashdown were bought at Rs. 272.50 and Premier Construction met with interested support around Rs. 221.50. Tata Locomotive were steady at Rs. 187 on an encouraging speech from the chairman of the company. A substantial portion of the company's expansion programme is reported to have been completed. Motor shares were quietly steady, and Premier Automobile were taken at Rs. 87.50, while Hindustan Motor declined to Rs. 7.72 on profit-taking.

Cotton mill shares disclosed losses all round. Bombay Dyeing declined to Rs. 58.60 and Century were lower at Rs. 443.50. Kohinoor were indicated at Rs. 270.50 and Swadeshi changed hands at Rs. 187. Simplex were bought at Rs. 179 and Central India were transacted at Rs. 89. Apollo were freely offered at Rs. 152 and India Ordinary were transacted at Rs. 94.00.

Miscellaneous shares moved downward in sympathy with the general trend. Sugar shares were quietly steady, and Belapur were in demand at Rs. 309 on prospects of a bonus share issue. Phalton came to hand at Rs. 175. Cement shares were fractionally shaded, and Associated Cement were done at Rs. 157. Digvijay Cement were transacted up to Rs. 151. In the mining group, Shivrajpur Syndicate were lowered to Rs. 90 on profit-taking. Steamship company shares were steady in the expectation of an increased tonnage. Scindia Steam were bought at Rs. 21.24 and Great Eastern Shipping were taken at Rs. 28.85. Bombay Burmah recovered to Rs. 504 on the publication of fiscal reliefs for common teas. National Rayon declined to Rs. 237.50 on pressure, while Tata Chemical were bought at Rs. 17.48 on investment account. Voltas were placed around Rs. 139.

Scattered interest was taken in bank and insurance shares, but fluctuations were minor. Central Bank of India were bought at Rs. 58.50 and Punjab National were transacted at Rs. 65. New India Assurance were indicated at Rs. 47.75 and British India General met with support at Rs. 15.72.

There was fair investment support in electricity supply company shares, and Ahmedabad Electric were wanted at Rs. 99. Tata Power were taken at Rs. 1,242.50 and Bombay Suburban Electric changed hands at Rs. 113.

SATISFACTORY CONDITIONS ON THE STOCK MARKET

GILT-EDGED FIRM: DOLLAR ISSUES RISE

London, 1st October.
 GENERAL conditions in the stock market during the past week were very satisfactory, although there was less buoyancy than in the previous week. The international situation, particularly in the Far East, remained a restricting influence and business, although on a good scale, was at a slightly reduced level. There were numerous encouraging factors, however, and it would appear that the markets would go further ahead if the Formosan situation could be settled satisfactorily. The excellent performance of sterling in this period of seasonal strain was a highly encouraging factor, while there have been signs that the recent credit relaxations are beginning to take effect. Bank advances have increased and the easing of hire-purchase controls, it is reported, has brought a considerable increase in retail trade. The expectations of an early fall in the British Bank rate are still running high and the gilt-edged market maintained a very firm tone. Although there is not a great deal of change on balance, the rise in the Treasury bill rate on last Friday dampened the enthusiasm. The firmness of Greek bonds, following the N.A.T.O. secretary's visit to Athens to discuss the Cyprus question, was the main feature of foreign bonds. Dollar stocks were mainly higher in response to the new peaks reached on Wall Street. Company news was a helpful influence in the industrial market, although the Imperial Chemical Industries' interim statement disappointed and tended to bring the prices of leading industrials lower. There was, however, very little selling. Gold shares lacked interest, but prices were fairly well maintained on the week. Copper shares moved irregularly and were easier on balance, while lead and zinc shares also lost ground. Tin shares, by contrast, advanced following the recovery in the metal price. Ultramar were a strong feature in an otherwise dull oil share market. Rubber shares generally were quiet, firm on a selective demand. Tea shares were neglected for the most part, and showed very little change.

The Money Market

Credit conditions were again difficult in the money market last week. A heavy bill take-up contributed to the causes of the stringent conditions with the approaching end-of-the-month influences attenuating the position. Under the keenness of demand for accommodation, money again ruled at 3½ percent and 3½ percent, while there was increased borrowing from the Bank of England at the penal Bank rate terms. The demand for bills was fair with December and "hots" changing hands at 3½ percent prior to last Friday's Treasury bill tender result. To the surprise of outside quarters, the money market reduced its effective bid at the tender by 4d to £99 1s 9d so that there was an increase in the bill rate of about 9d to £3 12s 6.10d percent. Business in bills in the market is currently done at 3½ percent for December and "hots".

