Getting
down
to
drilling

The oil driller's derrick looks imposing and strange as it stands silhouetted against the sky, but it is merely a sturdy steel support for lowering and raising jointed lengths of heavy pipe into and out of the well during the drilling operations.

In modern drilling, a sharp-toothed bit is first attached to a length of steel pipe called the drill pipe. The drill pipe, held vertical by a giant block and tackle system in the derrick, is lowered into a pilot hole and revolved by means of a turntable on the derrick floor. The turntable is rotated by powerful engines behind the derrick. As the pipe is turned, the bit cuts a hole in the earth's rocks and lengths of drill pipe are added as the hole becomes deeper.

When the bit becomes worn the entire length of drill pipe must be removed, unjointed, and stacked in the derrick.

After the new bit is attached the pipe is joined together and drilling begins again.

All during drilling, specially-prepared mud is pumped down inside the drill pipe. It passes through perforations in the bit and is forced back to the surface outside the drill pipe. This mud has many useful functions. It flushes rock cuttings back to the surface for examination, cools the bit and plasters the walls of the hole to prevent them from caving in. As drilling progresses the hole is lined with successive lengths of steel pipe called casing.

An oil well has been drilled to a depth of four miles, but a 10,000 foot well is still considered deep. Drilling at such depths is an extremely delicate operation, requiring great skill and long experience. Only by drilling, however, can the oil prospector prove the presence of mineral oil.

Assam Oil A full-scale petroleum industry

HIGHLIGHTS OF THIS ISSUE

Every day, said somebody called Coue, in every way I'm getting better and better. This was said to be some sort of auto-suggestion or self-mesmerism. In less time than you know, if you said so to yourself often enough, you would indeed feel better.

The Indian experience has been just the opposite, in a manner of speaking. In regard to the Second Plan, there have been people who, again and again, have been saying that it is bound to fail. The psychological effect has been—a loss of confidence.

Eavesdropper decries the way in which a whole nation has been unnerved. He considers this the propitious time for re-building confidence. This week's Gossip is the first in a series to this end.

"..... reserves must be created for expansion
and modernisation of the plant and machinery and in
their utilisation the Management remains accountable to
the investor. Money must also be provided for research."

Code of conduct—FORUM OF
FREE ENTERPRISE

To ensure a continuous and growing supply of quality Portland
cement to its customers, the ACC "ploughs back" every year a
substantial portion of its earnings, to rehabilitate, expand and
modernise its existing plants; to make its business grow and so
to provide the country with the much-needed cement which goes
into all types of construction, from the modest needs of the
small village to the hungry demands of gigantic power and river
valley projects, industrial development, housing schemes,
hospitals, schools and the like.

This "ploughing back" of a portion of the ACC's earnings—
though reduced last year owing to lower profits, resulting from
higher costs and increased taxation—remains a vital factor in
the production and supply of quality cement in increasing
quantities to millions of satisfied users throughout India who
have learned to depend on—ACC CEMENT.

The Roy and Rayon Rumours

Investment Gossip:

Rumours have been having a
field day. Soon after Indian Irons
had, during the past week notched
up a new high, gossip was about
the market place in such a way as
to induce, if not a bear trend, at
least caution in attitudes.

First, there was the "scare" about
Dr B. C. Roy. The imbroglio in
the West Bengal Government
evoked, at one stage, the whispered
possibility of Dr Roy's resignation.
Thereafter, however, with the
rumour proved false, and with a
vote of confidence, the Stock Ex-
changes fully recovered.

Second, there was the rayon
"excise duty" gupsa. If Lyons
Range had its hands full with the
Roy rumour, Dalal Street was
busy engaged with the rayon
rumour. This, too, was proved
false, and Bombay, too, staged a
recovery.

But, although prices are again
on the uptrend, there is to be dis-
cerned beneath the surface a
vein of doubt. The improvement
in the outlook for foreign exchange
is negated by the problems facing
a number of State Governments.

Then, I should also mention that,
in certain quarters, there is the
fear that Government may try to
make good the concession of Rs 15
crores that they have given on the
excise duty on cotton textiles.
Will there be new excises? is a
burning question.

What now? Up or down? New
operators are venturing to expres-
an opinion.

£ R\$

Investment Notes:

NATIONAL Carbons have been
ruling very firm at Rs 24.44. The
Chairman has disclosed that the
Company is in the midst of a
major expansion programme, hav-
ing recently established a Zinc
Rolling Mill in France. He has
also referred to the company's plans
for marketing Eveready flashlights,
now being manufactured in India
for the first time at its Lucknow
factory. The company will shortly
be starting the construction of a
Polyethylene and Chemicals plant
in Bombay.

In Bombay, Scindia Steams are
quoted very steady at Rs 17.20.
There are reports that the com-
pany has decided to restart its car-
go service to the USA. Negotiations
are, it is learnt, in progress bet-

ween the company and the Govern-
ment of India. Meanwhile, the
company is reported to have done
well and the profit for the first
nine months compares favourably
with that of the previous year.

National Rayons are quoted
around Rs 240. The company is
believed to have done well during
the year just ended, and a higher
distribution is forecast. This belief
seems to stem from the fact that
the company's Caustic Soda plant
has already gone into production
and that the 12 additional frames,
which were commissioned in July
last, will enable it to show higher
output.

Investment Briefs

India Paper Pulp has recommen-
ded an interim dividend of 5 per
cent for the year ended 31st March
1958, payable on or after the 17th
April, 1958.

In Bombay, Shivrajpur Syndicate
has maintained the dividend at Rs
8 per share for the year ended 30th
November, 1957.

Dunlop Rubber has recommended
a final dividend of 8½ per cent,
making a total of 16½ per cent on
the increased Ordinary capital as
against 15 per cent on the original
capital in the previous year.

In Madras, Buckingham & Car-
na'ic Company has maintained the
Ordinary dividend at Rs 10 per
share for 1957.

Blrny & Company has main-
tained the total distribution of 10 per
cent for 1957.

Mixed Sugar Results

Balance-Sheet Reviews:

FIVE Sugar Mills—Balrampore,
Champarun, Ryam, Samastipur
Central and Godavari—have pre-
sented their reports and ac-
counts for 1957, the first
four companies for the year ended
30th June 1957 and the last-men-
tioned for the year ended 31st May
1957. The working of these com-
panies has shown mixed results.
In the case of Balrampore, the
directors have recommended a di-
vidend of 25 pP per share as against
nil in the previous year, while
Champarun has passed over the
dividend against 10 per cent. Ryam
has reduced the dividend from 17½
to 15 per cent. Godavari has re-
commended a final dividend of Rs
10, making a total of Rs 20 per
share as against Rs 16. Samastipur
Central has passed over the di-
vidend for the third year in suc-
cession. Full details of the accounts of
all these companies are given below.

£ R\$

Balrampore Sugar

Thanks to a record crop and the
quantity of cane crushed being the
highest recorded so far at both the
Balrampore and Tulsipur factories,
the Balrampore Sugar Company
Limited has reported a substantial
increase in sales from Rs 97.65 lakhs
to Rs 1.49 crores. The net profit,
after providing for Depreciation

and Taxation, amounts to Rs
1,56,073 as against a nominal profit
of Rs 749 after making sundry
adjustments in the previous year.
Apart from providing a sum of Rs
2.90 lakhs for Taxation, the Depre-
ciation amount is reduced to Rs 1.30
lakhs from Rs 1.35 lakhs. After
transferring a sum of Rs 1.50 lakhs
from Contingency Reserve no longer
required, the directors have set
apart Rs 1.70 lakhs (nil) for Reha-
bilitation Reserve. The quantity
of cane crushed is substantially
higher at 68.65 lakh maunds
against only 40.67 lakh maunds
and sugar manufactured at 6.32
lakh maunds against 3.98 lakh
maunds.

In this connection, it will be re-
called that Messrs Begg Sutherland
& Company had resigned their
managing agencyship of the com-
pany with effect from the 19th
November 1957 and the manage-
ment had been taken over by the
Board of Directors. Sale proceeds
for the period from 1st July to the
19th November 1957 amounted to
97.53 lakhs, while the accounts re-
veal a loss of Rs 4.96 lakhs.

£ R\$

Champarun Sugar

Despite a substantial increase in
the quantity of cane crushed from
56.22 lakh maunds to 62.33 lakh
maunds, the Champarun Sugar
Company Limited has manufactur-
ed only 5.90 lakh maunds of sugar
as against 5.64 lakh maunds, mainly
due to a very poor quality of cane
obtained in the Champarun district
during 1956. This is also reflected
in the accounts, which reveal a
loss, after providing for Deprecia-
tion and Taxation, of Rs 5.53 lakhs
as against a net profit of Rs 4.45
lakhs in the previous year, despite
the fact that sales have risen to Rs
1.78 crores from Rs 1.02 crores. The
Depreciation amount is raised to
Rs 3.70 lakhs from Rs 3.25 lakhs,
while a sum of Rs 55,000 (including
for Wealth Tax) is provided for
Taxation against Rs 2.00 lakhs. No
provisions are made for Contingency
Reserve and Rehabilitation Re-
serve against Rs 1.00 lakh and Rs
2.55 lakhs previously. After trans-
ferring a sum of Rs 1.75 lakhs from
Contingency Reserve, the directors
have reduced the debit balance to
Rs 3.43 lakhs, to be carried forward
to next year.

According to the directors' report,
prospects for the current season
appear to be somewhat bright in
view of the improvement in the
quality of cane obtained.

£ R\$

Ryam Sugar

Ryam Sugar Company Limited
has reported a net profit of only
Rs 1.67 lakhs as against Rs 3.71
lakhs in the previous year. The
directors have set apart a sum of
Rs 65,141 (Rs 96,266) for Deprecia-
tion; Rs 2.44 lakhs (Rs 2.07 lakhs)
for Taxation and Rs 10,000 (Rs
50,000) for other Reserves. No
provision has been made for Gen-
eral Reserve as compared with Rs
1.25 lakhs last year. The quantity
of cane crushed is higher at 32.32
lakh maunds against 25.78 lakh
maunds. The company sold 34,494
bags of sugar for export.

Samastipur Central Sugar

Despite a substantial rise in sales,
from Rs 43.08 lakhs to Rs 1.16
crores, the Samastipur Central
Sugar Company Limited has re-
ported a loss, after sundry adjust-
ments, of Rs 2.24 lakhs as against
a net profit of Rs 94,857 in the pre-
vious year. This is mainly due to
the fact that the item 'Excise
Duty' is shown at as much as Rs
13.16 lakhs as against only Rs 6.16
lakhs paid in the previous year,
not to speak of the lowest recovery
percentage. In respect of allocations,
the Depreciation amount is raised
to Rs 1.50 lakhs from Rs 1.20
lakhs, while no provisions are
made for Contingency Reserve and
Rehabilitation Reserve against Rs
25,000 and Rs 75,000 respectively.
For the third year in succession,
the dividend is passed over, while
the last dividend was paid at 5 per
cent for the year 1953-54. The
quantity of cane crushed is higher
at 29.52 lakh maunds as against
28.35 lakh maunds, while sugar
manufactured is lower at 2.63
maunds against 2.64 lakh maunds.

Consequent on the disposal by
the managing agents and their
associates of their investments in
the company, Messrs Legg, Suther-
land & Company had resigned
their office as managing agents of
the company with effect from the
31st January, 1958.

£ R\$

Godavari Sugar

The Godavari Sugar Mills Limi-
ted has done well during the year
year ended 31st May, 1957. Sales
have increased to Rs 2.36 crores
from Rs 1.95 crores. The net pro-
fit, after providing for Deprecia-
tion and Taxation, amounts to as much
as Rs 24.48 lakhs as against Rs 7.55
lakhs in the previous year. The
directors have provided a sum of
Rs 10.51 lakhs (Rs 11.18 lakhs) for
Depreciation; Rs 16.00 lakhs (Rs
22.50 lakhs) for Taxation and Rs
12.00 lakhs (nil) for General Re-
serve. A final dividend of Rs 10,
making a total of Rs 20 per share

India-wide distribution

is undertaken of quality goods
of indigenous manufacture
of Engineering, Machinery,
Scientific and Electrical lines,
by their well-knit technical
Sales and Service Organisation.

on the Ordinary shares has been recommended; and this compares with Rs 16 per share in the previous year.

Sirpur Paper

The Sirpur Paper Mills Limited has produced satisfactory working results for the year ended 30th June, 1957. Sales have improved to Rs 2.28 crores from Rs 1.82 crores, while the net profit amounts to Rs 14.33 lakhs as against Rs 15.19 lakhs. Output has increased to 17,405 tons from 14,200 tons.

In respect of allocations, the Depreciation amount is raised by Rs 14.63 lakhs to Rs 17.63 lakhs, while Wealth Tax is allocated Rs 82,000. The dividend is maintained at 50 p per share for the year.

The directors have, in their report, stated there has been delay in the arrival of extension machinery and the target date for the completion of expansion had to be shifted a little further. As the machinery have already started arriving and the erection work is well in hand, it is expected that the different plants will start going into production in the next few months.

Braithwaite & Company

Despite an increase in the gross profit from Rs 35.75 lakhs to Rs 43.30 lakhs, Braithwaite & Co. (India) Limited has maintained the dividend at Rs 2 per share for 1957. The item 'contracts invoiced' is shown higher at Rs 3.32 crores as against Rs 2.22 crores. The directors have set aside a sum of Rs 4.30 lakhs (Rs 3.55 lakhs) for Depreciation; 87,000 (Rs 1.71 lakhs) for Development Rebate Reserve; Rs 25.55 lakhs (Rs 15.70 lakhs) for Taxation and Rs 2.00 lakhs (Rs 11.97 lakhs) for General Reserve.

Both the structural and wagon shops achieved record outputs during the year under review. The capacity remains fully booked; but the shortage of raw material may hamper production.

Century Mill

The Century Spinning & Manufacturing Company Limited has fared somewhat badly during the year 1957 even with its rayon plant coming into operation. The gross profit amounts to only Rs 67.77 lakhs as against as much as Rs 96.54 lakhs in the previous year, reflecting the unfavourable trading conditions in the cotton textiles trade. The directors have, after providing Rs 37.75 lakhs (Rs 30.80

lakhs) for Depreciation; Rs 18.32 lakhs (Rs 55.00 lakhs) for Development, Rebate Reserve and Rs 7.12 lakhs (Rs 3.11 lakhs) for Taxation, maintained the total distribution at Rs 22 per share. Sales, including those of rayon yarn, have increased by Rs 1.49 crores to Rs 9.22 crores.

Polson Limited

Thanks to an increase in sales by Rs 8 lakhs to Rs 1 cores, Polson Limited has reported a gross profit of as much as Rs 12.81 lakhs for 1957 as against only Rs 10.75 lakhs in the previous year. A sum of Rs 2.53 lakhs (Rs 1.15 lakhs) is provided for Depreciation; Rs 3.50 lakhs (Rs 1.20 lakhs) for Taxation and Rs 3.12 lakhs (Rs 4.34 lakhs) for Reserves and other funds. The dividend on the Ordinary shares is, however, reduced to Rs 10 from Rs 12.50 per share.

Mahindra & Mahindra

After providing Rs 5.42 lakhs (Rs 2.15 lakhs) for Depreciation; Rs 15.50 lakhs (Rs 16.00 lakhs) for Taxation; Rs 11.50 lakhs as bonus to employees and Rs 1.97 lakhs for directors' commission, Mahindra & Mahindra Limited has reported a higher profit of Rs 22.16 lakhs for the year ended 31st October 1957 as against only Rs 21.15 lakhs in the previous year. A sum of Rs 12 lakhs (Rs 11.52 lakhs) has been transferred to General Reserve. The dividend on the Ordinary shares has been raised to Rs 1.75 from Rs 1.25 per share. Sales are shown at Rs 24.41 crores as against Rs 14.03 crores. Trading for the year is reported to be satisfactory. First five months of the current

Burma Corporation

The shareholders of Burma Mines Limited have once again discouraging news about the performance of Burma Corporation (1951) Limited, mainly due to a further decline in metal prices. The operating profits of Burma Corporation (1951) Limited, during the three months ended 31st December, amounted to K. 5,69,200 as compared with a loss of £1,365 in the quarter ended 30th September. This represents a working profit of K.5,51,000 for the first six months of the company's financial year. The combined result, for the six months ended December, after allowing for Depreciation and Taxation, is an estimated net profit of only K.23,500 against K.29,13,400 of the previous year.

"Marshall Plan" for India?

TO the growing band of influential Americans who today champion India's case for foreign assistance, we are grateful. And yet, the support these men are extending is a logical "sequel" to the sympathy and moral strength that an earlier generation of Americans gave to India's struggle for independence.

Particularly since political freedom was won, we have had articulate expression, on the part of Americans, of the need for the US to assist India in its fight for economic freedom.

Mr Chester Bowles, Mr George Allen, Dr Henry F. Grady, Mr John Sherman Cooper,

Mr Ellsworth Bunker—these comprise a distinguished body of Ambassadors who have served superlatively well by India. Each of them, in his own way, has aroused greater interest in and enabled greater understanding of free India's economic problems.

Our gratitude must in particular be addressed to Mr Cooper, who has been untiringly presenting India's brief.

Now, to Mr Cooper's name, we have to add that of a fellow Senator, Mr John Kennedy. Senator Kennedy has imaginatively asked for a "Marshall Plan" to aid India. No Indian, and only an American, could have come up

Problems of the Coal Industry

THE performance of the Coal Industry in the first year of the Second Five Year Plan has not belied the expectation that, given half a chance the private sector will deliver the goods ahead of schedule. The Second Plan had drawn up a programme for an increased output of 22 million tons a year to be achieved by 1960 so as to meet the demand which, it was estimated, would be over 60 million tons. The Industrial Policy Resolution of 1948 had envisaged that future expansion of coal would be in the Public Sector except where the co-operation of the private sector was considered necessary in the national interest. Such an attitude, it is evident, was not exactly an incentive to the companies in the private enterprise to maintain and improve productive capacity, and it is satisfactory to note that, by the time the Second Plan targets were fixed, there was a more realistic appreciation of the possibilities of expanding output. The target of 8 million tons of increased output first suggested for the private sector was raised to ten million tons as a result of strong representations from the industry. The decision to place greater reliance on the private sector has been fully justified by the record of production during 1957. This also indicates that it will be wise policy to remove the impediments that stand in the way of utilising to the full the proved potential of the private sector, in the interest of coordinated development of the national economy.

The private sector's share of the increase in output of slightly over four million tons achieved last year is 3.1 million tons. If this rate of increase could be maintained, the private sector would be able to overtake its target two years ahead of schedule. But to calculate on those lines will be to ignore the chronic problems which hamper efforts to plan for increased production on a long-term basis. When a responsible spokesman of the industry, speaking as the Chairman of the Indian Mining Association, describes the progress achieved last year as "short term", the implicit warning cannot be ignored. And, as Mr D. Hogg pointed out in his speech at the annual meeting of the Association, there is no room for complacency that "this progress can be maintained unless urgent action is taken to remove many of these difficulties which stand in the way of long term planning and security for the industry."

Provision of adequate transport and adoption of a realistic price policy are the basic

conditions for sustained improvement in output. A respite from the deluge of legislation, often enacted without consulting those most intimately concerned with the industry, relaxation of controls and regulations and conditions which will promote better relations with workers will also be of considerable help. Even during the First Plan, when the coal industry was not called upon to make any large productive effort, transport consistently lagged behind production. The prolongation of this state of affairs is surely a matter for concern, for, the railways will have to move 5,000 wagons a day in 1961 as compared with the average of 3,667 wagons a day last year. While acknowledging the improvement in the Railways' performance, the Chairman of the Indian Mining Association has also drawn attention to the persisting shortage of wagons. The accumulation of stocks at pit-heads, which last year averaged 3 million tons, a million tons more than in the previous year, affords concrete evidence of the inadequacy of the arrangements for transport. The requirements of progressively expanding production impose a severe strain on the carrying capacity of the South Eastern Railway. A way to relieve the strain has been indicated by Mr Hogg. Mr Hogg has suggested the regrouping of the railway lines in the coal fields so as to enable the Eastern Railway to operate the adjoining lines of the South Eastern Railway.

Apart from provision of adequate wagon capacity, there is also the problem of equitable allocation. It is unfortunate that arrangements in this respect should still leave room for complaints of discrimination between the private and public sectors. As Mr Hogg has suggested, there is room for an impartial committee to enquire into the matter.

Mr Thapar told the Indian Mining Federation that the discrimination is not confined to the provision of transport but also obtains in regard to the supply of steel and other materials to private collieries and has referred in this connexion to a directive from the Planning Commission to the effect that priority should be given to private collieries. That such a directive should have been issued is most surprising, especially in view of the categorical assurance contained in the industrial policy resolution of 1956 that, where, in the same industry, privately and publicly-owned units exist, "it would continue to be the policy of the State to give fair and non-

Indian Finance

Established 1928

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

with a sweeping scheme of this nature. More power, it goes without saying, to the good Senator's elbow.

And should we forget Mr T. T. Krishnamachari, who undoubtedly paved the way for massive free world assistance by the public relations work that he did? It would be churlish if we did, and our thanks in brimming measure are also due to him.

These, then, are the men and reasons why the outlook for the Second Plan has been transformed from one of abject bleakness to one of hope.

discriminatory treatment to both of them." To hamper the private sector in order to enable the State-owned mines to make a good showing, is neither just nor sensible.

Improved provision of transport will help to move the coal as fast as it is brought to the surface, from pitheads to ultimate destinations. But that will not be enough to step up output to the extent necessary or even to maintain the present rate of production. The coal industry, by its very nature, requires continual capital expenditure, and increase in the tempo of production immediately steps up the requirements. As shallow workings, with comparatively easy conditions, are depleted, it becomes necessary to dig deeper. The spokesmen of the industry have made out a forceful case that, at present prices, the industry is not in a position to meet requirements for replacement of equipment, and for expansion of productive capacity, out of its own current profits. The development rebate makes only a small contribution to the vastly increased cost of replacement of plant and machinery. The working costs have steadily increased as a result of legislation requiring payment of Royalty at higher rates, and implementation of the new Mines Regulations and of the award of the Labour Appellate Tribunal. The industry has been following an enlightened policy in dealing with its workers, and in some cases it happens that the amenities provided are in excess of the workers' ability to utilise them.

These are points which the Coal Prices Revision Committee should take into consideration. In this connexion, Mr Hogg has made the interesting point that there is no justification for utilising a wasting national asset like coal to subsidise manufacturing industries and transport, by charging uneconomic prices for coal. An increase in the price of coal, he says, far from hurting will be actually beneficial to the economy, by providing the incentive toward more efficient utilisation of fuel. In spite of learned talk about conservation of high grade coals, the Railways continue to burn ten million tons of coking coal a year, and that is a measure of the extent to which coal is wasted in this country. Of all industries, the Coal Industry is subject to the largest number of regulations and controls, there is substance in the claim that Government, which regulate selling prices, should fix them at such a level as to

ensure that sufficient nett earning, at present requirements, will be available to maintain productive capacity.

The Government have a large legislative programme on hand which will directly or indirectly impinge on the working of coal mines. And it is surprising that important legislation should have been enacted without adequate consultation with those most intimately concerned. Important amendments were effected in the Mines and Minerals (Draft Regulations) Bill by the Select Committee without reference to the industry. The Coal Bearing Areas (Acquisition & Development) Act was also enacted without prior discussion with the industry. It is not as if machinery for consultation does not exist. In addition to the Coal Council, there are various advisory committees on which the industry is represented. There is no reason why these committees should not be utilised when formulating new policies.

The recent unfortunate disasters at Chinkuri and Bowraah have come as a stern reminder that Coal mining is still a hazardous occupation, a fact which is often ignored. There may be room for tightening up the regulations, though it is acknowledged that, in recent years, Indian Mines have recorded the lowest accident rates in the world, and the Mines regulations are both exhaustive and comprehensive. But the observance of any safety rules that may be framed will depend on the cooperation and understanding between workers and management. Unfortunately, the present pattern of competitive labour leadership places a premium on indiscipline.

A Critique of the Ambar Charka

By EMBEE

WITH the Government of India's New Textile Policy assigning an annual total of 300 million yards to "handlooms using Ambar charka yarn" within the annual increase of 1,700 million yards targeted by the end of the Second Plan, handspinning has been raised from an act of faith confined to a small group to a major item of national economic programme. The spinners originally converted by Gandhiji were attracted by the opportunity that producing one's needs gave for improving one's character. The Sarvodaya philosophy added to this the social significance of the self-sufficient village as an economic unit. Though not widely advertised, there was also the important aspect of Gandhiji's views, which must have been derived as an influence from Tolstoy, regarding the incompatibility of democratic freedom of the many with the big machine concentrating power in the hands of the few, which made both Tolstoy and Gandhi strongly suspicious of mechanized production. Handspinning is, however, no longer just a matter of esoteric faith or a mystic force moving the believers and the initiated. The Second Five Year Plan has forced discussion of homespinning in the light of the day in terms of values and costs that could enter the calculations on which decisions behind the National Plan could be based.

The Ambar Charka Enquiry Committee (1956) did extremely useful work going into a detailed cost analysis of the Ambar Charka programme, both on the basis of unit production and total expenditure involved in the Plan budget. The starting point is the target of 300 million yards fixed for handlooms using ambar charka yarn out of the increment of 1,700 million yards in the country's textile production. On the basis of an annual output of 720 yards of cloth with yarn produced from each charka, 420,000 charkas will be required

for an annual output of 300 million yards in 1960-61. The training programme for spinners and the annual phasing of charka installation would show that, in the fifth year, 420,000 installed charkas would yield an annual yarn output of 84 million lbs and a cloth output of 302 million yards valued at Rs 37.80 crores, providing employment to 840,000 spinners, 56,000 weavers and 112,000 weavers' assistants from 1960-61 onwards. The wages paid to spinners would amount to Rs 14.18 crores and to weavers and their assistants, Rs 7.50 crores while the subsidy paid on sales of cloth would total 9.45 crores every year.

In calculating the returns on investment in the spinning programme, the following estimates would be relevant:

(i) Towards installation of 420,000 sets of charkas	Rs 5.6 Crores
(ii) Cost of training 840,000 spinners	Rs 9.5 Crores
(iii) Working capital for production and marketing	Rs 30.24 Crores
(iv) Workshops, finishing centres, organisational overheads etc.	Rs 1.5 Crores
	Rs 46.84 Crores

The total capital outlay on the spinning programme would thus be of the order of Rs 47.50 crores to which must be added the recurring expenses toward subsidy of Rs 9.45 crores on yarn and cloth and Rs 21 lakhs on the charkas. Mr D. Bhattacharyya, in the course of his research work under the auspices of the Indian Statistical Institute, has made detailed calculations, on the basis of figures relating to wages for spinning contained in the Enquiry Committee Report, to show that, in 1960-61, the annual value added by the process of manufacture under the ambar charka programme would be Rs 12.24 crores against the capital outlay of Rs 47 crores. This would establish a capital output ratio of .28 which is much lower than the output coefficient of .45—.56 prevalent in spinning mills. This brings out the unsuspected feature that, in spite of the prodigious absorption of manpower, ambar charkas operating behind the reservations enforced by national policy would still be capital-intensive, i.e., making relatively higher use of capital to obtain specific output.

It has thus been suggested in many quarters that, before undertaking large-scale investments, the productivity of both labour and capital under the ambar charka programme should be carefully investigated, and experimental results obtained on pilot projects discussed in the open so that every citizen might realize the significance of any decisions that might be taken. Inquiries could profitably be made if investments on this scale in other lines of rural industries might not hold the promise of creating a larger number of jobs or returning higher value against investments. Manufacturing processes in the rural sector that might result in higher added value in final output could reduce the element of subsidy required for the economic survival of the relative experiment.

The debates and discussions regarding ambar spinning can by no means be regarded as having yet established final conclusions. In the economic evaluation of the scheme of ambar spinning, the following points would stand out for emphasis:

(a) Spinning by ambar charka cannot claim the merit of economising capital which, according to contemporary economic thinking, might justify adoption of inferior technique in backward economies suffering from scarcity of capital and persistence of unemployed labour. Being capital-intensive, the ambar charka returns less output per unit of investment and should therefore be considered as wasting scarce capital, which hurts the

national economy. The waste of capital combined with unproductivity of labour in our cottage enterprises would render a significant proportion of the nation's investments definitely unwise and uneconomic.

(b) The surplus value created per day by the worker using the ambar charka has been calculated by the Ambar Charka Enquiry Committee at 2 annas 2 pies and subsidizing it to even the submarginal wage level of 9 annas per day as planned would involve doling out 6 annas 10 pies per day, which would be the deficit per worker. The effect of distributing wages against work not done or output not emerging would be inflationary, as purchasing power would be released in the rural economy without a corresponding creation or provision of consumer goods.

(c) Though the ambar charka programme has been shown as securing lower output per unit of capital invested than the mechanized sector and could therefore be regarded as making improper use of scarce resources, there is some advantage in the scheme as regards employment in the national economy. The ambar charka might involve inferior technique in that less output is obtained per unit of capital invested, but, being a less mechanized process, offers the opportunity of associating with a small dose of capital a relatively large labour force. Thus, though capital might be unproductive on the calculation of final output, the programme must be regarded as having a definite advantage in creating jobs in a tragically under-employed economy.

(d) The point must also be considered if handweaving, which offers livelihood to 8.7 million artisans in India, can in the final analysis be regarded as having a permanent future based on the exclusive use of mill yarn. If the history of other countries is a guide, handlooms could survive even as a low-wage-earning sector so long as yarn could be obtained without much difficulty. The fundamental problem for the handloom weaver is that he has to depend for his most essential raw material, viz., yarn, on his competitor, the mill sector. So long as State action and official policies could assure the handloom weaver of a continuous supply of mill yarn, the paradox of depending on the support of one's competitors might not appear with all its untoward implications. But, in the long run, the handloom weaver could not wisely plan on the basis of supply of raw material from a competitive sector. This must be the main consideration for the Union Finance Minister, Mr Morarji Desai, himself a firm believer in handspinning and handweaving, constantly advising the handloom weaver to start planning his future on the supply of handspun yarn which he can by his action help largely to arrange and assure.

Management Development Schemes

By M. SUR

"There is no universal and all-embracing sausage-machine into one end of which you can put a trainee and expect a trained manager to emerge at the other."

Lord Heyworth, Chairman, Unilever Ltd.

LORD Heyworth has very neatly made the point that one cannot apply a tailor-made scheme of management training to any and every organisation, and that it must be planned to meet the particular needs of the organisation and its existing set-up. But it is possible to draw certain principles from others' experi-

March 29, 1958

ence, and there is no doubt that carefully selected personnel can be trained to become good managers.

A useful survey of Management Personnel Development Plans made by the American Management Association in 460 companies in 1955 found the fundamentals present in every company plan were:

- (1) Analysis of the company's needs in terms of executive talent for both present and future direction of the enterprise.
- (2) Emphasis on the individual's responsibility for self-development—supplemented, however, by a 'climate' of active encouragement, including a selected number of specific educational and training activities which are maintained and/or underwritten by the company.

The standard pattern for management personnel development programmes, according to this survey, consists of 3 phases:—

First Phase

- (a) developing and defining an improved organisation structure, preferably with one version for current use and another as the long-range goal;
- (b) developing a written job description for each key management position from first line to top;
- (c) preparing written specifications for each position, setting forth the education, experience, ability and minimum personal qualities required of the person who is to fill it.

Second Phase

- (a) appraising the present incumbents of the key positions in terms of individual performance standards, abilities, and potential;
- (b) setting up replacement tables, possibly in a form which will include the names of the most probable future incumbents among existing personnel.

Third Phase

- (a) additional training and development of the men earmarked to move into higher responsibilities;
- (b) selection and primary training of present and new employees to prepare for assuming managerial positions in the future;
- (c) planned periodic reviews and appraisals of the individuals involved in this process and of the programme as a whole.

Results of a British survey made by the Action Society Trust were published in 1956 under the title "Management Succession". Study of the background of 3,327 managers (ranks above foreman in industry and the equivalent in offices) showed that over half of them had started their working life as manual or clerical workers, and only one in five had a degree. The average age was 46. Less than one in five had professional qualifications. But analysis of the younger managers suggested that successors to the present managers will be better educated and more qualified. Top management was on the whole drawn from those with better education or qualifications. People who came up the hard way could get into junior or middle management, but had less chance of reaching top management. Most companies were now looking to the universities to supply more of their future managers.

Some points made in this British survey are commented on below.

TALENT SPOTTING

"The experience of companies who pay considerable attention to spotting talent suggests that unless there is an active policy for this, many of those who are suitable for promotion will be overlooked, particularly if they are rather quiet. In large organisations it is not

possible for top management to be aware of the potential of all their employees, nor is it safe for them to rely entirely on the judgement of the man's immediate boss—although it is important to stress his responsibility for looking for promising young men. Hence, in large organisations talent spotting must be organised; but the exact method adopted is not so important as the spirit behind it and the way in which it is used."

Of the methods of talent spotting the Trust report that internal advertising is good where employee morale is high, but there is the danger that it is inclined to cause frustration to those whose applications are turned down. The annual assessment is also good, if used with care, and it is best to combine it with the consideration of annual increments. The third method is close but informal contacts by top managers with all likely junior men, but this is not always possible in a large concern. Twenty of the 51 companies approached by the Trust had regular written assessments of some or all of their staff. The report adds a note of warning that allowance must be made for the different standards of managers and for personal bias, and suggests reports by several managers, or a discussion between the personnel officer and the manager on his assessment.

TRAINING

The survey showed that practice varied, but the experience of those who had paid most attention to management development suggested that early selection and training was essential if managers were to have the necessary variety of experience and opportunities to develop while still flexible enough to do so.

PLANNING MANAGEMENT SUCCESSION

"Companies could and should know how many managers are due to retire in the next 5 years and whether their successors are ready. They should also know how many people appear to have potential for further promotion and what training and experience they may need."

APPLICATION TO INDIAN CONDITIONS

Whilst American company plans for management development are too elaborate for present Indian conditions, any company could introduce the following steps from the three phases listed above:

- (a) Job descriptions of all key management positions;
- (b) An appraisal of the present incumbents of these key positions, noting especially where further qualities or specialised knowledge would be an advantage, and the planning of replacement;
- (c) Periodical reviews and re-appraisals of individuals as they progress up the ladder, and a regular method of talent-spotting for future promotion.

Replacement tables and periodic reviews would spotlight at once where there are gaps for which the management should be seeking suitable candidates, either from inside or outside the organisation.

For the present basic training, except for technical personnel, will still have to be on the job, but it is quite possible to arrange for younger managerial staff to spend short periods in other departments to give them an insight into the company's business as a whole, which they could not obtain from a single department. Once they have learnt their job, it is possible in some places for them to receive further training in business management through part-time courses such as that run by Calcutta University.

COMPANY TRAINING SCHEMES

One or two large companies are already running their own training schemes for

managerial staff. Tatas started a Staff College in Bombay in 1956, which runs sessions of 4 to 5 weeks for groups of 12 drawn from different units and embracing staff and senior supervisors. The object of the College is stated to be "to cultivate an awareness of what the management stands for, and to realise where it stands in the changed conditions of industry today; to create a feeling of fellowship among the participating units." Burmah Shell also have a Staff Training Centre in Bombay, where residential courses of about two weeks in length are held for technical and managerial staff. All senior staff are expected to attend at least two of these courses during their career. Imperial Tobacco is another concern which devotes great care to the development of managerial staff and runs regular residential management courses of a fortnight's duration at its centre in Calcutta.

These companies, which now have several years' experience of running managerial training, are convinced of its value in widening the outlook of their staff and giving them an appreciation of their responsibilities, particularly for human relations in industry. All make use of the 'syndicate' or participatory method of teaching, as it is now recognised that for the courses to appeal to the 'managerial temperament' and create mutual respect between trainer and trainee, practical projects relevant to their jobs must be introduced to avoid the schoolroom atmosphere of the ordinary lecture course. Students are divided up into small groups or syndicates and a task allotted to each group within a framework prepared in advance by the college. Each member is given a chance to take the chair and to act as secretary at one of these groups, and to draft a report on the conclusions of the group. The directing staff and outside experts are available to assist, but do not control the groups, so that the members have the experience of tackling 'live' situations on their own.

Management Associations are now coming into being in the main industrial centres of the country, and to co-ordinate their activities there is the All-India Management Association. All are concerned with methods of management development, and their growth is a welcome recognition of the need for such development. In Calcutta unobtrusive but effective work has been done for the last two years by the Ad Hoc Management Group, which started part-time courses in management studies for the benefit of middle management, also working on the syndicate system. This Group's activities will now, we understand, be merged with the Calcutta Management Association.

In addition there is the Administrative Staff College, opened in January this year at Hyderabad, to provide three residential courses of three months' duration each year for 60 young administrators drawn from such different fields as industry, commerce, trade unions, education, research, social and community welfare and local and central governments. The statement of objects of the college points out that "every large enterprise calls for the constructive skill and technique of leadership, policy making and planning which are not simply gifts of nature. Training is necessary. . . . What the Administrative Staff College hopes to do is to bring together young administrators from all walks of national life at an age when their views are formed but not fixed, to provide for the exchange of ideas to mutual advantage and to promote better understanding between those in charge in different spheres of activities. The resulting cross-fertilisation of ideas and techniques will be of advantage to all who participate and to the community as a whole."

March 29, 1958

Mr B. gets K.O.'d

For some months past, according to specialists in Sovietology, the exit of Mr Bulganin has been imminent. They can now go about with a self-satisfied air, for, Mr Bulganin has indeed been Khrushchev out. But it is difficult to comment on the changes that, in recent years, have frequently taken place in the Soviet hierarchy. For, the fact remains that we have precious little knowledge of practically anything behind the Iron Curtain. One thing alone is clear. If Stalin could ever have had a successor, Russia has already found him. Mr Khrushchev has proved that the dictatorship in the USSR is a one-man show. There is none to challenge him. Surely, it is no coincidence that, since the Stalin era, and except for a Malenkov regime for a week or so, the offices of Prime Minister and First Secretary of the Soviet Communist Party have not reposed in a single individual. Mr Khrushchev now makes bold to follow Stalin's example. It is too early to tell whether he will prove to be made of the stern, dictatorial stuff that Stalin was made of. It is also too early to speculate on whether Mr Khrushchev's assumption of office as Prime Minister means a change in international policies—whether the peace offensive will be given up. But it is not too early for western diplomats to mull over the situation, and prepare themselves for

a sudden volte face in Russia's attitudes in the world political arena.

*

The Winding Trail

"There is no magic formula or short cut to peace. We may proceed step by step, reach limited agreements, improve the political climate, strengthen the confidence among nations and foster policies of live and let live, of coexistence." That was the cautious estimate of the possible rate of progress toward establishing a structure of world peace which Dr Radhakrishnan gave in the course of the Gabriel Silver lecture he was to have delivered at Columbia University. The Gabriel Silver lecture is among the most important lecture series at Columbia and the list of previous speakers includes such distinguished names as President Eisenhower, Sir Anthony Eden and the Shah of Iran. The fact the Vice-President of the Indian Union has been invited to deliver this year's lecture may be regarded as indicative of a new trend in American thinking on world affairs, which strengthens the hope of co-operation between the two countries toward the attainment of common objective. On a later occasion, Dr Radhakrishnan has referred to the many similarities between India and the United States, the common pattern of democratic growth in the two countries. His personal contacts with US leaders have been encouraging in that they have revealed a very large area of agreement in regard to the fundamental values of civilised existence, "the sanctity of the individual, rule of law, social justice and right means for achieving right ends."

Perhaps, it was symbolic of the obstacles in the way of mutual understanding that adverse weather prevented Dr Radhakrishnan from delivering the address at Columbia in person. He has directed his appeal to the idealism which is such a large element in the mental make up of the American people, though it does not appear to form an obvious part of the American way of life as it is stridently presented to the rest of the world in the context of the cold war controversies. The great achievements of the American people during the short period of their existence as a separate nation, however, inspire the hope that they will yet be capable of the greater achievement of leading the world to peace and security. Dr Radhakrishnan has not hesitated to draw attention to the existence of reactionary regimes in the non-Communist camp, to lend force to his argument that it is not helpful to pose the problem in terms of absolute categories of good and evil. He has also given a warning of topical significance, regarding the explosive force of nationalism, especially when attempts are made to thwart it, and the danger inherent in racial injustice "which is the raw

material of strife." The foundations of peace can be strengthened by diverting part of the resources now utilised for war preparations toward the fight against hunger, disease and illiteracy which will be the most effective substitute for war.

*

World Food Pool

Dr Radhakrishnan's appeal for a concerted attack on poverty and hunger finds powerful support in the observations of Lord Boyd-Orr, who has not given up the hope that the Great Powers may yet agree to the formation of a world food pool financed by a levy on the defence budgets. The proposal was originally put forward by him when he was Director-General of the FAO. He had suggested the formation of a World Food Board, which would administer a pool to canalise supplies from surplus regions to deficit countries. To finance the scheme, he had suggested a ten per cent levy on arms budgets which would serve the dual purpose of assisting the economic progress of underdeveloped regions and of giving the Great Powers a chance of respite in the suicidal arms race. The proposal is an example of practical idealism which was quietly ignored when it was first suggested. But its significance in correcting the disturbances to the stability of world trade should be better appreciated during a period of recession, when the massive farm price support programme in the United States has reached the stage of collapsing under its own weight, and we find the strange spectacle of farmers being paid by the Government not to cultivate their land.

*

Paint's Problems

In common with several other industries, the Paint industry, too, is handicapped by shortage of raw materials. This is particularly felt in respect of imported materials as well as of packages and packaging materials. Most of these shortages, again, as Mr R. S. T. Cooke, Chairman of the Paint Federation, stated at its annual meeting, may be traced to the operation of Government restrictions and controls. The maintenance of production schedules and targets is, therefore, in a special sense, the responsibility of Government. Economy in paint can prove to be very costly in the long run. Paint is necessary for protecting costly and valuable equipment. It is not very economic to import capital equipment at great cost and then to leave it to the ravages of the weather. The machine may have to be scrapped even before the deferred payments have been completed! While some relaxation of import restrictions may be in order, paint manufacturers, for their part, should also recognise that, in the present conditions of the national economy, it is not advisable to bank on early relaxation of import controls. The

time and energy devoted to making representations to the Government may be spent to better purpose in the search for substitutes. The case of paint manufacturers for relaxation of import restrictions will be strengthened by efforts to develop the export potential of the industry.

*

UPSC Report

In recent Parliamentary discussion on the 1957 annual report of the Union Public Service Commission, a Congress MP questioned the present system of the viva voce or the so-called personality tests. In his reply, the Minister of State in the Home Ministry, Mr Datar, went off at a tangent with his quite pointless reply, that the Commission had to ensure that the candidates were persons of "integrity and character". Normally, one should have thought that this was rather a police matter and one that, in the case of candidates previously employed, could be easily decided on the testimonials of previous employers. In our opinion, the Minister did no good by being as evasive as he was. So far, the UPSC has been regarded as a sacrosanct body the qualifications of whose members have been taken too much for granted. There are standard qualifications for almost all public offices; only the members of the PSCS are chosen haphazard from various professions. True, most of them are recruited from high places. But that is not enough. They must have, in addition, a very special quality, namely, the ability to elicit the best in a candidate interviewed, and not, as members frequently possess, the ability to snub a candidate and pelt him with totally irrelevant questions.

Memo to the Reserve Bank

"The absence of faith in the stability of prices of such a type of investment on the part of the average citizen in this country is perhaps the most disturbing cause of this unfortunate state of the gilt-edged market."—Mr C. H. Bhabha.

Mr C. H. Bhabha, at his forceful best, has, at the annual general meeting of the Indian Banks Association, analysed the causes of the reduced popularity of gilt-edged. He has dealt with this question at some length, and, very rightly, states that the significantly reduced borrowings by Governments "cause anxiety to all those who have the well-being of the country at heart." Fundamentally, it is the fact that institutional and other investors have been suffering capital depreciation on their present holdings which has made the banking system reluctant to enlarge its gilt-edged portfolio.

Government and the Reserve Bank need to appreciate that banks will prize price stability and insurance against depreciation much more than they would an increase in the yield offered to them.

Just what strain an institution may be put to, can be gleaned from the experience of the Bank of which Mr Bhabha is Vice-Chairman. The Central Bank had always prided itself on the fact that, next to the State Bank (the Imperial Bank, as it then was), it was investing in gilt-edged the

largest proportion of its resources. What was the reward for Central Bank? Although, since banks will hold on—as far as possible—to their investments till their maturity, it is the face value vis-a-vis the book value that is important, the Central Bank nevertheless has to show on its balance-sheet that the market value of its gilt-edged falls short of the book value by Rs 2½ crores.

Is it any wonder that, after the calamitous fall in gilt-edged prices in 1951, the Central Bank has, in spite of a considerable increase in Deposits, reduced its gilt-edged portfolio?

Memo to the Reserve Bank: The first consideration for a successful borrowing programme must be, not the interest the coupon bears, but the safeguarding against depreciation in the value of existing loans.

+

Central Bank

WITH a sharp rise of Rs 16.15 crores, the Deposits of the Central Bank, at the end of 1957, have crossed the Rs 150 crore mark and are placed at Rs 154.87 crores. As is the case with most banks during 1957, the rise has occurred mainly under Fixed Deposits, which are higher by Rs 15.18 crores. Savings Bank Deposits are practically unchanged at Rs 28.59 crores against Rs 28.66 crores. Central Bank is one of the few institutions to report an increase in Current Accounts, which are marked up by Rs 1.04 crores at Rs 68.76 crores.

On the assets side of the ledger, cash balances record small rises. Cash is placed at Rs 13.89 crores (Rs 13.65 crores), balances with other banks at Rs 2.03 crores (Rs 1.93 crores) and money at call at Rs 2.47 crores (Rs 1.23 crores). In round figures, the increase in cash balances consequent to the accrual of new Deposits is Rs 1½ crores.

Thus, the improvement in Deposits went mainly to reduce borrowings and to increase the accommodation given by the Bank to its constituents. Borrowings are sharply lower at Rs 1.98 crores against Rs 9.22 crores. Secondly, Advances are marked up by Rs 10.73 crores at Rs 101.49 crores.

So, income registers a sharp rise. Interest and Discount fetched Rs 1.08 crores more at Rs 6.41 crores, while the income by commission, exchange and brokerage also rose by Rs 0.16 crores to Rs 1.30 crores.

But the high money rates ruling in 1957 have made their impact felt on the interest paid, which is higher by Rs 1.08 crores at Rs 3.25 crores. So also, salaries and allowances take up Rs 2.76 crores against Rs 2.59 crores. Nevertheless, the balance of profit is higher by nearly Rs 4½ lakhs at Rs 1.09 crores.

The interim dividend was maintained. The amount transferred to Bank's Investments is unchanged at Rs 15 lakhs. The provision for tax is the same at Rs 13 lakhs. The Staff Gratuity Fund gets Rs 1½

lakhs more at Rs 6.5 lakhs; and Bonus to Staff absorbs Rs 2½ lakhs more at Rs 30 lakhs. The balance carried forward, subject to final dividend, is Rs 43.60 lakhs against the comparative figure of Rs 43.39 lakhs.

+

Allahabad Bank

THE balance sheet of the Allahabad Bank Limited as at the end of 1957 again typifies the experience of the banking system during the period. Deposits are sizeably higher by Rs 4.79 crores at Rs 40.76 crores. But this rise in Deposits has occurred on account of Fixed Deposits—higher by Rs 5.60 crores at Rs 24.58 crores—and Savings Bank Deposits—higher by Rs 5 lakhs at Rs 5.01 crores. Current Accounts are lower by Rs 0.85 crores at Rs 11.17 crores. This means that, generally, the Allahabad Bank had to pay a higher interest rate on a larger proportion of its Deposits. Borrowings are again negligible. The gilt-edged portfolio shows a sharp shrinkage from Rs 12.62 crores to Rs 8.77 crores. While a portion of the disinvestment in gilt-edged has been applied to increasing the Advances portfolio by Rs 3 crores to Rs 23.12 crores, the improvement in Deposits is found to be reflected almost wholly in Cash Balances and Money at Call. The Cash Balances of the Allahabad Bank have more than doubled from Rs 4.96 crores to Rs 10.64 crores. Therefore, it would appear part of the disinvestment in gilt-edged was to take advantage of higher rates obtainable for call money.

The higher money rates obtaining during 1957 as well as the rise under advances are responsible for taking up the income from interest and discount to Rs 1.77 crores from Rs 1.62 crores. On the other hand, income by commission, exchange and brokerage is nearly Rs 4 lakhs lower at Rs 28.45 lakhs.

Meantime, the higher cost of money, and particularly the higher charge in respect of Deposits, is evidenced in the fact that interest paid has risen by Rs 16.11 lakhs to Rs 89.20 lakhs. It is heartening to note that there has been a concerted attempt to keep expenditure under control, since the other main head on this side of the ledger, salaries and allowances, is higher only by Rs 1.44 lakhs at Rs 74.61 lakhs. Inevitably, the balance of profit has been eaten into to the tune of Rs 2.11 lakhs to be placed at Rs 13.68 lakhs.

The appropriation account shows that the transfer to the Staff Pension Fund is maintained at Rs 1 lakh. The dividends are also maintained, on the ordinary shares at 18 per cent. It may be recalled that, in the last year, an amount of Rs 3.50 lakhs was transferred to Contingencies; and, besides, adjustment of interest on Provident Fund for 1954 and 1955 absorbed Rs 75,000. These two appropriations have been obviated in the latest year, and the balance carried forward, at Rs 10.42 lakhs, is essentially unchanged from the amount brought in of Rs 10.28 lakhs.

The Directors' Report draws pointed attention to a feature of the banking system which this journal has been reiterating. That is, while business as such has been expanding, with both Deposits and Advances rising, the banks themselves are not profiting thereby. The Directors of the Allahabad Bank point out, "Keen competition for Deposits has resulted in further raising of Deposit rates which with increased working costs and in absence of a fully compensatory increase in interest rates in advances has resulted in narrowing the margin of profit."

It is clear beyond doubt that, trends in Deposits and Advances being what they are, the unremitting deposits war is doing nobody any good, least of all the banking system.

+

Bank Advances Touch New Peak

The steepest deficit financing in any single week is disclosed in the returns of the Reserve Bank for the week ended March 14. The quantum of created money in the week under reference may have been for as large an amount as Rs 80 crores. This is to be inferred from the fact that a very substantial rise has occurred under the head of Rupee Securities in the Issue Department, the while that Investments in the Banking Department also have risen, though nominally. Apparently, the Central Government were thus compelled to have recourse to sales of ad hoc for such a considerable figure because of the need to meet very large payments in respect of the State Governments. While these are the two noteworthy transactions in the latest returns of the Reserve Bank, the fact that these occurred in a week in which the busy season

has not imposed an expansionary strain upon currency has involved consequential changes of a third category.

Rupee Securities in the Issue Department have been marked up by Rs 74.34 crores to Rs 1171.10 crores; and, moreover, Investments in the Banking Department are higher by Rs 4.42 crores at Rs 240.24 crores. In broad terms, therefore, it can be suggested that deficit financing during the week would have been in the environs of Rs 80 crores.

Since, as we shall see presently, there was far from any need for meeting an expansion in currency circulation, there has been a countervailing transfer from Foreign Securities which, in the Issue Department, are placed Rs 74.34 crores lower at Rs 171.19 crores. With this transfer, Balances Held Abroad are placed higher by Rs 67.38 crores at Rs 103.00 crores. This means that the foreign exchange reserves, which had shown some improvement in the preceding two weeks, are again lower by the considerable amount of Rs 7 crores.

During the week, active note circulation has declined by Rs 6.43 crores to Rs 1571.83 crores. Rupee Coin has also returned from circulation for Rs 0.93 crores; in the result, notes held have gone up by Rs 7.36 crores to Rs 16.97 crores.

Although the Central Government would have benefited by the proceeds from the sales of ad hocs in favour of the Reserve Bank, their balances have actually declined by Rs 0.60 crores to a level just below the traditional minimum of Rs 50 crores at Rs 49.71 crores. Thus, the whole of the Rs 80 crores of deficit financing has gone to meet the net disbursements of the Central Government. That these disbursements related almost wholly to payments to the State Governments is clearly indicated in the Reserve Bank returns. On the one hand, the balances of State Governments have improved by nearly Rs 56 crores to Rs 77.58 crores from Rs 21.67 crores. On the other hand, the State Governments have also reduced their indebtedness to the Reserve Bank by Rs 20.64 crores to Rs 24.20 crores. Thus, the improvement in the position of the State Governments exceeds Rs 76 crores, this comparing with deficit financing for, presumably, Rs 80 crores.

The Reserve Balances of member banks are practically unchanged at Rs 67.89 crores. Nor is there any considerable increase in their indebtedness to the central banking institution, since the Reserve Bank's Other Loans and Advances are higher only by Rs 1.45 crores at Rs 74.56 crores. Advances against usance bills, we may note, have been marked up by Rs 1.78 crores at Rs 23.53 crores.

With the latest dose of deficit financing, created money for the current year has already exceeded the revised estimate of Rs 380 crores postulated by Mr Nehru in his Budget in February this year. It does not, however, necessarily

follow that, at the end of March, deficit financing will be found to exceed the revised estimate of Rs 380 crores. For, while it is true that shortfalls in other sources of revenue, particularly small savings, will have to be made good to a corresponding extent by recourse to ad hocs, we must bear in mind the possibility that, as against the week's payments to the State Governments by the Central Government, we shall also be witnessing, before the end of the fiscal year, the repayment by State Governments to the Central Government of loans that they have taken. Once such repayment is made, before the end of March, the Central Government might find it possible to institute reverse ad hocs for an amount corresponding to the sum received from the State Governments.

According to the return of the State Bank for March 21, Deposits are lower by just under Rs 2 crores at Rs 414.18 crores. For the first time in some months, the State Bank does not figure as a borrower from the Reserve Bank. This is because, although the total of Advances has risen further by Rs 3.47 crores to Rs 211.32 crores, Cash Balances have been drawn upon. With Deposits declining and Advances rising, Cash Balances are shown to be Rs 2 crores lower at Rs 24.49 crores.

In the week ended March 14, the Scheduled Banks have achieved two new records. In the first place, Deposits have, in rising by Rs 8.18 crores to Rs 1462.63 crores, touched a new peak. In the second place, the total of Advances which, it may be recalled, declined quite substantially during the 1957 slack season, has, in rising by Rs 3.67 crores to Rs 940.11 crores, finally exceeded the peak touched during 1956-57 busy season. Cash Balances are shown to be lower by Rs 13.53 crores at Rs 151.91 crores. This is partly due to the fact that, in the week under review, the State Bank had purchased gilt-edged from Reserve Bank for Rs 7 crores. Thus, the Investments of Scheduled Banks as at March 14 are shown to be higher by Rs 6.80 crores at Rs 440.09 crores.

British Bank Rate at 6 Per Cent

Paul Einzig

ALMOST exactly six months after the increase of the Bank rate to 7 per cent, the Bank of England announced its reduction to 6 per cent. Although the possibility of a reduction was envisaged on practically every Thursday since January, the cut took the markets by surprise. This was perhaps not altogether accidental. It is said half-jokingly in the City that, before definitely deciding to reduce the Bank rate, the authorities made discreet inquiries to ascertain whether there were, on Wed-

nesday afternoon or on Thursday morning, any "unusual" dealings in Government loans, dealings of a kind that would suggest an intelligent anticipation of a change in the Bank rate. On being told that there were none, the authorities are said to have decided to proceed with the Bank rate reduction. If the story told in jest is true this overdose of caution must have been the result of the recent Bank Rate leak inquiry.

The authorities are, naturally enough, anxious not to provide the Opposition with another opportunity for suggesting that there was selling of Government loans on inside information about the impending Bank rate reduction. It would not be surprising if from now on Bank Rate changes were announced on the basis that they are not made on days when the market anticipates them. One cannot but admire the boldness of city men who dare to joke about the Bank Rate after the recent inquiry at which such jokes were taken literally.

While the decision was welcomed on the Stock Exchange, it was not followed by any spectacular boom. The reduction has been discounted some time ago, especially in the gilt-edged market, so that when it materialised its actual effect on stock prices was moderate. The change had an enthusiastic reception among Socialists and Trade Unionists, also in industrial circles. On the other hand, the financial press was, on the whole, disapproving. It is widely felt among practical experts in London that the move was premature.

The official explanation is that the improvement of the exchange position, the balance of payments and the gold position justified the reduction. But even in this point of view there is room for doubt about the wisdom of the move. The influx of gold has not been very impressive, and the gold reserve will have to be increased much more in order to enable the Government to view the autumn reserve with optimism. For one thing, it seems certain that the improvement of the British balance of payments will be more than offset by the deterioration of the balance of payments of the raw material exporting countries of the Sterling Area. Even as far as the United Kingdom is concerned, it remains to be seen whether the recession in the United States and in the raw material producing countries will not cause a sharp setback in British exports.

Viewed from the point of view of the domestic position, there was no justification whatever for relaxing the disinflationary measures. It is true, the cost of living index has remained steady since November. But any major wage increase is liable to cause a resumption of the inflationary spiral. And the reduction of the Bank Rate has given considerable encouragement to trade unions to hold out for higher wages. The view is widely held that the Government ought to

have awaited the outcome of the major wage disputes which are in progress before reducing the Bank rate. It seems more than probable that the trade union leaders, who were marking time until now, will now feel that the Government's resistance is weakening, so that it is safe for them to press ahead with their excessive wage demands. Employers, too, are likely to feel that, with the relaxation of the disinflationary drive, they are now in a better position to resume the practice of passing on wage increases to the consumers in the form of higher prices.

It is true, the authorities disclaim any intention of relaxing the credit squeeze. But lower interest rates do tend to increase the demand for credit facilities. While until now the banks had no difficulty in keeping their loans within the limits of the official credit ceiling, from now on they will be under pressure by their customers to grant increased amounts of credit.

Rightly or wrongly, it is widely believed that the Bank Rate will be reduced further in the not too distant future. Pressure is brought to bear on the Government by business firms, also by Conservative politicians who feel that the Government's popularity could be increased if interest rates were lowered. Moreover, quite a number of economists are constantly urging the Government to stop disinflating, in view of the very moderate symptoms of recession which have become apparent. There is an outcry at the evidence of any moderate increase in unemployment. Few people realise that pockets of unemployment are sometimes a necessary evil, enabling a re-allocation of labour between industries. In the absence of such pockets the only way in which labour can be attracted by an expanding industry is by bidding against each other, paying higher and higher wages, which means inflation.

The Government may have developed an overdose of pessimism under pressure by prophets of depression and by its own political and industrial supporters. Yet quite recently a Ministerial spokesman declared that this time the Government was determined not to reverse prematurely its disinflationary measures. The strongly adverse results of recent by-elections may have contributed towards the pressure on the Government not to defer any longer the relaxation of the disinflationary drive. Yet a few more weeks might have made an appreciable difference from the point of view of the outcome of industrial disputes. The decision is liable to influence the attitude of arbitrators engaged in considering wage claims. They may feel that the need for damping down wage claims is no longer as imperative. Quite conceivably the relief secured by the Bank Rate cut will prove to be very costly.

—(Copyright)

Pakistan Insurance Ordinance 1958

In most matters, Pakistan and India go opposite ways. It is seldom that there is identification in the matter of policy. If, therefore, Pakistan has endorsed and in fact borrowed, in most cases word for word, India's recent rules, regulations and codes applying to general insurance, there must be good reasons therefor. It is primarily a compliment to India's constructive genius and secondly, an overt acknowledgement that India has found the answer to problems surrounding trading in general insurance. In the latter, if the presumption is correct, Pakistan has erred, for Indian laws, rules, and regulations are more an experiment than an answer. India is still groping in the dark and endeavouring to combat the problem of rebating and illicit inducements. It is an incorrect presumption that India has found the answer, although the alleys and lanes which India is exploring may lead to the desideratum.

Part of India's regulations have been incorporated in the statute and part on an agreement voluntarily executed upon request. In Pakistan, little reliance has been placed on voluntary offer and acceptance. There, everything has been codified and given legal shape. The issues to Pakistan were so urgent and imperative that Pakistan Government promulgated an ordinance known as Ordinance No. 1 of 1958 governing trading in insurance. The Ordinance is calculated to amend the Insurance Act 1938 and has been brought into force from February 1, 1958.

For many years, unpartitioned India was trying to tackle the problem of what are now known as illicit rebates and malpractices. They mainly relate to payment of excessive commissions, much in excess of what is permissible in law or what are scheduled in various Tariffs. In unpartitioned India and even up to 1950, Principal Agency commission was not statutorily fixed. The high scale of principal agency commission then in force has, in fact, fostered the climate of high rebates and commissions. It is difficult to alter a given standard when the people, the trade and the industry have been attuned and, in fact, acclimatised to the standard. The climate has remained unimpaired because insurers could not develop the trade unionism to speak with one voice. The craze for business has led to unholy competition and, in fact, competition degenerated into pandering to the acquisitive propensities of the insured and the middlemen.

High rebates also proved, in a way, that the rates for insurance are theoretical and are not based on experience of adequate compilation of statistics. If the heavily slashed rates can be borne by the companies, most of whom declare dividends, there is good reason to sustain the theory that rates are high and unrelated to experience. If, on the other hand, rates are just adequate to sustain the statutory commission of ten and fifteen per cent, there is something very gravely wrong with the industry, for the implication then will be that either other expenses or reserve accounts are starved by illegal outgo of premium income.

These primary issues were sought to be resolved voluntarily in unpartitioned India and thereafter in both the countries, India and Pakistan. Having sensed from past experience and from the current trends in India, that voluntary efforts may not yield the requisite results, Pakistan is experimenting with law rather than with Codes as in India to find whether a correct answer to the issues posed above can be found.

In this struggle Pakistan has found the principal armour in India's law relating to limitation of expenses. This was, from the theoretical standpoint, one of the best that could be devised to curb reckless expenditure with a view to chasing business in the books of the companies. It was hoped, not without reason, that limitation in expenses will automatically channel the surplus into the reserves. In India, permissible expenses are allowed and measured in terms of gross direct premium income written in India. Pakistan has taken, almost word for word, India's regulation. I would have been well if Pakistan could in some way avert the danger that India's general insurance has been facing since the law relating to limitation of expenses came into force. Since the gross direct premium income is the measuring rod for permissible expenses, there has, in consequence, ensued a scramble for new and renewal direct business. Scramble for new business led to underwriting of substandard risks with the result that outgo by way of claims has increased substantially in recent years. There has been the complaint that claims accounts have been utilised by companies to find illicit money for rebating, since illicit money can come within the purview of management expenses. Pakistan, however, took lessons from India quite seriously, and although it has to adopt the Indian standard applying to measurement of permissible expenses, it has endeavoured to plug the holes for outgo of illicit money as best as it can. It has, therefore, devised elaborate regulations about surveyors and survey of claims. This is, however, quite a departure from the practice obtaining in India, for, in India, so far, there is no codified law relating to surveying, although India is still toying with the idea of registration of surveyors. Pakistan has, however, gone a step further in the positive action, in as much as the law in replacement of the current

Ordinance contemplate creation of a parcel of registered surveyors. It has been specifically laid down that no insurer shall pay any claim in respect of general insurance business in Pakistan unless the loss has been surveyed, assessed or adjusted as the case may be by a certified insurance surveyor.

The idea behind this novel innovation is quite clear. There is quite a possibility of creating a fund for illicit expenses by making false or inflated claims. If, therefore, claims are adjusted in accordance with the findings of Government certified surveyors, the possibility of finding money for rebating is naturally reduced to the minimum. There is also the provision for a second survey if, in the opinion of the Controller of Insurance, the first surveyor has given a false or exaggerated report. Penalties for false or exaggerated reports include cancellation of the certificate of the surveyor.

With a view to keeping the activities of the insurers in check annual special audit has been provided under the new law. In India, the special audit is not statutory. It forms part of the voluntarily accepted 'Code of Conduct'. The proposed audit is distinct and apart from the audit under the Companies Act, 1913. The special auditor will have a right, conferred by law, of access to all such books of accounts, etc., as he may require including any information and explanation as may be necessary from the directors and officers of the Company. The proposed special audit, it is anticipated, will plug further the holes that erode the finances of a company.

A freely accepted channel for outgo of money is to have inflated salary scales, that is to say, a part of the salary of the individual is earmarked, from the beginning, for illicit inducement in the market. This channel cannot obviously be fully closed but Pakistan has introduced a provision—similar to India—that all agreements for payment of remuneration exceeding Rupees 6,000 a year will have to be notified to the Controller of Insurance by submitting certified copies of such agreements. Under the ordinance, the Controller has the power to modify remuneration of an individual if, in the opinion of the Controller, such remuneration is excessive having regard to the normal standards prevailing in insurance business to the resources of the insurer.

Commission terms have been limited as in India to fifteen per cent for nonmarine business and ten per cent for marine. India has recently abolished Principal Agency resulting in India having one class of agents with one scale of commission payment. Pakistan has followed India in this also with, however, one important exception. An additional five per cent over the ten and fifteen per cent will be paid to an insurance agent who procures a yearly business yielding a premium income of not less than thirty thousand rupees. This commission is payable to an ordinary agent or an employer of agents—the latter being the Pakistan Insurance Corporation has a

tan counterpart of the now defunct Indian Principal Agent. A further remuneration (not defined) is payable to such employer of agents who carries out duties on behalf of the insurer which would otherwise have been performed by the insurer.

This will result in an agent or an employer of agents getting at the most twenty per cent commission when business yields a premium income of thirty thousand rupees. This fits in well with the rule obtaining in India before Principal Agency was abolished. How Pakistan will, however, guard against ordinary agents pooling business with a named agent and thus drawing more than the scheduled commission payable to an ordinary agent has not been answered. This system must inevitably come into force and will operate against an ordinary agent unable to make pooling arrangements.

After codifying and delineating carefully in the Ordinance and in subsequent amendments that have been proposed in the Bill now before the legislature, all these ameliorative and corrective measures to improve the moral tone of the market and for weeding out malpractices, further conditions have been proposed to improve the character of general insurance business and financial solvency of the insurers. The Indian practice of advance payment of premiums has been one of the most successful regulations ever proposed in this country. Pakistan has followed suit and adopted—almost word for word—the Indian regulations in the subject. In Pakistan, it is a statutory enactment, in India it is part of a voluntary agreement. In any event, the law will enable Pakistan to tide over one of the most intractable problems facing general insurance in that country, namely the large accumulating outstanding premiums.

With regard to reinsurance, Pakistan has stipulated that no insurer shall reinsure outside Pakistan any risk or part thereof in respect of any insurance business in Pakistan which is in excess of its treaty reinsurance arrangements unless a certificate has been obtained from the Controller to the effect that such excess cannot be placed within Pakistan. The Controller of Insurance will be the final arbiter as to whether a particular reinsurance arrangement is a treaty or not. This issue, vital in many ways, is intimately linked up with the trading of the Pakistan Insurance Corporation. The latter body now takes compulsorily 30 per cent of all insurances written by the insurers in the country. The balance, after net retention have been filled, can be reinsured with the treaties. It is, however, believed, that foreign insurers make allegedly large reinsurance overseas under the garb of what may be called treaty arrangements resulting in excessive drain of foreign exchange. The Controller of Insurance will now determine what is, in reality, a treaty or otherwise. The Pakistan Insurance Corporation has a

large power to absorb reinsurances. Besides, the local companies have hitherto been starved, the excess always finding its way outside the borders. By the present enactment a large part of reinsurances will be retained inside the borders which otherwise would have gone outside.

Pakistan reinsurance will thus take on an insular character. That will undoubtedly be a corrective to Pakistan's foreign exchange imbalance and if treaties can be correctly assessed—a delicate and difficult assignment—the process of conserving foreign exchange will receive additional impetus. If, however, such reinsurances outside were being arranged against adequate reciprocity from accounts of similar character, the enactment to conserve reinsurances will not be an advantage. In any event, these regulations are quite novel. In India, there are no regulations of this character.

These are the principal provisions in the Pakistan Ordinance and proposed subsequent amendments to the law. Pakistan has freely drawn on India's experience and hopes to eliminate malpractices altogether. In that, India has not altogether succeeded although the tempo has lessened somewhat. How far Pakistan will succeed with the proposed amendments remains to be seen.

Raw Material Policies

IN a statement to the annual meeting of the British Jute Trade Federal Council, Mr W. H. Valentine, the retiring Chairman, has pointed out that unless raw material policies are favourable to him no manufacturer of jute goods can effectively counteract the ever increasing competitive pressure from substitute materials and methods. In the world of jute today the raw material policies are largely dictated by Pakistan by virtue of its position as the largest supplier of raw jute. Consequently Pakistan's jute policy has a vital bearing on the world jute industry. But Pakistan seems to be only interested in getting the highest possible price for its raw jute. Referring to this attitude of Pakistan Mr Valentine says: "So long as Pakistan pursues a policy of unenlightened self-interest her economic future and the future of the world jute industry will remain uneasy and unassured".

Thanks to the vigorous effort put forth in India in the past few years toward raw jute self-sufficiency, the Indian jute mill industry is no longer at the mercy of Pakistan. Rapid progress has already been made in jute production and in the current season roughly 90 per cent of the fibre consumed by our jute mills has been grown within India. As against an import of 1,470,000 bales in 1955-56, India has imported only 646,000 bales of raw jute from Pakistan in 1956-57. During the eight month period July-February 1958 arrivals of raw jute of Pakistani origin have totalled 498,000 bales. From the trend of arrivals so far it would appear that imports of Pakistani jute in the current season may be more or less of the same order as in the previous season. Now that the target of jute production, excluding mesta, during the Second Plan period has been raised to 5.54 million bales it may be confidently expected that our mills' dependence on Pakistan will be only in respect of a small quantity of high quality fibre. Raw jute self-sufficiency will in the first place free the Indian industry from the oppressive influence of Pakistan's jute policy. In this regard it will be in a more advantageous position than those who are dependent on Pakistan for their raw materials. It is, however, to be noted that all the problems facing the Indian industry will not be automatically solved once self-sufficiency in raw jute is attained. There will still be hard work in a

number of directions as jute goods have lost considerable ground quite irretrievably in world markets. But it cannot be gainsaid that raw jute self-sufficiency will go a long way toward making the Indian industry strong enough to tackle its problems effectively.

It will not be entirely correct to say that raw jute policies have been solely responsible for the continuing loss of markets for jute goods. Speaking at the recent annual general meeting of the IJMA, Mr D. P. Goenka has pointed out that jute goods exports to the UK have been adversely affected by the operation of the UK Jute Control. Until the middle of last year all Indian jute goods imported into the UK were sold at no less than 40 per cent above the landed cost in order to bring the selling prices into line with those of Dundee. Since July the mark-up price has been reduced from 40 per cent to 30 per cent but it has been found that the reduction has not been sufficient to make jute goods competitive enough compared with paper bags. Mr Goenka opines that the reason given by the British authorities for not reducing the mark up still further cannot be sustained because the Chairman of the British Jute Trade Council has himself admitted that the bulk of Dundee's production is in specialty goods. The increase in the import of jute goods from India will not interfere with the output of Dundee. It is strange the UK has not realised that by keeping out jute goods from India it has left the door open for paper bags.

★

Conditions in the jute goods market continued to be less during the past week in the absence of a marked improvement in overseas demand. In earlier dealings the undertone was easy following heavy selling by a prominent operator. It would appear that marketmen were not very optimistic about an early improvement in overseas demand. The fact that burlap consumption in US during February had been at the satisfactory level of 70 million yards (burlap consumption in US during the corresponding month of the previous year had been placed only at 62 million yards) does not seem to have made any impression on the market.

The futures market in raw jute and jute goods will be inaugurated on Saturday the 29th March. In this connection it is learnt that the IJMA transferable specific delivery contracts will be freely permitted at least for a period of one year after the establishment of the futures market. The East India Jute and Hessian Exchange Ltd will for the time being be mainly concerned with futures contracts in raw jute and jute goods, of which there will be four in a year.

The jute goods markets opened the week in a listless mood with prices moving in a narrow groove in the absence of buying interest.

Hessian 40"×10 oz Ready was quoted at the end of last Friday at Rs 39.25 with B Twills Ready changing hands at Rs 99.20. In forward delivery positions, July-September was quoted at Rs 39.31 while B Twills for the same position was marked at Rs 100.

Some selling pressure was in evidence on Monday and consequently prices displayed a sagging tendency. Mills were not keen for business but the fact that there had been plethora of goods in the market helped the downtrend. The closing tone was quiet. Hessian 40"×10 oz Ready eased to Rs 39.10 and B Twills to Rs 98.40 July-September Hessian 40"×10 oz was marked at Rs 39.37 and B Twills at Rs 99.25.

With some covering by shippers the market slightly recovered on Tuesday. Business passing, however, continued to be at a disappointing level and the market closed quietly steady as follows: Hessian 40"×10 oz Ready Rs 39.10, B Twills Rs 98.65; July-September Hessian 40"×10 oz Rs 39.40 and B Twills Rs 99.75.

Report of an US order for hessian imparted some steadiness to the market on Wednesday and the undertone at close was steady. Hessian 40"×10 oz Ready gained 15 nP to be finally placed at Rs 39.25 while B Twills ready also improved to Rs 98.85. July-September Hessian 40"×10 oz was placed at Rs 39.50 and B Twills at Rs 100.20.

The raw jute market ruled generally steady and fair mill business was reported done toward close around Rs 24.50 for Assam Bottoms.

Speaking at the Farmers Day organised by Indian Central Jute Committee, Dr R. Ahmed, Minister for Agriculture, West Bengal, expressed the hope that the target of jute production under the Second Plan would be achieved by the State despite "heavy odds". He pointed out that out of a total jute production of 4.1 million bales in the country, West Bengal accounted for 1.8 million bales. In the past ten years the acreage under jute had increased from 250,000 to 700,000 acres.

March 29, 1958

Prospects for Common Teas

INTEREST now centres on the expected relief to the Tea industry, although it is realised that this may take a little time as it is not easy to devise a method of giving relief in export duty only to Common teas. The Government have appreciated the need for giving fiscal relief to the producers of Common teas, who are finding it difficult to secure a sufficient business either at home or abroad at economic prices.

While a scheme is being worked out in the Commerce and Industry Ministry, one of the complications which the Government seem to be concerned about is, that concessions shown to Common teas may find their way, by devious routes, to quality teas as well. In this connection, the Commerce and Industry Minister has indicated that the Assam Government may take over some of the gardens hit by current adverse market conditions for Common teas; but this can scarcely be a solution since the business of managing the gardens will conti-

S. E. RLY. TENDERS

Sealed tenders are invited for supply of the following materials: Tender No. CON/GM/7/WP/D/58 for supply of (1) 400 Nos. special chair for use with check rail 90 lbs. FF RBS rail as per drawing No. B-1588-32 and (2) 180 Nos. chairs slide steel 90 RBS as per drawing No. 10982.

Tenders will be opened on April 29, 1958 at 12 noon.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23, on remittance of Rs 5/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Rly., Garden Reach by local firms. Earnest money Rs 1000/- is to be deposited with the Chief Cashier of this Railway and the receipt obtained thereof should accompany the tender without which the tender is liable to be rejected. Approved contractors who have already made a permanent deposit of Rs 1000/- with the Controller of Stores are exempted. Firms not on this Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

S136 GENERAL MANAGER

nue to remain unsatisfactory unless the economic environment in which the industry functions itself improves.

A very good tone, however, continues to prevail in the tea auctions. Although there has been a good demand, a considerable irregularity is noticed in the export auction held at Calcutta this week. In Mincing Lane, the present supply position is generally not considered actually tight, although supplies are currently less than they were a year ago. The smaller quantity of tea available has certainly had something to do with the improved tone, especially as the proportion of quality invoices is not large. Moreover, the last of the North Indian teas is expected to be catalogued in London, possibly by the end of May, while the New Season's teas from Nyasaland have not yet started to arrive in strength.

In the Export Sale held in Calcutta this week, offerings were 58,418 packages. There was a good general demand with interal operators lending more support than in recent weeks. The strongest feature of the sale were the bright liquoring teas and black Fannings of all descriptions and these were 2 to 4 nP per pound dearer. There was also good support for "teas for price", while plain Broken and Medium teas were fully firm and sometimes dearer.

Medium Assam BOPs and Orange Fannings came in for good demand and were sold above valuations. CTC teas, particularly those with seasonal quality, were keenly bid for and were dearer. The poorer sorts, however, did not receive the same attention and were often 10 nP per pound easier. Brown Dooars were 4 to 6 nP easier except those with quality when they were dearer.

Stylish Whole Leaf grades and BPSs were well sought after and sold above valuations, while the Ordinary Pekoes were about steady. The stylish flavoury Darjeelings, on offer, were sold well as also Tippy kinds. Following rates were quoted:—Clean Black Pekoe Rs 2.25 to Rs 2.30; Plain BP Rs 1.38 to Rs 1.42; Plain CTC Rs 1.58 to Rs 1.62; Medium BP Rs 1.52 to Rs 1.56; Medium Fannings Rs 1.74 to Rs 1.78; Best Assam CTC BP Rs 2.60 to Rs 2.80 and Best Assam CTC Fannings Rs 2.70 to Rs 2.90.

In the Internal Sale, offerings were 18,896 packages of Dusts. There was a good general demand for most descriptions, which improved as the sale progressed. Orthodox descriptions from all districts with a clean black leaf appearance were well supported and were frequently upto 6 nP per pound dearer. The poorer sorts, in this category, were, however, a weak feature and generally easier.

There was less support for CTC Assams than in recent weeks. The best liquoring kinds were upto 20 nP and the Medium sorts upto 10 nP easier. Following rates were

quoted:—Medium Dooars Dust Rs 1.58 to Rs 1.60; Medium Assam Grainy Dust Rs 1.60 to Rs 1.62; Medium Assam CTC Dust Rs 1.85 to Rs 2.05 Best Assam CTC Dust Rs 2.75 to Rs 3.05.

Also, 4,780 packages of Leaf grades were offered for internal consumption. There was a strong general demand and prices were generally dearer. CTC Assams were a particularly strong feature of the sale.

In the Export Quota section, Special Export Licence changed hands at 2½ to 3 nP. The week ended with a large quantity being disposed of at 2½ nP per pound.

In the Colombo market, a good general demand prevailed at this week's auction with all centres operating quietly; but Russian buyers were absent from the sale. Best quality teas generally declined with quality; but Medium kinds were firm to occasionally dearer. Fannings grades were generally dearer as the sale progressed except for the best which registered a decline in quality. Low grades showed a firmer tendency at the close of the sale; but Persian Gulf types tended to easier.

In order to give relief to producers of lower-priced teas, particularly small holders, the Ceylon Government have decided to introduce a scheme for making rebates of duty. Under this scheme, all teas, which fetch prices of less than Rs 1.50 per pound at the Colombo tea auctions, will be given rebate of duty equivalent to the difference between the price fetched and Rs 1.50 per pound, subject to a maximum rebate of 50 cents a pound. This will enable producers of Green tea leaf to obtain a price of about 24 cents a pound for their leaf. The Government have also decided to increase the export duty on tea by 5 cents a pound with effect from mid-night of March 24 in order to prevent a loss of revenue.

Tea shipments from Pakistan, in February 1953, were lower at 3.03 million pounds as compared with 6.3 million pounds in the corresponding month of last year. Total shipments, in the first two months of the current year, were lower at 7.35 million pounds as compared with 12.95 million pounds in the corresponding period of 1957. The UK was practically the only buyer of Pakistani teas.

Indonesia harvested 9.8 million pounds of tea in December 1957 as compared to 3.4 million pounds in the corresponding month of the previous year. This brings the total tea production for 1957 to 102.8 million pounds as compared to 93.7 million pounds in 1956, showing an increase of 9.1 million pounds.

Tea stocks in London, as on the 14th March, were 117.58 million pounds as compared to 115.85 million pounds in the previous week and 123.62 million pounds a year ago. Landed between 8th and 14th March were 12.62 million pounds, while deliveries were 10.88 million pounds.

Alkali Chemicals

In the course of his inaugural address to the Chemical Manufacturers' Association last month, Mr Manubhai Shah, Union Minister of Industry, had described in detail the remarkable progress achieved by the chemical industry in recent years which was second only to that in engineering. An idea of the many-sided achievement in the manufacture of familiar products, as well as some of the new materials that chemists are turning out in an unending stream, may be gathered from the record of the Alkali and Chemical Corporation of India Limited. This concern, with its world wide affiliations, has made a substantial contribution to the achievements of the chemical industry in India and its plans promise more in the future. The total turnover last year was double what it was only three years ago, and record outputs have been achieved in every unit. The Company has also expanded the range of its products and its Polythene plant is expected to start production early next year.

The Minister of Industry, in the address referred to above, had mentioned that the biggest achievement of the chemical industry last year had been in the utilization of Chlorine, which is a by-product in the manufacture of caustic soda and presented peculiarly difficult problems of disposal. A steep increase in the offtake of chlorine has been observed with the result that the demand has outstripped production. By the end of the Second Plan, the demand for chlorine is expected to reach 75,000 tons. The time is, therefore, appropriate to consider whether the present level of prices is reasonable. Mr N. D. Harris, in his address to the annual meeting of the Company has suggested that increase in prices of chemicals have become necessary and that this is particularly the case in respect of chlorine. The most cheerful aspect of the Company's working is the maintenance of cordial relations between the management and the employers. This has led to the amicable settlement of questions relating to wages, bonus, promotions and other terms. Improved terms of service based on job appraisal have been introduced with workers' approval, a development of great significance for the Productivity movement. The tradition of successful negotiations of labour problems is not the least part of the legacy which Mr Harris, who is due to retire, will be leaving to his successor, Mr J. M. Lall, who has already established his reputation as an able executive.

US Notes

THE rising flow of investment funds from the United States has become an increasingly important factor in international economic relations. It has, of course, been a stimulating influence, contributing to the economic development of other countries. But it also has been a stabilizing influence, helping to sustain the international balance-of-payments of other countries even in the face of fluctuations in US merchandise imports.

A few figures reveal a telling trend. In the 1920's, more than 70 per cent of the dollars gained by other nations through dealings with the United States came from US imports of goods. But in recent years, only fifty per cent of the dollars so earned has come from such imports—and this despite the fact that US purchases of foreign goods have about quadrupled since the twenties. This obviously has left other countries far less vulnerable, economically, to any dips in US merchandise trade.

What has happened, of course, is that other forms of US payments abroad, largely government aid and private investment, have assumed a new and substantial significance. And the rise of private investment from the United States has been particularly remarkable in the past few years.

In the decade ending in 1955, the net outflow of private capital from the United States averaged \$1,600 million a year, a marked increase over previous levels. But even this figure pales by comparison with the \$4,300 million annual average of 1956 and 1957. About \$1,200 million of this represented short-term lending and portfolio investment, while fully \$3,100 million represented direct investment by US companies in foreign branches and subsidiaries.

According to some estimates, this latter figure, large as it is, actually understates the volume of US corporate investment abroad. It includes about \$1,000 million that American companies reinvest in host countries each year through retained earnings. But it does not take into account the more than \$1,000 million they reinvest out of depreciation and depletion allowances; if this is counted, their foreign investment in the past two years would be closer to an annual average of \$5,500 million.

Capital from the United States has gone to every part of the world and into virtually every type of enterprise. It has helped, for instance, to build steelworks in Asia, roads in Africa, factories in Latin America. And with it has gone American technology and skills,

bringing needed know-how to developing areas.

There is another aspect of US foreign investment which is sometimes overlooked—its impact in stimulating international trade. Last year, for example, the sales of the 2,500 American companies that have branches or subsidiaries abroad ran to \$32,000 million. But a good part of these sales represented exports back to the United States, as well as to other areas, and thus helped earn additional dollars and other currencies for the host countries.

It is no wonder that the exports and the rising tide of private US investment abroad a cause for optimism about continued world-wide economic growth and development. Not every year, of course, will see a large increase in this investment flow. This year, for instance, there conceivably could be some levelling-off, along with the adjustment in the US economy.

The consensus is, however, that US private investment abroad will continue to expand over the years. In fact, *Fortune* magazine, one of the most respected business journals in the United States, anticipates a 65 per cent increase in the US private capital outflow during the next ten years, from the present \$4,300 million to about \$7,000 million a year. And this projection, *Fortune* concedes, could turn out to be an underestimate.

In the final analysis, of course, as *Fortune* observes, "the development of any country depends far more on what its people do for themselves than on any thing that can be done for it from outside." Nevertheless, many countries will continue to need more outside capital if they are to reach and maintain the development rates they have set for themselves. Given a favourable economic climate, private capital can go far toward meeting this need.

Mutual assistance—US economic cooperation with other countries—currently is an important topic of discussion in the United States, as Congress takes up the question of another large annual appropriation for this purpose for the fiscal year beginning July 1.

This year, the discussion is taking place against the relatively new backdrop of Soviet-bloc aid to less-developed nations—a backdrop which is receiving careful scrutiny. In these circumstances, it becomes important to keep a clear and steady eye on the positive aspects of US economic assistance to other lands. US under-Secretary of State for Economic Affairs C. Douglas Dillon had some interesting points to make on this subject just last week.

The fact is, as Dillon emphasized, that US assistance was being disbursed on a large scale in all parts of the world long before the Soviet entered the aid picture. It is fair to conclude, then, that US aid is based not so much on reaction to Soviet aid efforts as on the economic appraisal of the development and security needs of free nations.

It should be clear, too, by this time that aid to other countries

has taken its place alongside liberal trade and investment programmes as an integral part of US foreign economic policy. The general objective of this policy, as Dillon indicated, is to help build greater economic strength at home and abroad, and in this way to help bring about a more unified and more durable community of nations.

In the achievement of these goals, US aid takes many forms. It includes direct assistance by the US Government through such instruments as the International Cooperation Administration, the Export-Import Bank, the New Development Loan Fund, and Technical Cooperation Programmes. In addition, of course, the United States contributes handsomely to such United Nations institutions as the World Bank, the International Monetary Finance Corporation, and UN Technical Assistance Programmes.

In the past decade, the United States has disbursed about \$25,000 million in economic loans and grants to other countries under its Mutual Assistance Programmes. In the beginning, much of this was going to rehabilitate war-ravaged European economies.

But in recent years, with the free countries of Western Europe reaching new levels of prosperity, nearly all of it has been going to developing lands in Asia, Africa and Latin America. In all, more than \$12,000 million in direct US economic aid has gone to these developing lands in the past ten years. And this aid undeniably has done much to help these countries—including about 20 newly re-established—improve their economic situations.

By comparison, communist bloc economic aid to developing nations outside the Sino-Soviet bloc, while till a few years ago, and totals only highly publicized, did not start until \$1,500 million. Why, then, is it a matter of concern to United States?

Part of the answer lies in the fact that the communists themselves have tried to make it an issue in world affairs, throwing it out as a challenge to the United States and other free nations. Beyond that is the fact that unlike the broad, generally non-political character of US assistance, communist aid obviously has been confined to a few countries and a few projects from which the greatest political and propaganda advantages could be extracted.

US reaction to this has been aptly summarized by President Eisenhower who said, "If the purpose of Soviet aid to any country were simply to help it overcome economic difficulties without infringing its freedom, such aid could be welcomed as forwarding the free world purpose of economic growth."

Unfortunately, the evidence at hand does not point to any such conclusion. And until such evidence is forthcoming, the President has noted, "We and other free nations must assume that Soviet-bloc aid is a new, subtle and long-range instrument directed toward the same old purpose of drawing its recipients away from the community of free nations and ultimately into the communist orbit."

Britain

Britain has a splendid future if Mr Harold Watkinson, her Minister of Transport and Civil Aviation, sees his faith fulfilled.

Speaking in London on March 15 about the Government's measures to sustain the pound and defeat inflation, Mr Watkinson said the present position was that "we are successfully creating a situation in which all the gains of the past will be preserved, but at the same time a new and more stable foundation will be laid for the future in order that expansion can be resumed on a sounder basis, and one that will be more beneficial to every section of the population."

The Minister went on: "Six months after the start of this operation we can claim that we have had much success. We have restored the value of the pound; we are rebuilding the reserves, and our trade figures are the best since the war. We are beginning to achieve a proper relationship between output, wages, salaries and profits. If we can go on like this, as I believe we can, then what does the future hold in store for us? If we succeed, unimagined prosperity for all of us."

In the next few years, Mr Watkinson added, Britain would have the atom as a new cheap source of home-produced power. "We can have all the benefits of other new industrial developments—in electronics, heavy engineering, and the motor-car industry, to name but a few. We can have a great new system of motor roads, a streamlined, efficient and profitable railway system: we can be leading the world in civil air transport."

"Most important of all, we could be paying the increased wages, salaries and profits that these developments will bring in a stable currency that is not depreciated by the inflation arising from a failure to balance earnings by output."

Britain's motor industry continued to improve on last year's record, when it produced 1,150,000 cars and commercial vehicles and exported very nearly half of them, said Mr A. S. Dick, President of the Society of Motor Manufacturers and Traders, at the Geneva Motor Show.

Mr Dick said: "We shipped a little short of 550,000 cars, trucks and buses overseas in 1957—more than ever before. In January last, the export graph continued to rise. Shipments of cars and commercial vehicles amounted to nearly 60,000, the highest monthly figure ever attained. The British motor industry has certainly had a remarkable recovery from the recession of a year ago."

"The United States was the principal market for British car manufacturers last year, with a purchase of a little short of 100,000 of our cars, worth \$111,000,000. Popular among the British cars going to the States are our sports models, of which between 800 and 900 a week are now being exported to world markets."

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

THE Second Plan has been officially in operation for the last two years and some kind of stock-taking is perhaps in order. In one sense, of course, the occasion is merely an excuse, for, the Plan has never been very far from the surface of the consciousness of our people, and interest in its progress has been coeval with its functioning. At any rate, it has been so in my case, for, looking over my weekly comments in these columns, I find that I have come back again and again to the subject. But, in another sense, the present occasion for undertaking this kind of review is not only propitious, but actually compulsive. Two years' fortune of an endeavour of five years—assuming, for the purposes of the present argument, that collective endeavour could be sliced into such neat little quinquennial packets—should give a reasonably clear indication of its possibilities and weaknesses. The wisdom garnered during the two years would consist not only of the knowledge of the chances of success of the Plan but also of the conditions of such success. Secondly, and more importantly, it would appear that the present moment offers a particularly vantage point for a reasonably clear survey of the immediate past and immediate future. The first two years of the Second Plan have, in my view, already encountered the worst weather of its career, and the Plan is just emerging into what can turn out to be calm waters with all its sails well set for a triumphant voyage. I shall presently explain the nature of the bad weather into which it had run as it had set sail, but, for the present, I wish merely to comment on the fact that there has been a distinct improvement in the mood of the country in its assessment of the last few months, in which the results of a series of concerted acts of Authority have partially restored the original confidence in the Plan. It now merely remains for me to show that the dissipation of confidence was, in the first instance, an uncalculated act of folly for which we have only partially paid the price. Secondly, since it is foreign to my temperament merely to say, "I told you so", I shall indicate how the prospects for the coming three years are extremely bright, provided the lessons of the last two years are seriously taken to heart.

What are those lessons? The first of these is the folly and criminality of allowing our minds and energies to get distracted from our real purposes. It is but trite that, having won our political freedom, it was our all exclusive duty to give palpability to that freedom by releasing our people from the intolerable burden of helpless poverty. The country cannot escape the charge that it has not consistently shown this degree of single mindedness this duty involves. Distractions, many of which were not only unhealthy in themselves but were actually interfering with the prime purposes of our nationhood, have distorted our national life in the last few years. To choose but a random example, there is quite a lot of time and energy wasted on the question of an official language for India. Now, one must have a queer sense of priority in wishing this comparatively unimportant question decided here and now. There is no Hindi economics any more than there is an English economics. Poverty and disease are not tackled better in one language than in another. And when one realises that this constant bickering releases a lot of irrational clashes of interests at all levels, and thus actually undermines the unity of purpose which alone will help us solve our economic difficulties, the criminal folly of this preoccupation is evident. I, for one, cannot imagine why the Congress should not give itself and the country a complete holiday from the discussion of the topic till the end of the Third Plan, when we can allow ourselves the comparative luxury of a controversy of this sort. Similarly, provincial jealousies are constantly rearing their ugly heads, and one cannot see the sense of endangering the integrity of the country by secretly pandering to them while denouncing them in public. The same is true of communally oriented politics, which like the other evils I listed earlier is not only bad in itself but is all the time interfering with the smooth progress of our economic tasks. For a nation apparently engaged in a colossal economic endeavour, the number of political and other distractions we permit ourselves is sinful.

An even more frivolous attitude to our real tasks is to be seen in

the morbid avidity for so-called scandals. I am not insensible of the value of vigilance in a democracy, of the need for keeping a close watch over the way authority is discharging its obligations. And our values being what they are these days, it is also inevitable that scandals should chiefly centre round money. A familiar spectre in any discussion of public morals is corruption among the ruling apparatus, and such corruption is almost always equated to bribe-taking, or some form of financial skulduggery. If one were to give credence to all the whiff of gossip that floats around, we must indeed be the most venal people on the face of the earth. But such charges in most cases have a way of evaporating into nothingness the moment some serious attempt is made to verify their veracity. In any case, it would be true to say that, though there might be lapses, even of the serious sort, the situation is not so hopelessly riddled with corrupt practices as to deserve the kind of obsessional absorption in it. It is true that plumbing is, especially under modern conditions of living, an essential preoccupation, and the sanitary inspector's is a wholly worthy calling. But one must be a psychopath to be all the time concerned with the state of the closet. Readers will recall Gandhiji's terse and crushing summing up of Miss Mayo's book on India as a Drain Inspector's report deserving of the same, neither more nor less, consideration as is due to a document that set out to assess the state of our environmental hygiene. But the drain is not the whole house. One is inclined to suspect that the kind of righteousness about public morals that we see in our country is often nothing more than the evasion of the constructive thought that the real tasks of the situation demand. A little less about the corruption of officials and a little more of appreciation of what they are trying to do would be an essential condition of the success of the Plan.

In this connection, I cannot refrain from commenting upon the deep blow to the morale of the permanent services dealt by the recent discussion in Parliament of the Chagla Report. One notices with regret that some members of

Parliament did not care to have the simple humanity not to attack a man who was not there to reply and not in a position to reply even elsewhere. Secure in the privilege extended to them as members of Parliament, they could say anything they liked without facing the consequence of such rashness; some of them dealt their cowardly blows with little regard to fair play. I know the cynical dictum that politics is not cricket, but it is not politics, but common decency that required that such attacks should not be made. The consequence is that the devoted band of permanent officials who have been bearing the brunt of the tasks of the Plan that the politicians have drawn up (at least nominally) are now filled with a sense of the thanklessness of their jobs. It would not be surprising, though it might be deplorable, if these men allowed their frustration to degenerate into a cynical indifference with the fortunes of the Plan. Fortunately for the country, most of these men are men of the deepest maturity, patriotism and devotion to duty. But, as Mr Nehru himself indicated in his speeches during the debate on the LIC investments, it is necessary to restore the morale of the services if you wish to succeed in the tasks you have set the nation and yourself.

But the most important lesson of the last two years' experience is more directly concerned with the Plan itself. For some reason, which it is too difficult to define with precision, almost since the beginning of the Second Plan, there has been a persistent effort by a section of the public to corrode confidence: and the most tragic thing in the fortunes of the Second Plan has been the success beyond expectation achieved by this section. Even when the first thoughts on the shape of the Second Plan were being formulated, this section was fretting away industriously at the self-confidence that the success of the First Plan had engendered. The plea was that the Plan targets were too ambitious and incapable of realisation; that it would impose an intolerable amount of strain on the economy: the requisite resources would not be forthcoming; that the expectation of friendliness from abroad for our efforts was

naively optimistic and so forth. In the course of subsequent gossips, I propose to deal in detail with these matters, especially in relation to the rest of the Plan period. But the point I wish to make at the moment is that the tremendous volume of creative confidence that undoubtedly existed at the end of the First Plan period has been completely set at naught by the activities of these people. It was nobody's case that the tasks of the Second Plan were not difficult and demanding of the utmost from our people in effort and sacrifice. But, it was also undeniable that, considering the result sought to be achieved, the aim was pitifully low. By harping on the difficulties and by constantly referring to the demands likely to be made by the Plan, a whole nation has been unnerved. A mood of crisis and helplessness has been allowed to seep into public consciousness; and, when this has happened, it is no wonder that the worst expectations of the pessimists were too flatteringly confirmed. It is not realised that, in an endeavour which involves the efforts of whole masses of people, the first requisite is confidence. Mr T. T. Krishnamachari put it admirably when he said that the first resource in a people who are out to develop an undeveloped economy is confidence and courage and the willingness to put in the necessary effort and the fortitude to bear the inescapable burdens. When confidence is eroded, the most important resource is lost.

To those who say that hard facts of economic life, like foreign exchange shortage, etc., have nothing to do with confidence, my answer is simple. It was not anybody's expectation that everything would be plain sailing with the Plan. Indeed, if one reads the Plan, it is clear that it has anticipated all the difficulties we are likely to face. But what was deplorable about what happened in the last two years was that the mood of crisis paralysed thinking, at least of those who were not obliged to deal with the problem. It also seriously unnerved those who were manfully tackling them. The difficulties, at any rate in their general outline, were not unanticipated, and the steps taken were the only ones that could have been taken with or without a chorus of crisis mongering. In other words, it is not that anyone expects the Plan to be smooth sailing, but it is that difficulties are not solved by pulling a long face about them. Indeed, when so much depends on self-confidence and the consequent confidence of others in us, such easy desperation may well make difficulties insoluble. It is hardly fair to those who are trying to face up to these difficulties, troublesome enough in all conscience, to saddle them with the further duties of a rear guard action of supporting popular morale. In times of stress, it is the duty of public spirited men to look after the morale of the people so that those who are

engaged in the real tasks can get on with their job without having to worry about public psychology. This is precisely what was not done in the last two years. More time was spent in restoring confidence, which ought never to have been impaired, than in the actual carrying out of the Plan.

In the subsequent gossips, I shall show how, in their essentials, the expectations regarding resources and targets formulated by the Plan were not wide off the mark. If such is the case and our difficulties were really those of phasing, then, it must be admitted that the pessimism of the last two years was wholly unwarranted. In any case, it is time to cry halt to this mood. There are indications that the worst of the crisis-mongering is over. The most important condition for the success of the Plan is the continuance of this recently restored mood of serene confidence, and determination to work hard.

At long last, the vexed question of where to locate the refinery to process the newly-struck oil in Naharkatiya in Assam is reported to have been settled. Delhi seems to have come to the decision that the refinery—the first in the public sector—should be set up near Gauhati and with Rumanian help. An Indo-Rumanian agreement covering the project is likely to be signed in Bucharest where, in the latter part of May, the Union Minister for Mines and Oil, Mr K. D. Malaviya, will be proceeding in the company of a few Central Government officials. The total cost of the refinery, estimated at Rs 15 crores, will have a foreign exchange component of 60 per cent which is to be fully met by the Rumanian contribution in the form of equipment and technical "know-how". Indian payment, to be spread over a long period, will be in commodities such as textiles, mica, shellac, oil-seeds, jute goods, hides and skins and possibly some ores. The details regarding the time-schedule of the establishment will be incorporated in the agreement, but meanwhile it is understood that the Union Government are keen on the refinery going into commission before the end of 1960. The whole subject, it is learnt, was thoroughly discussed by the team of oil experts who accompanied the Rumanian Premier on his recent tour of India.

I did not visit the annual exhibition of Art in Industry held over the week-end and I don't regret it. Exhibitions of Indian handicrafts are available galore in this city, and up and down Chowringhee and Park Street one can sample any number of them any day in the week excepting Sundays, only they are modestly called shops. The sole difference is perhaps that the exhibits at the Art in Industry Institute are somewhat more numerous and that, instead of being offered for sale, they are lectured on. When the Institute was started a decade ago, its object was

to help industry by providing artistic working models so that machine-made products might be made aesthetically more appealing; re-awakening popular interest in handicrafts was a secondary one. Since then, the Central and the State Governments have done a good deal in the latter sphere, so much so indeed that the Institute need no longer bother with it. But, as to its primary object, one may be excused for enquiring whether there is even a single case in which it has produced and supplied to industry a good model which has been made any extensive use of. The Director of the Institute, I know, has produced a few catalogues of Indian handicrafts which, because they are expensively produced and have been published by renowned booksellers, are dignified by the title of "books", and I wonder, how much the authorities of the Institute have exerted themselves in making him fulfil the object of the Institute besides providing him with ample time to compile his learned "books".

I have always counted myself fortunate in that, in respect of my European friends, the Tennysonian dictum of men coming and going is, from the journalistic point of view, restricted to retirements. And yet, each time I hear of a Clive Street personage due to leave India, it comes as something of a shock. It does little good to one's morale to have such proof positive of time marching on. So, when I learnt that Sir Allan Elliott Lockhart is shortly to be lost to Clive Street and Calcutta environments, my first reaction was, why, it is far too early. Only then did I realise that Sir Allan has spent thirty-two years in this country, and has earned by his hard work the rest he now will have. But, even when rest is required, one wishes that time might have a stop, and that Sir Allan could continue to be with us here. This is particularly so in his case, for, Sir Allan is a man of rare versatility and abounding range of interests. Leaving aside Gladstone Lyall, of which Sir Allan has been Chairman since 1951, there is a host of companies which will miss the keen and conscientious advice he gave to them as director. Then there are the associations—Sir Allan has headed practically every important sub-committee of the Bengal Chamber of Commerce. One of his hobbies was shooting—and Sir Allan will, I am sure, bemoan the shikar he will be bidding goodbye to. Another was racing, and the Royal Calcutta Turf Club will find it hard to find as upright and respected a Steward as he. Since we are talking of sportsmanship, well—Sir Allan has earned his retirement, and who are we to complain that he is depriving Clive Street of his live personality?

The recipe for the production of geniuses has so far eluded eugenicists. Neither Mendel nor Francis Galton had even the dimmest percep-

tion of the secret and their disciples and successors seem to be equally without a clue. Nature's strong-room is, of course, now and then pressed open by the thieving hand of science and a few patents deftly misappropriated. But that is as far as we have gone, and it is apparently a far cry yet when geniuses will come off the assembly line, making the task of keeping count a complicated problem in arithmetic. But this does not mean that we have never tried deliberately to produce geniuses. For all we know, biologists may be busy with their test tube experiments even at this moment, and their success may one day take our breath away as unexpectedly as the space moons did. Nevertheless, it is clear that, so far, we have been more modest, if also more diabolical, in our aims and achievement. What Nature concentrates in single individuals we have sought notionally to distribute among whole races. Whence Hitler's pet theory of Teutonic superiority, the Europeans' continued befuddlement with their own self-importance despite Spengler's "Decline of the West" and the post-war rise of the "black tide" in Afro-Asia and the South African whites' racial paranoia. As political animals, it is quite obvious, we have been more concerned with the creation of whole plateaus rather than of isolated peaks of superiority, a mournful triumph which has been attended with unspeakable inhumanity over large areas of the globe.

In this connection, gynaecologist Dr Green-Armytage's remarks on geniuses at the Los Angeles session of the Congress of the International College of Surgeons have raised interesting points. First, he is reported to have said that there has never been a woman genius. What are the Curies then? And Sappho? Next, according to him, geniuses have always been drink or drug-addicts. But what about Homer, a blind beggar who never had enough to eat? Or Valmiki the hermit? Was Pascal a genius or not? Was Francis of Assisi a genius, or Christ? And must we leave the Buddha out of count? Tolstoy was never a dipsomaniac or dope-fiend despite the luxuries of his earlier years. Can we or can we not call Gandhi a genius? Einstein and Tagore, what are they, then, if not geniuses? Hitler was certainly an evil genius, but he was taller than Dr Green-Armytage's specification of 5'3" or shorter. Goethe was not well-known for a short stature. The ancient Greeks and Romans, the eminent Victorians do not conform to the specification. As for the gynaecologist's theory that geniuses have hardly ever become the fathers of other geniuses, Dumas pere fathered Dumas fils and Leo Tolstoy, Alexi. This raises another question: Are all geniuses of the same dimensions and, if not which is probably true, what are the smallest dimensions to permit a person's inclusion in the category?

GATEWAY GOSSIP

MR C. H. BHABHA never disappoints, especially in providing provocative food for thought; one may disagree with him, or one may agree, but, in either case, he succeeds in evolving a line of argument that makes you think twice. His vast experience, in commerce and finance, perhaps befits him thus to set a controversy rolling; and I have been wondering for some weeks what Mr Bhabha was likely to say, in his capacity as the presiding deity of the Indian Banks Association. For, by all accounts, 1957 has been an eventful year for the banking system, and the developments have in the main been of a sort to enthuse a sense of satisfaction. But then, I should not have forgotten that, if Mr Bhabha has a fault, it is an undue anxiety to search out some topic for criticism. So it is that, in an entirely sensible speech, he expresses some sentiments which, I at any rate, would rather that he had avoided.

Cooperation was a keyword during 1957, as between the Indian Banks Association and the Exchange Banks Association, and Mr Bhabha records this fact. Then, too, there was the more than adequate relationship with the Reserve Bank, which impels the IBA President to express "great satisfaction" at the "very careful consideration" given by the Reserve Bank officialdom to the representa-

S. E. RLY TENDERS

Sealed tenders (Tender No. S/CAL/STV/CL/58) are invited for Stevedoring and clearance of wooden sleepers and timber from chartered or liner vessels arriving at Calcutta Port on Railway Account.

Tender Forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta 23, on remittance of Rupees Five (not refundable) only per copy by Money order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, South Eastern Railway, Garden Reach, by local firms.

Earnest money Rs. 1000/- is to be deposited with this Railway's Chief Cashier and the receipt obtained thereof should accompany the tender without which the tender is liable to be rejected. Approved Contractors who have already made a permanent deposit of Rs. 1000/- with the Controller of Stores are exempted.

Firms not on this Railway's list of approved Contractors must enclose a valid Income Tax Clearance Certificate with the tender.

Tenders will be opened at 12 noon on 30.4.58 in the office of the General Manager.

S138 GENERAL MANAGER

The Controversial Bhabha

It would have been graceful and gracious for Mr Bhabha to have stopped on this note. Unfortunately, some compulsion seems to have driven him to further remarks on the Reserve Bank; and these are not entirely proper although, interestingly enough, the viewpoint expressed is almost unexceptionable. In referring to the authority and independence of the Reserve Bank Governor, Mr Bhabha says that, "despite all official and Ministerial assurances of non-interference, the impression seems to prevail that there is a certain amount of subservience of the Reserve Bank to the Finance Ministry of the Government of India". Mr Bhabha is perfectly right in asserting that the central banking institution must be autonomous and independent; but does he have a basis for insinuating that such independence no longer obtains? And is he on firm ground when he ventures to remark that the pre-nationalised Reserve Bank used to publish—as apparently the present Reserve Bank does not—an "effective and highly critical review of economic conditions and policies"?

By implication, Mr Bhabha thus criticises the Reserve Bank for, shall I say, two sins of omission. On the one hand, in the annual publication on banking which it brings out, "the Reserve Bank remains silent about the policies of the Government as well as the extent to which it was necessary for it to invoke the various wide powers vested in it". On the other hand, in respect of the amendments to the Reserve Bank Act in the matter of the currency cover requirements, Mr Bhabha says that the Reserve Bank, as an expert body, "should have paid heed to the advice voiced from unofficial quarters and asserted itself to a certain extent in this matter before permitting a situation of the type that arose and necessitated the emergency amendments to the Reserve Bank of India Act".

I admit that the central banking institution of a country has to be independent enough and courageous enough not only to criticise but also to oppose Government's policy, if it conceives that policy to be wrong. Indeed, there have been such instances, and even a recent one in, if I remember right, Sweden. But where Mr Bhabha errs is in thinking that the Governor of the Reserve Bank will independently have thought, as a private banker might, that Government have been on the wrong track. If the Reserve Bank "remains silent about the policies of the Government", it is because, may I suggest, the Reserve Bank fully endorses what has been done in the monetary sphere. So, the slur that the Reserve Bank, in keeping mum, shows itself to be weak-kneed is altogether wrong.

Secondly, I cannot quite understand the burden of Mr Bhabha's complaint in regard to the currency reserve. It cannot surely be that the Reserve Bank should have disapproved of such a steep import surplus, or that, in consequence, it should have insisted that holdings of sterling securities for currency cover should not on any account be permitted to go below a certain level. For, I don't think that it falls within the competence of any central banking institution thus to refuse to part with any so called sacrosanct currency cover; indeed, any action of this nature, far from strengthening a currency, would merely weaken it in the sense that it would evoke the suspicion that foreign exchange commitments would not be honoured. I suppose what Mr Bhabha means is that the Reserve Bank could have and should have foreseen the need for scaling down the statutory minimum, and that, with ample time before it, it should have obviated the need for the emergency action constituted by the ordinance. Here, too, however, we do not know the whole story: could it be that Government were expecting foreign assistance? And was it because of such anticipation that a reduction in the minimum was deferred to the last possible moment? It doesn't matter what the hypothesis is, the Reserve Bank can be seen to be blameless.

So, while I support Mr Bhabha's contention that the Reserve Bank ought jealously to guard its independence, I am afraid I have to disagree with him as far as concerns any doubt about that autonomy in the present circumstances.

Mr Bhabha's review of the banking system is unimpeachable, though here, again, I have one reservation to make. The Scheduled Banks have done superbly well, in adding to their Deposits during 1957 by Rs 293 crores. There can be no two views about this fact, and I join with Mr Bhabha in his depreciation of the "unwarranted criticism of banks and bankers in India...made by those in authority." The record of Indian banking is indeed creditable, though I wish that the IBA Chairman had not omitted to draw attention to the harmful effect that the higher money rates, especially those on Deposits, are having upon the balance of profit of the banking system.

In alluding to the increase of Rs 123 crores in the Deposits of the State Bank, Mr Bhabha has been careful to point out that, in order to obviate unfair comments about the rate of increase in Deposits of the other banks, as much as 70 per cent of the State Bank's new Deposits were derived from Counterpart Funds. I fail to understand why Mr Bhabha has not similarly distinguished the figures of the State Bank from

those of the other Scheduled Banks in regard to investments. Mr Bhabha claims that "a good part of the increased Deposits of banks during the past year were invested in gilt-edged securities." The rise in the investment portfolio during 1957 amounted to Rs 68.52 crores. And this increase, says Mr Bhabha, "was effected despite the heavy demand for bank finance from various quarters". The IBA Chairman has omitted to mention that the State Bank alone is responsible for an increase in the gilt-edged portfolio amounting to Rs 78.13 crores. Thus, the other Scheduled Banks, far from utilising any part of their increase in Deposits in building up their investment portfolio, have actually disinvested in gilt-edged for around Rs 10 crores.

Mr Bhabha places his finger on the root of the problem in respect of gilt-edged, when he points to the "rather disturbing" decline in gilt-edged prices. The index number of security prices, which fell from 101.2 to 91.7 after the increase in Bank Rate in November 1951, has, in the years since then, declined further to 89.1 at the end of 1957; but then, meantime, a rise in Bank Rate to the tune of half per cent has occurred. I publish below a number of relevant statements in this regard of Mr Bhabha's:

"In recent years the market in gilt-edged securities has been showing symptoms of narrowing."

"The popularity of gilt-edged securities among the investors in this country is gradually diminishing...."

"Such a trend is indeed regrettable and the significantly reduced borrowings by the Central and State Governments from the market cause anxiety to all those who have the well being of the country at heart."

"The absence of faith in the stability of prices of such a type of investment on the part of the average citizen in this country is perhaps the most disturbing cause of this unfortunate state of the gilt-edged market."

The moral, as Mr Bhabha says, is obvious. Unless the policy of Government and the Reserve Bank is attuned to keeping the gilt-edged market in such a state as to ensure that no depreciation takes place in the existing loans, we cannot expect confidence in gilt-edged from the investing public. It is no good for the Reserve Bank or for the Government to charge that the Scheduled Banks have not utilised a larger proportion of their new Deposits in the purchase of gilt-edged; unless there is the faith that there will be no capital depreciation, it would be presumptuous to expect that the Scheduled Banks will be prepared to suffer capital depreciation in the service of their country.

BOMBAY REVIEW

Addressing the annual general meeting of the Bank of Baroda Limited last week, Mr Tulsidas Kilachand, the Chairman, has pointed out that while the recent concessions announced by Mr Nehru during the general debate on the Budget will go some way toward improving the investment climate, more relief of a general nature will be required if capital formation in the country is to reach the requisite level. The level of taxation and the rate of deficit financing in the first two years of the Second Plan have already exceeded the limits set by the Planning Commission. But despite such oppressive and high levels there is no guarantee that the targets of the Second Plan will be fulfilled. Indications are that achievements will fall far short of targets. The effect on the country's economy of the fiscal policy of Government is that development activity in the private sector has slowed down in the course of the past one year for want of adequate resources.

In Mr Kilachand's view, deficit financing if continued at the current rate will exceed Rs 1200 crores by the end of the Plan. Likewise taxation has also become oppressive to the extent of completely crippling private enterprise. Many of the private industrial concerns have exhausted both their internal resources and capacity for borrowing with the result that unless there is a substantial improvement in fresh investment, development activity in the country will be adversely affected.

In an attempt to get the requisite resources some of the industrial concerns have started taking deposits from the public at high rates of interest. Such a state of affairs is the direct outcome of Government's failure to recognise the fact that in the present context of high interest rates, investors will naturally expect higher yields on equity capital. It is, therefore, evident that if private enterprise is to function efficiently it is incumbent on Government to ensure that conditions conducive to capital formation obtain in the country.

It is, however, to be admitted that it will be mere wishful thinking to expect Government to make any radical changes in the pattern of taxation. But one can find no valid objection to some readjustments here and there especially when such alterations will not involve any serious loss of revenue. Mr Kilachand has pointed out that it will be advisable for Government to remove those tax proposals which are relatively unproductive of revenue and which act as deterrents to initiative, enterprise and investment. In this list can be included the tax on the issue of bonus shares.

More Incentives Needed

Population Control

It is generally agreed that if India is to derive the fullest benefit from its development programmes, it is essential that the rate of growth of population should be brought within manageable limits. It is in this view that family planning becomes important. But since family planning is a matter that vitally concerns the individual, utmost care is to be taken in implementing any programme connected with it. In the first instance it is to be realised that Government can only act as a secondary force leaving the actual planning to the individuals. It is therefore gratifying to note that Government's family planning activities are conducted solely on a voluntary basis, taking every care to see that the social and cultural values are not affected.

Reviewing the progress of Government's family planning programme at the fourth meeting of the Family Planning Board in Bombay last week, Mr D. P. Karmarkar, Union Health Minister, said that Government have provided Rs 25 lakhs for the programme in 1957-58 and Rs 46 lakhs in 1958-59. He has commended the provision of family planning clinic in every teaching institution for doctors and medical auxiliaries and to incorporate family planning in their course of study so that trainees from these institutions are able to give advice on the subject in the normal course of their work. In this connection Government propose to give every assistance.

Another measure which has been outlined by Mr Karmarkar if taken up earnestly will go a long way in achieving the objective of the programme. The Health Minister has said that the health visitor or social worker must be an essentially welfare worker who takes active interest in the health of the family as a whole. Advice on family planning should not be the sole duty of such workers. It should form part and parcel of advice and guidance on family welfare, home nursing, maternal and child health. Such equal emphasis on other aspects of family welfare will ensure the success of the family planning programme.

The Non-Ferrous Metalware Industry

The position of the metalware industry has considerably improved in the past few years thanks to increased demand for its products. Till a few years ago its main preoccupation had been overproduction but today the position has entirely changed and it would appear that the industry has to expand in order to meet the increasing demand. In view of the fact that it is largely dependent on imports for its raw materials,

extension is not easy in the present context of the drastic reduction in imports. The main problem which is confronting the industry, therefore, is the procurement of an adequate quantity of non-ferrous metals which are in short supply. The main metals, copper, zinc, lead and tin which were on OGL till the middle of last year are now placed among licencable articles and established importers only are granted licences on a restricted quota basis. As a consequence of this change, the supply position of these metals has worsened in the past few months and metalware manufacturers have had to pay from 15 to 30 per cent over the landed cost. Though Government have taken some steps to ensure that actual users get their supply at an equitable price, the position is still far from satisfactory.

In his presidential address to the recent annual general meeting of the All India Non-Ferrous Metalware Manufacturers' Association, Mr Vithaldas H. Shah, has urged Government to take some immediate action to make available supplies in the country reach actual users at reasonable prices. In this regard he has welcomed the reported move on the part of Government to increase the supply of copper in the country through imports by the State Trading Corporation. It is also gratifying to note that Government have already arranged for the supply of a sizable tonnage of this metal to actual users from the allotment of 7,500 tons under the Colombo Plan.

That the Government have decided to apply the Industries (Development and Regulation) Act, 1951 to utensils produced from non-ferrous metals shows that Authority has placed the metalware industry amongst the essential industries in the country. In the present context of the great importance attached to export earnings, this industry also deserves special attention because its products are in demand in overseas markets. During the past year though exports of copper artware and utensils have been well maintained, there has been a decline in the quantum of exports of aluminium utensils. The fall in the exports of aluminium utensils is due to a growing tendency on the part of erstwhile importing countries to manufacture aluminium utensils within their borders. It is to be hoped that Government will take suitable measures to enable the industry contribute an increasing share to export earnings of the country.

Textile Stores

While it is undeniable that the present scarcity of foreign exchange and the consequent drastic

cut of imports have given a fillip to domestic industry in a number of new fields as well as in directions in which Indian producers have yet to establish themselves, it cannot be maintained that these developments have not brought some adverse effects in their wake. The sudden cutting off of imports has placed many an industry in a difficult position as regards some essential requirements which are not manufactured in the country. According to Mr C. A. Kulkarni, president of the Association of Merchants and Manufacturers of Textile Stores and Machinery, the textile mills are finding it extremely difficult to obtain their requirements of essential machinery and sometimes even spare parts. Though Government have made arrangements through the State Trading Corporation for the import of textile machinery from Japan on a deferred payment basis, it is not clear when they will be available.

From the point of view of the textile machinery and stores manufacturers in this country, the import restrictions afford a rare opportunity to expand their production. They can also expect every encouragement from Government in this regard. In this connection Mr V. Nanjappa, Textile Commissioner has pointed out that the textile industry should extend a helping hand to the textile stores and machinery industry.

Need for Tax Relief

Addressing the members of the progressive group on the "Role of the private sector", Mr G. D. Somani prominent industrialist and M.P. warned against the adverse effects of the present tax system on industrial production and stressed the need for relief at least in respect of the tax on bonus shares, and excess dividends which according to him did not yield a substantial revenue but only acted as deterrents to initiative and enterprise.

Explaining the extent of the burden which the present taxes constituted for the private sector, Mr Somani drew attention to the fact that while the Planning Commission had fixed Rs 90 crores as the scope for additional taxation for the period of the Second Plan the new taxes levied by the Central Government alone exceeded this limit by nearly Rs 60 crores.

At the same time Mr Somani expressed confidence of the private sector being able to fulfil its target in respect of industrial production. But he said that many industries were not able to make headway for want of equity capital consequent on the heavy burden of the various taxes which industries in general have to bear. In the interest of improving the climate for investment the case for tax relief for the private sector is overwhelming.

WORLD OF COTTON

AS a result of non-utilisation by importers of full amounts allocated to them by sub-authorisation issued so far for the import of American cotton under P.L. 665, some balances are available for redistribution. It is proposed to cancel such balances from the respective sub-authorizations and reallocate this small surplus to the following categories of importers only, provided their contracts are still in force:—(1) Those importers to whom sub-authorizations were issued under P.L. 665 on a pro-rata basis as the ceiling was inadequate. (2) Those importers, who had applied originally under P.L. 480 with evidence against P.L. 665 converted to P.L. 480 and whose applications were considered on a pro-rata basis under P.L. 480, may also apply, provided they are able to obtain, by March 31, 1958, the confirmation of their suppliers that they are agreeable to supply under P.L. 665 for whatever balance is available. It should be noted that no additional commitments against the original contracts will be entertained; and (3) Those importers whose applications, both under P.L. 480 and P.L. 665, were received within the due date prescribed, but could not be considered because they were not complete in all respects.

Again, the Government are expected to announce an import quota for good grade US cotton stapling 1 1/16" and above. India has still unused cotton funds under P.L. 480 which can finance about 60,000 bales (400 lbs each) of good middling US growths. The shortage of these varieties in the country at present and hopes of getting more American aid in future are stated to have prompted the Government to decide in favour of the utilisation of cotton funds under P.L. 480 programme.

Meanwhile, the Indo-Egyptian trade agreement, which has now been signed, provides for an exchange of Egyptian cotton by Indian tea and jute goods against payment in Egyptian pounds and not in rupees. According to market expectations, about 45,000 bales of Egyptian cotton will be licensed for imports with a similar quantity of Sudanese cotton.

The Sudan's decision to reduce the export duty on cotton by 33 1/3 per cent and reserve prices by 4d per pound at a time when the Government are expected to announce import quotas for Egyptian and Sudanese cotton has come as a welcome surprise to the textile industry. The reduction in the duty from 3.75d to 2.50d per pound will make Sudanese cotton cheaper by about Rs 55 per candy, while lowering of reserve prices will bring the minimum price of that cotton down by Rs 200 per candy.

It appears that both Egypt and Sudan look on India as an import-

ant prospective buyer of their cotton. Cotton houses, therefore, expect some concessions from Egypt, which is inclined to bring the price of her cotton in parity with that of Sudan. While Egypt has already offered the discount of 12 per cent to Indian mills, it remains to be seen whether the discount will now be raised to attract Indian buyers.

The marketing policy for 1957-58 Sudanese cotton crop is yet to be announced. The Sudan Gezira Board seems to be keen on disposing of her unsold balance of last season. The Board has already announced a reduction in export duty on "S" and "L" Sudan varieties. This measure has now been supplemented by an equally important step in that the Board has now reduced its reserve prices drastically.

Mill interests are reported to have drawn the attention of the authorities to the rapid depletion of stocks of both Sudans and Egyptians with the mills and have asked for immediate permission to import these cottons. In the context of the reduction now announced by the Sudan Gezira Board, it is now imperative that the authorities should come out with an immediate announcement before it is too late.

The Government of India have also decided to permit the import of 70,000 bales of cotton from East Pakistan. In this connection, the Deputy Minister for Commerce and Industry has stated that licences for this cotton were already granted to actual users, viz. the mills, on production of quota letters issued by the Textile Commissioner. Payments against these imports were made on the presentation of shipping documents.

However, marketmen are disappointed at the Government's failure to make an announcement concerning the export quota of 2" staple. The latest quota announcement has rendered the situation unhealthy price-wise. Market circles presumably feel that no cotton of staple length 23/30" can go out of this country. There are a few Deshi varieties which may attract foreign demand; but prices of these varieties have already gone up substantially. Together with the latest quota, the total quantity of cotton released for export amounts to 2 lakhs bales, inclusive of 1.5 lakhs bales of Bengal Deshi.

COTTON FUTURES:

Prices in the futures section reacted sharply on heavy selling pressure. The expected release of the export quota of 50,000 bales of short-staple varieties of not about 23/32" stapling had already been discounted by market circles. Fears were, however, expressed, whether the inferior quality permitted for export would be acceptable to foreign importers at

all. This induced selling in Jharilla May contract, which declined to Rs 683.75 from Rs 687.50. Jharilla March went off the board on Tuesday at Rs 688 on heavy bull adjustments. The clearing rate for Jharilla May was fixed at Rs 685 and the settlement days were fixed on April 1 and 3.

