The Calcutta goods market ruled irregular, with changes daily and an easier tendency prevailed. Hessians were down to 60s 9d for 40in. 10oz. and 45s 9d for 74oz. October, and 59s 6d and 44s 9d, November-December, with B Twills at 143s and 143s 9d for the respective positions of shipment, all f.o.b., Calcutta.

The outlook for the jute industry in Dundee has greatly improved. There is now no unemployment in the industry and indeed, the main difficulty of spinners and manufacturers is to secure labour. James Scott and Sons, Limited, Dundee, will shortly re-open its Dura works, which remained closed since last May. It will produce yarns only.

Dalmia Products
for modern homes and offices

QUALITY STONEWARE AND PORCELAIN PRODUCTS

STONEWARE PIPES (for underground drainage)
1 salt glazed, acid-resistant and tested to standard specifications.

1 R.C.C. SPUN PIPES for irrigation, culverts, water supply and drainage, available in all classes and sizes.

1 INSULATORS AND ACID-RESISTANT TILES etc.

1 REFRACTORIES for all industrial purposes; firebricks, mortars, insulating bricks in all heat ranges and shapes.

1 PORCELAIN SANITARY WARES Indian and European closets, wash-basins, urinals etc.

1 DALMIA PORTLAND CEMENT for general construction

Commodity Markets

BRITISH TEXTILE REVIEW

PROSPECTS FOR CONSUMER DEMAND

THE British textile industry is keenly interested in the startling change in the state of credit in this country. It may be briefly recalled that the banks acquired interests in hire-purchase finance companies, that the former then offered loans on much more favourable terms than the latter offered for hire-purchase credit, and that a number of stores, including some specialised in clothing, promptly offered more favourable terms of credit than the banks. Competition in finance, as distinct from trade, is unfamiliar, and it is not yet possible to estimate how much more credit will actually be used or which trades will benefit most from an increase.

Installment credit is used mainly for durable consumer goods, and if consumers commit themselves to substantial monthly repayments in relation to such goods, less of their current incomes will be available for textiles. On the other hand, extended credit, in one form or another, is being offered for purchases of textiles. While the outcome of the struggle for the consumer's money is anxiously awaited it is relevant to point out that the banks' participation in installment credit involves particularly the middle class, which buys mostly higher quality textiles. If the middle class is induced to undertake more house repair, and to buy more motor-cars, the class of product on which the British textile industry is now supposed to concentrate will suffer more competition at home, and will probably then—because deprived of some of the benefits of a big domestic market—suffer in overseas markets as well.

Hopes of Trade Revival

The industry has not abandoned its hopes of the revival in trade which has lately been expected in some quarters, but it is naturally anxious when the general recession has affected textiles more than any other class of goods. Only the synthetic fibres have maintained their output and trade, while the industry as a whole, has this year suffered a decline of roughly 15 percent in output from the level of 1957. Even so, the total stocks of textiles were larger—though only about 3 percent larger—in the middle of this year than a year previously. Redundancy, already widespread, has spread further in recent weeks. Notable lay-offs are at the Broad Oak (Accrington) works of Calico Printers Association, involving some 400 employees, and at the Ferguslie (Paisley) mills of J. and P. Coats, involving some 200. In both these cases, as in others, the decline in export trade is blamed. An outstanding development of the present decade (though it began much earlier) is the contraction in textiles' share in the nation's export trade. It is even now not much less than 10 percent: but as recently as 1951 it was more than 20 percent.

A somewhat disturbing feature of Calico Printers' lay-offs is that they relate to the printing section (other activities of the Broad Oak works continue to function normally). Much spinning and weaving machinery has been taken out of use in recent years, but the finishing end of the industry has been generally maintained, both by improvements in technique and by processing the large quantities of grey cloth imported.

Selling to the Germans

The figures of textile exports must be viewed against the substantial increase in Britain's total export trade: and it must be remembered that one main section, the wool textile industry, has maintained, even improved, its position as one of the nation's leading exporters. It is therefore appropriate that the Foreign Office granted the pride of place to this industry in the U.K. pavilion at the German Industries Fair held in Berlin from 13th to 28th September. The National Wool Textile Export Corporation, commenting on the choice, pointed out that the industry, the largest exporter of wool textiles in the world, had earned since the war more dollars than any other single manufacturing industry in Britain. Now, however, the West German market is the focus of its attention. In 1957, an increase of 26 percent in U.K. exports of wool cloth to West Germany put that market at the top of the list of the industry's overseas customers, with an aggregate value of exports (including woollen and worsted yarns as well as fabrics) of £13½ million out of the industry's total of £95½ million. The main element in this trade with West Germany is medium to high-quality fancy worsteds.

It is significant that the industry's main outlets abroad are the dollar countries and West Germany, where living standards are high (the improvement in living standards in West Germany explains the increase in trade there), and that its main exports are, therefore, in the higher range of quality. It seems to follow that as the world's living standards rise, the industry can expand its trade—provided that it can keep a few steps ahead of its competitors concerning quality. The potentialities in Germany, which is already the world's largest importer of wool cloth, will be even better if the European common market is expanded into the European free trade area.

Modernisation Programmes

Such schemes as that which Patons and Baldwins completed in Kilncraigs at the beginning of September indicate the way ahead. This scheme,

spread over three years and costing about £1 million, is the biggest reconstruction and modernisation that the Scottish woollen industry has ever undertaken. Announcing its completion, the National Association of Scottish Woollen Manufacturers stated that, while no extra spinning capacity had been installed, the efficiency of the plant and the flow of production had been improved. In the new dyehouse, almost any shade can be dyed in the yarn so that the dyes are fast and even, and orders can be fulfilled in much less time than was required before modernisation. I. and R. Morley has installed in its knitwear factory in Nottingham a knitwear machine, developed by its own technicians in collaboration with the machine-making firm, S.A. Monk, which, eliminating about a dozen manual operations, moves a big step further towards automation.

However, modern equipment does not alone guarantee success in trade, even in the wool textile industry. The chairman of Salts (Saltaire), Sir Frank B. Sanderson, pointed out in his recent annual statement that his group was equipped with the most modern machinery and had the craftsmen and technicians to give the world the types of yarns and cloths required, but he had to add: "It causes us anxiety, however, that so much depends today on the extent to which quotas and tariffs affect our customers' ability to purchase and take delivery of our goods." For the present, he had to report lower demand, reduced machinery activity, and, under the pressure of increased costs, declining margins of profit.

RATIONALISATION IN JAPANESE TEXTILE INDUSTRY

GOVERNMENT TO IMPLEMENT FIVE-POINT PLAN

NEWS reports from Tokyo have referred to the Japanese Government's plans for organising the textile industry so as to avoid conflict between the interests of the big combines and the small independent weavers. It proposes to spend 700 million yen in the current financial year giving effect to a five-point plan to facilitate the recovery in the cotton textile industry, including the provision of 70,000 looms in the next two years and the imposition of an embargo on the installation of new looms for all kinds of synthetic fibres. This development is of sufficient import to other producers to justify a scrutiny of all available sources of information to ascertain just what its effects on world trade are likely to be.

According to the latest returns of the International Federation of Cotton and Allied Industries, Japan had a total of 376,208 looms at 31st January this year—a larger number than any other country, including the United States, for which a total of 350,109 is shown. Of the Japanese total, 78,387 looms were owned by firms in the Japan Cotton Spinners Association, and 297,921 by the small weaving firms which control no spindles. While the federated firms had 56,439 automatic looms and 21,948 ordinary looms, the non-federated firms had only 11,100 automatics, against 286,821 non-automatics. Any scheme for buying up redundant looms will presumably be directed mainly towards the non-automatic types, of which the small firms engaged solely in weaving are the principal owners, and it seems probable that the Government's intention is to reduce the number of looms not controlled by the spinning groups, and to ensure that existing looms not engaged on cotton are used for the newer fibres. The returns show that 12,094 of Japan's cotton looms were idle on 31st January, and no figure is given for new looms in course of installation on that date.

Pool System

The third step in the Government's plan is a recommendation that the weavers should establish a pool system for the purchase of their requirements of yarn. A fourth is a recommendation that all cotton spinners, rayon yarn producers, dealers, and weavers should form an organisation to try to stabilise prices and to help the market recover. Finally, the Government intends to assist various organisations which have been established recently for the purchase of unwanted textiles and for the stabilisation of prices.

Position of New Fibres

The issue for 1958 of *Rayon and Synthetic Fibres in Japan*, produced by the Japan Chemical Fibres Association, calls attention to the further rapid progress which the Japanese have made in this field. Last year, Japan produced 1,060 million lbs of man-made fibres, against 960,000 lbs in 1956 and as a producer of these fibres was then second only to the United States: Japan has far outstripped the United Kingdom in bulk chemical fibre production. Japan has never been blessed with an abundant supply of natural fibres and there has been a spontaneous national demand for the man-made fibres as they have appeared. This home demand has provided the firm foundation for the industry and as its production has outstripped the internal consumption, a large export trade has developed. The increase in production continues: that for 1957 was about 8 percent higher than it had been in 1956. Of the total yarn produced in Japan in 1957, 38 percent was of man-made fibre, whereas 42 percent was cotton and 10 percent was wool. Spun rayon yarn has always been one of Japan's biggest products in man-made fibres and the manufacture of this material continues to grow: whereas in 1956 Japan produced 515 million lbs of yarn, in 1957

it produced 622 million lbs (both figures include blends).

Better Qualities

In previous years, the emphasis in Japan's man-made fibres has been on the cheaper kinds, and still today much the greatest part of production is in that category—as indicated by the enormous production of spun rayon, the cheapest of all chemical fibres. But it is significant that polyacrylonitrile fibres of the same general type as Orlon and Acrilan are now being made, their Japanese names being Cashmilon, Exlan, and Vonnell. Still more significantly, high-bulk yarns, one of the latest developments, are becoming available. Three manufacturers made these fibres in 1957, two more will be making them this year, and three others are getting ready to make them. Tetoron is the Japanese polyester fibre, the equivalent of Terylene and the U.S. Dacron. Tetoron should be in commercial production this year by two Japanese manufacturers under licence from I.C.I. and "it will not be long before Japan will be offering this excellent fibre to overseas markets in apparel fabrics and for industrial uses."

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) rose by 0.2 percent to 116.8 during the week ended 18th September, compared with 116.6 (revised) for the earlier week. The index was higher by 0.8 percent and 6.7 percent, respectively, when compared with the corresponding week of the last month and that of a year ago. The index for Food Articles advanced by 0.2 percent to 121.7, compared with 121.5 (revised) for the previous week due to a rise in the prices of onions (+1.9%), wheat in Saurgar (+1.1%) and in Kotah (+7.7%), rice in Karnal (+9.9%), in Nellore and Cooch Behar-Sadar (+6% each) and in Trivandrum (+5%), potatoes (+5%), oranges and mustard oil (+4% each), ragi (+3%), groundnut oil, fish, chillies, cardamoms and betelnuts (+2% each) and arhar, urad and coconut oil (+1% each), although the prices of milk in Calcutta (-1.4%), meat in Ludhiana (-1.2%), rice in Imphal (-8%) and in Nowgarh (-5%), wheat in Kanpur, jowar in Jhansi and bajra in Jodhpur (-6% each), barley, gram and cashewnuts (-2% each) and maize, eggs, gur tea for internal consumption, coffee and black pepper (-1% each) moved down. The index for Tobacco remained stationary at the previous week's level of 88.6. The index for the Fuel, Power, Light and Lubricants group stood unchanged at the previous week's level of 115.9; castor oil (-1%) indicated a fall. Higher prices of bamboos (Dry) (+10%), tanning materials (Gaulnuts) in Salem (+8%), rapeseed in Delhi (+7%) and raw jute and groundnuts (+1% each) raised the index for Industrial Raw Materials by 0.5 percent to 119.4. The prices of linseed in Sahlganj (-10%), lac in Balmampur (-9%), gingelly seed (-2%) and raw wool (-1%), however, moved down. The prices of cotton yarn (20S) in Madras (+5%) and linseed oil, coir yarn and brass (+2% each) showed advances while rayon yarn, zinc and lead (-1% each) witnessed a decline and the index for Intermediate Products advanced by 0.6 percent to 112.1 during the week. An increase in the prices of general chemicals (+2%) and oilseeds and cycles (+1% each) was responsible for raising the index for Finished Products from 108.4 to 108.5.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: 1952-53=100)

Groups and Sub-Groups	13-9-58	Week Ended 6-9-58	16-8-58	14-9-57

RECONSTITUTION OF COFFEE AND RUBBER BOARDS

STRIKE MOVE BY COMMUNISTS IN KERALA PLANTATIONS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE Coffee and Rubber Boards are due to be reconstituted this year. The electoral rolls for the election of large growers' representatives on these bodies have been prepared and the election is due to take place in November. The growers are almost unanimously opposed to the system of election envisaged under the amendments introduced to the Coffee and Rubber Acts, 1954. Their main complaint is that the present method of election has not served the purpose of expert and competent representation to these boards. The latter were reconstituted in 1954. In doing so, very little credit was given to the contributions of growers to the efficient and creative functioning of these agencies, the planters argue. The various interests which are now represented on these boards are the Government, consumers, traders, curers, Parliament, growers, etcetera. Among these, the boards are intended to concern themselves principally with the affairs of growers. The latter have been reduced to a minority and their position has been weakened by a method of election which vitiates the system of representation. The chairman of the United Planters Association of Southern India has said recently that it is fundamentally unsound if the growers have very little voice in the disposal of the crop raised by them.

Industrial representation cannot be based on the methods and principles which are necessary and suitable for political representation in legislative bodies. To quote the U.P.A.S.I. chairman again: "By applying the method of electoral rules of India to industrial representation, the purpose of industrial representation has been inhibited. The present method will not facilitate the sending of men who could bring to the discussions within the board not only their experience and knowledge but also the sanction of the community of producers whom they represent." In the original Acts, representatives of producers were allowed to be elected or nominated by well-established associations of producers. This right has been abolished by the amendments made in 1954 at the instance of the then Central Government and Industries Minister, Mr. T. T. Krishnamachari.

Raw Rubber Production

According to the Rubber Board, raw rubber production in India during July this year was as high as 2,109 tons compared with 1,220 tons in June and 1,498 tons in July 1957. But it is doubtful whether this figure is reliable. The statement which the Rubber Board issued last week on production and consumption in July 1958, shows that it received returns from producers only for 811 tons and the remaining amount of 1,398 tons, included in the production figure, has its basis on the Board's own estimate. This amount of 1,398 tons is divided as follows: the estimated production on estates above 50 acres from which returns were not received, 305 tons, and the estimated production on small holdings of 50 acres and less from which returns were not called for, 1,093 tons.

The Board's estimate of production on small holdings does not bear any comparison with its previous estimates of the same. Never before has it made such a lavish estimate. Its estimates for five months from July 1957, were 599 tons, 706 tons, 708 tons, 710 tons and 757 tons when the output for each month totalled 1,499 tons, 2,341 tons, 2,712 tons, 2,785 tons and 2,858 tons, respectively. Even during the previous month, that is, June 1958, the production of small holdings, as estimated by the Board, was only 356 tons. Against this background, it is difficult to believe that there was a sudden spurt from 356 tons to 1,093 tons in the output of small holdings within the course of a single month and that too against the heavy odds of the monsoon season. Moreover, it is incredible to suggest that the small holders' share of raw rubber production has increased all on a sudden from less than 30 percent to over 50 percent of the total.

Gap between Output and Consumption

The Board estimates the production for the first seven months of the current year at 13,378 tons against the manufacturers' offtake of 20,074 tons. There was thus a gap of 6,696 tons between indigenous production and consumption towards the end of July this year. During last year, India had to import 13,211 tons to bridge the gap between production and consumption of rubber in the country. According to the manufacturers' estimate of prospective demand, nearly 40,000 tons will be required during this year, 46,000 tons next year and as much as 60,000 tons by 1961. It is obvious that rubber production has not kept pace with the rate of consumption.

There is a tendency to blame the producers for the industry's failure to increase production. This is unfair. The industry's progress was retarded due to the controversy over prices for nearly 12 years. A satisfactory solution to this problem was found only after the Tariff Board examined its cost structure in 1951. Later, the Rubber Board extended some assistance for developing the industry. But the growers still have cause for complaint not only on the amount of assistance grant-

ed for rubber cultivation but also on the manner in which such assistance has been made available by the Board.

Replanting Scheme

The Rubber Board's scheme of replanting rubber at 7,000 acres a year, which is inadequate to meet the situation, is not being fulfilled. Only about 2,766 acres have been replanted under the scheme in 1957 which means that replanting has fallen short of the target by 60 percent. Much of the expansion of rubber cultivation is now taking place in unsuitable areas. At least some responsible planters and planting associations in south India are of the opinion that the affairs of the Rubber Board need a thorough examination in view of the slow progress of the rubber rehabilitation scheme. There has also been considerable delay in going ahead with the construction of the research station of the Board, the foundation-stone of which was laid by the President of India long ago.

Thefts on Estates

Rubber theft is another problem which has worried the planters. Such cases are common in Kerala rubber estates. Neither the Board nor the State Government has been able to counter this menace. The Mundakayam Planters Association, which represents the largest rubber planting area in the whole of India, has been advised by police authorities, according to its chairman, that the Association should bear the cost for engaging a special police party for preventing thefts. The cost of this is estimated at Rs. 27,212. Protection of life and property is the prime responsibility of the State, but it is strange that it should ask for a special contribution from planters to prevent rubber thefts.

Recovery in Pepper Exports

Pepper exports from India made an appreciable recovery from 225 tons in June to 747 tons in July this year. The principal importing countries were the United States, Canada and Czechoslovakia having bought 378.5 tons, 67 tons and 223 tons, respectively. Exports in July 1957, were only 479 tons. The total export to the end of July 1958, covering the first nine months of the current season at 10,098 tons, show a decline of 2,419 tons compared with that during the corresponding period of last season.

On the other hand, exports from Singapore have made impressive progress. In July 1957, pepper exports from that area totalled 2,887 tons against 1,879 tons in the corresponding month of last year. The United States alone imported as much as 1,681 tons of black and white pepper from Singapore in July last. Next in order of importance comes the United Kingdom with an offtake of 250 tons followed by West Germany with 196 tons. For the first seven months of 1958, Singapore exported 12,286 tons against 11,863 tons during the corresponding period of last year. It is thus fast gaining ground in the world pepper trade.

Temporary Reduction in Freight

The American Conference Line has announced a temporary reduction in the freight on pepper from the west coast of India to the United States (north Atlantic ports). The reduced rate of \$(U.S.)80.50 a ton came into effect from 22nd August, and will be in force till the end of October when it will be reviewed by the Conference. The Indian shippers of pepper have been demanding a reduction in freight because of the steep fall in prices.

Firm Trend in Prices

The pepper market shows some firmness in view of the mounting tension in the Far East. Markets of origin, both Coochin and Singapore, demand higher prices, but New York which recently raised its price ideas to a certain extent, is unwilling to make any further concession. Consequently, the volume of business transacted has not been substantial.

Strike Move in Plantations

The Kerala plantation workers, under communist leadership, are preparing for a general strike on the question of bonus for 1957. Their representative on the Plantation Labour Committee, which has been constituted by the State Government as an industrial relations body, has resigned, and their unions are to serve strike notices to management. The decision of the communist unions is considered premature since the Plantation Labour Committee, which recently considered the problem, has decided to postpone the issue until such time as a clearer picture of the working results of the companies is available. The employers' representatives told the committee that the balance-sheets of companies would be ready by about the middle of October this year and then only would they be able to arrive at a decision on the amount of bonus which the employers can afford to pay. The labour unions will, therefore, be justified if they raise the issue after the middle of October.

The real reason for this quick and unexpected strike move of the communist-led plantation workers has to be looked for elsewhere. Planters have already paid a bonus of 4 percent for 1957. They think that the working results for the year do not warrant a larger payment. It is unlikely, therefore, that an agreement will provide anything substantial to workers in the form of a bonus. The representatives of labour know this position. For the 10½ percent they secured in 1956, the communist labour leaders have faced a lot of criticism from their rivals. If the settlement for 1957 results in a lower payment, they might have to face a

very embarrassing situation. The present strike move is to be a face-saving device and is an attempt to get the support of plantation workers. The communists have been fighting desperately to win over the workers and consolidate their position in the plantation industry.

Reluctance of Non-communist Unions

It is doubtful whether the threatened strike will materialise. The other plantation workers' unions under I.N.T.U.C., P.S.P. and R.S.P. leadership are not at present prepared for a strike and they are unlikely to join hands with the communists considering the present political atmosphere in the State. But if the communist labour leaders call for a strike unilaterally, clashes between the striking and non-striking workers will be inevitable. This will mean a serious threat to the highly explosive law and order situation in Kerala. It is doubtful whether the party in power will tolerate such a situation unless it is prepared for a showdown.

Import of Cashew Kernels by W. Germany

West Germany will allow the import of cashew kernels, free of Customs duty, irrespective of the type and manner of packing, in response to representations made by the Indian trade delegation which recently visited that country. Roasted kernels, however, will be charged a duty of 25 percent of the value while roasted and salted kernels will be subject to a duty of 30 percent of the value.

According to a Press note issued by the Coir Board, the External Affairs Ministry has instructed its subordinate offices to make use of coir goods to the extent of 25 percent of their requirements of floor coverings. The Ministry of Health has also instructed its subordinate offices to make increasing use of floor coverings made of coir. The Board made some representations, through the Central Commerce and Industries Ministry, in order that such measures might be taken to increase the internal demand for coir goods.

Crisis in Coir Industry

The Industries Minister of Kerala has again shifted the responsibility for the "crisis" in the coir industry to foreign firms. He has said in one of his recent speeches in Trichur that the main reason for the crisis is that the industry is being controlled by big foreign companies which are interested in creating a "deliberate crisis" to purchase coir products at cheaper rates for exporting them to world markets. While in all other industries, prices are fixed by the seller, it is the foreign concerns which determine the prices of coir products, the Minister says.

Efforts are being made to set up a Coir Marketing Corporation. Such an agency will be able to control the prices and will also be in a position to safeguard the interests of the industry. Concrete proposals concerning this have already been submitted to the Central Government. The Minister has made some baseless allegations against foreign firms. What he has said about foreign companies trading in coir goods the only plausible explanation is that it is a reflection of the hatred which the Communist Party nurses towards foreign companies.

Important Factors

For the present plight of the industry, apart from the general economic depression the world over, the following factors are responsible. The normal relationship between the price of the fibre and the price of finished products was upset by retters' manipulations to control the release of coconut husks and the unrealistic minimum wages which were fixed for the coir workers by the State Government. In order to make both ends meet, manufacturers have started using inferior fibre for the spinning of coir yarn which in turn had a vicious effect on the quality of coir goods. Exporters are further handicapped by the rising costs of processing resulting from the increased wage rates which in the case of certain operations are as much as 80 percent to 90 percent higher. Competitive world fibres, such as sisal, continue to make inroads into export markets which once heavily relied on coir yarn.

Declining Exports of Ginger

Ginger exports from India are falling steeply. Figures for the first eight months of the current season are now available, and they show that the decline amounted to 3,800 tons, the export during the period having been 4,747 tons compared with 8,547 tons in the same period of the last season. India had a very prosperous ginger trade during 1954, 1955 and 1956 due to the complete lack of competition from China and Africa. Indian ginger fetched very high prices during these years. But towards the end of 1956, India had a bumper crop, chiefly due to increased acreage and favourable weather conditions. In the same year, both Africa and China had a large crop. The price fell week after week and almost all the foreign buyers, who had ample stocks which they purchased at high prices before, had to suffer very heavily. Selling from stocks was their only alternative and exports from India declined in consequence.

Then came the Suez Crisis. The Egyptian upheaval also affected the ginger trade to a certain extent. Certain restrictions have recently been imposed on the import of commodities into D'Jeddah and ginger is one of them. This, too, has affected the trade. The Middle East buyers are hesitant now and they are reluctant to stock at present. The loss which they incurred in 1957, has made them cautious and they now only buy for firm commitments.

Coffee Marketing System

Some delegates who attended the South International Conference of Agricultural Economists, recently held in Mysore, showed great interest in

the system of marketing adopted by the Coffee Board. They had discussions with the Board's chairman on the economic aspects of the industry in India. These delegates came from coffee-growing countries such as Brazil, Columbia, Venezuela and Puerto Rico and important consuming countries such as the U.K., Germany, Russia, Yugoslavia and Czechoslovakia. They also showed great interest in the method of financing the marketing of coffee. Other matters discussed were production, size of an estate, subsidiary occupations of small growers, formation of co-operatives, fragmentation of holdings and the imposition of ceilings, etcetera.

COCHIN TEA SALES

At Dust Sale No. T, 650,000 lbs of tea were on offer. There was a good demand at lower rates for low medium and medium dusts, which were irregularly 10 to 15nP easier. Dust liquoring high-grown were considerably dearer and coloury clean leaves were firm to dearer.

At Sale No. 29, 1,800,000 lbs of tea were on offer. There was less demand for low mediums which were 5 to 10nP easier and mediums and good mediums were 10 to 20nP lower. Best liquoring and high-grown were irregular. Whole leaf were about steady. Tippy teas were strong.

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

At Sale No. 15, held on 29th and 30th September, offerings at the Export auction amounted to 65,670 chests. Quality showed a further seasonal decline. There was a good general demand, although prices were irregular and generally easier. The start of the sale was delayed up to 2 p.m. on 29th September, pending clarification of the new rates of excise and export duties. "Teas for price" sold well. Plain broken declined by about 2nP to 6nP. Similar Fannings also tending easier. Orthodox Assam B.O.P.'s and O.F.g.s were about 10nP to 30nP easier, while the B.P.'s and P. F.g.s in this category were about 10nP easier. C.T.C teas again met with a selective enquiry, the few with useful liquors sometimes selling above valuations but the more ordinary kinds declined by about 10nP to 30nP except for cheaper sorts which sold fairly well. There was less demand for whole leaf grades and prices were appreciably easier. Tippy teas and Darjeelings received fair enquiry but were irregular and generally easier.

lings received fair enquiry but were irregular and generally easier.

Quotations

	1958 Rs.
Clear Black Pekoe	1.95 to 2.00
Plain B.P.	1.70
Plain Fannings	1.80 to 1.85
Medium B.P.	1.75 to 1.85
Medium Fannings	1.90 to 1.95
Best Assam C.T.C. B.P.	2.70 to 2.90
Best Assam C.T.C. Fannings	2.90 to 3.20

LINSEED FIRM

Linseed prices were firmly held during the past week and a slight advance was recorded but business was negligible. Many mills were idle as crushing margins were uneconomic and a limited number of small mills were operating on a hand-to-mouth basis. The oil market was dull; prices showed no change, but enquiries were limited. Only small transactions of a purely local nature were reported. Latest quotations were as follows: ready Rs. 26-2 a maund and October Rs. 26 a maund.

HIDES AND SKINS STEADY

The market was Steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 23rd September and 29th September, 1958)
Cowhides:—Wet salted 16,750 pcs. on the basis of Rs. 6.50 to Rs. 11; Wet salted (Slaughtered) 10,500 pcs. on the basis of Rs. 9.50 to Rs. 14.50 and Rs. 17.50 to Rs. 25.50; Wet salted (Ord.) 11,300 pcs. on the basis of 75nP to 78nP a lb.

Goatskins:—Wet salted (Tata, Patna, Daissee and Kustia) 26,650 pcs. on the basis of Rs. 315 to Rs. 317.50, Rs. 270 to Rs. 275, Rs. 320 to Rs. 340 and Rs. 370 to Rs. 380; Wet salted (he-killed) on the basis of Rs. 3.75 and (she-killed) on the basis of Rs. 3.25 a piece; Maldah 47,000 pcs. on the basis of Rs. 345; Purneah-Kissenganj 8,400 pcs. on the basis of Rs. 315 to Rs. 330; Patna-Pakur 6,200 pcs. on the basis of Rs. 280 to Rs. 315; Muzafferpore 3,100 pcs. on the basis of Rs. 365.

Bazaar Stocks

(29th September, 1958)

Cowhides: Wet salted 1,04,700 pcs.

Goatskins: Wet salted 36,500 pcs; Assam-Dinajpur 109,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 273,500 pcs.

SUGAR FIRM

During the week ended 1st October, sugar sales in the Calcutta market averaged 6,000 bags. Arrivals a day were 5,500 bags and stocks totalled 140,000 bags. Rates for ordinary grain were Rs. 38-2 and Rs. 41 for bold grain. The market was firm.

SHELLAC STEADY

During the week ended 30th September, the market was steady. The range of quotations was as follows:

Standard Pure But-lonlac	Rs. 80 value; 80 buyers.
TN Pure Shellac	Rs. 60 to 58 value.
Standard One Shellac	Rs. 67 value; 66 buyers.
Superfine Shellac	Rs. 68 to 67 value; 68 sellers.
Lemon No. 2 Shellac	Rs. 73 to 74 buyers; 74 to 76 sellers.
Lemon No. 1 Shellac	Rs. 79 to 80 buyers; 80 to 81 sellers.
Kusmi Seedlac No. 2	Rs. 70 value.
Kusmi Seedlac No. 1	Rs. 75 value.
One B Seedlac	Rs. 65.50, 64, 65 sellers, 66 buyers, 67 sellers; 60 buyers, 61 sellers.
Two B Seedlac	Rs. 60, 59, 60 sellers; 60 buyers, 61 sellers.
Manbhumi Fine Seed-lac	Rs. 64 done and buyers; 65 buyers, 66 sellers.
C.P. Fine Bysacki Seedlac	Rs. 60 done and buyers; 61 buyers, 62 sellers.
C. P. under 5% Seed-lac	Rs. 56 to 55 buyers, 56 to 57 sellers; 57 done and buyers.
C.P. 5% to 7% Seed-lac	Rs. 52 buyers, 53 sellers; 53 buyers.

Shipments during September until the 27th were seedlac 10,846 packages, butanolac 251 packages and others 874 packages.

Books

POPULATION PROBLEM

Population Problem in India. By P. K. Wattal. (Published by Minerva Book Shop, Jor Bagh Market, New Delhi. Price Rs. 10, pages 228).

The most crucial demographic problem in India, as a Census Commissioner put it, is that of the "devastating torrent of children." The hand that rocks the cradle has been dogged with the task of rearing up too many babies, and in spite of controversy, there is no doubt today that the country is overpopulated. Mr. Wattal says that the socio-economic factors which lead to the voluntary restriction of numbers in Western countries are generally absent in India. Widespread illiteracy, early and universal marriage, the lack of a desire to attain higher living standards, a strong belief in fatalism and the reluctance to practise planned parenthood have undoubtedly contributed to the increase in India's teeming millions. Mr. Nehru, therefore, sarcastically said some time ago that while it would be necessary to increase the production of basic necessities there was one item the production of which should be restricted, and that was children. Vinoba Bhave are opposed to birth control as interfering with the will of the Creator. They should appreciate that the benefits of economic progress will be nullified by the growth in numbers, and India, like Lewis Carroll's Red Queen, will have to run faster and faster even to stand still. Economists say, therefore, that for a population like that of India, which is increasing at the rate of 1.3 percent a year, food production must increase by at least 3 percent a year, to ensure an improvement in the living standards of the people. Mr. Wattal, in this well-written monograph, cogently argues the case for the restriction of numbers. He does not indulge in any theoretical discussion, but shows by empirical evidence that the problem of population is the most crucial in India. The price of the publication is a bit high, and there should have been an index to it for ready reference. Some of the elementary chapters could have been omitted, but the book, as a whole, is a welcome addition to the literature on the population problem.

PROGRESS IN CHINA

The New Economy of China. By Gyan Chand. (Published by Vora and Co., Publishers Private Ltd., Bombay. Price Rs. 16, pages 429).

Many books have been written on the economic development of communist China, but most of them share the common defect of making an oversympathetic appraisal of what the Chinese planners call "the socialist transformation" of the economy. A well-known scholar like Dr. Gyan Chand, from whom one could expect an unbiased and critical approach, has obviously been unable to discuss the development of the Chinese economy without a shade of prejudice. The architects of the planned economy visualise the creation of a people's democratic dictatorship, based on the principles of Marxism and Leninism. But these zealots have not paused to consider that a democratic dictatorship is a contradiction of terms. The establishment of a socialist society through what Marxists call "the socialist relations of production" has necessitated the creation of a monolithic State. Its agent is the omnipotent and omniscient Party which throws individual liberties to the winds to establish an authoritarian regime. The ruthless destruction of landlords as a class, the complete elimination of the private sector in industry, the highly centralised system of administration and to crown all, the suppression of individual liberties through a steam-roller method, which is only possible under a dictatorship, have indicated that economic development of China will never be achieved through the democratic process. In spite of his knowledge of these glaring facts, Dr. Gyan Chand argues that the dictatorial regime in China will gradually become less important with the decline in world tensions. The untold universal austerity in China, which has even been extended to the national uniform of trousers and buttoned-up coats, shows to what extent consumption can be reduced through a Governmental fiat. There has been some achievement no doubt, made possible through liberal Russian assistance, but progress has certainly not been as phenomenal as the Chinese planners would have us believe. Even Dr. Gyan Chand admits that the method of compilation of Chinese statistics does need a scrutiny and careful appraisal. In spite of some defects, the author has collected a mass of facts and figures with painstaking care. There are remarkably few literal mistakes which make the publication interesting reading.

NEW SHIPPING JOURNAL

Shipping and Port Review, August 1958. Edited by E. H. Tippoo. (Published by Endeavour (India) Private Ltd., 8, Dharamtala Street, Calcutta 13. Pages 104; annual subscription Rs. 19).

The inaugural issue of this bi-monthly journal contains many useful articles on ports and shipping. Some of the current problems have been discussed elaborately and a section contains important statistics. As a new journal exclusively devoted to the subject, it bids fair to have a successful career.

COMPANY AND PUBLIC NOTICES

THE EAST INDIAN COAL COMPANY, LIMITED.

(Incorporated in England with Limited Liability).

NOTICE is hereby given that the One Hundred and Sixth Ordinary General Meeting of the Company will be held at the Head Office of the Company, 4, Clive Row, Calcutta, on Wednesday, the 5th November, 1958 at 11 a.m. for the following purposes:—

1. To receive and adopt the Directors' and Auditors' Reports and pass the Accounts for the year ended 30th April, 1958.
2. To declare a Dividend.

U.K. FIRM INTRODUCES A NEW RANGE OF CHLORINATED RUBBER PAINTS

A new range of chlorinated rubber paints which will be of interest to all countries in tropical and sub-tropical areas has been introduced by a British firm. It is known as Avigel 250. Chlorinated rubber paints are well known for their excellent chemical and water resistance, but in the past they have been criticised as being difficult to apply due to "cobwebbing"—the pinking up of previous coats by follow-on coats. The British firm has carried out a long-term research programme to eliminate these difficulties, and the new material, it is claimed, will be found as easy to use as oil paints while at the same time retaining full chemical and water resistance. Special attention has also been paid to the drying time of the new material. Avigel 250 has been made with a drying time fast enough to give the most economical application, but slow enough to provide a wet edge for joining up where work has been temporarily left off. In addition, special types have been introduced for application to wet surfaces (Avigel 250 wet) and also with fungus-resisting properties (Avigel 250 FR) for use where mould and fungus growth create problems. This new chlorinated rubber paint is available in a full range of primers, under-coats and glossy finishing coats.

TRADE AND AID IN THE COMMONWEALTH

MONTREAL IN RETROSPECT

CONSIDERING the divergence of interests involved, the Commonwealth trade and economic conference held in Montreal recently proved to be a remarkable success. The results of international conferences are apt often to look rather nebulous to the outside observer: delegates forgo their to deliver woolly speeches; lip-service is paid to such concepts as "closer economic co-operation" and "prosperity for all"; important differences of opinion which everybody knows to exist are mentioned only in undertones behind closed doors; and discussions culminate in *communiqués* saying how delighted the delegates were to meet one another and how their mutual understanding of the various points of view had increased. If the Montreal conference was notably different from the general run of such friendly assemblies, it was so mainly because of the frankness and plain-speaking which featured its discussions. Supporters of the Commonwealth link often under-estimate the need for such frankness: in doing so, they forget that the strength of the institution derives primarily from the diversity of interests it represents—a diversity which has to be freely recognised and appreciated if any useful purpose is to be served. This is particularly necessary in the economic sphere at a time when the value of political associations is being judged increasingly by the extent of the tangible, economic benefits they bring. In this sense, the Montreal conference may constitute a major landmark in Commonwealth economic history. The promise of greater material as well as moral co-operation born of it is a matter of first significance, especially for the under-developed countries of Asia and Africa.

To assure that steady growth is no easy matter. Much was heard during the Montreal talks about the need for commodity price stabilisation schemes, although no worthwhile suggestion emerged on how they might be made practicable and effective. Experience shows that the formulation of such schemes is invariably easier than getting them accepted and making them work. The two main difficulties are that they inevitably embody a conflict of interests as between buyers and sellers, and that sufficient finance cannot be found to make them really effective (the recent worries of the tin buffer stock manager are a case in point). Even assuming that the Commonwealth countries could surmount the first of these difficulties, it is debatable how many of them are rich enough to provide an answer to the second. In the circumstances, Britain was right in emphasising that commodity price stabilisation is hardly a venture for the Commonwealth to undertake on its own; the co-operation of major traders, especially the United States, and, if possible, Russia, is necessary if any lasting benefits are to be obtained. Meanwhile, the domestic economic policies of the primary producers could well be re-shaped so as to ensure that their major products, especially the exportable ones, develop greater resiliency when competition becomes stiff. Unless that basic condition is fulfilled, commodity price stabilisation is likely to do little more than ensure the survival of uneconomic and inefficient pockets of production in the under-developed areas of the world.

An important reason why the fall in commodity prices is causing serious worry is that development programmes in many territories are suffering. With a decline in export earnings, imports have had to be cut; as a result, inflationary pressures have grown, and industrial progress has been retarded by the shortage of capital goods and raw materials. The Montreal conference underlined the fact that more capital will have to be provided, and its flow facilitated, if the poorer members of the Commonwealth are to industrialise and diversify their economies. At present, there are only two important sources of capital within the Commonwealth—Britain and Canada.

INTERNATIONAL FINANCING

IF the choice of New Delhi as the venue for the current annual meetings of the World Bank and the International Monetary Fund has symbolic significance, it is because of the increasing interest which these institutions have shown in the economic problems of under-developed countries. The World Bank, in particular, has come to be looked upon as a major source of capital. The thirteenth annual report, which Mr. Eugene R. Black, president, has just submitted to the board of governors of the Bank, shows that its lending operations have increased considerably during the year ended 30th June, 1958, compared with the previous year, largely because of the accommodation provided to the poorer economies for a variety of development projects. Transport, power and other basic facilities for industrialisation claim

most of the loans—in other words, the Bank is substantially helping these countries in building the “infra-structure” of their economies, or the foundation on which they can set up industries to increase the wealth and the standard of living of their peoples. The total amount of the Bank’s loans rose sharply from \$(U.S.)388 million in 1956-57 to \$711 million in the year under report, and more than half of this amount went to Asian countries. The Indian Government received a \$90-million loan for its railways; the Tata Iron and Steel Company, which has the largest integrated steel mill in Asia, was given a 13-year 6 percent loan amounting to \$32.5 million; and the Commissioners of the Port of Calcutta and the Trustees of the Port of Madras borrowed \$29 million and \$14 million, respectively. Other Asian countries which took substantial amounts included Ceylon, Iran, Iraq, Japan, Pakistan, the Philippines and Thailand. It is denied in the report that this increase in the Bank’s lending operations has any relation to the recession in the United States or to the depression in the prices of primary commodities. The main explanation, it is stated, lies in longer-term factors “which are operating to make a larger number of development projects ready and eligible for financing”.

During the year began what the report describes as a fruitful relationship between the Bank and the U.S. Development Loan Fund, which is a new foreign aid agency of the United States Government. In two cases—India and the Honduras—loans were made from the Loan Fund to assist projects which were also being partly financed by the World Bank. The D.L.F. loans are repayable in the currency of the borrower, and as such give considerable relief to the country concerned in

the servicing of its foreign debts. The report says that D.L.F. funds were made available for projects which had already been thoroughly investigated by the Bank; the Fund authorities' decisions were thus considerably facilitated by the earlier findings. The Bank now has several big projects under consideration for the purpose of granting loans, and this may well indicate that its lending operations will increase still further in future years; also, the investigations may help in securing assistance direct from the United States Government.

It is not certain whether the International Development Association as proposed by President Eisenhower will eventually be formed as yet another affiliate of the World Bank in order to make long-term loans repayable in local currencies, but the record of the International Finance Corporation, which is the youngest member of this trinity of international financial institutions, has not been quite so encouraging from Asia's point of view. The I.F.C. was founded two years ago to provide loans to private concerns as well as to participate in their share capital. It has assisted only a few countries so far, such as Australia, Brazil, Chile, Mexico and Pakistan. In the last of these, two private concerns, the Steel Corporation of Pakistan and Adamjee Industries Ltd, have been chosen by the I.F.C. for investing its funds. The second annual report covering the year 1957-58 says that it is continuing "to receive a large number of applications for assistance", but due to the rigid method of scrutiny and a lending policy which is cautious, the total commitments of the Corporation to date amount to a little over \$10 million. All loans and investments are repayable in U.S. dollars.

There should now be less ground for the under-developed countries' complaint that the I.M.F. exists purely for the benefit of the developed economies. Apart from the fact that it has already helped an under-developed country, India, in relieving the pressure on her balance of payments by providing a line of credit, it is necessary to understand the limitations of this body. It could hardly have done otherwise within its terms of reference. The serious fall in the prices of primary products, which constitute the main exports of these countries, is partly rooted in the structural weaknesses of their economies; in some cases expanded production, and in some the invention of substitutes, have been the chief causes. The answer in such cases is the diversification of output, which it is difficult to finance adequately; but that is a field in which the I.M.F. cannot be expected to do anything. The I.M.F. annual report suggests that "the less developed countries have an obligation to adapt their own economies to fluctuations between high and low demand". It is, of course, true that by striving to help maintain conditions of equilibrium and stability in trade among the industrial nations, the Fund is helping the primary producers also. Production in the developed economies (which are after all the main buyers of primary products) is intimately connected with their balance of payments position. To the extent that the Fund has helped them and the world to move towards exchange stability with orderly exchange arrangements among its members, to avoid exchange restrictions and to restore a multilateral system of payments, it has promoted its main objectives. The Fund helped cushion the serious balance of payments crisis which beset the economies of countries outside the United States in the first quarter of 1957, by allowing the members to draw a net total of \$800 million. Although conditions have improved since then, it cannot be said that international trade is assured of long-term stability.

CHANGING FORM OF THE LONDON CAPITAL MARKET

PROVIDING FOR DEVELOPMENT

THE British Government's plans to provide more capital for the Commonwealth has fitted into its general policy to resist the recession in trade. Mr. Heathcoat Amory, the Chancellor of the Exchequer, was discussing the recession in Britain rather than the lack of capital in other Commonwealth countries when he referred in last April's Budget speech to the potentialities of the Export Credits Guarantee Act, which has now been invoked to assist the provision of capital for those countries. Naturally, however, at the Commonwealth Conference in Montreal, the Chancellor did not stress that British trade required a stimulant. Indeed, having decided that it is permissible and desirable to export more capital, the Government has taken into account the particular needs of borrowers and has remodelled the capital market accordingly. The new arrangements have aroused some criticism, especially in Britain, for in its effort to make capital available where needed the Government has raised some curious anomalies. Overseas countries whose credit-rating is not high enough to enable them to get funds through the open market, can borrow from the Government on more favourable terms than are available to "creditworthy" countries, which have to borrow in the market; and even local authorities in Britain, which are now required to satisfy their needs mostly in the market (they could until recently borrow cheaply from the Treasury-financed Local Loans Fund), must pay higher rates of interest than these favoured Commonwealth countries.

The favoured countries are not only the colonies, which will be enabled to borrow from the U.K. Exchequer at the credit-rate of the U.K. Government at the time of the negotiation, plus 1 per cent service charge, but also the needy independent members of the Commonwealth, which can obtain loans from the Export Credits Guarantee Department on the same terms. New legislation is necessary to provide for the colonies, whereas loans to the independent countries were previously permissible under the Export Credits Guarantee Act. It was under this Act that the recent loan was granted to India. But that was at the time a special case. Now the principle of Government-to-Government lending has been established as normal practice, and the terms of such lending have been specified. The E.C.G.D., whose primary function is to protect British exporters against defaulting debtors, and whose secondary function (envisaged by the Chancellor in his Budget speech) is to assist exporters when competing countries are providing more liberal export-credit, has been transformed into a kind of development bank; and its services as such will be supplemented directly by the Treasury under the Colonial Development and Welfare Acts, suitably amended. These arrangements reflect an important change of principle. The change is not unanimously approved, but the adverse critics are a minority. It has been evident for some years past that the evolution of colonies to independent status could have serious financial consequences for those countries, because there would necessarily be a gap of many years between the severance of their direct financial link with Britain and their achievement of independent "creditworthy" status, and to attain that status they would have to import capital. The vicious circle had to be broken at some point. It was suggested that the British Government might add its guarantee to developing countries' capital issues for which public subscriptions were invited. But the Government has preferred to by-pass the market and to lend to the Governments direct, at least for part of their requirements.

The London capital market is, however, available for lending to overseas development boards and other such bodies, which have hitherto been excluded from it; but this facility may not be widely used, as no special terms will be arranged. More important, the capital market will presumably be used indirectly to provide much of the money lent by the Government. Money released from the Exchequer (whether through the medium of E.C.G.D. or direct) will require in the first place equivalent issues of Treasury bills. As the authorities are attempting to reduce the floating debt, the Treasury bills will presumably be funded into stock at some stage. First the money market, then the bond market, will have to provide more capital. Yet the system will still be very different from the traditional system (little used in the last 20 years) whereby non-colonial countries negotiated their loans in the market. This change in the method of lending is not, of course, specifically British. The International Bank for Reconstruction and Development is an obvious example of a body designed to provide money on terms such as the recipients could not hope to arrange on the basis of their own security—terms, incidentally, which are approximately the same as those now offered by the British Government. Even orthodox economists, who would normally argue that the market should be free to establish

an "economic price" for credit in each particular case, have accepted the need to make special provision for developing countries. The tendency of capital to flow only to those countries that are already developed, because they provide better security, has caused the world to develop unevenly. "Unto him that hath shall be given" is not a good principle to apply in a world that is still mostly poor.

However, some critics in Britain feel that their country is taking charity too far; at least, they are anxious to impress on the receiving countries that the resources available for charity are not unlimited. Mr. Amory himself was non-committal: he said it was intended to maintain the outflow of capital from Britain at some £200 million a year, perhaps to increase the flow, but he did not imply that the Government was prepared to make liberal disbursements to all comers. Unofficial estimates suggest that lending may increase by £100 million a year. It is possible that the favourable balance in the overseas payments account will be as much as £400 million this year. But this year is peculiarly favourable, and we cannot assume such figures for future years. Nor should we forget that in providing that average £200 million Britain has suffered successive financial crises. So the critics remind the developing countries of the virtues of self-help—which plays a much bigger part in developing under-developed countries than is generally recognised. The technique of London's financial mechanism is important, but it can only help to distribute resources, not create them.

INCENTIVES FOR CAPITAL FORMATION

THERE has been no lack of homilies urging business men to show a spirit of patriotism and sacrifice. But their grievances have too often been dispensed with in the most cavalier fashion, and their problems have seldom been considered with the necessary sympathy and understanding. With catch-phrases, the planners have argued the case for rapid capital accumulation. But one thing they have neglected to consider, in spite of the persuasive pleadings of business men, is that capital formation is not possible without an inducement to saving and investment. Although Mr. Morarji Desai has spared no pains to remove misconceptions about Indian planning, even promising that foreign investors will receive a square deal, it is difficult to avoid the suspicion that private enterprise will continue to receive step-motherly treatment as long as a socialist pattern of society continues to be the economic goal. The case for giving incentive to the much-abused and much-maligned business man has been ably argued in a recently published pamphlet entitled *Incentives for Industrial Expansion* by Mr. L. N. Welingkar.

The real problem, which has cropped up due to too much emphasis on ideology, is that investors have been scared, employment has not increased rapidly enough and the growth of capital accumulation has been retarded. Furthermore, in the name of economic progress, the consumer has been called upon to tighten his belt, the investor has been told to bear the burden of back-breaking taxation and the present generation has been advised to make sacrifices for posterity. The situation being what it is, the common man cannot be blamed if he is disillusioned and becomes cynical towards the plan and the progress it offered. This is not a mere possibility at a time when real import restrictions have reduced the supplies of many essential consumer goods. Due to meagre returns on investment, many are heard to say gold, instead of in the shares of companies, they would have gained much more. This is not mere wishful thinking. The price of gold, after touching Rs. 77.75 in 1952, rose to Rs. 109.40 in 1957—a jump of 41 per cent. On the other hand, the Reserve Bank's all-India index for variable dividend industrial securities (revised series, 1952-53 equals 100) rose by 20.20 per cent only. It is obvious, therefore, that the talk of attracting the hoarded gold will prove to be mere moonshine unless an adequate return is offered to investors.

The middle classes, who are hard pressed by high prices and low incomes, have little capacity to save. Because of their meagre resources, they are naturally anxious to ensure the safety of their investments and are willing to invest in preference dividends. It is on account of the risk factor involved that ordinary shares have to offer the prospect of higher dividends, at least up to 9 per cent and it is hard to attract capital. But companies of the rise in prices of raw materials and wages and the heavy burdens of taxation, which have some reputed reduced profit margins, which have some reputed concerns, which can get their small and medium concerns are unable to raise

capital because they cannot offer attractive returns. As it is, the task of company floatation has become increasingly difficult because promoters are facing such adverse conditions.

No entrepreneur can be expected to undertake investment unless the rate of return is adequate. For one thing, the latter has been persistently falling; for another, the uncertainty in taxation policy, which has been aggravated by the difficulty of finding the resources for an over-ambitious plan, has dampened the enthusiasm of investors. The combined effect of income tax, super tax and wealth tax has had an adverse effect on the inducement to invest. Mr. Welingkar shows, with the help of statistics, that if the net wealth of an individual is Rs. 60 lakhs, and he gets an income of Rs. 3 lakhs from it, he is liable to pay 99.6 per cent of that income away in taxes to the State. The position is worse for those who have higher incomes, since they have to pay more than 100 per cent. It is no wonder, therefore, that the traditional investing classes no longer have the capacity to save or invest. Companies, too, find it hard to plough back profits due to the heavy burden of taxation, and this has already proved a positive deterrent to investment in the private sector.

Employers have been burdened with a spate of welfare legislation in the past few years. To the old Workmen's Compensation Act has been added the Industrial Disputes Act and the Factories Act. While an enlightened employer is not reluctant to pay reasonable wages to his workers, he has a right to expect a full day's work in return for a full day's pay. But productivity has

not increased in proportion to wages and amenities and, therefore, private concerns often feel the necessity for introducing rationalisation programmes. Unfortunately, even in this case the hands of employers are tied, for they are prevented from laying off surplus workers, either because they have to pay heavy compensation or because pressure is brought to bear on the grounds that this will increase unemployment. A labourer in a textile mill, whose job it is to look after the operation of a loom, has a limited capacity to keep a close watch on many machines of this type. If an automatic loom is installed, the need to keep a large labour force proves unnecessary, and the productivity of an individual worker, too, is increased. But this involves the discharge of surplus workers. The latter oppose mechanisation even though it might mean an increase in their wages through a rise in productivity.

There is the further danger that the ideal of a socialist pattern of society may eventually pave the way for State capitalism. It has been amply proved that nationalised concerns are by no means more efficient than private companies; in fact, the working results of State collieries have established the point beyond doubt. Private enterprise thrives on the profit motive and under conditions of competition. State concerns, on the other hand, have largely to operate on a public utility basis. The bureaucrats who run them are accountable to numerous authorities, and naturally have not the same drive and efficiency as private entrepreneurs. India's well-wishers have, therefore, persistently cautioned her to steer clear of too much bureaucracy. It is not yet too late for the planners to show a little more economic realism.

Current News and Comment

Industrial Activity Index

Corrected for seasonal fluctuations, Capital's Index of Industrial Activity shows a rise of 1.8 points during March 1958. Contributing to this were increases in tea, yarn, cloth, cement, pig iron, finished steel, paper, motor-cars, bicycles, electricity and railway ton-miles. Sugar, coal and tyres however decreased.

Optimism from Jay Engineering

Sir Shri Ram's speech from the chair, at the latest annual general meeting of the Jay Engineering Works Ltd. reports good progress. (A fuller version appears elsewhere in this issue of *Capital*). The production of sewing machines and fans during the past working year has increased appreciably. So has the turnover. The chairman says that the company's efforts to reduce the price of its products while improving their quality have continued. The price of Usha sewing machines had been brought down since 1954 from Rs. 200 to Rs. 175, and during the year under review, a reduction of Rs. 15 has been made. A hire-purchase scheme has been introduced to sell these machines to tailors. Exports have been doing well. "You will be glad to learn that we have been able to sell a fairly big number of our sewing machines in the U.S.A., Canada, England, Holland, Belgium and Italy, etcetera, and we hope to sell in other European countries also. So far as Asian and African countries are concerned, we have been exporters for many years now. We could with some justification say that the foreign buyers find our sewing machines the cheapest quality sewing machine." Sir Shri Ram hopes that exports will increase further during the current year, but complains that the pig iron normally supplied by the steel concerns is of poor quality, on account of which the rejections both in the foundry and at later stages in production are higher. "I have no doubt that the industry will not mind paying slightly higher prices for first quality pig iron, but it is very necessary for manufacturing industries to get good quality pig iron." As for new lines of manufacture, the company's needle plant has reached full production and the prototypes of zig-zag machines have been completed.

I.F.C. Moves Ahead

The tenth annual report of the Industrial Finance Corporation shows that it continues to make steady progress. For the year ended 30th June, 1958, the Corporation has not only been able to disburse with the subvention from the Central Government (as in the two previous years); it has also repaid a substantial amount (Rs. 5.45 lakhs) towards the subvention it had received in order to meet the commitment concerning a guaranteed dividend to shareholders. The gross income has

gone up steadily over the past ten years, and the ratio of administrative expenses has come down. In addition to its original purpose of long-term industrial financing, the Corporation has been authorised to undertake the new function of guaranteeing deferred payments due from an industrial concern for the import of capital goods. Three such schemes have been approved by it during the year, the amount involved being Rs. 3.96 crores. Addressing the tenth annual meeting, the chairman, Mr. K. R. K. Menon, says that industrial concerns have been eager to avail of this facility. (A fuller version of his speech appears on another page of *Capital*). The borrowing powers have also been increased by from five times the paid-up capital plus reserves to ten times.

Reviewing the progress of the Corporation over the past ten years, Mr. Menon says that the volume of work it has handled makes the considerable total of Rs. 125 crores, and loans sanctioned against applications for this amount are nearly Rs. 63 crores. The actual disbursement, however, comes to about Rs. 35 crores. The difference between the amount sanctioned and that disbursed has not been explained, but the major reason could be that the applicant concerns themselves have not yet availed of the loans sanctioned to them. An important feature of the Corporation's activities is that it has lent increasingly to new concerns and to concerns in States which are less industrially advanced—for instance, Andhra Pradesh, Madras, Mysore, Orissa and U.P. Another noteworthy feature is that the Corporation has been providing progressively larger accommodation to co-operative enterprises. The grand total of loans sanctioned to co-operative sugar factories up to the end of the year under report is Rs. 13.23 crores; this is 69 per cent of the total loans granted to the sugar industry (which, incidentally, occupies the first place among the industries receiving accommodation, cement and paper coming next), and 21 per cent of the loans sanctioned to all industries. There has, however, been a fall in the number of applications received during the year. Mr. Menon explains that the fall is due to the difficulties which are being increasingly faced by industries and entrepreneurs "in the matter of securing the necessary licences for importing the capital goods required for starting new industries or expanding existing ones. We insist on the production of the necessary import licences before we take up loan applications for consideration."

According to the annual report, the total number of applications during the year is 48, against 67 and 86 in the two previous years, seeking loans for Rs. 14.9 crores in all (Rs. 21.4 crores and Rs. 27.7 crores); the amount sanctioned is Rs. 7.8 crores, compared with Rs. 11.9 crores and Rs. 15.13 crores in the two previous years. Only one application has been rejected, against 14 and eight, and applications treated as lapsed or withdrawn number ten, compared with ten and seven. Those under consideration at the end of the latest accounting year are 41. The numbers were 26 and 34 in the two previous years. The Corporation has made its first venture in the field of underwriting, along with the Industrial Credit and Investment Corporation and

the Life Insurance Corporation. Mr. Menon hopes that this is the forerunner of many more ventures in coming years. The ways and means position has been strengthened with additional loans from the Government. The Corporation has raised Rs. 4.56 crores from the market by a bond issue during the year and it intends to "try and raise loans from the open market this year also". The borrowing concerns, by and large, have been meeting their obligations promptly. The percentage of defaults has come down to 6.1 in 1958 from 8.4 in 1957, and that concerning interest payments has declined from 2.7 to 1.7.

General Insurance Worries

In his address from the chair at the annual general meeting of the New Great Insurance Co. of India Ltd, Mr. Tulidas Kilachand says that it is necessary to remove all unnecessary controls and those statutory provisions which have led to malpractices in the general insurance industry. (A fuller version of the speech appears elsewhere in this week's issue of *Capital*). Insurers should be given the freedom to carry on their business on normal competitive lines. On their part, companies, both big and small, should formulate some kind of mutual agreement. This is necessary to ensure that smaller units get a fair share of the business and do not have to close down. The existing machinery to implement the code has proved expensive. Mr. Kilachand says that since expenses are to be ultimately borne by insurers, it is no use making it more elaborate and expensive. Referring to the move to reduce fire premium rates further, he denies that malpractices result from the rates being very high. Past revisions, which were based on this idea, did not stop rebates being given. Mr. Kilachand has suggested to the Tariff Committee that rates might be reduced "wherever experience shows favourable results," but there should be no hesitation in increasing them when it is necessary.

Inland Water Transport

It was in 1823 that the *Diana*, a vessel of 89 tons, sailed up the Hooghly with passengers from Kalpi Roads to Calcutta, a distance of 50 miles. By 1834, the East India Company began the transport of stores and produce between Calcutta and its trading stations on the Ganges, the Yamuna and the Gogra rivers. Steamers regularly called at Agra, Allahabad and Ayodhya in Uttar Pradesh, towns which are 1,200 miles away from Calcutta. These memories of the heyday of inland water transport have been recalled by the visit to U.P. of the Gokhale Committee on river navigation. Apart from holding talks with Ministers and officials of the State, the committee had a boat trip down the Ganges and the Yamuna. It was the development of the railways which, more than anything else, struck a crippling blow to river transport in India. One of the terms of reference of this committee, therefore, is the co-ordination of rail and river transport. Many western countries have underlined the importance of river navigation in national development by setting up special bodies like the Central Rhine Commission charged with the task of co-ordination with other forms of transport and also ensuring freedom from excessive national and provincial controls. The navigability of Indian rivers depends on the vagaries of the weather. Before the summer monsoon, most of them have a reduced flow, a circumstance which is aggravated by the considerable volume of water diverted by irrigation. At the same time, in areas which are liable to floods when other modes of transport are dislocated, the advantages of water transport are obvious. The development of the diesel engine has lowered the cost of water transport considerably. But the business community, which is understandably cost-conscious, seems usually more impressed with the speed of rail transport and, apart from a few notable examples, has not so far shown any marked preference for water transport. There is, however, no reason why the tendency should not change provided waterways and water transport are developed, as in the U.S.A., where many millions of dollars have been spent by the Government on schemes for the expansion of the Mississippi and Missouri waterways.

Indo-U.S. Commodities Agreement

India and the United States have recently concluded another agricultural commodities agreement which will provide more than 3 million tons of foodgrains to the former. The commodities to be supplied are: wheat, 2.8 million tons; corn, 100,000 tons and milo, 200,000 tons. The agreement involves an amount of \$238 million. The bulk of the rupee resources accruing from the sale of the commodities will be invested in India's development projects. Under two earlier agreements, agricultural products of the total value of \$340 million have already reached this country. So far,

Ship, Marine, General Engineering and Foundry work at all descriptions is undertaken at competitive rates at the RAJABAGAN DOCKYARD

COAL POLICY IN INDIA

By

Andrew Farquhar

This booklet consists of reprints of articles written by Mr. Andrew Farquhar, former Coal Adviser to the Tata Iron and Steel Co., Ltd. which have appeared in *Capital* in recent years. As expert analyses of India's coal problems and policies they have attracted widespread interest since they were originally published. The articles are now conveniently gathered in a 120-page publication, priced at Rs. 4.

Copies available from

CAPITAL (PRIVATE) LTD.,
5, Mission Row,
Calcutta 1.

shipments have included 3.5 million tons of wheat, 200,000 tons of rice, 175,000 bales of cotton, 10,500 tons of dairy products and 4 million lbs of tobacco. The total value of the commodities covered by agreements between the two countries is more than \$655 million. Besides this, the United States loaned India \$190 million for the purchase of wheat during the food shortages of 1950-51.

U.S. Business Recovery

The business recovery is continuing at a good pace and on a broad front, says the First National City Bank of New York in its latest monthly letter on U.S. business and economic conditions. Preliminary reports for September indicate that production and sales have risen further. The Ford labour contract has encouraged hopes that a prolonged automobile strike, with widespread effects on business generally, may be averted—to be sure at the cost of increased wages and prices. Particularly encouraging is the month's news from the capital goods industries. These industries are the laggards in the upturn, and, during the summer, while most business indices were rising sharply, optimism was tempered by fear that the decline in capital expenditures had much further to go and would exert a prolonged depressing influence. Latest evidence, however, is that the drop in this key area has already bottomed out. No great rise is in sight, but even a sideways movement is a help. Preliminary estimates show both personal income and personal consumption at new records during the third quarter, while economic activity generally—as measured by gross national product—appears to have recovered roughly two-thirds of the ground lost during the recession. The persistent rise in prices inflating dollar figures, causes them to understate the decline and overstate the rise in real terms, but, even after allowing for inflation, the gains are significant. More than one-half of the decline in the physical volume of industrial production was regained in the first four months of recovery. Between April and August, the Federal Reserve index (seasonally adjusted, 1947-49 equals

100) rose from a low of 126 to 137, making up 11 points of the preceding 20-point decline. The sharpest drop in output during the postwar period is thus being followed by the sharpest recovery. The problem now is how long the present speedy rate of recovery can be maintained.

Four influences stand out as dominant in this rapid upsurge: shifting inventory and purchasing policies, strong consumer demand, heavy Government buying, and an upswing in home building. The liquidation of inventories has been sharper and deeper than in previous postwar recessions. By late spring, stocks of purchased materials in many lines started to get uncomfortably low. Ordering picked up. As business in general improved, buying accelerated. In steel for example, the drop of 38 percent in mill operations far outstripped the most pessimistic estimates of the decline in actual steel consumption, as steel users drew heavily on accumulated inventories. Conversely, from April through August, while steel usage increased only slightly, output rebounded more than one-fourth, as the share of steel drawn from existing inventories dwindled and the share from current shipments increased. By late September, steel production and consumption were estimated to be roughly in balance. The same thing is happening in other industries. The shift from a record rate of inventory liquidation in the first quarter of this year to a condition of approximate stability seems likely to be completed in the near future. Overall, it will have increased the demand on producers by \$9½ billion. This, however, is a temporary stimulus. Continuing recovery will require improved demand from final consumers.

Progress of Paper

The paper industry has made significant progress in spite of serious handicaps. The production of paper and board reached the record figure of 210,000 tons in 1957, against 193,404 tons during the previous year. While the general index of industrial production has risen by 42.3 percent between 1952 and the first quarter of 1958, the index for the paper industry has shown an increase of 83.5 percent during the same period. Speaking at the annual general meeting of the Indian Paper Mills Association, Mr. A. K. Jain, president, says that in spite of a slowing down in the rate of industrial production during the past year, it is noteworthy that the paper industry improved its rate of growth. With the spread of literacy and the improvement in economic conditions, the demand for paper will increase at a tremendous pace. The consumption of paper and boards during the last five years increased at the rate of approximately 14 percent on an average every year, and is likely to rise to 400,000 tons by the end of the second plan period.

In spite of an increase in demand, the industry has been able to meet the requirements of consumers for almost all kinds of paper. Only recently has scarcity been felt for ordinary white writing printing paper. Several factors, which are beyond the control of mills, have been responsible for this shortage. For example, the expansion programmes of producers were delayed for about a year due to the Suez crisis and foreign exchange difficulties. Heavy restrictions were imposed on the import of printing paper, and the requirements of Government departments increased considerably. Furthermore, mills experienced difficulties in procuring important chemicals. Mr. Jain says that the industry is prepared to go ahead with its expansion programmes. But unfortunately, the Government seems to think that paper is not an essential commodity, judging from the low priority in allocating foreign exchange to the industry. "Several units in their licensed expansion schemes due to non-availability of foreign exchange even though they have been able to obtain long-term deferred pay-takes nearly four years to install a paper factory, adequate foreign exchange immediately to the industry so as to enable it to meet the requirements of the country during the third plan period." Referring to the increase in selling prices of 34p a lb announced by some mills, Mr. Jain says that manufacturers have generally absorbed the increased production costs, and only a part has been passed on to consumers. The costs of some mills up by the levy of one duty or another by State leases of bamboo areas.

Ancillary Equipment for Motor-cars

A delegation sponsored by the All-India Automobile and Ancillary Industries Association recently met the Central Minister for Industry, Mr. Manubhai M. Shah, and officials of the Ministry of Commerce and Industry. A Press note issued by the Association says that the delegation's meeting was a sequel to the memorandum which was

previously submitted to the Government on accelerating the development of the motor-car ancillary industries. One of the main points urged is the need for an integrated approach to problems such as the manufacture and assembly of complete motor-cars and the production of ancillary equipment, under the phased programme for the industry prepared by the Government. The latter has accepted the Association's proposal to constitute a panel to watch the progress of the ancillary industries. It will meet in New Delhi once in two months. At the first meeting it is proposed to call there in the latter half of this month, the production programme for ancillary industries covering a period of six months, from October 1958 to March 1959, will be considered with special reference to their requirements of imported raw materials and equipment. "The panel will also go through the lists of motor-car ancillary items at present being licensed for import both by the assemblers and by the trade for replacement purposes, and those items which can be produced within the country with a view to deleting from imports the items which can be indigenously produced. The understanding is that the foreign exchange thus saved will be made available to the ancillary industries to finance the imports of raw materials and equipment needed by them." The Press note says that producers of ancillary equipment who have been experiencing difficulties may contact the Secretary of the Association at "Brabourne Stadium", 87 Veer Nariman Road, Fort, Bombay.

Sugar Mills in Madras

Andhra Pradesh has 12 sugar factories and Mysore nine, but Madras has only three. Plans for new mills in the latter State are still uncertain. Co-operative schemes can work only if enough local capital is available, and the high prices of jaggery may not induce cane-growers to participate. The State Government, too, is not encouraging the spread of cane cultivation in Madras. Yet the Cauvery Sugar Company plans to set up a new factory with a capacity of 800 tons a year, and it is likely that the factory may be commissioned next year. Difficulties over the import of machinery also explain why more mills are not being started. In spite of the recovery percentage in the south being high and production being short of demand in Madras, fresh capital for new mills is hard to raise. Hence the scheme for a sugar mill in Pondicherry may not materialise at all. The establishment of three large modern factories in the private sector since 1950 has made it unnecessary to start new and relatively small co-operative sugar mills. Projects in Andhra for new co-operative mills have not fructified, while jaggery production is rising. In Madras, one licensee has joined hands with a West Bengal company for putting the scheme through.

Indian Business in Ceylon

The reference made last week by the president of the Indian Mercantile Chamber in Colombo to the Ceylonisation of trade is of considerable interest to commercial circles in the south. The language controversy in that country has had its effect on the Indian trade interests there. The tightening of immigration rules and the encouragement to local co-operative wholesale establishments to carry on wholesale and retail trade in all descriptions of goods are indications that Indian trade interests in Ceylon are likely to be gradually squeezed out. Co-operatives have been authorised by the Act passed last year to carry on insurance business. The growth of Ceylonese interests in the island's trade during the past year was indicated by the extension of Ceylonisation plans to the export trade. Licences were issued only to registered local traders and established Indian importers had difficulty in securing a reasonable share of the business. The exclusion of all non-Ceylonese from the import trade in foodstuffs followed. Adequate remittance facilities were denied by the exchange control authorities for a long time. No non-Ceylonese is allowed to engage in pawn-broking, unless the applicant has a valid visa for three years to qualify for a licence. According to the Indian Chamber's report, the Ceylon Government is now interested in the repatriation of the Indians affected by the Ceylonisation scheme and more than 53,000 Indian adults have already left Ceylon. Those who are in paid employment are to be replaced by Ceylonese. A large number of the local people have found executive posts as a result of the Government's policy of Ceylonisation of the staff in foreign firms. Non-resident partners of Indian firms in Ceylon find it hard to secure entry permits, and the Controller agrees to issue visas for visits of up to one month on the production of certain documents. It has been made clear that foreign business men with a capital of less than Rs. 50,000 will be replaced by the nationals. Ceylon, like Burma, seems no longer willing to accommodate Indian business men.

THE JUTE CROP

THE final report on the jute crop for this season, which we print in another column, estimates the area sown at 1,624,400 acres, against 2,151,600 acres last season, or a decrease of 24½ percent. Last year, however, was the record year, and this season it is put down at 88 percent of a normal crop or a 14-anna crop. The director estimates the probable outturn at 4,600,000 bales, which is a smaller outturn than any that has been estimated by the Land Record Department for the last five years. Of the 26 districts from which jute reports are received, only Cuttack reports a crop above normal. Six report normal crops. Thirteen report between 75 percent and normal. Six districts, including Jalpaiguri, Bogra and Faridpur, report crops less than 75 percent. Taking the outturn at 46 lakhs of bales, we arrive at the following:

Required locally	...	500,000
Indian Mills	...	2,300,000
For export	...	1,800,000
Total	...	4,600,000

This estimate assumes that the local mills here have no stocks whereas at no period in the history of the industry have they held such heavy stocks: and the same remark applies to the Dundee and continental mills.

Without Prejudice

A TWO-YEAR-OLD AS TRESPASSER
WHEN LAW AND COMMON SENSE
DISAGREE

(FROM OUR LEGAL CORRESPONDENT)

HERE is another case of alleged negligence in which we want to consider the duty of owners or occupiers of land towards the public, especially small children trespassing on the land where to do so involves danger to life and limb. Negligence is the doing of something which an ordinarily prudent person would not do or the omission to do something which an ordinarily prudent person would do. But a child of two or three years of age is not an ordinarily prudent person. No standard of care can be expected of him. He is unaccountable and irresponsible. You might almost say he is entitled to be negligent and certainly that he is expected to be so; so that it is no use talking about contributory negligence concerning him, or to say that he was to blame and brought his misfortunes on his own head. The question is, if he does what in an adult would be wrong and negligent and sustains injury as a result, how far is it the duty of a landowner to protect him against the consequences of his own act?

This little fellow Vijay Shanker was just over two years old. At about 3 p.m. one afternoon, he was crossing the railway line between Harding Bridge and New Delhi railway station. It should be noted that the railway track was laid in 1902, but during many years past residential buildings and quarters had been springing up on both sides of the track and the accident happened opposite those buildings which constituted a substantial residential locality, Mahabat Khan Road, New Delhi, immediately adjoining the line. The boy lived with his father at No. 26-E of that road. He was playing near the track, and then, with a few other children, he tried to cross. He did so just as the Parcel Express was approaching in the direction of New Delhi railway station. The

other children got across safely. Vijay, who was crawling across, did not. There was no negligence on the driver's part. From the moment he saw the applied his vacuum brakes and managed to pull up the train within 50 yards or so. But before Vijay could clear the track, the train ran over him. It was remarkable that he was not killed outright. He was gravely injured, had to have both legs amputated and the court later held that he had suffered "permanent and complete disability".

You will have spotted where the negligence was said to have come in. Not against Driver Bose. Against the railway, now the Union of India. Grounds: no fencing. So the question we have to consider is this. Is an infant in such circumstances entitled to say through his next friend: "True it is that I was a trespasser, if a boy of two can be said to be a trespasser. But you allowed me to be there. You knew that for years past, houses and quarters have been going up, until now there is a considerable residential suburban area right abutting on your line. You knew that children lived in those houses. You ought to have been aware, as every man of sense is aware, that the invitation to children, especially to tiny tots of two, to wander off and trespass is irresistible and to go on to the railway to play in the zone of danger and meet with an accident, knowing and realising nothing of zones of danger or accidents or trespass. Therefore, you ought to have fenced off the line where it adjoins the houses."

That was really the main argument apart from statute law on behalf of this little chap; for he had to show that the railway owed him some duty to take reasonable care that he was injured while on its property; and he was a trespasser on the railway's premises. We use the word trespasser *faute de mieux* and with some hesitation. Trespass is a crime and crime implies a mind directed to its performance. Can it be said that a mere baby, any more than an idiot, can so apply his mind? Nevertheless, he was there without permission, at his own sweet will. He was not a passenger, nor an invitee nor a licensee, as, for example, I am if I go on the platform to meet a passenger or to see a traveller off. To all the latter class, the railway owes some duty, varying in each class, to exercise reasonable care.

The court assumed, and it was not contested by the plaintiff, that Vijay was a trespasser, so we must accept it too, and the fact immediately loads the juridical dice against him; for, generally speaking, the law is that the trespasser trespasses at his own risk.

Another argument—and it is no surprise to read it again—was the venerable theory of the "dangerous monster", which takes us back to well over 100 years ago when the Prime Minister, the Duke of Wellington, believed in it and learned machines which will never force themselves into general use." Prejudice dies hard. And in 1902 we find the Punjab High Court only mildly repudiating the theory. "It has been said lastly on behalf of the plaintiff that the railway or rather a railway train is 'a dangerous thing'; but for a thing to be 'a dangerous thing' it has to be dangerous in itself, or, in other words, inherently or essentially dangerous. This can hardly in these days be said either of a railway or of a railway train." Quite so. "Hardly in these days."

Going back to the imaginary plea, which was put into this little boy's mouth, you may sympathise with it, as the writer at first did, as a fair and sensible presentation of what the law ought to be concerning an obligation to fence off at any rate where a railway line runs straight through residential houses with children in them. But whether it ought to be or not, there is, in fact, no such obligation. The Indian Railways Act, 1890, Section 13(a) does provide that the Central Government may require fencing to be provided by a railway administration, but as the dispositive word "may" indicates, and unlike the provision in the English Act, the Indian statute does not impose any imperative obligation on a railway to fence a line unless required by the Government to do so; and in relation to this particular stretch of line, no such requirement had been made. So Vijay was driven back upon the ordinary law of owner or occupier of land or premises owes no obligation or duty to a trespasser, except that he must not set up a trap for him or cause wilful injury to him. As the English Court of Appeal put it, in terms which were approved later the same year by the House of Lords: "The rule as to trespassers is...that the owner of the property is under the duty not to injure the trespasser wilfully; not to do a wilful act in reckless disregard of ordinary humanity towards him but otherwise a man trespasses at his own risk." "Yes," you may say, "but what about a child, more than a baby in arms? Does the same rigorous rule apply to him?"

Yes it does. That is the law and that is where the writer's ideas of the law and natural justice part company. It is all very well to talk learnedly about the duty of a natural and lawful guardian to look after her offspring but working-class mothers in railway colonies have much to do and little boys will wander off. However, that is irrelevant. The law draws no distinction between child or adult in the duty of the owner or occupier of premises towards either category of trespasser.

Farwell L. J. in another English case referred specifically to child-trespassers. "I am not aware," said his lordship, "of any case that imposes any greater liability on the owner towards children than towards adults; the exceptions apply to all alike and the adult is as much entitled to protection as the child. If the child is too young to understand danger, the licence ought not to be held to extend to such a child unless accompanied by a competent guardian." Again, in another case, Scrutton L. J. said: "If the children were trespassers, the landowner was not entitled to injure them or to put dangerous traps for them intending to injure them... (but) he was under no obligation to guard trespassers."

Well, in the result, the decision of the trial judge dismissing the claim was affirmed by the High Court and Vijay Shanker lost his case. There was ample judicial authority for his so doing and pecting to be in a minority of one with readers an ideal State, no doubt every child would be accompanied by a guardian. In actual fact, he is not with child-trespassers. Trespass is an unlawful act, often a criminal one. It involves at least the considered intention to go to a certain place.

A child, aged two years and two months, is hardly more than a baby. He is incapable of a considered intention. He just crawls around, as Vijay did, aimlessly. He does not say to himself: "Now I will trespass by crossing the railway line." The writer suggests that a small infant of that age cannot in law be a trespasser at all, and that when these venerable old English judges alluded to child-trespassers, they were referring not to babies but to children of an age sufficient to think and know the elements of right and wrong. If Vijay had been five or six years old, it would have been different. But accepting that it is a wrong view, the writer thinks that Vijay was subjected to a trap; and that the railway should have provided a fence between the residential houses on each side of its line.

A Ditcher's Diary

IT IS NOT OFTEN I TROUBLE TO AIR A GROUSE of my own. But this time is going to be an exception, because I have just come to the conclusion that some people do not appreciate how busy a journalist is. I am referring to those who send me a book, a pamphlet or a hand-out, demand an immediate acknowledgment or receipt and pester me interminably when they get none. I suppose it is useless to point out to such people that I did not ask for their communication, or that it has no interest for me and has been filed away in the waste paper basket, or that if I were to take notice in these columns of every gratuitous item that comes across my desk, I would never have room for anything else. Governments are the worst offenders and advertising agencies are not much better. The other day I received a badly-printed, indifferently-produced, highly-tasteless propaganda pamphlet from a State Government somewhere at the other side of the country. Along with it was an official looking directive that I acknowledge receipt and review the infernal thing without delay. I have done neither, and already three demand notes have arrived to jog my conscience. From the look of the last one, the next will contain a writ. I could name other examples—such as when a company or institute sends me an obviously exaggerated account of some work they intend to do, or discovery they are on the point of making in a field which for me has absolutely no interest whatever, or when a book is reviewed in this paper and its publishers send a strong letter of protest saying why they did not like the review and how they think it should have been written. No columnist or editor wants to discourage the flow of relevant information which people and companies send him. Nor does he resent the letter from an interested reader who has something intelligent to say or some comment to make; in fact, these often provide him with excellent material for publication. Letters from readers, balance-sheets, house magazines, statistical reports and public relations brochures, by all means, especially if they are interesting and well produced. But pamphlets on such-and-such a State's achievements in implementing Bhoodan, or how wonderful the blossoms look at the destination of a particular airline, or even Professor Unknown's views on the need for a spiritual approach to international affairs—well, if you do send them, do not expect an answer. And, oh yes, firms please restrain your advertising agents from sending unusable little snippets about the career of some visiting executive with the undisguised inference that unless it is published, there will be no welcome for your advertising representative when he next calls.

I REMEMBER SOME TIME AGO REFERRING TO THE growing anxiety which is being felt throughout the world for the health of the business executive—or the political one too for that matter, if he does his job conscientiously—but at the time I did not realise quite how serious the problem has become. Now I see that the British Institute of Directors is taking it up very determinedly indeed, and has already decided to set up a medical unit to enquire into the health problems of its members. The unit will set out to determine statistically the facts about the special occupational health hazards to which executives are liable. It will then attempt to define and isolate the causes and effects and, if possible, recommend ways of overcoming them. The project is being regarded as a serious and long-term one. The first step will be to examine health

records and to decide the health experience of executives and the risks to which they are individually exposed. Due allowance will be made for the fact that every man over fifty years of age is in some respects abnormal. He cannot be expected to be as fit and full of energy as a twenty-year-old. In addition, certain special features play a part. Flying, for instance, imposes an extra strain—as Professor Parkinson pointed out so cleverly in his essay on "How to get rid of the Boss"—especially when quite old men are transported within hours from bitterly cold weather to the heat of the tropics with no time for physical adjustment to the change. Again, there are the strains imposed by hospitality—the burden of too many rich meals and too much alcoholic refreshment when making contacts with clients. In view of the fact that the Institute of Directors has a membership of 30,000, there should be no lack of material to draw on. And by the way, I read that the latest view of medical opinion is that the occasional round of golf is not enough to keep the arteries from hardening. Something more energetic is needed.

NOT MANY, I IMAGINE, WILL BE ABLE EASILY TO fathom the reasons which have prompted the Uttar Pradesh Government to specify in detail the sort of hospitality its minions should extend to motley guests. The instructions which have just been issued to U.P. officials—indicating that lunch, "heavy" tea or "light" tea should be served according to the status of those invited, and according to whether or not Ministers are present—are remarkable primarily for the fact that it has been considered necessary to issue them at all. I was under the impression that U.P. had far more urgent problems to handle than deciding the right and wrong sort of hospitality for the right and wrong sort of occasions. In the midst of its many pre-occupations, it is a little surprising that the Ministry can find the time to debate and decide how many biscuits and sweets constitute the appropriate fare for particular occasions. Admittedly, wandering dignitaries have in recent years developed an extraordinary appetite for cakes and kotowing from non-plussed hosts during official tours. That appetite perhaps needs to be curbed, but it is questionable whether the best way to do so is to stipulate that luncheon invitations must have the prior sanction of the Chief Minister before they are issued, that heavy teas must be sanctioned by the Information Minister, and light teas by the departmental Secretary. It is stated that if journalists are to be provided "special entertainment"—a term which may have a sinister meaning in a region known for its *nautes* and *mujras*—the sanction of no less a luminary than the Chief Minister will alone suffice. Rather precise definitions have been issued as to what constitutes the appropriate fare for lunch, heavy tea and light tea. The last of these, for instance, is described as "tea or coffee, and a sweet and a salted item." I understand there is no truth in the rumour that an emergency meeting of the U.P. Cabinet is to be called in order to clarify how many cubic centimetres of tea or coffee, and how many milligrams of sweets and salties, are meant.

IF THE RECENT CONFERENCE OF THE BRITISH Liberal Party at Torquay was disappointing, the Labour one at Scarborough last week was posi-

tively frightening. At least it was for me, because it has always been my contention that in British politics it matters very little which Party wins an election provided it does not win more than two in succession. On that reckoning, for me it should be Labour next time. But after reading the speeches of the leaders at Scarborough, I am wondering whether an exception to the rule might not be better for Britain, for Labour and indeed for everybody except the Conservatives. Even after six years of responsibility under Mr. Attlee, it seems the Party has not learned that it is a mistake to promise the impossible too near to a general election. To take just one example: Mr. Harold Wilson's declared determination to maintain the strength of the pound—and to see that international speculators "get their fingers burnt" always good for a Labour cheer that sort of thing—reminded me somewhat of Sir Stafford Cripps's affirmations back in 1949. But when economic circumstances and consistent Labour economic mismanagement made devaluation inevitable, there was nothing Sir Stafford could do about it. No, if Labour is to maintain the strength of sterling which the Conservatives have built up, it is going to have to adopt some of its opponent's methods, and that is where it will find Mr. Frank Cousins's friendship an embarrassment. And allowing for the infinite faith of all socialists in their ability to inaugurate the millennium in ten minutes flat, how does Mr. Gaitskell hope to provide every family in Britain with a motor-car in the near future? There are about fifteen million families in Britain at the moment; the British motor-car industry produces just over one million cars a year, of which half are exported and half the remainder go to replace old units. If two-thirds of the total families already have cars—a liberal estimate—that would mean five million additional cars to be provided. On my rough reckoning, this would take twenty years—not counting the extra number required for replacement—with the British motor-car industry at its present size. But perhaps I am hitting below the belt. A politician's promises are like a lover's vows—pleasant to listen to but not meant to be taken literally.

THE DEATH OF MISS MARIE CARMICHAEL STOPES will, I am sure, be widely regretted, especially in this part of the world, which owes her an immense debt of gratitude for services rendered. Dr. Stopes was justly famous for her pioneering work in the campaign for birth control in the crowded peasant communities of the East, and contrary to the popular impression in this country, she was no physician but a scientist who, incidentally, was the first woman to accept a lecturer's post at the University of Manchester. Her earlier interests centred round fossil plants and coal mining, but she transferred them to the problems of living human beings when she went to Japan in 1907 as a visiting lecturer to some of the universities there. With her concept of "ideal children", she must have been deeply shocked to find how they were brought up in eastern countries, and that may have been why she launched her campaign against having offspring from "exhausted mothers, over-taxed fathers and in over-crowded homes." But it was no smooth road she chose for spreading her views; she had often to incur the hostility of ignorant and superstitious people to whom having more children was sometimes a social distinction and invariably a kind act of God. But Dr. Stopes was not easy to discourage, and it is thanks to the vigorous work she carried on that most of these countries, India included, are now taking practical steps to reduce the number of births.

INDUSTRIAL FINANCE CORPORATION OF INDIA

CHAIRMAN, MR. K. R. K. MENON ON IMPROVED WORKING RESULTS

Speech delivered by Mr. K. R. K. Menon, Chairman, Industrial Finance Corporation of India, at the Tenth Annual General Meeting of the Shareholders of the Corporation held at 4-00 P.M. on the 27th September, 1958.

The Accounts of the Corporation and the Report of the Board of Directors for the year ended the 30th June, 1958 which I place before you today are the tenth of their kind, and are, therefore, of particular interest, as marking the completion by our Corporation of a decade of service in the field of industrial finance. Printed copies of the Accounts and the Report are before you. These have also been circulated to all the shareholders. I shall, if you agree, take them as read.

A decade is but a short period in the life of an institution like ours, particularly in a field like industrial financing of a long-term nature in which, at the time our Corporation was set up in 1948, we were the pioneers. It is, therefore, perhaps too early yet to draw any firm conclusions of a general nature from such modest achievements as stand to our credit at the end of this ten-year period, but the factual details given in the Report that is placed before you will no doubt interest you.

Factual Details

Of these factual details I will pick out just a few as deserving of your special notice.

Firstly, the total volume of work that was handled by the Corporation during this decade was of a considerable size, involving the examination of loan applications for an aggregate amount of nearly 125 crores rupees. Loans sanctioned amount to nearly 63 crores rupees, and the actual disbursement of loans came to about 35 crores rupees.

Secondly, in the year which has just closed, we have been able not only to dispense with subvention from Government to enable us to pay our shareholders their guaranteed dividend, but we have also been able to repay to Government a substantial amount towards the subvention that we had been obliged to draw from them previously.

Thirdly, we have been able to raise funds aggregating 12.37 crores rupees by the issue of bonds, mainly from institutional investors, several of whom had also already subscribed liberally to our share capital.

Fourthly, and finally, we were able to help concerns in the relatively less industrially advanced States of the country to the tune of 32 crores rupees in all during this period. Out of this amount a sum of Rs. 22 crores was sanctioned as loans to new concerns alone in these States.

Better Results

Turning now to the accounts for the year under report you will observe that we have done even better than last year, as our profits, after paying for expenses on administration and interest on borrowings, amounted to Rs. 58.25 lakhs as against Rs. 43.06 lakhs during the previous year. We have, after a lapse of nearly five years, been able to transfer a sum of Rs. 11 lakhs to the General Reserve Fund thereby raising the balance in this Fund to Rs. 17 lakhs. As I have already mentioned, this year we are also paying the guaranteed dividend out of our profits, and, in addition, we are paying back to Government a sum of Rs. 5.45 lakhs as a first instalment in repayment of the subvention that we drew from them during the previous years.

You will recollect that last year we had made adequate provision for our anticipated bad and doubtful debts and that I had stated that no further provision would be required, though our Auditors were of the view that an increase in the provision by Rs. 5 lakhs would be desirable. I am glad to state that on a review of the accounts at the end of the current year our Auditors have agreed that the existing provision of Rs. 15.14 lakhs is adequate. We have not, therefore, found it necessary to transfer any amount from our profits this year to the Reserve for Bad & Doubtful Debts.

In the schedule attached to the Balance Sheet in which certain particulars in respect of the loans and advances outstanding are given, you will find an item headed "(d)". Debts due by concerns in which the Directors of the Corporation are interested as Directors and shareholders, Directors or members of

the Managing Agency concerns". As the word "interested" used in this heading is apt to be misleading in this connection, we have given a detailed analysis of the relevant figures in the Annual Report. You will observe from the analysis given in Appendix 'A' to the Report that a sizeable portion of the loans in which our Directors are stated to be "interested" represents loans given to concerns in which some of our Directors were interested as shareholders or Directors even before they came to be elected or nominated as Directors of this Corporation. Attention has also been drawn to the fact—and I wish to emphasize it here—that, when a loan application is under consideration by your Board of Directors or the Central Committee, every Director, who has any kind of interest in the concern whose application is under consideration, withdraws from the meeting as an invariable rule.

Loan Applications

The number of applications received by us during the year showed a further downward trend from last year's figure. The most important reason for this is the increasing difficulty experienced by industrial concerns and entrepreneurs in the matter of securing the necessary licences for importing the capital goods required for starting new industries or expanding existing ones. We insist on the production of the necessary import licences before we take up loan applications for consideration.

An analysis of the loans sanctioned during the year shows that States which are not industrially as advanced as the foremost ones like Bombay and Bengal came in for a substantial share this year also. The State-wise figures in this regard are perhaps worth special mention:—

	At the end of June, 1957	At the end of June, 1958
Andhra	Increase from Rs. 2.61 crores to Rs. 3.11 crores	
Madras	" Rs. 5.58 " " Rs. 8.57 "	
Mysore	" Rs. 3.80 " " Rs. 4.80 "	
Orissa	" Rs. 2.30 " " Rs. 2.94 "	
Punjab	" Rs. 2.66 " " Rs. 2.97 "	
Uttar Pradesh	" Rs. 3.86 " " Rs. 5.01 "	

The general pattern of industrial units that were sanctioned during the year under report has, as you will observe from the analysis given in Appendix 'C(I)(B)' to the Report, changed somewhat slightly. While sugar still occupies the predominant position as before, paper and cement have moved up to the second and third position respectively, leaving chemicals and textiles behind.

Co-operative Societies continued to receive our special attention. The financial assistance sanctioned to them now aggregates Rs. 13.24 crores which represents an increase of Rs. 24 crores as compared with the Rs. 10.73 crores as at the end of the previous year. Hitherto applications from the co-operative sector have been confined to the sugar industry; we have lately been approached for assistance from certain textile concerns also in this sector.

You will have observed from the Annual Report that the commitments of the Corporation in respect of loans sanctioned up to 30th June 1958 amounted to roughly Rs. 17½ crores. Out of this amount, a sum of nearly Rs. 7½ crores represented loans sanctioned during the last four months of the year. In respect of these loans the Corporation was in the process of negotiating the terms and conditions of the loans with the borrowers in the case of some and, in the case of certain others, was in correspondence with the Central and State Governments. The balance of Rs. 10 crores comprises:

(i) Amount awaiting disbursement according to the requirements of the borrowers. Rs. 3½ crores.

(ii) Amount held over for fulfilment by applicants of specific terms and conditions prescribed, including proof of title. Rs. 5 "

(iii) Amounts held over for miscellaneous reasons such as changes made by applicants in their original schemes and consequent need for re-examination of the loan applications, etc. Rs. 1½ "

Total: Rs. 10 crores.

I may mention in this connection that when borrowers

do not draw the loan according to the dates agreed upon in the mortgage documents, a commitment charge is levied until such amounts are actually drawn by them. In regard to amounts awaiting disbursement pending legal formalities being completed we grant interim loans liberally.

Periodical Reports

You will be glad to learn that the periodical reports received by us from our borrowers concerns of the progress made by them as well as the inspections carried out by our officers indicate that, on the whole, our loanee concerns are doing well. Quite a few of them have done so well indeed that, with our previous permission, they have declared dividends in excess of the standard rate of 6%. It seems reasonable to hope that this will prove to be an incentive to investors and thereby help to broaden the investment market.

Most of our borrower concerns met their obligations to us promptly in the course of the year. You will have noticed from the Annual Report that the percentage of defaults in the repayment of principal by our borrower concerns has declined from 8.4 in 1957 to 6.1 in 1958, and that the percentage of defaults in the payment of interest has likewise come down from 2.7 to 1.7.

In the Annual Report mention has been made of certain amendments that had been made to the Industrial Finance Corporation Act during the year under review. One of these amendments now enables us to give guarantees in respect of deferred payments to imported machinery. This is a very useful facility which has been eagerly sought for. You will find in the Annual Report the main criteria that we apply in examining applications for guarantees, and the more important terms and conditions that we prescribe for the grant of such guarantees by us. We have so far sanctioned three schemes for guaranteeing deferred payments; these aggregate Rs. 3.96 crores in all. We expect that the transactions in this behalf will be finalised shortly.

In the year under review, we have made our first venture into the field of underwriting, and I hope this transaction, particulars of which are given in the coming years, will be the forerunner of many more in the coming years.

Ways and Means Position

You will no doubt recollect that in my speech last year I had invited your attention to our ways and means position. In addition to the sum of Rs. 15 crores which I mentioned then as having been made available to us by Government, there have since been sanctioned a further loan of Rs. 7.25 crores for the amount will be available to us for the fresh loans that we decided, on the advice of the Reserve Bank of India and with the concurrence of Government, to raise We had a sum of Rs. 4 crores in mind; we actually raised 4.58 crores. We intend to try and raise loans from the open market this year also as we did last year.

Our scheme of nominating non-officials on the boards of directors of our borrower concerns, which I referred to in my speech last year, has, I am glad to say, worked quite satisfactorily. During the year under review we extended this scheme further. The nominees that we have received from our non-officials have been of an appreciable order, and I take their services.

In May this year, the International Bank for Reconstruction and Development held a Seminar in Washington under the auspices of their Economic Development Institute, for the purpose of enabling the heads of certain selected industrial financing institutions of the world to discuss problems of common interest. I was one of the invitees to this Seminar which was attended by representatives from Pakistan, Ceylon, Chile, France, Mexico, Puerto Rico, South Africa, Turkey, U.K. and U.S.A. The exchange of views between various representatives proved to be of great use, and, in particular, it gave me an opportunity to understand the problems of other industrial financing and like ours in the field of institutions in those countries in which financial problems. Despite certain important differences in the procedures adopted, conditioned mostly by differences in the politico-economic set-up in the various countries, it was apparent that there exists a rather remarkable uniformity of policy on a large number of items. The divergences were equally interesting, and gave much scope for thought and discussion. For instance, while certain institutions (including ours) adopt the line that the true function of a development bank is to provide credit as a bank of "last resort", viz., to help only the lame dogs over the stile, others adopt the line that no differentiation should be made between those concerns which can help themselves by resorting to other sources of credit and those which cannot do so. Then again, there appears to exist various institutions towards investment in equities and the also towards reliance on governmental or governmental controlled finance for their loan funds. The extent of governmental control over administration also proved to be another factor leading to divergent practices. However, there was complete unanimity of opinion regarding the utility of industrial financing institutions in under-developed countries, and, taken by and large, sound and healthy lines.

Before I close, it is my very pleasant duty to convey my hearty thanks to my colleagues on the Board of Directors, as well as to the members of the various Advisory Committees for their very valuable cooperation and wise counsels. The shareholders will have noticed from the Annual Report that Mr. L. S. Corporation, who had been a Director of the close of the year, resigned shortly before the able assistance in the deliberations of the Board of Directors over a long period of years I have also great pleasure in conveying the thanks of the Board of Directors, as well as my own, to the General Manager and the entire staff of the Corporation for another year of loyal and devoted work on their part.

THE GENERAL ASSURANCE SOCIETY LIMITED

CHAIRMAN, MR. B. L. JALAN'S SURVEY

Addressing the Annual General Meeting of The General Assurance Society Limited held on Monday, the 29th September, 1958, the Chairman, Mr. B. L. Jalan, said:—

Gentlemen, I have pleasure in presenting to you the audited Balance Sheet and the accounts of the Society, together with your Directors' Report, for the year ended the 31st December, 1957, a copy of which has been in your hands for some time now. With your permission, I take them as read.

In its fifty-first year of life, the Company starts with a new phase of its development in the service of the general insurance industry in particular and the country in general. While our ambitious plans, growing standard of living, increasing quantum of domestic and international trade and such other factors have opened vast vistas of future growth, our responsibilities have also increased. There is absolutely no doubt about our ability to shoulder these responsibilities with confidence and success, but this should give us cause for hope and not complacency; for hard work and not inactivity.

Creditable Role

You are aware of the creditable role which this country has played, under the inspiring guidance of our Prime Minister, in the settlement of international disputes which threatened world peace on many occasions during the last few years, such as the Korean War, the civil strife in Indo-China, the Suez crisis and the recent Middle East upheaval. A new scene of turmoil has now emerged in the Far East as a consequence of the shelling of the Quemoy and Matsu islands and the declaration of the extended twelve mile territorial limits by the Chinese. Our Finance Minister rightly said, the other day, that the Chinese should endeavour to settle the question by peaceful means and negotiations and should not precipitate a conflict lest it should develop into a bigger conflagration. He gave the example of our own country which has exercised utmost restraint in the matter of liberating Goa which is and has always been an integral part of India.

The neutral and peaceful policy followed by India has, I believe, yielded very rich dividends. We have earned the goodwill of almost all nations of the world as a truly impartial and peace-loving people. The other day, the Prime Minister of Pakistan came to India inspired by the usefulness of peaceful negotiations. He has returned home with a renewed confidence in peaceful methods for settlement of our mutual disputes which remained unsolved owing to mutual acrimony.

India's attempts to rebuild the economy on a democratic and planned basis have also been amply appreciated by many friendly countries and international agencies, including the World Bank. We recall that very recently a special creditors' conference was convened at Washington by the World Bank to find ways and means to help India tide over the present foreign exchange difficulties. The U.S. loan Fund and the Export-Import Bank have followed by the facilities have also been announced by the U.K. and the World Bank primarily as a result of the aforesaid conference and our Finance Minister's visit abroad. The country has viewed these developments with a great sense of gratitude, since these friendly acts will enable her to tide over the current financial and exchange difficulties. It needs to be mentioned here that these difficulties have emerged principally as a result of our eagerness to fulfil our bold programme of economic development and not as a result of reckless economic policies. Indeed, the country's economy is being strained to the utmost so as to secure an accelerated rate of industrialisation and economic growth. Our ultimate goal is to secure a reasonable standard of living for the masses and attain political stability of the country so that our economic, social and political system may not be vulnerable to attacks from undemocratic forces.

Foreign Capital

We are well aware that foreign capital has by and large played a prominent role in the industrialisation of many advanced countries. It should continue to do so on an extended scale and the efforts to provide financial assistance on governmental level, which are now being put forth on a considerable scale, should not supplant the natural flow of private capital if the desired results are to be attained with a minimum of sacrifice. The flow of such capital has been greatly deterred since the Second World War owing to the emergence of several uncertain factors. It is for this reason that in about a dozen countries export credit and allied risk insurance schemes have been introduced. It is for the same reason that the Government of the United States initiated in 1948 the U.S. Foreign Investment Guarantee Scheme. This scheme, although a laudable effort in the present context, has not been able to arouse sufficient interest. I understand that in its ten years of existence it was able to cover no more than a total capital of just over 200 million dollars. It is only a drop in the ocean of the U.S. capital resources. This amount is also insignificant in the context of the vast financial needs of underdeveloped countries. There are some specific reasons why this Scheme could not be utilised to the extent it should have been. This is a Scheme unilateral in one sense and lateral in another. Thus, capital flow from America only can be covered by the Scheme. Further, it requires the concurrence of Governments of recipient countries for each specified risk. Finally, it is limited in its coverage; it covers three risks, namely, expropriation, war and non-convertibility. What is more, it does not cover all the three risks for all countries. Thus, in the case of India it covers only "non-convertibility", to which the Government of India have

subscribed. Now these limitations are unavoidable so far as this Scheme goes but it does not solve the basic problem.

World Insurance Body

I have, therefore, been working on a project entitled "The World Corporation of Investment Insurance". I first suggested this Scheme in the course of several official addresses to the Ninth All India Commerce Conference held at Hyderabad in December, 1955.

The proposed institution is designed to insure all risks in the way of foreign capital flows from any one country to any other country. It will insure repayment and repatriation of capital and profit thereon to the financial participants of the lending countries. The institution is conceived as an international organisation. This may work in collaboration with the United Nations in general and the World Bank in particular. The capital of the Corporation is to be subscribed by all covenanted countries who are members of the Bretton Woods institutions. The Corporation will function on pure insurance business principles and will reinsure risks covered by it with thousands of insurance and reinsurance companies throughout the world, such as your Company. It will also reinsure risks underwritten by these companies in the matter of foreign investments. With the support, on the one hand, of all governments, and on the other, of thousands of commercial insurers, there cannot be any doubt about its successful operation. I referred my project draft to experts and financial authorities both in India and abroad. They offered some useful comments. A reconsideration of the project in the light of such comments leaves me in no doubt that it is a most workable and practical proposition. I am now trying to secure for it the support of all the governments who are members of the World Bank. If established, it will greatly supplement the work of the Bank. Since the proposed World Investment Insurance Corporation will assist towards the fulfilment of the objectives of the World Bank, I consider it desirable that it be established at a very early date.

A rapid private capital flow from capital-surplus countries will assist the solution of the basic economic problem of the under-developed countries in many ways. Apart from accelerating the pace of industrialisation and providing gainful opportunities for employment, it will also ease the foreign exchange problem. As you are aware, our country is now confronted with a serious foreign exchange crisis.

In spite of heavy import cuts, credit draws from the International Monetary Fund and loan assistance from other countries, the draft on our foreign exchange resources has continued to be rather serious. Sometime past, it was considered that Rs. 400 crore sterling balance level should be our minimum limit as a currency reserve. The Reserve Bank was empowered to reduce the statutory limit even below Rs. 200 crores as the legislation allowed. According to latest figures, this reserve had dwindled down to Rs. 185 crores. It is thought that the deficit will continue, for sometime to come, at about Rs. 5 crores per week. This means that our foreign exchange reserve may be wiped out in less than a year's time. It is, to say the least, an unenviable position for any country which has launched an ambitious programme of economic growth.

Import Cuts

It is sometimes suggested that the import cuts have proved a blessing in disguise at least in one sense: It has greatly encouraged the setting up and expansion of many industries in the country. But to my mind, this type of "forced industrialisation" is not a very happy phenomenon viewed in the context of planned development. This will promote non-durable consumer industries at the cost of heavy and basic industries. It also necessitates retrenchment of staff in the short period among the importing firms. A high level of international trade is always aid and not a deterrent to rapid economic growth. Moreover, these import cuts have created shortages accentuating the inflationary trend of prices. Prices of many consumer articles have greatly increased. The cost of living index has gone up. The wholesale price index of food articles (base: 1952-53=100) increased from 102.3 in 1956-57 to 107.0 in May, 1957, and 116.5 as on the 28th June, 1958. Preliminary forecasts show that crop prospects are not bright either.

These portends have a great bearing on the general economic situation in the country. A higher level of spending on bare necessities like food leaves a smaller margin for outlay on other family requirements with the result that consumer resistance has greatly increased for other commodities including cloth. Accumulation of stocks in the cotton mills is, I believe, principally due to this drain on the purchasing power of the Indian consumer.

This situation may be juxtaposed with international factors like the recession in the United States. The Government of the United States has initiated anti-recessionary fiscal and credit measures and there are now welcome signs of a reversal of the trend. However, the U.S. recession did affect our international markets. Meanwhile, severe competition is being offered by countries like China.

It is a matter of gratification that our Government is very alive to the situation and they have already taken measures to relieve the difficulties of our cotton textile industry. Let us hope these steps will put the industry on its own legs once again. But the whole story of this crisis in the industry has a moral for us. I believe a lot more vigilance is necessary. It is good to take corrective measures whenever crises occur, but it is far better to prevent such crises from occurring. It is not merely a question of loss of profits for a given period, but it aggravates the

trains and stresses in other sectors of the economy also. It creates unemployment and frictional and short term only), increases financial strain in other sectors of industry and upsets the economic balance which is so necessary for the success of our plans. Moreover, international markets are not built in a day. Any damage done at any time in this sphere will be a long-term loss to our exports. Needless to say, it also accentuates the foreign exchange crisis.

Since we launched our Second Five Year Plan, industrial expansion, both in terms of capacity and production, had been keeping pace with our expectations. It is only in recent months that severe difficulties are being faced by four major industries of the country, namely, cotton & jute textiles, tea and sugar.

These difficulties are due mainly to two factors: higher or sometimes rigid costs and financial stringency. We have been passing for some time now through a spate of labour activities. The public sector, too, has not escaped the impact of these activities. The strikes of port and dock workers and those of several other big units have done an irreparable damage to the economy at this juncture.

Rigid Costs

Excessive and rigid costs have been caused equally by high raw material prices and government taxation. While I speak of taxation as a factor of cost, I do not include the various new imposts of direct taxation. As you are aware, the gift tax has already been put on the statute book. We have now a most comprehensive scheme of direct taxation without its redeeming features. While the basic plank of all our economic policies still continues to be larger savings and investments, our taxation system has all the features of a strong deterrent to saving and investment. We have adopted Prof. Kaldor's proposal for novel and onerous taxation which will add to government revenues, but the essential features of his scheme, like the reduction of income tax—super tax limits from 91 to 45 per cent, have been practically put in cold storage. It needs to be realised now that it is not a matter of giving concessions here and there. This is an essential part of Prof. Kaldor's proposal. A scheme of direct taxation which may levy more than 100 per cent tax—by whatever name called—on a given income is, to say the least, a most irrational scheme, especially in the context of a developing economy. It is giving rise to a feeling that the Government is out to implement mainly its part of the Plan—shall I repeat, mainly its part of the Plan. While we have launched our Second Five Year Plan and wish to achieve the best results possible, this partialization of economic sectors will be greatly detrimental to the success of our efforts.

It appears that the same approach is being extended to the financial requirements and resources of various sectors of our economy. Thus, while it was announced that a part of the U.S. Exim Bank and Development Loan Fund facilities will be made available to private industry also, the Government have now decided that the beneficiary industry will have to deposit corresponding rupee capital immediately with the Government. This means that the industry will be required to advance even the advance which otherwise is available under deferred payment system. This will also mean that all the advantages will accrue to the Government although it would appear as though part of the funds of this special aid was made available to private industry. This is a rather serious question as by obtaining these credits the scope of individual credits otherwise obtainable by industry is restricted while it does not share in the credits obtained on government account. Faced with all the heavy taxation which in some cases exceeds the total income of a year, large domestic borrowing programme of the Government and restricted credit facilities, how can private industry be expected to fulfil its role as a source of accelerated rate of industrialisation in the country, which is essential for creating additional employment and providing a higher standard of living to the people.

Code of Conduct

As regards the general insurance industry in India, I have only to observe that although the new Code of Conduct has been enforced for more than a year, inter-competitive competition continues to afflict the industry. The Code has not been able to bring down the cost of business although it has served as a great relief in the matter of enforcement of cash payment of premiums before the assumption of risk. I believe, something needs to be done immediately to reduce the cost of business.

An idea of the intensity of competition may be obtained from the marine underwriting results as shown in the Insurance Year Book, 1957. The claims alone accounted for 69.6% of the premiums of all Indian insurance companies. The revenue account of these companies showed a net debit balance of Rs. 10 lakhs. In other words, marine business as a whole gave net losses to the industry.

You are aware that the new Code has necessitated raising the level of reserve for unexpired risks. This, coupled with the increasing quantum of reserves necessitated by general increase in business, has greatly strained the revenue accounts of the insurance companies.

I am told that the insurance companies are facing another major difficulty in the matter of limits being enforced by banks. These limits are arbitrarily fixed without considered reference to balance sheet position and reinsurance arrangements. Moreover, direct limits are imposed by different banks. In many cases, banks insist on deposits being maintained if the company desires a raise in its limits. This, however, is an unfair way for getting bank business. Further, insurance companies after all are not investment companies and if they have to deposit money with every bank, no insurance company will be able to function at all. The matter was taken up by the Insurance Companies Association with the Bankers Association. The reaction of the latter was favourable and I understand that they sent a circular to all the banks for more liberal treatment. It appears, however, that the position has not improved. This is a matter which requires immediate attention by the Government. You are aware that under Section 7 of the Insurance Act every insurance company transacting all kinds of general insurance business is required to keep a deposit of Rs. 3.50 lakhs with the Reserve Bank. If it is essential that the limit be raised on a sliding scale, this could be done and it would be much more reasonable than asking the insurance companies to maintain deposits with all banks. The Controller of Insurance may also check

up that the companies maintain proper reinsurance treaty arrangements, and if necessary, issue appropriate certificate. Once this is done, no bank including the State Bank should be allowed to place any arbitrary limits on business. This is the minimum safeguard which these companies require in view of the fact that they are given the licence to transact insurance business and that too after making a deposit.

Net Premium Income

Now, passing on to the affairs of our Company, you will have noticed from the Directors' report that the total net premium income of all the Departments, after deducting all reinsurance, amounted to Rs. 37,92,580 against Rs. 28,48,510 of the last year, recording an increase of 33.1%. After making all adjustments, our profit and loss account showed a debit balance. The loss is mainly due to an increase in Reserves for unexpired risks as required under the Code of Conduct. The increase in Reserves in the year under review in comparison to previous year is Rs. 6,76,992. Our total Reserves for unexpired risks now stand at Rs. 18,65,915 against Rs. 11,88,921 as on 31.12.56.

Under the Life Insurance Corporation Act, 1956, the Society was entitled to receive compensation from the Life Insurance Corporation of India. As the compensation offered was not acceptable to the Company, the matter was referred to the Life Insurance Tribunal. The net amount as decreed by the Tribunal has since been received by the Company. It has, however, been decided to appeal to the Supreme Court of India against the decision of the Life Insurance Tribunal. A petition for special leave to appeal was filed and has been admitted by the Supreme Court. Meanwhile, the total compensation received has been shown in the Profit and Loss Account of the Company for the year under review.

Before closing, I will only recall the observations which I made at the conclusion of my address last year:

"Meanwhile, an attempt is now being made to rehabilitate the general insurance industry in the wake of these attempts, we will have to tighten our belts and adjust ourselves to the changing requirements of the situation. While I have no doubt about our capacity to do so, we should look to the next few years as a period of caution and restraint. We should also ensure that progress will be achieved consistent with the intrinsic strength of the Company and orderly operations of our business. I do not, therefore, propose at this juncture to promise you a very bright future ahead, but I will only demand the continued and increasing goodwill of our shareholders and sincere co-operation of our staff both at the Head Office and the branches in India and abroad."

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

SOUTH EASTERN RAILWAY TENDERS.

Sealed tenders are invited for Tender No. PB/7/58/COS/WSP 2233B/EB2(56) for supply of 102 Nos. Lavatory Pan as per IRS Drawing No. C1880 alt.1 and to IRSS R-28 (Current).

Tender forms are obtainable from the undermentioned at Garden Reach, Calcutta-23 (P.B. Section) on remittance of Rs. 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, South Eastern Ry., Garden Reach, Calcutta-23, by local firms. Closing date of the tender is 13-11-58 at 12 noon. Firms not on the Ry's list of approved contractors must deposit Rs. 325/- as earnest money with this Railway's Chief Cashier and enclose his Receipt together with a valid Income Tax Clearance Certificate along with the Tender. No Dr. will be made available to the Tenderers.

THE JAY ENGINEERING WORKS LIMITED

CHAIRMAN, SIR SHRI RAM'S REVIEW OF PROGRESS.

The following is the text of the speech delivered by Sir Shri Ram, Kt., Chairman of The Jay Engineering Works Ltd. at the 21st Annual General Meeting of the Shareholders of the Company held at Calcutta on the 1st October, 1958.

Gentlemen,

The balance sheet and the profit and loss account and the Directors' Report have been in your hands for some time and these, with your permission I will take as read. You will be glad to learn that your company continued to make steady progress in the year ending 31st March 1958.

	For the year ending— 31.3.1957	31.3.1958
1. Sales	Rs. 3,89,49,999	4,71,60,120
2. Profit before providing for income-tax	35,76,491	38,52,326
3. No. of sewing machines made	1,34,204	1,57,945
4. No. of fans made	1,33,119	1,99,073
5. No. of workers	3,506	3,906
6. No. of school leavers	196	386
7. No. of students	15,000	30,000

In our schools examinations are regularly held and diplomas are given to successful candidates. In Calcutta last time the diplomas were given by Hon'ble Mr. I. D. Jalan, Minister for Local Self-Government, to 202 students.

Prices Reduced

When speaking to you in 1954 I told you that we had reduced our prices of sewing machines from Rs. 220 to Rs. 200. We again made a further reduction on December 1, 1954 and reduced the price to Rs. 175. I am glad to say that on January 1 this year, we again reduced the price from Rs. 175 to Rs. 160. This further reduction of Rs. 15 per machine, as I have stated above, is in consonance with our policy of improving quality and reducing prices.

It will be noticed that while there is increase in production in numbers, and in amount of sales values, the increase in profit is proportionately less; this is due to the reduction in prices.

While on this subject of reducing the price of our products, I may draw your attention to the two-sided difficult problem that we have to face. On the one hand, higher costs of raw material and articles of food are pushing our costs upward. Whereas, on the other hand, the purchasing power of our customers is strained by the rising prices of all kinds of food articles and other necessities of daily living. Our customers, in the main, are from two groups—middle class housewives and tailors. Over the preceding year, the purchasing power of both has been adversely affected—the housewife on account of the high prices of food stuffs and the rising costs of living in general; and the tailor by the lower off-take of cloth which means less work for him.

Hire-purchase Sales

To meet the difficulty of our customers, particularly the tailors, who eat their bread by use of sewing machines we have started selling machines on hire-purchase on easy terms. We hope, in course of time, this will be of great help to them.

To popularise our machines, in March this year, we organised an All-India Sewing & Embroidery Exhibition at Calcutta, in which no less than 3,000 entries were received. Most of them were the work done on USHA Machines. About half a million people visited this Exhibition.

We have been asked by our well-wishers who visited this Exhibition that we should hold similar Exhibitions in various parts of the country and steps are being taken towards that end.

While we have our selling arrangements very nearly in 1,200 places, to reach the remotest village we have got a big fleet of jeeps and vans in different parts of the country that go from village to village popularizing our machine, and in these jeeps and vans we send our mechanics also, so that if any of our customers find any difficulty, they help them and attend to their machines.

Quality Improved

While we have succeeded to a great extent in improving the quality and reducing the prices, the reduction in costs for reasons mentioned has not been possible. While on the question of quality, you will be glad to learn that we have been able to sell a fairly big number of our sewing machines in the U.S.A., Canada, England, Holland, Belgium and Italy, etc. also. So far as Asian and African countries are concerned, we have been exporters for many years now. We could with some justification say that the foreign buyers find our sewing machines the cheapest quality sewing machines.

Our exports last year were higher than the previous year, and we hope they will be very much higher in the current year.

During the year, showrooms of their own have been opened by our agents in Singapore and Bangkok for the sale of our machines. The credit of introducing our sewing machine and fans in countries goes, on the one hand to our engineers and workers under the guidance of our General Manager, Mr. T. R. Gupta, and for sales in these countries to Mr. Agarwal and his assistants, in particular Mr. Ravindra Nath.

You will be glad to know that Mr. Agarwal is doing excellent work as vice-chairman of the Engineering Export Promotion Council, and that our Production Manager, Mr. T. R. Gupta, is leading the

First Productivity Team to America and other countries. We are naturally proud of these people.

While it is not possible to sell fans in Western countries, as they are all cold countries, but the sale of our fans in African and Asian countries is also increasing.

Basis of Exports

Our approach to the question of exports is from three different angles. First of all, there is the duty which we owe to ourselves—the duty to keep our factory running and not to allow production to suffer for want of raw material including imported items. Secondly, we owe a responsibility to our workers, whom we would have to discharge if we don't keep the factory running. Thirdly, there is a duty that we owe to our country which today is facing a serious shortage of foreign exchange resources, and that in my humble opinion should be the approach of all manufacturers.

Since independence, industry in general, has been helped either by the grant of direct protection or by the restriction of imports. For the last two or three years, there has been a very severe restriction on imports of foreign goods, and it is this severe restriction, which, to an extent, is helping industry in making profits. It is true that in exports there will be perhaps, even a slight loss might occur, but taking abroad and long view, it is incumbent upon all manufacturers, in individual industries, to join together and take immediate steps for higher exports. It is in these days when profits are good, that by a little sacrifice, we can establish markets abroad to our permanent benefit.

While the manufacturers owe it to themselves, to their workers, and to the Government to do all they can for exports, may I also request the Government to take the various steps early for helping exports. Many questions have been pending before the Government for a long time. For instance, the concession in railway freights, income-tax, in the rate of interest and allowing a percentage of foreign exchange for imports of various things needed by industry, etc. An early decision on all these points will certainly help exports.

When I say this, I am fully aware and grateful for what the Government have already done, but more has got to be done.

Quality of Pig Iron

In the interest of engineering concerns, I would draw the attention of the Government to one fact which affects the production of the engineering industry. The pig iron normally supplied by the steel mills is of poor quality and on account of this the castings both in the foundry and at later stages in production are higher. Also on account of hardness of the castings the output in machine shop is lower than it would be otherwise. I have no higher prices for first quality pig iron, but it is very necessary for manufacturing industries to get good quality pig iron. I do hope that it will be possible for the Government to induce the steel mills to do so.

The Government, as is well-known, wants some sort of ancillary industries to be helped by big scale industries, and I am glad to say that the number of small who work for The Jay Engineering Works outside the factory is steadily increasing and our payment to these outside people last year amounted to Rs. 31,49,851 and the figure is steadily increasing.

The fan section has been completely shifted to the new factory at Bansdhani. The production there is steadily going up and the efficiency is improving.

Progress in New Lines

The needle plant has also reached almost full efficiency.

We have also started making shuttles and bobbin cases on line production basis. The quality is much better and the production much higher.

Last year, I told you that the heavy industrial sewing machine was expected to come in production, and it has come in production. We have started making the same and we have put them on the market. The production is steadily going up.

You will be very glad to know that prototypes of zig-zag machines have been very satisfactorily completed and we hope that our zig-zag sewing machine will not be inferior in quality to any foreign machine. We hope to be able to produce these and put them in the market in about 8 to 10 months. It is a very highly complicated piece of mechanism, and who designed and produced the prototype. We hope to be able to sell these not only in the Indian market but also in the foreign market at competitive rates.

During the year under report, your Directors thought it fit to increase the capital of the company and issued Ordinary Shares to the tune of Rs. 30,75,500 Shares worth Rs. 50 lakhs, which in the first instance were offered to the existing shareholders. I am happy to note that both these shares command a good premium in the market.

I will close my remarks with the hope that next year I will be able to report higher production, higher exports, increased profits and lower prices of articles of food and cost of living.

In the end, I must convey my and the Board's appreciation of the hard work put in by all concerned.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

Money

THE CALCUTTA MONEY MARKET

LITTLE CHANGE IN CONDITIONS

Wednesday, 8th October.

CONDITIONS in the Calcutta money market have changed very little during the past week. Accommodation given to the jute and cotton mills and for the storage of grain and seeds remains around the previous levels, but sugar credit has declined. In the interbank market, conditions are still comfortable, although the call rate has been quoted at a slightly higher level—around 1½ percent.

Not many bills have been noticed in the exchange market over the week as a whole, although during the past couple of days there has been a mild increase in activity: such bills as have been seen relate mainly to tea and gunny shipments. Remittance continues on a fair scale. Sterling remains strong and optimism about its prospects is reflected by the narrowing of the margin in forward rates.

SILVER WAS STEADY ON GOOD OFFTAKE IN THE absence of arrivals. The price closed at Rs. 186. The London quotation was 76½d and the price in New York was 89½ cents.

Gold was quoted at Rs. 109.50 in restricted activity.

TENDERS FOR RS. 2 CRORES OF 91 DAYS' Government of India Treasury bills were opened on 7th October. The total amount offered was Rs. 3,20,00,000. Tenders at Rs. 99.370 were accepted in full and those at Rs. 99.365 allotted approximately 45 percent. Total amount accepted was Rs. 2.525 percent a year. Tenders for Rs. 2 crores of 91 days' Government of India Treasury bills will be received at all centres up to 13th October.

During the week ended 3rd October, Government of India Treasury bills for Rs. 28,78,00,000 were sold in favour of the Reserve Bank.

THE STATEMENT OF THE RESERVE BANK OF INDIA for the week ended 3rd October, 1958, shows an increase of Rs. 11.72 crores to Rs. 1,527.70 crores in active notes, while the total note issue is Rs. 71 lakhs lower at Rs. 1,556.07 crores. Notes held in the Banking Department consequently fell by Rs. 12.43 crores to Rs. 28.37 crores. Deposits of the Government of India rose by Rs. 4.24 crores to Rs. 52.78 crores but other Government accounts declined by Rs. 8.80 crores to Rs. 17.31 crores. Balances of commercial banks at Rs. 96.49 crores showed a fall of Rs. 8.11 crores. Balances held abroad again declined by Rs. 83 lakhs to Rs. 13.38 crores. Other loans and advances increased from Rs. 51.74 crores to Rs. 51.83 crores, of which advances to scheduled banks against usance bills amounted to Rs. 97 lakhs (Rs. 1.08 crores). Investments at Rs. 299.30 crores showed a small decline. Ways and means advances stood at Rs. 14.50 crores, against Rs. 13.67 crores.

THE RETURN OF THE STATE BANK OF INDIA for the week ended 26th September, 1958, shows a rise of Rs. 3.32 crores to Rs. 446.10 crores in total investments. Investments in Government securities and other authorised investments are up by Rs. 1.81 crores and Rs. 10 lakhs to Rs. 237.35 crores and Rs. 11.21 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have declined by Rs. 3.26 crores to Rs. 161.17 crores. Cash and balances are, in consequence, shown at Rs. 48.66 crores or Rs. 36 lakhs higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 26th September, 1958, shows Demand and Time liabilities at Rs. 755.83 crores (Rs. 25.02 crores on account of borrowings from banks) and Rs. 850.10 crores (Rs. 36.87 crores), compared with Rs. 758.46 crores (Rs. 24.77 crores) and Rs. 843.04 crores (Rs. 37.79 crores), respectively, in the previous week. Cash has declined by Rs. 2.15 crores to Rs. 38.71 crores, while balances with the Reserve Bank have increased by Rs. 10.38 crores to Rs. 100.22 crores. There is a rise of Rs. 2.39 crores to Rs. 590.52 crores in investments. Advances and bills discounted at Rs. 841.54 crores show a drop of Rs. 9.28 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.6 percent and 52.4 percent, against 8.2 percent and 53.1 percent.

ISSUES FOR THE WORLD BANK AND I.M.F. MEETINGS

THE PROBLEM OF LIQUIDITY IN INTERNATIONAL TRADE

By R. M. Mitra

THE annual meetings of the boards of governors of the International Monetary Fund and the International Bank for Reconstruction and Development, now being held in New Delhi, have evoked more than usual interest. The suggestion made by President Eisenhower for increasing the resources of the Fund and the Bank, renewed discussions on the question of convertibility of the major currencies of the world, especially sterling, and the controversy over the adequacy of the monetary reserves of the member countries (known as the problem of "world liquidity") highlighted by Mr. Roy Harrod's advocacy of a rise in the dollar price of gold to as much as "the convenient figure of \$100 an ounce", have created a mixed atmosphere of seriousness and expectancy.

The Articles of Agreement drawn up at Bretton Woods in July 1944, which brought the two international financial organisations into existence on 7th December, 1945, set two principal objectives before them. One of the aims enunciated in Article I (ii) for the Fund is "to facilitate the expansion and balanced growth of international trade, and to contribute thereby to the promotion and maintenance of high levels of employment and real income and to the development of the productive resources of all members as primary objectives of economic policy". Article I (iii), which defines the purposes of the Bank, enjoins it "to promote the long-range balanced growth of international trade and the maintenance of equilibrium in balances of payments by encouraging international investment for the development of the productive resources of members, thereby assisting in raising productivity, the standard of living and conditions of labour in their territories".

Although the object of international trade receives favourable attention, it is advocated not as an end in itself, but as a means to the end of "high levels of employment" in, and internal economic development of, individual member countries. The plan of action formulated to ensure the orderly conduct of international trade, consists in (i) assisting "the establishment of a multilateral system of payments for current transactions", (ii) the "elimination of foreign exchange restrictions which hamper the growth of world trade", (iii) the promotion of "exchange stability" and (iv) "making the Fund's resources available" to members to enable them "to correct maladjustments in their balance of payments".

Quota Rights

The procedural methods pursued by the two institutions are now a familiar feature of international finance. The Fund has assigned a "quota" to each member with the right to draw on the Fund's currency resources not exceeding the exchange value of the quota, against a deposit of its own currency of equivalent value. The entire amount cannot, however, be drawn at a time; not more than one-fourth of the limit can be drawn in any period of 12 months. Moreover, the drawings are subject both to an initial charge and penalties depending on the period the drawings remain undrawn; and drawings are intended to be allowed only to enable a member to meet deficits in its "current transactions". The Bank grants loans or guarantees loans (whether or not in collaboration with other agencies or institutions) for member countries' developmental projects, on the one hand, and for assisting the conversion of current liabilities of members into long-term obligations, on the other. The combined operations of the

Fund and the Bank are evidently designed to counteract disturbances arising from a disequilibrium in claims for various currencies of the world.

The total amount of finance which can be arranged by the Bank is, however, limited to the nominal value of its authorised share capital which is now fixed at \$(U.S.)10,000 million. It may be observed that the Bank cannot normally call up more than 20 percent of its issued capital, and that of this 20 percent, only 2 percent is payable in gold or dollars. The major portion of the resources required by the Bank for its loan operations is, therefore, to be obtained by borrowing from other sources, unless the capital stock of the Bank is increased. As for the Fund, its resources are provided by the members' original contributions in the form of (i) gold to the extent of one quarter of the value of the "quota" or one-tenth of a country's gold and dollar holdings, whichever is less, and (ii) member countries' currency to the extent of the difference between gold contribution and the value of the "quota".

Question of Resources

The success of the monetary operations of the Bank and the Fund obviously depends on the adequacy of their resources. The question of adequacy, in turn, is related to the extent and degree of requirements which, again, are a co-efficient of the difference between the receipts and payments arising from international transactions involving payments in money. If the two-way transactions of a country strike a balance, not necessarily with each partner but with all the outside countries taken together, and not necessarily over any particular accounting period but over a reasonable period of time, it might be possible to make a workable estimate of the resources needed by the Fund and the Bank to meet the demands of member countries for their current obligations and help them obtain foreign capital investment.

It is necessary here to take an objective view of the economic conditions prevailing in the world today. The cumulative effect of the wide difference between the productive capacity of the U.S.A. and of other countries—the necessity for the U.S.A. to export her surplus production, the necessity for most other countries to import more than they can export, the simultaneous efforts by most of these countries to industrialise their economy, and the uncertainties introduced by quick and unforeseen changes in technological developments—has been to retard the growth of an orderly export-import relationship among different countries. A cursory examination of international financial operations will show that the disequilibrium in receipts and payments, both on current and capital accounts, is a recurring feature of international transactions, that the resulting imbalance fails to be met by the marginal operations of the Fund and the Bank, or by foreign investment arranged directly or through other agencies; that the gap is being filled by voluntary or involuntary loans and by restrictions on the movement of money out of a country.

Dollar Value of Gold

It appears, therefore, that suggestions like increasing the resources of the Bank and the Fund, or increasing the dollar value of gold, can hardly deal with the long-term needs of world financial stability, whatever short-term relief these measures may yield. It is also necessary to understand the objection which the U.S.A. has to any move to raise the international price of gold. It is clear that so long as that country operates as an open buyer of gold at a stated rate, an enhancement of the price will increase the flow of gold into the U.S.A., resulting in a useless addition to her huge stock of gold. This means that she will have to exchange her goods against an asset of questionable economic value until she finds it profitable to import more than she exports. Conditions have

so changed since the 'thirties (when the gold purchase policy of the U.S.A. stipulated the production of the metal) that the American monetary authorities would now be happy to lighten the weight of their gold acquisition by sharing it with other countries. Even if, however, they could be persuaded not to press their objection to enhancing the price of gold, it is doubtful whether such an action could make any appreciable contribution to the stability of international finance. The pattern of world trade relationships in recent years seems to show that while the U.S.A. and West Germany are faced with the problems of persistent export surpluses, most of the other countries (with a few exceptions like some Scandinavian countries in western Europe and Venezuela in Latin America) are suffering from a steady deficit on current transactions.

The annual production of gold (excluding Russia's) amounts to about 29 million ounces. Valued at \$(U.S.)100 an ounce (as suggested by Mr. Roy Harrod), against the ruling U.S.A. buying rate of \$35 it would bring about an increase of \$(U.S.)1,885 million in the resources available for meeting international obligations. The inadequacy of this increase will be evident from the fact that the U.S. surplus of trade in goods and services (including military transfers) amounted to \$6,313 million in 1956 and \$8,209 million in 1957. Moreover, the production of gold is not distributed among different countries in proportion to the volume of their import surplus, and more than half is accounted for by one single present stock of gold held by different countries (excluding Russia), which was reported at \$(U.S.)38,975 million in December 1957, more than 65 percent is owned by the U.S.A. (\$22,857 million) and West Germany (\$U.S. 2,542 million). The remaining 35 percent is spread thinly over a number of other countries. Although the U.K.'s gold reserve has risen from \$(U.S.)2,273 million in December 1957 to \$(U.S.)2,914 million in April 1958, and thus exceeds the West German holding it should not be overlooked that the volume of trade which the U.K.'s reserves are required to service is much larger than those of West Germany.

It is equally doubtful whether any conceivable increase in the resources of the Fund and the Bank will make an appreciable impression on the problem confronting the monetary authorities. These resources are raised from the member countries in much the same manner as the funds of the central bank of a country are built on the deposits of member banks. But unlike member banks in the latter case, the vast majority of the member countries in the former case, are usually in need of financial assistance. Even if it be assumed that suitable changes in the Articles will be made to increase U.S. contributions in proportion to her gold holdings and export surplus, it has to be remembered that the U.S.A. is already employing her surplus resources on a large scale, through channels other than the Bank and the Fund, to meet foreign exchange gaps of a number of countries. An increase in U.S. contributions to the two international institutions may, therefore, amount only to a change in the agency through which her surplus funds are used, and not mean an addition to the amount of international finance now available.

World Monetary Co-operation

It seems, therefore, that the world monetary authorities will need to re-examine the very basis of international monetary co-operation. One method of reforming and reorganising international financial institutions might lie in the awakening of a sense of oneness among the people of the world, irrespective of the country they belong to. It might then be possible to arrange for inter-country surpluses and deficits to merge into one form different countries into groups consisting of members having "close economic relations based on complementary needs". The latter method may involve a slower rate of development and a lower level of economic existence, but it will more effectively promote the objective of fuller employment, if slow, advancement in "world economic welfare and international economic relations". The Commonwealth economic group and the European Common Market group might be taken as the basis for new developments.

The changed conditions of international finance have imparted a new significance to the concept of convertibility of a currency. The dollar is supposed to be convertible, but such convertibility is deemed to be able to exchange them for any other currency of their choice, but the buyers cannot induce the sellers to accept any currency they can offer. This situation is recognised by the International Monetary Fund in its provisions for declaring a currency "scarce" in certain circumstances. The sterling convertible, therefore, acquires an air of unreality. Trends of international trade, changes in the methods of financing it and the loss of London's position as the centre of the world money market, moreover, render a return to the old system of convertibility almost an impossible venture. It is an irony of human progress that increasing opportunities for reaching distant markets and closer economic contacts between countries, tend to make it increasingly difficult to achieve order and harmony in international trade. The new situation perhaps calls for new thoughts, and new solutions. It is to be hoped that the course of elapsing between the meetings at Bretton Woods and New Delhi will provide some clue.

Stocks and Shares

SATISFACTORY OUTPUT FIGURES HELP INDIAN IRONS

TECHNICAL POSITION CONSIDERED SOUND

Wednesday Evening.

THERE were wide fluctuations in the speculative counters in the Calcutta Stock Exchange during the past week. Indian Iron at one time fell to Rs. 25.76 under heavy bear pressure, but quickly recovered to Rs. 26.80 on replacement buying aided by the satisfactory production figures of the company for the quarter ended 30th September. Bombay is now reported to have a heavy bear position of approximately 700,000 shares and, in view of the approaching settlement there on Friday, large-scale short-covering is expected. The bulls, therefore, now appear to be in a strong position.

The proposals made at the New Delhi meetings of the International Monetary Fund and the World Bank to expand these institutions and to establish a new body, the International Development Association, designed to ease borrowers' balance of payments difficulties by accepting repayment of loans in local currencies, were well received. Thus, the market finds itself in a mood of buoyancy before the Puja holidays, unlike in previous years when prices were usually marked down as a precautionary measure.

Government securities were slightly easier in view of the approaching busy season in the money market, although the undertone was quietly steady.

Preference shares were in good demand, particularly selected jute issues, but the volume of business was disappointing due to the almost complete absence of sellers.

In the banking section, Punjab National were a shade easier at Rs. 62.50 while United Commercial were unchanged at Rs. 69.

In railways, Dehri-Rohas were transacted at Rs. 11.37 and Howrah-Amta at Rs. 51.

Cotton textile shares were featureless and prices tended to sag. Kesoram were marked down from Rs. 11.25 to Rs. 11.

There was little activity in coal shares and prices were more or less unchanged, though in some cases, closing quotations were below the best.

In jutes, trading was of a mixed nature, but the undertone was quite steady. Here is a chart showing representative price movements:

	Opening 3rd October Rs.	Closing 8th October Rs.
Agarpara	10.56	10.19
Alliance	108	106
Auckland	139	140
Birla	20.37	20.31
Gourepore	337	344
India	156 x.d.	15.50 x.d.
	(100 pd.-up)	(12.50 pd.-up)
Megna	142.50 x.d.	14.12 x.d.
	(100 pd.-up)	(10 pd.-up)
Union	195	192

In electrics, Calcutta were easier at Rs. 15.12, but Patna were steady at Rs. 17.75.

In sugars, Dyer Meakin Breweries were better at Rs. 12.37, as were Ramnugger Cane at Rs. 21.37. Champaran were marked down from Rs. 19 to Rs. 18.75.

Among engineering issues, Indian Iron fluctuated between Rs. 25.76 and Rs. 26.80 to close at Rs. 26.75, which was tonight's settlement rate. Guest, Keen, Williams had buyers at the higher rate of Rs. 32.50 but Burn were easier at Rs. 375. Jessops met with small enquiry at Rs. 24.25, but Kumardhubi Engineering were lower at Rs. 9. Textile Machinery were easier at Rs. 22.50.

In papers, the outstanding feature were Orient, which spurred from Rs. 34.30 to Rs. 35.40. Titaghar were wanted at the higher rate of Rs. 42.50, while Sirpur were neglected at Rs. 13.12.

Cement shares displayed a generally easier trend.

There was little or no activity in the insurance section, with the exception of Ruby General, which were marked down from Rs. 7 to Rs. 6.87.

In shipping, India Steamship were unchanged at Rs. 13.75 but Port Shipping were easier at Rs. 13.75.

Among miscellaneous industrials, Alkali and Chemical were steady at Rs. 16.12 and Britannia Biscuits were a good feature with buyers at the higher rate of Rs. 16. Dunlop Rubber were taken at Rs. 28.62, while Imperial Tobacco were quiet at Rs. 11.87, as were Indian Aluminium at Rs. 15.94. Indian Cables were offered at Rs. 29.75 and Jardine Henderson recovered from Rs. 80 to Rs. 81.50. Metal Box were better at Rs. 30.75. National Carbon met with selling pressure and receded from Rs. 28 to Rs. 26.75 following the announcement of a lower interim dividend (65p against 75p). Shaw Wallace were easier at Rs. 14.31, while Rohtas had sellers at the lower rate of Rs. 23.37.