Decline in Paris Gold

The Paris gold market was neglected during the past week. Business was restricted, and changes

were merely fractional. But towards the end of the week, prices of coins tended to decline on internal political considerations. Dealers were of the opinion that a "massive" vote in favour of the new Constitution at the recent referendum would cause a further decline in prices. The ingot was steady as the Bank of France continued to absorb all offers, most of the latter coming from repatriated funds.

Withdrawal of Buffer Support for Tin

The chairman of the International Tin Council, Mr. George Peter, could give no reason for the timing of the withdrawal of support to the tin market at a Press conference recently held in London. He said that the council at its meeting unanimously endorsed the decision. The operation of the special fund was not bound by the price limitations of the agreement and consequently the withdrawal of support at the £730 level was not a breach of the agreement. The chairman could not say when the buffer stock manager might re-enter the market but referred to the improved trend of prices on the London Metal Exchange and private forecasts of better equilibrium between supply and demand of tin in the near future. The council has received no official communication from Russian sources in connection with the recent statements on reduced export sales in the future. The question of Russian admission to the council as an observer or member will be considered at the next meeting, which is to be held on 5th November. Export quotas for the first quarter of 1959 will also be considered at that meeting, but there is no intention at present of making any amendments to the terms of the agreement and the subject of floor price has not been re-considered.

Mixed Trend in Vegetable Oils

The main feature in the vegetable oil and oil-seeds market during the past week has been the persistent demand for palm kernels at hardening rates. Linseed made a good recovery from early easiness. Demand for castorseed showed a slight improvement, but groundnut prices were barely maintained. Copra remained very steady to firm. Linseed oil is in a position of stalemate between sellers and buyers' price ideas. Argentina had nothing tangible to provide, while offers from India could rarely be secured under £117 have been on the dull side in view of reported ample supplies available in India. Coconut oil by contrast has continued strong, mainly on Far Eastern developments. Palm kernel oil has also gathered strength. Liquid oils, as a whole, have remained quiet, except perhaps for groundnut oil which has been traded in steadily.

Market Stabilisation Plan for Coffee

A market stabilisation plan covering most of the world's supplies of green coffee will be put into operation by Latin American countries for the crop year beginning on 1st October. Fifteen of these countries which grow about 80 percent of the world's coffee recently signed an agreement in Washington to withhold a portion of their output from the market during the next 12 months. France and Portugal have announced that they will introduce export quotas on green coffee shipped to world markets from their African territories. The Coffee Study Group is to start work immediately on a long-range probe into coffee problems with a view to correcting the imbalance between production and consumption in the years ahead. Under the Latin American agreement, which was signed on 27th September, Brazil will withhold 40 percent of her 1958-59 production. Colombia will withhold 15 percent and the other Latin American countries 5 percent of their output.

MR. NEHRU TO INAUGURATE I.A.T.A. ANNUAL MEETING IN NEW DELHI

The Prime Minister of India, Mr. Jawaharlal Nehru, is expected to inaugurate the 14th annual general meeting of the International Air Transport Association in the Vigyan Bhavan in New Delhi on 27th October, it has been recently announced. This will be the first meeting in Asia of the annual assembly of presidents of the world's scheduled airlines. Sessions will continue up to 31st October. More than 350 delegates from the 85 I.A.T.A. member airlines from approximately 50 countries are expected to attend. There will also be observers from other international organisations and Indian Government agencies. Mr. J. R. D. Tata, chairman of Air-India International, will take office as president of I.A.T.A. when the meeting opens. He succeeds Dr. Tomas Delgado, president of Iberia Airlines of Spain. Sir William P. Hildred is the director-general of the Association. The five-day programme will include a comprehensive review of the joint activities of the airlines carried on through I.A.T.A., as well as discussions of the problems of the air transport industry in its first year of jet operations.

INTERNATIONAL ALUMINIUM TAKES OVER SALES FROM ALUMINIUM UNION

The activities of Aluminium Union Ltd in Calcutta have been taken over by its sister concern, International Aluminium Company Ltd, with which the 13-year-old business career in India of the former has come to a close. This change-over mainly signifies a reallocation of business territories. The International henceforth will take charge of the sales in India for the primary and semi-fabricated aluminium products of its parent company—the Aluminium Limited group of companies operating in nearly 20 countries of the world. The Indian associate is the Indian Aluminium Company Ltd, which is the largest aluminium producer in the country.

New Delhi

PROGRAMME FOR I.M.F. AND WORLD BANK MEETINGS

NEW AGREEMENT TO SUPPLY INDIA WITH SURPLUS U.S. FARM PRODUCTS

(FROM OUR NEW DELHI CORRESPONDENT)

THE 1958 annual meetings of the boards of Governors of the International Monetary Fund, the International Bank for Reconstruction and Development and the International Finance Corporation, will be held from 6th to 10th October. The Belgian Minister of Finance, Mr. J. Van Houtte, is chairman of the boards of Governors of the Bank and International Finance Corporation. The Governor of the Banque Nationale de Belgique, Mr. Hubert Ansiaux, is chairman of the I.M.F. board. The boards will assemble for the opening ceremonies at the Vigyan Bhavan Palace at 10 a.m. on 6th October. Mr. Van Houtte will address the boards at the opening session. Following the joint meeting, Mr. Per Jacobsson, managing director of the International Monetary Fund, will make his annual speech and present the Fund's annual report to the board of Governors. Discussion on the report will take place the next day.