SPOT MARKET:

Trade enthusiasm was reflected in the Spot market where activity broadened as many mills, who had so far adopted a hand-to-mouth policy, began their purchases of raw material. All popular varieties were, therefore, pushed up by about Rs 5 per candy, the improvement in Jaydhar being more marked to the extent of Re 15 per candy.

On the export front, enquiries from the UK, Japan and France were pouring in. Reliable sources indicated that shippers had put through sizable business with Japan during the past few days, taking advantage of cheapness of their cotton as compared to that of Pakistan.

STATISTICS:

Exports by rail, from 1st September 1957 to 20th March, were 151,758 bales. Estimated mill consumption in Bombay, during the same period, was 723,100 bales as compared to 738,814 bales in the corresponding period of last year. Estimated stock of raw cotton, held held by exporters, dealers and mills in Bombay, on the 20th March 1958, was 603,424 bales as compared to 595,210 bales on the corresponding date of last year.

Following is the consumption of cotton by mills during the period 1st September to 31st January (in bales of 392 lbs):—

	1957-58	1956-57
Indian ..	1,946,187	1,941,293
Pakistan ..	Nil	Nil
American ..	117,390	42,526
Egyptian ..	31,555	51,294
Sudan ..	31,597	42,636
East African	65,893	108,137
Others ..	2,983	4,042
Total ..	2,195,605	2,189,928

NEW YORK COTTON MARKET:

Price movements in the New York cotton futures market were rather irregular. The market displayed a steady undertone immediately after the opening on trade buying in the nearbys and commission house and New Orleans demands in the forward months. There was, however, no follow-through and prices tended to ease under increased profit-taking. The Census Bureau report, placing the final ginning from the 1957 crop at 10,875,000 running bales, was considered slightly bullish; but exerted little influence on the market. Middling Spot was quoted at 36 cents per pound.

The US Agricultural Department is now considering to establish a direct export subsidy for cotton. A subsidy scheme, if it is set up, will replace the Department's present policy of selling cotton for export by competitive bidding. No changeover is, however, contemplated for the current season; but the Department is looking to Congress for a directive on how it should conduct cotton sales beginning on 1st August this year.

The International Cotton Advisory Committee has generally predicted a brighter future for cotton in the western world. The Committee has stated that the reduction in stocks, this season, had been primarily because of much lower production, particularly in the USA. World production is now estimated at 39.4 million bales—down by 1.7 million bales from last season. Curtailed production in the USA and Japan is expected to call a temporary halt to the continuous expansion of cotton consumption of recent years and world consumption may be somewhat lower than last season's record of 42 million bales.

LIVERPOOL COTTON MARKET:

Prices in the Liverpool cotton futures remained fairly steady; but obscurities of the US export policy and prospects of still further heavy CCC export shipments were not conditions in which operators were prepared to commit themselves.

CLOTH AND PIECEGOODS:

The Bombay Cotton Piecegoods market was in a better form last week. Although demand for several qualities improved perceptibly, prices remained more or less unchanged. Dealers were hopeful that the offtake would improve still further in the coming weeks. It was also felt that, if the present trend was maintained, mills would be able to dispose of the heavy stocks lying with them in the near future. It was also encouraging to note that the South Indian centres also evinced better interest in the course of the past few days. Improved enquiries were also reported from Delhi, Uttar Pradesh and Bihar.

On the export front, however, conditions did not appear to be satisfactory although shippers were hopeful that the demand would improve in view of the better conditions prevailing in the domestic sector. Singapore confined its purchases to small lots, while only moderate business was reported done with Ceylon. Business with Burma continued to be negligible as the Burmese authorities have not yet issued import licences. Advices from West Africa were quiet, while East Africa was reported to have booked some business. Fresh enquiries from the Sudan was said to be subdued.

Paucity of Ready Copper

PAUCITY of ready copper has continued to persist; and the material, which arrived per s.s. 'Kampala' and 'Amra' is reported to have disappeared from the market. Fresh arrivals are expected shortly and, despite this factor, the rate for the metal has continued to display a firmer tendency, being quoted at Rs 175 per cwt. The main contributory factor is the fact that India's requirements have to be satisfied largely by imports, while the rate on the London market has risen by nearly £15 to £178 per ton.

As far the London Metal Exchange is concerned, three main factors have helped to improve the price. Firstly, the cut in the UK Bank Rate has encouraged replacement buying. Secondly, demand from Europe has increased considerably. Lastly, the US Custom Smelters have increased their price from 43 to 23.50 cents per pound. However, present indications are that the supply is likely to be excessive in relation to demand for some time. Whether requirements will overtake supply in the longer run depends upon US consumption and the tariff changes that are likely to be made to protect US producers.

The market for Zinc is ruling quiet with the rate hovering idly around Rs 50.75 per cwt, thanks to an adequate supply to meet the demand. Trading in the Lead section continues to be featureless, the rate being quoted around Rs 63 per cwt. Tin continues to rule quiet at Rs 128.50 per quarter on lower Singapore advices.

On the London Metal Exchange, Zinc is quoted around £63½ per ton. The future outlook for the metal appears to be uncertain. The Lead section remains dull with the rate quoted at £75½ per ton. Until the US duty question is cleared up, the market is likely to remain colourless. There is a certain amount of speculation whether the International Tin Council will change its policy in respect of export quota at its meeting next month. This may probably be the reason that Tin remains unchanged at £730 per ton.

Oils & Oilseeds

Bullish sentiment persisted on the Bombay Oilseeds Exchange where prices made further headway on speculative buying. The announcement about allocation of the groundnut oilcake and the recommendations of the Indian Central oilseeds Committee for a reduction in the export duty of castor oil and for an export quota of groundnut oil were the main factors to revive fresh buying from trade as well as speculative houses. With the result, new offers were very poor and prices developed a

hardening tendency to close at the best levels for the week.

Although the US demand for Cas'or Oil continued to be absent, a section of the trade was optimistic about its revival in view of the measures being taken in that country to counteract recession. Castor May delivery closed at Rs 148.75 after touching a high of Rs 149.12. In the ready section, the rate was quoted at Rs 29.50 and Castor Oil, commercial quality, at Rs 15.12.

There were strong reports that the UK was, once again, in the market for a large quantity of Linseed Oil and that a shipper had chartered a steamer to effect shipments of about 2,000 tons of oil sold to that country at £108 per ton. This factor lifted the rate of May delivery to Rs 31.44 from Rs 31.00, to finish the week at Rs 31.25. In the ready section, the rate was quoted at Rs 30.31 and Linseed Oil at Rs 16.25.

The tendency in the Groundnut section was generally Arm. May delivery closing at Rs 162 after opening at Rs 161.25. In the ready section, sold and buying was quoted at Rs 163.50, and Groundnuts Oil at Rs 27.62.

The decision to grant export quotas for Groundnuts Oil makes on the basis of 20 per cent of their basic year's exports has been received with a feeling of relief. The Government originally allowed exports of cakes within a ceiling of 20,000 tons; but business was handicapped in the absence of the announcement of the quantity that an individual shipper would be entitled to export. The latest decision has, however, clarified the situation.

Gold & Silver

The Government of Bombay have approved the decision of the Board of the Bullion Association to impose special margins on outstanding long positions in silver "Chaitra" and "Vaishak" settlements. The Association has stated that the margin at the rate of Rs 500 a bar on outstanding net positions above 40 bars will come into force on March 26. The Government announcement has also asked for submission of statements of outstanding purchase and sales by members as well as those of their clients.

Naturally, the setback in silver has been attributed to bull unloading, induced by the approval given by the Bombay Government for the amendments proposed by the market authorities to bye-law 33A. As against an offtake of only 10 bars, arrivals were as much as 18 bars. Forward rates moved between Rs 193.62 and Rs 195 and spot rates between Rs 194.00 and Rs 195.12, to finish at Rs 194.12 and Rs 194.50 respectively.

Gold receded under the impact of large arrivals and increased offerings of Kolar gold. The National Bank of India was reported to have sold 2,100 tolas of Kolar gold around Rs 111.15. Forward rates moved between Rs 111.19 and Rs 111.75 and spot rates between Rs 110.87 and Rs 111.37, to finish at Rs 111.50 and Rs 110.87 respectively. Sovereign eased off to Rs 71.26 from Rs 72.

DEATH
REVIEW

MR NEHRU laid on the table of the Lok Sabha on Thursday last the long awaited explanatory memorandum on the foreign exchange position in the first two years of the Second Plan. The statement was actually prepared last autumn in response to persistent anxiety about bad budgeting of foreign exchange content of our Plan requirements resulting in heavy drawing on foreign exchange nest eggs of various kinds. The Finance Ministry set to work and collated the necessary data, and the Planning Commission have now interpreted the data thus collated and brought them up to date, and the results have been placed before the public.

Broadly speaking, the statement confirms the view that the exchange difficulties were due mainly to the rise in imports necessitated by the attainment of our goal of the Second Plan. It discloses that rather than the impression that, somehow, the private sector was the villain of the piece, having consumed more than the planned share of the foreign exchange in much quicker time. It also shows that the rise in the cost of the imports due to causes beyond our control was not very significant. Fourthly, it shows how vulnerable our entire economy is in the agricultural front impinging adversely on our foreign exchange resources. A good deal of our foreign exchange troubles in 1956-57 was due to heavy import of foodgrains. Lastly, the moral of it all, drawn by the statement itself, is the need for a closer and tighter foreign exchange budgeting instead of the rather casual happy-go-lucky incidents of foreign commodities.

The statement shows that the present difficulties (now happily under control) commenced some time in April 1956, and reached their crucial worst in March-September 1957. By March 1957, our foreign reserves had fallen by Rs 219 crores, and by September, they had gone down by Rs 360 crores. Our sterling balances, which stood at Rs 527 crores at the end of March 1957 dipped down further, and are now expected to stand, at the end of April next, at Rs 280 crores.

The main difficulty has been caused by increase in imports rather than decrease in exports. Indeed, export earnings have been going up during the period, though, of course, not to the extent anticipated. Export figures have been showing a steady upward trend from Rs 596.6 crores in 1954-55 to Rs 641 crores and Rs 637 crores in the next two years. Imports, on the other hand, have shown a steep rise. From Rs 751 crores in 1955-56, they have shot up to Rs 1077 crores in 1956-57, an increase of Rs 326 crores. At the end of the current month, the out-

Foreign Exchange Post-Mortem

standing commitments are estimated at Rs 864 crores, of which the private sector's share is Rs 300 crores, the rest being on Government account. Of the Rs 300 crores, Rs 200 crores represent normal outstandings and only Rs 100 crores on account of capital goods for the Plan.

A comparative study of the break up of the import bills for the two years 1955-56 and 1956-57 is revealing. The most striking thing about the figures is that the largest single increase has been in the import bill of foodgrains which has equalled that of import of machinery. This shows at once the real weakness of our economy, a weakness that might conceivably set at naught all our other gains. Unless our agricultural production is able to reduce our dependence on foodgrains substantially, deep cuts in our foreign exchange resources, needed for the more ambitious industrial portions of our Plan, will inevitably jeopardise the industrial targets. Thus, not only from the point of view of controlling the domestic inflationary situation, but also from that of getting on with the industrial core of the Plan, a really determined effort on the agricultural front is inescapable.

For the rest, the break up supports the view that the increase in the foreign exchange draft has been in pursuance of the Plan's objectives. In this connection, it is necessary to recall that not only was the gap in foreign exchange anticipated by the planners, but also that the expectation was that the drain would be in the first, rather than in the second, half of the Plan. Machinery, iron and steel account for the bulk of the increase under individual heads, taking care of about Rs 133 crores of the increase. There has been some rise in consumer goods imports, but that has not been very enormous. In any case, the truly drastic cuts in imports under this head, even to the extent of stopping medicines and so forth for which we have as yet no wholly satisfactory substitutes, will correct any early extravagance. The inexorable demands and the need for importing essential raw materials (commensurate with our new status as a nation increasingly industrialised) have made some inroads into our foreign exchange assets. Increase in defence stores account is, along with other Government imports, at Rs 49 crores. The increase in import bill due to the increased tempo of industrialisation was reflected in such items as non-ferrous metals, oils, chemicals, drugs and also, to a smaller extent, by items like rayon, yarn, raw wool, raw rubber, etc. Of the other items, sugar whose import increased by about Rs 13 crores in 1956-57 became in the subsequent

period an asset rather than a liability.

Though the exchange difficulties were mainly due to the heightened tempo of Plan expenditure, there were certain factors which aggravated the situation. First among these is the regrettable increase in defence expenditure about which there was much heart searching in Parliament recently. On this score, the note does not hold out much cheer, for, it says that the foreign exchange component of the defence expenditure has been steadily rising in the last few years, and it seems likely that the annual average during the first two years of the Second Plan would be about Rs 30 crores higher than the average of the preceding three years. And what is more, the outstanding commitments are also very heavy. While one may regret the necessity of this enormous drain on our foreign exchange resources, there is apparently not much that can be done about it with a neighbour, like Pakistan, sabre-rattling all the time. But, it would be necessary, consistent with our professions in political contexts and the needs of the Plan, to see whether or not further economies should be effected in our defence budget.

The other complicating cause was the "under-estimate of the higher requirements" of raw materials, components, etc., for maintaining the high level of industrial production. Of course, the need for providing for the quickening tempo of industrial activity was foreseen at the time of the original estimates, but, by the nature of the case, such an estimate has been somewhat arbitrary and, in the event, inadequate.

It is comforting to note that the widely canvassed cause of increased cost of imports and freight rates has been one of the sources of our recent troubles only to a very limited extent. The statement is fairly reassuring on this point. The large increase in the value of our imports between 1955-56 and 1956-57 was mainly due to an "increase in their volume and only to a relatively small degree to an increase in the unit cost arising from higher prices abroad or from the rise of freight rates. The Reserve Bank has estimated the rise in freight rates resulting from the Suez episode at about Rs 15 to Rs 20 crores in the total value of the imports." This news is cheering not only because it has removed an existing misgiving about the past, but also for the prospect of our future commitments not being distorted by external factors. The much advertised recession abroad is again a favourable factor in the lowering of our cost of our imports, though, of course, its adverse effect on our export earnings is not quite a welcome consequence.

Finally, the statement repudiates the suggestion that a spending spree by the private sector encouraged by indiscriminate licensing has been one of the causes of our recent troubles. It states that the private sector has not gone beyond what was laid down in the Plan. Some industries, however, had gone ahead of the time schedule within the Second Plan itself. These include sugar, bicycles, electric transformers, electric motors and ACSR conductors. Thus, there has been an error in phasing, but no uncontrolled expansion of the private sector beyond the limits set by the Plan at the expense of the public sector and other areas of the economy.

The statement concedes that there may have been some lack of control in the past over the foreign exchange situation owing to certain laxity in sending delegations abroad too freely and in constructing too many large buildings without any thought of commodities that have to be obtained abroad. There has also been some lack of coordination or firm grip of the situation by the absence of foreign exchange budgeting. This wholesome control has, according to the statement, been revived since January 1957 with the result that there is a more careful husbanding of resources. There can be no doubt that the lessons of the last year and a half have painfully brought home to authority the need for the greatest vigilance in the matter. It is unlikely that the lesson will be forgotten in a hurry.

In this context, it is worth while to utter a word of caution about one aspect of the prospective experience in regard to foreign exchange during 1958-59. That is, that the extent of the import surplus is likely to be obscured from time to time by receipts against foreign assistance. If, therefore, in particular weeks, the Reserve Bank's foreign balances appear to show an improvement, this should not be mistaken to mean that the trend in balance of payments has reversed and in our favour. At the same time, I should also point out that we must not be unduly put out by the contingency of a sustained drawing on our balances during the next six months. For, the summer months are traditionally a period during which exports tend to be a bit slow. So, we should guard against both extremes—excessive pessimism as a result of continuing import surpluses, or ebullient enthusiasm as an offshoot of accruals to our balances by dint of foreign aid receipts.

As this journal pointed out more than a year ago, in a Leading Article, and as Mr Nehru suggested recently, the thing to do would be to start framing annual Budgets for Foreign Exchange.

NEHRU
REVIEW

A sizable increase in agricultural production has become one of the immediate tasks of the country for the simple reason that its future development itself depends in a large measure on its ability to attain self sufficiency in food. The increase in population and the steady improvement in the standard of living have considerably increased the demand for foodgrains. If the country continues to spend huge sums, as it is now doing, on the import of food from abroad, its development programme will suffer a setback as food imports will eat into its reserves of foreign exchange leaving little for use on capital projects. It is, therefore, rightly pointed out that agricultural expansion is of vital importance to our country.

The fact that despite strenuous efforts in a number of directions in the past five, six years, agricultural production has not increased to the desired level, has imparted a sense of urgency to the problem of food production in the country. The fresh efforts that are sought to be initiated aim at eliminating the obstacles in the way of kindling the enthusiasm of the agriculturists. The principle that the tiller of the soil alone should own the land has been generally accepted and many State Governments have already taken steps to give this principle a concrete shape. It is, however, recognised that much besides land reform has to be done if the desired result in the agricultural sector is to be obtained.

One such measure is price stabilisation for farm products. It is found that almost all countries have policies to support and stabilise agricultural prices. In an underdeveloped country like India there are very many problems which have to be solved before agricultural support and stabilisation measures can be formulated. Inaugurating the FAO Centre on policy to support and stabilise agricultural prices and income in Asia and the Far East in New Delhi early last week, Mr Ajit Prasad Jain, Union Minister for Food and Agriculture, has detailed the complications in the way of framing price policies. Broadly speaking a price policy should ensure that the interests of both the producer and consumer are fully safeguarded. And in a developing economy it should also help achieve the various production targets. An important problem in this regard in our country is the need to ensure social harmony. For while the industrial worker has been able to get substantially higher wages, the agricultural worker is still getting unduly low wages and incomes. This glaring disparity in incomes between two classes of workers has also to be taken into consideration when prices for agricultural produce are fixed. An idea of the difficulty

facing Government in devising a satisfactory price stabilisation policy for agricultural produce can be had from the apparently valid criticism that Government's land policy by which they seek to place a ceiling on land holdings savours of confiscation of a particular asset when no such limit is sought to be fixed with regard to other types of assets.

Bihar Budget

THE budget presented by Dr S. K. Sinha, Chief Minister of Bihar for 1958-59 shows no departure from the general pattern of State budgets this year. Like his counterparts in the other States Dr Sinha has produced a surplus in the revenue budget. Revenue receipts and expenditure charged to revenue being estimated at Rs 61,90 lakhs and Rs 56,42 lakhs respectively the revenue surplus worked out to an amount of Rs 5,48 lakhs.

The capital budget reveals a shortfall of Rs 6.05 lakhs, total capital receipts and capital expenditure being estimated at Rs 40,75 lakhs and Rs 46,85 lakhs respectively. The overall deficit in the budget is therefore Rs 57 lakhs which is quite negligible.

The budget has made provision for Rs 30.39 lakhs for expenditure for the third year of the Plan, of which capital expenditure on the Plan sector accounts for Rs 17.71 lakhs. With a view to meeting the needs for financial resources in connection with the Plan Dr Sinha has announced a series of new taxation measures capable of realising to the Government additional revenue to the tune of Rs 2.25 lakhs in 1958-59. The new tax measures are (1) introduction of a general sales tax of half per cent on all sales by all dealers with a turnover of Rs 5,000 and more besides the single point special sales tax as at present (2) a primary education cess and (3) a betterment levy on lands which have appreciated in value by execution of irrigation and flood protection schemes. While a return of Rs 1 crore each is anticipated under the general sales tax and the primary education cess, the betterment levy is credited with a revenue potential of Rs 25 lakhs. An additional revenue of Rs 30 lakhs is expected from the withdrawal of certain exemptions at present allowed to the Stamp Act. Considering that the Planning Commission have fixed Rs 3,00 lakhs as the flooring for additional taxation in the State, the new tax measures announced by Dr Sinha are on a modest scale.

The non-Plan expenditure in the budget which is estimated in the budget for the coming financial year at Rs 71.99 lakhs is of a huge order. Any conclusion of administrative extravagance that this might suggest is belied by the

fact that a large part of this is incurred as committed expenditure on schemes under the First Five Year Plan, social services being one of the major heads of non-Plan expenditure.

While the budgetary position has shown signs of improvement the general economic situation in the State is far from satisfactory. Only a few months back there were reports from the State of an influx of population from industries to agriculture, which suggest a deterioration in the living standards of the people in general. The influx has been attributed to a fall in employment opportunities in industries. Considering the expansionist effects of the Plan, this appears strange. Though Bihar is one of the most backward States in the country in point of industrial development the scope for industrialisation is generally accepted to be vast. The need to pay greater attention for starting industries is therefore great.

Orissa Budget

In preparing the budget for Orissa for 1958-59 Mr Harekrishna Mahatab, the Chief Minister, has tried to emulate the example of the Finance Ministers in the other States and had accordingly announced a series of new tax measures to cover the deficit as originally disclosed by the revenue budget for the coming financial year. Total revenue and expenditure charged to revenue being estimated at Rs 25,82,35,000 and Rs 26,94,38,000 respectively the deficit in the revenue budget is to the tune of Rs 112 lakhs. This is sought to be converted into a small surplus of Rs 58 lakhs by means of additional revenues from tax and non-tax to the extent of Rs 170 lakhs.

Standardisation of land rent, standardisation and unification of local cesses, levy of water rate on lands which have been benefited from irrigation facilities, cess on sugarcane to be collected through sugar factories, tax on transport of goods by road and canal, and postponement of the prohibition date for the sale of opium to another year, are the various means proposed by Mr Mahatab to raise the additional revenue of Rs 170 lakhs.

Orissa being one of the most backward States in the country expenditure for development purposes assumes great importance. In the budget provision has been made for new schemes worth Rs 23,40,70,000 both in the revenue and capital accounts. The possibility of the State Government floating a public loan to the tune of about Rs 2 crores during 1958-59 to finance development schemes has been mentioned by Mr Mahatab. In connection with the Second Plan provision of a sum of Rs

6,75,82,000 for schemes under the State sector for the third year has been made while schemes under the Central sector accounts for an expenditure of Rs 1,25,17,000.

Notwithstanding the surplus that is anticipated consequent on the introduction of new tax measures, the overall financial position shows only slight improvement. The total overall balance at the beginning of the year was a minus figure of Rs 4,28,00,000 which however is expected to be reduced to Rs 2,90,33,000 at the close of the year with the help of a surplus of Rs 6,27,000 under net transactions under "Public Account".

Handloom Industry

Widespread distress among handloom weavers has been noticed since last November. One school of thought attributes this lower offtake of handlooms to the acute competition from mill made cloth. The only response from Government to the persistent demand for relief was a reduction in the rebate on handloom cloth from one and a half anna to one anna. At the same time there has been successive concessions to the organised sector of the textile industry. From the middle of December last year, States Sales Tax on the mill cloth has been abolished. The excise duty has first been reduced by half an anna and again this month Mr Nehru has announced further concessions which will entail a loss to the tune of Rs 15 crores to the exchequer. No relief, has, however been extended to the handloom weavers.

In a statement two prominent members of the All India Handloom Board have issued a fervent appeal to Government to bring immediate succour to the 15 million people in the country who depend on the handloom industry for their livelihood. The heavy accumulation of stocks all over the country coupled with continued production in the past few months seems to have resulted in unemployment and consequent distress among a large number of weavers. The statement points out that handloom goods worth about Rs 2 crores are lying unsold within the cooperative fold alone in Madras. Such stocks are estimated at Rs 1½ crores in Andhra. It is said that there has been no normal off-take of handloom fabrics in the country since July 1956.

The statement argues that when Government have deemed it necessary to extend such extensive relief to the organised mill sector which employs only 2 lakh workers, it is strange that in a matter that vitally concerns 15 million people no ameliorative measures have not been initiated. It is evident that the handloom industry needs immediate help to tide over the present crisis over and above longterm steps to bring stability to it.

DEATH
REVIEW

Sugarcane Prices for 1958-59

THE Government of India have fixed the price of Sugarcane, to be crushed by vacuum pan factories during the 1958-59 season, as follows:—(a) A basic minimum price of Rs 1.44 per maund for delivery at the gate of the factory and Rs 1.31 per maund for delivery at rail centres; and (b) A deferred payment of an amount which may be found due under the formula prescribed by the Government for linking the price of cane with the price of sugar as realised by the factories concerned.

The basic minimum prices are the same as have been in force during the last five years. The fixation of prices, as recommended by an expert Committee, has been accepted by the Government for adoption on an all-India basis, unless any alternative scheme is applied in a State or region by the State Government concerned with the previous approval of the Central Government.

Meanwhile, prospects for sugar for the current season are more promising than were those for the past season. However, an important source of worry for the industry is, that factory despatches have not yet increased in proportion to the rise in production.

According to the Indian Sugar Mills Association, production, during February, was 4.14 lakh tons, bringing the total production, upto 28th February 1958, to 13.36 lakh tons as against 13.56 lakh tons and 11.63 lakh tons respectively in the previous year. Offtake from factories, during February, was 1.95 lakh tons as against 1.76 lakh tons during the corresponding month of last season. This brings the total despatches from factories up to the 28th February (including despatches for exports) to 6.36 lakh tons as against 6.35 lakh tons on the same date last season. Closing stock with the factories, on the 28th February, was 11.29 lakh tons as against 10.61 lakh tons on the same date last season.

From the above statistics, it is clear that the Government have to take vigorous steps from now on to increase sales. So far, there does not seem to have been any export from the current season's output, nor is the export outlook promising. It does not look as if domestic consumption will improve very much.

For obvious reasons, conditions in sugar markets have continued to rule quiet although demand from the consuming centres has been fairly good. In the Hapur market, following mill-delivery rates (per maund) are quoted:—Meerut (D-28) Rs 35.69; Simbhauli (E-29) Rs 36; Daurala (B-29) Rs 37.75; Amroha (D-29) Rs 35.31; Bijnore (E-29) Rs 35; Shamli (C-29)

Rs 36.50 and Modinagar (B-29) Rs 37.12.

★

Gur

Gur markets have continued to rule steady. In the Hapur market, 37.81; Iqbalpur (C-29) Rs 36.62; prices have recorded a further gain of Re 1 per maund as bulls are reported to be buying ready arrivals at higher prices. Bears have, on the other hand, arranged to sell ready gur at Rs 13 in small quantities to each individual buyer in order to prove that the rise in ready prices has been manipulated.

In the Muzaffarnagar market, too, prices have improved and daily arrivals are put at about 5,000 maunds. Chakku is quoted at Rs 17.50 to Rs 18.12; Kharpur Rusket at Rs 11 to Rs 12 and Shakkar Dara at Rs 18 to Rs 20.

★

Khandsari

Following good demand from Madhya Pradesh and other consuming centres, Khandsari prices have recorded modest gains. Production is continued on a fairly large scale. Latest prevailing prices are Rs 27 to Rs 33 per maund, according to quality.

★ ★

Foodgrains

Prices in the Hapur Foodgrains market have shown a mixed trend. Wheat prices have eased slightly, average quality being quoted at Rs 15.37 and the farm quality at Rs 17 per maund. A large quantity of imported wheat is being stored here for reserve purposes; and this has acted as a softening factor. Influenced by adverse crop reports from the main producing areas of the Punjab, Gram prices have recorded gains of about 25 nP per maund. With the beginning of new arrivals, Barley and Bajra markets have been ruling rather quiet. The markets for Maize and Bajra have improved slightly despite a fall in demand. The continued bullish tendency in the forward section has helped the rising tendency in Peas prices. Arhar improved in sympathy with peas.

In the Delhi grains market, farm wheat recorded a small rise early in the week due to good demand although increased supply caused a sizable log in the rates at the close. Gram eased by about 50 nP per maund as demand from Uttar Pradesh and other centres was lacking. As there was an increase in the supply, Rice rates receded by 50 nP to Re 1 per maund. A gain of about 50 nP in the rates of Guwar was attributed to encouraging advices from the producing centres.

A fresh all-round improvement in Pulses provided the main feature of trading in the Bombay grains market. The tendency in Rice and Coarse grains remained quietly steady with prices hovering in a narrow range. The volume of business was moderate. The strength in Pulses was attributed mainly to the shortage of superior supplies and higher upcountry advices.

Industrialisation of Andhra

ADDRESSING the Andhra Pradesh Legislative Assembly Chief Minister, Mr N. Sanjiva Reddi disclosed the intention of the State Government to constitute an Industrial Advisory Committee to help suggest steps for the industrial development of the State. In view of the wide gap between resources and utilisation the decision of the Government to constitute such a Committee is to be welcomed. The proposed attempt to associate persons from outside the State who are known for their keen interest in industrial advancement, with such a Committee would also be warmly appreciated since this would ensure effective correlation between formulation of schemes and actual resources.

In the course of his address Mr Sanjiva Reddi has also sought to stress the need to start more industries in the State and has given out a list of industries that would lend themselves to early development provided the needed capital resources were forthcoming. A fertilizer factory, a diesel engine factory, a low carbonisation plant, factories for the manufacture of heavy casting machinery and structural steel are a few that find a place in the list of Mr Sanjiva Reddi. The development of leather and coconut industry was what some of the opposition members found to be missing from the list of the Chief Minister.

But in view of what Mr Sanjiva Reddi refers as the Government's inability to invest large amounts in new industries, the scope for the development of industries in the State on any large scale would naturally be determined by the extent of help that the Centre would be able to offer to the State Government. In the Second Plan for Andhra Pradesh out of a total allocation for expenditure to the tune of Rs 175 crores provision for industries accounts for only Rs 14 crores. Concentration on development of irrigation, according to Mr Sanjiva Reddi, explains the relative inability of the Government to set apart larger funds for industrial advancement.

In the course of the debate in which the whole house participated, the Central Government became a convenient scapegoat for the continuing backwardness of Andhra Pradesh in the matter of industrial development. The Central Government's reluctance to sanction a fertilizer factory in Andhra Pradesh was interpreted by a communist spokesman as an act of injustice done to the people of the State. At the same time he was inclined to attribute this in part to what he claims to be the failure of the State Government

to put up its case effectively before the Centre. This sentiment was also echoed by a few other members. Even Mr Sanjiva Reddi confessed to a sense of disappointment at the attitude of the Centre in regard to the industrial development of the State. He was tempted to draw adverse comparison between the action of the Centre in granting aid to the Neiveli Lignite Project to the tune of Rs 66 crores and its turning down the request made by the Andhra Pradesh Government for aid for a sum of Rs 6 crores for the development of the Singareni Collieries. The non-acceptance by the Centre of the schemes prepared by the State Government for the starting of three co-operative sugar factories for which according to Mr Sanjiva Reddi capital to the tune of Rs 10 lakhs has been collected from the people was cited as another instance of the unsympathetic attitude of the Central Government. In view of the extremely limited resources at the disposal of the Centre and in view of the fact that similar complaints have been made by almost all the other State Governments there would seem to be very little substance in the charges of discrimination made against the Centre. The many adverse comments that have been made against the Centre could, in this case, only be taken as expressing the impatient enthusiasm of a State which having found its political aspirations for the linguistic integration of its territories fulfilled, wants to take larger strides in industrial development.

To the State Government that thus finds itself starved of capital to start new industries a Communist member has pointed a way out. An increase in the rate of interest offered for loans from the people according to him would evoke response to the tune of at least Rs 12 crores. But whether such a step would not increase the overhead cost it was not for him to bother about. Co-operation of private capital in the measure in which it is forthcoming would also fill part of the requirements for capital needed for starting new industries in the State. Mr Sanjiva Reddi has in this connection indicated the manufacture of fertiliser as a possible field where such private ventures would be welcomed. Even the communist member who laments the circumstance of the State Government being forced to seek the help of the private industrialists for opening a fertiliser factory, is prepared to counterbalance the participation of private capital in the starting of more sugar factories. The role of the State Financial Corporation in encouraging industries has also left much to be desired. It was pointed out by a member that since the inauguration of Andhra Pradesh the Corporation has given loans only for a meagre amount of Rs 6 lakhs. Complaints about delay in sanctioning licences for new industries speak of a state of affairs in which

new industries could only with difficulty be brought into existence.

While Mr Sanjiva Reddi has sought to impress public opinion on the need to start more industries in the State he has failed to evoke satisfaction on the conduct of industrial enterprises in the State. The number of industries inefficiently administered and which are unable to keep their heads above water is almost shocking. The Sirpur paper mills, the Allwyn Metal Works, the Taj Glass factory, the Hyderabad Chemicals and Fertiliser factory are a few of the industries having the State Government as a shareholder which are in need of better management. While the glass factory in which the Government held 23 per cent of the shares had been already liquidated, the share capital of the Allwyn metal works whose assets according to Mr Sanjiva Reddi are just enough to offset the debts, has been reduced with a view to attracting private capital. Further the Nizamabad Sugar factory which had a fairly long run of inefficient administration has only been recently retrieved to a working condition. The Praga Tools Corporation which till lately was faring no better was saved only by Central intervention with about Rs 1 crore. In the face of such glaring inefficiency in management the demand made by some opposition members for the appointment of an enquiry committee to go into the working of various industries and for enforcing strict auditing looks reasonable. Mr Sanjiva Reddi's statement that the Government's attempt would be to get the best out of the present industries and make an effort to march forward with confidence and fully utilise all opportunities offered by the Centre is, in this context, reassuring and would allay doubts about the attitude of the Government to the problem of industrial management. The Government's success in prevailing upon the Indian Bank to grant a loan of Rs 1 crore for the development of Singareni Collieries is an encouraging sign in the new outlook for industries. Besides the Neiveli Lignite Project in Madras, the Singareni Collieries provide the only source of fuel for industries in the South. Development of the collieries on sound and proper lines is therefore a minimum condition for the rapid and uninhibited growth of industries in the South.

When improvement in the management of industries assumes such overriding importance the demand made by some members to introduce labour participation in the management of industries would appear to be rather premature. Though some other States like Madras have taken action to associate labour in the management of industries in limited fields, the very short period for which it had been in operation would argue for a gradual process in the introduction of the experiment in all industries.

Industrial Relations

Speaking at the annual general meeting of the Employers' Federation of Southern India, Mr M. J. Edwards, Chairman, has counselled caution in enforcing the scheme of workers participation in management. For in the first place it is not agreed on all hands that the schemes will result in bringing about the desired result. Moreover it is to be remembered that good management is vital to the orderly progress of industry. Any tinkering with this aspect will only result in loss and serious setback to the industry as a whole. When it is realised that good management is essential to the efficient working of industry the force of the argument that such ideas as workers' participation in management will have to be adopted in the beginning only on an experimental basis and that the time for considering their implementation will be when the result of such experiments are available will be realised.

The question of workers participation in industry has been considered by the Planning Commission. They have pointed out that for the successful implementation of the Second Plan increased association of labour with management is essential. This will improve industrial relations and will also promote increase in productivity. Accordingly they have recommended the formation of Councils of Managements consisting of an equal number of representatives of management and workers. Though the suggestions have been considered further both by Government and industrialists, there is yet no clear cut notion about the exact extent of participation of the joint management councils in the actual management of industry. In this regard it is pointed out that one of the prerequisites to the schemes of workers participation in management is the ability of labour to provide workers with the requisite technical qualifications. For the fruitful functioning of the joint management councils it is essential that representatives from both sides are well versed in the working of the industry with which they are concerned. It is to be borne in mind that the main purpose of the schemes is to improve industrial relations and increase productivity. Conversely it is to be firstly ensured that the joint management councils do not become obstacles in the way of progress of the industry.

Government would also do well to take note of Mr Edwards' opinion about their labour policy. The extensive labour legislation enacted in the past few years has made the industrial worker a privileged person in a community where the majority of people who are engaged

in agriculture and allied occupations are only getting comparatively low emoluments. The disparity in wages between an industrial worker and an agricultural worker becomes quite glaring in the mofussil regions. Government have to take note of this aspect when they extort the agriculturists to increase production.

Referring to the move of the Kerala Government to abolish reference to Tribunals, Mr Edwards has pointed out that there is a strong bias on the part of the State Government toward labour instead of a position of impartiality. This is borne out by some of the proposals placed before the Industrial Relations Board by the Government. One of these proposals is that workers should receive 64 per cent of basic wages and dearness allowance as bonus irrespective of profit or loss. Another proposal is that 25 per cent of the net profit of a company before taxation should be distributed among workers.

Sales Tax Reform

Though simplification of the sales tax system was the object of the Madras Government in appointing the Lokanathan Committee to inquire into the sales tax structure in the State, the actions proposed to be taken by the Government on the recommendations of Dr Lokanathan would seem to violate this very canon of simplicity. The exemption limit which is proposed to be lowered to Rs 5,000 though it has the sanction of the Taxation Enquiry Commission could better have been left at its original limit of Rs 10,000 if simplification was the object of the Government. The effect of the lowering of the exemption limit would be to add to the expenditure on administrative personnel which the additional revenue that the lowering of the limit might secure, would only barely offset.

Some of the measures that have been announced also run contrary to the recommendations of Dr Lokanathan. The decision to fix the multi-point levy at the rate of 2 per cent against 1 per cent as suggested by Dr Lokanathan is only one of the departures made by the Government from the report of Dr Lokanathan. In the same way against a limit of 6 per cent in the case of single point levies which was recommended by Dr Lokanathan, the Government have chosen some 14 articles for a levy of 7 per cent. The fixation of the multi-point levy on foodgrains, milk and vegetables at 1 per cent as against 1/2 per cent as recommended by Dr Lokanathan and the upward revision of the monthly taxes to be paid by dealers in different slabs between Rs 5,000 and Rs 10,000 are two other changes proposed by the Government.

Thus barring the switch to single point levy in respect of the articles recommended by Dr Lokanathan, the recommendations of Dr Lokanathan for lightening the burden on traders and the community in general have been practically nullified. In the result the sales tax structure which it was

the object of the Government to modify on the side of simplicity and equity has been practically kept in tact.

Slum Clearance

Among the legacy of evils which an unregulated and unplanned industrial and urban civilization has left the drawing together and the overcrowding of industrial workers in particular areas with no proper facilities for adequate housing which converted such centres into slum areas was the worst. The pattern of industrial distribution in the country with the major industries being localised in particular areas especially around urban centres, was the most important factor in the creation of such slums. The removal of such slum areas is one of the most pressing problems with which local authorities in all urban centres in the country are confronted. The existence of such insanitary and unhealthy areas has converted urban centres into a fertile breeding ground for all kinds of contagious diseases. The case for the removal of slums rests as much on the social need for promoting the health of the entire population as on the economic need for bettering the living conditions of the slum dwellers.

Success in slum clearance is purely a matter of availability of finances for the local authorities on a scale adequate to the magnitude of the task. And this has been the limiting factor in the efforts of the Municipal administration in all the major cities in the country, towards rapid progress in the elimination of slums.

The allocation of the entire revenue from the enhanced entertainment tax in Madras, to the Municipalities would, in the context of the growing responsibility of the Corporation and the inelasticity of the sources of its revenue be warmly appreciated. The total amount that is anticipated under this head is about Rs 30 lakhs. Since there are so many demands on the limited resources of the Corporation, maximum benefits from the expenditure of the Corporation could be guaranteed only on the basis of a system of priorities, for the expenditure of its funds. The need to keep slum clearance in the priority list of the Corporation's schemes is too obvious to be ignored.

The importance and urgency of the need to renovate the slum areas in the Madras city was supported by Mr C. Subramaniam, Finance Minister for Madras in the course of his address to the Conference of the Municipal Chairman. To expedite progress in slum clearance it was suggested by him that the Municipalities should earmark the additional revenue to be derived from the enhanced levy of entertainment tax for the improvement of slums in their towns. Mr Subramaniam also assured sympathetic consideration by the Government of any additional demands for money that might be made by the municipalities for slum clearance schemes.

Nevertheless, India is struggling, with and through its high 5-year Plan target, to improve the standard of living of its vast population

and there is no doubt this endeavour is meeting with some success. The General Election confirmed India's adherence to democracy for the ensuing five years under the guidance of Prime Minister Pandit Jawaharlal Nehru, and the influence of this throughout the whole of South East Asia is of primary importance to the entire free world.

PAKISTAN

Mr. H. S. Suhrawardy continued as Prime Minister until October, 1957, when Mr. I. I. Chundrigar, leader of the Muslim League, took over the Premiership. This Government was, however, short lived and in December resigned, to be succeeded by Malik Feroz Khan Noon with a Cabinet of eight members of whom seven are members of the Republican Party. This Government relies on the support of the Awami League, National Awami Party, and National Congress Party. Two main issues continue to bedevil Pakistan politics the question of separate or joint electorates and the continuance of the One-Unit constitution in West Pakistan. Opinion is so divided on these two issues that political stability still seems some way off. Pakistan's foreign policy continues to be firmly pro-western and her overseas prestige was undoubtedly enhanced by Mr. Suhrawardy's visits, when he was Prime Minister, to the Far East, the United Kingdom, the U.S.A., and other countries.

The industrialization of Pakistan continues to expand; the Industrial Development Corporation provided Rs. 12 crores to finance industrial projects, including sugar and jute factories, newsprint, pharmaceutical products and dyestuffs, and fuel and power. The Pakistan Industrial Credit and Investment Corporation was established in October with a capital of Rs. 2 crores and loans from Government (Rs. 3 crores) and the International Bank (Rs. 2 crores), making a total of Rs. 7 crores to assist in the expansion and modernization of industrial enterprises in the private sector, particularly small and medium sized concerns engaged in the processing of indigenous raw materials. On the other hand, agricultural development is not receiving the expansion essential to the country and Pakistan continues to be dependent on large food imports: in 1958 it is estimated that 700,000 tons of rice and not less than 600,000 tons of wheat will have to be imported, whilst the adverse balance of trade for the 10 months ended October, 1957, was Rs. 22.54 crores.

Heavy Governmental expenditure resulting in excessive monetary demand brought about inflationary tendencies during the year, and credit restrictions were accordingly imposed to meet this trend. It is to be hoped that profitable revenue from the many industrial enterprises created in recent years will soon come to the assistance of the economy which at present is so largely dependent on foreign aid.

Severe drought adversely affected the tea crop in 1957 and there was a marked decline in world demand for jute goods, the two main industries of East Pakistan. Further progress was made in the industrialization of Khulna and the opening of the new shipyard was an important event, but much remains to be done if local amenities such as roads and housing, drainage, and water supply are to keep pace with the industrial development of Khulna.

CEYLON

Mr. S. W. R. D. Bandaranaike's Government continued in power throughout the year and has had considerable difficulties to contend with. Tact and skill were displayed in settling the Tamil problem and this language is now recognized as the language of the Tamil minority and as the administrative language of the Northern and Eastern Provinces.

Economically Ceylon has been adversely affected during 1957 by several factors: and the balance of trade for the first 11 months was unfavourable by Rs. 82 million compared with a favourable balance of Rs. 102 million for the same period in 1956 and a favourable balance of Rs. 480 million in 1955. Her Budget estimated for a deficit of Rs. 199.6 million, but this is likely to be greatly exceeded by the great increase in cost of wages in the public sector which must throw a considerable strain on the economy. Labour unrest, strikes and delays in clearance of goods in Colombo Harbour are all contributing to a serious economic decline.

Ceylon's economy is based on three commodities: tea, rubber, and coconuts, the world prices of which declined during the year. She is a net importer of foodstuffs and for the first 11 months of 1957 it is estimated that the cost of this has increased by some Rs. 92 million. Apart from transport there has been no nationalization of privately owned industry although fears of this have not been allayed. The Paddy Land Bill which should shortly become law is a measure of agrarian reform designed to increase rice supplies and reduce the nation's bill for imported foodstuffs.

Tea had a record crop with average prices fluctuating between Rs. 1.48 and Rs. 2.18 per lb. Rubber also produced a record crop and is now a creditor of Communist China to the extent of Rs. 120 million under the five-year barter agreement which has now expired. Under a new agreement 30,000 tons of rubber a year will be sold at Singapore prices in exchange for 200,000 tons of rice at Burmese prices.

BURMA

Early in 1957 the Premier, U Ba Swe, was replaced by his predecessor, U Nu, as I forecast last year. Second thoughts about nationalization seem to be taking

place and it is believed that a Bill will soon be passed by the Government to provide incentives to foreign investors to introduce capital into the country by reliefs in taxation and customs and guarantees against nationalization for 10 years with guaranteed repatriation of profits, dividends, and capital. This welcome change in outlook would, and may, have beneficial effects provided greater progress can be made in dealing with the problem of the insurgents, and banditry still unfortunately rife in many districts in spite of the surrenders which have so far taken place.

The Four Year Plan has been scrapped and the Prime Minister has stated that in future planning will be a continuous process, revisions taking place in the light of experience. A recent development is the setting up of Joint Venture Corporations to handle the import of consumer goods and industrial requirements. These, having a monopoly operate profitably.

The country's economy is largely dependent on the export of rice, of which, before the war, Burma was the largest exporter. Although production is still some 20 per cent below the pre-war figure, exports for the year ended September 30, 1957, were estimated at no less than 2,017,000 tons and earned K.87 crores in foreign exchange. The carry-over from 1957 is only estimated at 250,000 tons of rice and rice products. The third crop fore-cast for 1958 estimates an exportable surplus of 1.3 million tons. Long-term commitments include, to India 500,000 tons, Ceylon 200,000 tons, and Pakistan 100,000 tons.

FEDERATION OF MALAYA

An historic event took place on August 31, 1957, when the Federation of Malaya became an independent sovereign nation within the Commonwealth under the able Chief Ministership of Tengku Abdul Rahim. On September 17 the Federation was admitted as a member of the United Nations Organization and diplomatic relations have been and are being entered into with many countries. The change to independence was effected calmly and in a friendly atmosphere and Ministers have made a special point of reassuring investors concerning their stake in the country.

The rubber and tin industries continue to be the main support of the national economy. Rubber cultivation covers 3½ million acres or some 65 per cent of the total cultivated area, the export earnings of rubber produce 60 per cent of total earnings and 25 per cent of the employment of the people. The tin industry provides some 20 per cent to 25 per cent of export earnings. The price of both these products had declined substantially during 1957, and it is important that the development of other industrial and agricultural projects should take place to render the

economy more viable. Indeed, many new industries are coming into existence; ten large factories are to be constructed to produce chemicals, cables, rubber-products, tobacco and matches, and many smaller factories are also under consideration.

The estimates for 1958 budget for a deficit of \$ 119.2 million, but as the estimated general revenue surplus brought forward at end 1957 is \$ 494 million, the estimated deficit for 1958 will reduce this general surplus to \$ 375 million. Britain agreed in January, 1957, to provide Malaya with financial aid amounting to £38,700,000 over the first five years of independence.

SINGAPORE

Further progress in the policy of political advancement was made in 1957. In March, the Chief Minister, Mr. Lim Yew Hock, led an all-party delegation to London and agreement was reached in April on a new constitution designed to confer full internal self-government on Singapore. External affairs and defence will remain the responsibility of H. M. Government, and reserve powers are retained for emergency use. Elections are to take place in August, 1958, but the results of the first fully-elected City Council were disappointing as only 30 per cent of the electorate voted and this resulted in a decisive swing to the left, which may not bode well for the elections to the new 51 member Assembly and the inauguration of the new Constitution next August.

Economically 1957 was a prosperous year for Singapore and there appears to be no reason why 1958 should not also be prosperous, but I must mention some of the factors which may bear upon this prosperity. The confused political situation and uncertain outlook in Indonesia may affect both Malaya and Singapore, over 17½ per cent of whose external trade is with Indonesia. A trend to the left in Singapore is unlikely to expedite favourable consideration by the Federation of Malaya of union with Singapore, and indeed is likely to result in the speeding up of the modernization of Malaya's ports and tightening of her tariff policy to Singapore's disadvantage. A third factor is the rapid increase of population, which is rising by 50,000 a year, and must result in unemployment unless new industries are developed to provide employment and homes. This requires capital for both public and private development and the annual amount of new capital formation has not increased over recent years.

Rubber prices fluctuated throughout 1957, from \$ 1.11½ per lb. for R.S.S. 1 at the commencement of the year to 82½ cents at the end of the year, with a "low" at 74 cents in November. Washington statistics estimated world output of natural rubber in 1957 at 1,930,000 long tons with consumption at 30,000 tons less, and synthetic out-

put at 1,255,000 tons and consumption 5,000 tons less. United States consumed 560,000 long tons of natural and 930,000 tons of synthetic rubber, a total of rather under 50 per cent of aggregate world consumption of both products.

Trade with Japan, both export and import, showed a substantial increase. Imports from West Germany increased by 26.8 per cent to \$ 97.9 million.

The Port of Singapore at present handles approximately two-thirds of Pan-Malayan trade estimated to be in the region of \$ 8,400 million a year, only equalled by the record year 1951 when the balance of trade was favourable to the extent of \$ 1,270 million, whereas for 1957 it is estimated the balance will be unfavourable to the extent of some \$ 200 million.

THAILAND

The peaceful and prosperous progress of Thailand was disturbed by political upheaval resulting in the departure of Field Marshal Pibulsonggram and his co-adjutor. General Phao Sriyanond and eventually the appointment as Prime Minister of Lt-Gen Tanom Kittikachorn, close friend of Field Marshal Sarit following elections held on December 15, 1957.

Industrial development has not made great progress during the year but 1,566,699 metric tons of rice were exported, having a value of £54,707,536 and U.S. \$29,409,338, representing an increase of some 25 per cent over the previous year, but it is believed that the exportable surplus in 1958 will not greatly exceed one million tons.

Trading conditions have become more difficult, due to overstocking in 1956-57, shortage of money which is to some extent siphoned off by a plethora of lotteries, drawings for which take place seven times a month, tightening of credit, and also uncertainty which necessarily accompanies political changes. It is to be hoped that Lt-Gen Tanom Kittikachorn's Government will become firmly and satisfactorily established, maintaining the pro-Western foreign policy of its predecessors while securing the goodwill of the people by enlightened internal administration. Should this prove to be so, there seems to be no reason why Thailand's economic progress should not continue.

A sub-branch of the Bank was opened in the Rajawongse Road on November 14, 1957, for the convenience of our clients in that area of Bangkok.

HONG KONG

The value of imports into Hong Kong increased by 12.8 per cent over 1956 at \$5,149 million of which \$1,131 million came from China, \$667.3 million from the U.K. and \$539 million from the U.S.A. From Malaya and Japan imports declined. Exports declined in total by 6 per cent, compared with 1956

and although increases in exports to the U.K. and the U.S.A. occurred, they could not counter-balance the serious and continuous fall in exports to Indonesia, Thailand, Japan, and South Korea. Exports to China, which have steadily declined since 1957 reached a new low in 1957 at \$123.4 million.

Great progress has been made in establishing Hong Kong as a manufacturing centre, both as to quantity and quality of goods, and exports of Hong Kong products reached a value of nearly \$79½ million in 1957. There has been a boom in building development with consequent high prices for land, but money has become dear as a result of the raising of Bank rate and this has been reflected in depressed prices on the Stock Exchange.

Sir Alexander Grantham, who has been Governor for 10 years, retired at the end of 1957. There can be little doubt that the peace and prosperity which this colony has enjoyed since the war has been largely due to his wise Governorship.

MAURITIUS

Notwithstanding early drought, the sugar crop at 561,800 metric tons was only 10,000 tons lower than the previous year's all time record. Under the terms of the International Sugar Agreement, the export quota for Mauritius remains the same at 470,000 long tons, of which 335,000 will go to the British Ministry of Food and the balance of 135,000 long tons will be offered in the Preferential markets of the United Kingdom and Canada. The Cyclone and Drought Insurance Fund is now estimated to exceed Rs 110 million, but there will be some claims from estates affected by the drought in the north of the island.

In general, trading conditions in the island were satisfactory in 1957, but exports and imports show a substantial increase over 1956. Tea output reached 1½ million lbs. and is increasing. It is hoped, with Government assistance, to have 5,000 acres under tea by 1960.

Passenger transport by railway has ceased and road traffic consequently increased. An ambitious road building programme is under way and three new hydro-electric power projects are being developed.

A Commission headed by Sir Malcolm Eve, Q.C., was appointed by the Secretary of State to make recommendations on the demarcation of boundaries and the electoral system in implementation of the new Constitution. This report is not yet ready but in the meantime the new Ministerial system appears to be working very satisfactorily.

JAPAN

The prosperity and expansion which Japan enjoyed in 1956 re-

ceived a severe check in 1957. The pace of expansion had become too great and the cost of imports rose out of proportion to the value of exports, so that an adverse balance of trade and shrinkage of foreign exchange began to put a severe strain on the country's economy. In an endeavour to improve matters the Bank of Japan raised its rediscount rate in March and again in May to 8.395 per cent. In addition to this tight-money policy, the Government issued directives to private enterprise to restrict non-urgent investment such as house building, and took steps to curb imports. As a result, cuts in production are the order of the day until the Government considers that the situation justifies an easing of the present tight-money policy. There are indications that these steps are taking effect and improving the balance of payments equilibrium.

Japan had another favourable rice crop in 1957, estimated at 350 million bushels, 5.3 per cent higher than in the previous year. Population is now estimated at 91 million and may rise to 100 million by 1970. Strikes occurred in the shipping and steel industries, both detrimental to the country's export trade. In shipbuilding Japan now ranks first in the world having launched 2,424,000 tons in 1957. This industry is now Japan's biggest dollar earner and one of the best sources of foreign exchange income for the nation.

Mr. Ishibashi, who became Premier in December, 1956, resigned owing to ill-health on February 23, 1957, and Mr. Nobusuke Kishi was nominated Premier in his place.

BANK'S VALUABLE SERVICES

The life-line of trade, both national and international is through the facilities made available by the banking system and the friendly co-operation between those responsible for commerce, industry and trade and the banks through which their financial business is transacted. Fortunately, this is well recognized by the Governments of the countries in which we have branches and, although legislative controls are increasing and thus adding to the burdens of our managers and staff, the banking service we are able to provide is of considerable value to the national and international trade of these countries. The skilled work and friendly relations between our managers and staff and the customers and other nationals of the countries in which they work it a principal cause of the continued prosperity of the Bank. Our gratitude is due to them.

Mr. R. N. Drake has been chief manager since 1950. During this period we have made great progress. He will be retiring from the onerous position of chief executive and merits our thanks for his long years of service with the Bank. Mr. C. R. Wardle will be appointed chief manager in his place.

THE DUNLOP RUBBER COMPANY (INDIA) LIMITED

NOTICE IS HEREBY GIVEN that the 32nd Annual General Meeting of the Company will be held at the Registered Office at "Dunlop House", 57B, Free School Street, Calcutta, on Friday the 18th day of April, 1958 at 11 a.m. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended 31st December, 1957, the Balance Sheet as at that date and the Reports of the Directors and Auditors of the Company.
2. To declare dividends.
3. To appoint Directors in place of those who retire by rotation.
4. To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS

To consider and if thought fit to pass, with or without modification, the following resolution which will be proposed as an Ordinary Resolution, namely:

"That Mr. Eric Henry Morris be and is hereby appointed a Director and Deputy Managing Director of the Company with effect from 18th April, 1958 upon the terms and conditions presently governing his employment and that he will continue to be entitled to the remuneration presently paid or authorised to be paid to him."

By Order of the Board,

P. B. SEN GUPTA,
Secretary.

Dunlop House,
57B, Free School Street,
Calcutta.

24th March, 1958.

Note:—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

In terms of Article 4 of the Company's Articles of Association no Preference Shareholder as such is entitled to attend the meeting. A Debenture Stockholder as such is also not entitled to attend the meeting.

The Transfer Books and Registers of Members in respect of the Ordinary and Second Preference Shares of the Company will be closed from 7th April, 1958 to 27th April, 1958, both days inclusive. As any dividends that may be declared will be paid only to shareholders registered in the Company's Registers of Members, those holding shares on blank transfers are advised to register the transfers prior to 7th April, 1958.

ALLAHABAD BANK, LIMITED

(AFFILIATED TO THE CHARTERED BANK)

Balance Sheet as on 31st December, 1957

Pepper Rallies

THANKS to higher advices from New York and exporters' buying, Pepper prices, both in Alleppey and Kozhikode, have developed a firmer tendency during the week under review. Speculators have been active and are trying to boost prices. Naturally, in the rising market, growers have become reserved sellers. They are reported to be bringing only limited quantity to the primary markets, thus creating psychological scarcity. The firmer tendency in prices is mainly due to pressing demands from foreign countries, including the Soviet Union.

Some among the trade have interpreted smaller arrivals as an indication for a final smaller production. But, analysts are reported to be sticking to their former estimate and see no reason for reducing it. The bears in the market are estimated the final production at 27,000 tons, while the bulls at 22,000 tons. In the Alleppey market, superior Palai and inferior Thekkani varieties are quoted at Rs 650.00 and Rs 637.50 per candy respectively. In the Kozhikode market, Wynaad is quoting at Rs 700 and the Country variety at Rs 675 to Rs 800.

In the New York market, prices of both black and white pepper ruled firm with prices advancing sharply, reflecting continued European buying. Malabar and Lampung spot and "awaiting release" were quoted at 29 per pound.

Pepper exports from India, during January, have amounted to 54,704 cwt as against 59,961 cwt in the corresponding month of last year. Total exports, during the season upto January, have totalled

90,400 cwt as against 106,123 cwt, showing a decrease of more than 15,700 cwt. Arrivals of black pepper, in Bombay, during the said period are reported to be 34,620 cwt.

Ginger

The market for Ginger has also continued to rule firm. In the Alleppey market, the rate is mentioned at Rs 212.50 per candy. In the Kozhikode market, new quality is quoted at Rs 225 and the old variety at Rs 210 per candy.

Exports of ginger from India are lower at 21,719 cwt in January as compared to 42,312 cwt in the corresponding month of last year. Total exports exports for the three months ending January totalled 38,213 cwt as compared to 74,026 cwt in the corresponding period of the last season.

Coffee

At the monthly coffee auction held at Palayamkottai, about 653 cwt were offered. Out of this quantity, 118 cwt of Plantation; 15 cwt Arabica and 411 cwt of Robusta were sold to the bidders. A total quantity of 108 cwt was withdrawn. Following were the range of prices (per cwt):—Plantation "A" (1956-57 crop) Rs 225.75 to Rs 230.10; (1957-58 crop) Rs 220.29 to Rs 230; Plantation "B" (1956-57 crop) Rs 208 to Rs 223; (1957-58 crop) Rs 208.10 to Rs 215; Plantation Peaberry (1956-57 crop) Rs 232.50 to Rs 233; (1957-58 crop) Rs 231 to Rs 236.20; Robusta Cherry PB Rs 161 to Rs 165.40 and Robusta Flats Rs 153 to Rs 158.20.

Groundnut

Conditions in the Madras Groundnut market, after ruling quiet early in the week, steadied up towards the close of last week. Daily arrivals averaged 30 to 40 tons, local crushers being the main buyers. Business was reported done at Rs 145 per candy.

ALLAHABAD BANK NOMINEES PRIVATE LIMITED

Balance Sheet as on 31st December, 1957

Rs. nP.	Rs. nP.
Capital Authorised and Fully Paid-up 50 Ordinary Shares of Rs. 100 each Paid in Cash	Deposited with the Allahabad Bank, Ltd.
5,000 00	5,000 00
5,000 00	5,000 00
ALEX. IZAT, J. RITCHIE, JAGATNARAIN,	Directors.

We have audited the foregoing Balance Sheet as at 31st December, 1957, of the Allahabad Bank Nominees Private Limited. We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit. In our opinion proper books of account as required by the law in force have been kept by the Company so far as appears from our examination of those books. The Company's Balance Sheet is in agreement with the books of account and in our opinion and to the best of our information and explanations given to us the said Balance Sheet gives the information required by the Companies Act, 1956, in the manner so required and gives a true and fair view of the state of the Company's affairs as on 31st December, 1957.

No Profit and Loss Account has been prepared as the Company has no income and the expenses are paid by the Holding Company.

Calcutta:
The 28th February, 1958.

A. F. FERGUSON & CO.,
Chartered Accountants.

In the Groundnut Oil Section, the rate for the ready position declined from Rs 300.50 to Rs 297 per candy. Activity was generally restricted due to a sudden decline in Bombay prices. At the close of the week, however, a sizable volume of business was done in ready and nearby positions.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides continued to be restricted and everything available was readily taken up by the various shippers at firm prices and at a reduction of 3 nP per pound in the case of medium and heavy weights. Fresh business with UK was very difficult to confirm, as buyers continued to buy only from hand to mouth as prices were considered to be high. The main enquiry from UK, at present, appears to be for fifts.

The market for Buff hides ruled steady with restricted arrivals. In the Calf section, arrivals of Buff Calf were fair and prices advanced by about 3 nP per pound.

In the Tanned Skins section, there were only a few clearances and prices remained more or less unchanged.

In the the London Public Auction, as usual, Goat skins were taken up first. On the first day, prices realised were unchanged. On the second day, auctions were generally 3d to 9d cheaper. As a result of the whole auctions, the very best tannages can be quoted as approximately unchanged and others 6d to 1sh cheaper, especially for adulterated goat skins. According to a report, 150,000 goat skins have remained unsold.

The market for Raw Skins remained unchanged, Bangalore Goat skins advancing by Rs 10 to Rs 15 per 100 skins. In Bezwada, sheep skins were easier by about Rs 5.

Recovery After A Setback

Watch-Dog Writes:

STOCK markets, after ruling generally firm till the middle of the week, developed a reactionary tendency on Thursday due to selling pressure, induced by various rumours. Towards the close, however, they staged a marked recovery on some short-covering. The general feeling, however, has turned round the constructive side as it is felt that the worst is over.

Prices on the Calcutta Stock Exchange, after recording fresh higher levels, gave way to selling pressure on Thursday, although the closing tone was better on some short-covering.

Settlement considerations dominated trading sentiment on the Bombay Stock Exchange during the major part of the week under review.

On the Madras Stock Exchange, Plantation shares continued to be in strong bullish fervour and prices advanced further.

The London Stock Exchange failed to establish a decided trend and closed with an irregular appearance.

Wall Street closed barely steady.

Calcutta

DESPITE profit-taking at bulges, equities on the local Stock Exchange continued to forge ahead till Wednesday during the week.

March 29, 1958

under review. Apart from the fact that the appointment of Shri Morarji Desai as Finance Minister induced a somewhat constructive feeling, operators had an impression that he would follow a more realistic policy, resolve the crisis of confidence and thus remove some of the misgivings which were entertained so far by the private sector. There was a hope that the Government might devise a method of giving relief to the tea industry. It was also anticipated that the disabilities, imposed by the new regulations governing the grant of the Development Rebate, would be removed. But for some unfounded rumours with regard to the imposition of excise duties on iron, steel, paper and rayon which caused a reactionary tendency in prices, the market would have finished at the best levels for the week.

Jute shares were slightly better and there were widespread gains. Operators seemed to have derived encouragement from the fact that the establishment of futures trading in raw jute and jute goods would go a long way in preventing the violent price fluctuations stemming from the operations of the Fatka market. Howrah closed at Rs 13.75 (Rs 13.37); National at Rs 21.90 (Rs 21.90); New Central at Rs 13.50 (Rs 13.12); Barnagore at Rs 79.50 (Rs 74.00); Belvedere at Rs 71.50 (Rs 66); India at Rs 102 (Rs 96); Kamarhatty at Rs 79.50 (Rs 74) and Megna at Rs 92 (Rs 83.50). Figures shown within brackets were the lowest rates touched for the week.

Coal shares came in for selective support on the belief that the Government would not, for long, ignore the industry's claim for an increase in the selling price of the commodity. Burrakur, after being marked down at one time to Rs 23.06 from Rs 23.25 due to speculative selling, recovered at the close to the latter level. Bengal had buyers upto Rs 211 from Rs 208; Amalgamated upto Rs 16.00 from Rs 15.75; Central India upto Rs 7.12 from Rs 6.94 and Western Bengal upto Rs 5.56 from Rs 5.44. East India forged ahead to Rs 20.25 from Rs 20 and so also Equitable to Rs 25.87 from Rs 25.25.

Enquiry in the Tea section appeared to have petered out for the time being, and prices developed a slightly easier tendency on profit-taking at the recent high levels. Dealings were also restricted as operators were still anxiously awaiting the announcement on the reduction in the export duty on Common teas. Birpara changed hands at Rs 110 to Rs 114 (Rs 112); Brooke Bond at Rs 16.32 to Rs 16.75 (Rs 16.37); Dhelakhat at Rs 22.25 to Rs 22.62 (Rs 22.62); Eastern Cachar at Rs 4.81 to Rs 5.06 (Rs 5.06); Grob "A" at Rs 22.25 to Rs 22.56 (Rs 22.50); Methoni at Rs 16.81 to Rs 17.12 (Rs 17.12) and Telojian at Rs 22.87 to Rs 23.12 (Rs 22.87). Figures shown within brackets were the closing rates for the week.

Sugar shares continued to meet with selective demand on the belief that, with no large carry-over to the next season, the statistical position of the industry was sound and that the outlook for the sweet commodity would improve further. The most prominent feature was S.K.G. which recorded a fresh higher level of Rs 10.19 from Rs 9.19. Carew were enquired upto Rs 7.37 from Rs 6.37, while Balrampur finished a shade quieter at Rs 6.12 after touching a high of Rs 6.50. Champarun were, however, marked down to Rs 20.44 from Rs 22.37 following the passing over of the dividend.

After a steady and sharp rise witnessed till mid-week, Engineering shares developed a reactionary tendency on Thursday due to renewed selling pressure on unfounded rumours. Towards the close, however, prices staged a slight recovery on some short-covering. Against the week-end closing of Rs 21.33, Indian Irons opened steady at Rs 21.34 and, despite settlement considerations, steadily advanced to Rs 21.59. Selling pressure at this level brought down the scrip at one time to Rs 21.00, finishing better at Rs 21.42. The settlement rate was fixed at Rs 21.49 as against last settlement of Rs 20.36. In sympathy, TEXMACO were pushed down at one time to Rs 18.25 from Rs 18.50, to recover again to Rs 18.70 at the close. Jessop were on offer at as low as Rs 21.00 against Rs 22.62 on rumours of a right issue in the ratio of one for one, to finish better at Rs 21.50. Marshalls changed hands at Rs 5.31 to Rs 6.03; Kumarhubi at Rs 7.87 to Rs 8.06; Braithwaite at Rs 27.12 to Rs 27.25 and Indian Galvanizing at Rs 14.90 to Rs 14.12. Renewed investment demand caused G. K. Williams to firm up further to Rs 30.69 from Rs 29.75.

Despite profit-taking at bulges, the Miscellaneous section provided many firm features. An outstanding feature was Dunlop Rubber which met with sustained demand upto Rs 23.87 from Rs 22.69 following the increase in dividend from 15 to 16½ per cent on the increased ordinary capital. Reports of buying by LIC and higher advices from the metal market pushed up Indian Copper to Rs 3.36 from a low of Rs 2.98, to recede at the close to Rs 3.30 on profit-taking. Hindustan Motors were enquired upto Rs 7.25 from Rs 6.53 on expectation of better working results for last year. Indian Aluminium remained very firm at Rs 12.75 following the announcement of 6 per cent for 1957 on the increased capital as against 10 per cent on the original capital. National Carbon were in demand upto Rs 24.44 from Rs 23.75 on brighter prospects for the company as disclosed by the company's Chairman at the recent Distributors' Conference. Indian Oxygen were in demand upto Rs 17.44 from Rs 16.50; Philips upto Rs 14.00 from Rs 13.75; NICCO upto Rs 24.04 from Rs 23.87; Indian Cable upto

Rs 29.31 from Rs 28.81 and Alkali Chemicals upto Rs 13.87 from Rs 13.25. In the Paper section, Orient touched a low of Rs 28.00 from Rs 28.45; Titagur Rs 34.37 from Rs 34.87 and Sirpur Rs 9.19 from Rs 9.37, to improve towards the close to Rs 28.25; Rs 34.50 and Rs 9.56 respectively. India Pulp, after being taken upto Rs 19.44 from Rs 19.37 following the interim dividend announcement, receded at the close to 19.12 on profit-taking.

Bombay

THOUGH the undertone has been steady trading during the past week has been punctuated by frequent bouts of selling and buying. The optimism engendered by the concessions announced by Mr Nehru during the general debate on the budget has continued to impart a steady undertone to the market, but the reactionary tendencies have been able to assert themselves at times. As has been pointed out in this column last week, there is a persistent feeling that Government may not leave the loss of Rs 15 crores sustained as a result of the reduction in the excise duties on cloth unrecovered. This has been taken advantage of by bears to spread rumours about imposition of excise duties on a variety of commodities. Toward close of the week such rumours have been persistent and the market has finished the period under review with widespread small losses.

STEELS

Tata Iron opened at Rs 180.25 and after earlier steadiness developed a sagging tendency. Toward close the scrip conceded sizable ground to be finally placed at Rs 178.50. Indian Irons closed subdued at Rs 21.08 as against opening rate Rs 21.44.

MISCELLANEOUS

In the miscellaneous section prominent shares were quite firm upto midweek but in later dealings were marked down in sympathy with the general trend of the market. ACC was finally placed at Rs 150.50. National Rayon was quiet at Rs 236.50. After ruling steadier in earlier dealings, Scindia Steam was subdued by close to quote lower at Rs 16.90. TMLCO met with sustained support and closed higher at Rs 156.50.

Madras

A brisk turnover coupled with a smart rise in prices was seen on the Madras Stock Exchange. Plantations shares continued to be prominent, while Textile scrips met with moderate enquiries.

PLANTINGS Influenced by hopes of an early revision in the export duty on tea and also impelled by encouraging crop reports, prices in this section moved up smartly in several shares. United Nilgiris were taken up to Rs 15.25 x1; Chembra Peaks upto Rs 3.70; Twyford's upto Rs 13.80 and Periakaramalais upto Rs 14.15.

TEXTILES Several scrips in this section registered fair rise in prices. Bangalore Woollens changed hands upto Rs 173, while there was demand for Cauvery's, Travancore Rayons and Radhakrishnas at the market rates. However, Coimbatore Spinnings found some sellers. Coimbatore Murugans were on offer at Rs 120, while Malabar Spinnings dropped down to Rs 90 due to selling pressure. Buckinghams had buyers at Rs 167 c.d.

MISCELLANEOUS In this section, Mysore Paper recovered to Rs 16 with buyers at this level. Spencer Ordinaries were better supported at the improved rate of Rs 17.35. India Cements were taken upto Rs 27.25, while Textools dropped down to Rs 177 with sellers at this level. Metturs were slightly higher at Rs 404.

London

THE London Stock Exchange failed to establish a decided trend. With Wall Street again lower and in view of several adverse influences already in existence, operators were reluctant to enter into fresh commitments.

Gilt-edged securities were the main exception to the general trend and closed with small improvements.

New York

THE main body of stocks on Wall Street showed mostly fractional changes either way and losses holding a small edge. The recovery effort was restrained by profit-taking and other selling.

S. E. RLY TENDERS

Sealed Tenders (Tender No. S/ CAL-Handling/58) are invited for handling Wooden Sleepers and Timber at Railway's Dump or elsewhere in the Calcutta Port Commissioners' Area or Shalimar Stores Depot.

Tender Forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23, on remittance of Rupees Five only (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, S. E. Rly., Garden Reach, by local firms.

Earnest Money Rs. 1,000/- is to be deposited with this Rly's Chief Cashier and the receipt obtained thereof should accompany the tender without which the tender is liable to be rejected. Approved Contractors who have already made a permanent deposit of Rs. 1,000/- with the Controller of Stores are exempted.

Firms not on this Railway's list of approved Contractors must enclose a valid Income Tax Clearance Certificate with the tender.

Tenders will be opened at 12 noon on 30th April 1958 in the office of the General Manager.

HIGHLIGHTS OF THIS ISSUE

If an employee gets arrested, and hence compelled to absent himself, can management dismiss him?

Is the trend in India one in which a premium is placed on the mediocre—but no bonus for merit?

We commend to the reader the answers to these questions, given by M. Sur. See Leading Articles.

In the Offing: A new Bombay Issue

Investment Gossip:

The holiday spirit is abroad, but although that usually cramps the style of stock exchange operators, we have during the past week had the experience of cheerful conditions obtaining in market activity. I have, in this context, to repeat myself, and say what I said but last week, and that is, interest is broadening, the range of shares dealt in is wider and activity as such is also on an enlarged scale.

Tata Ordinaries have provided the spark on Dalal Street where, over and above the week end bank holidays, there was a mid-week interruption as well. The recent concessions that have been granted are now thought to have contributed to an improvement in the stock exchange hawa, and there are even some circles who speak vaguely of further reliefs to come, though I cannot think of any.

There is one exception to that last statement of mine, and that is, some concession in respect of export duties on common teas; but this relates to Lyons Range, and not to Dalal Street. But, as I have long maintained, it is the atmosphere that counts for far more than any specific acts, and it is the hawa that now appears conducive to a sustained bull phase on Stock Exchanges.

Moreover, in Calcutta, the investor's market has shown signs of perking up, thanks to the opening of the futures market in jute goods, which has been taken to pre-empt better prospects for the jute section. Consequently, we have recently been vouchsafed activity even in this section—one which has long been moribund.

Meanwhile, there is good news from Bombay; a new issue is in the offing, and the high respect in which the company—Greaves Cotton—is held is responsible for the investor looking forward keenly to the prospectus. As we go to press, some of the details are available, such as, for example, the fact that the subscription lists are to open on the 14th of April and close not earlier than the 16th of April; also, the offer to the public is restricted to Rs 35 lakhs consisting of 35,000 equity shares at par; the existing shareholders are taking up 11,600 shares of the present issue, and it is only the remainder that is being offered to the new investor.

I hope to be able to give a full analysis of the prospectus in the

next week's issue; for the present, I shall content myself with suggesting that the Greaves Cotton issue is being made at a time that is most propitious—a period during which share prices are headed upward.

₹₹₹

Investment Notes:

The Greaves Cotton & Company is to issue 46,600 equity shares of Rs 100 each, at par. Of this, 11,600 shares will be taken by the present shareholders and the balance 35,000 shares are offered to the public. The shares, now being issued, will confer the right to any dividend declared in respect of the year ended 31st March, 1959. The subscription list will be opened on the 14th April. An amount of Rs 50 per share is to be paid on application and the balance of Rs 50 on allotment.

The shareholders of the Oriental Government Security Life Assurance Company have approved the scheme of amalgamation with the Investment Corporation of India Limited, which has agreed to revise upward the cash compensation to Rs 4,300 from the original proposal of Rs 4,000 per share of Oriental.

The Saurashtra Central Co-operative Land Mortgage Bank Limited, Rajkot, has proposed to issue the fourth series of Debentures, guaranteed by the Bombay Government in respect of principal and interest. The total amount is Rs 1.25 crores, to be issued at Rs 98.50. They carry interest at 4½ per cent per annum and will be redeemable at par on April 30, 1968. The subscription list will open on the 9th April.

Forest Industries (Travancore) Limited has decided to reduce the capital from Rs 40 lakhs to Rs 25 lakhs by the return of Rs 1.50 per share on the 4,98,100 shares. The High Court has confirmed this capital reduction.

Dividend Payment

By K. V. Iyer.

There is an aspect of company practice which has attained greater importance owing to vast numbers of the public being interested in them as shareholders and which therefore calls for greater attention on the part of their management.

Though every company closes its accounts for the year on the same date every year, owing to the latitude allowed for the presentation of the Annual Accounts and in regard to the date for the Annual General Meeting, the months of the year when the shareholder receives his dividend varies widely in respect of the same company with the result that a shareholder may have to account in his return of income for Income Tax the dividends of two years sometimes and of none in the following year thus subjecting himself to a larger amount of tax in the earlier year than

should otherwise happen. And it cannot be affirmed that on the whole, by virtue of a shareholder holding shares in more than one company, the incidence of tax on his income would be evened out.

It is therefore necessary that management of companies should, except in the presence of insuperable difficulties, arrange to present the Accounts in the same month every year and pay the dividend in the same manner.

In regard to the payment of the dividend, the Act lays down that it should be paid within three months of the date of its declaration and failing to do so the Directors and others render themselves to imprisonment and a fine. But who is to bell the cat?

Further is a period of three of months really necessary? Is it not common sense that a company should arrange to meet its liability, like any other party, before undertaking it and meet it as soon as it arises?

Excellent Results of Dunlop Rubber

Balance-Sheet Reviews:

THE Dunlop Rubber Company (India) Limited has produced excellent working results for the year ended 31st December, 1957. While sales have shown a substantial rise to Rs 19.97 crores from Rs 17.00 crores, the net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 80.67 lakhs as against only Rs 55.09 lakhs in the previous year. In respect of allocations to Funds, the Depreciation amount is reduced to Rs 27.69 lakhs from Rs 30.55 lakhs, while Taxation provision is raised to Rs 86.52 lakhs from Rs 47.35 lakhs and General Reserve to Rs 30.00 lakhs from Rs 26.00 lakhs. The directors have recommended a final dividend of 8½ per cent, making a total of 16½ per cent on the increased Ordinary capital as against 15 per cent on the original capital in the previous year.

In this connection, it would be recalled that, in July 1957, the company issued 14 lakhs Ordinary shares of Rs 10 each at a premium of Rs 5, which provided additional capital of Rs 203 lakhs towards the cost of the expansion programme. To facilitate the Ordinary share issue, they declared an interim dividend of 7½ per cent, existing in June 1957.

According to the directors' report, the major expansion of the company's Sahaganj factory had progressed considerably by the end of last year and construction of the new factory at Ambattur was commenced in the latter of the year.

Share Premium Account, amounting to Rs 70 lakhs representing the premium of Rs 5 per share on the issue of 14 lakhs Ordinary shares, has been treated as a Capital Reserve.

Indian Aluminium

The Indian Aluminium Company Limited has created a new record in production as well as sales in 1957. Sales have risen to Rs 5.44 crores from Rs 4.25 crores; but the net profit, after providing for Depreciation and Taxation, amounts to only Rs 26.38 lakhs as against as much as Rs 35.79 lakhs in the previous year. This is mainly due to a larger provision of Rs 34.47 lakhs for Taxation against only Rs 7.00 lakhs. The Depreciation amount is raised to Rs 26.30 lakhs from Rs 22.80 lakhs, while a sum of Rs 4.50 lakhs is provided for Wealth Tax. The directors have recommended a dividend of 6 per cent on the increased Ordinary capital as against 10 per cent on the original capital in the previous year.

In this connection, it may be mentioned that, as part of the financing programme for the current expansion, the issue of Rs 2,68,13,200 5 per cent Convertible

Loan Stock, at par, was successfully completed in February 1957 and allotment was made in March 1957. In accordance with the terms of the issue, Rs 2,44,65,200 Loan Stock had been converted into 18,34,890 Ordinary shares by March 31, 1957.

According to the directors' report, work on the expansion programme has made considerable progress. The construction of the company's new reduction plant at Hirakud in Orissa will be completed on schedule, and that the 10,000 tons annual production capacity being installed will come into operation early in 1959. The expansion, simultaneously underway of the existing alumina plant at Muri to 18,000 tons of annual production capacity, is also expected to be completed during 1958. A further expansion of 30,000 tons of alumina capacity will be thereafter taken in hand for completion by 1961.

The directors have concluded that early expansion of the Hirakud Smelter from 10,000 tons to 20,000 tons ingot production capacity per annum is desirable. In order to facilitate this expansion, the company's Canadian shareholder—Aluminium Limited—has decided to offer a loan up to 5 million dollars, which is about equivalent to the foreign exchange required to expand the Hirakud Smelter from 10,000 tons to 20,000 tons and the Muri alumina plant from 30,000 to 40,000 tons annual production capacity.

£ R S

Orissa Minerals

Despite a decline in earnings, the Orissa Minerals Development Company has maintained the dividend at 20 per cent for the year ended 30th June 1957. Sales have risen to Rs 88.77 lakhs from Rs 68.94 lakhs, while the net profit, after providing for Depreciation and Taxation, amounts to only Rs 4.74 lakhs as against Rs 5.57 lakhs in the previous year. The directors have provided Rs 1.85 lakhs (Rs 1.71 lakhs) for Depreciation; Rs 10.90 lakhs (Rs 2.80 lakhs) for Taxation; Rs 315 (Rs 232) for General Reserve; Rs 24,000 (Rs 74,200) for Taxation Contingency Reserve and Rs 5,300 (Rs 12,340) for Development Rebate Reserve.

The company has formed a new company called, Bolani Ores (Private) Limited in the Bolani area to develop and exploit the large deposits in that area. The Central

Government and the Orissa Minerals Development Company have participated in the capital in the ratio of 50.5 and 49.5 per cent respectively. Messrs Bird & Company are the secretaries, appointed for a period of 15 years.

£ R S

Gokak Mills

Despite an increase of Rs 8.00 lakhs in sales to Rs 2.54 crores, the Gokak Mills Limited has been obliged to draw upon its reserves to the extent of Rs 4 lakhs to meet the reduced distribution of Rs 8 per share for 1957 as against Rs 13 paid in the previous year. The provision for Development Rebate takes away as much as Rs 6.76 lakhs as compared with Rs 1.10 lakhs. After providing Rs 3.88 lakhs (Rs 4.50 lakhs) for Depreciation and Rs 1.99 lakhs for Taxation, the net profit is Rs 6.62 lakhs as compared with Rs 8.63 lakhs in the previous year.

£ R S

Gold Mohur Mills

The working results of the Gold Mohur Mills Limited are in line with the trend of profits of the textile industry. After providing Rs 2.20 lakhs (Rs 6.25 lakhs) for Depreciation and Rs 6.30 lakhs (Rs 4.70 lakhs) for Taxation, the net profit amounts to only Rs 4.62 lakhs as against as much as Rs 12.49 lakhs in the previous year. The dividend on the Ordinary shares is maintained at Rs 15 per share. Sales have declined by Rs 19 lakhs to Rs 1.91 crores.

£ R S

Swan Mills

The Swan Mills Limited has reported a net profit of Rs 8.24 lakhs as against Rs 14 lakhs in 1956. A sum of Rs 4.50 lakhs (Rs 10.50 lakhs) is provided for Depreciation and Rs 6.00 lakhs (Rs 3.40 lakhs) for Taxation. The Ordinary dividend is Rs 25 per share. Sales of cloth, cord, yarn and waste have declined by Rs 26 lakhs to Rs 2.45 crores. Against a paid-up capital of Rs 36 lakhs, reserve and surplus total Rs 71.09 lakhs.

£ R S

Vishnu Cotton

Despite a rise in sales by Rs 25 lakhs to Rs 2.49 crores and reduction in stocks from Rs 64.25 lakhs to Rs 33.98 lakhs, the Vishnu Cotton Mill Limited has reported a loss of Rs 9.54 lakhs for 1957. The dividend has been passed over.

National Income Achieves Target in First Year of Second Plan

IN terms of national income, the first year of the Second Plan must be deemed to have witnessed the most satisfactory performance. And yet, there is, as there most assuredly should not be, some difficulty encountered in comparing the figures just released with those contained in the Second Plan.

It may be recalled that, according to the Plan frame submitted by Professor Mahalanobis, the national income, at 1952-53 prices, was estimated to rise from Rs 10,800 crores in 1955-56 to Rs 13,700 crores in 1960-61. The increase thus sought over the Plan period was 27 per cent, and the Professor calculated that, in the process, the per capita income would rise by 19 per cent from Rs 282 to Rs 334.

The Second Plan also bases its figures for national income at 1952-53 prices. But the estimate for 1960-61, in the Second Plan, is slightly lower at Rs 13,480 crores involving an increase over the Plan period of 25 per cent; and, secondly, the per capita income would rise by 18 per cent to Rs 330.

While, thus, the Second Plan papers base their national income statistics at 1952-53

prices, all other sources of this information provide the data at, firstly, current prices and, secondly, 1948-49 prices. So, strictly speaking, it is not possible to compare the figures just released with those mentioned in the Second Plan. Nevertheless, we have available a measure of the improvement that has been recorded.

At 1948-49 prices, national income, in 1956-57, showed a rise of Rs 730 crores over 1955-56 and was placed at Rs 11,010 crores. This means that, in the first year of the Second Plan, the rise recorded in the national income was 5.1 per cent. Although the figures for 1956-57 are provisional, the improvement fulfils the annual rate necessary to achieve the Second Plan target of 25 per cent increase in national income over the Plan period, and, indeed, slightly exceeds it.

As far as the per capita income is concerned, at 1948-49 prices, the figure has gone up from Rs 273.6 in 1955-56 to Rs 284.0 in 1956-57. The increase works out to 3.8 per cent; and it would mean that, if this annual rate were maintained, the increase over the Plan period

Indian Finance

Established 1928

April 5, 1958

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

would work out to 19 per cent as against the Second Plan target of 18 per cent.

It may be emphasised that such improvement has been recorded at 1948-49 prices. At current prices, the rise in national income during 1956-57 was even steeper, from Rs 9,990 crores to Rs 11,410 crores; the increase during 1956-57, at current prices, works out to over 14 per cent. Similarly, per capita income at current prices improved from Rs 260.8 in 1955-56 to Rs 294.3 in 1956-57; this increase works out to nearly 13 per cent. But we must bear in mind the fact that the larger increase at current prices, during 1956-57, was due to the upward trend in prices during the first year of the Second Plan.

But, even on the basis of 1948-49 prices, the latest figures are a most heartening indication of progress being achieved at the targeted annual rate. However, we should take this opportunity to enquire why there should be this difference in the basis for national income figures as between Second Plan statistics and those available elsewhere.

Rising Trend in World Economic Activity

THE United Nations Statistical Yearbook for 1957 discloses a rising trend in the level of world economic activity. With an increase of 4½ per cent in industrial production in 1956 as compared to the previous year and a rise of 16 per cent in agricultural production as compared to 1950, together with an increase in the value and volume of world trade to the tune of 11 per cent and 9 per cent respectively over 1955, world economic activity touched the high water mark in 1956. The changes assume revolutionary dimensions when the datum line is shifted to the remoter past of the pre-war years. Thus, the increase in the production from mines and factories was as much as 225 per cent as compared to 1938, the increase in railway haulage as much as 250 per cent, while the rise in exports, though relatively modest, was significant.

It is in the field of industrial production that the most spectacular changes have been recorded, industrial production in the world having exceeded the level for 1955 by nearly 4½ per cent. This represents an increase of 40 per cent over the figure for 1950 and 127 per cent over the figure for 1938. The relatively modest increase in agricultural production, which was only 16 per cent as compared with 1950, is a sign of the orientation of the world economy toward industrialisation.

With a population which has increased at a lesser pace of only 20 per cent in 1956 as compared to 1940, the rising trend in the world economic activity indicates an appreciable rise in the standard of living which is, however, true only of the countries which have contributed and shared in this economic expansion in a significant way.

Naturally enough, it was the USA which set the tune and pace for the changes in the world economy. And the improvements in the world economy are only a reflection of the profound changes that have taken place in the US economy. This would be evident from

figures for the share of US in the production of certain vitally important industrial products. The USA accounted for nearly 30 per cent of the world's production of coal in 1956, for 42 per cent of crude petroleum, 41 per cent of electricity, 25 per cent of cement, 37½ per cent of total world production of steel and 60 per cent of the total production of motor vehicles. This brings out the economic might of the USA and the concentration of economic prosperity in that country. The share of the Soviet Union in the industrial resources, though not on a comparable scale as the US, is significant, the share in the world production of coal, crude petroleum, electricity, cement, steel and motor vehicles being 19 per cent, 10 per cent, 11 per cent, 11 per cent, 17½ per cent and 4 per cent respectively. The scale and dimensions of economic improvement in these two countries have naturally eclipsed the process of development in the other parts of the world.

The economic supremacy of the USA is further brought out in the other indices of economic activity, such as the volume of world trade, consumption of raw materials, number of motor vehicles, railway freight traffic and shipping tonnage. The Statistical Yearbook has estimated the percentage share of the US consumption for such raw materials as cotton, natural rubber, synthetic rubber, tin and raw wool at 25 per cent, 32 per cent, 77 per cent, 38 per cent and 14 per cent respectively. The world consumption of these raw materials during 1956 improved considerably over 1955, the increase being to the tune of 3 per cent in raw cotton, 4 per cent in tin, 6 per cent in synthetic rubber. Only in regard to natural rubber was a decline registered in consumption in 1956.

The expansion of railway freight traffic in the post-war period was more concentrated in the countries behind the iron curtain, where, according to the Yearbook, between 1947 and

1956, railway freight traffic more than tripled. Progress in America was rather negligible, the increase being only 2 per cent, while Western Europe registered an increase of nearly 50 per cent in its railway freight traffic. Thus, the 8 per cent increase in the freight traffic in 1956 was practically contributed by countries of Eastern Europe and Asia.

The progress in shipping is equally remarkable and, during 1956, the shipping tonnage was 5 per cent greater than in 1955 the increase in tonnage loaded on ocean going ships being greater. It is perhaps the cessation of hostilities in 1945 that accounts for the drop in the tonnage of USA by 20 per cent since 1947. All the same, the US merchant fleet is reckoned as the largest in 1956 when it exceeded the steadily increasing United Kingdom tonnage by about a third. The high level of industrialisation reached by countries in the North American continent and especially USA is further brought out by the preponderant share of the continent in the total of motor cars and commercial vehicles existing in the world, the share being estimated in the Yearbook at 75 per cent for motor cars and 58 per cent for commercial vehicles.

The growing tempo of industrialisation could not have been sustained without a proportionate rise in the availability of power and energy for industrial purposes. In 1956, the world is shown to have consumed about 7½ per cent more energy than in 1955, the world per capita energy consumption being estimated at the equivalent of 1.35 metric tons of coal in 1956 against 1.27 in 1955. The increase in energy consumption is marked for South America which is shown to have registered an increase of 252 per cent since the pre-war years while the increase for the countries of the communist camp, which is the only other group to have shown appreciable increase, works out to 180 per cent. The countrywide distribution of energy consumption, which

shows energy consumption by USA at 44 per cent of the total and that of Asia at 5½ per cent, points to the wide gap that divides the underdeveloped countries of Asia from the advanced countries of America and Europe in the matter of industrial development.

While the countries of Western Europe and North America have made great strides in industrial development, and are in a position to plan and provide for industrial development on still larger scale, the countries of Asia and Africa are still in the stage of having to concentrate their efforts for ensuring an adequate level of income and a decent standard of living to their population. The leeway that these countries have to make in providing a satisfying life to their people is suggested by the great disparity in the available daily calories per capita as between these countries and those of Western Europe and North America. While most countries of Europe enjoy a daily per capita of more than 3,000 calories, the Asian countries are behind even the 2,500 mark. The fact that dwellings of 5-6 rooms constituted the largest group in Australia, New Zealand, Netherlands, United Kingdom, Canada and United States, while dwellings with one or two rooms constitute the largest group in British Guiana, Paraguay, Panama, Ceylon, etc., is a measure of the difference in the economic status between peoples of the underdeveloped countries and those of the developed countries.

The Triumph of the Mediocre

By M. SUR

IN recent years, there has been a disturbing tendency to decry merit in all negotiations for revised wage scales and to insist on a uniform pay for the job regardless of the efficiency with which it is carried out. Now, while, in general, the principle of the pay for the job is undoubtedly correct, it seems we are losing something if there is no incentive at all to put one's best effort into the job. On mechanical jobs, of course, where output can be measured, this incentive can be supplied by a bonus scheme related to production; and, in the interests of increased productivity, Government have been trying to encourage the introduction of incentive bonus schemes or piece rates, but, even here, workers and their representatives tend to be suspicious and to prefer the dead level of the fixed scale. In offices and in jobs requiring initiative, this levelling down is having an adverse effect on the standard of work.

Take the case of a filing clerk. Everyone knows that there are filing clerks and filing clerks—the first, though not bad enough to be sacked for inefficiency (if one could do such a thing these days!) are frequently at a loss and have the whole department in a frenzy when the boss is asking urgently for papers; the second, having interest in their work, a good memory and a systematic approach to their job, are able to turn up papers required at a moment's notice and contribute not a little to the smooth flow of work in the department. Indeed, the second type proves so valuable to the head of his department that his promotion to another job is frequently resisted on the grounds that he cannot be spared. How, then, is he to be rewarded for the performance of a good job, if he is not given the chance of promotion? Under the usual grading scheme now insisted on by all commercial unions and blessed by industrial tribunals, there is a scale for filing clerks and both the poor filing clerk and the outstanding filing clerk will receive the same increment. There is no award for extra merit, and no incentive to put extra effort into the job. This is the twentieth century version of the Levellers' Movement.

It is quite frequent for unions to claim a

The termination of the Second World War also witnessed the leadership of the world's trade passing from the UK to the US. While the share of the US in the world trade rose from 12 per cent in 1938 to 17 per cent in 1956, the share of the UK went down from 15 per cent to 10 per cent during the same period. This leadership was built on the basis of a greater increase in exports from USA than of imports, into that country. Against a share in exports of 21 per cent, the share of US in total world imports in 1956 was only 13 per cent. Currencywise, the dollar area countries accounted for 31 per cent of the world's exports in 1956 and 26 per cent of the imports while sterling area countries accounted for 23 per cent of exports and 24 per cent of imports. Though world trade has, during 1956, registered a notable increase over the previous year, the need to rectify the imbalance in the economies of the underdeveloped countries would warrant a freer flow of trade between countries and especially of capital investment from countries with surplus capital resources. Having emerged as the economic colossus, the trade policies and economic decisions of the USA would have a vital bearing on the pace of progress in the less developed countries. A recognition of its obligations to the other countries by America is therefore of supreme importance to the balanced development of the world economy.

higher pay or a higher grade in the office for a clerk with a degree, regardless of whether the degree is relevant to the job he is doing. While it is certainly true that a clerk with a degree has spent time and money on his higher education, it is unfortunately not true that this automatically makes him more qualified for his job. It may, in fact, unfit him for a job which he feels is beneath his qualifications, and many clerks who have not been fortunate enough to have the opportunity to sit for a degree, are better clerks than those who did.

In a recent dispute in one company, the union argued that those who had worked in several jobs should automatically have priority for promotion. Movement from one job to another is not necessarily evidence of versatility, but even when it is, versatility is only one of the factors which should be considered for promotion. Why should the worker who has been kept on a single job, where he has shown himself first-rate, be passed over when it comes to promotion by a man who has been shifted around just because he was the worker who could most easily be spared each time by the head of his department? For promotion, various factors must be taken into consideration and these factors may vary according to the type of job.

Discussion recently with a leading trade unionist confirmed the impression that the trade unions do not like any form of merit rating and only approve of merit being taken into consideration for purposes of promotion. The reason given was that the workers cannot trust the management to be impartial in rating merit and that factors such as "loyalty" are usually taken to mean non-support for trade union activities. It is only too true that this has often been the case, and managements have largely themselves to blame for the present accent on mediocrity.

The triumph of mediocrity is not, however, confined to India. A recent issue of Personnel, published by the American Management Association, contains an article entitled, "Whatever Became of Merit Rating?" The author argues that the idea of paying varying rates for the same job was soundly based on the fact that

people differ and that extra pay for merit was a real incentive and in accordance with the democratic principle of "to each in accordance with his ability". The AFL, with its craft outlook, in the past was not set against performance rating, but the CIO found different ratings for the same job "was distasteful to the great commonizing movement" and argued that merit rating was only a "peculiarly invidious form of favouritism". With the combination of the two great federations, the CIO view prevails.

There is much truth in the allegation, says the author, for, performance rating on unmeasured jobs is difficult to keep objective, and "it's always pleasant and satisfying—and only too human—to recognise the guy who goes along with you. It's hard to give a raise to a surly introvert, even though his production and quality are tops." The characteristics for merit rating have not always been wisely selected. One merit rating plan is quoted which required a numerical rating on the characteristic of "dependability", which foremen tended to interpret as "a good company man" not bothering about the union. Another numerical rating was "versatility" which was defined as "ability to perform adequately more than one job in the department", which took no account of the highly capable one-job man.

Among organised workers there is a strong urge to conform and not to be different from the others, which usually wins over the urge to excel. Faced by the opposition of organised labour to merit rating, it was natural for American managers to say, "if equal treatment is what they want, that is what they'll get". The urge to earn more began to be satisfied with group incentive schemes, or with incentives directly related to production where the job was measurable. Where high ability could not be measured, it was found that highly skilled men were turning down the skilled jobs in favour of lower-rated jobs where they could earn more on output.

If trade unions are suspicious of management intentions in the USA, they are doubly suspicious here. It is not likely that they can be expected to accept any form of merit rating except in appraisal for promotion. We shall have to content ourselves with pressing for payment by results on measured work and group incentives where these are practicable. We cannot afford to let initiative be smothered by mediocrity.

In the USSR, when mediocrity appeared to have gained the upper hand, the Stakhanovite movement had to be introduced to bring back initiative. This in turn has gone too far toward making a privileged class or caste, and recently it was reported that some modifications in the Stakhanovite system had become necessary. As always, the pendulum swings too far one way or the other, and needs some adjustment to give true balance. In India, we have gone too far in standardising pay. We need now to redress the balance by encouragement of initiative and outstanding performance.

Employees Under Arrest

CAN management take action against an employee who is under arrest by the police? This is a question that arises whenever there is a serious disturbance in factory premises and the police are called in and arrests follow. Or the question may arise where an employee has been arrested for some outside activity quite unconnected with his employment, and the management feel that he is no longer a suitable person for them to employ.

Normally, employers' standing orders include a clause to the effect that overstaying of leave or absence without permission for more than a certain period will lead to automatic dismissal. Can this be applied in the case

of an employee who is under arrest and therefore involuntarily prevented from attending to his duties? Trade unions always argue that, in such cases, the management should grant leave and that it would not be fair to take action against the employee when his absence is due to circumstances beyond his control. Even the Labour Appellate Tribunal held that a company was not justified in refusing leave when employees were in custody, but the Supreme Court has now reversed this decision. (LLJ Mar. 1958, p. 261).

The case before the Supreme Court concerned seven workmen of the Indian Iron and Steel Co Ltd who were arrested by the police in 1953 and remained in custody for some time. They applied for leave, which was refused, and their services were terminated under the standing order dealing with absence from work without permission for more than 14 days. The Supreme Court conceded that the arrested men were not in a position to come to work, but held that, while this was unfortunate for them, it would be unjust to hold that the company must always give leave in such circumstances:

"If a large number of workmen are arrested by the authorities in charge of law and order by reason of their questionable activities in connexion with a labour dispute (as in this case), the work of the company will be paralysed if the company is forced to give leave to all of them for a more or less indefinite period. Such a principle will not be just; nor will it restore harmony between labour and capital or ensure normal flow of production. It is immaterial whether the charges on which the workmen are arrested by the police are ultimately proved or not in a court of law. The company must carry on its work and may find it impossible to do so if a large number of workmen are absent. Whether in such circumstances leave should be granted or not must be left to the discretion of the employer."

Their lordships, however, added a proviso that, if the workmen were arrested at the instance of the company for the purpose of victimization or on the pretext of getting rid of them, then the position would be different and the action of the employer could be considered *mala fide*.

A rather similar case was referred to the Supreme Court in 1956 by Burn and Co Ltd (LLJ 1956 I p. 226) concerning an employee who was under arrest and whose services were terminated for continued absence. The Appellate Tribunal in this case had ordered reinstatement on the ground that the employee had been discharged without the issue of a charge-sheet and without holding an enquiry. The Supreme Court reversed the decision, pointing out that the ground of discharge was continued absence and it was difficult to see what purpose would be served by a formal charge being delivered to the man in jail.

Sometimes the problem arises in a rather different form. An employee is arrested on a charge, which may or may not be connected with his employment, and is subsequently acquitted. If the management have in the meantime discharged him, are they bound to take him back just because he has been acquitted?

When the employee had been arrested on a charge connected with his employment, acquittal does not necessarily entitle him to reinstatement. It is up to the management to establish the charge or not by their own departmental enquiry. If it is established, they can take independent action, but if the case should later be referred to an industrial court, they will then have to satisfy the court that their decision was justified and their action was not *mala fide*. This was made clear in a judgment of the Labour Appellate Tribu-

nal in the case of the State Bank of India, (LAC August 1957 p. 490):—

"We are of opinion that the mere fact of acquittal may not entitle the workman, who has been acquitted by the criminal court, to insist that the management are bound to reinstate him without any further question. On the contrary managements are within their rights in seeking to establish the charge against the workman concerned by adducing necessary evidence before the Tribunal. The judgment of the Magistrate will be useful for the purpose of proving the fact of acquittal. It may not have the effect of precluding the management from attempting to establish their charge against the workmen in question in the enquiry before the Tribunal."

As regards cases not connected with the arrested man's employment, it is open to management, as shown in the first case quoted, to terminate the services of an employee under the ordinary standing orders for continued absence without permission, and acquittal does not affect this position, except to prompt consideration on humane grounds of whether the employee can be re-employed if the case in which he was arrested has not brought any discredit on the company. In many cases, of course, the accused is "discharged for insufficient evidence"—though he will probably claim that he has been acquitted. He should be asked to produce the order of the court, from which it will be clear whether he was discharged or acquitted. In the first case, he has less claim for consideration; in the second, management's decision must depend on the circumstances of the case and the man's previous record.

Profit-Sharing Plans in US Industry

ON April 1, representatives of the United Automobile Workers and America's leading automobile manufacturers will open negotiations for a new labour contract to replace the present agreement, which expires on May 30.

The most controversial issue facing the negotiators will be a union demand that the companies share 25 per cent of their profits above 10 per cent of net capital before taxes with the workers. The proposal, advanced by UAW President Walter Reuther as a supplement to "basic minimum economic demands," was adopted by 3,000 UAW delegates at a special convention in Detroit.

Reuther recommended a three-way split of "surplus" profits, with 50 per cent going to management and stockholders, 25 per cent to the workers, and 25 per cent for consumer rebates on car purchases.

According to the union's statisticians, if the Reuther plan had been in operation at General Motors during the ten-year period of 1947 to 1956, it would have resulted in an average annual distribution of \$278,500,000 for GM workers, adding about 31 cents an hour to their earnings.

The three managements affected by the plan—General Motors, Ford and Chrysler—took quick exception to the proposal. Harlow H. Curtice, President of GM, called it "a radical scheme . . . foreign [to the concept of the American free enterprise system." Ford and Chrysler were equally critical.

A different point of view is expressed by Rawson Wood, chairman of the Council of Profit Sharing Industries. He reports that a profit-sharing plan at his precision casting

company in New York and Los Angeles has improved productivity, profits and morale.

"The profit-sharing plan," he says, "is one of the best ways to preserve and improve the free enterprise system. If the UAW's proposal could be worked out, it could be a way to break the wage-price inflation spiral."

The UAW demand reflects a significant change in labour's traditional attitude toward profit sharing. In the past, labour leaders had shied away from such plans on the ground that they encouraged a speedup of work efforts, and in some cases were used to justify lower basic wages.

As unions grew stronger and were able to set up safeguards against abuses, their opposition gradually lessened. In recent years there has been a rapid growth in the number of profit-sharing plans, many of them the result of union-management negotiation.

The Council of Profit Sharing Industries, a national clearing house for information on profit sharing, estimates that some 20,000 employers in the United States now have some arrangement for dividing profits with their employees. Altogether between 1,500,000 and 2,000,000 workers are covered. About two-thirds of the companies are reported to be unionized.

According to the Council, there are three major types of profit-sharing plans:

The first provides for a cash distribution by the employer monthly, quarterly, semi annually or annually.

The second calls for payment of part of the profits into a trust fund, from which deferred payments are made—usually when the employee dies, becomes disabled, retires or severs his employment with the company for any other reason.

The third combines features of the other two, providing for the division of part of the profits into a cash fund from which employees receive a bonus—usually once a year—and a trust fund to provide for death, disability or retirement benefits.

Most of the "big business" profit-sharing plans are of the deferred-payment type. Best known and oldest of these plans still in existence was established in 1886 by Col. William Procter of the Procter and Gamble Company, soap makers.

Other examples of large companies with deferred-payment plans include Lever Brothers, Motorola, Pacific Finance, Sears-Roebuck, Solar Aircraft, Union Tank Car, Jewel Tea and Western Auto Supply.

Cash plans among the big companies are fewer in number. An outstanding example in this group is the Eastman Kodak Company, with a plan dating back to 1912. For the year 1957, it is paying out \$78,200,000 in wage dividends to about 50,000 employees. This is in addition to its retirement plan.

Profit sharing has been defined as "any procedure under which an employer pays to all employees—in addition to good rates of regular pay—special current or deferred sums, based not only upon individual or group performance, but on the prosperity of the business as a whole."

Advocates of profit sharing argue that it provides the worker with a direct, personal interest in the success of the company. He begins to think more strongly in terms of better processes and time saving—of improved quality and the elimination of waste.

This attitude was well expressed by a salesgirl at Sears, Roebuck and Company which, since 1916, has contributed more than \$500,000,000 into a profit-sharing fund for its 120,000 employees.

"If an employee in our store gets angry," she said, "and feels like throwing the merchandise around or leaving the light on, he remembers that it is his merchandise and his light bill."

Coordination

Coordination is a convenient word which comes in handy when there is any administrative inadequacy to be explained or extenuated. Before going over to Transport and Communications, Mr S. K. Patil, in his last address as Minister for Irrigation and Power, told the Lok Sabha of the lack of co-ordination among the administrative and other agencies which have each something to do with food production. There are five of them—the Central Ministry of Food and Agriculture, the State Ministries of Agriculture, the Ministry of Community Development, the Ministry of Irrigation and Power and the Planning Commission. It will be unkind to suggest that the failure on the food front, which has undermined the basic assumptions of the Second Plan, was the result of the multiplicity of the agencies which shared the responsibility for increasing food production. On the other hand, it seems hardly likely that the setting up of another high level agency to coordinate the activities of the existing ones will serve any purpose other than providing resounding confirmation of Parkinson's law of bureaucratic growth. It is not merely the activities of the different administrative agencies that require coordination. The daily life of the seventy and odd million agriculturists in our country will have to

be coordinated for the achievement of the plan targets and the administration, in spite of its size and cost, is not equipped for the task. A fact of the Indian administration that is only imperfectly understood is that it does not go far enough. The only contact which the Government have with the village and the cultivators is through the functionaries of the revenue department. These underpaid and over-worked set of public servants have a variety of functions in addition to collection of revenue and maintenance of complicated sets of land records. Preparation of crop estimates, cattle census and progress reports on Vanamahotsava, to mention a few, have now become part of their routine duties. The Community Development Ministry, it is true, has its "village level worker." This estimable functionary is also loaded with a variety of functions. As these include propaganda for family planning and artificial insemination, it should not be surprising of his attempts to improve agriculture fail to hit the target in the countryside, where Gram Sevikas on bicycles are considered outlandish, if not positively immodest. The Welfare State has greatly extended the area of its administrative responsibility and has created a vast administrative machine at the centre to cope with its tasks. But the fact remains that most of the agencies responsible for development work stop short of the village. That is perhaps one of the reasons for incomplete utilisation of allotments for agriculture. The First Five Year Plan provided Rs 354 crores for agriculture of which only Rs 299 crores was actually spent. And there is no means of judging how much of the amounts spent were actually effective in increasing production, and how much consumed in priming the machine. Even the State agricultural and veterinary departments extend only up to the taluq or sub-division level. The time is yet far off when we can hope to have an agricultural demonstration farm or a veterinary centre in every village. In the meantime, the numerous agencies of agricultural improvement remain suspended in the air, like the aerial roots of the Banyan tree, adding to the burden on the taxpayer. Coordinating their activities will be like tying knots in the aerial roots in an attempt to make them more useful to the tree.

Centralisation of Road Transport

The likelihood of the formation of a central authority controlling road transport from the Himalayas to Cape Comorin was foreshadowed in ministerial pronouncements during the debate on the Transport and Communication Ministry's demands in Lok Sabha. The recently appointed Inter-State Transport Commission, it was hoped, would in time develop into an organisation with the powers

and responsibilities of the Railway Board. The need at present for a central authority controlling road transport throughout the vast extent of the Indian Union has not yet been clearly established.

Road transport is not intended to operate continental distances. It is more suited for comparatively short hauls and the States are sufficiently big to serve as the appropriate administrative units for controlling road transport. The problem of inter-State transport of goods and passengers in border regions is best left to be settled by mutual arrangements between the States concerned. It is possible to make a fetish of uniformity, ignoring the conditions of operation in different parts of the country. The bait has been held out that centralisation of motor vehicles taxation will result in lower rates of taxes. The final result may well be to fix taxes uniformly at the level obtaining in Madras. There is little to show that centralisation of Sales tax on certain commodities declared to be of importance to inter-State trade has resulted in any reduction of the tax burden.

The central road authority which is proposed can be effective only by making further inroads into what little remains of States' autonomy. At a time when emotional integration of the country is far from complete, and many fissiparous forces, linguistic and others, are raising their heads, further extension of central authority into regions of States' responsibility will be a step of dubious value for maintaining the integrity of the nation.

Reference has been made in the course of the debate to the employment potential of road transport. That is another reason why centralisation will come up against stiff local opposition. Moreover, the appropriate time for bringing into existence a Central Road Authority will be after the country has been linked up by an adequate net work of motorable roads. At present, there are too many missing links in the road system. Though a comprehensive plan was drawn up by road experts as early as 1943, it appears that a committee of engineers is still at work to prepare a national road plan for the next two decades.

Textile Troubles

The slump which hit the textile industry last year had its full impact on the cotton mills in West Bengal. Apart from the problems common to the rest of the industry, the Mills in West Bengal had problems of their own. As the president of the Bengal Mill Owners' Association told its annual meeting last week, many of the mills in West Bengal are working with machinery overdue for replacement. It is only by reducing costs, through adoption of modern techniques, that these mills will be able to survive in the keenly competitive days that lie ahead.

But heavy taxation has depleted the internal resources that might

otherwise have been available for plant renewal. The fall in working profits was particularly severe last year. The heavy excise duties have absorbed the lion's share of the actual profits. In the case of one typical concern which maintained sales at about the same level as in 1956, excise duty paid last year was nearly twice the previous year's figure while the profits had been reduced to half. On a total sale of nearly a crore and a half, the duty paid was over Rs 25 lakhs and profit after depreciation was just about two lakhs. This is the experience of one of the more prosperous units. When the accounts for 1957 are published, it will be seen that many concerns have suffered drastic fall in profits. The excise duty has also resulted in diversion of production from fine and medium to coarse varieties.

If the aim of the excise duty was to curtail the inflationary demand for cloth, it was more than fulfilled, as may be seen in the accumulation of cloth stocks. Though mills were successful in maintaining production last year, in spite of severe handicaps, there are signs that output had been going down since the beginning of the current year. The recent reduction in rates of excise duties has not come a moment too soon. But the benefits to the textile industry as a whole have been offset by the withdrawal of concessions enjoyed by the powerloom sector. This has resulted in largescale curtailment of production and lay off of workers. As Mr T. P. Chakravarti has suggested, there is a case for enquiry into the capacity of the power loom units, which are now treated on a par with composite mills, to bear the additional burden.

Tap Rate Raised on 4 per cent 1972

IN two successive stages, in the course of the last few days, the Reserve Bank has taken up its selling price on the 4 per cent 1972 loan to Rs 100.15 from Rs 100.05. At the same time, selling rates on a number of other loans have also been raised.

This has provoked a wave of speculation in the money market as to the prospect of the 1958 New Loan being announced somewhat earlier than last year or the year before.

The belief is strengthened by two facts. On the one hand, we are nearly at the end of the current busy season—it has roughly four more weeks to go; the demand for Advances has been substantially smaller than last year, and meantime the Scheduled Banks have been adding considerably to their Deposit resources. This is taken to mean that, with Scheduled Banks possessed of larger available resources, the New Loan could be announced earlier. On the other hand, the Central Government have been hard pressed in their ways and means position, particularly during March. Deficit financing during 1957-58 seems destined certainly to approximate, if not to exceed, the revised estimates given by Mr Nehru in his Budget. The target for deficit financing during 1958-59 is much lower. Therefore, it is reasoned that Government might seek, through the New Loan, to replenish their balances as soon as practicable.

It may be, thus, that the gilt-edged market is in process of being groomed, well ahead of time. If the grooming in this wise, of successive increases in the selling prices even of longer dated loans, is indicative of Government's intention to frame the New Loan on terms more favourable to Government, we should be heartened at the dawning signs of a sound borrowing policy.

Advances Cross Rs 950 Crore Mark

HAS there been further deficit financing during the week ended March 28? There is, apparently, no such indication in the latest returns of the Reserve Bank, nor for that matter has there occurred the reverse ad hoc that we had anticipated might have been enabled. But, then, the balances of State Governments show a

fairly substantial fall, and it will be necessary for us to explain how and why such a decline could have taken place.

Possibly on account of the end of the fiscal year payments by the Central Government, and due perhaps also to busy season demands reasserting themselves, active notes have risen, in the week ended March 28, by Rs 7.31 crores to Rs 1579.13 crores. But Rupee Coin has returned from circulation for Rs 0.55 crores, and Notes Held by the Reserve Bank are consequently drawn upon to the tune of Rs 6.76 crores to be placed at Rs 10.21 crores. In the Issue Department, both Rupee Securities and Foreign Securities are unchanged.

In the Banking Department, it is noteworthy that there has been a further sharp drain in Balances Held Abroad, which have declined by Rs 7.11 crores to Rs 95.81 crores. On the other hand, Investments show a small change in moving down from Rs 240.25 crores to Rs 238.44 crores. The most important change that has occurred in the Banking Department is the drop of Rs 22.73 crores to Rs 54.85 crores in the balances of State Governments. Partly, this running down of balances might reflect the decline of nearly Rs 3 crores to Rs 21.23 crores from Rs 24.20 crores in the indebtedness of State Governments to the Reserve Bank. Remains a decline of Rs 20 crores to be accounted for. Clearly, no payment has been effected to the Central Government, as the Centre's balances are actually lower by Rs 1.38 crores at Rs 48.33 crores. However, we should not rule out the possibility of the Central Government having found it necessary to have further recourse to deficit financing. It is possible that, from their plethoric balances, the State Governments might have invested in ad hoc Treasury Bills. So, we cannot rule out the possibility of deficit financing having occurred for Rs 20 crores, the Treasury Bills in question perhaps taken up by the State Governments.

If this hypothesis is correct, then the Central Government would have benefited by the proceeds from such deficit financing. Since, in fact, the Centre's balances show some decline, it would follow that the proceeds have been fully utilised in the Centre's net disbursements during the last week of the fiscal year.

However, three more days remain for the end of the fiscal year. On two of these days, the 29th and 31st of March, it would be within the competence of the Central Government to make such adjustments as they consider necessary in respect of inter-Governmental transactions. So, it is entirely possible that, on these two days, the other Governments may finally make payments of dues to the Central Government. In that case, it is within the realm of possibility that deficit financing for 1957-58 will be limited to the revised estimate given by Mr Nehru

on the last day of February this year.

The Reserve Balances of member banks are practically unchanged at Rs 67.83 crores against Rs 67.89 crores. However, the Other Loans and Advances of the Reserve Bank have moved up by Rs 3.84 crores to Rs 78.44 crores; and the advances against usance bills are marked up by Rs 3.06 crores. This would indicate some element of pressure being experienced by the banking system during the end of March; and this would presumably relate to income-tax payments of constituents to the Central Government. This could be another reason why the Centre's balances might rise unexpectedly in the closing days of March, again enabling some element of reverse ad hoc.

But then, the pressure to make tax payments might be reflected in the figures of Scheduled Banks both by a decline in Deposits and a rise in Advances. This is a phenomenon that we should expect.

Turning to the return of the State Bank for March 28, we may note that Deposits have again risen by Rs 4.34 crores to Rs 418.52 crores. Nevertheless, the State Bank has been compelled to borrow Rs 3.28 crores from the Reserve Bank. Advances have moved down slightly from Rs 211.79 crores to Rs 210.52 crores. Cash Balances are lower by Rs 1.34 crores at Rs 23.14 crores. The reason for these changes lies in a sharp increase in Other Assets from Rs 5.36 crores to Rs 15.59 crores. It is probable that, as on an earlier occasion, this might be payment effected to the Reserve Bank for purchase of gilt-edged—probable, but not quite likely.

According to the return of Scheduled Banks for March 21, a further rise of Rs 2.75 crores has occurred in Deposits, raising them to Rs 1465.38 crores. Since, in the relevant week, the State Bank had reported a drop of Rs 2 crores in Deposits, it is clear that the other Scheduled Banks have, during the period, added to theirs by nearly Rs 5 crores. Then, the total of Advances has crossed the Rs 950 crore mark with a sharp rise of Rs 11.80 crores to Rs 951.91 crores. While borrowings from the Reserve Bank are higher only by Rs 1½ crores, Cash Balances have been drawn on to the tune of Rs 0.88 crores.

Indian Overseas

THE Indian Overseas Bank Limited has reported an increase of Rs 3.35 crores to Rs 19.84 crores in Deposits in its balance sheet as at the end of 1957. This rise has occurred under all three heads, with Fixed, Time and Staff Security Deposits moving up by Rs 1.84 crores to Rs 7.99 crores; Savings Bank Deposits by Rs 0.76 crores to Rs 3.45 crores; and Current Accounts by Rs 0.72 crores to Rs 8.40 crores. This increase in Deposits has partly gone to an expansion of the Advances portfolio from Rs

10.81 crores to Rs 11.30 crores. Moreover, Indian Overseas is one of the few Indian Scheduled Banks to have utilised part of its increasing resources in adding to its gilt-edged portfolio, which is marked up by Rs 1.03 crores at Rs 5.55 crores. Lastly, Cash Balances also show a rise totalling just under Rs 1 crore.

According to the profit and loss account, the income by interest and discount shows a sharp rise from Rs 66.30 lakhs to Rs 85.38 lakhs. Commission, exchange and brokerage, however, have fetched slightly less at Rs 46.82 lakhs against Rs 48.16 lakhs.

While the higher money rates during 1957 will have partly contributed to the improvement in revenues, they are also responsible for a substantial rise of Rs 10.04 lakhs to Rs 40.65 lakhs in the interest paid on Deposits. However, the expenditure incurred on salaries and allowances has been kept well under control, with the figure rising only by Rs 3.70 lakhs to Rs 42.52 lakhs. In the result, the balance of profit shows a smart rise of Rs 3.84 lakhs to Rs 32.49 lakhs.

The provision for taxation has been raised by Rs 2 lakhs to Rs 16 lakhs. The transfer to Reserve Fund is placed Rs 1.32 lakhs higher at Rs 7.32 lakhs. Bonus to staff absorbs more at Rs 3.75 lakhs. The dividend, which is maintained at 10 per cent, also absorbs more at Rs 5.62 lakhs against Rs 4.91 lakhs in view of shares issued during the year.

The balance sheet discloses a paid-up capital of Rs 56.23 lakhs. Against this, the Reserve Fund is placed at Rs 38.50 lakhs, and there is also a share premium account of Rs 7.86 lakhs.

All in all, the Indian Overseas Bank has admirably maintained the rising trend in business that it has, in recent years, been recording.

Britain Wants Big Dollar Loan

Paul Einzig

IT is understood that two senior officials of the British Treasury, Sir Leslie Rowan and Sir Robert Hall, paid a visit recently to Washington, with the object of making preliminary soundings about the possibilities for securing a very large dollar loan, either through a direct operation or through a substantial increase of the American contribution to the International Monetary Fund or the International Bank.

The two emissaries of the Treasury are understood to have returned empty-handed. They found that the prospects for obtaining the co-operation of the Washington Administration for such a scheme were anything but favourable. The domestic political situation in the United States precludes for the present the possibility of placing substantial dollar facilities at the disposal of Britain. The weakness of President Eisenhower's position,

due partly to his unsatisfactory health and partly to the strength of the Democrats in Congress, is in itself sufficient to damp down any hopes. It is considered to be most unlikely that anything could be done at least until after the Congressional election in November.

Although the operation is, therefore, far from imminent and far from certain, the fact that preliminary soundings have been made is itself very significant. It shows how easily the Government can yield to the temptation of taking

the line of least resistance. After six months of firm policy there are now signs of a weakening of the determination to resist inflation at all costs. The premature reduction of the Bank Rate was one of the symptoms pointing in that direction; the abortive attempts to get Washington interested in the gigantic dollar loan scheme was another.

Admittedly, it is very tempting for the Government to try to regain its popularity in the country by relaxing the disinflationary squeeze without thereby running

the risk of being forced to devalue sterling as a result of a depletion of the gold and dollar reserve. It is highly doubtful, however, whether the bolstering up of the sterling exchange with the aid of borrowed dollars would save the Government at the next general election. For the relaxation of the credit squeeze would result in the resumption of the wage spiral. And it is the non-stop rise in the cost of living which is mainly responsible for the Government's unpopularity among the long-suf-

fering middle classes on whom a Conservative Government necessarily depends for its continued existence.

Trade unions, which have been marking time during the last six months, would press forward with maximum wage claims as soon as the gold reserve is reinforced with the aid of the proposed transaction. The employers, too, would show once more increased willingness to grant wage increases, on the assumption that in the absence of the disinflationary squeeze they would be once more in a position to add the increased wages to their prices. Inflation would become accentuated in Britain, precisely at a time when the trend abroad would be distinctly deflationary. The contrast between the trend in Britain and abroad would inevitably affect the British balance of payments, and the newly acquired dollars would be lost in a very short time.

The experience of 1946-47, when the proceeds of the biggest dollar loan for all times melted away in a matter of months, is still fresh in the minds of many people in Britain. They do not relish in the prospect of their grandchildren and great-grandchildren being burdened with the repayment of the new loan—as they are already burdened with the repayment of the loan of 1946—all for the sake of enabling the trade unions for a short time to continue to secure inflationary wage increases with comparative impunity. It is widely felt on this side that, had it been realised in the United States when the loan was negotiated in 1945 that the transaction would bring absolutely no benefit to Britain and that its proceeds would go down the drain, the loan would not have been granted. And it is hoped that, on the basis of that lesson, the United States Government would think twice before agreeing to a repetition of that experience in the lifetime of the same generation.

If Britain should succeed in resisting inflation then it would be superfluous to reinforce artificially her gold and dollar reserve. From the point of view of the nation's self-respect it is absolutely essential that it should be able to solve its problem without external aid. In 1945, at the end of six years' war in which Britain's economic resources had been exhausted, there may have been excuse for borrowing from the United States. The population was physically exhausted and after its supreme effort during 1939-45 it could not be expected to put up with a period of peace-time austerity and extra hard work for the sake of working out its own salvation. Britain's industrial equipment was worn out, her stocks of materials and consumer goods rundown to the barest minimum. But today, with British industry re-equipped, modernised and expanded, with ample raw material reserves, and with large inventories of consumer goods, there could be no excuse for going to Washington to borrow milliards of dollars. Engineering Performance and Prospects

The most heartening feature of the industrial outlook in recent years has been the heady growth of the Indian Engineering Industries. India has embarked on a plan of economic development designed to stabilise an economy, precariously poised on agriculture, with a broad-based and balanced industrial structure. The social objectives of the Second Plan cannot be attained by any other means. The pace of the change will naturally be set by resources available to the indigenous engineering industry, to fabricate the equipment and materials required by other industries and the variety of consumer goods characteristic of an industrial community. Borrowed equipment and techniques, like other borrowed things, cannot be expected to carry us very far in the direction of industrialisation. In this respect, though there are still some important gaps to be bridged, progress so far made by the engineering industries and trades in India is certainly encouraging and has been handsomely acknowledged. For instance, Mr Manubhai Shah told the conference of Engineering Trades and Industries held last January that the engineering industry, which he described as the basic sector of India's economy, has grown three times as fast as other sectors, such as consumer goods, agricultural production, mineral development and general non-engineering industries. The figures of production in recent years give body and substance to that claim.