In minings, Indian Copper were quietly steady at Rs. 3.82, as were Karanpura Development at Rs. 14.25.

Tea shares were dull and neglected and prices were easier on balance.

International Panorama of Progress

Modern methods for ancient acres

Over centuries-old fields of rice and sugar cane a new sound is being heard. Shouts of encouragement to plodding buffaloes and oxen are being supplanted by the hum of modern farm machinery. Efficient equipment is bringing in bigger crops with less effort—aiding economies, easing the farmer's life. In many of the countries where agriculture plays a vital role, Caltex quality petroleum products help maintain and expand farm prosperity. Through the power of petroleum, Caltex fuels and lubricants run the machinery that lightens the work load, increases the standard of living for the peoples of over 70 countries. Caltex—partner in progress in Europe, Africa, Asia, Australia and New Zealand.

SOUTH EASTERN RAILWAY TENDERS.

Sealed tenders are invited for tender No. CON/COS/20/H(C)/58 for supply of 525 Nos. Meter House service A.C. 230 volts 5 Amps. all insulated type to BBS-37 of 1952. Tenders will be opened on 31-10-58 at 3 P.M.

Tender forms are obtainable from the undermentioned (Construction Section), Garden Reach, Calcutta-23, at Rs. 2/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash Receipt from this Rly's Chief Cashier by local firms.

Tender forms should accompany the receipt for depositing earnest money of Rs. 260/- from this Rly's Chief Cashier without which the tender is liable to be rejected. Contractors having permanent deposit of Rs. 1,000/- with the undermentioned are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

CONTROLLER OF STORES.

ments of a non-recurring nature in connection with the reorganisation scheme.

The LAWRENCE JUTE COMPANY has incurred a loss of Rs. 6.66 lakhs. Providing Rs. 1.62 lakhs for depreciation and bringing in a loss of Rs. 7.73,368, there is a debit balance of Rs. 16,01,330. Transferring Rs. 12.85 lakhs from reserves, a debit balance of Rs. 3,16,201 is carried forward. The dividends have been passed over. The mill was closed in May 1958. Work is now proceeding on the dismantling of the old type machinery for sale as scrap, while the modern machinery is being partly sold and partly hired to those companies utilising Lawrence's loom hours. The long-term utilisation of the land, buildings, etcetera, at Lawrence is receiving the careful consideration of the directors, but it will be some months before the site is cleared for use for any other purpose. The shareholders' consent to the sale of the company's assets was obtained at an extraordinary general meeting held on 17th May, 1958.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION has earned a net revenue of £1,689,486 for the year ended March 1958, compared with £2,193,878 for the 15 months ended March 1957. Units sold have amounted to 1,501 million, against 1,709.7 million. A final dividend of 34 percent is declared, making 7 percent for the year; it absorbs £149,193. Other notable allocations include contingency reserve fund £80,240, development reserve £286,130, U.K. income tax £85,049 and Indian taxes £378,693. The carry-forward is £119,341.

THE BRITISH INDIA CORPORATION HAS MADE A LOSS of Rs. 12.58 lakhs for the year ended December 1957, after providing Rs. 13.42 lakhs for depreciation. Dividends have been passed over. Bringing in Rs. 1,22,521, there is a debit balance of Rs. 11,35,910 which has been deducted from reserves and surplus. The directors state that a profit of Rs. 17,73,324 was realised from sales of investments and this amount has been carried to the investments reserve account. An amount of Rs. 29,50,000 arising from a reduction in the valuation of investments has been charged against the investment reserve. The results have been unsatisfactory due to the losses sustained by the Cawnpore Cotton Mills branch and the Cooper Allen branch. Due to continuing losses and a shortage of capital required to rehabilitate the mills, the Cawnpore Cotton Mills branch was compelled to institute an indefinite lay-off from 2nd December, 1957. The production and sales of the Corporation's woollen branches continue to be satisfactory. "The prospects of the woollen branches for the current year are good, although, in the future, the branches' production programme may be affected by the restrictions on the import of raw materials."

THE OUTPUT OF THE INDIAN IRON AND STEEL Company for the quarter ended September 1958 shows increases compared with the previous quarter. The production of pig iron increased by 15,967 tons to 230,436 tons. Steel ingots amounted to 143,516 tons against 121,988 tons. Semi-finished steel for sale declined by 849 tons to 24,431 tons, while finished steel improved by 5,438 tons to 81,172 tons. The latter two together are shown at 105,603 tons (101,014 tons).

Bombay Market

WIDE FLUCTUATIONS IN STEELS

COTTON TEXTILES SUBDUED

Wednesday Evening.

THERE were wide fluctuations in steel shares in the Bombay stock market during the past week. At first, prices declined on substantial selling by holders. Later, there was a recovery on technical considerations and a good deal of replacement buying took place at the lower rates. Business in other equity shares was restricted and fluctuations were minor.

Towards the close, sentiment improved on hopes of an early increase in the retention price of steel. Tata Steel recovered to Rs. 174 and Indian Iron gained at Rs. 26.45 on support from Calcutta interests. Alcock Ashdown were offered at Rs. 265, while Premier Construction met with selective support around Rs. 226.50. Tata Locomotive were bought at Rs. 189.50 on investment account. Motor shares were quietly steady, and Premier Automobile were taken at Rs. 89.50. Hindustan Motor rallied to Rs. 7.84 on short-covering.

Cotton mill shares were subdued because of fears that exports during the current year might be lower than was expected. Bombay Dyeing were available at Rs. 58.20 and Century declined to Rs. 440. Kohinoor changed hands at Rs. 267 and Simplex were transacted at Rs. 179. Svadeshi came to hand at Rs. 184.25 and India United Ordinary were bought at Rs. 9.12. Apollo were freely offered around Rs. 1.38.

In the miscellaneous group, prices followed the general trend. Sugars were steady on prospects of increased earnings. Belapur Sugar were bought at Rs. 310 on hopes of a bonus share issue and Phalton were taken at Rs. 177. Steamship company shares were steady, and Scindia Steam changed hands at Rs. 21.52. Great Eastern Shipping met with support around Rs. 26.60. Minings showed little variation, and Shivrampur Syndicate were placed at Rs. 89.50. Bombay Burmah were quoted at Rs. 491 and National Rayon were done at Rs. 243. Tata Chemical declined to Rs. 16.88 on pressure, as it was thought that the dividend might be lower than was expected earlier. Cements were quietly steady, and Associated Cement were bought at Rs. 157. Digvijay Cement were taken at Rs. 147.50.

Turnover shrank in bank and insurance shares, but rates were maintained. United Commercial Bank were transacted at Rs. 67.50 and Bank of India were indicated around Rs. 137.75. British India General Insurance were placed at Rs. 15.72 and New India Assurance were transacted at Rs. 47.

There was fair investment support in electricity supply company shares, and Ahmedabad Electric were wanted at Rs. 98.40. Tata Hydro met with demand at Rs. 123 and Bombay Suburban Electric came to hand at Rs. 113.50.

THE WEEK'S TRANSACTIONS

S. N. BANERJEE, M.A., General Manager.

He tears paper all day long!

HE'S not destructive by nature; it's his job to tear paper wrappers... scientifically, to test their strength.

Wrappers, containers, cartons and packing cases are subjected to exhaustive testing at Hindustan Lever! As for the products themselves—they are also constantly undergoing the most gruelling tests. From raw materials to finished product, experts, scientists and technicians are sampling and checking.

But why all this testing? Well, we know that you expect unvarying high quality of a Hindustan Lever product. The only way to maintain it is by quality control at every stage. This quality control also enables us to conserve precious national resources and vital production time.

SUBSTANTIAL GAINS IN STOCK MARKETS GILT-EDGED AND INDUSTRIALS RISE

London, 8th October.

FURTHER widespread and substantial gains were recorded in the stock markets during the past week following renewed investment and speculative buying. Business was at a very high level and the number of bargains officially recorded on Monday, at 16,599, were the highest since May 1957. Many factors combined to stimulate the markets, while there were few adverse developments. The lower industrial production figures for August, the Ford Motor warning about profits in the second-half of the year and the rise in unemployment in the United Kingdom in September caused no more than temporary hesitancy. Among the many favourable factors were the consistent strength of Wall Street, the suspension of the Quenoy bombardment, the end-September gold reserve figures, the half-yearly revenue figures and the Chancellor of the Exchequer's optimism on his return from the Montreal Conference. In addition there was the general expectation of a further fall in interest rates and of a fresh cut in the British Bank rate in the not-too-distant future. The gilt-edged market showed an appreciable advance on renewed buying, although conditions became quieter after the week-end following the further rise in the Treasury bill rate last Friday. Nevertheless, gains exceeding 1 point were recorded. Greek bonds reacted after earlier firmness and German bonds were dull, but Chinese issues responded to the Quenoy news and Japanese issues improved. Dollar stocks advanced in response to Wall Street. Industrials recorded extensive and substantial gains. All groups participated in the advance, with engineering, steel and property shares providing the best sections. Golds moved higher on selective demand, while base metal shares advanced on the more optimistic outlook for metal prices. Oils generally showed useful gains, but prices were below the best. Rubber shares were quietly firm on selective demand. Teas were quiet and irregular, particularly

the Indian issues, but there was very little change in Ceylon issues.

The Money Market

Stringent credit conditions again prevailed in the money market during the past week. A major factor was a very heavy take-up by discount houses of the year-end bills, and end-month influences also affected the situation. On most days of the week, the market was forced to go to the Bank of England, even if only for small amounts, while the authorities provided a large amount of assistance. Under the keen demand for loans, non-regular money was largely borrowed at 3½ per cent. In spite of the tight credit position, there was a fairly good demand for bills. Up to the day of the bill tender, end-December, early January and "hots" were sold at 3½ per cent and 3¼ per cent, but with the market forcing up the Treasury bill rate to £3 14s 1.39 per cent, bills were subsequently sold at 3½ per cent.

Activity on Wall Street

During the past week, U.S. Government bonds dominated trading while the rest of the market was lower. Long U.S. Government securities lost over a point. Dealers pegged the losses in the absence of buyers. Traders also hinted that a portion of the liquidation might be in anticipation of a rumoured long-term Treasury offering later in the autumn at a yield level which would be sharply above current returns. There were no buyers for the high-grade corporate and tax-exempt issues. Some investment quality industrial and utility scrip fell around one point. Municipal bond traders reported little activity in their market. After the Government bond market falls, said one dealer, trading came to a near standstill. Rail lines lost in quiet trading with losses reaching more than one point over the week. Convertible and share privilege bonds were mostly lower also. Canada 2½ per cent at 75½ fell more than one point on a modest turnover. Among Italian issues, the 3 per cent public utilities at 87½ fell fractionally. Australian 3½ per cent were a big loser falling around four points. Among South Americans, Chile 3 per cent dipped fractionally.

Hongkong Gold Weak

Trading was extremely slow in a weak Hongkong gold market last week. Supplies of gold were still tight but sufficient to meet the extremely small demand. Thus sentiment was unaffected. The soft trend was attributed to the rise in British reserves and the continued steadiness of sterling. The official offer was 570 taels and the unofficial 10,100 taels. Carry-over charges were 43 cents a ten taels in sellers' favour. Arrivals in Macao totalled 28,000 ounces. Forward contracts were done at \$ (U.S.) 38.02 c.i.f., Macao.

Stalemate in Linseed Trade

Business in linseed oil between millers and shippers on the one hand as sellers, and processors and refiners on the other as buyers, was virtually stalemated during the past week by suggested changes in the allowance given to buyers to provide for the percentage of "foots" or sediment in the oil delivered to them. Under the general terms of the British Standard Specification for linseed oil in the United Kingdom, the contract of sale permits a maximum of 1 per cent "foots" or sediment, but for more than two years now, millers and shippers alike have been making an allowance of 1 per cent of their contract price for each 1 per cent of "foots" over and above the 1 per cent stipulated in the contract. Unexpectedly, accordingly, a reduction in allowances has now been suggested. A reduction in allowances to only 1 per cent of the contract price for each additional 1 per cent of "foots" up to 4 per cent. Above 4 per cent, the old allowance on the basis of 1 per cent of the contract price will be continued. The major buyers of linseed oil—namely, the processors and linoleum manufacturers—who together buy more than 90 per cent of the linseed oil traded in the United Kingdom, are objecting strongly to the cut in allowances and point out that most of the oil currently sold to them contains between 2 and 4 per cent "foots", so that the reduced allowance would apply to most of their purchases. On the other hand, both millers and shippers will for the time being be content with the new terms, so that reduced virtually to a standstill. It is understood, however, that a meeting of all parties concerned is being held on 15th October in an attempt to reach a general agreement.

West German Duty on Tea and Coffee Imports

The West German Finance Minister has drawn up an Ordinance which provides for cuts in import duties on coffee and tea, but at the same time, according to Government sources, anticipates the reduction of import duties West German has to effect under the European Common Market scheme and is intended to put West German coffee and tea importers on an equal footing with their Common Market competitors, these sources said. It is planned to become effective on 1st January, 1959. The effects on coffee for instance, will be that the import duty of 1.60 marks a kilo will be reduced to 1 mark, while at the same time, the coffee tax will be raised from 3 marks a kilo to 3.60 marks a kilo.

U.K. Rubber Statistics

During July 1958, U.K. consumption of natural rubber amounted to 12,709 long tons, while imports of natural rubber totalled 18,340 long tons and re-stocks of natural rubber held by manufacturers and in warehouses (exclusive of the U.K. Government's stocks) at the end of July amounted to 41,690 long tons.

New Delhi

I.M.F. CHIEF WARNS AGAINST EXCESSIVE DEFICIT FINANCING

OPPOSITION TO EISENHOWER PROPOSAL FOR DEVELOPMENT ASSOCIATION

(FROM OUR NEW DELHI CORRESPONDENT)

THE Managing Director of the International Monetary Fund, Mr. Per Jacobsson, gave some valuable advice to India at a Press conference last week. Asked to comment on the prospects of deficit financing for India's development plans, he expressed himself strongly against excessive dependence on deficit financing. After the second world war, he said, many countries thought that they could find more resources by creating credit through their central banks. "But you cannot get real resources by printing money. People soon found out that the creation of credit beyond what is needed for increasing working capital for industry and normal increase in circulation will either add to inflation or lead to a loss of monetary reserves. That has been the experience everywhere. This applies to India as much as it applies to the U.S.A., France or the industrialised countries. Persistent deficit financing that relies on credit creation from the central bank is only another name for using up your monetary reserves, and I am afraid the facts prove that. If you take the balance-sheets of the Reserve Bank of India, you will find that the amount extended to the Government as credit has its counterpart in the reduction of the Bank's sterling assets." Commenting on the idea that there are large untapped resources in the country which can be mobilised through deficit financing, Mr. Jacobsson referred to the policy pursued in Russia, and said: "There they seem to have no illusions about credit creation and they are following a rather orthodox credit policy. If it is possible to raise resources by credit creation, one could be sure the Soviet Government would have done it. But they have been wise enough not to do it."

Tapping Hoarded Gold

Asked about the possibility of India tapping her hoarded gold, Mr. Jacobsson placed world hoards at \$ (U.S.) 10,000 to 12,000 million, one-third of which is held by France. Her recent efforts at unhoarding this gold has resulted in her drawing out about 2 to 3 per cent of it. Mr. Jacobsson pointed out that people would not part with their hoarded gold unless they had perfect confidence in their currency. At one stage, full employment and development were regarded as more important than currency. Since then, people had become wiser. Public opinion now favoured a sound currency. A good currency was a great asset to a country. "I hope that the people will now realise that to have a good currency was worth some sacrifice", he added. For moral and material reasons, a good and sound currency should be preferred. No monetary system could function without monetary discipline. India, in his opinion, had had a good currency for years now. Referring to the problem of convertibility, Mr. Jacobsson said that it had to be achieved "step by step", the first step being free trade and free imports. "In fact, free trade is the sine qua non to convertibility. As a first step towards convertibility, Britain last month liberalised her imports."

Raising World Bank and I.M.F. Resources

The great advantage of the present proposal for raising the resources of the International Monetary Fund and the World Bank, Mr. Jacobsson said, was that they had come from the board of governors, and not from the executive directors. The proposals had been made by the U.S.A., the U.K. and some other governments of their own accord. There had been fears that there might be a liquidity crisis facing the world, and that because of the U.S. recession, there might be a dollar shortage as in the 'thirties. These have not proved true, and in fact during the American recession, there has been a net flow of gold out of the U.S.A. Mr. Jacobsson described the aid-to-India meeting in Washington last month as "rescue operations." Asked when the follow-up meeting for aid to India on a long-term basis would be held, he said that there was some relation between foreign aid and a country's willingness to apply correctives to its development programme and how best its domestic resources had been mobilised. Future aid to India, moreover, would largely depend on what was available from the United States of America. Mr. Jacobsson has stated that the Fund's study on international reserves and liquidity is opposed to raising the price of gold.

Five years ago, a mission of the International Monetary Fund visited India. It made a report which was given publicity in February 1954. Some extracts from that report are worth reproducing here: "Two conclusions emerge clearly from this analysis. First, home resources even as estimated are not adequate for carrying out the plan without resorting to measures that would risk serious inflation. Second, even the estimate of resources to be secured through home savings will not be realised unless positive action is taken to divert more of the expected increase in output into public or private savings. It is hazardous to attempt to set quantitative standards for a country's capacity to save and pay taxes. Nevertheless, it is evident that India can and should attack with renewed energy and ingenuity

the problem of securing additional home resources for development. With greater effort, it should be possible at least to approximate the goal set for public saving in the five year plan. It will be much harder to assure the projected level of private saving and investment or to expand public saving still further to make up for a deficiency in the private sphere. Even after every reasonable effort has been made, it is certain that available home resources will still fall short of the amount needed to proceed with the modest development programme, and to start the economy of India towards steady, if slow, progress in expanding production and attaining higher living standards.

Excessive Investment

"When a country undertakes investment in excess of the real resources that are available, the inflationary pressure manifests itself in two forms: first, in some rise in domestic prices; second, in some increase in the balance of payments deficit. In India, an increase in incomes would be accompanied by a relatively large increase in the demand for food and a significant increase in the demand for cloth. These are export and import goods. A smaller part of the increase in incomes would be spent on purely home goods. For this reason, the balance of payments is likely to be the focal point of any inflationary pressures in India.

"Although imports provide only a small portion of the supply of foodgrains, any increase in consumption would have to be met in the short run by imports. Domestic production cannot be quickly increased in response to demand, although it can be slowly increased by better irrigation facilities and improved methods of production. Almost the entire consumption of cloth is domestically produced, and an increase in demand would almost certainly be supplied from domestic sources. As the textile mills are not producing at full capacity, an increase in output is possible rather quickly. This would, however, require larger supplies of cotton which would have to be imported. In food and cloth, the two most important categories of consumer expenditure, the excess demand would be concentrated on imports in whole or in part and would give rise to a serious balance of payments deficit.

"Even without inflation, the payments position would be weakened, and the capacity to carry out the plan would be threatened, if there were a widespread crop failure in the next few years. Unless a grant of credit were available at the time, the extraordinary imports of foodgrains would involve such large sums that India would be unable to pay for the imports of equipment essential to the five year plan. In countries like India where the crop is dependent upon the vagaries of the monsoon, sub-normal crops must be expected from time to time and a widespread failure of the crop may occur at any time. If the five year plan is not to be jeopardised by a crop failure, steps should be taken in the near future to assure India an adequate supply of food under such emergency conditions.

"The problem of resources for development in under-developed countries has two aspects: there is the payments aspect arising from the shortage of foreign exchange for the purchase of imported equipment; and there is the inflation aspect arising from the shortage of real resources because of the inadequacy of domestic savings. The poorer the country, the more likely it is that the difficulty of securing development with stability will arise from the inadequacy of total resources for investment rather than the lack of exchange for imported equipment. Where the problem is one of inadequacy of resources, it cannot be met simply by providing foreign loans or grants to pay for imported equipment. And there is the danger that countries will distort their investment programmes to qualify for foreign aid available for imported equipment. Instead of giving priority to the most important projects, which may have a very small content of imported equipment, there will be a tendency to give priority to spectacular projects for which foreign aid is available because it has a larger content of imported equipment. Or, if the more important projects are given priority, they will be undertaken in a manner that uses imported equipment wastefully where local labour and materials could be used more economically. If foreign aid is limited to loans or grants for imported equipment, it may act as an inducement to countries to resort to inflationary policies to finance development. Such a policy on foreign aid encourages the advocates of inflationary policies who argue that domestic resources are never lacking for development, that their provision is merely a matter of finance.

"The Mission has studied the data provided by the Planning Commission. It could not, however, make independent estimates of its own, either of the resources needed for the five year plan or of the resources available for the five year plan. The aggregate investment that needs to be financed (investment apart from the labour of small proprietors) is certainly not less than the amount set

forth in the plan. The estimate of resources set forth in the plan is probably in excess of the amount that can be realised on the basis of present policies. It should be possible, however, to increase the domestic resources for the development programme by policies designed to increase tax revenues and savings and to divert investment from less productive to more productive uses. Even with the most forceful measures, however, there is likely to be a large deficiency of resources for the five year plan. If investment is curtailed, the deficiency of resources may not be apparent; nevertheless, it will be real and will hamper economic progress."

Support for Raising Resources

The delegates from the U.S.A., the U.K., France, Argentina, nationalist China and Pakistan to the meetings of the World Bank and the I.M.F., which began last Monday, have supported, in principle, the proposals to double the Bank's authorised capital and to raise members' quotas in the International Monetary Fund by 50 per cent. The Philippine delegate, who supported the former proposal as well as that for setting up an International Development Association, expressed doubts about the usefulness of increasing the quotas of the Fund and urged the I.M.F. authorities to re-examine their method of assessing member countries' requests for assistance. "If the very narrow meaning that is given to the purpose for which the Fund was established and the onerous conditions lately being imposed for the grant of the Fund's assistance continue, my Government fails to see how an increase in members' quota could help in times of need", he said.

It is understood that West Germany and Japan are likely to increase their share in the capital of the World Bank, as well as their contributions to the Fund over and above the general increases proposed in President Eisenhower's letter. In that case, West Germany would be entitled to become a permanent member of the executive. The present permanent members of the Fund-Bank executive are the U.S.A., the U.K., France, India and nationalist China.

U.S. Aid to India

Speaking on U.S. aid to India, Mr. Samuel P. Waugh, president of the U.S. Export-Import Bank, has told the Federation of Indian Chambers of Commerce and Industry that the U.S. Government has agreed to assist India to the extent of about Rs. 800 crores in the fields of agriculture, capital equipment and technical advice. Of this amount, he has said, the Export-Import Bank has advanced the Government of India a loan of \$150 million. The basic reason for the U.S. aid programme to India and other under-developed economies has been summed up by President Eisenhower in these words: "The economic need of all nations—in mutual dependence—makes isolation an impossibility; not even America's prosperity could long survive if other nations did not also prosper."

Mr. Waugh said that he hoped to return to India "when these loans of ours have been translated into working enterprises, and to see them in terms of the men and women whom, in the last analysis, they are designed to serve." He concluded: "For, after all, we do have a common objective—to raise the standard of living throughout the world and to develop a consciousness of the more worthwhile things of life."

Opposition to Eisenhower Plan

President Eisenhower's proposal for an "International Development Association" is meeting heavy weather here, the main opposition coming from the Commonwealth countries, West Germany and Japan. Even Americans are divided over the proposal. It is apprehended that the Association would become a bottomless pit, swallowing its own capital, which would rapidly be converted into the currencies of the borrowing countries. As the borrowing countries will be under-developed countries, a loan in the currency of an under-developed country will not help its borrower to finance its development by paying for its import of capital goods. As Mr. Jacobsson of the International Monetary Fund has said, regional banks should be preferred to an International Development Association. As for the two other proposals of the U.S. President, namely, an increase in the authorised capital of the World Bank and the quotas allotted to member countries of the International Monetary Fund, the delegates, *prima facie*, have no authority to commit their governments. They can report the decision of the meetings to their governments, which, in their turn, will have to seek the approval of their Parliaments. Indications are not wanting that a Commonwealth front will be formed to deal with important issues. This presupposes constant and close consultations among Commonwealth delegates. Efforts will also be made to implement the Montreal decisions. Another likely development of considerable importance to India relates to the India-South Africa trade. The ban on trade with South Africa has not been "an economic blockade". It has not helped the Indians there. It is partly responsible for the gap in India's export earnings. It is in the fitness of things that India as the host country is according all due courtesies to the South African delegation. The leader of the delegation, lunched with the Prime Minister on 7th October. Although no far-reaching results had been anticipated, it was generally expected that the question of resuming trade relations would be discussed.

Work Begun on Third Plan

The Central Ministries have already begun working on the third five year plan. As far as the Transport Ministry is concerned, its main drive will be for more and better roads. Industrialisa-

tion means heavier load transport, for which stronger roads are needed. There are also plans to build "express roads" to move traffic at a faster speed. A beginning will be made in the steel area of Bihar and West Bengal. A saving of Rs. 9 crores from trading in cement is being used for financing road projects which had been held up for want of resources. Better port and road facilities for iron ore exports are also being planned. A second shipbuilding yard and the expansion of shipping are important items in the third plan. As far as the latter is concerned, the non-lapseable fund has already been created. The Dutch shipyard expert, Mr. Posthuma, has been invited by the Government of India to advise, among other things, on constructing the second shipbuilding yard on the west coast, and the super port in the south of Calcutta. Mr. Posthuma was leader of the World Bank mission which visited India last year, in connection with this country's request for a loan to finance its port development. Mr. Posthuma is also responsible for the recent expansion of Rotterdam port in Holland.

G.A.T.T. Annual Meeting

The Additional Secretary of the Commerce Ministry, Mr. L. K. Jha, will lead the Indian delegation to the ensuing annual conference of G.A.T.T. There is a tentative proposal at present to hold a brief conference of Commerce Ministers of the member countries in Geneva during the G.A.T.T. annual session so that some policy matters may be discussed at the highest level. Should such a conference eventually materialise, Mr. Lal Bahadur Shastri or Mr. Manubhai Shah will have to go to Geneva for a few days. In addition to the European Common Market, the coming G.A.T.T. conference will discuss a report on recent trends in world trade submitted by a panel of well-known economists appointed by G.A.T.T. last year. This report is likely to have an important bearing on the problem of fluctuations in commodity prices, which is a separate item on the agenda, and is of special interest to India and other countries of Asia and Africa. In this connection, another subject of discussion will be the demand by many Asian countries for the removal of quantitative and other restrictions imposed by European countries on the import of agricultural and semi-manufactured goods. The impact of such restrictions has been particularly adverse on Indian exports of jute goods to West Germany. As for the European Common Market, India's stand, in common with many other countries, is that while the Customs union is now a reality, every effort should be made by G.A.T.T. to ensure that the tariff arrangements made by the six contracting countries do

not impinge on the trade of other members of G.A.T.T.

Special Import Quotas

Pending the announcement of the new import policy, it has been decided that in order to avoid dislocation and to ensure an even flow of raw materials for industries, applications from actual users will be entertained in the same form and in accordance with the same procedure as has been in vogue during the last licensing period ended September 1958. The announcement of quotas for established importers has been made for the following items which are now in short supply:

Milk foods for infants: Established importers will get a quota of 30 percent for the next half-year. During the last half-year, the quota was 15 percent. Later, an additional 7½ percent was announced.

Malted foods: A quota of 10 percent as against the 7½ percent quota during the last half-year.

X-Ray films: Same as in the previous half-year, that is, 75 percent general and 75 percent soft.

Block and tin scrap: A quota of 40 percent for established importers. Actual users will apply separately. Formerly, licensing for this was done on a yearly basis for established importers only.

Wattle extract, wattle bark and bark for tanning: An 80 percent quota for established importers. Actual users will make their applications separately.

Mercury: A 25 percent quota for established importers, against 100 percent during the last half-year.

Raw hides and skins: A 100 percent quota for established importers. Actual users can apply separately.

Among the items for which actual users' applications will be entertained are lead ingots (pig and scrap), zinc unwrought, tin block and tin scrap, copper unwrought and hops. Some items, for which during the last half-year actual users' applications were entertained, have been excluded from this announcement. The policy for them will be announced later. These are: printing paper, rubber tyres and tubes, chilled iron shorts, angular steel grits and anchors, ball bearings of one-inch bore diameter and below, D.D.T., monosodium phosphate, potassium chlorate and copper oxide chloride. Import quotas for items having a bearing on exports such as raw hides and tanning licences for raw materials and accessories required for manufacturing goods for exports will also continue to be issued on the same basis as during the period ended September 1958. The O.G.L. for

imports from Pakistan, which expired last week, has been extended up to 31st December, and raw skins of lizards and reptiles have been included in it.

Cotton Textile Consultative Board

The Government of India has set up an 11-member Cotton Textile Consultative Board in view of the important part played by the textile industry in the national economy. The board, of which the Minister for Commerce, Mr. Nityanand Kanungo, is chairman, will be consulted by the Government generally on important matters concerning the industry. Its advice will be particularly sought on the production, distribution and exports of cotton textiles and imports and exports of raw cotton. It will also be consulted in matters relating to the procurement of raw materials, machinery and accessories required for the industry. Besides the chairman, the members of the board are: Central Minister for Industry, Mr. Manubhai Shah, vice-chairman, Mr. Kasturbhai Lalbhai, chairman, Federation of Millowners Association, Bombay, Mr. Krishnaraj M. D. Thackersey, vice-chairman, Federation of Millowners Association, Bombay, Mr. Madannohan R. Ruia, chairman, East India Cotton Association, Bombay, Mr. Neville N. Wadia, chairman, Cotton Textiles Export Promotion Council, Bombay, Mr. Flarelal Seksaria, Mr. J. K. Srivastava, Kanpur, Mr. R. Venkataswami Naidu, chairman, South India Millowners Association, Coimbatore, Mr. C. S. Ramachandran, Joint Secretary, Ministry of Commerce and Industry, and Mr. D. S. Joshi, Textile Commissioner, Government of India. The non-official members have been nominated for a period of two years.

Company Law Administration

The Government of India has constituted an informal technical advisory committee and an informal research programme committee to advise the Department of Company Law Administration, Ministry of Commerce and Industry, on legal and accounting matters and research in company accounts and statistics. The first committee will help the Department in a consultative and advisory capacity on all major issues of policy relating to legal and accountancy matters arising out of the administration of the Companies Act, 1956. The committee consists of the Companies Act, 1956. The committee consists of legal and accountancy experts and those with experience of industry and commerce. The members have been selected in their personal capacity and not as representatives of any organisation. The committee will work on the lines of the consultative and technical advisory committees associated with the Insurance and Companies Department of the Board of Trade in the United Kingdom.

Since its inception three years ago, the Department of Company Law Administration has been aware of the important role assigned to it in the regulation of the organised private sector in conformity with the accepted social and economic policy of the country. It was necessary that the new Department should be properly organised and adequately manned to be able to discharge its new responsibilities satisfactorily. In addition to the purely routine policing functions that the registrars of joint-stock companies under State Governments had performed so far, this task is nearly over and the informal technical advisory committee has now been set up to be associated with the Department to help it in tackling the difficult technical questions. The committee consists of Mr. D. L. Mazumdar, Secretary, Department of Company Law Administration, Ministry of Commerce and Industry (Chairman); Mr. N. R. Mody, Mr. G. Basu, Mr. S. P. Chopra (chartered accountants), Mr. G. P. Kapadia, president, Indian Merchants Chamber, Bombay; Mr. J. D. K. Brown of Messrs Jardine Henderson, Mr. J. M. Lal of Imperial Chemical Industries and Mr. C. C. Shah, solicitor, Bombay, members.

The informal research programme committee will suggest suitable studies to be undertaken by the Company Law Department, the scope of such studies and the methods and techniques of analysis. It will generally assist the Department in making the best use of the data available from company records. The Research Statistics Division of the Department has already done considerable work in the collection, compilation and analysis of company accounts and other data. It has high-grade research in company accounts and statistics of the type carried on in some of the special United States and United Kingdom. The stage has now been reached when the scope of the work of the Division can be expanded. This Committee Department of Company Law Administration, Ministry of Commerce and Industry (chairman), and Mr. S. P. Chopra, Mr. S. N. Desai, Mr. C. C. Chokshi and Mr. R. C. Cooper (chartered accountants), members. In addition, there will be official members also.

Central Sales Tax Act

The Government of India has enforced Section 15 of the Central Sales Tax Act, 1956, from 1st October, 1958. Section 15 places certain restrictions and conditions on the powers of State Governments to levy tax on the sale or purchase of inter-State trade or commerce. These goods are cotton, cotton yarn, coal, hides and skins, iron and steel, jute, oilseeds, certain items of textiles, sugar and tobacco and its products. The last three items, in December 1957, in replacement of sales taxes, will, however, continue to be exempt from sales tax.

New Railway Freight Structure

The revised railway freight structure has come into force from 1st October. According to the Gov-

ernment's decisions on the Railway Freight Structure Enquiry Committee's report, the revised freight structure will result in additional revenue of Rs. 9.6 crores a year at the existing level of goods traffic. The additional revenue yield from the revised parcel rates, which have also come into effect from 1st October, is expected to be about Rs. 2 crores. Another important change which has taken place from 1st October is that all freight rates from that date are quoted in decimal coinage. Also from this date, the existing supplementary charge of 12½ percent has been abolished.

So far, a charge of 1 anna in the rupee was levied on all consignments weighing less than 20 maunds. Under the revised freight structure, this surcharge has been fixed at 10 percent of the total freight, instead of 1 anna in the rupee. This will, however, be levied only on consignments weighing less than 10 maunds instead of 20 maunds as at present. The four important features of the new freight structure are: (i) the overall freight burden on foodgrains is reduced; (ii) there is no overall increase in the freight on fruits, vegetables, kerosene oil and salt; (iii) special treatment continues to be accorded to handloom products, khadi, books and milk which are now exempt from the 12½ percent supplementary charge; and (iv) the overall increases generally will be moderate and the minimum necessary to give the extra revenue required.

Road Transport Co-ordination

In order to ensure proper and planned development and to secure the maximum co-ordination between the various modes of transport, the Government of India has decided to set up a Road and Inland Water Transport Advisory Committee. Its main functions will be to examine problems relating to roads, road transport and inland water transport and to make recommendations to the Transport Development Council for final decisions. The Minister of State in the Ministry of Transport and Communications, Mr. Raj Bahadur, will be the chairman of the committee, which will consist of 15 official and 1 non-official members. While the official members will represent the different Ministries of the Central Government connected with transport and the six Transport Commissioners and Controllers from the States selected on rotation, three of them being changed every year, the non-official members are being drawn from interests directly connected with the development of roads and road transport or inland waterways and are being nominated to the committee in their personal capacity. The names of the official and non-official members are as follows:

The official members are: The Secretary, Department of Transport, Ministry of Transport and Communications; chairman, Railway Board; Secretary, Ministry of Commerce and Industry; Adviser (Planning), Planning Commission; chairman, Inter-State Transport Commission; Financial Adviser, Ministry of Transport and Communications; Development Adviser, Department of Transport; Ministry of Transport and Communications; Consulting Engineer (Road Development), Department of Transport, Ministry of Transport and Communications; Deputy Secretary (in charge of Road Transport Division), Department of Transport, Ministry of Transport and Communications; and Transport Commissioners or Controllers of the States of Bombay, Uttar Pradesh, Madras, West Bengal, Bihar and Kerala.

The non-official members of the committee are: Mr. B. V. Vagh, vice-chairman, Indian Roads and Transport Development Association; Mr. K. G. Dayal, vice-chairman, Federation of Automobile Associations of India, Mr. Kundan Lal, Secretary-General, All-India Motor Union Congress; Mr. L. P. Misra, Hindustan Motors Limited, Mr. A. E. L. Collins, managing director, Messrs Ashok Leyland Ltd.; Mr. T. S. Krishna, Messrs T. V. Sundaram Iyengar and Sons Private Ltd.; Mr. R. G. Saraiya, chairman, Bombay State Road Transport Corporation, Bombay; Mr. Osman Ali Khan, M.P.; Sardar Uddham Singh Nagoke, M.P.; Mr. D. P. Sharma Ayurvedacharya, Patna; Mr. T. Subramanyam, M.P.; Mr. Liladhar Kotoki, M.P.; Mr. K. C. Chatterjee, managing director, Indian Shipping Company Ltd., Calcutta; Mr. J. M. Parsons, director, Macneill and Barry Ltd., Calcutta; and Mr. B. K. Gokhale, chairman, Tungabhadra Board. An officer of the Department of Transport will act as secretary of the Committee. It is proposed to hold the first meeting of the Committee on 14th and 15th November in Delhi.

Washed Coal Needs of Steel Works

The requirements of washed coal for the three new steel plants in the public sector and the expanded steel plants in the private sector are estimated at about 9 million tons. The washery in Karkali, set up by the National Coal Development Corporation, will supply 1.1 million tons to Rourkela and 500,000 tons to Bhilai. Two washeries owned by Tatas, one in Bokaro and the other in Jamshedpur, will, after certain improvements, supply 1.5 million tons of washed coals. The washery in Lodna, which supplies the Indian Iron and Steel Works, has an output of 220,000 tons. With the establishment of the washery in Karkali and the improvements to the Tata washeries, capacity has to be set up only for the balance of about 5½ million tons. A washery is included in the contract for the steel plant in Durgapur to wash Jharia coals to meet the requirements of that plant. The balance—about 4.8 million tons—is proposed, will be met from three washeries to be put up, one in Dugda, another in Bhojudih and the third in Patherdih. The washery in Dugda will supply washed Jharia coals to Bhilai and Rourkela, the one in Bhojudih to the Tata Iron and Steel Works and the Patherdih washery to Indian Iron and Steel Works.

4½ PER CENT. BIHAR STATE DEVELOPMENT LOAN 1970

ISSUED AT RS. 99.50 AND REDEEMABLE ON 13TH OCTOBER 1970.

The Government of Bihar announce the issue of their new loan for Rs. 250 lakhs bearing interest at 4½ per cent. at an issue price of Rs. 99.50 per cent. The Government reserve the right to retain subscriptions up to ten per cent. in excess of the notified amount.

The loan will be repaid at par on 13th October, 1970.

THE LOAN WILL OPEN FOR SUBSCRIPTION ON 13TH OCTOBER, 1958 AND CLOSE ON 18TH OCTOBER, 1958 OR EARLIER WITHOUT NOTICE. THE LOAN WILL BEAR INTEREST FROM 13TH OCTOBER, 1958.

Subscriptions may be in the form of cash/cheque.

Applications will be received at the Public Debt Offices of the Reserve Bank of India at Bombay, Calcutta, New Delhi, Madras and Bangalore and at the branches of the State Bank of India and treasuries and sub-treasuries in Bihar State.

Copies of Notification and Application Forms may be obtained at any Receiving Office.

TUGS MEAN PROGRESS...

Mazagon Dock Build Tugs

Mazagon Dock have built, during the last few years, tugs of different types for Bombay Port Trust, Saurashtra Govt. and several other parties. Their performance compares favourably with the best in the world and this is reflected by the further recent orders received by Mazagon Dock for vessels of this type.

INDO-CEYLONESE TALKS ON TEA PACT

A DELEGATION representing the Consultative Committee of Indian tea producing associations is paying a visit to Colombo to discuss informally with Ceylonese producers the problems connected with the International Tea Agreement. It consists of Messrs L. T. Carmichael, chairman of the Indian Tea Association, M. M. Varghese, president of the United Planters Association of Southern India, B. C. Ghose of the Indian Tea Planters Association, Jalpaiguri, and J. L. Llewellyn, the I.T.A.'s deputy chairman.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for September 1958:

Upper Assam: Weather hot and unfavourable in some circles and interfering with outturn; outturn normal to poor; immediate prospects fair.

Central Assam: Outturn normal to poor; weather generally seasonable but too hot in Golaghat where rain is badly needed; crop prospects fair.

Lower Assam: Weather generally hot and dry and rain badly needed; outturn normal though considerably under last year in Mangaldai; prospects poor to fair.

North Cachar: Rainfall badly distributed and crop is coming forward slower than usual in Lakhimpur.

South Cachar: Weather generally seasonable; outturn above normal in Chargola and Longai; prospects fair; black rot prevalent in Chutlabheel and Longai and helopeltis in Hallakandi.

Eastern Dooars: Weather seasonable; outturn about normal but poor in Kalchini; immediate prospects fair but unfavourable in Kalchini.

Central Dooars: Outturn about normal; immediate prospects fair; weather seasonable.

Western Dooars: Outturn about normal but poor in Oodlabari and Nagrakata; immediate prospects fair but bad in Nagrakata; helopeltis prevalent in Dam Dim.

Darjeeling: Outturn in August very poor; immediate prospects fair; weather unfavourable; blister blight severe.

Teral: Weather generally not favourable; crop prospects fair.

Commodity Markets

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) fell by 0.2 percent to 116.7 during the week ended 20th September, 1958, compared with 116.9 (revised) for the previous week. The index was higher by 0.6 percent and 6.3 percent, respectively, when compared with the corresponding week of the previous month and that of last year. The index for Food Articles receded by 0.2 percent to 121.6 compared with 121.8 (revised) for the earlier week due to a fall in the prices of fish (Sole) in Tirur (-12%), rice in Kanpur (-7%) and in Saharanpur (-5%), barley and maize (-5% each), tea for internal consumption (-4%), wheat and eggs (-3% each), jowar, bajra, gram and salt (-2% each) and cashewnuts and black pepper (-1% each). The prices of rice in Contai (+14%), in Tihu (+13%), in Cooch Behar sader (+9%) and in Matihat (+7%), meat in Ludhiana (+11%), arhar in Delhi (+9%), milk in Bombay (+6%), ragi (+3%), potatoes, gur and cardamoms (+2% each) and groundnut oil and gingelly oil (+1% each) however, showed advances. An increase of 5 percent in the price of raw tobacco (Pollah F.A.Q. medium) in Calcutta was responsible for raising the index for tobacco by 0.9 percent to 89.4. The index for the Fuel, Power, Light and Lubricants group stood at 115.8 compared with 115.9 for the earlier week. The price of castor oil in Bombay (-6%) showed a fall. Lower prices of raw hides (buffalo wet salted) in Kanpur (-7%), tanning materials (Avaram bark) in Madras (-6%), raw cotton (-2%) and gingelly seed, rapeseed and lac (-1% each) brought down the index for Industrial Raw Materials by 0.4 percent to 119.0 compared with 119.5 (revised) for the earlier week although the prices of tanning materials (Konam bark) in Madras (+11%), castorseed and bamboos (dry) (+5% each) and cottonseed (+1%) witnessed an increase. The index for Intermediate Products declined by 0.6 percent to 111.4 as a result of a fall in the prices of aluminium (circles) (-6%) and linseed oil and cotton yarn (-1% each) tin (+1%), however, moved up. The prices of handloom cloth, jute manufactures and silk and rayon manufactures (+1% each) showed advances while sesamum cake in Bombay (-6%) and general chemicals (-1%) moved down and the index for Finished

Products stood at 108.6 against 108.5 for the earlier week.

LONG-TERM PRICE POLICY FOR U.S. COTTON URGED

At its annual meeting in Stockholm at the end of August, the International Federation of Cotton and Allied Textile Industries unanimously adopted a statement on raw cotton policy. This has now been formally submitted to Mr. E. T. Benson, U. S. Secretary of Agriculture, who, it is hoped, will give due weight to the views of an organisation representing 16 countries which, between them, consume over 80 percent of all the raw cotton which enters into international trade. Last year, at a meeting in Venice, the Federation's Committee of Management adopted a resolution reiterating its grave anxiety over the continued uncertainty about the U. S. Government's policies for raw cotton prices. This, it was pointed out, might particularly affect the future stability of supplies, expansion of markets, and the trading position of raw cotton purchasers, spinners and manufacturers. What was required, the resolution said, was a long-term policy which would ensure the continued supply of raw cotton at world prices. The uncertainty under the two-price system seriously jeopardised the operations of spot, c.i.f., and future markets. In its present statement, the Federation expresses its belief that the cotton legislation which was passed recently in the United States represents significant progress towards the stated objectives of encouraging cotton consumption by establishing a long-term policy which will ensure a continuity of supply of cotton at more competitive prices. The Federation commends this forward step, but reiterates that the continuance of any cotton marketing policy, even for a limited time, under which export selling prices can be arbitrarily changed at any time with or without notice, is detrimental to the free flow of cotton into consuming areas. It undermines confidence in forward buying and prevents traders throughout the world from reaching long-term arrangements for the import and consumption of cotton and cotton goods. Moreover, it continues, such a policy makes it most difficult for futures markets to provide the traditional cover against price fluctuations. Unless there is a return at an early date to a one-price system and free marketing, the cotton futures markets in importing countries will cease to function and consuming world. Therefore, in order to restore confidence in cotton and further to encourage a worldwide increase in consumption of cotton, the Federation urges the U. S. raw cotton branches of the Government to continue their efforts to eliminate the two-price system as soon as possible. Sudden arbitrary changes in export selling prices, changes in export taxes, and abrupt alterations in rates of exchange in other producing countries also contribute to the prevailing uncertainty in the cotton consuming world. The Federation desires to impress on the cotton interests and the Governments of these countries the widespread consequences of such actions and most emphatically urges on them the necessity of adopting policies which will remove these uncertainties.

Jute

EASIER TREND IN GUNNIES AND FIBRE

ANXIETY ABOUT FALL IN RAW JUTE PRICES

PRICES in the Calcutta jute goods and fibre markets continued to improve at the opening of the past week, supported by the measures taken earlier by the futures market authorities. The advance was short-lived, however, and a slow under-current of bearish sentiment developed, which gathered momentum as the week progressed. It was fairly obvious that if overseas buyers were not interested in business at the previous low levels, there was very little likelihood of enquiries at the higher rates. This was particularly evident in hessian, where surprise had been expressed in various quarters that the discount on forward shipment goods had induced so little foreign interest. Business was again on a small scale, and was confined mainly to the near positions, which re-emphasised that buyers were firmly following a hand-to-mouth purchasing policy. As a result of this policy over a long period, many overseas consumers are now not in a position to wait for forward shipment goods to arrive as their stocks have been allowed to drop to the bare workable minimum. Thus they cannot take full advantage of the position which their policy has induced.

Following the recent decision by the futures market authorities, fibre prices followed the general trend by recording substantial rises. But the rise here was far greater than in goods, which perhaps discouraged mills from making large purchases. Raw jute advanced by Rs. 2 a maund, or about Rs. 55 a ton, but the rise in heavy goods and hessians was only equivalent to about Rs. 20 a ton in each case. Very little business was conducted at the enhanced rates, and as the current period progressed, prices gradually fell back to the former levels. This trend was hastened by the large arrivals of jute in most of the upcountry agencies.

Concern has been expressed in many quarters at the low price of jute, and jute growers' associations from many areas have urged the Government to take immediate action to relieve the situation. Official quarters are aware of the difficulties, as also of the possibility of a large drop in the area under jute next year should growers not obtain a reasonable return for their crop this season. In an attempt to stabilise the price of jute, the I.J.M.A. with the backing of the Government, recently recommended that its members purchase jute to bring their stocks up to three months' supply. Several State Governments have also decided to open godowns in jute-growing areas to purchase jute from the growers to stabilise prices. However, it is doubtful if this can be done in time to alleviate the growers' present plight, and it is feared that many of them will be forced to sell their produce at a huge loss as they do not have the holding power to delay sales longer.

THE JUTE MARKETS

Prices moved within narrow limits in the futures market, and rates, as given by the East India Jute and Hessian Exchange Ltd., for the period 1st October to 7th October were as follows:

	Hessian 40in. 10oz. November	Sacking B Twills November	Raw Jute Upper Assam December	
	Rs. a 100 yds.	Rs. a 100 kilos	Rs. a 100 bags	Rs. a md. 100 kilos
Opening	40.30	44.07	96.45	23.58
Highest	41.02	44.85	97.30	23.82
Lowest	40.06	43.81	95.90	22.92
Closing	40.30	44.07	96.45	23.12

Manufactured Goods: The jute goods market was officially closed last Thursday, but at the opening on Friday the steady trend continued and prices showed substantial advances. B Twills stood at Rs. 97 for October shipment and Rs. 98.35 for January-March shipment, while 40in. 10oz. hessians were called over at Rs. 42.40 for October, and Rs. 39.90 for forward shipment. There was no overseas interest at these prices, and as the day advanced an easier tendency developed. The

on Kishanganj jute at Rs. 22.25 a maund for garsat quality.

On Wednesday morning, opening quotations were as follows:

THE PAKISTANI JUTE MARKETS

FIBRE PRICES DEPRESSED

(FROM A CORRESPONDENT)

DURING the first half of September, the Pakistani raw jute market was weak and depressed due to heavy selling pressure. Prices fell to uneconomic levels and caused much concern among sellers and growers. The steadily rising level of the rivers was mainly responsible for making growers nervous who, in panic, started releasing stocks at even lower rates. Unlike previous years, they could not resist the bearish tendencies. Heavy arrivals, coupled with the lack of interest from local and overseas buyers, depressed the market. The worldwide depression in primary commodity prices was to a great extent responsible for this crash. Overseas buyers remained quite inactive. Export Firsts and Export Lightnings were offered below £90 and £50 a ton.

The past month ended with quite featureless trading. Prices continued to fall under the impact of hesitant and dull overseas and local buying. Export prices touched the lowest level.

Since the devaluation of Pakistani currency, and even now, overseas buyers have been expecting a further fall. The factors which have been responsible for the present situation are restricted buying by overseas spinners, a large jute crop and the worldwide depression.

The Pakistan Jute Association, in its monthly Press conference last month, expressed serious concern over this situation and urged the Government to set up a Jute Enquiry Committee with definite terms of reference for the improvement of the jute trade in general. In accordance with the suggestion of the Association, the Chief Minister appointed a committee to examine the reasons for the fall in fibre prices and to suggest remedies. Unfortunately, while selecting the members of the committee, he completely ignored the recommendations of the Association, as all members are

I.J.M.A. STOCK FIGURES FOR SEPTEMBER

The Indian Jute Mills Association reports the total stocks of jute goods at the end of September as follows:

Description	30th Sept., 1958 Lakh yds. (000 Metric Tons)	31st August, 1958 Lakh yds. (000 Metric Tons)	Increase or decrease from last month (Lakh yds. 000 Tons)	30th Sept., 1957 Lakh yds. (000 Metric Tons)
Hessian Cloth and Bag	6.33 (5,79,14)	17.0 (17.3)	6.83 (6,24,96)	19.0 (19.3)
Sacking Cloth and Bag	19.25 (17,60,61)	79.8 (81.1)	21.00 (19,20,39)	86.4 (87.8)
Others		11.8 (12.0)	11.8 (11.9)	0.0 (0.1)
Grand Total (000 Tons/Metric Tons)	108.6 (110.4)	117.2 (119.0)	-8.6 (-8.6)	77.0 (78.2)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills. The figures in brackets are metric measures, based on the actual (detailed) figures, and are more precise.

MORE PIPES

With the erection of the second spun pipe plant at the Kulti Works of The Indian Iron and Steel Co. Ltd., the production of spun iron pipes will increase from 60,000 to 150,000 tons per year. This additional tonnage will save India Rs. 8 crores annually in foreign exchange. The output of the plant will help to satisfy India's growing demands for pipe mains. Employing the latest techniques, this unit is the first to produce 16" to 27" diameter spun iron pipes in the country.

politician M.P.A.s. The whole thing smacks of politics rather than an expert probe.

The committee is understood to have already submitted its recommendations to the Government after three days' deliberations. It is reliably learnt that it has criticised the "dual" control on jute—on the one hand, by the Centre through the Jute Board, and, on the other, by the province through the Jute Directorate. Among its recommendations, the setting up of an export bank to advance money to local traders is most important. The committee, it is reported, has strongly criticised the interference of the Central Government. It has also expressed an opinion on the share of taxation collected by the Centre.

directors' report for the year ended 31st December, 1957. The report was presented to the fifth ordinary meeting of shareholders held at Adamjee Court in Dacca. After providing for depreciation, interest, etcetera, the profit and loss account shows a loss of the aforesaid amount. After adjusting a sum of Rs. 2,26,725, being the amount brought forward from previous years, and Rs. 1,07,268 for stores adjustment, there is a loss of Rs. 93.82 lakhs which the directors have recommended to be carried forward. Analysing the causes of the adverse trading results during the past year, the report says that general strikes during February, June and October, in addition to certain partial strikes staged by workers, resulted in a loss of 21 working days and 2,289,568 man-hours. The loss of production, in terms of money, amounted to approximately Rs. 65 lakhs. The loss in production as a result of strikes and labour inefficiency is estimated at Rs. 1.85 crores. The colossal loss has not only adversely affected the earnings of the company but also the country's foreign exchange earnings, the report says.

Other contributory factors leading to the adverse results were: (1) the wide disparity between prices of raw jute and manufactured goods. (2) the extremely poor quality of the jute crop containing heavy roots during the season 1957-58 which led to an increase in manufacturing costs. (3) loss in production due to poor productive efficiency of workers and (4) expenditure of over Rs. 8 lakhs in subsidising rice supplies to workers due to the abnormally high prices for rice in the province. No dividend has been recommended due to unsatisfactory trading results. The directors also regret that their previous decision to issue bonus shares by capitalising the general reserves of the company could not be implemented as it was considered not advisable to take any action for the time being.

THE FOREIGN JUTE MARKETS

DECLINE IN FIBRE PRICES

(FROM OUR DUNDEE CORRESPONDENT)

THE irregularity in the raw jute market in Pakistan is causing concern to the industry in Dundee, and buyers at present appear to be hesitant. Pakistani advisers have indicated a reduction of £2 a ton in the E.P.C. prices for the fibre, bringing them down to £101 for Mill Firsts, £85 for Mill Lightnings, £75 for Mill Hearts and £62 for grade Hearts, c.i.f. U.K., October-November. Some dealers have sold at these rates during the past week. A meeting is taking place in Pakistan to determine the fixing of minimum prices for raw jute, and it is reported that suggestions have been made to fix the new minimum rates at the levels now quoted. Sellers are, therefore, rather chary of quoting less at present although it is believed that business has been transacted at lower rates.

There is a feeling in the industry that the law of supply and demand will regulate the price level of raw jute this season, and that the bumper crop of good quality jute will result in low prices ruling later. It would be a good thing for the trade if the Pakistani authorities were made to understand that there are other sources of supply in the world, such as Brazil, Thailand, parts of Russia, Burma and China. Although at the moment they are not of much significance as competitors to Pakistan, it cannot be denied that the cultivation of jute is increasing.

Good marks of Daissee-2/3 are obtainable at £90 and grade at £84, with grade Tossa-2/3 from £101 and grade Tossa-4 £91, October-November, c.i.f. U.K. Spinners here have been buying quietly but steadily during the past week.

Calcutta goods are very firm for near shipment, as there is a scarcity of supplies. It is thought that the mills should be making money by buying their jute at the cheaper prices and selling at 63s 6d for 40in. 10oz. and 46s 3d for 74oz. October, 61s 9d and 46s November and 61s 6d and 45s 6d December, with B Twills at 145s 3d, 146s 6d and 46s for the respective positions of shipment, all f.o.b. Calcutta Jute yarns and cloth are selling steadily at firm prices. Spinners and manufacturers are comfortably placed with orders.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 25th September, 1958	1,140.8	21,960.7	23,101.5
1st to 25th August, 1958	3,601.2	19,540.9	23,142.1

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

DUST PRICES RISE

AT Sale No. 16, held on 6th and 7th October, offerings at the Export auction were 69,199 chests, for which there was a good general demand. "Teas for price" sold well, while plain medium B.P.'s and Fannings were fully firm and the latter were sometimes dearer. Orthodox Assam B.O.P.'s and O. Fgs. were about 10nP to 20nP easier, with buyers following quality. B.P.'s sold well at dearer rates. There was good support for C.T.C.'s, the lower priced sorts and those with useful liquors selling at sometimes dearer rates, while the poorer liquoring medium kinds were 10nP to 20nP easier. Legg cut and plainer Doars B.O.P.'s declined by about 4nP to 8nP, while leaf grades were irregular, but often dearer. There was again fair enquiry for tippy teas and Darjeelings at rather irregular and easier prices.

Quotations	Rs.
Clean Black Pekoe	2.00
Plain B.P.	1.70
Plain Fannings	1.85 to 1.90
Medium B.P.	1.85
Medium Fannings	1.90 to 2.00
Best Assam C.T.C. B.P.	2.70 to 2.80
Best Assam C.T.C. Fgs.	2.90 to 3.10

At the Internal Sale, 22,704 chests of Dusts were on offer. There was a strong and active demand for orthodox descriptions from all districts, and these were sometimes up to 10nP dearer. Legs-cut Doars also met with better demand and often sold above valuations. C.T.C. teas were rather irregular, the plainer liquoring kinds declining by 10nP, but the better grained kinds were 10nP dearer. The few Darjeelings on offer were about steady, preference being shown for the powdery kinds.

Quotations	1958 Rs.
Medium Doars Dust	1.86 to 1.88
Medium Assam Grainy Dust	1.88 to 1.90
Medium Assam C.T.C. Dust	2.10 to 2.30
Best Assam C.T.C. Dust	2.80 to 3.10 (Nominal)

Leaf offerings amounted to 1,936 chests. There was again a good general demand at firm to dearer rates.

FREIGHT MARKETS QUIET

SHIPOWNERS have received some encouragement from the announcement that 350,000 tons of grain is to be shipped from U.S. Atlantic and Pacific coasts by the end of January 1959. Half of this quantity will be carried by American flag vessels, leaving some 12 or 15 cargoes for ordinary traders. There is very little else of interest to report, and no local business has been concluded during the past week.

LINSEED QUIET

Due to improved arrivals and continued lack of demand, there has been a notable decline in prices over the past week. The general undertone of the market is quiet. Crushers are more or less idle with oil prices weaker, and offtake poor. The oil section is inactive. The Calcutta demand has decreased following a further fall in groundnut and mustard oil. Overseas markets are quiet, and Indian prices are still out of line. Latest quotations are as follows: Ready Rs. 25 a maund and October Rs. 25 a maund.

HIDES AND SKINS STEADY

The market ruled quietly steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 30th September and 6th October, 1958)
Cowhides: Wet salted (Ord.) 6,100 pcs. on the basis of Rs. 7 to Rs. 10.50; Wet salted (Slaughtered) 12,500 pcs. on the basis of Rs. 10 to Rs. 15.50 and Rs. 17.50 to Rs. 25; Wet salted (Ord.) 4,400 pcs. on the basis of 75nP to 78nP a lb.

Goatskins: Wet salted (Patna, Daissee, Kustia) 33,550 pcs. on the basis of Rs. 270 to Rs. 275; Rs. 314 to Rs. 340 and Rs. 370 to Rs. 380; Wet salted (he-killed) on the basis of Rs. 3.75 and (she-killed) on the basis of Rs. 3.25 a piece; Assam-Dinajpur-Ram-purhat 17,800 pcs. on the basis of Rs. 275 to Rs. 340; Purneah-Maldah-Kishanganj-Behariganj 7,700 pcs. on the basis of Rs. 310 to Rs. 345; Patna (Ord.) 3,300 pcs. on the basis of Rs. 270 to Rs. 305; Muzaffer-pore-Patna 4,100 pcs. on the basis of Rs. 315 to Rs. 325; Muzaffer-pore (Kurban) 1,100 pcs. on the basis of Rs. 370.

Bazaar Stocks

(6th October, 1958)

Cowhides: Wet salted 48,500 pcs.
Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 38,000 pcs., Assam-Dinajpur 1,25,000 pcs.; Muzaffer-pore - Patna - Pakur - Purneah - Kishanganj 273,000 pcs.

SUGAR QUIET

During the week ended 8th October, sugar sales in the Calcutta market averaged 6,500 bags. Arrivals a day were 5,000 bags and stocks totalled 132,000 bags. Rates for ordinary grain were Rs. 38-2 to Rs. 38-8 and Rs. 41-2 to Rs. 41-12 for bold grain. The market was quiet.

SHELLAC STEADY

During the week ended 7th October, the market was steady. The range of quotations was as follows:

Standard Pure Buttonlac	Rs. 80 buyers.
TN Pure Shellac	Rs. 58 value; 59 buyers; 60 sellers.
Standard One Shellac	Rs. 68 to 70 buyers; 70 to 72 sellers.
Superfine Shellac	Rs. 68 to 71 buyers; 70 to 72 sellers.
Lemon No. 2 Shellac	Rs. 76, 78 buyers; 78, 80 sellers.
Lemon No. 1 Shellac	Rs. 82, 83 buyers; 83 to 84 sellers.
Kusmi Seedlac No. 2	Rs. 70 value.
Kusmi Seedlac No. 1	Rs. 75 value.
One B Seedlac	Rs. 66, 67 buyers; 67, 68 sellers.
Two B Seedlac	Rs. 61 buyers; 62 sellers.
Manbhumi Fine Seedlac	Rs. 65, 66 buyers; 66, 67 sellers.

C.P. Fine Bysacki Seedlac Rs. 61 buyers; 62 sellers.
C.P. under 5% Seedlac Rs. 57 done and buyers; 57 buyers; 58 sellers.
C.P. 5% to 7% Seedlac Rs. 53 buyers.

Shipments during October until the 4th were 2,780 packages comprising shellac 715 packages, seedlac 1,950 packages, buttonlac 115 packages and others nil.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

TEA COMPANIES

O. Po. and Dd. indicate Ordinary Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

ACHIEVEMENTS OF THE NEW DELHI FUND-BANK MEETINGS

PROPOSALS FOR AN I.D.A.: EXPANDING THE BRETTON WOODS TWINS

BEFORE final judgment is passed on last week's Fund-Bank meetings in New Delhi, it is useful to recall what was originally expected of them. They were bound to have assumed special significance from the simple fact of being held for the first time, in Asia. There were also other influences to be taken into account, such as the growing Soviet economic offensive and the apparently rapid decay of democracy in this part of the world. But following so soon after the Montreal conference, with its emphasis on the more strictly technical issues of maintaining the earnings of primary producers under conditions of world depression and of promoting development in under-developed countries—both variants of the purposes for which these twin institutions, and their offshoot, the International Finance Corporation, were originally devised—the New Delhi meetings had become invested with an altogether more urgent technical significance than their predecessors long before the delegates got down to work. The main purposes of this year's Fund-Bank meetings were, therefore, to improve these institutions' efficiency as instruments for maintaining world liquidity and developing backward countries. More specifically, it was hoped they would approve a broad scheme suggested last August by President Eisenhower and designed to promote these two ends. Any cold-war purposes the meetings might have served, or any hope they may have given India in her balance of payments problems, must be ranked as largely incidental to the main issues. When this fact has been established, it is possible to make some assessment of what progress has been made with the problems the two international organisations were originally designed to tackle. Here, it seems safe to say that the New Delhi meetings were an unqualified success; and in being so, they have certainly made a more than average contribution towards promoting all the other incidental, though important, aims as well.

The most concrete achievement of the New Delhi meetings was, therefore, the unanimous acceptance of the Eisenhower proposals for increasing the resources of both the Fund and the Bank. Criticism was heard, some of it fairly strong for a conference not designed to deal with detail. But the general view was completely favourable to the expansion of the two institutions, especially the Bank. A 100-per cent increase in the share capital of the latter will make a handsome contribution to world development, and one from which India promises to be among the chief beneficiaries. It does not necessarily involve the shareholders in any immediate outlay—a fact which may have accounted for the enthusiasm with which it was accepted compared with the doubts expressed about the 50-per cent expansion approved for the Fund. This will cost all members a substantial sum in gold and foreign exchange at once, which some of them, India included, will find difficult to meet. The New Delhi meetings may have improved the scope and efficiency of the Bretton Woods twins, but it must not be supposed that there is no cost involved, any more than it need be expected that all benefits will be immediate. The most important point is that there should be a balance of advantage; and as to that it can be said without hesitation that there will be.

Along with most other developing countries, India has most to gain from the expansion in the Bank's resources. There will be some benefit from the increased Fund, especially during years such as the one just past when adverse trading conditions combined with bad planning to bring about acute balance of payments crises. But India can expect no permanent relief from her foreign exchange shortage from the Fund. This is not its function, as Mr. Per Jacobsson made clear in his address on the annual report. It can, now its expansion has been agreed upon, provide a larger cushion than before in times of emergency. What it cannot do is to postpone the emergency indefinitely. That remains the task of individual govern-

ments, and Mr. Jacobsson had much to say on the need for competent national housekeeping. One point he did emphasise was that a sound currency can, in the long run, foster more speedy industrialisation than one weakened by inflation. In this he is certainly correct; and fortunately India is not yet in immediate need of such a warning. The feeling at the meetings seemed to be that the rupee was remarkably sound considering the strain which development has inevitably exerted on it. At the same time, it would be foolish to ignore the warning, or to look to an expanded Fund as a certain guarantee against disaster. Its main task so far as the developing countries are concerned will continue to be that of ironing out temporary fluctuations in balance of payments situations. The only hope that it will ever act otherwise lies in the possibility that notice might be taken of the complaints put forward in New Delhi that the Fund is too rigid and conservative in its attitude towards the claims made upon it. But it needs to be emphasised that this would constitute only a change in detail, not in policy.

Any chance of more liberal policies from the World Bank would seem equally remote. In his address, Mr. Eugene Black was completely forthright on this point. The Bank's resources were not, he pointed out, at the disposal of Governments who refuse to put their own economic houses in order, or who look upon them as a substitute for unpleasant political policies. Even less were they designed to meet claims based on sentimental or strategic grounds. But taking full account of Mr. Black's warnings, the expansion of the Bank's resources promises a substantial benefit for India. This country is already the largest borrower and can expect, with reasonable confidence, to remain so, if only because it seems able to put forward the largest number of acceptable projects. The fact of this year's meetings being held in New Delhi may have helped considerably to supplement the faith that the Bank has already shown in this country's future.

The meetings brought the usual crop of criticisms against the Bank's lending policies. These have certainly been conservative in the past, if for no better reason than that the Bank must conduct its activities with normal commercial caution. There seems to have been one other reason, too, and that is the difficulty which some borrowers experience in making repayment in dollars. This question of easing the burden of repayment was the main feature of the discussions on both the International Finance Corporation and the proposed International Development Association. Plans for establishing such an organisation as an adjunct to the World Bank are now for discussion in Washington where, according to Mr. Douglas Dillon, U.S. Under-Secretary of State for Economic Affairs, they will receive urgent and sympathetic attention. The project was warmly supported by, among other States, India, in the person of the Finance Minister, Mr. Morarji Desai. Some of the

unofficial enthusiasm for the idea may have owed a good deal to the impression that the new Association will not be as strict in its lending policies as the Bank. Mr. Desai himself may have contributed to this when he referred to "some supplementary agency...necessary to assist those essential projects which are not eligible for World Bank loans because they do not yield adequate financial return". It is doubtful if this is in fact what the United States Government has in mind. If it were, the new Association would soon replace the Bank itself, because no borrower would go to an institution demanding an adequate return if he could raise the money from one which does not. The real point of the new organisation appears to be simply that it will be able to accept payment in local currencies for loans granted on exactly the same conditions as Bank loans themselves.

Even with this limited function, the idea has immense possibilities. Infinitely more projects could be covered and regard need not be had to the borrowing country's ability later on to find the dollars. Its importance to a country such as India, whose exports are traditionally orientated towards what are at the moment soft-currency areas, is not difficult to imagine. The local resources of the Association would be self-renewing and would remain available for investment within the same country over a considerable period of time. No doubt lending rates would be appropriately higher. But this does not alter the fact that such an organisation offers a new and remarkably hopeful opportunity for developing countries to raise more loans without at the same time having to plan for major adjustments in their economies such as would be required eventually to earn the dollars to meet repayment liabilities. It is to be hoped that the ideas expressed at the meetings about the proposed Association are translated into reality with the least possible delay. More than any others put forward, they promise a sensible and practical alternative to the present communist economic penetration based on the repayment of loans and payment for imports in local currencies.

Much the same can be said for the similar proposals put forward for the International Finance Corporation. This organisation, too, has met with considerable criticism on account of its slow rate of expansion, its exacting lending requirements and the high rates of interest it has been charging. Once again, there seems no hope that the Corporation will be allowed to degenerate into a "give-away" organisation; that was one point Mr. Robert L. Garner, like his colleague Mr. Black, went to great pains to make clear. But the acquisition of local resources might help to meet the first of these complaints, and possibly the second as well. India has not yet attracted the Corporation's attention. But Mr. Garner did not see why it should not do so in the near future; and the chances might be especially bright if, say, a proportion of the funds at present being accumulated in this country against sales of P.L. 480 foodgrains could be put at the Corporation's disposal. The possibility appears so disarmingly simple that it is difficult to see what objections could be raised to it either in India or elsewhere. At present, the disposal of these funds is usually a matter for both the local and the U.S. Governments. If the western trading countries also agree to accept some part of the payment for their exports in local currencies in future as the United Kingdom, for example, appears to be prepared to do, then the Corporation might provide one way in which such funds could be put to profitable use.

The work done in New Delhi gained a good deal in realism from the fact of its being located, first, in Asia and second, in the capital of a country which has become a symbol and a test project for democratic progress. It put into contact the receiver and the provider of assistance in a way which has never been done before, and by doing so, it has sharpened the understanding of both. This should be of inestimable value in future for tackling the problems which are bound to arise in this new and expanded phase of economic co-operation into which the free world appears to be steering itself. The name of New Delhi is assured a place in the history of international financial co-operation alongside that of Bretton Woods itself. All participants can feel satisfied with what

PLANNING FOR FOOD SELF-SUFFICIENCY

FINANCIAL AND ORGANISATIONAL DIFFICULTIES

THERE is probably no aspect of the second five year plan in which failure has been more dangerous than in the effort to increase food production. In recent years, output has fluctuated widely; pockets of scarcity have developed from time to time in different areas of the country; and it has been seen that agriculture remains, as ever, a gamble on the monsoon. The impact of food deficits has been particularly severe in a period when currency creation has been the fashion; the resulting price rises have helped throw the second plan out of gear, and have created popular dissatisfaction, the political consequences of which cannot easily be ignored. A vigorous debate has been going on for some months about how the agricultural base of the economy might be strengthened, so that development is combined with stability. This debate has taken place against the background of three dismal facts. One is that the country, already unable to support its huge population, is creating six million new mouths to feed each year. The second is that the foreign exchange reserves, which were once a useful insurance against domestic food shortages, are nearing exhaustion. And the third is that any substantial plans for agricultural expansion are unlikely to yield quick results; for the most part, they must remain essentially long-term in nature. A notable contribution to the debate has just been made by four industrialists (including an ex-Commerce Minister of the Central Government); it comes in the form of a pamphlet entitled *Suggestions for Agricultural Self-sufficiency*, wherein is outlined a scheme to increase food production by 50 percent in ten years.

The authors of the scheme—Sir B. P. Singh Roy, Mr. C. H. Bhabha, Mr. Tulsidas Kilachand and Mr. B. M. Birla—begin by pointing to the many deficiencies in organisation, attitudes and policies which exist today. None of the criticisms they make is new, but they do nevertheless serve to highlight some of the important problems which have to be tackled. The basic organisational deficiency, it seems, is that too many agencies under the Central and State Governments are involved in the implementation of food plans, while co-ordination between them is lacking. The Food and Agriculture Minister himself implied as much a few months ago when he said that other Ministries should be made to share the blame for such things as the inadequate utilisation of water potential, poor progress of community development projects, and transport delays. It seems that official promises about food plans being put on "a war footing" have been quietly forgotten; direction remains sectional and haphazard, with various Central and State Ministries jealously maintaining their right to act as they please. In these circumstances, the industrialists' plea for more unified control over the formulation and implementation of policies acquires added urgency. Not all the changes which they suggest, however, seem immediately practicable. There is perhaps a fair case for strengthening the hands of the Central Food Ministry in its dealings with other Ministries at the Centre and in the States; but it is questionable whether the vast army of petty administrators suggested for appointment at the district, zonal and village levels could be found. The shortage of trained personnel to implement grow-more-food policies on the farms has long been one of the most intractable problems of Indian agriculture.

The industrialists lay welcome emphasis on the need to improve irrigation facilities, and recommend concentration on minor schemes such as sinking tube-wells, installing pumps, clearing up old tanks, and digging drainage channels. It has sometimes been found that where irrigation facilities have been created, they are not being used because farmers find them too expensive. In order to cope with this, a reorientation of land and water tax policies is suggested, so that agriculturists can use the facilities and pay for them later when production increases. Land reclamation schemes can be financed in a similar manner, by selling to cultivators the areas which are reclaimed. These ideas look attractive on paper, but the difficulties in implementing them are likely to be formidable. Many State Governments have already run up large arrears in the collection of betterment levies and other agricultural taxes; it is questionable, therefore, whether they will be able to collect the cost of new investments from the beneficiaries. Certainly, the use of fertilisers should be encouraged; a larger supply of good quality seeds should be distributed; and farming operations should be mechanised to a certain extent by the use of tractors, etcetera. In a limited way, these things are already being done. An important reason why they are not being done on a wider scale is that there are serious organisational difficulties, for which the industrialist-authors of the

pamphlet cannot really have any quick or easy solution. In estimating the cost of the various food production schemes they suggest, they demonstrate persuasively that these are within the country's means if agriculture is given the priority it deserves. That is a point well worth making. But their pamphlet shows inadequate recognition of the fact that there are many handicaps in increasing food production which are as serious as the financial ones. To increase output by 50 percent in ten years calls for a radical reorientation of farming outlook and practices. Without that reorientation, the aids to better agriculture which they suggest should be created, are unlikely to be used on a wide enough scale.

STERLING AND THE FUND-BANK MEETINGS

WHY CONVERTIBILITY WAS NOT ANNOUNCED

WHEN Britain's Chancellor of the Exchequer made his statement on convertibility at the Fund-Bank meeting in New Delhi, and offered no positive proposals for making the pound convertible, the quotations for sterling reacted adversely. It seems that many people abroad—though few in London—had imagined that the meeting in New Delhi would be the occasion for a statement that convertibility was imminent. As long ago as 1954, it was said that the then Chancellor of the Exchequer, Mr. R. A. Butler, had missed an opportunity to consummate British financial policy by allowing conversion of sterling into all currencies. In some quarters, it is suggested that Mr. Heathcoat Amory is missing another such opportunity now. Such criticisms recognise the distressing fact that the appropriate circumstances, though they may recur, are not continuous. Britain's finances are strong for a few months, perhaps for a year or two; then they relapse.

This thought is certainly an inhibiting influence on any Chancellor of the Exchequer. The act of

PUJA HOLIDAYS

On account of the Puja holidays, there will be no issue of CAPITAL on 23rd October, 1958. The first issue to be published after the holidays will be dated 30th October, 1958.

making sterling convertible is not absolutely irrevocable, as we know from the experience of 1947, when it was revoked after a few weeks. But to fail a second time, after all these years of preparation, would be so humiliating that the British currency would probably never regain the world's respect. So the Chancellor of the Exchequer, as the man most responsible for any such decision, must be sure not only that the finances of the sterling area are sound at the present time, but also that they will continue in that state in the foreseeable future. If this cautious policy were to be carried to its logical extreme, we could turn our thoughts away from convertibility and forget it. It is impossible to foresee all adverse developments, and it is virtually impossible to build the reserves to such strength that no adverse circumstances can weaken the currency. It is for this reason that standby credits are essential. No responsible Chancellor would allow convertibility if he expected that the credits would have to be used, but they must be available to support confidence in times of difficulty.

Strengthening the International Monetary Fund is one means, possibly the best means, of providing ample standby credits. The Fund was very useful to sterling after the crisis of 1957. But credits granted by the Fund are not intended to be permanent. In fact, Britain is now in the position where she has to provide for repayment within a few years of substantial credits from the Fund and from the U.S. Export-Import Bank, also for resuming service in the much nearer future of the postwar U.S. and Canadian credits. When Mr. Amory made his much-debated statement on convertibility, the published reserve (as at end-September) amounted to £1,114 million. This figure included £290 million of credits repayable to the Fund and to the Export-Import Bank; and a further £67 million had to be mentally set aside for the service of the U.S. and Canadian loans at the year-end. (At the end of 1957, when sterling was still struggling to regain health after the crisis of a few months previously, this obligation was waived, but the waiver can obviously not be invoked this year.) And the Chancellor, having supported the proposal that the quotas in the Fund should be increased by 50 percent (a quarter payable in gold or the

equivalent), had to reckon a possible additional commitment of nearly £60 million for the U.K. and of more than £40 million for other sterling countries (if their contributions were chargeable against the central reserve). These various deductions amounted to 40 percent of the reserve.

It may be doubted, however, that the inadequacy of the reserve is the main reason for delaying the act of convertibility. There are two other important considerations, the one economic, the other political; and it may be the political impediment that is decisive. Economically, Britain has made remarkable progress in rebuilding the reserve, having achieved an increase every month over a full year from September 1957, although in any normal year seasonal pressure against sterling causes withdrawals from the reserve in the third quarter. The outlook for the coming months is favourable, in the sense that sterling is normally gaining strength in the season that is now ahead. But in its import and export trade, the overseas payments position is no longer favourable. Export trade is now suffering from the reduction in the primary-producing countries' earnings, but the general decline in commodity prices that caused this reduction in earnings and at the same time reduced the cost of Britain's imports has been checked, possibly reversed. If Mr. Amory were looking for a favourable opportunity to announce convertibility, he should have found that opportunity in September or October and seized it, for it was already slipping away.

However, the Chancellor was probably not looking for such an opportunity; for he is necessarily concerned with politics as well as finance. Both the governing Conservative Party and the opposing Labour Party are preparing for a general election, which will presumably take place next year. The Government will naturally choose a time when it interprets the omens as favourable, but it will not, of course, be assured of returning to power, and in advance of the election foreign opinion will probably be apprehensive. The Labour Party has leaned over backwards in its attempts to convince the world that it will defend sterling at least as resolutely as the Conservative Government has defended it since the crisis. But the world may decide that, however good the intention, the actions of a Labour Government would not be compatible with a healthy currency. In advance of the election (if only from fear that sterling may be more strictly controlled if the Socialists get in), and still more after the election if the Socialists win it (and do not immediately impose controls), considerable quantities of sterling may be sold. To offer new facilities for converting sterling when the election is not far ahead may seem to the present Government needless and foolish.

CO-ORDINATION OF ROAD TRANSPORT

THE growth of road transport has been hampered by many adverse factors, such as the multiplicity of taxes, the high costs of operation and the unsympathetic attitude of State Governments. Lorry operators say that, until recently, the Centre too was hostile to their interests, because its main aim was to make the railways prosperous. This naturally meant lesser opportunities for, and cumbersome controls on, road transport. But if the State did not attach sufficient importance to its development, the reason is presumably that the need was not felt to be urgent: no plans involving any huge increase in goods transport capacity were visualised. The raising of increased revenues from the railways was necessary for the Budget, and the prospect of keener competition from road transport was not, therefore, welcomed. But the position has now completely changed. The railways are unable to handle the huge volume of goods transport under the second plan. To alleviate the transport shortage, it is necessary to give an incentive to private operators. In a pamphlet entitled *Inter-State Transport Commission*, Mr. D. D. Suri discusses this subject with clarity.

The Central Government has shown its eagerness to remove the age-old barriers against road transport. Some progress has been made since the much-publicised Nagpur Plan was prepared. The Motor Vehicles Amendment Act of 1956 appreciated the difficulties of operators, and a number of factors which retarded the development of road transport have been dealt with. For example, the Government has rejected the demand from the railways which would have given statutory recognition to the distance limits imposed on the operation of motor transport. The Regional Transport Authorities, too, have been given the power to issue regular permits instead of temporary ones. It has been emphasised—in accordance with the recommendations of the Motor Vehicles Taxation Enquiry Committee and the Study Group on Transport Planning—that State Governments should instil a greater sense of security in the minds of operators and should not resort to sudden nationalisation. With the improvement in legislation, the Government has tried to take steps to overhaul the administrative set-up in the States as

well as at the Centre. A few months ago, the Central Minister for Transport and Communications announced the appointment of a high-powered *ad hoc* committee under the chairmanship of Mr. M. R. Masani, M.P., to enquire into the transport administration and to suggest a model set-up.

But it is the formation of the Inter-State Transport Commission which has opened new possibilities for private operators. Its appointment was criticised as a belated measure (in as much as the Commission was formed a year after the passing of the amending Act); great efforts had to be made to overcome opposition, mainly from State Governments, who were anxious not to lose the rights they enjoyed under the old Act. Moreover, the provision in the amending Act for setting up the Commission, as Mr. Suri argues, is not mandatory, but is only permissive. There is the other criticism, which has been made by some influential operators, that the Commission's personnel are all officials. The Central Minister for Transport and Communications has assured them that some non-officials will be included in the body. But it is in relation to the Commission's functions that the Government has showed imagination and vision. Its tasks, for instance, have been made very comprehensive. Apart from issuing directives to State Transport Authorities, which, incidentally, may evoke resentment from States, it has been authorised to grant, revoke or suspend any permit and to settle disputes about the operation of transport vehicles on an inter-State basis. Besides, it has been entrusted with the more arduous task of developing, co-ordinating and regulating "the operation of transport vehicles and, in particular, of goods vehicles in an inter-State region."

Mr. Suri says that the task before the Commission is enormous. It has to help increase the transport capacity for an additional 60 to 70 million

tons of goods traffic. The present road transport capacity is a little over 20 million tons. It is optimistic to assume that it can be increased to cope with the growing demand, considering that the foreign exchange crisis has already reduced the output of motor-vehicles. But existing capacity is under-utilised, and its more intensive use could relieve the growing pressure on road transport during the second plan. The Inter-State Transport Commission has been vested with enormous authority. But its main problem will be how to bring about reciprocal arrangements between States concerning the operation of vehicles on inter-State routes. Mr. Suri does not minimise the gravity of this problem. Although certain model principles were suggested by the Transport Advisory Council, progress in implementing them has been far from rapid. Many States have still been unable to arrive at mutual agreements. If they are adamant, the Commission will have to regulate the operation of vehicles on disputed routes. But it will hesitate to do this in case disagreements are numerous.

The Commission does not have the resources to carry on the administration (to receive applications, to scrutinise them and to grant permits) in many parts of the country. At present, taxes on motor-vehicles are collected by the States and with the revenue thus derived, they finance the administration and the construction and maintenance of roads. If the Centre has to take over the administration, it must either get a share of the taxes which States impose or levy new ones. Both courses appear to be impracticable. For one thing, the former will be reluctant to impose additional taxation since this would kill the road transport industry; for another, States would be unwilling to part with a share of their taxes. A great deal of patience and persuasion will, therefore, be needed in dealing with the States.

Current News and Comment

Competition in General Insurance

In his address from the chair at the annual general meeting of the General Assurance Society Ltd. (a fuller version of which appeared in last week's issue of *Capital*), Mr. B. L. Jalan asserted that although the new code of conduct has been enforced for more than a year, competition remains stiff. The code has not been able to reduce the cost of business operations, although the provision for cash payment of premiums before the assumption of risk has been helpful. The chairman thought that it is necessary to do something immediately to reduce the cost of procuring business. An idea of the intensity of competition in the general insurance industry may be gathered from the marine underwriting results shown in the *Insurance Year Book, 1957*. Claims alone accounted for 69.6 percent of the premiums of all Indian insurance companies. Their revenue accounts showed a net debit balance of Rs. 10 lakhs. The new code has necessitated an increase in reserves for unexpired risks. This, together with the bigger reserves necessitated by the general rise in business, has strained the revenue accounts of insurance companies. Another major difficulty, Mr. Jalan said, arises from the enforcement of deposit requirements by banks. These are "arbitrarily fixed" without reference to the balance-sheet position and reinsurance arrangements. The matter has been taken up by the Indian Insurance Companies Association with the Bankers Association. In spite of a request for liberal treatment, the position has not improved.

New Lines in Reinsurance

In his address at the second annual general meeting of the India Reinsurance Corporation a few days ago, Mr. A. D. Shroff described 1957 as a good year for insurance business in India. The fire claims ratio has been very favourable, being lower than in the previous few years. In the other classes, too, experience has not been unfavourable. But the same cannot be said of overseas business. Results in markets abroad, according to Mr. Shroff, have hardly been satisfactory, and 1957 can be classed as a very difficult year for general insurers who wrote a sizeable premium outside India. U.K. fire experience in 1957 has not been too unfavourable, but in the United States it has definitely been so, while in Canada it has been almost disastrous. The generally adverse trend of overseas business has affected the accounts of the India Reinsurance Corporation, but its effect on the net account is not very pronounced. Mr. Shroff said that the Corporation has until recently confined its activities to writing only "agreed cessions" from members and obtaining reciprocity from abroad. The system has worked well. The magnitude of the problem can be seen in its proper perspective when it is realised that the gross premium written

during the year totals over Rs. 2.30 crores. After processing this premium and fulfilling the reciprocity obligations, the Corporation has written a total net premium of Rs. 93.79 lakhs during the year.

The Corporation, said Mr. Shroff, has now started accepting reinsurance beyond the writing of agreed cessions. It has opened a separate department for accepting facultative business in the fire and accident sections. A branch office has been set up in Calcutta to provide better facilities to members. The Corporation is trying to expand its activities during the current year by accepting from member companies and others additional shares of automatic reinsurance over and above the agreed cessions. It has been able to secure some treaty participations in the fire and accident departments, and it is hoped that in course of time this section will expand materially. The same terms, facilities and advantages, as are obtainable from foreign markets, are being provided by the Corporation to the companies. Mr. Shroff expressed the hope that in such circumstances it will be in the interest of member companies to pass on business to the Corporation. By doing so, they will not lose anything; on the other hand, they will get satisfactory service, and will gain indirectly by building the Corporation and hence increasing the intrinsic value of their participation in its capital.

International Outlook for Sugar

India's sugar production has been increasing and she might soon become a substantial exporter of the commodity. Producers in this country will, therefore, be interested in the final outcome of a conference held in Geneva under U.N. auspices to determine what should replace the current International Sugar Agreement when it expires at the end of this year. An encouraging feature at the opening has been the presence of delegations from Peru and Brazil, the two major sugar exporters who have kept aloof from the current agreement which came into force in 1954. Forty-two countries from both East and West are participating in the conference, while six others have sent observers. The record of the current International Sugar Agreement has not been impressive. It aimed at keeping prices within a range of 3.25 cents and 4.35 cents (U.S.) a lb through a system of annually revised quotas. For the first two years and until the Suez crisis, this proved more or less possible. However, as a result of precautionary stocking in November 1956, which coincided with a particularly bad sugar beet harvest, the world sugar price rose within four weeks from 3.25 cents to 5 cents. By April 1957, it stood at 6.85 cents, and it was not until August 1957 that prices returned to the upper limit of 4 cents agreed on at the 1956 revision conference. Ac-

cording to expert opinion, it is unlikely that the plan for a stabilisation pool worked out by a group of experts appointed by the International Sugar Council will find favourable echoes at the present conference. There is also the suggestion, which experts seem ready at least to consider, that some machinery should be devised to ensure that in case the price mechanism breaks down, a special supplementary but optional quota system should be available. The general feeling, however, seems to be that it is essentially the absence of a will to co-operate rather than faulty machinery which has been responsible for the deficiencies of the current sugar agreement (it is, incidentally, the oldest international commodity agreement).

Guide to the European Market

It is understood that a new monthly review, *Euromarket*, is to be launched this winter in time for the proposed starting date of the European Common Market. In recent months there has been a great intensification of the efforts of various companies and trade associations to get a better idea of what changes are likely to be brought about by the Common Market, as well as of the factors governing the competitiveness of industries in the various countries. But some sort of news and intelligence service will be a necessary complement to these private investigations, and *Euromarket* will make a particularly useful contribution to British knowledge of this subject. The journal will be published in three identical editions in English, French and German, giving full coverage of the European industrial scene. Its chain of specialist observers in the capitals and industrial centres of Europe will be providing a monthly picture of trade developments throughout the whole area—this means, of course, not only the Common Market but all the countries of the proposed Free Trade Area. For the manufacturer, the main interest of the journal, which has its office at 180 Fleet Street, London, E.C.4, is that it will regularly report progress in research, plant location, product design, distribution, production policy and methods. There is also a comprehensive news service on manufacturing, financial, distributive and related developments to show what is happening in every European country. The new publication looks like having interest for a wider circle of readers than those directly involved in the proposed Free Trade Area, for some primary producers are no less concerned with how this experiment works out, while others are likely to be interested in changes which might occur in European export prospects.

Textile Mills Cutting Expenses

The difficulties facing the Bombay textile industry are reflected in the Millowners Association's decision to drop a housing scheme which was drawn up in consultation with the Rashtriya Mill Mazdoor Sangh four years ago. According to the scheme, the industry was to contribute Rs. 50 lakhs at the rate of Rs. 10 lakhs annually for five years to build cheap tenements for mill workers. The Central and State Governments were to contribute an equal sum. But the Association has now informed the union that it is unable to continue with the scheme because of financial stringency, unless the Government helps by way of tax reliefs. Meanwhile, it has filed an application before the Industrial Court seeking permission to reduce the dearness allowance paid to textile workers by about one-third. The industry contends that it cannot maintain the existing rate of dearness allowance because of deteriorating financial conditions. The Rashtriya Mazdoor Sangh argues that the earning capacity of the industry has remained unchanged since 1954 and denies the assertion that the Government's taxation policy has had an adverse effect. About 200,000 workers are entitled to receive dearness allowance, which is normally linked with fluctuations in the cost of living index calculated on the basis of the price structure that prevailed in 1939. The union argues that if the Court is not inclined to reject the Millowners Association's plea, the decision should be kept pending until the award of the Central Wage Board for the Cotton Textile Industry, appointed by the Government of India, is announced.

Another point of contentions is the delay in the payment of bonus for last year. Under a five-year agreement between the Millowners Association and the Rashtriya Mill Mazdoor Sangh, bonus has been paid to workers on the occasion of the Diwali festival for the last four years. But this year the industry has put in the demand for Rs. 72 crores for rehabilitation. The union contests this and says that Rs. 40 crores will be adequate for the purpose. In terms of the agreement, a five-member Rehabilitation Commission consisting of Mr. Justice K. T. Desai and two representatives each of the union and the Millowners Association must decide on allocations before a bonus can be declared. The Commission is expected to submit its report by February next year and it is believed that the earliest the bonus

Without Prejudice

THE MEANING OF INDUSTRIAL DISPUTE

JURISDICTION OF A TRIBUNAL TO ADJUDICATE

(FROM OUR LEGAL CORRESPONDENT)

HERE is a nice point. Several workmen have been dismissed. They claim that their dismissal was wrongful and illegal. At the time of their dismissal, they were not members of any trade union, nor was any action taken by the general body of their fellow workers concerning their alleged dismissal without notice. But after their dismissal, and in order to raise a dispute under the Industrial Disputes Act, they join an appropriate labour union. The union then seeks to espouse their cause as members of the union and the usual proceedings under the Act are started, concerning which the State Government, treating the matter as "an industrial dispute", refers it to the prescribed authority for adjudication. Is this an "industrial dispute" or is it an individual one? Has the tribunal jurisdiction to try it?

We will go into the facts a little. The workmen, through their union, said that there had never been any complaints against either their conduct or their work, but that their employers had paid attention to the idle tittle-tattle of a woman worker against them and had suddenly dismissed them on 11th April, 1955, without notice and without assigning any reasons. The employing company denied this, contending that the workmen were guilty of indiscipline, insubordination and misconduct and were rightly dismissed. We need not elaborate all that, except to say that the tribunal found for the workers on all points

and awarded them compensation. What is of general interest is the second point raised by the company. This was that the tribunal had no jurisdiction to enquire into the matter at all by reason of the fact that there was no industrial dispute within the meaning of Section 2(k) of the Industrial Disputes Act, the existence of which alone would confer jurisdiction on the tribunal to make an adjudication under the Act. The tribunal found that it had jurisdiction to decide the dispute and proceeded to do so in favour of the workmen. Thereupon the company applied to the High Court to quash the order.

It was common ground that the workmen were not members of any union before the date of their dismissal. It was also common ground that it was immediately after their dismissal that they and other workers, who were similarly dismissed by the company, reported the matter to the Guntur Town Tobacco Workers Federation, Guntur, and that the secretary of the British India Tobacco Company Workers Union took up the matter and filed a complaint before the labour officer which eventually resulted in the reference by the State Government to the tribunal. It was decided by the Supreme Court in *Newspapers Ltd v State Industrial Tribunal, Uttar Pradesh* (1957, II, L.L.J. 1) that in spite of the fact that the making of a reference by the Government under the Industrial Disputes Act is in exercise of its administrative powers, that fact is not destructive of the rights of an aggrieved party to show that what was referred was not an "industrial dispute" at all and, therefore, the jurisdiction of the industrial tribunal to make the award can be questioned, even though the factual existence of a dispute may not be subject to a party's challenge, and it did challenge the validity of the award on the ground that what had been referred for arbitration was not an "industrial dispute" within the meaning of the Act.

Going step by step, that brings us to the definition of the expression "industrial dispute" in

Section 2(K), which we have to read with reserve in view of the later judicial interpretations of it. This is it: "Industrial dispute" means any dispute or difference between employers and employees or between employers and workmen, or between workmen and workmen, which is connected with the employment or non-employment or the terms of employment, or with the conditions of labour, of any person."

Now, knowing, as well he knows, that he is riding off after a red herring, the writer would nevertheless suggest that whether you read that definition in a strictly grammatical or in its plain colloquial common sense meaning, there is not a word in it or shade of meaning which would exclude from its scope an individual dispute between employers on the one side and employees on the other, nor which would bar from arbitration under it a dispute in which no union had intervened or no substantial body of fellow workmen had taken up the aggrieved workmen's cause. However, it is far too late in the day to argue thus. It is not "in consonance with the idea underlying modern industrial legislation," whatever that impressive phrase may mean. Section 2(K) simply does not mean what it says.

"Notwithstanding that the language of Section 2(K) is wide enough to cover a dispute between an employer and a single employee, the scheme of the Industrial Disputes Act does appear to contemplate that the machinery provided therein should be set in motion to settle only disputes which involve the rights of workmen as a class and that a dispute touching the individual rights of a workman was not intended to be the subject of an adjudication under the Act, when the same had not been taken up by the union or a number of workmen." Thus their lordships of the Supreme Court. And in the same case: "...a single employee's case might develop into an industrial dispute, when, as often happens, it is taken up by the trade union of which he is a member and there is a concerted demand by the employees for redress."

Returning to the case of these dismissed workmen, the matter of the redress of their grievances was certainly taken up by the trade union of which they were members. But they had only become members after their grievances had arisen by their dismissal. In other words, they joined the union only in order that their grievances, already sustained, should constitute an industrial dispute.

Was this good enough? "Yes," said the tribunal, and hence the appeal to the High Court. Said S. S. Raju J. therein: "In the light of the principles enunciated by the Supreme Court, it is necessary to consider whether there is an 'industrial dispute' on the facts found by the tribunal. Respondents were admittedly not members of a trade union on the date when their employment was terminated. There was no concerted demand by the employees of the petitioner company for redress of the grievances of the respondents. After their services were terminated, the respondents joined a labour union, the office-bearers of which thereafter sought to espouse their cause. From a consideration of the facts, it is manifest that the dismissed workers joined the union only for the purpose of raising a dispute with their employers, and it was only after they were admitted as members of the union that its office-bearers began to interest themselves in the redress of the grievances of the respondents. It is no doubt true that a dispute simpliciter between an employer and a workman might develop into an industrial dispute within the meaning of Section 2(K) of the Act, if the cause is espoused by a union of which he is a member.

"On a consideration of the relevant provisions of the Act and the decided cases, I am led to conclude that the membership of the union, which would give it jurisdiction to espouse their cause, must be one anterior to the date of the dismissal, and not subsequent to it. The primary requirement, as I see it, must be that on the date on which the aggrieved workmen, their cause must be espoused either by a union of which they are members or by a substantial section of the entire establishment where the dismissed workmen were formerly employed. It may be that a recognised part of the establishment also can take up their cause. But so long as a substantial section of the entire establishment or a recognised part of the establishment does not take up their cause, there can be no industrial dispute, the existence of which is a pre-requisite for the assumption of jurisdiction by the tribunal. For the above reasons, I hold that the dispute referred to the tribunal for adjudication was an individual dispute and not an industrial dispute and that being so, the tribunal had no jurisdiction to adjudicate upon the dispute." The order of the tribunal was quashed accordingly.

(*Padarthy Ratnam and Co. v I. T. and others*, L.L.J. 1958, Sept. Vol. II, 290).

² Ibid. p. 195.

The Law Society's Gazette, organ of English lawyers, is concerned about what it terms the "rather monotonous English style in legal documents" and would like to see a little more pep and val, which the writer respectfully shares, the in India. "Dear Sir, unless you pay the rupees within seven days, we shall take such steps as will cause you the utmost damned astonishment."

A Ditcher's Diary

THE PRIME MINISTER'S SPEECH OF WELCOME TO the Fund-Bank delegates in New Delhi last week was one of the best I have heard him make. It was short, sincere and to the point. The approach was emotional rather than technical, but that, I suppose, was what the occasion demanded. As Mr. Nehru himself said, it was a meeting of experts, and numerous as the Prime Minister's talents may be, I am sure he would be the first to agree that a mastery of the intricacies of international finance is not prominent among them. There are few of us who can claim not to be in the same boat, as I realised myself after listening to a few of the delegates' speeches. One point Mr. Nehru made, however, did reveal something of his talents in another field. He said that the real division of the world today was not between communism and capitalism, but between the developed and the under-developed countries. As for the first part of his statement: well, I, for one, have never believed that it was—in their more extreme modern forms, both systems are too much alike, economically anyway. It has always been my opinion that the world is divided between the liberals and the authoritarians, economically, politically, nationally and internationally. But on the second part of Mr. Nehru's statement I immediately had my doubts. And what was said afterwards by other speakers only strengthened them. The I.M.F. chairman, M. Jean Van Houtte, for instance, described such a division as "artificial" because both groups of countries were really inter-dependent and anyway the terms "developed" and "under-developed" were only relative. But I wonder if that really contradicts Mr. Nehru's classification. The real weakness in it, I thought, was that it was a division based on material circumstance, whereas the real separators of men are ideas and ideals. I know that poverty and affluence each has its own point of view, but they do not divide men and nations these days so much as unite them in a common purpose. As a socialist, Mr. Nehru perhaps attaches more importance to differences in wealth than would some others, including myself. But I wonder if it is really the right approach to stress the duty of the "haves" to wait on the "have-nots" rather than the opportunities available to both for the pursuit of co-operative self-interest.

THIS THOUGHT HAS OCCURRED TO OTHERS BESIDES myself. The speech of the World Bank President, Mr. Eugene Black, for instance, contained a strong protest against this "duty" approach to international co-operation. It seems to be his view that such an attitude encourages in the recipient of development aid a kind of passive lack of responsibility towards his own problems. I quite see what Mr. Black means. Development is not just a process of physical change, it involves mental adjustments as well. It means, for instance, that dreams must be ruthlessly seconded to reality and that proven practical methods, however unattractive, must be preferred to the intellectually more satisfying, ideological ones. Indeed, if there is any duty involved in this situation of the "haves" and the "have-nots", it is surely in the responsibility of the developing countries towards their benefactors. Mr. Black was characteristically outspoken on this point. To quote only one of his numerous references to it: "I cannot accept a claim on the limited supply of international development capital which merely demands relief for a government from the unpleasant

and politically unpopular necessity of putting its own financial and economic house in order". That is realism talking, and what place more appropriate for it than New Delhi, which always seems to me the most unreal place in India? Arriving back in Calcutta, I wondered to myself whether the chances for realism would be better if planning were done here. But then, would they? We are, after all, human beings with hearts as well as brains. And in a place like Calcutta, where there is so much to test the sensibilities of the most hardened among us, it might be found even more difficult to reconcile the dictates of the two.

THE PAKISTANI DELEGATES TO THE NEW DELHI Fund-Bank meetings were left, it seemed to me, to cut unnecessarily sorry figures on the morning after their Government's overthrow. As they huddled, disconsolately, round their leader, Mr. Syed Amjad Ali—who had gone to bed the night before believing himself to be the Finance Minister of Pakistan and had got up that morning to find he was not—in the lobby of the Vigyan Bhawan, one could not help feeling sympathy for their plight. Only the day before they had been taking part in the discussions as representatives of their country. But not twenty-four hours later, apparently, they were mere expatriates, who would quite likely have to find themselves homes elsewhere without even being accorded the privilege of collecting their personal belongings. Such things, one might have been forgiven for thinking, happened only in Latin America. I do not know whether the position of these luckless delegates was cleared up in the course of the morning, but they did put in a rather apologetic appearance at the meetings held that afternoon. The Americans were surprisingly unmoved by it all. The impact had not registered on most of them, and those that it had were rather inclined to welcome it as a relief from chaos and uncertainty. Some of them did not conceal their belief that India would soon go the same way. I was asked what I thought of India's chances, and I had to confess that it was a difficult question to answer. The Indian, I pointed out, tends to look to a guru for a leader, not a military dictator. Here, democracy is still a working proposition and seems likely to remain so at least until Mr. Nehru dies. There is criticism and sometimes strife. But the former is healthy in a democracy, while much of the latter could be abolished if the Indian Government ever decided an emergency had arisen and firm action was needed. No, I was forced to conclude, India's time is some way off yet. In my turn, I put the question to some Indians. Their reactions were much the same. Pakistan had it coming; the odd thing was it had taken so long. Indian democracy had its faults, and at the present moment the situation was not improving. But India was not Pakistan and she was unlikely to look for the same remedies. I sincerely hope they are right.

THE PLAN FOR A BALLY-DURGAPUR EXPRESSWAY to carry fast motor traffic implies welcome, if belated, recognition of how poor transport facilities really are in Calcutta's hinterland. For the motorist, driving north-eastwards out of this city has long been a dismal experience. Badly maintained and overcrowded roads provide every opportunity for his vehicle to suffer a mechanical breakdown in case he himself should escape a

nervous one. With a four-lane system, the new expressway sounds rather grand in conception. On paper at least, it seems to promise facilities almost as good as those available on the German *autobahnen* and the Italian *autostrade*. But looking at the condition of the Grand Trunk Road in West Bengal, I am inclined to wonder whether a similar fate might not befall the expressway. My main fear arises from the suspicion that maintenance will be neglected, and that the police will remain unable to impose any sort of discipline on traffic. If movement is to be fast and safe, it will not be enough merely to issue edicts restricting the use of the expressway to motor vehicles; stiff penalties may be necessary to ensure that pedestrians and animals, especially from towns and villages bordering it, are kept off. Furthermore, police checks on the roadworthiness of vehicles, and on driving manners, will have to be a good deal stricter than they are now. Even on the West German *autobahnen*, where police surveillance is remarkably efficient and where driving manners are excellent, the frequency of accidents is alarming. I do not necessarily agree with those who criticise the proposal for levying tolls on vehicles using the expressway; a special charge would not be unjustified if it is low and if the money is used exclusively for maintaining the road in proper condition. (The Italians, who were among the first in the world to build special roads for fast motor traffic, still levy tolls on their *autostrade*.) However, the plea that the expressway be started somewhere nearer the heart of Calcutta than Bally deserves to be seriously considered. Admittedly, this might imply widening the Bally bridge at considerable expense; but it hardly seems rational to spend crores of rupees on building a top-class road if it is to be left clogged at one end.

THAT THE PASSING OF POPE PIUS XII HAS BEEN mourned widely by people who do not belong to the Roman Catholic faith is proof enough that Eugenio Parcell, the man, possessed many great personal qualities. Among them, I consider a sincere concern for peace as perhaps the most notable, for throughout his tenure of office, His Holiness always pleaded passionately for its cause. He came to occupy the Chair of Peter on the eve of the second world war and he died at a time when yet another holocaust, far more deadly than any the world has yet seen, threatens humanity with total extinction. The Pontiff himself had first-hand experience of all the horrors of a world war—horrors and inhumanity of a kind against which a sensitive soul could not fail to revolt. The Pope was known to this country as one of its greatest well-wishers and as a religious leader who took special interest in its rich spiritual heritage. After Independence, the Pontiff raised the office of the Indian Archbishop to that of a Cardinal, thus indicating the special importance which the Holy See accords to India. His clarification to Mr. Nehru that the Portuguese claim to Goa did not have the sanction of the Roman Catholic Church was yet another of the actions which enhanced his prestige here. A scholar of rare erudition, the late Pope knew all the major European languages well, and this, combined with his great skill in diplomacy, made his meteoric rise in the Catholic hierarchy not only possible but relatively easy. Although his name may not go down in history as one of the great reformers of the Catholic Church, he will certainly be remembered for attempting to bring it closer to modern science, something none of his predecessors had done.

RENEWED BUOYANCY IN STOCK MARKET

WALL STREET FIRM

London, 15th October.
RENEWED buoyancy developed in the stock market during the past week because of a number of encouraging factors. Further widespread, and in some instances substantial, gains were recorded. The steady advance on Wall Street, hints by British Government spokesmen of tax cuts, the excellent balance of payments figures and the continuation of the Quemoy cease-fire, all contributed to the strength of the market. Gilt-edged securities rose steadily throughout and widespread gains were established in dollar stocks. Prices advanced strongly in industrials on heavy buying, with profit-taking well absorbed. Oils, although moving irregularly, finished the period showing some useful gains, notably Shell, which ruled at a new 1958 peak. Chinese bonds advanced on the more favourable turn in the Far Eastern developments and Japanese issues also hardened. Although teas were rather quieter than most other sections, there were some prominent spots among them too. Rubbers ruled quietly firm, while gold suffered a slight reaction towards the end. Copper, stimulated by the Wall Street advances, gained momentum throughout.

The Money Market

While money remained tight during the past week, there was a slight improvement in the general situation in that the market did not have to undertake penal borrowing on the same scale as in the previous week. The normal supply of non-regular money remained restricted and the market again had to rely on official help. This was freely forthcoming and was sufficient each day. The rate for money ruled firm and there was quite a good demand for December and "hot" bills.

Activity on Wall Street

In a quiet market for foreign dollar bonds, German Nationals were mostly lower by fractions. Among the Italian issues, the Republic 3 per cent of 1977 eventually regained a part of an earlier loss. Greeks were lower while Serbs and Norway 4 per cent were higher. Amsterdam 5 1/2 per cent finished with a small fractional gain. Japanese Government 6 1/2 per cent of 1964 dropped, but later staged a recovery. Chile 3 per cent were steady around their 1958 high. There was a spectacular recovery in U.S. Government obligations with some of the long-term issues moving up from their 1958 lows established recently. The rebound was attributed by most dealers to a technical adjustment of prices following the almost unprecedented declines which have taken place during recent months. These declines, traders have emphasised, have been aggravated by forced selling from speculative accounts. High-grade corporate issues moved ahead with the Treasury list's recently issued industrials recording the sharpest gains. Speculative rails were generally steady. Convertible issues were higher in sympathy with the firmness in the security market.

U. S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 8th October shows that the gold stock rose by \$2 million to \$20,825 million. Foreign deposits rose by \$49 million to \$325 million and foreign investments improved by \$43 million to \$3,605 million. The Federal Reserve bought \$175 million worth of bills making the total holdings of Government securities \$25,222 million. Total discounts and advances rose by \$184 million to \$383 million while the aggregate excess reserves of member banks rose by \$275 million to \$536 million. The daily average excess reserves of member banks were \$112 million higher at \$604 million, while their daily average borrowings improved by \$33 million to \$433 million. Business loans of the New York city banks declined by \$55 million to \$16,685 million compared with a fall of \$132 million to \$11,783 million in the corresponding week of last year. Gold certificates on hand and dues from the U.S. Treasury rose by \$2 million to \$19,358 million. Federal Reserve notes in actual circulation were \$188 million higher at \$26,999 million. The deposit member banks reserve account was \$172 million higher at \$18,226 million.

Paris Gold Quiet

The Paris gold market was quiet during the past week and only routine business was recorded. Some demand from dealers emerged at mid-week reflecting foreign Press reports about negotiations between Mr. Pinay and Mr. Adenauer, but these were later denied by the French Ministry. Towards the end of the period, offers increased again due to continued repatriation of foreign holdings through the gold market and some selling by dealers. The I.M.F. conference in New Delhi also had a depressing effect on the market.

Decline in Quicksilver

The London ex-warehouse price of quicksilver is now indicated at about £78 a flask compared with £79 a flask previously. This is the first did not come as a surprise, as trade quarters have been reporting a weaker market undertone recently. Demand is quiet, dealers say, while supplies are still mentioned at £80 a flask for small quantities but varying discounts are still granted for larger lots.

Money

THE CALCUTTA MONEY MARKET

CALL RATE DECLINES

Wednesday, 15th October.

ONCE again, there has been very little change in the level of advances outstanding in the Calcutta money market during the past week. The demands of the jute industry show a slight rise, but these have been offset by the continued fall in the requirements of the sugar mills. Other sources of demand are about the same. The interbank market has become very easy. The call rate has fallen to 1 1/2 percent, with business being done down to 1 1/4 percent.

There has been a rather better showing of bills in the exchange market during the past week on account of both tea and gunny shipments. Remittance has been poor. The pound continues steady against the dollar but has closed slightly weaker against the more important Continental currencies.

BULLION WAS STEADY DURING THE PAST WEEK AS demand increased due to the Pujā festival. The price of silver advanced to Rs. 188.25, being quoted today for ready delivery, and the rate for forward delivery was Rs. 186.75. The London and New York prices remained unchanged at 76 1/2 and 89 1/2 cents, respectively.

Gold was firm in sympathy with silver and the price rose from Rs. 109.50 to Rs. 110. The sovereign at Rs. 72 showed a gain of 50nP.

TENDERS FOR RS. 2 CRORES OF 91 DAYS' GOVERNMENT OF India Treasury bills were opened on 14th October. The total amount offered was Rs. 3,90,00,000. Tenders at Rs. 99.370 and above were accepted in full and those at Rs. 99.365 allotted approximately 16 percent. The total amount accepted was Rs. 2 crores, the average rate of accepted tenders being Rs. 2.521 percent a year.

DURING THE WEEK ENDED 10TH OCTOBER, GOVERNMENT OF India Treasury bills for Rs. 8,22,50,000 were sold in favour of the Reserve Bank.

An increase of Rs. 17.46 crores to Rs. 1,545.16 crores in active notes was the outstanding feature of the return of the Reserve Bank of India for the week ended 10th October, while the total note issue was Rs. 82 lakhs lower at Rs. 1,555.25 crores. Notes held in the Banking Department consequently fell by Rs. 18.29 crores to Rs. 10.08 crores. Deposits of the Government of India at Rs. 52.78 crores showed little change but other Government accounts declined by Rs. 8.47 crores to Rs. 8.84 crores. Balances of commercial banks at Rs. 87.89 crores showed a decline of Rs. 8.60 crores. Balances held abroad fell again by Rs. 78 lakhs to Rs. 12.60 crores. Investments increased by Rs. 4.08 crores to Rs. 303.38 crores. Other loans and advances rose from Rs. 51.83 crores to Rs. 52.10 crores, of which advances to scheduled banks against usance bills amounted to Rs. Rs. 1.11 crores, against Rs. 97 lakhs. Ways and means advances stood at Rs. 20.09 crores (Rs. 14.50 crores).

THE RETURN OF THE STATE BANK OF INDIA for the week ended 3rd October, 1958, shows a drop of Rs. 1.71 crores to Rs. 444.39 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 1.71 crores. Rs. 15 lakhs to Rs. 239.06 crores and Rs. 11.36 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have increased by Rs. 1.49 crores to Rs. 162.66 crores. Cash and balances are, in consequence, shown at Rs. 46.77 crores, or Rs. 1.88 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 3rd October, 1958, shows Demand and Time liabilities at Rs. 737.36 crores (Rs. 29.16 crores on account of borrowings from banks) and Rs. 869.90 crores (Rs. 38.34 crores), compared with Rs. 755.83 crores (Rs. 25.02 crores) and Rs. 850.10 crores (Rs. 36.87 crores), respectively, in the previous week. Cash has increased by Rs. 1.53 crores to Rs. 40.54 crores, while balances with the Reserve Bank have decreased by Rs. 5.84 crores to Rs. 94.38 crores. There is a rise of Rs. 1.14 crores to Rs. 591.66 crores in investments. Advances and bills discounted at Rs. 845.75 crores show an increase of Rs. 4.21 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.4 percent and 52.6 percent, against 8.6 percent and 52.4 percent.

TREASURY BILL MATURITIES

INDO-BRITISH AIR AGREEMENT BEING REVIEWED

HITCH IN EXPANDING PALAM FOR JET OPERATIONS

(FROM OUR NEW DELHI CORRESPONDENT)

TALKS between Air-India International and B.O.A.C. have begun in Bombay, mainly to review the working of the Indo-British air agreement. Talks at the Governmental level will be held during the cold weather.

The deadlock on the question of providing an international airport for New Delhi still continues. Due to financial stringency and the shortage of foreign exchange, a new airport for either civilian or military use is ruled out for the present. Under the circumstances, it was expected that the Air Force would continue to accommodate the civil authorities by readily agreeing to the latter's plan for modernising the Palam airport in order to make it suitable for jet aircraft. The unsatisfactory nature of the runways for this purpose is well known. At one stage, B.O.A.C. declined to use it for its Britannia service. The Russian jet had to land at Agra from where passengers were brought to Delhi by train.

The Directorate of Civil Aviation has prepared a blueprint for a runway on the side of Gurgaon Road. Even this modified plan is not welcome to the Air Force authorities, who look at the proposal as yet another "encroachment" on their preserve. The tower control, however, is the crux of the problem. For the Air Force, tower control is not always necessary as it is for civil aviation. It is, therefore, not surprising that an Air-India International plane narrowly escaped disaster recently. It might have collided with a military aircraft. A joint control could be the only compromise for the present. What is even more urgently needed is a change in the attitude of the Air Force towards civil aviation, as they both are parts of the same Government. The Central Cabinet, it is learned, will shortly decide the issue.

B.O.A.C. Transatlantic Jet Service

B.O.A.C. launched its transatlantic passenger jet service during last week. The once-a-week service, which has started with the Comet 4s, is to become a daily service in each direction by mid-November, or even earlier, if the plans mature. On the eastern run, the Comets may be flying late this year, instead of early next year as was originally intended. The flow of bookings for the Atlantic route supports the new timetable plans, and the Corporation already has sufficient aircraft to make a daily Atlantic run. A fourth Comet has now been delivered, and by the end of the year, B.O.A.C. should be able to operate at least once-a-week flights to Hongkong and Australia.

The inaugural service from New York to London last Saturday set up a new record. It covered the distance in 6 hours 12 minutes from the take-off to touch-down. At the same time, the east-to-west flight was inaugurated, taking 10 hours 20 minutes. Following the inauguration of the Comet service on the transatlantic route,

B.O.A.C. plans to introduce the jet aircraft on the four services a week from London to Tokyo via Hongkong in May 1959, the managing director, Mr. Basil Smallpiece, has announced. In December 1959, the Comet will take over the "Kangaroo route" services to Australia. Britannias will be introduced on routes to east Africa this month, "six months ahead of schedule". Long-range Britannia 312s took over routes to central and south Africa on 27th July, replacing Britannia 102s. The scheduled flight time from London to Johannesburg via Rome, Kano and Nairobi is 25 hours and 15 minutes.

Higher Fare for Jet Services Demanded

The first request for higher fares for jet flights has come from Braniff. The airline proposed to the U.S. C.A.B. a "service charge" for jet flights of 15 percent of an adult one-way fare, first class or coach, to become effective from 1st January, 1960. The premium is required, Braniff said, because the domestic cost per available seat-mile for jets will be about 19 percent greater than the DC-6 and 30 percent more than the DC-7s. Braniff has five 707-227s on order with the deliveries starting in October 1959. The planes will be used first on domestic routes—on stage lengths averaging more than 600 miles, the airline said, and later on routes to Latin America. The C.A.B. has rejected Braniff's tariff proposal of a surcharge on Boeing 707 flights.

The Jet Noise Problem

Aviation Daily says that although the British authorities deny them, rumours persist that Britain is changing her attitude towards jet noise, and that the new jets will have access to virtually all European airports, depending on their performance, not their noise. The Aeroflot Chief, Air Marshal P. F. Zhigarev, has sharply criticised British objections on the ground that Tu-104 makes no more noise than such foreign aircraft as the Caravelle, Super-Constellation, DC-7 and DC-6. He says the fact that Tu-104s are flying into Brussels, Amsterdam, Paris, Delhi and other cities is proof that where there is co-operation, "noise is no obstacle." In trying to meet British requirements, the Tu-104's noise level during take-off has been reduced, depending on weight, he says.

Proving Flight for Electra

The Lockheed Electra will go abroad this month for a series of demonstrations in Europe and other places. The tentative itinerary includes Amsterdam, Brussels, Copenhagen, Oslo, Stockholm, Cologne, Zurich, Vienna, Istanbul, Teheran, New Delhi, Bombay, Athens, Rome, Paris, London, Weisbaden, Dublin, Argentina and Newfoundland. In announcing the forthcoming tour, Lockheed vice-president, Mr. Burt C. Monesmith, has stressed that the Electra is particularly well suited for operation in Europe and the Middle East. It can make a profit on routes as short as 150 miles, and

is suitable for ranges up to 2,500 miles. Capable of operating from runways as short as 4,250 feet, it can fly into 1,532 airports as they now exist, that is, without lengthening or strengthening of present runways and such airports account for 96 percent of the world's traffic. It can carry up to 99 passengers at cruising speeds in excess of 400 miles an hour. Allison, which designed and built the model 501 turbine engine for the Electra, will be jointly sponsoring the tour.

Commonwealth Developments

The following are some highlights of civil aviation developments in 1957 in Commonwealth countries: Aden Airways has stopped services to Cairo and Damascus because of the political situation. Difficulties about traffic rights have led to the suspension of flights to Addis Ababa. The Indian Airlines Corporation is now operating all ten of its Viscounts on main routes linking major Indian cities, and to Karachi, Ceylon and Rangoon. Traffic has increased considerably on all the Viscount-operated routes, and the airline is likely to order more of these British turboprops. Air-India International is likely to open a north Atlantic service in 1959, to be operated eventually by Boeing 707 jets. In Malta, Viscounts have replaced Elizabethans on services flown by B.E.A. on behalf of Malta Airways. The north African service now ends at Benghazi, not Cairo. The newly created Ghana Airways has taken over the country's domestic services, and certain regional services now flown by West African Airways since 1st October. W.A.A.C. will be reorganised as a company jointly owned by the Nigerian Government, B.O.A.C. and the Elder Dempster Shipping group. The new company will operate domestic and regional services and work with B.O.A.C. on the trunk route to London, now operated by B.O.A.C. planes and crews, but with W.A.A.C. markings. It is understood that the new Nigerian airline, which may keep the name of West African Airways, will continue to operate the internal services of Sierra Leone under contract to the Government. W.A.A.C. was formed by the four West African territories of Nigeria, the Gold Coast (now Ghana), Sierra Leone and Gambia.

Canadian Airlines

The growth and future prospects of Canada's two major airlines, T.C.A. and C.P.A.L., are discussed in the Aeroplane's annual review of Canada's aircraft industry. T.C.A., the review says, carries almost 90 percent of all Canadian domestic traffic. Its traffic has increased more rapidly than the world average and the U.S. domestic rate in six of the past 11 years. T.C.A. is assuming that traffic will continue to grow at a rate of more than 15 percent annually up to 1960, that there will be a 23 percent increase in 1961 when substantial fare reductions are planned, and that a 12 percent increase each year will be sustained during the next five years. Thus the airline is estimating that its total traffic in 1961 will be 96 percent higher than in 1957, which compares with a forecast for U.S. domestic airlines of a 65 percent growth. To handle this traffic, T.C.A. has extended its original order for 15 Viscounts, in DC-6s for medium and long-range routes, Canada's major carrier, C.P.A.L., has increased its most 318 million in 1957. The airline's network now embraces Japan, Hongkong, Australia, Mexico, Peru, Argentina, Portugal and a route over the Pole to Amsterdam. The airline would like to extend its Montreal-Lisbon route to Rome, but T.C.A. is also interested in services to that city. In any case, nothing can be done until a bilateral agreement with Italy is negotiated.

K.L.M. North Pole Service

The K.L.M. service via the North Pole will be officially inaugurated on 1st November. By this route, K.L.M. will make five flights a week to Tokyo and three to Netherlands New Guinea.

K.L.M. Service Expansion

The Netherlands Minister of Transport, in a memorandum on the budget of his department for 1959, says that K.L.M. (Royal Dutch Airlines) is considering the extending of its weekly service to Moscow to twice a week. The memorandum complains that the British Government does not permit the use of Singapore as the terminal for the K.L.M. services to Djakarta. The Netherlands Government hopes that the negotiations, which are being held with the British Government, will succeed. From the memorandum, it appears that the Netherlands Government intends to buy a Fokker F. 27 Friendship aircraft in 1959 for use by the members of the Royal family.

I.C.A.O. Assembly

The Council of the International Civil Aviation Organisation has accepted the U.S. invitation to hold the 12th session of its Assembly in San Diego, California, from 16th June, 1959. I.C.A.O., a specialised agency of the United Nations, has a membership of 73 States, each of which is entitled to one vote in the Assembly, which is the Organisation's legislative body, and which meets in a major session once every three years. At these sessions, the work of I.C.A.O. in the technical, legal and economic assistance fields of international aviation during the preceding three years is reviewed, and decisions are made on future policy. During the last major session held in Caracas, Venezuela, in 1956, particular attention was paid to the problems arising from the probable introduction of the world's air routes able impetus to I.C.A.O.'s planning for this. As the session of the Assembly will concern itself with both their air navigational and economic requirements,

Stocks and Shares

SPECULATIVES IMPROVE ON STEEL RETENTION PRICE NEWS

TURNOVER FALLS AS HOLIDAYS APPROACH

Wednesday Evening.

THE stock market has closed on a steadier note. The increase of Rs. 14 a ton in the retention price of steel, announced yesterday, has been welcomed by operators. During the past week, prices were maintained, although turnover shrank considerably, as is usual before the Puja holidays. The market will be closed from 18th October to 28th October.

The latest increase of Rs. 14 a ton on the average in the retention prices payable to Tata Iron and Steel Co. Ltd. and the Indian Iron and Steel Co. Ltd. will be in addition to the increase of Rs. 12 a ton announced last year. The further increase will be applicable to the entire five-year period, 1955-56 to 1960-61. This increase does not take into account the additional excise duty levied from 16th May, 1957. Adjustments to compensate this increase will be allowed only on despatches from that day. Based on the effect on finished steel, the incidence of the additional excise duty will be Rs. 45.74 and will be adjusted from the date on which the duty was levied, that is, from 15th May, 1957.

Assorted scrip were steady in the absence of any selling pressure. A number of good reports from jute companies helped maintain prices in that section, and the future outlook is considered fairly satisfactory in the light of the economies in the cost of production which are being effected as a result of modernisation and rationalisation. Coals were selectively supported on the prospect that output would increase. Turnover in tea shares broadened on encouraging auction prices this week, but there is no evidence yet that recent changes in duties will materially benefit common tea producers.

Government securities were quiet, and it looks as if banks are unlikely to be much interested in this section because of the approach of the busy season, which might start in a few days' time. It is believed that the recent 4½% Bihar State Development Loan 1970 has been over-subscribed and allotments are likely to be made on the basis of 85 percent to 90 percent of subscriptions. Except for a few selected loans, prices of other dated stocks, particularly National Plan loans, were shaded on balance. Paper was weak on selling pressure, but scattered interest was taken particularly in 4% State loans.

Preference shares, especially in the miscellaneous and jute group, met with good demand, but business was restricted in the absence of offer. In the banking section, United Commercial changed hands at Rs. 69 and Punjab National were transacted at Rs. 60.50.

Cotton mill shares were freely offered at lower rates, and Kesoram were marked down to Rs. 10.94.

Selected coal shares improved on investment enquiry, and Bengal were transacted at Rs. 294. East Indian Coal came to hand at Rs. 23.94 and Panch Valley were transacted at Rs. 24.81. Amalgamated were placed at Rs. 22.62 and Central India were taken up to Rs. 8.44. Burrakur were idle at Rs. 20.25, but South Karanpura improved to Rs. 13 on fresh support.

Jute shares were occasionally higher on scattered interest. Howrah closed at Rs. 21.12 and National were done at Rs. 22.25. Anglo-India improved to Rs. 212 and Megna were wanted at Rs. 14.31. Nuddea came to hand at Rs. 56.75 and Gourepore were bought at Rs. 351 on the publication of a satisfactory report. Union were done at Rs. 192 and Auckland met with demand at Rs. 141. In electrics, Calcutta were transacted at Rs. 14.94 and Patna were steady around Rs. 11.75.

Sugar shares were selectively higher, and Dyer Meakin Breweries were taken at Rs. 13.25. Champaran were marked lower at Rs. 18.81.

Engineering shares were buoyant, and Indian Iron closed steady at Rs. 27.03. Jessop mounted to Rs. 26 on replacement buying and increased support lifted Guest, Keen, Williams to Rs. 34.50. Burn were transacted at Rs. 378 and Braithwaite came to hand at Rs. 31.25. Texmaco closed at Rs. 22.50.

Miscellaneous shares were steady. In the paper group, Orient changed hands at Rs. 35.20 and Titagarh were bought at Rs. 43.25 on investment account. Sirpur were done at Rs. 13.44 and India Paper Pulp were transacted at Rs. 21.50. Notable rises included Alkali Chemical to Rs. 16.44, Dunlop Rubber to Rs. 30.19, Martin Burn to Rs. 30.37 and Indian Cable to Rs. 29.87. Jardine Henderson were transacted at Rs. 81.50, while India Steamship reacted to Rs. 13.69 on profit-taking. National Tobacco changed hands at Rs. 13.25 and Indian Aluminium were transacted at Rs. 16. Indian Cable were steady at Rs. 29.87 and British India Corporation came to hand at Rs. 3.75 on short-covering. Indian Copper rallied to Rs. 3.92 on an improvement in the world price for the metal.

Cement shares were quietly steady, and Rohtas

came to hand at Rs. 24.44. Orissa were transacted at Rs. 12.50.

In the tea group, Assam gardens were favoured, and Bishnauth improved to Rs. 20.94. Betjan were transacted at Rs. 23.12. Among Doars gardens, Hantapara were higher at Rs. 117.50 and Hasimara came to hand at Rs. 23.37. In the Terai group, Gungaram were transacted at Rs. 138.

THE PROFIT OF MACNEILL AND BARRY LTD has amounted to Rs. 46.40 lakhs for the year ended March 1958, against Rs. 44.75 lakhs. Bringing in Rs. 4,34,245, providing Rs. 22½ lakhs (same) for taxation and Rs. 72,413 for wealth tax, transferring Rs. 83,907 to capital reserve, Rs. 1 lakh to pension fund and Rs. 5 lakhs (Rs. 2 lakhs) to general reserve, and paying the same ordinary dividend of 8 percent, there is a carry-forward of Rs. 4,91,489. The directors say that the profit is slightly higher than in the previous year, mainly because of an increased income from dividends, where the company shared in the prosperity which the tea industry enjoyed in 1956. Unfortunately, the unsettled outlook in this industry which prevailed at the time of the last report has continued and the company's return from its investments in this field will be considerably reduced in the current accounting year. Improved conditions prevailed in the jute trade. Similarly, there should be an improvement in the dividend income from the company's interest in the coal trade, but "overall it is anticipated that the company's profit in the current year will be lower than the results now reviewed."

THE GIELLE TEA COMPANY HAS AGAIN PASSED OVER the dividends for the year ended December 1957. The loss has amounted to Rs. 26,929. After making all adjustments, a debit balance of Rs. 57,639 is

carried forward. Production amounted to 233,481 lbs and the average sale price fell from Rs. 3.01 to Rs. 2.68 a lb. Estimates for 1958 provide for a crop of 3,100 maunds at a cost of Rs. 2.63 a lb.

FOR THE ISSUE OF Rs. 1,00,00,000 WORTH OF 6½ per cent debenture stock 1968-73 by the Dunlop Rubber Co. (India) Ltd, 6,000 applications were received for Rs. 4,74,00,000 stock (of which 62 large applications accounted for Rs. 2,87,50,000). The company has decided that the basis of allotment should be by ballot, except that no applicant should receive more than the amount applied for, or Rs. 1,00,000, whichever is less. Letters of allotment, letters of regret and refund warrants will be posted soon.

THE ANGLO-INDIA JUTE MILLS COMPANY HAS MADE a profit of Rs. 26.54 lakhs for the year ended last March. Providing Rs. 12 lakhs (Rs. 10 lakhs) for depreciation, transferring Rs. 78,791 to tax-on-provision, Rs. 5 lakhs to machinery replacement reserve, Rs. 21,000 to development reserve and bringing in Rs. 1,77,822, there is Rs. 10,08,812. An ordinary dividend of 10 percent, against 7 percent, has been declared leaving a carry-forward of Rs. 2,36,742. The directors state that the Upper Mill was closed in January 1958 in order to concentrate production in the Middle Mill. Arrangements have been made to dispose of the Upper Mill property. It is proposed to complete the modernisation of the preparing and spinning machinery of the Middle Mill and an application has been made to the National Industrial Development Corporation for a loan.

TATA INDUSTRIES PRIVATE LTD. MANAGING AGENTS for the TATA IRON AND STEEL CO. LTD. report that the total approximate production of iron and steel at the steel works in Jamshedpur during September 1958 was: pig iron 89,600 tons; steel ingots 95,800 tons; semis for sale 13,000 tons; and finished steel 53,500 tons.

GOVERNMENT OF INDIA MINISTRY OF RAILWAYS (RAILWAY BOARD). TENDER NOTICE.

Tenders are invited from established foundries in India having experience in the manufacture of Cast-Iron Sleeper Plates for supply, by 31.12.1959, of about 2,50,000 tons of cast-iron CST9 sleeper plates, both B.G. and M.G.

2. Quota Certificates for pig iron will be issued by the Railway Board according to the requirements of the supplier, upto a maximum of 100 per cent of the quantity of sleepers ordered on the firms. The firms are expected to make up the melting losses under their own arrangements.

3. Applications for copies of tender documents should be made to the Joint Director, Railway Stores (Steel), Railway Board, New Delhi. Tender documents embodying conditions of contract, relevant drawings, etc. will be supplied at Rs. 10 per set and will be available for sale on any working day during office hours.

4. Tenders will be received upto 13.00 hours on the 14th November, 1958 and opened in the office of the Railway Board on State Entry Road, New Delhi at 15.00 hours on the same day.

SECRETARY,
Ministry of Railways
(Railway Board)
New Delhi,
Dated 11th October, 1958.

Bombay Market

STEELS LEAD IN FIRM MARKET FUND-BANK MEETINGS HELP SENTIMENT

Wednesday Evening.

THE Bombay stock market was steady last week and attention centred mainly on steel shares. The increase in the retention price of steel was favourably received. In spite of a decline in output of the Tata Iron and Steel Company during September, it was thought that the company's output would improve in the near future because a considerable portion of the expansion scheme has already been completed. Sentiment was further helped since the end of the international monetary meetings in New Delhi, as it is thought that moves might be made to improve the investment climate for attracting private capital.

Tata Steel were quoted at Rs. 178 and Indian Iron were maintained at Rs. 27 on short-covering. Tata Locomotive were bought at Rs. 160 on a report that the Government has sanctioned the company's application for the issue of rights shares at par. Premier Construction were taken at Rs. 226.75 and Alcock Ashdown were available at Rs. 273.75. Motor shares were quietly steady, and Premier Automobile were transacted at Rs. 88.70, but Hindustan Motor declined to Rs. 7.84 on profit-taking. Larsen and Toubro were done at Rs. 15.75.

Cotton mill shares were rather quiet on uncertain prospects relating to the export of cotton textile goods. Bombay Dyeing realised Rs. 58.10 and Century were bought at Rs. 436.50. There was scattered investment interest in Kohinoor around Rs. 266.50 and Svadeshi came to hand at Rs. 185. Simplex were indicated at Rs. 178 and Central India were done at Rs. 90. India United Ordinary were bought at Rs. 8.80 and Apollo changed hands at Rs. 13.88.

Miscellaneous shares moved in pattern with the general trend. Cement shares were steady, and Associated Cement were bought at Rs. 163. Digvijay Cement were transacted at Rs. 145. Sugar shares were steady on hopes of increased earnings. Belapur Sugar were wanted at Rs. 312 and Phalton were placed at Rs. 175. Steamship company shares backed away on the fear that there could be a cut in freight. India Steamship were transacted at Rs. 13.76 and Great Eastern Shipping were done at Rs. 27. Mining shares were steady on firm metal prices, and Shivrampur Syndicate were transacted at Rs. 90. Tata Chemical were maintained at Rs. 16.64 and National Rayon recovered to Rs. 245 on bear-covering. Bombay-Burmah were taken at Rs. 492 on improvement in tea prices.

Turnover in bank and insurance shares was small and fluctuations were narrow. United Commercial Bank were placed at Rs. 68.80 and Central Bank changed hands at Rs. 57.80. British India General were bought at Rs. 15.75 and New India Assurance were transacted at Rs. 47.25.

There was a fair enquiry in electricity supply company shares, and Bombay Suburban were indicated at Rs. 108.75 x.d. Tata Power came to hand at Rs. 1,257.50 and Ahmedabad Electric were transacted at Rs. 98.70.

Your Reference

Dear Bhai Sahib,

Thank you for your letter of October 6 in which you have asked whether Orange Pekoe is a guarantee of quality. No, Bhai Sahib it is not.

Orange Pekoe is one of nine or more "grades" of tea produced by almost all gardens. The grades originate from the sorting of black tea according to the size of leaf. Orange Pekoe is a tightly twisted "whole" leaf grade as opposed to the smaller "broken" grades. The word Pekoe is generally considered to have been derived from the Chinese for "hair"; "Orange" is usually held to refer to the colour of the buds or tips of leaf sometimes apparent.

Neither Orange Pekoe, nor indeed any other grade, has reference to quality or flavour. As with all other grades of tea the quality of Orange Pekoe varies from garden to garden, and even from month to month, due to weather, altitude and other factors. In the Calcutta auctions last season Orange Pekoes from two different gardens sold at Rs. 32.50 nP and Rs. 1.55 nP per pound respectively!

There is only one way to guarantee flavour in tea. An expert must select from thousands of samples the exact components which years of experience tell him will make up the blend desired.

You cannot do all this yourself, Bhai Sahib, but you can have it done for you. That is the advantage you get from buying blended Brooke Bond Tea in sealed, air-tight packets—the advantage of the blenders' experience and ability plus the assurance that you will get fresh tea of uniform quality every time.

Yours truly,
G. V. Krishnamurthy
(G. V. Krishnamurthy)
Chairman,
BROOKE BOND INDIA PRIVATE LIMITED

Some Interesting Facts about Indian Tea
Average number of totally different "lots" of tea offered in one week's Calcutta Auctions — 2,820
Approximate number of garden samples our experts taste in a year — 179,000
Average number of gardens whose teas are blended in even the smallest Brooke Bond packet — 45

U. K. PUBLICATION ON COMMONWEALTH
ECONOMIC DEVELOPMENT

An up-to-date account of the economic resources and plans for the development of Commonwealth countries is contained in the latest edition of a reference booklet, *Economic Development in the Commonwealth*, published recently in London by the Central Office of Information. After reviewing the extent of Commonwealth agricultural and mineral resources in the world setting, this 96-page booklet describes some of the more important economic projects and policies of the individual countries—outlining how these relate to the existing pattern of their economies. Examples include the nuclear energy programme of Britain's electricity authority, the expansion of manufacturing industry in Australia, the development of Canada's petroleum resources, and the development plans for the Federation of Malaya. The role of external finance in this economic expansion, with particular reference to the United Kingdom, is dealt with.

