Works will be regulated by similar settlements.

"To my mind the signing of these six settlements is one of the most significant events within the A.C.C., because the spirit which has brought forth these agreements should certainly lead to better industrial relations in the coming years and consequently to greater prosperity for the Company and, in the same measure, for those who work in it."

SHARES FOR EMPLOYEES

The Chairman stated that 12,202 shares out of the new issue of 6,35,928 shares had remained unapplied for by the shareholders as at 31st October, 1957. The Board had therefore decided to offer these 12,202 shares to the permanent employees of the Company at the face value of Rs 100/- plus the premium of Rs 20/- per share, and the consent of the Controller of Capital Issues had been obtained. Shri Khatau expressed the hope that this would not only enable the Company's employees to make a valuable investment, but would also give them a greater stake in the prosperity of the Company. The Chairman added that the

Indian Finance

offer of shares would have to be confined to the company's employees in India and would not be made to employees in Pakistan because the State Bank of Pakistan had declined to grant necessary permission.

BONUS AND APPRECIATION

The Chairman announced that the Board had decided to pay a bonus to all the employees in appreciation of their excellent work: to those employees drawing up to Rs 1,000 per month by way of basic earnings a bonus equivalent to one-fourth of their basic earnings during the year; to those drawing over Rs 1,000 a bonus equivalent to one-fifth of their basic earnings during the year. The Chairman concluded by recording the Company's warm appreciation of the whole-hearted co-operation and sustained hard work put in by all members of the Company's staff during the year.

Note: This does not purport to be Report of the Proceedings of the Annual General Meeting which will be sent separately to Shareholders on Request.

THE HOWRAH-SHEAKHALLA LIGHT RAILWAY COMPANY, LIMITED.

NOTICE is hereby given that the One hundred and twenty second Ordinary General Meeting (not being an Annual General Meeting) of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta-1, on Friday, the 7th March, 1958, at 3-50 p.m. for the following purposes:

- (1) To receive and consider the audited Accounts for the half-year ended 30th September, 1956, the Balance Sheet as at that date, and the Reports of the Board of Directors and the Auditors thereon.
- (2) To declare a dividend on the Ordinary Shares.

The Register of Ordinary Shareholders of the Company and the Transfer Books will be closed from the 25th February to the 7th March 1958, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member.

By Order of the Board,
K. CHATTERTON,
Chairman.

Calcutta,
the 8th February, 1958.

NOTE—Transfers to qualify for the dividend must be LODGED at the Registered Office of the Company by 4 p.m. on the 24th February, 1958.

THE SHAHDARA (DELHI)-SAHARANPUR LIGHT RAILWAY COMPANY, LIMITED.

NOTICE is hereby given that the One hundred and second Ordinary General Meeting (not being an Annual General Meeting) of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta-1, on Friday, the 7th March, 1958 at 3-0 p.m. for the following purposes:

- (1) To receive and consider the audited Accounts for the half-year ended 30th September, 1956, the Balance Sheet as at that date, and the Reports of the Board of Directors and the Auditors thereon.
- (2) To declare a dividend on the Ordinary Shares.

The Register of Ordinary Shareholders of the Company and the Transfer Books will be closed from the 25th February to the 7th March 1958, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member.

By Order of the Board,
K. CHATTERTON,
Chairman.

Calcutta,
the 8th February, 1958.

NOTE—Transfers to qualify for the dividend must be LODGED at the Registered Office of the Company by 4 p.m. on the 24th February, 1958.

February 8, 1958

Indian Chemical Manufacturers Association

Seventeenth Annual General Meeting held in Calcutta on 4th February, 1958

Presidential Address of Shri Charat Ram

The following is the Presidential Address of Shri Charat Ram at the Seventeenth Annual General Meeting of The Indian Chemical Manufacturers Association held in Calcutta on 4th February, 1958:—

Hon'ble Shri Manubhai Shah, Friends and Fellow Delegates,

It is my privilege to welcome you, Sir, once again in our midst today, to inaugurate the Annual Session of our Association. We are conscious that you have fulfilled our hope expressed last year here on a similar occasion, that the inauguration of the Annual Session of the Indian Chemical Manufacturers Association by the Minister for Industries of the Government of India, would become a precedent to be continued year after year. The Chemical and Pharmaceutical Industry recognise in you one of themselves. We particularly value the consultation and confidence, which you and your Ministry have sought to foster between the Industry and the Government, for it is only by co-operative effort that our national objectives can best be achieved.

GENERAL REVIEW

2. From the Industry's point of view, the most notable event of the year was the desperate situation of foreign exchange resources resulting in practically a blanket ban on imports. It was a shock from which most of us are only now gradually recovering. The shock was not so much on account of the extent of the foreign exchange shortage, as on account of the sudden manner in which all of us appeared to be having to face it one fine morning, in a condition of complete unpreparedness. It would be futile to find fault with the planners of our economic future, ostensibly for the lack of forethought about such an eventuality, for mistakes are sometimes inevitable, particularly when we do not have the wealth of experience, fiscal and industrial, to guide us. What however would be tragic, nationally, is, if we were to draw no lesson from such failures, and they were repeated for the lack of an adaptable approach in views, ideas, and means of achieving our national objectives. As one in industry, I must say that I consider this desperate situation a blessing. It is a call to each one of us to bring forth the traditional resourcefulness of the private entrepreneur in meeting the needs of the coun-

try from indigenous production, what was met so far from imports. A vastly changed approach to work and philosophy of business is what is expected from us men of industry today.

3. We have had another year of great upsurge in production all along the line, and consequently of consumption too. This is a welcome trend, but it would be wise to acknowledge, that this year's progress has been achieved at the cost of great stresses on the economic foundations of industry. Faced with mounting raw material costs, pressing labour demands, labour welfare measures, increased railway freights, higher costs of capital goods and spares and higher interest rates, on the one hand, and a desire on the part of the Government to keep the prices low on the other, the industry has had to dip deeply into its operating margins and reserves. Disregarding this cost-price squeeze on the Industry, increased taxation was imposed in the year, reducing greatly the resources of the industry. I should express a note of warning, that another year or two of this type of operations, would surely ruin the economic foundations of the Industry and enfeeble it to a degree that it may not be able to meet the demands of production expected of it. I say so with all the greater emphasis, knowing that it is the Government's desire to strengthen the sinews of industry to the utmost, to enable it to play its necessary part in the development of the country's resources, and what has happened has been somewhat in spite of the Government's wishes.

4. Mention must be made of the spectre of inflation that has been with us throughout the past year when compared to 1956 and 1955, even though there has been some downward adjustment in the latter part of the year. More, it bids to be with us indefinitely, if we do not make a determined bid to get rid of it. Over a year ago the Prime Minister had warned that increased food production was pivotal to the entire Plan, and that there must be a near 40% increase in food output if the Plan was not to be endangered. Sir, the real core of the Plan is not steel or transport, but food. I should be pardoned for saying that in this matter, the Government needs to make a critical reappraisal of the country's organisation, efforts and results, and without fear or favour make such shifts urgently as are needed. If food production is not increased

and food prices not brought lower, it is no use hoping to meet the threat of inflation. Food accounts for no less than 60% of consumer expenditure, and even a slight rise in food prices affects greatly the consumer cost of living index all along the line. The food price-line, Sir, has not only to be held, but surely to be brought down.

PRODUCTION

5. The momentum of industrial production was not only maintained during 1957; it also acquired greater substance and speed. The general index of industrial production, which stood at 133 in 1956 rose to 149 in the first 9 months of the year. Considering the strain, in view of the need to conserve foreign exchange resources, it is creditable that there was no diminution in the output of even those industries which depend on imported raw materials and components. An impressive range of new articles were manufactured for the first time during the year, such as sewing machine needles, hypodermic needles, automobile ancillaries like clutch and brake assemblies, synthetic detergents, raw materials for plastics etc. Production increases in the Chemical and Pharmaceutical industries have more than kept pace with the performance in other sectors of the industry. The production of caustic soda, soda ash, sulphuric acid, superphosphate, chlorine, D.D.T., Penicillin, pharmaceuticals, dye-stuffs etc. was all round higher. I should not burden you with the production statistics, as we are all familiar with them by now. Despite these impressive increases, there is considerable scope still for improving the utilisation percentage of the country's installed manufacturing capacity. For some unknown reason we continue to assess the capacity of the industry on the basis of 300/330 working days a year. Sir, in the Chemical Industry our target should be an effective utilisation of nearer 360 working days in the year. Given adequate emphasis on preventive maintenance by industry, I am confident that this is not difficult of achievement. This should give us more than a 10% boost in our output, for little or no additional foreign exchange requirements.

6. While on the subject of production, I should refer to the Industries Licencing Policy of the Government. Instances have been brought to us, where applications for such items as chloroform, chloral-hydrate, aspirin, sodium

salicylate, methyl salicylate, P.A.S., DDS, and gamapicoline have been disallowed on the ground that similar projects were under consideration for the public sector. Sir, we presume that the Government are interested now in putting their resources and energies into only those projects where initiative or finance is not forthcoming from the private sector. We place the case for the sanction of these small projects for your consideration.

7. Supplies of the products of the Chemical and Pharmaceutical Industry to the D.G.S. & D. form no mean part of the industry's production. We should not hesitate to place before you that in spite of best efforts on all sides, dealing with the D.G.S. & D. continues to be on the whole a frustrating business, whether it is in the matter of testing of samples, or getting the goods approved, or receiving first and final payments. So long as this Department will not change its basic approach and place its transactions on a normal commercial basis, and not deal with suppliers from a position of strength, no improvement could really be expected. It is easier to make supplies to scores of other parties, including the Government controlled industrial Companies, as they deal in a commercial manner, but not so with the D.G.S. & D. with whom time and money of the supplier are of no value. We have to suggest that purchases by the D.G.S. & D. should be made by specifications and not by 'brands', that in all cases no less than 98% advance payment can be made by them, as the average rejection percentage could not be as much as 2%, and that inspection at the works site would be of great assistance to both the suppliers and the indentors. Furthermore, the liability of the suppliers for the goods supplied should cease once the goods which have been approved are put on rail. Under the present rules, the contractor remains liable even for pilferages in transit.

8. Easing of the problems of the Pharmaceutical Industry, arising out of the Drugs and connected rules, would go a long way towards facilitating production. A complete uniformity in the enforcement of the Drugs Act in all the States is called for, and the Union Government should see that no State makes any local variations in matters connected with these Acts and Rules. We believe that at least in matters pertaining to industrial development, the coun-

try could be considered as one centrally administered unit, and that Industries and Excise Departments of the States would not attempt to consider themselves as law unto themselves.

9. A special reference to the slow development of production in the superphosphate industry is called for, as there is a real danger of a great short-fall in the production of this industry against the targets of the 2nd Plan. A production target for superphosphate of over 7 lakh tons in the remaining three years of the Plan period is to be reached as against the current annual rate of production of over 1 lakh tons only. I had highlighted this problem last year also, stating, that if the Plan target is to remain, not only a target, as was the case in the First Plan, a directed and purposive effort cannot be avoided. Production of superphosphate is dependent exclusively on its consumption. It is unfortunate that nitrogenous fertilisers are still considered a cure-all for our agricultural problems. Whereas almost without exception, the ratio of nitrogen to P_2O_5 used in other countries is 100:115, in India it is 100:30. Developing an effective system of subsidy as in the U.K., readjustment of railway freights on the same levels as for manures, and more liberal granting of taqavi loans are some of the measures which will prove of use in attaining the targets of production of superphosphates.

10. Increase of superphosphate production acquires an infinitely greater significance in today's context of foreign exchange shortage. Imported nitrogen could be replaced by indigenously produced superphosphates in many areas, without affecting food production adversely, saving the drain on foreign exchange. A memorandum has been submitted in this matter to the Prime Minister by the Fertilizer Association of India, which could be usefully followed up in your Ministry.

CAPITAL REQUIREMENTS AND RESOURCES OF THE CHEMICAL INDUSTRY

11. A reference has been made earlier to the cost-price squeeze and increased taxation which have reduced greatly the none too generous resources of the Chemical Industry. Chemical Industries, Sir, are capital-intensive.

12. The initial gross fixed capital requirement per worker in the Chemical Industry works out to more than six times as high as the requirement for all the industries covered by the Census of Manufacturers, i.e., Rs. 19,700 as against Rs. 3,200. Contrary to popular impression, the working capital requirements are also high in the chemical industries, the average for all the Census industries in 1954 being Rs. 2,800 per worker, as against Rs. 7,000 for the chemical industries. The Second Plan targets call for a spurt in investment in the chemical industries

from Rs. 26 crores in the First Plan to Rs. 132 crores in the Second Plan period. And a serious problem of finance availability arises. Chemical industries earned only 3% after paying taxes on their net worth during the period 1951-55 as against an overall corporate figure of 7.9%. When compared with other capital-intensive industries like steel, paper, cement etc., the picture is truly depressing and must cause concern to all interested in the attainment of the investment targets of the chemical industries, as the following figures show:—

Industry:	Ratio of profits after taxes to net worth
Iron & Steel ..	17.6%
Paper ..	10.6%
Cement ..	11.0%
Chemical ..	3.0%

13. According to a survey carried out by the Reserve Bank, the retained profit of 750 Public Limited Companies were 39% of the pre-tax profits. In the chemical industries, Sir, the comparable figure is only 1.2%. This may be compared with the retention in the other capital-intensive industries, being 66% in steel, 55% in paper and 39% in cement.

14. It will be obvious that the planning of the supply of capital is no less important than the planning of the supply of raw materials, utilities, etc. We had occasion lately to make an assessment of the capital needs of the caustic soda industry and were amazed to find that, as against the general idea of the capital requirement of Rs. 3½ lakhs per ton-year of caustic soda, on the basis of latest costs, Rs. 6½ per ton-year of caustic soda were needed, i.e., a total requirement of nearly Rs. 20 crores for meeting the Second Plan targets for the balance of the Plan period. Capital needs for other chemical products are likely to indicate capital requirements on a similar scale. Capital costs are increasing at an average annual rate of 8% to 9%, and a continuous adjustment in capital cost estimates has to be made of these increases, for the estimates we make in one year become out of date for another year. There are usually three sources of capital availability open to any business, viz., share capital, loan capital, and internal capital. Whatever the source of capital, however, business must provide for basic 'capital-charges' in its cost and profit structure, viz., depreciation, rehabilitation reserve, dividends, interest on loan, repayment of loan, and a fair net return on investment, and if we wish to avoid capital erosion, an acceptance of these capital charges in a realistic way will need to be made. It is not easy for any industry, and much less for the Chemical Industry, to raise capital in the share market these days. The procurement of capital however, must be looked at very much in the same way as the procurement of raw materials or any other services, i.e.,

the cheapest source must be tapped. Sir, the use of "Internal Capital" is the cheapest source of capital procurement, for there is fixed charge for dividends as in the case of share capital, nor of interest on loan and provision for repayment of loan as in the case of loans. All this is not a matter of opinion but a fact, and I have to commend that if an objective study does uphold this conclusion, then the Government and the Tariff Commission should in their consideration of fair prices of products keep this aspect in view. For correct guidance as to the direction which our effort should take for tapping sources of capital for the Chemical Industry, we need to begin to visualise in a general way, the extent of the needs of the 3rd Plan from now on, for such a long range approach will help direct our thinking into practical channels.

DEVELOPMENT OF GEOLOGICAL RESOURCES

15. Geological resources are a source of great potential wealth for any country. In a vast country like India, there must be an unlimited store of wealth lying hidden underground, waiting to be tapped. Geological industries are primary industries, on the development of which are dependent scores of chemical and engineering industries, the development of which would open up vistas of prosperity undreamt of. Intensive and extensive development of our geological resources would provide large scale employment at home, and much needed raw ores and finished goods for export earnings on the other.

16. We know in the case of coal and iron ore how intensified development has increased our knowledge of our wealth, and we are well on the way to becoming a leading producer and exporter of these items. In the chemical field there are so many of our industries which are totally dependent on geological industries, e.g., aluminium on bauxite, ammonium sulphate on gypsum, caustic soda on salt and so on. There are numerous other chemical industries which could be set up on a sound footing only if they could be fed adequately by well-developed geological industries. Bleaching earths need bentonite, bleaching powder and calcium carbide need good lime, superphosphates need rock phosphate, sulphuric acid needs pyrites and gypsum and so on. Sir, in high-lighting the importance of geological development for the development of chemical industries, I should like to mention that this aspect of our development as a vast potential source of national wealth appears to be somewhat under-rated. There is need probably for a closer liaison between the Ministries of Industries and Mines for a fuller exploitation of these resources. We could with advantage increase the educational institutions and also improve greatly the quantity and quality

of the graduates that our educational institutes turn out in the geological field. Geological development should not prove a great burden on our resources, for in the early stages there will be greater need of human resources rather than of equipment.

17. I should like to suggest that the organisation structure in the field of geological survey and development may be put on product-wise basis rather than on region-wise basis, or in the alternative, for selected products at least, separate cells or groups headed by senior people should be formed for achievement of quicker and more dependable results. To my knowledge this has already been done, for instance, for oil, coal and steel—these product-wise specialised divisions could be extended to cover many more items.

CHEMICAL INDUSTRIES AND FOREIGN EXCHANGE CRISIS

18. Last year I had mentioned that the size of our Second Plan will be largely determined by our ability to provide adequate foreign exchange resources. The events during the year have testified to this view. I should like to repeat what I said last year, that it is a primary duty of us industrialists to give a new slant to our production plans for specifically augmenting the country's foreign exchange resources by canalising the development of the industry into:

- products which will reduce imports, and
- products which will increase exports.

19. It is the Chemical and Engineering industries which the Government and the people are now increasingly looking to, for solving this difficult situation. The items exportable by the Chemical Industry are varied in character, such as bleaching powder, bichromates, magnesium and calcium chlorides, Azo-dyes, calcium carbonate, animal glue, phenyl, D.D.T., Penicillin etc. We also need to change our approach to production capacities, from planning for self-sufficiency only to planning for surpluses for export. At present even the planning for internal consumption becomes inadequate, by the time the planned capacities have matured. There is no reason why even the Government factories producing ammonium sulphate, D.D.T., Penicillin etc., should not plan for exports straightaway. Furthermore, instead of setting up new units of production, which would need far larger resources, we should proceed on the basis of expanding capacities in the existing units.

20. The trade agreements concluded with different countries as well as direct enquiries, have brought out the fact that not only adjacent countries such as Malaya, Indonesia, Thailand, Ceylon, Egypt and Burma are important prospective customers for us, but even industrially advanced countries such as the U.S.A., the U.K., Canada and West Germany would

buy some of our products. Prospecting for such exports has not been made so far in any systematic manner. I have to recommend that when negotiations for trade agreements are taking place with any country, representatives of the Chemical Industry through the Association may be given an opportunity for consultations with your Ministry. Such consultation at the time of the negotiations should be of considerable help in placing the export possibilities of the Chemical Industry in an appropriate perspective.

21. Unless the matter of foreign exchange is tackled on an austere basis, it will not be possible to have a rapid development of the country. I am one of those, Sir, who believe that the present generation will have to undergo hardships in the shape of restraint in consumption today, for investing in exports for the building up of India of tomorrow. I am glad that the Directorate of Export Promotion has set certain export targets for the chemical industries in the current year totalling over Rs. 5 crores. Expansion in manufacturing capacity, which is bound to arise by 1961 or later, and the importance of building up connections alike, demand that even if our exports should involve some sacrifice of domestic consumption, this risk should be deliberately taken. Informed opinion does appreciate this point, as I find from the Annual Report of the Directors of the Reserve Bank.

22. As an aid to exports, the Association sponsored the setting up of a Chemical & Allied Products Export Promotion Council, which we hope would be inaugurated shortly. I plead that we should

bring to bear on the problem of export promotion a great sense of urgency and no delays should be allowed to occur in the licensing of exports, assigning freight priorities, draw-backs of duties etc.

23. I should like to repeat this year again what was mentioned with regard to the sulphur needs of the country. Sulphur requirements have doubled to 80,000 tons at the beginning of the Second Plan period as compared to the First Plan period, and will rise drastically during the next five years. We need to look for basic long-term solutions for self-sufficiency by the two-pronged drive for exploitation of the processes utilising pyrites and gypsum by the help of technical aid from Norway, Germany, Poland etc. A great deal of time, Sir, has elapsed in considering these matters and it must be possible to concretize decisions now, for sulphur, apart from being a key raw material, is draining away several crore rupees worth of foreign exchange resources, which could be easily saved.

NEED FOR SOUND ORGANISATION AND GOOD MANAGEMENT

24. In emphasizing the need for sound management to my colleagues in industry here, I have in mind the requirements of our Plans for economic development. The Second Five Year Plan provides a model of economic growth in which per capita income would double by 1973-74, i.e., by about the middle of the Fifth Plan period. For this to happen, the planners envisage an increase of the investment effort of the community, so that India will make a net invest-

A mild recovery after sharp setback

Watch-Dog Writes:

THE recent improvement in the share market sentiment has proved short-lived. Equities have, once again, taken a downward course although they have staged a mild recovery at the close of the week.

There is a general feeling in market circles that, in the light of the statement made by the Prime Minister at the Indian Merchants Chamber in Bombay, there will not be any material change in the tax structure of the country. Moreover, operators are worried by the fact that the State Governments may be levying additional taxation with a view to meet their targets

of expenditure in the third year of the Plan.

Naturally, sentiment on the Calcutta Stock Exchange remained depressed and prices, after developing a sagging tendency due to renewed selling pressure till Wednesday, showed a slight recovery towards the close of the week due to some short-covering at lower levels.

Equities on the Bombay Stock Exchange showed a mixed trend with Steel shares steady and Textile scrips easy. The Miscellaneous section presented a mixed appearance.

On the Madras Stock Exchange, business continued to be restricted, and enquiry was confined to only a few selected scrips.

Prices on the London Stock Exchange advanced on a broad front, thanks to a steady investment demand.

Wall Street closed heavy with a fair distribution of losses, ranging mostly to around a dollar.

Calcutta

Calcutta, Friday Evening

EQUITIES on the local Stock Exchange, after developing a sagging

tendency till Wednesday due to renewed selling pressure, recovered moderately at the close following the emergence of bull support coupled with some bear-covering at lower levels. The initial weakness of the market was mainly influenced by the Prime Minister's speech at the Indian Merchants Chamber in Bombay which gave rise to a feeling that the Government might not introduce favourable chances in the impending Budget with a view to restoring confidence in the market. It was feared that the States would also be obliged to cast their nets as wide as possible in their attempt to strengthen their revenue position. There was also an anxiety on the part of operators to await Justice Chagla's report on his enquiry into the LIC investments in the Mundhra group of shares. But for some recovery in the speculative issues, the market would have finished at the worst levels for the week.

The Giltedged section ruled, however, comparatively steady although interest was still confined to short-dated issues. As enquiry from banks was negligible and from other quarters small, the

- to make an ever increasingly large quantity of goods of the best possible quality, to make them in the most economical fashion, and to push them in the market;
- to strive always for higher quality and lower prices, as well as lower costs;

3. to raise wages gradually but continuously, and never to cut them;

4. to get the goods to the consumer in the most economical manner, so that the benefits of low cost of production may reach him.

25. In addressing this to my colleagues, I am conscious that we have come to show a vigorous determination to take difficulties in our stride, and that the business fabric of India, and by that I mean the intellectual and moral calibre of our businessmen, is far stronger today than ever before, for there is growing appreciation that there is no gain comparable to that achieved by sound management practices.

26. I have attempted to place before you, Sir, and my colleagues in Industry, such important points as I feel need consideration. Before I close, I should record my appreciation of the co-operation and assistance which we have had from your Ministry at all levels. I wish also to express my thanks to the members of the Association, my colleagues on the Committee and the Secretary of the Association and his staff whose valued co-operation and assistance have been of great help to me during my second term of office. I am grateful to the members for the confidence they have expressed in me by re-electing me to a third term.

Gentlemen, I thank you for responding to our invitation and for giving me a patient hearing. I thank you, Sir, again most heartily and request you to inaugurate the Seventeenth Annual General Meeting of our Association.

volume of business continued to be restricted. 3 per cent 1986 Conversion Loan opened at Rs 70.90 and, after improving at one time to Rs 71.25, receded again at the close to Rs 71.12.

Bank shares came in for some profit-taking at the recent high levels. Hind were marked down to Rs 46.25 from Rs 48.75 and United Commercial to Rs 59.75 from Rs 62.25. Punjab National moved narrowly between Rs 51.37 and Rs 51.50.

Sentiment in the Jute section remained subdued following weaker advices from the jute goods market. Moreover, fears were entertained with regard to the profit-margins of mills in view of the tight supply position of raw jute. National were on offer further lower at Rs 23 against Rs 23.85; Delta at Rs 99 against Rs 105; Belvedere at Rs 67.50 against Rs 69.90; Budge-Budge at Rs 64 against Rs 70; Anglo-India at Rs 130 against Rs 134 and India at Rs 94.50 against Rs 96. Kankannarah were, however, maintained at Rs 46, while New Central, after being taken upto Rs 13.69 following company's proposal to issue

bonus shares, receded at the close to Rs 13.00 on profit-taking.

Coal shares ruled comparatively better on reports of the increase in raisings and despatches last year and on the expectation of good working results from various collieries. Higher levels could not, however, be maintained till the close due to the general trend of the market. Most prominent were Central India having buyers upto Rs 6.62 from Rs 6.50 and Amalgamated upto Rs 15.75 from Rs 15.62. Burrakur, after touching a low of Rs 21.87 on speculative selling, improved towards the close to Rs 22.25. Bengal met with some business at Rs 234. South Karanpura turned quiet at Rs 8.94 against Rs 9.25, while Western Bengal were a narrow market around Rs 5.31.

There was little doing in the Tea section with only few buyers in evidence. Lower prices still obtained at the auctions and fears of a reduction in dividends for 1957 had a depressing effect on sentiment. Only a few scrips managed to maintain their best levels on the hope that the Government of India would release a further quota for tea export as suggested by the Central Tea Board at the recently-held meeting. Most prominent were Brahmapootra changing hands at Rs 3.19 to Rs 3.21; Bateli at Rs 18.50 to Rs 18.62; Bishnauth at Rs 18.75 to Rs 18.94; Dhelakhath at Rs 20.25 to Rs 20.37; Jayshree at Rs 10.06 to Rs 10.12 and Rungamatttee at Rs 60.50 to Rs 62.50. Hantapara, however, lost nearly Rs 12 at Rs 119.

Although business continued to be restricted, Sugar shares came in for selective enquiry on expectation of good working results for last year. Most prominent were Balmampore being taken upto Rs 6.25 from Rs 5.25 and United Provinces upto Rs 13.12. Belsund, however, turned a shade quieter at Rs 9.81 against Rs 10 and Carew at Rs 6.19 against Rs 6.62. SKG were nearly maintained at Rs 9.00. The reports of the improved conditions in the cloth market had no marked effect on the Textiles section. The only bright spot was Kesoram which met with some support upto Rs 10.19 from Rs 9.94. New Victoria moved narrowly between Rs 1.28 and Rs 1.37.

In the week's dealings, Engineering shares were the worst affected and prices of all scrips were initially marked down sharply under the lead of Indian Irons although a slight recovery was noticed towards the close due to some covering at lower levels. Against the week-end closing of Rs 20.48, Indian Irons opened lower at Rs 20.35 and receded further to Rs 19.42 at which level some covering caused the scrip to recover again to Rs 19.65, to close the week finally at Rs 19.62. Similarly, TEXMACO was pushed down at one time to Rs 16.80 from Rs 17.85; Marshalls to Rs 4.95 from Rs 5.31 and Kumardhubi to

Rs 7.87 from Rs 8.00, to improve at the close to Rs 17.10; Rs 5.00 and Rs 7.94 respectively. Indian Standard Wagon changed hands at Rs 101 to Rs 103, while Britannia were a steady feature at Rs 13.25. Jessop, after improving to Rs 22.12 from Rs 21.50, receded again to the latter level at the close.

Except Indian Cable which met with sustained demand from institutional investors upto Rs 28.62 from Rs 27.50, other scrips in the Miscellaneous section moved in sympathy with the general trend of the market. Selling pressure caused Orient Paper to slip down at one time to Rs 24.00 from a high of Rs 25.30 and Titaghur to Rs 33.50 from Rs 34.00, to close better at Rs 24.25 and Rs 33.62 respectively. Shree Gopal changed hands at Rs 13.94 to Rs 14.12. Indian Copper, after touching a high of Rs 2.91 and a low of Rs 2.82, finished better at Rs 2.86. India Steamship were done at Rs 11.59 to Rs 11.81; Aluminium Corporation at Rs 9.81 to Rs 9.87; Indian Aluminium at Rs 12.31 to Rs 12.56; Hindustan Motor at Rs 5.95 to Rs 6.25; Sone Valley at Rs 5.06 to Rs 6.12; Philips India at Rs 13.87 to Rs 14.00; National Carbon at Rs 23.85 to Rs 24.00; Dunlop Rubber at Rs 21.60 to Rs 22.12; Alkali Chemical (new) at Rs 12.25 to Rs 12.31; Osler at Rs 2.31 to Rs 2.68 and B.I.C. at Rs 2.85 to Rs 3.86.

★

Bombay

SENTIMENT on the stockmarket has been subdued by three main factors. In the first place, the fact that steels have been receiving reduced interest following reports (since confirmed) of lower production in TISCO, has kept prices elsewhere in the market also at a lower level. Secondly, the Prime Minister's reference to the stockmarkets in particular and to last year's budget proposals in general seem to have engendered a feeling of pessimism. Thirdly, the proximity of the Central Budget has kept enthusiasm at a low ebb. Over and above all these, it would appear that the growing financial stringency of the corporate sector also seems to have restricted activity. Speaking at the annual meeting of the Indian Merchants Chamber Mr Naval H. Tata, the outgoing president has pointed out that the taxation policy of Government has seriously undermined the financial resources of the private sector. He has, therefore, made a fervent appeal to reduce the tax burden both on individuals and the corporate sector in the coming Budget. He has made it abundantly clear that unless this is done there will be serious dislocation in the working of the private sector as a whole. Operators are therefore eager to see what will be the reaction of Government to the appeal.

STEELS: In the steel section Tata Iron was subdued most of

the time on reports of lower production during January. In earlier dealings it met with some support and was done upto Rs 173.75 but in later dealings and especially toward close encountered pressure to close lower at Rs 169.50. Indian Irons after having been done upto Rs 20.52 closed easier at Rs 19.44.

TEXTILES: Textiles were generally dull and toward close were subdued in sympathy with the steel section. Bombay Dyeing closed lower on balance at Rs 50.80 as did Kohinoor at Rs 266.00. Century reacted to Rs 389.50 from an opening level of Rs 397.25.

MISCELLANEOUS: In the miscellaneous section National Rayon was subjected to heavy and sustained selling pressure on reports of a fresh issue at a premium. The scrip was hammered down to Rs 215.50 from Rs 224.50. ACC was quiet at Rs 153.00 presumably in view of the report of slowing down of the company's expansion programme due to paucity of funds. Shivrajpur was in request in earlier dealings on rumours of a bonus issue but toward close lost ground to close 2 points lower on balance at Rs 92. Scindia Steam was somewhat subdued at Rs 17.24 by close. Bombay Burma met with realising pressure toward close and was finally placed at Rs 540.50 but was nearly three points higher on balance. Premier Construction had declined by Rs 2.75 over the week to close at Rs 158.25. Likewise TELCO was lower on balance at Rs 139.50. Tota Chemical staged a moderate rally toward close to be quoted at Rs 12.84.

★

Madras

WITH the exception of selected Tea and Coffee shares which received mild support, business in other sections of the Madras Stock Exchange continued to be meagre. Lack of follow-up support and a tendency to lighten commitments were the main contributory factors.

TEXTILES: This section gave a poor performance although prices were generally maintained. Buckingham and Bangalore Woollens were maintained their rates at Rs 158 and Rs 173 respectively, while Maduras declined by 25 nP to 35. Lakshmis were one point higher at Rs 114. However, more selling resulted in a drop in Cambodias to Rs 9.90, while Vijayakumars had sellers at the market rate. Rajapalayams were quoted at Rs 123.50 and Mysore Silks at Rs 1.30.

PLANTINGS: Although Tea shares generally continued in poor form, a few selected scrips came in for mild support. Prominent amongst these were Coorgs, which met with sustained enquiry upto Rs 10.75. Periakaramalais were maintained at Rs 4, while United Nilgiris declined to Rs 15.30. Devasholas met with some enquiry at the market rate.

Rubber shares were rather quiet, as operators were awaiting the outcome of the representations which were reported to have been made to the Government for a revision in the price of the commodity in view of the increase in production costs. Cochin Malabars were done lower at Rs 4.05, while T.R.Ts were quoted around Rs 6 and Thirumbadis at Rs 1.33.

In the Coffee group, Consolidated Coffees were a steady feature at Rs 22.75, while Ouchterlony's closed slightly lower at Rs 4.95. Shevroys met with some demand at the market rate.

SUGARS: In this section, some buying was noticed in Deccans at Rs 7.85 to Rs 7.95, while United Breweries were in request at the market rate. However, Mysore had some sellers at the quoted rate. Travancore improved to Rs 10.20 from Rs 10.10.

MISCELLANEOUS: Cement shares continued to be active in anticipation of a rise in the price of cement. Indias improved to Rs 28.50, while Travancore had sustained support at Rs 8.10. Amongst other scrips, Aluminium Industries had some sellers at Rs 13.80 as also for Central Scientifics and FACTS. Mysore Chemicals were done at Rs 6.00 and Mettur Chemicals at Rs 9.80. Radio Electricals changed hands at Rs 5.05 to Rs 5.10; Philips India at Rs 14.00 to Rs 14.16 and Textools at Rs 177 to Rs 178.50.

London

PRICES on the London Stock Exchange advanced on a broad front under a steady investment demand. Sentiment was favourably influenced by increasing hopes of lower interest rates.

Gains were widespread in the Industrial section, Stores shares continuing their recovery. Under American influence, Oil shares ruled firm although the best levels could not be maintained till the close due to lack of sustained buying. Mining shares were also firm.

Giltedged securities advanced sharply on investment buying.

New York

WALL STREET, after advancing vigorously early in the week, closed heavy with a fair distribution of losses ranging mostly to around a dollar. While some shares—notably Aircraft Missiles and Rocket Fuel issues—developed firmness, most other sections were in the grip of consolidation. However, the damage done by profit-taking and other selling was relatively minor.

Steel shares were mostly lower with some selling attracted by the failure of industry operations to improve. Oil shares also favoured the losing side with Royal Dutch and its rights down by small fractions.

sea, air and land, on private and Government accounts during October 1957, according to data so far available in the Department of Commercial Intelligence and Statistics, Calcutta, are as follows:—

Merchandise, excluding transit trade of Pakistan and other overland foreign countries viz., Nepal, Tibet, Sikkim and Bhutan: Exports Rs 52.53 lakhs, re-exports Rs 1.11 lakhs, imports Rs 73.08 lakhs; total trade Rs 126.72 lakhs.

Treasure: Exports (including re-exports) of currency notes Rs 41 lakhs, current coins (excluding gold coins) Rs 1 lakh, other nil. Imports of gold Rs 9 lakhs, currency notes Rs 4.60 lakhs and current coins (excluding gold coins) Rs 1 lakhs.

Balance of Trade: The merchandise import figures are exclusive of the value of certain consignments of Government stores awaiting adjustment. Subject to this deficiency in import figures, the total value of exports (including re-exports) of merchandise and gold fell short of imports by Rs 19.53 lakhs.

EXPORT PROMOTION COUNCIL FOR SPORTS GOODS

An Export Promotion Council for sports goods has been set up with the support of the Government of India.

This is the tenth in the chain of Export Promotion Councils sponsored by Government to develop export markets for Indian products and create greater awareness among Indian manufacturers and exporters of the need for export promotion in the context of the increasing requirements of foreign exchange. The Councils already in existence are those for cotton textiles, rayon

and silk fabrics, plastics, engineering goods, cashew and pepper, tobacco, leather, mica and shellac.

The total annual production of sports goods in India is estimated to be of the order of more than Rs 1 crore. A small percentage of this production is exported. Sports goods industry has a considerable potentiality for earning foreign exchange.

GREATER VALUE OF MINERALS PRODUCED IN FIRST HALF OF 1957

The value of minerals produced during the first half of 1957 was over Rs 57 crores as against Rs 53 crores in the corresponding period of 1956, according to the Indian Bureau of Mines.

The increase, is the result of higher production of chromite, coal, copper ore, lead and zinc and salt and the higher prices of manganese ore during the period.

Coal, with an output of 21.6 million tons, was the leading commodity. The output represented an increase of nearly 2 million tons in comparison with the output during the first half of the last year.

Other minerals responsible for increased production were manganese ore Rs 6.9 crores; salt Rs 6.1 crores; gold Rs 2.5 crores; iron ore Rs 2.1 crores; mica Rs 1.9 crores; copper ore Rs 1.5 crores and ilmenite Rs 0.8 crores.

The quantity index of mineral production stood at 104.2 during the period (base—first half of 1956=100).

NO CHANGE IN TEA EXPORT DUTY

The Government of India have issued a notification fixing the

price of tea, for the purpose of determining the export duty, at Rs 2.99 per lb. as against Rs 3.02 per lb. in force from January 1, 1958. There is no change in the existing rate of duty of naye Paise 38 per lb.

PRODUCTION OF SUGAR

Production of indigenous sugar amounted to 7.02 lakh tons up to January 15, 1958, in the current season which began on November 1, 1957, as against 6.21 lakh tons in the corresponding period of the previous year. The total off-take, including quantities despatched for export, was 3.72 lakh tons.

Stocks with the factories on January 19, 1958, stood at 7.61 lakh tons.

CALCUTTA PORT TRADE DURING 1956-57

The total tonnage handled by Calcutta port during 1956-57 was 8,869,210 as against 8,030,735 in the previous year. There was thus an increase of 838,475 tons or about 10.44 per cent in the total trade passing through the port as compared with 1955-56.

The revenue receipts of the Port Commissioners for the year under review were Rs 10,86,61,288 as against Rs 9,96,93,011 in the previous year. The expenditure for the year amounted to Rs 9,59,88,125 as compared with Rs 9,34,41,109 in the previous year. The year ended with a surplus of Rs 1,26,73,163.

The number of vessels that entered the port during the year was 1383 as against 1285 in the previous year and the total gross tonnage increased from 8,092,143 to 8,562,955.

... and now your shop—Bhai Sahib!

Over 1,00,000 "Namaste" a day! Here, you see a Brooke Bond Salesman with his familiar red delivery van greeting your shopkeeper with a smile and fresh stocks of tea. Brooke Bond Salesmen call on over 1,00,000 dealers every day! These men form the final link in the chain that brings tea fresh from the garden to your door-step.

Be it a city or a village, a big departmental store or just a wayside shop, Brooke Bond Tea arrives

fresh and flavoured, delivered by our own salesmen.

Bhai Sahib! Brooke Bond sell on their guarantee, on their merit. And please note, there is no middleman, no credit sale and no prizes etc. The retailer is absolutely free to buy or to refuse and the fact that more retailers continue to sell more Brooke Bond Tea than any other brand, proves the popularity of the product and the system.

Issued by
Brooke Bond India Private Limited
This is the sixth in a series of 8 advertisements.

HERE ARE SOME FACTS ABOUT BROOKE BOND DISTRIBUTION, BHAI SAHIB!

Every Brooke Bond packet is guaranteed for free replacement if the customer is not satisfied.

Brooke Bond have 2,276 salesmen. They visit 18,612 villages and 1,000 towns per week, from the Himalayas to the southernmost tip of India.

5,25,014 retailers and shopkeepers are directly served by these salesmen.

Brooke Bond's system of distribution ensures that fresh tea reaches the consumer even in remote villages.

HIGHLIGHTS OF THIS ISSUE

GOING, they were saying of Mr T. T. Krishnamachari in Delhi last week, but, as Olympus records it, there was still some doubt.

GOING, they were saying in Clive Street, but, as Eavesdropper writes, there was still hope that the Parker Tribunal's example would be followed.

GONE, records the Leading Article, and a misfortune, but there is at least the prospect that his services will not be lost altogether.

Impact of TTK's Resignation

Investment Gossip:

IF Prime Minister Nehru has been the centre of attraction for market men last week because of his reference to stock markets and the Budget (though the Budget he referred to is nearly one year old!), his colleague in the Cabinet till the middle of this week, has been chosen to fill the bill this past week. It would appear that whatever may be the feeling of the people in the country or for that matter that of Mr Nehru himself, the stock exchange fraternity have decided to leave their reaction to the resignation of Mr T. T. Krishnamachari in no doubt.

In his resignation they have discovered, by the kind of cogitation which they have succeeded in keeping a closely guarded secret, a change in the attitude of Government to private enterprise. However, one can fairly clearly visualise the working of their minds. When Mr Krishnamachari, who has shown himself a ruthless tax collector with novel ideas of tax collection goes, goes with him also an inventive brain which has been plaguing them for the past two years. They are perhaps correct up to this point. But how this reasoning can lead them to conclude that, with his exit, there will be a softening in Government's attitude toward the private sector passes my comprehension.

From what I can see from the facts in the situation that has culminated in the resignation of Mr Krishnamachari, there does not seem to be any warrant for such a conclusion. For one thing, Mr Krishnamachari in his letter to Mr Nehru has pointed out that he has almost finalised the Budget that is imminent, and if we do not forget Mr Nehru's opinion about Mr Krishnamachari's prowess as the interpreter of the Congress Party's fiscal policies, it will be evident that the Budget which we will all see in about a fortnight's time from now will fully bear the impress of its predecessor. There can be no doubt about that. If my friends on the stock exchange still have any doubt, they have only to read that portion in the letter of Mr Krishnamachari referring to the economic situation in the country. Such reading will also be profitable because, while making them less exuberant over a development which in the context of a stable Government in power is a minor matter, will also help them view the economic situation through the eyes of one who

can claim to know it better than most of us.

Referring to the state of our economy, Mr Krishnamachari points out that it has been under great strain for many a past month. The efforts of Government to raise additional resources, coupled with the foreign assistance we are receiving, have eased the situation to some extent. The position, however, does not admit of any complacency. The economic discipline, must, if anything, continue to be rigorous and the nation should always be prepared for the contingency of tightening the belt further.

It is certain that the coming Budget will incorporate all these points and, as a consequence, will not bring any concession that may afford satisfaction. But there is one point about which there is a large consensus of opinion, and there is every possibility that Government may take note of that. As I have pointed out last week, there is urgent need for a gesture from Authority that fiscal policies, though they cannot but be rigorous, are not aimed at slowing down the tempo of economic activity. In this view, it is incumbent on Government to listen to what private enterprise has to say in this regard. Speaking at the Commerce Graduates Association in Bombay early this week, Mr J. R. D. Tata has pointed out that, since the concept of a mixed economy has been accepted by the powers-that-be, it is their duty to see that private enterprise is enabled to function effectively within the framework of that concept. According to him, the taxation policy has not ensured that and what is worse the springs of private enterprise have almost dried up in the past year or two. Such a state of affairs cannot be allowed to continue as the private sector has a big role to play in attaining the targets of the Second Plan. And let it be remembered that the main aim of the taxation policy is to make the Second Plan a resounding success.

All this brings me to the position Eavesdropper has formulated in his article last week. The Budget that is round the corner should demonstrate to the private sector that Government are not at all unmindful of its difficulties.

£ R\$

Investment Notes:

It is a known fact that 1957 has proved worse for the cotton textile industry and the results are coming to light. In the Brady group, New Great Spinning has passed over the dividend on the Ordinary shares for the first time after several years, while New City has halved the dividend to Rs 5 per share. Empire Dyeing has, however, maintained the dividend at Rs 3. Azamjahi has reduced the dividend from Rs 5.00 to Rs 3.50 per share. In Madras, Loyal Textiles have reduced the dividend from 7½ to 5 per cent.

These dividend announcements are indicative of the shape of things to come in respect of other

units. Excepting a few mills with greater financial resources, it is certain that the distributions by the majority of mills will be considerably lower than in the preceding year.

It is understood that the National Rayon Corporation Limited has received the permission for the necessary foreign exchange for their proposed tyre cord factory in Bombay. The question of raising capital in India is to be considered by the Board of Directors shortly. Out of the proposed Rs 3-crore scheme, the US Export-Import Bank had given a loan of Rs 1.80 crores. Of the rest, half will be contributed by the participating firm in the form of plant and equipment and the balance will be raised in India.

£ R\$

Investment Briefs

W. H. Brady & Company has raised the dividend from Rs 22.50 to Rs 25.00 per share for 1957.

Rawalgaoon Sugar has maintained the dividend at Rs 12 per share for the year ended 30th September, 1957.

In Madras, Andhra Sugars have raised the dividend from 10 to 12½ per cent for the same year.

£ R\$

Satisfactory Sugar Results

Balance-Sheet Reviews:

THE accounts of the sugar mills, covering the working results of the last season have, in most cases, made satisfactory showing. A noteworthy feature is the increase in the percentage of recovery even with a longer season and larger crush. Serious efforts are being made to improve the quality as well as the yield of sugarcane. As a result of higher earnings, larger dividends have even been paid by some mills.

£ R\$

Upper Ganges Sugar

Of the three sugar mills—Upper Ganges, New India and Bharat—in the Cotton Agents group, the first-named company has produced excellent working results for the year ended 30th June 1957. Although the quantity of cane crushed amounts to only 10,832,726 maunds as against as much as 12,154,737 maunds, the percentage recovery achieved is higher at 10.38—a record in the company's history. The previous highest record was 10.01 per cent, achieved in the season 1946-47.

Sales for the year have risen to Rs 3.59 crores from Rs 2.73 crores, while the net profit, after providing for Depreciation and Taxation amounts to as much as Rs 10.38 lakhs as against only Rs 5.05 lakhs in the previous year. In respect of allocations, the Depreciation amount is raised to Rs 12.54 lakhs

from Rs 10.54 lakhs; Taxation provision to Rs 18.50 lakhs from Rs 7.90 lakhs and General Reserve to Rs 3.00 lakhs from Rs 2.00 lakhs. Even after these increased allocations, the directors have found it possible to raise the Ordinary dividend from Rs 3 to Rs 5 per share.

According to the directors' report, the Government of India have granted the company a licence for the manufacture of power alcohol from molasses and that steps have been taken to establish a well-equipped distillery at Seohara. Erection of the plant and machinery is progressing satisfactorily.

£ R\$

New India Sugar

The New India Sugar Mills Limited, in the same group, has, however, maintained the dividend at Rs 2.50 per share despite an increase in the net profit from Rs 2.45 lakhs to Rs 3.15 lakhs and in sales from Rs 1.04 crores to Rs 1.47 crores. The Depreciation amount is raised to Rs 4.59 lakhs from Rs 2.95 lakhs and Taxation to Rs 7.10 lakhs from Rs 2.56 lakhs.

The quantity of sugarcane crushed amounts to as much as 5,153,581 maunds against only 4,574,333 maunds, the crushing being the highest in the State of Behar. The average recovery is, however, lower at 9.17 per cent against 9.47 per cent.

£ R\$

Bharat Sugar

The Bharat Sugar Mills Limited has crushed only 2,256,545 maunds, as against 2,498,153 maunds. The lower crush is due to less area under sugarcane and the crop having been affected by disease. The recovery is, however, better at 9.63 per cent against 9.48 per cent.

Sales for the year have risen to Rs 73.32 lakhs from Rs 60.29 lakhs, while the net profit is higher at Rs 2.47 lakhs against Rs 1.83 lakhs. The directors have, after providing Rs 94,400 (Rs 70,300) for Depreciation and Rs 1.60 lakhs (Rs 12,000) for Taxation, maintained the dividend at Rs 1.50 per share.

£ R\$

Bhopal Sugar

The Bhopal Sugar Industries Limited has raised the dividend from Rs 1.50 to Rs 2.00 per share for the year ended 30th September, 1957. The company has shown a substantially higher profit of Rs 14.58 lakhs as against Rs 8.66 lakhs in the previous year after providing Rs 2.27 lakhs (Rs 1.33 lakhs) for Depreciation and Development Rebate Reserve. The provision for Taxation has been raised from Rs 5.50 lakhs to Rs 7.55 lakhs, while a sum of Rs 3 lakhs (nil) has been provided for General Reserve.

Crushing, production and recovery are the highest achieved since 1943. The quantity of cane crushing amounts to 98,951 tons against 74,630 tons, while sugar manufactured has risen to 95,491 bags from 68,581 bags. The average recovery is 9.7 per cent against 9.27 per cent.

Burhwal Sugar

The working of the Burhwal Sugar Mills Company Limited shows a profit of Rs 4.63 lakhs for the year ended 30th September, 1957, after making usual allocations. A sum of Rs 3 lakhs has been provided for Taxation. The directors have proposed a final dividend of 3 per cent.

While expressing satisfaction over the year's working, the directors have stated that prospects for the current season do not appear to be bright on account of anticipated short supply of cane coupled with the absence of any improvement in its quality.

£ R S

McLeod & Company

A large reduction in the dividend income and lower earnings from the jute mills under the company's management, are fully reflected in the working results of McLeod & Company Limited for the year ended 31st December, 1956. The item 'Agency Commission and Allowances' is shown at Rs 23.63 lakhs against Rs 28.45 lakhs and 'Dividends and Interest on Investments' at only Rs 9.36 lakhs against as much as Rs 23.14 lakhs. The net profit, after providing for Depreciation and Taxation, amounts to only Rs 7.85 lakhs against Rs 21.92 lakhs in the previous year.

In respect of allocations, the Depreciation amount is raised to Rs 95,195 from Rs 78,147, while the amounts provided for Taxation and Convertible Notes Redemption Reserve are maintained at Rs 10.00 lakhs and Rs 2.00 lakhs respectively. No provisions are, however, possible for General Reserve and Investments Reserve against Rs 3.50 lakhs and Rs 3.35 lakhs respectively in the previous year.

For obvious reasons, the directors have not recommended the final dividends on the Ordinary and Deferred shares. With the result, the interim dividends of 8 and 3 per cent respectively declared on these shares earlier compare very unfavourably with the total distributions of 22 per cent and 17 per cent paid in 1955.

£ R S

Anderson Wright

Anderson Wright Limited has reported a net profit of Rs 4,18,667 for 1956 as against a loss of Rs 1,59,765 incurred in the previous

year. The directors have, after providing a sum of Rs 50,000 (nil) for Debenture Redemption Reserve and Rs 1.50 lakhs (nil) for Investment Reserve, recommended a dividend of 4 per cent on the Ordinary shares as against nil in 1955.

£ R S

Eastern Investments

Eastern Investments Limited has maintained the dividend at 9 per cent for the year 1957 despite a slight decline in the net profit from Rs 5.74 lakhs to Rs 5.32 lakhs. The item, "Dividends and Interest on Investments" is shown at Rs 12.60 lakhs against Rs 11.44 lakhs. The directors have set apart Rs 6.54 lakhs (Rs 5.45 lakhs) for Taxation and Rs 70,824 (nil) for General Reserve.

£ R S

Parasea Collieries

Parasea Collieries Limited has halved the dividend to 5 per cent for the year 1956 due to a substantial decline in the net profit from Rs 1.70 lakhs to Rs 35,242. The Depreciation amount is raised to Rs 66,634 from Rs 51,795, while the Taxation provision is lowered to Rs 5,000 from Rs 1.34 lakhs and General Reserve to Rs 20,000 from Rs 83,430. Both raisings and despatches are lower at 101,941 tons and 88,664 tons as against 111,481 tons and 102,445 tons respectively.

£ R S

Phalton Sugar

The Phalton Sugar Works Limited has reported encouraging results for the year ended 30th September, 1957. After stepping up the provision for Depreciation from Rs 3.22 lakhs to Rs 3.45 lakhs and for Taxation from Rs 12.25 lakhs to Rs 16.90 lakhs, the company has earned a higher net profit of Rs 13.53 lakhs as compared with Rs 11.82 lakhs in the previous year. Sales have risen from Rs 1.13 crores to Rs 1.37 crores. The directors have, in addition to maintaining the dividend at Rs 9 per share, recommended a bonus of Rs 3 per share for the year.

The quantity of cane crushed is 134,341 tons, producing 162,004 bales of sugar with a recovery of 12.17 per cent as against 125,008 tons of cane; 158,170 bags of sugar and a recovery of 12.785 per cent in the previous year.

TTK's Resignation

THE acceptance by Mr Nehru of Mr T. T. Krishnamachari's resignation is the culmination of a series of events about which none of us can feel happy. We have not yet had the opportunity of studying the Report of the Chagla Commission in any detail, but we must record with regret our first impression that it has left unanswered too many questions connected with the subject matter. It would appear that the Prime Minister is also similarly troubled, for, in his letter to Mr Krishnamachari accepting his resignation, he says that he "still has a feeling that all the relevant facts connected with this unhappy matter have not been brought out". Having said this, let us hasten to add that it is not the fault of the eminent judge who conducted the inquiry, that the findings have, despite his categorical answers to certain questions on the basis of evidence presented before him, the appearance of still remaining inconclusive. The reason for this is, in our view, that a good deal of the material relevant for the determination of the issues involved was not, for various reasons, placed before the Commission. It is a fact within our knowledge that a good many potential witnesses were daunted from doing what in less public circumstances, they would have considered their plain duty, and their inhibitions increased as the volume and nature of public interest manifested themselves during the course of the inquiry. This circumstance, for which the Commission is in no way to blame, prevented to some extent the correction of what the Prime Minister called "an one-sided presentation of facts".

But the reasons which impelled Mr Krishnamachari to resign have nothing to do with the final findings of the Commission, for, Mr Krishnamachari had submitted his formal letter of resignation even before the Commission had concluded its labours. Apart from the constitutional propriety of the Minister taking on himself the responsibility for the conduct of his department (on which Mr Nehru, the Mr Krishnamachari and Mr Chagla agree) the reason that impelled him was the need for absolute public confidence in the Finance Minister in these difficult times. In the best of times, the tasks of the Finance Minister are unpleasant, and during a period of stress, such tasks can be pushed through only by the weight of his personal prestige with the public. It was, therefore, entirely correct that Mr Krishnamachari should have asked to be relieved of his responsibilities. But it is precisely the circumstances of our economy that make his resignation the most unfortunate thing to have happened.

One has to have an inhuman amount of churlishness as well as lack of understanding not to recognise the splendid record of Mr Krishnamachari as a Minister at the Centre for the last six years and as a Finance Minister in the last two years. The most notable quality about him was his insouciance, a certain inner energy, surprising in one whose poor health was notorious. Expressions like "dash" and "drive" are peculiarly apposite to him and the defects of his character were best expressed in similar analogies of motion. His is the sort of man who would get booked for traffic offences like overspeeding and tooting

the horn too loudly and too often at silent zones. The success that attended his ability to "step on the gas" is unfortunately less often noticed than the fact that he is in a serious one-sided argument with the traffic policeman.

But the difference he has made to the bringing into control of the country's economy by his enterprising leadership at the Finance Ministry is there for everyone to see. As Mr Nehru pointed out in his warm personal tribute to TTK, he has taken the country's economy away from certain set grooves into which it had fallen. And, as a persuasive and canny negotiator, and as an able exponent of the country's economic policies to audiences unacquainted with them, he has repeatedly shown his prowess. The most recent demonstration of this quality was his success in bringing

Stimulating Exports 162529

THE discussions at the meetings of the Import and Export Advisory Councils are not as cheerful as the requirements of the Second Plan demand. The foreign exchange position on the whole is not easier today than it was six months back. Future prospects are undoubtedly more hopeful. Mr Morarji Desai recalled how there has been a drastic decline in the quarterly draft on foreign exchange resources. Against a net decline of about Rs 1000 millions in July-September 1957, in the succeeding quarter October-December, the fall was only of the order of Rs 550 millions. There is reason to think that the first quarter of 1958 will develop this trend further. The figures are indicative of the effectiveness of the comparatively rigid import policy accepted from the middle of last year.

Of the other repercussions of this policy, the spokesmen of industry and trade have been critical. At the Council meeting, no one talked of chin saving except the Commerce Minister and he was clearly convinced that the indigenous blades were good enough for the price paid. Grievances were expressed in respect of bigger items like steel, drugs and pharmaceuticals, coal and paper. The Commerce Minister met some of the charges of dubious practices in the market by a demand for specific details which were mostly not given. For the rest, he wiped off the last hopes of any general liberalization by the categorical reply that that policy was dead.

The only commitment he could give was that if specific requirements were mentioned and the items were found indispensable, the situation would be investigated and supplies sought to be arranged for. Even this commitment was subject to a clear-cut demarcation between the requirements of existing capacity and those of new development. The first would be receiving priority, without exception. For the second the strict test of essentiality would be applied. This relation in priorities follows from the realisation that there is still a great deal of idle capacity in several industries, and that the foreign exchange situation does not permit an easy course in respect of new development requirements. There are two additional points which reinforce this policy. There is considerable scope for using

about substantial American assistance. To have succeeded in inducing a Government and people, who are ostentatiously allergic to the word socialism, to take interest in what is openly proclaimed as a species of socialist experiment is a remarkable achievement in any manner of reckoning. In the crucial years to come, ability of this order and versatility of which we are not overprovided would be immeasurably useful, if not indispensable. It is, therefore, a great misfortune that Mr Krishnamachari has to leave the Finance Ministry at a moment when the Second Plan is just getting into its somewhat chastened stride. But it is to be hoped that, as indicated in Mr Nehru's letter to him, TTK's usefulness to the country will continue to be available in some form or the other.

indigenous substitutes for imported raw materials and fabricated parts. Capital imports on deferred payment basis are prospectively available in a very substantial measure. The Government are taking care to see that the deferred payment arrangements are also reasonable and relate to projects which on any count deserve priority. If, as was mentioned by more than one member at the meeting, spare parts worth several crores were lying idle in a number of projects, an investigation as to how far these could be transferred to other projects or industries is urgent and is bound to lead to considerable savings.

On the question of the availability of pig iron and steel, the mere assurance that in another year the position would be transformed does not seem to help much. If export goods could pay for the necessary imports of steel for particular industries, there is scarcely any reason why more steel imports should not be permitted.

On the export side, the Commerce Minister and the President of the Federation of Indian Chambers have given two different estimates of earnings. According to Mr Morarji Desai, the earnings for 1957 have been more or less at the same level as in 1956 at about Rs 6200 millions. Mr B. M. Chinai speaks of Rs 6480 millions. Both are of course tentative figures. Even at the higher one, there is no room for complacency. Current fortunes of a few leading export commodities seem to be far from pleasing. For tea, the earnings for 1957 are reported to be considerably below the 1956 figure, which of course was a record at Rs 1430 millions. Prices have slumped. Jute goods have experienced a like fate. Britain and Germany are less enthusiastic in their purchases. China has virtually gone out of the market and Russia's interest has flagged. Mr W. H. S. Michelmore is inclined to blame fiscal levels for the deterioration in the jute and tea trade. But of any reduction there is still no hint. The annual offtake of handloom fabrics was less than 50 per cent in value of that of the previous year. Against these disappointing performances, it is comforting to see a number of other items excelling previous records.

was pointed out how the increased shipping freight has been a handicap for more than one export commodity. That is a subject for an international forum. Railway freight rates too are not sufficiently friendly. For this Mr Chinal expects some gesture for export goods in the next railway budget. The scope for extension of other concessions in the form of drawback on import duties etc. was also discussed at the meeting. A suggestion which has been in the field for some time is for the sale of goods at cost or even below cost in the foreign market with a view to secure imme-

Toward a Summit Conference

IN the closing months of 1957, the world found itself gaping in mystery and awe over the Russian Sputniks travelling at 18,000 miles per hour in earth's outer space and US bombers laden with nuclear weapons circling over European Capitals. The excitement over the Russian achievement was diluted by a new sense of dread over the general fate of humanity. A war by sheer accident looked more than possible.

By the end of January 1958, one of the Soviet Satellites had disintegrated. Its place was promptly taken up by the US Satellite named Explorer. Though relatively anaemic in weight, the Explorer is claimed to be of larger dimensions keeping to a higher altitude and travelling at no less speed than its elderly rivals, the Sputniks. Marshal Bulganin is still proud that Russia has stolen a thunderous march over US in progress in scientific warfare. In the US, the launching of the Explorer signified a new momentum to catch up in the race. From the stand point of world peace it is open to interpret the events of early 1958 as either furthering the ultimate cause of world peace or of precipitating a showdown. The interpretation will depend on the emotional bias of the observer.

While the outer space is thus being pierced by rival Satellites the inner space has a more agreeable story to convey. A number of top-level messages have been passing from one country to another over the proposal for a fresh big power attempt to end the cold war. Marshal Bulganin has taken the initiative in making this proposal. He addressed seventeen leaders in different parts of the world who between them have the capacity to arrive at decisions which could be enforced.

President Eisenhower has endorsed the suggestion but wishes to have a preliminary round of discussions among the Foreign Ministers concerned. The British Prime Minister is also reported to have conveyed a message in more or less the same terms. India's Prime Minister has expressed his readiness to be present at the conference, if his presence is generally desired.

The impulse to recall the first Summit Conference held at Geneva four years ago and its barrenness of results is irresistible. But the very developments which have imparted a new pressure for mutual conciliation and faith just now argue against pessimism. If something is not done now to restrain the almost uncontrollable slide into complete mutual destruction, the curtain might once for all drop down over the history of mankind as we know it.

The crux of the situation lies in the utter lack of faith on mutual intentions between the two sides to the international cold war. The cold war will lift only if the Big Powers are found ready to agree on an agenda of practical points for discussion and pursue them in a genuinely give and take spirit.

Marshal Bulganin's latest letter sent to the US President mentions nine points as basis of the Summit talks. These points are:

- (1) The immediate suspension of atomic and nuclear tests;

diating foreign exchange and lay a sure foundation for new markets in the future. To those who are having a good time with the domestic market, the call for sacrifice may be a little irksome. They will have to think on a wider front. A mere general call, however, is not likely to cut much ice. The Government should feel obliged to indicate in greater detail which industries should accept the suggestion, for how long and the complexion of deferred hopes. Once the long term benefits are pressed sufficiently into view, the proposal can secure a wide response.

- (2) The renunciation by the USA, the USSR, and Britain of the use of nuclear weapons;
- (3) Creation of a nuclear free zone in Central Europe;
- (4) Conclusion of a non-aggression treaty between NATO and Warsaw Pact States;
- (5) Reduction of the number of foreign troops in Germany and other European States;
- (6) Working out of an agreement to prevent surprise attack;
- (7) Agreement on measures directed at broadening international trade;
- (8) Cessation of war propaganda; and
- (9) The easing of tension in the Middle East.

Barring the question of the prevention of surprise attack, this list is entirely different from what President Eisenhower has suggested in his letter to Marshal Bulganin. The list also contradicts Mr Khrushchev who is reported to have thrown some hints to a party of NATO Ambassadors at Kremlin. A few simple issues have appealed to Mr Khrushchev as a suitable starting point for the discussions rather than a complete range of all the important problems which call for an agreed answer. In any case, the two leading personalities involved have not yet seen eye to eye on what should be discussed and by whom at the first stage.

Actually, the position seems more hopeful. Because, Bulganin has suggested a widely flexible range of points for discussion and whatever might be the specific issues mentioned in his letter or in that of Eisenhower, no advance in the direction of mutual agreement is possible unless there is the resolute determination on all sides to clear the ground of all major controversial issues. The immediate suspension of atomic and nuclear tests, the conclusion of a non-aggression treaty, the cessation of war propaganda and reduction of foreign troops in Germany and other European

Indian Finance

States are all points on which neither side can afford to disagree. A non-aggression treaty was first mooted by the British Prime Minister and was promptly hailed as a highly imaginative and humanitarian move by Mr. Jawaharlal Nehru and several other international leaders.

In Western and Central Europe, the immediate post-war feeling that US regiments were an indispensable element of security has given place to concern over the risks involved in their retention. The US and Great Britain, on their part, have been compelled to reassess the value of conventional forces and weapons amassed in Central Europe since the advent of the latest nuclear armaments on either side of the Iron Curtain.

Once Russia is ready to withdraw its troops from East Germany, the only serious objection to a complete withdrawal of foreign troops in West Germany will have been met. On the limits to which East-West trade could be developed consistent with the requirements of Western security, the old differences between the US and its Western European Allies have no longer the same force or justification. Even against US remonstrances and persuasions, Britain had liberalized its Eastern trade in recent years.

Generally speaking, the points set out in Bulganin's letter not only form a reasonable basis for the proposed talks but some of them comprehend the issues raised by Eisenhower. In other words, there is much more of overlapping between the two sets of points than appears at first sight. In any case, no major issue can be left over by a conference whose aim is nothing less than to wipe out the passions, prejudices and the techniques which sustain the cold war.

If for instance, there is agreement on the reduction or removal of foreign troops from both sectors of Germany, German re-unification would follow as a matter of course. A nuclear free zone in Central Europe will remain an empty gesture, if on both sides armaments were again to be piled up and the cold war spirit to continue. Likewise, once a certain broad faith is mutually restored, present restrictions on the flow of commodities will become clearly meaningless.

However, there is scarcely any logic in hurry. Gradually, or at one stroke, the Big Powers will have to dismantle an organisational and military framework built up with fundamental division of social aims and political ideologies between whom co-existence, not to speak of a permanent reconciliation, calls for a more positive attitude of tolerance than what this generation is familiar with. At present the entire motive force behind the move for the Summit Conference is fear. It can hopefully be said that fear has generated more positive forces must come into play.

World Bank Operations in 2nd Half of 1957

PERHAPS the biggest influence in post-war reconstruction and development is the International Bank for Reconstruction and Development, otherwise known as the World Bank. Though there are other private organisations like the Ford and Rockefeller Foundations and Government institutions like the Export-Import Bank of the USA, which engage in activities similar to those of the World Bank, the operations of the former are not comparable to those of the latter either in scope or magnitude. The IBRD owed its birth to the recognition among the statesmen of the influential nations of the world, of the dangers

to world economy in the existence of countries differing widely in economic development with some of them living on a subhuman level of existence. This concern at the imbalance in the economic structure of the countries of the world found pointed expression in the famous statement of John Marshall, that poverty anywhere is a threat to prosperity elsewhere. The IBRD was, therefore, constituted specifically with the object of integrating the world economy on a new basis of increasing production and productivity in the comparatively underdeveloped countries and restoration of normal economic life in the war-devastated

February 15, 1958

countries of the West. The activities of the Bank in furtherance of this end, though to a certain extent limited by the non-participation of Soviet Russia and its satellites, have since its inception been on a scale which could not have been dreamt of at the time of its founding.

The latest press release about the financial statement of the IBRD for the six months ending December 1957 makes impressive reading and furnishes ample evidence of the great role that the IBRD has been playing in assisting the process of development in the war torn countries of the West as well as the underdeveloped countries in Asia, Africa and South America. The Bank has during the period under review made 19 loans totalling 372 million dollars, the beneficiaries being Austria, the Belgium Congo, Belgium, Chile, Ecuador, India, Japan, Pakistan, the Philippines, Thailand and South Africa. Disbursements on loans during the same period aggregated 250.9 million dollars.

The Bank has thus, at the end of 1957, entered into commitments by way of loans to the tune of 2,606 million dollars of which the biggest amount stands in the name of India, which figures on the World Bank's books as a net borrower of 318 million dollars, a figure which is approached only by Australia and France. These two countries have managed to secure accommodation to the tune of 279.6 million dollars and 234.7 million dollars respectively. With the exception of a few other countries such as Brazil, Italy, Mexico, South Africa and the UK, the loans agreed to by the Bank in respect of the other countries are for a sum below the 100 million dollars mark. The Bank's activities have extended to almost all countries excepting those remaining in the Soviet orbit of influence, the number of countries having drawn on the Bank's resources being 40.

The Bank has honoured its commitments in respect of loans to the tune of 2,003.4 million dollars, the balance remaining to be disbursed being 611.4 million dollars. In respect of loans already disbursed, Australia and France figure as the countries with the highest amount, the respective shares being 243.8 million dollars and 234.7 million dollars. The total that has been disbursed to India adds up to 158.8 million dollars.

The United States of America being the country with large disposable surplus stocks of materials and capital needed for the rehabilitation and development of the other countries, litigation and development of the Bank. The large in the transactions of the Bank, which run to a effective loans of the Bank, which run to a figure of 2,003.4 million dollars, are repayable in the United States dollars to the extent of 1,479.8 million dollars.

The loans made by the Bank are for purely development purposes and are thus of a self-liquidating character. Some idea of the kind of activities with which the Bank has been associating itself so far, would be evident from a few instances. The National Power Corporation of Philippines was given credit of 21 million dollars in connection with the Binga hydroelectric project on the Island of Luzon. The participation of the Bank was found necessary for procuring the required foreign exchange for the completion of the project. The loan of the Bank was for a period of 25 years with semiannual amortization payments beginning in December 1960 and ending in 1982, the rate of interest including 1 per cent commission credited to the Bank's Special Reserve being 6 per cent. Similarly, the Belgium Congo was granted a loan equivalent to 40 million US dollars for road construction and improvement under the country's Ten Year Plan of development and was intended to cover the costs of imported

equipment, materials and services. The loan was for a period of 18 years and bears interest at 6 per cent including 1 per cent commission credited to the Bank's Special Reserve.

So far as India is concerned, the impact of the Bank's operations has been profound and salutary. The Bank has till the end of 1957 made gross loans to private enterprises and government agencies to the tune of 356 million dollars. The loans were made for various purposes such as railway improvements, electric power, agricultural machinery, jet aircraft, iron and steel production, and the establishment of the Industrial credit and Investment Corporation. The Tata Iron and Steel Company, the largest and oldest established steel producer, was perhaps the first private enterprise in the country to which the Bank's credit has been extended. The loan made to the Tatas for expanding steel production is for a period of 13½ years and bears interest at 6 per cent including 1 per cent commission credited to the Special Reserve.

The total of the effective loans made by the Bank is the biggest single item in the assets of the Bank and forms 63 per cent of it. The total assets of the Bank are marked at 4,100.2 million dollars. The other important items in its assets are investment securities, which are valued at 516.5 million dollars, and a sum of 662.3 million dollars receivable on account of subscribed capital.

The liabilities of the Bank are predominantly made up of the capital stock worth 1,866.6 million dollars and the funded debt valued at 1,269.1 million dollars. The capital stock of the Bank is in 100,000 shares of 100,000 dollars par value each. The funded debt of the Bank is held mostly in United States dollars, such debt being marked at 1,068.9 million dollars at the end of 1957. The funded debt during the six months' period under review increased by a net amount of 235 million dollars. Of this, 175 million dollars were borrowed from the Deutsche Bundesbank (the Central Bank of Germany). Regular purchase fund and sinking fund transactions during the period amounted to 7.2 million dollars.

Interest on its borrowings is one of the important heads of expenditure for the Bank.

Slums

SLUM clearance in Calcutta and Howrah is as live an issue as the slums in these cities. Behind fine rows of buildings, they have steadily proliferating mud-and-slime hells smelling to high heaven, and about this little has been done all these years except to announce from time to time impending improvement which always impend. Or, if they do take place, the slum-dwellers themselves at least know nothing about them. Meanwhile, there is no lack of high-voltage social workers who, shovels or broomsticks in hand, posture once in a while before batteries of Press cameras and consider their job done almost as soon as these fast-working machines click. There are others, generally of the feminine variety who, duly dolled-up for the occasion, invade slums about once a year to give themselves the happy sensation of doing some rapid social work by distributing other people's biscuits or milk powder with infinite condescension. And they do not ask for anything in return for their labours except to have their pictures published in the newspapers, or what are called the society magazines. About them, Prime Minister Nehru had on one occasion some rather unkind things to say, but apparently this has not taken away either from their zeal for social service or from their style of doing it.

Under the Second Five Year Plan, the Government of India have allocated to West Bengal a sum of Rs 3 crores for slum im-

provement work in Calcutta and other towns. But it is not yet known whether or to what extent the municipal bodies or the Improvement Trusts will administer the funds. So far as Calcutta is concerned, the Improvement Trust has done some excellent work in recent years, a thing which, with the greatest goodwill in the world, is scarcely possible to say of the Corporation whose Mayors, one after another, continue to make brave gestures, especially toward the end of their terms and are then heard of no more. And no wonder, so far our "cleaner city" campaigns have always been carried up to, and no farther than, the frontiers of slumland. It is hard to persuade oneself that the creation of a Central Committee to enquire into and suggest means of improving slum conditions in India will make a difference to Calcutta, even if the chairman of this useful body is no less a person than Mr A. K. Sen, the Union Law Minister. For one thing, slum conditions vary from city to city and the problems and the nature of impeding factors in one may be quite different from these in another. Thus, one comprehensive blueprint for all Indian towns and cities may prove a very instructive document without being practical. For another, Calcutta is Calcutta and its Corporation—if it is entrusted with the job of slum clearing—will take a lot of internal slum-clearing first, a thing on which many Mayors have wrecked their reputations in the past.

First Things First in Agriculture

To an expert foreign observer the problems of Indian agriculture might appear largely medieval. We have only recently started taking to artificial manure on an extensive scale. The majority of farm units are incomparably smaller than the smallest that an American might deem desirable. There is a wide variety of land tenure.

While on the one side ceilings are sought to be put on individual ownership of land, on the other cooperative farming is recommended as a solution to fragmented cultivation. There is also the glaring differences between a country with 85 per cent of the population living on agriculture and still having a deficit in food and another with a fraction of this percentage employed in farming and yielding vast surpluses for export.

These points of difference notwithstanding, Mr Howard E. Houston, Director of US Technical Co-operative Mission in India, hopes that even under the present organisational pattern Indian agriculture can be made to yield substantially more with the aid of improved methods of cultivation. To Mr Houston, small holdings do not appear to be as great handicap in the way of improvement as it does to planners in India. It goes without saying that the ceilings

are also equally deserving of a strictly secondary place in the scheme of progress, in the eyes of one in whose country farms running into several hundreds of acres are the rule.

Somehow or other, in the official view, the organization of agriculture has taken greater urgency than what might be necessary in such estimation of priorities. This is not to say that fragmentation and socially undesirable accumulation of property are salutary. Both must be tackled. What Mr Houston obviously wants to drive home is the fact that irrespective of the size of holdings, mere improvements in the techniques of cultivation can do a great deal.

This is a view with which many others who have an intimate knowledge of Indian agricultural problems must surely agree. We wonder if this view will also gain the acceptance it can legitimately claim in official policy. If at all there is a feeling that too many changes are being pushed on simultaneously in the field of Indian agriculture, then the priorities implied in the US expert's analysis must be respected.

Unseemly and Pernicious Outlook

Two incidents reported recently underline the sordid fact of the existence of large pockets of opinion which does not respect the national unity of India. The members of Dravida Munnetra Kazhagam party in Madras decided to abstain from attendance on the day the Madras Legislative Assembly is addressed by the new Governor. The reason for this decision is given as the Governor being a North Indian.

In Orissa, several members of the Bar refused to participate on the occasion of the swearing-in ceremony of a new judge selected from another State. Here again the expression of protest arose because the incumbent did not belong to the State.

These incidents are obviously against the letter and spirit of the Constitution, which has specifically offered every citizen of India the right to practise any profession or hold any appointment in any part of the country. The Orissa appointment, which incidentally is not at all novel, as far as the choice of "outsiders" is concerned, is strengthened by the recent decision of the Eastern Zonal Council that each State in the Zone should have one High Court Judge recruited from other States in the Zone.

Behind this decision lies also the important recommendation of the State Reorganisation Commission wherein the States have been asked to recruit at least a third of the judges from other States. Actually, the decision of the Eastern Zonal Council has narrowed down the scope for such interchange of members of the top-most judiciary both in respect of number and territorial range concerned. The

very feeling that this is not a one sided traffic should reawaken the sense of national solidarity which surely is absent when cultured persons decide to register protests of the kind heard from Orissa and Madras.

If a State is reluctant to accommodate even a few distinguished men from other parts of the Union in its services, there is no meaning in looking to the Constitution as an inspiration for national conduct and behaviour. It is an alarming problem and must receive the highest priority from political leaders who are sincerely interested in preserving the territorial integrity of what is already only a residual State.

Long Live the Coffee Houses

The threat of extinction has been hanging over Calcutta's Coffee Houses for quite some time, and this seems a great pity. In this city, there are no more popular resorts, and if here the coffee always takes too long in coming nobody has ever shown any disposition to hold it against them; there are so many countervailing charms. In the first place, the coffee and snacks served are reasonably good and, what is more, cheaper by a long chalk as compared with the prices ruling in the posh eating houses mushrooming around Park Street, which are favoured mostly by expense account people and those who prefer and can pay for all-platinum dinners, usually uneatable and expensive into the bargain. In the second, the Coffee Houses, run by the Indian Coffee Board, are comfortably democratic and cosmopolitan. Here rendezvous all manner of people—Indian, European, Chinese, Russian, senior Government officials, smaller business executives, journalists talking through their non-existent hats, omniscient ad-men, long-haired poets and unemployed artists with carefully unkempt goatees. These places, especially the one on Chittaranjan Avenue, are among the acknowledged clearing houses of Calcutta's culture such as it is, and if these are shut down it will mean hardship for many. It is quite right, therefore, that an attempt is being made to continue the Chittaranjan Avenue Coffee House—the fate of the other one on College Street is presumably past praying for—as a co-op and that a committee has already been formed for this purpose. Calcutta's attractions, at least for ordinary folk, are not so numerous as to need an electronic computer to count them, and the disappearance of the Coffee Houses will only further shorten the list.

A Disturbed and Distressed Neighbour

President Sukarno's foreign tour is reported to be likely to end sooner than scheduled, for more reasons than acknowledged. While in Japan he received an ultimatum from "Young Colonels" in his army

demanding the elimination of the communist members of his Government. Of all the nations, approached for relief in the situation caused by the sudden seizure of Dutch economic interests, Russia seems to be alone in having offered ships to Indonesia.

The President may not be in a position to oblige the young colonels. A Government spokesman also refers to political pressure from dissident military leaders and politicians in Sumatra for the resignation of the Premier. Under the guided democracy which President Sukarno is supervising, Indonesia has not been speaking with one voice, especially in the matter of domestic policies. The unostentatious elimination of Dutch businessmen has created new problems to a Government which have ever remained vulnerable to the onslaughts of fanatic communal groups and rebellious territorial cliques.

The sharp disturbance brought to the economy by the sudden exit of Dutch personnel has lent edge to economic grievances whose expression was being met only with an occasional show of force. The now raised angry protests against the coalition cabinet which President Sukarno has brought into being and against the privations people in Sumatra are undergoing.

If oceanic transport is dislocated, the challenging political groups operating from islands far away from the seat of the Government will feel emboldened to go ahead. Indonesia is not known to have an air force sufficiently strong to tackle with a situation of widespread turmoil. As a neighbouring country most friendly and interested in Indonesia, India will have to take an anxious interest in current developments.

Downward Trend In Interest Rates

A few weeks ago, we had in this section undertaken a brief assessment of trends in interest rates in India, the USA and the UK. We suggested then that the evidence available pointed to the likelihood of such trends being downward rather than upward. In the event, already, the Federal Reserve Banks in America have announced a reduction in the discount rates, and with a fall in the Treasury Bill rate, there is a prospect of a further cut in the discount rate. In Britain, although Bank Rate continues to be at its emergency level of 7 per cent, it is assumed generally that a reduction is imminent. As far as India is concerned, although it is not likely that Bank Rate might be reduced in the near future, the fact remains that the pressure on the structure of interest rates is tending to be downward. We may here iterate some of the circumstances which may compel further relaxation in respect of interest rates.

In regard to the USA, the most important single factor is that it has now been generally recognised that the flip to the economy that is necessary to rescue it from recession must in a large measure be provided by the freer availability of credit. With unemployment touching its highest level since January 1950, the Administration has received a rude reminder as to the severity of the present retrogression in the US economy. Mr William McChesney Martin of the Federal Reserve Board, who had always stood four-square for dear money, has himself conceded that an important instrument for toning up the US economy might lie in further reduction of interest rates. So, there can be no doubt that the prospect before interest rates in America is downward.

As far as Britain is concerned, the growing realisation that high Bank Rate failed to achieve the results that had been expected of it is now paving the way for the general jettisoning of the Bank Rate weapon from the monetary armoury. Even when it was imposed, it was expected that the high Bank Rate would be, as Dr Einzig pointed out in his last week's article, a temporary measure. Now that America is in the throes of deflationary influences in the economy, it is inescapable that the monetary authorities in the UK should in the near future take such measures as will prevent recessionary trends from getting too firm a grip of the economy.

From this viewpoint alone, we must anticipate not merely a nominal, but perhaps even a substantial, reduction in the British Bank Rate before long.

Here, in this country, the two most important developments are the somewhat improved sentiment in the stock exchanges as well as the firmer behaviour of the gilt-edged market. The improvement in share prices is an inexorable force that gently pushes down the structure of interest rates. Similarly, gilt-edged issues, and especially in respect of the State Government Loans, have appreciably added to their values. For example, since the beginning of the year, the 4 per cent Madras 1968 has improved from Rs 97.05 to Rs 97.45; the 4 per cent UP 1968 from Rs 96.95 to Rs 97.40; the 4 per cent Madhya Pradesh 1968 from Rs 96.75 to Rs 97.10; and the 4 per cent Andhra 1968 from Rs 96.75 to Rs 97.05. While part of the improvement in prices might be ascribed to the approach of the due date for payment of interest, it is nevertheless clear that the appreciation in gilt-edged values is at least in part due to the demand for gilt-edged. In this wise, gilt-edged yields are declining. If we have regard for the fact that there is a growing scarcity of scrip available for purchase by institutional investors such as Provident Funds, the inevitable conclusion is that gilt-edged yields will fall still further.

Added to these factors, in India, we find that the relatively slackened demand for funds during the current busy season has prevented the money market rates from becoming unduly dear. At the same time, with Deposits steadily accruing to banking system, there has been a sufficiency of funds and this has obviated any stringency in the call money rate. The busy season has scarcely another ten weeks to go, and we would, therefore, suggest that, by the middle of the 1958 slack season, conditions are likely to be conducive to a reduction in Bank Rate, because of the decline in the structure of interest rates as such.

Steep Increase in Notes Circulation

Month-early disbursements, aggravated possibly by an intensification of the busy season demand for funds, have made their impress deeply on the latest monetary statistics. The returns of the Reserve Bank for February 7 disclose a steep rise of Rs 27.43 crores to Rs 1558.63 crores in Active Note circulation. Currency has been expanded against Rupee Securities for Rs 20 crores by transfer from Investments in the Banking Department. With Rupee Coin going out into circulation for Rs 2.28 crores, Notes Held have been reduced by Rs 9.72 crores at Rs 11.01 crores.

There would appear to have been no deficit financing, since the

rise under Rupee Securities in the Issue Department is explained by transfer from the Banking Department. So, with the Central Government's Balances declining by only Rs 0.61 crores to Rs 57.52 crores, it would seem apparently that the Central Government's disbursements have not been onerously heavy; but it is to be remarked that the balances of State Governments have been more than halved, in declining by Rs 14.22 crores to Rs 13.12 crores. Besides, the indebtedness of State Governments to the Reserve Bank has risen by Rs 4.59 crores to Rs 40.62 crores. We would suggest, in the light of these figures, that the State Governments may have made some payment to the Central Government, and, by virtue of such receipts, the Centre was not embarrassed by the need to meet month-early demand. For it is not likely that such a steep decline in the balances of State Governments would have been due only to excessively large routine disbursements.

The Scheduled Banks have also felt somewhat the drain of month-early disbursements. Their Reserve Balances are marked lower by Rs 3.81 crores at Rs 71.19 crores; this, however, is largely accounted for by the State Bank. But, in regard to the rise of Rs 6.49 crores to Rs 71.76 crores in the Other Loans and Advances of the Reserve Bank, the State Bank clearly cannot be held accountable, and it follows that it is the other Scheduled Banks which most likely account for the increasing recourse to the central banking institution.

By dint of the transfer to the Issue Department, Investments are placed lower by Rs 21.60 crores at Rs 233.12 crores. Finally, the decline in Balances Held Abroad is again of manageable proportions, with a fall having occurred during the week of Rs 2.33 crores to Rs 35.42 crores.

According to the return of the State Bank for February 7, month-early disbursements have caused a fractional drain of Rs 1.22 crores in Deposits to Rs 393.44 crores. The total of Advances has risen by Rs 3.39 crores to Rs 195.76 crores. Consequently, Cash Balances have been run down by nearly Rs 2½ crores to Rs 31.35 crores. It is interesting to note that, with the State Bank having thus far obviated any large scale recourse to the Reserve Bank for borrowings, Bills Discounted and Purchased, under the head of Advances, continue to be placed at the low figure of Rs 19.83 crores. We may expect that, unless there is a more than compensating improvement in Deposits, any future increase in Advances will require a corresponding recourse to the Reserve Bank; and, therefore, we may expect that some part of the expansion in Advances in the next few weeks to occur under the head of Bills rather than Loans and Cash Credits.

The return of Scheduled Banks for January 31 again reveals an increase of Rs 6.20 crores to Rs 1438.68 crores in Deposits. While this has more than covered the expansion during the week in Advances, which are marked up by Rs 5.53 crores at Rs 907.38 crores, the Scheduled Banks have nevertheless thought it advisable to increase their borrowings from the Reserve Bank. Such borrowings are placed Rs 3.70 crores higher at Rs 27.14 crores, but, even at this level, they are scarcely at one-third of the level in the corresponding week of last year, when indebtedness to the Reserve Bank was shown at Rs 80.51 crores. There is a fractional decline in Cash Balances to Rs 169.53 crores.

The Future of the Bank of England

By Paul Einzig

THE two days debate on the Report of the Tribunal on the Bank Rate Leak ended in the defeat of the Socialist amendment proposing that in future part-time directors of the Bank of England should have no say in respect of Bank Rate changes. During the course of the debate the Chancellor of the Exchequer, Mr Amory, announced that this subject would be considered by the Radcliffe Committee which was set up last year to investigate matters relating to the working of the monetary system. It is assumed that the Report of that Committee will become available later this year. Although it would be idle to speculate about its probable findings, judging by its composition there is almost certain to be a majority report proposing that the Bank of England should be left unchanged and a minority report by the Trade Union representative on the Committee suggesting changes on the lines of the Socialist Amendment.

The Government is decidedly in favour of retaining the existing system under which the formal decision on the Bank Rate rests with the Court of Directors even though the Chancellor of the Exchequer has the power to issue directions ordering the Bank to change the Bank Rate. It looked at one time during the proceeding of the Tribunal as if the Government were inclined to sacrifice the nominal independence of the Bank for the sake of political expediency. Such an impression was conveyed by the attitude of the Attorney General who subjected the Governor and other directors of the Bank to very severe cross examination. Since however, the Tribunal's Report stated that there was no improper disclosure of information on the Bank Rate change on September 19, and all those who had been suspected of improper conduct had been honourably discharged there is obviously

no need for any such acts of appeasement. In any case, it doubtful whether the Government ever intended to throw the Court of Directors of the Bank to the wolves.

During the discussion that followed the publication of the Tribunal's Report those in favour of excluding part-time directors of the Bank from Bank Rate decisions pointed out that the Federal Reserve Board consists entirely of full-time members. Government spokesmen on the other hand, replied that the Federal Reserve Board does not make bank rate changes which are decided upon by the individual

Federal Reserve Banks, and their Boards consist entirely of part-time Members who have various other interests.

It seems safe to assume that so long as the Conservative Government remains in office there will be no drastic changes affecting the composition, functions and powers of the Court of Directors. On the other hand, since the advent of a Socialist Government after the next General Election is possible, and appears to be even probable, it may not be without interest to consider the future of the Bank after such a change of Government.

No love is lost between the banking community of London and the Labour Party. During the Labour Government from 1945 to 1951 relationship was frigid but correct.

The Government did not display an unduly hostile attitude towards banks in general and the Bank of England in particular beyond its general hostility towards capitalists. When the Bank of England was nationalised in 1946 the Chancellor of the Exchequer reserved the right to appoint directors so that it would have been possible to pack the Court with Socialists or their sympathisers. In fact very few Socialists

Indian Finance

list directors were appointed by Labour Chancellors of the Exchequer, and throughout the period of the Labour Government the non-Socialists or anti-Socialists constituted the majority. It remains to be seen whether this policy will be adopted after the advent of the next Labour Government. There are a few superannuated Trade union leaders and a few tame Socialist economists awaiting their rewards for services rendered and in addition to conferring on them life peerages in the reformed House of Lords they are likely to be rewarded with seats on the Court of Directors of the Bank. If the Court is thus packed by Government nominees there will be no real need, even from a Socialist point of view, to curtail its functions.

It seems probable, however, that when deciding on the fate of the Bank of England, the Labour Government will envisage the possibility of a return of a Conservative Government which would replace the Socialist nominees by directors recruited from the business community. For this reason a Labour Government is not likely to miss its opportunity for making far-reaching changes. Possibly it may be satisfied by taking the Bank Rate decision out of the hands of the part-time directors. It seems more likely, however, that the solution will be that there should be no part-time directors appointed in the future. Even that change could be reversed by a Conservative Government but this would be more difficult than merely replacing Socialist nominees on the Court of Directors.

This controversy concerns the shadow rather than the substance. For even before the nationalisation of the Bank the Treasury was well in a position to dictate Bank Rate changes. It could control discount market trends by means of open market operations and could easily force the hand of a reluctant Court of Directors by causing a rise in the market rates of discount. Since the Bank of England Act of 1946 the Chancellor of the Exchequer has legal powers to order the Governor of the Bank to change the Bank Rate. These powers have not been exercised but could be exercised.

If the Report of the Bank Rate Tribunal had been less emphatic in rejecting charges of improper disclosure or utilisation of information on the recent Bank Rate change, there would be a case for changes which would make such action impossible. Since however, the Tribunal delivered the verdict of "not guilty" there is no cause for making changes on the ground of safeguarding the secrecy of Bank Rate changes. In any case, even if those with inside knowledge had been tempted to use such knowledge for their own benefit or of that of their friends, the terrifying experience of the Bank Rate enquiry which dragged out a large volume of highly confidential information from those concerned, is likely to act as an effective deterrent in the future.

Brighter Prospects for Coal Industry

All is not bleak with the World of Coal. After a period during which the horizon was continually over-hung by dark clouds, coal today appears to have entered into a phase in which the sky is no longer over-cast. Of course, there remains a problem or two to be dealt with, but there is nevertheless substantial ground for believing that coal is well set for prosperous times ahead. Such a picture of the coal industry emerged at the recently held annual dinner of the Mining, Geological and Metallurgical Institute of India at which, we may add, the other minerals have been accorded, shall we say, a stepmotherly treatment. But this is as it should be, for, of the fact that coal is central to India's plan for industrialisation, there can be no gainsaying. The sentiments voiced by Mr J. W. Whitaker, who presided, by Mr D. Hogg, who proposed the toast to the Mineral Industry and by Mr D. C. Driver in replying to the toast, taken together, give a comprehensive picture of the coal industry.

Mr Whitaker very properly emphasised that aspect of coal that related to what we might call optimum economy in utilisation. It is indeed surprising, as Mr Whitaker pointed out, that as much as 25 million tons of coal are being "consumed" at less than 50 per cent efficiency. It is in respect of the combustion processes that the need for controlled economy, with a view to avoiding wastage, has been stressed. Unintelligent stoking and improper adjustments of primary and secondary air supplied to the furnace are held out to be the villains of the piece. Excessive air makes for heat loss through the flue gases; insufficient air, on the contrary, results in incomplete combustion. Obviously, education in the utilisation of coal is indicated; and particularly is this so, if, as a result, with more "economic" burning of coal, the total demand could be reduced. For, in that case, we may conceivably avoid a scarcity in supplies—a contingency which, in the present circumstances, we cannot rule out toward the end of the Second Plan. Besides, a lesser overall consumption of coal would mean that, to a corresponding extent, economy would also be achieved in requirements of wagons.

Mr Hogg's chief concern has been production. He was in a position to assert that the private sector

in coal has done superlatively well, what with accounting for 3.5 million tons of the additional 4 million tons raised during 1957. This, characterised as a "proud achievement", emboldens him to suggest a revision of Government's attitude in respect of the coal production target. He has marshalled his facts ably in order to point to the desirability of permitting the private sector to go all out for new production. Thus, Mr Hogg quotes the Bombay Government's suggestion, in Simla last year, that facilities should be given to the private sector to exploit minerals which, in the Industrial Policy Resolution, have, in being listed under Schedule A, been reserved to the State. Clearly, in the light of the private sector's performance in 1957, at least in the matter of coal, such green light being flashed is not only desirable but also necessary.

Then, Mr Hogg has also cited the views of the Geological, Mining and Metallurgical Society of India which, at the same meeting, even more forcefully pleaded for the private sector in coal being given a freer hand in development. By its record, the private sector has proved that it has been responsible for most of the discoveries of mineral deposits; and this could be counted as a good reason justifying, as the Society suggests, the transfer of certain minerals from Schedule A to Schedule B.

But, then, there are some pin-pricks as well. Firstly, while in no way contradicting Mr Whitaker's emphatic call for economy in utilisation, Mr Hogg points out that the pegging of production in metallurgical coal is no longer necessary. In this context, he mentions that "the recent consideration being given by Government to liberalising the pegging of production of metallurgical coal is no doubt gratifying". In his short speech—Mr Driver at the outset stated that he did not intend to take up more than ten minutes—Mr Driver also refers to the revolution in the coal outlook arising from the "preliminary survey of the enormous new deposits of good coal" that has been discovered. So much so, much recent legislation is shrugged off by Mr Driver as having now proved to be redundant and out-of-date.

Mr Hogg is apparently saving his comments on the place of transport in the World of Coal for his address next month at the Indian Mining Association; but this aspect certainly qualifies as another pinprick—and a fairly bothersome one, at that—to the industry. He has instead chosen to say something about royalties which, he appears to apprehend, may be enhanced under the new Mines & Minerals (Regulation & Development) Act 1957. His thesis is simple: there is a world of a difference between royalty and tax, and a peremptory rise in the former would be not only an onerous burden but an unjust one as well. For, royalty can be defined as "a fixed charge for the privilege of exploiting natural resources and is

an item in the cost of production". Any increase in the rate stipulated by Government would amount "to an arbitrary imposition on what might be a practically fixed gross income". It is surely not a rhetorical question that Mr Hogg asks, when he states, "Should Government exploit unalterable circumstances in this way?"

We may conclude with a remark of Mr Driver's, which gives an indication of the vista before the World of Coal. With the discovery of "great deposits of new coal", the target of production may be "100 to 120 million tons in the Third Plan and 120 to 200 million tons in the Fourth Plan". Bleak No, bright, the future for coal.

★

Pump Industry

Pump production in India has recorded a big increase in the past two years. As against 34,441 pumps in 1955, output has increased to 46,861 in 1956 and it is estimated that production in 1957 would have totalled about 57,920. At the present rate of development it will be quite easy for the industry to attain its Second Plan target of 86,000 pumps.

Speaking at the recent annual meeting of the Indian Pump Manufacturers' Association, Mr C. N. Pradhan said that the industry was confident of achieving the target even with the existing capacity. Though the demand for Centrifugal pumps seems to be satisfactory, the industry is worried about the poor and declining demand for Borehole Turbine Pumps. It would appear that there is need for a reassessment of the position in the country as regards the demand for this category of pumps. Already the existing manufacturers of Borehole pumps are in an unenviable position because of the lack of orders. When the three other units, licences for which have already been granted, also come into operation, there is no knowing what will happen. Mr Pradhan seems to think that all the units will face serious difficulties.

Though it has been pointed out that shortage of pig iron constitutes a serious bottleneck to the progress of the industry, it is to be noted that this handicap will soon disappear. For Government spokesmen have recently revealed that pig iron production will increase considerably in the course of the next two years. In this connection they have even envisaged exports. We have now the biggest blast furnace with a daily capacity of 1,200 tons pig iron in operation in Burnpur, and it is expected that three more blast furnaces will come into commission in the different steel works in the course of this year.

A significant aspect of the industry is the fact that it has already made some headway in the field of exports. It is now exporting pumps to a number of neighbouring countries and the value of exports of centrifugal pumps from January to November 1957 is about Rs

92,000. The industry seems to be confident that given Government assistance it can increase substantially the export of pumps. In view of the good prospects for borehole pumps in overseas markets, the possibilities of exporting this category of pumps should be thoroughly explored. The fact that there is surplus capacity in our country in borehole pumps seems to underline the urgent need for putting forth special efforts to promote the export of these pumps.

★

IISCO's New spun Pipe Plant

A week after the blowing-in of its 1,200 tons a day blast furnace, which is so far the biggest of its kind in our country, the Indian Iron and Steel Company Limited have announced the commissioning of a new spun pipe plant which has an annual capacity in the neighbourhood of 90,000 tons, working on a two-shift basis. The new plant is designed to produce pipes from 16" to 27" diameter and 18 ft lengths. It is estimated that in full production the plant will help save foreign exchange to the tune of Rs 8 crores a year as most of the pipes of larger diameter are now imported. It is understood that the plant will, for the time being, work only one shift a day. The second shift will be started when the second new Blast furnace at Burnpur is blown-in in middle of the current year. It is said that the commissioning of this plant has had to await the blowing-in of the blast furnace, though it has been completed some time ago, due to shortage of pig iron.

Sharp Increase in Jute Goods Stocks

THE steep rise of 21,400 tons in jute goods stocks with mills during the past month shows that offtake has been too low even for this time of the year. Perhaps the most disconcerting feature is the sudden upward jump in the stocks of sackings. As against 38,400 tons at the end of December, sacking stocks stood at the end of January at 53,500 tons. These are the highest since last August. It would appear that the expectation that this category of jute goods may continue to enjoy good enquiries has been belied. It remains to be seen whether mills can continue to place the emphasis on the production of sackings. The position at present is that stocks of sackings are higher than one month's output. Hessian stocks are also higher by 4,500 tons at 29,700 tons. They are highest since October but are lower than one month's production. Other manufactures have contributed to the total increase to the tune of 1,800 tons, having been placed at 13,200 tons, which are highest in many months.

H.O. FORT, BOMBAY

N. K. KARANJIA General Manager

Total production in January at 93,300 tons are at a new high. The higher output is accounted for by the larger number of hours worked. As against 209 hours in December mills have worked 217.5 hours in January. Hessian output at 34,400 tons is 2,300 tons higher than that in the previous month while sacking production at 57,300 tons shows a rise of 2,600 tons. Other varieties are also higher by 600 tons at 6,600 tons. Thus the overall increase is 5,500 tons. During the corresponding month of last year total output stood at 88,800 tons with hours worked placed at 212.

From the above it is clear that the statistical position has become once again unsatisfactory. Offtake during last month has been at a low level; and in view of the reported business recession in US and the poor grain crop in Australia the near term outlook does not appear to be quite bright. It is, however, somewhat encouraging to hear reports of renewed Russian interest. The reports are yet to be confirmed. That the prospects are not very bright is also evident from the reference made to jute exports by Mr. Morarji Desai at the recent meeting of the Export Advisory Council. Mr. Desai has pointed out that China has practically gone out of the market as a buyer of jute goods and Russia's interest seems to be on the wane.

A comparison of the production figures and the hours worked during the two months, January 1957 and December 1957 will reveal a significant development in the jute industry. In January 1957, though mills have worked 212 hours, production has totalled only 88,800 tons. Working only 209 hours in December 1957, mills have produced 92,800 tons. The obvious inference is that the efficiency of mills has increased during the past year due to the steady progress of the modernisation programme.

The news that the Central Supervisory Body for Promotion of Jute Production has recommended an increase of 322,000 acres in the area to be cultivated under jute in the country during 1958-59 reveals a welcome sense of urgency in dealing with the problem of raw material supply to the jute industry. The new acreage target of 2,076 million represents an increase of 18.4 per cent over the previous year's acreage and is expected to produce a crop of 5.143 million bales, a rise of 1.045 million bales or 25.8 per cent over the final estimate of 4.88 million bales for 1957-58.

Statewise the breakdown of acreage is: West Bengal 800,080, Bihar 665,000, Assam 380,000, Orissa 125,000, UP 56,000 and Tripura 50,000. The respective production targets for the States are shown as 2 million, 1.38 million, 1.178 million, 300,000, 125,000 and 160,000 bales.

Though the supervisory body has recommended an increase in

acreage, it has made it clear that the figure represents the outer limit of area expansion and that the emphasis should continue to be placed on improvement of the average yield per acre which is at present very low and for some regions indicates a progressive downtrend. In view of the slow progress in application of fertilizers, an intensification of efforts for popularizing ammonium sulphate has been recommended. In order to minimise the delay in distribution of fertilizers, the States have been allowed to utilize stocks carried over from 1957-58 with the assurance that withdrawals of fertilizers for jute from these will be made good by the Centre early. The States have also been directed to furnish statements well in advance of a sowing season, specifying their requirements of fertilizers exclusively for jute crop and showing a monthly break-up.

To augment the supply of good quality seeds, the supervisory body has approved in principle a scheme prepared by the Chief Jute Development Officer, Government of India, to enlist the assistance and cooperation of recognised seed dealers in multiplication of improved jute strains. The scheme envisages registering a chain of dealers who will multiply improved jute seeds through their own agencies under strict supervision of the State jute development staff.

The jute goods market opened on a quiet undertone in the absence of foreign enquiry. With the announcement of stock figures as at the end of January, the downward trend gathered momentum as increase in stocks was much higher than market expectation. There was some improvement in market sentiment in later dealings with prices staging a moderate rally following speculative support on expectations of shipper interest. It would appear that speculators had derived some encouragement from the trend of shipment in the first week of the current month.

The market ruled almost unchanged on Friday though the undertone was rather quiet. Hessian 40" x 10 oz Ready closed the day at Rs 39.30 with B Twills at Rs 100.75. In forward delivery Hessian 40" x 10 oz April-June was placed at Rs 39.65 and B Twills at Rs 102.00. Prices were marked down all along the line on Saturday following the announcement of the stock figures. Hessian 40" x 10 oz Ready receded to Rs 39.05 and B Twills lost Rs 1.45 to be finally placed at Rs 99.30. Elsewhere, Hessian 40" x 10 oz April-June was done at Rs 39.55 with B Twills at Rs 101.00.

Though the market opened quiet on Monday, prices improved in later dealings due to due date manipulations in the Fatka. Hessian 40" x 10 oz Ready recovered to Rs 39.30 while B Twills moved up to Rs 100.25. Hessian 40" x 10 oz April-June was done at Rs 39.80

Indian Finance

and B Twills were placed at Rs 102.00. But for a small decline in Ready B Twills, prices on Tuesday showed some slight improvement over the previous day's levels. Hessian 40" x 10 oz Ready was fractionally higher at Rs 39.45 but B Twills ready reacted to Rs 100.85. In forward delivery positions Hessian 40" x 10 oz April-June was placed at Rs 39.85 and B Twills was done at Rs 102.35.

On Wednesday the market opened steady with both Hessians and B Twills meeting with speculative support. The improvement in B Twills were particularly prominent. B Twills Ready closed higher on balance at Rs 101.25 but Hessian 40" x 10 oz Ready was fractionally lower at Rs 39.35. A similar trend was noticeable in forward delivery positions also. Hessian 40" x 10 oz April-June was slightly lower at Rs 39.80 but B Twills were higher at Rs 102.75.

The raw jute market ruled dull and unchanged most of the time but toward close a slight improvement was noticeable. Assam Bottom Feb-March delivery which opened the week at Rs 24.50 was quoting at Rs 24.75 by close.

Buyers Closely Following Quality

THE improvement in auction prices, seen last month, has not generally been maintained during the current month. Despite the interruption in the supply from Colombo and Indonesia, foreign buyers are not anxious to buy more from India than their actual requirements. As a matter of fact, they are showing increasing resistance and this is reflected in a quieter demand and general easing in prices.

First, foreign buyers think that the supply is going to be adequate in view of the rise in world crop by 20 million pounds during last year. Secondly, credit stringency is not conducive to building up of stocks. Lastly, a lot of teas held up at the Colombo Port may have reached London.

But, it is clear that, throughout this season, buyers have shown a marked preference for quality teas. Thus, the price differential between fine and coarse grades, and good quality and Common teas has been considerable. While useful quality teas have been readily saleable at satisfactory prices, the support for Plain teas has been generally limited to the requirements of the internal market.

In this connection, the latest monthly report, issued by Messrs J. Thomas & Company, states:

"The discriminatory trend in favour of 'quality' teas is now clearly established and the production of a high standard of quality even at a sacrifice of crop has proved economically justifiable, while the grower of Plain teas has generally found it difficult to show any profit. This accent on quality is likely to continue in the coming season. With her rigid cost structure and heavy taxation, India can hardly underprice her competitors from the world markets. An improvement in the standards of quality by all available means will seem to hold the best assurance for the future of the Indian tea industry."

Meanwhile, in the Export Sale held in Calcutta this week, offerings consisted of 60,322 packages. There was a strong demand with buyers closely following quality, which showed an improvement. Orthodox BPs were generally 2 to 4 nP per pound dearer, while Fannings were 4 to 6 nP dearer and sometimes more. Clean Black Dooars BOPs were also dearer by 4 to 6 nP per pound.

The more ordinary Medium BOPs met with better demand

and these were about steady, while the brighter liquoring ones were dearer by 5 to 10 nP, the better Medium Orange Fannings often selling well above valuations. There was better competition for CTC grades, particularly for Fannings. The poor types were, however, difficult of sale at 10 nP below last rates. The better Medium and the best were frequently dearer and the very best ones were steady.

Legg-cut teas were a little irregular; but the brighter liquoring ones in this category were again dearer. Whole Leaf grades were well competed for, especially the more stylish ones which were sold at dearer rates. There was good support for Darjeeling teas and those with useful leaf appearance and flavour realised prices above valuations. Following rates were quoted:—Clean Black Pekoe Rs 2.25 to Rs 2.30; Plain BP Rs 1.54 to Rs 1.58; Plain Fannings Rs 1.64 to Rs 1.68; Medium BP Rs 1.60 to Rs 1.76; Best Assam CTC BP Rs 2.50 to Rs 2.60 and Best Assam CTC Fannings Rs 2.50 to Rs 2.70.

Offerings in the Internal Sale consisted of 18,876 packages of Dusts. There was a good general demand. The plainer liquoring orthodox descriptions were frequently easier; but those with improving quality were dearer. Non-wither Dooars continued to be well supported at about valuations. A few Darjeeling invoices with flavour met with keen competition; but the more ordinary kinds from

this district were generally neglected.

There was a good demand for the best liquoring and brighter liquoring Medium CTC types, particularly the powdery grades which were often dearer, but the remainder were again easier. Following rates were quoted:—Medium Dooars Dust Rs 1.54; Medium Assam Grains Dust Rs 1.56 to Rs 1.58; Medium Assam CTC Dust Rs 1.70 to Rs 1.90 and Best Assam CTC Dust Rs 2.80 to Rs 3.10.

Also, 2,552 packages of Leaf grades were offered for internal consumption. Prices were a little irregular and sometimes in buyer's favour.

In the Export Quota section, rates moved between 1 1/2 and 16 nP per pound. At the close of the week, business was reported done at 15 1/2 nP and 16 nP.

In the Cochin market, offerings in the Export Sale were 50,000 pounds. Quality improved further and there were some attractive high-grown teas on offer. Most types were dearer although good Medium teas were occasionally sold below last rates. High-grown Broken and Whole Leaf grades were sold well; but high-grown Fannings were again a weak feature and often proved difficult of sale.

Tippy sorts were well supported, while Whole Leaf grades of below best quality were easier to buy. Following rates were quoted:—Plain BP Rs 1.45; Low Medium Rs 1.65 to

Rs 1.75; Medium Rs 2.00 to Rs 2.20; Good Medium Rs 2.30 to Rs 2.50 and Quality Rs 2.80 to Rs 5.20.

In the Colombo auction, offerings were 6,458,260 pounds. Demand was quieter and prices again declined generally. Offerings of Nuwara Eliya teas were small. Broken grades being sold rather below valuations. The quality of high-grown grades showed improvement though some invoices had been affected by blister blight. Prices of the best BOPs again declined by about 50 cents per pound, while Plainer sorts were 10 to 15 cents per pound lower. Orange Pekoes were barely steady.

Among medium-grown teas, prices of the better Broken grades declined by 10 to 15 cents, while Plainer sorts were 5 to 10 cents easier. Orange Pekoes were slightly easier; but Pekoes were firm to dearer. There was an easier tendency in the prices of low-grown teas although demand for the Middle-Eastern sorts improved as the sale progressed. High-grown Fannings were generally easier. Offgrades were sold immediately following the main auction and were generally lower.

Tea stocks in London, as on the 31st January, were 121.44 million pounds as compared to 119.60 million pounds in the previous week and 65.46 million pounds a year ago. Landed between 25th and 31st January were 11.88 million pounds, while deliveries were 10.04 million pounds.

US Notes

MUCH is being said these days about the boost home construction will give the American economy this year. It is generally believed that the housing industry will play a significant part in stemming the current downturn and stimulating an early upturn in the nation's economic activity. A close look at housing trends and prospects seems to be in order.

It should be noted that no one is predicting a vast housing boom that will all by itself turn the economy around. But most of the experts in and out of the construction industry see the number of new houses put under construction rising some 10 per cent this year over last. This would mean about 1.1 million new 'starts'—not up to the 1950 record of 1.4 million, but still an important economic prop.

The construction industry itself is basing much of its confidence on the expectation that with the general easing of money-demand and of inflationary pressures, more credit for home financing will be available, and at lower rates—trends that already are noticeable.

How effective a stimulant easier credit can be was demonstrated effectively during the other moderate post-war business downturns of 1949 and 1954. In both those years, housing 'starts' rose some 10 per cent, and constituted vigorous anti-recessionary influences.

Some experts, in fact, see an outside possibility that housing may rise even faster this year than in either 1949 or 1954. For one thing, they note that home construction was showing renewed strength late last year, even before there was a significant relaxation in financial markets. For another, they point to the fact that the government has only recently begun to ease monetary and credit policies and to take special administrative measures to spur home building and buying; it can, if necessary, take even stronger steps this year.

This does not mean that builders are blind to the problems they may have to face. They realise that cheap and plentiful credit alone could not suffice, were employment and income to decline seriously.

But these are eventualities they do not anticipate. Along with the rest of the business community, they are reasonably certain that the economic downturn will not become severe, and that consumer purchasing power will remain high enough to permit easier credit terms for builders and buyers to have their salutary effect.

So far, this conference seems well substantiated. On the basis

of reports from all over the country, there has been no slackening in housing activity. If anything, there has in recent weeks been a discernible rise in both home sales and buyer interest.

On the whole, builders expect construction costs to be fairly stable this year, and the prices of homes to remain firm. They also see a large and expanding market for major home improvements by people who do not want to buy new homes but want to add more space and convenience to their old ones.

All told, considering both new home construction and major improvements, most of the experts are predicting a \$1,500 million spending increase for housing this year. Supplementing this amount would be outlays for furniture, appliances, and other equipment and facilities that accompany new housing; these could add another \$1,500 million to the total.

This comes to a fairly sizeable \$3,000 million boost in the 1958 gross national product—the total value of goods and services produced. When taken in conjunction with other expedited increases—such as spending by state and local governments for public services and by the Federal government for national security—it can be a powerful factor in reversing the present downtrend and setting in motion the upturn anticipated later this year.

Britain

BRITAIN's overseas trade position in December was again very favourable and both imports and exports in 1957 as a whole reached record levels, according to the full trade figures for December released on January 21 by the Board of Trade in London.

Confirming the provisional trade figures issued earlier this month, exports in December were £282,400,000, imports were £313,600,000 and re-exports £12,200,000. The visible trade deficit fell by £3,000,000 to only £19,000,000.

For 1957, exports rose by nearly five per cent, to £3,325 million; re-exports were £133,000,000; and imports rose, also by five per cent to £4,076 million. The resulting trade gap was £617,000,000—£49,000,000 more than in the previous year.

London financial observers point out that certain adjustments are necessary in comparing 1957 figures with the previous years'. If silver bullion repayments are excluded from the exports—since these are strictly a capital item—the rise in the value of exports in 1957 was 5.5 per cent. This was barely more than half the rise of 10 per cent—similarly adjusted for distorting factors—in 1956, but about equal to the increases in the two years before that.

Imports, on the other hand, were swollen by some £30,000,000 of arrivals in January delayed by the Suez Canal crisis. Re-adjustments of imports put the increase in the value of imports in 1957 at 3.5 per

cent, compared with a 1 per cent rise in 1956 and 15 per cent in 1955. Thus, the silver bullion repayments and the carry-over of imports were more than enough to account for the increase in the trade gap of £49,000,000, and on an adjusted basis there was a further improvement in the trade position in 1957, following on the major improvement in 1956. And the recent substantial reduction in the trade gap, coupled with the growth of invisible earnings, means that the improvement in the visible trade balance of payments is being maintained, the observers say.

Another Board of Trade announcement says that the production and export of passenger motor-cars in Britain continued at a high rate in December, and exports in 1957 reached a record level.

Production in December (covering a five-week period) was 90,882 units and exports 36,632. Comparable figures a year ago were 51,175 and 22,337. This considerable increase is reflected in the annual figures, which in 1957 were production 860,842, and exports 426,272 compared with the 1956 production of 707,594 and exports of 335,832.

Last year's production has been topped only by 1955's record output (897,560), and exports in 1957 were at an all-time high. A most successful year in motor-car exports has thus been buoyantly rounded off, and the export drive has been particularly successful in the highly competitive dollar markets of the Western Hemisphere.

For the British aircraft industry also, 1957 was a record year. The industry's export total in December of £17,516,043 was the biggest in a single month, and brought the year's total to £116,471,110—an increase of 11.5 per cent over the previous record annual figure of £104,500,000, achieved in 1956. This was a 58 per cent increase over the 1955 total.

The figures were announced by the Society of British Aircraft Constructors on January 21.

For the third year in succession, the industry sold more of its products abroad than ever before, and since 1954 (when exports amounted to £56,000,000) the total has been more than doubled.

Since the end of the war the British aircraft industry's exports have amounted to more than £650,000,000 of which about £167,000,000 was accounted for by the sale of aero-engines.

The Sterling Area's gold and dollar reserves increased again last month. They rose by \$131,000,000, said the Treasury in London on February 4, and at the end of the month (on January 31) stood at \$2,404 million.

A sum of \$13,000,000 was paid to the European Payments Union (EPU) in respect of December, and \$3,000,000 went to creditors of the Union in bilateral settlements. On the provisional figures for the month, the United Kingdom had a surplus of £10,500,000 with EPU. This falls due for settlement in February as to 75 per cent in gold or dollars

Indian Finance

and as to 25 per cent by reduction of Britain's debt to the Union.

This is clearly a satisfactory result, especially since the month saw no unusual movements on capital account and no abnormal receipts, writes a London correspondent. Of course, there may have been some movements of funds to London to take advantage of the high interest rates prevailing there, but it is impossible to be at all precise about these and the reserves must have grown principally through current earnings.

This is a time of year when the tide of commercial payments begins to move strongly in favour of sterling, the sterling exchange rate has been very buoyant for some time. Even so, allowing for favourable commercial factors, the addition to the reserves is substantial and it reflects the current strength of sterling.

The surplus with the European Payments Union is also gratifying—it follows two months of deficit. It means that instead of having to start the month with a debt of nearly \$14,000,000, as happened in January, Britain begins February with a credit of some \$21,000,000.

New nuclear research laboratories costing, with their equipment, £1,000,000 are to be built by and for the British firm C. A. Parsons & Co. Ltd., of Newcastle-upon-Tyne, which is a member of the Nuclear Power Plant Co.

Only five years ago it provided itself with one of the most modern research and design centres in Britain, which was expected to meet its needs for 15 years. Since then, however, the resources of this 1953 building have been so taken up with increased export orders for the company's world-famous turbines and generators that it has already been impelled to expand still further to meet the growing demand for nuclear research.

The new £1,000,000 building will have a tower 100 ft high for use as a full-length heat-transfer research channel, to give results of the accuracy that the designers require for the larger and more efficient reactors yet to come.

It will also have a digital computer to facilitate not only the most complex calculations of reactor operation but also, for instance, the work of an associated firm—Sir Howard Grubb, Parsons & Co.—on the astronomical telescopes it exports to many parts of the world.

As the country leading the world in the development of nuclear power, Britain will naturally have one of the largest displays at the second "Atoms for Peace" exhibition at Geneva in September.

Between 50 and 60 British firms associated with the development of atomic energy will occupy some 43,000 sq ft of floor space at the exhibition. Other countries taking part will include Belgium, the Federal Republic of Germany, France, Italy, the Netherlands, Switzerland, the USA, and the USSR.

MY plans for this week's gossip have been thrown into some disarray, thanks to the uncertainty about the publication of the Chagla Commission Report. I have been putting off sitting down to this week's task day after day, hoping that the Report would be available for comment. But there are indications from New Delhi that such an opportunity will not be forthcoming before it was too late for the week's issue. It is not, therefore, possible to put off the printer's devil at my elbow any longer, even with promises of brighter copy the next morning. In any case, it is now fairly certain that the Report will be available to the public only next week.

No one particular person is perhaps to blame for this disappointment, unless you pick on the over-anxious purveyors of news, who have been predicting the various dates of publication. But then, at second remove, you will have to blame the over-anxious public, which, having lapped it all up when the evidence was being tendered, was now clamouring for the final thrill. Some day, it will be worthwhile to go in detail into the tangled web of motives that made this phenomenon of extraordinary interest in the affair. Such an inquiry will include, I am afraid, the investigation of the modes of increasing the circulation of one's paper. Be that as it may, neither the Government nor the Commission are responsible for the denial, for the present, of the last thrilling instalment of this exciting drama. Certainly, the Commission has completed its job with remarkable expedition. (Indeed, Mr Sachin Choudhury, the Counsel for the Life Insurance Corporation, seemed to imply that he found himself at some disadvantage because of the somewhat limited number of witnesses examined). Mr Chagla himself submitted his Report early this week, and the Government are trying to get copies printed and placed on the table of Parliament by the end of the week. The whole thing has taken less than a month, and for an inquiry of this magnitude, is a remarkable feat.

In any case, my comment on the Report must await a future occasion. Meanwhile, since public interest in inquiries into conduct of men in position of responsibility

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

has, for whatever reason, shown a remarkable increase, it would be of some value to think about a somewhat contemporaneous inquiry in Great Britain. I am referring to the inquiry into the Bank Rate leak. As you are doubtless aware, a three-man Tribunal, presided over by Lord Justice Parker, went into the question of whether or not there was a leak of the decision to raise the Bank Rate in September last, and, if so, whether such information was made improper use of for making personal gain. After examining over two hundred witnesses and sifting a mass of gossip, rumour and tittle-tattle of the periphery of fashionable world, the Tribunal came to the finding that there was no evidence at all of irregularity.

I have no doubt that, when the Chagla Commission's Report is published, it would be of extraordinary interest to look for points of similarity in the approach of the two Commissions as also for points of dissimilarity, if any. In any case, there can hardly be any doubt that Mr Justice Chagla would have read the Parker Report, either as a matter of course, or as a document of interest in the context of his own particular assignment. It is safe, therefore, to assume that Mr Justice Chagla's Report will be of extraordinary interest from the point of view of a comparison of the sort I have mentioned. In fact, from some of the observations that the Prime Minister let slip the other day, it would appear that his mind is working on the possibility and perhaps even the necessity of basic departure from some of the Anglo-Saxon conventions on constitutional propriety. In the light of recent developments and in view of the reported findings of the Chagla Commission, it is likely that this particular line of inquiry into constitutional niceties will lapse into abeyance, as far as the general public is concerned. Constitutional pundits, however, will debate the point endlessly.

But the question I am at the moment interested in is whether the Chagla Commission's inquiry will reveal any departure from British conventions on quasi-judicial inquiry. As I said, I am incommode and indeed prevented

from answering this question that I have raised for the simple reason that the Chagla Commission's Report is not before me. In all likelihood, and considering Mr Justice Chagla's training and background, there may not be a serious departure. But that is merely a piece of speculation which I do not want to pursue now. I shall content myself with pointing out that the salutary principle of Anglo-Saxon jurisprudence that there should be positive evidence before any man is condemned of any misdemeanour runs through like a golden cord in the entire report of the Parker Tribunal. The Tribunal repeatedly, almost monotonously, says that no case of corrupt practice has been made out against anyone. In other words, the requirement that the Tribunal felt bound to insist on was a positive case against those of whom gossip and rumour had alleged all manner of misdeeds. Indeed, in a passage which is a classic exposition of the correct principles involved in such a situation, the Tribunal observes: "Where conduct and documents are capable either of an innocent or a sinister explanation, the only course is to reach a conclusion upon a dispassionate appraisal of the character and truthfulness of the person whose conduct is under inquiry". The importance of this dictum cannot be too strongly emphasised, especially in the context of a quasi-judicial inquiry. We have only to read Libowetz's magnificent book, "Trial", to realise how, even in normal processes of law, such prejudice can be a formidable obstacle to the formally accused person. And, in the case of an inquiry, even the smaller mercies available in a regular trial are not available to the persons concerned, for the simple reason that no one is formally in the dock and the purpose is ostensibly to find the truth. This leaves them wide open to popular prejudice of which both in the Bank Rate leak and the LIC inquiries, we saw impressive evidence. The crowds that jeered Mr Mundhra and Mr Patel no less than the crowds (perhaps the same) that cheered Mr Mundhra when he came out after his evidence are hardly likely to have conduced to create a proper atmosphere. Of course, trained judges like Mr Justice Chagla and Lord Justice Parker are fully armoured against this kind of pressurising.

But presence of popular prejudice is an additional complication in all such circumstances.

I should like to indicate by an example from the Parker inquiry how strongly reliant a Tribunal of this sort has to be on the principle that Lord Justice Parker enunciated in order to avoid any possible injustices. The example I am quoting has some points of similarity with the Mundhra deal since, in both, somebody was alleged to have made private gain (or avoided losses) by certain crucial acts of the persons concerned. In the British case, three reputed City firms were alleged to have sold £2,000,000 worth of Government securities three days before Bank Rate rose from five to seven per cent. A few days after the rise of the Bank Rate, one of the companies bought £750,000 worth of Government securities at the lower price (consequent on the crash in prices of Government securities) and made what the Attorney General called a "nice profit" of £32,000. Some of these securities bought back were the same as the ones that were sold before the rise in Bank Rate. And the crucial facts were, first, that Lord Kindersley, who had been a Director of the Bank of England for ten years, was also connected with these companies in the capacity of either the managing director or director. Secondly, he had met the Governor of the Bank of England at least twice before the rise in the Bank Rate (and the sale of securities) at which the possibility of the raising of the Bank Rate was discussed. As the Attorney General put it, "If it were a fact that Lord Kindersley had used his personal knowledge to secure that as much as £2,000,000 gilt-edged should be sold, then, it would be the case that he was using his secret knowledge for the benefit of Lazards and presumably also to his indirect, if not direct, advantage. It is only right I should say there is no direct evidence I can produce before your Lordship to establish that as a fact."

That last sentence of the Attorney General and the final verdict of the Parker Tribunal are extremely significant. I tried a small experiment last week on this

point. Without mentioning names and the context, but going into the substantial facts of this particular deal, I put it to three intelligent but not judicially-trained persons (one of them a stockbroker) and asked for their verdict. I deliberately omitted the context, because I feared that their knowledge of the final findings of the Parker Tribunal might influence their answer. And since I was sure that they had not read the evidence let in before Lord Justice Parker, I was also sure that the facts of the case were completely isolated from the context. I took the further precaution of saying that it had nothing to do with Mundhra, since, in the present context, it might have prejudiced them the other way. The results of the experiment were revealing. The stockbroker remarked cynically that it was all in the day's work. The others, scarcely less tentatively, agreed with him that a "nice profit" was made with the help of inside dope.

★
Mind you, none of these people was what you might call the "crowd". But that is the way they react. I have a friend, who is not so much Anglo-ophile as anti-Indian. He has a firm conviction that the Anglo-Saxon niceties of jurisprudence are hopelessly out of place for the simple reason of a certain alleged basic defect in character. I know that there are many others who share his view without his courage to speak it out. But he is hopelessly wrong, if for nothing else, for the reason that these principles of jurisprudence have, even on Anglo-Saxon premises, absolute and not relative validity. So, the three estimable men who in all probability share this prejudice along with their general view of the depravity of mankind, especially in the context of money making, would have had even less hesitation, if I had given the transactions an Indian context. Which, I need hardly say, is very improper and opposed to all canons of justice. Indeed, in our general disgust with some of the known practices in the commercial life of our country, we should not throw away salutary principles of justice when we are obliged to deal with them. I have a feeling that there is some danger of this mood overcoming us. Whether or not our conventions of constitutional propriety should be different from those of Great Britain is a question on which I have no firm present opinion. (I do not believe in meeting trouble, even intellectual trouble, half way). But, on the question whether the time has come for us to depart from British jurisprudence, I have no doubt. The time has not come, and I hope that it will never come.

★
Sir Biren Mookerjee is, as ever, on the go. That is why, within a week of the inauguration of the country's biggest blast furnace at Burnpur (which, incidentally, has brought no small measure of pride to West Bengal), the second spun

pipe plant at the Kulti works of the Indian Iron and Steel Company was put into commission late last week. This is news to gladden every heart. This plant, Sir Biren said, was constructed in under two years at a cost of Rs 14 million and, with its annual capacity of 90,000 tons, would mean an annual saving of Rs 80 million in foreign exchange. Spun iron pipes were manufactured in India for the first time about twelve years ago at the same works, but then they ranged in diameter between 3" and 12". Longer pipes of up to 14" diameter were later made, but those of larger diameters were either imported or cast at the vertical pipe foundry at Kulti. The new plant has now been turning out pipes wider in diameter as well as longer in size, i.e., from 16" to 27" by 18ft. These pipes, Sir Biren explained, were more economical, having fewer joints and more homogeneity of metal. When the second blast furnace at Burnpur starts working in July, the two Kulti blast furnaces will be dismantled as obsolete, and Sir Biren has already offered the services of the technical personnel at these plants to the Hindusthan Steel Works and the West Bengal Coke Oven Plant at Durgapur. More power to Sir Biren's elbow.

★
I have not had the time to visit the Leather Industry Exhibition now being held on Chowringhee. But that need not stop me from commenting on one aspect of it which is visible to all passers-by, namely, its facade. An exhibition of such importance and under such favourable auspices (Mr M. L. Khaitan must be the principal moving spirit behind it, I guess) should have been able to put its best face forward. But instead it presents to the public a rather unattractive one. The design is crude if colourful, and some of the slogans, curious. I was quite intrigued by, for example, "Leather For Health", which stared me out of countenance for a while. I had heard of such slogans as "Milk For Health", "Open Air For Health" etc. But "Leather for Health"? This was a floorer. Since when, I wondered, had tanned hide begun to be counted as among delicious, health-giving comestibles? Then, of course, I realised what I was face to face with—an ad-man's smartness. The coiner of the slogan was not content with the straightforward "Shoes for health". Probably that would be too intelligible and hence too drab. But this is obviously wrong. Advertising need never compete in reconditeness with the Relativity theory or modern poetry. I suppose the tendency to pinch-beck smartness in our advertising comes from the rather widely held notion that it is a highly specialised, almost esoteric art which, I am quite sure, it is not. Its main object is not to reveal the brilliance of the ad-man, but to convince the consumer, and this can always be done by being straightforward.

EAVESDROPPER

February 15, 1958

THE attempt to industrialise the country at a rapid pace has thrown up many problems, some of which seem to be intractable. There is first the problem of finding the requisite resources, as what we have has been proved to be quite inadequate even as we are taking the first steps.

Our deep faith in democracy and peaceful coexistence, coupled with our aim of a socialistic pattern of society, have left us no short cut to national prosperity. Foreign assistance is desired and acceptable only when there are no strings attached to it. Even so, aid being received by us is quite considerable and friendly nations are taking an active interest in our development as has been recently evidenced by the sanction of a loan of \$ 225 million by the U.S. Practically all major countries are giving us help one way or another. But, in spite of all these, we are not yet out of the woods. On the contrary, we seem to be moving toward the centre.

All our present financial difficulties are traceable to two main factors: high level of imports and low exports. Efforts at bridging the gap in our balance of payments have been vigorously pursued for some time now, but it would appear that such efforts have proved to be too feeble compared to the velocity of the current that separates the two sides of the gap. A study published in the latest issue of the Reserve Bank of India Bulletin indicates the extent of the gap and the factors responsible for the continued deterioration in our Balance of payments position. According to this article, the gap between the country's receipts and payments during the first half of 1957-58 amounted to Rs 298 crores, having more than doubled from Rs 126 crores during the corresponding period of 1956-57. It is pointed out that, since the main source of finance for this large deficit was chiefly the foreign exchange reserves, they had been drawn down by Rs 174 crores. The other important means of finance were the United States assistance under Public Law 480 and standby credit of Rs 34.5 crores from the IMF.

Though a seasonal decline in exports and a decline in invisibles had also contributed toward increasing the deficit, the principal reason was the continued high rate of imports. During the period under review, aggregate imports amounted to Rs 622.2 crores. Compared with the corresponding period of the previous year, this is nearly Rs 145 crores higher. Of this, imports on Government account alone aggregated Rs 238.7 crores, representing an increase of Rs 153.5 crores over the figure for the corresponding period of last year. The steep rise in imports on Government account is accounted for by two main items, food and

development expenditure. The figure includes imports financed through foreign exchange to the tune of Rs 82 crores, an overwhelming proportion of which represents imports of grains. If this item is excluded, the increase in imports will amount to Rs 96 crores.

A significant development to which attention is drawn by the article is that, unlike both halves of 1956-57, the rise in imports during the first half of 1957-58 is attributable wholly to increased spending by the public sector. In sharp contrast to the trend in the public sector, the trend in the private sector is in the opposite direction. For, during this period, imports of the private sector show a reduction of some Rs 20 crores. This, the article attributes to the various restrictive policies imposed by Government. It may be remembered that the bulk of the increase in imports in the previous year was associated with the private sector.

As has been pointed out earlier, exports have been disappointing. The poor performance is all the more glaring because, all through this period, Government have been pursuing a policy of active export promotion. The article points out that the low level has been brought about mainly by the fall in earnings from tea and jute goods exports. While tea has brought in Rs 20 crores less, jute has recorded a fall of Rs 10 crores. Exports of vegetable oils have also earned Rs 5 crores less.

The rapid running down of our foreign exchange reserves, while exports are showing no sizable improvement in spite of a vigorous export promotion drive, has raised honest doubts about the practicability of implementing the current Plan in its entirety. The Government seem to be quite determined to overcome all the obstacles in the way and go ahead with the Plan.

In this connection it is to be noted that the Economists advising the Planning Commission have endorsed the Plan targets. They have pointed out that in view of the fact that the rate of domestic saving implied in the investment target envisaged cannot be considered to be high "it should be possible to devise ways and means of raising the resources required without causing serious strains in the process". On the question of controlling the domestic inflationary situation, which is an essential condition for the success of the Plan, the economists are of the view that Government are in a position to keep it under check.

The critics of the Plan in our country fall into two broad groups. One group maintains that, though it is too ambitious, there can be no going back as the consequences of such a step will be disastrous for the nation as a whole. It

points out that by scrupulous husbanding of our resources and by arousing the active interest of the people, all the major schemes can be implemented.

The other group seems to be quite convinced that the Plan in its present shape is not at all feasible. It may be just an accident that persons who advocate this view are mostly from the business community or what may be called spokesmen of the private sector. From the very beginning, they have been warning that it is impracticable. After it has become apparent that the Plan is encountering rough weather, their voices have become louder than ever before. But Government can ill afford to ignore this point of view merely because it does not conform to theirs.

For instance, Mr J. R. D. Tata is of the view that there is no alternative to a considerable re-phasing or curtailment of the Second Plan in view of the inadequacy of resources available in the country. The present difficulties have stemmed mainly from an overestimate of our internal resources and an underestimate of our foreign exchange reserves. Moreover, the emphasis has been mislaid on the size of Plan instead of on the ultimate goal. Smaller steps are more likely to bring us nearer our goal than big steps which will involve us in all sorts of difficulties. Mr Tata has pointed out that, even now, it is not too late to carry out the necessary cuts and, in this regard, he advocates the postponement of the third steel plant and the diversion of the funds thus saved toward building additional fertilizer and steel using industries as these will yield higher foreign exchange. Economies can be effected in other directions as well, and he mentions particularly expenditure on civil administration, which has nearly quadrupled in the course of the last five, six years.

Whether Government choose to accept Mr Tata's views on the re-phasing of the Plan or not, they should bestow their closest attention on what he has to say on the working of the private sector. First of all, he has drawn attention to the fact that there is unanimity among businessmen and Government as regards the objective of the nation. Industrialists realise that the days of unrestricted free enterprise are gone for ever. They have accepted the concept of mixed economy and their understanding of it is that, in it, the private sector will be given an important role.

The point at issue now, therefore, would appear to be whether, having accepted the concept, Government have adequately discharged their concurrent responsibility of providing the private sector with the necessary facilities to function effectively. Mr

Tata says that Government have signally failed in this regard. Much damage has already been done by the fiscal and other measures initiated by Government in recent years.

Mr Tata is not the first person to refer to what appears to be the disastrous consequence of Government's taxation policy. In recent weeks, three other prominent spokesmen of the private sector have stated in unambiguous terms that industries in the private sector are very near breaking point on account of the heavy burden imposed in recent years. It will be wrong on the part of Government to ignore such overwhelming evidence, which at least clearly indicates that private enterprise is not in robust health.

New Tyre Factory

The proposed tyre factory under the stewardship of Tatas will be a welcome addition to the tyre manufacturing capacity in the country. At present Dunlop and Firestone are the only two producers of automobile, aero and tractor tyres and tubes. These units, between them, account for the entire production of giant, passenger, tractor and aero tyres and tubes and nearly 90 per cent of bicycle tyres and tubes. There are three other units engaged in the manufacture of bicycle tyres and tubes. With the rising tempo of industrial and economic activity in the country, it is to be expected that road transport will be called upon to bear a sizable portion of the increase in goods and passenger traffic.

As a corollary to the increasing demand for facilities for the movement of goods and passengers by road there will be a corresponding increase in road-building and the Second Plan envisages the building and upgrading of 20,000 miles of additional road. It is estimated that an addition of 10,000 to 12,000 trucks per year will have to be targetted for and that, if the requirement of replacement of over-aged trucks is taken into account, a fleet strength of 160,000 trucks by the end of the Second Five Year Plan will be essential to handle the growing goods traffic by road.

A direct consequence of the increased production of motor vehicles of all types in the country will be a sizable increase in the demand for original and replacement equipment from the tyre manufacturing industry. The estimated requirement of automobile and bicycle tyres by 1960 is 1,620,000 and 11,000,000 respectively. Such demand will grow further in the third plan period.

The factory which will be called the Ceat Tyres of India, Limited, will be floated by Tata Sons in collaboration with the well-known Italian industrial firm, Ceat S.P.A. The new company will have an authorised capital of Rs 4 crores and a paid-up capital of Rs 1.15 crores, of which 60 per cent is to be subscribed by the Italian firm and its associates and 40 per cent by the Indian public. This issue will be underwritten by the Investment Credit Corporation. The company will have no serious difficulty in finding the requisite foreign exchange as the capital subscribed by Ceat and its associates will be in the form of imports of plants, machinery and structures for the factory.

The technical know-how is to be supplied by Ceat Gomma, one of the subsidiaries of Ceat S.P.A. As the company has also a technical agreement with a well-known American company, the General Tyre and Rubber Company of Akron (Ohio), to exchange the most up-to-date technical knowledge, the Ceat Tyres of India will

have access to the technical know-how from both Italy and US.

★

LIC's Progress

The preliminary figures pertaining to the record of life insurance business in India during 1957 make heartening reading. These also dispel the apprehension occasioned by the poor showing of last year that with the advent of the Life Insurance Corporation there will be a fall in the tempo of new business written. Statistics so far available show that a business of Rs 256 crores has been completed during 1957. The figure is higher than the earlier ones and compares with Rs 258 crores, Rs 238 crores and Rs 188 crores in 1954, 1955 and 1956 respectively.

The Chairman of the Corporation had indicated in the middle of the last year that the LIC would reach the level of Rs 250 crores of completed business during 1957.

A press release issued last week by the Central Office of the Life Insurance Corporation states that, after recording the figures available to date, the Corporation has crossed the target. According to the latest figures available at the Central Office showing the position as on 20-1-1958, the business completed for 1957 amounts to Rs 256 crores with a further business of at least Rs 9 crores awaiting formalities. Proposals for insurance introduced aggregate Rs 320 crores. Final figures will be available after receipt of particulars from the various Divisions based on completion of business introduced before 31st December 1957 on which full first year's premiums were collected and in respect of which the Corporation was on risk on 31st December 1957. Total of Rs 256 crores relates only to all business done within the country. Foreign business is being accounted for separately.

Apart from the fact that 1957 has proved to be a record year for the life insurance industry in our country, the industry's performance last year is in sharp contrast to the state of affairs in 1956. The upsurge in activity which has been apparent since the beginning of the year has gathered fresh momentum toward the close as will be evidenced by the quantum of business introduced in the four weeks in December 1957.

★

Housing Problem

One of the problems which has been plaguing the Bombay Municipality, has been that of providing adequate housing facilities to the population of the city especially the industrial workers. The efforts so far made by the Municipality in this direction have failed to produce any tangible improvement in the existing situation. The shortage

of raw materials has aggravated the difficulties of the Municipality in facing the problem of housing shortage.

Speaking at the quarterly meeting of the Association of Indian Industries, Mr V. L. Gidwani, Municipal Commissioner of Bombay pointed out that the problem could be tackled effectively only with the cooperation of the private sector. State Government, railways, port trust and the public. The difficulties of the Municipality are more precisely that of securing adequate funds for house construction. An end to this can only be envisaged when the public and the private sectors as pointed out by Mr Gidwani come forward to give long term loans to the body at a small rate of interest.