The general index of industrial production has been rising in India since 1952. During the last five years, the engineering industries have more than doubled their output. Taking 1951 as base, the general index of industrial production, which was 122.1 in 1955 increased to 133.0 in 1956. During the first ten months of 1957, it averaged 147.7. During the same period, the index of production in the general engineering and electrical engineering industries was 183.3 in 1955, 219.0 in 1956 and reached the average level of 236.5 in the first ten months of 1957.

These figures afford convincing proof of the substantial contribution made by the engineering industry to the economic development and prosperity of the country

—a fact which deserves widespread publicity and recognition.

While the industry as a whole has recorded gratifying progress, it is even more satisfactory to find that all the sectors of the industry have contributed to the achievement. Manufacture of diesel engines, electric motors, machine tools, electric fans, sewing machines, to mention a few, has made very good showing in recent years. Of great significance to the future pace of development, is the progress made in the manufacture of heavy machinery and equipment, and the plans on hand to establish heavy machine-building plants, at Ranchi, Durgapur and in Bhopal. Machinery for cotton textiles, jute, sugar and cement and various other less-known industries is now being manufactured in this country. The value of the output of heavy machines last year is estimated at about Rs 35 crores. In the next few years, it is expected that the output of indigenous manufactures will be able to keep pace with the home demand.

While the performance of the industry in recent years inspires a hopeful outlook regarding its future, there are also certain disturbing developments which, unless corrected in time, threaten to hamper future progress.

Mr K. J. Cleetus, who in his presidential address to the 47th annual meeting of the Indian Engineering Association, has given an enthusiastic account of the achievements briefly indicated above, has not failed to point to what he has described as "light shadows" appearing over certain parts of the picture.

The overall picture of the healthy progress of the engineering industry during 1957, he has pointed out, concealed certain dangers and weak points in particular sectors which might, if unchecked, easily lead to serious dislocation in production, and to unemployment. He pointed in particular to the decline in production of electric motors, automobiles, bicycles and other items in the latter half of 1957. It was in this period that the twin arms of import Controls and Credit Squeeze had the industry in a tight grip and the decline in production registered during this period is indicative of a very disturbing trend. The fall in production and employment is confirmed by the decline in the level of bank advances to the iron and steel and engineering industries from October, 1957 onwards. This, Mr Cleetus pointed out, is in marked contrast to the progressive increase from 1953 to 1956, extending even up to the first half of 1957.

Another cause of concern was shortage of raw materials, particularly steel which, Mr Cleetus said, was rendering "inevitable and imminent" the partial closure of many engineering works. The difficulties caused by shortage of

steel are aggravated by anomalies of licensing technique. For instance, Mr Cleetus has cited the example of two major firms which had been granted import licences covering in one case only 25 per cent and in the other 13 per cent of their requirements of steel. At the same time, the licensing components, consumable stores and other raw materials continued on the basis of a much higher level of production than the allotments of steel warranted. It is not clear how the country can afford licences for some materials on a certain level of production, but cannot afford to import the steel, required to attain that level.

The engineering industries are concentrated in West Bengal, especially in the Calcutta industrial area. The prosperity and the level of employment in the State depends to such a degree on the heavy, medium and light industries, that West Bengal is peculiarly vulnerable to any change in the level of output of engineering goods. As a result of the decline in production brought about by shortage of raw material supplies, the employment situation in and around Calcutta is steadily deteriorating. Continued shortage of steel, Mr Cleetus has warned, is likely to throw out of employment large numbers of skilled and trained workmen and he has appealed to the Union and State Governments to take "timely action so that the unpleasant consequences of partial or even complete closure of engineering industrial establishments may be avoided." As far as the Calcutta area is concerned, irregular supply of gas has also seriously interfered with production.

While the principal reason for the decline in production was the shortage of raw materials, especially steel, high prices which provoked consumer resistance were also responsible to some extent. The high cost of production is also hampering exports. The Chairman of the Engineering Export Council had estimated that prices of most engineering goods had been found on an average 15 per cent to 20 per cent higher than those of competing goods manufactured in other countries.

Part of the reason for the high cost may be the uneconomic rates and quantities for the supply of controlled commodities for the execution of Government contracts. While recognising that Government cannot always arrange for regular supplies to suit the convenience of the contractor, Mr Cleetus has pointed out that the rate of delivery should not be unreasonably out of pace with his manufacturing capacity. Government, as he says, should not expect him to pay for supplies of raw materials beyond the normal stocks required for economic completion of the contract. The money locked up in these works handicaps the industry in undertaking production to

meet the needs of the market. The result is all-round increase in costs and prices. Another point is the high cost of machine tools like lathes and milling machines supplied by the State-sponsored organization.

While Government can help, the industry by adoption of reasonable licensing and pricing policies, substantial reduction in costs will depend mainly on the modernisation of equipment and techniques. And in this respect, the industry is bound hand and foot by the restrictive policies of the Government. The position has been made worse by the imposition of last year's budget. Mr Cleetus thinks that the Government's tax policies are likely to penalise those concerns which follow cautious financial and dividend policies and build up reserves for replacement of equipment. There is substance in the complaint made by Mr Cleetus that the industry is like a nut caught in the jaws of a nutcracker. "If as a result of efficient management and careful husbanding of resources," he says, "we are in a position to declare an attractive dividend, we are forthwith called upon to pay a heavy tax. If, on the other hand, we have been able to build up reserves from past profits in order to meet lean times or to provide for future expansion, again we are required to pay a stiff tax, when we take the money out of these reserves for actual utilisation." The tax policy, Mr Cleetus has pointed out, acts as an incentive to the distribution of the maximum amount of current profits as dividends, while the long-term interest of the country requires conservation of resources to the greatest possible extent.

Criticism, however well reasoned, about taxation policies may not produce any result in present circumstances. But Government could at least help by removing the bottlenecks that delay payment of bills to an inordinate extent. At present, a number of engineering units are either reluctant to quote or are obliged to quote higher prices, because of uncertainties and delays in getting payment for work completed. Mr Cleetus has suggested that not only the engineering industry, but the country as a whole will benefit, "if the Government, by making prompt payments, could release some of the very considerable sums of working capital, especially of the larger engineering units, which are now lying uselessly tied up on Government account".

One of the most satisfactory features of the working of the industry, which Mr Cleetus has dealt with in some detail, is the improvement in labour relations. Various factors have contributed to this welcome development, and Mr Cleetus has singled out three of them for special mention. Not the least is the efficient service rendered by the Association to its constituents through its Labour Department.

CLEAN COAL

India's expanding steel industry needs huge quantities of blast furnace coke, yet precious reserves of coking coal must be carefully conserved. Millions of tons of coal a year must therefore be scientifically washed and blended for steelworks coke ovens.

Simon-Carves have half a century's world-wide experience of the complete design and construction of large-scale plants for coal washing, grading, blending, storage and handling. In conjunction with The Automatic Coal Cleaning Company they offer the most advanced range of mechanical equipment for Baum jig washing and for two-product and three-product dense medium separation. These great resources are being applied to the construction of the complete coal preparation and blending plant for the new Durgapur steelworks—where Simon-Carves are also building the new coke ovens, by-product plant, sulphuric acid plant and power station.

Keen Bids in London Sales

IN Mincing Lane, the larger quantity of tea, that is now being offered, is very well competed for, especially where quality invoices are concerned. Outstanding are the limited offerings of Assam teas possessing autumnal characteristics. The remainder of the Assam teas, which are expected to be finally marketed by the end of May or early June, will presumably continue firm in price.

Good Assam teas are traditionally wanted by the big UK blenders to maintain the quality of their blends. Poorer liquoring descriptions, however, continue to meet

with less support and prices are barely maintained. Thus, plain varieties are now quoted at 36d to 53d per pound as compared with 38d to 53d previously.

Although there is no actual shortage of tea, spot and afloat supplies are below what they were a year ago. But, the figures of a year ago were still reflecting the piled-up supplies, especially in afloat teas following the Suez Canal incident. There will be the traditional break in auctions after Easter, the sales reopening on the 14th April.

In the Calcutta market, prices have been ruling generally dearer although demand is rather irregular. It is reported that a delegation of the Indian Tea Association has urged the Union Finance Minister to make a uniform lowering of export duty rather than on the Common tea, which is particularly badly affected by the duty. The relief, it is urged, should be general rather than regional which, in turn, will be difficult to work out to boost the general export trade. Any particular gains to better quality teas will be reimbursed to Government in the form of increased income-tax returns, etc.

A member of Parliament has also represented urgency of giving special consideration to the Common tea, which, because of the heavy burden, cannot successfully compete with similar tea from East Africa, where there is no such levy. Thus, the gardens of Cachar, Dooars and Uttar Pradesh are facing the danger of closing down.

It may not be out of place to mention here that the Mauritius Government has proposed to develop tea planting as a secondary industry. The preliminary experiment of growing tea in the colony has proved successful; and small quantities are being shipped for auction in London. Last year, as much as 288,640 pounds of Mauritius tea were auctioned in London as compared with only 88,770 pounds in 1956.

In the Export Sale held in Calcutta this week, offerings were 52,047 packages. Commonest sorts and "teas for price" were strong and dearer, while Plain BPs advanced by 4 nP to 6 nP per pound. Plain Fannings were frequently sold above valuations; but were irregular. Black clean Dooars teas were also irregular and sometimes easier.

Medium BOPs and Orange Fannings with improved quality were fully firm to dearer, while BPs and Pekoe Fannings, in this category, showed irregular advances. There was less competition for ordinary Mediums and these tended easier. Good CTC types were, however, readily taken up at about last rates, while a few selected lines met with keen competition and sold upto 20 nP above valuations. There was good enquiry for the cheaper sorts; but prices were irregular and generally in buyer's favour.

There was good demand for Legg-cut teas; but the poorer

liquoring ones were often sold below valuations. Whole Leaf grades were steady; but a few stylish ones tended dearer. There was less competition for a small quantity of Tippy teas on offer. Following rates were quoted:—Clean Black Pekoe Rs 2.25 to Rs 2.30; Plain BP Rs 1.44 to Rs 1.48; Plain Fannings Rs 1.60 to Rs 1.64; Medium BP Rs 1.56 to Rs 1.60; Medium Fannings Rs 1.74 to Rs 1.78; Best Assam CTC BP Rs 2.60 to Rs 2.80 and Best Assam CTC Fannings Rs 2.70 to Rs 2.90.

In the Internal Sale, offerings were 20,417 packages of Dusts for which there was a good demand although prices generally showed an easier tendency. There was good support for orthodox descriptions, but were generally upto 6 nP per pound easier. Some small powdery kinds declined occasionally by more.

The few best liquoring CTC types, on offer, as well as the Medium descriptions with improving liquors tended dearer; but the plainer kinds were sometimes upto 10 nP easier. The very few Darjeeling teas with flavour were sold well, but demand was limited for the remainder which were irregular and often easier. Following rates were quoted: Medium Dooars Dust Rs 1.54; Medium Assam Grainy Dust Rs 1.56; Medium Assam CTC Dust Rs 1.85 to Rs 2.05 and Best Assam CTC Dust Rs 2.75 to Rs 3.05.

There was a good general demand for the 4,801 packages of Leaf grades on offer and prices were dearer.

In the Export Quota section, business was transacted in Special Export Licence at 2½ to 3 nP per pound. The price of non-transferable Shipping Licence remained steady at 2½ nP per pound.

In the Cochin market, offerings were 500,000 pounds of Dusts. The market opened to a good general

demand, but a slackening was seen towards the close. Best Nilgiri Dusts met with useful enquiry at irregular, but generally steady prices. Good Mediums found less support and were easier by 5 to 10 nP per pound with buyers very selective. Demand was again strong for Mediums from Travancore, which must be quoted fully firm and sometimes dearer. Those from the Wynad were barely steady. Milled and Residual sorts were again weak features of the sale, declining fully by 10 nP per pound. Black grainy descriptions were sold well.

In the Colombo market, offerings this week were 6,712,714 pounds. These met with a good demand, Soviet buyers being absent. Good demand was evident for high and medium-grown teas although some irregularity was seen, depending on quality. Flavoury Mediums fetched firm to dearer rates. Low-grown teas met with good demand at lower rates, particularly Persian Gulf and Middle-Eastern types.

A total of 30,476 packages, including 20,520 packages of Northern India teas, was offered in Mincing Lane. Owing to the Easter holidays, sales were confined to Monday only this week. Good liquoring teas opened strongly; but, as the sale progressed, some irregularity and easier tendency was noticed where quality marked a decline. Coloury Mediums and well-made Common kinds were firm; but poor liquoring and stinky descriptions were generally easier. The next sale will be held on the 14th April.

Tea stocks in London, as on the 21st March 1958, were 118.97 million pounds as compared to 117.58 million pounds in the previous week. The total quantity to be landed on the same date was 18.94 million pounds. Deliveries during the week were 11.38 million pounds and landings 12.77 million pounds.

Need for Price Stability

RECENT developments in world jute goods markets have served to underline three main defects in the Indian jute industry. In the first, place it is not fully self-sufficient in the matter of raw material supplies. Though in recent years rapid strides have been taken in the direction of raw jute production, there is still a small leeway to be made up between demand and supply. It is, however, to be noted that complete raw jute self-sufficiency will be attained in the course of the next few years and that already the dependence of Indian mills on Pak'san for raw jute has been reduced to such an extent that this defect no longer constitutes a serious obstacle in the way of progress of the industry.

Secondly, it has been found that while in the past ten years continental mills have completely modernised their equipment and have thus increased their efficiency ably, the Indian industry has continued to work with its old machines. Only in recent years the move to modernise our mills has gathered some momentum and thanks to the timely help given to the industry by Government nearly 50 per cent of our mills have been modernised. It is expected that the entire programme will be completed in the course of the next few years.

The third defect that has been dogging the industry concerns the working of the jute markets. Quite frequently the jute markets have been plagued by unbridled speculation resulting in sudden and violent fluctuation in prices. Though a futures market had been in operation in the country upto 1952 it was powerless to deal with the speculative orgies. Government deemed it necessary to close the market. But even this drastic step did not improve matters as the speculators continued to carry on their activities through illegal markets such as the Fakka with the same depressing effect on the official market. Now active steps have been taken to tackle this defect also. With the inauguration of the Futures Market in raw jute and jute goods last Saturday under the aegis of the East India Jute & Hessian Exchange Ltd proper hedging facilities which are necessary for an export industry are now available to the Indian jute goods industry and trade. The futures market will go a long way in ensuring a reasonable degree of price

stability to which great importance is attached by our overseas buyers.

While the usefulness of a futures market has been generally recognised, not all the sections of the trade have been equally enthusiastic about its reopening after it had been closed in December 1952. An important section of the jute industry and trade has been more or less convinced that the reopening of futures market will lead to renewed orgies of speculation. So when the question of establishment of a futures market in jute and jute goods came up before the Forward Markets Commission, almost the first task was the formation of an association in which all the important jute interest were represented. That such a representative organisation alone can make the futures market a success has been one of the important lessons learnt both by the Government and the trade and industry from their experience as regards the working of the forward market in jute and jute goods for nearly 30 years ending December 1952. It has been found that the main reason for the failure of the futures market in the past to curb unsocial activities is that it has been under the overwhelming influence of speculators having little stake in the trade.

The Commission after examining the causes that were responsible for the failure of the futures market in the past, to fulfill its objective of bringing stability to jute prices, came to the firm conclusion that if a futures market was to be successful it should be broad-based. Three recommendations of the Commission are important. The first is that there must be a single forward market for raw jute and jute goods. Secondly, the East India Jute and Hessian Exchange Ltd must be granted recognition for conducting forward trading in raw jute and jute goods and thirdly, the Exchange must be entirely reconstituted so as to make it fully representative of the whole jute trade industry. The Commission have also declared that the transferable specific delivery contracts of the IJMA should also be brought under the purview of the new futures market. In view of the smooth functioning of the IJMA contracts which according to the majority of the people in the trade have rarely been the cause of excessive speculation, Government have decided to grant exemption to these transferable specific delivery contracts in raw jute and jute goods for a limited period under section 18 (2) of the Forward Contracts (Regulation) Act. The exemption with a time limit has obviously been given with a view to enable the trade to effect the much needed reform in the system of trading in these contracts.

Speaking at the inaugural meeting of the East India Jute and Hessian Exchange Ltd in Calcutta last week-end Mr Nityananda Kanungo Union Minister of Commerce has expressed the hope that the jute mills, the shippers,

the raw jute interests and the bulk of traders in jute goods will all give their support to the Exchange without any possible delay. For the successful functioning of the future market it is essential that people who have a vital stake in the industry and trade also actively participate in it. The bringing within one association all the important organisations connected with the industry and trade has evidently not been an easy task and hard and sustained work for over two years has had to be put for before the inauguration of the futures market can be thought of. There are on the Board of the Exchange now representatives of the Indian Jute Mills Association, the Gunny Trades Association, the Calcutta Jute Fabrics Shippers' Association, the Calcutta Baled Jute Association, the Bharat Jute Sellers' Association, and the Jute Buyers Association.

Though the Exchange will regulate only futures contracts in raw jute and jute goods for the present, it has been made clear by Mr Kanungo that it is only a matter of time before regulation is extended to the transferable specific delivery contracts in jute and jute goods also. Referring to the important place occupied by the jute exports in the economy of the country, the Commerce Minister has pointed out that the futures market has gained special significance in the present context of scarcity of foreign exchange. Jute goods still account for a large proportion of the country's foreign exchange earnings. As such it is vitally important to foster the export trade in jute goods. It has, however, frequently happened that due to unbridled speculation in the jute markets in Calcutta jute goods prices have been hammered down to very low levels which are not justified by the prevailing market conditions. Recently there has been such a steep decline and a serious crisis in the industry has been averted only by the timely action of the Indian Jute Mills Association.

After a steady start following reports of US enquiries the jute goods market turned quiet as there was no further expansion in business. Toward close, however, sentiment slightly recovered on renewed reports of enquiries both from US and Argentina. The coming into being of the futures market from Saturday 29th March had also imparted a steadying influence. Hessian 40"x10 oz Ready opened the week at Rs 39.25 and after receding at one time to Rs 39.15 again recovered to be done upto Rs 39.65 and was finally placed at Rs 39.60. B Twills Ready began on a steady note at Rs 39.25 but was soon pushed down to Rs 38.60. It staged a smart rally to Rs 39.50 on Tuesday but was again pushed down to Rs 39 by close on Wednesday.

The Futures Market under the aegis of the East India & Hessian

Exchange Ltd. was inaugurated on 29th March by Mr Nityananda Kanungo, Union Minister for Commerce. In his speech, Mr Nandalal Kanoria, Chairman of the IJMA mentioned some of the safeguards provided for. Provision has been made requiring members entitled to trade in the Ring of the Association to make initial Security Deposit of Rs 10,000 for raw jute and Rs 10,000 for jute goods and there will be a free limit of quantity for each commodity up to which a member can have a net open outstanding position against his sales and purchases but if he trades beyond the free limit, he will have to pay margin deposits. Then there will be an over-all limit beyond which no member can trade in any circumstances. Provision has been made for weekly clearing. After the expiry of the tenure of the present Board, a new Board will be formed by election from amongst representatives of the different panels elected by members of the panels themselves. There will be five panels—(1) jute goods manufacturers (2) jute goods shippers (3) jute goods dealers (4) raw jute dealers and (5) brokers. Four representatives will be appointed by the Government. Mr Kanoria pointed out that since considerable powers had been given to the Board of Directors and as there was always the Forward Markets Commission to take suitable steps in the event of any emergency, the possibility of over-speculation would be largely eliminated. Moreover, the constitution of the Board was such that there would always be a balancing of influence and no particular section of the trade could over-influence the Market.

The futures market has ruled steady during the past week. Hessian May opened on Saturday at Rs 39.20 and closed steady at Rs 39.48. The start on Monday was rather subdued with the quotation at Rs 39.24 but sentiment improved by close with the rate taken up to Rs 39.40. After opening steady at Rs 39.48 on Tuesday the price was lifted to Rs 40.18 on sustained support to be finally placed at Rs 39.86. Though the rates were slightly lower in comparison with the previous day, trading on Wednesday continued to be on a steady note with the opening and closing prices at Rs 39.92 and Rs 39.80 respectively. The range of fluctuation on the last day was between Rs 40.12 and Rs 39.76. In the Sacking section, Sacking May began at Rs 98.95. The highest level touched during the four-day trading was Rs 101.00 and the opening rate was also the lowest. The closing rate on Wednesday was Rs 99.88. Business in Sacking August was done on Tuesday between Rs 101.60 and Rs 100.00.

In the raw jute section, Assam Bottoms June ruled firm. At one time it was done up to Rs 26.82. The opening, lowest, highest and closing rates for the period under review are as follows: Rs 26.30, Rs 25.60, Rs 26.82 and Rs 26.12.

US Notes

So extensive has been the flow of development capital from the United States to other lands that its very magnitude has tended to obscure its specific accomplishments. Yet the accomplishments are many and varied, as a few recent examples attest.

Outstanding is the agreement signed a few weeks ago whereby the United States is making available \$225 million to help India with her economic development programme. Under the agreement, the US Export-Import Bank is giving India a 15-year credit of \$150 million for the purchase of needed capital goods, while the new Development Loan Fund, which went into operation just this year, is providing a \$75 million loan repayable in local rupees.

India, like the United States, is staunchly wedded to principles of freedom and democracy. And while India does not always see eye to eye with the United States on foreign policy, Americans nonetheless are greatly interested in the success of her development plans.

Even clearer evidence that the United States does not use the needs of other people as a basis for bargaining is seen in the recent economic agreement with Poland. Although Poland is in the communist bloc, the United States has made available to it \$73 million worth of agricultural products. In addition, the Export-Import Bank has extended to Poland a standard development loan of \$25 million.

Of course, the area that has benefited most so far from Export-Import Bank loans is Latin America. Only last week, for instance, the Bank announced a \$10 million credit that will help a Peruvian mining company, a subsidiary of an American concern, proceed with a construction programme for the processing of low-grade iron ore.

This case also represents a good example of US private investment in action. The company in question contributes about 8 per cent of Peru's dollar exchange receipts, employs about 1,300 persons—nearly all Peruvians—and pays Peru about \$4 million a year in taxes and royalties. In addition, its operating expenses, paid in local currency purchased for dollars, yield another \$65 million to the Peruvian economy.

On the other side of the world, the Republic of Vietnam recently announced approval of 10 new industrial projects—including a textile plant, a sugar mill and a glass-ware factory—to be financed by private foreign investment. Much

of the capital will come from the United States, but some also will come from other places, including France and Hong Kong.

In addition to the aid it extends directly, the United States is the largest contributor to the World Bank and other United Nations institutions which provide economic assistance to countries throughout the world. Only a few weeks ago, for instance, the Bank announced a \$75 million development loan for Italy, one of 46 countries which have received such loans.

Another example of US cooperation with UN programme was provided by the recent meeting of the UN Economic Commission for Asia and the Far East, where the United States offered a grant of \$2 million to advance the lower Mekong River project. The money would finance first-stage planning of flood-control, irrigation and hydroelectric project in Laos, Cambodia, Vietnam, and Thailand. In addition, in an example of US technical cooperation with other lands, American engineers would help train Asian technicians working on the project.

These, of course, are but a few recent examples of the part US aid is playing in furthering world economic development. But they help give concrete meaning to the \$60,000 million in US Government assistance and the \$20,000 million in US private capital that has gone to other countries in the past dozen years.

THE behaviour of stock prices has furnished both a cheering and a surprising side to the business downturn in the US for stock markets have held their ground rather firmly for the past several months despite the unfavourable business news. To this extent, at least, investors—and that means millions of Americans in many income groups and occupations—seem to be unaffected by the adjustment through which the economy is passing.

This does not mean, of course, that they are paying no attention to the economic situation. The feeling in financial circles is that most of the news on production and employment dips, and dividend cuts, has already been discounted by investors to a considerable degree. This would indicate confidence that the downturn, while it may last a while longer, will become neither protracted nor severe.

On the other hand, few experts would attribute the stock market strength solely to this one element. There must be other explanations, as well, for a situation in which stock prices in recent months have moved up—albeit slowly—while the economy has moved down.

Despite a fairly sharp drop in stock quotations last fall, the index today is only about 4 per cent below the level of a year ago, when the economy was at the height of its prosperity.

One explanation is strictly technical and concerns so-called short-

interest holdings, which now are the highest in more than 25 years. A short-interest position occurs when an investor borrows stock and sells it in the expectation that the price will decline and he can buy it back, at a lower price, for a profit. This may indicate a pessimistic attitude on the part of the investor, but it also means that the short sellers are forced to buy when prices rise thus providing a "cushion" under the market.

Still, this in itself would not account for the stock market rise. Short-selling, after all, is at best a contributory factor. Other and more basic explanations must be sought.

The fact that yields from stocks are higher now than those from bonds, tending to draw investments into the stock market, is one such explanation. This contrasts to the relationship during much of last year, when bond yields were well above the returns offered by stocks.

Some experts also are inclined to see the present market strength as a result of a kind of "hedge" against inflation. The thinking here is that if the downturn persists, the government will take stronger and stronger action to counter it—action that might have a long-term inflationary influence in the event of a quick and sharp recovery.

And this brings into play what most experts consider the most fundamental explanation of all. It is that, when all is said and done, continuing expansion is the economy's long-term outlook. Investors obviously agree with the generally accepted view that dynamic economic growth will resume once the current adjustment has run its course.

Guided by such thinking, investors seem to have assumed what has been called a "trans-recession" attitude toward the stock market and the economic outlook. And the substantial excess of odd-lot purchases of stocks over sales indicates that this attitude prevails among the smaller as the larger investors.

Many experts now believe it would take the highly unlikely development of a sharp and unexpected economic setback to weaken substantially the basic attraction of common stock. One broker with his finger on the investing pulse puts it this way. Americans appear to be "ignoring what may happen in the next twelve months, and thinking in terms of three to five years." This certainly reflects underlying confidence in the soundness of U.S. financial markets and the U.S. economic future.

Britain

In February—normally the peak month for unemployment—there were about 470,000 people out of work in Britain, or about 1.9 per cent of all employees. This unemployment rate, though the highest since 1952, was still very

low compared with the rates of 3 to 6 per cent recorded in many other industrial countries, or with the rates of 10 to 15 per cent which prevailed in Britain and many other countries in the thirties. There are more people at work in Britain than a year ago, in part the result of a reduction in the armed forces in 1957 of more than 100,000.

Nor are there signs of hidden unemployment. The number of operatives on short time in manufacturing actually fell during 1957 from 155,000 to 80,000—about 1 per cent of all employees in manufacturing.

Britain as a whole still enjoys, as it has since early in World War II, a state of full employment. A number of factors—technical advance, changes in defence policy, the decline of some industries, and measures against inflation—has on some recent occasions led to the dismissal of large number of workers but in most areas dismissed workers have quickly found new jobs, thanks to a widespread general demand for labour, the well-organized employment services provided by the Government, and the adequate notice of dismissal given by employers.

Some areas of Britain with higher unemployment rates and fewer possibilities of re-absorbing redundant workers are more vulnerable to shifts in demand for the output of particular goods.

Unemployment between the two World Wars, with its heavy concentration in those regions primarily concerned with the older industries, caused the UK Government to introduce special measures to deal with the situation. Industrial estates were established before World War II, and since 1945 the Government has had, and used, powers to help the development and diversification of industries in these areas, known as Development Areas, whose employment problems (though much reduced by the wartime dispersal of industry) still called for special treatment.

The action taken—principally the building in Development Areas of factories with all services for renting, and the exercise of controls over industrial building elsewhere—proved successful; many firms with expanding output welcomed the use of readymade factories with adequate labour available locally. Of the new factory space built in Britain between 1945 and 1956, some 30 per cent was in the Development Areas, which, in contrast, contain only 18 per cent of Britain's workers engaged in manufacturing.

The industrial estates have made an important contribution to the reduction of unemployment in the areas, and, in particular, in providing wider opportunities for women workers. In most Development Areas unemployment has ceased to be a problem; in parts of others small pockets still remain. At the same time, unemployment in certain places outside the Development Areas has become more serious.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

AN almost tacit order of priority in all discussions of the Plan's prospects has assigned the pride of place to the subject of resources. No one can perhaps seriously quarrel with this implied order of importance, though one may not subscribe to all that is implied in the philosophy of cutting the coat according to cloth. Therefore, in the series on the reassessment of the Plan's prospects which I promised last week, I shall deal first with the question of resources, but subject to one reservation about the absolute and relative importance of the tasks of the Second Plan. While the subject of the wherewithal is undoubtedly important, the general charge of overweening ambitiousness of the Plan may prove truer of certain rarely discussed aspects of the Plan than of the availability of resources relative to the tasks contemplated. As I propose to show in this series, while the question of resources may solve itself more or less satisfactorily, the Plan may well meet its greatest obstacles in organisational inadequacies and dearth of personnel for the requisite calibre for the tasks undertaken. It is necessary to remember that this is a very important aspect of the Plan. Once this awareness is there, it does not matter which aspect of the Plan is discussed first.

The situation in November, 1956
(See Indian Finance of 17-11-1956).

	(Rs crores)
Foreign Exchange gap expected to be ...	1500
But drawing on sterling balances up to ...	300
So, net gap, in terms of the revised figures of Indian Finance ...	1200
Indian Finance table for meeting this deficit as follows: (note explanations)	
Spillover from First Plan of unutilised foreign aid credits ...	100(1)
Foreign exchange saving on Surplus Commodities agreement with USA ...	137(2)
Gross Amount available on steel credits ...	83(3)
World Bank aid for Railways ...	400(4)
American aid ...	150(5)
Assistance from Colombo Plan countries ...	80(6)
Russian credits ...	80(7)
Foreign exchange earnings consequent to export promotion ...	180(8)
Making a total of ...	1200

(1) This is a slight marking up of the figure mentioned in the Second Plan, but was mentioned by TTK's note to Congress session.
(2) New agreement, not foreseen in the Second Plan; estimated saving.
(3) Bhilai and Durgapur; mentioned in the Second Plan.
(4) No official basis for figure, except TTK's view in note that "India can legitimately expect to get substantial loans from the IBRD". Indian Finance guess.
(5) TCA programme of the past had been around this figure. Will prove underestimate, since US aid now buttressed by Export-Import Bank credits.
(6) Indian Finance guess, but no over-estimate; sources include: Ford Foundation, UN agencies, Canada, New Zealand and other Colombo Plan aid.
(7) Official Russian rouble credit (500 million roubles) for a number of projects, since decided.
(8) Indian Finance figure, based on promotion of iron ore exports. Likely largely to be realised.
Also, the Indian Finance article mentioned the IMF source as emergency. Pointed to Rs 200 crores available from the IMF.
So, the IF assessment in November important for the first indication of (a) the increased size of the foreign exchange gap, and (b) the manner in which the whole of the gap appeared to be within our ability to cover.

revision of the Plan by about Rs 400 crores, largely consisting of foreign exchange, is also likely to be met.

I think it will be helpful, at this stage, to have the relevant figures in a tabular form. Readers will recall that, in November 1956, Indian Finance published in its World of Finance columns a chart of revised estimates of the requirements and resources of the Second Plan. It also gave a break up of the foreign exchange content of the Plan and indicated in detail how the gap was to be filled. It will be interesting to find out how far the estimates then made have stood the test of time.

As the reader will recall, the Second Plan's estimate of the gap in foreign exchange was about Rs 900 crores. This was arrived at after setting off against the expected trade deficit invisible earnings of about Rs 255 crores and amount drawn from the sterling balances to the extent of Rs 200 crores. Against this deficit, the Planning Commission itemised, without giving any definite figures, six possible sources which could be tapped for our needs. The only definite figures available in this regard at that stage were those relating to spillover from the First Plan (Rs 94 crores), USSR credit for Bhilai steel plant (Rs 43 crores) and the promised investment by British interests in Durgapur steel plant (Rs 33 crores), the three adding up to Rs 170 crores. This left an uncovered gap of Rs 730 crores.

Since then, it has inevitably become necessary to revise the estimates of the Plan requirements, and of the foreign exchange content thereof; and so the gap. In its estimates of November, 1956, Indian Finance put the gap at Rs 1,500 crores and arrived at a net gap of Rs 1,200 crores after making provision for drawing down the sterling balances by Rs 300 crores. This gap was to be filled from a variety of sources (including those mentioned by the Plan in general terms) and specific figures were given. (See Chart). As will be seen from the explanatory notes, the estimates were based on specific information available at that time.

It was in May 1957, that things seemed to be in a pretty bad shape because of the large import surplus that we were having. The Budget figures did not contain much cheer either, since, during the year 1956-57, the total new aid did not amount to more than Rs 40 crores.

Since then, the situation has improved enormously. Besides the rather meagre incomings for 1956-57, there was the second loan for the Railways amounting to Rs 29.28 crores and there was also West German credit for Rourkela amounting to Rs 13.56 crores (both for 1956-57). But the most spectacular figures are for the year 1958-59. As far as could be gleaned from the Explanatory Memorandum, (particularly Annexure XIV) to the Budget proposals for 1958-59, there will be, besides, a further instalment of the second loan to the Railways (Rs 13.56 crores), new assistance from the US to the extent of Rs 107 crores, credit from West Germany (Rs 30 crores), loans from foreign sources (Rs 15.14 crores) and a promise of Rs 24 crores from Japan. There has also been a promise of credit from France to the tune of Rs 28 crores of which no official note has been taken in the Budget memorandum.

Now let us chalk it all up:

Gap	Rs 1,500 crores
Expectations:	(In crores of Rs)
Spillover from First Plan	100
Bhilai credit	43
Durgapur	33
Public Law 480	137
USSR Rouble credit	60
World Bank Loan to Railways	43
West German deferred credits	45
Export Import Bank, etc.	107
Japan	24
France	28
TCA (2 years)	60
Colombo Plan (2 years)	20
International Monetary Fund	100
Total	800

Add to this the drawing down from sterling balances during the last two years. From Rs 746.14 crores, it has come down to Rs 274.20 crores in the returns of the Reserve Bank for March 21. If the fact that we have secured Rs 100 crores from IMF to add our sterling balances is taken into account, the actual amount utilised so far is Rs 571.94 crores. This means that the total of foreign exchange utilised or available for utilisation (on the basis of firm commitments so far) for filling the gap is Rs 1,371.94 crores. The shortfall

(between our requirements for a five-year period and the funds obtained by efforts before the end of the second year of the Plan) is only Rs 128.06 crores.

Consider the figures once again. You will have noticed that I have not taken any credit in the final reckoning for increased export earnings, which the Indian Finance estimate fixed at Rs 190 crores. (I shall deal with the export earnings aspect of the matter on a subsequent occasion). Secondly, I have taken credit for TCA funds

only to the extent of Rs 60 crores, being the estimated receipts for the first two years of the Plan. Thirdly, World Bank officials have repeatedly indicated their interest in our projects connected with Railways and Harbours. There is every reason to believe that the Railway part of our Plan will be taken care of by World Bank loans. Fourthly, negotiations are going on to enable the US to assist from the Special Development Fund for increasing iron ore export. Fifthly, there is massive evidence of fresh US interest in our Plan. Readers

will have read with admiration the closely reasoned arguments of Senator Kennedy urging aid on the Marshall Plan pattern to India. There have been other efforts also, notably by that indefatigable friend of India, Mr John Sherman Cooper. (It would appear that these American well-wishers of our country have more robust faith in our economy and confidence in our future than some of our own people).

Let us assume that the Indian Finance estimates of aid from the World Bank (put at Rs 400 crores for the Plan period) materialises only to the extent of, say, Rs 250 crores, and that foreign exchange earnings from export promotion do not exceed Rs 100 crores. And let us put the other receipts mentioned above, but not taken into account by me earlier, at Rs 200 crores (which is not an overestimate, considering that I have taken no credit for further Colombo Plan and TCA receipts and further American aid). The total available funds will then be about Rs 1,900 crores. Thus we have an extra Rs 400 crores which can be utilised either in rebuilding our sterling balances or in liquidating the deferred credits which are ripe for payment in the early years of the Third Plan and about which there are already gloomy forebodings. Again, this reckoning has been on the basis that our sterling balances will be left at the level of Rs 274 crores, about Rs 190 crores more than the statutory minimum. I am not saying that we should run through all our resources, but I am saying that there is absolutely no need to be worked up about the state of our external resources.

You will have noticed that a great deal of what I have said flows as a matter of simple arithmetic. Indeed, as I have said earlier, I have set off actual available funds acquired by efforts of two years against the requirements of a five-year period. In other words, by two years' efforts we have acquired not only more than enough to fill the original gap, but also more than ninety per cent of the gap expected to arise over a period of five years. Secondly, the gap that was envisaged at Rs 1,500 crores was the gap anticipated to be thrown up by the "full" Plan. So, it stands to reason that the pruned Plan will be more than adequately served by the resources already found. (Incidentally, this proves the point that the pruning was wholly unnecessary, unless, of course, there has been gross under-estimate of the costs). And, lastly, such arguments based on hope as I have used, have the massive support of evidence of actual goodwill and concrete acts of persons concerned. The conclusion is, therefore, irresistible that our difficulties were exaggerated in the first place; and, secondly, that there need be no misgiving whatsoever about the future in this regard.

LEAVESDROPPER

The Euclid S-7 is a versatile machine on all work for small scrapers. It is a cost-cutting supplementary tool to the larger equipment on big projects.

The Euclid S-7 outperforms all other scrapers of comparable size and reduces maintenance costs. All

major components are readily accessible

for easy servicing—keeps down-time to a minimum.

Simple hydraulic system and lever action of bowl, apron and ejector eliminate cable troubles and relative expense. The Euclid S-7 has all the profit-making features you want in a scraper—fast, easy loading... excellent traction and manoeuvrability... high travel speed... quick, clean dumping... easy servicing and low maintenance cost. It gets more work done at lower cost.

GATEWAY GOSPEL

THE main conclusion that one will derive from a reading of the speech delivered by Sir Homi Mody at the Annual General Meeting of the Shareholders of the Central Bank of India Limited last Friday is that, despite difficulties, the banking system has done exceedingly well during 1957. As one of the biggest units in the system the Central Bank's share of the general prosperity has been quite considerable. Gross earnings of the bank during the past year have amounted to Rs 780 lakhs, which works out to an increase of 19 per cent. The increase in gross profit is a little over 6 per cent.

The growth in earnings of the bank has been brought about by the increased economic activity in the country and the high level of Deposits. Deposits during the year have increased by Rs 16 crores, bringing the total Deposits to over Rs 150 crores. The level of Deposits attained in 1957 is an all time record for the bank. The high confidence reposed by the public in the Central Bank is borne out by the fact that the rise in Deposits, which is the highest in any one year, has occurred in spite of the comparatively lower interest rates it offers on Deposits.

There has been a sustained demand for Advances throughout the year and at one time, the bank's Advances reached a peak of Rs 115 crores, representing a ratio of 78 per cent to total Deposits. This compares with the Advance-Deposit ratio of 61 per cent for all scheduled banks.

Apart from the increase in Deposits, the resources of the bank have been augmented by a liquidation in investments. The high cost of working funds and the more remunerative rates obtain-

Central Bank's All-time Record

able for Advances, have been mainly responsible for the bank's decision to bring about a further liquidation in investments during the year. Thus, investment in Government and other Securities stood reduced by Rs 3.5 crores. This is not to be wondered at, because the gap between the book and market values of securities continued to widen and stood at the close of the year at Rs 254 lakhs. Sir Homi Mody, however, has pointed out that, since the close of the year, there has been a fairly substantial narrowing down of the gap due to a rise in the value of securities.

A significant development during the past year in the banking system is that Scheduled banks have been able to reduce their indebtedness to other banks. In the case of the Central Bank, borrowings from other banks have been reduced by Rs 7 crores as compared to the previous year. The ratio of liquid assets to Deposits has been maintained at 42 per cent.

Among the factors militating against the rising trend of net profit of the bank are the ever increasing level of establishment charges and the higher rates payable for Deposits. In view of the fact that, throughout the year, the average amount held by the bank in Savings Deposits Accounts have amounted to Rs 28 crores, even the small range of increase from 1 to 1 per cent has added substantially to the cost of working funds. While the bank has been obliged to pay higher rates of interest on Deposits in consonance with the higher rates paid by Government on their borrowings, the fact that there has been no corresponding increase in the rates of Advances has reduced the margin of profit.

It is not surprising that Sir Homi has laid special emphasis on the need for cutting down establishment charges. For, such charges now account for as much as 61 per cent of the bank's gross profits. During 1957, establishment charges have recorded an increase of Rs 16.72 lakhs. Nearly half of this increase has been accounted for by payments for Over-time. Bonus to staff has also appreciably gone up and amounted to Rs 30 lakhs, showing an increase of Rs 2½ lakhs over the previous year. In this regard, Sir Homi says: "It is time the staffs of banks realized that their interests were bound up with those of the institutions they were serving and that increase in their emoluments and amenities could only come from greater stability and higher profits".

Taking the banking system as a whole, one finds that the proportion of Advances to Deposits and that of Investments to Deposits of Scheduled have been lower during the past year. The former has been reduced to 61 per cent from 71 per cent and the latter to 31 per cent from 33 per cent. While Deposits have increased by Rs 292 crores, advances have gone up by only Rs 70 crores. There has, however, been an increase of Rs 68 crores in the investment portfolio. The lower rate of increase in advances is presumably due to the strict control imposed by the Reserve Bank on bank credit. The sizable increase in Deposits and the comparatively smaller rise in Advances have enabled the Scheduled Banks to reduce their indebtedness to the central banking institution from Rs 79 crores to Rs 24 crores during the year.

BOMBAY REVIEW

Though many may not agree with Sir Homi in his overall view of the immediate economic prospects in the country if the Plan is pursued, there is no gainsaying the difficulties confronting the nation in the next few years. Perhaps the difference between people of Sir Homi's manner of approach and that of those who have an abiding faith in the practicability of the Plan is that the former group thinks that the difficulties are insuperable while the latter is not only confident but determined to overcome the obstacles and make the plan a success. Be that as it may, there is urgent need for Government to bestow careful thought on the points raised by Sir Homi Mody. He has pointed out that "there is no short cut to foreign exchange: it has to be earned by hard work, enterprise and efficiency". If one is to believe what one has been constantly hearing from the Prime Minister and other spokesmen of the Government, one will have to admit that Government are also of the same view as Sir Homi Mody. It has been made clear to the nation that the foreign aid already obtained and in the offing is to be strictly repaid with interest. The aid and loans are taken because the nation is fully confident that it can repay them to the last naya paisa.

BOMBAY
REVIEW

That the Bombay Government is not lagging behind in the promotion of village industries is evident from the report of the State Village Industries Board for the year 1956-57. The report points out that the tempo of progress that was noticeable in the previous year was maintained during the 1956-57 also. Organisation of new centres for khadi, bee-keeping and village oil industries were the important achievements of the Board during the year.

Notwithstanding the addition of new centres, employment and production in these industries do not seem to have improved in any proportionate way. While in bee-keeping, production is estimated to have declined by about 19,000 pounds, the number of spinners in the khadi industry is reported to have gone down. Adverse weather is supposed to have been responsible for the decline in the production in the bee-keeping industry.

Progress in the neera and palm industry however was more substantial. As against 35 centres run by 25 cooperative societies in 1955-56 there were 48 centres run by 32 cooperative societies in 1956-57. Improvement in employment was also recorded in the hand-pounding industry where as against 4,446 persons in 1955-56 the number of persons employed increased

to 4,903 in 1956-57. The general progress in the village industries during 1956-57 is considered inadequate in relation to the target fixed for the second year of the Plan. Late sanction of schemes appears to be the reason for this lag.

While the importance of village industries as providing a profitable source of employment to the people in the country-side cannot be denied, the fact that the popularisation and maintenance of such industries involve subsidies of a huge order makes it necessary that attempts should be made in all expedition to make them self-supporting. The Statement of Mr. Ratubhai Adani, Minister for Prohibition and Village Industries that the policy of the Government was one of decreasing the subsidies in a gradual process, is in this context gratifying. Ways of reducing cost of production and improving quality of goods manufactured by the village industries have to be explored. Introduction of improved techniques and machinery holds great possibilities. Research on a more intensified scale could alone tackle all the problems confronting these industries.

Famine Relief

Disclosing the existence of famine conditions in a number of villages in the Bombay State, Mr. Rastkhai Parikh Revenue Minister announced

Village Industries

a series of measures with the object of giving relief to the famine stricken areas. The most important of the measures which among other things include the fixation of higher wages for agricultural labour and of annawari at low rates in the affected areas, is the liberalised provision of taccavi loans. The annawari has been fixed at below four annas in about 2,068 villages and at between four to six annas in the other villages.

The wage increase which in the case of workers engaged in scarcity works on soft soil is to tune of 25 per cent is in the case of others to the extent of nearly 50 per cent. The total sum which according to Mr. Parikh is kept at the disposal of collectors to be distributed as taccavi loans to agriculturists amounts to Rs. 2,23,20,000. A sum of Rs. 52,30,000 has also been set apart for the sinking of wells in the scarcity affected areas. The budget demand for famine relief for a sum of Rs. 75 lakhs has been passed by the Assembly. The contingency fund is expected to provide any additional money that might be needed.

The prevalence of famine conditions has come as a sequel to failure of crops consequent on draught conditions in many parts of the State. Mr. Parikh has in this connection referred to the almost complete destruction of cotton crop in the districts of Baroda, Surat and Broach. The decline in food production is held to be no less marked.

The recurrence of famine conditions which is however not confined to Bombay alone, brings into sharp relief the unfilled gaps in the food resources of the country and underlines the need for early and effective measures to increase agricultural production. The most effective way of preventing future occurrence of scarcity conditions would be to concentrate on provision of irrigation facilities in areas which are deficient at present in adequate rainfall. The organisation of other development works and of small-scale industries would also reduce the impact of scarcity conditions on the people in the affected areas.

Labour Indiscipline

Addressing the study conference of the National Institute of Labour Management, Mr. Y. B. Chavan, Chief Minister of Bombay, pointed to the need for an investigation into the continuance of indiscipline in the ranks of labour. Underlying the statement is the overriding need for the co-operation of labour for increasing industrial production on which the Second Plan has laid so much emphasis.

The improvement in labour conditions since the acceptance by the Government of Welfare State as the country's goal has been sub-

GATEWAY
NOTES

stantial. Fixation of minimum wages in particular industries provision of health services in some of the big cities which are also the major industrial centres in the country and the promotion of housing schemes are a few of the important measures undertaken by the Government to safeguard the interests of labour in general. Refractory behaviour on the part of labour in the face of such tangible progress can only be viewed with concern.

It is no doubt inevitable that in conditions of industrial democracy disputes between capital and labour should arise. But what is deplorable in the labour situation in our country is not the mere frequency of such disputes which in itself is alarming but the attempt to force a decision by resort to illegal methods, such as strikes, intimidation and go-slow tactics, in blatant violation of the industrial code which provides for proper machinery such as statutory conciliation arbitration etc for peaceful settlement of such disputes. The intractability of labour in such a situation is worth investigating.

Mr. Chavan has stated that labour troubles in the country are inspired by certain interested political parties. Perhaps the infiltration of political ideologies and the orientation of the trade union movement on political lines would explain the intractability of the labour situation in the country. Mr. Chavan advocates vigorous propaganda by trade unions in the country to discourage acts of indiscipline by labour. In view of the political orientation of trade union movement in the country, whether in the absence of parallel changes in the outlook of the political parties any substantial measures of success could be achieved in this way is doubtful. Recognition by employers of only those trade unions which incorporated a clause that they would actively discourage acts of indiscipline would be effective in guaranteeing industrial peace only when there is proper machinery for penalising infringement of such agreement.

GATEWAY
NOTESWORLD OF
COTTON

IN contrast to last week, the Cotton futures market gave a disappointing performance during the week under review. After early indecision, values sagged under general sell-off with sentiment adversely influenced by discouraging spot and textile markets, although the closing tone was a shade better.

In general, all hopes, which contributed to the bullish sentiment last week having been realised, a majority of operators preferred to mark time, pending a clearer picture of the textile situation, which has not yet shown the desired improvement. Some mills still complain of accumulation of cloth stocks and are reluctant to buy more cotton unless the cloth offtake broadens. Moreover, powerloom factories are still determined to close down since the Government of India have not provided any relief to them. Meanwhile, Jharilla May delivery opened at Rs. 681 and, after touching a high of Rs. 682.25 and a low of Rs. 671.50, finished better at Rs. 673.75.

The Spot market was rather quiet. Restricted business was reported done in Vagad and Jharilla, while Ahmedabad mills bought Laxmi CP/2 and Surti varieties.

In the export section, shippers were reported to have bought a sizable quantity of Bengal Deshi following the recent announcement with regard to the export quota. With the additional export quotas announced, the total quantity released for export, this season, aggregates to 200,000 bales of which 150,000 bales are Bengal Deshi. However, prices of Kala Gin, CP/1, CP/2 and Vagad varieties have risen by Rs. 25 per candy, making the export problem more difficult.

In the foreign cotton section, one more good news for the trade is the reported decision of the Egyptian Government to reduce the export duty on its cotton by

Cautious Attitude by Operators

250 talleries points per cantar with immediate effect. In terms of rupees, the reduction works out to about Rs. 55 per candy. Consequent on the revision, the duty on Karnak will be 5.65d per pound, while that on Menoufi, Giza 30 and Ashmouni, etc. will be 2.20d per pound.

Although the decision of the Egyptian Government is welcomed by the Indian cotton trade circles, there is a feeling that it may not result in any large-scale imports of Egyptian cotton. For, according to the trade, even after this reduction in duty, the Egyptian cotton prices will only come close to those of equivalent Sudan varieties. The position might have been better had the Egyptian Government extended the 12½ per cent discount to payments paid in Egyptian pounds as required under the new Indo-Egyptian barter agreement. Fortunately, there are indications that this may be done.

Meanwhile, rumours are afloat that Sudan now contemplates the abolition of the export duty of Rs. 100 per candy. East African cotton has already come down by Rs. 50 per candy last month. Fortunately for the Indian mill industry, these developments have taken place on the eve of the country's entry in foreign markets for superfine cotton.

It is also expected that the Government of India will give a new import quota of one lakh bales for sterling area cotton apart from 70,000 bales already permitted for East African varieties. Egypt has yet to dispose of 7½ lakhs bales and Sudan 3½ lakhs bales. Importers, however, prefer to adopt a cautious policy for the time being; but it is evident that the current world price trends will help the Indian industry to improve sales of fine and superfine cloth.

On the whole, there is a general inclination not to follow the peak levels as operators are inclined to wait and watch the production trend of the textile industry. Moreover, the export front continues to present mediocre performance due to a likely move for voluntary reduction in cloth exports to the UK. There is a possibility that there may be further deterioration in exports.

A textile industry delegation under the leadership of Shri Kasturbhai Lalbhai is, therefore, to proceed to the UK this month to have talks on voluntary reduction of cloth exports. At present, the British Delegate, Sir Frank Lee, is having discussions with the Hong Kong textile industry and trade on exploring the ground for reducing exports of cloth from Hong Kong to the UK. Much, therefore, depend on the success of Sir Frank Lee. It is, however,

clear that, unless Hong Kong agrees to the British proposal, Pakistan and India cannot assure Britain about the reduction in cloth exports.

NEW YORK COTTON MARKET:

Prices on the New York cotton futures market developed an easy trend on selling pressure, being influenced by the recent advance and reports of generally dry conditions over the cotton belt. However, trade and other support was partly attracted by the possibility of a higher mid-March cotton party price. Middling Spot was quoted at 36.25 cents per pound.

The US Department of Agriculture has predicted that American consumption of raw cotton will amount 8 million bales this season as compared with 8.6 million bales in 1956-57 and its exports of raw cotton to 5 million bales as compared to 6 million bales, to make a total of 13.6 million bales. Consumption and export of American cotton for the present period will be 2.7 million bales higher

than production. As a result, only 8.7 million bales of raw cotton will be available in the USA at the end of this season. This will be the second year in succession that cotton stocks in this country has registered a drop.

LIVERPOOL COTTON MARKET:

Dealings on the Liverpool cotton futures market were thin. Distant deliveries had several points improvement with American buying stressing limited offerings. The chief activity was in hedging transfers from nears to more forward positions and the market closed quiet for both contracts. Inactive conditions persisted in the Sudan contract.

KARACHI COTTON MARKET:

In the absence of any development, sentiment on the Karachi cotton futures market remained subdued. Values were generally easy. Sind Deshi was quoted at Rs. 64.8; Punjab Deshi at Rs. 69; 4F Punjab RG at Rs. 73.9; 289F Punjab RG at Rs. 80.9 and SG at Rs. 90.13.

BOMBAY
REVIEWMixed Trend in Oils and
Oilseeds PricesGATEWAY
MARKETS

PRICES on the Bombay Oilseeds Exchange showed a mixed trend last week. Disappointment over the absence of announcement of expected reduction in cost of oil export duty evoked selling in castor-seed. The disappointment was aggravated also by the continued dullness in the export trade in castor oil, the US and the UK keeping out of the market. With the result, Castor May delivery touched a low of Rs 149.12 from Rs 151.25, to finish a shade better at Rs 149.75. The ready rate was quoted at Rs 30. Castor Oil, however, reflected a comparatively steady tendency, thanks to covering of supplies by shippers against their imminent shipments. Commercial quality was quoted at Rs 15.37.

Prices in the Groundnut section fluctuated either way in narrow dealings with demand from crushers being the main sustaining factor. Turnover was 5,000 candelas. Traders were generally discouraged by lower advices from Saurashtra. May delivery opened at Rs 162.75 and, after touching a high of Rs 163.25, finished at Rs 162.50. In the ready section, conditions remained fairly steady with mills replenishing their stocks, the rate being quoted around Rs 32.50 for the bold quality. Groundnut Oil was quoted at Rs 17.87.

Trading in the Linseed section was featureless in the absence of fresh developments. May delivery touched a high of Rs 31.44 and a low of Rs 30.87, to close finally at Rs 31.12. In the ready section, the rate was quoted at Rs 30.56 and Linseed Oil at Rs 16.44.

Gold & Silver

On the Bombay Bullion Exchange, Silver registered some progress, while gold eased under selling by spot dealers with sentiment influenced by unabated arrivals.

The moderate rally in Silver was attributed mainly to the reassuring implications of the payment of margin by the bulls. It was estimated that the buyers had paid about Rs 8 lakhs by way of margin. This would represent outstanding purchase of 1,600 bars of a margin of Rs 500 per bar. Traders estimated the net outstanding position at about 2,500 bars.

Arrivals and offtake in the white metal were estimated around 15 and 8 bars respectively. Jeth delivery started at Rs 194.19 and, after improving to Rs 194.69, finished at Rs 194.37. Spot changed hands at Rs 195.56 to Rs 195.76.

In the Gold section, arrivals and offtake were estimated at 4,000 tolas and 2,000 tolas respectively. Forward rates moved between Rs 110.56 and Rs 111.44, while the spot rate was quoted at Rs 110.62 to Rs 111.00. Sovereign remained quiet at Rs 70.75.

Non-Ferrous Metals

Renewed firmness in Copper continued to be the main feature of trading in the Bombay Non-Ferrous Metal market. Ready rate was quoted very steady at Rs 176 per cwt, which suggested that the recent arrivals had already been sold in advance to consumers. Zinc ruled rather quiet at Rs 51.75 per cwt, as the stock position was re-

ported to be satisfactory. Trading in the Lead section remained featureless with the rate hovering idly around Rs 63 per cwt. Tin was almost static at Rs 129 per quarter following lower advices from Singapore.

At the recent meeting held by the Government with non-ferrous metal interests, returns from the established importers were called for and these were believed to have already been submitted. It is, therefore, considered likely that the Government may take measures to give some sort of relief to the copper and brass utensils manufacturers.

On the London Metal Exchange, Copper is quoted firm at £178½ per ton, mainly due to improved tone in the US market. It is reported from the USA that custom-smelter price may again be raised. Zinc is quoted around £63 per ton. The basic position of the market remains unaltered. There is no selling pressure as a result of which prices are well maintained.

Trading in Lead remains featureless with the rate hovering around £73 per ton. The Washington decision on the import tariff issue will determine the trend of this section to a great extent. The tone in the Tin section is rather subdued with the rate unchanged at £730 per ton.

Yarn

Irregular price movements were noticed on the Bombay Yarn market. Business put through was limited as prominent operators refrained from extending commit-

ments on account of the expected announcement of the new import policy. The Government's decision to allow import of acetate yarn of 120 and 150 deniers to the extent of 10 per cent of the face value of the licences against actual users' licences for the current period was welcomed by the trade.

In the case of Art Silk Yarns, fluctuations were comparatively much wider due to the hectic rise experienced in this class of yarns during the past several weeks.

As regards Staple-Fibre Yarns, rumours have been current that there will be a reduction of Rs 2 per pound in excise duty; but no authentic information is yet available. However, reports from various important consuming centres, particularly from the Punjab, go to show that large business has been arranged by several mills from Gujarat and Coimbatore in 20s dull hanks and cones. It is further reported that, on account of unsatisfactory demand for cotton yarns and unsuitable prices for the same, several cotton mills have turned their attention to spinning staple-fibre yarns for which there has been heavy demand, both for bright as well as for dull cones.

As regards Cotton yarns, the situation continues to remain unfavourable. Even at lower prices, sales by mills have been very limited. It is even reported that several mills in Southern India have, therefore, voluntarily decided to reduce their production of cotton yarns to the extent of 25 per cent of their production.

DELHI
REVIEW

“The Hardest Core of the Plan”

IT was, I suppose, inevitable that Mr S. K. Patil, until recently the Union Minister for Irrigation and Power, should have moved up to a responsibility more commensurate with his known capacity for hard work and organisational flair. For, the Ministry of Irrigation and Power, despite all the nominal centrality of its tasks, is more or less a technical Ministry in which the Minister has limited scope for such unspecialised talents as he might possess. But it is a moot point whether Mr Patil could not have been found a ministry where the urgency of tasks will find a ready response in his combative energies. Growing under the stern influence of the late Sardar Patel, whom Mr Patil worships with an intensity verging on apotheosis, he would have been an ideal man for the drive that is needed to make India more than self-sufficient in food.

But then, there are apparently many mysterious considerations that determine ministerial changes which will not readily make sense to folks who want merely to “get on with the job”. Apparently, “claims and counter claims” of the various people in the running have to be accommodated. And if one were to believe all the gossip that floats about, the atmosphere around aspirants is not unlike that among minor officials hoping for coveted promotions. Hard as it is to believe it, questions like “seniority” and so forth are stated to enter into calculations of chances of your becoming a minister, deputy minister and minister of state and so forth. Certain ministries are considered to be “senior” and certain others “junior” for no particular reason one can discover.

I say this not only because he has been in general demand whenever the Congress is in need of a trouble-shooter, and he has always shown himself equal to those occasions. The more immediate occasion for this reflection is his performance, which was something of a swan song, in Parliament last week when the demands of the Ministry of Irrigation and Power were being debated. In what was degenerating into a somnolent session, he brought a whiff of interest which made many a sleepy MP sit up and take note of the proceedings. Much to the chagrin of the opposition members, he took the wind out of their sails by conceding the failure of Government in bringing home to the people the fruits of all the various projects executed under the leadership of his Ministry. He showed a firm grasp of the real weaknesses of our present Plan by describing the centrality of food production in all our hopes of success. In a vivid phrase, he described agriculture as the “hardest core of the Plan”, putting to good use the current cliché about the

“core of the Plan”. He proceeded thereafter to elaborate, with hardly concealed impatience, the various uncoordinated agencies concerning themselves with agriculture and generally making a hash of the whole thing. With some irony, he described how he came to his Ministry some eleven months ago with the expectation of seeing that the obstacles in the way of utilisation of the gifts of his Ministry were mown down. Perhaps an inquiry was in order, before he did anything, he thought. But, soon enough, he said, he realised that it was none of his business to see what happened to the water he provided! It certainly must have been a frustrating conclusion for a man of his nagging organisational itch. The Planning Commission at the top, his own Ministry in the middle, and then the Union Minister of Agriculture, not to mention the Ministry of Community Development, are all there at the centre with all their familiar overlapping duties involving concurrence of a hundred minor and major officials. And then come the State Agricultural Ministries, who are, in the scornful phrase of Mr Patil, “Lords and monarchs by themselves”. Agriculture is a State subject and “who are you to tell us about our crop pattern and what we should do and should not do?” Of course, as in all simplifications, there is an element of injustice in this criticism of various authorities, but, by and large, the criticism that the present failure on the agricultural front is due to lack of concerted action cannot be denied.

I shall presently refer to a recent circular sent round to the States by the Union Minister for Food which gives impressive support to the view that the States have shown themselves somewhat irresponsible in the matter of food production and utilisation of resources. Meantime, certain other observations of Mr Patil are worth commenting upon. Mr Patil was referring to the unwillingness of the State Governments to face the consequences of their unpleasant duties. Before the elections, it might have been expedient to temporise on the subject of possible fresh burdens like “Betterment Levies” even if such imposts were eminently reasonable. But what, asks Mr Patil, is the justification for the indifference after the elections? The unclouded realism is entirely characteristic and accords well with Mr Patil's earlier background as a political manager who knows all the tricks of the game and is nevertheless keenly alive to the stark realities of the situation. One must indeed be a political greenhorn to be shocked at the apparent cynicism of this attitude. On the other hand, one must admire Mr Patil's frankness in this matter.

There can be no doubt that, in the discharge of their responsibilities in agriculture as in many other spheres, the States have been taking the line of least resistance. The tendency has developed in the last ten years to look up to the Centre for pulling their chestnuts out of the fire. One hates to say it, but all the wiles available in a politician's book of tactics are employed. These include the subtlest forms of blackmail like unctuous allegations of stepmotherly treatment by the Centre vis-a-vis other States. In more extreme cases, the State Governments connive at popular clamour of a regional sort, which, our present political maturity being what it is, is easily allowed ugly proportions. The Centre, rather hypersensitive to criticism of partiality and somewhat panicky at the prospect of regional discontents, is only too ready to assuage feelings. At the slightest indication of shortage, often grossly exaggerated, the Centre rushes in with an offer of taking over the responsibility for provision of further supplies and so forth. No wonder the State Governments are not particularly filled with a sense of urgency of their tasks and think that politically unpopular tasks like imposition of betterment levies are not really expedient.

Sometimes, the sense of responsibility of the States reaches really astounding heights. In the circular to the State Agriculture Ministers sent by the Central Ministry of Agriculture to which I referred earlier, the deplorable fact that States tend to exaggerate the adverse effects of droughts and floods is mentioned. It is now clear that Orissa, Madhya Pradesh, Uttar Pradesh and Bihar exaggerated their last year's calamity. Each of them said that their rice harvest would only be 4 per cent of their needs. Now, it appears that Orissa has surplus rice, and is bothering the Centre to take it; in Madhya Pradesh, the reduction in surplus is nominal; and, in the UP, the overall position is surplus. Only Bihar had a shortfall, but it was less than what was then stated.

In the first place, it seems a cynical use of adversity to make it an excuse for a lie, however well-intentioned. For, it is really no answer to say that, if the fact of adverse conditions is true, a little exaggeration to obtain a little more for distribution among the people cannot be considered wicked. Secondly, if one is to believe all that one hears about the food distribution as being handled in some States, the real beneficiaries of these exaggerations are profiteers. Thirdly, the truthful States are being punished for their virtuousness and one may easily understand their chagrin at the spectacle of the wicked thriving. And, lastly, do the States

realise how this very irresponsibility is wrecking the Plan? After all, the foodgrains they obtain on false pretences are being paid for and in hard currencies in the literal sense of the term. And food imports, as the recent memorandum on foreign exchange crisis showed, accounted for a sizable portion of our scarce foreign exchange.

Thus, ultimately, responsibility for the whittling down of the Plan, because of foreign exchange scarcity, is squarely on the shoulders of the people who have made Government import food they need not have imported at all. Thus, the Plan is being corroded at two vital ends by the States. One, by not putting forth the necessary effort and utilising existing resources and increasing the food production, they make the internal price situation inflationary to an extent that will diminish the value in real terms of the gains of the Plan. It will also push up the cost of the Plan and consequently the burden on the people. At the other end, by putting needless pressure on foreign exchange, vital tasks are postponed or abandoned. One wonders whether these implications are realised by the State Governments. If they are, it is time they showed their awareness in more concrete forms.

With the recognition of the big gap in the food requirements in the country and the leeway in the achievement of self-sufficiency in food, official attention has of late come to be concentrated on matters relating to food production. Last week in the Lok Sabha, Mr S. K. Patil Minister for Irrigation and Power spoke at length on the deficiencies of the administration and the lack of coordination between the various Ministries connected with food production in the country.

Following Mr Patil's speech in the Lok Sabha, reports have come from the Capital of a circular from the Centre addressed by the Union Minister for Food and Agriculture to the State Governments in which it has been suggested to the latter that target's of food production should be fixed for every district and village and also individual farmer.

The failure on the food front is now generally considered to have been the result of the apathy shown by the various State Governments in regard to agricultural production and therefore the circular is ostensibly intended to arouse them to a greater sense of responsibility than what they have hitherto shown. It would appear from the speech of Mr S. K. Patil

Food Production

in the Lok Sabha that the attitude of the State Governments has not been sufficiently cooperative. The administration at the village and district level in all the States has been found to be lagging behind in the implementation of the various schemes for increasing production of foodgrains.

The greatest need in this connection is the full utilisation of irrigation waters which has been added consequent on the completion of various major and minor irrigation projects. While during the First Plan the new irrigation potential that was created was nearly 7.5 million acres the additional area irrigated was only 4.0 million acres. There would seem to have been little improvement in the utilisation of waters even during the course of the first two years of the Second Plan. The record of the State Government in other fields such as minor irrigation, sinking of tubewells and the setting up of seed farms etc has also been found unsatisfactory. These gaps in vitally important matters relating to agricultural production show the erstwhile policy of the State Governments in a bad light and underline the need for more energetic pursuit of the goal of self-sufficiency. At the conference of the State Ministers in New Delhi, this need for the State Governments to concentrate on minor irrigation works, multiplication of seed farms and the development of local manurial resources was stressed by the Central Minister for Food and Agriculture Mr A. P. Jain.

Soft Coke

That soft coke deserves more considerate treatment, is the major theme of the presidential address of Mr B. D. Samanta to the annual meeting of the Indian Colliery Owners' Association. In addition to underlining the points made in the chairman's speeches at the annual meetings of the Indian Mining Association and Federation, Mr Samanta has also focussed attention on some additional problems. Railways have been sedulous in publicising the steady increase in the supply of wagons. But wagons form only a part of the requirements for expeditious transport of coal. Provision of sidings and loading facilities at pitheads form the other part of the requirements. In providing these essential facilities, the railways apparently move at a very leisurely pace.

Mr Samanta stated that at present it takes four years to complete a siding. He also referred to the interesting instance of communications in the form of telephone poles coming in the way of railway transport.

As regards soft coke, it will be agreed that the industry has not benefited by the two successive

price increases announced last year. At present rates, there is little incentive to the manufacturers to maintain output, and their hopes are centred on the Coal Price Revision Committees.

The potential demand for the product is also a factor in determining the level of output and there is little reason to think that increase in prices will not react adversely on demand for soft coke. The simple case for an upward revision of the price of soft coke rests on the fact that raw coal prices have gone up as a result of the Appellate Tribunal's Award, which has not made an exception in favour of the Collieries manufacturing soft coke. But the claim for a price adjustment is not strengthened by the argument, that the encouragement of soft coke manufacture will help to eliminate the wasteful use of cow dung as fuel in the villages. The peasants use cow dung as fuel, not because they like it, but because they have no alternative. It will take many five year plans before the economic position of Indian cultivators has improved to such an extent as to enable them to use soft coke even if it is carried to their door steps. The manufacturers will be better advised to study possible economies in production through more effective utilisation of by-products.

Road Development

Speaking in the Lok Sabha, Mr Raj Bahadur, Minister of State for Shipping claimed that the progress made by the country in regard to road development was significant and further pointed out, that at the conclusion of the Second Plan period the Government would have undertaken the construction of major bridges over all the important river systems except two.

Expert opinion in the country however is not generally complimentary to the policy of the Government in regard to road development, which is considered to be wanting in both boldness and imagination. Inadequate correlation of schemes for road development in the Second Plan with the overall transport needs of the economy at the end of the Plan is what the critics point out to be the most glaring deficiency of the road development plan of the Central Government. If bottlenecks in transport were to be avoided at the end of the Plan the need to intensify the pace of development is inescapable. In view of the limitations imposed by inadequate financial resources, the only means to ward off bottlenecks is to concentrate on the execution of the scheme for low-cost roads as envisaged by the recent ECAFE seminar on low-cost road construction.

The reference by the Minister to the high level of motor taxation

Good Demand for Sugar

SUGAR prices have continued to rise steady as demand from the consuming centres is fairly good. The announcement of the new quota for free sale is expected shortly. In the Hapur market, following mill-delivery rates (per maund) are quoted:—Meerut (D-28) Rs 35.75; Iqbalpore (C-29) Rs 36.62; Mansoorpur (B-29) Rs 37.81; Mowara (B-29) Rs 37.25; Modinagar (C-29) Rs 36.25; Amroha (D-28) Rs 35.12 and Bijnore (E-29) Rs 35.00. In the Kanpur market, however, prices have not shown any appreciable change as buyers are inclined to withhold their purchases in anticipation of an early announcement of a fresh quota.

According to the latest Government estimates, production, during the current season, will exceed 20.29 lakh tons, attained in 1956-57. Cane supplies to the factories are reported to be adequate. Most of the factories in Uttar Pradesh are expected to cease crushing by the end of April.

With regard to the prospects for sugar exports, the President of the Indian Sugar Mills Association has stated that country's growing needs for foreign exchange for importing heavy machinery, etc., for rapid industrialisation makes it incumbent to explore all avenues of furthering exports to earn more foreign exchange. He has added that the world sugar prices have come down appreciably, mainly because of better crops in Europe and Cuba. He hopes that some scheme will be devised without any further delay to start export of sugar on a permanent basis.

He has also referred to the waste involved in Khandasari production, because of its low sugar recovery of 6 to 7 per cent against 10 per cent of the sugar industry. In the additional production of 2 lakhs tons of khandasari, the industry loses about 1.3 lakhs tons of extra sugar, which will be recovered if the cane is crushed by the sugar factories. That is, against the expected production of 3.3 lakh tons in vacuum pan factories, the khandasari output is estimated at 2 lakhs tons only for the same quantity of cane crushed. In terms of the money value, this will mean a loss of over Rs 12 crores.

The industry had, therefore, expected that, at the time of the Budget proposals, the Government would announce some steps in the form of suitable excise duty on khandasari sugar to curb its unplanned growth; but this was not done. He has, therefore, urged the Government of India for speedy and effective action well in advance of the next crushing season to avert a serious situation that may otherwise develop as a result of shift of consumption from sugar to khandasari and diver-

sion of cane from factories to khandasari units, resulting in the expanded capacity of the factories not being fully utilised.

Khandasari

Good demand from the consuming centres has accounted for steady conditions in the prices of Khandasari. Production is gradually declining as cane supplies to the crushers is declining. Prices are now quoted at Rs 27 to Rs 33 per maund, according to quality.

Gur

Following good ready demand, mainly from the Punjab side and fall in daily arrivals, which now average to about 1,000 maunds, Gur prices have been ruling steady. In the Hapur market, Pansera quality is quoted at Rs 15 to Rs

15.31 per maund. Stocks are estimated at 1.40 lakh maunds, which is large when compared with the corresponding figure of last year, at 95,000 maunds.

Arrivals, this season, are small when compared to last year. Total arrivals, during the current season, are estimated at 3.75 lakh maunds as compared to 4.45 lakh maunds in the corresponding period of last season. Crushing is coming to a close, while sowings for the next season have also been nearly finished.

Foodgrains

Quietly steady conditions are witnessed in the Foodgrains market. In the Hapur market, Wheat prices are almost unchanged. Harvesting of wheat crop has begun in some areas and the new

crop arrivals are expected after a fortnight. Despite satisfactory supply position, the Rice section has continued to rule steady. Gram prices have recorded some gains, thanks to higher Punjab advices. Harvesting of Barley and Bejher crops have been completed; but as arrivals of the new crop in the market are small, prices have recorded modest gains. Firm trend in the prices of Jowar and Guwar has continued. The all-India crop of Guwar is estimated at 150,000 to 200,000 tons. About 7,000 tons of the commodity are stated to have been exported last year. Arrivals of new Peas have increased.

ACC HONOURS THE CODE

4

..... reserves must be created for expansion and modernisation of the plant and machinery and in their utilisation the Management remains accountable to the investor. Money must also be provided for research."

Code of conduct—FORUM OF
FREE ENTERPRISE

To ensure a continuous and growing supply of quality Portland cement to its customers, the ACC "ploughs back" every year a substantial portion of its earnings, to rehabilitate, expand and modernise its existing plants; to make its business grow and so to provide the country with the much-needed cement which goes into all types of construction, from the modest needs of the small village to the hungry demands of gigantic power and river valley projects, industrial development, housing schemes, hospitals, schools and the like.

This "ploughing back" of a portion of the ACC's earnings — though reduced last year owing to lower profits, resulting from higher costs and increased taxation — remains a vital factor in the production and supply of quality cement in increasing quantities to millions of satisfied users throughout India who have learned to depend on — ACC CEMENT.

THE CEMENT MARKETING CO. OF INDIA PRIVATE LIMITED

The Reserve Bank's Role

MR H. V. R. IENGAR did not oblige. The function was the annual meeting of the Madras Chamber of Commerce, and its Chairman, Mr G. N. Noel-Tod, had skillfully presented an assessment of Government's tax policies and their impact upon the individual's initiative and enterprise. Mr Noel-Tod also thought fit to end on a bleak note by pointing to incipient signs of recession in three major industries—sugar, cement and textiles. If the Madras Chamber Chairman thought that the Reserve Bank Governor might be goaded into a publicly voiced criticism of Government's policy, he was disappointed; and, in a sense, as I said, Mr Iengar did not oblige. But HVR did not try to evade the issue, but took up the challenge, and he is to be credited with a statement of major significance from the highest stratum of the country's financial needs.

In his address, to put it briefly, Mr Iengar has tried to foster the impression that India, in many ways, has turned the corner and now is poised on the road to success.

First, however, the Reserve Bank Governor utilised the opportunity offered to him to clarify the role of the central banking institution in the fashioning of a country's economy and of its financial policies. The Reserve Bank was primarily responsible for maintaining the stability of the currency, and it dealt with such matters as bank rate and credit policy, to this end overseeing the operation of the monetary mechanism as a whole. As if in refoit to Mr Bhabha's speech in Bombay in the preceding week, Mr Iengar also categorically stated that the Reserve Bank's responsibility was direct and unquestionable; and he dispelled the notion of Government

interference by asserting that, although the Government were possessed of the statutory power to issue directives, that power had not hitherto been exercised. But then, fiscal policy does have its repercussion on the monetary sphere; and fiscal policy remains the prerogative of the Government. In that sense, where a high level of taxation or an excessive dose of deficit financing disturbed the smooth functioning of the money market, clearly, the Reserve Bank should have something to say. But would it be wise or prudent—and was it desirable—for the Reserve Bank publicly to give expression to its independence, by voicing criticism where it felt necessary? Mr Iengar says it would be a mistake for the Governor of the Reserve Bank to join sides in any public controversy. Instead, he said, "I think the bank can carry out its functions very much better now if its views on controversial fiscal problems were communicated to Government in confidence". Indeed, this is how central banking institutions in other parts of the world function; but Mr Iengar was careful to emphasise that he "would not rule out public criticism in all circumstances".

Mr Iengar can thus take credit for nipping effectively in the bud a controversy that threatened to get deep-rooted. He has indicated the extent and the sphere of the Reserve Bank's responsibility; he has affirmed that this responsibility has not been abrogated or abdicated; he denies the charge that Government have interfered with the working of the Reserve Bank; and he stresses that, although as a general policy, the Reserve Bank will not enter into public controversy, it would express its criticism publicly should the occasion arise.

Mr Iengar conceived as his second duty the dispelling of the unconscionable pessimism that generally seemed to underline all public thinking at the moment. To this end, the Reserve Bank Governor must be credited with the first hopeful, official assessment of the foreign exchange situation. True, this improvement in the outlook had already been fore-shadowed by Mr Nehru, particularly in his address at the FICC and in his replies to the debate on the Budget. But it was left to Mr Iengar to assert that the country was now in sight of bridging the foreign exchange gap as originally estimated by the Planning Commission. This is a most heartening development, and we may now take it that those in authority will deem their future task to consist of a conscious attempt to dispel doubt and instil confidence. Mr Iengar's view is that the extent of foreign aid that India is likely to get in the course of the Plan-period would exceed the amount that had been put down by the Planning Commission.

Nor were the Reserve Bank Governor's remarks on a soberly optimistic view of the future restricted to the field of foreign exchange. The increasing industrial production is described as being remarkable, and Mr Iengar suggests that we have grounds to congratulate ourselves on the manner in which this country has waged the battle against inflation. During a period when money supply increased by 30 per cent, the wholesale price level has moved up only by 5 per cent. There was no reason, thus, to take a gloomy view of such a performance. Indeed, there were many countries which would envy the success that has attended India's efforts to keep inflation at bay.

MADRAS REVIEW

While the increase in production must be presumed to help keep inflationary pressure in check, it is proper that, at this juncture, we should recognise the role played by the Reserve Bank in this regard. Especially since the inauguration of the Second Plan, the central banking institution has had quite a complicated policy to implement. On the one hand, there were the known inflationary pockets in the economy; these were areas of shortage, and scarcity in available stocks was further intensified by the import cuts. In this sphere, the provision of bank credit had to be regulated in order that advances were denied to such elements as might have desired to make capital of this situation, and as might have tried to utilise bank advances for speculative with holding of stocks. On the other hand, the productive effort could not be allowed to be hampered, and industrial enterprises could not be starved of the funds that they were needing to expand their output. It is in such background that the Reserve Bank evolved its selective monetary control, by means of which it has ensured the provision of finance for productive enterprises, the while that it denied such accommodation to spheres in which there were speculative proclivities.

Another interesting point that Mr Iengar made was that he doubted whether deficit financing had thus far produced any considerable inflationary pressure. Such has long been the contention of this journal, and it would now seem that the Reserve Bank Governor is of the view that, in a developing economy, some element of deficit financing, far from being hampering, may actually help. Of course, this is partly because a developing economy normally experiences a balance of payments deficit; and the import surplus serves partly to siphon off and thus offset the higher level of money supply involved by deficit financing.

For the future, in this context, it appears certain that the size of the payments deficit will gradually become smaller; and, to that extent, there will be a reduction in the deflationary or contractionist effect of balance of payments deficit. Nevertheless, Mr Iengar remarks, "I see no reason why we should take a gloomy view of the situation."

This, then, is the reiterated burden of Mr Iengar's theme, that it is unnecessary for us to be bowed down by the feeling that we are faced by unsurmountable difficulties; on the other hand, in most spheres these difficulties are already largely overcome. If, as I hope, Mr Iengar's address at the Madras Chamber is significant as being the first salvo in the Campaign for Confidence about prospects in every sphere, it is indeed greatly to be welcomed.

SOUTH INDIAN NOTES

Speaking in the Legislative Assembly, Mr M. Bhaktavatsalam, the Madras Home Minister indicated the desirability of constituting the Madras State into a separate food zone. The food position in the State while it is considered to be satisfactory on the side of supplies in as much as there has not been any complaint of scarcity of rice, is held to admit of improvement on the side of prices.

The South Food Zone, though it has successfully prevented large-scale movement of rice from Andhra Pradesh to the North, had according to Mr Bhaktavatsalam, only limited usefulness in stabilising prices for foodgrains in the Madras State, the effect on prices being merely to fix a ceiling. It is the need to bring down prices for rice in the State that is the motive behind the proposal of the Government for the constitution of Madras into a separate rice zone.

The specific weakness of the South Food Zone arrangement appears to be the unrestricted movement of foodgrains within the zone and the speculative element which this introduced into the price level. Mr Bhaktavatsalam has in this connection referred to the largescale purchase and export of Madras rice by Kerala merchants. This drain would seem to have been intensified by the activities of the Kerala Government, who, according to Mr Bhaktavatsalam, have set up their own machinery in the Tanjore District of the Madras State to effect purchases. The setting up of a separate zone for Madras would naturally relieve the Madras markets of the pressure from Kerala.

Any scheme to replace the present arrangement of the South Food Zone would have to take into account the effects on supplies and prices in the other States which together with Madras now constitute the South Food Zone. It may be recalled here that proposals for converting Andhra Pradesh into a separate zone in itself were dismissed by Mr N. Sanjiva Reddi, the Chief Minister of the State, on the ground that it would impose undue hardship on the cultivators in that State. Thus while Madras Government have viewed the South Food Zone from the point of view of the consumer and have found it a failure to the Andhra Pradesh Government who were more interested in maintaining an adequate level of return to the cultivators the arrangement was highly satisfactory. It goes without saying that the Kerala Government would be hardest hit by the dismantling of the South Food Zone since supplies from nearer sources would be closed. Only an increase in production in the whole country would reconcile the divergent interests of all the State Governments.

Rice Zone for Madras

Education in Andhra

Education figured prominently in the proceedings of the Andhra Pradesh Legislative Assembly last week. The review of progress as contained in the speech Mr S. B. P. Pattabhirama Rao the Minister for Education testifies to a fairly satisfactory record during last year. While 36 new middle schools and 16 new high schools were opened, sections in schools were increased by about 216. The programme for increasing the facilities for elementary and basic education by starting 496 primary schools and 200 junior basic schools is according to Mr Pattabhirama Rao very near completion. The extension of free education to Form II was another improvement the importance of which could not be minimised.

The assistance of the Central Government was a major factor in the improvement of educational facilities in the State. For instance two mining institutes at diploma level, one in coal mining and the other in mining other than coal were started with Central assistance. The establishment of two polytechnic and two industrial training institutes have considerably improved the scope for technical education in the State. With the Sanction of the Central Government for the starting of an Engineering college in Waltair the future for engineering education is also assured. The introduction of pre-professional courses in the Engineering colleges at Anantapur and Kakinada as indicated by the Minister would widen the opportunities for engineering education in the State.

Notwithstanding the opening of so many new institutions for widening educational facilities the progress is not considered by the opposition members to be satisfactory especially in relation to the leeway that has yet to be made up. It has been pointed out that the provision of Rs 6 crores for elementary education is inadequate to the need for increasing facilities for elementary education in the State. The provision for primary education which is about 55 per cent of the total that has been allocated for education in general is also considered to be far below full requirements. The greater priority that has been accorded to agricultural development according to Mr Pattabhirama Rao explains the relatively lower sums allotted for education in the State.

In view of the great leeway that has to be made up in the educational sphere, the need to avoid shortfalls in expenditure on education is only obvious. The Minister while admitting the existence of shortfall, of a huge order, has attributed this to special factors such as difficulty to keep in touch with the numerous institutions and restrictions on building pro-

grammes imposed by the Central Government on account of shortage of steel and cement.

Labour Position in Madras

Replying to the discussion on the demand under Labour in the Madras Legislative Assembly, Mr R. Venkataraman, Minister for Industries has pointed out that though the labour position in the current year has been quite peaceful it may not be so in the coming year. He expects difficulties especially in the textile mill sector where there are already signs of unrest. The Minister himself thinks that the unsatisfactory situation has stemmed mainly from the accumulation of stocks with textile mills. Though the recent reduction in the excise duty on cloth may be expected to go a long way in relieving the financial difficulties of cotton textile industry in the country, that section of it which is situated in the South may not derive much benefit from the new concessions, because most mills, being only spinning mills, will not be affected by the reduction one way or another. It is, however, gratifying to note that the State Government will not remain passive spectators when they find that mill owners try to take advantage of the present situation to retrench labour.

The important points to be noted with regard to the textile industry in the State are that there is an accumulation of stocks with mills leading to short working and some retrenchment and that the present difficulties of mills are partly due to the accumulation of handloom goods in the State. It has been estimated that handloom goods worth Rs 2 crores are lying unsold with the co-operative sector. Unlike mills elsewhere, most mills in the State have got no relief from the recent reduction in excise duty on cloth. It is, therefore, incumbent on Government to take remedial action to check the reactionary tendency in the labour situation.

As far as the labour position in the current year is concerned Government can feel quite satisfied at their record. During the year only seven industrial disputes have been referred to the courts. Both employers and the rest having been settled by mutual negotiation. Such good result has been made possible by the willingness of both the workers and employers to seek the advice of Government on matters under dispute between them. That Government's claim that the question of the welfare of the workers has been receiving their constant attention is borne out by the fact that the average annual total earnings of employers has increased during the period between 1954 and 1956 from Rs 689 to Rs 1016.

Land Reform

The discussions in the Mysore Legislative Assembly on the Jetti Committee report on tenancy and land laws have revealed sharp differences of opinion among the members on the proposed legislation. Almost all the known arguments for and against measures of land reform involving fixation of ceiling on individual holdings and redistribution of the surplus land among the landless were repeated in the course of the debate. Those who opposed the land reform measures presented their cases in terms of the danger to agrarian economy and adverse effects on production. The injustice involved in the fixation of ceilings on agricultural income without similar ceilings on income from other sources was pointed out. The supporters pleaded with equal vehemence for the implementation of the reforms on the ground of favourable incentive effects on agricultural production. Among those who criticised the land reform bill were several Congress members in the Assembly.

Even those who were generally in favour of the land reform measures could not agree on where exactly to draw the line for ceiling. While one Congress member found the ceiling for family and basic holdings and for personal holdings too liberal than necessary, another member found the limit to be too low to permit reasonable living standards for the cultivator. The need to allow exemption for arca plantations also found a few champions.

Though the desirability of a bill which seeks to rehabilitate a large number of landless tenants cannot be denied much of the enthusiasm for the bill is emotionally grounded. The opposition of the landlords no doubt springs from the desire to protect their vested interests. But even opinion which is generally sympathetic to the landless has not been favourably disposed to the necessity for a largescale shift in the ownership of land at present. A recent conference of landowners in Mysore had drawn attention to these harmful consequences.

The argument of those who stress the incentive aspects of land reform has little significance in view of the general poverty of the agriculturists and the fact that low ceilings would not permit the introduction of scientific methods in cultivation. The element of uncertainty which it would introduce in agricultural operations in the transitional stage is another argument against implementation of the reforms at present when increase in production is the paramount need of the country. The case for postponing hasty legislation which seeks to disrupt existing relations in the agrarian economy in the interest of increase in production is therefore overwhelming.

J. W. YOUNG, MANAGER

THE OPERATIONS OF THE GROUP ARE WORLD-WIDE

The earned surplus of the P & O group for the year before charging taxation rose from £12.5 millions to over £17.5 millions, a record in the annals of our Group. The explanation of this rise is not difficult to find. Although in the popular mind P & O is regarded as a passenger liner company, over 40 per cent of its tonnage consists of cargo liners. Moreover, it is the parent company of a large Group of shipowning companies two of which are concerned wholly in the trading of tramp ships. Those ships are traded on the open market and depend entirely on the law of supply and demand for the rates of freight they can obtain. At the present time it is impossible to fix one at a rate which will show a profit. Yet eighteen months ago the demand for tramp ships was at its height and freight rates reached almost unheard of levels

Tramp Voyage Charter Rates (Chamber of Shipping Index, 1952=100)

after a year or more when rates had been steadily rising. Herein lies the difference between 1957 and 1952. The year 1952 had the benefit of a peak in tramp rates as high as has been lately experienced yet the 1952 profits were only four-fifths of the 1957 profit. The rise in tramp rates which resulted from the Korean War arrived suddenly and receded equally suddenly. The number of voyages that could be fixed at the high rates when ruling was strictly limited. On the other hand, all voyages finishing in 1957 had the benefit of the very firm rates which ruled throughout 1955 and 1956 culminating, of course, with the peak rates secured by the relatively few voyages fixed at the end of 1956. Furthermore, most cargo liners carry some cargo at rates related to these ruling in the open market and when those rates are very high the benefit is reflected in the voyage results. As I have explained on previous occasions, liner rates of freight do not fluctuate so spectacularly as do tramp rates of freight and

it is important to remember that the results of the past year have been derived very largely from the profitable state of the tramp market.

The operations of the Group are world wide. A drought in India necessitating the import of extra quantities of rice; a bumper wool cheque in Australia; Government restrictions on imports into any of the countries which we serve; a major disturbance somewhere in the world resulting in a temporary shortage of shipping space; all these occurrences can have an important influence for good or ill on our trade.

The closing of the Suez Canal caused disturbances to the pattern of world trade beyond that actually passing through the Canal. To give just one instance, the difficulty of obtaining goods from Europe caused India and other countries in the East to turn to other sources of supply. And so it happened that at a time when the earnings of the Group's cargo ships were swollen by the high rates of freight obtainable in the open market, certain of the liner trades experienced exceptionally good trading conditions.

Our ships are using the Suez Canal again, but one legacy of the unhappy events of 1956 still remains, who is to pay for the cost of clearing it? The suggestion made in the United Nations that the cost should be borne by the ships using the Canal (and that means 40 per cent would fall on U.K. shipowners) is simply monstrous. The closing of the Canal and therefore its reopening were the results of national policies. It is surely unjust therefore that the cost of reopening it should be thrown on individuals or companies representing a small section of the community. The cost of national policies should surely be borne nationally, and not by individuals.

As the P & O Group is the second largest user of the Canal, I need scarcely say that the United Nations proposal is wholly unacceptable to us.

THE OUTLOOK FOR THE FUTURE

In face of the complex influences I have described, this is a most difficult moment to forecast the results of a large shipping organisation. Although some of our passenger trades, which were particularly badly hit by the closing of the Suez Canal, have been showing improved results during the past few months, the general position of cargo trades has deteriorated, particularly since

Coffee Prospects

THE Chairman of the Mysore Planters' Association has predicted a bumper Coffee crop next year, which may well exceed last year's production. This result is being achieved by the increased attention the growers paid to production. During the current year, production touched a record mark of 42,000 tons. In this connection, the chairman has stated that, for a 30 per cent increase in acreage, there has been a 151 per cent increase in production during the last ten years.

With regard to the world crop, according to one estimate, the carry-over from the current season's crop will amount to 20 million bags equivalent to nearly 50 per cent of the exportable world crop. Meanwhile, an increase of 6.5 million bags in the exportable surplus is expected for the coming season. African territories, which produce as much as 20 per cent of the world crop, are outside the agreement to restrict exports.

On the whole, three main factors—large carryover, prospects of a large production in the next season and non-inclusion of the African territories in the Mexico City Agreement—are weak points in the situation, capable of bringing about a further decline in the already low prices. Dealers and roasters in America and Europe are stated to be very optimistic about a further recession in prices.

Viewed against this background, the export prospects for Indian coffee this year appear to be very clouded. The quantity available

at the end of 1957. Nevertheless, as a result of the normal time lag before such influences make themselves felt on our voyages, the current results do not yet reflect the full effect of the collapse in tramp rates and the shortage of cargo which lies behind it. At present there is little prospect of any improvement and if these conditions persist for very long it will be necessary to lay up ships. Fortunately the spread of the Group's interests affords some insurance against the worst effects of the slump, but until there is a general improvement in world trade the trend will be downward.

DIVIDEND POLICY

The profit for the year after taxation is £4 millions more than in 1956 and the Board were faced with the question of what dividend to pay. As we may well be on the threshold of a major depression in the industry, it might have been argued that the Board should not have raised the dividend above what was paid in 1956.

I fully realise, however, that the dividend that we have been able

for export, out of the current season's crop, is also very low—only about 8,000 tons as compared with over 15,000 tons last year. The cumulative effect will be a heavy depletion in the export earnings from coffee.

Pepper

Pepper prices have continued to forge ahead from last levels. The steady rise is mainly attributed to the political upheaval in Indonesia and its bullish implications for Indian pepper. There are strong fears that the present situation in Indonesia will lead to the loss of an important source of supplies.

Singapore, which relies rather heavily on Indonesia, has already reacted to this threat with the price for black pepper advancing to Strs. \$82 from \$68 and for the white variety to \$142 from \$110.

In the Alleppey market, superior Palai variety is quoted at Rs 600 per candy. In London, prices have continued to rise sharply on speculative buying, inspired by the reports that the new Sarawak crop is a small one. Malabar pepper is dearer by 30sh at 230sh per cwt. In New York, grinders are reported to have refused to follow the rise, while speculators and dealers are buying heavily and paying fancy prices, both for nearby and forward. They are exploiting the present situation in Indonesia to their own advantage.

While the immediate impact of the Indonesian situation has been bullish, observers are still hesitant to predict India's future. For one thing, domestic prices have tended to run ahead of parity by about 1½ cents per pound. India will have to reckon with the Sarawak crop, which will be available freely after May. It is felt, however, that the outlook will be generally bullish for a few months.

to pay for a number of years past has represented an extremely small percentage of the capital employed in comparison with the rate of return that can be paid by most other industries. Taking all this into consideration, the Board have decided to recommend an increase in the final dividend, making 11 per cent for the year. Even so, after increasing the dividend, the amount paid out by the Group is no more than 1½% on the book value of the net assets.

Whether we shall be able to maintain the dividend at 11% next year is obviously a matter of conjecture and I am anxious that nothing I say on this subject should be misunderstood. I would emphasise that shipping is a speculative industry where fortunes fluctuate more sharply perhaps than those of most land based industries. As to the future, I would remind you of the warning given in the Director's Report.

If you are interested in these extracts from Sir William Currie's speech at the 118th Annual General Meeting please write for a full report to the P & O Agent, Mackinnon, Mackenzie & Co. Private Ltd., 16, Strand Road, P. O. Box 163, Calcutta.

The Central Bank of India Limited

Bank's Deposits Cross Rs 150 Crore Mark

Further Growth in Business

Speech of Sir Homi Mody, the Chairman

Speech delivered by the Chairman, Sir Homi Mody, at the Annual General Meeting of the Shareholders, on Friday, the 28th March, 1958.

Ladies and Gentlemen,

I have pleasure in presenting to you once again the Annual Statement of Accounts and the Directors' Report.

INCREASED ACTIVITY

2. The year under review was marked by increased economic activity in India. Both agricultural and industrial production was generally on the upgrade. At the same time, serious difficulties were experienced in the implementation of the Second Five Year Plan. The growth of inflationary pressure, the shrinkage of internal resources, the depletion of foreign exchange reserves and the continuing increase in Government's non-developmental expenditure brought about a serious strain on the economy and threw out of gear the programmes of development in the public and private sectors.

3. In my speech last year, I referred to the rapid deterioration that had taken place in our foreign exchange resources. The situation became particularly acute during the year under review. It compelled Government to adopt stringent measures of import control which, whatever their justification, were bound to cause a great deal of hardship and dislocation. The Plan estimated that the total foreign exchange requirements over the five year period would amount to Rs. 1,120 crores; it is now calculated that the actual amount needed would be of the order of Rs. 1,600 crores. Owing to the gaping deficit in the balance of payments, India had to draw heavily on her foreign balances and borrow substantial amounts from the International Monetary Fund. Even after taking credit for the loan of Rs. 95 crores from the Fund, the foreign assets of the Reserve Bank of India declined from Rs. 749 crores at the beginning of the Plan to Rs. 280 crores at the end of February 1958. After taking into account the external assistance promised so far, including the American aid recently announced, the gap yet to be bridged is estimated to be in the neighbourhood of Rs. 600 crores.

INDIA'S UNENVIABLE DISTINCTION

6. Already, in these ten years, in the range and incidence of direct taxation, we have achieved the unenviable distinction of being among the most heavily taxed countries in the world. We are the only country in which there is a direct tax on personal expenditure and where the combined rate

figures which Pandit Jawaharlal Nehru, as Finance Minister, placed before Parliament in the course of the Budget Debate. They relate only to loans already taken, and when we take into consideration the heavy demands which the future is going to make upon us, we have to be prepared to face, as far ahead as we can see, conditions of acute stringency and ever increasing controls. There are no short-cuts to Foreign Exchange; it has to be earned by hard work, enterprise and efficiency.

5. There are other aspects of the economic situation, of equal concern to the public. One of them is the alarming growth in the revenue expenditure of Government. In the 10-year period ending with the Budget Estimates for 1958-59, there has been a rise in such expenditure from Rs. 317 crores to Rs. 796 crores, of which the allocation for Defence is Rs. 278 crores. Civil Expenditure as such amounts to Rs. 517 crores, as against Rs. 168 crores in 1949-50. Not all of this can be called unproductive, but the rate of increase in non-developmental expenditure is sufficiently high to cause concern. As the Chairman of Barclay's Bank has observed, "little babies have a way of growing into ugly old men". We are aware that modern governments with their greatly expanded sphere of activities are costly affairs, but it is a question for serious consideration whether India can afford to step up her nondevelopmental expenditure at such a rapid pace. In a growing economy many things are urgent, and in a Welfare State there is bound to be a gathering momentum for all manner of nation-building activities, but ultimately it must all come down to a question of resources and priorities. Those who are confronted with the task of transforming our age-old economy cannot brush aside financial considerations and cannot go on indefinitely imposing a strain on the economy which it cannot bear. It is simply not possible to run too far ahead of the resources of the nation.

of taxes on individual earnings and wealth can exceed 100 per cent. of income. So far as individuals, firms and companies are concerned, no where else are people called upon to bear so many different taxes and imposts. Can India, in her present stage of development, afford the pace which is being forced upon her, without gravely imperilling her capacity for the production of goods and services? No one can possibly question the concept of social justice and the compelling necessity of a wider diffusion of well-being throughout the community. But it is axiomatic that wealth has to be produced before it can be distributed. If the incentive to earn, to save and to spend is increasingly to be denied, where is it ultimately going to end up? If the answer is that, whatever happens, there can be no retreat from the Plan, it may well be asked whether the Plan is to be the master of the servant of the economy? In these last few months, there has been a greater responsiveness to informed criticism, and I would earnestly urge the need for a closer understanding between Government and the business community. The so-called vested interests may be conservative and their outlook may sometimes be suspect, but they have learnt a great deal in the last few years and have a real desire to employ their experience and resources for the general good; and they can inject a sense of realism into our planning which is sorely needed.

SELECTIVE CONTROL

7. Turning to events in the field of Banking, the Reserve Bank adopted during the year a series of measures in order to keep under control the inflationary pressure generated by the heavy capital outlay and by the large volume of deficit financing, which was expected to increase from Rs 250 crores in 1956-57 to Rs 366 crores in 1957-58. The technique of "selective control" introduced in the previous year was continued and reinforced by other steps. In February 1957, the Stamp Duty on Usance Bills was drastically stepped up so as to raise the effective cost of borrowing under the Bill Market Scheme to 4 per cent. Lending rates against Government and other securities were also brought into line. Finally, in May 1957, the Bank Rate itself was raised to 4 per cent. In addition, the Reserve Bank issued a direc-

tive to the Scheduled Banks to cancel the unutilised portion of their overdraft advances so as to bring down the level of bank credit to Rs 800 crores before the start of the busy season. The volume of Advances and Bills dropped accordingly from a peak of Rs 933 crores in May 1957 to Rs 858 crores in the last week of December.

8. In spite of these measures against inflationary trends, economic activity in the country remained brisk throughout the year and the demand for credit was pressing. When bank credit is controlled, customers are to some extent compelled to obtain credit from non-banking sources at a higher cost. This trend is noticeable even in countries where the money market is well organised. Referring to the credit squeeze in the U.K., the Chairman of Martin's Bank at its annual meeting observed: "This has caused the determined borrower to go outside his normal banking sources, often paying a high rate of interest but still obtaining the funds he required." Whether or not customers of Indian banks are in a position to resort to non-banking sources of credit, the pressure of the demand was fully reflected in the operations of Scheduled Banks. The Economic Survey, issued along with the Budget, admits that the high level of investment in the economy and the large step-up in imports have strained the resources of the banking system.

NEW HIGH FOR DEPOSITS

9. The Deposit liabilities of Scheduled Banks at the end of 1957 reached an all-time high of Rs 1,406 crores, as compared with Rs 1,114 crores in the previous year, the increase in time deposits being more marked than in demand deposits. The Rupee Counterpart Funds and the Compulsory Rupee Accounts with the State Bank of India contributed not a little to this upward swing. Notwithstanding an increase in the volume of Advances, the rise in Deposits brought down the ratio of Advances from 71 per cent. to 61 per cent. towards the end of 1957.

10. This sharp increase in Deposits considerably altered the structure of the Scheduled Banks' liabilities and assets. In 1956, banks had to approach the Reserve Bank for increased accommodation, liquify their gilt-edged portfolio and draw upon their till money. By contrast, the increase in Ad-

vances in 1957 was less than the expansion of Deposits. While the latter increased by Rs 292 crores, advances went up by only Rs 70 crores. The Scheduled Banks were, therefore, able to reduce their indebtedness to the Reserve Bank from Rs 79 crores to Rs 24 crores. Simultaneously, they were able to increase their investment portfolio from Rs 365 crores to Rs 433 crores. The proportion of Investments to Deposits, however, went down from 33 per cent. to 31 per cent.

11. The reduction announced last week in the Bank of England Discount Rate is welcome as indicating a lessening of the pressure against Sterling and a general easing of money rates. It should not affect the Discount Rate in our country, but it might have some effect on our economy in the field of export trade. However that may be, a high bank rate is generally restrictive in character, and the recent change, which may possibly be followed by further reductions, can be taken as signifying a return to a healthier economic climate.

12. I shall now turn to the Balance Sheet and the Statement of Accounts presented to you. There has been a further growth in our earnings and resources as a result of larger deposits and more active conditions in trade and industry. Gross earnings at Rs 780 lakhs recorded an increase of about 19 per cent., but with the rising cost of working funds, the increase in gross profits was only a little over 6 per cent.

13. With the rise in the Bank Rate from 3½ per cent. to 4 per cent. during the first half of the year, there was a general stepping up of our rates of interest on Advances, but the advantage gained thereby was to a large extent nullified by the higher rates that had to be paid for Deposits. In the result, the net earnings under Interest and Discount increased by only Rs 10.36 lakhs over the previous year. In consonance with the rise in the rates paid by other Banks and the suggestions made by our shareholders at the last meeting, we put up our rate of interest on Savings Deposits Accounts. Even though the increase ranged from ½ to 1 per cent. only, it added substantially to the cost of our working funds, in view of the fact that the average amount held in this account throughout the year was over Rs 28 crores.

14. Apart from the rise in the Bank Rate and the expanding demand for money, higher rates for Deposits were also due to Governments, both Central and State, coming into the market for large borrowings at 4 to 4½ per cent. and for small savings on still more attractive terms. This helped to accentuate the shift from Demand to Time Deposits, that is, from low interest to high interest bearing Deposits, and that, without an all-round corresponding increase in the rates for Advances, resulted

in reducing the margin of profits of banks.

15. There was a further increase of Rs 16.72 lakhs in Establishment Charges. These Charges stand at a very high figure, and their adverse effects on our working can be minimised only if the Staff at some of the centres were to show a greater awareness of their responsibilities and a greater devotion to the interests of the Bank. In this connection, I would particularly refer to a disturbing factor in our working, namely, Overtime. Despite increases in Staff, payments under this heading have been mounting up and they nearly doubled themselves during the year. They amounted to over Rs. 8 lakhs. I appeal to our Staff for its co-operation in cutting down Establishment Charges, which already account for as much as 61 per cent. of our gross profits.

16. By reason of the rise in salaries and allowances, the figure of Bonus to Staff has also appreciably gone up and amounted to Rs. 30 lakhs, showing an increase of Rs. 2½ lakhs over the previous year.

17. The Industrial Dispute (Banking Companies) Decision Act, 1955, imposed a heavy burden on most of the banks, but it was hoped there would be some return for it in happier relations with the staff and more efficient working. It is extremely unfortunate that that expectation has not materialized, and pen-down strikes and go-slow tactics are still in evidence. It is time the staffs of banks realized that their interests were bound up with those of the institutions they were serving, and that increases in their emoluments and amenities could only come from greater stability and higher profits. There should be no room for any antagonism between staffs and managements, which can only result in impairing the fortunes of both.

18. I must make special mention of the increase in our resources which took place during the year. Shareholders will have been gratified to note that, for the first time, our total Deposits crossed the Rs. 150 crores mark. They recorded a significant increase of Rs. 16 crores, the highest rise in any one year, and this, in spite of the fact that our rates were often somewhat lower than those offered by other banks. Increased resources arising out of this growth in Deposits coupled with the liquidation effected in our Investments, and the comparatively easy money conditions towards the close of the year, made it possible, despite an increase in Advances, to keep down our borrowings from banks, which at the end of the year stood at Rs. 7 crores less.

19. On the Assets side, despite an expansion in business, the ratio of liquid resources to Deposits was maintained at the level of 42 per cent.

20. In view of the higher cost of working funds and the more remunerative rates obtainable for Advances, our Investments in Gov-

ernment and other Securities were further liquidated, and in spite of the support we continued to extend to the new Loans floated by the Central and State Governments, we could reduce our holdings by Rs. 3.5 crores during the year. Owing to a further set-back in values, the gap between the book and market values of Securities unfortunately widened further and stood at the close of the year at the figure of Rs. 254 lakhs. There has, however, since been a fairly substantial narrowing down as values have been rising.

21. The higher price levels arising from the expanding economy of the country, the sluggish conditions in the trade in piece-goods and some other commodities, and the demand for working capital needs, all created conditions which kept up a sustained demand for Advances throughout the year, which at one time, reached a peak of Rs. 115 crores, representing a ratio of 78 per cent. to total Deposits. At the close of the year, though the busy season had not set in, Advances recorded an increase of Rs. 10.73 crores over the figure of the previous year.

22. In pursuance of our policy in respect of non-remunerative offices, eight of those showing consistently poor results were closed down during the year. In the past two years, as many as 30 such offices have been discontinued, and though new offices have been opened in centres considered more promising, the total number has gone down and stood at the end of the year at 286.

23. It is now my pleasant duty to make the customary acknowledgments. Our Vice-Chairman, Mr. C. H. Bhabha, has continued to devote himself to the interests of the Bank with a single-minded zeal. His knowledge and experience have been of inestimable value, and I am sure shareholders will join me in conveying to him our warmest appreciation of all he has been doing for the Bank. We are fortunate, also, in having as our General Manager Mr. N. K. Karanjia. His long association with the Bank, his ability and his thorough knowledge of every aspect of banking have been not a little responsible for the progress maintained by the Bank in spite of some adverse factors, and I hope we may look forward to having him with us for many more years. To Mr. F. C. Cooper, the Deputy Manager, to members of the Staff at the Head Office and the Branches, and to the Local Advisory Committees at the various centres, I would also like to convey our grateful thanks. Ours is a vast and widely spread business, and it is not possible to maintain the close personal contacts which are so essential to the success of an organization, but I have every hope that, more and more, in the years to come, from the General Manager down to the humblest member of the Staff, everyone may come to feel a sense of pride in his work and satisfaction in seeing it well done.

THE TITAGHUR PAPER MILLS COMPANY LIMITED.

Notice of Interim Dividends.

The Board of Directors of the above Company has sanctioned payment of the following Interim Dividends in respect of the Company's Financial year ending 31st March, 1958, without any deduction for Income Tax payable by the Company:—

	Per share.
On 8% First Cumulative Preference Shares ... Rs. 4/-	
On 4½% Second Cumulative Preference Shares ... " 2/25n.P.	
On Preferred Ordinary Shares ... " 0/12n.P.	
On 'A' & 'B' Ordinary Shares—Dividend ... " 0/88n.P.	
and Bonus ... " 0/25n.P.	

These Dividends will be payable on or after 5th May 1958, to those Shareholders (or their Mandatees) whose names appear in the Company's books on 22nd April, 1958, as the Registered holders of the above Shares.

The Share Transfer Registers of the Company will be closed from 8th to 22nd April, 1958, both days inclusive.

By Order of the Board,

F. W. HEILGERS & CO.
(PRIVATE) LTD.
Managing Agents.

Chartered Bank Buildings,
Calcutta, 26th March, 1958.

THE EAST INDIAN COAL COMPANY, LIMITED.

(Incorporated in England with Limited Liability).

NOTICE is hereby given that an interim dividend in respect of the year ending 30th April, 1958 at the rate of Naye Paise forty per share without any deduction for Indian Income-tax payable by the Company, has been declared payable by the Directors and will be paid to the Registered Shareholders as on 25th April, 1958.

The Share Transfer Books of the Company will be closed from the 12th to 25th April, 1958, both days inclusive.

By Order of the Board,
JARDINE HENDERSON, LIMITED,
D. Fordwood
Secretary,
Managing Agents and Secretaries.

4, Clive Row,
Calcutta, 28th March, 1958.

N.B. Payment of the above dividend will be made only to those members whose names are registered in the Books of the Company on the 25th April, 1958 or to their mandatees. No application for Warrants will be necessary. Claims on behalf of the holders of shares on blank transfer will not be entertained.

Sentiment Still Favour Bulls

Watch-Dog Writes:

SENTIMENT in stock markets has continued to favour bulls. Operators think that the worst is now over. Hopes are entertained that, when the Government are trying to improve business sentiment, no measure will be taken which will jeopardise the stability of the investment market. With the result, the undertone remains very steady despite a good deal of profit-taking at higher levels.

Conditions on the Calcutta Stock Exchange continued to rule firm although attention was mostly Miscellaneous shares.

The Bombay Stock Exchange made further headway although prices reacted modestly on profit-taking at the close.

On the Madras Stock Exchange, recent gains were consolidated.

Business on the London Stock Exchange was rather restricted due to the approach of the Easter holidays.

Wall Street closed barely steady.

Calcutta

THE local Stock Exchange started the week on a more cheerful note and, encouraged by higher Bombay advices, prices forged ahead despite profit-taking at bulges. The bullish fervour was helped by various favourable factors. There were expectations of an increase in retention prices of steel. Operators were also awaiting an early Government decision on cement industry's demand for higher prices and in regard to reduction in the export duty on Common teas.

Bombay

The stock exchange continued to rule firm under the leadership of textiles during the past week. Apart from the general revival of confidence engendered by the softening of Auto-

THE CALCUTTA STEAM NAVIGATION CO. LTD.,

A dividend of 6½% or 65 n.p. per share for the half-year ended 30th June, 1957, has been declared payable on or after 1st May, 1958, in the Indian Union to those share holders registered in the Company's books on the 28th March, 1958.

Hoare Miller & Co., Ltd.,
Managing Agents.

5, Fairlie Place,
Calcutta,
the 28th March, 1958.

city's attitude toward private enterprise, sentiment had also been helped by the welcome features in the new import policy in which the raw material and other essential import needs of industry in general had been given due recognition. Hopes were also entertained about further concessions in the form of cut in export duties for tea and higher selling price for cement. In earlier dealings the undertone had been a bit cautious but after the announcement of the import policy sentiment became again firm with prices forging ahead under the leadership of steels and textiles. The market closed the week on a firm undertone.

Madras

STEADY conditions prevailed on the Madras Stock Exchange where Plantings continued to receive good support and Textiles were quietly steady.

London

BUSINESS on the London Stock Exchange was rather restricted due to the approach of the Easter holidays and the Budget Day. However, conditions remained cheerful and buying was selective. Bank Rate and Budget optimism were important influences; and sentiment was further assisted by the excellent March gold and dollar reserve figures.

Gilt-edged securities were prominent; South African Gold shares ruled firm, while Copper shares were dull under American influence. Oil shares were irregular. Rubber and Tea shares were quiet.

New York

PRICES on Wall Street were rather irregular. After initial indecision, there was a mild on-balance recovery. Both domestic and international Oils were among the higher issues with buying here said to reflect the belief that the group had been oversold of late. There was good investment demand, at times, for Drug shares.

Companies Act

An analysis of the working of the Companies Act in Northern zone, comprising of Punjab, Himachal Pradesh, Delhi, Uttar Pradesh and Rajasthan, shows that 39 companies with a total authorised Capital of over Rs 1.21 crores were registered during the last quarter of 1957. Out of the total number of companies registered, Punjab, and Himachal Pradesh and Delhi accounted for 6 and 23 and UP and Rajasthan for 7 and 3 respectively. As against this, 29 companies went into liquidation during the same period in the northern zone, the highest being shared by UP, 14 in number. Of the liquidated companies, 4 were public limited companies. In all, 25 companies were finally dissolved and 148 were struck off from the register, under section 560 of the Companies Act.

During the last quarter of 1957, 27 cases of infringement of the Companies Act were reported to the courts, involving a total fine of Rs 2080/- for the offenders. Only in 1 case, a managing director of a public company was convicted under sec 282 of the Indian Companies Act and sentenced to imprisonment till the rising of the court along with a fine of Rs 1000/-.

The analysis under review leaves no doubt that violations and infringements of the Act have been

THE PUBLICITY SOCIETY OF INDIA, LIMITED

NOTICE

NOTICE IS HEREBY GIVEN that the Thirtieth Ordinary General Meeting of the Shareholders of the Company, will be held at the Registered Office of the Company No. 1, Waterloo Street, Calcutta, on Saturday the 26th April 1958 at 10-15 A.M.

To receive and approve the Directors' Report and the Audited Accounts for the year ended 31st March 1956 and to declare a dividend.

To elect Directors.

To appoint Auditors and fix their remuneration.

To consider and, if thought fit, to pass with or without modifications, the following resolutions:—

1. (As a special Resolution): Resolved that the authorised share capital of the Company be increased from Rs. 1,90,800 to Rs. 10,00,000 by the creation of 2,02,300 new Ordinary Shares of Rs. 4/- each paid up each ranking for dividend in all other respects pari passu with the existing Ordinary Shares of the Company except that these new shares shall not be eligible for any dividend to be declared for the period ended 31st March, 1958.

2. That it is desirable to raise further capital and accordingly it is decided that—

(a) 23,850 Ordinary Shares of Rs. 4 each paid up in the authorised capital of the Company and ranking for dividend and in all other respects pari passu with the existing Ordinary Shares in the Company except that these new shares shall not be eligible for any dividend to be declared for the period ended 31st March, 1958 shall be issued and offered in the first instance for subscription with the premium of Rs. 4 per share to the Ordinary Shareholders of the Company whose names appear on the Share Register of the Company on the 26th April 1958, in the proportion of one new Ordinary Share for every two existing Ordinary Shares held by them respectively;

(b) The Ordinary Shares which shareholders are entitled to take up shall be offered in accordance herewith to each shareholder entitled whose name appears on the Share Register of the Company on the said 26th of April, 1958 by notice specifying the number of Ordinary Shares to which he is entitled and limiting the time within which the offer, if not accepted, will be deemed to be declined and containing such terms as to payment or otherwise as the Directors may determine;

(c) The balance, if any, of the Ordinary Shares not taken up in response to such offer shall be offered for subscription by the Directors to friends, agents and clients of the Company as the Directors may think fit.

and

To transact such other business as may be properly transacted at an ordinary General Meeting.

The Share Transfer Books of the Company will be closed from 14th April 1958 to 26th April 1958 both days inclusive.

By Order of the Board

P. S. NILAKANTAN

Secretary.

Dated the 29th March, 1958

N.B. The member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote in place of himself and a proxy need not be a member.

very few in number, compared to the short time that the companies have had yet to be thorough about the provisions of the act. But what deserves the attention of thinking people of the country, is the staggering number of companies gone into liquidation during the last quarter of 1957, in the northern zone. If not anything, the picture gives a sordid account of the deepening economic crisis that the country has been passing through. Like human lives, an equation between birth and death ratio does not explain away the balance in respect of companies. The picture of some of the States like Punjab and UP is indeed very grim, in so far as, the number of companies gone into liquidation almost outweigh the numbers registered during the same period. We have no reasons to believe that

the new comers, are in any way, better placed economically and that their lives will be longer than their predecessors.

We have also to take into account the larger number of companies, that have been either dissolved or struck off the register. The overall picture, therefore, bear the symptoms of a lurking sore that the economic body of the country has been suffering from. On going through the report on the working of the Companies Act in the northern zone, one is left with the indelible impression, that preservation of the companies has become more important than the Act. What is required of the authorities now, is to enquire into the causes of the ruination of so many companies rather than plugging the holes of the Act from the wrong end.

THE BOMBAY DYEING & MANUFACTURING COMPANY LIMITED

NOTICE

The Eighty-sixth Annual General Meeting of The Bombay Dyeing & Manufacturing Co., Ltd., will be held at the Registered Office of the Company, Neville House, Ballard Estate, Bombay, on Thursday, the 17th April 1958 at 4-30 P.M. to transact the following business:—

1. To adopt the Directors' Report, and the audited Balance Sheet and Profit & Loss Account for the year ended 31st December 1957.

2. To sanction the declaration of a Dividend.

3. To appoint a Director in the place of Sir Jamsetjee Jejeebhoy, Bart., who retires by rotation and, being eligible, offers himself for re-appointment; and to consider and, if thought fit, to pass the following resolution as a Special Resolution in respect of which a Special Notice, as required by Section 261 of the Companies Act, 1956, has been received by the Company:—

"RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, Sir Jamsetjee Jejeebhoy, Bart., who retires by rotation and who is a Constituted Attorney and holding an office of profit under Messrs. Nowrojee Wadia & Sons (Private) Ltd., the Managing Agents of the Company, be and is hereby re-appointed a Director of the Company."

4. To appoint a Director in place of Mr. N. K. Petigara, who retires by rotation and, being eligible, offers himself for re-appointment.

5. To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board,
NOWROJEE WADIA & SONS
(PRIVATE) LTD.,
NEVILLE N. WADIA
Director,
Managing Agents.
Bombay, 7th March, 1958.

NOTES:—

(a) The relative Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, in respect of the special business under item 3 set out above is annexed hereto.

(b) A MEMBER ENTITLED TO ATTEND AND VOTE IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

(c) The Share Transfer Books of the Company will remain closed from Tuesday, the 25th March, 1958, to Thurs-

day, the 17th April, 1958, both days inclusive.

(d) The Dividend when declared will be made payable, at the National Overseas & Grindlays Bank Ltd., Bombay, on or after the 28th April, 1958, to those Members whose names stand on the Register of the Company on the 17th April, 1958, and the Dividend Warrants will be duly posted to them.

(e) Members are requested to notify immediately any change of address to the Company.

EXPLANATORY STATEMENT AS REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956, ANNEXED TO THE NOTICE.

Item No. 3—Sir Jamsetjee Jejeebhoy, Bart., is a Director of the Company who retires by rotation and is eligible and offers himself for re-appointment. A Special Notice under Section 190 of the Companies Act, 1956, has been received proposing the appointment of Sir Jamsetjee Jejeebhoy, Bart., as a Director in accordance with the provisions of Section 261. As set out in the Special Notice received by the Company, the reasons which make it necessary to have a Special Resolution are as under:—

Sir Jamsetjee Jejeebhoy, Bart., has been a Director of the Company since 1934, and the members of his family have been associated with the Company for nearly half a Century. Sir Jamsetjee Jejeebhoy, Bart. is on the Board of many reputed concerns. He joined the Managing Agents in connection with their other activities. He has a very wide and varied experience, and during his long period of association with the Board has rendered valuable services to the Company. As it is in the interests of the Company that the Board should continue to receive the benefit of his advice, it is desirable that he be re-appointed a Director.

THE MEMBERS OF
THE BOMBAY DYEING &
MFG., CO., LTD.

THE AMALGAMATED ELECTRICITY CO., LTD.

The Registers of Members and Transfer Books of the Company will be closed from 14th to 22nd April, 1958, both days inclusive, in connection with Ad-interim dividend for the half-year ended 30th September, 1957, payable on or after 23rd April, 1958.

By Order of the Board,
For N. C. Javeri & Co.,
N. C. JAVERI,
Partner,
Mg. Agents.

Tata-Fison hit Calcutta

When Mr. Tata and Mr. Fison joined hands in July of 1957 a chill of terror was struck in the heart of every insect pest. For the combined resources of Tata Chemicals and the Fison Group put the widest, most effective range of insecticides and fungicides into the hands of Agricultural and Public Health authorities, planters and cultivators.

Now Tata-Fison have arrived in Calcutta. From April 1 they have taken over the Geigy agency previously held by Gladstone Lyall. In conjunction with their new distributors, Shaw Wallace & Co. Ltd., Tata-Fison are laying their plans to deal with all pests and diseases in West Bengal, Bihar, Assam and Orissa.

As the Red Spider said to the Helopeltis

TATA-FISON

will be the death of us!

SENTIMENT on the stock exchange has been quite cheerful throughout March with equity prices recording sizable gains on sustained investment interest. Second thoughts on the Central Budget seemed to have engendered a feeling of optimism. The initial disappointment had been caused by the absence of the expected concessions such as abolition of the compulsory deposit scheme, a reduction in the excise duty on cotton textiles, a reduction or abolition of the bonus and dividend taxes etc. However, the disappointment yielded place to a constructive attitude when the implications of the absence of fresh levies came to be realised.

There has been no doubt a new levy—the gifts tax. But it has been expected. Otherwise the Budget has confirmed the belief that the worst in taxation has been left behind. In other words the rest of the second Plan period will not witness any new attempts at fresh taxation. Moreover the budget is not entirely bereft of concessions. Shipping companies have been given increased development rebate from 25 per cent to 40 per cent. The dividend tax for Section 23A companies has been revised: the existing three slabs have been converted into two. As a result of this revision Section 23A companies will have to pay only 20 per cent as tax on dividends exceeding 10 per cent whereas other companies will be assessed for dividend tax under three slabs. This is considered to be a real gain to the companies falling under this category.

Apart from the absence of new levies and some small concession the revival of confidence has stemmed mainly from the tone and tenor of the speech of Mr. Nehru when he introduced the budget. It may be recalled that while Mr. Nehru has been quite firm about the new taxation structure and the need for mopping up additional funds for the implementation of the Plan, he has also made it clear that private enterprise should be given adequate facilities to function efficiently.

Marketmen, however, have somewhat been worried over the radical changes in the clause pertaining to the Development Rebate. Hereafter the Development rebate should be utilized only for the acquisition of assets for the undertaking or for investment in the undertaking and that such utilisation should be made within the ten years following the accounting year. The new assets should not be transferred, or sold to any person other than Government. These changes will reduce the rate of dividend and consequently will retard capital formation. It is also apprehended that they will bring about other complications which will slow down the progress of the concern.

Despite this apprehension, the undertone has continued to be steady largely because of the ex-

Firm Trend During March

pectations that Government will take remedial action in due course in this regard. Trading during the Second week had been somewhat adversely affected by reports of labour unrest in Burnpur. With the return of normal working in Burnpur the market resumed its upward movement aided by hopes of some reliefs in respect of cotton textiles and tea.