The booklet's section on India opens with a statement—"India is the most industrialised country in south and south east Asia"—and discusses the specialised sections on agriculture, minerals, fuel and power, manufacturing, and transport. The section on agriculture indicates production, principles, and livestock improvement. The fuel and power plans. The manufacturing section briefly describes industrial undertakings, and production figures. The transport section indicates present rail and road capacity and future plans.

New Delhi

WORLD BANK PRESIDENT CAUTIONS
BORROWING COUNTRIESDR. ERHARD ANNOUNCES SECOND WEST
GERMAN LOAN TO INDIA

(FROM OUR NEW DELHI CORRESPONDENT)

THE outcome of the annual meetings of the International Bank for Reconstruction and Development, International Monetary Fund and International Finance Corporation, which were held in New Delhi last week, holds out a definite promise for the under-developed countries, and, in particular, for India. This is indicated by the unanimous decisions of the governors to increase the resources of the Bank by 100 percent and of the Fund by 50 percent. Announcements were made by many member Governments that they were ready to let the Bank make fuller use of the 18 percent portion of their capital subscription. Of the authorised capital of the Bank, only 20 percent is subscribed—2 percent in gold and dollars and 18 percent in the currency of the member Governments.

International Development Association

President Eisenhower had directed the U.S. delegation to elicit opinions on his proposal relating to the establishment of an International Development Association. The U.S. Under-Secretary of State for Economic Affairs, Mr. C. Douglas Dillon, explaining the proposal said: "While our Government does not as yet have a detailed plan to submit with reference to such an Association, we believe that any plan should take account of the following factors:

"1. As is well known, loans from the International Bank have to be repaid in hard currencies. We understand that in a number of cases the Bank has had to disapprove applications for loans, not because the development project involved was without merit, but because repayment of the loan entirely in hard currency would have placed an undue strain on the borrowing country to repay. Now, if a percentage of the cost of such projects could come from a new institution affiliated to the Bank which could make loans repayable at least in part in softer currencies, projects such as these might well become feasible.

"2. Our suggestion that member Governments of the Bank study the possibility of an International Development Association does not mean that the United States would favour any lessening of the technical lending standards of the Bank. Projects submitted to the International Development Association would be considered by precisely the same management and staff which now examines projects for the Bank. In other words, while an International Development Association would provide capital on more flexible terms, in a balance of payments sense, than are now possible under International Bank standards, the establishment of an International Development Association as an affiliate of the Bank would assure that the new lending authority would be in the hands of skilled financial management.

"We ourselves are actively studying the ways and means in which an International Development Association might operate, and hope to arrive at our own conclusions within the next few months. We would, meanwhile, welcome the thinking of our associates in the Bank on this subject. It is, of course, essential to the success of such an institution that it receive broad financial support from the industrialised countries which are members of the International Bank. Only in this way could it become an effective international instrument for development. If encouraging conclusions emerge from these studies and informal conversations, it will then be appropriate to undertake more formal negotiations."

The President of the World Bank, Mr. Eugene Black, referring to this proposal said at the annual meeting: "I have, of course, been much interested in what has been said about the proposal to establish as an affiliate of the Bank a new International Development Association to make loans repayable in whole or in part in the currency of the borrowing countries. This conference has not provided the occasion for any real discussion of that proposal because it has not yet taken concrete form. But I do want to say, as I have said on a previous occasion, that I believe the proposal, although it has some complex aspects, is both imaginative and constructive and that it is worthy of the most careful study by all of us. There is a real need in many countries for additional development investment capital on terms which impose little or no burden on their balance of payments, and if the Bank should be in a position to make a contribution in this form, I feel confident that we would be able to push ahead with many worthwhile projects which are now held up because they cannot appropriately be financed entirely on a hard loan basis. I venture to express the hope, therefore, that the studies and consultations now to be undertaken by various governments will result in the preparation of a workable plan which will attract wide support among the Bank's member countries."

Referring to development capital, the World Bank President said: "When we talk about the need for development capital, we are talking about something that can be measured objectively. Development capital, as we all know, is not just

to do the development job well. It must not be forgotten that, ultimately, it is the savings of the people of the capital exporting countries which is the source from which external capital for the under-developed world comes. This source is not limitless; indeed, the demands on it already exceed the supply. In these circumstances, there is a weighty responsibility on the shoulders of every government that is a recipient of external assistance—a responsibility to create conditions where its capital can be invested wisely and productively. Those governments who fail to recognise this responsibility, break faith with those who do."

Caution on Third Plan

Speaking at a Press conference, the U.K. Chancellor of the Exchequer, Mr. D. Heathcoat Amory, said that "it is very important that the Government of the borrowing country should work out its liabilities and its commitments for the future and make sure that it does not take on any commitments that it is not reasonably sure it can carry out when they fall due. In that regard we have expressed the hope that the Indian Government will keep us and the International Bank in very close touch with its plans for the future. Of course, this particular aid that the various countries have given as a result of that meeting of the International Bank covers the period up to the end of March next, and further consideration will be given to the subsequent period, the remaining period of the second five year plan. Then I imagine your Government, before it formulates its third plan, will get in touch with international institutions of friendly countries to find out what scale of assistance is likely to be forthcoming before it decides on the scale of future commitments."

Question: Would that mean you think that the whole concept of five year planning is all wishful thinking and it is wrong in principle or impracticable to think in terms of periods of five years.

Answer: No, I would not go so far as to say that. On the contrary, some degree of forward planning is prudent and absolutely essential. From the little experience that I myself have had in this field, in any forward plan one makes one might well have different phases or grades, the basic minimum that you are sure is going to be within your resources and then more flexible plans beyond that to be decided near the time in the light of what you find it possible to carry. I am certainly not against forward planning in any way.

I.F.C. Plans to Invest in India

Speaking at a Press conference, the President of the International Finance Corporation, Mr. Robert Garner, said that his organisation had so far made no commitments in India. This was not due to any deliberate action. They had been dis-

INSIDE FACTS REVEAL

Stator Core
Pre-built before pressing into frame. Machining of the bore avoided by special assembly cooling.

Stator Coils
Heavy grade polyimide covered wires into mica-insulated slots and impregnated with fully polymerising formaldehyde varnish.

Rotor
Pressure die cast with aluminum and dynamically balanced. Rigidly supported on over-sized ball bearings with ample grease capacity.

Cooling Fans
Large fans draw air from the back end shield only, blow off through the driving end shield, and thus keep away belt dust.

Terminals
Avoiding stiff single core leads, heavy multicore flexible cables are used to make working easier and less brittle.

End Shields
Ventilating windows below the horizontal axis make the motor drip-proof.

You can see it in his eye, his bearing and the way he dresses. Such self-confidence often indicates the influence of strong family traditions of refinement and culture.

THIS YOUNG MAN WILL GO FAR

When BINNY'S started manufacturing their quality cloth nearly eighty years ago young men discovered a new standard in textiles, for here was variety in colour, design and texture undreamt of before. As the years passed, BINNY'S continued to pioneer new materials including antcrease suitings and union fabrics. Soon BINNY became a household word and buying BINNY'S a family tradition.

Today, more people are able to buy more cloth, but discerning people look for these reassuring BINNY'S trade marks on the cloth they buy:

BINNY'S

curring some Indian projects for some time. But more than that there were certain questions of policy which had to be settled with the Indian Government. There had been discussions on this subject over the last few months. As a result of this, any loans by the International Finance Corporation to projects in India would not carry an interest of more than 7 percent. The terms of the loans would be in accordance with the policies that the Government of India was pursuing, particularly in view of its foreign exchange difficulties. As for the method of participation of the International Finance Corporation in projects which it proposed to help, the Government of India had said it was a matter of agreement between the Corporation and the sponsors of the particular project. "If a reasonable agreement is reached it will, in principle, be satisfactory to the Government." Some of the projects under scrutiny by the International Finance Corporation are in the fields of pulp and paper, metal fabrication, manufacture of machinery and chemicals. While he would not like to hazard a guess on the probable size of the investment, if the projects went through, "the investments may run into a few million dollars."

The International Finance Corporation did not require any guarantees from the governments of the countries in which it proposed to invest. "Since we are demonstrating what private enterprise can do, if we ask for government guarantees, we do not show much confidence in private enterprise," he added. Before making an investment, the International Finance Corporation first looked at the "reputation and character" of the people with whom it proposed to do business. The projects themselves were subjected to a more severe examination than would be done by a creditor. The International Finance Corporation had to decide whether it would be attractive enough for equity shareholders. Mr. Garner said they were not against protection to industries as such. It was reasonable to give protection to new industries. But when any particular unit was a pioneer in the industry and it enjoyed protection, and there were little prospects of others coming into the field, the entrepreneurs were likely to become slack. And since there was no danger of competition, they might neither care for the customers' interests or those of shareholders. Moreover, when a particular product had to be sold at twice or thrice the cost of an imported article, he had grave doubts whether that industry could be justified economically. In every case the International Finance Corporation had to ask itself the question: "Is the industry really sound or is it bolstered by excessive protection?"

Canadian Aid

Speaking at another Press conference, the Canadian Finance Minister, Mr. Donald Fleming, said that "Canada did not have any surplus capital and actually she was the largest net importer of capital in the world today. In spite of this, Canada had tried to play her part in the development of India and her aid to India from 1951, when the Colombo Plan began, up to the end of the current financial year, amounted to \$167 million. This aid included amounts provided within the Colombo Plan as well as special assistance outside it. It included a sum of \$33 million provided by way of loan to India for the purchase of wheat. India and Canada had already signed an agreement for a loan of \$24.2 million towards this end, and another agreement for an additional \$8.8 million

would be signed soon. Mr. Fleming said the loan had been given on terms which were the most favourable ever given by Canada to a foreign government.

Mr. Fleming said that for the first two years, India would only pay the interest. The principal and interest would be repaid by annual instalments in the next seven years. Canada would charge India only the same rate of interest as she charged for moneys lent to corporations within Canada. The rate of interest would be determined half-yearly and would be the same rate at which the Canadian Government borrowed in Canada plus 1 percent for handling charges; including this amount, the rate of interest for the six-monthly period from 1st April to 31st October, 1958, was 44 percent. Mr. Fleming said that there was "a strong feeling of kinship and amity between India and Canada." The assistance given by Canada to this country, in spite of her own needs of capital, was to the Canadians "an expression of the meaning of the Commonwealth family relationship between these two countries."

Yen Credit

In addition to the 18-million yen credit of last year and the \$10-million credit offered during the five-nation "aid-to-India" conference in Washington in August, Japan has offered another \$50 million to India in yen currency. Mr. Horie, president of the Bank of Tokyo, has disclosed. This new aid is being negotiated on a Government-to-Government level and might be available to the private sector also, he has said. The credit is for a period of ten years and will bear interest at the prevailing World Bank rate.

Second West German Loan

The West German Federal Vice-Chancellor and Minister for Economic Affairs, Dr. Ludwig Erhard, announced at a Press conference here that his country will advance another loan to India amounting to \$60 million to cover the two-year period ending March 1961. West Germany has already agreed to advance \$40 million at the Washington conference of the chief creditor nations which was recently convened by the World Bank. The terms of the second loan are under negotiation. Dr. Erhard feels that loans to a developing country are not enough. The country should create conditions for attracting foreign capital. Given a 51-percent share in the capital as well as management, German capitalists will be prepared to come to India in preference to other countries. They particularly prefer medium-sized industries. They want a 51-percent share not for dominating the management of a concern, but for putting across their viewpoints effectively. There is no danger of "West Germany swamping India," he added. Dr. Erhard did not favour deficit financing for long-term projects as that would lead to inflation. In the last analysis, he said, countries should undertake development with their own resources, although India has of necessity to industrialise to fight the poverty in the country. He felt that private enterprise in this country is being too rigidly fitted into the planned economy framework. Private enterprise, if encouraged, can produce more of the goods needed by India's masses, which would increase their purchasing power. "The objective of development is to generate purchasing power," Dr. Erhard said. There should be domestic competition if the protected national industries are to raise their efficiency and the quality of their products.

Delegation to G.A.T.T. Session

The Indian delegation to the 13th annual session of the General Agreement on Tariffs and Trade (G.A.T.T.), to be held in Geneva from 16th October, will be led by the Minister for Commerce, Mr. Nityanand Kanungo. The other members of the delegation are: Mr. L. K. Jha, Additional Secretary, Ministry of Commerce and Industry (who is currently chairman of G.A.T.T.), Mr. T. Swaminathan, Commissioner-General for Economic Affairs in Europe, Mr. M. G. Mathur, Deputy Secretary, Central Ministry of Commerce and Industry and Mr. D. N. Chatterjee, Indian Consul-General in Geneva. At the ministerial meeting, which is expected to last about four days, trends in

international trade and the future activities of the member countries in the context of expanding international trade, will be discussed. Some of the specific problems on which discussions will be held are the trading position of the less developed countries, and the conditions of trade in agricultural products and other primary commodities. Measures for further tariff reductions and the elimination of quantitative restrictions directed towards the expansion of world trade will also come up for discussion. Outside the ministerial meeting, the G.A.T.T. session will consider the effect of import restrictions on world balance of payments, trade and Customs regulations, reports of the inter-session committee on different problems and organisational matters. Messrs. Kanungo, Jha and Mathur left for Geneva on 13th October.

G.A.T.T. Report on Common Market

The G.A.T.T. report on the European Common Market has stressed the need for helping the trade of the under-developed countries, it is learned here. This could be done by the removal of restrictions on the entry into developed countries of their products, including finished goods. The restrictions now placed are not only in the form of protective duties, but also high revenue duties, it is pointed out. The report emphasises the need for greater stability in primary commodity prices.

Increase in Steel Retention Price

The Government of India has announced a further increase of Rs. 14 a ton on the average in the retention price of steel. This will be in addition to the increase of Rs. 12 a ton allowed last year. The latest increase will be applicable to the period between 1955-56 and 1960-61. It does not affect the selling price of steel, which remains at about Rs. 600 a ton.

Colombo Plan Meeting

The next annual session of the Colombo Plan Consultative Committee will be held in Seattle, the U.S.A., in November next. The Deputy Minister of Finance, Mr. B. R. Bhagat, will lead the Indian delegation to this Conference. Mr. John Foster Dulles will lead the U.S. delegation. It is expected that the Conference will discuss proposals for increasing the contribution of the member countries towards the development of the under-developed countries. The Governments of Canada and India have recently agreed on two additional items for the 1957-58 Colombo Plan capital assistance programme for India. The first allocation is a grant amounting to \$7,668 to meet additional costs in the establishment of the Biological Control Station in Bangalore. Canada originally contributed \$38,356 towards this project. In addition, Canada provided the services of a technical expert for a year and a half. The Biological Control Station, Bangalore, was set up as a result of a wealth Institute of Biological Control which suggested the need for adequate biological control of many pests which plague India. Indian entomologists trained at the station will be working on a co-operative basis with other biological control stations in this region. The second allocation amounts to \$8,000 to provide a stronger cobalt source in the "cobalt beam therapy" unit, already installed in the Cancer Institute, Madras. Cobalt beam therapy units are used in the treatment of cancer and are one of the peaceful uses of atomic energy, developed by the Atomic Energy of Canada Ltd. The unit in Madras was the first of its kind installed in Asia, and three additional units are now being installed in Bombay, Calcutta and Ludhiana.

Foreign Capital Investment

Foreign capital amounting to Rs. 398.83 lakhs was invested in Indian enterprises during the eight months ended August 1958, it is learned. The following is the countrywise breakdown of this investment:

Italy	136 lakhs
Switzerland	104 lakhs
United Kingdom	85.83 lakhs
United States of America	73 lakhs
	398.83 lakhs

The following are the details:

Name of the company	Public or private	Amount subscribed by the foreign participants	Name of the foreign participants
1. Rallis India Ltd	Public	Rs. 2.45	William Hogland and Co., the U.K.
2. The Mandya National Paper Mills Ltd	Public	Rs. 63	Parsons and Whittemore, the U.S.A.
3. C.E.A.T. Tyres of India Ltd	Public	Rs. 69	C.E.A.T.-Torino, Italy
4. Roche Products Private Ltd	Private	Rs. 44.50	F. Hoffmann-la-Roche Ltd (Switzerland)
5. Mahindra Owen Private Ltd	Private	Rs. 12.31	Ruby Owen and Co. Ltd, the U.K.
6. I.R.C. Weldmesh (Private) Ltd	Private	Rs. 10.67	1. Hall Engineering Industries, 2. Westinghouse Brake and Signal Co. Ltd (U.K.)
7. Indian Gun Industries Private Ltd	Private	Rs. 24.50	Organa Trust Reg Liechterstein, Switzerland
8. Khandelwal Ferro-Alloys Ltd	Public	Rs. 60	i. Steel and Metal Merchants Ltd, the U.K. Rs. 50 lakhs
9. Ralli Hogland Private Ltd	Private	Rs. 4.90	ii. K. A. Export Corporation, the U.S.A. Rs. 10 lakhs
10. Indian Overseas Shipping Co. Ltd	Public	Rs. 35	William Hogland and Co., the U.K.
11. Payen Teibros Private Ltd	Private	Rs. 1.50	N. A. Switzerland
12. Holman-Climat Manufacturing Private Ltd	Private	Rs. 4	Individual participants, the U.K.
13. South India Viscose Ltd	Public	Rs. 67	Holman Brothers Ltd, the U.K.
		Rs. 398.83	Italiviscose Eastern Trading, Italy

London

RESULTS OF CONSERVATIVE CONFERENCE IN BLACKPOOL

SPEAKERS STRESS NEED FOR EXPANSIONIST MEASURES

(FROM OUR LONDON CORRESPONDENT)

THE Liberal and Labour Party leaders were better placed than their Conservative counterparts in their responses to the call of the resolutions at their party conferences. They were uninhibited by such niceties as the right of Parliament to learn first about official policies or the dangers of anticipating legislation or Budgets. Within these limitations, however, the Ministers speaking at Blackpool last week gave encouragement to their supporters of an intention on the part of the Government to introduce a number of more forward-looking and expansionist measures than was possible during the period of restraint imposed by the anti-inflationary campaign and the economic difficulties to which it gave rise. They will no doubt expect to be twitted at the vagueness of their promises—they would be roundly condemned, of course, if they were more precise—but with a general election just around the corner, it is safe to anticipate that their backbenchers will keep them on their toes about implementing these plans for countering unemployment, paying adequate compensation for acquired land, encouraging home ownership, easing the burden of personal taxation, improving schools, introducing a voluntary super-annuation scheme, etcetera, as soon as is practicable.

Unemployment Rising

The confidence, which the leaders are trying to engender, is certainly necessary, for in spite of the somewhat bullish outlook taken by the City of late, there is little doubt that the backlog of the world recession in trade is at last catching up on Britain. The economic indicators are not quite as reassuring as they were, although it is hoped that the setback will be neither very severe nor unduly prolonged. Mr. Heathcoat Amory's speech at Blackpool might have given Britain some guidance; his subject was "Economic Expansion and Inter-dependence"—a vast field for speculation. Overshadowing everything at the moment, however, is the rise in unemployment.

This reached 2.2 percent in September, the highest percentage since May 1952, and Mr. Macleod has warned that it might rise higher. U.K. Ministry of Labour figures show that on 15th September, there were 476,000 unemployed—416,000 wholly and 60,000 temporarily. Since 11th August, the figure had gone up by 30,000, the wholly unemployed rising by 13,000 and the temporarily unemployed by 17,000. The September proportion of 2.2 percent compared with 2 percent in August and 1.2 percent in September 1957. There were 193,000 who had been unemployed for more than eight weeks—46.4 percent of the wholly unemployed. At the same time, the number of operatives working short-time in manufacturing industries in the week ended 23rd August was 160,000, which was 4,000 more than in July. The number working over-time in the same week in manufacturing industries was 1,196,000, or 338,000 fewer than a year ago.

Sharp Fall in Steel Output

There is disquieting news also concerning both coal and steel. As far as the former is concerned, the National Coal Board will either need fresh capital aid from the Government or be obliged to shut down a number of uneconomic pits—another factor in the employment issue. Steel production in September averaged 368,000 tons a week compared with 438,200 tons in the same month of last year. The production of pig iron averaged 230,900 tons, against 282,700 tons in September 1957. Steel production in the first quarter of this year was 1 percent lower, in the second quarter 10 percent, and in the third quarter 16 percent compared with the same quarters of last year. The main decline in steel deliveries recently has been to the export trade and to collieries, makers of rolling stock, shipbuilders, and constructional engineers. The blame is put in part on the running-down of stocks by consumers. Deliveries to the consumer goods industries have been maintained. It is hoped that the easing of the credit squeeze will help adjust this trend, but time alone can tell.

Industrial Building Plans

It cannot as yet have had much effect on investment plans, but new industrial building plans, approved by the U.K. Board of Trade in the third quarter of 1958, show a small increase. Provisional figures for July-September show the number of schemes for which development certificates have been granted at 512 against 499 in the preceding three months, for 12.5 million compared with 10.8 million square feet of development. Although the increase is relatively small, the suggested rise in the level of building activity is encouraging. It reflects the first impact of easier money and a slackening of official restrictions. On the other hand, to judge from the August official figures, retail trade in this country has been developing tendencies to level off. The value of sales during the month not only declined seasonally, but was down to about the same level as in August

1957. This was after having been about 3 percent higher than in the previous year, both in July and for the first six months of this year.

Rise in Reserves

Last month's further rise of \$31 million in the reserves achieved in the face of seasonal pressures against the sterling area, can justifiably be regarded as encouraging. If account is taken of the \$17 million paid to the European Payments Union in settlement of the August deficit, the \$8 million quarterly instalment on the Canadian interest-free loan and \$2½ million paid to E.P.U. creditors in bilateral settlements, the September residual surplus works out at the satisfactory total of \$58½ million. Nor need the £13-million September deficit with the European Payments Union be regarded as discouraging, even though it is substantially larger than the £8-million deficit for August. This is a seasonal phenomenon which should give place to modest surpluses towards the end of the year.

As the time when the sterling area is paying out heavily for dollar imports is coming to an end, and the movement of the reserves remains favourable, the prospect for sterling seems fair as far as the middle of next year at least. The level of the reserves is a useful insurance, although of the \$3,120 million in hand at the end of September, \$561 million is owing to the International Monetary Fund and \$250 million to the U.S. Export-Import Bank. Furthermore, \$176 million was kept in reserve in December last by deferring the annual interest payments on the U.S. and Canadian loans. Another instalment of \$176 million is due in December. Nevertheless, September's rise, carrying the total to \$3,126 million, was the 12th successive monthly increase in the reserves and the first in any September since 1953. It has lifted the reserves to the highest level reached since September 1951.

Hire-purchase Car Sales Lower

Last month's figures of motor-vehicle hire-purchase, recorded by *Hire Purchase Information*, are the first that can reasonably be thought to show any effects of the banks' personal loans schemes. For the moment, it seems that by making small reductions in their charges, finance houses have been able to retain their previous share of the market. Compared with August, total contracts in September fell by 9 percent from 102,927 to 93,404. In 1957, the corresponding fall was from 97,906 to 82,280, a drop of 16 percent. This was due mainly to seasonal influences, but the two-point rise in Bank rate must have played some part in the last week of September 1957. A feature of the returns is the contrast between new-car and used-car business. Last month, 5,893 new-car and 46,970 used-car contracts were registered. The former figure was 26 percent below September 1957, and the latter 8 percent above it.

New Bank for Persia

The registration of a new bank, with a substantial British interest, has been announced in Persia. It will be known as the Irano-British bank and 51 percent of the capital will be held by Persians. The balance of the equity is to be owned by the Chartered Bank and its subsidiary, the Eastern Bank. The majority shareholding in Persian hands will enable the new bank to operate within the framework of local legislation. It will be able to transact business through more than 100 branches of the Chartered and Eastern Banks in various parts of the world. If, as is expected, the first manager is to be British, it is likely to be Mr. James Fenwick.

In his last annual statement, it will be remembered, Mr. V. A. Grantham, chairman of the Chartered Bank, referred to the board's policy of widening the sphere of activities by taking an interest in the Middle East. In taking this step, it follows in the footsteps of a consortium of French banks which has already made a successful start with a similar joint arrangement in Persia and it is believed that other European bankers are anxious to follow suit. The Chartered Bank regards the rapid development of the foreign trade of Persia as inevitable.

Accounts by Computer

Increasing use of electronic computers in the future will make it possible to publish the final accounts of companies within a few days of the ending of the financial year. This prediction was among the views expressed by speakers at the opening of the autumn meeting of the Institute of Chartered Accountants in London the other day. Whenever practicable, figures for value and volume of sales should be published, it was suggested, and earnings should be related clearly to the capital employed. In prospectuses, the impact of inflation should be allowed for when discussing depreciation and capital asset replacement policies. One speaker, dealing with inflation, asserted that nowadays a company is holding its

own only if profits rise year by year in the same ratio as the pound falls in value.

Option Deals Resumed

About 1,000 option deals were done in a flurry of excitement in the London Stock Exchange on 7th October as business of this type started again for the first time since before the war. After market hours, tired brokers and their clerks checked the "bargains" made. Option deals enable people to pay for the right to buy or sell stocks and shares up to three months hence at prices fixed in advance. Relatively low personal stakes are needed, and the deals have a particular attraction for speculators. Business done ranged from deals costing £10. Some transactions involved big sums. The dealers were so besieged by orders and enquiries that, at one time, they had to pause to check their commitments. Nearly all the deals were "calls", which assume that share prices will rise further. Only a few "givers" of option money wanted to be able to sell stock in three months' time.

Hongkong Negotiations

At the time of writing, there is no official news available as to the outcome of the textile discussions in Hongkong, which Lord Rochdale continued after his two colleagues left for India and Pakistan, respectively. It appears, however, that hopes of reaching an agreement on a limit for exports to Britain have not been abandoned. At any rate, according to an agency message from Hongkong, the local millowners' negotiating committee agreed unanimously on a counter-offer to be submitted to Lord Rochdale. The message said later that the counter-offer represented an important concession, the Hongkong committee having reduced its earlier figure for the maximum quantity of cloth, thus reducing the gap between the two parties' views of where the limit should be fixed.

Brevities

Mr. H. O. Peake has been invited by the board of Harrisons and Crosfield to become life president. Last month, Mr. Peake completed 50 years' service with the company, which coincides with its 50th year as a limited company. He joined the board in 1919 and has been vice-chairman since 1924.

Calcutta Tramways has announced a tax-free dividend of 2½ percent for 1957, compared with payments totalling 8½ percent, tax free, in the previous year. Shareholders' account again receives its maximum permitted allocation of £87.457. Directors say that the recent six weeks' strike has made it necessary to conserve cash resources.

The industrial life ("home service" life assurance) offices in Britain did record business last year. Premiums collected totalled £169 million, and net savings were about £47 million.

Ralli Brothers, general merchants and merchant bankers, will soon register a subsidiary company, Minerva House Ltd, to conduct a credit mail order business from Salford.

An agreement has been signed in London for a loan of £500,000 by the Commonwealth Development Finance Company to the Central Electricity Board of Malaya towards the cost of its new hydro-electric scheme in the Cameron Highlands in central Malaya. The loan is guaranteed by the Malayan Government.

NEW BLAST FURNACE AT
TATA STEEL WORKSKEY UNIT IN EXPANSION
PROGRAMME

A new blast furnace—one of the largest in the world—was "blown-in" in Jamshedpur at a brief ceremony held last week. The Bihar Minister for Labour, Revenue and Gram Panchayats, Mr. B. Jha, assisted by Mr. Ramharak Aheer, the oldest employee among the operating crew of the furnace, performed the ceremony. Built at a cost of Rs. 7 crores, this furnace constitutes one of the most important items in Tata Steel's expansion project, designed to double output to 2 million tons. This furnace is equipped for high top-pressure operation, a production technique employed for the first time in India. Another first is the use of a sinter burden in the furnace for which a 5,000-ton-a-day plant is nearing completion. This plant will burn together iron ore fines, flue-dust from the blast furnace, and coke breeze to make briquettes for charging into the furnace. Sintering will thus find an economic use for materials hitherto thrown away, besides improving the operational efficiency of the blast furnace. Using 40 per cent sinter, and making up the balance with unprocessed raw materials, this blast furnace is rated to produce 1,650 tons of molten iron a day or about 50,000 tons a month. If 100 per cent sinter were used, capacity could be raised to 2,000 tons a day.

Tata Steel will now have six blast furnaces ranging in capacity from 600 tons to 1,650 tons a day, whereas the first two furnaces commissioned in Jamshedpur in 1911 had a capacity of only 175 tons a day. The smallest of the present furnaces will be kept as a stand-by for use when any of the other furnaces is down for relining.

Excavation at the blast furnace site began in September 1956 for foundations which go 40 to 47 feet below the ground level. Nearly 8,000 tons of steel and 15,000 tons of refractory bricks have been used on the job. The blast furnace was formally handed over at the ceremony to Tata Steel by Mr. Edgar Kaiser president of the Kaiser In-

dustries Corporation, on behalf of the Kaiser organisation. This organisation has taken responsibility for all the engineering, procurement and construction services required for the two-million-ton expansion project under a "turn-key" contract valued at Rs. 61 crores. Every major item was purchased on the basis of global tenders and over 100,000 tons of plant and equipment have been imported from nine countries in three continents. The total expansion job involves 75 million cubic feet of excavation—equivalent to digging a 500-mile long tunnel of 6-foot diameter. It calls for the pouring of 10 million cubic feet of concrete, and 80,000 tons of structural and reinforcing steel.

Welcoming the Bihar Minister, Mr. B. Jha, Sir Jehangir Ghandy, Director-in-Charge of Tata Steel, said that they were pushing through their programme to double output to 2 million tons, with a sense of great urgency, so that increased quantities may flow to the steel-starved industries of the country. He described the commissioning of the blast furnace as "the beginning of the end" of the two-million-ton expansion programme which began in December 1955. This programme was grafted on to an earlier project to modernise and expand the plant. This earlier project was limited in character and was designed to fit into the existing production framework because money was not then available for anything more ambitious. It was to have raised Jamshedpur's steel output from 1 million ingot tons to 1.3 million ingot tons.

Progress of T.M.P.

Describing the progress on the integrated expansion programmes, Sir Jehangir said that the earliest unit to be completed was the Rs. 38.5-million sinter mill in March 1956, which supplies the tube-making industry in the country with its principal raw material. Early in 1958, a new 26-oven coke battery was brought into operation, and, a little later, the rebuilt No. 2 battery. About the same time, a ferro-manganese plant, costing Rs. 17.5 million, commenced operation in Joda, in the Keonjhar district of Orissa, to provide not only the full requirements of ferro-manganese for steel production at Jamshedpur, but also leave a surplus for sale. Seven 200-ton furnaces in the new steel melting shop had been in operation for some time, but two Bessemer converters were commissioned only last month, while the last converter was expected to be "blown-in" within the next few hours. The steel melting shop was thus complete, and production would rise month by month as molten iron became available from the new blast

furnace. A new blooming mill, costing Rs. 10 crores, was completed in August. Between this new mill and the existing mill, Tata Steel's primary rolling capacity would be about 3 million tons, leaving scope for further expansion to that level of production at a fairly low capital cost. After primary rolling in the blooming mill, finished steel would be produced by the new continuous sheet bar and billet mill and the medium and light structural mill, both of which were expected to be in operation by the end of December. "Thus at the year-end", Sir Jehangir said, "our expansion programme will have been virtually completed. Production by 1959-60 was expected to be 1.2 million tons of finished steel, while the full rated capacity of 1.5 million tons (equivalent to 2 million ingot tons) might be attained in the following year."

While performing the "blowing-in" ceremony, the Minister, Mr. B. Jha, said that in the second five year plan, considerable emphasis had been laid on the development of industries so that the economy could be diversified and the country's immense resources of raw materials, fuel and manpower fully used. The steel expansion programme in the public and private sectors would entail an overall investment of about Rs. 462 crores which represents roughly 43 per cent of the total investment envisaged under large-scale industries. This was a clear indicator of the very high priority given to the steel industry because of its unique position in an economy seeking rapid development.

S.A.S. AND SWISSAIR SIGN NEW
AGREEMENTADDITIONS TO JET FLEETS
PLANNED

SCANDINAVIAN Airlines System (S.A.S.) and Swissair have recently concluded an important agreement. It was signed in Zürich by Messrs. Marcus Wallenberg, chairman of S.A.S., Per Kampmann and Per M. Hansson, the chairman of Swissair, Ernst Schmidheiny, and Ake Rusk and Walter Berchtold, presidents. An announcement was made on the proposed additions to jet fleets of S.A.S. and Swissair. Five Convair 880 medium long-range jet aircraft have been ordered by S.A.S. The latter already has 12 Caravelle medium-range jets on order. But it has signed a contract for four additional aircraft of this type whose price, with spare parts, is \$14.5 million. Of the 16 Caravelles now on firm order for S.A.S., four will be operated by Swissair.

The jet fleets of S.A.S. and Swissair in 1960-1961 will, if added together, comprise 31 units, namely, ten Douglas DC-8s, (seven for S.A.S. and three for Swissair), five Convair 880s (two for S.A.S. and three for Swissair), 16 Sud-Aviation Caravelles (12 for S.A.S. and four for Swissair). The latter has made an agreement with the U.S. manufacturer, Convair, concerning the delivery towards the end of 1960 of five Convair 880 jet aircraft. This is a four-engined jet, somewhere in between the Douglas DC-8 and the Caravelle in size. In a combined first and tourist class version, the Convair 880 will carry 85 passengers, compared with 120 in the DC-8 and 70 in the Caravelle. The speed of the Convair 880 is the same as the DC-8, 950 kilometres an hour (600 miles an hour). With a full passenger load, the Convair 880 has a range of 5,500 kilometres (3,400 statute miles) compared with 8,000 kilometres (5,000 miles) for DC-8 and 2,350 kilometres (1,450 miles) for the Caravelle. The Convair 880 is equipped with four General Electric jet engines.

Introduction of Convair Services in S.A.S.

Two of these Convair 880 jet aircraft will be leased by Swissair to S.A.S. for four years. This will enable the latter to introduce this new jet under the S.A.S. flag on certain long and medium-long distance routes towards the end of 1960, primarily to South America, South Africa and to Far East via India and Pakistan. S.A.S. and Swissair are holding a joint option for the delivery of another six Convair 880s. A contract has been signed in Paris between S.A.S. and Sud-Aviation for the delivery of another four Caravelle jets holding options for further purchases. In this connection, S.A.S. has made an agreement with Sud-Aviation to increase the take-off weight of the Caravelle to 100,000 lbs (45 metric tons) which will allow a range of roughly 2,350 kilometres (1,450 miles) with the full passenger load. These improved data will also be applied to the Caravelle.

Under the agreement between S.A.S. and Swissair, the former will lease four aircraft of its delivery of these aircraft for four years. The summer of 1960, Swissair will take place during the jet aircraft under its own flag for the same purpose as planned by S.A.S., that is, for medium-S.A.S. and Swissair have agreed to have their DC-8s, Convair 880s and Caravelles manufactured so doing, and by selecting the same type of aircraft, maintenance organisation for their jet fleets. The Swissair will be given technical maintenance services, too, will do the maintenance work in Switzerland on the Convair 880s owned or leased by S.A.S. In this way, the maintenance facilities of both the companies will be better used and more rationally operated.

Jute

STRONG MILL BUYING LIFTS FIBRE PRICES

MILD ANXIETY OVER DEVELOPMENTS
IN PAKISTAN

THE fact that mills' stocks of jute goods in September showed a substantial fall for the third consecutive month had less effect on the market than might have been expected. Hessian stocks declined to a new low level (17,000 tons or 15.6 per cent of the total). This happened in spite of an increase in hessian production, which indicated that shipping statistics and overseas interest were greater than operators would admit. There was still a very strong bearish element in the market, but its promptings were curtailed to a great extent by the political events in Pakistan. There was no violent reaction to the news, and the general tendency was to await further developments. Pakistani interests, in common with Indian, were perturbed over the recent fall in fibre prices and the lack of interest displayed by overseas buyers. The latter have held off the market recently for a variety of reasons, a prominent one being the very favourable crop reports which, in their opinion, should lead to lower prices. The Pakistani authorities are fully aware of this attitude, and also of the fact that alternative suppliers are becoming more prominent; this may have prompted the rumour that they were contemplating reducing the export duty on raw jute by Rs. 2 a maund.

Reports of small overseas business with America and the U.K. in Hessians tended to strengthen the undertone of the goods market, and hessian prices advanced, mainly for the near deliveries. Sacking was neglected but its price moved up in sympathy. The main incentive for higher prices for jute goods came from the fibre markets, where the general outlook appeared to be bullish. This was prompted by the increased activity, both in upcountry agencies and in Cossipore, of mill agents. With so many mills buying in the mofussil, high prices are still being paid. Most of the activity is confined to the better-class agencies, and in these areas the undertone is very strong, with sellers reserved. Agencies producing lower-grade fibre have been neglected and prices indicated by buyers hold out no attraction to sellers. The amount of jute available in the higher grades, however, is limited, and already many sellers have made successive commitments for the next two months. Consequently, the availability of jute for quick shipment has declined rapidly over the past week. Reports about the quality and conditions of good Assam and Dhurjuti have been very good, and Fibre prices have advanced by about Rs. 1 a maund. Growers still consider them uneconomical, and many prominent farmers who have cultivated jute for as long as they can remember hint that they will not be growing it next season unless the price is substantially higher. If this happens, it will be a severe blow to India's aim of self-sufficiency, especially as the prospects of obtaining increased supplies from Pakistan are remote.

Meanwhile, reports from Dundee are encouraging for the jute trade; manufacturers' order-books are full, short-time working has ceased, and many concerns are even working over-time. Unemployment in the jute industry there has decreased and the prospects are bright. Shift working has been reintroduced, and for the first time there is a shortage of skilled labour due to so many workers drifting away from the jute industry during the earlier period of unemployment.

I. J. M. A. Production Figures

The production of jute goods by member mills of the I.J.M.A. during September 1958 amounted to 87,300 tons in a 200-hour working month. This was 2,100 tons more than in the previous month, which had only 197.5 working hours. Hessian production showed an increase of 500 tons to 35,900 tons, but the percentage dropped to 41.2. Sacking production increased by 1,400 tons to 45,700 tons, with a slight increase in the percentage to 52.3. Other goods increased by 200 tons to 5,700, the percentage being 6.5.

THE JUTE MARKETS

There was not much activity in the futures markets during the past week, and rates, as given by the East India Jute and Hessian Exchange Ltd., for the period 8th October to 14th October were as follows:

	Hessian 40in. 10oz. November	Sacking B Twills November	Raw Jute Upper Assam December
Rs. a 100 yds.	Rs. a 100 bags	Rs. a 100 bags	Rs. a 100 kilos
Opening	40.26	44.88	96.40
Highest	41.12	44.96	97.35
Lowest	40.14	43.89	96.20
Closing	40.86	44.54	97.00

Manufactured Goods: The gunny market was quiet at the opening last Thursday and the publication of the I.J.M.A. stock figures had very little effect. There was an air of hesitancy because of the political situation in Pakistan. Opening quotations were nominal and were based on October B Twills at Rs. 96.10, with a premium of Rs. 1.50 for forward shipment. Hessians were quiet in spite of the favourable stock position, and 40in. 10oz.

showed only small gains in opening at Rs. 41.70 for October shipment, this representing a premium of Rs. 2.55 over forward shipment. During the day, hessian rates improved on reports of overseas enquiries; on confirmation of business, prices rose by 50nP in both sacking and hessian. There was little interest in sacking at that stage but the rise there was mainly in sympathy with Hessians. The improvement continued over the week-end due to local shipper covering and further small overseas business. On Monday morning, B Twills stood at Rs. 97 and Hessians at Rs. 42.70. Later, interest slackened, and although there was little alteration in the quoted rates, the undertone was easier. Mills showed no interest at this level, and prices were maintained mainly by speculative activity. Towards the close, an easier tendency developed and price indications were lower.

On Wednesday morning, opening quotations were as follows:

	October	November	December	Jan.-March
40in. 8oz.	33.60 (36.62)	33.00 (35.97)	32.40 (35.32)	31.80 (34.66)
40in. 10oz.	42.55 (46.38)	41.50 (43.23)	40.35 (43.98)	39.55 (43.11)
B Twills	96.90	97.40	97.65	98.25
Heavy Cees (Plain)	97.75	97.40	97.75	98.25
A Twills	117.25	117.25	117.25	117.25
Liverpools	110.50	110.50	110.75	111.00
Cornacks	102.25	98.50	99.25	99.25

Raw Jute: Calcutta mills took only small interest in the purchase of jute under contract in the early part of the past week, but activity in the agencies showed a considerable increase as agents competed for all available arrivals. Imports were reported to be heavy, but buying pressure prevented a fall in prices. After a quiet opening, rates gradually improved, and from Rs. 23.10 a maund

for Assam Bottoms, they moved up slowly to Rs. 24 a maund. Business was reported at each level but the quantities involved were small. Sellers were reserved for most of the week as large quantities of jute have still to be delivered this month and operators are chary about entering into fresh commitments meantime. Daissee prices are very steady, as fair quantities have been purchased under a short group or a long group label. This has caused a shortage of the better grades, as sellers naturally prefer to take advantage of the higher prices ruling for the pucca bale grades.

During the past week, business was done in Assam-Northern jute at Rs. 23 to Rs. 23.50 a maund basis Bottoms, and Northern Middles only were bought at Rs. 24.50 to Rs. 25.50 a maund. Small lots of Dhurjuti under selected marks passed at Rs. 24 for Bottoms. Desal White was reported at Rs. 21.50 to Rs. 22 and jungli white at Rs. 20.50. Only small quantities of mesta were purchased, the prices being Rs. 21.75 for Desal mesta, Rs. 21 to Rs. 21.50 for Daissee mesta, and Rs. 19.75 to Rs. 20 for jungli mesta. Tossa came in for a lot of attention and prices varied from Rs. 24.50 to Rs. 25.50 for Karimpur and Assam Tossa, and Rs. 24.25 to Rs. 24.50 for Murshidabad Tossa (selected districts). Small lots of Daissee were done at Rs. 25 to Rs. 26 a maund.

Wagon arrivals in Cossipore last week showed a drop of 100 compared with the previous week the total being about 700. During the corresponding week of last year, 922 wagons were reported. All arrivals found ready buyers, both among sellers and mill agents, and prices remained steady throughout. At the close, quotations were based on Kishenganj jute at Rs. 22.25 for garsat quality.

On Wednesday morning, opening quotations were as follows:

	Landed at Mills Rs. a maund	Rs. a 100 kilos (Basis Bottoms)	Shipment Oct. Nov.
Assam	23.50	62.98	"
Northern	23.00	61.64	"
Purnea Desal	22.25	59.63	"
Daissee	25.50	68.34	"
Daissee White	22.50	60.30	"
Assam Tossa	25.50	68.34	"
Murshidabad Tossa	24.50	65.66	"
Northern ex Calcutta	22.50	60.30	"

who'd have thought that the
cashewnut is India's second
largest dollar earner?

Twenty-five years ago, India exported only small quantities of cashewnuts. The big problem was their short-lived freshness—and, nothing is so unpalatable as a stale cashewnut!

But today, the humble cashewnut has become the second largest dollar earner for India! The major problem of keeping the nuts fresh was solved by a special gas-sealed container which keeps them crisp and full of flavour for long periods. And that's the way cashewnuts are wanted abroad.

Today, as a consequence of a determined export drive, India is developing her export trade in processed foods, sandal-wood oil, biscuits and confectionery. And the export of

these and similar consumer goods calls for carefully designed, superbly printed packages for protection and sales-appeal. The Metal Box Company of India Ltd., by making available packages specifically designed for diverse products, are helping to open up new export markets for Indian goods.

In the years that lie ahead, the country is bound to go through a phase of unparalleled expansion in the production and export of consumer goods. Automatically this will place an increasingly greater, more complex burden on the packaging industry. As leaders in the field, Metal Box are ready to meet the challenge of the future with all their resources and all their experience.

Commodity Markets

WOOL PRODUCTION LOWER IN
NON-COMMUNIST WORLDMARKED FALL IN AUSTRALIAN
CLIP

TOTAL production of raw wool in the non-communist world in the 1958-59 season is provisionally estimated by the Commonwealth Economic Committee at some 4,085 million lbs (greasy basis). This is about 1 percent less than the revised total of 4,115 million lbs for 1957-58. The reduction is almost entirely due to an estimated fall in the Australian clip. While non-communist world output seems likely to decline for the second season in succession, total world production—including that of Russia and China—is estimated at about the same figure as in the previous season, namely, 5,000 million lbs. The first official estimate of Australian production, states the Committee, is 1,386 million lbs (greasy), or 3 percent below the revised total of 1,426 million lbs for 1957-58. The fall is ascribed to widespread drought conditions during the growing season. South Africa has also been affected by drought, and the South African Wool Board anticipates a production of 306 million lbs, about 1 percent lower than last season. A preliminary estimate by the New Zealand Wool

Commission puts New Zealand output at about 505 million lbs, or 2 percent more than the revised total of 496 million lbs for the previous season.

Increase in U.S.A.

Of the other principal exporting countries, wool production in Argentina is provisionally estimated at 408 million lbs, or much the same as the total for last season. Unfavourable weather has been reported from Uruguay but, although the clip may suffer in quality, the size is not expected to show much change and the total is provisionally estimated at 200 million lbs. U.S. aggregate production is put at 295 million lbs, or 1 percent higher than a year earlier. In the U.K., although the sheep population is higher, wool production is not expected to exceed the previous season's total of 112 million lbs. In Russia, states the Committee, sheep numbers in 1958 showed a sharp rise and a further increase in wool production of 3 percent to 4 percent, to a total of about 620 million lbs, is estimated. Wool output estimates for certain other east European countries, in the light of fuller data now available, have also been revised.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) receded further by 0.3 percent to 116.1 during the week ended 27th September, 1958, compared with 116.4 (revised) for the previous week. The index was lower by 0.2 percent when compared with the corresponding week of last month but was higher by 6.7 percent when compared with that of a year ago. The monthly average for September 1958 worked out to 116.5 against 116.0 for the previous month and 109.5 for September 1957. Lower prices of rice in Jayanagar (-13%) and in Nowgarh (-8%), barley in Motihare and oranges in Madras (-9% each), maize (-8%), milk in Bombay (-6%), onions, fish (Hilsa) in Calcutta and meat in Bombay (-5% each), jowar and eggs (-3% each), ragi, masur and urad (-2% each) and gingelly oil, gur, tea for export, black pepper and cardamoms (-1% each) brought down the index for Food Articles by 0.2 percent to 120.6 compared with 120.9 (revised) for the earlier week although the prices of tea for internal consumption (+7%), rice in Vijayavada, fish (Rohu) in Calcutta (+5% each), gram, potatoes and chillies (+3% each), mung (+2%) and wheat, arhar, bananas, groundnut oil and coffee (+1% each) recorded an increase. The

index for tobacco remained stationary at the previous week's level of 89.4. The index for the Fuel, Power, Light and Lubricants group stood at 116.0 against 115.9 (revised) for the earlier week. The price of castor oil in Bombay (+6%) showed a rise. The index for Industrial Raw Materials declined by 0.7 percent to 118.4 compared with 119.2 (revised) for the earlier week. Items which showed noticeable variations were: raw skins in Kanpur (-6%), raw jute and lac (-4% each), rapeseed and bamboos (-3% each), raw silk (+5%) and groundnuts and cottonseed (+2% each). The price of coir yarn (+1%) witnessed a rise while those of tin (-2%) and rayon yarn (-1%) showed a decline; the index for Intermediate Products stood unchanged at the previous week's level of 111.4. The index for Finished Products also remained unchanged at its earlier week's level of 108.6. The prices of jute manufactures and lime (-1% each), general chemicals (+2%) and oilcakes (+1%) showed variations.

SUGAR PRODUCTION AND STOCKS

The production and despatches of indigenous sugar amounted to 1,972,000 tons and 1,895,000 tons up to 30th September, 1958, in the current season against 2,024,000 tons and 1,942,000 tons, respectively, in the corresponding period of last year. Stocks with factories on 30th September, 1958, stood at 517,000 tons.

Calcutta Markets

STRONG GENERAL DEMAND AT
TEA EXPORT SALEDECLINING TREND IN
DUSTS

AT Sale No. 17, held on 13th and 15th October, offerings at the Export auction amounted to 73,383 chests for which there was a strong general demand. A strong feature of the sale were "teas for price" and plain brokens which were at times up to 8nP dealer. Plain Fannings sold well and often at dearer rates. Orthodox Assam B.O.P.'s and O.Fgs. declined by 10nP to 20nP while similar B.P.'s and P.Fgs. were well supported and were dearer. There was a good demand for C.T.C.'s at rates which were generally 10nP to 20nP easier except for the cheapest kinds which were often dearer. Legg-cut descriptions were generally fully firm to dearer. Whole leaf grades, although an irregular feature, met with more demand and the lower priced kinds were sometimes dearer. The few tippy teas on offer sold well but there was more restricted enquiry for Darjeelings which were often easier.

Quotations	1958 Rs.	1957 Rs.
Clean Black Pekoe	2.00 to 2.04	2.10
Plain B.P.	1.72 to 1.78	1.64
Plain Fannings	1.86 to 1.92	1.64
Medium B.P.	1.90 to 1.95	1.70
Medium Fannings	1.97 to 2.05	1.72 to 1.74
Best Assam C.T.C. B.P.	2.80 to 2.70	2.90 to 3.00
Best Assam C.T.C. Fannings	2.80 to 3.00	3.00 to 3.10

At the Internal Sale, Dust offerings amounted to 21,514 chests. There was a good general demand at slightly easier rates. Orthodox descriptions were irregular and generally sold up to 4nP below last rates, although the stronger liquoring powdery kinds were keenly sought after. Legg-cut Doars met with good demand but generally shared in the easier tendency. C.T.C. teas were irregular, the plainer liquoring medium kinds declining by 10nP and sometimes 15nP, but as the sale progressed, enquiry for this type of tea became more restricted and prices declined by up to 20nP. The better grainy exportable C.T.C. Dusts were, however, well supported and sometimes sold at dearer rates. The few Darjeeling Dusts on offer met with a good market and often sold above valuations.

Quotations	1958 Rs.	1957 Rs.
Medium Doars Dust	1.86	1.60 to 1.64
Medium Assam Grainy Dust	1.88	1.64 to 1.68
Medium Assam C.T.C. Dust	2.05 to 2.25	2.10 to 2.30
Best Assam C.T.C. Dust	2.80 to 3.10	2.60 to 3.00

Leaf offerings amounted to 2,330 chests. There was a good general demand at slightly dearer rates, the few C.T.C. teas on offer being well supported.

FREIGHT MARKETS RISE

A MORE cheerful atmosphere has prevailed in the freight markets over the past week, and higher rates have been conceded in a number of directions. There has been considerable activity in grain fixtures to India from St. Lawrence and the U.S.A. The former paid 65s for a T2 tanker to Bombay, compared with \$(U.S.)17 paid to an American Flag tanker to the same destination from north Pacific. This clearly demonstrates the value to America of her 50 percent shipping restriction in aid programmes. Three other ships were arranged for October loading from St. Lawrence at 70s to west coast India. Australian grain shippers had to pay up to 80s from Geelong to the U.K., and sugar jumped 20s to 117s 6d from the U.K., and sugar jumped 20s to 117s 6d from Queensland to the U.K. Two British vessels found time charters attractive enough to break lay up, one accepting 13s for five to six months' trading with delivery Hongkong, and a motorship 16s for a west African round trip, delivery the U.K.

LINSEED DULL

Prices moved within narrow limits during the past week. A small advance of 8s as a maund in the price of seed as well as oil was recorded. Business was rather dull. The production of oil has declined to a great extent and arrivals of seed from upcountry have diminished. Activity in the oil market was negligible last week. Overseas oil markets were quiet, and the prevailing disparity in Indian prices remains at around 28 to 310 a ton. Latest quotations are as follows: ready, October, Rs. 25-8 a maund.

HIDES AND SKINS DULL

The market was dull. Stocks were higher than in the previous week.

Bazaar Sales

(Between 7th October and 13th October, 1958)
Cowhides: Wet salted (Ord.) 19,800 pcs. on the basis of Rs. 6.50 to Rs. 11; Wet salted (Slaughtered) 17,500 pcs. on the basis of Rs. 10 to Rs. 14 and Rs. 16.50 to Rs. 25.

Goatskins: Wet salted (Patna, Daissee, Kustia) 57,500 pcs. on the basis of Rs. 270 to Rs. 275; Rs. 315 to Rs. 340 and Rs. 370 to Rs. 380; Wet salted (he-killed) on the basis of Rs. 3.75 and (she-killed) on the basis of Rs. 3.50 a piece; Assam-Dinaipur 10,000 pcs. on the basis of Rs. 260 to Rs. 335.

Who wants
more food ?

My basic job is to assist in raising this country's food production from its present low level—so low that we have to buy abroad.

The extent to which I can help is very often not realised—it certainly is not realised enough.

Whether it is wheat or rice—gram or grass—sugar or groundnuts—whatever it is, only I can reliably and economically:

- Have the soil ready for the rains or water,
- Prepare the best till to suit the crop,
- Sow quickly and well on the right day,
- Give the crop attention whilst it grows,
- Harvest at the right time,
- Do, in time, all those never-ending duties such as agricultural housing, soil conservation, water distribution and so on— which mean the difference between shortage and enough.

... target to be reached ahead of time

Unparalleled in progress by any other industry, the Indian White Sugar Industry has doubled its production in four years—from 10.01 lakh tons in 1953-54 to 20.26 lakh tons in 1956-57. This industry today is the second largest in India, and is a vital factor in the nation's economy. Pledged to maintain its trend of progress, it will soon emerge as a leading producer of white sugar. Today it is contributing substantially to the success of the Second Five Year Plan.

The increase in production has been so remarkable that the Second Plan target of 22.5 lakh tons of Sugar will be achieved well ahead of time.

Today the White Sugar Industry provides scope for Indian capital investment of more than 100 crores of rupees;

it provides employment to over 1,40,000 skilled and unskilled workers and 3,600 university educated men, their total earning representing 5% of the national wages and salaries; it supports 20 million cultivators; it constitutes 12% of the total value of production of major Indian industries; it contributes over 65 crores of rupees (@ Rs. 13.19 per maund) in levies to the national exchequer.

It offers even brighter prospects for the country. With a lighter burden—with some of its present-day handicaps removed—this industry can contribute to achieving a more stable national economy. Its upward trend of production can continue to meet the needs of a growing home market and yet leave a surplus for export in order to earn foreign exchange.

Indian WHITE sugar ...

ample for home market—with surplus for export too

THE INDIAN SUGAR MILLS ASSOCIATION

HULDBARI TEA ASSOCIATION, LIMITED.

NOTICE is hereby given that the Sixty-ninth Annual General Meeting of the Members of Huldibari Tea Association, Ltd. will be held at the Registered office of the Company at No. 6, Church Lane, Calcutta, on Friday, the 14th November, 1958, at 12-30 P.M. for the following purposes:—

Calcutta-1, 6th October, 1958.

Shocks

and stares

OLD MOTHER HUBBARD's shock was a minor one, compared with the surprise of the shopkeeper with nothing to sell—but overfull shelves cause stares, too!

What do you do to avoid these unhappy situations? Simple—just make use of air transportation! For cargo by air:

Ensures an adequate supply of wanted goods

Cuts down on handling and storage costs

Cuts out 'idle' and tied-up capital

Cuts down the risk of damage and obsolescence

Means that your goods get where they're wanted, when they're wanted!

Seems to add up to commonsense? Then remember that AIR-INDIA International offers numerous weekly flights, East and West, to 26 cities of the globe—with easy onward connections to all the others!

AIR-INDIA International

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

PEKING ANNOUNCES A "CHINESE MIRACLE"

STARTLING CLAIMS FOR FOOD OUTPUT

FIGURES lately put about (and not only by the Chinese communists and their agents abroad) concerning the results of this year's harvests in China, are nothing short of staggering. This journal would be the last to accept official statistics from Peking at their face value, as has already been shown by a critical attitude to reports of "great leaps forward" in that country. But the extraordinary news of agricultural progress that has come from China during the months of September and October has gained extensive credence in equally critical places abroad, and moreover, it seems to be corroborated by the impressions of such recent visitors there as Mr. Charles Bettelheim. Since Professor Bettelheim is familiar with Asian agricultural possibilities, having advised India on hers, he is presumably not canvassing propaganda fantasies. Even if haste or optimism have led the Peking authorities to over-estimate this year's achievements somewhat, they will remain so extraordinarily impressive as to call for a complete revision of all Indian thinking and planning in the agricultural field. One western economist wrote this month that "the Chinese harvest is the event of 1958, as the Sputnik was of 1957". Another said, under the reservation that the Peking figures proved to be true, that "what is involved is the most astonishing agricultural progress in all history".

This is no exaggeration, for what Peking is plausibly claiming is that the 1958 harvests show, over those of 1957, an increase varying between 60 percent and 90 percent. Nothing of this order has ever been accomplished anywhere at any time, least of all over an area as large as that of continental China. The United States, in its most rapid period of agricultural growth, the four war years 1940-44, achieved an expansion of 40 percent for the whole of that period, and then only by bringing back under the plough lands voluntarily left uncultivated during the depression, by taking idle tractors out of mothballs and by re-opening existing but unemployed fertiliser factories. The Chinese have had none of these aids, and yet they are claiming a vastly superior advance. It is an advance, furthermore, that nothing in recent Chinese agricultural performance had led one to expect. Output increased by 4 percent in 1956, by the same figure in 1957 (to the discomfiture of the planners) and the officially proposed increase for this year was only 6 percent. The first reaction is to dismiss claims of 60 percent to 90 percent increases in one season as nonsense. But even if they are so, under the nonsense must lie some very substantial achievement, and it could be vitally important for India to learn what it is and how it has been brought about. Either the Chinese have had a record crop or they are telling a record lie.

If it is a lie, it is a detailed one. Specific figures, absolute as well as relative, are offered. The 1957 harvest produced 185 million tons of "base foods", i.e., cereals and grains, plus potatoes, sweet potatoes, etcetera, counted in for one-quarter of their fresh weight. The planned 6 percent increase for 1958 would have given under 200 million tons. But today Peking estimates the "base food" crop at between 300 and 350 million tons! The wheat harvest, it is claimed, has attained 40 million tons—an increase in one season of 70 percent—which is larger, for the first time in history, than the U.S. wheat crop and not far behind Russia's. The semi-late rice crop is given as 56.5 million tons, an increase over 1957 of 40 percent. The late rice crop will not be brought in until December, which is why the total has been estimated only approximately as between 300 and 350 million tons. Groundnut output is given as 6 million tons, an increase in one campaign of 124 percent. Soya, at 12.5 million tons, has increased by "only" 25 percent. The raw cotton crop, at 3.5 million tons, has been about doubled in one season.

Now what is one to make of these astonishing claims? It is for India's agronomists to assess their credibility, but the first requirement is that they be forcibly drawn to the attention of expert opinion in this country, along with the observation that,

at all events, Chinese agriculture has this year progressed enough for Peking to be able to make them without fearing blank disbelief. As we will go on to show, Peking does not announce this performance as an unexplained miracle. It gives the supposed causes, but the trouble is that these presuppose an effort in irrigation and fertilisation that is no less fantastic, be it compared either with recent Chinese achievement or with current Indian progress. Of more general interest, it is quite apparent what these figures would mean for the Chinese standard of living if they were accurate. They mean that this year, 1958-59, the Chinese have 1,100 pounds of grain per capita or half a ton, compared with only 627 pounds per capita last year. In other words, they have more cereals per capita than west Europeans—who, admittedly, have a lot else besides and do not rely so heavily on food-grains for their nourishment. Moreover, on the strength of this campaign's results, Mr. Mao Tse-tung has just fixed targets "for 1959 or 1960" in cereals, pork and vegetable oils that would give the Chinese an overall level of nutrition (i.e., not just in cereals) intermediate between those of east Europe and west Europe. China, with its immense population, would be about as well fed as Russia.

If we refuse to give credence to results of this order, we must still examine the methods by which Peking alleges they were brought about—since, as we have said, some considerable progress has surely been made and the causes of that are more important to India than the results claimed. A first suggestion, derived from Indian experience, can be laid aside; this is evidently not one of those fallacious comparisons between a bad and a good year. Chinese agriculture cannot be devastated by a deficient monsoon, as India's can in a bad year. Between 1950 and 1957, the weather has never caused a variation in Chinese output greater than 6 percent. Nor is it the consequence of China's industrial programme for the production of artificial fertilisers and agricultural equipment. Those plans are impressively ambitious, but as far as this season's crop was concerned they remained plans only. Of the 120 types of tractors designed for manufacture few have so far been turned out; of the 20 new nitrogenous fertiliser factories proposed for 1957, when they will produce 15 million tons, none was in operation for the 1958 crop.

The official Chinese explanation for 1958's performance refers to a vast extension of irrigation and to intense use of natural fertilisers. The pace of irrigation has apparently been quickened beyond belief. If the Peking statistics are accurate, officials are not boasting when they say that China irrigated more new land last season than in the previous 2,000 years of Chinese history put together. In 1949, China had 52 million acres of irrigated land; in 1955-56, this had risen to 67 million acres; another 20 million acres were added in 1956-57. But then in the one season 1957-58, Peking claims, almost 75 million acres of new land were irrigated. Not only does this beggar by comparison all previous Chinese effort, but it means that in one year more than twice as much new land was irrigated as in 100 years in the United

States, where 35 million acres were irrigated in a century's work using mechanical equipment denied the Chinese peasantry. The first thing that comes to mind in face of such an audacious claim is that "irrigation" here has a very loose sense. It cannot possibly mean the total and detailed mastery of the flow of water that has been achieved, for example, in the Punjab system. It would be literally impossible to provide Punjab-style irrigation for 75 million acres in one year. All sorts of amateurish intervention with natural water courses can be passed off as "irrigation" if all you want is an impressive total. But, precisely, the Chinese did not get merely an impressive total for new irrigation works—they got an impressive crop too. Whatever their system of irrigation was, it produced results very promptly and has given enough satisfaction for the authorities to announce that another 50 million acres of more difficult land will be brought under it over the next three years.

For fertilisers, the Chinese chemical industry being still rudimentary, reliance was placed on natural fertilisers and all sorts of organic matter. Dead leaves, vegetable waste, organic cuttings, peelings, fish remains, nightsoil were all pressed into use. But above all, human labour, working intensively, collected and redistributed the silt from river beds, and the slime and mud from trenches, canals, pools and ponds. This intelligent and simple (simple for a heavily populated countryside such as in China and India) method of fertilisation has been in wide use in China for several years, but last year a special drive was made to extend and enforce the practice. Peking claims that in the agricultural campaign now ending, every acre of cultivated soil received 40 to 50 tons of fertilisers, or ten times as much as in the previous season. Here again, "fertiliser" has to be taken in a very loose sense, to cover the makeshift commodities just listed. But, again also, the point is that they worked.

A final and important factor was more work by the peasantry. This is implied, of course, in the increase in irrigation and fertilisation of the soil, but it covered all other agricultural work too. The slogan in the countryside has been "manpower is short", and peasants who in 1955 worked only 125 days a year have worked 300 days. Peking discreetly omits to say what forms of persuasion and inducement provoked this sudden acceleration of activity; it mentions only willing co-operation and "explanation" by Party and local leaders. We may have other surmises, but we may be excused here and now for insisting on the purely economic aspect. First, men were not only induced by whatever means to work—and women too—but useful and quickly productive work was provided for them. Secondly, if reports from certain regions are believed—and the national harvest figures are there to endorse them—the point of diminishing returns from this extra labour was not reached nearly as soon as we would have thought—or not reached at all. Whereas in the poor and over-populated regions of south Italy it is accepted that one quadruples the labour force in order to double the production of the land, numerous Chinese co-operatives report having doubled their man-days and more than doubled output. The agronomist and economist will find this claim more surprising even than the extraordinary output totals that will impress lay opinion.

So these are the results the Chinese Government alleges it has attained this year, and the methods by which they are said to have been produced. Those who are seriously interested in the comparative rates and techniques of development in India and China might now like to refer back to the leading article on this page on 10th July this year. There it was shown how, from

FOREIGN CAPITAL: A SHRINKING INFLOW

INVESTMENTS BOOSTED MAINLY BY RETAINED EARNINGS

THE flow of foreign capital into India remains small. It is small not only in relation to the overall flow of capital across international frontiers throughout the world as a whole, and in relation to India's acute needs; it is small also in relation to what this country could get if she adopted more positive policies to attract it. This is the outstanding conclusion to be drawn from a study of "Recent Trends in Foreign Investment in India" appearing in the *Reserve Bank of India Bulletin* for September 1958. The study brings forward to the end of 1957 certain aspects of the earlier Reserve Bank *Surveys of Foreign Liabilities and Assets*, the latest of which covered the position as at the end of 1955. The information for 1956 and 1957 now given in the *Bulletin* is inevitably tentative in some details, but it offers a valuable clue as to how much investment this country has been able to attract from abroad. In normal circumstances, yearly fluctuations in the flow of such investment are not necessarily of much importance, since they are liable to be affected by many extraneous and adventitious circumstances. For India in her present state, however, with her foreign exchange reserves rapidly falling, they are a matter deserving urgent attention. The Reserve Bank is to be complimented on its efforts to bring up-to-date its study of this vital sector of economic activity.

The *Bulletin* article estimates that, excluding movements in banking capital, there was a net inflow of Rs. 36.4 crores of business investments from abroad during 1956. The book value of non-banking business investments, therefore, stood at Rs. 506.3 crores at the end of the year, compared with Rs. 469.9 crores at the end of 1955. The capital inflow included Rs. 12.1 crores of World Bank loans extended to steel and power companies in the private sector. Long-term business capital obtained from foreign private sources thus amounted to Rs. 24.3 crores. This figure was a little below the average annual inflow of about Rs. 25 crores during the period July 1948 to December 1953, but was higher than the average annual inflow of about Rs. 16 crores during 1954 and 1955. The inflow of Rs. 24.3 crores of foreign private capital was net of outflows arising from the sale or liquidation of investments worth about Rs. 6.3 crores. The gross inflow was thus Rs. 30.6 crores. Of this, as much as Rs. 17.9 crores came from retained earnings, while Rs. 9.6 crores represented investments in kind and Rs. 3.1 crores was received in cash. Retained earnings in fact largely accounted for the rise in the inflow of private capital during 1956 as compared with the average for the previous two years. Petroleum and manufacturing companies featured predominantly among those retaining their earnings.

The information for 1957 given in the *Bulletin* is inevitably less detailed, but from the available data the disturbing point emerges that the net inflow of capital from foreign private sources fell quite sharply last year. Although the net inflow of non-banking foreign business investments totalled Rs. 48 crores, as much as Rs. 32 crores of this was accounted for by World Bank loans. Thus, the inflow of capital from foreign private sources was about Rs. 16 crores only. Actually the *Bulletin* mentions a figure of "Rs. 19 to 20 crores" by implicitly suggesting that the outflow of Rs. 3.5 crores connected with the nationalisation of life insurance should not be considered. There is no obvious reason why it should not be; the Reserve Bank's calculation here looks like a deplorable attempt to mislead people into believing that the shrinkage in the capital inflow last year was not as serious as it actually was.

Many important features of investment trends emerge from the statistics for 1956 and 1957, read in conjunction with the earlier ones. It looks as if a large, and possibly increasing, proportion of the total business investment from abroad is coming from the World Bank; such investment is welcome, and its relatively high level may have something to do with the fact that it enjoys rather more security than capital from non-institutional sources. It is disturbing, however, to note that there is no sign whatsoever of an increase in the inflow of private foreign capital over the past ten years. Annual variations there are, and they are sometimes quite sharp; but the long-term trend, if any, is towards shrinkage. This is a poor record for a country which frequently (with some justification) boasts of its political stability and economic opportunities. It indicates that there are basic deficiencies in official policies which deter foreign investors from contributing to its progress. As it is, it seems an unusually large proportion of the so-called "inflow" of private foreign capital into India represents an inflow only in the technical sense; the predominant contribution is made by retained earnings. The amount of genuinely new capital coming to India, in the terms of this dis-

inction, looks minute, and its role in diversifying the economy has so far been relatively small.

There was a time when considerable hostility to foreign capital was expressed in this country, sometimes even by official spokesmen. Fortunately, that is no longer the case. The Reserve Bank's studies have done much to induce a realistic view of the rôle played by such capital, especially by showing that the returns earned on it have by no means been extortionate, or even large. But while verbal assaults against foreign investors and entrepreneurs have to some extent ceased, particularly since the onset of the foreign exchange crisis, positive efforts to attract them to this country have remained negligible. Taxes are heavy, numerous and complicated; what pass under the description of harmonious labour policies remain no more than idle pipe-dreams; and governmental controls over industrial enterprise are stifling. In none of these fields has any progress been made such as might encourage the foreign investor. Mr. Nehru is entitled to plead for a "human" approach to economic development, implicitly suggesting that a country deserves charitable sums of foreign aid merely because it is poor. But his plea would be better appreciated if he took tangible steps to show that the welcome accorded to foreign capital would be more than purely verbal.

THAT DECIMAL CONTROVERSY AGAIN

BRITAIN CONTEMPLATES THE METRIC SYSTEM

WHEN India began operating the metric system of weights and measures in various industries at the beginning of October 1958, having adopted the decimal system of coinage at the beginning of April 1957, the rest of the sterling area had to admit that one country, not the most advanced economically, was leading the way towards a more rational system. India's lead is appropriate, in that this country can claim to have originated the decimal system more than 2,000 years ago. She has nonetheless developed in the meantime a bewildering profusion of weights and measures; so she has sensibly begun to rationalise the whole procedure in the early stages of her evolution as a modern economy. Changes are more difficult when the old forms are ossified in a developed economy. Mainly for this reason, Britain herself is the most serious impediment to rationalisation of the system of measuring in the British Commonwealth; and as nearly every country outside the British Commonwealth operates a decimal currency, this problem is serious. But Britain cannot ignore the favourable reports on the decimal system, and the Governments' favourable reactions to these reports, in Australia and New Zealand and South Africa, as well as India. The subject is frequently debated in Britain, where most people seriously interested in finance are already convinced that the present system ought to be replaced. The currency is the most urgent problem; but weights and measures will require attention later.

On one point there can be no possible dispute. If a country with no currency system at all were confronted with the choice of the various systems now operating it would certainly adopt the decimal system in preference to one based on a pound, divisible into 20 shillings, each shilling divisible into 12 pence. This system continues not because it is a good system but because people are used to it (though it confuses even the British) and because it is embodied in the notes and coins and accounting machines and other physical things. There is also in Britain—it would show itself if any change were attempted—a false sense of pride; to abandon this peculiarly British system in favour of a foreign system would seem to some people undignified. And, of course, there is inertia; a party that put currency reform on its electoral programme would not enhance its chances at the polls. Preoccupation with short-term affairs may delay this long-term reform, but the forces of change are growing stronger. The dissatisfaction of other Commonwealth countries with Britain's archaic system is one important factor making for a change. Disharmony within the sterling system would be distressing. Another factor—ultimately the essential one—is the need to adapt an international currency to the practices of international trade. The inconvenience, and it must be frankly recognised—the material cost, of converting the currency to a decimal basis, are surely subordinate considerations.

An industrial and trading nation in the midst of a continent whose railways were of different

gauge from its own would surely convert its system to the common gauge; the capital cost would be considerable, but it would not be recurring. The cost of converting the British currency to a decimal basis is impossible to estimate precisely. It would depend, anyway, on the character and procedure of reform; for instance, to retain the shilling and decimalise it into 10 pence might be quite economical. Rough estimates suggest that complete reform of the currency in Britain would cost some tens of millions of pounds. But even if the cost were hundreds of millions of pounds—it could, of course, be spread over a period of years—it would surely be worth incurring. After the first upheaval, the nation would feel the benefits of a simple method of calculating values not just for years but for centuries—indeed, indefinitely. That first upheaval breaks the analogy with an off-gauge railway. So long as trains run the track is narrow or broad or standard. But when a currency is changed the users have to adjust their mental calculations, their accounting machines, their book-keeping. In a country where so many calculations are made every minute of the working day, a drastic change would at first be confusing. Until habits had been adjusted the effect of the change would be to hinder, not to facilitate, business. Therefore, if they intended to convert the currency to a decimal basis, the authorities would presumably choose a time sterling was healthy and the reserves were strong. But they would also be watching internal trends and would try to avoid a time when trade at home was hesitant. Timing the project would not be easy, for strengthening of finances is often associated with weakening of trade. But this, again, is a short-term practical problem. It cannot affect the basic case for a permanent reform.

The British authorities will quite possibly not be left to procrastinate indefinitely. If the principal non-decimal dominions decide that their currencies must be reformed, and newly-independent countries which have inherited the British system from the colonial era choose to decimalise as India has done, and Britain herself becomes more closely associated with decimal Europe (if not with the Common Market countries then with others), the disadvantages of the British system will be increasingly obvious. The attitude of other sterling countries is especially important, for Britain's extensive banking services with these countries would be much complicated by their conversion to a decimal system while Britain retained the old form of currency. The ultimate test should be efficiency. The function of money is to facilitate transactions, as well as to store wealth. It cannot facilitate transactions with the maximum efficiency if it is not itself as simple as possible. By this criterion the superiority of the basic decimal currency over the muddled assortment of pounds, shillings, and pence, is obvious and indisputable, and in a matter of such fundamental importance in trade a leading mercantile nation cannot afford to be whimsical. Reform of the British currency is long overdue.

WELFARE BEFORE WEALTH

IT has been stressed often enough here that the present high rates of taxation in this country are doing incalculable harm to the economy, especially the industrialised portion of it. Yet the point has to be stated again every now and then, if only because those who have imposed these taxes in the name of social equality and welfare have still to realise that far from promoting the ends they are designed to achieve, high imposts have hamstringed those dynamic elements which provide the bulk of the country's urban employment, most of the Government's revenue and a fair proportion of the nation's real income. These are not merely debating points. They are facts which the present state of the economy fully bears out. A pamphlet entitled *Impact of Taxation on Industrial Economy*, whose author describes himself anonymously as "a student of economic affairs" and which has been published by an organisation called the "Society for the Propagation of Democratic Thought," throws some interesting light on this matter.

In the first place, industrial production in this country, which recorded some impressive rises a few years ago, has been slowing down. The rate of increase was only 3.5 percent in 1957, compared with 8.6 percent in 1956 and 8.1 percent in 1955. Apart from the fact that the restriction on raw material imports due to the foreign exchange scarcity has been an important cause of the decline, the pamphlet shows how high taxation has also contributed to this result. It points out that private enterprise, which accounts for 97 percent of the total industrial production, will have to pay as much as Rs. 6.7 crores to the Central Government during the current financial year, during which the total estimated revenue has been placed at Rs. 750 crores. The bulk of the industrial sector's share will be in the shape of direct taxes such as income tax, corporation tax, wealth tax, expenditure tax, gift tax and indirect taxes such as excise, import

and export duties. In addition to this amount it will have to pay large sums to State Governments in the form of one levy or another; the total comes to Rs. 837 crores. This represents a considerable increase over the tax liabilities of past years. In the circumstances, savings have diminished and capital formation has been adversely affected, leading, inevitably, to a slowing down of industrial expansion. The pamphlet makes one other important point. The rising volume of Central and State taxes—from Rs. 752 crores in 1955-56 to Rs. 1,052 crores in 1958-59—implies that the urban population is carrying by far the heaviest burden of taxes. It is this section which pays most of the Government's taxes and is the largest source of demand for industrial products. Since increasing taxation must mean a corresponding reduction in its purchasing power, industries are losing the incentive to produce more.

Finally, the pamphlet stresses what is an obvious need of the hour—that of increasing production by making use of all sources of productive energy. The controversy between public and

private sectors has become irrelevant. The deliberate expansion of the public sector at the expense of the latter, for which all these tax measures have been devised, has not made the economy any better off. On the contrary, the country has lost heavily in terms of industrial production and there has been a great deal of waste in State projects due to bureaucratic inexperience and inflexibility, not to speak of corruption and bungling. The pamphlet shows that out of the total value of the industrial output of about Rs. 1,750 crores, some 50 percent is taken away by the Government in the form of one tax or another. "This 50 percent of the industrial value produced during every year constitutes 80 percent of the tax revenue of the Government on which the entire activity of the State rests". It necessarily follows that the Government can only expand its supposedly socialistic activity by drawing more and more on this source, which it is helping so much to contract. Wealth before welfare is perhaps a trite platitude but it is nevertheless a very good guide for the Government of a country which is struggling painfully to develop its resources.

road to ruin, not only of the individual owners but of the industry as a whole," the chairman says.

Textile Excise and Exports

The Central Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, has categorically rejected the textile industry's plea for a further cut in the excise duty on cloth. Addressing the Upper India Chamber of Commerce in Kanpur a few days ago, he said that since the relief of Rs. 20 crores already given has not led to any appreciable reduction in mills' stocks, further relief would not help. But he forgets that with an estimated fall of 500 million yards in consumption, revenue is suffering. The Exchequer might well not lose anything if the Government reduces the duties further and thus boosts offtake. An increase in turnover would clearly benefit the Government. To help mills in Kanpur and others similarly situated, Mr. Shastri announced that the Railway Board is considering the question of concessional freight rates for units located far away from port towns. The Commerce and Industry Ministry has finalised a scheme for linking exports with imports to help modernise the textile industry, but no details of the scheme have been given so far. Mr. Shastri had no solution for clearing the accumulated stocks with mills, but he called upon the federation of textile millowners to devise a scheme through which it could build a pool of the major portion of the unsold stocks for purposes of export, and if necessary for internal consumption. The experience of the sugar mills shows that if the creation of such a pool is left to the industry itself, it is not likely to materialise soon. On the other hand, if the Government were to issue an ordinance, as in the case of sugar, making compulsory levies from mills for the pool, the result may well be to raise prices further. The view that mills, especially in north India, cannot do without some sort of co-operative effort to survive, was forcefully put by Mr. Shastri when he appealed to them to go ahead immediately with the establishment of a Research Association in Kanpur. Madras already has one under the name of S.I.T.R.A. (South Indian Textile Research Association). Mr. Shastri first mentioned the subject of a research body for north India at the last meeting of the Cotton Textile Fund Committee in Bombay, but before the scheme can get under way the co-operation and support of at least 50 mills in the region have to be secured.

Competition for British Exports

The main trends in Britain's exports since the war are analysed in the October issue of the *G. E. C. Export Guide*, which incidentally marks the second anniversary of the publication of a useful quarterly whose circulation in that time has trebled. Dealing with the current prospects for 36 groups of British exports to 34 different countries, the Guide finds these are "good" in 12 countries, "improving" in eight, "deteriorating" in six and "bad" in eight. Prospects are shown to be good in Canada, Denmark, Hongkong, Iran, Iraq, Italy, Nigeria, Portugal, Spain, Trinidad, Russia and Venezuela; improving in Australia, Finland, Ghana, the Irish Republic, Kenya, Sweden, South Africa and the United States; deteriorating in Malaya and Singapore, the Netherlands, Norway, Pakistan, Switzerland and West Germany; and bad in Argentina, Belgium, Burma, Ceylon, the Federation of Rhodesia and Nyasaland, France, India and New Zealand. Since July, opportunities for exports to Australia, Denmark, Ghana, the Irish Republic, Spain, Trinidad, South Africa and the United States have grown better, but the outlook has become less favourable in Belgium, Burma, Ceylon, Malaya and Singapore, the Netherlands and Switzerland.

The longer-term analysis emphasises that the key factor has been competition from West Germany and Japan, which has intensified as their industries have been rebuilt. Britain has met this challenge by developing new markets in Europe and north America and by expanding exports of specialised equipment requiring a high degree of skill, such as capital plant or fine quality consumer goods, at the expense of textiles and consumer goods in general. In spite of these adjustments, Britain has proved more vulnerable to West German and Japanese competition than any other major exporting country. In consequence, her share of world trade in manufactures has declined by 3 percent in the past six years—from 21 percent to 18 percent. The current year's achievement is excluded from this assessment. It seems certain that this year the expansion of world trade, which has been continuous since 1951, will be halted. The U.S. share in world trade has fallen heavily but Britain's exports have held up fairly well, so that the decline in her share of world trade has been arrested. It is not yet clear whether this is a fluctuation in the established pattern or the onset of a new trend.

The Guide suggests that Britain's export business since the war has been hampered by two short-

Current News and Comment

Electricity Consumption in Calcutta

The demand for electricity in Calcutta and its industrial suburbs continues to rise. Consumers of all classes, domestic as well as industrial, used 107 million units more during the 12 months ended March 1958 compared with the previous year—the total being 1,501 million units. Since the consumption of electricity is a useful indicator of economic activity, the higher figure must mean that industrial activity in this city has increased. This is what Sir Harry Burn's speech at the latest annual general meeting of the Calcutta Electric Supply Corporation Ltd. held in London last week, suggests. (A fuller version appears on another page). The jute industry is the largest consumer of high-tension power supplied by the company, accounting for 40 percent of such sales, and its demand during the period rose to 359 million units from 331 million units. Sir Harry refers to the difficult conditions through which this industry is passing and quotes in support of his view an extract from a recent I.J.M.A. Press note which describes the actual nature of the problem and the specific solution which has had to be adopted. The industry has been pursuing a programme of modernisation and rationalisation, and although a few uneconomic units have had to be closed down in the process, the total output has not been affected and the impact on labour has been reduced to the minimum.

The next most important industrial consumers are the steel works and engineering workshops, accounting for 21 percent of the total. Cotton mills, chemical works and paper mills are also important consumers, and other industrial users represent a fair cross-section of the industry in the region. The small industries in Howrah made a greater demand, their consumption increasing to 91 million units from 85 million units. As for the increase in domestic consumption, Sir Harry traces this to the construction of more houses and shops to the south of Calcutta and on the fringes of most small towns in the company's areas of supply. But an important reason for the steady rise (domestic power consumption has doubled during the past five years) is the growing use of mechanical appliances in homes and the installation of small air-conditioning units in private houses. Public lighting also consumed more electricity. Referring to the development programme of the company, Sir Harry says that during the year under review, capital expenditure totalled nearly £1.5 million; the sum was spent almost entirely on improving its distribution system. Two large projects together costing £900,000 were commissioned, namely, the Howrah receiving station scheme and the Bauria electrification scheme. The former is meant to receive the bulk supply which has been taken since April 1957 from the Damodar Valley Corporation for feeding the company's 33,000-volt transmission system. The Bauria scheme supplies energy to the south-western portion of the company's licensed area on the western bank of the Hooghly. "This is the last area within our licence in which the main distribution remained undeveloped". The new consumers comprise seven jute mills and one cotton mill with an initial demand of 11,000 kilowatts. "It has been a difficult scheme to commission as communications are poor and much of the terrain is flooded for many months of the year".

Sone Valley Cement

In his address from the chair at the annual general meeting of the Sone Valley Portland

Cement Co. Ltd, Mr. Anandilal Poddar has reviewed the company's progress. (A fuller version of the speech appears elsewhere in this issue of *Capital*). In spite of the very old plant and worn-out equipment which "came to the lot of the present management," the output of cement has increased to 177,210 tons, from 174,630 tons. This figure could have risen to 200,000 tons if production had not been paralysed for about three months by a strike in the quarries. Mr. Poddar says that the Government of India has issued a licence for increasing the company's production capacity by another 750 tons a day. But not much progress has been made with the scheme due to the lack of finance, "mainly on account of the delay on the part of the Industrial Finance Corporation of India to sanction our application for a loan of Rs. 1 crore, which is still under consideration for the last 25 months." Although the retention price for the company's cement has been raised by Rs. 4.75 a ton with effect from 1st July, 1958, the increase "barely covers" the higher costs of production resulting from a sharp rise in the cost of stores, spares and raw materials, and in labour and administrative expenses. A further rise in railway freight rates from 1st October this year has worsened the situation and "representations have been made to the Tariff Commission to review the fixation of the retention price in the light of new conditions thus obtaining." Referring to the accumulation of stocks in the industry, Mr. Poddar wonders how the needs of the country can be met under the present distribution and pricing arrangements. Since producers have shown their ability to meet the entire domestic demand, the need for continuing State trading in the commodity should be reviewed. It is also necessary to explore new fields of consumption in order to reduce the glut in the cement market, the chairman says.

Taxes for Malayalam Plantations

In his statement to the shareholders of Malayalam Plantations Ltd, Mr. H. W. Horner, chairman, says that the profit for 1957-58, after tax, amounted to £279,502, against £319,455 for the previous year. (A fuller version of the statement appears elsewhere in this issue of *Capital*). The directors feel that circumstances warrant the maintenance of a high rate of dividend. Accordingly, they have decided to draw upon the whole of the £50,000 still remaining in the dividend equalisation reserve and to recommend a final dividend of 14 percent, making 20 percent for the year, including an interim of 6 percent. "It must be borne in mind that the capital of members of the company is represented not only by the figure of £1,812,021 of the authorised capital issued, but by further capital supplied by members out of profits 'ploughed back', totalling a good deal more than double that figure, so that a 20 percent dividend represents no more than about 7 percent on their capital as it stands in the balance-sheet."

From the aggregate sum of the prices realised in 1957-58 for the company's two products, namely, tea and rubber, the Governments in India levied a total of about £500,000 in the form of excise and export duties and cesses. Furthermore, taxes on income, payable by the Company, amounted to about £500,000 more. Mr. Horner says that the Governments have also introduced rapid improvements in the working conditions of labour; these are largely beyond what planters can afford to give. "To force, in effect, owners of estates to borrow money (whether from Governments or otherwise) to meet the oppressive demands upon them is surely the

comings: too much effort has been directed towards the relatively static sterling area, and too great an emphasis was initially placed on consumer goods. Since the overseas sterling area finances its imports largely through commodity exports, the fall in commodity prices since 1951 has affected them adversely. Periodic payments difficulties have led to import restrictions, which press particularly heavily on consumer goods such as motor-cars, pottery, domestic appliances and textiles. The growth of protected secondary industries also inhibits imports of consumer goods from Britain. In some cases, protected local industries now compete with British exports in other parts of the sterling area, for instance, Australian cars in New Zealand. Competition in consumer goods has been felt from outside the sterling area, particularly from Japan, West Germany and other European exporters. By contrast, British exports of capital equipment to the sterling area are well maintained in spite of competition. On the credit side, the Guide notes the increasing specialisation of British exports on goods requiring a high degree of skill to make. High precision and high quality goods are responsible for the rise of 70 percent in British exports to the dollar area and of nearly 50 percent in supplies to O.E.C.C. countries since 1951. These goods are usually a product of the metal and engineering industries which, although expanding, have not yet achieved the same relative importance in Britain's economy as they have in West Germany's. Under the impact of recession, the seller's market has virtually disappeared even for those products—such as certain coals or steels—where the strength of home demand alone restricted exports in recent years.

General Insurance Mergers

The nationalisation of life insurance has prompted many of the big composite offices to take over smaller units in order to continue in business and strengthen their position. The trend is not unexpected, and the absorption of some offices by New India Assurance last year only marked its beginning. General insurance in Andhra Pradesh is dominated by the big companies run from Bombay. Larger reserves and better service should help, but the elimination of unhealthy competition is essential for growth. A proposal to merge the Hindustan Ideal Insurance Company, which has its head office in Hyderabad, and the Andhra Insurance Company, has been put forward recently. Shareholders are expected to consider the scheme which proposes the payment of Rs. 25 a share to Andhra Insurance shareholders in addition to the issue of shares in Hindustan Ideal. The cash payment will come out of the compensation due from the Life Insurance Corporation. The High Court's approval is required to complete the arrangement, which is expected to consolidate the general insurance business of the companies. The main area of operation for both is Andhra State. The arrangement is warranted by the loss on working for 1957 reported by the Andhra Insurance Company which has asked the Government for compensation for loss of business. Hindustan Ideal had assets exceeding Rs. 14 lakhs at the end of 1957 and Andhra Insurance had assets valued at over Rs. 8 lakhs.

Rail Coach Factories Close

It was reported recently that the State owned Integral Coach Factory in Perambur, near Madras, turned out an average of one passenger coach every six working hours last month. This may have been

encouraging news, but reports have meanwhile appeared that private railway coach builders in Uttar Pradesh are faced with the prospect of immediate closure. Allahabad and Bareilly, which have three private coach factories each, are the hardest hit. One factory in Allahabad and one in Bareilly have already closed down. The U.P. industry has been manufacturing coaches for the North-Eastern Railway and the crisis has followed a decision by the railway administration not to place any more orders. The Allahabad factories have so far produced about 505 coaches and the Bareilly factories about 600. In addition, they have also built about 1,500 wagons. All the factories have installed valuable machinery and equipment to cope with orders which, it was hoped, would be substantial and steady. The Railway Ministry's original scheme to set up a coach factory of its own in Bareilly was revised in favour of Allahabad, but even the revised scheme has been shelved for the time being. Apart from the factory in Perambur, the Hindustan Aircraft Factory in Bangalore manufactures coaches for the railways; but Allahabad and Bareilly are the only two places where coach-building on a "cottage industry" basis has been done by private parties. The coach-builders claim that they were encouraged to look forward to a prosperous future following an assurance by the Railway Board that it would continue placing orders until the end of the second plan period. Under the Board's programme, only steel coaches will be made and used after 1962, when the wooden ones will be discarded. The industry maintains that the cost of the coach it builds with local labour works out to Rs. 62,300, compared with Rs. 89,000 for a similar coach built at a railway workshop. On a rough estimate, about 15,000 workers will lose their jobs if the industry closes completely.

Expanding Mineral Output

Inaugurating the Deccan Geological and Mining Society in Hyderabad a few days ago, Dr. M. S. Krishnan, special officer, the Ministry of Natural Resources and Scientific Research, expressed the hope that in another decade India would be able to attain self-sufficiency in oil. At present, she is importing oil worth Rs. 60 crores to Rs. 80 crores each year. This sum could be saved if prospecting operations by the 20 magnetic, gravitational and other technical parties prove successful. Reports of oil finds in Cambay and Jwalamukhi have yet to be corroborated and confirmed. But once data for the underground regions have been gathered, drilling in dry areas will be avoided. Dr. Krishnan regretted that at present India has no definite mineral policy; greater co-ordination of the work of various producing units is required. It is necessary to help small mineowners who are unable to engage technical advisers by forming them into co-operatives or larger units so that their operations become economic. At present, many of them are struggling to survive, for instance, in the manganese and iron ore industries. These industries depend heavily on exports and have been affected by wide fluctuations in prices. In view of the many difficulties, such as the lack of trained technical personnel, it might take three or four years more before the target for iron ore output under the second plan is reached.

Electricity Profits

The U.P. Government has issued a clarification saying that electricity companies in the State are within their rights in earning profits up to the limits laid down in Schedule 6 of the U.P. Electricity Supply Act, 1948. Electricity suppliers will be duly grateful for this small mercy, as it was feared that an unfavourable decision would be taken on a complaint from Shahjehanpur that the company there was charging higher rates for electricity although the Government was supplying it with cheap hydel power. The Government, however, is satisfied that the profits earned by the company have not exceeded the limits prescribed by the Act and that no action should, therefore, be taken. Already, it is apparent from the constant complaints in U.P. against the refusal of new connections by companies that the present ceiling on profits hampers expansion. The rate of return is hardly satisfactory for the investor. The regulation of profits was only one of the objects of the 1948 Act; another was to "rationalise the production and supply of electricity." How sadly the latter object has been neglected is clear from the high rates levied by the nationalised electric supply industry in Kanpur. Even for factories there are no special concessions, and an average mill, according to Mr. J. K. Srivastava, president of the Upper India Chamber of Commerce, has to pay Rs. 6 lakhs more each year for electricity than a similar mill in Bombay or West Bengal. The U.P. Chief Minister has been advised by the Centre to "risk" a lowering of electricity rates for industry so that the latter may develop, but so far there are no indications that the State Government proposes to take the advice. Meanwhile, a scheme for the

"electrification of towns to relieve unemployment" has been undertaken by the Government, which claims that 27 small towns are already getting energy under it. Apart from the employment opportunities created by granting connections to industrial units, the statistics from 22 of the 27 electrified towns show that a large number of people are employed in the maintenance and repair of supply lines. A total of 36 towns will be brought under the scheme, which is expected incidentally to increase the demand for electrical goods and electrical contract work. The economic implications do not seem to have been worked out yet, as the accent is on creating employment.

Trade with Italy

The prospects of increased trade between India and Italy have been discussed for some time, and hopes prevail in Madras that more groundnut oil might be bought by Italy as well as Spain because of the shortage of olive oil there. Mr. S. K. Guha, India's Commercial Attaché in Rome, was told that Italy has sold more to India than she has bought; she has also developed jute, coir and other industries, using imported raw materials. As a buyer of iron ore and manganese ore as well as hides and skins, she remains important, but other suppliers are competing with India in selling manganese ore. Mica, too, is now exposed to stiffer competition. But the point that India has cut rayon imports does not seem to have been mentioned. Italy has given assistance in starting a new viscose rayon plant. The textile industry of Coimbatore is supporting the scheme and the Milan group associated with Snia Viscosa is helping to put up the plant in Mettupalayam. Mr. Guha has been asked to find out why Italian costs of production for tyres, rayon yarn, etcetera, are lower and how exporting capacity there has been developed. The passing on of trade enquiries could be supplemented by information on differences in output and wages. Opportunities for selling more coffee to Italy have not been considered yet, but the present trend of prices, together with rising output, might force Indian growers to find new markets in Europe.

Land Mortgage Banks

Land mortgage banks were originally formed in Andhra Pradesh to help cultivators repay old debts. But they are now called upon to provide funds for land improvement in newly irrigated areas, so revised rules for valuing the land which is offered as security are needed. Loans on the basis of land revenue paid by the owner may not help much in providing funds for wells, for instance, in Telengana. New loans for productive purposes for a long term will have to be given by rural mortgage banks. The Reserve Bank could help the State agencies to do more, but many calls are being made on its agricultural development fund already, so it is felt that the State Government should set about helping ryots to increase production. As the need to raise output is urgent, the task of tapping funds in the rural areas for direct investment in various projects may devolve on the land mortgage banks. The secretary of the Andhra Land Mortgage Bank has pointed out that the Rs. 8 crores advanced so far is not enough and the Life Insurance Corporation should help by buying the bank's debentures, especially as provident fund money cannot be invested in rural debentures. It has been pointed out that rural debentures offering a return of 4½ percent and repayable in some years may compete with fixed deposits in banks if the major co-operatives in the State help gather funds for investment. The fact that in Andhra Pradesh banking has not developed as much as in other States may even enable funds to be raised for a longer term. In order to reduce the dependence on moneylenders, land mortgage banks intend to advance more money for land improvement and for the construction of wells. But a Government subsidy is needed, and drills, etcetera may have to be provided by the State's agricultural engineers. The chances of getting more revenue and helping cultivators to secure better terms from landlords cannot be overlooked. The land mortgage banks hope to increase loans from Rs. 70 lakhs in 1957-58 to Rs. 110 lakhs this year.

Textile Exhibition in Bombay

To demonstrate the quality of Indian mill-made cotton textiles, plans are under way for "The World of Fabrics" exhibition to be held in Bombay from 7th to 17th November. The exhibition will consist of two sections: a stall-display of fabrics and a daily fashion parade. Its aim is to show the remarkable developments achieved by Indian manufacturers in the field of cotton textiles. Twenty-four mills which are licensed to use the registered trade mark "Sanforized" will display a vast variety of materials in specially designed

kiosks. Each kiosk will differ in appearance and "atmosphere" from its neighbour. The exhibits will cover a wide range of fabrics from simple poplins and useful "wash and wear" cottons to sophisticated prints. The uses to which the cottons can be put will be demonstrated every evening from 6 p.m. to 9 p.m. at a fashion parade, "Mirror of Fashion". This feature of the exhibition is directed to appeal to a wide cross-section of society: to men, women and children who wear either Indian or western clothes. Designs for the latter were created by the International Section of Vogue, New York, and executed by a local couturiere. Mannequins drawn from all communities will model day-wear, evening-wear, sports clothes, suits, coats, cocktail dresses, pyjamas and housecoats.

Condenser Spinning Simplified

From Rochdale comes news of what is claimed to be a completely new spinning system for the condenser trade. The unit, coupled to a standard carding engine, enables the raw cotton after opening to go through only one process before the yarn is ready for weaving, whereas under normal practice there are five different processes. The inventor is Mr. Harry Shenton, managing director of Moss Bridge Mill Ltd., of Rochdale, who believes he has succeeded in devising a machine which will spin yarn ready for weaving in a single process. For 12 months Mr. Shenton has been working out engineering details and design with Mr. Frank Leach, a co-patentee, who is chairman of F. Smith and Co. (Whitworth) Ltd., textile machinery makers. But so far only the prototype has been finished, and this is installed at the Moss Bridge Mill, where it is working 24 hours a day on a continuous process without the need to stop for doffing. Another machine is being constructed by F. Smith and Co. which will be able to spin the fine counts in the condenser trade. The inventor claims that the new machine will produce a greater weight of finished yarn an operative-hour than any other system in existence in the world. He says that it can be adapted for use on English and Continental systems and can also be applied to the woollen industry. Plans are being made for the unit to be available to the trade in general within the next six months.

Attracting Capital

Considerable attention is being devoted to ways and means of providing capital to meet the needs of under-developed countries. A fair volume of investment has already been made in the form of loans or grants from Governments or from schemes such as the Colombo Plan, but private investment has fallen far short of the level hoped for and required. The element of risk involved has obviously outweighed the large potential returns, especially when compared with the yields and capital appreciation obtainable in more normal activities on international markets. In an attempt to attract capital and to dispel the almost automatic association of great risk with investment in Africa, the Government of the Federation of Rhodesia and Nyasaland has published a valuable guide, giving an outline of factual information which will be useful to potential investors. Here is an idea which could be followed with advantage by other countries similarly placed. Attractively bound in loose-leaf form, it provides a compact reference work in which any industrialist considering expansion in the Federation can easily find the answers to most of the problems likely to trouble him. The first part of the guide deals with the Federation in general terms, containing sections on its geography, peoples, national income and expenditure, communications and power supplies, and a description of the social and financial services offered. The second part gives detailed information on specific subjects such as business, law, taxation, import and export controls, prices of land, building, services and fuel, salaries, wages, trade unions and labour legislation. These are all details which the careful investor takes into consideration, and provided the answers are satisfactory, making them widely known should certainly serve as a strong incentive and pay good dividends.

CORRESPONDENCE

TEXTILE MILLS CUTTING EXPENSES

(TO THE EDITOR OF "CAPITAL")

Sir,

The report published under the above heading in Capital of 18th October, 1958, contains some mis-statements which require to be corrected. It is not true to say that the Millowners Association, Bombay, has drawn up a housing scheme for its workers in consultation with the Rashtriya Mill Mazdoor Sangh. In fact, no such scheme is in existence. All that the Association has done is to offer a sum of Rs. 50 lakhs as its contribution to the housing of the Bombay cotton mill workers if the project is taken in hand either by the Government or by other appropriate authorities. The Association is in correspondence with the Government of Bombay as to how best the scheme can be implemented. The Sangh has, therefore, nothing to do with the matter.

It is most unfair to blame the Association if the workers do not receive their bonus for 1957 before the forthcoming Diwali festival. It has been laid down in the five-year bonus agreement between the Association and the Sangh that the bonus for the years 1956 and 1957 should be determined on the basis of the rehabilitation amount that would be fixed for the industry by the Rehabilitation Commission. As the Commission had not completed its investigations, the Sangh approached the Association last year for disbursing the bonus for 1956 on the same basis as was adopted in the previous years. The Sangh is at perfect liberty to make a similar approach this year also, especially when it knows that the report of the Commission will not be available before March 1959.

Again, there is no basis for the statement that "this year the industry has put in a demand for Rs. 72 crores for rehabilitation". This amount has long been accepted by the Industrial Court and the Labour Appellate Tribunal. The Rehabilitation Commission, appointed in terms of the agreement, is going to make a de novo assessment of the rehabilitation requirements of the industry. In view of these facts, it is evident that the millowners are in no way responsible for the delay in the payment of bonus. I might add that it has always been our steadfast policy to honour our commitments scrupulously, however onerous they might be.

Yours etc,
B. G. KAKATKAR,
(Secretary to the Millowners Association, Bombay).

Bombay.

CLERGY AND COMMERCE

THE Bishop of Ripon is a brilliant and powerful speaker on many subjects, but at the Bradford Congress he seems to have waded a bit out of his depth to attack companies as "impersonations of the vices of intelligence more perilous even than vices of violence". He stigmatised trade as carried on under conditions which tended to lessen the consciousness of the need for personal uprightness, and companies as often more limited in honour even than in capital. The theory, he said, that trade was not a system for the interchange of needful commodities but a method of predatory warfare was too often tacitly accepted, and the principle in this warfare that anything was fair was alas! too frequently adopted in practice. He talked of the ruin of those whose only fault was the weak faith which led them to believe that noble names were a guarantee for noble conduct, and much more in the same strain. Very sonorous words these, and the pious, eloquent bishop would perhaps fain revert to the happy ages when he could have exchanged a certain number of eggs from his poultry yard for an equivalent quantity of fresh butter from his chaplain's dairy. Modern ways and modern requirements have advanced just a bit beyond this. In the gigantic operations of today, upon vast fields of operations, there must be occasionally some open gates for the little troop of dishonest promoters. A Panama or a Liberator scandal will occur now and then, but are these which has built up England's wealth and rendered possible the utilisation for the public benefit of great and useful inventions?

Without Prejudice

REFERRING AN INDUSTRIAL DISPUTE TO A TRIBUNAL

DISCRETIONARY POWERS OF A STATE GOVERNMENT

(FROM OUR LEGAL CORRESPONDENT)

ANY reader who does the writer the honour of regularly scanning these notes, will have noticed the remarkable frequency with which the ultimate decision in an important commercial case may turn on the correct interpretation of one simple English word in common, everyday use. Personally, one finds the study of such cases quite fascinating and is always on the look-out to find and present one to the reader. This week we will consider—not by any means for the first time—the word “may” as distinct from the word “shall”. The former is by far the weaker. It expresses a possibility. “I may or may not accede to your request”. There is something optional or permissive about it; it implies a discretion. “Shall” is mandatory, obligatory and peremptory. It expresses a command. “Thou shalt not commit adultery.” The Scots, it is wrongfully said, are particularly addicted to an incorrect use of the word “shall”. Said one of them, having fallen into the Tweed: “Nobody shall save me. I will be drowned.” So the Englishman on the Berwick side of the river, hearing a mandatory injunction not to interfere and the expression of a fixed determination to perish, let him drown.

That brings us to Madan Gurang and two other workmen who were out for their Constitutional rights. One of them, his union claimed, had been wrongfully transferred from one job to another. A second had been dismissed on what he termed

a wrongful charge of gross negligence. A third claimed that he had been dismissed on wrongful charges of misconduct. The workmen's union demanded that their grievances should be referred as an industrial dispute for arbitration under the Industrial Disputes Act. The Government of West Bengal declined to make the reference. Out of this refusal arose what P. B. Mukharji J. later described in the Calcutta High Court as “a novel application.” It was also one of considerable importance to employers in general. The workmen's application was one under Article 226 of the Constitution and its main purpose was to secure a mandamus to compel the Government to make a reference of an industrial dispute to an industrial tribunal. The prayers in the petition sought for the issue of a writ of mandamus calling on the Government to recall, rescind and withdraw an order dated 8th February, 1957. That order was contained in a letter which concluded by saying: “Under the circumstances, the Government does not like to intervene in the matter any further.”

The applicants then sought for a Constitutional writ of mandamus to compel the Government to intervene. In this letter, described as an order, the Government had stated that an enquiry was made into the industrial dispute between Messrs Alkali and Chemical Corporation of India Ltd and their workmen. It said further that it had transpired that: “Dandasi was transferred from the Fire Station to the Salt Dissolving Plant and not to the yard as alleged by the union. The transfer was necessary as the management re-organised the Fire Station on a more efficient line. Your allegation that the transfer amounted to demotion has not been found to be correct. Madan Gurang, the security darwan, was dismissed for gross negligence of duty which he committed by leaving the gate unguarded without permission from any higher authority. Bejoy Patra was charge-sheeted for taking the company's lorry out of the factory without a driving licence. Moreover, he was found

to be responsible for the loss of a tyre which was in the lorry when he took it out. From the evidence produced by different witnesses it has been established that Patra is guilty of the charges made against him.”

For these reasons, the Government refused to intervene further. The only way in which it could have intervened would have been by a reference of the matter to the industrial tribunal. Such a reference, of course, was precisely what the three workmen desired and to which they claimed they were by law entitled. Whether Dandasi had been demoted or not, whether the darwan had been guilty of gross negligence or not, whether Bejoy Patra had been making free with the company's lorry and had lost its tyre or not, and whether these offences, if proved, justified dismissal or any lesser and, if so, what penalty, were, the union claimed, essentially matters for a tribunal to decide; and by declining to refer it and deciding the issues itself, the Government had usurped the jurisdiction to decide the industrial dispute and allocated the guilt itself. It was contended for the workmen that this jurisdiction the Government did not possess and that, therefore, the matter must be referred to the industrial tribunal.

You may think, as the writer did but no longer does, that there is a good deal of substance in this contention. For example, take the third case, that of Bejoy Patra. This man was charged not with stealing his employer's lorry but with driving it without a driving licence, and not with stealing a tyre from the lorry but with allowing one to be stolen from the lorry while he was in charge of it. Two material offences, certainly, if he had committed them. But on the principles of so-called “natural justice” said to be administered under the Industrial Disputes Act, these are just the type of offences which are dealt with, month after month, by industrial courts and are regarded, rightly or wrongly, as more or less venial and not such as to justify extreme punishment. These references to industrial courts and tribunals are such an everyday occurrence and so customary that we are apt to forget that the appropriate Government has an option in the matter as to whether to refer them or not.

Read the opening words of Section 10 of the Industrial Disputes Act, with special reference to the one word italicised by us: “Where the appropriate Government is of opinion that any industrial dispute exists or is apprehended, it may at any time by order in writing refer the dispute”, etcetera. “May”, not “shall”. Discretionary, not mandatory. P. B. Mukharji J. pointed out three consequences that followed from the language of the section quoted above. His lordship said: “First, it is clear from the words of the statute that the power to refer the dispute is in the appropriate Government. The appropriate Government is the only referring authority. Secondly, the opinion that is conclusive whether there should be an order for reference or not, is the opinion of the appropriate Government. Thirdly, the Government has the discretion to refer or not to refer a dispute either to a board or court of enquiry or to a tribunal. This discretion follows from the use of the word “may” in Section 10. I am, therefore, satisfied for these reasons that the Government cannot be compelled by a Constitutional writ of mandamus to make a reference of a dispute. After all, under Section 10, the Government alone can refer a dispute. The Government has to be satisfied in some form or another that it is a dispute which should be referred. It is its opinion that counts under Section 10. It is alone the referring authority.

“Section 12(5) of the Act makes it compulsory for the Government to record and communicate the reasons for not making the reference. The Government has done so in this case in the letter of 8th February, 1957. I see nothing wrong in the Government's stating its reasons for not making the reference. Those reasons may be right or wrong but this court is not the authority under Article 226 of the Constitution to sit in judgment over the merits of the reasons which have impelled the Government not to take any further step in the matter. The Government in this case says in that letter that an enquiry was made into the dispute. It gives the result of that enquiry with reasons. The report of the Conciliation Officer need not be produced as such by the Government because the statute does not say so. The statute only casts an obligation on the Government to state the reasons for not making the reference and communicate them to the parties. The Government has complied with that statutory requirement in this case.”

His lordship, in forthright manner, rammed home the fact that the Government possesses discretionary powers with which the courts cannot interfere: “I am, therefore, satisfied that neither under the Constitution nor under any law, nor under any procedure for writs, should any rule issue to compel the Government to make a reference of a dispute to an industrial tribunal when the Government is of opinion that no such reference should be made. This court will not substitute its own judgment for that of the Government by reason of Section 10 of the Industrial Disputes Act read with Section 12 of the same Act.”

Putting it in a nutshell, the reason is that in both sections the word “may” is used and not the word “shall”. The Government's discretionary right to refuse to refer is, or would be, if it were more generally used, a valuable check on the abuse of the process of industrial courts and tribunals by the launching of frivolous, vexatious and trifling claims.

The petition in the case we have discussed was summarily dismissed. (A.I.R. 1958, Calcutta. 271.)

A Ditcher's Diary

LIKE ALL OTHER LIVING THINGS, Capital has a birthday. It falls this week, and I am pleased to report that we are about to enter our seventy-first year of publication in excellent health and with undiminished vigour. I wish I could say the same for an institution which, although not so old, is almost as well known and of which we are equally proud. I am referring, of course, to Capital's Christmas Toy Fund, which is once again open for contributions. Notwithstanding what Mr. Nehru thinks about charity, it is our claim that this Fund brings happiness to a large number of poor children who might otherwise face a very bleak Christmas indeed. Yet for the past few years, the sums we have managed to collect have diminished progressively. We have done our best; and indeed, the total for 1956 was only Rs. 7 less than that of 1955. But the trend is clearly there and last year's figure, at Rs. 3,777, was Rs. 436 lower than in 1956—in other words, a drop of about 8.7 percent. The account for 1957 is published at the end of this week's Current News and Comment. I know that Christmas is not the festival it was in India before Independence. And nobody is more aware than I am that the rapacity of the tax collector leaves little enough in the pocket for meeting life's unavoidable commitments, let alone giving to charity as well. But I feel I must urge on our readers not to let the spirit of Christmas die altogether whether they be Christians, Hindus, Muslims, Parsees or simple pagans like myself. After all, we make no distinction of colour, race or creed when selecting our children. It is good to remember that there are still some human beings who have the time to enjoy themselves and have not yet accumulated enough worries and responsibilities to prevent their doing so, whose tastes are simple, but who have still not reached the age of being able to provide for their own wants. Please send all you can, and send it early. The address is Capital Christmas Toy Fund, 5, Mission Row, Calcutta.

THROUGHOUT THE GERMAN-SPEAKING WORLD, THAT is, in Germany, Austria and Switzerland, the Duden dictionary has long enjoyed the same popularity and authority as the Oxford has where English is spoken. A German-speaking reader tells me that those days are now past. The division of Germany into two totally opposed régimes has, from this year, split Duden into two editions, one for the Federal democracy and one for the “popular” democracy. The presentation of the two books is different, of course, but the contrast does not stop there. My friend had the curiosity to look up the definitions offered for several political terms in “West Duden” and in “East Duden”. He found that in the western edition democracy is defined briefly as “government by the people”, whereas in the eastern version it is “a type of government of which the form is laid down by the governing class”. Pacifism for West Germans is defined as “a movement that seeks to eliminate wars”; for East German it is “a movement that opposes all wars, even just ones”. Cosmopolitanism in West Duden is “citizenship of the world”; in the eastern edition it is “an imperialist ideology which, under the pretext of internationalism, destroys the cultural heritage of nations and seeks to annihilate the national independence of peoples”. Agitation in the western lexicon is merely “excitation”, whereas in the eastern it is

“the action of enlightening a progressive movement”. But it is militarism that provokes the most notable divergence. West Duden is content with the traditional meaning, “spirit of the professional soldier”, but East Duden feels obliged to distinguish carefully between “the healthy militarism of non-imperialist States” and “the unhealthy militarism of imperialist States, which causes oppression of the mass of the people and provokes an aggressive foreign policy”.

THIS PASSION OF THE AMERICANS FOR BEING THE first with this, or owning the largest of that, probably has an interesting explanation for a psychiatrist. It is a quality which has always exasperated the Asian, amused the European and frankly baffled their best friends, the British. To me, it provides the solution to the mystery of their enviable prosperity—what, may I ask, is more conducive to effort than the spirit of competition? But when the game is always played to win, a defeat can lead to peevishness if not actual bitterness. No American can deny that what happened over the Russian Sputnik; I am glad to see that nothing of the kind is taking place over this victory of the Comet in the race for the first commercial jet service across the Atlantic. I have just finished reading Pan American's apology to its public and a more good-humoured acceptance of defeat would be impossible to devise. It seemed to me when I read those advertised claims—made so long before the service was due to start—that here were words which were asking to be eaten. But Pan American has proved itself a fine sporting loser, and where I am concerned that more than makes up for any previous over-confidence in its game. I cannot help thinking that although B.O.A.C. deserved the victory—if only because the Comet was the world's first jet airliner and because its unfortunate experiences have made such monsters as the 707 and the DC 8 a safer proposition—the real precursors of this era of non-stop jet air travel which is opening over the Atlantic are, in fact, the American machines rather than the British. But such are consolations, and they would not be necessary if a little of this rivalry could be forgotten—after all, it is human life that is being gambled with I have always rather admired the policy of the Cunard White Star steamship company in refusing to let its incomparable “Queens” strive for records when even the slightest risk is involved. It would be tragic if this competition in the air were all to end in one huge aerial Titanic disaster. But here I know I shall be set upon by the airline companies eager to reassure me; and indeed it is true that today each one of them exercises the most exaggerated caution. To return to our gallant loser: May I say that such a graceful assumption of sackcloth and ashes should be enough even to wipe the smirk off the face of a B.O.A.C. jet pilot. And I could not imagine anything better calculated to further that other American passion—for making friends and influencing people.

THE INABILITY OF MEN OF GOODWILL TO STILL THE passions of political dispute in our time has rarely been so clearly displayed as in the fiasco that overtook the “Mediterranean symposium” held in Florence recently. Arranged by the social-democrat mayor of that city, this unofficial conference

was intended to bring together eminent men from all the Mediterranean countries for a serene discussion of their common interests and culture. Blessed from Rome by President Gronchi and from Paris by General de Gaulle, the meeting did in fact attract delegations of the highest intellectual quality from all the nations surrounding the *Mare Nostrum*. But that was the trouble: “all” necessarily included Arabs, Jews and Frenchmen. The Arabs objected to the presence of the Israelis, and the representatives of scholarship in the United Arab Republic expressed the odd view that exactly because the meeting was non-political, no Jew should participate. The Arabs eventually consented to take part in discussions with the Israelis, provided they agreed to say nothing. Meantime, the French delegation discovered that a leader of the “Free Algerian Government” was present whereupon it demonstrated its non-political goodwill by withdrawing. Mediterranean tempers began to rise, and the well-intentioned organiser of the symposium had a heart attack that robbed the gathering of its peace-maker. Prince Moulay Hassan of Morocco made one of the few gentlemanly gestures of the conference by inviting the Israelis to remain as his personal guests, but by then the fat was in the fire and meetings degenerated into slanging matches. The French Press intervened to charge the Government in Rome with having deliberately arranged a diplomatic incident, and called for a total review of Franco-Italian relations. Thus a gathering of private men of goodwill ended in venomous displays of national animosities and a breach between friendly nations.

BORED AS I, ALONG WITH SO MANY OTHERS, HAVE become with seeing processions winding noisily through the streets of this city, my interest in newspaper reports about them is naturally limited. But my curiosity was aroused by one which appeared in a local daily some time ago. The reason was that it referred to a silent procession, something I have not seen in Calcutta for as far back as I can remember. The place was Gauhati, the participants were not men but wild animals and the slogan was the mute appeal: “Let us live”. I know that Calcutta's processions are an admirable opportunity for letting off a little steam—a very necessary safety-valve considering the explosive quality of the local temperament. But when it comes to the ostensible *raison d'être* of all processions—the representation of a cause—I can see that Assam's wild animals have much to teach the citizens of Calcutta. A silent procession leaves a much more sympathetic impression on responsible minds. It makes its point without disturbing the peace, without upsetting the traffic and without inconveniencing the general public. In other words, it attacks the conscience without offending the senses or incommoding the person. In fact, the Assam Forest Department, which organised this demonstration as part of its Wild Life Week, in my opinion showed beyond doubt that not in all aspects are we human beings as superior as we may think. It was not because of cynicism alone that Victor Hugo once said that the more he observed human beings, the more he loved dogs. How many of us, I wonder, can claim the same qualities of loyalty, devotion to duty, contempt for success, and indifference to worldly possessions which characterise our domestic animals. Then again, how many of us would not like to acquire the shrewdness of a fox, the diligence of an ant or the grace of an antelope? As a start, the leaders of processions in this city might adopt a little horse sense and learn from the animals how to conduct their affairs with dignity and effectiveness.

THE DITCHER

India is the giant among the countries manufacturing jute products. With a capital of about Rs. 100 crores and employing more than 3,50,000 workers, our jute industry accounts for over 50% of the world's total production. This ‘golden fibre’—our best dollar earner—brings in annually Rs. 125 crores in foreign exchange. Playing a significant part in the development of this major industry is Texmaco, pioneers in many fields of engineering in India. Aided by the world's best know-how of its technical collaborators, Fairbairn Lawson Combe Barbour Ltd., of England, Texmaco, today, is equipped to manufacture and supply the complete range of jute mill machinery, made to international standards.

THE UNITED STEEL COMPANIES LTD

THE UNITED STEEL COS. (INDIA) PRIVATE LIMITED.

P.O. Box No. 673, Himalaya House Hornby Rd., BOMBAY-1.

P.O. Box No. 3763, 19 Agurchand Mansions, Mount Road, MADRAS.

P.O. Box No. 119, P-15 Mission Road Extension, CALCUTTA-1.

SPECIAL STEELS FOR ALL INDUSTRIAL PURPOSE:

The products of the Steel Industry are more varied than ever—and vital to our economy. The industrial enterprises that are making history in our times depend largely on Steel. Steel for aircraft and guided rockets, steel for Atomic Power Stations and for the vast river Valley Projects, steel for railway locomotives motor cars and diesel engines—is supplied from the furnaces and mills of the United Steel Group.

United Steel have been well to the front in introducing new steels to withstand high stresses and high temperature. The latest scientific techniques are in practical use. Television Cameras, Photo-electric cells and radio active isotopes are all helping to improve efficiency. United Steel contributes by employing such modern methods for better steels in the march of Indian progress.

Made, sold and serviced by:

VALTAS VOLTAS LIMITED

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

INCREASED DEMAND FROM ALL CLASSES OF CONSUMER

TOTAL ENERGY SOLD GREATER BY 107 MILLION UNITS

TWO LARGE DISTRIBUTION PROJECTS COMMISSIONED DURING THE YEAR

SIR HARRY BURN'S SURVEY OF ACTIVITIES

The Sixty-first Annual General Meeting of the Calcutta Electric Supply Corporation Limited was held on October 23 at Victoria House, Vernon Place, Bloomsbury Square, London, W.C.

Sir Harry Burn, K.B.E., A.C.A., the chairman, presided.

The following is his statement, which had been circulated with the report and accounts:—

In my last review I drew attention to the results brought into force by the Government of India making it obligatory for our accounts to be made up to March 31 of each year instead of December 31 as was previously the case. It was, therefore, necessary to submit accounts covering the period of the 15 months that ended on March 31, 1957. The accounts now submitted cover the 12 months ended March 31, 1958, a fact to be borne in mind when studying the comparative figures shown in the revenue account and net revenue account.

During the year under review there was an increase in demand from all classes of consumer. Comparison with the energy sold during the corresponding 12 months ended March 31, 1957, demonstrates the expansion that has taken place. The total energy sold increased from 1,394 million units to 1,501 million units, an increase of 107 million units.

Area of Supply and Power Sales
The Company's area of supply covers 200 square miles. The approximate population in this area is 8½ million. As stated in last year's review, our constant aim and endeavour has been to supply power to run the wheels of industry and transport and also meet the increasing domestic requirements of our area of supply and thus make our contribution towards the prosperity and welfare of those who dwell and earn their livelihood in the City of Calcutta, its suburbs and in the industrial areas and municipalities which lie adjacent to the City.

The bulk of the low tension load, both domestic and industrial, is concentrated in the heavily built-up areas of Calcutta itself, and also in Howrah on the opposite bank of the River Hooghly; whereas the high tension industrial load is spread over the whole area on both banks of the river and particularly so throughout the 20 odd miles from Calcutta and Howrah to the northern boundary of the area. Reference is made later on this review to the commissioning during the year of the Bauria electrification scheme in the south-western portion of the area on the western bank of the river bringing further industrial load on to our system.

Sales for power purposes cover industrial consumers, public water works, and small power for

on the fringes of most small towns in the company's area of supply.

Public lighting again shows a steady increase, reflecting the progress in the Calcutta Corporation's expansion programme. The Calcutta Tramways Co. Ltd. is the sole consumer for traction purposes and there is no immediate prospect of any increase in their demands upon us.

There are seven distributing undertakings taking bulk supplies from the company. Of the total sales of 44 million units 75 per cent. was supplied to the North Calcutta Grid of the West Bengal Government. Sales increased by 6 million units during the year.

The increased consumption under special contracts was mostly due to sales of high tension energy under our special tariff to owners of large buildings. Sales increased from 44½ million units to 50 million units during the year. The special tariff gives considerable relief to our low tension network.

Expansion of Revenue

The increased energy sold is reflected in the Company's revenues as can be seen from a comparison with the figures for the years 1954 and 1955 and the 15 months ended March 31, 1957, which are set out in the directors' report. Receipts amounted to £7,467,390 (15 months 1956-57 £8,101,785). Apart from the receipts arising from the sale of energy, it will be seen from the revenue account that miscellaneous receipts show a large increase. Under this head has been included £43,120 for the hire of the jetty crane at our New Cossipore Generating Station for the unloading of steelwork required for the extensions to the Tata Iron & Steel Co. Expenditure including the depreciation charge of £843,551 amounted to £5,577,904 (15 months 1956-57 £5,907,907 including depreciation £999,579).

Revenue Expenditure

Coal prices and railway freights again increased and the average cost of coal per ton delivered to our stations during the year was 13 per cent. higher than during the 15 months ended March 31, 1957. The major item of expenditure amounted to nearly £2,000,000 and represents 72 per cent. of the total generation cost. Higher wages costs also had a significant effect. A new item of expenditure appears in the revenue account, namely, £569,560 for the cost of power purchased. This is the sum paid to the Damodar Valley Corporation for the bulk supply which they have afforded us since April, 1957, and to which reference was made in my last review. Management expenditure has also been affected by higher wage costs. Another new item in the nature of an annual tax charge is £73,960 for the Wealth Tax that has been imposed from April 1, 1957, by the Government of India on companies, including overseas companies operating in India.

The new appropriation in the net revenue account of £286,130 to development reserve has been made in accordance with an amendment to the Electricity (Supply) Act, 1948. It is equivalent to the specific relief granted by the Government of India on net capital expenditure and can only be used for investment in the undertaking. The transfer of £114,116 from the net revenue account to the fifth and final appropriation to a special reserve is directed by the Government of West Bengal. The circumstances which gave rise to these appropriations have been explained at length in the chairman's annual reviews for 1954 and 1955. The creation of this special reserve, now completed and built up from our reasonable return over a period of five years to the figure of £461,116 follows on the conditions laid down by the Stat Government in connexion with special appropriation to this extent permitted by them during the year 1949 to 1952 under the Sixth Schedule of the Electricity (Supply) Act, 1948, to finance the expansion of the machinery of production.

Taxation

The Company became an Overseas Trade Corporation for purposes of income tax and profits tax (April 6, 1957). The Finance Act 1957 exempted trading income (though not investment income) from income tax and exempts any trade or business carried on by an Overseas Trade Corporation from profit tax. Under the Act an Overseas Trade Corporation will be liable for income tax (subject to double tax relief) on the amount of its trading profit applied in payment of dividends. Non-resident shareholders in Overseas Trade Corporations will be entitled to repayment of income tax relating to dividends paid out of exempt trading income.

The United Kingdom taxation charge for the year amounted to £85,049 and was arrived at after making allowance for double taxation relief—as far as this at present ascertainable—and adjusting it so far as the Indian Tax position is concerned to balance of unabsorbed depreciation allowances—which I made reference in last year's review—has now been extinguished and a charge for tax arises in respect of the year's profits. Assessments are under appeal in respect of certain items of expense in which may not be known for the result of appeal the board has made full provision in the accounts in accordance with the Electricity (Supply) Act for £378,693.

The clear profit for the year is slightly less than the reasonable return which the Company good by a transfer from the tariffs and dividend reserve permitted by the Electricity (Supply) Act, 1948. This small shortfall can be related to the April 1, 1957, for the creation of a development reserve to which I have already referred—which entails a charge against revenue of £286,130.

We have made the usual allocation for the cost of the reserve fund as required by the Act and a retiring gratuity fund. Provision has been made for the interest and sinking fund charges in connection with the Debentures. In order to conserve our finances for the continued expansion of the Company's operations we have deemed it advisable to appropriate

a sum of £225,000 to "Special Appropriations" for plant expansion and replacements.

The dividend on the Preference stock and an interim dividend on the Ordinary stock have been paid and we propose to pay a final dividend of 3½ per cent. (free of tax) on the Ordinary stock, making 7 per cent. (free of tax) for the year. The balance left to be carried forward on net revenue account is £119,341.

Capital Expenditure

The balance-sheet shows a considerable reduction in the bank overdraft. Capital expenditure during the year totalled nearly £1½ million and was almost entirely for our distribution system. Two large projects together costing over £900,000 were commissioned during the year, namely, the Howrah Receiving Station scheme and the Bauria Electrification scheme. The bulk supply that has been taken since April, 1957, from the Damodar Valley Corporation is fed from the Howrah Receiving Station into our 33,000 volts transmission system, our switchgear and cables for that project cost over £400,000. The Bauria scheme supplies energy to the south-western portion of the company's licensed area on the western bank of the River Hooghly. This is the last area within our licence in which the main distribution system remained undeveloped. The current for this scheme is fed at 33,000 volts from the Howrah Receiving Station through 1½ miles of double circuit gas-filled cable, one of the first of its type to be laid in Asia, and thence by over 14 miles of double-circuit overhead line to three distribution stations. From those points some 10 miles of 6,000-volt cables lead to the new consumers, comprising seven jute mills and one cotton mill with an initial demand of 11,000 kilowatts. Another cotton mill and a foundry are also coming on to this supply and in the near future the total load in this new area will approach 20,000 kilowatts. It has been a difficult scheme to commission as communications are poor and much of the terrain is flooded for many months of the year. As a provision for the capital expenditure during the year there was available the sum set aside for depreciation, approximately £845,000, and the allocations to special appropriations for plant expansion and replacement, special reserve and development reserve, amounting to £655,000, thus making a total provision of £1½ million. Between January 1, 1951, and March 31, 1958, capital expenditure amounted to £9,400,000 and the depreciation provision together with reserves and special appropriations during the same period, amounted to £9,200,000. I give these figures to demonstrate what has been done during recent years—within the limit of earnings permitted by the reasonable return on the capital base—to provide internal finance for the expansion of the company's undertaking.

Visit to Calcutta

In January and February of this year I was in Calcutta for a period of seven weeks and visited all sections of the Company's organization and was afforded ample evidence of the care and attention which our officers and staff devote to their work in maintaining efficiency and promoting the interests of the Company.

Our relations with the authorities continue cordial. I had the pleasure of meeting Dr. Roy, the Chief Minister, and discussed the affairs of the Company with him. Dr. Roy and his officers show a great interest in the Company's activities and fully appreciate our problems. I also met leaders of commerce and industry in Calcutta.

I took the opportunity of touring Calcutta and Howrah and the suburbs in order to see building developments which have taken place in those areas and on which I have made comment in this Review.

During the course of my stay I had the pleasure for a period of four weeks of the company of Mr. Hobson, a member of the board and our technical adviser. Through the courtesy of the chairman and board of the Damodar Valley Corporation we, along with our agent Mr. Macpherson, spent some days in going over the irrigation and hydro-electric projects of that Corporation and were thus able to get a first hand picture of all that has been accomplished and of the magnitude of the schemes in hand. At the kind invitation of the West Bengal Government during the course of this tour, we visited the Damodar Barrage and the Headworks of the Irrigation and Navigation Canals, the latter, now under construction, will connect up with the River Hooghly some miles north of Calcutta. We were also taken over the coke oven gas plant and thermal power station, also in course of erection by the West Bengal Government at Durgapur. The tour was in all respects an interesting one and I wish to express my warm thanks to the officials of the Damodar Valley Corporation and the West Bengal Government for the hospitality shown to us.

Technical Training

Our technical training scheme for the training of young Indian graduates in the United Kingdom has now been in operation for nearly 12 years. During the same period we have also given training in the United Kingdom to a number of our permanent Indian staff. There are usually at least four men under training at any one time; at present three men are on their way back to Calcutta after completion of their training, two men are in the United Kingdom and two men are about to arrive. We are grateful to the Electricity Council, the Central Electricity Generating Board, the Area Boards and the various manufacturing companies that provide facilities for this training.

Tribute to Staff

I desire to express our thanks to the staff in Calcutta. The continued progress and development of the Company reflect the interest, efficiency and zeal which members of the staff and employees devote to the Company's affairs. Mr. Macpherson, our agent in Calcutta, has carried out his onerous duties with great ability and in all respects has justified the confidence which the board repose in him. To him and all members of our organization, we express our high appreciation for the services rendered during the year. I also wish to record the board's appreciation of the able manner in which Mr. Colley has discharged his responsible duties as secretary.

The report and accounts were adopted.

Note:—The above statement is not a report of the proceedings at the Annual General Meeting returned to.

MALAYALAM PLANTATIONS LIMITED

MR. H. W. HORNER'S ADDRESS

The Annual General Meeting of Malayalam Plantations Limited will be held on November 13 at 14, Great Tower Street, London, E.C.

The following is the circulated address by Mr. H. W. Horner, the chairman:—

It will have been deduced, from the announcement in May of the interim dividend at 6 per cent. (as compared with 10 per cent. in the previous year), that the company's profits for 1957-58 were then expected to be less than those for 1956-57 owing to the heavy fall in the price of tea of the type which constitutes the major part of this company's production. The total net realization of the sale of the tea and rubber crop has been maintained at approximately the same figure as for the previous year by increased crops—over 2 million pounds in the case of tea, and nearly 1 million pounds in the case of rubber, resulting in a reduction in the cost of production per pound of the former product. The net average selling prices per pound show decreases on those of the previous year of 6.23d. for exportable tea and (due to various factors) 28d. for rubber.

The steady increase in expenditure in recent years (in which the main factors are wages and amenities to labour) can be compensated to a degree by higher yields. For a number of years past it has been the policy of the board to increase the production of tea by progressive increases in manuring in relation to the yield and without deterioration in quality. Larger crops, in turn, involve capital expenditure for the extension of manufacturing facilities.

Year's Results

The profit for the year before taxation, £775,702, shows a drop of about 25 per cent. on that for 1956-57 and the profit after tax is £279,502, compared with £319,455, both figures being exclusive of tax adjustments in respect of previous years. Such adjustments are not directly relevant to the results of the period under review and are shown under appropriation account. The directors felt that the circumstances warranted maintenance of a high rate of dividend. Accordingly they have decided to draw upon the whole of the £50,000 still remaining in the dividend equalization reserve and to recommend a final dividend of 14 per cent., making 20 per cent. for the year as compared with 25 per cent. for the previous year. After allowing for £193,407 transferred to buildings, machinery, etc., special reserve and £650 to development rebate reserve, the amount to be carried forward is £136,493.

In this regard, it must be borne in mind that the capital of members of the company is represented not only by the figure of £1,812,021 of the authorized capital issued but by further capital supplied by members out of profits "ploughed back," totalling a good deal more than double that figure, so that a 20 per cent. dividend represents no more than about 7 per cent. on their capital as it stands in the balance-sheet. Actually, at to-day's values—calculated at the approximate cost of the land and of opening, clearing, planting and bringing into production an acre of tea and rubber, and allowing a lapse of years of no return at all whilst the plantations are coming into bearing—the members' total capital is not less than £10½ million.

A Meagre Return

The profit for the past year after taxation, totalling £279,502, summarises as follows: Tea, £178,857, representing profit per planted acre, £8 11s. 6d.

Rubber, £68,036, representing profit per planted acre, £3 8s. 10d. Interest, etc. earned less tax, £32,609. Total, £279,502.

These figures emphasize the meagre return to members from their valuable properties.

The development rebate reserve is a new item and is occasioned by an allowance for Indian taxation purposes in respect of the cost of machinery, subject to certain stipulations which include placing 75 per cent. of any such allowance to reserve, and the expenditure within 10 years of such reserve for the purposes of the business. During the year, changes have been made in the basis of superannuation of employees which supersede the special grants formerly made.

In view of the numerous uncertainties attending the company's operations in India, and the possibility by legislative enactment of unforeseeable burdens upon it, the directors have deemed it desirable to earmark £500,000 out of the revenue general reserve against such contingencies.

Onerous Duties

From the aggregate sum of the prices realized in 1957-58 for the company's two products, tea and rubber, already mentioned, the Governments in India have

levied, in the form of excise duty, export duty, and cesses (and not including income tax levied upon the company's employees), a total of about £500,000. (Some reduction has recently been made in export duty from which the current year's results will benefit.) Over and above this, taxes on income payable by the company amounted to about another £500,000. The Governments have further endeavoured to enforce vast and rapid improvements in conditions for labour, largely beyond the capacity of employers engaged in the tea and rubber plantation industries to meet, especially having regard to the relatively enormous sums exacted by the Governments by way of taxation. To force, in effect, owners of estates to borrow money (whether from Governments or otherwise) to meet the oppressive demands upon them is surely help road to ruin, not only of the individual owners but of the industry as a whole. Private enterprise cannot live if its life blood is withdrawn in endeavouring to meet impossible demands and it seems strange that the main concern of Governments in India in enacting labour legislation is to benefit almost entirely those who are already in employment, who constitute only a relatively small percentage of the total population—without equal regard for the fate of the great majority of the population who are without any regular employment.

In previous years reference has been made in my addresses to India's financial position. Recently, economic help has been secured from Western sources, primarily, doubtless, because of political considerations and the great economic and political importance for India and for the Western countries, of solving India's foreign exchange problems. Under the aegis of the World Bank £125 million are to be made available to India in the coming six months, and it is proposed that, during the next two years, a further £230 million should be made available to her. It ought not to be too much to hope that India herself will realize the urgent need of foreign capital and enterprise to assist her in developing her economy and in endeavouring to improve the lot of her vast population. In a recent article in *The Times*, it is said that foreign investors have now to think twice about an investment in India, solely because of the weight of taxation.

Current Crops

Crops for 1958-59 are estimated at about 17½ million pounds of tea and 7 million pounds of rubber and results to date indicate that the former figure, at any rate, should be substantially exceeded. Rubber prices in India continue to be controlled but it remains difficult to foresee the trend of tea prices. So far, this season's teas have sold at better prices than in the corresponding months of last year, and indications for the near future are hopeful. We are continuing steadily to expand as necessary our factories and machinery, all of which is ensured that the best results are obtained from the larger yields being produced as a result of the more intensive cultivation programme.

The staff on the estates are working under almost perpetual strain and continue to deserve the members' warm thanks for the results they have been able to achieve in conditions which call for great tact and restraint. Such conditions also add appreciably to the work and anxieties of the Eastern agents and visiting agents to whom thanks are equally due. We have recently had the advantage of discussions in London with our senior visiting agent, Mr. Park, who is at present in this country on furlough.

SONE VALLEY PORTLAND CEMENT COMPANY LIMITED

CHAIRMAN, MR. A. PODDAR'S REVIEW OF PROGRESS

Address of the Chairman, Mr. Anandilal Poddar, M.L.A., at the Annual General Meeting of the Company held on 13th October, 1958, at 36, Chowringhee Road, Calcutta.

Gentlemen,

I have much pleasure in welcoming you to this the thirty-fifth Annual General Meeting of the Company.

With your approval we shall take the notice convening this meeting Report of the Directors and the Audited Accounts, which have been circulated and are in your hands for sometime, as read.

I am glad to state that the activities of your Company have considerably grown and despite the very old plant and worn-out equipment which came to the lot of the present management, the production of cement increased to 1,77,210 tons as against 1,74,630 tons during the previous year. There was no reason why this figure would not have gone up to 2,00,000 tons, had not production been paralysed for nearly three months due to strike in your quarries which solely feed the works with limestone, the main ingredient that goes to make portland cement.