The Municipal Zoning Scheme of the Corporation has met with some opposition from certain quarters and in this connection, Mr S. M. Dahanukar who presided over the meeting urged the authorities to see that there was no harassment of industries to shift unless it was found that in their present premises they were causing great inconvenience to residents nearby. But such rationalisation and planning as were implied in the Zoning Scheme were made inevitable by the erstwhile chaos. Even the existing arrangement, in the absence of sufficient statutory powers for the Municipality to enforce the measures, has not been as effective as was expected at first. Mr Gidwani suggested that association of industries should promote public companies for acquiring large blocks of land to promote industrial estates in suitable areas and promised that the Municipality would help such efforts in respect of providing roads and water facilities.

The chief difficulties met by the industrialists in providing housing accommodation for the workers seem to be the prohibitive price of land, lack of adequate loading facilities at the local railway station and absence of suitable areas for housing the workers. Therefore, it was suggested by Mr Dahanukar that the Government should prepare a layout, construct roads and provide essential services on the Estates to attract manufacturers.

★

A Reactionary Trend

The proposed reduction in the dearness allowance of workers by some mills in Vidarbha has, as is to be expected, raised a storm of protest from Labour. Mr S. R. Vasavada, General Secretary of INTUC, has already dismissed the suggestion as ridiculous and has warned the employers that the workers will not agree to it. His argument is simple: How can anyone think of reducing the allowance when everywhere in the country workers are demanding an increase in wages in view of the rising cost of living.

The spokesmen of the mills are equally vehement about their contention that the only way open to them is asking labour to agree to a cut if the mills are to carry on at all. They point out that between mounting stocks due to poor offtake which in its turn has been brought about by the heavy excise duty and drastic depletion of funds on account of heavy taxation and credit restrictions, the textile industry in general and the marginal and uneconomic units in it in particular are finding it impossible to carry on even from day to day. In this connection it is to be noted that the closure of a few units is considered imminent.

It may be remembered that a similar situation obtained some time ago in Sholapur and that Government have had to take up the responsibility of management of some mills themselves. Now the developments in Vidarbha seem to be heading toward a more serious crisis. It would appear that as Mr Vasavada has pointed out that the time has come for a comprehensive enquiry into the working of the mills in Vidarbha. For only such a thorough examination will help in finding out the extent of the damage done to the mills by the cloth excise and the taxation and other fiscal policies of Government. The facts that will thus be made available will also help labour to find out what is good for them.

★

Food Position

Even after one year of its inauguration, the zonal system for distribution of food which was expected to ensure sufficient supplies to all parts of the country, while it had met with a measurable degree of success in some cases, seems to have singularly failed in relieving the position in Bombay State. The State has not yet been able to wipe out its deficits in regard to rice requirements.

In regard to rice, the problem of meeting the deficit had been aggravated by cutting off supplies of rice from Madhya Pradesh which until lately was allowed to export its surplus rice to Bombay. Further no rice imports are permitted to Bombay from surplus areas like Andhra Pradesh, Orissa and Punjab. And in spite of the zonal arrangement smuggling of large quantities of food grains, from neighbouring States seems to have been on the rise. This has received stimulus from the low prices for food grains ruling in those States. In such circumstances, the State Government are of the view that such smuggling could be effectively checked only when they are given freedom to purchase food grains from States with surplus stocks, and to sell them in the Bombay State.

LISTLESS conditions have prevailed in the Cotton market during the week under review. While price movements in the futures section have been moving irregularly, trading in the spot market has been restricted in the absence of fresh support. Even the announcement of an export quota of 50,000 bales of Bengal Deshi has not produced any effect on the market. This is mainly due to the fact that the absence of any reduction in the export duty has chilled the enthusiasm created by the announcement.

In this connection, it is pointed out that only half the quantity of Deshi varieties is consumed by the textile industry and the balance is usually earmarked for export. The output of this variety is estimated at 3.75 lakh bales during the current season and the carry-over from the previous season is placed at 40,000 bales. It is, therefore, suggested that an export quota for 1.5 lakh bales can easily be granted.

Price competition from Pakistan in regard to the Deshi variety is another factor to contend with. The average export price of this variety of Indian cotton works out to Rs 820 per candy (including an export duty of Rs 200 per candy), while Pakistan is offering this cotton at Rs 808 per candy, which includes an export duty of Rs 160 candy. Thus, the difference in Indian and Pakistani prices varies between Rs 12 and Rs 20 per candy, depending on quality.

Again, operators are taken aback to find that stocks of unsold cloth with the mills are still high. The improvement following the conversion of Sales Tax on cloth into excise duty and a cut in excise duty on medium cloth has proved to be temporary. The industry is still facing heavy accumulation of stocks. Many mills have, therefore, been adopting a hand-to-mouth policy in regard to their purchases of cotton since cloth prospects have not brightened.

On top of these, reports of a bumper crop of Bengal Deshi cotton in the Punjab and Ganganagar circles have caused considerable uneasiness in the trade. Huge stocks are reported to have accumulated with the factories in the Punjab and prices have receded to low levels not seen in many years. Total supply, including the carry-over from last year, is estimated to be well over 4 lakhs bales. With consumption in India being only about 2 lakhs bales and exports sanctioned so far amounting to one lakh bales, there still remains a surplus of one lakh bales. In these circumstances, unless the Government reduce the existing high export duty so as to nullify the price advantage offered by Pakistan, it seems doubtful if the entire quota will be taken up immediately.

For obvious reasons, sentiment in the cotton futures market re-

mained depressed, while the inauguration of futures trading at Akola accentuated the fall in prices. The turnover was only about 20,000 bales. Against the previous closing of Rs 683.50, ICC Jharilla March opened easier at Rs 677 and, after receding further to Rs 671.25, improved at the close to Rs 674.75. May delivery touched a high of Rs 672.50 and a low of Rs 669, to close finally at Rs 670.50.

×

SPOT MARKET:

Trading in the Spot market was quiet, reflecting trade disappointment over the Commerce Minister's statement at the Export Advisory Council meeting that no further export quota would be released. New crop Laxmi, Khadesh, Jharilla and Surti varieties were only in modest demand.

For reasons stated earlier, the export section remained dull.

On the import front, there was no development. New import programmes are awaited for East African, Egyptian and Sudan cottons. The general expectation is that import quotas may be forthcoming after the meeting of the Import Advisory Council. Meanwhile, trade attention is centred around the Egyptian delegation, which is reported to have arrived. With the Commerce Minister's reported statement that he would consider favourably more imports of East African cotton in relation to American types, the trade is hopeful for an early release of import quotas in these varieties. Prices, however, remain unchanged.

×

NEW YORK COTTON MARKET:

Price movements in the New York cotton futures market were rather irregular. A lower forecast of domestic cotton consumption and the uncertainty on the level of the interim cotton loan for the 1958 crop discouraged rallying tendencies. The market, however, staged a recovery, partially on trade buying and short-covering; but eased again towards the close as selling increased. There was some switching from nearby March to later months.

The US Department of Agriculture has estimated domestic consumption, this season, at 8 million bales, which is down 600,000 bales from its November estimate. The Agricultural Department has also announced an increase in price support on the 1958 cotton crop to 81 per cent of parity as compared with 78 per cent of parity from the 1957 crop.

The Department has stated that the average support level for the 1958 crop will figure out to 39.75 cents a pound for Middling 7 cotton as compared with 28.81 cents in 1957. Supports may be adjusted upward if cotton supplies decline by the time the next marketing year begins on August 1.

Listless Conditions

Meanwhile, Middling Spot is quoted at 36.10 cents per pound.

×

LIVERPOOL COTTON MARKET:

Values on the Liverpool cotton market showed a further small improvement last week with the distant mixed contract deliveries being supported by commission house buying. The advance attracted hedge selling and, with professional realising, the close was barely steady. Trading remained inactive in the Sudan contract.

×

KARACHI COTTON MARKET:

The easy trend, noticed in the Karachi cotton market, gathered momentum during the past week, thanks to persistent selling induced by continued slackness of foreign demand and poor domestic spinner interest. Towards the close of the week, there was a slight recovery in prices following speculative support being influenced by the reports that Japan would shortly make sterling allocation for the purchase of 15,000 bales of short-staple cotton. Sind Deshi was quoted at Rs 70; Punjab Deshi at Rs 67-8; LSS Punjab Rs 79-12 and N.T. Rolling Rs 80-4.

×

CLOTH AND PIECEGOODS: Conditions in the Piecegoods market remained steady. Inquiries from several consuming centres have broadened; but demand from the South Indian centres is yet to improve. But, in spite of the steady offtake, the quantity of unsold stocks with the mills is said to be still heavy.

From the peak figure of 664,000 bales on the 11th January, stocks of sold and unsold cloth with the mills have come down to 616,000 bales as on the 25th January. Last year this time, stocks were in the vicinity of 514,000 bales. It is still considered problematic as to whether this pretends a definite change in the psychology either of the wholesale trade or of the consumer. Following were the stocks of cloth (in bales) held by the mills during the past year:—January 514,188; February 527,631; March 543,706; April 534,767; May 469,672; June 506,764; July 539,210; August 563,200; September 572,163; October 605,526; November 612,138 and December 659,885.

Also, conditions on the export front were steady. Satisfactory business was reported with Sudan. Trading conditions in Aden seem to have improved slightly and there have been modest enquiries from this destination. Inquiries were also received from Ethiopia, while some business was booked with Iraq. Business with East Africa was moderate.

Economic Prosperity in South East Asia offers new markets for your goods

Now is the time to trade with South East Asia, because the people there can afford to buy your goods. The Indian Overseas Bank Ltd., with branches in several strategic centres has made a special study of this important, growing market. You can depend on them to help you solve your trading problems.

The INDIAN OVERSEAS BANK Limited, MADRAS

Branches at: Bombay, Calcutta, Madras, New Delhi, Hyderabad and throughout South India. Overseas Branches: Rangoon, Colombo, Ipoh, Kuala Lumpur, Penang, Singapore, Malacca, Bangkok, Hong Kong.

M. C. MUTHIAH Chairman C. P. DORAICANNU General Manager

Buoyancy in Bullion

THE Bombay Bullion Exchange continued to present a firm front in the midst of general depressed conditions in other commodity and share markets. Firm in their conviction and in full control over sentiment, bull operators dominated the market and manipulated prices to their own advantage despite imposition of margin.

In general, the trend of demand for both silver and gold has been reassuring and the traders are inclined to look forward to a generally satisfactory performance with a few spells of periodic dullness.

So far as Gold is concerned, prices have touched fresh higher levels as stocks are depleted and unauthorised arrivals have dwindled considerably. The tighter sealing of the Indo-Pakistan border and increased vigilance within the country have coincided with the brisk demand from Calcutta, Madras and North Indian consuming centres. The reduced offerings of indigenous gold during the last few days have also gone to tighten further the supply position. With the result, forward rates were taken further up to Rs 112.69 from Rs 112.44, while the ready position is quoted around Rs 113.87. Sovereign remained firm at Rs 71.50.

The position in respect of Silver has been more or less identical.

Thanks to the recent spell of consistent local as well as uncountry demand, the supply in Bombay is reported to have declined by about 500 to 1,000 bars during the last one month. Lesser arrivals of silver coins from Tibet on account of winter have also reduced the supply position. Arrivals and offtake are balanced at 17 bars. Forward rates moved between Rs 188.69 and Rs 189.50, while the ready position is quoted around Rs 189.06.

There is a general feeling that the offtake of silver, during the next two months, will remain good. Even since Tibetan coins were allowed as from April 1956, India is estimated to have absorbed about 38,000 bars or even a little more. This is something spectacular.

Oils & Oilseeds

Although the markets for Oils and Oilseeds commenced on a discouraging note under the lead of groundnuts, values improved slightly towards the close on technical considerations.

The Union Commerce and Industry Minister's refusal to grant export quotas for Groundnut Oil and HPS groundnut, for the time being, has caused a feeling of disappointment. This is reflected in a modest drop of about Rs 2 from

the week-end levels. It is pointed out that the setback in the market would have been more sharper, but for the healthy spot position. In the futures section, February delivery touched a high of Rs 154.75 and a low of Rs 153.25, to finish the week at Rs 154.62. Ready bold was quoted at Rs 30.37 and Groundnut Oil at Rs 16.62.

Meanwhile, the announcement releasing 20,000 tons of Groundnut Oilcake for exports has provided some consolation to exporters. This is reflected in the rate gaining Rs 10 to Rs 12 per ton. Shippers have envisaged a favourable outlook for exports to the UK and the Continent where the current rates are placed around £27½ per ton c.i.f.

Price movements in the Castor-seed section were confined to a narrow range. The dull atmosphere in the market was attributed to the absence of fresh overseas demand for castor oil. May delivery touched a high of Rs 139.62 and a low of Rs 138.62, to finish at Rs 155.62. Ready was quoted around Rs 27.25 and Castor Oil, commercial quality, at Rs 14.00.

Prices in the Linseed section, however, developed a slightly hardening tendency due to short-covering, stimulated by higher up-country advices and the reports that shippers had been able to put through export business for about 300 tons of linseed oil at £105 to £105½ per ton. May delivery changed hands at Rs 29.31 to Rs 29.50, while the ready position is quoted at Rs 28.25 and Linseed Oil at Rs 15.44.

Trading in the Cottonseed section was featureless with the May delivery moving between Rs 95.25 and Rs 98.00.

Yarn

Conditions in the Yarn market continued to remain dull with the prices, especially of Staple-Fibre, showing a further drop from last levels. Mills from Madras and Coimbatore were reported to be eager sellers, while the offtake in Calcutta and Delhi was low.

In Rayon yarn, business put through was meagre as traders adopted a wait and watch policy, pending a clearer picture of the import policy for the March/October period.

In the Spot section, National Rayon 120 1st quality was quoted at Rs 4.46 as against Rs 4.56 per pound. The Japanese and Italian varieties remained mostly unchanged.

Sentiment in the Cotton Yarn section continued to remain depressed although prices ruled practically unchanged. There was a general feeling that the export outlook was poor, while many spinners were willing to dispose of their production to handloom and powerloom factories at concessional rates.

Non-Ferrous Metals

With the exception of Copper which ruled firm due to continued scarcity of the metal, conditions in other sections of the Non-Ferrous Metal market ruled quiet. It is believed that, as a result of the discussions the Government of India had with the established importers and the actual users, a scheme is likely to be introduced by which the established importers will have to sell metals to the actual users under Government instructions and at a nominal profit in all the important metals. While this should end the complaint of the actual users, the Government are understood to be examining the price structure of the rollers. It is considered likely that the Government may take some action to bring down the profit of the rollers, so that non-ferrous metal utensil manufacturers can sell their finished products with reasonable level of profits.

Meanwhile, ready Copper ruled firm at Rs 175 per cwt, while Zinc was quiet at Rs 53 per cwt in view of the comfortable stock position. The stock position of Lead was also healthy, resulting in the rate hovering idly around Rs 64 per cwt. Trading in the Tin section was featureless, the rate being quoted around Rs 128 per quarter.

On the London Metal Exchange, Copper was quoted at £162½ per ton. There are reports that the Japanese copper smelters are cutting their production by 25 per cent. Zinc ruled better at £65 per ton. The cutback in the production of this metal is, it is felt, adequate to stabilise the market. Moreover, consumer demand in the UK is now better than in the previous week. Lead ruled remarkably steady at £73½ per ton, mainly attributed to the continued import of this metal into the USA in anticipation of higher import duties at a later date. Tin ruled quiet at £730 per ton. Heavy arrivals in the UK are expected in the next few days.

Budget Session Begins

PARLIAMENT begins its Budget session this year in an atmosphere tense with unresolved mysteries and unanswered questions about the immediate future of one of the most important members of Government. What has added to the piquancy of the situation is the fact that it has become tantalisingly difficult to predict about the developments of the next few days. Indeed, the difficulty has increased rather than diminished with the passage of time. This may appear somewhat paradoxical, but it is a fact that, until the meeting of the Congress Parliamentary party over the week end, observers here were fairly confident about not only the possible contents of the Chagla Commission Report, but also the possible subsequent developments. It may be such assumptions were premature, but they were there.

But Mr Nehru's speech, at the meeting of the party's Parliamentary wing, has thrown all prophetic wings into some confusion. Mr Nehru made it clear, of course, that it would not be useful to discuss the question till the Report of the Commission was actually submitted, and that when it was so submitted, the fullest possible discussion would take place. But, despite these reservations, some of his remarks at the meeting have every appearance of having been made with the deliberate purpose of rousing his party men and his countrymen from a too exclusive absorption with the Chagla Commission's inquiry. In the first place, he elaborated his earlier appreciation in Bombay of the splendid work that the Finance Minister has been doing in the last two years. It is a fact of some psychological interest that this undoubtedly splendid record of Mr Krishnamachari's stewardship of the finances of the country at a very difficult period has had but niggardly acknowledgment from his party men. This lack of generosity has now found a remote rationalisation in the alleged acts of the Finance Minister over the LIC deal. Mr Nehru's first purpose was to clear this fog of prejudice against the Finance Minister.

Mr Nehru went even further. It is possible to read too much into his remarks, but the context and terms of his reference to the constitutional issues involved in the LIC deal, in so far as they concerned Mr Krishnamachari, were extremely significant. It is an open question whether or not the terms of reference of the Chagla Commission included the constitutional position involved in these transactions. In any case, we must await the Report of the Commission to find out what view it has taken of its duties. And even on the constitutional questions involved, the situation, as Mr Nehru pointed out,

is not quite simple. In Mr Nehru's view, though we have been following the British Parliamentary system in our country, it is for consideration whether or not we should forge our own conventions with regard to constitutional proprieties.

This indication of the way in which Mr Nehru's mind is working is extremely important, for two reasons. Firstly, and in relation to Mr Krishnamachari's immediate future, it would seem that Mr Nehru would be willing to deprive himself of Mr Krishnamachari's services only if the Chagla Commission's findings fix direct, personal and factual responsibility on the Minister for any irregularity in the LIC deals. In other words, the doctrine of vicarious responsibility of the Minister, of which so much was said during the inquiry itself, is something which the Prime Minister considers needs reconsideration in our present context. And, if one may hazard a guess on the tenuous evidence of the observations and the surrounding circumstances, Mr Nehru would appear to reject the theory of vicarious responsibility at least at the stage of development in which we find ourselves. If this is indeed Mr Nehru's view and he persuades (as he, in all probability, will) his followers to accept it, it would be an event of considerable significance to our constitutional history. And this is the second reason why I consider Mr Nehru's remarks significant.

In the light of all this, the events of the next few days are fraught with momentous interest. Not only the future of an important and almost indispensable (at any rate at this juncture) member of the Cabinet is to be decided but also far-reaching constitutional conventions may be forged in consequence. Of course, all this assumes too much on the contents of the Commission's Report, which as I write, is just in the hands of Government. But, by the time this despatch is in your hands, some of the uncertainties would have resolved themselves one way or the other.

It is a measure of the obsessional interest generated by the LIC inquiry that so much of the space of my despatch reporting the new commencement of Parliamentary session should be taken up with it. Considering that the session is to unfold in a few days the final shape of the core of the Plan, and the Budget for the next year, this diversion of interest is all the more striking. But it would be a mistake to underestimate the importance to the future of the country of the decisions that are to be taken on these substantial matters in the course of the next few months.

From the point of view of scanning what the future has in store for us, the customary address by the President to the Joint Session of Parliament was somewhat barren of interest. Indeed, most of his address was taken up with a review of the activities of the last year and the success that has attended our efforts and the difficulties that have been overcome in the course of our endeavour during that period. But the President re-emphasised Government's determination not to allow themselves to take the easier but "not the gainful or constructive way" of slowing down the rate of progress. Though the President could not obviously indicate the details, he stated that we shall shortly have a clearer outline of the Plan rephrased to overcome current difficulties over foreign exchange. He also indicated what might well become a major shift in policy, namely, the decentralisation of the community project administration with a view to mobilising local democratic impulses toward purposeful endeavours. Among more particular promises is the possibility during the Second Plan period of one or more atomic power stations. The President also reiterated our general policy with regard to international affairs and, in a particular reference to the request for atomic weapons by Baghdad Pact countries, deplored it and added the assurance that we do not intend to produce, though we have the technical resources to do so, atomic weapons.

For the rest, the President's address was notable for its assurance that the difficulties of the past year have been brought under control and for the general tone of optimism that he brought to the immediate tasks. The economic situation has improved steadily since the President last addressed Parliament. The President referred to the improvement in the foreign exchange position, in which context he thanked friendly foreign countries (especially the US) who have come to our assistance. He quoted the increase in agricultural and industrial production and the substantial success achieved in the restraining of the inflationary pressures as further evidence of the economy being in fairly good shape. Emphasising that our difficulties were those of development, the President called for concerted efforts to reach the goals the country has set itself.

By way of post script, I should like to return to the Chagla Commission's Report. Since writing the earlier portion of this despatch, some indications are available about the actual finding of the Commission. It is believed that the ninety page report of Mr Justice Chagla fixes the responsibility of the deals on Mr Krishnamachari

and Mr H. M. Patel. It is believed that the Commission is of the view that the executive responsibility of the transactions is that of Mr Patel, who, the Commission thinks, could not have acted without consultation with the Finance Minister. The Commission is also reported to have been of the view that the Minister must, in addition, bear the constitutional responsibility for the deals. As at present advised, it is not clear what view the Commission takes of the soundness and bona fides of the deals themselves.

It looks as though we may all have to wait longer than originally anticipated for the official release of the Report. It was earlier expected that the Report would be presented to Lok Sabha on Wednesday, but it now appears that the Report is still being studied by Mr Nehru and will be considered by the Cabinet on Wednesday. In all probability, it will be presented to the Lok Sabha on Thursday and will be released to the public shortly thereafter.

Except that it now seems certain that Mr Krishnamachari will press his resignation, it is difficult to say anything definitely at this stage. The situation will perhaps be clearer by the end of this week. As I said last week, should it become inevitable that Mr Nehru should accept, for whatever reason, the Finance Minister's resignation, it would be one of the most unfortunate things to have happened. This is so especially in view of the fact that the first fruits of TTK's efforts have, as the President's address showed, started making their appearance.

Whether or not Mr Krishnamachari resigns, and whether or not such resignation is the direct result of any adverse remarks that might be made by the Chagla Commission, there can be no doubt that the whole affair has, as I said last week, all the attributes of Greek tragedy. Once the drama got under way, there was no break, no intermission in the story that it had to unfold. But I may mention here that, although the tragic characters had, in consonance with Greek definition, courted disaster almost inevitably, there is, in Delhi, the impression that the enquiry has, from every point of view, been much less than satisfactory. One almost gets the impression that the Government's case has gone by default. One also gets the impression that the Attorney General went beyond his province and has indulged in a denunciation of State enterprises that was not called for. So, whether or not TTK resigns, one thing is certain: the debate over this affair is likely to be prolonged—and, may be, even bitter and acrimonious.

international

exhibition

16-25 APRIL 1958
LONDON, ENGLAND

instruments, electronics & automation

you are cordially invited to the 1958 Instruments, Electronics and Automation Exhibition.

MORE THAN 250 BRITISH MANUFACTURERS will be showing the latest and most comprehensive range of exhibits.

OVER 100 OVERSEAS EXHIBITORS will be displaying their achievements in the rapidly developing fields of instruments, electronics and automation. Note the date NOW.

I.E.A. — the exhibition no progressive industrialist can afford to miss.

For further details contact the nearest British Embassy or Consulate, or write to:

Outlay on States' Plans

The outlay for the States during the third year of the Plan has been fixed by the Panning Commission at Rs 386.30 crores against a total of Rs 500.83 proposed by the State Governments. The pruning of the States' original proposals by Rs 115 crores seems to have been rendered necessary in view of the limited resources left with the Centre consequent on the recommendations of the second Finance Commission. The increased commitments of the Centre in respect of the steel plants, railways and coal development were partly responsible for such pruning. The figures given here refer to the outlay of only 14 States and exclude the Centrally-administered Union territories. The outlay in respect of the latter is still being worked out and the total for them is expected to come to another Rs 10 to Rs 12 crores.

Apart from the scaling down of the Plans of the State Governments for the third year of the Plan, they have also been asked to reduce deficit financing to a lower level in 1958 than in the first two years of the Plan. If expenditure is to be maintained at the old level the State Governments would be required to secure more resources internally. While small savings should offer a way for increasing the States' revenue, there seems to be scope for raising revenue in other ways also. For example in Madhya Pradesh the land revenue assessments and water rates would seem to admit of some upward revision at the present level of agricultural prices. Similarly the arrears of taccavi loans were also enormous, their advances having exceeded the recoveries.

In respect of programmes touching agriculture great stress has been laid on the need to pay sustained attention on minor irrigation works. To facilitate speedier implementation of agricultural programmes the States have been advised to concentrate on projects yielding quicker results in preference to long-term programmes. Fuller utilisation of every kind of irrigation facilities is one of the ways that should suggest to the Governments in the drive at quicker implementation of the programmes for agriculture. Agricultural production would also show better results if it is properly coordinated with the community development programmes.

In the field of social services the most glaring deficiency is perhaps the great leeway still to be made in regard to education. Though a dead line had been fixed for the introduction of compulsory primary education throughout the country by 1965 how far this would make headway would depend on what the State Governments do to tackle the problem in the course of the Second Plan. The State Governments have been asked to utilise fully the provision made for this purpose under the Second Plan within the

Plan period. In regard to housing a phased programme regarding the acquisition of land for industrial housing in place of yearly schemes as is the case with some States like West Bengal at present seems to have found favour with the Planning Commission.

* "Socialism Through Peaceful Means"

The Communist Party of India has made a radical departure from the orthodox preference of means, by amending the Party's Constitution to accommodate "socialism through peaceful means". For aught we know, this is the first time that a Communist party anywhere in the world registers formal acceptance of peaceful means for the attainment of its objectives. In taking this step, it has to be presumed, the Indian Party leaders have secured prior approval from their international colleagues to whom every national leadership habitually looks for life and guidance.

Having been able to secure Governmental authority through peaceful and legitimate means in one of the States of the Indian Union, the Communist Party can justifiably hope to repeat the performance in more States. If wedded to violence, the party will find its freedom of activity curtailed and the chances of securing public support may also be less.

Eschewing violence, the party can easily identify itself with whatever is convenient in the Congress platform and at the same time will be free to criticise and condemn whatever suits its public relations programme. It is therefore an admirably poised position for the party to strengthen its hold on the people. While claiming a share of the credit for the economic progress achieved by the plan, the party can shift the entire blame for deficiencies and lapses on to the Congress. Incidentally, untamable unemployment will continue to give the party the powerful whip it needs to beat the Congress with.

By accepting socialism through peaceful means, the distinctive marks of the leading political parties in India could be completely blurred to the utter confusion of the masses. Henceforward, socialism through peaceful means will be the common slogan for the Congress, the Socialist, Praja-Socialist and the Communist Parties, not to speak of the innumerable tiny local groups obtaining all over India.

* Progress of Education

Maulana Abul Kalam Azad's presidential address to the recent meeting of the Central Advisory Board of Education should serve to dispel some of the doubts and apprehensions which have come to

vitate discussion on the progress of education in the country. The main obstacle has been and continues to be, according to Maulana Azad, the non-acceptance by the Planning Commission of the theory that the spread of education should precede all developmental activity for the simple reason that progress in other fields without widespread education will fail to achieve optimum results. This is borne out by the scant attention paid to education in the First Plan. In spite of the Union Education Ministry's strenuous effort they have not been able to get the allocation asked for in the Second Plan also. Originally the estimate has been Rs 1,000 crores and when it has been subsequently halved to Rs 500 crores which in the opinion of the Ministry will be the minimum required, what they finally have been allotted is only Rs 300 crores. The Ministry has never left it in doubt that this sum will be grossly inadequate to carry out the abridged programme. This is not the end of the story. With financial difficulties assuming almost unmanageable proportions in the past two years, education also has had its share of the general pruning and the programme of educational buildings has been cut down.

Apart from the financial stringency the programme of education has also to grapple with the general lack of suitable personnel and Maulana Azad has mentioned the general inertia of the people as one of the impediments in the way. In the context of these inhibitory influences, therefore, the advance recorded in the field of education in the past few years must be deemed to be quite satisfactory.

On the controversial issue of official language of the Union the decision seems to rest with the Parliamentary Committee but Maulana Azad is emphatic on the need for the rapid development of Hindi. In this connection he has pointed out that considerable progress has already been made. Neither has he left the place of English in doubt. Knowledge of English is considered essential for progress in all fields of education and Maulana Azad has pointed out that "this requires that we must give adequate attention to the study of English even at the secondary stage."

It is gratifying to note that Maulana Azad has drawn pointed attention to the role of teachers and the need to make the teachers feel that their services are properly appreciated. If it is accepted that education is the basis of all progress, it will be easily evident that the teachers who mould the mind of the younger generation which is destined to succeed to the responsibilities of governing the country deserve the utmost consideration at the hands of Govern-

ment. Any neglect of the needs and problems of this section of people will leave an indelible and ugly mark on the future of the nation as a whole.

* Shellac Exports

The problems facing the shellac trade seem to have stemmed mainly from its rather uncertain position among the commodities. Perhaps the most important factor that militates against its stability is its availability neither on a large enough scale for industry to take an active interest in it nor too small to be completely ignored. It is this characteristic about the size of its production that seems to have been largely responsible for its difficulties. Moreover, it is difficult to forecast its availability in any particular year. The uncertainty about its production trend has, as is to be expected in such a case, led to a search for substitutes by consumers like gramophone record manufacturing industry. This has further reduced the demand. The violent fluctuation in the earnings from shellac may be seen from the estimate that during the current year shellac exports may bring in only Rs 2 to Rs 3 crores as against nearly Rs 6 crores during the last year, though the quantity has been more or less the same in both the periods. The decline in prices has become inevitable because of the limited scope for the commodity. It would appear that the steep fall expected this year is mainly due to the withdrawal of two big purchasers as well as the paucity of funds with the producers.

Mr Nityananda Kanango, Union Minister for Commerce, has rightly pointed out at the recent meeting of the Shellac Export Promotion Council that improvements in production forecast and the reorganisation of the producers on sound lines may reduce the uncertainty about shellac. Along with these, constant efforts should also be made to find new uses for this product in view of the growing competition from substitutes in the industries using shellac.

* Atoms for Medicine

Research in connection with the peaceful uses of atom in the country has revealed its revolutionary potentialities for diagnostic aids in medicine. In this connection, Dr H. J. Bhabha, Chairman of the Atomic Energy Commission stated, in the course of his address to the 12th Indian Congress of Radioactivity at Kanpur, that the Gamma rays produced by atom were of better quality and more penetrating than those of radium. Dr Bhabha stressed how important it was to know the safe dose for radiation of various types and tolerance levels for ingestion of different radio-active elements.

FOODGRAINS prices have been showing a downward trend during the past few weeks. They are appreciably lower at present than they were last year. The downward tendency is particularly noticeable in the case of Wheat. During January and February which are pre-harvesting months, prices of wheat normally tend to rise. But, this year, prices are not only down, but continue to show a steady decline.

In the case of Rice, although prices are not as low as they were last year, there is a downward tendency. For instance, price indices ranged from 91 in January 1957 to 96 in February and 97 in March. This year, the tendency is indicated by the fact that, in December 1957, the index stood at 102; in the first three weeks of January at 101 and in the last week of January 100.

In the Hapur market, conditions remained quiet. Although stocks are fast dwindling, the price trend is still bearish under the lead of Coarse grains. Good crop prospect is the main contributory factor, while the credit squeeze by banks against foodgrains stocks have gone a long way in easing the supply position. Wheat prices are quoted at Rs 15.25 per maund for the average variety and Rs 17 for the farm quality. Rice has recorded a slight fall, thanks to the satisfactory supply position. Appreciable fall in Gram prices in the Punjab have influenced local prices, which have eased fractionally. The markets for Maize and Bajra are, however, ruling steady. Sentiment in the Peas section continues to remain depressed due to good crop prospects and the demand is only at lower rates. Harvesting of early-sown variety will begin shortly. Arhar continues to attract good demand at almost unchanged prices.

In the Delhi grains market, Rice has recorded a further improvement of about Rs 4 per maund. Following reports of confiscation of rice stocks in the Punjab markets, buyers have become active. There is good demand for wheat. Owing to lack of timely rains, sellers are lacking, while stocks are also small. In view of the nearness of the crop, Gram prices are ruling easy in the absence of buyers. Bajra and Jowar have lost about 50 nP per maund for want of enquiry, induced by discouraging advices from the neighbouring States. The market for Pulses rules generally quiet as a result of slackened offtake.

The grains market in Bombay has passed another dull week. After a comparatively steady behaviour in the previous week, prices in the Rice section have developed a downward tendency, the fall being shared by both the old and new crops. The weakness in this commodity is attributed to sustained receipt from Andhra by road via Sholapur

Downward Trend in Foodgrains Prices

and a steady inflow by rail from other areas. In the Coarse grains section, Jowar has moved down by about Rs 5 per candy. The receipt of new jowar is stated to be fairly satisfactory and is expected to increase after about a fortnight. Bajra reflects a quiet undertone.

* Sugar

Sugar prices have tended to go up following good demand from the consuming centres. The export policy about the commodity having not yet been declared by the Government, the trade and industry are keenly awaiting the announcement, which will go a long way in shaping the future price trend.

Crushing is in full swing in West Uttar Pradesh as cane supplies are adequate. Ready mill-delivery prices have advanced by 19 nP to 25 nP per maund in the Muzaffarnagar market, as good business is done for the Punjab, Delhi, Gujarat, Saurashtra and the South.

Sufficient quantity is reported to have been sold by the factories out of the recently-released quota of 1.55 lakh tons for open sale. Following mill-delivery prices (per maund) are quoted in the Hapur market:—Meerut (D-28) Rs 35; Modinagar (B-29) Rs 36.50; Sim-

bhauli (E-29) Rs 35.37; Mansoorpur (B-29) Rs 37.62; Shamli (B-29) Rs 37; Daurala (B-29) Rs 36.81; Mowana (B-29) Rs 37.12; Amroha (D-29) Rs 34.62 and Bijnore (E-29) Rs 34.44.

Good demand from the Madras side accounts for 25 nP per maund advance in prices in the Kanpur market. Some of the factories have already disposed of their quota and demand from Saurashtra is keen. The undertone is fully steady.

There has been a marked decline in Khandsari arrivals and prices have moved up further, being now quoted at Rs 32 per maund.

* Gur

Despite loading restrictions to the Punjab and Gujarat sides—the two main consuming centres—ready Gur prices have improved fractionally due to support by stockists and in line with an appreciable advance in forward prices. Arrivals average 3,000 maunds per day, while stocks are estimated around 80,000 maunds. Forward delivery purchasers are reported to be keen to take delivery, while sellers are building up stocks for such delivery. Pansera quality is quoted at Rs 12.00 to Rs 12.12 and Balti at Rs 12.19 per maund.

How banking serves the PLYWOOD INDUSTRY

TIMBER suitable for plywood and tea chests is plentiful on the south-western coast, and the plywood industry in India is expanding every year. Production capacity has doubled since 1948, rating over 150 million square feet per annum now. Out of India's 53 plywood factories, more than half are in Malabar, Cochin, Travancore and Bangalore.

Banking has greatly helped in the rapid growth of the plywood industry. The facilities and guidance of a good bank, such as the availability of ready funds when needed, and the collection of dues in any part of the country, are an essential part of good organisation in the plywood industry.

We at Palai are proud that so many leading plywood manufacturers of South India employ the complete banking service we offer.

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investments—
Letters of Credit—Bill Collection—
Deposits—Loans & Overdrafts—
Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 24 branches are strategically located, 22 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office.

Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns and have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

(Incorporated in Travancore-Cochin with Limited Liability)

Head Office: PALAI, TRAVANCORE

Branches at: Madras, Cochin, Quilon, Trivandrum, Alleppey, Mangalore, Bangalore, etc. Also at: Delhi & New Delhi.

A LEADING BANK IN SOUTH INDIA

In the Muzaffarnagar market, prices have also improved and daily arrivals average 5,000 maunds. Chakku Minja is quoted at Rs 14.50 to Rs 15.25 and Shakkar at Rs 14.50 to Rs 15.50 per maund.

* Shellac

Conditions in the Calcutta Shellac market have turned a shade quieter due to lack of fresh buying from overseas consumers. Pure TN quality, which was done upto Rs 84 per maund, is presently quoted around Rs 81. Shipments, during the current month upto 5th, were 15,052 packages, comprising 9,093 packages of shellac; 5,127 packages of seedlac; 175 packages of buttonlac and 657 packages of other varieties.

Also, in the London market, business done is reported to be moderate and prices have eased by a few shillings per cwt. There are reports that the Board of Trade, London, is now offering its lac at ordinary c.i.f. prices and has managed to dispose of a fair amount. Thus, stocks with the British Government stand at 3,647 bags now as against 4,495 bags at the end of December last year. February delivery is quoted at 188sh with sellers at 191sh per cwt.

MADRAS REVIEW

THE long awaited Report of Mr P. S. Lokanathan has just been published and circulated to the members of the Madras Legislative Assembly last week. In his Report, Mr Lokanathan has recommended the extension of the single-point tax to a number of articles. Though the Report is yet to be debated by the members of the Legislature, the reaction among the general public to the proposals of Mr Lokanathan must be one of general satisfaction since the inquiry itself was instituted in an atmosphere of growing opposition to the system of multi-point levy which was in vogue in the State.

Mr Lokanathan was invited by the Madras Government to examine the scope and working of the Sales Tax Law in the State with a view to simplifying its structure and administration. The scope for the reform of the existing system was suggested by the very nature of the structure as it obtained in the State. Madras has been following a pattern of multi-point levy in regard to sales tax as against the general practice of single-point tax in the majority of States in India, including West Bengal, Bombay and Bihar. The case for the inquiry rested also on the fairly long period for which the tax has been in operation during which, from a secondary position which it occupied in point of revenue during the few years following its introduction, it had come to occupy the top place as the most prolific source of revenue for the State Government. The percentage which it contributed to the total revenue had risen from 2.6 in 1939-40 to 32.9 in 1952-53. The frequent impositions of the tax on new and additional articles as and when demanded by financial contingency also meant that the system had grown in a haphazard way without any attempt being made at rationalising the whole structure. By the indiscriminate extension of the tax to almost all articles, including those articles of daily consumption, the tax has got itself into emotional entanglements. Being a multi-point levy, opposi-

Rationalising the Sales Tax

tion was not confined to consumers alone but came from other quarters also, such as the producers and traders.

Mr Lokanathan has examined the main aspects of the system, namely, structure and administration of the sales tax in the State, and has made recommendations touching both these sides of the issue. In regard to the former, the most important change that has been suggested is the extension of the single-point sales tax to a number of articles in place of the multi-point levy. And though he has rejected the demand for the outright abolition of all multi-point levies and has a list of articles for taxation on the latter basis, he envisages a period when the multi-point system as such could be abolished. Thus, the Report carries a presumption against the multi-point system of sales tax. The condition for the ultimate abolition of the multi-point system is the adequacy of the revenue receipts from the single-point tax. Even after this condition is satisfied, the wholesale abolition of the system is viewed only as a gradual process beginning with the raising of the exemption limit for the multi-point levy from the present level of Rs 10,000 to Rs 25,000 and the exemption altogether of essential articles from sales tax. Perhaps the difficulties in a sudden and outright switch to single-point system would have explained the stand in favour of a gradual transition.

The suggestion for a single-point tax would naturally be welcomed by all interests, since the single-point system is less complicated than the multi-point system and is also simple to understand. The main complaint with the latter has been that it impinges on the economic system and interferes with the movement and sales of goods at too many inconvenient points. This vexatious interference by the Government would certainly be reduced by the introduction of the single-point pattern. Thus, much of the psychological resistance to sales tax from the commercial interests also would wear away. For the Government, the single-point system should simplify the problem of administration of the tax, since the point and source of collection would be better and clearer defined. Since the problem of simplifying the administration of the sales tax law in the State was one of the terms of reference in the inquiry, this presumption is inescapable. When ultimately even the remnant of the lingering multi-point structure is finally done away with, as envisaged in the Report, a greater element of uniformity would be imparted to the structure of sales taxes in the country.

Mr Lokanathan has further suggested that, as far as practicable the single-point tax should be collected at the source from the producer or the importer as the case may be. The reason underlying this is that, when imposed at the source, chances of evasion could be minimised. If it is to be imposed at any other point, it would open the door to evasion by unregistered dealers, especially when exemption limit for the turnover of different classes of dealers come to be fixed. Questions of where exactly to draw the line for the turnover limit and the increase in administrative expense in case of low limit would further have to be dealt with. Collection of taxes at source would eliminate all such difficulties.

While, certainly, the single-point system would make the task of the Government easier, so far as the common man who in the last analysis bears the burden of the taxes, is concerned it is the rates of taxation which matter. The relative merits of the two systems of taxation on the basis of incidence are impossible of being correctly assessed. The single-point tax of the same rate as the multi-point rate would certainly not yield the same amount of revenue to the Government. The burden would be equalised only when the rate under the single-point system is raised by as many times as it is taxed under the multi-point system. Mr Lokanathan has, in his Report, recommended the reduction of the multi-point rate to 1 per cent. Considering that almost all the items in the daily necessities of the consumer are grouped for multi-point levy, this reduction of the rate of tax should give great relief to the low-income group. Further, very low rates have been suggested for such articles as paddy and rice and cereals, pulses, and milk. For articles subject to the single-point tax, rates ranging from $\frac{1}{4}$ per cent to 6 per cent have been suggested. Low rates have been prescribed for articles of common use while higher rates have been proposed for articles having a luxury value.

The question of administrative simplification has also been kept in view in regard to proposals for exemptions from sales tax. In this connection, it has been suggested that exemptions which afford scope for misuse and evasion should be avoided. It has further been pointed out that criteria for exemptions should be defined clearly in the Act. Exemptions to cooperative societies are not considered desirable and other methods to lighten the financial pressure such as subsidies and subventions have been mentioned.

One of the weaknesses of the Madras Sales Tax Law was that it had not been sufficiently rigo-

rous in regard to methods of preventing evasion. Though the extent of such evasion has not been known, it is generally considered to be of huge dimensions. Proposals for rationalisation of the sales tax system which do not include measures to meet this need would have defeated the purpose of the entire scheme. Mr Lokanathan has in his Report suggested a number of measures to check this. They are as follows. (1) Reduction of the multi-point rate and of the difference between the single-point rates in Madras and in the neighbouring States. (2) Issue of bills and maintenance of stock accounts should be made compulsory for wholesalers and single-point assesses. (3) All agents should be made to register compulsorily for and submit proof of their agency status. (4) Greater powers should be granted to departmental officials to check movement of goods in lorries and boats and to check consignments by Railway. (5) A special Intelligence and inspection Section should be created. While there is not much to be said against these proposals, difficulties arise in regard to the first one. For, in the event that the single-point tax with reference to a particular commodity in Madras is comparatively higher than that in the neighbouring State, the reduction of the tax to the level of that prevailing in other States would involve the loss of receipts to the Government. The taxation system would further have to be manipulated to accord with the practices of the neighbouring Governments. Even original fixation of rates at similar levels is no guarantee against further revision if the neighbouring States choose to revise their own rates. Thus, a common measure of agreement in regard to the rates between the Contiguous States would be warranted if this condition is to be fulfilled.

In regard to administration, Mr Lokanathan has suggested a number of measures to make the system efficient. Compulsory registration of all producers and importers of single-point commodities without any turnover limit, registration of all casual dealers from other States and agents of all kinds, abolition of the licensing system are presumed to safeguard against any evasion. The single-point system demands the maintenance, by those liable to the tax, of elaborate registers and accounts. Recommendations as to this have been made with a view to giving the least room for manipulation.

The separation of the appellate authority from the assessment authority for which a case has been made is calculated to promote administrative efficiency and make for quick disposal of appeals against the law in particular cases.

THIS MINISTER

50 YEARS IN INDIAN POLITICS

The Kerala Government have to be congratulated in taking a move for the abolition of dowry. They could have pioneered in this field but Andhra has stolen a march. The social tragedies which the dowry system even now bring about are innumerable and often pass without serious public notice.

A group of village leaders in Rajasthan have taken a similar step for reducing expenditure on death ceremonies. Non-official efforts can always stimulate legislation and even independently contribute toward amelioration of conditions inseparable from outmoded outlook and practices. It is when Governments and non-official agencies march together that the best results are achieved and in the smoothest fashion.

A word of caution is also necessary against any fanatic view being taken of expenditure on ceremonies. While the dowry is invariably a dissipation of wealth hard earned by someone or other, social ceremonies within limits cannot be condemned outright, particularly in rural areas where there is little else to relieve the tedium of life to provide occasional hilarity and facilitate social mixing. Expenditure on ceremonies is a factor for economic good.

Many petty businesses and avocations, as for example, those of the florist and the cook thrive or are being preserved with the aid of these ceremonies. To cut them out at one sweep would mean new recruitment in strength to the vast ranks of the unemployed. A little expenditure once in a way by families who can afford does sustain social equilibrium and is a sluice for emotional exuberance without which neither stability nor peace can be ensured.

★

Village Officers

The report of the Village Officers Enquiry Committee just published by the Andhra Government contains many useful suggestions for the improvement of the prospects and conditions of the large number of village officers in the State. The Government have already accepted the main recommendations of the committee in regard to basic salaries and have ordered that the new scales of pay should take effect from 1st January 1958. An increase from Rs 2 to Rs 5 has been granted to the three classes of village officers who number about 47,000 and it is estimated that the additional cost to Government will be about Rs 15 lakhs.

The committee is of the opinion that village officers should continue to remain as part-time Government workers and that the hereditary system should be retained in a modified form. Another important recommendation is that

Good up to a Limit

village officers may be allowed to engage themselves in subsidiary occupations like stamp-vendors and branch post-masters within their village so long as the subsidiary occupation does not seriously interfere with the Government work. The committee has also recommended that the sons and daughters of village officers and servants may be given free education upto SSLC class. On the subject of educational qualification for village officers it has been suggested that the ultimate aim should be to raise it to SSLC Travelling allowance and daily allowance in certain specified cases, an increase in the existing rate when officers are required to go out of the village on Government work and additional remuneration for work in connection with loan collection have also been recommended.

The committee's suggestion that village officers may be made ex-officio members of panchayats without the power to vote but with the right to place on record their views on important matters will help ensure coordination between the revenue and panchayat administration at village level. In view of the important role assigned to panchayats in local self-government the active association of village officers in panchayat administration will go a long way in establishing an effective link between the village and the State Government. An essential prerequisite in this regard is the need to secure the willing cooperation of village officers. It is here that the suggestions of the committee can be of considerable assistance to Government.

★

A New Slant in Small Savings

The Madras Government are evidently determined to make a resounding success of the small savings drive. This is as it should be because this method of mopping up purchasing power with the community has the double advantage of containing inflation and providing the Exchequer with a sizable amount of much needed fund. The States have a special stake in the drive as the Centre has assured them that a good proportion of the proceeds will be given to them. The advice from the same source that they should desist from going into the market for loans has vested savings drive with a new sense of urgency and has helped give it fresh momentum.

It is, however, to be remembered that the small savings movement should not lose sight of the fact that there can be no element of compulsion. The investment must come voluntarily from the people especially in the rural area. Such ready response is possible only

when people at large come to realise that small savings give them not only a chance to put by something but that by investing in this wise they also make a direct contribution toward development of the country.

In this view, it would appear that the reported proposal of the Government of Madras to suggest to the employers to advance money to their workers in order to enable them to invest in national savings certificates is neither proper nor advisable. This hardly seems the correct approach. The Madras Government cannot have so soon forgotten the rather unhappy consequence of their "successful" loan collection in the not distant past. The representative of the Employers Federation of South India has pointed out that one of the unsavoury possibilities is that the employees may cash the certificate soon after buying them. An objectionable feature is the element of compulsion in asking the employers to advance money which rightly belongs to the shareholder or which the concern concerned has borrowed at a high rate of interest. The warning, however, seems to have fallen on deaf ears. It will be in the interest of everybody concerned if the State Government fully consider the pros and cons of their proposal before seriously putting it forward for adoption by employers.

★

Improvement of Livestock

At a time when financial stringency is threatening to slow down expansion plans in general, it is gratifying to hear that in such an important sphere as the development of livestock, the Madras State will implement in full all the schemes drawn up for the Second Plan period. It hardly needs to be emphasised that improvement of livestock will go a long way in strengthening our rural economy in the first place. There is ample scope for profitable development work in this regard as the return from livestock is very poor in our country though in point of numbers we occupy a prominent place among the countries of the world.

The allotment under the current plan for animal husbandry schemes for Madras is Rs 217.48 lakhs and Mr M. Bhaktavatsalam, Minister for Agriculture revealed in the course of his speech at a meeting of the Madras Livestock Improvement Board that so far a sum about Rs 25.48 lakhs had been spent. Though the amount is small considering the fact that two years of the five have passed by, there are indications that the outlay may considerably increase in the coming years as most of the schemes are still only in their preliminary stage of implementation.

Work on the setting up of three livestock farms is progressing satisfactorily and it is expected that soon it will be possible to supply good pedigree animals to the districts for grading up local scrub cattle and for building up pure breed herds. The key village scheme is also being implemented according to a planned programme for production of improved progenies through superior and pedigree bulls. Sheep and poultry development schemes are also making good headway.

It is, however, to be noted that for the development schemes to yield the desired results, it is essential to produce the requisite quantity of fodder. It would appear that in this regard progress has not been quite satisfactory. For Mr Bhaktavatsalam pointed out that the production of more fodder grasses and legumes had not increased to the desired extent. The main reason seems to be the lack of interest displayed by both the ryot and the breeder to use the land at their disposal for growing fodder. This underlines the need for impressing on the rural population that increasing the fodder supply is an integral part of the schemes of livestock development.

★

Community Development Programme

Community development programme is the point where planning in our country assumes the democratic pattern. This also fixes in a broad way the extent to which the people can contribute to the success of the Second Plan.

Speaking at Palghat, Mr K. P. Gopalan, Minister for Industries in Kerala regretted the relatively slower pace of the movement in the State as compared to other States. For till the end of December 1957, the people in that State have contributed a sum of Rs 26.32 lakhs by labour, and Rs 29.41 lakhs in land and Rs 20.62 lakhs in other ways.

Of the 142 blocks into which the State has been delimited, only about 64 blocks are now working. The blocks cover a total area of about 5787 sq miles which is about a third of the area of the entire State. Out of a total provision for non-loan items of Rs 26.5 million made for the movement in the State till December last, a sum of Rs 10.6 million has been spent. Agriculture seems to have received the maximum attention and achievements in this sphere have been substantial. About 25,500 tons of fertiliser have been distributed and 1,58,366 acres of paddy land have been brought under the Japanese method of cultivation.

IN the Madras Tanned Hides market, prices of Cow hides have developed a firmer tendency as all available supplies are being taken up by shippers. Although there is little change in the pattern of demand for Cow Calf hides, fancy prices are reported to have been paid for extra light weight fourth and inferior fourth selections.

There is, however, no change in Buff hides. Arrivals of Buff Calf and Cow Calf are small and there has been a steady clearance at firm prices.

On the export front, trading continues to be difficult as Madras sellers are rather reserved and business is not easy to put through as prices between buyers and sellers vary anything between 1d to 2d per pound. A small volume of business is, however, reported done in prime class 5/5 lbs at 69d, 59d and 49d for runs, fourths and fifths respectively.

Buff Calf is quoting 1d higher and, in one or two instances, a small advance is reported to have been paid for run selections. Business in Buff hides is difficult in view of the high prices obtainable locally due to North Indian demand.

In the Tanned Skins section, there is only a small clearance. Prices of Goat skins are unchanged, while those of Sheep skins are lower by 12 nP to 25 nP per pound. On the export front, trading is sporadic. Generally speaking, buyers in foreign countries are bidding 6d less than Madras-asking prices.

In the London auction, about 340,000 Goat skins were sold, representing about 78 per cent of the total offerings. Auctions in Sheep skins began with a catalogue of 669,000 skins as against 557,000 in

December last. Trading was extremely limited as the attendance of buyers was small. Where sales were made, prices were reported to be 1sh to 2sh per pound below December averages.

On the second day, demand improved, best primes and semi-primes realising full December levels. Fair and good middle classes, however, declined by 2½sh with other qualities ruling unchanged. The auctions ended with only 240,000 skins sold, representing about 38 per cent of the total offerings.

Following were the figures of exports (in bales) to the UK during January:—Cow hides 1,573; Cow Calf 127; Buff hides 17; Buff Calf 193; Goat Skins 525 and Sheep skins 584.

Groundnut

Conditions in the Madras Groundnut market remained fairly steady last week. Arrivals were small and averaged 15 to 20 tons per day. Only Chekku and rotary interests are taking up small quantities, while big buyers are not operating in view of the great disparity between the seed and oil prices. New crop is quoted around Rs 142 per candy.

In the Groundnut Oil section, there are no appreciable buyers. With the result, the rate for the ready position has declined to Rs 284 from 289 per candy. The fall in prices would have been greater, but for the resistance shown by sellers.

It has been decided to release 20,000 tons of Groundnut Oilcake (expeller variety) for export by established exporters, who exported groundnut oilcake during any one of the three calendar years 1955, 1956 or 1957 on the

basis of their past exports. Established shippers should submit documentary evidence of their past exports to the Port licensing officers, who will be issuing a trade notice in this behalf.

Coffee

There are indications that the Coffee industry will not be able to repeat, during the current season, the exceptionally good results it produced during the previous season. In view of the fears of a shortfall in output during the 1957-58 season, it is expected that the export quota for the current season will be pruned to about 7,000 tons as compared to about 15,000 tons expected last year.

On account of the increasing competition in world markets and the need for stepping up the country's foreign exchange resources, it is pointed out that there is an urgent need for revising the marketing policy by which exports are maintained at a stable level. It is felt that it will be helpful to the industry if a stable export policy is pursued, keeping in view the internal requirements.

It is also emphasised that more attention should be paid to the export of quality coffee. By exporting coffee which commands a high premium in world markets, the country will also help the industry to find more easily an export outlet whenever the exportable surplus becomes larger. In fact, a larger crop is envisaged for the next year, with the possibility of about 15,000 tons being available for export.

Pepper

Pepper markets, which had been ruling dull and quiet during the

Indian Finance

past few weeks, have taken a slight turn for the better, thanks to some covering purchases made by exporters who had sold to Russia and the USA for February shipment. Thus, a greater part of the arrivals in all the primary markets has been absorbed, relieving the pressure though temporarily. In the Kozhikode market, Wynaad quality is quoted at Rs 500 and the Country variety at Rs 490 per candy.

The rate in New York, reflecting steadier advices from both India and Singapore, has improved to 23 cents per pound, although no follow-through support is noted on the part of grinders. Sarawak is quoted at 22 cents per pound.

In the Singapore market, Black Sarawak special is quoted at 62½d. dollars per picul of 133.3 pounds. A sizable quantity of Lampong is reported to have been sold at Strs. \$58 to 60. The stock of Lampong and Muntok is reported to be heavy, as unauthorised arrivals are mounting from Sumatra though that of Sarawak black remains poor.

On the whole, the future of the pepper markets depends upon the buying policy of New York. If the USA continues to support the market at about 21 cents, the Indian market is likely to stabilise. However, trade in general awaits developments from Lampong and Singapore.

Cardamom

At the auction held this week at Bodinayakanur by the South Indian Cardamom Planters' Association, following rates (per pound) were quoted:—Green Rs 9.09 to Rs 9.73; shipment Rs 7.60 to Rs 8.79; Extra Green Rs 10.86 to Rs 11.13 and Thakkolam Rs 5.85 to Rs 8.23. In all, 7,307 pounds were sold. Average price realised per pound was Rs 8.87.

STATE BANK OF INDIA

NOTICE

The Third Annual General Meeting of the Shareholders of the State Bank of India will be held at the Local Head Office of the Bank, Apollo Street, Bombay, on Friday, the 14th March 1958, at 4 P.M. (Standard Time) for the transaction of the following business:—

To receive the Central Board's Report, the Balance Sheet and Profit and Loss Account of the Bank made up to the 31st December 1957 and the Auditors' Report on the Balance Sheet and Accounts.

P. C. BHATTACHARYYA,
Chairman.

Calcutta, the 24th January 1958.

February 15, 1958

Limited Trading: Selective Enquiry

Watch-Dog Writes:

ALTHOUGH business in stock markets remains generally restricted in view of the proximity of the Central Budget, a slightly steadier trend in prices is noticed this week. This may probably be due to technical considerations and paucity of offerings. Hopes are also entertained about some welcome changes in respect of compulsory deposit of reserves, Wealth Tax, tax on Bonus shares and Dividend Tax.

With the exception of the speculative issues which staged a marked recovery from the recent low levels, conditions in other sections on the Calcutta Stock Exchange remained generally steady.

The Bombay Stock Exchange experienced rather dull conditions with prices moving within a narrow range.

Thanks to short-covering and some replacement buying, conditions on the Ahmedabad Stock Exchange turned steadier.

A slight retreat on a cautious appraisal of the Budgetary prospects featured trading on the Madras Stock Exchange.

Trading on Wall Street was dull with losses ranging from fractions to around one dollar.

Calcutta

Calcutta, Friday Evening.

THE local Stock Exchange, which suffered a sharp setback last week, took a slight turn for the better during the week under review, although the recovery in prices was marked in the speculative issues under the lead of Indian Irons.

Turnover, however, remained restricted as operators were rather cautious in their commitments in view of the forthcoming Budget. Again, the acceptance of the Finance Minister's resignation failed to excite trading sentiment as it was in line with the market expectations. There was also a general disposition to await the Railway Budget which, it was felt, might contain further revisions in freight rates affecting some industries. Above all, anxiety was expressed over the findings made by Justice Chagla and fears were consequently entertained with regard to the investment outlook. But, the slight recovery in the prices of a few scrips was mainly due to speculative support, being induced by the expectation of some favourable changes in the tax structure. The market finished the week with moderate gains on balance.

With the money market showing some signs of stringency, activity in the Gilt-edged market was very much restricted. Enquiry was still confined to a limited number of issues, while the rest of the market was altogether neglected. Three per cent 1986 Conversion Loan opened steady at Rs 71.00 and, after improving at one time to Rs 72.00, receded again at the close to Rs 71.05.

Bank shares turned a shade quieter on the feeling that the working during the current year might not be as profitable as it was last year. United Commercial eased off to Rs 58.50 from Rs 59.75, while Hind were done at Rs 46.50 and Punjab National at Rs 62.75.

Weaker advices from the jute goods market following a sharp rise in stocks as well as in production of jute goods and the fears with regard to the profit margins of mills in view of the tight supply position of raw jute, had an adverse effect on sentiment in the Jute section where enquiry continued to be limited. The only bright spot was National which were pushed upto Rs 24.00 from Rs 23.00 on speculative buying, to finish the week at Rs 23.90. Ganges were a shade cheaper at Rs 48.50 against Rs 49; Howrah at Rs 13.19 against Rs 14.25 and Nuddea at Rs 31.50 against Rs 33.00. New Central were nearly maintained at Rs 13, while Anglo-India were marked down further to Rs 127 from Rs 129 and Belvedere to Rs 66.00 from Rs 67.50.

The belief, that the private colonies might be allocated a bigger expansion target, caused Coal shares to remain active; but higher levels could not be retained till the close due to general profit-taking. Burrakur were pushed up at one time to Rs 22.37 from Rs 22.25, to recede again at the close to the latter level. Bengal changed hands at Rs 231 to Rs 233; Central India at Rs 6.50 to Rs 6.69; Western Bengal at Rs 5.06 to Rs 5.25 and New Beerbhoom at Rs 14.31 to Rs 14.37. Equitable hardened to Rs 24.37 from Rs 24.06.

Tea shares continued to meet with restricted trading and, in the absence of any sustained buying support, prices were marked down further from last levels. Lower prices still obtained at the auctions, anxiety to await the interim dividend announcements to be declared shortly by tea companies and the fears of further taxation by the State Governments—were all factors contributing to a depressed sentiment in the section. The only bright spot was Jayshree having buyers upto Rs 10.25 from Rs 10.12. Hantapara were maintained at Rs 111, while Brahmapootra changed hands at Rs 3.21 to Rs 3.31; Bishnauth at Rs 18.62 to Rs 18.81; Choonabhutti at Rs 262 to Rs 263.50; East India at Rs 17.50 to Rs 17.62; Gohpur at Rs 21.25 to Rs 21.37; Hattikhira at Rs 10.25 to Rs 10.44; Methoni at Rs 16.25 to Rs 16.44 and Sapoi at Rs 23.75 to Rs 23.87.

Textile scrips met with stale liquidation on lack of support on the feeling that dividends to be declared by rest of the mills for 1957, would be substantially lower

than for 1956. Kesoram were on offer at Rs 9.87 to Rs 10.00 and Jayshree at Rs 6.00 to Rs 6.19. New Victoria were a steady feature at Rs 1.34.

The publication of excellent working results by some companies for last year induced a revival of activity in the Sugar section; but enquiry was selective. Most prominent were Cawnpore having recovered to Rs 12.37 from Rs 12.06 and Carew to Rs 6.56 from Rs 6.00. Dyer Meakin met with sustained demand upto Rs 9.81 from 9.19. SKG were a narrow market around Rs 9.00 with Belsund a shade cheaper at Rs 9.62 against Rs 9.81.

Engineering shares, after staging a sizable recovery till Thursday, lost ground towards the close on profit-taking following the release of the Chagla Commission's report and the consequent fears with regard to the investment outlook. Despite settlement considerations, Indian Irons were gradually pushed up to Rs 19.84 from the opening level of Rs 19.55 to finish the week at Rs 19.66. The settlement rate was Rs 19.74 against last settlement of Rs 20.36. "Satta" was fixed at 6 nP.

In sympathy, TEXMACO finished slightly lower at Rs 17.15 and Jessop at Rs 22.50 after touching higher levels of Rs 17.30 and Rs 23.00 respectively. Braithwaite changed hands at Rs 26.81; Britannia at Rs 13.44 to Rs 13.50; Burn at Rs 321 to Rs 333; G.K. Williams at Rs 28.25 to Rs 28.81 and Marshalls at Rs 4.87 to Rs 5.12.

Miscellaneous issues came in for selective support although price movements were rather irregular due to profit-taking at bulges. Orient Paper changed hands at Rs 24.15 to Rs 24.75 (Rs 24.50); Indian Cable at Rs 28.69 to Rs 29.12 (Rs 28.50); Indian Aluminium at Rs 12.37 to Rs 12.69 (Rs 12.69); Phillips India at Rs 13.81 to Rs 13.94 (Rs 13.87); Indian Oxygen at Rs 16.00 to Rs 16.19 (Rs 16.12); Hindustan Motor at Rs 5.87 to Rs 6.12 (Rs 6.12); Sone Valley at Rs 5.12 to Rs 5.25 (Rs 5.12); Indian Steamship at Rs 11.69 to Rs 11.34 (Rs 11.34); Indian Copper at Rs 2.83 to 2.87 (Rs 2.87); Aikali Chemical (new) at Rs 12.19 to Rs 12.25 (Rs 12.25); B.I.C. at Rs 3.75 to Rs 3.83 (Rs 3.80); Dunlop Rubber at Rs 21.75 to Rs 22.12 (Rs 21.87); Martin Burns at Rs 25.25 to Rs 25.37 (Rs 25.37) and Rohas at Rs 15.94 to Rs 16.12 (Rs 16.06). Osler were a steady feature at Rs 2.37, while Angelo Brothers were better at Rs 18.37 against Rs 18.25. Figures shown within brackets were the closing rates for the week.

Bombay

But for some active interest noticeable around Wednesday, the Stock market generally ruled dull last week. Reports that the Finance Minister's resignation would be accepted sent prices of speculatives up in earlier dealings on Wednesday but by close sentiment was once again subdued in the absence of fresh interest. The effect of the indication that the sanction for the Tata Jubilee bonus would be

given early was almost nullified by reports of labour unrest in Jamshedpur. In the background, there was the uncertainty caused by the proximity of the Budget though there seemed to be no doubt as to the absence of any relief in it. News from the cotton textile industry was far from encouraging. On the one hand, the reports published by some textile companies were disappointing and on the other, advices from the cloth market was also not quite good.

TEXTILES

Textiles shares were quiet. The accounts of Central India published during the week showed that, apart from the dislocation in the company due to renovations, the loss of nearly Rs 200,000 against previous year's profit was due to the continued depressed state of the cloth market and increase in labour costs. Over the week, Central India lost two points to be placed at Rs 82. Century on the other hand was well held around Rs 387.50. Bombay Dyeing was almost unchanged at Rs 50.60.

STEELS

In the steel section, Tata Steel began at Rs 170.50 and on the opening day fluctuated within narrow limits to close at Rs 170.25. In the absence of fresh support the scrip eased to Rs 169.75 on Monday. Rumours about the Jubilee bonus issue lifted the price to Rs 171.25 on Tuesday, while the uptrend was further extended on Wednesday by reports of the acceptance of the resignation of the Finance Minister. The quotation at close on that day was Rs 171.50. Thursday found the scrip subdued closing the day at Rs 171.00. Indian Iron continued to forge ahead after mid-week to be finally placed at Rs 19.78. In this case an additional bullish factor was the continued hope about a bonus share.

MISCELLANEOUS

Except for a few bright spots, the miscellaneous section followed the main trend of the market. National Rayon was in request due to interested buying and was done upto Rs 217.50 before closing at Rs 217.00. In earlier dealings ACC was done upto Rs 155.25 on hopes of increase in cement price. By close the scrip was marked down to Rs 153.75. Bombay Burmah closed at Rs 537.50 against its opening of Rs 539.50. Beapur Sugar was almost unchanged at Rs 236.50. Telco, after having been done upto Rs 141.50, closed at Rs 140.00.

Ahmedabad

THANKS to short-covering and some replacement buying, the Ahmedabad Stock Exchange developed a steadier tendency. Following were the closing rates:—Calico Rs 596.50 (Rs 591.50); Ambica Rs 591 (Rs 597); Arvind Rs 1008 (Rs 1004); Atul Rs 179 (Rs 179.50); Shorrock Rs 452.50 (Rs 452.50); New Commercial Rs 432 (Rs 433); Anil Starch Rs 260 (Rs 260) and New Shorrock Rs 690 (Rs 694). Figures shown within brackets were the opening rates for the week.

S. S. INDIAN SPLENDOR

Regular cargo service between INDIA-U.K.-CONTINENT and also INDIAN COASTAL service

Managing Agents: LIONEL EDWARDS (PRIVATE) LIMITED, "INDIA STEAMSHIP HOUSE", CALCUTTA

Madras

DULL conditions prevailed on the Madras Stock Exchange during the week under review.

TEXTILES: Prices in this section developed an easier tendency on lack of buying support. Loyal's had sellers at Rs 37.50 to Rs 38, while Coimbatore Cottons declined to Rs 162 on rumours of lower dividend. There were sellers for Coimbatore Spinnings, Rajalakshmis and Bangalore Woollens at the market rates. Air Glo-French were, however, in request upto Rs 79.

PLANTINGS: Dealings in this section were scattered and prices generally tended to lower levels, although there were a few exceptions. Tea shares met with selective support, prominent amongst these being Devasholas and Highlands. However, Talayars, Haileyburias and United Nilgiris attracted sellers at the quoted rates. Coonoors lost about 15 nP at Rs 17.60.

Coffee shares seemed to be rather neglected. Ouchterlony's were a

shade easier at Rs 4.85, while Badras had some support at the market rate. Consolidated Coffees changed hands a little lower at Rs 22.30, while Coffee Lands were quoted around Rs 27.60.

Among Rubber shares, Kalpettas were enquired at the market rate. Nilamburs declined to Rs 12.50 on more selling enquiries, while Cochin Malabars maintained the ground at Rs 4.05. Kil Kotagiris were done at Rs 5.00 to Rs 5.03 and Midlands at Rs 14.43.

SUGARS: Sugar shares were fairly active, K.C.P. Deferreds being in demand at the market rate. E.I.D. were a shade lower at Rs 29.12, while Deccans met with some business at Rs 7.88 to Rs 8.00 and Cauverys at Rs 88.50.

MISCELLANEOUS: In this section, Cement shares continued to be absorbed at higher prices. Buying enquiry was noticed for Indias, Travancore and Andhras at the market rates. FACTs dropped further to Rs 5.00 from Rs 5.20 on

renewed selling pressure. Offerings were seen in Mettur Chemicals and Mysore Papers at the quoted rates. Radio Electricals were done at Rs 5.10; Parrys Confectionery at Rs 3.70; Singareni Collieries at Rs 11.25 and Textools at Rs 178.

London

GENERALLY dull conditions were experienced by the London Stock Exchange. There was a reluctance to extend commitments, resulting in a substantial decline in prices at the close. News of a sharp rise in the number of unemployed in America was a major adverse influence.

Industrials were the chief sufferers and losses were widespread. Steel shares suffered a sharp setback following the Labour Party's declaration that rationalisation of the steel industry would be the first big task of the next Labour Government. Many of the Miscellaneous leaders were lower including Dunlop Rubber, which eased follo-

wing the news of tyre output cuts in the USA. Oil shares remained under the influence of falling world oil prices, while Tobacco and Brewery shares ruled comparatively steady. Tea shares were easier.

New York

TRADING on Wall Street was dull and losses ranged from fractions to around one dollar. There was again a contraction in the volume of business, which was interpreted as a favourable technical sign. On the other hand, there was little in the news to stimulate demand.

A rise in steel scrap prices at Pittsburgh was ignored by Steel shares. Price trends in Oil and Rubber shares were rather mixed. Paramount Pictures rose by 2.37 dollars following the news that it was selling its pre-1948 films for 50 million dollars. Anaconda Copper was quoted at \$43; General Motors at \$34½ and US Steel Common at \$56½.

pilfer-proof packaging for every product !

Thanks to the R. S. Closure, car owners can now be sure that the oil they buy in MB pilfer-proof oblong cans really is the advertised product they are paying for. Packers of lubricants, insecticides, liquid cleaners, brake and other fluids can now be confident that their factory-sealed products will reach the consumer without adulteration or substitution. Metal box provide individually designed and superbly finished containers and closures to protect some Rs. 100 crores worth of products every year.

The R. S. Closure provides an efficient and liquid-tight seal. As it is unscrewed, the lower skirt, known as the 'security band' breaks away. It is impossible to open the container without this happening—so that the intact security band is guarantee that the contents are genuine.

Amateur detection of the arm-chair type has recently been a favourite pastime.

Our sleuthing abilities have thus been tested in unravelling the various strands of evidence in "l'Affaire LIC".

Our task has proved difficult because, at the "inquest", the Chagla Commission did not by any means record all the evidence.

So, asks Eavesdropper, without this cardinal requirement of motive, what exactly is the case that has been made out at the inquest?

The "post mortem" was preceded by the inquest, but the Parliamentary debate on the Commission's Report still leaves us in the dark.

On the basis of available evidence, the amateur detectives have set about re-constructing the crimes.

What is conspicuously missing, strange to say, is ultimate motive.

What lies hidden in the Briefcase?

Investment Gossip:

AS I write this, the Budget looms a week away. Where once the market was confident that 1958-59 would offer little by way of unpleasant surprises, it has now been overtaken by the apprehension that, in the event, the Budget may not prove to have any incentives either. In this context, the new Finance Minister has aroused the anxiety in market circles, with his statements on the Chagla Commission Report, that the private sector can scarcely look forward to, shall we say, deferential treatment. So, while the market gained momentary steadiness when the LIC was reported as having purchased parcels of gilt-edged, in the hope that this presaged the Corporation's re-entry into the market for equities, sentiment later turned downward. By the end of the week, however, in consonance with the general desire to square up commitments before Budget, bear covering operations have been in evidence, such that there has been a slight recovery of prices.

But I do not think that the prospect is altogether bleak. On the contrary, I should say that prices have gone down as low as they could get. If I were sure that whims and caprices and fanciful interpretations of any development in the Indian economy no longer influenced the attitudes of stock exchange operators, I would straightaway suggest that the present is the time to buy. Sad to say, the whims and caprices will be there so long as there is a Stock Exchange. So, I suppose I would be best advised not to suggest any immediate purchases; that, instead, I should recommend a wait-and-see policy. This I will do; but, with it, I would like to couple an assessment of the factors that are likely to dominate the economy in the course of the next few days, weeks and months.

First, as regards the Budget. TTK prepared it, and if we are to be guided by his statement on the economic conditions, then, we would be foolish to expect any tax concessions. However, I am not without hope that he would have suggested some specific reliefs, accompanying, of course, one piece of major taxation—the Gifts Tax. What could these concessions be? One may well be the repeal of the Reserve Deposit. In this regard, a question was put in the Lok

Sabha, and Mr B. R. Bhagat's equivocal answer suggests that such repeal may be in the offing. Then, we might have a reduction in the dividends tax; this, however, is likely to be more a gesture than anything else, and the rate may not be much reduced. Lastly, I would not rule out the possibility of a reduction in the rate of Bonus tax.

Second, the next few weeks: the busy season is now running its course, and, after a delayed start, is now witnessing more stringent monetary conditions. This, of course, is a damper upon market activity. But, then, the current busy season would appear to be experiencing a much shorter period of stringent money; and to that extent, the recovery in market activity, following upon a relaxation in monetary conditions, will be quicker.

Third, as far as the next few months are concerned, the sizable accretions to the Deposit resources of Scheduled Banks are a sure indication of the fact that there is more money with the general public; and this, naturally, is of favourable significance to the Stock Exchanges.

Waiting, now, for the Budget and the contents of the briefcase of our Prime Minister cum Finance Minister.

£ R S

Investment Notes:

THE TISCO has obtained the Government sanction to issue bonus shares in the ratio of one share for every five shares held, by utilising the premium received on the new ordinary shares issued last year and a small amount out of the Reserves.

India Steamship Company Limited will capitalise Rs 22.50 lakhs from the Share Premium Account and issue 2.25 lakhs bonus shares of Rs 10 each in the proportion of 1:10.

The Metal Corporation of India Limited will be converting its Deferred shares into Ordinary shares in the ratio of one Ordinary for every three Deferred shares held.

Voltas Limited has decided to maintain the dividend at Rs 9 per share on the Old shares and Rs 6 on the New shares for 1957-58. Though the company has done well, the strict import policy has presumably prevented the directors in taking a liberal view on dividend.

An official announcement has been made by the liquidators for the payment, by way of fourth return, in respect of the Ordinary shares of the Bombay Electric Supply & Tramway Company Limited. The shareholders have, so far, received Rs 120 per share and, with the payment of another Rs 20 now, the total amounts to Rs 140. There appears to be a chance for additional payment of about Rs 2 or so per share. This may, however, take some months.

It is understood that the Premier Construction Company has a proposal to issue bonus shares in the ratio of one share for every share held. The proposal is expected to receive active consideration after the Budget. The company is also likely to request the Government for permission to pay the tax liability, in the event of a bonus issue, by instalments.

The authorities of the Bombay Stock Exchange have now allowed resumption of transactions for spot delivery in the shares of Anglo Brothers, Smith Stanistreet, Osler Electric, Jessop, Duncan Spartan, Brahmapootra Tea and F. & C. Osler.

In Ahmedabad, the directors of the Calico Mills Limited will decide the bonus issue on the 2nd March. This depends on the bonus tax in the forthcoming Budget.

In Madras, Kothari Textiles have made a final call of Rs 5 on the 2,52,000 equity shares of Rs 10 each. The amount is payable on or before the 7th April, 1958.

Jeypore Sugar Company has decided to capitalise Rs 6,95,330 out of the Reserves for issuing 69,533 bonus equity shares of Rs 10 each to the existing shareholders in the ratio of 3:10, subject to the Government sanction.

£ R S

Investment Briefs:

T. Stanes & Company, Coimbatore, has declared a final dividend of 12 per cent, making a total of 20 per cent for the year ended 30th September 1957 as against 17½ per cent in the previous year.

Jeypore Sugar has maintained the dividend at 6 per cent for the year ended 30th June, 1957.

Jogta Coal has again passed over the dividend for 1956.

£ R S

Textile Profits

Balance-Sheet Reviews:

THE worst fears about the unsatisfactory performance of the textile industry during the past year have already been confirmed by the dividend announcements made by certain important mills. The Brady group is the first to come out with dividend announcement for the calendar year and hence the distribution policy is indicative of the shape of things to come in respect of other textile units. As the industry had to nurse huge stocks and had to sell cloth at lower prices, it can be safely assumed that a serious inroad has been made into the profit margins of the mills.

£ R S

Central India

The above fact has been confirmed by the working results of the Central India Spinning and Manu-

facturing Company. The company has incurred a loss of Rs 20.79 lakhs for the year ended 30th June 1957 as against a profit of Rs 37,631 in the previous year. With the credit balance of Rs 13,125 brought in, there is a net loss of Rs 20.66 lakhs, which has been written off by transfer of the same amount from the Reserve Fund. Naturally, the directors have passed over the dividend.

According to the directors' report, the unsatisfactory working of the company were mainly due to the disruption and dislocation of normal working caused by the large-scale renovation programme which is in progress, the continued depressed state of the cloth market and the increase in labour costs.

In order to put the mills on a remunerative basis, they have now embarked on an extensive renovation and rehabilitation programme, which involves the complete scrapping of Mills No. 1 and No. 2 with the exception of the preparatory equipment of Mill No. 1 and 456 looms of Mill No. 2 which are serviceable and have been retained.

The transition period between the demolition of the old unit and the operation of the new unit is one of dislocation and disruption of normal working. On the basis of the progress so far achieved, it appears likely that the new unit will commence coming into operation by the middle of 1958. The resultant economies of this large-scale rehabilitation programme are expected to be realised when the whole new unit comes into operation.

£ R S

New Great

In the Brady group, the New Great Eastern Spinning & Weaving Company Limited has incurred a loss of Rs 9.55 lakhs for 1957 without providing for Depreciation, while the gross profit for the previous year amounted to Rs 1.67 lakhs. With a view of offset this loss and to provide Rs 30,178 for Wealth Tax and Rs 44,000 by way of dividends on the Preference shares, the directors have transferred Rs 7.30 lakhs from Reserve for Taxation and Rs 2.99 lakhs from General Reserve. Sales of cloth, yarn and waste are, however, slightly higher at Rs 1.97 crores against Rs 1.93 crores.

Further progress has been made in the modernisation of the mill in addition to the spinning machinery of the value of Rs 5.96 lakhs, which has enabled some retrenchment of operatives to be effected.

The paid-up capital of the company is Rs 38 lakhs, while Reserves and surplus have dwindled to Rs 11.72 lakhs. Secured and unsecured loans have increased to Rs 29.42 lakhs from Rs 10.95 lakhs. Current liabilities and provisions amount to Rs 20.90 lakhs.

The net block amounts to Rs 38.45 lakhs with Depreciation of about Rs 63 lakhs being provided so far. Current assets are shown at Rs 57.55 lakhs.

London and Overseas Representatives: Baptist Smith, Keith & Slater Ltd, Napier House, 24/7 High Holborn, London W.C. 1. Telephone: Holborn 5022.

New City

The New City of Bombay Manufacturing Company Limited has also incurred a loss of Rs 62.75 lakhs for 1957 without providing any depreciation as against a profit of Rs 3.80 lakhs in the previous year. With a transfer of Rs 23,888 being excess provision not required; Rs 2.68 lakhs from Reserve for Taxation and Rs 1.20 from General Reserve the total available balance comes to Rs 4.65 lakhs. This is adjusted against the loss of Rs 2.75 lakhs, leaving a credit balance of Rs 1.89 lakhs. Out of this, the directors have provided Rs 68,000 for Wealth Tax, while a dividend of Rs 5 against Rs 10 per share has been recommended on the Ordinary shares. Sales are higher at Rs 1.39 crores against Rs 1.32 crores.

£ R \$

Empire Dyeing

After providing Rs 30,419 by way of managing agents' commission as against Rs 37,168, the gross profit of the Empire Dyeing and Manufacturing Company Limited, for 1957, amounts to Rs 3.16 lakhs as against Rs 3.30 lakhs in the previous year. Out of the profit, Depreciation has been provided at Rs 37,433 (Rs 35,340) and Taxation Rs 1.06 lakhs (Rs 87,500). A dividend of Rs 3 per share has been recommended.

£ R \$

Sholapur Spinning

A move on behalf of three or four creditors has been made to take the Sholapur Spinning & Weaving Company Limited into liquidation. It is learnt that the application for the same has been received by the High Court. The Court has, however, given time till the 28th March for the formalities to be completed.

At the moment, the mills are working in very depleted strength as the working has been hard hit due to the incidence of heavy excise duty. The liabilities of the mills, which were once a most efficient unit in the textile industry, have steadily mounted up during the past few years.

The company owns two mills situated at Sholapur, which contain 86,048 spindles and 2,234 looms. The paid-up capital of the mills is Rs 49 lakhs. The carry-forward loss for the year ended 31st March 1956 was Rs 1.65 crores. This, it appears, might have increased further. The

net block stood at Rs 1.08 crores. Depreciation provided so far being Rs 2.05 crores.

£ R \$

Brady Engineering

The gross profit, earned by the Brady Engineering Company Limited, for the year 1957, has amounted to Rs 3.06 lakhs as against Rs 2.41 lakhs in the previous year. Out of this, the directors have provided Rs 94,787 for Depreciation against Rs 96,145 and for Taxation Rs 1.34 lakhs against Rs 33,000. They have transferred Rs 20,000 to General Reserve as against Rs 25,000. The dividend is maintained at Rs 3 per share.

Proceeds of engineering work amount to Rs 10.37 lakhs against Rs 8.92 lakhs. The directors have pointed out that the business has again been of a general nature; but a licence has recently been granted to the company for the manufacture of pulley blocks and ancillary equipment. It is hoped that this will develop into profitable line of business.

£ R \$

Eharat Collieries

Despite a rise in sales from Rs 82.11 lakhs to Rs 87.42 lakhs, Bharat Collieries Limited has reported a decline in the net profit, after providing for Taxation and Depreciation to Rs 3,60,320 for the year ended 30th June 1957 from Rs 4,23,536 in the previous year. After providing a sum of Rs 41,000 for Wealth Tax for two years, the Depreciation amount is reduced to Rs 3.70 lakhs from 3.72 lakhs. The dividend recommended is slightly lower at 60 nP against 62 nP per share.

According to the directors' report, the sinking of Pits No. 4 and No. 5 at Chapul Khas Colliery has been completed and the work in connection with the layout is now in progress. Raisings on a commercial scale from these pits will begin by the end of this year and increase gradually towards achieving the target of about half a million tons for this colliery under the Second Five-Year Plan.

The directors are also considering sand-stowing at Ekra Khas Colliery to increase the life and raisings from this colliery. Negotiations are being carried on with the Coal Board for requisite financial assistance to install ropeway for sand transport.

I—The Railway Budget

WITH little to offer by way of relief in congestion of passenger traffic and the alterations in freight arising from the Mudaliar Committee deferred to a future occasion, this year's Railway Budget is devoid of exciting features. Total revenues for the Budget year are estimated to be Rs 4075 millions, as against Rs 3844 millions in the revised estimate for 1957-58 and Rs 3476 millions in the actuals for 1956-57.

The increase in revenues anticipated for 1958-59 is at a lower annual rate than estimated for the previous year. This adverse difference is obviously due to the absence of any increase in rates in the budget. Last year the increase in gross traffic receipts was substantially assisted by the enhancement of rates. The anticipated addition to the traffic load in the third year of the Plan is of the order of 12 million tons, leading to a total of 145 million tons against 162 million tons in the original estimates of the Second Plan.

The year 1958-59 is described as a lumpy period from the standpoint of financial outlay. From that of addition to railway traffic too, it deserves the same description. While in the first year of the Plan it was 10 million tons, in the second year 9 million tons, and in the fourth and fifth years together 17 million tons, in the Central year 1958-59, the addition is estimated to be 12 million tons. To what extent this new demand on the Railways could be met is roughly indicated by the outlay proposed on rolling stock, machinery, works on new lines, electrification projects etc. For the current year, the budget estimate of Rs 2180 million for this purpose was arrived at on the basis of a probable saving to the extent of about Rs 247 millions. A revision of the estimate for the different heads of expenditure has wiped out the larger part of the anticipated savings and places the new estimate at Rs 2350 millions.

If the grievances voiced by trade associations from different parts of India are an indication, it is difficult to believe that wagon supply and movements have been satisfactory and sufficient during the year. For the budget year Rs 2600 millions have been allotted for this area of expenditure. Among the new items are included two important new lines which together add up to 140 miles, the doubling of line capacity on a few busy routes, the conversion of a section of the Southern Railway from meter gauge to broad gauge and a track renewal programme considerably bigger than what was undertaken in the previous year.

A total length of 1062 miles will be taken up for electrification with priority in execution going to those sections where traffic in steel and coal has increased, sections from Howrah to Moghalsara on the Eastern Railway and Asansol to Tatanagar and Rourkela and Rajkharwan to Barajamda on the South Eastern Railway. The Railway Minister in his speech presenting the budget was also able to report satisfactory results of steps taken to improve the supply of "critical" materials, by which he meant mainly steel.

At Chittaranjan 168 locomotives were produced in the current year and an equal number is expected in the next, against 156 in 1956-57.

The Minister would surely have wished for an increased output for the budget year. Chittaranjan, we gather, is hopeful of putting out a locomotive a day. Perhaps that day belongs to a period of surfeit and export. The TELCO is scheduled to improve the output from 78 locomotives last year to 90 in the current year and 100 in the next. The Integral Coach Factory has a more striking performance to report. From 88 unfurnished coaches in 1956-57, deliveries from the ICF have increased more than double to 180 in the current year and are expected to reach 295 in the budget year. A year hence, on double shift working the ICF output is scheduled to transcend the one per day limit.

While all these developments are indicative of a direction and a pace of improvement which in the context of the Second Plan has a certain inevitability about it, the day of adequacy in rail transport still remains far off. To say this is not to cast reflection on the determination or drive of the authorities. Strewn throughout the speech, there is ample evidence of both.

Financial outlay alone or for that matter the number and size of new projects can seldom be adequate criteria for actual improvement. Administrative steps have also a vital place. It is to be wondered if smaller zones can achieve greater all round efficiency. The creation of the North East Frontier Railway with the smallest mileage for any zone is a step in that direction, though here strategic considerations also came to play. The Mudaliar Committee is divided on the question of further zonal division. Anyway, that is a subject which the authorities may be called upon to pursue further.

Financially, the Railways are now in a sound position. The Second Plan allotment has been increased from Rs 11,250 millions to Rs 14,000 millions, which inspite of inflated costs here or there, must be fairly sufficient for the maximum physical achievement possible within another three years. In comparison with 1957-58 revised estimate, working expenses for 1958-59 have, as estimated in the budget, shown decline in the annual rate of increase. Net railway revenues on the contrary show a considerable higher rate of increase. Against Rs 584 millions in the actuals of 1956-57, the net revenues stand at Rs 659 millions in the revised estimate for 1957-58 and at Rs 769 millions in the new budget. Of the latest annual increase anticipated, the general revenues will absorb Rs 53 millions and the railway development fund Rs 57 millions.

These figures, comfortable as they are from the stand point of the Administration, can provide no relief to the lower class passenger who even now is obliged to travel under conditions of acute discomfort, if not also a threat of danger to life and property arising from too frequent accidents and too many thefts and robberies. Recent major accidents have induced the Railway Administration to take urgent measures of safety. Mr Jagjivan Ram assures us that technical improvements which can help to mitigate the incidence of the human element are being progressively effected. This is some consolation but when

Indian Finance

Established 1928

February 22, 1958

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

human failure admittedly accounts for these accidents more than any other factor, we can only pray with the Railway Minister that all those engaged in the running of Railways will be fully alive to their duty and responsibility. How far the labour unions could contribute toward avoidance of accidents is somewhat debatable. When the Railway Minister requests the unions to extend their full co-operation, he may be thinking only of the distractions and lassitude engendered by localised indiscipline or factionalism.

The experience of recent years has shown that the safety and comfort of the individual traveller are also dependent on his own conduct and the general attitude of the public toward crime and social discipline. As it is impossible to line the entire thirty thousand and odd miles of Indian Railways with a protection force, equally inconceivable is a policeman in every compartment. A better civic sense and more disciplined social co-operation in tackling lawbreakers will go a long way in the direction of rail travel with less discomfort.

For the lower class passengers overcrowding remains the worst terror, ordinarily. In spite of all the efforts being taken, the Railway Minister is afraid the difficulty will still continue to be as formidable as ever. Between requirements of additional goods transport and those of passenger traffic, the Administration has for the moment given priority to the first. In the light of the over-riding demands of a growing economy, this preference is scarcely a matter for controversy.

It is disturbing to feel that a vital national service like the Railways run by the State continues to be the cockpit of rival trade unions. Twice during last year there was threat of an All India strike. The revival of the All India Railwaymen's Federation is an unflattering development. There is reference in the budget speech to progress made by way of implementing the unity agreement made by the two organisations in March 1956. It is to be hoped that no new spoke would be put into the wheel. The budget contains quite an impressive array of items by way of extended amenities for railway staff. Against a provision of about Rs 30 millions provided for amenities for railway users, Rs 110 millions have been allotted for staff quarters and staff amenities. These figures speak of a solicitude on the part of the Administration for which the least that could be expected from the workers is the avoidance of strikes.

The lack of excitement in the Railway Budget arises, of course, in the fact that there is no sensation provided, by an increase either in passenger rates or goods rates. In the case of the Central Budget, there may be a similar absence of excitement, though there is one striking difference between the two Budgets. That is, while the tax effort has been completed from the standpoint of the Central Budget, much remains to be done in the case of the Railway Budget. And, surely, it would be inadvisable in this regard unduly to defer action on the recommendations of the Mudaliar Committee.

II—Performance in 1956-57

THE annual Report of the Railways Ministry, containing details about the activities and achievements of the Ministry for the last year (1956-57); points to significant developments in all spheres of railway operation. The performance of the railways during the year was marked by new levels of activity in almost all lines of operation which was paralleled by a rise in efficiency in working. This has coincided with improvement in other sectors of the economy which testifies to the impulse which railway expansion has given to economic development. Both industry and agriculture during the year have responded well to the momentum generated by the railways and production in these two has shown encouraging signs. In turn, part of the railways progress could also be traced to the expansionary influences generated in other sectors.

The all important index of performance so far as the railways are concerned, is the volume of traffic, both passenger and goods, which is carried. The volume of traffic under both these heads increased, goods traffic having gone up by 8.77 per cent and the number of originating passengers by 6.57 per cent over the previous year. In terms of tons and ton-miles, goods traffic during the year attained a peak of 125 million tons and 40,225 ton miles, against the previous year's figures of 115 million tons and 36,472 million ton miles. The increase in goods traffic on Government lines alone worked out to 10 per cent. The number of originating passengers showed a similar rise from 1,297 million in 1955-56 to 1,383 million in 1956-57. Passenger miles increased from 39,083 million to 42,194 million. Revenue loadings, or wagons loaded for the public, etc., also showed better results and averaged 12,168 a day on broad gauge and 7,819 on metre gauge against 11,374 and 7,263 on broad and metre gauges respectively during the previous year. In percentage terms, the increase was to the extent of 6.69 on broad gauge and 7.36 on metre gauge.

The most striking feature of the working of the railways was the increase in efficiency as reflected in the figures for the net tons miles per wagon day and for passenger train miles and goods train miles. The net ton miles per wagon day index rose to 570 on broad gauge and 210 on metre gauge from last year's figures at 541 and 203 respectively. Passenger train miles increased during the year by 2.70 per cent to 118.75 million and goods train miles totalled 86.64 million representing an increase of 4.85 per cent. As a result, the operating ratio (the ratio of working expenses, excluding suspense but including appropriation to Depreciation and Reserve Fund to gross earnings) was reduced from 81.95 per cent in 1955-56 to 79.90 per cent in 1956-57.

The increase in the volume of traffic made it possible for the railways to increase their earnings. Earnings from the carriage of goods increased from Rs 177.92 crores in 1955-56 to Rs 201.09 crores in 1956-57. The average receipts per freight ton mile stood at 11.3 pies against 11.1 pies during 1955-56.

The gross traffic receipts of the Government railways, amounted to Rs 347.57 crores and included Rs 116.33 crores under passenger traffic and Rs 203.96 crores under goods traffic. The net revenue during the year, after meeting all expenses including the ordinary working expenses to the tune of Rs 233.94 crores, was Rs 58.38 crores. Out of this, a sum of Rs 38.16 crores went to meet the obligation to pay dividend to the Government. Thus, the net surplus which remained for purposes of

development and allocated to the Development Fund was Rs 20.22 crores.

The year also witnessed the opening of new lines which had increased the mileage by 115.89 miles. Though this is only a minute fraction of what the country requires by way of new lines, more of such lines for about 569.45 miles are under construction. The total route mileage of all railways in India at the end of the year was 34,744, with about 34,291 miles under Government management. The total investment on all railways at March 1957 has been estimated at Rs 1246.40 crores, the investment on Government railways being placed at Rs 1239.88 crores.

The increase in the figures for revenue and volume of goods carried would fail to appeal to the common man, for whom progress is nothing unless it includes also increase in the amenities and facilities for travel. The expectations of the travelling public have also been roused by promises of such amenities by the Railway Ministry. The Railway Ministry, it is to be admitted have shown a keen awareness of the popular demand for better and more facilities and the need to meet them. The important standards for evaluating the performance of the Railways from the standpoint of the travelling public are safety, adequacy and comfort. Applying these standards, it would be evident that the Railway Ministry have not let their interest in the needs of passengers to slacken.

During the year, 1,301 new coaching vehicles were placed on line—565 broad gauge, 704 metre gauge and 32 narrow gauge. Out of this lower class coaches alone accounted for 910. Further, new locomotives numbering 322 broad gauge, 254 metre gauge and 3 narrow gauge were also released for increasing travelling facilities. Fitting of electric fans in third class coaches, supply cool drinking water to passengers, introduction of departmental catering on the Zonal railways on which it did not exist and efforts at improvement of the quality of food served, were the various kinds of amenities which received special attention. Sleeping accommodation for third class passengers was provided on seven pairs of trains. Further, extension of facilities was attempted by arrangement for reservation facilities for third class seating accommodation both at the starting stations as well as at intermediate stations. While all these would not fail to evoke appreciation, and have admittedly

made railway travel more comfortable for the middle class who form the majority of third class travellers, unless accompanied by greater safety of travel increase in amenities will remain a mere mockery for the travelling public whose chief concern is safety of travel. The unsafe condition of some parts of the Railways in the country has been so cruelly demonstrated by a series of major accidents a year ago involving heavy loss of human lives. That the causes of such accidents have not been completely eliminated has also been proved by some minor accidents in the course of the last year. More than anything else, it is this need to avoid accidents which should receive the major share of the attention of the Railway Ministry.

The Railway Ministry have shown themselves to be equally concerned in the welfare of their own staff and have been following a progressive and enlightened policy to meet the aspirations of the members. Construction of quarters, opening of staff canteens and co-operative societies and extension of medical facilities constitute the various strands of this policy.

Thus, judging from the capacity, shown by the railways in the first year of the Second Plan to respond to the needs of the industry and trade, there is no reason why, given the necessary foreign exchange, which is the basic factor governing the development of railways, the railways should not be capable of not merely repeating the performance of last year but also improving on it still further. As forming part of what is known as the hard core of the Plan, expenditure for railways is not subject to pruning and the Government are also committed to securing the requisite foreign exchange for the implementation of the various programmes coming under Railway development. Even if the difficulties on the foreign exchange sector are to be got over, the outlook for the successful implementation of the various schemes of railway development would remain uncertain to the extent that internal factors are not mobilised in support of them. In this connection, co-ordination in the implementation of programmes in the various sectors with particular reference to possibilities of diverting materials now in short supply from less important purposes would seem to be warranted. The Report has pointed to conditions of shortage in regard to certain materials vital to the development of the railways such as steel, cement, and timber. Ways of economising such materials by use of fair substitutes have therefore to be explored and the use of such substitutes encouraged.

III—Freight Rates Revision

IT was only in 1948 that a general revision of railway rates took place. Since then sporadic changes have been effected both at the time of the annual budgets and in between. The changes thought necessary in 1948 proceeded on the basis of the new approximation of economic to political conditions as much as for any other circumstance. Since then, economic development has followed a more systematic pattern and on a pace unprecedented for India. The appointment of a committee in 1955 to investigate the question of railway freight was impelled by this overwhelming circumstance.

The Committee's membership was a balanced mixture of servicemen and Members of Parliament, who could claim both an intimate knowledge of both business and public affairs in general. This very fact implied the assurance that no important relevant aspect would be missed in the analysis of problems or given an emphasis without proportion. The task of the Committee was also adequately defined. It had to review the existing freight structure on Railways in all its aspects bearing in mind the needs of a development economy and financial stability of the Railways.

Alongside, the Committee was also asked to examine the statutory responsibility of the Railways as a carrier and to suggest improvements towards making the Railway Rates Tribunal a more effective and expeditious instrument for adjudications on railway freight matters. That on a few important questions such as the size of zones, the members of the Committee could not come to unanimous conclusions is not so much a matter of regret as a basis for a further and deeper study of the impacts of the present zonal grouping on convenience, efficiency and discipline. Even these differences, apart from the general report, display the practical thoroughness which has been applied to a comprehensive survey.

The most important recommendation of the Committee is a basic revision of the freight structure. The existing telescopic pattern of mileage—of "legs" as it is described—is amplified to provide a more supple articulation. The change is primarily directed to discourage as far as possible short distance traffic by rail and encourage alternative modes of transport over such distances. The first leg of 1 to 25 miles is designed particularly for this purpose. The new pattern of legs for traffic in "smalls" and in wagon loads is as follows:

Mile	1—	25
Plus	26—	75
"	76—	150
"	151—	300
"	301—	500
"	501—	800
"	801—	1,200
"	1,201—	and

beyond, the distance being charged for in steps of five miles up to five hundred miles, and of ten miles beyond.

The classification of goods is altered that for "smalls" being increased from 15 to 24 and that for "wagon-loads" from 19 to 24. The revised total number of classes is 31, allowing for classes common to both categories.

As to rates, a percentage scale is proposed starting with the existing class IX as the norm "100" and working backward and forward over the whole range. At the same time the "minimum distance" has been raised from 20 miles to 25, as conducive to divert to the road an optimum of traffic.

The alternatives of "owners' risk" and "Railway risk" rates have been reduced, in favour of the latter; and it is recommended that where "owners' risk" terms are still ad-

mitted as desirable, the rate levied should be that of one class below the corresponding percentage class rate.

The new scheme of rating aims at absorbing the separate charges such as ghat charges, terminal charges, etc. It suggests new minimum loads. The Committee's approach to the question has been essentially pragmatic, and the increases of charge recommended are considered to be the minimum necessary to serve the growth of trade and industry while enabling the Railways to be paid adequately for the services rendered—particularly in the period of the Second Five Year Plan. The scope of separate "station-to-station" rates is curtailed.

The Committee view that the cost of service rendered should be the basis of railway rating and desire that a unified study of costs should be part of the statistical routine—differentiating, as far as practicable, between kinds of services such as coaching and goods.

On the question of liability of railways in respect of goods carried, the Committee is of opinion that the Railways should take the responsibility of "common carriers" or "insurers", instead of remaining "bailees" only as at present. They consider that packing conditions should be made stiffer than now, pointing out that the packing industry is now becoming important in the country and will be appropriately stimulated. Business should pay the carrier adequately for the new responsibility it imposes. The Committee have met

Deus ex Machina

EARLIER this month, many must have read with amused mistrust the report of the centenary of what are usually called the Lourdes miracles, and many more must have just passed it over as a sheer cock-and-bull story deserving no attention at all. What are these miracles? In Southern France, an illiterate peasant girl called Bernadette Soubirous is said to have had visions of the Virgin Mary in the grotto of Lourdes no fewer than eighteen times between February 11 and July 16 in 1858. Since then, the place has been a pilgrim centre for people seeking spiritual and physical healing. During the past hundred years, more than five thousand cures are believed to have been effected by bathing in the waters of the grotto spring, and of these thirty-four have been declared miraculous by the Catholic Church.

This story should be of interest to India where people, despite the influence of modern science and the frequent charlatanism of pseudo-religious humbugs, continue to believe in miracles. The believers usually come in for a good deal of ridicule from the more advanced, the so-called Western-educated, the scientists, the medical men and so on. The son of faith is retreating fast in the modern world. Yet this business of miracles is worth investigating, for, a proper scientific spirit cannot afford to disregard anything without examination and enquiry. This is the point we wish to emphasise.

What is a miracle? Carlyle shouted at his usual high pitch that we were all the time surrounded by miracles, and that only those with eyes to see could see them. The sunrise and the sunset were daily miracles for him. "Too mystical", we sardonically comment and return to our daily chores and accustomed cynicism. As for Sir Oliver Lodge, we take his science seriously, but reject his spiritualism with a deprecating shrug of the shoulders. Our attitude to Faraday is similar. In brief, scientists have made neat formulae and whatever cannot be fitted into their framework is

the needs of business and the public in a number of minor recommendations, including the liberalising of "excepted articles", suggesting legal amendments to allow of acceptance of certified copies of extracts of Delivery Books, Number Takers' Hand books, Seal Memo Books and other original documents.

The Committee favours a Railway Rates Tribunal, presided over by a High Court Judge, with mandatory as well as advisory functions—mandatory, binding on the Government, in matters relating to undue preference or unreasonableness of rates and charges and advisory only as to classification and other matters.

The Committee has also dealt fairly elaborately with the question of concessions for particular industries and regions. While it is felt that concessions for industries will have to be reviewed periodically in the light of their stage of development and financial status, concessions for export, for backward and under-developed areas as such are not regarded susceptible to any general formula. For the first, a permanent body of a high-level character is suggested; for the second, the Canadian practice of granting low concessional rates for wheat moving from certain territories and reimbursing the Railways to a corresponding extent by the federal Government, has been recommended.

Concessions to cottage and hand industries are suggested at 25 per cent of normal freight rates, to start with, provided these are given to products booked by recognised cooperative societies and on the authority of official or semi-official certificates.

treated as nonsense. Yet, science has a firm knowledge of very limited areas of the universe and the human mind. It has not written "finis" to the book of knowledge and shut it with a bang. A few enquiring spirits will always keep it open for fresh entries, and the late Dr Alexis Carrel was one such. In 1903, this eminent surgeon and Nobel Prize winner—then a young beginner—went on a personal investigation of the Lourdes miracles and recorded his findings in a book entitled *Journey to Lourdes*. To this, he gave the garb of fiction, using imaginary names in place of real, and called himself Lerrac, Carrel spelt backwards. Most men of reputation are cautious of discussing phenomena falling beyond the accepted purview of science, and Carrel as a young starter in life was fully alive to the dangers that he would run into if he openly testified to the miraculous cures he then witnessed. Hence the literary trick used by him and hence the decision to publish the book posthumously, in 1950. But this does not take away from its documentary value, especially as he had also published in the Press a report of his investigations and was obliged to defend his opinions publicly. The consequences to himself of the evidences of his own senses were profound. A girl called Marie Bailly (in the book she appears as Marie Ferrand), suffering from desperate tubercular peritonitis and actually on the point of death after years of unavailing medical treatment, was seen by him cured within minutes of her arrival at the grotto. Carrel at once found himself stimulated to research into those medical laws which had hitherto seemed reliable but which now appeared set at naught. In this book, he describes the mental processes which he underwent as he formulated his positions on the obscure question of religious faith and scientific investigation. Throughout his life, like a true scientist, he continued to believe that the outposts of reason are perpetually invested by mystery, a point which he later on expanded in his world-famous work, *Man the Unknown*.

Financial Pattern Challenged

Prognostications of most of the State Governments coming out with a crop of fresh taxation have been belied at least in the case of West Bengal. Barring the taxes, which would take effect from the new financial year, the latest West Bengal Budget is content with whatever existed before by way of sources of revenue. The revenue receipts for the Budget year are estimated at Rs 689 millions against Rs 700 millions for the current financial year. To a corresponding extent, the deficit on revenue account is larger.

The revenue expenditure is more or less the same, in the revised estimates for the current financial year and in the Budget estimates for 1958-59. The decision to float a public loan of Rs 50 millions directly by the State Government implies inadequacy of results for efforts to secure small savings.

In his Budget speech, Dr B. C. Roy has recapitulated some of the special difficulties which West Bengal has come to face, both on account of political changes and on account of a financial situation which he describes as "slightly different in practice from the clear cut division of functions and also of finances in relation to such functions as visualised in the Constitution".

In the general picture drawn by Dr Roy, many points have been

raised in support of the argument that the Union Government had not been fair or considerate to the State Government. This kind of charge goes against the latest Report of the Finance Commission too. The principal criterion accepted by the Finance Commission for the determination of allocations from the divisible pool of income-tax revenue has again been challenged.

On the eve of the budget, we are told, the Union Government revoked an earlier order accepting the Finance Commission's recommendations in respect of certain arrangements. This revocation, it is complained, has upset the Budget to some extent.

Of even the routine loan policies of the Government of India, the West Bengal Finance Minister has something severe to say. The point is made out that the Government of India obtained money by deficit financing, part of which they lend to the State Governments at a full rate of interest, with the result that there is loss in one place and gain in another.

In spite of all these difficulties, the West Bengal Government are hopeful of achieving the maximum measure of economic progress in the future and Dr Roy assures that the pace of progress will be accelerated.

The Second Arab Union

The immediate consequence of the formation of the United Arab Republic by the merger of Syria and Egypt is the emergence of a counter union through the merger of Iraq and Jordan. The ambition proclaimed by the Republic of winning over the entire Arab world into its fold has been quickly flouted by the action of two neighbours. Against the numerous independent principalities of the Middle East, two rival blocs have now been thrown up each with its friendships and alliances extending deep into the orbit of the international cold war.

The new setup does not appear to be more congenial to peace than the old. The Arab Federation, under which name the Iraq Jordan combination goes, has obvious points of contrast with the United Arab Republic. The second born has two presiding monarchs, two capitals and possibly two separate administrative systems, though the army and flag are common. Common diplomatic representation is qualified by the continuance of independent political and military commitments.

The details of the other merger are yet obscure. There are resemblances too. Both will suffer from the largely distorted equality which is sought to be maintained between the partners. Both are unequal combinations and it is also doubtful at least in the case of monarchies how far the union and its policies would receive popular approval. In the Egyptian camp, there has always been a hopeful suspicion of the overwhelming unpopularity of

the ruling families of the Middle East. President Nasser has however chosen to congratulate King Faisal and to describe the union of Iraq and Jordan as a blessed step which would bring close "the day of great unity". Except the presence of Israel as the common enemy for both the partnerships, there is scarcely any factor at present which is likely to hasten the unity of the Egyptian President's dream.

Nationalise What?

Few Resolutions before Parliament appear to have received as wide a measure of support from all parties as the one moved by Mr M. L. Dwivedi, a Congress Member from UP in the Lok Sabha, on the nationalisation of the Panna Diamond Mines. Any measure which receives all party approval must commend itself automatically to the majority.

But in this case a word of caution appears necessary. What is described as the Panna Diamond Mines, as far as we could gather, is really only an area in which a few private companies have been trying to discover diamonds. With hopeful hurry, the Government of India had declared as early as April 1956 that as a matter of principle these mines would be nationalised. In pursuance of this declaration, the Government are now being pressed to carry out the intention.

Mr K. D. Malaviya disclosed that as far as the Government were concerned they had many difficulties not the least of which concerned the import of machinery from abroad for prospecting the mines. This reply shows that the companies have not even completed the work of prospecting and no one is sure as to whether any diamond exists at all. Some newspapers have published an amusing anecdote about the mines which is also disheartening.

Of late, a fast deteriorating employment position is reported in the mines, which might mean that either a positive stage has been reached or that expectations have fallen. If the latter were to be the case, the Government would be well advised to proceed carefully before deciding to take over something whose value as an asset or a source of potential wealth still remains a matter of speculation.

It needs scarcely be said that when the Government do decide to nationalise these mines which after all does not seem urgent for any reason, they will have a clear idea as to what they are paying for and why.

Toward Better Cooperatives

The Report submitted by Sir Malcolm Darling to the Planning Commission on certain aspects of the cooperative movement in India would, we are sure, stimulate some rethinking on a question, on the discussion of which an element of

dogmatism has always been present. The progress of cooperative societies, which is being reviewed periodically and in a most competent fashion by the Reserve Bank of India and other authoritative agencies, has not been all too encouraging. There is also the fact that whatever progress that has been achieved is largely due to the initiative and interest shown by the Government.

The Planning Commission have, in accordance with the economic aims formulated by the Congress, outlined a programme for the development of co-operatives, particularly in the sphere of agriculture. Sir Malcolm regards this programme as a little too ambitious and having the drawback of overlooking the differences in conditions between States. In view of these differences, he suggests suitable alterations in phasing. According to him a slowing down of speed in the case of the weakest States to ten years instead of five for the attainment of the targets contemplated in the Plan would be desirable.

He is disturbed by the dissociation of credit from thrift in the village credit societies. These two features, Mr Malcolm insists, will have to be reunited so that credit could be supplied largely out of the savings of the members themselves. In the light of an economic situation in which small savings are regarded a significant item in total national savings, this suggestion coming from one who can claim rare intimacy with the problems of the Indian peasant is most timely.

For a clearer understanding of the needs of cooperatives in general and the proper role which the Government could play in satisfying these needs, Sir Malcolm suggests the formation of three types of societies namely, those with Gov-

Indian Finance

February 22, 1958

ernment participation in shares but not in membership and the third without Government participation either in shares or membership. Periodical review of these societies would enable a judgment which is impossible under present conditions.

It would be highly desirable if in future policy regarding co-operatives, these views are given the weight they deserve. As the State ought at some stage or other to leave the field entirely to private initiative, the comparative study

suggested by Sir Malcolm should prove out to be beneficial.

Rochdales of Calcutta

If the UK has had one Rochdale, Calcutta has had two this week, the milieu and consequences being, of course, different. At Rochdale the Liberals landed a heavy sock in the Conservative jaw, while the Labourites also fared miserably in the two Calcutta constituencies,

the Graduates' and the Teachers', the Congress was similarly beaten hip and thigh. From the former, two additional members were elected to the West Bengal Legislative Council, both non-Congress, one a Communist and the other a PSP. They are respectively Messrs Gopal Haldar and Tripurari Chakraborty. One of the two Congress candidates lost his deposit. Though things were not exactly as bad as this in the Teachers' constituency, the Congress candidates just managed to escape without the loss of depo-

sits, victory going to the two nominees of the All Bengal Teachers Association, Messrs Sachindra Nath Banerjee and Bijoy Behari Basu. It should be easy to interpret these victories as those of the Leftists, if precisely not of the Communists, since it is well known that the ABTA is largely dominated by crypto-Communists. The Congress has often been warned in the recent past through by-elections and municipal elections. Did it really need this last one too? Its complacency seems too, too solid, alas!

Thinking Aloud on State Borrowings

INDICATIONS are already available of the prospect of the State Loan borrowing programme in 1958-59 being on as substantial a scale as in 1956-57. In that year, it may be recalled, State Government Loan issues were for an amount of Rs 64 crores, and the amount realised, by virtue of the provision by which over-subscriptions to the extent of 10 per cent were retained, was of the order of Rs 69 crores. Two of the bigger State Governments, West Bengal and the Uttar Pradesh, have published their budgets for 1958-59, and it has been explicitly stated therein that their deficits are to be made up through market loans amounting to Rs 5 crores and Rs 7 crores respectively. Thus, it is fair to state that the financial authorities at least at the provincial Government level have decided that the conditions, which, during 1957-58, held them back from approaching the market, no longer obtain. It is, we must assume, in the confidence that conditions are propitious for State Government Loans that the Finance Ministers of West Bengal and the UP have announced their intention of going on to the market for a total of Rs 12 crores during 1958-59. We would like to utilise this opportunity of stating the case for State Government Loans.

At the outset, it is to be remarked that the State Governments have so far shown themselves chary of attempting the targets that were set for them by way of resources either against new taxes or against market borrowings. In both cases, as far as the first two years of the Plan are concerned, it is possible to excuse this apparent lack of ambition or effort. Why this is so, we may now see. First, in the matter of taxation, the State Governments were understandably reluctant to propose any new taxes in 1956-57, since the general elections were quite imminent. Then, by the time the Central Government had made their tax effort in 1957-58, there was precious little left for the State Governments to tax. So, we may suggest, in the present context, that there is little prospect of the State Governments attaining the target for additional taxation which, we may recall, was Rs 225 crores. Furthermore, we need not be unduly disturbed by this fact since, of the Central levies, many, involving excise duties, are divisible and accruing in part to the State Governments.

Thus, in a sense, the Central Government may be said to have taken the responsibility for proceeding with new taxation in behalf of the State Governments. Nor do we see any prospect of the State Governments, in the next three years, raising any considerable sums of money from new taxation. In a word, we would say that the target of additional taxation from State Governments will be achieved only to the extent that the amount from the divisible pool itself becomes larger. Secondly, in respect of borrowings, the experience in 1956-57 was of paradoxical significance. On the one hand, the State Governments together gleaned in a phenomenal amount of Rs 69 crores. On the other hand, however, no sooner were the subscription lists closed than there was a stampede to sell, which resulted in the new issues being offered on the gilded market at a discouraging discount. This last factor, coupled with the monetary stringency during the 1956-57 busy season, made it advisable for the State Governments to desist from any borrowings during 1957-58. This indeed happened, since only two State Governments, Mysore and Bombay, were on the market during the current financial year for an amount totalling Rs 9 crores. Now, however, there is clear evidence to show that the monetary stringency which was observable from, say, August 1956 to April 1957, no longer obtains. What is much more important, there are also signs that there is a famine of State Government loans.

Let us explain why we have suggested that an acute scarcity obtains in the availability of State Government Loans. Leaving apart loans floated by State Governments prior to the First Plan, it is to be noted that State Government Loans floated since 1951 have been as follows:

	(In crores of Rs)
1951-52	11.53
1952-53	17.03
1953-54	39.62
1954-55	2.52
1955-56	55.06
1956-57	68.71
1957-58	9.00
Total	203.47

That is to say, in a seven year period, the market absorption of State Government Loans has amounted to Rs 204 crores—that is, something less than Rs 30 crores per annum. There can be no doubt at all that the funds accruing annually with Provident Fund Societies and similar organisations are for an amount considerably exceeding this sum. This explains why, in spite of an increase in Bank Rate in the interim between the issue of the new loans in 1956-57 and the present time, the comparison of quotations between the two dates is not so unfavourable.

Again, even at the current prices, it is a sellers' market. Scrip is hard to come by, and the strength being displayed by some of the longer-dated Central Government

Loans—3 per cent 1966-68, 3 per cent 1970-75, 3½ per cent 1974 and 4 per cent 1972—indicates that some of this unsatisfied demand for State Government securities has overflowed into Central Government securities. We take this state of affairs to mean that the State Government Loans will have a favourable reception in 1958-59.

But we must warn against a recurrence of the 1956-57 debacle, when the closing of the subscription lists was a signal for an immediate selling pressure in the New Loans. It is within our knowledge that the selling pressure arose from the fact that many Scheduled Banks, intending a favour for particular Chief Ministers, put in their applications for State Loans. This explains the fact that the State Loans purchased by the Scheduled Banks were for an amount, roughly, of Rs 15 crores in 1956-57. But, in hardly three months, the Scheduled Banks had divested themselves of such State Government Loans as they had subscribed for. It is this selling pressure from the Scheduled Banks which must be held out as the villain causing the debacle in the State Loans soon after the closure of the subscription lists.

We put it to the financial authorities at the State Government level that they are doing themselves no good in seeking the support of such sections for their issues. It may be said, bluntly, that the Scheduled Banks are not that class of institutional investors which has a penchant for State Loans. In the result, the so-called support derived from Scheduled Banks is not only exceedingly short lived—the pressure or persuasion that might have been used by the State Government has a boomerang effect. This boomerang consists in the fact that, with Scheduled Banks losing no time in getting rid of their newly acquired purchase, the market gets spoilt for subsequent issues by the State Governments. So, the first thing we wish to suggest in the matter of State Loans is that it is neither necessary nor desirable to expect or to induce forced support for the State Loans from the Scheduled Banks.

At this stage, we shall be told that, if the Scheduled Banks are not to take up any parcel of State Loans, then the total amount that can be realised will be small; and it will also be suggested to us that, to the extent that the Scheduled Banks' sales of State Loans find a sanctuary with Provident Fund Institutions ultimately, the Scheduled Banks perform a necessary office as middlemen. We wish to say that, at least in this context, the Scheduled Banks prove to be as unnecessary and undesirable as most middlemen are. But it devolves upon us to suggest some other entity as a middleman; and this is so since the particular class of investors interested in State Loans are the provident fund institutions, which have funds accruing month by month. It is these funds, seeking State Loans,

which have to be satisfied by a continuing supply of State Loans. To our way of thinking, it is the help of the Reserve Bank which in this respect should be sought. By all means, let the State Governments set an ambitious target for their loans. But let them take care to see that the amount taken up by "stags" is kept to a minimum. Let the State Governments ensure that the bulk of their new loans are taken up by entities, which will not be in any haste to sell. Then, in order to cater to the month by month accruing funds, the State Governments could prevail upon the Reserve Bank to take up that part of the issues which is not subscribed to by the "investing" public. It should be an easy matter to arrange that the Reserve Bank would then make available its holdings of State Government securities through the tap. This, of course, involves strategy and tactics, since open market operations and especially sales through the tap are an intricate business. There must not on any account be the intention to make available securities from the Reserve Bank at a price lower than the issue price. On the contrary, the tap rate of the State Government Loans must be steadily taken up, so that their very strength induces further and further purchases.

Given these conditions, we are hopeful that the State Governments will be able to secure not only the spectacular Rs 69 crores that they did in 1956-57; we see no reason why the target for State Loans in 1958-59 should not be, say, Rs 100 crores.

+

SBI Deposits Cross Rs 400 Crore Mark

The latest banking returns are largely uninteresting, since the only noteworthy features are an indication of deficit financing, the crossing of the Rs 400 crores mark in Deposits of the State Bank and a sharp decline in Deposits of Scheduled Banks due to month early disbursements.

According to the return of the Reserve Bank for February 14, Active Notes are slightly lower at Rs 1557.65 crores against Rs 1558.63 crores. Rupee Coin went out into circulation for Rs 0.12 crores, and the Reserve Bank's cash in the till has improved by Rs 0.85 crores to Rs 11.86 crores.

The Centre's balances are lower by Rs 5.70 crores, but the improvement in the Deposits of other Governments is much sharper, with a rise of Rs 11.71 crores to Rs 24.83 crores. Besides, the State Governments have also reduced their indebtedness to Reserve Bank by Rs 2.41 crores. Thus, the rise in investments from Rs 233.12 crores to Rs 242.85 crores is suggestive of deficit financing that apparently became necessary in order that the Centre could effect some payments to the State Governments.

Reserve Balances of member banks have been marked down by

February 22, 1958

Rs 2.66 crores to Rs 69.26 crores; but there has been a decline of equal size in the Reserve Bank's Other Loans and Advances, which are lower by Rs 2.70 crores at Rs 69.07 crores. Advances against usance bills are practically unchanged at Rs 28.12 crores. Lastly, Balances Held Abroad have declined by Rs 1.81 crores to be placed at Rs 33.61 crores.

With a rise of Rs 7.23 crores, the Deposits of the State Bank, in the week ended February 14, have crossed the Rs 400 crore mark to be placed at Rs 400.67 crores. The continuing demand in respect of the busy season is responsible for a rise of nearly Rs 4 crores to Rs 199.71 crores from Rs 195.76 crores in Advances. Nevertheless, borrowings have been reduced from Rs 2.53 crores to Rs 1.59 crores. However, with Other Assets rising by Rs 3.80 crores to Rs 6.56 crores, Cash Balances have declined from Rs 31.35 crores to Rs 28.23 crores.

According to the return of Scheduled Banks for February 7, month early disbursements have involved both a drain in Deposits and a rise in Advances. Deposits have been marked down by Rs 9.35 crores at Rs 1429.33 crores. Ominously, while Demand Liabilities are lower by nearly Rs 28 crores, Time Liabilities have risen by Rs 18½ crores; and, furthermore, for the first time, Time Liabilities exceed Demand Liabilities. So, at the present time, Deposits on which Scheduled Banks pay a higher interest account for more than 50 per cent of total Deposits. The total of Advances is higher by Rs 11.27 crores at Rs 918.65 crores, and this has necessitated both an increase in borrowings and a drawing on cash balances. Borrowings from the State Bank have risen to Rs 9.96 crores against Rs 9.17 crores. Indebtedness to the Reserve Bank is higher by Rs 6.88 crores at Rs 34.00 crores. Cash balances have been drawn upon to the tune of Rs 8.21 crores to be placed at Rs 160.49 crores.

Politics & Inflation in the British Isles

By

Paul Einzig

MR. MACMILLAN, returning from this Commonwealth tour, found gloom and despondency. The result of the Rochdale by-election, at which the Government's supporter was easily defeated not only by the Socialist candidate but even by the Liberal candidate, was a setback in sterling and a further weakening of the Stock Exchange. The markets felt that this result foreshadowed a return of the Labour Government after the next general election. The effect was, however, moderate and short-lived, and a steadier tone set in within twentyfour hours. This was because Ministerial spokesmen made it perfectly plain that it is not the Government's intention to decide in favour of an early general election. Under the Bri-

tish constitution the Prime Minister is entitled to carry on for five years even if it becomes obvious that his Government no longer enjoys the confidence of the majority of the electorate, so long as he commands a majority in the House of Commons. And the Conservative Party could afford to lose quite a few seats in the House before the Government would cease to have a working majority.

The position is that, unless some unexpected development should make an early election appear expedient, there will be no general election for another two years. For this reason, it would be, to say the least, premature to sell sterling or British stocks in 1958 in anticipation of the advent of a Socialist Government in 1960. After the first unfavourable reaction most operators realised this and the immediate adverse effect of the disastrous by-election result ceased.

Even so, the increased probability of a change of Government in 1960 is likely to prevent unwarranted optimism about the

British economic prospects. It is true, there is nothing to prevent sterling and British stocks from booming if immediate economic conditions should favour such a trend. Towards the close of 1959, if not before, holders of sterling and of British stocks—whether Government loans or equities—are likely to begin, however, to play for safety at all cost. And many of the more cautious holders may feel inclined to get out much earlier, while the going is good. Possibly events may prove them to be wrong. After all, public opinion is liable to change unexpectedly, and it is by no means impossible that within the next two years the Conservative Party may restore its popularity.

To that end it would be necessary, however, to bring inflation to a halt and to resume non-inflationary expansion of production. If by 1960 the British public could be made to realise that the Government succeeded in establishing stability and to combine it with prosperity, the general election

might not bring the Socialists to power. But time is becoming short. At the present moment the rise in the cost of living is still going on. It would have to be halted and reversed for at least twelve months in order to satisfy the public that the change is of a lasting character. And it would take some time before the recovery that would follow two years of economic stagnation could make itself felt.

Strangely enough, the class of people who stands to lose the most through the advent of a Socialist Government has done its best to undermine the position of the Conservative regime. Employers, through their unwillingness to resist inflationary wage demands, have done fully as much as trade unions towards bringing about the non-stop rise in prices which has discredited their Government in the country. The temptation to take the line of least resistance in face of wage claims, and to outbid each other for the scarce manpower, was too strong for them to

In Industry PHILIPS do a good job!

INDIA'S industries have the heavy responsibility of ensuring the country's economic freedom; and to ensure top efficiency, they need the most modern aids available.

For these aids, our industries can rely on organisations like Philips who offer their world-famous products and experience to every industrial undertaking.

Whether it's a range of products for industrial application, a light bulb for an office, or planned lighting for a factory... or whether it's a sound system for staff entertainment in canteen and factory, it's certain to be a good job well done through Philips.

PHILIPS INDIA LIMITED

Contributing Today to India's Future

resist. They will have only themselves to blame if, as a result of their short-sighted attitude, they will be exposed to nationalisation with inadequate compensation, to crippling taxation, and to various other anti-capitalist policies that the next Labour Government intends to adopt.

The only hope to avoid a Socialist victory at the next election lies in a change in the attitude of employers. It would be well worth their while to sacrifice the greater part of their profits during the next two years, by making substantial cuts in their prices. If this is done by a sufficient number

of larger firms it would bring about a decline in the price level. The trade unions would then have no excuse for demanding wage increases. Should they continue to do so nevertheless, and should the resistance of employers to such demands lead to major strikes, the sympathy of the public would turn

strongly against the Socialists who have always identified themselves with wage demands. Such a change of sentiment would provide the Government with an opportunity to have a general election before the five years' time limit expires.

Yet, although most employers are supporters of the Conservative Party, the Government has not succeeded so far in obtaining their co-operation in this sense. The National Union of Manufacturers emphatically rejected the Government's recent appeal to cut their prices. Possibly the shock of the Rochdale by-election may induce them to re-consider their short-sighted attitude.

The Government itself is gravely at fault for its failure to enlighten public opinion about the inherently inflationary character of Socialist policies. It would be absurd if the Conservative Government were to be rejected by the country for its inability to stop inflation, seeing that under a Socialist Government inflation would be certain to proceed at a greatly accelerated pace. Even the inflation that has taken place since the Conservatives assumed office in 1951 has been largely the outcome of the Socialist devaluation of 1949. A country cannot devalue its currency from \$4 to \$2.80 without causing a substantial increase of its price level. For the price level of a country such as Britain, with extensive international trade and financial relations, does not exist in a vacuum; it has to bear some relation to the world price level. If its price level is reduced in terms of foreign currencies as a result of devaluation, there is bound to be a trend towards upward adjustment, unless the prices of other countries decline to a corresponding degree.

Socialist equalitarianism would greatly aggravate inflation, because a larger proportion of smaller incomes is spent and a smaller proportion is saved. The decline in the rate of saving would be accompanied by an increase in the rate of capital expenditure in pursuance of the ambitious Socialist investment policies. This would step up inflation. The Socialists would revert to the policy of overfull employment regardless of cost. The defence of sterling would rank very low in their list of priorities, and another devaluation would accelerate the rise in prices. The Socialist idea that this flood could be stemmed by physical controls is absurd. Such controls could disguise an inflation of, say, 5 or 10 per cent. But when it comes to a powerful trend physical controls would be helpless, as indeed they were helpless during the Socialist regime of 1945-51.

All this may appear self-evident. And yet the Government and the Conservative Party has done very little to make the public aware of these facts. Possibly the shock of the Rochdale by-election result may produce salutary effects also in this respect.

The Leeway ahead of Machine Tools

FROM the point of view of the prospects before individual industries, the most hopeful thing about the present state of affairs is that, although it is a negative way of looking at it, there is so much leeway to be made up. One such industry where the already existing indigenous demand far exceeds internal production is the machine tool industry, where, at the moment, we have preponderantly to depend on imports. The recently held annual general meeting of the Indian Machine Tool Manufacturers Association (IMTMA) in New Delhi offered an opportunity to the Association's President, Mr S. L. Kirloskar, for painting a word picture of the industry.

1956, reports Mr Kirloskar, was a record year in that a new peak was touched in production at an estimated value of over Rs 1 crore. This mark has been touched within 15 years of the establishment of the industry on an organised scale. Plans for raising production are being implemented. For instance, in 1957, the estimated production is expected to be over Rs 2 crores, that is, showing an improvement of 100 per cent over 1956. However, this is a far cry from the Second Plan target of Rs 10 crores in value, but Mr Kirloskar is confident that, "if the raw materials supply position becomes a little more easy during the next two or three years", then, the industry "would be able to accomplish the production target... as demanded by the Government". While it is heartening to note that new and modern types of machine tools have gone into production, we must not lose sight of the fact that internal production is of very small proportions. Mr Kirloskar estimates the ratio of indigenous production to demand at 13 per cent.

Thus, while internal production increased, there has been a proportionate rise in the demand. While Indian imports of machine tools in 1951-52 were valued at Rs 3 crores, by the end of the First Plan, the figure had risen to Rs 6.4 crores. The IMTMA President has reported that licenses issued for import during 1956 were placed at the staggering figure of Rs 12 crores. If we bear in mind the fact that Indian steel production will rise to 4½ million tons by the end of the Second Plan, it will be realised that an even greater demand will be generated for machine tools. This has been placed, by Mr Kirloskar, at approximately

160,000 machine tools installed by the end of the Second Plan.

The IMTMA President records his gratification at the good work done by the Machine Tool Committee, which has submitted a scheme under which "the development of the principal categories of basic machine tools has been allotted to different units existing in the country". This means, says Mr Kirloskar, that all grounds for dispute and wasteful competition will be eliminated; and he hopes that the industry would now settle down "to a collective integrated effort to develop and expand" production.

Aside from the difficulties in respect of the supply of raw materials, about which he has suggested that the least that the Government

should do is to issue to the industry "a priority in obtaining their requirements of graded pig iron and coke", Mr Kirloskar thinks that a more intractable problem requires urgent consideration. He refers to the difficulty in obtaining technical know-how, which, he says, "we so badly need for the purpose of rapid development and expansion". The fault would appear to lie in the fact that insufficient inducements are available for eliciting such cooperation. For example, the royalty that is permitted by Government is a maximum of 5 per cent; after Indian and foreign taxes are paid, the manufacturers usually receive a net of 1.8 per cent. Clearly, "this meagre margin of income to foreign manufacturer is not at all conducive to the entry of foreign

collaboration and technical know-how". So, Mr Kirloskar has pleaded for a change in Government policy in the sense that a liberal royalty might be payable tax free to foreign firms. As he puts it, "the case of royalty for the know-how in machine tool industry requires a special treatment."

In conclusion, Mr Kirloskar defines machine tools as the foundation of a nation's prosperity and progress; and, in this view, he remarks:

"We have no doubt that our Industry has a great future in this country and as our need for new machines and equipment increases, it would stabilise our Industry and place it on a firm footing with increased output from both the public and private sectors".

International Panorama of Progress

Oasis for modern skypower

PETROLEUM PRODUCTS

Centuries ago, plodding caravans formed the link that joined peoples, made nations great. Today a new dimension in transportation—the air—has shrunk distances, brought the citizens of the world closer. By touching down at modern oases for refueling, giant transports traverse the earth, bringing increased commerce and other advantages of the air age wherever they go. Progressive airlines know that quality petroleum products are indispensable for economical, dependable operation. Caltex aviation fuels and lubricants send perishable cargoes to market... machine parts to industry... passengers to far-off places—faster than ever before. Through the power of petroleum, Caltex is playing its part in establishing a new pattern of prosperity in over 70 countries—partner in progress in Europe, Africa, Asia, Australia and New Zealand.

Progress Attained in Modernisation

THE discussions at the recent meeting of the Export Advisory Council relating to jute goods have served to emphasise the urgent need for further intensifying efforts toward promotion of exports of jute manufactures. It is generally expected that earnings from jute goods exports in 1957 will be considerably lower than in the previous year. In this connection it may be noted that according to a study published in the latest issue of the Reserve Bank of India Bulletin on the Balance of Payments during the first half of 1957-58, earnings from jute goods during the period have declined by Rs 10 crores as compared with the corresponding period of the previous year. Such disappointing performance is particularly unfortunate at this juncture because jute goods constitute our biggest foreign exchange earner, contributing on an average some 20 per cent to our total foreign exchange earnings every year.

But when one looks ahead, one may find some encouraging signs. For, steps are being taken to remove some of the fundamental handicaps of the industry. Government are now in full agreement with the belief that hundred per cent raw jute self sufficiency is an important pre-requisite to its stability. Vigorous steps are to be taken to attain this objective. The Central Supervisory Body for the Promotion of Jute Production has fixed the target for the 1958-59 jute season at 5.143 million bales representing an increase of 25.8 per cent over the current season's production. A significant point is the emphasis placed on intensive cultivation through increased use of fertilizers, adoption of improved methods of cultivation and use of quality seeds. Though the attainment of the target depends also on other unpredictable factors such as the weather, the percentage of increase aimed at is an indication of the realisation that dependence on outside sources for raw material supply must be removed as quickly as possible. The emphasis on quality and yield augurs well for a reduction in the price of raw jute. Once the raw material becomes available in adequate quantity and at an equitable price level, the Indian jute industry will automatically be placed on the road to a speedy recovery.

The industry is also steadily gaining strength from the modernisation of its machinery. Thanks

to the active help extended by Government, nearly 50 per cent of the machinery has been replaced by modern equipment. It is understood that so far more than half of the companies have modernized their plant either completely or partially. In coming years the progress of modernisation will be quickened because indigenous production of jute mill machinery is also being stepped up.

Side by side with the programme of modernization, jute mills are also making steady progress in diversifying their production. Some of the specialities now manufactured are cotton bags, a loose fabric used for packing cotton in the US, jute tarpaulins, paper lined hessians, jute carpets and jute webbing. It is said that these types of jute goods fetch better prices. In this regard it may be noted that with the completion of the modernisation programme Indian Mills will be enabled to undertake the manufacture of many new varieties for which there is good demand in world markets. Continuous research may also reveal many more new uses for this versatile fibre.

The jute goods market ruled easier with prices steadily declining from day to day. Hessian section was subdued as US burlap consumption during January at 71 million yards, though maintained compared with the previous month, was 4 million yards lower as compared with the corresponding month of the last year. The fact that stocks in that country had increased by 15 million yards over the month to be placed at 240 million yards was interpreted to mean that the prospects of an increase in offtake of hessian in the succeeding months were not quite bright. As for sackings the position was considered uncertain, and in the absence of fresh enquiries the market was in the grip of bear speculators who had hammered down the price levels.

Despatches of jute goods during January 1958 were placed at 75,528 tons comprising 30,014 tons of hessian, 41,534 tons sacking and 3,980 tons other varieties. In December and January 1957, total despatches were 88,087 tons and 78,785 tons respectively. A significant feature of the offtake in January 1958 is the slight increase recorded in offtake for local purposes which has been placed at 19,874 tons against 19,079 tons during the previous month and 14,716 in January 1957. Exports were considerably lower at 55,654 tons against 69,008 in the previous month and 64,069 tons in January 1957. Exports of hessian were lower at 28,103 tons as against 31,265 tons and 31,864 tons in December and January 1957 respectively. Exports of sackings were considerably lower at 26,215 tons as compared with 36,273 tons in the previous month and 28,605 tons in the corresponding month of the previous year.

STATE BANK OF INDIA'S

RUPEE TRAVELLERS

CHEQUES FOR

CARE-FREE TRAVEL

You can travel anywhere in India and outside without having to carry a large amount of cash, without being in fear of theft or of running short of money.

The State Bank's travellers cheques, issued in denominations of Rs. 100/- and Rs. 50/-, represent the ideal travel funds. They are as safe as a bank draft and are encashable anywhere, anytime.

This is one more of the services the Bank provides from January 1958. For complete information, please ask for a copy of our illustrated booklet from the branch nearest to you, or consult your travel agent.

SISTA'S-58-15

Hessian 40"x10 oz Ready which was quoting at Rs 39.40 at the beginning of the week was placed at close on Wednesday at Rs 39.05. B Twills Ready had declined from Rs 100.75 to Rs 98.75. In the forward delivery positions, Hessian 40"x10 oz April-June was marked down from Rs 39.65 to Rs 39.10 while B Twills April-June was pushed down to Rs 99.25 from Rs 101.75.

The raw jute market ruled quiet in sympathy with the goods section. Assam Bottoms recorded a decline of 50 nP over the week to be finally placed at Rs 24 per maund.

Arrivals of raw jute into Calcutta and mill stations during

January 1958 were 7,50,000 bales of which 6,89,000 bales were of Indian origin and 61,000 bales Pakistani.

Mixed Trend in Prices

PRICES realised in this week's tea auctions in Calcutta have shown a mixed trend. The best grades, on offer, have sold well at hardening dates, while others have moved irregularly with buyers closely following quality. There is a general feeling that the present trend will continue for the remainder of the 1957 crop.

Despite a marked decline in the outturn of tea in North-East India and Pakistan due to adverse weather conditions, the total tea crop of the major producing countries has recorded a rise of more than 20 million pounds last year. Moreover, in view of the increase of 2.2 million pounds in the tea production of British East Africa in the first nine months of 1957, it is estimated that the year will show a rise of some six to eight million pounds. Thus, an adequate supply is expected. It is possible that buyers will take their requirements slowly.

According to the latest figures of tea production in South India, output in December amounted to only 10.56 million pounds, as against 10.68 million pounds in the corresponding month of 1956. This decline in output is mainly accounted for by the reduced output in South Travancore and Anamallai districts. The production returns from some other districts, including Coorg, Mysore, Malabar and Wynaad, have also shown slight declines as compared with those in December, 1956.

Meanwhile, the Government of India have declared the export allotment of tea for the year 1957-58 at 460.96 million pounds. This represents 63.44 per cent of the crop basis for the year, which is estimated at 726.56 million pounds.

In the Export Sale held in Calcutta, offerings were 59,979 packages for which there was good demand. Plain teas were easier by 2 nP per pound for Broken and 2 nP to 4 nP for Fannings. Clean Black BOPs and OFs met with good demand at dearer rates. Medium BPs were about 4nP easier; but Fannings were in strong demand and were dearer by 4 nP. The brighter liquoring BOPs and OFs were often sold well above valuations.

Better CTC types, especially the Fannings grades, were keenly sought after and sold at 20 to 30 nP above last rates. Those, which were bright or had antumnal character, were particularly strong. The poorer CTC types were, however, again easier and were often difficult of sale. Non-wither

Dooars were rather irregular and showed an easier tendency.