In the course of the general debate on the budget Mr. Nehru announced that the excise duty on cotton textiles had been reduced and that such reduction would involve a loss of Rs 15 crores to Government. He also

announced that companies would not be required to make compulsory deposit during 1958-59. There was some disappointment that no relief had been given in regard to tea and that the compulsory deposit scheme had not been completely abolished. But from official indications it was inferred that the absence of relief for tea was due to some technical difficulties as all types of teas were clubbed together for purposes of export duties. As regards the compulsory deposit scheme it was generally believed that its repeal would be made permanent in due course. With the announcement of the

concessions equity prices forged ahead with a sizable expansion in the business passing. The general feeling was that the stock markets were poised for a long bull phase.

During the last week of the month, trading had been characterised by alternate bouts of selling and buying. It would appear that ever since the new concessions were announced there had been an apprehension that the Government would not leave the loss of revenue as a result of the reduction in excise duty uncovered. That gave rise to rumours about the imposition of excise duties on a variety of commodities. In that connection, iron, steel, paper and

rayon were prominently mentioned. As a result bears were able to depress prices from time to time but the general sentiment was against their making much headway. For, as against the reports about excise duties on new commodities, there were the expectations that tea would get relief and that suitable amendments would be made with regard to the development rebate. The reduction in the British Bank Rate from 7 per cent to 6 per cent and the bright outlook for more foreign aid were contributory factors for the buoyant mood of marketmen. The new concessions have made the Budget quite a good one in the context of the Second Five Year

Plan and naturally operators and investors are now less prone than a month ago to pessimistic appraisals of the investment situation.

Sectionwise, jute shares were neglected during most part of the month, but toward close there was a broadening of activity with selected scrips making some headway on buying support. The jute goods trade passed through an anxious time early in the month due to a sudden decline in prices of jute goods. Thanks to the timely intervention of the IJMA whose members decided not to sell below certain fixed rates, a serious crisis had been averted. The Government of India announced that the Forward Market in jute and jute goods would commence from 29th March. This news also helped the recovery movement in the jute markets and consequently jute shares derived some benefit in the shape of improved enquiries. It is generally believed that with the futures market in operation and with other measures taken both by the industry and Government to strengthen the position of the industry, jute companies will have a better time in coming months.

In the coal section selected shares continued to meet with support. Though a broadening of interest was noticeable toward close, it would appear that investors were reluctant to extend commitments before the recommendations of the coal prices Revision Committee were known.

Tea shares were a steady market. In earlier dealings sentiment was helped by the expectation of a cut in export duty. But when it did not find a place in the announcement made by Mr. Nehru in Parliament during the general debate on the budget, there was some disappointment. It was, however, said that the absence of the concession was probably due to technical difficulties. This had revived hopes of the concession.

In the Engineering section, Indian Irons were in good demand throughout the month. It began the month with the quotation at Rs 19.53 but soon crossed the Rs 20 mark to be placed at the end of the first week at Rs 20.85. The next week the scrip was somewhat subdued and closed at Rs 20.33 following report of labour unrest in Burnpur. During the third week the scrip crossed the Rs 21 mark and after touching a high of Rs 21.44 close at Rs 21.33. The scrip continued to rule fully steady during the last week of the month and at one time was done upto Rs 21.59 to close at Rs 21.49. Other Engineering shares were also steady.

Sugar shares were generally steady due to the satisfactory statistical position of the industry coupled with hopes of export. Textiles shares were in good demand following the reduction in excise duty. Banks were steady.

(a) After transferring Rs 3,00,000 from Development Rebate Reserve, Rs 1,55,000 from Reserve for Taxation Contingencies and Rs 63,186 from Jute Stock Reserve.
(b) After transferring Rs one lakhs from General and Dividend Reserve.
(c) After writing back Rs 1,36,338 from provision made for loss on stock of jute at mill. Afloat and forward jute purchases, etc.
(d) After transferring Rs 1,14,000 from Reserve for taxation contingencies and Rs 70,000 from Jute Stock Reserve.
(e) After writing back Rs 4,22,698 being provision against anticipated loss on raw jute stock and work in progress; Rs 29,066 being provision against anticipated loss on jute contracted for and after transferring Rs 5,65,000 from General Reserve and Rs 63,000 from Dividend Equalisation Reserve.
(f) After transferring Rs 5,00,000 from General Reserve and Rs 3,00,000 from Machinery Renewal Reserve, Rs 2,00,000 from Dividend Equalisation Reserve and Rs 2,00,000 from Jute Stock Reserve.
(g) After transferring Rs 3,00,000 from Reserve for Machinery Renewal and Replacement.
(h) After transferring Rs 3,00,000 from General Reserve.
(i) After writing back Rs 3,04,000 being provision against anticipated loss on raw jute stock and work in progress and Rs 4,225 being provision against anticipated loss on jute contracted for Rs 38,000 being excess provision for taxation; and after transferring Rs 3,90,000 from General Reserve and Rs 22,500 from

Dividend Equalisation Reserve.
(j) After transferring Rs 4,26,000 from Reserve and writing back Rs 30,000 from Workers' Provident Fund shown in excess in previous half-year and Rs 81,000 from provision for possible loss on forward contracts.
(k) After writing back Rs 1,21,392 being provision against anticipated loss on raw jute stock and work in progress; Rs 29,161 being provision against anticipated loss on jute contracted for; Rs 14,000 being excess provision for taxation and Rs 1,95,000 from Dividend Equalisation Fund.
(l) After transferring Rs 8,50,000 from General Reserve.
(m) After transferring Rs 1,00,000 from Dividend Equalisation Fund and Rs 75,000 from General Reserve.
(n) After transferring Rs 1,01,808 from General Reserve and Rs 6,879 from provision for taxation and after including Rs 1,28,603 being refund of taxes.
(o) After transferring Rs 2,00,984 from General Reserve and Rs 88,366 being excess depreciation.
(p) After transferring Rs 1,08,998 from Jute Stock Reserve; Rs 62,400 from Reserve for Tax contingencies; Rs 21,000 from Development Rebate Reserve; and writing back Rs 52,371 from provision for taxation and Rs 10,000 from Dividend Equalisation Reserve.
(q) After transferring Rs 7,50,000 from General Reserve.
(r) After transferring Rs 5,00,000 from provision for contingencies and Rs 1,00,000 from provision for tax-

tion.
(s) After transferring Rs 8,23,000 from Reserve for Tax contingencies; Rs 2,30,000 from Jute Stock Reserve; and Rs 1,47,000 from Development Rebate Reserve and including Rs 1,89,366 being Requisition of which only 8 per cent is cumulative.
(u) After transferring Rs 36,026 from Jute Stock Reserve.
(v) After transferring Rs 3,28,000 from Tax contingencies Reserve; Rs 2,50,000 from Jute Stock Reserve and Rs 5,000 from Development Rebate Reserve.
(w) After writing back Rs 2,37,786 being provision against anticipated loss on raw jute and work in progress; Rs 7,350 being provision against anticipated loss on jute contracted for; Rs 19,500 being excess provision for taxation and Rs 85,000 from Dividend Equalisation Reserve and Rs 4,25,000 from General Reserve.
(x) After writing back Rs 1,63,396 being provision against anticipated loss on raw jute and work in progress and Rs 16,800 being provision against anticipated loss on jute contracted for and after transferring Rs 2,80,000 from General Reserve and Rs 25,000 from Dividend Equalisation Reserve.
(y) After transferring Rs 8,94,144 from Capital and after providing Rs 2,70,141 for Sales-tax Liability.
(z) After writing back Rs 1,00,000 from excess provision for taxation and Rs 25,000 from provision against anticipated loss on forward contracts.

(i) Includes stock on hand.

(e) After transferring Rs 120,000 from Reserve Fund Rs 268,000 from Reserve for Taxation and Rs 23,888 from excess provision not required.

(j) After transferring Rs 842,193 from General Reserve.

(a) After transferring Rs 4,45,718 from Depreciation, Renewal and Extension Fund and Rs 2,19,000 from Dividend Fund.

(b) After transferring Rs 2,49,897 from General Reserve.

(c) After transferring Rs 525,000 from General Reserve and Rs 500,000 from Dividend Equalisation Reserve.

(d) After transferring Rs 50,000 from General Reserve.

(f) After transferring Rs 730,179 from Reserve for Taxation.

(g) After transferring Rs 24,07,416 from dividend Equalisation Reserve.

(h) After transferring Rs 3,57,000 from Dividend Fund.

(i) After transferring Rs 8,00,000 from Machinery Replacement Reserve and Rs 18,400 from Reserve Fund.

(k) After transferring Rs 70,000 from General Reserve and Rs 37,500 from Dividend Equalisation Reserve.

(m) After writing back Rs 2,80,446 being excess provision not required.

(n) After transferring Rs 8,02,125 from General Reserve.

Same Dividend from Shivrajpur

Balance-Sheet Reviews:

DESPITE a decline in earnings, Shivrajpur Syndicate Limited has maintained the total distribution for the year ended 30th November, 1957. Although ore sales are higher at Rs 1.74 crores as against Rs 1.63 crores, the net profit, before providing for Depreciation and Taxation, amounts to only Rs 33.71 lakhs as against as much as Rs 44.66 lakhs in the previous year, mainly due to the heavy incidence of the export duty on exports of manganese ore. The amount paid by way of export duty is Rs 20.35 lakhs against only Rs 5.31 lakhs.

In respect of allocations to Funds, the Depreciation amount is raised to Rs 5.89 lakhs from Rs 4.50 lakhs, while Taxation provision is reduced from Rs 21.5 lakhs to Rs 15.75 lakhs; Retiring Gratuity Reserve from Rs 1.51 lakhs to Rs 74.336 lakhs and Minging Development and Prospecting Reserve from Rs 7 lakhs to Rs 3.3 lakhs. The Dividend Equalisation Reserve gets Rs 2.00 lakhs (Rs 1.00 lakh), while no provision is made for General Reserve against Rs 1.00 lakh previously. The dividend and bonus are maintained at 50 per cent and 30 per cent respectively, making a total of 80 per cent for the year.

As transport facilities have continued to be satisfactory, despatches are higher at 114,337 tons as against 117,482 tons. The output is higher at 92,784 tons against 83,238 tons. An agreement has been reached with the consent of the Government, renewing the two estates leases for further period of 12 years, beginning from December 1, 1957.

Even though the sanction has been received for the issue of bonus shares, the company has decided to drop the proposal in view of the heavy tax liability.

Premier Construction

The Premier Construction Company Limited has earned a higher net profit of Rs 15.21 lakhs for 1957 as against Rs 12.06 lakhs in the previous year after providing Rs 9.92 lakhs (Rs 10.00 lakhs) for Taxation; Rs 28,700 (Rs 23,800) for Depreciation and Rs 4.4 lakhs (Rs 4.42 lakhs) for managing agents' remuneration. The allocation to General Reserve has been raised from Rs 1.22 lakhs to Rs 1.54 lakhs.

Referring to the scheme of conversion of Promoters' shares into Ordinary shares and capitalisation of Reserves to the tune of Rs 62.85 lakhs, the directors observe that the consent from the Government has been received by the company. They are of the view that the conversion of Promoters' shares into Ordinary shares is very necessary and they considered along with it the question of implementing the scheme up to the stage of giving one bonus share of Rs 30 for every

Lull in Upward Movement

Investment Gossip:

A LULL in the upward movement of stock exchange prices was noticeable during the last week, and this trend was to some extent helped by two breaks in the activity on Dalal Street, one of which was the result of the demise of a former Director and another a normal holiday.

Thus, speculatives lost somewhat, and the mid-week settlement considerations contributed to the easier tendency that has been obtaining. But, even after the settlement was left behind, there was no perking up in activity.

In Bombay, the focus of interest continues to be the forthcoming issue of Greaves Cotton (details of which were given in last week's Investment Notes). The subscription lists are to open next Monday, and the general expectation is that the issue will be fully subscribed well before Wednesday—the earliest day on which the lists are to be closed.

There is, however, one interesting point about the new issue which I may mention here. That is, the additional capital is being raised so that Greaves Cotton can participate in the expansion of its associated company, Crompton Parkinson (Works) Private Limited, in which Greaves Cotton has a 50 per cent stake.

The issue is not underwritten, and this reflects the confidence on the part of the promoters that the shares offered will be snapped up by investors.

Another piece of Bombay news is that Mahindra and Mahindra may also be in the market with a new issue, though there is yet no information as to the form it will take. The company's performance during the last year has enabled excellent results, and the general Government approval for stepping up the capacity for the manufacture of jeeps presages such additional capital being sought. It would appear that the foreign collaborator, Willys, would be interested in subscribing to the new capital. Similarly, M&M are also expected to go ahead with the manufacture of trailer components by an arrangement with British associates; and, in this venture, too, foreign capital from the associates is expected in the form of the equipment.

These, then, are the facts which have highlighted a lean week.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.

Head Office: Oriental Buildings, BOMBAY-1

existing ordinary share. But even this means paying Rs 8.45 lakhs as Bonus Tax, which they consider as a heavy burden on the resources of the company. They, therefore, think that it is not, in the interest of the company, advisable to implement the scheme as long as the tax burden is so heavy. Hence, the scheme may be considered as held up for the time being.

Bombay Dyeing

Despite the difficult conditions generally experienced by the textile industry, Bombay Dyeing & Manufacturing Company Limited has reported satisfactory results for last year. Sales have risen by Rs 55 lakhs to Rs 8.02 crores, thanks to larger exports. The company's good performance is further illustrated by the fact that one out of every nine yards of the increase in exports in 1957 came from its mills.

After making liberal provisions generally, viz., Depreciation Rs 48.11 lakhs (Rs 26.45 lakhs); Development Rebate Rs 45.80 lakhs (Rs 13.14 lakhs); Wealth Tax Rs 3.40 lakhs (nil) and reducing the provision for Taxation from Rs 33 lakhs to Rs 3 lakhs, the net profit comes to only Rs 1.80 lakhs as compared with Rs 41.02 lakhs in the previous year. In fact, the net profit would have been better if the company had not set aside the full amount of Development Rebate. The company had to draw upon the Dividend Equalisation Reserve to pay dividends. The dividend is maintained at Rs 2.50

per share on the Rs 25 paid-up shares.

As against the paid-up capital of Rs 2.50 crores, Reserves and surplus total Rs 3.43 crores. Fixed assets are valued at Rs 4.01 crores; Investments at Rs 34.46 lakhs and current assets at Rs 2.86 crores. Cash balances are down at Rs 13.70 lakhs against Rs 1.28 lakhs. This is attributed to the heavy expansion and replacement programme.

Buckingham and Carnatic

Because of a higher level of production and its complete marketing, it has been possible for the Buckingham & Carnatic Company Limited to prevent an appreciable decline in earnings for 1957. Exports sales have increased by Rs 25 lakhs to Rs 2.17 crores; but the profit margin had to be cut in view of the severe international competition.

The net profit, before providing for Depreciation and Taxation, amounts to only Rs 95.32 lakhs as against as much as Rs 104.46 lakhs in the previous year. Sales are higher at Rs 9.98 crores against Rs 9.37 crores. The amount set aside to Depreciation is slightly lower at Rs 35.80 lakhs (Rs 40.97 lakhs), while the Taxation provision is raised to Rs 18.50 lakhs from Rs 15.00 lakhs.

The allocations to other Reserves have been helped to certain extent by the transfer of Rs 3.71 lakhs from the Raw Materials Fluctuations Reserve and Rs 2.5 lakhs from the Income-Tax Reserve. The Debenture Redemption Reserve gets Rs 5 lakhs (same), while

the provision for Workpeople's Gratuity is Rs 3.50 lakhs (Rs 20 lakhs). In accordance with the new regulation governing the grant of development rebate, a sum of Rs 8.1 lakhs has been transferred to this head, while the total Development Rebate, up to the end of 1956, amounting to Rs 60.14 lakhs, has been transferred from the provision for increased replacement cost of buildings and machinery.

In respect of deferred taxation, a sum of Rs 47.86 lakhs has been transferred from the last-mentioned reserve, while there is also a transfer of Rs 12.1 lakhs to this head out of the profit for 1957. General Reserve got Rs 11 lakhs on the last occasion. The total distribution on the Ordinary shares is maintained at 10 per cent.

Bangalore Woollen, Cotton and Silk Mills

The Bangalore Woollen, Cotton and Silk Manufacturing Company Limited has reported a substantial decline in earnings for 1957 despite an increase in sales from Rs 5.34 crores to Rs 5.42 crores. The net profit, after providing for Depreciation and Taxation, amounts to only Rs 19.18 lakhs as against as much as Rs 30.95 lakhs in the previous year, mainly due to various factors.

According to the directors, the incidence of high Central and State Government taxation on the textile industry, has, in general, had the effect of forcing prices to the consumer to such a level as has resulted in a considerable curtailment in demand. It has, therefore, not been possible to make adjustments in selling prices to cover the serious increase in cost of raw materials, stores, machinery parts and dearness allowance and consequently there has been a substantial fall in the profits of all departments.

Apart from setting aside a sum of Rs 3.59 lakhs for Development Rebate Reserve and Rs 30 lakhs for Deferred Taxation, the directors have reduced the Depreciation amount to Rs 12.73 lakhs from Rs 17.60 lakhs and Taxation provision to Rs 12.00 lakhs from Rs 23.75 lakhs. No provisions are made for General Reserve, Workpeople's Fund and additional provision for Depreciation as against Rs 11.00 lakhs, Rs 3.00 lakhs and Rs 4.00 lakhs respectively in the previous year. The total distribution on the Ordinary

shares is, however, maintained at Rs 10 per share.

East India Distilleries

The East India Distilleries and Sugar Factories Limited has reported all-round progress for the year ended 30th September, 1957. The quantity of cane crushed constitutes a record at 371,291 tons as against 349,247 tons in 1955-56. With the result, the quantity of sugar produced is higher at 33,413 tons against 29,574 tons.

The net profit, before providing for Taxation and Depreciation, is higher at £840,691 as against £599,772 in the previous year. Sales are much higher at £10.22 million against £6.71 million. The change on account of Depreciation is £100,161 (£94,309). Taxation accounts for the biggest slice—£505,322 (£284,756). General gets £120,000 (£100,000) and Capital Reserve £2,625 (£4,500).

The first and second interim dividends amounting to 15 per cent (same) have already been paid. The directors state that "in view of the heavy inroads made by taxation into the profits of the year under review and the necessity to conserve resources in the light of the present state of the world trade, they are not able to recommend the payment of any further dividend on the Ordinary share capital".

Parry & Company

Parry & Company Limited has recorded a marked improvement in the turnover, in the year ended 30th September 1957, to Rs 7.44 crores from Rs 5.76 crores in spite of the fact that sales of fertilizers are not included in the latest accounting period. The margin of profit on sales has, however, been lower. With the result, the net earnings, before Taxation and Depreciation, are only Rs 24.13 lakhs as against Rs 24.16 lakhs for the previous nine months. Depreciation accounts for Rs 3.10 lakhs (Rs 2.45 lakhs). The provision for Taxation is much higher at Rs 15.51 lakhs (Rs 11.38 lakhs). After transferring Rs 4 lakhs (Rs 3.5 lakhs) to General Reserve, the Ordinary dividend has been passed over. A payment of 15 per cent was made on the last occasion. The decision to pass over the dividend has, it is stated, been taken with the Board of the Holding Company in order to utilise the whole of the profit available for strengthening the company's resources.

Challenge and Response

IN vivid, if somewhat mixed, metaphors, Mr Asoka Mehta has recently analysed certain dominant manifestations of the current national mood. We, who have been grappling in these pages with precisely these strands of collective despair, would commend to our readers a close study of Mr Mehta's reflections. Something like a blizzard of dispiritedness has struck our hopes all of a heap, and they seem to lie about the place, a frost-bitten ruin, neither dead nor alive. Mr Nehru, who is as much influenced by passing social moods, as he sets their tone, confessed recently to a sense of staleness. This casual aside has captured the sounding board of national gloom and reverberated a hundred fold. The Congress party is once again in one of its periodic fits of introspection, mostly of a gloomy kind. Elsewhere, too, people whose traditional association with enterprise ought to make them look ahead with steady optimism and courage, have by and large reversed their roles into one of shrill Cassandra's of doom. As Mr Mehta points out in his article, the most hopeful thing about the current American dip is the serenity with which entrepreneurs and business leaders are facing the situation—in striking contrast to their behaviour in the thirties. For the rest, the air is filled with confused shouts of general dissatisfaction, and social indignation, such as it is, spends itself in ineffectual posturings. And the worst of it all is that such an exhibitionistic self-laceration does not even have the therapeutic effect of a complete catharsis.

One reason for this is, of course, that the various elements of the national mood are not analysed and dealt with separately. Some of the reasons for this mood of disenchantment are of a temporary kind and others are of a more abiding sort. And there are yet others which are the result of failings on our part as individuals and as a nation. Thus, a good deal of our current mood of out-of-love with ourselves is perhaps nothing worse than the national equivalent of the "seven-year-itch", a mood of undefined and ineffectual mutiny against the state of matrimony that is supposed to afflict the unfortunates. All the anticipatory thrills that we felt on the fateful day in August 1947 have had their opportunities of fulfilment with various degrees of perfection. And now, ten years after the irrevocable commitment to love and honour till death do us part, one wonders whether one has not been too free with one's promises. But the seven year itch is a passing mood and one need not worry about it seriously.

Somewhat more serious is the fact that India is passing through a mood of readjustment and transvaluation of its values. For centuries we have had a philosophy of life that had held the things of the world, at least in theory, as of small moment. Our present commitment to a more overtly worldly pre-occupation like the fashioning of a welfare State creates problems of adjustment, a certain gaucherie, a certain awkwardness and a certain bewilderment, a confusion of values, all of which are inevitable in any such momentous shift in values. Often, it takes on the hues of disenchantment. But, though the problem is basic, it is capable of solution over a period

of years, when the adjustments do take place willy-nilly, but, for the moment, its contribution to the general confusion of the mood cannot be exaggerated.

But the most serious—and therefore most difficult to combat—obstacle to a restoration of a serene faith in our destiny as a nation is an almost perverse denial to look at facts as they are. The most fantastic thing about the Indian situation today is that exhortations of facing the facts have to come from people who feel that facts are more hopeful than is generally supposed. The ostrich burying its head in the sand is refusing to face pleasant and not unpleasant facts. Readers will find

Policy for Sugar

THE sugar industry last year not only augmented national income with a record level of output, but also contributed to foreign exchange resources with exports valued at over Rs 12 crores. Sugar now takes its place as an important foreign exchange earner, next to tea and jute and cotton textiles. A bumper crop last season was mainly responsible for the record production. The problem for the industry now, as Mr A. P. Jain, the Union Food Minister, told the annual meeting of the Indian Sugar Mills Association last week, is to devise a policy to correct fluctuations in production, consequent on seasonal factors. This would require maintenance of cane output at a level which leaves a wide margin over and above internal requirements, the disposal of the surplus sugar produced in the external markets, and an organisation which would hold the stocks and regulate the supplies available for export. The achievements of the sugar industry entitle its spokesmen to be heard with respect and attention when they speak on the problems facing the Mills and indicate the measures that will be required to enable the industry to realise its potentialities.

Like the Engineering Industry, the Sugar Industry has also doubled its production during the last 4 years. The annual production has steadily increased from about one million tons in 1953-54 to 2.026 million tons last year. This increase has been economically achieved through expansion and better utilisation of the capacity of the existing units. The new units have contributed only about 40,000 tons of the increased production. Under the First and Second Plans, it was proposed to increase the capacity of this industry by 1 million tons to bring the total by the end of 1960-61 to 2.5 million tons. 56 new factories have been licensed in addition to expansion in the capacity of 66 existing units.

Apart from increased production the Industry achieved another remarkable success last year. Indian sugar was exported to foreign markets for the first time in 1957. The total quantity exported was about 153,000 tons and most of it was consigned to our neighbouring countries. China took the largest quantity amounting to 33,624 tons. The exports have been creditably handled by the Indian Sugar Mills Association on a non-profit basis. When we consider that

ample evidence for the assertion in the current series of Clive Street Gossip in which Eaves-dropper has been strenuously digging the sand around the heads of the ostriches so that they may see the facts in their true and hopeful aspects. We commend to our readers a careful study of his assessment of the situation. Civilisations have perished in the past because they have not responded to the challenges of their times. It should not be said of us that we failed to meet the challenges of our tasks. And the first step in meeting them is to realise that they are less formidable than our eyes, bleary with pessimism, make them appear.

not advisable to prolong the crushing to the hot months. The only remedy is to expand the capacity of the factories to cope with increased production of cane.

Questions of social policy are involved in the Government's attitude to the khandsari industry. While the policy of encouraging small units is generally acceptable, this should not be at the cost of efficiency. The preference given to the less efficient mode of production at the cost of the more efficient will be reflected in increased cost, loss of competitive capacity in foreign markets and will thus be a definite loss to the community. Even the most ardent advocates of Cottage and Small scale Industries concede that the manufacturing process followed by the khandsari industries is a wasteful one resulting in a national loss. Against the recovery of 10 per cent of sugar in vacuum-pan factories, sugar recovery of the khandsari industry is only 6 to 7 per cent. The small units cannot also be expected to make adequate arrangements for economic utilisation of the by-products, like molasses.

The wastefulness of the khandsari process has been admitted by the Karve Committee on Village & Small Scale Industries. The Committee has observed that, unless it is improved, the khandsari manufacture should not be encouraged at the cost of the sugar industry. The loss to the exchequer from the growth of khandsari production should also be taken into account. Sugar factories pay 38 per cent of their total cost of production as tax. The weakening of the sugar industry by competition from the khandsari units is bound to affect its capacity to maintain the exports even at a loss. Moreover, it may not be possible to achieve the expansion of capacity envisaged under the plan if the sugar industry has to compete with khandsari in the home market. These are points which Government will have to take into consideration in drawing up a policy for sugar. There is need for rethinking over the entire range of the question of assistance to small scale units, in sugar as well as in other industries. While there is a definite place for small scale industries in the national economy, the small units will have to justify their place by their efficiency in production.

One of the important items in the industry's cost structure is the freight paid on cane. It appears that, as a result of the recommendations of the Railway Freight Structure Enquiry Committee, the industry may be faced with a general rise in railway freight, particularly over short distances. Already, the freight on cane is five times the pre-1948 figure. The Committee's recommendations, if adopted, will result in the further increase of 80 per cent over the current rates. The increase in freight will affect not only the factories, but also the cane growers, and it is to be hoped that the special aspects of the freight rates on cane will receive due attention at the hands of the Railway Ministry.

Mr Sawhney has also done well to clear the widespread misapprehensions regarding the price policy pursued by the Indian Sugar Mills. For a variety of reasons, the public have come to feel that they have been victimised on several occasions over sugar prices. The public are aware only of the increased price which they have to pay. They are not aware that the gross profits and overhead charges account for only 5 per cent of the total cost of production. The biggest item of cost is cane, which accounts for 41 per cent. Taxes consume another 38 per cent. Salaries and wages, take up 11 per cent and manufacturing expenses 5 per cent. An analysis of the different items of cost will show that the cane price and taxes which are fixed by Government account for 79 per cent of the cost of production. Again, Salaries and Wages and manu-

facturing expenses like the cost of coal are also controlled by the Government.

A comparison of the current price of sugar and the price 10 years ago will show the disproportionate increase in Government levies. During this period, the cost of cane has increased by 14 per cent from Rs 12-10-0 to Rs 14-6-0; Wages and Salaries and packing by 62 per cent; Manufacturing charges by 36 per cent; and overhead charges and gross profit has decreased by 17 per cent. On the other hand, Government taxes have increased by 344 per cent from Rs 2-15-6 to Rs 13-3-0. On this basis, it is impossible to build up a case that, at the present level of taxes, there is little prospect of reducing the cost of production. In view of the growing requirements of the Government, it is not reasonable to look forward to any substantial reductions in the taxes. The only hopeful prospect, therefore,

The Art of Interviewing

By M. SUR

THE art of interviewing has been the subject of a number of books and articles. They all say much the same thing, and in theory they appear quite sound, but how to apply them in present conditions in India is a problem.

First of all, according to the experts, it is essential that a light, airy, pleasant waiting room should be provided with reasonably comfortable chairs and a table covered with light literature to put candidates at their ease while waiting for interview. Suggest to most managements that a waiting room should be set aside for candidates for jobs, and they are likely to think you crazy! Rooms are short enough in the factory and office, you will be told, without asking for waiting rooms. As an alternative, you timidly suggest that a space should be cleared outside the labour office and some chairs placed there for candidates, but this suggestion is equally frowned upon. If you are lucky, you may get a bench or two put up in a restricted space. Light, air, comfort, why should candidates expect this? So the first principle of the treatises on interviewing cannot be applied.

Principle No. 2: Put the candidate at his ease with a few friendly remarks before questioning him. What are the friendly remarks that an officer can make to a man seeking employment? Alas, each social and industrial group lives in a watertight compartment! The candidate will either fail to understand you altogether, or will think you are making fun of him. (I recently heard a supervisor say quite seriously, "But I cannot joke with my subordinates.") And it is true that only the most free and easy type of person can do so, and on the other side the subordinates do not expect the officer to demean himself by joking with them.)

Even with the candidate for an office job, the friendly remarks tend to fall flat. The young applicant for a clerical job is usually so scared that he can hardly take in the first few sentences spoken to him. He expects you to go straight to the point. He has his answers ready. If you do not follow the line expected, he is lost. Sometimes, even, he will give you his prepared answer when you have not asked him the relevant question. You dismally register failure on Principle No. 2.

Get the candidate to talk about himself, what he knows and what he wants to do. This is Principle No. 3, and seems plain sailing, so you start brightly:

"What kind of work are you interested in?"

"Anything," comes the flat reply.

You try again: "What would you do if you had the choice? What kind of work would you like to do?"

"Anything you can give me," is the usual

Indian Finance

both for the industry as well as the consumers, is in increasing the efficiency of production both in the field and in the factory. In this respect, there is undoubtedly considerable scope for improvement. The average yield of cane in India is only 13 tons per acre against 21 tons in Australia, 56 tons in Java and 62 tons in Hawaii. India is also at the bottom of the list in respect of recovery of sugar per acre, which is 1.26 tons as compared with 6.44 tons in Java and 6.45 tons in Hawaii. The fact that recovery per cent of cane is only 9.73 in India against 12.25 in Cuba and 14.33 in Australia will indicate the scope for increase in the efficiency in factory operations. The efforts of the industry as well as of the Government should, therefore, be directed toward encouraging research for the development of improved practice in agricultural and manufacturing techniques.

April 12, 1958

Communist Bloc's Trade Offensive Poses Questions

By HENRY V. BURKE

Mr Henry V. Burke is an analyst and writer on Soviet affairs. This is the first of a series of three articles on the Soviet trade offensive, in which Mr Burke has attempted a reasoned and objective analysis of the implications and significance of Russian moves in this aspect of the world economy.

PART I

TRADE OR POLITICAL INFLUENCE?

THE Soviet Union, in recent months, has shown evidences of increasing the tempo of Communist bloc economic overtures in a number of strategic world areas.

Either by direct negotiation with other countries, or working through its East European satellites, Moscow is unquestionably engaged in what might be termed a "trade offensive."

Intensified Soviet bloc activities in this field have been noted in the Middle East, Africa and parts of Asia. Approaches also have been made in Latin America.

Widespread interest has been generated by these actions, particularly on the part of officials in developing nations, where foreign economic cooperation might be regarded as a key planning factor in industrial and commercial expansion.

The new Communist trend, therefore, has quite naturally prompted questions as to Moscow's long-range foreign economic objectives. Are bloc trade overtures, for example, genuine offers of lasting business partnerships? Or is there an underlying political motive which supersedes future commercial considerations?

Soviet Communist Party Chief Nikita Khrushchev admitted as much in 1955 when he said: "We value trade least for economic reasons and most for political purposes." Although Khrushchev went on to explain that trade thus could become a means of improving relationships between countries, the type of improvement envisioned by Moscow has been the subject of some pointed speculation.

The newspaper *El Pueblo* of Buenos Aires pointed out in January, 1958, that "Russia and her satellites have given repeated proofs that they consider treaties as 'scraps of paper.' Without delving too much into history, we have the experience of Amtorg (Soviet trade agency) of less than a quarter of a century ago. Consequently, we have to step lightly because behind the technicians the totalitarian countries know how to hide their commissars of the people."

"Why," the newspaper added, "shouldn't we be afraid of those countries where technicians and merchants are nothing more than instruments of a many-sided policy of anti-Christian penetration?"

At the same time, *Excelsior* of Havana, Cuba warned its readers not to forget that when the Soviet Union makes trade overtures "behind the rubles or machines or products there is the political influence."

Ettelaat, an influential daily newspaper published in Tehran, Iran, recently charged that the Soviet Union operates on the theory that "economic influence is more effective than political influence, as a first step toward decisive domination.... The Soviet Union is now watching for opportunities to infiltrate any country which may require loans or credit."

In a pointed comment on implications of the 1957 Syrian-Soviet economic agreement, the Lebanese newspaper, *Le Jour* of Beirut, said:

"The Syrian economy will be until 1970 strictly controlled by the Soviet Union, which

cautioned against any further "trade and payment agreements in accordance with the selling policies of countries which have a very different way of living and trading from ours."

Despite *La Prensa's* note of caution, however, the USSR demonstrated how Communist political interests are made part and parcel of trade negotiations by aiming a barrage of radio broadcasts at Latin America in January of 1958. An Argentine trade delegation arrived in the USSR for business discussions on January 18. In a single two-week period, from January 13 to 26, Radio Moscow carried more than a score of special commentaries on Argentina and Argentine-Soviet "friendship." These broadcasts equalled Moscow's entire 1956 radio output on Argentina.

Sumer is Icumen in

DURING the past week or so, Calcutta has attained its true summer form. The temperature hovers around 105 degrees in the shade, the cholera has struck, the political processions are causing additional traffic problems; the Corporation, with the water supply in areas contaminated and a resolution passed for the removal of the Commissioner, is in a still sordid mess. To this must be added the rowdism in the Assembly leading to its adjournment sine die and the student hooliganism in the School Final examination centres. About the heat, little can be done unless, of course, the artificial rain makers, of whom we are supposed to have a few, come to our help in time and not when, heavily rained on, the city is already in the grip of a sweeping cold, desperately sneezing into its last handkerchiefs. As for the cholera, it will in any case be controlled with the onset of the monsoon, and all that we can hope for in the meanwhile is that, by the time it arrives, there will be no drastic change to report in the population position. Regarding political processions, they will go on so long as there is politics and we are afraid we are unable to foretell any relief for the traffic police or the office workers in a hurry to get back home after the day's hard grind. So far as the Corporation is concerned, the only possibility that we can see is that it will go on floundering deeper and deeper in the mire, out-Hamelin Hamelin.

Let us now turn to our law-makers and our young hopefuls. Leaving aside the right or wrong of Mr Siddhartha Sankar Ray's statement on his resignation, there is little doubt that the Opposition behaved with calculated discourtesy in not allowing Dr Roy, the Chief Minister, to have his say in the House. It started the disturbance, shouting, hooting, cat-calling and table-thumping which the Congress Party was obliged, as a last resort, to return. This made it inevitable for Dr Roy to answer Mr Ray's charges at a Press Conference at the Writers' Buildings, and when the Opposition continued with its noisy tricks on the following days, the Speaker found it impossible to carry on business and closed the session. The Opposition, by its disorderly conduct, has drawn upon itself a good deal of popular opprobrium and set a dangerous example before the country. It is difficult to resist the conclusion that such uproarious misdeeds on the part of the elders does have repercussions on the student community which is getting increasingly rowdy from year to year everywhere. Calcutta students have in recent years blotted their copy-books pretty extensively, but this year they have beaten all old records, going to the shameful length of beating up some girl candidates. This type of juvenile hooliganism must be halted at all costs. Punishment, doubtless a necessary corrective, is, however, no panacea, but example may well be. Will the elders in politics help? Otherwise we shall have teddy-boys all round.

Asking for Rejection

The rejection of Dr Graham's five-point proposal by India follows logically from the stand which the Government of India have consistently maintained over the Kashmir dispute. Considering the details of Dr Graham's proposals, it is difficult to see how he could expect India to agree to accept and implement them. No proposal which attempts to by-pass the main issue of aggression by Pakistan, which India took to the Security Council for redress is likely to bring about an equitable solution. Nor can India accept the position in which the victim is placed on the same footing as the aggressor. The proposals show the great anxiety of the United Nations' representative to facilitate implementation of part I of the UNCIP resolution of 1948 and the great pains he has taken to resolve the difficulties in the way of securing the withdrawal of Pakistan's forces from the occupied territories in Jammu and Kashmir.

Dr Graham himself recognises that India had not accepted the Security Council resolution of the 2nd December 1957 appointing the UN representative and he has also given, along with his report, the reasons for Government of India's rejection of his recommendations. In the view of the Government of India, "the sole onus of performance was on Pakistan and the United Nations, which both has the

responsibility and capability for taking steps towards a peaceful approach to the situation and for resolving the difficulties between India and Pakistan." India has also made it clear that, though it could not stop Pakistan exercising its sovereignty to permit stationing of the UN forces on Pakistan side of the Kashmir border, India would regard such stationing of foreign troops, in the territory of a nation with whom it desires nothing but the most friendly relations, as an unfriendly act.

Prime Minister Nehru, at his Press conference last week, has also made it clear that, while India was willing to deal directly with Pakistan, the proposal that a meeting should be held under the auspices of Dr Graham was "totally and absolutely unacceptable." While taking this stand, India is fully aware that Pakistan's acceptance of the proposal in principle would give the Government of Pakistan a propaganda advantage. But, from the very beginning, Pakistan had enjoyed this advantage as far as the Western powers are concerned, irrespective of any stand it had taken in the dispute, so that there is no need to worry about it.

Pak Musical Chairs

The recent spectacular changes of Government in East Pakistan, and its repercussions in both the Eastern and Western winds of that country, should be matters of grave import this side of the border. For, anything which aggravates the political instability of our next-door neighbour can be a matter of satisfaction only to those who are incapable of serious thinking. The imbalance inherent in the political structure of Pakistan, has not been corrected by appropriate action in the political and administrative spheres. The Constitution has been long in the making. When the first elections will be held, is anybody's guess. In the meantime, the politicians at the centre of things seem to be engaged in an unending game of musical chairs. So long as this unsatisfactory state of affairs persists, there is slender chance of any move to settle outstanding disputes between India and Pakistan, which will continue to drag on to the disadvantage of both parties. There can be no basis of negotiations, when Governments change from day to day and one can never be sure that persons who hold office will be there to deliver the goods.

The postponement of a final settlement is, however, the least of the evils. The uncertainty in Pakistani politics will effectively inhibit any politician from identifying himself with a policy of conciliation. When the internal situation is difficult, the temptation will be irresistible to find an external target. The Muslim League has for long successfully exploited the Indian bogey to remain entrenched in Power, and may be expected to do so in order to regain the power it has lost. There are also other reactionary forces in both East and

West Pakistan, ready to exploit the situation. The conflicts between the two wings of Pakistan, and the attempts of a section of East Pakistanis to resist what they regard as Punjabi domination can make things extremely uncomfortable for the Hindu minority which remains in Pakistan because it has no alternative. They have already been singled out for punitive action in the anti-smuggling operations launched by the military. It should not be surprising if there is a renewed influx of refugees from across the border, with or without papers, at a time when refugee discontent is coming to a head in West Bengal. General Iskandar Mirza has the reputation of being a strong man who could keep the politicians on leash. Of late, he does not appear to be in complete control. It is not without significance that the newly elected League President should indulge in an uninhibited attack on the Head of the State who was elected President with that Party's support.

Farm Price Stabilisation

The session of the FAO centre which concluded in Delhi last week has given a helpful start to the evaluation of policies to support and stabilise agricultural prices. Stability of agricultural prices is of particular importance for the maintenance of national income and living standards, in India and other countries of this region, whose economies are predominantly agricultural. But the very predominance of the agricultural sector rules out the adoption of techniques used in Western countries, of subsidising agriculture at the cost of other sectors. And when, in spite of size, the total output is insufficient to meet internal demand, as in India, price stabilisation will be seen to be of greater importance than support to fixed minimum prices. But the problem is likely to be different in countries with an exportable surplus.

But, both the surplus and deficit countries in the ECAFE region can formulate a policy of stabilisation of rice prices to mutual advantage. In view of the low level of national income, the improvement of agricultural incomes through increased output is of as great importance as stabilisation of prices. But the latter is necessary to give an assurance to the farmers that additional investment will bring in a definite return. As Mr. M. V. Krishnappa has pointed out, a guarantee of minimum stability in agricultural prices is essential to the success of programmes aimed at stepping up agricultural yields. A sharp break in prices will have an adverse effect on the level of production in the next season. In the present circumstances, as the report of the Centre points out, objectives of support and stabilisation of prices and incomes have to be inevitably limited. Elimination of large fluctuations in prices, rather than maintenance of fixed minimum prices, should be the main objective. Improved marketing

practices, and creation of a favourable environment for agricultural expansion will be of substantial assistance in that direction.

Atomic Politics

There seem to be only two ways of how not to diplomatisise. One is not to diplomatisise at all and the other, to diplomatisise like Mr Dulles. Of this, a fresh proof was available this week when the US Secretary of State publicly reacted to the Russian decision on a unilateral ban on nuclear tests. What he said in favour of US continuing with the pre-planned tests may very well have substance. The Russians have just completed a series of tests, there is no means of checking whether they will not secretly pursue them in spite of their open avowal to the contrary, the US has long announced that its tests are scheduled for the summer—all this is true. Nevertheless, Mr Dulles has once again lost the initiative in the diplomatic warfare. Some neutral Powers, including an important section of Indian public opinion led by Mr Rapagopalachari, had been enjoining upon Russia to abandon the test even if the other nuclear Powers did not, and now it has played up and taken world opinion by surprise. It has won a decisive gambit the US is left staggering along mumbling its eternal woes. World opinion will at this juncture be perfectly entitled to ask: "When will the free world then play on equal terms or arrive at a general compact with Russia? Only when all the Russians have shaved their beards, made a bonfire of all the Red Flags and vacated the Kremlin for Mr Dulles to come and occupy it with his large staff of Far Eastern Experts?"

April 12, 1958

Changes Relating to Fiscal Year-end

SWEEPING changes in connection with the end of the fiscal year adjustments have occurred in the latest bank statements. In the first place, the Central Government had presumably to meet, in the week ended April 4, not only the commitments pertaining to the end of the fiscal year but also the payments connected with the beginning of the month. In the second place, the State Governments have been obliged to complete transactions before the end of the fiscal year, so that the relevant appropriations would not lapse. In the third place, the State Governments had also to make repayment of loans taken from the Central Government. In the fourth place, the amount to be received from the British Government in respect of the advance payment of three instalments under the Pensions Agreement was due on 1st April, and is presumably reflected in the latest Reserve Bank returns. In the fifth place, the Central Government have the right, in the first week of April each year, to tender Rupee Coin for Rs 5 crores to the Reserve Bank and obtain replenishment thereagainst. Transactions of this nature have made their impress deeply felt in the latest returns of the Reserve Bank.

In the Issue Department, it is to be noticed that the sharply stepped up tempo of governmental disbursements, together perhaps with the pressure arising from month early disbursements and busy season demands, have accounted for the steepest increase ever to have occurred in Active Notes which are marked up by Rs 40.55 crores; Notes in circulation have crossed the Rs 1600 crore mark to be placed at Rs 1619.69 crores. Rupee Coin has also gone out into circulation for Rs 1.72 crores, but this is net of the rise that presumably would have occurred if the Central Government had, under their statutory right, tendered Rupee Coin for Rs 5 crores. It is quite unlikely that outflow of Rupee Coin during the week could have been for an amount as large as Rs 6.72 crores, and hence, apparently, we are to conclude that the Central Government have not yet exercised their right in this connection. Currency has been expanded for Rs 44.88 crores against Foreign Securities by transfer from the Banking Department. There has been a contraction of currency against Rupee Securities for Rs 4.87 crores. In the result, Notes Held have been

drawn upon to the tune of Rs 2.27 crores.

Before we study the position of the Central Government, it is necessary that we should appraise ourselves of the other changes in the Reserve Bank figures. Firstly, the balances of State Governments with the Reserve Bank have been run down by Rs 47.61 crores to Rs 7.24 crores. Secondly, their Ways and Means indebtedness to the Reserve Bank has risen by Rs 16.40 crores to Rs 37.63 crores. Thirdly, in order to meet their commitments, the State Governments would also appear to have disposed of part of their holdings of Treasury Bills, since Treasury Bills purchased and discounted, as shown in the Banking Department of the Reserve Bank, are marked up by Rs 5.04 crores at Rs 12.72 crores. So, it is clear that the net adverse change in the position of the State Governments vis-a-vis the Reserve Bank is around Rs 64 crores; and this excludes the element of Rs 5 crores representing probable sales of Treasury Bills by the State Governments to the Reserve Bank. This reflects the very steep net disbursements on the part of the State Governments. Partly, such disbursements would relate to appropriations which would otherwise lapse. Partly, their balances may have been drawn upon to meet month early disbursements. Mainly, we should think, the decline in the balances of State Governments is indicative of large repayment of loans to the Central Government. It is difficult to estimate what the size of such repayment could be, but that it was considerable there can be no doubt.

Then, turning to the head of Balances Held Abroad, we may notice that the figure has declined by Rs 27.47 crores to Rs 68.34 crores. But, then, a transfer of Rs 44.88 crores has been effected to the Issue Department. Therefore, it is clear that accretions to the Foreign Exchange holdings of the Reserve Bank amounted to Rs 17.41 crores during the week. This, of course, represents the advance payment of three instalments by the UK Government in respect of the Pensions Agreement. This, together with the instalment normally payable on April 1, 1958, would have meant that the receipts of foreign exchange under this head would have totalled £16 million, or roughly Rs 21 crores. It follows, consequently, that the import surplus during the week has caused a drain of between Rs 3½ crores and Rs 4 crores.

The next point that we have to note is that Investments in the Banking Department are lower by Rs 20.33 crores at Rs 218.11 crores. In the Issue Department, as we have seen, Rupee Securities have shown a decline of Rs 4.87 crores. It is thus clear that there have been reverse ad hocs for at least Rs 25 crores.

We may now turn finally to the position of the Central Government. Firstly, the Centre's balances might have been replenished by Rs 5

crores representing tender of Rupee Coin, but we have some reason to doubt that the relevant transaction was completed during the week. Secondly, the Central Government have obviously received a large payment from the State Governments. Thirdly, their account with the Reserve Bank would have received a credit of Rs 21 crores against the payment of £16 million by the UK Government. As against such receipts, the Central Government would have also had to make large payments at the end of the fiscal year as well as meet month early disbursements. Again, the Centre would have benefited by a higher volume of receipts from income-taxes during the period. With all this, it is to be noted that the Centre's balances have improved by Rs 6.94 crores to be placed at Rs 55.27 crores; and this rise in the Centre's balances has occurred after reverse ad hocs had been instituted for a minimum of Rs 25 crores. So, overall, the net improvement in the position of the Central Government is in the environs of Rs 32 crores; and of this, we repeat, Rs 21 crores is traceable to receipts from the UK Government. This would mean that an element of Rs 11 crores is traceable to receipts from State Governments and from tax payments. The position is obscured by the fact that the Central Government have also made heavy payments; and we also wonder whether the extent of reverse ad hocs has not been concealed. At this stage, we may recall that deficit financing as at the week ended March 21 amounted to Rs 441 crores. This exceeds the revised estimate given by Mr Nehru last February by Rs 61 crores. While it is sure that the extent of deficit financing would have been reduced by Rs 25 crores on account of reverse ad hocs as traceable in the returns of the Reserve Bank as at April 4, we still think that it may be possible that the exact quantum of deficit financing during 1957-58 would not far have exceeded the revised estimate of Rs 380 crores. This is possible in two ways. On the one hand, it is possible that reverse ad hocs instituted during March 29 and March 31 were for an amount in the environs of Rs 60 crores; and then, in the subsequent days of the week, for purposes of month early disbursements, deficit financing might have again taken place. On the other hand, while only Rs 25 crores of reverse ad hocs is traceable in the Reserve Bank returns, we cannot rule out the possibility of some element of such reverse ad hocs being concealed.

We shall have to wait for the next issue of the Reserve Bank of India Bulletin before clarification in this regard is available. The Reserve Balances of member banks have improved fairly sharply by Rs 13.23 crores to Rs 81.06 crores; and, at the same time, the Scheduled Banks would appear to have reduced their indebtedness to the Reserve Bank, since the latter's Other Loans and Advances have contracted by Rs 4.48 crores to be placed at Rs 73.92 crores. While the bulk of the rise in the Reserve Balances of the member banks is accounted for by the State Bank, the reduction of indebtedness is partly on account of the other Scheduled Banks. This improvement is presumably the result of a moiety of the large scale disbursements of the Central and State Governments at the end of the fiscal year finding its way quickly into the banking system. So, it stands to reason that the outflow from the Scheduled Banks in respect of tax payments from constituents will be rather more than offset by the inflow representing receipts by constituents from the Central and State Governments.

It is in this light that we have to understand the significance of the sharp rise of Rs 15.74 crores to Rs 434.25 crores in the Deposits of the State Bank as at April 4. It is quite likely that the accretions to Deposits in the main relate to receipts against Central and State Government payments at the end of the fiscal year. In the case of the State Bank, the increase in Deposit resources has enabled the borrowings of Rs 3.28 crores to be liquidated. Secondly, with Advances declining by Rs 1.52 crores to Rs 208.99 crores, Cash Balances have improved by Rs 10.82 crores to Rs 33.96 crores. This, as we have seen, was reflected in a rise in the Reserve Balances of the member banks with the Reserve Bank.

We come lastly to the return of the Scheduled Banks for March 28. In this statement, the onward march of the busy season and the continuance of substantial accretions to Deposit resources are the two noteworthy features. On the one hand, the total of Advances has risen again by Rs 10.43 crores to Rs 962.33 crores. In the four remaining weeks of the current busy season, it seems inevitable that the total of Advances will touch the Rs 1000 crore mark. In regard to Deposits, they have risen by Rs 14.37 crores to be placed at Rs 1479.75 crores. In the relevant week, the State Bank had shown a rise of a little over Rs 4 crores in Deposits, and it is clear, thus, that it is the other Scheduled Banks which are the main beneficiaries. Notwithstanding such rise in Deposit resources, borrowings from the Reserve Bank have been stepped up by Rs 4.25 crores to Rs 42.00 crores. Also, indebtedness to the State Bank has risen from Rs 10.71 crores to Rs 11.68 crores. In the result, since the rise in Advances was of the order of Rs 10½ crores, Cash Balances have improved by Rs 6.81 crores to Rs 157.84 crores.

We should anticipate, in the next week, another sharp upsurge in the Deposit resources of Scheduled Banks. Already, the State Bank has experienced an increase under this head of nearly Rs 16 crores. It is entirely possible that, in the week ended April 4, the Deposits of Scheduled Banks will cross the Rs 1500 crore mark.

Mr Birla Speaks on Interest Rates

Mr G. D. Birla has the happy knack of being able to utilise the forum provided by the annual general meeting of the United Commercial Bank Limited, of which he is the Chairman, for some very pungent and careful thinking of particular aspects of the banking system and its problems. His speech this year is largely taken up with the state of the Indian money market, and Mr Birla has addressed himself to a forceful depreciation of the higher trends in interest rates which are being indulged in allegedly with a view to attracting new Deposits. He has stated that he finds it "difficult to understand why banks should persist in bidding for Deposits by means of steadily mounting rates of interest", since it is clear beyond doubt that "the disbursements in connection with the Second Plan are to be seen as having a directly favourable impact upon the resources of the banking system". He has reminded shareholders that, some years ago, he had "deprecated the alarming tendency to try to attract fresh Deposits by means of higher interest rates". In reiterating his plea for "restraint in the competition for Deposits through high rates", Mr Birla points out that, in the light of the Second Plan disbursements, "the attraction of higher interest rates is unnecessary in order to induce Deposits".

This is an aspect of the banking system to which we have, in this column, been drawing reiterated attention. The experience, as Mr Birla points out, was that, during the 1957 slack season, "the favourable circumstance of an increase in Deposits, coupled with a decline in Advances, began week by week to improve the position of Scheduled Banks". In this light, there are certain important lessons that the experience during 1957 has for the banking system as a whole, but the favourable influences thus obtaining have not been made use of at all.

The more comfortable position of the Scheduled Banks in regard to resources made its impact felt on money rates, and, generally speaking, from the beginning of the 1957 slack season, money rates have tended to be within restrained levels. This is particularly so in the case of call money from banks and from the public. In such a background, it is a disquieting feature that rates for fixed Deposits should continue to hold to their high levels. The effect of this sustainedly high level of rates paid on Deposits is already threatening to jeopardise the earnings of the banking system; during 1957, while Deposits of Scheduled Banks rose by the heartening figure of Rs 292 crores, the bulk of this was accounted for by Time Liabilities, which rose by Rs 228 crores. Since the turn of the year, there has been no

improvement in this position, and we lately witnessed the overtaking of Demand Liabilities by Time Liabilities. In the case of United Commercial, the charge of interest paid has risen by roughly 50 per cent, and the experience has been the same in respect of all other major Indian Scheduled Banks. This is a development which it would be folly to ignore, and, at the moment, the incomprehensible feature is that there need not have been, in the first place, this tendency to offer steadily higher rates for Deposits.

It is time that we recognised that the expansionary influence of disbursements in connection with the Second Plan is having a directly favourable impact upon the Deposit resources of the banking system. In that recognition, we have to put an end to this suicidal Deposits war. Mr Birla had occasion some years ago to speak on this same matter, when he had decried the alarming tendency to woo fresh Deposits by means of higher interest rates.

Since then, there have been half-hearted attempts to reach agreement on calling a truce to the Deposits war, but nothing tangible has ever come of all such discussions as we have had. The Reserve Bank of India should be approached by the commercial banks generally for a round table discussion under which it should be possible to reach agreement on, if not actually an undertaking to prescribe limits, at least a convention that the rates to be offered on Deposits will be kept within certain limits with, perhaps, some measure of elasticity to cover the varying demand for money as between the busy season and slack season. Of course, such a voluntarily imposed ceiling for Deposit rates would also imply the necessity for certain minima to be observed in regard to Advances. A criticism that has been voiced against the imposition of such controls on interest rates is not really valid. The objection from certain quarters to such a scheme is that it will reduce the room for free play of competitive forces in the banking system. This view is hardly tenable, because it would imply that the measure of competition among banks is mainly in the interest rates that each of them offers. Surely, a bank proves itself, not by offering a higher rate of interest than its competitors, but, rather, the reverse. The higher the interest paid by a bank, surely, the lower its credit rating. On the other hand, the competition that banks should be engaged in is in the variety of services and facilities that they offer to their constituents. Let us by all means have competition of this nature, but let us disavow this suicidal upward spiral in the interest paid on Deposits. Again, it is not as if the higher interest is influential in or the sole reason for such accretions to Deposits as have been taking place. On the contrary, the Deposits in any case would have accrued to the banking sys-

tem, because the new money now finding its way into the monetised sector springs from Government's outlays and the private sector's disbursements on the Second Plan. All that the higher interest rates succeed in doing is to transform the character of the Deposits from Demand Liabilities to Time Liabilities.

Mr Birla has rendered signal service by thus spotlighting what is undoubtedly an emerging threat to earnings of the banking system. We wish he would do more. For, he is eminently fitted not only to give the lead in constructive thought but also to proceed with the logical next step of effective action. At this stage, merely to denounce high Deposit rates is not enough. Action at the highest level is necessary, and perhaps a roundtable discussion among the Indian Banks Association, the Exchange Banks Association and the Reserve Bank may be most fruitful.

[Note: A review of the United Commercial balance-sheet for 1957 will be published in the next week's issue.]

British Plan to Fight Depression

Paul Einzig

REPORTS arriving from the recent Washington visit of two British senior officials, Sir Leslie Rowan and Sir Robert Hall, that Britain was sounding official American circles about the possibility of a large dollar loan to reinforce the British gold reserve, need some rectification. It is now understood that the visit was connected with a much broader international financial plan. Its outlines were indicated in a speech by Mr Macmillan on March 31, in which he said that his Government was ready to apply measures necessary to prevent a slump if and when such measures should become necessary, but there were limits to what Britain could do by itself and regard must be paid to what Britain's reserves would stand. He added that collective security measures were called for in the economic as well as military field, because a slump would provide an opportunity for Communist subversion and intrigue. "A steady growth and reasonable stability in the trade of the free world are absolute necessities if the free world were to stand", he continued. "We should not secure them unless we used to the full the available mechanism of international co-operation. Organisations like the OEEC, the International Monetary Fund, and the International Bank for Reconstruction and Development must be used."

Mr Macmillan's words were undoubtedly wise, and his idea sound. If the resources of the two Bretton Woods institutions were greatly increased and mobilised in order to assist raw material producing coun-

Indian Finance

tries to overcome difficulties arising from the fall in raw material prices, there would be everything to commend such an action. But there could be no justification for an increase in the British gold and dollar resources in support of sterling under the disguise of a gigantic international transaction. Thirteen years after the end of the war in Europe Britain could and should maintain sterling without further American aid. Since the amount which the United States may be willing to contribute towards any international scheme is necessarily limited it is essential that all of it should be made available to countries which need it much more than Britain.

There could be no doubt that Britain's position in the negotiations in connection with Mr Macmillan's scheme would be incomparably stronger if the Government made it perfectly clear that Britain would not want to use any part of the proposed dollar facilities for the purpose of strengthening her own gold reserve. Such a declaration could be made much more convincing if at the same time Britain were to repay all dollar credits and cancel all dollar facilities arranged in 1956 and 1957. Since the balance of payments has a surplus such facilities are not really needed. Their original object was to meet speculative attacks against sterling. But if the domestic economic situation in Britain is as sound as is sought to be conveyed by recent official publications there is no cause for speculators to attack sterling.

It must be realised that speculators attacked sterling last summer not for their private amusement but because quite reasonably they took a very pessimistic view about the effect of the inflationary increases of wages. If it should be possible to stop that spiral speculators would have no cause for worrying about sterling, at any rate not until the next general election which is still far away.

One is permitted to wonder whether the recent outburst of official optimism in Ministerial statements and Treasury publications is likely to make it easier to hold down excessive wage demands. Until quite recently official spokesmen and publications stressed the dangers that would threaten Britain if wage inflation were to continue. Now they stress price stability during the last few months, the increase of personal savings, the increase in British output, etc. The facts and figures remained the same, but the emphasis has subtly changed. If the latest official interpretation of Britain's situation is correct speculators have no reason for distrusting sterling. In that case sterling would hold its own without any American support.

It seems likely that the manifestation of official optimism will encourage the trade unions to hold out for higher wages. The change of official emphasis from urging resistance to inflation to foregrounding measures against defla-

April 12, 1958

tion is likely to produce the same effect, in spite of lip-service paid to the need for holding out against inflation just a little longer.

If the ill-advised change of tone of official propaganda should be followed up by the conclusion of arrangements for a powerful reinforcement of the dollar resources, trade unions would derive the utmost encouragement for pressing forward with their excessive wage demands.

There is yet another aspect of this matter. At present the odds are strongly in favour of the Labour Party winning the next general

election. The only hope for a last-minute change of heart by the majority of the British electorate would be their fear that a Socialist Government would mean a major financial crisis through a flight from the pound necessitating the reimposition of war-time controls in time of peace. But if the Conservative Government should arrange a large dollar loan the proceeds of which would become available to its successor in office, the electorate would be reassured that it would be safe to vote Labour because the Socialist Government would be enabled to proceed with

inflation and nationalisation under the protective shelter of American financial aid.

The American taxpayer could reasonably be expected to finance an increased American contribution to the reserves of the International Monetary Fund for the purpose of assisting the raw material producing countries embarrassed by the fall in prices. But it would be most unreasonable to expect him to finance socialism and inflation in Britain, even if he is asked to do so by an anti-Socialist Government which ought to know better.

From a British point of view,

dollar aid to raw material producing countries without direct British participation in the proceeds would help indirectly, as it would enable these countries to maintain their imports. Any transaction that would mitigate the scarcity of dollars would help sterling, since it would reduce the extent to which transferable sterling and the British commodity markets are misused for securing dollar commodities. To secure such indirect help for sterling would be legitimate. But to ask for a British share in the American aid would have no justification. (Copyright)

SITA HAS NEVER SEEN A TRAIN!

True! Sita has never seen a train! Yet she knows that a train brought the oil that burns in her humble lamp in the far off village where she lives!

Yes, Indian Railways serve Sita and 38 crores of other individuals like her in their daily lives—intimately yet unobtrusively, in a multitude of ways. They serve, too, every sector of the national economy, for which movement is life.

We Carry 15 Cities Daily!

Think of it! One per cent of India's population travels daily by rail! About 3,800,000 passengers daily—equivalent to the combined population of these 15 Indian cities: Ajmer, Allahabad, Amritsar, Bhopal, Cuttack, Gwalior, Howrah, Jabalpur, Jaipur, Mysore, Patna, Poona, Rajkot, Tiruchirappalli, and Trivandrum.

We Carry Over One Crore Maunds Daily!

The Indian Railways also carry over 360,000 tons (more than one crore maunds) of vital supplies daily—the equivalent in weight of foodgrains which all the people living in the 15 cities named above normally consume in 200 days! Besides life-giving food for the people, they carry precious coal and other raw materials for industry, finished goods for far-flung markets and a countless variety of other cargo which helps to maintain the country's trade and commerce, imports and exports in good shape.

Over the past 105 years, wherever the Indian Railways have gone, prosperity has followed in close step. Daily, they run nearly 7,000 passenger and goods trains. Without them, today, the Nation's throbbing economy, its very heartbeat, would come to a breathless standstill!

"Aspirations of Under-developed countries"—Blaker

THE stresses and strains that industrialisation imposes upon underdeveloped countries constitute an important economic phenomenon that the world economy has witnessed during 1957. On the other hand, as far as the industrial West is concerned, the long experienced inflationary conditions appear to have been replaced at least in part by deflationary pressures and recessionary trends. This is a picture of the world economy in which the details have been admirably filled in by the Hon'ble C. Blaker in the statement relating to the accounts of the Hongkong & Shanghai Banking Corporation for 1957. Mr Blaker has succeeded in appreciating the importance of details without, however, losing sight of the whole picture. For, the Chairman has, in the statement, neatly emphasised the conclusions obtainable from the experience of particular countries or particular regions.

He has dealt first with conditions in the West, and the suggestion is advanced as to whether, in 1958, "the danger most to be guarded against is rising costs or falling production". He wonders whether inflationary tendencies are still growing or "whether a period of deflation is about to set in". Such a state of affairs imposes a particular strain upon sterling, and, when, with a view to meeting a crisis, the British Bank Rate was raised to 7 per cent, there was discussion as to whether it was advantageous "to maintain sterling as an international currency". While Mr Blaker has not tried to assert categorically upon the question of whether the world is in for inflation or deflation, he has been forthright on the matter of sterling as an international currency. Any suggestion to abrogate sterling's role could only be viewed with apprehension. Mr Blaker is surely right when he states that "no currency has yet been found able to take the place of sterling and it is difficult to see how the multitude of transactions which make up the settlement of trade in our particular area alone could be cleared without the facilities sterling and the City of London provide". Mr Blaker warns that any limitation of such facility would inevitably lead to "a return to bilateralism with all the frustrations this would involve". In brief terms, whether it

is inflation or deflation, sterling and the City of London will, for as long ahead as we can see, continue to be needed as a sort of international clearing house.

As far as Asia is concerned, a deterioration in the terms of trade has resulted in a general fall in the foreign exchange reserves of most countries in the area. Mr Blaker points out that these difficulties "were aggravated by the increasing pace of development". The Hongkong & Shanghai Corporation's Chairman refers to the necessity that the Asian countries would have to attract, to a greater extent, the flow of private capital. In the past, foreign capital has been invaluable in contributing to industrialisation and increased productivity. So, "it is now being generally realised that foreign investment is not necessarily tarred with the colonial brush"—but Mr Blaker cites the events in Indonesia as demonstrating "the disruptive effects that extreme nationalism can have on a nation's economy". Mr Blaker is fully appreciative of the urge on the part of the underdeveloped countries to industrialise as swiftly as they can, but draws attention to the problems created by rapid industrialisation, "the most difficult of which is to keep inflation under control". It is in this light, in a correct understanding of the aspirations of underdeveloped countries, that Mr Blaker concludes by saying that "any criticisms of the failings of these countries should be tempered with the realisation of the immense difficulties that they have to face and if at times they may have aimed too high, surely this is an accusation that could be levelled at many of the most successful examples of human endeavour".

Mr Blaker has every reason to be satisfied with the results of Hongkong & Shanghai for 1957. The profit for 1957 rose by HK\$ 400,000 to HK\$ 21.0 million. A sum of HK\$ 4 million is to be written off by bank premises. The interim dividend was at £2 per share, and the final dividend proposed is at £1.12.6d per share. We may note here that the final dividend is being paid on the enlarged capital. The carry forward is placed at HK\$ 2.1 million, and this is much lower than the amount brought in of HK\$ 11.0 million, because, from the last year's carry forward, a transfer of HK\$ 9 million was made to the Reserve Fund, as part of the operations to restore the Reserve Fund, from which HK\$ 25 million had been capitalised for the bonus issue, to its original level of HK\$ 128 million. Besides this transfer of HK\$ 9 million, an amount of HK\$ 16 million has also been appropriated to the Reserve Fund from inner reserves. Thus, the 1957 balance sheet shows that, whereas the capital has been doubled to HK\$ 50 million, by issue of bonus shares, the Reserve Fund has been maintained at HK\$ 128 million. This is an al-

together remarkable achievement and Mr Blaker, we repeat, has every reason to be satisfied with the Bank's accounts for 1957.

★

Mr Dhandhanja Speaks out

Speaking at the fiftyeighth annual General meeting of the Bharat Chamber of Commerce, Mr K. L. Dhandhanja traversed the entire vista of the economic life of the country, as envisaged in the Second Five Year Plan.

According to Mr Dhandhanja, the country's economy, after a continuous process of growth, has reached a phase of stalemate. The rate of industrial growth has fallen to 3 per cent in 1957, as against 9 per cent and 8 per cent during 1955 and 1956 respectively. As against an increase in money supply to the tune of Rs 132 crores in 1956, the figure declined to Rs 97 crores in 1957. Expansion in bank credit to the private industry was of the order of Rs 80 crores only, against Rs 180 crores in the previous year. Stock market prices declined by a little over 20 per cent.

Mr Dhandhanja suggested a few broad outlines to counter the effects of this stalemate. He suggested that the country's economy should be, as far as practicable, diffused through smaller business enterprises. His second suggestion was that slow growth of the economy is not suitable for India at this stage, especially when there was a continuous pressure of a growing population. The third observation of Mr Dhandhanja was that short term fluctuations should be taken as a normal characteristic of an expanding economy. Temporary inflationary pressures should not be counteracted by stopping of investment, as that would usher in deflation, an equally dangerous symptom in the economic body of the country.

Speaking about the slow growth of the economy, Mr Dhandhanja observed that the target for per capita income, rising to Rs 546 in 1976, is still too low. A per capita income between Rs 1,200 and Rs 1,500, now prevailing in Italy, should be the bare minimum required for effective functioning of a democratic form of Government.

Since development is central to the aspirations of the country, the Government should, in the opinion of the President of the Chamber, first ensure the means by which the pace of investment can be accelerated. In this regard, he thought that a 6 per cent return on capital investment was not enough to attract fresh investment in industrial undertaking; and the implication presumably is that the Government should allow a higher return.

Mr Dhandhanja made out a special case for increasing savings from agricultural and allied activities. During the Second Plan period, an aggregate income of Rs 34,000 crores was expected from

the agricultural sector. Only 2 per cent saving on this income may very well cover the outlay scheduled for agriculture. He rightly pointed out the case of China, where Rs 550 to Rs 600 crores are being realised as agricultural taxes a year, as compared to the meagre figure of Rs 80 to Rs 90 crores obtained in India. Even taking for granted the higher productivity of land in China, there is still substantial scope for earning much higher tax revenues from the agricultural sector in India.

The tax structure, according to the President of the Chamber, has hit the middle class traders most, who form the backbone of a socially ically patterned state. Small traders today do not find enough capital to run their business. Lowering of tax load on the income group upto Rs 1 lakh would go a long way in strengthening the base of small trade in the country.

Mr Dhandhanja stated that, while nobody could possibly deny the necessity of having foreign aid for the development of the country at this juncture, it was still a very poor substitute for internal saving. To repay the loans over a long period by instalments varying between Rs 33 and Rs 107 crores a year would be a dead weight on posterity. He welcomed business collaboration between foreign and Indian capital.

In view of the hardship on a large number of importers, caused by import restrictions, which will have to be continued for a few more years, Mr Dhandhanja urged a fair distribution of the available foreign exchange among the traders, putting a ceiling on individual quota. He called upon the Government to follow a more liberal export policy. Mr Dhandhanja, however, cautioned the country against the probable impact of the proposed European common market and Free Trade Zone scheme in Western Europe on the future export potentialities of Jute, Tea, Vegetable oils, Mica, etc.

The President of the Bharat Chamber of Commerce dwelt at length on the dangers of growing unemployment in West Bengal. He called upon the youth of the State to shake off their usual apathy towards business. He also requested the business Houses to see that their doors are open for the young people of this State for employment. He suggested a planned apprenticeship scheme, through the co-operation of Chambers of Commerce and educational institutions, which could prevent creation of an army of jobless youth in the country.

Mr Dhandhanja also suggested promotion of small scale industries through State assistance as a very effective measure of combating unemployment. He welcomed the move of the State Government to create industrial estates.

To handle the economic and commercial problems of the country, the President of the Chamber suggested constituting a State advisory council as a most effective device.

April 12, 1958

Hessian Stocks Decline

THE jute goods market has ruled quietly steady during the past week in the absence of fresh foreign enquiries. With the publication of the stock figures as at the end of March on Wednesday, prices especially in the hessian section steadied up as hessian stocks show a decline over the previous month. Total stocks as at the end of March are placed at 94,400 tons, made up of 24,500 tons hessian, 54,900 tons sacking and 15,000 tons other varieties. As compared with the previous month stocks of hessian are 2,700 tons lower at 24,500 tons. They are thus well below one month's production. Stocks of sacking have increased by 1,600 tons to stand at 54,900 tons. Even so, they are about one month's output only. It is, however, to be noted that sacking stocks now are the highest in the past seven months. Stocks of other varieties are the highest in the past many months. Compared to a year ago total stocks are lower by 3,300 tons, with both hessian and sacking lower by 5,300 tons and 1,600 tons respectively. Other varieties are higher by 3,600 tons. Taking the stock figures for the past three months it will be found that stocks of sacking after abruptly rising in January have remained more or less unaltered in February and have increased in March. Last year the level had been certainly higher but the trend had been one of decline from month to month. Other varieties have been steadily rising and at the end of March are substantially higher at 15,000 tons. As for hessian, the position is more satisfactory. After the rather sharp rise in January, hessian stocks have recorded a steady fall in the past two months.

In this connection it is interesting to note that hessian has fared well in the export field during the past year. In its main overseas market, USA, its performance is quite satisfactory considering the general outlook for burlap. Import of burlap into USA during the twelve month period January-December 1957 has totalled 220,500 tons as against 235,200 tons in 1956. But it is significant to note that the share of Indian hessian in the total for 1957 comes to 84.9 per cent while in the previous year such share was only 83.4 per cent.

The jute goods market opened the week with prices fluctuating in a narrow groove due to lack of interest. Hessian 40" x 10 oz Ready opened at Rs 39.56 with B Twills quoting Rs 99. July-Sept Hessian 40" x 10 oz was placed at Rs 39.86 and B Twills at Rs 100.85. With moderate interest from shippers the rates improved to close as follows: Hessian 40" x 10 oz Ready Rs 39.70, B Twills Rs 99.65; July-Sept. Hessian 40" x 10 oz Rs 40.10 and B Twills Rs 100.25. Conditions were rather dull on Tuesday as business passing was at a low ebb.

Of the total burlap imports into USA during 1957 of 220,500 tons India's share has been as much as 187,200 tons with the other coun-

tries accounting for the balance of 33,300 tons. Nearly half of this (15,000 tons) is from Pakistan. Of the continental countries Belgium's share shows a slight increase to 5,600 tons from 4,600 tons, West Germany's to 3,400 tons from 3,100 tons. Netherlands' to 1,300 tons from 1,000 tons. Japan's share has suffered a drastic diminution to 2,500 tons from 6,700 tons in 1956. Apart from the small increases recorded by some of the continental countries, the most significant feature of these figures is the increase in regard to imports from Pakistan. Pakistan's share is steadily increasing in the past three four years. From 1,900 tons in 1954, imports from Pakistan have increased to 2,700 tons in 1955. In 1956 there has been sharp increase to 13,700 tons and in the past year imports have further increased to 15,000 tons. The share of UK which has been maintained around 5,800 tons in 1955 and 1956 has declined to 3,900 tons in 1957. The competition from UK and most of the Continental countries in the US market has considerably slackened in the past year. Japan also seems to be losing ground. The only serious competitor to India now is Pakistan. Though as yet the quantum of import from Pakistan is small, indications are that it will continue to show a steady increase.

Even as regards competition from Continental countries there is no room for complacency; for with any easing of the raw material supply position these countries with their highly modernised mills may be expected to renew their efforts to increase exports. That the world jute industry may be finding an alternative source of raw material in Burma is indicated in a report issued by the Jute Bulletin of the Indian Central Jute Committee. It is reported that the Government of Burma have planned to produce over 5,000 tons of jute in the next season. The last crop in the country was only 1,500 tons. Burmese jute samples sent to Dundee for tests have obtained satisfactory grading results and the Burma Government has received a recommendation from the Director General, Agricultural and Rural Development Corporation, that all top qualities and grades of jute grown internally should be released for export.

★

Raw Jute June ruled steady throughout. The contract opened on Monday at Rs 26.30, touched a high of Rs 26.40 and closed at Rs 26.38. The lowest touched was Rs 26.14. On Tuesday the rate fluctuated between Rs 26.24 and Rs 26.12 to close at Rs 26.18. On Wednesday it was done between Rs 26.38 and Rs 26.10 to close steady at Rs 26.30.

A significant feature of the trading in the jute markets during the past few weeks is the comparative steadiness of raw jute. It would appear that raw jute holders have been encouraged to hold on to their stocks by the uncertainty shrouding the prospects for the next jute

As the trend of shipment revealed an improvement in the case of Hessian, this section ruled steadier. Shipments of sacking, however, continued to be disappointing and this factor was responsible for the quiet tendency in this section. The closing rates for the day were as follows: Hessian 40" x 10 oz Ready Rs 39.65, B Twills Rs 99.35; July-Sept Hessian 40" x 10 oz Rs 39.95 and B Twills Rs 100.65.

With the release of stock figures for the month of March, sentiment steadied up especially around hessian as hessian stocks were 2,700 tons lower. Hessian 40" x 10 oz Ready advanced to be finally placed at Rs 40 while B Twills was slightly better in sympathy with hessian at Rs 99.50. Elsewhere Hessian 40" x 10 oz July-Sept was placed at Rs 40.10 with sacking at Rs 100.75.

The raw jute market ruled steady and unchanged throughout the week. Assam Bottoms was quoted at the end of the week at Rs 25 per maund for April-May Shipment.

In the futures section, a steady undertone was noticeable. Hessian May Opened on Monday at Rs 39.76 and after touching a high and a low of Rs 39.84 and Rs 39.64 respectively, closed the day at Rs 39.80. The opening on Tuesday was somewhat subdued at Rs 39.72 and trading during the day was on a subdued tone with the range of fluctuations between Rs 39.76 and Rs 39.68. The closing was steady at Rs 39.76. An improved tone was noticeable on Wednesday and the highest level touched was Rs 40.14. The lowest was Rs 39.80. The day's opening and closing rates were Rs 39.80 and Rs 40.06 respectively.

Sacking May opened steady at Rs 100.05. After touching a high and a low of Rs 100.25 and Rs 99.65 the contract closed quietly steady at Rs 99.90. The range of fluctuations on Tuesday was between Rs 99.80 and Rs 99.50. The closing rate was Rs 99.60. The opening on Wednesday found the rate considerably lower at Rs 99.35. This was also the lowest rate touched during the day. In later dealings the rate improved to touch a high of Rs 100.10 but by close was pushed down to Rs 99.90.

Raw Jute June ruled steady throughout. The contract opened on Monday at Rs 26.30, touched a high of Rs 26.40 and closed at Rs 26.38. The lowest touched was Rs 26.14. On Tuesday the rate fluctuated between Rs 26.24 and Rs 26.12 to close at Rs 26.18. On Wednesday it was done between Rs 26.38 and Rs 26.10 to close steady at Rs 26.30.

A significant feature of the trading in the jute markets during the past few weeks is the comparative steadiness of raw jute. It would appear that raw jute holders have been encouraged to hold on to their stocks by the uncertainty shrouding the prospects for the next jute

crop. The general idea seems to be that the supply position may not be quite easy toward the end of the current season. The price level in the futures market for both the June and September contracts are above the Rs 26 mark. In Thursday's trading Raw Jute June was done up to Rs 26.62 with the September contract wanted up to Rs 26.25. In the other market Assam Bottoms April-May delivery was done at only Rs 25 per maund. Evidently operators in the futures section are influenced by the expectation that the supply position from June to September will be rather tight. The weather conditions seem to have been largely responsible for this kind of reasoning. It is said that though there have been occasional showers in the jute growing areas in the past few weeks, rainfall has not been quite satisfactory. In this regard it is naturally remembered that last year the crop had been delayed because of the late onset of the monsoon. It the monsoon is again late, then there may be some difficulty for mills in obtaining the required quantity of the raw material during the early part of the next season.

PRICE TRENDS.

Keen Demand in Export Auctions

THE keen demand in Export auction continues; and it is now more than likely that there will be nothing left of the 1957 crop when the auctions for the current season come to a close by the end of this month. There has been a strong and general demand for Plain and Medium Broken, while the Commonest sorts are well supported by local buyers.

In Mining Lane, however, the indifferent demand and lower trend for Plain teas is generally ascribed to the adequacy of supplies of these grades. It is thought that the downward movement would have maintained itself earlier had it not been for the trouble in Indonesia and the irregular arrivals of Ceylon teas because of the labour troubles in the Colombo Port.

Meanwhile, it is officially announced that the export of Dust teas will be allowed under licence without being required to be cover-

ed by export quota rights. Applications for such licences are, however, to reach the Tea Board's office in Calcutta or Cochin, as the case may be, before the 31st October.

In the Export Sale held in Calcutta this week, offerings consisted of 58,325 packages. The strongest feature of the sale were the "teas for price", which were from 6 to 10 nP per pound dearer, while Common and Medium BPs and Fannings were from 4 to 6 nP dearer. There was also keen competition for Medium Orange Fannings and these were generally considerably dearer, while the BOPs with good cup quality were sought after; but the Low Medium descriptions with indifferent liquors were often easier.

The CTC teas, on offer, especially the poorer kinds, met with good competition and were as much as 20 nP per pound dearer. Legg-cut teas, except for the best, tended to be easier and were sold at 5 to 10 nP below valuations. Whole Leaf grades were again well supported and those with good leaf appearance were sold about 10 nP above last rates. There was comparatively little demand for the few lines of Tippy sorts on offer and these were sold at a discount. Following rates were quoted:—Clean Black Pekoe Rs 2.30 to Rs 2.35; Plain Broken Pekoe Rs 1.50 to Rs 1.54; Plain Fannings Rs 1.64 to Rs 1.68; Medium Broken Pekoe Rs 1.62 to Rs 1.66; Medium Fannings Rs 1.78 to Rs 1.82; Best Assam CTC BP Rs 2.60 to Rs 2.80

and Best Assam CTC Fannings Rs 2.80 to Rs 3.00.

In the Internal Sale, offerings consisted of 18,464 packages of Dusts for which there was a good general demand. Orthodox descriptions with a clean leaf appearance were firm and sometimes up to 6 nP per pound dearer and even more at the close, especially for the powdery kinds and where quality showed some improvement. CTC Assams were in good demand, especially the smaller powdery types and those with improving liquors, which were generally sold at dearer rates.

Darjeeling Dusts were a weak feature of the sale and there were occasional withdrawals, too. Following rates were quoted:—Medium Doars Dusts Rs 1.66 to Rs 1.60; Medium Assam Grainy Dust Rs 1.60 to Rs 1.64; Medium Assam CTC Dust Rs 1.85 to Rs 2.05 and Best Assam CTC Dug; Rs 2.75 to Rs 3.05 (nominal).

Also, 6,029 packages of Leaf grades were offered for internal consumption. There was a strong general demand and prices were often considerably dearer.

In the Export Quota section, the price of Special Export Licence was initially 3 nP per pound and steadily hardened to 4½ nP at the close. Likewise, the rate for non-transferable Shipping Licence hardened from 2 to 3½ nP per pound.

In the Cochin market, offerings were 1,550,000 pounds for export. Quality continued to be very useful. There was a large quantity of Nilgiri teas on offer. The sale opened against a good but irregular demand. In the absence of Russian buyers operating, best quality teas declined by 25 to 50 nP per pound. Good Mediums were, however, strong and dearer. Medium descriptions met with less competition and were barely steady. Low Medium Broken were easier; but similar coloury Fannings were dearer. Whole Leaf grades were difficult to sell. Following rates were quoted: Plain Broken Pekoe Rs 1.45; Low Medium Rs 1.55 to Rs 1.90; Medium Rs 1.90 to Rs 2.20; Good Medium Rs 2.40 to Rs 2.90 and quality Rs 2.80 to 6.00.

In the Colombo market, offerings were 6,712,714 pounds with quality frequently showing some improvement. There was a good demand for Nuwara Eitya teas. Broken grades were selling at or about valuation; but Pekoes were slightly easier. There was also good demand for high-grown teas at fully firm rates for the better sorts with prices following quality. Medium-grown teas showed an advance of 5 cents per pound. Demand for low-grown teas was, however, quiet. Small Leaf Broken were 2 to 5 cents easier, while Bold leaf Broken were often 10 to 20 cents lower. Fannings were sold at firm rates although plainer sorts were occasionally easier. There was a good demand for off-grades at firm to dearer rates except for poor stalky broken mixed.

US Notes

THE old saying, the "administration proposes, Congress disposes" has been given a novel twist this year. New forces have changes and, in fact, are still changing the complexion of the current legislative session into something quite different from what Congress itself had set out to make it.

The business downturn has spurred both the White House and Capitol Hill into a multitude of actions that are turning this second session of the 85th Congress into one of the busiest in many a year. By the time Easter recess rolls around (on April 3rd), the number of bills passed in the 13 weeks since the national legislature opened is likely to be as great as is normal for a full session. And after the recess which is usually a breathing spell for hard working law makers, the tempo—already resembling the yearly adjournment spurt—is hardly likely to lessen.

By mid-April, new economic statistics will either strengthen the administration's view that the depth of the business downturn has been passed, or fortify the argument for an invigorating tax cut. Mutual aid, reciprocal trade and other controversial issues will begin to crowd the legislative calendar. And lest Congressmen succumb to the illusion that there couldn't be anything new under the sun, they were promised this week by the President legislative proposals dealing exactly with what is new under the sun, namely with the exploration of outer space.

Two types of proposals are in the making: One for setting up national programme for space exploration; the other for setting a national agency, under civil control, to direct government activity in space.

The foundations for a space programme were laid this week in an extraordinary report by those scientists who constitute the President's Scientific Advisory Committee under chairman J. R. Killian; former President of Massachusetts Institute of Technology.

The report is a remarkable ment. Wholly free of governmental or scientific ABCs of outer space, it is able primer on man's into cosmos. Yet at the Mr Killian and his manage to outline the problems that must be

a national programme of space exploration—all of which is part of the report's extraordinary character.

For its unspoken, but self-evident purpose is to make space understood by the average citizen. Its underlying assumption is that space is now as inevitable a topic of national policy as are taxes and defence, and that the voter therefore must become acquainted with that new realm of knowledge that concerns space and will more and more enter into important national decisions.

The report charts, but it also debunks some utopian ideas. It actually foresees "contacts" with Venus, Mars and the Moon, even trips to the Moon. But those wild estimates, recently current, of a trip to the Moon within the decade are cold-shouldered by the Killian group. So are atomic explosions on the Moon.

Space satellites, on the other hand, are foreseen to become everyday affairs soon and to serve radio and television as well as weather and a new type of earth observations.

While all these things are of partial military value, and while intercontinental missiles would, of course, travel through space, the most intriguing bit of debunking presented is exactly in the field of military space utilization. The Killian report bluntly dismisses another set of wild speculations of recent date, namely those on rocket launching sites on the Moon or on man-made satellites. Such methods would be "clumsy and ineffective," as the report clearly demonstrates.

Setting out to bring space, figuratively down to earth Dr Killian has come forth with a thoroughly realistic appraisal of the space age. Fortunately, the very realism makes the report the appraisal of a promising rather than an awe-inspiring future, probably a most welcome change for Congressmen who have to deal with space legislation.

United States public and private programmes aiding the economic growth of developing nations were outlined Thursday by Assistant Treasury Secretary Tom B. Coughran.

US efforts in this field, Coughran told a meeting of the League of Women Voters, help bring about an improved world-wide economic picture and help provide the people of new nations with the "magic ingredient" of hope—hope that carries with it "the spirit, the strength and the will to meet difficulties and surmount them."

Coughran noted that US programmes, both public and private must necessarily be shaped by the need to "balance pressing demands from abroad with the capacity of our people to provide savings to finance both domestic and foreign investment."

He said that there are "four broad ways" in which US savings

are used for economy-spurring investments abroad.

First, he said, are the private investments—such as those made, by the oil companies, automobile manufacturers and hundreds of other well-known American firms as well as purchases of foreign securities by American investors and loans by American commercial banks.

Second, there are "the loans repayable in dollars, extended by governmental and inter-governmental institutions such as the Export-Import Bank and the World Bank."

Third, there are "loans repayable in local currencies, such as those extended by the new Development Loan Fund."

And fourth, "agricultural sales against local currencies, such as those made by the commodity credit corporation under Public Law 480."

Coughran noted that he had not attempted to cover in these categories "the grants of economic assistance which we have made and which we will continue to make in some areas."

As to private investment he noted that "United States investors added to the value of their investments abroad about \$4,000 million in 1957 and about \$13,500 million in the five years just passed. The value of private investments abroad reached a total estimated at roughly \$37,000 million at the end of last year...."

As to the Export-Import Bank, Coughran noted that "since 1934, the Export-Import Bank has made loans of more than \$7,500 million, most of which has been important in economic development overseas."

The World Bank, he continued, has, since 1946, "loaned a total of \$3,400 million...."

Turning to "the newest technique" in providing financial aid to new nations—the Development Loan Fund—Coughran said:

"The Development Loan Fund has been in operation only a few weeks and has already committed in excess of \$100 million in loans.... The Fund is currently operating with a capital of \$300 million appropriated for fiscal year 1958. It is hoped Congress will include \$625 million additional.... for fiscal 1959."

Britain

A world obsessed by fear of war is inclined to view the United Nations in the stark terms of its ability to preserve the peace. We view it either with despair, as the sad mirror of our conflicts and obsessions—or with hope, as the prime international instrument of peace.

Often these preoccupations make us forget that the United Nations has other important tasks, and that its members bound themselves in its Charter to take very specific

measures in many different fields, in conformity with the spirit of common responsibility which is the basis of the Charter.

An excellent example is Chapter XI, concerned with the dependent peoples of the world and the responsibilities of the countries which administer them. Communist propagandists may describe such countries as "imperialist-colonialist exploiters".

Article 73 of the United Nations Charter describes them more gently—and much more accurately—as "members of the United Nations who have, or assume, responsibilities for the administration of territories whose peoples have not yet attained a full measure of self-government".

In Article 73, the administering countries recognize the principle that the interests of the inhabitants are paramount, and accept as a sacred trust the obligation to promote to the utmost their well-being.

They undertake to ensure the political, economic, social, and educational advancement of the dependent peoples and to assist them in the progressive development of their free political institutions.

In addition, the administering Powers have accepted the obligation to transmit regularly to the Secretary-General of the United Nations, for information purposes, information on economic, social, and educational conditions in the territories for which they are responsible.

One such report, by the British Government on its dependencies, was issued by the United Nations recently. It is stuffed with figures for the edification of experts, and plainly not intended to appeal to a wider public.

In fact, the statistics hide a story of drive and progress in the economic and social development of the British dependencies in the last 18 months. Take, for instance, the section marked "Public Health".

Typhoid fever, it says, has been arrested in the territories where it prevails, such as Kenya and Hong Kong. Sleeping sickness, although a constant threat in tropical countries, has been controlled in East and West Africa. Success has also been achieved in eliminating the mosquito that carries yellow fever. It is a story of the opening of new hospitals, the extension of existing ones and, above all, of the training of personnel to carry out medical and welfare work in the British dependencies.

If disease must be conquered before peoples can advance, so also must poverty. The economic sections of the report describe striking progress in this field as well. The main effort since the war has been directed to broadening the economies of the territories, so that prosperity no longer depends on a single crop or service.

But before wealth can create wealth, much capital must be invested in communications, agricultural research, and then in factories and other installations. The

report states that during the year 1956 about £470,000,000 was invested in capital assets in the British dependencies, and this annual investment was 75 per cent higher than that in 1948.

The report draws the conclusion that of this sum, about £350,000,000 a year now comes from local sources, which is a measure of the increasing prosperity. During the year there were increases in cocoa and cotton production, more cement was produced in Kenya and Uganda; more clothes, plastics, and carpets in Hong Kong. A new copper smelter and a textile plant were opened in Uganda. Development plans in many territories are in full swing, assisted by United Kingdom Colonial Development & Welfare grants.

Although at first sight this report may look a little like a nurseryman's catalogue—which is intelligible only to the gardener—it certainly shows that the British dependencies are healthy plants, and making good progress. It shows, too, the importance Britain attaches to her undertakings in Article 73 of the United Nations Charter to promote to the utmost the well-being of the inhabitants of her dependent territories.

Coal-washing plant for the State mines near Durgapur, West Bengal, where a steelworks is being built by a consortium of British firms, will come from a United Kingdom firm which helped to equip Britain's own biggest coal washery and recently completed a 125-ton-an-hour plant for an Australian colliery.

The firm (Automatic Coal Cleaning Co. Ltd., Carlisle) is designing and making the coal-washing installation for the State mines near Durgapur on behalf of Simon-Darves Ltd., of Stockport, Cheshire.

This will be the second plant made in Carlisle for India in recent years. The first went to Lodna colliery, in Bihar, and was India's first jig washer. This washery was erected by local colliery labour under the supervision of a Carlisle engineer and was completed in five months. The plant is reported to be working very satisfactorily.

The Carlisle firm supplies plants covering the whole range of coal washing from 30 to 400 tons an hour on a single unit. The biggest plant in Britain for which the firm supplied part of the equipment is at a colliery near Rotherham, Yorkshire, and has a washing capacity of 1,320 tons an hour. The firm's plants are installed in many other British and overseas coalfields because of the need to get the best use from coal.

Supervisory posts with the Durgapur steelworks are awaiting several young Indian engineers now in training, under the Colombo Plan, with steel companies in the United Kingdom. At present junior engineers or graduate apprentices with Huddersfield Steel (Private) Ltd., their year of training will involve hard practical work with firms long famous in the British steel industry.

actively yours

Cash in hand is idle money, and idle money is the devil in the price spiral. Money put in a banking account, like energy harnessed, is actively helping the National Plan, yet all the time remaining yours.

readily yours

Money lodged with a Bank holds in reserve your purchasing power readily available for judicious spending.

faithfully yours

Money transactions through a banking account are faithfully recorded in all details, sparing you a lot of worry and bother.

HEAD OFFICE: 4, CLIVE STREET, CALCUTTA

Namaste, Bhai Sahib !

I am very glad to welcome you back from your tour, Bhai Sahib, and thank you very much indeed for visiting the tea gardens, our factories, sales depots and dealers. I hope you found it all interesting.

Very interesting, Shri Chairman ; I learned a great many things about the Tea Industry ; how it employs a million people and earns crores for public revenue and vital foreign exchange.

What impressed you most, Bhai Sahib ?

Its complexity, Shri Chairman. What a vast organization stands behind a simple packet ; and the care you take in selecting teas and packing them hygienically and the efforts Brooke Bond put in to make certain that their packets reach every shop really fresh. I look forward to telling all my friends about it.

If you get any queries you can't answer, Bhai Sahib, don't hesitate to write to me about them.

Thank you, I will.

Namaste !

April 12, 1958

IN tabulating last week the foreign assistance that we have so far secured, or that has to date been promised, I had suggested that the foreign exchange gap as originally conceived by the Plan-ners had been more than covered. I went on to add that, if we had regard for a few seeming imponder-ables, but not for that reason falling outside the scope of our legitimate expectations, even the enhanced foreign exchange gap constituted by the Indian Finance revised estimates of 1956 would not present any difficulty. I should here like to take up for examina-tion one of these imponderables, the fruits of Export Promotion, which I thought last week could be counted upon to yield an addi-tional Rs 100 crores over the Plan period.

At this stage, it is worth re-marking that, if the foreign ex-change content of the Plan appears now largely to be vouchsafed, such a happy result is not due to any strenuous efforts on our part: what energy we have bestowed on this matter has been restricted to the institution of negotiations for obtaining an appreciation of our difficulties by foreign countries, and succeeding in eliciting from them a material expression of their appreciation of India's predicament. I do not mean to belittle the statesmanship that has gone into the discussions that have been carried on with foreign countries. Indeed, this is the proper juncture at which we should render unto Mr T. T. Krishnamachari the immeasurable debt that this country owes to him for courageously and competently presenting India's case to such effect as to have triumphed in bridging the foreign exchange gap for the Second Plan. This is also where we should appositely express our gratitude to our friends overseas, who have had the unstinted generosity to come to India's assistance at a time when many of them have been facing internal economic problems of their own. But it would be disastrous if the assurance of foreign assistance on an adequate scale were to make us so compla-cent as to disable us in our own strenuous endeavours at self-help. The academic view seems to be that, in the present day world conditions, an underdeveloped country can make no headway in

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

its programmes of industrialisation without a substantial modicum of foreign aid. In my own reading of not only India's potential but proved wealth, I for my part am quite unable to accept such a thesis. For, there is about foreign assistance a certain debilitating influence which can do irreparable damage to our desire to work out our own destiny. Unaided by inner moral compulsion of the desire to stand on one's own legs, foreign assistance can demoralise us completely by destroying al-together the wholesome attribute of self-reliance. Therefore, while I am happy that the foreign ex-change gap is being covered, the manner in which it is being done gives me moments of great uneasi-ness. I put it to the reader that the only self-respecting condition on which foreign assistance on an adequate scale can be accepted is that we should set about intensi-fying our own efforts to earn foreign exchange. Apart from the moral considerations I mentioned earlier, this effort is necessary for two reasons. In the first place, it would induce the confidence in us—that is, if we succeed in our efforts—that, while the external assistance has mitigated our diffi-culties, we were quite able to fend for ourselves. In the second place, it would be the surest indi-cation to our foreign friends that this country is determined to achieve its salvation by its own efforts, and that the foreign assist-ance that we have secured has not lulled us into the feeling that no further effort is required on our part. Export Promotion is thus seen to be at once a moral duty and an inescapable practical task. Already, two years of the Second Plan have been lost, with nothing much to show for it. If the whole economy, in the current jargon, has been passing through a crisis of development, the phrase for the crisis in export promotion is a crisis of paralysis. It is time we shrugged off this paralysis, and prepared ourselves to shoulder something of the responsibilities in the sphere of foreign exchange resources.

In brief terms, it is essential that we set out to achieve a target of Rs 100 crores as additional earnings by Export Promotion, as against a total foreign exchange gap of Rs 1500 crores for the

Second Plan. This is the least we could do for the sake of self-respect. Personally, I would rather that this target was much higher. But, two years have been lost, and realism demands that we scale down our objective to Rs 100 crores. Now, it is no good our taking up a freshly sharpened pencil and a piece of blank paper and proceeding to allocate, as it were, certain arbitrary targets for increased exchange earnings. It is important that the schemes of Export Promotion are practicable. In this light, it is necessary that we have regard for the four criteria which should be satisfied in respect of any commodity whose export we wish to intensify. These criteria were drawn up by Dr D. Bright Singh in a special article in Indian Finance a few weeks ago. The criteria are:

"In the first place, the expan-sion of such industries and the increased exports of their prod-ucts should not seriously affect the pattern or level of domestic consumption."

"Secondly, the expansion should be easy in the sense that it should not involve very much strain on the economy or violent transfer of resources from other industries in the country."

"Thirdly, it is necessary that the exports should have an expanding foreign market."

"Lastly, the prices of the commodities exported should, on the whole, be free from violent fluctuations."

Dr Singh had, in particular, studied the applicability of these criteria to India's "staple" exports of tea, jute goods and cotton tex-tiles. I agree that these are the three most obvious commodities in which we could usefully strive to increase exports. As Dr Singh remarks, "it is not likely that increased production of tea would affect output in any other industry including production of food crops." Largely speaking, there-fore, tea satisfies the four condi-tions, but a fifth in this case is that the price at which tea is available to the overseas customer should be attractive enough to induce him to increase his con-sumption. This fifth condition un-fortunately does not prevail. Far from any expansion in export, India is experiencing a decline in

the offtake of common teas. So much so that the internal price stability is being adversely affected. Government would appear to be quite aware of this sorry state of affairs, but the hint by Mr Morarji Desai, Finance Minister, that some relief is proposed to be given to common teas is not enough. Time is a-wasting and the sooner that the export duties on common teas are reduced, the earlier would India in practice have instituted export promotion in tea. As for jute goods, Dr Singh remarks that "methods of increasing output sub-stantially without much adding to the capital stock are to be found". But it has been the fourth condi-tion that jute goods have been re-currently unable to fulfil. Prices of jute goods have been anything but stable in recent years. The fluctuations have done little good to anyone, except perhaps to the substitute packaging material in-dustries in other parts of the world. Now, however, with the inaugura-tion of a futures market for jute and jute goods, I am hopeful that we shall be seeing the beginnings of practical Export Promotion in jute goods. Lastly, Dr Singh has stated that it is "possible to find an expanding market for the tex-tile manufactures of India in many of the underdeveloped regions of Asia and the Far East which are industrially less advanced than India". But the trouble has been that we have so much of a para-doxical situation in regard to cot-ton textiles. On the one hand, the necessity for augmenting employ-ment opportunities compels us to accord favourable treatment to the handloom sector. On the other hand, the increasing purchasing power in the country has to be discouraged from absorbing fully any increase in the production of the organised mills sector, since it is desirable to have a larger quan-tity available for export. In effect, to both these ends, the excise duties on mill made production have un-fortunately tended to rise. An over correction in respect of dis-couraging consumption has lately induced the Government to effect a reduction in some of the excise duties. In this sphere, Export Pro-motion would lie in a total relief from excise duties in respect of all exports. I know that the industry was permitted to instal a certain number of automatic looms, on condition that the production there-from was to be kept severely apart

for export; hence penal excise duties were to be levied on such production thereof as was sold in the internal market. All this is not enough; what is required is drawback of excise duties, to the full extent of the imposts, on all exports.

Over and above the so-called three traditional exchange earners, there is a fourth, which Indian Finance has reiterated suggested as being the most important and hopeful source of future foreign exchange earnings. This fourth item is iron ore; and the Indian Finance revised Plan estimates of November 1956 placed the additional foreign exchange earnings from exports of iron ore at Rs 125 crores over the Second Plan period.

That target is still within our capacity to achieve, but I am deferring to the next week a fuller consideration of what exactly iron ore means. It has a much larger significance, as I shall show next week, than mere foreign exchange earnings.

I had expected to write this week about the departure from this country of Mr Alexander Izat on his retirement from the Allahabad Bank, but I had not anticipated that my task would also be to record his journey to a country from whose bourn no traveller returns. One day after he had formally relinquished office as Allahabad Bank's General Manager, and three days before he was due to leave for home, death

struck him down with awful suddenness. So has been heightened the shock and the tragedy, and for my part the feeling of desolation is the more. Less than a week before he died, Mr Izat had the kind thought to express his appreciation of what he called "the progressive success of Indian Finance which is now well established as one of India's leading financial publications". Mr Izat was thus not merely my personal friend, but one who identified that friendship with this journal. So, it is entirely correct to say that I feel a personal sense of sadness. But then, who are we to question the will of God? Perhaps, it was thought fitting that Mr Izat, who had spent long years in the service of Indian banking, should lay him-

Indian Finance

self down to sleep in the adopted country of his work. I shall miss him.

Another good friend that Eavesdropper has had retired recently from India. Mr R. E. Castell, who had headed the two Binnys Mills, last week left Madras for good. I wish I could relate here the personal anecdote or two that is customarily part of the scribe's chore on such an occasion as this. But the camaraderie which existed between Mr Castell and me was one in which we did not frequently meet. Mr Castell, away from his country, was in Madras most of the time; and I, away from mine, had Calcutta as my headquarters. But when we did meet, we found pleasure in each other's company, and the relationship was enriched by the high regard and respect in which we held each other. Mr Castell, too, always showed an abiding interest in Indian Finance and its progress.

In this wise has this Journal, during the last week, lost the intimate association of two of its earliest supporters.

There is a third personality to whom India will be bidding goodbye. Mr W. R. Davis, MBE, is to leave India after a quarter century of yeoman service to the Metal Box Co Ltd, and hence to the cause of packaging in this country. Mr Davis, who has been a Director of Metal Box since 1951, has been the Technical Director and Chief Engineer of the Company, but it was inescapable that a man of his experience and knowledge would not be allowed to efface himself completely from his professional chores. For, Mr Davis has to his credit a long 40 years in the packaging industry, and, when he goes to England, he is to take up the management of the Metal Box Company Limited's new production development factory at Swindon. Mr Davis represents an example of the indispensability of the technician, for, it is generally known that, in the phenomenal progress in the development and mass manufacture of a very wide range of containers, Mr Davis has had a central responsibility.

If the exit from the Indian scene of three personalities is slightly less than cheering to write about, I am happy to be able to end on a more pleasant mood. Mr M. J. McLaren has assumed charge of the General Managership of the Allahabad Bank Limited and I welcome his appointment as an eminently suitable successor to the late Mr Izat. Still a young man, Mr McLaren has nevertheless ripe knowledge of Indian conditions. He has a keen and alert mind, a courteous manner, a quick grasp of the fundamentals in banking problems and exudes an air of charm. Under Mr McLaren, the Allahabad Bank Limited should notch up, in the years to come, further fine service in the cause of Indian banking.

EAVESDROPPER

April 12, 1958

THE non-availability of imported shaving blades and the echo heard in Parliament in this regard recently go to indicate the growing complexity of living in comparatively under-developed countries also. There are quite a few such articles which have usurped a place in the daily routine of civilised people. Some of them have got in because of the peculiar conditions of urban life while others have been adopted as a result of the impact of modern ideas. Be that as it may the fact remains that these articles have become inevitable adjuncts of modern life. The list is much longer in Western countries where modern ideas of living have a wider scope on account of the high standard of living.

A natural corollary to the multiplicity of needs of civilised people is the growth of industries which produce consumer goods. Being a lucrative field, the number of manufacturers of every one of these items is so numerous that the poor consumer often finds it quite a job to make up his mind. By and large, however, the individual forms a slightly higher preference for a particular brand than for others and usually goes in for them. But no satisfactory answer will be forthcoming to the poser what has made the individual give his vote for a particular brand. The truth of this statement will become evident if one addresses the question to oneself and tries to frame an answer.

In such a highly competitive field, the consumer goods manufacturers have to be ever active and vigilant if they are not to lose ground. The articles they want to sell have to satisfy many conditions before they can gain a fairly stable place in the housewives' list. A glance at a newspaper, a drive round the city, a visit to an exhibition of consumer goods, a visit to the picture house and a general observation of things in our environment will give us a fair idea of the wide variety of methods adopted by the manufacturers of consumer goods to put themselves in the good books of the general public.

Some time ago I had to go to a far off village all of a sudden without any preparation for the trip. For the first few days I was completely paralysed as I missed quite a number of items like my favourite brand of toilet soap, toothpaste etc. The brief sojourn has served to remind me that several items of consumer goods have become part and parcel of city dwellers. With my attention thus having been only recently focussed on consumer goods of every day use, I read the speech of Mr S. H. Turner, Chairman of the Hindustan Lever Limited, at the annual general meeting of the shareholders of the company with

Marketing Research

more than usual interest. I dare say it has been quite rewarding in that it has revealed to me that selling a product, however good it may be, is no easy matter. But for his occasional reference to his company's products, Mr Turner's speech is a layman's guide to marketing research as applied to the business in consumer goods.

Marketing research plays a vital role in the development of the business of Hindustan Lever. "All our decisions on the improvement of existing products or the development of new ones, the adoption of new selling methods and the application of new advertising techniques are the more effective for being taken in the full and intimate knowledge of our markets, which continuous research into these markets is designed to provide."

The primary task of the manufacturer is to find out how he can make his products acceptable to the greatest number of people for the simple reason that mass production is an effective method of ensuring economical working of his enterprise. Hindustan Lever does this by choosing a representative sample of the general consumer public in the country and questioning them on their opinions about their preferences. The task is not as simple as it appears to be. For a good deal depends on the type of questions put. Mr Turner points out that "the framing of our questions to ensure that the respondent is not tempted to disguise his true feelings calls for great skill". He gives a number of examples to prove the difficulties in the way of framing questions. For instance, the toothpaste manufacturers in the foreign country referred to by Mr Turner would have found themselves in an unenviable position if they had increased their production on the basis of the claim made by the consumers. In this instance it has been found that if everyone cleans his teeth as frequently as has been claimed the supply of toothpaste in the country will have been found to be much less than the demand. It is evident therefore the task of getting at the general preferences requires new techniques and Hindustan Lever has devised and is consistently devising new methods such as informal meetings of groups of housewives etc. The aim of the various methods is to pierce the "shynesses, reticences, resistances and subconscious blocks" and get at the factors influencing the decision in buying a product. It is interesting to note that marketing research has shown that factors which have nothing to do with quality, price or other characteristics of the product concerned also influence its sale. For instance it has been found that "women are quite allergic to advertising that sug-

gests that some new product will save them a lot of time in the kitchen because they feel that is the capacity as home-makers that gives them their prestige in the family; if making a home is made too easy, what will happen to the respect their husband and children feel for them?" Similarly it has been found that many of the prejudices against Dalda stem from factors which have nothing to do with the product at all.

Marketing research thus gives a fairly reliable idea about the prospects of the products in various regions, the consumer preferences, habits and attitudes. The results naturally influence greatly the decisions on the marketing side. Research enables the company to know the shape of the market and a clear picture of the market for its products is also made readily available. The company knows the region wise sale of its various products, and also knows why such and such a product is strong in a particular region. The research results will enable the company to carry out the necessary adjustments in its distribution and advertising. Mr Turner, however, points out that Marketing Research is not a panacea for all the problems of the sales department. He illustrates this by pointing to the difficulty in designing a toilet soap which will satisfy all the preferences. Marketing research has shown that "when people buy a toilet soap they look at almost anything except its capacity to clean—the luxury of its appearance, the purity of its colour and above all, the pleasantness of its perfume". It has been found that is beyond marketing research to define each and every one of the preferred qualities in clear-cut terms. In such cases it has been necessary to supplement the findings of marketing research by personal judgment.

Social and economic changes also play an important part in shaping the business. The manufacturer has to keep in close touch with these changes because these bring in their wake new communities wanting its products. Marketing research coupled with a study of the social and economic changes is also essential for the continued prosperity of the concern. The manufacturer must not only be vigilant about current needs but should ensure that his products are dynamic in the sense that they incorporate from time to time the changes in the changing consumer requirements and habits.

Market research plus personal judgment gives a fair idea of the product that is required. Then an article is produced incorporating all the desired features. But the main task will still remain to be done. It will be no good unless it is bought by a large number of

people. The public must be told that the product is exactly what it has been waiting for. It is of course essential that the manufacturer is satisfied that his product "will both do a good technical job and will also satisfy the desires, or prides which the public wants it to satisfy". The job of telling the public is most efficiently done by advertising as Mr Turner says "all consumer goods manufacturers must spend a lot of money on advertising, particularly in India, where advertising has not only the task of trying to sell a particular brand of product against its competitors, but may often be required to introduce the product-type as one which is a necessary part of a higher standard of living".

One of the main functions of marketing research is to find out why people buy and what influences them in their choice, as the success of the other steps and ultimately the success of the concern itself depends on how correct is its answer.

In view of the limitations of the direct methods of questioning the consumer to provide all the required answers, Hindustan Lever carries out widespread product tests before launching a product. Starting with the results obtained from Marketing Research, the company draws up a list of the qualities which approximate to the preferences of the public. Then sample products with the alternative qualities are prepared and tested.

Marketing Research has shown that there are no hard and fast rules governing the sale of a product. A product is bought sometimes to regale the consumer's resentment against "a world which is narrower and more difficult than it was before the war". And again there is the case of the housewife who is prejudiced against a product for a quality which the manufacturer thinks should qualify it for universal acceptance. The manufacturer may also be misled sometimes by some generally held beliefs. It is often found that a product which is expected to be popular with a certain section of people goes almost unnoticed by that section but is preferred by another section with whom its sale prospects have not even been considered by the manufacturer.

Marketing research techniques can also be applied with profit in directions other than sales promotion. They have been found useful by Hindustan Lever in arriving at a rough idea about the size of the groundnut crop which has an important bearing on the raw material cost of the company from year to year. As official estimates are usually available quite a considerable time after the start of the buying season, the company's own assessments of the crop provides a valuable guide to its buying policy of groundnut oil and seed.

"...and a bonus of goodwill to the management —for installing the 'Tushar' WATER COOLER!"

QUICK DIVIDENDS in improved staff relations — and greater efficiency! That's what investment in a TUSHAR Water Cooler brings you.

The TUSHAR provides a constant supply of cool, hygienic drinking water for your staff and clients. It's easy to operate and most economical to run. Why not get in touch with Voltas Limited, and order a TUSHAR now?

Tushar

WATER COOLERS

A modern must for factories, offices, schools, hotels, hospitals and colleges

With the TUSHAR you get

- A continuous supply of instantly-cooled water at the touch of a button — no unhygienic refilling or storing.
- A choice of two handsome models.
- Ease of installation.
- Economical to run.

Cotton Textile Industry

The enthusiasm with which the recent announcement regarding the reduction of the rates of excise duty on all varieties of cloth has been greeted seems to have yielded place to guarded optimism in the past few days. While the concession has been generally hailed as timely help to the long suffering industry, there is a section of opinion which has been maintaining that further help will be needed to put the industry on an even keel. Such a view seems to have gained further strength during the past few days because offtake of cloth has not yet recorded the expected improvement. In this regard it is also to be noted that the reduction of excise duty cannot be considered to be the panacea for all the troubles of the industry.

Delivering the presidential address at the annual general meeting of the Ahmedabad Mill-owners' Association last Saturday, Mr Arvind Narotam has indicated the other outstanding problems confronting the textile mills in Ahmedabad in particular and the cotton textile industry in general. Mr Narotam thinks that the reduction in excise duty ought to prove a turning point for the industry but he has also pointed out that if by any chance the expectations as regards disposal of stocks do not materialise it will be incumbent on Government to adopt such appropriate measures as will firmly check the crisis in the industry.

That the crisis in the industry has stemmed directly from the steep increase in the excise duty in September 1956 is now accepted even by Government. The resultant high price of cloth met with stiff consumer resistance which was aided to some extent by the rise in prices of foodgrains. In the past fourteen or fifteen months there has been a steady deterioration in the position of the industry. The stocks of cloth with the mills have recorded a continuous upward trend. With the credit squeeze, consumer resistance in the domestic market and the severe competition in overseas markets, the majority of the units in the industry have found it extremely difficult to meet even day to day commitments. The plight of the smaller units has been pitiable and in many instances the result has been closure. Mr Narotam has said that nearly 25 mills have closed down resulting in the unemployment of about 25,000 workers. Production of cloth has also received a setback. Production of cloth in the country in February 1957 was placed at 332 million yards and "was the lowest for the corresponding month in any of the last five years".

It would appear that in the present context of the need for large funds Government will have no

other alternative but to continue the high level of taxation. Mr Nehru has made it clear that the taxation structure is inevitable and will continue to be inevitable. By granting relief to the cotton textile industry Government have shown that they are quite sympathetic toward private enterprise. But it has often happened that a relief in one direction is nullified by the imposition of other levies or the withdrawal of existing concessions. For instance after the replacement of sales-tax by excise duty on cloth, the Government of Bombay have decided to withdraw the concessions granted in respect of sale-tax leviable on raw material, machinery, packing materials etc purchased for use in the manufacture or processing or packing and to charge general sales tax on such materials. As a result, of the withdrawal of the concession the mills in Bombay have had to bear an additional burden of one crore of rupees per annum. As other units of the industry outside the Bombay State are not subject to this fresh levy, mills in Bombay State will be handicapped.

The drastic import cut has also considerably added to the difficulties of the industry. In the name of conservation of foreign exchange the genuine needs of a major industry have been grossly ignored. Authority seems to have completely forgotten that the cotton textile industry in our country can remain healthy only if it keeps in step with its development elsewhere in the world. In order to ensure this it is essential that its machinery and equipment are up-to-date. The import restrictions have rendered it extremely difficult for the industry even to obtain essential spare parts.

Sooner or later the industry has to come to a decision on the question of automation. For unless it keeps pace with the modern trends toward automation it will be left behind in the international markets. The argument that automation will result in unemployment has long been disproved. It is no doubt a matter for the amicable settlement between labour and capital but it is good for all concerned and the industry that both the parties realise the importance of an early decision on the matter.

Prohibition

Perhaps the main reason why Prohibition has been encountering severe criticism in recent years is the continued use of liquor and other alcohol preparations in Prohibition areas even though the ban on liquor has been in operation for over eight years now. It is, however, gratifying to note that the State Governments who have already ushered in this reform are firm in their resolve to continue the good work.

Inaugurating the Prohibition Week in Bombay Mr Sri Prakasa has rightly pointed out that the fact that Prohibition has failed in other countries should not discourage us in this country. For in the first place the background here is different in that that traditionally drink is considered an evil and has been held so by all the major religions of the country. Another significant factor is that intoxicating drinks have rarely found their place into the Indian home. These factors still favour the Prohibition policy. There are no doubt, a number of difficulties in its implementation. Government are experiencing difficulty in obtaining the active cooperation in the field of enforcement. It has been found that people are not readily coming forward to give information of Prohibition offences. This reluctance of the people to volunteer information has also been one of the reasons for the continued prevalence in some areas of illicit distillation.

While it is true that there are setbacks and sometimes even an increase in illicit distillation, it is not correct to conclude that the policy as a whole has failed. Leaving aside the question of addicts, it is to be noted that the younger generation has been almost completely saved from the drink evil. No one can deny the great benefits that prohibition has brought to the poorer sections of the people who were former addicts. These people who were previously frittering away almost their entire income are now able to spend their wages for the benefit of their family. Eight years of working of prohibition has shown that the enforcement of the law alone cannot bring complete success to the programme. What is required is that Government's efforts should be supplemented by a strong public opinion in favour of prohibition.

Parliamentary Democracy

Addressing a meeting of the Democratic Research League in Bombay this week, the Bhoodan Leader, Mr Jaya Prakash Narain, stated that of all the different forms of democracy, parliamentary democracy was the best in spite of its short-comings. To those who have been watching his activities, in the recent past this may seem rather inconsistent with what he had said in his earlier speech, in New Delhi, some months ago, expressing doubts about the suitability of parliamentary democracy in the country. Since then he has been considered as one among those who have been drifting away from their faith in the parliamentary system of government.

Mr Narain's specific complaint with parliamentary democracy was that it tended to stifle the growth

of the individual by its inherent tendency towards centralisation and that in its working it did not reflect the wishes of the people. Therefore he wants parliamentary democracy to be improved by devolution of authority to the village communities. His ideal is a society organised on the lines of Sarvodaya principle of self-sufficient village communities who would look after almost their entire affairs including food clothing housing and even settle their own petty problems and disputes. Thus he is a minimalist so far as State Control is concerned and wants the State to be responsible for only such affairs as managing railways, posts and telegraphs and constructing major projects.

As an example of such communities he cites the instance of the 200 families in Vile Parle, a suburb of Bombay where according to him the people have made a small beginning in community life by resolving that no one among them would go without medical aid and no child among them would go without education. In this connection he criticises the tendency among the people to depend on the Government too much for solving their problems.

Calcium Carbide Industry

Though the Calcium Carbide industry is enjoying protection since 1956, its progress in the last two years has not been satisfactory. Production of Calcium Carbide which stood at 2890 tons in 1956 shows only a small increase at 3,596 tons in 1957. There is only one unit which is producing this article on a commercial scale. Calcium Carbide is in great demand from the iron and steel industry. Other industries which require it are plastics and synthetic organic chemical industries. With the rapid expansion of industry in general and the iron and steel industry in particular the demand for calcium carbide will record a further increase. There are plans for expansion of the existing units and also to set up new plants. It is estimated that when the expansion programme has been fully implemented, the installed capacity of the industry will rise to about 40,000 tons. At present the demand for the commodity is largely met from imports.

Opening the public inquiry into the continuance of protection to the industry in Bombay early this week, Mr K. R. Damle, Chairman of the Tariff Commission, has pointed out that the calcium carbide industry has a bright future as the demand for the commodity is bound to increase sizably with the completion of the steel projects.

WORLD OF COTTON

IMPORT houses in Bombay were, for long, awaiting the Government's announcement with regard to quotas for imports of cotton from the sterling area countries. The Government of India have now decided to permit the import of 30,000 bales of cotton stapling of 1 3/16" and above from all soft currency areas. This decision, though belated, has been generally welcomed by the spinners of superfine counts, who cannot use any cotton other than these imported varieties as it affects the quality of yarn produced by them. It appears that the authorities had decided to import about one lakh bales; but the present decision to allow imports in piecemeal is perhaps with a view to taking advantage of prices obtaining abroad at present.

Cotton from the sterling area has already gone cheaper by about Rs 300 per candy during the past few months. In an attempt to outbid each other, both Sudan and Egypt have now reduced their export duties. Egypt has already raised the discount rate to Indian mills by 8 per cent to 21 per cent. This has made Egyptian cotton cheaper than Sudan by about Rs 25 per candy. Importers feel that the present is an opportune time to enter those markets and that the current world price trends will help the Indian textile industry to improve sales of fine and superfine cloth.

The above decision by the Government has come at an opportune time and mills from Ahmedabad are eager to enter the African markets for their requirements of higher-staple cotton. Business to the tune of 20,000 bales is reported to have been already put through, subject to licences. Importers are, however, expected to go in mainly for Sudanese cotton on account of its relative cheapness and the availability of last year's good quality stocks.

In this connection, it will be interesting to study the trend of cotton imports. The quantity licensed for import of foreign cotton into India, during the first six months of the current season, aggregated 160,347 bales, while actual arrivals amounted to 185,174 bales. It may be recalled that only recently a fresh allocation of 70,000 bales of East African cotton was announced. At the present average monthly rate of consumption of about 50,000 bales, requirements of mills come to 6 lakhs bales for the whole season. The carry-over of foreign cotton, at the beginning of the present season, both with the mills and the trade, was 2.90 lakhs bales. This, together with the actual arrivals of about 1.85 lakh bales and the expected arrivals of about 1.70 lakhs bales, will bring the total supplies to 6.45 lakhs bales.

More Import Quota

Although this may be just sufficient to meet the normal consumption of mills during the current season, it will leave a very negligible carry-over at the end of the season or none at all. But, the present decision to allow more imports has saved the situation.

FUTURES MARKET:

Meanwhile, prices in the cotton futures market developed a sagging tendency under unabated selling pressure. The sharp fall was attributed to the delay in the announcement of an export quota for cottons of staple length 3/4" and below, stocks of which have started accumulating, while the demand from mills has not been encouraging. As against this, the price level for good quality cotton in the terminal markets has also started falling which has its effect on the futures market. ICC Jharilla May moved down to Rs 663.25 and August delivery to 671.50 after opening at Rs 674.50 and Rs 681 respectively.

SPOT MARKET:

Conditions in the Spot section ruled easy with prices declining moderately, reports of increased arrivals in the Southern markets influencing sentiment. Since many mills have already covered their requirements, the market is now facing a shortage of buyers. Moreover, the textile situation has not fully improved as some units are still complaining of an accumulation of cloth stocks. To make matters worse, spinners from the South are reported to be inclined to cut their yarn production by about 25 per cent.

In the export section, only moderate demand was noted for Oomra Deshi. Shippers were reluctant to go in for any business as they were still sceptical about the export announcement. Many of them were busy finding overseas buyers for Bengal and other varieties, which were allowed for export last month.

CROP REPORT:

Reports from upcountry centres have indicated that the season is gradually coming to a close in many parts of the country. Arrivals in Gujarat and Saurashtra are reported to be still good. Activity in Madhya Pradesh, Rajasthan and Gaorani areas is, however, considerably declined. The season has started in the South; but arrivals in the principal markets are still not very heavy.

NEW YORK COTTON MARKET:

After a sharp setback at the commencement, prices on the New York futures market became steady,

being influenced by the demand in nearbys and short-covering in new crops finding offerings limited. Middling Spot was quoted at 36.05 cents per pound.

The Agriculture Department, Washington, has announced the sale of 69,448 bales of United States Government-owned cotton. This cotton was sold for unrestricted use. The price paid is not revealed; but probably close to the domestic cash price. Bids for the next sale of cotton for unrestricted use will be received on April 14.

CLOTH AND PIECEGOODS

Activity in the Bombay cotton Piecegoods market improved substantially and demand from the consuming centres broadened consi-

derably; but prices remained unchanged. Interest was evinced in almost all varieties of cloth, being more pronounced in superfine, fine and medium qualities. Enquiries for coarse varieties were, however, reported to be subdued.

Although appreciable relief in excise duties has been given to the units producing superfine, fine and coarse categories of cloth, market circles say that no relief is given to the mills producing medium cloth except for sarees and dhoties. As the bulk of the manufacturing units are producing medium category of cloth, where ample relief is not given, it is feared that the crisis facing such mills will not be averted by the relief already announced by the Government.

A new level of excellence in fan design

Here is the fan that combines beauty, comfort, performance and durability that every one looks for. Orient Fan, replete with many features, is a technical masterpiece—a result of a new level of excellence in design and technique that is achieved by the vast funds of engineering 'know-how' accumulated over the years.

Its pressure die cast, dynamically balanced rigid rotor, complete die cast casing, centreless ground shaft, stove enamelled paint are the reasons for its remarkable performance and incomparable finish.

Here is the fan created by Orient's highly skilled technicians backed by their modern designers, tool engineers and other specialists to meet the exacting demand of the users all over the country and abroad.

Years ahead in look and performance

BOMBAY REVIEW

Business in Non-Ferrous Metals Regulated

THE Government of India have issued an order regulating, with immediate effect, the purchase and sale of Non-Ferrous Metals, viz., copper, zinc, lead and tin, in different forms at a price not exceeding an amount, represented by an addition of 3½ per cent to its landed cost. In the first instance, the order will apply to imported copper only. The Government may, however, extend the order to cover any other imported non-ferrous metals by notification. The order requires importers to notify to the Controller any quantity of a non-ferrous metal imported or cleared after April 3, 1958.