Gentlemen, I need hardly invite your attention to the important role that cement has to play in the building up of the country. Cement is among the basic requirements not only for industrial growth but in other fields of planned development as well, and as such the steady achievement by this industry is one of the most encouraging features of development under the Second Five-Year Plan. The output of this material in 1951 was of the order of only 2.7 million tons which increased to about 4.8 million tons in 1956 and by 1957 the total production had exceeded 5.6 million tons. The current year has made a still better stride and I am inclined to predict that production by the end of this year should be in the vicinity of 7 million tons.

In order to be able to play its due part in this programme of Expansion your Company had duly offered its services and has been aware, the Government of India has been pleased to issue necessary Licence for increasing its capacity by another 750 tons per day. Unfortunately however, the desired progress could not be attained due to lack of financial resources mainly on account of the delay on the part of the Industrial Finance Corporation of India to sanction our application for a loan of Rs. 1 crore which is still under consideration for the last 25 months.

Accumulating Stocks

Meanwhile, Gentlemen, the cement industry has been facing a new problem of accumulating stocks and consequent slowing down of production. In your own factory in recent months we have to carry over huge stocks at times and we do not know how the needs of the Nation can be duly met under present arrangement of distribution and pricing. As you know, the State Trading Corporation, which has taken over the responsibility of distributing the entire production of cement in the country, was originally instituted mainly with a view to equalise the prices of imported cement and indigenous cement by a process of unified control and price pool. Now that Indian cement has proved its ability to meet the entire demand of the country at present and in the foreseeable future, the justification for continuance of state trading in the commodity has to be reviewed and I may be pardoned if I take this opportunity to invite the attention of the authorities to the same. The days of selling cement on telephone instructions while sitting in comfort in air-conditioned chamber are almost over and in the near future a high order of salesmanship, publicity and organisation for storage and distribution throughout the country and possibly in some neighbouring countries will have to be called for. There is yet another aspect of the trade which requires close study and research viz the scope for exploring new and hitherto unknown fields of

consumption to tide over the present glut in the cement market.

I welcome the announcement of a hundred mile Express Highway to be constructed between Calcutta and Durgapore. Projects like this, apart from rendering a potent field for the utilisation of a good quantity of cement, go a long way in providing work to thousands of unemployed and at the same time by linking the growing industrial townships to the big marketing centres make it possible for a good portion of the finished products to be more conveniently and economically distributed. It is high time that the State Trading Corporation now fulfils its pledge to assist from out of its profits in the welfare scheme and improvements in and around cement works and let me hope the approach roads to your Japla Factory from the Grand Trunk Road on the one hand and the Ranchi Road on the other would be remodelled and reconstructed.

Increased Excise Duties

Another great handicap to which I must refer is the crippling policy of the Government in seeking to realise Excise Duties on an ever-increasing scale, which at present has reached the figure of Rs. 24/- per ton starting from Rs. 5/- only a few years ago. This works out to more than 40% of Rs. 59/- which is the retention price now fixed for your cement. This is a situation which can hardly be sustained when the buyer's market has already set in.

On the recommendation of the Tariff Commission, the retention price of your cement has been increased by Rs. 4.75 per ton with effect from 1st July 1958. This increase barely covers the increased costs of production resulting from sharp rise in the cost of stores, spares and raw materials and of labour and administrative expenses generally. Further rise in the railway freight rates from the 1st October of this year has aggravated the situation all the more and representations have been made to the Tariff Commission to review the fixation of the retention price in the light of new conditions thus obtaining.

I am glad to be able to inform you that your Company has arrived at a suitable agreement with labour under which it can be confidently hoped that complete industrial peace will be maintained and henceforth our work will proceed unhampered both at Japla factory as also at the Baulia Quarries.

Gentlemen great changes are happening in the world around us and events are taking place which should be an eye-opener to all. After the recent installation of military dictatorship in Pakistan, the field of democracy from Cairo to Diakarta has been confined to India and Ceylon and the repercussions of the world situation and of the situation in Asia on our Socio-economic life must be far reaching. We are proud of India's stand for democracy, freedom and tolerance as much in our internal affairs as in our international relations. The maintenance of this stand has been possible only through the untiring efforts of our great leader Pandit Nehru. In whatever field we are and however much we feel that certain measures of Government require examination and review. I have no hesitation in extending our whole-hearted support to the national and international policies pursued by our Government and I trust we shall be equal to the task for building up a happy and prosperous India.

In the end, I must thank all the executives and the staff both at the Head Office as also at the Works. I need hardly say that their fate is bound up with the industry as much as ours and I have every hope that with our combined efforts we would be able to take a further march towards progress and prosperity and I am absolutely sure that God willing, I would be able to present a still better picture when we meet next.

I thank you all.

Note: This is not a report of the proceedings at the above Annual General Meeting.

Money

THE CALCUTTA MONEY MARKET

LITTLE CHANGE IN OUTSTANDINGS

Wednesday, 29th October.

THE level of advances in the Calcutta money market has remained almost stationary throughout the past two weeks. There has been a slight increase in demand from the jute industry, but this has been compensated by the continued return of funds from the sugar mills. Other sources of demand are about the same. The interbank market has ruled easy and the call rate is around 14 percent.

There has been a fair showing of bills in the exchange market over the past two weeks, mostly on account of tea shipments. Remittance has remained poor. Sterling continues firm against all the important Continental currencies, but has lost some ground against the twin dollars.

THE CALCUTTA BULLION MARKET IMPROVED ON increased demand coupled with lack of arrivals during the past fortnight. The price of silver rose from Rs. 188.25 to Rs. 189.50, being quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 188. The London and New York prices remained at 78½d and 90½ cents, respectively.

Gold, in sympathy with silver, was steady and the price advanced from Rs. 110 to Rs. 112.50. The sovereign at Rs. 74 showed a gain of Rs. 2.

DURING THE WEEK ENDED 24TH OCTOBER, GOVERNMENT of India Treasury bills for Rs. 139,28,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 3 CRORES OF 91 DAYS' Government of India Treasury bills were opened on 28th October. The total amount offered was Rs. 8,75,00,000. Tenders at Rs. 99.380 were accepted in full and those at Rs. 99.375 allotted approximately 31 percent. Lower tenders were rejected. The total amount accepted was Rs. 3 crores, the average rate of accepted tenders being Rs. 2.489 per cent a year.

TENDERS FOR RS. 4 CRORES OF 91 DAYS' Government of India Treasury bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on 3rd November. Successful tenderers should make payment on 7th November. Other conditions will be as usual.

THE RETURN OF THE RESERVE BANK OF INDIA DURING the week ended 24th October, 1958, shows a rise of Rs. 36 lakhs to Rs. 1,555.97 crores in the total note issue but active notes declined by Rs. 10 lakhs to Rs. 1,544.80 crores. Notes held in the Banking Department consequently rose by Rs. 46 lakhs to Rs. 11.27 crores. Deposits of the Government of India declined by Rs. 2.32 crores to Rs. 49 crores and other Government accounts were Rs. 4.16 crores lower at Rs. 31.97 crores. Balances of commercial banks rose by Rs. 29.08 crores to Rs. 142.05 crores. Balances held abroad declined by Rs. 33 lakhs to Rs. 14.74 crores. Other loans and advances increased fractionally to Rs. 53.06 crores, of which advances to scheduled banks against usance bills amounted to Rs. 97 lakhs (same). Ways and means advances stood at Rs. 10.25 crores against Rs. 15.90 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR the week ended 17th October, 1958, shows a rise of Rs. 47.02 crores to Rs. 491.74 crores in total deposits. Investments in Government securities are up by Rs. 1.22 crores to Rs. 241.78 crores, while other authorised investments remain unchanged at Rs. 11.41 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have decreased by Rs. 2.20 crores to 162.67 crores. Cash and balances are, in consequence, shown at Rs. 60.37 crores, or Rs. 23.22 crores higher.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 17th October, 1958, shows Demand and Time liabilities at Rs. 718.86 crores (Rs. 24.21 crores on account of borrowing from banks) and Rs. 888.00 crores (Rs. 37.66 crores) compared with Rs. 720.31 crores (Rs. 23.08 crores) and Rs. 881.24 crores (Rs. 39.11 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 58 lakhs and Rs. 2.15 crores to Rs. 38.94 crores and Rs. 88.22 crores respectively. There is a rise of Rs. 19 lakhs to Rs. 594.90 crores in investments. Advances and bills discounted at Rs. 644.32 crores show a drop of Rs. 61 lakhs. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 7.9 percent and 52.6 percent, against 7.8 percent and 52.8 percent.

ACCORDING TO THE RETURNS RECEIVED IN THE Department of Commercial Intelligence and Statistics the total gross sea land and air Customs revenue collected in the Indian Union during May 1958, amounted to Rs. 11.65 lakhs, compared with Rs. 15.31 lakhs in the corresponding month of the

EASIER TREND IN STOCK MARKET

GOLD SHARES FIRM

London, 29th October.

THE stock market lost a good deal of its buoyancy during the past fortnight, and prices in most sections reacted from the year's peak levels reached two weeks ago. The exception was provided by gold shares, which continued to advance strongly in response to an excellent borehole result from President Brand, some good quarterly reports and an increased dividend from Consolidated Goldfields; West German and American buying was also reported, but the best prices were not fully held at the close. The less confident trend in the market as a whole was partly due to the more cautious performance of Wall Street and the resumption of the shelling of Quemoy. But it mainly reflected the desire to pause for breath after the pace of the advance over the past month or so. The news of the abolition of all hire-purchase controls stimulated the demand for consumer goods and hire-purchase finance shares, but it had no great effect on industrials generally. Prices in the gilt-edged market steadily receded on persistent small selling and at one time recorded losses extending to one full point, but a better tendency developed later in spite of the rise in U.S. discount rates and an increase in the U.K. Treasury bill rate. Nevertheless, losses predominated on balance. Foreign bonds and rails moved within narrow limits but dollar stocks were lower in sympathy with Wall Street. Platinums were firm. Copper and other base metal shares were uncertain and mainly lower. Oils were rather erratic but there was occasional support for Shell Transport and Burmah Oil. Rubber shares were distinctly firm on broadening demand and some particularly good features developed. Teas were also firm, with Ceylon issues responding to the statement that they will be no nationalisation for five to ten years.

The Money Market

There was little or no change in the tight conditions in the money market. Although the

Chancellor of the Exchequer eased credit restrictions to enable the economy to expand after its deflationary phase, it was the purpose of the authorities to keep a close watch on interest rates. They conducted their operations with such effect that there was never any surplus of funds. During the past two weeks, the general rate for overnight accommodation was about 3½ percent, while a certain amount had to be borrowed at the penal Bank rate terms of 4½ percent. There was a decline in the Treasury bill rate during the previous week to around 3½ percent because of the keenness of discount houses to secure as many bills as possible, but at last Friday's tender, because of the dearth of money and partly in response to rising discount rates in the United States, they revised their bids sharply so that the Treasury bill rate rose again to around 3½ percent.

Activity on Wall Street

Foreign dollar bonds were mixed in a light volume. Australian issues were mostly higher by fractions, although the 3½ percents of 1967 dropped over 3 points to the year's low of \$92 on few sales. German and Italian issues showed little change. Among Norwegians, new 4½ percents of 1965 dipped a point to \$96 while other issues held steady. Greeks unchanged to a shade lower and Serbs were slightly higher. Union of South Africa 4½ percents eased over a point, while 5½ percents were unchanged. Japanese Government 6½ percents of 1964 advanced fractionally at the outset but later gave up the gain. Chile 3 percents moved up over a point to \$42½, establishing a new high for the year. Long-dated U.S. Government obligations resumed the downward trend with some issues declining by over a point. The fall was due to the lack of investment interest and the reaction to previous week's sharp advance. Investment quality corporates were generally easier in line with Government bonds. Speculative rail issues and convertibles were down early in the past week but recovered a part of the loss when securities reversed their course.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 15th October shows that the gold stock fell by \$50 million to \$20,775 million. Foreign deposits declined by \$1 million to \$324 million while foreign investments rose by \$46 million to \$3,651 million. The Federal Reserve bought \$157 million worth of bills and \$128 million worth of securities

under repurchase agreements, making the total holdings of Government securities \$25,507 million. Total discounts and advances fell \$138 million to \$245 million, while the aggregate excess reserves of member banks rose by \$75 million to \$611 million. The daily average excess reserves of member banks declined by \$33 million to \$551 million, while their daily average borrowings rose by \$39 million to \$472 million. Business loans of the New York city banks rose by \$34 million to \$10,719 million compared with a rise of \$13 million to \$11,786 million in the corresponding week of last year. Gold certificates on hand and dues from the U.S. Treasury fell by \$41 million to \$19,317 million. Federal Reserve notes in actual circulation were \$57 million higher at \$27,055 million. The deposit member banks reserve account improved by \$324 million to \$18,550 million.

Hongkong Gold Easier

After early steadiness, which followed the resumption of the Quemoy shelling, the Hongkong gold market eased in sympathy with U.S. dollar notes, of which there were freer supplies. Carry-over charges totalled 34 cents a ten taels in sellers' favour. The official offtake totalled 2,430 ounces and the unofficial offtake was 7,050 ounces. Arrivals at Macao totalled 32,000 ounces. Forward contracts were at \$(U.S.)38.02, c.i.f. Macao.

Gain in Rubber Futures

Rubber futures ended the past week with net gains. Best advances were recorded in the earlier part of the week. Latterly, the impression was that the market was hesitant, following the recent advances. In actuals factory buying was fairly good. Demand was said to reflect the steady increase in tyre replacements as well as increased motor-car output scheduled on the new models. Mr. H. E. Humphreys, chairman of United States Rubber, forecasts that the passenger car tyre replacement market this year will set a new record of 58 million units or 1.4 million more than last year. Meanwhile, motor-car production in the United States totalled 45,343 last week against 34,834 during the previous week, according to *Automobile News*. Offerings from sources are light presumably due to competition for available supplies from Russia and mainland China.

International Talks on Lead and Zinc

A second round of international discussions on lead and zinc will take place in Geneva between 6th and 11th November, usually reliable sources in London say. The main task of the meeting, which follows a U.N. session in London in September, will be to decide whether to set up a study group for stabilising the market for lead and zinc. Delegates from 38 countries are expected to bring their Governments' replies to a questionnaire sent out after the London talks. Governments were asked for their views on: (1) applying export cuts to these metals in their raw and finished forms; (2) applying cuts in production; (3) setting up a machinery to review current developments in the trade and (4) setting up a study group to consider the long-term problems of the two metals. Two of the main producing countries—Australia and Canada—were parties to the Commonwealth Economic Conference last month which called for setting up a study group "without delay" to examine the latest developments in international trade in the metals.

Mixed Trend in Vegetable Oils

Market conditions for vegetable oils and oilseeds continued to follow the recent pattern, with harder types in sparse supply and firmly priced, while softer varieties tended easier in a dull market. Palm kernels registered further price changes, with the Nigerian Board marking £61 c.i.f. for January-February shipment and later refusing bids at £61½ c.i.f. full terms. Earlier resellers were indicating £60½ c.i.f. net terms for similar shipments, but most of these offers were subsequently withdrawn. Copra was a purely nominal market with comment concerning definite shipment offers virtually confined to prompt parcels, the cheapest of which was priced around \$227½ c.i.f. Coconut oil also retained a very firm undertone, with origin sellers seeking a further price increase. As far as European trading was concerned, activity was confined to occasional resale at an appreciable discount to occasional selling levels. Linseed oil prices gave ground a little, reflecting some downward reaction on the Continental market and a late easing in Canadian prices. It was learned that late on Friday several thousand tons of Canadian linseed were sold to U.K. ports, mainly for November shipment, in the region of £49½ a ton c.i.f. Castor oil prices remained steady, although the market was featureless, but castorseed continued to weaken with East nut oil displayed an easier undertone following reports that a fresh export quota of 20,000 New Year shipments to Continental ports at re-shipment position for groundnuts to February. However, resellers of earlier shipments were still down to £52 a metric ton, c.i.f., for December-January shipment, with sellers over. Chinese soyabean were offered at reduced rates to Continental ports, while a small trade in the Canadian product included November parcels to Liverpool at £32½ c.i.f. Chinese sunflower seed fell by £2 a ton while in the pressure on new crop Sudanese sesame seed cut back prices another £2 a ton.

Stocks and Shares

SHARE MARKET REOPENS ON STEADY NOTE

INCREASED I.I.S.C.O. PROFIT REPORT HELPS SENTIMENT

Wednesday Evening.

THE stock market reopened on a steady note on Wednesday after the Pujah holidays. Trading was restrained by settlement considerations, and the clearing rate for Indian Iron stood at Rs. 27.55. Sentiment was maintained on a report that the profit of the Indian Iron and Steel Company during the year ended March 1958 is higher than that of the previous year. Jute shares were selectively bought, as mills were reported to be making a profit on simultaneous business because of favourable raw fibre prices. Coal shares attracted little interest after the recent price cut. Assorted scrip met with good enquiry, but business was difficult in the absence of declared sellers.

Government securities were quietly steady and prices were fractionally shaded on balance. There was a decline in institutional support because of the near-approach of the busy season. The 3½ Conversion Loan 1986 closed at Rs. 73.20. The 4½ Bihar State Development Loan, 1970, has been oversubscribed. State loans were steady, with little change in prices.

Preference shares, especially of miscellaneous industries, met with support, but little business could be done in the absence of scrip.

Cotton mill shares were quiet, with sellers predominating, and Kesoram were quoted at Rs. 10.94. Turnover in coal shares was restricted, and Bengal were done at Rs. 287. Central India were transacted at Rs. 8.28 and Burrakur came to hand at Rs. 19.

Selected jute shares were quotably higher, and Howrah closed at Rs. 21.56. National were placed at Rs. 22.75 and Megna came to hand at Rs. 15.87. New Central were transacted at Rs. 14.69 and Nuddea were done at Rs. 58.

There was little interest in sugar shares, and Shree Krishna Gyanoday changed hands at Rs. 9.85. Dyer Meakin Breweries were maintained at Rs. 13.25.

In the engineering group, Indian Oxygen improved to Rs. 24.31 on investment support and Guest, Keen, Williams met with interest around Rs. 34.62. Jessop were transacted at Rs. 26 and Texmaco closed at Rs. 22.65 on speculative interest.

In the miscellaneous group, paper shares were maintained, and Orient came to hand at Rs. 35. Sipur were transacted at Rs. 13.19 and Titaghar were bought at Rs. 43.87.

Among cement shares, Rohtas were done at Rs. 24.25 and Orissa Cement came to hand at Rs. 12.56. Indian Copper were steady at Rs. 4.02 on improvement in the metal price. Demand centred on Alkali Chemical at Rs. 16.44, Dunlop Rubber at Rs. 31.50, Indian Cable at Rs. 30.37, Indian Aluminium at Rs. 15.81 and Metal Box at Rs. 30.25. Martin Burn were wanted at Rs. 29.75 on dividend prospects. India Steamship came to hand at Rs. 13.81 and National Insulated Cable were bought at Rs. 33.56.

Tea shares were quiet and turnover was limited. Among Assam gardens, Bishnauth were transacted at Rs. 20.81 and Brooke Bond declined to Rs. 17.87 on a dividend cut. In the Duars group, Hantapara were transacted at Rs. 124.

THE PROFIT OF THE NUDEA MILLS COMPANY HAS amounted to Rs. 14.51 lakhs for the year ended March 1958. Providing Rs. 5.59 lakhs for depreciation, Rs. 59,685 for development rebate reserve and bringing in Rs. 20,195, there is Rs. 8,13,126. A dividend of 5 percent has been declared. General reserve is allocated Rs. 4 lakhs, leaving a carry-forward of Rs. 79,151.

THE PROFIT OF THE ANGLO-INDIA JUTE MILLS Company has increased by Rs. 20.35 lakhs to Rs. 26.54 lakhs for the year ended last March. Providing Rs. 12 lakhs for depreciation (against Rs. 10 lakhs) and Rs. 75,000 for taxation, transferring Rs. 5 lakhs to machinery replacement reserve and Rs. 21,000 to development rebate reserve and bringing in Rs. 1,77,821, there is a balance of Rs. 10,08,812. The ordinary dividend has been increased from 7 percent to 10 percent, leaving a carry-forward of Rs. 2,36,742. The directors state that as a result of concentrating production in the modernised mills, the Upper Mill was closed from 6th January 1958. To dispose of the Upper Mill property, it is proposed to complete the modernisation of the preparing and spinning machinery of the Middle Mill. An application has been made to the National Industrial Development Corporation for a loan for the purpose.

THE BARNAGORE JUTE FACTORY COMPANY HAS earned a profit of £39,291 during the year ended March 1958. Depreciation is allocated £61,676. Bringing in a loss of £156,296, there is a debit balance of £175,567, which is deducted from revenue reserves. The dividends have again been passed over. The directors say that full advantage was taken of the new machinery throughout the year under report by concentrating production in the East Mill and working the mill machinery on a triple shift basis, with a double shift in the weaving

department. This procedure has proved satisfactory. The South Mill buildings and equipment are now "considered surplus to our requirements and negotiations are proceeding to dispose of these surplus assets." It is stated that the overall hessian stock position is satisfactory but there has been a gradual rise in stocks of sacking goods. They do not appear, however, to have reached a level at which they are likely to constitute a danger to the price structure of the market.

THE INDIAN GALVANIZING COMPANY (1926) LTD has made a profit of Rs. 3.49 lakhs for the year ended December 1957. The result is due entirely to the good working of the Bombay factory. The Calcutta factory has been closed. The ordinary dividends have been passed over so as to conserve resources for meeting retrenchment compensation as a result of the closure of the Calcutta factory. The carry-forward amounts to Rs. 4,22,513.

PROVIDING £12,827 (AGAINST £13,283) FOR DEPRECIATION, AND £14,663 (£32,025) for taxation, the profit of the EAST INDIAN COAL COMPANY has amounted to £11,766 for the year ended April 1958, compared with £4,730. Bringing in £26,677, there is £38,443. A dividend of Re. 1 a share has been declared, against Rs. 1.50 a share. The carry-forward is £19,431. Raisings for the year, at 524,535 tons, decreased by 36,515 tons compared with the previous year. Despatches were 468,747 tons against 562,446 tons. The Coal Board has fixed the output target for the company's collieries at 606,000 tons for 1958, against 564,000 tons for 1957. The mechanisation and expansion schemes continue to progress and are scheduled for completion in 1961, although it is expected that their effects on profitability will be reflected in an increasing degree soon. The directors state that it is difficult to give any reliable forecast about profits for the current year. It is reported that to date raisings are appreciably higher than in the corresponding months of last year.

How banking serves the PLYWOOD INDUSTRY

TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the complete banking service we offer.

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investments—
Letters of Credit—Bill Collection—
Deposits—Loans & Overdrafts—
Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns, and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office: PALAI, KERALA STATE.

Over 12,000,000 sq. ft. of Shalimar water-proofing Tarfelt were supplied in one year to protect the roofs of India.

with a consequent improvement in trading results. The continuance of this improvement is, however, contingent on the transport situation, a factor over which the company has no control. Stocks, which continued to increase until the end of June, are now showing a slight seasonal decline.

Bombay Market

BOMBAY MARKET CLOSES QUIETER

PRICES FALL ON TECHNICAL CONSIDERATIONS

Wednesday Evening.

THE Bombay stock market closed in a quieter mood last week. In the beginning, there was a hectic rise, especially in steel shares, but the top gains were not maintained towards the close due to long liquidation. The decline is believed to have taken place on technical considerations. Since prices had been rising continuously for some time, a reaction was overdue.

The trend, at least for the time being, is rather uncertain, as the outlook for the cotton mill industry is far from encouraging. Nevertheless, there is an undercurrent of optimism because it is hoped that the Government might take steps to encourage the inflow of private foreign capital.

Tata Steel reacted to Rs. 183.75 and Indian Iron closed at Rs. 27.50 on selling from Calcutta interests. Premier Construction were steady at Rs. 253.50 in the expectation of a bonus share issue. Tata Locomotive recovered to Rs. 163 on reports of good corporate working. Alcock Ashdown were quoted at Rs. 283.75. Motor shares were quietly steady, and Premier Automobile were taken up to Rs. 90. Hindustan Motor were placed around Rs. 8.

Cotton mill shares showed mixed movements. Svadeshi improved to Rs. 193.50 on buying from knowledgeable quarters, while Bombay Dyeing retreated to Rs. 58.40. There is considerable disappointment over the official indication that there will be no further reduction in the excise duty. Century were offered at Rs. 441.50 and Simplex changed hands at Rs. 177.50. Kohinoor declined to Rs. 262.50 and Central India were bought at Rs. 90. Apollo were freely offered at Rs. 136 and India United Ordinary were transacted at Rs. 1.08.

Miscellaneous shares were steady. Sugar shares attracted attention on prospects of improved earnings. Belapur Sugar rose to Rs. 322 on suggestions of a bonus share issue and Phalton were indicated at Rs. 179. Steamship company shares were maintained, and Scindia Steam came to hand at Rs. 22.44. Great Eastern Shipping were bought at Rs. 27.82. Mining shares were steady on steady metal prices. Shivrajpur Syndicate were transacted at Rs. 93.50. Cement shares were maintained, and Associated Cement were taken up to Rs. 160.75. Digvijay Cement came to hand at Rs. 143. Tata Chemical reacted to Rs. 16.31 on a dividend cut, but National Rayon rose to Rs. 261.25 on short-covering.

There was scattered interest in selected bank and insurance shares. Central Bank were bought at Rs. 58.20 and United Commercial Bank were done at Rs. 69. New India Assurance changed hands at Rs. 49.25.

There was investment demand in electricity supply company shares, and Ahmedabad Electric increased to Rs. 99.40. Tata Hydro were transacted at Rs. 123.

THE WEEK'S TRANSACTIONS

PAN AMERICAN STARTS DAILY JET SERVICE TO THE U.S.A. OCTOBER 27TH!

The No. 1 airline across the Atlantic welcomes you to a magic world of travel at no increase in minimum fares!

DAILY SERVICE
Departure **Arrival**
Paris: 7 p.m. New York: 10.25 p.m.
All times shown are local

FLYING HOURS, EUROPE TO THE U.S.A.

JET CLIPPER 7:30 HRS.

TURBO-PROP 10:30 HRS.

PISTON 12:00 HRS.

PAN AMERICAN

WORLD'S MOST EXPERIENCED AIRLINE

PAN AMERICAN WORLD AIRWAYS, INC. (Incorporated in the U.S.A. Liability of the Members is limited)

*Trade-Mark, Reg. U. S. Pat. Off.

FAA 3054AR

Fastest across the Atlantic!

Pan American's Jets are the fastest transatlantic airliners. They are pure jets, a major advance over propeller-driven aircraft. Four massive jet engines give you beautifully quiet, vibration-free comfort at speeds up to 600 m.p.h.

The fuselage of the Jet Clippers* is 144 feet in length, actually longer than the Wright Brothers' first 120-foot flight at Kitty Hawk.

Cruising altitudes are between 25,000 and 40,000 feet—high above the bother of weather; where your Clipper provides a 200-mile view.

No increase in minimum fares! Fly the finest, fastest transatlantic service including new economy-class. Coming: Jet service to Latin America, across the Pacific and 'round the world.

Reservations can be made now! Call your Travel Agent or Pan American—over 800 offices around the world for your convenience.

Calcutta: 42 Chowringhee, Tel. 44-2651-52-53
New Delhi: Imperial Hotel, Tel. 48172, 48717
Bombay: Taj Mahal Hotel, Tel. 35063, 35064

"CAPITAL" STOCKS AND SHARES INDEX *

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to August 1958. Compared with July, the August indices for Government securities and preference shares show

risers of 0.6 points and 2.3 points, respectively.

There were increases in banks 16.8 points, cottons 9.5 points, coals 13.8 points, cements 3.4 points, engineering 17.8 points, papers 25.8 points, sugars 7.7 points and miscellaneous 7.7 points,

while decreases occurred in jutes 0.4 points, oils 1.9 points and teas 2.5 points.

Correlating all the factors, the Capital Stocks and Shares Index advanced by 9.1 points during August 1958.

Weights	Index of Govt. Securities	Index of Preference Shares	Variable-Yield Securities													Index of Govt. Securities
			Banks	Cotton Mills	Coals	Jute Mills	Mining and Oil	Cement and Bricks	Sugar and Tea	Others	Govt. Bonds	Preference Shares	Govt. Bonds	Preference Shares	Govt. Bonds

DEVELOPMENT PROGRAMME FOR THE THIRD PLAN

OPPOSITION TO HEAVY AND CAPITAL-INTENSIVE INDUSTRIES

(FROM OUR NEW DELHI CORRESPONDENT)

THE "thinking stage" of the third five year plan has arrived. The Congress view was circulated in a note to the Hyderabad meeting of the All-India Congress Committee. As could be expected, the Congress is interested in employment for its own sake, and the note lays special stress on creating additional jobs. It says: "Even the bigger establishments could be worked on a co-operative basis, the labourers becoming co-partners and shareholders. Bonus and other financial benefits could be given to labourers in the form of shares so that gradually the proportion of shares owned by labourers grows fairly substantial. The existing system of taxation on urban incomes is in the right direction and the expenditure, wealth and gift taxes, in addition to estate duty, will gradually bring about greater equality in urban incomes. The present evasion and avoidance of taxes on a large scale will, however, have to be checked effectively."

The note says that the aim should be to double agricultural production in the next ten years "so that we not only become self-sufficient in our food requirements but also have a sizeable surplus for export in order to obtain capital goods for industrial development. The pattern of agrarian reorganisation, as laid down in the second plan, has been broadly accepted by the nation. This problem should, therefore, be dealt with on a national plane, enlisting the active co-operation of all the political parties and of the public in general."

"The second plan had drawn special attention to the need for ensuring integrity and efficiency in administration. It must be conceded, however, that we have not been able to achieve any substantial results in this direction. Delays and undue discretion in the hands of officers inevitably lead to corruption, particularly at the lower level. These can hardly be enforced administratively. It is better to withdraw or amend such laws in order to make for greater integrity and efficiency. Punishments for inefficiency and corruption should also be exemplary. Further, the language of administration must necessarily be the language of the people of the region."

"Apart from the question of overhauling the existing methods and procedures in administration, it is necessary to centralise the administrative machinery fully. Village institutions such as panchayats, co-operatives and schools should become the agencies of planning. Representatives of these institutions could co-ordinate their developmental activities at the block, tehsil and district levels."

Views of an M.P.

Similar views are expressed by a member of Parliament, Dr. Raghu Vira, who in a signed article in *Yojana*, says: "The planners of the first and second five year plans have promised a doubling of the individual's income after 27 years. That is something which will inspire no people. There is so much unused energy in the country that the tempo of development must be quicker. India is lagging behind by 150 years. This time-lag has to be made up. The inertia and the dissatisfaction, fatalism and wallowing in mud must be replaced by action and joy of achievement. The masses will consume more food, more clothing and their demands for numerous goods will create a new climate for developing industries. Unemployment will go. There will be no special measures necessary to fight it."

"India has already in hand several projects of major irrigation works. Their waters are not yet fully used. High taxes and betterment levies are standing in the way of the parched fields to quench their thirst of centuries. Let the taxes and levies be waived aside for the time being. The present machinery of administration is not constructed for achievement. Vast changes will have to be introduced in administration which will have to be simplified and activated in the new direction. The qualifications for recruitment will not be mainly academic, but such as may be termed to be the qualifications of leadership, integrity, organisation and achievement. The laws of the land will also have to be reviewed and remodelled. The system of taxation, relations of labour and capital as well as the system of education will have a different aim from what they have now."

He goes on: "If we take an area of about 150 square miles, it would be possible to plan the villages that ten small units comprising 500 persons are grouped together and formed into one big village of about 5,000. They would not be far removed from their fields. There would be planned streets and schools. Again, within this area of 150 square miles, ten or 12 of these big villages could be so juxtaposed that they could have common shopping centres, cinemas and theatres, educational institutions, seed stores and dairy farms, veterinary hospitals and artificial insemination centres, a tractor station, book shops, hardware shops, in fact all that these villages may need. Polytechnic schools and colleges would supply them intellectual and industrial skills. This bigger unit, a fair town of 50,000 to 60,000 would be capable of providing and sustaining an

elevated level of civilised existence. The life of the peasants would no longer be haunted by fear of robbery or by the tyranny of petty police and revenue officials. The land of 500,000 dilapidated villages will be turned over into a land of 5,000 to 6,000 orderly towns. The towns would have industries, small, medium and big, and thus help in diversifying the pattern of professions. It would be possible to take away from agriculture more and more people into secondary and tertiary sections of the economy."

Resources and Needs

According to another view, the country can afford a Rs. 4,800-crore five year plan, beginning from 1st April, 1961. This view visualises the third plan in terms of resources rather than needs. By the end of the second plan period, the country will have reached its optimum level of taxation. There will be no sterling balances to be drawn upon also. Fresh foreign aid may be forthcoming, but even the most optimistic cannot assume it to be on the same scale as during the second plan. It may be added that friendly countries have already warned India about the inadvisability of launching plans based more on aspirations than on real resources.

The payments for India's foreign loan liabilities contracted during the second plan period will average about Rs. 100 crores a year. The third plan, if it is to be realistic, must place greater reliance on internal resources and on labour-intensive as against capital-intensive programmes. In more concrete terms, this will mean concentration on agriculture (including forestry), irrigation, roads, housing, social services and on selected industries which either make (a) the minimum demands on foreign exchange or (b) quickly enable foreign exchange to be saved. The requirements of foreign exchange for all this will be relatively small.

Apart from marine fisheries and dairying, the agricultural programme requires practically no foreign exchange except for (i) certain large irrigation projects, (ii) the import of fertilisers or the

establishment of more fertiliser factories, and (iii) the import of tractors or machinery to manufacture them. By a judicious selection of projects, it is possible to reduce the foreign exchange requirements for irrigation to a very small figure. The only requirements for tractors or alternatively the capital equipment required for tractor manufacture are not considerable. As for fertilisers, their foreign exchange cost would be considerable if the requirements, as estimated by the Central Food and Agriculture Ministry, are to be met. Roads, housing and social services require negligible amounts of foreign exchange. They all contribute to the well-being of large masses of people, and roads and housing particularly provide considerable employment.

In the case of roads, India is already well equipped to carry out a much larger programme than in the second plan. Iron, steel, cement and other materials for a larger programme should be forthcoming from indigenous sources. Emphasis must however be laid on the construction of ancillary metal roads in rural areas rather than on widening national highways and constructing dual carriage-ways. In the case of housing also, with proper planning, the necessary materials should be available from indigenous sources. A housing programme gives rise not only to direct employment, but to large indirect employment through stimulating industries of an ancillary nature. It is doubtful, however, whether India is at present geared up for a housing programme of the dimensions required. A good deal of preparatory work requires to be done.

material foreign exchange commitments either for equipment or raw materials. This applies, among other things, to a considerable range of light engineering industries, cotton textiles and sugar. A limited number of industries can be expanded because, although involving the import of capital equipment, they save foreign exchange so quickly that the strain on the balance of payments is negligible. There are about 15 major industrial projects in the public sector, some of them of a "basic" character, on which little or no beginning will have been made in the second plan. In all, they are roughly estimated to require about Rs. 87 crores of foreign exchange. It would be desirable to complete the second plan by going ahead, at any rate, with the more important of these projects. It will not be possible to proceed at a rapid pace in the expansion of heavy industry, namely, iron and steel, heavy engineering and machine building, or of other industries requiring the import of costly plant and equipment.

In view of the general principles which have been suggested for formulating the third plan, programmes for village and small-scale industries will hold an important place. These industries mainly use indigenous resources and require very small amounts of foreign exchange; they are labour-intensive and their benefits are diffused widely. Obviously, therefore, this is one of the sectors on which the third plan will have to concentrate. It is the small-scale industries as dis-

tinct from the village and traditional industries which tend to require appreciable amounts of foreign exchange. By the end of the second plan, however, most of the small industries service institutes and the extension service centres are expected to be fully equipped. In other words, imports of machinery and equipment for these institutes and centres will not be required during the third plan except for purposes of replacement or expansion. On the other hand, if the scheme of the National Small Industries Corporation to supply machines on hire-purchase terms gains any popularity, the demand for imported machine tools is likely to increase considerably. At a rough guess, Rs. 8 crores to Rs. 9 crores of foreign exchange might be required for small-scale industries, and about Rs. 1 crore for the development of sericulture and Ambar Charkha, etcetera. The total requirements may, therefore, provisionally be estimated at about Rs. 10 crores and would be of very high priority.

An increase in production and economic activity, even if based primarily on indigenous resources rather than on large imports of capital goods from abroad, necessarily involves some greater or less expansion of power, railway, port and communication facilities. It also implies a larger output of coal. But in each one of these fields, India is still not in a position to expand without importing some equipment. Since the facilities must necessarily be expanded concur-

rently with any significant increase in production, provision will have to be made for them on a priority basis from the country's exiguous foreign exchange resources.

Foreign Investments

The Reserve Bank of India Bulletin for September 1958 contains a study of foreign investments in India in 1956 and 1957. This supplement to the three surveys of foreign investment which have been published relating to June 1948, December 1953, and December 1955. The study of 1956, however, differs from the others, in that it examines the inward and outward flow of investment capital. It does not, therefore, take account of changes in the valuation of assets not involving any movement of capital. It considers that these were "negligible" in 1956, but does not give the evidence on which this judgment is based. The important result of that enquiry is the following:

NON-BANKING FOREIGN BUSINESS INVESTMENT (Rs. crores.)				
	June 1948	1953	1955	1956
Total	255.83	403.34	469.91	506.68
United Kingdom	206.02	337.71	390.72	406.08
U.K.'s share as a percentage of the total	80.5	83.7	83.1	80.2

This shows a slight fall in the share of the U.K. in total foreign investment in India. This is

Men and Oil No. 8

THE CHEMIST

In many ways, the oil industry is a pure application of chemical knowledge. From the earliest stages of exploring for new oil deposits, through to controlling the great refineries, the chemist is a key man.

He examines rocks and oil shows collected during exploration, helps in drilling and cementing operations and assists in the interpretation of electrical well logs to identify oil and gas bearing zones. He also analyses formation fluids and oil-bearing reservoirs in order to estimate the total amount of oil recoverable from an oilfield, and studies means for improving the recovery efficiency.

The chemist, again, controls the technical operation of the refinery. At Digboi, for example, chemists are responsible for the production on specification of more than 100 products. From the Assam crude oil, the main products are motor spirit, kerosines, diesel, lubricating oils, and various grades of waxes. The chemist is also concerned with other products such as mineral turpentine, jute batching oil, tea drier oil, bitumen—all these being vital to India's economy.

Chemists in the oil industry must, therefore, possess very high qualifications. Indian chemists play an important role in the working of the Assam Oil Company.

ASSAM OIL

a full-scale petroleum industry

a member of the Burmah Group of Oil Companies

mainly because of an increase in investment in India by the International Bank for Reconstruction and Development. The I.B.R.D. share rose from 0.5 percent in 1955 to 2.9 percent in 1956. The share of U.S. investment—which is the next largest—rose from 8.8 percent in 1955 to 9.2 percent in 1956. Most of the increase in U.S. investment can be attributed to oil refineries. Yet the United Kingdom is still the largest foreign investor in India; and in 1956 that country accounted for 63 percent of the increase in foreign investment, if the I.B.R.D. loans drawn on in 1956 are left out of account. It is not possible from published information to judge how much of the increase in U.K. investment is fresh capital and how much represents retained earnings. Of the total increase in foreign investment in India in 1956, three-quarters are retained earnings. This is probably also the approximate ratio for the increase in U.K. investment. No country-wise information about foreign investment in 1957 has been given.

Cut in Foreign Travel Allowance

The Government of India has further reduced the permissible amount of Indian currency or foreign exchange from Rs. 270 to Rs. 70, which persons going abroad are freely allowed to take with them. This does not mean a ban on foreign travel. With the permission of the Reserve Bank of India, the persons going abroad are permitted to take foreign exchange with them, the amount being fixed by the Bank, after considering each case on its merits. Under the rules, in addition to this amount of foreign exchange, officially sanctioned, a person going abroad could take Rs. 270 in rupees or in a foreign currency with him. This free amount has been reduced. In actual practice, it is true that by these restrictions a certain amount of foreign exchange is being saved. But this is likely to lead to reduced earnings of Air-India International. Moreover, much more than what is saved is spent by the Government on avoidable items.

Visit of Sir David Eccles

The President of the U.K. Board of Trade, Sir David Eccles, is due to pay a visit to New Delhi in January next, when questions relating to the promotion of Indo-British trade are expected to be discussed. Sir David has shown a firm belief in free trade by not giving in to Lancashire's agitation to cut imports of Indian textiles into Britain.

Double Tax Avoidance Talks

A two-member official delegation from Denmark has arrived in New Delhi. It is negotiating with Finance Ministry officials a double taxation avoidance agreement. The talks are expected to last a week. Preliminary discussions on double taxation problems were initiated last summer when an official Indian delegation, led by Mr. A. K. Roy, visited Denmark in the course of its tour of Europe. This mission succeeded in reaching agreements with West Germany and Sweden. It also reached an agreement covering air traffic with Switzerland. Aide-memoires were exchanged with France and Greece. Delegations from France and Switzerland are expected here during the cold weather, the former to conclude an agreement on matters other than air traffic. Thanks to the tactful negotiations of the Roy delegation, India has been able to secure some valuable advantages. India-U.S.A. talks on the avoidance of double taxation are due to begin in Washington on 24th November. The composition of the Indian delegation is being finalised.

World Bank Mission on Export Promotion

A great deal is being talked about export promotion these days. Looking back, it can be said that India has sent a large number of missions abroad for this purpose. There are Trade Commissioners and showrooms in many important places. India has also been increasingly participating in exhibitions abroad. Three missions of the World Bank have made specific observations on export promotion. The one in 1956, in the course of its report, said: "For all the assurances we have received, we remain unconvinced that sufficient attention is really being given to the promotion of exports. Quite apart from the harm which may be done to exports by restrictions on the output of cotton textiles, we believe that more could and should be done actively to assist exports in other fields. It is our impression, for instance, that tea exports are being adversely affected by inadequate facilities for transport to Calcutta, by shortage of coal on the tea estates, by constant pressure for higher wages, bonuses and improved social amenities and, on some of the more progressive estates, by restrictions on re-planting. We feel that the Government has not always used its influence in the way best calculated to foster the competitive power of this vital export industry. We would urge, too, that greater emphasis be placed on the production of other cash crops for export, particularly vegetable oils and cotton. In this connection, we respectfully suggest that the policy of imposing restrictions on exports of commodities, such as groundnut oil, is generally a misguided one and it will be usually in the best interests of the economy to allow producers to export whatever they can."

Another report says: "The Indian people have never been traditionally export-minded, and it was largely foreign enterprise which developed the country's two main export industries, tea and jute manufactures. The Government has laid stress from time to time on the importance of exports, but until recently it has never accorded them a high priority, and government policies have frequently had the effect, although not the deliberate intention, of impeding the promotion of overseas sales. Outstanding examples are the ban imposed in 1956 on exports of groundnuts and groundnut

12 crores of rupees of Foreign Exchange

That was the beginning of exports by the Indian White Sugar Industry to earn foreign exchange. Geographically, India is within easy reach of sugar importing countries in the Middle, Near and Far East. In quality too, Indian Sugar compares favourably with that produced in other countries. With a better understanding of the industry's structure and problems and co-operation from the Government and consumer, the Industry can consolidate the position it has secured in the world market and improve it further to earn more foreign exchange: so vital for the progress of the Second Five Year Plan.

Today the White Sugar Industry provides scope for Indian capital investment of more than 100 crores of

rupees; it provides employment to over 1,40,000 skilled and unskilled workers and 3,600 university educated men, their total earning representing 5% of the national wages and salaries; it supports 20 million cultivators; it constitutes 12% of the total value of production of major Indian industries; it contributes over 65 crores of rupees (@ Rs. 13.19 per maund) in levies to the national exchequer.

It offers even brighter prospects for the country. With a lighter burden—some of its present-day handicaps removed—this industry can contribute to achieving a more stable national economy. Its upward trend of production can continue to meet the needs of a growing home market and yet leave a surplus for export in order to earn foreign exchange.

Foreign Trade...

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service. With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Foreign Agencies

ENGLAND, U.S.A., AUSTRALIA, CANADA, FRANCE, BELGIUM, HOLLAND, GERMANY, NORWAY, SWEDEN, SWITZERLAND, ITALY, AND JAPAN.

oil to conserve supplies for home consumption and keep internal prices down; the overloading of the tea industry with social overheads and a multiplicity of Central and local taxes; and the restrictions imposed in 1956 on the re-equipment of the cotton mills in order to protect cottage spinning and handloom industry. Much of the private export trade is inefficiently organised, and Government intervention may sometimes be both necessary and useful. Indeed, the State Trading Corporation appears to have had some success in stimulating private traders, in getting better contracts for bulk exports and in helping to organise new exports from small-scale industry (namely, shoes, handloom products). But, by and large, exporters have suffered from an excess of quotas and other restrictions, which inhibit the kind of enterprise and sustained effort needed to compete in world markets—and which sometimes result in breaking established trade connections, since when quotas and duties are subject to frequent revision, the foreign customer is apt to regard India as an unreliable source of supply. It was never to be expected that there would be any spectacular increase in India's exports during the second or third five year plans. At the same time, it is impossible to feel that full advantage has yet been taken of the opportunities.

Trade Delegation to Russia

An official Indian trade delegation left New Delhi by air last week for Moscow for discussions with the representatives of the Russian Government. The delegation will negotiate a new trade agreement between India and Russia and will hold talks on the possibilities of further developing Indo-Russian trade on a balanced basis. The existing five-year trade agreement is due to expire next December. The delegation consists of Mr. K. B. Lall, Joint Secretary, Central Ministry of Commerce and Industry and Director-General of Foreign Trade as the leader, Mr. N. S. Mani, Joint Secretary, Central Ministry of Steel, Mines and Fuel (alternate leader), Mr. B. B. Saksena, Joint Secretary, Ministry of Commerce and Industry, Mr. S. Chakravarti, Chief Mechanical Engineer, Southern Railway, Mr. L. K. Vij, Director, Central Water and Power Commission, and Mr.

R. V. Subramaniam, Deputy Secretary, Ministry of Finance, as members. Mr. S. Than. Deputy Secretary, Ministry of Commerce and Industry, as member-secretary.

After Moscow, the Lall mission will go to Warsaw and Berlin to initiate talks for the renewal of the trade agreements with Poland and East Germany which are due to expire next year. India has been running an adverse balance of trade with Russia. It was Rs. 5.20 lakhs in 1957 and Rs. 4.41 lakhs in the five months ended May 1958. She also had an adverse balance of trade with Poland in 1957, amounting to Rs. 3.73 lakhs. Indo-East German trade, however, showed a favourable balance amounting to Rs. 61 lakhs for India in 1957. As far as 1958 is concerned, exports and imports were almost equal in the case of both Poland and East Germany, in the first five months. The communist countries accept payments in Indian rupees for their exports to India. But by the terms of their agreements, they can demand the settlement of rupee balances in sterling. It is worth knowing what use are they making of their rupee holdings in this country.

U.S. Trade Mission

A trade delegation from the United States, consisting of business executives engaged in wholesale and retail trade and a fashion expert, has arrived in India on a four-week tour. The team, which was invited by the Government of India, is now in New Delhi. The object of inviting it is to examine the problems of export of handicrafts and handloom fabrics to the United States and to seek its advice on developing exports of these articles to that country. The leader, Mr. Edil Krogh, who arrived in advance of the other members of the team, has had discussions with the Minister for Industry, Mr. Manubhai Shah. Preliminary discussions have also been held by the members with the representatives of the Ministry of Commerce and Industry, the All-India Handicrafts Board, the Indian Handicrafts Development Corporation, the All-India Handloom Board and the Khadi and Village Industries Commission. They have also seen the display of handicrafts and handloom fabrics in the "India 1958" Exhibition, the Khadi Gramodyog Bhavan in New Delhi and other connected centres.

During the tour, the U.S. business executives will visit Srinagar, Hyderabad, Bangalore, Madras, Bombay, Calcutta and Varanasi. In these cities, they will see the handicrafts and handloom fabrics of the region and meet those connected with these industries and business.

The delegation will return to Delhi for final discussions, after it has met Government representatives and different agencies concerned with the development of handloom and handicrafts. Different members of the team are interested in such specialities as women's apparel, sportswear, fashion accessories, gifts and home furnishings. A definite control over the quality of goods is essential to this export drive. It is common knowledge that, very often, the goods supplied do not tally with the samples on the basis of which orders were booked. Mechanisation is the other alternative.

Indo-U.S. Trade

The United States is stepping up its efforts to increase trade with India. Leading representatives of business, labour and Government make up three teams—two from the U.S. and one from India—which are exchanging visits to one another's country to look into possible opportunities for private investment and mutual trade. Under this programme, a U.S. Department of Commerce trade mission will reach New Delhi on 8th November to start a month-long tour of principal Indian cities. The group will be headed by Mr. Nathaniel Knowles, Deputy Director of the Bureau of Foreign Commerce, and will include five business men selected on the basis of their knowledge and production marketing and financial techniques.

The trade mission will then return to New Delhi on 10th December for another month and will establish a trade information centre there in connection with a Commerce Department exhibit entitled "the place of small private enterprise in a developing economy." Similar displays will be held in Calcutta and Bombay in 1959 and in Madras in 1960. A major part of the trade mission's available for individual consultation on questions and production of items for domestic consumption or for export.

"While on tour in India, and at the New Delhi exhibition," a U.S. Commerce Department announcement said during last week, "the trade mission will receive enquiries from Indian firms about trade with the United States and will discuss investment and licensing opportunities. Qualified Indian firms will be placed in touch with U.S. firms engaged in the appropriate type of business."

International Wheat Conference

India is participating in the International Wheat Conference, which opened in Geneva on 28th October. The Conference is expected to discuss the principles and form of a new international wheat agreement, to replace the present one which is due to expire on 31st July, 1959. Parties to the present agreement are the six main exporting countries—the U.S.A., France, Canada, Australia, Argentina and Sweden. There are 36 importing Indian members, India being one of them. The Secretary, Central Ministry of Food and Agriculture, Mr. S. Krishnamurti of the Indian High Commission in London and Mr. Pratap Singh Mathuradas Vissanji (non-official), adviser.

London

CONSERVATIVE CONFERENCE IN BLACKPOOL DISCUSSES ECONOMIC ISSUES

RECORD BALANCE OF PAYMENTS

SURPLUS EXPECTED

(FROM OUR LONDON CORRESPONDENT)

THE past fortnight was busy and in some ways especially with the first visit to Britain of a German head of State since before the first world war, the B.O.A.C. maintenance engineers' strike, the end of the current session of Parliament, and the Lord Mayor's banquet to the merchants and bankers as the highlights—quite eventful, but also curiously disappointing from the point of view of significant concrete developments in the economic sphere.

First on the list must come a brief résumé of the economic debate at the Conservative Party conference in Blackpool. Mr. Amory, Chancellor of the Exchequer, was optimistic that production, employment and exports would again be rising, with the economy "better balanced, more efficient and more robust." He had nothing definite to say about how the economy would be put into high gear, but he said that the surplus in the balance of payments in the first half of this year would probably amount to well over £300 million—a record. Home investment in the same period was nearly 4 percent higher than last year. The final impression was that the Government was not prepared to let the economy expand until it was certain that the price of expansion was not inflation.

Record Balance of Payments

A White Paper issued a day or two later—the most encouraging of recent economic events—gave details to confirm the Chancellor's ideas. In the first half of this year, Britain earned a surplus of £334 million in its current transactions with the rest of the world. This is a record figure, which compares with a surplus of £118 million in the first half of 1957. For the full 12 months ended 30th June, 1958, the current surplus works out at £488 million, the highest yearly figure achieved since balance of payments estimates were first officially prepared ten years ago. Compared with the first half of last year, the increase of £216 million in the United Kingdom's current payments surplus is a remarkable achievement, even though it has had the help of some specially favourable factors. As the figures show, £162 million of the improvement has been on the visible trade account, mainly reflecting the lower cost of imports brought about by the fall in world prices. The balance of invisible trade has also moved strongly in favour of Britain.

The White Paper confirms the genuineness of the improvement in the United Kingdom's external position which has led to the increase in the gold and dollar reserves. In the first half of this year, the rise of £287 million in the reserves has been accompanied by scarcely any change in Britain's sterling liabilities. Overseas holdings of sterling during the period have become better distributed and are in firmer hands. The regional pattern of the United Kingdom's payments balance also shows encouraging features. Although about three-quarters of the £216-million improvement on the current balance in the first half of this year was with the rest of the sterling area, there was a striking change in the position vis-à-vis the dollar area. In each half-year between 1955 and the end of 1957, the United Kingdom's balance of payments with the dollar countries showed a deficit. For the first half of 1958, mainly because of a steep reduction in dollar imports, there has been a surplus of £63 million.

A new table in the White Paper shows the rest of the sterling area with a total surplus of £119 million with non-sterling countries. This is explained first by the sale of gold to this country, and second by the flow of capital to the Commonwealth, amounting to £184 million from the United States, Germany and Russia, and the World Bank and the International Monetary Fund. The importance to the rest of the sterling area of this flow of outside capital is increasing. The United Kingdom's net investment in the Commonwealth amounted to £127 million of which £24 million was raised in the London capital market. It is an interesting fact that more money (chiefly from the U.S.) was invested in Britain from outside the sterling area than the United Kingdom invested in non-sterling countries.

Bigger Trade Gap

It is only too evident that the balance of payments will not show as favourable a picture for the second half of this year. British exports at £240.4 million fell by £17 million in September compared with August and were even lower than in September 1957. Seasonal influences were mainly responsible, but the fall continues a trend discernible since July. With imports in September showing a rise of £7 million to £311.2 million and re-exports down from £13.1 million to £10.9 million, Britain's trade gap, measured by the excess of imports over exports was substantially bigger last month at £59.9 million. There was a £33.4-million gap in

Queen's speech in Parliament this week. The Chancellor coupled an increase of confidence in Britain's economic future with anxiety over the rise in wages. Three major points from the speech were: (1) If Britain can continue to conduct her affairs with restraint and a full regard for sterling, she will be able to look back to 1957 and 1958 as a decisive turning point in her economic affairs. (2) "Of one thing I am completely sure: the long-term prospects for British industry are now firmly based and new opportunities are opening out." (3) The rise in wages over the last year, though less than in the preceding year, exceeds any increase in productivity that can have been secured. If a similar increase were repeated in the coming year, the result could not fail to involve an appreciable element of cost inflation.

In his speech, the Governor of the Bank of England said he doubted "whether some of the boom talk one has heard recently in the City is well founded. Whatever else may be uncertain, it is surely a fair guess that profits will be harder to come by than they were in the postwar period." The comment could not have been more aptly timed. All three principal speakers were aware of the contrasts with a year ago. The objective then was clear-cut—to save sterling. Now the problem is to prevent the economy from "running down fast or far" without inviting a return of inflation. The Governor of the Bank, and Sir John Braithwaite, gave their blessing to recent changes in the joint-stock banking world.

More Hopeful Business Outlook

Nevertheless, industrialists are a little more optimistic about the general business situation than they were four months ago. This is the most striking fact to emerge from the third enquiry into industrial trends carried out by the Federation of British Industries. Four months ago, when the Federation asked a representative sample of its member firms what trade conditions were like, the report it received showed a marked decline in activity. The latest enquiry, made at the beginning of October, discloses a further decline. This is evident whether it be measured in terms of employment, hours worked, output or deliveries. But the rate of decline appears to be levelling off. Of the 510 firms which were asked, just over three-quarters reported that they were working below capacity. More than half of them are finding it easier than in June to get the labour they want. Raw material stocks have fallen, but stocks of finished goods and work in progress are no longer piling up as they were in midsummer. Although costs a unit of output are still rising, nearly one-third of the reports say that selling prices have

INSTRUMENTATION

Modern methods of measurement and automatic control can help you raise output by improving operating techniques. The results—economical operation, increased profits, and high product quality.

Whether you're building an entire new plant, bringing your present plant equipment up to date, or just modernizing a single production unit, Honeywell instrumentation can show the way to greater productivity... more profits for you.

Honeywell, a pioneer in automatic controls, offers the most comprehensive line in the industry, engineered and serviced in India by BLUE STAR. Ask a Blue Star representative to advise you on the profitability of modern instrumentation for your plant.

had to be reduced. Fifty-eight percent are working on narrower profit margins than they were in June.

In spite of all this, 35 percent say that they are more hopeful about the business outlook than they were in June. Only 17 percent are less optimistic. The main reason for this marked change in attitude (in June 19 percent were more optimistic than in February, while 31 percent were less so) is the stability in the rate at which orders were coming in from the home market. There are nearly as many reports of a rise as of a fall in home orders. But export orders have fallen away a good deal, and 31 percent say that their deliveries to overseas markets have fallen as well.

Bank Advances Up

This development is probably partly explained by the fact that the relaxation of the credit squeeze shows clearly in the latest balance-sheets published by banks. The total of their advances at 15th October was over £55 million greater than in mid-September, and has now risen nearly £100 million since the Chancellor announced, early in July, that the limit was to be removed. If any conclusion can be drawn from comparison with the normal seasonal pattern of bank lending, it is that the recent rise contains a large element of personal and professional borrowing. Advances usually rise steeply in the middle of the year, and then fall back by about £200 million, reaching their lowest point at about the new year. The usual sharp fall about this time of year has recently, as often as not, been directly due to Government action to meet the recurrent crisis of sterling. But total advances are now nearly £2,100 million and

they have not been over £2,000 million in October during the last five years.

Other indices are not quite so encouraging. Coal output, though improving slightly, is still running below last year's figures, the shortfall so far being 7 million tons. Consumption and exports are falling away as rapidly, so that stocks are up by a like amount. The shipyards are also worried, for orders in the 12 months ended 30th September are 2 million tons lower than for the previous year. Outstanding orders of 5.9 million gross tons are a cushion which will soften the immediate impact of this year's fall, but with 2.3 million tons already under construction and output running at twice the rate of new orders, there is little room for complacency. The motor-car industry is about the only one not as yet affected by a recession. The September figures of passenger car production and exports show no sign that the pace this section of the motor-car industry has kept up for more than 18 months is yet slackening. In contrast, figures for commercial goods vehicles are poorer than a year ago.

Savings Boom

With the National Savings movement reporting a surplus of new savings over withdrawals of more than £14 million recently, the cumulative surplus for the 28 weeks of the current financial year is now over £104 million against only £27 million at this time last year. This kind of saving is only one small part of the total savings of the British people. But these figures indicate that last year's Government-estimated figure of £150 million for all personal savings should be

well exceeded this year. It shows what growing confidence in a sound currency allied to realistic interest rates can do.

New personal savings made through assurance company policies rose by nearly £300 million last year, to bring total life assurance funds up from £3,969 million at the end of 1956 to a new record level of £4,268 million. These figures are given in a report issued by the Life Offices Association and the Associated Scottish Life Offices. The number of people covered by pension schemes arranged through the life offices rose from 2,701,000 to 3,011,000 in the year.

Machine Tool Orders

At first sight, the July figures of machine tool orders and deliveries look strange. Home orders, against the seasonal trend, dropped sharply from £4.1 million in June to £3.7 million in July. On the other hand, export orders rose more than 50 percent from £1.2 million to £1.9 million, and were actually higher than in July 1957. Home deliveries rose slightly; export deliveries were a little lower. As a result, the home order book fell again in line with the trend of the last 18 months, while the export order book rose slightly for the first time since February 1957. It would be a mistake to draw any firm conclusions from these figures. The returns are often "bunched," so that it is best to take the average of two or three months together. It is believed that the August figures will show a deterioration.

Compulsory Arbitration Ends

The B.O.A.C. strike—fortunately ended after a week and now under enquiry by a court appointed by the U.K. Minister of Labour—emphasised the unsatisfactoriness of existing negotiating machinery in industry and the inadequacy of clear thinking on both sides. Mr. Macleod has had occasion recently to make some pointed references to the need for calling an end to restrictive practices, the improvement of work methods and the vital need for the development of a team spirit. As to whether it will or will not help towards these ends remains to be seen, but he has announced the Government's decision to abolish the Industrial Disputes Tribunal, which means that about half the workers in British industry will have to settle their disputes in future by negotiation, voluntary arbitration, or strikes. The employers have always regarded this wartime measure with disfavour, and rulings have only too often been ignored by labour with impunity to make the loss a serious one, though the unions, of course, are unlikely to agree.

Lancashire and Hongkong

The Prime Minister himself explained to the Cotton Board conference in Harrogate why the industry could expect no more than moral support from the Government on the question of imports of cheap Commonwealth textiles. The Government's view is that obstacles should not be placed in the way of the export of manufactured goods from the poorer Commonwealth countries, but that whenever problems arise because sharp increases in such exports threaten to disrupt an established industry in the importing country, solutions should be found through consultations between the industries concerned directed towards an agreed and orderly evolution of the trade.

A day or two later, leaders of the Lancashire cotton industry decided in Manchester to accept the Prime Minister's advice to continue their efforts to reach agreement with the leaders of the Hongkong industry on a ceiling for imports from the colony of grey cloth and made-up goods. After the meeting, Lord Rochdale, chairman of the Cotton Board, issued a brief statement reading: "The consultative committee which represents the industry has discussed the position in its different sections and with all of us and authorised Sir Cuthbert Clegg, Mr. Broatch, and myself to continue discussions with Hongkong." The position now is that an offer of an upper limit has been made by the Lancashire mission and a counter-offer by the Hongkong committee. Both offers were reported by Lord Rochdale at Harrogate last week-end as being unsatisfactory to the other side.

Brevities

The official retail price index figure did not change between 12th August and 16th September. It remained at 108 (with the level at 17th January, 1956, taken as 100).

The offer made by Longbourne Holdings to acquire the 5s shares of Chandpore Tea Co. and the £1 shares of Mazdehee Tea Co. and the Sylhet Tea Co. have been declared unconditional. Acceptances have been received from holders of 95 percent of Chandpore, 93 percent of Mazdehee, and 95 percent of Sylhet shares.

Midland Bank's index of business turnover (1950 equals 100) for the third quarter is 151, compared with 159 for the previous quarter and 148 for the third quarter last year.

Fifteen experts of the English Electric-Babcock and Wilcox-Taylor Woodrow Atomic Power Group have left for Japan at the invitation of the Japanese Atomic Power Company, for technical discussions concerning the tender put forward by the group for the projected 150 mW nuclear power station.

The payment of wages by cheque is to be considered by a sub-committee of the Minister of Labour's National Joint Advisory Council. In agreeing to this course, the T.U.C. representatives on the Council made it clear that they were not saying that they favoured payment by cheque.

Jute

PAKISTAN CRITICISED FOR RAISING JUTE EXPORT PRICES

LITTLE REACTION IN CALCUTTA MARKETS

PAKISTAN'S decision to fix higher minimum export prices for her jute has been widely criticised. U.K. and Continental manufacturers view the move with concern, and reports from Dundee indicate that yarn and cloth rates have had to be increased. This step has probably been taken reluctantly in view of the recent improvement in trade in that area and the return to full employment. Many manufacturers overseas have suffered because of the Pakistani decision; they have long been advocating a reduction in fibre prices to enable them to compete with Indian mills, so purchases have been delayed in order to take advantage of a fall. But Pakistan, like India, has long been pressed by various growers' associations to increase jute prices so as to give the cultivator a fair return. Recent discontent over the activities of the various jute corporations and the societies that have sprung up, and which in the opinion of many have failed in their purpose, has no doubt influenced the decision. But it remains to be seen whether the advantage of higher export prices will be passed on to the farmers.

The Pakistani move has had little effect in Calcutta, although a substantial increase has been ordered in the minimum export price of cuttings. This is now fixed at Rs. 65 a bale ex Pakistan, which means about Rs. 88 landed in Calcutta, after freight, insurance, etcetera, have been added. The freight, insurance, etcetera, have been added. The move probably suits the Indian Government authorities, who have for some time strictly regulated the purchase of Pakistani cuttings in an attempt to encourage the use of indigenous fibres, especially the lower grades of jute from the jungle districts which are not very popular with Pakistani manufacturers. At the enhanced price, Pakistani cuttings, however, are still slightly cheaper than low-grade Indian jute of Bottom standard.

The gunny market reacted bullishly to the news from Pakistan. Heavy goods rose by Re. 1 and hessians by 75nP, but the rise was short-lived as selling pressure developed at the higher rates. Overseas buyers showed no interest, except in near delivery goods, and the undertone of the market was quiet. Price movements were small and general in a downward direction. Mills were keen to sell hessians as prices were attractive. But sales of sell sacking were restricted as many rates were still below the I.J.M.A. minimum level. Forward shipment B Twills continued to enjoy a premium of about Rs. 1.65 over near shipment, but in cornsacks the near deliveries commanded a small premium over other periods. This was mainly because Australia, the main market for this construction, was interested only in quick delivery goods. Much the same situation existed in hessians, but the premium for ready goods was about Rs. 2.80.

Business in raw jute was restricted and prices fluctuated narrowly. In the agencies, however, mill interest at favourable rates continued and a fair amount of business was transacted. Many sellers stopped offering jute on a contract basis through brokers, as the prices paid by agents and at mill agencies were far higher than in Calcutta. The quality of recent arrivals remained good, but the moisture content was still heavy.

THE JUTE MARKETS

Activity in the futures markets was small. Rates, as given by the East India Jute and Hessian Exchange Ltd for the period 15th to 18th October, and 23rd to 25th October, were as follows:

	Hessians	Sacking	Raw Jute
	40in. 10oz.	B Twills	Upper Assam
	Rs. a 100 yds.	Rs. a 100 metres	Rs. a 100 kilos
Opening	40.82	44.63	23.60
Highest	41.86	45.63	23.68
Lowest	40.34	44.11	23.16
Closing	41.74	45.49	23.56

Manufactured Goods: Due to the Puja holidays, this report covers only six working days, over the periods 16th to 18th October and 23rd to 25th October. At the opening, the market was quiet due to heavy selling pressure both from mills and in the futures market. Shipper interest was negligible and prices slumped by 60nP in heavy goods and 40nP in hessians. This brought ready B Twills to Rs. 96.30, with forward shipment at Rs. 97.75, while ready 40in. 10oz. hessians stood at Rs. 42.15, which represented a premium of Rs. 2.90 over forward shipment. Overseas interest at this stage was limited, and the only activity reported was covering at the continued to decline. Just before the holidays, ready B Twills had dropped to Rs. 96, and 40in. 10oz. hessians to Rs. 41.60. Over the holidays, Pakistan announced her new minimum prices for the export of jute, and prices showed a substantial reaction to this at the opening on 23rd October. B Twills rose by Re. 1 and hessians by 75 nP. Some thought that Pakistan's action would help the Indian industry considerably, as most overseas manufacturers were compelled to increase their prices to offset the rise in the cost of the raw material. After the initial rise, the market was idle because of a lack of inter-

est from overseas, and the approach of more local holidays. Mills showed moderate interest at the higher levels but little business was transacted. Price movements were limited and the market closed at the week-end on a quiet note.

On Wednesday morning (29th October), the first working day after the holidays, prices were as follows:

	Ready	November	December	Jan.-March
40in. 8oz.	33.35 (26.35)	33.20 (36.19)	32.35 (35.48)	31.55 (34.83)
40in. 10oz.	42.80 (46.65)	42.35 (46.16)	40.70 (44.36)	39.90 (43.49)
B Twills	96.70	97.50	97.95	98.50
Heavy Cees (Plain)	99.25	98.75	98.25	98.60
A Twills	117.00	117.25	117.35	117.25
Liverpools	111.25	111.25	111.25	111.25
Cornsacks	100.50	100.50	99.75	98.50

Raw Jute: Calcutta mills showed little interest in purchasing raw jute. Small business was transacted daily, however, and price indications generally tended to decline. The news about Pakistan's increased minimum export prices had little effect on Indian rates; the only category affecting India was cuttings, and for this sellers merely stopped quoting. Arrivals in the upcountry agencies remained large and prices eased. Sellers in general were not too keen for business, but in spite of this, much of the small trading that was reported was at a discount on the quoted rates. Prices opened at Rs. 23.25 for Assam Bottoms for November shipment but eased to Rs. 23 before the holidays began. Indications remained around this level for the rest of the period, but transactions were strictly limited.

Business during the period 16th to 25th October included Assam at Rs. 22.50 to Rs. 23 and Northern at Rs. 22.50 to Rs. 22.75. Northern and Assam Middles only were done at Rs. 24.50 to Rs. 25. Desal White fetched Rs. 22. There was a fair amount of interest in Tossa. Karimpore free from

Samla Middles only passed at Rs. 30 and Mursadab Tossa at Rs. 24.25 to Rs. 24.50 basis Bottom. Small lots of jungli white were done at Rs. 24.50. Daissee was in demand and prices ranged from Rs. 24.50 to Rs. 26 according to district.

Wagon arrivals in Cossipore were erratic, but during the period 16th to 20th October they totalled 837 wagons. This was slightly below the average for previous years. Mill agents were operating in strength in Cossipore and there were buyers for all arrivals. At the close, quotations were based on Kishenganj jute at Rs. 22 for Bottoms.

On Wednesday morning, opening quotations were as follows:

	Landed at Mills	Rs. a 100 kilos	Shipments
	Rs. a 100 kilos	Rs. a 100 kilos	
Assam	23.25	62.81	Nov.-Dec.
Northern	22.75	60.97	"

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption improved substantially in September. This was to be expected, reflecting increased seasonal demands. Compared with last year, consumption was about 5 percent higher due to better crops this year with a resultant increased use of bags. U.S. burlap stocks at the end of September declined by 8 million yards, being the lowest point since October last year. At 2 million yards, 130 million yards were spots and million yards were afloats. Appearing below are two tables which include the September figures (1) based on member reports to the Textile Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the

FIRST ATLANTIC JET SERVICE!

BOAC are first across the Atlantic with a "pure jet" passenger service. Why? Because Comet 4 jetliners have been delivered ahead of schedule... because the Comet 4 which made this historic first flight is the most tested airliner the world has ever known... and because BOAC has years more experience with jets than any other airline.

Consider the record...

One hundred and twenty BOAC pilots have logged a total of 15 million Comet flying miles. This year alone, BOAC Comets have logged 3,700 flying hours and made some 50 more transatlantic jet crossings than any other commercial jet airliner. Months and months of careful, patient and prolonged testing, proving and training flights lie behind this great achievement.

Fly to London by jet-prop Britannia

Partner of the Comet in B.O.A.C.'s fleet is the magnificent Britannia jet-prop—the largest, fastest jet-prop airliner in the world. From India you can fly BOAC Britannia to London where you can transfer to the Comet 4 for New York.

For further details consult your local BOAC Appointed Travel Agent or BOAC at Bombay, Calcutta, Delhi and Madras.

THE PAKISTANI JUTE MARKETS

NEW MINIMUM EXPORT PRICES FIXED

(FROM A CORRESPONDENT)

THE raw jute market had a better look during the past fortnight. Although interest was very selective, being mainly confined to quality and higher marks, the undertone was firm and steady. Sellers resisted any reduction in price and demanded higher premia for better marks. It is felt that as most of the crop has now passed out of the growers' hands, sellers are in a better position to check the downward trend of the market. Overseas buyers showed interest in Tossa grades only. Arrivals of loose jute from the interior in the Narayanganj market dropped considerably, and averaged 25,000 maunds a day. The quality of the fibre is considered to be poor and the condition average.

Improved enquiries in the local as well as in foreign markets, coupled with smaller arrivals, made the market steady. Local mills also showed interest in forward deliveries.

The market reacted very favourably to the Martial Law Administration. The Central Government has by a notification issued in Karachi on 20th October fixed since that date the minimum export prices of various grades of raw jute on the basis of £90 a ton, c.i.f. the U.K. and the Continent for Export Firsts. The minimum export prices of Narayanganj cuttings have been fixed at £34 a ton for other countries and at Rs. 65 a bale for India. Although it is difficult to assess the trade reaction to these measures just yet, it is reported that generally the decision has been welcomed. Some felt that this step should have been taken earlier to provide relief to growers. Shippers who have sold at lower prices are likely to suffer heavily. The Financial Times of London maintains that the Pakistan Government's decision to fix minimum prices for raw jute exports on the basis of £90 a ton for L.J.A. firsts appears to hold little advantage for jute growers either immediately or in the longer term. Like other commodities, jute's main problem recently has been the setback in world economic affairs. Only a high level of economic activity can guarantee long-run prosperity for jute and even then, certain reservations must be made. In recent years, substitute materials and bulk handling have affected the demand for jute bags and covering materials, though new fields have been opened up in furnishing and elsewhere.

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 10th October, 1958	1,321.3	11,813.0	13,134.3
1st to 10th September, 1958	649.3	16,239.3	16,888.6
1st to 10th August, 1958	3,282.2	15,335.9	18,618.1
1st to 10th October, 1958	12,913.0	256.1	13,169.1
1st to 10th September, 1958	13,853.3	428.7	14,282.0
1st to 10th August, 1958	10,825.7	94.4	10,920.1

THE FOREIGN JUTE MARKETS

HIGHER PRICES FOR FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

NEWS of the new minimum prices for jute was received from Pakistan during the past week. Due to the holidays, it took longer to fix the rates for grades, excluding Mill Lightnings which were the first to be agreed upon at £90 a ton. This was £3 10s a ton above the quoted rate on the Dundee market when the prices for jute yarns and cloth were raised with effect from 18th October. The other new minimum prices are as follows, and the rates prevailing when the committee agreed to alter the maximum terms for yarns and cloth are given in brackets: Mill Firsts £106 (£106), Mill Hearts £80 (£76), Grade Hearts £67 (£63), good Daisies-2/3 £95 (£90) and grade £88 (£83), Grade Tossa-2/3 £105 (£101) and Grade Tossa-4 £95 (£91), c.i.f. U.K., November-December shipment. The whole business of fixing minimum prices has been confusing but dealers expect that it will ensure more stability in the market than has been the case hitherto. Spinners here have been buying quietly but steadily. On occasions, there have been offers at 10s to 20s a ton less than the above fixed prices for Mill Lightnings and Mill Hearts.

Calcutta goods have ruled irregular again, closing rather firmer at 64s 9d for 40in. 10oz. and 47s 6d for 74oz. 10oz. 62s 6d and 47s November and 61s 6d and 46s December. With B Twills at 146s 3d, 147s and 147s 3d for the respective positions of shipment, all f.o.b. Calcutta. For January-March, there are quotations at 60s for 10oz., 45s 6d for 74oz. and 149s for B Twills, f.o.b.

Demand for jute yarns in Dundee has been fairly well maintained and further business has been done in hessian qualities at the dearer rates.

Engineering and Transport

PRIME MINISTER INAUGURATES I.A.T.A. MEETING IN NEW DELHI

DIFFICULTIES INVOLVED IN FIXING JET PASSENGER FARES

(FROM OUR NEW DELHI CORRESPONDENT)

THE annual meeting of the International Air Transport Association was inaugurated in New Delhi by the Prime Minister on Monday. It was also addressed by the Central Communications Minister Mr. S. K. Patil, who opposed an enhancement of rates and fares following the introduction of jet services. The chairman of Air-India International, Mr. J. P. D. Tata, who is the incoming president of I.A.T.A., did not endorse the views expressed by Mr. Patil and said that Air-India International was not committed by the Ministerial statement. The Cannes meeting of the I.A.T.A. Traffic Conference, which recently concluded its session, postponed the decision on fares for new jet services and on proposals for low developmental commodity rates over the north Atlantic to fill the expanded capacity which jets are expected to generate. This has robbed the New Delhi conference of its only issue of major importance. The Cannes meeting also ruled out economy class for areas other than the north Atlantic. It was, therefore, not surprising that instead of giving a lead, Mr. Tata had to talk about less important matters. He referred to airlines outside I.A.T.A. waging cut-throat competition and some members of the Association giving away money on any excuse to win passengers, one example being sandwiches. Unlike the World Bank meeting, the publicity arrangements were poor.

Superiority of Turbine Engines

The world airlines are turning to turbine power because this might lead to cheaper travel and expanded tourist traffic. Sir William P. Hildred, Director-General of the International Air Transport Association, says this in the annual report which he has submitted to the annual general meeting of I.A.T.A. Sir William says that turbine engines in jet or prop-jet aircraft, hold out a promise of reduced operating costs and the continued expansion of airline traffic by a progressive reduction in fares. This expansion is not only justified by public demand, but is also necessary for economies which derive substantial benefits from air tourism. Tourist expenditures, now several billions of dollars a year, mean "jobs, markets for home-grown products, profits for investors, revenues for Governments and relief for local tax-payers."

Declaring that the airlines "regard the jets as a challenge and an opportunity," Sir William says: "We look forward with hope and confidence to meeting the one and realising the other." In a review of the operations of the world's airlines during the past year, he says: "While we have done 14 percent more work and handled 17 percent more money, our expenses have gone up 25 percent and our operating profit seems to be down by 40 percent." Compared with 1956, the airlines in 1957 carried 13 percent more passengers and performed 16 percent more passenger-kilometres, 11 percent more cargo carriage, and 7 percent more mail ton-kilometres. He estimates that their total revenues during the past year were \$4,050 million leaving a net operating expenses of \$4,050 million leaving a net margin of only \$50 million, or 1.2 percent. Revised 1956 figures showed an operating profit of \$84 million or 2.4 percent on revenues of \$3,510 million.

Lower Fares

"In spite of these figures," Sir William says, "the consistent aim of the 86 airlines, comprising I.A.T.A., has been to lower the fare, while increasing the comfort and safety of air transport, and to bring air travel within the reach of increasing numbers of the world population at lower and lower income levels." He points out that by doing this, the airlines have increased traffic from 16 million passengers in 1946 to 87 million in 1957, and continues: "Some may say that in view of the financial result we have been too successful, but I think this is not the case. We are, in a sense, investing in the development of a habit of travel among people who have not flown before; and as that volume takes progressive hold, we shall eventually reap our rewards in volumes great enough to compensate for the reduction in unit revenues."

Over the north Atlantic route, where fares have been reduced by 30 percent over the last ten years, air traffic now equals the passenger traffic carried by steamships and may exceed it this year. The airlines' new economy class fares on the north Atlantic have been well received by the public since almost 60 percent of the scheduled traffic on the route now avails of the lowest fare. While admitting that the economy fares have diverted some passengers from the tourist services of the airlines, Sir William says: "I believe that there have been many more who could not have thought of travelling but for the introduction of this latest low fare. A lower one will be still better received."

Sir William says that the airlines now have on order almost 900 new jets and prop jets, worth nearly \$5,300 million. Sir William summarises the background of their decision to pur-

chase jet aircraft in this way: "For the first decade following the war, our fare reductions have largely been rendered possible by the fact that each succeeding generation of piston-engined equipment was more efficient than its immediate predecessor, producing a little more capacity at a slightly smaller cost. That period has come to an end. Although the latest types are faster, bigger, more handsome and comfortable, their costs a seat-mile showed no appreciable reduction. Turbine-powered aircraft represent a very definite technological advance and they promise a lower cost a seat-mile. How quickly that promise is realised depends on the operational experience of the next few years, on the extent to which they are given the kind of supporting services which their economical operation requires."

Advance Planning

Sir William emphasises that "there has been a very great deal of advance planning by the airlines, both individually and in concert. 'We are not small boys who have turned in an alarm for the joy of seeing the fire engines run out.' Thanks to massive exchange of technical information, 'no one will be going it alone: every pilot who takes the controls of a jet will have had the full benefit of everything that anyone has found out about these machines through millions of hours of research, test and actual flying.' Sir William stresses the need for promotional advertising of air transport. "We are penetrating the mass markets for the first time, and we must inevitably look for business among consumers who are inexperienced and want both guidance and reassurance. Advertising thus becomes an indispensable cost of operation." It is necessary to pay greater attention to the development of cargo traffic, because many piston-engined aircraft now carrying passengers

THE INDIAN OVERSEAS BANK LIMITED

SPECIAL SAVINGS CERTIFICATES

Invest in I. O. B's three-year Special Savings Certificates for security to self and service to country

Special Features:

- Interest on the certificates is payable half-yearly.
- Repayment may be obtained at the end of 1st, 2nd, 3rd, 4th, 5th or 6th half-year at the option of the depositor without loss of accrued interest.
- Loans may be taken on the security of the certificates at a nominal rate of interest.
- Certificates are available in denominations of Rs. 50, Rs. 100, Rs. 500 and Rs. 1000.
- Interest is allowed at progressively increasing attractive rates.

Shell X-100 Motor Oil fights Acid Action, the main cause of engine wear. It's detergent, stable and protective, to give you longer engine life.

Shell X-100 Multi-Grade is a motor oil plus, because it keeps its thickness at all temperatures and under all conditions. For new engines, Shell X-100 Multi-Grade is a must—see your Burmah-Shell dealer today.

Shell 2T Two Stroke Oil is still the only oil specially designed for two stroke engines. It mixes instantly with your petrol, giving you extra miles and added protection with every gallon.

Shell Rotella Oils are the finest specialized lubricants available for all diesel engines. Specially designed to withstand the toughest operating conditions, Shell Rotella Oils ensure smooth, even power from all diesel engines, with maximum protection.

How to get a winner every time

Just drive in to your nearest Burmah-Shell service station, and there you will find the widest... finest range of motor oils. For the private motorist there's Shell X-100 Motor Oil and Shell X-100 Multi-Grade; for the scooter owner, Shell 2T Two Stroke Oil; and for the diesel operator, Shell Rotella Oils.

When it comes to maximum performance and minimum engine wear, Burmah-Shell hold the ace—every time!

A winner every time...you can be sure of SHELL

'SANFORIZED' means better sales for you!

EXPERIENCE is teaching your customers to always look for the label 'Sanforized'. They know this label is their guarantee that garments will not shrink out of fit...even after many, many washings. What they don't know is the 'behind the scenes story' which ensures the complete reliability of all cloth labelled 'Sanforized'. Anytime, unannounced...our expert visits a mill licensed to use the trade mark 'Sanforized'. Selecting samples of cloth at random, he subjects them to a rigorous international wash-test, reports on his findings. Only cloth which passes the strictest anti-shrinkage test can carry the trade mark 'Sanforized'. It's this kind of care plus our advertising plus experience which makes cloth with the label 'Sanforized' such a sure seller—such a profit-maker for you!

Look for 'SANFORIZED' on the label

Owned by Cluett, Parbely & Co., Inc. (Incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trade mark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

For information: 'Sanforized' Service, 95, Marine Drive, Bombay 2.

and fill-in cargo will be put over to all-cargo service when the jets replace them. "Tomorrow there will be a flood of cargo space, and air cargo will have to be considered as a traffic which must stand on its own feet and earn its own way."

Role of Governments

"Positive control of air space, at all times, in all weathers and for all aircraft, civil and military" is an urgent necessity now that fast jet aircraft have been introduced, Sir William says. Governments should accept the principle that all aircraft are required to fly on instrument flight rules. They should integrate civil and military traffic control systems, and provide whatever additional services are needed to fill the gap. Discussing the rôle of governments and others in the development of air traffic, Sir William says: "In this business we have many partners: other forms of transport, hotels, resorts, tour operators and, above all, governments, who see tourism in terms of building the national economy. What each of us does or spends helps the rest; and what each fails to do harms the others. As this golden tide of tourism continues to flood, it is much to be hoped that there will never come a day when the development of air traffic can be retarded for lack of roads and baths, but the fact is that it very well might. There are places in the world at this moment, which are losing tourists because they have not got enough accommodation, or because their accommodation is sub-standard, or because they are charging more for what they offer than the tourist thinks he should pay. The tourist who ten or 20 years ago chose between the seashore and the mountains can now choose between continents. He is in demand and he knows it. He will not go where he cannot get what he wants. If he decides not to travel, we lose a passenger, but some country will lose a tourist. And a tourist spends more on his holiday in the country he visits than he spends on the air fare to get there."

Expansion Programme of Japan Airlines

Japan Airlines has shortened the lead time on an extensive route expansion programme by two years to permit the establishment of round-the-world Tokyo-London-New York-Tokyo service by 1963, instead of 1965, the airline has announced. Opening of the new routes will depend on Government financial support and the outcome of negotiations with countries who are interested in the proposed services. The programme, which has been submitted to the Government for its approval, calls for the purchase of two more DC-8 jet aircraft in addition to four now on order, plus medium and short-range jets. The following new routes are proposed to be opened: 1959: the Tokyo-

Honolulu-Los Angeles service, the Tokyo-Taipei-Hongkong service using DC-6Bs; the transformation of present irregular flights to Brazil to a monthly service, 1961: Tokyo-Anchorage-Stockholm across the Pole and Tokyo-Seattle with DC-8s; a southern route to Europe, extending from J.A.L.'s present stop in Bangkok through Calcutta, Karachi, Beirut, Rome, Paris, London and Stockholm; a Tokyo-Manila-Djakarta route using medium-range jet aircraft; the extension of the Tokyo-Singapore service to Djakarta, 1962: the extension of the northern Pacific route from Seattle to New York, 1963: the extension from New York to London, connecting the Tokyo-London service and the southern route to form a round-the-world network.

K.L.M. to Use Electras

K.L.M. will use eight of its 12 *Electras* on service within Europe and to the Middle East and four on the route to Singapore. The only European airline so far to order the *Electra*, K.L.M. will get its first delivery in September 1959, the second in November, two more in December, one each month during the first four months of 1960, the ninth and tenth in May 1960, and the 11th and 12th in November and December of 1960. The first DC-8 delivery will be made in February 1960, the second in March, third in April, fourth in May, the fifth in July, the sixth in August, the seventh in October and the last in December. The primary route for the DC-8 will be north Atlantic. The airline has no final plans for the south Atlantic because of airport limitations in South America. Capacity restrictions imposed on K.L.M. by foreign governments may bar the use of big jets on services to South Africa.

Air France Service to Cairo

Air France will route its Far East services to Saigon via Cairo starting in November, instead of in October as previously reported. The airline resumed its service to Cairo on 2nd September on two African services.

Additional Traffic Rights for Non-U.S. Carriers

President Eisenhower has approved the decision of the U.S. Civil Aviation Board amending the permits of all non-U.S. carriers to allow them to make charter flights to U.S. points off their authorised routes. Prior to the order, non-U.S. carriers could operate charter trips only between points specified in their operating permits. U.S. airlines have been granted this right on flights to other countries. The C.A.B. has set no specific limit on the number of off-route flights by non-U.S. carriers but has indicated that they would have to bear a relationship to the number of authorised

on-route flights. The new authority will be effective from 5th November.

C.A.B. Decision on Jet Passenger Fares

Passenger fares on new jets should be the same as on piston-engine planes, the U.S. Civil Aviation Board has decided. It has explained its attitude to U.S. carriers which are I.A.T.A. members to provide them with policy guidance for the I.A.T.A. traffic conference in Cannes. Since the C.A.B. will be called upon to ratify I.A.T.A. fare changes, the policy statement had considerable impact on the Cannes meeting.

Services to Moscow

The New Delhi-London air service via Moscow is operating according to schedule. There is now a direct New Delhi-Moscow service. Moscow is also connected with Paris, Amsterdam and Prague by Air France, K.L.M. and the Soviet airline, Aeroflot, respectively. The first two airlines are members of I.A.T.A. and can and do provide connecting service to the passengers carried by other airline members of I.A.T.A. The British have also an air agreement with Russia for the operation of the London-Moscow service. British European Airways are also a member of I.A.T.A.

T.W.A. INTRODUCES JETSTREAM SERVICES IN FAR EAST

A new type of piston-engine aircraft ever flown by a commercial airline, Trans World Airlines' *Jetstream* will now provide speed, comfort and luxury to passengers travelling to and from the Middle and Far East. They are to be used with effect from 30th October, 1958. The new aircraft, first introduced by T.W.A. on its transatlantic routes last year, will now operate as far east as Manila. The *Jetstreams* are powered by 3,500 horse-power piston-engines, which were designed by Lockheed Aircraft Company to bridge the gap between the piston-engine era and the age of jet power. With full fuel reserves, the *Jetstream* has a range of as much as 6,300 miles non-stop. The vast range of the *Jetstream* is largely due to its huge 150-foot wing span, 23 feet longer than the Super-G *Constellation*, enabling it to seek out high altitude "jetstream" winds (which gave the new aircraft its name), and ride their swift currents for long flights. At the same time, this enormous wing provides wider spacing between engines and cabin, making for a quiet, vibration-free interior. The *Jetstream's* sound-proofing system, including the location of engines away from the passenger cabin and the use of synchrophased propeller devices, produces cabin quietness unrivalled in propeller-piston aircraft and of the same order as that found in jet and jet-prop airliners.

Commodity Markets

BRITISH TEXTILE REVIEW

NUMBER OF IDLE LOOMS INCREASES

IT is a poor consolation to Lancashire that its difficulties are widely shared. Reports from most other textile manufacturing countries are almost as depressing as those from Britain, where the long-awaited recovery in trade has been deferred (if it was, indeed, about to begin) by the worst summer and autumn weather in living memory. While attention has been focussed on the negotiations in Hongkong to limit the colony's exports to this duty-free market, it has not been overlooked that stocks of cotton goods have been accumulating in India and Japan and that these and other countries are inclined to reduce their prices still further below the levels at which Lancashire can hope to compete in the world market. That the industry is slack in most countries does not conceal the fact that its condition is worse in Britain than in any other major cotton manufacturing country. The *International Review of Cotton and Allied Textile Industries* showed in a recent survey that the number of idle looms in Britain, more than 50,000, was far more than in any other country: Italy and the U.S.A., ranking second and third, respectively, on this dreary list, had only half as many idle, Japan only a quarter of the U.K.'s number. Yet the same *Review* showed that the number of looms installed in the U.K., some 266,000, was considerably in excess of Japan and the U.S.A. Thus the proportion of looms idle is far larger in Britain than elsewhere. In 1951, when the Lancashire industry reached its postwar peak, the U.K. was still the leading exporter of cotton fabrics; a few years later, its exports were exceeded by Japan's, and last year they were exceeded also by the U.S.A.'s. The past year recorded increased exports; but Britain's exports rose only 2 percent, while all countries' exports together rose by 8 percent.

Such facts are familiar, but they must be frequently restated; for they raise the question whether, or how, Britain can retain her share of what should be, in the long run, an expanding market. Cotton is politics these days, and at the recent conference of the Labour Party, Mr. Harold Wilson (President of the U.K. Board of Trade in a former Labour Government) hinted that Lancashire's problem of competition in the home market would have to be solved by "what is, in effect, the nationalisation of the business of importing the cotton goods". Mr. Hugh Gaitskell, Leader of the Opposition, on a tour of cotton towns just before the Conference, had likewise spoken of a State-controlled body to regulate imports. But these politicians had significantly little to say about exports.

Restrictive Control on Imports

Earlier this year, Mr. John Crabtree, a textile manufacturer, was encouraged by the chairman of the Conservative Party, Lord Hailsham, to submit proposals for strengthening the textile industry, which he did. This month his plan, redrafted, has been submitted again. It, too, insists that, as a first essential, "the Government must institute action to bring under a restrictive control imports from colonial and Commonwealth territories". But Mr. Crabtree regards this step as only a short-term expedient, to give the industry confidence so that it can set about the task of winning back what it has no right to protection, even against "unfair" competition, unless it can improve its efficiency; and as a means of doing so he emphasises that, in portance of shift work. He reckons that, in portance of depreciation and interest at a combined rate of 15 percent, installing modern shuttleless automatic looms working on a single shift at 45 hours a week, at 95 percent efficiency, costs 13d a yard; whereas on three-shift working (even in its present somewhat unsatisfactory form) the cost comes

down to 1d a yard; and if Lancashire's working year, comprising 5,512 hours on the three-shift system, could be increased to the normal U.S. working year of 8,068 hours, the cost of the looms will be reduced to 4d a yard.

Quality and Design

Reducing costs and prices is obviously important, but it is well to remember that much of Britain's trade abroad—in all textiles, not only cotton goods—is in markets where quality and design, rather than price, are the deciding factors. It must also be recognised that, whether for protective or for national financial reasons, imports into most of these markets are restricted; and goods which would otherwise be sold there are not generally suitable elsewhere.

Mr. Crabtree was expressing the general feeling of the industry when he said that "the Government must look to the interests of our textile trade when arranging trade agreements with Commonwealth and foreign countries". Industrialists, who did not realise in advance that the Commonwealth conference in Montreal would be concerned with finance rather than with trade, were disappointed that opportunities for negotiating trade agreements seemed to have been missed there. The Canadian assurances on preferential rates of duty were well received in Britain, but exporters could form no firm opinion on such matters as the tariff on wool fabrics, in advance of information on what had been said privately between the Ministers concerned.

New Trade Agreement

The development that has really shocked exporters in the U.K. is the trade agreement between New Zealand and Japan. The distressing feature of the Canadian wool tariff—that it improved the position of foreign suppliers as against British—is repeated in this case, though in relation, of course, to one particular foreign supplier, Japan. But the circumstances are quite different. Whereas the grant of most-favoured-nation treatment to Japan and other measures to facilitate her exports to New Zealand are planned to increase her exports to British markets for New Zealand's exporters. Moreover, this agreement between New Zealand and Japan was quickly followed by one between New Zealand and Britain, reducing the minimum preferential margins that favoured British goods. Evidently, British exporters must face stronger competition in New Zealand from other countries as well as from Japan.

So the trade with New Zealand is following the same course as, in past year, the trade with Australia, and largely for the same reason, that Britain cannot (or will not) provide a sufficient market for these countries' primary products. There is, of course, no deliberate discrimination against British textiles; but it happens that Japan is an obvious market for the primary products and a major exporter of textiles. It seems that the British Government tried to dissuade New Zealand (Mr. F. J. Erroll, Parliamentary Secretary to the Board of Trade, speaking at Bradford with particular reference to the wool trade, said that recommendations had been made to the New Zealand Government), but it is difficult to argue against these hard economic facts. Logically, the textile industry should protest against a policy which subsidises British agriculture and so reduces the market for British manufactures in food-exporting countries.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) declined by 0.2 percent to 115.9 during the week ended 4th October, 1958, compared with 116.1 for the previous week. The index was lower by 0.6 percent when compared with the corresponding week of last month but was higher by 6.6 percent than that of a year ago. Food Articles receded further by 0.2 percent to 120.4 due

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to September 1958. As compared with August, the September Indices for Food, Clothing and Miscellaneous show rises of 3 points, 2 points and 1 point, respectively, while that for Fuel and Lighting remains unchanged at 281 points. Correlating all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living increased by 2 points during September 1958.

Middle Class Cost of Living Index Number for Calcutta. Prices in August 1939=100.

Groups	Weights	GROUP INDICES											
		Sept. 1957	Oct. 1957	Nov. 1957	Dec. 1957	Jan. 1958	Feb. 1958	Mar. 1958	April 1958	May 1958	June 1958	July 1958	Aug. 1958

Compiled and constructed by the Statistical Department of "Capital"

to a fall in the prices of jowar in Coimbatore (-16%) and in Rohtak (-7%), rice in Ranchi (-15%), in Raipur (-12%), in Tihu (-8%) and Jamshepur (-7%), mung, milk and fish, all Bombay (-15% each), arhar in Delhi and eggs Bombay (-12% each), groundnut oil (-5% each), cashewnuts in Quilon and meat in Bombay (-5% each), black pepper (-3%), coconut oil and tur (-2% each) and urad and bananas (-1% each) although the prices of barley in Mohiara (+20%), eggs in Jhansi (+18%), milk in Nagpur (+17%), jowar in Jhansi (+13%), masur in Bombay and of one (+7% each), rice in Trivandrum and in Nandigram and chillies in Madras (+6% each), maize at gram (+4% each), wheat (+2%) and gingelly and coffee (+1% each) showed advances. The index for Tobacco rose by 1.9 percent to 91.1 as result of an increase in the price of tobacco in Madras (+10%). A fall in the price of castor oil (-4%) was responsible for bringing down the index for the Fuel, Power, Light and Lubricants group by 0.2 percent to 115.8. Lower prices, castorseed in Bombay (-7%), groundnuts (-4%), copra (-3%) and raw cotton, raw silk, gingellyseed and rapeseed (-1% each) brought down the index for Industrial Raw Materials by 1.0 percent to 117.0 compared with 118.5 (revised) for the earlier week. The prices of cowhides, wet salted (+7%) and goat skins in Calcutta (+6%), lac (+3%), cottonseed (+2%) and raw jute, raw wool and tanning materials (+1% each), however, moved up. The index for Intermediate Products went down by 0.8 percent to 110.5 due to a fall in the prices of rayon yarn (-4%), linseed oil (-2%) and cotton yarn and leather (-1% each). The prices of coir yarn (+3%) and zinc and tin (+2% each) registered an increase. The prices of glass (+3%), bricks in Delhi and Bangalore (+2% each) and jute manufacture (+1%) showed advances while those of tiles in Mangalore (-3%) and general chemicals (-2%) moved down, and the index for Finished Products stood at 108.6 against 108.5 (revised) for the previous week.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: 1952-53=100)

Groups and Sub-Groups	4-10-58	Week Ended 27-9-58	6-9-58	5-10-58

Plantation Topics

STRIKE BY PLANTATION LABOUR
IN KERALASTATE GOVERNMENT SUPPORT FOR
COMMUNIST WORKERS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

EFFORTS to settle the prolonged strike sponsored by the communists on the High Ranges have failed. A widespread strike on other Kerala plantations has meanwhile begun. The situation is badly out of control. Strikers have been violent and the police have had to open fire a number of times in recent weeks. Panic conditions prevail in many estates. Stabbing by mobs led by outside elements is reported from several areas. Terror tactics are driving workers away. High Range estates are being abandoned and production is coming to a standstill. Some communist leaders in Kerala give open incitement to violence. Party workers foam the estates in loudspeaker vans announcing that the strike must go on and, if necessary, violence will be used.

The State Labour Minister, Mr. T. V. Thomas, has practically substantiated the charge of the planters that the State Government is making common cause with the communist-led strikers. In a Press interview, which has appeared in several important papers, he is reported to have said that the Government is convinced that the "communist-sponsored strike in the estates is perfectly justified" and "the Government is determined to take all possible action against the management". He said the Government did not approve of the proposal to refer the bonus question to adjudication. The Minister claimed that the communist union represented the majority of workers (I.N.T.U.C. actually

has the largest membership) and it did not favour adjudication. He accused the management of "playing politics and flouting every accepted principle in dealing with the strike."

Rejoinder by Planters

The secretary of the Association of Planters of Kerala, Mr. O. C. Mathew, in a letter to the Labour Minister challenges his claim that "the strike is perfectly justified". The secretary says that the strike is in disregard of the fact that the major issues are under the consideration of duly-constituted tripartite committees, and the strike and the accompanying acts of open rowdism, violence and sabotage are in plain violation of the Naini Tal code of conduct. "This is a campaign of terrorism, not a strike as understood in industrial practice. In the circumstances, the suggestion that the strike is perfectly justifiable is pregnant with very evil consequences. It would be very unfortunate if the Kerala Government is understood to be encouraging the strikers and their thoroughly reprehensible methods."

Challenging the Minister's claim that absolute protection is given to the property and person of the management, the A.P.K. secretary says: "It is difficult to see what this statement could mean. You know very well that a vast amount of sabotage and destruction of industrial property has already occurred, that management personnel have been insulted and beaten up, that unruly strikers have attacked and continue to attack workers who wish to go to work, that the police who tried to prevent this have been attacked, that at least two police officers have been injured badly, and that the police have had to open fire on at least three occasions, resulting in deaths, the number of the dead being variously reported. I hope you will recall that you were in Munnar during the period from 14th to 18th October trying to persuade Mr. Soutar (General Manager, Kannan Devans) to pay a sum of Rs. 20 to each worker to be adjusted against bonus and strike pay, the quantum of which was to be decided by a tripartite conference.

On 18th or 19th, you left Munnar and Mr. Soutar had informed you that he could not agree. In the course of the discussions which we had with you on 22nd October in Kottayam, Mr. Soutar told you that, subsequently, union workers were going round all over Munnar, announcing through loud-speakers that the police would soon be withdrawn, and that anyone who did not join in the strike may be killed. On Monday, the 20th instant, there was an orgy of violence and the police had to shoot and kill people."

Referring to the Minister's statement that the Government has decided to take action against the management, the Association secretary says that the present situation involves only an industrial dispute and organised lawlessness indulged in by a group of striking workers and their sympathisers. It would be ungracious if the Government were to take action against the management for either of these. "The dispute could be dealt with under the Industrial Disputes Act; the lawlessness could be put down with a firm hand; those who incite others to commit acts of lawlessness, however eminent they may be, could be dealt with according to law. Nothing could be more calamitous than for the Government to overlook these basic considerations and to make up its mind to take all possible action against the management," he adds. In view of this unhelpful and hostile attitude of the communist Government of Kerala, a deputation of the planters of Kerala led by the President of the United Planters Association of Southern India waited on the Prime Minister of India to apprise him of the developments on the plantations and seek protection from the Central Government.

Stopping of Store Cash

In the meanwhile, the Association of Planters of Kerala has informed all its members that they are not obliged either to advance money or supply rice on credit to workers. If the owners pay "store cash" and supply rice on credit during the strike, that will mean that "we are subsidising the strike," the planters say. It is normal practice in the Kerala plantations to advance store cash and supply rice every Friday on credit against wages paid at the end of the month. If this system is stopped, the workers will face starvation.

The U.K. Deputy High Commissioner in India has just completed a tour of the strike-bound estates for an on-the-spot study of the situation. Several European managers have been victims of violence employed by strikers.

Agrarian Relations Bill

The controversial Kerala Agrarian Relations Bill is being scrutinised by a select committee. Many, including certain members of the committee, seem to be under the impression that plantations are completely exempted from its scope. This may be due to the fact that under Clause 62(2) of the Bill, land under tea, coffee, rubber and cardamom is exempted from the imposition of the proposed ceiling, but under Clause 61(1), the exemption is limited to areas planted under such crops before 18th December, 1957. This is the most dangerous part of the Bill as far as the plantation industry is concerned. It was by a continuous process of expansion and improvement during the past one century that the industry reached its position of today as the largest earner of foreign exchange, as one of the largest employers of labour and the most progressive agricultural enterprise of the country. It would ultimately harm the interest of the State if the progress of the industry is arrested in the name of land legislation. Land reserved bona fide for raising plantations should be exempted, as is done in the case of existing plantations. Islands of coconut, pepper and such other crops within the plantations of tea, coffee, rubber and cardamom should also be exempted from the purview of the Bill, for their parcelling out to new holders will disrupt plantation organisation and administration. There is a provision in the draft Bill which demands that to hold onto plantations, their owners must divest themselves of all other pieces of lands except their homesteads. This will be hard on persons who have ventured into this field. Owners of plantations should be permitted to hold lands up to the level of the ceiling which may be fixed.

The definition of plantation given under Clause 61 is defective. The amendment suggested by the Association of Planters of Kerala, if accepted, will correct the position. The amendment is: "Plantation means any land planted with or reserved for being planted with, tea, coffee, rubber, cardamom or other special crops, and includes all land which is used or reserved for the construction or maintenance of roads, buildings, factories, pastures or timber, or fuel trees or for any other purpose that is incidental or ancillary to the business and undertaking of planting as an organised and integrated, composite agricultural and industrial venture as also all areas which may be lying within the limits or boundaries of such land." Joint-stock companies should also be exempt from the ceiling.

The importance of the plantation industry to Kerala's economy cannot be over-emphasised. In this industrially backward State, planting is the main industry. It provides one-third of the State's revenue and gives gainful employment to 250,000 people whose per capita income is three times that of the agricultural worker on the plains. Many amenities like housing, medical aid and recreation are provided by employers.

COCHIN TEA SALES

At Sale No. 31, 1,725,000 lbs of tea were on offer. There was a good general demand, particularly for low mediums which were steady. Improved mediums and good medium broken were dearer but fannings and best liquoring high-grown were below valuations.

Calcutta Markets

FAIR ACTIVITY IN FREIGHT
MARKETS

THERE was fair activity in the freight markets during the past two weeks with the Australian grain trade playing the leading rôle. Barley from south Australia to the Continent was fixed at 95s and wheat from New South Wales was fixed at 80s. Transatlantic coals were slightly firmer at 23s 9d. The River Plate also produced a few fixtures at 62s 6d to the Continent for heavy grain, and flour was arranged from Montreal to Ceylon at 95s. The time charter section remains quiet with rates only attractive enough to owners with vessels in service. Some 35 Liberty type vessels have been sold for breaking up in America.

HIDES AND SKINS STEADY

The market was steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 21st October and 27th October, 1958)

Cowhides: Wet salted (Ord.) 6,900 pcs. on the basis of Rs. 6.50 to Rs. 9.50; Wet salted (Ord.) 6,900 pcs. on the basis of 75nP to 78nP a lb; Wet salted (Slaughtered) 23,700 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 17.50 to Rs. 26.

Goatskins: Wet salted (Patna, Daissee, Kustia) 33,600 pcs. on the basis of Rs. 270 to Rs. 275; Rs. 320 to Rs. 340 and Rs. 375 to Rs. 385; Wet salted (he-killed) on the basis of Rs. 4.12 and (she-killed) on the basis of Rs. 4.25 a piece; the Assam-Dinajpur-Kissenganj 23,000 pcs. on the basis of Rs. 265 and Rs. 310 to Rs. 334; Purneah-Kissenganj 6,600 pcs. on the basis of Rs. 315 to Rs. 335; Dacca 6,000 pcs. on the basis of Rs. 340; Maila (heavy) 2,500 pcs. on the basis of Rs. 360.

Bazaar Stocks

(27th October, 1958)

Cowhides: Wet salted 81,700 pcs.

Goatskins: Wet salted (Daissee, Kustia and Killed) 11,000 pcs.; Assam-Dinajpur 139,000 pcs.; Muzafferpore - Patna-Pakur - Purneah - Kissenganj 274,000 pcs.

SUGAR QUIET

During the week ended 29th October, sugar sales in the Calcutta market averaged 4,000 bags daily. Arrivals a day were 1,500 bags and stocks totalled 110,000 bags. Rates for ready sugar export-Kantapur delivery were Rs. 41-4 to Rs. 42-4 for bold grain and Rs. 38-15 to Rs. 39-6 for ordinary grain. The market was quiet.

SHELLAC STEADY

During the week ended 24th October, the market was steady. The range of quotations was as follows:

Standard Pure But-tonlac	Rs. 80 buyers; 85 value.
TN. Pure Shellac	Rs. 59 to 62 buyers; 60 to 64 sellers.
Standard One Shellac	Rs. 70 to 74 buyers; 72 to 75 sellers.
Superfine Shellac	Rs. 71 to 75 buyers; 72 to 76 sellers.
Lemon No. 2 Shellac	Rs. 78 to 82 buyers; 80 to 84 sellers.
Lemon No. 1 Shellac	Rs. 83 to 87 buyers; 84 to 88 sellers.
Kusmi Seedlac No. 2	Rs. 70 to 73 value.
Kusmi Seedlac No. 1	Rs. 75 to 78 value.
One B Seedlac	Rs. 67 to 68 sellers; 69 to 70 buyers; 70 to 71 sellers.
Two B Seedlac	Rs. 61 to 65 buyers; 62 to 68 sellers.
Manbhium Fine Seed-lac	Rs. 66 to 70 buyers; 67 to 71 sellers.
C.P. Fine Bysacki Seedlac	Rs. 61 to 64 buyers; 62 to 65 sellers; 66 done.
C. P. under 5% Seed-lac	Rs. 57 buyers; 58 sellers; 60 done.
C. P. 5% to 7% Seed-lac	Rs. 53 to 54 buyers; 55 sellers.

Shipments during October (until the 17th) were 11,498 packages comprising shellac 2,912 packages, seedlac 7,525 packages, butonlac 228 packages and others 833 packages.

PER CAPITA CONSUMPTION OF TEA IN
U.K. INCREASES

Consumption of tea a head in the U.K. in 1956 reached the highest level yet recorded—that of 10.1 lbs.—says a review of plantation crops just published in London by the Commonwealth Economic Committee. Of tea exports, the review notes that the record world figure for 1956 (1,140 million lbs) largely reflected the increase in the Commonwealth, where consignments from India reached the new high level of about 524 million lbs. The bulk of the recorded trade in tea continues to be carried on between Commonwealth countries, the report says. Supplies to the U.K. continue to represent one-half of world imports of tea—other Commonwealth countries and the United States together accounting for most of the remainder.

The report records some recovery in 1956 in imports of tea into Commonwealth countries as a whole (mainly as a result of the large shipments to the United Kingdom)—although the high figure of 1954 was not equalled.

Books

THEORY OF TRADE

Factor Endowments and International Trade. By Subimal Mookerjee. (Published by Asia Publishing House, Bombay. Price Rs. 8.75, pages 99.)

This well-written monograph, which is mainly meant for advanced students of international trade, gives an account of the theory of trade developed by Heckscher and Ohlin. As is well known, they tried to explain the existence and nature of trade in terms of factor endowments and production methods. This approach has gained considerable importance in the current literature on international trade, since it makes a systematic analysis as to why relative costs of commodities between countries may differ, leading to situations when trade may take place. But the Heckscher-Ohlin model does not invalidate the classical comparative cost approach. In fact, when the former is fully elaborated, one comes to the starting point of the latter. Some well-known economists have discussed the implications of the Heckscher-Ohlin model, and the most controversial application of the theory was made by Leontief who tried to determine the "real" factor endowments in the United States compared with the rest of the world. His analysis led to extensive comments by some notable authorities who re-examined the validity of the theory propounded by Heckscher and Ohlin. With painstaking efforts, Dr. Mookerjee has collected his materials from the periodical literature on the subject and has made a competent and authoritative appraisal of the theory. The only serious criticism against the book is that it has been over-burdened with too many diagrams. Its lucidity would not have suffered, or probably would have increased, if some of them had been omitted.

MARKET SURVEY

The Canadian Markets. Compiled by J. Walter Thompson Company. (Published by McGraw-Hill Book Company, Inc. Price \$18, pages 178.)

If you are looking for a comprehensive survey of the Canadian markets, this is a book which will give you a mine of information on the subject. The total personal income, before taxes, in 1956 was five and a half times the annual average for the 1935-39 period, and even after allowing for higher taxation, an average Canadian has at present a larger disposable income. It is no wonder, therefore, that the living standards in that country should be one of the highest in the world. For a clear understanding of the analysis, the publication has been divided into three parts: Part I gives an outline of the main features of the economy; Part II makes a detailed analysis of the ten provinces and two territories while Part III gives an estimate of future developments with a useful bibliography. The book contains a large number of tables, charts

and maps. There is no doubt that readers will find it factual, complete and up-to-date.

IRON AND STEEL ANNUAL

Iron and Steel in India. Edited by A. K. Kanwar. (Published by the Trade Chronicles, 6, Mangoe Lane, Calcutta 1. Pages 144.)

There was a time when the number of specialised publications on the iron and steel industry was extremely limited. But the attention of some enterprising publishers has now been drawn to this aspect, and they are bringing out special numbers to review the position of this developing industry. In this annual publication, an attempt has been made to review its progress through a number of well-written articles. The printing is good, and the publication, by and large, has been well worth the efforts the publishers made in bringing it out to commemorate the 50th anniversary of the steel industry in India.

Rural Credit Officers, Agricultural Credit Department	Rs. 375-55-815 E.B. 55-925-60-1045
Probationary Assistants	Rs. 250-25-450 E.B. 25-650
Economic Assistants, Agricultural Credit Department	Rs. 175-12-50-300 E.B. 20-440

Note:—Candidates possessing exceptionally good qualifications and experience of value to the Bank may be given a higher starting pay in the prescribed scales.

In addition to pay, the selected candidates will be eligible to draw local pay, house allowance and dearness allowance at the rates prescribed by the Bank from time to time.

(B) AGE LIMITS AS ON 1ST NOVEMBER 1958

Rural Credit Officers	Candidates should not ordinarily be over 30 years of age but the age limit may be extended up to 35 years in the case of candidates with exceptionally good qualifications and/or experience of value to the Bank.
Probationary Assistants	Between 21 and 24 years.
Economic Assistants	Between 18 and 24 years.

The maximum age limit is relaxable but not beyond 30 years in the case of—

1. Probationary Assistants, possessing special qualifications and experience of value to the Bank.
2. candidates with approved war service.
3. ex-employees of Banking Institutions whose services had to be terminated for reasons of economy or as a result of the Banks going into liquidation.
4. personnel retrenched from the Government Offices after at least one year's service applying through Employment Exchanges, and
5. candidates belonging to the Scheduled Castes or Scheduled Tribes.

(C) QUALIFICATIONS

1. Rural Credit Officers, Agricultural Credit Department

Applicants should possess very high academic qualifications of Indian or Foreign Universities (preferably post graduate) in Economics, Sociology or other Social Sciences, and possess degrees which are either first class or high second class. Special study or knowledge of rural economics or rural sociology will be an additional qualification; so also will be the experience gained in a responsible position in a Co-operative Department or in a Co-operative Institution.

2. Probationary Assistants, Agricultural Credit Department

Applicants should possess a first or high second class Master's degree of an Indian or Foreign University in Economics, Sociology or other Social Sciences or in Commerce. Special study or knowledge of rural economics or rural sociology will be an additional qualification; so also will be the experience gained in a responsible position in a Co-operative Department or in a Co-operative Institution. Due weightage will be given to the successful completion of the courses organised by the Central Committee for Co-operative Training at its training centres.

3. Economic Assistants, Agricultural Credit Department

Applicants should possess a high second class Master's degree or a first class Bachelor's degree in Economics or Commerce of an Indian or Foreign University and have practical experience in the Co-operative Department of any State in India or abroad or in a Co-operative Institution of standing. Specialised study in Rural Sociology will be an additional qualification. Due weightage will be given to the successful completion of the courses organised by the Central Committee for Co-operative Training at its training centres.

Note:—Experience in community development, small scale and cottage industries, marketing, training and publicity etc. will be given due weightage for the posts in the Agricultural Credit Department and especially for the posts of Rural Credit Officers and knowledge of regional languages such as Hindi, Bengali, Oriya, Kannada, Marathi will be an additional qualification.

4. Probationary Assistants, Department of Research and Statistics

Applicants should possess a first or high second class Master's degree in Economics or Agricultural Economics or Commerce of an Indian or Foreign University. A period of research work in one or

more of the subjects, viz. (a) Agricultural Economics (b) Co-operation (c) Rural Sociology or experience of field investigation work, or experience gained in a responsible position in a co-operative institution or co-operative department will be considered as an additional qualification.

5. Probationary Assistants in Department of Banking Operations and on the General Side

Applicants should have a brilliant academic record with a first or high second class Master's degree of a recognised Indian or Foreign University in Economics, Commerce, Banking, Accountancy or Law as a special subject. Preference will be given to the candidates possessing practical experience of commercial banking in a supervisory capacity and who have passed the Institute of Bankers' Examination.

THE BOARD WILL INSIST ON A VERY HIGH STANDARD OF SUITABILITY IN MAKING SELECTIONS FOR THE ABOVE POSTS AND ONLY CANDIDATES WHO POSSESS GOOD ACADEMIC QUALIFICATIONS AND ADEQUATE EXPERIENCE OF THE TYPE SPECIFIED ARE ADVISED TO APPLY.

2. Candidates selected must be prepared to serve in any office of the Bank in India and to undertake tours when required.

3. Candidates who wish to apply for more than one category of posts must submit separate applications accompanied by separate application fees and should clearly indicate the post and the department for which they have applied.

Applicants for all the above posts except Economic Assistants must remit with their applications a fee of Rs. 7.50 for each category of post in each department by cheque or bank draft on a Scheduled Bank payable at Bombay or by postal order. Applicants for the posts of Economic Assistants must remit a fee of Rs. 2.00. The application fee is in no case refundable. *Bona fide* refugee candidates not in employment applying through the Employment Exchanges are exempted from payment of application fees while in the case of candidates belonging to Scheduled Castes/Scheduled Tribes, the fee will be reduced to 4th.

Applications in the candidate's own handwriting in the prescribed forms obtainable from the Reserve Bank's offices at Bombay, Calcutta, Kanpur, New Delhi, Nagpur, Madras, Bangalore, Lucknow and Trivandrum accompanied by copies (originals should not be sent) of at least two testimonials, and copies of statements of marks secured in Graduate and Post Graduate degree examinations should be forwarded to the Secretary, Central Recruitment Board, Reserve Bank of India, Central Office, Post Box No. 406, Bombay No. 1 so as to reach him on or before the 22nd November 1958.

Candidates should also indicate in their applications whether they had applied previously for a similar post in the Reserve Bank and if so with what result.

Candidates already in service must submit their applications through their employers. Candidates belonging to Scheduled Castes/Scheduled Tribes should mention this fact prominently on their applications and also enclose a copy of certificate to that effect from a competent authority.

4. Appointments will be subject to candidates being found medically fit for service in the Bank.
5. If any candidate desires to have his application acknowledged, he should send it by "Registered Post Acknowledgement Due". Apart from those who may be specially called, interviews will not be granted to candidates nor will the Bank enter into correspondence with them.

6. Canvassing will be regarded as disqualification.

THE CHAMPDANY JUTE COMPANY LIMITED.

NOTICE is hereby given that the Annual General Meeting (being the Sixty-eighth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 2, Netaji Subhas Road, Calcutta, on Friday, 14th November, 1958, at 12 noon for the following purposes:—

- (1) To consider the Profit and Loss Account for the year ended 31st March, 1958, the Balance Sheet as at that date and the Reports of the Directors and the Auditors.

- (2) To elect a Director in place of a Director retiring by rotation.

- (3) To consider and, if thought fit, to pass the following resolution which will be proposed as a Special Resolution:—

"That Mr. J. H. Jamieson be and is hereby appointed a Director of the Company".

Special Notice dated 30th September, 1958 of the intention to propose the foregoing as a Special Resolution has been received by the Company wherein it is stated that a Special Notice is given to satisfy the requirements of Sections 190 and 261(1)(f). (2) and (3) of the Companies Act, 1956 as Mr. Jamieson is an employee of the Managing Agents and whose appointment at this Meeting will require a Special Resolution.

- (4) To appoint Auditors and fix their remuneration.

SPECIAL BUSINESS.

To consider, and, if thought fit, to pass with or without modification the following resolutions:

- (5) (As a special resolution). "That the Company do hereby approve of a contract

or contracts, as the case may be, being entered into between the Company (hereinafter called "the Buyers") of the one part and James Finlay & Co., Limited, the Managing Agents of the Company, (hereinafter called "the Sellers") of the other part the material terms of which shall be—

1. The Sellers will sell and/or supply and the Buyers will buy and/or receive goods and services as set forth in the Schedule hereto at the price mentioned therein.

2. Delivery of the goods or the rendering of the services shall be made in accordance with the requirements of the Buyers.

3. The Buyers shall give notice to the Sellers of their requirements by an Advice Note.

4. Unless otherwise mutually agreed, the usual terms and conditions published by the Sellers and those commonly used in the trade or business carried on by the Sellers shall be applicable to any contract made in pursuance of this Resolution in so far as such terms and conditions or any of them relate to the Goods and Services.

5. Any dispute or difference between the Sellers and the Buyers relating to the terms of any contract shall be referred to arbitration in accordance with the Arbitration Act, 1940.

6. Any contract made in conformity with the foregoing shall be valid for a maximum period of five years from the 1st day of March, 1958, unless previously terminated by either party giving to the other one month's notice in writing.

7. It is hereby expressly declared that any sum received by the Sellers from the Buyers whether directly or indirectly by way of remuneration, rebate, commission, expenses or otherwise under the provisions of the foregoing shall not be or be deemed to be remuneration paid by the Buyers to Sellers as the managing agents of the Company within the meaning of Sections 198, 348 and 363 of the Companies Act, 1956".

SCHEDULE.

EXPLANATORY STATEMENTS.**Resolutions Nos. 5 & 6.**

Section 360 of the Companies Act, 1956 prescribes, inter alia, that a company may by special

resolution approve of any contract being entered into with its managing agent or any associate of the managing agent for the sale, purchase or supply of any property or rendering of service. Copy of the nature referred to in force at the commencement of the Act, i.e., the 1st April, 1956, in the matters referred to in Section 360 are deemed to terminate on the 1st March, 1958, unless previously determined and this is the effect of Section 361 of the Act.

Contracts of the nature referred to existed between your Company and James Finlay & Co., Limited (the Managing Agents) relating to the purchase, sale or supply of goods and services. Such arrangements have been found convenient and in the interests and for the benefit of your Company. As these contracts expired by virtue of Section 361 of the Act on the 1st March, 1958, your Board of Directors considers it desirable that the same be renewed to have effect from that date. The special resolution sets out particulars of the transactions envisaged which may be affected by the provisions of Section 360 of the Act. The formal contracts in relation to the matters authorised by the special resolution will be dealt with by your Board of Directors as and when the occasion requires.

Interest of Directors and Managing Agents.
The Directors and the Managing Agents of the Company are interested to the extent of their shareholdings in the Company as set out below.

Mr. S. Stevenson	...	11 Shares.
Mr. B. Gill	...	10 Shares.
Mr. K. P. Goenka	...	100 Shares.
Mr. R. G. Edwards	...	10 Shares.
Mr. J. H. Jamieson	...	10 Shares.
James Finlay & Co. Limited (Managing Agents)	...	27,315 Shares.

THE BOMBAY BURMAH TRADING CORPORATION LIMITED**INTERIM DIVIDEND**

NOTICE is hereby given that the following Interim Dividends have been declared for the year ending 31st May 1958, namely:—

Rs. 150 per share on 100 Original Shares of Rs. 2500 each
Rs. 7.50 per share on 71,400 shares of Rs. 125 each
Rs. 3 per share on 84,000 shares of Rs. 125 each (Rs. 50 paid up)

The above Interim Dividends are payable on and after the 24th November 1958 to those shareholders whose names stand on the Register at the close of business on the 30th October 1958 and to holders of Fractional Certificates after such Fractional Certificates have been exchanged for Bonus Shares in accordance with the prescribed procedure.

The Transfer Books will be closed from the 31st October 1958 to the 7th November 1958, both days inclusive.

AND

In the matter of sections 397, 398, 399,

404 and 403 of the Companies Act, 1956,

AND

In the matter of Richardson & Cruddas Ltd.

By an order of the Calcutta High Court in the above matter, dated the 23rd April, 1958, the undersigned has been confirmed as Special Officer to take charge of the affairs of the Company and manage the same.

The Special Officer is collecting materials for a report to the Calcutta High Court as to the shareholding in the above company. He will be grateful if parties holding share scrips will please notify to him the following particulars by the 31st October, 1958:—

PARTICULARS

1. Face value of scrips.
2. Serial number of scrips and distinctive numbers of the shares.
3. Date and signature of Directors on scrips.
4. Any letter or document or evidence showing when the shares were registered or purported to be registered by the Company.
5. The title of the holder to the scrip, the name of the last transferor, date of acquisition by the present holder, and any other material particulars regarding the devolution of the shares.

A true copy of the scrip, together with any endorsement thereon, certified by the party applying should accompany the particulars. Original scrips should not be sent. It is proposed to arrange for inspection of the original scrips on behalf of the Special Officer at a later date.

The statement of particulars should be addressed to:—

"The Special Officer, Richardson & Cruddas Limited, Hindusthan Buildings, 4, Chittaranjan Avenue, Calcutta-13, Post Box No. 965" and superscribed "SHARES".

BANKS

H indicates that Share capital is half paid. O., C. and Dd. indicate Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE NEED FOR AN EXPANSIONARY BUDGET

MR. DESAI'S DILEMMA

IN India, this is the season of clear skies, cool evenings and feverish Budget calculations. The Finance Minister, Mr. Morarji Desai, is probably at this very moment working on his—the first of his term of office. Of all Finance Ministers, he has probably had the longest time to ponder the problems involved before committing himself in public on what he intends to do about them. He has shown considerable realism in his actions so far. And one thing he has not been short of has been good advice. The question now is whether he has drawn the correct conclusions from the experiences of his short term of office and whether he is prepared to apply them in a way which is obviously the best for the economy, although it may be in defiance of the unenlightened prejudices of his own party. More directly, will he follow the path of economic wisdom, sweep away the choking tangle left by his predecessor and reconstruct the tax system for the job it is intended to do? It can be said right away that if he intends any of these things, he will be making a complete break with the thinking of former Finance Ministers—which seems to have been simply to pile one sumptuary measure on top of another in pursuit of some arbitrary target for revenue and a vague, ill-conceived, out-of-date social theory, without any regard for the long-term health of the economy. What is wanted now, as Mr. Desai ought already to be well aware, is an expansionary tax system—one carefully designed to encourage economic activity and increase both employment and production. In other words, a modern system one devised scientifically for a developing economy, and incidentally, built on criteria completely different from those which have informed India's taxation policies in the past four years.

industrial sector must bear? Second, does it foster the establishment of new industries? Third, does it serve to attract private foreign capital to this country? Fourth, does it encourage effort and initiative on the part of the individual, whether worker or industrialist, or must he join the ranks of the harassed, the fleeced, or more usually the evaders, before extra economic activity is worth his while at all? Fifth, does it encourage inflation? And sixth, does it distribute the burden of taxation fairly, not only between individuals and classes, but between the industrial and the agricultural sectors of the economy? It is only after a tax system has been passed on each and all of these points that the question of revenue need be raised, because it is not until then that it is extracting the "long-run" maximum of resources with the "long-run" minimum of damage to the economy. It is true, of course, that Mr. Desai's hands are partly tied by the need to meet existing plan targets. But these are already so confused in other directions, foreign exchange for instance, that a little more disarranging will probably not do them any great harm.

No deep study of the principles outlined above is necessary to discover how inadequately the present Indian tax system measures up to them. The first has been the subject of appeal to authority by every Chamber of Commerce and representative body of private business in the country. A system which is capable of depriving a company of up to 100 per cent of its profits in any one year is obviously neither good for the company nor for the growth of private capital in the economy. The present stifling array of taxes on business enterprise is a distinct brake on economic progress. Its complete reform is called for, and should be undertaken on lines which will ensure that expansion and initiative reap their due rewards. On the second count, the present system acquits itself rather more honourably, except that it penalises established private enterprises which all new concerns aim to become sooner or later. Enough has already been said about the third criterion to obviate the need for further discussion here. For guidance, the Finance Minister could do no better than refer to that excellent publication of the National Council of Applied Economic Research entitled, *Taxation and Foreign Investment*, which is no doubt still gathering dust in some departmental pigeon-hole. On the fourth count, too, there

has been no lack of discussion of the demerits of the present system—among other places, on these leader pages of *Capital*—and there should be no difficulty in establishing just what is required to bring it more in line with economic rather than ideological requirements. As for the fifth, it is obvious that any system which takes such a large proportion of total national and individual income as this one does, must put a heavy premium on falling values.

The sixth criteria outlined above is one which has been emphasised recently in quite dramatic fashion by a contrast of the tax performances of the industrial and the agricultural sectors. The point must by now have been driven home to the Central Government that the States simply do not possess the political courage to raise the revenue targets which have been set for agriculture in the plan. Up to now, the Finance Ministry's answer has been to increase the burden on industry to compensate for the shortfall. The temptation to do even more of this in the next two years may prove more or less irresistible. But the question the Centre ought now to be asking itself is whether this trend does in fact conform to the dictates of either political wisdom or economic expediency. Is it, for instance, sound politics to subsidise a sector of the population which is admittedly powerful enough in a democracy, at the expense of one which may well at this very moment be feeling its strength in terms of what has been happening in neighbouring countries? And where is the economic justification for holding back the most modern and dynamic sector of the economy for the benefit of the more backward and static? These are serious questions which ought to be asked before the next Budget is presented; it would be foolish indeed at this stage in India's democratic development to ignore the fact that events across the frontiers are already casting their shadows over the discussions from which this country's economic and taxation policies must eventually emerge.

Such is the political and economic background against which Mr. Desai must work out the tax proposals he will introduce next February. It is indeed a formidable one. The main consolation is that Mr. Desai has ample expertise and example at his disposal. Provided he makes an early decision to work with it, and to close his ears to the clamour for fresh impositions, or even the present *status quo*, which is bound to go up from the Government back benches as the time approaches, there is a fair chance he may make a good job of his first Budget. It is important that he should—this year probably more than any other since planned economic development began. The events of the past few weeks should have been enough to convince any Indian Government and statesman that much more than the future of economic progress depends on making the right decisions and doing the correct things *now*.

IMPORT SQUEEZE CONTINUES

THE import policy for the half-year, October 1958 to March 1959, contains almost no surprises. Actually, none were to be expected. During the past couple of years, imports have been cut drastically, with the result that industrial expansion has slowed down. Some time ago, it looked as if a further cut was likely in view of the rapid decline in the foreign exchange reserves; if that had materialised, industrial expansion would in all

probability have simply ended. By delaying the policy announcement for a month and totting up the quite substantial foreign aid it has recently received, the Government has now been able to announce a slight liberalisation of imports instead. But the liberalisation is merely fractional. As against Rs. 176-crores' worth of licences issued during the past half-year for commercial imports (which exclude foodgrains, steel and defence requirements), the figure for the current six-month period is expected to be Rs. 180 crores. The changes in quotas are mostly marginal. Imports of certain items are to be reduced on the assumption that their indigenous production has increased; among them are ball bearings, electric m/o or starters, twist drills and metal-working saws. At the same time, imports of certain other items, particularly industrial raw materials and spare parts, are to be increased in order that production may be maintained. This is reasonable, as the fuller utilisation of existing industrial capacity deserves first priority. There is little relief for the consumer, except that his infants may be able to get more baby foods if State Government ordinances do not contrive to drive supplies into the black market, and he himself may be able to measure the timelessness quality of Governmental activity with the new time-pieces that are to be allowed for import. The fact that almost nothing has

been done to relieve the acute shortage of drugs and medicines will, however, be greatly regretted.

If the new import policy is somewhat unremarkable in its details, the same cannot be said of the official attitudes and assumptions underlying it. Indeed, the main feature of the comments made by a Commerce and Industry Ministry spokesman while explaining the policy, was deep complacency. It is becoming fashionable in New Delhi to pretend that the economy continues to bounce merrily along the road outlined in the second five year plan—that production is expanding fast, consumers are rejoicing in the use of domestic substitutes, workers are labouring diligently in bustling factories and trade is moving like a well-oiled machine. But those familiar with the facts of the industrial situation know that this is far from being the case. An actual decline in production has been averted only by the fortuitous arrival of foreign aid; such expansion as is continuing is noticeable in only a few sectors, whereas in other important industries large amounts of capacity have been rendered idle by the shortage of imported raw materials. Consumer experience of new domestic products is dismal, perhaps nowhere more so than in the case of medical requirements and motor-cars. A large number of workers have been thrown out of employment, while even larger numbers have been saved from penury only by the laws against retrenchment. Trade has been badly disorganised, with the result that white-collar employment has declined while smuggling has sharply increased.

The official tendency to take a complacent view of the declining production in many industries is particularly regrettable. Admittedly, the foreign exchange shortage has now got so far beyond the Government's control that nothing much can be done in the immediate future about stemming the decline—nothing much, that is, except wait for loans and deferred payment schemes from kind-hearted agencies abroad. But it is hardly creditable for official spokesmen to pretend that the troubles are mostly confined to the textile industry (whose importance, it now suits them to say, is exaggerated) and to a few odd engineering concerns in the Calcutta area. The fact is that there is hardly any important sector of private economic activity which has not suffered from the foreign exchange shortage. In many industries, urgent rehabilitation and expansion schemes have been held up, sometimes half-way, because equipment cannot be purchased from abroad. In many others, huge investments have been made in rehabilitating and expanding productive capacity, which have been rendered useless for the time being because raw materials cannot be imported. The licensing administration flatters itself if it believes that a smooth and judiciously-balanced flow of imports is helping keep production up. Such units as have been able to maintain output have often done so only by running down raw material stocks. Since the new import policy does not offer any hope that those stocks will be replenished, the process clearly cannot be continued indefinitely.

It is evident that there is little prospect of import restrictions being relaxed substantially in the foreseeable future. To that extent, industry, trade, consumers and workers have little relief to look forward to. With the foreign exchange reserves already down to disturbingly low levels, imports cannot be increased unless there is an improvement, firstly, in aid from abroad, and, secondly, in exports. While the Government's pleas concerning the first are sometimes heart-rending, its lassitude concerning the second is often remarkable. Export promotion efforts so far have mainly taken the form of maintaining a steady supply of exhortations. In the one instance where a tangible new step has been taken—the Krishnamachari experiment of boosting foreign sales by kicking the domestic textile market overboard—it has been a dismal failure. Now, with the latest import policy, are announced a number of measures designed to provide the textile mills with greater incentives to export their products. They look like a highly diluted imitation of certain recommendations made by the Export Promotion Committee, whose report has been in the Government's hands for at least a year; but their first effect has been to bring the textile export business in Bombay to a standstill. It is likely that, even after the procedural complications have been smoothed out, the incentives will prove to be of only limited value. They indicate no recognition of the fact that the trouble with textile exports goes much deeper. It is not that the mills are unwilling to sell cloth abroad; they could not be, considering the huge stocks with which they are burdened already. The real trouble is that they cannot compete with foreign producers, especially China, because production costs are much higher in this country. Neither the supposed concessions to the textile industry just announced, nor the Government's decisions on the Textile Enquiry Committee's report (which are summarised on another page in *Capital* this week), make any serious attempt to remove this basic difficulty. It has still to be appreciated that the way to make the textile industry economic and to increase cloth exports does not lie in first appointing a working party, then a panel, then a commission, then a consultative council, then a committee, and then

an advisory board—all of which produce much the same set of recommendations that ultimately get lost in the much the same series of Secretariat pigeon-holes.

EXPANDING CONSUMPTION IN THE U. K.

THE GROWTH OF HIRE-PURCHASE

BRITAIN'S Chancellor of the Exchequer, Mr. Heathcoat Amory, has made several more or less informal statements on economic policy in recent weeks, and his theme has been consistent: cautious expansion. Some observers wonder whether the methods chosen are compatible with this intention. Reducing Bank rate and decontrolling bank-credit have not reversed the downturn in industrial investment, and they are not immediately relevant to exports, which are also declining. So the Chancellor's attention is directed towards consumption. The greater part of hire-purchase credit is used to finance purchases of durable consumer goods, particularly motor-cars. In the space of a few weeks restrictions on hire-purchase contracts have been first relaxed, then removed. At the opening of the new session of Parliament at the end of October it was intimated that reductions in purchase-tax were under consideration, and that the Government would provide more money to the building societies so that they could finance more purchases of homes. Homes are not usually regarded as consumer goods, however durable; but there is no clear economic distinction between a car costing two or three thousand pounds and a house costing the same.

The first objection to this method of promoting recovery is that it is irrelevant to the problem of exports; or that its immediate effect on exports is adverse, because, facilitating trade at home, it reduces the incentive to press sales abroad. And expanding trade at home means expanding imports (particularly of materials but also of some manufactured goods), which may be admirable as a general policy but does nothing to strengthen the balance of payments. The second objection to this policy towards consumers is that it facilitates a kind of trade that has caused trouble in the past. In many countries, not only Britain, the growth of demand for durable consumer goods was a major element in the postwar inflation. In Britain it caused a crisis in 1955, and the controls on hire-purchase that had been removed in the preceding year had then to be replaced. Some observers fear that the new policy is creating the foundations of another boom like that of 1954-55.