Whole Leaf grades were barely steady, any change being in buyer's favour. Darjeeling teas were sold well, but generally below valuations although a few of the best realised attractive prices. Following rates were quoted:—Clean Black Pekoe Rs 2.25; Plain Broken Pekoe Rs 1.52 to Rs 1.56; Plain Fannings Rs 1.62 to Rs 1.66; Medium BP Rs 1.58 to Rs 1.62; Medium Fannings Rs 1.76 to Rs 1.80; Best Assam CTC BP Rs 2.70 to Rs 2.90 and Best Assam CTC Fannings Rs 2.80 to Rs 3.00.

In the Internal Sale, offerings amounted to 18,892 packages of Dusts. There was more general demand than last week. Black, clean Dusts from the Dooars as well as Assam met with competition from the Middle East buyers and these were generally sold above valuations. The best liquoring CTC sorts and the coloury or brighter liquoring Mediums were firm; but the plainer sorts, particularly those with fibre, were again easier.

The few Darjeeling teas, on offer, met with less demand and there were some withdrawals. Following rates were quoted:—Medium Dooars Dust Rs 1.56 to Rs 1.60; Medium Assam Grainy Dust Rs 1.60 to Rs 1.52; Medium Assam CTC Dust Rs 1.70 to Rs 1.90 and Best Assam CTC Dust Rs 2.80 to Rs 3.10.

Also, 2,848 packages of Leaf grades were offered for internal consumption. There was a good general demand and, with the exception of the CTC Fannings, prices were often in buyer's favour.

In the Export Quota section, business commenced at 15 nP per pound after which the rate gradually declined towards the close to 6½ nP per pound.

In the Colombo market, offerings totalled 6,529,246 pounds. All operators operated freely with the exception of Soviet buyers. Strong general demand prevailed at the opening and prices for the best quality improved. Dimbulas hardened as the sale progressed. Medium Broken were irregularly higher; but low-grown tended easier with the exception of Persian Gulf types, which were firm to dearer. Bright Mediums were 12 to 16 cents per pound dearer, while very Common sorts were irregularly lower.

The pausing tendency, discernible in Mincing Lane tea auction recently, was much less evident during the past week. Generally speaking, the volume of demand was more satisfactory, especially for any invoices possessing attractive characteristics. But, thin liquoring types were again irregular and easier in prices. Even so, the general price structure recorded no change at the close, with the plain descriptions continuing to range at 3sh 3d to 4sh 6d per pound.

At the sale held on Wednesday this week, offerings were 16,539 packages, including 11,972 packages from North India and 1,661 pack-

A table is MORE THAN A TABLE

Ever since the craft of furniture-making passed from Cabinet-makers to Engineers and from wood to steel, every item of office furniture has become an instrument for greater efficiency at less cost.

Godrej desks or tables have ideal writing surfaces; drawers slide at a touch and lock automatically, securing the contents against theft or fire, dust or vermin; chairs give correct posture and ensure free movement with the minimum of fatigue...

Patent methods of construction. Godrej's unique anti-rust treatment for lasting service.

BOMBAY - CALCUTTA - DELHI - MADRAS - KANPUR
HYDERABAD

Stockists all over India and abroad

ages from Pakistan. Similar market conditions to those ruling on Monday were experienced. A brisk tone prevailed for all descriptions and, although there were a few irregularities, prices on the whole remained fully firm. Rates remained unchanged. Plain Broken Pekoe was quoted at 3sh 3½d; Medium Assam BP 3sh 4½d and Best CTC 4sh 7d.

The offerings of Ceylon tea will be decidedly bigger for the time being. These liberal offerings presumably reflect the steps taken by Ceylon to reduce the quantity of tea that has been held up in the Port of Colombo.

Tea stocks in London, as on the 7th February, were 120.56 million pounds as compared to 121.44 million pounds in the previous week

and 73.58 million pounds a year ago. Landed between 1st and 7th February were 10.92 million pounds, while deliveries were 11.79 million pounds.

In the Internal Sale held at Cochin, offerings were 800,000 pounds. There was a fair general demand at easier rates. Best Nilgiris met with only limited interest and were generally lower by upto 15 nP per pound, while Good Mediums from Travancore and the Wynaad came to a strong market, but were generally easier by 5 to 10 nP and the unattractive sorts from these areas were often withdrawn. Milled and Residual sorts came to a weak market and, when sold, it was at a drop of fully 10 to 15 nP. Black leafy grainy descriptions again met with only limited enquiry.

US Notes

THE US Government is planning a marked increase in its "development" assistance to other countries in the next six months. Much of the increase will affect two major US lending institutions. The long-established Export-Import Bank and the new Development Loan Fund.

Between now and July, according to the latest estimates, the Export-Import Bank will lay out some \$625 million to finance exports of US capital goods. This outlay will serve a dual purpose: as an important stimulus to the economic advancement of other countries, and also as a source of strength to the domestic economy, since it involves the purchase of equipment made in the United States.

Among the commodities and countries expected to share in the \$625 million credits are these: railroad equipment, for Argentina, Brazil, Iran, Mexico and Spain; steel mill equipment, for Austria, Chile, Germany, Japan and Mexico; electrical generating equipment mostly for Japan; mining equipment, mostly for Peru. In addition, miscellaneous credits will help finance the export of aircraft and of electronic, road-building and telecommunications equipment to various countries.

Also in prospect is an estimated \$100 million in sales of US reserve farm goods, mostly cotton. Japan and Austria would be the chief beneficiaries of these sales, which will be conducted with the traditional care not to disrupt normal world marketing.

This is the first time the Bank's actual operations have been detailed in advance in this manner. It is estimated that a total of \$366 million in net credit outlays will have been made available by the Bank during the fiscal year ending this June 30—a faster pace than usual. According to present budget estimates, similar credits are scheduled to total about \$825 million in the fiscal year that begins July 1. Meanwhile, the Eisenhower Administration is seeking from Congress a \$2,000 million increase in the Bank's lending authority.

The US Government's new foreign lending agency, the Development Loan Fund, may be making its first loan abroad within a month. The Fund was authorized by Congress last year, and began operations this past January. Yet it already has application from 27 countries to finance development projects there.

Most of the financing proposals received so far have come from South Asia and the Near East. But there also have been a number

from developing lands in other parts of the world—the Far East, Latin America and Africa.

Applications already received amount in value to more than four times the \$300 million the Fund now has available for spending abroad. It was planned originally to have actually paid out some \$200 million on agreements concluded before the end of this fiscal year, but officials now say they expect to exceed that estimate.

The Loan Fund is designed to fill an important gap in international assistance programmes, by serving projects for which financing has not been available from such other sources as the UN World Bank or the US Export-Import Bank has confined its activities largely to short-term financing, chiefly for American exports, the Fund can finance long-term development projects of both foreign governments and private foreign businesses.

The \$300 million now available for lending is just a "starter", covering the Fund's operations through this June 30. Congress already has authorized an additional \$625 million for the second year.

Administration officials are hopeful that Congress will appropriate and thus make available for use in the next fiscal year—the full amount of this authorization. In fact, interest in the Fund has been so great that the Administration may ask Congress for even larger sum next year.

Britain

ORDERS from countries as far apart as India, Australia and Scandinavia have already been received for the products of the Rotherham (Yorkshire) steelworks of J. J. Habersohn & Sons Ltd., where a completely new principle in steel strip rolling has come successfully through its trials.

The new mill enables the manufacturers to hot-roll steel with the accuracy of cold-rolling, and the joint managing director, Mr Richard Habersohn, says that it makes it possible to roll thinner in the hot condition.

This hot-rolling mill, of a type of which there are only four in the world, is so revolutionary that engineering experts from China, Germany, Italy, Japan and the Soviet Union have been to watch it in operation.

Mr Habersohn says that the demand for the products of the new mill is such that the company is preparing to introduce double-and possibly treble-shift working.

The Under-Secretary of State for Commonwealth Relations, Mr C. J. M. Alport, told the House of Commons on February 13 that the first volume of the report of the Committee on Commonwealth Raw Materials had been completed and all Commonwealth Governments had agreed to its publication. It was a general survey and analysis of the Commonwealth's resources in raw materials.

Sweden

Sweden's foreign trade in 1957 resulted in a deficit of Kr. 1,423,000,000 (£98,600,000; \$277,000,000), as compared with Kr. 1,367,000,000 in the preceding year. Imports went up from Kr. 11,434,000,000 to Kr. 12,533,000,000 (£864,000,000; \$2,433,000,000), while exports rose from Kr. 10,067,000,000 to Kr. 11,104,000,000 (£766,000,000; \$2,156,000,000).

The actual figures for Sweden's foreign trade in 1957 are only slightly lower than those estimated in the National Budget report submitted earlier this month. As the net income of foreign shipping in this report is assessed at some Kr. 1,400,000,000, the balance of payments is likely to result in a deficit of Kr. 29,000,000 as against Kr. 127,000,000 in 1956.

Of the Kr. 1,100,000,000 increase in imports in 1957 close on Kr. 500,000,000 is accounted for by machinery, means of transport and instruments. The value of iron and steel imports was up by Kr. 225,000,000 and fuel imports by Kr. 140,000,000.

Of the somewhat more than Kr. 1,000,000,000 increase in exports nearly Kr. 300,000,000 referred to machinery and instruments. Kr. 270,000,000 to ships and Kr. 70,000,000 to automobiles. Timber exports rose by Kr. 100,000,000, foods by the same amount and iron ore by Kr. 130,000,000.

In terms of volume, imports of coal and coke declined from 5,400,000 tons in 1956 to 5,100,000 tons in 1957 and mineral oils from 9,700,000 tons to 9,300,000 tons. Iron and steel imports rose from 661,000 to 813,000 tons and imports of cars from 94,874 to 109,017 units. Textile imports rose in value from Kr. 1,090,000,000 to Kr. 1,227,000,000.

Exports of sawn and planed timber went up from 966,000 stds to a new post-war peak of 1,052,000 stds and paper exports rose from 921,000 tons to 961,000 tons, while shipments of chemical pulp decreased from 2,116,000 tons to 2,047,000 tons. A decline was also noted for iron and steel exports, i.e. from 330,000 tons to 301,000 tons, whereas iron ore shipments increased from 17,300,000 tons to 17,500,000 tons. The number of automobiles exported nearly doubled, or from 12,399 units to 24,362, with an increase in value from Kr. 253,000,000 to Kr. 323,000,000. Exports of ships rose in value from Kr. 527,000,000 to Kr. 797,000,000.

Registrations of new cars in Sweden showed a new high in 1957, totalling 154,344. This is 17 per cent, or 22,820, more than in the preceding year.

No less than 83 per cent of all cars sold in Sweden last year were accounted for by the 'Big Five' in the country's car trade. General Motors' share of the market was 21.2 per cent, while Volvo accounted for 18.2, Scania-Vabis (represent-

ing Volkswagen) 17.8, Philipssons (including Saab, Mercedes and DKW) 14.5 and Ford 10.7 per cent.

German-built cars predominated sales in 1957, followed by Swedish, British, French and Italian cars. American cars, which before the war accounted for about 50 per cent of total sales in Sweden, have shown a gradual decline over the past few years and no individual American make exceeded 2,000 registrations in 1957.

Registrations of trucks, including pick-ups and delivery vans, showed a decline from 12,736 in 1956 to 12,644, while the number of new buses rose from 507 to 541.

A 'planned parenthood' campaign will be started in Ceylon under a plan drawn up by Professor Sten Wahlund, Stockholm, who has previously conducted similar work in India. The scheme will be sponsored by the Central Committee for Swedish Technical Assistance.

The high nativity rate in Ceylon—40 per thousand as compared with Sweden's 14.5—would, if unchecked, double its present population of 8.5 million in 24 years. Swedish leader of the project will be Dr Jan Asplund, Stockholm, and he and his Sinhalese assistants will establish their headquarters in Colombo.

The costs will be defrayed by funds collected in Sweden. A sum of Kr. 400,000 (£28,000; \$80,000) has been set aside for the first four years.

A method of fishing by the means of electric shock is to be tried on the Swedish West Coast this spring. A Gothenburg company, Atlas Marin AB, has received permission by the Board of Fisheries to make experiments over a period of three months. The new method is reported, to be highly selective, so that only that size of fish wanted at a given moment is affected by the current.

The Swedish company has developed its method on the basis of a direct-current motor designed by the German physicist Conrad Kreutzer. The fish, for instance cod, tends to swim towards the positively charged pole in an electric field and is thus directed towards a chosen point where it is numbed by the current, floats to the surface and can be easily collected in a hoop-net or by a specially designed suction apparatus. The voltage is regulated so that the potential drop between the head and the tail of the fish corresponds exactly to the size fished for. The method thus spares fry and small fish.

When fishing for tuna, which is usually done by angling and which requires special skill, it is proposed to use the hook as electric conductor. A series of short D. C. shocks of 400 Volts and 100 Amperes numbs the fish, which can then be towed and taken on board and clubbed without difficulty. The Gothenburg firm works in close contact with the German inventor and is said to have perfected the method.

Export Risks

Replying to a question by Mr T. K. CHOUDHURI and Mr R. S. TIWARI in the Lok Sabha, the Minister for Commerce, Mr NITYANAND KANUNGO, said that 49 policies were sold by the Export Risks Insurance Corporation until January 25, 1958. Their value was over Rs 2.02 crores.

The Minister said that premium rates charged by the Corporation depended upon a number of factors like the types of risks and their causes, the markets to which the goods were exported, the types of goods and the period for which the risks were covered. Any change in any of these factors, he added, necessitated changes in the premium rates.

Technical Personnel

According to estimates made recently, the requirement of technical personnel in the country will be about 650,000 during the Second Five-Year Plan period.

This was stated by the Union Deputy Minister for Labour, Mr ABID ALI, in a written reply to a question by Mr S. M. BANERJEE in Lok Sabha. He added that the exact extent of shortage of technical personnel at present was not known.

Tractors

In a written reply to a question by Mr G. P. SINHA and two other Members in the Lok Sabha, Mr MANUBHAI SHAH, Minister for Industry, said that one firm had already been licensed for the manufacture of agricultural tractors. He added that a few more applications for the manufacture in collaboration with foreign firms were under Government's consideration.

Ethiopian Mill

The Deputy Minister of Finance, Mr B. R. BHAGAT, replied in the affirmative to a question in the Rajya Sabha whether it was a fact that a private company had been floated establishing cotton textile mill in Ethiopia. He also replied in the affirmative to a question whether the Central Government had permitted the company to raise capital in India.

The questions had been put by Mr V. C. KESHAV RAO.

Glass Plant

The Minister for Industry, Mr MANUBHAI SHAH, told the Lok Sabha that the Soviet expert team, which came to prepare a preliminary

report for the proposed optical glass factory, had recommended the Asansol area as the most suitable for locating the factory. They had considered a number of places for establishing the plant.

Mr SHAH, who was replying to a question by Mr V. C. SHUKLA said that, as regards the coal mining machinery plant, the first team of Soviet experts did not consider possible locations but gave only factors to be taken into account in choosing a site. The Soviet experts, who were now in India, were considering the suitability of different locations in the coal bearing areas.

Mr SHAH added that in both cases a final decision about the exact locations had yet to be taken by Government.

Quinine

In reply to a question by Mr J. H. JOSHI regarding the production of quinine, the Union Minister for Health, Mr D. P. KARMARKAR, said in the Rajya Sabha that 88,290 lbs of quinine sulphate were produced during 1956-57 and during 1957-58 the output amounted to 41,853 lbs upto the end of October 1957.

Asked about the annual requirement of quinine in the country the Minister said that it was not possible to estimate the exact annual requirement of quinine in the country. On the basis of data available the annual demand for quinine was estimated to be about 20,000 lbs he said.

Bhakra-Nangal

In reply to a question by Mr. J. H. JOSHI, Mr S. K. PATIL, Minister of Irrigation and Power, laid the following statement on the Table of the Rajya Sabha on the progress made in the construction of the Bhakra-Nangal project and the expenditure incurred up to the end of last year:

All works under the Bhakra-Nangal Project, except the Bhakra Dam and its two Power Houses and the transmission system, have been completed. The progress on these items of works up to the end of December, 1957, is given below:—

Bhakra Dam:

(i) Excavation:—Out of a total excavation of 51,60,000 cubic yards required to be done for the Bhakra Dam, excavation to the extent of 51,53,000 cubic yards had been completed by the end of December, 1957.

(ii) Concreting:—A total quantity of 23,78,216 cubic yards had been placed in the Dam which is nearly half of the total work involved.

Power Houses:

The construction work on the Power Houses at the Dam site made steady progress. Draft tube liners for the Bhakra Left Bank Power House have been installed for all the five units. Welding and assembling of pen stock units and work on tail race lining in the power house are in progress.

Transmission System:

The following lines and grid sub-stations have been completed and energised:

(i) Lines:

- 1 13/220 k.v. double circuit from Canguwal to Delhi.
- 2 132 k.v. double circuit from Ganguwal to Ludhiana.
- 3 132 k.v. single circuit from Ludhiana to Jullundur and Ludhiana to Moga and Mukatsar.
- 4 132 k.v. single circuit from Panipath to Hansi and Hansi to Bhiwani.
- 5 66 k.v. single circuit from Panipat to Karnal and Abdullahpur.
- 6 66 k.v. single circuit from Dhulkote to Surajpur.
- 7 66 k.v. single circuit from Dhulkote to Patiala.

(ii) Sub-Stations:

- 132 k.v.—Ganguwal, Kotla, Dhulkote, Panipat, Delhi, Hansi, Ludhiana, Jullundur, Moga, Muktsar.
- 66 k.v.—Chandigarh, Indri, Karnal, Abdullahpur.

(b) An expenditure of Rs 132.98 crores has been incurred up to the end of December, 1957, excluding interest charges.

Canal Waters

Replying to a question by Mr. AMOLAKH CHAND, Mr S. K. PATIL, Minister of Irrigation and Power, said in the Rajya Sabha that during his recent visit to India and Pakistan, Mr W. A. B. ILLI, Vice-President of the World Bank, discussed with the two Governments possibilities of various approaches towards a settlement of the canal waters dispute. These discussions had not yet led to any concrete result.

Foreign Exchange

The decline in the sterling balances of the Reserve Bank of India during the last three months had been significantly smaller than in the preceding three months, said the Deputy Minister of Finance, Mr. B. R. Bhagat.

He was replying to a question in the Lok Sabha by Mrs ILA PAL CHOUDHURI and three others.

Mr. Bhagat added that the weekly averages of decline were: November 1957 Rs 3.52 crores; December 1957 Rs 2.96 crores and January 1958 Rs 2.87 crores. The corresponding figures for the three preceding months were Rs 8.07 crores; Rs 6.83 crores and Rs 6.35 crores respectively.

The improvement, the Deputy Minister said, reflected the effect of the measures taken in the last few months to conserve foreign exchange such as the curtailment of imports, drastic restriction of allowances for foreign travel, negotiation of arrangements for deferred payments etc.

Dearness Allowance

In a written reply to Mr B. S. MURTHI in the Lok Sabha the Finance Minister, Mr T. T. KRISHNAMACHARI, stated that there was already a scheme under which Central Assistance was offered to State Governments for granting increases in emoluments of low-paid employees of State Governments, local bodies and teachers in aided primary schools. Four State Governments (Madras, Mysore, Andhra Pradesh and Uttar Pradesh) had recently raised the question of further Central assistance for removing the disparities between the emoluments of their employees and those of the Central Government.

The Finance Minister said that a decision had been taken for the present to liberalise the scale of Central assistance at the uniform rate of two-thirds of the expenditure entailed by the States in giving relief to their low-paid employees, provided that the increase did not exceed Rs 12/- p.m. in any individual case and the total emoluments after the increase did not exceed Rs 100/- p.m.

The Finance Minister added that the amounts that would be payable to the various State Governments under this modified scheme had not yet been worked out.

Ports

The Deputy Minister of Finance, Mr B. R. BHAGAT, replied in the affirmative to a question in the Lok Sabha whether it was a fact that negotiations were held with the World Bank for the grant of a loan for the development of ports in India. The ports concerned, he said, were Calcutta and Madras. The total foreign exchange component of the cost of the project amounting to Rs 17.68 crores had been mentioned in the memorandum given to the World Bank, he added.

Mr Bhagat was replying to a question by Mrs TARKESHWARI SINHA and four others.

Synthetic Oil

In a written reply to a question by Mr DAMANI whether Government had taken any decision on the report of the expert committee constituted under the chairmanship of Dr J. C. Ghosh to examine the feasibility of schemes for the manufacture of synthetic oil in the country, the Union Minister for Steel, Mines and Fuel, Sardar SKARAN SINGH, stated in Lok Sabha:

Government have examined the schemes drawn up by the expert committee. These schemes comprise a long-term and a short-term plan. The former envisages production of 50 million tons of domestic coke by low temperature carbonisation together with production of bye-product oils, phenols, road tar etc. at a capital cost of Rs 600 crores. In the short-term plan, production of about 0.8 million tons of domestic coke has been recommended with the consequential utilisation of the bye-products. The cost of this is Rs 20 crores. While Government

consider the schemes feasible, it has not been possible to make any financial provision for them so far because of the difficult foreign exchange position and the difficulty of finding even the rupee resources.

Investigation Commission

Mr B. R. BHAGAT, Deputy Minister for Finance, replied in the negative to a question by Mr RAM KRISHAN in the Lok Sabha, whether all the amounts of income-tax settled under the Taxation on Income (Investigation Commission)

Act by the Income Tax Investigation Commission, had been realised from various assessees. The Deputy Minister stated that the total amount realised so far was Rs 10.21 crores and that the remaining amount to be realised was Rs 7.93 crores.

Mr BHAGAT placed a statement on the table of the Sabha indicating the reasons for delay in realising the remaining amount. According to the statement, the main reasons for delay were (1) inability of a few assesseees to pay the demands on due dates due to their

financial difficulties; (ii) grant of instalments, and (iii) proceedings before High Court wherein the validity of the settlements had been challenged in consequence of which there were Court orders restraining the department from realising such demands.

Coercive measures for the collection of such demands had been kept in abeyance pending receipt of legal opinion on the question of the validity of the settlements arrived at before the Income Tax Investigation Commission. A few assesseees on their part were not honouring the

settlements on the ground that in view of the Supreme Court's judgment invalidating Sections 5 (1) and 5 (4) of the Commission Act from the commencement of the Constitution, such settlements had become bad. The Government had since been advised that the Supreme Court judgments did not affect the liability arising out of a settlement arrived at before the Commission under Section 5A of the said Act. In view of this, necessary steps have been taken for the purpose of collecting the outstanding demands expeditiously.

Indian Finance

February 22, 1958

Law

The Law Commission's section dealing with the reform of judicial administration has concluded its work and its report is likely to be submitted to Government in two or three months.

The Commission's other section which is mainly concerned with the statute law revision, has finalised its eighth report on the Indian Sale of Goods Act, 1930, which will be submitted to Government shortly. The report on the Specific Relief Act, 1877, is in the final stage. Another report on the Negotiable Instruments Act, 1881, has been drafted and is awaiting consideration of the Commission.

This information was given by Shri Hajarnavis, Union Deputy Law Minister, in reply to a question by Mr D. C. SHARMA and Shri Ram Krishnan.

UNTAB

The Deputy Minister of Finance Mr B. R. BHAGAT, told Mr P. C. BHANJ DEO, in reply to a question in the Rajya Sabha, that allotment

S. E. RLY TENDER

Sealed tenders are invited for supply of the following materials:—

Tender No. CON/GM/4/Gb5/225/P/58 for supply of 5000 gallons Paint Red Oxide ready mixed primer brushing I.S. shade No. 446 to specification I.S. 105-1950.

Tenders will be opened at 12 noon on 19-3-58. Tender forms (not transferable) are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 at Rs. 5/- (not refundable) per set of form.

Firms not on the Railway's approved list of contractors must obtain a Cash Receipt for earnest money of Rs. 1000/- from the railway's Chief Cashier and enclose a valid Income Tax Clearance Certificate without which the tender is liable to be rejected.

S125 GENERAL MANAGER

TEA BOARD REGISTRATION OF TEA EXPORT QUOTA TRANSFERS 1957-58

It is hereby notified that the last date for the filing of applications for registration of transfers of tea export quota rights in respect of the year 1957-58 is the 20th March 1958. Quota transfers will not be registered unless the necessary transfer forms from both the parties to the transfer are received by that date by the Controller of Licensing, Tea Board, 1-A, Vansittart Row, Calcutta-1.

P. V. GOVINDAN,
CONTROLLER OF LICENSING.

of funds for technical assistance by the United Nations Technical Assistance Board was made on an annual basis after discussions in India between the Government of India and the United Nations Resident Representative, and after examination of the country's programme in New York by the UN Technical Assistance Committee. This procedure had been followed for 1958 also.

The Deputy Minister said that technical assistance was provided not only in the form of services of experts but also in the form of

training facilities for Indian nationals and in the form of equipment. He added that it was not possible to say what would be the number of United Nations technical experts in India during the next three years.

Reserve Deposit

The total amount deposited by companies under the scheme of deposits enacted by sections 10 (2B) & 10 (2C) of Indian Income-tax Act during the year ended December 31, 1957, was Rs 348 lakhs, said the Deputy Minister of Finance.

Mr B. R. BHAGAT, in the Rajya Sabha.

He was replying to a question by Mr MAHESWAR NAIK.

The Deputy Minister added that the general object of the scheme was to ensure that surplus monies of the corporate enterprise out of liberal tax-free depreciation development rebate, etc., were utilised for developmental purposes. Since the scheme of deposits was effective only from April 1, 1957, he said, it was too early to assess fully the extent to which the objective of the scheme had been achieved.

GONE are the spacious days of the palki, the horse, the camel and the elephant. Today, for speed and comfort, the way to travel is by air—and wherever possible—by Viscount.

The Viscount represents a revolutionary advance in air travel—bringing the jet age to India. Cruising above the weather and eliminating vibration and noise, it ensures fatigueless flight at high speed. For this the credit goes to its four powerful 'turbo-prop' engines which employ the same gas turbine principle as jets.

the Viscount way

To add further to the comfort of passengers the cabin of the Viscount is fully pressurised, air-conditioned and sound-proofed and provided with huge picture windows which give an incomparable view of the scene below.

A pleasure beyond measure, flying by Viscount is something more than just getting from one place to the other in the shortest possible time.

You can now enjoy this new winged experience on the services between **Delhi—Calcutta, Calcutta—Rangoon, Delhi—Bombay, Bombay—Karachi and Bombay—Madras—Colombo.**

Very shortly Viscount services will be extended to all the other I.A.C. trunk routes.

INDIAN AIRLINES CORPORATION

THE Chagla Commission's Report and its sequel have brought into the open, among other things, a secret vice that most of us cultivate, with greater or lesser shamelessness. I mean the passion for amateur detection (the emphasis being more on the former word than on the latter). I hope, therefore, that you will not consider me flippant if I start my reflections on it with a reference to a detective story I read years ago. Unfortunately, both the story and its author deserved better since, with an appalling lapse in my memory, I am not able to recall the names of either. But I remember the story, for, it was something of a tour de force. A murder had been committed and three famous fictional detectives, Lord Peter Wimsey, Hercule Poirot and Father Brown are on the spot, besides the despised flatfooted policeman. Each deduces by the employment of his particular method the man responsible for the crime, but, as was not wholly unexpected, each pins the murder on different persons. The long-suffering police inspector, using such despised arts as the use of the eye and elementary chemistry, gets at the truth that is acknowledged as such by the others who had missed it by miles.

This is not entirely a shaggy dog story, as far as my present purposes are concerned, for, in the last few days, I have heard, besides the verdict of the Chagla Commission on the course of events, many other theories of what actually happened. There is no question of anybody trying to upset the findings of the Commission, but it can hardly be denied that the full picture of the whole unhappy business has not emerged at the end of the inquiry. I shall indicate one reason for this incompleteness presently, but let me deal with certain comments of shocked incredulity on the Prime Minister's remarks implying such an incompleteness. There was an element of disingenuousness at the horror simulated at the PM's alleged impropriety. First of all, this is not a judicial proceeding in actual progress, but a comment on the findings of an inquiry after it has been completed. Even in the case of the strictly legal proceedings, it is not improper for any one to comment academically on

the soundness of particular decisions, though, of course, every one concerned is bound by them. It is only comment on matters that are sub judice that is improper. In this case, the Prime Minister did not indulge in any such thing. Secondly, it must be remembered that it is open to Government to accept or reject the findings of an inquiry commission or accept them in modified form, though, of course, in practice, such dissent or modified assent would be infrequent. In any case, the findings of commissions of this sort, though entitled to the highest respect, are not sacrosanct. Indeed, the eminent judge who constituted the Commission would not claim any such immunity.

And what is the substance of Mr Nehru's complaint, if such it can be construed? In the first place, he felt that the full facts relating to the affair have not come to light. This is a feeling to which both the Attorney General and the Commission confessed in the course of the inquiry itself. Secondly, in the matter of procedure, the Commission's decision to make it a public inquiry has had mixed results. The Commission itself is satisfied about the correctness of the decision to make it a public inquiry. Perhaps there is nothing wrong in an inquiry being public, but many besides myself have wondered whether an inquiry with the appurtenances of microphones and loudspeakers was strictly necessary for the purpose on hand. It is ridiculous to suggest, as I have seen it done in print, that the inquiry resembled at some stages the notorious Communist open trials with a crowd baying for the blood of the victim. But it is true that the jeering and cheering crowds that flocked the Bombay Legislative Assembly, where the inquiry was held, did not contribute to anything of importance to the Commission's tasks. Indeed, in one sense, they seriously impeded with the ascertainment of truth. I think that very many people would have tendered evidence that was of relevance to the inquiry, if only it was conducted in a less lurid light of publicity. It is perhaps true, as Mr Chagla had suggested in his opening speech laying down the procedure, that democracy cannot function if all of us were afflicted

with this kind of squeamishness. But in matters like this, the ascertainment of what actually happened is more important than the appearance of having paid homage to an abstract principle of democratic conduct. I am not suggesting that anonymity should have been encouraged, or that insinuations are made in the security of secret avowal. As Mr Chagla conceived it, this stipulation of public inquiry was more a protection of the persons likely to be maligned. But, in the event, as the inquiry proceeded, and as the reports of the conduct of the crowd outside the halls came in, many who would have thought it their duty to render evidence thought it better to keep their own counsel. This surely was one of the reasons for the incompleteness of evidence of which the Attorney General, the Commission and the Prime Minister complained.

But the more serious difficulty was the absence of re-examination of witnesses. For some reason, it was considered either inexpedient or improper to recall an earlier witness and ask him to clarify issues in the light of later revelations. This led to the serious difficulty of the pattern of evidence being determined by the accident of the sequence of witnesses. Indeed, at one stage in the inquiry, when discrepancies in the evidence of two persons emerged (between that of Mr Mundhra and Mr Chaturvedi), the embarrassment was felt by the Attorney General himself. But, again, for a reason I am not able to fathom, it was not considered necessary to have them probed further.

A complaint made by Mr Nehru was that there was a one-sided presentation of facts by counsels. This is a more serious charge, and is not strictly correct. But, at some stage in the inquiry, which began with the position that there were no parties and all that it was interested in was the ascertainment of truth, a subtle distinction between parties and witnesses did emerge. These parties were identified as the Finance Minister, the LIC and the Principal Secretary. The last two were allowed counsel and the Finance Minister, being technically Government, was presumably understood to be represented by the Attorney General.

But, when it became evident that the Attorney General dissociated the person of the Finance Minister from Government at a particular stage, the anomalous situation, for which none is to blame, made itself manifest. The confusion was not cleared by the Finance Minister seeking representation by, of all people, the counsel for the LIC. To the confusion of the parties and witnesses was added the confusion of the personal and professional ethics and so forth of Mr Sachin Choudhury. A more complicated tangle it is difficult to imagine. It seems to me that a more informal but searching procedure may have helped to ease the rigidity of the procedure and, therefore, the nature of evidence before the Commission.

It will thus be seen that there was nothing seriously improper in the substance of the Prime Minister's remarks, which, he made clear, were not made in any spirit of complaint. It is difficult to understand the fuss made by some about these remarks. It is suggested, for instance, that such remarks will undermine the independence of the judiciary. A more ridiculous suggestion can hardly be imagined, and I am sure that Mr Justice Chagla will be the first to laugh at it. If it were indeed the case that an adverse comment by the executive on the findings of a judge acting in a different capacity is apt either to ruffle or to cow the judiciary to such an extent as to make them lose their poise, then the independence of such a judiciary is hardly worth a day's purchase. The sources of the equanimity and independence of judges are their unwavering vision of the inviolability of the human soul and the immutability of certain basic laws about human conduct. These are beyond the reaches of a passing comment. In any case, these very critics say that the complaint that this inquiry has demoralised the services is ill founded and irrelevant in the context of the larger purposes of the inquiry. By the same token, it is difficult to see why the judiciary as such should be upset about a passing remark.

As regards the actual findings of the Commission, it is no reflection on the learned judge to say that they have every appearance of in-

completeness. The reason for this can be explained again in terms of detective fiction. I myself lean to the psychological school of detective fiction which looks for motives (which very often resolves itself to the dictum of Cherechez la femme!, though in this case even the most incurable of romantics can hardly find a feminine interest. In this, of course, the Parker inquiry with its crop of ex-chorus girls and so forth was more rewarding). The point I am wishing to make is that, while the Commission has identified forces behind the transactions and fixed responsibilities, it has not answered the question why the people acted the way they did. As always, the question is "Why, Oh! Why?" What was the motive for these acts? To say it was to help Mr Mundhra out of his difficulties is surely not enough. Why should anyone help Mr Mundhra? For this, there is no answer at all in the Commission's Report. And until that is found, it cannot be said that the Commission has got to the bottom of the business.

★

It may be that the terms of the Commission's reference did not include this particular question. (I myself consider the terms of reference as very badly worded). But, on the other hand, if I assume that the purpose was not to help Mr Mundhra and it was in fact to help the revival of the stock market, then the ultimate and not the penultimate motive is found. It now remains to see whether this alternate hypothesis of ultimate motivation is correct or not. The Commission has marshalled impressive evidence for its conclusion that the claims that the stock exchange was in a bad way, that there was a "crisis" and that the crisis was due to the "drag" of the Mundhra shares on the market are incorrect. Graphs were consulted and particular experts were examined, and the weight of their opinion was to make the Commission reject the hypothesis of an objective presence of a "crisis" or near crisis. It was also found by the Commission that the actual

manner of the transactions did not remove the drag at all. And that was an additional reason for presuming that they were not intended to act in this way at all.

★

Now, I have no wish to question the findings of the Commission. Nor do I wish to defend the actual modes of transaction, the prices fixed and so forth. But, if I have learnt anything in my experience of the last forty years of the financial world, it is that the last thing that Indian Stock Markets consult in patterning their behaviour is "objective facts". One has no need to be financial expert to know this. A visit to the stock exchange any day of the week will show what a jungle it is. And behind it all, you will find men who base their conduct on the merest whisper and who buy and sell on the basis of the ghost of a rumour. The appalling naivete of these folks is a source of constant wonderment to me, no less than the fact that I, despite my sophistication, am not making one millionth part of the money they are making. The only rational explanation is that, since the whole stock exchange psychology is a closed circuit of irrational conduct, some kind of ultimate rational appearance is traceable in the results. I am aware that there is more than mere credulity in the stock market. But the share-rigger operates precisely on this credulity, and not on graphs and charts.

★

So the evidence to consult on the behaviour of stock markets is not charts and tables, but rumour, gossip and canards. It is here that there was comparative lack of illumination for the Commission. My point is that, however misguided Mr Patel might have been on the basis of the charts (which he admittedly did not consult) in imagining that the Calcutta market was in a bad shape, it was his subjective reading of the situation based on the "subjective" reading of those who told him of the Calcutta market that led him to believe there was a drag in the market. Here, the evidence of

Indian Finance

Mr Chaturvedi is clear. And it would have been relevant to inquire whether there were others who felt the same way as Mr Chaturvedi felt. Not experts, but the Katni operators are folks who would have thrown light on this.

★

Indeed, there was evidence, in the shape of the letter from Mr Raman (of the Reserve Bank, Calcutta), before the Commission that there was no inherent impossibility in the notion that the Calcutta Stock Exchange was in a bad shape. Quite a number of people seem to have thought that the LIC deal in June did good to the market. This is what Mr Raman says, according to the Commission, in his letter dated 6th of July 1957 to Mr Madan of the Reserve Bank: "The recent Life Insurance Corporation's support to buy the Mundhra shares has relieved the market of the floating stocks to the extent of over a crore of rupees. The opinion on the Life Insurance Corporation buying such shares is itself divided. While some say that to the extent that it has avoided a crisis and imparted some stability, the Life Insurance Corporation has done a good job. There are others who say that it has only temporarily plugged the loophole and has only postponed D-day."

★

This is the opinion contemporaneously gathered by an expert on the behaviour of the stock exchange and he clearly says that a "crisis" has been avoided by the action of LIC. It is also noteworthy that the dissident voices do not say that there was no crisis, but merely say that it has been postponed. So, all of Mr Raman's informants are agreed on the imminence of a crisis, though it must always remain a matter of opinion what and when a "crisis" is really a "crisis". But no prudent man would wish the Government to deal with a crisis only after it has descended on them. Indeed, the whole purpose of the proposed action is to avert a crisis. Support to a market that has already collapsed is meaningless. Thus, it seems to me that there is no inherent improbability in the notion that Mr Patel acted on the notion that there was need for the LIC supporting the market.

★

In the light of the charts and graphs and expert opinion, Mr Patel may have been deluding himself in so imagining, but then he was in good and numerous company. Of course, this does not answer the further question about the methods adopted of relieving the market and the propriety of his acting on his own in the matter and bypassing of the procedure laid down for the purpose. On all these issues, Mr Chagla's findings cannot be seriously called into question. But on the central question of motivation for the deal, it seems to me, especially in the absence of any finding on the ultimate motivation for the Com-

mission's theory of proximate motive, viz., helping Mr Mundhra in his difficulties, that the motive force was to help the stock exchange. How far this accords with declared Government policy and how far such policy is inherently justifiable is a different question. These and other aspects of the Commission's findings must await a future occasion.

★

I am neither so witty nor so bold as Sidney Smith who once said, "I never read a book until after reviewing it. It prejudices one so". Yet, I am afraid I am going to do precisely this for once. The reason is, of course, that the book is not available in India at the moment, and that a good deal about it has appeared in the form of reviews in foreign magazines, which makes me quite excited about it. An American publication, it is called *The Capitalist Manifesto*, which is said to stand in the same relation to a bigger and still unpublished work titled *Capitalism that The Communist Manifesto does to Das Capital*. This new Manifesto is the product of the joint authorship of Mortimer Adler, the philosopher, and Louis Kelso, a corporation lawyer, and is a kind of preview of Capitalism which the latter wrote some four years ago. Now, about the Manifesto. It sounds, the reviews tell us, a reveille to world capitalism and seeks to take it out of its hitherto defeatist and defensive position. It furnishes a new philosophy of capitalism, showing that, much more than any other type of economic philosophy, it is capable of securing the greatest good for the greatest number. It not only asks "Is it workable?" but also "Is it just?". It sees capitalism as the only just form of economic existence in conformity with democracy. Most important of all, it asserts that the moral aim of capitalism is not toil, but leisure, leisure for all to pursue the liberal arts of civilisation. Real capitalism, it argues, should not only bring full employment, but a full enjoyment by all "of the leisure work that machine-produced wealth can make possible for all". It also warns American capitalism that, despite all its great performance, it will not lead to this fine ideal but only to an increasing measure of socialism. Its great vision is, of course, that of economic citizenship, a thing which can and will materialise only with full automation and with machines becoming man's super-slaves. In the society of "economic citizens", there will be no "subsistence work", no drudgery to produce "the goods of the body"; only freedom to produce "the goods of the soul", such as the arts, sciences, culture, religion, etc. My final opinion on this work naturally awaits the opportunity of a fuller perusal. But, meanwhile, I would advise my friends in Clive Street to watch out for copies as soon as available. It looks like a capitalist's vademecum, if not a bible.

BAVESDROPPER

February 22, 1958

IF the main purpose of Governors' addresses is to give a clear indication as to how Governments have fared in the interregnum between one session of the Legislature and another and on what lines work in the coming months is going to proceed, Mr Sri Prakasa's address to the joint meeting of the Bombay State Legislature which commenced its budget session last Monday, has left little to be desired.

The past year has witnessed considerable progress being made in the Bombay State in a number of directions and such headway is especially significant in two of them. Firstly, the initial problems arising out of States reorganisation have been solved with remarkable speed with the result that Government energies have been increasingly diverted toward development work. Secondly, a sizable improvement has been achieved in food production and steps have already been taken to launch an all out drive to augment food supplies in the State.

That the Governor has devoted a considerable portion of his speech lasting for over three quarters of an hour to agricultural and allied matters is indicative of the great importance attached by the State Government to the food problem. This is as it should be; because recurring food shortage has been causing considerable anxiety to them. Last year the position has been rendered doubly difficult by the failure of the monsoon in some districts. However, thanks to the vigorous measures taken to step up production, food output in the State as a whole has recorded an improvement.

But the Governor has pointed out that "even so, the overall food position is by no means satisfactory". The problem of recurrent food shortage is sought to be tackled simultaneously in different directions. In the first place various steps have been taken to ensure the supply of sufficient foodgrains to the people. The fair price shops scheme has been extended throughout the State. The Household Foodgrain Card System has been introduced in Greater Bombay and a close watch is being kept on the situation in other large cities like Ahmedabad, Poona and Nagpur.

In the meantime Government have launched an all out drive to increase food production in the State by a rephrasing of the Plan so as to complete some of the important schemes of agricultural production ahead of schedule. In this regard emphasis has been placed on minor irrigation works in view of the fact that agriculture in the State is largely dependent on rainfall. Moreover, minor irrigation works can be completed much sooner than big projects. Therefore, a programme for the

Toward Increased Food Production

construction of 35,000 new wells and repairs to 28,000 wells has been prepared for the remaining three years of the Second Plan. The scheme is expected to bring under irrigation over 2½ lakh acres of land. Already some progress has been made and the response to the wells scheme is encouraging as a large number of people have applied for loans which are offered on liberal and attractive terms. Special attention is also bestowed on soil conservation by contour bunding as it will lead to an immediate improvement in food production.

It is, however, recognised that the long term solution of the food problem can be obtained only through systematic attention being paid to the implementation of the major irrigation schemes. Government have, therefore, not slackened their efforts in this direction. Though works carried over from the First Five Year Plan have been given priority for completion, preliminary works have been started in most of the new projects sanctioned by the Planning Commission under the Second Plan.

The fact that mere expansion of irrigation and other agricultural facilities will not bring the desired result has been well recognised and the State Government have taken active steps to extend to all areas of the State their policy to remove intermediaries and to make the tiller of the soil the occupant of the land.

The good progress made in the consolidation and reorganisation of the Administration in the enlarged Bombay State and the measures taken to democratise the institutions of local self-government show that the State Government are alive to the need for ensuring cooperation among the different parts constituting the State and making Government more broadbased. Already the integration of the various service cadre has been completed and steps toward integration of administrative setups and laws are in hand. It is gratifying to note that Government are "anxious that all corruption should be stamped out from the Administration", and have established an anti-corruption bureau under the direct supervision and control of Government in the Home Department with a view to ensure better co-ordination of work between the various anticorruption establishments. But as the Governor has pointed the evil of corruption can be completely eradicated only when there is full public cooperation with Government efforts in this direction.

Perhaps the most significant progress made by the State is in the matter of democratising local Government. The establishment of a Panchayat Raj is one of our ultimate objectives. But due to

various reasons, local self government has not made much headway. One of the main causes for this has been the absence of any provision for adequate finances for the local bodies including panchayats. The Bombay State Government have now decided to remove this basic defect by making to village panchayats in all regions grants from 25 to 30 per cent of land revenue according to a classification to be prescribed. The grants to municipalities and district local boards to meet 50 per cent of the expenditure on account of dearness allowance, hitherto applicable to institutions in certain specified regions, have been extended to all such bodies in the State. The grant to district boards has been made uniform at 5 per cent. These institutions will also get a share of 2 per cent of the forest revenue.

In the industrial sector, Government have assumed the direct responsibility for the development of small scale and cottage industries. The inclusion of new areas within the State has opened up new vistas of industrialisation. The discovery of extensive mineral deposits in parts of the State has led to the establishment of a full-fledged directorate of mining. The Governor has pointed out that the State Department of Mining has taken

up the survey and prospecting for bauxite deposits in Udgiri area in Kolhapur District.

In this connection it may be noted that there are reports that the State Government have already approached the Planning Commission with a request to include in the Second Plan the setting up of a big aluminium plant with a capacity of about 20,000 tons per year using the bauxite deposits from Kolhapur. It is also said that the suggestion has been favourably received by the Planning Body. The possibility of priority being given to the Kolhapur plant is heightened by the fact that the ore here is high grade and easily accessible. The requisite power will be available from Koyna and the communication system is particularly good in the area. The rival claimants, it is pointed out, to an aluminium plant (Madhya Pradesh and Madras) are lacking in one or more of the advantages enjoyed by Kolhapur. It would appear that the State Government are very anxious to put up an aluminium plant in the area and it is stated that they are prepared to seek the help of private enterprise in case the Planning Commission are unable to sanction the project due to financial considerations.

BOMBAY
REVIEW

Balance of Payments

The balance of payments difficulties experienced by India at present have provoked many comments from various quarters as to what the right solution to them should be. Devaluation of the rupee has found favour with a certain section of opinion in the country. Adherents to this view, as is obvious, believe that the causes of the present difficulties are deep-seated and not of a temporary character as would seem to be the view of the Government.

The latest and one of the most authoritative comment to come is that from Mr Per Jacobsson, Managing Director of the International Monetary Fund. Mr Jacobsson is in favour of tackling the problem from the side of internal spending and credit and he gives the examples of some European countries which have successfully controlled the problem by concentrating on internal speeding. Devaluation according to Mr Jacobsson deals only with the superficial side of exchange rates. So far as India is concerned, the error which led to deterioration in the balance of payments position lay, according to Mr Jacobsson, in the resort to deficit financing as contemplated in the Second Plan. In his view deficit financing is a costly method which only countries enjoying the status of creditor nations could afford, in view of the adverse reactions it might have on the payments position. In this connection he explains how in Italy, in 1949, attempts made by the Government at economic planning by recourse to deficit financing led to problems of inflation and unemployment.

The Government's policy on this problem is based on the view that the present difficulties on the foreign exchange sector are only of a short duration being the result of the pressure on foreign exchange which it expects, would subside once

the heavy initial requirements of imports for various development schemes are met. Therefore the Government have been content with taking steps to drastically restrict unnecessary imports and to encourage export of Indian goods by means of export promotion schemes. But in the light of the observations made by Mr Jacobsson in regard to the connection between deficit financing and balance of payments problem, a reappraisal of the provision made for deficit financing in the Second Plan would seem to be called for.

In regard to the credit needs of India Mr Jacobsson said that it would be unwise on the part of the Government to seek short term credit from the International Monetary Fund, since such credits have to be repaid in the near future, and that the policy of getting long term loans would be suitable for development purposes on which the country has embarked. It was also disclosed by him that no request had been made by the Government of India for such short term credits from the IMF. Mr Jacobsson also praised the creditworthiness of India one of the main elements of which according to him was the general political framework.

Personnel for Management

With the rapid industrialisation of the country, the problem of personnel has assumed great importance. In the first place it has been realised that to establish large industrial units and man them, we require a large number of technical personnel. Though it is not expected that the requisite number will be available in the immediate future, plans are already in hand to increase the training facilities in the country so as to be self-sufficient in this regard by the Third Plan

period. A kindred problem is the availability of trained personnel for management. Considering the fact that the importance of this factor has come to be adequately realised even in the industrialised countries of Europe only in recent times, it must be said that the need for having trained personnel for management has been well recognised quite early in our country. But industrialisation has been so rapid that there has been no time to wait for the availability of trained personnel. The result is already apparent in the shape of various difficulties in the industrial sector.

Speaking at the Ahmedabad Textile Industry's Research Association in Ahmedabad recently Dr A Ramaswami Mudaliar pointed out that there was urgent need for evolving a national technique of management if industrialisation was to progress smoothly and rapidly. Such a technique should be applicable to both the sectors. Referring to prevailing conditions he pointed out that the position was far from satisfactory. The defect in the public sector seemed to be an utter lack of initiative. There seemed to be a paralysis in the top management in which the personnel were unable to take quick decisions even on minor matters. The private sector suffered from a different handicap. There was interference from the managing directors who were more often than not, mere financiers without any industrial experience. The result was delay and consequent loss of production. Apart from the unnecessary interference in their work, the management personnel were frequently exposed to the wrath of the workers for no fault of theirs.

Therefore, it is essential that the industrial units have at their head and at the various sectional levels, management personnel especially

GATEWAY
NOTES

trained for the type of work involved in these positions. An essential part of the equipment of these personnel is a capacity to maintain smooth industrial relations. As a big employer Government are equally concerned with this problem along with private enterprise. It is therefore gratifying to note that Government have also recognised the necessity of providing training to management personnel.

Iron Ore Exports to Japan

The prospects of increasing iron ore exports from India to Japan seem to be becoming brighter every day. Already Japanese imports in this regard are estimated to be in the neighbourhood of 1 million tons per annum. It is now understood that Japan has decided to stop all imports of iron and manganese ore from Goa in order to pave the way for a speedy conclusion of a trade pact with India. It would appear that Japan's decision in this regard has been buttressed mainly by the advantages that are likely to accrue to it if it buys its requirements of these ores from India.

In the first place after the recent visit of the 35 member Japanese technical team to study the prospects of increased iron and manganese ore trade, it has become clear that India is in a position to supply its entire requirements.

In this connection it is said that the technical team has estimated the deposits in the Rourkela district of Orissa at about 1000 million tons of iron ore, which is higher than the estimates of the Government of India. Moreover, it would appear that the team is reported to have drawn attention to the fact that the final cost of the Orissa ore will work to be lower than that of the ore bought from the West coast area.

Stimulating Exports

The fact that despite export promotion efforts, export earnings during the past year have not come up to expectations shows that the task is both complicated and exacting. In this regard it is pointed out that better results can be obtained if the recommendations of the Export Promotion Committee are implemented at an early date. Speaking at the annual meeting of the All India Exporters' Association, its president, Mr Chinnobhai C. Javeri suggested that Government should periodically review the progress made in export promotion and make the findings along with useful suggestions from Government Trade Commissioners in overseas markets available to the business and trading Community in the country. Such reports would go a long way in helping Indian exporters to make their goods attractive to foreign consumers.

WORLD OF
COTTON

CONDITIONS in the Cotton market have again become sluggish and prices have taken a downward course in the absence of adequate demand and due to heavy arrivals at the terminal markets. Many mill's are still facing heavy accumulation of cloth stocks and are reluctant to enter the market for long-term commitments. The sustained monetary stringency has also compelled them to keep away from the market. They are, therefore, adopting a hand-to-mouth policy in purchasing cotton.

The season has already started in Andhra and Karnataka, while it is in full swing in Vidarbha, Gujarat, Saurashtra and Gaorani areas. Almost 45 per cent of the crop has, so far, been marketed. Also, arrivals of the new crop have been increasing as growers seem to be eager to market their crop as early as possible.

With the result, prices in the futures section developed a downward trend although a halt was cried at the close due to some short-covering. Turnover was 15,000 bales. ICC Jharilla March started lower at Rs 680 and, after touching a fresh lower level of Rs 674.50, finished better at Rs 674.75. May delivery closed at Rs 670.50 after touching a low of Rs 669.00.

SPOT MARKET:

Trading in the Spot section was dull. Mills were only interested in old staple varieties. Prices, where changed, were inclined to be lower with Dhollera down by Rs 10 to Rs 15 per candy. However, fairly good enquiries were emanating from Ahmedabad and Calcutta mills for Southern Cambodia, 0394, Laxmi and CO/2.

It is understood that Saurashtra merchants have wired to the Commerce Ministry about the consistent fall in prices of Dhollera owing to inferior quality of the crop and lack of spinner's demand. They have urged that an export quota for this variety should be released to stem the downward trend.

There was hardly any doing in the export section. Shippers, who relied too much on the recommendation of the Cotton Advisory Board that exports of 25,000 bales of the old crop cotton should be allowed, were disappointed at the refusal of the Commerce Minister to grant any export quota for Deshi varieties. Reports were, however, current that the Government had agreed to examine the need for a reduction in the export duty on Bengal Deshi cotton to bring it in line with the Pakistan export duty.

On the import front, mills continued to buy spot lots of East African and American cottons. The licensing programmes for all foreign cottons have come to an end and new import quotas are necessary for the licensing of fresh

Heavy Arrivals : Poor Offtake

business. This situation has, therefore, brought forth limited transactions in foreign cottons.

From the trend of discussions the visting Egyptian cotton delegation has had with the interests concerned in Bombay since its arrival, it is apparent that Egypt is anxious to conclude an agreement with India. India may be in a position to absorb a substantial quantity of her cotton every year against payment to be credited to a rupee account, which can be utilised by her to import Indian goods, particularly tea and jute.

Although it is said that no discount will be offered, the fact remains that Egypt is rather keen to sell her cotton in substantial quantities and, as such, it is still possible that the reported decision in regard to discounts may be reconsidered or possibly something will be forthcoming to bring Egyptian cotton eventually in close "parity" with Sudanese cotton.

COTTON CONSUMPTION:

Consumption of cotton by mills in India, during the first four months (September to December 1957) of the current season amounted to 1,754,794 bales as compared to 1,726,268 bales in the corresponding period of the previous season. Out of this, Indian cotton accounted for 1,554,180 bales as against 1,525,011 bales and foreign varieties 200,614 bales against 201,257 bales. The average monthly consumption, during the mentioned period, was 388,550 bales and of foreign cotton 50,150 bales.

Variety-wise monthly consumption, during the period from 1st September to 31st December 1957, was as follows (figures in bales of 392 lbs):—

	1957	1956
Indian	1,554,180	1,525,011
East African	51,823	93,658
American	95,943	25,510
Egyptian	25,537	43,908
Sudan	24,831	34,633
Others	2,480	3,548

Total ... 1,754,794 1,726,268

NEW YORK COTTON MARKET:

Price movements on the New York cotton futures market were rather erratic with old crops falling on liquidation and hedge selling, while new crops went irregularly higher for the market to close with the March position at 35.15 cents.

LIVERPOOL COTTON MARKET:

Also, prices moved rather erratically on the Liverpool cotton futures market, reflecting the interpretation of the various reports from the USA on cotton policy and possible legislation.

BOMBAY
REVIEW

front so far as cotton textiles are concerned. The gloomy outlook for textiles is reflected in the drop of mill output of cloth to 433 million yards in January against 484 million yards in the corresponding month of the last year. The production of Yarn has also come down by 9 million to 42 million yards.

Dealers report that, although the demand is not brisk, the situation cannot be said to be unsatisfactory. Satisfactory demand is reported in respect of super-fine mulls and dhoties. While enquiries from Andhra have started, the other South Indian centres, particularly Madras, are yet to evince any marked interest. Well-known mill's are said to be receiving orders for delivery of goods in March and April.

"Dear Sirs ..."

This is an important letter for it may close a big deal, or open a new account. More letters, estimates, indents, ledgers, bills, cheques and receipts—all these add up to prosperity provided the essential raw materials are available. In business there is no more essential raw material than paper.

Status Quo in Forward Bullion

THE Government of India have decided to maintain the status quo in respect of forward trading in Gold and Silver throughout the country. Initially, there was a fear that the Government's approach to the issue might hit trading in bullion in a number of small centres in the country. However, under the latest decision, these centres have received a fresh lease of life.

So far as the Bombay market is concerned, Government's decision has only meant the continuance of trading under the Forward Contracts Control Act, 1947 of the Bombay Government. The up-country centres, on the other hand, will continue to enjoy the present freedom regulation under the Forward Contracts (Regulation) Act, 1952. The only uncertain factor is, that the Government have not specified the time limit of the

present policy of maintaining the status quo.

The highlight on the Bullion Exchange was a sharp upswing in Silver to a new high level for the past several years. A prominent speculator of Calcutta was stated to have built up a substantial bull interest in forward silver, taking advantage of the paucity of actuals. Arrivals amounted to 20 bars as against an offtake of 12 bars. Fagan delivery was taken upto Rs 192.50 from Rs 190.87 and Chaitra upto Rs 191.25 from Rs 190.56. Ready changed hands at Rs 191 to Rs 192.

Gold also tended to harden in early dealings, being influenced by the encouraging performance of silver. Prices, however, reacted on profit-taking at the close, prompted by slow spot demand. Arrivals were estimated at 4,000 tolas as against an offtake of 2,000 tolas.

Fagan delivery changed hands upto Rs 112.56 and Chaitra upto Rs 112.06, to finish at Rs 111.84 and Rs 111.62 respectively. Ready, after being taken upto Rs 113.56, receded at the close to Rs 112.19.

Oils & Oilseeds

The market for Oils and Oilseeds gave generally a cheerful performance, thanks to aggressive buying by the Punjab operators and nervous short-covering by local dealers. The rally was also aided by the marked improvement in the spot position.

The changed sentiment in the market was concided with the reports that the terminal markets in Hyderabad and Bombay State had been receiving smaller arrivals of the new crop due to dwindling supplies with the growers and their disinclination to sell at lower prices. Moreover, a section of the

shippers was not still inclined to give up hopes of export possibilities in respect of HPS groundnut. Groundnut May delivery started at Rs 156.37 and improved gradually, to finish at Rs 158.75. Similarly, February delivery started at Rs 155.62, to finish at Rs 158.62. In the ready section, bold quality was quoted at Rs 31.37 and Groundnut Oil at Rs 17.25.

There was a noteworthy advance in prices in the Castor seeds section, the buying movement being largely spurred by the revival of shippers' enquiry for castor oil. Hopes, that the Government would sooner or later accept the suggestion made recently to effect a reduction in the export duty on castor oil to facilitate exports, were also a contributory factor. May delivery opened at Rs 137.25 to advance gradually towards the close to Rs 139.37. In the ready section, Madras quality was quoted at Rs 28.12 and Castor Oil, commercial, at Rs 14.31.

The Linseed section presented a steadier appearance with the rate registering a gradual improvement on scattered support at lower levels. The occasional interest shown by the UK in linseed oil also tended to stabilise the market. May delivery opened at Rs 28.94 to finish firm at Rs 29.31. Ready rate was quoted at Rs 28.62 and Linseed Oil at Rs 15.56.

Non-Ferrous Metals

According to the announcement made by the Import Trade Control authorities, established Importers of Non-Ferrous Metals have been asked to supply certain particulars to the Government to enable them to review the supply position of the metals. The information is to be supplied separately in regard to lead ingot, pig and scrap, zinc or spelter unwrought, tin block and tin scrap, copper unwrought in the form of ingots, blooms, slabs, cakes, tiles, billets, cathodes, blister bars, electrolytic wire bars and ingot bars.

Meanwhile, with the renewed firmness in copper prices, conditions in other sections of the Non-Ferrous metal market ruled generally steady. Copper ready was marked up to Rs 181 from Rs 175 per cwt despite lower advices from London. This was mainly due to continued shortage of the metal. Zinc and Lead remained practically unchanged at Rs 53 and Rs 64 per cwt respectively, while Tin changed hands at Rs 127.50 to Rs 128 per quarter. On the London Metal Exchange, Copper is quoted at £164; Zinc at £64; Lead at £74½ and Tin at £733½ (all per ton).

Yarn

The Yarn market took a slight turn for the better last week. Staple-fibre yarn prices improved partially on renewed support from upcountry weaving centres, while Art Silk Yarn and Cotton Yarn continued to be steady.

The Last Reel

THE last instalment of the exciting serial 'L' Affaire LIC' is providing fresh thrills to the citizens of the capital as it is to those of the rest of India. Only our thrills are first hand, since the scene shifted from Bombay to Delhi when the report of the Chagla Commission was flown to Delhi. In the true traditions of the conventional serial, either of the magazine or of the cinema, the LIC affair has been providing new excitements at every stage. One would have thought that the last ounce of the unexpected had been squeezed out in the earlier instalments and the contrivance of newer surprises will be impossible. But the enterprising concocter of the serial is never at a loss. The last reel of the LIC transactions has provided an entirely new variation on the theme of which we have been hearing so much all these weeks. And, appropriately enough, it was provided by the outgoing Finance Minister.

As you would have learnt by now, the Finance Minister made an entirely new case in so far as he was concerned in the particular affair. It was a lucid and coherent account and fits in with all the known facts of the situation. According to Mr Krishnamachari, the three reasons that led the Commission to the fixing of his personal responsibility are: "(i) it is improbable that any secretary would have put through an unusual deal of this character without Ministerial concurrence. (ii) there must have been some prior understanding in Calcutta to which the Minister was privy. (iii) the absence of subsequent repudiation from which could be inferred the Minister's prior concurrence or subsequent acquiescence." Mr Krishnamachari deals with each of these reasons. As regards the first, he says that neither the Principal Finance Secretary nor the Chairman of the State Bank (who were the only persons who testified to any mention of the deal to the Minister) said that any specific approval was either sought or given. These two also testified to the mention of only the scrip of Jessops and Richardson and Cruddas. It is also in evidence that Mr Krishnamachari gave some cautionary advice on the matter.

In fairness to TTK, it must be said that, if any argument is to be built about an approval by him that absolved the Secretary of his (Secretary's) responsibility, then he (TTK) is certainly entitled to ask that it should be built on a firmer foundation than one in which an approval is inferred from a casual conversation. The fact that Mr Patel says that he would not have taken a decision since the sum involved was so large and that the haste was due to the fact that he wanted to take advantage of

the presence of the Minister would not in itself make such an assumption of specific approval tenable.

As regards the second reason, surely TTK is right in saying that there is absolutely no evidence of any prior understanding in Calcutta. The fact that there is an inherent improbability in that the whole thing should have started in Bombay on the 20th of June cannot be any reason for inferring any prior confabulation at Calcutta. In a matter like this, positive evidence is certainly necessary.

The question of the subsequent conduct of the Minister is somewhat more complicated. The two strands of the Commission's argument in this regard are: firstly, the absence of repudiation by the Minister may indicate a prior concurrence before the event. And, secondly, an acquiescence. As regards the first strand, there is a certain illogicality and even absence of equity in that that too much is sought to be inferred about prior conduct by subsequent events. It is quite conceivable that one may not repudiate conduct that one knew nothing of at the time (for a number of reasons) it took place. It is true such an argument throws one into the lap of the latter alternative of acquiescence. But that is a different argument, and though it has to be met squarely, cannot confer any respectability to the fallacy involved in the argument that seeks to infer earlier motives from subsequent conduct.

About the theory of acquiescence, Mr Krishnamachari's defence is two-fold. First, on the assumption that he knew the real state of affairs, Mr Krishnamachari points to difficulties involved in administration in which such repudiation is demanded as a matter of course. Mr Krishnamachari wisely refrains from developing this argument, because it is not particularly good. He refers to the need for an inquiry before any action is taken. This is not strictly correct, for a prima facie case is all that is necessary to make a gesture, say, by way of suspension, in order to indicate that you have repudiated the action of the person concerned without in any way jeopardising his obtaining justice after inquiry.

But the real defence of Mr Krishnamachari is that he was not aware of the true nature of these transactions until well after the inquiry was on its way and, therefore, there is no question of acquiescence in a thing that he was not aware of. It is here that we enter into a realm of facts of which a more detailed survey would have been useful. It is a great pity that this was not undertaken during the inquiry. Mr Krishnamachari blames the procedure laid down for the inquiry.

He says that since he was merely answering specific questions and not deposing, he was not in a position to give a complete picture. It is difficult to say at this stage whether or not the Minister could have been less of a model witness, answering only the questions put to him. In any case, the crucial fact as it now emerges is that not only did TTK not see before the inquiry the letter dated 16th July written by Mr Kamat giving the details of the June transactions, but he saw the letter by Mr Kamat dated the 12th of July in which he had given information about the LIC investments in blue chips and this letter did not contain details of the LIC investments in Mundhra concerns in June. Now, this important fact explains very many puzzling things about Mr Krishnamachari's answers to questions in Parliament in September and November, and certain apparent contradictions that bothered observers while the inquiry was proceeding. Another fact that greatly added to the confusion was the absence (on the crucial dates) of the Principal Finance Secretary from Delhi from whom the Minister says he could have had the clarifications he needed.

According to TTK, the factual position, therefore, boils down to this: he was not aware of the deal of June 1957 at any time before the inquiry started and, therefore, the question of repudiating it did not arise. He agrees that the deal was irregular and that there was no reason for any departure from the normal procedure laid down in this behalf. And his ignorance of Mr Kamat's letter of July the 16th explains his statement in Parliament that the investment policy was dictated by the Investment Committee.

Mr Krishnamachari has also given a very convincing explanation about what the Commission had characterised as "equivocation" in his reply to questions in September in which reference was made (in the Lok Sabha) to LIC's dealings with private interests with headquarters in Kanpur. He says that the supplementaries were not reached on the occasion and that was the reason why the cryptic answer to the main question gave the wrong impression.

Mr Krishnamachari's statement is thus a detailed exoneration of what were admittedly inferential charges against him by the Commission. There is apparently no reason why this should not be the truth. Even on the controversial question of the prior approval, the issue is one of understanding by the parties concerned. There is no factual conflict about what happened between Mr Patel and Mr Krishnamachari. What Mr Krishnamachari may have imagined as a mere casual conver-

sation may have been invested by Mr Patel with more specific attributes and he may have proceeded on that basis. So, unless there is positive evidence of prior consultation which would show that TTK was privy not only to the purchase but also to the procedure finally adopted, Mr Krishnamachari's version of the story should be accepted.

As regards the constitutional responsibility, Mr Krishnamachari takes his stand on the factual position of his ignorance of the events. Here, the Commission's finding is at variance with Mr Krishnamachari's own view of the matter mainly because the Commission proceeded on the footing that Mr Krishnamachari was actually responsible. Of course, it is an open question whether constitutional responsibility extends even to cases where a civil servant acts in a way that the Minister (as it now appears) does not approve of and without his knowledge. In the Crichton Down case, which has some resemblance to the present case, the Minister's resignation was not considered obligatory, and the resignation of the Minister came as a surprise to many. (By a curious coincidence, Sir Thomas Dugdale, the British Minister who resigned, was in India and was an interested listener to Mr Krishnamachari's references to the case). Indeed, Mr Krishnamachari himself has stated in a Press interview that he looked up and saw Sir Thomas in the galleries when he was making the statement.

According to TTK, his reasons for resignation had nothing to do with either actual or vicarious responsibility both of which he specifically denies. His reasons are that a Finance Minister must function from a position of strength these days. And in this context, he made some scaring references in blood-curdling metaphors to some unspecified powerful interests who are out to destroy the Government. I must confess that it left me, as it did many others, somewhat puzzled and slightly disappointed. It would have been better if he had been more specific. Of course, such references may have been motivated by tactical reasons of stealing the opposition's thunder in advance. (And in the event, it proved to be a shrewd calculation). But it helps no one to understand the situation, already obscure enough in all conscience. It is a little late in the day to chill spines by referring to the insatiable private sector prowling to swallow the public sector. The cynical answer to such scare-mongering is that if it did swallow, it would die of indigestion. In any case, to vary the metaphor, the octopus is more than a match for the whale.

The second round of Dr Frank Graham's attempt to discover a formula for the settlement of the Kashmir issue is reported to be as barren of results as the first. Even when the Mission was announced, there was frank scepticism in India over what the UN emissary could achieve.

What he has managed to gather from Pakistan is not known. From India he could have heard only a repetition of the arguments raised in the UN. The situation, as far as India is concerned, has not been materially altered in any respect, since the US became a party to the Baghdad Pact and started supplying arms to Pakistan. For the rest, Kashmir's accession to India has been confirmed irrevocably by the Constituent Assembly of the State.

Dr Graham's recent visit has fortuitously coincided with Sheikh Abdullah's activities after release. If any foreign observer wished to have a close study of the emotional reactions of the people of Kashmir to the question of accession or to any related matter, the situation which has prevailed during the last few weeks could have given them impressions as hostile to India as they could possibly have.

Dr Graham is believed to have suggested the abandonment of the proposal for a plebiscite. Such a recommendation could have pro-

ceeded only from the recognition of facts which the representatives of the Government of India have been trying hard to press home on the United Nations. India has clearly stated that on no account would war be resorted to as a means of settlement. If now Dr Graham reports that a plebiscite is no longer feasible, the UN should feel enabled to take decisions which would simplify the issue, to the relief of all parties concerned.

UP Budget

The budget of Uttar Pradesh for 1958-59 which was presented to the State Assembly last week by the Finance Minister Mr Hafiz Mohd. Ibrahim lacks any novel feature unlike the one he presented last year which contained some provision for pension to old people beyond the age of 70. The budget for the coming financial year contains no new tax proposals and it envisages no relief to any particular section of the State's people. Thus for the low-paid government servants who have been clamouring for increased dearness allowances the budget is a disappointing one. The revenue for the coming financial year has been estimated at Rs 108 crores and expenditure at Rs 112.77 crores. Thus there is a deficit to the tune of Rs 4.54 crores.

More Light for UN

The important schemes of development for which the budget has made provision are the expansion of Churk cement factory and precision instruments factory in the public sector and construction of a 30,000 k.w. steam station on the Ganga Grid at Harduaganj. The budget has also made provision for the opening of ten spinning centres and one weaving and production centre for the hill districts, as also for the construction of more houses for labour at a cost of Rs 1 crore. With a view to meeting the credit needs of small-scale industries in general the setting up of a Small-scale Industries Corporation with a capital of Rs 12.5 lakhs is contemplated.

As regards educational services, provision has been made for the starting of 1250 new junior basic schools and 150 school libraries. The scales of pay and allowances to teachers of aided Harijan schools are also sought to be brought on a par with local body schools. Extension of medical facilities to teachers of aided higher secondary schools on lines of those available to their counterparts in Government institutions is envisaged.

The deficit in the budget for the coming year is of the same size as that for the last year. Though the original budget estimates for 1957-58 disclosed a deficit of the order of Rs 11.6 crores, according to the revised estimates this has been reduced to Rs 4.07 crores. While in the original budget estimates the revenue receipts were placed at Rs 96.66 crores in the revised one this had gone up to Rs 99.86 crores. Similarly while in the original budget estimates for 1957-58 expenditure was estimated at Rs 108.3 crores according to the revised estimates this is anticipated at Rs 103.93 crores.

As against the deficits in these two years, the figures for the 1956-57 showed a surplus of Rs 12 lakhs though a deficit of nearly Rs 9 crores was anticipated at the time of the original estimates. The revenue receipts estimated in the budget for the coming financial year shows an improvement over the figures for the previous years. This according to the State Finance Minister is primarily due to the Finance Commission's recommendations as a result of which the State's share of income-tax is expected to go up by Rs 249 lakhs and of the Union Excise Duties by Rs 114 lakhs. Perhaps this accounts for the fact that no new tax proposals have been made in the new budget.

Harijan Welfare

Inaugurating the conference of State Ministers in charge of the work of welfare of the Scheduled Castes and Scheduled Tribes Pandit G. B. Pant, Home Minister,

Union Government, disclosed that the funds allocated to the State Governments for expenditure on welfare of Scheduled Castes and Tribes have not been fully utilised. Such a state of affairs is really intriguing in view of the scope for incurring even more funds than has been allocated for the purposes by the Union Government. Why such expenditure for welfare schemes should be restricted to a level even below that warranted by the total allocations is not clear. This reflects adversely on the attitude of the State Governments to the problem of Harijan welfare in which there is an immense gulf to be filled.

The most important aspects of the problem of welfare of these underprivileged classes are those of economic betterment and educational improvement. The minimum requirement for their economic uplift is as pointed out by Pandit Pant that every Harijan family should be enabled to own a small plot of land. But substantial success in this direction seems to have been achieved only in the Punjab where the State Government have purchased land for distribution among the Harijans.

If these classes are to be enabled to move on equal terms with others, more attention would have to be paid to the educational side. As pointed out by Pandit Pant secondary and primary education could not alone produce these results, and facilities for higher education intended to fit them for higher positions of responsibility would have to be increased. But this aspect of the matter would seem to have received only little attention, attempts so far having been confined to secondary and primary education.

There would appear to be more room for coordination of activities of the Central and State organisations connected with welfare schemes and Pandit Pant suggested that it should be possible to establish some link between the Central Welfare Board and the State Welfare Boards. According to him a small body consisting of representatives of these boards could also look to the execution of the programmes chalked out by them.

The Second Plan has earmarked a sum of Rs 91 crores for schemes in connection with the welfare of the Scheduled Castes and Scheduled Tribes, against a sum of Rs 39 crores allotted under the First Plan. Pandit Pant has indicated that larger sums could be made available if the States could utilise the sums already allocated under the Second Plan. Thus the progress of the schemes would depend on the capacity for organisation and cooperative effort shown by the State Governments on whom devolve the responsibility for the formulation and prosecution of the schemes of welfare.

Indian Finance

February 22, 1958

NORTH INDIAN MARKETS

LIVELY conditions have been witnessed in the Khandsari sugar market during the week under review. In view of the heavy incidence of excise duty on sugar production during the current season and the amalgamation of the Sales Tax as from the 14th December 1957, it is considered very likely that part of the supplies of sugarcane will be directed to Khandsari production, which has already been on a fairly heavy scale.

As production is not subjected to excise duty, it is estimated that production of khandsari may increase to 3 lakh tons as against 1.25 lakh tons during the past season. Stockists are, in some areas, reported to be trying to conceal stocks in anticipation of imposition of some levy in the Budget proposals. In some areas, producers are buying cane up to Rs 1.44 per maund. Rates, as a result, have improved, to be quoted at Rs 26 to Rs 33 per maund.

Sugar

Prices in Sugar markets have tended to go up following demand from all the consuming centres and good business was done with the Punjab, Delhi, Gujarat, Saurashtra and the South. Mill-delivery prices have, therefore, recorded an advance of 25 nP per maund. Rumours, that the excise duty on sugar will be raised further in the ensuing Budget, have also helped the rising trend.

So far, no tangible scheme for the export of sugar has been mooted in view of the serious difficulties following the disparity in rates. The problem of subsidising exports bristles with difficulties. The latest rumour is that a scheme may be formulated through increase in cane prices.

In this connection, the Deputy Minister for Food and Agriculture, has stated that the Indian Sugar Mills Association has suggested two schemes for the export of Indian sugar. One suggestion favours the establishment of an Indian Sugar Marketing Corporation and another the grant of quotas for each factory for export. These suggestions are being considered by the Government.

He has further added that the question of utilising the services of the State Trading Corporation is not ruled out. The Government are considering various suggestions in regard to this matter and no decision has been taken so far. He concludes by stating that the export of Indian sugar will depend on world market conditions. At present, the price of sugar in the world markets has gone down. Therefore, it is not possible to fix any target for exports. It will, however, be Government's effort to export the maximum quantity.

The Bombay sugar market has been ruling steady with prices of small grains improving by 50 nP

per bag, as local stocks are diminishing. The recently-declared quota of the Deccan mills has almost been sold off except in the case of two Co-operative factories for which the results of the tenders will be known shortly. Ex-mill quotations are ruling steadier as some of the mills appear to be somewhat reserved due to approaching Budget.

Gur

The Gur market has presented a firm front with spot as well as forward rates rising by about Rs 2 per maund on increased buying and improved despatches to the consuming centres. The advance has been aided by the reports that the crushing season in the Punjab and Uttar Pradesh will draw to an end earlier this year, perhaps at

the end of March or in the beginning of April due to the scarcity of sugarcane. Barring a few mandies in Uttar Pradesh, gur stocks have been generally smaller this year, and there are rumours that the excise duty on sugar will be raised further in the Union Budget.

In the Hapur market, prices have advanced despite loading restrictions. Arrivals average 2,500 to 3,000 maunds daily, while stocks have swelled to one lakh maunds, the corresponding figure for last year being 65,000 maunds. Pansera quality is quoted at Rs 13.00 to Rs 13.25 and Balit as Rs 13 per maund.

In the Muzaffarnagar market also, prices have improved. Chakku Minja is quoted at Rs 15.25 to Rs 15.75; Khurpa Rusket at Rs 9 to Rs 10 and Shakkar Dara at Rs 15 to Rs 16 per maund.

Foodgrains

With the exception of Cereals which have recorded modest gains following the damage done to the standing crop, conditions in other sections of the Foodgrains market have remained quiet. At Hapur, Wheat average quality is quoted at Rs 15.50 and the farm quality at Rs 17.25. The market for Rice continues to rule steady although the supply position is satisfactory. Prices of Gram have improved due to the firmer Punrab advices, while those of Barley and Bejher have improved by about 25 nP. Maize and Bajra have also scored small gains, with Pulses developing a hardening tendency.

The Bombay grains market has displayed a steadier undertone with Rice, Cereals and Pulses recording a sizable improvement in prices.

MADRAS
REVIEW

The Autonomy of Universities

IN his Convocation address at the Venkateswara University, Dr A. Lakshmanaswami Mudaliar, Vice-Chancellor of the Madras University, has drawn attention to certain disturbing developments in the field of University education. More specifically, he has referred to the dangers posed to University education by official interference in University administration on the one hand and the infiltration of political ideology into the ranks of University students on the other.

The new power which official interference signifies, it would appear, is exercised by the Secretaries and Under-Secretaries both at the Centre and the States, and takes the form of communications addressed to the University men on a wide variety of subjects. What would seem to cause concern to the Vice-Chancellor is not the mere fact of communications as such but the nature of them, which, according to Dr Mudaliar, partakes of the character of directives and near-directives. From what Dr Mudaliar has said, it would seem that such communications have in recent times risen to such proportions as to make the Vice-Chancellor feel distressed.

Considering the autonomous position which the Universities in the country have been enjoying and the wide discretionary powers and freedom of action left with the Vice-Chancellor, such directives would seem to imply an unwarranted intrusion into the affairs of the University by bureaucratic

officialdom and would have the effect of circumscribing the powers of the Vice-Chancellor. What these officials exactly intend to do for the cause of University education by such interference is not clear. But, in the light of the autonomous position of the University, this can be interpreted to mean as casting an aspersions on the competence of the present management, and this is one of the motives which Dr Mudaliar attributes to them. It cannot be that such interference is in ignorance of the autonomous status of the Universities, for, this is not the first time that Dr Mudaliar has made the complaint. It would appear that, far from taking any corrective action, the authorities have only allowed the matter to drift, with the result that Universities are faced with new condition under which they have to grow and function and this raises questions about the future of University education in the country.

That autonomy for the Universities is essential is demonstrated by the example of Universities in foreign countries where they enjoy freedom from unnecessary official restrictions. In fact, as pointed out by Dr Mudaliar, it was the example of these Universities which inspired the structure and constitution of our own Universities, the latter having been shaped on the model of the former. Much of the progress that our Universities have been able to achieve in academic fields has been not a little due to the particular condi-

tions in which they functioned, and University autonomy, which carried with it freedom from vexatious interference, was the most congenial of them. Under University autonomy, the Vice-Chancellor could give University education his personal touch. The springs of dynamism would be dried if the Vice-Chancellor is to be reduced to a position of subservience to others. But if the Universities are to adjust themselves to the new conditions, it will only be at the expense of University autonomy. This, as Dr Mudaliar has said, would not enable the Universities to function properly or to deliver the goods even according to the expectations of those in political authority.

As Dr Mudaliar has pointed out, University autonomy is never so keenly needed as it is now. For, Universities in the country are now saddled with greater responsibilities of extending facilities of University education to greater numbers of students and shaping University education to suit the needs of the country and of changing time. These are matters which call for the personal care and attention and energy of the University men, and especially the Vice-Chancellor. Under such circumstances, official directives would only add to the embarrassment of these people with adverse effects on the quality and progress of University education, and it is doubtful whether education would attract men of quality and eminence. The length to which the

evil effects of such meddling in Universities could go has been indicated by Dr Mudaliar, who has charged these men with trying in many ways to direct University education to such activities as seem desirable to particular persons or departments of the Government. Above all, the fundamental question arises whether, if these new forces were to be accommodated, University administration would not be reduced to mere chaos.

Apart from the propriety of such behaviour on the part of officials in relation to University education—which is at best tenuous—it has larger implications for the political life of the country. If Governmental officials are to exercise their power in contravention of accepted conventions and customs and even rules, how it would conduce to smoothness and stability in the working of any department is not clear. Already, eminent men in public life have noted a centralist tendency in the political rule of the country. No less a person than Mr C. Rajagopalachari has seen in the dealings of the Central Government *Visa-vis* the States a disposition on the part of the former to treat the States as existing merely to carry out the orders of the Centre. What Dr Lakshmanaswami Mudaliar speaks as official interference in University education would in this light appear to be only a symptom of this centralist direction in which the whole administrative machinery is moving.

Secretaries and Under-Secretaries at the Centre and States do not seem to exhaust the source of interference in University education. The freedom of action of the Universities is made even scarcer than what the officials would leave it by certain All-India Organisations and professional bodies who, according to Dr Mudaliar, tend to take a superior attitude in matters affecting the University. The Indian Medical Council, he says, exercises powers to the point of even controlling medical education in the country. The activities of other professional bodies such as the All-India Council of Dental Education, the All-India Pharmaceutical Council, the All-India Nursing Council are all to similar effects. Though some of the powers exercised by these bodies over University education are statutorily given to them, Dr Mudaliar questions the wisdom of the action in having given these powers which, he says, was done without consulting the University officials. Further, he finds no parallel for such powers being vested with such bodies in foreign countries where, according to him, these organisations function in an advisory capacity in matters relating to University education.

SOUTH INDIAN
NOTES

As a solution for regional disaffection, Dr V. K. John, Deputy leader of the Opposition in the Madras Legislative Council, has put forward a novel idea, novel as far as India is concerned. He pleads for representation in the Union Parliament and the Cabinet on a footing of equality of all the States.

Any idea which offers the prospect of upsetting the existing setup in whatever sphere will always appeal to those who stand to benefit by the change. To all the small States in India are thus thrown an irresistible temptation. It is undoubtedly fascinating to be told Kerala and Orissa that in the affairs of the nation they could command a directly equal voice with States such as Uttar Pradesh or Bombay several times their size and population.

In the United States, the Senate alone has equal representation for all the States but there all the States are nearly of the same size and there is scarcely any factor which tends to divide one State from the other emotionally. The two causes of division, race and religious sect transcend political boundaries. Equality of status in a limited measure for the Federal Legislature in the United States does not form an answer to the kind of problems which Dr John has in mind when he recommends equal representation for States in the Parliament and Union Cabinet. Even otherwise, the idea strikes at the very root of the principle of one man one vote.

Dr John's suggestion, if carried out, will mean that as far as the national legislature and Government are concerned, five voters in Uttar Pradesh will have the political right represented by one voter in Kerala. This will be a kind of inequality unknown to any democracy in the world and palpably indefensible. How it will meet regional dissensions is not clear.

The possibility is more toward aggravation of tensions when the numerically weaker States are persuaded to feel equally strong with the rest. It will be also carrying the assumption of emotional divisions to a dangerous extreme. The answer for some of the present ill-feelings and misgivings should come in the form of the realisation

in a deeper and deeper measure of the identity of material interests and aspirations between one State and another and a fundamental sense of national unity based on that realisation.

Industrial Health

Measures to promote industrial health which is an important aspect of human relations in industry are of recent origin, the first forward step taken in this direction being the inauguration of the Employees' State Insurance Scheme. Before the introduction of the ESI Scheme there were of course some factories who had their own medical services and health units to attend to the medical needs of the staff. The Employees' State Insurance Scheme made it compulsory on the part of the factory management to render the necessary help to factory workers and members of staff in cases of breakdown of health. But the ESI scheme deals with only one aspect of industrial health namely the curative side and gives help to the worker in cases of breakdown of health. The preventive side of the problem has practically received little attention and the position has been rendered worse by the disbanding of the medical services maintained by some of the industrial establishments consequent on the inauguration of the State Insurance Scheme.

The ninth All-India Conference of the Society for the Study of Industrial Medicine which met last week in Madras has served to spotlight attention on the preventive aspect of industrial health. At the conference the various aspects of industrial health and the problems connected with them were all discussed. Dr Ramachandrar who presided over the conference explained the peculiar features of industrial medicine and said that industrial medicine laid stress on the maintenance of health rather than on the treatment of diseases. The factory medical service as pointed out by him could contribute to this in a wide variety of ways such as assisting in choosing a good location for the factory, planning the buildings to house the factory recruiting the most suitable candidates by means of medical tests, supervising the health of the worker by periodical check-ups studying

industrial processes with a view to making it safe for men to work.

Thus the subject of industrial health is as pointed out by Mr Ramachandrar highly specialised one which would require thorough study and research. But while in every industrially advanced country provision to carry out such research has been made by industrialists, this field has been neglected in our country. Even the medical units maintained by some of the factory establishments had largely concentrated on the curative aspect alone. Therefore it is absolutely essential as suggested by Ramachandrar that factory doctors should get interested in industrial medicine in the broader sense of the term.

Sugar Development

Mr T. C. Puri, the Chairman of the Development Council for Sugar Industry of India has suggested to sugar mill owners that they should buy indigenous machinery. The consumption of indigenous machinery was valued at Rs 1,900,000 in 1955 which increased to Rs 3,200,000 in 1956. The production in the first half of 1957 has been estimated at Rs 4 million. These figures show the upward trend of production and, no doubt, the demand will increase in course of time.

Although India is the leading producer of sugar in the world, the yield of sugarcane per acre is poor, compared to the western countries. While in India the per acre production is of the order of 13.5 tons, the yields in Hawaii, Java and Puerto Rico are respectively 62, 56 and 24 tons per acre. This is due to the different methods of cultivation adopted in India and those countries. In those countries, large scale methods are followed and scientific methods of cultivation are encouraged. Aeroplanes are used to spray insecticides to keep away the pests and periodical manuring is done. While in those countries they have modern methods of cane crushing, and the extraction rate is high, in India the methods of cane crushing and extraction rates are defective. Also, the quality of the Indian cane is poor compared to the rich canes of the West. This could be attributed to the poor sucrose contents of cane in India. And a large quantity of sugar is wasted during refining. The other causes of the backward condition of the sugar industry in India are: (1) Improper utilization of the by-products, specially bagasse which is used as fuel and which could be better utilized for making paper; (2) the absence of control by the industrial units over sugarcane cultivation, which is in the hands of the ryots; (3) sporadic outbursts of crop diseases; and (4) lack of subsidiary occupation for the mills during the growing stage of sugarcane.

MADRAS
REVIEW

The Indian Tariff Board recommended (1) shifting up of factories from UP and Bihar to more suitable localities; (2) allocation of adequate funds for carrying out research and other development programmes; and (3) fixation of sugar prices at a fair and reasonable level. The cost of shifting the factories as recommended would be a colossal sum, and if the suggestion were accepted, then, the position of those employed in the mills in those areas would be severely affected. If the price of sugar was fixed, then sugar will be kept off the market.

But the sanctioning of adequate finance to the Sugarcane Research committee for its various programmes is a wise course to follow, since the quality of the Indian cane is poor. Moreover, our methods of cultivation are antiquated and therefore reorganisation of our system is essential.

Exports of sugar in 1956 amounted to 174,000 tons and the buyers were mainly Middle East countries. But, despite the increased production of 2.1 million tons of sugar in 1957, the exports declined due mainly to the competition of the Western countries, whose quotations were much lower. Whether a subsidy on exports would be practicable is worth examining. In the alternative, a generous drawback from excises and cesses could provide the necessary fillip to sugar exports.

MADRAS REVIEW

THERE has been some criticism, among Coffee interests, of the policy regarding exports. They suggest a new look in the coffee marketing policy. Since late 1952, it has been policy of the Government and the Coffee Board to make considerations of export subordinate to the needs of the domestic market.

It is pointed out that the quantity of coffee earmarked for export is about 22 per cent of the total export. This means, that a disproportionate weight in inferior coffee is allocated for the export market, which is already faced with an over-supply. Since Plantation coffee fetches about Rs 100 more than Arabica Cherry, a larger quantity of the latter will mean lower foreign exchange earnings.

It is also pointed out that the export policy violates the principle of restricting internal consumption

and of exporting its quality products in an effort to build up overseas markets. One of the reasons for domestic disinterest in Cherry and other inferior coffees is the small margin of difference, which has been arbitrarily placed between the realised price of Plantation coffees, Cherry and Robusta. The small margin makes the domestic consumer keep away from inferior varieties.

The season's first export sale was held on February 6. Prices offered were disappointing and nearly 75 per cent of the stocks exposed for sale were withdrawn. In view of the difficulty in obtaining imports of potash and rock phosphate, the Board has decided to sell 2,000 tons of coffee this year to East Germany against supplies of these fertilizers for the coffee industry to be paid on rupee account.

Coffee Exports

Meanwhile, receipts of new crop into the Coffee Pool, upto the end of January, totalled 14,566 tons, consisting of 12,749 tons of Plantation; 1,509 tons Cherry and 308 tons of Robusta. During January, the Board released 2,361 tons for the home market as against 1,931 tons for the corresponding month of the previous year. The carryover of the previous crop, as on January 1, would not be sufficient to cover the needs of Plantation in February and Robusta in April. But, the shortfall will, however, be made up by the newly-processed coffee as it becomes available.

In respect of the crop, coffee-growers are in high hopes of a bumper crop in the coming season, larger than any they have ever picked, provided the weather behaves. As for the crop now being picked, guarded optimism seems to

prevail and the estimate may be exceeded.

Pepper

Conditions in the Pepper markets remained generally steady. There was brisk trading in the Alleppey market where the rate was quoted at Rs 481.25 per candy for superior new season variety. In the Kozhikode market, rates were quoted at Rs 525 for Wynad quality and Rs 500 to 510 for the Country variety.

Arrivals at Cochin and Alleppey are reported to be light, while they are rather heavy in North Malabar. As a consequence, the rates in Tellicherry are comparatively cheaper. Most of the daily arrivals are absorbed.

The New York market also ruled steady. London is reported to have purchased at 177sh, while New York has raised its buying indication by about 1 cent. In the London market, White Sarawak is quoted at 24½d and Black Sarawak at 16½d per pound.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were restricted and all the available stocks were easily absorbed at firm prices. Arrivals of Buff Calf and Cow Calf were small and prices were generally unchanged.

In the export section, business was difficult on account of the price difference between the UK and Madras. There was some enquiry for 5/5½ lbs and business was done in premium single tannage marks at 69d, 59d and 49d for runs, fourths and fifths respectively. There were some enquiries for 8/8½ lbs at 45d.

In the Tanned Skins section, there was no change in the arrivals. Bazar quality Goat skins ruled unchanged. In Sheep, heavily adulterated qualities were maintained at steady levels on account of small arrivals.

On the export front, stray sales were reported in prime goats at unchanged prices. In Sheep skins, no fresh business was reported done as foreign buyers seemed to be adopting a "wait and watch" attitude.

The market for Raw Hides ruled firm. However, the market for Raw Skins continued to rule weak, particularly for sheep.

Groundnut

Conditions in the Madras Groundnut market ruled generally steady last week. Arrivals averaged 30 to 40 tons a day, while small crushers were the main buyers.

Report from Tanjore indicate that the summer crop cultivation may be smaller this year. The rate is quoted around Rs 144 per candy.

In the Groundnut Oil section, the rate for the ready position showed a slight improvement to Rs 297 per candy, thanks to good buying interest.

Scindia Steam Navigation Company Limited

Satisfactory Results Despite Enhanced Costs

Expectation of Reasonable Support in Future Years

Mr Dharamsey M. Khatau, the Chairman, Reviews Prospects

Speech delivered by the Chairman, Shri Dharamsey M. Khatau, at the 38th Ordinary General Meeting of the Company held on Wednesday, the 19th February, 1958, at 4 p.m. at Scindia House, Ballard Estate, Bombay.

Gentlemen,

It gives me great pleasure to welcome you to this, the thirty-eighth Annual General Meeting of the Company. The Directors' report and the Statement of Accounts for the year ended 30th June 1957, have been in your hands for some time now and with your permission, I will take them as read.

I shall now make a brief survey of our operations during the year.

ACCOUNTS

In my speech I had informed you last year that the working results for the year 1956-57 would be satisfactory compared with the previous year and I am happy to be able to report that our expectations have been fully realised as can be judged from the Accounts already before you. I would invite your attention to the allocations proposed in the Directors' report with you and would clarify that the amount of Rs. 72 lacs provided as Special Depreciation represents the amount by which our tax liability has been reduced on account of the Development Rebate allowed under the Income Tax Act in respect of new ships commissioned during the year under review. This together with the amounts previously provided in this behalf, brings the total of Special Depreciation to Rs. 150 lacs. Our gross earnings of freight have shown an increase of about 20% even though during the year under review the cargo lifted by your vessels was only 18.67 lac tons as against 19.15 lac tons last year.

In spite of enhanced and rising costs of operation the improved results have enabled your Company to pay a dividend of Rs. 1.25 per share. You will also observe that we have added substantially to various reserve funds and these additions have strengthened the finances, which will be necessary for the modernisation and expansion of our fleet, to which I shall refer later this afternoon.

With the addition of new and faster ships in the trade, it was expected that our liftings would increase proportionately. Unfortunately, however, owing to the closure of the Suez Canal, our voyages were longer with the result that our liftings increased only by about 5%. The freight earnings have been higher than last year due to freight increase during the year and to the Suez surcharge levied to cover increased costs due to deviation in the routing of ships.

The India/U.S.S.R. Service which we started last year is still meeting with some operational difficulties which I would call

I had referred last year. The freight earnings would have been better had the increase recommended by the Rail-Sea Co-ordination Committee been made effective by Government on salt cargoes carried by your vessels. The sanctioned increases in freight rates, referred to above, have helped us in meeting to some extent, the rising operating costs, but they still fall short of the request of 28% increase made by the Coastal shipowners. Under these circumstances it is not going to be easy not only for your Company but also for other shipowners engaged in these trades to meet with the rising spiral of operating costs and to provide even for a modest programme for replacement of old and uneconomic units presently employed. It is apparent therefore that it would be extremely difficult if not impossible for shipowners in these trades to provide for additional tonnage, which would be necessary to meet with the trade requirements as envisaged not only by the Rail-Sea Co-ordination Committee but also by the authors of the Second Five Year Plan.

As regards the West Coast (B. S. N. Line) trade catered for by the smaller vessels of your Company, I have nothing very hopeful to report for even though there is some improvement on the Bombay-Saurashtra Sector, it is apparent that we have lost a good portion of our passenger and cargo traffic between Bombay and Karachi due to passport and export-import restrictions between the two countries. Similarly, the passenger traffic between Bombay and Mormugao is not available owing to our having to discontinue the services to and from Mormugao.

OVERSEAS TRADES

With the addition of new and faster ships in the trade, it was expected that our liftings would increase proportionately. Unfortunately, however, owing to the closure of the Suez Canal, our voyages were longer with the result that our liftings increased only by about 5%. The freight earnings have been higher than last year due to freight increase during the year and to the Suez surcharge levied to cover increased costs due to deviation in the routing of ships.

The India/U.S.S.R. Service which we started last year is still meeting with some operational difficulties which I would call

"teething" troubles. To meet the increased operating costs, we have requested the Government to increase the freight rates suitably and hope that an early decision will be taken.

The India/West Africa service to which I referred last year has found favour with the exporters from the West Coast as it provides regular direct sailings at lower rates. This new service has enabled us to cater not only for cargoes to West African ports but also to the cross trades between West Africa and Continental Mediterranean ports thereby making an additional contribution to the foreign exchange resources of the Country.

OPERATING EXPENSES

In view of the greater number of 8 and 12 yearly surveys in 1956-57 as compared to the preceding year, repairs, surveys and dry-docking charges show a considerable rise over the preceding year. Our fuel bill shows a rise due to the deviation of some of the voyages via the Cape and the increased cost of fuel oil consequent upon the Suez crisis, apart from the two extra voyages performed in the year under review. There is a small set off against these increases due to saving in the Canal dues. The implementation of the piece-rate scheme at Bombay has brought an increase in the stevedoring charges which, to some extent, could be set off against the improved despatch obtained.

In view of the demand made by the National Union of Seamen of India for a rise in wages and for certain other benefits a ten per cent increase in wages and certain benefits were agreed to be given to the seafarers as from 1st October, 1957, i.e. in the current year, and this will cost us about Rs 5 lacs per annum.

PORT CONDITIONS

Shipowners had to put up with considerable delays at some of the Indian ports, thereby losing a number of ship-days in a voyage, due not only to monsoon conditions but also to unphased imports of fertilisers, foodgrains, iron and steel and other Plan cargoes, which severely strained the resources of the ports like Bombay and Calcutta and nullified the advantage gained by the introduction of the piece-rate system in Bombay. The port congestion was further aggravated by the clearance and reopening of

the Suez Canal which brought about a simultaneous arrival of ships via the Cape and via the Canal. The port congestion in India caused great concern to the members of the various Conferences abroad trading with India. These Conferences were seriously considering the question of levying a surcharge on freight to compensate themselves for losses due to such delays and it required most strenuous efforts on the part of Indian Lines to persuade the Conferences to stay action in regard to the imposition of surcharge. These efforts were very necessary in view of the active steps taken by the port authorities and Government to reduce the congestion and minimise delays to ships in ports. It is hoped that the good record recently established in the working at different ports will be continuously maintained. Early steps should be taken by Government to introduce the piece-rate system, so effectively working in Bombay, at other important ports. Side by side, no doubt, efforts will be made by the authorities to augment and improve the handling equipment at various major ports. The Government, I am sure, will not spare any effort in expanding the capacity of major and important minor ports so that they can in future cope with the increased export-import trades and conveniently handle larger and deep-drafted ships.

TONNAGE PROGRAMME

With the delivery of the six 17-knot ships from the Lubeck shipyard we have now with us 44 ships aggregating 2,36,532 GRT in all operating in the overseas, coastal and adjacent trades including also the seven smaller ships employed in the West Coast trade. Delivery of two ships ex the Vizag Shipyard has been considerably delayed and we now expect one of these to be handed over to us next month and the other in June this year. Two faster ships on order with the Lubeck Yard are expected to be delivered to us in 1959 and 1960. With the delivery of these new ships we hope to be able to cater to the requirements of the coastal, adjacent and the overseas trades by suitable adjustments. Such additional demand for space as we have to cope with particularly from the U. K.-Continent, we arrange to cover by chartering ships on a suitable basis.

The question of providing the necessary tonnage to meet our requirements has been receiving our constant attention. As from May, 1955 to date we have acquired 14 ships in all and expect two more to be delivered to us in the next few months and a further

part of the pattern
of India's
industrial progress

In every industrial undertaking, efficient insulation is vitally important. Good insulation is not just a question of using high quality materials...it's a science that calls for experience and skill.

We offer the services of a highly specialised contracting organisation, with the resources to undertake heat, cold and sound insulation contracts of any magnitude anywhere in India. Whether you are faced with a minor problem or a major project in Insulation, we shall be glad to serve you.

'Newalls' Insulating Materials
"Sprayed 'Limpet' Asbestos"
Heat & Cold Insulating Materials

Manufacturers & Applicators in India:

ASBESTOS, MAGNESIA & FRICTION MATERIALS LIMITED
(TURNER & NEWALL LTD.) INCORPORATED WITH LIMITED LIABILITY IN ENGLAND
Calcutta - BOMBAY - Madras

two during the next two years. Even so, we shall have to replace the eight liberty ships and five ships presently employed in the coastal and adjacent trades, apart from any expansion of our fleet, to enable us to cater increasingly to the overseas trades of the country in which the Indian lines have so far had a very meagre share. Looking to the depressed state of the freight market and the easier position in regard to placing of orders for new tonnage, the present seems to be an appropriate time to acquire tonnage to provide for replacements and expansion. We have been planning to provide at least for our replacement programme. We have the necessary resources but we are faced with the very tight position in regard to foreign exchange. We trust that as a result of the efforts being made by our Transport Minister, it will be possible for Government to release some foreign exchange for acquisition of tonnage.

PROSPECTS FOR THE CURRENT YEAR

You would perhaps like me to say a few words about the current year which is coming to a close shortly. With the improvement in working at ports our turn-around has improved and we expect more voyages to be completed due to our placing newer and faster ships in service. Our operating results as up to the six months ending 31st December 1957 have been satisfactory. We propose to provide regular coastal berthings for the carriage of general cargoes both from the West and East coast ports, and we expect improved earnings in the carriage of coastal cargoes. In regard to the carriage of rice from Burma to India aggregating four lac tons in the current year, the rate of freight as agreed by the Government of India is far from economic. While the low rate awarded is no doubt the result of lower prevailing tramp freight, it particularly hits essentially Liner Companies like ours who have not hesitated in the past to carry rice cargoes at comparatively lower rates even when the tramp freights were at a high level.

The persistent low level of tramp rates in the overseas trades has, however, affected the Liner rates on bulk cargoes like ores, fertilizers, oil-cake, bulk oil, scrap, etc., and the effects of this downward trend in rates will have some impact on the working results for 1958-59. The import restrictions and the delayed announcements in regard to export quotas also affect the availabilities of cargoes in the Liner trades. In view, however, of the positive foreign exchange earning possibilities manifest in the expansion of the export markets of these commodities, I am sure the question of the release of sizeable quotas of these commodities is engaging the constant attention of the Government of India. With these steps and with the expansion of the trade in general as a whole, I would expect

our Liner services to get reasonable support in years to come.

We had the usual periodical Conference of our Agents and Branch Managers early in December at Bombay when our various departments at the Head Office and the Management of the Company had full and frank discussions about the important developments affecting our various services. Particular advantage was taken during these discussions to place before our representatives our plans for further improvement in our services and as a result of these joint deliberations we have drawn up improved schedules of different services which are being given effect to during the current year. I have every hope that our joint deliberations will result in a better and more efficient working of our services as we progress from year to year.

GOVERNMENT AND SHIPPING

The year under review has seen a number of taxation and allied proposals being given effect to with a view to augment the finances for the implementation of the Second Five Year Plan. The Indian shipowners were considerably agitated over the introduction of the Wealth Tax and the effect of this tax on the competitive ability of Indian shipping in the international trade. A delegation of Indian shipowners presented the case of the shipping industry before the Select Committee of the Parliament and ultimately we were able to obtain the necessary exemption from the application of the provisions of this Act to the shipping industry. I am sure, you will join with me in expressing our due debt of gratitude to Shrimati Sumati Morarjee who led the delegation and particularly to Shri M. A. Master for his able advocacy in the cause of Indian Shipping before the Select Committee.

The systematic disposal of our older and uneconomic ships is a natural outcome of planned modernisation of our fleet. The sale of such ships, however, brings us within the ambit of the Capital Gains Tax. Your Directors are alive to the fact that a ship is sold only to be replaced and that such replacement costs the Company at least 5 to 6 times the original cost of the vessel disposed of. We are therefore making every effort to impress upon the Government that the sale of such vessels is not with a view to encash the 'Capital Gains' arising out of the transaction but only to replace and improve the general tonnage position of Indian shipping and that therefore shipping should be exempted from the imposition of the Capital Gains Tax.

As on 1st January 1957, India had 124 ships of 5,17,300 GRT; ten ships aggregating 69,017 GRT were added during 1957. On 1st January 1958, there were under construction or on order twenty-three ships of 1,38,100 GRT in Indian and foreign shipyards.

Two second hand ships of 9,870 GRT were purchased for delivery in 1958. With these acquisitions the Indian Registered tonnage would reach a total of 159 ships of 7,34,296 GRT. By 1960-61 about 90,000 GRT will be due to be scrapped or sold and India would, therefore, still need about 2,55,000 GRT to reach the modest target of nine lac GRT as fixed by the Planning Commission. Viewed in the context of available finance and the foreign exchange resources of the country, the fulfilment of this objective would appear to be a stupendous task. It was, therefore very heartening to hear the encouraging and appreciative remarks from our Transport Minister, Shri Lal Bahadur Shastri, about the efforts made by the Indian Shipowners in acquiring additional tonnage, when he addressed the General Meeting of the Indian National Steamship Owners' Association in December last. He was not only fully appreciative of the difficulties that the Indian shipowners had to face as regards acquisition of tonnage but was further prepared to extend assistance to the Indian shipowners in this connection. I particularly value his very encouraging observations about the shipping development fund, reduction in the rate of interest on loans granted to Shipping Companies for the acquisition of Coastal ships and the hopes that he has held out for an increase in the development rebate allowance. He was sympathetic also in regard to the question of foreign exchange. The Transport Minister further made certain proposals in regard to the availability of cargoes to be moved in Indian ships and we are happy to note that—thanks to his efforts and the co-operation of the other Ministries in the Government of India—a Shipping Co-ordination Committee has been constituted which would attend to this question and suggest steps that could be taken to enable the Indian shipowners to acquire additional tonnage. Indian shipowners are indeed very grateful for the sympathetic understanding of our difficulties and the steps taken to resolve the same. We are sure, with the presentation of the next budget we may see further implementation of some of the proposals made.

MANAGING AGENCY AGREEMENT

As mentioned in the Report the question of future Managing Agency of the Company is now in the final stage of discussion and the same will be placed before you for approval at an early date.

BONUS SHARES

I may inform you that, consequent on the receipt of the sanction of Controller of Capital Issues, allotment letters in respect of Bonus Shares are being got ready and will be sent to Shareholders shortly.

THE ALKALI & CHEMICAL CORPORATION OF INDIA, LTD.

NOTICE TO MEMBERS

The Twentyfirst Ordinary General Meeting of the Members of The Alkali & Chemical Corporation of India, Ltd., will be held on Wednesday, 19th March 1958, at 3.30 P.M. at the Registered Office, 34 Chowringhee, Calcutta, to transact the following business:—

- (1) To receive and adopt the Directors' Report and Audited Balance Sheet and Profit and Loss Account for the year ended 30th September 1957.
- (2) To declare a Dividend on the Ordinary Shares.
- (3) To elect Directors.
- (4) To appoint Auditors for the current year and to fix their remuneration.

The Ordinary Share Registers of the Company will be closed from the 10th March 1958 to the 19th March 1958, both days inclusive.

By Order of the Board,
Imperial Chemical Industries
(India) Private Limited,
Secretaries.

Calcutta,
5th February 1958.

Notes:—If the Dividend as recommended by the Directors is sanctioned at the Meeting, it will be paid on or after the 19th March 1958, to those Shareholders whose names are on the Company's Register on the 8th March 1958.

A Member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and the proxy so appointed need not be a member of the Company.

To,

The Shareholders of the Alkali & Chemical Corporation of India Ltd., and in particular to:—

Mr. L. E. Bagshaw, Mrs. E. E. Thompson & Mr. W. B. Joiner, Mr. E. A. Nassim & Mrs. R. E. A. Nassim, Mr. Allan Biggar, Mr. J. P. Brander & Mrs. A. J. Brander, Mr. G. F. Carter, Mrs. H. C. Webb.

Lack of Support: Setback in Prices

Watch-Dog Writes:

EXTREMELY dull conditions have prevailed in stock markets during the week under review. The complete absence of support and small selling have caused prices to drift to lower levels, resulting in a limited turnover. The markets have finished the Pre-Budget week on a cautious note.

The Calcutta Stock Exchange witnessed another featureless session and, with the speculative issues losing ground, prices of other scrips developed an easier tendency, although the closing tone was a shade better.

The Bombay Stock Exchange ruled easy with prices yielding ground on renewed selling and lack of support.

The Madras Stock Exchange continued to function in a state of uncertainty.

Prices on the Ahmedabad Stock Exchange drifted to lower levels on some selling pressure.

Unsettled conditions persisted on the London Stock Exchange where prices again moved lower, although on less extensive scale.

Trading on Wall Street remained quiet with price movements confined to a narrow range.

Calcutta

Calcutta, Friday Evening.

EQUITIES on the local Stock Exchange displayed an all-round easier trend in the absence of support, as both investors and operators adopted a cautious attitude due to the proximity of the Budget. Mr. Nehru's speech in the Lok Sabha on Chagla report and his reference to nationalisation policy also caused a bearish effect on sentiment. Above all, Mr. Krishna-machari's recent statement in Parliament created some doubts about the future of the private sector. The only redeeming feature of trading was a slight recovery noticed towards the close, thanks to short-covering and some replacement buying at lower levels.

Renewed weakness of the jute goods market caused a further setback in the prices of Jute shares in view of the predominance of sellers. Budge-Budge were offered further lower at Rs 66.00 against Rs 66.50; Delta at Rs 94.50 against Rs 97.00; Kelvin at Rs 160 against Rs 175; Nuddea at Rs 29 against Rs 31.50 and Kanaknarrak at Rs 40 against Rs 46.00. National lost nearly 70 nP at Rs 23.10, while Howrah changed hands at Rs 13.12

to Rs 13.25; New Central at Rs 12.87 to Rs 13.06; Champdany at Rs 95 to Rs 96 and Union at Rs 105.50 to Rs 108.00. It is reliably learnt that the Naihati Jute Mills Company, in the managing agency of F. W. Heilgers & Company, has changed over hands.

With the exception of Bengal which suffered a sharp setback to Rs 208 from Rs 231 on reports of the explosion in the company's mines, other Coal shares ruled generally steady. Turnover, however, remained restricted as operators were inclined to await the Price Revision Committee's report, which is expected to be issued very shortly. Burrakur were almost maintained throughout the week at Rs 22.50, while Central India were enquired upto Rs 6.75 and Western Bengal upto Rs 5.25 from Rs 6.72 and Rs 5.19 respectively. Amalgamated were, however, a shade quieter at Rs 15.50 against Rs 15.62.

Tea shares were devoid of interest and prices were marked down again from last levels on renewed liquidation. There was a general belief that there would be an adequate supply and that buyers would take their requirements only slowly. Even the absence of any proposal for taxation by the West Bengal Government had no effect on sentiment. Brahmaputra changed hands at Rs 3.19 to Rs 3.31; Bishnauth at Rs 18.44 to Rs 18.62; Choonabhatti at Rs 260 to Rs 263.50; Grob "A" at Rs 20.75 to Rs 21.12; Telojian at Rs 22.75 to Rs 22.87 and Tezpor at Rs 15.44 to Rs 15.56. Tukvar were on offer at as low as Rs 7.87 against Rs 8.62 and Methoni at Rs 15.25 against Rs 16.44.

Sugar shares came in for selective support although higher levels could not be retained till the close due to general profit-taking. Most prominent were Balramore being taken upto Rs 8.25 from Rs 6.25; Buland upto Rs 13.37 from Rs 13.25 and Belsund upto Rs 9.90 from Rs 9.62. Darbhanga touched at one time a high of Rs 18.81; Ramnugger Rs 25.06 and Dyer Meakin Rs 9.62, to ease off at the close to Rs 18.56; Rs 24.00 and Rs 9.12 respectively. S.K.G., after improving to Rs 9.25 from Rs 9.00, receded again at the close to the latter level.

Price movements in the Engineering section were mainly influenced by the speculative activity in Indian Irons. Against the week-end closing of Rs 19.66, Indian Irons opened at Rs 19.64 and, after improving to Rs 19.68, receded gradually to Rs 19.34, to finish the week better at Rs 19.32 on some bear-covering. In sympathy, TEXMACO were pushed down to Rs 16.90 from Rs 17.15 and Burn to Rs 320 from Rs 323, to recover at the close to Rs 17.20 and Rs 322 respectively. Jessop were, however, on offer at Rs 21.25 against Rs 22.56. Indian Galvanizing were better at Rs 14.00 against Rs 13.19, while Indian Standard Wagon changed hands at Rs 94.50 to Rs 97.00. Britannia were well maintained at Rs 13.50.

G. K. William continued to rule firm, having sustained support upto Rs 29.27 from Rs 28.75. Marshalls closed quiet at Rs 5.00 against Rs 5.12.

Miscellaneous issues came in for selective enquiry. Most prominent were Dunlop Rubber having sustained buyers upto Rs 22 from Rs 21.87. Indian Steamship were keenly sought after upto Rs 12.00 from Rs 11.75 following the company's proposal to make a bonus issue. Indian Cable had buyers at Rs 28.50 to Rs 28.87; Metal Box at Rs 25.25 to Rs 25.37; NICCO at Rs 23.75 to Rs 24.19; Indian Aluminium at Rs 12.62 to Rs 12.87; Sone Valley at Rs 5.25 to Rs 5.13; Phillips India at Rs 13.69 to Rs 13.94 and Indian Oxygen at Rs 15.75 to Rs 16.12. B.I.C. were nearly maintained at Rs 3.80, while Angelo Brothers were offered further lower at Rs 18.12 against Rs 18.37. In the Paper section, Orient Paper moved rather erratically between Rs 23.90 and Rs 24.40 on alternate buying and selling, to close finally at Rs 24.35. Titagur were marked at Rs 33.19 against Rs 34.00. Among other scrips, Rohas closed better at Rs 16.00 after touching a low of Rs 15.87 and Jardine Henderson at Rs 57.75 against 53.75. Hindustan Motor were a narrow market around Rs 5.94.

Bombay

THE announcement that Government had given sanction to Tatas to issue Jubilee bonus shares and the absence of any taxation in the West Bengal and UP Budgets were not found to be powerful enough to counter the depression caused in the market by thoughts about the coming Central Budget. It would appear that sentiment had been quite adversely affected by the Finance Minister's speech and the subsequent reiteration of Government's industrial policy by the Prime Minister. The reference to powerful groups working against the Government in the country was taken to mean that it was an indirect attack on the private sector. The reactionary tendency was further accentuated by the Prime Minister's somewhat changed idea on nationalisation. In the prevailing anxiety about the Budget, Mr. Nehru's statement that if private sector was to function effectively it was essential that it was given adequate facilities and the report that the LIC had resumed purchases of equities failed to induce any enthusiasm. The market closed the week on a subdued note with operators reluctant to extend commitments.

In the steel section Tata Iron opened at Rs 170.50 on announcement of Government sanction for bonus issue. But the enthusiasm proved shortlived as anxiety over labour situation in Jamshedpur began to disturb sentiment. With the rejection of the company's appeal on sales tax, prices eased to be finally placed at Rs 167.50 Indian Irons after a steady opening reacted to close 40 nP lower on balance at Rs 19.24.

In the miscellaneous section Scindia Steam was a steady counter following the encouraging prospects

for the company as revealed in the speech of the Chairman during the week. The scrip was well maintained at Rs 17.32. National Rayon was also a steady spot in earlier dealings but closed easier at Rs 215. Telco was marked down to Rs 137.50, while Premier Construction was no better at Rs 155.75. ACC turned ex-dividend at Rs 143.00.

Madras

THERE was a feeling of apathy on the Madras Stock Exchange. Plantings noted small and selective buying, while Textiles were extremely dull. Miscellaneous issues ruled generally steady.

PLANTINGS: Selective support was given in this section. In the Tea section, Peermades improved to Rs 19.75, while Coonoors were done at Rs 17.87. Halleyburlas at Rs 16 and United Nilgiris at Rs 15.15.

Among Rubber shares, selling enquiries were noted for Kailas and Mercaras. Kalpettas were, however, bid higher at Rs 19, while T. R. Ts met with some demand at the market rate. Cochín Malabars were done at Rs 4.10.

In the Coffee section, Ouchterlony were enquired at Rs 4.95; Consolidated Coffees at Rs 22.15 and Blue Mountains at Rs 2.90. Puthathottams were a steady feature at Rs 2.50.

SUGARS: Sugar shares came in for selective enquiry. There was sustained buying of E. I. Ds upto Rs 29.25. Cauvery, Decang and Travancore remained steady with moderate enquiries.

Ahmedabad

SENTIMENT on the Ahmedabad Stock Exchange remained rather depressed with prices developing a slightly easier tendency at the close due to some selling pressure. Following rates were quoted:—Calico Rs 612 (Rs 614.50); Arvind Rs 1006 (Rs 1011); Atul Rs 177.25 (Rs 179.00); New Commercial Rs 431 (Rs 434); New Shorrock Rs 686 (Rs 689); and Ambica Rs 597 (Rs 595.50). Figures shown within brackets were the week's opening rates.

London

BUSINESS on the London Stock Exchange failed to expand as operators continued to adopt a cautious attitude, awaiting further developments particularly those concerning the American economic situation.

The brightest spot in trading was Gilt-edged where in renewed demand. Dollar Stocks were adjusted upwards in unison with the improvement on Wall Street.

New York

PRICES on Wall Street, after initial firmness, developed a slightly reactionary tendency towards the close. At the opening, demand improved following the better results shown by various companies. However, towards the close, the news of lower industrial production in Texas caused some hesitation, resulting in prices developing an easier tendency.

A major operation

Geological and geophysical surveys provide clues to the whereabouts of underground traps which *might* contain mineral oil. But there is only one way of proving whether or not oil is actually present. And that is by drilling a test well.

With all the skill and knowledge of modern science, the odds are still 20 to 1 against striking an oil-trap which justifies the heavy costs of exploration. For example, it may cost over a crore of rupees and take years of research before success is achieved. Yet only by taking these risks will new oilfields be discovered.

Drilling a test well is a tremendous undertaking in itself, involving great quantities of machinery, equipment and supplies. A typical well (10,000 or more feet

deep) would probably need: a complete drilling rig, weighing about 200 tons, 15,000 to 17,000 feet of drill pipe, 14,000 to 16,000 feet of steel casing, 60 to 100 drilling bits, 500 to 1,000 tons of drilling-mud chemicals, 2,000 to 5,000 sacks of cement, 48,000 barrels of water, and 3,000 barrels of fuel oil. In addition, at least 125 skilled personnel comprising drillers, drilling crews, geologists, engineers, cementers, electricians and other technicians would be required for drilling the well.

It can take as long as a year to drill a deep test, and the result may be that the well strikes water, not oil; or it finds only a little oil, or even turns out to be dry. Then the mass of machinery and equipment is moved to another location and drilling begins all over again.

Assam Oil A full-scale petroleum industry

This is one of a series of informative advertisements about the petroleum industry.

Disappointment— or a Sigh of Relief?

Investment Gossip:

THE market has not quite made up its mind about the Nehru Budget. Should it heave a sigh of relief, in that it has been let off lightly, with new taxation proposals running to barely Rs 6 crores? Or should it show its disappointment, because scarcely any of the concessions it had hoped for has materialised?

As expected, the Gifts tax has turned up; and I don't think that its imposition will cause the sentiment to be swayed one way or the other. For, not only had it been anticipated—and therefore "discounted", in market parlance; the exemptions are just, with the provision of permissible gift to spouse being more than fair.

As expected, this was the single piece of major taxation—on the "new" proposals side.

I am afraid I must record the disappointment of markets, that the compulsory reserve deposit has not been done away with, that excise duties have not been reduced.

But there are the silver linings.

An immeasurable gain to the shipping industry is the hiking of the Development Rebate to 40 per cent; and, in the Budget Session on Lyons Range, this was suitably recognised by a marking up in India Steamship.

For the Investor, there is a concession which, I am led to believe by the discussions I have had, the market has not apparently understood the significance of. I refer to the Super-tax on Dividends. The proposal is that, in the case of Section 23A Companies, for purposes of determining the tax, there are henceforth to be two slabs instead of three as heretofore. (It may be noted that for companies other than Section 23A Companies, there will continue to be three slabs). The first slab will comprise dividend payment between 6 per cent and 10 per cent, and will attract a Dividends Tax of 10 per cent; and the second slab, on dividend exceeding 10 per cent, will attract tax at 20 per cent; at present a dividend between 10 per cent and 18 per cent attracts 20 per cent and dividends over 18 per cent attract 30 per cent.

It may be said that, by and large, the gain to Section 23A Companies will amount to roughly 50 per cent of their retore Dividend Tax liability—provided, of course, they were paying high dividends!

As I write this Gossip, the thought occurs to me that such concessions as have been given, coupled with nothing unexpected in the way of new levies, should have the effect of toning up market sentiment. There are other reasons why this should be so, as for instance the hint by Mr Nehru that "some changes might be made here and there in the tax structure" in the light of experience. Nor is there any reason to be pessimistic, merely because the Finance Minister has said that the tax structure is here to stay, that "the major steps that were taken last year had to continue."

Market reaction, as I said at the beginning, is groping and uncertain. But then, this has always been the case; there are few Budgets on which the market has been able expeditiously to make up its mind, and the most notorious instance of an inability on its part to read the facts correctly was when Sir Chintaman Deshmukh handed over Development Rebate on a silver salver. So, I suppose we shall have to wait a while, as ponderously the market weighs the Budget.

It has no right, I say, the market has no right to come to the conclusion that the Budget is lacking in concessions. What were the concessions that had been expected? First, the Dividends Tax; some relief has been offered, and there are not many non Section 23A Companies which have to bear a heavy or intolerable burden under this head. Second, the Bonus Tax; and I agree some relief should have been granted. Third, the Reserve Deposits; but, if the score on which its repeal has been asked for is that it profits the exchequer negligibly, then, it is as correct to say that the impost cannot be involving so severe a strain.

Indian Iron's quotation in the Budget session shows how difficult the market felt about assessing prospects. On Lyons Range, in the Budget session, Indian Iron opened at Rs 19.60. The pressure at first was all downward, as it was pressed rapidly to Rs 19.20. Then apparently came "flash" news that seemed more encouraging, and Indian Iron was lifted to its high, past the Rs 20 mark, to Rs 20.20. Call it profit-taking, if you will, but thereafter there was a quickening in the sentiment, with Indian Iron declining to Rs 19.66—the closing quotation.

I must take this opportunity of drawing attention to a specific weakness in the Stock Exchange. The Concession that Did Not Materialise, is the excise duty that was not reduced on cotton textiles. In Bombay, I understand that Dalal Street proved to be unsteady, and the motivating force for the downtrend in prices was the selling pressure in the Textile section.

I put it to the authorities that relief in this sphere is warranted. After all, when the duties were raised in September 1956, there were two objectives: on one side, the inflationary pressure in cotton

textiles was sought to be mitigated by inducing consumer resistance; and higher excise did the trick. On the other side, it was intended that the higher profits being made by textile companies should part of them at least be diverted to Government exchequers.

By now, both these objectives have been attained. Consumer resistance was in fact generated, as mounting stocks with mills will testify. Also, there was a diversion to Government of profits, as witness the sharp decline in earnings of textile companies.

At the present stage, I trust Government will recognise that a revision in the excise duties is called for.

For, the law of diminishing returns is beginning to set in. The improvement in revenues by way of excises is being cancelled by a decline in the tax realised on profits. Then, the industry itself is none too prosperous. On grounds of equity, no less than enlightened self-interest, a reconsideration of the cotton textile excise duty is indicated.

It is not too late for Government to revise excise duties—such revision does not necessarily have to be restricted to a Budget. I suggest the appointment of a special body to examine all excises currently in force, and it could be directed to recommend changes where they are necessary.

These, then, are the first thoughts I have on the Budget; my second thoughts, I reserve for the Budget Supplement, which I suppose will be brought out some time next week.

£ R \$

Investment Notes:

IT is learnt that the control of the Nalhuti Jute Mills Company Limited has passed into the hands of Messrs Bhagat & Company from the present managing agents, Messrs F. W. Heijgers & Company. The shares are presently quoted around Rs 69.

Details of acceptance of the applications to the offer for sale of 570,000 shares in Indian Oxygen Limited, by the British Oxygen Company Limited, are now available. It is learnt that over 1,800,000 shares were applied for by the public and applications for the minimum quantity (50 shares) alone exceed one million. The British Oxygen Company Limited have obviously given priority to the smaller applications as will be evidenced by the following basis of acceptance:—50 shares—40 per cent; 100 shares—25 per cent and 150 to 300 shares—20 per cent. Higher denominations have been accepted at a reducing percentage down to a minimum of about 7 per cent. It is also learnt that Letters of Acceptance and Refund Pay Orders will be issued by the Registrars from March 8th onwards.

The issue of right shares by the Tata Chemicals Limited, for an aggregate of Rs 1.12 crores, is un-

derstood to have been oversubscribed. According to the Chairman of the company, the company's operations are now well established on a profitable basis.

The results for the year to 31st December 1957, of Hindustan Lever Limited showed that net profits for the year were Rs 100 lakhs after providing Rs 123 lakhs for taxation at current rates. After allowing for the additional taxation consequent upon the 1957 budget, net profits in 1956 were Rs 61 lakhs after charging taxation of Rs 162 lakhs. Included in the 1956 taxation charge of Rs 162 lakhs was Rs 47 lakhs on account of the bonus issue made in October 1956.

The Board of Hindustan Lever Limited propose to recommend to the Annual General Meeting of the Company which will be held on 7th April 1958 the declaration of a dividend of one rupee and forty naye paise per share free of income tax for the year to 31st December 1957.

£ R \$

Investment Briefs:

Walchandnagar Industries Limited has maintained the dividend at Rs 21 per share for the year ended 30th September, 1957.

Sirpur Paper has maintained the dividend at 50 p per share for the year ended 30th June, 1957.

United Motors (India) Limited has reduced the dividend from Rs 2.00 to Rs 1.20 per share for 1957.

In Madras, Aluminium Industries have recommended an interim dividend of 64 per cent on the Ordinary and the new Ordinary shares (allotted on 1st April 1957).

Dhanalakshmi Mills have reduced the dividend from 25 to 10 per cent for 1957.

United Nilgiri Estates have recommended an interim dividend of 5 per cent for the year ended 31st March, 1958.

£ R \$

Balance-Sheet Reviews:

Gillanders Reduce 1956-57 Dividend

DESPITE a rise in sales from Rs 1.39 crores to Rs 1.99 crores, Gillanders Arbuthnot & Company Limited has reported a substantial decline in profits for the year ended 31st March, 1957. The net profit, after providing for Depreciation and Taxation, amounts to only Rs 11,53,857 as against as much as Rs 17,20,481 in the previous year.

Managing agents' commission and allowances have recorded a considerable decrease to Rs 39.03 lakhs from Rs 58.59 lakhs, reflecting the cession of income from those managing agencies for jute, tea and coal, which were relinquished during the year under review and in the preceding year. It appears inevitable that there will be further contractions in the earnings from these sources in future. As the directors are fully conscious of this situation, they have taken action to consolidate the company's position in relation to its managed

companies and to expand the company's interests in other directions.

The item "Income from Investments" is also shown substantially lower at Rs 5.49 lakhs against Rs 11.79 lakhs, mainly due to the reduction in the dividends received from the tea companies under the company's management. In this connection, the directors state that the outlook for the tea industry continues to give cause for some anxiety.

In respect of allocations to Funds, the directors have, apart from providing a sum of Rs 2.00 lakhs for General Reserve and Rs 1.00 lakhs for Superannuation Fund, raised the Depreciation amount to Rs 2.15 lakhs from Rs 1.82 lakhs. But, the Taxation provision is slightly lower at Rs 12.52 lakhs against Rs 12.83 lakhs. The dividend on the Ordinary shares is reduced to 10 per cent from 16 per cent.

In connection with the relinquishment of the managing agency of the Air Conditioning Corporation Limited, the directors state that the total loss now amounts to Rs 25.64 lakhs, which has been written off.

£ R S

Jogta Coal

The Jogta Coal Company has again passed over the dividend for 1956 despite a substantial increase in earnings. The net profit, after providing for Depreciation, amounts to Rs 66,540 as against only Rs 27,847 in the previous year. The directors have, after setting apart a sum of Rs 60,462 for Capital Redemption Fund, reduced the Depreciation amount to Rs 70,579 from Rs 96,095.

For the purpose of redeeming the Preference shares of the company which will require a total sum of Rs 5.00 lakhs, the directors have transferred Rs 4.40 lakhs from various Funds. This amount, together with a sum of Rs 60,462 out of the profits for the year under review, has been transferred to a special Fund called "Capital Redemption Fund" in order to utilise the same for redeeming the fully paid-up preference shares of the company at the face value thereof.

£ R S

Alkali and Chemical Corpn.

The Alkali & Chemical Corporation has produced excellent results for the year ended 30th September, 1957. After stepping up the pro-

vision for Depreciation from Rs 10.40 lakhs to Rs 12.18 lakhs, the net profit amounts to as much as Rs 36.28 lakhs as against only Rs 29.84 lakhs, in the previous year. The directors have provided Rs 16.30 lakhs (Rs 4.67 lakhs) for Taxation; Rs 2.00 lakhs (Rs 3.00 lakhs) for General Reserve; Rs 6.20 lakhs (Rs 13.64 lakhs) for Dividend Equalisation Reserve; Rs 2.00 lakhs (nil) for Wealth Tax and Rs 5.64 lakhs (Rs 2.25 lakhs) for Deferred Tax liability. The dividend on the Ordinary shares is maintained at 8 per cent on the increased capital. Sales total Rs 2.25 crores against Rs 1.88 crores.

According to the directors' report, production in most units has surpassed all previous records. There were record outputs of Chlorine and Caustic Soda to meet demand, both for sales as such and for the manufacture of Chlorine derivatives. The output of Hydrochloric Acid plant kept pace with the demand. A substantial increase in output and sales was recorded in "Gammexane" formulations. There has been a steady expansion in the demand for the well-known 'Duco', 'Dulux' and ancillaries and the plant has been working at capacity. Very satisfactory sales were achieved in the metal pre-treatment products, which are becoming increasingly popular. For the manufacture of Polythene, delivery of plant and equipment from the UK has started and is reasonably in step with the programme.

£ R S

Ravalgaon Sugar

The Ravalgaon Sugar Farm Limited has also reported satisfactory working results for the year ended 30th September, 1957. The net profit, after providing Rs 4.10 lakhs (Rs 5.07 lakhs) for Depreciation and Rs 8.50 lakhs (Rs 7.50 lakhs) for Taxation, is slightly higher at Rs 13.96 lakhs as against Rs 13.88 lakhs in the previous year.

Other allocations are: Rs 2.75 lakhs for Reserve for special Depreciation and development against Rs 1.43 lakhs; Rs 1.45 lakhs to General Reserve against Rs 2.00 lakhs; Rs 80,000 to Dividend Equalisation Reserve against nil; Rs 2.00 lakhs to Debenture Redemption Reserve against Rs 3.00 lakhs and Rs 75,000 to Contingency Reserve against Rs 1.25 lakhs. The directors have recommended a dividend of Rs 12 per share on the Ordinary shares.

The Budget and the National Economy

MR NEHRU himself was impelled to say, in presenting the Budget for 1958-59, that it was this year a pedestrian statement. To him also belongs the credit for one of the shortest speeches that have been made on such an occasion. It is for us to examine in what sense and to what extent the description affixed to his Budget by Mr Nehru is correct. This we shall do in the course of this article, though we must defer a fuller study of the Budget, since the relevant papers and documents have yet to be received. If by pedestrian, Mr Nehru wishes to suggest that there is nothing in the Budget which is intended to provoke excitement, none will disagree with him. But this does not mean that the Budget itself is unexciting. The intention may not have been there, but hints are not wanting that, for all the rousing cries in behalf of austerity, economic conditions are so improving as to suggest a more hopeful future. Indeed, it is noteworthy that, in his review of the past year, the Prime Minister paid more than passing attention to the change that has taken place in the economic outlook over the recent few months. Before, however, we take account of this facet of the Budget, we may deal with its core—the new proposals.

The fact is that the 1958-59 Budget is, as compared to the May Budget of Mr Krishnamachari last year, devoid of any sweeping changes. It is, shall we say, a status quo Budget, with minor changes or "such changes as flowed from what was done last year". There is an endorsement of the tax structure created by Mr Krishnamachari, although, "with experience", some changes might be made here and there. The only major measure of new taxation is the Gifts tax; but its imposition had been expected.

On the side of the concessions, the increase in Development Rebate to shipping companies was also expected. Similarly, it had been anticipated that some relief would be given in respect of the Dividends Tax. Other hopes have failed to materialise, and a particular disappointment is that the excise duties on cotton textiles have not been reduced. Does this mean that the Budget will generally be found as being below expectations? We do not believe so, because the concessions that were being talked about were not so much anticipation as wishful thinking. A source of relief must be that new taxes raised amount to a meagre Rs 6 crores, the concession is that changes in the future are not, in the light of experience, ruled out.

We would like at this stage to draw attention to a speculation that had been mooted in some circles that it would be desirable to do away with the Expenditure Tax, because it did not serve a useful purpose since its realisations were so low; and, for the same reason, it was thought in certain sections that Wealth Tax, too, was not in Indian conditions necessary. This is a way of thinking that has been completely scotched by Mr Nehru. The intent of the two new taxes imposed last May and of the Gifts tax levied this year is not merely that they will bring in revenue to Government; the main objective is that an integrated structure of taxes be created, in which, with the existence of numerous check-

points, the scope for evasion would be minimised. The honest tax-payer should not resent, but indeed welcome such imposts. For, there is now reasonable hope that, as the system of checks begins to function efficiently, and as the extent of evasion becomes less, tax revenues would improve and so pave the way for the reduction in the income-tax rates that Mr Kaldor had postulated in his Report. It is no use bemoaning the fact that, while Mr Kaldor's suggestions of new-fangled taxes have been accepted and implemented, his recommendation of a 45 per cent maximum on income tax rates is a far cry from the existing 84 per cent. For, it was not to be expected that Government would sacrifice their revenues in the hope that, as a consequence of a lowering in the tax rates, there would be more honesty in the payment of taxes. Indeed, if revenues improve in the future, it would be because evasion would have been rendered difficult, not because of any improvement in the honesty of the tax-payer.

Thus, the "pedestrian" Budget of Mr Nehru assumes an importance by virtue of the fact that it completes the integrated tax structure that Mr Krishnamachari last year set about bringing into being. It is important, also, because it may prove to be the turning point in Indian taxation; for the future, we have to wait for the enforcement of the laws, for the gradual banishment of evasion, so that in

Indian Finance

Established 1928

March 1, 1958

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

due course the burden falls less heavily and unfairly on the honest tax-payer. But we should not make the mistake of expecting such reliefs within the period of the Second Plan. On the one hand, it will be inexpedient, since, with a socialistic pattern of society as their objective, Government could not effect such reduction in taxes as will appear to the general public as pampering of the haves. On the other hand, at the present stage of development, Government can afford no such loss of revenue.

Usually, of the two parts of the Budget,—the review of economic conditions and the new tax proposals—the importance naturally attaches to the latter. But, in the current year, the roles have been reversed. Mr Nehru has noted that, in recent months, "some" improvement has been discernible in the economic conditions. We would like to suggest that he had unnecessarily underplayed the extent of the change for the better. These improvements may be first listed.

The most important gain to the economy is the downward trend in prices. The index number of wholesale prices was headed dangerously upward from the beginning of the Second Plan, and by August 1957, it had touched a peak of 112. Today, the index number has declined to 105. Mr Nehru attributes the improvement to various measures to hold the price level, and also to a better supply position.

While it is true that, over the same period, other countries in the world had also experienced a decline in prices, after a bout of inflationary pressures, there are two important differences as far as India is concerned. In the first place, the inflationary pressures in this country were derived, at least in part, from the very substantial deficit financing that we had to have recourse to. It is now learnt that, in the first two years of the Second Plan, deficit financing has been of the order of Rs 600 crores. In such conditions, it was inescapable that an impetus was given to higher prices. In the second place, in the face of such inflationary pressures, the steps taken by the monetary authorities have been distinctly different from those taken elsewhere. The institution of a policy of selective monetary control was taken in hand; and such a policy was imperative in Indian conditions, because it was not open to us to impose a blanket credit squeeze. For, development could not be impeded. The evolution of such quantitative and qualitative control over the money market is of especial significance in that, while inflationary pressures have been turned back, no obstacle has been placed in the way of development and increasing production. In brief, Indian monetary policy has proved that, given the vigilance and the determination to take effective steps, the inflation implicit in deficit financing can be kept in check; and this means that, for a country in the process of industrialisation, planned deficit financing need not be avoided as having in it the seeds of runaway inflation.

Secondly, the money market itself is showing an improved countenance. Mr Nehru has stated that expansion of money supply and bank credit has been brought under control. Properly speaking, the sense in which this

is to be welcomed is that bank advances to sectors of the economy wherein prices tended to be upward have, by selective monetary control, been restrained. Again, it is the fact that the resources of the banking system have risen substantially which, from the point of view of the money market, is heartening. Mr Nehru made a reference to this fact as well, but let us explain what its significance is. If control is being wielded upon advances, such that bank credit is available only for productive purposes, and if meanwhile the resources of the banking system are rising sharply, it means that banks will have extra resources which could be, and indeed will need to be, invested in giltedged. So, the improvement in the money market signifies a more favourable reception to Government's market borrowings.

Thirdly, the foreign exchange situation is, after eighteen months of continued strain, in sight of a more hopeful outlook. Mr Nehru made pointed reference to the fact that the drawal on the Reserve Bank stands reduced from a monthly average of Rs 36 crores to less than Rs 3 crores a week. This is due to the steps taken by Government to arrest the drain, but the problem remains as to the manner in which the foreign exchange gap for the Second Plan is to be covered. Here, too,

West Bengal's Budget

A DEFICIT budget is always an exciting document, almost like a thriller, except that the denouement is known well before the details. West Bengal's 1958-59 budget is a deficit one in line with its several predecessors, but before we proceed to examine it, it would appear useful to go a little backward to obtain a correct perspective. Since the partition, this State has had to face tremendous financial difficulties, often hard put to it to keep the pot boiling. In 1948-49, the State's revenue income stood at around Rs 32 crores while its expenditure was of the order of Rs 29 crores. Both sides of the ledger have since shown more than a cent per cent increase, the revenue income, as in the budget presented, being Rs 68.87 crores and the expenditure, Rs 72.69 crores. The moral? Once in the enjoyment of surplus budgets, the State has now the right side of its account heavily marked in red. But there is more to it; the State's economy is far from moribund. True, its expenditure exceeds its income, but it happens because, like a bold entrepreneur who borrows to expand and increase the income of his establishment, the State Government are embarked upon a programme of progress.