The price control has become necessary, because of the steep artificial rise in prices, especially in copper, which is now quoted around Rs 176 per cwt, while the landed cost is reported to be only Rs 128.

In fact, the Government have been forced to step in and take the above action, because the importers of copper and other non-ferrous metals failed to implement the solemn undertaking given by them not to charge more than 3½ per cent on the landed cost. It is gathered that importers and traders had already sold substantial quantities of copper on forward shipment basis. Doubts have been expressed whether these contracts will hold good in view of the present order by the Government.

The country's requirements of copper are estimated around 45,000 tons per year, while the Government have granted licences to the extent of 24,000 tons in addition to imports of copper to the extent of 7,500 tons under the Colombo Plan. The country's output is placed around 7,000 tons. Even then,

there is a deficit of 6,500 tons. The supply and demand position in the case of other metals is said to be manageable. Zinc is quoted at Rs 51; Lead at Rs 63 and Tin at Rs 129 (per quarter).

Under the Colombo Plan, Canada has agreed to supply 10,000 tons of aluminium; 7,500 tons of copper and 500 tons of nickel to India. Imports of these metals, the value of which will be Rs 5.75 crores, are to be completed as early as possible. The allocation of funds for these quantities of metals is based on the current prices. In case prices go up, the quantities to be supplied may have to be modified to keep within the total allocation. The actual consumers of these metals are to be allowed to import the allocated quantities. They will be given the option of indicating the prices on the basis of average (London Metal Exchange) prices for the month of shipment or the LME price prevailing on the date of shipment.

On the London Metal Exchange, Copper is quoted around £176½; Zinc at £62; Lead at £72½ and Tin at £730 (all per ton).

★

Oils & Oilseeds

Prices in the Oils and Oilseeds markets showed a mixed trend. Castor seeds suffered a sharp landslide under heavy selling by a prominent speculator to the tune of 15,000 candelas. The absence of anticipated relief in castor oil export, and the continued silence on the part of the UK and USA were also contributory factors. Rumours of business in castor oil with Russia periodically pepped up the market, but failed to bring about a significant change, in sentiment since the rumours could not be confirmed. At the same time operators were not in a mood to take an aggressive bearish trend in view of the insufficient arrivals in the major producing areas. May delivery finished at Rs 150.87 after touching a high of Rs 153.75. Ready rate was quoted at Rs 30 and Castor Oil commercial quality at Rs 15.69.

[At the time of going to Press, it was learnt that the Government of India had decided to reduce the export duty, leviable on Castor Oil, from Rs 175 to Rs 100 per ton and, on Nigarseed, from Rs 150 to Rs 50 per ton, with immediate effect. The reduction in the export duty on Castor Oil had no marked effect on castor futures as operators were all along hoping for a total abolition of the impost. From the export angle, the measure is not expected to bring about any significant change in the country's position in world markets. Exports to the US will continue to be impossible, while the outlook is stated to be less discouraging as far as business with the UK is concerned. The reduction in the export duty on Nigarseed has almost been ignored since Indian prices conti-

nue to be higher by at least £7 per ton even after the relief. Besides, Bombay does not have enough supply to think of exports]

The Groundnut, section ruled comparatively steady, reflecting continued support from crushers. With the season approaching its end, the inflow of ready groundnut declined noticeably at terminal centres, while the demand from vanaspathi manufacturers remained satisfactory. May delivery changed hands at Rs 164.12 to Rs 164.62, while the ready rate was quoted at Rs 33 for the bold quality and Groundnut Oil at Rs 18.06.

Prices in the Linseed section were confined to a narrow range. May delivery moved between Rs 30.62 and Rs 31.06, while ready rate was quoted at Rs 33.44 and Linseed Oil at Rs 16.25.

In the Cottonseeds section, May delivery, after opening at Rs 108.50, eased off at the close to Rs 108.00.

★

Gold & Silver

The Bombay Bullion Exchange maintained, on the whole, a very steady undertone. In the initial dealings, Gold eased for lack of support, but short-covering, aided by better off-take, paved the way for a partial rally at the close. Forward delivery opened at Rs 111.75 and, after touching a low of Rs 111.56, improved towards the close to Rs 111.94. Ready changed hands at Rs 111.75 to Rs 112, while Sovereign was rather quiet at Rs 70.50. Arrivals and off-take amounted to 3,000 and 5,000 tolas respectively.

Although sentiment in the forward Silver section was generally depressed, encouraging spot advice checked the decline. Arrivals and off-take were estimated at 14 and 15 bars respectively. Forward delivery changed hands at Rs 195.44 to Rs 195.69 and ready at Rs 197.25 to Rs 197.56.

★

Yarn

The Yarn market was extremely disappointed at the continuation of the ban on imports of Art Silk Yarn through traders for another six months. There was, therefore, a sudden around improvement in prices on fears that the scarcity of Viscose yarns would be acute in the coming months.

Staple-Fibre yarns moved up in sympathy. Earlier expectations of the Government liberalising import of this yarn for the current six months having not materialised, most operators preferred not to part with their goods.

Trading in the Cotton Yarn section, however, remained listless in the absence of any support. Reports from South India have indicated that many spinners have inclined to cut production by 25 per cent.

Mr Nehru's Press Conference

AT the best (or worst?) of times, your correspondent cannot complain of absence of significant news from the Capital to comment upon. His problem, on the other hand, has always been one of selection. This week, this problem has assumed the proportions of an embarrassment of plenty. It is not as though some of the items will keep. For instance, there is the ill-fated Graham Report on Kashmir. Though it is depressingly familiar in its being another attempt at chasing shadows, leaving the substance well alone, it has to be dealt with since Kashmir is one of our problems with international complications (mostly, as some would say, of our own making). Secondly, there were Congress leaders shaking their heads worriedly over the state of their party discipline in the States. There were the usually colourful exaggerations about the precise degree of the party parousness—some went, reportedly, to the extent of comparing it to the state of the Wafdists in Egypt before the present regime took over. Slightly farther from home, there was the announcement by the Soviet Union of its unilateral renunciation of nuclear tests, and the woefully routine reaction of Mr Dulles thereto. Whether propaganda or a genuine gesture of peace, the credit of having been the first to take such a momentous step, in however qualified a form or fashion, cannot be denied the Russians. Anyway, it is a subject that should any day qualify for comment from any one whose duty it is to be a sounding board to opinion in the Capital.

And finally, as a sort of last straw, one of the perennial subjects that correspondents keep for lean days has cropped up in a rather sharp form in a week that is already over-crowded. I refer to the subject of "After Nehru—Who?", or, as some gloomy people put it, "After Nehru—What?" Fortunately, there is a sort of focal point from which all these questions can be viewed. Mr Nehru addressed a press conference last Friday in which all these subjects came up. It should be possible to deal with them in brief by taking the cue from the PM.

It was the PM himself who has given rise to animated discussion of a substitute for him. As usual, the position is tantalising. Arising out of a question regarding his recent feeling of "tiredness", given expression to in his letter to the Chief Ministers, Mr Nehru clarified the position by saying that he was healthy enough in body, but that he was feeling "rather flat and stale" after more than a decade of office. He thought he needed "freshening up". Some dark hints from correspondents, of hopes in the right wing circles of Congress that Mr Nehru's retirement would

make things easier for them, brought the prompt reply from the PM that the opposite result might follow from his retirement. If the right wing really does think that Mr Nehru is the person who is encouraging left wing extremism in Congress thinking, it must be very pitifully ill-informed. It is Mr Nehru who is keeping the ardour of the more starry-eyed among his followers in some control. The centrality of Congress socialism is very much Mr Nehru's creation, and it would be a sad day when right wing miscalculation plays into the hands of the extremist elements in the Congress and the country.

An error of the opposite sort by those whom, for lack of a better word, we must call radicals, has equally short shrift from Mr Nehru. Some fanciful comment that Mr Nehru's "staleness of mind" was responsible for his stand on Hungary and the Chagla inquiry and so forth elicited from Mr Nehru the sharp retort that his stand on these matters revealed, on the contrary, a "freshness of mind". It is easy enough to see how the criticism of the two extremes cancels each other out. In any case, to equate freshness of mind with an uncritical radical enthusiasm is a gross improper use of words. However evocative of youth the notion of fresh mind may be, it would be wrong to equate it to a green mind. Maturity, though evocative of autumn, can and should coexist with freshness. And that is the whole point of Mr Nehru's comments on staleness and flatness. He feels that, for the kind of creative tasks he has to perform, he needs all the resources of the human mind. Maturity is certainly one such attribute. And a second attribute is a capacity for thinking in a way different from the routine way in which the best minds are in constant danger of slipping.

Mr Nehru did not disclose, or perhaps has not made up his mind about, how he was going to get his freshening up. There has been a lot of speculation about how he was going to do it, and suggestions of how he should do it. One suggestion is a long holiday, with only the important decisions being referred to him. Another is that he should divest himself of all formal responsibilities except that of the Prime Ministership, and concerning himself only with the function of coordination. A third suggestion is that he should take over the Congress organisation, leaving some one else as the Prime Minister. This suggestion finds favour with people who take an extreme view of the ill health of the party, and who think that only Mr Nehru can bring back to it some of its earlier vitality. Present indications are that, whatever Mr Nehru does, it will not be theatrical and spec-

tacular. It may be that he will have a Deputy (a post that was abolished after Sardar Patel's death) and divest himself slowly of those aspects of his work which are merely of a routine character. Anyway, the whole subject of a second line of leadership is now ripe for serious consideration.

Mr Nehru tended to make light of the "crisis" in which the Congress party was now finding itself. He said amidst laughter that it has always been in the middle of a crisis, and advised his listeners to read some of his letters to Gandhiji in the thirties. It was, however, clear that the Congress leadership is seriously exercised about the unseemly way in which petty squabbles and personal rivalries and factional considerations manifest themselves in the activities of the regional party politics. It is reported that the discussion was more searching than the announced decisions on party discipline indicate. The Congress, as the party in power for over a decade, has to contend with the inevitable unpopularity of those in power, not to mention the kind of "staleness and flatness" that Mr Nehru mentioned in his personal context. The time has come to set this tendency right. For, the next elections are only three years away.

On the question of Kashmir, Mr Nehru was completely forthright. Any approach to the Kashmir problem which sought to put Pakistan, the aggressor, on a footing of equality with India, the aggressed, would be unacceptable. Mr Nehru also ruled out a meeting between him and the Prime Minister of Pakistan for two reasons. First, such meeting can be held only if there were any possibility of any useful discussion. With Pakistan and its leaders taking the tone they have been in recent months and years, such an atmosphere for useful discussion does not exist. Secondly, Dr Graham's suggestion is that the two Prime Ministers should sit on either side of him, and he acting as a sort of umpire; totally unacceptable. It will be seen that Dr Graham is still hamstrung by a past that has no relation whatever to the present, and he is trying his ingenious best to evolve a solution within a framework that will not work at all. The rejection of his proposals was, therefore, quite inevitable. It is not unlikely that this rejection by India will be followed by a spate of comment from Britain and the US about the unreasonable and intransigent attitude of India in the matter. But these are comments that we need not take seriously, because they are either partisan or ill-informed about the true nature of the problem.

Mr Nehru touched on a number of other questions, as is his wont in such press conferences. On the

subject of Russian gesture in the matter of nuclear tests, he hoped that the decision was an irrevocable one, and that other countries would follow suit. He deplored the supply of nuclear arms to West Germany, and said that the Rapacci plan for a neutral zone deserved serious consideration though, admittedly, it would not solve all problems. About the significance of the ascent of Mr Khrushchev to the top of the Soviet hierarchy, Mr Nehru was rather non-committal. But he seemed to believe that Mr Khrushchev's success represents the continuance of the liberal trends in Russian politics brought about by pressure from below and at the top. On Indonesia, the other international event he touched upon, he was very cautious, and beyond saying that his information was that some of the arms supplied to the rebels were from Formosa, he did not comment on the charges and counter-charges.

On the language issue, on which also he was asked to comment, he reiterated his earlier view that nothing should be done without willing cooperation from others, and that there should be no rigidity in regard to dates and so forth. But he stuck to the original view that the Constitution needs no revision. He spoke persuasively about the need for cultivation of English in the coming generations and the role of the regional languages in the future set up. But he fell into the popular error of equating official language with the National language, and said that "it was beyond my most distant conception that English should be called the National language of India". Now, Mr Nehru is boxing with shadows here, for, it is nobody's case that English is our National language. All that Rajaji says is that English should continue indefinitely to be used for the official purposes of the Union and for inter-state correspondence where the States desire it. There may be room for controversy whether this should be permitted indefinitely. Mr Nehru himself has no particularly rigid views about it, except that it should be allowed to continue only as long as the non-Hindi people desire it. But clarity in controversy is not gained by not defining our terms and loosely equating National language (whatever that may mean) with official language, whose import is clear.

I might add here that Rajaji has been proved right in the campaign that he waged for unilateral renunciation of tests by the nuclear powers. There is always something of the weird hunch in all of the elder statesman's campaigns, and it is certain that his stand on the language question will in due course be found to be impeccably correct—even by those who oppose him today.

With the encouraging trend in the production of coal in the country, the prospects for realising the targets for coal production in the Second Plan have improved considerably. While production in the private sector had increased from 33.8 million tons in 1955 to 38.20 million tons in 1957, production in the public sector increased from 2.8 million tons to 3.38 million tons. In percentage terms the increase was to the tune of 4.35 per cent in the private sector and 21 per cent in the public sector, the overall increase in coal output being 14 per cent. The increase in the production from the Singareni collieries was from 1.5 million tons in 1955 to 1.92 million tons in 1957.

The target for coal production in the Second Plan has been fixed at 60 million tons and the gap in production is therefore about 20 million tons. The yearly increase needed to attain the target during the next three years, is a little over 6 million tons. Considering that the increase during the last two years was only of the order of 6 million tons the problem of achieving the target of about 20 million tons in the next three years looks more difficult than would be admitted. But the Minister for Steel, Mines Fuel, Sardar Swaran Singh is confident of the target being realised, and has given an assurance that every possible step would be taken to ensure the realisation of the target.

In the course of his speech in the Lok Sabha, Sardar Swaran Singh also stated that the target for coal production for the Third Plan has been provisionally fixed at 100 million tons. Development of new coal fields such as Korba, Korea and others, according to the Minister, would ensure the achievement of this high level of production. The Minister also dispelled pessimism about the availability of technical personnel and stated that the question of availability of technical personnel is being examined.

In the interest of balanced regional economic development it is necessary that development of the fuel resources of the South be given high priority. The Singareni collieries and the lignite project in Neyveli hold great potentialities for starting heavy industries in this region and for putting the Peninsular region on a level with the other industrialised areas of the country. The Minister's indication of the possibility of setting up few more steel plants in the South is in this context reassuring.

Rice Supply

A few of what Mr. A. P. Jain, the Union Food and Agriculture Minister, has disclosed as the prevailing uneasy position in regard to the availability of rice in the country, possibilities of improving the supplies position in

regard to food would seem to be limited to the substitution of wheat for rice in States suffering from a shortage of rice. Three-fourths of the food shortage of West Bengal is expected to be met in this way.

The difficulties in the supply of rice chiefly arise from the inability of the Burma Government to supply rice to India to the full limit of its commitment, consequent on the failure of rice crop in Burma. Only 2½ lakh tons of rice are expected from Burma as against 5 lakhs tons originally agreed upon between the two Governments. Though purchases from other countries could make up for the shortfall in the supplies failure of rice crops in various parts of the country which in the case of Bihar was as much as 40 per cent of its rice crop seems to have widened the gap in the internal availability of rice. The shortfall in the production of rice has been estimated at about 3.5 million tons.

However the position in regard to wheat is considered bright, present stocks in the two States of Uttar Pradesh and Bihar being estimated at 50,000 tons and 2 lakhs tons respectively. The stock position in respect of wheat is further expected to be improved with the import of wheat from the United States under a fresh agreement for which a proposal has been mooted at present. The overall position in regard to food for the coming year is therefore considered satisfactory. The improvement is reflected in the present position in regard to stocks of both rice and wheat with the Government. As against a stock position in January 1, 1957, of little more than two lakhs tons of rice and wheat, on March 15, 1958, the stock position according to Mr. Jain was 1,471,000 tons of rice and wheat, of which rice alone amounted to 4,14,000 tons.

The need for improving the machinery for the procurement of foodgrains from surplus areas is also obvious. The setting up of an extension wing in the Food Ministry to keep in close contact with the State Governments, to arrange timely supplies and to cut down delays in sanctioning would contribute greatly to the efficiency of administration. Measures for efficient procurement are more important for rice than for wheat in which the supply position is relatively easier.

Sugar Industry

With the disappearance of the abnormal conditions in the world sugar market which ruled in the last year and the consequent lowering of world prices for sugar, possibilities of India selling sugar in the world market without loss have receded. Exports in such circumstances can be envisaged only on the basis of a reduction of

the Indian prices to the competitive rates ruling in the world market which would necessarily involve considerable loss to the indigenous industry.

Speaking at the 25th annual meeting of the Indian Sugar Mills Association, Mr. A. P. Jain stated that at the present level of prices India could export only at a loss of ₹20 per ton. The desirability of sugar exports in spite of the loss this involves to the industry rests on the need to retain market captured last year which might otherwise remain inaccessible for future occasions. The argument for maintaining exports of sugar is also strengthened by the need to accumulate foreign exchange in which unexpected difficulties have been experienced. Realisation of foreign exchange from export of sugar last year was to the tune of ₹12 crores.

In presenting the case of the industry for permission to export at a loss, Mr. Balmokand Shah Sawhney, has pointed out that export at a loss is not a phenomenon peculiar to India and that subsidization of export of sugar is almost the rule in most of the sugar exporting countries. While subsidy as a short-term measure could certainly do much to stabilise the conditions of the industry, to argue for subsidy on a permanent basis is only to take a complacent attitude on the scope for improvement of the conditions of the industry in the country. In this connection Mr. Jain himself has indicated that the gap between world and the Indian price for sugar cane be narrowed by about ₹4 to ₹6 per ton if only the Indian manufacturers produce sugar which satisfies the requirements of foreign buyers in regard to standard and quality. Production of bold grain sugar would in this connection seem to hold great possibilities.

Ultimately, the prospects for exports of Indian sugar as a permanent feature, would rest on the measures taken to reduce the cost of sugar. The needs of the expanding public sector limits the scope of relief from the fiscal burden which the industry is at present made to bear. In the absence of rapid improvements in the cultivation of sugarcane it is difficult to foresee a bright future for export of sugar from India.

PNB's Phenomenal Year

The Punjab National Bank Limited has recorded a phenomenal year of progress. The balance sheet for 1957 discloses a rise of ₹18.22 crores to ₹124.61 crores in Deposits. Fixed Deposits are higher by nearly ₹12 crores at ₹60.06 crores. Savings Bank Deposits have been marked up by ₹2.75 crores at ₹30.37 crores. Current Accounts show an improvement of ₹3.47 crores to ₹33.28 crores.

This improvement in resources has enabled the Punjab National Bank to reduce its borrowings from ₹2.36 crores to a nominal figure of ₹16 lakhs. Also, the Bank has been able to expand its Advances portfolio by ₹13.10 crores to ₹67.96 crores. This rise has taken place under the head of Loans, Cash Credits and Overdrafts, with Bills showing a small decline of just over half a crore to ₹8.25 crores.

Nevertheless, it would appear that the Bank has not re-invested in gilt-edged maturing loans that it might have held during last year, or that, during 1957, it sold some part of its gilt-edged holdings. For, securities of the Central and State Governments held by Punjab National have declined fairly sharply from ₹45.68 crores to ₹36.48 crores.

Consequently, Cash Balances reflect both the increase in Deposit resources and the disinvestment in gilt-edged. Cash Balances have nearly doubled from ₹12.39 crores to ₹24.48 crores.

According to the Profit and Loss Account, the income by interest and discount has risen steeply by ₹1.17 crores to ₹5.18 crores. Commission, Exchange and Brokerage, have also fetched more at ₹1.06 crores against ₹9.20 lakhs.

The interest paid on Deposits has climbed to ₹2.67 crores from ₹1.93 crores; and Salaries and Allowances also absorbed more at ₹2.17 crores against ₹1.80 crores.

The balance of profit is very sharply higher by ₹23.25 lakhs, at ₹1.11 crores. The provision for income-tax is ₹50 lakhs, and compares with ₹27.50 lakhs last year. The Reserve Fund gets a transfer of ₹22.50 lakhs or ₹5 lakhs less than in 1956. Charity Account gets ₹1 lakh, the same as last year. The bonus to Staff Account gets the much higher allocation of ₹16 lakhs against ₹13 lakhs; but the grant to Staff Account, which received ₹1 lakh last year, does not get any appropriation from 1957 profits.

During the year, the share capital was increased by a bonus issue, from the share premium account, of ₹37.5 lakhs to ₹1.25 crores. The ad interim dividend absorbs ₹8.75 lakhs against ₹7 lakhs last year. The final dividend on the increased capital takes up ₹12.50 lakhs against ₹7.00 lakhs. Thus, as against total dividend distribution of ₹14 lakhs for 1956, the amount absorbed in 1957 works out to ₹21.25 lakhs.

With the current year's transfer, the Reserve Fund is placed at ₹1.10 crores against ₹1.25 crores last year; but then, thereafter, an amount of ₹37.50 lakhs was capitalised for the bonus issue.

All in all, we repeat, Punjab National's performance in 1957 is phenomenal.

Decline in Shellac Exports

EXPORTS of Shellac, during last month, were disappointing with shipments of only 28,830 packages as compared with as much as 38,758 packages in February. The decline in exports was shared by all grades. Out of the total exports, shellac accounted for 13,274 packages (19,290); Seedlac 13,082 packages (16,715); Buttonlac 487 packages (623) and other varieties 1,987 packages (2,130), the figures shown within brackets being February figures.

With the prospects of a recession in commodity prices gaining momentum, the shellac market has presented an easier tone. The rate for Pure TN quality has receded further to ₹69.50 from ₹74 per maund quoted in the previous week.

On the London market, prices are ruling easier in the absence of any sustained demand. Britain is reported to be a buyer of forward months although buyers show no interest in prompt material. June delivery is quoted lower at 173sh per cwt.

Sugar

Prices in Sugar markets remain generally firm on reports that some of the factories in Western Uttar Pradesh have stopped crushing. Following mill-delivery rates (per maund) are quoted in the Hapur market:—Khatauli (C-29) ₹36.56; Iqbalpur (C-29) ₹36.50; Mansoorpur (B-29) ₹37.81; Shamli (B-29) ₹36.55; Daurala (B-29) ₹37.12; Mowana (B-29) ₹37.12 and Modinagar (C-29) ₹36.25.

It is understood that the Government of India are taking steps to avoid fluctuations in the production of sugar from year to year and to put the industry on a stable basis. In this connection, the Union Minister for Food and Agriculture, has stated that world prices of sugar have now returned to the normal levels. On the basis of the prevailing prices, sugar can be exported from this country only at a loss of about ₹20 per ton.

The two schemes, submitted by the ISMA for exporting sugar at a loss, have been carefully considered by the Government. The Union Minister has stated that it is not possible to allot quotas for export under the existing laws. The question of enacting a suitable legislation for the purpose is receiving the Government consideration and the scheme will soon be finalised.

Gur

After the recent spurt, mostly manipulated by bulls to lend support to the futures section, Gur

prices have reacted slightly. The rate is now quoted at ₹15.50 per maund—the highest touched so far being 16.75.

In the Hapur market, arrivals averaged 750 to 1,000 maunds, while stocks were estimated at 1.40 lakhs maunds, the corresponding figure for last year being 97,000 maunds.

Khandsari

Good demand from the consuming centres have accounted for steady conditions in the Khandsari market. Production, however, shows a downward trend due to fall in supplies of cane to the crushers. Prevailing rates are ₹27 to ₹33 per maund, according to quality.

Foodgrains

Conditions in the Hapur Foodgrains market remain generally quiet on lack of fresh support. Wheat has recorded a modest dec-

line, average quality quoting ₹15.25 and the farm variety at ₹17 per maund. The market for Rice continues to rule steady following reports of overall shortage in the country. With the beginning of arrivals of the new crop, Gram prices are a shade easier. The markets for Bareilly and Bejher have ruled steady, thanks to good consumer demand and the arrivals of the new crop being still far from normal. Despite heavy arrivals, Peas have continued steady following strong support from stockists. Moong prices are firm on advices from the South.

In the Delhi grains market, wheat prices have shown a small setback owing to decreased buying activity, induced by discouraging outside advices. Barley has softened slightly in sympathy. A further fall of about 50 p to ₹1 per maund has been recorded by Rice following lower upcountry advices. Among Coarse grains, Bajra has recorded a rise of 75 p due to increased offtake.

Continued strength in Rice provided the main feature of trading in the Bombay grains market. The anxiety about the stock position mounted further following reports that Government had reduced the supply, distributed to consumers under the family card system. It was felt that the situation would worsen with the passage of time if the present policy regarding imports was not suitably modified. In the Coarse grains section, Jowar became cheaper by about ₹5 per candy following increased arrivals. Trading in Bajra indicated a steady undertone. Trading in Pulses was highlighted by Moong rising by ₹15 to ₹20 per candy. With the season drawing to an end, the inflow in the growing areas was reported to have dried up during the past few days.

GROWTH of industries in the Madras State, in recent years has been rapid enough to warrant optimism about progress on a bigger scale in the years to come. The policy and programmes of the State Government as contained in the recent speech of Mr R. Venkataraman, Minister for industries, in the Legislative Assembly are such as would give a further impetus to this process of industrialisation. And the speech has left nothing to be desired by way of encouragement to industries in the State. In the perspective of the Second Plan it is only natural that industrialisation should figure prominently in the economic policy of all the State Governments in the country.

Perhaps the major step in improving the scope for industrialisation in the State was taken when the Neyveli lignite project was started in the South Arcot district last year. This has brought within the reach of the State a source of fuel in the absence of which the scope for industrialisation and especially for the starting of heavy industries would have been greatly reduced. Close on the heels of this major undertaking, several new industries such as the phosphate factory have been started which have greatly added to the industrial strength of the State. Schemes for the establishment of a raw photographic film factory at Ootacamund and of a cement factory in Ramanathapuram district in the private sector are according to Mr Venkataraman awaiting finalisation.

Prospects for the early realisation of the schemes for the starting of some heavy industries in the State have brightened with the indication, by Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel, in the Lok Sabha, last week, of the possibility of setting up a few steel plants in the South. Mr Venkataraman has himself stated that four applications for licences to set up pig iron plants in the State were pending with the Government of India. In the light of the Union Minister's statement, there is ground for hope that the schemes submitted by the State Government would receive the sanction of the Centre.

No less important than the schemes for the establishment of some more pig iron plants, is the one to exploit the bauxite ores in the Salem district which was rendered feasible by the opening up of the Neyveli lignite project. This, according to Mr Venkataraman, has been entrusted to Burn and Company which is expected to start a factory in Salem at an estimated cost of Rs 70 lakhs for

Industrialisation of Madras

the manufacture of refractory bricks employing over a thousand workers.

In view of the great potentialities thrown open by the Neyveli lignite project, it is only fitting that the exploitation of lignite should be accorded top priority in the economic plan of the State Government. It was revealed by Mr Venkataraman in the course of his speech that upto the end of 1955-56 an expenditure of Rs 189 lakhs had been incurred on it, while the expenditure incurred in 1956-57 was Rs 4.19 lakhs. The expenditure for 1957-58 has been estimated at Rs 400 lakhs while the provision for expenditure for 1958-59 is about Rs 700 lakhs.

The industrial policy of the State Government has been such as to subserve the needs and requirements of industrialisation in the State. Mr Venkataraman has in this connection invited participation of the private sector in the development of industries in the State and has assured provision of the appropriate facilities that might be needed for the starting of new industries by private industrialists. The efforts of the Government in associating Burn and Company in the exploitation of the magnesite in Salem is a concrete example of the attitude of the State towards private capital and should have dispelled doubts about the sincerity of the Government's appeal for co-operation.

The role played by the State Government in the promotion of industries in the State is reflected in the activities of the Madras Industrial Investment Corporation. The latter had during 1957-58 issued loans to the tune of Rs 63.08 lakhs and had guaranteed loans to the tune of Rs 9.5 lakhs under a scheme recently evolved for the guaranteeing of loans from other sources such as scheduled banks. If the role of the Corporation has not belied expectations it is largely because of the patronage extended by the State Government to the institution by way of temporary advances from time to time, such outstanding advances being estimated at about Rs 60 lakhs. It has been revealed by Mr Venkataraman that provision for such temporary advances during 1958-59 was to the tune of Rs 40 lakhs. The need for efficient functioning of the industries has been recognised and provided for by the setting up of the State Industries Development Committee which is expected to make project reports on the basis of the surveys which the eight sub-committees of this body would make.

Central assistance is perhaps the biggest factor in the achievements

so far made in the industrial field, and the lignite project at Neyveli affords ample testimony to the impartiality of the Central Government in the allocation of projects to the various State Governments. The goodwill of the Central Government is further vindicated by the possibilities of setting up small steel plants in the South indicated by Sardar Swaran Singh in his recent speech in the Lok Sabha. Development of the Tuticorin port has been figuring in recent discussions between the Central Government and the State representatives as a possible field for Central assistance under the Second Plan. The Centre has already promised assistance of their experts to the port Administration to expedite work on boring tests now being carried on.

In the face of such tangible assistance from the Central Government it is only unfortunate that cries of discrimination against the Madras State in the matter of industrial development should persist. In the recent debate in the Madras Legislative Assembly such complaints were made not only by the members of the D.M.K. but also by the leader of the Opposition who is supposed to represent a party which professes non-sectarian principles. While the attitude of the D.M.K. can be understood in terms of its anti North stand, that such points should be treated as grist for its political mill by the I.N.D.C., to which party the leader of the opposition belongs can only be explained in terms of the tactical value of such propaganda to a party whose single objective is to discredit the party which the present Government of the State represents. To persist with cries of discrimination in spite of positive proof to the contrary is only to be blind to the limitations, financial and physical that operate on a national scale precluding a higher rate of progress in the whole of the country.

Success in the development of small-scale industries has been equally remarkable. The programmes in the field of small-scale industries include the setting up of four small industrial colonies in Tirunelveli, Tiruchirappalli, Madurai and Coimbatore at a total cost of Rs 24.21 lakhs and a small colony in Marthandam at a cost of Rs 2.91 lakhs. The other schemes include one for the demonstration of the use of narrow strips of wood now going to waste by use of quick setting resin glues, a saw mill and servicing plant at Guindy, departmental cycle assembling unit at Vellore as an adjunct to the General Purpose Engineering Workshop, a departmental servicing centre at Guindy etc. Sales emporia for

marketing the articles produced by the artisans are also proposed to be started for each of the districts in the State.

More imperative is the need to put the handloom industry in the State on a profitable footing and this calls for effective measures for the release of the huge stocks which have accumulated with the weavers. While the value of such accumulation in the case of weavers in the cooperative fold is about Rs 1.30 crores, the value of stocks outside the cooperative field is, according to Mr Venkataraman one and a half times greater than in the former, the total value of accumulations being estimated at about Rs 4 crores. The favourable prices of mill-made cloth is held to be at the root of the troubles facing the handloom industry at present. Mr Venkataraman has indicated the increase in the rebate on the sale of handloom cloth from one anna to two annas as offering a possible remedy for the accumulation of stocks. While it can be hoped that the Government would take suitable steps to enable the handloom industry to tide over the present crisis, the fact that such crisis has been a regular feature of the handloom industry calls for measures for putting the industry on a permanently stable footing.

The problem being one of co-existence between the handloom industry and its more modernised rival, i.e. the mill industry, the position of the handloom sector can only be safeguarded on the basis of real improvements in the handloom industry which raise its capacity to compete with mill made cloth. The need for raising the efficiency of the handloom industry and reducing the cost of production, has therefore overwhelming importance. That there is scope for reducing cost of production in the handloom industry is a fact which has been admitted even by experts in the industry. The remarks of the Textile Enquiry Committee in regard to the scope for raising the technical efficiency of the handloom industry is also highly significant. The Committee's conclusion was that "at a pace at which there will not be too drastic a disturbance of the economic and social fabric, the handloom industry has to be made technically more efficient by converting the handloom either into a semi-automatic loom and or into a powerloom, as power becomes available more generally in areas where the handloom industry is widely prevalent". A measure that promises improvements in productivity in the handloom industry and raise the status of those engaged in the industry, deserves better consideration at the hands of the authorities than what it had so far received.

Though rapid development of the village economy is the proclaimed goal of all the State Governments in the country, evolution of the proper administrative machinery at the village taluk and district levels to speed up development works, has been marked by varying levels of tempo and progress in the different States. The formation of village panchayats and similar bodies at district and taluk levels to undertake development works in close collaboration with the community development and national extension service blocks is the pattern of administration prescribed by the Planning Commission and generally accepted as suitable for the conditions in the country. The Bill for the reorganisation of the local bodies in the Mysore State while it follows the general pattern set by the Planning Commission comes a year after legislation on similar lines has been passed in the neighbouring States of Madras and Andhra Pradesh.

The Bill provides for the replacement of the existing District Boards by Taluk Development Boards and District Development Councils, while at the lowest rung Village Panchayats are proposed to be constituted for single villages or groups of villages with populations between 1,500 and 10,000. The function of the Taluk Development Boards as defined in the bill is to supervise the working of the Panchayats and to act as advisory bodies for the NES blocks in their area. The supervision of the Taluk Boards is a charge on the District Development Councils which besides would afford guidance or assistance and coordinate the work of the Boards. The membership of the Council includes the Deputy Commissioner of the district, the members of Parliament and the State Legislature, the President of the Taluk Boards, the officers of the development departments of the Government and the representatives of Scheduled Castes and women.

To meet the financial needs of the various local bodies, the Bill has provided for allocation of a certain percentage of the land revenue collection to them, the basis being 15 per cent of the land revenue collection of the village and 10 per cent of the land revenue collection of the State. The total amount payable on this basis to the Village Panchayat and the Taluk Development Boards has been estimated at Rs 190 lakhs which works out to about half of the total land revenue collection of the State. As against this the amount now being paid as land revenue assignment to Panchayat and District Boards in the State is only Rs 5.7 million. Though the extra cost of implementing the measures for the reform of local bodies thus works out to about Rs 1.32 crores, the constitution of these

Rural Self-Government

bodies is credited with the possibility of relieving the Government of commitment for expenditure to the tune of Rs 77 lakhs.

★

Reorganising Agriculture

While the general attitude towards cooperation as a method of reorganising Indian agriculture is one of comparative apathy in many of the States, the success achieved by the Madras Government in extending the cooperative principle in all the important aspects of agriculture especially in the sphere of credit should be a matter for profound satisfaction. Speaking in the Madras Legislative Assembly, Mr R. Venkataraman, Minister for Industries, pointed out that cooperative banks in the Madras State covered about 77 per cent of the villages, giving credit facilities to about 31 per cent of the population. The new schemes for the coming year in the field of agricultural credit, according to Mr Venkataraman, include the starting of 60 new cooperative banks which would bring the total of banks to 300, and would give loan facilities to nearly 40 per cent of the population in the State. The other schemes relate to the opening up of about 200 small-size societies and five land mortgage banks. The completion of these schemes is expected to increase the amount that would be available to the cultivators as loans to Rs 13,50,000.

The number of primary land mortgage banks at present existing in the State is estimated at 76 and the total loan amount dispersed by these banks in the current year at Rs 51 lakhs. The loan amount is further expected to reach the target of Rs 70 lakhs in the coming year. With a view to augmenting the resources of these banks the Madras Government have in view a proposal made by the State Cooperative Central Land Mortgage Bank for floating short-dated seven year debentures. The proposal is aimed at attracting rural investors who are reluctant to lock up their money in long-dated securities. Subscriptions to this seven year debentures would naturally enhance the capacity of the land mortgage banks to provide medium-term loans but the success of the scheme would largely depend on the nature of the criteria for the granting of such loans. The restriction of such credit for purely productive purposes which hold early prospects of increase in productivity is vital for the success of the scheme.

In the field of marketing the formation of an Apex Cooperative Society has been announced. The society as envisaged at present would undertake export and import of agricultural produce, and therefore marks an important step in the improvement of the chaotic

marketing structure in the State. The establishment of the Madras State Warehousing Corporation has filled up a vital gap in the marketing structure of the State.

★

Mysore's Finances

The Finance Minister of Mysore who would have expected favourable comments from the opposition at the surplus budget he had produced would have been disappointed at the reaction of the opposition parties to the budget proposals he had presented. Without a solitary exception all the opposition parties expressed themselves, in the course of the debate on the budget, vehemently against the record of the Government. Even the very basis of the budget is, the estimates of revenue was called in question by a few members, the budget being characterised as a statistical camouflage by a member.

The chief criticism against the budget was that the surplus which it revealed was fictitious being based on overestimates of receipts from land revenue and other sources such as agricultural income taxes and motor vehicle taxes. While such criticisms are sweeping in their nature and beyond reasonable answer, it has to be conceded that receipts from agricultural income taxes would only go down in the context of the land reform measures recommended by the Jetti Committee and which the Government are keen on implementing.

Another point of criticism against the financial position of the State was that the public debts contracted by the State were of a huge order which could not be properly serviced at the present level of income from the industrial enterprises of the Government. While it cannot be denied that there is scope for improvement in the working of some of the State-owned industries in the State, the complaint about the level of the public debts is obviously based on orthodox ideas of development and excludes in the reckoning the long-term benefits that would accrue from the projects for which such debts have been incurred. The observation of the Minister that such schemes as the Tungbhadra Project could not be interpreted in terms of rupees, annas and pies, was only apt, and would have met the points raised by the opposition members about the weak financial position of the State.

While the financial position of the State does not appear to be as bad as the opposition parties have sought to make it, that there is scope for improving the revenue resources in various directions

cannot be denied. Reorganisation of sales tax structure alone is credited with great revenue potentials. The fact that Mysore which covers a larger area than Madras was not collecting as much from sales tax as the latter is a measure of the scope for improvement in this direction.

★

Indian Bank

The Indian Bank continues to make satisfactory progress, and, in the accounts for 1957, the balance sheet discloses a rise in Deposits from Rs 32.56 crores to Rs 35.21 crores. In common with most Indian Scheduled Banks, this rise has occurred under the head of Fixed Deposits, which are marked up by Rs 1.61 crores to Rs 12.29 crores. Savings Bank Deposits are also higher at Rs 6.93 crores against Rs 6.07 crores. However, the Current Accounts show a small decline of Rs 0.12 crores to Rs 11.25 crores.

The accretions to resources have been sufficient to enable the bank to liquidate its borrowings from Rs 1.93 crores as shown in the 1956 balance sheet.

Investments show no material change at Rs 10.04 crores against Rs 9.99 crores. On the other hand, in accordance with the official policy of credit restraint, Advances of the Indian Bank are placed lower at Rs 19.98 crores against Rs 23.69 crores. In the result, Cash Balances are sharply higher at Rs 7.18 crores against Rs 3.87 crores.

The income by interest and discount has improved by Rs 0.17 crores to Rs 1.43 crores. But Commission, Exchange and Brokerage have brought in less at Rs 64.28 lakhs against Rs 75.46 lakhs.

Interest paid is marked up by Rs 6.61 lakhs at Rs 83.81 lakhs. There is a sharper jump in Salaries and Allowances, which are higher by Rs 10.65 lakhs at Rs 68.35 lakhs. In the result, the balance of profit is sharply lower at Rs 32.07 lakhs against Rs 45.71 lakhs.

According to the Appropriation Account, taxes absorbed Rs 15 lakhs against Rs 18.50 lakhs; Reserve Fund gets half a lakh more at Rs 10.50 lakhs; the transfer to Sinking Fund is doubled to Rs 1.50 lakhs; and there are other transfers amounting to Rs 1.25 lakhs against Rs 1.80 lakhs last year.

The ad interim dividend, including bonus, was maintained at 6½ per cent, but absorbed slightly more at Rs 4.22 lakhs against Rs 3.91 lakhs. The final dividend, including bonus, is also maintained at 6½ per cent, absorbing Rs 4.30 lakhs against Rs 4.06 lakhs. To commemorate the Golden Jubilee, a special dividend of 2 per cent is to be paid, taking up Rs 1.83 lakhs.

THE UNITED COMMERCIAL BANK LIMITED.

(INCORPORATED ON 6TH JANUARY, 1943)

728

Balance Sheet as at 31st December, 1957

CAPITAL AND LIABILITIES.		PROPERTY AND ASSETS.

8. ACCEPTANCES, ENDORSEMENTS AND OTHER OBLIGATIONS per contra	15,75,09,621 58	(i) Debts considered good in respect of which the banking company is fully secured	31,08,22,116
9. PROFIT AND LOSS:		(ii) Debts considered good for which the banking company holds no other security than the debtors' personal security	3,55,21,181
Profit as per last balance sheet	14,29,419 68	(iii) Debts considered good by the directors on the basis of the personal liabilities of one or more parties in addition to the personal security of the debtors	8,81,88,832
Less Dividend	29,419 58	(iv) Debts considered doubtful or bad, not provided for	Nil
Add Profit for the year	59,70,012 50	(v) Debts due by directors or officers of the banking company or any of them either severally or jointly with any other persons	1,29,910
Less Appropriations made:		(vi) Debts due by companies or firms in which the directors of the banking company are interested as directors, partners or managing agents	2,83,79,002
To Reserve Fund	Ra. 19,00,000 00	(vii) Maximum total amount of advances, including temporary advances made at any time during the year to directors or manager or officers of the banking company or any of them either severally or jointly with any other person	2,01,894
To Provision for Taxes	Ra. 18,50,000 00	(viii) Maximum total amount of advances, including temporary advances granted during the year to the companies or firms in which the directors of the banking company are interested as directors, partners, or managing agents or, in the case of private companies, as members	2,92,84,701
To Bonus to Staff	Ra. 7,00,000 00	(ix) Due from banking companies	14,41,455
10. CONTINGENT LIABILITIES:		6. BILLS RECEIVABLE BEING BILLS FOR COLLECTION as per contra:	
(i) On Partly Paid shares	Ra. 3,95,000 00	(i) Payable in India	3,25,36,141
(ii) Claims against the banking company not acknowledged as debts	3,02,781 36	(ii) Payable outside India	6,61,77,784
(iii) Guarantees given on behalf of customers and Correspondent Banks	Ra. 6,45,20,839 57	7. CONSTITUENTS' LIABILITIES FOR ACCEPTANCES per contra	18,17,29,613
(iv) On Foreign Bills Re-discounted all of which have run off by 1-3-1958	Ra. 66,140 65	8. PREMISES LESS DEPRECIATION:	
(v) Forward Exchange Contracts outstanding for the purchase and sale of Bills and Telegraphic Transfers of which upto 1-3-58 Rs. 14,96,77,872.24 have been delivered	Ra. 29,23,23,195 21	Cost as per last balance sheet	18,37,189
(vi) Bonus given to employees for 1950, 1951 and 1952 not acknowledged as debts and reported by the Bank before the respective Tribunals		Additions (Rs. 1,35,52,139) Less (Rs. Nil) during the year	5,13,821
(vii) There is a liability for outstanding bills, not certified by the architects, in respect of construction of the Bank's building at New Delhi.		Less depreciation written off to date	23,41,009 94
(viii) A demand of Rs. 26,13,502.81 has been made for assessment year 1952-53 by the Income-tax Officer assessing the Bank in India by adopting a totally new method. The Bank has appealed against the assessment disputing the very basis of assessment and contending that there is no liability whatsoever. No provision has, therefore, been made for this demand. Accordingly, provision for later years has been made on the basis adopted all along in the past and accepted by the Department.		9. FURNITURE AND FIXTURES LESS DEPRECIATION: (including vehicles and equipment)	
		Cost as per last balance sheet	69,55,094
		Additions (Rs. 7,68,491-11) Less deductions (Rs. 2,17,810-80) during the year	3,44,787
		Less depreciation written off to date	62,99,881
		10. OTHER ASSETS, INCLUDING SILVER:	
		(i) Land and Buildings:	
		Cost as per last balance sheet	21,83,126
		Additions during the year (Premises under construction)	8,97,220
		Less depreciation written off Ra. 1,98,927 43	30,10,345
		11. NON-BANKING ASSETS ACQUIRED IN SATISFACTION OF CLAIMS	
		(i) Silver	7,80,000
		(ii) Interest accrued on Investments	1,81,069
		(iii) Estimated amount of return and advance payments of Tax (computed for six years 1952 to 1957 not yet completed)	28,29,256
		(iv) Stamps and Stationery	18,30,127
		(v) Silver	37,35,655
		12. PROFIT AND LOSS	
		Profit as per last balance sheet	7,80,000
		Add Profit for the year	59,70,012 50
		Less Appropriations made:	
		To Reserve Fund	Ra. 19,00,000 00
		To Provision for Taxes	Ra. 18,50,000 00
		To Bonus to Staff	Ra. 7,00,000 00
		TOTAL Ra.	90,22,60,998 91

We have audited the foregoing Balance-Sheet of The United Commercial Bank Ltd. as at 31st December, 1957, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the Branch returns audited by the Statutory or other Auditors in accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of Section 211 and sub-sections (3) of Sections 211 and 227 of the Companies Act, 1946, the Balance-Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1946; they are, therefore, drawn up in conformity with Form A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that—
(a) we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
(b) the transactions of the Bank which have come to our notice have been within the powers of the Bank;
(c) in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of these books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;
(d) the Bank's Balance-Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of accounts and the returns.
(e) in our opinion and to the best of our information and according to the explanations given to the auditors, the said accounts give a true and fair view of the state of the affairs of the Bank as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

The United Commercial Bank Limited

Continued Progress Achieved During 1957

Higher Interest Rates Unnecessary for Inducing Deposits

Need to Restore Profitability to Industry by Fiscal Reliefs

Review of the Indian Economy by Mr G. D. Birla, the Chairman

Statement of Shri G. D. Birla, Chairman circulated to the shareholders at the Fifteenth Ordinary General Meeting of the Bank held on 9th April, 1958.

Gentlemen,

The Balance Sheet and Profit & Loss Account of the Bank have been in your hands for some time and you would, no doubt, have noticed with pleasure the continued progress achieved by the Bank during the year to which the accounts relate.

DEPOSITS

You will notice that the total of the current, savings and fixed deposits and other accounts at the end of 1957 stood at Rs. 61.07 crores as compared with Rs. 52.15 crores at the end of 1956. The increase in deposits of Rs. 8.92 crores represents a rise of 17.1 per cent, which is a higher rate of increase than 9.3 per cent recorded in 1956 and compares with the rise of 16.9 per cent in the deposits of scheduled banks other than the State Bank of India, for the year

1957. The rise in the deposits of the State Bank of India was much higher than that of the banking system by reason of certain adventitious factors to which reference is made in the report of that bank.

CASH

Cash on hand and with banks and money at call and short notice amounted to Rs. 8.28 crores and represented 13.5 per cent of our deposit liabilities.

INVESTMENTS

The Investments of the Bank in Government and other approved securities at Rs. 19.94 crores were only Rs. 50 lacs higher than our holding at the end of 1956. The additional resources which accrued to the bank from the increase in deposits were utilised primarily to repay the loan taken from the Reserve Bank of India during the 1956-57 busy season, thereby enabling the bank to work within its own resources. The cash balances and unencumbered investments together amounting to Rs. 27.92

crores give a ratio of 45.7 per cent to total deposits.

BILLS

The amount of bills discounted and purchased decline from Rs. 15.92 crores to Rs. 13.00 crores but the high figure of bills at the end of 1956 was due to the conversion of advance accounts into bills for "rediscount" with the Reserve Bank of India under the Mill Market Scheme. The figure at the end of 1957 is the normal figure and does not include any created bill. This self-liquidating asset forms 21.3 per cent of the deposits of the Bank.

LIQUIDITY RATIO

The total of our liquid assets, cash on hand and with banks, money at call and short notice, unencumbered investments and bills represents 67 per cent of our deposit liability which, you would agree, is a highly satisfactory liquidity ratio.

ADVANCES

Our advances at Rs. 24.69 crores are roughly 40 per cent of our deposits. There is a decline in the

total of our advances and bills in conformity with the policy of credit squeeze pursued during the second half of 1957.

FOREIGN EXCHANGE BUSINESS

The foreign exchange business of our Indian and overseas branches continued to expand and our London branch shows considerable increase in its activity and usefulness.

The credit for the excellent results of the working of the Bank goes primarily to the General Manager, Mr. S. T. Sadasivan and his able deputies and assistants, to whom I take this opportunity of offering the thanks of myself and of the Board of Directors. I wish also to record our thanks to the other members of the staff of the Bank for their contribution in achieving these results and I look forward to greater co-operation from them in the current year and the years to come.

BANK RATE

The official Bank Rate of the Reserve Bank of India was raised

April 12, 1958

on the 15th May 1957 from 3½ per cent to 4 per cent, but the rate for advances to scheduled banks against Government Securities, which had earlier been raised from 3½ per cent to 4 per cent, was left unchanged. At the same time, the stamp duty on usance bills of exchange, which was intended to act as a surcharge on interest rate and which was raised to 2 annas per cent for 3 months or part thereof, was reduced to 1/5 of 1 per annum. As a result of these changes, loans against Government Securities cost the scheduled banks 4% while loans against bills cost a minimum of 4-1/5%.

MONEY MARKET

Monetary conditions during the earlier part of 1957 were, as a result of the severity of the 1956-57 busy season as well as the already fully extended position of the banking system, extremely stringent, and the demand for accommodation from trade and industry imposed a severe strain upon the resources of the commercial banks. In addition to the need to satisfy this seasonal demand, the banks were called upon to finance the heavy imports of steel, which were at the time being made. Fortunately, the Reserve Bank of India, which has displayed a sensitive awareness of its role in the monetary sphere in terms of the implementation of the Second Plan, suitably anticipated the difficulties that might be presented during the 1956-57 busy season, and, by substantially liberalising the bill market scheme, under which it approved lines of credit totalling approximately Rs. 150 crores, thereby giving the banks all the money they asked, enabled the commercial banks to tide over this period of stringency. Borrowings from the Reserve Bank of India against both Government Securities and bills reached a peak of Rs. 103 crores at the end of March 1957, and this figure would have been much higher but for the receipt by the State Bank of India of extraordinary deposits arising from the sale of U.S. surplus commodities under P. L. 480 which enabled the bank to dispense with borrowings from the Reserve Bank of India altogether. At about the same time, but gathering momentum in the second half-year, the deposits of commercial banks also began to rise and eased the strain under which they were functioning. But during the great part of the year scheduled banks, other than the State Bank of India, and, in particular, the Exchange Banks, had to resort to heavy borrowings from the central banking institution and also to sell off a part of their holding of Government Securities.

CREDIT SQUEEZE

It was during the slack season of 1957 that the favourable circumstance of an increase in deposits, coupled with a decline in advances, began week by week to improve the position of scheduled banks. On the one hand, early in June, the Reserve Bank of India,

in pursuance of its policy of selective monetary control and with a view to bringing down prices and discouraging speculative holdings of stocks, directed the commercial banks to reduce the level of advances against foodgrains. A few days later the Reserve Bank advised the banks generally to reduce the volume of advances and gradually to lower the advances-deposits ratio from the high level that it had reached at the peak of the busy season, so that the banks could, while regaining normal liquidity, find themselves in a better position to take on the next season's demand for finance without undue dependence on the Reserve Bank for accommodation. Towards the close of the year, the Reserve Bank made it known to the scheduled banks that the facilities under the bill market scheme would not be as liberal as they were at the beginning of the year and that the banks should, normally, try to work on the basis of their own funds and only with a modest resort to central bank credit. These measures, which should be construed to be tantamount to a "credit squeeze", succeeded in bringing about a reduction in the level of scheduled banks' advances from the busy season peak of Rs. 939.87 crores to Rs. 839.98 crores at the end of November 1957. On the other hand, the process of augmentation, throughout the period, of the deposit resources of scheduled banks gathered momentum. During 1957, deposits of all scheduled banks rose from Rs. 1101 crores to Rs. 1369 crores. Even if the State Bank were left out of the reckoning, by reason of its extraordinary receipts, the improvement in the deposits of the other scheduled banks, still, amounted to the considerable figure of Rs. 145 crores.

INTEREST RATES ON DEPOSITS

It is clear that the disbursements in connection with the Second Plan are to be seen as having a directly favourable impact upon the resources of the banking system. Set against this fact, I find it difficult to understand why banks should persist in bidding for deposits by means of steadily mounting rates of interest. The published accounts of banks reveal how steeply the figure of interest paid on deposits has risen. I had occasion some years ago to speak to you on this same matter when I deprecated the alarming tendency to try to attract fresh deposits by means of higher interest rates. I would like to reiterate here my plea for restraint in the competition for deposits through high rates. If it is conceded that the Second Plan disbursements by themselves result inevitably in the flow of new deposits, it follows logically that the attraction of higher interest rates is unnecessary in order to induce deposits.

THE ROLE OF THE RESERVE BANK OF INDIA

It is a matter of pride to hear the Indian central banking institu-

tion being described as one of the most efficient in the world. This is no exaggeration, for, the selective monetary control instituted by the Reserve Bank has succeeded in keeping at bay the inflationary pressures which this country had to face during 1957. While it is true that the inflationary potential in deficit financing was partly offset by the contractionary influence of a balance of payment deficit, the fact, nevertheless, remains that, by timely directives, the Reserve Bank has played a considerable part in imbuing the Indian economy with stability and in preventing the price situation from getting out of hand.

INTERNATIONAL ECONOMIC SCENE

I shall now turn my attention, albeit briefly, to the international economic scene. After a long tussle with inflation, dear money enthusiasts in the rest of the world have finally won the battle so well as to have induced deflation! The result is that many countries are trying to change into reverse gear, but the process appears to be difficult, and recession in the United States of America is threatening to become an invisible export to other countries. The United States unemployment has reached a 16 year peak of 5.1 million, and other economic indicators also presage a difficult time for the economy. This recession is sought to be got over by a number of programmes, including the easing of credit. For the third time in recent weeks, the Federal Reserve Bank approved a reduction in the discount rate, and the latest cut of half per cent brings the rate down to 2½ per cent. The Bank of England has also followed the general trend and reduced the bank rate by 1 per cent to 6 per cent. Among other countries which have effected a reduction in the discount rate is West Germany, where the Deutsche Bundesbank reduced the bank rate by half per cent to 3½ per cent. This is the fourth successive reduction since the autumn of 1956. The Netherlands Bank also cut its bank rate by half per cent to 4½ per cent. Quite suddenly, it seems to me that the bogey of inflation has yielded place to the reality of recession. While I shall not presume to advocate a world-wide cheap money policy—after all, conditions in the various countries differ widely, and the level of Bank rate must be consistent with trends in the internal economy of each country—I should nevertheless, point out that we seem to have reached a stage where we may be exaggerating the effect of inflation in present-day conditions. A study has to be made of the extent to which a rise in prices is not necessarily evidence of inflation. After all, when there occurs an improvement in the standard of living, some element of increase in the price level is inescapable. And it is true to say that never before in economic history have so many countries

participated in so general a rise in the standard of living. Finally, I should like to say that, in our pre-occupation with the so called dangers of inflation, we should not allow ourselves, as the rest of the world had during 1957, to become oblivious to the even greater danger of recession.

CAPITAL MARKET

The prices on the Stock Exchange continued to decline and the downward trend was accentuated by the budget of May 1957 which introduced several new taxes and still further reduced individual and corporate saving capacity. A few new issues of capital and offers for sale were successfully put through, but these issues were rather exceptional, and conditions in the Stock Exchange have remained wholly unfavourable for the raising of any capital for new enterprises. The yield on industrial securities rose from 5.75 per cent (tax-free) at the beginning of the year to 7.26 per cent (tax-free) at the end of the year and this factor also contributed to the difficulty of existing companies in procurement of fresh capital by way of debentures or preference shares at reasonable rates. The Industrial Delegation which visited the United States and Europe has pointed out that the limiting factor in getting credit from abroad is not so much the reluctance on the part of foreign institutions and suppliers to give credit as the difficulty of raising internal capital in India itself. It is really the quantum of Rupee capital available in India which would appear to determine the finance that could be obtained from abroad. Broadly speaking, it would be necessary to raise 20 per cent of the capital to be used for the purchase of equipment for any project and the whole of the rupee counterpart of the expenditure on the project before foreign credits could be sought for the rest of the capital. If the minimum rupee capital which, thus, would come to about 50 per cent of the entire cost of a project could not be raised in the country, there would be no basis for seeking credit from abroad. In view of the fact that it is almost impossible to raise any substantial amount of rupee equity capital, industrial expansion in the private sector will have to come to a stop unless the profitability of industry is restored to a reasonable level through fiscal reliefs.

It is gratifying to learn that the efforts of the Government of India to raise Dollar credits in the United States of America have been successful and that loans of \$150 million from the Export Import Bank and \$75 million from the Development Loan Fund have already been arranged, part of which is available for utilisation by the private sector in cover of 100 per cent of the cost of purchase from the United States. These arrangements imply that if the private sector is to derive benefit from these loans it should be able to raise immediately the rupee

capital required for the full cost of any project and not merely 50 per cent of the cost which would have sufficed under schemes of deferred credit or foreign participation.

ECONOMIC SITUATION

I now turn to the review of Indian economy, and, in doing so, I have inevitably to deal with the Second Five-Year Plan, the execution of which has become a subject of controversy. There are those who vehemently insist that the plan be implemented in toto irrespective of the cost or availability of resources, while others urge that the plan be pruned or rephased without stating how or to what extent the re-planning should be done. People are apt to forget that the plan is not an end in itself but only a pointer to certain objectives, viz., greater production, fairer distribution and increased employment.

The plan envisages an outlay of Rs. 4,800 crores in the public sector and Rs. 2,400 crores in the private sector, making a total of Rs. 7,200 crores which, in subsequent estimates, has been still further increased to allow for increased costs and additions to projects. But, sticking to the original estimate of expenditure in the public sector, the main provisions are: Rs. 2,300 crores for transport, communications, power and irrigation; Rs. 340 crores for agriculture and Rs. 690 crores for industry and mining in the public sector (total Rs. 3,330 crores), and Rs. 700 crores for industry, mining and plantations in the private sector. The projects covered by these allotments constitute the core of the plan, the rest of the plan expenditure being for community projects, social services and the like. In insisting that the plan shall be put through at all costs, the Government is more figure-conscious than performance-conscious, more insistent on the amount of plan expenditure than on the achievement of the planned rise in production or planned increase in employment. The public sector is faced with difficulties in the matter of both spending to the target limit as well as in achieving the production and employment targets. On the other hand, it would appear that the private sector is almost certain to complete its assigned task and invest its full quota of earmarked resources well before the end of the plan period. Mr. T. T. Krishnamachari, whose exit from the Finance Ministership I deeply deplore, speaking before the Annual Meeting of the World Bank on September 25, 1957 said:

"Private enterprise is, in fact, playing a vital role in India. Indeed, its development has never been more marked or varied at any previous period than during the past ten years. To some extent our recent difficulties stem from the very sizeable boom in private investment that has been under way. We do not regret this boom as it

takes us a step forward towards our objective of higher levels of living".

The physical targets assigned to the private sector are also well on the way to fulfilment. The index of industrial production has risen from 100 in 1951 to 168.5 in June '57.* Privately owned collieries are already producing coal at an annual rate of 40 million tons as against a target of 48 million tons in 1961. Textile mills were briskly moving towards the plan target of 8500 million yards, but there is not enough cotton available to enable this quantity of cotton textiles to be manufactured, and as both internal consumption and exports have dwindled, the plan target will have to be lowered. Expansion of manufacturing capacity in cement is lagging behind on account of foreign exchange shortage, but enough progress has already been achieved to make the supply position turn easy. Steel is an easy winner. Owing, however, to factors, all too familiar, of shortage of foreign exchange and lack of internal capital, the tempo of industrial expansion is slowing down and the goal of 8 million new jobs is receding. It, therefore, behoves the Government to reappraise the situation and initiate policies calculated to reactivate the industrial sector and to increase the foreign exchange earnings on our export trade.

THE NEED FOR FOREIGN CAPITAL

Our foreign exchange needs will, for years to come, exceed our earnings. But I am averse to the idea of continued borrowing from abroad because, ultimately, the problem of repayment would become acute. Already, we have piled up future liabilities at an average rate of Rs. 90 crores per annum for a four-year period beginning from 1960-61. It would be better to create a favourable atmosphere in which foreign capital would feel encouraged to invest in our enterprises. Such foreign participation in equity capital would contribute to the creation of new wealth and the question of repatriation of capital would normally not arise so long as private enterprise is allowed to function with a reasonable degree of freedom. In this connection, I should like to bring to the notice of the Government of India the note handed to the Indian Industrial Delegation by the Department of Commerce Washington, listing the factors which are considered to constitute some of the obstacles to U.S. investment in India and to appeal to the Government to take action to remove the deterrents.

AGRICULTURE

The weakest feature of the Second Five-Year Plan is the imbalance between agriculture and industry. Agriculture occupies a

*The index number for June 1957 is taken because it was at that time that sugar factories ceased production for the season.

key position in our economy. At the end of the Second Plan period our total national income is expected to rise to Rs. 13,500 crores of which nearly 46% is expected to come from agriculture. If agricultural production is not increased substantially, the purchasing power of the countryside will, in relation to industrial production, be reduced and the latter will ultimately have to go down. Increased food production would abolish scarcity conditions with attendant whole-some effect on the psychology of the masses and creation of conditions favourable to higher production. This should be emphasised from another angle also for, it is difficult to contemplate with equanimity, in view of the deteriorated foreign exchange situation, continued imports of between two and three million tons of foodgrains a year for as far ahead as we could visualize. While production of grains in absolute figures is not declining, the increase in output is not commensurate with the addition to population. Even after allowing for the vicissitudes of the monsoon and the failure of rains in some parts of the country it should be possible with greater utilisation of available water in other parts and through more intensive cultivation, to produce a higher yield of foodgrains per acre. But unfortunately, the cut in fertiliser imports is likely to reduce agricultural production still further. We cannot afford to build steel mills at the risk of jeopardising food supplies. The least that should be done is to erect more fertiliser factories at the same time as steel mills.

Increased production of cash crops could also alleviate our foreign exchange position. An additional 1 million bales each of jute and cotton, per annum would mean an annual gain of almost Rs. 55 crores in foreign exchange. There is a scarcity of vegetable oils all over the world and the prices of copra and oilseeds have either remained steady or only slightly declined in the commodity markets of the world while other internationally traded commodities have been sagging. Our production of oilseeds and the yield of oilseeds per acre have remained static and a 25% rise in the output of oilseeds would enable us steadily to export to foreign markets vegetable oil which is so much in demand. We were successful last year in exporting about 160,000 tons of sugar earning valuable foreign exchange. Again if only we could increase the production of foodgrains by 10% and improve the export of tea and ores, we could achieve a diversification of our exports and substantially improve our foreign exchange earnings with resultant benefit to our foreign exchange reserves. I would go to the length of suggesting that exports of sugar and other commodities in international demand should be encouraged even at the risk of such commodities becoming somewhat scarce in the country or of subsidising such exports.

Indian Finance

TAX RELIEF

I feel happy to conclude my speech on a note of favourable import. Government have recently announced certain fiscal reliefs by way of repeal of the compulsory deposit of reserves relating to the year 1958-59 and reductions in excise duties on various qualities of cotton textiles. While it has been hoped that those concessions might have formed part of the budget proposals themselves, it is heartening to note that, on due representation being made to them, Government have seen the validity of the requests for relief and have accorded it. If, as I hope, this is indicative of the willingness on the part of the Government to study each situation dispassionately, and not merely from the point of view of revenue, we may look forward to revisions being announced and implemented by Government at timely junctures.

NEW FINANCE MINISTER

I have great pleasure in welcoming the appointment of Mr. Morarji Desai as Finance Minister. He has held charge of the Ministry of Commerce & Industry with great distinction and he brings to his new and onerous task a reputation as an extremely able and efficient administrator. I am sure that finance is in the hands of one who will safely steer this important portfolio through the remaining difficult years of the Second Plan period.

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

Glass Industry

Availability of coal and its transport in time to the factory sites remain the major problems of the Glass industry. In respect of both, there is scope for improvement. The president of the Indian Glass makers association, Mr. O. M. Somany, told its annual meeting that increasing requirements of the industry for coal have not been met by corresponding increase in quotas. As regards transport, he gave the warning that the industry was about to lose its markets as a result of transport bottlenecks. To remedy this unsatisfactory state of affairs, he has suggested the development of the canal system linking Calcutta with the coal fields. That will take time to be completed. For the immediate future, pending development of railways carrying capacity, he has suggested movement of coal by road. Apart from bottlenecks in the supply of materials, the industry is faced by the problem of mechanisation which, however, is necessary to maintain quality and competitive efficiency. The export performance of the industry has fallen far short of the Second Plan estimates. The high cost of production of Indian glass is the main inhibiting factor, for, in respect of quality and variety, Indian glassware can now compete with the products of other countries.

April 12, 1958

MAHINDRA & MAHINDRA LIMITED

NOTICE

The 12TH ANNUAL GENERAL MEETING of the Shareholders of MAHINDRA & MAHINDRA LIMITED will be held at the Taj Mahal Hotel, Apollo Bunder, Bombay 1, on Monday, the 12th May, 1958, at 4 p.m. to transact the following business:—

- (1) To receive and adopt the Directors' Report, the audited Balance-sheet and Profit and Loss Account for the year ended 31st October, 1957.
- (2) To declare dividend on Preference and Ordinary Shares.
- (3) To appoint a Director in place of Sir Dhiren Mitra who retires by rotation under Article 110 of the Articles of Association and who, being eligible, offers himself for re-election.
- (4) To appoint a Director in place of Mr. H. C. Mahindra who retires by rotation under Article 110 of the Articles of Association and who, being eligible, offers himself for re-election.
- (5) To appoint a Director in place of Sardar H. S. Malik who ceases to hold office by virtue of Article 116 of the Articles of Association and who, being eligible, offers himself for re-election.
- (6) To appoint a Director in place of Mr. Stephen A. Girard who ceases to hold office by virtue of Article 116 of the Articles of Association and who, being eligible, offers himself for re-election.
- (7) To appoint Auditors for the current year and to fix their remuneration.
- (8) To consider and if thought fit to pass the following resolution with such modification, if any, as may be agreed upon at the Meeting—the relative explanatory note as required by Section 173 of the Companies Act, 1956, is annexed hereto:—

"RESOLVED that the Company's Authorised Share Capital be increased by Rs. 3,50,00,000 and that Clause 5 of the Memorandum of Association be altered so as to change" Rs. 1,50,00,000 (Rupees One crore and fifty lacs) dividend into 12,50,000 shares of Rs. 10/- each and 25,000 shares of Rs. 100/- each" into "Rs. 5,00,00,000 (Rupees Five crores) divided into 40,00,000 shares of Rs. 10/- each and 1,00,000 shares of Rs. 100/- each."

- (9) To consider and if thought fit to pass the following as a special resolution with such modification, if any, as may be agreed upon at the Meeting:—
- "RESOLVED that Article 3 of the Articles of Association

of the Company be deleted and the following substituted therefor.

"ARTICLE 3: The Capital of the Company is Rs. 5,00,00,000 (Rupees five crores) divided into 40,00,000 Ordinary Shares of Rs. 10/- each, 75,000 Preference Shares of Rs. 100/- each and 25,000 Redeemable Cumulative Preference Shares of Rs. 100/- each.

The said 75,000 Preference Shares of Rs. 100/- each shall have such preferential rights privileges and other conditions attached thereto as may be determined by the Board at the time of the issue of this capital.

The said 25,000 Redeemable Cumulative Preference Shares shall confer the right to a fixed cumulative preferential dividend at the rate of 6% per annum without deduction of Income-Tax on the capital for the time being paid up thereon, and the right in a winding-up to payment off of capital and arrears of such fixed dividend, whether declared or earned or not, accrued up to the commencement of the winding-up in priority to the Ordinary Shares, but shall not confer any right to participate in profits or assets. The Company shall be entitled on or at any time after the 1st day of November 1965 to redeem the whole or any part of the said Redeemable Cumulative Preference Shares for the time being issued and outstanding out of any moneys which may lawfully be applied for the purpose at par plus a premium of Rs. 5/- per share upon giving to the holder of the shares to be redeemed not less than three months, previous notice in writing.

In the event of the Company determining to redeem a part only of the said Redeemable Cumulative Preference Shares for the time being outstanding, the particular shares to be redeemed shall be selected by a drawing which the Company shall cause to be made by one of its officers at its registered office in the presence of a representative of the auditors of the Company for the time being.

Every such drawing shall be made in such a manner as the Company shall (subject to the approval of the auditors) determine as convenient for selecting the number of shares required to be drawn.

The said Redeemable Cumu-

lative Preference Shares shall confer the right to attend and speak at General Meeting of the Company but shall not confer any right to vote except when—

- (i) the cumulative preference dividend is passed over in any year or has remained in arrears for more than six months from the date it is declared; or
- (ii) any resolution affecting the rights, privileges or interests of the holders of the said Redeemable Cumulative Preference Shares is proposed; or
- (iii) any resolution for the winding up of the Company is proposed.

None of the funds of the Company shall directly or indirectly be employed in the purchase of, or lent on the security of shares of the Company."

Notes:—

- (a) The relative explanatory statement pursuant to Section 173(2) of the Companies Act, 1956, in respect of the special business under items 8 and 9 set out above is annexed hereto.
- (b) A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF, AND THE PROXY NEED NOT BE A MEMBER.
- (c) The Transfer books of the Company will be closed from 28th April, 1958, to 12th May, 1958, both days inclusive.
- (d) Dividends, if sanctioned at the Meeting, will be made payable to those Shareholders whose names are on the Company's Register on the 12th May, 1958, and the dividend warrants will be despatched to them on and after the 19th May, 1958.

By Order of the Board,
KESHUB MAHINDRA,
Director.

19th March, 1958.
Gateway Building,
Apollo Bunder,
Bombay 1.

ANNEXURE TO THE NOTICE

Explanatory Statements as required by Section 173 of the Companies Act, 1956.

Items No. 8 and No. 9: The Company's original programme for manufacture of Jeeps was limited to a volume of 2,500 units a year. The Tariff Commission reporting in 1956 forecasted a progressively increasing demand for Jeeps reaching to 5,000 units by 1960-61. Government in accepting the recommendations of the Tariff Com-

mission called upon the manufacturers to elaborate and adjust their respective programme in accordance with the conclusions indicated by the Tariff Commission. The Company accordingly presented an application for the doubling of its programme of production and preliminary approval of Government has been received. This will necessitate a considerable expansion of Company's manufacturing operations, and of the assembly facilities.

The Tractor Division of the Company is also being expanded, and it is hoped that the Tractor manufacturing proposals will receive Government approval shortly.

It is anticipated that substantial additional capital will be required for these various expansion schemes. As a first step, it is proposed to increase the authorised capital of the Company from Rs. 1,50,00,000 to Rs. 5,00,00,000 as set forth in the Resolution. The alterations of clause 5 of the Memorandum of Association and of Articles 3 of the Articles of Association are therefore proposed for Shareholders' approval as required by Section 31 and 94 of the Companies Act, 1956, and Article 50 of the Company's Articles of Association.

By Order of the Board,
KESHUB MAHINDRA,
Director.

Bombay,
19th March, 1958.

To All Shareholders of the Company and in particular, Mr. B. B. Auty, Ethiopia; Mr. Mangalbhai Nathabhai Patel, Tanganyika; and Mr. M. V. Shirodkar, Baltimore, U.S.A.

S. E. RLY TENDERS

Sealed tenders (Tender No. GM/S1/S/8) are invited for entering into a contract to cut up condemned Rolling Stock and other units of condemned stock at the South Eastern Railway Reclamation and Mathurakati Scrap Yards at Khargpur for a period of two years from 1-6-58 to 31-5-60.

Tender forms are obtainable from the Controller of Stores (Sales Section), Garden Reach, Calcutta-23 on remittance of Rupees five only (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of Cash Receipt from the Chief Cashier, South Eastern Railway, Garden Reach by local firms.

Earnest money of Rs 1,000/- is to be deposited with the Railways' Chief Cashier and the receipt obtained thereof should accompany the tender without which the tender is liable to be rejected. Tenders will be opened at 12 noon on 12-5-58 in the office of the General Manager.

S3 GENERAL MANAGER

(Incorporated in Hongkong with Limited Liability)

BALANCE SHEET AT 31st DECEMBER, 1957

MICHAEL W. TURNER
Chief Manager.

REPORT OF THE AUDITORS TO THE MEMBERS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION.

We have examined the above Balance Sheet with the books of the Corporation kept in Hong Kong, with the audited Accounts of the London Office and with the Returns received from the other Offices. We have obtained all the information and explanations we have required for the purposes of our examination. The above Balance Sheet gives the information required by the United Kingdom Companies Act, 1948 in the manner prescribed for a Banking Company and on that basis, in our opinion, is a full and fair Balance Sheet properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs at 31st December, 1957, according to the best of our information and the explanations given to us and as shown by the books kept in Hong Kong and the Returns received from the other Offices.

The Hongkong and Shanghai Banking Corporation

Asian Countries Face Foreign Exchange Difficulties

The Problems Arising from Rapid Industrialisation

Is Inflation the Danger, or Deflation?

Survey of the Eastern Scene by the Hon. C. Blaker, the Chairman

The Ordinary Yearly General Meeting of the Shareholders of The Hongkong and Shanghai Banking Corporation was held on 14th March, 1958, at the Head Office of the Corporation, No. 1, Queen's Road, Central, Hongkong.

The following is the statement by the Chairman The Hon. C. Blaker, M.C., E.D.—

During the past year there was very little improvement in international relations throughout the world. The outstanding problems in the Middle East seemed no nearer solution and in spite of discussions on disarmament and proposals for high level talks, the main issues between the two sides still remained unresolved. In the scientific field, on the other hand, there were two remarkable developments which seem likely to have a major influence on the future progress of the human race—the launching of the Russian earth satellites and the first steps in the control of thermonuclear reactions. Although the latter may prove, in the long run, to be the more important, the immediate impact of the former was very much greater, showing as it did the lead that Russia has now gained in intercontinental missiles. There is no disguising the fact that the west and the United States in particular, have suffered a severe political reverse due to the strategic consequences of the Russian advances in technology. It would seem doubtful whether the present policies will meet this changed situation and the demand for a more positive approach to break the deadlock seems likely to gain in intensity.

The economic picture has been somewhat mixed and it is not clear whether in 1958 the danger most to be guarded against is rising costs or falling production; whether in fact the inflationary tendencies that have been so much a feature of the postwar era are still growing or whether a period of deflation is about to set in. Whatever the future may hold the present situation, with the increasing cost of manufactured goods and a considerable drop in commodity prices, has pressed heavily on the balance of payments of the eastern countries in which we operate and this must inevitably slow up their progress. The heavy cost of modern industrial development has intensified the world capital shortage and this, coupled with an

overall fall in the dollar reserves, has resulted in a growing use being made of the drawing facilities member countries enjoy with the International Monetary Fund. During the year many currencies suffered a period of considerable strain and in Europe the problem was aggravated by the strength of the Deutsche Mark, the weakness of the French Franc and the rise in wages and prices in the United Kingdom. Sterling once again had to bear the brunt of the speculative pressure and in September the bank rate was raised to 7%, the highest since 1921, with restrictions on both bank advances and expenditure by local authorities. These measures halted the drain on the sterling area reserves and as a result the short-term position has greatly improved, but judgement must be deferred as to whether or not the over-riding problem of keeping British costs in line with those of her competitors has been solved.

These recurring currency crises have evoked serious consideration as to whether it is advantageous to the United Kingdom to maintain sterling as an international currency. Those who argue against have drawn support from the fact that the drain last year took place at a time when the country was paying its way, and various estimates have been made to show that the foreign exchange earnings of the City are much less than has been generally supposed. While this is not the place to enter into this interesting discussion, I should like to say this, that from the point of view of a bank such as ours, mainly concerned with the financing of international trade, any suggestion that sterling should abrogate the role it has held for so long, can only be viewed with apprehension. Notwithstanding periods of distrust from time to time in recent years, no currency has yet been found able to take the place of sterling and it is difficult to see how the multitude of transactions which make up the settlement of trade in our particular area alone could be cleared without the facilities sterling and the City of London provide. This applies also to other parts of the world and a return to bilateralism, with all the frustrations this would involve, would seem to be the inevitable result of any serious limitation in the use of these facilities.

The common market, composed of France, Western Germany, Italy and the Benelux countries, officially came into being on 1st January 1958 but the wider free trade area, which is to be established around these countries and which is intended to comprise most of Europe as well, has still many bridges to cross. Progress seems likely to be slow, as, although there is a growing agreement on the general advantages of such an area, when negotiation turns to particular problems the extent of the difficulties is revealed.

ASIA.

The political situation in the Far East shows little outward change. Many outstanding problems still remain unsolved but while it would be unwise to be complacent at a state of affairs with so many explosive possibilities, the fact that local disturbances have not spread gives ground for satisfaction. Deterioration in the terms of trade, which has resulted in a general fall in the foreign exchange reserves of most countries in the area, is the most disturbing economic feature. Admittedly these difficulties were aggravated by the increasing pace of development but administrative weaknesses in several cases have quickened the trend and have delayed the taking of appropriate action to reverse it. It would be unfair to criticise the various countries concerned unduly, as very few other countries have been free from balance of payment difficulties at one time or another in recent years. Nevertheless it is unfortunate that this state of affairs should have occurred at a time when most of the various development programmes require outside capital, the demand for which throughout the world is so acute. Actually considerable amounts of capital have been granted to the area during the past year through such media as the International Bank, various United States agencies and the Colombo Plan, but there are signs that these supplies are not unlimited. It would therefore seem to be necessary to attract to a greater extent the flow of private capital but Asian countries should not forget that there is already considerable competition from other areas for what is available. In their annual report the Consultative Committee of the Colombo Plan point out "the advantage of the region in

this competition is that it offers potentially large and growing markets" but go on to warn that "the attractions of the region, however, can be counter-balanced by such factors as apprehensions as to the security of investment, difficulties with administrative and financial procedures and restrictions and uncertainties about the incidence and weight of taxation." I hope that this advice, coming as it does from a gathering of representatives of the governments concerned, will be given careful consideration. Foreign capital has in the past done much to assist the industrialisation of many countries and continues today to increase the productivity of those that are most advanced. It is now being more generally realised that foreign investment is not necessarily tarred with the colonial brush but recent events in Indonesia have shown the disrupting effects that extreme nationalism can have on a nation's economy.

HONG KONG.

On the last day of the year, to the traditional sound of Chinese firecrackers, Sir Alexander and Lady Grantham left Hong Kong after a governorship of over ten years. By 1947 the Colony had repaired the worst of the damage and neglect left over from the occupation and had resumed its pre-war role as an entrepot for South China but the development of the local industries, which were to provide employment for the growing number of refugees, still lay ahead. These were not easy years but, amidst the numerous trials and tribulations which afflicted this part of the world, Sir Alexander stood firm and by his leadership guided the energetic people of Hong Kong along the path to the thriving metropolis we now see today. Greatly assisted by his lady, he instilled members of the community with a feeling of social responsibility, which was not always to be found in earlier days, and the numerous charitable organisations in the Colony today owe much to their interest and encouragement.

The pressure of population continues to be the most serious problem facing the Colony and the concentration of such large numbers of people, in the urban areas of Kowloon, places a heavy burden on all the public services and in particular on the police force. The recent remarks of the Governor

and the Financial Secretary on the water situation give some idea of the difficulties that have to be overcome in the provision of this basic requirement. It seems clear that even if the Shek Pik scheme on Lantau Island should prove workable, this will not be sufficient to meet the growing demand of industrial development and improved standards of housing. The government announced at the end of the year that they had appointed a firm of consulting engineers to survey certain areas in the New Territories with a view to exploring the possibility of building self-contained new towns. This proposed development will naturally take time but the necessity of housing and finding work for the large number of Chinese refugees is still a major problem. The General Assembly of the United Nations recently considered this question and appealed to member countries to give all possible assistance to alleviate distress. It would, I think, be optimistic to expect any large response to this appeal but it is naturally a matter for regret that Hong Kong seems likely in the future, as in the past, to be required to tackle this problem from her own resources. I hope, however, that the needs of the refugees will not be forgotten and that there will be some relief from abroad.

All the indications are that the population will continue to grow which will necessitate considerable future industrial development and I sometimes wonder whether this will be forthcoming. We have been fortunate in recent years in the inflow of capital, much of which has built up new industries, but it would be unwise to rely on this continuing indefinitely. In spite of the progress of local industries the adverse balance of trade continues to grow; granted in an entrepot this is not too reliable a guide, but the fact remains that the time may come when the invisibles will not be sufficient to make up the difference. If this should happen, private enterprise might not be tempted to invest to the extent that it has done in the past and a more positive approach by the government might be necessary to fill the gap. The economic position in the Colony has been so favourable in recent years, and so much praise has been expressed abroad at the progress that has been made, that it is easy to become complacent. The dangers I have hinted at may not be so far away as people like to think and it would therefore be wise to consider some preliminary planning to avoid being taken unawares.

Business activity remained at a high level throughout the year and although there are signs of a slight contraction there seems no doubt that the number of new buildings springing up all over the Colony is a fact the amount spent on building last year was the highest since the war. Visitors are to be amazed at the speed with which these are constructed

and even residents, after a short absence, comment on the changes that can be seen. The supply of flats for the more well-to-do members of the community has probably now reached saturation point but there is an ever-growing demand for smaller flats for the lower income groups. The recently completed North Point Estate, one of the largest state-aided housing projects in Asia, containing nearly 2,000 flats, will help to supply part of this need. A great deal more, however, will require to be done and it is good to know that plans for further housing estates are already under way.

It was announced in November that the Royal Naval Dockyard would be closed down progressively over a period of two years. This decision has been taken as part of the British Government's recent defence policy which includes the reorganisation of naval forces and their shore support throughout the world. Other dockyards are being closed in the United Kingdom and we must accept this decision. It is nevertheless a matter for regret, as not only has this raised the problem of re-employment of the workers but it must inevitably weaken to a certain extent the close connection which has existed for so long between Hong Kong and the Senior Service.

On the recommendation of Sir Alexander Grantham, a committee has been formed, composed of ten members representing trade and industry, to consider the advisability of setting up a Federation of Hong Kong industries. This organisation, it is hoped, will assist with industry's problems of management, training and overseas trade relations. Technical training is a most important adjunct to modern industrial development and Hong Kong's new technical college was opened at the end of the year. It is hoped that in a few years this will be one of the finest technical colleges in this part of the world.

HONG KONG'S TRADE.

Hong Kong's trade in 1957 was higher in total than that of the previous year but this was due to a rise in imports as exports showed a slight decrease. Total trade was around HK\$9,000 millions with imports at HK\$5,600 millions and exports at HK\$3,400 millions. China remained the principal source of the Colony's imports followed by Japan and the United Kingdom. Exports to Indonesia, Thailand, Japan and South Korea were much reduced and increases to other areas, including the United Kingdom and the United States, were not sufficient to offset this loss.

Exports of Hong Kong products at nearly HK\$794 millions represented a small increase over the figure for 1956. The United Kingdom continued to be the largest customer but purchases of local products by the United States increased by almost 100%. A large

part of which was due to the efforts of the garment industry. Although the registration of new factories showed a fall, local industry is becoming more diverse and new lines continue to be actively developed.

Business on the Stock Exchange showed a similar trend to last year and decreased by about 30% over the year. Considering the sharp fall in security values that have taken place throughout the world, the market on the whole stood up very well. Land values remained fairly steady although prices in certain parts of Kowloon continued to rise. There are no longer so many first class sites available in the central district and this has caused buyers to turn to smaller properties, many of which are old and are long overdue for re-building.

The bank clearing figures for the year increased by about 11% and reached a total of nearly HK\$17,000 millions, to come close to the record figure of 1951. Increasing velocity of circulation has been much in the news recently in the United Kingdom. It is interesting to note that in the last two years, here in Hong Kong, a similar trend has been evident.

FINANCES OF HONG KONG

The financial position of the Colony continues to be very satisfactory and a surplus of just over HK\$1 million for the current year is now estimated as opposed to the original deficit of HK\$54 millions. Even this revision seems to be an under-estimate and the Financial Secretary considers it likely that the final result will show a much larger surplus.

For the financial year 1958/59 revenue is expected to remain at about the previous year's level but expenditure shows a considerable increase and a deficit of HK\$87 millions is estimated. The provision for public works non-recurrent at HK\$183 millions is the main reason for this rise, including as it does expenditure on new schools, hospitals, reservoirs and the air port. It is notoriously difficult to estimate accurately expenditure under this heading but, even if all this money is in fact spent, the Financial Secretary considered it perfectly sound to finance this capital expenditure out of reserves and no increase was made in taxation.

At the meeting of the Legislative Council at which the Budget was presented, the Governor announced that the Secretary of State for the Colonies had further relaxed the financial control which he exercised over Hong Kong and that the annual estimates and supplementary provisions would no longer require his approval. "This is a very important and considerable extension of our financial independence" as the Governor pointed out but I think that when one considers the conservative way in which our finances have been managed over the last few years there should be no cause for anxiety.

Indian Finance

CHINA.

On looking back over the events in China during the past year it is clear that a number of stresses have developed, both political and economic. Evidence of this is not difficult to obtain and a study confined to official pronouncements could only lead to the same conclusion. Indeed it would be surprising if all had gone smoothly, when one considers the profound changes that have taken place in the whole Chinese way of life in such a short time, with the collectivisation of the farms and the great strides that have been made in industrial development. A policy of such rapid growth must rely on a considerable degree of austerity in the present for the sake of the future, and is bound to raise doubts amongst certain sections of the population; the extent of these doubts became evident when the much publicised speech of Chairman Mao Tse-Tung, indicating that a greater degree of freedom of expression was to be allowed, touched off a wave of critical comment. This period did not last very long and soon press reports from Peking were once again full of confessions by counter-revolutionaries while it became clear that a campaign against "rightists" was actively under way. The extent of the criticism was no doubt embarrassing to the government but there is no evidence to suggest that it was more than just that or that it has in any way changed the declared policy of pushing ahead at as rapid a pace as possible with the industrialisation of the country. This remains the aim which will, I am convinced, be carried out resolutely and will be limited much more by the results of the harvest than by the opinions of disaffected groups. It may be that agriculture will not be able to play the part allotted to it as nature will continue, as in the past, to be a dominant influence. If this should prove to be the case the part of the national cake that is devoted to capital development may require to be smaller but there seems no doubt that it will still continue to be a sizeable slice.

The higher targets which were decided upon after the bumper harvest of 1955 proved too great a strain on the country's economy when last year's crops did not come up to expectation. The reduction in the allocation for economic construction in the budget was one of the signs that the authorities appreciated that the pace was too swift, while a number of official pronouncements show that it is now realised that many of the targets were too ambitious. The shortage of food has been the subject of much comment in the Chinese press and in December pork joined grain, vegetable oils and cotton cloth as a rationed commodity. Speculators, laxity of officials and errors of judgement are all blamed for the present state of affairs but the problem of a balanced distribution of food in a

April 12, 1958

country the size of China, particularly subject to the vagaries of the weather, would seem to be almost insoluble. Mistakes in the running of collective farms are now being freely admitted and agricultural development seems likely to be concentrated on improving on the existing model without as yet the introduction of mechanical aids. In an endeavour to raise the standards of rural conditions the movement of government employees from the towns to the countryside is being vigorously directed.

It is against this background that the decision of the United Kingdom and other governments to bring the list of goods which may be exported to China into line with the Russian list must be viewed. In association with British merchants interested in the China trade, we have been urging this relaxation for some time and we are happy to see that action has now been taken. It would, however, be unwise to expect any great immediate benefit but the visits of both the Parliamentary Secretary to the Board of Trade to China and the Chinese Economic and Technical Mission to the United Kingdom have, I hope, laid the foundations on which a growing exchange of goods may be based. The present volume of British trade with China is not very large and there would seem to be no reason why this should not be materially increased, even if a slowing down of development in China should be found necessary.

The period of the first five-year plan has now ended and it is claimed that industrial output greatly exceeds the original estimate. This is, I think, most likely as considerable strides have been made in the production of steel, coal, electric power and cement, to take a few examples, while the bridge at Wuhan, the first to span the Yangtse, is not only a considerable engineering achievement but will greatly assist communications between north and south. There are, however, signs that the pace has been uneven—too fast in some directions and too slow in others—which has resulted in overall production being slowed down. Action aimed at the elimination of these bottlenecks would seem to deserve high priority in the next five-year plan.

JAPAN

In our review last year I was able to report that Japan had a satisfactory year of economic expansion despite considerable political difficulties. This year the reverse seems to be true, as, although the inherent weaknesses in Japan's political structure remain unaltered and factional differences are still as strong as ever, it is economic problems rather than political that have given most cause for concern. The industrial expansion, which had been such a noteworthy feature of 1956, continued during the first half of 1957 with no slackening in investment de-

mand, but although exports increased they were unable to keep pace with the growing volume of imports and this caused a steady deterioration in the balance of payments. The raising of the discount rate by the Bank of Japan, an increase in import margins and a reduction of public and private investment programmes were some of the measures taken to reverse this trend and in October the drain on the foreign exchange reserves was halted after having reached the somewhat alarming total of U.S.\$600 millions for the first nine months of the year. Fortunately, with such heavy pressure on the balance of payments for the import of industrial materials, the rice crop turned out to be the second highest in Japan's history. Taking the year as a whole the net deficit was U.S.\$533 millions as compared with a surplus of U.S.\$293 millions in 1956, with exports higher by 14% and imports by 32%.

It would seem that the tide has been turned and that the deflationary policy has succeeded in slowing down the too rapid expansion which threatened to exhaust the reserves if allowed to continue. Falls in the index of production, increasing stocks of goods in the hands of importers and lower wholesale prices are evidence of this; on the other hand advances by the Bank of Japan to the banking system at the end of December were four times what they were a year previously and it is doubtful whether consumer demand has been seriously reduced. When one looks back on conditions in Japan over the last few years, with the rapid swings of the pendulum from one extreme to the other, it is tempting to speculate whether a way can be found to prevent such quick changes in the economic climate. This poses a difficult problem, faced as Japan is with a steadily rising population which necessitates a growing increase in her exports to keep her industry running and avoid the dangers of severe unemployment. No wonder there is pressure to increase industrial production particularly as there has been a change in the pattern of the export trade with less demand for consumer goods. This has resulted in activity in markets where there is already strong competition from other suppliers, many with old established connections, which makes the economy particularly vulnerable to any recession abroad. The shipbuilding industry is a case in point. Last year Japan reached the highest peacetime output of any nation but with the fall in world demand for shipping, particularly tankers, it seems unlikely that this level can continue. Other industries will undoubtedly suffer also but raw materials are continuing to come forward and it is not so easy to turn off the tap. It may be that action was not taken in time but, with the danger of unemployment always present, it is not surprising that the monetary

authorities are sparing in the use of the deflationary weapon lest the cure be worse than the disease. Taking everything into account it seems likely that Japan's economy will continue for some time to be subject to considerable variations unless there is renewed and sustained world-economic expansion.

The political situation remained uneventful during the year and very little positive action was taken in internal affairs apart from the financial measures already mentioned. Mr. Kishi retained the cabinet he inherited from his predecessor until July but, when the new cabinet was formed, it bore signs of the usual compromise between the different factions, with their varying personal loyalties. The Prime Minister was absent from Japan for a large part of the year making two tours of Asia and visiting the United States and Australasia. During these tours he propounded his plan for a South-East Asian Development Fund, which was given a mixed reception. This plan was somewhat vague in outline but the original intention was to set up a fund in U.S. currency available for the supply of industrial equipment from Japan to South-East Asia; when it became clear that U.S. currency was unlikely to be forthcoming a yen fund was proposed. Time alone will tell how valuable these tours were but the signing of the peace treaty with Indonesia and the settlement of the reparations issue gave a successful outcome to the last of these. Japan continues to maintain the most cordial relations with the United States but economic necessity alone would prevent neglect of her large neighbours. A trade pact was successfully concluded with Russia in December but although the Japanese have followed the United Kingdom in their relaxation of the embargo on trade with China, progress in the negotiations with that country was slow and trade in fact fell off. Arrangements have recently been announced for the sale by Japan of steel products to China in exchange for coal and iron ore and the resumption of this traditional trade must be in the interests of both countries.

Rearmament still remains far from popular and although the Constitution Research Council has been formed the opposition of the Socialists makes it unlikely that the controversial article in the Constitution, relating to rearmament, will be revised in the near future. Japan's election to the Security Council will, however, enable her to press more vigorously her objections to the holding of nuclear tests in the Pacific.

Now that she is once again a member of international organisations, Japan has been feeling her way searching for a policy which will suit her particular geographical position and satisfy her needs for export markets. For this reason I do not think that the last has been heard of the South-East Asian Development Fund.

PHILIPPINES.

The sudden death of President Magsaysay in the early part of the year was a severe blow to the people of the Philippines where he was greatly loved and respected. This tragedy, coming as it did in election year, made the contest more open but the Nacionalista Party were once again successful in the presidency although they lost the vice-presidency to the Liberal Party. President Carlos P. Garcia and Vice-President Diosdado Macapagal were duly inaugurated on 30th December and they have assumed office at a critical time in the affairs of the young republic.

This is mainly due to the deteriorating economic situation and the new administration are faced with a number of very grave problems. To quote from the President's recent State of the Nation Address these comprise "food insufficiency, unemployment, rising prices, dwindling international reserves, decreasing revenue collections and increasing budgetary requirements." This is indeed a formidable list and a reduction in consumption would seem to be an essential ingredient for any medicine that is prescribed. Certain steps to this end have already been taken. The rediscount rate was raised in September from 2% to 4½% and in December importers were required to deposit cash margins—in some cases up to 200%—before letters of credit could be opened and these were restricted to essential commodities. Without the repeal of the "No-Dollar Import Law", which permits barter trade, the monetary authorities are somewhat handicapped in their efforts to impose austerity on the import programme and it is to be hoped that Congress will follow the President's recommendation and re-examine this legislation at an early date. The measures adopted so far will no doubt result in a slowing down of the immediate drain on the foreign exchange reserves but they are in no way a lasting cure. For this reason it is not surprising that the suggestion for a devaluation of the peso is finding a growing number of adherents and it is true that by many standards the currency is overvalued. Nevertheless it does not seem to me that devaluation of itself is the answer to the problem and in fact there is the danger that once tried there will be the temptation to repeat the experiment. The immediate necessity is the implementation of a strict fiscal and monetary policy to drain the inflation out of the economy and curb unnecessary expenditure. Once the inflationary tendencies begin to weaken then the time might come to reconsider whether the present value of the peso was advantageous to the country as a whole but this should be decided upon as a matter of deliberate policy and not as a rescue operation.

VIETNAM

The Republic of Vietnam has now achieved a considerable degree of political stability and what might be described as the first stage in the task of resettlement is almost completed. Great credit for rescuing the country from the disturbed conditions which previously existed is due to the President, Ngo Dinh Diem, and his administration, in which far from easy task American advice and assistance has greatly contributed. Consolidation will be the next step and this may prove more difficult, requiring as it will the stabilisation of the present political structure and the building up of a viable and independent economy.

Imports during the year have continued at a high level and the market is heavily overstocked. There is no doubt that import licences were granted on too lavish a scale but the tight money conditions caused by the delay in utilising counterpart funds has greatly hampered sales. These counterpart funds are obtained by the government from the importers of goods under the American Aid programme and can only be utilised on approved projects. Unfortunately delay in formulating such projects has resulted in a large amount of money still being immobilised with the Banque Nationale du Viet-Nam at a time when its use would not only improve the country's future productive capacity but by putting purchasing power back into circulation would have the immediate effect of speeding up the disposal of stocks.

More decisive action can be found in the rural areas where the improvements in farming equipment and techniques have produced higher yields, while work is proceeding on clearing highland areas and bringing more land under cultivation. Rice exports were resumed and totalled about 200,000 tons for the year but it is hoped to improve on this figure during 1958. Negotiations on reparations continue with Japan and the gap between the two sides is being narrowed. It seems likely that the building of a hydro-electric system on the Danhim river will be included in the final settlement.

CAMBODIA

The National Assembly has been dissolved and pending the result of the new elections a provisional cabinet has been formed. On the whole the political situation remains little changed and Cambodia continues to adopt a foreign policy of strict neutrality. Trade increased over last year with imports and exports more in balance due to a substantial rise in exports of rice. Various light industrial projects are under consideration and efforts are being made to develop a deep-sea fishing industry in the Gulf of Siam. Clearing of the jungle to make a road from the capital to the port of Kompong Som proved more difficult than had been expected but it is hoped that this road will be completed some-

time during 1959. The opening of this deep water port will lessen Cambodian dependence on communications by the river through Viet Nam.

THAILAND

The general elections which were held at the beginning of last year touched off a series of events which have somewhat changed the characters on the political scene. Although the Seri Manangasila party won a comfortable majority, the way in which the elections were run left a feeling of public dissatisfaction which grew more vocal as time went on. In September a bloodless coup d'etat, led by Field Marshal Sarit Thanarat, resulted in a caretaker government being established and the withdrawal from the country of Field Marshal Pibul Songgram and General Phao Sriyanond. Fresh elections were held in December and a government was formed from members of the new National Socialist Party. It remains to be seen how this new party, which is in fact a coalition of three other parties, will fare in internal politics especially as, with Field Marshal Sarit Thanarat's departure for medical treatment to the U.S.A., the three personalities who have dominated Thailand's politics for so long are for the present at least absent from the stage.

Although the import market has been somewhat overstocked, which has resulted in difficult trading conditions with some business failures, the year on the whole has not been unsatisfactory. In spite of the necessity to impose restrictions on the exports of rice during the second half of the year the volume exported during 1957 at one and a half million tons was the highest since the war. This is unlikely to be repeated this year, as the new crop is below average, and the exportable surplus is not expected to exceed one million tons. Teak exports were considerably reduced due to competition from Burma. The budget, which was delayed pending the formation of the new government, is expected to be presented shortly.

A survey mission from the International Bank is at present in Thailand to plan a long term development programme and a loan has been granted by this bank for the first stage of the Yarnhee Hydro-electric project.

FEDERATION OF MALAYA

Malayan independence was proclaimed on 31st August at a colourful ceremony in the new Merdeka Stadium in Kuala Lumpur in the presence of representatives from many nations. The Duke of Gloucester, representing the Queen, handed over a specially bound volume containing the constitutional instrument providing for the withdrawal of British protection over the Malay States and of the Crown's sovereignty over the settlements of Malacca and Penang. The Federation of Malaya thus became the tenth nation in the Commonwealth and subsequently was elec-

ted the eighty-second member of the United Nations. The final arrangements for the transfer were completed swiftly in a spirit of goodwill on both sides; while the constitution followed to a great extent the recommendations of the Reid Report and seems to be a workable compromise which provides an opportunity for the development of democratic government. The ruler of Negri Sembilan State was elected by his fellow rulers as the first Constitutional Sovereign of the Federation and at the state opening of the Legislative Assembly outlined the policy of the government. Their first duty would be to safeguard the independence of the Federation and to protect the constitution, the initial threat to which came from the communist terrorists. The government would not dissipate the resources of the country in large armed forces or an elaborate foreign service but would concentrate on home affairs and aim "to maintain confidence in the financial standing of the Federation as a field for investors at home and overseas." The Anglo-Malayan Defence and Mutual Assistance Treaty, which was signed in October, permitted the United Kingdom forces to be stationed in the Federation to assist in external defence and to provide "for the fulfilment of Commonwealth and international obligations."

The Prime Minister made no alterations in his Cabinet and the Alliance Government which, under his leadership, had done so much to enable the change-over to be completed smoothly, continued to guide the destinies of the country. This was in accordance with the wishes of the majority of the population, as, although ripples of discontent can be deduced from the result of some recent elections, the country as a whole is still strongly behind the present administration. The only disturbing feature has been found in some Chinese schools where the dislike of certain members of that community for some aspects of the government's education policy resulted in outbreaks of indiscipline which in some cases led to violence. It would be unreasonable to expect this honeymoon period in the political arena to last indefinitely and some more vigorous form of opposition is bound to emerge, perhaps before long. Following historical precedents, this would seem likely to come from the left, but there is hope that this may be multi-racial in character and thus avoid issues being decided on a purely racial basis.

In an effort to bring an end to the emergency the government, in September, made a final offer of an amnesty to the terrorists with the option of either remaining in the Federation or returning to China with their families. Over one hundred terrorists took advantage of this offer by the end of the year when it was due to expire and the period was extended to 30th April. There are signs of definite cracks in the terrorists' organisation and

there is now more ground for hoping that the ten-year old emergency may be ending.

A White Paper was issued in the early part of the year setting out the general plan of capital and development expenditure for the period 1956-1960. This envisaged the utilisation of part of the reserves which "will require strict control over the ordinary budget to ensure that revenue is maintained at levels sufficient to protect the reserves so that they can be used to finance part of the capital budget and are not unduly depleted by deficits on the ordinary budget." With revenue dependent to such a large extent on the price of so volatile a commodity as rubber and with future calls of the Emergency so difficult to forecast, it is unlikely to prove easy to maintain a continuing surplus of revenue. For the current year a deficit of M\$119 millions is forecast and although estimated deficits have tended not to materialise in recent years, the low price of rubber will make this more difficult this year. A separate capital budget is expected to be introduced shortly and it may be that some of the projects will be slowed down as present high interest rates make either the flotation of a loan or the selling of investments particularly unattractive.

Discussions on the formation of a central bank for the Federation have continued during the year and Mr. W. H. Wilcock, of the Commonwealth Bank of Australia, has been appointed banking adviser and is now in Kuala Lumpur. I do not think it would be appropriate to make any comment on this subject until some definite proposals are announced.

TIN AND RUBBER

The test of the effectiveness of the International Tin Agreement came earlier than was expected and judgement must be reserved as to whether this experiment will prove successful. At the meeting of the International Tin Council in March, the price range was raised and due to the decline in the market price, in sympathy with other commodities, the floor price of £730 per ton was reached in October. Both the second and third contributions were subsequently called for from subscribers and restrictions on exports were imposed in December and the period extended in January. The price at which the manager of the buffer stock could sell was lowered and the producing countries recommended the creation of a special fund to be put at the disposal of the buffer stock. These measures will in time reduce the supply but meanwhile the pipeline has to be cleared and the increased exports from Malaya in January show that this may take longer than was originally expected.

Both production and exports decreased slightly compared with 1956.

The price of rubber declined slightly during the year and the

average for 1957 was 88½ cents as compared with 97½ cents in 1956. In spite of the downward tendency doubts about the arrival of stocks from Indonesia caused a sharp temporary rise in December and this factor continues to make its influence felt. Exports were higher than the previous year and exceeded one million tons. The most notable feature was the considerable rise in exports to Japan.

SINGAPORE

The talks in London last year were successfully concluded and the way is now clear for the granting of the new constitution to the State of Singapore and the holding of elections for the fifty-one member Legislative Assembly. Any doubts which existed concerning the attitude of the government of the United Kingdom in this connection should have been allayed by the assurance given by Mr. Macmillan on his recent visit. Registration of citizenship under the recently enacted ordinance which provides automatic citizenship for those born in Singapore, with residential qualification for others, has recently been completed and the new electoral rolls are being prepared. The new constitution will provide for full internal self-government with the sole responsibility for maintaining law and order and preventing subversion but the United Kingdom will look after external relations and defence and will have the right to the use of bases in the island. A consultative body, the Singapore Internal Security Council, will be established with certain advisory powers, composed of three members each from Singapore and the United Kingdom and one from the Federation. It is hoped that this body will iron out any difficulties that may arise due to the interrelation of internal security and external defence.

In view of this impending change in the form of the administration, it is not surprising that disturbances in Chinese schools and strikes in the docks and among the telephone workers have attracted considerable attention abroad. Many shareholders are no doubt wondering what the future course of events will be but although I do not propose to attempt to give any forecast, there are a few significant pointers which I will mention. In August a White Paper was issued showing the extent of Communist activity and penetration in unions and political parties which was becoming a serious threat to the maintenance of law and order. At the same time, a series of arrests of active subversionists was made which was followed a few weeks later by the detention of a number of students. These strong measures had their effect, and conditions in the schools and relations with labour have greatly improved. The City Council elections were held in December, at which only a third of those eligible recorded their vote, and resulted in a sharp swing to the left. The behaviour of the supporters of some of the delegates

in the early sessions certainly hardly augured well for the smooth working of democratic government, but recent meetings have been quieter and there are signs that the Council are now getting down to business. It is not difficult to find cause for misgiving from some of these recent events, but it would, I think, be premature to look only on the dark side, and dangerous to exaggerate the fears for the future. The responsibility of office has usually made politicians in other parts of the world view things in a different light, and there is no reason to suppose that this will not happen in Singapore. Nevertheless, it is not surprising that there is a feeling of uneasiness as the economy of an entrepot is so vulnerable to outside influences that any lack of confidence abroad would have disastrous consequences.

In what seems likely to be his last budget address, the Financial Secretary, Mr. T. M. Hart, looked back on what has been achieved in Singapore since the war. During this period M\$600 millions have been expended on development by the government and the City Council and recurrent expenditure is now more than four times what it was in 1947. A large part of this increase is due to the ever growing demands of education, public health and social welfare but the organisation of the police force to its present high state of efficiency has not been achieved without cost. In spite of all that has been done, development must still go on and it will not be as easy in the future as in the past to obtain the required capital from either surplus revenue or institutional investors. Already the government are relying to a large extent on loans from the Central Provident Fund Board, which are naturally limited in amount, and for this reason the pace of future development is likely to be increasingly governed by financial considerations. This will necessitate a degree of co-ordination and the government have set up a Planning Committee to integrate development plans of the various authorities to the extent of the funds available. The current position is not unsatisfactory and increases in taxation this year were confined to the raising of the petrol duty to the same level as that of the Federation and a few minor adjustments but a rise in taxation must be looked for in the future. In fact, it seems likely that some new forms of taxation may be introduced shortly and although this is no doubt inevitable, I hope that these will not include any measures which will damage the free port status.

Malayan total external trade showed a rise of 2.7% over 1956 but there was an adverse balance of M\$209 millions compared with a surplus of M\$13 millions in 1956. This was caused by an increase in imports of over 5% with exports at about the same level as the previous year. It must of course

be remembered that there are a number of invisible items such as British military expenditure not included in these figures which make the position not as bad as it looks.

NORTH BORNEO

The racial problem across the sea is not without its influence on North Borneo, where the administration are moving slowly in the admission of the Chinese labour which could be so beneficial to future development. The Governor, in his annual report to the Legislative Council, made it clear that "there is no intention of sacrificing the future to our present needs." Under existing conditions I should hesitate to criticise such a decision but it will inevitably result in progress being slow, which is naturally disappointing to all interested in trading conditions in this area. In Jesselton the building programme has gathered momentum and projects completed during the year include the new market, new government offices and an up-to-date hospital. In Tawau, development of the Quoin Hill area should in time decrease the dependence of the port on the barter trade while in Sandakan the construction of new buildings and roads is being pushed ahead. In Labuan there is little sign, as yet, of expansion but the new Shell installation has been completed which will be the main distribution depot for North Borneo. Trade continued at about the same level as in 1956, and for the first time timber and copra exports combined exceeded rubber in value.

Both the Governor of North Borneo and the Governor of Sarawak have recently broadcast a suggestion that their two territories together with Brunei should consider some form of closer association. No concrete proposals have been put forward and for the present all that is being attempted is to ascertain whether there exist "bodies of opinion in favour of federation sufficiently substantial to make it workable." It will be interesting to see how the people of these territories react to the proposed federation.

BRUNEI

Draft constitutional proposals were announced by the Sultan providing for the replacement of the State Council by the Privy Council, Executive Council and Legislative Council. Unofficial members of the Legislative Council will be nominated, but the majority of these will be elected by the District Councils. This proposed constitution seems to have received general support but it is strongly opposed by the Peoples Party.

The State continues to be in a very happy financial position. The surplus for 1958 is expected to be M\$68 millions and investments total M\$450 millions.

A considerable amount of building is in progress and the trunk road connecting the capital with

the oilfields is expected to be completed by September of this year.

INDONESIA

Indonesia has passed through troubled times since my last report and, whatever the outcome, it is difficult to see much hope of improved trading conditions in the immediate future. The lack of agreement between influential political figures in the capital steadily weakened the control of the central government over the outer islands where many of the local commanders to a large extent acted independently, merchanting local produce to pay and supply their troops. This not only made the chances of any political settlement more difficult but deprived the central government of the revenue and the foreign exchange which would normally have accrued to them. As a result the economic situation deteriorated rapidly with an increase in the note issue, steadily rising government borrowing from the Bank Indonesia and a dwindling of the foreign exchange reserves. These tendencies, which had been evident to a greater or lesser degree during the year, gathered momentum in December when it was decided to expel the Dutch in whose hands so much of the country's trade still remained. The disruption of coastal shipping which followed this move was a particularly serious matter. Many leading personalities in Indonesia expressed doubts about the wisdom of this action, which was in fact less strictly enforced in the outer islands, and relations between Java and the rest of Indonesia continued to deteriorate. Although political differences played a large part in the growing dissension, the main cause has been economic. Java with its large population has always required more of the country's resources than she has been able to contribute and although this is to a certain extent inevitable, the outer islands have felt that they were not getting their fair share. Whatever the outcome of recent events may be it seems clear that the previous method by which foreign exchange resources were allocated is unlikely to be resumed. Meanwhile barter trade of various types enables necessary supplies to be obtained but the terms of a great deal of this trade are far from favourable and do not benefit the economy of the islands as a whole.

INDIA

In August, India completed the first decade as an independent country during which period she has developed a considerable degree of political maturity and now exercises a profound influence on neighbouring Asian countries. The elections resulted in the expected victory of the Congress Party, although they suffered a number of setbacks, particularly in Kerala where a Communist administration took office. This has necessitated certain problems of adjustment at the centre but the

Congress supremacy over the country as a whole has not been seriously challenged. Relations with Pakistan unfortunately show no signs of improvement, with the Kashmir problem still outstanding and the dispute over the irrigation rights in the Indus valley no nearer solution. Trouble still continues on the border of Goa but a settlement has been reached in respect of the Naga areas. On the whole, the political scene shows little change.

The most conspicuous feature of the economic scene has been the steady deterioration in the foreign exchange reserves. When the Second Five-year Plan was drawn up it was anticipated that there would be a foreign exchange gap which would develop towards the middle of the period and it was hoped to meet this by borrowing abroad. Due to a large extent to the rise in world industrial prices the drawing down of the sterling balances occurred earlier than was expected and in fact the rapid decrease during the summer was one of the strains which resulted in the weakness of sterling. In spite of a loan in U.S. currency from the International Monetary Fund of the equivalent of £45 millions, the sterling balances dropped from £400 millions at the end of 1956 to £220 millions at the end of 1957, which by any standards is a sizeable fall. In October it was in fact found necessary to reduce the foreign assets which were required by statute to be held by the Reserve Bank of India. It was India's misfortune that this deterioration in the balance of payments should occur at a time when capital was in short supply and it soon became obvious that assistance would be difficult to obtain. The amount required seems likely to be considerable as, even after paring down the plan to its bare essentials and discarding all the frills, it is still expected that there will be a shortfall on external account of over £500 millions. Recently the U.S. Government has announced a loan of approximately £80 millions and has promised to provide surplus agricultural products, while other countries will grant credit on a smaller scale. As a result, the immediate outlook is more promising but the problem of providing sufficient food for internal consumption still gives cause for concern. It had been hoped that food imports were a thing of the past but the harvests have not come up to expectation nor has production increased fast enough to meet the increased demand and it has been found necessary at times to use valuable foreign exchange for the import of food. Imports of other commodities have been cut to the bone and all types of expenditure requiring the use of foreign exchange are being rigorously curtailed.

It will be seen that active steps have been taken to reduce the foreign exchange drain but this has resulted in the index of indus-

trial production starting to decline, having moved steadily upwards since 1951. This is probably due to a certain extent to a shortage of industrial raw materials and I am glad to see that it has recently been announced that the import of capital goods will not be made at the expense of raw materials. I hope that this policy will be strictly adhered to as, necessary though new industrial investment is, there will be no overall benefit to the economy if existing industries are forced to curtail production.

Last year I pointed out how important it was for the future of parliamentary institutions in Asia that India should succeed in her efforts towards increased industrialisation and this is as important now as it was then. In spite of the difficulties I mentioned above a great deal has already been done and the available capital has on the whole been wisely spent. Progress is being made in the construction of the three new government steel plants and the expansion of the two that are privately owned, while many other projects are completed or nearly so. The industrial delegation, led by Mr. G. D. Birla, which recently visited North America and Europe found genuine sympathy for India's aspirations and willingness to help as far as possible. The delegation, however, was impressed by the serious misgivings which were felt about some of the country's fiscal and economic policies and these criticisms are similar to many that have been made from time to time by industrialists both in India and elsewhere. In particular, the slow growth of domestic savings, which has resulted in a shortage of local capital, could have an unfortunate influence abroad. High taxation is blamed for this shortage and the recent widening of the taxation net by the inclusion of the wealth and the expenditure tax is unlikely to make the position any easier. "Without profits there can be no savings, without savings there can be no investment and without domestic investment no seeking of capital abroad," the delegation declare in their report and these are words which could with advantage be seriously considered not only by India but by many other countries in the world today.

In conclusion, it is clear that the country faces a difficult time in the immediate future with the probability that things will get worse before they get better. The outlook is, however, not entirely black and if it is possible to surmount the troubles of the next few years the increasing industrial investment should begin to make its influence felt.

BURMA.

Burma also recently celebrated the tenth anniversary of the attainment of independence and this coincided with a growing improvement in the internal situa-

tion. It had been clear for some time that the restoration of law and order must take precedence over economic development and in June the Prime Minister, U Nu, promised that in future this would be his government's policy. The increased expenditure in the budget on the police and defence was practical action along these lines while the surrender of several regional commanders of the terrorists with their followers was evidence that the more vigorous measures adopted were having their effect. Little progress, however, was made in the border dispute with China over territories in the Kachin State.

The general financial outlook is far from promising. The foreign exchange reserves fell from £40 millions to £30 millions notwithstanding a loan from India; while the failure of the rice crop in certain areas will result in the exportable surplus being only a little over half of the two million tons shipped last year—admittedly a post-war record. Tea output which was running at about 50% over the previous year's figures is expected to continue to improve and exports increased by about one fifth. The fall in the world price of non-ferrous metals will, however, result in lower earnings from this source. In view of the deteriorating state of the foreign exchange reserves it is not surprising that action has been taken by the exchange control and import licencing authorities to bring about a reduction in imports.

The semi-government organisations which I mentioned last year now handle a large part of the import trade and were set up with the intention of reducing the cost of living. In this they have had a limited success as although some prices have fallen they have run into difficulties over distribution and have not always arranged their orders to meet the market demand. In fact faulty procurement has resulted in the arrival of imports being uneven and this has at times caused delays at the port of Rangoon. Reconstruction of the port is continuing but a great deal still remains to be done.

Although it has not been found possible to push ahead with industrialisation with as rapid a speed as was once hoped, quite a large number of projects have been completed and the joint venture arrangements between foreign concerns and the government are working well. Until it is clear that the terrorists' organisation has been broken the pace of future development may be slow but a favourable rice crop this year would alter the economic outlook very rapidly.

CEYLON.

During the year the government were able to implement a number of their election promises. The British bases were handed back, a compromise was reached on the

language issue and a select committee was set up to examine the question of revising the constitution. Nationalisation on the other hand is not being rushed although the bus transport system came under public ownership on 1st January, 1958, and it seems likely that the port of Colombo will follow suit. The tenth anniversary of the attainment of independence, however, finds the political situation uneasy with considerable rivalry between the various groups which make up the People's United Front. This has mitigated against resolute action being taken to deal with some of the outstanding problems, the most important of which is the continuing labour unrest, particularly in the port of Colombo. The movement of exports has naturally been hampered and the delays in the port have caused a number of ships to bypass Colombo.

Ceylon is fortunate in having a comfortable cushion of external assets but the terms of trade moved against her in 1957 and the reserves fell by Rs. 236 millions, the first year in which they have declined since 1953. The tea crop was a record and in spite of the delays in the port of Colombo, exports of tea for the first eleven months increased both in value and volume, as did exports of rubber. Trade as a whole was greater but as imports showed a larger increase there was an adverse balance of Rs. 85 millions. A number of measures have already been taken to restrict withdrawal of capital and import duties on luxury goods have increased but it remains to be seen whether or not stricter control of imports will be necessary. The recent floods, although not quite so devastating as had been reported in the press, are bound to increase government expenditure for relief work and repairs; a deficit had already been estimated in this year's budget which seems likely to be increased.

The future economic outlook is somewhat uncertain as is always the case with this country when the price of her export commodities is low. While external events dictate the level of these prices, the other unsatisfactory feature of the economy, namely, the disturbed labour relations, is a problem which must be tackled internally. I hope that action will not be too long delayed.

CONCLUSION.

Once again I come to the end of my survey of the eastern scene and I am afraid this year it has not been possible to paint quite such a rosy picture. It may be that the post-war boom is ending and that a period of recession is setting in. On the other hand this may be merely a pause before the advent of a further upward surge of world economic expansion. Time alone will tell but meanwhile I think it would be wise not to count on any rapid improve-

Indian Finance

April 12, 1958

ment in the conditions of the countries which I have been discussing. Commodity prices are still very weak and the resulting adverse reaction has been accentuated by the large development plans most of them have undertaken. Their problems are on the whole similar; growing populations, a large part of which have a comparatively low standard of living, with their economies dependent to a large extent on agricultural commodities subject to severe fluctuations in price. It is not surprising that there is the urge to expand local industry in

order not only to raise the standard of living but also to make the economy less susceptible to the vagaries of world demand. But rapid industrialisation has its own problems, the most difficult of which is to keep inflation under control. As the projects get under way employment rises and with it demand, particularly for food and basic clothing. Prices go up and it is found that the available foreign exchange is earmarked for the imports of machinery and industrial raw materials. Imports of consumer goods which would restore the level of prices have to

be limited due to payment difficulties but the internal demand still grows. It can be seen that striking the proper balance among the conflicting claims on the resources available is by no means easy and to point out what is wrong is easier than to show the way of putting things right. No doubt development can be slowed down but this takes time as it is obviously uneconomic to stop enterprises already half completed. Raw materials must continue to be imported to keep existing industries running and the failure of a harvest or a rise in prices

abroad may completely upset even the most conservative of calculations. I am not suggesting that errors have not been made nor that administration has not at times fallen down due to inexperience or even more blameworthy causes. Nevertheless any criticisms of the failings of these countries should be tempered with the realisation of the immense difficulties they have to face and if at times they may have aimed too high, surely this is an accusation that could be levelled at many of the most successful examples of human endeavour.

The Indian Sugar Mills Association

Impressive Performance of the Industry

Exports—A Significant Land Mark

The Presidential Address of Mr Balmokand Shah Sawhney

In his presidential address at the 25th Annual General Meeting of the Indian Sugar Mills Association held at New Delhi on 3rd April last Shri Balmokand Shah Sawhney reviewed the achievements of the sugar industry in the field of production and exports during the last year and also dealt with the various problems facing the industry such as growing competition from tax-free khandasari, high tax burden, low yield and quality of cane etc.

Following are extracts from Sri Sawhney's speech:—

SUGAR INDUSTRY'S IMPRESSIVE PERFORMANCE

I am sure sugar industry's performance last year would be viewed with satisfaction. With sugar production at 20.26 lakh tons, we have for the third successive year surpassed the previous records as will be evident from the following figures:—

Year	Production (lakh tons)
1953-54	.. 10.01
1954-55	.. 15.90
1955-56	.. 18.62
1956-57	.. 20.26

It will be seen that over a short period of four years, sugar production in the country has doubled itself. I doubt if any other established industry has such a promising record to show. The achievement of the industry will be further appreciated if we take into account the fact that almost the entire increase in production has been achieved by the existing units, the new units contributing only 40,000 tons.

SUGAR EXPORTS

A significant landmark in the history of the sugar industry's development is our emergence for the first time as an exporter of substantial quantities of sugar. The total quantity exported during

the year has been about 153,000 tons, destination-wise details of which are:

Name of country	Quantity exported (Tons)
China	.. 33,624
Malaya	.. 20,837
Singapore	.. 5,096
Burma	.. 11,643
Ceylon	.. 8,158
Aden	.. 8,050
Iraq	.. 13,085
Saudi Arabia	.. 1,247
Other destinations in West Asia	.. 5,045
Sudan	.. 14,847
East Africa	.. 29,454
U.K.	.. 1,002
North Vietnam	.. 823

Considering our precarious foreign exchange position, the export of sugar has been a welcome development and is expected to contribute materially towards the success of the Second Five-year Plan. This year, its earnings have been over Rs. 12 crores of foreign exchange which compares well with the earnings from the other commodities exported regularly, and perhaps would rank only after tea, jute and cotton manufactures.

EXPORTS HANDLED BY I.S.M.A.

When Government agreed in December, 1956 that sugar should be exported outside India, they entrusted this work to our Association. It was a unique case of an Industrial Association taking up actual business and that too on a non-profit basis.

The Association had to start working almost from scratch in a sphere which was quite new to it. Indian sugar was an unknown commodity in the world markets and we had to contend against the natural hesitancy on the part of the foreign buyer. We lost no time in contacting the prospective markets through sending our re-

presentatives and otherwise, and gradually Indian sugar came to be accepted in competition with the world's finest sugars like British Refined and Formosan. It is noteworthy that though new in the export market, Indian sugar has so established itself that it is not grouped among the cheaper varieties like Brazilian or Argentine sugars which have been known to the markets for a long time.

As our business started taking shape, the competition from the well-established exporters became formidable. In fact, there have been instances of organised competition from world's established sugars to oust Indian sugar and we had to sell in competition with them, and it should be a matter of satisfaction to the members that we were able to secure in good many cases business from international tenders. Indian sugar is now well-known throughout the world export markets and even though sales for exports have been presently suspended, enquiries continue coming, not only from our neighbouring markets but from such far off countries as Germany, Finland, etc. Internationally reputed brokers have also begun to look forward towards the supply of Indian sugar to the various markets.

In some cases they personally visited this country to gather first hand knowledge of our quality and packing and arrangements for storage and shipments at ports. These visits proved to be very helpful in their gaining the necessary confidence in the Association's ability to effect shipments according to their requirements which resulted in increased business with them.

Undeniably, the efforts of the Association have enabled Indian sugar to find a permanent market in the neighbouring countries in East and West Asia as well as in Africa. That Indian sugar has now

come to stay as a strong rival to other well-known sugars in the world export markets is amply borne out by the remarks of the Chairman of Tate & Lyle, London, at the Annual General Meeting of the Company, when he described the Indian sugar industry's achievements as "a threat to wrest some of our business". This is fairly indicative of the Association's achievement and of the future possibility of the export of Indian sugar.

EXPORTS IN FUTURE

The world sugar market has, however, now come down appreciably mainly because of better crops in Europe and Cuba and exports are now possible only at a loss. This is not a phenomenon peculiar to India alone. Most of the sugar exporting countries subsidize their exports in one form or another. We will also have to find some way of meeting the loss on exports to be able to export sugar on a permanent basis.