Financially, the present situation is not the same as that of 1954-55. The forces of inflation have been controlled, if not eliminated, and the balance of payments is much healthier. On the other hand, the mechanism of credit has been so developed that much more trade in consumer goods can be done on credit. In the present year the banks have involved themselves in hire-purchase finance, and they are thus more willing to provide credit to the finance houses. In the economy in general, credit is relatively plentiful, providing a broad base for expansion of trade in consumer goods on instalment-credit. The immediate result of decontrolling hire-purchase was a "credit war" among the finance houses and manufacturing and trading businesses which provide comparable facilities. The "war" did not take the form of rate-cutting: the interest on hire-purchase credit remains at the former high rates. It took the form of competitive reductions in the cash element in transactions and of competitive increases in the duration of hire-purchase contracts. As the mass of the public is conscious more of the immediate outlays of cash than of the interest included in the periodical payments, and conscious more of the amount of the periodical payments than of the period over which they extend, the form of this "credit war" can have a marked effect on trade.

Ignoring the element of interest, one can easily see the change that has occurred in the case of a motor-car, for example, costing £1,000. While the regulations were in force it was necessary to pay one-third of the price in cash and the remainder within two years; so the purchaser had to pay about £333 immediately and the same amount in each of the next two years. When the regulations were withdrawn the financiers required, for their own protection, some immediate payment, but in many cases it was reduced to 10 percent, in some cases to 5 percent and the period of the contract has been generally extended to three years. On the basis of a 10 percent down-payment, for the same £1,000 car, the buyer has to pay immediately only £100, and, even so, his subsequent annual payment is less than it would have been previously—£300 a year for three years. The same kind of advantage—superficial it may be, but it is nonetheless attractive—applies to refrigerators and washing machines, radio and television sets, and other household goods and equipment. It is on such goods, and housing, that the consumer's attention is focussed; and in the matter of housing the

Government's plan is intended to widen the range of houses that can be bought on credit (building societies are reluctant to advance money for older houses without governmental assistance)—even, perhaps, entirely on credit, 100 percent of the price being advanced by the building society to the purchaser.

There is a political factor in this unusual willingness to lend money for consumption, but it cannot be allowed to dominate the economic situation. The Government, which will soon be seeking re-election, cannot contemplate complacently a further recession in trade (which would certainly occur if the important motor industry slipped into recession) and would naturally view with favour a rising standard of living. But competition to persuade people to buy expensive goods easily is risky at this stage, when the overseas payments position, after improving month after month since last year's crisis, is tending to deteriorate. Cautious observers in the banking community and elsewhere hope that the British Government has not permanently abandoned control of hire-purchase; for this is not really, as it has often been described, an objectionable physical control. In any case, the indirect monetary controls will necessarily be kept in readiness. The authorities will be less willing to reduce Bank rate, more insistent on converting floating debt into more permanent form, and otherwise tightening the nation's credit so that credit for hire-purchase will not be abundant.

LABOUR PROBLEMS IN INDIAN IRON

THERE has been a disturbing increase in labour troubles at the country's two biggest steel works in recent years. It is particularly unfortunate that this should have occurred at a time when they have undertaken major expansion programmes and when the general shortage of foreign exchange has become steadily more acute. A statement circulated to the shareholders of the Indian Iron and Steel Co Ltd by the chairman, Sir Biren Mookerjee, along with the report and accounts for the year ended March 1958, gives a vivid account of how these troubles have affected their company. (The statement is in lieu of the chairman's annual address, and is published in full on a later page.) It provides reason for anxiety not among investors alone, but also for the Government and the country as a whole.

Sir Biren points out that production during the past accounting year has suffered because of three main factors. One is that less purchased steel scrap could be used, because it was difficult to obtain. The second is that with the extension programmes in full swing, normal operations have inevitably been disorganised to a certain extent. But the third, and most serious, factor has been the indiscipline among workers, which has resulted from an apparently concerted communist attempt to gain control over the labour force in steel—a key industry. This indiscipline has taken the form of frequent strikes launched on flimsy pretexts by employees who not long ago seemed reasonably content with their working conditions. The serious effect these strikes have had may be judged from the fact that the stoppage of work by contract labour alone, during February-March this year, will delay the completion of the expansion programmes on which they were working, and lose the country as much as Rs. 5 crores in foreign exchange. Furthermore, although the first stage of the 1953 extensions has been virtually completed, production in the melting shop remains well below capacity because of unsatisfactory labour conditions; the foreign exchange cost of the equivalent saleable steel which is thus being lost is estimated at Rs. 95 lakhs each month.

It may seem surprising that unrest has been increasing at a time when Indian Iron has been giving substantial new benefits to its workers. Dearness allowance rates have been raised, scales of incentive bonus in certain departments have been improved, and additional housing and medical facilities are being created. But what is even more surprising is the Government's apparent unconcern. Sir Biren rightly emphasises that one of the biggest dangers to economic progress arises from the frequency of strikes, often violent ones, in industrial, transport, administrative and other services. Unrest is encouraged by the rise in the cost of living, but the underlying instigation is very often purely political, in that communist bodies are making a determined effort to replace existing recognised unions. Labour troubles cannot be ended merely by increasing wages at the end of each strike; this process is itself highly inflationary and gives rise to further unrest. A more determined effort to reduce the cost of living and to resist the communist onslaught in union politics seems to be necessary. In the case of the steel industry, an approaching worry is that there will be a large increase in the number of workers when the State-owned steel plants come into operation; Sir Biren feels that unless a uniform formula for determining wages in the industry as a whole can be evolved to replace the present highly complicated wage structure, there will be

endless scope for disputes. He therefore considers it urgently necessary to appoint a statutory wage fixing tribunal to determine a wage structure "on the basis of (a) an evaluated basic wage in relation to productivity and world standards for each class of work, which would consolidate most of the multifarious allowances now being given by the private sector; (b) a zonal dearness allowance; (c) an incentive bonus; and (d) an annual bonus based on the financial results achieved." Prompt action is necessary to reduce the scope for future stoppages, considering that the country cannot afford to lose production and earnings when the time to amortise the present heavy foreign liabilities comes.

After this none-too-encouraging picture, shareholders might find solace in Sir Biren Mookerjee's remarks about Indian Iron's capital structure, but the solace will not be immediate. The capital structure of the company, along with that of many others, is being distorted by the bonus share tax. This distortion will, for the time being, be partially corrected by the proposal to issue bonus shares in the ratio of one-for-five by capitalising a large part of the share premium account; capitalisation in this form does not attract the bonus issue tax. But Sir Biren points out that the already substantial reserves will be increasing steadily for some years as money is set apart from profits in order to repay the company's heavy obligations. The problem of maintaining a reasonable relationship between share capital and reserves will then become more acute. Normally, he says, the policy of the directors would be "that a part of these reserves should be capitalised from time to time by means of bonus issues." But for the time being, with the taxation structure as it is, the bonus issue already proposed represents the most that can be done. Shareholders will have reason to hope that the Finance Minister, as he frames his coming Budget, will recognise that the serious harm done to investment prospects and to the capital organisation of many companies far outweighs the supposed benefits of the bonus share and excess dividend levies.

Current News and Comment

New Explosives Factory Opened

India's first commercial blasting explosives factory was formally opened in Gomia, Bihar, yesterday. It has been built by Indian Explosives Ltd. a company in which Imperial Chemical Industries is working in partnership with the Central Government. The Nobel Division of I.C.I. has been responsible for the design, erection and commissioning of the plant, which has a production capacity of 7,500 tons of explosives a year. They will be used for industrial and other purposes such as mining, railway and road building and quarrying. A scheme to produce safety fuses at the same site has been licensed by the Government of India. The factory, which covers 2,000 acres, is near the coal mines of Bihar and West Bengal, which are major consumers of its products. Indian Explosives Ltd is a public company, in which I.C.I. holds 80 percent of the equity capital and the Government of India 20 percent. Its authorised capital is Rs. 4 crores and the present investment in fixed and floating assets is estimated at Rs. 5 crores. In two or three years, when further extensions are completed, this figure may increase to Rs. 8 crores. The board of directors consists of one Government director and five representing I.C.I.

The factory had to be located close to its principal raw material sources and to the main market outlets. Furthermore, it had to have cheap and adequate supplies of electric power, convenient rail access and a steady supply of water all the year round. A site was chosen in Gomia, a small village west of Berma on the Barkakhana railway loop. It comprises about 2,000 acres of a hilly jungle, very little of which is cultivable. A hill rises about 400 feet above the general level of the land and divides the area into two sections. To the east of the hill is a housing estate for the staff and workers, and factory buildings for operations which are not dangerous; to the west of it are situated those parts of the factory where operations are conducted and finished explosives are stored. Gomia lies a few miles downstream from the Konar dam, and the controlled flow of the Konar river provides a steady supply of water. Ten miles further downstream is the Bokaro thermal power station of the Damodar Valley Corporation. All the power that the factory needs is, therefore, readily available. One of the principal raw materials, liquid ammonia, is supplied by the Sindri fertiliser factory, which is about 50 miles away, and a fleet of special railway tankers transports the material to the factory. Another important raw material, glycerine, comes from soap manufacturers in Calcutta. The Gomia works of Indian Explosives Ltd will eventually make India self-sufficient in commercial explosives, which play a vital part in industrial projects.

Merck-Tata Pharmaceutical Company

The Government of India has approved a project for the manufacture of drugs and pharmaceuticals by Merck Sharp and Dohme International of New York, through an Indian company which is to be promoted in association with Tata Sons Private Ltd. A licence has been issued to Merck Sharp and Dohme International for this purpose. The new company, which will be a subsidiary of Merck, will operate in India under the name of Merck Sharp and Dohme (India) Private Ltd. It will have an authorised capital of Rs. 4.2 crores (\$8.5 million). The total paid-up investment will be Rs. 2.1 crores. Approval for the first issue of shares to the Indian company has been given by the Controller of Capital Issues. Sixty percent of the share capital will be subscribed by Merck and

40 percent by Tata and its associates. The initial manufacture is scheduled to begin in early 1959. The new company will, in the first instance, manufacture Vitamin B₁₂ and steroids together with many of its well known pharmaceutical products. When the permanent plant is completed, it will provide for more basic production of Vitamin B₁₂ and steroids, sulfa drugs, chlorothiazide—Merck's important new drug for use in the treatment of heart diseases and high blood pressure—and other medicines. The facilities will include a flexible unit adaptable for the production of a wide variety of organic chemicals. This will make possible the immediate production in India of important new drugs that are discovered in Merck's research laboratories in future.

Merck Sharp and Dohme is one of the world's leading manufacturers of drugs and pharmaceuticals. It is a pioneer in the vitamins, steroids, sulfa drugs and antibiotics field, many of the currently used products being first discovered in its research laboratories. Every year, Rs. 7 crores are spent on research directed towards the discovery of new products. The benefits of this research will be available to India immediately. In addition, a local research laboratory is planned, which will conduct research primarily for the development of drugs needed in this country and for processes using locally available raw materials. The establishment of the new company which, apart from one Government-owned firm, will be the largest drug manufacturing enterprise in India, will save a large amount of foreign exchange currently spent on importing drugs and pharmaceuticals.

Developing Minor Ports

Port development schemes in the second plan provide for the improvement of selected minor ports with a view to supplementing the facilities of the major ones. The formation of a dredger and launch survey pool is treated as a first step in this direction. Mr. S. K. Patil, Central Minister for Transport, in his address to the National Harbour Board in Madras recently, referred to the prospect of foreign aid for port development, particularly in Visakhapatnam. Which minor ports are to be given priority has not been made known yet, but it seems that Kakinada and Tuticorin may be high on the list because of the railway facilities already available there. The chances of exporting cement by sea to Asian countries have been linked with plans for improving Kakinada as an outlet for the increased output of cement factories nearby. The subsidiary port it is proposed to build near Calcutta may give some relief to Visakhapatnam also, but it is clear that the ore traffic will require a new port in Orissa, although Chandbali or Balasore may not be revived. No definite indications are available about coastal shipping, and the claims of some west coast ports to become all-weather ports for handling the ore which is shipped to Europe are more or less left in the air. The provision now made for minor ports by way of dredging is just what was set down in the plan as presented in 1956. The promise of loans to supplement the minor ports fund built up through the levy of port dues is by no means enough, according to many. However, fishery development may help some southern ports like Cuddalore, which is now used for the shipment of ore brought by railway from Andhra Pradesh. Shipping companies cannot get much satisfaction because all the hints given in the report on improving minor ports have been left to State Governments for implementation. The fact that the Andhra Pradesh Government in 1955-56 provided only Rs. 2 lakhs for loans to minor

ports, suggests that the Nanjundayya report of 1954 has yet to be followed up by positive action. There is a pious hope that labour will become more efficient and reliable, but it is not known how casual workers at the minor ports will be treated, whether contractors will be dispensed with altogether, and how wages will be related to work. The promise of relief for congested Calcutta can be fulfilled if other ports are improved, even before a new port in Geonkhali on the Hooghly is established. The latest review of port problems does not offer much hope that railway traffic will be steadily diverted to the sea route, as was intended.

Report on Customs Reorganisation

The committee which was appointed early in 1957, with Mr. F. C. Badwar as chairman, to go into the existing complicated and out-of-date Customs procedures with a view to suggesting their reorganisation on more modern lines, has submitted its report. It has run into three volumes, the first two of which have been made over to the Finance Ministry. The third will be forwarded soon. The first two volumes constitute the main part. Volume I contains the reorganisation proposals, and Volume II the procedural arrangements which the committee has suggested for the implementation of the recommended measures. Volume III has the texts of the advance recommendations, copies of questionnaires, and lists of chambers and associations which furnished data. The committee was to have submitted its report earlier, but as the compass of investigation was too large, involving numerous interests including importers, passengers and tourists, shipping and clearing operations, travel agencies as well as many Government officials and organisations from whom it had to collect data, the work could not be completed before 30th April, which was the last date of the committee's life. So it had to be extended to 31st October. The first volume gives a fair idea of the wide field over which the committee has ranged. The subjects with which it deals include the tariff structure, import trade controls, valuation for duty purposes, assessment of mixed goods, bills of entry, cargo examination, analytical tests, detention of goods, guarantee and bonds, bonded warehousing, foreign parcels, stores for Government organisations, exports, drawback, tourist and passenger traffic, penal proceedings, steamer agents, air traffic problems, Customs house agents, advisory bodies, information services and public relations, improvements in the entire Customs organisation to achieve more efficient performance, and land Customs.

Ceiling on Plantation Holdings

The Kerala Agrarian Relations Bill, 1957, and the Jatti Committee report contain certain proposals for land holdings which, if implemented, will disrupt the plantation industry and undermine its growth. The United Planters Association of Southern India has criticised the proposals in a memorandum submitted to Mr. Lal Bahadur Shastri, Central Minister for Commerce and Industry. The memorandum has now been issued in the form of a pamphlet entitled *Ceiling on Land, Its Effect on Plantation Industry*. Plantation crops are grown on holdings of various sizes, and it is stated, the standard of productive efficiency varies with the quality of the management and almost invariably with the size of the holding. The average yield of large holdings is greater than that of small ones. Furthermore, as income tax is based on income, small units do not pay as much as the large ones. In other words, most of the revenue of the Central, State and local Governments is derived from the larger units, because they have to bear a much heavier burden of taxes. The plantation industry depends on an integration of processes from planting to marketing, and on a comprehensive network of organisations linking each phase in an efficient chain of operations. It is the larger growers who have provided the active leadership in bringing about this integration. The industry would not have taken the present shape, nor would it have reached its present importance, had the crops been grown on peasant holdings. That plantation crops have to be grown on large units was recognised by the Plantation Enquiry Commission in its report. It strongly opposed the fragmentation of estates under any land reform policy. "The basis of a sound agricultural economy is higher production a unit of area and labour. If that is achieved by the more efficiently productive larger holdings, it is serving a supremely desirable national purpose," the Association says. It urges the Central Government to make a proper study of the case of the industry and to consider the desirability of making a policy statement on plantation holdings. This will offer guidance to all States where plantation crops are grown.

Expansion of Singareni Collieries

The Andhra Pradesh Government recently asked the Centre for a loan of Rs. 4 crores to develop the Singareni collieries. With this loan, it was hoped to raise output so that in course of time

the collieries could meet the industrial fuel needs of the whole of south India. The Centre was prepared to grant financial assistance on condition that it acquired a majority or controlling interest in the Singareni Collieries Co. Ltd. But the State Government declined to part with the controlling interest it had by holding 88 percent of the share capital. The Centre has now agreed, in principle, to extend financial aid without insisting on a controlling interest. Sardar Swaran Singh, Indian Minister for Steel, Mines and Fuel, after paying a visit to the collieries recently, declared that "the Centre, while participating in the equity capital, will no longer insist on having majority share capital." But part of the financial assistance which it agrees to give will be in the form of equity capital, and the rest will be advanced as a loan. He pointed out that it would be in the interest of both the collieries and the State Government not to ask for any specific figure, because as and when the needs of development arose, they could be met by assistance from the Centre.

Sardar Swaran Singh felt that the production of the Singareni collieries could easily be stepped up to the target of three million tons by the end of the second plan period. When developed fully, Singareni could meet all the fuel needs of south India, and a major saving could be made by avoiding the transport of coal from the distant collieries of north India. It is estimated that about Rs. 3 crores could thus be saved on freight annually. Sardar Swaran Singh did not think there would be any difficulty in obtaining foreign exchange to import plant and machinery for expansion. Singareni coal is suitable for steam-raising, but is non-coking. Although it is lower in calorific value than Bengal coals, it does not clinker.

Atherton West Mill

It looks as if, after Bombay, Uttar Pradesh is to be the second State where the Government proposes to try the experiment of running a textile mill. Mr. H. N. Bahuguna, Parliamentary Secretary to the U.P. Labour Minister, stated recently that the State Government has called for an expert assessment of the ability of the Atherton West Mill in Kanpur to recover. According to non-official estimates, working capital of about Rs. 20 lakhs might enable the mill to resume operations. Once the report of the Textile Commissioner has been received, it appears to be the intention of the State Government to ask the Centre for permission to run the mill under the Industrial Development and Regulation Act. This represents a departure from the policy of the Bombay Government, which took over the Sholapur mill under the Unemployment Relief Act. According to Mr. Bahuguna, the Sholapur experiment was made possible because the workers agreed to a voluntary cut in their wages. These, incidentally, have since been made good with retrospective effect. It is unlikely that in Kanpur the workers will agree to any such cut. Mr. Bahuguna was also doubtful if the services of experts would be offered voluntarily in Kanpur as in Sholapur. When the Atherton West Mill—a British India Corporation concern—ceased production for financial reasons, nearly 2,700 workers were thrown out of employ-

ment, and this touched off a series of labour troubles in the industrial metropolis of the State. The Cawnpore Cotton Mill is involved in litigation because of its association with Mr. Mundhra, and Mr. Bahuguna said that it would not therefore be possible for the Government to do anything about reviving it. As for the other mills lying closed in different parts of the State, their machinery is so old that there is no question of the Government being able to run them. A welcome announcement made by Mr. Bahuguna is that the Government is considering the feasibility of abolishing sales tax on yarn produced by spinning mills in the State. This might to some slight extent help the rehabilitation of such mills.

Electrical Inefficiency in U.P.

The official administration and revenue report for 1955-56, which has just been released by the U.P. Government, shows that a record low in operational efficiency has been set up by the Electricity Department. During the year, line losses increased to 24 percent of the total energy generated, as against 21.88 percent in the previous year. It is distressing that this loss occurred in spite of a fantastic increase of 78.7 percent in working expenses, which rose to Rs. 79.8 lakhs from Rs. 47.29 lakhs in the previous year. The total energy generated by the department was 241,390,180 units, as against 224,523,261 units. But with the already low operational efficiency of the previous year, the department lost more than 51 percent of the additional energy produced. Of the 16,866,916 extra units generated, a net total of only 8,154,913 units was actually added to the supply. Compared with 1950-51, the energy generated for each kilowatt of installed capacity also declined by more than 50 percent. During the five years, 1950-51 to 1955-56, the installed capacity increased by about 180 percent, but generation increased by a mere 29.8 percent. It appears from the figures that this waste of unutilised resources when the demand for power has been steadily increasing is without parallel in any other part of the country. Scrutiny of the report brings out the startling fact that the electricity tariff of the department is faulty and has led to substantial losses. For example, while the cost of every unit of electricity delivered worked out to 1.31 annas, its average price was only 1.14 annas. This means that the department suffered a net loss of 0.17 annas on every unit of power sold. If the unrealised assessments for the year, estimated at 19 percent, are added, the losses would be formidable. No private company would have survived such a state of affairs for long; not even the State can afford the luxury once the true extent of the wastage is generally realised.

Boom in World Shipping

The boom in world shipbuilding activity is continuing. According to the latest Lloyd's returns covering the third quarter of this year, 1,563 steamships and motorships of 12,205,791 tons gross were under construction. This total is 72,294 tons higher than that for the preceding quarter, and is described as the highest figure ever recorded. These figures do not include shipbuilding statistics relating to China and Russia. The U.K.'s share amounted to 22.53 percent of the world total. In absolute figures, ships under construction in U.K. yards were 328 of 2,299,133 tons gross, which showed an increase of 3,762 tons over the previous quarter. Among other leading shipbuilding countries, Japan which used to be ahead of the U.K. a few months ago, showed a large decline of 85,637 tons to 1,169,926 tons; Sweden, Denmark, Yugoslavia and Finland also registered falls. West Germany, another leading shipbuilding country, showed an increase of 3,324 tons to 1,103,388 tons. The United States, Italy, the Netherlands, France, Spain, Norway, Poland and Belgium also showed increases ranging from 12,000 tons to 73,000 tons. The biggest increase of all countries was achieved by the United States, where the figure rose by 72,817 tons to 913,505 tons. Italy, Sweden and Belgium also had relatively big rises in their output figures. A little over one-third of the total tonnage under construction was meant for export, some 3,997,274 tons in all. Japan led the rest in this, her share coming to 20.8 percent, followed by West Germany (14.2 percent), Italy (11.5 percent), the United States (9.9 percent), the Netherlands (9.5 percent), Sweden (8.3 percent) and the U.K. (6.3 percent). Among the "importing" countries Liberia led by 1,130,573 tons. Norway and Panama were in the second and third place. The countries which were making the largest additions to their fleets were the United Kingdom, Norway, the United States, West Germany, France, Italy, the Netherlands, Japan and Sweden.

Suez Canal Improvements

Work has just started on widening and deepening the Suez Canal, with a large U.S. dredger, the *New Jersey*, pumping sand ten miles north of

Ismailia. When the task is completed, some time in 1960, the canal will have been deepened to permit the passage of ships drawing 37 feet of water. Most of the world's oil tanker tonnage falls within that limit. In addition to deepening, the channel is also being widened by almost 100 feet to take larger ships safely. New revetments are being built. The Suez Canal Authority, a Government department which took over the management of the canal when it was nationalised in 1956, is spending £10 million on the improvement programme. The cost is being financed out of revenue, which this year will reach a new peak. Ships now are passing through the canal at the rate of 49 a day, and the average is rising every month. For the first six months of this year, it was 47.8 a day. For the same period of 1956, the last comparable normal period before the Suez action, the average was 44.6. The Canal Authority has even more ambitious plans than the present one. When it is finished, the Authority hopes to begin work on a programme to permit two-way traffic, which will allow continuous passage. Now it is possible to send through only two south-bound convoys a day and one north-bound. They must pass either in the Great Bitter Lake or at the by-pass between Ismailia and Port Said. When work on the present project is in full swing, three dredgers will work round the clock seven days a week.

Movement of Gram and Peas

The Government of India has perhaps done well to reject U.P.'s demand for a ban on the export of gram and peas from the State. It is strange that while the State Government asked for a ban on such exports it should also have stipulated that there should be no ban on importing these commodities from other States like Punjab or Rajasthan. U.P. produces about 95 percent of the peas in the country and to stop their export would have led to a pea famine elsewhere. In the case of gram, U.P. is a net importer, but then the traditionally surplus States like Punjab, Rajasthan and Madhya Pradesh also demanded, in turn, that due to poor crops the export of gram to places outside should be prohibited. The Centre could not very well grant U.P.'s request and yet deny the same treatment to others. If, on the other hand, a general ban on the inter-State movement of gram were to be imposed, States like Bihar, West Bengal, Bombay and Madras would suffer. U.P.'s Minister for Civil Supplies, Mr. Ali Zaheer, recently stated that the Centre's failure to impose a ban on gram and pea exports has hampered his Government's de-hoarding operations. But there appears to be no connection between the two. He also declared that the State Government is virtually powerless to check the rise in prices due to the Essential Commodities Act. According to him, there are only two ways of dealing with the situation—procurement and de-hoarding of stocks. Neither of these is practicable because of the existence of the Essential Commodities Act and the Centre's refusal to impose an export ban on peas and gram. Now that the West Bengal Government has tried to tackle the situation by an ordinance, the U.P. Government is credited with the intention of approaching the Centre with a draft ordinance on similar lines. How soon it sets about the job may depend upon the political pressure exerted by the opposition parties, which only recently called off their direct action campaign. What is not easily understood is why the Government should have simultaneously called off its de-hoarding operations.

Larger Co-operatives Favoured

The official preference for organising many small co-operative societies instead of a few large ones does not meet with the approval of a co-operative body in Madras. Commenting on the proposal, the Tamil Nad Co-operative Union has drawn attention to the need for large, viable units run by trained staff. The basis of future development, it thinks, should be the large society serving half a dozen villages. The theory that new societies should be started in poor and backward areas is not accepted. The success of the multi-purpose society in Chandrasekharapuram in Tanjore is due mainly to its location. Its members buy fertilisers and it collects small savings, besides acting as an agent for the Janata policies offered by the Life Insurance Corporation. The inception of 240 agricultural banks, which disbursed about Rs. 170 lakhs as loans to members last year, supports the argument for large, efficient societies. The Tamil Nad Co-operative Union argues that such units can play a better part in the scheme for integrated rural credit. Competent and continuous supervision to take care of the increase in dealings is required and the larger societies alone can provide it; the knowledge and resources of members are the key to successful working. It is recalled that the Madras Committee on Co-operation declared some years ago that over 3,000 small societies showed a loss in 1955 and the large societies alone could be turned into rural banks.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations to the 1958 fund:

Rs. 75

J. Charanjiva

Rs. 50

Imperial Tobacco Co. of India Ltd.

Rs. 20

E. F. Kingsley

Rs. 10 each

R.S.T.C., "A Donor".

The fund now totals Rs. 515.75, including a carry-forward of Rs. 350.75.

CORRESPONDENCE

CHANGING TO THE METRIC SYSTEM

(TO THE EDITOR OF "CAPITAL")

Sir,

I refer to the article "India Goes Over to the Metric System", which appeared in Capital of 2nd October, 1958. The article generally supports the reform of weights and measures, for which we are grateful. The author has, however, expressed certain misapprehensions which seem to be based on insufficient information.

He has expressed misgivings about the supply of weights and measures for the use of trade. A careful assessment has been made of the prospective demand for metric weights and measures, and the country's capacity to meet it. According to a recent survey, the total number of weights in use is of the order of 50 million. It will be necessary to replace these by corresponding metric weights during the next three or four years. We have fortunately sufficient manufacturing capacity to meet this demand. A list of manufacturers of weights and measures was published in *Metric Measures* in September 1958. The list, which does not claim to be complete, contains over 300 names. Many of these manufacturers have begun producing metric weights. If more have not done so, it is because of certain unavoidable delays in the issue of licences to manufacturers and dealers.

The author of the article considers the introduction of the metric system in the cotton textile and salt industries premature, since these industries cater to the needs of the masses of the people. The metric system has been introduced only in transactions between producers and those who buy from them. The retail trade in cloth and salt may continue for the time being in the present units. Even for sales by producers, the use of the metric system will not be compulsory for a period of two years. During this period, the producers may sell in either the metric units or the units previously in vogue. The cotton textile manufacturer will not "forthwith have to sell his goods in the existing foot-pound system and also in decimetres, metres and decametres". A manufacturer may sell in either system of units according to his choice. The industry has, however, of its own accord, decided to mark cloth in both yards and metres during the transitional period.

The metric system has not yet been introduced on the railways. They will, however, permit certain classes of consignors to show quantities in metric units, in forwarding notes. You will, no doubt, agree that considerable preparation is required before the system of measurement can be changed in a vast undertaking like the railways. The preparations are well in hand. The commercial branches of the railways will adopt the metric system at an early date.

The introduction of the metric system is not expected to have any effect on the country's foreign trade. Care will be taken to ensure that customers abroad continue to receive goods from India, packed and invoiced in the manner they are accustomed to. The metric system is being introduced in the main export industries like jute, cotton textiles and tea, according to the advice given by the interests concerned. It has also been decided that imported machinery might be designed either on the metric system or on the foot-pound system, although it should be capable of producing goods according to metric dimensions. This will ensure that there is no diversion of trade in machinery from countries like the U.S.A. and in the Commonwealth.

Yours, etc.,
P. N. NAYER
(Secretary, Standing
Metric Committee)

New Delhi, 27th October, 1958.

The hard iron lay dead in slumber deep

And we stirred it to life, ho!

In the dark depths of a million years it lay hid

And we stirred it to life, ho!

Tamed by our strong hands

It sings to the tune we call.

Its silence of long years have we broken, ho!

The dead doth stir with new life today

And rushes forth the wide world to conquer.

Fearless with our two hands today

Its reins we hold strong, ho!

Fastest across the Atlantic!

Pan American's Jets are the fastest transatlantic airliners. They are *pure* jets, a major advance over propeller-driven aircraft. Four massive jet engines give you beautifully quiet, vibration-free comfort at speeds up to 600 m.p.h.

The fuselage of the Jet Clippers* is 144 feet in length, actually longer than the Wright Brothers' first 120-foot flight at Kitty Hawk.

Cruising altitudes are between 25,000 and 40,000 feet — high above the bother of weather; where your Clipper provides a 200-mile view.

No increase in minimum fares! Fly the finest, fastest transatlantic service including new *economy-class*. Coming: Jet service to Latin America, across the Pacific and 'round the world.

Reservations can be made now! Call your Travel Agent or Pan American — over 800 offices around the world for your convenience.

A Ditcher's Diary

THE MOST TRAGIC ASPECT OF THE PASTERNAK AFFAIR is that an aged poet and novelist, who has done so much for his country, is now practically being hounded out of it. If the "permission" which Mr. Khrushchev has so graciously given him to go abroad to receive his Nobel Prize had been granted in the same spirit as that in which it was given to the scientists, then there would be no cause for this famous Russian poet and novelist to be begging his Prime Minister to be allowed to stay on in the Soviet Union. I see that Mr. Khrushchev's yes-men and, of course, his mouthpiece, *Pravda*, are busy making it hot for poor Mr. Pasternak. He has been stripped of the title "Soviet Writer", after being accused of "political and moral downfall, betrayal of the Soviet people and the cause of socialism", and the Nobel Prize award has been described as the price the capitalist world has paid him for "intensifying the cold war". This is pure nonsense, although anybody familiar with the communist method of damning by abuse will realise what it is all leading up to. If Mr. Pasternak is eventually bullied into accepting Mr. Khrushchev's "invitation" to quit Russia, he will not have to starve on western city streets as a down-at-heel author. In fact, he is likely to be much better off for the change. Apart from being guaranteed the complete artistic freedom for which he is at present paying such a high price, he would, if the huge sales of *Dr. Zhivago* in all languages are any guide, soon be able to count himself a millionaire. But Mr. Pasternak passionately loves his country and its people. That is why he is so pathetically pleading with Mr. Khrushchev to call off the heresy-hunt and allow him to live in peace. What better proof of patriotism is needed? As for the alleged crime of slandering the all-benevolent socialist State, I have no doubt Mr. Pasternak is guilty of no such thing. His book, I am told on good authority, is critical of certain inhuman features of the police State which insists that all human beings should conform to pattern. But that is a freedom which all literary men of genius must necessarily enjoy.

IF MR. NEHRU IS HIMSELF FOLLOWING THE advice he gave in Baroda last week-end, there need be no worry that the recent happenings in Pakistan will be repeated here. India, he said, has to learn from these events and see that it does not get entangled in such things. That is certainly sound enough: what I am anxious about is whether what is learned will be the right lessons. The changes in Pakistan present few threats to Indian democracy yet; these are only likely to arise if and when the new régime begins to make a good job of things. There is no danger of its suddenly introducing the economic millennium; material progress is one asset which is bound to remain in India's favour. The points where it will compete are those which are apt to become supremely important only when people are thoroughly frustrated by democratic bungling. These I would describe briefly as clean streets, punctual trains, brisk and honest civil servants, obliging traders, disciplined workers and an absence of self-seeking politicians. What is troubling me is whether democratic India, no matter how well she learns from events, will be able to provide these things in anything like sufficient time. And let there be no mistake about it, they have an irresistible attraction for many folk who ought to know better—how often was it quoted in favour of that strutting loud Mussolini that at least he made the trains run on time? There is a limit even to the importance of economic progress as a counter-attraction: nowadays people expect that of any régime they may choose. Nor is there much salvation in Mr. Nehru's ideal of "scientific socialism", ingenious expedient though it may seem for combining the modern and the traditional urges in Indian society. It is perhaps this question of modernity which is the crucial one; the trouble with India's democracy so far is that it has been forced to propitiate so much that is atavistic in its vast electorate in order to gain its votes. I wish I could suggest a simple answer to the problem, except to run democracy as efficiently as possible, keep an eye open for trouble, and otherwise to hope for the best. But one thing does strike me and it is that if Indian democracy has nothing which will appeal more effectively to its educated youth, much of which is tragically under or unemployed, and offer something to satisfy its yearning for the modern virtues of orderliness, efficiency, hygiene and honesty in high places, it might just as well give up the struggle now.

ONE QUESTION WHICH IS BEING ASKED IN LONDON at the moment is what Pakistan's new régime intends to do about its predecessor's plans for developing Karachi into the capital city it is intended to be. Just before the political change-over, a London architect, Mr. William Whitfield, discussed with the Pakistani Government a building scheme for Karachi designed to meet the needs of the next hundred years. One of the projects was for a hall to accommodate the National Assembly. Mr. Whitfield, whose firm is Raglan, Squire and Partners, was given one of the most enviable commissions any architect could have. Not only was he to draw up plans for Karachi, which was to be the Pakistani equivalent of New Delhi, but he was also to design the buildings for the University of the Punjab in Lahore. Work was expected to start next year and Mr. Whitfield's working drawings are reported to be nearly complete. His firm, of course, already has a substantial contract in Karachi for the memorial to Mr. Jinnah, who died eleven years ago. This is to be a kind of Taj Mahal in concrete shaped like a vast canopy. Its designer, Mr. Robert Roberts, won an international competition for his work against fifty-six other architects from seventeen countries. What will happen to all these projects now is something which only General Ayub Khan can predict. No doubt the memorial will go through and possibly the university in Lahore. But the erection of a Parliament House in Karachi seems likely to suggest itself to a military dictator as an admirable opportunity for exercising economy in public expenditure.

NO ONE WHO SELLS "GHEE" EVER ADVERTISES in this newspaper, that I know, but people who manufacture margarine and other prepared vegetable fats sometimes do. But that has nothing to do with my now drawing attention to the recent congress of heart specialists in Brussels, where it was agreed among cardiologists from all over the world that animal fats cause heart disease and hardening of the arteries, whereas vegetable fats combat those maladies. The makers of *Dalda* and

other such cooking media had a long job to convince the Indian housewife that their products were as pure and as nutritious as the traditional *ghee*. To a large extent they have succeeded—in spite of a campaign of denigration in which ill-will was sometimes as evident as conservatism—so the medical support of such authorities as Dr. White (President Eisenhower's heart specialist) and Professor Sinclair of Oxford, probably comes too late. Dr. White and his research team made a systematic study of the diets of people in England, France, Italy, Scandinavia, Japan and North Africa. They found that those who consumed most animal fat, the Finns as it happens, suffered most from arteriosclerosis (hardened arteries) while those who consumed least—Levantine people, who cook entirely in olive oil—were least subject to heart diseases. Professor Sinclair corroborated this by showing that Englishmen suffered fewer heart accidents during the hard years of war and rationing, when they had to do without refined and clarified animal fat. The Oxford nutrition specialist even goes so far as to say that it is this, and not cigarettes, that is responsible for lung cancer. The accounts of the Brussels congress that I have seen make no mention of any Indian doctors' participation, yet the question is surely one on which they could throw some light, once it was drawn to their attention. Among certain more comfortable sections of north Indian society where *ghee* is consumed in astonishing quantities, the intake of clarified animal fat must be among the world's highest. We all know the effect this has on the figure, but it would be a test of the opinions expressed in Brussels to find out whether it also has an effect on the arteries.

MR. NEHRU HAS SEVERAL TIMES STATED THAT THE *de jure* transfer of the former French Indian settlements to the Indian Union will have to wait for the meeting of the new French Parliament, shortly to be elected under the new Constitution, because General de Gaulle's interim powers do not include the making of treaties. Closer reading of the short Constitution of the Fifth Republic, however, suggests that the Prime Minister has been misinformed. True enough, under the old Constitution it was Parliament that had to ratify treaties, and the General's interim powers did not include this right. But under the new régime, that came into being on 5th October, it is the President of France that makes treaties, not Parliament. So the General will be able to give India satisfaction on this old score as soon as he is installed as President, probably in December. Since there is no doubt that the General wants to close this dossier, and has told India's representative that he will do so as soon as legally possible, he will probably take advantage of this earlier opportunity for action, to open India's relations with the new French Republic with a mark of goodwill. In the facts, a few months either way will not make much difference; the French settlements have been part of India for some years past in every sense but the most fastidiously legal one. But the reluctance of the former French régime to recognise this fact in a written document has been a small but quite unnecessary impediment to cordial relations, as well as giving certain French-speaking Indian citizens the chance to continue a foolish campaign of anti-Indian agitation abroad. It was this campaign, and in particular the allegation that the referendum in Pondicherry was grossly faked with the aid of the Indian authorities, that has delayed a settlement, rather than any special imperialist proclivities in Paris.

THE INDIAN IRON AND STEEL COMPANY LIMITED

CHAIRMAN, SIR BIREN MOOKERJEE'S STATEMENT

The Annual General Meeting of the Indian Iron and Steel Company Limited will be held at 12, Mission Row, Calcutta, at 3 p.m. on Friday, the 28th November, 1958.

The following statement by the Chairman, Sir Biren Mookerjee, has been issued to the shareholders along with the Directors' Report and audited accounts for the year ended 31st March, 1958.

It has been the custom in the past for the Chairman in a speech at the Annual General Meeting to supplement the Report of the Board of Directors with additional information regarding the year under review and to deal at the same time with matters affecting the general interests of the Company. It is, however, thought that it would be more advantageous to shareholders and assist in a better understanding of the Accounts and the position of their Company that this further information should be made available to them at an earlier date. The innovation is, accordingly, being introduced this year by issuing this statement which will take the place of my previously customary speech and will enable shareholders to attend the Annual General Meeting with a fuller knowledge of matters affecting their interests. If this meets with general approval it is intended to adopt this procedure in future years.

Production

There was a reduction in the production of saleable steel of no less than 31,879 tons in 1957-58 compared to that in 1956-57, as has been stated in the Directors' Report. I shall now explain some of the more important causes which led to that result. There was an unavoidable diminution in the use of purchased steel scrap during the year on account of difficulty of procurement which largely accounts for the fall in the output of ingots relative to the increased availability of Hot Metal. The output ratio of saleable steel has registered a decrease due to the fact that in 1957-58 more steel was produced in fully finished form commanding a higher realisation price but involving naturally a lower overall yield per ton of ingot.

As foreshadowed last year, the disorganisation of production by reason of the extension works gradually increased throughout the year and has since reached the point where the maximum effect on current production is being felt. It has to be realised that the new constructional works have involved diversions of normal supply routes for raw materials, the re-organisation of the movement of semi-processed and other materials within the works, interference with the distribution of gas, water and power and a general congestion of the entire works area. This has been inevitable and looking back I may say that it reflects the greatest credit on all concerned that, for so long a period of the construction, the effect on production has been kept at such a remarkably low level.

Another factor of a graver character however operated during the year under review to adversely affect production. This was the growing lack of discipline on the part of the workers generally and the marked deterioration in the effort put forth by them. We are, together with the other main producer, being made to suffer by reason of Communist plans to foster discord in an endeavour to supplant the recognised labour unions. What this effort to gain control of a key industry can lead to has been demonstrated in a most unfortunate form by the chaotic conditions that were brought about at the Jamshedpur Works of the Tata Iron & Steel Co. Ltd. in May last. In our own case there were seven sporadic strikes and a two-day lightning strike in the Melting Shop earlier in the year. It is most disappointing that the workers who had previously established such a good record of production in this section in the face of many difficulties should have allowed themselves to be led astray by agitation. In their case unrest centres primarily around the question of production bonus which they claim should be based on total shop output irrespective of additions to the capacity of the plant, a proposition which is clearly untenable.

The result of these factors will be apparent from the production figures set out in the Directors' Report from which it will be seen that although the new Open Hearth Furnace 'E' contributed an output of more than 20,000 tons, the total production of ingots in 1957-58 fell short by approximately 25,000 tons compared to the previous year. This is a regrettable state of affairs and I can only express the hope that the workers will quickly come to realise where their true interests lie and to appreciate that to allow themselves to be swayed by political agitators can result only in detriment to their own welfare and the complete disruption of the country's planned progress.

In February 1958 there was a strike of workers employed by the contractors engaged on the construction of the 1953 and 1955 extensions which lasted from the 24th February to the 21st March and spread to the Company's own contract labour both at Burnpur and Kulti, the ostensible issue being the question of permanency of employment. This had a further detrimental effect on plant operation by reason of increased disorganisation and the general lowering of morale throughout the works. The consequences of this strike will delay the completion date of the expansion programme and it is estimated will involve a loss in foreign exchange to Government to the extent of some Rs. 5 crores.

With the virtual completion of the first stage of the 1953 Extensions, the Melting Shop capacity is now approximately 62,500 tons of ingots per month against which production is only averaging some 44,000 tons as a result of the unsatisfactory and continuing conditions I have explained above. In terms of the imported cost of the equivalent saleable steel this means a loss of foreign exchange to the country of

approximately Rs. 95 lakhs for every month that these conditions continue.

Employees' Welfare & Emoluments

In the Chairman's speech of last year a full account was given of the Company's policy in respect of its employees' emoluments in cash and the many free amenities at Burnpur, Kulti and the Ore Mines. At the same time information was given to you as regards minimum and maximum daily and monthly earnings of several classes of your Burnpur employees. Since then a general increase has been made in the rate of improvement effected in the scale of incentive bonus payable to departments of the Iron Section to bring this more in line with that applicable to the Steel Section. In the case of the Steel Section it is dis-incentive bonus, production was such that the bonus all departments with the exception of the Sheet Mills, the creditable performance of which beat all previous records and enabled the workers to earn a higher production bonus than ever before.

Housing

Up to the end of March 1958 approximately a crore of rupees had been spent on the provision of additional housing accommodation. The Company's programme for 1958/59 is set at an expenditure of some Rs. 88 lakhs. It is the policy of the Company to continue the extension of housing facilities subject to the availability of finance, building materials and labour.

In lieu of quarters the Company continues normally to pay a monthly house allowance.

Medical Facilities

Your Board attach great importance to the provision of amenities in kind to the Company's workers and perhaps that in which we take some pride is the provision of free medical services not only for the workers themselves but also for their families and dependents. Although very adequate medical facilities are maintained at Kulti, the Ore Mines and the Collieries, under constant supervision from headquarters where we have now a hospital which will compare favourably with any in the country. Under the supervision of the Chief Medical Officer, Maj. Genl. P. P. Chowdhry, the hospital is manned by a staff of fully qualified medical officers and with the recent enlargement is now equipped with 260 beds. The growth of the medical services will be apparent from the following statement of the number of patients treated:—

	1956	1957
Indoor	35,985	56,691
Outdoor	152,389	214,896

While the work of the Medical Department is of course intended primarily for the benefit of employees and their families the expansion of the Company's activities has inevitably brought with it responsibilities extending considerably further. Satellite townships have arisen in the Works neighbourhood and for the protection of the Company's workers and families it has been found necessary to undertake the task of epidemic control in these areas involving widespread inoculation and vaccination against cholera and smallpox and the control of mosquito and other disease carrying pests.

Kulti

Under the 1955 Extensions programme it was decided that with the large amount of pig iron available from the two additional Blast Furnaces at Burnpur and from the Blast Furnaces of the Government plants, the two old, obsolete and uneconomic Blast Furnaces at Kulti with their Coke Ovens and ancillary Kulti Funnels met from Burnpur. With the bringing into operation of No. 3 Blast Furnace at Burnpur on the 11th October, 1958 one of the Kulti Furnaces was accordingly closed down and this will be followed by the closing down of the second towards the end of 1958 to synchronise as nearly as possible with the bringing into operation of the Blast Furnaces at two not absorbed at Burnpur, will receive full retraining have been offered for the opportunity of command and experienced workers. It is disappointing under these circumstances to have to record that the closure of the first Kulti Blast Furnace was seized upon by even to attempted interference with the inauguration ceremony of the new No. 3 Blast Furnace at Burnpur performed by the wife of an American official closely associated with the World Bank. Our thanks are due to the authorities both of Delhi and West Bengal for the prompt measures taken to ensure that these plans were thwarted and the good name of the country preserved with an institution that has done so much for the development of India.

Future Prospects

It will take a bolder person than a mere business man, who is not a politician, to venture on any forecast of the future of this key industry or of the trend of economic, financial or industrial development of the country as a whole. This much, however, I think can be reasonably said that the prospect is uncertain in the absence of the correction of adverse circumstances which persist in many directions of which I would mention a few. The most hazardous and a almost daily occurrence, frequently accompanied by violence, of strikes in industry, transport, administration and other services. It cannot be denied that some of the more recent strikes have been organised by the Communist Party for political purposes and

for supplanting existing recognised Unions. The material for these and other strikes is greatly fostered by the lack of effective measures to reduce the cost of living, to produce more food and to augment the supply of cheap cloth, housing and other indispensable necessities of life.

The present level of direct taxation, both corporate and individual, has, undoubtedly, destroyed incentive to a great extent and reduced the desire to earn more and to save for industrial investment, a negligible factor. The heavy burden of indirect taxation, both central and State, is borne almost entirely by the common man who falls an easy victim to the promises and propaganda of careerist labour leaders.

Whatever the foreign aid by way of loans, gifts or technical assistance may be, it will not help India to achieve the over-emphasised and unduly speedy development of its heavy industries, whether in the public or in the private sector, unless immediate and adequate remedial measures are set in train to counteract the general sense of frustration now prevalent in all classes of the people of this country.

The worker must feel that he and those dependent upon him have security and a reasonable condition merely tends to the creation of more inflation. The grant of increased wages, irrespective of productivity, to some industries or services which appears to have become a corollary to a strike can only encourage disruption in other industries and the vicious circle instead of breaking will continue to grow larger paralysing, in turn, every national activity.

In the case of the steel industry, there will be a very large increase in the number of workers when operation, and it would seem essential that if future labour unrest is to be eliminated there must be a uniform formula for the determination of wages for existing producers as a legacy from the past, complicated wage structure which has been activated by the many divergent Tribunal and Adjudication Awards in the face of constant demands for greater emoluments, in addition to new demands of every description. This threatens to entirely disrupt the advent of the Government of the industry. With the industry would, in the absence of a uniform formula for a wage structure, possess the makings of a labour agitator's paradise and inevitably lead to most tremendous adverse consequences on production. If the pansion of the country's heavy industries does not produce the relevant increase in production the consequences may well be disastrous. Apart from internal considerations, a fact which must not be lost sight of is that a large part of the expenditure involved in the building up of the industry which must be represented by foreign liabilities which must be repaid by the industry. The exchange balance, can only be achieved by exports. This being so, it is absolutely essential, as a first step, out delay to determine a wage structure on the basis of an evaluated basic wage in relation to productivity and world standards for each particular class of work, which would consolidate most of the multi-farious allowances now being given by the private sector; (b) a zonal dearness allowance; (c) an incentive bonus; and (d) an annual bonus based on the financial results achieved.

Accounts

Whatever may be one's views on the equity of the new levies on Companies, Wealth Tax now finds its place in the Profit and Loss Account for the first time as an added burden on profits in addition to the heavy rates of current corporate taxation. The Act relating to this new imposition makes a provision by reason of the fact that it was passed in September 1957 with retrospective effect.

Regarding the amounts of Rs. 16,50,000 and Rs. 1,04,83,856 set aside from profits to Development Reserve (Statutory) and Development Rebate (Reserve) respectively, I would explain that it has always been our practice voluntarily to place allowance of Development Rebate in respect of the plant installed and the two amounts in total represent under review. The Finance Act, 1958 has, however, introduced a provision that in respect of plant installed after the 31st December, 1957 a pre-requisite to amount equal to 75% of such Rebate shall be charged in the Profit & Loss Account and set aside to Reserve. The transfer of Rs. 1,04,83,856 to the Statutory Reserve has accordingly been made in terms of this balance of the tax saving for the year amounting to Rs. 16,50,000 has been set aside to Development Reserve (Tax Rebate). In future it will be necessary to set aside to reserve 75% of the entire Development Rebate claimable in respect of plant installations for at current rates of taxation the tax remission amounts to 51% of the Development Rebate and it is accordingly difficult to understand why the compulsory reserve transfer should have been enacted at 75% on the rate of 100% that was proposed in the original Finance Bill.

In the past we have maintained a number of separate reserve accounts relating to various aspects of the general development of the Company's undertaking. It is considered unnecessary to continue to maintain this segregation and, as you will see from Schedule B to the Balance Sheet, a number of accounts have now been amalgamated under the head of General Development Reserve. To this Reserve has also been transferred the balance standing on the Kulti of the decision taken under the 1955 Extension programme to close down these two very old and uneconomical Furnaces with their ancillary plant before the end of the current year and to supply pig iron to Kulti from Burnpur.

Consequent upon the redemption of the 4½ First Mortgage Sterling Debentures the balance of Rs. 68,03,147 standing to the credit of the Debenture Sinking Fund on the 31st March, 1957 has now been transferred to General Reserve.

In the Chairman's speech last year there was fully explained the reason for the maintenance of the Taxation Contingencies Reserve and the principles governing the write back to profits from this Account. As a

result of the Special Depreciation allowable for the year under review a sum of Rs. 41,00,000 has been credited to the Reserve while the amount to be brought back to profits in respect of the calculated adjustment up to the 31st March, 1958 is Rs. 14,00,000.

Capital Structure

The Balance Sheet now presented shows the effect of the changes mentioned in the 1957 Report of your Directors. Following upon the release by the Trustees of the mortgaged properties the former charge securing the 4½ First Mortgage Sterling Debentures disappears from the Schedule of secured loans, the small balance of Debentures not yet surrendered for repayment being now included in Schedule D under the head "Debentures of Past Issues Redeemed but not Paid". As a result of the Rights Issue of Ordinary Shares last year the subscribed capital of the Company is increased to Rs. 13,06,69,560 by inclusion of the par value Rs. 5,18,37,080 of the Rights Shares, while the share premium account is raised to Rs. 2,42,88,327 by inclusion of the premium of Rs. 3.50 per share at which these shares were issued. Requests have been received from a number of shareholders that the share premium account should be utilised for an issue of bonus shares. Your Directors are in full agreement and I am pleased to confirm that, as already publicly notified, the Board have authorised application to be made to Government for their consent to the capitalisation of the major portion of the share premium account to cover an issue of bonus shares in the proportion of one bonus share for every five Ordinary shares held at a date to be determined in due course by the Board of Directors, with the intention that the new shares shall rank in all respects pari passu with the existing Ordinary shares save and except that they will not participate in any distribution of dividend in respect of any period ending on or before the 31st March, 1959.

This bonus issue, however, touches only the fringe

of the problem of the Company's capital structure. It is desirable that a reasonable relationship should be maintained between share capital and reserves and that, in turn, share capital should reasonably reflect the value of the net assets of the undertaking. Our reserves, which are already substantial in relation to capital, will increase from year to year as profits are set aside to provide for repayment of our heavy indebtedness and it would normally be the policy of your Directors that a part of these reserves should be capitalised from time to time by means of bonus issues. The present penal rate of tax on bonus shares, however, effectively precludes such a course being taken and the bonus issue for which application has now been authorised, being made out of the share premium account and not accordingly attracting the tax, represents the maximum extent to which the

Account and has been merged with the security for the First Loan of \$31,500,000 so as to constitute security for a single consolidated series of Bonds to the extent of the equivalent of \$51,500,000 issuable against withdrawals on both the Loan Accounts. In this connection I would express our appreciation and the action of the Government of India and the State Bank of India as holders of the equal ranking second charges in having agreed to the introduction of the further charge of \$20,000,000 ranking in priority to their own security.

Share Holdings

As a matter of interest I have had an analysis made of the Company's Share Registers at the 31st March, 1958. The position disclosed is illuminating as showing the wideness of distribution of the share capital and is summarised in the following table:—

Ordinary Shares			Preference Shares		
Number of shares held	Number of Holders	Percentage	Number of shares held	Number of Holders	Percentage
1 to 100	5,489	41.58%	1 to 10	2,573	49.25%
101 to 500	5,693	43.12%	11 to 50	1,981	37.91%
501 to 1000	1,110	8.41%	51 to 100	767	7.67%
Over 1000	909	6.89%	Over 100	270	5.17%
	13,201	100.00%		5,225	100.00%

problem can, under the existing taxation structure of the country, be resolved.

Since the close of the year under review the security for the Second Loan of \$20,000,000 from the World Bank has been legally constituted. The security takes the form of a First Mortgage of the Company's undertaking as security for Bonds issued or deemed to be issued against withdrawals on Loan

Acknowledgments

In conclusion I should like to express on behalf of your Board our appreciation of the services rendered by the General Manager, Mr. J. McCracken, his senior executives and other supervisory staff throughout the year under the very difficult and frustrating circumstances that have existed.

THE LABEL

is stamped on the selvage of every yard of cotton cloth which meets the rigorous anti-shrinkage standards set by the owners of the trade mark: Cluett, Peabody & Co. Inc., New York.

Now, almost every variety of cotton fabrics, drills, tussos, coatings, shirtings, gaberdines, suitings, including poplins, dyed and printed are labelled 'SANFORIZED'. When you buy cloth marked 'SANFORIZED', the fabric will not shrink out of fit.

The following mills are the licensees, and they manufacture different types of cotton cloth which is stamped with the label 'SANFORIZED'.

STOCK MARKETS BUOYANT INDUSTRIALS LEAD RISE

London, 5th November.
RENEWED buoyancy developed in the stock markets during the past week under the lead of industrial equities which went strongly ahead. The initial impetus for the revival in industrials, which had tended to fall during the previous fortnight after their earlier sustained advance, came from the Government's decision to abolish the remaining hire-purchase controls. The advance was stimulated further by the optimistic statements by the official spokesman on the economic outlook, by the sharp increase in sales of consumer durable goods following the removal of hire-purchase controls and by rising optimism concerning the U.S. business outlook. After contracting further, business expanded again and reached a very high level at the beginning of the week. Foreign bonds and rails attracted very little attention apart from the Antofagasta issue

which receded following poor results, but later staged a partial recovery. Dollar stocks were mainly higher in response to Wall Street. Canadian bank shares were firm on the increased dividends announced by some of these banks. Generally firm conditions prevailed in the industrial market, which established widespread and often appreciable gains on renewed buying. Shares of the companies manufacturing domestic electrical goods, motor-cars and radio stores provided some of the best features on the view that these companies are likely to benefit most from the removal of hire-purchase controls. Many good improvements were, however, recorded outside these groups and the whole industrial market was very firm. Gold shares continued their advance on selective support. Base metal shares were irregular, while oil shares also moved within narrow limits. The recent advance in rubber shares was sustained by investment support and a further general improvement was recorded. Particularly good features included United Suez Canal which advanced sharply to 63s. Tea shares were also firm. Ceylon issues continued to respond to the "no nationalisation" statement and there were firm spots in Indian issues.

The Money Market

The credit situation in the money market last week appeared a little easier than of late, mainly due to a smaller take-up of bills by discount houses. Thursday was a very bad day, for besides the usual weekly tax transfers to the Revenue Department, there was a very heavy take-up of Treasury bills in view of these being a favourable January maturity. There was an acute shortage of money and the authorities had to give assistance on a very large scale while several houses had to borrow from the Bank of England on Bank rate terms. During the most difficult phases, the rate for money was rarely below 3½ percent with 3½ percent as the minimum, but the market was able to obtain loans during the easier periods at cheaper rates down to a minimum of 2½ percent. The turnover in bills was moderate with January and "hots" changing hands at 3½ percent up to the time of the tender last Friday, but finally it was 3½ percent as a result of a fall in the 91-day Treasury bill rate to £3 11s 8.23 percent. The 63-day Treasury bills were reintroduced to cushion the heavy drain on cash resources during the main tax-gathering season. They went at an average rate of £3 12s 10.07d percent.

Stock Market Prospects

The Investors' Chronicle market newsletter writes: "London gilt-edged securities rallied strongly. The reaction in industrials is necessary and logical in order that the recent broad advance can be resumed. Gold shares look like penetrating the important June 1956 resistance level. The technical outlook for base metals is more favourable. Wall Street should emerge healthier from its technical reaction as all the evidence indicates a continued flight from the dollar with domestic investors taking their own defensive action. The former's correction was well within normal limits. London's consolidation may take a little time but the undertone continues firm with selective shares indicating a further advance."

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 29th October shows that the gold stock was unchanged at \$20,690 million. Foreign deposits declined by \$17 million to \$290 million but foreign investments rose by \$76 million to \$3,776 million. The Federal Reserve bought \$148 million worth of bills, making the total holdings of Government securities \$25,373 million. Total discounts and advances fell by \$381 million to \$378 million, while the aggregate excess reserves of member banks declined by \$377 million to \$307 million. The daily average excess reserves of member banks fell by \$43 million to \$571 million, while their daily average borrowings rose by \$87 million to \$455 million. Business loans of the New York city banks rose by \$11 million to \$10,634 million compared with a fall of \$22 million to \$11,627 million in the corresponding week of last year. Gold certificates on hand and dues from the U.S. Treasury were unchanged at \$19,218 million. Federal Reserve notes in actual circulation fell by \$34 million to \$29,939 million. The deposit in member banks' reserve account was \$408 million lower at \$18,267 million.

Hongkong Gold Falls

The Hongkong bullion market declined gradually over the past week on lack of incentives, and the steadiness of sterling. Carry-over charges were 55 cents in sellers' favour. The official offer totalled 278 ounces and the unofficial 9,700 ounces. Arrivals in Macao were 20,000 ounces. Forward contract was done at \$ (U.S.) 38.02 an ounce c.i.f. Macao.

U.K. Government Copper for Sale

The U.K. Board of Trade has announced that it is offering 10,000 tons of Government stockpile copper for delivery and pricing during the period mid-November to the end of next January. Some 8,000 tons of this total will be offered to the original suppliers or their agents. The remainder will be offered by open tender. In addition, a small quantity of copper cakes is being released to consumers immediately.

Money

THE CALCUTTA MONEY MARKET STERLING STRENGTHENS ON RESERVES REPORT

Wednesday, 5th November.

THERE has been a slight fall in the demand for funds in the Calcutta money market during the past week. The requirements of the jute industry have increased, but there has been a return of advances from the sugar mills and on account of grain storage. There is still no sign of the beginning of the busy season at a date when in normal years it is already under way. Conditions have remained extremely easy in the interbank market and the call rate has fallen from 1½ percent to 1 percent.

The month-end brought with it the first spate of bills in the exchange market. Both tea and gunny documents have been plentiful. Remittance has remained poor. Sterling has firmed up against the U.S. dollar on the announcement of another large dollar payment surplus for October. The pound is also higher against all Continental currencies with the exception of the German D-mark.

SILVER WAS QUIET ON PROFIT-TAKING AND THE PRICE declined from the previous week's level of Rs. 189.50 to Rs. 187.50, quoted today for ready delivery. The forward rate was Rs. 186.50. The London and New York prices were 78½d and 90½ cents. Gold was quiet in sympathy with silver and the price fell from Rs. 112.50 to Rs. 111.75. The sovereign at Rs. 73.50 showed a loss of 50nP.

DURING THE WEEK ENDED 31ST OCTOBER, GOVERNMENT of India Treasury bills for Rs. 149,23,50,000 were sold in favour of the Reserve Bank.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills are being sold from 5th November to 7th November at Rs. 99.401 percent. Sales can be stopped at any time without notice if the Government thinks it necessary.

TENDERS FOR RS. 4 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on Tuesday. The total amount offered was Rs. 10 crores. Tenders at Rs. 99.385 and above were accepted in full, the average rate of acceptance being Rs. 2.458 percent a year. Tenders for Rs. 4 crores of 91-day Government of India Treasury bills will be received up to Saturday, 8th November.

A DECLINE OF RS. 10.26 CRORES TO RS. 1,544.70 crores in active notes was the notable feature of the return of the Reserve Bank of India for the week ended 31st October, but the total note issue was Rs. 1.18 crores higher at Rs. 1,557.15 crores. Notes held in the Banking Department consequently rose by Rs. 11.44 crores to Rs. 22.71 crores. Deposits of the Government of India increased by Rs. 22.75 crores to Rs. 71.75 crores and other Government accounts were fractionally higher by Rs. 15 lakhs at Rs. 32.12 crores. Balances of commercial banks declined by Rs. 31.37 crores to Rs. 110.68 crores. Balances held abroad fell again by Rs. 99 lakhs to Rs. 13.75 crores. Investments at Rs. 361.79 crores showed a decline of Rs. 15.08 crores. Other loans and advances increased from Rs. 53.06 crores to Rs. 53.35 crores, of which advances to scheduled banks against usance bills amounted to Rs. 92 lakhs against Rs. 97 lakhs. Ways and means advances stood at Rs. 16.87 crores (Rs. 16.25 crores).

THE RETURN OF THE STATE BANK OF INDIA FOR the week ended 24th October, 1958, shows a drop of Rs. 7.83 crores to Rs. 483.91 crores in total deposits. Investments in Government securities and other authorised investments remain unchanged at Rs. 241.79 crores and Rs. 11.41 crores, respectively. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have declined by Rs. 1 crore to Rs. 161.67 crores. Cash and balances are, in consequence, shown at Rs. 88.48 crores or Rs. 28.11 crores higher.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 7-11-58.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate

LONDON FINANCIAL LETTER

CAPITAL SPENDING IN PUBLIC SECTOR MAY BE RAISED

By Air Mail.

OCTOBER is the month when the highest personalities in British finance gather together for "the bankers' banquet" at the Mansion House and give a progress report on the financial situation halfway between Budgets. The most interesting fact this year was the Government's decision, announced by the Chancellor of the Exchequer, Mr. Heathcoat Amory, to allow an increase in capital spending in the public sector, after the "freeze" imposed in the crisis just over one year previously. This development is perhaps of more symbolic than practical importance. Although the Chancellor foresees a "quite appreciable" increase in spending in that sector, the authorities will surely proceed cautiously, not only because they are still apprehensive of inflation but also because the need to increase investment in fuel and power and transport is no longer obvious. But this curb on public investment was the sole survivor of the restrictions imposed in the crisis; one by one, the others had been removed. So the Mansion House dinner marked the end of the period of special restraint.

One must hasten to explain that the end of restraint does not mean the beginning of expansion. The Chancellor gave no hint of the Government's intentions for reversing the downtrend of

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 24th October, 1958, shows Demand and Time liabilities at Rs. 743.81 crores (Rs. 24.33 crores on account of borrowings from banks) and Rs. 907.87 crores (Rs. 38.55 crores), compared with Rs. 718.85 crores (Rs. 24.21 crores) and Rs. 888 crores (Rs. 37.66 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 3.39 crores and Rs. 45.93 crores to Rs. 42.33 crores and Rs. 134.15 crores, respectively. There is a rise of Rs. 5.95 crores to Rs. 600.85 crores in investments. Advances and bills discounted at Rs. 840.32 crores show a drop of Rs. 4 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 10.7 percent and 50.8 percent, against 7.9 percent and 52.6 percent.

THE FOLLOWING IS A STATEMENT OF THE CASH balances of the Central Government on the last day of July, 1958:

	Rs.
(1) At the Reserve Bank of India in India	70,33,19,000
(2) At treasuries in India	12,19,000
(3) In England (Sterling converted at 18d the Rupee)	25,69,000
Total	70,71,07,000

**For every rupee of sugar
you buy...**

- 40 nP.
for Statutory
Cane Price.
- 38 nP.
for Excise and other
production levies.
- 16 nP.
for manufacturing
expenses including
Salary, Wages
and Packing.
- 6 nP.
for overhead charges
and profit subject
to taxation.

Sugar is plentiful. The Indian White Sugar Industry has made that possible, by doubling the production from 10.01 lakh tons in 1953-54 to 20.26 lakh tons in 1956-57. Yet when you buy sugar, you probably feel you are being overcharged for the producer's benefit. Actual facts, however, prove this impression to be groundless. From the cost structure given above, you will see that the profit margin allowed to the Industry is low indeed, and is shrinking further. However, nearly 38 per cent of what you pay is for taxes and levies on sugar, which form your contribution to the Second Five Year Plan—an investment in the country's future.

Today the White Sugar Industry provides scope for Indian capital investment of more than 100 crores of

rupees; it provides employment to over 1,40,000 skilled and unskilled workers and 3,600 university educated men, their total earning representing 5% of the national wages and salaries; it supports 20 million cultivators; it constitutes 12% of the total value of production of major Indian industries; it contributes over 65 crores of rupees (@ Rs. 13.19 per maund) in levies to the national exchequer.

It offers even brighter prospects for the country. With a lighter burden—some of its present-day handicaps removed—this industry can contribute to achieving a more stable national economy. Its upward trend of production can continue to meet the needs of a growing home market and yet leave a surplus for export in order to earn foreign exchange.

Indian WHITE sugar...

production, of which there has been plenty of further evidence in recent weeks; and the Governor of the Bank of England, Mr. Cameron Cobbold, while recognising some deflationary tendencies in the present, emphasised that the task of monetary authorities over the longer term was rather to restrain than to stimulate activity.

Easier Credit

The most important permanent restraint was the "ceiling" imposed on the banks' lending—perhaps the temporary restraint of a high Bank rate was more effective while it lasted. There was some doubt during the period of restraint whether firms and individuals would borrow more from the banks if they were allowed to do so, and it cannot now be known, because the conditions at present are different. But it is clearly established that in the changed circumstances more is being borrowed from banks. From mid-July (after the Chancellor had announced that the limit on advances was to be removed although the change did not take effect until the end of that month) until mid-October, the banks' advances increased nearly £100 million—against the seasonal trend—to nearly £2,100 million. Until the figure for advances is broken down in the next quarterly statement, showing advances to the various categories of borrowers, one can only surmise the reasons for this substantial increase. It is suggested that industrial and commercial firms need more money to finance stocks, either because prices of some materials have risen or because manufacturers have had difficulty in selling goods which they have produced. But it is more likely that the increase in lending is attributable more to the personal category. The banks' much-publicised "personal loans" are not, obviously, a notably important factor but the publicity has focussed account-holders' attention on the possibilities of borrowing from their banks, and in many cases they have found that the ordinary overdraft is the most appropriate medium.

Lending by Banks

At the Mansion House, Mr. Cobbold showed no sign of anxiety when he referred to the banks' lending, but it has, superficially at least, some undesirable qualities. It is tending at present to stimulate the one sector of the economy which has not suffered recession—the consumer trades at home. (By contrast, the capital trades and the export trades are declining, and it is unlikely that they have received any appreciable increase in bank loans since the squeeze was relaxed.) But when the banking position is viewed as a whole, there does not seem to be much cause for apprehension. Considerable increases in the banks' investments (a few months ago) and advances (more recently) might have added considerably to the

supply of bank money, in the form of deposits although this potential increase has been almost entirely neutralised by the authorities. Although the increase in the gold and dollar reserves required additional sterling (in exchange for the additional gold and dollars), the Government has not had to obtain extra finance from the banking system but has been able, on the contrary, to reduce its net requirement. The Budgetary deficit is somewhat less this year than it was last year and, more important, the influx of small savings has increased and the Treasury has been actively funding short-term debt. Mr. Cobbold confirmed that this process of funding—selling long-dated stocks held temporarily by Government departments—in order to reduce borrowings against Treasury bills, had been successful in the past year and was "being pursued with vigour".

Limiting the Supply of Money

An important element of policy announced (by the then Chancellor of the Exchequer, Mr. Peter Thorneycroft) in the critical period last year was limitation of the quantity of money, which was assumed to mean the aggregate of bank money and currency. It was argued at the time that the quantity of money was only one factor in inflation, that the velocity of circulation of that given quantity was equally important. In fact, over the past year, the supply of money has been stable, and there is evidence—especially in the figures for clearings of cheques, etc.—that the velocity of circulation has not increased appreciably.

Yet the main purpose of this stabilising policy, to stop the rise in wages (by making it impossible for employers to get finance for wage increases), has not been achieved. Earlier this year, the rate of increase in wages was less than previously, but in recent months the curve has risen again. Limiting the supply of money, even depressing the mood of business so that employers were more than usually reluctant to allow their costs to rise and employees were apprehensive that higher wages might mean fewer jobs, have had no marked effect on this rising wage curve. It is natural that the authorities are worried that in a more buoyant mood of business wages will rise strongly. It is mainly for this reason that the former are psychologically restrained and that the remarkable surplus in the overseas payments account—£488 million in the year ended June last—is not in itself sufficient to allow a policy of expansion. In the present difficult phase of export trade, manufacturers must keep down their costs. Exports are already declining; and the upturn in prices of industrial materials implies that cheap imports which were the main factor in that impressive surplus will not be available much longer.

Stocks and Shares

SPECULATIVE PRICES REVIVE ON INDIAN IRON BONUS HOPES

CHAIRMAN'S STATEMENT RECEIVED BULLISHLY

Wednesday Evening.
The Calcutta share market has been rather quieter during the past week. Turnover has been less, and speculative prices, which receded sharply from last week's clearing quotations, have remained subdued until today. Indian Irons at one time fell to Rs. 26.80, but recovered to close this evening at Rs. 27.15. Later, in unofficial dealings, the price is reported to have reached Rs. 27.40. The main reason for the temporary break in sentiment seems to have been the state of the Bombay market, which has been weakened by the debacle into which the Government's cloth export policy has fallen. Another factor which has tended to restrain enthusiasm is the increased sabre rattling in Karachi. These influences have not, however, reversed the prevailing bullish undertone in the market and values have moved up again in response to the Indian Iron chairman's statement and the publication of the company's annual report. These reveal, as discussed elsewhere in this issue of Capital, that the company is eager to capitalise a proportion of its reserves and that these reserves are growing at an encouraging rate. The restraining factor at the moment, Sir Biren Mookerjee has pointed out, is the high tax on bonus issues. The continuing easiness in the money market has also helped the revival of speculative prices which has taken place today.

There has been fair activity among investment counters. Jutes were in demand and miscellaneous shares came in for considerable attention.

Government securities were steady and prices improved fractionally all round. The increase in the supply of floating money seems to suggest that banks might again begin to take interest in the section. Changes in buying and selling rates for Government securities made by the Reserve Bank helped steadiness. State loans were steady, but sellers were reserved.

Preference shares, especially in the jute and miscellaneous group, were wanted selectively, but business was scarce in the absence of offers.

Cotton mill shares were neglected because of slow trading here and abroad. Kesoram were quoted at Rs. 11.25.

Business in coal shares was limited but prices, especially of selected stocks, were maintained in the expectation of an early increase in the price of the commodity. Bengal were transacted at Rs. 27.50 and Amalgamated came to hand at Rs. 22.25. Central India were done at Rs. 8.06 and Pench Valley were transacted up to Rs. 24.75. East Indian were bought at Rs. 23.56 but Burrakur slipped back to Rs. 18.37 on speculative pressure.

Jute shares were quotably higher and a fair turnover was seen. Howrah closed at Rs. 21.75 and National were bought at Rs. 23.25. Megna came to hand at Rs. 15.94 and Auckland were transacted at Rs. 14.95. Kinnison were placed at Rs. 18.6 and Agarpara improved to Rs. 10.81.

There was little interest in sugar shares with the exception of Dyer Meakin Breweries which were maintained at Rs. 11.75 on increased earning prospects.

In the engineering group, Indian Iron were steady at Rs. 27.11, and the statement from the company's chairman was interpreted bullishly. Other notable rises included Indian Oxygen at Rs. 23.62, Jessop at Rs. 25.87 and Guest, Keen, Williams at Rs. 34.12. Burn hardened to Rs. 384 but Texmaco reacted to Rs. 22.15 on profit-taking.

Paper shares were prominent and a fair turnover was seen. Titagarh were bought at Rs. 44.12 and Sirpur came to hand at Rs. 13. India Paper Pulp were transacted at Rs. 20.62, but Orient declined to Rs. 34.20 on pressure.

In the miscellaneous group, Indian Copper were maintained at Rs. 3.95. Cement shares were slightly easier because of accumulation of stocks. Rohtas were transacted at Rs. 23.31 and Orissa Cement were placed at Rs. 12.25. There was selective demand for scrip such as Alkali & Chemical at Rs. 17.19, Dunlop Rubber at Rs. 30.37, Indian Cable at Rs. 30.50, Indian Aluminium at Rs. 15.69 and Metal Box at Rs. 31.62. National Insulated Cable increased to Rs. 34.37 on rumours of a bonus share issue and Martin Burn were bought at Rs. 29.62. India Steamship were transacted at Rs. 13.84, but Hindustan Motor retreated to Rs. 7.69. There was little change in tea shares, and Brooke Bond came to hand at Rs. 18.25. Bishnauth were transacted at Rs. 20.75. In the Duars group, Hasimara declined to Rs. 23.12 on a lower dividend and Hantapara were transacted at Rs. 12.4.

THE PROFIT OF THE INDIAN IRON AND STEEL COMPANY has declined from Rs. 6.40 crores to Rs. 5.45 crores during the year ended March 1958. The ordinary dividend is maintained at 10 percent and absorbs Rs. 1.04 crores. Important allocations include taxation provision Rs. 1.34 crores (against Rs. 3.19 crores), wealth tax Rs. 27.40 lakhs, taxation contingencies Rs. 41 lakhs, plant rehabilitation reserve Rs. 45.10 lakhs (same), extensions special reserve Rs. 26.13 lakhs (Rs. 23.70 lakhs), general development reserve (tax rebate) Rs. 16½ lakhs

(Rs. 9½ lakhs), development rebate reserve Rs. 1.05 crores, general reserve Rs. 32.97 lakhs and general development reserve Rs. 1 crore. The carry-forward is Rs. 9,94,375, against Rs. 9,13,368 brought forward. The output of pig iron increased from 695,156 tons to 733,945 tons but that of steel fell from 443,721 tons to 412,042 tons.

THE DIBRUGARH COMPANY (A TEA ESTATE) HAS earned a profit of Rs. 3.82 lakhs for the year ended last December. The dividend is reduced from 30 percent to 25 percent. General reserve is allocated Rs. 25,000 and buildings and machinery reserve gets Rs. 74,000. The crop fell from 7,323 maunds to 6,832 maunds. The average sale price increased from Rs. 2.64 to Rs. 2.73 a lb. Estimates for 1958 provide for a crop of 8,000 maunds at a cost of Rs. 9.90 lakhs.

THE GROSS PROFIT OF THE ALUMINIUM CORPORATION of India has amounted to Rs. 27.20 lakhs for the year ended March 1958, against Rs. 27.35 lakhs. Bringing in Rs. 2,33,758, providing Rs. 3 lakhs for taxation provision, Rs. 14 lakhs (same) for depreciation and making other adjustments, there is a balance of Rs. 8,29,784. The ordinary dividend has been maintained at 9 percent, leaving Rs. 92,284 to be carried forward.

THE OODLABARI COMPANY HAS MADE A PROFIT OF Rs. 1.61 lakhs for the year ended last December. The dividend is lowered by 5 percent to 10 percent, leaving a carry-forward of Rs. 76,168 against Rs. 19,057 brought in. The tea crop fell from 8,106 maunds to 7,476 maunds and the average sale price declined from Rs. 1.84 to Rs. 1.58 a lb. Estimates for the current year have been made for a crop of 8,000 maunds at a cost of Rs. 10.17 lakhs.

THE PROFIT OF THE INDIA PAPER PULP COMPANY has declined by Rs. 5.84 lakhs to Rs. 7.92 lakhs during the year ended last March. Depreciation is allocated Rs. 5.47 lakhs against Rs. 4.30 lakhs. The taxation provision is lowered from Rs. 5.25 lakhs to Rs. 3.41 lakhs. The dividend is cut from 14 percent to 10 percent. There is a carry-forward of Rs. 29,471, against Rs. 33,544 brought in. The directors state that the third paper machine came into production in June. Pending the availability of pulp from the projected Assam pulp mill, the company has to rely on imported wood pulp for its increased requirements, and this has enabled it to concentrate on the manufacture of special qualities of paper which have hitherto been imported. Negotiations concerning the finance and foreign exchange for the proposed pulp mill in Assam have reached an advanced stage.

THERE IS A NET PROFIT OF Rs. 7.40 LAKHS FOR Brooke Bond Estates India Ltd. during the year ended last June. The dividend is reduced from 17½ percent to 10 percent, leaving a balance of Rs. 4,29,840 to be carried forward, against Rs. 5,44,800 brought in. The crop fell from 34,37,309 lbs. to 30,01,268 lbs. The estimated crop for the current year amounts to 34,00,000 lbs.

PROVIDING Rs. 8.53 LAKHS FOR DEPRECIATION, THE profit of the Champdany Jute Company has amounted to Rs. 1.78 lakhs for the year ended last March. The debit balance has therefore been reduced to Rs. 5,45,989. The dividends have again been passed over. The directors have decided to operate the new preparing and spinning machinery at the Champdany mill for three shifts a day instead of two, and to transfer the machinery thus rendered surplus to the Wellington mill where it will eventually be operated on three shifts also. They intend to complete the modernisation of the preparing and spinning departments of the Wellington mill on a triple shift basis and this work is progressing.

Bombay Market

PRICES STEADIER AFTER DULL WEEK

PLENTIFUL MONEY HELPS SENTIMENT

Wednesday Evening.

THE Bombay stock market was dull last week and turnover shrank considerably. At the beginning of the week, equity share prices slumped on selling pressure because of technical considerations. Towards the close, prices seem to have settled, though turnover continues to be restricted. The increase in the supply of floating money was interpreted bullishly.

Tata Steel recovered to Rs. 180.25 and the possibility of an increase in the output of the company during October encouraged a fair amount of short-covering. Indian Iron were steady at Rs.

RESERVE FUND ... Rs. 1,34,00,000

Chairman
G. D. BIRLA

27.20 on the Chairman's observation about prospects for the issue of bonus shares by capitalising reserves. Premier Construction were bought at Rs 247.50 by knowledgeable quarters and Tata Locomotive were taken up to Rs. 160.50. Alcock Ashdown were offered at Rs. 276.25 and Larsen and Toubro came to hand at Rs. 171.2. Motor shares were quiet, and Premier Automobile were sold at Rs. 88. Hindustan Motor reacted to Rs. 7.72 on profit-taking.

Cotton mill shares were quiet and little buying interest was seen around current levels. The move to give incentives for exports met with a cold reception, as it was feared that shippers would not participate in the opportunity to utilise the foreign exchange which could be earned on exports of textile goods. Bombay Dyeing declined to Rs. 58.30 and Century fell to Rs. 437.50. Kohinoor were available at Rs. 258 and Simplex were done at Rs. 175.50. Svadeshi met with scattered support at Rs. 193.50, but India United Ordinary were freely offered at Rs. 8.80. Apollo were placed at Rs. 1.34.

Miscellaneous shares declined in sympathy with the general pattern. Cement scrip were subdued on reports of accumulation of stocks at the factories. Associated Cement declined to Rs. 157 and Digvijay were quoted lower at Rs. 139.50. Sugar shares were quietly steady, and Belapur Sugar were bought at Rs. 319. Phalton changed hands at Rs. 175.50. Steamship company shares were steady, and Scindia Steam were indicated at Rs. 21.84. Great Eastern Shipping were transacted at Rs. 28. Mining shares showed little variation, and Shivrampur Syndicate were done at Rs. 91.50. Bombay-Burmah reacted to Rs. 505 on profit-taking and Tata Chemical were transacted at Rs. 16.08. National Rayon came to hand at Rs. 254.50.

Business in banking shares was restricted and prices were quotably unchanged. Scattered interest was taken in insurance shares. Oriental came to hand at Rs. 4.035 and New India Assurance were quoted at Rs. 49.

There was investment interest in electricity supply company shares, and Ahmedabad Electric were done at Rs. 99.40. Bombay Suburban changed hands at Rs. 110.25 and Tata Hydro were placed at Rs. 123.

The Moort trading will take place between 6.30 p.m. and 7.30 p.m. on Monday.

THE WEEK'S TRANSACTIONS

Brooke Bond—

item to Rumania and North Viet-nam, and crude opium also to Russia. Exports of jute goods to the latter rose by Rs. 49 lakhs.

Oil Surplus in Rumania

In October 1957, Mr. I. Horatiu, described as Deputy Minister for Industries and Petrol in Rumania, said in Bombay that that country had petroleum available for export to India. He said that Rumania's annual production was over 11 million tons, of which five to six million tons were exported. In December 1957, a question was asked in the Lok Sabha about the possibility of importing petroleum from Rumania. In reply, the Minister, Mr. Malaviya, said that the question of importing crude oil from Rumania had not been examined. Asked whether Russia was willing to supply petroleum to India, he said "no".

On 21st August, in reply to a question in the Lok Sabha, Mr. Malaviya said that the Government of Rumania had offered to supply kerosene oil and highspeed diesel oil to India. On 4th September, he was pressed for some information but confined himself to saying that Rumania offered to supply kerosene oil and high-speed diesel oil; that the offer was under examination; and that it would not be in the public interest to disclose the details. It is perhaps worth recording that two important commodities do not feature in India's trade exchanges with the communist countries. First, India has bought no arms from them. Second, India has bought odd lots of rice from North Korea and Viet-Nam, and has obtained Burmese rice through Russia. But that country has made no offer of home-grown food supplies, even when after a partial monsoon failure, India had great need of them in the closing months of 1957.

National Development Council Meeting

The next meeting of the National Development Council will be held in New Delhi on 8th November. The Prime Minister will preside. The meeting will have a four-point agenda, namely, a re-appraisal of resources for the second plan, the finalisation of the annual plan for 1959-60, consideration of the progress report on the use of irrigation potential and preparations for the third plan for which the States have submitted some studies. Concerning the complaint that a large proportion of the irrigation potential is not being used, the Council will have reports from Planning Commission officials as well as from the Chief Ministers of the States.

Size of the Plan

The Planning Commission's chickens are coming home to roost. The Commission has now been compelled to admit that this country's resources cannot support a plan of more than Rs. 4,220 crores in the public sector, or Rs. 280 crores less than the target fixed at the last meeting of the National Development Council three months ago. It may, however, be pointed out that the proposed outlay of Rs. 4,500 crores was based on the assumption that the Centre and the States would be able to raise additional taxation amounting to Rs. 240 crores. This has not materialised. On the contrary, the latest appraisal discloses a shortfall of Rs. 280 crores, Rs. 198 crores at the Centre and Rs. 82 crores in the States. This will reduce the plan outlay to Rs. 4,220 crores. Even this calculation is based on the assumption that during the next two years there will be deficit financing of Rs. 200 crores, that the Centre will be able to raise additional taxation amounting to Rs. 40 crores, that the States will be able to raise another Rs. 12 crores and that there will be no additional expenditure involved in the recommendations of the Central Pay Commission or for defence purposes. On these assumptions, the plan outlay in the next two years should not exceed Rs. 890 crores by the Centre and Rs. 864 crores by the States. These calculations assume further foreign assistance of \$650 million to bridge a gap of \$1,000 million, \$350 million already having been provided by friendly countries.

Steel Import Policy

The import policy for steel will be the same for the current period as it was for the April-September term with the exception that imports of tinplates, wires and electrical sheets will be solely through the Controller of Iron and Steel who will issue them to consumers in requisite quantities. In addition to indigenous production, the Government proposes to import 250,000 tons of steel from Russia and 350,000 tons from the United States, the latter to be financed out of the loan from the U.S. Development Fund. There will be small imports from other sources.

Indo-Russian Shipping Service

The Indo-Russian shipping agreement of 1956, now ratified, will enable the two countries to operate a regular shipping service on a liner basis between the ports of this country and the Black Sea ports of Russia. Indian shipowners will have the liberty to reserve up to 25 percent of cargo-space for the carriage of cargoes from intermediary ports to India provided on each such occasion they obtained prior concurrence from Russia. The service will be operated by 12 vessels, six of each country. The Russian shipping organisation, called "Sovfracht", will endeavour to give full cargoes to both Indian and Russian vessels at Black Sea ports as well as in Indian ports, but in the event of paucity, freight earnings will be shared between the Indian and Russian liners on a *pro rata* basis, according to the number of vessels employed by each side. The schedule of freight rates has been mutually decided. In view of the services to be performed by Sovfracht in Black Sea ports as well as for obtaining cargo in Indian ports, it has been agreed that the owners of Indian vessels will pay to Sovfracht an agency commission of 2½ percent for the cargoes booked from Black Sea ports and a brokerage of 1 percent for cargoes booked from India. Tonnage will be so arranged by Sovfracht

that the average cost from the Black Sea end does not exceed £500 for each sailing.

National Harbour Board

The National Harbour Board which met in Madras last week discussed various matters relating to the development of major ports, hydrographic survey of minor ports, improvement of head-water supply in the Hooghly, establishment of a subsidiary port for Calcutta and improvement of the navigation to and development of the port of Kandla. As for minor ports, the Central Minister, Mr. S. K. Patil, announced that as recommended by the National Harbour Board last year, a Committee had been set up to establish priorities of development between important minor ports. The Board recommended to the Government that another committee should be set up to consider in detail the different aspects of the development of such ports, particularly in relation to the suggestion that a regular coastal service be started of small vessels calling on most of the more important minor ports on the coastline of the country.

The Bombay Minister, Mr. D. S. Desai, emphasised the urgency of constructing a railway line between Diva and Dasgaon and the Board recommended that the project should be taken up as a matter of priority in the third five year plan, if not in the second. It was also decided that the question of supply of headwater to the Hooghly should be taken up as a matter of urgency. As for a subsidiary port to Calcutta, it was noted that the Government is taking suitable steps to secure the services of technical experts from abroad so that after an on-the-spot study, it might be possible to decide on the location and size of the port. Two or three top-level technical experts are being invited, including Mr. Posthuma, the Chief Engineer of the Rotterdam Port authority.

The recent Press reports concerning the changing depths in the approach channel to the Kandla port were discussed. The Development Commissioner of the port assured the Board that ships up to 28 feet draft could even now get to the port at high tide. He further stated that arrangements were being made urgently for carrying out the necessary dredging operations in the creek and that the training works necessary to stabilise a deep channel were being studied in all their technical aspects at the Poona Hydraulic Research Station. The Board also recommended that the development schemes relating to Kandla and Cochin ports should be included in the "core" of the second five year plan. The members expressed great interest in a dredger-cum-survey launch pool for the minor ports, and desired that its formation should be expedited.

As far as Calcutta is concerned, the observations made by the Transport Minister, Mr. S. K. Patil, in Jamnagar last week, has special significance. According to newspaper reports, the Minister said that silting at the Calcutta port was so alarming and fast that its utility at present was not even 10 percent of what was expected of it. "This indicated that India needed more deep-draft major ports. In this context, Sikka should be developed into a first class intermediate port immediately with scope for further development into a major port."

It may be added here that a German expert, Dr. Hansen, was invited by the Government of India to make a report on the Ganga barrage project. He made his report in 1954. After that, the former Secretary of the Works Ministry, Mr. Gokhale, was appointed further to investigate the project. He has also made his report, recommending a project at an estimated cost of Rs. 54 crores. At a recent inter-ministerial meeting, the Transport Ministry, it is reported, cold-shouldered this project in favour of a super-port in the south of Calcutta. With Mr. S. K. Patil's forebodings and the reported attitude of indifference of the Ministry of Transport, the future of Calcutta as a major port does not look bright. Looking back, it seems that even floods serve a useful purpose. The Damodar river floods used to desilt the port of Calcutta. The planners of the Damodar Valley project should have been aware of the effect on the fortunes of the Calcutta port.

International Wheat Agreement

The International Wheat Conference which met in Geneva last week under the auspices of the United Nations, is considering the basic principles to be incorporated in the new international agreement which will take effect from 1st August, 1959, and also the form of that agreement. India has been a party to the International Wheat Agreement since its beginning in 1949. Under the current agreement which expires on 31st July, 1959, India has guaranteed the import of a quantity of 200,000 tons of wheat a year. The basic minimum and maximum prices for the duration of the current agreement are \$50 and \$2, respectively, a bushel, applicable to Canadian Manitoba wheat No. 1, with an appropriate price differential for other qualities of wheat.

Under the 1949 Agreement, which was in force for four years, the import of wheat guaranteed by India was 1.5 million tons a year. In the second agreement, signed in 1953, she originally guaranteed an import of 1.5 million tons a year, but the quantity was subsequently reduced to 1 million tons.

The current Agreement covers only a little over a quarter of the whole world trade in wheat. The six exporting countries under the Agreement are Argentina, Australia, Canada, France, Sweden, and the U.S.A. The United Kingdom, which is a large importer of wheat, is at present out of the Agreement. It was India's view at the 1955 International Wheat Conference that the disposal of wheat surpluses should not be a purely commercial operation and the needs of the millions of people in under-developed countries unable to

purchase wheat through lack of financial resources, must be taken into account. Since prices under the Wheat Agreement are fixed on a f.o.b. (free on board) basis, the landed price in India was then calculated as being some 30 percent to 40 percent higher than the f.o.b. price due to freight charges, while in some areas in India, the price of wheat to consumers was almost 50 percent higher than the price to United States or Canadian consumers due to further transport costs. Even today, while the average *per capita* income of an Indian is about one-fourth or one-fifth of that of an average Canadian or Australian, he has to pay a price for his imported wheat which is one-fourth or one-fifth higher than what the latter pays for his own wheat.

The fact that only a quarter of the world wheat trade is covered by the Agreement, it is felt, puts importing countries like India, where consumption of wheat is on the increase, in a difficult position. The Agreement has been found to be disadvantageous to the less developed countries in Asia because of the prevailing "one price" system and the heavy cost of transport over long distances. Since any large increases in consumption of wheat can take place only in under-developed countries, the Government of India, it is understood, feels that some changes in the principles under which the Agreement is based will be necessary. This may involve the abandonment of the "one price" system and also the acceptance of some arrangement by which payments can be made either in local currency or in some other manner which will ease the balance of payments position of importing countries. If the Agreement is to be of advantage to consuming countries which are under-developed, it is also felt, there should be a downward adjustment in the maximum and minimum prices of wheat under any new Agreement to be concluded.

At present only commercial sales of wheat are registered under the International Wheat Agreement. As such, the Government of India, it is understood, considers that it would be desirable if sales for local currency or on a deferred payment basis are also made eligible for registration. Under the existing Agreement, India has fulfilled her obligation of importing the guaranteed quota of 200,000 tons a year during the years 1956 and 1957. Up to 10th October, 1958, she has already imported 184,799 tons.

India-Italy Talks for Iron Ore Fail

Talks between India and Italy for the import of iron ore from India, co-related to the development of port and transport facilities on the west coast of India, have failed, it is learned. The ceiling for the Italian demand for iron ore was placed at 500,000 tons a year, while the port and transport development programme needed an export target of 2 million tons. It is possible that the Italian interests may sound other European steel interests to create a combine which might take up the project. German participation in the project is another possibility. It may, however, be added that due to U.S. recession, there has been a "stockpiling" of steel in Europe, which makes a fresh approach soon unlikely.

Export Promotion

The State Trading Corporation is at present engaged in negotiating the sale of handloom products to Czechoslovakia, sugar to Rumania and chiclet to Russia. It is also negotiating the purchase of fertilisers from north Korea. Some interesting information on the so-called export drive is also available. A party from Poland wanted to purchase Rs. 2 crores worth of cotton textiles. The deal fell through because the Indian textile interests were not prepared to reduce the price of cloth by 10 p. a yard. It may sound unpleasant, but some centralisation is needed for export promotion at present. The case of ores should illustrate the point. There has been a rapid decline in the exports of manganese ore as will be seen from the following figures:

	1957	1958
January	180,802	117,110
February	100,873	109,631
March	141,724	66,728
April	166,965	93,706
May	133,688	71,909
June	179,981	43,503
July	94,460	115,041
August	167,708	69,046
September	123,214	77,160
October	132,640	
November	154,744	
December	138,447	

Iron Ore Exports Rise

Although they are lower than last year's figures, exports of iron ore have been increasing as will be seen from the following figures:

	1957	1958
January	196,976	134,158
February	136,139	182,110
March	196,517	200,188
April	186,679	132,181

Over-cautious Officials

It has taken ten months to finalise the tenders for a coal washery and a fertiliser plant to be located at a steelworks. This should show that following the L.I.C. enquiry, officials have become extremely cautious in dealing with such matters.

London

RESULTS OF ANTI-INFLATIONARY MEASURES IN THE U.K.

BALANCE OF PAYMENTS SHOWS A BIGGER SURPLUS

(FROM OUR LONDON CORRESPONDENT)

THE statistical surveys for the first half of 1958 are now available, and they show, graphically, how much improvement has occurred as a result of the anti-inflationary measures which were taken last year. Personal incomes continued to rise in the second quarter of this year and were £258 million, or 6 percent higher than in the corresponding period of 1957. Wages and salaries rose by 4 percent, the smallest increase for a number of years. The latest quarterly estimates of national income and expenditure, issued by the Treasury, go on to show that while incomes from employment rose by 4 percent, there was a 2-percent drop in gross trading profits of companies. Consumer expenditure in the second quarter increased by £176 million, or 5 percent at current prices, but at constant prices (1954 level) the rise was only 1½ percent. The largest proportionate increases were in motor-cars, motor-cycles and fuel and light. For the first half of the year, consumer spending went up by £403 million, or 6 percent to £7,141 million, compared with the first half of last year. The general level of prices in the first half was about 3 percent above last year's period. As import prices were lower, the increase was due to higher home costs.

Total investment both at home and abroad during the first six months of the year increased by £144 million, or 7 percent on the 1957 half-year. Of this rise, £118 million was in gross fixed capital formation and £216 million net investment abroad. Investment in stocks fell by £190 million. Increases in personal, Government and corporate savings totalled over £100 million. Personal savings were 11 percent of disposable income, the same as in the first half of last year. Production in the second quarter was 2 percent lower than in the same period last year in real terms, that is, excluding price changes. For the half-year, it was 1 percent less than in the 1957 period. Exports in the first half of this year were 4 percent lower and imports 11 percent less than in the same months of 1957.

Gains and Losses Assessed

Assessing the position in its latest *Bulletin for Industry*, the U.K. Treasury thinks that the economy is in a better condition than for some time. Sterling has become almost a hard currency. The balance of payments in the first six months of this year showed a bigger surplus than for any full year since the war, and the gold and dollar reserves have risen to a much safer level. Internally, the chief gain has been a period of fairly stable retail prices. In August, the index was only fractionally higher than in January and 2 percent above last year. Incomes have continued to rise, but this pull on the price level has been counteracted by declining import costs. The gains in terms of the internal and external value of the pound have not been achieved painlessly. Various Government measures have kept both industrial and total output down and, in fact, they are now lower than they were last year.

In manufacturing industry, where the cost of imported materials is not a major factor, higher wages, coupled with lower output, have raised home costs a unit of output, and in the first half of this year, wholesale prices of manufactures rose by 3 percent. In the first six months, total demand fell slightly as smaller exports, reduced public spending, and a decline in the rate of stock building were not entirely offset by the rise in consumption and fixed investment. The belief that the downward trend may continue, explains why the Government has taken steps to stimulate demand. Stable prices have also cost something in employment. At mid-September, 476,000 were registered as unemployed (2.2 percent of the labour force). Unfilled vacancies have dropped sharply and there is less over-time and more short-time working. It is possible that the unemployment figure will rise to between 600,000 and 700,000 by January, merely as a result of seasonal factors.

All Hire-purchase Controls Lifted

Faced with this danger, and encouraged by the successes achieved in other sectors of the economy, it is hardly surprising that the Government is looking around for ways and means of expanding without running the risk of returning to the crisis of a year ago. The remaining restrictions on hire-purchase and the renting of goods were scrapped at the start of the past week. Terms were left entirely at the discretion of the retailer, and already there are some indications of cut-throat competition, although this may not mean consumer goods and an upswing in production and employment, but probably too selective to affect the overall picture. The full importance of the relaxations on hire-purchase must be related directly to the degree of concentration in the different industries affected. Thus the relatively large share of hire-purchase debt linked to motor-vehicle purchases

should be given more weight by reason of the small number of manufacturers who benefit from it.

A breakdown of the total amount of instalment credit for durables outstanding at mid-1958, given in the *Bulletin for Industry*, helps emphasise the dominating position of the mass-production industries. More than £400 million of the £503 million outstanding for durables was due from families, who owed an average of £25, against a national average five times higher in the United States. More than half of all furniture and electrical and gas appliance sales are now estimated to be on credit. One-third of all radio receivers and half of all sales of television sets are sold on hire-purchase while one-fifth of all new motor-cars, and probably a higher proportion of used cars, are estimated to be sold on credit terms.

From Squeeze to Expansion

The question which will now be raised is whether the Government has gone quickly far enough to prevent some slack in the economy during the next few months. Since the last Budget, the credit squeeze has been substantially relaxed and the Chancellor said recently that the limit on investment by the nationalised industries would be lifted. The Government's legislative programme, which was outlined in the Speech from the Throne last week, the cheaper loans to Councils, help for house purchasers, grants for house repairs, the compensation for compulsory purchase of land at "market value" and the abolition of all but a handful of the wartime emergency powers and controls—all have an expansionist trend. What happens if these fail to have the desired effect? The Government can still stimulate business activity by reducing taxes, both indirect (purchase tax, for example, which could be lowered any time) and direct (income tax and surtax, which need a Budget). In the light of what has already happened, we may well expect a "good" Budget in April. But no Chancellor, and least of all Mr. Amory, can lose sight of the balance of payments, which is already worsening after a year of exceptional strength, and the weakening of sterling which will follow if expansion turns into inflation. It is that qualification no doubt which inspires the Opposition's decision to make the new session of Parliament a dog fight all along the line. A vote of censure which "notes with concern that Government policies have led to a fall in industrial production, a continuing increase in unemployment and a failure to make full use of our industrial capacity" is in this week's list of business.

Sugar Board Loss in First Year

Restoring the freedom to import raw and refined sugar has helped the return of competitive conditions in the United Kingdom, in spite of initial difficulties, due to unexpectedly violent price fluctuations. This is stated in the first annual report of the Sugar Board. It was set up in October 1956, buys two-thirds of Commonwealth sugar exports to sell on the free market, and also buys the U.K. output from the British Sugar Corporation. By means of surcharges (on sugar collected in Britain) and distribution payments, the Board is required to adjust its trading balance so as to keep its overall position stable, taking one year with another.

Over the whole period of the report, there was a net outgoing of £11.2 million on the purchase and resale of Commonwealth sugar and nearly £1 million on home-produced sugar. The surcharge raised £11.4 million, offset by £7.8 million in distribution payments. Thus an "under-recovery" of about £7.6 million is carried forward. Commenting on this, Sir George Dunnett, chairman of the Board, says that this might quite possibly be recovered next year without any effect on the housewife.

Export Credits still High

Taken at their face value, the figures for the export credit business done in the third quarter of 1958 are highly encouraging. At £141.3 million, the business in this normally slack time of the year nearly touches the record of £143.5 million achieved in the first three months of 1957. Short-term business in the quarter, the Export Credits term business in the quarter, was £22.2 million higher at £586.8 million and the number of policies increased. Medium-term business also rose helping the average for the current year, while the overall total for the quarter was 26 percent higher than that of last year. The figures for a single quarter are notoriously difficult to interpret. But the rising average for medium-term business—mainly in relation to capital goods—is most reassuring.

Lancashire and Asian Competition

Replying to a question in the House of Commons the other day, the Prime Minister reported

that the Cotton Board had now made its new proposals for an agreement with the cotton textile industry in Hongkong. It is sincerely believed, Mr. Macmillan said, that these were generous and should permit a fair and reasonable settlement. Lancashire appears to be less critical of Government's attitude since hearing Mr. Macmillan explain it in Harrogate. On the other hand, traders are not disposed to over-estimate the benefits to be expected from restrictions on retained imports from India, Pakistan and Hongkong. They appreciate that any relief in the home market will be offset by increased competition elsewhere. The three Commonwealth Asian countries so far have naturally taken full advantage of the unrestricted U.K. market, but if expansion in the latter is limited, they can no doubt switch more of their attention to other outlets. Already, for example, it appears that Hongkong is making progress in its trade in cotton goods with Australia and New Zealand.

Japan is also gaining trade in those two dominions and is making great efforts to expand her exports to many other markets. Communist China is increasing the capacity of its textile industry and no doubt hopes that textile exports will make a big contribution to its supplies of foreign exchange. Competition in Asia seems certain to become keener, and there will be a tendency for all the Asian producers to look for further markets outside their own continent. This aspect of the outlook for world trade makes Lancashire all the more anxious to have a period of stability in its home market.

Incheape Shares for the Market

The many companies which form the great merchanting business associated with the family of Lord Incheape including Gray, Dawes and Co., Duncan Macneil and Co., and St. Mary Axe Securities, with time-honoured links with the Peninsular and Oriental shipping interests, are to be consolidated within one holding company whose shares will be quoted on the London Stock Exchange. This step is being taken to lighten the burden of estate duty and also to make the best use of the group's resources and to clear the way for new developments. The company says that if it is valued on an asset basis for estate duty purposes, it will disintegrate. It is not intended to reduce Incheape interests in India and Pakistan, where about a third of the net assets are concentrated and about a fifth of group income is derived, or in the Persian Gulf area.

As the family intends to remain firmly in control, only 350,000 £1 shares, out of an issued capital of £1.8 million, will be placed, and these shares will go largely into firm hands. The placing price is 25s a share, and on the indicated dividend for 1958-59 of 11 percent, the yield is £8 18s percent. Profits last year were £607,861 and although this year they are expected to fall, they should exceed £517,000. With this figure, the dividend will be covered twice. The company is also to issue £850,000 6½ percent unsecured loan stock, 1978-83, the bulk of which will also be placed. Lord Incheape's holding is 608,000 shares, worth £760,000 at the placing price of 25s, of which he is selling 132,440. His relations, the Hon. Alan Mackay, Lord Craigmyre and the Hon. Simon Mackay, are selling respectively, 76,685, 89,460 and 51,415 shares.

Scrip Issue of Brooke Bond

A revaluation of assets enables Brooke Bond and Co., the tea and coffee dealers and distributors, to add £1,064,000 to capital reserves. There is to be a one-for-four scrip issue and, in addition, to an unchanged dividend of 3d a share, tax free, for the year ended 30th June, the directors declare a tax-free interim of 1d a 5s share on account of the current year. Both the final dividend of 1½d and the special interim will be paid on the capital before the scrip issue. The "profits tax" interim has no bearing on the payment for 1958-59. An interim dividend will be considered in April in the usual way. The world income increased from £79.5 million to £80 million and the group profit works out at £4.1 million, against £3.3 million. Tax absorbs nearly £2.3 million, against £1.6 million, and a net profit of £1.75 million compares with £1.6 million.

Brevities

A wire rope, 1,656 feet long, 13¼ in. in circumference and weighing 25½ tons, is being made at the Doncaster works of British Ropes for a Hongkong dockyard.

In the first nine months of 1958, 14,775,000 ingot tons of steel were produced in Britain compared with 16,202,000 tons in the first nine months of 1957.

In addition to the final dividend of 10 percent, making 15 percent as before, shareholders of Harisons and Crossfield will receive a jubilee bonus of 2½ percent. Group net profit, after tax, for the year ended 30th June amounts to £547,403, against £564,109 for the previous year.

Mr. G. F. Thorold, who has completed his term of appointment as head of the Treasury delegation and Economic Minister in Washington, will be succeeded in January by the Earl of Cromer, who will hold the post for two years.

Lord Poole has been elected chairman of Financial Times, Ltd and Financial News, Ltd.

The aircraft industry's exports are booming. The current export rate is £13 million a month. The total for the first nine months of the year was £116,320,153—more than 48.5 percent above the corresponding 1957 figure. In September, the United States was Britain's best customer, followed by India and West Germany.

1,50,000 seers of milk every day!

Modern dairies, equipped with the latest processing units, are fast replacing the old, unhygienic systems of milk distribution—are supplying more and more people with wholesome, pasteurised milk.

Among other important projects of the Second Plan, are the Government's large-scale milk supply schemes. And Larsen & Toubro Limited are proud to have helped in this by planning and installing 44 model dairies—some of them the largest in the country. The Kaira Dairy plant at Anand, for instance, processes 1,50,000 seers of milk every day—enough for 1,92,000 families—produces butter, milk powder, ghee, condensed milk and casein.

Helping to produce more food

Established in Bombay 20 years ago, Larsen & Toubro Limited have grown to be India's leading engineering firm in the field of food producing and processing machinery.

Pioneers in dairy engineering, Larsen & Toubro Limited now manufacture dairy machinery, milk tanks, butter churns and other dairy equipment. From the largest spray-drying installations for milk powder, down to the smallest lactometers for testing milk, Larsen & Toubro Limited serve the needs of the nation.

Service for our customers

With a thoroughly trained and efficient staff of engineers and technicians...modern workshops for servicing of machinery...and a nation-wide organisation of stockists and dealers—Larsen & Toubro Limited, now as always, are confident of giving their customers SERVICE...confident that by manufacturing, supplying and installing machinery to increase food production, they are also contributing vitally to the country's progress towards self-sufficiency and plenty.

This 2200 gallons-per-hour L&T/Silkeborg milk pasteuriser is one of the four pasteurisers installed at the Kaira Dairy, Anand

Jute

RAW JUTE PRICES FALL AS DELIVERIES INCREASE

BETTER FEELING IN GOODS MARKET

THE ambiguity of the ordinance, issued recently by the Pakistani Government, concerning the new minimum export prices for raw jute, has caused considerable confusion over the question of cuttings for India. Opinion has been divided on whether the Rs. 65 mentioned was the price for Pakistan, or the price landed in Calcutta. It has now been ascertained, although still not officially published, that Rs. 65 is the E.P.C. price, and is therefore the landed price in Calcutta. Thus cuttings are still very much cheaper than the lower grades of Indian jute, but much as some mills would like to take advantage of this, their hands are tied due to lack of licences. The Indian Government's policy regarding licences is very strict, and in the long run does not appear to have helped the Indian farmers, as many of them still have large stocks on their hands. This is particularly noticeable in Bihar, which was the area the Government mainly had in mind when deciding its policy. This type of jute is not a reasonable substitute for cuttings. In many cases it requires special preparation and handling, and where possible mills still prefer to use cuttings.

The current raw jute supply position to mills is very favourable. Imports in all agencies are high and it would appear that reports of a bumper crop are not exaggerated. Imports in the Daissee districts are particularly good, but the quality of this type of fibre is not comparable with previous seasons. High class Daissee is at a premium, as most of it is finding its way into long-group or short-group categories which carry premium rates. Thus kutcha bala Daissee is being deprived of much of the better-class fibre which it had in previous years. Current prices, especially of Daissee, are cheaper than they have been for many years, and on the current price level of jute goods, especially hessian, mills are enjoying a manufacturing profit. Doubt has been expressed, however, whether the present easy availability of jute will last the season. Arrivals from Pakistan are continually dwindling, and over the years India has depended on a reasonable supply from this source to see her through. Self-sufficiency in jute is all very well, provided it is jute of the correct quality, but unfortunately the biggest increase in the Indian crop comes under the category of mesta and low grade jungli jute. High grade jute is still in short supply, and in many cases, only available from Pakistan. Recent political unrest and restrictions in that country may have repercussions on the amount of jute eventually available to India.

The goods market continues to be favourable and in general there has been a rising tendency. American burlap consumption during September showed a welcome increase of 9 million yards over the previous month, to 76 million yards, the highest this year, while stocks showed a drop of 8 million yards to 222 million yards, the lowest this year. This means that America has about three months' stock, of which 11 months is spot, the balance afloat. Hessian operators have been anticipating America's entry into the market, as it is normal for her to buy at this time of the year, and for this reason there was a spurt of speculative buying. This pushed prices up, but while the hessian section enjoys considerable prosperity, with prices well above the floor level, the sacking section continues to rule below the minimum prices. This is the aftermath of over-production of heavy goods, and this category still constitutes over 70 per cent of the industry's total stocks. Mills are keen sellers of sacking but world demand is low, and business is restricted by the price.

Raw Jute Weakens

While goods quotations have been advancing, raw jute prices have shown a tendency to fall. In spite of continuous business by mills. This apparent reversal of normal trends is not uncommon at this time of the year when heavy jute arrivals depress the fibre section and cause it to move independently of the goods section.

THE JUTE MARKETS

There was a fair amount of activity in the futures market last week, and speculative buying, especially in Hessians, caused prices to rise. During the same period, fibre prices recorded a substantial fall. Rates, as given by the East India Jute and Hessian Exchange Ltd., for the period 28th October to 4th November, were as follows:

	Hessians 40in. 10oz. November		Sacking B Twills November	Raw Jute Upper Assam	
	Rs a 100 yds.	Rs. a 100 metres	Rs. a 100 bags	Rs a md.	Rs. a 100 kilos
Opening	41 60	45 49	97 15	23 68	63 44
Highest	42 20	46 20	97 30	23 68	63 44
Lowest	41 44	45 31	96 05	23 08	61 83
Closing	42 20	46 20	96 65	23 18	62 12

Manufactured Goods: The market opened on a quiet note due to heavy speculative selling and prices in all sections showed substantial losses. B Twills dropped 70nP to be called over at Rs. 96 for ready shipment and Rs. 97.80 for January-March shipment. In Hessians, 40in 10oz lost 40nP to rule at Rs. 42.40 and Rs. 39.60 for the near and forward positions respectively. Lack of overseas enquiry depressed the market, and small losses

were recorded on Friday. Mills showed no interest at the lower levels. At this stage price movements were mainly governed by settlement considerations in futka. Towards the week-end, reports of overseas business with the U.K. had a steadying influence, and by Monday the previous losses had been more than made up, B Twills being quoted at Rs. 96.90 and 40in 10oz at Rs. 42.85 for the near positions. The market continued steady under speculative activity and covering business, but no further foreign interest was reported.

On Wednesday morning, quotations were as follows:

	Ready	November	December	Jan.-March
40in. 6oz.	33.80 (36.84)	33.75 (36.79)	32.80 (35.75)	31.10 (33.90)
40in. 10oz.	43.35 (47.25)	42.80 (46.65)	41.10 (44.80)	40 (43.60)
B Twills	96.80	97.30	97.85	96.40
Heavy Cees				
(Plain)	99	99	98.75	98.40
A Twills	116.25	116.75	117	117
Liverpools	111.75	111.25	111.25	111.25
Cornsacks	99.50	99.50	99.25	99.25

Raw Jute: In spite of business being conducted every day, the fibre markets remained weak throughout. The steadiness of the goods section had little effect on raw jute due to heavy imports in all receiving centres. Sellers were keen for business, but the mills' main interest appeared to be in the lower grades of jute of the mesta variety. Daissee mesta came in for a good deal of interest, but so great has been the demand for this type of fibre recently, most of it at higher prices, that it is now quite difficult to obtain. Sellers have large quantities still to cover, and are reluctant to take more on their books. Interest in other categories of jute was limited, but in all cases, business was invariably done at reduced rates. The week opened with Assam bottoms at Rs. 23 a maund for November shipment. During the week-end to Rs. 22.25, recovering slightly after the week-end to Rs. 22.50. Quotations, however, were purely nominal, as there were always sellers willing to sell below the quotations were forced down from Rs. 21.25 to Rs. 20, but little business was done at the lowest rates.

Business reported during the period consisted of Northern jute at Rs. 21.75 to Rs. 22.25 a maund

for November-December shipment, and Northern Middles only at Rs. 24.25. A fair amount of Murshidabad Tossa was contracted for on the basis of Rs. 22.75 to Rs. 23.25 a maund, according to district. Daissee and/or Tossa was done at Rs. 23.50 to Rs. 24 a maund. The biggest business of the week was done in mesta at falling prices, and Desal mesta was reported at Rs. 21 to Rs. 20.75 and Daissee mesta at Rs. 20.50 to Rs. 20 a maund.

Last week, wagon arrivals in Cossipore amounted to 810. This was slightly less than in the previous week, which included the backlog from the Puja holidays, but about 120 more than during the corresponding week of last year. Cossipore sellers are keen for business, and are willing to discount rates. There are buyers for all types of fibre, but stocks have not been reduced to any great extent. At the close, quotations were based on Kishenganj jute at Rs. 20.50 for Bottoms.

On Wednesday morning, opening quotations were as follows:

	Landed at Mills Rs. a maund Rs. a 100 kilos.	Shipment Basis Bottoms
Assam	22.75	60.97
Northern	21.75	58.29
Purnea Desal	21	56.28
Daissee	23.50	62.98
Daissee White	19.25	51.59
Assam Tossa	23.75	63.65
Murshidabad Tossa	23	61.64
Northern ex-Calcutta	21.25	56.95
Mesta		
Assam Northern	21	56.28
Desal	20.75	55.61
Daissee	20.25	54.27
Jungli	19.50	52.26
Bimil F.A.Q.	20.50	54.94

GUNNY SHIPMENT STATISTICS

The following figures include coastal shipment relating to manufactured jute goods for shipment from the port of Calcutta. These are gross figures based on shipping bills presented.

	Hessian Bags (Tons)	Cloth (Tons)	Total (Tons)
1st to 15th October, 1958	1,448.8	13,363.4	14,812.2
1st to 15th September, 1958	734.0	17,712.1	18,446.1
1st to 15th August, 1958	3,414.4	17,743.1	21,157.5
	Sacking		
1st to 15th October, 1958	19,916.7	335.2	20,251.9
1st to 15th September, 1958	18,419.7	459.1	18,878.8
1st to 15th August, 1958	16,143.7	217.3	16,361.0

Here a man stacking tinplate in the godown... there a mechanic making dies on a precision machine-tool... in the printing room a skilled operator working on a high-speed press... in the laboratory a chemist experimenting on a container lacquer... plus artists, salesmen, clerks...

Having commenced operations in 1933 with only a handful of men, Metal Box have increased their staff to 5,000 in the short span of 25 years. And today, Metal Box supply a wide range of containers and closures to over 1,000 packers and bottlers who together employ more than 80,000 workers!

As in any progressive company, the strength of Metal Box lies largely in their attitude towards their employees many of whom have been with them for over 20 years. Nearly forty promising young men have received training abroad in order to contribute better to the Company's activities.

As India's economy expands rapidly, an increasingly greater, more complex burden will have to be borne by the packaging industry. As leaders in the field, Metal Box are ready to meet this challenge of the future with all their resources and all their experience.

Engineering and Transport

MORE CARGO HANDLED BY BOMBAY PORT

PROGRESS OF DEVELOPMENT SCHEMES

THE cargo handled at the docks and bunders of Bombay port during 1957-58 amounted to 13,109,676 deadweight tons. This is a new record for the port, says the Bombay Port Trust Administration Report for 1957-58. Compared with the traffic in 1956-57, the increase amounts to 1,130,324 deadweight tons.

The general account for 1957-58 closed with a surplus of Rs. 3.11 crores against a surplus of Rs. 1.98 crores envisaged in the revised estimates. The pilotage account showed a surplus of Rs. 10.82 lakhs compared with the estimated surplus of Rs. 7.93 lakhs. As far as the general account was concerned, the improvement over the revised budget was due to an increase of Rs. 46.39 lakhs in receipts and a saving of Rs. 67.23 lakhs in expenditure. The increase in receipts was mainly under wet docks due to higher recoveries of demurrage fees and handling charges; under bunders due to higher recoveries of wharfage; under railway department due to higher recoveries of through freight and terminal charges; under dry docks due to higher recoveries of dues on vessels; and under interest and miscellaneous due to more interest earned on cash balances and larger receipts under lapsed deposits and sale proceeds of unserviceable stores, etcetera. The saving in expenditure was chiefly the result of the slow progress of repairs and maintenance, new minor works and dredging and less expenditure than anticipated on water charges and the Chief Engineer's workshops, docks, hamallage and station establishments. The total actual expenditure on capital account was Rs. 1.65 crores against the revised estimate of Rs. 2.6 crores. The withdrawals from the general reserve fund and the renewals and replacements fund came to Rs. 53.61 lakhs and Rs. 32.83 lakhs, respectively, compared with those of Rs. 1.03 crores and Rs. 74.42 lakhs, respectively, envisaged in the revised estimates.

Working at Docks

The volume of imports rose from 3.53 million tons in 1956-57 to 4.42 million tons. The volume of exports, namely, 1.87 million tons, however, remained practically the same as last year's. The total traffic aggregated 6.29 million tons against 5.39 million tons in the previous year. Excluding mineral oils and foodgrains in bulk, iron and steel continued to form the largest single item in the foreign import trade passing through the Port. There was a fall in the concluding months of the year in the overall volume of dry cargoes imported and exported, the fall being marked in relation to imports. The piece-work scheme, introduced with effect from 3rd March, 1956, continued to be successfully implemented and was extended, by agreement with the union concerned, to the aggregate labour cost (including the cost of ancillary labour) for the year amounted to Rs. 98,79,861, against Rs. 93,29,898 during the previous year. Departmental labour handled 3,934,897 tons compared with 3,630,410 tons in the previous year. The measures which were previously taken to relieve congestion in the docks remained in force during the year.

Development and Modernisation

Further progress was made with the various development schemes carried over from the first five year plan including the scheme for the modernisation of the Prince's and Victoria docks (minimum scheme), reconstruction of transit sheds in the Prince's and Victoria docks, and the labour housing schemes. As for electric cranes for Ballard Pier and Alexandra Dock, the civil and electrical works in relation to 34 cranes in operation, four at Ballard Pier and 30 at berths Nos. 1 to 6, Alexandra Dock. An order for the supply and erection of 54 electric wharf cranes to be installed at berths Nos. 7 to 20, Alexandra Dock, at a cost of Rs. 1,64,20,415 has been placed with Messrs Jessop and Company, Calcutta.

WORKING OF COMPANIES ACT IN NORTHERN REGION

Fifty-four companies—four public and 50 private—were registered under the Companies Act, 1956, in the northern region during the three months, July to September 1958. In addition, one association, which is not for making profit, was registered under the Act in Uttar Pradesh. The total authorised capital of the companies was about Rs. 2 crores. The northern region comprises Punjab, Himachal Pradesh, Delhi, Uttar Pradesh and Rajasthan. During the same period, 32 companies in the region went into liquidation, and names of 71 companies were struck off the register under Section 560 of the Companies Act. In Punjab and Himachal Pradesh eight private companies were registered. Thirteen companies went into liquidation. The number of companies struck off the register was 19. Forty-one complaints were filed in the courts by the Registrar of Companies against provisions of non-compliance of various decided during the quarter. 24 resulted in convictions and a total fine of Rs. 5,645 was imposed. In registered. One company went into liquidation, and 20 companies were struck off the register.

GOVERNMENT DECISIONS ON TEXTILE ENQUIRY REPORT

NEED FOR RATIONALISATION SCHEMES STRESSED

THE Government of India's decisions on the recommendations of the Textile Enquiry Committee have been published in a resolution in the Gazette of India. It accepts the committee's view that for the removal of the deep-rooted causes leading to the present state of the industry, it is necessary to replace antiquated machinery and to introduce rationalisation and modernisation schemes and to promote efficiency in management and productivity of labour. It hopes that the industry will also consider the advisability of reconciling the volume of production of the various varieties of cloth with the actual demand. In this connection, the Textile Commissioner will exercise a continuous watch on the general trends of production of the different varieties of cloth and will issue such directions as may be necessary to arrest any imbalance of production.

Demand for Cloth

After careful consideration and taking into account the rate of economic development, the committee assessed that the per capita consumption at the end of the second five year plan would not exceed 17.5 yards. Estimating the mill capacity at about 5,100 million yards and even providing for the additional requirements to be met mostly from the handloom sector, it felt that the target for expanded production from the handloom sector might have to be restricted to 2,100 million yards. The Government thinks that the assessment of consumption at 17.5 yards a head, as made by the committee, is realistic. On this basis of consumption and production in different sectors, it considers it unlikely that a situation will arise in which it may become necessary to resort to a regulation of production of cloth or yarn, on the lines recommended by the committee, to be adopted in the event of a steep fall in exports of textiles or an unprecedented accumulation of yarn. As for the question of surplus yarn, the Government has removed all restrictions on exports and has decided to maintain this policy as a long-term measure for three years in the first instance.

Marketing and Finance

The Government has accepted the recommendations of the committee about the need for a more continuous and sustained study in the field of marketing intelligence and research for cotton textiles, but it feels that this should be the legitimate function of the industry itself. It is aware that the Cotton Textile Fund Committee is already considering this issue. It hopes that, in close co-operation with the industry, the Textile Enquiry Committee's recommendation will be implemented by the latter.

The Government has accepted the view of the committee that correlated statistical information about stocks and prices should be obtained. It proposes to entrust this work to the Textile Commissioner as a part of his normal functions. It draws special attention to the observation of the committee that the total stocks with the entire trade have shrunk considerably and to enable their normal free movement, traders, on their part, should co-operate by increasing their holdings and relieve to some extent the pressure on mills by way of accumulations. Even prior to the receipt of the report, the Government took up with the banking industry the need for allowing adequate and even liberal credit facilities to the industry. The response of the Reserve Bank and the scheduled banks has been very helpful. The Government proposes to request banks to extend similar liberal facilities to textile traders in order to enable them to increase their holdings.

Closure of Textile Mills

The committee observed that the findings of the Specialised Wing in the Textile Commissioner's organisation showed that the main reasons for closures seemed to be the bad condition of machinery, in many cases neglected continuously without proper attendance, repairs and replacements. Apart from this, various investigations by committees, from this, various investigations by committees, which were set up under the Industries (Development and Regulation) Act, 1951, have brought out instances of mismanagement.

The Government has accepted the suggestions made by the committee for enabling the closed mills to re-open. It particularly stresses the need for replacing outmoded and obsolete machinery and the proper balancing of uneconomic units. The strengthening of the Survey Organisation in the Textile Commissioner's office with a view to ensuring a continuous study of the marginal and sub-marginal units of the industry will also be reviewed.

Rationalisation and Modernisation

The committee stressed the importance of rationalisation and modernisation. In particular, dealing with rehabilitation, it referred to the fact that a large majority of the machines in existence were installed more than 40 years back leading to low production, a poor quality of products, engage-

ment of a large number of workers and the high cost of production. The Government has accepted the suggestions of the committee that, for rationalisation, the approach on the lines accepted by the fifteenth session of the Indian Labour Conference will be both proper and helpful, although the latter pointed out that this process might not be quick enough for some centres where the margin of excess labour is large.

As for modernisation, the Government agrees with the committee that every case of replacement will have to be judged on its merits both from the standpoint of the interests of the economy as well as the interests of the industry. Discussing this question, viewing it from the export promotion angle, the committee has drawn attention to the point that India's exports will continue to fall steeply unless cloth produced on automatic looms is exported, the reason being the definite preference in the markets abroad for flawless products which can be manufactured only on automatic looms.

As for the installation of such looms, the committee felt that a proper psychological climate should be created within the country to facilitate their introduction within a specified period. The Government agrees entirely with this view, and hopes that with the co-operation of all concerned, it will be possible to evolve a simple procedure for their replacement according to a phased programme.

Advisory Body

The Government has accepted the suggestion of the committee that an advisory body consisting

For those you leave behind

DO you realise that you expose those who depend on you to grave risks, by failing to make immediate arrangements for their welfare, when you are no longer there to look after them yourself?

If you haven't yet done so, please make a will — or execute a Trust in their favour — now!

The administration of estates is a highly complicated matter these days, and it would be difficult to find a better Executor of Trustee than a bank which is always accessible, and which can be depended on to act with prudence, sympathy and impartiality. A bank is human — but it never dies.

The State Bank of India accepts appointment as Executor and Trustee, solely or jointly with any other person — and its services are at your disposal.

Why not call on your nearest Bank Agent or send for a copy of the Bank's Booklet on Executor and Trustee business?

The State Bank's local head office at Calcutta, one of more than six hundred offices waiting to serve you throughout India.

Foreign Trade...

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service. With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Foreign Agencies

ENGLAND, U.S.A., AUSTRALIA, CANADA, FRANCE, BELGIUM, HOLLAND, GERMANY, NORWAY, SWEDEN, SWITZERLAND, ITALY, AND JAPAN.

of all interests and having representatives from all the important textile centres should be set up to advise the Textile Commissioner on important matters affecting the industry as a whole or any of its units in particular. It proposes to set up such a body shortly as also a rationalisation sub-committee for advising on policies and principles governing rationalisation, assisted by regional sub-committees for dealing with individual schemes of rationalisation. It is, however, not considered necessary that a sub-committee should be set up for advising on principles and procedure for deciding application for the import of machinery.

As for the observations made by the committee on the levy of sales tax on yarn and other materials by State Governments after the replacement of sales tax on cloth by the Central excise levy, as also other levies by the States, the Government does not consider that the discretion of the latter in this matter should be fettered. The practice concerning the grant of concessions on the supply of raw materials to industry varies from State to State and in the implementation of the scheme of replacement of sales tax by additional excise duties, it was never contemplated that State Governments should maintain the status quo concerning these concessions, particularly in view of the restrictions placed under Section 14 of the Central Sales Tax Act, 1958.

Exports of Cloth and Yarn

The Government says that the need for promoting exports of cloth and yarn is constantly engaging its attention. Several facilities for the import of necessary materials and for the modernisation and rehabilitation of equipment have just been given to exporting mills to enable them to export textiles of high quality.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) rose by 0.3 percent to 116.7 during the week ended 18th October, 1958, compared with 116.4 for the earlier week. It was 0.7 percent higher than that of the week ended 4th October, 1958. The index was also higher by 0.3 percent and 7.0 percent, respectively, when compared with the corresponding week of last month and that of a year ago. The index for Food Articles advanced by 0.7 percent to 122.1 due to a rise

in the prices of milk in Calcutta (+33%), oranges (+19%), potatoes (+10%), masur in Patna (+9%), rice in Balurghat (+7%), mustard oil in Delhi and cummin (+5% each), arhar, gingelly oil and gur (+4% each), gram and chillies (+3% each), barley, eggs and tea (+2% each) and wheat and groundnut oil (+1% each). The prices of milk in Bombay (-20%), onions (-17%), rice in Kanpur (-16%), in Balasore (-9%), in Jamshedpur (-7%) and in Mathiath (-5%), bananas in Bombay (-11%), mung in Bombay (-8%), mustard oil in Kanpur and fish (-7% each), cashewnuts in Mangalore (-6%), maize and cardamoms in Mangalore (-5% each), jowar (-3%) and coconut oil, meat and black pepper (-1% each), however, showed a fall. The index for Tobacco stood unchanged at its previous week's level of 91.1. The price of castor oil (-1%) registered a fall and, in consequence, the index for the Fuel, Power, Light and Lubricants group moved down from 115.8 to 115.7. The prices of cottonseed in Hyderabad (+8%), raw wool in Bombay (+4%), raw jute (+3%) and singellyseed (+1%) moved up, while groundnuts (-3%) and linseed (-1%) showed a fall and the index for Industrial Raw Materials rose by 0.6 percent to 117.8 compared with 117.1 for last week. Lower prices of rayon yarn (-5%) and linseed oil and tin (-1% each) brought down the index for Intermediate Products by 0.5 percent to 110.1 compared with 110.7 for the previous week. The prices of zinc (+4%) and coir yarn (+1%) were, however, marked up. The index for Finished Products receded by 0.2 percent to 108.4 against 108.6 for the previous week. The items which showed variations were: silk and rayon manufactures and general chemicals (-2% each), cotton cloth (mills) (-1%), jute manufactures, oilcakes and bobbins (+1% each).

RETENTION PRICES FOR MYSORE IRON AND STEEL WORKS INCREASED

An average increase of Rs. 20 a ton and Rs. 5 a ton in the retention prices of steel and pig iron, respectively, payable to the Mysore Iron and Steel Works in Bhadravati, has been announced by the Government of India. The increase will be applicable to the period 1st April, 1955 to 31st March, 1959. This increase does not take into account the additional excise duty levied from 16th May, 1957. Adjustments on account of the additional incidence of excise duty on finished steel will be made on actual despatches from that date at the rate of Rs. 42.85 a ton. In July 1956, the Government announced the retention prices of steel and pig iron payable to the Mysore Iron and Steel Works. The average price of steel was Rs. 405 a ton and Rs. 195 a ton for Standard Foundry Grade I pig iron from 1st April, 1955. The present increase has been announced by the Government following the representation made by the company in 1957 for a revision of the retention prices. Its claims, based on increases in manufacturing costs such as increases in coal prices and railway freight, have been enquired into, in accordance with the recommendations of the Tariff Commission in its 1956 report, which provided for a revision of the retention prices payable, in the prices of raw materials and stores, freight rates or compulsory charges under any labour welfare schemes initiated by the State.

Plantation Topics

KERALA PLANTATION STRIKE SUSPENDED

CENTRAL INTERVENTION TO RESTORE ORDER

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE communist union leaders have suspended the plantation workers' strike on the High Ranges of Kerala since 30th October for "creating a peaceful atmosphere necessary for a negotiated settlement of the dispute". The union, it is stated has taken this decision "in the light of an assurance given by the State Labour Minister that the management is prepared for a negotiated settlement and that he is convening a conciliation conference on 31st October and 1st November." The communist-led workers went on strike on 4th October in the High Range plantations. In fact, it is the Central Government's intervention which has largely led to this suspension. The State Government received a communication from the Union Home Minister on 23rd October advising that the dispute between the planters and their workers be referred to adjudication in view of their failure to come to a settlement and the increasing lawlessness on the estates.

In his telegraphic communication, Pandit Pant is stated to have told the State Chief Minister, Mr. Namboodiripad, that the Deputy High Commissioner for the U.K. had personally conveyed to him his apprehensions about the danger to the life and property of the British nationals on Kerala estates. He also referred to certain reports he had received from "other people" about the prevalence of lawlessness there. The Chief Minister did not agree with this suggestion on the plea that it was opposed by the "majority of workers". The Union Home Minister however did not leave the issue at that. He took it up again with the Chief Minister and the Labour Minister while he was in the State capital for the South Zonal Council meeting on 27th and 28th October. He is reported to have told the State Ministers that the Central Government took a very serious view of the communist-sponsored strike and wanted the State Government to find a solution either through negotiations, which were preferred, or by referring the dispute to adjudication. The State Government was forced to give him an assurance that the strike would be called off. Before leaving, Pandit Pant announced to the Press that he got the impression that the communist-sponsored strike would be called off forthwith as a result of his talk with the State Ministers. The State Committee of the Communist Party was urgently summoned in Trivandrum and the decision to call off the strike was announced on 29th October. Pandit Pant made the announcement on 28th October.

Apart from the Central intervention, the fact that the strike was fizzling out also forced this suspension. Contrary to the expectations of communist leaders, other labour unions did not extend any real support. After the joint strike of 25th October, the other unions have suspended the strike until 6th November, with a view to creating a favourable atmosphere for negotiations. The communist union in the Munnar area at first refused to fall in line, although in other parts of the State, the communists agreed to call off the strike. The president of the communist union, Mrs. Rosamma Punnoose, started a hunger strike in Munnar, which she has now given up.

Police Firings

The three firings on the High Range estates and a few lathi charges by the police against violent communist-led workers have created a storm within the ruling party. The police action was contrary to the understanding given to the strikers by the leaders. They had been telling workers that the police would not interfere and they could do anything against willing workers and the management personnel. When the police gave protection to management staff and their property, they also were not spared. At least two sub-inspectors and over two dozens of police constables sustained serious injuries in the fight with the workers. According to official reports, two workers were killed and three others were injured. This has created a very embarrassing situation for the communist leaders, who have been noisily condemning police firings in other States. They are presently engaged in a campaign against the State police. They are trying their best to absolve their Government from responsibility for the police firings. They even go to the extent of blaming the planters by saying that European planters on the High Ranges bribed police officials and a instigated them to sabotage the new police policy of the Communist Government of Kerala. The organisational wing of the Communist Party is demanding drastic action against the police officials posted in the Munnar area. The State Government has transferred two police officials from Munnar and has appointed a commission to hold an enquiry into the alleged police excesses. Another commission has been appointed for conducting an enquiry into police firings in the High Range estates. In the meanwhile, non-communist unions and planters complain that they are not given sufficient protection by the police. For instance, the manager of the Kanan Devan Company's Periar estate, who was stoned and wounded by the strikers, has complained in his report to the police authorities that he was told by the police party camping in the adjoining estate that

they would not come to his rescue unless "they knew that violence was taking place".

Views of Mr. Namboodiripad

The United Planters Association in contradicting the Kerala Chief Minister's statement to the Union Home Minister that the reports about the danger to the life and property of European planters were false and that neither the person nor the property of anyone had been touched since the beginning of the strike, says that apart from injuries sustained by the police there have been reports of assaults at various places on 16 out of 21 days up to 25th October. There were several cases of attack on management personnel. Almost every day wherever there is obstruction of workers, the managers, if present, were insulted, obstructed, threatened or attacked. It is, therefore, not true to say that the persons of management personnel or their property have not been touched since the beginning of the strike.

In another statement the U.P.A.S.I. says that the management is of the firm opinion that the outburst of violence on the Kanan Devan estates was the outcome of open incitement to violence by top leaders of the Communist Party. The statement continues: "Now the Law Minister of Kerala has made certain suggestions which have grave implications. According to his statement, the police have been given instructions to resort to firing only under clearly dangerous circumstances compelling the use of extreme force. Is it his suggestion that firing occurred under conditions less compelling in Kanan Devans? Under present conditions any suggestion of influencing police action or appearing to make such suggestions by a Minister responsible for the preservation of law and order is most disturbing and can have very serious consequences. His proposal to set up a Special Police Force for plantations cannot be reassuring to the industry in view of his statement."

Compromise Formula

Commenting on the compromise formula proposed by the Labour Minister, the U.P.A.S.I. statement says: "The Labour Minister argued for a payment of Rs. 20 to the striking workers as an advance to be set off against the settlement of the issues and strike pay. This amounts to pronouncing judgement that the strike was justified. It also means that the Minister is seeking the management's support to subsidise the strike; not only to condone but to reward those who violated every code of conduct. The Labour Minister has taken a casual view of the loss of foreign exchange and revenue to the Government. If this represents the Government view, it shows that the victory for a party union is the dominating idea, not the loss to the country and the workers themselves. He also made a surprising observation, namely, that if workers are attacked during the strike, it is not for the management but for the affected party to appeal for police protection. Under the conditions obtaining in plantations, this suggestion would leave workers on scattered estates to the mercy of mobs who roam the estates and molest workers in the name of a strike."

There were Press reports last week that the Government of Kerala has offered to take over Kanan Devans and other companies. If these reports are correct, it can only be fulfilling its promise made 18 months ago, under very questionable circumstances, of nationalising foreign-owned plantations. The campaign now openly conducted against the Kanan Devan Hills Produce Company must be viewed against this background. There appears to be a subtle distinction between spokesmen to draw a distinction between foreign-owned and Indian plantations. The U.P.A.S.I. says that the plantation industry considers this to be a line of propaganda and states in unambiguous terms that the entire industry is aligned in its views on recent happenings. It alleges that the Government of Kerala is preju-

dicing the issues and is misleading the public on the Kanan Devan incidents.