The State budget's principal relieving feature is, of course, that there is no proposal for fresh taxes, obviously because there is hardly any room for any. The 1957-58 budget exhausted the last remaining sources of taxation by enhancing the sales tax and instituting the entry levy. The net deficit of the current budget is Rs 1.76 crores, by no means a large one for a progressive State

Mr Nehru dwelt at some length. In expressing his gratitude for the assistance that has been forthcoming from friendly foreign countries, Mr Nehru has given an idea of the expectations of aid in the Budget year. Whereas, last year, foreign assistance was for a total of Rs 463 crores, credit has been taken in the Budget for Rs 325 crores. The USA, the USSR, the UK, West Germany, France and Japan, in addition to such sources as the World Bank, are expected to extend credits or assistance during 1958-59. It would seem to us that, by these means, the gap in foreign exchange has been largely covered.

However, imports must continue to be kept at a minimum, and efforts at increasing exports have to be intensified. It is in this light that the prospect before Indian industry may be said to be very good during the Budget year. For, it means that the responsibility of indigenous producers becomes magnified, since they will be called upon to meet the rising demand internally as well as to augment foreign exchange earnings. Since, meantime, prices have assumed stability, the economic conditions would favour further development. Thus, in the final analysis, it is the improvement in the internal economic conditions which must be said to be the most hopeful thing about Mr Nehru's Budget for 1958-59.

like West Bengal.

State Finance Minister Dr B. C. Roy's criticisms of the Central assistance and the Second Finance Commission's recommendations in the matter of allotment of Central taxes to West Bengal seem highly pertinent. Apart from the general tardiness of Central loans and grants-in-aid, Dr Roy points out that the Union Government have been charging exorbitant rates of interest on loans to the States, frequently far higher than the former pay on their borrowings from foreign countries. Another difficulty is presented by the rehabilitation loans from the Centre. The State is asked to repay these on realisation from the refugees.

For this State the unemployment problem is a specially harassing one. The Government must continue to do everything possible to control it, even though this means a good deal of non-productive investment. Expenditure on productive investments, even when excessive, does no great harm. For, after a period, the income more than counterbalances the expenditure. But non-productive investments have to be maintained as a purely social service measure, and the State Government have been incurring substantial debts on this account from year to year and at high rates of interest payable to the Centre.

Finally, it is obvious that the State Government will have to rely largely upon public loans and the Small Savings Scheme. As for the latter, there is no sign that one sees of any active interest shown by the Government in carrying on an energetic campaign.

The Future of Trade Unionism

By M. SUR

THE history of trade unionism in India in recent years has been one of uneven development and many contradictions. Trade has been a great increase in the number of unions and their membership, but little real consolidation and growth of national unions. The principle of compulsory recognition of trade unions has been on the Statute Book since 1947, but has never been enforced. Mushroom unions and union rivalry spring up everywhere; disputes are raised against management which are really disputes between unions; agreements made with one union are

turned up by another; and there is a great outcry from management against multiplicity of unions. These are the symptoms of the present malaise in industrial relations.

Opinion now seems definitely to be crystallizing in favour of action to establish a single representative bargaining agent in each industrial unit—to borrow the jargon of American industrial relations. At an interesting conference of labour and welfare officers drawn from both the public and the private sectors, held in Delhi last week by the Indian Institute of Personnel Management, it was remarkable

Indian Finance

that speeches prepared for different sessions of the conference by the President of the Hind Mazdoor Sabha and the Labour Adviser of a large employers' association put the same point of view on this subject, and this was accepted without a dissentient vote from more than 150 delegates. They agreed that the time had come to take steps, if necessary by legislation, for the recognition of a single collective bargaining agent in each unit, both as a means of preventing indiscipline and of promoting negotiation and joint consultation in industry.

Mr S. C. C. Anthoni Pillai, President of the Hind Mazdoor Sabha, was outspoken in his criticism of trade unions at the present time. He admitted that they were weak and said the first essential for developing direct negotiation and joint consultation was a strong trade union. He did not think that the stage had been reached when workers' participation in management could be realistically discussed—certainly a bold admission. One of the difficulties, he said, was a dearth of good trade union leaders, and he deplored the fact that union leaders at present were being forced to think more of the reactions of their rivals than the achievement of a reasonable settlement. "Bitter experience" he said, "has shown that negotiations cease to be honest and straightforward when there is a multiplicity of rival unions. None of the rival unions will dare accept a good and realistic offer of a concession to conclude an agreement, lest a rival make a bid to canvass support for a still higher claim." He was strongly of the opinion that the country could not afford to wait for the natural development of strong unions, and maintained that it was absolutely essential that one trade union should be recognised as the bargaining agent in each unit and that where there were rival unions a ballot should be taken among the employees.

The Labour Adviser stated his case as follows: "It is worth considering whether the Trade Union Act should be suitably amended to give the status of bargaining agent only to a union having sufficient majority amongst the workers. It is desirable that for one unit there should be one bargaining agent which should be voted to power for a limited period, and if its authority is not challenged it should continue to remain in power."

A few years ago there would not have been unanimity among labour officers on the subject of recognition of trade unions and of a single bargaining agent, but many labour officers now know the frustration of attempting to build up sound industrial relations with rival unions around the corner. A case was quoted of a large engineering concern which had a recognised union whose efforts had achieved very substantial results for the workers, but certain outside trade unionists became jealous of its success and tried to force outsiders on the committee. When this was turned down by a vote of the workers, other means were attempted to undermine the recognised union, and eventually a minor cause of discontent in a particular department was fanned until it broke into an open riot, and fighting between the rival unions. Similar examples can be multiplied from many parts of the country.

There are still, it is true, many employers who do not recognise trade unions in their concerns. No jute mill has a recognised union, although discussions with the unions take place at the level of the Indian Jute Mills Association. Other companies may recognise their unions but give them little chance to function effectively.

There is no doubt that at first when rival trade unions began to spring up many employers thought this an excellent opportunity for applying the old adage "Divide and rule"; but they have found that this does not work in the present day. Fifteen employees can get themselves registered as a trade union, but

March 1, 1958

they can also raise a dispute and have it referred to adjudication, despite the existence of an agreement with another recognised union. "Divide and rule" has not helped the employers; the unfair labour practice of intervention in trade union affairs and encouraging rival unions has returned like a boomerang. Those employers who have tried to play fair and to negotiate honestly with their recognised unions have found themselves also accused of unfair labour practice. The more successful negotiation in the past, the more often settlement has been reached by collective bargaining, the more easy is it for a rival union to raise the cry of 'dalal' or 'stooge' against the recognised union. And eventually such propaganda has its effect, for after all the employees do not really know what goes on behind the doors of the joint conference room, and they have a suspicion of their own leaders as well as of authority—the suspicion, born of ignorance, of the illiterate for his more fortunate, lettered friend, even when the latter comes from his own class, and when, as so often happens, he comes from a different class, the suspicion is heightened.

Out of this present chaos opinion is definitely veering towards appreciation of the need for strong, national trade unions. Strong unions may mean harder bargaining, but at least they will introduce an element of stability and bring with them a sense of responsibility for carrying out agreements fairly negotiated. They should prevent such sad spectacles as that witnessed at the Engineering Tribunal in Calcutta last week of a trade union president calmly arguing that the recent agreement which bore his signature did not mean that the union had settled their dispute with the company, and that they now preferred to refer the dispute for adjudication.

Opinion is still divided on whether the recognition of a single bargaining agent should be made compulsory by legislation or achieved in other ways, but the Labour Minister can rest assured that action taken towards this end will have the backing of experienced labour officers throughout the country and of many employers also, although others may shake their heads over it. After all, when we have reached the stage of experimenting in workers' participation in management, it is high time that unions were recognised in all industries.

The conference referred to had before it consideration of two main questions: discipline and grievance procedure; and means of developing direct negotiation, joint consultation and co-operation in industry. Both discussions led the delegates back to the need for stronger trade unions, and the third session, which took the form of a symposium on "My Approach to Industrial Relations", approached the same point from a different angle. In a friendly sparring match between the present Union Labour Minister and Mr V. V. Giri, former Labour Minister and present Governor of Uttar Pradesh, the latter took up the theme which he has been consistently urging in recent years that "if you want to have good industrial relations; if you want differences and disputes to be settled at the level of the industry, adjudication has no place. Adjudication should be taken out of the statute book, otherwise there can never be an abiding settlement in trade disputes.... My feeling is that so long as there is adjudication and compulsion in the statute book, strong unions will not come into existence."

Mr Gulzarilal Nanda, who was in the chair, could not resist a humorous dig at his former colleague, when he pointed out that "a Labour Minister cannot take the risk which a person who is not a labour minister at the moment can do. Other persons have been labour ministers, but they did not take that risk then." He then went on to explain that in his

view a strong trade union movement should come into being first before government could take the risk of abolishing compulsory adjudication. At the moment trade unionism had not yet reached that stage of maturity. "Trade unionism, in spite of adjudication, is becoming stronger," he said, "but still for its strength and sustenance it depends upon incitement for getting the support of the workers." If one union came to an agreement with the employer for a 5 per cent increase, another union would say that they should have got 10 per cent. Till workers' education had reached a point where they could understand these things, it would be difficult for the State to keep aloof from industrial disputes. Mr Nanda also pointed out that in 99 per cent of the cases the reference to adjudication came from the workers; if the Government were to take this machinery away, it would be said that it was being done merely in order to help the employers.

It is certainly a quandary. Most people with experience of industrial relations deplore the tendency to rely upon compulsory adjudication, and agree that it is weakening the trade unions; yet Government dare not abolish the system because it is the unions in their weakness who wish to retain it. Yet it is compulsory adjudication in its present form which encourages rival unions. The problem is like that of weaning a baby away from the use of the unhygienic rubber 'comforter'. It has to be done gradually, otherwise the infant will howl. So some intermediate measures must be found.

Mr Nanda said he was quite prepared to make an experiment, and he suggested placing before the next Indian Labour Conference the suggestion that Government should not use its powers of referring disputes to compulsory adjudication for a period of six months and see what happened. He dared not abolish the system at a single step because that would lead to a state of anarchy and might undermine the country's industrial development. He also suggested that a trial might be given to Industrial Courts on the British model whose decisions would not have the force of law but would depend upon the power of public opinion for their enforcement.

A Great Man Goes

MAULANA Abul Kalam Azad's death last week has cast a gloom over the country. He was not merely a great Muslim, he was a great Indian fashioned in a mould which is seemingly fast going out of vogue. It will be off the mark to pretend that he was among the most popular of our leaders. He was not, despite the fact of his uncontested return in the last general election, which it would be more correct to attribute to the Congress's apparently undamaged prestige in the North than to any personal magnetism on the Maulana's part. He represented a paradox in Indian politics where it is well-nigh impossible to strip a person of his popularity to obtain his true measure. He was not a mass man and yet a great leader, a type that democracy tends to eliminate everywhere. He was a leaders' leader, a Triton among the Tritons.

He was a scholar, a man of refinement and a lover of the good things of life which, for him, comprised a long list covering everything from the creature comforts to communal harmony. Not a touch of petty puritanism about him with all its paraphernalia of hardwood bed, hair shirt and grumpy penny-pinching. He saw no necessary relation between a well-furnished mind and dowdy dress or a lack of savoir faire. He was a flower of Islamic culture at its Mediterranean best. A good liver with moderation as his

It was not suggested, though it might very well have been considered, that Government should advise the Labour Commissioners to use their powers of reference sparingly. The Labour Minister of the former Travancore-Cochin State frequently refused to refer cases to adjudication when he felt they were insufficiently urgent. The Kerala Government have announced their intention of using the machinery sparingly. Unfortunately the weak position of conciliation officers in the main industrial areas, confronted with rival unions, attacked from all sides as partial and with insufficient backing from their ministers, has led them, like the trade unions, to lean on the support of compulsory adjudication. If the Labour Commissioner's authority to say "this is a dispute which can and should be settled by the parties themselves, instead of by adjudication" was in some way strengthened, it would be a step in the right direction. It is the general impression that as soon as conciliation proceedings break down the case is automatically referred to adjudication, and so both trade unions and employers pay but perfunctory attention to conciliation proceedings. The Industrial Disputes Act does not require the Labour Commissioner, except in the case of essential services, to refer a case to a tribunal on the breakdown of conciliation proceedings. The operative word in the Act is "may", but in the minds of the parties this is assumed to mean "shall". If there were some doubt about the ultimate reference to adjudication, greater efforts would be put into the task of finding an agreed settlement.

Though most people are afraid to go as far as Mr Giri, the time does seem ripe for making it more difficult to go to the industrial courts. One way might be to make a distinction between quasi-judicial cases, such as claims of wrongful dismissal, and cases for arbitration such as claims for increased wages, bonus, etc. If the unions are to learn to stand on their own feet, they must achieve results by bargaining in the latter cases. In the former cases, however, since much of their support depends on being able to back the individual who loses his job for whatever cause, we may for the present have to continue to send these cases to adjudication.

key-note, he died a fitting death, involving the minimum of suffering—a denouement full of poetic justice such as nature rarely provides.

One of the severest tests of culture is that it should be able to pass through fire without reeking of smoke afterwards. Of this ability, the Maulana gave ample proof. The hazards of a hectic political existence in a country in the bonds of slavery, repeated spells of imprisonment, personal bereavements—he had a full share of them all, yet he remained wonderfully unsoured, his personality enriched and intensified by his experiences. Of the role he played in the country's fight for independence, it should be enough to say that few had such a difficult task to perform. Being a Muslim, he had perpetually to walk on a razor's edge and he often got nasty cuts, mostly from his own co-religionists. The Leaguers had attempted to make him out, man of steel as he was, a wax-doll in the hands of the "Hindu Congress", and whenever he retorted, he did so with cool dignity, never flinging invective for invective. It was an act of supreme self-sacrifice on his part when, at the clamour of the Leaguers, he gave up his right as the Imam of Calcutta to address the Id gathering on the maidan, and he did it without the least fuss. No wonder, although he was no popular hero, millions are mourning his death.

create a slump scare have not met with very much success so far.

At the time of writing the British official policy continues to favour resistance to inflation. There are no indications of a softening of the British monetary policy. This is all the more remarkable as inflationists in Britain are incomparably more vocal than their opponents. A large number of well-known economists have publicly advocated abandonment of resistance to inflation, while most of those who are against such a change of policy are reluctant to commit themselves in public. The whole of the Socialist Opposition in Parliament and in the country have thrown their weight into the balance on the side of inflationists. A large section of the British Press is either neutral or is inclined to flirt with inflationism. Even among Treasury officials there are many who would prefer to take the line of least resistance.

As and when the gold reserve will increase during the next few months pressure on the Government in favour of adopting a more popular monetary policy is bound to gain in strength. Yet whatever the balance of arguments may be in the United States, there is no case for replacing disinflation by reflation in Britain. An increase in productive activity in the United States is liable to reverse the downward trend of world commodity prices. On the other hand, the extent to which a relaxation of the credit squeeze in Britain would increase world demand for commodities would be much more moderate to be a decisive factor in the world trend.

There is everything to be said against the abandonment of fight against wage inflation in Britain. For that fight has not been altogether without results. There have been no major wage increases since last summer, and major wage demands are pressed very half-heartedly by the trade unions. They are beginning to believe that the Government really means business this time, and most trade union leaders are reluctant to precipitate a major showdown. The moment the Government were to show signs of weakening in its determination to fight the battle to a finish, the trade unions would feel encouraged to press their claims with vigour and determination.

Having regard to the stability of wages during the last six months, it may well be asked why the trade unions refused to agree to a wage freeze six months ago. Had they consented to a six months' wage freeze in August there would have been no need for an increase in the bank rate to 7 per cent. If, having learnt their lesson, they were to consent now to a six months' wage freeze, it would be possible to lower the bank rate and relax the credit squeeze. But British trade unions, like their counterparts in the United States, are too much under the influence of their "Fools' Paradise Economics" favouring a non-stop rise in money wages to be willing to consider such a course.

—Copyright

Prospects for Next Season are Better

TEA is selling quite well at all the main auction centres. There is some irregularity at times; but, where quality is maintained, prices are generally maintained or a little dearer. Dealers do not expect prices to show much change for the rest of this season, provided the Colombo unrest does not flare up again.

A noteworthy feature of the current season is, that, for the first time in some years, a fairly close balance between supply and demand has been achieved. It is, therefore, hoped that the next season will start reasonably well. It is generally felt that the limit of production has been reached in Ceylon and it will not be surprising if her output, this year, falls short of last year's total.

As far as North India is concerned, an expansion in output is likely in view of the areas newly planted. A section of the trade has the feeling that the effects of the past year's drought may reduce production, while some estates may not be able to obtain their full requirements of artificial manures in view of the foreign exchange shortage.

There is also a general feeling that the output as well as exports from Indonesia may suffer in view of the uncertain political situation there. But, East Africa is expected to produce as much as she can, as production costs in that area are lower. It, however, appears that Indian tea will be advantageously placed if the domestic markets are properly expanded.

In the Export Sale held in Calcutta this week, offerings were 59,919 packages. Although there was a fair demand, price movements were rather irregular due to lack of consistent support. Commons, Low Medium Broken and Fannings declined by 4 to 6 nP per pound, while Clean Black ones, especially the Fannings as well as the leafy BPs, were frequently dearer. Low Medium BOPs and OFs were about steady; but the brighter liquoring ones were strong and tended dearer, especially the OFs.

Good CTC sorts were readily taken up by the buyers at or about 10 nP below valuations, while the best in this category were strong and sometimes dearer. The poorer types were rather irregular and there were some withdrawals, too. Plain legg-cut teas were about 4 to 8 nP easier; but the brighter liquoring types were sold well and were often

dearer. Whole Leaf grades were about steady.

Darjeeling teas met with fair demand, especially those with flavour or attractive leaf appearance which were generally sold above valuations. Following rates were quoted:—Clean Black Pekoe Rs 2.25; Plain BP Rs 1.48 to Rs 1.52; Plain Fannings Rs 1.56 to Rs 1.60; Medium BP Rs 1.56 to Rs 1.60; Medium Fannings Rs 1.74 to Rs 1.78; Best Assam CTC BP Rs 2.70 to Rs 2.90 and Medium Fannings Rs 2.80 to Rs 3.00.

In the Internal Sale, offerings amounted to 19,663 packages of Dusts for which there was a better general demand than last week and prices for all descriptions, except the plain CTC types and Darjeelings without flavour, were dearer. There was improved enquiry from the Middle East buyers this week. Doors and Assams of orthodox manufacture, when they had clean black leaf appearance, were generally dearer, while the remainder were firm.

Good liquoring CTC types were about firm, while the best were occasionally dearer; but the plain liquoring kinds were easier. Following rates were quoted:—Medium Doors Dust Rs 1.60; Medium Assam Grainy Dust Rs 1.62; Medium Assam CTC Dust Rs 1.75 to Rs 1.95 and Best Assam CTC Dust Rs 2.80 to Rs 3.10.

Also, 3,352 packages of Leaf grades were offered for internal consumption. There was a good general demand; but prices were irregular and occasionally in buyers' favour.

In the Export quota section, rates moved between 4½ and 7 nP per pound and business was reported done between these levels. At the close of the week, the rate was quoted at 6 nP per pound.

In the Colombo market, offerings this week were 6,723,836 pounds. There was a strong general demand with best liquoring Broken dearer on quality; but below the best were rather irregular and generally easier. Small Leaf low-grown were 5 to 10 cents per pound easier; but Persian Gulf types were firm as the sale progressed. Better liquoring and bright Fannings followed the trend of Broken; but Medium types were somewhat firm to dearer. At the close, the sale of the Middle East teas registered firm to dearer prices; but a firm demand prevailed for other teas, which were irregularly easier. All centres operated quietly with no Russian interest evident.

Although the movement of tea in the Colombo Port has somewhat improved, the market there is still affected with uncertainty about the export duty and the basis on which it should be levied. Crops are slightly lower than in the previous year; and there is no immediate prospect of fine quality tea being available.

In the Cochin market, about 1,300,000 pounds were offered. There was a very useful all-round selection, particularly of high-grown teas. Low Medium and Medium teas met with a useful enquiry at 5 to 10 nP per pound below last rates. Good Medium

teas and best liquoring high-grown encountered some competition and, although rates were often below valuations, they were above last prices. There was a rather better demand for high-grown Fannings. There was a strong demand for Whole Leaf grades at dearer rates. The next auction will be held on the 4th March.

In the tea sale held at Chittagong, offerings were 13,326 chests of Leaf grades and 3,467 chests of Dusts. With a few exceptions, the offerings of Leaf grades were a dull end-of-the-season lot. Demand, although irregular, improved as the sale progressed and, at the close, bidding was fairly brisk. The weakest feature were Fannings, which shed about As 3 per pound, while the Commonest sorts were frequently down by As 4.

There was an irregular demand for all sorts of Dusts. The leg-cut varieties and quality teas were well supported, selling around valuation and sometimes a fraction dearer. The remainder were, on the average, an anna per pound easier. Plain Sylhet Dust was quoted at Rs 2-5-0 per pound.

The polished grades of Green teas, on offer, were readily sold at around As 2 to As 3 per pound below last rates; but the offerings met with keen competition at or even valuation. The next sale will be held on the 12th March, 1958.

In the Djakarta market, offerings were about 1,500 packages. Demand was again good for all good liquoring teas; but, due to the continued scarcity of offerings, only a small quantity of sales was recorded. Good Medium to best quality Broken changed hands at higher rates, while lower kinds also shared in the general advance. Leaf grades continued to meet with a good enquiry, although no sales were recorded so far. Dusts, with the exception of high-grown, were a quiet feature.

In London auction, offerings were 23,522 packages including 19,235 packages of Northern India and 966 packages of Pakistani teas. The market proved generally strong, especially for colour Fannings and Orange Fannings. Thin liquoring Assams were sometimes easier to buy; but this weakness was lost in the keen tone of the market. The few invoices of Doors with cold-weather flavour were sold extremely well and prices realised were above broker's valuations. Good demand for clean plain teas was still evident and no quotable change in the price was recorded.

Stocks in London, as on the 14th February, were 123.58 million pounds as compared to 120.56 million pounds in the previous week and 83.48 million pounds a year ago. Landed between 8th and 14th February were 13.81 million pounds, while deliveries were 10.80 million pounds. Total afloat was 39.32 million pounds including 30.59 million pounds from Calcutta; 347,380 pounds from Chittagong; 2.19 million pounds from Cochin; 3.52 million pounds from Colombo and 2.68 million pounds from other Ports.

Indian Finance

March 1, 1958

Budget of Calcutta Port for next year

THE Commissioners for the Port of Calcutta have presented their Budget Estimates for 1958-59, and the position was particularly clarified by a Note very ably drawn up by the Chairman, Mr R. K. Mitra. In drawing attention to the Revised Estimates, which show a distinct improvement in revenue, Mr Mitra has pointed to the difficulty of assessing with any degree of accuracy the tonnage that is likely to be handled by the Port, in view of the uncertainties in imports as a result of the tight foreign exchange position. Indeed, it was caution arising from this recognition of a difficult foreign exchange position which led to the conservative estimates drawn up in the Budget for 1957-58. The Revised Estimates for the current financial year disclose that tonnage handled by the Port exceeds the original figure by 1.7 million tons to be placed at 10.1 million tons. Foodgrains and flour account for an increase of 300,000 tons, ores contribute another 300,000 tons, coal handled has risen by 200,000 tons, movement of petroleum and lubricating oil was higher by 150,000 tons and other cargo, especially iron and steel and machinery, was placed at 800,000 tons higher. It is expected that tea exports would be 15,000 tons lower, so that the net increase in cargoes handled by the Port would work out to 10.1 million tons.

This has naturally had a favourable impact on the revenues of the Port. As against the Budget figure of Rs 10.15 crores, it is now expected that revenues will amount to Rs 12.20 crores. It is heartening to note that, while such a favourable turn has been experienced in revenues, the Commissioners have succeeded in having a rigorous control upon expenditure. For, the Revised Estimates of expenditure are merely Rs 29.29 lakhs higher at Rs 10.82 crores. Such a net increase has taken place after a number of adjustments, among which the most important may be mentioned. On the one hand, the heads under which increases in expenses occurred totalled Rs 80.40 lakhs, the main rises having occurred under dearness allowance (Rs 11.50 lakhs), maintenance and repairs (Rs 11.75 lakhs), miscellaneous (Rs 35.22 lakhs) and interest and sinking fund charges (Rs 9.55 lakhs). This was largely offset by decreases under other heads for a total of Rs 61.11 lakhs, this being rendered possible mainly by a

decrease of Rs 45.65 lakhs under Labour. In the result, the expenditure of the Port showed a net increase of Rs 29.29 lakhs.

Thanks, however, to the very substantial increase in revenue, 1957-58 is expected to produce a surplus of Rs 1.38 crores as contrasted with the Budget deficit of Rs 39.97 lakhs. The Chairman has indicated that the original estimates "were prepared on a conservative basis keeping in view the possible fall in imports as a result of the difficult foreign exchange position".

As far as the Budget Estimates for 1958-59 are concerned, the Chairman qualifies his remarks with the statement that, because of the severe restrictions on imports, "it is difficult to forecast with any degree of accuracy the probable trend of trade during the coming year". Nevertheless, the present estimates indicate that the tonnage likely to be handled by the Port during the Budget year would be 10.7 million tons. The anticipated revenue is Rs 11.97 crores, and the expected expenditure is Rs 11.16 crores, so that the anticipated surplus is Rs 80.90 lakhs.

But, mindful of the foreign exchange difficulties, Mr Mitra advocates "rigid austerity as in the previous years on all items of Port expenditure". Nevertheless, the Port is doing its bit to ensure that it will be equipped to facilitate the handling of developmental cargo that has to pass through Calcutta. To this end, the Port has its own Second Five Year Plan schemes. Thus, in the matter of capital expenditure, work in progress and firm contractual commitments for 1957-58 are placed at Rs 3.28 crores, of which Rs 2.96 crores relate to Second Plan projects. This expenditure is to be met partly from the Rs 1.40 crores brought forward from the previous year, and the balance will be secured as to Rs 1 crore by loan from Government and as to Rs 1 crore by contributions from revenue out of the year's surplus. It is also noteworthy that, during the current year, the Commissioners floated a 30 year 4½ per cent Loan of Rs 1.24 crores for repaying uncanceled debt against the 5 per cent 1927-57-87 Loan of Rs 1.5 crores.

Estimates for the capital budget for 1958-59 place expenditure at Rs 5.43 crores. Moreover, expenditure on unsanctioned capital works is put down at Rs 1.47 crores. On this basis, Mr Mitra remarks that the Commissioners will need to have recourse to Government for Rs 6 crores. Moreover, a loan of Rs 1.3 crores is to be raised for repaying uncanceled debt against the 5 per cent 1928-58-88 Loan of Rs 1.5 crores. Lastly, the capital account is to close at a credit balance of Rs 20.89 lakhs.

Altogether, the Calcutta Port Authorities are to be congratulated for having risen commend-

ably to the occasion in tackling the onerous responsibilities posed by the Second Plan. Its past performance should not, however, permit complacency to creep in. The tasks in the future are going to be as arduous and the Calcutta Port will have a busy time. But we cannot help wondering whether the creation of a subsidiary port at Geonkhali, under the direction of the Commissioners for the Port of Calcutta, will not go a long way in solving the problem of congestion of cargo at this major port.

"The Philosophy of Despair"

When, in August last year, the UK Government set up a Council on Prices, Productivity and Incomes, trade unions were apprehensive that the newly created body would view wage increases with a jaundiced eye. That apprehension has more than materialised, for, in its first Report issued last week, the Council has reached certain conclusions none of which will find favour from the trade union or labour point of view. While there can be no disputing the need for stopping inflation, the method by which such an end is to be consummated, at least as suggested by the Council, is likely to arouse a bitter controversy. The Council says, in brief, that the crux of the inflation threatening the British economy lies in untoward wage increases. So, it has recommended that wage increases should be kept to the minimum. Here, again, it must be conceded that, other things—especially production—being static, higher wages must be resisted. But, surely, the Council has gone too far in stating that wage increases should not necessarily be linked with cost of living or—and this is what is questionable—productivity. For, the linking of wages to cost of living can act as a continuing inflationary spiral. But, if there is an improvement in productivity, it is hardly equitable to deny a part of the benefit accruing therefrom to labour. Not content with this, the Council has also indicated that it could not at the present time recommend physical controls over investment, or controls over prices, or subsidies, or limitation of dividends. This, of course, is likely to exacerbate labour grievances. Is it just that higher productivity should pave the way for a stepping up in the dividend rate, but that it should not necessarily be grounds for a wages claim? Small wonder, therefore, that the Report, approving as it does the Government's "tough" money policy, should be considered by union leaders as being "archaic, out of touch with modern times and the philosophy of despair".

At one time, it was thought that the exit of Mr Peter Thorneycroft signified a change in Government economic policy. But it now appears as if, under New Management, the Enterprise is to be conducted as before. Plus ça change, in other words, plus c'est la même chose.

Jay Engineering Works

THERE is an implication in the decision to raise Indian steel production to 6 million ingot tons, which, we are afraid, tends generally to be overlooked. That is, that, unless auxiliary industry is also set up, we may have a surplus in steel, notwithstanding the demands arising from such sources as the Railways. Of course, such surplus availability could always be exported, but, surely, it should be the objective to export finished goods rather than raw materials. To this end, it is clearly desirable that the so called light engineering industry should be given every initiative to develop.

On the part of the industry, it is heartening to note that there is to be discerned a resourceful attempt to add to productive capacity. Details were available last week of the steps taken by one important unit, the Jay Engineering Works.

The Planning Commission have estimated the probable demand for sewing machines by the end of Second Plan at 300,000. Manufacturing licenses given by Government cover this target, and the Jay Engineering Works, it is intriguing to note, have received permission to increase their capacity to 300,000 from the present 120,000.

In regard to another light engineering product, electric fans, the Development Council found it necessary to raise the target for the Second Plan from an annual rate, originally fixed, of 600,000 units to 900,000 units. This is because, in addition to rising internal demand, an export market is also being built up slowly.

Jay Engineering can take legitimate pride in the fact that they figure as a worthy earner of foreign exchange. Exports of fans by the company last year fetched over Rs 18 lakhs; and the prospects, of course, are that overseas demand—on the basis of the very satisfactory quality of Indian fans—will rise considerably.

In respect of sewing machines, exports by Jay Engineering fetched in Rs 8 lakhs in 1957. Present indications are that exports may increase sevenfold; and so too, naturally, exchange earnings.

It is units like Jay Engineering which have to be afforded every incentive to add further to manufacturing capacity.

★

Scope for Further Progress

Perhaps there are very few industries in the country which could stand comparison with electrical engineering industry in point of performance during the course of the last few years. The industry at the beginning of this decade occupied an insignificant place and filled up only a fraction of the demand for electrical goods in the country.

The remarkable progress made by the industry would be best appreciated if it is put in terms of figures of production in the two major lines of activity with which

Pakistani Target for next Jute Year

WHY they bother to do so, I really don't know. By they, I mean the Pakistani jute authorities; and what it is that they do, and which I don't comprehend, is the "official" fixation of the jute crop. Each year that passes witnesses the farce of a target for raw jute production; of official estimates of crop that provoke incredulous amusement; and of trade estimates which show that there is no prospect whatever of the raw material being in short supply. All that happens is a self-deluding satisfaction that an attempt has been made to mulct higher prices; for, in the event, such attempted ransom proves a failure as there is nobody, but nobody prepared to give credence to official figures or pay the higher prices.

Evidence was available last week of the true state of affairs in the Pakistan jute market. Reports are current that the Pakistani Jute Board has taken action against eight firms doing business in that country. The charge? That they had collusively depressed the market, by dint of sales at lower than prevailing market rates. But the point precisely is that the quantity of raw jute available for sale could be disposed of only at lower than market rate. May I suggest that there are some in our neighbour country, who appear to think that the Korean war boom in commodities continues to be experienced? It is very far from a seller's market that we today have in raw jute or, for that matter, in jute goods. Consequently, it is unrealistic to hope that prices can be maintained.

I am afraid that Pakistan has cooked its own goose; and neces-

sarily my comments relate only to the raw jute position. For, by trying to extort high prices from its customers, it has succeeded in pushing up the cost of production of Continental mills to such an extent as to destroy the competitiveness of Continental jute goods. I hope I am mixing no metaphor, when I go on to suggest that Pakistan is stewing in its own juice. The intention may have been twofold: on the one hand, to imbue the sparse indigenous jute goods production with an advantage in export markets; on the other hand, to handicap the Indian industry by postulating a high cost for the so-called superior quality of Pakistani jute.

But, I repeat, the scheme has backfired, it has boomeranged on Pakistan. Let me explain.

What was altogether unintended happened: the position of the Continental mills was rendered weaker. What was furthest from the objective occurred: Indian jute goods were stronger placed. The totally unexpected was a rude shock: demand for Pakistani jute declined.

I should not be taken to mean that all's well with the Indian World of Jute. But then, it has always been the experience, uniquely of this industry, to suffer cyclical prosperity—or is it depression? And, at the present time, we are in the midst of one of the periodic slumps. That, however, does not mean that there is no prospect of a change for the better. Indeed, it is certain that the retrogression has had a long enough currency, and there is reasonable hope of a much more cheerful jute year in 1958-59.

Pak animosity has been the salvation of the Indian industry. Were it not for the obstacles that Pakistan placed in the way of raw jute exports to India, we would never have plucked enough courage to have self-sufficiency in raw jute as our objective. We have succeeded spectacularly well, and Pakistan knows it only too well.

Back to the present: As I reported at the beginning of this despatch, the target for raw jute production in East Pakistan for the jute year 1958-59 has been fixed; the figure is 5.5 million bales. I suppose that we may confidently expect, always providing that the weather gods, by not visiting drought or floods, are unkind to Pakistan, that actual production will turn out to be in the environs of—shall we say—7.5 million bales. In due course, we shall be informed that, miraculously, the output was slightly below the target; and, meantime, reports will be finding their way abroad, that unlicensed production for 2 million bales was destroyed! The most unkindest cut of all will be when the trade estimates place the crop at—strange, isn't it?—7.5 million bales.

But I am anticipating. The crop is to be 5.5 million bales; the carry forward will be—as already determined by the authorities—0.6

million bales. World (sic) demand, according to the Pakistan Government, would amount to 5.7 million bales; internal consumption will take care of the rest; and there will presumably be no raw jute carried forward into 1959-60.

I would again draw attention to the phrase used: "world demand". What of the Indian jute goods industry? Is it to be kept out of the reckoning? I suppose what was intended to be meant was the net effective demand for Pakistani jute; and if so, I fancy that the authorities have been rather liberal in their estimates. My impression is that the "world" demand has tended barely to touch the 5 million bale mark in recent years.

As far as the carry forward into the next jute year is concerned, no trade circle would not but place it at three times the official asseveration. In a word, the supply of Pakistani jute during the current jute year will certainly be substantially in excess of "world" demand; and, unless the weather is really bad, there is little prospect of any improvement in the position as far as Pakistan is concerned: Outlook, over-production as before.

It is a trifle early to talk of the next Indian raw jute crop. So, I shall content myself in the current article with what debunking I have been able to do in respect of the Pakistani jute figures.

★

The jute markets had been very much depressed during the past week with conditions at one time becoming akin to panic. The sacking section of the goods market had to bear the brunt of the selling pressure. As against last Thursday's closing rate of Rs 97.75, B Twills Ready was done as low as Rs 93.90 on Monday. Hessian 40" x 10 oz Ready was also weak on that day quoting at Rs 37.80 as against Rs 38.90 at the beginning of the week. The undertone, however, steadied up from Tuesday on bear covering presumably stimulated by reports of fixation of minimum prices for ready jute goods. It was reported on Wednesday that all IJMA mills had agreed not to sell below Rs 100 and Rs 39.50 for B Twills and Hessian 40" x 10 oz, respectively. The news was greeted with a spurt in prices on Wednesday and the market closed as follows: Hessian 40" x 10 oz Ready Rs 39.50 and B Twills Rs 97.00.

The jute goods market opened the week on a quiet note in the absence of foreign enquiries. Locally also buyers were conspicuous by their absence. Hessian 40" x 10 oz Ready was finally placed at Rs 38.90 while B Twills was marked down to Rs 97.75. In the forward deliveries April-June Hessian 40" x 10 oz was quoted at a small premium at Rs 38.95 while B Twills was marked at Rs 99.00. Nervous selling characterised trading on Friday with B Twills reacting to Rs 96.30. Hessian 40" x 10 oz was however almost unchanged at Rs 38.89. Elsewhere

B Twills April-June was on offer at Rs 97.80 while Hessian 40" x 10 oz was placed at Rs 38.87.

Panicky conditions prevailed on Monday as sellers dominated the proceedings the whole of the day. With mills also coming out as sellers toward close prices declined sharply all along the line. B Twills Ready lost Rs 2.40 to be finally placed at Rs 93.90 while Hessian 40" x 10 oz also lost more than a point to come back to Rs 37.80. April-June Hessian 40" x 10 oz was placed at Rs 37.85 and B Twills at Rs 95.25.

After a quiet opening on Tuesday the market steadied up in later dealings on bear covering. Hessian 40" x 10 oz Ready improved by 20 nP to Rs 38.00 but B Twills was only 10 nP higher at Rs 94.00. In the forward delivery positions Hessian 40" x 10 oz was quoted at Rs 38.00 while B Twills was done at Rs 95.65. The recovery movement gained further momentum on Wednesday on news of fixation of minimum prices for Hessian 40" x 10 oz and B Twills. By close of transactions on that day, Hessian 40" x 10 oz Ready had gained Rs 1.50 to quote at Rs 39.50 while B Twills recorded a gain of Rs 3 to advance to Rs 97.00. Hessian 40" x 10 oz April-June also improved to Rs 39.06 and B Twills for the same position was placed at Rs 98.65.

The raw jute market had closely followed the trend in the goods section. After opening on a quietly steady note with Assam Bottoms quoting at Rs 23.75 the market developed a sagging tendency in the subsequent two or three days in sympathy with the goods market. When there was panicky selling in the goods section, raw jute holders were also inclined to discount rates and in the continued absence of mill interest prices declined sharply and on Monday Assam Bottoms were quoted Rs 22.50. From Tuesday the downward trend was arrested and a steadier tendency was noticeable with Assam Bottoms recovering to Rs 23.00. With mills evincing interest presumably on account of the sharp improvement in prices in the goods section, the raw jute market also steadied up further on Wednesday and Assam Bottoms added one full point to its rate to be finally placed at Rs 24.00 per maund.

PRICE TRENDS DURING THE WEEK.

	Week's Opening	Week's Closing

the industry is concerned, namely electric motors and transformers. Production of the former increased from 1,42,800 H.P. in 1951 to 4,50,000 H.P. in 1957 while production of the latter showed a steeper rise from 1,95,600 K.V.A. in 1951 to 11,95,000 K.V.A. in 1957. What these figures conceal is the fact that the industry is now in a position to meet the needs of the country for electrical engineering goods to the extent of 90 per cent of the national demand, for almost all kinds of goods barring Commutator and Flame-proof motors. The

main stimulus for such hectic activity was provided by protection which was granted to the industry. But an expanding market which schemes for power generation and distribution undertaken by the Government of India assured would explain for part of the increase in production that was witnessed in the electrical engineering industries.

The rapid strides made by the industry notwithstanding, it would be wrong to conclude that the industry has reached the limits of its growth. Considering the low

level of industrialisation and the low per capita consumption of electrical energy the scope for further progress is still vast. Therefore it is necessary that the limitations in the way of smoother progress of this industry should be removed. The existence of such uncertainties was revealed by Mr N. R. Banerjee in the course of his presidential address to the Tenth Annual General Meeting of the Indian Electrical Manufacturers Association in Calcutta. The major problem before the industry according to Mr Banerjee is that

of securing adequate raw materials especially pig iron and mild steel which are in short supply in the country. A slackening of demand by the Government has rendered the extensions to manufacturing capacity, largely futile. He has also referred to regional lapses in the assistance rendered to the industry by the DGS & D and Stores Purchase Departments. Finally the complaints Mr Banerjee has made about imports of even restricted types of motors have to be looked into if there is to be sufficient offtake of indigenous goods.

A wonderful experience... dining out at 20,000 feet

Aloft, aboard your Clipper*, you settle back relaxed. You're flying the World's Most Experienced Airline—it's a wonderful feeling.

Scan The President service menu from Maxim's of Paris, offering three entrees, Filet Mignon, Rock Cornish Game Hen and Lobster Americaine. A second perfect cocktail sets the mood for dinner.

Your meal is served. Vintage wines Bordeaux Grand Cru Classe, Pouilly Fuisse 1953 and Champagne, Charles

Heidsieck 1952, blend perfectly with your entree. You see why Pan American is famous for its international cuisine. Dessert... after dinner coffee, liqueurs, and the unique fulfillment of that after-dinner cigarette. Your wishes have been pleasantly anticipated. This is Pan American's President service, backed by 30 years of experience.

It's easy to see why experienced travellers have made the Clippers a pleasant international habit. When you next fly—call your Travel Agent or one of Pan American's over 800 offices around the world.

March 1, 1958

WITH the conclusion of the debate in both the Houses of Parliament, the curtain has been rung down, at least temporarily, on the exciting drama of L'affaire LIC Investments. It is time, therefore, to gather such wisdom as one can from all that has been aired in the last two months. But, before we start doing it, let me dispose of some of the preliminary courtesies and congratulations. Almost every member of Parliament taking part in the debate referred to the part played by the sovereign body to which he had the honour to belong in bringing into the open this murky affair. Mr Nehru himself referred to the fact that the inquiry has vindicated the dignity and majesty of that august assembly. There is no doubt that this patting on the back is legitimate. The persistence and, one might add, caninness, with which Mr Feroze Gandhi brought matters to a head in November and December last and the readiness, in fact over-readiness, of the Government to have the matter thoroughly investigated showed clearly that Parliament is wide awake and we have among us that essential requisite of democratic good Government, Parliamentary gadfly. So far, so good.

The country, too, is to be allowed its mead of praise on the same token. This inquiry has demonstrated again the way this country functions in matters involving the public responsibility. Comparisons are invidious and in any case the point need not be laboured. In some countries that we know, a situation of this sort would have been dealt with in either of two ways: it would either have been completely hushed up, or, if the situation demanded it, the heads of those involved would have literally or metaphorically rolled in the dust without their having a say in the matter. Indeed, in the course of the debate, some of the members demanded precisely this kind of justice to be administered to some of the civil servants involved. Even as they were complacently patting the Parliament on the back for its "democratic victory", Communist members were wanting to get Mr Patel dismissed summarily. This completely gave away their democratic pretensions. On the other hand, the decision of the Government to allow departmental rules to govern the future

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

of the civil servants concerned is in strict conformity with democratic code and demands of natural justice.

As regards the debate itself, it was of uneven quality. It was, perhaps, inevitable that personalities should loom large, since the Commission was primarily concerned with investigating particular acts and with the fixation of specific responsibilities. And even so, some members safe behind the immunity of parliamentary utterances hit out wildly at folks who were in no position either to defend themselves or to hit out with assurance of similar immunity. While we are all anxious to allow Parliament to scrutinise as closely as it wishes into the lives of those who are in position of authority, the tendency to make legislatures the forum for cowardly attacks on people who do not belong there can degenerate into the worst kind of tyranny.

One other aspect of the debate is worth commenting upon. Mr Krishnamachari's little stratagem in his final speech succeeded beyond all hopes. Many members, especially of the Communist party, chased happily all the various red herrings he had strung all along the tracks. Thus, the man-eater and other wild animals supposedly prowling around the environs of our economy were pursued with vigour. But the humiliating discovery at the end of the chase, which was evident to all but the happy hunters, was that they were chasing shadows. Meantime, the real subject of controversy was left in tact on the high road.

On the factual side of the inquiry, the debate in the Lok Sabha only proved how inconclusive the present ascertainment of the real truth was. Mr Feroze Gandhi confirmed further his already well established reputation as an industrious producer of skeletons from cupboards. (I wonder whether it is not worth investigating how he has such apparently easy access to secret cupboards). There was an unexplained telegram and a top secret note in which Mr Krishnamachari had apparently expressed himself dissatisfied with the working of the LIC. Incidentally, this revelation of TTK's manner of expressing himself, even in secret

documents, has not enhanced his reputation as an administrator. We all have our notions about others, but we do express ourselves, even in the security of top secrecy (now proved illusory), with a becoming sobriety. These and other data will presumably be sifted further and we shall hear more about it later. It is very much to be hoped that this inquiry, held in the anonymity and obscurity of departmental proceedings, will succeed where the open inquiry failed, namely, the eliciting of positive evidence of the motives behind the transactions. Quite conceivably, it may produce the ultimate motive to which I referred last week. In which event, Mr Justice Chagla's finding, on admittedly inadequate material, that the force behind the transactions was the desire to help Mr Mundhra will get firmly established.

Another aspect of the debate was the desire on the part of some members to obtain from Government the clarification about Government's own view of the factual responsibility of TTK for the transactions. It will be recalled that the motion on the Report before the Parliament was to obtain Parliamentary approval for the statement of the Government that the Government accept the Commission's finding that the transactions were irregular and that they propose to initiate proceedings against the officials concerned and to consider carefully the principles recommended by the Commission for adoption by the Corporation and the Government in regard to the running of the LIC. As will be seen, this has carefully omitted any reference to the Finance Minister and his factual or vicarious responsibility. Perhaps, the Government's naive hope was that members would take the view that the portions relating to the Finance Minister were of no particular significance one way or the other, since the Finance Minister had, in fact, resigned. As was only to be expected, this hope, if such it was, was falsified soon enough. For one thing, many a member has been sharpening his political knife for precisely this kill and he is not going to be diverted at the last moment by a simple expedient like resignation. Secondly, the Finance Minister had made matters somewhat complicated by denying in his statement both factual and

constitutional responsibility. Thus, Government's assertion that they have accepted the Chagla Commission's Report was, on a reading of the motion, only partially true.

Though many tried to bring the matter to focus, the only person who really and unambiguously brought it to a head was Pandit Kunzru. This was just as well, since it brought Mr Nehru on his feet and, in the ensuing exchanges and clarifications, it became clear that Government had not accepted the factual responsibility of Mr Krishnamachari for the deal. Mr Nehru asserted that there was no finding by the Commission that Mr Krishnamachari gave any factual approval of the deal. It is true that Mr Chagla had given as his own opinion that there must have been a prior approval or at least subsequent acquiescence. But the basis for this, as found in the Commission's Report, is quite tenuous. As Mr Nehru argued, a reference in a casual conversation of about a minute or two on one's way to lunch after discussing entirely different subjects cannot be construed as a basis for assuming that the matter has had the necessary approval.

In this connection, there is one aspect of the matter that has not had the proper emphasis in discussion. It is the possibility, admitted by all during the evidence, of both the principal Secretary and the Minister being right, at least in a manner of speaking. Is it not possible that the conversation has been construed entirely differently by the two persons concerned? For, it is significant that there is no variation in the factual material let in on the incident by the two persons. "You may look into it" is an expression that can be considered by the man in authority as a mere casual suggestion. To the technical subordinate at the receiving end, it may be an approval. This kind of misunderstanding may have taken place in other contexts also, but since the consequences on those occasions may not have been vastly different on the basis of either understanding, no piquant situation as in the present case might have arisen. After all, human communication is so imperfect even when one takes care, as in a formal document, to define one's terms. People who

have read some of the stimulating books of the American political scientist Stuart Chase will have some idea of how different memory pictures that words evoke in different persons are responsible for three quarters of the confusion in the international scene today. On the lesser scale, we have the daily misunderstandings, some of which have serious consequences, as in the present case. The moral, of course, is that there should be greater precision in making known one's intentions and ascertaining the correctness of one's understanding, even when exigencies of business make it difficult to give or take written instructions.

★ Another lesson of the inquiry was about the need for greater preliminary work before an actual inquiry takes place. Mr Nehru referred to it more than once, and there is absolutely no doubt that he is right. Many members thought that Mr Nehru was being specious about his complaint of having been hustled into the inquiry and some were even inclined to be cynical about the real purposes of a preliminary inquiry. But the many awkward moments that arose in the course of the inquiry, the pervasive atmosphere of incompleteness, were certainly due to the lack of sufficient preparation. In the result, when a dead end was reached, the considerable resources of the Commission, the Attorney General and the other counsels who assisted at the inquiry were helpless. The flat footed policeman who

does the routine job of gathering the material is best left to him and the judge should not be embarrassed, as Justice Chagla undoubtedly was in this, of feeling that the truth has not come out and that there is nothing he can do about it.

★ Finally, we come to the seven principles that the Commission had recommended as a code of conduct for the running of the Corporation. The enunciation of these principles, it may be said without disrespect to the learned judge, was not part of the terms of reference of the Commission. These are essentially not judicial questions, not even, in some of their aspects, administrative questions. They are essentially political. Indeed, certain things said during the inquiry had made politicians somewhat irritated at what they considered as needless poaching on their preserves. But all this does not mean that Mr Chagla's suggestions do not provide a starting point for discussion of the issues involved. The answers are not easy and Government were certainly wise in deferring their consideration to a future occasion, and Parliament was sensible in agreeing to it. Indeed, it would be worth while and I hope the editor would consider the suggestion, to bring out a special study on the subject. Any such study will have to consider, among other things, the place of open market operations in the context of LIC investments. There is no doubt that part of the difficul-

ties of the LIC in the last one year arose from the absence of a coherent investment policy. Indeed, TTK was aware of it and was evolving a suitable policy and was preparing a bill to give effect to his ideas on the subject. Two points I wish to make here in this connection are: The recent unhappy experience of the LIC is likely to make it withdraw into a shell as far as open market operations are concerned. This would, in my view, be a pity. I believe that with the evolving of suitable conventions and safeguards, the LIC can have a function somewhat analogous to the Reserve Bank. The theory that LIC's funds can be employed only in 'safe' investments because of its being in the nature of a trust, is one that needs several qualifications. In the first place, the real security to the policyholder is the fact that ultimately Government are the guarantors of the moneys they pay in. So no real jeopardy threatens the policyholder when intelligent open market operations are carried on by the LIC. Indeed, as the largest investor, (having a daily fresh investible fund of over ten lakhs) it must do this in order to safeguard its own large investment portfolio. Secondly, as Mr Nehru was quick to point out, the nationalisation of insurance has wider implications from the point of view of the Second Plan. He stated that the policy in this regard cannot be dictated by the Investment Committee. And the directive will have to come from the Government under Section 21 for purposes which many now consider as not strictly legitimate in the narrow view of the function of the LIC that has suddenly become fashionable.

★ My second comment is simple. Do people (especially enthusiasts of free enterprise) realise the full implications of the suggestion that the LIC should invest only in blue chips? In less time than it takes you to say Jack Robinson, Indian Iron would be Government property. Alternatively, LIC will have funds which it cannot invest. It is all very well to hold up the LIC as an example of the ineptitude of the public sector and suggesting that no private insurance company would have made the kind of investment that the LIC made. The alternative suggested by these people would be the 'Backdoor' nationalisation that they so ostentatiously denounce.

★ The moral of it all is that the whole problem should be studied dispassionately in sensational contexts and a sensible policy evolved. This the Government have promised and all of us should make public our considered opinion in this regard, so that the correct thing may be done.

★ If Lady Ranu Mookerjee was the recipient of the Cross of the Legion of Honour awarded to her the other day by the French Ambassador, Count Ostrorog, on

Indian Finance

behalf of his Government, I do not suppose it was anything but a pleasant surprise for any one in Calcutta. Lady Mookerjee has been the acknowledged patron saint of the fine arts in this State, giving her time and resources without stint to their cause. Anybody who has had anything to do with the art world must think of her as the benevolent discoverer of many obscure talents, and it will indeed be hard to name another, since the heyday of Abanindranath Tagore and Nandalal Bose, whose services to art and artists have been more considerable than hers. There is hardly any contemporary Indian painter or sculptor who has not trodden with profit the gravel drive of 7 Harrington Street and who does not owe his recognition and standing to Lady Mookerjee's silent inspiration and encouragement. The various art bodies of the city, the Government College of Art and Craft, the Institute of Art in Industry, the Academy of Fine Art—to mention only a few—are all in her debt and immeasurably so. Lady Mookerjee's activities in the propagation of French culture in India are but another facet of her love of art. If I have my facts right, she is the President of the French Cultural Centre in this city and it is not a little due to her personal efforts that there is a steadily widening interest here in the great French masters of painting.

EAVESDROPPER

THE BANK OF BARODA, LTD.

Established 1908.

Capital Authorised - Rs. 2,40,00,000
Capital Issued & Subscribed - 2,00,00,000
Capital Called-up & Paid-up - 1,00,00,000
Reserve Funds - 1,28,00,000

Head Office: BARODA

Calcutta Office:

INDIA EXCHANGE

20/1, MAHARSHI DEBENDRA ROAD,
218, CROSS STREET, HARRISON ROAD

&
SHAMBHAR BRANCH

140/1, Cornwallis Street

CURRENT DEPOSIT ACCOUNTS.—Interest on daily balances from Rs. 300 to Rs. 1,00,000 will be allowed at quarter per cent per annum and on sums over Rs. 1,00,000 by special arrangements. No interest which does not come to Rs. 3 per half-year will be allowed.

LOANS, OVERDRAFTS AND CASH CREDITS.—The Bank grants accommodation and undertakes on behalf of its constituents the Safe Custody, of Shares and Securities and the collection of dividends and interest thereon.

It also undertakes the sale and purchase of Government Paper and all description of stock at moderate charges. Terms on application. Sterling and Dollar credits arranged and foreign bill negotiated for approved customers.

The Bank acts as EXECUTOR AND TRUSTEE UNDER WILLS AND SETTLEMENTS and undertakes TRUSTEE business generally.

OVERSEAS BRANCHES.

General Manager. Ag. Manager, Calcutta.

March 1, 1958

PERHAPS no aspect of our national life so constantly reminds us of the darkest period in our history as our mercantile marine. For, even after ten years of freedom, we depend almost entirely on outside agencies to carry our goods to and from our shores. We have too few ships to be placed in the overseas trade and the addition of shipping tonnage has been proved to depend on factors other than the national will. In the first place, we do not have the requisite number of shipyards. Secondly, most of the important raw materials are not available within the country. Thirdly, we are only now acquiring the know-how necessary for engaging on largescale modern shipbuilding.

The question naturally arises why we should not buy the required number of ships as we are not in a position to build ourselves all the ships we need. This is quite a pertinent query, but not quite so easy to answer. Because acquisition of a large number of ships requires a huge capital outlay all of which we simply cannot afford at the present juncture. Even supposing we are in a position to lay our hands on the required amount of foreign exchange, it is not easy to find the shipbuilders who can undertake the task.

It is when one is appraised of the stupendous character of the problem which confronts the nation in this regard that one finds one's mind going back to the past. History shows that India has held an important place among the maritime nations of the world till about the middle of the last century, having attained high standards as early as the 11th century. It was no accident that shipbuilding as an industry in our country practically ceased with the advent of foreign domination. It is no accident again that the industry has begun to sprout fresh shoots soon after independence has been regained. But, in the interregnum, serious damage has been done and the hundred years or so of forced inactivity has put the Indian shipbuilding industry as many years backward in the shipbuilding history of the world. Meantime, shipbuilding has undergone a metamorphosis. Timber and sails have yielded place to steel, steam and a new technique. So, the Indian shipbuilding industry has not only to start from scratch but has to acquire the new technique as well.

It is not surprising, therefore, that the Reconstruction Policy Sub-Committee on Shipping, 1947, fixed the target of shipping at only 2 million tons. Taking into account all factors the Planning Commission put the target for the First Plan at 600,000 tons. It has now been found that even this reduced tonnage has been difficult

Shipping: Problem of Foreign Exchange

of attainment. For on June 30, 1956 Indian owned tonnage totalled only 491,463 GRT. In view of the actual achievement, the Second Plan has placed the target by 1960-61 at only 900,000 tons. It would appear that, in the past one and a half years approximately 100,000 tons have been added.

Speaking at the 38th Ordinary General Meeting of the Scindia Steam Navigation Company Limited held in Bombay last week Mr Dharamsey M. Khatau, the chairman, has estimated that India would need about 255,000 GRT to reach even the very low and moderate target of 900,000 tons fixed by the Planning Commission. The relevant figures given by him are as follows: Total Indian tonnage as on 1-1-1957—517,300; added during 1957—69,017; tonnage on order or under construction on 1-1-1958—138,100; tonnage purchased for delivery during 1958—9,879; total—734,296 GRT. As it is estimated that, during the next three years, about 90,000 GRT will be due to be scrapped or sold, the short-fall will come to as much as 255,000 GRT. It would appear that the chances of reaching the target of 900,000 tons are rather slender, even though the entire Second Plan allotment of Rs 38 crores has already been spent. For, the money needed to purchase the requisite tonnage has turned out to be much more than the original estimate on account of the increase in the cost of ships. And the problem now is, how to find the extra money in the present context of paucity of foreign exchange?

As far as Scindia is concerned, it is very anxious to implement its expansion and replacement programme and, what is more important, it has the necessary resources. The company has Rs 150 lakhs in special depreciation account. Gross earnings have increased by about 20 per cent during the year ended June 1957. Substantial amounts have been added to various reserve funds, thereby strengthening the finances of the company. Despite such substantial addition to its funds, the company is "faced with the very tight position in regard to foreign exchange." The expansion and modernisation of its fleet, therefore, now depend largely on the release by Government of sufficient foreign exchange for acquisition of tonnage.

Mr Khatau has pointed out that coastal and adjacent trades are beset with the rising spiral of operating costs. Shipowners engaged in these trades have been sanctioned an increase of only 15 per cent in freight rates as against 28 per cent requested. The companies feel that this increase will not be sufficient to provide even for a modest programme of replacement of old and uneconomic units presently employed. On the

overseas trade, the India-USSR service which Scindia started last year is still meeting some operational difficulties and the company has requested Government to increase the freight rates suitably.

Referring to the prospects for the current year Mr Khatau has said that with the improvement in working at ports, ships' turn-round has improved. It is also expected that more voyages will be completed due to the placing of newer and faster ships in service. The improvement is already reflected in the company's operating results for the six-months ending 31st December 1957. The company has plans to provide regular coastal berthings for the carriage of general cargoes both from the West and East Coast ports. These proposals when implemented will result in improved earnings in the carriage of coastal cargoes. It is, however, to be noted that the persistent low level of tramp rates in the overseas trades is having an adverse effect on Liner Companies. Mr Khatau has indicated that the effects of the downward trend in tramp rates will have some impact on the working results of the company for 1958-59. The import restrictions and the delayed announcements in regard to export quotas have also to be taken note of in assessing prospects. But in view of the export earning possibilities of commodities like ores, oil-cake, scrap etc., it may be confidently expected that there will be no dearth of cargoes in the Liner trades.

Another difficulty that shipping companies are faced with is the delay at some of the Indian ports. Though the position has lately improved, there is need for vigilance and sustained continuance of effort. It should be the constant endeavour of Government to augment and improve the handling equipment at various major and important minor ports. In this regard, Mr Khatau has appealed to the Government to extend the piece-rate scheme, which has been found to work effectively in Bombay, to other important ports.

It is gratifying to note what Mr Lal Bahadur Shastri, Union Transport Minister, has recently assured the shipowners that Government will extend all possible help to them in the matter of acquisition of tonnage. Already, a Shipping Development Fund has been envisaged. A Shipping Coordinating Committee has been constituted to study the question of cargoes to be moved in Indian ships and to suggest steps that can be taken to enable Indian shipowners to acquire additional tonnage.

It may be recalled that, in response to the representations made by the shipping industry, Government have exempted it from the application of the provisions of the Wealth Tax. It would appear that

there is urgent need for granting exemption from the provision of the Capital Gains Tax also. As shipping companies are now engaged on a planned programme of modernisation of their fleet, it is inevitable that there should be a systematic disposal of their old and uneconomic ships. As such sale proceeds will naturally be ploughed back into the business for purchasing new ships, there is no question of "Capital Gains" in these transactions.

It is undeniable that the problem that faces the country as regards the attainment of even the modest target of 900,000 tons by 1960-61 is a serious one. In the first place, as our only shipyard is fully booked up for the next five, six years, it cannot undertake to fill even a small part of the leeway to be made up. The only alternative open is to acquire the necessary tonnage from overseas. For this, it has been estimated that foreign exchange to the tune of Rs 50 crores will be required. It would appear that Indian shipowners have not been quite successful in their attempts to acquire additional tonnage from foreign countries on a deferred payment basis as suggested by Government. Such a condition in the case of coastal trade will bring to a standstill the expansion programme for coastal shipping, because coastal ships have no means of earning foreign exchange.

In this regard, it may be recalled that the Export Promotion Committee has drawn attention to the fact that shipping can help augment our foreign exchange resources. It has been pointed out that, if the Indian shipping's share in the country's overseas trade, which is only 6 per cent now, is appreciably increased, a sizable portion of our country's annual freight bill of nearly Rs 200 crores can be saved.

The present also seems to be an opportune time for the acquisition of ships. For, Mr Khatau says: "Looking to the depressed state of the freight market and the easier position in regard to placing of orders for new tonnage, the present seems to be an appropriate time to acquire tonnage to provide for replacement and expansion". Past experience has shown that conditions in the shipbuilding trade are quite unstable and that favourable conditions for the buyer of ships do not obtain often. The shipping companies are helpless because of the paucity of foreign exchange, even though they have the adequate resources. It is, therefore, incumbent on Government to devise ways and means of finding the requisite foreign exchange at an early date so as to enable the shipping companies to take advantage of the prevailing favourable conditions to place orders for additional tonnage.

BOMBAY REVIEW

BOMBAY
REVIEW

One of the urgent problems which India had to grapple with soon after partition had been the finding of adequate quantities of raw material for its cotton and jute textiles industries. The solution was naturally seen in the growing of the requisite quantities of cotton and jute within the country itself. But at the same time it was recognised that such consummation could come only in course of time and after sustained endeavour.

Thanks to the vigorous efforts put forth in the past ten years the position today has vastly improved and as far as raw cotton is concerned the gap between supply and demand has been narrowed down considerably. The country has attained self-sufficiency as regards the supply of short staple cottons. The varieties now imported are cottons of staple length 1.1/16 inch and above.

In his speech at the recent annual meeting of the Indian Central Cotton Committee Mr Ajit Prasad Jain, Union Minister for Food and Agriculture, has said that the time is not far off when the country will be in a position to supply all the cotton required by the textile industry. For, superior varieties of cotton approximating to those that are now imported are already under cultivation in Madras State, Gujarat region and Mysore State. Further, experiments have proved that staple lengths of 1.3/16 inch and above can be successfully grown in Kerala State.

As in the case of most Indian crops, in regard to cotton also we have yet to go a long way in the matter of profitable utilisation of the land already under cultivation. Apart from the fact that much additional land may not be available for cotton cultivation due to the emphasis that has to be laid on food production, there is need for directing attention toward increasing the yield per acre because yield in our country is the lowest in the world. Moreover, intensive cultivation has become an urgent necessity in order to bring about an improvement in the economic condition of the cultivator who has an important role to play in the development of the country as a whole.

An increase in yield can be brought about, however, only when the cultivator adopts the latest improved methods of cultivation and the cultivator is not likely to effect any change in his methods until he is told of the benefits that will accrue to him by the use of the new methods. Government have initiated measures to enable the cultivator to obtain a fair price for his produce. But it would appear that distress selling is still prevalent because growers have not been provided with adequate alternate means to

Self-Sufficiency in Cotton

meet their demands. It is to be hoped that the National Co-operative Development and Warehousing Board and the Central Warehousing Corporation which have already been established will be able to afford the much-needed relief to farmers. As regards intensive cultivation it is imperative that concerted measures are taken to bring home to the cultivator the benefits of the improved methods of cultivation.

Corruption in Administration

One of the principal points on which, the almost unanimous voice of the members of the opposition was raised in the course of the debate on the Governor's address in the State Legislature was in regard to the necessity for eradicating corruption at all levels of administration in the State. Corruption they considered to be one of the serious defects of the administrative machinery of the State.

Corruption as a social and administrative malady is not something confined to Bombay State only and its existence in all other States has been recognised even by the parties in power. Though attempts have been made by arming the legal machinery with sufficient powers and even by the creation of separate departments, to deal with the social menace success has so far been limited. Even appeals to sentiments of patriotism and larger interests of the nation have seemed to have made little impression on those who have been defying the law for their own petty interests. If mere threats of severe penalties could have solved it the problem should have been solved long ago.

Corruption also does not seem to be the special weakness of the administrative machinery of the Congress Governments. After one year of rule in Kerala, the Communist Government which fed the electorate during the election time with promises of ending corruption in the State have now admitted failure in its fight. Mr Namboodiripad, Chief Minister of the Kerala State only a month ago stated that corruption was still one of the major problems with which the Ministry had to contend.

Evidently only an all-out assault on the problem would yield any result. And this calls for the need for co-operation from all the parties concerned. The need for urgent action to fight the evil has been met by the Bombay Government by the setting up of an Anti-Corruption Bureau. To a certain extent the creation of such a separate department to deal with offences of corruption would reduce the incidence of corruption. But it is idle to expect such a department to give the final blow to such anti-social practices. For such a department would be concerned with the punitive aspect of the problem and not

with the preventive side. A corruption enquiry committee for the Railways has not succeeded in eliminating corruption completely. The problem cannot be solved unless the root causes are analysed and remedies on this basis provided. But there is clear need for taking it out of the realm of party politics.

Futures Trading in Bullion

The decision of Government to maintain the status quo in forward trading in bullion for the time being would seem to indicate that they have taken some more time to study the problem. The Forward Markets Commission have pointed out that there is a case for permitting futures trading in bullion on a limited scale. The Commission have found that the usual arguments advanced against futures trading in bullion are not valid.

The lack of an adequate volume of internal production cannot be said to provide a decisive ground for prohibiting futures trading in bullion in India. For, appreciable stocks of both gold and silver are found to be available in the market despite large hoarding and small internal production. The explanation for this phenomenon seems to lie in the fact that being non-perishable the same stocks can be offered for sale almost continuously. It is also wrong to contend that futures trading encourages smuggling because it is fostered by the high price obtainable in India for bullion and not by any stability that may be brought about by the existence of a futures market.

The Commission aver that the fact that futures trading in bullion is not carried on in any country in the world except India cannot justifiably be cited as an argument in favour of its abolition in our country. For, in India the use of bullion is neither confined as in most countries only to monetary purposes nor the Government or the Central Bank enjoys a monopoly of the purchase of these metals. Private transactions are a common feature in our country and there is a long tradition in futures trading. Internal production of gold and silver in India is almost negligible when compared with the total world production. It is estimated that Indian gold production forms only 0.71 per cent of world production while that of silver is much less at 0.08 per cent. The Commission point out that the value of gold smuggled into India is roughly estimated at between Rs 30 crores to Rs 40 crores annually and say that "since the cost of gold even after payment of duty is below the price of gold ruling in the Indian markets, it has provided a strong incentive for the smuggling of gold into India."

Anti-Bi-lingual

Though the Bi-lingual experiment in the Bombay State has been successfully working, opposition to it from the parties rival to that in power has continued unabated. Even after one year of its successful working these parties refuse to accept that merits of the new scheme. They see in continuance of the setup a serious wrong done to the people speaking the two languages who have been brought together under one administrative unit and consider it as anomalous since they are able to show that all the other States have been split up on linguistic basis.

This has not only given a rallying point to the opposition parties to work on a united basis against the party in power, but has also furnished a common theme for the opposition parties on every occasion the State legislature meets. The new session of the legislature was no exception to it and the opposition members raised their unanimous voice for the creation of two unilingual States of Maharashtra and Mahagujarat and demanded the scrapping of the present setup. Naturally the Government spokesmen had a busy time in answering these demands of the opposition parties. And Dr Jivraj Mehta the Finance Minister of the State made an impassioned appeal for ending linguistic bickerings which he said would stand in the way of forging national unity at a time when this is the paramount need of the country. He also pointed to various other fields in which the people could utilise their energies in a constructive way.

The opposition parties have also found issues other than the continuance of the present Bi-lingual set up to exploit the linguistic feelings of the people in the State. One such is the non-integration of the outlying Marathi speaking areas in Bombay State. This point was raised in the course of the present session of the State Legislature by the Samiti members. In regard to this issue it would seem that the difference between the opposition parties and that of the party in power is not so marked as that in regard to the question of the Bi-lingual State. The difference is only one of approach towards this issue. Mr Mehta in this connection pointed out that the issue would be taken up at the forthcoming meeting of Western Zonal Council to be held in Bombay. Thus though the Government is agreed about the need for incorporating the remaining areas in the State it depends on the method of negotiation with the neighbouring Government in the Zonal platform. Considering that such disputes between Madras and Andhra Pradesh were amicably settled by Zonal meetings, there is reason to hope that the proposed meeting of the Western Zonal Council should yield results satisfactory to all parties concerned.

GATEWAY
NOTESWORLD OF
COTTON

THE forward Cotton market has developed a weak tendency due to heavy selling pressure from local and upcountry interests. Although values commenced on a promising note in response to the fixation of room rates which was considered favourable, the trend was reversed and there was a decline in prices for lack of follow-up support and on general liquidation prompted by continued inactivity in the spot section.

The market had an eye on the tendering differences to be fixed by the new Spot Rate Committee for the maturing March contract. The prevailing feeling among the bulls that the decision to be arrived at in the meeting would not be favourable to them caused heavy liquidation. Upcountry interests, specially from Akola and Gujarat, joined hands in the downswing.

There were also other factors contributing to a depressed sentiment in the market. Arrivals of the new crop were fast increasing at the upcountry markets. Unnerved by the current easy trend in the commodity and the obscure outlook for textiles, growers became impatient to market their produce as early as possible. The limited holding capacity also compelled them to do so. A somewhat higher estimate of this year's cotton output at 52 lakh bales by the Indian Central Cotton Committee also aided the easy trend. Mills were reluctant to buy even at lower levels. With the result, ICC Jharilla March finished lower at Rs 660.50 after opening at Rs 670. May delivery started at Rs 667, to finish at Rs 657.50.

In sympathy, the Spot section remained dull. While the values of the lower quality cotton declined by about 15 points, rest of the varieties declined by about 5 to 10 points per candy. Due to restricted spinner interest, domestic styles were on offer at somewhat lower prices. Limited business done had been mainly in good quality lots of 197/3 of Khandesh and the new crop Lakshmi of Karnataka.

On the export front, listless conditions prevailed. Shippers showed little interest in the absence of any fresh interest. As a result, prices of Wagad, Kala and Berar Deshi growths declined further. No important turnover took place in Zoda and Yellow Pickings.

On the import front, there were practically no enquiries. Many mills appear to have postponed their purchases until the Government of India announce definite import quotas and resume licensing. Some of them hope that the Government will soon announce import of AR/Uganda cotton.

Traders are anxiously awaiting such permission as business has already been concluded covering

80,000 bales of the new crop, subject to import licences.

FUTURES AT AHMEDABAD:

Forward trading in Gujarat cotton was opened at the end of last week after a lapse of 15 years. Trading was conducted under the auspices of the West India Cotton Association—the body recognised by the Forward Markets Commission for the purpose of forward trading in Gujarat cotton in Gujarat, Saurashtra and Kutch. The basis of the hedge contract is 25/32" Kalyan MG fine and the tenderable varieties included Kalyan, Vijay, Surat and Wagad cottons. The total annual production of varieties of cotton in the region is estimated around 12.5 lakh bales. The four major varieties of cotton permitted for forward trading constitute nearly 75 per cent of the total cotton production in the region.

The resumption of futures market in Ahmedabad will enable both the cotton textile mills of the region (there are 74 cotton mills in Ahmedabad alone) and the cotton trade, which had been deprived of its avocation because of Government restrictions in force, to get all their requirements of cotton directly instead of via Bombay, as hitherto. It not only satisfies the regional aspirations, but also provides facilities for straddle operations, especially when price fluctuations are wide. The establishment of one more futures market—there are now four—for cotton should also make for more stable prices.

CROP STATISTICS:

Areawise, about 80 per cent crop in Vidarbha, Khandesh and the Punjab has been marketed. Malva, Moglai and Rajasthan will take about six weeks more, while the season will continue unabated in Saurashtra and Gujarat till the end of April. The quality of the crop has been satisfactory although there have been some complaints about the crop in Surti and Broach areas. The season has just commenced in Andhra and Mysore.

Thanks to the efforts of the ICC in the matter of improving cotton production, India's dependence on imports of foreign cotton is being gradually reduced. A co-ordinated scheme on the development of Andrews variety of sea-island cotton has been undertaken by the Committee. The scheme is intended to bring an area of 3 lakhs acres in Kerala, Mysore and Assam. In the not too distant future, imports of foreign cotton will largely be substituted by similar indigenous growths.

Exports by rail, from 1st September 1957 to 20th February 1958, were 107,440 bales. Estimated mill consumption in Bom-

bay, during the same period, was 631,232 bales as compared to 626,319 bales in the corresponding period of last season. Estimated stock of raw cotton, held by exporters, dealers and mills in Bombay, on the 20th February 1958, was 614,171 bales as compared to 536,248 bales on the corresponding date of last year.

NEW YORK COTTON MARKET:

Prices on the New York cotton futures market moved rather irregularly in early dealings with further liquidation in near March and hedging and profit-taking in new crop months. The pressure eventually lifted and the market took on a steadier appearance and then became firm and active with prices rising by as much as 30 points for the new crops.

The revival of demand was traced to the likelihood that more acreage would be placed in the Soil Bank this year, thus reducing the potential size of the new crop. Increased buying and the uncovering of stop-loss orders followed the news that the House Appropriations Committee had voted an additional 175 million dollars for the 1958 Soil Bank programme. Traders took this to imply that additional acreage might now be taken out of cultivation this year. Middling Spot was quoted at 35.95 cents per pound.

The International Cotton Advisory Committee has forecast that, for the present season, world cotton consumption is expected to stabilise at near last season's level of 42 million bales. In the United States, the decline in per capita consumption of cotton textiles has more than offset the increase in population. The Committee has stated that textile output in India has continued to expand; but stocks of yarns and cloth are increasing, which may be a moderating influence in the future.

With cotton yarn production presently curtailed, consumption in Japan should fall to around 2.6 million bales—a decline of about a quarter of a million bales from 1956-57. Aggregate free world consumption is likely to be down this season from last season's record of 29.5 million bales, largely on account of the continued downward trend. In Belgium and Holland particularly, some decline in consumption is in prospect. Italy is reportedly considering voluntary curtailment of cotton yarn production, while France and Spain are experiencing difficulties in obtaining raw cotton supplies.

On the other hand, yarn production in the UK has stabilised last year, while textile production in Germany, Switzerland and many of the smaller countries should continue at or near record levels. In brief, cotton consumption for Western Europe, as a whole, is

expected to remain close to last season's level.

The Soviet Union grew 4,355,000 tons of cotton last year—more than six times the total grown in Russia in 1913.

LIVERPOOL COTTON MARKET:

The Liverpool Cotton futures market ruled generally steady, although business remained small. Some commission house buying gave support; but, in the absence of trade buying, light hedging and professional realising caused a small setback at the close.

The Sudan contract remained nominally unchanged.

CLOTH AND PIECEGOODS:

Trading conditions in the Bombay Piecegoods market remained dull as demand from the consuming centres was not quite encouraging. Offtake was confined to a few popular items. In view of the Budget uncertainties, upcountry dealers were not willing to extend their commitments at the moment.

Even on the export front, conditions were slack. Ceylon is said to have booked some quantities of saris, dhoties, bleached long cloth and printed voiles. In the absence of the issue of import licences for cloth by the Burmese authorities, demand from this country has been negligible.

We offer attractive rates for long and short Term Deposits Details on request from Head Office or any of our Branches.

World Copper Surplus: Acute Shortage in India

IN contrast to the international trend, the steadiness in Copper prices in India continues, mainly because imports are small in relation to requirements. Copper, which arrived per s.s. "Pachumba" and "Amra" last week, consisted more of blister metal. Thus, these arrivals had no effect on the market apart from the fact that these were already sold on a forward basis. Whereas, in London, the rate has eased to £163½ from £164 per ton, the rate in the Bombay market, has developed a hardening tendency to Rs 180 from Rs 178 per cwt. In Calcutta, the rate is unquoted in the absence of any stock.

Indications are available that India will continue to face a shortage of the metal for another six months if the Government of India's policy is not modified. As for indigenous sources of supply, pure copper scrap is not procurable as most of the copper sheet in the market contains zinc ranging from 6 to 18 per cent or even more. According to an information, importers have established a claim for quotas of the value of Rs 10.05 crores up to the end of 1957. It is estimated that these licences will cover about 24,000 tons on the basis of the Government's policy of permitting imports to the extent of 65 per cent of the past imports.

In addition to these 24,000 tons, the country is expected to receive about 7,500 tons of copper as a result of the recent release of this quantity to the scheduled industries under the Colombo Aid Programme. Besides, the Government have issued some ad hoc quotas to actual users; and some more imports are likely to take place on account of the initial policy of permitting imports to the extent of 85 per cent before the basis was revised to 65 per cent. However, an early arrival of about 2,000 tons of copper by s.s. "Kampala" is expected to ease the situation a bit and bring down prices to saner levels.

Meanwhile, the world copper surplus for 1957 is estimated at 200,000 tons. The surplus—which is unchanged as compared with the 1956 surplus—is partly due to a drop in world consumption despite an increase during the first months of the year in Japan. The overall copper reserves for 1957—both raw and refined—total 995,000 tons or 149,000 tons more than the previous year.

The drop in consumption particularly hit the United States and Canada, while West European consumption has reached a new high, totalling 1,549,000 tons as compared to 1,467,000 tons in 1956. At the same time, consumption in Japan

has risen by 20,000 tons during the first six months; but has dropped during the last quarter of the year.

Production in the main producer-countries has dropped: it is 44,000 tons lower in the USA than the previous year; 9,000 tons lower in Chile and 7,000 tons in the Belgian Congo. It has increased by 13,000 tons in Japan; by 3,000 tons in Canada and by 32,000 tons in Rhodesia. The USA and Canada have, no doubt, contributed substantially to the fall in consumption. World producers have, however, recently taken steps to reduce output. If the Government stock-pile sales are regulated, it is expected that copper prices will achieve relative stability in future.

With regard to other non-ferrous metals, there has been a good demand for Zinc from mofussil centres, as Calcutta prices are higher at Rs 53.50 per cwt than Rs 52.50 quoted in the Bombay market. Although stocks in the market are reported to be ample, they are not in the weak hands. With the result, prices are still ruling firm. In London, the rate has eased to £63½ from £64 per ton. The cuts in production, recently announced by various smelters, should have strengthened the market; but the sluggish demand from consumers has prevented such a development.

Lead is moving narrowly between Rs 62 and Rs 64 per cwt. Supply position is quite healthy and, as such, the improvement in LME prices has not affected the local price. In London, the rate is quoted around £75½ per ton.

As regards Tin, the sharp rise in prices in Singapore to the extent of \$ (St.) 7½ per picul and £5 to £6 per ton in London has not affected local prices due to heavy stocks. Normally, this much rise in Singapore would have raised local prices by Rs 10 per cwt. But, in the present case, the price is higher by only Rs 5 per cwt, being quoted at Rs 515 per cwt. In London, the rate is quoted at £735 per ton.

★

Gold & Silver

The recent boom in Gold prices has shown signs of abatement on the Bombay Bullion Exchange during the last few days. The easy turn of the market has been attributed mainly to the changed outlook for the yellow metal. Dealers have reported a marked fall in the demand from the South, which had figured as a major buyer in the past few weeks. The situation in Calcutta and Delhi has, of course, been relatively good with prices remaining higher than those in Bombay. It is generally felt that the present dull spell will last for another fortnight.

Arrivals and offtake of Gold were estimated around 3,000 and 5,000 tolas respectively. Unrefined metal receipts totalled 4,000 tolas. Phagun delivery changed hands at

Rs 111.00 to Rs 111.25 and Chaitra delivery at Rs 111.00 to Rs 111.25. Ready was quoted around Rs 111.62, while Sovereign remained firm at Rs 71.37.

Arrivals and offtake of Silver were estimated at 16 and 10 bars respectively. Unrefined metal receipts were heavy at 11 bars. Phagun delivery changed hands at Rs 191.62 to Rs 192.50 and Chaitra delivery at Rs 190.37 to Rs 191.00. Ready was quoted at Rs 191.62.

★

Oils & Oilseeds

With the commencement of the marketing of the new crop of Castorseed, trade interest has turned on a reassessment of the export outlook for Castor Oil. The situation is particularly alarming this year in view of the country's disappointing performance on the export front in the last few months. The UK and the Continent have continued to observe silence and quoted highly unremunerative rates, while the US market is unfavourable on account of the increasing competition from Brazil. With the result, Castor May delivery eased off further to Rs 136.25 from Rs 138.37. In the ready section, ready is quoted at Rs 28.25 and Castor Oil, commercial quality, at Rs 14.25.

Trading in the Groundnut section, was featured by strong rumours that the Government would enhance the excise duty on groundnut oil in the forthcoming Budget. May delivery, after opening at Rs 158.87, receded gradually towards the close to Rs 157.37. In the ready section, bold quality was quoted at Rs 32.12 and Groundnut Oil at Rs 17.62.

Prices in the Linseed section, moved with the general trend of the market. Although the export outlook for linseed oil is far from encouraging, operators are not inclined to press sales. May delivery finished at Rs 28.94 after touching a high of Rs 29.25. In the ready section, the rate is quoted at Rs 29.25 and Linseed Oil at Rs 15.50.

★

Yarn

Listless conditions continued to prevail in the Yarn market. Operators were reluctant to extend their commitments in view of the forthcoming budget, while prices in both spot and futures sections moved within a narrow range. Turnover was reported to be negligible.

The market for Cotton Yarn continued to be easy, medium counts suffering a loss of about 50 nP per bundle. Upcountry weavers were reluctant to augment their stocks on account of growing accumulation of handloom cloth. Demand for cloth from upcountry centres was also at a low ebb. Above all, the export picture is also disappointing, barring some demand from Aden and Buma.

A Great and Gracious Spirit

IT was some years ago that I saw Maulana Azad swish past me in his car in the ascent that leads to the Secretariat. I have seen him often enough since, but the fleeting image of a moment has stuck firmly in my mind. His face, as of burnished bronze, with a well trimmed beard and a sharp nose had a certain austere calm of one on whom authority settles easily and appositely. Though it was the face of an intellectual, there was nothing of the tortured, tormented soul about it. There was nothing harassed, nothing neurotic and nail-biting about his sense of his own burdens. On the contrary, there was the contemplative calm of man used to intellectual authority. But it was not a smug face. Though it did not appear, like Rodin's Thinker, bent with the burden of his own cerebrations, there was no mistaking the air of his being acutely aware of the responsibility of his own authority. Here was a man, one would have instantly thought, to whom I could go to get the proper advice in any difficult situation. And such advice would have been not only admirable, but also provided with a depth that derived nothing from the immediate accidents of the particular problem. In other words, in acting on the advice, you would have committed yourself to a way of life and an attitude of mind.

There is thus no wonder that, in all the tributes paid to him in the last few days, a recurring motif should be the deprivation of his wise counsel. This may come as a surprise to many whose acquaintance with the world of affairs is limited to the more formal aspects of public life. Especially since independence, Maulana Azad has reduced his formal public acts to the minimum. Though he was Mr Nehru's deputy after Sardar Patel's death, he had chosen the comparatively quiet tasks of the Education Ministry as his formal responsibility. But this very freedom from strictly formal tasks gave him the time and the opportunity for being a sage counsellor on all aspects of policy. Mr Nehru had, especially since the Sardar's death, come to lean heavily on the Maulana's counsel. Apart from the fact that he was an old colleague, he was, in the latter days, almost as the only man who dared tell him what he really thought about any particular problem. In an atmosphere in which more and more people were too awed to tell the PM what he ought to be told, the calm wisdom of Maulana Azad was what was valued most by Mr Nehru. And yet, characteristically, there was nothing assertive about Maulana Azad's special position. Lesser men who had the ear of the Prime Minister and who had occasionally dared him have boasted about it some time or the

other. But Azad and Nehru, who (despite basic identity on almost all things) have had many differences, have never allowed them to come into the open.

As a man, Maulana Azad was one of a band that is becoming rarer every day: the intellectual aristocrat. Mr Nehru described him with his usually admirable felicity—which especially springs when he is under the stress of powerful emotion—as a man of "luminous intelligence". Maulana Azad had a most unusual education in that he did not go to conventional schools, where minds are mechanically filled with more or less useless information. Azad's, on the other hand, was the Muslim equivalent of Arnold's famous "grand, old, fortifying classical curriculum". His father, who was a famous divine, taught him fairly young and put him through the paces of Islamic theology. And to this equipment was added, then and later, the rich harvest of Azad's own adventures in the sensuous realms of Persian and Urdu poetry. It would, therefore, be a mistake to imagine the Maulana as one of those ineffectual disputators or effeminate poetasters that turn up monotonously in the pages of the Arabian Nights. When a mind so naturally gifted as Maulana Azad's is fertilized by the heady waters of Persian and Urdu literature, it flowers forth into a humane and civilised intelligence. Nothing that is shoddy in feeling or thinking will get past the penetrating luminosity of such a mind. And it is not only the mind that acquires such an imperviousness to vulgarity and pettiness. The character of a person submitted to such an intellectual discipline scorches to ashes the banal and fatuous in human behaviour. His was a mind that was both tough and cultivated and there was nothing that was merely smart that could get past it. And he was no mere book-worm, as references to his having translated the Koran may make one imagine him to be. He once wrote: "There is no conviction of mine but was riddled with all the thorns of doubt. There is no spiritual belief but has passed through all the vicissitudes of unbelief. I have quaffed the poison jar even as I have tried all the antidotes that the science of medicine has prescribed. When I was thirsty, my thirst was unlike that of others, nor was the peace that has filled me since obtained from the common spring". This characteristically eloquent account of his spiritual and intellectual battles shows him to be a man both complex and great.

As I said, there must have been hundreds of occasions when the petty and little minded have wilted

before the calm authority of the Maulana and about which we know nothing. But there have been occasions within public knowledge when small minds have visibly slunk away in fear before the steady and unruffled gaze of the Maulana's calm authority. Many will recall the debate in the Lok Sabha some years ago when some extremely petty insinuations were made about Maulana Azad's lack of energy in propagating Hindi. It was one of those rare occasions when the Maulana was stirred deeply enough by pettiness to reply. The dignity with which he defended himself put his opponents completely out of countenance and the entire House became positively hostile to the unfortunate cavillers.

Likewise, Maulana Azad was able to deal effectively with other assaults made by narrow prejudice on him. Many have, in the soporific atmosphere of post-independence, forgotten the unutterable insults hurled at Maulana Azad by rabid Muslim communalists in the old days. Jinnah had used, in reference to him, language which was characteristically haughty. A lesser man than the Maulana would have referred to them, at least for the purpose of showing up how unutterably vulgar such slanders were and how impervious he was to all such insinuations. It is to the eternal credit of Maulana Azad that he treated all such indignities with a contempt that did not even reveal itself as contempt.

His was a truly emancipated mind, which had transcended all narrow prejudices. Politically, the Maulana was a constant vindicator of our secular aims. Just as, in his person, he was in the tradition of the composite culture of India that had its first beginnings in Akbar's court, in his political career he symbolised the concept of the unity of India, and India's great capacity for absorbing a variety of cultures. In the crucial years in which the Muslim League was trying to assail this concept, Maulana Azad was the sole spokesman of a body that was vainly sought by Mr Jinnah to be identified with the Hindus. If subsequent events have yielded to fanaticism and not shaped themselves according to the light of reason, it only shows how primitive our politics still is.

Maulana Azad's passing away has been universally considered as not only the passing away of a great and gracious spirit but also as the passing of an age. Even during his life time, the pressure of modern life had corroded deeply into those things he valued most. The good life, courtesy, gracious personal relationship, and compassion are daily receiving short shrift at the hands of a society that is in too much of a hurry to get nowhere in particular. And more

immediately, the Maulana has taken away with him part of a world that is not even a memory for many young people today. It is sometimes a shock to realise that, to the young of today, 1942 is just history and there are school children who have heard of Gandhiji only in the past tense. And the number of the old guard, still happily left with us, is dwindling. Mr Nehru, Mr Pant, Mr Rajagopalachari, Dr B. C. Roy, Mr Krishna Menon are the names that occur to me readily. Of course, it is not necessary to cross bridges before you reach them and, therefore, it is not necessary to get panicky about future leadership. But, to the grief of the passing away of a great and good man, is added the worry about future leadership. It is true that Maulana Azad is irreplaceable. He is so in more than the conventional sense because of his unique position in Indian public life, but India, as Mr Nehru pointed out, has had many great men before and shall without doubt produce many great men in future. But, try as one might, the thought of the need for training a second order of leadership comes breaking in on our present grief. It is time that the several parties in the country set about thinking seriously on the subject.

DELHI REVIEW

One of the basic shortages of the country's economy in relation to the need for industrialisation is that of adequate technical manpower. If technical education is only in a nascent stage it is because of the fact that the need to develop it was not felt acutely as long as economic development was left to take care of itself. But with the need to develop basic heavy industries in the country, the importance of the technical education has also come to be increasingly recognised.

According to a latest report, the Government of India have now a scheme for starting new institutes to provide education in technological subject, with the object of increasing the availability of technical manpower for the Third Plan. The new scheme envisages a target of 15,000 engineering graduates during each year of the Plan as against the original target of 10,000. This upward revision of the target seems to follow the approval of some new schemes like the heavy machine-building plant and the forge foundry at Ranchi.

For the purpose of meeting this target the Government have in view the setting up of eight new technological institutes two each in the four geographical regions of the country. These institutes between them are expected to turn out nearly 5,000 graduates the annual intake of students being 500. Apart from the new institutes, expansion of the existing ones is also envisaged so as to fill up the shortfall that would be left even after the starting of the new institutes.

The novel feature of these new institutes is that they will give education in all branches of engineering for which purpose the laboratories and workshop facilities would also be on correspondingly larger scale. This is a welcome departure from the practice of present institutes which specialise in certain branches of engineering. Apart from these changes which would increase the number of engineers during the Third Plan there are also schemes sponsored by the government of India for giving foreign training to personnel in connection with certain specific projects such as the three steel plants. Further increased facilities for instruction and training in metallurgical and mining engineering are also contemplated.

The setting up of these institutes will mark a new turning point in the educational policy of the Government, which has long stood in need of a new orientation in favour of engineering education. This is in tune with current trends in education in other countries especially Soviet Union and the Western European countries.

Bichromates Industry

The main difficulty of the bichromates industry would appear to be lack of adequate demand for

its products either within the country or abroad. One of the probable reasons for its failure to attract the attention of overseas buyers may perhaps be found in the price level of its products. As far as internal demand is concerned the market is necessarily restricted as consumers of bichromates are confined to one major and three or four medium scale industries only. It is but natural that an industry which has yet to develop the markets for its products is finding it difficult to stabilise itself even after ten years of protection. The Bichromates industry has asked for the continuance of protection for a further period beyond December 1958 when the present term will expire.

It will be evident from a study of its history in the past ten years that the Bichromates industry has had its origin in wartime needs. After the war most of the units which have been set up found no demand for their products and consequently have closed down. In 1946 there were 17 units and in the course of the next two years they were reduced to 11. By 1953 there were only 8 units engaged in the manufacture of bichromates. In the past four years, four more units closed down and a new one was put up with the result there are now 5 units situated as follows: two in Calcutta, one each in Bombay, Madras, and Kanpur. The average number of workers employed in 1957 by the three main producers in their bichromate plants was about 700. The overall capacity of all the five units for production of sodium bichromates (inclusive of capacity for the production of potassium bichromates) is 4,548 tons per annum and the actual production was 2,461 tons in 1953, 3,207 tons in 1954, 2,934 tons in 1955, 3,262 tons in 1956 and 3,623 tons in 1957.

Except soda ash, all other raw materials for the industry are available internally in adequate quantities. The gap between demand and supply in soda ash is now filled by imports made through the State Trading Corporation. According to the manufacturers considerable difficulty is experienced by them in procuring the raw materials because of high transport cost and high prices of chrome ore and sulphuric acid. Shortages of coal are also contributing to delay and the high cost of production.

The industry's products have obtained the approval of consumers. Estimates of current total demand for bichromates in India vary from 2,800 tons to 3,950 tons. The Development Wing of the Ministry of Commerce and Industry has placed the demand at 3,400 tons of sodium bichromates and 240 tons of potassium bichromate, same as

the level of production in 1957. The basis for this calculation is that there has been no import during the year.

The problem that is now confronting the industry is the utilisation of its idle capacity. This is possible only if exports increase. Progress in this regard so far seems to be disappointing even though exports of bichromates are freely allowed since 1955. Government have now permitted draw back of duty on imported raw materials used in bichromate for export.

Technology and Humanities

Delivering the Convocation address of the Kharagpur Institute, Dr John Matthai, Vice-Chancellor of the Travancore University, laid stress on the need for incorporating subjects of humanities in the curriculum of technological institutes so that the wider atmosphere of cultural development of the country would not be lost by the students. In this connection he pointed to the example of the technological institutes in the USA where students according to him are required to devote a considerable portion of their time and study to subjects of a purely cultural character.

But Dr Matthai would seem to justify the exclusive preoccupation of our technological institutes with technological studies in the great need to increase the country's technical manpower in relation to the growing demands from fast developing industries. He also emphasised the need for intensive specialisation of technological studies in view of the comparatively undeveloped stage of such studies in the country.

Dr Matthai pointed to the example of Soviet Russia which in the course of only 40 years has made tremendous advances in the field of technological studies, and pointed to certain lessons which this has for us. In this connection he said that such great strides which Russia has made was because of the comprehensive nature of the improvement and expansion of education which the Russian planners undertook. This would call for action on lines similar to that which was taken in Russia. Perhaps the most outstanding feature of education in Soviet Russia which has relevance to the conditions existing in India and her needs for more trained technical personnel is that in Soviet Russia nearly 50 per cent of the 10-year curriculum is devoted to Science and Mathematics.

Dr Matthai also warned against the futility of efforts at improvement of education which was directed merely at setting new laboratories and new institutes without considering the need for progress in the primary and University stages. This as he points out would considerably detract from the value of such new institutes and laboratories.

Indian Finance

NORTH INDIAN MARKETS

Dr Matthai also deplored the existence of the paradox noted earlier by Prime Minister Nehru, of industries complaining of shortage of skilled personnel and young engineers going without jobs or drudging at wrong jobs. With a view to removing this paradox Dr Matthai called for closer examination of the methods of recruitment followed by private as well as the public sector of industry.

Role of Unesco

With its firm belief in mutual negotiation as the best means of establishing world peace, India has naturally been drawn toward the Unesco whose main aim is to promote better understanding among the peoples of the world. Ever since its inception our country has been one of its strongest supporters as it has been able to find in its basic objectives the best guarantee for world peace.

At the two conferences of the permanent Indian National Commission and at the Ninth Session of the General Conference of Unesco held toward the end of 1956 in Delhi, India has, by example and through fervent appeal endeavoured to bring home to the Unesco that it should become global in character if it has to be truly representative of peoples of the world.

Speaking at the Third Conference of the Indian National Commission for Cooperation with Unesco last week in Delhi, Prof. Humayun Kabir pointed out that with the enormous advances in science and technology, the role of organisations like Unesco had become very important. For, in a fast contracting world the need for matching the physical neighbourhood by "neighbourly feelings and sentiments and the growth of mutual respect among the nations of the world" has become quite urgent as the absence of these will lead to disastrous consequences to the world as a whole. It is in this view that a major project for mutual appreciation of cultural values between the various peoples of the world and particularly between the East and West is an immediate necessity. Such mutual appreciation will become fully effective only when the major project is supplemented by mutual appreciation between the peoples in the different regions.

The Unesco programmes, however, can achieve the desired results only when the different regions of the world are enabled to play their rightful part in the formulation as well as the execution of its policies. The different cultural traditions should be given adequate representation in the Secretariat of Unesco. It would appear that so far none of the Asian countries has found a place in any of the senior posts in the Unesco Programme Department. It is to be hoped the early steps will be taken to rectify this defect.

March 1, 1958

NORTH INDIAN MARKETS

PRICES in Sugar markets have developed a hardening tendency following good demand from all the consuming centres. Rumours about like increase in excise duty on the commodity in the ensuing Budget proposals have aided sentiment. Crushing is in full swing in West Uttar Pradesh; but, due to shortage of cane and appreciable rise in gur prices, it is feared that the factories will have to close their season earlier than last year. Following mill-delivery rates (per maund) are quoted in the Hapur market:—Meerut (D-28) Rs 35.50; Simbhauli (E-29) Rs 35.75; Mansoorpur (B-29) Rs 37.81; Shamli (B-29) Rs 37.36; Daurala (B-29) Rs 37.75; Mowana (B-29) Rs 37.50; Amroha (D-29) Rs 35.00 and Bijnore (B-29) Rs 34.81.

According to the Indian Sugar Mills Association, in January, production was 4.28 lakh tons, bringing the total production, upto 31st January 1958, to 9.22 lakh tons. The corresponding figures for the 1956-57 season were 3.61 lakh tons and 8.13 lakh tons respectively.

Offtake from factories, during January 1958, was 1.46 lakh tons as against 1.41 lakh tons during the corresponding month of last season. This brings the total despatches from factories upto 31st January (including despatches for exports) to 4.41 lakh tons against 4.59 lakh tons in the corresponding period of last season. Closing stock with the factories, as on the 31st January, was 9.10 lakh tons as compared to 8.78 lakh tons on the corresponding date of last year.

Gur

Gur prices have registered further gains of about 75 np per

Hardening Tendency in Sugar Prices

maund, thanks to good buying support from stockists and easy loading facilities. Daily arrivals at Hapur have gone down to an average of 2,000 maunds, while stocks have swelled to about 1.15 lakh maunds, the corresponding figure for last year being 85,000 maunds. Total arrivals, from the beginning of the season up-to-date, are put at 3.40 lakh maunds as against about 4 lakh maunds, by this date last year. Gur Pansera quality is quoted at Rs 13.12 to Rs 13.56 per maund.

In the Muzaffarnagar market also, prices have recorded some gains as demand from the consuming centres has been fairly heavy. Chakku Minja is quoted at Rs 15.62 to Rs 15.87 and Shakkar Dara at Rs 16 to Rs 17 per maund.

There is a general feeling that gur will not come under the purview of the Forward Markets Commission. The Commission, while recommending a regulated hedge market in the commodity, has stressed the need for ensuring fair practice in the marketing of the commodity. Regulated markets, it is stated, can also assist in improving the quality of gur. The forces of supply and demand in respect of the commodity are uncertain enough to require a continuous assessment of their changing relationship through the medium of a futures market.

Khandsari prices have recorded further advance due to good demand; and producers are now buying cane upto Rs 1.25 per maund. Levy on Khandsari production is feared in the coming Budget proposals. Prevailing rates are Rs 27

to Rs 33 per maund, according to quality.

Foodgrains

Quietly steady conditions have prevailed in the Foodgrains market. In the Hapur market, Wheat prices have recorded fractional gains due to falling stocks, average quality being quoted at Rs 15.75 and the farm variety at Rs 17.25 per maund. In sympathy, Rice has improved, while the reports of overall shortage has aided sentiment. After recording some gains early in the week, Gram prices have receded following good crop prospects. The market for Barley and Belher are ruling quiet, while that of Malze remains unchanged. Arhar prices have scored some gains, while Pulses rule quiet.

In the Delhi grains market, mixed conditions are noticed. Prices of Wheat have slightly improved, while those of Gram have receded due to the predominance of sellers following the nearness of the new crop. The market for Rice rules quiet on account of better supply, while there is a good demand for Bajra from Saurashtra. Malze has improved slightly due to better offtake. The Puses market rules generally quiet on decreased buying activity.

A moderate all-round improvement in Pulses has provided the main feature of trading in the Bombay grains market. Trading in Rice has been characterised by the continued small arrivals into the City. The Union Food Minister's assurance to the Bombay

State of larger supplies of rice has been received with a sense of relief; but traders expect little change in the trading conditions in the near future. In the Coarse grains section, Jowar rules steady following higher advices from Sholapur. Bajra has reflected a firm undertone with prices rising by about Rs 5 per candy.

Shellac

The Shellac market in Calcutta, which had been ruling very firm during the past few weeks, has turned quiet with prices developing a reactionary tendency on lack of fresh demand from overseas buyers. Pure TN quality is now quoted at only Rs 75 per maund as against Rs 82.50 at the beginning of the month.

Although there have been some buying by the USA and Russia and some re-stocking by Britain, ship pers in India are reluctant to discount the next crop which, they fear, may be small. Further, the Chairman of the new Shellac Export Promoting Council has announced, in his recent speech, that steps may have to be taken to stabilise prices; and this has induced some caution in the market.

Traders in Calcutta are also disappointed by the January export figure, which was not much above the low December figure. However, shipments, during the current month upto 24th, are slightly higher at 27,112 packages as compared to about 24,000 packages in the corresponding period of January.

MADRAS REVIEW

IF the address of Dr B. Ramakrishna Rao, Governor of Kerala, to the Budget session of the State Legislative Assembly, is marked more by concern for the problems faced by the State than by elation at the achievements of the past, as it evidently is, it is an indirect admission of failure on the part of the State Government in tackling the vital problems touching the welfare of the common man. The deteriorating unemployment problem as well as the continuing deficits in food production to which the Governor has made reference in the course of his address would seem to have made the task of the Government at improving the living standards only difficult. Excepting for certain measures, such as increase in the pay-scales of certain classes of Government employees and the fixation of minimum wages in regard to certain industries, there has been little else to improve the quality of the life of the middle classes as well as that of the working classes.

The problem of food production is viewed as not merely serious but as likely to continue as such for a few years more. Cutting off of rice supplies from outside the zonal area of which Kerala is a member is adduced as one of the reasons which have made the supply of food acute. But there is no mention of the measures the State Government have taken to increase production of foodgrains

The Situation in Kerala

within the State. As is natural, in the future economic programmes of the State Government, priority has been given to increasing agricultural production. The list of measures by means of which this increase is sought to be achieved is of the familiar variety and includes the implementation of some major irrigation schemes, besides a number of minor and medium irrigation schemes, opening of more seed farms, and distribution of fertilisers. While these measures would certainly have the desired effect on the production of foodgrains in the measure in which professions of such intentions are translated into practice, how the passing of certain legislative measures such as the agricultural relations bill would conduce to increased production is a matter of controversy. It is indeed probable that, in so far as such reforms displace progressive and improved cultivation, the new outlook which Dr Ramakrishna Rao wants the cultivators to bring to bear on agricultural production would be found to be lacking. The dilemma which such land reforms have posed to increase production in agriculture was the subject of a discussion at the recent conference of land owners at Mysore.

The stress on the formation of industrial co-operatives and other organisations for resuscitating and strengthening cottage and small scale industries, which has been assigned the second place in the list of priorities of the State Government, follows the recognition of the gravity of the unemployment problem in the State and embodies the determination of the State Government to fight it. With the invitation extended on his assumption of office by Mr Namboodiripad, the Chief Minister of the State, to industrialists in other States, along with a sure guarantee he gave of a favourable atmosphere in the field of industrial relations, the employment position in the State would at least have been expected to remain the same even if it did not improve. But even modest expectations seem to have been belied in this respect, for, Dr Ramakrishna Rao has, in his speech, pointed to a deterioration in the employment opportunities existing in the State. The setback to the coir industry, which is the biggest source of employment in the State, is believed to have been responsible for this. Whether and to what extent it is connected with the partisan attitude of the Government in matters affecting industrial relation is also worth examining. Dr Ramakrishna Rao has referred to the setting up of a tripartite committee which is expected to evolve an acceptable basis for industrial truce in the State. How far this would succeed in maintaining industrial peace and consequently

attracting capital from other States would depend not on the terms of the truce itself but on the behaviour and attitude of the State Government in disputed cases.

The Governor has also laid stress on the utilisation of available cultivable land by planting rubber and cashew so as to mitigate the severity of the unemployment problem. Industrial cooperatives for coir, fishing industry, and bamboo and for other small scale industries are also envisaged.

The solution of these problems and others is naturally bound up with the implementation of the various programmes coming under the State sector in the Second Plan. The prospects for this, as indicated by the State's ability to raise the required financial resources, do not appear to be entirely free from difficulties. The total allocation to the State under the Second Plan amounts to Rs 87 crores of which the share of the Centre is Rs 40 crores, the balance of Rs 47 crores being left to the State Government to procure. The Governor's observations on the ability of the State Government to raise the required amount are cautiously worded. He has referred to the difficulties imposed on the State Government by the requirement to provide a revenue surplus of Rs 13.4 crores during the five year period, and the increasing demands of non-plan expenditure. He has also referred to the problem of raising the State's allotted share of loans from the market to the tune of Rs 19 crores which, he says, has been rendered difficult in view of the tight conditions of the money market in the country and the directive of the Reserve Bank to the State Governments not to go to the market. Even the recommendations of the Finance Commission, as a result of which the State has gained to the tune of Rs 1.5 crores, do not seem to have altered the problem materially. Concentration on small savings would seem to point the way out. In this respect, the record of the State Government during the last year has been very encouraging. Collections from small savings showed an increase from Rs 44.90 lakhs in 1956-57 to Rs 66.76 lakhs in the next year. Therefore, organisation of small savings drive on bigger scale, the need for which has been recognised by Dr Ramakrishna Rao in his speech, should show better results in the coming year than in the previous one. Economy in non-plan expenditure is also mentioned as a field in which the efforts of the State Government would be directed.

The implementation of the various programmes under the Plan has also left much to be desired, as is evident from what the Governor has spoken as deplorable lag between targets and fulfilment. It

Indian Finance

THIS IS THE PENINSULA

would appear that the actual expenditure during the course of the First Plan has fallen short of allotment by nearly 16.67 per cent of the total allocations, the actual allocation and expenditure being Rs 30.03 crores and Rs 25 crores, respectively. The shortfall in expenditure in the first year of the Second Plan seems to be even greater being about 55 per cent of the total allocations, the respective figures for allocations and expenditure being Rs 18.60 crores and Rs 10.20 crores. The reasons for such lags, according to Dr Ramakrishna Rao, are delay in working out details of schemes and their scrutiny at State and Central levels, delay in implementation even after sanction has been obtained because of what he calls the slow-moving administrative machinery. The failure of the Government in tackling the problems of food production and unemployment, which the Governor deplores, could be partly attributed to the failure to utilise the Plan allocations fully. That the State Government are sufficiently seized of the need to remove such deficiencies in administration as stand in the way of the implementation of the various programmes is evident in the action of the Government in setting up an administrative reform committee to look into the problem and suggest recommendations.

It would also appear that the State Government are fast progressing in the direction of administrative integration and unification of laws. Dr Ramakrishna Rao enumerated a number of measures that have already been passed in the Legislature. The important bills which are awaiting final sanction are University Bill, Forest Bill, Agrarian Bill and the controversial Education Bill. The reference to the problem of minorities in the State and the need to give educational facilities, especially the use of their own mother tongue as the medium of instruction, was a welcome feature of the Governor's speech and would be warmly appreciated by the resident minorities.

SOUTH INDIAN NOTES

Optimum utilisation of the scarce resources is the very crux of the problem of economic planning. But in an underdeveloped country such as India is, the problem is complicated by certain dilemmas inherent in the economy and the conflicting claims of social and economic policies. Though the need to raise the national income of the country is the accepted goal which is sought to be achieved by means of five year plans, the size and pace of the increase would depend on the level of investments and the manner of such investments.

Speaking on the "dilemmas of Indian economy" Mr K. Santanam, former Chairman of the Finance Commission, analysed the various aspects of the problem and said that while both increased productivity in the existing farms and factories and increase of production through new farms and factories would contribute to higher level of production, diversion of savings to social services would not raise national income in the near future. Even investment in new industries would take time before it yields the full fruits. Naturally planning in the country has to take account of the widely divergent potentialities of these various courses for raising national income.

Another aspect of social policy which would have profound impact on the pace of development is that with regard to the distribution of income in the country. As pointed out by Mr Santanam though there would be scope for reduction of inequalities of income it could be done at the cost of reducing the level of savings and investment. The existence of disparities of income as between various sections and regional groups such as agricultural and urban workers, workers in cottage industries and factories, and State Government and Central Government employees is another source of friction which does not contribute to any effective solution of the problem of a just distribution of national income in the country.

Provision of more opportunities of employment which should be one of the obvious goals of economy policy, Mr Santanam points out, conflicts with the need for bettering the conditions of those already in employment, and therefore could be achieved only to the extent to which the demand for increased wages and salaries could be effectively controlled. Though he would seem to advocate austerity on the part of salary and wage earners so that more savings would be available for longterm investments he is not totally opposed to the legitimate demand of these sections, but at the same time he thinks it desirable to give such increases in deferred payments.

In regard to the nature of investments Mr Santanam considers

that the long term interest of the country should have a higher priority over the short term interests, and therefore he gives a weightage to such investment to the extent of at least 60 per cent.

★

Agricultural Banks

Though it has been long recognised that rural indebtedness is the main impediment in the way of economic progress of the agricultural community, it is only in recent years that concerted efforts have been initiated towards removing the crushing burden of rural debt. In this regard the report of the Rural Credit Survey has indicated that for a successful solution of the problem it is essential that the State should enter into partnership with cooperative institutions at various levels. The second Plan has incorporated many of the recommendations of the Committee in the programme for the development of cooperation.

However, in view of the formidable character of the task involved in the liquidation of rural indebtedness, it is idle to expect much improvement in the rural sector of the economy all of a sudden. It will take some time for the effect of the steps that are being taken, to become apparent. As yet only a small proportion of the population is benefited by the cooperative movement.

In the Madras State active efforts are being made to bring much needed relief to the poor ryots. In this connection special attention is bestowed on the expansion of rural banking. Speaking at the Second State Rural Banks Conference, Mr R. Venkataraman Minister for Co-operation revealed that the State Government had planned to open 600 rural agricultural banks during the Second Five Year Plan period. To raise the requisite fund for this purpose, they would float a short-term seven year debenture loan. The Minister pointed out that the ready response to a similar offer made recently had given encouragement to Government to adopt the method in regard to setting up the proposed banks. Already considerable progress has been made in increasing the credit facilities in the rural areas. As against 300 agricultural banks sanctioned by the Planning Commission for the Second Plan period the State Government have, even in the first two years of the Plan, set up 160 banks. Considering the rate of progress it is certain that the target will be attained much sooner than 1961. Besides these, there were as on 31st January 1958, 23 cooperative rural banks whose main object is to provide medium term credit facilities to needy villages.

With more than 180 rural agricultural banks in operation in the rural areas the cooperative movement in Madras may be expected

to forge ahead. It is however, to be noted that the facilities and help provided by Government will be of little avail if the people do not take an active part in it. In this regard it may be recalled that it has been envisaged in the Plan that every family in the rural areas should be a member of some co-operative society or other.

★

Development of Mysore

Considering the fact that Mysore had to face many administrative problems as a consequence of the States Reorganisation, the progress achieved in the development of the State during the past year must be considered to be quite satisfactory. Delivering his opening address to the Budget session of the Mysore Legislature, His Highness Jayachamaraja Wadiyar, Governor, pointed out that concerted efforts had to be made toward increasing food production in order to achieve a lasting solution of the State's food problems. A target of an additional production of 5 lakh tons has been fixed for Mysore under the Second Plan, the additional production target for 1958-59 being 148000 tons. If the State is to avoid the recurring food shortage, it is essential that the additional production is achieved. The schemes costing about Rs 4 crores which are already under implementation may go a long way toward making the State self-sufficient in foodgrains.

In this regard it may be mentioned that it has been the accepted policy of the State Government that the land must belong to the tiller of the soil. A draft bill mainly based on the recommendations of the Land Reforms Committee is due to be introduced in the current session of the Legislature.

Against the allocation of Rs 28.68 crores for 1957-58 under the Second Plan, actual expenditure is expected to be of the order of only Rs 22 crores. The shortfall in fulfilment has been occasioned largely by the Government's preoccupation with the administrative problems posed by the States Reorganisation. Though an allocation of Rs 35 crores had originally been made for 1958-59 target had to be revised downward to Rs 25.7 crores due to the difficult financial position in the country. Of this, nearly Rs 16 crores are proposed to be spent on Agriculture, Community Development, Power and Irrigation. The next big item is Social Services absorbing Rs 5.84 crores.

Notable developments in the large-scale industries sector are the coming into operation of a new spun pipe plant with a capacity of 17,000 tons of cast iron pipes and the finalisation of the plan for the expansion of the ferro-silicon capacity in the Bhadravati Iron and Steel Works from 5000 to 20000 tons. In the field of mining the Government have reserved mineral

bearing regions for exploitation by the State and in this connection have set up a Board for Mineral Development. Development schemes involving an outlay of Rs 94.50 lakhs for the Kolar Gold Mines have been sanctioned.

★

Hindi and Non-violence

It is unfortunate for the country as a whole that the protagonists of Hindi fail to pause to consider why a person of the calibre of Mr C. Rajagopalachari has come out in support of English as the Union Language and at the same time is so vehemently opposed to the elevation of Hindi. If, however, they do so they will be able to find that Rajaji's arguments are quite simple and reasonable. In the first place it will be foolish to associate a language with any sentiment. In other words it will be wrong to say that English signifies slavery or that Hindi denotes freedom. Secondly, Union language can be any one of the national languages or even one that is not included in the list. By selecting one language as the Union language, other languages will not suffer, and should not be made to suffer. Such guarantee is inherent in the demand for making the regional language the official language of the State. Thirdly, the Union language should be capable of expressing in adequate measure modern thoughts in every walk of life. Fourthly, the Union language should be capable of being understood by the people of the country. The test here should not be by numbers alone.

The list perhaps is lengthier but the four criteria seem to be the most important. Rajaji's contention is that taking into consideration all the relevant factors and especially the fact that wide tracts in the country are utterly ignorant of Hindi, the status quo should be maintained. Hindi cannot become the official language not only because it is unintelligible to the people in the southern States but also because it is incapable of discharging its responsibility as a Union language for the simple reason the language itself is in an undeveloped state.

Speaking in Madras last week, Rajaji has pointed out that the protagonists of Hindi do not seem to realise that they are flouting one of the cardinal tenets of Mahatma Gandhi. The imposition of Hindi on a region when it does not want it is tantamount to violence and it is in no way different from lathi charge or military action. Rajaji has given another suggestion. He has asked the predominantly Hindi speaking States to try Hindi as the State language in the first instance. In this regard he has pointed out that these States are yet to introduce Hindi in their own regions.

MADRAS REVIEW

Slump in Ginger Prices

THE Ginger-growers of Kerala, who number about 1½ lakhs, are reported to be in a very sad plight as a result of the steep fall in the price of the commodity. It is stated that, during the last 15 years, they had not faced such a deplorable situation. Three years ago, ginger was fetching a handsome price of Rs 1,400 per candy of 6 cwts. Last season, on an average, the price ruled between Rs 700 and Rs 800 per candy. But, it is now difficult to get buyers even for Rs 200 per candy.

The paradox of the situation is, that the price has dipped to such a low level despite the fact that the current season's production is considerably lower when compared to last season's. The present price is much below the cost of production, which is estimated by the

growers at Rs 600 per candy. Last season's production, in India, is estimated at the record figure of 15,000 tons and the export at 9,500 tons.

The Ginger Marketing Co-operative Society in North Travancore has, therefore, suggested that a Committee should be appointed by the Government to enquire into the present slump in the market and to suggest remedies for the situation. It is also suggested that the Government should purchase the stocks with growers and the floating stocks in the market at an average of the prices obtained during the last five years. Prices can thus be rigged up and the stocks with the Government can be sold in an improved market. The margin, that the Government get from the sale, should be distributed

among the growers after taking a reasonable interest for the money which the Government advance for this purpose.

Coffee

Export prospects for Indian Coffee, for the current year, appear more clouded than what was expected earlier. That the first export sale for the current season, held last week, was marked by very disappointing prices and the Coffee Board was forced to withdraw 75 per cent of the quality, is a known fact. It is felt that the present system of closed bidding in coffee sales is disadvantageous to the producers and it should be replaced by open auctions, at least in respect of export sales. It is also felt that the open export auctions will be more popular with foreign buyers, who may show more interest in India's export sales which will ultimately fetch better prices. With prospects of lower export prices ahead, the industry cannot afford to rely on an inadequate marketing system. A well-established exchange for marketing coffee similar to the tea markets at Cochin and Calcutta should be the target.

Meanwhile, world coffee production is expected to be in excess of demand. The US Department of Agriculture estimates the world production of Green coffee, in the 1957-58 marketing season, at 50.4 million bags, which is 8.9 per cent higher than the previous season's output. This means, that the surplus already hanging on the market will be enlarged, acting as a damper on the market.

According to reports, Brazil, Colombia and Central American States have come to an agreement by which nearly 4 million bags will be withheld from the market during the 1957-58 season to bring about a better balance between exportable production and world demand.

Pepper

Prices in Pepper markets are forging ahead to fresh higher levels following the news of deterioration in the political situation in Sumatra. Advices are also better from New York where ready stock is reported to be at a low level as dealers there had so long persisted in their conservative buying policy. The future of the market, therefore, depends on the political situation in Indonesia. In the Kozhikode market, rates are quoted at Rs 542.50 per candy for the Wynaad quality and Rs 520 for the Country variety.

In the New York market, values have continued to rule steady, reflecting political unrest in Indonesia. However, overall buying is inclined to be more cautious as dealers are awaiting further developments in the situation. In view of moderate demand, Lampung now

compares favourably with Malabar Pepper. Muntok February delivery is quoted at 33½ cents per pound. In London, Black Sarawak is quoted at 17d per pound.

Groundnut

Steady conditions prevailed in the Madras Groundnut market where the rate was quoted around Rs 145 per candy. Arrivals averaged 35 to 40 tons per day, Chekk/rotary crushers being the main supporters.

In the Groundnut Oil section, ready rate was quoted around Rs 297 per candy. Calcutta interests were reported to have given good support and taken sizable quantities. Offerings from the South were not appreciable, while business on forward account was small.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides continued to be restricted and these were taken up readily by shippers at the previous week's levels. There was very little change in Buff hides and Calf sections.

On the export front, trading was rather quiet. Enquiries from UK were small on account of the unworkable price levels.

In the Tanned Skins section, arrivals of Goat and Sheep skins were on the same level as in the previous week and there was fair clearance.

In the export section, trading was small. Sellers of prime quality goat skins were quoting erratic prices. With the result, the market was a little confused. In Sheep skins, business was reported in middle class marks at 9d to 1sh per pound lower as compared to pre-auction levels. Semi-primed and good middle classes were difficult to sell.

The market for Raw Hides ruled steady.

In the Raw Skins section, prices were quoted Rs 20 to Rs 25 per 100 skins lower.

THE ANDHRA BANK LTD.

The net profit of Andhra Bank Limited for the year ended 31st December, 1957, after payment of one month's substantive salary as bonus to staff and after effecting revision in the pay scale from 1st May 1957 amounts to Rs. 7.23 lakhs, as against Rs. 8.46 lakhs in 1956. The ad-interim dividend is 8 per cent p. a. compared with 7½ per cent p. a. in the previous year. From profits a transfer to statutory reserve amounting to Rs 1.08 lakhs, has been made, against Rs. 1.03 lakhs. The net profit available for final appropriations towards taxes, further statutory Reserve, Final dividend etc., is Rs. 4.80 lakhs against Rs 6.25 lakhs last year.

Sober Reception to Budget

Watch-Dog Writes:

PENDING announcement of the Budget proposals, stock markets generally experienced a dull period till Thursday when price movements were narrowly irregular in all the sections as operators were rather cautious in their dealings. But, a better sentiment prevailed in the pre-Budget session on Friday when an all-round recovery in prices was recorded, being influenced by the hopes that there would be no increase in the burden of taxation excepting for the introduction of a tax on gifts.

Following the announcement of Budget proposals, prices reacted sharply as disappointment was felt at the omission of the keenly-awaited relief in cloth excise duty. Although the gift tax had generally been expected, the retention of the compulsory deposit scheme and the absence of any relief in the bonus tax caused a barish sentiment in the market. However, the proposals, that the surcharge levied on cement by the State Trading Corporation would be withdrawn and that the rate of development rebate for ships would be increased, induced some short-covering, resulting in a partial recovery in prices at the close.

The Calcutta Stock Exchange, after having experienced steadier conditions till the pre-Budget session, suffered a setback in the special session. Some short-covering, on second thoughts, caused a partial rally at the close.

On the Bombay Stock Exchange, Textiles suffered a sharp fall in the special Budget session with popular scrips losing substantial ground.

A mixed trend in prices was noticed on the Madras Stock Exchange.

The London Stock Exchange developed a firmer tendency, sentiment being assisted by some good company statements and a sharp recovery in sterling.

Wall Street closed barely steady.

Calcutta

Calcutta, Friday Evening.

ONITIONS on the local Stock Exchange remained generally dull till Thursday when price movements were confined to a narrow range as operators were found to be rather cautious in their dealings due to the proximity of the Budget. However, they took a turn for the better in the pre-Budget session when prices staged a marked improvement, being influenced by belief that there would be no fresh increase in taxation and some re-

lief would be granted in excise duties, especially on cloth.

But, the announcement of the Budget proposals caused a sharp reaction in prices. What inspired bullish buying in the early part of the session remained obscure. Later on, the idea of a gift tax or of lowering the level of Estate Duty proved unpopular. In the prevailing confusion, the market's bell-weather, Indian Irons, were subjected to wide fluctuations in prices. The frugality of turnover indicated that the market had formed only a tentative view of the Budget proposals. Full reaction will be known on Saturday as operators had no time to study the full implications of the Budget proposals.

The Giltedged section ruled generally steady with a good all-round enquiry for most issues. The demand was particularly noticeable for medium-dated issues. State Loans were also enquired for; but here, too, sellers were reported to be scarce. 3 per cent 1986 Conversion Loan opened at Rs 70.90 and, after improving at one time to Rs 71.25, receded again at the close to Rs 71.05.

Sentiment in the Jute section continued to remain depressed in view of the obscure outlook for the industry. The reported decision made by the mills not to sell jute goods below certain specified minimum prices (Hessian Rs 39.50 and B. Twills Rs 100 per 100 bags) had no marked effect on the market. National, after being pushed up to Rs 23.75 from Rs 22.65 on settlement considerations, receded at the close to Rs 22.75 on profit-taking. Nuddea receded to Rs 28.50 from Rs 29.00; New Central to Rs 12.75 from Rs 13.00 and Kinnison to Rs 104.50 from Rs 113.

Coal shares suffered from neglect due to the revival of nationalisation talk following the Chinkai mine disaster. Bengal lost another Rs 4 at Rs 21, while Burakur closed a shade easier at Rs 22.60 after touching a high of Rs 22.75. Central India changed hands at Rs 6.50 to Rs 6.65. Western Bengal eased off to Rs 5.12 from Rs 5.22 and Amalgamated to Rs 15.25 from Rs 15.50.

Textile scrips were also a neglected counter on pessimistic outlook regarding the dividends as well as the absence of any improvement in the working of the industry. The absence of any relief in excise duty on cloth was also a contributory factor. The only steady feature was Kesoram at Rs 9.75.

Reports, that an adequate supply of tea was expected and it was possible that overseas buyers would take their requirements only slowly, caused restricted trading in the Tea section. Although a few scrips were pushed up on the expectation of some relief in the export duty, especially on Common teas, profit-taking erased most of the gains at the close in the absence of any relief following the Budget proposals. Basmatia were taken up to Rs 22.00 (Rs 21.87); Brahmapootra up to Rs 3.19 (Rs 3.06); Betjan Rs 22.87 (Rs 22.75);

Bishnauth up to Rs 19.00 (Rs 19.00); Dhelakhat up to Rs 19.94 (Rs 19.87); Grob "A" up to Rs 21.62 (Rs 21.50); Hasimara up to Rs 20.75 (Rs 20.00); Jayshree up to Rs 10.22 (Rs 10.12) and Methoni up to Rs 15.12 (Rs 14.69). Figures shown within brackets were the closing rates for the week.

Sugar shares continued to meet with selective support. Most prominent were Champaran being taken up to Rs 22.12 from Rs 19.00; Dyer Meakin up to Rs 9.31 from Rs 9.25 and Buland up to Rs 13.56 from Rs 13.37. Darbhanga changed hands at Rs 18.37 to Rs 18.50 and S.K.G. at Rs 8.94 to Rs 9.00. Barrampore were, however, quiet at Rs 6.06 against Rs 8.25.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to settlement adjustments till mid-week. Against the week-end closing of Rs 19.32, Indian Irons opened better at Rs 19.43 and advanced further to Rs 20.20 in the pre-Budget session on expectation of some relief in taxation. But, the announcement of the Budget proposals caused a sharp setback to Rs 19.35, to finish better at Rs 19.66 on second thoughts about the Budget proposals. Similarly, TEXMACO were pushed down to Rs 17.08 from a high of Rs 17.20 and Jessop to Rs 22.25 from Rs 22.37, to finish better at Rs 17.10 and Rs 3.12 respectively. G. K. Williams continued to attract good investment support up to Rs 29.37 from Rs 29.31, while Kumardhubi changed hands at Rs 7.75 to Rs 7.87; Indian Galvanizing at Rs 13.94 to Rs 14.06; Burn & Company at Rs 316.50 to Rs 318 and Marshalls at Rs 4.94.

The Miscellaneous section provided a few firm spots. The most outstanding feature was India Steamship, which were keenly sought after up to Rs 12.50 from Rs 11.94 following the relief granted to the shipping companies, to finish a shade quieter at Rs 12.44 on profit-taking. Paper shares remained strong in the absence of any further increase in the excise duty as was originally feared.

Orient Paper were taken up to Rs 25.00 from Rs 24.30; Titagur up to Rs 33.56 from Rs 33.50 and India Pulp up to Rs 19.37 from Rs 19.25. Dunlop were enquired up to Rs 22.12 from Rs 22.00; National Carbon up to Rs 25.00 from Rs 24.50; Hindustan Lever up to Rs 19.69 from Rs 19.50; Phillips India up to Rs 13.87 from Rs 13.75 and Indian Cable up to Rs 28.81 from Rs 28.44. Indian Oxygen developed a hardening tendency to Rs 16.25 from Rs 16.00 on reports of the tremendous success of the recent offer made to the public.

Indian Copper were a narrow market, moving between Rs 2.80 and Rs 2.85. Rohtas were enquired up to Rs 16.12 from Rs 15.87; Indian Aluminium up to Rs 12.81 from Rs 12.75 and Sone Valley up to Rs 5.25 from Rs 5.12, to finish at Rs 16.00; Rs 12.81 and Rs 5.22 respectively. Alkali Chemical new shares changed hands at Rs 11.94 to Rs

12.31, to close at Rs 12.12 on profit-taking.

Bombay

Thursday.

Sentiment on the stock market during the past week was quite steady most of the time despite the proximity of the Central Budget. Around midweek the textile section was quite active with selected scrips changing hands at improved levels following expectations of reliefs for the cotton textile industry.

Sectionwise Steel shares ruled steady. Tata Iron opened at Rs 168.00 and after fluctuating within narrow limits closed better on balance at Rs 169.25. Indian Irons moved up to Rs 19.52 from Rs 19.32.

In the textile section Bombay Dyeing opened at Rs 50.20 and steadied up further by midweek but by close developed a sagging tendency to close at Rs 50.50. Century was higher at close at Rs 381.50. Swadesh was steadier at Rs 165.00.

In the miscellaneous section ACC after opening at Rs 143.25 was finally placed at Rs 143.50. Scindia was well maintained at Rs 17.40. Bombay Burmah was quietly steady at Rs 523.00. Sugar shares were better with Belapur quoted at close at Rs 234.00.

Madras

PRICES on the Madras Stock Exchange showed a mixed trend during the week under review. Plantings met with better support, while Textiles were generally easy. Sugars and Miscellaneous issues remained steady with moderate enquiry.

Textiles: There was not much activity in this section. The poor dividends by Coimbatore Cottons, Dhanaalakshmi and Loyals caused a generally easier tendency in prices.

Plantings: This section accounted for a lively turnover, thanks to better crop reports. Among Tea shares, Chembas and Periakaramals met with good enquiry up to Rs 2.90 and Rs 4.10 respectively.

Miscellaneous: In this section, Cement shares turned a shade quieter on lack of fresh enquiry. Indias were offered at Rs 27.25 with Orissas quoting around Rs 12.35.

Ahmedabad

CONDITIONS on the Ahmedabad Stock Exchange ruled quietly steady. Following were the trend of prices:—Calico Rs 611 to Rs 614; Ambica Rs 589.50 to Rs 592; Atul Rs 177 to Rs 177.25; Arvind Rs 1,004 to Rs 1,012; New Shorrock Rs 689 to Rs 690; New Commercial Rs 430 to Rs 432; Rohit Rs 141.25; Nutan Rs 360 and Ahmedabad Cotton Rs 420.

London

ONE of the worst accounts, that the London Stock Exchange had experienced for some time past, came to an end. Although sentiment was still very much influenced by the determination in the American business situation and the uncertainty at home, the closing rates for the week showed substantial gains on balance, thanks to some good company statements and a sharp recovery in sterling.

New York

EXCEPT for some selected scrips which made gains, trading on Wall Street was generally dull as business news continued to be on the gloomy side. Steels and Motors appeared to be the softest sections.

SIJUA (JHERIAH) ELECTRIC SUPPLY CO. LTD.

NOTICE is hereby given that an Annual General Meeting of SIJUA (JHERIAH) ELECTRIC SUPPLY CO. LTD., will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 2.30 P.M., on Monday, the 31st day of March, 1958 for the following purposes:

- To consider and approve the Audited Accounts of the Company for the period of 15 months ended 31st March, 1957 and to receive the Directors' and Auditors' Reports thereon.
- To declare Dividend recommended by the Directors.
- To appoint Directors in the place of the retiring Directors, including Mr. S. B. Bose, who retires by rotation, and being 69 years of age, is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting, specifically declaring that the age limit shall not apply to him.

AND in this connection to consider, and, if thought fit to pass the following resolution, of which special notice as required by Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act is appended below.

TO BE PROPOSED AS AN ORDINARY RESOLUTION:

"That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Mr. S. B. Bose and

that he be and is hereby re-elected as a Director of the Company, whose period of office as such director would be liable to determination by retirement of directors by rotation".

- To appoint Auditors and fix their remuneration.

The Share Transfer Registers of the Company will be closed from 20th to 31st March, 1958 both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries.

CHARTERED BANK BUILDINGS,
CALCUTTA: 24th February, 1958.

NOTES:

(a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after 10th April, 1958, to those shareholders so entitled whose names appear in the Company's books on the 31st March, 1958, or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT.

In the special notice given to the Company of the resolution under item No. 3 of the above notice it has been stated that the services of Mr. S. B. Bose have proved most useful to the Company and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956, should not apply to him.

ALKALI & CHEMICAL CORPORATION OF INDIA LIMITED.

Secretaries:—Imperial Chemical Industries (India), Private Ltd.

2,000 miles make no difference, Bhai Sahib!

Whether you are in Calcutta or Kutch, Delhi or Dhanushkodi, you can be sure of buying your favourite brand of Brooke Bond Tea fresh and at the same price.*

This is because the Brooke Bond system of standard price and direct selling guarantees a square deal to lakhs of shopkeepers and to the crores of consumers who drink over 55,000,000 cups of Brooke Bond Tea every day.

Further, and it is important that you know it, your grocer is under no obligation to buy our

tea. As there are no middlemen or credit tangles but just straight cash dealings in our system of selling, the dealer is free to buy what he likes and when he likes and the fact that more dealers continue to buy Brooke Bond Tea than any other brand proves its growing popularity.

Remember! Wherever you are, there is Brooke Bond—standard in quality and price.

*Subject to local taxes and other duties

HERE ARE SOME FACTS ABOUT BROOKE BOND, BHAI SAHIB:

Number of dealers regularly buying
Brooke Bond Tea ... 5,25,014
(This includes grocery and other shops,
teashops, hotels and canteens)

Number of villages directly served by
Brooke Bond salesmen ... 18,612

Issued by Brooke Bond India Private Limited

This is the seventh in a series of 8 advertisements

Indian Finance

INVESTOR'S SUPPLEMENT

Equities Quietly Steady in February

The Stock market began the month on a confident undertone following the improved prospects of foreign aid as a result of the sanction of the \$225 million loan to India by the US. A contributory factor for the signs of improvement noticeable had been the general expectation that in view of the difficulties encountered by the private sector in finding necessary funds for expansion and even for day to day working, the coming Central Budget would contain some concessions which would go a long way toward restoring confidence in the investment situation in the country.

The speech of Mr Nehru at the Indian Merchants Chamber early in the month, seemed to have revived apprehension about the Central Budget. The Prime Minister had said that last year's Budget faithfully reflected Government's policies. The statement was interpreted to mean that there would be no reliefs or concessions.

Meantime it became clear that Mr T. T. Krishnamachari would not be the person who would present the Budget at the end of the month. And when news of the acceptance of his resignation came there had been some speculation as to whether the new Finance Minister would continue the policy of his predecessor or make any fundamental change. In this regard it was noted that in his letter of resignation to the Prime Minister Mr Krishnamachari had said that the preparation of the Budget had been completed by him. Taking this factor along with the announcement that Mr Nehru would take up the Finance Portfolio, it was generally believed that the Budget would fully bear the impress of Mr Krishnamachari.

The Lok Sabha debate on the Chagla Commission Report brought out a number of points which had a vital bearing on the stock markets. In the first place there was uncertainty about the investment policy of the Life Insurance Corporation. As the LIC has become the single major investor in equities it was naturally considered important to have a clear idea in this regard. Mr Nehru's observation that there seemed to be no harm in obtaining the control of private enterprises through LIC investments was responsible for reviving the apprehension about back-door nationalisation.

Toward the close of the month, however, sentiment took a turn for the better with the growing belief that the Budget would contain good tidings especially for the cotton textile industry and for the private sector as a whole. The confidence was reflected in the pre-Budget trading on the last day of the month. When the Budget proposals were made known on the evening of the 28th sentiment was rather disappointed and in the

special budget session prices showed a declining trend. It would appear that the retrogression was due to the disappointment caused by the absence of concessions so eagerly expected. Second thoughts on the budget seemed to have revived confidence as it was realised that though the anticipated reliefs were absent there were no surprises. Moreover, one industry, namely shipping, has been given substantial benefits by increase in the Development Rebate to 40 per cent. It is also to be noted that the Budget is not utterly devoid of concessions. For hereafter in the case of Section 23-A com-

panies, for purposes of determining the tax, there will be two slabs instead of three. The first slab which comprises dividend payment between 6 and 10 per cent will be liable for a dividend super-tax of 10 per cent; while the second slab, dividends exceeding 10 per cent, will attract a tax of 20 per cent.

The absence of any new taxation proposals in the West Bengal and UP Budgets was also responsible for reviving sentiment as it was earlier expected that State Budgets would show fresh taxation proposals. The Railway Budget was also considered to be a favourable

ward self-sufficiency in jute, but also on the foreign exchange earnings of the country". National Jute which opened at Rs 23.85 touched a low of Rs 22.65 to be finally placed at Rs 22.75.

Sugar shares were an active counter following publication of excellent working results by some companies for last year. Some of the prominent spots were Champaran (Rs 22.12), Dyer Meakin (Rs 9.31) and Dharbanga (Rs 18.50).

Tea shares were a subdued market largely because of the uncertain outlook for common teas. Prices obtained in the auctions during the month continued to be at low levels. Though fears of further taxation by the State Government were belied, some disappointment was caused by the absence of any relief in the Central Budget.

Coal shares were a steady market most of the time. Reports of satisfactory working results of coal companies coupled with expectations of a larger allocation for private collieries in the target under the Second Plan kept selected scrips in moderate demand. With the explosion in Chinakuri, Bengal Coal was hammered down. Further, discussions in the country about safety in mines have also revived apprehensions about nationalisation of coal companies. Burrakur opened at Rs 22.12 touched a low of Rs 21.87 and finally closed at Rs 22.60.

The Miscellaneous section was generally steady with a few bright spots showing up from time to time. Toward the close and on announcement of the Budget proposals, India Steamship spurted to Rs 12.50 to close at Rs 12.44. Orient paper steadied up to Rs 25. Other prominent shares were Dunlop Rubber, Indian Cable & National Carbon. Indian Oxygen was in good support up to Rs 16.25. Details of acceptance of the applications to the offer for sale of 570,000 shares in Indian Oxygen Limited, by the British Oxygen Company Limited disclosed that over 1,800,000 shares were applied for by the public and that applications for the minimum quantity of 50 shares alone exceeded one million.

The Textile section remained subdued most of the time but toward close displayed signs of recovery on the confident expectation that the Central Budget would contain some provision that would be beneficial to the cotton textile industry. When it became known that no such concession was to be given, this section became once again quiet.

Bank shares were a steady market. Punjab National Bank was quoted at close at Rs 52.75 against Rs 51.37 at the beginning of the month. United Commercial Bank was finally placed at Rs 59.00.

factor as it contained no new proposals for increasing freight rates as was apprehended.

Sectionwise Engineering shares were quietly steady with Indian Irons fluctuating both ways following alternate bouts of buying and selling. As against the month's opening rate of Rs 20.35, the scrip receded to a low of Rs 19.20. In pre-Budget trading it recovered to Rs 20.20. During the special budget session it receded again to Rs 19.35 but staged a rally to close the month steadier at Rs 19.66.