At 9-30 a.m. of 7th October, Mr. Eugene R. Black, president of the International Bank, will deliver his annual address and present the Bank's annual report to its board of Governors. Discussion on the report will take place on 9th October. At 10 a.m. on 8th October, Mr. Robert L. Garner, President of the International Finance Corporation, will deliver his annual address and present the Corporation's annual report to the board of Governors. Discussion on the report will follow. In the afternoon, I.F.C. will hold an informal panel discussion on "private enterprise in economic growth". The chairman will be Mr. Edgar Kaiser, President of Kaiser Industries Corporation of Oakland, California, and the principal speakers will be Dr. Klosekner and Company of Duisburg, Germany; Mr. Vicente Ribeiro, President of D.L.R. Plásticos do Brasil, S.A. of Sao Paulo, Brazil; Mr. J. L. S. Steel, director, Imperial Chemical Industries Ltd of London, England; and Mr. Neville S. Wadia, chairman, Bombay Dyeing and Manufacturing Company Ltd of Bombay, India.

During the course of the meetings, the Fund and the Bank will hold their regular biennial elections of executive directors. The closing sessions are scheduled for 10th October morning. All sessions except committee meetings will be open to the Press and public.

The authorities of the International Monetary Fund, the International Bank for Reconstruction and Development and the International Finance Corporation, have asked for 150 cars of suitable sizes and models to be placed at their disposal for the duration of the conferences, out of which the cost for the first 100 will be borne by the Government of India, and the cost for the rest by the I.M.F., I.B.R.D. and I.F.C. In addition, in connection with the work of the Indian Liaison Office for the conferences, 20 cars have been arranged to be used on an "as and when required" basis. The authorities of the conferences also require the running of shuttle bus services for the transport of persons who cannot avail themselves of the cars, and arrangements have been concluded with the Delhi Transport Undertakings for the supply of these buses. Arrangements have also been made for the hiring of 125 big cars and 25 taxis from U.P. Roadways, and 20 small taxis for the use of the Indian Liaison Office.

Proposal to Raise World Bank Funds

India will support President Eisenhower's proposals for a general increase in the quotas assigned to the members of the International Monetary Fund and in the authorised capital of the World Bank, at their forthcoming meetings, beginning in New Delhi on 6th October, it is understood. The proposals are likely to act to the advantage of borrowing countries such as India. The World Bank and I.M.F. meetings will probably be the biggest international gathering this side of Suez. It will be attended by 98 Bank governors, 129 alternate governors, 159 advisers, 14 observers and about 400 special invitees from all over the world. This is also the first time that the Bank and Fund meetings are being held in Asia. The executives of the Bank and the Fund are on the model of the U.N. Security Council. They have five permanent members—the U.S.A., the U.K., France, India and the Nationalist China. The strength of the Bank's executive is expected to be raised by one to 18; and the new vacancy is likely to be filled by Spain.

Twenty percent of the Bank's authorised capital has been subscribed, 18 percent in the national currencies of member countries and 2 percent in gold and dollars. Eighty percent of its capital is subject to call by the Bank, among other things, to redeem its debentures. Some \$2,500 million, representing 80 percent of its share, is guaranteed by the United States to the Bank. The Bank's borrowings in the U.S.A. is expected to reach this ceiling by 1960. The value of President Eisenhower's proposal, which will enlarge the Bank's borrowing powers, is to be judged in this light.

An important proposal of President Eisenhower seeks to set up an "International Development Association", to be affiliated to the World Bank. The U.S. President has directed his representative to hold informal discussions with other member governments with a view to ascertaining their attitudes. "If results indicate that the creation of the Association would be feasible, I request that you initiate promptly negotiations looking towards the establishment of such an affiliate of the Bank," says President Eisenhower.

Box Camera Manufacture

The Government of India has granted permission to New India Industry Ltd of Baroda for the annual manufacture of 5,000 box cameras in the first stage, and 20,000 box cameras in the second. The manufacture of folding cameras and other photographic material, such as slides and projectors, will be taken up later. The company proposes to collaborate with two West German firms, one of which will provide capital equipment and machinery against the issue of shares in the Indian company. The other company will supply drawings and tools on a hire-charge basis. Another scheme to manufacture folding cameras is under consideration by the Government. It envisages the annual manufacture of 36,000 folding cameras from 1960, reaching 60,000 progressively during the next five years. The Indian firm, Chowgule and Company Hind Private Ltd of Bombay, proposes to make two lumpsum payments to two West German experts for technical know-how and drawings and designs.