Loss to Workers

The economic consequences of the strike are far more serious than the workers know. They seem to be under the impression that the estate owners will be the major losers. The fact is otherwise. The plantation rupee is divided in the following ratio: labour 35.3 percent, taxes 23 percent, upkeep 20.3 percent, reserves 10.4 percent, dividends 5.3 percent and management 5.7 percent. There is yet another factor. In September, October and November, the labourers earn a minimum of Rs. 2 a day over and above their minimum wage. As a result of the 26-day-old strike, every worker might have lost at least Rs. 92 in wages. There are workers who make anything from Rs. 5 to Rs. 10 a day during this peak season. Most of the tea bushes in the strike-affected areas are so much overgrown that they will not be ready for plucking for another six to eight weeks. It is estimated that more than 4 million lbs of tea has been lost already as a direct result of the strike. The crop will be lower for another two months because of pruning. The net result is that the peak season will be completely lost. On a very conservative estimate, the loss so far sustained by the country as a result of this strike is Rs. 1.5 crores, 80 percent of it in foreign exchange. The heavy loss sustained by planting companies will reduce the bonus for workers, as well as dividends for shareholders next year. It is for raising the 4 percent bonus which the tea gardens have already paid their employees that the communists have sponsored this strike. It is almost certain that next year the planting companies will not be in a position to pay even 4 percent.

Strike in Rubber Estates

Rubber production has also been affected by strikes. The Mundakayam Valley and many of the Malabar estates recently had a strike for a few days sponsored by communist unions on more or less similar grounds. Mundakayam Valley is India's largest rubber area, and there 10,000 lbs of rubber were lost daily as a result. Last year, India had to import over 13,000 tons of raw rubber to bridge the gap between indigenous production and the country's total requirements, at a cost of Rs. 12 crores. This year, the requirements will be higher in view of the expansion programmes undertaken by India's major tyre factories. Production having been affected by the strike, larger imports might become necessary. The impact of the strike in Kerala plantations on India's foreign trade will, under the circumstances, be serious.

The rubber growers have already paid a bonus of 64 percent for 1957. They have told the strikers and the State Government that unless and until the statutory price of raw rubber is raised, they cannot consider giving any more benefits to the workers. The price of rubber was last fixed in 1955. According to the formula suggested by the Tariff Commission in 1951, the producers can approach the Government for a revision of the price at any time a rise in costs exceeds a 10 percent tolerance limit. Since prices were fixed last, there have been substantial changes in the cost structure. According to rubber growers, a re-examination of production costs for that reason alone is overdue. Now the workers have raised a series of demands including higher wages, a bigger bonus, paid holidays, gratuity, and provident fund, which are capable of enhancing the cost considerably.

COCHIN TEA SALES

At Dust Sale W, 425,000 lbs of tea were on offer. There was a strong but irregular demand. Coloury mediums were dearer, and others were steady except for best liquorings which were easier.

GOOD GENERAL DEMAND AT
TEA EXPORT SALESTRONG SUPPORT FOR
DUSTS

AT Sale No. 18, held on 3rd and 5th November, offerings at the Export auction amounted to 64,901 chests. There was a good general demand for teas of orthodox descriptions. "Teas for price" were fully firm and sometimes dearer. Plain and low medium B.P.'s and Fannings were at times easier, but any better liquoring medium broken and Fannings were well supported and sometimes dearer. Orthodox B.O.P.'s and O.F.'s met with more demand, although at irregular rates, the few with bright liquors selling well but others being often 10nP to 20nP easier. C.T.C. teas were the weakest feature of the Sale, and were sometimes as much as 35nP easier with several withdrawals. Legg-cut Doars received fair support, but were generally easier. Whole leaf grades, particularly those from Assam, met with a keen enquiry and were the strongest feature of the sale, while more interest was shown in Darjeeling teas.

Quotations	1958	1957
Clean Black Pekoe	2.04 to 2.12	2.25 to 2.27
Plain B. P.	1.70 to 1.76	1.82 to 1.84
Plain Fannings	1.44 to 1.50	1.72 to 1.74
Medium B. P.	1.90 to 1.96	1.74
Medium Fannings	1.55 to 2.05	1.76 to 1.78
Best Assam C.T.C. B. P.	2.30 to 2.40	3.10 to 3.20
Best Assam C.T.C. Fgs.	2.50 to 2.70	2.85 to 2.90

At the Internal Sale, Dust offerings amounted to 21,477 chests, for which there was a strong general demand. Orthodox descriptions were generally firm and sometimes dearer, and the stronger liquoring powdery types were keenly sought after. Legg-cut Doars shared in the strong demand and often appreciated in price by 2nP and sometimes 4nP and again, the stronger liquoring powdery types in this category were well supported. C.T.C. teas were irregular and the medium kinds sometimes declined by upto 10nP, while the better liquoring types sold 20nP below valuations. A few selected lines of grainy exportable types met with keen competition and often realised prices above valuations. Darjeeling Dusts were irregular but a few better invoices sold well.

Quotations	1957	1958
Medium Doars Dust	1.96	1.70 to 1.74
Medium Assam Grainy Dust	1.98	1.74 to 1.78
Medium Assam CTC Dust	2.00 to 2.20	2.20 to 2.30
Best Assam CTC Dust	2.80 to 3.10 (Ncm.)	2.70 to 2.90

Leaf offerings amounted to 1,585 chests. There was a good general demand, but C.T.C. teas were irregular and sometimes easier.

FAIR BUSINESS IN FREIGHT
MARKETS

THERE was a fair miscellaneous business concluded during the past week in the freight markets, and a better tone was noted in the American grain market when \$(U.S.)6 was paid twice from Gulf to Hamburg. It is now learned that a total of 126 ships have been taken on time charter by China for varying periods. Three small vessels were fixed for ore from India—Cuddalore-Yugoslavia at 40s. West Coast-Poland at 45s 6d. West Coast-Black Sea at 37s 6d, all f.i.o.t. In the sale and purchase market, the Jalaganga is reported to have changed hands at the rupee equivalent of about £90,000.

LINSEED QUIET

Trading has been almost at a standstill over the past week, because of the holidays. Prices have shown hardly any change, but the undertone has remained quietly steady. It is reported that Bombay shippers have made some sales to Australia at marginal prices. Latest quotations are as follows: Ready Rs. 25-14 a maund, and November Rs. 25-12 a maund.

HIDES AND SKINS STEADY

The market ruled quietly steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 28th October and 3rd November, 1958)
Cowhides: Wet salted (Slaughtered) 4,500 pcs. on the basis of Rs. 9 to Rs. 14.50 and Rs. 16.50 to Rs. 26.

Goatskins: Wet salted (Patna, Daissee, Kustia) 59,800 pcs. on the basis of Rs. 325 to Rs. 340 and Rs. 375 to Rs. 385; Wet salted (he-killed) on the basis of Rs. 4.25 and (she-killed) on the basis of Rs. 3.75 a piece; Assam-Rampurhat-Dinajpur-Maldah-Purulia 32,600 pcs. on the basis of Rs. 280 to Rs. 350; Patna-Pakur 9,100 pcs. on the basis of Rs. 280 to Rs. 305.

Bazaar Stocks

(3rd November, 1958)

Cowhides: Wet salted 1,11,500 pcs.
Goatskins: Wet salted (Daissee, Kustia, Patna, Killed) 17,000 pcs.; Assam-Dinajpur 13,900 pcs.; Muzafferpore-Patna-Pakur - Purneah - Kissenjani 2,97,000 pcs.

COMPANY AND PUBLIC NOTICES

HASIMARA TEA COMPANY, LIMITED.

NOTICE is hereby given that the Fifty-third Annual General Meeting of the Members of Hasimara Tea Company, Limited will be held at the Registered Office of the Company at No. 6, Church Lane, Calcutta, on Wednesday, the 26th November, 1958 at 3-15 P.M. for the following purposes:—

- To consider and adopt the Profit and Loss Account for the year ended 31st December, 1957, and the Balance Sheet at that date, and the reports of the Directors and Auditors.
- To declare dividends on the Preference and Ordinary Shares.
- To appoint Auditors for the year ending 31st December, 1958, and to fix their remuneration.
- To appoint a Director in place of Mr. D. P. Goenka who retires by rotation and who, being eligible, offers himself for re-election.

AS SPECIAL BUSINESS:—

- To appoint a Director in place of Mr. H. R. Townsend who resigned on the 31st October, 1957 and in this connection to consider and, if thought fit, to pass the following resolution which will be proposed as a special Resolution, namely:—

"That Mr. R. F. Kettle who is a Member and Director of W. S. Cresswell & Company Private Limited which Company may be deemed to hold an office or place of profit under the Company be and he is hereby appointed a Director of the Company."

Special notice dated the 11th March, 1958 of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that the notice is given to satisfy requirements of Section 190 and sub-sections (1) (c), (2) and (3) of Section 261 of the Companies Act, 1956, for the reason that Mr. R. F. Kettle is a Director and Member of W. S. Cresswell & Company Private Limited which customarily acts as Brokers of the teas produced by the Company which may be deemed to be "an office or place of profit" under the Company. Having regard to the fact that the Managing Agents of the Company have a right to appoint a member to the Board of the Company a special resolution appointing Mr. Kettle as a Director of the Company is required by the provisions of Section 261 of the Act.

The Share Transfer Books and Register of Members of the Company will be closed from the 13th November to the 26th November, 1958, both days inclusive.

By Order of the Board,

DAVENPORT & COMPANY PRIVATE LIMITED,
Managing Agents.

6, Church Lane,

Calcutta, 1st November, 1958.

Note: A member entitled to attend and vote at the Meeting may appoint a proxy to attend and vote on his behalf. A proxy need not be a member of the Company.

EXPLANATORY STATEMENT.

Annexed is a notice convening the Fifty-third Annual General Meeting for the purpose, among others, of giving effect to the transaction explained hereunder.

W. S. Cresswell & Company Private Limited together with J. Thomas & Company Private Ltd. have for a number of years sold the Company's teas under the terms and conditions laid down by the Calcutta Tea Traders' Association. Further, a representative of each of these Companies has held a seat on the Board of your Company for many years and this has been found most helpful and beneficial to your Directorate as each such representative brings to the deliberations of the Board a practical knowledge of the tea market and marketing conditions.

It is now proposed to appoint Mr. R. F. Kettle, a Director and Member of W. S. Cresswell & Company Private Limited, as a Director of your Company to fill the vacancy created by the resignation of Mr. Townsend.

As W. S. Cresswell & Company Private Limited may be deemed to be holding an office or place of profit under the Company and as the Managing Agents of your Company have a right to appoint a representative to the Board of Directors of your Company, a special resolution will be required, pursuant to the provisions of Section 261 of the Act, on each occasion any member, officer or employee of W. S. Cresswell & Company Private Limited is to be appointed or reappointed a Director of your Company whose period of office is liable to determination by retirement by rotation. For this reason special notice has been received by the Company of the intention to propose the Special Resolution specified in item No. 5 of the convening notice to effect the appointment of Mr. Kettle as a Director. Mr. Kettle may be deemed to be interested in the proposed Special Resolution to the extent indicated above.

AMLUCKIE TEA COMPANY, LIMITED.

NOTICE is hereby given that the Annual General Meeting of the Members of AMLUCKIE TEA COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 27th November, 1958, at 3-15 P.M. for the following purposes:—

- To receive and consider the Profit and Loss Account for the year ended 31st December, 1957, the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
- To declare Dividends.
- To appoint Directors in place of those retiring.

And, in this connection to consider, and if thought fit, to pass the following resolutions which will be proposed as Special Resolutions in conformity with the provisions of Section 261 of the Companies Act, 1956:—

- "That Mr. P. Banyard be and is hereby appointed a Director of the Company liable to retirement by rotation."
 - "That Mr. G. T. Routledge be and is hereby appointed a Director of the Company liable to retirement by rotation."
- Special Notices of the intention to propose the foregoing resolutions as Special Resolutions in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, have been received by the Company wherein it is stated that Mr. P. Banyard and Mr. G. T. Routledge are "associates" of the Managing Agents and within the meaning of the Act, and that therefore, they can only be appointed by Special Resolutions as Directors liable to retirement by rotation.

- To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 18th November, 1958 to 27th November, 1958, both days inclusive.

By Order of the Board,
McLEOD & CO. LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3, Netaji Subhas Road,
Calcutta, 30th October, 1958.

Note:—

1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

2. Payment of the proposed Dividends, if declared, will be made on or after 11th December, 1958, only to those members whose names are registered in the Books of the Company on 27th November, 1958, or to their Mandatees.

THE INDIAN CABLE COMPANY LIMITED

THE Directors have decided to recommend at the next Annual General Meeting of the Shareholders, Dividends for the year to 31st March 1958 as follows:—

- Dividend on Cumulative Participating Preference Shares @ 12½% free of Income Tax.
- Cash Bonus on Cumulative Participating Preference Shares @ 2½% free of Income Tax.
- Dividend on Ordinary Shares @ 12½% free of Income Tax.
- Cash Bonus on Ordinary Shares @ 2½% free of Income Tax.

Note:—

Ordinary Shares issued as Rights or Additional Shares during the year are not eligible to participate in the above Dividend and Cash Bonus.

By Order of the Board,
B. J. WOODLEY,
Chairman.

Calcutta, 30th October, 1958.

THE KARANPURA COLLIERIES LTD.

AT a meeting of the Board of Directors held on Thursday the 30th October, 1958, the following dividends were recommended to be paid for the year ended 28th February, 1958.

- Cumulative (taxable)
Preference Shares 5½% per annum after deduction of Income-tax payable by the Company.
- Ordinary Shares 5% per annum without any deduction for Income-tax payable by the Company.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 30th October, 1958.

THE INDIAN IRON AND STEEL COMPANY
LIMITED
NOTICE

NOTICE is hereby given that the Annual General Meeting (being the Forty-first Ordinary General Meeting) of the Company will be held at the Registered Office, 12, Mission Row, Calcutta, at 3 p.m. on Friday, the 28th November, 1958, for the following purposes:—

- To receive and adopt the Audited Accounts for the year ended 31st March, 1958, and the Directors' and Auditors' Reports thereon.
- To confirm as the final dividend for the year ended 31st March, 1958, the interim dividend on the Ordinary shares declared by the Board on the 12th August, 1958.
- To appoint Directors in place of those retiring.
- To appoint Auditors and fix their remuneration.

SPECIAL BUSINESS

- To consider, and if thought fit, to pass the following Resolution as a Special Resolution.

"That Article 113 of the Articles of Association of the Company be altered in manner following:—

The first two sentences in lines 1 to 13 shall be deleted and the following substituted therefor:—

"Unless otherwise determined by the Company in General Meeting each Director shall be paid out of the funds of the Company by way of remuneration for his services in attending Meetings of the Directors a fee of Rs. 100/- for each Meeting attended by him.

Each Director shall also be entitled to receive a share of a commission (to be divided among the Directors in such manner as the Directors may determine equally) of one per cent of the net profits of the Company computed in the manner referred to in sub-section (1) of Section 198 of the Companies Act, 1956 in any financial year. The commission payable to the Directors shall be payable for a period of five years up to and including the financial year ending on the 31st March, 1961, but this provision may be renewed or reviewed from time to time in accordance with the provisions of any statutory enactment from time to time in force and applicable thereto."

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

Calcutta,

4th November 1958.

N.B. Explanatory Statement for Resolution No. 5 as required by Section 173 of the Companies Act, 1956, has been sent to all shareholders.

THE KARANPURA COLLIERIES, LIMITED

NOTICE is hereby given that the Fortieth Annual General Meeting of THE KARANPURA COLLIERIES, LIMITED will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, on Saturday, the 29th November, 1958, at 10-30 A.M. for the following purposes:—

- To consider and approve the Audited Accounts of the Company for the year ended 28th February, 1958, and to receive the Directors' and the Auditors' Reports thereon.
- To declare the Dividends recommended by the Directors.
- To appoint a Director in place of a retiring Director.
- To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from the 15th to the 29th November, 1958, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Calcutta, 30th October, 1958.

Note:—

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(b) The Dividends, if declared will be paid on or after 6th December, 1958, to those shareholders so entitled whose names appear in the Company's books on the 29th November, 1958, or to their mandatees. No application for Dividend Warrants will be necessary.

INDIA STEAMSHIP COMPANY, LIMITED.
ORDINARY GENERAL MEETING.

NOTICE is hereby given that the Ordinary General Meeting of the Members of the above-named Company will be held at the Registered Office of the Company, "India Steamship House", 21, Old Court House Street, Calcutta, on Monday, the 22nd December, 1958, at 4 p.m. in order to transact the following business:—

- To receive the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 31st March, 1958.
- To sanction payment of Dividend on Preference Shares as recommended by the Directors for the year ended 31st March, 1958.
- To sanction payment of Dividend on Ordinary Shares as recommended by the Directors for the year ended 31st March, 1958.
- To appoint a Director in place of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon.), who retires by rotation and is eligible for re-appointment and to consider and if thought fit, to pass the following resolution of which a Special Notice as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

Resolved that pursuant to the provisions of Section 261 of the Companies Act, 1956, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon.), who has attained the age of 71 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

- To consider, and if thought fit, to pass the following resolution as Special Resolution, in respect of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon.), a special Notice for which as required by Section 261 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto.

Resolved that pursuant to the provisions of Section 261 of the Companies Act, 1956, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon.), a Director of the Company who is also a Director and Member of Messrs. Lionel Edwards (Private) Ltd., the Managing Agents of the Company and thereby an associate of the Managing Agents, be and is hereby re-appointed a Director of the Company.

- To appoint a Director in place of Maharajadhiraja Sir Udyachand Mahatab Bahadur of Burdwan, K.C.I.E., who retires by rotation and is eligible for re-election.
- To appoint a Director in place of Mr. S. C. Roy who retires by rotation and is eligible for re-election.
- To appoint Auditors and fix their remuneration.

The Share Transfer Register of the Company will be closed from 1st December, 1958 to 22nd December, 1958, both days inclusive.

By Order of the Board,

A MUKERJI,

Assistant Secretary,

INDIA STEAMSHIP COMPANY LTD.

Calcutta,

1st November, 1958.

The Dividend if sanctioned will be made payable to those Shareholders whose names stand on the Register of the Company on the 1st

December, 1958, and the Dividend Warrants will be posted from the 20th January, 1959, onwards.

N.B.—Member entitled to attend and vote is entitled to appoint a proxy and the proxy so appointed need not be a member of the Company.

Explanatory Statement as required by Section 173 of the Companies Act, 1956.

(1) In respect of Item No. 4 of the Notice of the Annual General Meeting, Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon.), has attained the age of 71 years and hence this needs your approval by a resolution in respect of which a Special Notice has been received from a Shareholder in accordance with the requirements of Section 190 and 261 of the Companies Act, 1956. Sir A. Ramaswami Mudaliar, joined the Board of Directors of the Company in 1947. During the long period of his association with the Company he has rendered very valuable service to the Company and it is in the interest of the Company that the Board should avail of his valuable advice which is of great asset to the Company, by retaining him as a Director of the Company.

(2) In respect of Item No. 5 of the Notice of the Annual General Meeting, a Special Notice has been received from a Shareholder of the Company as required by Section 261, proposing that the appointment of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon.), as a Director, be made and/or be approved in accordance with the provisions of the Companies Act. The Managing Agents of the Company, Messrs. Lionel Edwards (Private) Ltd., have the right to appoint two Directors as ex-officio Directors of the Company. Mr. G. K. Khemka and Mr. K. M. Naik are the two ex-officio Directors of the Company. Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon.), became a Director of the Company in the year 1947, and has for the last several years been associated as one of the Directors of the Managing Agents, who are entrusted with the Management of the affairs of the Company and of which he has been the Chairman since the date of his appointment. As it is in the interest of the Company that it should continue to receive the benefit of his valuable advice and guidance, it is desirable that his appointment as a Director be made and/or approved by a special resolution in accordance with the provisions of Section 261 of the Act.

THE EUROPEAN COMMON MARKET AND INDIA'S TRADE PROSPECTS FADING BUT SITUATION STILL NEEDS WATCHING

COUNTRIES outside Europe took only a remote and intermittent interest in the long and complex negotiations for a west European Common Market. So many plans for unification and for Customs unions on the Continent have come to nothing, that scepticism seemed justified about the latest and by far the most ambitious of such plans. But events began to move quickly in 1956 and 1957, until a firm programme and time-table for the Common Market were drawn up and approved in the Rome treaties. The question arose whether the urgency and facility of these final negotiations were a sign that west Europe was at last really determined to unite economically. From Paris at least, it looked much more likely that it was just another sign of the love of paradox of the politicians of the Fourth Republic: while the French Government pursued ultra-nationalist policies in one direction (for instance, on Suez, Algeria and armaments) it saved its conscience by promoting theoretical internationalism in paper plans for Euratom and the Common Market. In any event, other countries began to take the project seriously after the signing of the Rome treaties, and even more seriously when the Common Market came technically into operation on the first day of this year. (The treaties visualise an initial 12-month period in which nothing happens except "preparation".) Earlier scepticism and lack of interest then gave way to active concern. Governments and business men all over the world, including India, began wondering what impact on their affairs the Common Market would have.

All of them found that this was a very difficult question to answer. Appeals to the six signatory powers produced reassurances, but very little information. The Conservative Government in Britain decided that it knew the answer as far as the U.K. was concerned, and proceeded to make energetic and anxious representations to the Continental capitals. Mr. Macmillan may have communicated some of this anxiety to those Commonwealth capitals, including New Delhi, where he sought support. The question was thus posed: what advantages and disadvantages might India expect to flow from west Europe's Common Market? It was at once evident that India's concern was infinitely less than Britain's, both because the U.K. depends more on foreign trade and because the Common Market threatens to give her main rival, West Germany, a privileged position within the Continental market for manufactures. But any substantial trading nation such as India, it was thought, must have similar, if less acute, reasons for anxiety. After all, the nations of west Europe now import twice as much from the outside world as the United States does, so if six of them form a Customs union, this must surely have reverberations throughout international trade. That nations such as India would be specially involved seemed even more likely when the dependencies of the Six (that is, most of Africa) were co-opted into the Common Market.

Although India and her neighbours did not do as the Latin American countries did and present a formal set of questions to the Six on the possible effects of the Common Market on their mutual trade, the Indian Government did take up the question at G.A.T.T. meetings. What replies it received to the specific enquiries it might have made, is not clearly known. Some pundits have ventured detailed forecasts of how the Common Market will affect this aspect or that of India's foreign trade. But in general economists and business men in this part of the world have realised that such detailed speculation may be premature. The feeling has persisted that the Common Market must have some effect on India's exports, and that the effect will almost certainly be bad.

Recent enquiries in the Continental capitals suggest that it would be wiser to relapse from this mood of vague apprehension to the scepticism that was the first reaction of many people to news of

the Common Market, with the reservations that will be noted at the end of this study. The reasons for dismissing anxiety about the Common Market's consequences are these. Firstly, no one in west Europe is sure that the Rome treaties will ever be implemented extensively, let alone in their entirety, in view of the changed political atmosphere within France and as between France and her neighbours. Secondly, many months' analysis of, and reflection on, the treaties by European economists have led to the conclusion that the Common Market plan is a juridical document and not an economic document like, say, India's five year plans. It is a legal framework, of which the economic content has yet to be supplied by events and that content is virtually impossible to predict even as concerns west Europe itself, let alone as concerns hypothetical repercussions on Europe's trade with other distant countries such as India. Thirdly, whatever these latter repercussions (if any) may be, they will emerge very gradually (a matter of quinquennia, not months or years), and with ample notice between each stage. Fourthly—and this point holds even if what is said about the previous three proves wrong—none of the possible effects that could flow from the successful implementation of the Common Market would be important in comparison with the revolution that India's foreign trade must undergo in order to cope with the current and the next five year plans: the situation here is very different from that of a country with a relatively stable trading pattern such as the United Kingdom. Finally, even assuming the worst, namely, a rapid, successful, protectionist and discriminatory evolution of the Common Market, this would hit many (and more influential) nations before it hit India. This country is well protected against such dangers by its association, contractual or amicable, with much more powerful potential victims, for instance in G.A.T.T. and in the sterling area.

Several of these points deserve amplification. Doubts about the smooth implementation of the Common Market treaties are justified by the notorious hostility of General de Gaulle and, even more, of leading Gaullists, to any scheme that might limit France's sovereignty or efface her individuality in a union that includes West Germany. The new régime in Paris has indeed given assurances that it will respect the treaties signed by its predecessor, but since the Common Market treaty is riddled with escape clauses and excuses for evasion and procrastination, faithfulness to the letter of the pact will mean little. More important would be faithfulness to its spirit, and here it is useless to deny that last summer's political upheaval in France has completely transformed the outlook for European union. Besides, quite apart from questions of personalities and policies, there is the stark economic fact that France is not prepared, under any régime, for a return to free competition with her low-cost neighbours West Germany and Italy. From this point of view, the

"year of preparation" has been quite wasted; France has done nothing to fit herself for an intensification of competition. The most that can be expected to happen in 1959, the first year of the Common Market's active life, is an all-round 10 percent reduction of Customs duties in west Europe, and even that will concern not merely the six signatories of the treaties but all the European members of the O.E.E.C. Although technically an infringement of the G.A.T.T. rules, the limited and discriminatory (because it is confined to west Europe) freeing of trade will not damage India's trade with the West; perhaps the contrary will be the case.

It might be argued that the political changes in France can at most delay the implementation of the Common Market pact and that the move towards unity will begin some time, if a few years later. But this overlooks the fact that the main design of the British Government has been to ensure that the Common Market was not set up before its own "free trade area" scheme (which would safeguard outsiders from the possible harmful effects of the Common Market on their trade with the Continent) was adopted. The present delay and the cooling of the European unity élan that it produces, give London more time to exercise its potent means of pressure and persuasion on the Continental capitals. Every victory that London gains in its tenacious battle against the objectionable features of the Common Market further protects outsiders against any possible damage to their trade with west Europe.

What is true, however, is that there is a tendency for the countries of west Europe as a whole (and not only the Six of the Common Market) to trade increasingly between themselves, at the expense of their trade with raw material producers, such as the countries of Asia. This tendency will continue, whatever the fate of treaties such as the Common Market. The trend is, beyond doubt, harmful to India; and her five year plans need to take account of it. It is the result of the progress of synthetics: of the increased productivity of western agriculture as compared with Indian agriculture; of the development of new sources of energy; of the lesser weight of food and clothing in a prosperous family's budget compared with durable consumer goods (the former absorbing more imported materials than the latter); and generally of the higher level of investment in Europe than in Asia. This is one of the enduring facts of international trade that has to be reckoned with: it will mean a steady deterioration of the terms of trade against India during the forthcoming five year plans. Unless those plans make allowance for it, this country will continue to be surprised by foreign exchange crises, as she was by the last one. But the most that the Common Market could do would be to exacerbate it slightly. The same trend shows up in trade between Asia and all advanced western countries, not least Britain, which is becoming more independent of the overseas Commonwealth each year. If the scare about the effects of the Common Market on India's trade with Europe has served to draw attention to this

would not be relevant here, because those territories were already mostly in the franc zone.

India's main interest is in trade with West Germany. In this case, the outstanding fact is that West Germany enjoys an immense and growing surplus in her trade with India; this surplus had already swollen to Rs. 76 crores by 1955-56. Nothing the Common Market could imply would produce any significant worsening of this position. The plain fact is that the imbalance in India's trade with West Germany is already, and has been for several years, beyond the power of the former's exports to rectify. India can never hope to balance her transactions with the West Germans by trade alone. She must obtain capital imports from them. The Common Market scheme does not affect her chances of doing that.

When one remembers the harm that India has already suffered in her trade with Europe because of the growth of the west European jute mill industry—a growth that was stimulated by the Indian Government's policies as much as by European protectionism and by Pakistan's raw jute policy—one realises that it is rather late in the day to start worrying about declining exports of this commodity or the other to the Continent. Looking back on the history of world trade in jute manufactures since the war, it can be said that India has already suffered the worst: half-a-dozen Common Markets could not equal that blow. And if that seems but cold comfort, one may look to the future and think of tea: the present limited consumption of tea on the Continent and its tendency to rise in spite of grotesquely high prices holds a promise for India's exports to Europe that half-a-dozen Common Markets cannot tarnish, provided the authorities here make the necessary exertions. (Such exertions might well commence

INTERNAL RESOURCES FOR THE PLAN

THE flow of substantial foreign aid to India in the midst of an acute balance of payments crisis may have lulled some into the complacent belief that the second plan will now be able to proceed satisfactorily. But this is far from being the case. The shortage of internal resources has still to be overcome, and it could hold up many important projects, throwing the entire pattern of investment out of balance. It is, therefore, necessary to try to remedy the shortage with the same earnestness that has been shown in securing assistance from abroad. The Federation of Indian Chambers of Commerce and Industry has produced an informative and up-to-date booklet which focusses attention on this problem. It points out that, compared with the estimates of resources which it was originally proposed to raise from actual savings, a large shortfall has become evident since the reappraisal which has lately been made. For instance, the surplus from current revenues, which was estimated at Rs. 800 crores, is now placed at Rs. 759 crores; borrowings from public loans and small savings have been reduced from Rs. 1,200 crores to Rs. 984 crores; and the contribution of provident fund and other deposit heads has been cut from Rs. 250 crores to a mere Rs. 29 crores. There is thus a total shortfall of Rs. 378 crores. This, it is estimated, will be made up partly by foreign aid being Rs. 238 crores more than the Rs. 800 crores anticipated in the report, and an additional Rs. 100 crores will come from the railways, whose share was originally fixed at Rs. 150 crores. The volume of deficit financing remains the same at Rs. 1,200 crores as it would be unsafe to exceed this already risky limit. Thus,

with an enquiry into why the price of tea is so high in Continental Europe, followed by diplomatic action to secure a reduction of tariffs where these have proved to be responsible.)

In sum, the still doubtful birth of the Common Market and its hypothetical threat to India's exports will be no excuse for failure to wrestle at this end with the problem of increasing sales to west Europe. The problem will have to be attacked with every determination, whether or not the Common Market fulfils its promise. And it will have to be attacked in the clear realisation that it is unlikely to be resolved in the foreseeable future—that this country's trade with the Continent will continue to be in deficit and will only be balanced by capital exports from Europe either directly or through the international institutions. This is not to deny the possibility that one or other of India's minor export industries might find itself placed at a disadvantage by some protectionist regulation in the Common Market. But such cases will have to be met as they arise, or, more exactly, just before they arise. The opportunity to do this exists in G.A.T.T., where the Indian Government will have to see that the complaints of individual Indian industries about specific cases of discrimination (if they occur) are promptly and forcibly drawn to the attention of the Six. India will not lack for allies among the other members of G.A.T.T. in making such representations, for some of them will be watchfully suspicious. It will no doubt turn out to be much easier to protect Indian industries against protectionism in a public and multi-national organisation like the Common Market where decisions have to be preceded by open debate and agreement, than against the protectionism of single nations where harmful tariff changes can be prepared secretly and suddenly.

the total resources of which the planners feel reasonably certain amount to Rs. 4,260 crores, or Rs. 540 crores less than the Rs. 4,800 crores which was the first investment target for the public sector.

Now that the National Development Council has settled the figure—finally, it is said—at Rs. 4,500 crores, there may be less scope for confusion about the amount of the outlay. But it is equally important to know in what final shape the second plan stands, how the priorities are being readjusted, and whether welfare or wealth-creating aspects are to be given the greater importance. The latest deliberations of the Council have thrown little light on these points. It has not even been indicated how the gap between Rs. 4,500 crores and the latest estimate of probable resources will be made up, although taxation and deficit financing might suggest themselves to the Government as the easiest of courses. The F.I.C.C.I. booklet has something pertinent to say about the standards of budgeting in Central Ministries as well as State Governments. Numerous instances have been given where gross over-estimates of expenditure, and in some cases sheer administrative incompetence, have led to large funds remaining unused and having to be surrendered. Even the money which is spent on development schemes is not always wisely and economically used. The sharp increase in civil administration expenditure and in the number of Government employees suggests this. There is another matter to which the booklet draws attention—the profits or “surpluses” of concerns in the expanding public sec-

tor. It was hoped by the planners that part of the resources for the plan would be found from these undertakings. There is no sign yet of that hope being realised substantially.

It is thus quite on the cards that the “gap” in the plan budget will be made up by another draft on the resources of the private sector, in which capital formation has been lagging seriously. It is already somewhat doubtful whether all the industrial and mining schemes in this sector, the cost estimates of which have also been revised upwards, can be implemented. The booklet argues with considerable force that while the mobilisation of internal resources is extremely important, the manner in which it is done is no less important. If it is done by endangering institutions which “develop and canalise economic leadership, enterprise, and investments”, then the choice will not have been a wise one. “Planning has to take an overall interest in all economic sectors, none of which should be allowed to languish or stagnate.”

AIRCRAFT AND SHIPBUILDING IN THE U.K.

CONTRASTING PROBLEMS OF TWO IMPORTANT INDUSTRIES

IT was evidently with extreme reluctance that the British Government authorised the Export Credits Guarantee Department to insure credit on airlines and civil aero-engines for periods as long as seven years. The previous limit, for these as for other capital goods, was five years. The aircraft firms had argued for months that they could not offer the same liberal credit as their main competitors and that valuable markets were being lost, but the Government is anxious to avoid any suspicion that it is participating in a “credit war”. When Sir David Eccles, President of the Board of Trade, announced the change he emphasised that it was “exceptional”, and there are, indeed, good reasons for treating the aircraft trade as an exceptional case. The world's potential demand for civil aircraft in the next decade is valued in thousands rather than hundreds of millions of pounds, and there was a serious risk that Britain's share of this trade would diminish. Britain's exports of aircraft and parts are at present at an annual rate of more than £150 million, but the value of new orders placed this year has not been sufficient to maintain that rate when old orders are fulfilled.

British aircraft firms are now on a parity with their American competitors as far as export credit is concerned. It is clear that the British Government will match whatever terms the U.S. Export-Import Bank may offer. In other respects the advantages seem fairly evenly divided. The Americans have already secured a large proportion of new orders valued at approximately £1,000 million for 1958-61 and it is unlikely that the major airlines will commit themselves much further, even on extended credit until some of the new aircraft are in profitable service. As most of the big aircraft in service are American, the American aircraft companies are advantageously placed to get new orders by offering favourable terms for buying back used aircraft. On the other hand, the new British airlines, smaller and more manoeuvrable than the American giants, are probably more suitable for most operators. And payment for British aircraft can be made in sterling—though this advantage diminishes as dollars become more plentiful. Any way, the British industry has now a real opportunity to justify its huge (Government-aided) expenditure on research and development. Technically the results of this expenditure are excellent, but in terms of productive capacity they are less impressive. The American industry began the postwar era with an immense advantage. By mutual agreement, the wartime effort was concentrated on bombers in America and on fighters in Britain—and fighters are useless as a basis for developing airlines. The British industry has since been hesitant in building up productive capacity, because the market for its products has been precarious; and resources have been wasted on military prototypes which have been abandoned. The industry has been too slow in amalgamating its own resources; but this year the Government has been prodding it into action along this line. A difficulty that confronts the manufacturers, of whatever nation, is the unsatisfactory financial state of the world's airlines. They have rapidly increased their traffic by maintaining or reducing their fares in a world where most prices have been rising, but in the process they have earned very meagre profits. Hence their financing problems—and the importance of export credits.

The problems of airline operators may be serious, but those of some shipowners are far worse. There is no simple and direct comparison between the two services and the two industries that provide their basic equipment, but there are some interesting points of contrast and comparison. There has been nothing in the aviation business to compare with the slump in freight rates in the shipping

business. But the slump is in tramp shipping; rates in the liner services are much more stable. The shipping lines compete with the airlines for passengers and for the more valuable kinds of freight, and their interests are often closer than those of the shipping lines and the tramp-ship operators. The airlines and the shipping lines are equally not interested in the coal trade between America and Europe, which is an important factor in tramp shipping rates. There are other sub-divisions in shipping, notably the specialised ships for carrying oil or ore or food. However, these distinctions are not of major importance to the shipbuilding industry, which is, within limits, adaptable. The simple fact is that the world has too many ships in relation to traffic. Not even the most modern vessels can always be operated at a profit; large reserves of carrying capacity are laid up—available, therefore, to absorb the impact of any short-term increase in traffic; new orders for ships are few, cancellations of old orders frequent.

Comparison between the aircraft and the shipbuilding industries in Britain presents a curious paradox. While airlines are expanding, the aircraft industry is confused and its resources are not fully employed; while shipping, as a whole, is in a

state of crisis, the shipbuilding industry is working steadily in a state of full employment. The explanation is not the volume of new orders but the accumulation of old ones. In the optimism of recent years a huge total of orders has been placed with the shipyards. But the comfort of well-filled order-books is transient. The rate of launching and completion has been disappointing, but old orders are being gradually worked off. Cancellations have not been large in relation to accumulated orders, but they were sufficient in the year to September last to neutralise completely the modest total of new orders. Statistically, the industry has enough orders to keep it fully employed for some years: in fact, some of the smaller yards face unemployment only a few months hence. For the first time in a generation the shipbuilding industry is threatened with recession. Most authorities agree that the world has too much capacity for building ships. In terms of launchings and completions, the British yards have already lost to Japan the first place in the industry that they had occupied so long, and their prospect in this new era of competition is discouraging. From the national viewpoint, resurgence of the aircraft industry is thus doubly important.

new orders received by manufacturers have been rising, but closely in line with shipments, and backlogs of unfilled orders have levelled off following the steep decline through early spring. Business indicators showed some hesitancy in September. The Federal Reserve's seasonally adjusted index of production for that month was 137, only one point higher than the revised August index. The U.S. Department of Commerce estimates that retail sales, seasonally adjusted, were down 2 percent from August to September. According to the limited data available, October output and sales may show only a seasonal rise. In part, the levelling out of production and sales reflects temporary factors such as strikes and model changes in the motor-vehicle industry, as well as, perhaps, a natural adjustment following a period of unusual acceleration. Some people ask whether recent developments are signalling a renewed downturn, but the general view is that they are not. The question now is whether the upturn tripped off in large part by Government spending can become self-sustaining. To assure full recovery, a sizeable revival in both consumer and business demand for durables is needed. While a moderate upturn in these areas is generally expected, few observers look for anything spectacular.

In its early stages, the outstanding characteristic of this recovery was the rapid reversal of the recession—the sharp decline followed immediately by an equally sharp upturn. This V-shaped pattern was conspicuous in industrial production, and particularly in durable goods output. The Federal Reserve index of durable goods production rebounded 10 percent in the four months from April to August—the same percentage it had declined in the four months preceding the April low. In September, however, the durable goods index was unchanged from August. Most durable goods industries expanded production in September, notably steel, building materials, furniture and household appliances. A drop of one-eighth in the output of motor-cars, lorries and parts neutralised this trend. The decline in motor-car production reflected the greater concentration of model changeover shut-downs this September than last, and the loss of output through local union walkouts both before and after the industry signed new three-year contracts with the international union. Labour troubles and resulting parts shortages closed some plants for most of October as well, and production of new cars, originally scheduled at 488,000 in October, may not have reached 250,000. The output lost due to strikes in September and October combined was 300,000 new model cars, according to Ward's Reports. Such a loss, just as the 1959 models were being introduced, aided a rapid clean-up of old model stocks but resulted in thin dealer stocks of new models. Sharply accelerated production is scheduled in November and December as motor-vehicle manufacturers work to stock their dealers and fill order backlogs.

Productivity in Sugar

Many familiar problems of sugar production were discussed at the 26th annual convention of the Sugar Technologists Association of India in Kanpur last week. While U.P.'s Minister for Agriculture, who inaugurated the convention, drew the industry's attention to the shortfall in production which is feared during the coming season, Mr. Deshraj Narang, president of the convention, criticised the Government's decision to control the price and distribution of the reserved quantities of sugar. Thanks to whatever advances have been made in sugar technology, the Director of the National Sugar Institute, Kanpur, has been able to claim a perceptible improvement in the quality of sugar produced throughout India in 1956-57; the major portion of the output was accounted for by the highest colour grade, namely, I.S.S. 29. According to the latest review by the Institute, there has also been a steady fall in the production of crushed sugar during the past few seasons. While the Bureau of Sugar Standards may claim credit for this performance, the fact remains that cane production and area have decreased in States like Uttar Pradesh, Bihar, Madhya Pradesh and West Bengal. To some extent, perhaps, the decline may have been offset by the increases reported from Bombay and Punjab. It was stated at the convention that the export of even “200,000 tons of sugar would yield an income of Rs. 12 crores to Rs. 15 crores in terms of foreign exchange.” The decision to export 50,000 tons of sugar was taken by the Government of India about five months ago and recently the last date for shipment was extended until the end of November. The quantity so far sold is estimated at about 30,000 tons. It seems that India cannot be a big exporter except at a heavy loss to the industry, unless ways and means are found to cut down the cost of production.

Commerce in Cochin

In his address from the chair at the latest annual general meeting of the Cochin Chamber of Commerce, Mr. J. K. Hopkins dealt at some

Current News and Comment

More Capital for J. K. Steel

On a later page today are published details of an offer whereby ordinary shareholders in J. K. Steel Ltd can increase their capital investment in the company. The present paid-up capital is Rs. 5 lakhs, divided into 5,000 ordinary shares of Rs. 100 each. The proposal is to increase it by Rs. 25 lakhs, by issuing 10,000 7 percent tax-free redeemable cumulative preference shares of Rs. 100 each and 15,000 ordinary shares of Rs. 100 each. All these shares are offered at par to the present members, in the proportion of two preference and three new ordinary shares for each ordinary share now held. The full amount is payable on application, and shareholders are entitled to apply for additional shares also but the allotment of the latter will be made at the discretion of the directors. The preference shares can be partially or wholly redeemed five years after being issued, and the new ordinary shares will not participate in any dividend for the 12½ year ended June 1958. Ordinary dividends of 12½ percent were paid for each of the years ended June 1955, June 1956 and June 1957. Floated in 1953, the company has been making jute baling ropes; it has recently expanded its activities by starting the manufacture of cold rolled strips, box strapping and steel wire ropes.

Indo-British Trade Shrinking

The decline in Indo-British trade, which has been noticeable since New Delhi cut imports sharply, still continues. According to the latest statistics compiled from the U.K. Trade and Navigation Accounts, the U.K.'s imports from India during January-September 1958 have fallen by 19 percent compared with the same period of last year. Its exports to India have meanwhile declined by 14 percent. In the past year, U.K. exports to this country totalled £176.4 million while its imports from India were worth £157.5 million. The U.K.'s exports to India in September this year have fallen by 27 percent, while her imports from this country have increased by 55 percent, compared with the same month of last year. But a single month's figures are not always significant, and the declining trend in Indo-British trade is likely to continue for some time yet, since India's import restrictions have not been substantially relaxed in the latest policy statement for the half-year, October 1958 to March 1959.

Most major items in the U.K.'s imports from India show a decrease over the nine-month period. Tea, for example, fell by 24 percent, leather and leather manufactures by 33 percent, wool and other animal hair and tops by 46 percent, cotton by 40 percent and miscellaneous textile fibres by 50 percent. The only item marked by an increase was tobacco and its manufactures, which rose by 33 percent. Of the U.K.'s exports to India, falls occurred in all major items, barring road vehicles and aircraft, which increased by 70 percent. Exports of machinery, other than electric, declined slightly, while those of electric machinery, apparatus and appliances fell by 23 percent, chemicals by 30 percent, paper and paperboard and their manufactures by 27 percent, iron and steel by 36 percent, and non-ferrous base metals by 34 percent. Of individual items of machinery, increases occurred in U.K. exports of boiler and boiler-house plant, machine tools, industrial and works trucks and tractors and mechanical handling equipment, and mining and well-drilling machinery. On the other hand, falls occurred in internal combustion engines (55 percent), agricultural and

track-laying tractors (50 percent), and office machinery (64 percent). During the nine-month period, the U.K.'s exports to India declined to £116 million from £135 million in the corresponding period of last year. Her imports fell to £94 million from £116 million. India's deficit in this trade thus increased by £3 million to £22 million.

Land Holdings and Co-operation

Fixing ceilings on land holdings has been among the main aims of the Congress Party's land reform programme. That is why several States have passed legislation fixing ceilings according to local conditions. The States include Andhra, Assam, Bombay, Jammu and Kashmir, Mysore, Punjab, West Bengal and Himachal Pradesh. Some of the others are in the process of doing so. But the Party has since discovered that the question is more complicated than it had thought—for instance, it could have an adverse effect on agricultural production by leading to the further fragmentation of holdings. In any case, there would not be enough land to distribute to the vast number of landless peasants, even if it were possible to fix ceilings at a relatively low level. In fixing ceilings, it is impossible to find a simple, uniform formula which could be applied in all cases, as productivity conditions vary from State to State. State Governments are naturally having second thoughts on the question, and Uttar Pradesh, which usually tries to look very enthusiastic where land reform is concerned, is reported to be showing little eagerness for imposing a ceiling. In fact, it has been laying stress on the consolidation of small holdings. Opinion on the question was so sharply divided at the Hyderabad session of the A.I.C.C. that the High Command has had to appoint a committee to look into the ceiling problem. The committee is expected soon to evolve a uniform formula, since the Congress Party wants land reforms to be completed in all States by March next year. Mr. Nehru has asserted that although the committee will examine the ceilings question, the basic policy of imposing absolute limits on land holdings remains unchanged; but he has also said that the question appears to be getting tied up more and more with that of agricultural co-operatives. The committee has been asked to suggest how best to marry the two. Although it is not difficult to anticipate its findings, a more concrete way of helping the landless might be to ensure better wages and fuller employment through increased land productivity, which would be possible only with large-scale and efficient farms.

U.S. Business Recovery Continues

The upturn has passed the six-month mark during October and business reports indicate continuing recovery, even though at a slackened pace, says the First National City Bank of New York in its latest monthly letter on U.S. business and economic conditions. The general expectation is that new peaks in income and gross national product will be reached in the fourth quarter. Retailers are talking confidently of a record Christmas season. The high level of contract awards indicates sustained residential and non-residential construction activity, and increased motor-vehicle production and sales seem assured. An added sign of business improvement is the definite upturn in corporate profits during the third quarter. Industrial purchasing remains cautious;

length with the working of Cochin port, its growth and prospects. The demand for port facilities has been increasing, and during 1957-58, the volume of cargo handled at Cochin has increased to 1.9 million tons from 1.8 million tons in the previous year. The port has been remarkably free from congestion, and Mr. Hopkins attributed this to the efficiency of the administration. As for development work, the construction of four new berths is proceeding. Although delayed to a certain extent due to the difficulties in procuring machinery, it is hoped that they will be commissioned by the end of 1959, or early in 1960. The new coal berth, too, has not been completed for similar reasons, but it is understood that it will be ready for use by next April. The metre-gauge railway line will be extended into the port area by early next year, although it will for some time be confined to goods traffic. The port has had its quota of labour trouble, but a total strike has been averted for the time being by the authorities conceding some of the demands, while negotiations have been proceeding on the remainder. Two major difficulties concern fresh water supply and the unsatisfactory road communications with the interior. Mr. Hopkins felt that the problems can be permanently solved only when the Kerala Government's scheme has been implemented. Until then, improvement will necessarily depend on local efforts. Passenger ships have now resumed calling at the port, which they did only before the war. Mr. Hopkins thought that the prospects for Cochin being chosen as the second shipbuilding yard are favourable. "I believe that there is every hope and that, in fact, Cochin will be chosen".

Reviewing developments in the important markets of Cochin Mr. Hopkins said that conditions in the coir yarn trade remain bad. Resistance from major users, coupled with steadily increasing production costs and demands for higher wages, leave little incentive for investment in the commodity. The pepper market improved for some months at the beginning of this year, but had a relapse by the middle. Due to timely action by the Indian Pepper and Spice Trade Association, things have improved "and the smooth conduct of business as well as the volume of trade are reported to have exceeded the most optimistic expectations of the trade." Exports of lemongrass oil were a record during 1957-58, but prices fell sharply by 40 percent. The depression in the market, in spite of a large direct purchase by Russia, was due to reports that similar oil was being produced in China and that the major consuming countries had discovered substitutes for use by the vitamin A manufacturing industry. The proposed factories in India offer some hope of stability for producers, but prices meanwhile remain depressed. Consequently, the present estimates of current production are 1,000 tons, against 1,400 tons in 1957. Mr. Hopkins referred to the labour trouble in Kerala plantations and pointed out that while tea shipments from Cochin have been increasing, stoppages of production will do serious harm to the plantation economy of the south.

Speculation in Oilseeds

The president of the Oil Technologists Association, speaking at its annual convocation in Kanpur, declared that excessive speculation in oilseeds has led to violent fluctuations in the price of the commodity and rendered crushing uneconomical. He suggested that the Forward Markets Commission seriously consider imposing a ban on illegal speculation. Reports on 25 commodities in which futures trading may be permitted have already been submitted to the Government by the Commission. In its annual report for 1957, the Commission has observed that even when sufficient data are available, "the State police departments do not find it possible to pay adequate attention to this problem on account of their other pre-occupations." Some of the difficulties mentioned by the Commission are the reluctance of the police to seize documents or conduct raids, lack of evidence due to business being often done orally, and the difficulty of finding independent witnesses. Illegal speculative trading can only be curbed with the co-operation of the State police, but it is also true that merely punishing the offenders will not solve the problem because, as the Commission points out, in many cases people are ignorant of the law.

Industrialisation in Madras

The recent speech of Mr. Kasturbhai Lalbhai commenting on the great industrial progress made in Madras during the past few years may have impressed many who are unaware of the growth of new enterprises there. The setting up of bicycle, tyre and other factories since the war is a sign that the State has been moving into line with more industrialised ones. The last official review of industrial progress discussed the possibilities of iron and aluminium production, but apparently paid little attention to the manufacture of electric motors, storage batteries and switchgear. British interests have aided and guided industrial progress

PRIVATE CAPITAL INVESTMENT

WE print in another column a paper read by Lord Rothschild before the Indian Currency Committee on July 25th last, so as to have it on record. Lord Rothschild observes that any amount of capital could be found in England for Indian enterprises, such as railways and irrigation works (naturally some guaranteed and unguaranteed), if the Indian Government had given more facilities and had been more liberal to private enterprise. He states that whenever a railway concession has been granted to a private individual or a company, the Indian Government reserved to itself the right of re-purchasing the enterprise after the lapse of a certain time making the investment of capital unattractive. We quite agree with Lord Rothschild's remarks. There is no doubt that the Indian Government and the India Office between them do all in their power to discourage private enterprise in India by making the most grasping terms and rendering the undertaking unattractive to capitalists. If a firm or a person, or a company expend time and trouble, and in some cases money, upon a certain enterprise, they naturally expect to reap some substantial profit when the concern is focussed in such sort that capital is invited from the public. They have run the risk and they expect a profit. But the Government of India, or the India Office, or both combined, imagine that people should work for nothing. The idea is not altogether a consistent one. For the officials, both here and at home, take very good care that they are very handsomely rewarded for their services.

Government Printing Inefficiency

As the number of Government publications increases, the presses have to do more work. The Estimates Committee, looking into the Madras Government's requirements of printing and stationery, cannot but have noticed that receipts are far below expenditure, and both expenses and work have risen since 1953. This may be partly because Tamil translations of Government proceedings are necessary and the Government press now has to print bus tickets. It is noted that automatic feeder machines cannot be used since Indian paper is often not good enough. More work for the press may come with the nationalisation of the textbook trade; the Government has been advised to buy suitable machinery, although import licences for renewals and replacements are already difficult to get. Profits from textbooks could swell the income from publications sold by the Government; at present, that income suffers because the sales depot does not offer much to the average buyer and stocks of Acts and Bills are seldom adequate.

A comparison of costs has led to the conclusion that private presses work for a lower price, since their rules of working are different and overtime is avoided. But the Government press, which employs 2,000 workers, should at least be able to work at the rate quoted by the railway press. If the work done for local bodies is passed on to the former, the rates for printing could be cut, especially as overheads are high (the staff enjoys salaries and pensions as full-time Government servants, as well as more holidays). The major complaint is about accounting: the cost of each item is not known and the efficiency of the press cannot be gauged by calculating overheads. The Estimates Committee urges that the Government press, as a commercial concern, should keep proper accounts and show the value of printing done for each department. This suggestion might well be directed to other States also.

Without Prejudice

EMBEZZLEMENT OF FUNDS BY
EMPLOYEEASSEESE CLAIMS DEDUCTION
UNDER INCOME TAX ACT

(FROM OUR LEGAL CORRESPONDENT)

THERE are a number of conflicting decisions, both Indian and English, on the question whether sums embezzled by an assessee's employee are allowable as a deduction in computing the profits of the assessee's business under Section 10 of the Income Tax Act; wherefore the recent decision of the Supreme Court reversing on appeal one by the High Court, Nagpur, is enlightening and instructive.

The facts were these. The appellant was the sole proprietor of a firm called Bansilal Abirchand Kasturchand carrying on business as money-lenders, dealers in shares and bullion and commission agents in Bombay, Calcutta and other places. According to the judgment of the Supreme Court, the appellant, a resident of Bikaner, managed the business at the several places through agents and, during the relevant period, the agent of the firm in Bombay was one Chandratana who held a power of attorney dated 13th May, 1944, conferring on him large powers of management, including authority to operate on bank accounts. During the period 15th November, 1944, to 25th November, 1944, the agent withdrew from the firm's bank account sums aggregating to Rs. 2,30,636-4 and applied them in satisfaction of his personal debts incurred in speculative transactions.

On 25th November, 1944, the cashier of the firm sent a telegram to the appellant informing him of the true state of affairs. Thereupon, the appellant went to Bombay on 3rd December, 1944, and on 4th December cancelled the power of attorney given to the agent and by notice dated 6th December, 1944, called upon him to pay the amounts drawn by him. The agent replied on 8th December, 1944, admitting the misappropriation and pleading for mercy. On 16th January, 1945, the appellant filed a suit against him in the High Court of Bombay for the recovery of Rs. 2,30,636-4 and that was decreed on 20th February, 1945. A sum of Rs. 28,000 was recovered from Chandratana and adjusted towards the decree and the balance of Rs. 2,02,442-13-9 was written off at the end of the accounting year as irrecoverable.

Before the income tax authorities, the dispute related to the question whether this amount of Rs. 2,02,442-13-9 was an admissible deduction. The tribunal found that the amount in question represented the loss sustained by the appellant due to misappropriation by his agent Chandratana, but held on the authority of the decision in *Curtis v. J. and G. Oldfield Ltd.*, 1925, Tax Cases, 319, that it was not a trading loss and, therefore, could not be allowed. On the application of the appellant, the tribunal referred the following question of law for the decision of the High Court, Nagpur: "Whether the said sum of Rs. 2,02,442-13-9, being part of the amount embezzled by the assessee's *mumim*, is allowable as a deduction under Section 10(1) or under the general principles of determining the profit and loss of the assessee or Section 10(2) XV?"

The learned judges held that the case was governed by the decision in the *Curtis* case (above) and answered the question against the appellant. An application by him for a certificate enabling him to appeal was dismissed and, thereafter, the appellant applied for and obtained leave to appeal to the Supreme Court. There were three grounds put forward in support of the claim for deduction: (1) that the loss sustained by reason of embezzlement was a bad debt allowable under Section 10(2) (XI) of the Act; (2) that it was a business expense falling within Section 10(2) (XV) of the Act; and (3) that it was a trading loss, which must be taken into account in computing the profits under Section 10(1) of the Act. We need not occupy the reader's time much concerning ground (1). The expression "bad debts" is a commercial term for trade debts. A debt arises out of a contract between the parties, express or implied, and if a dishonestly takes money out of B's till, though he is liable to make good the money misappropriated, the liability does not arise out of any contract, and the authorities which the Supreme Court upheld in this case have consistently held that the deduction is not admissible under Section 10(2) XI.

The Supreme Court also ruled out the claim under (2) because moneys which have been withdrawn by the employee out of the business till without authority and in fraud of the proprietor can in no sense be said to be "an expenditure laid out or expended wholly and exclusively" for the purpose of the business as required by Section 10(2) XV. The controversy, therefore, narrowed itself to the question whether amounts lost through embezzlement by an employee are "a trading loss" which could be deducted in computing the profits of a business under Section 10(1). As has been said, the income tax authorities and later the Nagpur High Court relied, in deciding

against the assessee, on the decision in *Curtis v. J. and G. Oldfield Ltd.* This is an English decision and as their lordships of the Supreme Court observed in this appeal: "English authorities can only be utilised with caution in the consideration of Indian income tax cases because of the differences in the relevant legislation." Nevertheless, the *Curtis* case decided by a very eminent commercial judge has, ever since it was decided in 1925, been constantly cited and relied on in Indian cases. Therefore, one welcomes the fact that, while not repudiating it, the Supreme Court has gone out of its way to emphasise not only what it decided but what it did not decide.

The facts in the *Curtis* case were that the managing director of a company, who was in exclusive control of its business, had, availing himself of his position as such managing director, withdrawn large amounts from time to time and applied them to his own personal affairs. This went on for several years prior to his death, and, thereafter, the fraud was discovered and the amounts overdrawn by him were written off as irrecoverable. The question was whether these amounts could be allowed as a deduction, and it was answered in the negative by Rowlatt J. Commenting on this judgment in the Supreme Court, T. L. V. Aiyar J. said: "It should be observed that the learned judge did not say that amounts embezzled by an employee in the course of business would not be admissible deductions. On the other hand, he observed: 'I quite think with Mr. Lattor that, if you have a business... in the course of which you have to employ subordinates and, due to the negligence or the dishonesty of the subordinates, some of the receipts of the business do not find their way into the till or some of the bills are not collected at all, or something of that sort, that may be an expense connected with and arising out of the trade in the most complete sense of the word.'"

The fact is that for once Rowlatt J. did not express himself with his customary incisive clarity and has led other judges down the same path in India, so we are driven back amid the confusion to the old slogan that each case depends on its own particular facts and circumstances. The learned judges of the Nagpur High Court "would appear," said the Supreme Court, "to have read (Rowlatt J.'s) observations as meaning that, as a rule of law, embezzlements made prior to the receipt of the amounts by the assessee would be incidental to the carrying on of the trade and, therefore, admissible but that embezzlements made after receipt are not connected with the carrying on of the trade, and are, therefore, inadmissible. We do not so read those observations. It is a question turning on the facts of each case whether the embezzlement for which deduction is claimed took place in the carrying on of the business, and the observations of the learned judge (Rowlatt J.) that it did not so take place have reference to the facts of that case and can afford no assistance in deciding whether in a given case the embezzlement was incidental to the conduct of the business or not."

Personally, the writer always reads in law reports that reference to "the facts and circumstances of each particular case" with a certain feeling of dismay. It is so often an excuse for not giving guidance on the general principles. Wherefore we may be grateful to their lordships of the Supreme Court for going out of their way to enunciate the latter. ".....(In) deciding whether loss arising from embezzlement by an employee in a business is admissible as a deduction under Section 10(1), what has to be considered is whether it arises out of the carrying on of the business and is incidental to it. Viewing the question as a business man would, it seems difficult to maintain that it does not. A business, especially such as is calculated to yield taxable profits, has to be carried on through agents, cashiers, clerks and peons. Salary and remuneration paid to them are admissible under Section 10(2) XV as expenses incurred for the purpose of the business."

"If employment of agents is essential to the carrying on of business, it must logically follow that losses which are incidental to such employment are also incidental to the carrying on of the business. Human nature being what it is, it is impossible to rule out the possibility of an employee taking advantage of his position as such employee and misappropriating the funds of his employer, and the loss arising from such misappropriation must be held to arise out of the carrying on of business and to be incidental to it. And that is how it would be dealt with according to ordinary principles of trading." The Supreme Court held that the loss sustained by the appellant, as a result of misappropriation by Chandratana, was one which was incidental to the carrying on of his business and that it should, therefore, be 10(1) of the Act. The order of the High Court was set aside with costs.

Nevertheless, the Supreme Court emphasised that it is not every business loss for which deduction is allowable: for example, "where thieves do break in and steal". Their lordships put a suppositious case. "If a thief were to break over-run away with funds accrued therein, that must result in the depletion of the resources available to him for lending and the loss must be in that sense a business loss, but it is not one incurred in the running of the business but is one to which all owners of properties are exposed whether they assessee, not as a person carrying on business but as owner of funds." This distinction, though fine, is very material....."

[A.I.R. 1958 (October), S.C. 783.]

A Ditcher's Diary

WE ALL KNOW THAT MARX WAS WRONG, BUT sometimes it is interesting to see just how wrong he was about the development of industrial society after his day, that is, in the period covered by his prophecy of increasing "proletarianisation". His main error on this point was a natural one; in the last century it was not only Marx and the Marxists who thought it quite self-evident that capitalist industry grew in size, the number of workers would inevitably increase too, that the relative importance of the proletariat in society would increase more quickly than other classes, and that this would have momentous political consequences. In fact, what happened was—I speak in the past tense for Western countries, but if we use the future tense this would all apply to India—that more people indeed became involved in one capacity or another with industry and business, but because of increased mechanical productivity, a smaller and smaller proportion of these were workers or proletarians. That this has notable social and political consequences we can see by comparing the flavour of the Indian words *babu* and *quli* (or, to be more modern, *mazdoor*). Any politician will realise that the increasing "babuisation" of Indian society would be a very different thing from its increasing "quliisation". The experience of the West suggests that it is the former, not the latter, that lies ahead of us. In France about one-third of workers are office workers (6,700,000 of them), while in the U.S.A., since last year, production workers have been outnumbered by people in other economic occupations. In the former country, I should guess, the steady increase of white collars over blue jeans is part of the reason for the French working man's conversion from revolutionary doctrines to reformism. In the latter country, to hazard another guess, I should think that the same process is part-cause of the flattening out of the boom-slump cycle—in bad times factory hands are always laid off more readily than administrative and technical staff, while the office worker, especially at the higher levels, when he meets adversity cannot afford to cut his expenditure so sharply because he has status to maintain.

WHEN I COMMENTED TWO WEEKS AGO ON THE noisiness of processions in this city, I did not mention that other irritating method they use for drawing attention to themselves, the obstruction of traffic. A reader has written in to say that this is one nuisance which could be ended if the police were ever allowed to do their duty to the public. I could not agree more. His office, it appears, is situated in a part of the city which sees a large number of these processions, and from an upstairs window he has been able to make something of a study of the techniques used. They are always the same; the marchers are divided into two files with the union officials or organisers in between. The whole idea is to make sure the files keep as far apart as possible, thus occupying the whole width of the roadway and bringing traffic to a standstill throughout the surrounding area. And it is woe betide anybody who tries to squeeze past either file to go about his lawful business. Whether he be a cyclist, a motorist or a lorry driver, he still runs the risk of being hauled from his vehicle and manhandled. All this, apparently, takes place with the tacit approval of the police, because wireless vans often take up positions at the head or tail of the marchers and no effort is ever made to keep them to their own half of the

road. Obviously, "processionology" has become quite a science in Calcutta. When applied, its object is to cause the maximum of inconvenience to the public, while the fundamental premise on which it is based seems to be that whatever is done will be immune from interference by the authorities. What a state of affairs. But then, what could be more indicative of the official lethargy of mind which seems to have grown up over the past few years than that the only way to get anything done should be to make a loud noise about it and to interfere with the convenience of as many as possible of one's fellow-sufferers?

THE ENGLISH HAVE OFTEN BEEN ACCUSED, NOT least by their nearest neighbours, the Scots, Welsh, Irish and French, of the failing of hypocrisy. The accusation has even been made in India. I much doubt that it could be supported in a general way, against all or most Englishmen. But the accidental juxtaposition of passages from two books I was looking into lately provided me with a striking example, which happens to concern one of the greatest of Englishmen and one who used to live in Russell Street, Calcutta, at what is now the back of the Bengal Club. In the *Life and Letters of Lord Macaulay*, I find Macaulay writing to his sister, under the date 17th August, 1833, about the position of legal adviser to the East India Company, which he was to take up that year: "The salary is ten thousand pounds a year. I am assured by persons who know Calcutta intimately and have themselves mixed in the highest circles and held the highest offices in that Presidency, that I may live in splendour there for five thousand pounds per year, and may save the rest of the salary with the accruing interest. I may therefore hope to return to England with a fortune of thirty thousand pounds. A larger fortune I never desired". Yet, in an extract from *Hansard* under the date 10th July, 1833, (i.e., five weeks previously) I find Macaulay declaring: "I rejoice to see my countrymen, after ruling millions of subjects, after commanding victorious armies,.... after administering the revenues of great provinces, after judging the causes of wealthy Zemindars, after residing at the courts of tributary Kings, return to their native lands with no more than a decent competence". The only way to exculpate Macaulay from the charge of flagrant hypocrisy in his Commons speech would be to suppose that he really meant what he said both times, that is, that he was pleased at the prospect of amassing £20,000 for himself, and equally pleased that those of his fellow-countrymen who went to India to do hard work would do no such thing. If the latter spectacle "rejoiced" him, he would presumably be in transports of delight to know that in 1958 many of his compatriots, after a longer spell in India than Macaulay did, return to their native lands without even the decent competence that would enable them to spend their last years like Lamb's "superannuated man". Which is as wrong, in my view, as was the system that permitted a brilliant young snob of thirty-three to acquire £30,000 in five years.

INDIAN CLASSICAL MUSIC IS A SUBJECT ON WHICH my knowledge and understanding are unfortunately limited. But that does not mean I do not agree in principle with the authorities of All India

Radio, and with Dr. Keskar, of course, that the people of this country should be encouraged to take a greater interest in something which forms a vital part of their cultural heritage. After attending, at the invitation of the radio authorities, a *Sangeet Sammelan*, in the auditorium of a local school the other evening, I am inclined to believe they might be succeeding in their purpose. This is because the audience at that performance showed such a lively appreciation of each of the items on the programme, both instrumental and vocal, and the applause for every one was spontaneous as well as prolonged. There are still some people who argue that Indian classical music was able to flourish in the past only because court patronage was available, and that in this democratic age popular interest is unlikely to be stirred by a school of music which is distinguished by its technical qualities rather than by its melody. They would, therefore, like All India Radio to provide a measure of film and popular music in its programmes as well. I am inclined to agree. The purists should remember that even if jazz and this latest thing called rock 'n' roll have become popular in America and on the Continent, it does not mean that Western classical music is losing its superior qualities or that its audiences are being drained away. It is possible to say against the radio authorities, even when defending the basic soundness of their policy, that they err by over-emphasis. I will, however, agree with those critics who complain that the standard of the radio's classical music programmes is not only not high enough, but sometimes not even tolerably good. But here, of course, All India Radio by itself cannot do very much, apart from booking the best artists available. As training in the technicalities is so important a part of this accomplishment, it is perhaps for the Government, through its *akademias*, to do something about improving standards.

IN THE GLORIOUS HISTORY OF THE BENGAL renaissance, Bipin Chandra Pal must rightfully be accorded a high place as a leader of thought and opinion. His birth centenary, which was celebrated last week, provided an opportunity to look back to the days when this great son of India dedicated his life for the country's cause. I have heard it said he inherited the traditions of Ram Mohan Roy and Dwarka Nath Tagore, who were themselves fine products of liberal Western education. But it was the personal qualities of head and heart which made Bipin Chandra Pal such an outstanding figure of the period. His firm belief in truth, his strong attachment to his ideals, the versatility of his intellectual powers and his conviction of the cause for which he dedicated his life (which were, incidentally, common enough among nineteenth century leaders but which since seem largely to have been lost) brought him his great renown. Yet this illustrious man did not hanker for fame and was never known to do anything for personal ambition. As a politician, he opposed Lord Curzon's decree for the dismemberment of Bengal. But he did not associate himself with the violent methods of agitation. Like Mahatma Gandhi, he believed in the constructive approach for attaining *Swaraj* or independence. Bipin Chandra Pal combined within himself a grim determination and a strong personality. He was unflinching in his faith when he differed with the Mahatma in 1921 over the non-co-operation movement. When he found himself isolated towards the end of his life because of his political philosophy, he nevertheless remained undaunted. In the art of persuasive speech, he was said to have been like Pericles while in erudition Thucydides was his model. But I respect him for a special reason; he was a fine journalist and editor of some of the best known papers of his day.

THE DITCHER

LEYLAND COMET

THE BIG CHASSIS FOR THE BIG JOB

The LEYLAND COMET is the longest wheel-base passenger chassis made in India. Its large body space accommodates at least six more passengers in every trip than any other make. Its low fuel consumption and easy

maintenance have made it the ideal passenger transport vehicle everywhere. No wonder, LEYLAND is the first choice in passenger transport in over 50 countries around the world.

RECORD TRANSACTIONS ON STOCK MARKET

INDUSTRIALS IN KEEN DEMAND

London, 12th November.

THE past week was one of the busiest in the market for years. The number of bargains officially recorded exceeded 16,000 on most days and on Monday, a figure of 19,152 was reached, the highest since June 1955. The demand for industrial equities was extremely keen, stimulated by Government optimism over the longer-term economic outlook. The persistent strength of Wall Street also helped sentiment. The first month of option dealing was more successful than generally expected, and on most days good business was transacted. While boom-like conditions prevailed in the industrial market, gilt-edged came under constant pressure, much of which was selling by the small investor to pay for commitments in equities in some instances. Losses in gilt-edged securities were severe. Foreign markets provided very little of interest while dollar stocks were mainly higher in response to the rise in transatlantic values. Extensive gains were recorded among industrials, but with the account ending on Tuesday there was the inevitable profit-taking and some gains were reduced. News of increased consumer spending since the hire-purchase restrictions were lifted, helped hire-purchase finance shares and stores while the motor share market received a considerable boost from the excellent British Motor Corporation results. There was renewed buying of commercial television shares and shipping shares were occasionally supported. An initial better trend in gold shares was not fully held, and there was a return to quieter conditions. Copper shares improved, helped by the rise in the price of the metal, and tin shares advanced for the same reason but lead and zinc shares were generally steady. The big event in the oil share market was the boom and subsequent deflation of oil search shares. Demand for rubber shares persisted following favourable investment comment and a rising commodity price. Tea shares also improved.

The Money Market

The money market experienced slightly better conditions last week than for some time past. There was no great increase in the volume of credit available to the market from the banks, and the general overall position still necessitated the intervention of the authorities to overcome occasional difficulties, although the amount of assistance given was on a reduced scale. The market's one particularly bad day was Thursday when once again there was a very heavy take-up of bills by discount houses, and money was very short. However, the market surmounted its difficulties with the aid of official help and there was no penal borrowing. Under the more comfortable conditions which prevailed, the rate for money ranged from 3½ percent down to 2½ percent, although much of the non-regular money obtained by the market was done at 3½ percent. There was a good enquiry for bills with the banks keen buyers of "hot" bills on behalf of customers

who had missed them at the previous tender. The money market made no change in its effective bid at last Friday's Treasury bill tender, and the average rate for the bills showed very little change from the previous week at £3 11s 7.04d.

Stock Market Prospects

The Investors' Chronicle market newsletter writes: 'London gilt-edged securities were not fluctuating much. Industrials responded to credit relaxations. Gold shares were around the best levels for two and a half years in spite of profit-taking. London oil shares were consolidating, with the technical position sound. Wall Street is expected to resume its uptrend even though equity yields are at a 12-year low. The London Stock Exchange was stimulated by reports of increasing business following the abolition of hire-purchase controls and the U.K. Government's optimism about the economic outlook. But its popularity will depend on unemployment staying within the expected limits.'

Rise in Paris Gold

Paris gold prices were harder at the beginning of this week after a long apathetic period. Some protective buying by investors was noted, and business picked up slightly for the Napoleon, in particular. A feature was the gain of two points by the gold ingot after a stable price of 513,000 francs. Although fluctuations generally remained too narrow to show a definite trend, gold dealers said that some demand was evident. This was thought to reflect a nervous feeling concerning the Government's financial and fiscal policy.

Vegetable Oils Firm

Most vegetable oils and oilseeds started the past week on a firm and buoyant note. Early trading was featured by further sharp price gains in Nigerian palm kernels and groundnuts. Initially, the Nigerian Board sold January-February shipments of palm kernels from £88 to £88½ c.i.f. full terms, and later claimed business up to £89 c.i.f. and finally was not quoting before February-March at £89½. At the outset Nigerian groundnuts made £58½ c.i.f. full terms for February-April shipments and later advanced to £58½ paid. Nigerian groundnut oil also recorded notable gains in active trading involving December-January and January-February shipments, certainly from £94 to £94½ c.i.f. and possibly up to £95½. First-hand sellers of Chinese groundnut oil seemed to have withdrawn from the market for the time being. Argentine groundnut oil, it was reported, sold at \$262 a metric ton, c.i.f. Continent, although most sellers wanted nearer \$266. Copra remained fully firm with most sellers seeking advanced prices, but general activity was much slower with most buyers well out of reach. The advance in coconut oil continued, but here again most European buyers appeared to be holding back and resisting further advances. Linseed oil, although steady in price, lacked features with trade reported in Canadian linseed, confined to parcels for end-December-February shipment from Vancouver to Hull at £51½ a ton, c.i.f. Palm oil was steady with December-January and January-February shipments of Nigerian making £80 c.i.f. with further sellers at the price. Palm kernel oil remained strong with British and Dutch oil marked substantially higher. Castor oil was featureless at unchanged prices. A number of enquiries were being handled for Canadian soyabean on U.K. account, but no details were available immediately. The market was firm for north American and Chinese supplies.

Rubber Futures Rise

Rubber futures were firm and moderately active in the past week with gains ranging up to 50 points. Actuals were also higher with manufacturers buying on a larger scale. Trade sources attributed the better tone in both futures and actuals to firmness in London and predictions for an increased consumption of rubber. According to published reports, sales of new cars by dealers in the United States rose sharply in the last third of October over the preceding period, putting sales for the full month ahead of September.

Groundnut Surplus in French West Africa

The French Government is preparing measures to cope with French West Africa's groundnut surplus. It has been reported. The groundnut crisis last year was accentuated by the bumper crop which produced an 80,000-ton surplus over consumption in the franc area. After long negotiations with foreign buyers and crushers in metropolitan France, 55,000 tons were disposed of, including the sale of 12,000 tons of second-grade groundnuts abroad last week. The balance of 25,000 tons might be held as a "security stockpile." This week, the Government took two decisions: (1) French metropolitan crushers will not be allowed to import new crop groundnuts as long as old crop supplies are available and (2) the local African administrations will pay a subsidy of 10 francs a kilo for clearing the surplus. The final question which has yet to be resolved is the French Treasury's share in financing the surplus. The Prime Minister's office is expected to make an announcement this week.

World Sugar Futures Better

World sugar futures closed unchanged to a 3-point advance on a turnover of 75 contracts. The upturn was influenced by continued tension in Cuba and some concern was generated by the return to Jordan of King Hussein immediately following his departure for a European vacation. World raws advanced. A higher rate of sugar consumption has resulted in trade predictions that the authorities concerned will set the initial 1959 sugar marketing quota between 9 million and 9.1 million tons raw value, compared with the initial quota figure of 8.8 million tons for 1958.

Money

THE CALCUTTA MONEY MARKET

LITTLE CHANGE IN CONDITIONS

Wednesday, 12th November.

CONDITIONS in the Calcutta money market have changed very little during the past week. Jute credit has risen to a small extent while sugar advances are declining. Most other categories remain around the previous levels. The interbank market is reported to be steadier; the call rate is quoted at 1½ percent to 2 percent, but this is nominal because lenders are scarce.

Not many bills have passed in the exchange market. Most of the bills that have been seen relate to tea shipments. Remittance remains on a small scale. Sterling is steady in relation to the dollar and most Continental currencies.

SILVER WAS QUIET AS DEMAND WAS POOR AND arrivals of Tibetan coins increased. The price declined from the previous week's level of Rs. 187.50 to Rs. 186.50, quoted today for ready delivery. The rate for forward delivery was Rs. 184.75. The London and New York prices remained at 77½ and 90½ cents, respectively.

In spite of the fall in silver, gold was steady on good demand coupled with lack of arrivals. The price advanced from Rs. 111.75 to Rs. 112.50. The sovereign at Rs. 74 showed a rise of 50nP.

DURING THE WEEK ENDED 7TH NOVEMBER, GOVERNMENT of India Treasury bills for Rs. 58,29,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 4 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on Monday. The total amount offered was Rs. 7,20,00,000. Tenders at Rs. 99.390 and above were accepted in full, the average rate of acceptance being Rs. 2.430 percent a year. Tenders for Rs. 4 crores of 91-day Government of India Treasury bills will be received up to Monday, 17th November.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 11th November to 15th November, at Rs. 99.406 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. The bills sold from 5th November to 7th November amounted to Rs. 3,50,00,000.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 31st October, 1958, shows a drop of Rs. 7.62 crores to Rs. 476.29 crores in total deposits. Advances in Government securities and other investments in Government securities by Rs. 15.34 authorised investments have increased by Rs. 15.34 crores and Rs. 10 lakhs to Rs. 257.13 crores and Rs. 11.51 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have increased by Rs. 39 lakhs to Rs. 182.06 crores. Cash and balances are, in consequence, shown at Rs. 56.83 crores or Rs. 31.65 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 31st October, 1958, shows Demand and Time liabilities at Rs. 712.35 crores (Rs. 23.16 crores on account of borrowing from banks) and Rs. 927.20 crores (Rs. 39.09 crores), compared with Rs. 743.81 crores (Rs. 24.33 crores) and Rs. 907.87 crores (Rs. 38.55 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 2.32 crores and Rs. 27.42 crores to Rs. 40.01 crores and Rs. 106.73 crores, respectively. There is a rise of Rs. 17.88 crores to Rs. 618.43 crores in investments. Advances and bills discounted at Rs. 838.85 crores show a drop of Rs. 1.47 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 8.9 percent and 51.2 percent, against 10.7 percent and 50.8 percent.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 14-11-58.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
14-11-58	15-2-59	4,00.00	Rs. 2.430%
7-11-58	8-2-59	4,00.00	Rs. 2.458%
31-10-58	1-2-59	3,00.00	Rs. 2.489%
17-10-58	18-1-59	2,00.00	Rs. 2.521%
10-10-58	11-1-59	2,00.00	Rs. 2.525%
3-10-58	4-1-59	2,00.00	Rs. 2.527%
26-9-58	27-12-58	2,00.00	Rs. 2.529%
19-9-58	20-12-58	2,00.00	Rs. 2.524%
12-9-58	13-12-58	3,00.00	Rs. 2.523%

February 1959	11,00.00
Total	37,00.00

Foreign Exchange

— a top most priority

Never before has India stood in such dire need of foreign exchange as today. The country's development projects on which our future prosperity depends, call for straining every resource to earn this. Indian White Sugar Industry has risen to the occasion by increasing production, thus making white sugar available for export. But the present poor yield of cane per acre and its low sugar content make the cost of sugar production high. Yet in the national interest, Indian White Sugar must be sold abroad even at a loss—a burden to be shared by the industry and people alike.

Today the White Sugar Industry provides scope for Indian capital investment of more than 100 crores of

rupees; it provides employment to over 1,40,000 skilled and unskilled workers and 3,600 university educated men, their total earning representing 5% of the national wages and salaries; it supports 20 million cultivators; it constitutes 12% of the total value of production of major Indian industries; it contributes over 65 crores of rupees (@ Rs. 13.19 per maund) in levies to the national exchequer.

(This is an announcement to the members only and is neither a prospectus nor an invitation to the public or any section of the public for subscription of shares).
Consent of the Central Government has been obtained to this issue by an Order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinion expressed with regard to them.

J. K. STEEL, LIMITED

AUTHORISED CAPITAL ... Rs. 50,00,000

Divided into

- 1) 10,000 - 7% Tax Free Redeemable Cumulative Preference Shares of Rs. 100/- each.
- 2) 40,000 - Ordinary Shares of Rs. 100/- each.

SUBSCRIBED & PAID UP CAPITAL Rs. 5,00,000

Divided into

- 5,000 - Ordinary Shares of Rs. 100/- each fully paid-up in Cash.

The Directors have decided to offer with right of renunciation for subscription at par 10,000-7% Tax free Redeemable Cumulative Preference Shares of Rs. 100/- each and 15,000 Ordinary Shares of Rs. 100/- each to the Registered holders of Ordinary Shares whose

names would appear on the Register of Members on the 13th day of November, 1958, in the proportion of 2 (Two) Preference Shares and 3 (Three) Ordinary Shares for every ONE existing Ordinary Share then held. The Shareholders are also given the right to apply for additional shares, the allotment of which will be at the absolute discretion of the Directors.

RIGHTS ATTACHED TO DIFFERENT CLASSES OF SHARES IN RESPECT OF CAPITAL & DIVIDEND

The Preference shares carry the right of fixed cumulative preferential dividend of 7% per annum tax free on the Capital for the time being paid-up or credited as Paid-up thereon. The holders of the said redeemable Preference Shares shall also have right in the event of winding up to be paid all arrears of preferential dividends earned whether declared or not down to the commencement of winding up and also to be repaid the amount of Capital Paid-up or credited as paid-up on the Redeemable Preference Shares in priority to any payment in respect of the Ordinary Shares but shall not be entitled to any other rights in the profits or assets of the Company nor confer any voting rights.

As regards redemption, the Company may at its option after the expiry of 5 years from the date of issue, from time to time, redeem the said shares or so many of them as the Company may think fit, by giving not less than six months' notice of its intention to do so. If all the Shares shall not be intended to be redeemed at one and the same time, the Shares to be

redeemed shall be determined by drawings. Notice of the intention to redeem shall be given at such time and in such manner and the drawing will be made in the presence of such person or persons and at such time and place as may be fixed by the Directors of the Company.

The new Ordinary shares, for all purposes, shall rank pari passu with the existing Ordinary Shares of the Company save and except that the new Ordinary Shares shall not confer on the holders thereof any right to any dividend on the Ordinary Shares declared in respect of any Accounting year of the Company ended on or before 30th June 1958.

VOTING RIGHTS

Subject to the provisions of the Companies Act, 1956 on a show of hands every member present in person or by proxy shall have one vote and upon a poll every member present in person or by proxy shall have one vote for every Ordinary Share held by him.

COMPANY'S ACTIVITIES

The Company was floated in the year 1953 and its Works are situated at Rishra, District Hooghly, (11 Miles from Calcutta). It manufactures Jute Baling Hoops and is catering the entire requirements of the Jute Mills in India. Imports having been totally stopped. It has recently expanded its activities by starting the manufacture of Cold Rolled Strips, Box Strapping and Steel Wire Ropes which were hitherto imported from outside India. By manufacture of these very much needed engineering products, the Company is saving vitally needed foreign exchange of the country.

The Company's gross block and other liquid assets at the end of June 1958 stood at approximately Rs. 83,00,000 out of which a sum of Rs. 20,50,000 has been received from the Ministry of Rehabilitation.

The Company has paid dividend from its inception as under:-

Year ended	Rate of Dividend
JUNE	
1954 (for 23 months)	25 %
1955	12½ %
1956	12½ %
1957	12½ %

TAX BENEFIT

The Company is advised that Companies Subscribing capital under this issue will be entitled to obtain exemption from payment of super tax provided in Section 56A of the Income Tax Act.

Stocks and Shares

MARKET TURNS QUIET ON SETTLEMENT CONSIDERATIONS

SELECTIVE SUPPORT FOR JUTES

Wednesday Evening.
THE stock market reopened on Wednesday after the Diwali festival in a quiet mood because of settlement considerations. The clearing rate for Indian Irons was Rs. 27.22, and it was thought that high badla charges induced a certain amount of selling pressure. Towards the close, sentiment improved fractionally on an unconfirmed report that the company's application for a one-for-five free scrip issue has been sanctioned by the Controller of Capital Issues. Jute shares were prominent and selective buying took place at higher levels. The favourable trend of fibre prices helped improve mills' working. Coals were idle and no definite trend was expected until the publication of the Price Revision Enquiry Committee's report. Miscellaneous shares were selectively bought, but teas reacted in response to the decline in prices at the Calcutta auctions.

Government securities were steady because of a shortage of scrip, and prices, especially of short-dated stocks, were notably higher. Support from the Life Insurance Corporation helped maintain the rates for selected State loans.

Turnover in preference shares was negligible in the absence of declared sellers, especially in assorted scrip.

Routine turnover was seen in banking shares, and United Commercial Bank were done at Rs. 69. United Bank of India "D" were transacted at Rs. 4.44.

Cotton mill shares were quiet, and Kesoram were sold at Rs. 11.25. Jay Shree Textile were maintained at Rs. 8.06 on interested support induced by prospects of a higher dividend.

In the engineering group, Burn were supported at Rs. 380 and Guest, Keen, Williams were transacted at Rs. 34.37. Jessop were done at Rs. 26.12 and Kumardhubi Engineering came to hand at Rs. 9.12. Texmaco were transacted at Rs. 22.

Among jute shares, Howrah were transacted at Rs. 21.50 and Anglo-India changed hands at Rs. 220. Agarpura improved to Rs. 11.70 and Union were quoted higher at Rs. 221. National were placed at Rs. 24 and Megna came to hand at Rs. 15.81. Auckland met with support at Rs. 160 and Kamrathly were wanted up to Rs. 176.

Routine business was done in coal shares, and Bengal were transacted at Rs. 278. Amalgamated were bought at Rs. 22.25 and Central India were done at Rs. 8.25. Burrakur declined to Rs. 18.25 on selling pressure.

Cement shares were quiet, and Rohtas declined to Rs. 22.62. Orissa Cement were available at Rs. 12.19. Other notable features in the miscellaneous group included Alkali and Chemical at Rs. 17.12, Dunlop Rubber at Rs. 30.12, Indian Cable at Rs. 30.50 and Indian Aluminium at Rs. 15.50. India Steamship were maintained at Rs. 14.06 on the expectation of a good report and Hindustan Motor retreated to Rs. 7.69 on profit-taking. Jardine Henderson were bought at Rs. 82.50 and Martin Burn were transacted at Rs. 29.75. National Insulated Cable improved to Rs. 34.25 on rumours of a bonus issue. In the mining group, Indian Copper were fractionally shaded at Rs. 3.92. Paper shares were steady, and Titagur were done at Rs. 44.12. Sirpur came to hand at Rs. 12.94, but Orient reacted to Rs. 33.70 on pressure. Sugar shares were quiet and routine turnover was transacted. Dyer Meakin came to hand at Rs. 11.69 on an increase in sales of liquor.

Tea shares were quiet. Among Assam gardens, Bishnauth were transacted at Rs. 20.75 and Grob "A" came to hand at Rs. 27.69. In the Doars group, Hasimara were bought at Rs. 22.37, but Hantapara were sold at Rs. 124.

THE HASIMARA TEA COMPANY HAS MADE A GROSS profit of Rs. 10.40 lakhs for the year ended December 1957. The ordinary dividend has been cut from 22½ percent to 7½ percent, leaving a carry-forward of Rs. 3,65,371. The crop fell from 5,723,159 lbs to 5,411,891 lbs. Estimates for 1958 have been made for a crop of 73,300 maunds at a cost of Rs. 95.48 lakhs.

THERE IS A PROFIT OF Rs. 7.40 LAKHS FOR THE Brooke Bond Estates India Ltd. during the year ended June 1958. Bringing in Rs. 5,44,800 and making other adjustments, there is a balance of Rs. 9,23,690. The ordinary dividend has been reduced from 17½ percent to 10 percent, leaving a carry-forward of Rs. 4,29,840. The crop declined from 3,437,309 lbs to 3,001,268 lbs. Estimates for 1958-59 have been framed for a crop of 34,000 lbs.

THE PROFIT OF THE KUMARDHUBI ENGINEERING Works Ltd has declined by Rs. 2.28 lakhs to Rs. 13.91 lakhs for the year ended November 1957. The ordinary dividend has been reduced from 62½ p to 45½ p a share, and absorbs Rs. 2.76 lakhs. Notable allocations include general reserve Rs. 8,327

(against Rs. 4,888), plant renovation reserve Rs. 1.25 lakhs (Rs. 2.75 lakhs), tax contingency reserve Rs. 80,000 (Rs. 88,000) and development rebate reserve Rs. 11,000 (Rs. 57,000). The carry-forward amounts to Rs. 22,949, against Rs. 25,110 brought in. The output was reduced partly by a lack of steel and partly because the capacity of the works was affected by the implementation of foundry expansion plans.

THE GOUREPORE COMPANY LTD. (A JUTE MILL) has made a profit of Rs. 19.24 lakhs during the year ended last March. Depreciation absorbs Rs. 4.81 lakhs. Bringing in Rs. 45,248 and making other adjustments, there is a balance of Rs. 13,76,269. The ordinary dividend is increased from 2½ percent to 20 percent. General reserve is allocated Rs. 4½ lakhs and general and dividend equalisation reserve receives Rs. 2.40 lakhs. The carry-forward is Rs. 47,269. The directors state that the modernisation of the spinning departments has been virtually completed. Trading in the current year has so far enabled reasonable profits to be earned, and prospects until the end of 1959 are encouraging.

TATA INDUSTRIES PRIVATE LTD, MANAGING AGENTS for the Tata Iron and Steel Co. Ltd, report that the approximate production of iron and steel at the steel works in Jamshedpur during October 1958 was: pig iron 94,200 tons; steel ingots 96,400 tons; semi-finished steel for sale 23,800 tons; and finished steel 53,100 tons.

Shell meets the challenge

TO A WORLD HUNGRY FOR ENERGY, nuclear power brings rich promise. With it, inescapably, come complex new problems which can be mastered only by new thinking. Conventional lubricants, for instance, are useless when exposed to radiation. They break down, thicken and form harsh solids. Yet the lubricants needed for mechanisms close to the reactor may have to withstand radiation 4 million times stronger than would kill a man. Some of them have to take such punishment continuously for two years or more, for the complicated mechanisms which they lubricate cannot be serviced without closing down the reactor altogether—a costly business with plant involving a capital outlay of some £50,000,000.

Here was the challenge...where was the answer? Shell was first to foresee the problem. In 1953, a special group was set up at Shell's Thornton Research Centre to study the effects of atomic radiation on lubricants. Searching tests took place there and under actual reactor radiation at the Atomic Energy Research Establishment at Harwell; and in 1957, after four years of research, Shell

introduced the first-ever range of Atomic Power Lubricants, named Shell APL.

This is still the only range of proved radiation-resistant lubricants on the market. Oils and greases from this range, as well as other Shell Industrial Lubricants, are in daily use both at Harwell and at Calder Hall, England, the world's first full-scale nuclear power station. They have also been chosen by the Central Electricity Generating Board for the new British atomic power station under construction at Bradwell, Essex.

Here is Shell "Leadership in Lubrication" in action—anticipating a need, undertaking fundamental research, and finally developing the products to solve a problem of world-wide importance.

Shell lubricants are distributed throughout India by Burmah-Shell. Thus we are able to meet India's requirements of fuel and lubricants, to help her to face the many challenges that are before her on the road to industrial progress.

Bombay Market

TEXTILE STOCKS CAUSING ANXIETY

TATA STEEL OUTPUT FIGURES ENCOURAGING

Monday Evening.
TRADING in the Bombay stock market last week was affected by the holidays. The Moorat session was held today; the undertone was cautious and thoughts concerning the accumulation of stocks with textile mills, called for caution. There was, however, an undercurrent of optimism because of a number of favourable developments. The first was an increase in the output of the Tata Iron and Steel Company during October; it was thought that the expansion programme had begun to yield results. Reports that there would be no increase in the second five year plan outlay targets were interpreted bullishly.

Tata Steel closed at Rs. 180.50 and Indian Iron fell to Rs. 27.45 on selling from Calcutta interests because of high carry-forward charges. Among other engineering shares, Tata Locomotive were bought at Rs. 159 and Premier Construction were transacted at Rs. 249.50. Alcock Ashdown were offered at Rs. 272.50. Motor shares were quietly steady, and Premier Automobile were taken at Rs. 88.50. Hindustan Motor realised Rs. 7.80.

Cotton mill shares were shaded on balance, and Bombay Dyeing declined to Rs. 58.40. Century were lower at Rs. 437.50 and Kohinoor were placed at Rs. 258. Simplex declined to Rs. 176 and Svadeshi were available at Rs. 194.50. India United Ordinary were freely offered at Rs. 8.80 and Apollo were sold down to Rs. 1.36.

There was a mixed pattern of trading in the miscellaneous group. Belapur Sugar were steady at Rs. 321 on increasing the distribution by Rs. 2 to Rs. 20 a share. Phalton made Rs. 176.25. Cement shares were quiet on reports of accumulation of stocks at the factories. Associated Cement fell to Rs. 156.25 and Digvijay Cement were transacted at Rs. 139.50. Steamship company shares were quietly steady, and Scindia Steam Navigation were maintained at Rs. 21.68. Great Eastern Shipping changed hands at Rs. 27.45. Mining shares were steady, and Shrivrajpur Syndicate were indicated at Rs. 91. Bombay-Burmah reacted to Rs. 503.50 on profit-taking and National Rayon were taken at Rs. 254. Tata Chemical were done at Rs. 15.96.

There was scattered interest in selected bank and insurance shares, but prices showed little variation. United Commercial Bank were done at Rs. 68.50 and Bank of India were transacted at Rs. 140. New India Assurance came to hand at Rs. 49.

Prices of electricity supply company shares were maintained on steady investment buying. Ahmedabad Electric were transacted at Rs. 98.70 and Bombay Suburban came to hand at Rs. 110. Tata Power were done at Rs. 123.75.

THE WEEK'S TRANSACTIONS

WHEEL BRAND GLYCERINE

in Indian industry

Glycerine is included in industrial formulae and processes all over the world. WHEEL Brand Glycerine is used in such widely varied industries as textiles, tobacco, leather tanning, printing, roller composition, paper, rubber, etc. Guaranteed to contain 98% Glycerol. WHEEL Brand Glycerine conforms to the highest standards of quality.

a symphony in steel

All over this vast land of ours, today, you will hear it—the ring of steel upon steel as a mighty nation surges ahead in its quest for industrial prosperity. It is a symphony

TRENDS IN COMPANY FINANCES

RESERVE BANK SURVEY SHOWS

RISE IN ASSETS

AN article published in the October 1958 issue of the *Reserve Bank of India Bulletin* analyses the balance-sheets and profit and loss accounts of 1,001 companies for the years 1955 and 1956. A similar article, based on statistics relating to the finances of 750 public limited companies for the years 1950 to 1955, was published in the September 1957 issue of the *Bulletin*. But as those statistics did not include many large public limited companies which started functioning during the first plan period, and also some very large private limited companies converted into public limited ones during the same period, the scope of the analysis has now been enlarged by including such companies. The new series of statistics pertain to 1,001 companies, comprising approximately three-fourths of the sector covered.

Many important series relating to rates of capital formation, profits, etcetera, obtained by the present analysis for the years 1955 and 1956, are shown along with those of the earlier sample of 750 companies for the years 1951 to 1955 for purposes of comparison. The present study, like the previous one, does not cover banking, insurance and investment companies, Government companies (as defined in Section 617 of the Companies Act, 1956), companies and associations functioning not for profit and companies limited by guarantee. A note explaining the methodology and other details pertaining to the analysis of the accounts of the companies is appended to the study.

The study shows a very marked increase in assets, which carried the rate of the increase of both fixed assets and inventories to the highest level for the postwar period. This expansion was accompanied by a sizeable rise in sales, profits, tax provision and dividends, with virtually no change in retained profits. In the financing of capital formation, a feature was the emergence of external sources, in place of internal ones, as the major contributing factor.

Income and Expenditure

In 1956, income from sales of the 1,001 companies rose by 11.8 percent to Rs. 1,551 crores from Rs. 1,388 crores in 1955. The corresponding percentages for the 750 companies were 11.0 in 1955 and 6.9 in 1954. The rise in 1956 was most marked

in engineering, sugar and other plantations, being over 30 percent. Manufacturing expenses also went up by 16.1 percent from Rs. 817 crores to Rs. 948 crores, nearly one-half of the rise being accounted for by engineering and cotton textiles. Salaries and wages rose by Rs. 24 crores to Rs. 257 crores. Managing agents' remuneration (including that to secretaries and treasurers) was the only item to show a decline, from Rs. 15 crores to Rs. 12 crores. In 1956, 62 companies did not pay any remuneration to managing agents, against 40 companies in 1955.

Rising Trend in Profits

The rising trend in profits, as distinguished from profitability, noticed after the post-Korean recession in 1952, continued during 1956, although at a lower rate. In 1956, profits before tax rose by 9.7 percent from Rs. 117 crores to Rs. 128 crores, against increases of 24.1 percent and 19.5 percent, respectively, in 1955 and 1954 in the case of the 750 companies. Because of a sizeably larger tax provision, profits after tax showed only a moderate rise of Rs. 3.3 crores to Rs. 70 crores. Industrywise, shipping and tea showed phenomenal increases, which were partially offset by the loss in jute and declines in iron and steel and cotton textiles. Distributed profits rose by Rs. 3.5 crores to Rs. 42 crores, as a net result of increases in engineering, shipping, tea and sugar, and declines in jute, cement and coal, among others. Retained profits remained almost unaltered at Rs. 28 crores, the loss suffered by jute and declines in cotton textiles and iron and steel being offset by rises in shipping and tea.

The profitability of equity capital of the 1,001 companies, as measured by the percentage of profits after tax to net worth, declined from 9.0 in 1955 to 8.6 in 1956; the corresponding percentage for the 750 companies was 7.8 for 1954 and 6.8 for 1953. The average rate of dividend on ordinary shares rose from 8.9 percent in 1955 to 9.4 percent in 1956. This rate had moved up steadily from 7.5 percent in 1952 to 8.8 percent in 1955 in relation to the 750 companies. Other plantations gave the highest rate of dividend (20.2 percent), followed by tea plantations (16.1 percent). The rates were very low (under 5 percent), among others, in jute and other textiles and vegetable oil industries. The percentage of dividends to net worth remained unchanged at 5.2.

The total assets formation of the 1,001 companies in 1956 amounted to Rs. 255 crores, of which gross fixed assets accounted for over one-half (Rs. 133 crores), inventories for over one-third (Rs. 89 crores), and receivables for nearly one-

sixth (Rs. 42 crores). Investments showed hardly any change, while cash and bank balances fell by Rs. 9 crores. Capital formation (in relation to gross fixed assets and inventories) of the 1,001 companies amounted to Rs. 222 crores in 1956. A corresponding estimate for the entire public limited sector (excluding financial companies) would be Rs. 296 crores, comprising Rs. 177 crores of gross fixed assets and Rs. 119 crores of inventories, and for the entire non-financial private corporate sector in India, including foreign companies, Rs. 254 crores and Rs. 171 crores, respectively. Net fixed assets formation constituted 72 percent of gross fixed assets formation. "Finished goods and work-in-progress" was responsible for 56 percent, and raw materials for only 21 percent, of the inventory accumulation in 1956. Nearly three-fifths of the gross fixed assets formation in 1956 was accounted for by iron and steel, cotton textiles, engineering and shipping and the major part of inventory accumulation took place in cotton textiles and engineering.

Annual Rate of Increase

The annual rate of increase in gross and net fixed assets was appreciably higher at 14 percent and 18 percent, respectively, for the 1,001 companies in 1956, compared with 11 percent and 14 percent in relation to the 750 companies in 1955. The annual rate of increase in inventories was still higher at 21 percent. An outstanding feature in 1956 was the significant shift from internal sources of funds to external sources; the latter at Rs. 161 crores accounted for 63 percent of the total funds in 1956, against only 44 percent in 1955. Under external sources, bank credit was the most important, amounting to Rs. 73 crores, or 28 percent of total funds, compared with only 6 percent in 1955. Due to trade and other current liabilities came next in importance, accounting for Rs. 43 crores, or 17 percent of the total. Internal sources at Rs. 93 crores accounted for only 37 percent of the total sources in 1956, against 56 percent in 1955. Industrywise, the groups relying for the bulk of their finance on external sources in 1956 were engineering, cement, iron and steel, vegetable oil, electricity, sugar, cotton textiles, shipping and trading.

New issues of shares and debentures by the 1,001 companies during 1956 amounted to Rs. 24 crores, of which ordinary shares accounted for 76 percent, preference shares for 18 percent and debentures for only 6 percent. Of the total ordinary shares of Rs. 18 crores in 1956, one-half was accounted for by the iron and steel and engineering industries.

Assets and Liabilities

The total gross assets of the 1,001 companies at the end of 1956 amounted to Rs. 2,082 crores and their total net assets to Rs. 1,638 crores. Of the total net assets, fixed assets at Rs. 821 crores constituted 38 percent and inventories at Rs. 506 crores 31 percent. Receivables formed 15 percent, investments 6 percent and cash and bank balances 5 percent of total net assets. Net worth at Rs. 809 crores (paid-up capital Rs. 495 crores and free reserves and surplus Rs. 314 crores) constituted nearly one-half of total liabilities at the end of 1956. Trade dues and current liabilities (Rs. 292 crores) accounted for 18 percent and borrowings from banks (Rs. 211 crores) for 13 percent of total liabilities. The liquidity of the assets of the 1,001 companies showed a slight decline during 1956. The percentage of current assets to net total assets declined from 59.9 to 59.2 and the ratio of current assets to current liabilities from 1.50 to 1.38.

The principal indicators of the growth of the 1,001 companies are shown in the following table: (Amount in crores of Rs.)

	1955	1956	Percentage increase
Paid-up capital plus free reserves (net worth) at the end of the year	7.42	8.09	9.1
Gross fixed assets at the end of the year	9.32	10.65	14.3
Net fixed assets at the end of the year	5.25	6.21	18.2
Inventory at the end of the year	4.17	5.06	21.4
Total assets (net) at the end of the year	14.20	16.38	15.3
Total income during the year	16.03	18.19	13.5
Sales during the year	13.88	15.51	11.8
Profits, before tax, during the year	1.17	1.28	9.7
Profits, after tax, during the year	.66	.70	5.0
Dividends during the year	.39	.42	9.0
Retained profits during the year	.28	.28	— 0.5
Gross profits as percentage of total capital employed	10.4	9.5	
Gross profits as percentage of gross sales	10.4	10.0	
Profits, after tax, as percentage of net worth	9.0	8.6	
Dividends as percentage of paid-up capital (ordinary shares)	8.9	9.4	

New Delhi

FINAL AMOUNT OF PUBLIC SECTOR OUTLAY FIXED

PLANNING COMMISSION SUGGESTS LESS DEFICIT FINANCING

(FROM OUR NEW DELHI CORRESPONDENT)

AGAINST expert advice, the National Development Council has decided, at its latest two-day meeting in New Delhi, to stick to an outlay of Rs. 4,500 crores for the public sector in the second five year plan. In the note submitted by the Planning Commission for the meeting, the ceiling of expenditure proposed was at Rs. 4,200 crores, and the total resources which it was said would be available during the five-year period were Rs. 4,220 crores. This latest estimate is made up of Rs. 2,028 crores of domestic resources, Rs. 1,100 crores of external aid, and Rs. 1,092 crores of deficit financing. The corresponding figures in the revised estimates prepared last May were: domestic resources Rs. 2,020 crores; external assistance Rs. 1,038 crores and deficit financing, Rs. 1,200 crores, or a total of Rs. 4,258 crores.

To complete the plan outlay of Rs. 4,500 crores, something like Rs. 1,088 crores at the Centre and Rs. 946 crores at the States will be required during the next two years. The total gap in resources is estimated at Rs. 280 crores, of which Rs. 198 crores is expected to be at the Centre and the balance on account of the States. Originally as well as in the revised estimates, the Planning Commission placed the ceiling on deficit financing at Rs. 1,200 crores. But in its latest appraisal, the Commission has lowered the ceiling because it feels that with prices at their present level and with the growing pressure for increases in wages and salaries, it is necessary to avoid further deficit financing. The total amount of deficit financing it would recommend for the remaining two years of the plan is Rs. 210 crores. The Federation of Indian Chambers of Commerce and Industry has suggested that the original target of Rs. 1,200 crores could be pursued without much harm to the economy, and it seems the National Development Council does not greatly differ from that view. During the discussion on a price policy for the plan, the Council, however, has agreed that if prices are allowed to drift upwards, the plan and the economy as a whole will suffer. So as a check on further price rises, the Council has decided that the Government should take over the wholesale trade in foodgrains. It is perhaps the view that it is the wholesale trader who has been manipulating prices. The Planning Commission thinks that much of the price increase is due to scarcity, and the failure of the cultivator to increase his output by taking advantage of the new irrigation facilities which are being created for him. There is no doubt that a big risk is being taken by retaining the original ceiling of deficit financing at Rs. 1,200 crores. Again, the Planning Commission has pointed out that its suggested figure of Rs. 4,220 crores as the maximum of resources which could be available for the plan does not take into account any increases that might result in the salaries of Government employees because of the second Pay Commission's recommendations, or the bigger defence expenditure which might be forced due to the hostile policy of a neighbouring country.

In a White Paper, the Planning Commission says: "The position of plan outlay and financial resources for the Centre and the States was reviewed in the Planning Commission's Memorandum on Appraisal and Prospects of the Second Five Year Plan published in May 1958. That memorandum brought out the fact that the resources likely to be available were short in relation to the original plan outlay of Rs. 4,800 crores. The estimates then made indicated the level of total resources at around Rs. 4,260 crores over the five-year period. It was stressed that efforts should be made to raise additional resources of the order of Rs. 240 crores so as to bring up the plan outlay to Rs. 4,500 crores. It was agreed at the last meeting of the National Development Council that the plan allocations hereafter should proceed in terms of this revised target of Rs. 4,500 crores for the Centre and the States together over the five-year period.

"Briefly, the position of resources is that, on present expectations, the Centre and the States are likely to be able to provide in the next two years resources of the order of Rs. 1,754 crores, whereas the requirements for reaching a total of Rs. 4,500 crores over the two years amount to Rs. 2,034 crores. There is thus a shortfall of Rs. 280 crores: Rs. 107 crores at the Centre and Rs. 82 crores in the States. Over the plan period, the aggregate outlay can, on this basis, be only Rs. 4,220 crores.

"This estimate of the overall resources position takes into account the additional taxation of Rs. 12 crores over the next two years that the State Governments have proposed in the recent discussions. It also envisages additional taxation of about Rs. 40 crores at the Centre. No allowance has been made for any increases in emoluments that might be recommended by the Pay Commission. Such increases, in other words, will have to be financed by additional taxation. The likely yield on loans and small savings and the availability of external assistance have been estimated in the light of the latest trends and expectations. Not too much pre-

cision can be claimed for estimates under each separate head. One might also allow for a small variation either way in the overall totals. The conclusion, however, is clear: the outlay on the plan over the five-year period will, on the basis of the resources in sight, have to be limited to Rs. 4,200 crores to Rs. 4,300 crores. This means that the outlays at the Centre and in the States for the next two years will have to be limited to Rs. 890 crores and Rs. 864 crores, respectively.

"The total allotment for the plan for 1959-61 is Rs. 2,034 crores. Rs. 1,088 crores being at the Centre and Rs. 946 crores in the States. The allotment at the Centre is subject to a total gap of Rs. 198 crores being made up. The allotment for the States at Rs. 946 crores has been retained at the same level as in the memorandum, the small difference of Rs. 10 crores being accounted for by a higher estimate of expenditure in 1958-59 reported during the recent discussions with the States. Out of Rs. 946 crores, Central assistance may represent a total sum of Rs. 470 crores. The balance of Rs. 476 crores will remain to be found by the States. As against this, the resources of the States for the next two years have been indicated at Rs. 394 crores, leaving a margin of Rs. 82 crores. To the extent this gap is made up by the States, they will be able to approach the level of outlay for 1959-61 provided for in the re-appraised plan. The incidence of the shortfall will, however, be distributed between different States according to the extent to which they find the balance of resources required to implement their respective plans, especially under revenue heads.

Deficit Financing

"In the above estimate of resources, the limit for deficit financing for the next two years has been taken at Rs. 100 crores a year. This does not mean that deficit financing of that order is safe or innocuous. With prices at the present level and with the growing pressures for increases in wages and salaries to compensate for the increase in the cost of living, there is, strictly speaking, no case for deficit financing for some time to come. Hitherto, the inflationary impact of deficit financing has been offset by the large balance of payments deficits financed by a draft on foreign exchange resources. Since that cushion is no longer available, the less deficit financing there is, the better. It is only if food production increases substantially and food prices register a distinctly downward trend that deficit financing on any significant scale can be contemplated.

"Foodgrains prices have already risen sharply in the course of this year. Part of this rise has been due to the large shortfall in the output of foodgrains in 1957-58. The crops this year are expected to be better. It is particularly important in the context of the present price situation and the outlook for resources that food prices are brought down to a reasonable level. This is a consideration which has to be kept in view while framing the policies for procurement.

"A word may now be said here on the foreign exchange position vis-à-vis the plan. Briefly, the balance of payments deficit over the plan period is expected to be of the order of Rs. 2,000 crores. Roughly one-half of this deficit has been incurred so far. The sterling balances held by the Reserve Bank now stand at about Rs. 180 crores, and it is Bank now stand at about Rs. 180 crores, and it is necessary to avoid drawing them down any further. For bridging the estimated foreign exchange gap for the period October to March 1958, external assistance totalling \$350 million has been promised. The further assistance required for the rest of the plan period is estimated at \$650 million, and this has yet to be secured. Estimates of the balance of payments trends are necessarily highly tentative, but it is clear that by the end of the second plan period, the country will have substantial debt liabilities abroad. It should also be noted that in estimating the foreign exchange gap just mentioned, it is assumed that no food imports over and above the 'normal' purchases and existing commitments will be sanctioned unless covered by separate aid programmes.

"Considering the overall resources position, a sizeable cut in plan outlays even as compared with the revised target of Rs. 4,500 crores is unavoidable. This cut can be reduced only if more resources for the plan can be raised in non-inflationary ways. Whether and how far this can be done is for consideration by the National Development Council."

F.I.C.C.I. Study of Internal Resources

The Federation of Indian Chambers of Commerce and Industry has issued a detailed study of the internal resources for the second five year plan. In a foreword the president of the Federation, Sir B. P. Singh Roy, says: "Forced diversion of resources to certain constituents of the plan—while it is not forgotten, is not Rs. 4,800 crores but Rs. 7,200 crores—has had its impact on many efforts to increase India's economic potential. A situation has developed whereby industry is not able to secure its fair share of both rupee finance and

foreign exchange. This underlines the fact that a reappraisal of the plan cannot be complete without perhaps a radical readjustment of the approach to the overall needs of the economy and to the questions of collection and expenditure of resources. Otherwise, a passing phase involving a postponement or slackening of individual projects may assume a permanent form, a stultification with far-reaching effects on the basic factors like balanced growth of the secondary sectors of the economy as well as conditions and institutions which develop and canalise economic leadership, enterprise and inventiveness. It is to be hoped, therefore, that deliberations concerning the mobilisation of internal resources would take place against this wider perspective of alternative choices in the procedures of planning."

Yield from New Taxation

The study says: "As against the additional taxation target of Rs. 850 crores, the five-year yield from new taxation is now expected to be Rs. 920 crores. The target for the Centre was, at the most (Rs. 225 crores to Rs. 200 crores), Rs. 425 crores; the actual taxation is estimated to exceed this by 70 percent. The States, on their part, have so far undertaken measures which will yield only about 45 percent of their quota. The seriousness of this shortfall is brought into truer perspective when one takes into account the fact that under the award of the second Finance Commission, the States will receive from the Centre a sum of Rs. 160 crores more than the transfers envisaged in the original plan.

"However, against this overall massive mobilisation of tax collection, the estimate of the surplus from current revenues as it stands now shows a deficit of Rs. 441 crores. The balance available on revenue account is eroded and eaten away in expenditure outside the plan, mainly for non-developmental purposes. It is estimated that the leakage of resources not anticipated in the plan will amount to more than Rs. 500 crores—about Rs. 287 crores at the Centre and Rs. 224 crores in the States. In the expenditure of the Centre, the transfer of Rs. 160 crores to the States as recommended by the Finance Commission, an other grants, etcetera, for the purposes of the plan may not be excluded: a large part of this may or may not find its way into some developmental schemes. Over the five years, the cost of defence is likely to go up by more than Rs. 225 crores over and above the levels anticipated in the plan. Further, it is estimated that there will be an increase of Rs. 50 to Rs. 60 crores on account of additional expenditure on civil administration, collection of taxes, etcetera.

"It may be argued that much of this expenditure was unavoidable, but the choices in an underdeveloped economy are almost always between essentials. Scrutiny and economy have to extend further into the details of every defence project, including those relating to defence. This scrutiny has to be followed up and it must be ensured that the resources are spent prudently. The need for such scrutiny seems especially necessary in the expenditures of the States. It is estimated that the States are likely to spend over Rs. 270 crores on non-developmental expenditure outside the plan. There has been a considerable miscalculation on the increased costs on health, education, etcetera, in recent years; while this expenditure will no doubt be socially beneficial if properly used, there is no gainsaying that the expenditure on secondary social services may eliminate the use of funds on more directly productive and essential schemes within the plan.

Increase in Non-plan Expenditure

"Even the net effectiveness of these services is considerably minimised due to the increasing expenditure of administering them. In fact, there is a very steep increase in the civil administration expenditure. The expenditure on civil administration by the Central Government has in this year's Budget crossed the Rs. 200-crore mark. This may be compared with the sum of Rs. 51.71 crores spent in 1951-52, the first year of the first plan. The growth in the absolute number of the Government employees in the administrative field is also equally spectacular. In 1950, the number of Government employees in administrative, executive and ministerial jobs was about 183,000. This is only the case of the Central Government; there are, no doubt, similar increases both in the numbers employed and their pay bill in all the States. It is clear that expenditure on civil administration absorbs far too high a proportion of the national revenue than can be justified in a poor country like India.

"It is interesting to note that in these large sums collected by the Government, the contribution by the agricultural sector is very small. In 1952-53, this sum amounted to Rs. 61.47 crores; by 1958-59, it is expected to increase to Rs. 103.14 crores. The direct collection from the agricultural sector—wherein half of the national income originates—to the tax pool has remained static at less than 10 percent of the total. Unless this vast sector of our economy is enabled to contribute a larger proportion to the national pool, the burden of taxation will continue to fall heavily and disproportionately on a small section of the community.

Borrowing from the Public

"Under this head fall loans and small savings. The net accrual visualised in the plan was Rs. 1,200 crores—Rs. 700 crores by loans and Rs. 500 crores through small savings. The present estimate for this item is Rs. 984 crores, a shortfall of more than Rs. 200 crores in loans and small savings taken together. The yields from loans naturally fluctuate from year to year and the results of 1958-59 seem to be quite encouraging. However, it should be

noted that the comparative success of these flotations stems from a not-too-healthy feature, namely, surplus funds with banks on account of a slackening of economic activity. Small savings have failed to register any marked increase, particularly in the rural and semi-urban areas as well as in secondary and tertiary employment. The need for having an efficient and economical organisation to mop up the savings potential is recognised since the past few years, but hardly any progress has been made.

"In the plan the estimate of the railways' contribution was Rs. 150 crores. Since then, freight rates on goods have been increased and the total amount likely to accrue to the plan is expected to be Rs. 250 crores. This is no doubt a substantial gain, but it is to be achieved at a price, namely, pushing up costs and prices. It would be a real achievement if the railways on the other hand were to acquire a surplus through more economical management.

"The net contribution of other Central Government undertakings and industries to the income is really disappointing. The yield from the Posts and Telegraphs, in spite of continual increases in charges and deterioration in service, has not substantially increased; this leads one to the conclusion that better commercial results can be achieved only if departmental efficiency is increased. Even a cursory repainting of the balance-sheets of the various industrial companies of the Central Government shows an asymmetrical cost structure, especially in the matter of royalty arrangements, and the net return on capital—if it is a positive amount—is not a good rate, particularly when one considers the almost monopolistic and privileged positions they hold in their particular branch of industry. It is to be hoped that methods will soon be evolved to infuse standards of commercial viability and competitiveness in State enterprises. This head of resources was expected to yield Rs. 250 crores for the second plan. The recent reassessment indicates that the net amount will fall very much short of this estimate. It is essential that an analysis of the shortfall is made available to the public."

Preliminary Work on Third Plan

During the past four or five months, the Planning Commission has begun some preliminary work on the third five year plan. Each plan has to be based on a careful assessment of current and recent experience as well as on a perspective view of the next 15 or 20 years. The perspective view guides major decisions concerning the current and the next plan. At the same time, it is necessary to take as precise a view as possible of existing commitments, those carried over from one plan to the next, and especially the outlook concerning the mobilisation of resources. Work on the preparation of the third plan, which is to commence on 1st April, 1961, falls broadly into four stages.

1. The first stage consists of studies of different sets of problems and of different sectors of the economy and how they can be developed in step so as to get certain overall results. These, in turn, are conditioned by the resources that can be mobilised. It is proposed that the studies should be undertaken by working groups in which the Planning Commission and the Central Ministries and the States will also be engaged in the consideration of important individual projects, in evaluating the working of the present plan and in drawing up programmes of future development in different fields along with estimates of costs.

2. When these studies have made sufficient progress, it is proposed to put the results together and to prepare a preliminary draft outline or "plan-frame" for the third plan.

3. After the preliminary draft outline has been generally approved, detailed preparation of Central and the State plans and of local plans (the latter incorporated into State plans) constitutes the third stage. This will be completed with the preparation of a fairly full outline of the plan, more or less in its final form, which can be placed for consideration before Parliament and State legislatures and the general public.

4. The fourth stage will refer to the preparation of the final version of the plan which is submitted for approval to the National Development Council and the Government, and later to Parliament.

Policy and Approach

At various stages in the formulation of the plan, important questions of policy and approach will come up before the National Development Council. In drawing up the third plan, it is hoped to take the fullest advantage of the experience of planning gained during the past few years in India as well as in other countries. A great deal of stress will be placed on undertaking technical, economic and statistical studies, both at the Centre and in the States. It is realised that in many fields the studies which can be undertaken are limited by the volume and quality of data which are available. The aim, however, will be to make the best possible use of the data and to take steps as far as possible to reduce the gaps in information.

The Planning Commission has already set up working groups for irrigation, power and agriculture. Letters are being addressed to State Governments suggesting that they form small groups for the consideration of programmes and problems in these fields and work in association with the groups at the Centre. It is proposed shortly to set up a working group for resources, which will consider both internal and external resources, and will, in particular, examine the measures needed to step up domestic capital formation. Other groups which will be established at the Centre, for which associated groups in the States will need to be established, will be for

elementary education, secondary education, technical education, health (including family planning), urban development and housing, welfare of backward classes and administrative problems of plan implementation. Besides the groups mentioned above, the Planning Commission will shortly consider the establishment of groups for industrial development, steel, coal, oil, mineral development, village and small industries and transport. The setting up of special technical groups to study population trends and employment and working force estimates is also under consideration.

It is hoped that it will be possible to complete the first stage in the formulation of the third plan, namely, the preparation of the preliminary draft outline in about a year's time. The preparation of a fairly complete outline, based on detailed work at the Centre and in the States, will take another year. The latter will be the basis on which the detailed plans for the first year of the third plan period will be drawn up towards the end of 1960. A question which needs to be considered carefully in relation to the preparation of State plans is the place to be assigned to projects for districts, development blocks and villages, and the lines along which these should be prepared for the third plan. The primary purpose of local plans is to serve as a means for mobilising local man-power and other resources. In the light of the experience gained when the second plan was prepared, the working of the community development programme as well as the decision early this year by the National Development Council in favour of the introduction of democratic administration within the district, and especially at the block level, the Planning Commission hopes shortly to address its suggestions on this subject for the consideration of State Governments.

Minor Irrigation Works

For purposes of maintenance, minor irrigation works can be divided into three broad categories, namely, (a) works owned by individuals; (b) State-managed works; and (c) community schemes benefiting groups of individuals in one or more villages. responsibility for the maintenance of which has not been placed with any State Department. The problem of proper maintenance of these works was discussed at length by the Regional Minor Irrigation Conference of States Ministers of Agriculture held in Hyderabad, Calcutta and New Delhi during July, August and September 1958. Their views and recommendations may be summarised as follows:

Works owned by individuals: (i) The maintenance of these schemes should be the responsibility of the owners entirely.

(ii) In order to ensure proper servicing and maintenance of mechanical appliances, such as pumping sets and Persian wheels, there should be adequate arrangements for their servicing and repairs, particularly in areas where the number of such appliances is large. In addition to mobile units for attending to small repairs on the field, there should be a workshop in each district, preferably attached to the agricultural school, for attending to major repairs and service.

State-managed works: (i) Adequate provision of funds required for the proper maintenance of these works should be made in the annual State budgets of the departments in charge of these schemes.

(ii) On State-managed works like drainage, flood protection and some irrigation works where water rates are not levied, the initiative and co-operation of the beneficiaries should be harnessed to the maximum extent possible in the shape of unskilled work, such as all bulk earthwork.

(iii) Contracts for the maintenance of such works should, as a rule, be awarded to *gram panchayats* or co-operatives.

(iv) Where necessary, arrangements should be made for the levy of a maintenance cess, which should be credited as a non-lapsable fund exclusively for maintenance purposes.

Community Schemes: (i) The maintenance of these works should be entrusted to local organisations, such as *gram panchayats* or *panchayat samitis* in cases where the command extends over the jurisdiction of more than one *gram panchayat*. These *panchayats* or *samitis* should be empowered to levy a suitable cess to cover maintenance charges.

(ii) The *panchayats* should be equipped with suitable technical staff for carrying out the maintenance properly.

(iii) Provision should be made empowering the Governments, in the event of default in proper maintenance by the *panchayats*, to take over the work, carry out the maintenance and recover its costs from the *panchayat* concerned.

(iv) In order to ensure that the works are properly maintained, standards should be prescribed by the department concerned for strict adherence by organisations responsible for their maintenance.

General: All completed works, whether Government or private, should be periodically visited by Government agencies to ensure effective maintenance, and necessary measures should be taken when and where any tendency towards deterioration is noticed. While the principle of devolving responsibility for maintenance of all minor irrigation works on the *gram panchayats* or *panchayat samitis* is fully accepted, it will be necessary to ensure that they have adequate revenues and technical staff to take up this work. This was also the view expressed by the Central Ministry concerned on the recommendations of the Com-

mittee on Plan Projects Study Team early this year.

Auxiliary Port in Calcutta

Further details are now available of the proposal for an auxiliary port for Calcutta. Originally, Geonkhali on the right bank of the river Hooghly was considered a possibility. It was pointed out that, as the construction of a deep-sea port was a long-term proposition, the possibilities of using Geonkhali as a minor port might be examined. The State Government appeared to be more interested in the construction of a deep-sea port in Geonkhali than in developing it as a minor port. The Calcutta Port Commissioners also did not favour the development of Geonkhali as a minor port, but as a satellite port to Calcutta. A statement was made in the Lok Sabha by the Central Minister of Transport and Communications on 28th March this year that the Government of India had accepted in principle the need for a deep-sea port in the Calcutta region and that the only question to be decided was the best possible site for its location. The question of siting a subsidiary port in Geonkhali was examined by various experts including Mr. H. P. Mathrani, Development Adviser, Central Ministry of Transport, the Director, Poona Research Station, Mr. Posthuma, leader of the World Bank mission on ports which visited India in 1957 and Professor J. A. Larras, a French port expert, who came to India in March 1958, and Messrs Rendell, Palmer and Tritton, consulting engineers to the Calcutta Port Commissioners. All these experts have unanimously expressed the view that Geonkhali cannot serve ships of more than 26 feet draft on account of the restrictions imposed by the Balari bar below Geonkhali. Another objection to the provision of new port facilities in Geonkhali arises from the absence of a railway link. If a new railway line is to be built, it should connect a port which can offer better facilities for deep-draft vessels than Geonkhali.

The World Bank technical mission, which visited India in October-November 1957 for appraising port projects for loan assistance from the Bank, expressed the view that having regard to the industrial developments which were taking place in the hinterland of Calcutta, it was necessary to have an additional sea port in the region and that the port should have a depth of 40 feet or more. Since it was not possible to get this depth on the Hooghly down to Geonkhali, the mission recommended an examination of alternative sites nearer the mouth of the river.

Expert Views on Haldia

Studies in this direction were taken in hand by the engineers of the Calcutta Port, the Development Adviser to the Central Ministry of Transport and Messrs Rendell, Palmer and Tritton. Professor Larras also inspected the river Hooghly. Their tentative view is that the best possible site for the location of the new port is in Haldia. The majority of the experts, however, are of the opinion that Haldia will be suitable for about 30 feet draft ships and that it would be difficult to bring ships of much bigger draft to this port. While this will be a great improvement on the existing conditions, it is not likely to achieve the object of bringing 36 feet to 40 feet draft ships to the port.

Another alternative under consideration is to provide a deep draft island port in the Hooghly estuary. Opinions on the advisability of having this immediately due to its possible effects on the estuary and the time required to study this problem, are divided. To decide whether the Haldia port project should be proceeded with immediately, whether the island project should be dropped, whether its studies should continue side by side with the construction of Haldia port or whether the Haldia project should be dropped in favour of the island port, requires detailed technical examination by the best harbour engineering experts. To this end, the Government of India has sought the assistance of the U. N. Technical Assistance Administration for the services of three harbour engineering experts to undertake the technical investigation. One of the experts will be Mr. Posthuma who is expected to come to India for six weeks.

If it is decided to proceed with the Haldia port project immediately, the intention is to provide initially two or three mechanised jetty berths at the new site for handling ore and coal. These will release about six to eight berths at Calcutta port, which are at present being used for handling these items of cargo. As most of these berths are not equipped with jetties, shore cranes, transit sheds and other equipment, it will be necessary to provide these facilities at the berths which would be released at the port of Calcutta. This will make up for the river jetty berths going out of use. On a rough basis, the subsidiary port near the Haldia river, excluding the railway line, will cost Rs. 4 crores, the rail line itself costing about Rs. 3 to Rs. 5 crores. The conversion of the manual coal and ore loading berths in the Calcutta docks to general cargo berths is estimated to cost nearly Rs. 3 crores. Thus, with an overall expenditure of nearly Rs. 10 to Rs. 12 crores, port facilities in the Calcutta region can be augmented considerably in order to facilitate the handling of additional traffic which will be generated by the increased industrial activity in the region.

Import of Petroleum Products

The Government of India has allotted Rs. 25 crores for the import of petroleum products during the six months ended March 1959, compared with Rs. 41 crores allotted in the previous six months and Rs. 45 crores in the six months ended March 1958. This reduction in the allocation has been made in full consultation with the oil companies, which have agreed to run down their stocks without affecting supplies.

London

GOLD AND DOLLAR RESERVES SHOW ENCOURAGING INCREASE

UNEMPLOYMENT STILL RISING

(FROM OUR LONDON CORRESPONDENT)

FOR the next few months, the most eagerly awaited economic figures will undoubtedly be those recording the rise or fall of the sterling area's gold and dollar reserves on the one hand, and on the other of unemployment in Britain. The former, more than any other factor, will dictate the tempo of the Government's switchover from restrictionist to expansionist measures, while the latter will serve, again better than almost any other indicator, as the measure of success which is being achieved. In both aspects, fortunately, the latest figures available are encouraging. With the seasonal pressure against the pound past its peak, the rise in the gold reserves continued at a satisfactory pace in October. The increase of \$54 million, which has lifted the reserves to \$3,174 million, was up to the City's best expectations. If account is taken of the \$28 million paid to the European Payments Union in settlement of the September deficit and \$3 million paid to its creditors in bilateral settlements, the October residual surplus works out at \$85 million. This compares with a surplus of \$58½ million for September and is the best residual gain achieved since May. Last month's deficit of £12 million with the European Payments Union, though it marks an improvement, if only very slight, on the £13-million September deficit, is regarded as only "reasonably satisfactory" for it is larger than the average September deficit during the past five years. Seasonal influences are beginning to operate in favour of the sterling area, but their effect is reduced by the low level of commodity prices and the increasing difficulties encountered by British manufactured exports in European markets.

Rise in Unemployment

The unemployment figures cover the month ended 13th October and show that 514,000 or 2.3 percent of the population were out of work more than in any month since the war, with the exception of February and March 1947, when the coal crisis was at its height. Unemployment rose by 38,000 during the month from 2.2 percent. Even this percentage had only been equalled once before since the war, in April and May 1952. Perhaps the most significant figure among those issued, however, is the 212,000 people who have been unemployed for more than eight weeks. This compares with 193,000 in the previous month and 111,000 at this time last year. These people will not regard their unemployment as simply a matter of changing from one job to another.

This trend was anticipated by the Government and was foreshadowed by the Minister of Labour. He expects it to continue till January or February, but at its worst stage, Mr. Macleod anticipates the total will not exceed 2.8 percent. After that he hopes that a better than seasonal trend in the opposite direction will develop. Another encouraging sign, in Mr. Macleod's view, is that in September and again in October, for the first time for nearly a year, unemployment in opposite directions, "sign posts" were pointing in opposite directions, in that the vacancy figures showed an increase when all the due adjustments were made. He hesitates to say that two months constitute a trend, but "it is certainly true that the uninterrupted downward movement of vacancies which have gone on since the autumn of last year seems to have been brought to a halt. This is an encouraging sign and may be one more indication of a return of business confidence."

Over to Expansion

That the Government is alive to the dangers of unemployment and of the recent recession in the United States hitting Britain hard was made only too evident by the policy it outlined during the economic debate. That, in itself, was disappointing, for the Opposition's chief spokesman, Mr. Harold Wilson, adopted a levity in moving the censure

motion which well deserved the "comedian" tag which the Chancellor of the Exchequer applied to him when replying. One after another, the Ministers who participated in the two-day debate distanced a succession of expansionary measures closed a succession of expansionary measures by starting with the increase of expenditure by nationalised industries by between £125 million and £150 million (the process was actually started in August with a £30-million rise). The State is to lend money to the building societies to encourage the purchase of smaller and older houses. It will make improvements in amenities for the Services to encourage recruitment. It will also grant extended credit terms to the aircraft industry, up to seven years, to assist foreign sales. One way and another, the Government is encouraging expansion quite substantially, and the defeat of the motion by 69 votes, against a theoretical majority of 47, was hardly surprising.

Mr. Heathcoat Amory's changed outlook was evident when he addressed the Institute of Directors at its annual conference the other day. He told the 3,000 business men present that his experience had made him an expansionist, "but the expansion I believe in has to be firmly based and sensibly contained." His own guess was that, in the future, the main theme would be how to exploit opportunities which lay ahead. "When expansion will come—how much, in how many months—I cannot predict. That it is coming I have no doubt." He advised business men to go ahead with their investment plans "steadily and methodically with confidence in Britain's future."

Revised Production Index

The monthly index of industrial production has been revised, with 1954 as the base year, but the new series tells much the same tale as the old. The seasonally adjusted index rose from 106 to 109 between January and February this year, then declined to 105 in June, and recovered slightly to 106 in July. In August, the index fell to 104 and it is estimated at 104 to 105 for September. If the Chancellor is right and demand is now building up, the index should rise in the coming months, but the comparison between September this year and that of last year, when the index was 109, is an indication of the way in which industry has been held back in the effort to keep prices and sterling stable. The unadjusted index for August is put provisionally at 89, compared with 98 for July and 92 for August 1957.

The choice of 1954 as the new base year for the index was a logical one as soon as the detailed results for the census of production taken in that year were available. Another change has been to bring industries covered by the index into line with the new standard industrial classification. For instance, the engineering, shipbuilding, and electrical goods group is now divided into "engineering and electrical goods" and "shipbuilding and marine engineering." The series of figures which make up the Index has also improved. Greater use is now made of output figures, compiled monthly, and less use of quarterly data. Figures compiled annually have been dispensed with, which makes it possible to measure month-to-month changes more accurately.

Motor-car Sales Boosted

The first hint of the possible effect on the motor-car and motor-cycle industry of the abolition of the remaining hire-purchase controls is given by the hire-purchase figures for October. These show that sales responded immediately. A total of 32,735 motor-cycles were sold on hire-purchase against 24,563 in September and only 17,895 in October 1957. Sales of commercial vehicles jumped from 11,876 in September to 13,857 in October. This was over 4,000 more than a year ago. Caravan sales were 2,285 in October against

1,902 in September and 1,661 in October 1957. The increase in second-hand motor-cycle sales on hire-purchase is even more pronounced: 24,534 were sold in October, against 18,471 in September and 12,875 a year ago. Hire-purchase sales of private motor-cars rose, but more modestly. Used car sales rose from 46,970 in September to 53,433 in October—nearly 10,000 higher than in October 1957. But sales of new cars, at 6,982, were actually 500 lower than in the same month last year, although 1,100 higher than in September.

Orders to Shipyards Decline

There has been a considerable decline in orders received by British shipyards this year and some orders have been cancelled. This was stated by Mr. T. D. Galbraith, Civil Lord of the Admiralty, in a written parliamentary reply. In terms of launchings, said Mr. Galbraith, the industry had produced more gross tonnage this year than last and still had an order-book of nearly 5½ million gross tons. The situation was becoming serious, however, in those yards which had no appreciable backlog of orders. "We must look to an improvement in world trade to bring about a recovery in ordering." The number of British ships laid up in ports in Great Britain and northern Ireland on 1st October was 204, seven more than at the beginning of September, and the largest number since the present slump in shipping markets began. A year earlier only 62 ships of 218,052 tons were laid up. The actual tonnage laid up on 1st October was 1,035,135 gross tons, a decrease of rather less than 20,000 tons from the September total. The 37 tankers laid up made about 30 percent of the total. There were also 76 foreign vessels laid up, totalling nearly 500,000 gross tons.

Machine Tool Orders

There is no sign of recovery in the latest figures of machine tool orders, but the reduced output has almost stopped the persistent fall in outstanding export orders. Both home and export orders and deliveries show the sharp drop which is usual in August. Home orders, which fell to £3.7 million in July, were again lower at £3.1 million. In August 1957, orders worth £4.4 million were received. Deliveries dropped by nearly £1.5 million to £4.1 million. Although the fall is largely explained by holidays, the output was £800,000 down on a year earlier. The rise in export orders in July was, as seemed likely, not significant: orders during August fell from £1.9 million to £1.2 million (still, however, slightly more than in August 1957) and deliveries declined by £336,000 to £1.3 million, against over £1.5 million last year.

Outstanding orders for home delivery are now down to £46.7 million, compared with £66.2 million a year ago, and £50.1 million three months ago. But reduced exports and the unusual volume of orders received in July have kept the export order-book in better shape. Although it has declined from £22 million to £16.5 million over the year, the fall over the last three months amounts to less than £500,000.

Burmah Oil Maintains Dividend

The board of the Burmah Oil Company has been content merely to maintain the half-year's dividend at 5 percent tax-free. Expectations in some quarters that Burmah would make a capitalisation of reserves sprang from the recent one-for-one capitalisation announced by British Petroleum, in which Burmah has a large shareholding, but were not realised. Burmah's holding of British Petroleum ordinary stock now amounts to over £53 million which, taking the current market price of 55s 9d, makes this holding worth about £146 million. It is believed that Burmah Oil's investment in British Petroleum is carried in its own books at only £22½ million. Presumably, the Burmah directors have decided to leave this matter over for a while, possibly until they make their final dividend announcement next spring.

Brevities

Under an agreement with the Republic of Indonesia covering the treatment of tin concentrates, the sale of the resultant Bangka tin will be handled exclusively by Brandeis, Goldschmidt and Co., London.

Compulsory arbitration is to be officially abolished from 1st March. Although the Industrial Disputes Tribunal will remain in existence until then, it will have as its final tasks only disputes between employers and unions reported before 10th December.

Plantation Topics

TALKS ON KERALA LABOUR DISPUTE FAIL

STATE GOVERNMENT OPPOSES ADJUDICATION

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE tripartite conciliation conference convened by the Kerala Government to bring about a negotiated settlement of the issues in dispute between the plantation managements and workers, has failed. Mr. T. V. Thomas, State Labour Minister, who presided, told Pressmen that they were about to come to an agreement for a three-year period, but failed largely because of the rigid attitude taken by the representatives of the I.N.T.U.C. unions. Mr. Thomas explained that while the I.N.T.U.C. spokesmen are decidedly opposed to the application of any settlement that might have been reached at the conference to the plantation workers in the Devicolum area of the High Ranges, the representatives of the Association of Planters of Kerala have reacted by saying that if there is no possibility of an industry-wide settlement on a State-wide basis they are not prepared to carry on the negotiations, nor are they prepared to discuss any piecemeal or patch-up settlement of the dispute. He pointed out that all along in the past it has been the convention and custom to have an industry-wide settlement in the plantations.