Jute shares were depressed in view of the uncertain outlook for the industry. Toward the close of

the month prices in the jute goods market declined sharply. With the announcement that the IJMA mills had agreed not to sell Hessian 40"x10 oz below Rs 39.50 and B Twills below Rs 100, sentiment somewhat revived. Explaining the reasons leading to the decision of mills, the IJMA in a press note said "the decline in prices, which was quite unwarranted by the statistical position or prevailing market conditions, was a direct result of the activities of speculators in the fatka market and was having a most serious effect, not only on raw jute prices, with the danger of repercussions on India's drive to-

(a) After transferring Rs 3,00,000 from Development Rebate Reserve, Rs 1,55,000 from Reserve for Taxation Contingencies and Rs 63,186 from Jute Stock Reserve.
(b) After transferring Rs one lakhs from General and Dividend Reserve.
(c) After writing back Rs 1,26,328 from provision made for loss on stock of Jute at mill. ADOAT and forward Jute purchases, etc.
(d) After transferring Rs 1,14,000 from Reserve for taxation contingencies and Rs 70,000 from Jute Stock Reserve.
(e) After writing back Rs 4,22,828 being provision against anticipated loss on raw jute stock and work in progress; Rs 29,066 being provision against anticipated loss on jute contract for and after transferring Rs 5,65,000 from General Reserve and Rs 69,000 from Dividend Equalisation Reserve.
(f) After transferring Rs 5,00,000 from General Reserve and Rs 3,00,000 from Machinery Renewal Reserve, Rs 2,00,000 from Dividend Equalisation Reserve and Rs 2,00,000 from Jute Stock Reserve.
(g) After transferring Rs 3,00,000 from Reserve for Machinery Renewal and Replacement.
(h) After transferring Rs 3,00,000 from General Reserve.
(i) After writing back Rs 3,04,000 being provision against anticipated loss on raw jute stock and work in progress and Rs 4,225 being provision against anticipated loss on jute contract for and after transferring Rs 3,90,000 from General Reserve and Rs 32,500 from

Dividend Equalisation Reserve.

(j) After transferring Rs 4,25,000 from Reserve and writing back Rs 30,000 from Workers' Provident Fund shown in excess in previous half-year and Rs 61,000 from provision for possible loss on forward contracts.
(k) After writing back Rs 1,21,392 being provision against anticipated loss on raw jute stock and work in progress; Rs 29,161 being provision against anticipated loss on jute contract for; Rs 14,600 being excess provision for taxation and Rs 1,95,000 from Dividend Equalisation Fund.
(l) After transferring Rs 8,50,000 from General Reserve.
(m) After transferring Rs 1,00,000 from Dividend Equalisation Fund and Rs 75,000 from General Reserve.
(n) After transferring Rs 1,01,808 from General Reserve and Rs 6,879 from provision for taxation and after including Rs 1,25,603 being refund of taxes.
(o) After transferring Rs 2,00,934 from General Reserve and Rs 58,376 being excess depreciation.
(p) After transferring Rs 1,06,985 from Jute Stock Reserve; Rs 62,400 from Reserve for Tax contingencies; Rs 21,000 from Development Rebate Reserve; and writing back Rs 52,371 from provision for taxation and Rs 10,000 from Id. Liability.
(q) After transferring Rs 7,50,000 from General Reserve.
(r) After transferring Rs 5,00,000 from provision for contingencies and Rs 1,00,000 from provision for tax-

tion.

(s) After transferring Rs 8,23,000 from Reserve for Tax contingencies; Rs 2,30,000 from Jute Stock Reserve; and Rs 1,47,000 from Development Rebate Reserve and including Rs 1,89,365 being Requisition claim realised.
(t) Preference shares carry a dividend of 10 per cent of which only 5 per cent is cumulative.
(u) After transferring Rs 36,028 from Jute Stock Reserve.
(v) After transferring Rs 3,28,000 from Tax contingencies Reserve; Rs 2,50,000 from Jute Stock Reserve and Rs 5,000 from Development Rebate Reserve.
(w) After writing back Rs 2,37,786 being provision against anticipated loss on raw jute and work in progress; Rs 7,350 being provision against anticipated loss on jute contract for and Rs 19,500 being excess provision for taxation and Rs 85,000 from Dividend Equalisation Reserve and Rs 4,25,000 from General Reserve.
(x) After writing back Rs 1,65,396 being provision against anticipated loss on raw jute and work in progress and Rs 16,800 being provision against anticipated loss on jute contract for and after transferring Rs 2,80,000 from General Reserve and Rs 25,000 from Dividend Equalisation Reserve.
(y) After transferring Rs 5,94,144 from Capital Reserve and Rs 3,00,000 from Contingencies Reserve and after providing Rs 2,70,141 for Sales-tax Liability.
(z) After writing back Rs 1,00,000 from excess provision for taxation and Rs 25,000 from provision against anticipated loss on forward contracts.

Brisk Rise in Indian Irons

Investment Gossip:

BRISKLY, prices were taken up during the course of the last week, though the volume of activity was still not as large as could be desired. But, definitely, the feeling is one of a change for the better, with the worst left behind—at least, for another three years. This is on the presumption, which is in the form of a strong and confident belief, that the rest of the Plan period will not witness any new attempts at fresh taxation. So, it is this negative favourable factor that has been welcomed by the markets, and made much of. Moreover, in the last week, second thoughts have begun to be entertained about the king-pin of the Calcutta Stock Exchange, Indian Irons; and no longer is this scrip low in the estimation of the market.

The reasoning on which there has been this change in the assessment of the worth of Indian Irons may now be analysed. Firstly, the yield on Indian Irons till recently exceeded 5 per cent; and so, from the point of view of rate of return, it affords every satisfaction to the investor.

Secondly, the growth prospects are more unambiguous in respect of Indian Irons than with regard to any other scrip. There is already available the hint that the company may be called upon to proceed with further expansion in terms of the Third Plan.

Thirdly, the current expansion programmes are practically completed; and so, the trend in production should be consistently upward, which means that earnings, too, will be headed upward.

Fourthly, it is considered that there is no danger, as in some other industries like sugar or cement or cotton textiles, of production exceeding demand. Even if supplies run ahead of the indigenous market, it is felt that the surplus could quite easily be exported.

Fifthly, it is hoped that, as and when internal production catches up with the demand, Government will recognise that an anachronism will have come into being: this would be the system of retention price and selling price for steel. It is not altogether unreasonable to expect that, in such conditions, the internal producers will be permitted to be paid an amount that nearer approximates the present selling price.

In such a contingency, sixthly, logic suggests that the margin of

profit available to the steel manufacturers will go up.

It is recognised that the increased profits thus enabled will not all be available for dividends; but they will surely be permitted for meeting the liabilities that the companies have undertaken in order to put through their expansion programmes. So, seventhly, it is felt that there is reasonable prospect of steel companies earning a higher margin of profit, so that they become able more quickly to repay the loans that they have secured.

Then, eighthly, it would mean automatically that the break-up value of steel shares would also, automatically, go up sharply.

The fee 1/3 in Calcutta's that, applying these criteria, it is Indian Irons that is much the better off, as compared with Tata Ordinaries.

This perhaps explains why the current rise in prices owes its motivating force to Lyons Range, which has signified itself as a fairly strident purchaser of Indian Irons. There are some circles which have already started talking up Indian Irons to a level of Rs 25 a share.

Whether this materialises or not, the fact remains that, already, the rise from the pre-Budget level is of satisfactory proportions; and some further rise seems almost certain.

£ R\$

Investment Briefs:

Braithwaite & Company Limited has maintained the dividend at Rs 2 per share for 1957.

Tractors (India) Limited has recommended a dividend of Rs 2 per share on the enhanced capital for the year ended 30th Jun., 1957 as against Rs 5 on the original capital in the previous year.

£ R\$

Investment Notes:

The shares of the Bank of Baroda have firmed up to Rs 115.50 from Rs 112.00 on expectation of a bonus issue of one share for every five shares. This is the golden jubilee year for the bank, being established in 1908.

The business of the Union Bank of India Limited has shown good progress during last year. The directors have considered the desirability of a suitable increase in the paid-up capital and resolved to increase the same from Rs 40 lakhs to Rs 60 lakhs by the issue of 4 lakhs new shares of Rs 5 each. To be fully paid, at par, to the shareholders in the ratio of one new share against two old shares. The necessary application, in this behalf, has already been made to the Government of India.

Calico Mills have decided to issue half ordinary share as bonus for every existing ordinary share (i.e. one share for every two shares). This was expected for some days past. An extraordinary general meeting is being convened on the 28th March, as the Government's sanction has already been obtained to the bonus share scheme.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.

Head Office: Oriental Buildings, BOMBAY-1

The shares have moved up to Rs 645 c.d. (Rs 11 interim).

It is learnt that negotiations with a leading American firm, Cabbots, have now reached an advanced stage in connection with a proposal to manufacture Carbon Black on a commercial scale in India. The plant is likely to cost Rs 1.5 crores. A leading Indian industrialist is expected to sponsor a company in collaboration with the American firm. Details are yet to be worked out. Carbon black is an important constituent in the manufacture of tyres.

A scheme for the amalgamation of the Oriental Government Security Life Assurance Company Limited with the Investment Corporation of India Limited has now been evolved as a sequel to protracted negotiations between the directors of both the companies. The scheme, to be effective, will have to be approved by the requisite majority of the shareholders of each company, and the sanction of Bombay High Court will also have to be obtained. In consideration, the Investment Corporation will allot to every shareholder of Oriental in respect of every share of Rs 200 each held by him, 40 shares of the Corporation of Rs 100 each fully paid or Rs 4,000 in cash. The meeting of the shareholders has been convened on the 31st March.

It is understood that the Kerala Financial Corporation will shortly issue Debentures to the tune of Rs 50 lakhs. The Debentures will carry interest at 4½ per cent and

are repayable over a period of 10 years. The issue price is Rs 98.50, which gives a redemption yield of 4.94 per cent. The Kerala Government has guaranteed both principal and interest. It is expected that the list will be open some time in the third week of this month.

Hindustan Lever Steps up Dividend

Balance-Sheet Reviews:

THE shares of Hindustan Lever Limited had been ruling very firm at Rs 19.69, during the past few days, on expectation of an increase in dividend. It is now confirmed that the company has raised the dividend from Rs 1.25 to Rs 1.40 per share for last year.

The company, during the year under review, has maintained the results. The net profit amounts to Rs 100 lakhs after providing Rs 123 lakhs for Taxation at current rates. After allowing for the additional taxation consequent upon the 1957 budget, the net profit in 1956 was Rs 61 lakhs after charging taxation of Rs 162 lakhs. Included the 1956 taxation charge of Rs 162 lakhs was Rs 47 lakhs on account of the bonus issue made in October, 1956.

The annual general meeting of the company will be held on the 7th April 1958 and the payment of dividend will be made on or after the 8th April.

Produce More and Serve A

Walchandnagar Industries

The directors of the Walchandnagar Industries Limited have proposed to maintain the dividend at Rs 21 per share for the year ended 30th September, 1957. The company has earned a higher profit of Rs 38.97 lakhs as against Rs 33 lakhs in the previous year after raising the provision for Taxation from Rs 17 lakhs to Rs 18.75 lakhs and providing Rs 8 lakhs against Rs 10.40 lakhs for Depreciation. Special depreciation, development reserve, etc., have claimed Rs 11.80 lakhs against Rs 4 lakhs and the allocation to the General Reserve has been maintained at Rs 5.00 lakhs.

ER\$

Volta

The Volta Limited has earned a higher profit of Rs 25.51 lakhs for the year ended 31st August 1957 as against only Rs 19.74 lakhs in the previous year after raising the provision for Taxation from Rs 20.10 lakhs to Rs 50 lakhs and for Depreciation from Rs 3.56 lakhs to Rs 4.69 lakhs.

Proceeds of sales and services, etc., have gone up substantially from Rs 14.52 crores to Rs 20.60 crores. The allocation to General Reserve has been maintained at Rs 3.25 lakhs. The provision for Retiring Gratuity is also maintained at Rs 2.00 lakhs. The proposed dividend absorbs Rs 19.80 lakhs against Rs 13.50 lakhs.

The company's achievement reflects its continued expansion in spite of import restrictions. Arrangements have been made with foreign principals for local production of diesel engines, water meters and tool-holder bits, tipped tools, etc. Agreements for the manufacture of a number of other items have been finalised or are under discussion.

ER\$

Rallis India

Rallis India Limited has reported a substantial decline in profits for the year ended 31st August 1957, reflecting the disturbed trading conditions generally experienced by the company. Although trading in gunnies, oils and oilseeds resulted in a loss, profits are reported to have been made in all other articles. However, there is a further reduction in turnover of about Rs 1 crore as compared with the previous year. The depart-

ments, mainly affected, are oil, oilseeds and cotton, owing to the smaller licensing of imports of foreign cotton, while there are substantial increases in the business done in fertilizers and steel.

The accounts, before providing for Depreciation, reveal a net profit of only Rs 1.91 lakhs as against as much as Rs 20.82 lakhs in the previous year. After transferring Rs 14.04 lakhs from Property Reserve Account and Rs 5.25 lakhs from provision for taxation no longer required, there is an available sum of Rs 22.93 lakhs. Out of this amount, a sum of Rs 7.55 lakhs (Rs 7.65 lakhs) is provided for Depreciation; Rs 12.41 lakhs (nil) for arrears of depreciation for two years and Rs 1.25 lakhs (nil) for Wealth tax, leaving a debit balance of Rs 44.13 lakhs to be carried forward to next year.

ER\$

Calcutta Steam

Despite a substantial decline in profits, the Calcutta Steam Navigation Company Limited has maintained the dividend at 65 p per share for the half-year ended 30th June, 1957. Freight income is higher at Rs 12.18 lakhs against Rs 10.54 lakhs; but the net profit, after providing for Depreciation and Taxation, is substantially lower at Rs 44,919 against 1.00 lakh in the previous year. This is mainly due to the fact that the Depreciation amount is raised to Rs 1.33 lakhs from Rs 1.27 lakhs and the Taxation provision to as much as Rs 1.78 lakhs from Rs 70,000.

ER\$

Kelvin Jute

The Kelvin Jute Company Limited has presented accounts for the eleven months ended 31st March 1957. The accounts are not strictly comparable with those for the half-year ended 30th June, 1956. Sales are shown at Rs 1.58 crores against Rs 73.31 lakhs, while the net profit, after providing for Depreciation and Taxation, amounts to Rs 2,48,578 as against Rs 1,20,482. A sum of Rs 3.58 lakhs (Rs 2.69 lakhs) is set aside for Depreciation and Rs 2.40 lakhs (Rs 90,000) for Taxation. A dividend of Rs 9 per share has been recommended on the Ordinary shares as against Rs 5 for the half-year ended 30th June, 1956.

The Budget: Second Thoughts

CRITICISM of the 1958-59 Budget tends, not strangely, to be in muted tones. There is nothing tangible that can be taken umbrage at, and even the one major levy introduced by Mr Nehru, the Gifts Tax, has been expected. So, if criticism at all there is, it is not because the Budget contains provisions which are onerous, but rather because it does not contain reliefs that had been expected, or at least hoped for. While we gave our first views on the Budget in the last week's leading article, and while it is proposed to bring out a Special Supplement to be issued together with next week's Indian Finance, we here briefly take account of what may be called the disappointments that the Budget presented.

A list of disappointments—or tabulation of measures which many in this country would like to see disappear from the statute book—would be unconscionably long, but legitimately at the head of such grievances is the plaintive grouse of the cotton textile industry. The industry's record as a whole has been satisfactory, even if there were elements in it, during the war, which took unfair advantage of the scarcity conditions to mult higher prices. Whether from the point of view of expanding production or increased exports, the industry has done its bit. But, for all the higher production, a stage was reached in the middle of 1956 when supplies threatened to be inadequate vis-à-vis the demand generated by the improved purchasing power of the Indian masses. At that time, Mr T. T. Krishnamachari raised the excise duties on cotton textiles rather sharply, but it appeared to be implicit in his action that the marking up of the excise duty had merely two short-term objectives in view. The first aim was to divert a moiety of the higher level of profit that the industry was earning. The second aim was to discourage consumption by means of inducing consumer resistance to the higher prices which the excise duties would bring into being. As reflected in the Centre's receipts from excise duties on cotton textiles, both these aims were achieved.

In the Budget for 1956-57, receipts from excise duties on cotton textiles were placed at Rs 29.50 crores. Sir Chintaman Deshmukh's proposals for 1956-57 raised the revenues from cotton cloth to Rs 45.08 crores. Then, later in the year, Mr Krishnamachari further raised the excise duties, so that, in the Revised Estimates for 1956-57, realisations from cotton cloth were put down Rs 15.50 crores higher at Rs 59.58 crores; and, at the same time, the Finance Minister estimated the receipts from cotton cloth at Rs 72 crores for 1957-58. In the Budget presented for 1958-59, the actuals for cotton cloth for 1956-57 are placed at Rs 51.86 crores. Thus, with the higher excise duties in effect from September 1956, production already began to be affected. The short fall of nearly Rs 8 crores cannot easily be ascribed to any other reason. Again, the Revised Estimates for 1957-58 showed a short fall of Rs 11½ crores from the Budget figure of Rs 72 crores. While this decline in expectation might be due partly to the fact that, late last year, some relief was given in respect of

medium varieties of cotton cloth, the feeling still persists that the point of diminishing returns has been touched in the case of excise duties on cotton cloth. In the Budget for 1958-59, curiously, credit is taken for Rs 58.56 crores. This would seem to indicate that Government themselves have been compelled to recognise that the revenues from cotton textiles are on the down trend.

It is scarcely to be denied that the textile industry is in sore straits. Stocks, which had risen rapidly after September 1956, do not show as healthy a decline as could have been wished for. Secondly, at the current rates of excise duty, the experience of most units is an inability to earn profits. Indeed, the argument has been advanced that the improved revenues to Government from the excise duty on cotton cloth have at least been partly offset by a decline in the income-tax collections from the industry. The facts, it would seem to us, clearly point to the need and desirability of some relief being given to the cotton textile industry.

The second head under which relief had been expected was in respect of the reserve deposit. As against the Budget estimate of Rs 14.58 crores for 1957-58, the Revised Estimate discloses that realisations are likely to be very much lower at an almost negligible figure of Rs 3.48 crores. Consequently, it was hoped that, having regard to the paucity of resources available under this head, and also having regard to the fact that the impost is not central to the integrated tax structure that Mr Krishnamachari created, it might be repealed. This hope was further strengthened by the fact that Mr Krishnamachari had himself hinted that it was by no means to be a permanent entry in the statute books. If only because there apparently is quite needless loss of time and energy, not to speak of the possibility of harassment, it might have been a good thing if Mr Nehru had seen his way to eliminating the deposits requirement.

The third relief that has failed to materialise is in regard to the export duties on common teas. The export duty realised from tea, according to the actuals for 1956-57, is Rs 20.47 crores; but the revised for 1957-58 is Rs 17 crores, or Rs 2 crores lower than the Budget figure of Rs 19 crores. The credit taken for 1958-59 is Rs 18 crores. While nothing definite can emerge as a conclusion from these figures, prices on the tea market are replete with evidence of sluggish conditions for common teas. Not only are exports sluggish, but prices are tending to be depressed. It was hoped that Government would consider the earning of foreign exchange to be as equally important as the vouchsafing of tax revenues; and it had been anticipated, in this light, that a cut in the export duty would have been effected, in order that exports of common teas might be fostered.

These are three concessions that this journal supports. There are some other aspects of the Budget for 1958-59 in particular, and the tax system generally, which need a detailed examination. For instance, the tightening up of conditions under which a company can claim Development Rebate may create unexpected hardships. All these are matters

which will be dealt with fully in the study of the 1958-59 Budget, to be published next week.

Rice Supply: Fiasco in Andhra Pradesh

By S. KESAVA IYENGAR

WE are at the end of the second year in the Second Plan, but experience has not made us wiser, particularly with regard to food supply. Rice is the staple food in the Southern States as also in Orissa and Bengal, and in spite of all the claims by the Grow More Food campaign and sweeping resolutions at Mussoorie and New Delhi, the economics of rice supply have definitely taken a turn for the worse. The following figures show the drifting way in which import of rice from abroad has behaved during the last few years:

Year	Import of rice from abroad ('000 tons)
1951	749
1952	722
1953	175
1954	603
1955	265
1956	325
1957 (provisional)	770

Equally fluctuating have been the reserves maintained by the Central and State Governments as is clear from the following figures:

Year	Opening Stock of Rice in '000 Tons	
	State Govts.	Central Govt.
1951	729	—
1952	1,309	—
1953	1,507	110
1954	924	518
1955	784	856
1956	168	738
1957 (provisional)	79	208

Later, the Central Government have been more active in stockpiling. What about domestic production of rice? The situation has been no less disturbing: figures stand thus:

Year	Southern Region (a)		Eastern Region (b)	
	Region (a)	Region (b)	Region (a)	Region (b)
1953-54	6,927	11,316		
1954-55	7,075	9,951		
1955-56	7,060	11,298		
1956-57	7,392	12,063		

Note: (a) Southern Region includes the States of Andhra Pradesh, Madras and Mysore.

(b) Eastern Region includes the States of Assam, Bihar, Orissa and West Bengal.

All India wholesale price index numbers for cereals show uncomfortable ups and downs, exerting a profound influence on the working class cost of living. The index numbers are:

Year	Highest Index number & Month
Base: Year ended August 1939=100	
1949-50	474—August
1950-51	387—March
1951-52	494—September
1952-53	464—August

Base: 1952-53=100

1953-54	108—July
1954-55	89—April
1955-56	87—March
1956-57	100—November
1957-58	106—February
	106—August

The change of the base from the year ended August 1939 to 1952-53 is nothing short of a contrivance to hoodwink the lay public into a psychology of complacency: a rise of six points between 1956-57 and 1957-58 really means a rise of $6 \times \frac{100}{100} = 27.8$ points. Putting together rice production, rice imports, rice stocks of Government and rice prices, the over-all picture is definitely displeasing and discouraging: not even a neutral price policy was pursued, and vicissitudes in Government price policy were spasmodic and irresponsible, to put it mildly.

ANDHRA PRADESH "SURPLUS"

The Table given below shows production of rice in Andhra and Telangana separately and in Andhra Pradesh as a whole:

Region.	PRODUCTION OF RICE.			
	(In '000 Tons).			
	1953-54	1954-55	1955-56	1956-57
Andhra ..	2463	2559	2503	2668
Telangana ..	612	548	543	636
Andhra Pradesh ..	3075	3107	3046	3304

The relative position of Telangana as a deficit area, of Andhra as a surplus area, and of Andhra Pradesh as a surplus area with regard to rice and millets put together, is shown in figures noted hereinunder:

Region and year.	Population (in 1000s.)	(In '000 Tons).			
		Production (rice and millets).	Consumption at 14 oz. per capita per day.	Seed.	Surplus or deficit.
1955-56:					
Andhra ..	21,768	3,907	3,104	74	+729
Telangana ..	11,413	1,244	1,628	40	-424
Andhra Pradesh ..	33,181	5,151	4,731	114	+305
1956-57:					
Andhra ..	22,029	4,165	3,141	76	+948
Telangana ..	11,550	1,261	1,647	41	-427
Andhra Pradesh ..	33,579	5,426	4,788	117	+621

Normally, Andhra Pradesh is believed to have an annual surplus of 600,000 tons of rice. Rice prices in Andhra Pradesh also fluctuated widely. In the Andhra region, when it was a part of the Madras State, rice was decontrolled in June 1952 and there was a rise in the average wholesale price of second sort of rice from Rs 14.94 per maund of 40 railway seers to Rs 16.27. After continuing more or less around these levels till January 1955, the price declined to Rs 13.37 and further to Rs 12.44 in February 1955—the lowest level after de-control. From June 1955, prices started rising and they stood at about Rs 15.44 in December 1955. From then, except for a very slight seasonal fall to Rs 15.31 in January 1956, the price continued to rise, and in December 1956, it was Rs 21.19. In January 1957, there was a slight reduction, but in subsequent months, they again moved upwards and in May 1957, the level stood at Rs 20.94. The level reached its peak in June at Rs 21.52 and began receding from July consequent upon the announcement of the Southern Zone for Rice. In October, the price went down to Rs 19.84, though it was followed by a slight rise of ten naye paise in November. In the Telangana region (formerly part of the Hyderabad State), the withdrawal of the food subsidies in 1951 and the upward revision of controlled prices resulted in a rise in prices commencing during the last quarter of 1951

and continuing throughout 1952. Following the bumper harvest of 1953-54, rice in Telangana was de-controlled by February 1954. The price then declined to Rs 14-14-0 by June 1954, and except for a slight rise between July and October 1954, continued to fall rapidly till May 1955, when it stood at Rs 11-15-0. The fall in the early half of 1955 was accelerated due to the good harvest of 1954-55. From June 1955, the prices recovered and except for a slight fall between September 1955 and January 1956, continued to rise to Rs 19-12-0 in November 1956. In December 1956, there was a reduction by Rs 2.00 but in the first quarter of 1957, the prices were in the vicinity of those of November 1956.

PARADOX OF THE "SOUTHERN ZONE"

On July 10, 1957, "The Southern Zone" was announced by the Union Food Minister at Madras. Like the GTE (neither Grand nor Trunk nor Express), this proved to be neither Southern nor Zone. Highlights following the announcement on July 10 may be summarised thus:

- In the beginning, rice could not move to the South on account of shortage of wagons.
- When wagons were in plenty, rice could not move to Madras or Kerala because quotations were high, and the Southern States wanted cheaper rice.
- Observing that the "Southern Zone" was not functioning, the Union Food Minister ordered unilateral procurement of rice in Andhra area. Between August 1 and February 21, 1958, 153,000 tons of rice were procured in Andhra by the Union Government. The procurement price was lower than the average cost of production per maund of rice, namely, Rs 11.60.
- In Madras and Kerala, the Union Government sold rice at subsidised prices with the result that rice sold higher in Andhra Pradesh (a surplus State) than in Madras and Kerala.
- The Andhra Pradesh Government have done nothing either to procure rice or sell within the State at subsidised prices.
- Export of fine rice to Bombay and Bengal was prohibited when the Southern Zone was created, but under a system of permits, 8,090 tons of fine rice have been exported outside the Southern Zone while surplus stocks were about 50,000 tons. It is impossible to understand a system of permits when the supply is larger than the demand.
- Cheap grain shops in Madras were the victims of quick-changing policy. Soon after the Southern Zone was created, supply of rice to such shops was stopped. A few weeks later, it was resumed. A few days ago, the supply was again stopped. Reasons for these quicksilver changes were neither given nor asked for.
- Within Andhra Pradesh, profiteering in rice has been rampant. As among the village level, the rice mill level, the regulated market level, the **mandi** level and the urban retail level, there has been a difference of almost Rs 20/- a panna of 120 standard seers. The latest quotation given by the Hyderabad Broadcasting Station was Rs 77/- per panna of fine rice, while the wholesale market rate was Rs 85! The only step taken by the Andhra Pradesh Government has been to levy a tax on stocks of rice handled by rice mills, but this has injured the consumer further, not benefited him.

VITAL ISSUES INVOLVED

Obviously, there is "something rotten in the State of Denmark". It is not clear why the Union Government took to procurement unilaterally, without the free consent and co-operation of the Andhra Pradesh Government. Another mystery is that the Andhra Pradesh Government did not stir a finger for bringing down the steeply rising prices of rice, either through procurement or through subsidisation. It looks as though there has been a small quarrel, and the Union Government's procurement of rice in Andhra reminds one of President Eisenhower despatching Federal Troops to Maryland for safeguarding coloured pupils in the Little Rock High School. Have the Andhra Pradesh Government no responsibility for checking runaway prices of rice in deficit pockets within the State? Is it not high time that quotations of market prices by the Bureau of Economics and Statistics and the Broadcasting Stations showed little deviation from facts? The latest is a "rice deal" between the Governments of Andhra Pradesh and Kerala, but details are not available.

"COST STOP: WAGE STOP: PRICE STOP"

Administration in India, it is admitted on all hands, is still theoretical to a large extent, and sensational developments in Bhakra-Nangal and the Life Insurance Corporation are symbolic of the great dangers that are sure to follow in the wake of a re-imposition of food control. Steps taken by the Union Government with a view to controlling prices of rice, have proved a miserable failure. The right end to begin with would be to prevent costs of production from rising, through a liberal policy of supplies of agricultural requisites at subsidised rates. This would inevitably persuade the primary producer of rice to sell in the competitive market at lower rates. The dictum of Dr Schacht "cost stop: wage stop: price stop" should prove of great practical value to policy makers in India with regard to foodgrains. Fertilizers, pig iron, cattle and fodder, and industrial consumer goods required by the cultivators should be made available at lower prices through subsidisation, in better quality and larger quantities, more extensively and efficiently, and if necessary, sufficient imports should be ensured through bilateral agreements with foreign countries where the required material is available with good quality and at low cost. Net burden to Government on account of this should prove much less than for importing grain. The time unit in agriculture being one year, such net burden on Government should prove a more efficient insurance against scarcity than uncertain imports and buffer stocks maintained by the Government. Supplies of agricultural requisites should be made to bona fide cultivators at subsidised rates. Departmental supplies have been far from efficient. The Rs 100 crores spent by the Government in reducing the cost of production of foodgrains should augment their supply in a much more effective manner than Rs 300 crores worth of foreign imports, with much higher self-respect. What is most urgently required is a continuous and thorough study of cultivation costs and consumption standards periodically: a brain spark from a Minister or a hasty annual or half-yearly conference assembling for a few hours, is more likely to mis-judge and mis-lead. Unfortunately, the Research Programmes Committee of the Planning Commission and the Indian Council of Agricultural Research appear to think that they have reached the climax with the appointment of innumerable Panels and Committees which are provided neither with funds nor with facilities for high-level research. And the powers that be are blessing this atmosphere of supreme indifference with slogans like "change food habits", "austerity drive" and "miss a meal!"

March 8, 1958

Trade Union or Labour Front?

By N. CEEM

THE suspicion is widespread, though not as yet so widely expressed, that Trade Unionism in India has been a cause more of disorder than of industrial peace. The present industrial landscape abundantly bears it out, but, apart from that, the suspicion deepens, as one looks back at the circumstances in which this Trade Union movement originated and developed. It not only did not arise, as in other countries, out of 'bonafide' industrial or economic reasons, but was just one more front opened up in the political struggle against an alien power—with a direct political emphasis, complexion and outlook, which determined every other part of its character. Its leaders were not drawn from the people, like Keir Hardie, nor were its aims and methods, either in form or in substance, anything but political. Those crowded out of the front rank of political leadership used the industrial arena as just a stepping stone or for the dress-rehearsal for their spectacular political performances; and if they succeeded in securing the Mahatma's blessings for the industrial labour movement, starting from Ahmedabad and ending in his now famous "Trusteeship Theory", that hardly mitigated the overall position. Economic Nationalism might have been stimulated in consequence, but Trade Unionism, in the economic sense, gained very little. And this explains why the 'corpus' of Labour legislation, since the Trade Union Act of 1926, is not only fairly complete, but in some cases stream-lined, almost futuristic, but social and industrial realities hardly correspond to it.

This early entanglement with politics and integration into the nationalist movement have not only been retained, but accentuated since 1947, even though in that year, the nationalist movement achieved its objective and disappeared; and this unnatural state of things has been entirely due to Trade Union politicians. There is now no foreign rule to fight, but there is much more power and prestige to enjoy; and all the fight the Trade Union politicians had in them, they now employ against one another, with the Trade Unions as mere pawns. Those who have risen to leadership after 1947 are imitating their seniors in power-politics, though without their experience or ability; and disunity has helped Communism and other subversive forces to thrive and held up normal industrial production in the State.

It is time it was recognised that factionalism in Trade Union leadership is responsible for too many man-days lost. Not too long ago, one of the most important industrial organisations in West Bengal, the Iron and Steel Works at Burnpur, had to close down for a fairly long period because of inter-Union disputes. Though the story of the great amalgamations in British Trade Unionism since 1920 has been steadily before its eyes, the history of Indian Trade Unions does not show that that example was followed.

The law does not make recognition of any particular Union compulsory; and this increases rather than diminishes factionalism, though, in some cases, of course, the law, as it is, may be of advantage to the employer and, in some others, to the employees and Government. Since factionalism, more than anything else, is responsible for reactionary strikes and slow-downs and all their unhappy consequences, the prime urge, if industry is to be saved, should be to reduce the number of power-hunting Trade Unions to a minimum. Trade Unions, somebody said, are "the very

foundation of true democracy". One need not disagree with this trite observation, but the present rampant factionalism in Trade Union leadership is no less obviously the very foundation of 'ochlocracy' (Aristotle's perverted form of 'democracy') or of anarchy, if, of course, anarchy needs any foundation. Into no other pattern than anarchy perhaps would so many competing factions fit, bullying the Government with impunity.

It is not enough to point out that something is undemocratic, as if democracy was the last word in political wisdom; the deeper and more permanent problem is how to reconcile democracy to planning and whether, in achieving this reconciliation, a good point or two from 'totalitarianism', so called, may not be suitably adopted.

It would be desirable at this juncture to have the Trade Unions run by another set of leaders, but the present leaders cannot be dislodged, for they have too much political pull. One may ask, without echoing platitudes, what "bonafide" purposes Trade Unions now really fulfil in this country, since nearly all the required social, economic and other laws are there already and the Government enforces them against the employer and employee to protect the rights of each. If enforcement is defective, or more good laws are needed, there is the Legislature to mend matters. In any case, a common Labour Front is the next progressive step, Trade Unions having outlived their usefulness.

There would be no intermediate organisation between the State and the workmen; there would be only a common Labour Front consisting of workers of all classes and categories, of all trades and all industries. A strike would be impossible for the reason that no employer would dare pay less than the standardised minimum wage. The State would immediately take up workers' grievances, if any employer violated the law. On the other hand, were the workers to demand more than their due, they themselves would bring about the collapse of the organisation for which they work. The Trade Union funds would be pooled together and diverted by direct State agency to workers' welfare-work like housing, slum-clearance et cetera.

Industrial Tribunals would be even more useful than they already are, if the touts were eliminated. Constructive details can be worked out easily enough, but a thorough re-adjustment of policy would be a prerequisite. The German Labour Front—the most significant part of Hitler's experiment—constituted in 1933 and given legal form in 1934 may serve as the model. Like the "curate's egg", it may be found to be good in parts.

The abolition of Trade Unions would not leave the workman uncared for. In addition to the Labour Welfare Officers appointed by or on behalf of the management, there would be Government Labour Welfare Officers and there would be more comfort, more amenities and more welfare for the workman than the employers would compulsorily or voluntarily provide; and everything now there would of course remain. Only the middleman would go.

Perspective

By COGNOSCENE

NEW YORK.—The Soviet economic offensive continues to pose significant questions.

The targets of the Soviet efforts—nations of the Middle East and Asia—generally concede that Moscow's moves in the economic field are not motivated solely or even primarily by economic realities. Any number of factors testify to this. For one thing, Soviet bloc countries are not natural markets for some of

the products imported from less-developed nations.

For instance, while importing cotton from Egypt, the Soviet Union itself already is one of the greatest cotton producers. Communist China and the Soviet Union now rank second and third in world cotton production. Aggregate production for communist countries, mainly the Soviet Union and Red China, is estimated at 11.8 million bales for 1957-58.

Soviet communist Party Chief Khrushchev, in a lengthy speech last week to the all-union conference of cotton growers, broadcast by Moscow Radio, devoted a great part of his 10,000 or so words to cotton production. As evidence of the "great successes" achieved by the Soviet Union in the production of cotton, he cited the following figures:

"Growth in 1957 as compared with 1913: Uzbek SSR, 5.5 times; Turkmen SSR, 5.5 times; Tadzhik SSR, 13.7 times; Azerbaijan SSR, 5.4 times; Kazakh SSR, 10.7 times; Kirgiz SSR, 5.1 times; and Armenian SSR, 2.2 times."

This was no cursory speech, noting achievements and exhorting greater things for the future. Khrushchev went into meticulous detail concerning means of stepping up cotton production—methods of sowing, of cultivation and of harvesting.

In addition, thus far in the Soviet Union there can be no great market for the type of cotton produced by Egypt which is quality cotton and not the kind used for cheap goods.

The natural question that arises: what are Soviet bloc countries doing with imports of cotton beyond the quantities they can use in their own economies?

And what happens to Egypt's traditional customers for cotton, the natural markets of Western Europe? With an increased share going to the Soviet bloc, the countries of Western Europe are faced with the problem of finding non-Egyptian sources for their cotton imports or finding substitute products.

A recent study of the Soviet bloc's economic offensive in the Middle East, prepared by the Woodrow Wilson Department of Foreign Affairs of the University of Virginia, notes: "In 1953 Western Europe took more than half of Egyptian cotton. In 1956 this area took less than 30 per cent."

These statistics indicate the trend.

Trade with the Soviet bloc thus can mean not an addition to markets but a substitution of new markets for old ones. And the reliability of Soviet bloc countries as customers and suppliers, as shown by the record, leaves much to be desired.

These are some of the facts that explain why Middle Eastern nations are much more careful today in working out trade and aid agreements with the Soviet bloc, and why they are trying to keep within limits the portion of trade given the bloc.

In this connection it is interesting to note a statement on Egyptian foreign trade policy broadcast earlier this month by Cairo Radio. Egypt's Finance and Economy Minister outlined government plans to maintain Egyptian cotton prices on the level of world prices and to encourage the normal flow of this cotton in all world markets. The official said the government plans would help "to safeguard these markets and enable Egypt to obtain its imports from various areas for reasonable prices, and would insure a balance in Egypt's foreign trade."

With the recognition that political aims play a big role in Soviet economic relations, it is probable that Middle Eastern leaders will give increasing attention to the most crucial question of all:

What happens when the short-run Soviet political objectives now being pursued in the Middle East have been realised? What then?

Report on Sanskrit

In making a long list of recommendations for ensuring an important place for Sanskrit in the scheme of things, the Sanskrit Commission have laid themselves open to the charge of biting off more than the country can be expected to chew with facility. The recommendations cover a wide field and include suggestions for setting up half a dozen central organisations dealing with various aspects of Sanskrit studies, including Ayurveda. But the crucial and controversial recommendation is in respect of the place of Sanskrit in Secondary Education. The Commission have recommended remodelling of the syllabus of Secondary Education so as to find a place for Sanskrit in the list of subjects for compulsory study. The Commission's views about the importance of Sanskrit to Indian culture and the development of modern Indian languages will command ready assent. But recognition that Sanskrit provides the backdrop to cultural progress in India does not mean that the prescription of compulsory Sanskrit will be equally acceptable.

The Commission have suggested three alternative formulae for compulsory teaching of Sanskrit in all the schools in the country. Two of these are modifications of the Union Education Ministry's Three Language Formula, and will have Sanskrit replace Hindi or

English, and in either case will meet with opposition. To pit Sanskrit against English is the surest way to prejudice a dispassionate consideration of the claims of the classical language. When the Commission's scheme for revitalisation of the Pathasala system includes introduction of courses in English and General Science, it is difficult to see how they expect English to be dropped in favour of Sanskrit in the general system of education. And so long as the Constitutional provision regarding Hindi is not repealed or suspended, no one even in regions where anti-Hindi agitation is strongest will be prepared to prefer Sanskrit to Hindi.

There is the third alternative suggested by the Commission, a four-language formula which adds Sanskrit to the mother tongue, English and Hindi. The overloading of the curriculum which will be the result is a problem for educational experts in which the general public have a vital interest. It may be that students with the linguistic faculty may be able to learn four languages or more, if instruction is imparted at a sufficiently early age when the brain is still receptive to new linguistic patterns. But, in estimating the burden that will be imposed by the four language formula, not only the languages but also other requirements of modern education, especially a basic grounding in science subjects for which Sanskrit is not of much help, should be taken into account.

The question whether Sanskrit should be taught to every child entering secondary schools will continue to be debated in spite of the authoritative conclusions of the Sanskrit Commission. When, according to the Commission's own recommendations, the highest University Course is expected to provide for no more than the attainment by students of ability to write and speak Sanskrit freely and to read further Sanskrit texts by themselves, one begins to wonder whether, after all, it is necessary to make Sanskrit a compulsory subject of study in Secondary Schools. The doubt is strengthened by the fact that a considerable number of persons wielding power and influence are allergic to Sanskrit, which they equate with social reaction. Historically, Sanskrit was the language of the elite and its study had been fostered by classes which face liquidation in the socialist pattern. The objective of preserving a high level of Sanskrit scholarship may be more easily reached by making Sanskrit an optional subject and confining instruction to those who have the feeling and aptitude for classical studies.

Chaturmasya for Legislators

The West Bengal Chief Minister's proposal for a change in the Finan-

cial Year is not the first in the field, and is not likely to meet with a different fate from its predecessors. This is so in spite of the fact that the main argument for continuing with the present arrangement is that it has been in force for a long time and that there is a limit to changes which the public can be expected to digest within a Five Year Plan period, on the top of the Wealth Tax, Expenditure tax and now the Gifts Tax. Earlier arguments for changing the first day of the Financial Year from the first of April to a more dignified date were based on the determining influence of the monsoon on Indian economic prospects. It is argued that there will be greater correspondence between estimates and actuals if the Budget is presented at the conclusion of the monsoon. November 1 and January 1 were the preferred dates in the recommendations made by the Welby Commission and the Chamberlain Commission. To the earlier arguments based on the March of the Seasons, Dr B. C. Roy has added another derived from democratic exigencies. He has pointed out that the present arrangement prevents legislators from maintaining contact with their constituencies, as the legislature sessions are held during the months November to May when cross-country travel is feasible. He also stated that monsoon months are the most suitable for holding the sessions of the legislature. Apart from other advantages, it may be mentioned that the rainy season is not particularly suitable for holding processions and demonstrations, and this fact may be depended upon to ensure opposition to Dr Roy's proposal from the leftist parties. Members of ascetic orders in India, who are obliged by their vows not to stay in any fixed abode, are, however, permitted to camp in one locality for the duration of the rainy season. Dr Roy could not have mistaken legislators for sanyasins when he prescribed chaturmasya for their benefit.

Accent on Arms

In spite of the fact that Pakistan's Budget estimates for the year 1958-59 show a small surplus at existing rates of taxation, the Finance Minister has raised taxes and duties all round, thus placing himself on the wrong side of the press and the public. Total revenue at current rates of taxes is estimated at Rs 143.76 crores. This is an increase of Rs 4.38 crores over the current year. Expenditure is estimated at Rs 143.54 crores. The new taxes are expected to yield Rs 11.40 crores out of which the provinces will get Rs 1.40 crores. A sum of Rs 145 crores is allocated for development in the capital Budget, which provides for a total capital expenditure of Rs 188.83 crores. Pakistan like India is faced by a deficit in the balance of payments, though

of smaller dimensions. The need to close the gap explains the comprehensive array of customs duties. Apart from increased duties on specified items, the existing rate of duty on residual items is stepped up to 75 per cent. The rates of entertainments tax, bonus tax, business profits tax and so on have also been raised. The announcement of new duties has been followed by a rise in the prices of imported articles. A public, accustomed to cheap and plentiful imports of a wide variety of consumers goods, naturally finds this very irksome and the feeling is reflected in the uncompromising references to the Budget in the Pakistani press. The increase in taxation has drawn attention to the main feature of the Budget, namely, the heavy allotment for defence. Out of the total budgeted expenditure of Rs 143.54 crores, defence accounts for Rs 80.85 crores. In addition, money will have to be found for inducing US military aid. While the Budget provides for Rs 12.29 crores under this head, to be met out of counterpart funds established under the US aid programme, it is estimated that total military expenditure during the year will run to Rs 115 crores. The Chairman of the State Bank of Pakistan has drawn attention to the fact that defence expenditure has been mounting since the country entered into pacts. From 1953-54 through 1956-57, it has grown from Rs 75 crores to Rs 100 crores. The impact of new taxes has raised doubts, even in quarters which in the past were enthusiastic about pacts, as to whether the defence pacts and mutual aid agreements had been really worthwhile. But, there is no prospect, now or in the immediate future, of any reduction in Pakistan's heavy outlay on defence.

Loans, Ad Hoc and Small Savings

WE propose to make a brief study this week of three aspects of the Central Budget, namely, market loans, small savings and deficit financing. For, it is these three heads of resources which may be said to have a direct bearing on the World of Finance, though we must have regard for the fact that foreign loans are also germane to the issue. For, although the immediate impact of foreign assistance is felt in the sphere of balance of payments, the accrual of counterpart funds and the utilisation in development plans have an ultimate significance for the money market. The only qualification is that there is generally a divergence between the volume of foreign assistance and the quantum of counterpart funds. To a corresponding extent, naturally, figures in this regard tend to be vague. Since our purpose here is to confine ourselves to a study of the Budget from the money market point of view, we shall omit from the purview of this essay the transactions or figures involving foreign loans.

In order to understand the trends correctly, it would be useful if an analysis were made as from the Budget for 1956-57, that is, from the beginning of the Second Plan. We shall, in proper sequence, review the estimates that were made, the extent of revision there has been, as well as the actual figures achieved.

In his Budget for 1956-57, Sir Chintaman Deshmukh assumed a receipt of Rs 100 crores from market loan. There was no provision for discharge of debt, since no loan was due for redemption during the year. In the Budget presented in February 1957 by Mr T. T. Krishnamachari, it was noteworthy that the revised estimates placed the receipts from market loans at Rs 158 crores. However, this included Rs 79 crores representing subscriptions in the form of the 3 per cent Victory 1957 Loan, for which conversion facilities in advance were offered. So, the net receipts were in the environs of Rs 79 crores, and show a shortfall of Rs 21 crores as far as concerns new cash for which credit had been taken in the 1956-57 Budget.

Secondly, in respect of small savings, Sir Chintaman had put down receipts during the Budget year at Rs 70 crores. By February 1957, Mr Krishnamachari felt that realisations would be lower, and the revised estimates placed small

savings during 1956-57 at Rs 64 crores. Now that the accounts for that year are available, the information is vouchsafed that the actuals amounted to Rs 58 crores. Thus, the actuals for small savings for 1956-57 fall short of the Budget figure by Rs 11 crores.

Thirdly, leaving aside for the moment improvement in other heads of resources or shortfalls in expenditure, it would be expected that deficit financing would have been rendered higher. In the result, however, the obverse is true. The expansion in Treasury bills was expected by Sir Chintaman to amount to Rs 390 crores; but, after his tax proposals, deficit financing was put down Rs 34 crores lower at Rs 356 crores. Mr Krishnamachari's February Budget witnessed a revision of this figure to Rs 270 crores. It is now known that the actuals for 1956-57 place deficit financing during that year at Rs 240 crores. In other words, there was a shortfall of Rs 116 crores in deficit financing.

Turning, now, to 1957-58 we may note that Mr Krishnamachari took credit for Rs 100 crores from market loans in presenting his February Budget. Provision was also made for discharge of debt amounting to Rs 31.5 crores. Small savings were expected to net Rs 80 crores. The overall deficit to be met by the expansion of Treasury bills was placed at Rs 365 crores. Except for an increase in the last figure to Rs 368 crores, the May Budget presented no change in these respects. This figure of Rs 368 crores was, however, before taking credit for the new taxes that were levied by the Finance Minister. With the new taxes, it was expected that deficit financing for the year would be reduced by Rs 93 crores to Rs 275 crores. The Revised Estimates for 1957-58 indicate that the realisations from market loans were placed at Rs 136.16 crores; but, meantime, discharge of debt was also placed higher at Rs 67 crores. Secondly, small savings collections were now estimated at Rs 62 crores. The deficit to be met by sales of Treasury bills in favour of the Reserve Bank rose very sharply from the budgeted Rs 275 crores to Rs 380 crores.

We may, lastly, study the figures for 1958-59. For the first time in some years, credit taken for market loans has been raised to a figure of Rs 145 crores. Provision for discharge of debt amounts only to Rs 20 crores, including provision for expired loans, and, thus, the net budgeted target for the new loan in 1958 is placed at Rs 125 crores. While this is an improvement in the target over previous years, we are of the view that it should have been higher still. Then, the target for small savings is put at roughly Rs 100 crores. Lastly, the deficit to be met by Treasury bills is sharply lower at Rs 205 crores.

Looking at the three sets of figures, some interesting points emerge. In the first year of the Plan, Government failed to borrow

from the market the target that they had set for themselves in the Budget; but, in the second year, they just about managed to do so. For the third year of the Plan, Government have raised their sights slightly higher, and hope to secure Rs 125 crores net from the market. If it is possible to say, merely from the experience over a two year period, that a definite trend has been formed, the conclusion would be that realisations for market loans are headed upward. But, apart from the Budget figures, it is abundantly clear that the market for gilt-edged has expanded considerably in recent months, and the very vast accretions to Deposit resources of Scheduled Banks, not to speak of the accruals to the funds of the Life Insurance Corporation and Provident Fund Societies and other investing institutions, presage the possibility of the capacity for the market to absorb during the Budget year much more than the Rs 125 crores net that has been envisaged by the Budget. At this stage, we shall content ourselves with suggesting, and it is not too early to do so, a higher target from market loans during the Budget year—a figure, say, around Rs 200 crores.

If the experience in respect of market loans is encouraging, the obverse is true in respect of small savings. Realisations have consistently fallen far short of Budget estimates or even Revised Estimates. In the light of such trends, it appears excessively ambitious further to raise the target for small savings to a figure of Rs 100 crores. This does not, however, mean that we think that the target is impracticable. But there has to be much more of concerted effort than we have witnessed in the past. Hope for the future lies primarily in such success as may attend the small savings drive in respect of the 12 Year National Plan Savings Certificates issued in June last year. This Certificate replaces the 7 Year National Certificates, the 12 Year National Savings Certificates and the 10 Year Treasury Savings Deposit Certificates. The credit that was taken under these three heads in the Budget for 1957-58 amounted to Rs 39 crores. Although, in the case of the Treasury Savings Deposit Certificates, fresh sales were simultaneously commenced at a higher interest rate of 4 per cent, it is interesting to note that the bulk of small savings, even for the current year, is expected to result from the 12 Year National Savings Certificates, whose sale commenced only in June 1957. In the first six months of sale of this Certificate, the total net receipts have amounted to Rs 32.82 crores. In the last three months particularly—that is, between September and November—the monthly rate of accruals has exceeded Rs 6 crores. On such a basis, the Revised Estimates very correctly placed receipts under this head at Rs 62 crores; and, surely, an expectation of Rs 29 crores in the last four months is not being

too ambitious. For the Budget year, the bulk of the receipts from small savings is also credited to the 12 Year National Savings Certificates, which is expected to bring in Rs 86 crores during 1958-59. This involves a monthly accrual of only Rs 7 crores. As we have seen, such a figure has already been very nearly touched. So, the second point that we wish to urge is that, although in past years the performance of small savings has been disappointing, there is every reason to expect that 1958-59 will prove to be a turning point, that realisations will, in the event, even exceed the Budget estimates.

Lastly, we come to deficit financing. Here, the experience is not too happy. In the first year of the Second Plan, deficit financing turned out to be much less than had been budgeted for. In the second year of the Plan, it sharply exceeded the Budget estimate. (As against the Revised Estimates of Rs 380 crores for 1957-58, deficit financing, by the week ended February 21, amounted to Rs 326 crores). However, there is still some chance that the actuals for 1957-58 may turn out to be smaller than the Revised Estimates. For, it may be recalled that, in March 1957, deficit financing amounted to almost Rs 100 crores. This was by reason of the fact that payments, particularly to State Governments, were concentrated in the last month of the fiscal year. During the current year, it is known that payments have been made from time to time to State Governments, and there is reasonable evidence to show that there will not be, in March this year, as there was in earlier years, a concentration of such payments by the Central Government. If, in this background, there continues to be, as there has been in past years, an accelerated tempo of revenue collections, particularly from taxes, it is not wholly improbable that there will be some element of reverse ad hoc during March. Purely as a hypothesis, we would suggest at this stage that deficit financing during 1957-58 is unlikely to exceed Rs 350 crores, and may conceivably be somewhat lower. For the Budget year, we will not attempt to think aloud of the extent of deficit financing. But, in examining the three major heads of resources, we have shown that the realisations from market loans ought to be much higher; we have indicated that the realisations from small savings should not fall short of the target; and, ostensibly, our conclusion is that deficit financing should, in the event, turn out to be for smaller proportions. However, we have thus far taken account only of the resources side of the ledger. Our view is that disbursements, particularly outlay on the Plan, must not be allowed to fall short of targets and must, if possible, even exceed the target, so that the target for the Second Plan as a whole may be accomplished. For

this reason, on account of an increase in disbursements, we should anticipate deficit financing as conceivably exceeding the Rs 205 crores that the Finance Minister has placed it at.

Foreign Balances Rise

In the two years that have elapsed since the commencement of the Second Plan, a feature of the Reserve Bank returns has been the almost unremitting decline, week by week, in the Foreign Balances held in the Issue and Banking Departments. Only on six previous occasions have the Foreign Balances shown a rise; and, of these six occasions, one was in the very first week of the Second Plan, that is, in the first week of April, 1956. Then, soon after Mr T. T. Krishnamachari assumed office as Finance Minister—and around the time when he introduced his mid-year Budget, in the week ended December 7, 1956, Foreign Balances in the two departments showed a small rise of Rs 1.78 crores. Two weeks later, they again showed small rise. After that, the three occasions when Foreign Balances showed any increase were due to extra-ordinary receipts. It may be recalled that, when the reserves were being fast depleted, the Government of India negotiated with the International Monetary Fund for the purchase of foreign currencies to the tune of \$ 127.5 million, and also arranged for a standby credit of \$ 72.5 million. The first withdrawal was made in the week ended February 8, 1957, when, apparently, foreign currency for the value of roughly Rs 22 crores was secured. But, exactly five weeks later, in the week ended March 15, it again became necessary to avail of the balance of roughly Rs 32 crores for which arrangement had been made with the International Monetary Fund. Even this did not suffice for long, and about three months later, in the week ended June 14, 1957, the standby credit was also availed of. Thus, it may be noted that three of the six occasions when foreign balances showed a rise were all due to extraordinary receipts. Also, the very first rise, occurring in the week ended April 6, 1956, could perhaps have been due to the receipt from the UK Government of Rs 5 crores odd representing the annual payment made by UK Government in terms of the agreement in regard to sterling pensions. So, there have, till the present time, been only two former occasions when a rise in Foreign Balances could be attributed to an excess of exports over imports. After over a year from that date, we have had again that fortunate experience, with the returns of the Reserve Bank for the week ended February 28, disclosing a heartening increase of Rs 2.75 crores. This is the noteworthy feature of the latest banking returns.

In the week ended February 28, notes in circulation have, contra-

seasonally, shown a decline of Rs 0.75 crores to Rs 1545.26 crores. Rupee Coin has returned from circulation for Rs 0.21 crores. In the result, Notes Held show an improvement of Rs 0.95 crores to Rs 25.06 crores.

The Centre's Balances are marked higher by Rs 5.59 crores at Rs 58.60 crores. Since there does not appear to have been any deficit financing, nor any receipts from State Governments, it is possible that this reflects the acceleration of revenues receivable by Government, mainly on account of taxes, toward the close of the fiscal year. Balances of State Governments are slightly lower, by Rs 1.06 crores, at Rs 15.67 crores. However, indebtedness of State Governments has shown a more than corresponding decline of Rs 1.46 crores to Rs 38.26 crores. On the other hand, the Reserve Balances of member banks have been marked down by Rs 1.83 crores at Rs 75.46 crores, with no improvement in indebtedness to the Reserve Bank. Indeed, the Other Loans and Advances of the Reserve Bank are nearly Rs 2 crores higher at Rs 66.60 crores against Rs 64.67 crores. However, advances against usance bills are nearly Rs 2 crores lower at Rs 22.17 crores. Investments are slightly lower at Rs 239.75 crores against Rs 240.58 crores.

Lastly, as already noted, Balances Held Abroad have been marked up by Rs 2.75 crores at Rs 34.25 crores. The fact that this improvement in foreign balances has followed a period during which, week by week, the size of the import surplus has declined, would lend plausibility to the view that, at long last, the import restrictions imposed toward the end of 1956 have started to bear fruit and that, consequently, the balance of payments will henceforth be a much more manageable affair, especially since foreign assistance seems also to be vouchsafed.

The return of the State Bank for February 28 shows little or no change in Deposits, which are placed at Rs 407.87 crores. Borrowings have gone below the Rs 1 crore mark, to be placed at Rs 0.57 crores. Advances have again expanded by Rs 3.64 crores to Rs 205.21 crores. Cash Balances are Rs 1.92 crores lower at Rs 33.48 crores.

The return of the Scheduled Banks for the week ended February 21 reveals a sharp rise of Rs 15.97 crores to Rs 1454.59 crores in Deposits; and Rs 6.84 crores of this rise is attributable to the State Bank. Borrowings both from the Reserve Bank and from the State Bank have been reduced, the former by Rs 0.73 crores and the latter by Rs 4.41 crores. The total of Advances continues its busy season rise with an increase of Rs 3.86 crores to Rs 927.03 crores. But the increase in Deposits has proved sufficient to enable a rise of Rs 3.72 crores to Rs 158.33 crores in Cash Balances.

British Disinflation

Paul Einzig

CONTRARY to widespread anticipations, Britain is not going to follow the American example of giving up the resistance to inflation for fear of a depression. Even though there are some moderate symptoms of a recession in Britain, too, the Government is determined to continue the credit squeeze and the other measures adopted to resist inflation. This was made quite clear, during a debate in the House of Commons on unemployment, by Mr Macleod, the Minister of Labour. "Half a dozen times since the war," he said, "we had lost the full benefits of courageous action because we went into reverse too soon. Now we have a better chance of achieving price stability than at any time since the war. It would be folly, and indeed worse than folly, to throw the chance away." Considering that Mr Macleod is reputed to be in favour of the appeasement of labour, these firm words may be taken as conclusive evidence that the Government has no intention this time to call off the disinflationary measures unless and until they have produced their desired effects.

The Government's unexpected firmness has taken the markets by surprise. It had been expected for some time that, in view of the firmness of sterling, the reduction of interest rates in the United States and elsewhere, the increase of the gold reserve, and the steadiness of the price level during the past two months, the Government might yield to the temptation of lowering the Bank rate. When it was raised to 7 per cent in September very few people expected it to be still at that level in March. The continuation of the abnormally high interest rates is causing much discontent and is partly responsible for the unfavourable results of by-elections.

The statement made by Mr Macleod has made it quite clear, however, that a Bank rate reduction is not imminent. As a result, there was a marked setback on the Stock Exchange. Paradoxically enough, even sterling was affected, although the continuation of dear money and tight credit should have been interpreted as a bull point rather than a bear point for sterling. For several days during the last week of February the tendency on the Stock Exchange and on the foreign exchange market was anything but favourable. Before the close of the week, however, dealers came to realise that, taking a long view, the Government's firm attitude is bound to produce a favourable effect on securities and on sterling. There was a sharp recovery, fully as inexplicable as the previous fall, on any ground other than on psychological grounds.

The business recession in Britain would have to go much further than it has gone so far before the

Government would be willing even to relax the disinflationary measures, let alone abandon them altogether. On the other hand, nor are there any indications of any willingness on the part of the trade unions to abandon their pressure for higher wages. The fight is assuming an increasingly political character. The Government is aware that the only thing that would restore its popularity among those who normally vote Conservative would be a victory over inflation through the achievement of a prolonged stability of prices before the general election.

Indeed the Government is not even prepared to facilitate retreat by the trade unions by making a few face-saving concessions. If the trade unions intended to give way their retreat would be greatly facilitated if the Government were prepared to agree to restoring some degree of physical controls, to meet the favourite trade unionist argument that if there is a "free for all" for capital there must be also a "free for all" for labour. Instead, the Government has just taken a step to relax further the remaining exchange restrictions. The Treasury has now removed the limit for the import of pound notes. This means that pound notes formerly exported, legitimately or otherwise, can now be returned to the United Kingdom and used in the same way as sterling balances. It also means that the illicit export of pound notes as a means for evading exchange control will derive encouragement from the improved quotation of the notes in foreign markets and from the broadening of these markets.

This important step was allowed to pass without immediate protest by the Socialist Opposition. Yet it is arguable that the import of pound notes constitutes an additional item of invisible imports, and tends to weaken the balance of payments position. It also helps towards the transfer of British capital abroad in anticipation of a Socialist victory in 1960. There is a strong likelihood of a flight of British capital as the date of the general election will draw nearer, owing to the prospects of a change of Government. The conception is gaining ground that it is no longer unpatriotic to salvage one's capital to the dollar area while the going is good. Those who feel this way argue that so long as the attitude of the trade unions is devoid of any public spirit and patriotism, it would be too much to expect capitalists to submit to the gradual erosion of their capital through non-stop inflation and the depreciation of Government loans. It is argued that capital exported out of the Socialists' reach is salvaged for the national economy. Although this attitude is far from being general, it is likely to gain in popularity as and when it becomes obvious that the trade unions and the political wing of the Labour movement are determined to pursue their policy of ruthless plunder.

—(Copyright)

Who can Raise an Industrial Dispute?

Can an industrial dispute be raised about a person who is not a workman according to the definition of the Industrial Disputes Act? One would have thought that obviously the answer was 'no', but even the Supreme Court in a recent case held divided views on this point, though the majority decision was in the negative.

Various High Courts and finally the Supreme Court have held that an individual dispute cannot be an industrial dispute unless it is backed by a body of workmen or their union. The case in question before the Supreme Court was a claim by an assistant medical officer attached to the hospital of the Dimakuchi Tea Estate that he had been wrongfully dismissed, and his case was supported by the union. The Labour Appellate Tribunal had upheld the Industrial Tribunal's ruling that an assistant medical officer was not a workman as defined in the Industrial Disputes Act and therefore no dispute could be raised about his dismissal.

However the doctor took his case to the Supreme Court and argued that under Section 2(k) of the Act, which defines an industrial dispute as any dispute between employer and workman "which is connected with the employment or non-employment or the terms of employment or with the conditions of labour of any person," the term "any person" would cover him. The majority judgment held that the words "any person" could not include anybody and everybody. "In our opinion," said the Lordships, "the expression 'any person' under the definition clause means a person in whose employment, non-employment or terms of employment or conditions of labour the workmen as a class have a direct or substantial interest—with whom they

have, under the scheme of the Act, a community of interest." This test could not hold good in the case of a member of the medical or technical staff who were in a different category altogether from workmen. The union of workmen of the tea estate could not, therefore, have any direct or substantial interest in the employment or non-employment of a doctor.

Mr Justice Sarkar in a dissenting judgment, however, held that a dispute concerning a person who was not a workman could be an industrial dispute and he did not agree that substantial interest of the workmen should be made a condition for the existence of an industrial dispute.

Actually in the tea gardens there are quite a number of low-paid assistant medical officers, who are usually referred to as "doctor babu," and whose status is therefore little above that of the clerks, despite their medical training. A number of these doctors have joined the tea garden unions, so that in fact the unions do consider that they have an interest in their employment, although they belong to a different category from the clerks and workers. The definition of workman in the amended Industrial Disputes Act includes supervisory and technical staff unless they are mainly employed in a managerial capacity or are supervisory staff drawing more than Rs 500 per month. Many of these garden doctors do not earn more than Rs 500 per month, so there still remains some doubt as to whether these men can raise a dispute if they have the backing of the union. Awards given before the amendment ruled that they were not workmen, but can't they be considered as technical staff?

Repairs and Maintenance

The appointment of a committee headed by Mr O. V. Alagesan, to investigate and report on existing ship repair facilities in India, raises the question, why the need for fact-finding was realised so late in the day. The Second Five-Year Plan had provided a sum of Rs 100 crores for development of Shipping, Harbours and water transport. The target for handling capacity was raised from 26 million tons in 1955-56 to 33.8 million tons in the last year of the Plan. Increase in handling capacity should presuppose provision of adequate repair facilities. The same point is emphasised by the increase in tonnage on the Indian register. The original allotment for acquisition of new ships has already been exhausted though on account of rising costs, the new tonnage acquired is below the targeted figure. The increased cost of acquiring new ships underlines the importance of prolonging the effective lives of those we have by proper maintenance. This committee will enquire into and report on the existing ship repair facilities in Calcutta, Bombay, Madras, Vishakhapatnam, Cochin, Kandla and other places, and recommend measures for improvement and expansion. The committee has also been asked to look

into the question of the supply of stores required for ship repairs and suggest how India can be made self-sufficient in this respect as soon as possible. The committee, which will report in six months, will also recommend what steps should be taken by the Government and by the private sector for securing the requisite expansion and improvement of ship repair facilities.

Watch on Manholes

THE current shortage of pig iron and steel and the consequent need for economy in utilisation have been highlighted at numerous industrial conferences. The point was dealt with authoritatively in speeches made at the Small Scale Industries Conference, the Conference of Engineering Trade and Industry organised by FICCI, and more recently at the Conference of Engineering Trades. The shortage which has become chronic is not only troubling the engineering industries, but it has also created a problem of law and order in Calcutta. On the top of the innumerable problems it is not able to cope with, the Corporation of Calcutta has also to deal with the problem of disappearing man-hole covers. It has been estimated that over seventy-five per cent of man-hole covers in certain sections of Strand Road and in some other localities are missing, adding to the hazards of the streets in Calcutta. At a recent meeting of the Corporation, the Councillors expressed grave concern at this state of affairs, and decided that the police should be called in. A conference was held with the police authorities to draw up a plan of operations and it was decided to detail plain clothesmen to keep watch on manholes. The problem of catching the culprits is complicated by the fact that the Corporation also sells old or unserviceable manhole covers and other municipal hardware to dealers in scrap iron. And there is no means of identifying the stolen goods on the scrap heap. It has been suggested that, for the time being, the Corporation should suspend disposal of old scrap iron, and that it should also issue identity cards to those of its employees, who meddle with manholes. In the meantime, the public will watch with interest the result of the watch on manholes.

A Plea for Bad English

Having done everything practicable to bring down the standards of written as well as spoken English throughout the country nearly to vanishing point, we are now apparently in a mood for repentance. Of this, the latest symptom is the creation of a "sop the rot" board under the chairmanship of the Union Education Secretary. It is, of course, not yet known how this admirable body with an admirable object will proceed, but meanwhile a few points may be considered.

Large numbers of Indians have learnt English for well over a century and a half, some extremely well. A few names stand out as

producers of original verse in this foreign tongue, e.g., Michael Dutt, the sisters Toru and Aru Dutt and the late Mrs Naidu. Considerably more are responsible for prose works in various literary genres. All this is easy to see. But it's less easy to see that the average English-educated Indian's performance in English is less than delectable! He is the father of "Baboo English", at least as well-recognised a variety of degraded English as Pidgin. For every single Mrs Naidu, there are hundreds of cranks who spawn trash without rhyme, rhythm or reason. Every English-language newspaper or magazine is constantly threatened by this type of "literature", which would perhaps have never been produced without anti-Indian for making a reputation as a versifier in English. And it is perhaps partly true that if editors of such papers were not afflicted with this voluminous rubbish, they themselves would have had more time to revise their own writing. It is a noteworthy fact that, during the long period of our linguistic apprenticeship, we have not produced a Joseph Conrad who was a Pole spinning off masterpieces in English, or a Lu Xun who does so even now. Meanwhile, our leaders go on merrily speaking President's English in the legislatures, at academic meetings and, despite the increasing vogue of Hindi, not unoften on public platforms.

Let us, therefore, take it for a fact that good English will never be learnt here, not at least on an extensive scale. But better English, better than we at present have, may not be impossible. The first requisite for this seems to be a large-scale employment of British teachers in the school stage, as in some of the few missionary schools still functioning. And if it is difficult to re-introduce them in colleges, it is imperative to import them as Heads of English departments in the universities. Another equally imperative need is the almost wholesale scrapping of the Indian-written school textbooks on grammar, translation and composition which, with a few honourable exceptions, are sheer reckless pot-boilers, made by the ill-educated for the prevention of a good knowledge of English. The linguaphone—another point—is probably completely ignored in our educational institutions as a language teacher.

CLOSING OF SHARE REGISTER & TRANSFER BOOKS

Notice is hereby given that Register of Members and Transfer Books of The United Commercial Bank Limited will be closed from Monday, the 24th day of March to Wednesday, the 9th day of April 1958, both days inclusive.

By Order of the Board

S. T. SADASIVAN
General Manager.

Calcutta,
March 6, 1958.

Fatka Rules Supreme!

WHEN prices in the jute markets were falling steeply early last week there were persistent rumours about fixation of floor prices in order to arrest the disastrous downturn. One naturally took it for granted that such steps would issue from Government. At the same time the rumours were not given any serious consideration because Government were never noted for quickness in an emergency. But all doubts were set at rest when it was known that the initiative has been taken by the IJMA mills, who had come to an agreement between themselves not to sell below certain specified prices (Rs 39.50 for Hessian 40"x10 oz and Rs 100 for B Twills).

Subsequently on the 28th February the IJMA have explained in a press note the impelling reasons which have led to their decision. It is made clear in the note that the recent decline in prices has been brought about solely by speculative activity. The statistical position of the industry as well as prevailing market conditions cannot be said to have generated any sudden despair in the prospects for jute goods. The IJMA have found it necessary to take some remedial measure to restore stability in the markets because a continuance of such depressed conditions will have serious repercussions in a number of directions some of which are vital to the development of the country. In the first place the sharp decline in the prices of jute manufactures is inducing easier conditions in the raw jute market where prices are pushed down to very low levels. It is a generally accepted theory that with raw jute prices at an uneconomical level for the cultivator the drive toward raw jute self-sufficiency will receive a setback. And so long as there is no 100 per cent raw jute self-sufficiency the jute goods industry cannot be rid of its main worry.

Continued depression in the market will also discourage foreign customers. It may be recalled that in the course of his speech at the recent meeting of the Export Advisory Council Mr Morarji Desai has disclosed that one of the reasons for the slowing tempo in foreign offtake of jute goods from India has been a tendency to buy for immediate requirements—a tendency which has derived considerable encouragement from the frequent wide fluctuations in the Calcutta market.

The press note points out that apart from these adverse effects on the national economy, the sharp fall in prices has caused great difficulties to genuine traders who hold considerable stocks of both manufactures and raw jute purchased at higher prices. In conclusion the note says that the decision "not to sell below the prices specified was taken by the Association in the knowledge that its anxiety over the situation was fully shared by the Government of India." Many in the world of jute will not be, however, so sure about Government's vigilance.

Perhaps the most important part of the IJMA press note is that which refers to the cause of the sudden depression in the jute markets. The IJMA are firmly convinced that the decline in prices is "a direct result of the activities of speculators in the fatka market". Now one may naturally want to know what is this fatka market which has evidently such tremendous influence over the entire jute industry which occupies a central place in the affairs of the nation especially in the present context of stringency of foreign exchange, on the adequate availability of which depends the future progress of the nation as a whole. The Fatka or the katni is a group of individuals without any specified meeting place or registered office or legal sanction. In short it is a form of gambling using the rates in the official market. But the forces at work are so powerful that it is the Fatka that often determines the course of the official market. All this is an open secret to those who have anything to do with the jute markets in our country. From time to time there have been fervent appeals to put an end to the Fatka and occasionally also one hears about police raids and arrests. But if anything the Fatka has continued to flourish.

It cannot be said that Government are not unaware of the depredations of the fatka. For, the Jute Enquiry Commission 1954 have noted the harmful effects of the existence of the katni and expressed their opinion in unmistakable terms as follows: "We are strongly of opinion that every step should be taken by Government to stamp out altogether Katni and other irregular markets". It may be argued on behalf of Government that they have been trying their best to stamp out this evil. Then the verdict should be that they have not taken sufficient pains to get at the root of the matter. If they reread the Commission's report they may perhaps be able to find a way out. Meantime we may commend the following sentence occurring in the report to their special attention. The Commission have observed inter alia "Some business is purported to be done on the basis of prevailing market rates, the artificial ups and downs in these Katni rates can have a harmful effect on price stabilisation in the regular market, where the possibility of

some sections of the industry also operating through Katni cannot be ruled out."

In this connection it is also to be noted that even though more than a year has elapsed since the Forward Markets Commission have recommended the establishment of Forward trading in jute and jute goods under the auspices of the East India Hessian Exchange Association, nothing seems to have been done in the matter. It is agreed on all hands that one of the main benefits in the establishment of forward trading in jute and jute goods will be the elimination of the Fatka. It is said that the delay is due to the lack of understanding between the Commission and the trade on certain technical details. It is high time both the Government and the trade realised that while they are higgling over details, the nation's interests and particularly the interests of a large number of people who are depending on the industry for their livelihood are gravely jeopardised by unsocial elements which go to make markets like the Fatka.

The jute goods market opened the week on a steady note following the fixation of floor prices for Hessian 40"x10 oz and B Twills. As the Press Note issued by the IJMA had made it clear that the sudden depression had been the outcome of intensive speculative activity in the Fatka it was generally believed that active steps would be taken by Authority to curb katni and other irregular markets. All these reports and expectations resulted in further bearing covering and rates steadily improved. Toward close, however, prices developed a sagging tendency presumably due to paucity of business due to Holi holidays.

Steady conditions prevailed on the opening day as the news that the IJMA mills had agreed not to sell jute goods below certain specified rates. These rates are Rs 39.50 in the case of Hessian 40"x10 oz and Rs 100 for B Twills. There was bear covering and Hessian 40"x10 oz Ready at the close of the day was placed at Rs 39.45 with B Twills done at Rs 98.70. Elsewhere April-June Hessian 40"x10 oz was placed at Rs 39.32 and B Twills at Rs 99.85.

Conditions were unchanged on Friday as marketmen were awaiting the Budget proposals. Prices were quoted nominally as follows: Hessian 40"x10 oz Ready Rs 39.45 and B Twills Rs 98.75. April-June Hessian 40"x10 oz Rs 39.25 and B Twills Rs 99.15. No business was reported done on Saturday also. The undertone was quite steady and the closing quotations were as under: Hessian 40"x10 oz Ready Rs 39.40 and B Twills Rs 98.90. April-June Hessian 40"x10 oz Rs 39.45 and B Twills Rs 100.

With renewed rumours about curbing of Fatka dealings there was further bear covering on Monday and as a consequence price levels recorded marked improve-

Indian Finance

March 8, 1958

ment. Hessian 40"x10 oz Ready closed the day slightly above the floor level at Rs 39.56 while B Twills advanced to Rs 100. April-June Hessian 40"x10 oz was also higher on balance at Rs 39.69 while B Twills was finally placed at Rs 100.70.

Due to Holi no business was reported done on Tuesday and the undertone was quiet with the nominal quotations marked down. Hessian 40"x10 oz Ready was at Rs 39.40 while B Twills declined by 70 nP to Rs 99.30. April-June Hessian 40"x10 oz was placed at Rs 39.50 and B Twills at Rs 99.30.

With the improvement of the jute goods section, the raw jute market also recovered and Assam Bottoms at one time was done up to Rs 24.50 from the opening level of Rs 24. Toward close the market ruled subdued in sympathy with the goods section and Assam Bottoms closed at Rs 24.25 per maund. During the week the following mill business was reported done. Dalsee Mes'a at Rs 22.50 basis bottoms and Binli A.Q. at Rs 18.50 all per maund for March-April shipment. Some mill business had also been reported in Deshal Mesta at Rs 22.75 and Jungli at Rs 20.50.

URUGUAY REDUCES DEPENDENCE ON INDIAN JUTE GOODS

To reduce dependence on Indian supply of jute products and conserve foreign exchange, Uruguay has commenced internal manufacturing of jute, reports the Jute Bulletin of the Indian Central Jute Committee.

The first plant to produce hessian for bags, containers and general packing purposes was opened in Montevideo in November. It has 200 looms with a daily capacity of 82,020 yds of hessian.

Uruguay is a leading wheat producing country, its other main commercial crops are cotton and oilseeds. Requirements of hessian to handle these crops are at present obtained entirely from India at an annual cost of around \$4 million.

The new plant, when working at full capacity, is expected to produce hessian valued at \$2 million, thus enabling Uruguay to reduce imports to half and conserve valuable exchange. It is proposed to operate the plant in three shifts by 470 workers and also to grow the required raw material locally.

The Story of Oil—6

A major operation

Geological and geophysical surveys provide clues to the whereabouts of underground traps which might contain mineral oil. But there is only one way of proving whether or not oil is actually present. And that is by drilling a test well.

With all the skill and knowledge of modern science, the odds are still 20 to 1 against striking an oil-trap which justifies the heavy costs of exploration. For example, it may cost over a crore of rupees and take years of research before success is achieved. Yet only by taking these risks will new oilfields be discovered.

Drilling a test well is a tremendous undertaking in itself, involving great quantities of machinery, equipment and supplies. A typical well (10,000 or more feet

deep) would probably need: a complete drilling rig, weighing about 200 tons, 15,000 to 17,000 feet of drill pipe, 14,000 to 16,000 feet of steel casing, 60 to 100 drilling bits, 500 to 1,000 tons of drilling-mud chemicals, 2,000 to 5,000 sacks of cement, 48,000 barrels of water, and 3,000 barrels of fuel oil. In addition, at least 125 skilled personnel comprising drillers, drilling crews, geologists, engineers, cementers, electricians and other technicians would be required for drilling the well.

It can take as long as a year to drill a deep test, and the result may be that the well strikes water, not oil; or it finds only a little oil, or even turns out to be dry. Then the mass of machinery and equipment is moved to another location and drilling begins all over again.

Assam Oil

A full-scale petroleum industry

This is one of a series of informative advertisements about the petroleum industry.

Limited But Fair Demand

THERE is a growing belief that the working of quality Tea producers will be reasonably satisfactory during the current season. It is also felt that there will be a near balance in the demand and supply position and the coming season will get a good start as there will be little carry-over.

The output of principal tea producers in the world, during last year, was about 20 million pounds above that of 1956. There are,

however, indications that there will be increased consumption, especially in the UK and India.

The Indian Tea Planters' Association, Jalpaiguri, has made a suggestion that the Government of India should withdraw the export duty on tea, for at least three months, as a tentative measure to put the Common teas of India in a competitive position in the world markets. The Association says that the existing slab system of export duty on tea, which does not differentiate between quality and quality but imposes a flat rate of duty on types of teas, is causing hardship to producers of Common teas as a result of which India is losing her hold on the foreign markets for such teas. But, according to the latest Government notification, there is no change in the existing rate of duty of 38 nP per pound.

Meanwhile, in the Export Sale held in Calcutta this week, offerings amounted to 59,287 packages. There was a better general demand

than last week, especially for bright liquoring sorts except for clean black leaf grades, which were fully firm to dearer. Plain BPs and Fannings declined by 4 to 6 nP per pound, while Medium BPs were also easier to the extent except when they had a leafy appearance. Fannings, in this category, declined by 2 to 4 nP. Bright liquoring teas were again strong and sometimes dearer.

The best CTC sorts were about steady and there was better enquiry for poorer types although these were generally sold below valuations. Brown Dooars were disposed of at a discount of 4 to 8 nP although some of the better sorts have been sold above Rs 2.00 per pound. Whole Leaf grades were about steady with any change in buyer's favour although some stylish sorts were frequently dearer. There was fair demand for Darjeelings which, however, tended easier. Following rates were quoted:—Clean Black Pekoe Rs 2.20 to Rs 2.25; Plain BP Rs 1.44 to Rs 1.48;

Plain Fannings Rs 1.52 to Rs 1.56; Medium BP Rs 1.52 to Rs 1.56; Medium Fannings Rs 1.72 to Rs 1.76; Best CTC Assam BP Rs 2.70 to Rs 2.90 and Best CTC Fannings Rs 2.80 to Rs 3.00.

In the Internal Sale, offerings consisted of 18,942 packages of Dusts. There was a good general demand but prices were again easier for most descriptions. Middle Eas. buyers showed very little interest, orthodox descriptions from all districts being up to 10 nP per pound easier. Plain liquoring and medium CTC Assams were again easier and sold at a discount of 10 nP and sometimes more. The best liquoring CTC sorts were irregular and, although a few lines were sold above valuations, they were generally up to 20 nP per pound easier towards the close.

Demand for Darjeeling teas was restricted to a few flavory lines, which were sold well. Following rates were quoted:—Medium Dooars Dust Rs 1.54; Medium Assam Grainy Ds. Rs 1.56; Medium Assam CTC Dust Rs 1.75 to Rs 1.95 and best; Assam CTC Dust Rs 2.80 to Rs 3.10.

Also, a total of 3,753 packages of Leaf grades was offered for internal consumption. There was a good general demand, especially for CTC Assams; but the orthodox descriptions were irregular and occasionally easier.

In the Export Quota section, business was reported done at 4 nP and 4½ nP per pound. At the close of the week, there were sellers at only 4½ nP with buyers at 4 nP.

In the Colombo market, a fair general demand prevailed at this week's auction when all centres operated quietly; but no Russian buyers appeared on the market. As the sale progressed, prices were generally lower except for best flavory Broken Orange Pekoes and Fannings grades, which were firm to dearer. Low-grown teas were easier, particularly Persian Gulf types. At the core of the sale, Broken and liquoring Fannings met with strong competition, while good Mediums and good Broken declined. All other teas were rather irregular.

In London auction, offerings were 26,960 packages including 21,577 packages of Northern India teas. The quality of the offerings showed some improvement and met with a strong demand. Cold-weather teas were well supported and realised prices in excess of brokers' valuations. The market for Medium and Low Medium descriptions remained fully steady, although the orthodox Dooars manufacture were sometimes easier to buy. Very little good Plain tea was available and the rate remained unchanged.

Stocks, as on the 21st February 1958, were 123.06 million pounds as compared to 123.58 million pounds in the previous week and 98.03 million pounds a year ago. Landed between the 15th and 21st February were 10.18 million pounds, while deliveries were 10.70 million pounds.

US Notes

THE WORLD TODAY

By Paul L. Ford

Leaders of both major American political parties, in and out of public office, have joined in unprecedented endorsement of the United States' Mutual Security Programme—unprecedented not in declaration of principle but in manner and means of delivery.

These men, representing the top names in the American political "Who's Who", gathered in Washington Tuesday to make clear that whatever their differences on other issues they regard the Mutual Security Programme as vital both to the United States and to co-operating nations.

Never before has such an array of notables from both sides of the political fence been assembled in support of a governmental programme. They included—to name only a few—President Eisenhower, former President Truman, Vice-President Nixon, Secretary of State Dulles, former Secretary of State Dean Acheson, and Adlai Stevenson, titular head of the Democratic Party.

They spoke to some 1,200 persons influential in business, industry, civic affairs, religion, the press and other fields. The audience came from 42 states and the territories of Alaska and Hawaii.

The occasion was "conference on foreign aspects of United States national security," arranged at the request of President Eisenhower. It was designed, quite candidly, to stimulate public interest in—and, more succinctly, public support for—the \$3,942 million mutual security programme.

That programme faces considerable opposition in Congress—what with national elections coming and demands being issued for spending at home rather than abroad to meet a decline in business activity.

The conference, therefore, was intended to impress both the public at large and doubting members of Congress with the continued need for broad economic and defence co-operation between the United States and other nations.

The immediate result has been wide press, radio and television coverage of key speeches emphasizing the benefits of mutual assistance. But it is the final result—the impact on Congress—that will really count. And Congress will not vote on the President's programme recommendations until after many weeks of debate.

The key members of both parties who took part in the Washington conference are confident, however,

that their efforts will bear fruit. Their attitude is perhaps best summarized in the words of Eric Johnston, who has served in diplomatic capacities under both Mr. Eisenhower and Mr. Truman and who organized the conference at the President's behest.

"This unmistakable display of bipartisan agreement," said Johnston, "in effect removes the question of foreign economic aid from the context of politics and establishes it as a major imperative of our present position in the world."

Actually, of course, foreign economic assistance has figured prominently in US planning since the end of World War II. It served originally aid to nations recuperating from the devastation of war; it has served more recently to help allied nations bolster their defences and their economies against the encroachments of international communism.

Taking into account all forms of assistance since World War II, the United States has provided something like \$60,000 million for what Mr. Eisenhower has termed "community" progress.

In this connection, it should be noted that an important anniversary is coming up. On April 3 it will be ten years since the U.S. Economic Co-operation Act, embodying the earlier aid programmes and the famed Marshall Plan, became law. Since that time the programme has changed names and its emphasis has switched from Europe, as that continent regained its economic health, to areas such as the Far East and the Middle East, but its basic concept has remained the same.

That it is in the "enlightened self-interest" of the United States to aid other nations in remaining strong, economically and defensively.

A large volume of international trade is necessary to help developing countries expand their economies, raise living standards, and achieve stability, according to the National Foreign Trade Council.

This conviction was strongly expressed by the Council, America's largest organization in the foreign trade field, in a statement to the House of Representatives Ways and Means Committee.

The Council thus became another influential group which is vigorously supporting legislation to extend the trade agreements programme now being debated in Congress.

President Eisenhower and Secretary of State Dulles both favour extending the Reciprocal Agreements Act for five years. It is to expire on June 30, unless extended by Congress.

"A large volume of international trade enlarges opportunities for the less-developed countries to sell increased quantities of the raw materials, foodstuffs and other goods which they can currently produce," the Foreign Trade Council statement said.

"It thus makes it impossible for these countries to obtain from the industrial more advanced nations the capital goods and other products needed to further develop their economies, raise living standards, and achieve the diversification essential to economic stability and growing prosperity."

"International trade is a proven means for the fulfilment of the aspirations of free peoples for economic and social advancement and so contributes to the peace and security of all the free world including the United States."

The Council emphasized that it considers the trade agreements programme to be the "best mechanism, thus far devised for maintaining a high and rising level of international trade and for preservation and enhancement of the world trading relationships."

Failure of the United States to support the trade agreements programme, the Council added, "would have a bad psychological effect and would be serious blow to world confidence and to the trade relationships between free nations upon which rests, to a very great extent, the ability of free peoples to advance their well-being and at the same time remain free."

"It would be extremely unfortunate," the Council pointed out, "for the United States to discontinue a programme for expanded international trade relations which means so much, both to the industrially-advanced and less-developed nations of the free world—a programme in which this country has played such an active and leading part for nearly a quarter of a century."

Price of consumer commodities in the United States continued to climb in January, according to the US Department of Labour.

The consumer price index, measured monthly, rose 0.6 per cent in the price index at 12.3, placing January per cent of the 1947-49 average, an all-time high for January prices, the Labour Department reported.

Adverse weather conditions in January affecting fruit and vegetable production in the southern states are the primary cause for price rises. Substantial advances in meat prices, largely because of a reduced volume of livestock marketing, also affected commodity prices.

*

Britain

THOUGH the present capital cost of building a nuclear power station is three times that of building the most advanced conventional steam station, the "progressive lowering of nuclear generation cost to below that of steam plant can be confidently expected". This is stated by Lord Ciltine, who was the chairman of the British Central Electricity Authority till the end of 1957, when it was split into two bodies.

Discussing future electricity charges for industrial and domestic use in the United Kingdom, Lord Ciltine says that already the capital cost per kilowatt of nuclear plant is on the downgrade.

Even before the reduction of generating costs to below that of steam plant is achieved, the use of nuclear power generation should not result in making electricity dearer despite the present higher capital costs. The operating cost of the nuclear system is low, and the higher capital cost "is not of such significance that it cannot be spread over and offset by economies in the supply system as a whole without itself affecting the price of electricity to consumers".

Lord Ciltine, writing on the Central Electricity Authority's programme for nuclear power, states in the Fuel Economic Review just published: "Britain leads the world in the practical application of nuclear power to electricity generation, and has good prospects of a healthy export market in this field."

Lord Ciltine tells of speedy implementation of the British Government's 10-year nuclear power programme. "In only one year and nine months," he says, "four groups of manufacturers were organized for the construction of nuclear power stations, personnel were trained in the know-how of reactor design and operation, initiating specifications were issued, tenders invited, received, examined and adjudicated upon, and firm contracts placed for the first two commercial-size nuclear power stations to be built in any country in the world."

The British Government's total net estimates of expenditure for the coming financial year will amount to £4,280 million, according to a statement circulated by the Chancellor of the Exchequer, Mr. Derick Heathcoat Amory, on February 18 in answer to a parliamentary question. The figure excludes the Post Office estimate, which covers self-balancing expenditure.

Mr. Heathcoat Amory has emphasized in his written answer that the total net estimates give effect to the Government's determination to insist on the greatest practicable economy in public expenditure, and, in fact, some cuts appear to have been made since the resignation of Mr. Peter Thorneycroft, from the post of Chancellor of the Exchequer. They have, however, only marginally affected the grand total.

The two largest elements in Government expenditure are defence and social services, and it is in the latter field that the estimates for the coming year show material increases—in particular for education, health services, and National Insurance. The National Health Service contribution will be increased with effect from the beginning of July. In this way it is hoped to begin placing the National Insurance Scheme on a sounder financial footing, and this will, clearly, be a long-term governmental preoccupation.

part of the pattern
of India's
industrial progress

In every industrial undertaking, efficient insulation is vitally important. Good insulation is not just a question of using high quality materials...it's a science that calls for experience and skill.

We offer the services of a highly specialised contracting organisation, with the resources to undertake heat, cold and sound insulation contracts of any magnitude anywhere in India. Whether you are faced with a minor problem or a major project in insulation, we shall be glad to serve you.

March 8, 1958

The question of having powers similar to those in the Industries Act, for regulating the plantation industries was under consideration, added Mr KANUNGO.

Cement

Mr MORARJI DESAI, Minister for Commerce and Industry, stated in a written reply to a question by Mr N. S. CHAUHAN, in the Rajya Sabha, that the State Governments had been advised to increase the public quota of cement to the extent possible and to abolish the permit system for sale of cement by stockists. This had been done in view of the comparatively easier supply position as a result of increase in indigenous production.

Abolition of control on prices and distribution of cement was not contemplated, Mr DESAI said. Only in respect of sales by stockists, the State Governments had been requested to do away with the permit system.

The Minister said, the present estimate of monthly production of cement available for sale was 590,000 tons as against 470,000 tons last year.

Productivity Councils

Fifteen Productivity Councils are proposed to be set up during 1958-59 on regional, State and local basis.

This was stated in the Rajya Sabha by the Minister for Industry, Mr MANUBHAI SHAH, in reply to a question by Mr MAHABIR PRASAD. Mr SHAH said that the National Productivity Council had already been registered as a society under the Societies Registration Act. The Union Ministries concerned and organisations or employers and workers had been requested to nominate their representatives on the Council. These representatives would collectively co-opt in the Council representatives of other interests.

Mr SHAH said that organisations of industries, employers and workers in the industrial centres were being approached to initiate efforts to organise Productivity Councils. State Governments had been requested to give their support in the formation of such councils. Meetings of representatives of employers, workers, Government and institutions and organisations interested in productivity were being promoted at certain places for preparing draft constitutions of the Councils.

The Productivity Council of Mysore State, with the Minister of Industries of the State as President, had recently been constituted as a result of such joint consultations, Mr SHAH added.

Foreign Indebtedness

Replying to a question by Mr RAGHUNATH SINGH and two others, in the Lok Sabha, the Deputy Minister for Finance, Mr B. R. BHAGAT laid a Statement on

the Table of the House, showing the extent of India's present foreign indebtedness and the rates of interest on various categories of loans.

According to the Statement, the amount of indebtedness payable to various countries and the World Bank are as follows:—

Name of Project.	(Rs in Crores). Rate Amount of of in- indebted- terest. ness.*	
World Bank:		
Railways (1st Loan)	4 %	8.65
Railways (2nd Loan)	5½ %	14.63
DVC (1st Loan)	4 %	6.75
DVC (2nd Loan)	4½ %	4.38
Air India International		
IISCO (1st Loan)	5½ %	0.81
IISCO (2nd Loan)	4½ %	9.44
TISCO (1st Loan)	5 %	2.54
TISCO (2nd Loan)	4½ %	28.10
Trombay (1st Loan)	4½ %	5.88
Trombay (2nd Loan)	5½ %	0.90
Total		82.04

United Kingdom:		
ISCON credit for Durgapur Steel Project	1½ %	0.67
Sterling Loans		1.29
Total		1.96

USSR:		
Russian Credit for Bhilai Steel Plant	2½ %	12.85

Germany:		
Interim Credit in respect of Rourkela Steel Plant	6 %	13.16

USA:		
US Wheat Loan 1951	2½ %	89.21
US Loan 1955	3 or 4½ %	15.33
US Loan 1956	3 or 4½ %	3.33
US Loan 1957	3 or 4½ %	3.44
Total		111.31
GRAND TOTAL		221.32

* (Amount so far received less repayments).
† (1% above UK Bank rate).
‡ (3% if repaid in dollars and 4% if repaid in rupees).

DEFERRED PAYMENT COMMITMENT—COUNTRYWISE†

	(Rs in Crores)
USA	2.60
Japan	3.37
Italy	6.54
West Germany	1.64
France	6.67
UK	1.17
Norway	0.36
Czechoslovakia	0.23
Total	22.61

Note:—The figures given are approximate.

† The Statement relates to deferred payment commitments of the public sector only.

Brokerage

The Deputy Minister for Finance, Mr B. R. BHAGAT, told Mr MORARJI DESAI and Mr NATHWANI in the Lok Sabha that the prices at which shares and debentures of companies were purchased by the Life Insurance Corporation through brokers were inclusive of brokerage. It was not possible to indicate the amount of brokerage paid, as the brokers did not show this separately, he added.

West Germany

The Deputy Minister of Finance, Mr B. R. BHAGAT, said in the Rajya Sabha that an Indian delegation was a ready in West Germany in connection with the settlement of certain outstanding matters connected with the Rourkela Steel Plant.

Replying to a question by Mr MAHESHWAR NAIK, he said, by an interim agreement signed in December 1957, the West German Government had agreed to defer certain payment relating to the Plant which fell due to German firms upto February 15, 1958. The present delegation was negotiating a final agreement for postponement of payments due to German firms under contracts for the delivery and erection of a Steel Plant and rolling mill and related construction work at Rourkela.

Bhakra-Nangal

Mr S. K. PATIL, Minister of Irrigation and Power, in reply to a question by Mr HARISH CHANDRA MATHUR said the following statement on the table of the Lok Sabha on the cost-outlay of the power statics of the Bhakra-Nangal Project and how it would be shared by the participants in the scheme:—

Rs 5,590.27 lakhs for (1) the three power houses at (i) Bhakra Dam (left bank), (ii) Gangwal and (iii) Kotla; (2) transmission lines and (3) grid substations. This figure also includes the cost of residential and non-residential buildings chargeable to power sub-structure and super-structure for the Left Bank Power House concretising of the Right Bank Power House up to tail-race level and hydraulic works etc. The electricity portion will pay for the use of water at Bhakra Nangal power houses.

The cost will be shared by the States of Punjab and Rajasthan as follows:

(i) for the generating stations and step-up sub-stations of both Bhakra and Nangal in proportion to the share of stored water supply (Punjab 84.73% and Rajasthan 15.22%); (ii) for transmission lines of 132 kv. and above, including the cost of Grid Sub-stations connected thereto, which serve the common interests of the two partners, in the same proportion as (i) above. If any such line and/or sub-station serves the needs exclusively of any individual partner, the whole cost of such line and/or sub-station is borne by that partner; (iii) for transmission lines and/or grid sub-stations below 132 kv. serving exclusively any individual partner the whole cost is borne by that partner. If such line and/or sub-station serves both the partners, the cost is borne by the partners concerned in proportion to the estimated load of each partner to be fed from the line and/or sub-station; and (iv) for local distribution schemes, the cost is borne by the individual partner concerned.

Electrification

In a written reply to a question by Mr MOHAN SWARUP in the Lok Sabha, the Deputy Minister of Railways, Mr SHAH NAWAZ KHAN, placed the following statement on the table of the House:

The work pertaining to electrification of Howrah-Bandel-Burdwan and Sheoraphuli-Tarakeshwar branch on 3,000 V DC system is on hand. The section Howrah-Bandel has already been brought into commission.

Electrification of section Howrah-Burdwan (via Chord) Moghalsari is also being progressed on 25 kv single phase 50 cycle system but no commitments except for purchase of 110 locomotives have been entered into so far. However, tenders for supply and erection of structures and overhead equipment for these sections have been invited and are due to be opened on March 4, 1958.

Contract for the supply and erection of about 6,000 tons of steel structure for the main line section between Howrah-Bandel and Burdwan has been given to Messrs SAE (India) Ltd. Contract for 568 prestressed structures for section Sheoraphuli-Tarakeshwar has been given to Messrs Chanda Engineering Ltd. Contract for the supply and erection of overhead equipment comprising contact wire, catenary, insulators and associated fitting for the entire section Howrah-Bandel-Burdwan and Tarakeswar branch on 277 route miles has been given to SAE.

The rate for erection of steel structures by SAE (India) Private Ltd is Rs 250 per ton. The cost of erection of prestressed concrete structures by Messrs Chanda Engineering Private Ltd is included in the cost of the structures, which varies from Rs 1,000 to Rs 2,558 for portal structures. The rate for supply and erection of a cantilever structure is Rs 380 each. The cost of installation of the entire overhead equipment varies from Rs 3,000 to Rs 3,800 per single track mile.

Hirakud Dam

Mr S. K. PATIL, Minister of Irrigation and Power, in a written reply to a question by Mr SANGANNA, laid on the table of the Lok Sabha the following statement on the earthen portion of the Hirakud Dam Project:

Settlement in earth dams is expected even where the embankment is laid on an unyielding foundation. For an embankment such as at the Hirakud Dam, rolled in 6" to 9" layers generally of both the previous and impervious materials, and laid generally on an unyielding foundation as under the 3-mile main dam, no appreciable settlement after the completion of embankment is expected. During the construction itself as the embankment comes up, much of the settlement in the bank takes place. Some settlement can be expected even after the completion of the dam and in the course of years, depending on the height of the dam above the foundation. The foundation material itself, not

being granite rock, may yield in course of time though to an inconsequential extent. Government is aware of all these eventualities. There need be no apprehension regarding the safety or stability of the dam.

The readings taken at a number of 'observation points' on both the left and right earth dams have revealed that settlement has ranged between 0.2 per cent to 1 per cent only and is much below the normal settlement which goes up to 3 per cent.

Flood Control

In reply to a question by Mr BALI REDDI, Mr S. K. PATIL, Minister of Irrigation and Power, laid the following statement on the table of the Lok Sabha on the master plans for flood control:

The outline plan for a river within a State is prepared by the State Government concerned. Where the river traverses more than one State, the outline plans of the

States concerned have to be integrated by the River Commissions which have been set up for that purpose. These outline plans form the basis for the preparation of a master plan for each river basin. After the master plans for the different river basins have been finalised, they will be considered by the Central Flood Control Board for preparation of an integrated flood control programme for the country.

The present position is that the master plans for individual river basins can be prepared only after the High Level Committee on Floods has indicated the lines which future flood control works, particularly the long-term ones, have to be undertaken, taking into consideration the outline plans submitted by the States.

So far only six States have furnished information in this regard. Assam has forwarded an outline plan. Bihar has sent a master plan for flood control in North Bihar which covers the Ganga, Ghagra

and other rivers. Orissa has sent a brief note entitled "Long range flood control plan programming for the next 15 years beyond the Second Five-Year Plan." Uttar Pradesh has sent an outline of the master plan which covers the Ghagra, Ganga, Rapti and other rivers. The Chief Engineer, Punjab, has furnished the engineering side of the State plan for flood control measures. West Bengal State has sent a plan for the rivers Bhagirathi, Teesta, Torsa and Mahananda.

All these plans are under study by the High Level Committee on Floods. After the committee has given its directions, the draftmaster plans will be prepared and finalised by the States for approval by the State Flood Control Boards, the River Commissions (Floods) concerned and the Central Flood Control Board, and any assistance necessary for the technical examination of these plans will be rendered to the Central Flood Control Board by the Central Water and Power Commission.

NATIONAL SAVINGS ORGANISATION

The Spirit of Adventure

"Tatas represent the spirit of adventure."

—Mahatma Gandhi

"Jamshedji Tata laid the foundations of heavy industry in India by starting Steel and Iron Works in, what came to be known as, Jamshedpur... It had a precarious childhood but the war of 1914-18 came to its help. Again it languished and was in danger... but nationalist pressure saved it."

—Jawaharlal Nehru
from *The Discovery of India*

"Be sure to lay wide streets planted with shady trees, every other of a quick growing variety. Be sure that there is plenty of space for lawns and gardens. Reserve large areas for football, hockey and parks. Earmark areas for Hindu temples, Mohammedan mosques and Christian churches."

—Jamsetji Tata to his son Dorabji,
in 1902, six years before work
started at Jamshedpur

"We are constantly accused by people... of wasting money on the Town at Jamshedpur. We are asked why it should be necessary to spend so much on housing, on sanitation and water-works, on roads... on hospitals and on welfare. People who ask these questions are sadly lacking in imagination. We are not putting up a row of workmen's huts at Jamshedpur; we are building a city..."

—R. D. Tata addressing Tata Steel
shareholders on October 25, 1923

The Indian Steel Industry celebrates its 50th Anniversary

THE TATA IRON AND STEEL COMPANY LIMITED

Architects of India's steel industry:
(from L to R) Jamsetji Tata, R.D. Tata,
Ratan Tata and Dorabji Tata.

"So far we have but scratched the surface of this great land. Vast resources still remain unexploited and unused in the service of man. To think that hundreds of thousands of people should ever fall at the touch of famine, or die from disease aggravated by insufficient nourishment, while there is so much latent food and wealth in the country! ... Is it not time to stir ourselves; to wake up to the great opportunity and the stern duty before us, the task of India's industrial regeneration?"

—Dorabji Tata addressing Tata Steel
shareholders in 1918

"We are like men building a wall against the sea. It would be the height of folly on our part to give away any part of the cement that is required to make the wall secure for all time. That is why we and you have to use this money... to build up this great industry... And we should not think of dividends until we have done that..."

"... Make no mistake about this point. We hold this money in trust for you. But you yourselves hold it in trust for the Indian Nation..."

—R. D. Tata addressing Tata Steel
shareholders on June 4, 1925

INDIA & PAKISTAN**

ONE of the austere reproaches of the academic historian is that the average Indian lacks a historical sense. This is said with scarcely concealed exasperation when he is trying to piece out the chronology and sequence of events of early Indian history from such exiguous material as fugitive artifacts, epigraphic and numismatic evidence. But it is open to us to reply, purely as a debating score, that, in lacking a historical sense, we are, at any rate at the present moment, in the excellent company of the average citizen of any country. Indeed, in so far as our lives are still rooted in tradition and in a culture that is oral and mnemonic, we possess a sense of continuity, which, after all, is the essence of the historical sense. Compared to us, the West, which has burnt its pre-Caxton cultural boats and allowed its folk traditions to wither away, is really the worse off. Of course, its factual history can be told with greater or lesser accuracy because of the fact that they had greater secretarial and filing efficiency.

But, as I said, this would only be a debating point, legitimately available solely when your opponent is stupidly and stridently assertive of his case. For the rest, my point in bringing up the question now is really to agree dolefully with the historian, but in a context that does not get mentioned often by him. You would have noticed that the historian brings his charge, mostly in the context of dating the Vedas and the "circa" of Kalidasa and so forth. But, what about more recent times, times which have been meticulously documented? How many of us have, even with the advantage of hindsight, seen the design and continuity in our history of the last hundred and fifty years in terms that will make a meaningful whole? Most of the history that is being taught is purely political and in so far as any set pattern is discernible in it, it is usually in terms of political destiny. Depending upon your point of view, it is either "Rise and Fulfilment of the British Rule in India", or "Decline and Fall of the British Empire". And, even here, it would be true to say that most people have but the haziest notion of the pre-Candian phase of this political history, for, such was Gandhi's impact on his

people. There are aspects of the last hundred and fifty years of which many do not even seem to be aware. What, for instance, is the relationship between our present economic hopes and fears and the often heart-breaking pioneering endeavours in industrial enterprise in the last quarter of the last century? What was their relationship then and later to the political impulses of the time? How and in what diverse directions did Indian nationalism and Indian enterprise interpenetrate each other? Were their aims identical or were they at cross purposes?

The average citizen does not seem to be bothered by the questions at all. But these are important questions nevertheless, both as a matter of history and as giving meaning to our present endeavours. And if one wanted to think about them for either purpose, the moment is propitious, for, this week saw in Jamshedpur the commemoration of a Jubilee of a great endeavour of the early days of Indian national enterprise. My thoughts of the preceding paragraphs were inspired by some of the things that Mr J. R. D. Tata and Mr Nehru said on the occasion of the formal celebration of the fiftieth anniversary of the founding of TISCO. The history of TISCO, and indeed of the House of Tatas, is an essential strand of Indian history of the last seventy five years. Its vicissitudes were in a very important sense the agonies of Indian nationalism. In order to measure the true stature of a man like Jamshedji Tata no less than to understand a great deal of modern Indian history, it is necessary to go back a little and in the process learn more about our notorious unhistoricity.

At the time Jamshedji Tata came on the scene, India had reached the nadir of its destiny. 1857 was a bitter memory. The somewhat informal Indo-British relations of the early years of the century, when the British still felt that they were the guests and not conquerors of the country, had definitely yielded place to one of cold hostility between the rulers and the ruled. And yet, the transformation was not merely political but economic. It is something of a shock to realise that, when the British came to India, it

was as to a country at an equal, if not higher, stage of economic development. And though it is dangerous to talk without qualifications and reservations of cause and effect in history, it was the accident of industrial revolution in England that completely changed the nature of Indo-British relations. And—this is the important thing to note—the very emergence of the industrial revolution was, in its turn, made possible by the unconscionable "plundering of India" by the British. The rather harsh words are not mine, but that of a well-known authority, Brooke Adams. This is what he has to say: "The influx of the Indian treasure, by adding considerably to the nation's cash capital not only increased its stock of energy, but added much to its flexibility and rapidity of movement. Very soon after Plassey, the Bengal plunder began to arrive in London and the effect appears to have been instantaneous, for all authorities agree that the industrial revolution began with the year 1773... and Plassey was fought in 1757, and probably nothing has equalled the rapidity of the changes that followed. In themselves inventions are passive... waiting for sufficient store of force to have accumulated to set them working. That store must always take the shape of money. Possibly since the world began, no investment has yielded the profit reaped from the Indian plunder, because for nearly fifty years Great Britain stood without a competitor".

In 1958, it is possible to take a detached view of the sequence of events that is summarised in the above passage. And in 1800, it is unlikely that this pattern would have been clear even to those who benefited by the plunder. But, for those in 1875, neither of these stances was possible. For, by then, the pattern of events must have become clear to those like Jamshedji, and it must have been a galling thought that their economic degradation was made possible, ironically enough, by the plunder of their own country. It is sometimes not realised that, before the industrial revolution, India was, relative to the times, a manufacturing country of great complexity and had already developed the rudiments of modern banking and finance. All these were set at naught, not only by

deliberate policy but also by the forces of history, which, let me repeat, were given the necessary momentum by Indian wealth. In the political humiliation of the post mutiny era and in the economic degradation of the post industrial era, must be sought the seeds of Indian nationalism and Indian enterprise as we see it today.

But a sense of grievance without the necessary greatness to combat it is merely corrosive of character. The founders of the Indian National Congress, no less than the pioneers of industrialisation in the last quarter of the nineteenth century, were men who had the necessary strength of character to deal with the situation. It is difficult to decide which of the two was the more formidable task. But there can hardly be any doubt that, to have conceived of a modern steel industry at all at a time when, in Mr J. R. D. Tata's words, "the passive despair engendered by colonial rule had reached its peak", and to have converted it into a reality, is an achievement of the highest order. It is one of the first reassertions of Indian character, perhaps the first of a new series of triumphs of human will over circumstance. None of the subsequent successes in the field, however nominally more ambitious, can touch its lonely magnificence.

Even as an idea, it was of such proportions as to daunt a lesser man. Mr Nehru was gently ironic about the latter day planners, and said that Jamshedji constituted himself into a one-man Planning Commission and thought out the entire scheme. It is the barest truth, and is a true measure of the man and times. The passing bureaucrat of today would have thrown in the towel, had he been in Jamshedji's place. The story of the slow unfolding of the idea has been told often before and has all the elements of not so much a success story as a fairy tale. The search for the site, for instance. The stumbling upon Sakchi was almost accidental. It is all very well today to talk of the Jamshedpur area as the Ruhr of India, but before Dorabji and Weld chanced on it, it had no particular industrial antecedents, except, of course, scrappy geological data thereon. Indeed, the earlier scenes of steel production were, curiously,

—As You Like It.

Madras, an area that is now rather despised as a possible producer of steel. The choice of Jamshedpur has thus an element of miracle about it.

As for securing the necessary capital, that again is a story that does honour to the promoters and the country. When the London money market was rather lukewarm about the idea, Jamshedji took the unfashionable step of asking for Indian subscribers for his capital issue. And his faith in his own enterprise was magnificently rewarded by the capital of Rs 2 crores (a colossal sum for those days) being subscribed within three weeks. It took four years more before the first ingot of steel was poured out. The modest capacity of a hundred thousand tons of 1912 was raised to five hundred thousand tons during the war years to meet the exigencies of war. Things began to get into a bad way after the war when the slump interfered with the half completed plans for expansion. Fresh capital had been raised, and before the installation of the machinery, the slump had got into its stride and competition from Britain and the Continent almost killed the enterprise. It was then that Indian nationalism lent its helping hand to Indian enterprise and the protection for the indigenous industry extorted from an unwilling Government. Once the storm was weathered, the company made steady progress, and now it completes its two million tons programme in its jubilee year.

Since independence, and the era of plans, TISCO has ceased to be the concern of merely its shareholders but is instead a valuable national asset. Indeed, it is nonsense to talk of the sectors, at least as far as steel is concerned.

Jamshedpur, around which has grown a whole industrial complex, is, in the literal sense of the over-worked cliché, the heart of India, and if, for some reason, it does stop beating, then, quite literally, the whole industrial life will come to an end. And, therefore, the heirs of Jamshedji are quite truly the nation.

That the House of Tatas shares this view of its heritage, has been abundantly clear throughout its distinguished record of service. The vision of its founder has comprehended more than mere success in industrial enterprise. It was inspired not only by the highest patriotism, but by a sense of values that transcended even love of one's own countrymen. The township of Jamshedpur is a constant reminder to us of the fact that the Tatas have learnt the first lesson of European industrial revolution, that is, the need to avoid the appalling human degradation that machine-minding and mass production gave birth to. The bitter fruits of this initial mistake are still being harvested in the West, despite subsequent atonement. It was the same fundamental concern for the men under them that has made them commemorate the jubilee of TISCO by the presentation of a Park to the citizens of Jamshedpur.

The social responsibility, this sense of trusteeship of which Gandhiji used to speak, is a hall mark of the House of Tatas. I have spoken of it often in these columns, but it is worth recalling on this occasion, that the bulk of the Tata earnings goes to Trusts that are promoting humane and liberal endeavours like education, research and medical aid. Even among these, the Tatas have concerned themselves with the funda-

mentals that others leave well alone. There is scarcely any doubt that, in this, as in everything they do, the pervasive and beneficent influence of the founder of this house is to be discerned.

I was an interested visitor to the Baluchar Sari Exhibition, a little way off the "Hoodoo" corner on Chowringhee. Its facade is much better, very much so indeed than was that of the Leather Industry Exhibition on which I commented a fortnight ago. In attractive motifs, mostly from old Indian sari border designs, it tempts one in. And once there, one need never feel bored for a moment, for, wherever the eyes rest, there is something to fascinate them, something to intrigue the enquiring mind; and when one leaves, one does so with regret. Regret for the fact that, for all our fanfare-nade about reviving the decaying folk handicrafts, we have little to reawaken interest in this unique product of Murshidabad's once-famous handloom product. The peculiarity of the Baluchar sari is that it was a sort of running commentary on contemporary events, much as hair styles were in the Paris of Marie Antoinette. It shows how alive was the mind of the village craftsman to the happenings of the day, big or small. And this precisely was a source of never-ending novelty of design. I congratulate Subho Tagore, who has organised this excellent exhibition to focus attention on an extinct variety of Bengal's textile craft. There is an extensive collection of various designs of this sari, and I deeply miss not having been present at the fashion parade. The large number of stalls set up by commercial organisations and those of the West Bengal Government have turned out well. The exhibition will run for a few days more, and I would urge all who are interested in India's textile arts not to miss it.

Pakistan's pathological state of mind is revealed even in its budget which, on the admission of that country's Finance Minister, Mr Amjad Ali, has a distinctly anti-Indian slant. In allocating Rs 90 crores to Defence expenditure, he said that this large sum could well have been utilised for Pakistan's development, but... And here comes in India. India that has always been a thorn in Pakistan's side. India, he pointed out, has a Defence budget of Rs 302 crores, to find which enormous sum. Mr T. Krishnamachari, the former Finance Minister, had to go, according to Mr Amjad Ali, "with the beggar's bowl all round the world". Of Mr Krishnamachari's "beggar's bowl" mission, the whole world is, of course, aware. Put as to its object, Mr Amjad Ali has certainly given a very original explanation, so much so indeed that he is in the minority of one, a position in which he has been landed by the anti-Indian majority in his brain. He, however, said a very sensible thing, namely, that "money spent on defence is money

thrown away". If this counsel of perfection were reduced to practice, all would be well. There are, however, a few "buts" which trouble Mr Amjad Ali, and these are Pakistan's unresolved disputes with India over the canal waters and Kashmir for which he squarely puts the blame on Pakistan's bete noire, Prime Minister Nehru. Over the canal waters dispute, Pakistan has shown a notorious intransigence, having repeatedly turned down the arbitrators' suggestions, and still India continues the supply; and, as regards Kashmir, it has always insisted on all or nothing, making compromise impossible. Ever since the partition of the country, Pakistan's one unremitting preoccupation has been running India down, which reminds one of the Romans' famous invective against Carthage, "Delenda est Carthago". And this explains its military pacts.

GANDHIAN CROSSING

STATE Budgets have been awaited this year with more than local interest. For, it has been reported that the Central Government have asked the States to raise a considerable sum by way of taxation. In this context, the suggestion of the Second Finance Commission that States should not leave uncovered deficits has also been recalled. The two States of West Bengal and Uttar Pradesh have belied these expectations by presenting deficit Budgets without any accompanying taxation measures.

Bombay, however, has chosen to face its problems squarely. Dr Jivraj Mehta, State Finance Minister, has been confronted with a revenue deficit of Rs 201 lakhs and he has announced taxation measures which will yield Rs 300 lakhs. Out of this amount, Rs 75 lakhs are likely to be earmarked for credit to the State Road Fund leaving a surplus of Rs 24 lakhs. Considering that Bombay is already a highly taxed State—almost all the probable avenues open to the State Government have been tapped—this further effort is indeed laudable. The additional revenue is sought to be obtained under two main heads. A tax on all passengers and luggage carried by State carriages is expected to yield Rs 180 lakhs. The unification of taxes throughout the State is expected to bring in another sum of Rs 120 lakhs.

Though the regions affected may feel aggrieved, the reasons adduced by Dr Mehta for unification of taxes are unassailable. In the first instance, the State as a whole has passed the transitional stage in integration after States Re-organisation. Services, pay-scales and dearness allowances have already been unified. It is only meet and proper that the tax laws are also unified. At the same time, Government have not hesitated to abolish or modify tax-laws which may place certain regions in a disadvantageous position. In this list are the sales tax on cereals, pulses, fresh fruits, ata, maida, suji and gram and the agricultural income tax in Marathwada area, and the tax on trade, professions, callings and employment in Vidarbha. All these have been abolished. The unification scheme covers taxes on motor vehicles, taxes on motor spirit including highspeed diesel oil used as fuel, taxes on consumption of electric energy, duty on entertainment and stamp duty on non-judicial instruments.

The new tax on all passengers and luggage carried by stage carriages, excepting those which are levied within a municipal area, is to be levied at such rates as would yield an amount equal to 10 per cent of the inclusive amount of fares payable to the operator of a stage carriage. The justification

The Bombay Budget

for this tax has presumably been derived from the fact that the railways have imposed a surcharge of 10 per cent on railway fares.

Dr Mehta has indicated in his Budget speech that the State's financial position would have been much stronger than it is now, had the Second Finance Commission given a square deal to the State. His verdict on the Report of the Commission is that, so far as the Bombay State is concerned, the Commission have failed to give due recognition to the fact that the new Bombay State needs additional resources by way of Central devolution of shared taxes and grants-in-aid to tackle the tremendous transitional financial difficulties arising out of integration.

The fact that greater weightage than before has been given to population as compared to collection has been mainly responsible for the reduction in the State's share of Central taxes. As against 21 per cent under the Deshmukh Award of 1949, Bombay State's share of the divisible pool of taxes on income other than the corporation tax had been reduced by the First Finance Commission in 1952 to 17.5 per cent, though the population had increased from 21 million to 35.9 million. The Second Finance Commission in 1957 have further reduced it to 15.97 per cent. The present population is higher at 48.2 million. The collections of income tax within Bombay in 1957-58 has been Rs 66 crores, whereas they were only Rs 3.5 crores in 1937-38 and Rs 50 crores in 1952-53.

The population basis, however, seems to have been ignored when apportioning the net proceeds of Union Excise duties on matches, tobacco and vegetable products. The Second Finance Commission have extended the divisible Union Excise duties to five more commodities but have reduced the State's share from 40 per cent to 25 per cent. The share of 12.17 per cent given to Bombay does not conform to the population basis on which the State's share should be 13.5 per cent. It is in regard to the distribution of Sales Tax Revenue from mill made textiles, sugar and tobacco that Bombay has had to entail serious loss. By introducing an element of population apart from consumption, the Commission have drastically reduced the State's erstwhile income from Sales tax on these commodities.

The principle that a State's record in raising additional revenue should be given due recognition when distributing Central assistance also seems to have been forgotten in the case of Bombay. In the First Plan period, Bombay had raised over Rs 28 crores by additional taxation though the target set for it in this regard was only Rs 23.5 crores. During the

same period, all other States put together had raised only Rs 56.4 crores. It is not as though Bombay does not stand in need of help. In the first place, as a result of reorganisation, the State Government have to meet the budgetary deficit of Rs 325 lakhs of Kutch, Saurashtra and Marathwada. Further, the integration of services alone is expected to involve an additional expenditure of Rs 3 crores annually.

In view of the Finance Commission's recommendation that, in future, the distribution of the divisible pool of taxes should be entirely on population basis, Bombay will have to be prepared for a further reduction in its share of Central Taxes. That is to say, the share will be reduced to 13.5 per cent from the present 15.97 per cent.

The Budget for 1958-59 shows a revenue deficit of Rs 201 lakhs under existing taxation. Revenue receipts are placed at Rs 120 crores while Revenue Expenditure is estimated at Rs 122.01 crores. Compared to the revised estimates for 1957-58, receipts are higher by Rs 2.68 crores while expenditure shows an increase of Rs 10.25 crores.

The revised estimates for 1957-58 show, on the basis of the first eight months actual, a revenue surplus of Rs 5.57 crores as against the estimated deficit of Rs 2.37 crores and Rs 3.17 crores in March and June 1957 respectively. This is because of an increase in receipts to the tune of Rs 7.90 crores and a decline in expenditure of the order of Rs 84 lakhs compared to the modified estimates of June 1957. The State is yet to attain the target of capital expenditure. Against the total estimated expenditure of Rs 46.51 crores last June, the revised for 1957-58 has come to only Rs 40.56 crores. In the Budget for 1958-59, Capital expenditure is estimated at Rs 48.23 crores. This is to be met from loans from Central Government, State's share in small savings, withdrawals from the fund for development schemes and other earmarked funds, and from open market borrowing possibly amounting to Rs 10 crores.

The aggregate State share expected to be received in 1957-58 from small savings is estimated at Rs 13 crores. The Central Government have changed the basis of sharing net collections in favour of the States to two-thirds of the net collections. Small Savings have assumed vital importance to the success of the State Plans because they are going to be the main source of funds for the Plan. Accordingly Bombay is intensifying the campaign for Small Savings and it is confidently anticipated that collections will come up to expectations.

The State's Second Plan places the emphasis on Agriculture as

Bombay, even in normal years, has a deficit of over one million tons. Moreover, as the Asoka Mehta Foodgrains Enquiry Committee has pointed out, self-sufficiency in foodgrains is an important prerequisite to the success of the country's development programme as a whole. Bombay has made a provision of about Rs 191 crores or 55 per cent of the total Second Plan outlay for schemes of agriculture and Community Development as well as for multipurpose, major, medium and minor irrigation schemes as would directly benefit agricultural output. The target of additional production has been fixed at 1.5 million tons. In the budget for 1958-59 the State has made a provision of Rs 35.8 crores consisting of Rs 22.1 crores for schemes of Agriculture and Community Development and of Rs 13.7 crores for schemes of major and medium irrigation.

The next year's budget has also paid special attention to the establishment of effective local self-government. Dr Mehta has pointed out that "it is the intention of Government to make every village a self-contained unit able to cater to the essential civic needs of its people". It is gratifying to note that Government have realised that so long as the panchayats are not provided with an assured source of income, the desired results will not follow. An extra provision of Rs 62.70 lakhs has been made in the next year's budget in order to enable panchayats to get grants from 25 per cent to 30 per cent of land revenue realised in their respective areas.

That the State has strenuous work ahead in the next three years if it wants to fulfil the targets of the Second Plan is evident from the fact that, so far, Plan expenditure has been at a disappointing level. The State's target of expenditure under the Second Plan is placed at Rs 350.28 crores. Of this, in the first two years only Rs 109.45 have been spent. In the second year, the revised figure has been well below target (Rs 65 crores against Rs 73.5 crores). A target of Rs 76.8 crores has been set for 1958-59. Thus, over Rs 240 crores remain to be spent and there are only three years left. Dr Mehta has pointed out that larger provisions will be made in the last two years of the Plan period. He has further made it clear that "it is indispensable that we develop our spending capacity to the fullest extent of the task before us". The State Government are taking active measures to eliminate administrative delays by delegating financial powers to heads of departments. It is to be hoped that these and other steps already initiated will quicken Plan expenditure to the requisite level in the next three years.

THE COMMISSIONERS FOR THE PORT OF CALCUTTA

NOTICE

Repayment on the 15th September 1958 of 5% Calcutta Port Trust Debenture. Loan 1928-58-88 issued on the 15th September 1928.

The Commissioners for the Port of Calcutta, in pursuance of the right reserved by them at the time of issue to repay the 5% Calcutta Port Trust Debenture Loan 1928-58-88 for Rs. 1,50,00,000/- issued on the 15th September 1928 at any time after the expiration of thirty years from the date of issue, on six months previous notice, hereby give notice of their intention to repay the said Loan on the 15th September 1958.

The holders of debentures of this loan should tender their debentures at the Local Authorities Loan Section, State Bank of India, Calcutta, at least three weeks before the due date of repayment with the following endorsement on the back of each debenture:—

"Received payment in full of all demand for Principal and interest thereon."

(Signature of holder)

Interest on the Loan will cease from the 15th September 1958.

P. C. MITTER,
Secretary.

15, Strand Road,
Calcutta—1.
The 3rd March 1958.

BOMBAY
REVIEW

Inaugurating the conference on Savings and Investment in Bombay last week Mr Y. B. Chavan, Chief Minister of Bombay, asserted that the complaint that the investment climate in the country in the past one or two years had deteriorated, had no basis on facts. For the real state of affairs was that any "enlightened" entrepreneur could go ahead with his plans in the confidence that all his legitimate needs would be met. There were many State sponsored organisations to render him all necessary help so long as he did not swerve from the path of service to the nation. Mr Chavan also quoted figures to prove that even after the so called heavy taxation of last year the rate of investment had not slowed down as had been claimed by Mr Babubhai Chinal. It would appear that the Bombay Chief Minister traced the difficulties of the private sector to a fundamental defect in the outlook of some businessmen. He called it the get-rich quick trading complex.

It is, however, to be admitted that there are many people who do not consider the investment climate in the country encouraging. In this regard there is the fact of heavy losses sustained by investors during the past one or two years. As pointed out by Mr Chinal the index for variable dividend securities which was 126.19 in September 1956 and 114.5 on 29th December 1956 came down to 98.1 on 7th December 1957. The flow of foreign investments also seems to have been retarded during this period. As against an

Savings and Investment

average investment of Rs 25 crores annually in the 5½ years period ending December 1953 the average for the two years period ending December 1955 is only Rs 20 crores. This would indicate that foreign investors are not very enthusiastic about employing their funds in enterprises in our country. It is not as though there are no other avenues open to them for there is keen demand for capital in many countries.

It is agreed on all hands that savings have an important part to play in economic development. In a country which wants to take rapid strides in this regard, therefore, it is doubly important that the community realises the need for restricting current consumption in order to have more savings. The problem is rendered difficult by the fact that the size of the accumulated capital in the country as a whole is not large. In this regard it is also to be noted that savings will become effective only when they go to add up to capital. In our country where the State plays a dominant role in the life of the community, savings and capital formation are largely influenced by Government policies.

Development of Shipping

With the acute shortage of foreign exchange in the country it has been apprehended that Second Plan target for shipping of 9 lakh tons will not be attained. For it has been found that even after the spending in full of the funds provided, there is a gap of over 2 lakh

tons between target and achievement. It has been estimated that an additional Rs 50 crores worth of foreign exchange will be needed to make up this deficit. The shipping companies are also unable to continue their modernisation programme due to paucity of foreign exchange even though they have the requisite internal resources.

It is gratifying to find that Government are taking active steps to reach the target by the end of the Second Plan period. Speaking at the annual day of the Nautical Engineering College in Bombay this week Mr Raj Bahadur, Minister for Shipping, said that the chances of acquiring additional tonnage had improved in recent months and that most probably the target might be exceeded by over 1 lakh tons. This welcome prospect seems to have been brought about by the success of the recent negotiations for loan assistance with countries like USA, Japan and West Germany.

Mr Lal Bahadur Shastri, Union Minister for Communication and Transport, had disclosed in a recent speech in the Lok Sabha that far from allowing the target to be unfulfilled, it might be upgraded to one million tons. A good part of the yen credit from Japan is to be used to get about six ships from that country. A programme to acquire 20 to 24 ships during the next three years would appear to have been drawn up.

Strangely enough the present shortage of foreign exchange has itself given a fillip to Government's efforts in increasing shipping tonnage notwithstanding the fact that purchase of ships also requires foreign exchange. The loan accommodation from foreign countries has solved the problem of immediate payment. There is no difficulty in meeting the loan commitments in this regard because by having more ships a considerable portion of the country's annual freight bill of about Rs 180 crores worth of foreign exchange can be saved and set apart against the payments toward these loans.

Import Policy

With the progressive reduction of import quotas in the past few years, the import trade of our country has also undergone a corresponding diminution. The drastic cuts in import quotas and the total banning of several items in recent months have further aggravated the difficulties of the trading concerns which depend on imported goods.

Speaking at the annual general meeting of the All India Importers' Association, Mr Shanilal M. Shah, president, pointed out that the serious situation that had arisen in the trade could be considerably improved if the indigenous industries

who were the main beneficiaries of the import cuts, utilised the services of the import trade for distributing their products within the country. As a similar appeal made some time ago by Mr Morarji Desai seems to have been completely ignored, it is to be hoped that Government will take suitable measures to absorb existing channels of trade in the distribution of indigenous goods.

While recognising the need for drastic cut in imports in the prevailing circumstances in the country, Mr Shah appealed to Government to take note of the fact that import cuts carried too far would militate against the growth of indigenous industries. Moreover complete ban of imports is neither practicable nor desirable. Government should give their sympathetic consideration to the import of commodities for the indigenous manufacture of which there are no plans at present in the country. It is also to be noted that severe import restrictions may adversely affect our export drive because countries which import commodities from India may try to cut down their offtake when they find the commodities which they want to export are not finding any access in our country. Imports have also a vital role to play in the development of indigenous industry. For without competition there will be no incentive for our industry to improve its products.

The Madhya Pradesh Budget

The Budget of Madhya Pradesh for 1958-59 reveals a revenue surplus of Rs 110.03 lakhs. Total revenue for the year is estimated at Rs 5616.79 lakhs and expenditure at Rs 5506.76 lakhs. The improvement in the finances of the State has been brought about mainly by the award of the Finance Commission which has given a grant of Rs 4 crores. Though no new taxation is proposed, additional receipts to the tune of Rs 130 lakhs are anticipated as the result of a betterment levy introduced in the budget and rationalisation of sales tax.

In his budget speech Mr M'shr Lal Gangwal, State Finance Minister, announced that Government had decided to introduce new pay scales for primary school teachers all over the State with effect from April 1. The entire additional expenditure which will have to be incurred on the implementation of this decision will be met by the State Government.

Capital expenditure for the next year is placed at Rs 1812.17 lakhs. Apart from a sum of Rs 130 lakhs that is expected to accrue from betterment levy and rationalisation of sales tax, credit has also been taken in the budget for Central Grants for Plan schemes to the tune of Rs 417.49 lakhs and encashment of securities of Rs 350 lakhs.

GATEWAY
NOTESWORLD OF
COTTON

ONCE again, the Cotton market presented an uneasy front. The market reacted bearishly to the Central Budget with a fall of about Rs 10 per candy. Heavy liquidation brought down the Jharilla March contract at one time to Rs 658 per candy—a new low in recent weeks—while May contract also shared the nervousness although it escaped with a comparatively light punishment.

Shippers were disappointed over the absence of any reduction in export duty on Bengal or any announcement with regard to the export quota for other Deshi varieties. However, on second thoughts, the market recorded a slight recovery on Saturday last, which was extended further during the current week, mainly due to the absence of any tenders on the second notice day. Traders were also optimistic about a more sympathetic attitude of the Government towards the textile industry.

Also, technical considerations induced some short-covering, while option dealers were busy adjusting their commitments in view of the settlement on Monday. On top of these, there were no tenders issued against the maturing contract which acted as a bolstering factor. Turnover was 20,000 bales. ICC Jharilla May delivery concluded at Rs 672, while March closed at Rs 675.25.

The Spot market, ruled steady. There was mill enquiry, notably for Luxmi, Vijay and other staple varieties.

On the export front, shippers showed little interest and the only transactions reported were in small lots of Bengals.

In the foreign cotton section, there was hardly any enquiry for foreign growths.

The Government of India have announced an import quota of 70,000 bales of East African cotton of 1 1/16" and above. The trade is now concerned over its impact on the present price structure of this cotton. It has been estimated that the quantity of East African cotton, sold subject to the availability of import licences, is around 1.10 lakh bales. The present quota of 70,000 bales has, therefore, failed to cover up this entire quantity. It is feared that this might lead to the cancellation of the excess quantity sold to this country by East African shippers.

The recent protest by the Karachi cotton trade against an indifferent attitude of their Government in the current cotton crisis induced shippers in Bombay to study conditions at home. As prices of Deshi varieties (excepting Bengal) declined by about Rs 50 per candy during the past six weeks, shippers suggested that a small export quota of about 2 lakh bales could be easily earmarked for Kala Ghn, Wagad, CP/1 and CP/2 and other Deshi varieties and the duty could be doubled to Rs 100 per bale.

STATISTICS

Exports by rail, from 1st September 1957 to 27th February, 1958, were 107,815 bales. Estimated mill consumption in Bombay, during the same period, was 647,932 bales as compared to 652,079 bales in the corresponding period of last year. Estimated stock of raw cotton, held by exporters, dealers and mills in Bombay, on the 27th February, was 638,897 bales as against 564,399 bales on the corresponding date of last year.

Following are the mills' cotton consumption for the period from 1st September to 31st December (figures in bales of 392 bales):—

Description:	1957	1956
Indian	1,554,180	1,525,011
Pakistani	Nil	Nil
American	95,943	25,510
Egyptian	25,537	43,908
Sudan	24,831	34,633
East African	51,823	93,658
Others	2,480	3,548

Total ... 1,754,794 1,726,288

NEW YORK COTTON MARKET:

Trading on the New York cotton futures market developed strength on more active dealings with covering in the near March and more active buying in July. New crop deliveries reached new seasonal high levels on the assumption that the Soil Bank allotment would be increased to cover the surplus applications. The higher prices were not, however, fully maintained and some reaction set in when buying power dried up on the appearance of some hedge selling. Middling Spot closed at 36 cents per pound.

According to the Census Bureau of the US Department of Agriculture, cotton mills consumed 800,000 bales of raw cotton during the period 20-12-1957 to 31.1.1958. Total consumption, during the season till the close of last month, was 4,174,000 bales.

LIVERPOOL COTTON MARKET:

Trading on the Liverpool cotton futures market was at a standstill. No encouragement was derived from New York, while interest was mainly in some short-covering in the near position of the mixed contract. The Sudan contract remained idle and closed quiet.

The continued inactivity and the offtake in the yarn and cloth sections gave little encouragement to sustain the improvement in the spot section where prices eased off on light offerings. A clarification of American policy is needed to enable the Liverpool market to operate on a sounder basis.

ALEXANDRIA COTTON MARKET

Quiet conditions were witnessed in the Alexandria cotton futures market where prices moved downward on account of interior and professional selling.

BOMBAY
REVIEW

The cotton supply position in Egypt is as follows (figures in bales of about 730 lbs):— Carry-over as on the 31st August 1957—128,082 bales. Estimate of the 1957-58 crop—1,182,876 bales. Total visible supply—1,310,958 bales. Export sales upto 31st January 1958—405,684 bales. Estimate of annual local consumption—273,971 bales. Total disappearance—724,655 bales. Free stocks—586,303 bales of all varieties.

KARACHI COTTON MARKET

The Karachi cotton futures market ruled bearish. Absence of export enquiries, slackness of domestic spinner demand and increasing new crop pressure touched off a large volume of selling, which depressed prices. Following rates were quoted:—Sind Deshi Rs 64; Punjab Deshi Rs 62; 4F Punjab Rolling Rs 71-12; LSS Rolling Rs 74-15 and NT Rolling Rs 76-3.

CLOTH AND PIECEGOODS:

Steady conditions were noticed in the Bombay Piecegoods market. The offtake was reported to be

better in respect of fine and superfine varieties, while satisfactory demand was also reported for coarse and medium varieties. There was a general feeling that the up-country demand would broaden further after the "Holi" festival.

Trade circles were, however, disappointed that the anticipated relief in the excise duty on cloth had not materialised. It remains to be seen whether the cut in the duty on medium varieties will be made available beyond March 31. The quantity of unsold stocks with the mill is reported to be still heavy. It is pointed out that, unless the excise duty on cloth is reduced, the offtake of cloth will not be brisk.

Output of cotton textiles, during last year, totalled 5,317.41 million yards as compared to 5,306 million yards in 1956. Production in recent months has, however, tended to decline on account of the unsatisfactory trading conditions for cloth. For instance, output in January 1958 is lower at 433.23 million yards as against 483.70 million yards in the corresponding month of last year.

BOMBAY
REVIEW

PRICES in the Bombay Oils and Oilseeds markets have shown a mixed trend during the week under review. Although these markets received the Budget with a feeling of disappointment in the context of strong hopes entertained by traders that the Government would offer some relief in export duties, the continued uncertainty about the cut in export duty on Castor Oil gave a free hand to speculators of Calcutta to influence the sentiment in the manner they liked. With the result, Castorseed registered a spectacular rise—the season's high so far.

In view of the option settlement, option dealers were busy adjusting and applying "teji" options. Shorts, who sold earlier in the absence of any relief in the budget, hurriedly covered their commitments, which added the recovery. Talks, that Brazil was not willing to sell its castor oil first pressure to the US at below 12.50 cents per pound, also acted as a contributory factor. With the result, Castor May delivery was taken up to Rs 143.50 from Rs 141.37. In the ready section, the rate was quoted at Rs 23.75 for the Madras quality, while Castor Oil, commercial quality, was done at Rs 14.75.

Trading in Linseed was devoid of fresh interest. The marketing of the new crop has already started in Hyderabad and the inflow is expected to pick up in the coming weeks. In Uttar Pradesh

Mixed Trend in Oils and Oilseeds

and Madhya Pradesh, arrivals will commence after about a fortnight. In these circumstances, operators in the futures section have been inclined to press sales at higher levels in the new crop contract. May delivery started at Rs 29.31 and finished at Rs 29.25. Ready bold was quoted at Rs 18.62 and Linseed Oil at Rs 15.69.

After a break of nearly two months, Australia is reported to have shown an active interest in Indian Linseed oil. It is stated that shippers have been able to conclude business for about 450 tons for early shipment. Although the Australian purchases have ended the quiet spell, prices have lacked parity by £2 to £4 per ton on the basis of current domestic rates. It is pointed out, that the business has been done on the presumption that the internal rates will move down in the near future on account of the arrivals of the new crop. In spite of the present disparity, a section of the exporters believes that the long-term outlook for linseed oil exports is favourable in view of the changed supply position in world markets.

The 1957-58 crop has been substantially smaller, both in Canada and the USA, the estimates being 567,000 tons and 625,000 tons as against 862,000 tons and 1,218,000 tons respectively in the last season. Overseas buyers will, therefore, have to depend more on India this year.

Trading in the Groundnut section was dull in the absence of any fresh developments. The receipt is just large enough to take care of the demand from crushers and vanaspati interests. However, hopes of some relief in excise duty on vegetable oils have provided a mildly bullish factor. May delivery changed hands at Rs 159.62 to Rs 159.87. In the ready section, the rate is quoted at Rs 32.00 for the bold quality and Groundnut Oil at Rs 17.50 for Railway Receipt.

In the Cottonseed section, May delivery started at Rs 106.25 to finish lower at Rs 105.00.

Arrivals of Oilseeds in Bombay during the past two months were as follows (figures in Tons):—

	January	February
Groundnut	13,193	9,830
Cas or	1,007	1,885
Linseed	752	3,379
Rape & Mustard	79	121
Seasame	685	383
Mouru	22	29
Cottonseed	3,789	2,576

There were no arrivals of Kardi and Niger seeds during the two months mentioned above.

Gold & Silver

Sentiment in the Silver section, on the Bombay Bullion Exchange, remained generally depressed under the influence of lower Calcutta advices. The talk of possibility of increased Tibetan arrivals evoked offerings although profit-covering minimised losses. Arrivals and offtake were estimated at 6 and 10 bars respectively. Chaitra delivery moved between Rs 189.75 and Rs 190.19, while Fagun delivery hovered around Rs 191.94. The spot rate was mentioned at Rs 192.19.

Gold was steady in slow professional dealings, but the undertone was steady. Arrivals and offtake were estimated at 3,000 and 5,000 tolas respectively. Chaitra delivery moved between Rs 111.94 and Rs 112.19, while the spot rate was quoted at Rs 112.37. Sovereign remained firm at Rs 71.75.