More U.S. Surplus Commodities for India

An agreement to finance the sale to India of \$238,800,000 worth of U.S. surplus agricultural commodities, was signed last week. The new agreement provides for financing the sale, for Indian rupees, of 2,800,000 metric tons of wheat, 100,000 metric tons of corn and 200,000 metric tons of grain sorghums. The agreement also provides that the Indian rupees accruing from the agreement will be used for loans to the Indian Government for the financing of economic development projects, some as grants and some for meeting U.S. expenditures in India. It brings the total to \$664,200,000 of U.S. surplus agricultural commodities sold to India under Title I of the Agricultural Trade and Assistance Act (Public Law 480). Two previous agreements, the first concluded in August 1956, and the second in June of this year, totalled \$425,400,000. The U.S. and Indian authorities are discussing an additional agreement to supplement the one just signed. Involved in the supplementary agreement will be unspecified quantities of rice and cotton.

Restrictions on Foreign Travel

The Government of India is likely to impose fresh restrictions on foreign travel. As far as travel to the United States is concerned, the intending visitor has to obtain a clearance certificate from the Reserve Bank of India. These restrictions, it is now proposed, will be extended to all the non-dollar countries. The Minister for Civil Expenditure, Dr. B. Gopal Reddi, told the Lok Sabha last week that due to restrictions, the expenditure for foreign travel had come down from Rs. 134 crores in 1956 to Rs. 63 crores in 1957. In the first six months of 1958, this expenditure amounted to Rs. 34 crores. The question raised here relates to the Government's own expenditure of foreign exchange. The latest Indian delegation to the U.N. is bigger than last year's. In spite of the directive by the Prime Minister, delegations and missions are going abroad every few days. While representatives from Russia and Britain, among others, had to come to New Delhi to sign agreements for industrial projects, Mr. Malaviya has left for an extensive European tour with the specific purpose of signing a deal with the Rumanians to finance the Assam oil refinery. Although there is a fair-sized supply mission functioning in London, it is announced that Mr. Malaviya will also be buying three drilling rigs. The Productivity Council was set up as a result of a study an Indian team made in Japan. The first thing the Productivity Council has done is to send a team abroad. Seven more are due to go. It is said that the visits of these teams abroad will be financed by the U.S. Government. This year, the strength of Indian High Commission in London has been raised from 1,250 to 1,700.

The Rajya Sabha Debates the Plan

There was a two-day debate on the second five year plan in the Rajya Sabha last week. The Planning Minister, Mr. Gulzarilal Nanda, was in a confessing mood. He frankly admitted that mistakes had been made by the Planning Commission in estimating resources and that the Government had failed to arouse adequate public enthusiasm for the plan. He conceded two major points to

Dr. H. N. Kunzru; first, the total foreign exchange requirements will be more than the revised estimate of Rs. 1,700 crores, although it might not be as high as Rs. 2,000 crores. Secondly, the complacency that followed the successful implementation of the first plan, and a desire for quick industrialisation had led the Planning Commission to make "tight estimates incapable of easy adjustments" under stress. Similarly, it had over-estimated the capacity of the States to raise additional resources. Even the revised target of Rs. 4,500 crores, he added, was difficult to achieve owing to the gap of Rs. 240 crores.

Registration of Foreigners

The question of simplifying further the procedure and formalities for the registration of foreigners in order to speed up the clearance of passengers at ports, has been engaging the attention of the Government for some time. The existing procedure has been modified with effect from 1st October, 1958, concerning the foreigners who are not governed by any special rules. Under the new procedure, foreigners coming to India will be required to fill in only one form—namely, the Disembarkation Card—which is in use in most of the countries of the world. This card will be completed by all passengers before they land and presented to the registration staff at ports along with passports. There will be no registration of foreigners coming for a stay of 30 days or less. Those holding visas valid for stays for more than 30 days but less than 90 days, will be required to register themselves at the Registration Office of the place where they happen to be resident when they have stayed in India for 30 days. All others who hold visas for stays for more than 90 days will be required to register themselves at their destinations in India within a period of one week of their arrival in this country. Passports of foreigners will be suitably stamped to indicate how they should get themselves registered and how to obtain residential permits. Persons leaving India also will be required to complete only one form—namely, the Embarkation Card—which is in use in most countries. Special registration offices, which will be in direct touch with the Central Foreigners Bureau in the Ministry of Home Affairs, will be set up in the cities of Bombay, Calcutta, Madras and Delhi. In addition to the registration of foreigners, the officers in charge will be competent to grant extensions of stay, "no objection to return" endorsements and return visas to foreigners staying within their jurisdiction. The large majority of the foreigners in India, who are residing in these cities, will thus have to approach only one authority, instead of several as at present, in these matters. This is expected to facilitate the disposal of applications and save avoidable inconvenience.