The country's growing needs for foreign exchange necessary for importing heavy machinery etc. for rapid industrialisation makes it incumbent on us to explore all avenues of furthering exports to earn more foreign exchange. In fact, as the Prime Minister said in course of his budget speech last February, "we must try to produce more, export, more and save more to find the resources for implementing the Plan". Already, last year, we earned over Rs. 12 crores of foreign exchange by export of sugar.

Apart from the undoubtedly urgent need of foreign exchange, export of sugar is also necessary for continued health and development of the industry and welfare of the cane-growers. For, sugar industry, in common with all other industries based on agriculture and

therefore on vagaries of nature, cannot plan its production within narrow limits. A plan for exports will alone be able to insure against periodical plenty and scarcity.

Fortunately, because of our geographical position, we have an easy access to a number of sugar importing countries which are in our neighbourhood. Of the total world exports of about 12 million tons, 1.2 million tons are consumed in the neighbouring markets.

That we have already sold substantial quantities to most of these markets can be seen from the figures given by me earlier. It is only reasonable to expect that with the experience gained, this year it will be possible to step up our exports to them. This matter, I know, is as much in the minds of Government authorities as it is in ours, and I hope some scheme will be devised without any further delay to start export of sugar on a permanent basis.

DISQUIETING DEVELOPMENT OF KHANDSARI

I have referred to the achievements of the industry in the field of production and exports. And while these developments were expected to gather further momentum a dark cloud has gathered on the horizon which may upset all our calculations and do incalculable harm to the sugar industry with serious repercussions on the national economy, growers' well-being and the Governmental revenues. I refer to the fast growing khand-sari industry which is developing under, what may be called, entirely artificial conditions created by the growing tax burden on factory sugar as compared to complete immunity of khand-sari units from such burden. The sugar factories have to pay Rs. 10/11/- per maund as excise duty, Rs. 2 as cane cess and about As. 8 as co-operative societies commission, bringing the total tax burden to Rs. 13/3/- per maund, which forms 38% of the total cost of production. This high tax burden has placed the factory sugar industry at a disadvantageous position vis-a-vis the khand-sari units. With its production at under one lakh tons, khand-sari has so far played only a minor role as a sweetening agent when compared to the vacuum pan sugar. The position has, however, lately been undergoing a change and with indirect assistance resulting from Governmental measures, khand-sari units are fast expanding particularly in the U.P., the foremost sugar producing State in the country. Prior to March, 1955, khand-sari had a relative advantage of Rs. 5.36 per maund (Rs. 2/12/- excise duty, 2/- cane cess and .7/6 co-operative societies commission). But with successive increases in the excise duty the relative tax advantage to khand-sari has, as stated by me earlier, risen to Rs. 13/3/- per Md.

Apart from this, khand-sari units have also the advantage of being free from any regulations on the

minimum cane price and quota releases. These exemptions from statutory regulations further add to the indirect protection that this industry gets.

The wide margin of the concessions, and other advantages have given a spurt to khand-sari and its production is expected to reach 3 lakh tons this year; and there are reports of large scale diversion of cane from factories to khand-sari which will adversely affect sugar production.

A WASTEFUL PROCESS

I am conscious that cottage industries have a definite place in our industrial set-up. But they are meant to supplement and not supplant the work done by the large scale industries. Besides, I don't think, it is the Government's policy to encourage an industry whose manufacturing process is a wasteful one and involves a national loss. But that is what the khand-sari industry is. Its sugar recovery is 6% to 7% against 10% of the sugar industry. This is equally true if we compare the yields between khand-sari and gur. Therefore, any expansion in the khand-sari industry whether at the cost of the factory industry or the gur industry would not be in the larger national interest. The Karve Committee on Village and Small Scale Industries also testified to its being based on a wasteful process and observed that unless it is improved it should not be encouraged at the cost of the sugar industry.

The considerable waste involved in khand-sari production will be appreciated when we realise that in the additional production of 2 lakh tons of khand-sari we lose about 1.3 lakh tons of extra sugar which would be recovered if the cane were crushed by the sugar factories. That is, against the expected production of 3.3 lakh tons in vacuum pan factories, the khand-sari output is estimated at 2 lakh tons only for the same quantity of cane crushed. In terms of money value this would mean a loss of over 12 crores of rupees. On the basis of production of 3.3 lakh tons, the loss to the State Exchequer would work out to Rs 10 crores by way of central excise duty and Rs. 2 crores by way of cane cess. Surely, this is a considerable loss resulting from the inherently wasteful process of khand-sari manufacture.

There is another aspect of the matter also. The Second Five-year Plan envisaged a bold programme of expansion for the sugar industry and for this purpose provided Rs. 50 crores for the expansion of capacity and another two crores for the expansion of sugar machinery plants. All this expansion of capacity and the expenditure on the same was based on the assumption of an increased level of sugar consumption resulting, among others, from shift from gur and khand-sari consumption to sugar.

With the expansion of khand-sari now occurring, entirely against the

Plan premises, the rate of consumption of sugar will not be as expected and, in fact, a contrary trend of shift from sugar to khand-sari is likely to develop. As a result, it may not be possible to effectively utilise the increased capacity of the industry which we hope to build up at a great cost. I am sure no one will view a situation like this with equanimity.

It should also be realised that with increasing production of khand-sari the prospects of export of sugar would be considerably reduced. For, in any scheme of exports which the Government might adopt, the basic consideration would be that any loss on exports would be made up from the internal market. This in turn, presupposes a steady demand for sugar within the country even at higher prices resulting from the passing on of loss on exports to the internal market. But this cannot be the case with continuous supplies of cheaper khand-sari flooding the markets. Any attempt to increase exports to meet the situation would not succeed and we shall find ourselves in a vicious circle of higher prices and shrinking demand. I firmly believe that successful implementation of an export programme would depend, on the one hand, on increased production of sugar in the country; and on the other, on its effective demand. Increased production of khand-sari will, however, affect adversely both production and consumption of factory sugar and thus also exports.

URGENT NEED FOR REMEDIAL MEASURES

Keeping in view these various facts, I hope Government will appreciate the industry's anxiety. In fact, it had expected that Government would at the last budget time announce some steps in the form of suitable excise duty on khand-sari sugar to curb the unplanned growth of this wasteful industry. But the absence of any such proposals in the budget has been a great disappointment.

I would urge with all the emphasis at my command for speedy and effective action in this behalf, in any case, well in advance of the next crushing season.

DIFFICULTIES OF EAST U.P. AND BIHAR FACTORIES

The sugar industry in the East U.P. and Bihar has not made any head-way despite the progress of the industry as a whole. It might interest the members to know that in Bihar which is the second important State in the matter of sugar production, sugar output last year amounted to 3.12 lakh tons which though about the highest for the last several years is lower than the production achieved during the year 1939-40. In the matter of sugar recovery also the position instead of showing any improvement has deteriorated over the last several years. Against a recovery as high as 10.9% in 1942-43, the last three years' figures at 10.22, 9.76 and 9.36,

show a steady decline. The position in the East U.P. is also very serious as the mills there are not able to get even an economic crush. The production of 3.28 lakh tons achieved by these mills during the last season exceeded by only about 4000 tons their output of 3.24 lakh tons in the season 1936-37. From the point of view of market also, these mills are at a serious disadvantage in that there is no important market where they enjoy preference of any sort. Their production has to be sold in far off places in competition with others more favourably situated.

The important role that this industry plays in the economy of this region needs no emphasis. Here sugarcane is primarily grown for supply to sugar mills, and if they are allowed to stagnate, as has been the case, I venture to say that the development of the entire region will suffer. Perhaps there is no other part of the country where the dependence of agricultural economy on the sugar industry is so marked. I shall, therefore, urge upon the Government of India and the two State Governments concerned to pay special attention to the problems of the industry in this region.

CANE DEVELOPMENT

Speaking of the difficulties of the East U.P. and Bihar factories in the matter of cane development, I am mindful of the fact that the position with regard to cane development in the country as a whole requires much more concentrated attention, than has perhaps been given so far. The poor yield and quality of our cane is a malaise from which the industry as a whole suffers. This is the main problem facing the industry. Though the authorities themselves are conscious of the leeway to be made and have also undertaken some positive steps in the last few years, the problem is so big that all the efforts done so far have made little impression on the overall position.

It is a truism that sugar is grown in the fields and so long as we do not get from the fields what they are capable of yielding both in terms of yield and quality of cane, so long will our industry remain in an unenviable position.

Our Association had suggested that in order to give a stimulus to the working of the Research Institutes, it would be better to bring all the main institutes under an autonomous Sugar Research Board on which the industry and the growers would be represented. But somehow the Government have not seen their way to agree to this suggestion so far. It is true that the Indian Central Sugarcane Committee on which the industry and the growers are represented has as one of its functions the supervision of the sugarcane institutes. But in view of its multifarious activities, it would be advisable if the research institutes are placed under an autonomous Board devoted exclusively to research work. This

Board would also take over the National Sugar Institute, Kanpur, presently not under the Indian Central Sugar Cane Committee, which would help better co-ordination between agricultural and technical research.

LAND CEILINGS

While the need for improvement with regard to cane development is realised on all hands, the policy of some of the State Governments in regard to land holdings, I am constrained to say, is not proving at all helpful in this behalf. It is well known that in the main cane producing countries, the efficiency of sugar industry is to a great extent determined by following what is known as plantation economy. In India, although this is not the rule, yet wherever sugar factories operate large scale cane farms, these farms render a signal service as models and extension services for the cane growers in the neighbouring areas. The Planning Commission acknowledged the utility of these farms and recommended their exemption from ceilings. But some of the State Governments seem to follow a different policy. The U.P. Government have, for instance, by passing the U.P. Large Land Holdings Act and making it applicable to the sugar factory farms also, imposed a very high rate of tax on larger farms. Such a measure will in all likelihood lead to disintegration of the farms and loss of their valuable service to the industry and growers. In Mysore also, a Committee appointed some time back, has recommended application of ceilings to factory farms. If this position continues, other States may follow suit.

Such a development will prove harmful not only to the sugar industry but to the economic development of the country as a whole. For, any diversity in approach or policy between the Planning Commission and the State Governments will stand in the way of speedy and integrated development for which the country has sought to make planned efforts.

LICENSING POLICY

The two Five-Year Plan envisaged an increase of 10 lakh tons in the capacity of the sugar industry to bring the total capacity by the end of 1960-61 to 25 lakh tons. Necessary licences have already been issued for establishment of 56 new factories and substantial expansions in the capacity of 66 existing units. These cover the entire additional capacity targetted for. Of the new units licensed, four went into production in 1955-56 and five in 1956-57. Another 2 units were expected to start this year, but only 9 have actually started working. 30 existing factories have also expanded their capacity and others are expected to complete their expansion in due course. The total additional capacity thus brought into effect is 4 lakh tons. There has, however, been a set back in the installation of new

factories, due to delayed shipments of machinery and payment difficulties.

As members are aware, in the matter of licensing of additional capacity, we have been urging upon the Government to first meet the requirements of the existing units. For, it would cost much less both in terms of money and time if preference is given to the expansion of existing capacity wherever cane availability and other facilities permit the same. It may be pointed out that the expansion of existing units will largely be achieved with machinery manufactured within the country and will not require much foreign exchange. However, Government have not seen their way to agreeing to the same. The foreign exchange difficulty now further underlines the need of exploring avenues of expanding the capacity at as little cost as possible. I would, therefore, again appeal to Government authorities that wherever the units already licensed have not come up according to programme, the capacity thus released should be re-distributed among the existing factories depending on the scope of expansion of such units.

SUGAR PRICES

Earlier, I have referred to the progressive increases in the sugar excise duty in recent years and their serious repercussions on the industry. These increases in the excise duty have tended to push up the price of sugar to an unduly high level now ruling when consumers' resistance is apparent. This is, however, not related in any way to the working of the sugar mills but is a direct result of high taxes levied by the Government. It, therefore, comes to us as a surprise when the current prices are misconstrued to imply high profits. It is not uncommon to observe in the press or in the observations of persons occupying responsible position in the country's life, uninformed and unfounded criticism of the industry. I am not against criticism and would welcome it provided it is based on facts. Even a cursory glance at the cost structure of Indian sugar as adopted by the Government will at once convince any body of the fact that neither is the sugar mill industry responsible for the present level of prices nor does it benefit from them.

NEED FOR TAX RELIEF

In recent years the cost structures has undergone considerable variations. While the Government levies show a phenomenal increase of 344%, the cost of cane has also gone up by 14%. Similarly, other items of cost have also gone up reflecting the higher prices of raw materials and increased labour charges. In sharp contrast to the increases on all these items, the single item which has shown a decline and that too by a fair percentage of 17% is in respect of overhauls and the gross profit margin allowed to the industry.

It is, therefore, not understood how in the face of these facts allegations against the industry of high prices or high profits can be sustained.

Before I pass on to another matter, I would like to invite Government's particular attention to the sharp increase in the tax burden on the industry. Since 1946-47, the Central Excise Duty has been raised from Rs. 2/3/- to Rs. 10/11/- per Md. Of this increase Rs. 2/7/- accounts for replacement of sales tax by additional excise duty effected last December, which may normally not be taken as an additional burden. But the position with regard to Sales tax was that it was paid by the trade and in the final analysis, by the consumer. But the additional excise duty has to be shouldered initially by the industry with the prospects of its passing on to the consumer depending on market conditions. And with unfavourable market conditions such prospects look rather dim.

The State Governments of U.P. and Bihar have also raised the cane cess from -1/- to -3/- per Md. Along with this, the Co-operative Societies Commission in these States also went up from -1/3 to -1/9 per Md. of cane. All these together amount to a high figure of Rs. 13/3/- per Md. of sugar.

I would submit that such disproportionately high rate of taxation on this industry is bound to stifle its future development. Admittedly, if the industry has to fulfil the Plan targets and also maintain increased exports, it is necessary that a rising tempo of production and consumption of sugar within the country is maintained; these are like the two needles of a clock and should function in close harmony. But the present rate of taxation, as I have shown is adversely affecting both production and consumption of factory sugar. There is thus an urgent need for granting an appropriate tax relief to this industry, and I appeal to the Government, to give due consideration to our request.

REHABILITATION AND MODERNISATION

While on this subject, I would also invite Government's attention to the financial requirements of the industry for rehabilitation and modernisation of the existing plants which have a close bearing on their efficiency and production. The Planning Commission has assessed its cost during the second Plan period at Rs. 50 crores. The profit margin now available to the sugar mills industry hardly permits of such heavy investments specially with the prices of machinery parts ruling 4 to 5 times of the pre-war level. The industry has already brought this fact to the notice of the Government and I hope that some solution will be found to enable the industry to proceed with rehabilitation and modernisation of the plants now overdue.

CANE FREIGHT

I would also take this occasion to draw Government's attention to the recommendations of the Railway Freight Structure Enquiry Committee which envisage a general rise in railway freights, particularly for short distances. The sugar factories particularly in U.P. and Bihar depend to a large extent on cane supplies from distant centres. In the absence of good roads in the factory areas, this cane has to be transported by railways and any increase in the railway freight will further add to the industry's cost structure thus making it uneconomical to crush distant cane. This will adversely affect both sugar production and the interests of cane growers who may have to utilise their cane for less remunerative uses. I hope, while considering the Freight Committee's recommendations, the Railway Ministry will give due consideration to the peculiarities of this case and decide against any further increase in cane freight.

THE HIND BANK LIMITED.

Notice is hereby given that the Fifteenth Annual General Meeting of the Shareholders of The Hind Bank Limited will be held at the Registered Office of the Bank at 4, Brabourne Road, Calcutta, on Saturday, the 10th May 1958 at 11-30 A.M. to transact the following business:—

1. To receive the Report of the Directors and the Audited Accounts for the year ended 31st December, 1957.
2. To declare a Dividend.
3. To elect Directors in place of those retiring by rotation.
4. To appoint Auditors for the current year and to fix their remuneration.

By Order of the Board,
S. D. PARDIWALLA,
General Manager.

Calcutta,
7th April, 1958.

Note:

- (i) A member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and a Proxy need not be a member.
- (ii) The Transfer Book of the Bank will remain closed from Thursday, the 1st May, 1958 to Saturday, the 10th May, 1958 inclusive.
- (iii) The dividend, if sanctioned, will be payable on or after Monday, the 12th May, 1958 to those shareholders whose names appear in the Register of Members on Saturday, 10th May, 1958.
- (iv) Dividend Warrants will be posted to shareholders at their registered addresses or in accordance with their mandates. Shareholders are requested to advise changes in their addresses, if any.

Hindustan Lever Limited

The Importance of Marketing Research

Influence on Development of Business

The Impact of Social And Economic Changes

The Speech of Mr S. H. Turner, the Chairman

The Annual General Meeting of Hindustan Lever Limited was held in Bombay on April 7, 1958. The following is the text of the speech made at the meeting by the Chairman, Mr. S. H. Turner.

I have great pleasure in welcoming you to this Annual General Meeting of the Company.

The Annual Report and Accounts have been with you for some time and I shall take them as read. As I have also circulated to you my review of their salient features, I do not wish to dwell on them further in my speech to-day.

I would like to tell you about a particular activity of our Company which has an important influence on the development of our business that is, Marketing Research. Marketing research involves a study of consumer preferences, habits and attitudes. Thus it helps us to decide how our immediate market operations should be directed. It also involves an examination of trends, so that its findings indicate the future pattern of the market and assist us in shaping our forward policies. All our decisions on the improvement of existing products or the development of new ones, the adoption of new selling methods and the application of new advertising techniques are the more effective for being taken in the full and intimate knowledge of our markets, where a continuous research into these markets is designed to provide.

To large manufacturers of consumer goods—and we must rank among the largest in India—economies come largely from mass production and mass selling of standardised lines. This standardisation is only successful if the resultant products appeal in properties and performance to the greatest number of people. We have many millions of customers. They vary widely in their tastes. They are conditioned by different social, cultural and religious background. We must have products which are acceptable alike to the rich and the poor, to the educated and the uneducated, to the Punjabi and the Tamil.

To discover what preferences are most general in this variegated pattern of consumers we choose a

representative sample of them and find out what their opinions are by questioning them. The result is intended to reflect the opinion of our universe of potential customers. The size of this sample is determined mathematically once we have postulated the number of categories of people it shall contain to fulfil the particular purpose in view. The combined opinions and attitudes of the individuals composing this sample will be representative of our universe within a calculable margin of error, provided the questions we put to them are so phrased as to evoke the respondent's true opinion and not an opinion adapted to please the questioner or to express what the respondent thinks it is respectable to say rather than what he really thinks.

The framing of our questions to ensure that the respondent is not tempted to disguise his true feelings calls for great skill. For example, people who believe that good form requires them to have a bath every day sometimes sincerely think they have a bath every day, whereas in fact they only have a bath four times a week when the weather is cold. In a foreign country it was once found that if everyone cleaned his teeth as frequently as was claimed, the toothpaste manufacturers would be unable to supply the total demand. Similarly we find that in Kerala people are inclined to say they take a bath four times a week, and some may even claim to do so twice a day, whereas in Saurashtra nobody minds confessing to washing himself and his clothes only once a week or even much less frequently. The mental attitude to washing in Kerala is conditioned by an abundant supply of water. The habits in Saurashtra have been formed by a geography in which water is scarce and precious. In Northern India there are still women to be found who will not admit to eating vanaspathi because it is socially more estimable to eat ghee. And in most U.P. households both the wife and the husband will treat the choosing of anything, whether cooking fat or soap, as the prerogative of the male, despite the fact that the investigator may often have an uncomfortable suspicion that when

it comes to the point the wife makes the husband's choice for him.

These shynesses, reticences, resistances, sub-conscious blocks or what you wish to call them, run through the whole of our work. Nowadays, therefore, in addition to the straightforward technique of so phrasing the questions that they are completely neutral, a great many techniques have been devised to set people's subconscious at ease, to get at the facts below their lapses of memory and to allow for their desire to conform to convention. We may, for instance, ask a group of housewives in for a cup of tea and get them sufficiently relaxed so that they will talk freely and even admit the prejudices which, in answer to formal questions, they might feel were too ridiculous to mention. These are obvious examples. Beyond them lie the more surprising discoveries that have been brought out by touching the deeper layers of the mind. Women are, for instance, quite often allergic to advertising that suggests that some new product will save them a lot of time in the kitchen because they feel that it is their capacity as home-makers that gives them their prestige in the family; if making a home is made too easy, what will happen to the respect their husband and children feel for them? Or, again, we have done some investigations which suggest very strongly that many of the prejudices people have about Dalda do not really have anything to do with Dalda at all but are only a way of venting their resentment against a world which, for many professional class people, is narrower and more difficult than it was before the war. Buying Dalda instead of ghee is a very good way of economising, so they transfer to Dalda the resentment they feel that the world has now become a place where they have to watch every rupee.

Another technique is to try simply to get the housewife to talk freely with the investigator doing no more than listen sympathetically, prompting only when the flow stops. In that way we can sometimes discover what the associations are which really

matter in people's minds. These are not always either predictable or logical; for instance, it is not necessarily the rich woman who buys Sunlight; it may be the poor woman who values its lather and the ease with which she can do her washing with it; the rich woman whose washing is done for her by servants quite often feels that they are so wasteful of soap anyway that it is best to buy for them the cheapest brand on the market.

I have not attempted to describe marketing research techniques in detail, or with the accuracy of a textbook. I have only been trying to give you some idea of the principles on which a marketing research department works. I would now like to try and tell you something of how we use the results of marketing research in order to influence the decisions we have to make from day to day in the running of our business; and nowadays there are hardly any decisions on the marketing side which we can make without taking into account our research results.

We begin with a picture of our market. Who is it who buys our products? We know they are not bought equally over the country. Dalda, for instance, is bought far more in the hard fat areas of the North than in the oil areas of the South. Sunlight is specially strong in Eastern India. We have to find out exactly what the map is like for each product and whether the reason for its strength or weakness in particular areas is due to the habits of the local people or to something in the product. For instance, Dalda sells well both in Maharashtra and in the Punjab, but that in itself gives no guidance on how we should split our advertising between the two. Marketing research shows that we have a much lower percentage of the total hard fat market in the Punjab and that therefore the Punjab is much more likely to reward a major advertising effort than Maharashtra. Again, Sunlight sells quite satisfactorily in the Punjab, but marketing research shows that whereas in Eastern India it is used largely as a general laundry soap, in the way we hope it will be used, in the Punjab it is used

mainly for washing particularly good cloths. The Punjab therefore offers an immense opportunity for the expansion of Sunlight's use into general washing.

Until we know the shape of the market we do not know where to strengthen our distribution or how to split up our advertising. We may even find sometimes that we have reached saturation point, that any further consumption of our products can be only attained by a quite disproportionate expenditure, and we might then even slacken our advertising or make our distribution less intensive. And of course if marketing research shows that our product is bought only by the professional class because it is suitable only for the educated, we would not spend a lot of money advertising it in publications read only by farmers or industrial workers.

We not only have to find out who buys our products and where. We have also to find out what they think of them. We have a very clear idea in our own minds of what our products can and cannot be expected to do, and the temptation is always to think that our image of them is so based upon technical fact that the public must think of them in exactly the same way. Sometimes this is not so. It is no consolation that we are right and the public are wrong. The public's beliefs are a fact. We do not expect mountain of public opinion to go to the Mohamed of our knowledge. On the contrary, I hope you have all noticed we are at pains to bring the Mohamed of our knowledge to the mountain of consumer opinion.

With a product we have had on the market for a long time, Marketing Research is only one of several ways of knowledge. We can, for instance, cross-check a great deal of what Marketing Research tells us from our sales figures, which tell us quite as clearly as Marketing Research can whether we sell more in U. P. than in Mysore or in Malabar Hill than in Parel; and, though the figures themselves will not tell us why, sometimes we can find that out too from what our dealers and our shopkeepers and our salesman tell us; or sometimes we can guess what is giving us our sales from the laboratory's reports on the performance and quality of the product. We know that the law does not permit Dalda to have the taste of ghee and are not surprised when we find that Dalda is not used for those purposes where it is the ghee taste which is essential.

Marketing Research is not a panacea. It does not provide an answer to every question. Sometimes people find it so difficult to define what they mean that we are driven back on our own personal judgement.

For instance it was discovered a long time ago that when people buy a toilet soap they look at almost anything except its capa-

city to clean—the luxury of its appearance, the purity of its colour and, above all, the pleasantness of its perfume. The reason is obvious. Every toilet soap will wash the dirt off one's face. Thus far Marketing Research gave a perfectly clear answer, but when we then tried to find out which colour or perfume or wrapper people like, we very rapidly got frustrated. One cannot get adequate explanations out of most people for why they like the perfume or colour they like; their reasons are too intangible, too indefinable, perhaps too deep in the subconscious. The standard way of praising a perfume is to say that it is nice, and since different people call perfumes of almost every not and composition nice, that is very little help. If one presses them they may say 'strong' or 'weak'. But since different people have different definitions of 'strong' and 'weak', one tends to find that the same perfume is being praised for both qualities. Equally, people will talk of the purity of a colour or of its whiteness. 'Pure' is a word of clear meaning when applied to ghee or to morals; but what is a pure as against an impure blue? And white is a colour or infinite shades. One has to use one's judgement of which shade of colours or perfumes the public would probably like, and then, within the narrow range thus selected, make a final choice by asking people their preferences as between, at the most, three or four blank tablets, the only difference between which is the perfume or colour or whatever the variable is one is testing. Moreover, as people's preferences are usually accurate only between two products at a time, even to test four is a pretty elaborate business. To test the whole possible range is simply impossible.

Thus a large part of our marketing research effort is Product Testing. Recently we were faced with a problem in marketing Rinso. We had to decide whether we should choose for the powder a soap base which would give a superlative lather provided warm water was used, or an alternative base which, though giving a less spectacular lather, would dissolve well in cold water. We prepared experimental powders with the alternative bases and gave trial packets of both to a selected sample of housewives. The majority preference was in favour of the cold water-soluble product and as a result of this we were able to formulate Rinso to be most suitable for a country where the water is rarely heated for washing.

In the spring of 1957 we introduced our Lather Shaving Cream—Erasmic. Before launching this product we carried out widespread product tests, and the results were measured by marketing research to ascertain that the product was of sufficiently high quality.

Social and economic changes have the most important bearing on our business. For example, the

development of new industrial colonies like Chittaranjan and Sindri where the habits of the villagers living on a subsistence level change quickly when they become industrial workers with regular pay and modern amenities. Their standard of living rises suddenly and they begin to consume products which they could not afford before. A study of these new dynamic townships that are growing up shows that they are likely to create a strong demand not only for our main products but also for our special lines and toilet preparations.

Besides research into our current products and people's existing habits and preferences, a growing and important use of our research is looking into the future to study possible modifications and changes in products to make sure that we keep pace with shifts in consumer requirements and habits. It is as much our responsibility to investigate future demands of consumers as to satisfy their present demands. In a free economy consumers' wishes are never static, and it is for us to look ahead and find out what consumers are likely to want in the future. This is particularly important in a country like India where society is changing fast and will change perhaps even faster in the future.

In recent years we have applied marketing research techniques to estimating the size of the groundnut crop. The official figures do not come out until the end of February, and since the heaviest buying season of the year is in December, January and February, we must form our own assessment of the crop to guide our buying policy of groundnut oil and seed. We take a very rough sample of roadside farmers and confine ourselves to a few simple questions. The margin of error with such a technique is obviously considerable, but we have found that we get an answer which is reasonably near the final official answer, and also that we get an idea, which the official figures give only months later, of where the crop has been good and where the crop has been bad, which has a very considerable influence on the relative prices our different factories will have to pay.

When we are satisfied that we are making the right product, a product which will both do a good technical job and will also satisfy the desires or prides which the public wants it to satisfy, there still remains the question of how to tell the public that this desirable product is there to be bought. The answer is advertising, and therefore all consumer goods manufacturers must spend a lot of money on advertising—particularly India, where advertising has not only the task of trying to sell a particular brand of product against its competitors, but may often be required to introduce the product-type as one which is a necessary part of a higher standard of living.

We should naturally like to find out whether our advertising money is being spent to the best effect. That is not easy. When people buy something they very rarely remember why they first bought it. Very few people ever say that they first bought Sunlight Soap because they read in a news paper on the 15th January that it washes white and bright. Partly this is because they do not know that that is what happened. Advertising comes to them from many angles—shops displays, cinemas, press, posters—and it is hard to identify just what sparked the final decision to buy. Partly it is because people like to think they make their minds up for themselves and resent the idea that they were moved by the pretty girl in the advertisement.

Because of all this it is not easy to test how effective advertising is in making people buy. What we can test is whether people have seen our advertisements and whether they remember what the advertisements said. In these respects the results of the tests we have done on our own advertising are generally satisfying. Lifebuoy advertisements, for instance, have been seen and remembered by about half the people we have asked. Cinema-goers seem to be receptive to advertising films and ours have normally been well remembered. In a recent enquiry Rexona shop display material was recalled by a high proportion of respondents.

Though it may be difficult to assess how effective any particular advertising campaign or subject has been in creating a sale, nevertheless, we have constantly to develop our judgement in them. Motivation research attempts to supplement intuition with scientific enquiry. It involves investigation of consumer attitudes and behaviour and particularly of the reasons why people buy. We feel that if we can establish the reasons (whether they be conscious or unconscious) why people buy and what influences them in their choice, then we will be in a better position both to give them the products they want and also to present and advertise them in a convincing way.

Our function as a Company is to try and give the consumer products which he will like and which will do the job he wants them to do. Before we can do that we must find out what the consumer will like, what is the job he wants them to do, as distinct perhaps from the job we think he ought to want them to do, whether the products we can make come near enough his ideal—one never achieves perfection—and whether our methods of telling him about them are adequate. For all these purposes there is no tool more valuable than marketing research.

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

One Hundred and First Report

7. The Directors regret to report the sad demise of Mr. C. Krishnamoorthy Mudaliar, Director of the Bank on 21st December, 1957. Mr. C. Ramanatha Mudaliar, who was co-opted in his place died on 14th February, 1958. The Directors desire to record their great appreciation of their valuable services to the Bank.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the above Balance Sheet of the Indian Bank Limited as at 31st December 1957 and also the above Profit and Loss Account of the Bank for the year ended on that date with the books of account of the Head Office and Branches, other than those in Malaya and with certified returns from Malayan Branches and report that:—

- We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit;
- Such information and explanations have been found to be satisfactory;
- The returns received from the branches have been found adequate for the purpose of our audit;
- The transactions of the Bank as have come to our notice have been, in our opinion, within the powers of the Bank;
- In our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956 in the manner so required;
- In our opinion:
 - the Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December, 1957;

- The Profit and Loss Account gives a true and fair view of the Profit or Loss for the year ended that date and shows a true balance of profit for the period covered by the audit; and
- proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books; and
- The Bank's Balance Sheet and the Profit and Loss Account dealt with by the Report are in agreement with the books of account and Returns.

THE PUNJAB NATIONAL BANK LIMITED

Directors' 111th Report to the Shareholders for the Year ended 31st December, 1957

The General Board of Directors begs to submit to the Shareholders the audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1957. The transactions for the year under report have resulted in a profit of Rs. 1,17,26,903.52 (including Rs. 6,20,272.48 brought forward from the previous year's account) after contribution of Rs. 9,31,830.00 to Gratuity Fund Trust. The following amounts have been appropriated for the undermentioned purposes:—

	Rs.
1. Transferred to Income-tax Provision ...	50,00,000.00
2. Transferred to Reserve Fund ...	22,50,000.00
3. Transferred to Bonus to Staff Account ...	18,00,000.00
4. Transferred to Charity Account ...	1,00,000.00
5. Ad-Interim Dividend at Rs. 2.50 per share free of income-tax paid ...	8,75,000.00
	1,00,25,000.00

The Directors recommend that the balance of Rs. 17,01,903.52 be disposed of as follows:—

	Rs.
(a) Dividend at Rs. 2.50 per share free of income-tax on the increased capital as on 31-12-1957 ...	12,50,000.00
(b) Carry forward to the next year's account ...	4,61,903.52

The Directors consider that the working of the Bank has been satisfactory.

By Order of the General Board of Directors,
S. P. JAIN
Chairman.

March 7, 1958.

US Enquiry in Pepper

PEPPER markets have continued to display strength, thanks to renewed speculative activity on firmer advices from New York. The deteriorating political situation in Indonesia appears to have changed the buying ideas of the US importers. Their earlier hopes of replenishing their stocks with Indonesian supplies are not bright now. They have, therefore, been purchasing Indian pepper for the past few days even by paying a higher price.

According to one report available in the market, nearly 500 tons of "afloat" Indian pepper were bought by them at the rate of 25 to 27 cents per pound. They are reported to have placed more orders at still higher prices. The US is stated to be in a vulnerable position; for she has allowed her stocks to run down on the hope of replenishing them at short notice. The non-availability of the commodity from other sources has forced her to buy Indian pepper.

Another factor that has given rise to some speculation is the low rate of arrivals in the termi-

nal markets in India. This is interpreted, in certain quarters, as an indication of a smaller crop. In the Alleppey market, the rate is quoted at Rs 650 per candy for superior Palai variety and Rs 637.50 for inferior Thekkan variety. In the New York market, Malabar/Lampong spot and "awaiting release" are quoted at 26 cents per pound. In the London market, Black Sarawak is quoted at 19d per pound.

Ginger

The market for Ginger remained practically unchanged with the rate quoted at Rs 225 per candy.

Indian shipping companies, operating on the West Coast, are stated to have effected a cut in their freight rates for pepper and dry ginger from April 1. The rate for pepper from any point on the Malabar coast to Bombay has been reduced from Rs 99 to Rs 65 per ton. The rate for ginger is down from Rs 54.50 to Rs 50. The rates have been reduced due to the competition from country boats.

Groundnut

Conditions in the Madras Groundnut market ruled generally steady. Arrivals were 30 to 40 tons per day, local crushers and Calcutta interests taking up most of these arrivals. The rate was quoted around Rs 146 per candy.

According to reports, summer crop fields in the South are in need of one or two good showers.

In the Groundnut Oil section, the rate for the ready position was quoted around Rs 303 per candy. Calcutta parties were reported to be buying sizable quantities, while sellers were scarce as they were unwilling to commit themselves due to increased power-cut in hydel areas.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were on the same level as in the previous week; but prices were generally lower by 3 to 6 nP pound. There was no change in the arrivals of Buff hides. In the Calf

section, arrivals of Cow Calf particularly were small.

On the export front, trading with the UK was reported to be difficult as importers were unable to support the market, in spite of the offers at reduced prices. In inferior fifties Cow hides, light weights were still maintaining last levels. In Calf, only a small amount of business was reported done at slightly reduced prices in view of the heavy shipments of buff calf.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were moderate, while clearances were somewhat restricted. Prices of sheep were lower by 12 to 31 nP and goat by 12 to 18 nP per pound.

In the export section, a small amount of business was reported done in prime class goat skins at prices 3d to 6d cheaper as compared to pre-auction levels. Continental support was restricted with Germany adopting a cautious policy for fresh contracts. In the sheep skins section, a small amount of business was concluded in primes and semi-primes.

A Pause

Watch-Dog Writes:

ACTIVITY in stock markets has generally been at a low ebb during the week under review. Lack of fresh support coupled with small selling has resulted in prices developing a slightly easier tendency. The technical position of the markets is, however, sound, weak holders being eliminated by profit-taking.

Trading on the Calcutta Stock Exchange was dull with price movements narrowly irregular in the absence of any fresh influence.

The Bombay Stock Exchange had a dull week, turnover being limited.

On the Madras Stock Exchange, Planting shares depicted a steady trend, while prices in other counters were almost maintained.

Wall Street closed heavy with a fair representation of losses ranging to a dollar or more.

Calcutta

DULL but quietly steady conditions prevailed on the local Stock Exchange last week when prices developed a slightly easier tendency due to profit-taking and small selling by weak holders in the absence of any fresh incentive. Enquiry from investors was also not large and such business, that

was put through, was mainly of a speculative nature.

Various factors contributed to a sudden change in market sentiment. Uncertainty revived about whether the relief in export duty, which was expected to be announced, would apply to only Common teas or all varieties. The delay in the decision about an increase in the selling price of coal resulted in a tendency on the part of operators to hold off until something definite was known. Sentiment was also affected by the oppressive tax on bonus shares. The market was reminded of this by the decision of certain companies to abandon or shelve their proposals to issue bonus shares. Operators also showed some anxiety over the conditions of the clause pertaining to the Development Rebate to the industries which, it was felt, would cause considerable difficulties.

The recent improvement in the Gilt-edged market made further progress on sustained demand for some of the short and long-dated issues. The shortage of stocks also accelerated the rise in prices. 3 per cent 1986 Conversion Loan opened at Rs 71.05 and, after advancing at one time to Rs 71.30, receded at the close to Rs 71.20 on modest profit-taking.

Bank shares were fully steady. Hind met with good demand at rates varying from Rs 50.00 to Rs 50.75, while United Commercial were nearly maintained at Rs 62.25.

Despite profit-taking at higher levels, Jute shares ruled fairly steady. Reports were going around that several mills had done well and that the working results, due to appear shortly, would be encouraging, thanks to the effects of modernisation and rationalisation programmes. Anglo-India had buy-

ers upto Rs 147 from Rs 144, while Alliance were well maintained at Rs 65 despite the passing over of the dividend for eleven months ended 31st May, 1957. National turned ex-dividend (75 nP) at Rs 22.00, while Kelvin were offered at Rs 162 against Rs 172. Nuddea were taken upto Rs 35.25; Howrah upto Rs 14.56 and Reliance upto Rs 6.32, to finish slightly lower at Rs 34.00; Rs 14.31 and Rs 5.94 respectively on profit-taking. New Central had buyers at Rs 13.50 to Rs 13.75, while India after spurring at one time to Rs 117 from Rs 109, receded at the close to Rs 112. Belvedere were a steady feature at Rs 80.00.

There was only limited activity in the Coal section. Operators were generally inclined to await the Government decision with regard to the selling price of the commodity, before entering into fresh commitments. However, prices ruled very steady following the news of the Government taking all steps to raise production and achieve the Second Plan target. Burrakur turned ex-dividend at Rs 22.75, while Amalgamated were taken upto Rs 17.00 from Rs 16.87; East Indian upto Rs 22.19 from Rs 21.56 and Western Bengal upto Rs 5.87 from Rs 5.75. Central India, after dropping down to Rs 7 from Rs 7.87, recovered partially at the close to Rs 7.56. South Karanpura turned quiet at Rs 9.87 against Rs 10.12.

General interest in the Tea section tended to peter out in view of the inordinate delay in the announcement of the reduction in the export duty. Doubts were also expressed in some quarters as to whether the relief, to be recommended, would be an overall reduction or apply only to Common teas. But, the sustained support lent to a few selected scrips was mainly due to the sound statistical position of the industry and the reports that only a small surplus would be left over from the current season's sales. Most prominent scrips were Baghmari changing hands at Rs 18.87 to Rs 19.25; Brahmapootra at Rs 3.00 to Rs 3.15; Brooke Bond at Rs 17.12 to Rs 17.57; Bishnauth at Rs 19.62 to Rs 19.94; Dhelakhat at Rs 22.12 to Rs 22.31; Hantapara at Rs 110.50 to Rs 111.00; Jayshree at Rs 10.75 to Rs 10.94; Methoni at Rs 16.75 to Rs 17.19 and Tezporo at Rs 15.70 to Rs 16.06.

Sugar shares continued to meet with selective demand in view of the brighter prospects for the industry during the coming season. Balrampur were enquired upto Rs 6.12 from Rs 6.00 c.d., Belsund upto Rs 11.06 from Rs 11.00; Champaran upto Rs 20.37 from Rs 20.12 and S.K.G. upto Rs 10.00 from Rs 9.87. Cawnpore were on offer as low as Rs 10.37 against Rs 11.75.

Trading in the Textiles section was limited as operators were inclined to await a definite improvement in the conditions of the cloth and piecegoods markets. Cawnpore were offered at as low as Rs 3.75 against Rs 4.06, while Elgins had

sellers at Rs 13.06 against Rs 13.12 following a reduction in dividend from Rs 1.25 to Re 1.00 per share for last year. Kesoram were, however, slightly better at Rs 11.50 against Rs 11.37, while New Victoria were maintained at Rs 1.44.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to settlement considerations till mid-week. The release of encouraging production figures for the year ended 31st March 1958 had no effect on sentiment; and, against the weekend closing of Rs 21.53, Indian Irons opened lower at Rs 21.49 and receded further to Rs 21.18 at the close. In sympathy, TEXMACO were marked down at one time to Rs 17.90 from a high of Rs 18.25; G.K. Williams to Rs 30.37 from Rs 30.50 and Jessop to Rs 19.75 from Rs 21.12, to improve at the close to Rs 18.05; Rs 30.69 and Rs 20.25 respectively. Britannia changed hands at Rs 11.56 to Rs 11.75 x.d., Kumardhubi at Rs 8.37 to Rs 8.56 and Marshalls at Rs 5.56 to Rs 5.62. Burn lost nearly Rs 10 at Rs 326.

Despite profit-taking at bulges, the Miscellaneous section provided many firm features, thanks to sustained investment demand. Most prominent were Dunlop having sustained support upto Rs 24.75 from Rs 24.56; National Carbon upto Rs 25.19 from Rs 25.00; Indian Aluminium upto Rs 13.75 from Rs 12.87; Aluminium Corporation upto Rs 10.75 from Rs 10.31; Rohtas upto Rs 17.00 from Rs 16.75; Alkali Chemicals upto Rs 14.75 from Rs 14.37; Indian Cable upto Rs 29.37 from Rs 29.00 and India Steamship upto Rs 11.12 from Rs 10.87. The news of a strike at the company's Ghatsila mines caused a sharp setback in Indian

S. E. RLY. TENDERS

Sealed tenders are invited for the following items:—

(i) Tender No. PA/COS/4/464/IP/GB10 for supply of 99 Cwts. Cane China Best picked (1st quality) in lengths of not less than 15 to 16' ft each with knots not less than 9" distances apart. The thickness of the cane should not be less than 3" or more than 4".

Tender forms are obtainable from the Controller of Stores, Garden Reach, South Eastern Railway, Calcutta 23 (PA Section) on remittance of Rs. 2/- per copy per tender (not refundable) by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, South Eastern Rly., Garden Reach, Calcutta-28 by local firms. Earnest Money against the tender is Rs. 1500/-. Closing date of the tender is 29.4.58 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid income-tax clearance certificate along with the Earnest Money receipt with the Tender.

S5 CONTROLLER OF STORES.

April 12, 1958

Copper to Rs 3.11 from Rs 3.25. Metal Box scored another half point at Rs 27.75 on sustained buying, while Martin Burn were enquired upto Rs 24.00 from Rs 23.69. BBP turned a shade quieter at Rs 2.17 against Rs 2.28; Philips at Rs 13.87 against Rs 14.12 and Indian Oxygen at Rs 17.37 against Rs 18.00, on lack of fresh support. Among Paper shares, Orient, after touching a high of Rs 28.75, declined towards the close to Rs 27.90 on renewed selling pressure. Tita-ghur remained very firm at Rs 35.25, while India Pulp met with good support at Rs 19.50 to Rs 19.62; Shree Gopal at Rs 15.00 to Rs 15.19 and Sirpur at Rs 9.25 to Rs 9.56.

Bombay

THE Stock market has ruled quietly steady with prices showing a declining trend on balance. It would appear that a general inclination to book profits has been mainly responsible for the slowing down of the tempo of activity. Marketmen also seem to be somewhat disappointed by the performance of the cloth market in the past few weeks. It has been generally expected that offtake of cloth will show a marked improvement after the reduction of excise duty on all varieties of cloth. But so far there is no indication of a broadening of interest. Offtake is reported to be as slow as before. The decline in steel production in the two steel companies in the past year and rumours about increase in stamp duty have been other depressing influences.

STEELS:

Steel shares after earlier steadiness developed a sagging tendency in later dealings. Indian Irons after having been done upto Rs 21.60 closed quietly steady at Rs 21.28. Tata ordinary receded from Rs 182.25 to close at Rs 180.75.

TEXTILES:

Textiles were generally subdued. Bombay Dyeing opened at Rs 56.30 but eased to Rs 55.70. Century was pushed down to Rs 430 from Rs 439.50. Kohinoor was marked down to Rs 281 from Rs 286. Central to Rs 89 from Rs 93 and Simplex to Rs 156 from Rs 159.50.

MISCELLANEOUS:

In the miscellaneous section Scindia Steam was a firm spot improving to Rs 17.36 from Rs 17.16. National Rayon was well maintained at Rs 223.50. Premier Construction was another bright spot and advanced to Rs 182.25 from Rs 174.25. Bombay Burmah after earlier firmness closed quiet at Rs 546.

Madras

CONDITIONS on the Madras Stock Exchange ruled generally steady although profit-taking erased some of the gains at the close.

PLANTINGS More popular shares in this section were able to maintain their last levels. Coffee shares were an active counter where Consolidated Coffees were taken upto Rs

23.55 and Coffee Lands upto Rs 33.00. Ouchterlony were a steady feature at Rs 5 c.d., while Badra gained 25 nP at Rs 3.75.

Among Tea shares, there was support for Chembra Peak and United Nilgiris at the market rates. Halleyburias were taken upto Rs 18.60; Periakaramalais upto Rs 4.15 and Kalasag up o Rs 15.35. Coorags were done at Rs 11.75 c.d.

In the Rubber group, there was enquiry for Kalpetas at the improved rate of Rs 21.50, while Nilamburg met with good demand at the market rate. T.R.Ts. were done at Rs 7.10; Thirumbadls at Rs 1.53 and Valkundams at Rs 21.75.

TEXTILES This section ruled generally quiet in the absence of any definite improvement in the cloth market. There were selling enquiries for Metturs at Rs 400, while Adonis, Bangalore Woolfens, Lakshmis and Coimbatore Pioneers at the market rates. Loyals were on offer at Rs 36.75. Maduras met with good business at Rs 33.60 x.d. and Coimbatore Cottons Rs 151.

MISCELLANEOUS Prices in this section showed a mixed trend. REMCO improved to Rs 13.25 and Mysore Stonewares to Rs 11.75 on better support. India Cements had some buyers at Rs 27.00 to Rs 27.25, while Andhra Cements found sellers at the market rate. Travancore Cements met with some business at Rs 8.62. FACTs remained practically unchanged at Rs 5.30 and Ashok Leylands at Rs 4.06. Mysore Paper were done at Rs 16.25; Ralis at Rs 28.50; Textools at Rs 178; Mysore Chemical Fertilizers at Rs 6.85 c. d. and Mettur Chemicals at Rs 9.62. Aluminium Industries changed hands at Rs 13.55 to Rs 13.67.

New York

WALL STREET showed a fair representation of losses ranging to a dollar or more. Signs of rallying powers proved rather feeble and short-lived. While various quarters felt that the list was entitled to a better show of hardening on technical grounds alone, buyers continued to move cautiously, because of the weight of unfavourable news, especially from the key industries such as steel and motors. Anaconda Copper was quoted at \$42½; General Motors at \$34½ and US Steel Common at \$55½.

Investment Notes:

With the growing pace of the company's expansion programme, the output of saleable Steel by the TISCO have, once again, suffered a setback. Production, for the year ended 31st March 1958, has recorded a drop of 12,900 tons to 786,600 tons. Pig Iron output has fallen from 1.151 million tons to 1.099 tons, while the outturn of Steel Ingots has shown a rise from 1.071 million tons to 1.104 million tons.

The expansion programme, which is now being carried out by the Indian Iron & Steel Company Limited, is fully reflected in the

until the end of 1959, represents a business of Rs 1 crore.

According to the resolution of the directors of the Halleyburia Tea Estates, which is reported to have received the sanction from the Government, holders of the company's recent right issue are also eligible for the bonus issue of 31,250 shares of Rs 10 each in the proportion of one for every five shares held.

Kalpetta Estates have decided to issue bonus shares in the ratio of one for one, subject to the Government sanction.

Investment Brief:

Among Jute Mills, National Company has maintained the Ordinary dividend at 75 nP per share for the year ended 31.10.1957, while Alliance has passed over the dividends, both on the Ordinary and Preference shares, for the 11 months ended 31.5.1957.

Elgin Mills have reduced the dividend from Rs 1.25 to Rs 1.00 per share for the year ended 30th September, 1957.

Getting down to drilling

The oil driller's derrick looks imposing and strange as it stands silhouetted against the sky, but it is merely a sturdy steel support for lowering and raising jointed lengths of heavy pipe into and out of the well during the drilling operations.

In modern drilling, a sharp-toothed bit is first attached to a length of steel pipe called the drill pipe. The drill pipe, held vertical by a giant block and tackle system in the derrick, is lowered into a pilot hole and revolved by means of a turntable on the derrick floor. The turntable is rotated by powerful engines behind the derrick. As the pipe is turned, the bit cuts a hole in the earth's rocks and lengths of drill pipe are added as the hole becomes deeper.

When the bit becomes worn the entire length of drill pipe must be removed, unjointed, and stacked in the derrick.

After the new bit is attached the pipe is joined together and drilling begins again.

All during drilling, specially-prepared mud is pumped down inside the drill pipe. It passes through perforations in the bit and is forced back to the surface outside the drill pipe. This mud has many useful functions. It flushes rock cuttings back to the surface for examination, cools the bit and plasters the walls of the hole to prevent them from caving in. As drilling progresses the hole is lined with successive lengths of steel pipe called casing.

An oil well has been drilled to a depth of four miles, but a 10,000 foot well is still considered deep. Drilling at such depths is an extremely delicate operation, requiring great skill and long experience. Only by drilling, however, can the oil prospector prove the presence of mineral oil.

The splitting of the atom sets off a chain reaction.

This phenomenon is not without a certain beneficent aspect: the atom can serve all mankind.

It is in this sense that we cannot denigrate all chain reactions as constituting a threat to our continued existence on earth.

In the current week's Gossip, Eavesdropper describes one such chain reaction which should spread all round prosperity: Promote the export of iron ore.

Development Rebate Reliefs

Investment Gossip:

MARKETS have forged ahead. Mr. Morarji Desai did not a little to help, with his announcement, at the close of the week, of two concessions in respect of Development Rebate. Indian Irons have consequently touched a new peak.

I may state frankly that the reliefs granted in themselves do not amount to much. All that has happened is that, where the profit is inadequate for providing the full extent of Development Rebate, the required provision is to be restricted to the available profit; and, as in the case of losses, the shortfall in Development Rebate provided can be carried forward for eight years.

The second concession is that the compulsory transfer to a Special Reserve need now be for 75 per cent of the Development Rebate, instead of being the full amount. This would imply that 25 per cent of the Development Rebate becomes "freed" for payment of dividend, etc.

However, as always, the most important gain is in the hawa. The Finance Minister has indicated that, except for a specific ban on the use of such Reserve for payment of dividend, companies will generally be permitted to utilise the Development Rebate Fund in any way necessary for the running of the business.

It is this more than anything else that has contributed to the fresh rise in share values; and except that holidays are once again interrupting market activity, it could safely have been assumed that the Stock Exchanges are headed for a sustained improvement in prices.

But it can be taken as reasonably certain that, when the market recommences activity, the trend will, as in the last few weeks, be once again upward.

In a word, I reiterate what I said some time ago: the bear phase has yielded place to a bull reign.

£R\$

Reader C. V. Narahari Rao
writes from Coimbatore:

Investment Forum:

I have read the interesting suggestion of Mr. K. V. Iyer in Indian Finance of April 5 that, for the convenience of income-tax assesses, it would be better if a

company holds the annual general meeting in the same calendar month every year and declares dividend at that meeting. Mr. Iyer himself has admitted that companies enjoy a certain latitude in the matter of time for holding the meetings. Section 166 of the Companies Act, 1956 states that, except in the case of the first annual general meeting and the one following it and where the Registrar of Companies has allowed an extension of time, there shall not be more than fifteen months' interval between two annual general meetings. It seems impracticable to prescribe statutorily, or even adopt for practice, the rule that a company shall always hold its general meeting in the same month year after year, although, generally, there may not be many days' difference. For instance, the audit will have to be completed, the Board of Directors will have to meet to draw up or approve of the Balance Sheet or consider the Auditor's report, a convenient day will have to be fixed thereupon for the general meeting, and so on. Obviously, therefore, there can be no rigid practice observed in this matter. The broad limit of the interval prescribed in the Act seems a wholesome rule.

With regard to the other suggestion of Mr. Iyer that dividends should be made payable immediately on the date of declaration or soon after and that a three months' delay should not be allowed, I have to refer him to Para 87 of the report of the Companies Act Amendment Committee, where it has been stated, "the law should not lend countenance to excuses resorted to for delaying payment of dividends after they are declared" and a recommendation has also been made that a new sub-section (2) to section 207 of the Act may be added as follows: "Within seven days of the declaration of a dividend, the company shall deposit the total amount of the dividend payable in a Scheduled bank in a separate account and the dividend warrants shall be made payable out of such account". A penalty is also recommended for not making such deposit.

Hereafter, it may, therefore, become necessary for companies to earmark a certain portion of their profits (roughly computed before audit) at the end of the financial year and spend it for business purposes so that they may keep liquid cash to make the bank deposit for payment of dividend a few months hence, as in any case an annual general meeting will have to be held within nine months after the expiry of the financial year. As dividends are to be normally declared out of profits earned, the Companies Act Amendment Committee seems to have thought that its recommendation in this respect will not cause undue hardship to most companies run on sound lines while, at the same time, it will benefit the shareholders.

Dividend Cut by National Carbon

Balance-Sheet Reviews:

THE National Carbon Company (India) Limited has reduced the dividend from 15 to 14 per cent for the year ended 25th December, 1957 due to a decline in earnings. Sales are higher at Rs 5.35 crores against Rs 5.19 crores; but the net profit, after providing for Depreciation and Taxation, amounts to only Rs 40,62,672 as against Rs 46,79,975 in the previous year. The principal reasons for the decline in net profit are increase in the cost of a number of the raw materials used in the manufacture of the company's products, a significant decline in demand for flashlight batteries during the last half of the year and increases in wages and other costs which were not offset by increased selling prices.

Apart from setting aside a sum of Rs 5.40 lakhs for Development Rebate Reserve and Rs 1.50 lakhs for Wealth Tax, the Depreciation amount is raised to Rs 12.03 lakhs from Rs 9.12 lakhs, while the provision for Dividend Tax is reduced to Rs 1.79 lakhs from Rs 4.45 lakhs.

According to the directors' report, substantial progress has been achieved in the company's expansion programme. The greater part of the production equipment for the Eveready Flashlight Company, division of the National Carbon Company (India) Limited, has been received and installed at Lucknow. It is expected that this unit will reach rated output during the current year. The construction of the Chemicals plant, involving a capital investment of over Rs 3.5 crores, was delayed by the restriction placed on imports of capital goods, other than on deferred payment basis, in the early part of 1957. Satisfactory arrangements have been made for foreign credits to the full extent required to construct and equip this unit. Negotiations for the supply of raw materials have reached an advanced stage. It is planned that construction will commence during 1958 and the plant be completed in about two years' time.

£R\$

Burrakur Coal

Despite a decline in earnings, Burrakur Coal Company Limited has maintained the dividend at 37 nP per share for the half-year ended 30th June, 1957. Sales have risen to Rs 1.13 crores from Rs 1.07 crores, while the net profit, after providing for Depreciation and Taxation, amounts to only Rs 8,69,157 as against as much as Rs 12,39,378 in the previous year.

Regarding allocations to various Funds, the directors have set aside Rs 5.31 lakhs (Rs 5.77 lakhs) for Depreciation; Rs 8.50 lakhs (Rs 5.05 lakhs) for Taxation; Rs 2.30 lakhs (nil) for Wealth Tax; Rs 77,000 (Rs 45,200) for Taxation

Contingency Reserve; Rs 25,000 (same) for Debenture Redemption Fund; Rs 65,000 (Rs 18,000) for Development Rebate Reserve and Rs 2.67 lakhs (Rs 5.90 lakhs) for provision against payments under Appellate Award. Both raisings and despatches are higher at 4.84 lakh tons and 4.93 tons against 4.66 lakh tons and 4.72 lakh tons respectively.

According to the directors, a directive has been received from the Government sanctioning the company's plans for expansion on a modified basis. Pegging targets for coking coal were increased by about 10 per cent overall.

£R\$

Elgins Mills

The difficult conditions generally experienced by the textile industry are fully reflected in the working results of the Elgins Mills Company Limited for the year ended 30th September, 1957. Although sales have risen from Rs 3.19 crores to Rs 3.61 crores, the net profit, after providing for Depreciation and Taxation, amounts to only Rs 21.86 lakhs as against Rs 23.32 lakhs in the previous year. The directors have, after allocating Rs 6.50 lakhs (Rs 6.00 lakhs) to Depreciation; Rs 26.50 lakhs (Rs 22.50 lakhs) to Taxation; Rs 2.50 lakhs (nil) to provision for Taxation for previous years; Rs 3.00 lakhs (Rs 15.00 lakhs) to Rehabilitation Reserve and Rs 9.00 lakhs (Rs 2.00 lakhs) to General Reserve, reduced the dividend on the Ordinary and Vendors shares to Re 1.00 from Rs 1.25 per share.

£R\$

National Company

This company, in Andrew Yule jute group, has reported better working results for the year ended 31st October, 1957. Although sales have declined from Rs 1.36 crores to Rs 1.29 crores, the net profit, after Depreciation and Taxation, has improved to Rs 1,21,765 from Rs 42,535 in the previous year. Apart from setting aside a sum of Rs 78,000 for Wealth Tax, the Depreciation amount is raised to Rs 1.65 lakhs from Rs 61,000. Provision for Taxation is reduced to Rs 1.15 lakhs from Rs 1.56 lakhs. The dividend on the Ordinary shares is just maintained at 75 nP per share.

With a view of having direct contacts with overseas markets, the directors, together with the directors of other jute mills under the same group management, have resolved to a firm company under the style of Budge-Budge & Allied Jute Mills Export (Private) Limited. Each of the participating jute mill companies has subscribed equally to the company.

According to the directors' report, orders were placed for the supply of modern spin-draft spinning machinery to meet the requirements of the factory. Installation of this machinery is now almost complete. The directors have now applied for import licences to enable orders to be placed for spinning machinery for Hessian Warp yarn.

Alliance Jute

Alliance Jute Mills Company Limited, in McLeod group, has however, incurred a loss, after providing for Depreciation, of Rs 5.68 lakhs for the eleven months ended 31st May 1957 as against a loss of Rs 2.76 lakhs in the full year ended 30th June, 1956. The Depreciation amount is reduced to Rs 1.38 lakhs from Rs 1.68 lakhs. Dividends, both on the Ordinary and Preference shares, have been passed over. The debit balance carried over to next year is as much as Rs 5.74 lakhs.

In order to run the mills on a more economical basis, the directors considered it advantageous to close down the North Mill with effect from the 6th May 1957; and the loom-hours of this mill are being utilised by the South mill, which is now working on double shift.

Waverley Jute

Waverley Jute Mills Company Limited, in the same managing agency group, has also reported a loss of Rs 4.26 lakhs for the eleven months ended 31st May 1957 as against a loss of Rs 1.68 lakhs in the full year ended 30th June, 1956. Sales are lower at Rs 74.99 lakhs as against Rs 99.35 lakhs. The Depreciation amount has been raised to Rs 1.37 lakhs from Rs 70.250. Dividends, both on the Ordinary and Preference shares, have been passed over. The debit balance carried forward to next year is Rs 4.15 lakhs.

The directors have considered advisable to sell the working loom-hours of the mill, which will enable the company to earn a profit. With the sale of these loom-hours to other mills within the McLeod group, this company has still a liability for various gratuity payments to the workers to the extent of Rs 1.01 lakhs.

National Rayon Corporation

The National Rayon Corporation Limited of Bombay has maintained the dividend at Rs 14 per share for 1957. Despite substantial increase in sales from Rs 4.22 crores to Rs 5.37 crores, the gross profit for the year has gone down from Rs 144.94 lakhs to Rs 139.58 lakhs. The net profit works out to only Rs 52.59 lakhs as against Rs 58.33 lakhs in the previous year, after raising the Depreciation

amount to Rs 75 lakhs from Rs 60 lakhs and reducing Taxation provision from Rs 26.61 lakhs to Rs 12.00 lakhs. The setback in the profit is to be attributed to the rise in the cost of production in general and the heavy burden of the excise duty in particular.

The allocation to General Reserve is raised from Rs 7.00 lakhs to Rs 13.35 lakhs, while the allotment to Debenture Redemption Reserve has been maintained at Rs 10 lakhs. The allocation to Deferred Taxation Reserve, which claimed Rs 10 lakhs in 1956, has been skipped.

WIMCO

Despite a substantial rise in gross sales of the order of 25 per cent to Rs 12.84 crores, the net profit of Western India Match Company Limited has shown a setback from Rs 37.22 lakhs to Rs 27.18 lakhs for 1957. This is mainly to be attributed to larger provisions comprising Rs 16.26 lakhs for Depreciation against Rs 9.66 lakhs; Rs 7.44 lakhs for managing agents' remuneration against Rs 7.33 lakhs and the higher burden of Taxation, which necessitates an increased allocation of Rs 36.80 lakhs against Rs 29.90 lakhs.

Of the net profit, to which has been added the excess provision of taxes for previous years to the extent of Rs 6 lakhs and the balance brought forward of Rs 8.59 lakhs, making a total of Rs 41.78 lakhs, dividend absorbs Rs 30.25 lakhs, the same as in the previous year. General Reserve nil against Rs 4 lakhs; managing agents' extra commission on 1956 profits Rs 3.57 lakhs against Rs 4.07 lakhs and additional taxation for 1956 Rs 7.06 lakhs against nil. A sum of Rs 89.860 is carried forward.

Binny and Company

Binny & Company (Madras) Limited has more or less maintained its earnings for 1957. The net profit is Rs 29.01 lakhs as against Rs 29.80 lakhs in the previous year. The provision towards Depreciation is Rs 77.317 (93.689) and Taxation Rs 17.72 lakhs (Rs 17.81 lakhs). A sum of Rs 1.05 lakhs (Rs 1 lakh) has been transferred towards Pension and Gratuity Fund. The final dividend on the Ordinary shares has been maintained at Rs 6 per share which, with the interim dividend of Rs 4, makes a total of Rs 10 per share, same as previously.

Cotton Textiles

THE year in which the Indian Cotton Textile industry achieved a record level of output is also, by a strange irony, the most disappointing year in the experience of the industry during the last two decades, in the estimation of its authoritative spokesmen. During 1957, Indian Cotton Mills produced 5,315 million yards of cloth and 1,779 million pounds of yarn as compared with 5,307 million yards of cloth and 1,671 million pounds of yarn in 1956. A high rate of production was maintained for the best part of the year. The output for 1957 would have recorded a substantial increase if production had not declined in the closing months of the year, as a result of unexpected difficulties in marketing the product. Having successfully overcome the hurdles in the way of production, the industry was brought to a standstill by the difficulties of selling the cloth produced at remunerative prices, to which the fiscal policies of the Government also made a notable contribution. The serious impact of these policies on the financial position of the industry can be seen in the balance sheets for 1957.

The year began with a heavy burden of excise duties, which were sharply scaled up in September 1956 in a bid to restrict consumption against an apprehended shortage of stocks. The year closed with heavy accumulation of stocks with all the mills in the country, leading to curtailment of production. A number of mills were forced to resort to distress sales and some of them had to be closed down. It is estimated that, by the beginning of the current year, 26 mills had closed down depriving 25,000 workers of their means of livelihood. Most of the mills are obliged to hold stocks equivalent to two months' production. At current prices, this constitutes an intolerable burden on the industry. The President of the Bombay Millowners' Association has estimated their value at Rs 66 crores.

The accumulation of cloth stocks affords a measure of the impact of the shortfall in agricultural production on the purchasing power of the population. While, in 1956, there was a shortage of cloth and demand had to be curbed in order to hold the price line, there was a glut in the succeeding year, though production was only slightly higher. Failure of crops in particular areas, and consequent rise in prices of foodgrains all over the country, have reacted on the effective demand for cloth. As Mr Ramnath A. Podar has pointed out in his presidential address to the annual meeting of the Bombay Millowners' Association, the steady increase in cloth consumption, "noticed throughout the First Plan period has been arrested and the consumer, who is forced to divert the bulk of his earning towards the purchase of food is finding it difficult to meet even his normal clothing requirements." The heavy excise duties which were imposed in 1956 have achieved their object, but at great cost to the industry. The concessions allowed last month afford relief to the industry of about Rs 15 crores a year; but their effect on

the demand for cloth has yet to be evaluated. The handloom sector, which is even more vulnerable to the fluctuations in demand for cloth, is also faced with the problem of disposing of the accumulated stocks. While appropriate measures should be taken to help the handloom weavers in their plight, the suggestion put forward by five members of the All India Handloom Board to peg mill production at a lower level will be decidedly against the national interest. Curtailment of production will react on the availability of cloth both for exports and domestic consumption. One favourable monsoon will be enough to convert a domestic surplus into a shortage. Restriction of production will also react on the national income. The solution of the problem of accumulating stocks should be sought in ways which do not reduce the national output.

Seasonal fluctuations of agricultural production, as indicated already, have a direct bearing on the fortunes of the textile trade and industry as is the case with the Sugar industry. And like the latter, the textile industry should also seek to stabilise its production schedules by pushing exports even at a sacrifice. Success in this enterprise will evidently depend on the ability of the Indian mills to offer competitive prices to the foreign buyer. They have to market their products abroad against the formidable competition of the highly modernised Japanese industry. On the other hand, Mr Podar has drawn attention to the fact that India's oldest industry is also operating with antiquated equipment. This reacts both on the productivity of the industry as well as on the ability of the industry to pay wages at a level necessary to ensure a contented labour force. The industry has not been able to make much headway with modernisation. While the Kanungo Committee had recommended that half the existing loomage should be converted to automatic looms, little progress has been made even in respect of the installation of the 18,000 looms sanctioned for producing cloth for export. Apart from shortage of funds for replacement of old equipment, most of the mills are reluctant, in the present uncertain state of the export markets for cotton textiles, to take the risk of guaranteeing to export the production from these looms over and above their normal exports. Perhaps, a relaxation of the conditions for the installation of automatic looms will be helpful in preparing the ground for a successful export drive, by facilitating the modernisation of plant and equipment. Mr Podar has stressed the duty of the units of the industry to take necessary steps to ensure productive efficiency. Government can also hasten the process by offering appropriate incentives.

Achievement of the targets for cloth exports fixed in the Second plan is necessary both for maintaining the stability of the industry as well to meet the country's requirements of foreign exchange. And improved productivity through modernisation of plant and machinery is the essential condition for a successful export drive. This will also be helped by attention to the cost structure. The President

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

of the Millowners' Association has indicated the elements which account for its rigidity. Cost of cotton and wages account for eighty per cent of the manufacturing charges. Both have increased in recent years. Cotton prices have increased by 17 to 20 per cent over the levels of 1955. The additional dearness allowance paid by Mills in Bombay since that year amounts to Rs 3.42 crores per annum. While any suggestion to curtail dearness allowance, at a time when the cost of living is going up, is bound to provoke defensive action by organised labour, it must be conceded that Mr Podar has made out a case for calculating dearness allowance on a more realistic basis than obtains at present. The merging of the dearness allowance with the basic wages, as suggested by some spokesmen of labour, appears to offer a way out of the problem by rectifying the anomalies in dearness allowances. The Wage Board for the Textile Industry will have to take this into consideration along with the need for adjustment of workloads and wages. The possibility of maintaining and improving on the present level of wages depends on rationalisation of the industry's productive equipment and methods. It should not be impossible to persuade workers to see the advantage of cooperating in hastening the process.

Availability of raw material within the country is one of the favourable factors in pushing Indian textiles in foreign markets. With their present level of productive efficiency, the Indian Mills may not find it economic to compete with Japan with textiles manufactured out of imported cotton. The position regarding availability of cotton shows a very satisfactory improvement in recent years. Internal production has increased from 1,767,000 bales (of 392 pounds) in 1949 to 4,723,000 bales in 1957. During the same period Mills have reduced their consumption of foreign cotton from 1,224,000 bales to 567,000 bales. Along with increased output, satisfactory progress has also been made in improvement of quality and staple lengths. Production of long staple cotton in India, which was only 15 per cent in 1947, has been stepped up to 38 per cent in 1955-56. Preliminary estimates for the 1957-58 season place total output at over five million bales, so that Mills are not likely to be handicapped by shortage of raw materials in developing the export potential.

In view of the importance of exports for maintaining stability of output and prices for domestic consumption, it is worth while considering whether it is not time to replace the scheme of subsidising handloom production for the home market at the cost of the organised mill sector, by one designed to provide adequate incentives for exports both by the mills as well as by handlooms. The industry's contribution to the Central and State revenues is estimated at over Rs 115 crores a year, more than a quarter of the value of the annual output. In view of the heavy burden of taxes, the possibility of a tax rebate on exports merits serious consideration.

Changes in the Ownership of Plantation Companies—I

By Dr R. M. AGARWAL

THE Plantation industry comprises coffee, rubber and tea. Coffee produced in the country is just sufficient to meet domestic requirements and only a little is left for exports. Rubber, on the other hand, is still in short supply and a good quantity is imported

from abroad for internal consumption. Quite against these, tea plays a vital role in the trade and commerce of the country as it happens to be the second largest item of the country's exports which, during the last few years, have been as under:—

Year	Tea Exports from India		Total Exports from India	Percentage of Indian Tea Exports to			
	Quantity (M. lbs.)	Value (Rs. crores)		Tea Exports to Total Exports from India (%)	USA & Canada (%)	Others (%)	Value (%)
1951-52	425.87	93.98	2.2	729.07	12.89	15.5	11.3
1952-53	427.39	80.88	1.9	572.34	14.13	12.1	12.5
1953-54	470.41	102.19	2.2	525.81	19.43	10.7	11.6
1954-55	452.52	147.74	3.2	588.47	25.11	11.0	12.0
1955-56	403.58	109.14	2.7	590.85	18.47	10.6	10.5
Average	437.35	106.79	2.4	601.31	17.76	11.0	11.6

Out of the total production of tea in India, exports and domestic consumption respectively accounted for 65.2 per cent and 27.7 per cent in 1950, 71.6 per cent and 28.8 per cent in 1951, 66.8 per cent and 38.3 per cent in 1952,

80.8 per cent and 28.8 per cent in 1953 and 69.2 per cent and 27.9 per cent in 1954.

This is as regards India. Even in the world set-up, the country's tea industry holds a position of pre-eminence as indicated below:—

Year	Tea Acreage in India as Percentage of World Acreage	Tea Production in India as Percentage of World Production	Tea Exports from India as Percentage of World Exports
1939	38.38	43.48	37.7
1947	44.91	54.91	53.6
1952	40.52	47.91	45.0
1953	40.25	48.08	48.3
1954	40.50	46.20	38.9

This important industry, employing about 915,000 workers, is concentrated in foreign hands, an idea about which could be had from the following table:—

Type of Ownership	No. of Companies	Capital Invested (%)	Acreage (%)	Production (%)	Exports (%)
1. Sterling Companies	...	23.2	64.2	50.4	66.6
2. Non-Indian Rupee Companies	...	21.4	...	16.4	19.5
3. Indian Rupee Companies	...	55.4	35.8	24.2	13.9
Total during 1953 for which figures are available	...	100.0	100.0	100.0	100.0

TABLE 'A'

Indian Finance

Besides this, the London Auction still accounts for two-fifths of the total sales, which is almost equal to the sales through the Calcutta Cochin Auctions.

However, there recently has been a tendency for the foreign companies to change hands and, since 1947, a good many companies have already passed from non-Indian to Indian management. But that alone does not or rather cannot solve the problem. Actually, managerial disintegration has given rise to another problem, perhaps more serious, which may become a source of potential danger in the not distant future. It has been noted that all such non-Indian Managing Agents as have parted with their companies in India have started plantations in South East Africa which, combined with their vast financial resources, years of experience, and Government encouragement are fast emerging as the greatest rival to India's tea exports. Moreover, our tea exports face competition not only from alternate sources of supply but also from substitutes like coffee and cocoa. Already, the percentage of Indian exports to total world exports has declined from 53.6 per cent in 1947 to 38.9 per cent in 1954, which, if it continues unchecked, may bring the Indian tea industry to a position of comparative insignificance. Yet, there is no cause for anxiety, but a sense of awareness and caution is required. We have merely to keep an eye over the quality of the tea produced and the prices at which they are made available to our foreign buyers.

This naturally leads us to a study of the working efficiency of our tea companies. This also leads us to a comparative evaluation of the Indian and the non-Indian Companies and how far the transfer of the non-Indian companies to Indian management has affected their performance. Here, I cannot but draw heavily from the Report of the Plantation Enquiry Commission, which has analysed no less than 247 companies, 76 Indian and 171 non-Indian, covering approximately 47.0 per cent of acreage and 53.0 per cent of production in India. If, on the basis of these studies, it is established that the Indian Companies have not done well in comparison with the non-Indian companies, then, it could reasonably be argued that the efficiency of all such companies as have changed hands has deteriorated. If, on the other hand, it is found that the working of the Indian companies has been better than the working of the non-Indian companies, then, it can safely be assumed that all those companies which have been transferred from non-Indian management to Indian management are being looked after properly.

The efficiency of tea companies depends on a number of factors, the most important of which are the yield of tea per acre, the quality of tea manufactured and the cost of production per pound, the price of tea per pound and the net profits per pound of tea produced. Table 'A' clearly demonstrates the comparative position of the 247 companies during 1953.

From Table 'B' it could be noticed that the Indian Companies have done better than the non-Indian Companies, both Sterling as well as Rupee Companies. It is true that the quality of tea produced by non-Indian companies compared favourably with the tea produced by Indian Companies and that it fetched a higher price in the market, but the increase in the cost of production was more than proportionate with the net result that the profit per pound was more in the case of the Indian companies. It is no doubt correct that Indian companies should devote greater attention toward improving the quality of tea they produced, but they cannot afford to neglect the rising cost of production, and it is here that their record is reassuring.

The British Budget

The British Chancellor of the Exchequer, Mr Derick Heathcoat-Amory, could hardly have relished the presentation of the Budget for 1958-59. For, Britain is so queerly placed as to render nebulous the composition of the threat the economy might be facing. On the one hand, there is the monotonous and unceasing evidence of the recessionary trends in America; and it would not be surprising if the British monetary authorities have had a heart-in-mouth apprehension of deflation striking the British economy. On the other hand, the Conservative Government are committed to continuing the battle against an inflation that allegedly still obtains. Partly, it is no doubt true that, in the peculiar circumstances of the British economy, the state of overful employment contains in it the hazard of incipient inflation. So, the British Chancellor was called upon paradoxically to urge caution against any relaxation in the battle against inflation, the while that he announced a series of tax concessions which, all too clearly, are intended to be anti-deflationary. Our own view is that the tax concessions were inevitable, that the anti-inflationary battle has succeeded only too well, and that a further cut in the Bank Rate must be deemed to be imminent. It is to be hoped that the American recession, to which the Chancellor has

referred, will have one useful by-product: perhaps, in the future, there will be less fear of prosperity. We may also hope that a new study will be made of economic conditions in which there will be an assessment of the extent to which a rise in prices is not necessarily indicative of inflation.

"Indian Shipping"

Indian shipping interests have reacted strongly to the proposed legislation to amend the law relating to merchant shipping especially the provision regarding the definition of "Indian Ship". The new definition, it has been pointed out, goes back on the recommendations made by the Policy Committee on Shipping in 1947, as well as the resolution adopted by the Government on these recommendations. The Policy Committee had recommended that Indian shipping should be defined as shipping owned, controlled and managed by Indian nationals. While conceding that this definition would be the ideal and should be the ultimate objective, the Government considered that a rigid application of the definition would come up against practical difficulties and resolved that the criteria to be satisfied by companies to qualify as Indian Shipping Companies should be (1) that at least 75 per cent of the shares and debentures of the companies should be held by Indians in their own rights; (2) that all the Directors should be Indians (3) that the Managing Agents, if any, should be Indians.

The reasons why, ten years after adopting this resolution, Government have come forward with legislation which would broaden the definition of Indian ship, have not yet been satisfactorily explained. The new bill provides that an Indian ship is a ship owned by an Indian company as defined in the Companies Act, 1956. As the Chairmen of the two leading Indian Shipping companies have pointed out, it will be open to any foreigner to register a company with cent per cent foreign capital and a ship owned by such a company will be regarded as an Indian ship and will be entitled to the same treatment and privileges as are accorded to Indian ships at present. This constitutes a major change in shipping policy, and it is surprising that circumstances justifying the change have not been set forth in the statement of objects and reasons attached to the Bill.

Indian shipping has more than justified the limited support accorded to it by the State, both in adding to the tonnage and in opening new services. The introduction of foreign interests at this juncture, when the indigenous shipping industry is getting established, will lead to conflicts and weaken the position of Indian shipping as a whole in international conferences. Indian shipping is already facing serious

difficulties on account of the highly competitive conditions prevailing in the freight market. Till recently, ships could dictate their own terms and tramps were making substantial profits. But there has occurred a total reversal of the situation and, at present, even the liners, not to speak of tramps, are getting worried as sufficient freight is not available for economic runs. This is, however, a field in which legislative interference designed to help Indian shipping is likely to cut both ways. Government could arrange that Indian ships are not deprived of their legitimate share of the freight on the heavy import programme on Government account.

Atomic Power

The Prime Minister's speech in the Lok Sabha on the demands of the Atomic Energy Department indicates that the work done by the department is no longer a matter of purely academic interest. The department will soon be in a position to make a substantial contribution to augment the nation's supplies of power. The Prime Minister revealed that it was possible that the first atomic power station might go into operation in 1962. Of even greater practical significance is the estimate of the cost at which atomic power will be available. It was expected that the cost of power from atomic stations would be about 2.6 nP per unit, which compares favourably with the cost of generation from thermal stations in most parts of the country. In view of the absolute limitation of available supplies of conventional fuels, and their uneven distribution which makes coal a costly fuel in most parts of the country, development of atomic power has a direct bearing on the pace of industrialisation. The Prime Minister has indicated that a policy decision has already been taken for the construction of an atomic power station. The utilisation of atomic energy will be limited less by the cost of materials than by the availability of technical personnel. It will be necessary to take on hand a programme for the creation of an adequate force of highly trained technicians. This is a field where the Atomic Energy Commission can work in close cooperation with the Universities in spotting and directing scientific talent. Fortunately, in India, the problem of training in nuclear technology is not complicated by security considerations. Since Government are interested in the peaceful utilisation of nuclear energy, they can pay due respect only to merit and therefore to recruit workers from a broad field.

Communist Transformation

The extraordinary Congress of the CPI at Amritsar, which has transformed the party's constitu-

tion and organisation, has been followed with keen interest in India and abroad. This is the logical sequel to the party's success in Kerala. It is also a recognition that elections in India have been conducted with scrupulous impartiality, so that a party's return to legislature and power depends on the volume of popular support it is able to mobilise rather than on control of the machinery of administration. The Communists have learnt the value of the ballot box. Will they respect its sanctity once they have utilised it to establish themselves in seats of power?

In view of the party's past record and its ideology, affirmation of adherence to peaceful means and democratic convention has naturally been received with a strong dose of scepticism. While caution is necessary in evaluating the party's professions, it can be carried too far. The party's practical programme has always been determined by pragmatic rather than ideological considerations. The change in the party's tactics is a belated recognition that a policy of subversion will serve to consolidate the reactionary elements instead of bringing revolution nearer. The lesson has been driven home by the experiences in Telengana and in Kerala. It is also not impossible that change of tactics stems from a more fundamental change in outlook. Many of the party's most effective members have graduated to Communism through the path of Gandhian discipline, and if they have really succeeded in giving a new turn to party line, the word co-existence, which has been very freely used, will cease to have a hollow ring, at least in the Indian context.

Deposits Cross New Landmark

THE impress continues to be felt of the heavy governmental disbursements pertaining to the end of the fiscal year, and, consequently, the impact of the year-end transactions is, at it were, partly carried over into the returns of the Reserve Bank for the week ended April 11. Moreover, the return of the Scheduled Banks for April 4, as anticipated in this column, is significant for its revelation of the Deposit resources of member banks crossing the Rs 1500 crore mark. Also, as anticipated last week, the special transaction of the Central Government relating to tender of Rupee Coin by the Central Government and the replenishment thereagainst, which we had suggested had been deferred, is discernible in the returns of the Reserve Bank for April 11. There is also evidence of the busy season, for its part, continuing its course, although the severity of the busy season has been mitigated by large scale accretions to Deposits. It is broadly speaking these aspects of the money market which we shall study with the aid of the banking returns.

According to the latest returns of the Reserve Bank, Active Note circulation has registered a further increase of Rs 18.52 crores to Rs 1638.21 crores; this no doubt is due partly to beginning of the month disbursements and partly to fiscal year-end outlays of the Central and State Governments being carried over into the second week of the month. Secondly, there is an apparent return of Rupee Coin from circulation for Rs 3.76 crores; but it can be taken as reasonably certain that the Central Government will have, during the week, exercised their statutory right of tendering Rupee Coin for Rs 5 crores to the Reserve Bank and obtaining replenishment thereagainst. In this light, it will be seen that there actually would have been outflow of Rupee Coin for Rs 1.24 crores.

Currency has been expanded for Rs 10 crores against Foreign Securities and for another Rs 10 crores against Rupee Securities. While the expansion against Foreign Securities is obviously by transfer from Balances Held Abroad in the Banking Department, some element of mystery surrounds the rise that has occurred in Rupee Securities. As a result of all these, notes held by the Reserve Bank are marked up by Rs 5.24 crores at Rs 13.18 crores.

The mystery deepens when we take up the study of the Banking Department. The changes may first be enumerated:

(1) The Centre's Deposits have declined by Rs 6.04 crores to Rs 49.23 crores.

(2) Balances of the State Governments have improved by Rs 6.39 crores to Rs 13.63 crores.

(3) But the indebtedness of State Governments has risen more sharply by Rs 8.96 crores to Rs 46.59 crores.

(4) The Reserve Balances of member banks are lower by Rs 3.22 crores at Rs 77.84 crores.

(5) But then, indebtedness of the Scheduled Banks would appear to be sharply lower since the Other Loans and Advances of the Reserve Bank have declined steeply by Rs. 18.39 crores to Rs 55.53 crores.

(6) Significant in this regard is the fall of Rs 5.13 crores to Rs 19.06 crores in the advances against usance bills.

(7) Balances Held Abroad are marked down by Rs 16.33 crores at Rs. 51.82 crores.

(8) Investments are also lower by Rs 2.17 crores at Rs 215.94 crores.

(9) Government Treasury Bills Purchased and Discounted are unusually higher by Rs 13.20 crores at Rs 25.91 crores.

There is only one change that does not require extensive explanation. The decline in Foreign Balances is accounted for to the extent of Rs 10 crores by transfer to the Issue Department. The balance of the decline may be said to reflect the import surplus during the week.

Dealing first with the State Governments, it is clear that the improvement in their balances is at least in part due to the rise in the Ways and Means Advances taken from the Reserve Bank. Furthermore, there is reason to believe that the sharp rise of Rs 13.20 crores in the holdings of Treasury Bills in the Banking Department may conceivably relate to sales of Treasury Bills by the State Governments to the Reserve Bank. It is not improbable that, in order to meet the spill-over of cheques relating to the end of fiscal year payments, as they were presented during the second week of April, the State Governments were compelled to liquefy some of their resources, and the easiest way that this could be done was to effect sales of Treasury Bills held by them. There is one other possible explanation for the steep rise under the head of Treasury Bills, but we propose to reserve the discussion of this alternative hypothesis to a future occasion. At the present moment, the thesis that we have advanced appears to be satisfactory.

By the same token, the Central Government had also to meet the spillover of cheques being presented for payment which had been

issued as relating to the end of the fiscal year transactions. Thus, in spite of the fact that the Centre's Balances would have benefited from the tender of Rupee Coin for Rs 5 crores in favour of the Reserve Bank, the Centre's Balances have declined by Rs 6.04 crores. At the least, thus, the net disbursements of the Central Government have exceeded Rs 11 crores.

The next set of changes relates to the Scheduled Banks. There is, as we have seen, a decline of Rs 3.22 crores in the Reserve Balances. But it is obvious that the Reserve Balances have been partly run down in order to liquidate substantially the indebtedness of the member banks to the Reserve Bank. The very large size of the decline in Other Loans and Advances would suggest that the Scheduled Banks experienced, in the relevant week, considerable accretions to their resources. Thus, it may be stated that the heavy disbursements of the Central Government and State Governments have had their immediate impact upon the banking system, thus enabling the Scheduled Banks to reduce their borrowings from the Reserve Bank.

Lastly, we have to explain the decline of Rs 2.17 crores to Rs. 215.94 crores in Investments side by side with the increase of Rs 10 crores in Rupee Securities in the Issue Department. Thus, the Rupee Securities held by the Reserve Bank in both the departments have risen by Rs 8 crores during the week. The only possible explanation seems to be a further dose of deficit financing to account for a rise in Rupee Securities of this size; and such deficit financing would indeed be probable since the Central Government might have experienced a large draft on their balances. But the complicating factor arises in that the rise in Rupee Securities in the Issue Department is for exactly Rs 10 crores. Heretofore, whenever deficit financing has occurred, this has usually been reflected in a rise in Rupee Securities net of the relevant interest, which was deducted. If, for this reason, this rise in Rupee Securities is not indicative of deficit financing, the only conclusion that we can reach is that the securities in question presumably relate to marketable securities sold by institutional investors. It may be that the holdings by some government departments or the State Bank or the Life Insurance Corporation or even the Scheduled Banks have been sold to the Reserve Bank. So, on the one hand, there could have been deficit financing; on the other hand, there could have been sales of marketable securities by other entities. There is no fresh evidence to indicate which of these hypotheses is the more likely.

The return of the State Bank for April 11 discloses a drop of Rs 6.90 crores to Rs 427.35 crores in Deposits. Cash Balances are practically unchanged at Rs 33.68

1956 balance sheet, are shown to be at a nominal Rs 34 lakhs in the latest accounts.

According to the profit and loss account, there is considerable increase in the income from interest and discount, from Rs 1.82 crores to Rs 2.57 crores. Commission, Exchange and Brokerage, have fetched less at Rs 1.08 crores against Rs 1.20 crores.

If, to some extent, the higher money rates during 1957 could be said to account for the improvement in revenue from interest and discount, this fact also explains the sharp rise in the interest paid on Deposits, which has moved up from Rs 1.18 crores to Rs 1.63 crores. Salaries and allowances have also absorbed more at Rs 96.11

lakhs against Rs 85.85 lakhs. In the result, the balance of profit has moved up by Rs 3.18 lakhs to Rs 59.70 lakhs.

The provision for taxes absorbs Rs 18.50 lakhs against Rs 16 lakhs last year. The transfer to the Reserve Fund is Rs 1 lakh less, but continues to be at the massive figure of Rs 19 lakhs. Bonus to staff absorbs half a lakh more at Rs 7 lakhs.

The dividend has been stepped up to Rs 3.75 a share, the distribution absorbing Rs 15 lakhs, against Rs 14 lakhs relating to 1956.

It is interesting to note that the United Commercial can claim to have a set of ratios in respect of its figures which typify sound

banking. Cash Balances account for 13.5 per cent of Deposit liabilities. Cash Balances and unencumbered Investments work out to Rs 45.7 per cent of Deposits. Bills Discounted and Purchased are placed at 21.3 per cent of Deposits. If the three are taken together, the "liquidity ratio" works out to a high 67 per cent. Advances—this excludes Bills Purchased and Discounted—are placed at 40 per cent. There can be little doubt that the UCO Bank Chairman, Mr G. D. Birla, is perfectly correct in asserting that "the credit for the excellent results of the working of the Bank goes primarily to the General Manager, Mr S. T. Sadashivan and his able Deputies and Assistants".

Indian Finance

UK labour conflict

Paul Einzig

THE National Railway Wages Tribunal decided against the wage claims of the 450,000 employees of British Railways. If the unions concerned should decide to strike they are likely to be reinforced by the employees of other transport services whose claims have been or are likely to be rejected. So the long-expected "showdown" may take place in the near future. Yet there was very little sign of uneasiness in financial circles about the prospects of a strike which is liable to paralyse industrial activity and which might easily develop into a general strike. Indeed the announcement of the Tribunal's award and the publication of the reaction to it among the Trade Unions concerned did not even prevent a further rise of sterling on the day after the announcement.

A major strike would have the advantage of acting as a highly drastic disinflationary influence. There would be a sharp fall in the demand by millions of strikers and workers dismissed because of the breakdown of the transport system. It is true, local shortages in various goods would cause sharp rises in prices, but this tendency would become reversed as soon as normal conditions of transport and production are restored. Wage and profit incomes would fall by hundreds of millions of pounds. The decline in the output, on the other hand, would be largely offset by a decline in exports and an increase in imports, so that there would be no decline in the supply of goods corresponding to the decline in the demand.

This means that it would be safe for the Government to allow industry to go ahead without running the risk of causing inflation. It would become possible to relax the disinflationary measures, because the strike and its consequences would effect all the disinflation that is needed. Even those not directly affected by the strike would be inclined to exercise caution in their future expenditure, so that there would be no longer any need for the Government to restrain consumption or capital expenditure.

Moreover, a prolonged major strike would drain the financial resources of the Trade Unions concerned and would damp the fighting spirit of all Trade Unions. A much-needed sharp lesson in the form of an unsuccessful strike would greatly improve Britain's economic prospects. The question is, however, whether at the last moment the Government would not decide after all to take the line of least resistance and decide to subsidise British Railways in order to avoid a conflict. This was done four years ago, with disastrous effect on the attitude of the Trade Unions.

British public opinion has not been prepared adequately for the conflict. Neither the Government nor the Conservative Party nor

April, 19 1958

employers' organisations, nor the press, nor the economists have taken the trouble to enlighten the British public about what is really at stake. The one major effort to that end, the Report of the "three wise men" of the Cohen Committee, has been an almost complete failure. It is too long and too technical to be intelligible for the layman. It is couched in too tactless language, so that it unnecessarily antagonises trade unionists. And it overloads some of the most effective points. The Government hastened to dissociate itself in public from its findings, instead of trying to popularise it by the publication of abridged and simplified editions.

The increase in the cost of living by some 4 points during the past 12 months has been entirely due to the wage increase granted to the Trade Unions last year. The increase of 5 per cent given to the employees of British Railways a year ago was the first of a series of increases which more than nullified the effects of the fall in raw material prices and of the Government's disinflationary measures. If wage increases are now conceded on the ground of the increase in the cost of living last year, the resulting increase in the cost of living would give rise to another similar claim by the same unions next year, to compensate their members for the rise in prices caused by their previous wage increase. And this would go on indefinitely.

Economists ought to have explained to the Trade Unions politicians and newspapers depending on them for guidance that, in the absence of further increases in wages the rise in prices is bound to become reversed, for the simple reason that there would not be enough purchasing power to maintain the demand on the basis of the higher price level. In addition to this argument, based on a combination of supply and demand theory and simple arithmetic, economists ought to have explained that, if only Trade Unions restrained their greed for a little longer, the resulting stability of prices would enable the Government to call off its disinflationary measures, so that manufacturing industry would be able to make full use of its expanded producing capacity. This would mean a reduction of the cost per unit of output, and in the absence of wage increases prices would be reduced.

But this solution does not suit the more extremist Trade Union leaders. It would mean that everybody would benefit by the expansion of production. And Trade Unions want to reserve the entire benefit to their own members. If only this selfish attitude were adequately exposed, public opinion would range itself wholeheartedly against the strikers fighting for such short-sighted and selfish ends. And although the Trade Unions represent many millions of people, even they could not afford to ignore the pressure of public opinion.

Export Trends

A complete picture is now available of the pattern of distribution of North-East Indian tea in the twelve months ended March 31. Out of a fall of nearly 78 million pounds to 342 million pounds in 1956-57, the bulk of the shortfall of about 72 million pounds was due to the UK's reduction in her off-take from 296 million pounds in 1956-57 to 224.4 million pounds in 1957-58. Other out-markets accounted for the balance of the shortfall in shipments from 124 million pounds to 117 million pounds. That Russian buying in the Calcutta market was less aggressive was shown by a reduction in her off-take from 17 to 12 million pounds. There were slight declines in the off-take by West Germany, Canada and the USA; but these were substantially offset by increases by Turkey, Iran and, to some extent, Egypt.

According to the figures released from Chittagong, tea exported to foreign countries, during the period from 1st April, 1957 to 28th February 1958, totalled 5,131,302 pounds as compared with 5,637,827 pounds during the corresponding period of 1956-57. Exports to the UK amounted to only 4,000,206 pounds as compared with 23,037,329 pounds in the corresponding period of 1956-57. Exports to Karachi were, however, at higher 34,802,532 pounds as compared with only 24,920,628 pounds.

According to trade sources in Calcutta, regular sales of North India for the 1958 season will commence on the 9th June. Two supplementary sales of New Season's Darjeeling teas will, however, be held in May. Sale "A" will be held on the 12th May followed by sale "B" a fortnight later. There will be no Export Sale during the week commencing on April 21; but a final clearing-up sale of the 1957 season's tea is scheduled to be held on April 28.

Domestic buyers are expected to remain active as their stocks are on a hand-to-mouth basis due to credit stringency. The crop reports are encouraging so far and, in Assam, in particular, quality is likely to improve. Temporarily, the size of the crop is restricted by drought; but rains are expected soon. Planters are anxiously awaiting the Government's announcement relating to export duty relief. As no working formula has so far been worked out satisfactorily for giving relief in duty to only Common teas, it will not be surprising if the export duty is generally cut by 12 nP per pound.

In connection with the reports of closure of some gardens in Assam, the Union Minister for

Commerce has stated that only six gardens have been closed down for a short time and this not an alarming feature as there are 6,500 tea estates, covering an area of nearly 7 lakhs acres. He adds that, apart from the question of adjustment of duty on Common tea which is under active consideration, efforts are being made to evolve a certain procedure by which finance will be available to tea gardens through State Finance Corporations. The matter is under discussion between the various interests concerned.

The existence of the Common tea producer in India, whose position is already marginal, appears problematical in the absence of any agreement between the larger producing countries for the regulation of exports, but also of further expansion in planting. Any early relief in this direction appears unlikely however, and it would seem that each country must face individually its own problem. While the overall picture may appear distressing, there are some more hopeful aspects. The present low prices for poor quality tea must result in an improvement in plucking and manufacturing from which may follow some reduction in crop this season, particularly from Ceylon.

In the Export Sale held in Calcutta this week, offerings were as much as 58,199 packages for which there was again a strong and general demand. The strongest feature of the sale were "eas for price", which were from 6 to 10 nP per pound dearer. Plain Broken Pekoes and Fannings advanced by 6 to 8 nP, particularly the latter. Medium BPs and Fannings were 2 to 4 nP dearer. The brighter liquoring BOPs and OFs were fully firm to dearer; but BOPs with ordinary liquors generally realised prices below valuations.

CTC teas, particularly those with seasonal quality, were well supported and were dearer. The more ordinary sorts, however, did not receive the same attention and, at times, realised prices below valuations. Brown Doars teas met with good demand. Whole Leaf grades were generally easier, particularly the ordinary Pekoes. The limited quantity of Tippy teas, on offer, were about steady at last rates. Following rates were quoted: Clean Black Pekoe Rs 2.25 Rs 2.30; Plain Broken Pekoe Rs 1.54 to Rs 1.58; Plain Fannings Rs 1.68 to Rs 1.72; Medium BP Rs 1.64 to Rs 1.68; Medium Fannings Rs 1.80 Rs 1.84; Best Assam CTC BP Rs 2.60 to Rs 2.80 and Best Assam CTC Fannings Rs 2.80 to Rs 3.00.

In the Internal Sale, offerings consisted of 20,665 packages of Dusts. Although a good general demand prevailed which strengthened as the sale progressed, prices for most sorts tended easier. The orthodox descriptions, at the start, were often 6 to 10 nP per pound easier; but prices appreciated as the sale progressed and, at the close, were only 2 to 4 nP easier. Powdery descriptions were well supported and, towards the close, were fully firm and sometimes dearer. Best CTC Assams

were fully firm, while Medium types, in this category, with autumnal liquors enjoyed a very satisfactory sale and often realised prices above valuations. The poorer types, however, were generally easier.

The limited quantity of Darjeeling teas, on offer, were the weakest feature of the sale. Following rates were quoted:—Medium Doars Dust Rs 1.54 to Rs 1.58; Medium Assam Grainy Dust Rs 1.58 to Rs 1.62; Medium Assam CTC Dust Rs 1.90 to Rs 2.10 and Best Assam CTC Dust Rs 2.75 to Rs 3.05 (nominal).

Also, 4,627 packages of Leaf grades were offered for internal consumption. There was a fairly strong general demand. Prices for all descriptions advanced with the exception of a few invoices of Green Teas, which tended easier.

In the Export Quota section, the rate for Special Export Licence developed a hardening tendency to 4½ from 4 nP per pound. The rate for non-transferable quota remains practically unchanged at 3½ nP per pound.

In the Internal Sale held at Cochin, offerings were 650,000 pounds. There was only a fair demand and prices were generally lower by 10 to 15 nP per pound. Best Nilgiris came to a selective market and were irregular and generally easier. Good Mediums met with fair support at a drop of up to 15 nP per pound. Mediums from Travancore were weaker and declined by 10 to 15 nP, while Wynad descriptions were sold at barely steady prices. Milled and residual Dusts declined fully by 10 nP. Black grainy descriptions followed the downward trend of the market.

The first sale, after the Easter holidays, was held in London this week when offerings were 23,849 packages, including 20,417 packages of Northern India teas. Prices were decidedly dearer for all grades, the best colour Fannings being the dearest and prices showing sometimes as much as 8d per pound. Good Doars were 2d to 4d dearer, according to quality. But, buying was very selective. Plain types were fully firm to dearer; but some of the thin liquoring kinds met with a little less demand. Plain Common Broken Pekoe was quoted at 3sh 5d per pound.

Firm Undertone

FIRM conditions have prevailed in the jute markets during the past week. The main impetus seems to have come from the large number of fresh enquiries received in the past few days. Egypt is reported to have made enquiries for the supply of cotton packs and there has been an order for sacking from the Government of India. Toward the close of the week there have been reports that enquiries have been received from USA, Argentina and the UK for hessian. As is to be expected the hessian section has fared well because of its additional advantage of a decline in stocks as at the end of March. The sacking section has also recorded a sizable gain initially in sympathy with hessian and later on the strength of fresh enquiries. B Twills Ready which was quoting at Rs 99.50 a week ago is now placed at Rs 104.00. Hessian 40" x 10 oz. Ready has advanced from Rs 40.00 to Rs 41.56.

One of the favourable factors for the recent improvement in sentiment in the jute goods market has been the announcement that US burlap consumption in March has totalled 71 million yards. This shows that there has been a slight improvement over February when such consumption stood at 70 million yards. Taking the first quarter of the current year as a whole, US burlap consumption has totalled 212 million yards as against 210 million yards during

the corresponding period of last year. Stocks in US, however, continue to be somewhat at a high level, the figure for March-end being 242 million yards. This shows an increase of 2 million yards over the previous month's level. But compared with the corresponding date of the previous year (Stocks at March-end 1957: 262 million yards) the position must be deemed to be quite satisfactory. Though the improvement in March is only small, it has nevertheless aroused keen interest in the trade because it was generally believed that with the US said to be in the grip of a recession, burlap consumption may also have been adversely affected. It is now clear that burlap consumption has been well maintained during the past three months which are generally considered to be slack months. The outlook for hessian seems to be quite bright.

A strong contributory factor for the firmness of the jute goods market has been the keen demand and the consequent improvement in the prices of raw jute. We have already noted the disparity in the price levels in the ready and forward markets in raw jute. Operators seem to be of the view that the supply position in the first few months of the next season will not be quite easy. It would appear that holders in the ready section have also been successful in persuading mills to believe that the supply position is already tight. As a result Assam Bottoms April-May shipment which was selling at Rs 25 per maund a week ago is now quoted at Rs 26.50.

Production of jute goods during March has totalled 85,300 tons, the same as in the previous month. Mills, however, have worked 5½ hours more than in February. Output of hessian at 30,400 tons is 300 tons higher; but compared with the corresponding month of a year ago is 5,600 tons lower. Pro-

duction of sacking at 49,500 tons is also higher by 200 tons as compared with February but as compared with the corresponding month of a year ago is 6,400 tons higher. Other varieties at 5400 tons in March 1958 show only slight variation.

Production so far this year is higher than in the corresponding period of 1957. Output in the quarter ended March 1958 amounts to 268,900 tons as against 253,700 tons for the first quarter of 1957. Sectionwise, production of hessian has been lower at 94,900 tons as against 103,800 tons. Production of sacking is higher at 156,100 tons as against 126,200 tons. It is clear that the shift in emphasis from the production of hessian to the production of sacking made from the middle of last year has continued unaltered.

★

The jute goods market ruled firm during the past week. In earlier dealings sentiment was aided by the steadiness of the raw jute section but in later dealings prices were pushed up on the strength of fresh enquiries from a number of foreign countries. The slight increase in the burlap consumption in US during March as compared with February was also a contributory factor.

The market opened on Thursday on a steady note in sympathy with the raw jute section and with mills showing only small interest prices firmed up by close. Hessian 40" x 10 oz Ready was finally placed at Rs 40.00 while B Twills ready reached the Rs 100 mark. Elsewhere Hessian July-September was quoted at Rs 40.37 with B Twills at Rs 101.25.

Prices further firmed up on Friday on reports of enquiries from Egypt and the Government of India. Mills took interest at the higher levels. The market closed the day steady as follows: Hessian 40" x 10 oz Rs 40.20; B Twills Rs

100.15. July Sept Hessian 40" x 10 oz Rs 40.55 B Twills Rs 101.75. Though no fresh overseas business was reported done on Saturday the undertone remained fully steady and prices made some further headway on bear covering. Hessian 40" x 10 oz Ready advanced to Rs 40.40 while B Twills was done at Rs 100.75. Elsewhere 40" x 10 oz July-Sept. was placed at Rs 40.75 with B Twills marked at Rs 102.25.

The market reopened on Thursday after the holiday on a slightly easier undertone but within a short time again firmed up on speculative buying which had been influenced by the firmness of the raw jute section and reports of fresh foreign enquiries. Hessian 40" x 10 oz Ready was stably higher at close at Rs 41.15. B Twills was similarly firm at Rs 102.55. July-Sept Hessian 40" x 10 oz was placed at Rs 41.45 and B Twills at Rs 104.20.

Brisk activity with a further improvement in price levels characterised trading on Wednesday. There were persistent reports that enquiries had been received from the UK, US and Argentina. Mills were also keen sellers at the higher levels but the sales had been well absorbed. Sentiment had also been aided by the report that US burlap consumption in March had totalled 71 million yards. The following are Wednesday's closing rates: Hessian 40" x 10 oz Ready Rs 41.56; B Twills Rs 104.00. July-September, Hessian 40" x 10 oz Rs 42.00 B Twills Rs 105.50.

With mills evincing sustained interest the raw jute market firmed up considerably during the past week. Assam Bottoms April-May shipment gaining 1½ points in the course of the week to be finally placed at Rs 26.50.

The futures market ruled firm. Hessian May opened the week at Rs 40.36 and was steadily pushed up to touch a high of Rs 41.92 to be finally placed at Rs 41.70. Sacking May opened steady at Rs 100.65 and at one time was done up to Rs 105.15 to close at Rs 104.10. Upper Assam June was throughout a strong feature. Opening at Rs 26.80 this contract touched a high of Rs 28.44 on Thursday to be placed at the end of the day at Rs 27.60.

Crisis in Oil Industry

India is one of the largest oilseed producing countries in the world, standing third in order of preference, China and America having occupied the first and second positions respectively. But undoubtedly, India produces the greatest varieties of oilseeds. Of the total world production of groundnuts, sesamum, linseed and castorseed, India accounts for 30 per cent, 25 per cent, 11 per cent, and 37 per cent, respectively.

It has been estimated that there are near about 8,175 power driven oil mills in the country, besides about 450,000 village ghanis operated by animals. The installed capacity of the oil mills can be safely estimated at 7,865,000 tons and that of village ghanis at 2,00,000 tons. The total of all the capacities would come to the neighbourhood of 10 million tons. As compared to this installed capacity, India's production of oilseeds is lagging far behind and is estimated at about 6 million tons. But, strangely enough, according to the Indian Central Oil Seeds Committee, nearly 1.7 million tons of oilseeds of all varieties were crushed by oil mills in India during 1955-56. The All India Khadi and Village Industries Board is of the opinion that the village ghanis throughout the country crush nearly 1 million tons of oilseeds every year. Taking the mill and village sectors into account, the total quantity of oilseeds crushed in the country is hardly 2.7 to 2.8 million tons. Thus, we see that less than 50 per cent of the total oilseeds produced in the country is being crushed for the purpose of extraction of oil. In other words, only a fraction of the total installed capacity of the oil crushing industry is being utilised.

It is a matter that requires research and investigation as to why such a small percentage of the produced oilseeds is crushed, while such a large percentage of the installed capacity of the oil mills remains unutilised. There is no reason why 80 per cent, of the oilseeds grown in the country should not be crushed by the oil mills, keeping aside 20 per cent as farm stocks and for edible purposes. During the second Five-Year Plan, the target for oilseeds production has been fixed at 7.6 million tons, an increase of about 1.6 million tons over the production, hitherto recorded.

Oil Mills in India are extremely backward from the point of view

machinery and implements. Almost all the mills are equipped with age old ghanis. The expellers used by the mills are mostly outdated and the oil cakes are left with oil contents varying between 8.0 and 8.5 per cent, as compared to the modern expellers, which are capable of extracting another 4.0 to 4.5 per cent of oil from oilcakes. In western countries, this kind of expellers is in extensive use. Due to the use of outmoded expellers, the Indian oil millers are incapable of reaching a competitive price structure in the overseas market. We refrain from discussing about the village ghanis, whose oilcakes are left with oil contents as high as 18 per cent. No one can deny that the working of the village ghanis is extremely uneconomic. The emphasis that the Government have been laying on the development of the village ghani industry, has to be judged from the point of view of its employment potential. It has to be examined in detail as to whether the Government should at all subsidise an outmoded industry, at the cost of the power driven sector.

It is evident that the utilisation of the unutilised crushing capacity of the oil mills in India depends on the increased per capita consumption of oil as well as the export promotion of the commodity. The nutrition advisory committee has recommended a per capita consumption of 2 oz of oil per day. Taking even a consumption of 1 oz per day, the consumption of edible oils would rise to 3.7 million tons a year as against only 1.85 million tons now consumed in the country.

Oil has been a very reliable foreign exchange earner over the past years. Stepping up of exports would not only cause the oil mills to run all the year round, but would also help the country in bridging the foreign exchange gap. During 1955-56, India exported oils to the value of Rs 34 crores. Unfortunately, due to various factors, export of this important commodity has declined considerably in subsequent years. During the first six months of 1957-58, the value of exported oils amounted to only Rs 9.2 crores, as against Rs 14.7 crores in the corresponding period of the previous year. This presents a very discouraging and dismal picture of the trade. A close analysis shows that the main reason leading to the fall in exports, is the inability of the Indian exporters to compete in the world market.

Castor oil, which has had a very good market in the USA, has fallen back owing to the competition from Brazil. Linseed, another major exportable oil, has suffered a similar reverse due to the Argentine having had a bumper crop last year. The UK and other countries are now rallying behind the Argentine for their requirements for linseed oil. Quite recently, the Trade Ministry of the Argentine declared that Soviet Russia had decided to purchase

30,000 tons of linseed oil from that country, which means that the Russian enquiries, which were so long being sent to India, will now be diverted to the Argentine. Groundnut oil may have a very good overseas market, provided, the Government of India find out a suitable substitute for home consumption and allow its exports more liberally. A move has been taken in the right direction by the Government, by laying emphasis on the development of cotton seed industry. The Chairman of the Vanaspathi Manufacturer's Association of India, while presiding over the annual general meeting of the Association, declared that the Vanaspathi Industry had no prejudice against the use of cotton seed oil, if it was of a good bleachable quality. It was further learnt from the Chairman's speech, that the Vanaspathi Industry had voluntarily decided to use cotton seed to the extent of 2½ per cent of the total oil requirements during 1958. This, it is believed, would find a ready market for 7,500 tons of cotton seed oil. Once the cotton seed industry is developed, groundnut will be free for exports and this would give a great impetus to the export trade.

Besides developing the markets for Castor, Linseed and Groundnut, sufficient emphasis should also be laid on minor oils like Kardi, Niger, Mohua, Tobacco, Kapok, etc., which may have lucrative overseas markets. In order to find out the varied uses to which these oils might be put, intensive research work should be undertaken in the country.

The oil milling industry of India is extremely conservative and does not generally take to crushing of oilseeds other than those being crushed for ages. There are very few oil mills in the country, which undertake any research work on their own. It is, therefore, necessary that research and investigation about new oils should be undertaken by the Government and the results disseminated to the oil mills free of any charge. The purpose could be better served, if every State could maintain a research laboratory of its own.

The oil interests of the country have been suggesting abolition of export duties on all exportable oils as the most important precondition for export promotion. The decline in the export of linseed oil has been attributed to the refusal of the Government to abolish the export duty on the commodity, till September 1956, by which time the established markets of the exporters were lost. Due to continuous pressure from the trade, the Government have recently reduced the duty on Castor oil from Rs 175 to Rs 100 per ton and that on Niger seed from Rs 150 to Rs 50 per ton. The trade is of the opinion that, in view of the serious competition in the world market, nothing short of complete abolition of duty would meet the requirement. One has got to admit that the policy of the Government in respect of abolition or reduction in

export duty on oils has been extremely non-responsive to the requirements of the trade. The Government have always been following delaying tactics, and by the time something has been done, the trade has had already lost its out markets.

Full refund of Excise duty, wagon priority for oilseeds carried from centres of production to centres of crushing and treatment of oilseeds on the same level as food grains, as far as Railway freight is concerned, are some of the important measures that have been recommended by the Indian oil exporters, as essential preconditions for stepping up exports.

It is equally important that new markets for Indian oils are sought out by the Government through trade delegations. Somehow or other, the market has so long been limited only to a few countries, and naturally, any untoward developments in those countries are liable to give rise to violent reactions in the Indian oil milling sector.

In the past, there has been an erratic growth of oil mills in the country, mainly due to the fact that the industry, in some parts of the country, is regarded as a seasonal one, and except for the few months that crops are available in plenty, most of the oil mills situated in these areas remain closed. The Oilseeds Crushing Industry Enquiry Committee, appointed by the Government, recommended that no fresh licenses for oil mills should be granted, so that the existing installed capacity of the mills can be better utilised. In view of the fact that only a small fraction of the capacity is utilised at the moment, this recommendation will have far reaching consequences.

The general pattern of the oil industry in India is that of small industries run by power on cottage industries scale. Most of these units are unable to operate throughout the country, owing to severe fluctuations in the oilseeds prices. Until such time as these units may have the opportunity of drawing their seed requirements from either Government or co-operative store houses, they will not be able to work properly and economically. As for the bigger units, introduction of solvent extraction process and installation of latest machineries are the only way out. Financial assistance from State Financial Corporations or similar organisations set up for the purpose is very essential for bigger units to carry out the innovations.

It is a matter of great regret that the power driven mills of the country are not receiving half the attention of the Government as is the case with village ghanis. It has been proved beyond doubt that the village oil industry, by itself, is not capable of meeting the requirements of the country. To what extent the oil industry of India may thrive in the future, depends entirely on the attitude that the Government take up with regard to its future development.

US Notes

IN the State of Colorado technical experts from countries of the Middle East, Asia and Africa are sharing American experience in what has been called the "greatest drama of all times: the drama of water, land and people."

The story of Colorado itself vividly points up this drama. Slightly more than 100 years ago, the total assessed valuation of the state's agricultural industry might have been two oxen, a wagon and some meager personal possession. Colorado is now a wealth-producing state with an annual income from agriculture exceeding \$500 million.

Water conservation and use is literally a matter of life and death in many areas of the world. While it may lack the spectacular urgency of political issues, it is one of the most important long-range problems facing the United States and many other parts of the world today.

The United States has not, by any means, dealt with all problems concerning proper use of its natural resources. But it has made tremendous advances in the field of reclamation during the past century. It is to study these advances that engineers and other technicians from many countries come each year to the Denver Engineering Laboratories of the US Bureau of Reclamation. These visitors gain practical experience at one or more of the US reclamation projects that are still under construction in the West. The training is part of the programme of the US International Cooperation Administration (ICA).

Many of the problems now faced in newly-developing countries are the same problems that are a part of America's agricultural history.

The picture of America's early settlers finding an abundance of fertile land simply waiting to be turned by a plow is not the true picture of the development of the US west. In large areas west of the Mississippi river the dry soil would not produce much more than the native buffalo grass and home grains. There were no summer rains to keep crops growing to maturity. And in the truly arid west, the need for an artificial water supply was a matter of absolute survival. Some areas there receive as little as two or three inches of rainfall during an entire year with virtually none during the summer. Yet in the high mountain precipitation of as much as 100 inches is deposited in snowbanks during the wintertime, and in the summer melting snow water once flowed down rivers

while crops in nearby fields died from lack of moisture. The history of western states is replete with struggle against drought, flood and dust, grasshoppers (locusts) and the capriciousness of water.

Insufficient rainfall and the wasteful use, destruction and rapid depletion of land resources made a dreary prospect of America's west during the first half of the 19th century. Many otherwise farsighted American statesmen looked upon it as a worthless area of deserts and mountains, unfit for any use.

Some 100 years later, in 1956, the total harvest from all reclamation projects constructed and financed by the federal government was valued at more than \$951.6 million, an average of \$148.69 per irrigated acre. This figure does not cover state and private reclamation efforts. Nor does it include the value of the livestock concerned—the "meat crop" made possible by irrigated areas.

Early and modern pioneers in reclamation found the answer to once disastrous flood and drought, as well as to the expanding need for electric power. And reclamation has taken most of the arid west out of a non-crop economy and permitted diversification where the farmer can shift his production to meet market demands.

And major reclamation areas in the western states had a humble beginning—a few irrigated farms from which has grown an economic giant. Early efforts were carried on by individuals and cooperative groups, the earliest dating from a day in 1847 when settlers in what is now the state of Utah first diverted the waters of a creek to their sunbaked fields. The Federal Government has participated in reclamation work since 1902. All efforts combined have resulted in a fourfold increase in irrigated acreage in 17 western states on their own in addition to committing themselves to pay back most of the Federal investment.

The gigantic size of some of the Bureau of Reclamation's projects may give the visitor the impression that the Federal reclamation programme could not be adopted to the small, simple irrigation project. Actually, the reverse is true. Bureau engineers have indeed proved capable of solving such problems as those involved in constructing the Hoover Dam, the world's tallest; drilling the 13-mile tunnel through the continental divide on the Colorado big Thompson project, the country's longest; building river-size canals like those of the central valley of California and the Columbia river basin project in the state of Washington. However, most of the Bureau-built projects are small in size and involve relatively simple engineering structures.

These are some of the factors that make American experience in reclamation of value to less-developed countries. Another factor is the attitude of US reclamation experts here and at the Bureau in Washington. These men stress the mutuality of efforts in this field. They refer to knowledge obtained

by America from other countries. And they obviously are proud that what has been accomplished in America can now be of help in meeting the pressing needs of friends.

Britain

Last year the United Kingdom had a current surplus of £237,000,000. Although the surplus was slightly lower than in 1956, it compares well with the outcome of most years since the war.

As the events of last August and September showed, a balance of this size does not, by itself, prevent temporary severe pressure against sterling. But, over the year, the country's overseas monetary position—that is, the relation of its reserves to its short-term liabilities—improved. These are two outstanding features disclosed in the Balance of Payments White Paper published earlier this month.

The provisional estimate of £237,000,000 for the 1957 surplus (£115,000,000 for the first half and £122,000,000 for the second half of the year) compares with the revised 1956 estimate of a surplus of £266,000,000. The decline may seem disappointing, but it is possible that the estimate may be increased if further information comes to light on relatively large balancing items.

As usual, the United Kingdom had a deficit on visible trade (trade in merchandise), which was more than covered by a large surplus on invisible transactions (including shipping, banking commissions, interest, overseas oil transactions, Government expenditure and receipts). The deficit on visible trade as calculated for balance-of-payments purposes was £97,000,000 in 1957—£36,000,000 more than in 1956—but less than in any other year since the war. This result should be considered against trends in world economy.

Three developments were outstanding in 1957. First, the rate of growth in world trade and production showed signs of slowing down; but the fourth quarter the American economy was in recession. Secondly, commodity prices were declining. Thirdly, many countries (other than the Federal Republic of Germany and the United States of America) suffered serious losses in their reserves, making it more difficult for them to meet temporary deficits.

The United Kingdom benefited from the steep fall in import prices from May onwards, coupled with the continued rise in export prices during the first eight months of the year. It is particularly gratifying that in spite of the US recession, United Kingdom exports to the dollar area were at much the same level in the second half as in the corresponding period of 1956. Exports to member countries of the Organization for European Economic Co-operation (OEEC) however, fell off, though

imports from these countries went up further.

The surplus on invisibles rose from £327,000,000 in 1956 to £334,000,000 in 1957, mainly in consequence of higher earnings from shipping and oil and a reduction in net overseas expenditure by the Government. The net earnings from interest, profit, and dividends were somewhat lower than in 1956, although annual interest payments on the US and Canadian loans were again deferred.

The United Kingdom is, traditionally, not only a trader but also an investor. The net outflow of long-term capital was £189,000,000 in 1957, as against £231,000,000 in 1956, but there was an unusual drop from £168,000,000 in the first half to £21,000,000 in the second half of last year.

The small size of the deficit in the second half was due to Government transactions—the drawing of £89,000,000 from the line of credit granted by the U.S. Export-Import Bank (in addition to the deferment of interest already mentioned). It is believed that in spite of tighter monetary conditions in the United Kingdom, the normal outflow of private capital was about the same as in recent years, especially to the colonies. Government assistance to underdeveloped colonial territories was higher than in previous years.

The balance on current and long-term capital transactions combined, which reflects the United Kingdom's activity as a trader and an investor, showed a surplus of £48,000,000 in 1957, against the surplus of £35,000,000 in 1956. This surplus is balanced by the "financing" items which reflect the United Kingdom's function as a world banker and indicate the changes in its overseas monetary position (that is, its reserves and liabilities). It is noteworthy that, in spite of the pressure on sterling following the exchange adjustment of the French franc, the overseas monetary position improved over the year by £239,000,000.

Overseas sterling holdings decreased by £178,000,000—partly offset by the increase of £11,000,000 in the debt to the European Payments Union. On the other hand, the reserves increased by £50,000,000, and the official holdings of OEEC currencies by £22,000,000. Of this improvement, £189,000,000 was due to special transactions which, in fact, replaced short-term by long-term liabilities. But even if these transactions are taken into account, there remains a real improvement of £50,000,000.

The sterling holdings of the rest of the Sterling Area fell by £226,000,000 in the second half of the year after an increase of £69,000,000 in the first half. The holdings of non-sterling countries decreased by only £1,000,000 in the second half (after a rise of £4,000,000 in the first). This unexpectedly small decline would have been much larger but for the £67,500,000 deposited by Germany against future debt payments.

OBEROI HOTELS

INDIA & PAKISTAN

IF my reaction to authority's helplessness acquiescence in a mood of despair about the prospects of the Plan is one of impatience, my reaction to its obtuseness over the question of iron ore export is one of exasperation. In one sense, of course, the two facets of Government's attitude are related: for, a good deal of the gloom about the Plan's prospects, especially in the matter of obtaining the foreign exchange needs of the Plan, will get automatically dissipated if there was a more wideawake and enterprising attitude toward possibilities of exchange earnings by export of iron ore. Conversely, the general loss of revenue largely accounts for the pusillanimity toward export promotion. Apart from the foreign exchange aspect, the ancillary benefits likely to flow from a vigorous ore Export Promotion programme are so obviously attractive that it passes my comprehension why there should be such lack of enthusiasm for pursuing it.

Nearly four and a half years ago, Indian Finance had mooted a comprehensive scheme for iron ore exports. If ever there was a scheme that would have had a many sided beneficial impact on the economy of the country, it was that scheme. For some reason which I am unable to fathom, authority does not seem to have taken to it. Not that, let me add in fairness to Government, there have been no efforts to promote export of iron ore. But such efforts have been of a half-hearted sort and have every appearance of being responses to importunities from outsiders. Protracted negotiations with Japanese interests, for instance, have been more indicative of that country's awareness of its own needs than of our sense of urgency in Export Promotion. This is evidenced also by the fact that it was Japan which took the initiative in the matter of negotiation for the creation of adequate port facilities for the export of iron ore from India. It was Japan, again, that seized upon the idea of seeking an appropriation from the US President's Special Fund for a foreign exchange loan under which port facilities could be expanded. It was only recently that the information that India was also to make an approach to the US Administration for the

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please!"
—As You Like It.

same purpose was vouchsafed. What does all this reluctant activity add up to? Only to the hope, as expressed by the State Trading Corporation some months ago, that we shall be supplying to Japan some twelve million tons for the entire Second Plan period; and, at a slightly longer range, the promise of equipping Vishakapatnam for export, from 1964, of iron ore on a larger scale. This is the sum of the official response to Indian Finance's suggestions.

Now, I should perhaps feel heartened by the fact that one of Indian Finance's suggestions is thus in the process of being accepted. On this matter, however, I cannot honestly profess such a gratification. For, I am depressed by the fact that the cue has been taken, not by India, but by Japan. Recurrently, this journal had suggested the availability of the President's Special Fund for exploring iron ore potentialities. It is a sad commentary on the lack of a spirit of venture on the part of the Indian authorities, that it is the Japanese interests which all along seized the opportunities that were offering themselves.

As I remarked last week, Export Promotion is both a moral duty and an inescapable practical task. If this country is to accept the massive foreign assistance that is now in sight, without loss of self-respect, it should display the initiative and enterprise that would be comprised in an inspired plan for exports. So, let us not think that such arrangements as we have concluded with Japan have already exhausted the possibilities of iron ore.

The iron ore resources of India, the proved reserves, make us potentially the most powerful country in the world. True, the measure of a country's industrial might lies in steel rather than in iron ore. It is in this light that, now and then, the rather specious argument is sometimes advanced that India should not export iron ore, because such export will impoverish the Indian potentiality in the form of steel to that extent. I do not deny that it would be far more advantageous if India were to export steel; alas, all these are very much in the realms of hope. Indeed, by the same token,

I would wish India to export not steel, but finished steel goods, heavy machinery and so forth. It will be a decade or two before we shall figure as a prominent exporter of steel; and, as an exporter of heavy machines, our hopes are deferred even farther. The status of a predominantly industrial economy, with manufactures figuring largely in what we have to offer in the world markets, is at the moment a distant vision. Presently, our problem is to intensify the process of industrialisation. This means a large outlay in capital goods and machinery that we today do not possess, and which have to be paid for in foreign exchange. Such imports play havoc with our balance of payments, and, as has happened in the last two years, we find ourselves face to face with an inadequacy of foreign exchange resources.