Yarn

The Yarn market greeted with relief the Central Budget, which did not contain any proposal to raise import and excise duties on rayon as well as staple-fibre yarns. Higher import duty on nylon and perlon yarn failed to impress the market, while a section of the trade pointed out that the Government had not done anything to promote exports of cotton yarn.

However, trading continued to be restricted. There was hardly any change in the prices of Art Silk yarns. Listless conditions prevailed in the Rayon yarn section. Reports were current that a scheme for an equitable distribution of

indigenous yarn among weaving mills at a fair price was being evolved at the instance of the Government.

Trading in the Cotton yarn section was uninteresting in the absence of export as well as indigenous demand. The easy trend continued as many stockists were eager sellers. It is very likely that prices may decline further and the decline may be extenuated by the levy of excise duty on the production of cloth on power-looms and also due to the decline in raw cotton prices after the announcement of the budget proposals. On the whole, the future course of the market remains uncertain.

Non-Ferrous Metals

Steadiness in Copper continued to be main feature of trading in the local Non-Ferrous Metal market. Although there was a shortage of stocks, prices reacted moderately from Rs 175 to Rs 173 per cwt in view of the forthcoming shipments. Copper, which was due to be unloaded from s.s. "Kampala", was quoted at Rs 165 per cwt. After ruling steady for some time, Zinc developed signs of weakness due to usual arrivals, the rate being quoted around Rs 51 per cwt. However, it was felt that any further recession in price was unlikely as most of the expected arrivals were purchased at higher foreign prices ruling today. Trading in the Lead section was dull and featureless with the rate quoted at Rs 63 per cwt. The hectic price movements in Singapore had their repercussions on the Tin market, the rate being quoted at Rs 129 per quarter.

On the London Metal Exchange, the rate for Copper is quoted around £161 per ton. The overall position of this metal is reported to be unchanged and the weakness in evidence is attributed purely to local factors. It is also reported that Russia is negotiating with wire industries in the UK, and orders for considerable tonnage are likely to be placed by the Soviet if and when the deal is concluded.

Zinc was quoted around £62 per ton. The consumption of this metal is reported to be not as bright as expected, mainly due to dull conditions in the zinc sheet industry.

Lead is quoted around £73½ per ton. The level of consumption is reported to be on the same scale as in the past two months. The US Tariff Commission's recommendations are expected during the current month.

Tin was quoted at £731 per ton. It is reported that the Thai Government is seeking a higher quota for their country. Although Thailand is not a big tin-producing country, an upward revision in their quota, it is feared, will certainly have serious repercussions on the sentiment of the tin market.

"To Tax and to Please . . ."

DELHI
REVIEW

A COMBINATION of circumstances has conspired to cheat the public of its pre-Budgetary thrills this year. To begin with a remote reason, Mr T. T. Krishnamachari had made, last year, such large drafts on the unexpected and the unpleasant that not even the confirmed pessimist could prognosticate this year anything more drastic than a Gift tax. As for the optimist, he confined himself to hoping, rather forlornly, that some of the demonstrably cumbersome and inequitable levies would be quietly dropped. For the rest, resistance and hope had been so completely broken that one sensed a feeling of "we couldn't care less" in circles delighting in anticipatory hopes and fears.

More immediately, events of the last few days had left the country rather low and emptied of vitality. The prolonged debauching of public feeling over the Mundhra deal, culminating in the resignation of TTK, had left the public limp and saggy. Since pre-Budget astrology is largely a matter of mood, this circumstance was particularly unpropitious to any real effort at prediction. What little insouciance was left after the catharsis of l'Affaire Mundhra was dissipated in the sorrow at the passing away of Maulana Azad. Indeed, the

PM's Budget speech began with what was, for him, a rather curious note of superstition. He referred to the unpropitious times, and made a feeling mention of the death of the Maulana and the resignation of his "distinguished predecessor" in office. In what was surely an uncharacteristic mood, he referred to his feeling of "desolation and unfitness for the task that fate and circumstances have thrust on me". It was clear that something of the emotional exhaustion of the last few days had infected even Mr Nehru's amazing elan.

As for the contents of the Budget, it accorded well with the somewhat limply anticipation thereof. Mr Nehru himself described it as "pedestrian". Many will be disposed to think that is what every Budget ought to be. Drawing their analogy from domestic felicity, they may quote the example of the ideal family as one in which, at least to the onlooker, there is scarce a ripple. Despite the somewhat obviously interested comments that have referred to the Budget as imposing intolerable fresh burdens, there is hardly any one who believes that the Budget for 1958-59 is likely to upset the economy one way or the other. Even those who say otherwise do so with no real conviction, but almost as a point of professional etiquette, and for the reason that such a point of view should not go by default. A new tax, however rightly anticipated and secretly acquiesced in, should, for appearance's sake, be formally opposed. "To tax and to please, no more than to love and be wise, is not," as Burke pointed out long ago, "given to men." While, as I shall show in a moment, the Budget's disappointments are not wholly imaginary, it can scarcely be argued that such disappointments stem from its positive proposals. In so far as the Budget is unsatisfactory, it is so in its not doing away with certain things that are already there, rather than in the new burdens it implies.

If therefore, the Budget is to be criticised at all, it should be, not on the grounds that it will unsettle things again, but, with greater justification, for not making any significant impact on the current economic conditions either positively or negatively. Indeed, one may notice a certain apathy on the part of authority about the Budget's possible impact. Such apathy is not unlike, and perhaps not unrelated to, the feeling of "I couldn't care less" of the taxed public, to which I referred earlier. One hopes that such an unconcern is really a temporary phenomenon induced by the events of the last few weeks or months. For, otherwise, it may lead to a chasm between financial policies

and economic reality, with disastrous consequences to the future of planning and the economy itself.

The point can be illustrated by an example. Certain inequitable features about current corporate taxation, that we have been repeatedly drawing attention to in these columns, would surely have been removed by a Budget with a greater concern for the shape of the economy. The vexatious profits deposit scheme (on the removal of which some hopes were entertained, on the basis of certain reported utterances in the US by TTK) could have been dropped. Again, the rather half-hearted remedying of the anomaly of taxing Section 23A Companies both for distributing and not distributing dividends shows an uneasy and uncomfortable compromise with reality. Nothing has been done to meet the unanimous (except for those in authority) demand for the abolition of the tax on bonus shares. Every one, from Professor Kaldor to the Taxation Enquiry Commission, is agreed that the levy is unsound. But nothing has been done about it. Lastly, the continuation of the high excise duty on cloth is, as pointed out in our last week's issue, another example of a self defeating impost. Its continuance at the

present level is clearly demonstrative of a certain lack of touch with reality.

It must, however, be admitted that, along with these somewhat discouraging features, there were significant directions in which recognition of the present needs of particular industries was demonstrated. The substantial beneficiary of this realism is the shipping industry which has been allowed a development rebate of 40 per cent. For people who have only the haziest notion of what this means, it needs to be pointed out that, in effect, Government are making a gift of roughly 20 per cent of the cost of a ship (on the rough assumption that the rate of tax is 50 p p in the rupee) to a company on every new ship put in use. Of the new imposts, the Gift tax is the most significant. As this was something that has been in the offing for quite some time, it has not created much of a furore. The provisions of this act are comparatively simple and, on the whole, its impact is not likely to be too onerous. It only *raison d'être* is that it was essential to complete the circuit of an integrated tax structure. The idea, as has been repeatedly argued, is to have as complete a picture of a man's financial activity, so

Enquiries to:

that an automatic check of his various statements is readily available. It is quite simply an operation in arithmetic involving only addition and subtraction. In checking the correctness of your income and wealth (which alone are substantial and legitimate targets for revenue), gifts made have necessarily to enter besides regular expenditure. With the data supplied for the Income, Expenditure, Wealth and Capital Gains taxes and Estate Duty (which last has had a series of amendments made to it this time), the

tax official will have his tab fairly completely on the tax payer. It would then be not possible to lie glibly about any one of these particular items without exposing yourself elsewhere.

With the enactment of the Gifts tax, we shall have seen the end of major structural alteration in direct taxation. With that, we shall also have come to the end, I believe, of any further increases in the rates of these particular levies. As Mr Krishnamachari said last year, at least for the

Second Plan period, it is unlikely that we shall have any major increases in the quantum of these taxes. Therefore, it is legitimate to infer that the worst of these proposals is already behind us. This should come, if not as a piece of joyous tidings, at least as a matter of relief to the tax payer. Of course, we have not yet achieved even the beginning of a tidy tax system. The jungle that is income tax law is a constant nightmare to even the expert. As regards the newer taxes, they are but rough hewn rocks. There can hardly be

any doubt that, with experience and accumulation of data, refinements will be effected. Such refinements need not necessarily be subtler forms of fiscal torture. Indeed, it is reasonable to hope that, with the sewing up of the substantial rents in the tax nets, the haul of the big fish should be more satisfactory. To that extent, smaller and honest fry may get a much needed respite. Of course, the appetite for tax of Governments grows with what they feed on, but there is in economics, as in physics, such a thing as the limit of elasticity, and the consequence of stretching beyond this limit is disaster. The most attractive thing about the Kaldor proposals was its promise of substantially lower total taxation. I have no doubt that, in the years to come, the twin tasks of tidying the tax laws and evolving as near a scientific tax system as is compatible with human nature will inevitably lead to less astronomical rates of taxation.

Rather curiously, the much publicised core of the Plan did not get announced by the Prime Minister during his Budget speech. It made its rather unobtrusive appearance as a reply to a question. (One wonders at this somewhat odd procedure adopted for announcing so important a matter). The list placed on the table of the House by Mr Bhagat, the Deputy Minister for Finance, follows more or less closely earlier anticipations on the subject. It includes the three steel plants in the public sector, coal mining schemes of the National Development Corporation, the mining part of Neivell project and the development of the Calcutta, Bombay, Madras and Vishakapatnam Ports. The Railways, of course, are in the core. Among power projects, the more important ones are included in the core. As regards the private sector, the expansion programmes of TISCO and IISCO and of the coal industry are accorded core status. For the coming year, the Plan expenditure will inevitably be principally pumped into the projects in the core.

One post-Budget reflection: it is plain that Mr Nehru cannot and should not be asked to carry on the responsibility of the Finance portfolio, in addition to his own heavy duties as the PM. It is fair neither to him nor to the country. He is already cruelly overworked, and Finance is not a portfolio that one can casually add to one's other duties. If the PM gave the time and thought that Finance requires at this juncture in the country's development, he will have neither left for other things which he is now attending to. If he attends to other things and takes the Finance portfolio in his stride, he cannot do justice to the complex tasks of the controller of the country's economic destiny. It is, therefore, of the utmost importance that a new Finance Minister is appointed without further delay.

Indian Finance

March 8, 1958

Punjab's Budget for 1958-59 has disclosed a deficit of Rs 208 lakhs which, the State Finance Minister, Mr Mohan Lal expects, may increase to Rs 234 lakhs because of the formation of the Electricity Board there will be a loss in net revenue to the tune of Rs 18 lakhs and Government are assuming an additional liability in the matter of concession to Government Employees involving an expenditure of Rs 8 lakhs. The deficit however, is not to be left uncovered. The Finance Minister has announced additional taxation proposals which will not only wipe out the deficit but leave a surplus of Rs 10 lakhs.

The additional revenue is sought to be obtained largely from sales tax. The Government have decided to remove cotton, cotton seed, oil-cakes, raw hides raw skins and raw wool from the schedule of exemptions in the Punjab General Sales Tax Act. Along with it sales tax will be levied on raw materials purchased by manufacturers. Sales tax at the rate of 75 paise per Rs 100 will be levied on all food grains, including pulses. Other taxes to be levied are an education cess which will take the form of an electricity duty. The sales tax on food grains is also part of this education cess. Electricity duty will be levied at the rate of ten per cent on the existing tariffs of the first slab of domestic and commercial categories of consumers and 25 per cent of the existing tariffs on the remaining categories of consumers.

The revised estimate for the current year show a surplus of Rs 258 lakhs, revenue receipts being Rs 4223 lakhs and revenue expenditure Rs 3665 lakhs. As against Rs 4383 crores proposed for the year 1958-59, the plan outlay has been finalised to be only Rs 3319 crores largely because of the stringent financial position in the country. This is to be financed to the extent of Rs 16 crores by way of loans and grants from the Centre and the balance of Rs 1779 crores from State resources. The Finance Minister has pointed out in his speech that the State will find it difficult to produce such a large amount. Accordingly it has been decided with the approval of the Planning Commission to liquidate some of the State's securities to finance a part of its share of the development expenditure.

From an analysis of the figures for Plan expenditure in the past two years it will be evident that the progress last year has been more satisfactory than in the first year when only 76 per cent of the outlay was spent. For the year 1957-58 a plan of Rs 318 crores was approved. It is expected that almost the entire amount, practically under the Bhakra Project, irrigation, power and roads would be utilised.

An important step taken by Government during the current year has been the provincialisation of local body schools in the State. Government have also decided to extend the free concession of education in all Government schools from the primary standard to the sixth standard throughout the State from the next year. The Finance Minister has also announced a number of concessions to Government employees in the low-paid categories.

Kashmir Budget

The budget for 1958-59 presented to the State Legislative Assembly by the Kashmir Premier Mr Bakshi Ghulam Mohammed reveals a surplus of Rs 286.54 lakhs on the revenue and non-plan ordinary expenditure, revenue receipts and expenditure charged to revenue being placed at Rs 1046.99 lakhs and Rs 760.36 lakhs respectively. The financial position seems to have improved so much that even after making allowance for all transactions a net surplus of Rs 3.04 lakhs is estimated.

The surplus does not seem to be so much a reflection of any reduction in expenditure as that of an increase in the revenue consequent on the financial integration of the State with Centre as well as the increase from the State's own sources. In this connection Mr Bakshi Ghulam Mohammed stated that the Government would receive an amount of Rs 283.43 lakhs more than the ad hoc grant of Rs 250 lakhs which the State was receiving upto 1956-57. The receipts from the State's own sources are also expected to increase from Rs 426.45 lakhs in the current year to Rs 538.47 lakhs. The total increase in estimated revenue receipts consequent on improvement in these two heads is about Rs 355.22 lakhs. This seems to have obviated the necessity for any new taxation and excepting for the exemptions in respect of some existing heads of revenue no new taxes have been proposed.

The important heads of expenditure for the Plan are food production and development of large scale industries. Renovation of the silk weaving factory in Srinagar, and the Government woolen mill, establishment of a ceramics factory in Jammu and veneer plant in Kashmir besides a cement factory and bricks and tiles factory are some of the schemes which have been included in the plan for the development of large scale industries. Implementation of various irrigation schemes and investigation and survey for the development of some multi-purpose projects are also envisaged. The State Government's contribution towards plan expenditure, the

Punjab Budget

first of its kind to be made, is Rs 2 crores.

The capital expenditure not charged to the revenue for the coming financial revenue year is Rs 417.88 lakhs and this includes Rs 69.86 lakhs on account of schemes of State trading. The Debt Head Budget makes provision for financial assistance to petty traders, artisans and craftsmen as also for such purpose as house building and education. The main items of expenditure on beneficiary departments are: Roads and Buildings (Rs 202 lakhs); Irrigation (Rs 160 lakhs); Education (Rs 139 lakhs); Electricity (Rs 91 lakhs); and Medical and Public Health (Rs 66 lakhs).

Cotton Textiles Industry

Speaking at the recent annual general meeting of the Upper India Chamber of Commerce, Kanpur, Mr J. K. Srivastava, president, dealt with the various economic developments in the country during the past year and concluded that despite the difficulties facing the national economy there was no need for anyone to lose faith in the future of the country. Referring to the cotton textile industry he pointed out that quick remedial measures were urgently needed to put the industry on an even keel. He entered a strong plea for a further and substantial reduction in the excise duty on cloth in order to relieve the most acute depression in the history of the textile industry.

The depression has stemmed mainly from the disappointing level of demand. Cloth production in the past six or seven years has substantially increased. From 3660 million yards in 1950 output in the organised sector has gone up by 180 to 2000 million yards. Simultaneously there has been an increase in production in the handloom sector. With exports showing a decline, the internal availability of cloth has gone up by 75 to 80 per cent. The recent changes in the excise duties on medium counts have resulted in the concentration of production of coarse varieties leading to a glut in the market.

On the export front the industry is encountering serious difficulties. Exports in 1957 have been below expectations and it is apprehended that even the reduced target of 800 million yards will become difficult of attainment. Due to acute competition in world markets, Indian mills have already been obliged to sell export goods at an uneconomical price. It would appear that unless Government come to the rescue of the industry our cotton textiles may not be able to maintain their position even in existing overseas markets. Mr Srivastava has suggested a scheme of rebate of excise

duty in the internal market correlated to the additional export efforts of individual mills together with concessional freight rates for mills situated away from port towns and top priority for the movement of goods for export.

The heavy financial burden involved in the lay-off compensation has put the ready remedy of curtailing production according to demand, as is being done in the case of the jute industry, beyond the reach of the cotton textile industry. There remains, therefore, only one other alternative of encouraging offtake both internal and external. While it is true that concerted measures have been initiated to promote exports, it is to be realised that a "buoyant home market is after all a condition precedent to the export drive". Moreover, it is not as though internal consumption of cloth in our country is excessive. Per capita consumption is still small and conditions that will result in encouraging consumption are to be welcomed.

Higher Education

The difficulties facing the country in the sphere of higher education are clearly brought out in the first report of the University Grants Commission. The number of students seeking higher education has enormously increased in recent years but the educational facilities in the country have not recorded a corresponding expansion. The result has been fall in the standards of education. It is estimated that in the past ten years the number of students in the colleges has more than trebled. From 240,000 in 1947, the number has increased to 400,000 in 1951-52 and is currently placed at 750,000. As against this rise in the number of college students, the number of university institutions and colleges has been 532 in 1946-47, 625 in 1951-52 and 746 in 1956.

The remedy suggested by the Commission is control on students' admission in university institutions imparting education in arts, science and commerce. For only then it will be possible to improve standards within the limited resources likely to be available for the advancement of university education. The provision in this regard under the Second Five Year Plan is Rs 27 crores. The Commission have pointed out that any reduction of this amount will hamper the progress of the development programme undertaken in universities. It is evident that they have found it necessary to make this observation because the Government of India have already cut down the sum of Rs 5.24 asked for by the Commission to Rs 4.17 crores.

FACTS BEHIND FIGURES

Astride India's rivers are rising mighty dams to bring power and plenty to the nation.

With the completion of the major Plan projects, 171 million acre feet of India's river water will be harnessed. The new river valley schemes will release 2,000,000 KW power and irrigate 16 million acres. The total expenditure on irrigation, power and flood control during the next five years will be Rs. 913 crores, a 38% increase over the First Plan. These great development schemes constitute one of the most important aspects of the nation's efforts to achieve economic self-sufficiency. Texmaco, pioneer in many fields of engineering, working in technical collaboration with Voest of Linz, Austria, has constructed a wide range of hydraulic dam equipment for Rupar, Hirakud and other projects.

TEXTILE MACHINERY CORPORATION LIMITED

Outlook for Sugar

THE production and despatches of indigenous Sugar have amounted to 11.45 and 5.33 lakh tons, upto February 15, 1958 in the current season, as against 10.02 and 5.48 lakh tons respectively in the corresponding period of last year. Stocks with the factories, as on the 15th February, stood at 10.42 lakh tons as compared to 9.81 lakh tons on the corresponding date of last year.

Output in the new season is expected to be around 21 lakh tons and, with the carry-over stock of 5.43 lakh tons, the total available for consumption will be 26.43 lakh tons. The consumption is estimated at 19.5 lakh tons, leaving a surplus of 6.93 lakh tons. If the present trend in the offtake from factories is any indication, it is feared that there will be a crisis in the industry. While the offtake

is unsatisfactory, the production of sugar, as indicated above, has been quite encouraging. The supply position of cane remaining comfortable, the chances of the industry achieving the target of 21 lakh tons is quite on the cards.

But, what is distressing is, that the outlook for export has become bleak with the growing competition from abroad and the industry having failed to export any substantial quantity during this season so far, when generally exports are possible. World sugar prices have declined from £70 per ton in April last to £31½ and exports are possible only if a loss of about £25 per ton can be incurred. Since there is no likelihood of a reduction in the prices of cane in the near future, the industry has suggested that it should be allowed to raise the internal price of sugar

in the interests of promoting exports.

It is understood that the Government of India are studying the possibilities of compelling the industry to export sugar through the State Trading Corporation. But the industry is opposed to the policy of Government bodies undertaking the export of sugar. Instead, it has suggested that export quotas should be distributed among the five State zones. The crux of the problem is how to avoid losses on exports; but no proper solution has yet been found.

Meanwhile, quiet conditions are witnessed in the sugar markets at various centres. The last quota, released by the Government for free sale, is reported to have been exhausted by most of the mills. Following ex-mill delivery rates (per maund) are quoted in the

NORTH INDIAN MARKETS

Hapur market: Mansoorpur (B-29) Rs 38.00; (C-29) Rs 26.87; Daurala (B-29) Rs 37.75; Mowana (B-29) Rs 37.50; Amroha (D-29) Rs 35 and Bijore (E-29) Rs 34.75.

Gur

In the Hapur market, ready gur prices have advanced following a fall in arrivals due to cloudy weather. Sellers of Fagun delivery are reported to be building up stocks as purchasers are anxious to take the delivery. Stocks have swelled to 1.25 lakh maunds, the corresponding figure for last year being 91,000 maunds. Total arrivals, from the beginning of the season, are estimated at 3.5 lakh maunds. Gur Pansera quality is quoted at Rs 13.62 to Rs 14.00 per maund.

In the Muzaffarnagar market, prices have also advanced, Chakku Minja quoting Rs 16 to Rs 16.12 and Khurpa Rusket Rs 9.50 to Rs 10.75 per maund.

Foodgrains

Steadier conditions are noticed in the Hapur Foodgrains market, thanks to reports of dwindling stocks. Wheat is quoted at Rs 15.87 per maund for the average quality and Rs 17.25 for the farm variety. Rice has recorded further slight gains on reports of overall shortage of the commodity in the country, Basmati quoting Rs 28 to Rs 31 per maund, according to quality. Gram prices have also improved modestly on the Punjab advices and reports of shortage of stocks. The markets for Barley and Bajra rule rather quiet, while Maize and Bajra prices have improved slightly.

The Bombay grains market has presented a steadier appearance. Prices of seasonal Rice have advanced by Rs 5 to Rs 7 per candy, while Burma rice is indicated at Rs 215 to Rs 220 per candy. The improvement in this commodity is attributed to the reduced arrivals from the upcountry centres. With the closer watch over smuggling of rice from Andhra and Madhya Pradesh, the inflow into the City has declined significantly. In the Coarse grains section, Bajra has improved by about Rs 5 per candy.

Shellac

The Shellac market in Calcutta continues to rule quiet with the rate for the Pure TN quality hovering idly around Rs 76 per maund despite the fact that shipment have shown a substantial rise to 38,758 packages in February from only 28,486 packages in January. This is mainly due to the absence of any fresh enquiry from overseas buyers.

Trading in the London market is also dull as buyers are found to be rather cautious. April delivery shellac is quoted at 175sh with sellers at 178sh per cwt.

The Madras Budget

CONVERSION of an original deficit of Rs 135 lakhs which was subsequently reduced to Rs 105 lakhs consequent on the announcement of Central aid to the extent of Rs 30 lakhs, into a surplus of Rs 15 lakhs by means of new taxation measures is what the Finance Minister of Madras, Mr C. Subramaniam has done in the budget for 1958-59 which he presented to the State Legislative Assembly last week. The undertaking to balance the State's Revenue Budget which he gave to the Planning Commission at the discussions with the latter on the size of the State Plan for the third year would seem to have forced the decision in favour of the new taxes announced in the Budget. The revenue receipts for the budget year is estimated at Rs 62.40 lakhs and expenditure charged to revenue at Rs 63.75 lakhs.

The new taxes that have been announced are (1) enhancement of the levy of sales tax on motor spirit other than on petrol, i.e. on diesel oil from 10 nP per gallon to 35 nP per gallon, (2) enhancement of the rate of entertainment tax from 20 per cent on the first slab to 25 per cent, from 25 per cent on the second slab to 33 1/3 per cent and from 33 1/3 per cent on the third slab to 40 per cent, (3) levy of agricultural income-tax on all landholdings with an exemption limit of Rs 3000 and at rates and slabs now in force on plantation holdings. These three levies are estimated to bring in a total revenue of Rs 170 lakhs in a full year. But in view of the delays in bringing the necessary legislation, account is taken for only Rs 120 lakhs for the coming financial year.

The justification for the increase of sales-tax on diesel oil is the preferential treatment which it has been enjoying as compared with petrol which is considered unwarranted in view of the capacity of diesel oil to give the same mileage per gallon as petrol while the price per gallon for diesel oil is lower than that of petrol by one rupee. The enhancement of the entertainment tax will affect only cinemas and horse-racing, since the abolition of the tax on other entertainments have been announced in the budget. While no doubt this would give encouragement to other fine arts like dance, drama and music, the measure carries a strong presumption that the entertainment value of cinemas is of a lower grade than that of others. The local bodies are the main beneficiaries of this measure since 90 per cent of the collection from this source is earmarked for distribution among them. The justification for the tax on agricultural holdings is its supposed mildness compared to the confiscation of their excess holdings which is postponed to a more convenient date in future.

Relief is provided to the non-gazetted officers by extending the full fee concession to their children which has so far been limited to III form, to the complete High School course. Considering that these classes form one of the most aggrieved sections of the State's population, this generous gesture should be warmly appreciated by them. Agricultural demonstrators are the only other section to whom relief has been extended by the upward revision of their scale of pay from Rs 100.5-140-10-220 to Rs 135.5-200-10-270. For the common man the benefits are only those that might accrue from the various schemes for increasing agricultural production for which provision has been made in the budget.

Apart from the new taxes that have been proposed Mr Subramaniam has also referred to some improvement in the financial position of the State and points to the larger anticipated receipts under land revenue from the assessment of Inam lands and the betterment levy as also to increased yield from taxes on Motor Vehicles that would result from the increasing number of vehicles on road. The recommendations of the Finance Commission has benefited the State to a greater extent, the increase in revenue on this account being Rs 202 lakhs for the coming year. The Finance Commission award has also turned an anticipated deficit in the original budget estimates for the current year into a surplus of Rs 4.83 lakhs. But part of the benefits that has thus accrued to the State has been lost consequent on the withdrawal of the Central assistance in connection with the enhancement of the emoluments of Government servants, at the recommendation of the Finance Commission.

The surplus on the revenue account is only slightly affected by the financial transactions of the Government outside the revenue account. The deficit on these transactions being only Rs 0.35 lakhs the net surplus in the budget is of the order of Rs 14.39 lakhs. As a result there is a proportionate increase in the closing cash balance for the budget year which is estimated at Rs 64.89 lakhs. The ways and means position is also expected to improve with the realisation of the target for small savings at Rs 10 crores which would entitle the government to a share of Rs 6½ crores.

Notwithstanding the improved financial position it is still not recognised as sufficiently adequate to the needs of developing the industrial resources of the State. Mr Subramaniam has in this connection referred to the need for incurring more expenditure in electricity development, but has not provided increased allocations, the provision being about Rs 11.94 crores. This figure is not only lower than the allocation for the current year which is Rs 13.02 crores, but would also seem to be inadequate to meet the growing needs of industries for power. The present demand for power in the State is far in excess of even the increased supply that might be available with the commissioning of new plant in Madras and the Periyar hydro electric project. And the new schemes for the starting of an aluminium plant and an iron melting plant in and around Salem would only add to the pressure of demand.

However, the Government would seem to have concentrated on schemes for increasing agricultural production, to make the State self-sufficient. This would require an addition of at least 2 lakh tons of foodgrains to the existing production. Though the encouraging trend in the per acre yield in the last few years which is considered to be the best for any State in the country, would lend feasibility to the target of 3 lakh tons which is fixed for the coming year, shortages of fertilisers and improved seeds to which Mr Subramaniam has referred in the course of his budget speech and the new levy on land holding would present real difficulties to the Government in attaining the target.

The one field in which considerable headway has been made has been in regard to major irrigation schemes most of which according to Mr Subramaniam are at the final stage of completion. Outlay for this has therefore been reduced by Rs 1.17 lakhs for the budget year. With the reduced scope for expenditure on major irrigation schemes and the advance procurement of the essential materials for the much restricted development of power the foreign exchange content of the Plan for the third year is of a comparatively lower order than for most of the other States.

Under such circumstances the implementation of the various schemes during the third year of the Plan should present less difficulties. The Plan outlay for the third year for the Madras State is Rs 30.47 crores which is lower than the revised estimates for the second year by about Rs 1.84 crores. Since Central assistance to the extent of Rs 18 crores has been promised, the State Government's efforts at securing the balance of Rs 12.47 crores would necessarily determine the pace of progress of the Plan during the third year. The Government have plans to raise a public loan in the open market and the limit has been

tentatively fixed at Rs 587.19 crores. The ways and means position is further sought to be improved by intensifying the small savings drive so as to realise a net yield to the State of Rs 6½ crores.

While these are matters which are by their very nature rather unpredictable, there would seem to be no excuse for the short falls in implementation of certain schemes, which even on Mr Subramaniam's own showing are appreciable. Such short falls are particularly glaring in agriculture, soil conservation, medical housing, village industries and handicrafts. Mr Subramaniam attributes this to delay in sanctioning schemes, and in acquisition of land and scarcity of building materials such as cement and steel. But beyond expressing pious hopes about better performance for the coming year he has not outlined any tangible measure for eliminating such delay.

In Education **PHILIPS** help to teach the modern way

INDIA'S teachers today need the most modern methods of mass education to cope with the fast-growing number of students in schools and colleges. Philips are proud to be helping our teachers by supplying the equipment they require — backed by many years of Philips research and experience. Whether in a city classroom or out under a village tree... whether it's a community listening radio set to bring entertainment and knowledge to the people, or audio-visual equipment to demonstrate the modern way of life, Philips help to teach our millions everything from basic hygiene to the ways of our democracy.

PHILIPS INDIA LIMITED

Contributing today to India's future

MADRAS REVIEW

With the increased revenue that has accrued to the State consequent on the recommendations of the Finance Commission what was until recently feared to be a very critical financial situation for Andhra Pradesh has turned out to be short lived as is revealed by the surplus budget presented to the State Legislative Assembly by Mr B. Gopala Reddi, the finance Minister, for the coming financial year. The budget for 1958-59 estimates the revenue at Rs 63.66 crores while expenditure is estimated at Rs 62.87 crores, the surplus being Rs 79 lakhs. Even the anticipated deficit in the 1957-58 budget to the tune of Rs 5.48 crores has been on the basis of revised estimates which take into account the increased allocations from the divisible pool of income taxes and Union Excise duties has been turned into a surplus of Rs 3.12 crores. The net addition to the revenue of the State under the Finance Commission award is estimated at Rs 6.27 crores for the current year and at Rs 7.05 crores for the coming financial year.

The revenue estimates for the budget year show an increase of Rs 2.58 crores compared with that for the current year while revenue expenditure shows a greater increase of Rs 4.91 crores. The increase in revenue expenditure is more marked in the non-Plan sector being to the tune of Rs 3.52 crores while the increase in the Plan sector is only Rs 1.32 crores. The increased liability of the State Government consequent on the increase in the pay scales of primary and secondary school teachers and that of certain classes of State Government employees together with the need to provide relief to the famine affected areas in the State would seem to explain for the increase in the expenditure in the non-Plan sector.

The capital expenditure in the budget for 1958-59 is estimated at Rs 21.29 crores against the revised figures for the current year at Rs 24.75 crores. Multi-purpose river valley projects, civil works and electricity schemes claiming Rs 715.00 lakhs, 365.71 lakhs and 356.70 lakhs respectively are the major heads of expenditure in this field. The Nagarjunasagar Irrigation Project alone accounts for a provision of Rs 700.00 lakhs.

Notwithstanding the difference made to the finances of the State by the Finance Commission award, the ways and means position is far from sound. The ways and means position which revealed an excess liability of the State to the Reserve Bank of India to the tune of Rs 3.71 crores at the beginning of the current year has been aggravated by the net deficit of Rs 7.62 crores in the budget for the current year. The closing balance for the current year after making allowance for lapse in the

Andhra Budget

Plan outlay to the tune of Rs 2.11 crores is therefore expected to amount to minus Rs 9.06 crores. But the 1958-59 financial year is expected to close with a Cash Balance of Rs 11.75 crores.

The budget provides for an outlay of Rs 30.02 crores for the third year of the Second Plan, the Central Government being committed to provide the State Government finances to the extent of Rs 18 crores. Mr Gopala Reddi referred to the possibility of the State Government raising a public loan, to meet part of the State's share in the outlay on the Plan for the third year. The public debt of the State Government is estimated to increase from Rs 144.46 crores at the end of March 1958 to Rs 162.07 crores at the end of March 1959.

The decision to raise public loans seems to have been the result of the poor performance of the small savings campaigns launched by the State in the last year. Against a target of Rs 9.25 crores for small savings which if it had been realised would have entitled the State Government to a share of Rs 6 crores, the actual share of the State in view of the meagre collections has been reduced to Rs 4 crores.

For the budget year small savings together with the open market loans is expected to realise a sum of Rs 6 crores. Mr Gopala Reddi also referred to the various administrative steps taken by the Government to promote the expansion and intensification of the small savings movement within the State.

The reorganisation of the Secretariat on the lines recommended by the Economy Committee set up by the Government, according to Mr Gopala Reddi would result in a saving to the tune of Rs 10 lakhs per annum. The arrears of outstanding agricultural and revenue taxes, land revenue and excise, in the estimate of the Mr Gopala Reddi, stand at Rs 19 crores. But the difficulties experienced by the cultivators consequent on failure of crops in large areas of the State would seem to have precluded the possibility of realising this in full. And in the budget provision under this has been made only for Rs 4.55 crores.

While Mr Gopala Reddi seems to be satisfied with the present position of the State's finances, the future does not appear to be free from difficulties. Apart from the need to rectify the ways and means position the demands in connection with the implementation of the second plan for the last two years are expected to be of a higher order than for the early period, if the ceiling of Rs 175 crores for the entire period is to be attained.

Land Reforms

The sway of ideological considerations in the economic policy of

Government of India is nowhere so strongly in evidence as in the field of land reforms and there is nothing at present more injurious to the needs of increased food and agricultural production than this preoccupation of the various State Governments with the redistribution of land among landless tenants in small bits. This could only be the result of a one-sided approach to the problem which precluded considerations of the impact on total production which such reforms would have.

The effects such policy would have on the food and agricultural production, were analysed by Mr K. Santanam former Chairman of the Finance Commission, in the course of the second of the four series of lectures on "Dilemmas of Indian Economy". The food problem according to Mr Santanam is essentially one of assuring adequate supplies of rice and wheat to the urban population in the country which is estimated at about 60 million, the rural population being in a position to meet all its requirements of food grains. These requirements of the urban sector which is estimated at about 20 million tons or half the production of rice and wheat, could only be met from the surplus production from medium and large farms, production in the small farms being only adequate to the needs of the cultivators. Since the many land reforms which the various State Governments have in view would entail the cutting up of these big farms into smaller pieces, and their distribution among sections with little resources to effect improvements in cultivation, the total production of food grains would inevitably be reduced.

In this connection Mr Santanam cited as an instance the recent legislation passed by the Madras Government to increase the share of the tenant from 40 per cent to 60 per cent of the gross produce of the land. This according to Mr Santanam would only result in reducing the sources of capital that might otherwise flow to agriculture since in view of the extreme poverty of the tenants they could not be expected to set apart any amount even from their increased share of the total produce. Investments in improvements of land have also been prevented by the uncertainty generated in the minds of the big land owners by the new and projected land reforms. Therefore Mr Santanam feels that there is at least a case for a speedy completion of the land reforms since this would result in removing the uncertainty for those left in the possession of land.

Mr Santanam is in favour of fixing the ceiling on land for an individual at a level of 16 acres. Though this would aggravate the problem of rehabilitating the landless, the solution to this problem according to him must be

found not in the redistribution of land which would have adverse effects on total production, but in their absorption in industrial development.

Rice Zone

Proposals for the constitution of a separate rice zone for Andhra Pradesh made by some of the members in the course of the debate in the legislative Assembly have been strongly opposed by Mr N. Sanjiva Reddi, Chief Minister of the State. The argument for the creation of a separate rice zone, has as its basis, what its sponsors consider to be a higher level of price for rice in the State which they attribute to the arrangement of the South Food Zone under which movement of foodgrains is free within the zone. A separate rice zone in their view would exert a moderating influence on the price since movement under such a setup would be less free than what it is now. The Chief Minister's opposition springs from his desire to protect the interests of the cultivators which he fears would be adversely affected by a decline in prices.

The controversy thus reflects a difference in view between the Chief Minister and the sponsors of the separate zone scheme in regard to the propriety of the present level of prices for rice in the State. The latter would seem to dispute what Mr Sanjiva Reddi holds as the reasonableness of the present level and they are able to point to a lower level of prices in the neighbouring State of Madras which is not self-sufficient in the production of foodgrains. This Mr Sanjiva Reddi attributes to the Madras Government's scheme of subsidised supply of foodgrains.

To decide between these two different points of view would be rather difficult. The South Food Zone was constituted with the object of making the region self-sufficient, by making available the surplus production of rice in Andhra Pradesh to the other States which were always dependent on imports to fill the gaps in their requirements of foodgrains, the deficit being greater in Kerala than in the other two States of Madras and Mysore. There have been reports of the Kerala Government trying to divert supplies from Andhra Pradesh by offering higher prices. How far this has reacted on the internal price for rice in Andhra is not known. Though the complaints about high price of rice in the State would not warrant the scrapping of the present arrangement in regard to the movement of foodgrains within the South Food Zone, they would at least point to the need for keeping a vigilant eye on price with a view to keeping it at a level which while assuring a fair return to the cultivator would at the same time protect the interests of the consumer.

SOUTH INDIAN NOTES

SOUTH INDIAN MARKETS

ACCORDING to the official figures released from Cochin, shipments of black Pepper from India, in the first 11 months of last year, have totalled as much as 12,903 tons as compared to only 10,750 tons in the corresponding period of the previous year. The increase is regarded as very significant, because shipments from Singapore have shown a marked fall during the period under review. During the period January to November 1957, 15,000 tons of black pepper and 7,900 tons of white pepper were exported from Singapore against 16,850 tons and 11,100 tons respectively in the corresponding period of 1956.

Russia has made a notable contribution towards raising the shipments of Indian pepper with an offtake of 3,300 tons during the period under review as compared to only 2,000 tons in the corresponding period of 1956. Significant increase in exports of Indian pepper, during the period under review, were noted in respect of Poland (330 tons); West Germany (320 tons); France (230 tons); Rumania (200 tons) and Egypt and Suez (200 tons). A disappointing feature, however, was that shipments to the USA—the main buyer of pepper in the world—were lower at 4,800 tons as compared to 5,510 tons in January-November 1956.

JARDINE HENDERSON, LIMITED

NOTICE is hereby given that an Interim Dividend at the rate of 2½ per cent less Indian Income-tax thereon, will be paid to the Registered holders as on the 7th April, 1958, of the 50,000 Cumulative Preference Shares of Rs. 100 each in the Company in respect of the year ending 31st March, 1958.

The Share Transfer Books of the Preference Shares will be closed from 31st March to 7th April, 1958, both days inclusive.

By Order of the Board,
D. FORDWOOD,
Secretary.

4, Clive Row,
Calcutta 1, 27th February, 1958.

THE ALKALI & CHEMICAL CORPORATION OF INDIA LTD.

NOTICE

The Preference Share Registers of the Company will be closed from the 2nd April 1958 to the 10th April 1958 both days inclusive.

By Order of the Board,
Imperial Chemical Industries
(India) Private Ltd.,
Secretaries.
Calcutta,
19th March, 1958.

Rise in Pepper Exports

Meanwhile, prices in pepper markets have continued to rule steady. In the Alleppey market, the rate is quoted around Rs 550 per candy. The Singapore market is barely steady at \$0.64. Sellers there are reserved, since holders are watching keenly the day-to-day political developments in Sumatra. General feelings are, that the present firm attitude of the Central Government at Djakarta in dealing with the rebel governments will most likely restore law and order soon in the disturbed areas, provided there is no outside interference.

However, the future of the market is uncertain. Prices are likely to move narrowly both sides, pending the clear picture of the Indonesian situation. Everything will depend upon the attitude of the USA buyers as Malabar is usually lacking strength of its own.

Brazil appears to be a new producer of pepper, according to two million pounds last year. Provided the market holds up to make production profitable, Brazil will probably find the US market more accessible than other producers in the East. Domestic consumption in Brazil is of the order of about two million pounds.

In New York, the pepper market is virtually at a standstill as buyers are disposed to hold off on the belief that further concessions may be obtained because of the continued lack of any aggressive demand and the evidence that the market is unable to hold its recent rise. Prices are unchanged from previous levels. Original market advices are quiet and unchanged and this is an additional cautionary influence. Black Sarawak is quoted at 16½d per pound in the London market.

Rubber

According to the Rubber Board, during 1956, 15,969 acres were newly brought under Rubber. Of this, 6,021 acres were planted with clonal rubber; 1,639 acres under budded rubber and 8,279 acres under ordinary seedlings.

The expansion of planting by estates, holding over 50 acres, accounted for only a third of the total new planting, the rest being carried out by small holdings. The small holdings, however, went in for large-scale planting of unselected ordinary rubber, which accounts for over 60 per cent of the total planting.

The year 1955 was another year of extensive new planting. There is a possibility that the large acreage sown in these two years may quite considerably be influenced by fresh registration which the Board undertook.

Cardamom

In the Cochin market, offerings of Cardamom totalled 15,614 pounds

which met with a very poor demand. Prices were irregular and appreciably lower. Withdrawals were, therefore, heavy. Best descriptions were virtually neglected, while the lesser sorts found some buyers at a drop of 25 to 75 nP per pound. Sale No. 10 will be held on the 10th March.

Groundnut

Conditions in the Madras Groundnut market remained generally steady with the rates moving between Rs 143 and Rs 145 per candy. Local small crushers were the main supporters of the market, while big crushers were not operating for any sizable quantity.

In the Groundnut Oil section, the rate for the ready position is quoted at Rs 293 to Rs 298 per candy.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were rather restricted last week and the small arrivals were readily cleared by shippers at firm prices. There was no change in the Buff hides section. Arrivals of Calf hides were poor and these were taken up by the shippers at firm levels.

On the export front, trading did not show much change. With

the limited supplies at the disposal of the exporters at Madras, sellers in London were finding it difficult to work on buyers' ideas. In the Calf section, business was difficult, not only on account of smaller offerings but also lower price ideas of buyers. Small sales were, however, reported in inferior selections of Buff Calf and Cow Calf at steady prices.

In the Tanned Skins section, arrivals were on the same level as in the previous week. It was reported that there was a good clearance of sheep skins at prices 12 to 13 nP per pound lower as compared to the previous week. According to market anticipations, arrivals of adulterated sheep skins may improve in the coming weeks.

In the export section, a few sales were reported at workable prices. There was a steady enquiry for light weight fifties and inferior fifties and business was reported to be improving, depending on the quality and marks. Fair enquiry was reported in primes and semi-primes at 6d to 1sh per pound down as compared to pre-auction level.

Reports from London indicate that, for the coming auction, about 4 lakhs Goat skins and 8 to 10 lakhs Sheep skins may be offered. Exact figures are not yet available.

BRAITHWAITE & CO (INDIA) LIMITED

Notice is hereby given that the twenty-eighth Ordinary General Meeting of Braithwaite & Co (India) Limited will be held at the Registered Office, 4, Clive Row, Calcutta-1, on Saturday, the twenty-ninth day of March, 1958 at 10.00 a.m. to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1957.
2. To declare a Dividend.
3. To elect Directors.
4. To re-appoint Auditors and fix their remuneration.

The Transfer Books of the Company will be closed from the 17th March, 1958 to the 29th March, 1958, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and the proxy need not be a member. Payment of Dividend as may be declared will be made to those members whose names are on the Company's Register on the 29th March, 1958.

By Order of the Board,
Y. S. TAYAL,
Secretary.

CAREW & COMPANY, LIMITED

NOTICE is hereby given that the Ordinary General Meeting of the Shareholders will be held at the Registered Office of the Company at 4, Fairlie Place, Calcutta, on Monday, the 31st day of March, 1958, at 10-30 a.m. for the purpose of:—

1. Receiving the Directors' Report and passing the Accounts for the year ended 30th June, 1957.
2. Electing Auditors for the current year and fixing their remuneration.
3. Electing Directors.
4. Transacting such other business as may be brought before the Meeting.

The Transfer Books of the Company will be closed from the 21st March, 1958 to the 31st March, 1958, both days inclusive.

GLADSTONE LYALL & CO., LTD.,
S. DATTA,
Secretary,
Managing Agents.

4, Fairlie Place,
Calcutta.
4th March, 1958.

Note: A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of him and a proxy need not be a member of the Company.

THE BANK OF INDIA LIMITED

(ESTABLISHED 7th SEPTEMBER, 1906)

ANNUAL REPORT

To be submitted to the Shareholders at the Fifty-Second Annual General Meeting to be held at the Registered Office of the Company at Mahatma Gandhi Road, Fort, Bombay, on Wednesday, the 12th day of March, 1958, at 4 O'clock in the afternoon.

Directors' Report for the year ended 31st December, 1957

The Directors submit to the Shareholders the BALANCE-SHEET AND PROFIT AND LOSS ACCOUNT for the year ended 31st December, 1957. The Auditors' Report is also annexed.

The transactions for the past year, including the balance brought forward from the previous year, Rs. 15,44,924.45, have resulted in a profit of ... Rs. 1,09,02,381 34

An interim dividend was paid for the half-year ended 30th June, 1957, at the rate of 6 per cent free of Income-tax on the Paid-up Capital of Rs. 3,00,00,000, which absorbed ... Rs. 18,00,000 00
Provision made for Income-tax and Super-tax for the year ... Rs. 30,00,000 00
Bonus to Staff ... Rs. 18,00,000 00

The Directors now propose:—

To pay a final dividend for the half-year ended 31st December, 1957, at the rate of 10 per cent free of Income-tax, making 16 per cent for the year, on the Paid-up Capital of Rs. 3,00,00,000, which will absorb ... Rs. 30,00,000 00
To carry forward to the next account ... Rs. 16,02,381 34
Total Rs. ... 1,09,02,381 34

The Bank's business continued to function satisfactorily.

The official Bank Rate was raised from 3½% to 4% on 16th May, 1957. The Rate of 4% continued to the end of the year.

Mr. Dinsha K. Daji, who had been a Director of the Company for nearly 23 years, died on 8th July, 1957. Mr. Daji rendered great service to the Company. His mature counsel was greatly esteemed by the other members of the Board. The Directors deeply regret the loss of a valued colleague.

Under the provisions of Section 256 of the Companies Act, 1956, the following Directors of the Company retire by rotation, but are eligible and offer themselves for re-election:—

Mr. Joseph Kay, K.B.E.,

Mr. Ramnivas Ramnarain,

Mr. Krishnaraj M. D. Thackersey.

The Shareholders are requested to appoint Auditors for the ensuing year and to fix their remuneration.

COWAJEE JEHANGIR,

Chairman.

AMBALAL SARABHAI,

JOSEPH KAY,

RAMNIVAS RAMNARAIN,

BHAGVANDAS C. MEHTA,

K. M. D. THACKERSEY,

A. D. SHROFF,

MADANMOHAN MANGALDAS,

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the foregoing Balance-Sheet of The Bank of India Limited, as at 31st December, 1957, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated unaudited returns from all the Branches in India not visited by us for the purposes of this Report and the audited returns of all Branches outside India audited by other Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of Section 211 and sub-sections (5) of Sections 211 and 227 of the Companies Act, 1956, the Balance-Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956; they are, therefore, drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

- we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- the transactions of the Bank which have come to our notice have been within the powers of the Bank;
- in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;
- the Bank's Balance-Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of accounts and the returns.
- in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and on such basis the said Balance-Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

Statement Pursuant to Section 212 of the Companies Act, 1956

The Profit and Loss Account of The Bank of India Limited for the year ended 31st December, 1957, does not include any profit or loss of its subsidiary. The Bank of India (U. K.) Nominees Limited (a nominee company incorporated and operating in the United Kingdom), as no profit was made no loss was sustained by that subsidiary. All expenses incurred were borne and paid by The Bank of India Limited. The shares of the subsidiary are wholly owned by the Bank.

Having regard to the fact that no Profit and Loss Account of the said subsidiary is prepared in the circumstances aforesaid and that its Balance-Sheet and the Reports of its Board of Directors and Auditors are drawn up in accordance with the law in force in the United Kingdom, an application was made to the Central Government under sub-section (8) of Section 212 of the Companies Act, 1956, and, in exercise of the powers conferred by the said sub-section (8) of Section 212 of the Companies Act, 1956, the Central Government, being satisfied that it is necessary so to do, have directed that, in relation to The Bank of India (U. K.) Nominees Limited, a subsidiary of the Bank, the provisions of Section 212 of the said Act shall apply only to the extent that The Bank of India Limited, shall be required to attach to its Balance-Sheets copies of the Balance-Sheets and of the Reports of the Board of Directors and of the Auditors of the said subsidiary made out in accordance with the provisions of the English Companies Act for the time being in force in the United Kingdom and that The Bank of India Limited, is exempted from attaching to its Balance-Sheets a copy of the Profit and Loss Account of the said subsidiary.

Markets Turn the Corner

Watch-Dog Writes:

STOCK market's appear to have turned the corner on second thoughts about the Budget proposals. The main factor, which has provided a driving force to the market, is the well-liquidated position before and after the budget. Markets may be expected to stabilise in view of the prevailing low levels.

The steadier trend in prices, noticed in the post-Budget session, gathered momentum on the Calcutta Stock Exchange during the short week under review.

Equities on the Bombay Stock Exchange tended to rally on higher Calcutta advices.

On the Madras Stock Exchange, Plantings remained steady, while textiles noted better enquiry. Selected issues in other counters came in for small attention.

Firm conditions prevailed on the Ahmedabad Stock Exchange.

The London Stock Exchange had one of its best weeks, the advance in prices being widespread.

Wall Street closed barely steady.

Calcutta

Calcutta, Friday Evening.

EQUITIES on the local Stock Exchange, which developed a steadier trend in the post-Budget session on Saturday, gathered momentum during the week under review, which was short of two working days due to "Holi" festival. In the absence of any fresh taxation proposals and after a closer study of minor alterations proposed in rates of excise duties, increase in the development rebate allowed to shipping companies and the fixation of two slabs instead of the exist-

ing three for calculation of super-tax on dividends to be declared by Section 22A companies, operators preferred to lend gradual support to the market, resulting in a marked recovery in prices. Although higher levels attracted some profit-taking, a steady firm undertone prevailed till the close.

The fledged market maintained a steady front being geared up to the needs of the borrowing programme of the Central Government, which is placed at Rs 145 crores for the new financial year. Demand for short-dated and some other loans was, therefore, well maintained. State Loans also met with good enquiry following approach of interest-payment dates. Against the week-end closing of Rs 71.05, 3 per cent 1986 Conversion Loan was taken at one time upto Rs 71.50, to recede again towards the close to Rs 71.00.

In sympathy, Bank shares were in demand and prices looked up. Punjab National were taken upto Rs 52.00, while United Commercial were quoted around Rs 59.

Despite the decision recently made by the mills not to sell jute goods below the specified minimum

prices, sentiment in the jute section continued to remain depressed in the absence of any definite improvement in the raw jute market. The only exception to this general trend were Arg-o-India having persistent support upto Rs 130 from Rs 128; New Central upto Rs 13.00 from Rs 12.62 and Union upto Rs 108 from Rs 106. National, after touching a high of Rs 22.50 and a low of Rs 21.00, finished better at Rs 22.60. Nuddea closed a shade quieter at Rs 28.50 against Rs 29.50, while Belvedere and Fort Gloster were nearly maintained at Rs 63.50 and Rs 275 respectively.

Coal shares turned a shade quieter due to revival of nationalisation talk following the recent mine disaster at Chinakuri. However, a few selected scrips firmed up from the recent low levels in sympathy with the general trend of the market. Prominent amongst these were Bengal having improved to Rs 210 from a low of Rs 201; Central India to Rs 6.83 from Rs 6.59 and Burrakur to Rs 22.75 from Rs 22.60. Western Bengal changed hands at Rs 5.12 to Rs 5.22.

Despite the absence of any relief in the excise duty on cloth, Textile

THE BANK OF INDIA (U. K.) NOMINEES LIMITED

Directors' Report for the year ended 31st December, 1957

The Directors submit the Balance-Sheet for the year ended 31st December, 1957. The Auditors' Report is also annexed.

No Profit and Loss Account is submitted as none has been prepared. No profit was made and no loss was sustained. The expenses of the Company have been paid by The Bank of India Limited, of which the Company is a wholly-owned subsidiary.

J. DONALDSON,
S. H. BRADFORD, } Directors.

London, 1st January, 1958.

THE BANK OF INDIA (U. K.) NOMINEES LIMITED
BALANCE-SHEET 31st DECEMBER, 1957

Capital Authorised and Fully Paid-up:	Cash at Bankers	£ 100
100 Ordinary Shares of £1 each		£ 100
		£ 100

Signed on behalf of the Board,
J. DONALDSON,
S. H. BRADFORD, } Directors.

We have obtained all the information and explanations which we have required and which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Company. We have examined the above Balance-Sheet which is in agreement with the books of account. In our opinion such Balance-Sheet gives the information required by the Companies Act, 1948, in the manner so required and is properly drawn up so as to exhibit a true, correct and fair view of the state of the Company's affairs at 31st December, 1957, according to the best of our information and the explanations given to us and as shown by the books of the Company.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

March 8, 1958

scrips behaved better. Textile interests expected an end to the unhealthy competition in some varieties of cloth as a result of the withdrawal of concessions as well as additional duty on power-looms. Kesoram were enquired upto Rs 9.75 from Rs 9.65.

Sugar shares continued to meet with selective support in the absence of any increase in the excise duty as was originally feared. Carrew had buyers at Rs 6.69 to Rs 6.75; Darbhanga at Rs 18.50 to Rs 19.06; Ramnugger at Rs 22.94 to Rs 23.87 and Dyer Meakin at Rs 9.31 to Rs 9.43. SKG was a steady feature at Rs 9.00.

Despite the disappointment over the absence of any relief in the export duty especially on Common Teas, selected Tea shares came in for good attention at improved levels. This was attributed to hopes, entertained by some operators, that the dividends for last year were likely to be maintained by quality producers. Another contributory factor was the belief that the prospects for the coming season would be bright in view of the near balance in the demand and supply position. Most active scrips were Banarhat changing hands at Rs 294 to Rs 297; Brahmapootra at Rs 3.00 to Rs 3.12; Bharkawa at Rs 19.37 to Rs 19.75; Brooke Boid at

Rs 16.25 to Rs 16.31; Bishnauth at Rs 19.12 to Rs 19.62; Gungaram at Rs 10.7 to Rs 11.0; Hasimara at Rs 20.12 to Rs 20.37 and Jayshree to Rs 10.25 to Rs 10.44.

Price movements in the Engineering section were mostly influenced by the speculative activity in Indian Irons. Against the week-end closing of Rs 19.53, Indian Irons opened higher at Rs 19.93 and after advancing further to Rs 20.85 finished the week at Rs 20.80 on profit-taking. In sympathy, TEXMACO were taken upto Rs 17.90 from Rs 17.25 and Braithwaite upto Rs 27.12 from Rs 26.87, to finish at Rs 17.85 and Rs 27.00 respectively. Jessop came in for good demand upto Rs 24.75 from a low of Rs 22.75, while Britannia received support upto Rs 13.50.

The Miscellaneous section provided many firm spots. The absence of any fresh increase in the excise duty on paper, as was originally feared, caused Orient Paper to firm upto Rs 26.60 from Rs 25.00 and Titagur to Rs 34.00 from Rs 33.75. Better advices from the metal market caused a hardening tendency in Indian Copper to Rs 2.91 from Rs 2.83. The announcement of the increase in the development rebate to shipping companies made India Steamship to spurt to Rs 12.25 from Rs 12.00. Indian Cable had buyers

upto Rs 28.50 from Rs 28.31; National Carbon upto Rs 25.25 from Rs 25.12; NICCO upto Rs 24.25 from Rs 24.06 and Rohas upto Rs 16.19 from Rs 15.79, on investment considerations. BIC were better at Rs 3.80 against Rs 3.70, while Hindustan Motor changed hands at Rs 5.97 to Rs 6.06; Philips India at Rs 13.87 to Rs 14.12; Indian Oxygen at Rs 16.37; Dunlop Rubber at Rs 22.06 to Rs 22.25 and Indian Aluminium at Rs 12.75 to Rs 13.00. Alkali Chemical new shares were a steady feature at Rs 12.50 and so also Gillanders at Rs 12.19.

*
Bombay

The easier undertone which prevailed on the stock market during the special Budget session last Friday yielded place to steadier conditions before long and in the short session of the market on Saturday prices had begun to show marked recovery. It would appear the initial setback was largely due to the disappointment caused by the absence of some confidently expected concessions such as the aboition of the regulation pertaining to Compulsory Deposit by companies and a reduction in the excise duty on cotton textiles. Of the two some relief for the

The 7th March, 1958.

Cotton textile industry had been considered as almost a certainty as would be evidenced from the sizable advance in textile shares in pre-budget trading. The only bright feature in the post-Budget ment in Scindia as the budget was especially favourable to shipping companies. Textile shares were naturally quite depressed and steep decline was noticed all along the line in this section.

A closer scrutiny of the budget seemed to have dispelled the initial gloom and when trading commenced on Monday, a distinct

improvement was discernible as the budget was on the whole favourable. The absence of fresh taxation and concessions to shipping industry and Sec. 23A companies were considered significant gains. It was also believed that Government might grant further small concessions in the course of the year.

It would appear that the lead had been given by Indian Irons which was in good request from early in the week from Calcutta interests. With textiles also recovering the rest also rallied and by Wednesday the undertone had become firm. Indications at the close were that conditions had become conducive to further substantial improvement.

STEELS:

In the Steel section Indian Irons which had declined to Rs 19.52 in the post-Budget session closed on Tuesday at Rs 20.32. Tata Iron after having been hammered down to Rs 167.50 closed at Rs 174.50.

TEXTILES:

In the post-Budget session textile shares encountered heavy selling pressure but in later dealings recovered following revival of interest. From Rs 49.70 Bombay

12, Mission Row,
Calcutta-1.
The 7th March, 1958.

Dyeing moved up to Rs 52.50. Century advanced from Rs 373 to be finally placed at Rs 389.25.

MISCELLANEOUS:

In the Miscellaneous section ACC after initial setback recovered to close at Rs 145.75. Scindia was a very prominent spot and closed at Rs 17.08 xd. Tata chemical came in for a lot of attention to be finally quoted at Rs 12.96. Teeco was also in good request around Rs 145.50.

THE CENTRAL BANK OF INDIA, LIMITED

NOTICE

NOTICE is hereby given that the Forty-seventh Annual General Meeting of the Shareholders of The Central Bank of India, Limited, will be held at the Registered Office of the Company, in the Central Bank Building, Mahatma Gandhi Road, Fort, Bombay, on Friday, the 28th day of March, 1958 at 4 P.M. (S.T.) to transact the following business:—

1. To receive and consider and adopt the Report of the Directors and the Audited accounts for the period ended 31st December 1957.
2. To declare a dividend.
3. To appoint a Director in place of Mr. Cooverji H. Bhabha who retires by rotation under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956, and who is eligible and offers himself for re-appointment.
4. To appoint a Director in place of Mr. Dharamsey M. Khatau who retires by rotation under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956, and who is eligible and offers himself for re-appointment.
5. To appoint a Director in place of Mr. Manmohandas M. Amersey who retires by rotation under Article 92 of the Articles of Association read with Section 256 of the Companies Act, 1956, and is eligible for re-appointment and to consider, and if thought fit, to pass the following resolution of which a special notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which is annexed hereto as required by Section 173 of the said Act:—

"RESOLVED that pursuant to the provisions of Section 281 and other applicable provisions (if any) of the Companies Act, 1956, Mr. Manmohandas M. Amersey who has attained the age of 67 years and who retires by rotation under Article 92 of the said Articles of Association read with Section 256 of the Companies Act, 1956, be and

is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him".

6. To appoint Auditors and to fix their remuneration.

By Order of the Board,
N. K. KARANJIA,
General Manager.

Bombay, 3rd March, 1958.

Note:—

A MEMBER ENTITLED TO ATTEND AND VOTE [IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

- (a) The Transfer Books of the Bank will be closed from Friday, the 7th day of March 1958, to Friday, the 28th day of March 1958 (both days inclusive).
- (b) Dividend Warrants for the half-year ended 31st December 1957 will be posted to the Shareholders at their registered address on and after the 31st day of March 1958. Shareholders are requested to intimate the Bank their change of address, if any, immediately.

ANNEXURE TO THE NOTICE.

Explanatory Statement as required by Section 173 of the Companies Act, 1956.

To,
The Shareholders of
The Central Bank of India,
Limited.

Dear Sir/Madam,

In conformity with the Companies Act, 1956, which came into force on 1st April, 1956, the following Explanatory Statement, as required by Section 173 of the aforesaid Act, sets out all material facts relating to item 5 mentioned in the accompanying Notice dated the 3rd March 1958.

2. In respect of item No. 5, it is notified that Mr. Manmohandas M. Amersey who retires by rotation and is eligible for re-appointment, has attained the age of 67 years and hence he cannot be re-appointed a Director of the Company except by a resolution in respect of which special notice has been given in accordance with the requirements of Sections 190 and 281 of the Companies Act, 1956. The Company has received such a special notice from some members notifying their intention to move the resolution as set out in the said Item No. 5. Mr. Amersey has been a Director on the Board of this Company since 1947. As a businessman of wide experience, he has proved himself very useful on the Board and it is in the interest of the Company that the Board should continue to receive the benefit of his services.

By Order of the Board,
N. K. KARANJIA,
General Manager.
Bombay, 3rd March, 1958.

a pilfer-proof package for every product !

Thanks to the R. S. Closure, car owners can now be sure that the oil they buy in MB pilfer-proof oblong cans really is the advertised product they are paying for. Packers of lubricants, insecticides, liquid cleaners, brake and other fluids can now be confident that their factory-sealed products will reach the consumer without adulteration or substitution.

Metal box provide individually designed and superbly finished containers and closures to protect some Rs. 100 crores worth of products every year.

The R. S. Closure provides an efficient and liquid-tight seal. As it is unscrewed, the lower skirt, known as the 'security band' breaks away. It is impossible to open the container without this happening—so that the intact security band is guarantee that the contents are genuine.

HIGHLIGHTS OF THIS ISSUE

".....I think it is perhaps more India's way than that of most other countries, the way of toleration of opinion, and finding a common path."

Read

The words are Mr Nehru's, and he was speaking at the annual session of the Federation of Indian Chambers of Commerce and Industry. There are many who think that Mr Nehru's speech marks the beginning of a bright new era of cooperation between Government and the private sector.

Suiting Action to the Word—Nehru

Investment Gossip:

STOCK Exchanges have brightened up considerably, and, at the end of the week, in official dealings, Indian Irons were momentarily taken past the Rs 21 mark.

Cheer for the markets was drawn from certain reported utterances of Prime Minister Nehru, which seemed to hold out hope of a revision of the export duties on common teas and of the excise duties on some varieties of cotton cloth.

This, taken together with the improved labour situation in Burnpur, was sufficient cause for a healthy revival of confidence.

Moreover, the markets have interpreted Mr Nehru's speech at the FICC as being favourable to the investment climate generally.

It is not that, in the realm of taxation, any concessions or reliefs are expected, beyond those in respect of tea and cotton cloth; indeed, Mr Chinai's tabulation of the taxes he would like to see repealed is in the nature of wishful thinking; and nobody really believed that the Prime Minister would recant the integrated structure of taxes that has been built up.

But, then, for the market, what counts for far more than any specific reliefs is the hawa, or atmosphere. And it is this hawa that has improved immeasurably in the course of the weeks since the Budget, and particularly in recent days.

For, the general feeling is that, firstly, in the important sphere of external resources, all is well. The aid already promised from various countries—particularly mention needs to be made of the USA—and the prospect of further assistance is likely to prove of such proportions as will ensure that the core of the Second Plan will be carried through without difficulty.

What is more, it seems also possible that the availability of foreign assistance will even exceed the requirements postulated by the core, and there seems a reasonable chance of our final achievements approximating more to the original targets envisaged by the Second Plan.

Then, Mr Nehru is thought to have every intention of suiting action to the word, in respect of the encouragement to be given to

the private sector for enabling to see through its developments programmes. His insistence, at the FICC session, on cooperation appears to presage such joint endeavour between Government and the private sector.

Look at it which way you will, and the future for the Stock Exchanges appears to be one of ascending prices.

ER3

Investment Notes:

It is learnt that CEAT Tyres of India Limited—a joint venture of Tatas and the Italian Industrial firm, CEAT—will shortly enter the market to raise the necessary capital. According to present indications, the company will market 40,000 shares of Rs 100 each—Rs 25 being payable on application; Rs 25 on allotment and the balance to be paid in the course of three to six months thereafter.

Polson Limited has decided to issue bonus shares in the ratio of one share for every four shares held. Meanwhile, the dividend on the Ordinary shares is reduced from Rs 12.50 to Rs 10 for 1957.

In Madras, Halleyburia Tea Company has received the Government sanction for the issue for bonus shares in the ratio of 1:5.

Kalasa Tea & Produce Company has received permission from the Government of India for the issue of bonus shares for Rs 60,000.

ER3

Cotton Mills in the South

WITH the depression in the yarn market and the accumulation of heavy stocks of handloom goods, there is great anxiety over the difficulties experienced by many of the cotton mills in the South. With a considerable increase in the spinning capacity, it has not been possible to market remuneratively the higher production, especially as the efforts to step up exports have not been attended with that measure of success expected earlier.

ER3

Madura Mills

In the case of Madura Mills Co. Ltd., the earnings would have been adversely affected to a great extent, especially as there was serious disturbances to working in the latter half of 1957 on account of the implementation of an award by a Special Industrial Tribunal which revised work loads and wages. The disturbances were such that the Tuticorin Mill had to be closed for forty-six days and the mills at Madurai for twenty days. Certain shifts in the Pandyan Mill also, at Madurai, were stopped for periods of five days. It is also stated that, prior and subsequent to these stoppages all the company's mills ran at efficiencies considerably below

INDUSTRIAL EXHIBITIONS LIMITED

9 ARGYLL STREET, LONDON, W.1. ENGLAND

normal. It is only recently that the labour position has returned almost to normal as a result of prolonged negotiations in which the State Government also took part. It is hoped by the Directors that "as efficiency and co-operation of the workers improve, the company will be in a better position to face the future".

The decline in sales to Rs 14.83 crores in 1957 from Rs 15.69 crores in 1956 may be in part due to lower prices fetched. But, production was also appreciably affected. With the result, the margin of profit was considerably reduced. Even so, the results for the last accounting period should be considered satisfactory especially as salaries, wages and bonus were higher by about Rs 13 lakhs at Rs 2.92 crores.

The net profit, before providing for Taxation and Depreciation, was Rs 62,55,445 as against Rs 1,14,49,537 for 1956. The amount set aside to depreciation is slightly higher at Rs 19,66,835 against Rs 18,79,346. But the provision on account of Taxation is relatively very higher as the incidence of dividend taxation has been heavy and, since the presentation of the last account, the Wealth Tax Act 1957 and the Finance Act 1957 have introduced further major imposts. Thus, it is explained that provision for tax on current profits is only Rs 28,18,732, while the additional super-tax on dividend paid in 1957 accounted for Rs 3,32,547 and the wealth Tax Rs 3 lakhs. The under-provision in the accounts for 1956, mainly arising

out of the Finance Act 1957, was Rs 8,26,252. Including the tax deducted at source on income from investments and securities of Rs 1,37,470, the total provision under this head amounts to Rs 42,15,000 as against Rs 51.5 lakhs on the former occasion. These large unexpected allocations have thus left only a disposable profit of Rs 73,610 against Rs 44,20,251 on the former occasion. Even the reduced dividend of 15 per cent against 17½ per cent for 1956 has, therefore, to be paid more or less fully out of the undistributed profit carried over from previous year. Thus, the amount carried forward is considerably lower at Rs 6,92,368 as against Rs 32,44,130.

ER3

Loyal Textile

Because the accounts of Loyal Textile Mills Limited for the year ended July 30, 1957, did not feel the full impact of the decline in prices in 1957, the earnings have not been very much adversely affected. But, the Directors point out that the impact of the higher excise duties and Sales Tax has been heavy and that it has been necessary to reduce the dividend.

Sales were actually higher at Rs 92,42,257 as against Rs 86,62,963 for 1956-57; but the net profit, before providing for Taxation and Depreciation, has declined to Rs 8,57,163 from Rs 10,31,019. The amount set aside towards normal and special Depreciation and Development Reserve is higher at Rs 4,72,710 (Rs

2,29,592). The provision for Taxation is lower at Rs 2,22,500 (Rs 4 lakhs). Even the reduced Ordinary dividend of 5 per cent against 7½ per cent previously can be paid only by utilising the sum of Rs 75,053 brought in from last year, in part. The amount carried forward is very much lower at Rs 3,662. The Directors state that 6,000 spindles out of 12,000 spindles have been installed and commissioned during the year and the balance of 6,000 spindles are expected to be installed during the current year.

£ R S

Enfield India

Enfield India Limited has been progressing fast in the last two years. But, it has been experiencing the difficulties of under-capitalising to a great extent even though the company has completed arrangements for credit facilities with the principals and bankers. Larger sums had to be invested in fixed assets. At the present moment, against a total capital expenditure of Rs 23 lakhs, the paid-up capital is only Rs 10 lakhs. Relatively to the volume of investments, the value of sales is rather high, the total for 1957 being placed at Rs 40 lakhs.

In view of the continuing expansion and the increasing demand for the company's products on account of the total ban on the import of motor cycles, it has been considered advisable to raise additional capital for a large sum. In view of the fact that the company has not paid any dividend so far, and as conditions in the capital market are not quite favourable, a cautious policy has been adopted by the directors.

Permission had been received from the Controller of Capital Issues for the issue of additional capital to the extent of Rs 15 lakhs, consisting of Rs 7 lakhs in Ordinary shares of Rs 10 each and Rs 8 lakhs in Preference shares of Rs 100 each. But, the present issue will be only for Rs 6 lakhs, Rs 2 lakhs in preference shares and Rs 4 lakhs in ordinary shares. The ordinary shareholders are offered the new shares for subscription in the first instance. It is understood that the company has made reasonable profits in the past year and that there is every likelihood of a dividend being declared shortly. The new ordinary shares do not rank for dividend in respect of the profits for 1957.

Carew & Company

Carew & Company Limited has presented disappointing results for the year ended 30th June, 1957. Despite an increase in sales from Rs 2.93 crores to Rs 3.34 crores, the accounts reveal a loss after providing for Depreciation, of Rs 19,928 as against a net profit of Rs 6.67 lakhs in the previous year. The Depreciation amount is reduced to Rs 3.38 lakhs from Rs 3.52 lakhs and the Taxation provision from Rs 5.89 lakhs to Rs 2.24 lakhs. The Ordinary dividend is passed over again. Even the dividend, recommended on the Preference shares in 1956, has been passed over. The debt balance carried forward to next accounts is as much as Rs 2.23 lakhs.

According to the directors' report, distillery operations in India have produced good results due to import restrictions on foreign liquor and these will be maintained during the current year. The working, both at the Rosa and Darana sugar factories have been up-to-date satisfactory. The quality of the cane and factory efficiency resulting in fair recoveries.

BANK DIVIDENDS

MERCANTILE BANK

The Mercantile Bank Limited, Calcutta, has received the following telegram from their London Office:—

"Final dividend recommended 6½ per cent, less income-tax, on increased capital".

★

CHARTERED BANK

The Chartered Bank, Calcutta, has received the following cable information from their London Office:—

"At the Annual General Meeting of Stockholders 2nd April Directors will recommend final dividend 7½ per cent actual subject Income Tax making 15 per cent for year 1957. In the consolidated accounts of The Chartered Bank and its subsidiaries the following appropriations have been made:—

£ 125,000—Pension Fund
£ 20,000—Widows and Orphans Fund
£ 250,000—Written off Bank Premises
£ 220,000—Contingencies leaving £ 438,458—to be carried forward.
Net profit £ 1,070,890—compared with £ 804,641—in 1956."

Indian Finance

Established 1928

March 15, 1958

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

MR NERU was in rare form when he addressed the annual session of the Federation of Indian Chambers of Commerce and Industry. His achievement is that, while in no way resiling from the integrated tax structure which has been created, he has succeeded in eliciting the impression that Government will, within the confines of that structure, be amenable to adjustments here and there. To say that Mr Nehru's assurances are a far cry from the "demands" made by FICC President, Mr Chinai, does not in any way detract from the merit of either's utterances. For, each had a different function to perform, with Mr Chinai's perhaps the more difficult chore. By virtue of the fact that he is a member of the Congress party, Mr Chinai might, after due heart-searching, have decided that he was best fitted to present the extreme point of view in the matter of taxation policy. But, certainly, he would never have expected that the concessions he asked for would readily be acceded to. And, for Mr Nehru's part, he had patiently to listen to the list of "grievances", before reiterating his determination to make no alteration in the tax structure as such.

The gain, then, is in the assurances that Mr Nehru has been able, both implicitly and explicitly, to impart. It must certainly have been flattering for the Federation to be addressed as "a very important section of opinion" to which it would be desirable for any "Government to pay the greatest attention". Then, Mr Nehru set about lulling the Federation with a feeling of confidence. Government's is not a doctrinaire approach, nor one which considers the Federation to be "in some way the opposite party". Stress was laid on India's particular attribute of the way of toleration of opinion and finding a common path; and what counted, even if differences existed, was "the mental approach towards cooperation", because it is that approach "that really governs the atmosphere in a country". While acknowledging the generous foreign assistance that India has received, Mr Nehru pointedly mentioned that foreign aid is a "catalyst", and that, in the ultimate analysis, what matters is "the stature of men and women in the country, the temper, the capacity for hard work, the ability, the psychology behind them". In other words, for all the foreign aid which we may secure, Indian industrialisation and prosperity are dependent upon our own effort to better our conditions. As for taxation, Mr Nehru stated that the broad approach is inevitable, but it should be examined carefully to see whether "it can be improved, if it can be tempered here and there".

This is neither less nor more than one had a right to expect from the Prime Minister. We may now see what Mr Chinai had to say on the occasion.

An affirmation of support to the basic objectives of the Government's economic policy is the most striking feature of Mr Babubhai M. Chinai's address to this year's Annual Conference of the Federation of Indian Chambers of Commerce and Industry. These objectives are comprehended in the term "Socialist Pattern." Government's policy, which commands the support of the vast majority of the electorate not only of those

who had voted the Congress ticket, but even those who opposed it—is directed, as Mr Chinai has pointed out, to the creation of "a new social order which will assure to the people a better standard of living, increased employment opportunities, a larger national income and a better distribution of that income". The business community, Mr Chinai said, "is one with the objectives".

One of the most significant features of the last general election is the almost total elimination of the parties of the Right. Only those parties whose programmes included a broad socialist content could approach the electorate with any hope of success. While the elections have shown that the country as a whole is solidly behind the economic policy of the Government in spite of the burdens that have been imposed on the common people, natural and legitimate criticism of Government's particular policies by the leaders of industry, or rather the manner in which it was voiced, raised doubts whether the country could depend upon the business community to cooperate in the great tasks of economic development. Nothing could be more unfortunate, for, under a mixed economy, the best results could be achieved only if there is fullest understanding and cooperation between the private and public sectors. And it is always preferable that coordination of economic activities should be achieved by directions rather than by directives. The President of the Federation, in emphasising the desire of the people to play a positive role in the affairs of the nation, has given an assurance of positive cooperation in the tasks of development. He has also taken particular care to state most unequivocally that no one in the Federation is anxious to make capital out of the troubles of the Life Insurance Corporation.

In endorsing the objectives of the national economic policy for the achievement of a socialist pattern, Mr Chinai has only reiterated what his senior colleagues have stated on numerous occasions. Mr G. D. Birla's address on the occasion of the opening of the Marwari Relief Society's hospital was a call for unreserved acceptance by the Indian business community of its social obligations. A few days earlier, in Bombay, Mr J. R. D. Tata, while giving friendly advice to Government to resist the "fatal fascination for steel", also left no room for misunderstanding about the private sector's attitude to the tasks of planning. No one in the private sector, he said, wanted or advocated unrestricted free enterprise. There was unanimity, he added, among businessmen and industrialists on the one hand and the Government on the other in regard to the objectives of creating a just democratic society in which all would have equal opportunities, inequalities would be reduced to the minimum and the aged, distressed and underprivileged would be cared for. Formal endorsement of the objectives by the President of the FICC, on behalf of the leading organisations of Indian Commerce and Industry, endows the acceptance with added force and authority and should leave no room for entertaining doubts about the aims of the business community.

Acceptance of the objectives of the socialist pattern also strengthens the claim of the business community to be heard with respect

and attention when they point to the risks inherent in a rigid approach to the problem of industrial growth, and suggest modifications in regard to details which will help to reach the objective at less cost. While the principle of mixed economy holds the field, there is always room for debate regarding the proportions of the mixture. The utility of nationalisation as an instrument for the achievement of socialism is being increasingly questioned as a result of actual experience of the working of nationalised institutions. Sweden, for instance, has shown that all the objectives which socialists of an earlier generation had in view, when they plumped for nationalisation, could be achieved without disturbing the pattern of ownership and the responsibility for management of large industrial undertakings.

That production should have priority in any purposive programme for economic betterment is now conceded on all hands. How far it is feasible and desirable to divert resources from the field of private enterprise to the region of the public sector should be decided on the basis of facts gathered in our country and others, and not on the basis of ideological considerations. The only relevant criterion should be the resulting addition to the total output. And when policies pursued in the fiscal sphere tend to inhibit production and investment in productive enterprises, it is surely not unreasonable to demand that the policies be revised in time.

Apart from the timely affirmation of faith in objectives, the FICC President's address is remarkable for its objective survey of the economic situation in the country and the constructive suggestions advanced in order to relieve the strains that are being increasingly felt at strategic points. While indicating the difficulties that the country had to face during the last year, Mr Chinai has also viewed them in the perspective of economic development. In spite of the inter-related problems of food shortages, rising prices, shortage of foreign exchange, and growing pressure of taxation on internal resources, industry rendered a good account of itself during last year, maintaining and bettering its record of previous years. More significant than the increase in production is the diversification of the range of production. An impressive range of new articles, as Mr Chinai pointed out, were made for the first time in 1957. While the development of new productive facilities has been to some extent responsible for the foreign exchange crisis which threatened the country this time last year, it also holds the promise of increased earnings as well as savings of foreign exchange in the coming years. The Industrial Delegation sponsored by the Federation, which visited Europe and United States last year, has also contributed greatly to the resolution of the crisis by creating favourable climate for the flow of foreign assistance. And within the country, industry, under the lead of the Federation, has made a magnificent effort to hold the price line, despite the upward pressures on costs brought about by a combination of factors, including Government's tax policy. In this connection, Mr Chinai has also drawn attention to the cramping effects of prolongation of import controls beyond their period of utility.

11.7.58

West Bengal's Cabinet Loses a Minister

West Bengal has taken Judicial Minister Siddhartha Sankar Ray's decision to resign with almost universal regret. Almost, because a few Congressmen on the Right may have reacted differently; to them the incident may have even brought relief. It has been public knowledge, for quite some time, that Mr Ray started to have trouble with the conservative among his colleagues shortly after joining the Cabinet and that, later on, he had similar experience with some of the principal Congress leaders outside. His present decision is the upshot of it all. At the moment of writing, Mr Ray's resignation has not been officially accepted and he has not made any statement in the Assembly or outside, except to the effect to say to stray members of the Press, that his decision remains and that he will also resign from the Assembly to seek re-election with Leftist backing.

The situation will be clearer if not obscure, when he speaks in the Assembly as a Minister for the last time. But, meanwhile, a few questions can be discussed. Mr Ray made an excellent impression on the public immediately he was appointed a Minister. His stock in the public eye is very high, so high indeed that few doubt that he will be re-elected, if he so desires, as an

independent, with leftist support. He has been known throughout his brief Ministerial career as a keen reformer and progressive. His speeches or replies in the legislature have proved him a man of outstanding qualities and the public regards him as one of the ablest members of the West Bengal Cabinet. Why, then, does such a man find it impossible not only to stay in the Government, but also in the Congress? Have we not heard it repeated ad nauseam by the senior members of the Congress that the organisation needs and welcomes new blood? Then, why does Mr Ray have to go? Perhaps, his blood group does not agree with the Congress's? The fact, unwelcome though, must be told and it is that the old "establishment" in the Congress is too strongly entrenched for new blood to have much say. Mr Ray's resignation will mean discredit for the old guards who, it seems, are bent on monopolising the organisation while losing the public, almost as wise a thing as to keep an auditorium with the audience out.

*

Crawl to the Summit

The exchange of communications between Moscow and Washington regarding the summit talks, which has been going on since Mr Bulganin's first letter to the Western powers last December, is capable of leaving the unhappy impression that the West is less eager than the Soviets in finding a way out of the nuclear impasse. It would seem to superficial observers that, as soon as the Russians have cleared one road block barring the way to the summit, Mr Dulles is ready with two new ones. Till the end of last month, progress was held up by differing views on the utility of a preparatory foreign ministers' conference. The Russian note of March 1, handed over to M. Pineau, marked a major step forward. And it will be idle to deny that the summary rejection of the proposals by Mr Dulles was received with disappointment which was keen and widespread, and was not particularly helpful toward a correct appreciation of the US stand. The US Government's reply to the Soviet note has, however, softened the initial impression created by the statement of the Secretary of State. The dominant impression left is that the door is still open for further negotiations. And it is certainly encouraging that the Russians consider that the differences have been further narrowed down.

The point at issue now concerns the topics that the leaders meeting at the summit should discuss to save the meeting from ending in a fiasco. Is it possible to isolate the question of suspension of nuclear tests from that of a ban on production of nuclear weapons? Again, is any agreement likely over the ultimate weapon, so long as major East-West disputes remain unresolved? The Russian proposal for a non-nuclear zone in Central Europe is bound up with the question of the German peace treaty

and the thorny issue of unification. And Asian nations may well ask why a non-nuclear zone should be confined to Europe. Clear understanding on these questions is essential, if the hope roused by the summit talks proposal is not to be followed by a wave of disillusionment which can only lead to a cynical scramble for possession of nuclear arms. And while the issues are being clarified, the crawl to the summit will not be accelerated by propagandist diversions.

*

Slimming for Standards

The University Grants Commission have prescribed a course of slimming for the Indian Universities as the only means of preserving their fitness for the job of imparting education at the highest level. The Commission have found that the pressure of numbers has made serious inroads on teaching standards. The 33 Universities in the country cater to an estimated 750,000 students, and every one of them looks to the University Grants Commission for assistance. The Second Plan allocation of Rs 27 crores, most of it earmarked for the four Central Universities, has naturally to be spread too thin to be really effective. The position is not improved by the absence of machinery for coordination among the authorities concerned, namely, the Central and State Governments, the Universities themselves and the Commission, in dealing with development needs. The Commission have reached the conclusion that it will not be possible to raise standards to a desirable level, unless the Universities are more selective in admitting aspirants to higher learning.

But slimming is a difficult and painful process, and weight once put on is not easily dislodged. Another condition for improvement of standards is the upgrading of the status and emoluments of teachers. Universities may not find it possible to limit admissions and at the same time increase the emoluments of the teachers. Moreover, it is not possible to consider University education in isolation or to devise measures to lift it to higher levels, without complementary action at the lower levels of secondary and primary education.

The universities, after all, have to deal with the material already shaped or misshaped by the primary and the secondary schools. Both, in recent years have suffered grievously as a result of amateurish experiments in educational reform. Improvement in standards of education has been unhappily confused with the adoption of a stiff curriculum which is beyond the capacity alike of the teachers and the taught. The result is all-round frustration, which is not exactly conducive to any purpose effort toward higher standards.

*

Student Indiscipline

The endless discussion on student indiscipline continues and many diagnoses have been made, ever

since it was realised that the malady could blight all prospects of a bright future for this country. The University Grants Commission have done well to place the finger on the principal focus of infection. Among other causes analysed by them, the Commission have indicated the use of students by politicians of all persuasions in their election campaigns. This cannot be dismissed as the hang-over of the days of the struggle for freedom. It is different in kind and consequences. The educational authorities cannot be expected to maintain discipline, when those who systematically defy rules of academic behaviour, are in the protection of powerful political personages. An amendment of the electoral law which would automatically disqualify any candidate using services of students for election campaigns will be the surest means of putting an end to the evil.

But one cannot be sure whether the political parties will be able to achieve the necessary detachment which will enable them to place the future of the nation above party interest. Apart from pinpointing the main reason for the prevalence of indiscipline, the Commission have also given a comprehensive list of other causes. The report refers to the unsatisfactory living conditions in some university centres, financial anxiety, insufficiently qualified and poorly paid teachers "who are indifferent to their work and not seldom a source of evil influence among the students", lack of proper counselling and poor prospects of employment after graduation. To this might now be added the frustration bred by an impossible course of studies at the secondary stage, which the teachers are not competent to teach and students are not able to learn.

Bank of India

AS the first of the bigger banks to publish their results for 1957, the Bank of India's balance sheet will ordinarily command more than the usual interest, in the sense that it would give an indication of trends in banking in general. Besides this, the accounts are of particular interest to the money market since the Bank of India figures offer us a striking lesson as to the manner in which the banking system is being discomfited by, on the one hand, the accentuation of new Deposits in the form of time liabilities and, on the other, the resultant impact on the interest paid on deposits.

As at the end of 1957, the Bank of India has reported quite a substantial increase of Rs 13.05 crores to Rs 82.60 crores in Deposits. The increase in Deposits in 1957 works out to 18.8 per cent, as against 3.0 per cent in 1956. While this is in itself a splendid achievement, it is noteworthy that Fixed Deposits and Savings Bank Deposits have been the only gainers and that, in fact, current and contingency accounts actually show a decline. Fixed Deposits have risen by Rs 13.94 crores, while Savings Bank Deposits have been marked up by Rs 0.36 crores. Current accounts show a decline of Rs 1.25 crores.

Of the increase in deposit resources of Rs 13.05 crores, rather more than 25 per cent—or Rs 3.95 crores—went to augment the cash balances, which are placed at Rs 11.95 crores. Investments, which in the previous year had shown a fall of Rs 2.12 crores, have improved by Rs 1.20 crores, to be placed at Rs 18.01 crores. The other major head under which an increase has occurred on the asset side of the ledger is Advances, which are higher by Rs 2.16 crores at Rs 59.38 crores. Here, too, it is noteworthy that the expansion in Advances is very small as compared to that registered during 1956 of Rs 11.12 crores. Again, whereas, last year, a moiety of the increase in Advances took place under the head of Bills Discounted and Purchased, in the current year, loans, cash credits and overdrafts have expanded by Rs 7.52 crores, with bills discounted showing a decline of Rs 5.36 crores. In the 1957 balance sheet, the advances—deposits ratio is placed at 71.9 per cent, whereas in the 1956 accounts, the ratio was sharply higher at 82.3 per cent. The last point that we may take note of in the balance sheet is that the substantial accretions to Deposits have enabled the Bank of India to reduce its borrowings from Rs 7.85 crores to Rs 1.50

crores. While the higher volume of business is responsible for an increase in the total income from Rs 3.51 crores to Rs 4.11 crores, this is mainly on account of income by interest and discount, which is higher by Rs 63 lakhs at Rs 3.35 crores. Commission, Exchange and Brokerage shows a small fall of Rs 4 lakhs to Rs 67 lakhs.

It is on the other side of the ledger that the import of a larger volume of interest-bearing Deposits is to be discerned. Interest paid has gone up sharply, by more than 50 per cent, to Rs 1.66 crores from 1.10 crores. On the other hand, it is encouraging to find that the other major item of expenditure, which in earlier years had made the position difficult for the banking system, has been kept within control. Salaries and allowances are higher by merely Rs 3 lakhs at Rs 1.11 crores. But, with a very much higher charge of interest paid, the balance of profit has not gone up as sharply as it might have, the rise during 1957 working out to Rs 1.44 lakhs as against the increase last year of Rs 7.12 lakhs.

Of the balance of profit of Rs 93.47 lakhs, Rs 30 lakhs have been set aside for taxation, an amount that is higher than in the previous year by Rs 2 lakhs. Bonus to staff also absorbs more, with a rise of Rs 1.25 lakhs to Rs 15 lakhs. The dividend distribution, which is maintained at 16 per cent, but on a capital which has increased by Rs 50 lakhs, absorbs Rs 48 lakhs against Rs 40 lakhs last year. Finally, the carry forward at Rs 16.02 lakhs is slightly higher than the amount brought in of Rs 15.55 lakhs.

+

Sharp rise in active notes

Month early disbursements, acceleration in the tempo of busy season demand for finance and the transactions that have to be completed by the end of the fiscal year have combined to involve a measure of strain for the money market which, it lately appeared possible, the World of Finance might be able to avoid during the 1957-58 busy season. The intensification of demand for funds under these three heads is seen reflected particularly in the returns of the Reserve Bank for the week ended March 7, although the statement of the State Bank for the corresponding week does not throw much light.

Notes in circulation have risen very steeply, by what appears to be the largest increase in any single week, with a rise of Rs 33.41 crores to Rs 1578.67 crores. Currency has been expanded for Rs 19.94 crores against Rupee Securities, Rupee Coin went out of circulation for Rs 2.61 crores, and the Reserve Bank's cash in the till was drawn upon to the tune of Rs 16.09 crores.

The Centre's balances are placed lower by Rs 3.14 crores at Rs 53.46 crores, in spite of deficit financing for an amount around Rs 10 crores. For the return of the Banking Department discloses that the transfer from Investments to Rupee

Securities in the Issue Department involves an amount of Rs 10 crores, whereas the rise under Rupee Securities is one of Rs 20 crores. Thus, it may be said that deficit financing during the week would have been for an amount around Rs 10 crores; and we may also add that, since the Centre's balances have declined by Rs 3 crores odd, the Central Government's net disbursements have exceeded Rs 13 crores. Net disbursements of this order have presumably taken place despite what should be normally heavy collections; and this would reflect the pressure felt by the Government to meet month early commitments, on the one hand, and the end of the fiscal year liabilities, on the other.

The State Governments have also had to make heavy payments. Their balances with the Reserve Bank have fallen by Rs 5.92 crores to Rs 9.85 crores; secondly, their borrowings from the Reserve Bank are marked higher by Rs 5.66 crores at Rs 43.91 crores; and, lastly, it would also appear that they have had to divest themselves of some of their holdings of Treasury Bills in order to replenish their cash balances, since Government Treasury Bills purchased and discounted, shown in the return of the banking department, are marked up by nearly Rs 5 crores at Rs 8.39 crores against Rs 3.48 crores. In broad terms, it may be suggested that the net disbursements of the State Governments have been for an amount aggregating Rs 15 crores; and this also would be indicative of month early disbursements and end of fiscal year payments.

As we have seen, the net disbursements by the Central and State Governments would have been in the environs of Rs 28 crores. This is reflected in the rise of Rs 33 crores in Active Note circulation. But it is also clear that the expansion in currency circulation must have received a further impetus from the month early demand, as well as the busy season demand, of trade and industry. For, of the Rs 33 crores of expansion in currency—and this does not take into account the outflow

of Rupee Coin—Rs 10 crores is accounted for by deficit financing and a total of Rs 18 crores by drawing down of Government balances or increase in indebtedness of State Governments. There is an indication that "private sector" demand for funds also increased during the week. Although the Reserve Balances of member banks have risen by Rs 1.94 crores to Rs 77.40 crores, this is almost wholly attributable to the State Bank; and, meantime, Scheduled Banks would appear to have increased their borrowings from the Reserve Bank, since the latter's Other Loans and Advances are marked up by Rs 7.70 crores at Rs 74.30 crores. However, it is noteworthy that Advances of the Reserve Bank against usance bills are practically unchanged at Rs 22.52 crores.

Lastly, the decline in foreign balances is nominal, with Balances Held Abroad showing a drop during the week of Rs 0.77 crores.

According to the return of the State Bank for March 7, Deposits have staged a further rise of Rs 4.75 crores to Rs 412.62 crores. Borrowings stand reduced at a nominal figure of Rs 0.13 crores. Investments are unchanged; Advances show a small rise of Rs 2.30 crores to Rs 207.51 crores. Cash Balances are higher by Rs 14 crores at Rs 34.98 crores.

The return of Scheduled Banks for February 28 discloses a small decline of Rs 2.18 crores to Rs 1452.41 crores in Deposits. The total of Advances is higher by Rs 4.48 crores at Rs 931.56 crores. Borrowings both from the Reserve Bank and the State Bank are higher, the former by Rs 1.76 crores and the latter by Rs 1.04 crores. Nevertheless, Cash Balances are higher by Rs 8.26 crores at Rs 163.65 crores.

nalists, investors—got it into their heads that the United States Government intended to lower the official buying price of gold from the figure of \$35 fixed three years earlier. By 1937 there appeared to be indications of boom-like developments, and the Washington authorities were credited with the intention of checking them by

means of lowering the gold price. Although the Washington authorities themselves did not initiate these rumours, they abstained for a long time from discouraging them effectively. Indeed they welcomed them, because they hoped that the damping effect of the rumours would obviate the need for taking active steps to check an

unwanted boom. They must have been misguided by Bernard Shaw's character, Captain Shotover, who sought to enforce discipline on his ship without resorting to flogging, by spreading about himself the rumour that he had sold his soul to the devil, thereby inspiring the required degree of terror among his crew.

Brokers and speculators were the initiators of the "gold scare." But, after the flight from gold and from gold mining, as made some progress, economists and bankers, too, discovered that there was theoretical justification for a cut in the dollar price of gold. Instead of guiding public opinion, they were guided by it. Nor did the scare confine itself to gold and mining equities. After a while it began to affect Stock Exchanges in general, and business activity took a downward course. Thereupon the long-overdue official denials of any intention to tamper with the price of gold brought about a recovery. The United States authorities succeeded in their intention of influencing the business cycle by allowing the development of a "gold scare" and then stopping it at the right moment.

The question is, is his cry now repeating itself in an inverted sense? Since the beginning of 1958 there has been a great deal of speculation about the possibility of an increase in the official American selling price of gold. So far its effect has been confined to a revival of demand for gold and gold mining shares. But it is widely assumed that should the movement gather momentum it would affect Stock Exchanges in general and might lead to a revival of business activity. Possibly the United States authorities, with the experience of 1937 in mind, welcome rumours and forecasts for which they are not responsible, in the hope that the inverted "gold scare" would obviate the need for drastic action to bring the recession to an end.

An increase in the dollar price of gold would produce inflationary effects. And it is probable that these effects would go considerably further than merely arresting the present recession. There might not be an immediate expansion of credit as a result of increasing the gold reserves through their revaluation. But the psychological effect of making such an expansion possible would be considerable. Such effects would be world-wide. The revaluation of gold reserves in terms of dollars would increase the safety margins of these reserves over maximum requirements. The result would be a relaxation of disinflationary measures which were taken under the influence of the decline of the gold and foreign exchange reserves.

There would be an increase in the gold output, as it would become profitable to work seams which are at present unprofitable. There would be an increase in the export of Soviet gold, attracted by the higher dollar price. Private hoarders, too, would be tempted to take their profits by de-hoarding, as they did during the 'thirties as a result of the increase in the price of gold. There would be a substantial increase in the physical stocks of monetary gold, in addition to the bookkeeping increase resulting from the revaluation of gold. All this would be inflationary.

March 15, 1958

"Pakistan Jute is much Too Dear"

TWO weeks ago, I had reason, in this column, to dispute the accuracy of certain estimates made by the Pakistani jute authorities. I find that, at the recently held annual meeting of the Jute Industries Limited at Dundee, the company's Chairman, Mr W. G. N. Walker, has said much the same thing. The difference is that he makes no charge that Pakistani figures are unreliable, but instead states matter of factly that the carry forward of raw jute in Pakistan into the next year may be "rather larger". Other points made by Mr Walker deserve a study by the World of Jute.

There is clear indication as to the extent to which the European jute goods industry has been affected by the intransigence of Pakistan as far as concerns the price at which it is ready to make available the raw material to the producing countries of the world. Mr Walker remarks that the price paid for Pakistani jute is "out of line with the price levels at which finished manufactured goods from India made from Indian raw jute are being sold." He goes on to say that the Pakistani raw jute "is too dear if she is to continue to sell it in overseas markets at anything like the volume previously achieved".

The anxiety being entertained about the future is very real. The dissatisfaction with Pakistan as the source of the raw material is hinted at by Mr Walker, when he says that the future of the jute industry, both in Britain and in other countries, is uncertain; and he also charges that these countries "are all at the end of the day at the mercy of international politics".

Indeed, Pakistan, while able to distinguish, shall we say, friend from foe, appears to have no idea of how it should set about helping the so-called friend. Mr Walker's complaint is that, although Pakistan's interests are closely allied to those of the jute manufacturers outside India, "she is not helping them at the moment as her raw jute prices in export markets are higher than equivalent qualities available to manufacturers in India". He is apparently at a loss to understand why Pakistan has failed to appreciate that the making available of its raw material more cheaply to the Continental mills would be the worst blow to the Indian jute goods industry. His summation in this regard concludes by asserting that the survi-

val of the Continental jute goods industry "depends primarily on Pakistan's ability to supply raw material at a price which will enable the manufacturers to compete not only with goods exported by India but also with alternative materials and methods".

This, of course, reflects the attitude of the typical Continental jute goods industry. But...Gone for ever are the days when the Continental mills could hope to compete with India in the standard varieties of jute goods. Secondly, Continental mills can never hope to secure raw jute from Pakistan at a price that bears any relation to the raw material being utilised by Indian mills. For, the Indian mills, with necessity as the mother of invention, have succeeded in producing quality hessian from mixtures of the inferior quality Indian raw jute, on the one hand, and bimli and mesta, on the other. So, the first point that the Continental mills have to recognise, if they are to survive at all, is that the market for them will comprise manufactures of constructions which may be called specialties. In this view, it is even wrong to consider India as a competitor at all, at least at the present stage, since, although we have made a beginning, Indian mills have not yet embarked on large scale manufacture of special constructions. If it is conceded that the Continental mills must resign themselves to a virtual stoppage of manufacture of standard varieties, it follows that they must be prepared to pay a little extra for the quality jute—which Pakistan purports to export—that is needed for special constructions. I will add a word of warning, and that is, if the Continental mills are deluding themselves into thinking that they will ever be in a position to outbid India, the industry's days are numbered.

So, we come back to the problem of Pakistan. Is it logical for that country to ensure the supply of raw jute to the Continental mills at, as it were, favourable prices vis-a-vis the price at which Indian mills obtain their raw material? I don't think so, and I will explain why I do not think so.

When we talk of expanding economic conditions in the world, and of the resulting increase in demand for jute goods, we should be clear in our mind as to the extent of the demand that will arise for standard varieties, on the one hand, and specialties, on the other. The standard varieties may be said to fulfil the agricultural demand for jute goods. Although, in this sphere, world production is tending upward, there is a limit to the expansion in output; and, moreover, each year, some agricultural products which use jute goods, switch to bulk handling methods, which obviate the need for jute goods. In a sense, thus, the market for the standard varieties is not very elastic, although, over a medium term of years—say, 10 years—there may be prospect of consumption going up by 30 to 50 per cent. Inevit-

ably, it is my view that the bulk of this agricultural demand for jute goods will be, as in the past, met from India. Not even Pakistan is likely to be able to under- quote us; nor is there much chance of the Pakistani jute goods industry expanding itself, over the next 10 years, either to meet the major portion of this demand or even merely the expansion in the demand. It is my view, therefore, that the Indian jute goods industry's future is assured.

In such a light, why should Pakistan make available to Continental mills raw jute at a cheaper price, which would merely enable the Continental mills to entrench themselves in markets, wherein, at a later stage, Pakistan itself might hope to gain ground? Besides, if the prospect of selling raw jute to Continental mills appears to be limited, over the medium term future, why should Pakistan forego higher exchange earnings at the present time? It is all very well to talk of Pakistan's long term interests being linked up with a continuity of supply of raw jute to Continental mills at cheaper prices at the present time. But, in fact, is this so? Pakistan cannot be sure, and hence, I suppose, this decision to earn what foreign exchange it can, while the going is good. While I sympathise, therefore, with Mr Walker, when he bitterly complains of the Continental mills being outbid by the Indian jute mills merely because Pakistan will not supply raw jute at cheaper prices, I must conclude with drawing attention to one unfortunate word that Mr Walker has used two or three times. Mr Walker is doubtless aware of the fact that the Asian does not like to be referred to as an Asiatic, but why then does he refer to "Asiatic goods" and "Asiatic imports"?

After early listlessness the jute goods market steadied up somewhat especially around the sacking section on reports of a Government order for 12,000 bales B Twills. Later in the week, when it was reported that Government purchases would be larger there was a further recovery in prices. Thursday's closing rates were as follows: Hessian 40"x10 oz Ready Rs 39.15; July-September Rs 39.25; B Twills Ready Rs 99.00; July-September Rs 100.15.

Stocks of jute goods at the end of February at 95,100 tons were only 1500 tons lower than they were at the end of January. Stocks were 97,400 tons at the end of February 1957. Hessian stocks at 27,300 tons were 2,400 tons lower compared with January while those of sackings at 53,400 tons were only 300 tons lower. Other varieties at 14,400 tons were 1,200 tons higher.

Production of jute goods in February amounted to 85,300 tons. During the month mills had worked 192 hours. Output in January was 98,300 tons for 217.5 hours worked. Of February production, hessian accounted for 30,100 tons, Sacking 49,300 tons and others 5,900 tons.

The raw jute market ruled quiet during most of the time with sellers anxious for business. Mills however took little interest and as a consequence price levels developed a sagging tendency. Toward close some improvement in the undertone was noticeable largely in sympathy with the goods section, but prices remained unchanged. Assam Bottoms which was quoted at Rs 24.50 at the close of last week was finally placed this week at Rs 23.75.

WORLD OF TEA

Outlook for Common Teas

DUE to the improved standard of manufacture this season, there was a comparative shortage of Common teas in the market and as a consequence "teas for price" were always keenly competed for generally by the bazar buyers. Taking into account the price of quota, the internal price level of these teas has remained comparatively steady.

Since the output of competitive producers, especially East Africa, is steadily increasing, it is difficult to foresee an improvement in

Common grades. There is a general feeling that, if India's Common tea is to be sold at an economic price, costs of production will have to be reduced by cutting fiscal and labour burdens.

In this connection, the monthly report, issued by Messrs J. Thomas & Company, states that "the position regarding the plainer offerings are rather more uncertain. It is quite possible that the UK will continue to lend strong support to the market during the current month. This must be the hope of the Common tea producer as the only alternative outlet for these teas in the market where extremely unremunerative prices are being paid at present".

A noteworthy feature is, however, that a substantial portion of the North Indian crop is likely to be sold before the beginning of the 1958-59 season, leaving a negligible carry-over, if any at all. The coming marketing season will, therefore, start with an improved statistical position.

Meanwhile, in the Export Sale

held in Calcutta this week, offerings were 59,525 packages. There was a fair general demand and bright liquoring teas of all descriptions were firm to dearer. Clean black Common Broken and Fannings were steady and often dearer; but the plain liquoring ones and those with poor leaf appearance were 4 to 6 nP per pound easier. There was fair support for medium CTC Fannings at about last rates; but the Broken were often sold below valuations. Any medium CTC sorts with autumnal character, were however sold at dearer rates. The best types were a little irregular and declined by about 10 nP and sometimes more per pound.

Bright liquoring non-wither Doors were strong and often dearer; but the more ordinary types were often sold at 4 to 8 nP per pound below valuations. Clean and stylish Whole Leaf grades were fully firm to dearer; but those of inferior leaf appearance were barely steady. Darjeeling teas were sold well, particularly those with autumnal flavour. Following

rates were quoted:—Clean Black Pekoe Rs 2.20; Plain Broken Pekoe Rs 1.42 to Rs 1.46; Plain Fannings Rs 1.56 to Rs 1.60; Medium BP Rs 1.52 to Rs 1.56; Medium Fannings Rs 1.72 to Rs 1.76; Best Assam CTC BP Rs 2.60 to Rs 2.80 and Best Assam CTC Fannings Rs 2.70 to Rs 2.90.

In the Internal Sale, offerings were 20,282 packages of Dusts. These met with a good general demand at easier rates. Middle East buyers again showed interest; but orthodox descriptions were generally upto 6 nP per pound easier. CTC teas met with an irregular demand; but bright liquoring powdery types were firm and often dearer. The few best liquoring kinds, on offer, were easier; and the plainer liquoring types were also easier despite better enquiry. Following rates were quoted:—Medium Doors Dust Rs 1.52 to Rs 1.54 Medium Assam Grainy Dust Rs 1.54 to Rs 1.56; Medium Assam CTC Dust Rs 1.75 to Rs 1.95 and Best Assam CTC Dust Rs 2.80 to Rs 3.10 (nominal).

Also, 5,042 packages of Leaf grades were offered for internal consumption. There was a good general demand for the increased number of chests offered. Orthodox teas were irregular; but generally easier. The brighter liquoring CTC Assams were often dearer although the plainer ones in this category met with less demand at easier rates.

In the Export Quota section, rates moved narrowly between 4 and 4½ nP per pound and business was reported done at these levels.

The last day for the acceptance of "bought and sold" forms by the Controller of Licensing, Tea Board, in respect of season 1957-58 Export Quota, is the 20th March, 1958.

In the Colombo market, offerings were 6,929,246 pounds, which met with a strong general demand. As the sale progressed, prices for all teas improved, particularly for best Dimbula/Dickoya teas which registered an appreciable advance in prices. Persian Gulf types met with strong demand and closed at firm to dearer rates. All centres operated freely, particularly the USA buyers. The Soviet Union was, however, absent.

In Mincing Lane, a decidedly better tone prevailed. Competition was keen and well-distributed and prices were generally dearer, sometimes by several pence per pound for the quality invoices. Buyers' recognition, that the amount of tea available in London would be smaller for the time being, had undoubtedly been responsible for the stronger tone. Next week's offerings will be around 57,500 packages and for the week after around 56,000 packages.

Tea stocks in London, as on the 28th February, were 119.47 million pounds as compared to 123.06 million pounds a year ago. Landed between 22nd and 28th February were 6.67 million pounds, while deliveries were 10.26 million pounds.

IT sometimes happens, as is the case this week, that I find myself faced with the problem of a topic for a gossip. And yet, I do not have any reasonable grounds for complaining, because the past week has thrown up a good deal that has been provocative and which, normally, I would have liked to discuss in this section. For one thing, for all that Mr Nehru conceived his Budget to be pedestrian, it is nevertheless a topic that I should have with profit approached again. But my commitment to write about it in the study of the 1958-59 Budget—whose publication, I may mention here, is unavoidably delayed to next Tuesday—has robbed me of this particular choice. Then, there was the annual session of the FICC, and I had early in the week made up my mind that, to the comments of Mr Chinai and Mr Nehru on the national economy, I would add my own. Unfortunately, I find that the scribe in Delhi has anticipated me, and I would indeed be put to some strain either in excelling his despatch or in avoiding duplication. So, on a Thursday morning I find myself in a most unenviable position, blank sheets of paper in front of me, and nothing particular as subject to write about. I trust, therefore, that the reader will pardon me if I indulge in thinking aloud on random subjects.

I wonder how many of my readers have been struck by the remarkable change that has occurred in what I might call the public American attitude to India. By public I here mean statements that are uttered by people who count and in public. For, an important reservation in all assessment of the American attitude to India must be that, all along, at the official level, the US Administration has not been unappreciative of either India's need for assistance at the present moment or the imperative-ness of the success of India's Second Plan. But, in the past, whether by design or accident, the top officials in the US Government have avoided any direct reference to us. I had suggested to some friends of mine that this silence, this refusal to commit themselves on the significance of India's Second Plan, seemingly presaged a disinterest on their part; and on those occasions, my American acquaintances have invariably replied that

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

the periodical disagreement between India and US on international attitudes and policies so affected the estimation of India by the Americans generally and by US Congressmen in particular, that it seemed advisable to keep silent and thus provide no opportunity for inviting criticism of India. I suppose this explanation is as good as any, though I am by no means convinced that the rift, if at all there was one, between America and India ever extended to the citizens of the two countries. The last major development in world politics was the imbroglio in Suez, on the one hand, and Hungary, on the other. In refreshing contrast to other previous occasions when there was a world development of this nature, America and India found themselves talking and thinking on similar lines. So, perhaps, the atmosphere was made conducive to a more open avowal of friendship toward and interest in the Indian Second Plan. But, even then, when Mr T. T. Krishnamachari went to America in September last year, and when first the idea began to be mooted of US assistance on any large and worthwhile scale, the old bogey, of a not too friendly Congress, was found still to be present, and we were given to understand that, as far as possible, the US Administration would try and extend the assistance we needed without approaching Congress. Scarcely six months have passed, but we now have both the US Vice President, Mr Nixon, and the Secretary of State, Mr Dulles, testifying before Congress of the basic identity between India and America. What is more, the evidence is directly in connection with aid for India. At that stage, I thought to myself that Mr Nixon and Mr Dulles were able to speak as they did for two reasons. One was that international "skirmishes" had not occurred for some many months. The other was that Mr Krishnamachari did a very good piece of public relations work while he was there. But there must be more to it than merely this, for, it is extremely heartening to read of a development which could not have been dreamt of six months ago. I refer to the move, in the US Congress, for the introduction of a bill which would specifically offer massive assistance to this country. Though reports that I have seen are quite vague, the figure that, apparently,

is being talked about is \$900 million. The question that we have to set ourselves is: how is it that, within the space of six months, a Congress that was thought to be not too friendly disposed to this country, is today entertaining the idea of a special bill for assistance to India?

I suppose this is the juncture when we should have a word or two to say about the unparalleled record of America as a donor country. Let me make it clear, however, that America will not be making grants; the aid that we expect, and the aid that we will surely get, will be in the form of loans. But, if you concede that, in the background of such attitudes and predilections which, mistakenly or otherwise, the American is possessed of, the American could with some justice come to the conclusion that there was a basic difference between the policy of his country and that of ours, you must come to the inescapable conclusion that he is an even more generous individual than we might formerly have thought. I do not want, at the present stage, to express my gratitude for the ready assistance that America is tendering to us; and, in this, I am not motivated by any caution, in the matter of counting the chickens before the eggs are hatched. But I do think that it is necessary for us to sit up and take notice of an attribute that the American possesses in abundance, the ability to give freely. For, it is the attribute of the individual which is transformed into the policy of a country, and if Kudos were deserved for any reason, certainly the most eligible quality for praise is philanthropy.

There is another reason why the American attitude is particularly noteworthy. This is an even year, and hence Congressional elections are in the offing. Generally speaking, in a Congressional year, the duly elected representatives of the American people tend to shirk issues that might be controversial. It is indeed this fact of elections ensuing in November this year which influenced the US authorities to announce the first tranche of their assistance from such sources as the Special Development Fund and the Export Import Bank, the utilisation of resources from which is not subject to approval

of Congress. But now, it seems to me, responsible men in the US Congress have come to a finding that aid to India is a subject that will brook no postponement; otherwise, quite simply, the consideration of such a matter in the US Congress would have been postponed to some time next year, with the elections left behind. I hope I shall not be thought uncharitable if I suggest that a question of aid to India can be turned to advantage in the elections. To understand why this could be so, you have to appreciate that the bete noire of Americans is Communism, not merely in their own country, but anywhere else in the free world. A Congress that could claim—or a Congressman who can make such a claim—that it has taken a major step in building up and strengthening a bulwark of democracy in Asia can be expected to receive approbation from the electors. No longer is India thought of as a country which frequently rubs America the wrong way, but it is instead a country which is engaged in a strenuous competition with a neighbour belonging to a different ideology and, certainly, American politicians have become alive to the central position which India's Plan occupies in the fight for safeguarding democracy. I am not sure whether it will be subtle or blatant, but I have the feeling that aid to India might conceivably become an issue in the American elections: India as an example of a democracy which is being strengthened to resist Communism by means of appropriate assistance.

In the last paragraph I have said that the assistance from America is, or should be, appropriate. While on the whole, US foreign assistance has not gone to waste in the rehabilitation programmes for Western Europe, I am afraid that quite a few million dollars have gone down the drain in other parts of the world. I shall not attempt to give any examples, but this brings to the forefront of attention a prime qualification of a recipient as far as the foreign aid is concerned. This requisite was postulated some months ago by Dr Leon H. Keyserling, and referred to the political and economic conditions of the country concerned as well as to the efficiency of its administration and the absence of corruption in it. After some disastrous experiences, America has in recent

years tried to have a greater check on foreign assistance, with a view to ensuring that it is properly utilised; and hence the operational terms and agreements under which US assistance has lately been provided, on a basis of specific and particular projects. It is interesting to note that this country so far enjoys the confidence of the US Government as to have received, for the first time in recent years, a blanket offer of aid. It is perhaps immodest to say this, but I think on the whole we deserve to be the repository of such trust and confidence.

These random thoughts must be extended to an assessment of our

present foreign exchange position. Very rightly, a few days ago, Mr Nehru decried those who criticised the Plan on the score that it is over ambitious. The developments in the matter of external resources are such that we can now proceed with the confidence that the core of the Plan is not in danger of non-fulfilment. I am not, I assure the reader, indulging in wishful thinking, but the quantum of assistance that has been assured to us is of proportions that should even enable us to think actively of restoring some of the cuts in the Plan. For the present, of course, consolidation is the watchword, and since the next 12 months to March 1959 are expected to be the hump period of the Plan, we should perhaps

restrain ourselves and concentrate on the core of the Plan. But I fancy that, by next February, the Finance Minister in office should be able to present a much more hopeful picture both of internal and external resources, and that, consequently, he should be in a position to announce acceleration of outlay on the Plan such that the targets originally aimed at are made to be within the realms of attainment and accomplishment.

Sir B. P. Singh Roy's election to the Presidency of the Federation of Indian Chambers of Commerce and Industry will bring universal satisfaction to the business community throughout India. Not

only has he had a distinguished record of political work in the pre-Independence era, when he was Bengal's Minister for Local Self-Government and President of the Bengal Legislative Council, but he has over a couple of decades been a pillar of industry, being the directing brain behind several eminent commercial and financial institutions. To have held important political offices in those days, served as a passport to oblivion for many under the new regime, and that Sir Bejoy has steadily risen in stature and public esteem must be considered a signal triumph for his personality, of which, as is well known, the chief ingredients are sheer unremitting hard work and an undeviating sincerity of purpose. His long public career has been marked by exemplary integrity and a constructive ability of the highest calibre. Formerly President of the Indian Chamber of Commerce, Sir Bejoy quite rightly finds himself at the head of the FICC. West Bengal, I am sure, has special reasons for gratification in his election, especially because no Bengali has held the Presidency of this all India body since 1934, when the late Mr N. R. Sarker was at its helm. Many will recall that Mr Sarker was the first to utilise the platform of the FICC to propagate the idea of national planning. Sir Bejoy, I am sure, will be able to provide a new lead to this body, like his illustrious compatriot. Over the past few years, a sharp cleavage of opinion has existed between the Government and the private sector of industry over the taxation policy, and it showed itself once again at the FICC's annual session, where Prime Minister Nehru spoke in firm tones in favour of the retention of the present tax structure, while industry insisted on drastic concessions. If the new President of the FICC can bring the two sides closer through his moderating influence on both, that will indeed be a major achievement on his part, which the country will not easily forget.

GATEWAY TO PROSPERITY

Intervening in the debate on the Chagla Commission Report in Parliament, Mr Nehru has observed that, since the concept of mixed economy has been accepted, it is only proper that private enterprise is enabled to function efficiently within the framework set for it. From this statement, it is evident that Government are satisfied that conditions are quite conducive to the growth of private sector industries. In recent weeks, prominent industrialists in the country have, however, averred that the monetary and fiscal policies initiated by Government in the past two, three years have placed private enterprise in an unenviable position. In a forthright speech at the Commerce Graduates Association in this city some time ago, Mr J. R. D. Tata declared that the high level of taxation has "dried up the springs of private enterprise". In short, all spokesmen of the private sector are unanimous in their verdict that if the present level of taxation is continued, non-Government enterprises will not be able to fulfil their targets under the Second Five Year Plan. The Budget for 1958-59 has shown that the appeals and arguments of private enterprise have made little impression on Authority.

In a statement circulated to the shareholders of the ICIC with the Directors' Report and Accounts for the year ended December 31, 1957, Sir A. Ramaswami Mudaliar, the Chairman, has declared in unambiguous terms that the investment climate in the country is not favourable. It is to be noted that the bases of his remarks have stemmed directly from his intimate knowledge of the working of the ICIC during the last three years in general and last year in particular. By virtue of its position as a financial institution which also provides permanent capital for industrial development, the ICIC is in a position to feel the pulse of private enterprise much more scientifically than most people. Sir Ramaswami Mudaliar's findings in this regard are far from reassuring.

The ICIC has had to contend with abnormal conditions ever since its inception three years ago; for, during this period, the economy has been geared up to the needs of the Second Plan with its almost insatiable demand for finance. Even so, it has so far managed to make strident progress. The answer to the question whether it can continue to record progressively satisfactory results is not quite encouraging.

By the end of 1957, ICIC has agreed to give financial assistance for a total of Rs 116.5 million. Of this, rupee assistance has amounted to Rs 94.4 million while loans in foreign currencies has totalled Rs 22.1 million. A significant development in the Corporation's working during 1957 is the receipt of a large number of applications for assistance in the form of foreign cur-

rency loans. But as the ICIC has only a line of credit of the equivalent in various currencies of US \$10 million available from the International Bank for Reconstruction and Development, it has not been able to entertain such of those applications which were for very large amounts. During the year, 5 loans in various foreign currencies for a total of the equivalent of Rs 22.1 million (\$4.63 million) have been sanctioned. Sir Ramaswami Mudaliar has pointed out in his statement that it may not be long before the entire amount is used up. The ICIC hopes to approach the World Bank in due course for an additional line of credit.

During 1957, five underwriting operations amounting in all to approximately Rs 9.3 million have been completed, but the ICIC had to take up as much as Rs 5.8 million worth of shares as other investors had taken only Rs 3.5 million. The Directors point out that underwriting operations of public issues of capital became more difficult during the year due to the fall in stock exchange prices and the reluctance of investors to take on new commitments, particularly investments in newly-established companies. In the case of some issues underwritten during the year, public response was negligible. In this connection, the directors observe: "The revival of confidence in stock markets must be regarded as of vital importance to the economy of the country and also to the continuance of operations of your company in this field. Without the support of the investing public, no underwriter, however strong financially, can continue indefinitely in business".

So far, the ICIC has sanctioned 16 underwriting operations involving a total commitment of Rs 53.5 million. Out of these, nine have been completed by the end of 1957. In the current year, another 2 have been completed. In granting assistance, the company has given due consideration to regional development as well as to types of industries covered.

The prospects for the current year seem to be far from rosy. For, after paying taxes at existing rates, the ICIC may not find much left to distribute to the shareholders. Already, there has been a substantial reduction in the balance which stands to the credit of the Revenue Account. In the accounting year taxation has taken away Rs 2.5 million out of an operating profit of Rs 4.8 million, excluding a sum of Rs 282,916 additional taxation for the year 1956, which has been paid from the balance brought forward. Being an industrial financing company, the ICIC does not get any benefit such as development rebate, additional depreciation, etc., which are available to industrial enterprises. Nevertheless, it has to pay all the taxes. Sir Ramaswami Mudaliar

Investment Climate

has illustrated the heavy incidence of taxation on the company by two examples. In the case of its investments in new ventures, the dividends which are received after many years' waiting are also subject to Corporation Tax "despite the fact that the same earnings will already have suffered Corporation tax in the hands of the companies concerned". Again, when the ICIC realises investments, they will attract capital gains tax. Now, the ICIC is a financing institution which also takes care of providing permanent share capital for industrial development. Its main role is to provide risk capital to new as well as existing enterprises. Unless it is enabled to retain enough of its earnings to build up substantial reserves against the risks inherent in its operations as well as to pay a reasonable return to its shareholders, its usefulness will be considerably diminished. It is to be hoped that the representation made to Government by the directors that consideration be given to the grant of tax conces-

sions to the company will bear fruit. In this regard, it is to be noted that the ICIC's present resources are likely to be fully utilised in the near future. The problem of raising additional funds is engaging the attention of the Directors, but it is to be admitted that the task that faces them is by no means easy, considering the present state of the capital market in our country. The ICIC Chairman points out that his "plea for tax relief has considerable bearing on our ability to do (to raise additional funds) so".

It is evident, therefore, that, without a suitable investment climate, the working of financial institutions such as the ICIC will be greatly hampered. When these institutions begin to languish, there will be a reduction in economic activity in the country. And a reduction of economic activity is a thing that is to be avoided at all costs, if the nation is to continue in its path of progress as embodied in the Second Plan.

BOMBAY REVIEW

Compact, smartly styled, your Allwyn filing cabinet is good to have around—it looks efficient and businesslike. The drawers glide open...without a sound.

CHANGING OVER TO THE METRIC SYSTEM

India has at present no common system of weights and measures. There are not less than 143 systems in use. This multiplicity gives room for malpractices. The introduction of a uniform system throughout the country based on Metric Weights and Measures will be very convenient and make calculations extremely easy, especially because the country has already adopted the decimal coinage. The Standards of Weights and Measures Act, 1956 has laid down the basic units under the metric system. The reform will be gradual so as to cause minimum inconvenience to the people.

Even after its introduction in an area or a trade, the traditional weights and measures will be permitted to be used for a period of three years.

ISSUED BY THE GOVERNMENT OF INDIA

WORLD OF COTTON

ACCORDING to the latest reports, production of Cotton Textiles has declined for the third month in succession. It is placed at 392 million yards in February as against 433 million yards in January and 438 million yards in December 1957. Production in February 1957 totalled 435 million yards. These figures reflect the unsatisfactory trading conditions witnessed during the past many months. It is generally feared that the overall output, during the current year, will reveal a sharp setback unless the Government provide the necessary relief to the industry without delay.

Also, the pace of shipment in the first two months of the current year, has not been encouraging. The quantity of cotton goods, passed for shipment in January, amounted to 63.35 million yards as against 95.14 million yards in the corresponding month of January, 1957. The figure for February 1958 is placed at 47.72 million yards against 76.16 million yards in February, 1957. Unless exports of cotton textiles pick up in the following months, it is feared that the overall exports, during the current year, may not reach the last year's level of 850 million yards.

For obvious reasons, trading conditions in the cloth market have been slack; and there were only scattered enquiries from the consuming centres. It is, however, satisfactory to note that the demand for superfine qualities has continued to be better, while fair demand is also reported in the case of medium qualities.

On the export front, conditions have not been satisfactory. Fresh enquiry from Singapore has been subdued, while demand from Burma has been negligible. Business with West Africa has been on a subdued scale. Fresh advices from Sudan have also been quiet and business with Ethiopia has been negligible.

FUTURES MARKET

Wild and erratic fluctuations were seen in the Cotton futures market due to alternate bouts of buying and selling. While the distant delivery was relatively steady, the maturing contract eased moderately under long liquidation.

Initial buying was partly influenced by the strength of the maturing contract. The upturn in this contract was attributed to strict survey results where, out of 400 bales surveyed, 350 bales were reported to have been rejected. The distant delivery followed a similar trading pattern. In mid-week, however, rates spurred on heavy covering by a leading bear from Calcutta and buying by speculative bull interests. Again, towards the close, there was tired liquidation following hints that the authorities would not, at present, either lower the excise duty or grant any export quota of cotton. ICC Jharkhand

Successive Decline in Cloth Output and Exports

May delivery opened at Rs 680 and, after touching a low of Rs 673.50, finished at Rs 679.50. March delivery moved between Rs 680.50 and Rs 685.50.

SPOT MARKET:

The Spot section continued to rule steady with demand for all varieties. Although a section of the trade has been complaining of accumulation of stocks, prices of good staple varieties have remained mostly unchanged.

In the export section, superfine Bengal continued to be in moderate demand. Rumours of a possible reduction in the export duty on Bengal Deshi have induced some shippers to buy Bengal for April-May delivery, while some of them are buying ready lots against their previous commitments.

In the foreign section, enquiries were few. Spot lots of East African and American cotton were in demand. Traders are generally marking time, presumably awaiting the allocation of quotas for the East African cotton, particularly for mills. Spinners are engaged in obtaining quota as against the permission to import 70,000 bales of East African cotton stapling 1 1/16" and above. The date for submitting applications to the Textile Commissioner, for the issue of quota letters, has been extended up to March 15, 1958.

There are rumours that the Government of India will soon announce import of one lakh bales of cotton from Sudan and Egypt, as the latter has shown willingness to sell her produce at parity with that of the former country. Cotton import houses hope that Egypt will offer cotton at a discount of about 10 per cent. Also, reports from Sudan indicate that the overseas demand for that country's cotton has been restricted. The new crop selling programme has not yet been announced by the Gezira Board. There is also anxiety as to what the level of export duty will be after April 18.

STATISTICS

Exports by rail, from 1st September 1957 to 6th March 1958, were 108,573 bales. Estimated mill consumption, during the same period, was 669,232 bales as against 673,504 bales in the corresponding period of the previous year. Estimated stock of raw cotton, held by exporters, dealers and mills in Bombay, on the 6th March 1958, was 650,650 bales as compared to 581,134 bales on the corresponding date of last year.

Cotton receipts in Bombay, from 1st September 1957 to 27th February 1958, were as follows as compared to the corresponding period of last year (figures in bales):—

Growth:	1957-58	1956-57
Khardesh	117,754	310,857
Vijay	125,503	24,359
Surat	21,081	6,139
Kalyan	9,636	4,360

Growth:	1957-58	1956-57
Dholera	3,884	5,669
Gaorani	19,223	20,318
M. Pradesh	60,385	34,439
Punjab	87,979	108,974
Rajas. & U.P.	60,285	49,890
Andhra	4,452	1,846
Madras	660	449
Mysore	2,448	3,060
American	66,946	136,779
Sudan	28,450	29,148
Egyptian	23,191	22,623
E. African	42,186	66,018
Burma & other sorts	...	765
Coast Ports	11,600	10,703

Total ... 686,363 836,393

Of the total estimated AR/Uganda crop of 320,000 bales, 178,500 bales were reported to have been sold, leaving an unsold balance of 141,500 bales.

CROP OUTLOOK

A severe deterioration in new crop cotton in Surat area is reported. It is learnt that the growers in this area have been persuading the State Government to apply the Bombay Agricultural Pests and Diseases Act 1947 to the whole of Surat district in view of the damage to the crop. The crop in that area was first estimated at

BOMBAY REVIEW

about 2.6 lakh bales; but it is now expected to be only 1.3 lakh bales.

The Gezira Cotton Board, the largest in the Sudan, has released figures showing that the cotton harvest this year will probably produce less than a third of the quantity produced last year. The cotton crop, which is a stable source of revenue of the Sudan, has been adversely affected by disease and bad weather conditions.

NEW YORK COTTON MARKET

Prices on the New York cotton futures market failed to sustain the upward movement of last week. Following a mixed start, prices rallied early with some buying of the new crop postcides, apparently based on the idea that the Senate would approve additional funds for the Soil Bank programme, but would oppose attempts to get an increase in the acreage. Activity was, however, limited, partly reflecting the quiet conditions in the Worth Street textile market where trading was said to be virtually at a standstill due to the garment workers' strike. At the close of the week, new crops slipped from the recovery levels under small offerings.

BOMBAY
REVIEW

THE market for Non-Ferrous Metals ruled generally quiet last week. Copper prices developed a slightly easier tendency on actual receipts from abroad. The rate, which was quoted upto Rs 182 per cwt, declined to Rs 174. With the arrival of 2,200 tons per s.s. "Kampala", the tight supply position of the market had considerably eased. Moreover, a couple of hundred tons was also expected per s.s. "City of Chicago". On the whole, nearly a thousand tons is expected in Bombay during the current month. With consumption which is likely to go down after April and with anticipated sizable arrival, the supply position may ease further in the coming weeks.

The market for Zinc continued to rule quiet with the rate quoted around Rs 51.25 per cwt. Trading in the Lead section was featureless, the rate being quoted at Rs 63. As the stock position was comfortable and the demand was moderate, Tin remained quiet at Rs 130 per quarter.

On the London Metal Exchange, Copper was quoted at £166½ per ton as against £165 in the previous week. The former trend was due to consumer buying and expectations in the market that Soviet Union would place orders for copper wires with the UK manufacturers.

Zinc remained almost unchanged at £62½ per ton. The general impression is, that the present price level is low although trade confidence in the metal is still lacking.

Lead ruled firm at £74½ per ton. This was due to shipment of consi-

Non-Ferrous Metal Markets Quiet

derable quantities of the metal to the USA.

Tin was quoted lower at the close at £730½ against the opening rate of £736 per ton. The initial firmness was mainly due to American and Continental demand; but the easiness at the close was attributed to lower Singapore advices.

Oils & Oilseeds

Prices of Oils and Oilseeds developed a reactionary tendency on reports of improved arrivals. Castorseed May delivery opened at Rs 145.75 and receded further to Rs 143.87 as conditions on the export front for castor oil were not encouraging. The ready rate was quoted at Rs 30 and Castor Oil, commercial quality, at Rs 15.12.

The market for Groundnuts remained depressed on lower spot and upcountry advices. May delivery opened at Rs 162.75 and, after improving at one time to Rs 162.87, receded gradually to Rs 161.37, to finish better at Rs 161.62. In the ready section, bold quality was quoted at Rs 32.62 and Groundnut Oil at Rs 17.87.

Price movements in the Linseed section were rather irregular although the overall trend was steady. Reports of fresh enquiry for linseed oil from Australia and of a rise in the UK prices aided the sentiment. May delivery changed hands at Rs 29.94 to Rs 30.37. Ready was quoted at Rs 29.62 and Linseed Oil at Rs 16.06.

In the Cottonseed section, May delivery changed hands at Rs 108.00 to Rs 106.50.

Gold & Silver

The bullion market in Bombay revealed fresh strength during the week under review. The sharp rise in the prices of both the metals signified the end of the pre-Holi spell of dullness and signalled the resumption of a busy period. Buyers were also encouraged by the bullish implications of the Gift Tax proposed in the Union Budget.

A section of the trade felt that an improvement in the market was overdue considering the recent strength in cotton, oilseeds and other commodities. It was believed that the improvement in the commodity markets in the midst of the marketing season, should place more cash in the hands of the farmers, who continue to prefer investment in precious metals. The overall performance of the market, during the current season, is, therefore, expected to be encouraging.

In the circumstances, bulls had been adopting an aggressive attitude and this was already reflected in the backwardation charges. Gold receded early on fears of Government action against bullion hoarders; but profit-covering finally minimised losses. Arrivals and off-take were estimated at 2,000 and 3,000 tolas respectively. Chaitra delivery moved between Rs 112.51 and Rs 112.87, to close finally at Rs 112.56. Ready changed hands at Rs 112.31 to Rs 112.69, while Sovereign was quoted firm at Rs 72.00.

Following a subdued beginning, Silver made an effort to go ahead; but interim gains could not be

consolidated for lack of follow-through support, though the underlying trend remained fully steady. Arrivals and off-take were estimated at 9 and 15 bars respectively. Chaitra delivery started at Rs 193.12 and advanced gradually to Rs 193.87, to close finally at Rs 193.69. Ready changed hands at Rs 193.00 to Rs 193.75.

Yarn

Conditions in the Yarn remained generally firm and active throughout last week. Turnover, both in Art Silk and Staple-Fibre yarns, improved further as a result of increased enquiries from almost all important consuming centres.

In the case of Art Silk Yarns, the improvement has been particularly noted in sympathy with the improvement in Nylon yarns where prices have advanced to the extent of Rs 2 per pound after the Budget proposals were announced. It is also stated that the market is now facing the full impact of the drastic reduction in import quotas to actual users and established importers. The Government have recently granted ad hoc import quotas of a modest value to the manufacturers; but it will take some time to secure supplies from abroad.

Latest reports from almost all important consuming centres go to show that confidence has now been revived in Staple-Fibre Yarns and there has been an improvement all round to the extent of 7 h/p per pound in several counts and qualities. It may be noted that stocks of imported staple-fibre have now been declining and the cotton mills, which are producing staple-fibre yarns, have now been compelled to use indigenous raw material in which prices have further advanced. Looking to this situation, it appears that the prices of staple-fibre yarns are likely to remain steady and, if demand shows further improvement, prices may improve further.

With the yarn market exhibiting a consistently firmer tendency, manufacturers of Rayon cloth have found themselves in a difficult situation. Besides, the improvement in cloth prices has not been commensurate with the fresh rise in yarn prices. The only redeeming feature of the present situation is, that most of the units have been able to clear 60 to 80 per cent of the accumulated stocks. It is feared, however, that several mills, especially in the small units, will be faced with the prospect of closure if the situation does not improve in the near future.

In the case of Cotton Yarns, the overall position remains unchanged except that the undertone is rather weak. This has been accentuated by further increase in the excise duty on power-looms. As a result of this, it is feared that the consumption of Indian cotton is likely to decline further.

OLYMPUS

I REFERRED last week to the well worn dictum of Burke of the difficulty of taxing and pleasing at once and of the formal acts of protest by the taxed against new levies even when the taxes are accepted gloomily as more or less inevitable. Close on the heels of the presentation of the Budget has come one such influential protest: I am referring, of course, to the address of Mr Babubhai Chinai at the 31st annual session of the Federation of Indian Chambers of Commerce and Industry. Mr Chinai, who incidentally has been recently elected to the Rajya Sabha on a Congress ticket, was vigorous in his attack on the heavy incidence of taxation and asked for specific reliefs like the withdrawal of the Expenditure Tax and Wealth Tax on companies. The Federation has also since passed a formal resolution asking for a number of specific reliefs in taxation measures: If the Federation did seriously believe that all the reliefs asked for in the list are likely of acceptance by Government, it must indeed be very optimistic.

The list includes, among other just and reasonable demands somewhat remotely acceptable to Government the treatment of dividend as earned income, the abolition of Expenditure Tax, and Wealth Tax on companies, and further reduction of personal taxation. It is not that there is not a case to be made for at least some of these demands—for instance, that on personal taxation more or less on the Kaldor pattern—but, considering that all these changes have been introduced only last year, and Government have not shown themselves particularly anxious to revise their notions on their justice or inevitability, it is very unlikely that the Federation seriously believes that the request for relief is likely to fall on receptive ears. And yet, the formal act should not go by default. That would appear to be one of the reasons for the reference to the heavy incidence of taxation both by the President and the formal resolution.

Not that there was not a case for readjustments in the tax structure or that certain specific reliefs asked for were not legitimate. In the list I cited earlier, there were included the compulsory deposit and taxes on bonus shares both of which are instances of bad fiscal measures. And, as a general proposition, Mr Chinai's plea for a recognition of a limit for taxability was something exceptionable. I myself had referred to the limit of elasticity in these matters. But the surest way to keep well within these limits of elasticity would be to see that the existing taxes are collected efficiently and no evasion is allowed to occur. Once this is achieved, then there would be such a powerful popular feeling in

FICC Meets

favour of the inequity of such heavy taxation that the Government will be obliged to yield. As it is, evasion of taxation is pointed out both by the common man and the Government as an argument against the plea of heavy taxation and as a convenient escape from the charge of thoughtless stifling of enterprise. Of course, this kind of argument is not entirely logical and contains several non sequiturs, but, as long as there is extensive tax evasion, there is no possibility of obtaining popular approbation, and, therefore, Government acquiescence to significant tax reliefs.

Indeed, the new levies like wealth tax, expenditure tax and gift tax are justified more often on the ground that they act not so much as straight fiscal measures in their right but as mere check-points of evasion of the more conventional. Many among the business community merely feel that this is also a piece with other specious arguments that deny legitimate tax reliefs, but the theoretical attractiveness and the abstract validity of the argument cannot be denied.

Mr Nehru's reply to the Federation President's request for tax reliefs was brief. Indeed, some of those present felt that the President had turned an innocuous occasion into a rather controversial one and were actually apprehensive that Mr Nehru might "break loose". In this, they were doing less than justice both to Mr Chinai's courage and Mr Nehru's reasonableness. In the event, Mr Nehru conceded that there may be points at which fiscal acts of the Government may impinge adversely on the private sector, but he said that tax relief on any extensive scale or changes in the structure of the existing taxes cannot be expected for the present. That must have seemed inevitable enough even before the President rose to speak, since the same questions have been discussed at contexts other than Chamber meetings.

For the rest, Mr Nehru showed himself both reasonable and willing to listen to suggestions. He was anxious to convince that Government did not consider the private sector to be an "enemy" of the Government. Having afforded the private sector a well defined role to play, Government were determined to help them play it worthily. In this context, he referred to the help rendered by Government in a variety of ways. He was having in mind the large scale loans given under Government auspices and with Government guarantees and so forth.