Raw Materials for Industries

India's total requirements of industrial raw materials and components are estimated to be of the order of about Rs. 500 crores a year. The following measures have either been taken, or are being taken to meet the shortage of raw materials for industries: (i) for large and medium-scale industries an order of priority and preference will first be determined, having regard to the essential nature of the raw materials which are necessary to maintain production. The indigenous availability of raw materials will be supplemented by imports within the ceiling fixed to maintain production at such levels as may be deemed advisable; (ii) as for small-scale industries, the import of essential raw materials will be arranged on an ad hoc basis within the ceiling fixed for the small-scale sector; (iii) provision has been made in the export promotion schemes to meet the raw material requirements of manufacturers meant to be exported; (iv) an ad hoc provision has been made to meet demands for raw materials not covered by the licensing policy.

In addition to the measures already indicated in (i), efforts are being made to import raw materials from some countries against payment in rupees. Schemes for the manufacture of important raw materials are being encouraged in order to reduce the volume of imports. Industries are allowed to use a portion of the foreign exchange earned by the export of their products for the import of additional raw materials. Relaxations or liberalisation of import restrictions, with a view to meeting the demands of industries for certain specific items, have been made.

Foreign Exchange for Steel Plants

The latest estimates of the foreign exchange requirements of the three State steel plants are:

	Rs.
Rourkela	120 crores
Bhilai	82 crores and 80 crores
Durgapur	90 crores

These correspond to the estimates of total costs of Rs. 170 crores, Rs. 131 crores and Rs. 138 crores, respectively. However, there are other elements of foreign exchange expenditure which also pertain to these steel plants. These are the salaries and other allowances of the Russian experts in the case of Bhilai, estimated to cost Rs. 4.5 crores, and fees to the consultants—Rs. 2.85 crores for Rourkela, Rs. 2.5 crores for Bhilai and Rs. 1.9 crores for Durgapur. The cost (i.e.) of imported plant, equipment and stores is estimated at Rs. 103 crores for Rourkela, Rs. 82 crores for Bhilai and Rs. 86 crores for Durgapur. It is difficult to separate the cost of technical know-how from the other charges. The clearly identifiable items of know-how—fees to the consultants—amount to Rs. 2.85 crores in Rourkela, Rs. 2.5 crores in Bhilai and Rs. 1.9 crores in Durgapur.

As has already been explained, the three steel plants proper are estimated to cost Rs. 439 crores.

London

CITY VIEW ON THE CONTINUED STRENGTH OF STERLING

U. K. BOARD OF TRADE SURVEY SHOWS DECLINE IN EXPORTS

(FROM OUR LONDON CORRESPONDENT)

AT a time of year when sterling usually comes under pressure, its continued strength is persuading the City—and maybe not only the City if the reports from Montreal mean what they say—to take an optimistic view both of current trading and the more immediate prospects. This is not entirely unjustified so long as it does not lead to the less reassuring factors being overlooked. A U.K. Board of Trade analysis of foreign trade up to August shows that the decline in exports, which was very slight in the first quarter of this year, rose to 3½ percent in April and May and to 7 percent in the three months, June to August, compared with 1957. Taking the first eight months of this year, exports are down by 4 percent, a reflection almost entirely of a lower volume of shipments, export prices having remained practically unchanged. That is probably less than what might have been anticipated in view of world conditions, but it indicates a change in the previous steadily rising trend. Even more significant, however, is the fact that exports to the sterling area countries, which were still rising slightly in total value in the first part of the year, have more recently begun to decline, especially those to New Zealand, South Africa, and Rhodesia. Smaller falls have occurred in exports to India, Pakistan, Burma, Ghana, Singapore and Malaya. It seems that the expected reaction to the prolonged fall in commodity prices has at last set in, and the trend may gather momentum. On the other hand, the surprisingly steep fall in exports to the O.E.E.C. countries, specially to France and Belgium, has become less strongly marked, and exports to North America are still very well maintained.

The total volume of imports in the first eight months of this year has been very close to that of 1957, but due to the steep fall in prices up to March, the cost has been 11 percent less this year. Moreover, the composition has changed; imports of many industrial materials have fallen sharply, while imports of petroleum, finished manufactures, and a number of foods and feeding stuffs have increased. The Board of Trade comments that in recent months "the divergent trends have become rather more marked." An interesting trend is the heavy fall in dollar imports this year (18 percent down in the first eight months). This was due to smaller arrivals of dollar oil as well as sugar, cotton, metal ores and scrap, coal, iron and steel. This saving in dollar expenditure, undoubtedly, has made it easier to relax restrictions on imports of other dollar goods. It would appear that the trade trends justify the unseasonal strength of the pound, but do not look especially durable.