If we are to pay for what we buy, we must seize upon some commodity which we can spare without difficulty, and for which there is a world demand. Such a commodity is iron ore. At this stage, my mind hearkens back to a talk that I had, some thirty years ago, with Jack Keenan, who was the General Manager of the Tata Iron & Steel Company. At that time, I do not remember who the contracting party of the other part was, but there was an enquiry for the import from India of something like 50,000 tons of iron ore. Jack Keenan vetoed the idea. He said: "If you export the iron ore today, you will be deferring the time when the world's steel producers will be flocking to you and begging you for the iron ore that you possess so richly. Do not export today; and there will be no limit to what you will be able to export 30 or 40 years hence." That prophecy of Keenan's has come true. Japan, Czechoslovakia, Poland, East Germany and Hungary are all countries which today would be only too happy to get India's iron ore. With such impressive evidence of contending suitors, bashfulness on our part is entirely misplaced. As I said earlier, official hopes at the moment are no larger than 3 million tons annually at the end of the Second Plan. This seems to me to be pitifully small. What we must aim at is export in the environs of

10 million tons or more by the end of the Second Plan. I shall be satisfied with nothing less, and, as the reader will see, the export of iron ore on such a scale is in the nature of a panacea for almost all of India's economic ills.

On a rough and ready basis, we shall be able to get something like \$10 a ton for the high grade iron ore. Thus, export of 10 million tons would fetch roughly Rs 50 crores of foreign exchange annually. By the end of the Third Plan, this figure could rise to Rs 100 crores annually. This extra earning, from iron ore, could make all the difference in our balance of payments. If, by the end of the Second Plan, we are able to achieve the targets that we have postulated, we shall experience no difficulty even in the so-called hump years between 1960 and 1963, when heavy foreign exchange commitments will fall due. So, I wish to suggest in the first instance that, if for no other reason, then, solely for the sake of ensuring that we shall not fail to meet our foreign exchange commitments, we should immediately proceed with Indian Finance's iron ore programme.

Consider how this will impinge on our self-respect. We shall have maintained our record as having never defaulted in our international debts. We shall have the satisfaction of having met these commitments, not from a perennial flow of foreign aid, but from our own efforts. We shall have shown the world that, if there are some things that we need, there are others that we can spare and which the rest of the world needs. We could justifiably take pride in the fact that Indian iron ore is being transmuted, all over the world, into the capital equipment that goes to raise the standard of living of all peoples everywhere. This is the kind of chain-reaction that should be particularly pleasing to us.

There is another aspect of the matter. The Railways have a plan of their own to implement, if the movement of goods on an accelerated tempo is to be accomplished. In a sense, the success of the Railway Plan is a prerequisite to the success of the Second Plan as a whole. In grudging recogni-

Dasnagar, Howrah.

tion of this fact, the allocation for the Railways in the Second Plan, after having been cut, has been restored to the original figure. If the Railways could earn more on freight than planned for at the moment, and if such earnings could be achieved without undue strain, then the Railways would not only be increasing their own internal resources, but also reducing the pressure on general revenues. This is precisely what the programme of export of iron ore offers as a mere by-product. Movement from mine site to port of ten million tons of iron ore

annually will earn enough freight for the railways to solve their problems of finance. In other words, the movement of iron ore on the scale suggested will ensure the implementation of the Railway Plan. If the Railway Plan is a prerequisite for the success of the Second Plan, then, somewhat similarly, the iron ore export plan could be considered to be a prerequisite for success attending the Railway Plan. On this score alone, if on nothing else, we cannot afford not to go ahead with the programme outlined for intensifying iron ore exports.

Of course, you could not put through the scheme for iron ore exports unless you created the additional port facilities. Let us not clutter up the issue by speaking about the comparative advantages of Vishakhapatnam or Paradip as ports suited for this purpose. The fact is, that the Hooghly is geographically the best located for shipment of iron ore. The fact also is that the Calcutta port is overstrained with the cargo that it has to handle in respect of the industrial programmes that lie in Calcutta's hinterland. Whatever it is, a subsidiary port is, therefore,

inescapable. Such a port would, besides handling the export of iron ore on a grand scale, also help to reduce the congestion at Calcutta port by being an offloading centre for some of the heavier cargoes. It may be said, and it is certainly no exaggeration, we must pursue the iron ore export programme if only that it will, by reducing the congestion at Calcutta port, vouchsafe the speedy implementation of the industrial schemes in the potential Ruhr of India. (The latest developments in this regard are heartening. There is a move in Parliament to propose the creation of a subsidiary Port at Geonkhali or south of it. Mr Raghunath Singh, Mr Satish Chandra and Mr Upendranath Burman are to be congratulated for having taken the initiative in this matter).

I come lastly to what is perhaps one of the most important basic inspirations behind the Second Plan. And that is to increase the purchasing power at the lowest strata and to provide employment for the millions that are unemployed. It is all very well to talk of steel and cement and machinery to make machines as the foundation of industrialisation. It is true that such an orientation will pave the way for a general improvement in the standard of living. There can also be no doubt that the implementation of such schemes will have a pronounced impact on the national income figures. But there is today's misery to be combated even while you lay the foundation for tomorrow's happiness. Such misery commonly takes the form of unemployment. Now, if Government really desire to increase employment opportunities, let them examine what export of iron ore has to offer in this regard. If Rs 50 crores are going to be earned in foreign exchange, then, the bulk of this Rs 50 crores will be disbursed among the hundreds of thousands of workers at the sites, who will be mining the iron ore. Employment opportunities will be created, without raising auxiliary problems as is the case in respect of the Ambar Charka. This is a consequence whose attraction can hardly be exaggerated.

What does it all add up to? Foreign exchange earnings on a vast scale; vouchsafing of self-respect; furtherance of the Railway Plan; the relieving of congestion at Calcutta port; new job opportunities; and freshly generated purchasing power. And the cost? In financial terms, a sum not exceeding Rs 50 crores, of which at least Rs 30 crores will easily be secured by way of foreign exchange credits from such countries as are interested in getting the ore from us. But in organisational terms, the scheme will certainly be more demanding. But where and when in this world has there been a thing that is worth doing that has not also been difficult?

EAVESDROPPER

OURS is a story worth telling. It is really a chapter in the story of our country's industrial progress. India's first ring spinning frame rolled off our assembly lines in 1946. We have since added other firsts to our credit—the Lancashire type boiler and the water-tube boiler. Some of the largest sluice gates in India have been erected by us at Rupar. At Hirakud we have provided giant penstock liners. For the Indian Railways we manufacture

a story worth telling

Textile Machinery

Corporation Limited

April, 19 1958

INDIA has no doubt taken great strides in many directions in the past one decade. But the work that remains to be done is still enormous and as such requires sustained effort. The First Five Year Plan symbolises the first rung of the ladder of the nation's progress. The targets set under this plan have been achieved and we are in the midst of the Second Plan which is naturally much bigger than its predecessor. Within a short time of its commencement, however, the Second Plan has begun to encounter rough weather in the shape of paucity of foreign exchange. In other words the Plan has come to depend for its success on a factor over which we have little or no control. No amount of eloquence about our determination to go ahead with the Plan or the fact that we have been able to obtain a large proportion of our requirements in this regard through foreign assistance can hide this.

Another probable reason why our planned endeavour is meeting with serious difficulties is our attempt to do too many things all at the same time. The task is not a little complicated by the formulation of a socialistic pattern of society as the objective of the nation. The cumulative effect of the simultaneous initiation of effort in diverse directions can be seen in such phenomenon as our equally deep interest in the development of the Ambar Charka and atomic reactors.

The objective of socialism has given us an industrial policy which has divided industrial activity into two sectors. Though it is maintained that the public and the private sectors are complementary, there is nevertheless mutual suspicion and distrust between the two. The coal industry is the first to experience the full impact of the new industrial policy. The life span of the private sector in coal has been well defined. It will last as long as coal reserves in its existing collieries will last. In the meantime it is hemmed in all sides by diverse controls so that the people who are engaged in raising coal which is so essential for the success of the nation's endeavours, are going about their task without much enthusiasm.

Another industry that has also come to be reduced to a state of suspended animation under the new dispensation is the cotton textile industry. The fact that the handloom sector has a large share in cloth production has been seized upon to find a solution to the problem of unemployment. The result is the Ambar Charka programme and the pegging of production of the organised sector. It is still a moot question whether the handloom sector will be able to meet the anticipated increase in

the demand for cloth in the country in the next few years.

The situation in both the sectors of the industry at the present juncture is something that is quite different from what has been anticipated. Both complain of lack of demand and a heavy load of unsold stocks. Government have responded to the call of distress by a reduction of excise duty on all varieties of mill made cloth and a rebate for handloom cloth for two months. But no one is prepared to say confidently that the remedial measures will solve the problem of mounting stocks to any appreciable extent. The fact that offtake of mill cloth has not improved to any marked extent after the reduction of excise duty seems to indicate that the problem is much more complicated than has earlier been thought of.

According to the five non-official members of the All India Handloom Board "permitting unabated production of cloth, surpassing the domestic requirements and exports are leading to a glut in textiles". Production in textiles, they say in a joint statement, has outstripped consumption by leaps and bounds and has caused the present crisis in the industry. They point out that the mill sector during the first year of the Second Plan itself has reached the figure of 5,306 million yards with 5400 million yards in the second year as against a target of 5000 million yards fixed for it to be attained by the end of the Second Plan period. The solution they offer is a voluntary cut in its production by the organised sector. The reason that has prompted them to advocate this seemingly retrograde measure is that cloth consumption within the country has not grown as anticipated by the planners and the prospects for export are not bright.

Mr E. D. Sheppard, Chairman of the Kohinoor Mills Company Limited also seems to think that the difficulty of the industry has stemmed mainly from a lack of demand for cloth in the country. Speaking at the 63rd annual general meeting of the shareholders of the company last week he has drawn attention to the fact that despite "an ever-increasing population and greater earning capacity in the industrialised areas of the country, the demand for cloth has latterly fallen off." The explanation is to be sought in the food situation in the country. After pointing out that "it is an established fact that food prices and cloth prices are very closely linked and that if the price of food goes up, the demand for cloth goes down" he goes on to explain how the obvious first choice of the majority of the population in times of economic stress will fall on food with the purchase of cloth postponed for better times. This then

is the correct explanation for the mounting stocks with the mills and the handloom sector. Last year has been a bad year for the farmer and consequently for the entire population who have had to pay high prices for their foodgrains. That is to say that a goodly portion of their earnings has been consumed by food purchases leaving little to be spent on other necessities. Mr Sheppard's reasoning yields the logical conclusion that "until such time as the food position becomes easier with consequent lower prices, it is hard to foresee any real improvement in the Textile industry". He touches the crux of the problem when he says that "it is the financial position of the man in the street and agriculturist that dictates what prices can be obtained and what profits can be made by your mill and the whole industry".

While the consumer's inability to buy an adequate quantity of cloth has been mainly responsible for the accumulation of stocks with mills, the movement of cloth has also been retarded by the reduced holding power of wholesale and retail trades at all levels. The Wealth and Expenditure taxes coupled with the credit squeeze have rendered it extremely difficult for traders to invest in hard moving goods. Moreover, with the Government frequently altering the rates of excise duty merchants are chary of carrying large stocks due to the fear of incurring sudden losses.

The inevitable consequence of the fall in demand has been the piling of stocks in mills' godowns. But there is a limit even to the holding power of mills. For sooner or later they will exhaust their cash balances and will be left with no other alternative but to find the cash for payment of wages and purchase of raw material and stores by somehow selling their finished products. Such a situation has arisen in the case of some mills during the past year as they have been forced to sell off a portion of their stocks at below cost price. Though it is true that not all the mills have been obliged to take recourse to this extreme step, the effect of the distress sales by some units has nevertheless been felt by the industry as a whole because lower prices offered by some have resulted in depressing the price level in the entire market.

Units which are engaged in the manufacture of sewing thread and yarn and those which produce coarse and medium variety cloth seem to have been the worst sufferers in last year's crisis. The fine count mills have had the advantage of catering to a section of the people who are not very much affected by the rise in food prices. Yarn production has been

in excess of demand even in 1956. This overproduction has been largely brought about by the uncertain yarn export policy of Government. While the domestic industry has been unsuccessfully trying to cope with the vagaries of Government policy, the foreign consumer has turned to other sources of supply for his yarn requirements, and in recent years Pakistan and Hongkong have established themselves as suppliers of yarn in many markets previously served by India.

The continued uncertainty in the supply of cotton has also been a contributory factor for the difficult position of the industry. As import licences are given on a piecemeal basis advance planning has become difficult. The present quota system has turned out to be better than the former system but it has not much reduced the uncertainty. The need of the hour is a far-reaching system of import licences. The proper way would appear to be to work out an import policy for a 12 month period. The quantity that may have to be imported in a year can be arrived at as the country's resources and the mill industry's needs in a particular year can be forecast fairly accurately.

It may be argued that when such an important prerequisite as an increase in demand is absent, it will be idle to find fault with other factors for the present crisis in the cotton textile industry. The objection is quite valid as none can deny that the lack of adequate consumer demand has been the root cause of the trouble of the industry. It is, however, maintained that had it not been for the fiscal and monetary measures taken by Government in the past few years and especially during last year the industry would have weathered the storm successfully. As it is the new pattern of taxation has imposed a crushing burden and mills have had to draw from their reserves to pay the taxes. Mr Sheppard says that the Kohinoor Mills is called upon to pay taxes equal to 114 per cent of its assessable profit for the year. He finds no justification for the Dividends Tax. In his opinion it is the most regressive and inhibiting of the taxes. It not only penalises companies which have ploughed back their profits into the business in the past years but also directly affects the interests of the investors. With an additional direct tax on the return from their investments, it is not a matter for surprise that investors have shown little enthusiasm in fresh investments. Mr Sheppard accepts that taxation is inevitable but he says that "there is no reason why their form should not be simple and equitable".

Problems of Cotton Textile Industry

Progress of Automobile Manufacture

Production of automobiles in India continues to be well below the installed capacity. Against total assembling capacity on single shift basis of about 50,000 vehicles, the production in 1957 was only 30,604 vehicles. The growth of the industry is conditioned by the level of demand which continues to be low. Apart from the low level of income, taxation policy also tends to inhibit sales and output. Taxation in this field has passed the stage of diminishing returns, as indicated by Mr Lalchand Hirachand in his presidential address to the last annual meeting of the Automotive Manufacturers' Association of India. Within the limitations indicated above, the industry has made encouraging progress. From 13,926 vehicles in 1953, production has increased to 30,604 in 1957. It is expected that the industry in the current year will be manufacturing nearly 70 per cent of the components of cars and trucks. Ancillary industries for the manufacture of components like pistons, spark plugs, leaf springs, diesel equipment, etc., have been established and have made some headway.

The adoption of the recommendations of the Tariff Commission regarding levy of higher rate of duty on imported components, which Government have not seen their way to accept, will help indigenous manufacturer. The present rate of duty, Mr Hirachand points out, is hardly conducive to the development of the industry, as firms which have made some progress in the manufacture of components remain at a disadvantage. Progress in this direction will also be accelerated by a more liberal licensing policy in regard to the import of capital goods and raw materials required for the manufacture of a wider range of components. Such a policy will also make for economic utilisation of foreign exchange, as the expenditure incurred on equipment and materials will be compensated by savings on imports of components. Policy for automobiles should keep in view its important role in the development of road transport as well as its contribution toward the development of ancillary industries with a large employment potential.

★

The Way Out

The merger of the Congress and the PSP parties has been advocated by Mr Jayaprakash Narayan in Bombay this week. He has, however, pointed out that the initiative in this regard should come from the Congress and particularly from Mr Nehru. The crisis in the national and international spheres requires a strong party enjoying the fullest confidence of the people at the helm of affairs in the country. Such a Government can be formed only by the joint efforts of the

Congress and the PSP parties. The principle enunciated by Mr Jayaprakash Narayan is that all democratic parties must merge to form a single party. But when the criterion of a democratic structure is applied to the major parties in the country, only the Congress and the PSP pass the test. Though the Communist Party seems to have become democratic in structure, its past history makes it necessary for the country to wait and see whether the change is real. As for the Jan Sangh, it appears to be quite alright on the outside but in reality it is a communal organisation and hence stands disqualified.

From the points of similarity between the Congress and the PSP it is rather surprising that the two parties are not already merged. Mr Narayan has pointed out that the two parties have a great deal in common. Each believes in the democratic way of life and each attaches significance to the dignity of the individual. Each wants to bring in socialism with a view to raising the living standard of the people and assuring them social justice and adequate opportunities for development.

Speaking a day earlier and at Ahmedabad Mr Asoka Mehta has dwelt on a similar theme. The PSP leader has warned the Congress that if the prevailing economic and political crisis in the country is to be resolved the Congress Party should first rejuvenate itself. Too many cracks have appeared in the organisation in recent months that it is almost a certainty that the mighty edifice will crumble to pieces if urgent remedial action is not taken by the leaders of the party. It is time Congressmen realised that they have lost touch with the masses.

That the Congress Party is not having a smooth time is becoming increasingly evident. The reverses in the bye-elections, the elections to the Council and the emergence of rival blocs each ever ready to pull down the other in the State Congress parties have demonstrated clearly that the main preoccupation of congressmen has become the quest for power. It is no wonder that they have lost touch with the people at large. But this tendency is not at all good for the party as congressmen will be judged by people in the next election not only by their record of achievement but also by their behaviour.

★

Improving Investment Climate

It is generally accepted in the country that Government are now more sympathetic toward private enterprise than they appeared to be a year ago. The budget for 1958-59 together with the concessions announced by Mr Nehru during the general debate on the budget in the Lok Sabha has clearly demonstrated that Govern-

ment have started to think in terms of reliefs to the private sector. In the first place it has been made clear that the worst in taxation during the Second Plan period has already been seen. Secondly, Government have realised the need for taking measures which will enable the private sector to function efficiently. Small but significant concessions have been given in the shape of increase in the development rebate to shipping companies and a favourable revision of the regulations regarding the levy of excess dividend tax in the case of Section 23A companies. These have been followed by the abolition of the profit Deposit Scheme and the reduction of the excise duty on all varieties of cotton textiles. Above all the investor has derived considerable satisfaction from the welcome change in the attitude of Government toward private enterprise in general.

The cumulative effect of the various indications of Authority's better understanding of the problems facing private enterprise has been seen in the sizable improvement in the undertone of the stock markets during the past one month. While it is true the concessions given have served to revive confidence in the stock markets, it cannot be confidently asserted that all is well with the investment climate. For instance the amendment made in the regulations regarding the development rebate does not seem to be conducive to a broadening of interest in equities.

According to the deputation of the representatives of the Bombay Shareholders' Association which met Mr Morarji Desai, Union Finance Minister, last week in Bombay, a few more measures would be necessary in order to restore the confidence of investors. The Wealth Tax, it is contended, is inequitable and as such is reacting adversely on capital formation. The bonus tax of 30 per cent is prohibitive and the Excess Dividend tax has also a similar effect as that of the Wealth Tax. As is to be expected, the Finance Minister has not given any definite assurance but he is understood to have stated that the new situation arising out of the amendment of the regulations regarding the development rebate is under the active consideration of Government. But the deputationists should have derived considerable comfort from the fact that the Union Finance Minister recognises the importance of the investment market as an instrument in promoting the development activities with regard to the Five-year Plan. It is also significant to note that he has assured them that Government will be willing to consider and remedy the position wherever genuine difficulties appear in the way of industry and business.

New Pattern of Taxation

Speaking under the auspices of the Forum of Free Enterprise last week in Bombay, Mr Morarji Valdia, has pointed out that with the high level of taxation in the country it has become almost impossible to obtain the requisite risk capital. The new pattern of taxation has placed such a heavy burden on small and medium scale industries that the small man who finances the ventures is barely left with 6 per cent return on his investment. The fact that at the same time Government loans are yielding more than 5 per cent tax free has been largely responsible under the prevailing circumstances for the reluctance of people to invest in private enterprise.

The fallacy of the argument that the new taxation pattern aims at minimising the disparity in wealth will be seen if one remembers that the direct effect of the new taxation policy is the slowing down of private enterprise of all kinds. Mr Valdia says that of India's industrial labour, more than 45 per cent is employed by small and medium scale industries. Government's fiscal and monetary policies have adversely affected this sector also.

★

Private Sector

Though it is maintained by Government spokesmen that Authority is equally interested in the development of both the private and public sectors, they do not seem to have achieved much success in convincing the business community of Government's impartiality. For, the spokesmen of private enterprise point out that if Government really want to see the private sector function efficiently they would not have imposed such intolerable burdens in the shape of new taxes. Addressing the members of the Federation of Indian Chambers of Commerce and Industry in Bombay early this week, Sir Homi Mody has pointed out that though the hard facts of the economic situation have induced a sense of realism in planning in the country in recent months, the tendency to ignore "considerations of men, materials and resources" in drawing up plans for the future continues unchanged.

The Second Plan has been drawn up on the basis of certain estimates in regard to foreign exchange, internal savings, deficit financing and production targets. These estimates have now turned out to be incorrect. Though Government seem to have decided to revise the Plan in the light of the new development, no clear cut programme has so far been chalked out. According to Sir Homi Mody even if all the financial targets are to be achieved, it is doubtful whether the physical targets can be realised in view of the rising costs and uncertain world conditions.

WORLD OF COTTON

THE smart recovery, witnessed after the reduction in excise duty on mill-made cloth, has proved short-lived. A feeling of uncertainty now prevails in the cloth and piecegoods markets, as the outlook has still not improved to the desired level. Dealers consider the modest setback in business as a normal reaction to the brisk turnover witnessed in the preceding weeks. Reports from the consuming areas, however, indicate that offtake is satisfactory. It is, therefore, hoped that replacement buying from these centres will revive in the near future.

In this connection, the Chairman of the Bombay Millowners' Association has stated that it is wrong to make any distinction between sold and unsold stocks lying with the mills, because so long as even sold stocks remain unlifted, the mills have to bear the burden of nursing these stocks. Again, there seems to be a wrong impression that two months' production is after all a normal and reasonable quantum of stocks. This might have been the case when prices were on the low side as in pre-war years. But, today, the value of two months' production will amount to as much as Rs 66 crores as against only Rs 10 crores in the pre-war years. He is, therefore, of the opinion that the prevailing cloth accumulations ought not to be viewed lightly and that any stock in excess of six weeks' production should be regarded as abnormal.

Meanwhile, the output of cloth, in March 1958, is provisionally estimated at 410 million yards. This compares with 453 million yards in the corresponding month of last year and 392 million yards in February, 1958. The production of mill-made cloth, during the first quarter of this year, has shown a decline to 1,239 million yards as against 1,371 million yards in the corresponding period of 1957.

Conditions on the export front have continued to be unsatisfactory as enquiries from foreign countries have not yet broadened. The unsatisfactory business conditions are reflected in the lower level of exports in the first quarter of the current year.

Shipments from Bombay, during the period January-March, 1958, amounted to only 165.62 million yards as against as much as 255.29 million yards in the corresponding period of last year. This shows a setback of nearly 90 million yards. It is even feared that the overall exports for the year may not reach last year's level unless shipments in the following months pick up considerably.

×

FUTURES MARKET:

Prices in the cotton futures market developed a sagging tendency on renewed liquidation as

operators were reluctant to augment their stocks for the time being. Turnover was 15,000 bales. ICC Jharilla May delivery, after touching a new low of Rs 654.50 from Rs 659.25, finished better at Rs 654.75. August delivery moved between Rs 666.50 and 670.50, to finish at the former level.

The current situation in the market is expected to come up for consideration before the meeting of the Cotton Advisory Board on Thursday. Traders expect that the Board will recommend to the Government the export of 2" cotton and the extension of other export incentives. A suggestion to raise "floor" price by Rs 55 to Rs 550 per candy for the next season may also be considered at the meeting.

×

SPOT MARKET:

In sympathy with futures, the Spot market also ruled quiet with modest demand noted for Jaydhar, Laxmi, Surti and Kalyan varieties. Cotton-growers and traders were perturbed over the reports of some mills reluctantly considering a curtailment of their output. Financial stringency, damage to the Vijay and Surti varieties and the absence of demand for exportable varieties also aggravated the situation. There were even reports that some mills were again in the market to dispose of their previous purchases of cotton. These factors made buyers to be cautious in their commitments, resulting in a decline in prices to the extent of Rs 50 pr candy. The fall in prices is reported to be heavy at upcountry centres, particularly in Andhra and Mysore. The marketing of the new crop in these two centres is reported to be in full swing, while Saurashtra and Gujarat have yet to market 30 per cent of their produce. The season has just commenced in Madras.

On the export front, shippers were disappointed to see that the export demand had not broadened and they were not able to put through sizable business with overseas buyers during the past two weeks.

In the foreign cotton section, listless conditions continued to prevail. The long-awaited announcement for the import of 30,000 bales of soft currency area cotton, stapling 1 3/16" and above, had fallen flat since earlier expectations were up to one lakh bales.

It is reported that importers have been asked to approach the State Bank of India for the payment procedure relating to Egyptian cotton. A clear picture of the procedure is, however, not yet available. With the result, many importers have not been able to put through any business. The general impression is that a discount of 21 per cent will be given to Indian mills for the purchase of

Egyptian cotton; but it has not been officially confirmed.

×

STATISTICS:

Exports by rail from 1st September 1957 to 3rd April 1958 amounted to 164,758 bales. Estimated mill consumption in Bombay during the same period was 776,350 bales as against 790,164 bales in the corresponding period of last year. Estimated stock of raw cotton, held by exporters, dealers and mills in Bombay, on the 3rd April, was 606,769 bales as against 579,493 bales on the corresponding date of last year.

According to reports from Surat, 90,000 bales of cotton are lying unsold with ginning factories in Surat and Broach districts. The total cotton crop yield in this zone is expected to be about 1.40 lakh bales as against the normal crop of 2.25 lakh bales. Mostly co-operative ginning factories are reported to be holding stocks.

×

KARACHI COTTON MARKET:

Conditions in the Karachi cotton market ruled steady. The steadiness was influenced by the expectation of the removal of export duty (Rs 80 per bale) on Deshi styles following the recommendation of the Pakistani Central Cotton Committee. The expectations

induced good buying support and cotton futures registered a modest rise. The rise would have been more marked, but for the continued slackness of foreign demand.

×

NEW YORK COTTON MARKET:

Prices on the New York cotton futures market drifted lower as traders found only few incentives to influence the market. Light New Orleans and commission house selling caused prices to touch new lows for the week with final prices down by 35 to 65 cents a bale. Further switching developed from old crop May to deferred deliveries. Middling Spot was quoted at 36 cents per pound.

×

LIVERPOOL COTTON MARKET:

Prices in the Liverpool cotton futures market continued to be depressed under the prospect of still larger unsold shipments of CCC cotton to this market between now and the end of July. Some longs were, however, transferring from the near delivery into more forward positions. The mixed contract came under light hedging pressure and the market closed quiet and steady. The Sudan contract remained unchanged and, with no fresh business, conditions remained inactive.

BOMBAY
REVIEW

BULLISH fervour has hit the Oil-seeds market with prices of both Castor-seeds and Groundnuts touching new high levels after several months. Although Linseed and Cottonseed reflected an easy trend early in the week, prices staged a smart rally towards the close.

Castor-seeds received fillip on brighter prospects of business in oil following the relief in export duty. There were even reports that some export business had already been put through. Shippers had been able to put through business for about 700 tons of commercial castor oil with the UK at prices ranging from Rs 114 to Rs 116 per ton. Although business with the USA, one of the major buyers, continued to remain out of question on account of the persisting disparity, operators were hopeful that the export picture would change for the better. Sentiment was also aided by the reports of a possibility of trade with Russia and East European countries and by the sharp rise in groundnut. Castor-seed May delivery, after touching a high of Rs 156.62, finished the week at Rs 156.50. Ready was done at Rs 30.25 and Castor Oil, commercial quality, at Rs 16.00.

The enforcement of margin at the rate of Rs 25 per candy in

Bullish Fervour Hits Oilseeds

Groundnuts did not deter the "longs" from exerting their pressure in view of the fact that the spot market continues to be buoyant with consistent good upcountry demand along with enquiries from vanaspati manufacturers. Continued firmness in Sarson and other edible oilseeds had its sympathetic effect, while there were indications that consumption trend in vanaspati continued to be higher. May delivery touched a high of Rs 170.50 and a low of Rs 168.75, to finish at Rs 169.50. In the ready section, bold quality was quoted at Rs 34.25 and Groundnut Oil at Rs 18.56.

Trading in Linseed was devoid of any special feature and prices generally followed the trend set by castor-seed and groundnut. May delivery changed hands at Rs 30.75 to Rs 31.06, while the ready rate was quoted at Rs 30.19 and Linseed Oil at Rs 16.06.

In the Cotton-seed section, May delivery moved between Rs 106.50 and Rs 107.50.

Gold & Silver

On the Bombay Bullion Exchange, Silver displayed considerable strength with values hitting new highs for several years. Bulls tightened their grip, as floating

stocks depleted with frantic covering by shorts accentuating the upward trend. Arrivals and off-take were balanced at 14 bars. Forward rates moved between Rs 198.12 and Rs 198.31, while ready changed hands at Rs 200.37 to Rs 200.56.

In the Gold section, prices after ruling firm early in the week, developed a slightly easier tendency towards the close due to profit-taking. Turnover was moderate. Arrivals and off-take were estimated at 4,000 and 3,000 tolas respectively. Forward rates moved between Rs 112.37 and Rs 112.44, while ready changed hands at Rs 113.00 to Rs 113.12. Sovereign was rather quiet at Rs 71.00.

Yarn

The recent sharp rise in Art Silk Yarn prices has not only revised the demand for increased imports, but has also led to appeals to indigenous manufacturers to maximise their yarn production and to ensure equitable distribution of yarn to actual users. While both National Rayon and Century Rayon have been permitted to expand production and also offered other facilities, Kohinoor Mill is ex-

pecting permission to associate itself with a Dutch firm to start a nylon plant.

As regards equitable distribution to actual users, the manufacturers point out that they have neither put up their prices nor withheld stocks. Only a few days ago, representatives of manufacturers, actual users and also Government decided on an agreed scheme of distribution which, they say, is being scrupulously observed.

After the natural excitement during the first week of this month, dealers and consumers have come to realise that the present level of prices for Art Silk Yarns in particular, have been unnatural, artificial and dangerous and that the rise was more due to unbounded speculation in the market amongst the dealers and not due to any genuine purchases.

As regards Staple-Fibre yarns, there has been a decline to the extent of 6 to 9 np per pound in almost all counts and qualities for ready delivery. June delivery is, however, quoted at a premium of Rs 9 per bale. The turnover has been much restricted and the future tendency is uncertain.

Imports of art silk yarn in Bombay, during March, were considerably lower at 11,35,466 pounds. Cotton yarn imports were 96,792 pounds; woollen yarn 3,068 and spun silk 99 pounds. There were no imports of staple-fibre and its yarn. Thus, imports of art silk yarn, during the first quarter of 1958, totalled 47,15,825 pounds; staple-fibre yarn 11,969; woollen yarn 3,064 and cotton yarn 2,224,208 pounds. Exports of cotton yarn from Bombay, during March, came to 838,245 pounds and cotton sewing-thread 33,551 pounds.

Non-Ferrous Metals

Trading in the Bombay Non-Ferrous Metal market continued to be at a standstill. The Government of India have named the Chief Industrial Adviser and the Development Officer, both at New Delhi, as officers empowered to issue permits for acquiring Copper. Enquiries made have, so far, not been able to throw any light on the delegation of powers to any officer stationed locally to issue such permits. However, it appears that buyers of copper will have to go to New Delhi for securing such permits.

On the London Metal Exchange, Copper is quoted at £172 per ton—the highest level touched being £175 on the 10th April. Zinc is quoted around £61 3/8. Lead remained very steady at £72 1/8; and there has been no change in the basic position of the metal. The Tin market remains inactive with the rate ruling unchanged at £730 per ton.

The New Communist Line

"I WILL aggravate my voice so that I will roar you as gently as any sucking dove; I will roar you as 'twere any nightingale". So, Nick Bottom, the weaver in Shakespeare when one of his obtuse fellow craftsmen objected that his rendering of the roar of a lion might frighten the Court ladies gathered to witness his play. Indian Communists in session in Amritsar last week would at first sight appear to have shown a similar concern for the more hysterical among their countrymen. As you may have read in the daily papers, the Communists have given their party a new constitution which mitigates to a great extent the strident roar of Proletarian dictatorship that was the avowed party line so far. Scepticism about the sincerity of the new changes will naturally be widespread; after all, the zig and the zag of Communist professions have a way of eating each other like the planet Rahu, which, according to the Indian imagination, is a serpent eating its own tail. But it is something of a miracle that, even as a blind, the party constitution should give formal respectability to peaceful means and parliamentary institutions. And what is even more of a miracle, and is not capable wholly of explanation in terms of the "thaw" since Stalin's demise, is the recognition of the right to form other political associations within the country. If this indeed represents the true mind of the Communists in India and elsewhere—for after all, Communism is nothing if not international—then the one tenuous justification for Mr Dulles in politics would have been removed. Even if the whole thing was a colossal pretence, it is some gain that formal homage for free institutions and peaceful means should have been wrested from those whose contempt for these things is part of a creed.

How far is the new line of the Communists a genuine change of faith? As I said, it is a legitimate question and none with even a bare acquaintance with endless resources in sophistry of the Communists—let alone active bad faith and practical double-cross—can accept these professions readily. For, what the changes add up to is nothing less than the complete disappearance of Communism as we have so far known it. The preamble of the new constitution discards the expression "dictatorship of the proletariat" and describes the party's aim as "the achievement of power by the working people, the establishment of people's democracy led by the working class and realisation of Socialism and Communism". More importantly, the preamble recognises that the party can achieve

this goal by "developing a powerful mass movement, winning a majority in Parliament and by backing it with mass sanctions". Of course, this is perhaps one of those rare instances in Communist doctrine where you come across theory following fact, instead of facts being sought to be bent on a prior reasoning. (Indeed, many would consider this return to the so called scientific method the most fundamental change in Communist theory and practice). Here again, doubts about the genuineness in the revolution in methodology will assail the cautious. With the example of Kerala before them, the Communists have perhaps learnt for the first time what others have known long before, that parliamentary institutions can be used effectively for bringing about basic changes in society. Indeed, the new policy statement is stated to be the result of integration of the theory of Marxism-Leninism with the realities of the Indian situation, with the experience of Indian history, with the tradition of the Indian people, with India's national peculiarities. If so, Indians can be proud of having "destroyed" Communism by peaceful means.

But most interesting of all, the preamble makes a bid to remove the force of the charge of political intolerance levelled against Communist parties of the world. It states that the party stands for "the right of political organisations for all, including those who oppose the government so long as they abide by the constitution". This avowal is interesting for a number of reasons. Firstly, it embodies a respect for the constitution which, in the light of experience elsewhere, sounds startling. (In justice to the Indian Communists, it should, however, be admitted that, in the last four years, their conduct in this regard has been exemplary. After the first futile attempts at fomenting contempt for the constitution in 1950 and one or two years thereafter, they have changed their line completely).

The second interesting fact is that the preamble talks of a right to form an opposition to the Government. It may be said that, since the Communists are still in the opposition at the national level and in all the States except one, nothing need be read into it. But that will be giving the statement a much less significance than it deserves. In the first place, even a theoretical assertion of the right to form an opposition is heresy according to Communist canon. Secondly, there is already a government by Communists in the country and therefore the recogni-

tion of right to oppose includes the right to oppose that government also. It is no answer to say that Communists dare not, situated as they are at the moment, suppress the other parties in Kerala. For, there was no need to write all this into the party constitution, and they have done it, which takes me on to the third point I wish to make in this context.

There is in this statement an assumption—how far conscious is more than I can say—that the Communists will soon be "The Government". And partly to indicate their policy when that happens and partly to induce people to vote them to that status by showing how reasonable they are, this undertaking to allow political opposition is given. In this connection, the present Communist mood in the country is exceedingly interesting to watch. It would appear to the outsider that this mood alternates between extremes of hopes and fears. The hopes are built partly on the fact that they have already formed a government, a fact whose effect on their psychology can hardly be overestimated. (In one sense, it can be argued, though I have no space for it here, that "Kerala" is a landmark in communist thought, both Indian and international, that is as decisive as the disgrace of Trotsky). But the principal nourishment feeding the hopes are what, according to the Communists, constitute the signs of disintegration of the Congress party. In a purple patch in their resolution, which is partly wishful thinking, the Congress is described as "increasingly isolated from the advanced democratic masses, corroded from within by dissensions and factional squabbles." The Congress, according to the Communist party, "is in a state of political and moral decline, in a state of chronic crisis which has deepened after the general elections". There is a good deal of force in the description of the state of health of the Congress party, as recent evidence of squabbles in the various Pradesh Congress Committees showed. But the Communists have a lurking fear that, firstly, the Congress prestige may still endure and may even be enhanced by fresh effort by the party itself and that they may have exaggerated the state of decline of the Congress. Secondly, they fear that the decline of the Congress does not automatically mean their stepping into the shoes vacated by the Congress. In this connection, the recent looking up in the fortunes of the PSP and the prospects of socialist unity must have been distinctly unpleasant news to them. As

against this, the Amritsar congress has shown a distinct improvement in the relations among the leadership of the party. Unlike at Palghat, when the throes of birth of the new policy brought to the fore sharp differences between the die-hards and the "liberals", at Amritsar there was marked unanimity of views. The adjustments following the change of party-line have attained a certain degree of permanence, and consensus has solidified itself in favour of the "liberals". Thus Dange and Joshi—the latter perhaps the only really genuine liberal in the Communist camp—vied with each another in supporting the new changes instead of fighting, as at Palghat, a bitter behind-the-scenes battle. There is, therefore a real chance that organisational streamlining will now follow this new accord among the leadership. And if there is one thing that the Communist party in India and elsewhere does better than others, it is organising. It is therefore, likely that, with the possibility of forming government three years from now, the Communist party machine will work with great vigour. Moreover, attempts to consolidate unity with the so called left forces in the country will become more strenuous. Here, the Communist expectations will be very modest, for the simple reason that the one real "left" alternative to the Congress, other than itself, is the PSP, and that party does not, even as a joke, consider the possibility of collaboration with the Communists. The PSP is apparently not impressed by all these attempts at giving a "face-lift" to party dogma. It thinks that the new look is but an attractive talcum powder that hides the same old ugly skin, and it will be a fool to be seduced by it.

As for the Congress, its general secretary has already come out with a statement that it is not impressed by all the new changes in the party line. But one detects a certain smugness in Mr Sriman Narayan's denunciation of Communist tactics. Despite last month's deliberations over the state of the party's health, the public has not yet felt any sense of urgency among Congress leadership. On the other hand, one senses a profound ennui, an unwillingness to set about reforming the organisation. There is an unmistakable tendency to allow things to drift in the hope that everything will turn out all right. Unless Congress leadership pulls itself together and does something to restore the vitality the party has obviously lost, the Communists will be able to sell their new line more easily than they themselves hope.

DELHI REVIEW

Mr K. D. Malaviya, Minister for Oil, disclosed in the Parliament that the oil Companies operating in India, did not yet agree to a price cut of petroleum products as proposed by the Central Government. The Minister declared the intention of the Government to take recourse to other means to have the prices of these products reduced, if the interests concerned did not ultimately agree to their proposal.

The burden of Mr Malaviya's speech indicated that the Government were pretty serious in taking up a most ambitious programme for prospecting and processing of oil with immediate effect. He made it clear that prospecting of new oil fields was of vital importance for the country not only to meet the ever increasing requirements of an expanding economy, but also to conserve the much needed foreign exchange, drained out every year on this account. It was learnt that the Government proposed to undertake drilling at four places in the country, Cambay, Hosierpur, Janauri and Sibsagar, during the coming year. The Minister was very hopeful about the drilling operation undertaken at Jwalamukhi, where work was temporarily impeded by an accident.

Speaking about the two proposed refineries in the public sector,

Mr Malaviya declared that the refinery at Gauhati, with a capacity of 1 million tons, was expected to go in for production by 1960. The one proposed to be set up at Barauni would take some more time, as refining could be undertaken only after the pipe line was extended from Nahorkatiya to Barauni.

It was learnt that the Government were desirous of having Kerosene and Diesel base for both the refineries, in as much as the demand for Kerosene and Diesel was expected to go up by leaps and bounds during the next few years. In fact, the Government could visualise the prospect of Kerosene produced in India being insufficient to meet the growing demand. According to a moderate estimate, a million tons of crude oil would produce only 22 per cent of the total requirements of Kerosene. The Government were trying to find out if the wax content of crude oil could provide a suitable substitute for Kerosene. Mr Malaviya dispelled the fear that the Government had any intention of handing over the management of the proposed refineries to outsiders. He emphasised that they were determined to keep the control in their own hands, as the price policy was to be fixed up by them.

Oil Prospecting

Manpower Planning

Manpower planning is of recent origin in India. Its importance to a country which aspires for rapid industrialisation needs no stressing. For without increases in per capita efficiency which adequate manpower planning alone can bring about, the pace of progress in industrial development will remain tardy and slow. Manpower planning has been defined by Mr John Haillard, manpower consultant from the Ford Foundation as a rational development and efficient utilisation of the human resources of a nation to attain the major objectives to which the nation had committed itself.

In India the need for manpower planning has been recognised and provided for by the establishment of a Cabinet Sub-committee, of a Manpower Directorate at the Centre and of its counterpart in the various states. In relation to the needs of the developing economy and as compared to the achievements of some of the advanced countries of the West, the scope for intensifying efforts to increase efficiency is very great. Against a total number of 6,00,000 engineers in USA and 7,00,000 in the U.S.S.R. the number of engineers in India was only about 70,000.

Only, provision of increased facilities for training in scientific and technological lines could ensure an adequate number of trained personnel. Speaking at the conference of Manpower Officers of State Governments in New Delhi, Pandit Pant, Union Home Minister, stressed the need for mobilisation of the technical resources of the country in the interest of raising efficiency.

In its negative aspect the problem of manpower planning involves the abolition of waste and duplication of efforts at all levels of national activity and therefore calls for effective correlation of programmes of development and training of personnel. As pointed out by Pandit Pant this can only be ensured through proper change in the educational curricula in the various States to suit the needs of planning and development.

It is of the essence of manpower planning that it involves rational assessment of the requirements of future, and provision of the needed facilities. According to Pandit Pant the success of manpower planning in our country depends on the correct assessment of the situation in the States and he has therefore suggested that the States should confer among themselves so that their resources could be pooled to meet their needs for different kinds of technical manpower.

Tribal Welfare

Progress in the welfare of the scheduled castes and tribes, in spite of the many schemes that have been launched to expedite it, has been deplorable. The report of the Commissioner for scheduled castes and tribes for last year which revealed great gaps in the schemes for the welfare of these people and the actual implementation of the programme, brought this into high relief. The report was generally critical of the attitude of the State Governments in the matter of implementation of the programmes meant for the advancement of the backward people in their States and underlined the need for greater attention to be paid to these matters.

So, it would be only with a guarded sense of optimism that the latest scheme prepared by the Central Government for the welfare of the tribal people would be received. The scheme is intended to achieve rapid improvement in the economic and social standards of the tribal people, and envisages setting up of 43 special multi-purpose development blocks each costing Rs 27 lakhs in the States and Union territories.

The important schemes include the setting up of training institutions, and establishment of cottage industries and training cum production institutions. While nearly 825 cottage industries centres are sought to be established, the target for training covers about 11,000 persons. In addition, 87 industrial and technical training centres are also programmed to establishment.

A plan to start shifting cultivation control scheme is proposed for weaning the tribal people away from the harmful practice of felling trees in the hill districts. This plan is meant to benefit about 27,000 tribal families and is estimated to cost Rs 3 crores over the Plan period. Special housing schemes are an important part of the Second Plan development projects for scheduled castes and other backward classes. The target for the Second Plan in this field is construction of 325,000 houses and 20 colonies as against the construction of 9,000 houses and establishment of 31 colonies already achieved under the First Plan.

The most important feature of the development work contemplated under the Second Plan is the setting up of five technical institutions for tribal students each costing Rs 15 lakhs and offering training in mechanical and civil engineering. On the whole, a rapid improvement in the economic and social status of the tribal people is expected in the course of the Second Plan, and the total allocation for this purpose amounts to Rs 91 crores against Rs 39 crores in the First Plan.

NORTH INDIAN MARKETS

April, 19 1958

NORTH INDIAN MARKETS

ACCORDING to the latest reports, the Sugar manufacturing season is gradually coming to a close and about 50 per cent of the factories will stop their crushing operations this month. At the same time, the continued availability of sugarcane in certain tracts and the remunerative price structure for the sweet commodity may enable some factories to work till June 15. On balance, the total output of crystal sugar is expected to be around 20.6 lakh tons, a little higher than that of the last season.

Production and despatches of indigenous sugar amounted to 17.13 lakh tons and 8.08 lakh tons upto March 31 in the current season as against 15.44 lakh tons and 8.37 lakh tons respectively in the corresponding period of last year. Stocks with the factories, as on the 31st March 1958, stood at 13.34 lakh tons as compared with 12.35 lakh tons on the corresponding date of last year.

With an assured internal market for about 18 lakh tons and comparatively stable prices throughout the season, it is generally expected that the industry will have another good year. It appears that the Government are not still inclined to do away with the practice of monthly releases in view of the fact that the gap between production and demand is not so large as to rule out cornering of stocks.

So far as the export prospects are concerned, the sharp fall in world prices has caused a substantial element of uncertainty about the fulfilment of the export target. It is understood that the Food and Agriculture Ministry is considering proposals for increasing internal prices of sugar to subsidise exports to enable the industry to compete in foreign markets where prices have lately fallen sharply. Should an increase be decided upon by the Government, it is unlikely to be more than Re 1 per maund. But, the Indian Sugar Mills Association had suggested a compulsory levy on factories of Rs 2 per maund of production to build up a fund to subsidise the exports. Final decision in this regard is, however, expected only by the end of this month.

The resultant rise in internal prices, it is stated, is not going to be more than a rupee per maund. If the Government take a decision, the consumer will have to pay only 2½ paise more than what he is paying now. The proposed small increase in the internal prices of sugar will not, therefore, cause any undue strain on the consumer. This is a sacrifice which the consumer can readily make in order to enable the country to earn more of the much-needed foreign exchange.

Meanwhile, sugar markets are ruling quiet as the supply position

Outlook for Sugar

is reported to be satisfactory. Following ex-mill delivery prices (per maund) are quoted in the Hapur market:—Meerut (D-28) Rs 35.69; Khatauli (B-29) Rs 37.62; Iqbalpur (C-29) Rs 36.37; Rampur (B-29) Rs 36.75; Mansoorpur (B-29) Rs 37.75; Daurala (B-29) Rs 37.00; Amroha (B-29) Rs 34.94 and Bijnore (E-29) Rs 34.87.

Khandsari

The market for Khandsari continues to rule steady, thanks to good demand. Production is reported to have increased considerably this season in Uttar Pradesh and Bihar, which is expected to be around 3 lakh tons as against 1.5 lakh tons last season. Rates are moving between Rs 28.00 and Rs 32.50 per maund, according to quality.

Gur

The Gur market in Hapur rules rather quiet in the absence of fresh demand, the rate having declined to Rs 15 from Rs 15.75 per maund. Arrivals have declined to an average of 500 to 600 maunds daily, while stocks have continued to be unchanged at 1.40 lakh maunds.

Total arrivals, from the beginning of the season, are put at 3.90 lakh maunds as against 4.5 lakhs maunds in the corresponding period of last season.

In the Muzaffarnagar market, prices have developed a slightly easier tendency and arrivals average 2,000 maunds. Total arrivals up till now are estimated at 8.75 lakh maunds, while stocks are placed around 3.00 lakh maunds. Chakku Minja is quoted at Rs 16.75 to Rs 17.75 and Ruskat at Rs 12.50 to Rs 13.50 per maund.

Foodgrains

Quietly steady conditions have prevailed in the Hapur Foodgrains market. Wheat, average quality is quoted at Rs 15.25 and farm variety at Rs 17.00 per maund. New crop arrivals are higher at an average of 150 maunds daily and the entire arrivals are being lifted by consumers. However, arrivals of new Barley are scanty, while Bejher arrivals have improved to an average of 125 maunds daily. Prices are ruling steady as both these grains have been attracting good consumer demand. Other Coarse grains remain almost unchanged. Heavy arrivals, both locally and from East Uttar Pradesh, coupled

with the credit squeeze by banks have accounted for the fractional fall in the prices of Peas. Arrivals of new Arhar have begun in small quantities.

In the Delhi grains market, wheat prices were soft due to some arrivals. The market for Gram also rules quiet, following better supply in the main producing areas. Rice rates have registered small losses due to continued good supply. Among Coarse grains, Jowar is easy on lack of marked enquiry against better arrivals. The Pulses market rules generally firm on improved demand.

The Bombay grains market has disclosed an easy undertone and the setback in prices is attributed more to the subdued consumer interest than to any other significant developments. The Rice section presented an easy appearance, mainly due to the improved supply position and unusually small demand. In the Coarse grains section, Bajra has become cheaper by about Rs 5 per candy, while Jowar prices have moved down by Rs 2 to Rs 3 per candy in sympathy. Pulses have reflected an all-round easiness. The decline is attributed to selling pressure induced by liberal supplies.

How banking serves the SPICES INDUSTRY

There is tremendous demand throughout the world for pepper and cardamoms, and South India produces the bulk of these spices. One-third of the entire world demand for pepper is grown between Karwar and Cape Comorin; and in 1951-52, India's exports earned more than Rs. 27 crores.

Within the last ten years there has been a remarkable increase in cardamom growing, particularly in the South Indian states of Mysore and Coorg, and the districts of Madurai, Tirunelveli, Malabar and Coimbatore.

The Indian spices industry has a happy future, and banking will naturally help to expand and improve it. The facilities and guidance of a good bank, such as the availability of ready funds when needed and the collection of dues from any part of the country, have become part of efficient organisation in every industry.

We at Palai are proud that many spice growers of South India employ the complete banking service we offer:

Current Accounts—Demand Drafts—
Telegraphic Transfers—Investments—
Letters of Credit—Bill Collection—
Deposits—Loans & Overdrafts—
Confidential Credit Reports, etc.

If you have business interests in the South, it will pay you to open an account with us. Our 25 branches are strategically located, 23 in important South Indian business centres and two in Delhi and New Delhi; and we have correspondents in all important Indian cities. We offer a fully comprehensive banking service at each office. Our clients can make deposits at any of our correspondent banks, situated in all important Indian towns & have the amounts credited to their accounts at any of our branches.

PALAI CENTRAL BANK LTD.

Head Office: PALAI, KERALA STATE,
Branches at: Madras, Cochin, Quilon,
Trivandrum, Alleppey, Mangalore, Bangalore, etc. Also at: Delhi & New Delhi.

Education in Madras

THE current budget session of the Madras Legislature has many achievements to its credit most notable of which has been in the educational field. The budget has made provision for expenditure on education for a sum of Rs 12.04 crores which amounts to about 20 per cent of the total revenue receipts of the State Government. The division of this total as between different types of education in percentage term is 53 per cent for primary schools including higher elementary schools and Basic schools, 21 per cent for Secondary Education, 15 per cent on University Education and 7 per cent for teacher training schools. In the course of the general debate in the Legislature on the educational policy of the Government almost all members expressed satisfaction at the increased sum set apart for expenditure on education.

The review of progress of education in the state as given by Mr Subramanian in the course of his speech on the educational policy of the Government reveals tangible improvement in the facilities and the number of candidates in the different grades. While in the first year of the Second Plan the number of children in the elementary schools increased by 1,17,000, the number of students in the primary schools increased from 22.03 lakhs in 1953-54 to 27.76 lakhs in 1957-58. The number of teachers employed in all the primary schools is also shown to have increased from 79,900 in 1956 to 86,300 in 1957.

As regards collegiate education progress was confined to conversion of the old system of education into the new pattern of a three year degree course with the pre-University course. The total number of institutions in this sphere comprised 18 in the pre-University

and Intermediate level and 35 degree colleges. Programme for expansion of technical education envisages development of the five Government Polytechnics, starting of two more post graduate courses in the Engineering College at Guindy and the establishment of a Higher Technological Institute for which sanction has been given by the Centre.

The Government have also introduced some new measures to give a fillip to education in the State, such as the provision of free mid-day meals to children and pension schemes for teachers. While the first one is intended to spread literacy among the poorer sections of the people, the latter is aimed at improving the quality of education by attracting qualified teachers to the profession. This latter measure has particular importance in view of what Mr Subramanian has revealed as the paucity of trained teachers in the State. The number of trained teachers has according to Mr Subramanian declined consequent on the recruitment of the non-trained S.S.L.C. teachers in single-teacher schools.

The policy of the Government in regard to primary schools has been indicated by Mr Subramanian as one of converting them into Basic schools in accordance with a phased programme and at a pace consistent with the availability of teachers trained in basic education. The number of schools that have been so far selected for conversion into basic schools is 1,000.

While in regard to elementary education, the record and policy of the Government are above criticism, the same could not be said about the state of affairs in the secondary and university education. Though the number of students in the secondary stage has shown an

increase from 4.4 lakhs in 1956 to 5.2 lakhs in 1957 and is further expected to increase to 5.8 lakhs at the end of 1957-58, the public in general have been aware of a general deterioration in the standard of education in the Secondary level. Paucity of trained graduate teachers, which according to Mr Subramanian himself almost reached a critical point last year is believed to be at the root of this defect. Mr Subramanian has attributed this to the reluctance of graduates to join teacher training institutions. Whether the extension of the pension scheme to the teachers in the secondary schools as announced by Mr Subramanian would be sufficient incentive in improving the strength in the training colleges remains to be seen. But a better course would have been to raise the pay of the teachers to a level which gives inducement for them to choose the teaching profession.

In the collegiate level Mr Subramanian has referred to the problem of lack of sufficient finance needed for the smooth and rapid transition from the old system into the new one of three-year degree course. Further he has also referred to the decision of the Government in favour of a changeover in the medium of instruction in the University level from the English language to the mother tongue, and in support of this he has stated that there is no longer any controversy or difference of opinion on the need for this changeover.

Unless he bases this on mere popular sentiment the claim made by Mr Subramanian about the non-controversial nature of the demand for the grafting of the mother tongue as the medium of instruction in the Universities is rather untenable. Leading men in public life in the State including educationalists have been generally in favour of retaining English as the medium of instruction at least in the University stage and have warned against deterioration in the standards of education which would result if the present system is discarded. If in contravention of the opinion of those who could assess better, the merits of the different media of instruction the Government should plump for the mother tongue this only suggests an emotional approach which is more capable of hindering education than helping it.

The introduction of the mother tongue as the medium of instruction is envisaged in two stages, Humanities being favoured for the experiment in the first instance, to be later extended to the scientific studies. The effect of this experiment would be to place students of Humanities at a disadvantage in the matter of job opportunities as compared with students in Science. For during the period when mother

tongue is the medium of instruction only in Humanities, job opportunities for the former would be confined to the State alone, while science students would certainly enjoy an all India market. The narrow scope for employment which education in Humanities at present provides would thus be still further reduced for the students in Humanities in Madras.

But the most important of the problems which the educational authorities as well as the State Government are faced with is the outbreak of indiscipline among the student community. The public in South India as well as the University authorities for whom the safe conduct and good behaviour of the students in the South was a facile assumption were rudely shaken in their belief by the recent happenings in the Annamalai University. The whole incident was set off by what is believed to be the misbehaviour of a watchman towards a section of students and culminated in the closure of the University and the postponement of the University examination.

Though this was the first and only instance of such indiscipline to occur in the South, the nature of the crisis and the result to which it led have considerably perturbed the general public. It is the triviality of the cause which started the trouble that has been the real source of worry to men in general. In the Legislative Assembly the leader of the P.S.P. group confessed to a sense of sorrow that the students should have so deplorably deviated from their earlier record of fighting for worthier causes. The leader of the Communist group though he was inclined to find fault with both the students and the University authorities for this unhappy incident did not fail to stress the need for keeping discipline among the students.

There is a section of opinion in the State which would explain this in terms of party alignments among the student community in the South, and the influence of the DMK in the Annamalai University is further mentioned as a strong factor in this situation. Though this offers no basis for apportioning blame especially when there is no evidence of overt encouragement, the need to keep the students away from party politics is obvious. As pointed out by Mr Subramanian the full return for the money spent on education would only be got when educational institutions were run as handmaidens of power politics. The move to appoint a Committee of the leaders of parties in both the houses of legislature, as suggested by Mr Subramanian, to go into the whole matter is therefore to be welcomed.

The stability of the cashew industry, mainly an export industry, earning foreign exchange of about Rs 14 crores annually, is a matter of vital importance not only to the economy of Kerala but also to that of the whole country. But a variety of factors of which shortage of raw materials is the most important has left the industry in a state of impaired efficiency.

The shortfall in internal production of raw materials on the basis of the requirements of the factories for full working has been estimated at a little more than 1 lakh tons. While the estimate of raw materials needed by the industry is of the order of about 2 lakh tons, internal production amounts to less than 70,000 tons. Even imports which in the last year were placed at about 93,000 tons, were insufficient to meet the needs of the industry for raw materials fully. The effect of this on the working of the industry in Kerala was to leave a wide gap between capacity and utilisation.

Though, thus, the need for increasing indigenous production of raw materials is great, prospects for an early increase of production to the full extent of the present gap do not seem bright. Speaking at a conference of the representatives of employees' and employers' associations in the cashew industry at Trivandrum, Mr K. P. Gopalan, Minister for Industries in the Kerala Ministry, pointed out that while at least 40,000 acres of additional land would have to be brought under cashew cultivation to ensure self-sufficiency in raw materials, the scheme for additional cultivation of cashew in the Second Plan covers only 13,000 acres.

The formation of a trading corporation as suggested by Mr Gopalan, for procurement and distribution of raw nuts is therefore to be welcomed. Competition for raw materials which is bound to arise in conditions of limited supplies can be allowed to continue only at grave risk to the stability of the industry. The utility of the corporation would be greatly enhanced if marketing of processed kernels is also brought under its operation. Uneven expansion of the industry in such circumstances could only lead to more difficulties by aggravating raw material shortage and therefore such expansion has to be controlled with reference to possibilities of enabling the industry to utilise its idle capacity. The extension of the Industries (Development and Regulation) Act of 1951 to the cashew industry as suggested by Mr Gopalan has justification in this need to prevent unregulated growth of the industry.

Diversification of exports of cashew is another field in which

much remains to be done. The present dependence on the US for 80 per cent of exports has according to Mr Gopalan adversely affected prices for processed nuts in the Kerala State. It is therefore gratifying that new markets are being explored in such countries as France, Italy, Switzerland and the U.S.S.R.

★

Regulated Markets

Regulated markets for agricultural produce is an important line of agricultural reform in which progress has not corresponded to expectations. Basic legislation for the regulation of markets is still absent in a number of States including Assam, West Bengal, Bihar, Uttar Pradesh, Rajasthan and Kerala. The number of wholesale markets in the country remaining outside the purview of such regulatory measures is about 1,300.

The object of the scheme of regulated markets is to eliminate the malpractices current in most of the markets for agricultural produce and thus to reduce the spread between the price received by the producer for his produce and the price paid by the consumer. This price spread which at times is as much as the price received by the producer and which is appropriated by middlemen is a measure of the extent of the parasitic living which unregulated marketing has encouraged.

But marketing regulation intended to secure to the cultivator his due share of the price paid by the consumer depends for its success on measures for standardisation and grading of produce by the producer. The Agmark scheme is intended to supply such standards and grades for various agricultural produce. Implementation of the various schemes for the regulation of markets, promotion of grading and standardisation etc also calls for adequate technical personnel to undertake the work relating to reform of the marketing structure.

The Government of India have opened two such training centres one at Sangli in the Bombay State and the other at Hyderabad in the Andhra Pradesh. Inaugurating the training Centre at Hyderabad Mr Thimma Reddi, Minister for Agriculture urged the need for taking effective steps to see that the regulated markets fully benefited the farmers and secured them a high share of the price paid by the consumer. With this view he made the suggestion that the market committees should make available to the producer-sellers market intelligence in a form that could be understood by them.

Cashew Industry

Bharat Electronics

The review of progress of the Bharat Electronics as made by Mr A. K. Ghosh, the retiring Managing Director of the company in the course of a press conference which he held at Bangalore, is largely disappointing. As against a production target of Rs 50 lakhs worth of equipment in the first year of production, 1956, and Rs 200 lakhs and 300 lakhs in the second and third year respectively, actual production figures were only for Rs 1.47 lakhs Rs 20.42 lakhs and Rs 48.33 lakhs worth of equipment for the years 1955-56, 1956-57 and 1957-58 respectively. Difficulty in obtaining orders was, according to Mr Ghosh, the reason for this lag in production.

The capital expenditure incurred by the company also reveals a gap as compared to the original estimate of such expenditure made at the time of sanctioning the scheme six years ago. While the estimated capital expenditure was Rs 700 lakhs, the expenditure so far incurred, according to Mr Ghosh, was Rs 243.48 lakhs.

The important items in the production list of the company at present are a general purpose receiver, a transmitter, and a man-pack VHF trans-receiver. While these are of French origin, the company also, according to Mr Ghosh has two items of indigenous origin viz, a Rawin transmitter designed and developed at the Bharat Electronics and some studio equipment being produced in collaboration with the engineers of All India Radio.

The redeeming feature of the working of the Bharat Electronics is the cheap production of transmitters. While, according to Mr Ghosh, the French imported ones cost Rs 47,000, the BEL transmitter was offered at about Rs 35,000. Mr Ghosh also envisages cheap manufacture of radio valves in the Bharat Electronics, and has pointed out that while a set of five valves of foreign make cost Rs 25, the BEL could manufacture them at a cost of Rs 12.5-0.

The proposal for the manufacture of valves is according to Mr Ghosh awaiting the sanction of the Central Government. This is credited with great possibilities for providing largescale employment to Indians, and preventing the large drain of money from out of the country. The target for the manufacture of radio valves is about 15 to 20 lakhs a year. The manufacture of X-Ray tubes is also indicated as a possibility.

★

Development Works

Kerala being one of the backward States in the country, developmental works have great importance for the economy of the

State. The satisfactory progress of these development works as disclosed in a recent review of the activities of the Kerala Government Public Works Department is therefore a matter for gratification.

The noteworthy feature in the progress of the development works was the inauguration of the four new major irrigation schemes namely Kattampally, Cheerakuzhi, Thannirmukham regulator and Pothundy. The Thannirmukham scheme has as its object the protection of the Kuttanad area from danger from floods and salt water and is expected to benefit an area of 1,21,000 acres. The other major irrigation schemes such as the Periyar valley scheme, and the Malambuzha scheme are also reported to be progressing satisfactorily.

Anti-sea erosion works and inland navigation constitute the other lines of developmental activity. The Government have plans for improvement of inland navigation on the basis of the report recently made into ways and means of improving inland navigation in the State. Greater progress in this field is envisaged for which a special circle has been formed to study the potentialities of the rivers in the State. About 21 works amounting to Rs 3.41 lakhs are reported to have been sanctioned by the State Government upto January, apart from those included in the budget.

As regards power, the Government have a programme for electrifying 1,344 additional village areas during the present Plan period. For the year 1958-59, the target is to extend electric supply to 396 new centres at a cost of Rs 1.20 crores. The electrification of 396 villages during 1958-59 is expected to benefit nearly 22,805 consumers and also provide 10,963 street lights in the State. In its electrification policy, the need to remove the disparity between T.C. and Malabar has also been kept in view. While only those places which yield more than 6.5 per cent as revenue return have been selected from the T.C. area, places which yield 5 per cent and more have been selected from Malabar for electrification.

To meet the growing requirements of Malabar extension of transmission lines from the Hydro-electric system in the State has been proposed. The three important schemes in this connection are the transmission line from Trichur to Palghat, another from Chalakudy to Kozhikode and the third from Cannanore to Kasargode. While the two latter schemes are expected to be commissioned by 1959-60, the transmission line from Trichur to Palghat has nearly been completed.

General Manager.

SUBSIDY INDIAN MARKETS

THE Rubber Board has announced its revised replanting scheme, which provides for the replanting of Rubber in 70,000 acres of land. The scheme is in the process of being implemented from 1957. The subsidy to be granted under the scheme will be on a slab basis. Apart from the subsidy, additional financial assistance will be given to small growers whose estates are not more than 10 acres in extent.

The minimum planted area, to be replanted in a year, should be either one acre or part of an acre if that part is the only area remaining to be replanted in the estate after replanting either under the scheme or otherwise. If the number of trees standing on any one acre of land in an estate is less than 30, that area of land is not eligible for subsidy.

The weather is now reported to be favourable to rubber production, which is expected to increase over last years. This increase will not, however, offset the increase in demand, as manufacturing plants have been expanding and their consumption requirements are well ahead of any likely increase in estate production. One of the largest expansions in manufacturing capacity is Firestone's at Bombay. Steady enlargement of other factories has also been going on.

Coffee

The high expectations of a record Coffee crop of over 50,000 tons for the coming year are now defin-

Revised Rubber Planting Scheme

tey on the wane as seasonal conditions are causing anxiety. According to a Coffee Board Press release, blossom showers have been delayed and have, in some cases, occurred very scantily. The current crop, just harvested, is estimated to reach very nearly 40,000 tons as against the Board's estimate of 27,000 tons.

The Board exported for sale, in April, only 1956-57 stocks in order to close the Pool accounts for 1956-57. Total export sale, out of the 1957-58 crop, till the end of March, were placed at 1,650 tons. Prices realised have not, however, been satisfactory. This factor is causing most concern among growers. The margin over internal prices is also reported to be narrowing down with each successive sale and the latest of the series has brought prices to quite near internal levels. The Marketing Board is, it is understood, said to have voted against a more realistic price fixation for releases from the Pool. If export prices fall, the subsidy, now allowed for fixing internal prices, may have to go.

Contrary to expectations, the offer of 2,000 tons to East Germany, through the State Trading Corporation, has not yet materialised. The exportable surplus with the Board is now estimated at 9,256 tons.

Pepper

Pepper markets, which had been ruling very steady during the past few weeks, turned a shade quieter, mainly due to lack of fresh sup-

port. Buyers from the USA are reported to be showing very little buying interest now, as most of their requirements are fulfilled by Lampong, which is underselling Malabar. Further, sizable unsold consignments from India as well as from Singapore are reported to be on the way and consequently, the New York market, except during the last week's boomlet, is always ruling below the replacing parity.

The Indian crop is rather exaggerated in official estimates. According to producers and trade sources, the upper reach of the crop may be about 25,000 tons; but the average is not far above 23,000 tons.

Groundnut

Prices in the Madras Groundnut market firmed up last week on higher Bombay advices. Arrivals were about 200 tons, while local crushers and Calcutta interests took up sizable quantities. The rate improved to Rs 151 from Rs 147 per candy. According to some reports, the summer irrigated crop in South Arcot district needs good showers.

In the Groundnut Oil section, the rate for the ready position improved to Rs 307 from Rs 303.50 per candy. Calcutta interests were active and lifted sizable quantities in the ready position.

Hides and Skins

Conditions in the Madras Tanned Hides market ruled generally quiet. Enquiries from London were rather restricted as operators were anxious to await the British Budget. Another factor was the approach of the Ramzan holidays.

There was no change to record in the arrivals of Cow hides. Clearances were slow with no change to report.

On the export front, enquiries were restricted and were mostly for fifth selections. In the Calf section, business was very slow and prices, especially of Buff Calf, were slightly weak on account of heavy shipments made last month.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were moderate. There was fair clearance at rates varying from 12 to 18 nP pound lower.

In the export section, business in Goat skins was sporadic, while Sheep skins were quiet.

In the Raw Hides section, there was a further decline in prices by about 50 nP per piece.

In the Raw Skins section, prices remained unchanged.

Tobacco

The first forecast, issued by the Madras State, states that the area

sown with Tobacco, upto 25th December 1957, is estimated at 45,000 acres as compared with 44,900 acres in the corresponding period of the previous year. Compared with the average of 40,000 acres, calculated for the five years ended 1956-57, the present estimate shows an increase of 11.4 per cent.

Cotton

The area sown with Cotton, in the Madras State upto 25th November 1957, is estimated at 683,600 acres as compared with 655,100 acres in the corresponding period of the previous year. Compared with the average area of 612,600 acres, calculated for the five years ending with 1956-57, the present estimate shows an increase of 11.6 per cent.

Bangalore Silk

Prices in the Bangalore Silk market, for the week ended 5th April, presented a distinctly quiet trend. Kanakapura and Channapattana, in the Filature section, tended to rule at a lower level as compared to the rates that prevailed in the previous week. In contrast, T. Narasipur and Kisan Filatures maintained their firmness. Kollegal was the exception with its prices moving up by 50 nP.

In the case of Charka Silk, all the varieties saw lower levels. The price trend in respect of Reeling Coccons also reflected a declining value, while those of Seed Coccons recorded distinct gains over the week.

The price of Silk waste, which had remained unchanged since 22nd February, have been quoted lower since 31st March.

In the Foreign Silk section, Japan 20/22A f.o.b. price was quoted at Rs 19.45 and Italy 20/22A at Rs 28.30, landed cos's being Rs 30.89 and Rs 43.70 respectively.

MANAGING DIRECTOR'S SPEECH

THE DUNLOP RUBBER CO. (INDIA) LTD.

Mr. John Luckham's Review

The 32nd Annual General Meeting of The Dunlop Rubber Co. (India) Ltd., was held in Calcutta on the 18th April. Mr. John Luckham, Managing Director, said:

Gentlemen,

The Directors' Report and Accounts for the year 1957 have been in your hands for some time, and with your permission I will take them as read.

It is with great regret that we have to record since our last Meeting the loss which we have suffered in the passing of two of our Directors.

Mr. George Morgan died in Calcutta on the 26th June, 1957. Mr. Morgan originally came to Calcutta in 1889 and the experience which he gained during his distinguished career was of very great value to your Board of which he was a member since 1945.

On the 19th January this year Mr. Kanai Lal Jatia, who had also been on your Board since 1945, died from a heart attack at his Calcutta residence. His wise counsel was at all times made freely available to the interests which he so earnestly served, and he will be greatly missed in the industrial field with which he was connected.

You will have seen from the notice convening the Meeting that it is proposed to appoint Mr. E. H. Morris to the Board. Mr. Morris first came to India in 1933, and apart from service in this country, has had many years of service with the Dunlop Rubber Co. Ltd. in the Far East. He returned to India in 1956 as General Sales Manager following the untimely death of Mr. Guy Stack. The Company's business is expanding so rapidly that your Board feel it necessary to have a wholetime Director at the head of the Company's selling organisation and Mr. Morris is recommended for this appointment.

THE YEAR'S TRADING:

During the year production increased in nearly all lines, but even so we were not able to meet the demand for all our products. The Government permitted limited imports to help relieve some of these shortages, but particularly in respect of cycle tyres and rims sufficient quantities have not been available to meet requirements.

During the past year the road transport industry has been undergoing tremendous changes and expansion, particularly long distance goods transport. The modern truck now engaged in this work requires tyres capable of carrying heavy loads at high speeds over long distances. Such tyres must be built with the best available materials and using the latest manufacturing techniques. It is in this respect that your Company is particularly

fortunate in having available to it the full resources of the Dunlop world-wide research, technical and engineering organisations.

We have continued to retain our premier position in the car tyre market. The progress which the motor car industry has been making in recent years is in danger of slowing up owing to the difficult licensing situation of the imported components. The reasons for this are too well known to everyone and unfortunately these are likely to persist for some time.

The bicycle industry has continued to grow very rapidly and the demand for our products has been well in excess of supply. I will deal separately with our expansion plans to meet this situation.

During 1957 the installation of plant for the manufacture of large earthmover tyres was completed and production commenced early this year. The demand for this type of tyre is increasing.

Good progress was made in our Industrial Rubber products range and in particular the demand for conveyor belting has exceeded all expectations.

The popularity of Dunlopillo for all its various uses continues to grow and the additional capacity which was installed during the year was utilised to the full.

EXPANSION PLANS:

I am happy to be able to tell you that satisfactory progress is being made at your new factory at Ambattur, near Madras, and we are hopeful that everything will be ready for the production of bus, truck and cycle tyres to commence at the beginning of next year. The construction of the main buildings is well under way and plant and machinery are beginning to arrive in the country.

Expansion is also continuing at Sahaganj and in particular increased production of giant tyres, cycle tyres and cycle rims is well in hand.

I advised you at the Annual General Meeting last year that an issue of further share capital would form the basis of the Board's plans for raising additional capital. As most of you will be aware, in July 1957, 14 lakhs of new Ordinary Shares of ten rupees each at a premium of five rupees were offered to the Ordinary Shareholders in the proportion of 7 for 8 existing shares. It is gratifying to be able to report that in spite of the difficult conditions this issue was an unqualified success. The net proceeds of the issue amounted to Rs. 203 lakhs. As a result of the issue the Subscribed Ordinary Capital now stands at Rs. 3 crores as against Rs. 160 lakhs at the end of 1956.

RAW MATERIALS:

The raw materials supply position was generally satisfactory although on several occasions during the year our stock position became dangerously low in some of our main requirements. There was a period when the congestion in Calcutta port seriously delayed clearance of vital cargoes but the position improved very considerably towards the end of the year. Our production planning problems would be considerably lessened if Government could grant import licences for essential raw materials on a longer basis than six months at a time.

There was virtually no improvement in the production of raw rubber in India during 1957 as compared with the previous year. On the other hand, consumption of rubber reached a new record, with the result that we had to rely on considerable imports. In my report last year I mentioned that import licences for raw rubber issued after August, 1956, were subject to a cess if the imported rubber landed at a cost less than the local price. On imports during 1957 we paid nearly Rs. 11 lakhs to the Rubber Board on this account, and we also had to absorb Rs. 2 lakhs on rubber which was imported at a price higher than the local price.

Prices of raw materials were stable throughout the year but there were increases in import duty on a number of raw materials and machinery parts.

As I have already said, our production is due to expand very considerably in the near future to meet the essential needs of the road transport industry which is so vital in this country. This expansion has, of course, the full support and approval of the Government and we are therefore confident that licences to import increased quantities of raw materials will be granted.

PROFIT & LOSS ACCOUNT:

The net profit for the year after providing for depreciation, interest and taxation was Rs. 80,67,449 compared with Rs. 55,09,999 for 1956. In the face of the high level of taxation and the rapid expansion of our business, the building up of our internal resources continues to be of paramount importance. The Directors are, therefore, proposing the transfer of Rs. 30 lakhs to General Reserve. This will increase the General Reserve to Rs. 2,38,83,000 and you will see from the Balance Sheet that the increased Ordinary Share Capital is covered more than one and a half times by the total Reserves and Surplus. The rate of Ordinary Dividend was maintained without change at 15% from 1951 to 1956 and in view of the improved results the Directors consider there should now be a modest increase. They are, therefore, recommending a final Ordinary Dividend of 8½%, which with the interim dividend paid in June, 1957, gives a total

of 16½% for the year and absorbs Rs. 38,25,000. The surplus carried forward will then be Rs. 22,23,000.

BALANCE SHEET:

The additions to Fixed Assets during the year amounted to Rs. 97 lakhs, most of which was in respect of building and plant additions at your Sahaganj factory, but this also included Rs. 17,80,000 expended on the new Ambattur factory. The amount of depreciation written off in 1957 was Rs. 27,69,000. A special provision of Rs. 6,60,000 made in previous years has now been transferred to Special Depreciation Reserve, and after allowing for this the net value of fixed assets has increased during the year by Rs. 69 lakhs to Rs. 382 lakhs.

Stock Inventories at Rs. 486,84,000 higher than at the close of the previous year, but even so finished goods stocks were abnormally low owing to the ever-increasing demand for the Company's products. Sundry Debtors were up by Rs. 83,66,000 due to the greater sales turnover.

Turning to the liabilities side of the Balance Sheet, I have already commented on the increase in Ordinary Share Capital and Reserves. Compared with the end of 1956 the bank borrowings have been reduced by Rs. 42,79,000 and the unsecured loans of Rs. 76,07,000 have been repaid. In spite of substantial increases in Sundry Creditors and Provision for Taxation there was an overall reduction in current liabilities of Rs. 56,46,000 resulting from the additional share capital subscribed during the year.

EMPLOYEE RELATIONS:

The standards of our welfare facilities and working conditions have been well maintained throughout the year. General labour relations remained cordial and I am sure you would like to join with the Directors in thanking the staff and operatives for their loyal and willing service throughout the year.

NOTE:—THIS DOES NOT PURPORT TO BE A RECORD OF THE PROCEEDINGS OF THE ANNUAL GENERAL MEETING.

THE BENGAL FLOUR MILLS CO., LTD.

The Board of Directors has decided to recommend to the forthcoming Annual General Meeting of the Company a final dividend of 12½ per cent for the year ended 31st December, 1957.

By Order of the Board,
BALMER LAWRIE & CO., LTD.

D. MANSON,
Secretary,
Managing Agents.

AUDITORS' REPORT TO THE SHAREHOLDERS.

We have audited the annexed Balance Sheet of THE HIND BANK LIMITED as at 31st December, 1957 and also the annexed Profit and Loss Account of the Bank for the year ended on that date, in which are incorporated Branch returns audited by Statutory or Local Auditors.

In accordance with the provisions of Section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of Section 211 and sub-section (5) of Section 211 and Section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit and Loss Account of the Bank are not required to be and are not drawn up in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are, therefore, drawn up in conformity with forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

- we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- the transactions of the Bank which have come to our notice, have been within the powers of the Bank;
- in our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;
- the Bank's Balance Sheet and the Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
- in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1957, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

AUDITORS' REPORT ON THE INDIAN BRANCHES OF LLOYDS BANK LIMITED UNDER SECTION 30 OF THE BANKING COMPANIES ACT, 1949

* We have audited the Balance Sheet of the Indian Branches of Lloyds Bank Limited, dated 31st December, 1957 and above set forth and the annexed Profit and Loss Account for the year ended 31st October 1957 with the books and accounts as kept at the Chief Managers' (Eastern Branches) Office, Calcutta, in which are incorporated certified returns from the ten Indian Branches and also with the books and accounts kept at the Calcutta Branch.

In accordance with the provisions of Section 29 of the Banking Companies Act 1949, read with the provisions of Section 211(1), (2) and (5) and Section 227(5) of the Companies Act 1956, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with Schedule VI of the Companies Act 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule of the Banking Companies Act, 1949.

We report that:—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit.

(b) In our opinion proper books of account as required by law have been kept by the Chief Managers' (Eastern Branches) Office and the Calcutta Branch so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the 9 Branches not visited by us.

(c) The Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the certified returns.

(d) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act 1956, in the manner so required for banking companies, and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Branches as at 31st December, 1957 and the Profit and Loss Account gives a true and fair view of the profit for the year ended 31st October, 1957.

Improvement in Sentiment

Watch-Dog Writes:

STOCK markets have exhibited a cheerful sentiment during the week under review. Turnover, however, remains restricted. But, the sustained support lent to the market suggests that operators have not yet revised their ideas about the more favourable turn in the investment outlook.

Speculative issues making a steady advance on renewed support provided the main feature of trading on the Calcutta Stock Exchange.

Sentiment on the Bombay Stock Exchange was more cheerful this week as selected scrips staged a marked recovery from the recent low levels.

On the Madras Stock Exchange, business was mostly confined to Planting issues.

Budget proposals were well received on the London Stock Exchange.

Wall Street closed heavy with a fair representation of declines ranging to a dollar or more.

Calcutta

THE local Stock market, which remained dull last week, took a turn for the better. Although business remained restricted, selective support was lent to the speculative and miscellaneous scrips. The main inspiration was provided by the Finance Minister's proposal to grant two new concessions to the industry in respect of development rebate. Hopes were also entertained that the relaxation of restrictions by the Government on the terms of partnership with foreign firms would stimulate large-scale flow of American capital into India. Another contributory factor was the substantial expansion in notes in

circulation, as revealed by the latest returns of the Reserve Bank.

The Gilt-edged market ruled very firm, the shortage of stock having continued to give further emphasis to the steady rise in prices. A major influence was the Reserve Bank's operations by way of preparing the stage for the Central Government's borrowing programme. The sustained fashion in which the Bank has been endeavouring to create a favourable climate in the market suggests that the issues are scheduled to come some time in the latter half of next month. Meanwhile, 3 per cent 1986 Conversion Loan, after opening steady at Rs 71.40 and advancing steadily to Rs 71.45, finished the week at Rs 71.25.

Bank shares ruled steady. The United Commercial had buyers at Rs 59.50 to Rs 60.00 following the publication of a satisfactory report. Punjab National changed hands at Rs 52.75 to Rs 53.00, while Hind were enquired upto Rs 52.00 from Rs 50.75.

Jute shares lost some of the gains recorded earlier though, in some cases, prices were remarkably well maintained on expectation of better working results for last year and in view of the sound statistical position of the industry. The news of the slight increase in burlap consumption in March also suggested that the American recession had not yet affected the offtake ofessian in the USA.

The most active scrips were National, Howrah and New Central having sustained support upto Rs 24.00; Rs 14.06 and Rs 13.87 from Rs 22.10; Rs 13.87 and Rs 13.56 respectively. Despite the passing over of dividend, Alliance were well maintained at Rs 64, while Anglo-India changed hands at 143 to Rs 147.50; Barnagore Rs 81.00 to Rs 83.00; Birlas Rs 15.00 to Rs 15.31; Standard at Rs 80.50 to Rs 81.00 and Union at Rs 113.00 to Rs 113.50.

Despite the inordinate delay in the announcement of the Government decision with regard to the increase in the selling price of the commodity, Coal shares ruled remarkably steady. It was generally felt that, if the targets for coal production had to be raised, the private sector would be allotted a bigger slice for development. Ben-

gal had buyers upto Rs 219 from Rs 12 and Western Bengal upto Rs 5.78 from Rs 5.69. New Beerbhoom and Burrakur were well maintained at Rs 14.50 and Rs 22.75 respectively, while Central India changed hands at Rs 7.06 to Rs 7.56.

The Tea section appeared to be marking time, waiting for the Government to make up their mind about whether the tax relief for the industry should be an overall reduction of export duty or whether it should apply only to Common teas. However, the satisfactory statistical position of the commodity gave rise to hopes that the industry would do well in the current year. Brooke Bond changed hands at Rs 16.50 to 16.62; Hasimara at Rs 21.62 to Rs 21.63; Hatikhtra at Rs 9.81 to Rs 10.00; Huldibari at Rs 21.12 to Rs 21.37; Jayshree at Rs 10.91 to Rs 11.00 and Patrakola at Rs 121 to Rs 124.

Sugar shares attracted limited interest with prices developing a slightly easier tendency on profit-taking at the recent high levels. Operators were generally inclined to await the Government's decision regarding exports. Only firm feature was Raza/Buland having forged ahead to Rs 14.19 from Rs 13.69. Carew turned quiet at Rs 7.12 against Rs 7.81; Ramnugger at Rs 21.44 against 22.12 and SKG at Rs 9.81 against Rs 10.00. Dyer Meakin were practically unchanged at Rs 9.56.

A general disposition to await a definite improvement in the conditions of the cloth market, caused Textile scrips to rule quiet. Jayshree were cheaper at Rs 6.94 against Rs 7.13; Kesoram at Rs 11.46 against Rs 11.50 and New Victoria at Rs 1.37 against Rs 1.44. Cawnpore showed a partial recovery to Rs 4.06 from the recent low of Rs 3.75, while Elgins changed hands upto Rs 13.50 from Rs 13.06.

Price movements in the Engineering section were mainly influenced by the speculative activity in Indian Irons. Against the weekend closing of Rs 21.18, Indian Irons opened higher at Rs 21.42 and advanced steadily to Rs 21.96, to finish the week at Rs 21.85 on profit-taking on higher Bombay advices. Despite a small reduction in dividend from Rs 2.06 to Rs 2.00 per share, G. K. Williams firmed up to

Rs 31.00 from Rs 30.37 in view of the brighter prospects for the company and on expectation of a higher dividend during the current year. TEXMACO were taken upto Rs 18.45 from a low of Rs 18.15; Burn upto Rs 322 from Rs 319.50; Jessop upto Rs 20.75 from Rs 20.12 and Britannia upto Rs 11.44 from Rs 11.31. Indian Standard Wagon remained firm at Rs 100 with Marshalls changing hands at Rs 5.12 to Rs 5.47 and Brathwaite at Rs 25.25 to Rs 25.31.

The Miscellaneous section continued to provide many firm spots, thanks to sustained investment buying. Most prominent were Dunlop changing hands at Rs 24.50 to Rs 24.87; Indian Aluminium at Rs 13.62 to Rs 13.81; Aluminium Corporation at Rs 10.56 to Rs 10.75; Indian Oxygen at Rs 16.81 to Rs 17.50; Indian Cable at Rs 29.19 to Rs 29.62; India Steamship at Rs 10.81 to Rs 11.00; Alkali Chemicals at Rs 14.19 to Rs 14.25 and Rohtas at Rs 16.87 to Rs 17.12. The news of the strike at the company's Gha'sila mines had an adverse effect on Indian Copper which, after touching a low of Rs 3.11 improved to Rs 3.26. Phillips India were nearly maintained at Rs 14.12. NICCO were enquired upto Rs 23.87

JESSOP AND COMPANY, LIMITED

Notice is hereby given that the Directors have sanctioned payment, on 1st May 1958, of the Dividend on 5 per cent Cumulative Preference Shares of the Company for the half year ending 30th April 1958, without any deduction in respect of Income Tax which is payable by the Company.

The Preference Share Transfer Register will be closed from 29th April to 30th April 1958, both days inclusive.

Dividends will be paid only to the Registered Shareholders or their Mandataries.

By Order of the Board,
D. D. MARKAN,
Secretary.
63, Netaji Subhas Road,
Calcutta-1,
Dated the 17th April, 1958.

April, 19 1958

from Rs 23.75 and National Carbon upto Rs 25.37 from Rs 25.12. In the Paper section, Orient staged a marked recovery to Rs 28.85 from a low of Rs 27.90, while Titaghar were taken upto Rs 36.00 from Rs 35.37; Shree Gopal upto Rs 15.12 from Rs 14.69 and India Pulp upto Rs 19.50 from Rs 19.25.

Bombay

After a subdued start, the stock market displayed a rallying tendency to close the week on a steady note. The initial quiet trend had been caused by the disappointing level of production in Jamshedpur during March. The reactionary movement was aided by reports that a section of workers of TISCO would serve a strike notice on the company during the week. From midweek the undertone became steadier mainly on hopes that some concessions in regard to development rebate would soon be announced. A contributory factor was the decision of the directors of Bombay Burmah to capitalise reserves to issue one bonus share for every four shares.

STEELS:

In the steel section, Tata Steel was rather depressed in earlier dealings on announcement of lower production figures for March and due to apprehensions of labour unrest at the company's works. Toward close the price level steadied up a little on the expectation that labour dispute would be amicably settled. The scrip closed the week at Rs 182. Indian Iron met with good support from midweek onwards, from speculative interests and consequently closed higher on balance at Rs 21.68.

TEXTILES:

Textile shares were generally subdued though toward close selected scrips met with buying support. It would appear that the fact that the recent reduction in the excise

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED
(Incorporated in England)

Notice is hereby given that the Board of Directors of this Company have declared payment of a Final Dividend on the Company's Preference Stock at the rate of £2-10-0 per cent net for the year ended 31st March, 1958. Payment will be made on 15th May, 1958 to those stockholders whose names are registered in the Company's Stock Register on 6th May 1958.

Applications for transfers received in this office before 12 O'clock noon on Tuesday, the 6th May, 1958, will if otherwise satisfactory, be registered at that date for the purpose of participation in the above dividend.

By Order of the Board,
I. A. MACPHERSON
Agent.
Victoria House,
Calcutta,
16th April, 1958.

on all varieties of cloth had not brought about any marked improvement in the offtake of cloth had diminished the enthusiasm in the section. Bombay Dyeing after initial hesitancy moved up to close higher on balance at Rs 57.40. Century was steadier at close at Rs 436. Kohinoor was easier at Rs 278.

MISCELLANEOUS:

In the miscellaneous section Bombay Burmah was an outstanding feature following announcement of bonus issues. The scrip which opened at Rs 543 improved up to close at Rs 564.50. Tata Locomotive advanced to Rs 167 from Rs 160 on sustained support. Premier Construction was a bright feature at Rs 189. After initial setback National Rayon recovered to close steady at Rs 219.50.

Madras

WHILE there was practically little change in the market behaviour, there was steady absorption of selected Planting issues.

TEXTILES: This section accounted for only a small volume of business. Sellers were seen for Coimbatore Spinnings; Coimbatore Marugans; Lakshmis; Travancore Rayons and Ranga Vilas at the market rates. Malabar Spinnings receded to Rs 85 on selling pressure, while Cambodias were done at Rs 9.00 to Rs 9.10.

PLANTING: Buying support in this section was confined to only a few shares as investors were, it seemed, bidding time. Coffee shares ruled generally firm. Consolidated Coffees had buyers upto Rs 23.50; Shevroys upto Rs 2.15 and Ouchterlony upto Rs 4.90 x.d.

In the Tea group, there was large absorption of Periakaramalais around Rs 4.10. There was some demand for United Nilgiris at the market rate, while Chembra Peaks and Coorgs found some sellers at quoted rates. Nonsuch were active, having buyers upto Rs 22.75.

Among Rubber shares, there was good support for selected scrips. Prominent were Kalpettas having demand upto Rs 21.75 and Thamrapallis upto Rs 23.00. There was good turnover in T.R.Ts. around Rs 7.05 and Kil Kotagiris upto Rs 6.20 c.d.

MISCELLANEOUS: Cement shares accounted for only a small turnover. India Cements were done at Rs 27.35, while Andhra Cements changed hands on cum-rights basis at Rs 11.50. A. V. Thomas, General Papers and Mysore Stonewares met with some demand at market rates. Offerings were, however, seen in FACTs at Rs 5.30. T. Stanes met with some buying at Rs 20 x.d.; Spencer at Rs 17.12 to Rs 17.15; Aluminium Industries at Rs 13.30 to Rs 13.40 and Mettur Chemicals at Rs 9.50 to Rs 9.55.

London

THE Budget proposals were well received on the London Stock Exchange. There was a general rise in prices which was, however, to some extent, due to adjustments to the

new single Profit Tax rate of 10 per cent. The shares of those companies, which are likely to benefit from the concessions, were supported and gaining in some instances were fairly substantial.

Property shares were outstanding and showed gains of several shillings. Rubber shares continued to move ahead on dividend hopes, while Tea shares ruled quietly steady. Gilt-edged securities were quietly supported and closed firm.

New York

PRICES on Wall Street generally developed an easier tendency following a flood of largely unfavourable first-quarter corporate reports. In addition, sentiment was affected by the news that President Eisenhower had indicated that he still saw no need for tax-cuts. The reaction was led by Industrials, notably Chemicals, Electronics, Oils, Papers, Steel and Motors.

Investment Notes:

The issue of 35,000 shares of Rs 100 each, at par, by Greaves Cotton & Company is reported to have had a good response. It is stated that Bombay alone has already accounted for the full amount offered.

TELCOs have firmed up to Rs 165.25 from Rs 158.50, thanks to sustained buying support. The main inspiration

has been derived from the reports of excellent working during the year ended 31st March, 1958 which, it is felt, will enable the company to raise the dividend from Rs 8 to Rs 9 or Rs 10 per share for the year.

The Bombay Burmah Trading Corporation has decided to make a bonus issue by utilising the Share Premium Account. The issue will be on the basis of one fully paid Rs 125 share for every Rs 125 fully paid share held and one fully paid Rs 125 share for every ten Rs 125 partly-paid shares. An application has been made to the Controller of Capital Issues.

It is understood that Mahindra and Mahindra Limited has applied to the Controller of Capital Issues for increasing the authorised capital of the company from Rs 14 crores to Rs 5 crores.

Walchandnagar Industries have indicated a move to raise fresh capital to the tune of Rs 50 lakhs with a view to financing expansion activities, especially the sugar machinery manufacturing project.

Investment Briefs:

Guest, Keen, Williams Limited has recommended a final dividend of Rs 1.20 per share for 1957. This, with the interim of 80 nP, makes a total of Rs 2.00 per share for the year as against Rs 2.06 in the previous year.

Belsund Sugar has maintained the dividend at Re 1 per share for the year ended 30th September, 1957.

Rawanwara Collieries have passed over the dividend for the year ended 30th September, 1957.

Vijay Mills, Ahmedabad, has proposed to reduce the dividend from Rs 50 to Rs 40 per share for 1957.

Why all this flurry about internal resources?

Consider the performance so far achieved.

You'll find there's already a surplus.

You can even think of tax reliefs.

Such, Eavesdropper's thoughts.

FOOD for thought

One lump?... or two?... Now you can have as many lumps as you like, thanks to the magnificent job done by sugar producers in this country.

Not only is there enough sugar to go round, but surplus production can now be exported to earn valuable foreign exchange for India. It has been estimated that exports can be increased to 300,000 tons a year: this means no less than Rs. 15 crores of foreign exchange.

The country is making steady progress in increasing sugar-cane production. Control of the sugar-cane termite would be an important step in this direction as it is estimated that the sugar-cane termite lowers sugar production by as much as 200,000 tons a year. This quantity of sugar could earn Rs. 10 crores of foreign exchange if this wastage could be stopped. *And it can be stopped.*

Consider the facts. A Shell chemical called aldrin applied at the rate of one pound per acre, eliminates soil termites and can increase sugar yields by 300 lbs. per acre. Endrin—another Shell chemical—gives effective, persistent control of the sugar-cane pyrrilla and also shows great promise against sugar-cane borers. These petroleum chemicals can protect one of the most valuable cash crops grown in the country.

True—Shell chemicals have to be imported because they are not manufactured in India. Indigenous materials are however, used in their formulations. And for every rupee spent on importing aldrin, enough extra sugar can be produced to earn sixteen rupees of foreign exchange. This is a sensible expenditure whichever way you look at it: food for thought, in fact.

SHELL Chemicals can save crops and Foreign Exchange too!

More Cheerful Expectations

Investment Gossip:

A GOOD many months have passed, certainly more than a year, since Indian Irons have officially touched Rs 22; and it is to the credit of the current week that such barrier was pierced. There is now a more hopeful and cheerful assessment of prospects, and the bull trend may be said to appear established. Since the Budget, Indian Irons have put on Rs 2.36 to touch the new peak of Rs 22.12.

What now? Well, for my part, I do not see that any particular crystal-gazing is necessary to have a clear view of the future. I have always maintained that the Second Plan should be synonymous with an improvement, with a sustained rise in stock exchange values. Unfortunately, in the first two years, the overshadowing factor was the institution of the tax effort necessary in behalf of the Plan, so much so that, until recently, the market was in the grip of a bear phase. But the future now appears reasonably certain.

Firstly, the prospect for steels is assured. There can be no gain-saying the rise in the break-up value of the steel scrip. It is an undeniable fact that the profits will be rising quite sharply. No slump is expected, in the sense that supplies might exceed demand. It can be taken for granted that Government will take steps to export steel, when production reaches a sufficiently high level. The expansion programmes of the two private sector producers have been practically completed. One of the companies has received permission to capitalise from the Share Premium account; and there is the lively expectation, hardly likely to be belied, that IISCO, too, will be allowed to return, in the form of a bonus issue, the premium that Government insisted should be levied on the rights issue. The current yields offering on the steel shares are what would be expected on investments that had no growth prospects. In the light of such growth, the yields obtaining may be said to be too high; and a correction in this regard will mean that prices will inevitably be taken up.

Secondly, take cotton textiles and jute goods. A Parliamentary committee is now in process of investigating why resources available from the National Industrial Development Corporation are not being utilised for the avowed purpose of modernisation of the two industries. In view of the doldrums in

which the two industries recently found themselves, we can henceforth expect, with some improvement in their prospects, greater attention being paid to modernisation. Which means more economic working. As far as cotton textiles are concerned, the reduction in the excise duties may soon prove fruitful. There are some in the trade who expect a gradual improvement in offtake, and there are not a few who expect demand to be well up by the Pujas. Cotton textiles had a tough time of it in 1957, and the beginning of 1958 has been scarcely better, but a real improvement is, in my view, in the offing. As far as jute goods are concerned, there is already greater stability in prices, with the inauguration of futures trading. It should be a matter of time before purchases of jute goods themselves stabilise; and the world-wide steps being taken to set back recession should mean that the world oftake of jute goods will remain largely unaffected. Recently, prices in both sections have been, as it were, in the basement; and we may look forward to a steady recovery.

Thirdly, the engineering industries; and if there is one section that does not need any comment, it is this. Except for the shock administered by l'affaire Mundhra on Jessops and Richardson and Crundas we should have had an unbroken rise in engineering scrip.

Fourthly, tea; which are, anyway, investors' shares, and one poor year will more often than not be offset by another when earnings go up incredibly.

Cement? Sugar? Rubber? Prospects good. There is hardly any section in the Stock Exchange in which it is unreasonable to expect some modicum of rise in quotations.

By way of post-script, I have two things to add. Firstly, the money market is very well supplied with funds, and the all round denunciation of the high interest rates being paid on Deposits presages the possibility of action being taken statutorily to control them. Any move to effect a reduction in the rates on Deposits will automatically cause yields on Stock Exchanges to decline. Secondly, the information was given out by the Finance Minister that deficit financing during the Second Plan was likely to amount to the original estimate of Rs 1200 crores, rather than the lower pegging by Mr Krishnamachari some time ago. Deficit financing is normally a bull point for stock exchange activity; that the amount is being raised should make it more so.

£RS

Lloyds Bank

The Indian balance sheet of Lloyds Bank Limited discloses a smart rise in the balance of profits. Deposits and Other Accounts have moved up by nearly Rs 4 crores to Rs 43.89 crores from Rs 39.93 crores. This has enabled Lloyds Bank to keep its borrowings much lower at Rs 1.35 crores against Rs 6.36 crores. Cash Balances, including money at call, have im-

proved from Rs 3.69 crores to Rs 4.75 crores. There is a small shrinkage in the gilt-edged portfolio from Rs 12.61 crores to Rs 11.54 crores. There is also a decline of Rs 1.83 crores to Rs 29.01 crores in the Advances of Lloyds Bank.

The income by Interest and Discount has improved substantially from Rs 1.57 crores to Rs 1.84 crores. The income by commission, exchange and brokerage is also higher at Rs 50.71 lakhs against Rs 48.02 lakhs. Though it is true that interest paid is also higher, by Rs 19.07 lakhs at Rs 76.72 lakhs, the other main item of expenditure has been kept well under control. Thus, salaries and allowances are shown to be at Rs 86.07 lakhs against Rs 87.67 lakhs. In the result, the balance of profit is up sharply from Rs 28.64 lakhs to Rs 43.06 lakhs.

The sterling balance sheet shows that Deposits and Other Accounts have moved up from £1,197 million to £1,257 million. Loans and Advances are slightly lower at £327 million against £337 million. Cash Balances have improved by £28 million to £275 million. The profit and loss account shows that the profit for the year is more or less unchanged at £2.50 million against £2.54 million. The interim dividends absorb £693,869 against £640,495. General Reserves get the same appropriation of £500,000. The reserve for future contingencies is also maintained at £500,000. The final dividends absorb £693,870 against £747,244. The amount carried forward is £826,712 against £712,060 brought in.

The Indian balance sheet of Lloyds Bank shows clearly that the exchange banks operating in India can continue to thrive and improve their performance.

Companies and Notice of Trusts

By C. V. NARAHARI RAO

Investment Special:

Companies' managements are often puzzled about the procedure they have to adopt in recognising (or not) equitable trusts in the records of their share registers. There are apparent inconsistent provisions in the Companies Act, 1956 between section 153 on the one hand and sections 4 (3), 42, 49, 226 (3) and 307 on the other, which have left the law dubious. Section 153 relates to trusts and states that "no notice of any trust, express, implied or constructive shall be entered on the register of members or of shareholders or be receivable by registrar". The other sections have recognised the holding of shares in the names of a nominee or nominees of the real owner.

There was a Press Note in June 1957 which stated that shares in a company being the property of a trust can be held in the names of its trustees being individuals, corpo-

on buildings and construction activity and introduction of a profit tax in Norway. To mop up excess consumer purchasing power, indirect taxes were raised in the United Kingdom as well as the Scandinavian countries.

The slowing down of the rate of growth was inevitable in such circumstances. In England, the increase in the volume of the gross national product in 1957 has been estimated at 1½ per cent and was among the lowest in Western Europe, while the index of industrial production was only 2 per cent above the 1956 level. In the Benelux countries, the volume increase in the gross national product was only 2½ per cent which was below the comparatively small increase achieved in 1956. Suspension of the investment allowance, increase in turnover tax and restriction of bank loans to private firms were the chief factors responsible for the decline in the rate of growth. The increase in fixed investment, which was to the tune of 4 per cent, was considerably below that of 1956.

Where, as in France, maintenance of currency reserves was not the criterion of State policy, the growth of economic activity was unimpeded and it increased at a faster pace than in the previous year. While, in 1956, the increase in national product was only to the tune of 4 to 5 per cent, in 1957 the increase was as much as 6 per cent. Considerable advances in productivity fostered by the high rate of investment in the previous two years and migration of labour from agriculture to industry explain the higher rate of increase in gross national product in France.

However, some of the measures that have been adopted by the French Government during the last year are expected to have a contractionist influence on economic activity for the coming year. Restraint on personal consumption, decrease in military expenditure, suspension of import liberalisation, reduction of public investment outside the nationalised industries are the measures that preclude a rate of growth similar to the one witnessed in 1957.

In West Germany, the gross national product, which, in 1956, increased by 6 per cent, increased only by 4½ per cent in 1957, constant fixed investment and falling off in private consumption being the main causes for the decline in growth. Another important factor which contributed to the same result was the fall in exports. The decline in exports was a feature common to almost all the West European countries in this year and was as much the effect as the cause of decline in economic activity noted earlier.

Leadership

By M. SUR

FASHION changes rapidly in the theory of industrial management these days, and just as industry is becoming used to a new phrase, the jargon changes. "Industrial relations" is being replaced by the term "human relations in industry", but already some of the American experts are attacking this conception and one has gone so far as to declare that it leads to a distortion of the basic concepts of democracy.

Does this mean that all the time devoted to research and writing by the experts is wasted? Probably, what really matters is that the outcome of all this ferment of ideas is to keep people thinking on their relationships with their colleagues and their subordinates, and to prevent industry from drifting into the position of viewing all new developments from a fixed, traditional point of view, which is the least conducive to settlement of problems.

Conditions in the East European countries during 1957 were, however, different and were marked by record agricultural crops in almost all the countries, with the exception of East Germany, and Czechoslovakia, and excess of industrial production over planned levels. Production of cereals in Western Europe is shown to have exceeded that of 1956 by more than 8½ million tons. In East Germany and Czechoslovakia, harvesting losses due partly to labour shortage on large farms and in the machine and tractor stations were responsible for poor results. These two countries, therefore, continue to depend heavily on imports of foodgrains, present imports being estimated at about 20 per cent of grain consumption and 10 per cent of meat consumption for both of these countries.

As regards industry, with the exception of East Germany and Czechoslovakia, the plans envisaged slowing down of the rate of industrial growth. In the event, actual production turned out to be higher than the planned levels. In Poland, as against an increase of 10 per cent in 1956, the plan for 1957 envisaged only an increase of 3½ per cent which, however, in actual working, registered an increase of 9½ per cent. Similarly, in the Soviet Union, while the planned increase was only 7.1 per cent, the actual increase in production worked out to about 10 per cent.

Improved supplies of materials from imports which a good agricultural season permitted and flexible allocation of the materials were the crucial factors in the bettering of the 1957 plans in Eastern Europe. Metal consumer goods and textiles were the two industries which benefited most from the improved supply position of materials. Output of consumer durable goods such as washing machines and refrigerators recorded similar increase especially in the Soviet Union. The restoration of the cuts in the imports of fibres in Eastern Europe put production of textile goods back at the level of 1955.

Shortages of energy in both Eastern Europe and the Soviet Union are the major threat to future expansion of industries. The energy surplus of the six East European countries in 1957 has been estimated at 7 million tons. Most of the countries in this region are dependent on the Soviet Union for supplies of energy fuels, the extent of East Germany's dependence being more than one million tons of hard coal equivalent. Slow progress in the generation of electric generating capacity is another serious bottleneck, which, if it is not removed, would adversely affect future prospects for industrialisation.

So, in this context, it is interesting to study changing conceptions of industrial leadership. We are used to hearing that executives should be chosen for their qualities of leadership, that schemes for management training (or development, which is the current phrase) should endeavour to bring out the qualities of leadership, and that, though some may argue that leaders are born and not made, the characteristics of a leader can be developed in the right kind of candidate.

What are the characteristics of leadership required in an industrial organisation? There is now a controversy on this point. In the UK, the question being raised is: How is it that, when industry has been selecting its supervisors and managers for their power of leadership and has been training them to be leaders, the term "the men's leaders" is invariably used, not of the management, but of the elected officials of the trade unions?

Has selection been wrongly made? Does election rather than selection throw up the leaders? Col. Urwick, in his book "Leadership in the 20th Century", published last year, pointed out that if, when people speak of "the men's leaders", they mean trade union representatives, then there is something lacking in supervision and management.

Enquiring into the meaning of leadership in the 20th century, Col. Urwick describes two kinds of leaders: the explorer type who leads men out into the unknown, and the tribal chieftain, master craftsman or priest, whose long experience and understanding of custom and practice fits him for the task of preserving them and protecting ordinary men and women from the discomfort of change. He holds that industry should choose its leaders from the first group. Can it be said, then, that the trade union leaders are drawn from the second group by the system of election? It is certainly difficult to select the first type in the early stages of their careers, and they somehow rarely come to the top by election.

Other students of this problem, however, do not agree with Col. Urwick that industry requires the Nelson touch. They regard leadership as "a social process intimately connected with the structure of the group and the individual members who are being led." They say there is no single characteristic of leadership, but only a series of capabilities which have to be related to the particular situation:

"It would seem that the leader in any group is produced as much by the pressure of the personalities which surround him, as by his own conscious efforts, and the capacity for leadership would seem to be as integral a part of his make-up as would be a tendency to colour blindness, or an allergy to shell fish. Not all men with the natural flair emerge as leaders, but no man without it can be completely successful as a leader."

In the old days, the leaders came from a class of society with breeding and education and accustomed to giving orders. They were "men who attracted loyalty to themselves rather than to the causes which they espoused". But present democratic ideals have changed all this, and, in a society where all men are regarded as equal, the first reaction to the potential leader is one of resentment. The leader in modern society, therefore, has to realize that his authority is by consent and that people will respond to persuasion but not to dictation. His objective must be "not so much to make people do things as to make people want to do those things."

Mr William H. Whyte, Assistant Managing Editor of Fortune, after three years' research on American ideas of personnel and social values, says in his recent book, "The Organisation Man", that, if all that has been learnt so far about the industrial employee as a member of a group is to be followed to its logical conclusion, then a strong personality will be viewed with overwhelming suspicion and the ideal leader should be the "well-rounded" individual, who is reasonably extrovert and has no fixations, and whose dominant characteristic is a cheerful acceptance of the status quo. This is the man who will achieve his object, not by pushing his employees around or arguing with them, but by adjusting them. It is a matter of communications and method of approach, and adaptation to environment is more important than adaptation of environment.

This seems somehow rather discouraging, but is borne out by two recent studies in the UK. One was an enquiry into the qualities required by industry in University graduates

*Mr A. R. Cooper, Divisional Controller, N. West Division of the Central Electricity Authority.

April 26, 1958

as candidates for executive posts where it was found that leadership came very low in the list and drive lower still. The other was an enquiry into the type of executive wanted by other sections of management, and it was noticeable that personnel officers came down heavily in favour of the "well-rounded" individual rather than the "explorer" type. Commenting on this in a recent lecture at the Bengal Chamber of Commerce and Industry, Professor N. C. Hunt of Edinburgh University said he felt that industry would lose much in the future if the personnel officers' views prevailed and executives were chosen only because they were well-adapted and not likely to cause friction in the organisation. On this assumption, industry would lose the type of man who in the past had been the successful entrepreneur.

Perhaps, the answer is that we need both types, or that at different stages we need

different types, but this makes the problem of selection even more difficult. However, there is no doubt that those in charge of industry should be pondering on these things, and that the problem of leadership is equally relevant in the political as in the industrial sphere. Someone once said that, to attend a Cabinet meeting under Winston Churchill was like being a witness to a historic event, whereas Clement Attlee, though not a dominant personality, was the ideal chairman and co-ordinator of views.

Perhaps the great explorer should be followed by the adapter. Baden-Powell always said that the man to follow him as head of the Scout movement must be an entirely different personality, for, while he had initiated, his successor must co-ordinate the results. Perhaps this is the way to approach the great problem of today: Who is to follow India's first Prime Minister?

Communist Block's Trade Offensive Poses Questions

By HENRY V. BURKE

Mr Henry V. Burke is an analyst and writer on Soviet affairs. This is the second of a series of three articles on the Soviet trade offensive, in which Mr Burke has attempted a reasoned and objective analysis of the implications and significance of Russian moves in this aspect of the world economy.

PART II

HOW DEPENDABLE ARE COMMUNIST TRADE OFFERS?

A PART from questions concerning the political nature of Soviet bloc economic dealings with other nations, there is an equally basic consideration—the matter of business reliability.

This subject often arises in discussions of the many complexities involved in world trade, and the natural desire of all nations to safeguard their investments in foreign commerce.

It is perhaps significant that comment on the Soviet bloc's business record includes a definitely skeptical attitude on the part of some observers.

The widely-read Iranian newspaper Ettelaat, of Tehran, reported at the end of 1957, for example, that "the Russians are very stiff in their dealings with Iranian businessmen, and for that reason many of the Iranian merchants were reluctant to trade with them this year."

On January 22, 1958, the Ceylon Daily News found it necessary to explain that trade negotiations between the USSR and Ceylon were "deadlocked" because proposals were "tilted heavily" in Moscow's favor.

In a later comment touching on certain perils involved in long-range barter or other economic agreements with the USSR, the Times of Ceylon said past experience raised the possibility that Ceylon "would be compelled willy-nilly to accept Russian goods for which quite possibly no market could be found in this country—or to wait for long periods of time before receiving payment on the balances outstanding in our favor."

"It is also worthy of note," the Times added, "that both Burma and Indonesia have been pushed by similar considerations into modifying their earlier predilection for barter arrangements."

Burma discovered in 1955 that the barter aspects of Soviet trade pacts, particularly, can boomerang. After agreeing to exchange almost 400,000 tons of rice for Soviet bloc products, Burma soon ran into a series of formidable obstacles. Many items on the Communist "available" products list proved to be "unavailable," and it was necessary to take substitute goods in exchange for the rice.

Later it was estimated that Burma had paid from 10 to 30 per cent more for the Communist-made goods she obtained than would have been necessary in non-Communist markets.

How the cement phase of this barter deal proved almost disastrous is now a well-known story. Soviet freighters dumped some 42,000 tons of cement in Rangoon alone, filling all available warehouse space and blocking the unloading of badly needed consumer goods from other areas. Much of the cement was ruined by exposure to the elements, while Burmese efforts to halt or even slow down the Soviet deliveries were ignored by Communist representatives.

An ironic commentary on the erratic nature of Soviet economic policies was seen in reports that at the very time the USSR was flooding Burma with unwanted quantities of cement, the same commodity was virtually unobtainable in Moscow.

Meanwhile, Burma's bartered rice was being re-exported by Soviet bloc recipients in direct competition with Burma's normal trade. Communist China, in particular, took advantage of its middle-man position to profit on Burma's rice by reselling the commodity to Burma's regular customers.

The Rangoon newspaper, Nation, on February 1, 1956, reported another complaint by Burmese businessmen—that Chinese Communist suppliers often raised prices from 10 to 15 per cent after exchange terms had been signed.

As a result of these events, there was comparatively little surprise when the same Rangoon newspaper, in May of 1956, quoted Burma's Prime Minister U Nu as commenting: "A man who takes barter when he can get cash must be out of his mind."

Another warning of the hazards involved in barter arrangements with the Communist bloc was implied in the Ceylon Daily Observer's late 1957 report that products from Communist China were going begging on local markets.

Although 20,000 tons of cement had been imported from China four months before, the Observer said, no buyers could be found. The cement "was offered below cost to buyers of one thousand tons or over," the newspaper

added, "but still the establishment has no offers." At the same time, according to the Observer, there was "no difficulty in disposing of British or Japanese cement."

A January 22, 1958 news report from Bangkok quoted a delegate to the Economic Commission for Asia and the Far East (a United Nations organization) as saying he doubted that most nations would be interested in new Soviet barter proposals. This delegate based his conclusion on the widespread impression made by Burma's unhappy experience in bartering rice for cement and the Communist bloc's custom of re-exporting the goods it receives at great potential damage to its "partners" regular trade outlets.

International trade annals are full of examples casting doubt on the dependability of both Communist-made products and Soviet bloc promises.

Syrian importers, two years ago, found that a shipment of automobiles made in Communist East Germany was of such poor quality that many had to be returned. Other Syrian importers complained that when they ordered crystal glassware from Czechoslovakia they received inferior, substitute products.

In 1956, discussions of a Soviet-Netherlands trade accord included a Dutch question as to why Soviet proposals contained no provision for buying meat, cheese and butter from the Netherlands. The Soviet answer was that the USSR no longer imported such items. When confronted with evidence that the Soviet Union had just agreed to import these same commodities from Denmark, the Soviet reply indicated how political motivation can override purely business considerations. The Soviet answer was simply that, after all, the Premier of Denmark had recently paid a visit to Moscow.

In July of 1956, it was disclosed that Soviet agents were using trade channels to finance subversion in Iran. It was also brought out that the USSR was manipulating the volume of its textile and rice imports from Iran to create sharp fluctuations in the market. Iranian publisher Abbas Shahenah charged that these tactics proved "the Soviets are playing, not trading, with Iran, and this play is always at the cost of numerous merchants' bankruptcy and despair among the northern farmers."

Earlier, Greek merchants complained that their imports from the USSR had included farm and industrial machinery that proved to be of substandard quality and from five to 15 years out of date. Other items rejected as unusable included shipments of dyes, photographic equipment, radios and coal.

Afghanistan had these experiences: cement imported from the Soviet Union proved to be "mostly sand," deliveries of Soviet gasoline totalled only one-sixth of the promised volume, Soviet-made trucks proved to be 50 per cent defective and Soviet export prices, on later comparison, were found to be about one third higher than free world rates.

In 1955, Communist East Germany undertook to build 40 oil storage tanks in Sweden, getting the contract by submitting an extremely low bid. Two years later, however, only four of the tanks had been completed. Contracts for nine tanks were cancelled and Swedish firms were forced to finish 17 others in a general fiasco caused by inexperienced Communist workmanship and faulty materials.

Argentina's 1957 coal purchases provide another example of how Soviet bloc agreements sometimes work. Faced with the problem of sizeable credit balances remaining from a bloc trade agreement negotiated three years before, Argentina agreed to take 100,000 tons of Polish coal as one way of settling the account. This coal, however, was priced at \$31.50 per ton—some \$8.70 more than the cost of comparable coal then being sold in Europe at \$22.80 per ton.

Refugees Afloat

While nearly 3 million of East Bengal's displaced continue to suffer incredible hardships, the Opposition leaders go on, rather Neromically, arguing that these people must be absorbed by West Bengal and should not be sent out without their consent. This seems as wrong-headed as Dr Roy's acquiescence seems weak-kneed. Why should not these unfortunates go, for example, to Dandakaranya, where there is ample room for them and excellent opportunities can be created for their resettlement? Firstly, the population pressure on this State, with nearly 1,000 persons per square mile, is the highest in India. Secondly, if the Punjabi dishabilitated could spread all over the country, why can't those from East Bengal? It is, of course, natural that the latter should be anxious to be settled in a milieu to which they were born. But things are difficult, the country has been partitioned and an unforeseen upheaval has taken place. When the disease is desperate, only desperate remedies can do any good. Besides, if the refugees move in large numbers and the Government provide them with all the promised facilities, they ought to be able to create their own milieu. Why does the Opposition stand in the way and incite them not to take the Government assurances? By being where they now are, under the canopy of the sky and

in overcrowded hells called camps, they are being gradually devitalised and losing the power to create a new life for themselves. How long can they go on? Why should they continue to be the prey of politicians and lose everything in the process? Certainly, there is a reason for all this. And that is the Government's inability to do things quickly. The description of the resources with which Dandakaranya seems to abound is pretty attractive. If those can be tapped, new fortunes are there for all comers. But the point is that the refugees, after all their bitter experience of the past few years, can no longer pin any faith on the Government's capacity to deliver the goods. This faith must be re-created. Despite the Opposition leaders and despite the refugees themselves, the Government should push on with the Dandakaranya scheme, and if even a handful of refugees can be persuaded to go there and find that life there holds prospects of comfortable re-settlement, they will act as decoy ducks to their fellows. Then they will not be here in West Bengal merely to suffer and dance to the tune of designing politicians.

The Government seem to believe in making mistakes in a series. Dr Roy should not have yielded to the Opposition's demand not to move the refugees out of the State; and Mr Khanna has shown a peculiar pig-headedness in the Lok Sabha by maintaining that the refugees in West Bengal's camps are comfortably off. Even if we forget about the consequences of the refugees' dissatisfaction on the next general elections, sheer humanity demands that these unhappy people should not be left as they are, that they should be helped in re-establishing themselves in normal life, within West Bengal if possible, without if not. Let the Government be firm and act with confidence and speed. This alone will revive the refugees' faith in the Government's professed goodwill. Nothing else will. As days pass in idle debate or in dilly-dally, the Opposition's hold strengthen.

Disparity in freight rates

In a Memorandum issued by the Bengal Oil Mills Association to the Railway Ministry a case has been made out against the disparity existing between oils and oilseeds imported into West Bengal from up-country. The memorandum says that West Bengal, being chronically deficient in the production of oilseeds, has to depend on the UP, Punjab, Gujarat and other States for the supply of oilseeds. It is estimated that the State imports nothing less than 4 million maunds of mustard seeds alone from the above mentioned States every year. Huge quantities of linseed, groundnut and other seeds are also imported.

Along with the heavy quantities of oilseeds, West Bengal also imports very substantial quantities of finished oils from the UP. The average yearly imports of mustard

oil into West Bengal from different Stations of the UP stand nearly at 1 million maunds. Such being the position, a very serious competition exists between the oils manufactured in West Bengal and those imported from out-stations.

The Memorandum of the Association points out that, in the fitness of things, the Freight Rate Parity between oilseeds and oils should be 1:3, taking into account the basic factor that 3 maunds of seeds make one maund of oil. But, contrary to this basic pattern of the freight, the Railway authorities have been charging much lower freights for oils as compared to oilseeds. Citing an example of the disparity, the Oil Mills Association has mentioned the case of Aligarh from where large quantities of oilseeds and oils are being imported into West Bengal. Whereas the freight of 1 maund of mustard seed from Aligarh to Howrah is Rs 1-10-3, the freight on 1 maund of mustard oil imported from the same station is only Rs 2-6-5. To enable the West Bengal oil mills to compete with their counterparts situated at Aligarh, the freight rate on 1 maund of mustard oil should have been Rs 4-14-9. Thus, the oil mills of Aligarh have the opportunity of imposing a clear handicap of Rs 2-8-0 per maund of oil on the mills of West Bengal.

Fixation of an ethical freight parity between centres producing both raw materials and finished products and centres producing only finished products by importing raw materials from centres of production, has been one of the most fundamental problems before the Railway Administrations all the world over. In the interests of the industries situated at both the points, the demand for fixation of a reasonable freight parity between oilseeds and oils deserves the immediate attention of the authorities.

Sugar Statistics

It is a familiar habit with persons speaking on agricultural topics to quote comparative figures output in India and elsewhere for the edification of the audience. Whether it is output of rice, wheat, potato or dairy produce, the speaker reels off a long list of figures of production in different countries, and invariably India comes at the tail end of the list. The speakers, if they happen to be Indians, seem almost to derive a masochistic pleasure in proclaiming the low productivity of Indian agriculture. And the speech made by Mr A. P. Jain, while inaugurating the 25th annual meeting of the Indian Central Sugarcane Committee last month, was no exception. It will be understandable if students of agronomic problems, who have no direct responsibility or power to influence activities in the field, indulge in these comparisons in order to draw attention to the scope for improvement. But we expect something more than

comparative statistics from the Union Minister of Agriculture. Statistics would have been more illuminating if he had also indicated the environmental factors which prevent the average output of cane in this country from reaching the standards set elsewhere. The fact that average output in north India is only one-third of the output in the South indicates that climate and crop seasons may have something to do with such large variations. And climate cannot be made to order. Even when increased output is possible through improved techniques adopted in research institute, it does not follow that methods which satisfy certain technical standards will be economically feasible in the field. Recognition of these facts will endow official pronouncements on agricultural topics with greater realism. While Mr Jain indicated the possibility of increased output which is necessary to maintain exports, the President of the ICSC, Mr T. C. Puri, stated that 30 per cent of the total area under cane had been brought under development schemes. He was also hopeful that the Second Plan target of 78 million tons would be achieved ahead of schedule. It is satisfactory to note that yield in the areas covered by development schemes has responded to the intensive manuring programme, with increased output varying from 9 to 37 per cent. That gives a proper measure of additional yields that may be reasonably expected. It is proposed that the development schemes will cover the entire area under sugar cane by the end of the Second Plan. The work done at the Coimbatore Sugar Cane Breeding Institute and the chain of research stations will also help to increase productivity, but over a long period.

“No Inflation Worth the Name”

DEFICIT financing in 1957-58, by inferential admission of the Finance Minister, exceeded substantially the revised estimate of Rs 380 crores, and there is reason to believe that the amount may have been as large as Rs 460 crores. In this wise, within the first two years of the Plan, the total of deficit financing has amounted to Rs 700 crores. Mr Morarji Desai has also stated that, as things stand, deficit financing during the Second Plan is likely to amount to the Rs 1200 crores postulated by the Planning Commission rather than the Rs 700 crores to Rs 800 crores as indicated by Mr T. T. Krishnamachari. Undoubtedly, this assertion by the Finance Minister will let loose a fresh onslaught on the Second Plan, with the charge that deficit financing of such proportions will contribute greatly to inflationary pressures. Thus, the warning uttered by certain sections will be that, if inflation is to be avoided and if, therefore, the quantum of deficit financing is to be kept at a lower figure, Government will inevitably need to reduce the size of the Plan. It is in this background that we may examine broadly the impact of deficit financing as reflected in the monetary indicators.