On points of details, too, he showed himself receptive to ideas, though, here again, he showed basic adherence to Government policies. On the LIC, he said that there was no question of "denationalisation", but he would con-

sider suggestions made for decentralisation and creation of several units competing with one another. On the question of investment by LIC, he agreed that there should be no "backdoor" nationalisation of companies, but he felt that the LIC cannot be said to have no functions in consciously shaping the economic trends in the country. Mr Nehru's words were significant in that they give some indication that his mind is working along lines suggested in this journal from time to time. It will be recalled that, even when it became suddenly fashionable (following the furore over Mundhra shares) to believe that the LIC should invest only in "safe" companies, we have been urging a wider and more significant function than that of mere investor. Indeed, we said that the LIC had a duty to see that stock market health was properly maintained. Mr Nehru's mind, too, seems to be working along these lines. For, he says, that he "could not accept the proposition that the Government should not invest in certain companies essential to the economy of the country and prevent the collapse through the activity of speculators. If there were dangerous symptoms in the stock market and if the future of some important and vital undertakings was jeopardised, then the Government had every intention of seeing that these undertakings did not fail".

This categorical statement from the Government is most welcome since it represents a return to a sense of proportion over LIC investments. Even now, it cannot be said that Government have understood the larger possibilities of the function of open market operations by the LIC. But, after the panicky retreat from the market that has been recommended as proper conduct for the LIC, we are now seeing the beginnings of a new strategy, which in the fullness of time may become a full blooded open market operations policy for the LIC.

I have reserved for my final consideration what indeed was, in some respects, the most refreshing thing that happened during the annual session of the Federation. I refer to the speech of Mr G. D. Birla, at a luncheon meeting of the Federation. The most interesting thing about Mr Birla is that he cuts clear through the soporific clichés that businessmen are only too prone to substitute for hard thinking. For instance, the word "Socialism" is something to which business reacts in the same unthinking way in which a doctrinaire socialist does. Their reflexes are preconditioned: only that of the former is violently against it, while the "professional socialist" is uncritically enthusiastic about it. To Mr Birla, the word socialism has no terrors. He says: "Industry

must welcome in its own interest the country's goal of socialist pattern of society. Socialism must depend upon production of more wealth. Our interests are entirely with the interests of the people. Unless there is prosperity in the country, you cannot sell".

In saying this, Mr Birla clears quite a lot of mental cobwebs. The first among these, of relevance to the theoretical socialist, is that socialism as such can produce more wealth. It cannot. The producer of more wealth is neither socialism nor capitalism, but technics. Both socialism and capitalism are primarily concerned more with distribution, an operation that follows production. So, if nothing is produced, then there is nothing to distribute. This is the "socialist" error. The error of the "capitalist" with which Mr Birla was more immediately concerned, was that they imagined that given freedom of enterprise, they can make more profits. But you can make more profits only when you sell, and how can you sell to a people who have nothing to buy things with? The sine qua non of the businessman's prosperity is the existence of a prosperous buying public. The most important, almost the single, purpose of the present efforts of the country is to bring into being the prosperous buying public.

Another instance of Mr Birla's freedom from clichés was seen in his discussion of the "sectors". Steering clear of the familiar—all too familiar—private and public sectors, he postulated the "agricultural and industrial sectors". He said that "the greatest disappointment was not in respect of industrial targets either in the public or private sector, but in the agricultural sector. In this direction we have miserably failed". The failure, which is only too depressingly true, is as much a failure on the part of the Government (i.e., the public sector) as on the part of the people (i.e., the private sector). The moral, of course, is that unless these two sectors combine to increase agricultural production, the Plan must collapse.

On the question of foreign exchange, he expressed the view that it is really a long range problem and temporary expedients like the deferred credits, etc., are likely to prove embarrassing later. Here again, promotion of exchange earning exports is the only real solution. Indeed, look at the problem whichever way you like, in abstract terms of prosperity or in more palpable terms of agricultural production or foreign exchange, and the only real answer is more real effort at primary tasks. You cannot produce two sheaves of corn where there was only one before, by merely talking about sectors. And this is a counsel that both the public and private sectors will do well to take to heart.

DELHI
REVIEW

Mixed Trend in Foodgrains Prices

QUIETLY easy conditions have been noticed in the Foodgrains markets during the week under review. Harvesting of Coarse grains has begun and new grainings have begun to arrive in the markets.

In the Hapur market, Wheat prices have recorded a fall of about 50 nP per maund, to quote Rs 15.37 for the average quality and Rs 17.00 for the farm variety. Arrivals from the producing areas are nominal. The market for Rice continues to rule steady although the supply position is reported to be satisfactory. Gram prices have recorded a slight fall, while those of Jowar remain unchanged. The market for Maize and Bajra remain depressed. Peas rule quiet due to slack outside demand. The market for other pulses remaining steady.

In the Bombay grains market, the upward tendency in Rice has

gathered fresh momentum with the old crop registering a rise of Rs 7 to Rs 10 per candy. Traders have reported a growing shortage of seasoned rice with the continued absence of arrivals in the City. Fears are general that the supply position will deteriorate after some time if the Government's policy remains unchanged. In the Coarse grains section, Jowar prices have moved down, by about Rs 5 per candy, while arrivals range from 600 to 1,000 bags per day. It is believed that the quantity will increase in the next few days. The market for Bajra, too, has reflected an easy sentiment with prices moving down by about Rs 5 per candy.

Sugar

The market for Sugar continues to rule depressed. Hopes of additional levy of excise duty on the

sweet commodity have been belied. At the same time, the Government of India have announced the usual monthly release of 1.72 lakh tons out of the current season's production for free sale. As a result, stocks, which had been cornered by a few speculators, have come out in the form of distress sales. Consequently, prices of both spot and ex-mill prices have come down.

Export policy is eagerly awaited. It seems that the export of sugar has become problematical as the foreign markets are reported to be declining. In an effort to earn foreign exchange to the tune of about Rs 8.80 crores on estimated export of 2 lakh tons, the Government of India shall have to pay a very high price of losing about Rs 11.24 crores by way of actual loss of profit and rebate on excise and cess.

NORTH INDIAN
MARKETS

State-wise sugar production, up to 15th February, is as follows (figures in tons):—Uttar Pradesh 561,647; Bihar 176,458; West Bengal 5,479; Punjab 42,863; Rajasthan 7,017; Madhya Pradesh 20,074; Orissa 1,301; Madras 20,949; Kerala 8,039; Bombay 167,927; Mysore 56,902 and Andhra 76,135. Total—1,145,391 tons.

Crushing in West Uttar Pradesh is still in full swing; but cane supplies to factories are likely to go down shortly.

Gur

The market for Gur continues to rule steady. In the Hapur market, the rate for the Panseera quality is quoted at Rs 13.50 to Rs 14 and Balti at Rs 13.62 per maund. Arrivals average 1,200 to 1,500 maunds per day, while stocks have swelled to 135,000 maunds, the corresponding figure for last year being 95,000 maunds. Total arrivals, from the beginning of the season, are estimated at 3.6 lakh maunds as against 4.2 lakh maunds in the corresponding period of last year.

Crushing is almost coming to a close and may last hardly for another fortnight. Sowing of cane for the next season is in full swing. As gur prices have been fairly high this season, it is expected that acreage of sowings for the next season will increase.

Khandsari

So long, it was felt that a countervailing excise duty would be imposed on Khandsari, which has lately thriven on the artificial advantage given to it by the heavy fiscal burdens on crystal sugar; but this has not been done. But the successive increases in the excise duty on crystal sugar has stimulated the output of Khandsari by more than five times. This expansion has, so far, been marked mostly in Uttar Pradesh. There is a growing belief that the Khandsari industry will expand to other cane-growing areas also. In fact, it is believed that the rate of output may soon reach 600,000 tons a year.

In general, the basis for preferential tax treatment of Khandsari in comparison with crystal sugar has disappeared. It has also to be noted that the Khandsari manufacturer is free from the obligation to pay the statutory price for cane and the dues of the Co-operative Societies of the cane cess.

Shellac

The Shellac market in Calcutta continues to rule quiet, with Pure TN quality easing off further to Rs 73 from Rs 75 per maund. This drop in price brought out a moderate amount of business. The USA took part in this better off-take though not on a wide-enough scale to affect prices.

THE
PENINSULA

WHEN alone among all the States, the Kerala Finance Minister provided for a surplus budget last year, it attracted unusual interest among the people in general and even evoked appreciative comments from the Finance Commission. Though Mr C. Achuta Menon has provided for a surplus budget for the second year in succession, the achievement of a surplus even without resort to new tax measures in Andhra Pradesh and the conversion of an original deficit into a surplus by means of new taxes in Madras have tended to obscure the importance which the surplus budget which he has presented would otherwise have had.

Notwithstanding the provision for a surplus, the budget for 1958-59 which Mr Achuta Menon presented last week is disappointing. The chronic deficit in the rice requirements of the State could only have been met by providing for substantial increases in internal production. But the provision of Rs 50 lakhs in the budget to serve as subsidy on food distribution, would seem to belie hopes of an immediate prospect of the food position getting eased. The Finance Minister's statement about the need to popularise the consumption of other foodgrains such as wheat and tapioca confirms this. Self-sufficiency in the production of rice is envisaged only at the end of the Second Plan and this is sought to be achieved by the extension of the Japanese method of cultivation to an area of 13 lakhs acres. To popularise the Japanese method of cultivation, the organisation of about 500 demonstration farms is also envisaged. The establishment of a co-operative farming society in each of the block area is conceived with the same purpose of increasing food production in the State.

The working of the Community Development Programme has also been behind schedule. For the budget year a sum of Rs 14 crores has been provided. The completion of 142 blocks originally fixed for 1961 has been postponed to 1963. Mr Achuta Menon points to financial difficulties, as having necessitated such a decision.

The gap between target and fulfilment is even greater in the sphere of industrial development. While Mr Achuta Menon regrets the failure of the scheme for starting several industries provided for in the budget for the current year, his explanation for this is curious and superficial. He attributes this to lack of co-operation between capital and technical skill. But he could not indicate how these two could be brought together.

It is also not sufficiently clear from the speech of Mr Achuta Menon whether the scheme for the starting of new industries which had not fructified as originally expected would be taken up during

The Kerala Budget

the budget year. The extreme pressure on land in the Kerala State which is noted for a high density of population would have warranted a more dynamic approach in regard to industrial development. But the problem does not seem to have been viewed in its proper perspective. While legislation has been passed for safeguarding the interests of labour by means of minimum wages the interests of the industrialists do not seem to have been adequately recognised. The speech of the Finance Minister is lacking in assurances to private capital.

The nationalisation of the transport services in the State has been announced in the Budget. But when scarcity of capital is recognised as the main limiting factor in industrial development, why the Government should choose to forego Central assistance for transport development by turning down the latter's suggestion for the constitution of a corporation to be in charge of the nationalised service is incomprehensible. It is all the more strange since a corporation is generally credited with qualities of enterprise and efficiency of administration which Government departments do not possess. But the Government would seem to have preferred ideological victories to economic assistance from the centre.

The decision of the Government to bring under State ownership some private forests in the Malabar area does not seem to be well-timed in view of the fact that this would involve diversion of the extremely limited resources of the Government from purposes which are comparatively more important and which could have absorbed any increase in expenditure with greater profit. A sum of Rs 19.96 lakhs has been provided for this purpose. But the provision of a sum of Rs 7.5 lakhs for research in forest conservation and the decision to extend cashew cultivation over a wider area would be welcomed.

The need to balance the budget would seem to have precluded relief to any particular section of the population and consequently no such relief has been announced in the budget. Though he has promised sympathetic consideration of the demands of the low paid Government servants for increased pay the reference to the increased expenditure already incurred by the recent enhancement of the pay of certain categories of such employees, could bely hopes of any further concession.

The accretion of revenue under the recommendations of the Finance Commission and the new taxes that have been announced in the budget have considerably improved the budgetary position. And though anticipated increase in gross revenue in the current

year has revealed a shortfall of Rs 55 lakhs, consequent on the non-fulfilment of expectations in regard to agricultural income tax which was first announced in the budget for the current year, he expects improvement of revenue from other sources, such as land revenue and forest revenue.

The new taxes that have been announced in the budget are, increase in the rate of tax on urban immovable property, stamp duty on forward transactions in pepper and coconut oil, sales tax on timber surcharge on passenger fares in the State Transport Services, electricity duty at a higher level, and its extension to consumers other than licensees, and increase in sales tax on diesel oil from 8 nP per rupee to 20 nP. These tax measures are expected to fetch an additional revenue of Rs 66.78 lakhs, and convert the original deficit of Rs 32.77 lakhs to a surplus of Rs 34.01 lakhs. The revenue and expenditure for the coming financial year have been estimated at Rs 33.62 crores and Rs 34.17 crores respectively. Though the statement of the Finance Minister that the taxes have been carefully chosen so that the burden would not fall heavily on any particular section of the population, could not be disputed,

the stamp duty on forward transactions on pepper and coconut oil which is credited with a revenue potential of Rs 50,000 only has little justification.

Mr Achuta Menon is optimistic about the prospects for the Second Plan and the budget is largely oriented to facilitate successful implementation of the various programmes under the Second Plan. Since there are few schemes in the State's Second Plan which depend for their implementation on the availability of foreign exchange, the success of the Plan would depend solely on the efforts of the Government to raise the resources internally. In this connection Mr Achuta Menon has referred to the need for pruning unnecessary expenditure on non-plan items. This problem has been referred to the Administrative Reforms Committee which is also expected to make recommendations to eliminate delay in the implementation of the schemes that have been sanctioned. The arrears of expenditure in connection with various schemes under the State's Plan are of a huge order and more than anything else, it is on this task of eliminating delay in implementation of schemes that the State Government have to concentrate its energy.

Discharge of Function Rendered More Difficult

Substantial Underwriting Carried out

Sir Ramaswami Mudaliar, the Chairman, Reviews Prospects

The Annual General Meeting of the Shareholders of the Company will be held in the Board Room of the Associated Cement Companies, at Cement House, Queen's Road, Bombay 1, on 7th April 1958 at 4 P.M. The following is the Statement by the Chairman Sir Ramaswami Mudaliar circulated to the Shareholders with the Directors' Report and Accounts for the year ended December 31, 1957.

It will be seen from the Directors' Report that by the end of 1957 your Company had agreed to give financial assistance in Rupees for a total of Rs. 944 lacs in respect of 31 projects. In addition 5 loans in various foreign currencies had been sanctioned for a total of the equivalent of Rs. 221 lacs.

With the Directors' Report and Annual Accounts for 1957 your Company completes the third year of operation and I take this opportunity to review the activities of this Company and to make a few observations of a general character. After allowance is made for the slow rate of progress inevitable in the initial stages of a new enterprise it may be stated that from the figures given above your Company's operations will not be regarded as unimpressive. In my previous remarks at General Meetings I have referred to a number of measures in the field of taxation and elsewhere which have operated during the three years since this Corporation commenced business; collectively these measures have produced what is conveniently described as an unfavourable investment climate in which investors have been reluctant to take on new commitments and in which their ability to do so has been curtailed by high taxation. It is against the background of these conditions that the operations of this Corporation must be viewed.

From the information given in the Directors' Report for 1957 it will be apparent that total assistance sanctioned by your Company can be divided more or less equally between loan operations in Rupees and Foreign Exchange on the one hand and underwriting operations in respect of shares or debentures on the other. In the provision of loans while your Company is not the only source of Rupee finance in India it has come to occupy a special position by reason of its ability to grant loans in foreign currencies of moderate amounts in present times when the shortage

of foreign exchange is holding up the development of many enterprises. Out of a line of credit of the equivalent in various currencies of U.S. \$ 10 million available to your Company from the International Bank for Reconstruction and Development, loans have so far been sanctioned of an equivalent of \$ 4.63 millions for five projects, and it may not be long before the entire amount is used up. It was hoped at the time when this Company was floated that further foreign exchange resources would be made available when the first line of credit became exhausted and I trust that your Company may be enabled to continue to render assistance in the form of foreign exchange loans in suitable cases and for suitable amounts through the grant of additional credit from the World Bank when this becomes necessary.

As a financing institution which also takes care of providing permanent share capital for industrial development your Company is the only one of its kind in this country and it is a matter of no small significance that within the short period of its existence it has been able to carry through substantial underwriting operations in spite of the unfavourable investment climate. Out of 16 underwriting operations sanctioned involving a total commitment of Rs. 535 lacs, 9 operations had been completed by the end of 1957 and two more have been completed so far in this year. Of equal importance with the actual underwriting operations effected is the laying of the sound foundation for our future activities in this field. I am hopeful that with the traditions that are being established it should be possible in the future to organise underwriting activities on a larger scale. It has been our endeavour to interest institutions and firms of good standing to join us as underwriters or sub-underwriters so as to be able to organise underwriting operations which are too large for your Company to carry through alone. I have emphasised before that success in this field depends upon a suitable investment climate and I trust that Government will give due regard to the necessity for doing their share to bring about the right sentiment among potential investors without whose support we cannot do fully what we set out to achieve.

Generally our approach is based on the idea of interesting other parties or agencies in our opera-

tions so as to broaden their base. In this way we hope, as experience of our operations becomes more widely known, potential investors will learn to rely on the detailed examination of every project which we insist upon before providing financial assistance of any kind. It is to be noted that the World Bank in its operations is always looking for, and has achieved a substantial measure of success in obtaining, the support of other financial institutions and investors.

I should like to mention one significant feature of the assistance so far sanctioned. Out of the 36 projects which we have agreed to help 16 are new enterprises. It may also be noted that both in the matter of industries covered and their distribution over the country the assistance is broad-based. Special attention has been given to the needs of underdeveloped areas.

It has become a matter of concern that while your Company has been trying to fulfill the role for which it was set up by providing risk capital to new as well as existing enterprises, the discharge of that function has been rendered more difficult as a result of new factors which have come into operation during the last 3 years. On account of a considerable increase in income tax and corporation tax rates and the levy of capital gains tax the earnings of your Company after tax are so reduced that the sums remaining are insufficient to permit adequate allocation to reserves as well as a reasonable return to the shareholders. I need not repeat all the arguments which show the need for building up substantial reserves against the risks inherent in our operations—particularly in the financing of new ventures. In the case of new ventures your Company may have to wait several years before it can receive any Dividends on its investment and, when received, such Dividends in common with all Dividends received on investments in shares by your Company, will suffer Corporation tax in the hands of your Company despite the fact that the same earnings will already have suffered Corporation tax in the hands of the Company concerned. Investors in new projects who look to an appreciation in the value of their investments as some compensation for foregoing Dividends in the earlier years now find that the capital gains will be taxed, admittedly at a lower rate than

normal income tax. This means that your Company will be taxed on capital gains when it realises investments with the view to taking on new commitments. It will be recalled that it is the policy of this Company to revolve its investments in order to make its funds available for further industrial financing. Your Directors have represented to Government that consideration be given to the grant of tax concessions to Companies such as yours which are engaged in industrial financing and do not have the benefits available to industrial enterprises in the way of development rebate, additional depreciation allowances and the like. Without some such concession your Directors feel that it will be difficult for them to recommend the setting aside of adequate amounts to Reserve for possible capital losses on their operations and at the same time give a reasonable Dividend to the Shareholders.

It will be evident from the results of 1957 that against operating profits of Rs. 48 lacs taxation takes Rs. 25 lacs leaving only Rs. 23 lacs for allocation to Reserves and for Dividends to the Shareholders.

You will see from the accounts that the meeting of the additional tax imposed in respect of 1956 and the allocation of Rs. 5 lacs to Reserve this year together with the payment of a modest Dividend of 4% tax free on the paid-up Capital have involved a substantial reduction in the balance which stood to the credit of the Revenue Account after payment of the Dividend last year. Unless we are able to step up our income during the current year and obtain some tax concessions the payment of a Dividend to Shareholders at a reasonable rate commensurate with the risks which this business involves will be no easy matter. Your Company's present resources are likely to be fully utilised in the near future. How best additional funds can be raised is engaging our attention and my plea for tax relief has considerable bearing on our ability to do so.

Turning now to the state of India's economy during 1957 I should like to refer to certain aspects of major importance. Early in the Second Plan both the Private and the Public Sectors have met a severe shortage of internal and external capital for fulfilment of the production targets laid down. While I am far from

Pepper Steady

DESPITE quieter advices from New York and Singapore, Pepper markets in India have continued to rule steady, thanks to continuous support from bulls and covering by shorts. In the Alleppey market, the rate is quoted around Rs 562.50 per candy. Calcutt, which was until recently soft seller at round about Rs 550, has become reserved at Rs 575, as holders and growers have the feeling that New York should sooner or later must come in for Malabar black if the present uncertainty in Indonesian situation continues and as soon as the present heavy stock of Lampong at Singapore is liquidated.

In the New York market, prices remain unchanged. Despite continued improvement in prices reported from India and Singapore, sellers here say that they are unable to raise current rates, because of the lack of consumer demand.

In the London market, black Sarawak is quoted at 16½d per pound seller. The rate for Malabar pepper has developed a slightly hardening tendency on higher advices and reported covering against Russian demand at origin. In the Singapore market, Sarawak special is quoted at Str. \$63 per picul of 133.3 pounds.

Groundnut

The Madras Groundnut market has continued to rule steady with business reported done at Rs 145 per candy. Arrivals are reported at about 200 tons per day. Calcutta interest and local small crushers are taking up this quantity.

In the Groundnut Oil section, the rate for the ready position is maintained at Rs 298 per candy. Operators felt great relief on the news that there would be no fresh levy on vegetable oils in the Union Budget; but the continuance of the exemption limit of 75 tons and clearance at the reduced rate of Rs 70 per ton were disappointing to the market since it would handicap the working of the bigger mills.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides did not show any improvement; but prices ruled firm with a steady clearance. Arrivals of Buff hides were normal with no change in prices, while those of Cow Calf and Buff Calf were rather restricted.

In the export section, trading was not brisk and business suffered from price difficulties. It is re-

ported that there is enough stock on spot in London to keep the demand well satisfied and, with larger Government releases in the UK, the market in London has not felt any scarcity of supplies.

In the Tanned Skin section, arrivals of both Goat and Sheep skins were moderate and there was a steady clearance. Prices were 6 to 12 nP per pound lower in the case of sheep, and unchanged to 6 nP per pound lower in goat skins.

On the export front, trading was limited. Only a few sales were reported done in 5½/6 lbs goats run selections at prices varying from 14sh 3d to 14sh 9d. There was, however, improved enquiry for 8/9 lbs, which were sold upto 15sh 3d. In Sheep skins, primes and semi-primes were quiet. Some sales in common quality sheep were reported at last November levels.

In the London auction, to be held on the 17th March, offerings are expected to be 480,000 goat skins and 940,000 sheep skins.

Coconut Oil

Near-panic conditions were witnessed on the Coconut Oil market in Alleppey during the week under

SOUTH INDIAN MARKETS

review following continued good spot enquiries from Calcutta and consequent pick-up in values. As a result, bear operators, in the futures section, rushed to cover their pending commitments, while bull's secured full control of the market.

These sudden developments reflected miller's reserve caused by higher advices from overseas markets and slight drop in corn inflow. In the spot section, the rate, after opening at Rs 590 per candy, was pushed up to Rs 605 at the close. March and April deliveries spurted to Rs 612 and Rs 607 from Rs 602 and Rs 599 respectively.

Bangalore Silk

Prices in the Bangalore Silk market maintained a generally firm trend last month particularly in the case of Filature varieties. Kollegal ranged between Rs 31 Rs 38.50 with T. Narsipur quoted between Rs 37 and Rs 38.50. Kanakapura, on the other hand, tended to rule at still higher levels, touching Rs 40.

The general rising trend in the prices of Filatures, which is not a healthy sign, is attributable to paucity of cocoons following certain unfavourable seasonal factors.

happy at the apparent slowing down of the rate of progress as a result of such shortage it looks to me that the country is now entering a more realistic phase of planning. I see in the country welcome signs of awareness of difficulties which lie in our path and a determination to grapple with those difficulties in a serious fashion.

While special attention appears to have been given recently to the need for increasing exports it does not appear to me very probable that substantial and early relief to our balance of overseas payments can come from this source. The unsatisfactory feature of our overseas payment situation is the dependence on imports of food grains. It appears that favourable harvests during the First Plan Period have resulted in insufficient effort being directed towards the expansion of food production during the Second Plan Period with the result that the partial failure of crops in some parts of the country have increased the dependence on imports at a time when this can ill be afforded. I am glad to note that this problem is now engaging the attention of Government. However, I believe it should be given a central place in all our planning both present and future because, with the population growing at a faster rate than ever before as the result of improved standards of living and health, our efforts in the direction of industrial or other development will remain at risk until we have built up a continuing overall surplus of food grains for domestic consumption.

I referred briefly to the need and the efforts which are being made to encourage exports and said that this was not likely to be an easy task. I feel bound to observe that

in my opinion the channelling of exports through State Trading is not the only or the best way in which the most satisfactory results are likely to be achieved. The efforts of Government could, I believe, be even more profitably directed towards the support of export promotion groups comprising those in the exporting industries to whom in any event Government must look for the major efforts.

Any survey such as I have attempted of the problems confronting our country at this important stage of the Second Five Year Plan would be incomplete if I do not pay a tribute to all those overseas Governments, International Agencies and other friends of India who have during this period of exchange shortage come forward with help in various forms. We must also remember the many overseas Companies who have made new investments or increased existing ones in India thereby showing their confidence in our country. On the other hand we must ourselves recognise that help from such sources can, at best, be only marginal in meeting our large-scale requirements. It is to our own efforts that we must look in the main for finding the resources to carry through our ambitious plan of social and industrial development whether they require finance in the form of Rupees or foreign currencies. To this end it is necessary to recognise that it is the actions of individual persons which will determine whether we are able to find the resources we need or not and the task falling on Government is primarily to bring about the conditions under which individuals will be able and willing to do their share.

In the present and the immediate future I believe that the utmost

attention should be given to the completion of those projects included within the Second Five Year Plan which are already substantially advanced. This applies particularly to those which when in operation, will achieve early savings of foreign exchange. Concentration in this direction at this moment even at the cost of deferring the commencement of other attractive projects which may also eventually achieve exchange savings by avoidance of imports is the only way in which quick results can be counted upon. Coupled with a review designed to take advantage of progress already made there should be, in my opinion, an early objective examination and rephrasing of the remainder of the Second Five Year Plan with due regard to the resources now available to us. The time for proceeding on the assumption that windfalls will come from some direction or another so as to enable us to avoid a crisis is, in my opinion, passed. At all costs we must endeavour to avoid a reduction in economic activity as the result of a shortage of imported raw materials or semi-finished goods necessary to sustain the industries already started or far advanced in construction.

THE UNITED COMMERCIAL BANK LIMITED

Registered Office:

2, INDIA EXCHANGE PLACE, CALCUTTA-1

NOTICE

NOTICE IS HEREBY GIVEN that the FIFTEENTH ANNUAL GENERAL MEETING of the Shareholders of THE UNITED COMMERCIAL BANK LIMITED, will be held at the Registered Office of the Bank at 2, India Exchange Place, Calcutta, on Wednesday, the 9th day of April 1958, at 4 P.M. to transact the following business:—

1. To receive and adopt the Report of the Directors and the Audited Balance Sheet as on 31st December, 1957, and Profit & Loss Account for the year ended 31st December, 1957.

2. To declare a dividend.
3. To elect four Directors in the place of

Shri M. L. Tapuriah
Shri I. P. Goenka
Shri A. C. Law
Shri R. L. Nopany

who retire under Article 92 of the Articles of Association of the Bank, and, being eligible, offer themselves for re-election.

4. To appoint Auditors for the current year and to fix their remuneration.

5. To consider and, if thought fit, to pass, with or without modification, the following resolution as a SPECIAL RESOLUTION:

"That Articles of Association of the Company be altered in manner following:

- (a) In Article 22—lines 8, 9 and 10 the words 'or the Directors may agree with such member that the member may participate in profits upon the amount so paid or satisfied in advance' appearing after the word 'upon' in the eighth line of the said Article 22 and ending before the word 'And' in the tenth line thereof be deleted.

- (b) That the first paragraph of Article 87 be deleted and the following be substituted in place thereof: '87. Each Director shall be paid out of the funds of the Company by way of remuneration a sum of Rs. 500/- every calendar month.'

Note: 1. A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND THE PROXY NEED NOT BE A MEMBER.

2. (a) The transfer books of the Bank will be closed from Monday, the 24th day of March 1958 to Wednesday, the 9th day of April 1958, both days inclusive.

- (b) The dividend, if sanctioned, will be payable on and after the 10th April, 1958, to those Shareholders whose names appear in the Register of Members on Wednesday, the 9th day of April, 1958.

- (c) Dividend Warrants will be posted to Shareholders at their registered addresses or in accordance with their mandates. Shareholders are requested to advise change in their addresses, if any.

EXPLANATORY STATEMENT REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956.

The item of Special Business to be transacted at the Annual General Meeting to be held on the 9th day of April 1958 is to consider and pass a Special Resolution seeking to alter articles 22 and 87 of the Articles of Association of the Company.

Item 5 (a): The words "or the Directors may agree with such member that the member may participate in profits upon the amount so paid or satisfied in advance" appearing in the 8th, 9th and 10th line of the existing Article 22 are likely to be construed to contravene or violate the provisions of Securities Contracts (Regulation) Act 1956 and the Securities Contracts (Regulation) Rules 1957, which have come into force since 20th February 1957 and which, inter alia, provide that any amount paid in advance of calls on any share may carry interest but shall not entitle the holder of the shares to participate in respect thereof, in a dividend subsequently declared. To remove all doubts the Company has been advised to alter the said Article 22 by deleting the above words. The Directors have no interest in the above amended Article 22.

Item 5 (b): This refers to the remuneration by way of sitting fee payable to the Directors which, in accordance with first paragraph of the Article 87 of the existing Articles of Association, is a sum not exceeding Rs. 100/- for each meeting of the Directors or any Committee of the Directors attended by him.

It is now proposed that a remuneration of Rs. 500/- per month be given to every Director instead of sitting fees of Rs. 100/- per meeting.

The responsibility of the Directors has considerably increased under the new

Companies Act and their work has also increased by reason of the increased volume of business that the Bank has to handle compared to what was being done in the first few years. The Directors have to devote a good deal of time for attending to the affairs of the Bank at its meetings or otherwise. In view thereof, it has been proposed that the remuneration of Direc-

tors be increased as stated above.

The Directors are interested in the amended Article 87 which seeks to increase their remuneration as aforesaid.

By Order of the Board,
S. T. SADASIVAN
General Manager.

Calcutta,
4th March, 1958.

THE JAY SHREE TEA GARDENS LIMITED

NOTICE is hereby given that the twelfth Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at India Exchange (2nd floor), India Exchange Place, Calcutta-1 on Wednesday the 23rd April, 1958 at 3.00 P.M.

Directors and in such manner as may from time to time be thought fit by them."

The share transfer Registers will remain closed from 25th March 1958 to 23rd April 1958 both days inclusive.

By Order of the Board,
BIRLA BROTHERS PRIVATE LIMITED,
Managing Agents.

8, India Exchange Place,
Calcutta, the 4th March, 1958.

- (1) To receive and consider the Directors' Report and pass the Audited Accounts for the year ended 31st December, 1957.

- (2) To declare dividend on Preference and Ordinary Shares.

- (3) To elect a Director in place of Shri N. C. Mehta who retires by rotation and in respect of whose reappointment, to consider and if thought fit to pass the following resolution of which a special notice has been received by the Company.

"RESOLVED that Shri N. C. Mehta, who has attained the age of 65 years and who retires by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit prescribed under Section 280 of the Companies Act 1956 shall not apply to him."

- (4) To appoint Auditors for the current year and to fix their remuneration.

- (5) To transact any other business that may be transacted at such meeting.

- (6) As a special business to consider and if thought fit to pass the following special resolution with or without modification:

"RESOLVED that for a period of five years from 1st January, 1957, payment of commission to the Directors upto a maximum of one per cent, to be decided by the Directors from year to year, on the net profits of the Company in respect of each financial year, as determined in accordance with and subject to the provisions of the Companies Act 1956 be and is hereby sanctioned to all the Directors of the Company and that the same be distributed amongst such

Note.—1. A member entitled to attend and vote at the meeting may appoint a proxy in place of himself and that the proxy need not be a member.

The explanatory statement as required in pursuance of sub-section 2 of Section 173 of the Companies Act 1956 in respect of item Nos. 3 & 6 is given below.

ORDINARY RESOLUTION NO. 3.

Shri N. C. Mehta, I.C.S. (Retd.), Bar-at-Law, Director of the Company retires by rotation. As he has attained the age of 65 years his reappointment as a Director of the Company requires the resolution of shareholders specifically declaring that the age limit prescribed in Section 280 of the Companies Act 1956 shall not apply to him. The Company has received special notice from a member notifying his intention to move the resolution set out in the item. Shri N. C. Mehta has been a member of the Board of Directors of the Company since long and it is in the interest of the Company that he should continue to be a Director of the Company.

SPECIAL RESOLUTION NO. 6.

Under Section 309 (4) of the Companies Act 1956, Special Resolution is required for the payment of Directors' commission not exceeding one per cent of the net profits of the Company. The said resolution is to be for the period beginning from 1st January 1957 onwards and subject to its being passed the Directors' commission @1% of the net profits of the Company for the year 1957 and subsequent years will become payable to the Directors.

THE NATIONAL BANK OF INDIA LIMITED AND TWO SUBSIDIARY COMPANIES

CONSOLIDATED Balance Sheet as at 31st December, 1957 (See Note 1)

	1957 £		1957 £
Capital—Authorised and Subscribed—4,562,500 Shares of £1 each	4,562,500	Current Assets—

REPORT OF THE AUDITORS TO THE MEMBERS.

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purposes of our audit have been received from Branches not visited by us. We have examined the above Balance Sheet which is in agreement with the books of account and returns. In our opinion and to the best of our information and according to the explanations given to us the said Balance Sheet gives the information required by the Companies Act, 1948, in the manner thereby authorised for Banking Companies and, on such basis, the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1957.

We have also examined the annexed Consolidated Balance Sheet and Consolidated Profit and Loss Account of the Bank and its Subsidiaries dealt with thereby, with the audited accounts of those Companies. In our opinion such Consolidated Balance Sheet and Consolidated Profit and Loss Account have been properly prepared from such view of the state of affairs and of the profit ascertained in the manner therein indicated of the Bank and its Subsidiaries so far as concerns members of the National Overseas and Grindlays Bank Limited.

London,

National Overseas and Grindlays Bank Limited

Difficult Year for India in 1957

The Effect of High British Bank Rate

Statement by the Chairman, Mr J. K. Michie

The following is the statement by the Chairman, Mr J. K. Michie, relating to the Accounts to be submitted to the Annual General Meeting to be held on the 1st April 1958:—

The physical amalgamation of the National Bank of India Ltd. and Grindlays Bank Ltd. into the National Overseas and Grindlays Bank Ltd, took effect from the 1st January, 1958, so while this is the first report to the shareholders under the new name, the Accounts for 1957 perforce are presented in the previous form.

Despite the enormous amount of detailed work involved, thanks to the organising ability of those specially seconded to the task and to the co-operation of the staffs of both Banks, the fusion was accomplished with remarkable smoothness and I hope without inconvenience to our customers. In a complex operation of this kind to foresee and anticipate every difficulty would be superhuman but I am satisfied that any outstanding problems will be disposed of with the sympathy and understanding which were the keystones of the whole operation.

We have established a 54 Parliament Street Committee of five members, all of whom were on the Board of Grindlays Bank Ltd. This Committee will assist the Management to deal expeditiously with the large number of accounts which they hold and so maintain the very high standard of service associated with the name Grindlays.

I have to report a change in your Board since our last meeting. Sir Robert Reid, who had been a member since 1943, retired on 31st December last. Sir Robert had a distinguished career in the Indian Civil Service, finally as Governor of Assam, and his intimate knowledge of the sub-Continent was of great value to us. Incidentally his father was a member of the Board for 31 years, from 1878 until 1909.

To fill the vacancy we invited Mr. E. H. Owen to join us, which he did early in January. Mr. Owen had been a member of the Board of Grindlays Bank Ltd. since October, 1955, so already had knowledge of our business. He also has wide interests in the City and I recommend him to you with every confidence.

I also have an impending loss to report. Mr. W. H. Miles, who has very special knowledge of Ceylon and who has been on the Board since April, 1946, has intimated that he wishes to reduce his busi-

ness commitments and his resignation will take effect after the Annual General Meeting. We accept his decision with much regret and shall miss his wise advice not only on matters concerning Ceylon but on the wider aspects of our business.

Before leaving the subject of the Board I am sure you would wish to join in congratulating Sir Toby Low, K.C.M.G., C.B.E., D.S.O., M.P., on the honour of Knighthood conferred on him by Her Majesty the Queen in the 1957 Birthday Honours List for his distinguished services as a Minister of the Crown over a period of six years.

Turning to figures, the total of our Consolidated Balance Sheet at £162,105,220 shows a small reduction and our net profit is £5,345 lower at £427,490. As usual this figure is arrived at after full provisions for taxation, for bad and doubtful debts and other necessary reservations. Two interim dividends each of 7½% have been declared, making a total unchanged distribution of 15%.

During 1957 Government securities again fell considerably in value—a process which fortunately has recently been reversed—but I am glad to be able to report that these temporary reductions in value as in the past have been provided against internally.

INDIA

1957 was a difficult year and at the moment prospects for 1958 promise little, if any, alleviation of her financial problems; in fact, due to a poor monsoon, the food situation is less favourable than in recent years and that means more imports and a greater drain on monetary reserves.

When a country is in process of an industrial expansion at a rate far in excess of its own savings, this, combined with a fall in the values of its basic exports, i.e., jute products, tea and cotton goods, is doubly hurtful. The new investments absorb sterling balances which previously yielded interest; alternatively they are being built with the help of borrowed money on which in some form or another and at some time or other interest will have to be paid. There is, temporarily there is a large element of inflation in the phase through which India is passing.

Internally money is tight and too cheap and Government have asked Banks to reduce their lendings. This process would be easier if Government itself paid its dues

somewhat more promptly and recognised that money, too, is a commodity which should only be cheap if it is plentiful.

Another major aggravation of India's difficulties has been the lack of public confidence as evidenced by a continued fall in Stock Exchange values, accentuated, of course, by the Mundhra incident. In view of the wide publicity being given to this affair you will be glad to know that our Bank is involved only to a limited extent and full provision has been made in these accounts for any possible loss. It is most regrettable that the involvement of the Life Insurance Corporation in the Mundhra affair has led to the resignation of India's able Finance Minister Mr. T. T. Krishnamachari.

At this stage it is impossible to avoid comment on India's immediate economic difficulties, but on the other side of the picture there is no question of the energy and realism with which she is now facing them. Imports are being cut, long credit is to some extent being arranged and a certain success is being achieved in raising further loans and aid. Equally there is no doubt of the goodwill towards India of the countries and organisations from which the funds and other assistance may be secured and I am certain they will strain themselves to help India over her difficulties.

PAKISTAN

The economy of Pakistan is also under strain. The year 1957 ended with a deficit of over £19,000,000 in the balance of payments as compared with £675,000 in 1956.

There have been falls in both prices and production of tea and jute, the cotton crop yield was about the same as the previous one, but exports are running at a much lower level.

The food situation in East Pakistan has recently improved considerably and prices have fallen to reasonable levels. In October Mr. Suhrawady resigned the Premiership and after a short period under Mr. Chundrigar was replaced by Malik Feroz Khan Noon, who has previously held office in a variety of capacities.

Internally, money is in fair supply in Pakistan, but as is now much more generally realised it is trade balances and external reserves that really matter and Pakistan has a stern fight ahead of her. Nevertheless prospects for 1958 are more favourable, but much depends on food production

and the slowing down of purchases of capital goods from overseas. The Sui Gas Scheme is also increasingly helpful by saving imports of fuel.

CEYLON

Last year I was able to report a buoyant economy; good prices for tea and an increased balance of trade, the only clouds being labour relations, particularly in the port of Colombo, and the continued talk of nationalisation of tea estates.

Since then tea prices have been volatile and generally lower and rubber prices also are lower, while recently conditions in the port of Colombo have been chaotic and have caused a severe and crippling hold-up of exports.

It has been stated officially that tea estates in Ceylon would be nationalised only when it became necessary in the interests of the country's economy and that time has not yet arrived.

To add to the troubles there was a disastrous flood up-country in December which has disrupted communications and slowed down exports even further. The country's most immediate problem is port labour and how it is to be handled. At the moment it seems to be largely out of hand. Other labour is also restless and widespread strikes are threatened. Whatever the causes of this unrest the results are certainly embarrassing and extremely damaging to the economy of the country.

BURMA

Last year rice exports reached a post-war record of over 2,000,000 tons, timber exports were maintained and with the coming into operation of the new oil refinery, imports of oil were reduced. There was, too, an encouraging improvement in what is called "law and order". In fact, portents were distinctly encouraging.

Unfortunately 1957 brought the poorest monsoon since 1920 and Burma's rice crop will thrash out 30% short of the previous year, which means the exportable surplus of around 1,000,000 tons only and a loss of foreign exchange of nearly £30,000,000. Foreign exchange reserves are already falling and economies will have to be the order of the year. There is a regrettable movement afoot to restrict and even ban internal overdraft facilities to foreign or foreign-controlled companies and firms and this will affect many of our constituents. It is also very doubtful if it will benefit Burma's trade. The difficulties over remit-

tances, both personal and of accumulated profits, I regret, continue.

EAST AFRICA

During the past year Branches were opened at River Road, Nairobi, and at Gulu in Uganda.

In Kenya Fort Hall, which had formerly been a sub-Branch to Thika, became a full-time Branch on 1st July, 1957, and on that date a Sub-Branch to Fort Hall was opened at Embu. In the same month a sub-Branch to Nyeri was opened at Karatina.

KENYA

Grain crops were reasonably good, while the coffee crop reached an unexpectedly high figure of 22,000 tons and fetched quite good prices. Tea production continues to expand, although prices were not as good as in 1956.

The resettlement of Kikuyu and Meru tribesmen involved in "Mau Mau" continues and during a brief visit to Kenya in November I was able to see a part of what is being done.

From my observations the building boom in Nairobi and elsewhere is over, and particularly as the flow of capital into East Africa is declining it would be a good thing if less money were now to be put into bricks and mortar and more devoted to increasing liquidity.

The Government and other public bodies are finding it increasingly difficult to raise loans either in London or locally and this both has an effect on and is a reflection of the availability of money generally.

UGANDA

The two main cash crops, cotton and coffee, gave average to good yields last year, although neither reached the figures hoped for. Due to a prolonged drought in August/November prospects for this year are far from good and will mean a great deal less spending power in the Protectorate. The cotton crop, which partly because of better agricultural methods was at one time expected to reach a record yield of 450,000 bales, is now estimated at 310,000, the one satisfactory feature being that but for the improved methods adopted the yield would have been even lower. There is therefore a good hope for future years. The yield of clean coffee is now estimated to be 45,000 tons against 67,000 tons last year. Uganda suffers less variation in her rainfall than do her immediate neighbours and given reasonably peaceful political conditions her economy will undoubtedly continue to expand.

TANGANYIKA

Sisal prices continue depressed and during 1957 went as low as £69 per ton. A satisfactory feature of the industry and a proof of its vitality is that yield is being maintained in spite of the low price. Tanganyika's cotton crop in the Mwanza area is steadily growing in importance and value and in 1957 150,000 bales were marketed against 120,000 bales in 1956. In 1951 the crop was 41,000 bales only.

Coffee yields in the Kilimanjaro area continue good and acreage is expanding.

ZANZIBAR

Zanzibar and cloves are automatically associated in one's mind and last year's crop of 21,500 tons was an all-time record. Coinciding with the troubles in Indonesia, which is one of the major markets, this vast crop is proving something of an embarrassment as the carrying of a large part of it is falling on the Clove Growers' Association, a quasi-Government body created to assist in the financing, storing and orderly marketing of Cloves. Madagascar also has a large crop and is marketing actively with a naturally depressing effect on prices. It is most unlikely that there can be two exceptional crops in succession, so it is hoped the situation will be adjusted.

THE FEDERATION OF RHODESIA & NYASALAND

The Federation of Rhodesia & Nyasaland features in our survey for the first time. We now have six Branches in Southern and Northern Rhodesia and one agency in Bulawayo. Two further offices, one in Salisbury, and one in Belmont, Bulawayo, are in train.

During 1957 we were well pleased with our progress despite the fact that certain credit restrictions were placed upon Banks when it was seen that copper prices were still on the way down. Since the close of the year, because of a large reduction in the sterling balances of the Federation and the continued depression in the price of copper—the price has fallen by over £100 per ton since 1st January, 1957—further restrictions on lending have been imposed on the Banks and generally we must expect a period of relative stagnation.

Tobacco did well in 1957, but because of unseasonable rains prospects for this crop are not so good.

Last October, accompanied by Sir Toby Low, I made a fairly extensive tour of Southern and Northern Rhodesia to inform ourselves at first-hand about these, to us, new territories and about our business there. In spite of the difficulties I have already mentioned we brought away an impression of a young and virile country which is determined to develop a part of the world in which there is not only plenty of room but also great possibilities of agricultural and industrial expansion.

At time of writing, the Deputy Chairman, Mr. Stuart, and Mr. Kerr, our General Manager, are visiting our Rhodesian Branches and this additional first-hand experience will be of undoubted benefit to our local Management and to the Board.

On the assumption, which I think is a reasonable one, that the present recession in copper and other prices, is temporary and that a somewhat higher plane can be expected, there is no reason to be pessimistic of the economic future of the Federation.

ADEN

The re-opening of the Suez Canal gave the trade of Aden a very definite fillip and it has remained on a fairly high level of activity, although there are now signs of overstocking.

SOMALILAND PROTECTORATE

Rainfall has been plentiful this season and exports of livestock, which is the territory's chief product, have been running at a high level.

A considerable expansion of the harbour facilities at the port of Berbera is now under way.

GRINDLAYS BANK LTD

The last year of the Bank as a separate unit was a successful one and the volume of deposits again showed an increase.

OUR FINANCE & DEVELOPMENT CORPORATION

The year's operations again showed a profit, which is being retained in the business.

GENERAL

The reduction of the Bank of England rate to 5% in February, 1957, proved to be an over-optimistic step and on 19th September last circumstances demanded that it be again raised, this time drastically to 7%. This unpalatable medicine seems to be working, although the Governor of the Bank of England has just warned us against being too complacent about our progress. There is indeed no panacea in monetary policies by themselves. If they have the desired effects of making us as a country not only tighten our belts but also gird up our loins then all will be well—otherwise no.

I have commented in each of my last two Statements on the disparity between money rates in countries where it is certainly as scarce as it is here and those prevailing in London.

One result of this disparity is a very natural one—for industries and businesses to endeavour to borrow as largely as possible where money is "cheap" and as little as possible when it is not only considerably more expensive but much harder to come by. This fact is not making our role as overseas bankers any easier, particularly as competition for deposits is growing in every sphere of our activities. It is therefore with interested sincerity that I hope for an easier money market in this country and its re-opening on a larger scale to overseas borrowers.

It is impossible to foresee other than a difficult year for commerce, industry and their handmaiden, banking, but that is no justification for pessimism and I look forward albeit not immediately to a resumption of progress.

STAFF

As always, we are beholden to our Staff, and I wish to thank an enthusiastic and able body of men and women for their loyal service.

S. E. RLY TENDERS

Sealed tenders are invited for supply of the following materials:

Tender No. CON/COS/4/87/WP/CEC/F1/58 for supply of 2 Nos. of each of (1) standard type of Foot over Bridge B. G. as per details of unit 'A' as per C.E's No. 15924 Sheet No. 3 Head of Central Column should be made 18'0" instead of 16'6" and (2) standard type of Foot over Bridge B.G. as per details of unit 'D' as per C.E's No. 15924 Sheet No. 4 Head of Trestle column should be made 9'11½" instead of 8'5½". Tender will be opened at 12 noon on 10-4-58.

Tender forms (not transferable) are obtainable from the office of the undermentioned (Construction Section), Garden Reach, Calcutta-23 at Rs. 2/- (not refundable) per set of form by Money Order to him direct in the case of outsider firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tender forms should accompany the receipt for depositing earnest money Rs. 400/ from this Rly's Chief Cashier together with a valid Income Tax Clearance Certificate without which the tender is liable to be rejected. Contractors having permanent deposit of Rs. 1000/- with the undermentioned are exempted.

S128 CONTROLLER OF STORES

MARTIN BURN LIMITED

NOTICE is hereby given that the Board of Directors of this Company has sanctioned payment of the Dividend on the Preference Share Capital of the Company at the rate of 5% per annum for the half-year ending 31st. March, 1958. The Preference Share Registers will be closed from the 1st April to the 16th April, 1958, both days inclusive. Payment will be made on or after 16th April, 1958, to those Preference Shareholders whose names appear on the Company's Registers on the 31st March, 1958, or in accordance with their instructions.

By Order of the Board,
A. G. GIDLEY,
Secretary.
12, Mission Row,
Calcutta-1,
10th March, 1958.

MARTIN BURN LIMITED CONVERTIBLE NOTES

NOTICE is hereby given that interest for the half-year ending 31st March, 1958, will be paid on or after that date to those holders of Convertible Notes whose names appear on the Company's Register on the 31st March, 1958, or in accordance with their instructions.

A. G. GIDLEY
Secretary.
12, Mission Row,
Calcutta,

THE CHARTERED BANK

Improvement in Earnings Acquisition of Eastern Bank Ltd.

Confidence in the Future

Mr V. A. Grantham's Survey of Activities

The one hundred and fourth annual general meeting of The Chartered Bank will be held on April 2 at 38, Bishopsgate, London, E.C.2.

The following is an extract from the statement by the Chairman, Mr V. A. Grantham, which has been circulated with the report and accounts for the year 1957:—

THE BANK'S BALANCE SHEET

During the year we acquired by an exchange of shares the entire share capital of The Eastern Bank Ltd., and for cash, the business which the Ionian Bank Ltd., conducted in Cyprus and there are consequential changes both in our Balance Sheet and in the Consolidated Balance Sheet.

Our own Balance Sheet indicates the continued expansion of the Bank's business and reveals a high degree of liquidity. The total at £231,622,655 is the highest we have ever recorded, being some £8,600,000 up on last year's figure.

Current and other accounts and Fixed Deposits show increases of £2,958,494 and £4,499,423 respectively. Our Acceptances are again in excess of £10 millions.

On the assets side Cash in Hand at Call and at Bankers shows the substantial increase of £10,501,948 the ratio to our demand and time liabilities, excluding the notes in circulation against which security has been lodged, being 22.9% against 18.5% last year. Our investments in Government and Other Securities are slightly lower and, you will note, have again been brought in at market value. Advances and Other accounts show a contraction of £6,165,632 which is partially offset by our increased holdings of Bills of Exchange amounting to £4,496,736. Our programme of expansion and modernisation of offices and houses in the East has given rise to an increase in the net figure for Bank Premises and Furniture.

The Consolidated Balance Sheet includes the figures of all our wholly owned subsidiaries and the inclusion of The Eastern Bank Ltd.'s figures brings the total to £271,898,015.

CONSOLIDATED PROFIT AND LOSS ACCOUNT

I am glad to say that our earnings have improved. The results of The Eastern Bank Ltd., and of

our new acquisitions in Cyprus and Pakistan, are included for the first time in our figures.

The Bank paid an interim dividend in September last of 7½% less Income Tax, absorbing £189,750, and it is now proposed that out of the balance available a final dividend of 7½% be paid, costing £189,750, making a total distribution of 15%.

The dividends cost more because of the new issue of capital we made last year but are more than compensated for by the increase in profits.

We have allocated £250,000 to Bank Premises and Furniture and £125,000 and £20,000 respectively to the Pension Fund and Widow's and Orphans' Fund. We have transferred £220,000 to Reserves for Contingencies and the balance carried forward is £438,458.

Transfers to Bank Premises and Contingencies include this year those made in connection with The Eastern Bank Ltd.

For us, this year is one of consolidation and in view of the unsettled condition of the world in general it is wise that we should continue to build up the strength of the Bank.

THE COURT OF DIRECTORS

Since my last statement was made there have been a number of changes in the Court of Directors.

With great sorrow I have to record the death in July last of Mr. Archibald Orr Lang, our senior director, who joined the Court in 1939 when the P. & O. Banking Corporation was absorbed.

Early in September we were deeply grieved to learn of the sudden death of Sir William Cockburn, who joined the Court in 1955 on his retirement from the post of Chief General Manager. I have already recorded the gratitude and admiration felt by the Court for the highly distinguished and professionally competent services rendered by Sir William during his tenure of the chief executive office over a period which extended to fifteen years.

In July last Mr. Clifford Waite, Chairman of Consolidated Tin Smelters Ltd., accepted our invitation to join the Court. His wide knowledge of the tin industry will be of great help to us.

During 1957 The Borneo Company Ltd., with which the Bank

has always had the happiest of business relations, commemorated the centenary of its incorporation and in September last I had the pleasure of moving the election to the Court of Mr. Ian Lilburn MacEwen, a Director of the Company.

As part of our plans to co-ordinate the operations of The Chartered Bank and The Eastern Bank Ltd. we invited Sir Evan Jenkins, G.C.I.E., K.C.S.I., the Chairman of The Eastern Bank Ltd., to join the Court.

Towards the end of the year Sir Kenneth Harper relinquished his directorship upon retiring from business in the City and to fill the vacancy in the Court we elected Mr. W. E. Eadie, C.A., who has succeeded Sir Kenneth as Chairman of The Burmah Oil Company Ltd. The Bank's new interest in the commerce and industry of the Middle East is reflected in the election to the Court of Sir Stephen Gibson, C.B.E., who was, until last year, Managing Director of the Iraq Petroleum Company Ltd.

On 1st January 1958 Mr. E. J. Pakes, C.B.E., a Managing Director of British India Steam Navigation Company Ltd., joined the Court.

At the approaching annual general meeting I shall invite the stockholders to confirm the election to the Court of Mr. Clifford Waite, Mr. I. L. MacEwen, Sir Evan Jenkins, Mr. W. E. Eadie, Sir Stephen Gibson and Mr. E. J. Pakes.

For some time past it has been clear that the expansion of the Bank's activities and the growing complexity of its affairs have necessitated an enlargement of the Court. There are now fourteen Directors, three more than a year ago, and it is consequently easier to organise the work delegated by the Court to its committees.

THE GENERAL MANAGEMENT AND STAFF

In June last Mr. L. J. Blanchard, the senior General Manager, retired and Mr. David Beath and Mr. Stafford Northcote were promoted to be Joint General Managers. At the same time Mr. John Shewan, who has served the Bank with distinction in the Far East, was appointed an Assistant General Manager.

The continued prosperity of the Bank reflects the highest credit upon the General Management at

Head Office, the branch managers and the staff at home and abroad.

I take this opportunity of acknowledging with gratitude not only the professional skill displayed by the staff in preserving and extending the prosperity of the Bank but those personal qualities of toleration, forbearance and helpfulness which contribute so much to the survival of the historic links, forged under conditions very different from those which now exist, between Asia and the West.

THE EASTERN BANK LTD.

On 12th July last I communicated to the stockholders the terms and conditions of an offer made by The Chartered Bank to acquire the whole of the issued share capital of The Eastern Bank Ltd.

The response to the offer was highly satisfactory and the holders of approximately 96% of the share capital of The Eastern Bank Ltd. accepted our proposals. Early in December we invoked the provisions of Section 209 of the Companies Act 1948 to acquire the unassented shares and we now own the whole of the issued capital of The Eastern Bank Ltd. To complete the operation we issued, as fully paid, new stock in The Chartered Bank to the extent of £900,000 and thereby increased our paid-up capital to £4,400,000. Since the offer closed on 21st August last the operations of the two banks have been progressively co-ordinated.

NEW BRANCHES

A year ago I stated that The Chartered Bank had acquired by purchase the banking business transacted in Pakistan by the Allahabad Bank Ltd. The former offices of the Allahabad Bank Ltd. at Lahore and Lyallpur have now been fully incorporated within our branch establishment and The Chartered Bank has been enabled thereby to participate to a much fuller extent than was possible previously in financing the up country trade and industry of Western Pakistan.

To our expanding branch organisation in Borneo there was added in April last an office at Sarikei and we are planning to open in the near future branches at Brunei Town and Kuala Belait. In order to enlarge further the services we extend to our numerous customers in Singapore a new branch has

been opened at Bukit Timah, a thriving industrial suburb of the city, and we have lately leased premises for a new branch in the residential suburb of Tanglin.

CYPRUS

Stockholders will have learned from the Press that on 1st November 1957 The Chartered Bank acquired the goodwill of the banking business conducted by the Ionian Bank Ltd. at Nicosia, Famagusta, Kyrenia, Larnaca, Limassol and Paphos in the Colony of Cyprus. The customers of the Ionian Bank Ltd. readily agreed to entrust their business to us and the transfer was conducted very smoothly indeed. We are grateful for the co-operation and assistance received from the former staff of the Ionian Bank Ltd., all of whom seem to have been happy to join our service.

We have succeeded to an excellent business with the merchant community of Cyprus, a form of banking activity with which we have been familiar throughout our history.

A foothold in the Eastern Mediterranean should ultimately prove to be of great value and this move may be regarded as part of the policy which prompted us to widen our sphere by interesting ourselves in the Middle East.

OVERSEA SURVEY

During 1957 there was no important change in what may be called the strategic disposition of the countries served by the Bank. Pakistan and Iraq continued to adhere to the Baghdad Pact while India remained the leader of the neutralist powers. The Peoples' Republic of China pursued a policy of non-intervention in the Far East and its leaders appeared to be pre-occupied with domestic affairs, notably in the fields of industrial development and social reform. All the uncommitted Asian countries are clearly anxious to avoid embroilment with either of the two major power blocs based upon Washington and Moscow and it is evident that throughout the continent nationalism remains the most powerful political force.

LEBANON

A five-year development plan has been adopted, including projects for the improvement of agriculture, industry, communications and town planning.

Inflationary conditions persist, with a fairly sharp rise in the cost-of-living and bank credit running at a high level. The Eastern Bank branch at Beirut is making satisfactory progress in a highly competitive market.

IRAQ

Iraq surmounted the economic difficulties arising from the Suez crisis with great determination. The severance of the pipe-line in Syrian territory halted the pumping of oil from Kirkuk on 2nd November 1956. Repairs enabled pumping to be resumed on 11th

March 1957, at the reduced flow of 7½ million tons per annum, since increased progressively to about 17½ million tons, against the pre-Suez rate of about 25 million tons. The pre-Suez rate is expected to be restored by April, 1958 and thereafter Kirkuk production will be gradually increased to 34 million tons per annum. Apart from the loss of production in 1956-57 and 1957-58, the stoppage involved a deficit of about I.D. 10 million in the budget for 1956-57 and a total loss to Iraq which has been officially estimated at as much as I.D. 56 million. The Iraq government were determined not to interrupt their development programme. The temporary shortfall in oil revenue was made good by an arrangement with the Iraq Petroleum Company.

PERSIAN GULF

Bahrain

Bahrain had a quiet year, with no repetition of the disturbances of 1956. The Suez crisis had little effect on business, though the stoppage of Arabian crude oil reduced the output of the refinery. Import restrictions in Saudi Arabia, designed to conserve foreign exchange, caused some overstocking in the bazaar, but business was on the whole quite good.

Doha

Doha had a peaceful year. Revenue seems buoyant and development continues. Merchant business continues to grow, though more slowly than could be wished. The bazaar recovered quickly from the Suez crisis, but appeared to be somewhat overstocked in the middle of the year. Towards the end of the year there were signs of renewed activity and business on the whole was satisfactory.

Sharjah

During the year a new office of The Eastern Bank was under construction at Sharjah. This office was opened on the 15th January 1958.

ADEN

Our new building at Crater was opened for business in November and during the course of the year we occupied new premises at Steamer Point.

The temporary closing of the Suez Canal subjected the colony to fewer stresses than might have been expected but during the first four months of 1957 foreign trade was drastically curtailed. Later in the year an improvement in trade with the countries surrounding the Red Sea and the running down of stocks restored commercial conditions to a more normal and sounder basis.

INDIA

The Indian exchange reserves fell from Rs. 529 crores at the end of 1956 to Rs. 297 crores a year later. The latter figure includes a drawing during the year of U.S. \$200 million (Rs. 95 crores)

from the International Monetary Fund, to be repaid within three to five years. When it is remembered that India initiated the second five-year plan in April 1956, with exchange reserves equivalent to some Rs. 750 crores and that under the plan it was intended to run these balances down by some Rs. 200 crores over a period of five years, it is possible to gauge the extent to which the position has got out of hand.

There is now an awareness of the immediate dangers of the situation. A series of measures designed to arrest the progressive reduction of the exchange reserves have consequently been introduced.

Nevertheless, after reducing the plan to more manageable proportions and allowing for the country's normal export earnings of foreign exchange and for promised foreign aid and World Bank loans, the official estimate is that additional external assistance amounting to some Rs. 700 crores will be required before 1961 and mostly in 1958-59.

Certainly the completion of the most essential part of the plan will in time effect a saving in the import bill, but despite the assistance which in response to the Indian request for help has been promised by the American and West German governments, India clearly has a difficult road to travel.

PAKISTAN

The past year has been one of difficulty for the Pakistan economy. Unfortunately the balance of payments, which must be regarded as the most reliable indicator of a country's external economic situation, has again been under pressure. This has disappointed the hope that the devaluation of the Pakistan rupee to parity with the Indian rupee in August 1955 followed by an increased payments surplus for the year 1955-56 would have restored a large measure of economic stability enabling Pakistan to begin to enjoy the benefit of the industrial development which had for some years imposed a heavy strain on the country's exchange reserves.

The severe food crisis which developed towards the end of 1956 owing to deficiencies in both the rice and wheat crops necessitated the importation of about 1½ million tons of food grains into East and West Pakistan. Although part of these supplies was financed by assistance from abroad, the balance had to be purchased out of Pakistan's own exchange resources and this unexpected expenditure was a major cause of the payments deficit during the year ended in June 1957, the largest since 1952-53.

BURMA

In the economic sphere 1957 was a disappointing year for Burma. Rice exports according to the latest figures available have been running at much the same level as in 1956 and it seemed reasonable to assume that overseas sales would be sufficient to maintain the exchange re-

serves at much the same level as a year ago. The reserves have in fact declined substantially despite a loan from the government of India and assistance from the United States and the World Bank. The payments deficit and the loss of reserves appear to have been due to a partial relaxation of import restrictions, for imports, although partly financed under Japanese reparations and United States Public Law 480, have still been substantially higher than in 1956.

CEYLON

The recent disastrous floods have caused widespread distress among the people of Ceylon and have evoked world-wide sympathy and many offers of assistance from within the Commonwealth and elsewhere. It is tragic that in the country's hour of need the landing of food and other essential supplies required in the inundated areas has been seriously impeded by labour disputes in the port of Colombo. Indeed strikes and go-slow movements in recent months have so deranged the normal working of the port that Ceylon's overseas trade has been badly affected and labour unrest has been by no means confined to the docks.

Under these circumstances and in view of the fall in the prices paid for tea at the local auctions and of the rise in imports, particularly of rice and manufactured goods, it was inevitable that the country's balance of trade would be unfavourable.

SINGAPORE

Singapore is to become a self-governing state within the Commonwealth and a new constitution will come into effect after the beginning of 1958 as soon as new electoral rolls have been prepared. The Citizenship Bill which was passed by the Legislative Assembly during the latter part of the year has conferred voting rights on probably as many as 300,000 additional electors. The choice of representatives made by this enlarged body of voters at the General Election to be held next September may well prove crucial for Singapore's future and it is to be hoped that party controversy will not obscure from the electorate the hard facts of Singapore's unique economic situation. Only by virtue of the prosperity which its international status as an entrepot and a commercial and financial centre has brought to it, has Singapore been able to develop in recent years an impressive range of services and amenities for the benefit of its population, who enjoy standards of housing, medical services and education that compare favourably with any to be found in South-East Asia to-day.

FEDERATION OF MALAYA

The outstanding event during the past year, and one which has been widely welcomed, was the achievement by the Federation of Malaya of its independence within the Commonwealth on the 31st August.

Before the formal granting of independence, the Prime Minister and his government had shown a statesman-like approach to the country's problems and a wise comprehension of their new responsibilities. The Federation is now joining such international organisations as G.A.T.T., the World Bank, the International Monetary Fund and the International Finance Corporation.

The Federation embarks on its career as an independent state with substantial external assets and an economy which though mainly dependent on the rubber and tin industries, is sound and progressive. As the Finance Minister pointed out in his budget speech in December, the general level of wages and the standard of living in the Federation is probably the highest in South-East Asia. On the other hand the emergency which still continues remains a drain on the country's resources. The government is doing all that it prudently can to end the emergency and it is to be hoped that efforts in this direction will prove successful and so enable the country to finance larger expenditure on economic and social development.

NORTH BORNEO

The latest figures available show that North Borneo's overseas trade last year may well have reached a record level, although the trade surplus for the year as a whole is likely to be less than in 1956. The expansion of imports is again to be attributed partly to the purchase abroad of capital equipment required in connexion with the colony's development schemes. It is encouraging that on the other side of the account a wider range of export commodities is making a significantly increased contribution to North Borneo's earnings of foreign currency.

SARAWAK

Sarawak is progressing slowly but steadily towards self-government and last May there took place the first meeting of the Council Negri since the introduction of a new constitution providing for an unofficial majority. Following successful municipal elections in Kuching and Sibiu, it is the government's intention to hold similar elections at Miri during the course of the coming year.

Again last year two of the colony's principal exports, rubber and pepper, fetched lower prices in the international market, with a consequent fall in export earnings.

Although total imports are estimated to have been slightly lower, the reduction in export earnings has increased the trade deficit of the previous year.

INDONESIA

It is difficult to discover in the political crisis which threatens the unity of the country whether the opposing factions are contending for different forms of government

or defending incompatible economic interests. Manifestly the situation is one of grave danger to the young republic but it can be resolved only by the Indonesian people and their leaders without interference, however well-meaning or gratuitous advice, from abroad.

The constructive work in which the Indonesian branches of the Bank engage has necessarily been hindered by the political ferment which has now issued in a conjuncture the outcome of which cannot be foreseen. The situation and its uncertainties are causing us a good deal of anxiety but we can do no more than join with other friends of Indonesia in hoping that a peaceful way out of the present impasse may soon be found and that the Indonesian people may attain the higher standards of living that would accrue to all of them from the restoration of political stability, administrative probity and labour responsibility; a state of affairs which is indispensable to the effective development and economic deployment of the enormous natural riches with which the country is endowed.

THAILAND

Although the unsettled political situation has had a disturbing effect on trade, particularly since September, Thailand has again enjoyed a relatively prosperous year. The country enjoys a measure of economic stability, which is denied to many of its neighbours in South-East Asia, because of its self-sufficiency in rice, and of the consequent well-being and contentment of its peasantry. Rice normally accounts for approximately one-half of the country's export earnings; shipments which last year showed a substantial increase over those in 1956 and reached their highest level since 1952, contributed to the rise which took place in the exchange reserves.

VIETNAM

There have been no major political developments in Vietnam during the past year and the country has therefore been able to consolidate to some extent the economic progress which has been made since President Ngo Dinh Diem succeeded in restoring law and order in territory which had been ravaged by many years of war.

The country continues to be largely dependent on American aid to pay for the bulk of its imports. Although there was a modest, but nevertheless welcome, revival of the export trade in rice last year and a higher tonnage of rubber was shipped abroad, export earnings amounted to only 28% of the value of imports.

CAMBODIA

Cambodia is almost unique among the countries of South-East Asia in having a surplus of agricultural land and thus an abundance of staple food-stuffs for the whole population. A good harvest last

year allowed of greatly increased exports of rice and other cereals, and since rice accounts for some 42% of the country's total exports, the trade balance, which had been substantially in deficit in 1956, yielded a surplus last year. Most of the country's imports continue to be financed by American Aid and in consequence of an increase in the value of exports and a reduction in imports exchange reserves have risen during the course of the year.

THE PHILIPPINES

The past year has seen a serious reduction of the foreign exchange reserves and an increase in the money supply accompanied by the all too familiar and disturbing symptoms of inflation.

There can be little doubt that the natural resources of the Philippines if efficiently developed and administered could within a relatively short period strengthen the national economy and assure the population of a reasonable standard of living. Although the bulk of the external trade of the Philippines is still conducted with the United States, trade with the United Kingdom and with Western Europe is increasing. Negotiations have been taking place during the course of the year with a view to facilitating the use of sterling by the Philippines, which, if accomplished would facilitate a further expansion of trade with the United Kingdom and the sterling area.

HONG KONG

Hong Kong's total trade increased last year with imports expanding and exports falling in aggregate value. Rather more than a quarter of Hong Kong's exports are locally manufactured and the local industries in general have had a fairly good year, their sales overseas having been stimulated as a result of the colony's participation in trade fairs abroad. It is clear, however, in view of trade restrictions and shortage of foreign exchange in South-East Asia particularly, that the future success of Hong Kong's industries will depend to an increasing extent on their ability to sell their products in more distant markets, such as Europe and North America, where competition will be more severe. Efforts in this direction should be assisted by the trend which is apparent in many branches of local industry, towards producing and shipping finished goods, rather than semi-manufactured products.

CHINA

Last year I mentioned that the authorities in Peking evidently considered it useful to have banking connexions throughout the world to supplement those afforded by the Bank of China and that with official encouragement. The Chartered Bank was again participating, if only to a small extent, in the financing of China's overseas trade. The business suits us very well and there are good prospects of its continuing.

JAPAN

The economic expansion which made 1956 Japan's most successful post-war year, continued unabated well into last year, but subsequently increased imports began to impose a serious strain on the country's balance of payments. Industrial and mining production continued to rise, but to sustain their expansion it was necessary to purchase increased quantities of raw materials from abroad. The monthly deficit on the country's balance of payments reached its peak in the middle of the year and was on such a scale that it was necessary for the Government to seek assistance from the International Monetary Fund and to introduce measures designed to restrict imports and to curtail domestic credit. By the end of the year it became apparent that equilibrium had been largely restored and in October Japan's balance of payments showed a surplus. The remedies applied have inevitably caused an increase in unemployment, and the problem of expanding exports sufficiently to ensure reasonable living standards for an expanding population persists. Nevertheless Japan is fortunate in possessing an industrious population and in remaining relatively free from labour unrest despite the growing strength of the trades unions.

NEW YORK

Our New York agency is an important link in our interregional organisation since many of the principal exports of the Asian countries in which we have branches find remunerative markets in the United States. We have many business connexions of long standing among exporters and importers in the United States and our relations with the American banks have always been cordial.

THE STERLING AREA AND THE UNITED KINGDOM ECONOMY

The appointment of a committee under the chairmanship of Lord Radcliffe to enquire into the working of the monetary system has evoked a good deal of discussion among economists concerning the merits of the sterling area system and the position of this country as its banker.

Widely divergent estimates have been made of the extent to which foreign currency accrues to the United Kingdom Control from the operations of overseas banks based upon or represented in London and it has been argued that the advantages of those operations to the United Kingdom economy are more apparent than real. The effectiveness of organisations like The Chartered Bank in sustaining the external economic defences of the United Kingdom cannot be in doubt. The Bank finances a very large proportion of the trade in primary products between the eastern countries and the rest of the world and it is a considerable earner of US dollars and other scarce currencies in its own right;

moreover the Bank is enabled by means of its already extensive and growing overseas establishment to play an important part in the promotion of the export trade of the United Kingdom.

To impose restraint upon the activities of the British overseas banks would be the last resort of the destitute and it is reassuring to know that changes in currency management and exchange control which might prejudice the unique position of the City of London in international commerce will not be made without the most searching enquiry.

CONCLUSION

The superficial observer of the contemporary international scene might suppose that few, if any, of the Asian countries hold opportunities for the British banks. There have been reactions against what is loosely and often mistakenly termed 'financial imperialism' but most Asian countries realise that an efficient international banking

service can play a powerful part in sustaining the economic defences of an undeveloped country struggling to be free and prosperous and that foreigners practising banking in their territories can be trusted by their hosts.

While our primary function is that of an exchange bank we have, during the past twenty years, operated to an increasing extent within the domestic economies of the countries to which our organisation extends. These credit operations are financed by local deposits and, where they exist, local money market facilities. In proportion to the extent to which the Bank is permitted to attract deposits it can, of course, engage in the financing of sound business activities but there are signs in many countries of a disposition to restrict deposit banking to the indigenous banks.

One of the most striking features that has emerged during the year has been the extent to which the holdings of foreign exchange of so

many of the Eastern countries have seriously deteriorated. Attention has been focussed on India's position because of the extent to which she has drawn on her sterling balances but it is clear that her problem is common to other Asian countries. In nearly all of them there has been the urge towards rapid industrialisation which has caused excessive imports of capital goods and imposed further strain upon dwindling resources of foreign exchange.

It is too soon to anticipate what may be the consequences to the Bank of the impending liberalisation of trade within the Western European community but the pursuit of such a policy would widen markets for the agricultural produce and raw materials which are still of vital importance to most of the Asian national economies. The Bank has a thriving agency in Hamburg and it enjoys mutually satisfactory correspondent relations with an extensive range of banks established on the European con-

tinental. Our international organisation is well equipped to take advantage of changes in the direction of trade which are likely to result from tariff revision in the United Kingdom and Western Europe.

When addressing the stockholders in past years I have remarked more than once that The Chartered Bank has given many hostages to fortune but the success with which the affairs of the Bank have been conducted since the end of the war and the way in which the technique of management has been adapted to meet revolutionised economic situations resulting from changes of sovereignty and other political upheavals encourage me to continue to view with confidence the future of British banking in the East.

Copies of the full text of the statement will be sent on application to the Secretary of the Bank at 38, Bishopsgate, London, E. C. 2.

General sentiment Remains friendlier

Watch-Dog Writes:

GENERAL sentiment on stock markets has remained friendlier during the week under review, although price movements have been rather irregular due to alternate bouts of buying and selling. Most of the operators have a general feeling that, with the budget uncertainty now over the outlook is considerably better.

Although there was slight profit-taking in the speculative issue, the recent gains were fairly well maintained on the Calcutta Stock Exchange.

The Bombay Stock Exchange ruled steady despite erratic movements in prices.

There was moderate activity on the Madras Stock Exchange.

Conditions on the London Stock Exchange ruled generally firm.

Wall Street closed barely steady.

Calcutta

Calcutta, Friday Evening.

CONDITIONS on the local Stock Exchange remained generally steady during the past week, although price movements were punctuated by recurrent bouts of profit-taking. After starting on a steady note, prices developed a slightly reactionary tendency due to some selling pressure. Being influenced by the reports of the Prime Minister's address at the annual session of the FICCI and the news of labour unrest at Bampur, settlement considerations were another contributory factor. Thanks to the subsequent reports that the strike at the Bampur Works had been called off, the market staged a gradual recovery towards the close, although operators were found to be rather cautious in following the rise in prices. The gilt-edged market was in good shape. Sentiment was aided by the

decision of the authorities to raise the selling rates of some of the short-dated securities for the second week in succession. Operators were inclined to the view that the authorities had started rigging the market for a new Central Loan. 3 per cent 1956 Conversion Loan, after opening steady at Rs 71.00 and improving at one time to Rs 71.30, receded again at the close to Rs 71.03.

In sympathy with gilt-edged securities, Bank shares ruled better. Punjab National changed hands at Rs 52.50 to Rs 54.00 and United Commercial at Rs 59.75 to Rs 60.00. Hind remained steady at Rs 47.50.

With the exception of a few scrips which met with some special support, the Jute section remained generally neglected. Operators were reluctant to enter into commitments in the absence of any improvement in foreign demand despite the LJMA Committee's decision not to sell jute goods below the specified minimum prices. Howrah were on offer at Rs 13.69, while National, after being taken up to Rs 23 on speculative support, receded to Rs 22.00. However, New Central met with persistent support upto Rs 13.00 from Rs 12.94, while Kankannarh eased off to Rs 43.00 from Rs 51.00; Lawrence to Rs 72.50 from Rs 76.50 and India to Rs 90.50 from Rs 94.00. Alliance, Barnagore, Dalhousie and Champdany were all nearly maintained around last levels.

The reluctance on the part of operators to enter into fresh commitments, pending the release of the Price Revision Committee's report, was fully reflected in the Coal section where turn-over remained restricted. Benga were marked back to Rs 213 from Rs 216 and Western Benga, to Rs 5.22 from Rs 5.31. Burrakur remained almost steady at Rs 22.10 while Equitable after a long time came in for some enquiry upto Rs 25.25 from Rs 24.37 and East India upto Rs 20.19 from Rs 19.75. Central India changed hands at Rs 6.75 to Rs 6.87. South Karanpura were quoted at Rs 9.9.

Although trading in the Tea section was restricted, a few selected scrips continued to receive good support at improved levels. Operators were enthused over the reports that the Government would give serious consideration to the high export duty on inferior quality tea. Another contributory factor would be the belief that the new season would get on a good start in view of the improvement in the statistical position of the industry. Most prominent scrips were Brooke Bond changing hands at Rs 17.25 to Rs 17.44; Bishnauth at Rs 20.37 to Rs 20.63; Grob 'A' at Rs 22.06 to Rs 22.25; Hantapara at Rs 103 to Rs 104; Jayshree at Rs 10.31 to Rs 10.44; Methoni at Rs 15.75 to Rs 16.12.

New Doors at Rs 269 to Rs 272 and Sapal at Rs 22.00 to Rs 24.47.

Textiles scrips ruled fairly steady on the hope that the reduced excise duty on medium cloth might be extended beyond 31st March. The Prime Minister's assurance to the Congress Parliamentary Party that the Government would give serious consideration to the high excise duty on textiles was also a contributory factor to a better sentiment in the section. The only two bright spots were Jayshree and Kesoram having changed hands upto Rs 6.31 and Rs 10.00 respectively.

Sugar shares recorded a good turn-over at enhanced levels although slight profit-taking erased some of the gains at the close. Most active scrips were Darbhanga and Raza-Buland having persistent support upto Rs 21.06 and Rs 14.00 from Rs 19.75 and Rs 13.87 respectively. Dyer Meakin developed a hardening tendency to Rs 10.41 from Rs 9.53, while B.K.G. moved narrowly between Rs 9.12 and Rs 9.19. Carew were marked down to Rs 5.44 from Rs 6.62 on reports of the passing over of the dividend again for last year. Bolund recovered to Rs 10.12 from Rs 9.94.

In the Engineering section, price movements were rather erratic on alternate bouts of buying and selling under the influence of the speculative activity in Indian Irons which, in turn, were subjected to settlement considerations till mid-week. Against the week-end closing of Rs 20.85, Indian Irons opened lower at Rs 20.66 and, after improving at one time to Rs 20.83, receded gradually to Rs 20.33 on reports of labour unrest at the company's Works, to improve again to Rs 20.86 following the news of the strike being called off. The closing rate for the week was Rs 20.78. The settlement rate was fixed at Rs 20.35 as against last settlement of Rs 19.52. The carry-over charge for the next settlement was fixed at 61 NP.

In sympathy, TEXMACO was marked down to Rs 17.00 from Rs 17.75, to recover partially towards the close to Rs 17.60. Jessop turned a shade quieter at Rs 22.62 against Rs 23.00, while Britannia were marked down to Rs 12.81 from Rs 13.62 following the reduction in dividend. Braithwaite changed hands at Rs 26.81 to Rs 27 c.d. (Rs 2); Kumardhul at Rs 7.60 to Rs 7.94 and Marathi at Rs 5.06 to Rs 5.19. Indian Standard Wagon were enquired upto Rs 101.50 from Rs 96.50 with Indian Galvanizing well maintained at Rs 14.06.

Miscellaneous issues shared the general trend of the market. An outstanding feature of the week's trading

was Orient Paper which was pushed up at one time to Rs 27.35 from a low of Rs 26.10 on reports of a substantial increase in production, to close finally at Rs 27.25. Titaghur had buyers at Rs 34.12 to Rs 34.50, Sango Coal at Rs 14.25 to Rs 14.37 and India Pulp at Rs 19.37 to Rs 19.42. India Steamship, after touching a high of Rs 12.25 and a low of Rs 11.94, finished at Rs 12.06. Indian Aluminium, after being taken up to Rs 13.00, eased off at the close to Rs 12.94 following a reduction in dividend from 10 to 6 per cent. NICCO touched at one time a high of Rs 24.25; Alkali Chemical new shares Rs 12.94 and Dunlop Rubber Rs 22.69, to finish the week slightly lower at Rs 24.00; Rs 12.81 and Rs 22.44 respectively on modest profit-taking. Indian Cable were a firm feature, having forged ahead to Rs 29.00 from Rs 28.87, while Indian Oxygen had buyers at Rs 16.19 to Rs 16.37; Hindustan Motors at Rs 6.06 to Rs 6.31; Martin Burn at Rs 23.37 to Rs 23.63; Metal Box at Rs 25.75 to Rs 26.12 and Phillips India at Rs 13.75 to 13.94. Indian Copper were a narrow market, moving between Rs 2.85 and Rs 2.91. Rohtas were nearly maintained at Rs 16.00 and so also BIC at Rs 3.85.

Bombay

THE stock market opened on a steady note but in subsequent dealings developed a slightly reactionary tendency. Mr Nehru's speeches at the annual meeting of the FICCI and subsequently in the Lok Sabha indicating firstly that the taxation policy of Government was inevitable and secondly that no change could be expected imparted a setback to sentiment. Textile shares led the decline and prices were marked down over a wide front. The downtrend was further accentuated on news of labour unrest in Bampur. Steels also joined the downward course. Though reports of settlement in Bampur checked the reactionary trend in earlier dealings on Thursday, closing prices were below the day's best in the absence of fresh support.

Steels: Tata Iron opened steady at Rs 175 and after fluctuating within narrow limits closed quietly steady at Rs 174. Indian Irons began around Rs 20.60 and improved further only to be marked down by close to Rs 20.44.

Textiles: Textiles were steady at the beginning but soon came under pressure. Around midweek they were steadier but by close were lower on balance. Bombay Dyeing was finally

placed at Rs 51.80 against its opening rate of Rs 52.00. Century was in good request at one time in the week but was quietly steady at Rs 393.25 at close. Swadeshi was a bright spot at Rs 171.50 on dividend expectations.

Miscellaneous: In the Miscellaneous section Telco eased to Rs 145.70 from Rs 147.00 on reports of lower prices for locomotives. Scindia Steam reacted Rs 16.76 from Rs 17.04 on liquidation. Bombay Burmah was easier at close at Rs 505.50. ACC was marked down to 143 from its opening level of Rs 144.75. National Rayon was steady at Rs 222.50. Belapur Sugar was lower on balance at Rs 235.50.

Madras

SMALL and selective buying was noticed on the Madras Stock Exchange.

Textiles: This section gave a mixed performance. Metturs, after being lifted upto Rs 410 from Rs 363.50 following the news of the special dividend, receded at the close to Rs 400 on profit-taking. Buckingham's noted support upto Rs 161, while there was enquiry for Cauverys at the market rate. However, Radhakrishnas had sellers at Rs 124 and Adonis at Rs 8.10.

Plantings: Prices in this section ruled generally steady though profit-taking was noticed in a few shares. Rubber and Coffee shares were in good favour. Cochin Malabar were in lime-light, improving to Rs 4.80 on good buying. Among Coffee shares, Consolidated Coffees changed hands at Rs 22.78 to Rs 22.95. There was some steady buying of Shevroys and Sangameshwars upto Rs 2.10 and Rs 2.63 respectively.

In the Tea section, a few scrips encountered speculative support. Most prominent were Peermades and Nonsuch, which were keenly sought after upto Rs 20.25 and Rs 20.62 respectively. Highlands were enquired at Rs 12.40, while Halleyburys were done at Rs 17.25 and Twyford at Rs 12.50.

Miscellaneous: In this section, there was some demand for Mysore Stone-wares at the market rate. FACT's hovered narrowly around Rs 5.37, while Aluminium Industries were marked at Rs 14.10 c.d. Indian Steel Rolling Mills were done at Rs 10.60; Andhra Cements

at Rs 11.90 and Ashok Leylands at Rs 4.25.

London

THE London Stock Exchange started the new account on a generally firm note following the advance on Wall Street and the possibility of further anti-recession moves in America. Industrials were finally below the best in prices. Oil shares advanced under American influence. Rubber shares were firm, while Tea shares ruled quiet.

New York

WALL STREET closed barely steady with the main body of stocks showing a fair representation of mostly fractional losses. Most operators moved cautiously, awaiting a final decision by the administration—possibly next week—on tax-cut proposals.

In Brief

National Carbon has announced a final dividend of 65 mP per share, making a total of 14 per cent for 1957 as against 15 per cent in the previous year.

Indian Aluminium Company has recommended a dividend of 6 per cent on the increased capital for 1957 as against 10 per cent on the old capitals.

In the Bombay Textile group, Kohinoor has maintained the dividend at Rs 18 per share and Bombay Dyeing at Rs 2.50 per share for 1957 (the final dividend of Rs 1.75 being payable on or after 17th April). Vishnu Cotton has passed over the dividend as against 8 per cent, while Lakshmi has reduced the dividend from Rs 17 to Rs 15 per share.

In Madras, Mercara Rubber has reduced the dividend from 22½ to 15 per cent for the year ended 30-6-1957, while Anapara Estates have announced a total distribution of 40 per cent against 25 per cent.

a pilfer-proof package for every product !

Thanks to the R. S. Closure, car owners can now be sure that the oil they buy in MB pilfer-proof oblong cans really is the advertised product they are paying for. Packers of lubricants, insecticides, liquid cleaners, brake and other fluids can now be confident that their factory-sealed products will reach the consumer without adulteration or substitution.

Metal box provide individually designed and superbly finished containers and closures to protect some Rs. 100 crores worth of products every year.

MB
PILFER-PROOF
OBLONG CAN

The R. S. Closure provides an efficient and liquid-tight seal. As it is unscrewed, the lower skirt, known as the 'security band' breaks away. It is impossible to open the container without this happening—so that the intact security band is guarantee that the contents are genuine.

HIGHLIGHTS OF THIS ISSUE

We need have no roseate dreams of a saving in imports, once we achieve our Plan targets.

For, except for Russia, it has been the world's experience that trade expands with the economy.

Indeed, expansion in foreign trade may be said to be an indicator of a country's economic development.

Dr D. Bright Singh has contributed an erudite article on foreign trade's link with economic development.

"Dear Sirs ..."

This is an important letter for it may close a big deal, or open a new account. More letters, estimates, indents, ledgers, bills, cheques and receipts—all these add up to prosperity provided the essential raw materials are available. In business there is no more essential raw material than paper.

For 75 years The Titaghur Paper Mills Co. Ltd. have been among the largest producers of fine quality papers. The makers of Elephant Brand Papers remain as pioneers in the forefront of the industry.

TITAGHUR PAPER

The Titaghur Paper Mills Company Limited, Calcutta-1

As the crow flies

I'm nobody's fool. As smart as they come, I could teach anything in feathers a thing or two—and even teach you when it comes to flying.

But A-I-I.—they're a different proposition! Like me, they too fly swift and straight. And although I hate to admit it, they're a trifle faster than I am. So let them fly your goods to Tokyo. Air-India flies to Bangkok, Hong Kong and Tokyo twice a week—Every Sunday and Thursday. Fly as the crow flies. Be first on the market.

Activity Broadens: Bullish Undertone

Investment Gossip:

INDIAN Irons touched a new high during the week; activity has broadened; the undertone is bullish.

Mr Nehru's announcement of relief to the cotton textile industry and the repeal of the compulsory deposit scheme for 1958-59 was dramatic enough, but there are some who say: What's so good about it, it was expected, wasn't it? And the reliefs are just, aren't they?

I am, quite definitely not in sympathy with those who argue thus. And I have a creeping doubt, about the bona fides of these detractors. For, the fact is clear that concessions have been granted, concessions that were merited, reliefs that were necessary. But, just because they were necessary, does not mean that we have no reason to welcome them.

Then, the gain for the Stock Exchanges is not merely that a relief or two has come their way. Mind you, the reliefs themselves are considerable. But what is more important, this reflects a Government attitude that, from whatever viewpoint you look at it, is heartening.

For, we can now have the confidence that revenue is not the sole determinant of Government tax policy: if this were so, we would not have had reliefs aggregating more than Rs 15 crores.

It means that tax rates—and especially excise duties—are not to be rigid; as and when necessary, as and when consumption-inhibiting excises become so successful as to pile up stocks with industry, so soon may we expect Government to reverse their policy, and instead seek to encourage consumption and offtake by the public.

It is significant that a Minister had something definite to say on another depressed industry. Common teas are having a hard time of it, but, to judge by what Mr Morarji Desai said on the floor of Parliament, Government are aware of the tribulations being undergone by these varieties.

Mr Desai stated that Government were examining the question, and were anxious to do something to help common teas. The present snag is that all teas are lumped together for purposes of export duties. The solution, apparently, will be to distinguish common teas, and then to reduce the export duties on them, if not altogether repeal them.

So, the optimism in me is finally having a firm basis on which it can build itself up. There are soft spots in the economy, but it is precisely their presence which has moved Government into granting reliefs. Thus, we need not be apprehensive—unduly, that is—of further such soft spots. Government will implement the necessary measures.

How are we to reconcile the fact that, following the relief announcement, the market has not spurred? Well, there has been an element of profit-taking, and that has erased some of the gains. I much prefer that this is so, for, it means that the rise in prices is not wholly due to speculative activities. The consolidation that occurs at each stage is a guarantee of a longer life for the current bull phase.

How long will the bull phase last? Well, it has just started—barely so. And unless something really dreadful happens, the bull phase—by which I mean a period during which prices may be stationary, or improve somewhat, but will not go down—should last through the remaining years of the Second Plan.

Investment Notes:

It is understood that the scheme for the reorganisation of the capital structure of the Premier Construction Company Limited has been shelved, at least for the time being.

National Rayon Corporation has obtained the sanction from the Controller of Capital Issues for the issue of new shares in the ratio of one for every two shares held, at a premium of Rs 25. The company has also obtained the sanction for the establishment of a tire-chord plant at an estimated cost of Rs 3 crores.

Killick Industries have decided to issue 25,000 equity shares of Rs 100 each at a premium of Rs 20, subject to the approval of the Controller of Capital Issues. The shares will be issued in the ratio of 1:4.

Arvind Mills have decided to issue bonus shares in the ratio of 1:2. The overall dividend for 1957 is proposed to be maintained at Rs 35 per share.

Kalasa Tea & Produce Company has decided to issue bonus shares for Rs 60,000. The present shares of the face value of Rs 9 will be sub-divided into shares of Re 1 each. A bonus issue of one Re 1 share for every nine shares of Re 1 held will then be made; and the one-rupee shares will then be consolidated into Rs 2 each.

£ R S

More Textile Results

Balance-Sheet Reviews:

SOME more textile mills have presented their reports and accounts for 1957. Judged from the depression in the textile trade, the Mafatlal group of mills has,

on the whole, achieved satisfactory results. The decline in profits of the various mills range from: about 10 to 33 per cent as compared to previous year. The Standard Mills Limited has maintained the dividend at Rs 22.50 per share, while announcing also a bonus issue of one share for four shares following the Government's sanction. Sassoon Cotton has also repeated the dividend at Rs 2 per share. Mafatlal Fine has, however, reduced the dividend from Rs 18 to Rs 15 per share. In the case of New Shorrock as well as Shorrock Mills, dividends have been reduced on the increased capital; but, on the basis of old capital, they have been maintained. Particulars of results are given below.

Standard Mills

The Standard Mills Company Limited has earned a profit of Rs 82.37 lakhs as against Rs 1.11 crores in the previous year. After transferring a sum of Rs 6 lakhs from Rehabilitation and Development Reserve, the directors have set aside Rs 27.01 lakhs (Rs 28.10 lakhs) for Depreciation; Rs 31.75 lakhs (Rs 35.15 lakhs) for Taxation; Rs 6.00 lakhs (nil) for additional taxation and Rs 4.75 lakhs (Rs 7.10 lakhs) for Development Rebate Reserve.

£ R S

Sassoon Mills

The Sassoon Spinning & Weaving Company Limited has shown a profit of Rs 35.72 lakhs as against Rs 39.90 lakhs. After transferring a sum of Rs 3.25 lakhs from General Reserve, the following appropriations have been made:—Depreciation Rs 18.44 lakhs (Rs 15.09 lakhs); Taxation Rs 9.97 lakhs (6.15 lakhs); additional taxation Rs 1.31 lakhs (nil); and Development Rebate Reserve Rs 3.24 lakhs (Rs 9.57 lakhs).

£ R S

Mafatlal Fine

The Mafatlal Fine Spinning & Weaving Company, Limited has reported a decline in the net profit to Rs 27.99 lakhs from Rs 43.17 lakhs. After transferring a sum of Rs 4.25 lakhs from General Reserve, the directors have provided Rs 10.82 lakhs (Rs 9.49 lakhs) for Depreciation; Rs 7.63 lakhs (Rs 14.75 lakhs) for Taxation and Rs 5.05 lakhs (Rs 2.88 lakhs) for Development Rebate Reserve.

£ R S

New Shorrock

The net profit of the New Shorrock Spinning & Manufacturing Company Limited amounts to only Rs 50.89 lakhs as against Rs 62.30 lakhs in the previous year. A sum of Rs 10.02 lakhs (Rs 9.46 lakhs) has been provided for Depreciation; Rs 23.75 lakhs (Rs 23.80 lakhs) for Taxation; and Rs 5.02 lakhs (Rs 1.43 lakhs) for Development Rebate Reserve. No provisions have, however, been possible for General Reserve and

Dividend Equalisation Fund against Rs 10.00 lakhs and Rs 4.00 lakhs respectively in the previous year. A shortfall of Rs 4.60 lakhs in taxation provision for 1956 has been provided from General Reserve.

Shorrock Mills

The Shorrock Spinning & Manufacturing Company Limited has earned a net profit of Rs 27.59 lakhs as against Rs 35.11 lakhs in the previous year. The directors have transferred a sum of Rs 1.25 lakhs from General Reserve and made the following allocations:—Rs 8.25 lakhs (Rs 8.16 lakhs) to Depreciation; 13.80 lakhs (Rs 11.30 lakhs) to Taxation and Rs 1.87 lakhs (Rs 3.84 lakhs) to Development Rebate Reserve. A shortfall of Rs 2.30 lakhs in taxation provision for 1956 has been provided from General Reserve.

Kohinoor Mills

In common with other mills, the working of the Kohinoor Mills Limited discloses a sharp decline of Rs 14.14 lakhs in the net profit at Rs 6.64 lakhs for 1957 as against Rs 11.21 lakhs in the previous year. The directors have, however, decided to maintain the dividend at Rs 18 per share. Even to maintain this dividend, they have to draw upon the Dividend Equalisation Reserve to the tune of Rs 5 lakhs. Sales of cloth, yarn and waste have dropped by Rs 52 lakhs to Rs 6.35 crores.

The assessment of the company's profits for 1956 has not yet been completed. Provision for Taxation, amounting to Rs 9.5 lakhs in the profits of the year and for any liability of uncompleted assignments including Wealth Tax for 1956 and 1957, has been made. To meet this extra liability, the directors have to draw upon the General Reserves to the extent of Rs 5.25 lakhs.

Coimbatore Cotton

In view of the difficult conditions in the yarn trade, the net profit of the Coimbatore Cotton Mills Limited, for the year 1957, should be considered rather satisfactory. Earlier profitable sales have probably been responsible for the absence of any steep drop in earnings. Sales are Rs 78.83 lakhs as against Rs 83.67 lakhs, while the net profit, before providing for Depreciation and Taxation, amounts to Rs 11.13 lakhs as against Rs 14.17 lakhs. The amount set aside to Depreciation is Rs 1.35 lakhs (Rs 3.07 lakhs) and Taxation Rs 4.00 lakhs (Rs 5.5 lakhs). Transfer to the Machinery Replacement Reserve is Rs 3.09 lakhs. The dividend of 9 per cent is payable on an increased capital, while a dividend of 25 per cent was paid in 1956.

Anil Starch

Thanks to the substantial increase in the gross profit from Rs 9.03 lakhs to Rs 16.58 lakhs, Anil Starch Products Limited has proposed a dividend of Rs 10 and a bonus of Rs 10 per share for 1957 as against only a dividend of Rs 10 in the preceding year. A sum of Rs 8.61 lakhs (Rs 4.32 lakhs) is provided for Depreciation and Rs 7.89 lakhs (Rs 4.77 lakhs) for

Development and Rehabilitation Reserve. The company has fared well with sales rising from Rs 1.45 crores to Rs 1.91 crores.

Industrial Investment Trust

The Industrial Investment Trust Limited has reported a net profit of Rs 5.92 lakhs for 1957 as against Rs 5.19 lakhs in the previous year. After adding a sum of Rs 15,921 being the amount transferred from Capital Reserve; Re 4,912 being tax-assessed on capital gains for 1956 and transferred from Capital Reserve; Rs 23,116 being refund of income-tax and Rs 3.23 lakhs being the amount brought in from the previous year, the total available for distribution is Rs 9.80 lakhs.

From the above amount, the directors have set aside a sum of Rs 2.30 lakhs towards tax assessed for 1957-58. A higher dividend of Rs 5.50 per share has been declared. The company has earned, by way of dividend and interest, as much as Rs 7.37 lakhs as against only Rs 6.72 lakhs. The approximate valuation of the company's investments at the market rate, as at the close of the year, is lower than the total book value by 2.9 per cent.

Jayshree Tea

In the context of adverse market conditions that prevailed in the tea market during last year, the working results of the Jayshree Tea Gardens Limited should be considered as satisfactory. The net profit, after providing for Depreciation and Taxation, is only slightly lower at Rs 10.56 lakhs as against Rs 14.62 lakhs in the previous year. The directors have, after setting aside a sum of Rs 8.73 lakhs (Rs 7.88 lakhs) for Depreciation; Rs 9.00 lakhs (same) for Taxation; Rs 1.70 lakhs (nil) for Development Reserve and Rs 3.00 lakhs (Rs 8.50 lakhs) for General Reserve, maintained the dividend on the equity shares at Re 1 per share.

According to the directors' report, permission has been received by the company to its application for the issue of bonus shares. In view of very high incidence of taxation on bonus issues, it is proposed that, for the present, the same may be kept in abeyance.

Jute Goods Need Help

IF the jute goods industry finds itself today in an unenviable position, it is largely because some of the major outlets for its products have been firmly closed or are in the process of being closed. Bulk handling methods and changes in packaging techniques have sizably reduced the consumption of jute goods in the world in recent years and, for all practical purposes, the loss sustained in this regard is to be considered irretrievable. The future of prosperity of the industry, therefore, seems to depend to a large extent on its ability to find new uses for jute goods. As a major constituent of world industry, the Indian jute mills industry has perforce to bestow the maximum possible attention toward diversifying production to suit the changed packaging needs of its overseas customers as well as find new uses for its products.

It is, therefore, not surprising to hear Mr D. P. Goenka, the outgoing chairman of the Indian Jute Mills Association, say emphatically that trading conditions are not going to be easy in the coming years. In his opinion, any sizable improvement can be expected only through the development of new uses for jute fabrics. It is gratifying to find that the IJMA chairman has not minced words in assessing the prospects of the industry. In this regard, Mr Goenka has pointed out that the pattern of offtake during 1957 has differed from that of the previous year. Almost all our traditional markets have taken less, the percentage of decline being 5 in the case of US and 50 in the case of the UK. If the level of exports during the year has been maintained, it is because the loss has been somewhat compensated by the increased offtake by Egypt, East Africa and Argentina.

Why has there been a fall in the offtake by our traditional customers? In the UK, some peculiar factors which militate against entry of jute goods of Indian origin in large quantities are in operation. Most of these have stemmed directly from the extremely difficult position in which the Dundee industry has been placed by its virtual dependence for its raw material on Pakistan. In trying to save the domestic industry, the UK Government have not hesitated to take measures which will ultimately defeat the very purpose for which they have been implemented and which are clearly unjust to India.

In the US, there has, no doubt, been a rise in the consumption of burlap for industrial purposes, but offtake has been lower from bag manufacturers. One of the reasons for the setback is said to be the success of the return bag programme. More bags have been sold and some ground has even been regained from paper, but the programme has adversely affected purchases for replacement. The second reason is the growing trend toward smaller packages, for which burlap is unsuitable but paper is. Mr Goenka thinks that the third reason, namely, bulk handling, is the largest single inhibiting factor to the burlap trade in US.

In the final analysis, the real state of an industry is to be gauged from the financial condition of the individual units comprising it. Applying this criterion, one finds that the Indian jute goods industry is still deep in the woods. Whereas, in 1955, it made a net profit

of about Rs 2.5 million, it has had to bear a huge loss of more than Rs 25 million in the next year. Though it is expected that, in 1957, the position would have somewhat improved—in other words, the loss would be less—it is pointed that the cumulative effect of the unsatisfactory working in the past three years is being severely felt by the industry.

It is to be admitted that there is no lack of recognition on the part of Government of the serious position of the jute goods industry. Concerted efforts are being made in our country to put the industry on an even keel. The programme of raw jute self sufficiency is being pursued with vigour with the emphasis placed on higher acreage yield. The modernisation and rehabilitation programme of mills have made commendable progress, and mills are

much more efficient today than they were last year.

While the measures already initiated are bound to result in increasing the competitiveness of our mills in the long run, the present financial condition calls for ameliorative measures that can bring immediate succour to the industry. The recent decision to allow drawback of import duty on batching oil indicates Government's recognition of the urgent need for relief to the industry. Though this concession in its actual application has not reached the mills, it is a welcome gain to the trade as a whole. The additional burden to the tune of Rs 45 lakhs imposed by the Bengal Electricity (Amendment) Act on Calcutta mills does not quite fit in the picture. It is incumbent on Government to give all possible help to the industry at this juncture.

Exchange Bankers' Survey

THOSE who are accustomed to look to the annual meetings of the British Exchange Banks for objective estimates of the economic conditions and prospects of the newly enfranchised countries of South Asia will not be disappointed with the current crop of chairman's speeches. The range of operations of these Banks, the Chartered, the National Overseas and Grindlays and the Mercantile, covers almost all the countries bordering the Indian Ocean in South Asia and down the coast of Africa, and extends from the East Mediterranean to the Pacific and further north to Japan. This region has been the scene of revolutionary changes of political status during and after the war, and these have been followed in the economic field by a race to catch up with the industrialised West. The Exchange Banks operating in this area have adapted themselves to the exigencies of the changed situation by amalgamations and otherwise. The amalgamation of the National with Grindlays came into effect with the New Year. The Chartered Bank acquired the entire issued capital of the Eastern Bank last July and a year earlier had acquired by purchase the banking business of the Allahabad Bank Bank in Pakistan. While the Mercantile Bank has not reported any acquisitions, its capital structure has been streamlined, and the Bank transacts business behind a new name plate.

Though countries in the region covered by the Bank surveys show a wide range of patterns of government and levels of economic and political stability, they nevertheless share some common features. Most of them have only recently attained national status and suffer from the hang-over of the old colonial era. In the economic field, this is reflected in the dependence on a few primary export commodities, like tea, rubber, rice or sugar, and export earnings have been naturally affected by the decline of world commodity prices. And Mr V. A. Grantham of The Chartered Bank has drawn attention to the dominant feature of the political scene in the following words: "All the uncommitted Asian countries are clearly anxious to avoid embroilment with either of the two major power blocs based upon Washington and Moscow, and it is evident that throughout the continent,

nationalism remains the most powerful political force." An unbiased understanding of this basic factor will help to counteract any misapprehensions in the West about the position of India and the countries which stand with India in world affairs. But, as far as the Exchange Banks themselves are concerned, their policies are firmly grounded on recognition of this cardinal principle of Asian politics. It is a measure of the mental resilience of the managements that, within ten years of the end of the war, they have been able to adapt their techniques of management to suit "the revolutionary economic situation resulting from changes of sovereignty and other political upheavals" and are now able to face the future with guarded optimism. This process of adaptation is mutual. As Mr Grantham has acknowledged, "most Asian countries realise that an efficient international banking service can play a powerful part in sustaining the economic defences of an undeveloped country struggling to be free and prosperous, and that foreigners practising banking in their territories can be trusted by their hosts." In the result, the Exchange Banks have been operating to an increasing extent in the domestic economies of the countries to which their organisations extend.

Most of the countries in the region are in the throes of forced economic development and a number of them in the past year have experienced severe balance of payment difficulties. The chairman of the Mercantile Bank, Sir Kemeth Mealing, has drawn attention to the foreign exchange shortages, restrictions on imports and exports, which, in some countries, have tended to restrict business and made trading conditions difficult. Among the countries facing adverse balances, of India in world affairs. But, as far as the though for different reasons, are India and its immediate neighbours, Pakistan, Burma and Ceylon, and further afield, Hongkong and Japan. India's difficulties have attracted the maximum attention, both on account of the magnitude of foreign exchange shortage as well as of the efforts made to meet it. India's crisis, it is recognised, is a crisis of development which already shows signs of

providing its own cure. In Pakistan, the balance of payment deficit is the result of food shortage of an earlier season aggravated by fall in the price of major export commodities. Burma, after setting up a post-war record with export of over two million tons of rice in 1956, has been hit by a parsimonious monsoon which has cut the rice crop by thirty per cent. The shortage of foreign exchange, partly caused by relaxation of import restrictions, has added to the troubles of foreign firms and foreign nationals, in respect of facilities of remittance and internal financial accommodation. The economy of Ceylon has suffered from natural and man-made disasters. While the floods of last December have destroyed crops and disrupted communications, the loss in terms of exports has been aggravated by trouble in the ports. Fall in tea prices has also contributed to the adverse balance in trade. Hongkong's exports have suffered as a result of the shortage of foreign exchange and trade restrictions in neighbouring areas and the Colony will have to look to more distant markets to pay for its growing imports. Japan, which has run into an import surplus, has been obliged to slow down the pace of development and to impose restrictions on domestic credit. The countries on the Persian Gulf are in the process of recovery from the aftermath of the Suez crisis. In South East Asia, a number of countries have been able to maintain their export earnings, and in some of them, American aid has been a significant factor contributing to economic stability. The crisis in Indonesia renders any assessment of the economic situation

Foreign Trade & Economic Development

By Dr D. BRIGHT SINGH

IN the matter of foreign trade underdeveloped countries as compared with economically advanced countries are in an unenviable position. In the course of their development they are frequently confronted with balance of payments difficulties which seriously affect their rate of growth and the stability of their economy. Such difficulties spring mainly from the nature of the articles which they export and import. To some extent they are also due to the fact that many of the underdeveloped countries are economically dependent on developed ones.

But though the difficulties of the underdeveloped countries in the sphere of foreign trade are quite real, the fact remains that their external trade actually increases with economic growth. The expansion of foreign trade is in fact an indicator of economic development. The economic history of nearly all advanced countries of the world, UK, Germany, France and Japan shows that increase in the national product has been attended with increase in the volume of foreign trade. The one great exception to this general rule is the Soviet Union. The peculiarity in this country is to be explained partly by the economic policy of the government and partly by the vastness of the country and the abundance and variety of its resources which have helped her to bring about a self-contained development. The normal trend however is for both foreign trade and national income increasing together. Economic development means production of more and better goods. Export capacity is thus increased. At the same time the rise in national income helps greater imports.

There is then this paradoxical situation. On the one hand, the terms of trade of developing economies turn adverse to them in the process of their growth and thus land them

largely irrelevant. The most important development in this region has been the emergence last year of Singapore and Malaya as self-governing members of the Commonwealth. Both, it is gratifying to note, have fairly prosperous economies. In spite of the continuing emergency, Malaya has a general level of wages and standard of living, probably the highest in South East Asia. And Singapore is embarking on a programme for expansion of franchise, which, it is hoped, will not affect the Island's unique status as an entrepot, which has been responsible in no small measure for its prosperity. All the three Bank chiefs have drawn attention to the adverse effects of the restrictive monetary policies adopted in the United Kingdom last September. As Mr J. K. Michie of National Overseas and Grindlays has stated, this has not made the role of the overseas bankers any easier, particularly as competition for deposits is growing in every sphere.

The Exchange Banks, which followed the flag in the regions where they now operate, were pioneers in providing international banking facilities, a field in which they still remain the leaders. In spite of the current economic difficulties through which the region is passing, it represents a vast potential of economic development. The British Exchange Banks can contribute to that development by strengthening the life line of trade both internal and international. They can render this service to greater effect, if their resources are not dried up at the source, as a result of divergent estimates of the accrual of foreign currency to the UK from overseas banking operations.

into balance of payments difficulties. On the other hand, expansion of foreign trade is not only necessary for growth, but also registers the rate of growth. In other words in order to ensure a high rate of economic growth, expansion of external trade is necessary.

It is possible to explain this paradox. In the first place, from the long term point of view, the conditions of foreign trade of economically backward countries are not so bad as they are often represented to be. Even when the terms of trade are unfavourable it is quite likely that there would be other factors such as increase in the total volume of trade, larger production of particular commodities of decline in the real cost of production of articles of export which more than offset the loss from the adverse movement of the terms of trade. It should also be remembered that if the countries exporting primary commodities are squeezed in a period of depression, they get correspondingly large gains in periods of boom. Thus during the Korean boom in the first half of 1951 favourable price and quantum movement in export trade of underdeveloped countries resulted in a large increase in the foreign exchange earnings of these countries. In such a situation it is possible for governments—as was done in New Zealand and some other countries—to divert by means of proper monetary and fiscal management the profits of the fat years for purposes of investment. Further, the terms of trade of the primary producing countries are unfavourable mostly because of the nature of their exports and imports. But if the country's economy is progressing, it will not be exporting raw materials and importing manufactured goods at the same relative rates. The very fact that the economy is growing implies that the composition of foreign trade will change.

Normally with economic development, the relative importance of manufactures in imports, and agricultural commodities in exports declines. It is wrong to presume that import of manufactures will decline in absolute terms with economic growth. In fact the reverse has happened in the course of development in many countries. Progress in industrialization has been attended with an increase in the exports as well as imports of manufactured goods. Lastly, it should be noted that while in general the terms of trade may be unfavourable to underdeveloped countries, it is very likely that in respect of particular commodities that are exported conditions are very favourable to the exporting countries. These are the commodities in the production and exporting of which the less developed countries have special advantages like favourable climatic conditions, availability of natural resources, cheap but efficient and skilled labour supply etc. A few commodities which enjoy such natural facilities may account for the bulk of the export earnings of these countries. The gains from such exports may not always be quite obvious and may be offset by the general unfavourable terms of trade.

EXPORT TRADE AS A MEANS OF ECONOMIC DEVELOPMENT

Herein lies hope for the underdeveloped economies. If it is a fact, that a country has certain special advantages in the production and exporting of particular commodities and that the foreign trade in such goods accounts for a large part of the total export earnings of the country, it is obvious that by concentrating on the expansion of such export oriented industries, the country can realise large earnings which can be profitably used for capital formation. In order to understand the significance of this means, it is necessary to look more carefully into the true nature of the problem of capital formation in underdeveloped countries.

The rate of capital formation in a country is a sure measure of its standard of development and the rate of its growth. Normally in underdeveloped countries this is about 3 to 5 per cent of the national income; in developed countries it is more than 10 per cent. In fact the transition from 5 per cent to 10 per cent investment represents change from an underdeveloped to a developed economy. This increment of about 5 per cent in the rate of capital formation is crucial in the development of an economy but it involves considerable strain. When, however, the higher level is reached further growth is self-sustained. In other words, in the process of this all important transition, per capita productivity would have increased sufficiently as to ensure a high rate of automatic investment of savings. For it is a fact that the higher the level of per capita income, the lesser is the strain involved in maintaining a high rate of investment.

Higher rate of investment is possible only if savings are larger. There are three ways in which larger resources, necessary for increasing the rate of investment, can be found: (a) Increased production (b) Lower consumption and (c) Foreign assistance. While the importance of the role of foreign capital in promoting economic growth cannot be questioned, it has been shown by experience that by far the larger proportion of the means of increasing investments has to be found from domestic resources.

It, therefore, follows that if the savings margin which is vital for economic development is to be widened, either production with the help of existing techniques, equipment and resources is to be increased or consumption level is to be lowered or what

March 22, 1958

is better, both means are to be resorted to simultaneously. Given the level of consumption, savings can increase if production in any line increases, because of better utilisation of resources or when there is an improvement in productivity which manifests itself in an increase in output per unit of input. If there is expansion in total output, while consumption remains constant or is forced down, the additional output can be exported and exchanged for capital goods. On the other hand, if output increases per unit of input, it would be possible to release part of the resources employed in the production of food and other agricultural commodities for producing capital goods. Both the methods promote growth. If the country is not altogether agricultural, but has already developed some of the light industries and is producing some manufactured consumption goods, then it is possible for such a country to export not only raw materials but also some manufactured goods. However, in so far as the spread between cost of production and marketable value of the finished product is greater in the case of manufactured goods than raw materials, it follows that by exporting manufactured goods rather than agricultural commodities there is the possibility of larger gain through export trade. This makes it relatively easier to step up the level of investment.

It is in fact possible that the transition to self-sustained growth, or to use Professor Rostow's expressive term "the take off" may be brought about through the expansion of exports. Normally in the absence of any innovation by means of which a "new" commodity is produced, expansion of one industry has to be at the expense of another industry. And innovation is difficult and rare in an underdeveloped country. This problem can be solved, if increased output resulting from the expansion of one or more industries is exported and disposed of in external markets. Since the export sector can be readily controlled, the larger earnings arising out of increased exports can be profitably diverted for investment purposes. The development and expansion of export oriented industries help growth not only through the earning of much needed foreign exchange but also by indirectly helping other industries in the country. Higher money incomes raise the level of effective demand and ensure larger internal offtake of goods produced at home. Also the overhead facilities which have to be provided to promote particular industries, the products of which have large external markets, would help other industries also, that cater to the needs of domestic consumers. Apart from all these advantages, export promotion has, of late, become of vital importance to all underdeveloped countries of the world in so far as the international flow of capital to primary producing countries has tended to decline markedly in recent years.

But export promotion, if it is to be really effective as a means of facilitating economic growth, should be of the selective type. Quite often the development of particular industries provides the necessary impetus and the means to ensure rapid growth of the economy as a whole. The yield of one or a few industries in a country may increase more than in proportion to the yield of the other industries. This brings about larger earnings through exports and thus facilitate import of capital goods. At the same time the expansion of the domestic market and higher levels of consumption provide an incentive for increased investment and production. It is stated that in Britain in the late 18th century the invention of the cotton gin and the cheapened and enlarged supply of raw materials for the cotton textile industry stimulated inventive talent on the engineering side of the industry. Economic

history provides ample illustrations showing how the expansion of particular industries in different countries has helped in their "take off" into self-sustained growth. Thus, in Britain it was cotton textiles; in Sweden it was the timber industry, in Denmark meat and dairy industry, in Japan the silk thread industry.

This points to the need for finding out those industries in an underdeveloped country which are not merely capable of expansion but the expansion of which would accelerate general growth of the economy. These should be industries, the products of which would bring in large export earnings. Apart from this, it is possible to lay down four conditions which should be satisfied if the industry is to be regarded as one, which can help growth in the manner indicated. In the first place, the expansion of such industries and the increased exports of their products should not seriously affect the pattern or level of domestic consumption. Secondly, the expansion should be easy in the sense that it should not involve very much strain on the economy or violent transfer of resources from other industries in the country. Since underdeveloped countries are handicapped by capital shortage it is obviously preferable to choose those industries which can be made to yield larger output without any great addition to capital equipment. This would mean that wherever possible production should be increased by better use and maintenance of existing capital stock. Thirdly, it is necessary that the exports should have an expanding foreign market. The demand for these commodities should preferably be income elastic, the assumption being that other countries with which the exporting country has trade relations are also developing and would therefore require more and more of the exports of the latter. Lastly, the prices of the commodities exported should, on the whole, be free from violent fluctuations.

EXPORT PROMOTION IN INDIA

In the light of what has been mentioned above, it is possible to examine the extent to which expansion of particular industries in India can help in raising the level of domestic investment. In the last seven years since 1950-51 our imports have been running at an annual average of Rs 722 crores and exports at Rs 607 crores. It has been estimated that over the five years of the Second Plan 1956-57 to 1960-61 exports would be of the order of Rs 2965 crores and imports Rs 4340 crores giving an average per year of Rs 593 crores and Rs 868 crores respectively. The overall deficit in trade balance is estimated at Rs 1375 crores and the current account balance making an allowance for invisibles, is Rs 1120 crores. The last mentioned figure represents the aggregate deficit on current account over the Second Five Year Plan. Exports are expected to rise moderately from an estimated level of Rs 573 crores in 1956-57 to Rs 615 crores in 1960-61. The recent Export Promotion Committee has recommended the fixing of an export target of Rs 700 to Rs 750 crores a year.

The imperative need to step up our exports has been well realised by the government and they have taken steps already in that direction. But the measures that have been adopted so far, such as the setting up of the Export Promotion Councils, the organisation of Market Surveys, the institution of the Foreign Trade Board by the Ministry of Commerce and Industry and the establishment of the Exports Risks Insurance Corporation are all of the general type without reference to any special industry or group of industries. Similarly many of the recommendations of the recent Export Promotion Committee in the nature of tax policy, overseas publicity, provision of credit facilities etc. are also of the same

general nature. But what is required in the present context is concentrated effort to push up the export of those articles which can bring in the maximum of benefit to the country.

Among the export commodities of India there are a few which conform to the requirements indicated above. Of the total value of India's exports three commodities—Tea, Jute yarn and manufactures and Cotton yarn and manufactures—account for a little more than a half. It is not likely that increased production of tea would affect output in any other industry including production of food crops. What is required in the matter of tea is expansion of markets. Tea exports were running at slightly more than 400 million pounds. It is estimated that the exports would reach a level of 470 million pounds by 1960-61. Jute exports have been modestly estimated at 875,000 tons per year in view of growing competition from other jute manufacturing countries. Exports of cotton yarn and manufactures are expected to increase from about 850 million yards to a level of 1000 million yards in 1960-61. As regards jute and other manufactures, methods of increasing output substantially without much adding to the capital stock are to be found. Recently the Union Minister of Industry pointed out that this can be achieved by working more shifts where possible, by adding balancing and marginal equipments to the existing machinery so as to get the maximum out of the existing capacities, by modernising the existing equipment and by insisting on substituting indigenous and swadeshi raw materials, equipment and capital goods, even if they be somewhat inferior to the imported goods. The present output of cotton in India meets only 89 per cent of the total requirements of our textile industry, leaving a gap which is covered by imports involving an expenditure of foreign exchange of Rs 50 crores annually. There is considerable scope for increasing the output of raw cotton in our country without any great increase in the area under cultivation. Among the cotton growing countries of the world, India occupies the lowest place in the matter of yield per acre, with 100 lbs of lint per acre as compared with about 400 lbs obtained in the United States, Egypt and Peru. The production per acre can be increased by reduction in crop duration, and by adopting better methods of cultivation. It is also possible to find an expanding market for the textile manufactures of India in many of the underdeveloped regions of Asia and the Far East which are industrially less advanced than India. The main objective should, therefore, be to increase production to the maximum extent possible. To give to any other objective, such as additional employment, precedence over this vital need on non-economic or sentimental grounds, is then unmistakably a bad policy. In a stunted economy like ours, growth is difficult because of various adverse factors. Nevertheless it is possible to find opportunities for growth and expansion in particular sectors of the economy or in individual industries. In ignoring these opportunities, or what is worse by deliberately restricting expansion in those few lines of enterprise where circumstances favour such expansion we are actually scorching out the very source and fountain head of economic growth.

Promotion of these export industries results in increased production and increased incomes. This, however, is the first step. It is important to follow this up with measures to canalize the additional income into profitable investment. For, in a planned economy, it is necessary not only to seek out better ways of using available resources and increasing the national income but also to see that increased earnings help in economic growth by raising the level of investment.

Towards Mutual Understanding

The improvement in Indo-U.S. understanding and co-operation, of which there are several welcome indications, will be further consolidated by Dr. Radhakrishnan's present visit to the U.S.A. The Vice-President, who occupies a unique place in India's public life, owes it to a combination of talents rarely found to coexist in the same person. He is an unmistakable and even aggressive intellectual, but an intellectual who has no use for the defensive mechanism of the ivory tower. He is equally attached to the Hindu Way of Life, of which he is the most gifted exponent, along with the new values brought to prominence by the French and Russian revolutions. With an integrated philosophy of life which comprehends the values which have stood the test of time along with modern knowledge, he stands for the authentic tradition of Indian philosophy exposition which always related ancient saws to modern instances. A distinguished philosopher, he is no recluse. We shall not be wrong if we characterize him, borrowing the words which Anthony Lewis has used to describe Mr. Justice Frankfurter, "as a passionate ascetic, a libertarian traditionalist, a worldly intellectual." His passionate interest in the welfare of the world around him has drawn out of the

of the cloistered life of the university into the hurly-burly of public affairs. At the same time he has brought rare distinction to the political life in our country and his influence is the greater for being exercised above the level of party politics. It is not without significance that he was the first name suggested by prophets of Cabinet changes to fill the vacancy caused by the passing away of Maulana Azad. While regretting that he could not accept the offer when it was made, one must acknowledge the validity of the reasons which prompted the refusal. His inclusion in the Cabinet would have added to its dignity and prestige, but would have limited his usefulness in spheres where he could be of the greatest service to his country and to the world. His present visit to the United States belongs to this category of larger and more fruitful area of service.

In a sense Sir Sarvapalli Radhakrishnan will be completing the work which was begun last year by Mr. T. T. Krishnamachari, but without the overtones of controversy inseparable from so controversial a personality as the late Finance Minister. Mr. T. T. Krishnamachari was able to create, among the hard-headed businessmen he met in the United States, a helpful understanding of the economic problems facing this country in its efforts to reach a socialist pattern of society without jettisoning democratic values. We may be sure that Sir Sarvapalli Radhakrishnan will be able to make it clear to the distinguished audiences of American intellectuals, whom he is scheduled to address at Harvard, Princeton, Columbia as well as at the Academy of Arts and Sciences and elsewhere, that the Indian brand of socialism is not only not inconsistent with the freedom of the individual, but is in fact the fulfilment of rights of the individual which are guaranteed by the Constitution.

Tea for Taxes

Not many who savour a cup of tea stop to reflect how much of what they pay goes for taxes and how much for the flavour. It is perhaps as well that they do not, for the knowledge will kill the flavour and only the bitter taste will remain. These thoughts are prompted by the telling figures quoted by Mr. C. D. Wilson in his address from the Chair at the annual meeting of the Indian Tea Association. During the last four years, according to his calculations, the income-tax, agricultural income-tax, and excise and export duties paid by tea companies had averaged Rs 522 per acre. This staggering estimate does not include the recent impositions like the Carriage Tax and the General Octroi. The end of writing under the burden, the tea companies appear to have made a good business of it, so that the Tea Industry today is a gold mine, and not merely of the collector of taxes. During the same four-year period, apart from paying

Rs 200 crores in direct and indirect taxes, the industry has earned for the country Rs 499 crores worth of foreign exchange, pushing far ahead of its nearest rivals, Jute and Cotton Textiles. The industry has also provided work and welfare for about a million workers and their families. The industry has no reason to regret the enlightened measures of labour welfare it has undertaken in recent years. These have paid dividends in the shape of better labour relations. The man-days lost through industrial disputes, as Mr. Wilson acknowledged, had been reduced to the record low of one hour per worker for the whole year 1957. The industry has also paid bonuses to workers in the last two years amounting to Rs 15 crores. These remarkable achievements may stand in the way of an understanding by the public of the heavy burden the industry has to bear in the share of taxes and which is likely to handicap its future. Mr. Wilson has served notice that the Tea Industry cannot be expected to repeat a miracle every year, by selling good tea at reasonable prices, after paying for taxes and workers' amenities and subsidised food grains. Taxation is the recurring theme in his comprehensive survey of the problems facing the industry. While it is no doubt true that no estate has been closed down, the number of estates which have changed hands is significant enough to cause concern. For the capital and know-how have been transferred to other regions, to rear formidable competitors to Indian tea. The Present Finance Minister, while he was in charge of Commerce and Industry, firmly turned down Kerala Government's request for nationalisation of foreign estates, and for perfectly valid reasons. He should be able to appreciate that taxes can on occasion be as inhibiting as a direct threat of nationalisation. Heavy taxation not only impairs competitive position abroad, but it also stands in the way of the development of the internal market for the common teas which account for a substantial percentage of the total output. The demand for reduction of taxes gains added relevance, when there is apprehension that the producing countries are turning out more tea than the world is prepared to buy. And there are many new entrants to the ranks of tea exporters, the latest in the field being People's China. There is now a satisfactory growth of export consciousness among all ranks of the administration, and especially when it is a matter of granting import licences. But the taxing authorities, it seems, are an exception. A slight relaxation of the tax burden will enable the Export Promotion Committee to report more satisfactory results. The case for reduction of excise duties on cotton textiles has at last been conceded after a number of mills had closed down. The tea industry, which is the country's largest earner of foreign exchange, deserves similar assistance which should be extended before some estates are allowed to revert to jungle.

Defence Requirements

At a time when the defence budget has come under strong attack in Lok Sabha from the sand point of non-violent absolutism, those who take a more realistic view of national interests can draw satisfaction from the increase in defence production capacity within the country. This is reflected in the larger proportion of defence stores purchased in India during successive years. These show a steady rise from Rs 35 crores in 1956-57 to Rs 45 crores in the current year and to Rs 56 crores in the budget for the coming year. Correspondingly the foreign exchange component of the defence budget has been reduced from Rs 98 crores in the revised estimates to Rs 92 crores in the budget for 1958-59. Further developments in this direction will help to strengthen the national economy quite as much as national defence. Critics who complain against the growth of defence expenditure in recent years, overlook the principal factors responsible for the rising bill. The increase in the cost of materials, railway rates and the rapid obsolescence of defence equipment are some of the main reasons. And though the defence budget has increased from Rs 186 crores in revenue account and Rs 10 crores capital outlay in 1953-54 to Rs 278 crores revenue expenditure and Rs 27 crores capital outlay in budget for 1953-59, the proportion of defence expenditure to total revenue and expenditure has been falling. From 44.79 per cent of total revenue in 1953-54 it has come down to 36.70 per cent in 1957-58 and 36.17 per cent in the budget estimates for 1953-59. The figures are even smaller when expressed as a percentage of total expenditure.

UK Bank Rate cut to 6 per cent

THE inevitable has happened, and all that is surprising is that action on the part of the Bank of England should be so late and that the reduction is no more than 1 per cent. For, the trend toward easier money rates has been quite pronounced in the U.S. where, for the third time since the autumn months, the Federal Reserve rate was reduced. Both the Netherlands and Germany have also, in recent weeks, effected reduction in the Bank Rate. The Bank of England, therefore, may be said merely to fall in step with the measures being taken by the central banking institutions of other countries.

There is, however, one distinct difference between conditions in the U.S. and the U.K. In America, it is frankly conceded that recession is the problem of the day, and that it is futile and wasteful to expand energies on inflation. On the other hand, the communique announcing the cut in the British Bank Rate makes it a point to stress that the measure does not mean that the deflationary policy will be relaxed.

It remains to be seen how long the UK will be able to persist with a 6 per cent Bank Rate.

Deficit Finance for Rs 15 Crores?

WITH two weeks to go in the current financial year, the Central Government last week were compelled to have recourse for central banking credit. However, in the returns of the Reserve Bank for the week ended March 14, the quantum of deficit financing has been concealed. In the first place, although sales of ad-hocs in favour of the Reserve Bank should be reflected in the Issue Department, Rupee Securities are unchanged. It is, thus, clear that, after sales of ad-hocs in favour of the Reserve Bank, there has been a transfer, for a corresponding amount, of marketable securities from the Issue Department to Investments in the Banking Department.

Notes in circulation are practically unchanged at Rs 1578.67 crores, and Rupee Coin also is more or less at the same level at Rs 127.39 crores. Cash in the till marks a small rise of Rs 0.37 crores to Rs 9.98 crores.

In the Banking Department, it is to be noted: (a) that the Cen-

tre's balances are lower by Rs 3.15 crores; (b) that the Deposits of State Governments are sharply higher by Rs 11.82 crores; (c) that the Reserve Balances of member banks have fallen quite substantially by Rs 9.47 crores to Rs 67.93 crores; and (d) that investments are marked higher by Rs 6.44 crores at Rs 235.82 crores. All these changes are interconnected, and we have besides to note that, in the relevant week, the State Bank's Investments in gilt-edged show a rise of nearly Rs 7 crores. If the Reserve Bank's Investment Portfolio is marked up by Rs 7.44 crores, after sales have been presumably effected to the State Bank for another Rs 7 crores, it may be inferred that the gross rise in Investments during the week would have been of the order of Rs 15 crores. This would appear to be the quantum of deficit financing during the week, and, we repeat, there has been a transfer of marketable securities for Rs 15 crores from the Issue Department to conceal the rise that would have occurred under that head in respect of sales of ad-hocs in favour of the Reserve Bank. The deficit financing for Rs 15 crores has enabled the Central Government to make some payment to the State Governments, as is suggested by the steep rise in the balances of the State Government. If the Central Government's balances were replenished in this way, we have now to see how the sale of securities to the State Bank has had its impact upon the position of the Reserve Bank. Briefly, the securities were paid for by the State Bank by running down its balances with the Reserve Bank. This would explain the sizable decline in the Reserve Balances of member banks.

Thus, it is to be noted that the fall in the Reserve Balances of Scheduled Banks is not derived from any pressure felt in respect of the busy season. Indeed, the Other Loans and Advances of the Reserve Bank actually show a decline of Rs 1.91 crores to Rs 73.11 crores. Moreover, Advances against usance bills are practically unchanged at Rs 21.75 crores. Lastly, Active Note circulation has also been stationary, and all this suggests that, the decline in the Reserve Balances notwithstanding, there is the barest hint of a deceleration in the pace of 1957-58 busy season.

We should not make too much of it, but Foreign Balances have, for the first time since the beginning of the Second Plan, registered a rise of some dimensions, a rise which is attributable to an export surplus. The increase in the week under review amounts to Rs 3.14 crores. Once again, it is worth emphasising that some semblance of balance has been achieved in the payments position.

The return of the State Bank for March 14 discloses another rise of Rs 3.52 crores to Rs 416.14 crores in Deposits. Borrowings are placed at Rs 0.18 crores. The total of

Advances is slightly higher at Rs 208.32 crores against Rs 207.51 crores. Cash Balances have been drawn upon to the tune of Rs 8.61 crores, mainly for the purpose of purchase of gilt-edged from the Reserve Bank. The State Bank's Investments in gilt-edged mark a rise during the week of Rs 6.81 crores to Rs 180.36 crores. This means that, since the beginning of the current busy season, the State Bank has experienced an increase of Rs 49.14 crores in Deposits. The expansion in Advances has amounted to nearly Rs 43 crores. Nevertheless, Investments in Government securities have risen by Rs 36.43 crores, and this entailed a drawing down of Cash Balances, which have been marked down from Rs 63.65 crores to Rs 26.37 crores. In broad terms, the accretions to Deposits have been adequate to meet the expansion in Advances, while the additions to the gilt-edged portfolio have been met from the Cash Balances.

The return of Scheduled Banks for March 7 bears some impress of the month early demand for funds. The total of Advances marks a rise of Rs 4.88 crores to Rs 936.44 crores, and is now in sight of the peak touched during the 1956-57 busy season of Rs 939.87 crores. Nevertheless, the member banks report a small increase of Rs 2.04 crores in Deposits, but this was solely on account of the State Bank which, in the corresponding week, had reported a rise of Rs 4.75 crores in Deposits. Thus, the other Scheduled Banks actually suffered a drain on their Deposits. In order to meet the expansion in Advances, and also to improve their cash position, the Scheduled Banks have increased their borrowings from the Reserve Bank by Rs 8.06 crores to Rs 36.92 crores. Nevertheless, the level of borrowings this year is much lower than in the corresponding week of last year, when indebtedness to the Reserve Bank amounted to Rs 79.08 crores. Cash Balances have improved from Rs 163.65 crores to Rs 165.44 crores. As far as the Scheduled Banks are concerned, the position is that, since the commencement of the current busy season, Deposits have risen by Rs 58.51 crores. The expansion in Advances has been for more than this amount, the relevant head showing a rise of Rs 68.51 crores. Moreover, Investments have increased by a little under Rs 40 crores. In the result, on the one hand, borrowings from the Reserve Bank are marked up by roughly Rs 7 crores, and Cash Balances are lower by Rs 39 crores, on the other.

Pandyan Bank

THE Pandyan Bank Limited continues to make good progress, and, in the accounts for 1957, an increase of Rs 0.30 crores to Rs 2.74 crores in Deposits is revealed. While cash balances are practically unchanged, the additional resources thus postulated have gone to satisfy the expanded demand for

accommodation from constituents. Besides, Investments are also shown to have declined by Rs 3.34 lakhs to Rs 69.56 lakhs. Advances are sharply higher by Rs 37 lakhs at Rs 1.72 crores.

The higher volume of advances accounts for an increase in the income by interest and discount to Rs 15.83 lakhs from Rs 12.85 lakhs. Moreover, the income by commission, exchange and brokerage also shows a rise of half a lakh to Rs 3.48 lakhs. However, the dearer rates in the money market have been responsible for an increase of Rs 1.51 lakhs to Rs 7.81 lakhs in the interest paid. Again, salaries and allowances are also marked up by Rs 1.34 lakhs at Rs 5.84 lakhs. In the result, the balance of profit marks but a small rise from Rs 3.47 lakhs to Rs 3.50 lakhs.

Taxation absorbs Rs 1.88 lakhs against Rs 1.35 lakhs last year; provision has been made besides for additional tax payable for 1956 to the tune of Rs 0.52 lakhs. As against a transfer to reserve fund last year of Rs 0.75 lakhs, there has from the current year's profits been provided a sum of Rs 0.25 lakhs to Contingency Account. The dividend is maintained at 7½ per cent.

The most notable fact about the Pandyan Bank's progress is its energetic attempt to spread the banking habit, by a carefully thought out programme of new branches. As against 8 new offices established during 1956, the relevant figure for 1957 is 12. In this context, the Directors' Report acknowledges the kind consideration given by the Reserve Bank to the proposals for new branches submitted by the Pandyan Bank.

Reading the US economic weather

By THOMAS J. MITCHELL
WASHINGTON—When it comes to forecasting, economists face more serious occupational hazards than even meteorologists. But at this moment it is almost certain that their analysis is a more reliable guide to a correct reading of the economic weather data than are raw, unevaluated figures, especially those on US unemployment (5.2 million by mid-February) and employment (62 million).

The reason is in the figures themselves. They are serious enough to lessen the obligation of officials to speak with caution lest their words have the wrong psychological effect. Yet, at the same time, the question arises—and it is an important one just now—exactly how reliably such figures disclose trends rather than just money situations.

The February labour market survey, the usual sampling rather than an exact head count, was made when blizzards paralysed large sections of the United States, with undetermined but detrimental effects on the labour statistics.

Nobody, of course, tends to disregard the figures for that reason.

Much to the contrary, both the administration and congress immediately put in motion new anti-recession measures. But the blizzard's effect on the statistics goes to show why, for a great many reasons, economists may want to reserve their ultimate judgement, as to the actual depth of the business downturn, until mid-April at least.

Cuts of both individual income and business taxes have been deferred for the moment by the administration and also by congressional leaders. But White House as well as Capital Hill economists have buckled down to study the latest

data, especially those on business investment and consumer buying plans.

And while they have long agreed that the potent medicine of a tax cut needs to be applied with caution, they are also agreed that action short of a tax cut is very much in order. Such action is to be financed primarily by releasing available federal public works funds faster than originally planned, and by providing federal payments (for about 13 weeks) to those whose unemployment benefits, differing from state to state, have run out after anywhere from 16 to 30 weeks.

With a whole hopper full of bills now going through the congressional mill, and with Mr Eisenhower consulting frequently with his economic advisers, these are the measures most likely to come: Substantial federal aid to housing; speed up in the vast federal highway programme approved by Congress two sessions ago; speed up of the reclamation, harbour improvement and flood control programmes that are a normal part of governmental activity.

Mr Eisenhower's point is a proposed increase in highway spending to \$6,600 million instead of the

previously scheduled \$4,000. Senate majority leader Johnson (Texas Democrat) in turn has pushed a special \$1,800 million housing bill which already has been approved by the senate.

All told, the administration's programme would inject into the economy some \$2,800 million as against some \$4,000 million under the congressional programme, which has support from important Republicans, in addition to the democratic proponents of the programme who have always been particularly conscious of governmental action in the economic sphere.

British International Loan Scheme

Paul Einzig

THE idea, first launched by the Leader of the British Socialist Party, Mr Gaitskell, last year, that Britain's problem should be solved by means of issuing a gigantic international loan seems to be receiving increasing support. Those who favour this device believe that since the only reason why Britain cannot inflate indefinitely with impunity is the inadequacy of her gold and dollar reserve, all that is needed is to secure a big reserve of borrowed gold and dollars. They think that, once that is done inflationary Britain could live happily forever after.

When Mr Gaitskell made the suggestion very few outside the Labour Party took any note of it. Political leaders make such suggestions by the dozen. But some months later Sir Oliver Franks, former British Ambassador to the United States and now chairman of Lloyds Bank, came out with a substantially identical suggestion. Many people who dismissed the idea out of hand when it was advocated by Mr Gaitskell became firmly converted to it when put forward by Sir Oliver Franks. And now one of the leading theoretical economists, the Oxford Professor J. R. Hicks, joined the Gaitskell-Franks combination. So now the scheme is backed by a leading politician, a leading banker, and a leading economist, not to speak of the lesser supporters among the three professions and among financial journalists.

The reason why Professor Hicks, addressing the Manchester Statistical Society on March 12, declared himself in favour of a substantial stabilisation loan was because he feels that even if inflation is eventually defeated the country might still be forced into high money rates in order to protect sterling. For an economist of first-rate reputation this is an amazing view to take. It is understandable if illiterate politicians see no connection between domestic monetary trends and the trend of sterling exchange. But economists have no right to ignore

March 22, 1958

the existence of a very close connection. The main reason—indeed practically the only reason—why sterling has been subject to frequent adverse pressure in recent years, and why Britain has been unable to accumulate an adequate gold reserve, lies in the non-stop wage inflation. It has handicapped British exports and has reduced the volume of goods available for early delivery to foreign buyers. It has created a feeling of distrust in the stability of sterling, leading to recurrent flights from the pound.