Indices Remain Steady

The terms of trade, reflecting the relation between imports and export prices, moved slightly against Britain in August. With the import price index up from 98 to 99 (1954 equals 100) and the export index unchanged at 110, the index measuring the terms of trade was 1 point higher at 90. This index has remained between 89 and 90 since February. The Board of Trade's basic material index for August was unchanged at 93.3 (1954 equals 100). Increases in the prices of copper and rubber were offset by falls in whale oil, cotton, palm and linseed oil. An index for all manufactured products, other than fuel, food and tobacco, is introduced for the first time and is shown at

112.5 for August, against 112.6 for July. A new index for home market sales, also on the basis of 1954 equals 100, shows no change between July and August at 113.

More Capital Spending

Within a fortnight of the gloomy estimates for manufacturers' fixed capital spending plans next year, comes more evidence that capital expenditure so far this year has been running slightly above the 1957 level. Expenditure in the second quarter is now provisionally estimated by the Board of Trade to have been 3 percent higher than in the second quarter last year. This is about the same increase as the 2 percent rise recorded for the first three months. The similarity arises from a substantially smaller increase in expenditure on motor-vehicles compared with that in the first quarter and no change in expenditure on plant and machinery; this being just about counter-balanced by an increase in building work. Expenditure by "other industries and services" is estimated to have been 21 percent higher in the second quarter than a year earlier. In the first quarter, the increase was 12 percent. In this section, the increase in expenditure on motor-vehicles was 45 percent against 42 percent in the first quarter. There was also a larger increase in expenditure on plant and machinery.

Developing Middle East Trade

The industrial development organisation for the Middle East, in which 120 European and six U.S. firms are participating, is to be known as "Midex," and has offices in Luxembourg, Beirut, and The Hague. Its objective is to stimulate new and existing industrial and commercial enterprises in Persia, Iraq, Jordan, Kuwait, Lebanon, Saudi Arabia, the Sudan, and the United Arab Republic (Egypt and Syria). Capital is 2 million Swiss francs, with 830,000 in capital and 810,000 in reserves paid in to date. British firms associated with it include the British-American Tobacco Company, Imperial Chemical Industries, Dunlop Rubber, Associated Electrical Industries, and Schwepes (Overseas).

Take-over Plan for Tea Companies

Capitalisation issues and their subsequent merger proposed by three tea companies are to be replaced by a straight "take-over" plan. The companies, Chandapore Tea, Mazdehe Tea, and Sylhet Tea are offered shares in a new company, Longbourne Holdings, plus cash payments. The terms are three £1 Longbourne ordinary and 6s cash for every eight Chandapore, five Longbourne and 10s cash for every three Mazdehe, and five Longbourne and 10s cash for every three Sylhet Tea. Authorised capital of Longbourne is to be raised to £250,000, and it will be converted into a public company, and a quotation will be sought.

Mawchi Mines Dispute

For some time, a wordy warfare has been in progress between the board of directors and the shareholders' committee of Mawchi Mines, the tin and wolfram joint enterprise in Burma. Last week was enlivened by both sides issuing circulars to shareholders as a preliminary to an extraordinary meeting held at the week-end, which in point of fact went off very quietly and smoothly. Among complaints made by the committee against the board are that no director, except Mr. Orr, has visited the mine in Burma since 1938, and that

Mr. Annan, who is also chairman of the Consolidated Gold Fields group, "has neither devoted sufficient time nor given sufficient impetus to the company's affairs." The mine has been losing money and the board has suggested that operations should be confined to care and maintenance. The committee claims that if this were to happen, it would cost another £400,000 to bring it back into operation. The proposed new directors would try to maintain production if at all possible.

The board in seeking proxies, on the other hand, has replied that the opposition's proposals have failed to state how additional finance for the company is to be obtained, or what use is to be made of funds now held by Mawchi Mines. Nor is it said what administrative economies are to be made, and how they are to be secured. The board has said that the opposition has also failed to state what arrangement will be made for the technical direction of the company's operations. Shareholders were advised not to give proxies to the committee until satisfactory information was given on all these points.

Replying to this circular, the shareholders' committee has stated that if the proposed new directors were appointed, the company would initiate talks on the highest level with their partners—the Burmese Government—with a view to taking positive steps for the stability of the mine area. Funds now held by Mawchi Mines in London would be conserved and used to shareholders' best advantage.