The conference which was to have discussed a report and "factual statement" prepared by a

three-man sub-committee it appointed a few days ago to scrutinise the trading results of plantation companies—five each selected by the managements and workers—to decide on the amount of bonus for 1957 "could not go into the merits of the question" because of the basic difference that developed at the very outset.

I.N.T.U.C. Stand

The I.N.T.U.C. representatives are reported to have told the conference that they are still bound by the joint application of the management of the Kanan Devan Hills Produce Company and the I.N.T.U.C.-led plantation labour union of Munnar, requesting the State Government to refer the dispute to adjudication. The Labour Minister, it is reported, informed the conference that the Government had rejected this request, for it did not feel that the I.N.T.U.C. union represented the majority of workers on the High Range plantations. There were some technical flaws also in the application, the Minister is reported to have said. According to the spokesman of the I.N.T.U.C., the I.N.T.U.C. refused to join in any industry-wide settlement. They wanted adjudication in the Munnar area but were not prepared to negotiate a settlement for the rest of Kerala. This made negotiations pointless and the conference had to break up.

Adjudication Inescapable

Under these circumstances, adjudication has become "inescapable", the planters say. But the Kerala Government refuses to accept it. The Association of Planters of Kerala in a statement says: "The dispute is an industry-wide one. The same set of demands and strike notices have been showered on the industry all over the State by unions of different political complexion. The dispute and the situation arising out of it are one and indivisible. Any effort to differentiate between Munnar and any other district and the rest of Kerala is mischievous and misleading."

Efforts are being made by communist union leaders to come to an arrangement with the I.N.T.U.C. leadership for a collective agreement. The Secretary of the State unit of the A.I.T.U.C. has said that the workers have no right now to abide with the planters, for they have agreed to abide by the decision reached at the tripartite conciliation conference. The immediate task before labour, according to the communist trade union leader, is to bring pressure on the I.N.T.U.C. leadership and "to force it to put up a joint stand." A conference of all registered trade unions of plantation workers is being convened in Ernakulam to decide the future course of action. In the meanwhile, the strike stands suspended.

Loss of Output

According to a spokesman of the United Planters Association of Southern India, 5 million lbs of tea valued at Rs. 1.32 crores has been lost in the 27-day strike sponsored by the communists on the Kanan Devan estates. There has also been a fall of one million lbs in the production of rubber, valued at Rs. 15 lakhs as a result of sporadic strikes in the Mundakayam Valley.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for October 1958:

Upper Assam: Outturn in September normal to good; weather seasonable but abnormally hot in Tingri; immediate prospects fair to good.

Central Assam: Outturn normal; weather seasonable; crop prospects fair to good.

Lower Assam: Outturn in September normal to good though to date considerably under last year in Mangaldai; weather seasonable but hot in Tezpur; prospects fair.

North Cachar: Outturn good; weather seasonable; prospects fair to good.

South Cachar: Outturn normal to good; weather generally seasonable but unusually heavy rain and floods have been reported from some districts; prospects fair to good; helopeltis prevalent in Longai.

Eastern Doorgas: Outturn about normal but to date considerably under last year in Kalchini; weather good and an early cold weather is expected; immediate prospects fair but unfavourable in Kalchini.

Central Doorgas: Outturn about normal; immediate prospects fair; cold weather has set in in Dalgao.

Western Doorgas: Outturn normal to good but to date considerably under last year in Chalsa; immediate prospects fair to good; weather seasonable and the season will close about the normal time.

Darjeeling: Outturn in September about normal; immediate prospects fair weather seasonable; helopeltis severe and blister blight severe in some districts.

Teral: Outturn normal; weather seasonable; crop prospects fair.

ANNUAL GENERAL MEETING OF ASSOCHAM

The annual general meeting of the Associated Chambers of Commerce of India will take place at 11-30 a.m. on 5th December in the Royal Exchange, Calcutta. The Central Finance Minister, Mr. Morarji R. Desai, has accepted the invitation to be the principal guest and to address the meeting. The meeting will continue on 6th December.

Jute

FALL IN RAW JUTE PRICES CAUSING ANXIETY

MILLS ACCELERATE PURCHASES

THE rapid fall in raw jute prices over the past few weeks has brought them down to their lowest levels for several years, and has caused anxiety to many. The Government, which has long been criticised by various jute growers' associations, is perturbed over the current situation. Many rumours have been circulating during the past week, and the possibility of Government action is being freely discussed. Various proposals have been put forward about how to alleviate conditions, and it is understood that one of these—to allow the export of limited quantities of jute—has been discussed at a high level. Some people are in favour of minimum prices being fixed at a level that would give the grower an economic return for his crop. No longer is jute considered a "golden fibre" by cultivators; there is a distinct possibility that many will grow less of it next season and concentrate on a more profitable crop.

Some think that this situation has arisen due to the Government's short-sighted policy of indiscriminately increasing the jute acreage. Farmers have been encouraged to grow more jute, but lack of supervision and advice, plus the shortage in some districts of fertilisers to carry out the plans formulated, have created a glut. Much of the output from the new areas consists of low-quality jute, of which there is usually an abundance in India. Now that the fibre is being marketed, and prices have fallen, the authorities are beginning to have second thoughts on the matter, but so far no concrete proposals have been put forward. On the question of exporting jute, it is doubtful whether any overseas buyers could be found for the type India may have in surplus. U.K. and Continental manufacturers demand a higher grade than India would be willing to supply, as there is always a shortage of the superior fibres in this country, so much so that mills still depend on Pakistani jute to a great extent to make up the deficit. What, then, will India export? If she releases good quality fibre, it would have to be replaced from Pakistan, and the whole aim of self-sufficiency in jute would be defeated.

Substantial Purchases by Mills

Calcutta mills, thinking that some action may be taken to increase the price of jute, have followed the advice given them and made substantial purchases throughout the past week. Some estimates put the figure as high as 800,000 maunds but supplies are so large that these purchases have made very little difference. Prices have advanced slightly, but business has always been possible at a discount.

The gunny section has meanwhile been steady, but this is not really because of overseas business, but is the result of a fall in the local jute goods market following a fall in the jute goods market last month, are responsible for the improvement. Calcutta mills have helped strengthen the market by adopting a reserved attitude, especially for sacking, which in general remains below the minimum levels. Hessians have been very firm throughout the week and new high levels have been recorded for 11 porter fabrics.

A Press note issued by the Pakistani Jute Board indicates that the minimum export prices for jute fixed recently are for the whole of the current season, and will not be altered. The Board expects that the market will rise after the harvest of the rice crop, thereby reducing the present heavy pressure on the grower. In another Press note, the Board directs all shippers of jute to hold the contracts for export to ship at least half the contracted quantity in the first month of a two-month shipping period, or at least one-third in the first month of a three-month shipping period and two-thirds in the first two months. The order comes into force with immediate effect.

I.J.M.A. Stocks of Jute Goods

Gunny stock returns by member mills of the I.J.M.A. showed a reduction for the fourth consecutive month. The figure for October was 107,100 tons, this being 1,900 tons less than in the previous month. Hessian increased by 800 tons to 17,800 tons (or 16.6 percent of the total), and "other goods" recorded a small rise of 400 tons to 12,200 tons (11.5 percent). These increases were more than offset by a drop of 3,100 tons to 77,100 tons in sacking (71.9 percent). Sacking stocks are now the lowest for six months. In the corresponding month of last year, total stocks amounted to 76,000 tons—38.8 percent being hessian, 49.3 percent sacking, and 11.9 percent other goods.

THE JUTE MARKETS

Activity in the futures market was varied last week, and prices, as given by the East India Jute and Hessian Exchange Ltd for the period 5th November to 11th November, were as follows:

	Hessians	Sacking	Raw Jute
	40in. 8oz.	B Twills	Upper Assam
	Rs. a 100 yds.	Rs. a 100 metres	Rs. a 100 kilos
Opening	42.26	46.25	96.65
Highest	43.32	47.37	97.70
Lowest	42.28	46.25	96.50
			23.16

Jungli	19.75	52.93
Bimil F.A.Q.	20.50	54.94

I.J.M.A. PRODUCTION FIGURES FOR OCTOBER

The Indian Jute Mills Association reports the total production of jute goods for October 1958 as follows:

Description	Quantity
1. Gunny Bags (a) Hessian	2,869 tons (2,915 metric tons)
	98.3 lakh yds. (89.89 kilometres)
	69.3 lakh Nos.
(b) Sacking	42,350 tons (43,030 metric tons)
	10,23.5 lakh yds. (9,35.84 kilometres)
	4,55.7 lakh Nos.
2. Gunny Cloth (a) Hessian	30,412 tons (30,900 metric tons)
	11,50.1 lakh yds. (10,51.67 kilometres)
(b) Sacking	673 tons (684 metric tons)
	15.5 lakh yds. (14.13 kilometres)
3. Other Manufactures	5,508 tons (5,596 metric tons)
4. Total Production (All Kinds)	81,812 tons (83,125 metric tons)

Summary		Summary

THE FOREIGN JUTE MARKETS

LIMITED FIBRE OFFERS BELOW MINIMUM RATES

(FROM OUR DUNDEE CORRESPONDENT)

THE position in the jute trade quietened a good deal during the past week or two and very little fresh business was done in yarns and cloth. Spinners and manufacturers have good orders on their books. Therefore, it is not easy to secure delivery within the next two months. As far as raw jute is concerned, shippers are not offering at less than the minimum prices. But there are many secured parcels floating around at from 10s to 30s a ton under the minima, and holders are unable to get buyers interested in them. Dundee spinners are already well bought in their raw material and they are unwilling to pay the prices asked for. When Mill Lightnings were available at around £85 and Mill Hearts at £75 a ton, just before the fixing of the minimum prices, spinners bought fairly freely. The lowest for these now are £90 and £80, respectively, for November-December shipment, c.i.f. U.K.

Firms who have no secured lots for sale are not offering below the minima and there are many who will not quote £90 for Mill Lightnings. They are asking £91 and £92, as this grade is scarce in Pakistan, as well as Mill Firsts which are lowest at the minimum rate of £106. Good marks of Daissee-2/3 are obtainable at £94 10s (£95 minimum) and grade at £87 10s (£88), while grade Tossa-2/3 can be bought at £103 10s (£105) and grade Tossa-4 at £94 (£95), all c.i.f. U.K., November-December shipment. The raw jute market is practically idle. Afloat near-at-hand parcels commanded a premium a week or two ago, but sellers will now take less than the minimum rates.

The Calcutta goods market was somewhat irregular and fluctuating. Quotations last week were 64s 3d for 40in. 10oz. Hessians and 47s 9d for 74oz. November, 62s 3d and 47s December and 60s and 45s 3d January-March, with B Twills at 147s 3d, 147s 9d and 148s 3d for the respective positions of shipment, all f.o.b. Calcutta. Most spinners are now quoting January delivery as the earliest for jute yarns and prices are very firm.

I.J.M.A. STOCK FIGURES FOR OCTOBER

The Indian Jute Mills Association reports the total stocks of jute goods at the end of October as follows:

Description	31st October, 1958	30th September, 1958	Increase over (+) or decrease (-) last month	31st October, 1957
Lakh yds. (000 Tons)	Lakh yds. (000 Tons)	Lakh yds. (000 Tons)	Lakh yds. (000 Tons)	Lakh yds. (000 Tons)
Hessian Cloth and Bag	6.67 (6,06.56)	17.8 (18.1)	6.33 (17.3)	17.0 (17.3)
			+34 (+30.42)	+0.8 (+0.8)
Sacking Cloth and Bag	18.71 (17,10.51)	77.1 (78.4)	19.36 (17,70.08)	80.2 (81.5)
			-65 (-59.57)	-3.1 (-3.1)
Others	12.2 (12.3)	11.8 (12.0)		+0.4 (+0.3)
Grand Total (000 Tons/Metric Tons)	107.1 (106.8)	109.0 (110.8)		-1.9 (-2.0)
				76.0 (77.2)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhai with estimates for three non-member mills. The figures in brackets are metric measures, and are more precise.

Commodity Markets

SLIGHT FALL IN WHOLESALE PRICE INDEX

THE official wholesale price index (base: year ended March 1953=100) worked out to 116.4 during the week ended 25th October, 1958, compared with 116.5 (revised) for the previous week. The index was higher by 0.3 percent and 6.9 percent, respectively, when compared with the corresponding weeks of the previous month and of last year. The monthly average of October 1958 stood at 116.3, compared with 116.5 for September 1958 and 108.9 for October 1957. The index for Food Articles receded by 0.2 percent to 121.9 due to a fall in the prices of milk in Calcutta (-15%), jowar in Rohtak (-12%), in Gulbarga (-6%) and in Nagpur (-5%), ragi in Madanapalli and oranges (-11% each), rice in Kotma and in Imphal (-9% each) and in Jamshepur (-6%), cashewnuts in Mangalore (-7%), gingelly oil in Bombay (-6%) and mustard oil and eggs both in Delhi and potatoes (-5% each). The prices of maize in Bhilwara (+14%), jowar in Akola (+10%), and in Jhalawar (+6%), onions (+9%), rice in Tirunelveli, barley in Hapur, arhar, mung in Bombay, chillies in Madras and cardamoms in Calcutta (+5% each), gram (+4%), coconut oil (+2%) and wheat and urad (+1% each), however, moved up. The price of raw tobacco (snuff) in Madras (+5%) showed a rise and in consequence the index for Tobacco advanced by 0.7 percent to 91.7. The index for the Fuel, Power, Light and Lubricants group remained stationary at the previous week's revised level of 115.1. The prices of cottonseed in Amaravati and lac (+5% each) and raw cotton and copra (+1% each) showed advances while gingellyseed in Jhansi (-6%) and raw wool and rapeseed (-1% each) moved down and the index for Industrial Raw Materials rose by 0.2 percent to 116.8, compared with 116.6 (revised) for the earlier week. Lower prices of rayon yarn (150 bright Indian) (-5%) and linseed oil and cotton yarn (-1% each) brought down the index for Intermediate Products by 0.7 percent to 109.3. The price of zinc (+4%), however, showed a rise. In spite of a rise in the prices of dyeing materials and cycles (+1% each), the index for Finished Products stood stationary at its previous week's level of 108.4.

INDEX NUMBERS BY GROUPS AND SUB-GROUPS (Base: 1952-53=100)

Calcutta Markets

GOOD GENERAL DEMAND AT TEA EXPORT SALE

EASIER TREND IN PRICES

AT Sale No 19, held on 11th November, offerings at the Export auction amounted to 74,614 chests for which there was a good general demand, although prices were below last week's rates. "Teas for price", plain and medium Assam B.P.s were 2nP to 2nP easier, while plain Fannings were irregular and sometimes dearer. A few orthodox medium Assam B.O.P.s with bright liquors sold well, but the more ordinary B.O.P.s in this category were again easier as were O.F.s. which met with a restricted enquiry. C.T.C. teas were again a weak feature, although poorer descriptions met with a fair demand. The better C.T.C. teas were up to 2nP easier, and the majority of withdrawals were of this type. There was a fair demand for Legg-cut Dogars, but at generally easier rates. Clean Pekoes were about steady, but some of the more stylish leaf grades were dearer. Darjeelings met with quite a fair demand and prices were irregular and sometimes dearer.

Quotations	1958	1957
Clean Black Pekoe	2.04 to 2.12	2.25 to 2.30
Plain B.P.	1.86 to 1.72	1.86 to 1.70
Plain Fannings	1.84 to 1.90	1.78 to 1.86
Medium B.P.	1.90	1.76 to 1.86
Medium Fannings	1.85 to 2.00	1.81 to 1.90
Best Assam C.T.C. B.P.	2.15	N.A.
Best Assam C.T.C. Fgs.	2.30	2.80 to 3.00

At the Internal Sale, 2,310 chests of Leaf were on offer for which there was a good demand at generally easier rates.

FAIR BUSINESS IN FREIGHT MARKETS

FAIR miscellaneous business was concluded last week in the freight markets, which included a large number of grain fixtures to India. Gulf, West Coast India was done at 67s 6d and North Pacific-East Coast took eight American vessels at \$125.50 with November-December loading. This rate compares very favourably with 67s 6d paid for two open market vessels for the same business. A transatlantic coal voyage was arranged at the higher rate of 24s 3d. Ore fixtures from India included Mormugao-France at 45s f.i.o., and Karwar to Yugoslavia at 40s f.i.o. There is still no sign of any revival sufficiently strong to tempt the many ships now laid up to resume trading.

LINSEED EASIER

There has been very little change over the past week, but due to poor demand for seeds and oil, a slightly easier tone has developed. Supply is still scarce. With only limited enquiries from Calcutta crushers, business has been negligible. In the oil market, with no appreciable stocks held by either manufacturers or dealers prices have not shown much decline. The tendency is quiet with sellers more in evidence than buyers. Latest quotations are as follows: Ready Rs. 25.75 a maund; November Rs. 25.62 a maund.

HIDES AND SKINS STEADY

The market ruled steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 4th November and 10th November, 1958)

Cowhides: Wet Salted (Ord.) 18,800 pcs. on the basis of Rs. 5.50 to Rs. 9.50; Wet Salted (Ord.) 7,000 pcs. on the basis of 72nP to 78nP a piece; Wet Salted (Slaughtered) 24,500 pcs. on the basis of Rs. 9.50 to Rs. 15.50 and Rs. 17.50 to Rs. 26.

Goatskins: Wet Salted (Patna, Daissee, Kustia) 49,700 pcs. on the basis of Rs. 270 to Rs. 285, Rs. 325 to Rs. 345 and Rs. 350 to Rs. 390; Wet salted (he-killed) on the basis of Rs. 4.25 and (she-killed) on the basis of Rs. 3.75 a piece; Assam - Dinajpur-Rampurhat - Maldah - Jalpaiguri 29,100 pcs. on the basis of Rs. 275 to Rs. 347.50; Purneah 5,000 pcs. on the basis of Rs. 340; Patna-Pakur (Ord.) 5,900 pcs. on the basis of Rs. 280 to Rs. 300; Purneah (kurani) 3,200 pcs. on the basis of Rs. 360 to Rs. 365.

Bazaar Stocks

(10th November, 1958)

Cowhides: Wet Salted 86,800 pcs.
Goatskins: Wet Salted (Patna, Daissee, Kustia, Killed) 24,600 pcs.; Assam-Dinajpur 143,000 pcs.; Mozufferpore-Patna-Purneah-Pakur-Kissen-ganj 3,89,500 pcs.

SUGAR MARKET STEADY

During the week ended 12th November, sugar sales in the Calcutta market averaged 5,000 bags daily. Arrivals a day were 4,000 bags and stocks totalled 90,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 38.50 for ordinary grain and Rs. 40.45 for big grain. The market was steady.

COMPANY AND PUBLIC NOTICES

PHILIPS INDIA LIMITED

Notice of Extraordinary General Meeting to be held on Saturday the 13th day of December 1958.

NOTICE is hereby given that an Extraordinary General Meeting of the abovenamed Company will be held at the premises of the Bengal Chamber of Commerce & Industry, Room No. 1, 6 Netaji Subhas Road, Calcutta 1 on Saturday the 13th Day of December 1958 at 11-30 a.m. for the purpose of considering and, if thought fit, passing, with or without modification, the following resolution as an ordinary resolution:

"That, as recommended by the Directors, a further dividend of 1.4% (free of Indian income tax) be declared for the year ended December 31, 1957, by way of addition to the dividend already declared at the Annual General Meeting of the Company held on September 27, 1958, and be payable to those persons whose names appear as members in the register of members of the Company as on December 13, 1958".

The share register of the Company will be closed from December 1, 1958 to December 13, 1958, both days inclusive.

Dividend Warrants will be sent to registered shareholders or to their mandatees, registered in the books of the Company on December 13, 1958. Powers of Attorney, etc. where necessary should be submitted with completed deeds for transfer registration before the transfer books are closed.

By Order of the Board,

P. C. VINK

Chairman & Managing Director.

November 7, 1958

7 Justice Chandra Madhab Road, Calcutta 20.

Note:—A member entitled to attend and vote is entitled to appoint a proxy to attend and, on a poll, to vote instead of himself. Such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the Meeting.

EXPLANATORY STATEMENT

Consistent with the dividend policy announced by your Company in the Prospectus published last year and having regard to current requirements in financing various expansion projects in the industrial field, your Directors recommended that a dividend of 2% should be declared out of the profits for the year ended December 31, 1957, at the Annual General Meeting held on September 27, 1958. At the time the dividend of 2% was recommended representations had been made to Central Board of Revenue as to the application to the Company of Section 23A of the Indian Income-tax Act in order to obtain confirmation that a dividend of 2% out of the profits for the year ended December 31, 1957 would fulfil the requirements of the Section. The Central Board's reply has now been received and has led your Directors to conclude that it is desirable to declare a further dividend amounting to 1.4% out of profits for the year ended December 31, 1957, in addition to the dividend of 2% already declared, the balance of the undistributed profit of Rs. 63,842 being supplemented for the purpose by transferring to the Profit & Loss Account the Contingency Reserve amounting to Rs. 3,00,000.

It will be appreciated that the payment of such additional dividend absorbing Rs. 3,08,000 will affect your Company's liquid position which factor you may have to be taken into account when your Directors come to consider the amount of dividend to be recommended in respect of the current year.

The Directors of your Company are or may be deemed to be interested in the above recommendation by virtue of their respective shareholdings in the Company. These Shareholdings and the respective amounts which the Directors will each receive by way of additional dividends if this recommendation is adopted are as follows:

	Number of shares held	Amount of additional dividend Rs.
Mr. P. C. Vink	3	42
" D. P. Dunderdale	1	14
Dr. P. K. Kapre	1001	140.14
Mr. H. R. Vorstman	1	14
" J. Zantman	1	14

SIJUA (JHERRIAH) ELECTRIC SUPPLY CO. LTD.

Sixth Drawing of First Debentures (5% Registered), 1976.

HOLDERS of First Debenture (5% Registered), 1976, are hereby advised that the Sixth Drawing will be held at 10 A.M. on Wednesday, the 10th December, 1958, at the Registered Office of the Company, Chartered Bank Buildings, Calcutta.

For & on behalf of

SIJUA (JHERRIAH) ELECTRIC SUPPLY CO. LD.

J. HAMILTON WHITE,

Chairman.

Chartered Bank Buildings, Calcutta, 5th November, 1958.

THE INDIA JUTE COMPANY, LIMITED.

NOTICE OF INTERIM DIVIDEND

THE Board of Directors of the above Company have sanctioned payment of an Interim Dividend on the Ordinary Shares at the rate of 62 naye paise per share (without deduction of Income Tax) in respect of the year ending 31st March, 1959, payable to those Members whose names appear in the Company's Registers on the 15th December, 1958, as the Registered Holders of Ordinary Shares.

The Share Transfer Books of the Company will be closed from 1st December, 1958 to 15th December, 1958, both days inclusive.

As the Members are aware the following Resolutions were passed at the Annual General Meeting of the Company held on the 29th September, 1958:—

(a) That the conditions of the Memorandum of the Company be altered in manner following, that is to say—

That each of the existing Ordinary Shares of Rs. 125/- each in the authorised capital of the Company be sub-divided into 10 shares of Rs. 12/50 nP each and that the 6,96,400 issued Ordinary Shares of Rs. 12/50 nP each resulting from such sub-division be credited as fully paid up.

(b) That the existing Certificates of Shares be called in by the Directors and cancelled and that new Certificates be issued subject to the terms and conditions of the Articles of Association.

Pursuant to the above the Members are requested to send their Share Certificates to the Company to enable the Company to issue new Share Certificates after sub-division in their favour in terms of the aforesaid Resolutions.

By Order of the Board,

A. D. A. ALEXANDER,

Secretary.

16, Strand Road, Calcutta.

Dated the 7th November, 1958.

THE MEGNA MILLS COMPANY, LIMITED.

NOTICE OF INTERIM DIVIDEND

THE Board of Directors of the above Company have sanctioned payment of an Interim Dividend on the Ordinary Shares at the rate of 50 naye paise per share (without deduction of Income Tax) in respect of the year ending 31st March, 1959, payable to those Members whose names appear in the Company's Registers on the 15th December, 1958, as the Registered Holders of Ordinary Shares.

The Share Transfer Books of the Company will be closed from 1st December, 1958 to 15th December, 1958, both days inclusive.

As the Members are aware the following Resolutions were passed at the Annual General Meeting of the Company held on the 29th September, 1958:—

(a) That the conditions of the Memorandum of the Company be altered in manner following, that is to say—

That each of the existing Ordinary Shares of Rs. 100/- each in the authorised capital of the Company be sub-divided into 10 shares of Rs. 10/- each and that the 8,16,520 issued Ordinary Shares of Rs. 10/- each resulting from such sub-division be credited as fully paid up.

(b) That the existing Certificates of Shares be called in by the Directors and cancelled and that new Certificates be issued subject to the terms and conditions of the Articles of Association.

Pursuant to the above the Members are requested to send their Share Certificates to the Company to enable the Company to issue new Share Certificates after sub-division in their favour in terms of the aforesaid Resolutions.

By Order of the Board,

A. D. A. ALEXANDER,

Secretary.

16, Strand Road, Calcutta.

Dated the 7th November, 1958.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

(Incorporated in England).

Drawing of 5% Rupee Debenture Stock 1970 For Redemption

The 24th October, 1958.

THE GROB TEA COMPANY LIMITED.

THE Annual Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company, No. 14, Old Court House Street, Calcutta, on Tuesday, the 16th day of December, 1958 at 3-00 p.m. for the following purposes:—

- (1) To receive and adopt the Directors' Report and the audited Accounts for the year ended 31st December, 1957.
- (2) To confirm the payment of the dividend paid on 6th October, 1958.
- (3) To elect Directors in place of the retiring Directors. In this connection, Special Notice is hereby given of the intention to move the Special Resolution at the meeting, that is to say—

"That Mr. I. P. Goenka who retires by rotation be and is hereby re-appointed a Director of the Company."

- (4) To elect Auditors for the ensuing year, and to fix their remuneration. In this connection notice is hereby given that the Company has received from Messrs. Octavius Steel & Co. Ltd., shareholders of the Company, notice of an intention to nominate Messrs. Lovelock & Lewes, Chartered Accountants of 4, Lyons Range, Calcutta, to the office of Auditors of the Company in place of the retiring Auditors Messrs. Price, Waterhouse, Peat & Co., Chartered Accountants of B4, Clive Buildings, Netaji Subhas Road, Calcutta.

The Share Transfer Books of the Company will be closed from 8th December 1958 to 16th December 1958, both days inclusive.

OCTAVIUS STEEL & CO. LTD.,

A. H. GALLOWAY,
Managing Director,
Managing Agents.

Calcutta, 14th November 1958.

Note:—

(i) A member of the Company entitled to attend and vote at the meeting is entitled to appoint a proxy, to attend and on a poll to vote instead of himself and the proxy need not be a member.

(ii) In connection with the business to be transacted under Item 3 of this Notice, please see the undernoted Explanatory Statement.

EXPLANATORY STATEMENT

In the Special Notice given by the Company to the shareholders, under Item 3 of the annexed notice for the Annual General Meeting, intimation has been given of the intention to move a Special Resolution for the re-appointment to the Board of Directors of Mr. I. P. Goenka. Special Notice of such intention has also been given to the Company. Under the provisions of Section 261 (1) (f) of the Companies Act, 1956, Mr. Goenka, who is an officer of the Managing Agents of the Company can be appointed to the Board only by Special Resolution. Since he will retire in rotation at the meeting, his re-appointment for compliance with those provisions, will therefore have to be by Special Resolution.

KUMARDHUBI FIRECLAY & SILICA WORKS, LIMITED.

THE Directors of the above Company have decided to recommend the payment of Dividends for the year ended 31st December, 1957, as under:—

On Redeemable Preference Shares @ 5% P.A. after deduction of Income Tax payable by the Company.

On Ordinary Shares @ Rs. 1.25p per share without any deduction for Income Tax payable by the Company.

By Order of the Board.

BIRD & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta: 6th November, 1958.

BANKS

H indicates that Share capital is half paid. O, C and Dd indicate Ordinary Contributors and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

[illegible]

Jouvenal and Raymond Aron there, France was well represented. Ignazio Silone of Italy spoke little but raised important questions and the men from Africa were a significant mixture of pride and injury. The Indians present looked awfully pleased with themselves—no coups to explain away (as the Pakistani had), good parliamentary institutions, a good Press; compliments were many, sometimes almost embarrassing.

The hopeless task of defining democracy was given up early on, wisely. Pretty nearly everybody knew what he was talking about and the confusion occasionally created by an Arab or two in suggesting that suspension of democracy by such persons as Colonel Nasser was, in special circumstances, the greatest vindication of democracy, did not endure for long. With able guidance from Edward Shils, who presided over most sessions, and Gunnar Myrdal, who often brought theoreticians to earth, discussion soon centred on the two most important aspects of active democracy: the political institutions, infra-structure it was called, necessary for democracy to function; and the economic base of democracy. The philosophers, such as Daya Krishna and Raghavan Iyer from India and de Jouvenal from France, must often have deplored the "low" and mundane level of the discussion; but the earthiness of John Strachey and Minoo Masani, who differed violently on everything else, set the pace. India's Asoka Mehta ably summed up the philosophers in the penultimate session, and Raymond Aron's brilliant summary of the other point of view deserved Strachey's compliment: "We did not know we had been talking so coherently and intelligently."

The intelligence is a fact: the coherence was imposed by the suspiciously limp logic of a Frenchman. The only two points in general agreement were that (a) democracy is a good thing, and (b) the foundations of democracy in the newly independent countries of Asia and Africa are not as secure even in the apparently stable countries as they would require to be to resist the lures of alternative and anti-freedom ideologies. In the nature of things, the most potent of the latter was not represented at all in the seminar; its appeal was, however, treated as a fact and there was no illusion at all that democracy, as it is now functioning in the majority of the countries under discussion, could go on as at present without rendering itself vulnerable. The answer was to see how to make the blessings of democracy more real and more tangible to the people it is meant for.

Louis Fischer was not wholly wrong in suggesting, in his usual down-right manner, that the larger part of the area would be left uncovered if the seminar fixed its gaze only on India, which country he thought was far and away ahead of the others. The warning was heeded only partially, for India featured more prominently than any other country (a fact that seemed to irritate a Nigerian, who reminded the praisers of India that the Gold Coast had twice the per capita income.) And it is equally significant that when participants got down to an analysis of the contents of Indian democracy they were found wanting in more respects than one. Tributes to Mr. Nehru were mixed with an apprehension that the secondary institutions of democracy had not all been making uniform progress. The absence of a strong opposition was noted, but there were some (not necessarily reactionaries) who held that this was not a primary need at this stage of political evolution. When contrasted with those of Burma, Pakistan, Indonesia and so many other countries, India's institutions looked rather good. The question was not raised what India's rôle might be, or ought to be, in a politically disintegrating Asia offering to China a field of extensive "liberation."

It was not seriously disputed by many that the gravest threat to democracy in Asia and Africa arises from the economic backwardness of these two continents, in which enormous hopes of prosperity have been aroused by the fact of political emancipation. However false the dichotomy—and it is false—the spurious proposition has been presented to Asia and Africa that surrender of political rights and liberties may well be worth while, for it is imagined, with scant regard for truth, that this will be followed by the prosperity, itself exaggerated, of China and the Soviet Union. There were Americans, Professor Galbraith included, to set it out in great detail that American prosperity had been achieved differently; but it was admitted by many even among them that the American methods might not be applicable to Asia and Africa in their present state—mental and physical. There were passionate and urgent pleas for rapid economic advancement by John Strachey and others (who refused Minoo Masani's somewhat bland assertion that the Indian people, once "left alone to worship their gods," would not choose communism simply because it offers a higher standard of living) but there was no tendency to abandon the aim of democracy for the attainment of doubtful economic ends. The mood was one of, as Raymond Aron put it, dynamic pessimism. It is to be hoped that the Asian and African delegates have not, on their return home, found cause for more pessimism and no dynamism at all.

CHANGED FACTORS IN THE POSITION OF STERLING

HAZARDS AHEAD

THE outlook for sterling has lately been assessed in terms of the crisis in the Middle East, the United Kingdom's balance of payments in the first half of this year, and the sterling area's gold and dollar reserve. We must now take into account the United Kingdom's terms of trade—the relation between import and export prices. Sterling has not suffered from this latest crisis as it suffered from the crisis that arose from the nationalisation of the Suez Canal in 1956. The actual effects of the Suez crisis were not as serious as those anticipated, and the pound is in a much stronger position in 1958 than it was in 1956. In the middle of 1958, a couple of weeks before the revolution in Iraq, the reserve had increased over nine successive months, to reach \$3,076 million—the highest level since September 1951, despite the various pressures that have been applied since then. The world saw no good reason to convert sterling into other currencies, or to delay converting other currencies into sterling, for the reserve was evidently sufficient protection against any trouble that might develop from events in the Middle East.

But the reserve is not quite as strong as it appears, for some of the dollars in it are borrowed. On the other hand, it has withstood massive withdrawals of sterling balances held in London on behalf of other countries, and some of the sterling withdrawn has been converted into dollars. These withdrawals cannot continue long at the rate of the past year, because the reserves of some of the countries concerned, particularly India, are already seriously depleted. In another respect, however, the outlook for the reserve is not as favourable as its present position. During approximately three-quarters of a year to mid-1958 it was strongly fortified by an unusually favourable balance of payments in the U.K.'s current account; and this balance arose from unusually favourable terms of trade. But the terms of trade in the second half-year are deteriorating rather than improving further.

Calculating the invisible items in the external account is a lengthy process, but the U.K. Board of Trade has made a useful analysis of the nation's visible external trade in the first half of this year, compared with the first half of last year. It seems that there was no big change in the volume of trade in either direction. In 1958 exports were about 24 percent less, imports virtually unchanged if the figures for 1957 are adjusted for the diversion of shipping and the figures for 1958 are adjusted for the dock strike. But, whereas in 1958 the value of exports was likewise about 24 percent less, the value of imports was reduced as much as 12 percent. In visible trade the U.K. was earning nearly as much in the first half of this year as in the first half of last year but paying considerably less for its imports, although the volume of trade was little changed. Unfortunately for Britain (her suppliers and her customers view these developments otherwise, of course), the trends are changing. Import prices are no longer declining, they turned upward in June. And it seems almost inevitable that the decline in export trade, in terms of both volume and value, will be accentuated.

It might be thought that the recovery in primary prices (if maintained) would keep export trade flowing at the level of recent months, when primary-producing countries were forced to reconsider their import policies. But changes in prices do not affect trade immediately. A curious and significant feature of Britain's trade in the first half of this year is that the moderate decline in exports related to the European countries, not, as might be imagined, to the primary-producing countries from which Britain had been buying her imports cheaply, or to the dollar countries, suffering recession. The decline in exports to Europe is somewhat ominous. Its extent was nearly 20 percent in the cases of the Netherlands, Denmark and Norway, more than 20 percent in the case of Belgium, nearly 30 percent in the case of France. The downward trend will probably continue in the current year and will certainly be accentuated subsequently if the negotiations for a Free Trade Area eventually break down. And the F.T.A., if formed, would not, of course, solve the problem of German competition. However, Britain increased her exports to West Germany by 10 percent in the first half of this year.

More serious is the probability of a decline in exports to the primary-producing countries. Unless some new method of financing their imports is devised, they will necessarily import less until primary prices have recovered appreciably and have been held at higher levels long enough to strengthen these countries' resources. In some cases imports have already been restricted and the effects will soon be more clearly apparent. They were already apparent in some cases towards the middle of this year. The dollar markets are difficult to assess but seem, on the whole, fairly promising. Higher duties on wool goods, especially, are distressing, but there is no reason to expect a

decline in sales of motor-cars, which have firmly sustained Britain's dollar-earning trade during the American recession. The broad outline of the trading prospect suggests that exports will be reduced, while the cost of imports is no longer falling and may be rising. The strong balance of payments that has fortified sterling since the currency crisis of 1957 will probably not be sustained in the current half-year, and the prospect for next year is obscure. Experience seems to show that terms of trade favourable to Britain are more beneficial to sterling than terms of trade favourable to the primary-producing countries of the sterling area. However, higher prices for sterling commodities would certainly be helpful to sterling in so far as they relate to sales outside the sterling area. In any case, it seems unnatural that countries that need finance for their further development should suffer low prices for their goods while the developed countries enjoy the benefits of these low prices. We should not be too distressed if the terms of trade are turning somewhat against Britain.

UNEMPLOYMENT AND THE PLAN

THE second five year plan was launched with the idea of creating 10 million more jobs for the country's growing army of unemployed and the ever expanding labour force. But the policy of taxation and investment pursued by the Government has largely defeated that purpose. While employment has increased in the public sector, it has perceptibly decreased in private industry and trade, which provide the bulk of the employment in the country. The latest employment exchange returns show that the number of job-seekers on exchange registers has recently increased to an all-time high of one million persons. If the National Sample Survey investigation of unemployment is any guide, this should mean that there are today at least four million people without jobs. (According to this N.S.S. enquiry, there are usually four persons unemployed to every one registered with employment exchanges). It is by no means certain that the employment position will improve during the remaining years of the plan, and one reliable source has estimated that not more than 2.5 million jobs will have been created due to the efforts being made during the current quinquennium. Thus it appears likely that the end of the plan will find the country facing a bigger problem of unemployment than it did when the plan began.

Newspaper reports suggest that thinking for the third plan is now mostly concerned with the employment aspect of development. To ignore this problem would be to endanger the democratic foundations of Indian society. Democratic planning cannot deny the people at least tolerable conditions of living if it is to make sense to those for whom it is meant. This country cannot go on building heavy industries without further depressing the already low consumption standard. The economy does need some breathing space. It would at the same time be unwise to slacken development efforts. What is needed is a change of approach, a varying of means. The latest pamphlet on this question by the Society for the Propagation of Democratic Thought makes some concrete suggestions how best to increase opportunities for employment. Its author, Professor P. R. Gaitonde, starts with the thoroughly sound premise that unemployment economically is "a wastage of man-power and productive effort." It is morally unjust, socially degrading and psychologically leads to frustration and despondency. He then proceeds to analyse the structural weaknesses of the economy which cause large-scale unemployment and under-employment, and is generally in agreement with the approach of the Planning Commission to this question. Where he differs are the means followed. He does suggest that cottage industries should be revived on modern lines, in addition to building village roads, schools and dispensaries, to provide fuller employment to the farming population which should also be aided in its effort to raise land productivity, but points out that the maintenance of these industries at the expense of the large-scale sector could considerably worsen urban employment. Says the author: "Such a policy will hamper the increase in the net output of goods and commodities, lead to a lowering of incomes, prevent the diversification of employment and production and stand in the way of the long-term development of the country. As a matter of fact, the use of more up-to-date and effective methods of production would generate more wealth, lead to an increase in employment opportunities and keep the country in the vanguard of industrial progress." The interests of the two must be reconciled by careful planning and that by the choice of right techniques so that both the sectors of industry complement and do not compete with each other.

Professor Gaitonde discusses the unemployment-creating effects of high taxation of industry and points out that due to the continually declining volume of capital formation in the private sector, industries in most cases have been unable to undertake expansion. "In an under developed country like India, the task of accumulating savings and

their wise distribution in investment channels is done mainly by the companies and the wealthy and the investing classes." The new taxes on wealth, capital gains and expenditure have imposed a heavy burden on these institutions and classes with the result that the private sector is hard put to it to raise money in the market. Apart from their other adverse effects, these taxes are likely to lead "to an appreciable fall in the volume of employment, when their full effects have worked themselves out in the long run." Professor Gaitonde asserts. The high rates of income tax and super tax have also discouraged internal expansion as much as they have scared away foreign capital. A suitable revision of the tax structure is absolutely necessary. Professor Gaitonde suggests that the time has come when wages have to be firmly linked to productivity and production costs kept down while a drive is made to increase sales. Otherwise industrial employment will continue to fall. He also suggests that facilities for financial assistance to industry from official institutions should be liberalised in order to aid the process of internal expansion. He is in favour of expansion along the lines of consumer goods production because such industries do not require a heavy capital base and produce results in the quickest possible time.

Moreover, they do not cause inflation in the same way as the more capital-intensive heavy industries do, and also put a check on the inflationary spiral by being able to increase the supply of consumer goods quickly.

He makes other suggestions for increasing employment opportunities, which are by no means new, but are the only obvious ways of doing it. These include housing, primary education, plan propaganda, feeder, engineering and servicing industries, works centres and reorientation camps at the community development projects. Many of these schemes are capable of absorbing a large part of the educated unemployed. Professor Gaitonde is on firm grounds in suggesting that the latter problem can never be wholly solved as long as the present system of education continues—turning out graduates and matriculates whose mental equipment is suited to clerical employment only. Employment exchange registration figures amply corroborate this view. While the majority of the educated job-seekers fall in the category of those looking for clerical employment, the exchanges are unable to meet the demand for skilled workers including draughtsmen and overseers. Even experienced stenographers, fast typists, compounders, midwives and nurses are in short supply.

which enables the description of this somewhat limited achievement to be stretched over four pages. The literary merit will not be immediately obvious: the report is as dry as dust.

Shorn of trimmings, the activities of the Commission may perhaps be broadly summarised as follows. It worked hard. Very hard, indeed. The total number of references made to it was 1,677. Disposals, which amounted to four cases in 1948, rose to a crescendo of 320 cases in 1951, but then fell to the remarkable figure of nil in each of the years 1955 and 1956; their number was six in 1957 and two in 1958. Plotted on a graph, they would indicate roughly the same trend as the efforts of a dog barking up the wrong tree: a few preliminary yells, then steady and vigorous barking, followed by complete exhaustion and an irritated wagging of the tail before final dispersal. Sadly, in reference to the Commission's activities, the analogy is not wholly inapt. It laboured diligently for years, but, to quote its report, found itself "rendered practically ineffective when the operative provisions of the Taxation on Income (Investigation Commission) Act were struck down as *ultra vires* of the Constitution by three successive judgments of the Supreme Court." The first of these judgments, which was delivered on 28th May, 1954, affected 335 cases; the second, in October 1954, caused the investigations pending in 470 cases to be abandoned; the third, in December 1955, affected 752 cases. Bereft of work, the Commission meanwhile assiduously took up an enquiry into the affairs of sundry gentlemen, including cashew-nut exporters, in Travancore State. One of the eight cases in this field had to be dropped because of legal difficulties. The total concealment in the remaining seven "came to Rs. 35.34 lakhs, on which the tax and penalty payable has been fixed at Rs. 17.38 lakhs."

The cost of the Income-tax Investigation Commission, says the Income-tax Investigation Commission, "cannot perhaps be called immoderate." No comment seems to be necessary.

Competition in Common Teas

Africa is producing good grades of common teas and they are competing strongly with Indian varieties in the U.K. market. The chairman of the Tea Board, Mr. A. B. Chatterji, said at a Press conference on Monday that a market survey would be undertaken in the United Kingdom to study the position of Indian teas compared with those exported from other countries. He was discussing the impressions he had gathered in the course of a recent tour of Britain, Ireland, Egypt and Iraq, which was undertaken with a view to expanding the export markets for Indian tea. Mr. Chatterji said that the U.K. is India's principal export market, and the annual per capita consumption there is 10.7 lbs, against 0.5 lb in India. In London, he met representatives of producers' associations, with whom he discussed the prospects for Indian tea. The outlook in that country might be improved if planters here produce better grades, particularly in the Cachar, Dooars and Terai areas. In spite of the increasing popularity of African tea in the U.K., the competition it offers is still relatively limited. But its production is rising; at present, it amounts to 70 million lbs, against India's 700 million lbs. There are almost unlimited possibilities for expansion in Africa because of cheap labour, and the favourable elevation and climate. The point where India scores is that her tea garden labour is more efficient and its productivity is greater. Referring to Ireland, the chairman said that she is one of the best buyers of Indian tea; out of her total imports of 20 million lbs, about 18 million lbs go from this country alone. A non-official delegation accompanied Mr. Chatterji to establish contacts with tea merchants there.

Tea is a popular beverage in both Egypt and Iraq, and there is much scope for increasing exports to these countries. Ceylon tea, which is relatively black and bitter, is in growing demand there. The chairman has brought samples of this kind of tea from the Middle East to see if it can be produced here. He said that promotional work in those countries will be helped by the fact that the Governments there are favourably disposed towards India. If the right kind of tea is exported, India can acquire a good market. At present, Egypt is getting black teas from China at low prices, and some Egyptian Ministers whom the chairman met pressed for a reduction in the prices of Indian teas. Referring to adulteration, Mr. Chatterji said that the Tea Board has been empowered to collect samples to examine whether the tea shipped differs in quality from that stipulated in the agreement.

Grain Supplies for Tea Gardens

The supply of cereals for workers on tea gardens has long been a source of anxiety to planters. The Assam gardens were confronted with a difficult situation in meeting this obligation, and if they had not started the current year with about 7,000 tons of rice in stock, they would have been faced

Current News and Comment

New Indo-Russian Trade Pact

In the new five-year trade agreement just concluded in Moscow between India and the Soviet Union, the two countries undertake to "increase the volume of trade with each other to a maximum level on the basis of equality and mutual advantage." There are two interesting points about the agreement. The first is that each party has agreed to extend most-favoured-nation treatment to the other. It is not clear what difference this is likely to make. The goods which India aims to import from the Soviet Union are not those which carry excessive import duties, while the methods by which Russia raises revenue from her own imports is confused by the present mechanism of Government purchase and distribution. The second point is that payments for imports from Russia are to be made in Indian rupees without the conversion facilities contained in the former agreement. This factor places the new agreement on a completely bilateral basis and may well be forced to future agreements which India will be forced to make now that the cushioning effect of the sterling balances has been largely removed. Formerly, the provision that rupee balances accumulated by Russia could at any time be converted into pounds sterling constituted an embarrassment to India. So did the fact that these balances have so far been in favour of the Soviet Union, and for this a clause has been incorporated in the new agreement providing for a more balanced trade between the two countries in future. This is a wise precaution in view of the doubt which exists concerning the use made by the Soviet Union of the balances. Lately, trade has been in reasonable balance, although at a distinctly low level, but if India is to pay for the tempting selection of goods which the Russians are offering, there will be considerable scope for such traditional items of Indian exports as tea, spices, hides and skins, wool, tobacco, shellac, cashewnuts, jute goods, leather goods, vegetable oils and coconut fibre products. It is also provided in the agreement that balances already accumulated by the Soviet Union will be spent on Indian goods during the next five years instead of being converted into sterling under the terms of the old agreement.

Parkinson's Law in India

Few aspects of governmental working have been criticised more often, and more justifiably, than the rise in administrative expenditure. The reasons for the rise are various, and of uneven merit. Among the more understandable ones is the fact that the increase in the Government's political, economic and social responsibilities has inevitably necessitated an increase in the staff attending to them; it is arguable, however, that in assuming new responsibilities the administration has often been irrational and has tended to over-estimate its capacity to meet them. A more important reason for the expansion of staff is to be found in the advance of socialist ideology and in the operation of Parkinson's Law—that it is the inherent tendency of bureaucracies, not to employ more people in order to cope with more work, but to invent "work" for the steadily larger numbers which they tend automatically to employ.

In a pamphlet based on a lecture delivered under the auspices of the Forum of Free Enterprise, Professor M. Ruthnaswamy, a former President of the Madras Legislative Council, makes some useful remarks on the subject. Part of what he

Bark but No Bite

The latest report of the Income-tax Investigation Commission, a body which will amply deserve the well-earned burial it is at present due to receive in six weeks' time, is a remarkable document. It covers a period of a little over four years (1st January, 1954, to 31st March, 1958) in a little over four pages, thereby setting an example in official brevity which could well be more widely emulated. The Commission was of course at a special advantage in being able to attain such admirable terseness compared with other bodies: it achieved almost nothing. If for little else, its report will now be read for the literary merit

with a serious problem. Speaking at the annual general meeting of the Assam Branch of the Indian Tea Association, Mr. J. H. Kilburn, chairman, said that the State Government asked tea gardens to stay off the local grain market at a time when they could have acquired supplies at a fair price. But allotments were inadequate when grain shortages arose later. Persistent representations led to the allocation, from within Assam, of over 10,000 tons of rice, although not all of it was available when millowners were approached. Furthermore, the quality of the rice offered has often been unacceptable, and planters have had to remove the impression current in some quarters that they would accept any rice, whatever the quality. Constant representations to the Government of India have so far resulted in allocations from that source of 12,445 tons of rice, including 2,000 tons from stocks allotted by it to the State Government. The latter has released 1,070 tons of *atta* while the Central Government has allotted 20,000 tons of wheat.

Mr. Kilburn felt that the Assam Government should find it possible next season to maintain firmer control over food supplies, in order that tea gardens may be able to start 1959 with adequate grain stocks of good quality. Union leaders can help by persuading workers to accept a ration consisting of 50 percent of rice and 50 percent of *atta*. "The allotments we receive from the Government of India are made on condition that we offer a composite ration of that nature, and it is also the wish of the Government of Assam that half of the ration shall be in the form of *atta*. Union leaders can do much to help in this matter, and I would remind them that it is not a question of thereby making things easier for managers, but of helping their own country through a difficult period."

Mr. Kilburn mentioned that the provision of improved housing and medical services in Assam gardens under the Plantations Labour Act continues to make progress. The shortage of cement, which had previously been a great handicap, has been overcome this year. The meetings of the Housing Advisory Board have arrived at decisions on a number of subjects, such as the specifications for *katcha* houses, the applications for exemption from various regulations on the building of houses, and in a few cases, applications for exemption from the full implementation of the programme. Although there have been unfortunate cases of violence, relations with labour in Assam gardens have been generally good and fewer working hours have been lost through strikes this year than for some time past.

Khandelwal Ferro-Alloys

It is reliably learnt that a company called Khandelwal Ferro-Alloys Ltd is being floated to set up a ferro-manganese plant with a capacity of 30,000 tons a year. It proposes to offer a substantial portion of its preference and ordinary share capital for public subscription. The general prospects in the line of business it is to undertake seem promising; it is believed that an agreement concerning the forward sale of its output has already been negotiated with New York interests.

Synthetic Rubber Prospects

The Central Minister of Industry, Mr. Manubhai Shah, has stated that it has finally been decided to locate the synthetic rubber factory in Bareilly, U.P. Its capital requirements are estimated at Rs. 17 crores and it is expected to employ about 10,000 persons. Domestic production of natural rubber in recent years has not kept pace with demand. According to Mr. A. V. George, vice-chairman of the Rubber Board over Rs. 6 crores' worth of rubber was imported in 1957. Imports during the first eight months of the current year were 7,728 tons, compared with 5,895 tons in the corresponding period of last year. Consumption over the same period rose from 20,335 tons to 22,871 tons, whereas production rose only slightly from 12,882 tons to 13,671 tons. Because of the plantation troubles in Kerala, domestic output is likely to suffer and Mr. George has warned that unless higher prices for rubber are sanctioned after a fresh enquiry by the Tariff Commission, it will not be possible for growers to meet all the demands of labour.

Meanwhile, the scheme for replanting 70,000 acres of old and worn-out rubber estates with better varieties, at the rate of 7,000 acres a year, appears to have received a setback. Not even half the acreage could be replanted in 1957. Even if the scheme is implemented according to schedule, it takes at least ten years from the date of planting for a rubber tree to yield latex. An early increase in supplies can, therefore, be effected by synthetic rubber, small quantities of which are even now imported from the United States. It is estimated that such imports during the first six months of the current year amounted to 1,792 tons and were valued at over Rs. 50 lakhs. There has been a trend in many countries to replace natural rubber by synthetic. In the United States,

alone, it is reported that the latter accounted for 62 percent of the total used for tyres and 64 percent for other purposes in 1957. While the American protectionist policy for synthetic rubber will largely influence the long-term outlook for natural rubber growers all over the world, as far as India is concerned the time when the synthetic product can really menace rubber plantations may not come soon. Each ton of rubber imports costs Rs. 3,000 in foreign exchange, and to the extent that the Bareilly factory can reduce this expenditure, it is welcome.

Moghulsarai Steam Plant

The Government of Uttar Pradesh, it is reported, has decided to purchase a 6,000-kilowatt steam plant, owned by Sahu Chemicals in Moghulsarai, at a cost of about Rs. 1 crore. The plant was erected in 1956 by Sahu Chemicals for the manufacture of fertilisers, after receiving a loan of Rs. 1.45 crores from the State Government. While purchasing the plant, the Government, it is stated, will enter into an agreement with the company to supply electricity to it for a period of 20 years at a specified rate. Although the rate has yet to be decided, it is expected to yield a net profit of 1 percent to the Government, after allowing for interest charges at 5 percent on capital and for overheads. The Government will run the steam plant until power from the Rihand dam becomes available. Thereafter, it will transfer two boilers with a capacity of 4,000 kilowatts to some other site, while continuing to work one boiler of 2,000 kilowatts permanently in Moghulsarai for supplying steam to Sahu Chemicals. While the arrangement earns the Government a modest profit of 1 percent in power supply, it will unlock a capital sum of Rs. 1 crore for the company, which needs the amount for expanding its production of fertilisers to meet the increasing demand.

Producing More Soap

The soap industry, as Mr. Manubhai Shah, Central Minister of Industry, pointed out in his address at the latest annual general meeting of Indian Soap and Toilettries Makers Association, has expanded rapidly over the past seven years, and its output has doubled. The current production of the organised sector amounts to 120,000 tons, and a similar quantity is being turned out by the smaller units. Together, they yield a value of Rs. 35 crores. The organised sector accounts for 70 percent of the expansion in output, and in the opinion of the Minister, "the quality of the good Indian soaps is as good as any soap in the world." It is the Government's policy to encourage both sectors of the industry, Mr. Shah said. He also made the significant announcement that the Government could not consider the representation of many of the organised units that "they have to suffer in competition with a big combine operating in the country which is able to utilise capacity to a much greater extent than others." Mr. Shah declared that the Government did not wish to protect one section of the industry from another except on economic grounds. "The interests of all the sectors of the industry, be it cottage, small, medium or big, foreign-owned or Indian-owned, would be safeguarded and there can be no discrimination between one segment and another."

Explaining the difficulty in ascertaining the actual amount of capacity remaining unused, Mr. Shah said that there is no regular yardstick by which the rated capacity of soap units can be measured. Variable quantities of soap can be produced from the same pan, depending on the type and quality manufactured. By reducing the time cycle, more can be turned out. The Government does not intend to licence further capacity in the industry, and this, Mr. Shah said, should help those units which are now unable to make full use of their productive equipment. The tropical climate of India offers vast scope for marketing soap, the *per capita* consumption of which is only 1 lb a year at present. The industry can raise demand by better advertising and publicity. If the units can reduce costs and make a fuller recovery of the by-products, they will be able to offer their products at lower prices. That would lead to higher consumption. The Minister affirmed that it is the Government's policy to reduce raw material imports for soaps to the minimum. They still average Rs. 8 crores a year. Two measures which could lead to a substantial economy in imports, it is stated, are to use less coconut oil in soap manufacture and to replace groundnut oil by cottonseed oil. Referring to synthetic detergents, the Minister said that they are now finding extensive application in various industries, particularly textiles, as well as for domestic cleaning in other countries. The Indian manufacture of synthetic detergents is of recent origin, and the current annual output is around 300 tons. A new plant with a capacity of 600 tons has been almost completed and will be commissioned shortly. "Development in this line in a big way will be possible soon with the development of the petrol-chemical industry for produc-

tion of the active ingredients of such type of detergents".

Sugar in the Third Plan

The Indian Central Sugarcane Committee, at its session in Rampur, has recommended the appointment of an *ad hoc* planning sub-committee to chalk out a sugarcane research and development programme for the third five year plan. It has tentatively been decided to spend Rs. 360 lakhs on research and Rs. 30 crores on cane development under the plan. An annual target of 3.5 million tons of sugar is visualised. How far it is realistic remains to be seen, but the figure compares with a production target of 2.55 million tons set for the industry under the second plan as against an estimated consumption of 2.25 million tons. U.P.'s Minister for Agriculture, who addressed the committee, rightly observed that increases in cane production have been achieved in the past only by increasing acreage at the expense of food crops. But an idea of what can be achieved by improved methods of cultivation may be gained from the committee's announcement about the prize plots for 1957-58. These plots have reported the highest yield of 1,809.99 maunds in the northern region and 2,979.45 maunds in the southern region. At present, there is no compulsory stipulation concerning the use of improved varieties, and the committee accordingly recommends the formation of statutory bodies in the States for the purpose. A decision has also been taken to participate in the world agricultural exhibition in 1959.

It appears that New Delhi is having second thoughts about whether India should participate in the International Sugar Agreement, under which it has been allotted an export quota of 150,000 tons for the next three years of the five-year agreement. The Indian delegation actually asked for a quota of 200,000 to 300,000 tons on a graduated scale, and from the Government's point of view, the allotment of only 150,000 tons is said to be unsatisfactory. But it is difficult to see why, as the main problem is whether this country can use even this limited quota in full. The maximum price of 4 cents a lb is not high enough for India, as her production costs are very large. However, it does not look as though she has much choice on the question whether or not she should participate in the Agreement. Malaya and Ceylon are among her customers for sugar at present, and if they join the Agreement, she will not be able to sell to them unless she too is a member.

Motor Vehicle Fuels

In view of the plea for economy in the use of mineral oil, an independent study of fuels at present used in motor vehicles acquires great value. The imbalance found in the existing pattern of consumption is due to certain economic factors such as the usefulness of diesel vehicles for heavy loads and long hauls, although in hilly areas they have not the same advantage. The growing use of high speed diesel oil is not due merely to the difference in price. The refineries' output of the oil falls short of demand; the estimated shortage in 1963 might exceed one million tons. Its consumption since 1948 has been rising steadily. Incidentally, a point ascertained by detailed surveys is that private cars consume just about 25 percent of the petrol sold in India, and most of them are used for business purposes. Some 70 percent is used by commercial vehicles, including buses. Since the railways also may consume more diesel oil in the future, its shortage will persist. The increased tax on this oil may curb the present trend of consumption, and kerosene may be used as a substitute fuel but the latter has to be imported. Alternative remedies may be found in a discriminatory tax on diesel-engine vehicles, but this will hit road transport, so the better course appears to be a reduction in the duty on motor spirit.

Quality of Indian Sago

Tariff protection for the sago industry has been renewed on condition that it uses tapioca. An expert committee, which considered the matter in 1956, urged that the processing of starch should be undertaken by large establishments in Salem and the colouring of sago globules should be stopped. Manufacturers were advised to start a laboratory and enlist the aid of the Food Research Institute. The outlet already available for tapioca growers in the starch industry makes the sago industry of secondary importance for them. The stoppage of genuine sago imports from Malaya will, however, keep the latter alive, but it needs

CORRECTION

In *Capital* of 6th November, 1958, the Atherton West Mill was incorrectly described as a British India Corporation concern. In fact, it has no connection with the B.I.C.

to improve the hygienic conditions of its production. The controversy over the synthetic sago sold in West Bengal lends added importance to the recommendations of the experts that the nutritive value of tapioca globules will have to be established. The need for some control over sago manufacture has been suggested. In its survey report, the expert committee suggested that the quality of indigenous sago be improved. In the wholesale markets, it is sold like barley, but is much cheaper, and does not come in packed tins with a guarantee of purity or nutritive value. These are points on which the expert committee rightly laid stress in order to make sago acceptable for infants and invalids.

Developing the South

In his recent address to the South Indian Chamber of Commerce, the Central Finance Minister, Mr. Morarji Desai, maintained that the private sector should have no reason to feel dissatisfied because of the Government's plan policy. He supported the case for regional planning in the south, a subject which was discussed in detail at the Bangalore conference of south Indian commercial bodies last September, when the peninsula's disadvantages were fully highlighted. It is stressed that Madras port needs further development to expand exports of local products and that there must be a greater flow of trade among the southern States, for which inter-State road transport should be freed from existing restrictions. For making better use of the region's water resources, there should be closer co-operation among these States. In his presidential address at this meeting, Mr. K. V. Srinivasan, dealt with the present rates of taxation, the attitude of labour and land reforms. He pointed out that an efficient road transport system in the south depends on the motor manufacturing industry developing rapidly. The techno-economic survey in Madras may throw light on the numbers benefited by road transport.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations:

Rs. 100
F. P. Gilbert.
Rs. 52
Staff of Place, Siddons and Gough.
Rs. 50

Total Rs. 339
Previously acknowledged Rs. 1,321.75
Grand Total Rs. 1,660.75.

CORRESPONDENCE

THE PASTERNAK AFFAIR

(TO THE EDITOR OF "CAPITAL")

Sir,

Pasternak, says the Russian Press, has himself announced that he declined to accept the Nobel award because he discerned political motives behind it. When he first decided to spurn the honour, after earlier expressions of joyous abandon, the world naturally suspected that he had been prevailed upon against himself. The news given out by the Communist Press about Pasternak's confession-like explanation will not remove this suspicion because it remains to be known that, like the rejection, its explanation was not extorted from him. In matters like this, we cannot but be guided by past experience, and too many instances have come to light in the past of people in Russia "confessing" to crimes of which, it later turned out (that is, when it suited the books of the dictators to let it so turn out), they were just as innocent as I am of the death of Charles Bravo.

The long and short of the Pasternak tragedy is: Pasternak wrote a novel of outstanding literary merit in which he criticised certain aspects of Soviet society; and (2) he is being hounded not only by many, including the Ditcher, appear to believe, out of Russia, but round and round within it. These are the two and two of the episode, and the Russian Government deceives itself if it thinks that people outside Russia cannot put them together. It is not improbable that Pasternak was forced to reject the Prize, forced to say he did so because he knew

the award was inspired by political motives, and forced to implore Mr. Khrushchev to permit him to stay in Russia. Mr. Khrushchev once visited a primary school when he asked a boy to tell him who wrote *War and Peace*. "Tolstoy", was the reply. By way of joke, Mr. Khrushchev assumed a serious look and queried: "Are you sure?" Pat came the "confession" from the terror-stricken child: "Forgive me, Sir, it was I who wrote it!" Of course, this is an invented anecdote, but it might well have been true. This is the background against which Pasternak's conduct and statements should be set.

Yours etc.,
R. MANT

Calcutta, 12th November, 1958.

INDIAN LEATHER INDUSTRY

THE manufacture of leather in India shows year after year but little progress considering the enormous capabilities of expansion afforded by the large and ever-growing demand for the article, both in this country and abroad, and the boundless supplies of cheap raw material and tanning agents available locally. The following trade statistics furnish some evidence of the essentially backward condition of the industry. Last year (1957-58) raw hides and skins, valued at close upon 44 crores of rupees (hides Rs. 3,37,49,320; skins Rs. 1,11,93,650), and dressed or tanned hides and skins valued at over 3 crores and 82 lakhs (hides Rs. 98,66,948; skins Rs. 2,83,65,376), were exported, making in all, roughly, 81 crores worth of crude and semi-crude material sent out of the country to be worked up by leather manufacturers in Europe, America and elsewhere. These figures indicate an increase of no less than 39 percent on the value of exports in the preceding year, and 48 percent on the average of the three years immediately prior to 1956-57. The expansion is, therefore, due to no mere rebound abroad on the importation of hides and skins owing to the plague. This activity in the exportation of raw and semi-raw material may be compared with the languishing state of the inland trade in the manufactured and partially manufactured product.

**MORE
PIPES**

With the erection of the second spun pipe plant at the Kulti Works of The Indian Iron and Steel Co. Ltd. the production of spun iron pipes will increase from 60,000 to 150,000 tons per year. This additional tonnage will save India Rs. 8 crores annually in foreign exchange. The output of the plant will help to satisfy India's growing demands for pipe mains. Employing the latest techniques, this unit is the first to produce 16' to 27' diameter spun iron pipes in the country.

LIABILITY OF A COLLECTING BANK

INVOKING THE NEGOTIABLE INSTRUMENTS ACT

(FROM OUR LEGAL CORRESPONDENT)

WHERE a collecting bank makes payment on a demand draft to an unauthorised person, then the question as to whether the bank was guilty of negligence or not depends on the particular facts of each case. But the onus of proving "good faith" and "absence of negligence" as contemplated by Section 131, Negotiable Instruments Act, is on the banker claiming protection under the Act. That is the lesson of the latest reported decision on the subject. It concerned an appeal to the High Court by a bank against a decree of a district judge in Kerala State, passed against the bank, in which the facts were these: The plaintiff company, Woodbriar Estate Ltd., had filed a suit against a bank, known as the Catholic Bank of India Ltd., for recovery of two sums of Rs. 10,000 and Rs. 5,000, respectively, together with interest thereon. The plaintiff's case was that in pursuance of contracts

entered into with Mody and Company, Bombay, the latter company, as purchasers, had sent two demand drafts on 16th March, 1946 and 20th March, 1946, payable on certain banks at Kottayam. Krishnankutty and Veloo (India) Ltd. were the managing agents for the plaintiff company, and one Mr. Veloo was the managing director of the managing agents' company.

The two drafts for Rs. 10,000 and Rs. 5,000 were endorsed by the managing director, Mr. Veloo, and delivered for collection to the defendant bank. The bank, instead of collecting the amounts and paying them to the plaintiff company, credited them to the personal account of Mr. Veloo in the name of Wilson and Company and in the words of Vaidialingam J. in the High Court later, "Veloo appears to have drawn the amounts and misappropriated the same." The plaintiff's case was that the payment by the defendant bank to Veloo was unauthorised and that the plaintiff was in law entitled to recover the two amounts covered by the two drafts on the ground of conversion and wrongful detention.

The defendant bank contested the claim on the ground that they paid over the amounts to Mr. Veloo under his instructions and that they had acted in good faith and in due course of business and as such there was no liability in law for refunding the amounts to the plaintiff, especially as the amounts had already been paid over to the

managing director of the managing agents, Mr. Veloo.

The district judge, on a consideration of the relevant section of the Negotiable Instruments Act and also on the evidence placed before him, came to the conclusion that the bank could not be said to have acted "in good faith and without negligence". In particular, the learned judge also referred to the actual endorsements on the two drafts and held that those endorsements clearly put the bank on notice that the amount had to be paid only for the plaintiff company and not to Veloo in his individual capacity. In this view, the judge held that the payment of the amounts covered by the two drafts to Mr. Veloo was wrong in law and he passed a decree against the bank for the amount claimed. The bank, as has been stated, appealed to the High Court. At the appeal, counsel for the bank raised two contentions on its behalf. They were (1) that the trial court's finding that the bank had not acted in good faith and without negligence was wrong and that the judge had not properly applied the correct legal principles concerning the duties of a collecting bank; (2) that in any event the judge erred in treating the bank as a collecting bank and that he should have treated the bank as a bank which had paid value for the drafts and that as such he should have applied different legal principles applicable to such paying banks.

On the first point, the High Court at the appeal held that in construing Sections 85 and 131 of the Negotiable Instruments Act, the authorities in previous decisions had laid it down that whether a bank is guilty of negligence depends on the particular facts of each case. The onus of proving "good faith" and (not "or") "absence of negligence" is on the banker claiming protection under the Act. Perhaps, it is rather over-emphasising the obvious to add that it has also been laid down that in finding out whether a collecting bank has or has not been negligent in a particular case, it is necessary to take into consideration any factors such as the customer, the account and the surrounding circumstances.

In this case, there was no dispute that the two demand drafts were in the name of Messrs. Woodbriar Estate Ltd. The first for Rs. 10,000 was a draft in favour of Messrs. Woodbriar Estate Ltd. by the Indo-Mercantile Bank Ltd., Bombay, on its branch at Kottayam. The next draft for Rs. 5,000 was by the Central Bank of India Ltd. in favour of the plaintiff company, payable on the bank's branch at Kottayam. Both these drafts were endorsed as follows:

"For Woodbriar Estate Ltd."

"For Krishnankutty and Veloo (India) Ltd."

Sd. V. N. Veloo

Managing Director, Managing Agents."

The High Court held that these endorsements were enough to put the defendant bank clearly on notice that the amounts were payable only to Woodbriar Estate Ltd. and not to anybody else. Mr. John, the Agent of the defendant bank, gave evidence before the trial judge on behalf of his bank and though his evidence is not set out in the High Court judgment, it was not helpful to the defence and the High Court held that Mr. John's evidence clearly showed that it could not be said that the bank had acted in good faith and without negligence. Further, the High Court pointed out that when Mr. Veloo asked the bank to credit the proceeds of the drafts to his company, Wilson and Company, the bank officials did not take the trouble to find out what exactly was the connection between the plaintiff company and Wilson and Company and whether the plaintiff company had authorised the payment of the amounts to Wilson and Company. The High Court, therefore, accepted the finding of the trial judge that in paying over the amount to Wilson and Company, the bank could not be said to have acted in good faith and without negligence.

Thus the main contention of the bank at the trial was rejected, namely, that they had been under no liability to pay the amounts to anybody other than the person who presented the drafts endorsed by the payee and that as it was Mr. Veloo who presented the drafts to them, they were entitled to pay the amounts to Mr. Veloo and they were so paid to the account of Messrs. Wilson and Company under directions from Mr. Veloo. Based on this reasoning, they contended that they had paid the amounts in good faith and in due course of business. But the bank had not raised before the trial judge the second points which they raised at the appeal, namely, that they had paid value for the drafts and that they acted as a paying bank. The omission to make this contention at the trial was in itself fatal for such a plea, if it had been raised, would have acquired evidence, which would have been later available to the appellate court as to the exact time when the drafts were given to the bank, when they paid cash for them and when they collected the proceeds of the drafts. But the trial judge had, as he was bound to do on the evidence before him, found as a fact that "the defendant bank was acting only in the capacity of a collecting bank" and that "no argument was made for the defendant on the basis that Veloo was a holder and/or that the defendant paid value." Thus hampered at the appeal by lack of essential details, the High Court examined such dates as were available to it and confirmed the trial judge's conclusions on all points, including his finding that the bank could not be considered to be a paying bank.

[Woodbriar Estate v Catholic Bank. 1958. A.I.R. 45. (Kerala). 316.]

A Ditcher's Diary

WHATEVER MR. NEHRU'S CRITICISM OF THE GIFTS and telegrams he received on his birthday last Friday, his own present to the world on the occasion was an excellent one. I browsed through A Bunch of Old Letters (Asia Publishing House, Rs. 12.50) over the week-end, and it occurs to me how the political scene and climate in the country has changed almost beyond recognition since the date of the first letter produced in this admirable collection—17th December, 1917. Many are the controversies which are dead, and letters dealing with those would perhaps interest only the elderly and the historian. What impressed me was the tone of the debate, and the highly formal language in which it was conducted—with occasional welcome departures, of course. Most of the writers of these letters were distinguished lawyers, and in those days you had to attain distinction in some field before even trying to be anybody in politics. The leadership then was, I gather, derisively referred to as the "barristocracy," and I am quite prepared to believe that, with certain adversaries, petitions composed with exquisitely chosen phrases are an ineffective weapon. But my regret for the manners gone by remains. In many of the letters I read there was a degree of criticism within the party which is perhaps unknown today, and it is not for me to say that the present is in this respect an obvious improvement on the past. Looking at it with historical detachment, which is happily possible today I was agreeably surprised to find in what great respect the British rulers were held, in spite of the bitter political argument going on all the time in public. The personal relations between Sir Harcourt Butler and Pandit Motilal Nehru, for instance, are a tribute to both, and I am quite sure that a great deal of the later acrimony might have been avoided had there not been a near-total severance of social contact. And the grace with which the old guard carried themselves! On 11th July, 1928, Motilal Nehru wrote to Mahatma Gandhi: "Our race is fast dying out and the struggle will sooner or later have to be continued by men of Jawahar's type. The sooner they begin the better." On Friday last, the Prime Minister must have wished more than once he could look to the future with nearly as much assurance as his father was able to.

ALTHOUGH THERE ARE NO RULES ON THE SUBJECT, convention always seems to have decreed that a monarch in exile shall be accorded a certain measure of protocol. Out-of-work Habsburg princes have usually been fairly easily identifiable, and if they could no longer claim the royal suite at Claridges, the management has usually seen to it that they were given the next best thing on the appropriate floor. But what does one do about a deposed President? The thought came to me in connection with the arrival in London of ex-President Mirza who has quitted office under somewhat different circumstances from, say, ex-President Truman. London, of course, has given sanctuary to many political exiles, ranging from Karl Marx to deposed monarchs like Haile Selassie. But I doubt if it has ever before received the head of a Commonwealth Government who has been—not to put too much gloss on it—dismissed from his post. Much, of course, depends upon the man himself: ex-President Mirza is not greatly given to self-effacement, but he is probably considerably shaken by the events of the past few weeks, and at fifty-nine years of age, it does not seem likely he is con-

templating a political "come-back". From British newspaper reports I see that he wisely refused to be interviewed by reporters on arrival at London airport. It will be interesting to see whether this self-imposed silence continues. From what one can make out, Iskander Mirza was sacked because his past involvement with certain political groups in Pakistan would have embarrassed the new régime if he had been allowed to stay. A strange quirk of fate this for a man who has never made any secret of his contempt for politicians and their devious ways. My own guess is that Mirza is glad enough to be well out of the way: I am sure some of the politicians he so despised are at this very moment congratulating him on his luck.

TOO MANY WELL-INFORMED PEOPLE IN THIS country share the Continental view that the British have no real gift for music. If they were fortunate enough to hear the talk which the Earl of Harewood gave at Loreto House the other evening, I doubt whether they are now so firmly convinced. While exploding the myth, this distinguished art historian and critic—who is also a cousin of the Queen—gave within the short time at his disposal a fine review of British music today, and in times past. It is true that British composers tend towards the soft and contemplative, and that they are not particularly known for the kind of vitality which characterises so many of the European masters. But that does not necessarily mean that the British are any the less musical than, say, the French, the Germans or the Italians. They have certainly produced composers of international appeal—Sir Edward Elgar, for instance. I know that this particular one has been accused of "imperialistic tendencies"; but I regard this as irrelevant because to me the political beliefs of an artist are of no concern when it comes to judging his art. That is why I can still enjoy reading Kipling, or the poems of Pound. And when Paul Robeson comes to India, as it is reported he will, I would not care to miss the opportunity of hearing him sing. Much of Elgar's music is extremely beautiful and I should like to recommend to the Calcutta School of Music, as I believe the Earl has done, that more of his works be included in their regular programmes. Of the three great living British composers, Walton, Trippett and Britten, the one whose music is most likely to find an appreciative audience in this country is the last-named. The pieces he writes for the stage are indeed superb; not only does the audience get the feel of the drama through the music alone, but the warmth of the composer's own personality is communicated as well. I have always had a special liking for the rousing quality of the choral music for which the British have a special talent. It cheers me up. So did the piece from Walton with which Lord Harewood concluded his talk.

AS A RESULT OF DR. CHARLES HILL'S RECENT TOUR of these parts, British information services, here and elsewhere in south Asia and the Middle East, are to be strengthened. More British books are to be made available, increased facilities are to be given for the teaching of English and in some way, as yet unspecified, something is to be done to counter radio propaganda which is deliberately hostile to Britain. Presumably, this last applies to the Middle East only where the ether carries a

cacophony of sound from Radio Cairo, the Voice of America, Moscow Radio and the BBC. Happily not all of these are audible on our radio receivers in Calcutta. There is certainly a case for making more British books available in India, although most of the time the import licensing authorities have taken a liberal and enlightened view of our reading requirements. But the fact is that ordinary commercial imports fail to meet either the full trade demand or what I may call the cultural need for English books and other forms of printed matter. It is this latter demand which Dr. Charles Hill's plans seek to satisfy. English is not only the business language of the world, it is the chief means of communication in science, diplomacy and the arts. Just as in the middle ages it was the hallmark of an educated man to speak and write Latin, so today a good command of English serves to open many doors which remain closed to those who do not possess it. I have sometimes asked myself which of the many things which the British have taken overseas with them will best survive the passage of time. I have no hesitation in saying it will be their language, for it has become one of the world's great unifying factors.

IT SEEMS ONLY LOGICAL THAT HOTELS IN THIS country should adopt Indian décor, as suggested in the Lok Sabha the other day. I can imagine that modern architectural requirements do not always lend themselves to it, but the adaptation of traditional designs should not be beyond the ingenuity of local artists. What seems to me a more important issue is whether the time has not arrived to protect the tourist's pocket as well as please his eye. On a short visit to New Delhi last week I stayed in a hotel which could certainly have been improved by a touch of Indian décor, but would have benefited far more from some increased attention to its standards. And what makes things worse is that it is Government owned. It has been standing for the best part of two years, yet it still gives the impression of being unfinished; much as if the decorators only managed the first coat of paint before their contract ran out. The fan in my room creaked incessantly; fortunately it was cool enough to do without it. In the bathroom, the flush overflowed and made dripping noises throughout the night. The spout of the pot from which I poured my early-morning cup of tea was so badly chipped that I got more on the tray than I did in the cup. The colour of the crockery suggested the kitchen might be using tobacco juice for washing up rather than honest-to-goodness soap and water. The breakfast I had brought to my room took twenty-five minutes to arrive and was cold by the time it did so. While I was eating it, a sweeper walked in without knocking, gave me a baleful look which seemed to suggest I had no right there at all, and without so much as a salaam headed for the bathroom. When I threw him out he looked at first surprised and then rebellious. The dining room staff specialised in what a tennis player might term a fast cross-the-body serve, often presenting a head of greasy unclipped hair a few inches from the eye level in the process. I have never been able to understand why the traditional and picturesque pagri should have been discarded in favour of this offensive and unhygienic style. But what appalled me most was the display of Indian goods presented in the lobby, presumably to impress the visitor. Not only were the glass cases dusty and inadequately lit, but the objects themselves were among the dullest and least imaginative that I have seen anywhere in India. If these were meant to attract the roving dollar, I can understand why export earnings are so disappointing nowadays.

THE DITCHER

Sugar prices have increased of late. That the Indian White Sugar Industry is not responsible for this is clear from the chart given above. The gross profit and overhead charges together account for no more than 6% of the total cost of sugar. Compare the current price composition with that prevailing about 10 years ago and you will find that all items except overhead charges and profit, have increased—certain of them by over 300 per cent—a trend over which the Industry has no control.

It has always been the Industry's endeavour to increase production and reduce costs. Efforts in this direction still continue.

Today the White Sugar Industry provides scope for Indian capital investment of more than 100 crores of

rupees; it provides employment to over 1,40,000 skilled and unskilled workers and 3,600 university educated men, their total earning representing 5% of the national wages and salaries; it supports 20 million cultivators; it constitutes 12% of the total value of production of major Indian industries; it contributes over 65 crores of rupees (@ Rs. 13.19 per maund) in levies to the national exchequer.

It offers even brighter prospects for the country. With a lighter burden—removed—this industry can contribute to achieving a more stable national economy. Its upward trend of production can continue to meet the needs of a growing home market and yet leave a surplus for export in order to earn foreign exchange.

Indian WHITE sugar...

vital to India's national economy

THE INDIAN SUGAR MILLS ASSOCIATION

achievement
depends on
reliable steel

United Steel, with an annual output of 3 million tons of steel, meets many of the very exacting material needs of today. United Steel Structural Company built the radio telescope at Jodrell Bank (its reflecting bowl, 250 feet in diameter, was fabricated accurately to one eighth of an inch). All steel employed in this remarkable structure was rolled by United Steel.

BRISK ACTIVITY IN STOCK MARKET

BIG DEMAND FOR INDUSTRIALS

London, 19th November.

VERY active conditions prevailed in the stock market during the past week. But profit-taking after the recent prolonged advance was responsible for some reaction later and closing prices were often below their recent peak levels. Gilt-edged securities relapsed again after developing a steadier appearance, while industrials, although continuing to attract heavy demand, suffered from substantial profit-taking. Nevertheless, the tone of the industrial market remained very firm and confidence in its future was quite unimpaired. The buying of equities was encouraged by the recent optimistic statements by Government spokesmen, and to a lesser extent by the strength of sterling in the foreign exchange market. The fresh rise in the October gold reserves and a narrowing of the trade gap in that month helped sentiment. Encouraging company statements by several major industrial concerns, including Distillers, Tube Investments and Unilever, were further helpful factors. British Motor Corporation remained active on further consideration of the preliminary statement which was thought to be very encouraging. Gilt-edged securities, which earlier appeared to have recovered their equilibrium, met with renewed small selling, and in the absence of support prices lost further ground to record substantial losses on balance. Dollar stocks improved in response to the sustained advance in New York, although prices in London tended to lag behind at times. Gold shares attracted good support and established widespread gains. Coppers were rather neglected and lead and zinc shares tended to ease. Leading oils recorded some useful gains, but Oil Search were much quieter although a few pence better. Rubbers made further headway in spite of profit-taking and there were occasional good features. Teas were firm and often a few pence higher.

The Money Market

The experience of discount houses in the money market during the past week was somewhat mixed. Conditions in the first few days were very difficult, and with the banks having to meet the usual taxation commitments, they were withdrawing funds from the market on a considerable scale. Discount houses also had a heavy bill take-up to contend with and this caused a shortage of funds. However, the difficult period was negotiated without having to borrow from the Bank of England on Bank rate terms, but the authorities gave considerable assistance through the normal channels and at times full privilege money had to be taken. The position changed for the better afterwards, thanks mainly to the release of education money. Towards the close, the supply of credit was such that balances were left unutilised. The money rate fluctuated somewhat and in the more uncomfortable period was 3½ percent, but when the position eased loans were arranged at down to 2½ percent. There was good business in bills at times but the slight fall in the Treasury bill rate was insufficient to move bill rates generally.

Activity on Wall Street

Foreign dollar bonds were a little more active, the trend being mixed during the past week.

German Nationals and Norwegians showed little variation either way. Among the Italian issues, Republic 3 percents of 1977 dropped a full point early but eventually recovered the loss. Consorts 3 percents of 1977, however, declined by over a point on the week. Amsterdam 5½ percents were fractionally better. Japanese Government 6½ percents eased nearly a point at the outset but later recouped a part of the loss. Chile 3 percents finished with a small gain. Long-term U.S. Government obligations tended higher in quiet dealings in a market described as strictly professional. Investors awaited the U.S. Treasury's announcement about its plans to refund about \$12,000 million of securities due in December. The terms of this operation are likely to be announced shortly. High-grade corporate issues were firm with industrials prominent and speculative rail issues mostly higher. Convertibles followed the stock market in its advance in active dealings but eventually backed away when securities faltered.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 12th November shows that the gold stock was \$11 million higher at \$20,676 million. Foreign deposits fell by \$11 million to \$288 million, while foreign investments rose by \$60 million to \$3,852 million. Total discounts and advances declined by \$127 million to \$375 million, while the aggregate excess reserves of member banks fell by \$1,360 million to show a deficit of \$38 million. The daily average excess reserves of member banks rose by \$213 million to \$662 million, while their daily average borrowings improved by \$67 million to \$469 million. Business loans of the New York City banks rose by \$60 million to \$10,728 million, compared with a rise of \$12 million to \$11,612 million in the corresponding week of last year. Gold certificates on hand and dues from the U.S. Treasury rose by \$5 million to \$19,198 million. Federal Reserve notes in actual circulation improved by \$182 million to \$27,266 million. The deposit in member banks' reserve account declined by \$489 million to \$17,792 million.

Steady Trend in Paris Gold

After a long period of apathy, the Paris gold market suddenly turned bullish during the past week. International political events were partly responsible but technical considerations were also said to have been responsible for the upsurge. Fears of new taxes and reports about German speculation against the franc also had an influence. However, a reaction set in towards the middle of last week which sharply reduced earlier gains. Nevertheless, in the last session, new buying was reported and the week closed with the tone steady.

Vegetable Oils Market

Although groundnuts have made a substantial recovery over the past few weeks, the advance has yet some way to go before the high levels of last April are exceeded. Interest in Canadian linseed was well marked at the beginning of the past week and since then prices have shown some increase. For castorseed, sellers of near positions have been more evidence. Movements in linseed oil have been more stubborn in the last few weeks but there are signs of a modest rise. Castor oil dull trend, the competition of oil from Brazil and the reduced import demand of the United States being the main contributory factors in this situation. Groundnut oil has lately attracted more enquiry and this is now spreading to cottonseed and soyabean oils.

Money

THE CALCUTTA MONEY MARKET

SLIGHT RISE IN DEMAND

Wednesday, 19th November.

THERE has been a small increase in offtake of funds in the Calcutta money market during the past week. Most of it is accounted for by the jute industry. The usual seasonal requirements on account of grain and seeds storage have not yet materialised. There has also been a fall in the requirements of the sugar mills. After a spurt of activity at the beginning of the period, the inter-bank market is once again easier. The call rate is between 1½ percent and 2 percent, after quoting 2½ percent a few days ago.

There has been a steady supply of bills in the exchange market. These were chiefly on account of tea shipments, although a number of gunny documents also came to hand. Remittance has been moderate. Sterling has fluctuated narrowly during the past week, and the undertone remains steady. Parity has been maintained against the U.S. dollar and increased against most Continental currencies. There has been a slight fall against the Canadian dollar.

SILVER WAS STEADY ON BEAR-COVERING AND CLOSED at Rs. 186.50. The price was quoted at 77½ in London and at 90½ in New York. Gold was steady at Rs. 114.50 but trading was restricted.

DURING THE WEEK ENDED 14TH NOVEMBER, Government of India Treasury bills for Rs. 15,13,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 4 CRORES OF 91-DAY GOVERNMENT OF India Treasury bills were opened on Tuesday. The total amount offered was Rs. 5,02,50,000. Tenders at Rs. 99.390 were accepted in full and those at Rs. 99.385 allotted approximately 83 percent. The average rate of acceptance being Rs. 2.458 percent a year. Tenders for Rs. 3 crores of 91-day Government of India Treasury bills will be received up to Monday, 24th November.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 19th to 22nd November at Rs. 99.401 percent, subject to the condition previously announced (that sales can be stopped at any time without notice if the Government thinks it necessary). There were no sales of 91-day Intermediate Treasury bills from 11th to 15th November.

RISES OF RS. 13.36 CRORES TO RS. 1,585.92 CRORES in active notes and of Rs. 9.07 crores to Rs. 1,593.25 crores in the total note issue were the notable features of the return of the Reserve Bank of India for the week ended 14th November, 1958. The currency expansion was adjusted by increasing rupee securities in the paper currency reserve by Rs. 10 crores to Rs. 1,174.73 crores. Deposits of the Government of India declined by Rs. 1.12 crores to Rs. 62.21 crores and other Government accounts were Rs. 1.22 crores lower at Rs. 18.17 crores. Balances of commercial banks at Rs. 79.88 crores showed a decline of Rs. 2.96 crores. Balances held abroad increased by Rs. 4.11 crores to Rs. 18.33 crores. Investments declined by Rs. 8.68 crores to Rs. 302.52 crores. Other loans and advances increased from Rs. 56.74 crores to Rs. 58.28 crores, of which advances to scheduled banks against usance bills amounted to Rs. 96 lakhs against Rs. 1.17 crores. Ways and means advances stood at Rs. 22.25 crores (Rs. 20.36 crores).

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 7th November, 1958, shows a drop of Rs. 45 lakhs to Rs. 475.84 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 15.77 crores and Rs. 10 lakhs to Rs. 272.90 crores and Rs. 11.61 crores, respectively. Advances, including loans and cash credits, overdrafts and bills discounted and purchased, have increased by Rs. 2.88 crores to Rs. 164.95 crores. Cash and balances are, in consequence, shown at Rs. 41.27 crores, or Rs. 15.56 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 7th November, 1958, shows Demand and Time liabilities at Rs. 705.34 crores (Rs. 23.20 crores on account of borrowings from banks) and Rs. 926.62 crores (Rs. 39.58 crores), compared with Rs. 712.35 crores (Rs. 23.16 crores) and Rs. 927.20 crores (Rs. 39.09 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 4 lakhs and Rs. 24.94 crores to Rs. 39.97 crores and Rs. 31.79 crores, respectively. There is a rise of Rs. 22.03 crores to Rs. 640.46 crores in investments. Advances and bills discounted at Rs. 844.55 crores show an increase of Rs. 5.70 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 7.5 percent and 51.8 percent, against 8.9 percent and 51.2 percent.

IN ORDER TO AUGMENT ITS RESOURCES, THE INDUSTRIAL Finance Corporation of India, with the approval of the Central Government and the Reserve Bank of India, has decided to issue bonds under Section 21 of the I.F.C. Act. The present issue is for Rs. 4 crores. These bonds will have a maturity of ten years and carry interest at 4½ percent. The issue price will be 99 percent. The subscription list will open at the offices of the

Reserve Bank of India in Bombay, Calcutta, Madras, Delhi and Bangalore, on 24th November, 1958, and will close on 29th November, 1958, or earlier as soon as the issue is fully subscribed. These bonds are guaranteed by the Central Government for the repayment of principal and the payment of interest under sub-section (2) of Section 21 of the I.F.C. Act. They are approved securities under the Indian Trusts Act, the Insurance Act and the Banking Companies Act. They are also eligible securities for purposes of advance to scheduled banks by the Reserve Bank of India under Section 17(4)(a) of the Reserve Bank of India Act. Certain institutional investors have already agreed to subscribe to a substantial portion of the issue and it is expected that the general public also will contribute liberally to these bonds. Copies of the prospectus and application forms can be obtained from the above offices of the Reserve Bank of India and from the offices of the Industrial Finance Corporation of India in New Delhi, Bombay, Calcutta and Madras.

LONDON FINANCIAL LETTER

MOVE TO INVEST WORKERS' SAVINGS IN SHARES

By Air Mail.

A topic of conversation in the City of London a few months ago was the moves by some of the banks to induce wage-earners to open bank accounts, thereby bringing some of the great aggregate wealth of the wage-earning community into the banking system. Attention has been diverted this month to the idea of making some of this wealth available for investment in ordinary shares. Against the background of a broadly declining trend in Government stock prices, the whole problem of savings and investment has been reviewed. Traditionally, the small saver invests in the fixed-return investments of the National Savings Movement, in building societies, perhaps in hire-purchase finance companies, or through "home service" insurance. But for some years past he has had access also to ordinary shares through unit trusts, or through bonus shares in the company in which he works. Plans for investment of the workers' money in ordinary shares have now been extended by a scheme propounded by Aims of Industry and supported by a number of important companies, whereby ordinary shares (in bearer form) will be available in factories, and by a scheme of a leading hire-purchase finance company, whereby ordinary shares, as well as other securities, can be bought on instalment credit.

To appreciate the significance of these schemes (in principle, no one knows yet to what extent they will be used), it is necessary to recall the problem of "fragmentation" of capital in the modern capitalist community. Big accumulations

of capital are rare, as wealth is more evenly spread than it was in former generations. Much of the nation's wealth is in the wage-earners' hands, available for current spending. The aggregate of private capital, as a proportion of current production, has diminished as more money has passed to those who are, by their circumstances, spenders rather than savers. They have, in fact, been saving on a substantial scale in recent years, but most of their savings are made available, one way or another, to the Government. These latest moves tend to change the flow of the workers' savings in favour of ordinary shares.

Unit Trusts

The question arises whether the effects of a profound sociological change can be averted in this way. In principle, it is certainly desirable that the class with the largest aggregate income should provide capital for the nation's development. In practice, the fact remains that ordinary shares are not the most suitable media for the wage-earners' savings. Because the ordinary employee is, functionally, a wage-earner, not a "capitalist", he lacks the basic security needed for risk-taking. Unit trusts are good in principle, because they enable small amounts of capital to be spread over a wide range of securities; but not even a wide spread can prevent serious depreciation of capital when ordinary shares in general are declining before and during an industrial recession. Investing one's savings in the company in which one works makes one doubly dependent on it. Investment of small savings in individual ordinary shares, whether with the aid of instalment credit or by the normal procedure, requires special judgment and knowledge which are not normally available to the wage-earner.

This latest extension of instalment credit involves another possible danger, that "the little man" will be encouraged to speculate when he lacks the resources needed for speculation. An obligation to hold the shares for at least three months provides some protection, but "the little man", who is persuaded that a particular share will show a good profit after, say, six months and buys it with the aid of credit may find himself in difficulties; and he will not, anyway, be a useful provider of capital.

Rising Trend in Shares

Such schemes are in one sense opportune, in another sense misleading, at this time. Ordinary shares are on a rising trend. Most of them appreciate substantially in the course of a single month. The ordinary public is aware of the opportunities; less aware, perhaps, of the attendant risks. The rise began last February in anticipation of the withdrawal of restraints on the economy when it was evident that the nation's finances were improving. It has been accelerated recently in anticipation of economic revival. The restraints were duly withdrawn, and the revival will probably follow. But plenty of problems will remain. The continuing influx of gold and dollars is nothing less than astonishing, and it has certainly confounded the sceptics. They include, of course, observers who recall that the reserves were built up strongly in 1950 and again in 1954, and that the security, which seemed in those years to have been achieved, was illusory. It is difficult to find in this year's situation any analogy with that of 1950, but the events which followed the recovery of 1954 could be repeated.

The Korean war boosted the earnings of the sterling area but turned the terms of trade sharply against Britain. Commodity prices are recovering, but the rises are selective and are not likely to reach great heights. So the conditions of 1950-51 are not likely to be duplicated. But there are signs suggesting that the boom in consumers' buying, which was a major factor in the relapse of 1955, may be repeated: since all restraints on hire-purchase were removed, there has certainly been a substantial increase in trade, although the latest available figures are not recent enough to show it. Britain has not yet the investment boom which accompanied that consumption boom, but some increase in investment in the private sector seems imminent.

BOLTS, NUTS, SPIKES and RIVETS

Just check with us for your requirements. The products of our modern factory, precision engineered to international specifications will be found uniformly satisfactory.

Made to any required specifications.

head office :

to 1,919,494 tons and despatches from 1,566,529 tons to 1,815,601 tons.

THE PROFIT OF THE TELIOJAN TEA COMPANY HAS amounted to Rs. 4.03 lakhs for the year ended December 1957. Transferring Rs. 50,000 to buildings and machinery reserve, the ordinary dividend is reduced from 35 percent to 30 percent, leaving a carry-forward of Rs. 78,434, against Rs. 64,681 brought in. Output rose from 9,653 maunds to 10,300 maunds and the average sale price fell from Rs. 2.53 to Rs. 2.25 a lb. Estimates for 1958 have been made for a crop of 9,800 maunds.

PROVIDING Rs. 1.74 LAKHS (Rs. 64,016) FOR taxation Rs. 30,000 for wealth tax, and Rs. 1.52 lakhs (Rs. 1.30 lakhs) for depreciation, making other adjustments and bringing in Rs. 1,962, there is a profit of Rs. 2,14,704 for the Karanpura Collieries Ltd for the year ended last February. Tax contingency reserve is allocated Rs. 32,600, development rebate reserve Rs. 29,000 and statutory development rebate reserve Rs. 4,200. An ordinary dividend of 5 percent is declared, leaving a carry-forward of Rs. 11,229. Raisings increased from 145,448 tons to 167,051 tons and despatches from 145,991 tons to 164,095 tons.

PROVIDING Rs. 37½ LAKHS FOR TAXATION, AGAINST Rs. 55 lakhs, Rs. 16 lakhs (Rs. 20 lakhs) for Pakistan taxation, transferring Rs. 5 lakhs (same) to wealth tax, Rs. 88.91 lakhs (Rs. 97.16 lakhs) to depreciation and Rs. 16.10 lakhs to development rebate reserve, there is a profit of Rs. 52.85 lakhs (Rs. 38.31 lakhs) for the Delhi Cloth and General Mills Company, during the year ended last June. Bringing in Rs. 2,77,593, the available balance amounts to Rs. 55,63,303. An ordinary dividend of 8 percent is maintained. Development reserve is allocated Rs. 20 lakhs, leaving a carry-forward of Rs. 4,80,599. The Lyallpur mills are being modernised and renovated. The chemical activity of the company has been increased.

How banking serves the PLYWOOD INDUSTRY

TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the complete banking service we offer.

Bombay Market

PRICES EASE ON SELLING PRESSURE

FINANCE MINISTER'S SPEECH DEPRESSES SENTIMENT

Wednesday Evening

THE Bombay stock market closed in a subdued mood last week. There was heavy selling pressure, particularly in steel shares because of lower advices from Lyons Range. Calcutta operators were nervous on a report that an investment company sold a large block of shares in Indian Iron and the delivery of the scrip had already begun. Reports of slow trading in cloth, both here and abroad, were also considered as an unhelpful factor.

For the time being, the trend looks uncertain and there is some disappointment over the Indian Finance Minister's statement that there would be no reduction in taxation in the near future. An encouraging feature is that there has been no heavy selling pressure in investment scrip.

Tata Steel declined to Rs. 173.75 and Indian Iron were lowered to Rs. 25.95. Turnover in other engineering shares was restricted, and Alcock Ashdown were offered at Rs. 257.50. Premier Construction came to hand at Rs. 234.25 and Tata Locomotive were placed at Rs. 151.50. Minor fluctuations were seen in motor shares, and Premier Automobile were done at Rs. 84.50. Hindustan Motor were transacted at Rs. 7.40.

Cotton mill shares showed losses all round. Bombay Dyeing dipped to Rs. 56.60 and Century were offered at Rs. 425.50. Simplex changed hands at Rs. 173 and Kohinoor were bought at Rs. 248.50. Swadeshi were transacted at Rs. 136.25 and Central India were quoted at Rs. 85.50. India United Ordinary were available at Rs. 8.40 and Apollo were offered at Rs. 1.28.

Miscellaneous shares declined in sympathy with the general trend. In spite of an increase in the distribution, Belapur Sugar lost at Rs. 313.50. Phalton were quoted at Rs. 167.50. Steamship company shares were about steady, and India Steamship were maintained at Rs. 14 on prospects of a good report. Scindia Steam came to hand at Rs. 21 and Great Eastern Shipping were transacted at Rs. 26.80. Cement shares were quiet and accumulation of stocks at the factories continued.

to disturb sentiment. Associated Cement changed hands at Rs. 152.50 and Digvijay Cement were bought at Rs. 136. Mining shares were quiet because of a fall in metal prices. Shivrajpur Syndicate were indicated at Rs. 85.50. National Rayon reacted to Rs. 240 and Tata Chemical were placed at Rs. 15.44. Bombay-Burmah declined to Rs. 480 on an uncertain outlook for tea.

There was a restricted turnover in banking and insurance shares, but fluctuations were minor. United Commercial Bank were done at Rs. 68.30 and Central Bank made Rs. 58. New India Assurance were sold at Rs. 55 and Oriental came to hand at Rs. 4,035.

Electricity supply company shares were maintained on scattered investment interest, and Ahmedabad Electric were bought at Rs. 98.80. Bombay Suburban were taken at Rs. 110.25 and Tata Power were placed at Rs. 1,222.50.

THE WEEK'S TRANSACTIONS

Men and Oil No. 2

THE CHEMIST

In many ways, the oil industry is a pure application of chemical knowledge. From the earliest stages of exploring for new oil deposits, through to controlling the great refineries, the chemist is a key man.

He examines rocks and oil shows collected during exploration, helps in drilling and cementing operations and assists in the interpretation of electrical well logs to identify oil and gas bearing zones. He also analyses formation fluids and oil-bearing reservoirs in order to estimate the total amount of oil recoverable from an oilfield, and studies means for improving the recovery efficiency.

The chemist, again, controls the technical operation of the refinery. At Digboi, for example, chemists are responsible for the production on specification of more than 100 products. From the Assam crude oil, the main products are motor spirit, kerosines, diesel, lubricating oils, and various grades of waxes. The chemist is also concerned with other products such as mineral turpentine, jute batching oil, tea drier oil, bitumen—all these being vital to India's economy.

Chemists in the oil industry must, therefore, possess very high qualifications. Indian chemists play an important role in the working of the Assam Oil Company.

ASSAM OIL

lore, etc. Also at: Delhi & New Delhi.

BRITISH OVERSEAS AIRWAYS CORPORATION

In Rajasthan, there is a provision for establishing 164 farms of 25 acres each. During the first two years of the plan, it was proposed to start 92 farms, against which 84 farms were set up and

land was selected for another three farms. The target of 60 farms proposed for the current year is expected to be achieved well in time.

Uttar Pradesh has a target of 876 seed multiplication farms during the second plan period. In 1956-57, it was proposed to start 110 farms. Actually 115 farms were started. The target and achievement for 1957-58 are 350 and 335, respectively. In 1958-59, as against the target of 254 State farms, 160 have already been opened. The rest are expected to start functioning by the end of the year. It is proposed to open 100 seed farms in 1959-60 and the remaining in the last year of the plan.

The original West Bengal plan target of establishing 100 seed farms was raised to 200 as a result of the revision of the food production targets in September-October 1956, for which the State Government wants additional funds. It has recently been decided after discussion with the State Government that the seed produced from 100 farms would be sufficient to cover the entire State in 1960-61 and, therefore, the original target of 100 seed farms is being adhered to. No farm could be set up during 1956-57; in 1957-58, 25 farms against the target of 90 started functioning. Compared with the target of 75 farms for 1958-59, the possession of 69 farms has been taken over. The remaining six farms are also expected to be started during the current year.

The second plan target of establishing seed farms in Jammu and Kashmir State is 45. It includes the Padgampora agricultural farm of 800 acres which has been treated for purpose of assistance as equal to 32 farms of 25 acres each. During 1956-58, 36 farms were set up.

Fall in Small Savings

The table below gives the year-wise net collections under small savings for the period 1947-48 to 1957-58.

	Year	Rs. crores
	1947-48	14.7
	1948-49	29.7
	1949-50	25.6
	1950-51	33.8
First plan period	1951-52	38.7
	1952-53	39.8
	1953-54	39.7
	1954-55	55.5
	1955-56	67.9
Second plan period	1956-57	61.5
	1957-58	69.5

In 1947-48, the net collections amounted to Rs. 14.7 crores. As a result of partition and other factors, the small savings movement suffered a setback. In the following year, there was a noticeable improvement; the net collections reached the level of Rs. 29.7 crores. The annual average for the three-year period, 1948-49 to 1950-51, worked out to a little less than Rs. 30 crores.

For the five years of the first plan, the target was placed at Rs. 225 crores. As against this, the net receipts amounted to Rs. 241.6 crores. There was a steady improvement from year to year during this period. In 1950-51, the year immediately preceding the first plan, the net receipts totalled Rs. 33.8 crores; in 1955-56, the last year of that plan, the net amount realised was roughly double this figure. Encouraged by the success of the small savings movement, the target of net collections for the second plan was taken at Rs. 500 crores, or a little more than double the net receipts over the five years of the first. The collections in the first two years have, however, been much below the annual average envisaged; the total for the two years works out to Rs. 131.1 crores—Rs. 61.5 crores in 1956-57 and Rs. 69.6 crores in 1957-58. In contrast to the rising trend in the period of the first plan, the net collections in the very first year of the second plan declined. In 1957-58, in spite of all the emphasis which was placed on intensifying the drive, the net collections were only marginally higher than the figure for 1955-56. In the first four months of the current year, the performance has been far from

encouraging, the aggregate net collections being a little over Rs. 15 crores.

Transport Policy

The appointment of a committee to draw up the main features of a national transport policy was recommended by the Road and Inland Water Transport Advisory Committee, which last week held its two-day session in the capital. The Committee felt that State Governments should take steps to consolidate the various motor vehicle taxes and fees and centralise their collection, and that the ceiling on motor vehicle taxation should be fixed at 75 percent of the total existing Madras rates and that indirect taxes should be progressively eliminated. The necessity of abolishing double taxation was stressed by the Committee and it recommended that the principle of single-point taxation should be accepted and acted upon by the States which had not yet agreed to it. As for lorry-trailer combinations, the Committee felt that their operation should be permitted freely on national highways and State highways which are over 22 feet wide. Where the roads were narrower, these combinations could be allowed to operate at night only.

The Committee discussed at length the position of inland water transport. It was emphasised that since it was the cheapest form of transport, it should be encouraged as much as possible. The need for a special set-up to deal with different aspects of inland water transport was also stressed, along with the urgency of co-ordination between the Ministries of Irrigation and Power and the Department of Transport so as to take into account the requirements of inland water transport while constructing irrigation canals.

International Wheat Agreement

The nature of the purchases and sales of wheat which should be included within and conform to the provisions of a new International Wheat Agreement was one of the questions discussed at the first session of the International Wheat Conference called by the United Nations in Geneva from 28th October to 7th November. The existing Agreement is due to expire on 31st July, 1959. Other questions discussed at the Conference were the extent to which the importing countries should guarantee purchases from the exporting countries which are parties to the Agreement, and the flexibility of the prices in relation to supply and demand.

India was represented at the Conference by Mr. B. B. Ghosh, Secretary, Department of Food, Ministry of Food and Agriculture; Mr. B. I. Sahney, Deputy Secretary, Department of Food, Ministry of Food and Agriculture; Mr. S. Krishnamurthi of the Indian High Commission in London; and Mr. P. S. Mathuradas Vassanji (non-official), adviser. The Indian delegation explained India's balance of payments difficulties and the circumstances in which she had to limit her commercial purchases and depend more on buying under special arrangements from other exporting countries. The delegation also explained that the present price at which wheat was available from other countries involved payment of a subsidy by the Government and, therefore, further limited the ability of the Government to make commercial purchases.

Basic questions of policy were discussed, and a preparatory committee was set up with definite terms of reference to examine the various issues in detail in the light of the discussions at the first session. Final decisions will be taken at the second session which is due to be held towards the end of January 1959. A separate technical committee has also been set up to examine certain technical issues relating to prices. India has been elected to serve on both these committees. Forty-one countries were represented at the Geneva Conference by their delegates. There were observers from certain countries and the F.A.O.

World Agreement on Sugar

Under the International Sugar Agreement, formulated by the United Nations International Sugar Conference held in Geneva between 22nd September and 24th October this year, India has been allotted an export quota of 150,000 tons a year, consisting of 100,000 tons as the basic quota

and 50,000 tons as a special reserve quota. India was represented at the Conference by Mr. A. M. Thomas, Deputy Minister of Food, Government of India, (leader); Mr. T. Prasad, Director of the Sugar Directorate, Ministry of Food and Agriculture; and two representatives of the Indian Sugar Mills Association, Messrs D. D. Puri and M. N. Pittie. Mr. Thomas and Mr. Prasad have returned to India.

The purpose of the Conference was to review the working of the International Sugar Agreement of 1953 and to consider the question of its renewal for a further five-year period with reference to the world production and consumption of sugar. The delegation will be making a full report to the Government of India, who will then decide whether India should join the International Sugar Agreement. The Indian delegation's viewpoint at the Conference was that it should approach the problems of sugar exports in the light of the special circumstances obtaining in India. In an under-developed country like India, the central objective of public policy has been the promotion of rapid and balanced economic development, and it would be possible for India to join any international agreement only if it would facilitate the objectives and targets of the five year plan. The delegation urged that the Conference should be guided in its formulation of policies not so much on the past position taken up by various countries but give due regard to the present and the potential created for the future. The need for India earning as much foreign exchange as possible through exports of sugar was also underlined. On the question of prices of sugar, the delegation suggested the importance of a "reasonable price" based on an equitable return to the grower and a fair wage to the worker and one which would have the desired extent of stability.

India was a signatory to the International Sugar Agreement of 1953, which is scheduled to expire by 31st December, 1958. She was a party to the international agreement originally framed in 1937, but decided to break off after 31st August, 1942. The decision was taken because it was felt that India did not derive any benefit as a result of the restrictive scheme regulating the supply and demand of sugar. She was also opposed to her being grouped in the list of countries importing sugar. In 1956, approaches were made at the United Nations Sugar Conference to bring India back into the Agreement. India was classified as an "exporting" country and allotted a basic export quota of 25,000 tons of sugar and a special reserve quota of another 25,000 tons. She did not, however, become a signatory to the Agreement because it was felt that the export quota allotted was inadequate in the context of India's developing sugar industry. It was also considered that some of the clauses of the Agreement were restrictive and would have operated harshly against Indian interests. Adherence to the Agreement would have meant that India would be committed not to exceed the quota allotted to her.

Indian Sugar Industry

India is the world's biggest producer of cane and the Indian sugar industry employs about 150,000 workers. During the last two decades, both production and consumption of sugar in the country have been progressively on the increase. From 931,000 tons in 1937-38, production rose to 1,975,000 tons in 1957-58. Correspondingly, consumption of sugar increased from 1,150,000 tons in 1937-38 to 1,990,000 tons in 1957-58. The stock position was sometimes comfortable enough to enable her to export certain quantities. For example, at the end of 1955-56, the stocks on hand after the internal demand was met amounted to 4,77,000 tons, while at the end of 1957-58, it is estimated that she has stocks of 356,000 tons, after making an allowance of 50,000 tons for export. These figures do not take account of the production of *khandari* sugar and *gur*. During the second five year plan, a production target of 2,550,000 tons has been set for the sugar industry against an estimated consumption capacity of 2,250,000 tons. Even allowing for a further rise in consumption in the next few years, it is considered that India will have a substantial surplus of sugar for export. During 1957, a little over 150,000 tons of sugar was exported outside the Agreement. For 1958, the quota fixed provisionally by the Government up to the end of October 1958, was 50,000 tons.

Asian-African Trade Conference

The Asian-African Trade Conference will begin in Cairo on 8th December. India will be represented through the Federation of Indian Chambers of Commerce, which is now selecting its delegation. The nine-nation preparatory commission, consisting of Japan, China, India, Indonesia, Iraq, U.A.R., Sudan and Tunisia, has prepared the following four-point agenda:

- (1) To study ways and means of fostering financial collaboration, including the organisation and development of trade with a view to eliminating harmful competition.
- (2) To study the European Common Market project and assess its possible effects on Asian and African countries.
- (3) To study the problems of transferring payments between the countries of the region, and the ways and means of resolving them.
- (4) To establish a central body for co-ordination of policies and economic collaboration among federations of chambers of commerce within the regions, and the ways and means of getting them adopted by respective governments.

London

RISE IN UNEMPLOYMENT CONSIDERED TEMPORARY

CHANCELLOR EMPHASISES NEED TO HOLD DOWN PRICES

(FROM OUR LONDON CORRESPONDENT)

THE Chancellor of the Exchequer, Mr. Heathcoat Amory, was called upon twice last week to defend the Government's economic policy. He presided at a meeting of the National Production Advisory Council on Industry at which the increase in unemployment gave rise to considerable anxiety among trade union delegates, and the return of inflation appeared to be the biggest danger as far as employers were concerned. The Chancellor himself admitted both these dangers, but was nevertheless confident that the Government was dealing with them in the right way. He felt sure that the current unemployment problem was a relatively short-term one, and went on to say: "Two facts, however, remain strongly in our favour. On the one hand, prices are more stable than at any time since the war. Retail prices in September were much the same as at the end of 1957, while wholesale prices of manufactures have been edging down for some months. On the other hand, we have been able to keep investment high. If we go on holding the price level and if we can see past investment leading to solid gains in the efficiency of output, we can take a cheerful view of the outlook for 1959."

Mr. Amory's second test was a meeting of the Conservative members' Finance Committee at the House of Commons, and it must have heartened him to learn at its conclusion that his management of economic and financial affairs still has the warm support of most members of his party. He remained confident about the future of British industry but said that a return of inflation would have serious effects on Britain's export trade, which would be facing warning markets in coming months. He repeated the warning that it would be extremely difficult for the economy to absorb next year the wage increases of about 4 percent which had been made this year. This is particularly so because import prices are likely to rise.

Strong Trade Position

The overseas trade position is certainly being well maintained, according to the latest provisional figures released by the U.K. Board of Trade for October. Exports were worth £266.8 million, or £26 million more than in September and slightly more than the average for the first three-quarters of the year. Imports rose to £328 million or £17 million more than in September, and 6 percent above the average for January-September. Exports were £12.2 million, compared with £10.9 million in September. The "trade gap" in October was £49 million, or £11 million less than in September, but £16 million more than the average for the first nine months of the year.

The strength of Britain's external trade position can be seen by comparing the first ten months of 1958 with the same period of 1957. Exports fell 7 percent down by 34 percent, but imports fell 7 percent while re-exports rose by 13 percent. The 84 percent while re-exports rose by 13 percent. The average, been £23.5 million less this year. Exports to the United States in October were £26.2 million—£3.5 million more than in September and the highest monthly total ever recorded. In the first ten months of 1958, they were 12 percent higher than a year ago. Exports to North America, as a whole, rose by 4 percent. Although exports to Canada rose by £3.5 million last month to a value of £16.1 million, the total so far this year was 5 percent down on the first ten months of 1957.

Simplifying E.C.G.D. Rules

The Export Credits Guarantee Department has simplified the arrangements for getting the extra cover needed when exporters of engineering goods wish to give long-term credit to buyers. It is at pains to avoid giving the impression that it is trying to make the running in the international credit race, and it is understood that few applications for cover which would have been rejected are likely to have a better chance now. But the change in the rules for getting "extended terms" endorsements from the Department will strengthen the bargaining position of British exporters. They will now know right from the start of any negotiations with overseas buyers, whether they can get extended cover.

Up to now, the Export Credits Guarantee Department has only granted cover for longer than six months after considering each case on its merits. It has told policyholders that they can now assume there will be no objection to arranging credit terms of up to two years on orders worth £20,000 or more, or of up to three years on orders worth £50,000 or more. Three-year covers will, however, be given only where the buyer will be the actual user of the goods.

Steel Output Disappointing

Output and consumption of steel continued to decline in October. Production averaged 363,500 tons a week, over 5,000 tons a week less than in September and, on a monthly basis, 17 percent lower than in October 1957. Deliveries to the mining industry fell by 29 percent compared with the third

quarter of last year. Deliveries to the railways fell by 31 percent, and purchases for shipbuilding and constructional engineering also declined substantially. Steel exports, 18 percent lower, fell proportionately more than home sales.

Radio and T.V. Sales

There is little evidence of the relaxation of hire-purchase restrictions in the September returns of radio and television retail sales. The minimum deposit (since abandoned altogether) for both radios and television sets was reduced from 50 percent to one-third about half-way through the month. Although the sales were higher in September than in August the increase was no more than expected from past experience of the seasonal trend of the trade, and in both months sales a shop were lower than at the same time last year. The decline in radio sales (12.1 sets a shop against 13.1 sets in September 1957) is in line with the earlier months 1958, but the fall in sales of television sets, compared with last year (only 9.8 sets a shop against 15.3 sets), is described by the Radio and Television Retailers Association as "serious." The explanation

lies in the popularity of the new rental schemes. For every 11 sets which the retailers sold in September they hired out another eight sets. The potential buyer has turned instead to renting his set. Of the total of sets sold in September less than 50 percent were on hire-purchase, against 53.3 percent a year earlier.

Capital Issues Surprises

Two striking facts emerge from the latest quarterly figures of Capital Issues Committee applications and consents. One is the sharp fall in the number of applications in the third quarter of this year. The other is the very high percentage of consents. These are the salient figures:

	Number of applications			
	Total	Wholly allowed	Partly allowed	Wholly refused
1958				
1st quarter	931	810	8	113
2nd "	870	780	8	82
3rd "	398	360	4	34

In terms of money, the application total has come down from £351.1 million for the first quarter to £249.8 million for the third. Whereas for the first quarter, refusals amounted to £99.5 million, leaving consents at £251.6 million, refusals in the third quarter of this year amounted to only £11.5 million, with consents at £238.3 million. Obviously, under the new directives from the Chancellor, the committee has found few reasons for saying "no".

The Case against Nationalisation

A pamphlet on nationalisation, published by the Federation of British Industries, says that "the expectations of outstanding progress and improvement held out by the nationalisers" have not yet been fulfilled. Although there is no general call for denationalisation, the document says that it may be "both practicable and desirable to set free"

CHEVROLET

The greatest name in road transportation

Once again, transport operators in India have the opportunity to do business with unrivalled, world-renowned Chevrolet trucks and buses. And these broad-shouldered, big-muscled heavy-duty huskies are designed to take the toughest assignments without strain.

Features like four-speed transmission, heavy-duty springs, long-stroke 7-inch diameter hydrovac brakes, sturdy chassis frame with alligator-jaw cross members, heavy-duty rear axle and many others, make Chevrolet tops in truck and bus value.

These reliable and stronger-than-ever trucks and buses stay on the job and save on the job.

at least one of the industries, namely, civil air transport. Among the main charges made against the nationalised industries are that depreciation provisions have been inadequate, and that the failure to cover outgoings has been partly due to a mistaken belief that the national interest is served by low prices irrespective of cost, or to postponement by Governments of proposed price increases, and partly to weakness in the control of costs. Nationalisation has made labour relations more difficult.

The report says that there is no justification for the proposal to re-nationalise steel and long-distance road haulage. Even the indirect effect on the rest of industry must be profound. The steel-using industries, in particular, cannot afford the slightest loss of flexibility, nor can Britain afford a further upheaval in the steel industry. "The acquisition of equities: nationalisation by the back-door" is also examined and found wanting. If such acquisition is intended to increase Government control of industry, it will throw up even

worse problems than nationalisation. If it is intended to give the Government ownership, but not control, the former will nevertheless find itself drawn or propelled into control. The latest idea of the Labour Party's economic policy, the national investment board, has also been discussed without enthusiasm.

Hongkong to Play Ball

According to reports from Hongkong, the textile committee there is meeting high officials of the colony's Government to work out the administration of a scheme for voluntary restrictions on cotton textile exports to Britain. The committee will also ask the Government to ratify the undertaking—a proposal which has so far brought no favourable response from officials. Hongkong traders say that the colony's industry is now prepared to "play ball" with Lancashire over the proposed voluntary export ceiling. But before this is accepted, the industry wants to see what outside protection it can expect. France's recent decision to impose import restrictions on Hongkong textiles is

expected to play an important part in the talks. Manufacturers there would like the British Government to apply pressure for the withdrawal of the French restrictions before they agree to the ceiling on exports to Britain.

Brooke Bond Outlook

Net current assets of Brooke Bond increased by nearly £1½ million in the year ended 30th June, 1958, in spite of a fall in stocks from £21.6 million to £19.4 million. In the year now reviewed by Mr. John Brooke, world sales reached another record and an extra 12 million lbs of packet tea was sold in Britain and India. The decline in stocks held is almost entirely due to the dock strike in the summer. This stopped buying and depleted existing stocks of tea. The sharp rise of £800,000 to £4,125,000 in pre-tax profits is more impressive when seen against a background of materially increased production expenses and wages. As far as the plantation companies are concerned, good crops have been harvested. Mr. Brooke says that world tea production appears to be increasing again.

LETTERS TO BHAI SAHIB. This is the fourth in a series of 9 advertisements. Look for the fifth advertisement in this publication next month.

"...for our children's future"

Dear Bhai Sahib,

You have asked whether the tea industry is important, "like steel or the big hydro-electric projects". It is certainly easier to understand how a new steel plant or the Bhakra Nangal Dam works for our children's future, but, I assure you, "Tea's" part is every bit as significant.

Our Second Five-Year Plan requires many things which at present are not made in India, such as heavy electrical machinery. Much aid has been received from friendly foreign countries but our leaders constantly urge us to stand on our own feet. To get money to buy necessities from abroad we must sell something to foreign countries.

That's where Tea plays a part of tremendous importance. More money comes to India from the sale abroad of tea than from any other commodity; about 25% of all our foreign exchange earnings come from tea.

In addition, the Government needs to raise money at home. The tea industry pays over Rs. 100 crores in taxes to Central and State Governments, besides making business for other industries like Railways, Plywood and so on.

All this, Bhai Sahib, is done in the teeth of fierce competition. It requires scientific research, skill on the plantations and in the packing factories and—most important of all—good salesmanship.

Bhai Sahib explains to his friends the Chairman's viewpoint in regard to an important question which they raised.

We in Brooke Bond are justly proud of our great part in this effort. We believe that, by constantly striving to bring to millions of consumers good tea at a reasonable price, we are helping to keep the tea industry strong and thereby serving the nation well.

Yours truly,

(G. V. Krishnamurthy)
Chairman,

Brooke Bond India Private Limited

Some Important Facts about Indian Tea

Total export of tea during 1957	442,651,000 lbs.
Foreign exchange earned during 1957-58	Over Rs. 113 crores
Revenue earned as export and excise duties during 1957-58	Rs. 21.40 crores
Estimated Central and State taxes other than above	Rs. 80 crores

Jute

WEAK TREND CONTINUES IN RAW JUTE PRICES

FIBRE DISTRIBUTION HAMPERED BY WAGON SHORTAGES

SENTIMENT has remained bearish in the raw jute markets during the past week, and prices have slumped by up to Re. 1 a maund. It is generally admitted in the trade that present-day conditions are very different from those in former years, and market trends and reactions have been contrary to expectations. Business during the past week has been much smaller than previously, but even so in normal times it would at least have had a steady influence. At present, however, prices appear to move downwards irrespective of what the day's activities may have been. Sellers are partly responsible, as their pressure for business is tremendous, and there are some who are prepared to sell at almost any price. There is no holding power as stocks are piling up in most agencies.

Transport difficulties have added to the confusion, and an alleged wagon scarcity has delayed the shipment of jute. Many sellers in the Kaliaganj and Raiganj districts might have their comparatively high-priced contracts cancelled due to non-delivery, even though the jute is lying ready in full godowns. Option requests for shipment via alternative routes have not been granted in many instances, as the districts through which the jute would have to be re-routed are not popular with buyers. Most of the requests, however, are genuine, and sellers are only too anxious to fulfil their obligations but are being prevented by unforeseen circumstances. The strangeness of the situation is demonstrated by reports from neighbouring areas, where requests for wagon allocations have not only been speedily complied with, but allotments for December have been made already; in many cases, sellers have had to cancel registrations, thus forfeiting the registration fee, because requests for early delivery have not been granted. It is normal for sellers to make applications for space well in advance, in the knowledge that in the normal course of events these take anything up to three months to come through.

Conditions in the gunny market also appear to be irregular. While hessians, under both local and small overseas interest, have moved up, sacking prices have recorded new low levels, falling by about Rs. 1.25 over the week. There is no support at all for the latter. Calcutta mills are not interested in the low sacking rates, although fairly good business has been reported in hessians. Local shipper covering has been more vigorous than usual but foreign interest has been limited.

THE JUTE MARKETS

The futures market has shown a mixed trend, with hessian prices rising, and sacking and jute rates falling. Prices, as given by the East India Jute and Hessian Exchange Ltd for the period 12th to 18th November, are as follows:

	Hessians 40in 10oz. November	Sacking B Twills November	Raw Jute Upper Assam November
	Rs. a 100 yds. 100 metres	Rs. a 100 bags	Rs. a md. 100 kilos
Opening	43.04	47.06	23.38
Highest	43.80	47.89	23.42
Lowest	42.94	46.95	22.68
Closing	43.40	46.65	23.00

Manufactured Goods: The gunny market was dull at the opening as operators awaited the election results for the appointment of the directors of the futures market. Both sacking and hessian showed a mildly bearish reaction. B Twills lost 20nP to be quoted at Rs. 97.05 in the near positions, and Rs. 98.20 for January-March shipment; 40in. 10oz. hessians dropped by 15nP in the near positions to record Rs. 43.20, the forward section being at a discount of Rs. 3.40. The general undertone was quiet, but local shipper covering tended to boost prices on Friday, when there was a general, but small, improvement. Good business in hessian was reported, which pushed 40in. 10oz. rates up to Rs. 43.90, but sacking was completely neglected, and heavy goods dropped by 40nP or 50nP. This trend continued over the week-end, with hessians making further gains and sacking dropping by 45nP. Prices fluctuated within narrow limits, the general pattern being maintained with hessians steady and sacking weak. Interest from overseas was limited. On Tuesday, an easier undertone developed, so both sacking and hessians recorded small losses.

On Wednesday morning, the market showed a steadier tendency, and opening quotations were as follows:

	November	December	Jan.-March
40in. 8oz.	34.85 (37.99)	33.35 (36.35)	32.05 (34.93)
40in. 10oz.	44.00 (47.96)	41.60 (45.34)	39.95 (43.54)
B Twills	96.10	95.00	97.50
Heavy Cees (Plain)	98.25	98.00	97.50
A Twills	116.75	116.75	117.00
Liverpools	110.50	110.50	110.50
Cornsacks	97.50	98.00	98.25

Raw Jute: The fibre markets were quiet at the opening, with mills showing less interest than

of late. Sellers were keen for business; they were offering discounts and in most cases were prepared to meet mills' counter-bids. Imports into all the upcountry agencies were heavy and mills' purchases over the past few weeks, although large, made little impression on stocks. Imports into Calcutta were also big, and mill agents kept buying steadily in Cossipore. In spite of this, prices tended to fall, and a slump prevailed in Calcutta. Selling pressure increased as stocks piled up, but mills' interest at this stage slackened, as most of them were now well bought. Transport difficulties added to sellers' anxiety and it was feared that many high-priced contracts would be cancelled due to wagon shortages. Opening quotations last Thursday were based on Assam jute at Rs. 22.75, with Northern jute at a discount of 75nP. Prices eased later to Rs. 22.25.

Business was done in Assam jute at Rs. 22.75 to Rs. 22, and in Northern at 25nP or 50nP lower. Tossa passed at Rs. 23.25 to Rs. 23 a maund, and Daissee at 25nP to 50nP over those prices. A fair amount of business was done in X Bottoms and prices ranged from Rs. 15.50 to Rs. 17 for Jungli X, and Rs. 16.50 to Rs. 17 for Mursidabad District X Bottoms. Mesta was again in demand; Desal mesta fetched Rs. 20 to Rs. 20.25 and Daissee mesta Rs. 20.

Wagon arrivals in Cossipore last week rose to 800. This was slightly higher than in the previous week, and 200 more than in the corresponding week of last year. It was reported that stocks in Cossipore were about 100,000 bales. Mill agents and representatives continued to buy freely, and heavy business was reported. Imports were re-

The Last Phase

THE COMMISSIONING OF THE NEW Rs. 70-million Blast Furnace in Jamshedpur in October marks the beginning of the end of the expansion programme started in December 1955 to double Tata Steel's capacity to two million tons a year.

One of the largest in the world, the new Blast Furnace will produce 1,650 tons of molten iron per day. Completed earlier was the third Steel Melting Shop with its seven open hearth furnaces, which alone will produce 1.3 million tons of steel ingots a year. Also in operation now is the new Rs. 100-million Blooming Mill with a primary rolling capacity of two million tons.

Covering every phase of operation from the winning of ore to the rolling of finished steel, the expansion will be virtually completed by the end of 1958. The capital investment on expansion and annual replacements by Tata Steel over the five years 1955-60 is estimated at Rs. 1,330 million—more than one-fifth of the total outlay by organised industries in the private sector.

TATA STEEL

ON TO TWO MILLION TONS

ported to be good for both quality and moisture. At the close, quotations were based on Kishenganj jute at Rs. 20.25 a maund.

On Wednesday morning, opening quotations were as follows:

	Landed at Mills	Rs. a maund	Rs. a 100 kilos	Shipment
	Basis Bottoms			
Assam	22.50	60.30		Nov.-Dec.
Northern	21.50	57.62		"

1st to 10th October, 1958	12,913.0	256.1	13,169.1
1st to 10th September, 1958	13,853.3	428.7	14,282.0

THE FOREIGN JUTE MARKETS

FIBRE PRICES IRREGULAR

(FROM OUR DUNDEE CORRESPONDENT)

THE existence of a fair number of secured parcels of raw jute has made fibre prices irregular. It is estimated that there must be about 50,000 bales of various grades which have been bought before the fixing of the Pakistani minimum prices. These are being offered at anything up to £3 a ton below the minima, but spinners in Dundee are not much interested in them, and, therefore, sellers find it difficult to dispose of their stocks. It is believed that spinners have already secured a big proportion of their requirements for this season, and this could be the reason for their apathy. Those sellers who have no secured jute to offer are adhering rigidly to the minimum rates and, had it not been for these secured lots, the market would have been very firm.

Spinners are all very busy and consumers of yarns who had delayed in purchasing, find it difficult to buy even small lots. The hessian descriptions for weaving are well booked and the rate for 8 lbs C.H.W. cops is not less than 14.29d a lb, and 8 lbs J.C.H. medium spools at 15.43d, with 3 ply some attention at £95 10s for 48 lbs and £77 for 200 lbs. Manufacturers are well booked for cloth and bags. The market met with some enquiry last week for pulp bags for the beet sugar crop. A number of dealers are not quoting because they cannot give delivery next month, which is required by buyers. Prices are very firm on the basis of 12.88d a yard for 40in. 10oz. Hessians and 11.03d for 8oz.

Raw jute prices are at the minima of £106 for Mill Firsts, £90 for Mill Lightnings, £80 for Mill Hearts and £67 for grade Hearts, £95 for crack Daissee-2/3 and £88 for grade, and £105 for grade Tossa-2/3 and £95 for grade Tossa-4, c.i.f. U.K., November-December.

The Calcutta goods market is still irregular, and prices are at 65s 3d for 40in. 10oz. and 48s 6d for 7oz., November, 62s 6d and 46s 9d, December and 59s 9d and 45s January-March, with B Twills 146s 6d, 147s 3d and 148s 6d for respective positions of shipment, all f.o.b., Calcutta.

In reply to a request for a 10-percent increase in jute workers' wages, the Council has granted a rise of 4 percent. The new minimum rates are now 144s 10d for adult males and 99s 6d for females for a 45-hour week. This is an increase of 5s 7d and 3s 10d a week, respectively.

EXPORT DUTY ON RAW COTTON REDUCED

The Government of India has decided to reduce, with immediate effect, the export duty from Rs. 50 a bale to Rs. 25 a bale on the following varieties of raw cotton: Bengal Deshi, Mathia, Kalagin, Dholleras, Central India Deshi, C.P. I and II, Oomra Deshi and other varieties of raw cotton up to and inclusive of 25/32in. in staple length. In addition to 250,000 bales of raw cotton already released for export during the current cotton season, the Government has also decided to release a further quantity of 250,000 bales of raw cotton, making in all 500,000 bales for export. The quantity and varieties of raw cotton now released for export are as follows: (i) Bengal Deshi cotton: 100,000 bales; (ii) raw cotton not above 3in. in staple length: 100,000 bales; (iii) raw cotton of staple length below 3in.: 50,000 bales.

CALCUTTA TEA AUCTIONS IN OCTOBER

RIISING TREND IN QUALITY GRADES

ONLY two sales were held during October, on account of the Puja holidays, and offerings totalled 142,582 packages. The market was strong at the bottom, plain teas and "teas for price" appreciating in value on demand from both exporters and internal operators. Orthodox Assam B.O.P.'s and O.F.s, declined by 20nP or 30nP a lb over the month, with the fall in quality, but B.P.'s and P.F.s. in this category tended dearer, especially the few with bright liquors, while B.P.S.'s sold well at steady to dearer rates, say Messrs Carritt Moran and Co. Private Ltd in their monthly tea market review. C.T.C. teas were well supported, and some quite useful prices were forthcoming for the few best liquoring ones. The cheapest sorts were often dearer, but the more ordinary medium C.T.C. teas, being in ample supply, again tended easier. Legg-cut Doars teas were a little easier in the first sale of the month, but, in the following week, rates for this class of tea were fully maintained and were occasionally dearer. Orthodox Doars sold well, any change tending to be in sellers' favour. There was a slightly better enquiry for whole leaf grades, and prices, although a little irregular, were frequently dearer, particularly for the lower priced sorts and those with bright liquors. The few tippy teas on offer sold well, but the demand for Darjeelings was less active and prices showed some irregularity and were generally easier.

Both leaf appearance and cup quality of teas from Darjeeling continued to be fully average for the time of year, and although few grades with real flavour were catalogued, a very satisfactory stan-

dard was maintained. The offerings from Assam were mostly of an ordinary rains description, and in some cases quality showed a slight falling away. The general standard was, however, up to the level expected. Leaf appearance was, on the whole, satisfactory, although more stalk and fibre became noticeable in the lower grades, particularly from some of the poorer estates. A little more fibre was noticed in Legg-cut teas from Doars, but the appearance of orthodox grades continued quite useful although the lower qualities sometimes displayed a little more stalk. Cup quality was barely up to the standard of the previous month's offerings, but was nevertheless satisfactory for rains production. Some of the lower grades from Cachar were a little duller and more stalky than earlier invoices, but the general standard of leaf appearance was about average, and liquors were, with few exceptions, sweet in character.

Quotations

	1958-59	1957-58
	Rs. nP	Rs. nP
Sale No. 16 Plain B.P.	1.70	1.62
Sale No. 17 " "	1.75	1.64

There were 6,239 chests of Leaf on offer. During the last three sales before the Puja holidays, there was a good general demand. Quality generally was of a fibrous residue description. There were 63,890 chests of Dust on offer. Quality was fair for the time of year. There was a strong general demand, particularly in the second sale when prices for orthodox descriptions rose by as much as 10nP. C.T.C. Assams continued to be an irregular feature. Prices for the plainer liquoring kinds continued to decline but the best showed some improvement in Sale Nos 16 and 17. Demand for Darjeeling Dusts strengthened during the month.

Quotations

	1958-59	1957-58
	Rs. nP	Rs. nP
Sale No. 15 Clean Common Dust	1.78	1.59
Sale No. 16 " " "	1.87	1.63
Sale No. 17 " " "	1.85	1.59

Export sales up to and including Sale No. 17 totalled 810,617 chests at an average price of Rs. 2.58, compared with 686,997 chests at an average price of Rs. 2.46. Internal sales at 16,858 chests of Leaf and 271,638 chests of Dust at the average prices of Rs. 1.73 and Rs. 2.03 go against 17,412 chests and 230,876 chests (Rs. 1.54 and Rs. 1.90), respectively.

The estimated north Indian crop to the end of September 1958, was 381,500,345 lbs, compared with 178,038,080 lbs to the same date of last year. The average figure at this date for the three years, 1955-57, was 386,519,531 lbs.

Business in export quota during the first half of the month was transacted at 3nP a lb, rising for a short while to 3nP a lb. A slight decline in price was evident thereafter and business at the close was transacted at 3nP a lb.

Arrivals (in chests) in Calcutta warehouses from 24th September, 1958 to 23rd October, 1958, with the corresponding figures in parentheses, were: by steamer 551,446 (493,847), by rail 138,926 (96,623) and by air 11,718 (29,762), totalling 702,090 (611,233) chests. Arrivals since the beginning of the season, 1st April, 1958 to 23rd October, 1958, have been: by steamer 1,959,912 (1,698,929), by rail 517,361 (539,107) and by air 73,489 (112,293), making a total of 2,550,762 (2,350,329) chests.

COCHIN TEA SALES

At Sale No. 32, 1,700,000 lbs of tea were on offer. There was much less demand. Low mediums and mediums were barely steady while improved quality good mediums were strong. Best liquoring high-grown were lower following quality.

At Dust Sale X, 650,000 lbs of tea were on offer. There was less demand. Prices declined irregularly by 15nP or 20nP for milled Dusts and low mediums. Other grades were irregularly 10nP lower.

The new Jet Clippers you will ride in are Boeing 707s, the most thoroughly flight-tested aircraft ever to enter commercial service.

PAN AMERICAN INAUGURATES JET SERVICE FROM LONDON TO THE U.S.A.

Both Deluxe and Economy class fares!

Departure	Arrival
London 11:00 am ...	New York 2:45 pm
DAILY SERVICE	
Departure	Arrival
Paris 6:00 pm ...	New York 9:25 pm

ALL TIMES SHOWN ARE LOCAL

FASTEST ACROSS THE ATLANTIC!

Pan American's Jets are the fastest transatlantic airliners. They are pure jets, a major advance over propeller-driven aircraft. Four jet engines, cradled in pods from distinctive swept-back wings, give you quiet, vibration-free comfort at speeds up to 600 mph.