Now if only inflation could be brought to an end sterling could well hold its own. British exports would expand and the Treasury would be able to accumulate a substantial gold reserve out of balance of payments surpluses and out of the foreign balances which would be kept in London permanently in the absence of a devaluation risk. There would then be no need for a fictitious reinforcement of sterling with the aid of borrowed dollars.

British prices would be competitive in the absence of inflated domestic demand, and delivery dates would be reasonable. A substantial and steady balance of payments surplus would ensure the prestige of sterling at home and abroad even in the absence of window-dressing increase in the reserve with the aid of borrowed dollars.

Is it too much to expect people of the standing of the three advocates of a big dollar loan to remember the experience of the big dollar loan of 1946? Its proceeds disappeared in a remarkable short time. There is no reason to suppose that it would be otherwise if the Government should allow itself to be persuaded into repeating that experience. Indeed the false security provided by the borrowed reserve would encourage trade unions to insist on unearned wage increases; it would encourage employers to concede such increases in the hope of a non-stop boom that would enable them to add the extra costs to the prices; it

would encourage arbitrators in wage disputes to award substantial wage increases; and it would encourage the Government to allow inflation to proceed rather than incur unpopularity by trying to arrest it.

In any case it seems doubtful whether such a transaction would be practicable. According to Sir Oliver Franks' suggestion, the reinforcement of the British gold reserve should be provided by the International Monetary Fund. But that institution does not conjure dollars out of thin air. In order to be able to increase its resources on the scale envisaged by Sir Oliver Franks, it would be necessary for the member Governments to double or treble their contributions. This would mean that the United States would be expected to provide additional billions of dollars so as to enable the International Monetary Fund to reinforce the British reserve. The contributions of other countries with hard currencies would be negligible compared with that of

the United States. It is not the American investor that would be called upon to provide the money, but the American taxpayer.

Twelve years after the end of the war, the British people should not ask for further financial assistance from the United States. The American people would be fully justified in rejecting such a request. The only net result of the transaction would be that Britain would be landed with additional international liability. Wage inflation would lead to the depletion of the proceeds, while the millstone of the liability would remain round the necks of generations yet unborn.

It is to be hoped that the present British Government will have enough sense and dignity to resist the temptation provided by the proposal. Should it choose to favour the line of least resistance, it is to be hoped that the United States would not be prepared to be party to such a transaction.

A matter of confidence

'CONFIDENCE' is essential in all human affairs. An advanced economy depends on confidence because of the interdependence of its members.

Confidence is the real backing for all forms of currency and credit, and for the reputation of business houses. For instance, people talk of having confidence in Binny's because they know from the experience of three generations that Binny's fabrics are dependable for their good quality.

Life Insurance—the Issue of Differential Bonuses

DURING the company regime, a large number of policy holders of the companies took life insurance policies from the companies on "with profit" basis with the hope that the enhanced premiums that they were being called upon to pay would be adequately compensated by the bonuses declared by the companies. During the company regime, since business was canvassed on the basis of competitive advantage, there was in reality competition amongst the insurers to declare higher and higher bonuses. Competition amongst the insurers to render service to policy holders insured ultimately to the benefit of the policy holders. Since life insurance was nationalised, there had been no pronouncement from the Life Insurance Corporation of India or from the Central Government as to the future of this class of policy holders and the benefits they would be entitled to, in consideration of their paying premiums higher than that scheduled for "without profit" policies. Such policy holders, as a class, have been greatly exercised in their

minds about the uncertainties facing the future of their policies.

There is no provision in the Life Insurance Corporation Act which guarantees the benefits which the policy holders were so long enjoying during the company regime. In Section 37 of the Life Insurance Corporation Act, it has been laid down that, subject to the provisions contained in Section 14 the amounts assured by all policies issued by any insurer the liabilities under which have been vested in the Corporation under this Act and all bonuses declared in respect thereof whether before or after the appointed day shall be guaranteed as to payment in cash by the Central Government. Section 14 confers on the Government the power to reduce the amounts of insurance under contracts of life insurance having regard to the financial condition on the appointed day of any insurer whose controlled business has been transferred to and vested in the Corporation.

It will thus be seen that whilst the Life Insurance Corporation of India has been granted statutory powers to modify contracts in respect of companies whose financial solvency is in jeopardy, there is no concomitant guarantee on the part of the Corporation or the Central Government to assure to the policy holders that the benefits and advantages that they were enjoying during the company regime will also be guaranteed in the future. Section 37 merely guarantees bonuses declared whether before or after the appointed day, but there is no guarantee in that section with regard to future bonuses.

Following this feeling justifiably entertained by a large number of

policy holders in the country, the question of re-classification of units under the Life Insurance Corporation into "A" class and "B" class units is being considered by the Life Insurance Corporation of India. The class of "with profit" policy holders has not taken kindly to the idea of getting uniform treatment from the LIC. They have, therefore, justifiably contended that if no additional benefits were to be declared in favour of those policy holders who have taken out "with profit" policies, they should not be asked to pay higher premiums which they were paying in pre-nationalisation days.

For purpose of valuation two courses are said to be possible, viz., either the units be re-classified as "A" and "B" units or in the alternative the clause pertaining to profits and bonuses be abolished and uniform policies and rates of premium introduced.

A spokesman of the LIC is reported to have said that the Corporation will go in the matter of valuation of assets of companies to determine whether valuation should be made treating LIC as one unit or as different units for the purpose of declaring differential bonuses. This view attributed to the spokesman of the Corporation cannot apparently be taken as authoritative. Nevertheless, it is high time that the Corporation should at least declare, to allay misgivings from the mind of the public, that the Corporation intends to do justice to those policy holders who have been paying for many years enhanced premiums for the additional advantages. Bonuses are integrally associated with premiums, costs and returns from investments. There is no knowing at the present moment of the costs of the Corporation, because the Corporation has not come out so far with a revenue account. All that the public has before it is merely a statement of business so far effected. Rationalisation of costs of the Corporation will inure to the benefit of the policy holders. In any event, the Corporation should be able to assure the policy holders that administration is not eating into the bonus reserve nor is it making inroad into the fund which should have gone to policy holders in consideration of their paying higher rates of premiums.

The view that insurance units should be re-classified into "A" and "B" class units should be gone into by the authorities of the Corporation more carefully and a policy statement to allay the misgivings of the policy holders seems to be overdue. If, however, it is not practicable to ensure to the policy holders similar rates of advantages and bonuses which they were enjoying in pre-nationalisation days, the expert actuaries at the disposal of the Corporation should be able to declare to such policy holders the rates of premium they should pay in the future in the event of there being difficulties in guaranteeing the advantages.

Import Squeeze—A Boon for Indian Industries

Mr Morarji Desai, while explaining the rigorous import policy of the Government of India, pointed out that this would provide the indigenous industry with impetus and inducement for further development. The import restrictions would, according to the Union Minister, also help the Indian industry to improve the quality of their products. Once the present difficulties were over, and the Indian industries developed, the necessity of imports would go down very considerably, resulting in a huge saving of foreign exchange in future.

But another very important question remains to be answered, as to what is going to happen to those firms, completely devoted to import for a very long time. In business, it is very difficult to switch off to completely new lines, as and when one likes. The present import restrictions imposed by the Government have thrown quite a good number of old as well as new firms out of gear, and if this policy is pursued for one or two years more, firms, mainly dealing in imports will have to be closed down with all the concomitant consequences.

Then, coming to the contention of the Union Minister for Commerce and Industry, that restrictions on imports would go a long way toward development of the Indian Industry, both quantitatively, and qualitatively, one has to observe and scrutinise all the factors associated with the subject. Paradoxically enough, the development of home industries is, also to a very great extent, dependent on importation of machineries raw materials and other vital requisites. The present import restrictions have not only been imposed on luxury goods, but also on capital goods, the dearth of which has affected the development of industries very considerably. The apprehension of some quarters, that the public sector is being allowed to develop and grow at the cost of the private sector, will be possibly justified to some extent, if the present import restrictions continue. Hundreds of small and medium industries are not able to expand for want of imported materials. In fact, we have been moving in a vicious circle, by restricting imports, and at the same time expecting that Indian industries would expand on modern lines.

★ INDEX NUMBER OF WHOLESALE PRICES

The official wholesale price index (with the year ended March 1953 as 100) advanced by 0.3 per cent to 105.0 during the week ended March 8, 1958 as compared with 104.7 (revised) for the earlier week. The index was higher by 0.9 per cent when compared with the corresponding week of the previous month but was lower by 1.0 per cent than that of a year ago.

Futures Trading from March 29

THE long-awaited announcement as regards the date of application of the Forward Contracts (Regulation) Act, 1952 to forward trading in raw jute goods was made last week-end. The Government of India have decided to apply the provisions of Section 15 of the Act to raw jute and jute goods, and to recognise the East India Jute and Hessian Exchange Ltd., under Section 6 of the Act for the purpose of conducting futures trading in these commodities at Calcutta with effect from March 29, 1958. Forward trading in raw jute and goods in the rest of the country will simultaneously be prohibited by the application of Section 17 of the Act.

At present futures contracts in jute goods are prohibited in West Bengal under the West Bengal Jute Goods Act, 1950 although trading in all types of forward contract in these goods has been free in the rest of the country. The Forward Markets Commission who submitted their report to Government in August 1956 had recommended that forward trading in raw jute, and jute goods be organised under the aegis of the East India Jute and Hessian Exchange Ltd., Calcutta, which might be recognised for the purpose of conducting trading in all types of forward contracts in these commodities on a comprehensive and well-regulated basis. The fact that the IJMA's standard contracts had also been sought to be brought under the purview of the Act was viewed with grave apprehension by the trade because such interference with the IJMA standard contracts would completely disrupt the trade in jute goods with adverse effects on exports. The Commission had argued that if the IJMA contracts were exempted there would be little left to control because those contracts accounted for the bulk of the trade in jute goods.

The Government of India accepted the recommendations of the Commission but decided that in so far as transferable specific contracts in raw jute and jute goods were concerned, these might be freely permitted for a period of six months after Section 15 of the Act was applied to trading in these commodities.

As a result of this decision the Commission will be able to control only hedge trading in raw jute and jute goods from March 29. Any such contracts entered into after that date outside the recognised association will be illegal. The constitution of the East India Jute

and Hessian Exchange Ltd which will hereafter be the recognised association for conducting futures trading in raw jute and jute goods is broad-based in order to enable members of various jute associations to join the Exchange.

While it is true that in view of the uncertainties in the supply of raw material to the industry there will continue to be some speculative activity, the establishment of futures trading in raw jute and jute goods will go a long way in preventing the violent price fluctuations stemming from the operations in the fatka market. The futures market will be of considerable help to the industry because it will provide hedging facilities. But for futures market to become effective, it is essential that the trade should take advantage of facilities now being provided. It is to be hoped that a well regulated forward market in jute will be established before long.

★ Speaking at the annual general meeting of the Indian Jute Mills Association last week Mr D. P. Goenka, Chairman, pointed out that the hope that the Indian jute industry would show substantial improvement in 1957 had been belied. Nevertheless, the past year had been significant in that it had witnessed the consolidation for the industry. Considerable progress has been made in regard to attaining raw jute self-sufficiency. Indian jute mills' dependence on Pakistan has been greatly reduced. In the current season roughly 90 per cent of the fibre consumed by mills has been grown in India. Indications are that given favourable weather conditions, the size of the next crop will be even bigger. The efficiency of mills has been increased by the good progress made in the direction of modernisation and rehabilitation of machinery. Statistically also the industry is in a better position than it was a year ago. Despatches during the year have been at a higher level than production. Total production has been at 1,023,000 tons but total off take has been 20,000 tons higher than this figure.

Compared with the previous year, however, output has declined by 6 per cent. Even so 1957 is a record production year since 1948 barring of course, 1956. As for off take during the year, sackings seen to have fared better than Hessians and other varieties. The result has been an overall decline in exports to the tune of 15,000 tons. Mr Goenka has drawn attention to the fact that there has been a distinct change in the pattern of India's export trade in jute goods in 1957. The off take of our traditional markets almost without exception has fallen and these have been compensated for by larger shipments elsewhere. There has been a decline of 5 per cent in the case of USA and this has largely been brought about by the economic recession there and increase in bulk handling. The drop of 50 per cent recorded in the case of UK is a direct result of the operation of the UK Jute control. The sub-

stantial fall in the export of sackings to Australia, India's principal market for this category of goods, is due to the serious drought in the wheat-growing areas in that country last year. Apart from the decline in off take from overseas countries, there has been serious disappointment for the industry from the domestic front. Contrary to expectations domestic off take during 1957 has recorded a fall of 14,000 tons compared with the previous year.

Referring to the financial position of jute mills, Mr Goenka has pointed out that the situation continues to be quite unsatisfactory. As against a net profit of about Rs 2.5 million in 1955, the industry in 1956 (on the basis of 90 per cent of the balance sheets of companies) has recorded a loss of more than Rs 25 million. Though "the losses in 1957 may not have been so great as in 1956 their cumulative effect is telling on the mills".

Referring to the future prospects of the industry, Mr Goenka says: "The one certainty is that trading conditions are not going to be easy, and I do not think we can expect any material expansion of our export trade, except perhaps through the development of new uses for jute fabrics." He, however, concludes that barring some unforeseen calamity, the jute industry and trade will fare better in 1958 than in the past year.

★ The jute goods market ruled steadily during the past week with business passing at a moderate level. The under one was firm after midweek on news of higher exports of sackings during the previous month. The Hessian section was also helped by report that burlap consumption in US in February stood at 70 million yards.

Despatch of jute goods during February were higher at 85,845 tons as compared with 75,523 in January. During the corresponding month of the previous year despatches were placed at 85,951 tons. Of the total February despatches, exports amounted to 67,443 tons against 55,654 in the previous month, while off take for local purposes at 18,402 tons were lower than in the previous month when they totalled 19,874 tons. Of exports sackings accounted for as much as 35,231 tons. In the previous month such exports were placed at 26,215 tons. Exports of Hessian were also higher at 30,793 tons against 29,103 tons. Compared with exports in the corresponding month of last year, sackings exports during last month were higher as the comparable quantity for February 1957 was 34,981 tons. Hessian exports on the other hand were lower as Hessian exports in February 1957 were placed at 31,363 tons.

The improvement in sentiment in the sacking section had also been aided by the confirmation early in the week of the Government order for 12,500 bales of sacking. Hessian 40"x10 oz Ready which opened at Rs 39.19 closed on Wednesday at Rs 39.30. B Twills

Ready advanced from Rs 39.15 to be finally placed at Rs 100.40.

PRICE TRENDS

D. W. Flour	...	116.75	117.50
Sugar Bags	...	112.50	112.50

The raw jute market ruled steady during the past week in sympathy with the goods section. Apart from the fact that despatches had been better in February, the announcement that futures trading would commence toward the end of the month was helpful in steadying up sentiment. Throughout the week small daily mill business at a steadily advancing rates was reported done. Assam Bottoms which opened at Rs 23.50 had gained 1½ points by the end of the week to be finally quoted at Rs 25 per maund.

One of the contributory factors for the improvement in sentiment was the fact that arrivals of raw jute into Calcutta and Mills stations during February were sizably lower than in the previous month. Arrivals during February were 5,47,000 bales against 7,50,000 bales in January. Of February's arrival, jute of Indian origin was placed at 5,23,000 bales while that of Pakistan origin was 21,000 bales. January's arrival was made up of 6,89,000 bales from India and 61,000 bales from Pakistan.

Final Sales of 1957 Teas

WITH improved demand, sales of the current season's Tea in Calcutta are expected to close before the arrival of the next crop in the market. Tentative estimates put the available tea for sale in the export auctions at 300,000 packages. Assuming that offerings will continue to be about 60,000 packages each week, there will be another five sales of export teas. Thus, the last full sale in the season will be held on the 15th April. It is possible that a small clearing-up sales might be necessary a week or a fortnight after the final sale.

About 250,000 packages of Dusts remain to be sold in the internal market. Assuming that offerings will continue at the present rate of 20,000 packages a week, there will be thirteen more sales during the current season. The balance of the 1957 Dust crop will, therefore, be finally disposed of by the middle of the year.

These estimates for the final sales of the current season's teas are very similar to those of last year when the final sale for export was held on the 8th April, 1957 and the final sale on old season's dusts on the 11th June last year.

Meanwhile, offerings in the Export Sale, held in Calcutta this week, were 60,788 packages. There was a good general demand which strengthened as the sale progressed. Bright liquoring teas and orthodox Fannings were the strongest feature of the sale and were generally dearer although the plain and medium liquoring Broken types were often 2 to 4 nP per pound easier.

There was fair demand for CTC teas which were fully firm. The poorer and more fibrous kinds met with better enquiry than in recent weeks and were 10 nP to 15 nP per pound dearer. Brown Doars met with limited demand, while Fannings were 5 to 10 nP easier. Darjeeling teas, on offer, were sold well, while Leaf grades were sold at about last rates, particularly the stylish ones which often fetched prices above their valuations. Following rates were quoted:—Clean Black Pekoe Rs 2.25 to Rs 2.30; Plain Broken Pekoe Rs 1.38 to Rs 1.42; Plain Fannings Rs 1.56 to Rs 1.60; Medium Broken Pekoe Rs 1.50 to Rs 1.54; Medium Fannings Rs 1.72 to Rs 1.76; Best Assam CTC BP Rs 2.60 to Rs 2.80 and Best Assam CTC Fannings Rs 2.70 to Rs 2.90.

In the Internal Sale, offerings consisted of 20,299 packages of

Dusts for which there was a strong general demand. Prices were generally dearer, particularly for those suitable for the Middle East. The best CTC types and the better liquoring medium CTC Assams with bright liquors were fully firm and occasionally dearer; but the plainer and fibrous kinds were often easier.

Orthodox descriptions from all districts with a clean black leaf appearance were sold well and were sometimes 2 to 4 nP per pound dearer at the close. The poor liquoring kinds were, however, easier. The Darjeeling teas, on offer, met with an irregular demand. Following rates were quoted:—Medium Doars Dust Rs 1.54 to Rs 1.56; Medium Assam Grains Dust Rs 1.56 to Rs 1.58; Medium Assam CTC Dust Rs 1.85 to Rs 2.05 and Best Assam CTC Dust Rs 2.85 to Rs 3.15.

Also, 5,478 packages of Leaf grades were offered for internal consumption. There was a good general demand and, with the exception of better CTC types, prices were generally irregular and easier.

In the Export Quota section, rates moved narrowly between 3½ and 4½ nP; and business was reported at these levels.

In the Cochin market, 600,000 pounds of Dusts were offered for internal consumption. The sale witnessed a strong general demand. Medium and good medium teas were sold at 10 to 15 nP per pound dearer. Other descriptions advanced in price irregularly by 5 to 10 nP. The next Dust Sale will be held on the 25th March.

With all centres operating freely, except for Russian buyers who were absent at this week's auction, a good general demand prevailed in the Colombo market. Best liquoring sorts and colour Broken fetched firm to dearer prices; but below the best were sometimes easier. Medium Broken advanced substantially as the sale progressed and registered firm to dearer rates; but low-gown teas declined by 5 cents per pound. Fannings grades were generally dearer; but Persian Gulf types were stronger.

Ceylon is reported to have taken the initiative for re-opening negotiations for a new Tea Agreement, which will provide for the control of production, acreage and export. Producers generally must be in a new frame of mind when looking at the idea of a new agreement; because till recently individual producing countries have found advantage in keeping outside the Agreement. One of the stumbling blocks will be the attitude of East African producers, who are now in a phase of active expansion. To them, any kind of curb may be objectionable.

In the Sale No. 18, held at Chittagong, Leaf offerings consisted of 9,354 chests and Dusts 3,827 packages. There was a strong and widespread demand for Leaf grades. Whole Leaf grades were generally As 2 to As 3 per pound higher, while Broken improved by As 2 to As 2½ per pound. The

brightest feature of the sale was the demand for Orange Fannings and Fannings which lifted the prices of these grades by some As 4 to As 6 per pound. "Price" teas were rather irregular.

There was a useful general demand for all types of Dusts, which advanced by As 2 with better sorts being frequently up to As 4 dearer. Plain Sylhet Dust was quoted at Rs 2.7.0.

In Mincing Lane, offerings this week were 22,481 packages including 17,207 packages from Northern India. There was a strong and active demand and prices were generally higher. The best quality descriptions advanced by 2d to 4d per pound and often more in the case of Fannings grades. Good liquoring Medium kinds were up to

2d higher. Thin liquoring teas were the weakest feature of the sale and these did not always realise valuations. Rates remained unchanged as no Clean Common Pekoe was offered for sale.

Tea stocks in London, as on the 7th March, were 115.81 million pounds as against 119.47 million pounds in the previous week. The total quantity to be landed on the same date was 21.43 million pounds. Deliveries totalled 10.51 million pounds and landings 6.89 million pounds. Total afloat was 42.56 million pounds including from Calcutta 29.55 million pounds; from Chittagong 352,520 pounds; from Cochin 4.81 million pounds; from Colombo 6.27 million pounds and from other Ports 1.58 million pounds.

STATE BANK OF INDIA'S

RUPEE TRAVELLERS

* CHEQUES FOR CARE-FREE TRAVEL

You can travel anywhere in India and outside without having to carry a large amount of cash, without being in fear of theft or of running short of money.

The State Bank's travellers cheques, issued in denominations of Rs. 100/- and Rs. 50/-, represent the ideal travel funds. They are as safe as a bank draft and are encashable anywhere, anytime.

This is one more of the services the Bank provides from January 1958. For complete information, please ask for a copy of our illustrated booklet from the branch nearest to you, or consult your travel agent.

US Notes

Washington—The Eisenhower Administration is pressing hard to obtain Congressional approval of its full request for \$3,900 million with which to carry on US Mutual Security and Assistance programmes during the fiscal year beginning next July. In one of the most significant demonstrations of non-partisanship in the nation's history, it has been joined in this effort by outstanding Americans repre-

S. E. RLY. TENDERS

Sealed tenders are invited for supply of the following materials: (1) 40 Nos. Switch and Lock movements complete with stretcher bars as per drawing No. SA3300 IRS S-10 (Current). (2) 40 Nos. Signal Bracket 3-Doll Lattice main post 21'9" complete except Arm and Roundel as per drawing No. IRS SA5536A, 5538B to IRS S-10 (Current). (3) 20 Nos. Frame Lever 1935 type complete (MA) each consisting of 21 Levers as per drawing No. IRS SA. 530. (4) 500 Nos. Lock facing point complete but without plungers as per drawing No. SA 5984 IRS S-10 (Current). (5) 75 Nos. Relay D.C. neutral track (T.A.) 1000 W, 2F/B as per specification BSS. 1659-50. (6) 24 Nos. Double wire points mechanism B.G. without escapement only as per drawing No. IRS SA 7900 IRS S-10 (Current). (7) 16 Nos. Interlocking frame ground type direct locking 4-Levers as per drawing No. IRS SA. 925 IRS S-10 (Current). Tenders will be opened on April 22, 1958 at 12 noon.

Tender forms are obtainable from the Controller of Stores (Construction Section) Garden Reach, Calcutta-23 on remittance of Rs 5/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Rly., Garden Reach by local firms.

Earnest money is Rs 1000/- which should be deposited with this Railway's Chief Cashier and the receipt obtained thereof should accompany the tender without which the tender is liable to be rejected. Approved contractors who have already made a permanent deposit of Rs 1000/- are exempted.

Firms not on this Railway's list of approved contractors must enclose a valid income tax clearance certificate with the tender.

S133 GENERAL MANAGER

sending virtually every field of endeavour.

One of the less fortunate by-products of this kind of a national effort, however, is that it sometimes tends to obscure the enormous amounts of capital already flowing from the United States to the rest of the world. And government funds make up only part of this flow. The rest—in fact, the larger part—takes the form of private investment, which is proving an increasingly fruitful source of economic assistance to countries in all stages of development.

In just the past two years, for example, American private investment abroad has averaged \$4,300 million a year. In addition, US government grants and loans, entirely apart from direct military aid to its allies, has come to more than \$2,000 million a year. This means that annually almost \$6,500 million in useful capital has been pouring from the United States into other lands.

When to this is added the foreign investments of other free nations

—such as those of Western European countries which are making substantial contributions to the development of former colonial territories—the total capital outflow from free nations comes close to \$8,000 million a year.

This represents a substantial increase over previous levels of investment. In the 1950-54 period, for instance, net free world investments and financing from both private and governmental sources averaged something over \$4,000 million a year. And for comparison purposes, it is in order to note that over the past two and one-half years, the entire communist world—the so-called Sino-Soviet bloc—has made available a total of \$1,900 million in assistance to the less-developed countries.

The outpouring of development capital from the free nations today is indicative of their steadily growing economic strength—a strength which has been able to overcome in a dozen short years the ravages of war and economic dislocations. It also is reminiscent

in a sense of the nineteenth century situation, when European capital did so much to build up the then-developing United States.

Today, of course, it is the United States which is far and away the world's leading foreign investor. In 1946, at the end of World War II, the then foreign commitments and investments—governmental and private—of the United States were valued at a total of \$19,000 million. By the end of 1957, the private total alone had risen to an estimated \$37,500 million, exclusive of outstanding government credits valued at an additional \$17,000 million. This remarkable growth has had far-reaching effects both in rebuilding European economies and in spurring the economic progress of developing nations in Latin America, Asia and Africa. In fact, US governmental and private investment abroad since World War II has helped other free countries to the point where they, too, can be important sources of needed capital for lands in the early stages of economic development.

In Health PHILIPS aid the science of healing

INDIA's doctors need the most modern medical aids in tackling their tremendous problems. They are aided in this noble task by organisations like Philips who are proud to place their many years of research and experience at their disposal. Whether it's the highly intricate X-Ray unit, which is one of modern science's contributions to accurate diagnosis; or the super-sensitive cardiograph which registers every tremor of the heart; or whether it's the assured supply of flawless lighting or a whole range of tested pharmaceuticals, Philips aid in many ways the noble science of healing and point the way to recovery.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

READING the proceedings of the Lok Sabha now discussing the Budget, I was struck by a number of things which I thought I should share with you. Since the special study of the Budget promised earlier is just around the corner and is sure to deal with the more substantial and "technical" aspects of the year's financial proposals, my reflections here will be inevitably of a marginal character. First among these will be about Mr Nehru as Prime Minister. My intention is not so much vaudeictory as speculative. It may be even considered "academic" in the sense of "unprofitably speculative". (By the way, this morphological cynicism about academics—rendered quite respectable by the inclusion of this meaning in dictionaries—tells its own sorry tale about relative values!) It is certainly true that, since Mr Morarji Desai is to be the new Finance Minister, it is not much immediate use trying to assess Mr Nehru's possibilities as a Finance Minister. But there is some purpose to be served by following this line of inquiry some distance. Some months ago, even this short-distance ride into the realms of speculation would not have been available. Any such attempt would have been not only academic but hypothetical. Now, perhaps, it is merely speculative, though, of course, we have something to go on. It is true that Mr Nehru has been Finance Minister for a short spell even before, but then he had done nothing in particular during the short period. Now, however, he has had to put through a Budget and follow it up by one or two acts which give some indication of the sort of Finance Minister he would have made, had he continued.

In such an assessment, it would be wrong to take into account only the Budget presented by him. As he himself described it, it was not really his, but a mere continuation of last year's Budget. What would be of greater relevance are the subsequent speeches and actions which show that he has a remarkable ability to master the details of his tasks as Finance Minister and take appropriate steps. For instance, there has been a general impression that the present Government's protestations of pragmatism in its approach to its tasks is a pose that hides (with no particular success) deep ideological commitments. It

cannot be said that there were no occasions to justify such misgivings. But, in his short term as Finance Minister, Mr Nehru has given practical demonstration of how he himself is firmly committed to an open approach to a problem. All these days, his connection with finance had been of a distant sort. Now that he had had an opportunity to look closely into the way in which particular fiscal and financial acts of Government affect the economy of the country, he has acquired a newer understanding of the meaning of pragmatism in economic tasks. Two pieces of evidence in support of this proposition are the reduction of excise duty on cloth and the promise of abolition of the provision regarding compulsory deposit by companies. While the first is put down as merely a response to popular clamour, the second was certainly something of a surprise. For, it was in reality accepted by most companies with a gloomy sense of inevitability. It may be that Mr Nehru, who perhaps had the haziest notion about what the scheme really involved in terms of administrative complexity and so on, must have found it, on close examination, a measure involving great vexation to companies without any corresponding advantage to Government. This is the sort of measure, one can fancy him saying to himself, that makes people doubt Government's professions of a practical approach to problems and of their desire to let the private sector function in comparative peace. Hence, the decision to do away with it.

Admittedly, all this is pure guess work and may quite conceivably be wrong. However that may be, I cannot help feeling that, in the last few days, Mr Nehru has learned more about what the financial tasks of the Plan involved than he did in all the years before. Of course, from now on, he may not be able to come in touch with the details of the Finance Ministry's tasks and to that extent his new insight will not be of as much use as it would have been, had he continued as Finance Minister. For, it is not politics stated in too broad terms that bother the public: such general propositions have a way of meaning all things to all people. It is really in particular acts done in pursuance of stated policy that we can discern flexibility or rigidity

as the case may be. Nevertheless, this is a very important gain and one that is valuable even if he does not continue to be Finance Minister. For a Prime Minister, this new insight should be of immense value to the country.

But one thing is becoming increasingly clear. Whether it is Mr Nehru or Mr Morarji Desai who is at the Finance Ministry, the compulsions of the economic reality leave but few alternatives for us. Indeed, I would even go further and say that it matters little whether it is the Congress or some other party who is in the seat of Government. Whoever it is that has the nominal responsibility for the tasks in front of us, he will have, if he has any sense of responsibility, to follow more or less what has already been charted by the Plan. And what is even more interesting and important, he will have to do so more or less in the manner in which the present Government is doing it. In other words, both the means and the ends of our economic life have clarified themselves in the last ten years or so, and there can be no important variations from them.

What are the reasons for this remarkable development? It is partly, of course, the consequence of the Plan itself. Total planning, itself the child of economic necessity, becomes in turn a moulder of the economy. Attempting to impose order on chaos, you cannot later rebel against the order you yourself have erected. Moreover, the facts of the situation do not admit of several possible solutions, even in the matter of means. That is why we have the extraordinary phenomenon of the Communist Government in Kerala wishing to woo the capitalists into starting new industries and producing an election manifesto in which the party cooes to the capitalists as gently as the sucking dove. It would be wrong to consider this as mere seductiveness, for, despite automatic party clichés, the Communist Party in India is clearly aware of the compulsions of the situation.

This situation was clearly demonstrated in the Lok Sabha debate on the Budget. Many an old timer has complained to me that parliamentary proceedings are not

as lively as they used to be in the old days of the Central Assembly. And if you have to pepper up the proceedings, he sneers, you have to fish up a scandal. In my view, such a complaint is not wholly fair, though, of course, not unnatural. But the point to remember is that you cannot be vibrantly eloquent about the welfare state in the same way you can be about, say, imperialist exploitation. During the debate on the Budget, most of the speakers were obliged to concede, at some stage or other, that the present policies were inescapable. And such unanimity cut across party lines. Indeed, what was interesting about the Lok Sabha debate was the complete erasure of party differences in the attitude to the Budget. By this, I do not mean that every one endorsed the Budget in its entirety, but that approval or disapproval was not polarised party-wise. Some Congressmen were critical, while many opposition members supported the Government. Not often, a situation such as this is cited as an example of the deleterious effect of not having an effective opposition. I do not think this is a wholly tenable view. Take a man like Asoka Mehta. If there is anyone who is likely to be able to link up alternatives to the present policies, if such existed, it would be Mr Mehta. For, his economic erudition is both vast and deep and he has a firm grasp of the basic facts about our economic life. Secondly, if there indeed existed an alternative policy, Mr Mehta is not the person who would be prevented from expressing it, merely because there is no official opposition to back him. In other words, the absence of an opposition is the consequence of an absence of an alternative policy. Whether such a situation is a calamity is arguable, but, however hard you try, you cannot have an opposition for the sake of having one.

The comparative unanimity among the various parties of the country is not due to any lack of desire to see the Congress out of the way, but because of the absence of any real alternative to the present economic programme. Indeed, this is not merely an Indian phenomenon. In Great Britain (whose economic compulsions, though of a different sort from ours, are no less relentless than

ours) bi-partisanship in economics has been steadily gaining ground. There are, to be sure, local quarrels about the Rent Act and so forth and often bitter wrangles about the relative urgency of dividend freeze and wage restraint. But the inescapability of maintaining the vast structure of the welfare state on the basis of mixed economy with all the modifications of one's particular economic philosophy this involves, has been recognised in the christening of the current bi-partisan attitude as "But-skellism". In the same way, the need for a massive increase in production, for a diversification of our economy, for laying the foundation of heavy industries, for asking from our people for the necessary present sacrifices to carry out these inescapable immediate economic

duties are all recognised by all the parties (except those of the extreme right and the extreme left) in the country. This unanimity extends even to details of the means to be employed. The basis of mixed economy is recognised even by Communists. For the rest, though Mr Dange may speak childishly and irrelevantly about the fascination of the Dollar, he is glad enough in his heart of hearts that our foreign exchange difficulties are getting solved in a way that owes nothing to his party's efforts. On the question of taxation policy, too, despite the outcry from the interested quarters that the poor or rich (as the case may be) are squeezed out of existence, there is general recognition that the present policy cannot be evaded. It is, therefore, no wonder that Mr

Nehru should get the most constructive cooperation from Mr Asoka Mehta, who even gently chided Mr Nehru for seeming to lose heart in the Plan.

Such unanimity may make parliamentary proceedings somewhat dull, but they certainly do offer opportunities for constructive endeavour. For, granted basic unanimity, or near unanimity, and the promise of a pragmatic approach, then the problem of development resolves itself into one of research in institutional and administrative agencies. It is here that the experience of the Fabians and the New Deal enthusiasts becomes relevant. I have been watching with interest the development of the so-called "ginger group" within the Congress. Their declared aim

is to clarify for themselves and others the socialist content in the Congress programme. I really do not know how they propose to set about it, but the report that they propose to study in detail particular problems and formulate their views on it is most welcome. There are literally hundreds of particular problems, big and small, which need to be studied dispassionately. I hope that the group will not content itself with retreading familiar grounds like land reform and so forth. They should venture into unfamiliar fields and bring out within a short compass concrete suggestions for particular reforms. A vast and uncharted field is the assessment of the relative merits of the varieties of institutional agencies a socialist system involves. There has been too much ideological wrangling all along. The time has come for some "milk and water socialism". Younger men aspiring for a career in public life can no longer tread the easy way of agitational politics. Such a view may sound somewhat unreal when it tries to raise its small voice above the din of demonstrations regularly organised by the members of the Communist and Praja Socialist parties in Calcutta. But it is nonetheless valid. The tasks of public life in the coming years have no glamour except that of hard and somewhat pedestrian work through which shape is given to our fellow feeling to our countrymen. Doubtless, some satisfaction is derivable from the exercise of power. For the rest, virtue is its own reward. If such indeed are the aims of the "Ginger Group", more power to their elbow.

I am afraid I have lately guzzled a good deal of culture. Short of reading advertisements and house magazines, I have done everything to absorb as much of it as possible, visiting exhibitions, hearing learned lectures and attending theatricals. It is of these last that I propose to speak here. Last Monday evening, I was at the St Xavier's College auditorium where the Calcutta Theatre Group, in collaboration with the USIS, presented three one-act plays by Eugene O'Neill, Moliere and Thornton Wilder. So far as acting goes, all three were successful. The O'Neill piece, entitled "Where the Cross is Made", was deeply moving, no doubt because the theme is meaty, turning as it does on the incorrigible tendency of man to dream; in this particular case, two characters pay for it with their sanity. The Moliere piece, a typical social farce on the vanity of women, was a roaring success. The roof was all but brought down with the audience's howling merriment. The third one, by Wilder, was too subtle for my stomach, being psychological. In matters literary, I am afraid I am a little dense and prefer the solid to the subtle, especially if the subtlety threatens to progress to the point of ceasing to exist.

EAVESDROPPER

CANDIDLY GOSSIP

No democratic government can function without levying taxes. And what is a tax but a contribution by the individuals and group of individuals in a community for the common good of the community itself. In this view there cannot be anything objectionable in a democratic government imposing any tax because such a tax will be a levy voluntarily imposed by the people on themselves. But a closer examination of this statement will reveal that it is quite possible that in a democratic country a measure may pass through Parliament even though on the basis of voting there may be a large section of the people who do not subscribe to the Government's view. It is here that the Opposition party comes to play a vital role by ventilating the view of those who do not belong to the party in power. In a country like India where we have yet to provide an effective opposition party, it is the responsibility of the government to take careful note of the views of those who do not agree with them. It cannot be said confidently that the party in power today is discharging this responsibility adequately.

Government's indifference to opinions which do not accord fully with their own is increasingly becoming evident since the commencement of the Second Plan. Ever since the formulation of projects under the Plan, there has appeared a sizeable cleavage in opinion in the country. With the emergence of difficulties much sooner than earlier anticipated, Government, being wedded to the implementation of the whole of the Plan, have not hesitated to step out of the beaten track to fill their coffers with the needed funds.

The new fangled taxes for augmenting Government revenue have been opposed mainly on the ground that the resultant depletion of the resources will defeat the very purpose for which the Second Plan has been formulated. The fiscal and monetary policies followed in the past two years have brought about a crisis of confidence in the field of investment and without adequate investment there has been a slowing down in development activity in the private sector. The fact that private enterprise is given an important role to play in the Second Plan seems to have been completely ignored by Government.

It is, however, gratifying to find that at long last Authority has begun to view matters in their proper perspective. The abolition of the deposit scheme and the reduction in excise duty on cotton textiles are a welcome sign of a growing realisation on the part of Government of the harshness of some of the measures initiated by them to augment their revenue.

Though the latest concessions may go some way in relieving the pressure on the cotton textile industry in particular and industry in general, grave apprehension is still entertained that at the present rate of taxation corporate enterprise will before long find itself completely crippled.

Speaking at the Fifty-Second Annual General Meeting of the shareholders of the Bank of India Limited at Bombay last week, Sir Cowasjee Jehangir, the Chairman, has pointed out that the heavy level of taxation in the country is having an adverse effect on the private sector industries. Referring to taxation in general he has taken particular objection to the Wealth Tax which, according to him, is a capital levy. It is also a form of double taxation because it is applicable to companies and also to shareholders of companies. The expenditure tax is another novel levy, the like of which is unheard of in any other country in the world. While it is doubtful whether these two taxes will net in any worthwhile amount for the Exchequer, there is no manner of doubt that they will embitter people's feelings toward Government as the information to be furnished in this regard is of an extensive character. With the announcement of the budget for 1958-59 the tax burden has further increased. Sir Cowasjee Jehangir thinks that sooner or later Government will realise that the additional taxation has done more harm than good and then they will have to beat a retreat from the present position of heavy taxation. That the Government line of approach to the financial problems facing the country is wrong is borne out by the poor response to the Small Savings Scheme. The Bank of India Chairman is not very hopeful about the success of the scheme in coming years because the level of taxation in the country has rendered it impossible for any section of the community to effect savings.

Efficient working of private enterprise is also hampered by the threat of nationalisation. Suggestions have recently been made in Parliament that Government should obtain a controlling interest in important concerns. In this connection the Prime Minister has opined that there is nothing wrong in Government obtaining controlling interests in concerns through the Life Insurance Corporation under certain circumstances. This statement has aroused renewed apprehensions in the country about nationalisation through the backdoor. Though in a subsequent speech at the annual meeting of the Federation of Indian Chambers of Commerce and Industry Mr Nehru seems to have realised the necessity for a thorough examination of this new idea, the apprehension about Government policy in this regard still persists. Sir Cowasjee Jehangir declares that the suggestion to gain control over a company by acquiring a percentage of shares in that concern "savours very much of confiscation and is as objectionable as outright nationalisation, if not more so". Government would do well to remember that the rules obtaining in the case of private enterprise are also equally applicable to them. Under the new Companies Act and the Insurance Act, the acquisition of control by companies in other companies is regulated. But if Government begin to obtain control of concerns through LIC purchase of shares in those concerns, they will be violating the regulations which they have formulated. Government should also realise that they will be doing grave injustice to shareholders of companies if they gain control over their concerns by purchasing a percentage of the shares because that will amount to nationalisation without paying compensation. While it is true that apprehensions

Business Outlook

BOMBAY REVIEW

in regard to backdoor nationalisation are somewhat exaggerated, it is to be admitted that recent discussions on the subject in Parliament have engendered a sense of uncertainty among investors. As Sir Cowasjee Jehangir has suggested, an official unequivocal disapproval by Government of any such intention will go a long way in restoring the confidence of investors. The heavy level of taxation is also having an adverse effect on banking companies and Sir Cowasjee Jehangir has pointed out that it "may not be easy in the future to maintain our net profits after tax". The business of banking during the year 1957 has been rather difficult because of the continuance of tight money conditions in the country. As a matter of fact there is no sign of any early relaxation in the present scarcity of funds. Deposits are hard to come because funds available for deposits with banks are limited and competition is acute. With inadequate resources banks are unable to satisfy the demand for funds in full.

International Panorama of Progress

Modern methods for ancient acres

Over centuries-old fields of rice and sugar cane a new sound is being heard. Shouts of encouragement to plodding buffaloes and oxen are being supplanted by the hum of modern farm machinery. Efficient equipment is bringing in bigger crops with less effort—aiding economies, easing the farmer's life. In many of the countries where agriculture plays a vital role, Caltex quality petroleum products help maintain and expand farm prosperity. Through the power of petroleum, Caltex fuels and lubricants run the machinery that lightens the work load, increases the standard of living for the peoples of over 70 countries. Caltex—partner in progress in Europe, Africa, Asia, Australia and New Zealand.

Presiding over the annual day of Nautical Engineering College at Bombay, Mr Raj Bahadur, the Union Minister for shipping, said that the target of 900,000 GRT fixed in the Second Plan would not only be achieved in time, but would also be exceeded by 100,000 tons by 1961. It was learnt from the Minister that the expected shortfall in the shipping target, caused by the foreign exchange gap, would now be overcome by the assured foreign aid from USA, West Germany and Japan.

The Minister stressed that the Government were doing their very best not only to increase the shipping tonnage, but also to consider the scheme of increasing the efficiency of the available vessels by modernising them, wherever possible. The Union Government have, it seems, an ambitious plan to develop minor ports throughout the country, alongside building up of a large fleet of minor vessels, to meet the immediate shortage of shipping space. If properly executed, this scheme would certainly improve coastal trading, to a considerable extent, relieving pressure on the Railways.

Mr Raj Bahadur described at length the steps that the Union Government have been taking in the matter of training up of new officers and ratings, so as to meet the requirements of the expanding industry. He further stated that Government were also aware of the very high standard of efficiency that shipping personnel should maintain, and all necessary steps were being taken in that direction. As against the intake of 60 trainees in the Dufferin and 50 in the marine engineering establishments, 75 and 60 boys respectively were going to be taken from the next session. Giving a comparative study of Indian and non-Indian personnel in the merchant navy, the Union Minister said that Indianisation was proceeding very fast. Out of a total of 1,290 deck and engineering officers, 1,178 were Indians. Of the total of 112 foreign officers, 78 were masters, who are required to have a minimum of 10 years' sea experience. Most of these posts could, therefore, be Indianised only after the Indian boys had completed 10 years at the sea. As far as engineers were concerned, Indians were holding 727 posts out of a total of 745 which was not a mean achievement!

Referring to the Principal's remark about dearth of hostel accommodation for the trainees, the Union Minister said that, out of the sum of Rs 75 lakhs earmarked for the training of Merchant Navy personnel, Rs 70 lakhs were meant to be spent for building up of hostel accommodation during the Second Plan. He further remarked that the Government would not allow the standard of technical training to suffer for want of financial provisions.

Future of Indian Merchant Navy

The Principal of the National Nautical College held out high hopes for the future, in so far as from only one training institution, the country had now six, giving out a good number of officers and ratings every year. According to him, if by the end of the Second Plan, India would definitely achieve self sufficiency in merchant Navy personnel, by the end of the Third Plan.

No Discrimination Against Foreign Firms

Speaking at a function held in his honour, by the Maharashtra Chamber of Commerce & Industry, Bombay, Mr Morarji Desai, the Union Commerce and Industries Minister, cleared the mist from the minds of foreign business houses, who, since Independence, have been weighed down by a false sense of discrimination. Replying to objections raised by the Maharashtra Chamber regarding granting of import licence for a certain commodity to a foreign concern, Mr Desai categorically denied having acted with any bias for foreign firms, and also refused to deny the privilege that a firm was enjoying, irrespective of its being either an Indian or foreign concern. The reply of the Minister was as pointed and poignant, as the issue raised by the Maharashtra Chamber was drab and delicate. For, a discriminatory attitude of any Government on such a vital issue would go against its reputation, as emphasised by the Minister, who said, "If we do so, we will have no reputation left in the world".

It goes without saying that the speech delivered by Mr Desai is a major policy speech, containing an assurance of the Government to foreign investors, whose vision is being clouded by all sorts of wrong impressions about industrial policy. But leaving aside the rather delicate part of the issue raised by Maharashtra Chamber of Commerce and Industry, it has another important aspect, which cannot be overlooked. When imports have been so drastically cut down, a most pertinent question arises as to the method in which the existing import quota should be distributed. For historical reasons, foreign firms have had the opportunity of establishing themselves very firmly in the Indian soil, and, in a large number of cases, they are still enjoying great advantages. It is quite likely, that a good number of foreign firms, by virtue of their longer existence and financial stability, are in a position to have more import quotas than the late coming Indian concerns. Without in any way touching the reputation of Indian hospitality, the allocation of quotas should be made in such a way, that the new Indian Companies may also have some facilities of importations, even though

in smaller quantities. Possibly, Indian businessmen will have no objection to foreign concerns having larger shares in import business of the country, but by all means, they want an assurance, that their national aspirations do not absolutely go by default. Let no foreigners be given an opportunity to say that they have been discriminated against, but at the same time, the Government of India should follow a policy of harmonious development of foreign and national concerns.

Trends in Life Insurance Business During 1957

A press note issued by the Central Office of the Life Insurance Corporation of India reveals, that upto 28th February, 1958, the Corporation wrote a business to the tune of Rs 281 crores, surpassing the business recorded by private insurers during 1955, regarded as the peak year for Life Insurance business in India. Foreign business has shown some depreciation as compared to 1955, but it is ascribable to the fact, that the Corporation has not been writing business in Pakistan, Burma and Ceylon.

A zonal wise analysis of the total business written during 1957 shows that the South zone recorded a business to the order of Rs 74.14 crores, the highest among all the zones. The Eastern and Western zones have accounted for 67.62 and 64.63 crores respectively. The press note says that the scope for expansion in the above zones is still very wide and that the rather poor performance is due to organisational snags. The overall position of business written by the Corporation during 1957, reveals some encouraging trends in one of the most important industries of the public sector. A comparison between the business done by private insurers during 1955, and that by the nationalised sector during 1957, is worth our attention. In 1955, the spurt to the high business to the tune of about Rs 243 crores, was provided by factors like reduction in premium rates, introduction of Estate Duty and Married Women's Act policies etc. The Corporation has also to its credit measures of far reaching consequences, like liberalisation of women's policies, acceptance of some sub-standard risks etc. But if we take into account the confusion that pervaded the industry as a whole, following nationalisation, and which came to a close for quite a long time, the performance of the Corporation is quite creditable. The protagonists of the private sector, who foretold the failure of Life Insurance business in India following nationalisation, will have enough food for thought.

The reasons of this singular success of the Corporation are mainly to be sought in the organisational

changes undertaken after nationalisation. One cannot but come to the conclusion that the dissolution of the parasitical hierarchy, existing so long, between the agent and the administration, has been very useful for procurement of business. A large number of supervisory staff, who were so long tied up to the office, have now been made available for field work. This has helped the Corporation to have more business at less cost. Moreover, the focus of the entire organisation has now been shifted on to the agents, who are the pivots of the industry.

But now the question remains, as to whether the trend of business, recorded during 1957, can be successfully maintained by the Corporation in the coming years. Everything depends upon the relation between the field staff and the Corporation. Should this relation be adjusted for mutual benefit, there is no reason as to why the Corporation will not do much better in the coming years and far surpass the business underwritten during 1957.

Unified Housing Board

Speaking at the inaugural meeting of the reconstituted Housing Advisory Committee S. G. Kazi Minister for Housing announced the proposal for the constitution of a unified Housing Board for the enlarged Bombay State to facilitate uniform implementation of housing programme in the State. The unified Board would replace the three separate boards at present existing for old Bombay State, Viharbha and Saurashtra. The existence of one body in place of three bodies whose activities remained unco-ordinated should naturally give a better lead in constructional activities in the State.

Explaining the steps taken by the Government to provide housing facilities to industrial workers Mr Kazi pointed to the scheme of construction of tenements for persons of low income groups for which he said a beginning has been made. The Low-Income Housing scheme is run on the basis of Central assistance to the extent of 80 per cent of the cost of construction. And with a view to attract the balance of funds interest free deposits from persons desiring housing facilities have been invited by the State Government. According to Mr Kazi those persons who co-operate with the State Government by furnishing interest free deposits to the extent of 20 per cent of the cost of construction would receive preferential treatment in the allotment of tenements, the deposit being adjusted towards the rent in a period of five years.

But it would appear that the Low-Income Group Housing Scheme has failed to evoke good response from the people, for reasons which are not yet known.

ALTHOUGH price movements were rather irregular, sentiment on the Bombay Cotton futures market was distinctly bullish in sharp contrast to that witnessed immediately after the announcement of the Budget proposals, thanks to the announcements of a further export quota for Bengal Deshi cotton; reduction in the export duty on the same variety from Rs 100 to Rs 50 per bale and the relief in the excise duty on cloth. Broadening mill enquiry for spots acted as an additional influencing factor. Although values apparently reluctant to improve after the above announcements reflecting profit-taking by a section, the market subsequently cheered up under trade support.

The announcement to reduce the export duty by half on Bengal Deshi cotton was greeted with relief by shippers although half the charm was lost by a sudden rise of over Rs 30 per candy in prices of that variety. The additional export quota of 50,000 bales for Bengal Deshi, not above "fine" in grade, is expected to be fully utilised in view of the current good demand from Japan, the UK and France. Exports will be permitted on a "first-come-first-served" basis. In this connection, a press communique states that if, on any particular day, shipping bills are received for a quantity exceeding the ceiling then available, licensing will be done on a pro-rata basis. Shipping bills will be valid for shipment within fifteen days or till June 30, 1958, whichever is earlier.

A section of the trade is, however, disappointed to see that no export quota for cotton stapling 3/4" and below has been announced. This cotton includes Kala Gin, Wagad, CP/1, CP/2 and other varieties, prices of which declined by about Rs 75 per candy during the past six weeks. It is pointed out that the loss in the reduced export duty on Bengal Deshi could have been made up by imposing export duty on these varieties, which are in good demand at present. Meanwhile, ICC Jharilla May delivery opened at Rs 685 and, after touching a high of Rs 686.50, finished at Rs 685.50. Similarly, March delivery closed at Rs 688.50 after touching a high of Rs 688 and a low of Rs 684.

Although the reduction in the export duty on Bengal Deshi cotton has enabled shippers to reduce their rates, actual business depends largely on Karachi's reaction to the Government of India's announcement. Rumours are current that Pakistan has also been planning to reduce the export duty on her cotton with a view to bring her prices on parity with those of Bengal Deshi cotton. The difference at present is about Rs 40 per candy.

Sentiment Distinctly Bullish

Trade anxiety over Karachi's reaction is reflected on the Spot market where April delivery of superfine Bengal Deshi shot up by Rs 50 to Rs 605 per candy after the Government announcement; but declined on second thoughts to Rs 580 per candy. However, mills showed good interest in buying all staple varieties, Wagad and Dhollera improving by Rs 10 per candy.

There were no fresh developments on the cotton import front. Trade is awaiting allocation of East African cotton quotas. There was some demand for spot lots of East African and American cottons.

STATISTICS:

A private survey made by a leading cotton house in Bombay indicates that the total crop this season will be in the neighbourhood of 48.50 lakh bales, which is about one lakh bales lower than that made earlier.

According to official statistics, Indian cotton consumption in India, during January 1958, has amounted to 392,007 bales as compared to 391,490 bales in the previous month and 416,282 bales in January, 1957. Foreign cotton consumption, in January 1958, came to 48,804 bales as compared to 49,618 in December 1957 and 47,378 bales in January last year.

Consumption of Indian cotton, during the five ended 31st January 1958, totalled 1,946,187 bales as compared to 1,941,298 bales in the corresponding period of last year, while foreign cotton consumption totalled 249,413 bales as compared to 248,635 bales.

The average monthly consumption of Indian cotton, so far this season, comes to 389,240 bales as against 388,260 bales and of foreign cotton 49,880 bales as against 49,730 bales.

NEW YORK COTTON MARKET:

In slow dealings, prices on the New York cotton futures market drifted lower on light hedging and commission house selling with some stoploss orders uncovered. Trade support was limited. The decline was mostly traced to technical conditions, although some of the selling was evidently due to the continued slow conditions in the domestic cotton textile market and reports of further mill curtailment. The decline was subsequently checked by trade support and shortcovering. Sales totalled 45,000 bales. Middling Spot was quoted at 35.95 cents per pound.

LIVERPOOL COTTON MARKET:

The week commenced in the Liverpool cotton futures market with prices firming up slightly, mainly on account of stronger New York advices. Early in the week, the news, that any increase in cotton acreage had failed to pass in Congress, cleared up one of the

uncertainties overhanging the market and prices moved up appreciably in later dealings.

KARACHI COTTON MARKET:

The Karachi cotton futures market ruled distinctly easy. Due to the failure of export demand to revive and the continued slackness of domestic spinner interest, buying support was practically absent.

CLOTH AND PIECEGOODS:

The announcement of the reduction in excise duty on different categories of cloth was generally welcomed by market circles and by the textile industry in particular. Although it was felt that a larger reduction was necessary so as to place the industry on a sounder footing, the present concession was considered a move in the right direction. With the uncertainty now over, the offtake in

the piecegoods market is expected to improve considerably. This will also help in the reduction of accumulated stocks with the mills.

Statistics available indicate that the quantity of unsold stocks with the mills has dropped from 4.50 lakh bales at the end of 1957 to 3.64 lakh bales. Stocks sold but not lifted by the trade have also declined from 2.10 lakh bales to 2.00 lakh bales. It is significant, however, that the output of cloth has also slackened in recent months.

Trading conditions on the export front were not encouraging. Moderate business was reported to have been concluded with East Africa. The UK appeared to have evinced interest in grey goods. As the Burmese authorities have not yet issued import licences for textiles, fresh business with this country has been negligible.

BOMBAY
REVIEW

FORWARD trading on the Bombay Bullion Exchange was resumed on Wednesday after a break of three days. Till Tuesday this week, business was at a standstill as most jobbers along with bear operators refrained from entering into business as a protest against the continued bull squeeze in the Silver section. It was contended by these operators that a "one-way traffic" was prevalent in the silver section as scarce stocks and reduced arrivals of Tibetan coins had emboldened bulls. It was further contended that the authorities should come out boldly to curb such unbridled speculative activity in the interest of the general trade. The futures section, as a sequel, remained stagnant although, in the private dealings, prices ruled firm. In the initial part of the week, Silver forged ahead as bulls were

Resumption of Forward Trading
in Bullion

successful in taking full advantage of the scarcity of the metal in the country and in Bombay in particular. It appears that the import of the white metal from Tibet has been, in recent months, monopolised by about half a dozen traders. In the absence of proper banking and other commercial facilities, trading with Tibet has been found difficult. When the Board of Directors of the Bullion Association decided to hold a meeting to consider the situation, trading was resumed. Forward rates moved between Rs 194.44 and Rs 194.56, while ready changed hands at Rs 194.19 to Rs 194.31.

Gold improved early in the week on better spot demand, but profit-taking checked the advance towards the close. Forward rates moved between Rs 112.15 and Rs 112.28, while ready changed hands

at Rs 111.94 to Rs 112.06. Sovereign ruled firm at Rs 72.25.

★
Oils & Oilseeds

The markets for Oils and Oilseeds ruled generally steady with interim profit-taking readily absorbed by short-covering. Sentiment was aided by continued talk of reduction in castor oil export duty and recommendations of the Sub-Committee of the Indian Central Oilseeds Committee for groundnut oil quota.

Linseed futures firmed up on heavy bear-covering following the reports that the UK was buying oil at around £109 per ton. A leading export house bought sizable quantity of linseed oil. May delivery changed hands at Rs 30.19 to Rs 30.62, to finish the week at Rs 30.50. In the ready section, bold

GATEWAY
MARKETS

was quoted at Rs 29.75 and Linseed Oil at Rs 16.00.

After initial firmness, Castor seeds slipped back on liquidation and profit-taking, prompted by easier advices from North India. Continued arrivals in Andhra and Gujarat also chilled buying enterprise. May delivery moved between Rs 146.00 and Rs 146.62, to close at Rs 146.37. In the ready section, Madras quality was quoted at Rs 29.62 and Castor Oil, commercial quality, at Rs 15.00.

In the Groundnut section, crushers and vanaspathi in esters kept sidelines, which softened values. May delivery moved between Rs 159.12 and Rs 160.00, to finish at Rs 159.87. In the ready section, bold quality was quoted at Rs 31.75 and Groundnut Oil R.R. at Rs 17.56.

The announcement regarding the reduction in the excise duty on cloth gave rise to hopes that the announcement of the export duty cut on oil would follow soon. This caused the revival of buying fervour in the Cottonseed section where May delivery was taken up to Rs 107.50 from Rs 107.00.

★
Non-Ferrous Metals

Conditions in the Non-Ferrous Metal Market remained quietly steady. Copper ready was quoted steady at Rs 178 per cwt as recent arrivals were less than expected. The tone of the Zinc market was quiet, the rate hovering narrowly around Rs 51.50 per cwt. Lead, however, remained firm at Rs 63 per cwt on reports of the receipt of Government tenders. The Tin section generally followed the Singapore market where hectic price movements were taking place without reason. The rate was quoted at Rs 129.50 per quarter.

On the London Metal Exchange, Copper was quoted firm at £168½ per ton, mainly due to a tight supply position in Electrolytic Wire Bars and Cathodes in London. Better economic reports from the USA, too, helped to firm up prices. Zinc was quoted at £63½ per ton. It is reported that the Board of Trade, London, is now considering the export of 1,000 tons of remelted zinc through trade channels. The Lead market continued to be inactive, the rate being quoted at £74½ per ton. It is rumoured that domestic lead prices are likely to be reduced in the USA. The overall position in respect of Tin remains unchanged and the rate is quoted steady at £730 per ton.

★
Yarn

The Yarn market in Bombay continues to rule firm with prices forging ahead on heavy short-covering and renewed upcountry support. Operators are keen in augmenting their stocks since they fear that the scarcity of yarn will be acute in the coming weeks.

SOLIVIPUS

FOR once, a minor vice has paid off. Had I been on my conscientious best and written this despatch yesterday (as I, in common consideration for my hard-pressed boss at Calcutta, ought to have), I would have perhaps sent in a cheerless and exiguous account of the budget discussion in Parliament, eked out, perhaps by an analysis of the comments on the new cabinet appointments. But my dilatoriness has been rewarded this time, since I am in a position to inform you of two important and timely concessions announced by Mr Nehru in the Lok Sabha on Tuesday. It is true that one of these, the reduction in excise duty on cloth, has been anticipated for some two or three days, almost from the time Mr Nehru spoke at the FICC annual session. The other concession, viz., the abolition of the compulsory deposit out of current profits and reserves introduced about two years ago by TTK was a very pleasant surprise. Readers will recall that this journal has been urging its scrapping for some time now. And in my despatch a fortnight ago, I had mentioned how the expectation of its abolition this year was strong on account of reports that TTK had hinted at its abolition in some of his speeches in the US. But when the Budget proposals did not give any indication of this expectation getting fulfilled, there was considerable disappointment. On second thoughts, Mr Nehru has been able to shelve into oblivion this interesting but bothersome measure.

One can perhaps permit oneself a line of speculation about the way in which these important reliefs have been announced as second thoughts. Can it be, that these reliefs were intended all along and not announced in the first instance for the well known reason that an assumed disappointment is treasured more than a fulfilled expectation? After all, if Mr Nehru had announced these concessions in the first instance, they would have been welcomed, of course, for, things had come to a pretty parlous plight even then, at least with regard to textiles. But it would not have had the same degree of enthusiasm as the present announcement has had. Secondly, conceiving a prophet can be amusing and even salutary for the soothsayer, and since you have every intention of ultimately granting his wish, you may as well have your little joke on him. The Budget astrologer, too, has, despite initial chagrin, his self esteem intact, for he can always turn round and say, if not on the first occasion, at least on the second occasion, "I knew all the time it was coming!"

Such a line of reasoning is plausible, but I believe it is not true in this case. The truth is, I believe, something else, and is far more interesting, as I shall presently show. I think that when Mr Nehru had to take on the burden of the finance portfolio, he was more or less ignorant of the complexities of the details of the tasks of his new responsibility. He knew, of course, in a general way about the economic problem and so forth. But he had the haziest notion of how particular measures communicated their complicated impact on the entire economy in a way that was not apparent to those who are not associated with the daily tasks of those areas of the economy. In any case, Mr Krishnamachari had drafted the outlines of a budget for the next year with the intention perhaps of springing eventually the kind of pleasant surprises as the reduction in excise duty, etc., so that he may cash in on the psychological advantage of such concessions. (Such a procedure would have been entirely in character.) But Mr Nehru took over and presented what was in effect a TTK Budget. And it was only after it was presented and after he met the members of the business community that he began to have some idea of the way in which things had their impact on the economy. In other words, his constant reference to pragmatic approach and so forth was the result of his intellectual awareness of the need for such an approach and the need for an open mind on these matters. But, for the first time since he became a Prime Minister, he had in his recent term of finance ministry to examine particular fiscal measures closely. (His short former term of Finance Ministership on Mr Deshmukh's resignation was only a stop gap affair.) And when he did that, his notions of pragmatism in economy attained a degree of clarity that he had not before. Therefore, he saw the entire justness of demands like the reduction of excise duty on cloth and the harassing nature of measures like compulsory deposits and decided to do something about these. In other words, in Mr Nehru's case, the reliefs announced were the result of not so much second thoughts, but first thoughts on the subject.

This raises a very interesting question, namely, how good a Finance Minister would Mr Nehru have made? Of course, with the name of the new Finance Minister already announced, this question is purely academic. And I suppose at all times it would have been academic, since Mr Nehru is preeminently our Prime Minister and it is impossible, unfortunately, that one can combine the offices of Prime Minister, Foreign Minister and Finance Minister. Such burden would be insupportable even by such broad shoulders as those of Mr Nehru. But, it does seem a pity that we could not have had

“For this Relief, Much Thanks”

Mr Nehru as the Finance Minister. It was evident from his speech to the FICC that Mr Nehru had recently acquired a new awareness of the tasks of the country in the economic sphere. And though he gave every indication of sticking to his basic principles, it was evident that he would have translated his counsel of pragmatism to the fullest possible extent to the great benefit of all concerned. In ways, it is a pity he could not have had the opportunity to do so. On the other hand, this brief but close contact with the ramifications of fiscal and financial policies would give him, as the leader of Government, a new dimension in thinking.

As was only to be expected, Mr Nehru's announcement of the reduction in excise duty of cloth and abolition of the deposit scheme has been widely welcomed. As the PM himself explained, the reduction in excise duty had become unavoidable, because of the continuing crisis in the cotton textile industry indicated by the increasing accumulation of stocks at the mills, the steady decline in the rate of production. At the end of February, 355,500 bales of cloth were lying unsold with the mills and 200,000 bales had been sold but not yet taken delivery of. The corresponding figures for September last were 201,431 and 81,822 bales respectively. Incidentally, this consumer resistance (which accounts for unlifted stocks) supports the contention of those who said that the excise duty is intended to act as an anti-inflationary measure, though, of course, there is such a thing as a point of diminishing returns in this, as in other matters. There can be no doubt that that point had already been reached, and that further complications were leading the industry to a crisis. For instance, production trends have been dismaying. Instead of the expected expansion, production has been more or less stagnant in 1957, the figures being 5440 million yards in 1957 against 5306 millions in 1956. And the figures for January 1958 tell an even sadder tale, for, though January is normally a good month for production, this January's output has been less than the average monthly production of 1957. It was 433 million yards as against the 484 million yards in January 1957. Another nasty consequence of accumulating stocks and falling production trends has been the closure of some mills and unemployment caused by closure and retrenchment and so forth.

As regards the compulsory deposit scheme, Mr Nehru's reason for dropping it was that experience of last year showed that the bulk of resources of companies were, in fact, being utilised for purposes conducive to industrial development. Now, this is a find-

ing doubly welcome. Firstly, this general exoneration of the companies should go some way to remove popular misconception about corporate finances. Secondly, this knocks the bottom out of the principal argument of those who wanted this scheme introduced. It was said that this was not a scheme to raid into the funds of the private sector for financing the public sector, but that it was a painful necessity to put an end to certain unsavoury practices of the private sector who misused concessions under the income tax act. In any case, the recent tightening of the conditions under which development rebate will be available will stop possible abuses of these concessions.

Apart from these two important concessions, Mr Nehru's reply to the debate was interesting chiefly for his robust faith in the country's ability to surmount the difficulties that were in front of us. In this connection, he was critical of the activities of disruptionist forces like political parties who were making capital out of human distress. He referred to the advice given by Leftists to refugees in West Bengal to insist on rehabilitation in Bengal itself a proposition that is not only not feasible, but one calculated to depress the already low level of living standards there. Such agitation sets at naught all the efforts made by rehabilitation agencies to translate compassion into practical action. No one can be callous to the difficulties of these uprooted people, but unless cooperation is offered by all concerned, the problem will become insoluble instead of merely difficult as it is at the moment.

Another important subject dealt with by Mr Nehru was the increased defence expenditure. It was plain to see the anguish of Mr Nehru in his inability not to follow his master in the matter of disarming the country. But circumstances as we are, we cannot think of abandoning our plain responsibilities to our people in safe-guarding our frontiers. With a neighbour pathologically filled with hatred for us, we cannot abdicate our plain duties. Mr Kripalani's moving plea in this regard has, therefore, in the circumstances, remained partly unfulfilled. Mr Kripalani himself clarified his statement to mean not a total abolition of our armed forces, but a determined effort at reducing its size and expenditure thereon. Here, one can attempt to make a beginning. After all, every rupee saved from defence is available for development. It is this interrelation, more than even abstract arguments about non-violence, that makes the problem so urgent. A detailed examination of all possibilities of saving in defence expenditure is a worth while undertaking.

REPORT OF THE AUDITORS

TO THE PRESIDENT OF INDIA,
We, the undersigned Auditors of the State Bank of India, appointed under Section 41(1) of the State Bank of India Act, 1955, do hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1957.

We have examined the above Balance Sheet and the Returns submitted and certified by the Secretary and Treasurer of the Local Head Office at Madras and by Branch Agents, which Returns have been incorporated in the above Balance Sheet and Accounts, and report (i) that, in our opinion, the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (ii) that where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory; (iii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iv) that the Returns received from the Local Head Office at Madras and from the Branches of the Bank have been found adequate for the purpose of our audit; (v) that the Profit and Loss Account shows a true balance of profit for the period covered by such account; (vi) that, in our opinion, the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law, and (vii) that, in our opinion, Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs. S. B. Billimoria & Co. and Messrs. Ray and Ray. The audit of the Books and Accounts of the Local Head Offices has been carried out at Bombay by Messrs. S. B. Billimoria & Co. and at Calcutta by Messrs. Ray and Ray.

6th February, 1958.

Stricter Prohibition

THE discussion of the amendments suggested by the Joint Select Committee to the Madras Prohibition (Amendment) Bill, provided the occasion for a reaffirmation of the prohibition policy of the State Government by the Home Minister Mr M. Bhaktavatsalam. That the issue of prohibition had passed from the stage of controversy into that of general acceptance by all parties in the legislature was also revealed in the course of the discussion on the amendments. Leaders of all shades of opinion in the Legislature expressed themselves as not being opposed to prohibition. The D.M.K. leader Mr C. N. Annadurai even testified to the benefits of prohibition in having reduced the incidence of drunken brawls in the State. The P.S.P. leader Mr P. S. Chinnadurai

put up a plea for the extension of prohibition throughout the country and even charged the State Congress Government as being not sufficiently enthusiastic about the enforcement of prohibition in the State.

Notwithstanding the unanimity of views on the issue of prohibition, differing opinions were expressed on the extent of success that has attended the introduction of prohibition in the State. Mr Kalyanasundaram leader of the Communist group in the Madras Legislature has pronounced prohibition a failure and he is able to point to the increase in the number of offences against the Prohibition law from 95,000 in 1955-56 to 1,25,000 in 1956-57. Whether this figure is to be interpreted as suggesting increased vigilance on

the part of the enforcement police or the increasing prosperity of the illicit trade it is difficult to say. But that large-scale illicit distillation of liquor is still going on in the State has been admitted even by the Congress members. One of the Congress members pointed out that prohibition offences were larger in the Salem district where he says illicit manufacture of liquor is thriving as a cottage industry. He assigns the extreme poverty of the people of this district and the hilly terrain which enables the people to carry on the trade undetected by the police as the reasons for this state of affairs. The leader of the Opposition Mr T. S. Ramaswami Pillai has also found prohibition a failure and points to the increasing number of crimes against the prohibition law though

he ascribes this to loopholes in the law and the laxity in the enforcement of it by the police. Slackness on the part of the police authorities in bringing to book the guilty was repeated by a few other members also, one of them, the leader of the Communist group even going to the extent of charging the police as being in secret conspiracy with the offenders in the illicit distillation of the liquor. Mr Bhaktavatsalam has the testimony of the D.M.K. leader on the success of the prohibition policy of the State Government, and he himself has pointed out that as a result of prohibition about 75 per cent of the addicts have been weaned away from the habit. The rest is sought to be weaned away by the deterrent punishment as envisaged and provided for in the amendment to the prohibition law.

On the need for deterrent punishment which has been accepted by the Government the opposition as a whole is ranged against the Government, and has urged the postponement of the consideration of the bill seeking to pass it into law for six months so as to enable the parties to sit together and arrive at a mutually agreeable basis for the enforcement of prohibition throughout the State. In pressing for deferment of the bill the opposition parties have without exception also expressed their opposition to punitive punishment for the enforcement of the law. The opposition's attitude springs from fear of unmitigated harassment to the poor people. The leader of the Opposition has in this connection indicated possibilities of individuals fabricating charges out of sheer enmity against people innocent of any actual offence against the law.

Whether punitive punishment would by itself eliminate the drink habit entirely is open to question. The inverse correlation between the severity of the punishment and the incidence of crime against the prohibition law is something which cannot be taken for granted. And in view of what Mr Bhaktavatsalam has admitted as the laxity in the administration of the law by the police whether even deterrent punishment would meet the need is doubtful.

Mr Bhaktavatsalam's reference to the statement of Mr Khrushchev about the need to prevent drunkenness in Soviet Russia is largely irrelevant, since what the Russian leader is confronted with is drunkenness while the problem before the Madras Government is elimination of the drink habit completely from the State. While legislation could do much to prevent the drink habit, to neglect the need for propaganda and education would only make the task of enforcing prohibition more difficult.

Mysore Budget

Government hold shares are the Hindustan Aircraft Factory, Indian Telephone Industries, Radio and Electrical Manufacturing Co Ltd the Mysore State Cooperative Apex Bank and the Mysore Central Cooperative Land Mortgage Bank.

Popularising Radio

The tendency for modern arts to gravitate to the urban centres in the country had left a wide gap in the quality of life led by people in the rural and urban areas. The modern radio which provides cheap additional recreation though it has an important place in every urban homestead is still a rarity in the countryside, and the aloofness of the rural areas from the artistic influence of the urban centres is largely a product of this.

The efforts of the Government to popularise radios and to provide them in increasing numbers in the countryside would seem to have met with little success in view of the high cost of radio sets. This only underlined the need for developing the industry on modern lines so as to realise in economies of production and to concentrate on other means for making available the additional facilities which the modern radio provides.

Speaking at Bangalore Mr R. K. Ramadhyani Secretary Ministry of Information and Broadcasting referred to the various ways which the Government have in view to meet the need for increasing facilities for radio listening in the countryside. Among other things provision of a system of local transmitters which will enable good reception with crystal and small valve is important. The connection for a loudspeaker or earphones is also supposed to obviate the need for a full radio set. The extension of facilities in this way is also highly desirable. The introduction of the new transmitter type is credited with the possibility of making radio listening in the countryside popular. But what Mr Ramadhyani refers to as the high cost of such transmitters raises doubts about their immediate possibilities.

Governmental action is still in the exploratory stage the final decision on the best method of popularising radio listening being deferred for consideration by foreign experts. In this connection Mr Ramadhyani pointed out that the Government are trying to get in touch with a foreign technical expert to assist the A.I.R. to make a detailed technical study of its system with a view to making a large expansion in radio receivers possible. The delegation of radio industrialists from foreign countries to which Mr Ramadhyani referred, would also enable a thorough study of the problems of radio manufacture in the coun-

try. Importance is also attached to the possibilities of the Electronics Factory in Bangalore for manufacturing radio components and transmitters.

Madras Corporation Finances

If even after the implementation of most of the recommendations of the Taxation Enquiry Commission as well as those of the Local Finance Enquiry Committee for augmenting the financial resources of local bodies the Madras Corporation should find itself still hampered in its activities by insufficient resources, it only highlights the extreme inelasticity of its sources of revenue. This would be evident from the fact that the Corporation is dependent for a major part of its resources on fixed grants from the Government which inevitably tend to become inadequate for the growing needs of the population in the city.

Education is one of the most important fields of activity of the Corporation where the pinch of finance is acutely felt. The Corporation's responsibility in the educational sphere includes the provision of free midday meals to the students of the primary stage and the extension at its own cost of facilities for primary and Secondary education to the city's population. The extent to which the Corporation has been limited in its activities in this sphere would be evident from the fact that at present only about 25,000 children in the primary stage benefit from the free provision of mid-day meals. Complaints of the inadequacy of the sources of revenue such as grant of 50 per cent from the proceeds of the education tax collected by the Corporation, lump-sum grant for the maintenance of elementary schools opened after 1921 etc are also frequently heard.

The Corporation is also left with no external source of help for the maintenance of the Poor House, the Industrial Home for able-bodied beggars and the Special Home for the diseased and the infirm. Any improvement in the services which the Corporation at present provides in these fields is therefore contingent on the availability of more finances.

These problems of the Corporation were brought to the attention of the State Governor Mr Bishnuram Medhi in the course of a civic address which the Corporation presented to him, last week. Mr Medhi expressed sympathy with the needs of the Corporation for more finances and assured sympathetic consideration for any proposal for increasing the resources of the Corporation. But when mention was made of Octroi and Terminal taxes on passengers which have the sanction of the Taxation Enquiry Commission, Mr Medhi expressed doubts about the

possible reaction of such levies on the general public in the State.

The Corporation on the other hand is tempted to see the end of its financial troubles only in the devolution of full autonomy and financial strength on it. Even though the demand may seem exaggerated there is at least a case for a thorough study of the need of the Corporation for more resources in relation to its growing responsibilities.

Silk Industry

The silk industry is one of the few surviving cottage industries in the country and though the prospects for the industry as indicated by current demand for silk fabrics are bright, increasing cost of production and fluctuation in the prices for silk fabrics have underlined the need for co-operative methods in production. This was urged by Mr Morarji Desai Union Minister, when he inaugurated the Sixth Mysore Sericultural Conference at Bangalore last week.

In view of the disorganised nature of the industry the scope for improving the methods employed in the industry also appears to be great. The greatest need in this connection is thorough research into the problems of the industry and the application of the results of research. Mr Morarji Desai pointed to the great strides made by Japan in the matter of research in the problems of the silk industry and exported the Indian sericulturists to concern rate on research so as to better the record of Japan in sericultural research.

Mr Morarji Desai, referred to the saring of the Silk Board by the Government ten years ago as evidence of the great importance attached by the Government to the silk industry but at the same time pointed out that the solution to the difficulties at present faced by the industry could only be found by the people engaged in the industry working hard so as to reduce cost of production and improve the quality of the silk goods.

of India's
industrial progress

In every industrial undertaking, efficient insulation is vitally important. Good insulation is not just a question of using high quality materials...it's a science that calls for experience and skill.

We offer the services of a highly specialised contracting organisation, with the resources to undertake heat, cold and sound insulation contracts of any magnitude anywhere in India. Whether you are faced with a minor problem or a major project in Insulation, we shall be glad to serve you.

Prospects for Rubber

THERE is a general belief that Rubber production will be showing some improvement this year as the weather, at the beginning of the season, has been fairly satisfactory in the main districts. Given slightly better-spread-out rainfall, a marked increase in production can be expected.

In view of the national need for raising the production of rubber—an important raw material in which India is not self-sufficient at present and for the import of which considerable volume of her foreign exchange earnings is being spent—the announcement by the Kerala Finance Minister that the Government have decided to utilize a share of the available land in Kerala for the extension of rubber cultivation is welcome.

Kerala has a near-monopoly in the production of natural rubber

in India and ideal conditions for production exist. According to one estimate, at least 50,000 acres will be available for new planting in the State; but the proposed land reforms pose a real threat to the further expansion of cultivation. But, it is gratifying to note that the Government have proposed to set apart a portion of the available land for rubber cultivation and have disclosed their intention to draw up a comprehensive scheme for this in consultation with the Board. At present, demand is outstripping production as the existing manufacturing capacity is being rapidly expanded besides the entry of new-comers.

Pepper Conditions in Pepper markets have turned a shade quieter on lack of fresh demand. After the

shipment to Russia, if the USA or other foreign buyers remain conspicuous by their absence, the market is likely to go down, as growers generally reappear as sellers on slight weakness in the trend. In the Kozhikode market, Wynaad quality is quoted at Rs 590 to Rs 600 and the Country variety at Rs 575 to Rs 580 per candy. In the New York market, activity remained extremely quiet as buyers were inclined to sideline and test recent firmer prices.

Coffee The world Coffee market is having a second look at the prospects for the current year after having thwarted a fall in prices by the Mexico City Agreement. It is clear now that any agreement among latin-American producers without bringing in African pro-

ducers will not last very long. In fact, American restriction, if effective in holding up prices, will directly act as a strong stimulus for African expansion in production. For the present, the decline in coffee production has been arrested by the agreement. In the consuming countries, stocks are moderate and an active demand for close positions exist.

Meanwhile, the India Coffee Board has announced the release of 1,060 tons of coffee seeds from the 1957-58 crop for export. It consists of 885 tons of Plantation "A"; 61 tons of Plantation "B"; 56 tons of Plantation Triage and 58 tons of Arabica Cherry Flats. The last date for tender is April 16.

At the monthly auction held at Tanjore last week, the entire quantity, which was offered, was sold. Following were the range of prices (per cwt.):—Plantation "A" Rs 230.10 to Rs 233.60; Plantation PB Rs 229.50 to Rs 232.75; Robusta PB Rs 172.00 to Rs 172.60 and Robusta Flats Rs 158.50 to Rs 167.60.

Groundnut

Conditions in the Madras Groundnut market ruled firm. Arrivals were 200 tons per day. Local crushers, both big and small, took up sizable quantities around Rs 140 per candy. Sowings of the summer crop are stated to be in progress; but the acreage is less in Tanjore district.

In the Groundnut Oil section, the rate for the ready position was quoted around Rs 301 per candy. Calcutta interests took up sizable quantities although most of the buyers were busy in squaring up their commitments at the close. There was limited business in the forward position.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were again restricted. With the result, all the available supplies were readily taken up by shippers at firm prices. The market for Bull Hides ruled steady. In the Calf section, arrivals were rather poor, resulting in prices ruling very steady.

On the export front, business was restricted as buyers in the UK were talking of fresh business at lower levels. London enquiry centred around top-grade kips and fifth selections in single tannages. Although there was a certain amount of enquiry for lower selections in the Calf section, supplies were negligible.

In the Tanned Skins section, arrivals of both goat and sheep skins were moderate and there was a fair clearance. Prices of the former were about 13 nP per pound lower, while those of the latter were almost unchanged.

In the export section, trading was restricted.

The Indian Mining Association

First Year of Achievement for Private Sector in Coal

The 6 Difficulties Faced by the Industry

No Room for Feeling of Complacency

Statement of the Chairman, Mr D. Hogg

The following is the speech made by Mr. D. Hogg, the Chairman of The Indian Mining Association, at the Annual General Meeting of the Association, held in Calcutta on 20th March 1958:

Gentlemen, The most outstanding feature of the year has been the fact that coal production has increased from 39.43 million tons in 1956 to 43.50 million tons in 1957. Of this increase of just over 4 million tons 3.1 million tons were produced by the Private Sector. The year 1957 may be regarded, therefore, as the first year of achievement after the Private Sector of the Coal Industry had been given the "green light" to go ahead to produce its additional 10 million tons of coal during the Second Five Year Plan period.

It has always been said that the goal of an additional 10 million tons in five years was well within the ability of the industry, provided that there was sufficient inducement and incentive and various handicaps were removed. Last year has proved that the Private Sector has not been found to be lacking in its desire to achieve its objective. But is sufficient inducement and incentive present for progress to continue at this rate and have many of our handicaps been removed? The Industry has tackled its problems realistically in an effort to produce the goods, but I would venture to say that our progress, in view of certain deficiencies, can only be regarded as "short term." There is, therefore, no room for a feeling of complacency on the part of Government and the many authorities to which the Coal Industry is subjected that this progress can be maintained unless urgent action is taken to remove many of the difficulties which stand in the way of long term planning and security for the Industry.

THE SIX DIFFICULTIES

It is tedious to recount our difficulties yet again, as these have been publicised over the past decade on so many occasions and the voluminous memoranda have been prepared at various times by the Association on these subjects. However, I feel I must enumerate the more important items again. Briefly they are:—

1. A realistic price structure.
2. Security of tenure for leaseholders.

3. Adequate transport to remove coal from where it is raised, throughout the year.
4. Facilities for the provision of the required plant and machinery.
5. A little relaxation from the spate of legislation which has been imposed on this Industry constantly throughout the last few years.
6. A realistic approach to both the controls which bind the Industry and the labour problems with which it is constantly faced.

With regard to a revision in the price structure, Government wisely appointed a Coal Prices Revision Committee about a year ago to examine and report upon the costs of production of coal and coke and to take into account all relevant factors which have a bearing on the coal production programme envisaged in the Second Five Year Plan and to recommend whether any changes and, if so, what changes were necessary in the present price structures. The Committee is eminently composed but it is constituted of Government officials only, who are mostly concerned with consumers' interests rather than those of the producers. This Committee therefore, may not hold such impartial views as are so necessary when consideration is being given to such a complex problem as the fixation of prices for a wasting asset where both technical and commercial problems are involved. However, this Association has extended its fullest co-operation by providing the Committee with various information and has had the privilege of formally meeting the Committee on one occasion, shortly after its formation. It is to be hoped that the Industry will have another opportunity to participate in a joint consultation before the Committee makes its final recommendations or draws any conclusions. The complexity of the problem under investigation makes it desirable, if not essential, for further meetings to take place.

PRODUCTION COSTS

In the meantime, the Coal Prices Revision Committee has investigated the production costs of selected collieries and has made a comparison of the costs obtaining during the second half year of 1955 with the second half year of 1956. While this will no doubt serve as

a basis for their deliberations, it is considered that the information collected is now completely out of date as costs have risen considerably subsequently and other elements must now be taken into account. To mention a few, they are, increases in labour costs on account of implementing the Appellate Tribunal's Decision, recurring increases due to annual increments which have to be introduced, the cost of issuing clothing and boots to workmen at concession rates, which are 50% of the cost, the supply of free rations to worker's children in the creches, the provision of canteens and many other welfare amenities and last but by no means least, the cost of implementing the new Coal Mines Regulations, necessitating the appointment of additional staff and other statutory obligations which result in a never ending increase in production costs.

The fate of the Coal Industry rests, no doubt, at present, with the Coal Prices Revision Committee and it is to be hoped that they will take into consideration the fact that credit facilities for future expansion are strained and large capital investments are required in mining to achieve the target. There must be an adequate margin of profit, therefore, to enable money to be ploughed back into the industry for future development since in mining, development is a continuous process which requires continual expenditure of a capital nature. The maintenance of coal prices at an absolute minimum really means that the Coal Industry is being utilised to subsidise manufacturing industries and national transport—the rail ways. Should a wasting national asset like coal be treated in this way to subsidise other industries, particularly when the nation's industrial future, steel production, is inextricably linked with the future of the Coal Industry? Should not others help to subsidise our future expansion?—Particularly when the country's Fuel Research experts tell us that there is a terrific wastage in the utilisation of coal in industry in India, and when there is a need to make them fuel efficiency minded. In other words, an increase in coal prices should not affect the general economy of other industries but should help them to achieve greater efficiency and at the same time provide the neces-

sary funds for capital investment in the Coal Industry where it is urgently required to provide the necessary resources for increased production.

ACCOUNTS ANALYSED

An analysis of the financial accounts of 19 coal producing companies of this Association which, between them, raise about one third of the total output of the country, reveals some very interesting information. The profit remaining after providing for taxation averaged Rs. 1.21 per ton. Out of this, the shareholders were paid in dividends Rs. 0.54 per ton. This represents a return of 6.3% on the paidup capital involved. It will be seen, therefore, that the share of profit distributed to shareholders was low compared with the general level existing for other industries, and this despite the additional risk involved in investing in mining enterprises. Now, the real value of the shareholders' investment must include amounts which are available for distribution but which are shown in balance-sheets under the heading "Reserves and Surplus." In this analysis, the total dividends paid to shareholder are found to be 3.4% on the total value of the investment.

It is the complaint of the Industry that there are insufficient profits available to meet current needs and the analysis of these 19 Companies' accounts certainly illustrates that this is true. It is found, after providing for taxation and distributing dividends to shareholders, the balance remaining is Rs. 57 lacs, out of which, amounts have to be set aside for depreciation. Against this total retention, there was spent on capital expenditure a sum of Rs. 88 lacs. It will be seen, therefore, that the financial resources of the 19 Companies were depleted to the extent of Rs. 31 lacs in one year only. Taking this to be the average for the remaining producers, the total for the Industry is in the region of Rs. 1 crore—a staggering figure. Investigation also shows that this trend has existed for many years. It will be obvious that no industry can continue to suffer this serious depletion of its resources in this way. The Coal Industry is one which has to meet regular demands for capital expenditure due to its very nature. Underground plant and equipment require continual repairs and replacement and it is

276 Crores

The Life Insurance Corporation has recorded a spectacular achievement. In 1957, Rs. 276 crores of Life Insurance was sold in India, comfortably exceeding the target of Rs. 250 crores.

This is an outstanding improvement on the comparable figure of Rs. 238 crores in 1955, said to be the peak year for Life Insurance under private management.

The Corporation's signal performance reflects the popularity of Life Insurance as an instrument for social and personal security. Indeed, over 8,00,000 new policies now stand as eloquent testimonials to this conviction.

Life Insurance Corporation of India

Central Office: "Jeevan Kendra" Jamshedji Tata Road Bombay 1

ASPLIC-22

a new record in life insurance

a fact that capital expenditure becomes heavier after complete development to the boundary. Then comes the additional capital costs for pumping and slowing operations.

REPLACEMENT

While, in theory, the amounts set aside for depreciation are intended to equal the original cost of an asset and to be available to meet the cost of replacement, it is well known that present day costs for replacing identical assets are very much higher than the original cost. It was argued before the Tariff Board on behalf of several important industries that the cost of replacement was 3 to 4 times greater in 1948 than in 1939 and it is common knowledge how much prices have risen in the last decade. This deficiency in funds has, therefore, to be made up in some way out of the Companies' own resources. It is true that the Finance Act of 1955 recognised this need and with the object of providing funds to be retained in the business, reduced the liability for taxation by providing a free allowance of 25% of the cost of the new assets (Development Rebate). It would be interesting to consider an example of the position on the basis that a new and identical asset will cost 4 times more than the one replaced and taking into account the Development Rebate.

As the selling prices for coal are controlled, the onus is clearly on Government to fix these at such a level as to ensure that sufficient nett earnings, to meet present day requirements, will be available for ploughing back. It is hoped that the Coal Prices Revision Committee will take this realistic view as a basis for its recommendations.

WAGON AVAILABILITY

To revert to the year's working, credit must be given to the Railways for their increased wagon offerings. Unfortunately, however, wagon availability has not kept pace with production and coal stocks in Bengal and Bihar at the end of 1957 stood at over 3 million tons and were over a million tons higher than at the end of the previous year. While the Railways' performance improved considerably during the year (an average movement of 3667 wagons per day with coal from Bengal and Bihar compared with 3405 wagons per day in 1956), they have a colossal task ahead of them if they are to move over 5000 wagons per day from Bengal and Bihar by 1961. The Industry's fears over sufficient improvement not being achieved by the South Eastern Railway during the Second Five Year Plan period, appear now to be confirmed by the Railway Board themselves. Unfortunately, the South Eastern Railway System appears to have been strained to the extreme already in its efforts to meet its commitments under the Second Five Year Plan. These are extremely heavy as it serves Bhilai, Rourkela and Tatas' and is responsible for almost all the ore

traffic both for export and internal consumption and serves a large percentage of the coking coal collieries and Selected Grade High Volatile coal collieries from where expansion is required. The South Eastern Railway also service all collieries in Central India. There have been rumours that coal targets for the Second Five Year Plan are to be revised and the Private Sector welcomes the thought that a larger share may be allotted to it. However, rumours that this increase is to be given to collieries in Central India cannot be received with much enthusiasm as production there is already much in excess of the Railways' capacity. In fact, there was no increase in wagon availability in the Central India and Talcher Field in 1957.

The minimum guaranteed supply of wagons for the movement of coal by the South Eastern Railway in 1957 was 950 wagons per day. The Coal Industry maintained that the figure should have been 1050 wagons but even the lower target set was not achieved. Further increases in wagon offerings are required in 1958 and in the years to follow. An increase in coal production in the collieries served by the South Eastern Railway is now vitally required. With the present strain on its resources, it appears to be impossible for this Railway to move the number of wagons required. I would, therefore, emphasise the necessity for a regrouping of certain sections of the Railways to relieve this strain. The Eastern Railway appear to have the capacity to operate adjoining sections of the South Eastern Railway (some of which they already operated in the past) and I would humbly suggest that they should now take over these sections with the least possible delay.

DISCRIMINATION

Another feature regarding transport which gives cause for great concern is the discrimination which is shown over the allotment of wagons between the Public and Private Sectors. The Industry has drawn Government's attention to this on many occasions during the year but controls are still being used to the advantage of one sector. While it may be expected that Government will wish to purchase its coal requirements from the N. C. D. C. as far as possible, it does not appear to be in keeping with equity that controls should so be used that in effect priority which is given to one sector of the Industry is not shown to the other. The replies from the Secretariat on this vexed question of discrimination cannot be considered as satisfactory and there would appear to be a need for an impartial committee to enquire into this matter. Facts must be faced—why are heavy stocks held by one sector and not by the other?—should greater priority be given to the movement of coal to burn bricks for government staff quarters in preference to industrial housing or a housing estate?

The implementation of the Appellate Tribunal's decision in June last year has brought greater benefits to our workmen. In fact, they have probably received greater benefits in the last two years than workmen in any other industry. I have used the term workmen which also covers our female workers who are now in receipt of equal pay. We welcome these improvements, if they result in increased production, a more contented labour force and better relations. But, so far, there have not been noticeable changes in these directions and there is great scope and need for improvement. In fact, absenteeism has tended to increase since the All India Industrial Tribunal's Award and the Appellate Tribunal's decision were implemented. One of the greatest problems which has faced the nationalised coal industry in the U. K. since wages increased so considerably there, has been absenteeism. It has been estimated that a reduction of 1% in absenteeism in the U. K. would probably result in an additional 2 million tons of deep-mined coal per year being produced. It is interesting, also, that a solution has been offered by the Lancashire Mineworkers who have agreed, under the auspices of their local area National Union of Mineworkers, to set up "Attendance Committees" to scrutinise attendances and ultimately withdraw protection from a consistent offender if the management were to resolve, after warning, to sack him. Their Area Secretary has said that "there is no room in the industry" for a man who will not put in a full week's work.

BONUS SCHEME FOR WORKMEN

Our Industry is by no means backward in its structure. Our workmen have their own Bonus Scheme. They have their own Provident Fund and Welfare Organisation with separate Commissioners to look after their interests. We have our pithead baths, our canteens where food and other facilities are provided for children—clothing and boots are to be provided to workmen at concession rates and canteens are being introduced on an increased scale. The Welfare Organisation has built hospitals. In addition, it has built Multi-purpose Institutes and Miners Institutes and while more could be built and are being built, in keeping with the availability of materials, their construction is, unfortunately, in excess of our workers' ability to utilise these facilities to the full. We, for our part, wish them to be utilised to the full because we realise that they should bring about greater happiness and contentment. I cannot help but think sometimes that Union Leaders would be doing a great service to those whose interests they claim to represent and to the country as a whole if they were to concentrate more of their attention on encouraging and influencing their members to use the facilities which are offered at present and educating them for better things

to come. It might be asking too much to expect Union Leaders to be social workers but surely we can expect them to have a more active social conscience. How many do we see encouraging such activities as Sports or even attending Sports Meetings?

Unfortunately, our workmen are divided by a multiplicity of Unions which vie with each other for their support and which all claim, in their dealings with employers, to represent the workers' interests. Many Union Field Workers are divided by differences in political ideology and, in many cases, self-interest. In order to gain popularity and even maintain their position, these union officials organise demonstrations to attract support which leads to indiscipline within the industry. The present activity of these leaders is not only destroying good relations between employers and employees but also between supervisory staff and workers and is also making the formation of responsible and properly constituted trade unions virtually impossible. In view of the unruly elements present, few collieries can afford to organise Pit Committees and sometimes the formation of such Committees is even opposed by Unions.

SAFETY IN MINES

While the Association welcomes the formation of a Steering Group to consider the question of safety in mines, the irresponsible nature of some Union leaders, on occasions, must not be lost sight of. Mining is a hazardous occupation and while a miner is constantly faced with the immediate perils of nature, good leadership and discipline is essential. Where the safety of the minor is involved there is no conflict of interests between the Unions the employers and the employees. Petty difference of opinion or of viewpoint must be subordinated to the overriding interests of providing safe conditions for mine workers.

I sincerely hope that the Steering Group will bring to light defects, if any exist, but our new Mines Regulations, based on past experience in India and the regulations existing in other countries, appear to be exhaustive and comprehensive. A most fundamental point is that education of our miners will require to be undertaken vigorously in order to achieve results and greater safety. Constructive help from the Unions is necessary to achieve this. This Association is at present bringing out a series of Safety Posters but it is difficult to make them sufficiently simple for illiterate labour to understand. Unfortunately, the required standard of education cannot be achieved in one generation but I am pleased to be able to say that there has been a revitalisation of our Labour Welfare Fund Organisation and the appointment of a new Commissioner has brought about greater interest in Multi-purpose Institutes where, among many other activities, adult literacy classes are held. It is hoped

that our posters will be utilised to serve the dual purpose of teaching literacy and safety at the same time, at these Multi-purpose Institutes. In addition, several of our members have made their own safety slides which are shown at cinema performances in their collieries. I would emphasise the greater need for such activities and request Government to produce suitable safety films. Their Films Division are producing some very excellent films on other subjects and might well devote a few films to the subject of safety in mines. Such films would earn their real reward in the form of a reduction in the number of accidents in mines in India.

HIGH STANDARD

Mines in India have recorded one of the lowest fatal accident rates in the world in recent years but the recent disasters at Chinakuri and Central Bhowrah have brought home to us all once again the stark realities of mining. While we express our sincerest sympathy to the relatives of the victims and sufferers of these recent disasters, we must also record our appreciation to the very high standard achieved by our Rescue Station Organisation which compares favourably with similar organisations in other countries. It is only at times like this that the public hears of their existence. They were present at Chinakuri and I understand did an excellent job of work. They are a brave band of citizens, largely voluntary, who turn out unflinchingly, on such occasions not only to assist in rescue operations in emergencies but in mine recovery also.

The spate of legislation, not only concerning mining, but seriously affecting the stability of the Industry appears to be unending. I see from the Ministry of Labour and Employment's latest Report that they had a total of only nine enactments under consideration during the year and five of them specifically concerned the mining industry and another one affected us. In addition, we are constantly affected by legislation brought out by other Ministries, not to mention the controls and regulations which are imposed upon us by our own Ministry.

RATE OF ROYALTY

During the year, the Draft Mines and Minerals (Regulation and Development) Bill, 1957, was considered by the Lok Sabha and was then referred to a Joint Committee of both Houses. The Bill had been discussed with the Industry at the Mineral Advisory Board meetings held since 1956 but, without reference to the Industry, the Joint Committee made far-reaching amendments to the Bill, which was passed at the end of December last year. The most important amendment was that royalty would have to be paid at 5% of the f.o.r. value of coal, subject to a minimum of 8 annas per ton, immediately the Act became law. Also, the rights of intermediaries appeared to be liquidated without payment of compensation. The amendment

concerning royalty rates meant that on an average collieries in Bengal and Bihar would immediately have to bear an increase of 12 annas per ton in the royalty payable and in some cases the increase would be as much as almost Re. 1/- per ton. Royalties in Bengal and Bihar at present range from Zero in some cases to about Rs. 1/- per ton and average about 4 annas per ton. It will be appreciated that royalty is a fixed charge for the privilege of exploiting natural resources and is an item in the cost of production. If the rate of royalty is increased by Statute, a Court of Equity, I would expect, would consider that selling prices should be increased correspondingly. The Industry has taken the opportunity of explaining to Government the far-reaching effects which the Mines and Minerals (Regulation and Development) Act, 1957, will have and it is to be hoped that amendments will be made to this Act before the effective date from which it will come into force, is gazetted.

Under the Coal Bearing Areas (Acquisition and Development) Act, 1957, the State has been empowered to take over unworked land containing or likely to contain coal deposits. Although the Bill in draft form was never placed before the Coal Industry for comments, the Industry has taken the opportunity to point out the difficulties with which it is now faced as a result of this Act. These are only two of the cases where drastic changes have been made affecting the Industry without reference to or discussion with them. In addition to the many Advisory Committees on which the Coal Industry is represented, we have our own Coal Controller and also the Coal Council which has recently been formed to act as the future policy makers for the Coal Industry. I would strongly urge Government to make the fullest use of these various Advisory Committees and the Coal Council before formulating policies or amending legislation, in future.

FOREIGN EXCHANGE SHORTAGE

The foreign exchange shortage which has hit all industries throughout the country has also been acutely felt by the mining industry as a large percentage of mining equipment and machinery has to be imported from abroad. I would, however, express our grateful thanks to our Coal Controller, who, at the end of 1956, started what is known as the Progress Review Committee, which has achieved results in some directions. This Committee held monthly meetings throughout last year and as a result of the presence of representatives from the Joint Chief Controller of Imports and Exports, the Regional Honorary Cement Adviser, the Iron and Steel Controller and other officials, a few of our shortages have been eased and we have at least had the opportunity of explaining our difficulties to the different representatives concerned. This has given the

various Government Departments a greater insight into the problems which confront us. As far as the import of mining equipment and machinery is concerned, we have been allowed more scope to obtain essential items under Actual Users' Licences but we have lost or have had curtailed many facilities which existed previously, such as drawing our requirements through established importers. In many cases this has resulted in a loss of efficiency in those collieries which are no longer able to draw their requirements from established importers, who previously handled the items required, or from the stocks of spares normally held by them. There is no doubt, particularly as far as spares are concerned, that the present Import Policy results in a wastage of foreign exchange as it is abundantly obvious that it is preferable for spares to be canalised through one source, or a restricted number, rather than for each actual user to have to import his own requirements. Our grateful thanks are also due to the Deputy Coal Controller (Production) who is the sponsoring authority for licences required by the Coal Industry. Unfortunately, however, a sponsored application does not always mean that a licence will be issued in due course. In the case of certain items, there appears to be no provision in the present Import Policy. Also, our requirements so often are far in excess of foreign exchange allocations. Collieries have continued to experience serious shortages of iron and steel materials, particularly rails which are of such vital importance to the Coal Industry but at least we have the consolation of knowing that while there is an acute shortage of both indigenously manufactured iron and steel materials and foreign exchange to import them, at least we have had an opportunity of bringing our shortages to the notice of the authorities on one occasion each month.

TRIBUTES

Before I conclude, gentlemen, I want to pay a tribute to the valuable assistance which has been given to me by your Committee during the past year and to the Vice-Chairman, Mr. W. D. Forrest, who retired during the year after long service to the Industry, both in the Coalfields and in Calcutta. I would particularly like to thank Mr. Maulik and refer to the devoted service which he has continued to render to the Industry as a member of your Committee, after having been Chairman of this Association on two previous occasions. I thank the members of the Standing Coalfields Committee and their two hard-working Honorary Joint Secretaries and wish to record my appreciation of the services rendered by the Secretariat of the Association and the Joint Working Committee. I would also thank the Indian Mining Federation and the Indian Colliery Owners' Association for the co-operation which this Association has received from them during the year.

THE SAMNUGGUR JUTE FACTORY COMPANY LIMITED

The Directors of this Company regret that on account of the continued adverse trading conditions during the year ended 31st December, 1957, which have resulted in a substantial loss, they are unable to recommend payment of any dividend on the Ordinary shares.

The Directors have declared on the Preference Shares a Dividend at the rate of 6% per annum for the half year ended 31st December, 1957. This Dividend will be paid on 28th March, 1958, less Income Tax at 8/6d. per £1 and the Transfer Books will be closed from 21st March to 28th March, 1958, both dates inclusive.

On account of certain Budget proposals announced by the Government of India on 28th February, 1958, it is not possible at this stage to determine the results for the year, but it is, however, known that it will be necessary to transfer a sum from General Reserve to meet the loss on the year's working and the payment of the year's Dividend on the Preference Shares.

P. WILLIAMS,
Secretary.

THE CENTRAL BANK OF INDIA, LIMITED

BALANCE SHEET AS AT 31st DECEMBER, 1957

ly atmosphere and the eventual agreement reached is significant. There is encouraging evidence that workers and their representatives share the feeling that such differences as may arise are capable of solution by direct negotiation with management.

Last year I mentioned that we were endeavouring to introduce improved terms of service based on job appraisal. I am glad to say that despite initial scepticism we have been able to introduce the scheme with workers' approval.

Government's policy in present circumstances is naturally to restrict such imports to the minimum and, in order to play a full part in assisting the country's present foreign exchange difficulties, your Company has paid, and is continuing to pay, great attention to the use of locally manufactured plant and indigenous raw materials.

PRODUCTIVITY

Your Company has recently set up a Work Study section under an experienced Work Study practitioner with the object of increasing productivity and thereby the effective use of capital employed on our plants. Already promising results have been achieved.

PRODUCTIVITY

This has been a very busy year in the Rishra Factory and record outputs have been achieved in almost every unit; Paints and Chlorine/Caustic Soda showing in particular gratifying increases. Extensions to our Paints Plant were completed in the latter part of the year enabling us to meet the increasing demand for our well-known range of "Duco" and "Dulux" products. At the same time production of our metal pretreatment products showed a substantial increase.

Contrary to the pessimistic view taken by a shareholder at the last meeting our recent rights issue of Rs. 248 lacs was a success in the market conditions prevailing at the time and a reflection of the confidence in the Company's future and its management. Only 6.5% of the issue was not taken up by shareholders. This represents in value Rs. 16 lacs which Imperial Chemical Industries (India) Private Limited were called upon to pay—an additional British investment in India over and above the figure of Rs. 175 lacs I gave you last year.

I would like to repeat for the information of those shareholders concerned that Section 56A of the Indian Income Tax Act applies to this issue and companies are exempt from super tax on the dividends received by them on the new shares.

Our "Gammexane" formulations of Benzene Hexachloride also registered a satisfactory increase.

I have seen our latest production figures which encourage me to predict that in the current year all previous records will be beaten.

The Company must find more money as its requirements of capital are not yet fully filled. Our internal resources which we hope will increase over the next few years will not suffice, and so your Directors are giving much thought to this problem. All I can say at the moment is that our immediate requirements will be met from loans from Banks including a loan of Rs. 100 lacs already negotiated for the Polythene project.

I have little to add to what has been already said in the Directors' Report. The plant will begin production early in 1959 provided nothing unforeseen occurs.

A range of products under this well-known mark has been sold by Imperial Chemical Industries (India) Private Limited for many years for the treatment of industrial and locomotive boiler waters. There is therefore an established market and we have recently been licensed under favourable terms to manufacture them at Rishra.

Your Company has felt keenly the difficulties in obtaining foreign exchange both for essential imported plant and engineering stores for construction and maintenance, and for raw materials for production.

PERSONNEL

Our relations with our employees have been maintained on a cordial basis. Recently we have arrived at an amicable settlement with two unions operating in our Factory on questions relating to wages, bonus, promotions and other terms. The Company has agreed to meet as reasonable a bonus liability for past years involving an additional amount of Rs. 74,000 and an increase in wages of Rs. 1,60,000. Negotiations took place in a friend-

To meet a long felt want a training school for tradesmen has been started. This will go some way to meeting the shortage of skilled men in our Factory and particularly for the Polythene unit.

In line with the Company's policy more and more Indians are participating at all levels. Several promising young Indians have already been sent to the United Kingdom for training in the factories of Imperial Chemical Industries Limited and more are to follow.

In an industry so highly technical as ours it is essential that we attract the best men from the universities. A system of recruitment by a panel of judges including a representative from a university has assisted in the selection of suitable technical staff.

I am happy to announce that your Factory was recently visited by Sir Alexander Fleck, F.R.S., the Chairman of Imperial Chemical Industries Limited, London, and Mr. S. P. Chambers, the Deputy Chairman of that Company. They both expressed appreciation of the fine work being done by the staff and workers at the Factory.

This will be my last address to you as Chairman of this Company as I shall soon be leaving India on retirement. I would like to take this opportunity of introducing to you my successor, Mr. J. M. Lall who will be your future Chairman. In Mr. Lall I am sure you will have a very able and efficient executive who will steer the Company through the difficult years ahead to even greater prosperity. I have every confidence that this Company will prosper under his guidance.

The Directors retiring by rotation are myself and Mr. B. R. Goodfellow. Mr. Lall who was appointed during the year as an additional Director vacates office. His election comes up as special business and Mr. Goodfellow and I offer ourselves for re-election in the ordinary way.

The Auditors also retire and you are asked to re-appoint them at a fee of Rs. 7,500 the same as that of the previous year.

This document does not purport to be a Report of the Proceedings of the General Meeting.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the annexed Balance Sheet of the Central Bank of India, Ltd., as at 31st December, 1957 and also the annexed Profit and Loss Account of the Bank for the year ended on that date in which are incorporated the returns of 51 branches audited by other auditors and the unaudited returns from 95 other branches and 118 Pay Offices not visited by us.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisos to Sub-section (1) and (2) of Section 211 and Sub-section (5) of Section 211 and Section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A & B of the Third Schedule to the Banking Companies Act, 1949.

We report that:—

- We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- The transactions of the Bank which have come to our notice, have been within the powers of the Bank;
- In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank;
- The Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
- In our opinion, and to the best of our information and, according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet, read along with the notes appearing thereon, gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1957 and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

The Bank of India Limited

Revolutionary Tax Changes in 1957

Persistent Tightness in Money Supply

Satisfactory Result of Year's Trading

Statement of the Chairman, Sir Cowasjee Jehangir

Extracts from the Speech of the Chairman at the Fifty-Second Annual General Meeting of the Shareholders of The Bank of India Limited at Bombay, on Wednesday, the 12th March, 1958.

Ladies and Gentlemen,

With your permission the balance-sheet may be taken as read.

At the time of our Annual General Meeting in 1957 the currency in circulation was Rs. 1,515 crores, whilst at the corresponding time in 1956 it was Rs. 1,406 crores. This year it is Rs. 1,546 crores. The increase on last year's figure is Rs. 31 crores. This limited increase, viewed in relation to the requirements of the Second Five-Year Plan, is an indication of attempt at control of inflation.

In present times, each year seems to witness substantial changes. The year 1956 saw the nationalisation of life assurance business

and the formation of the Life Insurance Corporation of India. That year also saw that major enactment, the Companies Act, 1956.

The year 1957 has seen the adoption of decimal currency. It has seen revolutionary taxation changes.

Decimal currency is, I think, for the benefit of the country generally. The change-over appears to have been made smoothly. We are now quite used to naye paise in accounts and in our every-day dealings.

The major tax legislation changes during the year 1957 were contained in the following Acts:—

The Finance (No. 2) Act, 1957.
The Wealth-tax Act, 1957.
The Expenditure-tax Act, 1957.

The picture for 1957 was an increased tax burden by enhancement of old taxes and the levy of new taxes.

In the Finance (No. 2) Act, 1957, the rates of income-tax and

super-tax were appreciably increased for companies. The increased rates come into force in respect of the Bank's income for the year 1956. These tax increases and the ever-present rise in expenses, not only in the principal item of salaries but in sundry overheads, will, I fear, add to our problems. It may not be easy in the future to maintain our net profits after tax.

Tax-payers have to cope with the Wealth-tax Act from the 1st April, 1957, and the Expenditure-tax Act from the 1st April, 1958. These two new taxes are novel. I believe the Expenditure-tax has not been tried out in any other country. These levies may cause much apprehension. Apart from the doubt whether the yield from either tax will be substantial, the tax-payer will be obliged to furnish extensive information. He will, naturally, regard this as an inquiry into how the new taxes will

operate. They are likely, I think, to engender a sense of uncertainty and resentment to a much greater degree than other forms of direct taxation.

The Wealth-tax is objectionable as being a capital levy. Though it does not apply to banking companies because of an exception made by section 45(a) of the Act, the tax applies to companies generally and is bound to affect their working and financial position. It has a double effect in that it also applies to the shareholders of companies.

The commercial and industrial community were hoping for some relief in taxation in the present budget recently presented but this has not materialised. Taxation has, in fact, become more severe and the Government are expecting to take five crores of rupees more from the people. A major portion of this comes from the Gift-tax, which replaces death duties in cases where donors are in a posi-

Note:—Remuneration received by Directors for their own use from other Companies by virtue of nomination by the Bank on the Board of other Companies amounted to Rs. Nil during the year.

tion to make gifts. Taxation on death also becomes more severe as, not only is the exemption limit for estate duty reduced from Rs. 1,00,000 to Rs. 50,000, but the exemption limit is increased from two years to five years in the case of bona-fide gifts made before death, as if the Government were ashamed for being even less severe than England in any one direction. In no part of the world would such heavy taxation be tolerated without very severe agitation but, in India, we are a long-suffering people and the time is bound to come when the Government will have to retrace their steps from heavy taxation as they will find that the result will be much worse for the country.

During 1957, banks have continued to contend with a persistent tightness of money. This is so stubborn that it almost seems as if it has come to stay. We know, of course, that this is not so. Conditions sooner or later change, often turning completely round. I have seen many examples of this in my time. Even so, there is no sign of any early relaxation in the present scarcity of funds. These tight money conditions and the existence of various restrictions and legislative enactments affecting money and banking can hardly have made 1957 other than difficult for the business of banking. Banks depend upon deposits. In times of tight money the funds available for deposits with banks are restricted. Competition between banks for deposits increases. Higher rates of interest must be offered and paid.

The funds of the Government and of semi-Government bodies are, generally, lodged with the Government banks. These banks also receive the rupee counterpart proceeds of surplus agricultural commodities of the United States of America under that country's public Law 480. The two main Government banks are the Reserve Bank of India and the State Bank of India. As the central bank of the country, the Reserve Bank of India does not compete for business with the commercial banks, but I must make an allusion to the competition that banks like ours encounter from the State Bank of India which has a monopoly in several directions.

The amount available with ordinary banks for advances to customers does not satisfy the demand. For a considerable time we have been obliged, much to our regret, to restrict or to decline to give credit facilities to many credit-worthy customers. The pressure tends to become intensified at the present period of the year when the tax-gathering season is in full swing.

We have heard a great deal about the Small Savings Scheme but I would like to know which class of people are in a position to effect small savings. The Government and the public are well aware of the very heavy taxation we have to bear. It is said that India is the most heavily taxed country in the world. How can

the Government expect to have anything like a substantial amount from a Small Savings Scheme when they take away everything they possibly can by taxation?

As an alternative to direct nationalisation and state ownership, suggestions were recently made in the Legislature for the Government to obtain a controlling interest in important concerns. The method proposed, it seems, would be for the Government to buy enough shares in companies to secure, control and, notwithstanding that the amounts required would be large, they are apparently expected to be provided from the funds at the disposal of nationalised institutions like the Life Insurance Corporation of India. A reason given for the proposal seems to be that it would be cheaper to buy a percentage of shares and gain control over a company than to compensate all the owners of or shareholders in a fully-nationalised institution. The repercussions of the idea call for cautious and anxious examination. The Prime Minister, in the course of his address two days ago to the Federation of Indian Chambers of Commerce and Industry, appears to have realised the necessity for such examination. I venture to suggest that there should be official unequivocal disapproval of any such intention. While the Government are not generous in their compensation to owners of nationalised concerns—one school of thought is that they are not even fair—it falls to be considered whether the proposal of divesting existing shareholders of companies of control over their own concerns without paying any compensation on the basis of wholesale nationalisation is fair and justified. To me it savours very much of confiscation and is as objectionable as outright nationalisation, if not more so. Both the Insurance Act and the Companies Act regulate the acquisition of control by companies in other companies, but, when it comes to applying salutary principles like these to themselves, the Government appear to be quite reluctant to adopt them. Such methods, if adopted, would certainly sap the foundations of private corporate enterprise on which the prosperity of the country depends.

The Reserve Bank of India Rate was raised from 3½ to 4% on the 16th May, 1957. In our case, any additional income due to the rise in the Bank Rate and higher rates of interest on advances tends to be cancelled out by the increased interest paid to our depositor-customers and the upward pressure of operating costs. I would now refer you, ladies and gentlemen, to the balance-sheet and accounts.

The total at foot of the balance-sheet is over Rs. 98 crores. This is an increase of Rs. 2 crores over the figure of Rs. 96 crores of the previous year.

The profit figure for 1957 is about Rs. 93½ lakhs. This is an increase of about Rs. 1½ lakhs

over the previous year's profit of about Rs. 92 lakhs. The increase is not great but, at least, there is no recession in the face of increasing costs and difficult trading. Before the profit figure has been arrived at, usual appropriate and prudent provisions have been made.

The provision for taxation absorbs Rs. 30 lakhs against Rs. 28 lakhs for the previous year.

A final dividend of 10 per cent., free of income-tax, is proposed, absorbing Rs. 30 lakhs. This, with the interim dividend of 6 per cent. paid last August, makes the total distribution 16 per cent. per annum, or Rs. 48 lakhs for the year, free of income-tax, on the present paid-up capital of Rs. 3 crores. The proposed carry forward is Rs. 16 lakhs against Rs. 15½ lakhs the previous year.

I think we have real cause for satisfaction in the result of the year's trading, having regard to all the circumstances in which our operations have been conducted.

Mr. Dinsha K. Daji, who had been a Director of the Bank for 23 years, died on the 8th July, 1957. Mr. Daji was a solicitor of great experience, the benefit of which he ungrudgingly gave to the Bank at all times. My colleagues on the Board and I greatly miss Mr. Daji's wise counsel at our deliberations.

Five days after the death of Mr. Daji, the General Manager, Mr. D. R. Thom, died on the 13th July, 1957, following an operation. Mr. Thom served the Bank for 28 years, the last three of them as General Manager. He had the respect and confidence of the Board and, by his death, the Bank has lost an officer of the highest calibre. He was at all times courteous and was popular with both customers and staff.

Mr. T. R. Lalwani, who held the post of Deputy General Manager, has been appointed General Manager. Mr. Lalwani is our first Indian General Manager and is an officer of much experience. He has served the Bank at Head Office and at various branches.

I have the pleasure to record the Board's appreciation of the help rendered during 1957 by our Local Committees at various centres.

I would also express the thanks of the Board, in which I am sure shareholders will join, for the efficient service rendered during the year by the General Manager and the staff of the Bank at Head Office and branches. Their ability and continued hard work in carrying out the directions of the Board are a material contribution to the results of the year's trading which I have placed before you.

NOTE:—THIS DOES NOT PURPORT TO BE A REPORT OF THE PROCEEDINGS OF THE ANNUAL GENERAL MEETING WHICH WILL BE SENT SEPARATELY TO SHAREHOLDERS.

THE INDIAN IRON AND STEEL COMPANY LTD.

NOTICE is hereby given that the Board of Directors have sanctioned payment of dividend on the Preference Share Capital of the Company at the rate of 5% per annum for the half-year ending 31st March, 1958.

The Preference Share Registers will be closed from the 7th April, to the 10th April, 1958, both days inclusive. Payment will be made on or after the 1st May, 1958, to those Preference Shareholders whose names are on the Company's Register on the 10th April, 1958, or in accordance with their instructions.

By Order of the Board,
MARTIN BURN LIMITED,

S. Gupta
Director,
Managing Agents.

12, Mission Row,
Calcutta.

17th March, 1958.

THE VICTORIA JUTE COMPANY LIMITED

The Directors of this Company regret that on account of the continued adverse trading conditions during the year ended 31st December, 1957, which have resulted in a substantial loss, they are unable to recommend payment of any dividend on the Ordinary Shares.

The Directors have declared on the Preference Shares a Dividend at the rate of 6% per annum for the half year ended 31st December, 1957. This Dividend will be paid on 28th March, 1958, less Income Tax at 8/6d. per £1 and the Transfer Books will be closed from 21st March to 28th March, 1958, both dates inclusive.

On account of certain Budget proposals announced by the Government of India on 28th February, 1958, it is not possible at this stage to determine the results for the year, but it is, however, known that it will be necessary to transfer a sum from General Reserve to meet the loss on the year's working and the payment of the year's Dividend on the Preference Shares.

P. WILLIAMS,
Secretary.

DUNDEE.

March 22, 1958

Equities Forge Ahead

Watch-Dog Writes:

PRICES in stock markets have flared up again during the week under review. A reduction in the excise duty on cloth, the withdrawal of the compulsory deposit scheme for 1958-59, a rise in sterling balances and the consequent hopes of a relaxation in import restrictions, and the news of a reduction in the British Bank Rate—all these factors have helped to boost up sentiment.

Encouraged by higher Bombay advances, prices on the Calcutta Stock Exchange continued their upward trend with more attention directed towards the speculative, textile and tea scrips.

Brisk trading was noticed on the Bombay Stock Exchange where there was a flare-up in values under the lead of Textile scrips.

On the Madras Stock Exchange, Textiles were in limelight, while other counters maintained a steady iron.

The immediate reaction, on the London Stock Exchange, to the news of a reduction in the Bank Rate from 7 to 6 per cent was a rise in the prices of Oil shares.

Wall Street closed heavy with a fair distribution of fractional declines.

Calcutta

Calcutta, Friday Evening.

A CHEERFUL atmosphere continued to prevail on the local Stock Exchange, although activity was mostly confined to the speculative, textile and tea scrips. Despite profit-taking at bulges, the market finished the week with handsome gains on balance.

Resuming the week on a buoyant note, selected scrips made hectic advances as operators felt that, with the appointment of Mr. Morarji Desai as Finance Minister, the market would not be periodically subjected to shock-giving tactics. Two other factors also imparted further strength to the market. First was the reduction in the excise duty on cloth to the extent of Rs 15 crores and secondly, companies will not be required to make compulsory deposits during 1958-59. The news of a rise in sterling balances and of a reduction in the British Bank Rate from 7 to 6 per cent were also contributory factors. Foves were also entertained that suitable amendment might be made with regard to the Development Rebate.

The Gilt-edged market maintained a steady front. Demand was noted for short-dated loans, while some enquiry was noted in medium and long-dated issues. A general view was held that the market was being groomed in preparation for the new loan programme, which was expected to be put through in June. 3 per cent 1986 Conversion Loan opened at Rs 70.75 and gradually improved to Rs 71.25 towards the close. Bank shares remained steady with price movements confined to a narrow range. Punjab National were taken up to Rs 52.75 from Rs 52.25, while United Commercial were half a point lower at Rs 53.50. In the Jute section, a few selected scrips attempted to improve in sympathy with the general trend of the market. But, turnover remained restricted in the absence of any definite improvement in foreign demand for jute goods. National, after touching a low of Rs 21.95, improved steadily to Rs 22.20 on speculative support. Howrah were, however, on offer at as low as Rs 12.87 against Rs 13.69, while New Central changed hands at Rs 12.87 to Rs 13.06; India at Rs 93.50 to Rs 96.00; Belvedere at Rs 64.50 to Rs 68; Budge-Budge at Rs 95 to Rs 99 and Standard at Rs 75 to Rs 79. Ganges were maintained at Rs 44 and Delta at Rs 93.00.

Coal shares met with selective support on the belief that the selling price of the commodity would be raised shortly. Birrakui were taken up to Rs 23.00 from Rs 22.60; Central India upto Rs 7.09 from Rs 6.93; Western Bengal upto Rs 5.28 from Rs 5.19 and Amalgamated upto Rs 15.75 from Rs 15.25. Bengal, however, ruled rather quiet at Rs 207 against Rs 213 on lack of fresh support.

Textile scrips reacted favourably to the announcement of a cut in the excise duty on cloth; and selected scrips staged a marked recovery from the recent low levels. However, operators were inclined to be rather cautious in their dealings, pending a definite improvement in the conditions of the cloth market. Jayshree were pushed upto Rs 6.87 from Rs 6.19; Cawnpore upto Rs 4.87 from Rs 4.00; Dunbar upto Rs 127 from Rs 117; Kesoram upto Rs 11.62 from Rs 9.91 and New Victoria upto Rs 1.34 from Rs 1.28. Bowreah, after being taken upto Rs 120 from Rs 108, receded again at the close to Rs 107 on profit-taking.

Sugar shares recorded a good turnover on increased activity, being influenced by the belief that the statistical position of the industry was sound with no large carry-over to the next season. It was also felt that, if a scheme for continuing sugar exports could be devised and implemented, the outlook for the industry would remain good. However, higher levels could not be retained till the close due to profit-taking. Dealings in Dabanga continued to be very prominent and the scrip, after being taken up to Rs 23.62 from Rs 21.56, receded at the close to Rs 22.09. S. K. G. had buyers at Rs 9.12 to Rs 9.25 and Belsund at Rs 10.37 to Rs 10.50. Dyer Meakin and Carew

hardened further to Rs 10.50 and Rs 5.44 from Rs 10.44 and Rs 5.25 respectively.

Tea shares continued to be an active counter. Selected scrips forged a lead of fresh higher levels although profit-taking erased some of the gains at the close. An important stimulus was provided by the report that the Government would give serious consideration to the high export duty on inferior quality teas. Another contributory factor was the belief that the new season would get a good start in view of the improved statistical position of the industry. Most active scrips were Baghmari changed hands at Rs 18.37 to Rs 18.73 (Rs 18.75); Brahmapootra at Rs 3.31 to Rs 3.56 (Rs 3.31); Bishnauh a Rs 20.00 to Rs 20.50 (Rs 20.00); Gohpur at Rs 21.12 to Rs 21.31 (Rs 21.31); Han'apara at Rs 114 to Rs 120 (Rs 117); Hatikhira at Rs 10.87 to Rs 11.44 (Rs 11.12); Jayshree at Rs 10.69 to Rs 10.81 (Rs 10.81) and Mohani at Rs 16.50 to Rs 17.00 (Rs 17.00). Figures shown within brackets were the closing rates for the week.

Brisk trading was noticed in the Engineering section where all scrips touched fresh higher levels for the week under the lead of Indian Irons. Persistent rumours with regard to the possibility of mainaining the Ordinary dividend on the increased capital and to the prospect of a bonus issue, were the stimulating factors. Against the week-end closing of Rs 10.8, Indian Irons opened higher at Rs 21.06 and advanced gradually to Rs 21.44, to finish the week at Rs 21.33. In sympathy, TEXMACO were taken up to Rs 18.40 and Jessop upto Rs 22.87 from Rs 22.75, to finish at Rs 18.30 and Rs 21.81. G. K. Williams continued to be a firm feature, having persistent support upto Rs 29.56 from 29.25. Brai-hwaie had buyers at Rs 23.87 to Rs 27.25, while Britannia, after improving at one time to Rs 12.62 from Rs 12.50, receded at the close to Rs 12.25 on profit-taking. Indian Galvanizing were nearly maintained at Rs 14 with Mas alls moving between Rs 5.06 and Rs 5.44 and Kumardhubi between Rs 7.75 and Rs 7.34.

Miscellaneous issues were steady to firm. Most prominent were Oren Paper which, after touching a new high level of Rs 23.45 from Rs 27.25, receded at the close to Rs 28.30. Titaghar remained firm at Rs 34.25, while Shree Gopal hardened further to Rs 14.50 from Rs 14.37. Alkali Chemical new shares had buyers upto Rs 13.19 from Rs 12.87 and Angelo Brothers upto Rs 17.12 from Rs 16.75. Dunlop touched at one time Rs 22.89 from Rs 22.62; Indian Aluminium Rs 12.87 from Rs 12.69; National Carbon Rs 24.87 from Rs 24.62 and Roht's Rs 16.19 from Rs 16.00, to ease off at the close to Rs 22.62; Rs 12.69; Rs 24.62 and Rs 16.06 respectively. Indian Copper developed a hardening tendency to Rs 2.98 from Rs 2.87 with India Steamship moving narrowly around Rs 12.12. NCCO changed hands at Rs 23.93 to Rs 24.12; Hindustan Motor at Rs 6.22 to Rs 6.25; Phillips India at Rs 13.69 to Rs 13.81 and Indian Oxy-

gen at Rs 16.25 to Rs 16.37. Metal Box were a firm feature at Rs 26.25 with Martin Burn changing hands at Rs 23.87 to Rs 23.62.

Bombay

The stock market ruled buoyant during the past week with prices under the leadership of textiles recording sizable gains. Quite early in the proceedings sentiment was hopeful as the air was thick with reports about early relief in excise duty on cloth. And when the announcement came that excise duty relief involving a loss to the tune of Rs 15 crores to Government had been given, prices especially in the textile section were firm. Activity, however, continued to be restricted and there had been some nervous selling after the first burst of enthusiasm. It would appear that market men were not sure if Government would not impose some other tax to make good the loss in the excise revenue. In later dealings sentiment once again recovered as by that time it became clear that the reliefs were real. There was also the news that compulsory deposit scheme would be abolished. Apart from the immediate gain to textiles, the announcements had brought about a situation in which marketmen found that ultimately the Budget for 1958-59 had turned out to be quite satisfactory under prevailing circumstances.

TEXTILES

Among textiles Century met with good support while others were marked were sizably higher on

S. E. RLY TENDERS

Sealed tenders are invited for supply of the following materials:

Tender No. CON/GM/6/CE/((C)) WP/40 Gbl for supply of 3016 Nos. Bearing plates Joyce's 90 BS Type A.D. as per CE's drawing No. 10177 (for Girder Bridges).

Tenders will be opened on April 25, 1958 at 12 noon.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta—23 on remittance of Rs 5/- (not refundable) per copy by Money Order to him direct in case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Rly. Garden Reach by local firms.

Earnest money is Rs 1000/- which should be deposited with this Rly.'s Chief Cashier and the receipt obtained thereof should accompany the tender without which the tender is liable to be rejected. Approved contractors who have already made a permanent deposit of Rs 1000/- are exempted.

Firms not on this Railway's list of approved contractors must enclose a valid income tax clearance certificate with the tender.

GENERAL MANAGER

S134

balance. Century spurted to Rs 425.00 from Rs 392.50. Bombay Dyeing advanced to Rs 55.40 from Rs 52.40. Kohinoor was marked up to Rs 233 from Rs 276. Svadeshi moved up to Rs 183.50 from Rs 172.50.

STEELS

In the steel section Tata Iron came in for active interest toward close to be finally placed at Rs 180.25 as against the week's opening rate of Rs 175.00. Indian Iron was also firm at Rs 21.36.

MISCELLANEOUS

In the miscellaneous section Telco was in request and firmed up to close at Rs 153.00. Bombay Burma gained 28 points over the week to be finally placed at Rs 530.00. ACC was only slightly higher on balance at Rs 150.00. National Rayon advanced from Rs 224 to Rs 243.25.

Madras

NEWS of a reduction in the excise duty on cloth and the lifting of the compulsory deposit scheme for 1958-59 gave the local stock market a measure of satisfaction after the prolonged suspense of the past few weeks.

Textiles: For obvious reasons, this section was in better form. Buckingham moved up to Rs 168 from Rs 161; Bangalore Woollens to Rs 172 from Rs 169; Travancore Rayons to Rs 13.55 from Rs 12.65; Maduras to Rs 35.50 from Rs 35.00; Colambore Spinnings to Rs 61.50 from Rs 59.50; Metturs to Rs 401 from Rs 397.50; and Loyals to Rs 37.50 from Rs 37.00. Lakshmi was quoted at Rs 112 and Rajalakshmi at Rs 73.

Plantings: A good turnover was possible in this section. Among Rubber shares, Cochin Malabars were prominent with rate moving up to Rs 5.00. There was demand for Thirumbadis and T.R.T.s prices of which developed a hardening tendency.

With the Mysore Budget released without any further imports, Coffee shares were in good support. Consolidated moved up to Rs 23.20 from Rs 22.75 and Coffee Lands to Rs 31.60 from Rs 30.87. Due to higher total dividend, Anapara

SOUTH EASTERN RAILWAY AMENDMENT TO TENDER NOTICE FOR SUPPLY OF SWITCH, SIGNAL BRACKET ETC

The material described against item No. 4 of the above tender notice (which was recently published in this paper) should be "Lock facing point complete with Plunger" instead of "Lock facing point complete without Plunger". The tender Number of above notice is CON/IGM/5 F2/58.

S135 GENERAL MANAGER

DORCHESTER PRINTING WORKS

PRINTERS OF DISTINCTION

116, LOWER CIRCULAR ROAD, CALCUTTA

were taken further up to Rs 5.85 from Rs 5.60, while Kill Kotagiris were keenly sought after up to Rs 5.45. Ouchterlony's had buyers at Rs 4.78 cd.

Among Tea shares, Twyford's met with some support up to Rs 12.60, while sellers were seen for Devasholas and Coorgs. There was some demand for Chembra Peaks at the market rate. Peermades were done at Rs 20.15 and Perlakaramalais at Rs 6.06.

Miscellaneous: In this section, Aluminium Industries met with buyers up to Rs 14.15 from Rs 14.00. Radio Electricals, India Cements and Mysore Papers were enquired at the market rates. Andhra Cements had, however, some sellers at Rs 11.90. Travancore Cements met with some enquiry at Rs 8.25; Textools at Rs 177 to Rs 177.50 and Indian Steel Rolling Mills at Rs 11.00 to Rs 11.25. FACTs were neglected around Rs 5.35.

London

THE London Stock Exchange took a turn for the better. The immediate reaction to the announcement of a reduction in the Bank Rate from 7 to 6 per cent was a rise in the prices of Oil shares, British Petroleum rising by 3sh to 92sh 3d. Other Industrial forged ahead with Steel shares, especially those where yields were large, being the most to benefit from the rise in prices. Rubber Tea and Gold shares were firm, while Metal shares showed little change.

Glitged had a satisfactory week with the long and undated stocks making good headway and closing at the best levels for the week.

New York

PRICES on Wall Street showed a fair distribution of losses under the leadership of Industrials. Ropes of a tax-cut persisted; but the business was weighed on the unfavourable side. It included further reports of plant closures; the view of labour leaders that the recession had not yet reached the bottom and forecasts made in Government reports of reduced spending by both consumers and business concerns this year.

In Brief

Gokak Mills have reduced the dividend from Rs 13 to Rs 8, while Century Mill has maintained the dividend at Rs 22 per share for 1957. In the Finlay group, Finlay has maintained the dividend at Rs 20; Swan at Rs 25 and Gold Mohur at Rs 15 per share. Jayshree Textiles have raised the dividend from 37 nP to 50 nP per share.

Orissa Minerals have recommended a total distribution of 20 per cent for the year ended 30th June 1957, same as in the previous year.

Samugger, Tl'aghur and Victoria Jute Factoris have passed over the Ordinary dividends for 1957.

Premier Construction has raised the dividend from Rs 8.50 to Rs 10 per share for 1957.

In Madras, Sri Ramalinga Choodambikai Mills have reduced the dividend from 20 to 7 per cent for 1957.

More Company Results

Atul Products

The move by the directors of Atul Products Limited to raise the dividend from Rs 6 to Rs 8 per share for 1957—for the second year in succession—has been rendered possible by a substantial increase in the gross profit from Rs 30.95 lakhs to Rs 54.46 lakhs. Total sales and other receipts are placed higher at Rs 2.79 crores against Rs 1.83 crores.

After raising the provision for Depreciation from Rs 12.68 lakhs to Rs 16.76 lakhs, the net profit amounts to Rs 34.50 lakhs against Rs 18.27 lakhs. The provision for Wealth Tax amounts to Rs 1.50 lakhs and the Development Rebate Reserve has been allocated Rs 3.50 lakhs. A sum of Rs 7.50 lakhs has been provided for Depreciation Reserve.

United Nilgiri Tea

The benefit of a large increase in earnings of the United Nilgiri Tea Estates Company Limited, in the year ended 31st March 1957, has been mostly derived by the Central and State Governments. In the directors' report, it is pointed out that the total provision for Taxation has had to be raised to Rs 8.8 lakhs from Rs 3.61 lakhs for 1955-56.

The net profit, before providing for Depreciation and Taxation, is Rs 16.06 lakhs against Rs 11.31 lakhs in the previous year. Depreciation claims Rs 1.75 lakhs (Rs 1.60 lakhs). The allocation to Development Reserve is Rs 1.00 lakh (Rs 2 lakhs). The directors have recommended a total distribution of 17½ per cent as against 26 per cent in the previous year. The distribution for the previous year was payable on a capital increased by the issue of bonus shares.

Anapara Estates

Anapara Estates Limited has reported a sharp rise in earnings for the year ended 30th June, 1957, thanks to the harvesting of a record coffee crop. The net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 6.21 lakhs as against only Rs 3.51 lakhs in the previous year. A sum of Rs 24.41 (Rs 23.378) is provided for Depreciation and Rs 2.14 lakhs (Rs 90,000) for Taxation. For obvious reasons, the directors have raised the total distribution to 40 per cent from 25 per cent.

Tirrihannah Tea

The Tirrihannah Tea Company Limited, in McLeod group, has not recommended any final dividend for 1956. An interim dividend of Rs 2.50 per share was declared on the 28th December 1957; and this compares with Rs 3.00 per share recommended for 1955.

The net profit, after providing for Depreciation and Taxation, is higher at Rs 3.00 lakhs as against Rs 1.80 lakhs. In respect of allocations, the Depreciation amount

is raised to Rs 62,352 from Rs 41,258 and Building and Machinery Reserve to Rs 2.50 lakhs from Rs 1.00 lakh. Taxation provision is, however, lower at Rs 1.50 lakhs against Rs 1.63 lakhs. Crop output is lower at 8,084 maunds against 8,585 maunds, while the average price realised is higher at Rs 2.37 against Rs 1.14.11 per pound.

£ Rs

Sijua (Jherria) Electric

The Sijua (Jherria) Electric Supply Company Limited has presented accounts for the 15th months ended 31st March, 1957. The net profit, after providing for Depreciation and Taxation, for the period under review, amounts to only Rs 2,45,468 as against Rs 2,53,645 for the full year ended 31st December, 1956. The directors have, after setting apart Rs 1.67 lakhs (Rs 1.19 lakhs) for Depreciation; Rs 1.25 lakhs (Rs 34,000) for Taxation; Rs 43,227 (Rs 29,606) for Contingency Reserve; Rs 60,000 (same) for Debenture Redemption Reserve and Rs 33,000 (Rs 60,000) for Development Rebate Reserve, recommended dividend at the rate of 7½ per cent for the period under review.

Tractors (India) Limited

Tractors (India) Limited has earned a higher profit of Rs 18.22 lakhs for the year ended 30th June 1957 as against Rs 10.58 lakhs in the previous year after raising the Depreciation amount from Rs 1.32 lakhs to Rs 1.41 lakhs. Sales have risen substantially to Rs 1.73 crores from Rs 1.00 crore. A dividend of Rs 2 per share has been recommended on the increased capital as against Rs 5 per share on the original capital. In respect of allocations, Taxation provision has been raised to Rs 13.75 lakhs from Rs 10.25 lakhs.

The directors have, in their report, stated that they have been taking steps, as within their power, to interest their overseas suppliers in the manufacture of their products in this country. Indications are, that the results for the current year ending 30th June 1958 will be satisfactory although turnover will fall short of the record figures established in the previous year.

Standard Batteries

The net profit of the Standard Batteries Limited has amounted to Rs 6.87 lakhs for the year ended 30th June 1957 as against Rs 5.14 lakhs in the preceding year. Taxation provision has been raised to Rs 2.65 lakhs from Rs 1.17 lakhs. The dividend is maintained at Rs 8 per share.

The directors report that, during the year under review, orders were placed for the latest type of plant and machinery and equipment for replacement of some of the existing old machinery and balancing units for rationalising and improving production.