At the meeting itself, Mr. Robert Annan, chairman, announced that proxies supporting him and his colleagues were far fewer than those in favour of the opposition, and the board would, therefore, resign. Lt.-Gen. Sir Ernest Wood and Mr. Bernard Braine were then elected as directors. Sir Ernest, as chairman, told shareholders that it would be foolish to make promises until the state of the company's affairs was known. He would not commit himself to repaying the £214,000 of 6-percent notes on 30th September, as promised by his predecessors. Mr. L. A. Crozier, the company's General Manager at Mawchi, who is in London, told the meeting that he believed there would be an improvement in conditions in the next few months. They had been trying to rehabilitate the mine while a war was still being waged. Although the mine would never make the same profits as before the war, he added, it had at least eight years' life left in it at full production. He estimated there were 490,000 tons of high-grade ore there.

Nuclear Scientists in Conference

More than 40 nuclear scientists from Commonwealth countries have just held a private conference in Britain during which they have seen and discussed the work of British atomic energy establishments. The conference was arranged as the result of suggestions made at the Commonwealth Prime Ministers' meeting last summer. All Commonwealth countries, except Malaya, are represented. The conference opened at the Atomic Energy Authority's research establishment in Harwell, moved to Bankside House, London, to meet representatives of the Electricity Council, the Central Electricity Generating Board, and firms taking part in the nuclear power programme, later visited the nuclear power station in Bradwell, and finally the delegates went by air to Calder Hall in Cumberland, and to Dounreay in Caithness. The Queen has invited delegates to lunch at Balmoral as a finale.

Dollar Imports Freed

The U.K. Board of Trade has announced that the open general licences have been amended to give effect to the measures of import liberalisation recently declared by Sir David Eccles, President of the Board of Trade, in Montreal. The Minister made the statement at the Commonwealth Trade and Economic Conference. The changes affect broadly industrial, agricultural and office machinery from the dollar area and western Europe. These goods can now be imported without individual import licences.

Rise in Hire-purchase Debt

The hire-purchase debt rose again in July and reached £510 million compared with £503 million in June, the Board of Trade Journal reports. The figure for July last year was £442 million. At the end of July, the debt owing to finance houses had risen by almost a third over the previous 12 months, while that owing to retailers, after rising slightly during the period, was the same as at the end of July 1957. The Journal says that new finance house business, which had declined slightly in June, increased again during July and continued at a level about 10 percent above that of a year ago. Of the £510-million debt, it was estimated that £210 million was owed to household goods shops, and the rest to finance houses.

Another Steel Resale

After a long spell of inactivity, the Iron and Steel Holding and Realisation Agency has completed another private resale. It has sold the entire issued share capital of the Millom and Askam Hematite Iron Company and of the Hodbarrow Mining Company and of the Hodbarrow Mining Company for £1.7 million. The Agency also gets a special distribution of £500,000 reserves. The total proceeds of the sale thus amount to £2.2 million. The buyers are Close Brothers and Cyril Kieft and Company, who have acted jointly as agents for Mr. J. H. Fischel and Agency's investment in the shares now being sold to the Treasury, the deal has yielded a useful profit

GUNNY AND FIBRE PRICES RISE

BEARS DETERRED BY BIGGER MARGIN DEPOSIT REQUIREMENTS

A LACK of overseas business during the early part of the past week depressed jute goods prices further and caused a great deal of anxiety in the trade. There was heavy speculative activity by a group of bear operators; being unable to deal in real goods as prices were below the I.J.M.A. minima, they turned their attention to official and unofficial speculative opportunities. Prices slumped alarmingly as a result and new low levels in sacking were recorded. For some weeks, the board of directors of the East India Jute and Hessian Exchange Ltd, through which all futures transactions should be carried out, expressed a certain amount of concern at this state of affairs, and the continual bearing of the market prompted them to declare a state of emergency. Certain restrictions were placed on transactions taking place in the three main commodities—hessians, B Twills and raw jute. Those who sold below certain minimum levels (Rs. 39.50 a 100 yards for hessians, Rs. 95 a 100 bags for B Twills and Rs. 22.50 a maund for jute) were asked to pay additional margin deposits on net outstanding sales at the close of each day's business. It was hoped that this would deter bearish activity, and give the market an opportunity to recover. The amount of margin deposit payable was Rs. 1.50 a 100 yards in the case of hessians should they fall below Rs. 39.50; Rs. 3 a 100 bags in the case of B Twills should they fall below Rs. 95, and Rs. 2.25 a maund for raw jute below Rs. 22.50. The new regulations to take effect from 29th September. It was stated that the margin deposits were refundable when prices rose above the minimum limits.

Mixed Reception

The decision met with a mixed reception in trade circles, but apart from some who were inclined to object to interference in their activities, it was welcomed as a necessary evil. Prices immediately began to recover, and at the opening on Wednesday morning rates in all sections had advanced beyond the minimum levels. It was welcomed particularly by the raw jute trade, which was concerned about the low level to which fibre prices had fallen. These were uneconomic to the farmer, and in view of the prospects of a bumper crop, there seemed little likelihood of any recovery. The new regulations, however, for as long as they are in force, should stabilise the price of jute, and help give growers a fair return for their crop.