The fuselage of the Jet Clipper* is 144 feet in length, the wings nearly 132 feet—both longer than the Wright Brothers' first 120-foot flight at Kitty Hawk.

Calcutta: 42 Chowringhee, Tel. 44-2651-52-53
New Delhi: Imperial Hotel, Tel. 48172, 48717
Bombay: Taj Mahal Hotel, Tel. 35063, 35064

In minutes you reach cruising altitude of between 25,000 and 40,000 feet—high above the bother of weather, where your Clipper provides a 200-mile view.

No increase in fares! Fly the finest, fastest transatlantic service, including new economy class. Coming soon: Jet Clipper service to Latin America, across the Pacific and 'round the world.

Reservations can be made now! Call your Travel Agent or Pan American—over 800 offices around the world.

FAIR GENERAL DEMAND AT
TEA EXPORT SALE

DUST PRICES FALL

AT Sale No. 21, held on 17th and 18th November, offerings at the Export auction amounted to 71,230 chests for which there was a fair general demand. "Teas for price" and plain brokers received fair support at prices which were from 2nP to 10nP easier, while orthodox medium Assam B.O.P.'s and O.F.s. were up to 20nP easier. There was again restricted enquiry for the C.T.C. descriptions which declined irregularly by 10nP or 15nP with many withdrawals. Legg-cut Doars received a fair enquiry but at prices which were up to 8nP lower. There was fair support for whole leaf grades at irregular and often easier rates. Well-twisted Pakoes were sometimes dearer. There was a fair demand for Darjeelings but prices showed an easier tendency. Towards the close of the sale, there was a general slackening in demand, prices showed a further decline and withdrawals became numerous.

Quotations	1958	1957
	Rs.	Rs.
Clean Black Pekoe	2.00 to 2.10	2.30
Plain B.P.	1.64 to 1.86	1.70 to 1.72
Plain Fannings	1.90 to 1.96	1.78 to 1.82
Medium B.P.	1.80	1.76 to 1.80
Medium Fannings	1.88 to 1.92	1.86 to 1.90
Best Assam C.T.C. B.P.	2.05 to 2.10	3.00 to 3.53
Best Assam C.T.C. Fgs.	2.20	2.80 to 3.00

At the Internal Sale, offerings amounted to 20,372 chests of Dusts for which there was a good general demand, but an easier tone was noticeable in the market. The orthodox descriptions on offer were readily absorbed although they were 2nP to 4nP lower than last week's rates. There was fair demand for C.T.C.'s which were rather irregular. The poorer types were up to 10nP easier, while the medium and the best descriptions were as much as 15nP to 20nP easier. The few Darjeeling teas on offer sold well at irregularly dearer rates.

Quotations	1958	1957
	Rs.	Rs.
Medium Doars Dust	1.86	1.76 to 1.78
Medium Assam Grainy Dust	1.88	1.78 to 1.80
Medium Assam C.T.C. Dust	1.95 to 2.20	2.05 to 2.20
Best Assam C.T.C. Dust	2.70 to 3.00	2.70 to 3.00

There were 1,374 chests of Leaf on offer for which there was a fair demand at generally lower rates.

HEAVY GRAIN BOOKINGS IN
FREIGHT MARKETS

HEAVY bookings of grain vessels have been the feature of the freight markets over the past week, and India has figured prominently in this business. Eleven vessels including some large tankers were fixed from Gulf ports to West Coast or Bombay direct at 65s for free tonnage. Nine vessels were fixed from Gulf and Pacific ports to Calcutta at \$(U.S.) 25.75. Since all these vessels have been chartered for December loading, there will be considerable congestion at discharging ports. The situation in Madras and Visakhapatnam is particularly bad since, with the Hooghly river drafts unlikely to allow vessels deeper than 23 feet to enter in January-February, the additional quantities to be discharged at these lightening ports will overtax the available storage space and rail offtake. A most interesting fixture was the chartering of a British vessel from the Great Lakes to the U.K. for the commencement of the St. Lawrence season next year. The rate fixed was 82s 6d for heavy grain from Fort William or Port Arthur and emphasises the importance the Saint Lawrence Seaway is likely to assume in tramp chartering.

SUGAR UNCHANGED

During the week ended 19th November, sugar sales in the Calcutta market averaged 5,000 bags daily. Arrivals a day were 2,500 bags and stocks totalled 115,000 bags. Rates for ready sugar ex-Kantapur delivery were Rs. 40.50 to Rs. 40.87 for bold grain and Rs. 38.50 to Rs. 38.87 for ordinary grain. The market was unchanged.

HIDES AND SKINS FIRM

The market ruled firm. Stocks were less than in the previous week.

Bazaar Sales

(Between 11th November and 17th November, 1958)

Cowhides: Wet Salted (ord.) 6,000 pcs. on the basis of Rs. 7.50 to Rs. 9.50; Wet Salted (slaughtered) 9,200 pcs. on the basis of Rs. 9.50 to Rs. 14.50 and Rs. 16.50 to Rs. 25.

Goatskins: Wet Salted (Patna, Daissee, Kustia) 54,700 pcs. on the basis of Rs. 290 to Rs. 310, Rs. 330 to Rs. 355 and Rs. 350 to Rs. 400; Wet Salted (he-killed) on the basis of Rs. 412 and (she-killed) on the basis of Rs. 3.87 a piece; Assam-Dinaipur-Ram-purhat 30,700 pcs. on the basis of Rs. 280 to Rs. 340; Purneah-Kissanganj 27,000 pcs. on the basis of Rs. 340 to Rs. 355; Patna-Pakur (ord.) 21,000 pcs. on the basis of Rs. 310; Muzafferpur-Patna 700 pcs. on the basis of Rs. 320 to Rs. 325.

Bazaar Stocks

(17th November, 1958)

Cowhides: Wet Salted 97,500 pcs.

Goatskins: Wet Salted (Patna, Daissee, Kustia, Killed) 19,000 pcs.; Assam-Dinaipur 75,000 pcs.; Muzafferpur-Patna-Purneah-Pakur-Kissanganj 1,66,500 pcs.

Calcutta, 12th November, 1958.

THE INDIAN STEEL & WIRE PRODUCTS
LIMITED.

NOTICE.

NOTICE is hereby given that the Twenty-third Annual General Meeting of the Shareholders of The Indian Steel & Wire Products Ltd. will be held at its Registered Office No. 7, Wellesley Place, Calcutta 1 on Monday, the 22nd December, 1958 at 11-30 A.M. to transact the following business:—

- 1) To receive and adopt the Directors' Report and audited Balance Sheet and Manufacturing and Profit & Loss Account of the Company for the year ended 31st March, 1958.
- 2) To declare Dividend and Cash Bonus on ordinary shares of the Company.
- 3) To appoint a Director in place of Sir Indra Singh Kt. who retires by rotation and is eligible for re-appointment and to consider and, if thought fit, to pass the following resolution as a Special Resolution:—

"RESOLVED that Sir Indra Singh Kt., a Member, Director and Associate of Indra Singh & Sons Private Ltd., the Managing Agents of the Company, be and is hereby re-appointed a Director of the Company and that he be and is hereby declared that the age limit prescribed in Section 280 of the Companies Act, 1956 shall not apply to him."

Notice is hereby given that special notice as required by Sections 261 and 261 of the said Act of intention to move the resolution as a Special resolution for the re-appointment of Sir Indra Singh Kt. is a reason that Sir Indra Singh Kt. is a Member and Director of Indra Singh & Sons Private Ltd. and therefore "an Associate of the Managing Agents" and stating that he has attained the age of 75 years has been received by the Company.

- 4) To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 2nd December, 1958 to 22nd December, 1958, both days inclusive.

By Order of the Board of Directors.

INDRA SINGH & SONS PRIVATE LIMITED,
A. SINGH,
Director.
Managing Agents.

7, Wellesley Place,
Calcutta 1

The 13th November, 1958.

Note: 1) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and upon a poll to vote instead of himself and that a proxy need not be a member.

- 2) If dividend and cash bonus on shares as recommended by the Directors are passed at the Annual General Meeting, the payments will be made on or after 10th January, 1959 to those shareholders whose names are on the Company's Registers on the 22nd December, 1958.

- 3) The relevant explanatory statement in respect of item No. 3 of the Notice of the Annual General Meeting to be held on the 22nd December, 1958 is hereto annexed.

ANNEXURE TO NOTICE.

Explanatory statement for item No. 3 of the Notice of the 23rd Annual General Meeting of the Company to be held on the 22nd December, 1958 as required under Section 173 of the Companies Act, 1956.

The Company has received a special notice, as required by Sections 261 and 261 of the Companies Act, 1956, of intention to propose the resolution set out under this item as a special resolution for the reason that Sir Indra Singh Kt. Chairman of the Company who retires by rotation at this Annual General Meeting is also a Director, Officer and Member of Indra Singh & Sons Private Ltd., the Managing Agents of the Company, and as such an Officer and Associate of the Managing Agents, and stating that he has also attained the age of 75 years and hence he can only be appointed a Director of the Company by a special resolution passed by the Company under the said Section 261 of the said Act and also specifically declaring that the age limit for Directors as prescribed under Section 280 of the Act, 1956 shall not apply to him and that it is in the interest of the Company that it should continue to avail of the benefit of the valuable advice and guidance of Sir Indra Singh Kt. by appointing him as a Director of the Company and declaring that the age limit shall not apply to him.

SITUATION REQUIRED.

SENIOR Indian Executive, Chartered Accountant, accustomed to responsibility at management level is open to immediate engagement. Please reply Box No. 4795, c/o "Capital", P. O. Box No. 14, Calcutta-1.

THE TITAGHUR PAPER MILLS COMPANY
LIMITED

NOTICE is hereby given that an Annual General Meeting of THE TITAGHUR PAPER MILLS COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 3 P.M., on Friday the 19th day of December, 1958 for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st March, 1958, and to receive the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Directors in the place of the retiring Directors.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 28th November, 1958 to 19th December, 1958, both days inclusive.

By Order of the Board,

F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Managing Agents.

Chartered Bank Buildings,
Calcutta, 12th November, 1958.

NOTES:—

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividends, if declared, will be paid on or after 3rd January, 1959 to those shareholders so entitled whose names appear in the Company's books on the 19th December, 1958, or to their mandates. No application for Dividend Warrants will be necessary.

THE INDIAN CABLE COMPANY LIMITED

THE Company issued an Allotment Letter No. 4099 dated 21.8.58 in respect of Ordinary Shares Nos. 2316568-2316582 (both inclusive) in favour of Sri Kanallal Mukherjee of Piyari Bhaban, 3 Lake View Road, Calcutta. This Allotment Letter was so issued through an oversight and the Company will not therefore recognize any dealings in the same.

For THE INDIAN CABLE COMPANY LIMITED,
B. J. WOODLEY,
Chairman.

9, Hare Street.

Calcutta, 15th November, 1958.

He's never
colour blind
about vitamins!

Yes, vitamins do produce colours! And this expert can tell the exact strength of a vitamin by the colour reading on his photo-electric equipment.

"Why all this precision? Because we know that you expect unvarying high quality when you buy Hindustan Lever products."

To ensure that these standards are maintained, we test at every stage. From the buying of raw materials, to the manufacturing process, to the performance of the finished product...experts, technicians, scientists are checking and double-checking. This quality control also helps conserve precious national resources and vital production time.

In this way, we are providing you with quality products you can trust, at economical prices.

Liquid Assets

TEA COMPANIES

O. Po. and Dd. indicate Ordinary Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Vol. CXXXVI No. 3536

THE IMPROVED BALANCE OF PAYMENTS

CONTRIBUTION OF IMPORTS

It will be some time before it can be decided whether or not the Rs.4.1-crore increase in the foreign exchange reserves, which was recorded for the week ended 15th November, represents the beginning of a strong upward trend. Certainly, India's trading balance has been improving: September, for instance, was the first "surplus" month for three years. But until the true significance of this single remarkably encouraging result can be judged, it might be as well to postpone the congratulations. This is only common prudence, although the fact of any increase in the reserves at all after so many months of continual decline must be accepted as an excuse for moderate satisfaction. The announcement made a fitting background to last week's Lok Sabha statement by the Finance Minister on the prospects of foreign aid. These are still a matter of life and death for the Indian economy, and will remain so even if it is eventually shown that the reserves have turned the corner and are now on the increase. Figures published in the October issue of the Reserve Bank of India Bulletin reveal the somewhat depressing fact that the recent improvement in the balance of payments position is due more to a contraction of imports than to any increase in export earnings. This is not a good omen for the expansion of the Indian economy. It means that future development, now that the sterling balances are nearing their lowest safety level, is almost completely dependent on foreign aid for the first time since planning began. The all-important export earnings, by which India hopes eventually to secure independence from foreign aid and meet the commitments already incurred, were, at the end of June 1958, still declining.

The news Mr. Desai was able to give was encouraging. The efforts of successive Finance Ministers abroad, and their officials, have made the western world intensely aware of India's problems and their significance for democracy. Assistance up to March 1959 is now assured, and there seems little doubt that the \$650-million bill for the rest of the second five year plan, will be met. The prospects from then on will, of course, depend on many factors, both political and economic, not the least important of which will be the realism exercised in selecting the size of the foreign exchange component for the third plan. Perhaps the most important feature about foreign aid now—at least until the end of the second plan—is its composition rather than its size. Mr. Desai made this point in the Lok Sabha, and it is one which should repay considerable study. A fair proportion of the aid secured will be lost to India if it is made available in an inconvenient form. Credits to meet orders already placed—such as Britain has granted—are more useful than those intended to cover future requirements. Similarly, resources which can be added to India's foreign exchange holdings—the sterling payments against pension liabilities, for example—have a higher value than loans intended for purchases from the lending country only. Too much of the aid already negotiated has been wasted because of the inconvenient way in which it has been granted. Attention to this point might be more rewarding in the long run than the unrealistic efforts which are often being called for to persuade the West to underwrite India's development to a specific amount for a period stretching up to fifteen years.

The figures published in the Reserve Bank of India Bulletin show how the improvement in the balance of payments has been achieved. In the period January to June 1958, the gap in current payments was Rs. 196 crores; it was closed by a foreign exchange inflow amounting to Rs. 119 crores and a draft on the reserves of Rs. 77 crores. This deficit corresponds to one of Rs. 256.6 crores for the same period of 1957 and one of Rs. 112.1 crores for the six months July to December of the same year. The improvement can, therefore, be said to have been steady. During the latter half-year, the burden on the reserves was higher than in the former—Rs. 158.1 crores compared with Rs. 77.1 crores—but this fact is probably indicative of nothing more

significant than the availability of foreign assistance, which was Rs. 54 crores against Rs. 179.5 crores. This improvement has been obtained at a time when both exports and imports have been falling. In the first half of 1957, exports were Rs. 317 crores; in the corresponding period of 1958, the figure was Rs. 276.7 crores, a fall of Rs. 40.3 crores. For imports, the relevant totals were Rs. 628.8 crores and Rs. 541.2 crores respectively; a decline of Rs. 87.6 crores. It will be seen, therefore, that the Rs. 61-crore improvement in the net current account owed more to the fall in imports than to any other factor; invisible exports declined in line with visibles. As with so many other instances of belt-tightening over the past few years, the burden of these import cuts has fallen entirely on the private sector. In the three half-years ended last June, capital goods imports for private industry fell by Rs. 62 crores compared with a rise in all imports for the public sector of Rs. 27 crores to a record total of Rs. 260.1 crores. It is clear that the principle is now well established that whoever must suffer for the planners' mistakes, it is not going to be Government investment. It is facts such as these which disprove the official claim that in this country there is no discrimination against the private sector.

The reasons given for the set-back in exports during the half-year ended June 1958 are the world recessionary trends, which affected both demand and prices of the principal items, and, to a much smaller extent, the Calcutta dock strike last June. On the whole, this is probably a fair conclusion, although it is rather more difficult to project it to explain a trend which has been apparent now for almost two years. It is perhaps significant that not all India's competitors in her main exporting lines have suffered quite so badly. The point is admitted in the case of cotton textiles, which faced keen competition from China, Russia, and Hongkong. It might also have been conceded for the tea industry, where the fall in earnings from the U.K. market was probably due as much to increased competition from east Africa and Indonesia as to a fall in world demand.

If the fall in export earnings is the result of world recessionary tendencies, it must follow that they will increase when economic activity quickens. To a certain extent this is bound to be true; one of India's main exports, jute goods, is already showing some signs of increasing demand, especially from the all-important north American market.

THOSE SAVIOURS WITH SWORDS

EXACTLY what happened in Ceylon to threaten the overthrow of the Government, is obscure. Not so the general tendency over large areas of Asia and Africa for democratic régimes to yield place to authoritarian ones. In some cases, Iraq in particular, many gruesome murders took place. But by and large these "revolutions" have been ac-

companied by surprisingly little bloodshed, and so rotten were some of the governments thrown out that the subsequent dictatorships were often hailed as a deliverance. Even liberal opinion has been inclined to take a tolerant view of the changes, for in the short run at any rate, they seemed an obvious improvement on what had gone before. This tolerance is the result of two factors. One, "controlled democracy" has not yet been followed by totally uncontrolled totalitarianism. Two, the succeeding dictators have not been of the Left; they have certainly not been communists. Whether these two constitute sufficient ground for approbation of basically illiberal régimes seems doubtful especially when it is remembered—as it must be—that dictatorial moderation is an essentially impermanent quantity.

Any analysis of the causes of this trend away from democratic forms of government must take into account not only the common pattern in which chaos consummates itself into military rule, but also the many important differences in the objective conditions in the countries concerned. In Pakistan, for instance, the failure of the politicians did not immediately lead to military dictatorship. There was an interregnum in which the civil service tried hard to dominate the government. Partly

Contents

because the civil service was not good enough, and partly because it corrupted itself by flirting with the politicians, the country had eventually to turn to the only remaining institution in which there was some efficiency and integrity still left—namely, the Army. In Burma and Indonesia, on the other hand, the transfer of power was preceded by turmoil in which the armed services had been involved; and the civil governments never had much of a chance to establish themselves. In the Middle East, where Iraq and the Sudan have followed the pattern set by Egypt, the earlier democratic governments simply could not withstand the fatal appeal of Colonel Nasser, whose version of Arab nationalism requires every government in the area to be subservient to Cairo.

Democracy's own faults were many. Not one of the governments recently superseded could claim that it had given its people either justice or prosperity. In each case, there were gross inequalities, conspicuous luxury next door to unspeakable poverty. Inefficient administrations produced injustices, sometimes actual hardship. Nobody in power cared for the people. Against this background, debates in parliaments seemed inadequate rewards of democracy. Frustration and despair seized people's minds, which had already been subjected to anti-West propaganda and thus prepared for the alternative snare: the saviour with the sword. He was not long a-coming.

Neither justice nor prosperity has followed immediately: neither may, even in the months and years to come. But discontent has had an outlet, and the next bout of discontent has not yet articulated itself. Nasser, Soekarno, Ne Win, Kassem, Abboud, Ayub—all of them are beginning to find out that it is easier to overthrow inept régimes than to satisfy the hopes aroused by an event that calls itself, and sometimes looks like, a revolution. It should not be surprising if the people also are beginning to wonder whether the removal of the corrupt necessarily leads to good government, whether the surrender of liberties inevitably ushers in prosperity. Even in Cairo, which is drunk with so many heavy triumphs, whispers are heard about the men around Nasser; it may be Nasser's turn before long.

In the meantime, the world has to deal with governments as they are. In doing so it is necessary neither to regard the régimes as permanent—no government is—nor to regard them as final answers to the problems of Asia and Africa. The primary implications of these régimes are internal and, as such, only of limited interest to other countries. Interference, especially by the West, will only strengthen the hands of the despots. Bourguiba is vis-à-vis Nasser, weaker to the extent of his support for and from the West. Soviet Russia, which even to many non-communists in Asia and Africa appears so agreeable a contrast to the West, will assuredly seek to exploit this to its advantage, but the going may not indefinitely be as easy as it is now. This is not to say that the West will in the very near future find it easy to fill the vacuum created by its post-war departure from large areas of Asia and Africa. Nor are internal democratic forces, such as they are, likely to come back to power in the next few months. It may be years before disillusionment over dictatorship makes itself felt, and the authoritarian régimes can be trusted to do much meanwhile to establish themselves firmly—with, if necessary, recourse to military methods. And yet, difficult as the situation is from the point of view of democracy, there is no inescapable warrant for despair.

As Mr. Walter Lippmann recently pointed out after his interview with Mr. Khrushchev, democracy has to set an example big enough to impress these vast areas of Asia and Africa. The recovery of Germany and Japan under democracy and a free economy appears to these large populations as miniatures. Hence, Mr. Lippmann pointed out, the supreme significance of the Indian experiment. Both politically and economically, India can—if the West will have the imagination to help her—set an example big enough to offset the huge Russian and Chinese achievements. If India can demonstrate that a backward country with a big population can preserve its liberties and yet attain a measure of prosperity, the spell Russia and China now cast over the hungry peoples of Asia and Africa may well be broken, or at least shaken. Besides aid on a scale hitherto unknown, great internal efforts will be necessary; the latter too on a scale hitherto unattempted.

The political significance of this is even more important. India's support for Asian or African defiance, whatever form it may take or whatever meaning it may bear, may be more a feature of the transition the world is going through than a long-term attitude on the part of this country. India strongly repudiated the Eisenhower Doctrine's thesis of a vacuum in the Middle East, understandably. Similar suggestions that in south-east Asia, too, there may be what may be called "political air-pockets" will be viewed with suspicion by India, but a very different view of the state of this part of the world may be in the process of formulation already—even in New Delhi. One interpretation of the recent statement in Parliament on

developments in Pakistan is that India is no longer indifferent to supposedly internal matters in neighbouring countries. Domination and influence are dirty words, but it may be that India can eventually be persuaded to do in her own neighbourhood some of the functions that have not been done since the West left. Such duties are occasionally unpleasant. Even unpleasant may be the way some other power will perform them—if India does not. Is it necessary to name the alternative snare in this case? It is as well to remember that, seemingly apart though they may be, authoritarian régimes of one sort often find it easy to make deals with authoritarian régimes of another sort, and this is what demands fresh thinking on those "saviours with swords."

THE CHALLENGE TO BRITISH CREDIT

DRIFT TO EQUITY SHARES CONTINUES

THE London Stock Exchange is moving towards the end of 1958 in a state of mental and, most of the time, material animation. Prices change direction occasionally, and investors wonder then whether the basis of their policy is sound. But there is little doubt about the underlying trends. Ordinary shares—industrial, commodity, or gold—are moving upward. Government stocks and related securities are moving downward. A year ago ordinary shares were still falling, whereas Government stocks had begun to rise. During most of 1958 both groups were moving up together. The recent change—the one group continuing upward, the other turning downward—has disturbing implications. The stock market's forecast of events is significant, even though it may be wrong; for it represents the corporate expectation of investors, and most of them are business men. That they believe in economic recovery has been evident throughout the period of the rise in ordinary shares. The fall in Government stocks shows that they believe also in inflation. There have been occasions in recent weeks when confidence in fixed-income stocks has seemed on the verge of collapse in London; in New York it collapsed months previously.

The authorities have to consider this distressing phenomenon both from the practical and from the psychological viewpoints. It could become impossible in Britain, as it has already become impossible in France, to finance public expenditure by issuing simple fixed-income stock, and converting maturing debt could become progressively more difficult. The French Government has already adopted the practice of offering special inducements to lenders, and the idea of bonds with interest exempt from tax and variable with the cost of living has already been proposed in America. A British Government that adopted such practices would in effect declare that it had given up the fight against inflation; and the effect on sterling would be disastrous. Even the weakening of Government stocks must damage the nation's credit. It does not signify that the Government has resigned itself to inflation, but it does signify that business men are sceptical of the Government's ability to prevent inflation. The present situation is not new, but it presents a new challenge. In the crisis of 1957, the Government enforced a policy that had no true precedent in the post-war era. Mr. Peter Thorneycroft, then Chancellor of the Exchequer, had already hinted at such a policy: he had said that, no matter how painful might be the internal adjustments necessary to defend the pound, the pound would be defended. It was just such a policy that orthodox economists and bankers had demanded for years. It was just such a policy that the sceptics had said would never be adopted, because in practice it would mean wage-restraint and unemployment. In the event, the community suffered some unemployment—whereas the attempt to stabilise wages was unsuccessful. But the growth of unemployment has alarmed a Government that must soon put its policies to the test of a general election, and the primary purpose of the Government's policy now is to stop the growth of unemployment. Can it at the same time maintain the world's confidence in the currency?

The monthly index of security prices compiled by the *Investors' Chronicle* may provide an indirect and tentative answer to that question. When the index was compiled on the basis of end October prices, it was discovered that the 96 industrial ordinary shares included in the index had risen, as a whole, above their previous composite high-point reached in the middle of 1955; and the occasion called for a special analysis by Mr. Harold Wincott, the editor. Explaining why the *Investors' Chronicle* index had risen above the peak of 1955 while the *Financial Times* index was still some distance below it, he pointed out that the *Investors' Chronicle* index included more shares concerned with consumer goods and remarked: "It is the consumption groups virtually exclusively which today are responsible for our industrial share in-

dex standing above its 1955 peak"; and he showed, furthermore, that groups that were still considerably below their top prices of 1955 were "almost exclusively in the heavy and export industries". That is the investors' judgment on the Government's policy. The capital industries and the export industries are depressed and are not expected to recover soon; the consumer industries were not, in general, similarly depressed, are already expanding, and are believed to have interesting possibilities of further growth. If investors are right—and the Government's actions suggest no reason to believe otherwise—the economy will "re-expand" in an inflationary manner, with the emphasis on consumption. It may be argued that there is no other way; that companies will not increase their investment until they see demand for the final products expanding, and that exports cannot be increased by edict. The fact remains that this procedure has inflationary implications; for it operates against saving, and it stimulates some industries that were already active (notably the motor industry) while leaving unemployed resources in the depressed industries, and it tends to raise retail prices and so to promote demands for higher wages. Increasing capital expenditure is also, of course, inflationary (Britain has that additional inflation in prospect), but in present circumstances it would take up the slack rather than increase the tension, and in due time it is productive.

Yet, we should remember, a great deal of investment has been undertaken in recent years, and it can help solve the problem. Modern plant fully employed can produce more goods; and increasing goods is deflationary. We should remember, too, that when "the great boom" ended people said an era ended with it; and they may have been right: for we have certainly witnessed a tendency towards general over-production. Nor is it proved that the British Government has resigned itself to inflation—at least, not permanently. A Government that hopes to be re-elected will be tactful rather than strict, but if re-elected it will have another term of five years in which to complete the conquest of inflation. Yet faith in fixed-income stocks must surely be restored sooner. The loss of that faith—which is almost a world-wide phenomenon—is a symptom of a deep malaise; and if it forces governments to rely on inflationary short-term financing it will aggravate that malaise.

RED SPOTS IN TRADE UNIONISM

AMONG the more remarkable features of trade unionism in India in recent years is that it has been developing somewhat like the measles—an increasing number of red spots have come to adorn an increasingly pale body. Unions have been rising and dying like mushrooms, not only in industries as a whole but also in factory units. Their birth has been prompted neither by the need to express a new attitude to employer-employee relations nor by the need to make labour's voice more effective, but in most cases simply by the demagogic desire for leadership. For a time, it looked as if the Indian National Trade Union Congress and its affiliates would prove an exception. A test-tube baby fathered by the ruling Congress Party, the I.N.T.U.C. was expected to have a greater sense of responsibility by virtue of the fact that its ideological inspiration would be derived from the same sources as that of the Government in charge of the nation's economic destinies. Unfortunately, experience has so far belied the hope. The I.N.T.U.C. has grown, and grown fast, especially in membership and volubility. The growth has been promoted partly by special favours from Congress Governments, and partly by its acquiescence in the deplorable but time-honoured practice of inflating demands on employers in competition with other unions. But as for the cultivation of a greater sense of responsibility, or a constructive effort to make labour better aware of its rights and obligations, there is as yet little sign. In fact, as Mr. G. Ramanujam's presidential address to the I.N.T.U.C. General Council in Jamshedpur over the week-end indicated, any move in that direction is liable to be thwarted for the time being by the current preoccupation with communist competition for labour leadership.

The strength of that competition, and the reprehensible methods by which it is being conducted, are not to be under-estimated. The serious harm which communist tactics have done in the steel industry is well-known, although the Government's response to it remains largely one of complacency. Even more dramatic have been the recent troubles on the Kerala plantations, where the peculiar feature has been not so much the violence of workers as the open attempt of the State Government to condone that violence and to demoralise the policemen who might have tried to prevent it. No word of condemnation which Mr. Ramanujam uttered is too strong in relation to the activities of the communist unions and the Kerala Ministry. But the suspicion is unavoidable that his condemnation would not have been half

as strong as it is, but for the fact that the I.N.T.U.C.'s future in that State is now seriously threatened. In other words, it is not the communist violence which is worrying him so much as the danger to the I.N.T.U.C.'s existence. This may be one reason why Mr. Ramanujam has hardly any worthwhile suggestions to offer about what should be done. It is worth remembering that the I.N.T.U.C. has shed few tears and expressed very little disgust in the past over the murder of tea garden managers in Assam and colliery managers in the West Bengal-Bihar coalfields. If violence is to be deplored, it has to be deplored wherever it occurs, however much this may strain the conscience.

There may be some substance in Mr. Ramanujam's plea for greater unity among labour unions. If unity gives them confidence, and thereby reduces their urge to outbid one another in making demands, it would be welcome; it would be even more welcome if, by promoting greater cohesion in the labour force of a unit or an industry, it enables union leaders to make their supporters stick to agreements or awards which have been accepted. Clearly, however, as Mr. Ramanujam seemed to agree, there is little hope of reconciliation between the I.N.T.U.C. and the communist-

dominated A.I.T.U.C.—for reasons that have as much to do with ideology as with the rivalry for power. But he thought that it should not be difficult to establish a closer association with the Hind Mazdoor Sabha, which, like the I.N.T.U.C., is affiliated to the International Confederation of Free Trade Unions. Any such association, if it is to be lasting, will have to be based on a common attitude and programme of action, to which both organisations genuinely subscribe. That attitude and programme will need to offer labour a prospect fundamentally different from the constant unrest, agitation and violence which communist unions already offer. The trouble with non-communist unions in this country is that they have tried to play the communist game, and have played it badly. The setting up of "protective" volunteer forces by I.N.T.U.C. organisations, for instance, is reminiscent of the more militant wings of the communist movement. Trade unions professing a democratic ideology have yet to learn that they have to combine democracy with discipline in their attitude and organisation. They have also to show, as they well can, that a democratic approach to bargaining with employers pays better dividends in the long run than constant agitation and violence.

foreigner) is also benefiting from it. Otherwise the industrialist would add the extra cost on account of raw materials to the prices of his products, and that would aggravate the present cost inflation. Third, some parties might corner groups of licences in order to create a monopoly. Professor Shenoy does not appear to have given sufficient thought to the first two of these questions, and his answer to the third is that there should be a wide distribution of the accepted tenders. Assuming this to be the correct solution, there seems to be no way by which the first two can be satisfactorily disposed of. In the circumstances, the suggested scheme might only have the effect of a new indirect tax in disguise.

Reducing the Cloth Glut

Mr. Lal Bahadur Shastri, Central Minister for Commerce and Industry, inaugurating the first meeting of the Cotton Textile Consultative Committee in Bombay a few days ago, remarked that the accumulation of cloth stocks is "indeed acting as a big trade drag." His concern is borne out by the fact that stocks with mills now total 600,000 bales, of which 358,000 bales remain unsold while the remainder have been contracted for but delivery has not yet been taken. But it is doubtful if the suggestion that these stocks should be disposed of in export markets is a practical one. Textile exports this year are running at an annual level of around 600 million yards, against 850 million yards last year. There is no reason to believe that the rate will increase appreciably in the near future. Considerable business has been lost to Japan and communist China in India's traditional markets. It appears, therefore, that price is a crucial factor in overseas competition. In these circumstances, propaganda and export promotion alone are not likely to yield big results. For the same reasons, the suggestion that each mill should export a certain minimum of its production seems to be equally impracticable. The fact is that the industry has to be thoroughly rationalised if India is to offer effective competition. This is a question which deserves to be urgently considered by the Government, management and labour. If modernisation is postponed indefinitely, the situation is likely to become worse and India will find herself steadily pushed out of export markets. The question is urgent even from the point of view of the domestic market. The accumulation of stocks with mills and the reluctance of the trade to take delivery of contracted goods, indicates that the local off-take has also shrunk. The dilemma is that if the industry curtails production in accordance with sales, manufacturing costs might rise and lead to a further slackening in demand; if it maintains its present level of output, then it must be prepared to continue accumulating stocks. In this context, Mr. Shastri's proposal to request banks to extend more liberal credit facilities to the textile trade so that it can increase its holdings to "nearer normal levels" is likely to prove only a temporary palliative.

Business Convention in Calcutta

A convention of business men from all over West Bengal will meet at 43 Chowringhee, Calcutta, during the first week of February. The first of its kind to be held in the State, it is being sponsored jointly by the Bengal National Chamber of Commerce and Industry, the Bharat Chamber of Commerce and the Indian Chamber of Commerce. The sponsors are at present visiting the districts to get a clear idea of business undertakings in West Bengal. Explaining the aims and objects of the convention, Sir Bijoy Prasad Singh Roy, chairman of its working committee, said at a Press conference last Saturday that one of the main topics for discussion would be how to assist small industries in the State with credit and banking facilities. Business in Calcutta and some districts is more or less organised through chambers of commerce, but numerous small traders and manufacturers elsewhere are not connected with any business organisation. The convention will try to find a common meeting ground for the different sections of the business community. Big manufacturers now feel, Sir Bijoy Prasad said, that small industries should be helped to develop as ancillary industries. The young men of West Bengal should be encouraged to take up business as a career, he added.

Sugarcane Prices

The Joint Sugarcane Board for U.P. and Bihar, which met in Lucknow, is reported to have failed to reach any agreement on the question of the minimum price for cane. The Board, which includes representatives of the Central Government, millowners, cane growers and factory labour, also failed to reach any conclusions on the formula suggested by the Centre for linking the minimum price with the sugar content of cane. Instead, a compromise proposal was adopted for referring the whole question to the Central Sugarcane Com-

Current News and Comment

Aluminium Corporation Expanding

In his address from the chair at the annual general meeting of the Aluminium Corporation of India Ltd this week (extracts from which appear on a later page), Mr. Lakshmi Prasad Singhania points out that the consumption of aluminium in India has remained steady. Less is being used for utensil manufacture, but its uses in other industries are growing, with transport likely to become the biggest consumer after the A.C.S.R. industry. The industrial uses of aluminium in building and packaging have yet to develop, in his view. Meanwhile, aluminium production is expanding. The Government has approved the Aluminium Corporation's scheme to treble metal production capacity and to fabricate the metal into finished products; negotiations are now going on for deferred payment terms from foreign suppliers. Arrangements have been made with the West Bengal Government for power supply, and with consultants and manufacturers in Europe for technical collaboration. It is hoped to complete the expansion scheme by the end of the second five year plan. As for financing, Mr. Singhania tells shareholders that "besides borrowing, it will be necessary to raise fresh capital and we shall in due course approach you for it."

In his view, the working results for the past accounting year have been maintained at a satisfactory level considering that sales were lower and that costs increased in comparison with the previous year. The rise in costs was accounted for by labour, stores, spare parts, raw materials and maintenance charges. Aluminium units in India generally, Mr. Singhania says, are handicapped by the cost of power being high and capacities being small. As their production costs have been rising, they are hardly in a position to bear additional burdens. The Tariff Commission's report on continuing protection to the aluminium industry is awaited, but the Government has meanwhile announced that protection will be continued until the end of 1960 and the present ad valorem rate of import duty will remain.

Business Difficulties in Kerala

The difficulties of operating a business enterprise in communist-ruled Kerala are not peculiar to the plantation industry. Others, too, have had their share of trouble. For instance, Mr. G. N. Noel-Tod, chairman of Travancore Sugars and Chemicals Ltd has told shareholders at the annual general meeting in Tiruvallur, Kerala, earlier this month that his company is being forced to pay more for the cane consumed by its factories during the last sugar season than what was fixed before the season began, because of the Government's policy. (A fuller version of his speech appears on another page of this week's *Capital*.) Growers started an agitation at the end of last season for a higher price for the cane they had supplied according to the terms fixed in September 1957. The agitation took the form of picketing and *satyagraha*. After a representation, the Kerala Government convened a tripartite conference including itself, the company and the growers on 12th November, 1958. At that conference, far from judging issues on their merits, the Minister present warned the management that if it failed to come to an agreement a difficult law and order situation would result. "All arguments were brushed aside and it was against the frequently repeated statement of the Ministers that our failure to come to an agreement would result in a very difficult law and order situation that the company's representatives conceded

mittee. But the simultaneous demand for expanding the Central Committee so as to include the Chief Ministers of U. P. and Bihar as well as representatives of cane growers and millowners, indicates that the sugar politics of the two States may now be fought out in the forum of the Central Committee. The Bihar Government last year recommended raising cane prices. This was followed by a resolution in the U. P. Legislative Assembly this year urging that cane prices be raised to Rs. 1.75 a maund. Although the Treasury benches did not oppose the passage of the resolution, the Government did not support the demand for higher cane prices at the meeting of the Joint Sugarcane Board. The prevailing minimum price for sugarcane is Rs. 1.44 a maund at mill gates and Rs. 1.31 a maund at rail centres. Much of the trouble with sugarcane cultivation is attributable to the system of paying for cane by weight without regard to its quality or sugar content. The Central Government's formula for linking prices to sugar content has really not had a fair trial so far due to opposition coming mainly from cane growers. As a result, the quality of cane continues to be poor. In fact, it has been becoming poorer. The all-India average yield of *gur* a 100 tons of cane has come down to 10 tons in 1957-58 from 10.5 tons a year previously. There has also been a decline in the average yield of cane an acre, which in 1957-58 was 12.8 tons, compared with 13.2 tons in 1956-57.

Alcohol Exports

Addressing the Development Council for the Alcohol and Fermentation Industries in Delhi, the Central Minister for Industry, Mr. Manubhai Shah, said that the export of alcohol against imports of pulp or newsprint from Sweden and Norway was being considered. This is of special interest to the Press, but for the alcohol industry the problem of increasing exports exists anyway. Mr. Shah set an export target of 5 million gallons for 1959, but if all the production schemes for power alcohol go through, there will still be a substantial surplus. Current production is estimated at 16 million gallons, out of which Uttar Pradesh with its 12 distilleries accounts for a little over 10 million gallons. The Government of India has issued licences for four more distilleries in the State. It may be recalled that the Power Alcohol Committee in its report recommended that the expansion of the industry should aim at reaching a production target of about 47 million gallons by 1961. The Committee also estimated that, after providing for alcohol as a raw material for the various industries it is proposed to establish by 1961, and after meeting the power alcohol needs of industries which are already taking shape to the extent of 10 million gallons, the residual surplus may amount to 10 million gallons. The proposed synthetic rubber factory in Bareilly, with a capacity of 23,000 or 20,000 tons, will consume about 12 million gallons of alcohol a year. But it is not expected to be in production before the start of the third plan, which means that increased exports alone can offer an immediate outlet for the surplus. Unlike many other Indian products which have priced themselves out of the world market, power alcohol is in an advantageous position. The alcohol obtained by the fermentation of molasses from the sugar industry is cheaper than that available in Europe or the United States. According to Mr. Shah, there have been enquiries from Australia and some European countries, but the principal handicap of alcohol exporters appears to be the lack of port facilities. At the time of the inauguration of the Chemicals and Allied Products Export Promotion Council last July, a demand was made for the provision of storage facilities at ports for at least 2 million gallons, but nothing more has been heard of it since.

Heavy Electrical Equipment Project

According to a report in the Press, the Central Minister for Commerce and Industry, Mr. Lal Bahadur Shastri, while laying the foundation stone of the Rs. 61-crore heavy electrical equipment factory near Bhopal, said that Madhya Pradesh, by having both the Bhilai steel and the heavy electrical projects, has stolen a march over Uttar Pradesh which has no heavy industry so far. Such comparisons are bound to accentuate the already nasty provincial rivalries over the location of industries and are best avoided. The agreement between the Government of India and Associated Electrical Industries in connection with the heavy electrical equipment project was concluded in August last. The total cost of the first phase of the project, which is likely to be completed by 1961, will be Rs. 21 crores. Mr. Shastri expressed the hope that the time lag between the three phases of the project may be minimised, in which case Heavy Electricals (Private) Ltd may be in a position to start the production of transformers, switch-gears, control gears and capacitors a little earlier than 1961. Under the second phase, the manufacture of traction motors, industrial motors and heavy rotating plant will be undertaken, while the production of turbines and rectifiers will be taken up under the third phase. Heavy Electricals (Private) Ltd is a

notable example of the co-operation of foreign enterprise in industrial development. About 50 persons, who will occupy senior posts, are already undergoing training in the factories of Associated Electrical Industries in the U.K., while the construction of a training school and workshop at the site in Bhopal itself will be completed in a few months. The first batch of 900 trainees will be admitted to the school in 1959.

Markets in the Middle East

Discussing impressions gathered during a recent tour of the Middle East, Mr. V. A. Fazalbhoy, managing director of General Radio and Appliances Private Ltd said at a Press conference in Bombay last week that the markets there display the finest quality products, which are mainly imported from the United Kingdom, France, Germany and the United States. Since many countries have no foreign exchange problem, they can buy from almost anywhere. "To succeed in this market, we must match their tastes and concentrate on the method of presentation of our goods, especially in the finish of the product and its packaging, because this counts very much indeed with the people there, and they are prepared to pay the price for a quality product." The Government of India has established showrooms in Cairo, Jeddah and Teheran. An arrangement has been made to display Indian goods at the Consular offices in Damascus, and a representative of the Engineering Export Promotion Council has created great interest in Indian goods in Baghdad by displaying them at his office. Furthermore, a showroom has been opened in Jeddah recently. Mr. Fazalbhoy said that the Arabian countries want quality products and are willing to buy them from India. They have a great deal of goodwill for this country, and "other conditions being equal, I feel the Arab buyer will prefer to buy from us." At present, western countries are sending trade delegations to the Middle East to promote business. They also hold exhibitions there; for example, an international fair is held in Damascus every year at a permanent exhibition site. India should take a lesson and "have a permanent trade fair in an important place like Bombay or Calcutta for the benefit of international and national buyers. Although efforts have been made to establish such an organisation in Delhi, I feel this is concerned mainly with what the country is doing, rather than with the active promotion of commerce and trade," Mr. Fazalbhoy said.

Rise in Tea Exports

India's tea exports this year have increased substantially, although prices have not been good. Exports from north India up to the end of October were 204.4 million lbs. against 162.7 million lbs. during the corresponding period of last year. The figures for the whole of India show that during the first nine months of the current year, exports were 275.5 million lbs. against 250.1 million lbs. in the same period of 1957. Speaking at the annual general meeting of the Calcutta Tea Merchants Association last week, Mr. M. K. Sinha, president, said that the rise in exports is satisfactory, in view of the overall increase in output and declining exports from other producing countries such as Ceylon, Indonesia and Pakistan. But an important cause for concern is that the United Kingdom's off-take during the first nine months of the year was about 42 million lbs. less than in the same period of last year, although her purchases of Ceylonese and Indonesian teas were somewhat better than before. "It must not be ignored that the total import of tea by the United Kingdom in nine months of this year was 372 million lbs. against 430 million lbs. in the previous season, and as the biggest supplier to the U.K. market, we were, therefore, bound to feel more than others the effect of such reduced off-take." At present, Indian tea enjoys improved prospects in the Egyptian market, while sales to Australia have been maintained in spite of a reduction in the latter's imports. Both Russia and Ireland have been active at the Indian auctions during the current season, but the United States has shown less interest in spite of increased propaganda efforts in that country.

Although exports have increased, the internal consumption of tea, Mr. Sinha said, will be the main factor determining the future of the industry. To develop the internal market, it is not only necessary to make a proper assessment of the progress in consumption but also the consumption potential. Referring to taxation, the president said that the levy of sales and entry taxes on tea virtually amounts to putting two consumption taxes on a single commodity. Tea is a conventional necessity to the average man; therefore, its consumption "should be as little inhibited as possible."

Employment in Coimbatore

Employment trends in Coimbatore district, which is perhaps the most affluent area in Madras today, suggest that if the cotton mills have failed

to take more workers, other industries have afforded better opportunities to many. The Madras Government's Labour Commissioner released a report last week about the work of the employment exchange in the district. It shows that the Government has helped by notifying vacancies and that women also have registered for employment. There is a shortage of technically trained workers and a surplus of clerks, but more important is the indication that organised industry employs now as many engineers as it requires. The main outlet for unskilled workers has always been the plantation industry, but mining and quarrying have also taken many. The cement industry is among the major employers. Apprenticeship in major establishments is common, and carpenters, turners and compositors are able to learn skilled work. For clerical workers, the private sector rather than the Government is the biggest employer. It is noted that craftsmen alone are assured of regular employment promptly, and the demand for motor mechanics is rising.

The report confirms the belief that the textile industry cannot absorb new entrants. The only tip given to would-be clerks is to undergo some training for skilled occupations. Young persons are advised to seek technical training before looking for jobs. The pattern of activity in the district has been analysed and it indicates the rise of new industries, including the making of electric motors and appliances. Rice mills, like cotton gins, are working seasonally, relying on contract labour. The number of people looking for jobs is increasing but the increase in the number of jobs available is insufficient. The conclusions contain few surprises, but it has been observed that trained teachers and nurses are not enough to meet the current demand. One important point which is made is that over 50 per cent of the district's population does not depend on agriculture because trade and industry have grown since 1932 and educational facilities have changed the occupational pattern.

Tube Investments in India

The proposal for the amalgamation of T. I. Cycles and Tube Products of India is largely derived from the connection of both companies with Tube Investments of the U. K. whose broadening base of activity is reflected in the overseas connections also. More significant than the proposal to make a rights issue to T. I. Cycles shareholders and the conversion ratio of four T. I. Cycles shares for five Tube Products shares, is the proposal to raise a loan of £1 million bearing interest at 6½ per cent and repayable in ten years. This, even more than the substantial interest of T. I. in the two companies, affords proof of the real value of foreign collaboration arranged by the private sector. The T. I. Cycles report for the year ended June 1958 is good, permitting the maintenance of the 10-per cent dividend and the transfer of Rs. 12.5 lakhs to general reserve, Rs. 4.5 lakhs to development and replacement reserve, and Rs. 3.5 lakhs to dividend equalisation fund. The meetings of the shareholders of both companies are expected to approve the arrangement, which will raise the paid-up capital of T. I. Cycles to Rs. 2.5 crores. The further expansion of the bicycle factory is assured by the proposal to set up a cold strip mill in Avadi. It is expected that a self-sufficient and integrated industry will grow up after the expansion of the Tube Products plant started last May. The trend towards bigger units is reflected in the proposal to raise local capital plus a loan ensuring essential imports from the sterling company whose successful diversification of interests rests on financial strength and technical advance alike. The chairman of T. I. has referred to the Indian connections and the growing stake in India of the sterling company which will help T. I. Cycles to make chains, saddles and lamps. T. I. now has an interest in the new Ceylon bicycle industry also.

Judgment on Bonus

The Allahabad High Court's judgment on the nature and content of bonus constitutes yet another addition to the already numerous judicial pronouncements on the subject which the Indian Chamber of Commerce, Calcutta, recently brought together in the form of a brochure. Dismissing a writ petition filed by the Diwan Sugar Mills of Meerut for quashing an award of the adjudicator, the Allahabad High Court declared: "The recognition of workmen's claim for bonus rests on the view, which is now well established, that both labour and capital contribute to the earnings of an industrial concern and that social justice requires that workmen should be allowed a reasonable share in the profits made by the industry, that is to say, the available surplus." The court added: "But to enable labour to earn bonus, one or both of the conditions must exist: first, that wages fell short of living standards, and, secondly, that the industry has made much profits, part of which is due to the contribution made by workmen by increasing production. The demand for bonus becomes an industrial claim when either or both these conditions

are satisfied, and if the claim is raised, an industrial dispute arises, which under the scheme of the Industrial Disputes Act can be decided by an award given by the prescribed authority, the award being binding on both the employer and employees." The case arose out of a notification issued by the U.P. Government directing various sugar mills to pay bonus and retainer allowances to workmen.

Boosting Exports

Mr. Manubhai M. Shah, Central Minister for Industries, addressing the second annual general meeting of the Indo-German Chamber of Commerce in Bombay recently, criticised Indian businessmen for concentrating too much on imports rather than on exports. The criticism is not unjust, but the Government is no less to blame if spectacular results have not been achieved. In some fields, however, notable successes have been scored. Indian sewing machines and electric fans, for instance, are competing with similar products from advanced countries. The responsibility for stimulating exports does not rest wholly on the business man or the manufacturer. Stable industrial conditions are needed, which include a regular supply of raw materials, some of them imported, at reasonable prices and a steady wage level. These are necessary if the manufacturer is to produce at reasonable cost and therefore remain competitive in export markets. The export duties levied on certain commodities are not varied quickly enough to suit changing conditions, with the result that exports are hindered. In many cases, the licensing procedure too is cumbersome.

Control of Chit Funds

The Madras Government has reached a decision about the control of chit funds and will probably adopt the provisions of the law in Kerala. In the latter State, banks are closely associated with such funds and manage many of them. The chit funds are thrift societies which pool small savings and permit subscribers to take loans that are repayable in instalments. The need for control arises from certain cases of irregularity by organisers of funds, and licensing by registration is contemplated. The fact that some organisers run a series of chits and have opened branches may be a reason for applying statutory rules similar to those in parts of Kerala. The Travancore-Cochin Banking Enquiry Commission has reviewed the working of chit funds in the State and has approved the system which enables small businesses to draw working capital. The proposal of the Madras Government to regulate chit funds has met with guarded approval as the Bill will be ready only in February. It has already been urged that funds functioning as friendly societies in rural areas, helping members to take loans for marriages and for the purchase of property, should be distinguished from those operating as loan offices. When the chit fund has no branches and collects subscriptions from one set of members only, it is really like a co-operative society, that is, it collects savings to provide loans to members. There are many forms of chit funds but the object of regulation is perhaps to limit the organisers' deductions and to ensure the proper keeping of accounts which will be open to official inspection.

The history and nature of various forms of chits and *nidhis* was examined by Sir F. A. Nicholson in his monumental report on rural credit, which gave an impetus to the co-operative movement in India. The principle of mutual aid implicit in chit funds has been upheld and it is felt that protection for subscribers should not prevent their continuance since they help the lower middle class which has no access to banking facilities. Chit funds in cities help salary-earners to put by savings regularly. Their appeal is necessarily greater than that of savings certificates at present, for the chances of a profit are greater, the facilities for borrowing others' money easily on the basis of an agreement to repay through regular subscriptions are real and the rate of interest is distinctly lower than that charged by money-lenders.

"CAPITAL" CHRISTMAS TOY FUND

WE acknowledge, with thanks, the receipt of the following donations:

Rs. 20 Dr. Rajendra Prasad, President of India.
Rs. 315 Members of the Staff of the Imperial Tobacco Co. of India Ltd.
Rs. 100 each The Gramophone Co. Ltd., Burmah-Shell Oil Storage and Distributing Co. of India Ltd., Vickers India Private Ltd.
Rs. 50 each Claviere, Carritt Moran and Co. Ltd.

Rs. 25 each H. J. M. Cook, J. G. Thomson

Rs. 20 each A.H.G., I.P.G., N. Ramanand Rao, E. M. Cohen, T. R. Varadachary, W. P. G. MacLachlan, "Anonymous".

Rs. 15 G. W. Denby

Rs. 10.50 P. D. Tew

Rs. 10 each C.K., S.C.F., B.G., D. N. Gupta, J. H. H. Ross, K. A. Anderson, W. G. Smith, Indian Turpentine and Rosin Co. Ltd.

Rs. 5 each C.S.S., D.N.M. D.S.J., S.R., P.K.S., F.D.C. G.K., W.D.B., Y. Sadasivam, J. K. Clifford, D. Sen Roy, D. A. Weatherston, L. B. Hubbard, A. K. Chakravarty, J. R. S. Holmes, A. H. Deverall, E. D. Stedman, J. R. Heaton, O. W. G. Endacott, A. J. Mitchell, S. Ghose, S. K. Bakshi.

Rs. 2 A.M.

Total Rs. 1,142.50

Previously acknowledged Rs. 1,860.75.

Grand Total Rs. 2,903.25

CORRESPONDENCE

LORD MACAULAY

(TO THE EDITOR OF "CAPITAL")

Sir,

I hold no brief for Lord Macaulay, who was not only a very partial historian but also a rather glib one. He was, moreover, no freer of hypocrisy in a number of matters than many of his contemporaries. In the instance which the Ditcher quotes in *Capital* of 13th November, however, I think we must exculpate Marlborough's detractor. He rejoiced to see compatriots who had "judged the causes of wealthy zamindars", "resided at the courts of kings" etcetera, returning to England "with no more than a decent competence", not because he liked to see them underpaid, but because it pleased him to see they were poor to supplement what he considered barely adequate pay, by accepting bribes. He was not discussing pay levels, which would in any case not have been the Commons' business, when he made the speech to which you refer; he was praising the men who ruled India.

Certainly his own salary was splendid in comparison with those of the majority of the East India Company's servants in this country, but it would be very strange of him not to be pleased at receiving so much. We know, in fact, that the Company's servants were, on the whole, reasonably well remunerated and a "decent competence" on retirement is as much as most people, both then and now, would look for or expect. If a fortune could be had quite honestly, however, a man would surely be a saint to do other than accept it and Macaulay's salary was not larger than those of several other senior officials both at home and abroad.

Yours Etc.,
G. W. DENBY

Madras, 20th November.

TRANSPORT TO CALCUTTA

IN our opinion the Committee of the Bengal Chamber of Commerce would be better serving the interests of those they represent if, instead of continually girding at the East Indian Railway they were to direct their attention to the Port Trust, Calcutta. The great block in the traffic which occurred in May last was occasioned by the incapacity of the officers of the Port Trust to deal with the quantity of produce offering. This caused great delay in unloading the railway wagons and ended in confusion worse confounded. It will be seen from a letter addressed to their Agent by the Board of Directors of the East Indian Railway at home (see *Capital*, Nov. 10, p. 671) that a large addition is to be made to the rolling stock and that the siding accommodation is to be very largely increased. When these necessary improvements are carried out the line will be able to accommodate all the traffic that it is likely to be coming into Calcutta for many years to come. Besides which the Directors contemplate a chord line to Burdwan which will lessen the distance by some miles and provide additional facilities for the coal traffic to Calcutta. If the Committee of the Chamber would address the Government, strongly urging upon them at once to sanction these additions and improvements to the East Indian Railway, we feel certain that no complaint would arise in the future; but at the same time with all these increased facilities there must be some administrative ability infused into the Port Trust or the last state of things may possibly be worse than the first.

Without Prejudice

RIGHT TO RETRENCH DURING
A PENDING DISPUTESEEKING THE APPROVAL OF
LABOUR COURTS

(FROM OUR LEGAL CORRESPONDENT)

THIS is an interesting case on retrenchment and involved the question as to whether an employer's action in retrenching certain workmen did or did not require the approval of a labour court under Section 33 of the Industrial Disputes Act, as the proposed retrenchment was intended to be effected during the pendency of adjudication proceedings before the labour court. The decision is of some general importance because similar facts and the like desire to retrench, on account of them, quite frequently occur. It is a decision of the Industrial Court in Bombay and, of course, may be the subject of appeal not yet reported. All the same, as far as it goes, the principle decided is worth noting.

Just a few preliminary words on retrenchment under the ordinary law of master and servant, apart altogether from the Industrial Disputes Act and where that statute has no application. The right to retrench and thus determine employment of workmen, guilty of no misconduct, has not been and is still not looked upon with favour by the law. Judges look upon the exercise of the right as applied to, what we may term, regular work-

men with distaste if not downright suspicion; and in cases where their intervention is sought, lean towards the employees' side. We have used the expression "regular" workmen to avoid the more often used and more dangerous one "permanent" employment. It was seriously contended up to less than 20 years ago that unless his contract expressly provided for the event, a servant on the "permanent staff" could not be discharged as long as he chose to remain in his employer's service. Of course, he could be dismissed for misconduct, dishonesty, incompetence or the like. But as long as he loyally carried out his part of the contract of service, it was contended for him that the contract could not be determined by the employer by discharge. Matters came to a head in Britain in 1939 when in the famous case of *Ward v. Barclay Perkins and Co. Ltd.* I. All E.R. 287, the contention failed; and it is now indisputable that by the ordinary law of the land, in cases not given special treatment by industrial legislation, employers may, for purposes of retrenchment, determine by discharge on proper notice the contract of employment, subject, of course to its terms, of a member or members *en bloc* of the so-called and wrongly styled "permanent staff".

That brings us to the latest Indian case on the subject. It concerned an application by an employing company for approval of the Industrial Court in Bombay of its retrenchment of some 50 workmen. The facts leading to the employers' application were these. By a notice dated 17th May, 1958, the company notified its operatives that on account of non-availability of raw materials, it was impossible to work the factory in both the shifts and the management had decided to close down the working of the second shift with effect from 19th May, 1958. The notice further stated that the services of 50 employees, named in the list attached to it, would be terminated from the date of the notice on payment of one month's wages in lieu of notice as retrenchment compensation, which they were asked to receive from the office on the same day. Four more employees were further retrenched in accordance with the notice. Two of them were retrenched on 31st May, 1958, and two on 9th June, 1958. The company then applied to the Industrial Court for approval of its action in retrenching the men. It considered that it was obliged to seek this approval because at the time that it sought to effect retrenchment, an industrial dispute was pending for disposal between itself and its workmen, that is the proposed "retrenchees", on a matter of wage-scales; and, therefore, the company, deem-

ing that it might be hit by Section 33 of the Industrial Disputes Act, applied for the Industrial Court's sanction to retrench.

Out of this application, an interesting question arose. In the words of the judge of the Bombay Industrial Court later, the question was this: "The notice issued by the company speaks of the closure of the night shift and of retrenchment and the question is whether the company's action in retrenching the workmen on account of the closure requires to be approved by the tribunal." Now the relevant provisions of Section 33 bearing on the necessity of obtaining the tribunal's approval are as follows: "33 (2) During the pendency of any such proceeding i.e., conciliation proceedings or any proceedings before a labour court or tribunal in relation to an industrial dispute) the employer may, in accordance with the standing orders applicable to a workman concerned in such dispute, (a) alter, concerning any matter not connected with the dispute, the conditions of service applicable to that workman immediately before the commencement of such proceeding; or (b) for any misconduct, not connected with the dispute, discharge or punish, whether by dismissal or otherwise, the workman; provided that no such workman shall be discharged or dismissed, unless he has been paid wages for one month and an application has been made by the employer to the authority before which the proceeding is pending for approval of the action taken by the employer." The standing order applicable to the case is No. 10 (c) which is as follows: "Whenever an additional shift is started or shifts are altered or discontinued, a seven days' notice shall be given to the workmen but if, as a result of the discontinuance of the shift, any permanent workman is likely to be discharged, a notice of one month will be given."

If we add to the above the fact that in resisting the company's application for the tribunal's approval of retrenchment, the workmen's contention was that the so-called closure and retrenchment were bogus and *mala fide*, that the company's allegation that it was impossible to work the factory in both the shifts due to non-availability of raw materials was false in as much as there was no such shortage of raw materials and that, therefore, the tribunal should withhold its approval of the company's action, you have the whole case before you; and what emerges is not a mere dispute on facts between master and men but an important point of principle. It is this: the industrial court had no right one way or the other, either to approve or disapprove the company's action. The company's application for approval simply did not lie. Why not? Because the conditions of Section 33, under which it is necessary to obtain the tribunal's approval, in this case and other cases of the same type did not exist. Look back at the proviso at the end of Section 33 (2) and read it with Clause (b). Note especially the vital word "misconduct".

The proviso obviously refers to Clause (b) in as much as it speaks of discharge or dismissal of a workman and controls Clause (b). "It will," said the learned judge of the Industrial Court, "come into operation only in a case in which action has been taken by the employer under Clause (b). In other words, the approval of the tribunal is necessary in those cases where, in accordance with Clause (b), a workman has been discharged or punished for misconduct. In the present case, no doubt the company discharged these workmen, but they were discharged not for any misconduct but as a result of the closing down of the second shift. This amounts to retrenchment of the workmen." It was true that the workmen alleged that they had been "framed" by the employers and that the alleged cause of the retrenchment and their discharge, that is, the shortage of materials, did not exist. Nevertheless, the fact remained that this was a case of retrenchment and not a case of workmen discharged or dismissed for misconduct. The labour court proceeded to hold that "discharge by way of retrenchment does not come to that clause (b) and, consequently, the proviso to that clause cannot apply to such discharge. Even assuming for the sake of argument that such misconduct was alleged against the opponents (the workmen), nor were they in a position to allege misconduct." Hence no application for approval is necessary for retrenchment effected by the employer pending adjudication proceedings before the industrial tribunal.

All this is logical enough and one respectfully agrees with the decision. Yet one leaves it with an uneasy feeling. Take a purely supposititious case of an employer who is dissatisfied with a whole batch of workmen employed on particular duties. He considers them guilty of misconduct but as there is an industrial dispute pending on some matter, say, of bonus, he cannot discharge them for misconduct not connected with the dispute without the approval of the tribunal. He knows also that he will be unable to obtain such approval since he cannot actually prove misconduct. So he decides to close down that particular shift on grounds of necessary retrenchment and applies to the labour court for its approval of the consequent discharges. The workmen claim that the whole thing is not a genuine retrenchment at all but a colourable device to enable the employer to by-pass Section 33 (2) and without the approval of the tribunal to discharge them for misconduct of which they are not guilty. That is a matter of fact. Should not the tribunal hear evidence on it?

(1958. ii. L.L.J. 518.)

A Ditcher's Diary

IT IS GOOD THAT CRITICS IN THIS COUNTRY OF THE Commonwealth link should occasionally be reminded that it involves considerably more than simply India's relations with the U.K. And it seems to me this is exactly what the visit of Mr. Diefenbaker has done; it has reminded India of the fact that the Commonwealth is an association in which Britain—although no doubt the senior—is still only one of many equal members. The Canadian Prime Minister's visit has also pointed another fact—that contacts between Commonwealth countries do not necessarily have to be channelled through London. If nothing more has been accomplished than simply the establishment of these two points, then the visit of Mr. Diefenbaker has been a success and his example could profitably be emulated by other Commonwealth Prime Ministers whose attitude towards this unique international association is a progressive one. I say this because it seems to me the Commonwealth concept might come in for a good deal of re-examination in the near future, indefinite though it has always been. Ghana, for instance, proposes to unite with a country whose colonial background is French, not British. Pakistan has abandoned it, it is to be hoped temporarily, the democratic institutions which are the main thing that Commonwealth countries have in common. Ceylon threatens to go the same way. South Africa is moving in a direction which both she and the other Commonwealth members might eventually find is incompatible with her continued membership. There may even be further complications on the way, such as the possibility of Scandinavian countries, especially Norway, being drawn closer to the Commonwealth if Britain should choose to join the proposed Scandinavian Customs union instead of the European Common Market. With all these problems looming on the Commonwealth's horizon, such visits as Mr. Diefenbaker's can do nothing but good, quite apart from the benefit to his country's already considerable prestige here.

IT IS BY NOW WELL KNOWN THAT THE RE-EMERGENCE of General de Gaulle created much more stir outside France than within, and that all the talk of civil war indulged in by the British Press (not the *New Statesman* alone) was pure moonshine. The latest election shows that the general does enjoy the confidence of his people. This is not by itself guarantee that France may not have a dictatorship some day, for Hitler too was elected. But the general is obviously a very different sort of man. He once told doubters that he was unlikely to embark on a career of dictatorship at the age of sixty-seven and many must have noticed that he was sixty-eight last week. De Gaulle's recent award of the greatest French honour to Francois Mauriac may have been a hint to some of the general's embarrassing supporters, for the writer's fire is now concentrated on these latter, although it also indicated the soldier's great love for literature and liberty. This is not in abundant supply among the communists who, I am not inconsolably sorry to find, have been humbled in the recent election. The pertinent question to ask about France today is whether de Gaulle is building the institutions which will preserve liberty in his absence. No firm answer is possible; he still has to lean heavily on several anti-libertarian agencies and individuals; but it seems to me more than probable that, given time, he will be able to deal

with Soustelle and his group. One of de Gaulle's tactical successes does not appear to have received much notice here: he has, in fact, been able largely to separate the armed forces from the fatal embrace of the colons in Algeria; and it may be that he will one day succeed in restoring peace in that unhappy country. Meantime, the French economy is making tremendous strides despite many handicaps; and this may eventually prove to be as effective in clearing political confusion as the general's personality. It has often saddened me to think that the usual Indian view of France is the British view—the British tourist's view to be precise. Nothing could be more mistaken: the greatness of France is not a myth, nor a thing only of the past.

MR. MIHIR SEN, WHOSE COLLECTION OF THE proverbial pillars of success seemed rather large at one time, has eventually "made" the Channel, and the honour given him at Howrah station he certainly earned. His other claim to distinction may not be as well known, which is that he was the subject of not one but two fourth leaders in *The Times*. To appear in a clue to the crossword puzzle in that distinguished newspaper is supposed to indicate that one has arrived; Mr. Sen's achievement must be considerably greater. On the first occasion, *The Times* light-heartedly mused on an alleged remark by Mr. Sen to the effect that, while halfway across the cold Channel, he suddenly began to wonder whether the effort was worth while and so gave up. On the second, the great newspaper congratulated itself upon having spurred Mr. Sen on to his final successful attempt on the Channel, for the first piece of facetiae was understood to have incurred Mr. Sen's displeasure, which in its turn steered his determination to make *The Times* eat its words. I now find that Mr. Sen does not propose to take up swimming as a career. Swimming's loss, let us hope, will be the law's gain. But I am not so sure that the laurels he has won for himself and his country will be enriched by his getting involved in controversies which have nothing whatever to do either with sport or with the law; and I sincerely hope that when he talks to the Prime Minister, he will discuss things he knows something about. What I mean is that it is far better to appear in fourth leaders than in the first or the second, and Mr. Sen may well do the latter if he keeps confusing the sport of swimming with activities wholly different—clubs, for instance. All racial laws are silly, but if Mr. Sen and his friends want to swim or do anything else by themselves, I would be the last man to intrude and I would not for one moment imagine, far less complain, that he is keeping me out because he doesn't like me or my people. I would say he likes being alone, and I would leave him alone.

THE IDEA OF A FOUR-DAY WORKING WEEK, OR even a three-day one, is at least as old as the concept of economic progress itself. It has certainly been discussed with varying degrees of conviction for as long as I can remember, although I doubt whether the reduction in working hours which has taken place so far in western countries, has, on the average, made up for the increased time and effort required to get to the place of work. The prediction Dr. Homi Bhabha made in Paris last week, therefore, struck me as the kind of dream to

which one is entitled only when one's country is passing through the early and enthusiastic stages of economic development. I doubt if many western scientists would nowadays agree with him, idealistic though they may be as a tribe. Personally, I cannot see how advanced technology is going to bring the developed countries more leisure, even if they do eventually solve the problem of how to use it. I say this because it strikes me—and I am not the only one—that the world is entering an era when the prevailing competition between ideologies is shifting to the economic sphere and is likely to expand to proportions we have not so far imagined. For example, I wonder how many people have realised the significance of Mr. Khrushchev's staking the whole reputation of the Soviet system on its ability to surpass the United States in physical production, whatever that may mean. In that interesting account Mr. Walter Lippman, the American columnist, has written about his recent interview with the Russian leader, he quotes him as saying that the people of the undeveloped countries will be "convinced by their stomachs" of the superiority of socialism over capitalism. Of course, Mr. Khrushchev does not mean this at all—if there is one thing the Soviet system has failed to do, it is to keep its promises in agriculture. What he does mean is that cold-war competition in future will be confined largely to the sphere of such prestige items as *Sputniks* and space rockets. Although that is certainly a healthier form of rivalry than the piling of hydrogen bombs, it is not one that is going to leave the developed countries with time on their hands, if only because the opportunities in these fields are just about unlimited. No, it seems to me that the time is fast approaching when, far from enjoying much leisure, the only prospect of securing a reduction of working hours will be to negotiate it at the international level and embody it in the kind of mutual agreement which would be required to enforce a cut in armaments.

AMONG THE SCIENTIFIC PIONEERS OF MODERN INDIA, there is no name more illustrious than that of Sir Jagadish Bose, whose birth centenary celebrations will begin on a national scale next Sunday. The life of a true scientist, I believe, has much in common with that of a philosopher, for each dedicates himself to the quest for truth. But the unique trait of Sir Jagadish's character was that he possessed the attributes of both: he had the crusading zeal and indomitable energy to carry on scientific investigation, and at the same time combined within himself the unassuming modesty of a sage. His outstanding contributions to organised knowledge earned for him the distinction of being one of the greatest scientists of this century. Some of his best work was done on the properties of electromagnetic waves, which were then as novel as the thermo-nuclear phenomena of today. Undaunted by handicaps, such as meagre finances, poor facilities of scientific research and the lack of official encouragement, he carried out investigations on the similarity of responses in living and non-living matter, and presented them for discussion at the International Congress of Physics in Paris in 1903. He later established the similarity of responses in plant and animal tissues, which work was eventually recognised by the Royal Society of London. But this great man did not restrict his activities to scientific researches only. A friend tells me that he made rich contributions to Bengali literature and was a fine connoisseur of art. But the greatest epitaph to his memory is the Bose Institute here in Calcutta which he dedicated for the advancement of knowledge and for the welfare of humanity.

THE ALUMINIUM CORPORATION OF INDIA LIMITED

MR. LAKSHMIPAT SINGHANIA'S REVIEW

Extract from the Speech of Mr. Lakshmiapat Singhania at the Twentieth Annual General Meeting held on Tuesday, the 25th November, 1958.

Welcoming the Shareholders to the Twentieth Annual General Meeting of the Corporation, Mr. Lakshmiapat Singhania said—

"It will be a matter of satisfaction that the year's results are at the same level as that of last year, against the background of lower sales and increased cost of operations due to increases in labour cost, cost of stores, spare parts, raw materials and maintenance charges. The allocation to Reserves and depreciation and provision for dividends to the Shareholders have been maintained at the same level as that of last year.

The consumption of the metal in the country has remained steady though as anticipated the consumption of virgin aluminium metal by the utensil-manufacturing industry has gone down. The industrial uses of metal are gradually developing and from the trends it appears that the Transport Industry will be the next biggest consumer of the metal after the A.C.S.R. Industry. The building and packaging industrial uses of aluminium have yet to develop."

World Production and Sales

Mr. Singhania then gave a picture of the Aluminium Industry in the World and in India.

"There have been recently certain developments in the world production and sales of aluminium metal. The world production of aluminium for 1957 was 32,56,000 tons i.e. an increase of about 15,000 tons over that of 1956. The production capacity at the end of 1957 stood at 40,14,000 tons. The production increased in Japan, France, Brazil and the Communist Countries but declined in U.S.A. and Canada. The stocks at the end of 1957 was much higher than at the beginning of the year. As the U.S. Government are not buying aluminium for stock piling, production has been cut down in U.S.A. and Canada during 1958. Canada has again from 1.8 1958 cut production by 10%. In spite of the cut in production and in spite of increased cost due to wage rise, Canada, reduced the price of metal from £197 to £180 per ton delivered and in addition offered a 'Loyalty Discount'. This price reduction was followed by the U.S. Producers also. Yet it is stated that metal from Yugoslavia, Norway, Hungary, Formosa and Czechoslovakia is being offered at a much cheaper rate and that Russia was selling Aluminium in England at a price 'which was

guaranteed always to remain below the Canadian price'. This forced Canada to apply to the Government of U.K. for an anti-dumping duty and it has also forced the U.S. producers to ask for a rise in the import duty on aluminium.

The picture that arises from these developments is one of easy supply position of aluminium and rapidly developing keen competition for export markets. Even when pot lines are idle new plants are being put up everywhere.

High Cost of Power

The inherent defects of the Aluminium Industry in India of high cost of power and small capacities still continue. Further, because of the expanding economy in the country there are increases in wages, cost of raw materials and stores. But agricultural production has not kept pace with increase in population and rise in standard of living and, therefore, it is imposing new burdens on industries.

Aluminium is a basic industry, highly capital and power intensive and involves complex technical know-how. Because of these characteristics, in Aluminium Industry one is limited to think of production in terms of thousands of tons whereas in other basic industries production is thought in terms of million tons. Naturally the scope for absorbing the impositions of new burdens becomes limited. Further, the industry is protected and will have to remain protected as long as present-day conditions continue. Under these circumstances any rise in the price of aluminium will appear disproportionately high purely from the point of view of per ton price. But if one considers the effect of the increase quantitatively then it will be apparent that the increase in price is not high at all. The per capita consumption of aluminium in India is about 0.2 lb. while the per capita consumption of steel is about 15 lbs. In other words, a rise in price of steel of about Rs. 50/- per ton imposes on the consumer a load seventy-five times heavier than that caused by an increase of Rs. 50/- per ton in the price of aluminium."

Tariff Commission's Enquiry

"The Tariff Commission have conducted an enquiry on the continuance of protection to the Aluminium Industry and their Report is awaited. A press note released by the Government, however, states that protection to the Aluminium Industry will be continued till 31.12.1960 and the existing ad valorem rate of import duty will continue. It would not be out of place to mention here that there

is duty on import of aluminium and Aluminium Industry is protected in almost all countries in the world. In U.S.A. the duty on Aluminium Ingots is 1.30 c. per lb. and on plates, sheets, bars, rods, circles etc. it is more than double at 2.70 c. per lb.

Mr. Singhania then made an earnest appeal that an understanding between the employers and labour without the intervention of any third party should be created and promoted in the interest of rapid industrialisation. On the general economic conditions of the country Mr. Singhania said—

"No doubt the benefits of industry of economic production and creation of more jobs should go to the general population. But I must caution those who expect too much out of the industry, as it is a question of what the social economy can bear and as it is also a matter of comparison between the per capita income of the nation and of those who are employed in the industry. At present direct industrial employment may not be more than about 3 to 4 million people, i.e. about 1 to 2 per cent of total population. If persons indirectly employed in industries are also considered then the figure will be between 40-44 million people. On the other hand more than 70-75% of the total population in India are depending on agricultural income. Under these circumstances, it is neither practicable nor advisable to create a special privileged class of directly employed persons by granting them special benefits and increase in wages. Otherwise, the social conditions of these persons constituting only 1 to 2 per cent of the total population will be raised much out of proportion to the general standard of the country and this will cause the national economy to suffer to a much greater extent. Instead of the disparities between different classes becoming less the disparity between the industrial employees and others will widen. The Union Government have already pronounced that the Industrial Sector has made its due contribution to the national income whereas the Agricultural Sector has remained much behind. In order to balance the national economy and to balance the general standard it is therefore necessary that agricultural production and income should go up and thus join the industrial development to contribute to a greater economic prosperity of the country."

Expansion Programme

Mr. Singhania concluded that—

"Our scheme to treble the metal production capacity and to fabricate the metal into finished products has been approved by the Government of India and we are negotiating with foreign suppliers for deferred terms of payment as sanctioned by the Government. We have made necessary arrangements for power supply with West Bengal Government and for technical collaboration with renowned manufacturers and consultants in Europe. To finance the entire project besides borrowing it will be necessary to raise fresh capital and we shall in due course approach you for the same. We hope to complete the expansion in the shortest possible period, by the end of the Second Five Year Plan period."

THE TRAVANCORE SUGARS AND CHEMICALS LIMITED

CHAIRMAN'S REVIEW OF WORKING RESULTS

The Twenty-first Annual General Meeting of the Shareholders of The Travancore Sugars and Chemicals Limited was held at The Pamba River Factory, Tiruvalla, Kerala, on the 14th November, 1958.

In the absence of the Chairman, Mr. G. N. Noel-Tod, Mr. P. Hadfield presided over the Meeting and read the Chairman's Speech. He said:

Gentlemen,

"The Accounts and the Directors' Report for the year ended 30th April, 1958 have been in your hands for the statutory period and with your permission I shall take them as read.

It will be observed that the net profit before taxation has dropped by about Rs. 14 lacs on last year notwithstanding an increase in sales of approximately Rs. 15½ lacs. The principal reasons for this are the lower tonnage of cane crushed, 1,00,664 tons this year against 1,34,337 tons last year and the drop in the recovery from 8.88% last year to 8.31% this year.

However, net profit after taxation shows a small increase, notwithstanding the increased provision which it has been necessary to make this year for taxation on current profits mainly because, as forecast last year, no transfer to Taxation Equalisation Reserve has been necessary this year.

Provision for taxation on current profits has been made after allowing for tax relief on the full amount of book depreciation provided on fixed assets and the tax on the excess of book depreciation over the depreciation allowed for income tax purposes has been provided by a transfer of Rs. 45,000/- from Taxation Equalisation Reserve.

Provided that taxation on companies is not further increased in future we propose to make similar transfers from Taxation Equalisation Reserve for the years which will provide for the tax on differences between book depreciation and tax depreciation.

This year a further step has been taken in building up our reserves to meet inevitable expenditure in replacement of machinery by the transfer of Rs. 50,000/- to General Reserve, which now stands at Rs. 3 lacs.

The Company's cash position continues to be sound and it will be noted that there has been a substantial reduction in borrowings, which is, of course, reflected in the lower charge for interest against profit for the current year.

Turning to the operations of the Company during the year under review, and in particular to Sugar Production, the performance corresponds closely to the Chairman's forecast last year, when he told you that the Cane Crop might not exceed 1 lac tons, from which 8,500 to 9,000 tons sugar might be produced. I have already referred to the lower rate of recovery and in actual fact 8,362 tons of sugar were produced. Despite the late start of the season due to the threat of strike, all the available cane was taken in. Last year's late start resulted in late planting and this is partly responsible for the low recovery of less than 8% being obtained in the current season which started on 3rd September. The other reason for the poor recovery is that the cane has been subjected to heavy flooding. There are, however, signs of improvement which it is hoped will be maintained. We expect a crush of about 1,25,000 tons. Here, I must apologise for a printing error in the Directors' Report under the heading 'sugar'. The last sentence of the first paragraph reads: 'This was also responsible for the late start of the season' which should have read: 'This was partly responsible for the late start of the season'. Floods were experienced and would have made the starting of the season difficult, but the factory could have worked, even if not at its full crushing capacity. The principal reason for the late start of the season, as I have just mentioned, and as was clearly stated by the Chairman in his speech last year was the threat of a strike by the Staff and Labour and it was not considered advisable to start the season until the question of bonus in respect of the year 1956/57 had been settled. Crushing was commenced immediately a settlement had been arrived at, by which time the floods had also subsided.

Sugar Prices and Supplies

Sugar prices remain steady and there was no shortage of supplies in Kerala. Releases were made uniformly throughout the twelve months. The price paid for cane was Rs. 40.38, which figure is composed of the minimum price of Rs. 39.20 plus the average Brix bonus of Rs. 1.18, probably the highest price paid anywhere in India for cane of equivalent quality.

In June 1958, the Indian Sugar Mills Association, of which your Company is a member, negotiated an agreement with Government whereby the Association was entrusted with the export of 50,000 tons of sugar. The quantity represented approximately 24% of the total production of the country and each factory was required to deliver 21% of its sugar production for export. The share of this Company was 211.9 tons. In actual fact, our allotment was not exported but was sold in the local market on behalf of the Association. The difference between what the Association has paid us and the market rate at which it was sold was used to finance the purchase of sugar from factories more suited to export.

The Government's export policy in respect of the 1958/59 season, which is now in progress, has not been declared at the time of writing this report. The policy of financing exports by enhancing the local price is one that can only apply where sales in the local market are freely possible at the rates necessary in order to provide for the loss on export and it will be obvious that the higher the quota exported the

Abkhari contract for the Districts of Alleppey, Quilon and Kottayam.

Last year, the Chairman commented at considerable length on the Company's contract with the Government for the supply of Pharmaceutical products. During the year under review, the Government did place orders on the Company for all their requirements, but the quantity was less than might have been expected consequent upon the incorporation in the State of the Malabar District, which previously formed part of the State of Madras. It is gathered, however, there was considerable difficulty in estimating actual requirements. Since the date of the Balance Sheet, the Government has entered into a fresh agreement with the Company whereby it undertakes to purchase 50% of its total requirements for the enlarged State from the Company, for the next three years and the Company is free to tender for the remaining 50%. Although this is not unreasonable and will ensure the continuation of the Company's Pharmaceutical business for at least the next three years on a small profit making business, it is less favourable than was hoped for.

Sales to the public remained steady during the year under review and are now showing a tendency to rise.

I regret to have to report that the assurances required by our American Associates from the Government of Kerala in respect of the starting of the proposed Starch Factory at Pamba River, have not been received and consequently this scheme remains in cold storage.

Some progress has been made regarding a settlement with Staff and Labour, and since we met last, I am happy to be able to report agreements have been signed with the Unions representing both Staff and Labour covering terms of service, but so far, unfortunately, we have been unable to persuade the Unions to accept a Formula governing the Award of Bonus, and as a result, the question of bonus for the year under review is still pending with the Government Labour Conciliation Officer. The cost of the concessions already given by the Company in revising the Grading Scheme and calculation of dearness allowance to Labour is estimated to cost the Company about Rs. 1 lakh per year. It is hoped, therefore, that the Unions will appreciate the gesture made by the Company and be prepared to settle the pending Bonus dispute in a friendly and reasonable manner.

We also have on our hands a dispute with the boatmen carrying cane to the Factory, who claim they are employees of the Company and should be treated accordingly. The Company feels strongly that their case is completely unsustainable, but as the matter is pending before the Labour Tribunal, I can say no more at the present time.

In April this year the Staff Club was opened providing facilities for reading, indoor games as well as football and volley-ball and as recently as yesterday a Club was opened for the Officers of the Company. The Board recognises that such amenities are most desirable in the case of a factory situated in a rural area such as this and hopes that all concerned will find relaxation and pleasure.

In conclusion, I should like, on your behalf, as well as my own, to thank the Staff and Labour of the Company for their efforts during the year. We have had our differences as usual, but I must record that work has not suffered on this account. As regards the staff, the complexity of modern Government Rules and Regulations has not made their task any easier and many have shouldered additional burdens cheerfully and capably."

The Report and Accounts for the year ended 30th April, 1958 were unanimously adopted and dividends on the Preference and Ordinary Share Capital of the Company, at the rates of 5% and 10% respectively, both free of income-tax, were declared, payable on 15th November, 1958.

The retiring Directors Mr. S. Chattanatha Karayalar and Mr. P. Hadfield were re-elected and the retiring Auditors of the Company, Messrs Lovelock & Lewes were re-appointed on the same remuneration as for the previous year.

N.B.—This does not purport to be a report of the proceedings of the General Meeting.

INCREASING FOOD SUPPLIES IN CHINA

POTATOES TO SUPPLEMENT CEREALS

(FROM A CORRESPONDENT)

LAST year, communist China launched an all-out drive to economise further on the consumption of grain and make up the deficit with sweet potatoes. Since then, the people—rural as well as urban—have been required to eat some sweet potatoes along with rice or wheat flour. They apparently do not like this, for in many provinces sweet potatoes have always been considered as feed for pigs. Now the communists have decided to make it compulsory that a definite percentage (in some places as high as 20 percent to 30 percent) of the food ration is to be issued in sweet potatoes. At the same time, the régime has strengthened its propaganda drive telling the people that "sweet potatoes are full of vitamins", and has been even organising "potato feasts."

In a directive, the Government says: "Production of potatoes and sweet potatoes has been greatly expanded in our country this year. The total acreage devoted to these crops is about 240 million mows, about 50 percent larger than last year. The total output is initially estimated at about three times that of last year. They have a high nutrition value. The people in most parts of the country are used to potatoes and sweet potatoes as food, and in many parts they are the staple food. However, their consumption as food is after all limited. Ways and means must be devised to make full use of these in making synthetic rubber and as a raw material for other chemical industries, such as the making of synthetic fibres, plastics, dyestuffs, agricultural chemicals and other medicinal products. Once we have ample supplies of alcohol and synthetic rubber (not to mention other products), we shall have ample supplies of fuel and rubber tyres."

"Are there difficulties in the development of complex utilisation of potatoes and sweet potatoes and in the development of the alcohol industry using these crops as raw material? Yes, there are. The harvest seasons of potatoes and sweet potatoes are very short and both occur at the same time. Moreover difficult problems of transportation and storage of potatoes and sweet potatoes exist as a result of their bulky mass, their high water content, the thinness of their peels, and their susceptibility to damage and disease. A large portion of the crops must be handled and treated within a fairly short time in order to avoid losses due to the highly perishable nature of the crops. Our principal difficulty lies in the fact that our existing starch-making and alcohol industries are far from adequate to cope with the situation."

Traditional Methods of Storing

"The history of the cultivation of potatoes and sweet potatoes is a long one in China. As for the storage and preservation of fresh potatoes, for instance, the methods of storage in cellars, hermetically-sealed chambers, and sacks are being used. The peasants have been making dried potato chips, dried potato shreds and starch, and have been using such methods of dehydration as pressing, grinding and loading the pulp into earth pits, and grinding and hanging up the pulp in sacks. When urging the masses to carry out the preliminary processing of fresh potatoes, we must oppose those who regard the 'native' methods with contempt and maintain that the 'native' methods are unscientific and un-

hygienic. It is true that the 'native' methods have their defects, but since at present our existing modern technical equipment is inadequate to cope with the situation, these 'native' methods should be fully employed. Besides, there is much in these 'native' methods to recommend them. The starch produced by the 'native' method by the masses of Tangshan administrative district, Hopeo province, compares favourably with the first-class product of foreign countries, without having to go through the bleaching process. Scientific and hygienic methods may be found by summing up native experience, sorting it out and raising it to higher levels."

Industrial Uses

As for putting potatoes to industrial uses, it says: "Our existing alcohol plants and several thousand distilleries and breweries are a formidable force which should play an important rôle in the complex utilisation of potatoes and sweet potatoes. But the capacity of this existing equipment is insignificant compared with the huge output of potatoes and sweet potatoes, so that we must vigorously expand local distilling and brewing industries and other industries using potatoes and sweet potatoes as a raw material. In the principal potato and sweet potato producing areas, every *hsiang* and every co-operative should set up its own brewery or distillery and its own factory for complex utilisation of potatoes, for that is the only way to solve fundamentally the problem of complex utilisation of potatoes. Most of our peasants have some sort of experience in brewing wines with grain and potatoes, and there are many villages which have simple distilling or brewing equipment. If such local industry is fully mobilised and utilised, and aid is given it in the more important items of equipment, breweries and distilleries can be set up in large numbers."

"Once we have adequate numbers of breweries and distilleries, the problem of producing alcohol will present no difficulty at all. Experience in various parts of the country shows that an ordinary distillery can produce 75 percent pure alcohol without any additional equipment. If simple distillation equipment is added to these distilleries, they will be able to produce directly 95 percent pure alcohol. So, the making of wines and spirits is within the ability of every *hsiang* and co-operative. General chemical industries such as the making of synthetic rubber may be managed at the *hsien* level, whereas some higher class chemical industries have to be managed at the administrative district or even provincial level. In this way, every province will have its own network of general chemical industries with a solid production basis, base of raw material supplies and home market. Such industries will make timely purchases of locally produced potato crops and other agricultural by-products (such as paddy straw and bran), while at the same time make timely supplies of fuel, raw materials, livestock feed and other means of production and subsistence available to agriculture and the local industries, so that agriculture and industry may boost each other and expand together."

"The complex utilisation of potatoes and sweet potatoes is a new and complicated job. It involves agriculture, industry, commerce, food production and communications and transport. It is necessary to divide responsibilities and co-operate under the unified leadership of the Party committees in order to do well this job which is of great economic as well as political significance. Shantung and Szechwan, which produce more potatoes and sweet potatoes than many other provinces, have also completely solved the problem of the complex utilisation of their own potato crops by their own efforts."

Money

THE CALCUTTA MONEY MARKET CALL RATE DECLINES

Wednesday, 26th November.

THE total of advances outstanding in the Calcutta money market has tended to fall during the past week. There has been some increase in the requirements of the jute mills, but those of the sugar industry are down and accommodation against grain storage has also fallen. At this late date, there is still no sign of the onset of the busy season. The interbank market has turned extremely easy and the call rate is down to a new low of 1 percent.

There has been a good supply of bills in the exchange market, encouraged by the recent reduction in the U.K. Bank rate. Both tea and gunny documents have been in evidence. Remittance has been fair. Sterling is showing weakness against all the major currencies due partly to the reduction in the U.K. Bank rate and partly to some nervousness about the Berlin situation.

BULLION WAS FIRM AS ARRIVALS DECREASED BECAUSE of the tightening of anti-smuggling measures. Silver advanced to Rs. 188, quoted today for ready delivery, and the rate for forward delivery was Rs. 187.50. The London and New York prices remained at 77½d and 90½ cents, respectively.

Gold was firm in sympathy with silver, and the price rose from Rs. 114 to Rs. 114.50. The sovereign increased by 25p to Rs. 74.

DURING THE WEEK ENDED 21st NOVEMBER, Government of India Treasury bills for Rs. 20.5 crores were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 3 CRORES OF 91-DAY GOVERNMENT of India Treasury bills were opened on 25th November. The total amount offered was Rs. 5.5 crores. Tenders at Rs. 99.390 and above were accepted in full and those at Rs. 99.385 were allotted approximately 35 percent, the average rate of acceptance being Rs. 2.442 percent a year. Tenders for Rs. 3 crores of 91-day Government of India Treasury bills will be received at all centres up to Monday, 1st December.

IT IS STATED THAT 91-DAY INTERMEDIATE TREASURY bills will be sold from 26th November to 29th November at Rs. 99.406 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. The 91-day Intermediate Treasury bills sold from 19th November to 22nd November amounted to Rs. 63,75,000.

THE DECLINE OF Rs. 23.23 CRORES TO Rs. 1,585.92 crores in active notes was a notable feature of the return of the Reserve Bank of India for the week ended 21st November, 1958, while the total note issue rose by Rs. 1.27 crores to Rs. 1,594.52 crores. Notes held in the Banking Department consequently increased by Rs. 24.52 crores to Rs. 31.84 crores. In the Banking Department, deposits of the Central Government were Rs. 11.30 crores lower at Rs. 52.03 crores but other Government accounts increased by Rs. 6.32 crores to Rs. 24.49 crores, partly because of a transfer of money from the Central Government. Balances of commercial banks at Rs. 101.94 crores showed a rise of Rs. 22.06 crores. Balances held abroad declined by Rs. 1.48 crores to Rs. 16.85 crores. Other loans and advances fell from Rs. 58.28 crores to Rs. 54.30 crores, of which advances to scheduled banks against usance bills amounted to Rs. 70 lakhs (Rs. 96 lakhs). Investments at Rs. 303.87 crores showed a small rise. Ways and means advances stood at Rs. 20.80 crores against Rs. 22.25 crores.

THE RETURN OF THE STATE BANK OF INDIA FOR THE week ended 14th November, 1958, shows a rise of Rs. 4.34 crores to Rs. 480.18 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 1.73 crores and Rs. 5 lakhs to Rs. 274.63 crores and Rs. 11.60 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have increased by Rs. 1.02 crores to Rs. 165.96 crores. Cash and balances are, in consequence, shown at Rs. 34.71 crores or Rs. 6.56 crores less.

THE STATEMENT OF THE POSITION OF SCHEDULED banks for the week ended 14th November, 1958 shows Demand and Time liabilities at Rs. 707.16 crores (Rs. 15.48 crores on account of borrowing from banks) and Rs. 921.13 crores (Rs. 37.58 crores), compared with Rs. 705.34 crores (Rs. 23.20 crores) and Rs. 926.62 crores (Rs. 39.58 crores), respectively. In the previous week, Cash has increased by Rs. 6.77 crores to Rs. 46.74 crores, while balances with the Reserve Bank have declined by Rs. 8.11 crores to Rs. 73.68 crores. There is a rise of Rs. 85 lakhs to Rs. 641.31 crores in investments. Advances and bills discounted at Rs. 841.08 crores show a fall of Rs. 3.47 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 7.4 percent and 51.7 percent, against 7.5 percent and 51.8 percent.

The following is a statement of the cash balances of the Central Government on the last day.

of August 1958:

	Rs.
(1) At the Reserve Bank of India in India ...	69,25,06,000
(2) At treasuries in India ...	22,31,000
(3) In England (Sterling converted at 18d the rupee) ...	61,74,000
Total ...	70,09,11,000

U.K. BANK RATE CUT LIFTS
GILT-EDGED

INDUSTRIALS FALL

London, 25th November. THE past week was an eventful one in the stock market. The cut in the British Bank rate from 4½ percent to 4 percent took operators completely by surprise and an all-round improvement resulted. The effect of the Bank rate cut proved to be short-lived, however. The market soon developed an irregular tendency and suffered a sharp fall on Tuesday following Monday's heavy decline on Wall Street. Uncertainty was already apparent prior to the setback in New York as the reasons for the reduction in Bank rate and accompanying statements had generated a less confident view of the immediate business outlook. The market, therefore, was highly susceptible to a break on Wall Street, particularly as the account ended on Tuesday. Heavy profit-taking developed and prices of industrial equities particularly suffered substantial losses. The Berlin situation contributed to the prevailing nervousness. Gilt-edged, as expected, made the best response to the Bank rate cut. Prices in this section went strongly ahead and were subsequently not greatly affected by the setback in New York. Although below the best, gains predominated on balance. German bonds were dull because of the Berlin situation but other foreign bonds recorded very little change. In rails, Antofagasta issues lost ground following the annual report. Dollar stocks were sharply lower in sympathy with the fall on Wall Street. Indus-

trial went ahead in response to the Bank rate reduction and reached a new peak for the year, but a subsequent reaction brought prices back sharply and the earlier gains were substantially reduced. The strength of gold shares was one of the main features of the week but the setback in New York brought prices back from their best levels. Nevertheless, many useful improvements were established on balance. Platinums were lower on the cut in the price of the metal, while base metal shares declined under Wall Street's influence. Oils were sharply lower for the same reason. Rubber shares lost their recent buoyancy and turned dull on profit-taking. Teas were easier, but losses were usually small.

The Money Market

After a two-day spell of easy conditions in which money came into surplus supply, the money market reverted to a state of tight credit conditions. The supply position was affected by the monthly make-up of balance sheets on the third Wednesday and the weekly tax payments to the Revenue Department on last Thursday which drained the market of funds. Considerable assistance was given by the authorities while a small amount was borrowed from the Bank of England. A highlight of the week was the cut in the British Bank rate on Thursday to 4 percent, which came as a complete surprise. As explained by official sources, this was done to stimulate industry and facilitate the Government's coming re-financing operation. In view of the changed Bank rate, money rates over the week ranged from a high of 3-5/8 percent for non-regular money down to a low of 2-3/8 percent for regular call money, the latter being the new rate. A fairly good business was transacted in bills. The Treasury bill tender resulted in an average rate for 91-day bills of £3 8s 4.68d percent, and was the lowest rate for three and half years.

Activity on Wall Street

Long-dated U.S. Government obligations held quietly steady at first as traders awaited the terms of the Treasury's \$12,000 million refunding operation. These were eventually announced and the market edged up a trifle in response to the news that no new long-term bond would be issued but fell back in the absence of investment interest. Investment quality corporates were narrowly mixed, while speculative rail lines held steady. Convertibles followed the stock market trend. In foreign bonds, German Nationals and Italians showed mostly minor price changes, while Greeks and Norwegians were unchanged to a shade lower. Chile 3 percents advanced to the best level of the year at \$44.

U.S. Federal Reserve Return

The U.S. Federal Reserve return for the week ended 19th November shows that the gold stock fell by \$18 million to \$20,658 million. Foreign deposits rose by \$29 million to \$317 million while foreign investments declined by \$31 million to \$3,821 million. The Federal Reserve sold \$42 million worth of bills but bought \$45 million worth of securities under repurchase agreements, making the total holdings of Government securities \$3 million higher at \$25,448 million. Total discounts and advances rose by \$185 million to \$560 million. The aggregate excess reserves of member banks stood at \$717 million compared with the preceding week's deficit of \$38 million. The daily average excess reserves of member banks declined by \$195 million to \$467 million while their daily average borrowings fell by \$18 million to \$451 million. Business loans of the New York city banks declined by \$30 million to \$10,690 million, compared with a fall of \$90 million to \$11,522 million in the corresponding week of last year. Gold certificates on hand and dues from the U.S. Treasury fell by \$22 million to \$19,176 million. Federal Reserve notes in actual circulation rose by \$3 million to \$27,269 million. The daily average of the deposit in member banks' reserve account was \$867 million higher at \$18,659 million.

Decline in Rubber

For the greater part of the past week, the rubber market was dull with prices sagging in sympathy with the declining eastern levels. Buying was small and selective. Traders pointed to Polish orders on f.o.b. terms at Singapore as a feature, but buyers for British and Continental factories generally were not much in evidence. Nearby rubber was at a discount for forward positions. Covering against sales, coupled with some switching of positions, relieved the dullness. Towards the close, a steadier trend developed. A small rally was partly attributed to the reduction in the U.K. Bank rate but it was not accompanied by a substantial increase in demand. Prices finally were about 3d a lb lower on the week. Traders continued to express disappointment over the movement of sole crepe. Some reported a fair volume of enquiry but business was slow to develop. Sales were made between 30d and 31d a lb for ordinary Jin. smooth No. 1 on the spot and at slightly more for superior grades.

U.K. Platinum Price

Baker Platinum and Johnson Matthey, the two leading refiners of platinum in the United Kingdom, have reduced the price of platinum to their regular customers to £194 a troy ounce from £214, which price has been in force since 22nd September. These companies reduced their price in the United States by a similar amount recently. The unsettled state of the market has been underlined for a long time past by the discounts obtainable in the free market, where prices recently were indicated at £184 to £19 a troy ounce, trade sources said.

Stocks and Shares

SPECULATIVES DECLINE ON SETTLEMENT
CONSIDERATIONSGUEST KEEN WILLIAMS TO ISSUE BONUS
SHARES

Wednesday Evening. THERE were many operators in the Calcutta Stock Exchange who felt last week, on 21st November to be precise, that a big break in prices was imminent, mainly because of settlement difficulties. But their fears did not materialise. With this problem successfully solved, the market recovered and Indian Iron & Steel moved up steadily from Rs. 25.69 to Rs. 26.36 yesterday. Today, however, the high budla charges brought a fresh wave of selling and the shares closed at Rs. 25.78 which was the settlement rate. Shareholders of the company are now awaiting the annual general meeting which is to be held at 3 p.m. on 28th November, in the hope that the chairman will make a statement about the probable date of the bonus issue.

The next important date for both investors and business men in Calcutta will be 5th December, 1958, when the Finance Minister will address the Associated Chambers of Commerce. If he reiterates his recent statement in Bombay that there is likely to be no lessening of the tax burden, the stock market may once again find itself in a state of lethargy. But the fact remains that the money market is still overflowing with funds and part of these seem likely to find an outlet in the stock market. The outstanding success of the 4½% Industrial Finance Corporation Bonds for a sum of Rs. 4 crores, at an issue price of Rs. 99, seems to confirm this view. The list opened on 24th November and closed in a matter of hours, being more than twice subscribed. Applicants received approximately 51% allotment.

The market was cheered by the news of the proposal by Guest, Keen, Williams to issue bonus shares in the proportion of three for 10, subject to Government sanction, and the price moved up from Rs. 34 to Rs. 38.75 buyers.

The gilt-edged market has been very steady with a general enquiry for all dated loans. Three percent Conversion Loan 1986 was fractionally better at Rs. 73.18. Here is a chart showing representative price movements:

	Opening 20th Nov., 1958	Closing 26th Nov., 1958
	Rs.	Rs.
3 % Loan 1963-65	96.73	96.85
3 % Loan 1964	96.75	96.80
3 % Loan 1970-75	90.25	90.32
3½ % Loan 1967	100.50	100.60

Preference shares continued to meet with good enquiry, but sellers were not forthcoming. In the miscellaneous group, Aluminium Corporation 6% were marked at Rs. 87 and later at Rs. 88. Brooke Bond changed hands at Rs. 70.25 and Calcutta Electric were crossed at Rs. 11.62. Indian Iron & Steel changed hands at Rs. 100 and McLeod second at Rs. 71.50. In jute, a solitary transaction was reported in Birla 7½% at Rs. 90.

In banks, Punjab National met with some selling pressure and were quiet at Rs. 55 while United Commercial were unchanged at Rs. 68. Cotton shares were dull and neglected. Among the few which changed hands were Dunbar at Rs. 134, Jay Shree at Rs. 8.10, Kesoram at Rs. 10.87 and New Victoria at Rs. 1.25. Cawnpore Textiles and Elgin Mills were marked down from Rs. 4.87 to Rs. 4.37 and Rs. 12.81 to Rs. 12.50.

Investors in the coal section were disinclined to make fresh commitments due to the continued delay in publication of the Coal Prices Revision Committee's report. Bengal were marked at Rs. 270, two rupees lower than last week's opening rate, and Burrakur were depressed at Rs. 17. Central India were crossed at the lower rate of Rs. 8 as were New Manbhoom at Rs. 11.25. Western Bengal were unchanged at Rs. 6.37.

Jute shares were quietly steady, though the volume of business was disappointing. The following table illustrates the trend in this section:

	Opening 20th Nov., 1958	Closing 26th Nov., 1958
	Rs.	Rs.
Anglo-India	210	206
Auckland	160	159
Chandpany	127	128
Howrah	20	20.12
Kinnison	185	182
India	16.37	16.69
Megna	15.37	15.62
Union	212	206

In electrics, Calcutta were unchanged at Rs. 14.69, but Jubbulpore were reported at a slightly higher rate of Rs. 14.87.

With the exception of Carew and Dyer Meakin Breweries which spurted from Rs. 8.44 to Rs. 8.87

and Rs. 11.12 to Rs. 12, sugar shares were featureless.

As mentioned earlier, Guest, Keen, Williams were a star feature in the engineering section with strong buyers at advancing prices. Braithwaites were shaded at Rs. 31.25 and Bhartia Steel were unchanged at Rs. 16. Jay Engineering were marked at Rs. 173 while Kumardhubi Engineering were easier at Rs. 8.75. Saran recovered from Rs. 5.87 to Rs. 6.12 and Textile Machinery were lower at Rs. 21.30.

In paper, Orient were lower at Rs. 31.90 but Shree Gopal improved from Rs. 16.19 to Rs. 16.50. Sirpur were offered at the lower rate of Rs. 12.25 and Titagur were steady at Rs. 43.06.

In cement, Ashoka were done at Rs. 7.75 and Orissa at Rs. 11.62. Sone Valley were unchanged at Rs. 5.25.

The only share transacted in the insurance section was Concord of India at around Rs. 12.37.

In shipping, Bengal Assam improved from Rs. 103 to Rs. 107, while India Steamship were steady at around Rs. 14.06 following the publication of a satisfactory report.

Among miscellaneous industrials, Alkali & Chemical were steady at Rs. 17.25, and Aluminium Corporation improved to Rs. 11.12 x.d. Angelo Brothers were better at Rs. 20.69 and there was some enquiry for Balmer Lawrie at Rs. 143. Dunlop Rubber were a good feature with the price improving from Rs. 28.75 to Rs. 29.75. Indian Aluminium improved from Rs. 15.06 to Rs. 15.25 while Indian Cables were subdued at Rs. 29.75. National Insulated Cables were steady at Rs. 34 following the declaration of a 20% dividend (same as last year). Phillips India were better at Rs. 16.25 while Rohtas Industries were depressed at Rs. 20.37. Shaw Wallace met with slight reaction.

Well protected—

BECAUSE THEY ARE PACKAGED IN

FILM MADE FROM

Polyethylene

POLYETHYLENE film affords protection for the contents and also enables easy inspection of the products. And because POLYETHYLENE film is pliable, won't crack, and can be easily and efficiently heat-sealed, there are no problems in keeping the contents well protected.

POLYETHYLENE will shortly be manufactured in India by National Carbon Company (India) Limited at their plant at Trombay Island, Bombay.

INDUSTRIAL PRODUCTS DIVISION

NATIONAL CARBON COMPANY (INDIA) LTD.

The term UNION CARBIDE is a registered trade mark of Union Carbide Corporation, U.S.A.

at the close to Rs. 14.94. Most other issues were unchanged.

In the mining group, Indian Copper were quiet at Rs. 3.75 but Metal Corporation were better at Rs. 7.12.

Tea shares displayed an easier trend and prices of most scrip were trimmed down.

PROVIDING RS. 4.81 LAKHS FOR DEPRECIATION against Rs. 5 lakhs, Rs. 1.10 lakhs for taxation, making other adjustments and bringing in Rs. 8,401, the profit of the Central India Coalfields Ltd has amounted to Rs. 3,42,829 during the year ended last March. Development rebate reserve is allocated Rs. 82,210. The ordinary dividend is maintained at 5 percent, leaving a carry-forward of Rs. 10,769. Raising amounted to 310,054 tons and despatches totalled 297,201 tons.

THE KUMARDHUBI FIRECLAY AND SILICA WORKS Ltd. has increased its profit by Rs. 4.61 lakhs to Rs. 15.72 lakhs for the year ended December 1957. P.voiding Rs. 5.72 lakhs for taxation, Rs. 1.17 lakhs for wealth tax, Rs. 4.69 lakhs for depreciation and bringing in Rs. 41,098, there is a balance of Rs. 9,23,219. Allocations include tax contingency reserve Rs. 87,000, development rebate reserve

Rs. 90,500, debenture redemption reserve Rs. 1 lakh and capital redemption reserve fund Rs. 2 lakhs. An ordinary dividend of Rs. 1.25 has been declared, leaving a carry-forward of Rs. 53,076. The directors say that the second stage of the expansion in the firebrick section was completed at the end of 1957 and this has increased the firebrick manufacturing capacity to 72,000 tons a year. The silica and sillimanite brick production stands at 24,000 tons a year and the order-book is very full.

THE PROFIT OF THE GROB TEA COMPANY HAS amounted to Rs. 8.42 lakhs for the year ended December 1957. A dividend of 25 percent has been paid, against 32½ percent. Buildings and machinery reserve is allocated Rs. 50,000, leaving a carry-forward of Rs. 96,829 (Rs. 1,04,298). Output fell from 24,712 maunds to 23,658 maunds and the average sale price declined from Rs. 2.40 to Rs. 2.18 a lb. The Teen Ali Tea Co. Ltd. has been amalgamated with Grob since 1st January, 1958. Estimates for the current year have been made for a crop of 31,500 maunds at a cost of Rs. 41.85 lakhs.

THERE IS A PROFIT OF RS. 1.14 LAKHS FOR THE Dejo Valley Company. The dividend is reduced from 30 percent to 20 percent to absorb Rs. 24,000. General reserve is allocated Rs. 24,000. The crop fell from 4,993 maunds to 4,045 maunds and the average sale price declined from Rs. 2.76 to Rs. 2.42 a lb. Estimates for 1958 provide for a crop of 5,000 maunds.

HOARE MILLER AND COMPANY HAS MADE A PROFIT OF Rs. 3.79 lakhs for the year ended December 1957. A dividend of 5 percent is declared and it absorbs Rs. 1.76 lakhs. The taxation provision amounts to Rs. 32,500, leaving a carry-forward of Rs. 1,87,554 (Rs. 17,163).

THE PROFIT OF THE BETJAN TEA COMPANY HAS amounted to Rs. 3.38 lakhs for the year ended December 1957. The dividend has been cut from 25 percent to 15 percent. General reserve is allocated Rs. 50,000 and an amount of Rs. 50,000 is transferred for plant and building improvement. Output amounted to 9,574 maunds, against 9,548 maunds.

Bombay Market

MARKET CLOSES IN HESITANT MOOD

BEARISH VIEW OF COTTON TEXTILE PROSPECTS

Wednesday Evening.

THE Bombay stock market has closed in an uncertain mood. During the early part of the week, share prices slumped on heavy selling pressure. There was a recovery during mid-week on replacement buying induced by the hope that an increase in output, as a result of near-completion of the expansion schemes, would improve the earnings of the Tata Iron and Steel Company. Towards the close, operators were hesitant on an official announcement that no further step would be taken to relieve the accumulation of cloth stocks.

Tata Steel closed at Rs. 176.25 and Indian Iron were lowered to Rs. 25.85 on selling from Calcutta interests. Tata Locomotive were taken at Rs. 155 in routine turnover and Premier Construction changed hands at Rs. 241.50. Alcock Ashdown were freely offered at Rs. 261.25 and Larsen and Toubro were transacted at Rs. 16.92. Motor shares were quiet, and Hindustan Motor declined to Rs. 7.24. Premier Automobile were quoted at Rs. 86.

Cotton mill shares lost on balance and anxiety was felt about export prospects. Bombay Dyeing

declined to Rs. 56.90 and Century were sold at Rs. 428.50. Simplex fell to Rs. 172.50 and Kohinoor were placed at Rs. 249. Svadeshi were bought at Rs. 197 and India United Ordinary were available at Rs. 8.80. Apollo were freely offered at Rs. 1.30.

Except for a rise to Rs. 91 in the price of Shivarajpur Syndicate, because of the removal of the export duty on manganese ore, miscellaneous shares were quiet in sympathy with the general trend. In the sugar group, Belapur Sugar lost at Rs. 305.75 on fears of a decline in earnings. Phalton were indicated at Rs. 172. Cement shares were freely offered at lower rates, and Associated Cement were transacted at Rs. 153.50. Digvijay Cement came to hand at Rs. 130.50. Steamship company shares were quietly steady, and Scindia Steam were done at Rs. 21.36. Great Eastern Shipping changed hands at Rs. 27.05. National Rayon reacted to Rs. 240.50 on pressure and Tata Chemical were lowered to Rs. 15.64.

Routine turnover was seen in bank shares, and United Commercial Bank were transacted at Rs. 68.20. Bank of India came to hand at Rs. 136. In the insurance group, New India Assurance spurted to Rs. 55.30 on the payment of an interim dividend of Rs. 2 a share. British India General met with support at Rs. 14.

Sellers predominated in electricity supply company shares on an unconfirmed report of nationalisation of the industry. Ahmedabad Electric were sold at Rs. 99.40 and Bombay Suburban were done at Rs. 109.75. Tata Hydro were bought at Rs. 122.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations. Highest for the week. Lowest for the week. Closing Quotations. Quotations for the corresponding Date a Year Ago, the last named being shown in parentheses and will not be given where such a quotation is not available.]

PRODUCTION AND DESPATCHES OF COAL DURING JUNE

Employing nearly 400,000 workers on an average a day, collieries in India raised 3.55 million tons of coal during June 1958. These figures relate to 842 collieries which submitted their returns to the Chief Inspector of Mines, Government of India. A review of the coal production statistics shows that during the period February to June 1958, the output showed an upward trend till May (from 3.7 million tons in February to 3.88 million tons in May). The fall noted

MANUFACTURE OF SYNTHETIC RUBBER

U.K. PLANT STARTS PRODUCTION

(FROM A SPECIAL CORRESPONDENT)

THE new £6-million (\$16.8-million) installation of the International Synthetic Rubber (I.S.R.) Co. Ltd in Hythe is Britain's pioneer venture to produce general-purpose synthetic rubber. With an annual output capacity of 70,000 long tons a year, it makes the country independent of overseas supplies and, in addition, will enable it to export a substantial quantity.

The company produces styrene butadiene rubber. Its main ingredients are, as the name implies, styrene and butadiene, in the ratio of three parts of the latter to one of the former. Its butadiene requirement is met by the Esso Petroleum Company's Fawley refinery which is 1.75 miles from the Hythe plant. The ingredient is piped between the two installations. The suppliers of styrene are Forth Chemicals in Grangemouth and Shell in Partington. It is transported by road, rail and sea. The Hythe installation, occupying a 54-acre site, was built in 16 months, beginning from February 1957. It started production the following March and attained full output on 20th July, 1958.

Polymerisation System

In the G.R.-S process, the polymerisation system is an emulsion of the monomer or monomers in an immiscible liquid, that is, water, which enjoys several advantages in comparison with other techniques. The advantage of the polymerisation solution is that the monomers—in this case butadiene and styrene—are hydrocarbons. Any other solvent will necessarily be expensive since it will entail the introduction of a complicated and costly solvent recovery system. Moreover, the formation of the polymer as a dispersion or emulsion means that the synthetic product is initially formed under conditions similar to those in which natural rubber is derived from the tree, so that the extension of the synthetic item into the field of latex processes is facilitated.

The use of the emulsion system also enables the best use of a redox catalyst. This is a multi-component material, including, as the name implies, an oxidising and reducing agent. In addition to the catalyst, soap, which is present in substantial quantities, serves to promote the necessary conditions for polymerisation and to stabilise the hydro-carbon emulsion. Another important component in the reaction mixture is the modifier, usually a mercaptan, which is soluble in the hydro-carbon phase. It directs the course of polymerisation and controls the molecular weight.

Major Advances

Around 1945-47, major advances were made in the redox catalyst systems enabling the temperature of polymerisation to be dropped from 120° Fahrenheit to around 41° to 55° Fahrenheit. The resulting cold G.R.-S has considerably improved

physical properties. The cold G.R.-S polymerisation is accomplished in the course of ten or 13 hours. The various solutions needed for the cold, emulsion polymerisation reaction are made up in the appropriate area and then, together with the butadiene and styrene, charged to the reaction system. When a pre-determined proportion of the monomer charge has been reacted, the polymerisation is short-stopped and the resulting latex passes to the recovery system where the unreacted butadiene and styrene are removed from the latex. The stripped latex is thence blended and an oil extender, if called for, is added as an emulsion.

Various Stages

The next step is the coagulation of the latex to yield a slurry of rubber in aqueous liquor. It is filtered and washed, and the crumb is dried and is eventually compressed into bales. The following are the details of the various stages: Fresh butadiene is blended with the recycle material. Excess recycle butadiene is returned via pipeline to the Esso refinery for re-purification. The blended butadiene is pumped through a scrubber to remove the inhibitor and goes via surge tanks and metering systems to the reactor train. Also, fresh styrene is blended with recycle styrene. The resulting product is pumped from the tank farm via surge tanks and metering systems to the reactor train.

The emulsifier solution is prepared for the reactors. Rosin soap or fatty acid soap and other materials are dissolved in water to form the emulsifier solution, and it is pumped via metering systems to the reactor trains. The activator solution is prepared and similarly pumped to the latter. The modifier is pumped by metering pumps to the reactor trains. A similar procedure is followed for the catalyst. The butadiene, styrene and various other solutions are combined together in a single charge pipe which passes first through exchangers cooled by sea water. It then passes via exchangers cooled refrigerated ammonia. The outlet temperature of the charge stream from the latter is adjusted as may be required for the polymerisation reaction. At this stage, the activator is added to the charge stream and it enters the first of the train of reactors in series.

Continuous Operation

The whole polymerisation operation is continuous and the rate is controlled by varying the amount of activator solution and catalyst solution charged. The plasticity or Mooney viscosity of the polymer is controlled by the amount of modifier charged. The polymerisation is stopped by the addition of short-stop. This is done in a series of displacement columns which succeed the reactor train. The latex then passes to any one of the latex surge tanks where it is heated by the direct addition of steam. This raises the temperature of the latex and so increases the vapour pressure of the unrecovered monomers. The recovery of the latter is thus facilitated when the latex passes to the recovery area.

The hot latex from the surge tanks passes first to pressure flash tanks where the majority of the butadiene is removed, and then it goes to vacuum flash tanks where the remainder is removed. The butadiene vapour thus collected is compressed and condensed and pumped to the recycle butadiene

storage tank. The partially stripped latex then goes to the styrene stripping columns where, by a process of steam stripping under vacuum, the unreacted styrene is removed. The styrene vapour on steam overhead streams from the columns are condensed and the styrene, which is separated from the water by decantation, is pumped to the recycle styrene storage tank. The latex is then completely stripped and passes to one of the stripped latex storage tanks.

Blended Latex

The blended latex from the storage tanks is pumped to one of the four blending tanks and, at this stage, oil emulsion may be added to the latex if it is required to produce oil-extended rubber. Anti-oxidant is also added in an emulsion form to protect the rubber after coagulation when the wet crumb is dried. The latex then passes to the coagulation stage. This takes place under conditions of vigorous agitation. The resulting crumb and serum overflow into a second agitated vessel which is known as the soap conversion tank. From the latter, the slurry overflows to a vibrating screen where the serum and coagulum are separated. The coagulum falls from the end of the vibrating screen into a reslurry tank where it is then washed by the addition of dilute filtrate from the filters.

The slurry from the reslurry tank overflows to a rotary vacuum filter where the aqueous phase is removed partially by the action of the vacuum and partially by the action of externally applied squeeze rolls. The cake of rubber crumb then formed discharges to a hammer mill where it is broken down once more into discrete crumbs. The latter are fed pneumatically to the top conveyor of a three-conveyor drier. The moisture content of the crumb on entering the drier is of the order of 50 percent/wt. on the dry rubber and in passing through the drier the moisture content is reduced to approximately 0.5 percent/wt.

Final Stage

From the discharge of the driers, the rubber is fed via automatic weigh scales to balers which produce an 80-lb bale of rubber. These bales pass via a metal detector to either film wrapping, dusting or bagging machines. Finally, the bales pass to the rubber storage building which is capable of holding 3,000 tons of rubber. The plant capacity is handled in the finishing area by four trains of equipment in parallel, that is, four coagulation tanks, four rotary vacuum filters, four driers, etcetera, until the baling stage is reached, when the two train operation is resumed.

THE INTERNATIONAL SYNTHETIC RUBBER CO. LTD., U.K.

Statistical Summary	
Production capacity	70,000 tons a year
Area of plant site	84 acres
Area covered by installations	280,000 square feet
Cost of constructing and equipping the plant, inclusive of site clearance	£5,750,000
Number of employees	400
Storage tank capacities	(in terms of imperial gallons):

Butadiene	350,000
Styrene	240,000
Process oil	120,000
Antioxidant	33,000
Salt water	1 million
Water (other categories)	93,000
Latex	125,000
Estimated pipeline mileage within plant boundaries (all liquids)	Over 50 miles
Annual butadiene consumption	50,000 tons approximately
Annual styrene consumption	13,000 tons approximately
Fuel oil consumption	2.5 million imperial gallons a year
Electricity consumption	25 million units a year
Compressed air consumption	450 million cubic feet a year

Indirectly Relevant Statistics:	
Capacity of I.S.R. as a percentage of total U.K. rubber demand (all types) including natural	27 percent
Average proportion of synthetic rubber in current types of passenger car tyre	45 percent approximately
Annual possible dollar saving on imported synthetic rubber resulting from I.S.R. production.	More than \$25 million
Annual U.K. consumption of all types of synthetic rubber, including categories not produced by I.S.R.	65,000 tons

New Delhi

INDIAN MISSION TO STUDY CHINESE STEEL-MAKING METHODS

FINANCE MINISTER OPTIMISTIC ABOUT MORE EXTERNAL AID

(FROM OUR NEW DELHI CORRESPONDENT)

A THREE-MAN mission, led by the Deputy Secretary to the Central Iron and Steel Ministry, Mr. K. S. Raghupathi, will shortly leave for China to undertake an on-the-spot study of that country's methods of steel-making in the light of the claim that a "phenomenal increase" has been achieved in the production of iron and steel. According to Chinese sources, steel output has risen from one million tons to seven million tons in recent years. This increase, it is claimed, is from large integrated steel works of conventional design and from medium-scale steel plants of 300,000 tons to 500,000 tons capacity. Iron is manufactured in low-shaft small furnaces, using low-grade iron ore and coal. In addition, there are literally thousands of small blast furnaces which produce six to ten tons of iron a day. It is said that the output from these small blast furnaces has reached a figure of four million tons a year in the past 18 months. It is converted into steel either by the conventional open hearth methods or by the L.D. process in a modified form. Steel is also being manufactured by electricity. The Raghupathi mission will study the economics of this type of iron production, what use is being made of the iron, at what cost it is being converted into steel, and above all, whether the method used by the Chinese can be adopted by India.

Trade Agreement with Russia

The Director-General of Foreign Trade, Mr. K. B. Lal, returned to India last week, after successfully negotiating the renewal of trade agreements with Russia, Poland and East Germany. The three agreements have been renewed on better terms, negotiated in the light of experience. The "most favoured nation" treatment under the old agreements was the same which India accords to soft currency area countries. Under the revised ones, it means the treatment which the contracting parties accord to any country with which it deals in its own currency. In other words, imports from Russia have been placed on the same footing as those from other communist countries transacting business in the Russian currency.

Under the old agreement, although payments for imports were made in Indian rupees, the rupee balances maintained with banks were convertible into sterling. This will cease under the new agreement. For example, Russia will open a central account with the Reserve Bank in order to feed its subsidiary account or accounts with other Indian banks. This is intended to adjust seasonal fluctuations in trade in order to reach a balance in exports and imports. At the end of the agreement, the balance will be adjusted by the sale or purchase of goods, as may become necessary. The third modification relates to the composition of trade. So far, India largely imported machinery and plant from these countries. To these, industrial raw materials such as steel, non-ferrous metals, wood pulp, sulphur and certain ferrous chemicals have been added. India will also be entitled to import such components of machinery or plant as are not manufactured by her.

On the export side, finished or processed goods have been added in order to increase the range and volume of trade. The most important provision is that the goods imported by the contracting parties will be solely for the use of the importing country and will not enter into its export trade. The payments for the Bhilai steel plant may also be made in rupees. Similar agreements are contemplated with Czechoslovakia, Hungary and Rumania.

The following is an unofficial translation of the text of the joint Indo-Russian communiqué on the economic relations between the two. The agreement provides, specifically, for the reciprocal application of the most favoured nation treatment to trade between the two countries, and for the establishment of a clearing account without the conversion of the Indian rupees, in which the payments will be made, into pounds sterling or any other currency, which is in line with the desire of both countries to have a balanced trade without any expenditure of foreign currency. The list of goods to be exported from Russia to India contains various types of equipment, including complete sets for industrial establishments, as also power and oil drilling equipment, equipment for the coal industry, equipment for irrigation, construction, various machine tools and instruments, tractors and farm machinery, ferrous rolled stock, non-ferrous metals, fertilisers, dyes, cellulose, paper, asbestos and other industrial materials and products, oil products, cereals, films, printed matter, and other goods. The list of goods to be exported from India contains such traditional exports as tea, spices, skins and hides, wool, tobacco, shellac, cashewnuts, vegetable and essential oils, as well as manufactured goods including, specifically, jute fabrics and sacks, leather goods including footwear,

woollen fabrics, coconut fibre products and handicraft goods, films, printed matter and other goods.

Synthetic Rubber Plant

The Central Minister for Industry, Mr. Manubhai Shah, said in New Delhi at the meeting of the Development Council for the Alcohol and Fermentation Industries last week that the proposed synthetic rubber plant is expected to be in full production early in the third five year plan. The plant, which will be set up in Bareilly, will have a capacity of 20,000 tons to 30,000 tons of rubber a year and will consume about 12 million gallons of industrial alcohol annually. Preliminary steps to set up the synthetic rubber plant are already in hand. Referring to the growing and anticipated demand for industrial alcohol, the Minister has said that the first plant for the manufacture of polythene in India using alcohol as raw material will be commissioned early next year. It will consume about two million gallons of alcohol a year. Another polythene plant with a similar capacity is expected to go into production early in 1960. Plants for the manufacture of acetic acid and butanol have been licensed. All these industries will use about ten million gallons of alcohol a year. The new target for alcohol production has now been fixed at 45 million gallons a year by the end of the second plan. This will make India one of the largest industrial and power alcohol producing countries in the world.

Training Centre for Leather Technicians

The Government of the Netherlands, the U.N. Food and Agriculture Organisation and the Government of India are collaborating in setting up a model training-centre in Bakshi-ka-Talab, Uttar Pradesh. The object is to provide training facilities in hide flaying, curing and tanning as well as in the making of various leather goods. The Netherlands Government will give, subject to the Dutch Parliament's approval, assistance to the extent of Rs. 12.50 lakhs for the purchase of equipment and to cover funds required by the F.A.O. for the recruitment of three experts from the Netherlands to work at the centre. Hides are in great demand for the manufacture of various leather goods and hides worth Rs. 34 crores are purchased annually in India. Besides, by-products such as meat-meal and bone-meal are economically valuable for feeding livestock and for use as manure. At present, the collection of fallen cattle and the flaying, curing and processing of hides is carried out in rural areas in a primitive manner, causing much avoidable loss and affecting adversely the quality of products.

To avoid the wastage of these resources, the Government of India has sanctioned a scheme for setting up training centres. To provide trained personnel for them, it has been decided to expand the Bakshi-ka-Talab centre which was established by the U.P. Government with F.A.O. aid in 1952. An F.A.O. expert, Mr. F. H. Hoek, who initially assisted in the establishment of this centre and later worked in the Central Ministry of Food and Agriculture, will continue to work in India and give technical assistance in the development of the centre. The proposed centre will be run for training as well as production purposes with the stress on training, which is the primary objective. Facilities for advanced training in hide flaying, curing and the use of carcasses, vegetable and mineral tanning, and footwear and the use of leather will be provided on an all-India basis for the technicians already employed by various State Governments as well as for those engaged in the trade and serving in privately-owned factories. The centre will train 100 students each year—60 for hide flaying and 20 each for tanning and footwear.

Expansion of Hindustan Cables

The expansion scheme of Hindustan Cables (Private) Ltd proposes the manufacture of 300 miles of co-axial cables a year as a new item. The estimated cost of expansion is Rs. 82 lakhs. It will be financed partly by a loan from the Government to the extent of Rs. 50 lakhs and the balance from the company's own resources. Production is expected to begin in April 1960. The capacity, it is planned, will be achieved in the first year itself. The value of annual output is expected to be Rs. 70 lakhs, and the anticipated annual foreign exchange saving will be Rs. 50 lakhs. Standard Telephones and Cables Ltd of the U.K., who are technical consultants to the company under an agreement, are the technical consultants for this expansion scheme also. A supplemental agreement on the lines of the principal agreement, it is proposed, will be concluded.

Cost Estimates for Steel Works

Some further details of the costs of the Durgapur steel project and the Rourkela steel project

are now available. The estimate of Rs. 138 crores for the former plant proper is made up of:

	(Rs. crores)
(i) F.O.B. supply	77.32
(ii) Shipping and insurance	7.07
(iii) Technical service charges	14.13
(iv) Site works including construction equipment	14.43
(v) Indian plant and Indian work (target price and erection of cables)	23.11
(vi) Railway freight and handling	1.48
Total	137.54 (or Rs. 138 crores)

The estimate in the detailed project report for the rolling mills in Rourkela was Rs. 48.44 crores. In the revised estimate, the figure has gone up to Rs. 72.36 crores—an increase of Rs. 23.92 crores. During the negotiations in West Germany in August 1956, this difference was explained as follows:

The f.o.b. part of the two estimates are Rs. 32.37 crores and Rs. 44.07 crores, respectively—a difference of Rs. 11.70 crores, the breakdown being:

	(Rs. crores)
(i) Increase in the level of prices and wages	4.20
(ii) Increase in the price of furnaces	0.74
(iii) Increase in the price of rolling mills	0.36
(iv) Increase in the price of electrical equipment	5.70
(v) Increase in the price of cranes	0.36
(vi) Increase in the price of steel structures	0.34

In the new estimates, ocean freight has gone up by Rs. 65 lakhs, mainly on account of additional supplies and partly on account of increases in freight between the submission of the detailed project report and the preparation of the revised estimates. Erection costs—including civil engineering, structural and plant erection, inland transport and handling—have gone up by Rs. 4.62 crores on account of (1) provision for inland transport which had not been made in the original estimates and (2) increased cost of Indian work. Costs of Indian supplies have gone up by Rs. 2.60 crores. Additional spares have been provided to the extent of Rs. 4.35 crores. It may be recalled that on releasing the West German collaborators from their obligation to invest in the equity capital of Hindustan Steel Private Ltd, a reduction of about Rs. 2.9 crores was obtained in the prices quoted. In the figures given above, this reduction has been taken into account.

Limestone Supplies

Limestone required for the Rourkela steel plant will be obtained from the Hathibari-Purnapani area. It is expected that fully mechanised quarrying operations in this area will begin by about the middle of 1960. Meanwhile, quarrying is being done on a limited scale by manual labour. In order to supplement this supply, special arrangements have been made to obtain limestone from the Bisra limestone quarry of Bird and Company. For the first few years of operation of the Durgapur steel plant, it is intended to draw limestone from existing sources in the Birmitrapur-Hathibari area of Orissa. Only when both the Rourkela steel plant and the Durgapur steel plant are expanded will it become necessary for new sources to be located. Investigations are going on at present in the Shahabad district of Bihar and the Sambalpur and Sundergarh districts of Orissa.

Machinery for Streptomycin

For the streptomycin scheme, an agreement has been signed with Merck and Company of the U.S.A. for obtaining consultant services. Lists of machinery and equipment to be imported from abroad and to be obtained from indigenous sources have been drawn up in consultation with the American firm. Tenders are expected to be invited shortly. The scheme visualises the production of 40,000 to 45,000 kilograms (40 to 45 tons) of streptomycin and dihydrostreptomycin a year. It is estimated to cost about Rs. 170 lakhs, out of which about Rs. 91 lakhs will be in foreign exchange. It is expected to be completed in 1960-61.

Development of Visakhapatnam Port

The development project for Visakhapatnam port consists of two parts, namely: (i) construction of four berths, two for general cargo and two for ore; and (ii) provision of the belt conveyor system and auxiliary facilities, including railway sidings and plants for handling ore. The project will cost Rs. 4.50 crores, as now estimated, the foreign exchange component being Rs. 2.10 crores.

Railway Electrification

The following statement shows the progress made up to 31st October, 1958, and the expenditure incurred up to 30th September, 1958, on the elec-

trification of the various sections of the Eastern and South-Eastern Railways.

Serial No.	Sections	Expenditure incurred up to 30-9-1958	Progress made up to 31-10-1958
1	Howrah-Bandel-Burdwan-Tarakshwar Branch	Rs. 11.40 lakhs approximate	Work on these sections has been practically completed and electric suburban services right up to Burdwan have been extended from 15th August, 1958.
2	Durgapur-Gaya; Paradhankanta-Pathardih	Rs. 120 lakhs	Order has been placed for 110 mixed traffic-type locomotives.
3	Asansol-Sini-Tatanagar-Rourkela; Kandra-Gomhoria; Rajkharwan-Dongaposi	Rs. 75 lakhs	Preliminary survey and design works pertaining to civil engineering, signalling and telecommunication works for these sections are in progress. Tenders for supply and erection of overhead equipments are being finalised and orders are expected to be placed shortly. An estimate for survey and design of overhead equipment for these sections has been sanctioned and this work will be taken in hand shortly. Civil engineering work including the slewing of the track and raising of foot over-bridges has been done on some portions of the Durgapur-Docks section.
4	Gaya-Moghalsarai	Rs. 1,140 lakhs approximate	
5	Khargpur-Tatanagar	Rs. 60,000 approx.	
6	Howrah-Khargpur	Rs. 1.3 lakhs	
7	Durgapur-Docks	Rs. 8 lakhs	

Suggestions of Railway Users

The latest report of the National Railway Users Consultative Council is now available. The Council has urged the railways to encourage the indigenous manufacture of wagons and coaches, including electrical multiple units. In what way indigenous manufactured coaches add to the amenities of railway users has, however, not been explained.

Coal Commissioner

The Coal Commissioner, Mr. Nayak, will be shortly finishing his term. Various persons, including Mr. Zaman, at present employed in the Administrative College in Hyderabad, are being considered to succeed him. The managing director of the National Coal Development Corporation, Mr. Krishnaswamy, has asked for a change in his assignment after he finishes his present term of office.

Insulin Imports

During 1957, insulin to the value of about Rs. 19 lakhs was imported, while during the first eight months of this year, Rs. 10 lakhs worth of imports have been made. The Government is planning to set up an insulin plant with a production capacity of 30 million mega units a year. The cost of investment will be about Rs. 2 crores. The raw materials for insulin are animal glands. The Government proposes to establish the factory with Russian collaboration at a suitable place.

In particular, MONSANTO makes a major contribution to the following industries:

rubber	disinfectants
textiles	food
pharmaceuticals	perfume and cosmetics
plastics	soap and detergents
paint	timber
petroleum	dyestuffs
preservatives	leather
printing inks	paper
adhesives	

Monsanto Chemicals Limited, London • Monsanto Chemical Company, St. Louis, U.S.A. • Dependable service from Monsanto companies in London, Melbourne, Montreal, Paris, Bombay, Tokyo, Mexico, D.F., Buenos Aires and from sales representatives in all principal cities of the world.

able an additional \$60 million during the next two years.

Decline in Exports

During the eight months ended August 1958, India's exports declined by Rs. 59 crores compared with 1957; cotton piecegoods, jute yarn and manufactures, manganese ore, castor oil, tanned hides and skins and raw wool were the principal items responsible for the fall. This was disclosed in the Lok Sabha in reply to a question by Mr. Mahabir Tyagi, who proposes to raise a discussion on the issue during the current session. The question raised is of more than ordinary importance. The Government has its own explanations for the fall. Chinese competition in south-east Asia, it was pointed out, was mainly responsible for the decline in the exports of cotton textiles. It was explained that Chinese prices, which had no relation to the cost of production, were even lower than those of Japanese textiles.

The Government, however, did not explain how far India had lost its competitive advantage due to its own ideology or policy. It is admitted, for example, that the export trade in manganese ore has declined, as a result of which some mines have closed down. Simultaneously, the Labour Ministry has announced its decision to bring legislation during the current session of Parliament levying a cess for labour welfare on these mines. In the nature of things, this should further depress exports by raising the prices of manganese ore. It is time the effects of labour policy on the price structure were given closer examination. The case of the Polish deal for Rs. 2 crores worth of textiles, which fell through because the textile interests would not reduce the price by one naya paisa, has already been reported. How far the existing profit margins are responsible for the fall in exports needs to be examined also.

Impressions of the U.K. Industrialist

Sir Peter Roberts, chairman of the Wellman Smith Owen Engineering Corporation (a member of the British consortium erecting the Durgapur steelworks) and of Newton, Chambers and Company Limited (sub-contractors on the project), has declared on his return from a tour of India: "I received a very favourable impression of the way in which the Indian Government is maintaining progress in its ambitious development programme. India will be able to produce cheap steel, and this must ultimately benefit intra-Commonwealth trade. There are enormous opportunities for British engineering in India." He foresaw hopes of increased trade for Britain in iron ore following the development of India's rail and port facilities. Sir Peter, while in India, showed interest in the development of port and railway transport facilities on the west coast of India for the development of the export trade in iron ore.

Project for Tractors and Lorries

The Prime Minister lent his support in the Lok Sabha to the Defence Ministry's project for the manufacture in India of the Crowler type of tractors. The Defence Ministry's claim is that it has idle capacity in its 19 ordnance factories with 45,000 employees. It has, for example, begun manufacturing sealed unit compressors for refrigerators and air-conditioners. It has entered into two agreements, one with the Japanese firm of Komatsu, for the manufacture of the Crowler type of tractors. There is a similar agreement with a German firm, M.A.N., for the manufacture in India of lorries. Both the firms will supply drawings, specifications, technical know-how and components at contract prices. Royalty will be payable on the components manufactured in India. There is no obligation to buy equipment from the two firms. It will be obtained through global tenders. The tractor project will require Rs. 25 lakhs in foreign exchange for which the yen credit may be used. The agreement with M.A.N., similarly, will require Rs. 40 lakhs of foreign exchange. Both the agreements are for a period of ten years. It is claimed that 95 percent of the components for the lorries will be manufactured in India within five years.