Scattered business in the goods market with overseas buyers towards the close of the week caused a steadier sentiment to develop. Interest in sacking from Australia gave an impetus to cornsacks, which for some time past have been neglected. They are among the few fabrics in the sacking range which show a substantial premium for ready goods over forward shipment; in their case, the premium amounts to nearly Rs. 5 a 100 bags. This is due to the lack of interest shown by buyers in forward shipment. The small quantities that have been contracted for have invariably been for quick shipment. Local shipper interest increased with the rise, and covering business against previous orders at full market rates helped to steady the trend. Some interest from America for hessians was reported towards the close but the quantities involved were small.

The raw jute market was very weak in the early stages, and conditions were far from encouraging from the sellers' point of view. There was a fair amount of buying pressure, however, and the invariably business was done at below the level. Imports were good at all upcountry agencies and also in Cossipore. The undertone was quiet as arrivals far exceeded buying indications. Sellers were accumulating large stocks, and price most of them were keen to sell at whatever price they could get. Following the futures market authorities' decision to demand security deposits against sales below a certain price, sentiment changed and rates rose.

THE JUTE MARKETS

There was a fair amount of activity in the futures market, mostly of a bearish nature, and rates, as given by the East India Jute and Hessian Exchange Ltd, for the period from 24th September to 30th September were as follows:

	Hessian 40in 10oz.		Sacking Raw Jute B Twills Upper Assam		Sacking Raw Jute B Twills Lower Assam	
	Rs. a 100 yds.	Rs. a 100 metres	Rs. a 100 bags	Rs. a md.	Rs. a 100 kilos	Rs. a 100 kilos
Opening	39.84	43.56	96.70	22.80	61.08	61.08
Highest	40.32	44.09	96.70	22.58	63.17	63.17
Lowest	39.44	43.13	94.95	22.56	60.44	60.44
Closing	40.30	44.07	96.45	22.58	63.18	63.18

Manufactured Goods: The jute goods markets were depressed at the opening, and prices fell on rumours of a possible revision in minimum prices. Overseas buyers showed no interest, and there was no selling pressure from mills. The undertone was generally weak, and opening quotations, especially in sacking, reflected this. B Twills dropped by 40P to open at Rs. 95.10 in the near position, with forward shipment at a premium of Rs. 1.80, while hessians were virtually unchanged at Rs. 47.70 for

There was a large increase in arrivals in the Cossipore market last week, and wagons totalled 810. This was 310 more than in the previous week, and 285 more than in the corresponding week of last year. The market was weak in the opening sessions, but towards the close prices hardened on account of increased activity, and in sympathy with the improved trend in goods. Sellers were reserved and good business was concluded at rising prices. Quotations at the close were based on Kishanganj jute at Rs. 23 a maund for Bottoms.

On Wednesday morning, opening quotations were as follows:

	Landed at Mills—Basis Bottoms		Shipment
	Rs. a maund	Rs. a 100 kilos	
Assam-Northern	23.75	63.65	Oct.-Nov.
Purnea Desal	22.50	60.30	"

THE FOREIGN JUTE MARKETS

ANOTHER CUT IN YARN AND CLOTH PRICES

(FROM OUR DUNDEE CORRESPONDENT)

ANOTHER change has been effected in the prices for U.K. jute yarns and cloth, the second in September and the eighth this year. Prices of manufactures have been reduced by approximately £5 a ton with effect from 24th September. This has had the effect of increasing the interest of consumers, and already a fair volume of business has been transacted. Both spinners and manufacturers are steadily building up their order-books, and it is now difficult to get delivery of anything over the next four to six weeks. Those buyers who have been purchasing "off the shelf" for some time past are facing difficulties because they cannot fulfil their needs immediately. The prices of hessian yarns were reduced from 14.30d to 13.73d a lb for 8 lbs C.H.W. cops and from 15.44d to 14.87d for 8 lbs spools. Spinners are complaining bitterly about this further reduction in the terms, because the jute they have on hand at present must have been bought at a higher price. Two years ago the fibre was as cheap as it is now, although the undertone of the market is still none too steady.

Mill Firsts are offered at from £102, Mill Lightnings from £84, Mill Hearts from £74 and grade Hearts from £62, with good marks of Daissee-2/3 from £90 and grade £84, and grade Tossa-2/3 from £101 and grade Tossa-4 from £91, all c.i.f. U.K., October-November shipment. Meanwhile, spinners are buying little. They have already bought a fair proportion of their requirements for the current season, say, at least one-third.