Between March 1956 and March 1958, during a period when deficit financing aggregated Rs 700 crores, Active Note circulation has risen by Rs 112.49 crores to Rs 1579.13 crores. Secondly, during the same period, Deposits of Scheduled Banks have risen very steeply by Rs 428.73 crores to Rs 1479.75 crores. Also during the same period, the Advances of Scheduled Banks have gone up by Rs 201.09 crores to Rs 962.33 crores. Finally, between the end of March 1956 and the last Friday in March 1958, Investments of Scheduled Banks have increased by Rs 80.46 crores to Rs 440.36 crores. It is, thus, noteworthy that the impact of deficit financing upon Active Notes has been relatively negligible. For, a rise of Rs 112 crores is more possibly in response to and mirroring of the accelerated tempo of economic activity than any result of deficit financing as such. It may, however, be remarked that quite conceivably, expansion in Active Notes would have been much sharper were it not for the contractionary influence of the balance of payments deficit which, in the first two years of the Second Plan, was in the environs of Rs 575 crores. In broad terms, the expansion in Note circulation plus the drain in the

foreign exchange reserves are roughly equivalent to the quantum of deficit financing. It may be true to say that the deficit financing during 1956-57 and 1957-58 might have proved inflationary, except for the balance of payments deficit. It would ostensibly follow that, during the remaining three years of the Plan, the estimated deficit financing of Rs 500 crores may prove to be inflationary to the extent that the balance of payments deficit may prove to be smaller. But then, it is a safe assumption that the import surplus during the remaining three years of the Plan will certainly amount to Rs 500 crores, and will, in all probability, quite considerably exceed such a figure. In that case, it is reasonable to suggest that deficit financing even of the order of Rs 1200 crores may not substantially affect Active Notes; and, to that extent, we are unlikely to have evidence of inflation as reflected in any large increase in Note circulation.

Secondly, it is possible to suggest that deficit financing for Rs 700 crores, as reflecting steep governmental disbursements, has had more direct impact upon the Deposit resources of Scheduled Banks. As we have seen, Deposits rose by Rs 429 crores. Such a rise in Deposits could be construed either as an indication of inflation or a factor contributory to inflationary pressures. But this is to overlook the fact that very nearly 20 per cent of the increase in Deposit resources has been applied to the purchase of gilt-edged by Scheduled Banks. Thus, roughly Rs 350 crores of Deposits remain which could be inflationary in character. They could be inflationary in the sense that increased banking resources were available for credit, which could be utilised for holding up stocks or goods in short supply. In fact, Advances of the Scheduled Banks have, as we have seen, risen by Rs 200 crores. But by no stretch of imagination could this expansion in Advances be construed as having contributed to inflationary pressures. For, the selective monetary control wielded by the Reserve Bank has expressly withheld banking credit from those sectors of the economy in which there appeared to be the opportunity for speculative activity.

The index number of wholesale prices, it is true, shows some rise. With 1952-53 as base, the index has gone up from 99.2 in the last Saturday of 1955-56 to 106.1 in the last Saturday of March 1958. The rise is hardly of the order of 7 per cent, and, while we should not understate the fact that there has been some element of upward pressure on prices, it is as important to stress that neither deficit financing for Rs 700 crores nor expansion in Scheduled Bank credit for Rs 200 crores has resulted in an alarming degree of inflationary tendencies. Indeed, Mr Desai has emphasised this point, when he remarks that there has been no inflation worth the name in India. “though we have shouted very loudly about the rise in

prices”. The important thing to remember here, a point that has been reiterated stated by Indian Finance, has been given expression to by Mr Desai when he says that, with the increase in the standard of living of the Indian people, some element of price rise is inevitable. It would be worth our while to consider whether we should not indeed welcome, not a large, but a small rise in prices in the sense that such a rise would be an index of an improvement in the standard of living.

The conclusion is that, while Government must always be vigilant about the price situation, with a view to providing checks in sectors of the economy wherein a speculative pressure arises from a shortage in supplies, we need not, at the same time, worry over much about the possibility of deficit financing for Rs 1200 crores leading to run away inflation.

Deposits Again Steeply Higher

According to the returns of the Reserve Bank for April 18, there has been a contraction of Rs 10.44 crores to Rs 1627.77 crores in active Note circulation. Rupee Coin has also returned from circulation for Rs 0.24 crores, and the Reserve Bank's cash in the till is consequently marked up by Rs 10.69 crores to Rs 23.87 crores.

There is a mysterious contraction of currency for Rs 1.32 crores against Rupee Securities, with a countervailing expansion of currency against Foreign Securities. Why there should have occurred such a small adjustment under these two heads cannot easily be explained. Perhaps, the decline in Rupee Securities represents partly the debiting of interest against the expansion in Rupee Securities which occurred in the Reserve Bank's returns for April 16, when deficit financing, it is now clear, was taken recourse to for Rs 10 crores without, however, any apparent deduction of interest. Also partly, the decline under Rupee Securities may relate to the debiting of interest in connection with sales of ad hoc Treasury Bills in favour of the Reserve Bank during the week under review. For, according to the return of the Banking Department, Investments are marked up by Rs 14.20 crores at Rs 230.14 crores.

The Centre's Balances would have benefited by this deficit financing for between Rs 10 crores and Rs 15 crores. The Central Government's Deposits are, however, found to be only Rs 3.22 crores higher at Rs 52.45 crores. The drop of Rs 5.47 crores in Government of India Treasury Bills Purchased and Discounted, as shown in the assets of the Banking Department, is probably indicative of a commitment in respect of maturing bills which the Government had to meet and for purposes of which deficit financing was instituted.

Balances of State Governments are practically unchanged at Rs 13.09 crores; however, the Ways and Means Advances obtained from the Reserve Bank have risen again by Rs 4.58 crores to Rs 51.17 crores.

The member banks have substantially improved their position vis-a-vis the central banking institution. The Reserve Balances of Scheduled Banks have risen considerably by Rs 13.15 crores to Rs 90.99 crores. Since, in the relevant week, the State Bank reports an increase in Cash-in-Hand and with Reserve Bank of only Rs 2 crores odd, it is clear that the improvement in the Reserve Balances is owing mainly to the other Scheduled Banks. The indebtedness of Scheduled Banks to the Reserve Bank also appears to be reduced, with the Other Loans and Advances of the Reserve Bank declining by Rs 1.16 crores to Rs 54.37 crores. In this regard, it is noteworthy that the Reserve Bank's Advances against usage bills are lower by Rs 1.73 crores at Rs 17.33 crores. The sharp rise in the Reserve Balances would indicate that the Scheduled Banks experienced a further accretion to their Deposit resources during the week ended April 18—a week during which the State Bank, as we shall presently see, suffered a depletion in Deposits of nearly Rs 6 crores.

Finally, the import surplus is reflected in a further decline in Foreign Balances. While there has been a transfer of Rs 1.32 crores to Foreign Securities in the Issue Department, Balances Held Abroad show a drop of Rs 9.34 crores to Rs 42.48 crores. The net drain in foreign exchange resources thus amounts to Rs 8.02 crores during the week.

According to the return of the State Bank for April 18, Deposits have been marked down by Rs 5.80 crores at Rs 421.55 crores. Cash Balances, however, have improved by Rs 2.05 crores to Rs 35.73 crores. Advances are slightly lower at Rs 208.02 crores against Rs 209.35 crores. The decline in Deposits did not affect the cash position of the State Bank because Other Assets have been run down from Rs 17.80 crores to Rs 9.74 crores.

A further sharp rise in Deposit resources of Scheduled Banks is revealed in the return for April 11. With a rise of Rs 21.47 crores, Deposits are placed at Rs 1532.07 crores, and the accretions in the course of the last two weeks exceed Rs 52 crores. It is particularly noteworthy that, in the week ended April 11, the State Bank had shown a decline in Deposits of Rs 6.90 crores. It is thus clear that Deposits of other Scheduled Banks rose in the relevant week by over Rs 28 crores. This has enabled the Scheduled Banks to reduce borrowings from the State Bank to a figure of Rs 8.77 crores from Rs 11.31 crores. Furthermore, indebtedness to the Reserve Bank has been very sharply cut by Rs 15.78 crores to Rs 22.16 crores. This figure of

Rs 22.16 crores contrasts with indebtedness to the Reserve Bank, in the corresponding week of last year, at Rs 80.94 crores. Besides, the Scheduled Banks have added to their Cash Balances by Rs 4.64 crores to Rs 185.02 crores. Lastly, there appears to be evidence of the abatement of the busy season, since Advances are lower by Rs 7.21 crores at Rs 962.20 crores. This is the first decline in Advances which has occurred during the currency of the 1957-58 busy season. However, we should warn against any facile assumption that the decline in Advances in the latest week is proof positive of the relaxation of the busy season's rigours. In the 1956-57 busy season, the Advances of the Scheduled Banks marked a decline—though a small one—in the week ended April 19, 1957. But, thereafter, Advances showed a rising trend for the next five weeks, until the peak of Advances was touched during the week ended May 24.

Hind Bank

In its accounts for 1957, the Hind Bank has reported a small decline in Deposits from Rs 5.12 crores to Rs 5.06 crores. A similar decline is marked by Advances, which have fallen from Rs 3.49 crores to Rs 3.43 crores. Investments are placed at Rs 1.18 crores against Rs 1.28 crores. Cash Balances are shown at Rs 1.27 crores against Rs 1.14 crores.

According to the profit and loss account, the income by interest and discount is lower at Rs 23.13 lakhs against Rs 24.21 lakhs. Commission, Exchange and Brokerage have also fetched less at Rs 9.13 lakhs against Rs 11.35 lakhs. On the other side of the ledger, interest paid is practically unchanged at Rs 12.02 lakhs; Salaries and Allowances have moved up slightly to Rs 8.85 lakhs from Rs 8.80 lakhs.

In the result, the balance of profit stands reduced to Rs 7.61 lakhs from Rs 12.11 lakhs. The provision for taxation is reduced to Rs 2.65 lakhs from Rs 4.50 lakhs. The transfer to Reserve Fund is Rs 2 lakhs lower at Rs 1.75 lakhs. Bonus to staff, however, is placed higher at Rs 95,000 against Rs 90,000. The dividend, unchanged at Rs 3 per share, absorbs Rs 3 lakhs, and the amount carried forward is Rs 84,485 against Rs 1.62 lakhs brought in.

Socialist Attitude Towards Sterling

Paul Einzig

THE interest aroused in the country by Mr. Heathcoat Amory's first Budget on April 15 was overshadowed two days later by the disastrous rout of the Conservative Party at the London County Council election. The losing party at local elections usually argues that results at such elections are influenced by local considerations and do not reflect the country's attitude towards the Government of the day. Nevertheless, such a landslide as

occurred in London and, to a more or less extent, in other countries, must be regarded as an indication of the political trend. It is true, the general election is not imminent. Mr Amory's Budget is certainly not an electioneering Budget. It is evidently the Government's intention to have at least one other Budget before Parliament is dissolved, so that there will be an opportunity for making a bid for popularity by means of appropriate tax concessions. Even so, the outcome of the local elections cast gloom over business circles. The Stock Exchange boomlet resulting from the reduction of the tax on distributed profits from 30 to 10 per cent was nipped in the bud. Which is perhaps as well, because any evidence of big profits made by investors and speculators on a rise in equities would not make it any easier to settle the wage disputes on reasonable terms.

That profits tax concession was in any case a mistake—one of the many mistakes made by Mr Amory in his very first Budget. The replacement of the rate of 30 per cent on distributed profits and of the rate of 3 per cent on undistributed profits by uniform rate of 10 per cent would have been the correct measure in an ideal world, but it was a grave error of judgment in our existing world. Trade unions which were hoping for some face-saving device to enable them to retreat without loss of dignity regard it as an act of provocation. Since it is bound to lead to a number of dividend increases it will be much more difficult to persuade the unions to restrain wage demands.

The Budget is inflationary also because it deliberately increases the Budgetary deficit through various tax concessions amounting to £50 million. That amount is admittedly not excessive; indeed most people think Mr Amory could and should have given away much more revenue. But it is a legitimate argument to say that a Government which preaches disinflation on the ground that the time has not yet arrived for a reversal of its economic policy should not have incurred an additional deficit even to the moderate amount of £50 million.

Perhaps the most deplorable mistake made by the new and inexperienced Chancellor of the Exchequer was the decision to issue new Defence 5 per cent Bonds repayable in seven years at 103, the premium of 3 per cent being free of tax. This new Bond gives a yield of about 5½ per cent—even more for investors in the higher income groups—which is quite unnecessarily generous. It greatly reduced the chances of a further rise in the gilt-edged market, and it will force local authorities to continue to pay 5½ per cent, and even 6 per cent on their new loans. The only conceivable reason for giving such expensive terms is that the Government is anxious to show a spectacular increase in the figures of savings. Yet Defence Bonds are not usually held by workers; they are favoured by upper middle-class investors.

The high interest will attract very little genuine new saving. All that will happen is that investors will switch into the new Bonds from other forms of Government loans they already hold. The same will happen as a result of the increase from £600 to £1,000 of the maximum permissible individual holdings of the tax-free Saving Certificates. These measures will certainly not induce many individuals to refrain from spending in order to save more. All they will do is to increase the published figure of new savings. This may be considered useful and necessary for propaganda purposes abroad, to impress opinion overseas about the degree of improvement in the economic situation. But to the extent to which this effort is successful it will further increase the difficulty of inducing the trade unions to adopt a reasonable attitude. They are sure to argue that if such a high proportion of the increased wage incomes is neutralised by an increase in savings then wage increases could not after all be so inflationary. It will be difficult to convince them that the increased savings represent middle class money and not even new savings at that.

Mr Harold Wilson, Chancellor of the Exchequer-designate to the next Labour Government made a solemn declaration that the defence of sterling has first priority in the Labour Party's programme. This is certainly a change of attitude, for until recently the official line was that full employment must be given first priority. The explanation of the change lies in the realisation of the danger of a sweeping flight from the pound on the eve of the next general election, in anticipation of a Socialist victory. Remembering the experience of 1931, Socialists are doubtless aware that such a flight might induce many people to vote Conservative. It is, therefore, to the interests of the Labour Party to make an effort to discourage such a flight, even if in doing so it assists the Conservative Government in the defence of sterling.

Since in this instance Party considerations happen to be identical with patriotic considerations, there is no reason to doubt the sincerity of the Socialist attitude. But its practical effect in preventing a run on the pound on the eve of the general election is likely to be negligible. After all, the Socialist Government devalued sterling in 1949, after having declared many times its determination to maintain the parities. And even if the next Socialist Government should be genuinely determined to defend sterling, its inflationary policies are bound to result in a devaluation eventually. It would be a different matter if Mr Wilson's declaration of the prior claim for sterling's defence had been accompanied by a renunciation of the inflationary policies of the Socialist Party. But in this respect there is no change of policy.

The Labour Party is as strongly against credit restrictions as ever. All Socialist speakers during the debate advocated a resumption of

economic expansion regardless of its inflationary effects. They all refrained from saying anything that might be interpreted as disapproval of wage demands in excess of increase in productivity. The Labour Party has not abandoned or reduced its ambitious plans for increased public expenditure, especially on capital projects. The private sector of the economy, too, would be pressed to increase investment expenditure under a Socialist Government. On the basis of such policies the Socialists' newly found faith in sterling's priority is not likely to impress many people abroad about a Socialist Government's ability to defend sterling.

Evidently there are two conflicting attitudes. Socialists still feel that there must be full employment and expansion even at the cost of inflation. Conservatives feel that inflation must be stopped even at the cost of economic stagnation and a moderate degree of unemployment. It did not occur to any speakers on either side that there is a third alternative. If only the trade unions could be persuaded to agree to the principle that the extent of wage increases in any one year must not exceed the increases in productivity during the previous year, it would be possible for the Government to remove immediately any credit restrictions and to encourage the maximum of expansion without running the risk of inflation. This is true not only for Great Britain but also for the United States and other industrial countries.

The trade unions could remove the danger of increased unemployment by accepting the formula of confining wage increases to within the limits set by increases in productivity. But unfortunately trade unions are more interested in trying to increase labour's share in the output of goods than in making it possible to increase the total output. In the absence of the disinflationary measures forced on the Government by excessive wage increases, it would have been possible in Britain to raise the standard of living of the worker by at least ten per cent during the last two years, as a result of an increase in the output. As it is, money wages have increased by far more than ten per cent, but most of it has been cancelled out by the rise in prices caused by the unearned wage increases, so that the standard of living of the workers advanced only slightly duly.

But no trade unionist would ever admit these obvious facts. All they are concerned with is to secure the maximum of increases in money wages at the expense of the rest of the community which has to bear the consequences of the resulting increase in prices. So long as this is the labour attitude, the alternative solution indicated above remains impossible, and the choice will continue to rest between expansion at the cost of inflation and stability at the cost of stagnation. And since the former policy is more popular the chances of the Conservative Government to survive the next general election must be regarded as negligible. —Copyright.

Raw Jute Supply

THE jute markets have been somewhat subdued during the past week. Barring the hessian section which has maintained a steady undertone, the other sections of the market have displayed an easier trend. The comparative steadiness of hessian is of course due to its good statistical position, and the better enquiries for this category of goods from foreign countries.

It would appear that the sagging tendency that has characterised trading during the past week has largely stemmed from the weakness of the raw jute market. Following news of favourable weather conditions in the jute growing areas, sellers of raw jute have become keen for business. A contributory factor to the offerings at a lower price level has been the larger arrivals of raw jute into Calcutta and Mill stations during March as compared with the corresponding month of the previous year.

Raw jute arrivals during the last month totalled 494,100 bales as compared with 554,000 bales in February and 481,000 bales in the corresponding month of the previous year. Arrivals from Pakistan during the last month have amounted to only 18,700 bales as against 21,000 bales in February and 40,000 bales during March 1957. Though arrivals of raw jute of Indian origin at 475,400 bales are lower when compared with the previous month, they are higher as compared with the corresponding month of the previous year when such arrivals totalled only 441,000 bales. During the period July-March 1958 a total quantity of 5,081,100 bales of jute has reached Calcutta and Mill stations made up of 4,559,400 bales of Indian jute and 521,700 bales of jute of Pakistani origin. Such arrivals during July-March 1957 amounted to 5,111,000 bales comprising 4,585,000 bales of Indian origin jute and 526,000 bales Pakistani.

According to official estimates, production of raw jute and mesta during the current season is placed at 5,254,000 bales. Production of mesta at 1,166,000 bales shows a decline of 245,000 bales as compared with the previous season. Thus the total availability of jute and mesta of Indian origin amounts to approximately 70 lakh bales (Indian production plus Mills' opening stocks and Indian carryforward). So far this year raw jute to the tune of about 5 lakh bales has been received from Pakistan. This will raise the total availability of raw jute in the country to 75 lakh bales. As against this the total demand during the period is placed at 64.2 lakh bales. These calculations have not included the quantity of raw

jute that may be received from Pakistan during the last three months of the current season.

After a steady opening the jute goods market turned quiet especially around the sacking section. The hessian section ruled comparatively steadier. In the absence of fresh foreign enquiries the market had been solely under the influence of news regarding the new jute crop. Reports from most jute growing areas indicated that weather conditions had turned favourable for preparations for the new crop, and consequently sellers in the raw jute section were obliged to discount rates. With raw jute prices declining higher price levels could not be held in the goods section. B Twills which was quoting at Rs 103.60 at the beginning of the week came down to be finally placed at Rs 100.75 at close on Wednesday. Hessian 40"×10 Oz after quoting around Rs 41.40 in the first half also developed a sagging tendency toward close to be done at Rs 41.12.

Despatches of jute goods during March totalled 86,000 tons as compared with 85,800 tons during the previous month and 84,000 tons during the corresponding month of the previous year. The slight increase in despatches is due to an improvement in internal offtake which accounted for 20,465 tons during March as against 18,400 tons in February. Exports are lower at 65,535 tons as against 67,400 tons in the previous month. Of exports, hessian has recorded an increase from 30,800 tons to 31,267 tons while sacking has shown a decline from 35,300 tons to 32,757 tons. Of the total internal offtake, both categories show an improvement with hessian at 2,257 tons and sacking at 15,794 tons.

The jute goods market opened on Thursday on a steady note following reports of further foreign inquiries but eased off toward close on profit-taking to close quietly steady as follows. Hessian 40"×10 Ready Rs 41.45 and B Twills Rs 103.60. The undertone was again quiet on Friday and prices continued to display a sagging tendency. The sacking section was particularly depressed. Hessian 40"×10 oz Ready was fractionally lower at Rs 41.40 while B Twills declined rather sharply to Rs 102.85. B Twills staged a recovery on Saturday but otherwise conditions were generally unchanged. Hessian 40"×10 oz Ready was unchanged at Rs 41.40 B Twills however rallied to close at Rs 103.20. Reopening on Tuesday after the holidays the market displayed a firm undertone in earlier dealings. But in the absence of follow-through support and on reports of favourable weather conditions in most jute growing areas prices in later dealings declined sharply. While hessian 40"×10 oz ready did not suffer much damage as it closed at Rs 41.20, B Twills Ready recorded a steep fall to Rs 101.45. The reactionary trend gained further momentum on Wednesday as foreign enquiries continued to be conspicuous by their absence. Hessian 40"×10 oz Ready thus closed the week at Rs 41.12 and B Twills at Rs 100.75.

Production Forecast

DISCUSSING the outlook for Tea in an interesting section of their monthly review, Messrs Carritt Moran & Company (Private) Limited, a well-known firm of tea brokers, have stated that, although world tea markets were depressed in the 1957 season due to increased supplies, the new season's crop would come to a market, which would be short of tea. While the overall crop from India in 1957 showed little change from the previous season, production from Ceylon made a further substantial increase and increased quantities of tea, largely in the Common category, reached the London auctions from a number of countries, such as Iran and Argentina.

The review adds that, with the continuing expansion of tea growing in East Africa and new ventures in Mauritius, the Cameroons and other places, tea production appear to be increasing faster than world consumption and the existence of common tea producers in India, whose position was already marginal, appears problematical in the absence of any agreement between the larger producing countries for the regulation, not only of exports but also of further expansion in planting.

While this overall picture may thus appear depressing, the review states, that there are some more hopeful aspects. Taking into account the disturbed conditions in Indonesia, it seems reasonable to forecast that there will be no increase in world tea crops during the year. In this event, world consumption may well be in close balance with production during 1958-59 as there are indications that the large crop of 1957 will not have to be added to world stocks.

No Export Sale was held in Calcutta this week. The final clearing-up sale will be held on the 28th April.

In the Internal Sale, offerings were 20,466 package of Dusts. There was a strong general demand and price for most sorts were firm to dearer. Towards the close, however, some descriptions tended to be slightly easier. Clean leafy orthodox types were the strongest feature of the sale and their prices showed an advance of 6 to 10 nP per pound, while others, in this category, were generally sold 4 to 6 nP above valuations.

The very best CTC types and Medium descriptions with useful liquors were in good demand but the remainder tended to be easier. Following rates were quoted:—Medium Dooars Dust Rs 1.64 to Rs 1.68; Medium Assam Grainy

Dust Rs 1.68; Medium Assam CTC Dust Rs 1.90 to Rs 2.10 and Best Assam CTC Dust Rs 2.80 to Rs 3.10 (nominal).

Also, 4,416 packages of Leaf grades were offered for internal consumption. These met with a good general demand and most sorts were generally firm and often dearer.

In the Export Quota section, there were buyers of Special Export Licence at 2½ nP; but sellers were not interested below 3½ nP per pound. Business was done in Non-transferable Shipping Licence at 3½ nP. Towards the close, however, the rate declined to 3 nP per pound.

In the Cochin market, twenty-two lakh pounds were offered for export. Quality showed a phenomenal decline; but there was still a useful selection on offer. The sale opened with a limited demand from the exporters and the demand lessened considerably as the sale progressed. Low Medium descriptions declined by 15 to 20 nP per pound with good medium and medium teas declining by 20 to 30 nP. The best liquoring teas were sold at rates up to one rupee per pound lower than last price. Whole Leaf grades met with less competition and were quoted 15 to 20 nP per pound easier than in the previous week.

In the Colombo market, there was a good general demand for all better liquoring teas. There was an active demand for Nuwara Eliya teas at dearer rates. Among high-grown teas, top quality Broken were irregular following quality. There was, however, strong demand for medium-grown teas. Best Broken were fully firm; but those below the best were generally 5 to 10 cents per pound dearer. There was slightly less demand for low-grown teas.

In London auction, offerings were 23,162 packages, including 12,379 packages of Northern India teas. Bidding was again brisk and the market for all teas with colour was dearer. Buyers were more selective than of late and were willing to pay for the better quality types. Dooars generally met with a firm market and again the better autumnal teas were commanding the best prices. There was no plain tea on offer and the rate for these types were nominally quoted 3sh 6d per pound.

Tea stocks in London, as on the 11th April, were 137.17 million pounds as compared to 136.36 million pounds in the previous week. The total quantity to be landed on the same date was 7.50 million pounds. Deliveries totalled 9.13 million pounds and landings 16.46 million pounds. Total afloat was 36.71 million pounds including from Calcutta 21.43 million pounds; from Chittagong 168,520 pounds; from Cochin 2.97 million pounds; from Colombo 10.50 million pounds and from other Ports 1.64 million pounds. The average price realised, at the auction during the week ended 11th April, was 57.02d per pound as against 55.42d in the previous week and 43.08d a year ago.

Ferro-manganese Plant at Joda

THE inauguration of the Ferro-manganese Plant at Joda, in Keonjhar District in Orissa, is important in more respects than one. The completion of the plant ahead of schedule has been made possible by the hearty cooperation between the public and the private sectors. In his welcome address, Sir Jehangir Ghandy has acknowledged the assistance received from the Hirakud dam authorities, the local officials and the Railways. The area where the plant is situated had no rail, telegraph or postal communications. The Railways not only agreed to build an 18-mile link from Dangaposi, but also went to work in right earnest so as to complete it simultaneously with the work on the plant. The Hirakud dam authorities "went out of their way to expedite the transmission line that brings power to this plant." The assistance of the State Government and the local authorities was continually available before and during the construction of the plant. The State Government are constructing an all-weather road which will be a valuable supplement to the railway and be a safeguard against the uncertainties of a newly built railway line. This picture of cooperation in actual working is in refreshing contrast to the tiresome verbal warfare indulged in by the spokesmen of the private and public sectors. It also strengthens the hope that the mixed economy will be successful in delivering the goods in terms of the Plan targets, provided the task is approached without mutual recrimination. "The leadership in India," as Dr Mahatab, the Chief Minister of Orissa, has pointed out in his inaugural address, "is not obstinate enough to think only of ideologies; its aim is quick national development."

Though India is a leading producer of manganese ore, the bulk of it is exported. Only a small quantity is converted into ferro-manganese at the two steel plants for their own use. The product made in the blast furnaces is not readily acceptable in foreign markets on account of its comparatively low manganese content and high proportion of phosphorus. With the availability of cheap electric power, it has become practicable to manufacture ferro-manganese for export, opening the way to larger export earnings. The Second Plan has set a target of 160,000 tons of ferro-manganese of which 60,000 tons will be needed for internal consumption, leaving 100,000 tons

available for export. Exports of ferro-manganese of this order are expected to bring in Rs 9 crores in foreign exchange. Exports of ore will also continue in addition to exports of ferro-manganese. At present, about a million tons of ore valued at Rs 10 crores are exported every year.

In connection with the exports of ore, Sir Jehangir has drawn attention to the need for conservation of high grade ores. Until a process for beneficiation of low grade ores is developed, it will be necessary to conserve the reserves of high grade ore required by the ferro-manganese industry. This question of conservation is of some urgency as deposits of high grade ores are limited; in Orissa, 50 per cent of the ore has a manganese content of 30 per cent or less. While investigations in the use of low grade ores and their upgrading through beneficiation, which will be useful both to exporters as well as to the ferro-manganese industry, are being pursued, it will also be necessary to intensify systematic exploration for locating new deposits. Exploration of minerals is a field in which there is scope for pooling the resources of the public and private sectors so as to speed the progress. Though distinct regions have been marked out for the public sector and private sector, Government, as the State Governor pointed out in his address to the Assembly, are willing to associate private firms in the exploitation of minerals in the regions reserved for the public sector. Metallurgical industries could not function without the assurance of continued supplies of raw materials for a number of years. Sir Jehangir has drawn attention to the claims of these industries to special consideration in the matter of grant of mining leases.

Tatas have for long been pioneers in the field of metallurgical enterprise. It was the Tata Steel Works at Jamshedpur which first manufactured ferro-manganese in India in 1915. It is, therefore, no surprise that Tatas have again set up a new record by being first in the field to establish a plant in India to manufacture ferro-manganese by use of the electric process. The Joda plant at present has two 9,000 kVA electric furnaces capable of processing 13 tons of raw materials, (ore, coke and limestone,) every hour into four tons of ferro-manganese. Forming part of Tata Steel's Rs 120 crore project to raise steel output to two million tons, the Joda plant has been erected at a total cost of Rs 17.5 million, of which the foreign exchange component amounted to Rs 7 million. The plant provides employment to 150 men. It is certainly a matter for gratification that, in spite of the numerous difficulties of establishing an industrial plant in an out of the way place ill-served with communications, its erection by an Indian firm of consulting engineers, Messrs M. N. Dastur and Sons, has been completed ahead of schedule.

US Notes

Statistics, it has been said, can be interpreted in many ways. And the latest government figures on the employment situation in the United States—those for March—certainly fit this time-worn adage.

For they show a sizable increase in employment as well as a negligible increase in unemployment, and are thus cited to prove either that the economic situation is improving or that it is worsening, depending on how you look at the statistics.

The figures themselves appear to be somewhat on the optimistic side. Employment rose 323,000 during March to a total of more than 62.3 million, while unemployment rose only 25,000 to hold about level at 5.2 million. Thus, the economy showed a marked ability nearly all the new jobseekers that usually swell the labour force at this time of year.

The March employment rise was by far the smallest month-to-month increase since the number of persons out of work began increasing last November. On the employment side, March was the first month since last October in which the number of persons gainfully employed showed any increase.

On the other hand—and this is where some of the differences in interpretation come in—employment usually rises noticeably in March, and unemployment usually declines. Thus, on a seasonally adjusted basis, the job picture is not quite as bright as the figures seem to indicate.

In addition, the increase in employment stemmed largely from a seasonal rise in agricultural jobs. Most categories of non-agricultural employment were down from February, with the number of manufacturing jobs showing the greatest decline.

It should be noted, however, that the decline in manufacturing employment is not exactly new. It has, in fact, been going on for some fifteen months straight, in good times and bad. March factory lay-offs, moreover, were centered mainly in the automobile, machinery and metals industries. Non-durable goods industries showed a much more moderate employment dip, with nearly half of it attributable to a brief strike in the garment industry.

This seems to substantiate the view that the economic adjustment has so far been concentrated to a large degree in certain manufacturing sectors, and some major areas of employment have been affected only slightly, if at all.

A look at the year-to-year employment picture appears to reinforce this view. Total non-farm

employment this past March was down only 1.75 million, or 3.5 per cent, from March a year ago, when the country was at the height of its prosperity. Nearly three-fourths of this decline—1.25 million jobs—was in the durable goods manufacturing industries. Such fields as wholesale and service trades, finance, insurance, real estate and government, actually have experienced increases in employment over the year. Interestingly enough, these were among the areas showing employment gains last month.

Those seeking comfort from the past recall that in only one other post-war year did the number of jobless rise during March. That was in 1954, also a year of economic adjustment. Only a few short months later, by the middle of 1954, the economy was showing unmistakable signs of resurgence.

This does not mean that exactly the same pattern will apply this year. The 1958 dip has been somewhat deeper than that of 1954. But it does point to the strong possibility of an upward movement in the not-too-distant future.

If one wishes to take an even longer-range view, there is this further evidence of sustained US economic growth. Over the past two decades, the US population has climbed rather steeply, from 139 million in 1938 to 173 million today—a rise of 33 per cent. But during the same period, total employment has climbed from 44 million to more than 62 million—a rise of forty per cent.

The Rockefeller Brothers Fund, a prominent private American study group, says the growth potential of the American economy should double real wages in the next 30 years and make possible a "tremendous advance in human welfare."

The study group, in a recent report said American public spending for education, social insurance and health, and for such projects as new housing, water supplies and highways will probably double in the next ten years.

The report, the second in a series of important national questions, was entitled: "The Challenge to America: Its Economic and Social Aspects." The panel that wrote it was headed by Thomas B. McCabe, former Chairman of the Federal Reserve Board and now President of the Scott Paper Company.

The study expressed confidence in the nation's ability to cope with the current downturn and then to plan for the future in a way that would take fullest advantage of the basic dynamism of the American system.

Selecting the next ten years as a base, the report outlines what the nation might expect from creative leadership and broad scale planning.

The group's findings coincided with a Commerce Department report showing that the average family income last year was more than \$6,100—nearly 50 per cent higher than ten years ago. The Department noted that the rise in living costs in the ten-year period made the real income increase about 20 per cent.

INDIA & PAKISTAN

IN the last three gossips, my endeavour was to reassess the extent of external resources available for the purposes of the Plan. This week, I shall try to examine the question of internal resources. The picture that emerges at the end of scrutiny of the relevant figures is more cheerful than is allowed (or realised) by those who have been arguing that our economy is bursting at the seams because of the impossible demands made by the Plan. In other words, a study of the figures reveals that the likely resources in the shape of taxes, borrowings, funds from other budgetary sources and from estimated deficit financing are much more than what is estimated to be the needs of the Plan. So, unless there has been a gross underestimate of the Plan, or something catastrophic happens, the present worry about the Plan failing for lack of internal resources will prove to be unfounded.

Let us consider the figures. The Second Plan's original estimate of total outlay on the Plan was Rs 4800 crores. This was later felt to be an underestimate and, in November 1956, Indian Finance estimated the cost at Rs 5200 crores. A more recent estimate of the cost has been around the figure of Rs 5400 crores for the whole of the original Plan. But the Plan has shed some of its original projects and it has, finally, been decided that the Plan is to cost no more than Rs 4800 crores. Let us not waste our time discussing whether this reduction in the target of the Plan expenditure was justified or not, since such a discussion would be merely academic. Instead, let us attempt the more practical task of trying to see how we are to find the Rs 4800 crores needed for the pruned Plan.

As you will recall, the Plan itself had given a rough indication of its own financial expectations from various sources. Since the financial targets for the original Plan and the pruned Plan are the same, we could profitably begin with the Planning Commission's anticipation in the matter of resources. Briefly, the Planning Commission hoped to finance the Plan in the following way: (i) Surplus from current revenues: Rs 800 crores. (Of this Rs 350 crores

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

expected to be the surplus from the then existing taxes at the rates for 1955-56, and Rs 450 crores were to come from additional taxes). (ii) Public borrowings: Rs 1200 crores (of which small savings would account for Rs 500 crores). (iii) Other budgetary sources like surplus from Railways and Provident Funds, etc.: Rs 400 crores. (iv) Resources to be raised externally: Rs 800 crores. (v) Deficit financing: Rs 1200 crores. This left a final gap of Rs 400 crores to be covered by internal resources.

The present position, however, is somewhat different. The Plan itself is to cost Rs 4800 crores, of which the foreign exchange content is, as indicated in the earlier gossips, to be Rs 1500 crores. I have already shown how this part of the Plan's needs is abundantly provided for. We are, therefore, left with the finding of Rs 3300 crores internally. You will notice that the final effort for procuring internal resources is thus less than what the Plan originally estimated. For, what we have to get from internal sources is only Rs 3300 crores against the Plan's estimate of Rs 4000 crores. The question is whether we can and should achieve this modest figure.

The last sentence refers not only to our ability but also to our obligation of obtaining the necessary internal resources for a very good reason. And that is that we owe it to our self respect to make the maximum effort by ourselves before we ask and deserve the foreign assistance we require for the Plan. I know I have been saying this over and over again, and only last week I said it in the context of Export Promotion. But there is really no getting away from that obligation, and I for one would like to remember it all the time. Even apart from the moral obligation in the matter, no foreign Government would be interested in a Government that does nothing by itself for obtaining the maximum resources from within.

On the question of our ability to achieve the target for internal resources, the present position would appear to be as follows. I shall presently explain how the figures are arrived at, but the

overall picture is somewhat like this:

	In crores Rs
(i) Receipts from additional taxes by the Union Government. (This does not include increased yield from taxes already in existence in 1955-56 estimated by the Plan at Rs 350 crores)	703
(ii) Market borrowings (both Union and State Governments) and small savings on the basis of the annual average for the last two years (Gross Rs 1225 crores) net	825
(iii) Other budgetary resources. As per Plan's estimate	400
(iv) Deficit Financing according to Mr Morarji Desai's recent statement	1200
(v) Counterpart Funds in respect of certain projects available for Rupee capital—an estimate	300
Total	3428

This reckoning needs a number of amplifications. In the first place, this is the minimum expectation we can have in many of the heads under which the expectations have been tabulated. Under the head taxes, for instance, no credit has been taken for the surplus from taxes that existed at the beginning of the Plan at the rates then prevailing. Secondly, no credit has been taken for tax efforts by the States, the yield from which the Planning Commission put at Rs 225 crores. And, thirdly, the figures of market borrowings given above are on the basis of the admittedly disappointing performance of the last two years. This depressing performance has been, in my oft repeated view, due to faulty strategy in borrowing. In any case, with phenomenal increase in funds that are more or less statutorily to be invested in gilt-edged (like a portion of Scheduled Bank Deposits, insurance funds and provident fund accumulations) the estimate of market borrowings has to be far higher than what is indicated in the table above. I shall deal with this aspect of the matter in detail

ATLAS

on a subsequent occasion, but I think the gross loan expectation should be nothing less than Rs 1600 crores leaving a net figure of Rs 1200 crores (this includes small savings of Rs 500 crores). Taking into account the additional factors, the situation will be as follows:

	In crores Rs
Union Government additional taxes	703
Surplus at 1955-56 rates as per Planning Commission	350
Market borrowing (gross Rs 1600 crores) net	1200
Other budgetary sources	500
Deficit Financing	1200
Counterpart Funds, etc.	300
Total	4253

So, against estimated requirements of Rs 3300 crores we have, on the above basis, funds to the tune of Rs 4253 crores. This, again, does not take into account the tax effort by the States. If this indeed is the position, why should there be any disquietude about resources? On the other hand, the prospect of availability of nearly a thousand crores over what we need, should make it possible for us to keep deficit financing at the level of Rs 700 crores suggested by Indian Finance. This will have to be done in the later period of the Plan by the technique of reverse ad hoc. And even when the deficit financing is pegged down at Rs 700 crores, we shall still have "found" internal resources in excess of "requirements" to the extent of approximately Rs 450 crores. Therefore, there is really no need for all this flurry about resources. Indeed, this prospect of excess should make us think whether incentive for greater effort should not be provided by giving appropriate relief in taxation.

As a matter of fact, it seems to me that those people who are urging upon Government the need for lessening tax burdens are employing the wrong strategy and the wrong kind of arguments. Most of the people who complain of heavy taxation are also people who say that the Plan is too ambitious and the resources for the Plan cannot be found. This they say, presumably with the object of persuading the Government to give up some of the tasks of the Plan, so that, with much less to perform, the burdens

on them can be correspondingly reduced. But this is a strategy that is sure to misfire in the circumstances in which we are placed. For certain reasons, the Plan is "sacrosanct", in the sense that it is the minimum we can attempt. And it is no use ridiculing that idea: we "must" find the resources for it. If that position is accepted, then the Government will say that we must find the money willynilly and, therefore, even on your own showing, the tax burden cannot be lightened. On the other hand, you have greater chance of convincing

the Government, if you couch your arguments in these terms:

"Far from not having the money you need, you have more than you know what to do with. Indeed, it would appear, on Indian Finance's figures, that you have about Rs 450 crores more than you need. If you streamline your tax machinery and collect all the money that is being evaded, you will not even need the extra taxes. In any case, here is a clear case of your budgeting for more than you need. Why don't you ease up a bit and

let us keep the money you don't need? We have a hundred uses for it, whereas you have none. Indeed, we can even offer it for your own use. For instance, we may voluntarily invest it in gilt-edged about which you yourself are so chicken-hearted. Or we may invest it in our own business from whose extra profits you will have your due share."

Put this way, it appears to me that the case for reduction in the tax burden is irresistible. It is bad strategy to put off a man who is

having false hunger at midnight by telling him that he is not likely to get anything to eat at that hour. That will only add to his frustration. It should be explained to him that, only an hour earlier, the doctor had diagnosed his trouble as due to overeating. If that is done, he may after all be convinced that this is a false malady.

In any case, one thing is clear. The worst of the tax nightmare is over. It is quite inconceivable that Government should have further levies up their sleeve. Let us consider the figures again. 1956-57 Budget's new taxes were estimated to yield extra revenue of Rs 34 crores annually. This means a total of Rs 170 crores for the Plan period. Mr Krishnamachari's Mid-1956 excise levies and customs duties are expected to yield, for the Plan period, Rs 195 crores. (This is after taking into account the reductions recently announced.) New levies of the 1957-58 Budget were expected to yield an annual revenue of Rs 80 crores which means a total of Rs 320 crores for the Plan period. Mr Nehru's Budget for the year 1958-59 let us all off lightly with the mere Rs 6 crores annually. This means a total of Rs 18 crores for the Plan period. All this adds up to the figure of Rs 703 crores in the table. In the light of what has been said earlier, there is no need whatever for any fresh levy in the rest of the Plan period. On the other hand, there is a case for an intelligent readjustment of the tax burden so that incentive for greater production may be created among the public.

In his second speech as Managing Director of Dunlops, Mr John Luckham was in a position to give continued good news to the shareholders at the annual general meeting of the company. At a time when some industries are complaining of supplies overtaking demand, Mr Luckham could assert that, in spite of increased production in nearly all lines, "we were not able to meet the demand for all products." In keeping with the progress charted out in the Second Plan, Dunlops can claim to have installed plant for the manufacture of large earthmover type tyres; and production has commenced. Work at the new factory at Ambattur is making satisfactory progress, and "everything" is expected to be ready for production to commence at the beginning of next year. Expansion is also the keyword at Sahaganj. The rights issue during the year was "an unqualified success". The best news for shareholders is that the profit has risen sharply by nearly Rs 25½ lakhs to Rs 80.67 lakhs. Since profits have to be conserved for the expansion programme, a transfer of Rs 30 lakhs has been made to the general reserve. But the shareholder also participates in Dunlops' prosperity: the ordinary dividend, which has been maintained at 15 per cent from 1951, has been stepped up to 16½ per cent.

EAVESDROPPEN

in a valley called Joda

Amid the silence of the Joda hills in the Keonjhar district of Orissa, a Rs. 17.5 million plant has gone into operation to produce ferro-manganese—a vital requirement in steel-making.

Served by an 18-mile rail link just completed, and power from Hirakud, this new plant starts with an initial capacity of 36,000 tons a year, to be stepped up by stages to 100,000 tons.

This plant has been speeded to completion eight months ahead of schedule, thanks to the invaluable assistance received from the State Government, the Hirakud Dam project and the Railways.

Life in the little-known village of Joda has turned a new chapter, reflecting the increasing importance of ferro-manganese as India strives towards a four-fold increase in steel capacity.

TATA STEEL

ON TO TWO MILLION TONS

Joda Ferro-Alloys Private Limited
(a subsidiary of The Tata Iron & Steel Co., Ltd.)

TN 2027

SIR HOMI MODY was in rare form when, recently, he addressed the members of the Federation of Indian Chambers of Commerce and Industry at a luncheon meeting held in the Gateway city. There was wry humour, for such of his audience as possessed a sense of humour. (Alas! business is getting these days so businesslike, that a good deal of the sparkling wit no longer is to be found). There was acidulous comment, for such of those who hoped to hear forthright criticism of Government policies. (I fear the greater part of those listening fitted into this category). Finally, there a sharp-tongued denunciation of the black sheep in the fold, and it is to be hoped there were at least a few who welcomed Sir Homi's remarks in this context. I wish I could say that I am in entire agreement with Sir Homi; and I can indeed say that Indian Finance will gladly endorse much of what he said. But, here and there, and at least to this scribe, it appeared as if Sir Homi had got carried away, and that some part at least of his criticism could have been considerably toned down. This, however, is a minor qualification to what was altogether a refreshing experience.

Sir Homi's opening remarks set the tone of his speech. In asserting that the function must have cost the organisers "a bit of money", Sir Homi uttered the gentle warning that he hoped the organisers would not regret it. Then came some good-humoured chiding. Such luncheon meetings added to "the harassments of life". He thought that "members talked enough as it was". He was not "frightfully fond of hearing my own voice". Making speeches was a tiresome occupation. And Sir Homi feared that, one day, he might be "emulating the performance of a well-known Victorian statesman who once yawned in the course of his own speech in the House of Lords".

Then Sir Homi got down to business; which was to deliver a broadside at the Second Plan. A sense of realism had been introduced, not as a result of the pleas and warnings of critics, but by the hard facts of the economic situation. There was no room for complacency, because the hard core of the Plan had yet to be defined; no clear cut programme appeared to have been framed; no assurance had been given that fresh commitments had been halted; finally, the "imbalance inherent in the Plan... will still be there".

Sir Homi then had some provocative questions to ask. Did the planners realise that the difficulties being experienced at the present time were not "of a transient character"? Or that "a radical rethinking on the programme for the future is called for"? In referring to the Explanatory Memorandum, in which the information is vouch-

safed that the steel production target for the Third Plan would be 15 million tons, Sir Homi states that, if the statement is taken seriously, "we can only conclude our Planners are living in a world of their own, in which considerations of men, materials and resources do not seem to worry them much".

It is this last point on which I beg to disagree with Sir Homi. Granted, all that he says about the Second Plan could be reasonable criticism; but it is not surely being over-ambitious to think of 15 million tons as the target for steel production at the end of the Third Plan. In fact, I remember Mr Pheroz Kutar, of Tatas, as having said somewhere that it would not be out of place for India to think in terms of steel production rising, in not too distant a future, to 100 million tons. But this is by the way. If, in the Second Plan, steel production can be expected to be trebled—the expansion is to be 4 million tons—it is not being unrealistic on planning to touch 15 million tons, a rise of 9 million tons. One important point in this regard is that the heavy machine making plant will be "delivering" by then, and this could turn out a steel plant in two years. Nor am I worried about resources, in money, foreign exchange, materials or men. For, I should think that, in the process of increasing production to 6 million tons, we should have gained the experience and trained the men for taking on the additional expansion during the Third Plan. So, in this regard, I must confess to living in a world with the Planners; but then, I would have—I presume—Mr Kutar for company.

Sir Homi's point is well made when he attacks those whose "persistent refrain of hostility to capitalism" is cause for anxiety. This stems partly from the loose talk about India's social aims. And loose talk, which was rightly charged to have caused death during the war, is proving to be as lethal in peace—and particularly in India. There is needless controversy and avoidable misunderstanding. Nothing is gained; what is lost is the feeling of camaraderie (may be, this is not too happy a choice of words) that is necessary for our industrial advancement.

Such critics, as Sir Homi points out, have no understanding of modern capitalist society. "A society in which vast strides towards the attainment of a just social order and wider diffusion of well being have taken place in the course of the last half a century". The tragedy of it is that, on the basis of the stigma that once was attached to it, capitalism, for all that it bears no resemblance to the early nineteenth century species, is often decried by those whose con-

cept of socialism relies just as much on exploitation. It is palpably absurd that they should preach that the "happiness of the masses cannot be attained except by the uprooting of all that capitalism stands for". Sir Homi is right in wondering "if these makers of a new heaven on earth realise that the Socialism of their thinking is as outmoded as the capitalism of the nineteenth century".

Humour, irrepressible, crept in once again when Sir Homi remarked that he had saved the theme of his talk to the end, "as a sort of post script"—but then, the post script is something which "women are apt to treat as more important than the body of a letter". This was indirectly his way of saying that he felt the remarks that followed as being important. Sir Homi posed the question: "Where does the business community stand in the political and economic set-up of today?"—and then went on to answer it.

Pushed about a lot, often described in unflattering terms, looked down upon as parasites, the business community has had belittled "the part we have played, and are still capable of playing, in the economic development of the country". Sir Homi is a scrupulously fair man, and he acknowledges that, amongst the leaders at the top, "there is no such bias against free enterprise; on the contrary, there is a real recognition of the part it can play in a planned economy".

Inferentially, Sir Homi was calling upon the business community to state its acknowledged place in the country; and it is indeed on this point that he concluded his speech. There was a good deal for which business could claim credit legitimately; if an industrial structure exists today, it is by the efforts of the business community in the past, despite all discouragements and handicaps. But what is it that the business community is fighting for? In Sir Homi's words,

"We are not fighting for an outmoded concept of capitalism; or for the opportunity to enrich ourselves at the expense of the community; or for exploiting any section or class of the people; or for the concentration of wealth or power in a few hands. We unreservedly accept the social objectives which the country has adopted

through its Government and Parliament. We fully accept the obligations cast on us to implement these objectives and help to create a social order in which there shall be equality of opportunity for all and a more equitable distribution of the good things of life."

In this light, the business community has a duty which it cannot forsake. That duty is to achieve a closer understanding with Government. But selfishness and subservience must be eschewed, and then it could make itself felt by proving by action that Government could always "count on the knowledge, experience and cooperation of the commercial and industrial community". It is thus that "we have an assured and honourable future".

What I consider is the meatiest portion of Sir Homi's speech lies in his asseveration that "we have to put our house in order"; and this presumably is what Sir Homi was not quite sure that the magnates gathered at the lunch would relish. But then, Sir Homi is a scrupulously fair man, as I said; and he was the first to originate the idea, some years ago, of Nation First Industrialists. On that occasion, he urged the upright elements to disclaim and dissociate themselves from the black sheep, who had indulged in blackmarketing and profiteering. He has reverted to this subject, and "the abuses and irregularities in which a section of the business community, however small, is indulging cannot be too strongly condemned".

If, on the side of Government, loose talk is straining relations, the existence of base elements in the private sector creates "a prejudice against our class as a whole" and is the cause of all the rigours of legislative and administrative controls.

Bluntly, Sir Homi says that "we can have no truck with such people", and he has come up with the suggestion "whether we cannot devise some internal sanctions against those amongst us who have been found guilty of fraudulent practices or gross abuse of trust".

So, as I said earlier, Sir Homi's speech is to be wholly welcomed. And I think it would have been a more effective one if his criticism of the Second Plan had been somewhat tempered.

BOMBAY REVIEW

A Refreshing Experience

JESSOP & CO. LTD.
ENGINEERS

63, NETAJI SUBHAS ROAD, CALCUTTA.

Structural and Mechanical Engineers : Builders of all types of Railway Rolling Stock : Importers of Electrical and Mechanical Plant and General Industrial Requirements.

Speaking in Bombay last week Dr B. V. Keskar, Union Minister for Information and Broadcasting, has advised the film industry to reorganise itself on a new basis in order to cope with the situation that has arisen as a result of the drastic cut in the import of raw films. Raw film imports were cut by 40 per cent in last June and now a further cut of 20 per cent has been imposed. Dr Keskar seems to think that if film producers abandon the idea of long films the industry may not find the restrictions very irksome. He has, however, pointed out that in allotting the available foreign exchange to the national industries it is essential to ensure that no industry suffers grievously. It would appear that this criterion has been ignored when Government have decided to impose a further cut on the import of raw films.

Spokesmen of the industry have pointed out that the drastic cut in import of raw films will result in large scale unemployment in the industry because many producers will be forced to suspend work for want of an adequate supply of raw films. As a result of the first cut of 40 per cent in imports stocks in the country have almost been exhausted. There is thus an acute shortage of raw film and unless sizable imports are allowed work in most studios will come to a standstill. It is said that the size of the import that is now allowed will be inadequate to complete even a fraction of the productions on hand.

A point that is to be borne in mind is that the supply of raw film plays a vital part in the working of the Indian film industry. Though the industry has taken rapid strides in recent years, it is entirely dependent on imports for its raw film requirements. Despite this fundamental defect it has grown into a major industry and today it is the second largest industry in the country providing employment to a large number of people. With the supply of raw film drastically cut there will be a corresponding fall in production and as it is said that the present stringency is likely to continue for sometime, the industry will be left with no other alternative but to retrench. It is, therefore, incumbent on Government to consider whether the saving of foreign exchange is so very important that it is of no consequence to them that a large number of people are deprived of their only means of livelihood.

It would appear that Authority has not taken all the relevant factors into consideration while imposing the cut on raw film import. It is obvious that the ban has been decided upon with a view to conserve foreign exchange. But it has evidently been forgotten

that finished films from India are already in good demand in Ceylon, Burma, Malaya, Siam, Indonesia and South Africa. It is said that the amount of foreign exchange earned through export of finished films is much larger than the amount of foreign exchange spent on the import of raw films.

Primary Education

THOUGH the problem of providing adequate educational facilities for the people has been receiving considerable attention in recent years in our country, we have yet to go a long way to reach our objective. The main obstacles in the way of a rapid progress are the limited resources at our disposal and the need to expand educational facilities in numerous directions. With the increasing tempo of development activity it has been found that a large number of technical personnel will be required to service the new projects and enterprises which are rapidly springing up all over the country and which are in the offing.

The expansion of facilities for technical education has, therefore, come to be given a high priority in the educational programme. At the same time it has been recognised that the emphasis on the rapid spread of primary education should not be lessened. For without the mental development of the younger generation, progress attained in other spheres of the national life will become largely ineffective. But the task of providing facilities for primary education of all children of the school going age is so stupendous in our country that the available resources are far too inadequate. The problem, therefore, resolves itself into how to derive the maximum benefit out of the available funds.

It is often taken for granted that an essential prerequisite to the rapid spread of primary education in the countryside is a suitable building to house the rural school. Hence it will be idle to talk about providing educational facilities in a village without making sure there is a building to accommodate the school. Construction of a building means quite a large outlay of money. Without buildings, rural primary education has little chance of forging ahead.

Speaking in Bombay last week, Mr Jawaharlal Nehru has indicated a way out of this impasse. He says that if we abandon what he calls the PWD approach to primary education in the countryside the problem will not be as intractable as it seems to be. The trouble has arisen because we think that there should be a building for a school to function. This is a fallacy because in rural areas schools can very well function in the open or under the trees. What

Film Industry

is however essential is a teacher and a well paid one at that. Instead of worrying about the absence of a building the concerned authorities can straightaway start schools in the rural areas taking care that they give good and well paid teachers. The only necessary item will be a simple structure to house the equipment of the schools.

Development of Transport

Speaking in Bombay last week Mr H. N. Haji, Chairman of the All India Manufacturers' Association has pointed out that in view of the fast pace of the country's trade, we would require at least about 2.5 million GRT of Indian shipping. The present position is not at all satisfactory because even as on the 1st March 1958 Indian shipping has not even reached the target set for the First Plan. Thanks, however, to the vigorous steps taken to acquire shipping tonnage in the past two, three years, it is expected that good progress would be made in coming months. With the ships that are to be delivered during the current year we will be moving toward the Second Plan target of 9 lakh tons. But it would appear that with the available resources it will be possible to attain only about 7 lakh tons by the end of the current Plan. Government spokesmen have, however, declared that necessary arrangements are under way to enable the industry to attain the target within the scheduled time it has been further stated that there is every possibility that the target will be exceeded.

Mr Haji has suggested that to fill up the gap it will be quite in order, to invite foreign capital. The principle of permitting foreign capital in Indian industry has already been accepted by our country. There is no reason why such participation should not be allowed in the shipping industry also. As a matter of fact it would appear that this is the only course now open to us if we want to develop our shipping industry rapidly. In the first place there is not enough internal resources and secondly, our foreign exchange position is so acute that it is not possible to think of self-help for some time to come. In this regard Mr Haji has pointed out that though the Indian Merchant Shipping Bill fulfills a long-felt need of the shipping industry in our country, it requires some modification in the matter of the definition of "Indian Ship." In order to safeguard the interests of Indians, an Indian ship should be defined as one owned by citizens of India or by a Joint Stock Company having a majority of Indian shareholders and Directors. Further it is also important to stipulate that the principal place of business of the company should be located in India.

Price Trends in Gold and Silver

PRICES on the Bombay Bullion Exchange, after recording fresh higher levels early in the week, developed a slightly easier tendency towards the close due to some selling pressure on apprehensions that the Board might decide to introduce stricter margins.

For the first time after a lapse of seven years, spot Silver prices pierced the level of Rs 200. It may be recollected that the market touched an all-time high level of Rs 207.75 in June 1951, while, in the next year, i.e. in December 1952, it recorded a low of Rs 140.75. Since then every year, the market has continued to establish new high levels.

The general sentiment in the white metal has continued to be bullish following depletion in floating stocks as well as excellent seasonal offtake, while receipts of Tibetan coins have dwindled considerably. There is still another month for broadened offtake in view of the harvests in North India. Reports from upcountry centres, especially in North India, have revealed a scramble, the all-India daily offtake ranging from 75 to 100 bars.

On the other hand, the receipt of the metal has fallen markedly in the past two months, thanks to the drying up of imports of Tibetan silver coins. In these conditions, the all-India supply has fallen from more than 2,000 bars to as low as 1,200 bars with Bombay accounting for about 450 bars. With at least three weeks of seasonal demand ahead, buyers are in no mood to relax their grip; and this was amply reflected in the heavy backwardation charge of Rs 1.62 as against only 75 up a few days ago.

Meanwhile, arrivals and offtake, during the week under review, were estimated around 13 and 12 bars respectively. Forward silver, after touching a high of Rs 197.44 and a low of Rs 196.44, finished at Rs 196.50. Valsakh and Jeth deliveries were quoted at Rs 194.62 and Rs 193.81 respectively. Spot changed hands at Rs 198.75 to Rs 119.62.

Gold, which had recently gone down, has once again rallied in sympathy with silver. Arrivals and offtake were estimated at 6,000 and 4,000 tolas respectively. Forward rate touched a high of Rs 112.06 and a low of Rs 111.84, to finish at 111.94. Valsakh delivery was quoted around Rs 111.06. Spot changed hands at Rs 112.3 to Rs 113.06, while Sovereign remained practically unchanged at Rs 71.50.

There has been a fresh revival of rumours about the possibility of an upward revision of the official price of gold. Although the USA has been inclined to discount any revision in the current price of \$35 per ounce, holders of dollars in several countries are, it is reported, tending to argue that the economic recession in the US has strengthened the prospect of a change in the American policy in regard to the gold price.

As a result, the market price of gold, in terms of the dollar, moved above the official figure in the last few months and recently touched \$35.13, the highest for many years. This has, however, led to substantial sales by the Bank of England and prices have since then stabilised at lower levels.

Oils and Oilseeds

Prices on the Bombay Oilseeds Exchange showed a mixed trend. However, trading was limited as operators were inclined to be cautious in view of lower commodity advices from Uttar Pradesh and the Punjab.

Business in Castor futures and ready was small with prices developing an easier tendency. The setback was attributed to aggressive selling by Gujarat operators on reports of larger arrivals in Bihar and Uttar Pradesh. The situation on the export front also failed to provide much comfort. While the trade with the UK and the Continent continued to be absent on account of disparity in rates to the extent of about £7 per ton, offers from India failed to evoke response from the USA. It is felt that, with Brazil and Africa continuing their offers of cheaper castorseed, prospects for India are not encouraging. Also, New York reports suggest that Indian oil is now about 2 cents per pound higher than the Brazilian product. Buyers have, therefore, stepped up their acquisition of Brazilian castor oil. May futures closed at Rs 154.00, while the rate for the ready position was quoted at Rs 30.25 and Castor Oil, commercial quality, at Rs 16.06.

The uncertain behaviour of the Groundnut section continued to be in evidence. The Forward Markets Commission is understood to have asked the Bombay Oils and Oilseeds Exchange to find out the volume of outstanding business in groundnuts non-transferrable delivery contracts. The Commission, it is understood, intends to apply Section 18(3) of the Forward Contracts (Regulation) Act to the groundnuts, which empowers the Commission to regulate trading in such contracts so as to discourage unhealthy speculative nature of business. May delivery was quoted at Rs 172.75, while the ready bold was quoted at Rs 35.25 and Groundnut Oil at Rs 18.81.

The Linseed section lacked strength as the export trade in linseed oil remained absent. Hence, there was little inclination on the part of buyers to be aggressive.

May delivery changed hands at Rs 30.31 to Rs 30.81, while the ready position was quoted at Rs 30.12 and Linseed Oil at Rs 15.81.

Yarn

Sentiment in the Yarn market remained depressed. Both staple-fibre and rayon yarns declined further in the absence of support. Turnover was limited as most operators preferred to be cautious in extending commitments. Although mill's complained of heavy accumulation of yarn stocks. Cotton Yarn showed some improvement on reports of better offtake at Coimbatore.

There has been a sharp increase in stocks of unsold yarn, as is clear from the following table for the first quarter of this year as compared with the position for the

corresponding period of 1957 (in bales of 400 pounds):—

End of:	1958	1957
January	89,200	27,445
February	94,500	39,214
March	1,11,800	45,724

It is not, therefore, surprising that leading mill interests in the South have begun to complain about heavy accumulation of yarn as also of over-production of yarn in the country.

Non-Ferrous Metals

The United States Administration, it is reported, has endorsed a Senate Bill to restore import duties on Copper and the likelihood that this will be done in unsettling the London copper market. There is still a substantial world surplus of this metal (which is keeping prices down);

but most of the surplus is in the USA. Prices there are higher than in London and this encourages the import of copper into the USA from European producers.

If the United States tariff proposal is put into effect, the result will be an easing of the surplus in America and the reappearance of a substantial surplus in Europe. Copper, now being shipped to America to take advantage of the higher prices, will then remain at home. European dealers say that, if the tariff were not re-imposed, one of the main uncertainties currently affecting the London market would be removed and prices would rise. This, it is argued, will make the American prices less attractive.

Meanwhile, On the London Metal Exchange, Copper is quoted at £175½; Zinc at £62; Lead at £72 and Tin at £730 (all per ton).

International Panorama of Progress

More time for tradition

The world famous cave-temples of Ellora richly proclaim the glories of the great Hindu medieval renaissance times, when life moved at a more leisurely pace. This proud heritage lives side by side with swift, modern transportation that provides tourists with more time for tradition, businessmen with more time for commerce. Automobiles and trucks around half the world rely on Caltex service for the petroleum products that keep them operating at highest efficiency. Wherever they travel—to distant supply points or on short vacation trips—Caltex rides with them. Through the power of petroleum, Caltex fuels, oils and lubricants help bring mobility and prosperity to over 70 countries. Caltex—partner in progress in Europe, Africa, Asia, Australia and New Zealand.

BOMBAY
REVIEW

CAB's Recommendations

THE Cotton Advisory Board, by a majority decision, recommended to the Government of India that they should release immediately for export 50,000 bales of cotton with stapling not above 3 inches. The recommendation also included the raising of the "floor" price of cotton by Rs 55 to Rs 550 per candy. The Board resolved that no change should be made in the present "ceiling" price of cotton. Except for the majority decision on the export of cotton, all other recommendations of the Board were unanimous.

The Board expressed the view that unutilised export licences for cotton should be re-issued to those who had utilised their quotas. A pool might be made of these unutilised quotas before re-issuing them. No extension should be

granted to those who did not utilise their quotas in time.

The Board recommended that Punjab 320F cotton with stapling 27/32 inches should be included in the Textile Commissioner's schedule of prices and that the staple length of Vijay should be changed from the present 25/32" to 26/32". The Board also recommended to the Government that the import policy of cotton should be announced for the whole period of six months. The Board also requested the Government to expedite the finalisation of the payments procedure for the import of Egyptian cotton.

Details of the scheme for importing Egyptian cotton are now announced. The memorandum, issued by the State Bank of India, called on cotton importers to contact

shippers of jute and tea to negotiate the discount that could be applied to Egyptian cotton imports. Exporters would invoice tea and jute goods at a premium and would thus be able to sell Egyptian pounds to cotton importers at a discount equivalent to the premium earned.

The rate of exchange between the Egyptian export pound and Indian rupee will be mutually decided by exporters and importers. Although the State Bank will collect the Egyptian pounds in the "export account", the risk in regard to fluctuations in exchange rates will have to be borne by shippers. Mills and import houses have, however, found the system very complex and will soon approach the Government for a simplification of the procedure. In this connection, it may be added that the Indo-Egyptian payments agreement is purely temporary and attempts will be made to retain the barter character of the agreement. In other words, the advantages provided by jute and tea exports will be passed over to cotton.

X

FUTURES MARKET:

The immediate reaction to the Cotton Advisory Board's recommendations was favourable as was evident from the improvement noticed in cotton futures early in the week. Jharilla May advanced at one time to Rs 659.50 and August to Rs 671 from Rs 656 and Rs 668 respectively. Towards the close of week, however, prices developed a reactionary tendency due to resumption of liquidation and profit-taking. The rates closed at Rs 655.50 and Rs 668 respectively.

X

SPOT MARKET:

The Spot section witnessed another dull week. Prices of domestic styles, both in Bombay and in the interior, were marked down following a break in the futures market and small spinner demand. Mills' interest was almost confined to good quality cottons, because of the lack of demand for coarse cloth.

On the export front, all varieties were quoted lower. The only exception was Bengal Deshi, which was quoted steady and attracted limited buying from shippers.

In the foreign cotton section, a small shipment business was reported to have taken place in top Egyptian Menoufi and medium to higher Karnaks. These sales were made by some importers whose shippers were understood to have offered cotton, calculating at a discount of 21 per cent—any variation on sellers' account. Interest in other foreign growths was negligible. There was, however, a small turnover in spot lots of El Paso cotton.

WORLD OF
COTTON

STATISTICS:

The declining trend in cotton prices is due less to reversion of crop estimates than to the continued anxiety about cloth offtake, which has affected consumption of cotton. According to the figures released by the Textile Commissioner, cotton consumption, during the first half of the current season, amounted to 22.96 lakh bales of Indian cotton and 2.93 lakh bales of foreign cotton. The corresponding figures for the previous season were 23.24 lakh bales and 2.92 lakh bales respectively.

X

NEW YORK COTTON MARKET:

Prices on the New York cotton futures market, after showing initial easiness, rallied towards the close on scattered short-covering. Trade and commission house buying, attributed to tightness in the supply of good quality cotton and reports of a better demand at the primary spot markets, took prices higher in early dealings. Demands were eventually satisfied and prices eased under scattered liquidation and hedging in the nearby deliveries and profit-taking in the 1959 October delivery. However, towards the close, the market developed a mild rally on short-covering as offerings were light. Middling Spot was quoted at 38.00 cents per pound.

X

LIVERPOOL COTTON MARKET:

The Liverpool cotton futures market, after ruling quiet early in the week, firmed up towards the close on American support.

In the Sudan contract, no fresh developments occurred to bring in fresh interest from outside sources and, in inactive trading, the market closed quiet.

X

CLOTH AND PIECEGOODS

Trading conditions in the Bombay Piecegoods market were slightly better last week. Activity was more pronounced in fine and superfine goods, while there was selective demand for medium varieties. Coarse qualities were comparatively neglected. The main consuming centres were Kanpur, Delhi and Madras. There is a general feeling that, if the present conditions continue for another eight or nine weeks until the commencement of the off-season, the condition of the textile industry will be as unsatisfactory as it was, particularly for such units which are financially weak.

Conditions on the export front have not shown any improvement whatsoever. As a matter of fact, it will be correct to say that they have retrogressed as will be seen from the figures of goods passed for shipment. Shipments from Bombay, during the first quarter of the year, amounted to only 165 million yards as against as much 255 million yards in the corresponding period of last year.

SYMPOSIUM

THE conference of provincial Congress Committee Chiefs that took place over the week end here was the culmination of a process of introspection by the Congress Party. Earlier in the month, the Parliamentary party and the Working Committee applied their somewhat distracted minds to the seemingly waning influence of the party with the public and came to certain inconclusive decisions. Defeat in key elections and a sudden and somewhat alarming eruption of Party indiscipline practically all over the country were seen as symptoms of a deep-rooted malaise. Meanwhile, rumours about Mr Dhebar's disenchantment with the party and his desire to be relieved of the responsibility of being its leader were first widespread and later officially denied.

At the conference of local party chiefs, Mr Nehru restored the perspective which had been somewhat distorted by extreme gloom. Relating the decline in standards in the Congress to the more general decline in moral and political standards all over the world since the Second World War, he said that the Congress had nevertheless rendered effective service to the people. Another point made by him was that there was nothing new in the present squabbles in the Congress. There have always been squabbles in the Congress and even in the days of Mahatma Gandhi they used to rear their ugly heads.

There was certainly cause for worry about the fortunes of the party; there was also need for a concerted effort to shake off the moral torpor that has afflicted the party. But there was no reason for panic. And though Mr Nehru himself did not mention it, the consensus among the leadership would appear to be that the Communists were a little premature in their frankly jubilant expectation of the Congress Party's imminent disintegration.

For an observer with no particular party affiliation, this seems an accurate enough summing up. Political disenchantment is today a very widespread phenomenon. Such disenchantment takes all kinds of forms. It drives Mr Jayaprakash Narain into the Sarvodaya fold from where he comes out with oracular pronouncements about the futility of Parliamentary democracy and so forth. He conducts inconclusive negotiations with Dr Lohia in the interests of a socialist unity. And when the latter asks for what any party would consider impossible demands, the ambiguity of his stand becomes apparent since he has no authority to concede to them and he makes a characteristic retreat saying that the responsibility for the failure is some defect in himself. And though probably still regarded as a PSP leader, he advises, apparently without consulting his com-

rades in the party, and much to the embarrassment of everybody, that the Congress and the PSP should merge. All this is said in no carping spirit, but to make the important point that the man who is often considered as an alternative to Mr Nehru is at once fascinated and repelled by the demands of active politics.

Such evidence of ambivalence of politics is not particularly Indian. Many among my readers will have read a Fabian Society tract published some time ago entitled, if I remember right, "Politics and the Intellectuals". It was written by Mr Kingsley Amis, a successful young novelist. In it, he has made the interesting confession that politics as such has no particular attraction for him. He is a traditional labourite, has always voted Labour and hopes to do so to the end of his life. And, during the elections, he would willingly lend his car for use by the Labour candidate, and his wall for a poster supporting him. That is the limit of his political interest. As for actively engaging himself in politics, he does not even seriously consider it. In saying this, he believes he is speaking for most of his generation.

One of the reasons for this apathy, which has some relevance in the Indian context, is that the original inspirations of the parties have been fulfilled to a large extent and they now feel that they are without causes to fight for. Most of the frustration of the "Angry Young Men"—of whom we hear so much these days—is due to the fact that they have no more objects towards which they can direct their anger. "Give us back our cause" is their paradoxical cry. The Welfare State for which they all fought is a reality and a rather drab reality. Hitler, against whom they directed their moral indignation, is a fading memory, and all that they can attack now is the stuffiness that surrounds the Institution of Royalty. But, as a target of indignation, the Royal family is most inept. But for Eden's incredibly clumsy handling of the Suez situation, young political enthusiasm would have died of sheer infamy after ten years of postwar Welfare State. As it is, it has had a spurt of life and is kept precariously alive by nuclear tests. But how sustained the renewed interest in politics will be, is difficult to predict.

In a similar manner, one reason for the current disenchantment with and in the Indian National Congress is that its most important original inspiration has been fulfilled. Setting out to obtain political freedom, it has achieved it. But having said this, it must be made plain that we have, unlike the young in England, less justification for shirking public responsibility. For, unlike the bright

Heart-Searching

young men in England who have found that there was comparatively little by way of cause to fight, we are embarrassed and overwhelmed by them. In fact, the idea of a Welfare State, for which earlier generations of angry young men fought happily and which has since been converted into a reality, is still a distant vision for us. Therefore, we have really no right to affect the postures of the angry young men elsewhere. Our anger has palpable—alas, only too palpable—objects against which it can and should be directed. And that is why political apathy is inexcusable in our country.

The second reason for the Congress party being so out of love with itself is the vagueness about its true nature as an organisation. From the beginning, the Congress made the claim—a claim largely allowed it—that it was more than a political party, and it represented all the urges of renaissance India. The core of its inspiration was without doubt political, but it was really a movement of thought, an intellectual tendency, an instrument of fundamental changes in our social structure. These ancillary attributes were sought to be given concrete shape by Mahatma Gandhi in the form of allied institutions. But lack of unanimity among his colleagues blunted the effectiveness of these efforts. And its principal inspiration being what it was, it could not afford to ask for complete streamlining of its philosophy. Thus, the Congress was, even during Gandhi's lifetime, all things to all people in its wider implications, and there was a tacit understanding that these other things will keep while political freedom will not. The result was that the moment political freedom was achieved, the ambiguities in the basic attitudes revealed themselves only too glaringly.

Gandhi's characteristic solution was the conscious winding up of the Indian National Congress. He thought that attitudes, political and social, should be allowed to find their new orientations. This was not possible for a variety of reasons, the most important of which lay in the conditions in the country following partition. There were other reasons, perhaps less flattering to Congress. In any case, one of the sources of present disenchantment is that Congressmen are not sure whether they should frankly declare themselves to be a conventional political party, or whether they should continue to claim, and therefore live up to the claim of being the symbol of India's nationhood. The advantage in declaring that it is but one of many political parties would be that it will not have to live up to the standards that Gandhi set, and that the distance between its proclaimed ideals and practice will be narrowed to a considerable

extent.

But the objections both from the general and party point of view are several. Firstly, the theoretical degree of purity expected, even in an organisation frankly political, is high enough and certainly not much lower than what would be asked of an organisation claiming to be "national". So there is no advantage to be gained by giving up an adventitious aid to the party's fortunes. Ultimately the problem is really one of change in conduct which will approximate the ideal as nearly as is humanly possible. Secondly, the Congress has, despite its professions, become a frankly political party. It has bequeathed to Sarvodaya the more specifically Gandhian aspects of its earlier character and to Government its more conventionally political tasks. And indeed, herein has lain the seed of its own degeneration: as a party, it has now very little to do. The remedy, therefore, lies in an effort to make itself more effective in both these spheres by rededicating itself to functions it has abdicated. This is the reason why Mr Dhebar's call to engage in a constructive programme, on the one hand, and to act as the interpreter of Government policy, on the other, is so relevant. Even a political party has functions other than vote-gathering. Indeed, vote-gathering itself involves being in rapport with the people, getting to know them and their problems and bringing them to the notice of authority.

But the real trouble with the Congress today lies in the factional squabbles. I do not suppose that Congressmen are particularly selfish, nor do I believe in the common superstition that, in the last ten years, they have battered themselves on corrupt practices. Of course, there may have been instances where such things have occurred, but to formulate a general proposition of pervasive corruption is wrong. Such charges have been widely thrown about precisely because of factional squabbles. The one way to throw out a man who has displaced you from the seat of power is to charge him with favouritism and corruption. Even where the quarrels take the mildly respectable garb of rivalries between the Party and Government, the basic character of the opposition based on personal and communal considerations is hardly concealed. The remedy, of course, is easily prescribed: a genuine change of heart on the part of all concerned and a firmer attitude by the leadership. Easy as it is to prescribe it, it is difficult to administer it. Often enough, leadership, especially at the State level, suffers from the very same defects. But, short of such radical reform from within, the effectiveness of the Congress with the people will continue to diminish.

DELHI REVIEW

The Land Reform Committee appointed by the Government of Orissa to suggest land reforms on the lines indicated by the Planning Commission in their Second Plan has reported failure to come to a unanimous decision on the important question of ceilings on holdings. The problem has thus been left to be decided by the Government. The Committee has however suggested certain considerations which should underline fixation of maximum size for individual holdings. According to it besides being an efficient operational unit it should yield a certain average income as will enable the family to have a standard of living consistent with other sectors of national economy.

The failure of the Committee to come to a unanimous decision in regard to ceilings reflects not only the complicated nature of the problem of fixing ceilings but also differences of view on the very question of ceilings. It has in this connection been suggested by the Committee that the Government may take into consideration the administrative and financial difficulties in arriving at a decision whether ceilings should apply to existing holdings in the present context. There is implicit in this a warning against any precipitate decision in favour of ceilings. The Committee is to be commended for its cautious approach to the question of ceilings, since, in the whole series of land reform measures, the question of ceilings has been the most controversial issue. All the same the Committee has favoured fixation of ceilings on future acquisitions.

At least so far as Orissa is concerned the more pressing problem of land reform is the elimination of intermediate interests. The range of such intermediate interests in Orissa is very great and includes a large number of revenue-free estates, tenures, and inams. It has been disclosed by the Committee that in Cuttack, Puri and Balasore districts alone there are over 111,000 revenue-free estates with a total area of about 407,000 acres, the area of subsisting tenures in these districts being estimated at 313,000 acres. In the opinion of the Committee the successful implementation of land reforms is contingent on the complete elimination of intermediate interests and preparation of up-to-date land records. The Committee has therefore recommended that the Government might immediately take up a planned programme for the elimination of all intermediate interests within a period of three years.

Ferro-Manganese Plant

The opening of the ferro-manganese plant at Joda in Orissa State represents a major success in the country's attempts to meet the

needs of steel plants for ferro-manganese. The plant forms part of the Tata Company's project to raise their steel output to two million tons. The plant has an initial capacity of 36,000 tons a year which could be stepped up by stages to 100,000 tons. Besides processing manganese ore the plant is also equipped to manufacture other ferro-alloys such as ferro-chrome and ferro-silicon.

From the point of view of the country's industrialisation, the opening of the plant has far-reaching significance. Though India is the second largest manganese producing country in the world, in the absence of a manufacturing plant to process the ore the benefits of such large supplies were confined to earnings of foreign exchange from exports of unprocessed ores. Such exports of unprocessed ore amounted to about 1 million tons and were valued at Rs 10 crores. The opening of the plant is thus important not only from the point of view of the needs of the Indian steel plants but also because of the prospects of greater foreign exchange earnings from export of ferro-manganese rather than of ore. The Second Plan has set a target of 160,000 tons a year by 1961, out of which 100,000 tons are expected to be available for exports, the foreign exchange potential of which is estimated at about Rs 8 crores.

Mr H. K. Mahatab, the Chief Minister of Orissa who formally declared open the plant cited the allocation of such a heavy plant to the Tatas as an instance of the Government's uninhibited approach to the problem of industrialisation.

In view of the limited reserves of high grade ore there is need to restrict export of high grade ore. Beneficiation of low grade ore offers possibilities for utilising low grade ores in the country itself. Much store is therefore set on the success of experiment now being carried on in the National Metallurgical Laboratory in Jamshedpur on beneficiation of low grade ore.

Mr Jehangir Ghandi Director in charge of Tata Iron and Steel Company in the course of his speech stressed the need for the development of small-scale and medium ancillary industries for the around development of Orissa. The suggestion made by him that the Government should treat metallurgical industries on a separate footing from other industries in respect of their raw material requirements is also worthy of consideration.

Textile Crisis in Kanpur

The persistence of crisis conditions in the Kanpur textile mills is really alarming. The data collected by the State Government have disclosed a huge accumulation of stocks with mills. The total accu-

mulation of stocks has been estimated at 71,856 bales of cloth and over 5,000 bales of yarn valued at Rs 6.23 crores till the first week of this month. Accumulation of this order represents eight to nine months production by the mills in the State.

What is really intriguing is the non-clearance of stocks even after the announcement of reduction in the rate of excise duty by the Central Government. In the first fortnight following this announcement total clearance of stocks was no more than 3,000 bales of cloth and yarns valued at Rs 30 lakhs.

The crisis thus seems to be of a more deep-seated nature and is in a sense a warning against unregulated growth of any particular section of the textile industry without reference to conditions of demand. It is the opinion of experts in the industry that the essence of the crisis in the Kanpur industry was the over production of the coarse variety of cloth in which the Kanpur industry specialises. Belief of increase in consumption of coarse variety of cloth, fostered by the Second Plan target of raising per capita consumption of cloth to 22 yards, on the basis of which the increase in production was planned had in the actual event turned out to be mistaken. How widespread this belief was would be evident from the fact that production of coarse cloth in the country as a whole has increased threefold as compared to the 1951 level and was twice as much as in 1955. The inroads, which handloom cloth and artificial silk had made into the market further aggravated the difficulties for coarse cloth in the country.

The concern of the State Government chiefly arises from the need to protect the interests of about 40,000 mill workers who are faced with threat of unemployment, which if it comes off is feared to lead to a big political crisis in the State. So far the labour force in the industry has been kept on on the basis of partial employment which however the employers do not find advantageous to them. With one mill already threatening closure and another almost on the brink on such a decision, the developments in this direction are most discouraging, and call for early and effective measures from the Government to clear the stocks and create conditions of stability for the industry in Kanpur.

Leftists in

There is by now no doubt that the leftists, after being foiled in the general elections, have concentrated their attention on local bodies, municipalities and city corporations. Their two recent resounding victories have been in Bombay whose Corporation has got Mr Mirajkan, a Communist

NORTH INDIAN NOTES

leader, for its Mayor, and in Delhi where Mrs Asaf Ali, a PSP leader, finds herself the Mayor of the city's new-born corporation. In such local elections, the Congress has shown itself steadily on the retreat. It almost seems as if the Congress had entered into a pact with these parties not to create too much trouble over such trifles. In a sense, it is interesting. It gives a chance to the ordinary citizen to assess which party can put in better work. But does it not also show that the Congress is tired, that it can no longer fight the Opposition all along the line? In politics, we should have thought, quarters are neither asked for nor given. Obviously, the time has come for us to revise that hitherto-accepted notion.

NORTH INDIAN MARKETS

DIVERGENT trends were witnessed in the Foodgrains market. While Wheat was quiet owing to heavy stocks of imported stuff, Coarse grains improved on poor arrivals of the new crop. Pulses continued to rule steady.

In the Hapur market, the Wheat section ruled quiet with the average quality quoting Rs 15.50 and the farm variety Rs 17 per maund. Rice, however, continued to be dearer on reports of overall shortage in the country. In some centres in east Uttar Pradesh, prices have even risen by about Rs 2 per maund during the past two weeks. Threshing reports from the Punjab indicating a poor crop accounted for the steady conditions in the Gram section. Barley and Bajra prices improved by about 50 p, while Jowar moved up slightly in sympathy. Arrivals of Peas were heavy at an average of 2,000 to 2,500 maunds daily, while those of Arhar were also higher at an average of 500 maunds daily. Urad and Moong advanced further on firmer advices from the producing centres of the South.

A sharp decline in indigenous Wheat was the main feature of trading in the Bombay grains market. The Government of India's decision to lift the ban on imports of indigenous wheat into greater Bombay from the Western Zone provided the most significant development of the week. It is pointed out, however, that the chief beneficiary of the Government's decision will be the consumer who will be able not only to revert to more palatable varieties, but also to save appreciably on his food bill. The local demand for wheat per day has been placed at about 2,000 bags, the quantity being comparatively small on account of reduced purchases during the middle of the month. Traders are of the opinion that prices may decline further by about Rs 10 per candy in the near future with increased arrivals.

The decline in wheat prices had a bearish effect on Coarse grains as Jowar and Bajra. Prices of the former receded by about Rs 5 per candy, while those of the latter recorded a similar fall.

The tendency in indigenous Rice was easy, which was aided by the sustained improvement in the stock position, resulting from satisfactory arrivals. In the Pulses section, Gram presented a firm front with the Punjab quality rising from Rs 110 to Rs 117 per candy.

Sugar

Sugar markets ruled steady, thanks to better support from the consuming centres. According to the latest reports, some of the factories in West Uttar Pradesh have closed for the season, while the rest are likely to drag on up to the end of the current month as cane supplies with them are ade-

Divergent Trends in Grains

quate. Following mill-delivery rates (per maund) are quoted in the Hapur market:—Meerut (D. 28) Rs 35.87; Rampur (B. 29) Rs 36.62; Mansoorpur (B. 29) Rs 37.75; Daurala (A. 29) Rs 37.50; Mowana (A. 29) Rs 37.37; Modinagar (C-29) Rs 36.37; Amroha (D. 29) Rs 35.19 and Bijnore (E. 29) Rs 35.00.

Khandsari

The market for Khandsari continued to rule steady due to good consumer demand at favourable prices. Production is gradually

declining and prices are quoted at Rs 28.00 to Rs 32.50 per maund, according to quality.

Gur

Conditions in the Hapur Gur market remained rather quiet. Arrivals were smaller at an average of 250 maunds. Outside demand was slack, while stocks were estimated at 1.43 lakh maunds as compared to 97,000 maunds in the corresponding period of last year. Total arrivals, from the beginning of the season, are put at 4 lakh

maunds as against 4.55 lakh maunds last year. Rates are moving between Rs 14.75 to Rs 15.25 per candy, according to quality.

Shellac

Activity in the Calcutta Shellac market remained subdued with prices developing a sagging tendency in the absence of any foreign demand. Pure TN quality is quoted at as low as Rs 64.00 per maund as against Rs 72.50 quoted at the beginning of the month.

Backward Classes' Welfare

THE existence of a vast mass of people with the label of backward classes attached to them is one of the most poignant facts which detracts from the character of democracy in the country. Though a legacy of the caste system, that these classes should still be weighed down by social disabilities can only be explained in terms of the immobility that characterises social thought in the country.

The recent conference of the backward classes at Hyderabad had served to focus public attention on the meagre progress made in improving the conditions of the scheduled classes, tribes and other backward classes. All the speakers at the conference who included representatives of backward classes and national leaders stressed the need for rapid progress in ameliorating the conditions of the backward classes and for implementing the development schemes conceived to expedite progress.

The conference has demonstrated that though backward in every respect, they were not backward in putting forth their demands for economic betterment. A number of resolutions were passed seeking preferential treatment in various fields. These demands included award of scholarship to backward classes students on the basis of population, provision of free and compulsory education upto higher secondary stage, reservation for admission in professional institutions in proportion to their population, setting up of a separate Ministry for the Scheduled Castes, Tribes and other backward classes at the Centre and at the State to coordinate and promote welfare schemes in the interest of these classes, and priority in respect of vacancies in the industrial undertakings run by the Central Government etc. The Conference also decided to observe a "Demands day" every year to press the demands of the backward classes as embodied in the Kalelkar Commission's report.

Some of the demands made at the conference would seem to strike as too forward at least in the present level of the country's development. Whether the claims for the reservations of seats in higher educational institutions in proportion to their population could be met without impinging on the due interests of other sections of the population is doubtful. Similarly the demand for allotting lands for housing in urban areas free of cost and for grant of loans and subsidy at the rate of 50 per cent of the cost above construction would seem to be inconsistent with the present state of finances of the Central Government.

The policy of the Government towards the problem of amelioration of the conditions of the backward classes has been explained by Mr B. N. Datar Minister in the

Ministry of Home Affairs as being one of encouragement to non-official organisations working for the welfare of backward classes to the maximum extent. While all-India organisations were given direct grants by the Centre the voluntary agencies working in particular States were given assistance by the State Governments concerned of which 50 per cent was shared by the Centre. Under the First Plan Central assistance of the latter type amounted to about 22 lakhs. Mr Datar also pointed to the increased expenditure of Rs 208 lakhs envisaged under the Second Plan for aid to non-official agencies.

The various programmes envisaged by the Government attests to real concern for rapid progress of the backward classes. These include provision of Rs 5.5 crores for the development of cottage industries and for the starting of industrial, training and technical centres, provision of Rs 4 crores for Centrally-sponsored housing programme for backward classes, provision of Rs 1.1 crores for starting ashram schools for tribal children. The Second Plan envisages an expenditure of Rs 91 crores for the welfare of the backward classes nearly two-thirds of which is expected to be met by the Centre, the States having to find out the balance of Rs 30 crores. The total provision under the Second Plan is nearly double that of the First Plan, and excludes the cost of maintaining institutions set up during the First Plan. The share of scheduled castes out of this provision is about Rs 27.5 crores while Rs 47 crores has been set apart for tribes and development of scheduled areas.

The need for ameliorative measures has further been recognised and met by protective provisions in Constitution of the country. The backward classes also enjoy preferential treatment in the matter of education and training in technical institutions. In this connection Mr Datar disclosed that the State Governments, the Ministries of Government of India and the Universities had been requested to reserve 20 per cent of the seats in all technical and other educational institutions controlled by them for the admission of Scheduled castes and Tribes students. In Andhra Pradesh, it was disclosed by Mr Sanjiva Reddi, that the backward classes enjoy reservation of seats in medical and engineering colleges to the extent of 25 per cent of the total accommodation, with the additional arrangement for district wise quotas, for admission in medical classes. Whether the separate Advisory Council for backward classes as advocated by Dr Panjabrao Deshmukh for providing additional funds to the Ministry of Education for scholarship to their students could do more, consistent with the due interests of the other sections

of population is debatable. But all the same there was a sense of disappointment at the conference at the non-acceptance by the Government of the recommendations of the Backward Classes Commission. This only serves to show the magnitude of the problem of improving the conditions of the backward classes.

In the course of his speech Dr Panjabrao Deshmukh defended the system of concessions to backward classes and dismissed arguments that such concessions would perpetuate feelings of casteism and create disharmony in Indian society. While the need for such concession will not be denied, the purpose of such concessions will be stultified if the term backward classes is not properly defined. In this connection Mr Sanjiva Reddi raised a pertinent point when he said that certain communities were backward in certain districts while they were forward in other areas and cited the Ganjam Reddis who were declared backward in the Srikulam district of Andhra Pradesh as an instance. A rigid definition of the term would thus exclude even a part of the really backward population in the country.

Mr Sanjiva Reddi laid his finger on the crux of the problem when he said that backwardness was the result of economic conditions. While thus ameliorative measures would only give some kind of relief, real advancement is inconceivable without rapid economic development of the country. The need to concentrate attention on backward areas, in this development is only obvious. This is a field in which the backward classes could themselves do much especially by way of organised effort towards community development programmes. Speaking in this connection Mr B. R. Bhagat pointed out that lack of initiative and drive among people who had the defective economic structure enabled only those who had land assets already to benefit from projects like the community development. Mr Choudhry Brahma Prakash former Chief Minister Delhi State also stressed the need to concentrate efforts on economic advancement which alone he said could raise their social and education status.

While economic advancement is linked with development of the whole country, the social environment could be improved only by rousing public consciousness to the indignities which they are at present made to suffer. That practices of segregation of harijans and untouchability still persist has been revealed by the report of the Commissioner for Scheduled Castes and Tribes. The report attributed a large part of the failure in removing the disabilities to the apathetic attitude of the State Governments towards the problems

of backward classes. Mr Datar referred to the need for qualified workers with the necessary background as well as missionary zeal and enthusiasm for work in connection with removal of untouchability which required great psychological tact. This could only be met by opening more training schools by the State Government as well as the Union Government. The existence of certain "bogus" organisations which conducted themselves cleverly by correspondence with the Government was also revealed.

Though the backward classes had emerged since the advent of independence as one of the most clamant sections of the population, it was in fairness, to be said, that their approach to their problems has not been marked by even a trace of the class war tactics. This is a tribute to the disciplined leadership under which they have organised themselves for fighting their legitimate grievances. Even at the conference there was no attempt to play on the emotions of the people. While Mr Datar stressed the need to ensure that, in raising the status of the backward classes, the social order did not disintegrate in a way that might be detrimental to them and the society at large, Mr Jagjivan Ram exhorted them to join the Congress party since the future of democracy was linked with the strength of the Congress. Mr Sanjiva Reddi also advised them to keep the interests of the country before them when general questions affecting the entire population came up.

The ultimate objective so far as the backward classes are concerned is their integration with the rest of the population. This, as Mr Jagjivan Ram has pointed out, is a problem of bringing about a change in the minds of men and in the age-old Hindu thought pattern and thought structure. The achievement of the socialistic pattern of society is contingent on the achievement of such a revolution in the caste-ridden minds of the people. While it can be expected that with their economic improvement much of the prejudices based on considerations of caste would wear away, to leave the reorganisation of the individual merely to chance would be to delay progress in social reconstruction. Mr Jagjivan Ram has in this connection referred to the need to fight the caste outlook which assessed the status of the individual in society. This has first to begin in the ranks of the backward classes itself where the existence of such divisions and sections based on the caste system is only too well-known. Dr Panjabrao Deshmukh has therefore pleaded for intermarriages among the various sections of the backward classes.

Addressing a meeting under the auspices of the Forum of Free Enterprise in Madras, Mr M. A. Master, expressed apprehensions about the effect of the Government's tax policy on the private sector. The concern of the private sector mainly springs from the series of new taxes which had been imposed on the private sector and which have the effect of taking away from it nearly Rs 100 to Rs 200 that would otherwise have remained with it. That some of the new tax measures have deleterious effects on the private sector is a view which is shared even by persons who do not represent any sector. But to attribute motives to the Government for its tax policy is to distort the Government's policy which on all accounts, is not one of hostility to the private sector.

Mr Master has in this connection stated that under the Second Plan the policy of the Government towards the private sector has changed. Unless he means that the public sector has been assigned a larger role under the Second Plan than under the First Plan, the statement, has in it, very little that is true. The latest concessions in tax measures such as the development rebate, have amply proved the lack of rigidity in the Government's attitude to the private sector.

Mr Master has also referred to the various difficulties encountered by the Second Plan especially in regard to foreign exchange and food production. On the foreign exchange front the sterling balances had been reduced from Rs 740 crores in April 1956 to Rs 280 crores in February 1958. But to the extent that the balances have declined the national sector, has gained by increase in the tempo of development especially in respect of the hard core of the Plan. Mr Master is however right when he points to the vagueness that characterises official thinking in respect of the foreign exchange requirement needed to carry the Plan through.

The difficulties which the Plan has to encounter in the internal situation arise chiefly from the shortfall in respect of collections from small savings and public borrowing. As against a target of Rs 280 crores for borrowings for the period 1956-58, the actual collection amounted only to Rs 160 crores. Similarly, in the case of small savings also there is shortfall of Rs 100 crores. Since the Government has defined its approach to the Second Plan to be a flexible one it is to be hoped that these difficulties would be taken into account in the laying down of policies in respect of development.

What one misses in the speech of Mr Master is a reference to the success that has attended the

efforts of the Government towards economic development in certain vital fields. Merely to expatiate on difficulties showing scant attention to the scope and prospects for improvement of the economic situation is to display a crisis mentality for which at least in the existing situation there is absolutely no warrant.

Printing Industry

The printing industry is in a special category in itself. The nature of the industry which is in a direct way linked with the growth of learning and knowledge invests it with an importance which attaches to few other industries which is further enhanced by the fact that the industry combines in it the characteristics of a creative art. It was not an accident that the discovery of printing preceded the advent of the Renaissance. The position of the industry is a rough measure of the progress made by a country in the field of education.

In India the printing industry comprises about 25,000 units most of them being small private undertakings. In the Southern region there are about 2,000 printing presses of which about 1,000 are situated in the Madras State. The organisation of the industry runs along the familiar lines of the two sectors operating independently, though the private sector accounts for a major share of the activities. The Government presses are in the stage of a new expansion and the Government of India have chalked out an expansion plan for the Government printing business. As part of this scheme two presses in the Southern region, one at Coimbatore and another in Kerala are envisaged. As such there is genuine apprehension among certain sections in the printing industry of competition from the Government presses. But Mr R. Venkaraman, Minister for Industries Madras in the course of his inaugural address to the All-India Master Printers' conference at Coimbatore has allayed such fears of competition from the Public sector.

The problems of the industry are those of eliminating excess capacity and improving the quality of work turned out. Mr S. Ramu in his presidential address pointed to the high standard of craftsmanship required in the industry which could be met only by providing facilities for adequate training and education in the various operations connected with the printing industry. At present the Regional Printing School at Madras caters to the needs of the Southern region. Since the demand for trained personnel is bound to grow in the future the need to increase facilities is only obvious. A central institution for training in printing is also a much-felt need. Since it

Private vs Public Sector

has been found that the present regional school is fit for conversion into a Central School it remains for the State Government to take up the matter with the Centre.

Excess capacity is purely a short-term problem which is bound to disappear with the increase in demand for printed matter. But patronage of Government by way of business job works is also needed to tackle the problem in the short run.

Kerala's Industrial Policy

Addressing a public meeting at Trichur, Mr C. Achutha Menon, Kerala Finance Minister outlined the industrial policy of the Kerala Government as being aimed at encouraging private capital to start new industries in the State. The object in clarifying the industrial policy of the Government was to counter the propaganda which, Mr Menon claims, has been let loose that outside capital will not flow into the State in view of the peculiar behaviour of the workers in the State. As proof of the Government's policy of encouragement to private enterprise he has quoted the statement of Mr Morarji Desai, Union Finance Minister, that the Communist Government was giving maximum facilities to capitalists.

The policy of the Government in the matter of industrial relations is explained as one of establishing industrial truce between the workers and industrialists. In this connection he has referred to the need for mutual negotiations between capital and labour in all the industries in the State for arriving at long-term industrial truce.

But in trying to remove apprehensions of capitalists about the policy of the Government in the field of industrial relations Mr Menon has failed to carry conviction. And it is not difficult to discern the partisan attitude of the Government even in the very statements of Mr Menon which were ostensibly meant to clear doubts. For while he has said that the Government was anxious to safeguard the interests of the workers in all possible manner, assurances to the private sector go to the extent of only endeavouring to safeguard their interests.

The statement of Mr Menon about the working of the Industrial Relations Board in the State would only confirm the fears of private capital about the attitude of the State Government towards it. Mr Menon has criticised the Board as having failed to discharge its duties for the reason that it had not recommended bonus for workers in those industries which had been working at a loss. This only proves that encouragement to private sector by the Government stops short of some facilities for the starting of new industries but does not extend to the guarantee of an adequate return on the

capital invested. The policy of the Government can best be described in terms of the old adage "Heads I win, tails you lose" and as such can be least expected to help industrialisation.

Village Panchayats

With the reorganisation of the local administrative machinery in almost all the States by the creation of village panchayats at the village level a great deal of devolution of administrative responsibility is expected to take place. The declared policy of the Government is to entrust the village panchayats with work in connection with the community development schemes.

Addressing Guntur District Panchayat Conference, Mr N. Sanjiva Reddi, pointed to the need for the panchayats to realise their responsibilities and actively participate in the national reconstruction work. In the changed context of village administration inefficiency of administration at the village level will have far-reaching effects on the country as a whole.

In line with the enlarged responsibilities of the village panchayats the finances of these bodies have also to be increased if they are to be enabled to work effectively for village improvement. The Andhra Pradesh Act has provided revenue powers to the Panchayats. Mr Sanjiva Reddi stressed the need for spending the money at the disposal of the Panchayats wisely and also for properly utilising the services of the block development officers.

Mr V. B. Raju, Planning Minister in his speech pointed out that the Block Development Committees were the agencies of the State Governments and not a separate entity and stressed the need for harmonious relationship between them. He expressed the hope that the Village Panchayats on whose shoulders heavy responsibility was placed would play their part successfully providing improving amenities in villages.

Mr Sanjiva Reddi also referred to some of the other policies of the State Government, such as nationalisation of bus services and deplored the opposition of certain sections of the public towards this policy of the State Government. He also explained the Government's policy in regard to the publication of text books as being aimed at supplying books to students in time and without any mistakes which according to him was not done when the books were printed by private publishers. Expressing disappointment at the poor response to the small savings scheme of the Government Mr Sanjiva Reddi stated that for the successful implementation of the development schemes public co-operation was essential.

SOUTH INDIAN MANUFACTURERS

AN official mission from Ceylon is to visit this country shortly to study marketing prospects for her goods in general and for Copra in particular. The mission will meet Government officials as well as the trade and explore the possibilities of increasing this country's participation in Ceylon's trade. Since India has been the largest buyer of Ceylonese produce, the delegation will urge the Government of India to revise their policy particularly in view of the fact that India has been running a favourable balance of trade with that country.

Soap and vanaspathi manufacturers in the country have, in recent months, preferred to buy their requirements from Singapore on account of a price difference of about Rs 200 per ton between Ceylonese and Singapore copra. Although Ceylon's produce is of better quality and its oil contents are higher, the export duty of Rs 185 per ton has become the main obstacle. It remains to be seen whether Ceylon is prepared to bring its prices on parity with its competitors by suitably reducing the export duty.

Not long ago, India was the main buyer of Ceylon's exportable surplus. But, following the Suez crisis, the pattern of trade has undergone a distinct change, i.e. Singapore, Malaya and Indonesia have ousted Ceylon from the Indian market. Moreover, supplies from Ceylon were restricted following floods last year. The result is, that India's offtake of copra from Ceylon has declined sharply from 900 tons in January this year to 200 tons in March as compared with 9,000 tons and 5,300 tons in January and March respectively last year. In order to achieve concrete results, the mission, it is stated, will have to think in terms of providing substantial price relief, perhaps by removing the export duty completely.

Meanwhile, in a memorandum to the Union Commerce and Industry Minister, established importers of copra and coconut oil have criticized the Government's import licensing policy for the current half-year of banning the imports of both copra and coconut oil by established importers in their anxiety to guard the interests of actual users. They point out that, although India is the second largest grower of coconuts in the world, our production falls short of by at least 30 per cent of the needs. The importers have, therefore, requested the Government to allow them to import at least 50 per cent of their basic quotas. In the Alleppey market, Coconut oil is quoted around Rs 632 and, in the Calicut market, at Rs 725 per candy.

Rubber

Production of Rubber in India amounted to only 951 tons in February as compared to 2,639 tons in the previous month, showing a

fall of 1,688 tons. Imports of rubber, during the month under review, rose to 884 tons from 705 tons in January this year. Consumption by manufacturers was slightly lower at 2,747 tons as against 2,877 tons in January. Stocks of natural rubber with the estates, dealers and manufacturers were also lower at 9,510 tons as against 10,422 tons at January-end, while those of synthetic rubber fell to 1,063 tons from 1,220 tons.

Following is the summary:

	Tons
Opening stock as on 1-2-1958	10,422
Production in February 1958	951
Imports in February	884
	1,835
	12,257
Less:	
Consumption in February 2,747	2,747
Exports Nil	Nil
	2,747
Stocks with estates, dealers and manufacturers as on 28-2-1958	9,510
Stock of synthetic rubber as on the same date	1,063
Total	10,573

The total availability of natural and synthetic rubber in the 1958-59 season will be around 33,500 tons; but the consumption is expected to be as high as 58,000 tons. This suggests that imports of around 24,000 tons—about 10,000 tons higher than in 1957-58—will be needed.

In the meantime, reports from the South indicate that the scheme for rubber plantation is progressing at a rather slow pace. The shortage is likely to increase in the coming years in view of the proposed expansion of the manufacturing industry. Three new tyre plants are to be put up shortly—one in Kerala, second in Bombay and the third in Madras. In these circumstances, there is need for providing better incentives to growers to step up production. Already, growers have been pleading for a revision of the statutory price of rubber due to increased costs of production. Unless the present statutory prices are revised to meet increased costs, the chances of any increase in the area of rubber planting will be reduced.

Pepper

Although Pepper markets have been ruling steady during the past few days, an uncertainty prevails with no inducement for a further price-rise. Prices last week were more or less steady throughout for want of foreign demand and a seemingly easing of the political situation in Indonesia.

In the Cochin market, the rate was quoted at Rs 108.75 for the ready position. In the Alleppey market, superior Palai variety is quoted at Rs 637.50 with sellers at this level and inferior Thekkan variety at Rs 12.50 per candy lower.

Copra Imports

In the Calicut market, Wynaad quality is quoted at Rs 705 and the Country variety at Rs 685.

In the New York market, prices have been well maintained, although there has been little or no trade buying. The spot price is quoted around 27d per pound. The market has had a more orderly look about it after the flurry of speculative activity last month.

Groundnut

Steady conditions prevailed in the Madras Groundnut market where prices showed further improvement over last levels. The rate was quoted at Rs 153 per candy. Arrivals totalled 200 tons, local crushers being the main buyers.

In the Groundnut Oil section, the rate for the ready position improved by Rs 5 to Rs 317 per candy. Offerings were rather small due to the smaller production following power-cut in hydel areas. Calcutta Interests were reported to have taken up small quantities for ready and nearby positions.

According to the latest reports, meagre rainfall, recorded in the Cuddalore area, is not found to be helpful to the standing summer crop. Good and wide showers are necessary for the proper growth of the plants and pod formation at a later stage. Failure to have good rains in the coming weeks may adversely affect the yield. Wells are getting dry. With the result, the crop cannot be irrigated copiously. However, the standing crop continues to be satisfactory for the present.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides remained unchanged with prices quoting about 6 nP per pound lower. Arrivals of Buff hides were moderate with fair clearance. Arrivals of Calf hides were, however, better; but prices were lower by about 13 nP per pound.

In the export section, enquiry was selective and mostly for light weights. Business was reported done in ordinary kips 5½ lbs. In single tannages, sellers' prices were mostly unchanged. Inferior fifths Cow hides in light weights were still too dear for export trade. It was reported that Madras sellers were either making combined offers of runs and fourths or, in the alternative, asking a premium for fourths alone, which prevented the flow of business.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were moderate; but there was a steady clearance at 6 to 18 nP per pound lower.

On the export front, a small volume of business was reported done in 8/9 lbs runs at 14sh 6d; light weight fifths at 11sh 9d to 12sh and inferior fifths at 10sh 9d

to 11sh. There was restricted enquiry for extra weights at 10sh to 10sh 3d.

In the Sheep skins section, buyers were making considerably reduced bids for prime qualities. However, there was moderate enquiry for semi-primers.

The markets for Raw Hides and Raw Skins remained unchanged due to smaller arrivals.

THE MODERN MILLS, LIMITED.

NOTICE TO SHAREHOLDERS.

NOTICE is hereby given that the Twentyfourth Annual General Meeting of the Shareholders of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Wednesday, the 21st day of May 1958 at 4.30 P.M. to transact the following business:—

- To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st October 1957.
- To declare a dividend.
- To appoint Directors in place of those who retire but are eligible for re-appointment.
- To amend Articles 20, 35, 36, 37, 49 and 61 of the Company's Articles of Association.
- To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 25th day of April 1958 to the 15th day of May 1958, both days inclusive.

A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and a proxy need not be a Member.

Detailed Notice of the above Meeting is being published in the Press and is also being posted to the Shareholders individually.

By Order of the Board,
N. SIRUR & CO. PRIVATE LTD.,
Managing Agents,
V. N. CHANDAVARKAR,
Managing Director.
Bombay 12th April 1958.

N.B. The dividend when declared will be made payable at the State Bank of India, Bombay, on and after Monday the 26th May 1958 to those Shareholders whose names stand on the Register of Members on the 25th April 1958, but only in respect of their holdings of shares allotted prior to 31st October, 1957, i.e. shares bearing Nos. 1 to 66376. The dividend warrants will be made negotiable at par at the State Bank of India, Bangalore. Shareholders are requested to intimate change of address, if any.

BASANTI COTTON MILLS LTD.

NOTICE is hereby given that the Twenty-fifth Annual General Meeting of the above named Company will be held at the Registered Office, 24, Netaji Subhas Road, (Top Floor), Calcutta on the 31st May, 1958 at 11.30 A.M. for the following purposes:

- (1) To consider and adopt the Directors' Report.
 - (2) To consider and adopt the statement of Accounts and Balance Sheet for the year ended 31st December, 1957.
 - (3) To sanction the declaration of Dividends on Preference and Ordinary Shares.
 - (4) To elect Directors.
- Lord Sinha of Raipur and Mr. N. Beed Directors of the Company are retiring by rotation and being eligible each of them offers to be re-elected a Director of the Company.

Mr. Ramendra Nath Sircar is an associate of the Managing Agents and is retiring by rotation and offers himself for re-election and special resolution under Sec. 267 of the Companies Act, 1956 is necessary for his appointment. Since it is desirable to avail of his valuable advice by retaining him as a Director of the Company, the following special resolution will be proposed, a special notice has been received by the Company for the purpose and is also hereby given to the shareholders.

"Resolved that Mr. R. N. Sircar an associate of the Managing Agents under the Companies Act 1956 be and is hereby re-elected a Director of the Company."

Mr. S. K. Mitter is an associate of the Managing Agents and is

ket, moving between Rs 3.15 and Rs 3.21 Rohtas changed hands at Rs 16.94 to Rs 17.12; India Steamship at Rs 10.81 to Rs 10.91; Titagur at Rs 34.62 to Rs 34.87 x.d.; Shree Gopal at Rs 14.75 to Rs 14.87; Railis at Rs 32.00 to Rs 34.00; Phillips India at Rs 13.75 to Rs 14.06 and Metal Box at Rs 27.81. Martin Burns were quietly steady at Rs 24.06.

Bombay

THE initial steadiness resulting from Government's relaxation of provisions concerning the Development Rebate yielded place to a quieter tendency on the Bombay Stock Exchange on adverse reports but toward close sentiment rallied with prices generally regaining lost ground. Steel shares were well supported at the beginning. With the report that a section of workers of IISCO had also given strike notice, this section developed a reactionary tendency. A contributory factor for the lack of support for equities around midweek was the pessimistic appraisal of the prospects of the textile industry by Mr. Neville N. Wadia, Chairman of

retiring by rotation and offers himself for re-election and special resolution under Sec. 261 of the Companies Act 1956 is necessary for his appointment. Since it is desirable to avail of his valuable advice by retaining him as a Director of the Company, the following special resolution will be proposed, a special notice has been received by the Company for this purpose and is also hereby given to the shareholders.

"Resolved that Mr. S. K. Mitter an associate of the Managing Agents under the Companies Act 1956 be and is hereby re-elected a Director of the Company."

- (5) To appoint Auditors and to fix their remuneration.
- (6) To transact any other business that may be brought forward.

The Share Transfer Books of the Company will be closed from 4th May 1958 to 31st May 1958 both days inclusive.

By Order of the Board,
THE CALCUTTA AGENCY
PRIVATE LTD.,
Managing Agents.

24, Netaji Subhas Road,
Calcutta-1,
The 19th April, 1958.

N.B.—Dividend, if declared, will be paid to those shareholders whose names stand registered in the books of the Company on 31st May 1958 or to their mandatees.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself. A proxy need not be a member.

Indian Finance

the Bombay Dyeing and Manufacturing Company Ltd. He had pointed out to the shareholders at the company's annual general meeting that 1958 would prove to be a very difficult year for the cotton textile industry in view of the continued disappointing level of cloth offtake. The absence of any purchase by the LIC also aided the downtrend. Toward close rumours of bright prospects of an amicable settlement of the labour disputes in the two Steel companies revived sentiment. Though improvement could be seen only in the more speculative counters, selected scrips all along the list also met with buying enquiry.

STEELS

Steel shares recorded sizable improvement on Friday last—Tata Iron sharply advanced to Rs 184 from Rs 182.75. Indian Iron also moved up to Rs 21.88 from Rs 21.68. There was a setback on Wednesday when the market reopened after the extended weekend. Reports of a strike notice by workers at IISCO dampened enthusiasm and rates were marked down. Tata Iron dropped a point to close at Rs 183 while Indian Iron came back to Rs 21.72. Both the shares staged a recovery on Thursday on indications that a settlement would be reached between workers and management at the two steel works. Tata Iron improved to Rs 184. Indian Iron after regaining lost ground moved up further to close at Rs 21.92.

TEXTILES:

Textile shares were depressed at the beginning on apprehensions about continued difficulty for the industry. Bombay Dyeing reacted to Rs 56.30 from previous closing of Rs 57.40. Century came back to Rs 433.50 from Rs 436.00. There was a further setback on Wednesday and Bombay Dyeing lost ground to be finally placed at Rs 55.80. Century declined rather sharply to Rs 428.50. Toward close selected shares in the section met with some enquiry and consequently the undertone became steady. Bombay Dyeing recovered to Rs 56, while Century also improved to Rs 433.00.

MISCELLANEOUS:

In the miscellaneous section Tata Chemical was a bright spot having been taken up to Rs 15.08 from its opening rate of Rs 14.28. Bombay Burmah was in good request and moved up to Rs 575 from Rs 564.50. Scindia Steam was a steady feature at Rs 17.68. ACC was more than three points higher at Rs 155.75. Belapur Sugar at Rs 244.50 was almost unchanged on balance. National Rayon was done up to Rs 224.50 from Rs 221.50. Premier Construction recorded a gain of over 5 points at Rs 195.75.

Madras

SENTIMENT on the Madras Stock Exchange continued to rule better. Planting shares met with a steady support, while Textiles came in only for small attention. Other sections ruled quietly steady.

PLANTINGS: This section came in for good support. Rubber shares

were absorbed in an increasing measure though this was confined to a few selected shares. Midlands were enquired at the market rate, while T. R. Ts improved to Rs 7.20 from Rs 7.10. Cochin Malabars ruled very firm at Rs 5.05 with Thirumbadis quoted around Rs 1.68.

In the Tea section, there was large buying of Periakaramalais. Peernades and Chembra Peaks. Devasholas changed hands at Rs 18.40 to Rs 18.50, while United Nilgiris were taken up to Rs 16.30.

Among Coffee shares, Consolidated improved further to Rs 24.12 from Rs 24.00.

TEXTILES: Trading in Textile scrips was at a low ebb. Most of the Coimbatore group of shares met with good sellers at the quoted levels. Balasubramanias and Trinopolys were on offer at the market rates. Virudhunagar Textiles met with some enquiry upto Rs 29.75 c.d.; Cambodias at Rs 9.25 c.d. and Buckingham at Rs 171 c.d.

MISCELLANEOUS: In this section, Mysore Papers were wanted at the market rate. Aluminium Industries accounted for good offtake at Rs 13.30. FACTS had buyers at Rs 5.30 following the publication of higher production figures. Ashok Leylands changed hands upto Rs 4.25 on reports of the maintenance of the dividend.

London

RATHER unsettled conditions prevailed on the London Stock Exchange, and the volume of business failed to show any marked expansion. Investors were reluctant to deal in the absence of incentive. There was, however, a selective demand for Industrials, which was encouraged, to some extent, by satisfactory company news.

Ship-building shares were mainly lower, reflecting the contraction of orders for new ships. Stores shares showed dullness on the slowing down in retail trade, while Suez Canal shares were marked up sharply following Egyptian reports of an impending compensation agreement. Investment buying of gilt-edged securities remained on a fairly considerable scale.

New York

PRICES on Wall Street, after ruling initially firm, developed a slightly easier tendency at the close. Motors, some Oils and other selected issues were active, but the general advance had little group leadership. Steels were aided by the prediction of an upturn in industrial activity during the summer and the final quarter of the year. Railis, again, moved ahead solidly. The market closed a bit below the best levels for the week.

Among Sugar shares, Belapur was finally placed at Rs 244 with Phaltan and W'nagar quoting at Rs 138 and Rs 285 respectively. In the Electric section, Ahmedabad turned ex-dividend at 94.50 with Tata Hydro quoted at Rs 118 and Tata Power at Rs 118.125. Among Banks Baroda was done at Rs 113.50. Central at Rs 52.50.

Your Income tax affairs need not worry you

Preparation of Income tax returns is a complicated matter these days. This need not, however, worry you.

You will find it to your advantage to place your Income tax affairs in the hands of your bank.

The State Bank of India will be pleased to undertake the preparation of returns, the checking of assessments and the submission of claims for refund of tax at moderate charges. The Bank will ensure that you obtain all the refunds to which you are entitled.

Why not talk things over with your nearest Bank Agent or write for information?

The State Bank's local head office at Calcutta, one of more than 555 offices waiting to serve you throughout India.

STATE BANK OF INDIA
Largest of the Indian Joint Stock Banks

BRITANNIA

HIGHLIGHTS OF THIS ISSUE

The series on resources for the Plan is continued in the current week's issue by Eavesdropper.

He has this week addressed himself to the question of resources by taxes.

The interesting point that emerges is that neither Government nor the critics of the Government can base their arguments on the plea of insufficient revenue.

That is to say, Eavesdropper proves that additional taxes are already contributing more than was taken credit for in the Second Plan.

Read Clive Street Gossip to find out where and how a thoughtful Government could provide appropriate tax reliefs.

Straws in the Wind

Investment Gossip:

THE New Loan has been announced, but its significance has been obscured because the markets have been preoccupied with an event of greater importance. The decision of Mr Nehru to absent himself from the political arena for some time is the talk of the town, and the immediate reaction is one of a depression in prices. What is intriguing is that the magnitude of the decline is strangely small. It is as if the decision had already been discounted, because it was not altogether unexpected.

I shall presently have something to say about the New Loan, but we may first take stock of the other developments during the week.

There was the Telco imbroglio, with the Estimates Committee passing unkind remarks about the prices being paid for the locos turned out by the company; and though I understand that the company has circularised its own version in the matter, the Estimates Committee's report conducted to a bear trend in Telco prices.

I shouldn't overlook the threatening labour situation in the steel plants. Rumour and cross rumour have been sweeping the market place, but the sum of it all is still to cause a less happy assessment of prospects. I may add that the whole thing will probably fizzle out, because Government are almost certain to term any projected work stoppage as an illegal strike.

Another less than cheering piece of gupsa emanating from Dalal Street was that Bombay Burmah would not secure Government sanction for the bonus issue; this, of course, was interpreted to mean that the authorities generally did not look with favour upon such capitalisation.

To top it all, the New Loan seeks more by way of cash subscriptions than has been the case in recent years. The issue is for Rs 135 crores, but maturing loans eligible for conversion are for the small amount of barely Rs 21 crores. And so the resultant intention to obtain Rs 114 crores of new cash from the market, it is thought, will cause a severe drain.

We have to set against these developments the price movements during the last week. During the period, Indian Irons have shed only 28 nP to rule at a level of Rs 21.67. So, the conclusion must be that the market has been behaving inherently stronger than might have

been supposed or expected in what could easily have been a crushing week.

This leads me to a few remarks about the future. I shall necessarily be guarded in what I have to say; and, at the outset, I may assert that the last week offers proof positive of an underlying strength in the market's outlook.

The significance of the last week's developments needs now to be studied as affecting future prospects. Mr Nehru's decision, I repeat, is already discounted, and Mr Nehru will return, so there need be apprehended no further erosion of share values.

Secondly, the strike threat will end up by having been a strike threat; that is, nothing will come of it.

Thirdly, the Bombay Burmah bonus will, I suppose, ultimately be made; Government will have no tenable grounds to refuse to accord sanction.

Fourthly, the New Loan should not tantamount to a drain on resources for stock exchange activity. For, the subscriptions of the LIC and the Provident Funds would in any case have been earmarked for gilt-edged, and would not have been available for stock exchange investment. Even so, such subscriptions as are forthcoming from the Scheduled Banks would have been unavailable for the share markets. Thus, any outcry that Rs 114 crores have "disappeared" from the money market, to the detriment of stock exchanges, is wrongly based.

I suggest, therefore, that the impact of the last week's developments on the future of stock exchange activity will be meagre; and we should derive cheer in the fact that the reaction so far has been of negligible proportions.

On the other hand, there is definitely cause for markets to resume their upward trend. In the first place, good news in steel may be in the offing. I am not in a position now to say what form this will take, but, in any case, it is clear that each month that passes witnesses another month in which the expansion programmes have been furthered. Production during the current year is likely to exceed the expectations of most people.

In the second place, Government have by concrete action shown they are not against concessions as such. The reduction in the excise duty on cotton textiles, the promise of a cut in the export duty on teas, the virtual repeal of the Compulsory Deposits scheme and the liberalising of the regulations for Development Rebate are all straws in the wind; and the wind is clearly one which is not antipathic to the private sector.

In the third place, the money market is experiencing extremely comfortable conditions. The prospect is that the resources of the banking system will continue to derive great benefit from the Plan disbursements of Government. In

GOVERNMENT OF INDIA

3½ per cent. Bonds 1963 Issue Price Rs. 98.75 per Rs. 100 (Nominal). Repayable on 12th May 1963.

3¾ per cent. National plan Bonds-fifth series (3¾ per cent. 1968). Issue price Rs. 99.50 per Rs. 100 (Nominal) Repayable on 12th May 1968

4 per cent. Loan 1973. Issue price Rs. 100 per Rs. 100 (Nominal). Repayable on 12th May 1973.

Subscriptions to the above bonds and loan will be received simultaneously and will be limited to a total of Rs. 135 crores (approximately). Subscriptions may be in the form of (i) Cash/Cheque or (ii) securities of the 3 per cent. Loan 1958 or 4½ per cent. Loan 1958-68, which will be accepted for conversion at the following rates:—

3 per cent. Loan 1958 .. Rs. 99.75 for Rs. 100 (Nominal)
4½ per cent. Loan 1958-68 .. Rs. 100.10 for Rs. 100 (Nominal)

Interest will be paid on the 3 per cent. Loan 1958 and 4½ per cent. Loan 1958-68 tendered conversion upto 11th May 1958 inclusive.

The new bonds and loan will bear interest from 12th May 1958. Interest will be payable half-yearly on 12th May and 12th November.

Subscription lists will open on 12th May 1958 and close on 14th May 1958 or earlier without notice.

Applications for the bonds and loan will be received at:

- (1) Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi;
- (2) Branches of the State Bank of India at other places in India except at places mentioned in (3) and (4) below;
- (3) Branches of the State Bank of Hyderabad conducting Government business; and
- (4) Branches of the Bank of Mysore Ltd. in the State of Mysore.

For full particulars apply to any of these offices or branches or treasuries.

this context, the announcement by Mr Morarji Desai, the Finance Minister, that deficit financing for the Second Plan will approximate to the original target of Rs 1200 crores is an indication that the resources accruing to the banking system will be very considerable.

I will content myself by concluding that, while the short-term future may be somewhat obscure, there can be no doubt at all about future prospects generally.

Investment Notes:

CEAT Tyres of India Limited will be in the market next week with a public issue of equity capital for Rs 1.15 crores, divided into 1,15,000 shares of Rs 100 each, at par. CEAT S.P.A., one of the promoters of the company, will subscribe 69,000 shares, while the Investment Corporation of India Limited will subscribe 6,000 shares. The remaining 40,000 shares are offered for public subscription. The subscription list will be opened on May 5 and will close on May 15 or later at the discretion of the directors. A sum of Rs 25 is payable on application, while Rs 25 are to be paid on allotment. The balance of Rs 50 will be called in two instalments at an interval of at least two months. The issue is underwritten by the Investment Corporation of India Limited.

In the Calcutta market, Indian Coppers are idling around Rs 3.15. The sluggishness is to be attributed to the uncertain outlook for copper in world markets. Also, there are rumours that the company is likely to pass the interim dividend for

last year. In 1956, the company recommended an interim of 9 nP and a final dividend of 18 nP per share on the increased capital. The working of the company, however, continues at a satisfactory level, while the development work is proceeding according to the schedule.

Cement shares have, of late, been ruling firm. Sone Valley have buyers upto Rs 5.03; A.C.C. upto Rs 154.75 and Digvijay upto Rs 146.25. The main inspiration is derived from the hope that the Government of India will soon announce their decision on cement prices which, it is expected, will enable the industry to meet higher costs and provide funds for expansion.

National Rubber has recommended a dividend of 10 per cent for the year ended 31st December, 1957. All the ordinary shares, including those covered by the recent new issue, are eligible for the dividend.

In Bombay, Killick Industries have, it is understood, have received the sanction from the Controller of Capital Issues for raising new equity capital. The company will issue 25,000 equity shares of Rs 100 each, at a premium of Rs 20. The shares will be issued in the ratio of one share for every four shares held. These shares will be issued, in the first instance, to the shareholders of the company.

In Madras, Parry's Confectionery Limited has proposed to issue 2,50,000 equity shares of Re 1 each, at a premium of Re 1, payable in full on application, to holders as on the 10th May, in the proportion.

Peermade Tea has reduced the total distribution from 37½ to 25 per cent for 1957.

Nisco Maintains Dividend

Balance-Sheet Reviews:

DESPITE a slight decline in earnings, the National Iron & Steel Company Limited has maintained the dividend at 62 p per share for the year ended 31st March, 1957. Sales have risen to Rs 1.91 crores from Rs 93.41 lakhs; but the net profit, after providing for Depreciation and Taxation, amounts to only Rs 6,55,655 as against Rs 6,87,033 in the previous year, mainly due to the rise in the "Salaries and Wages" item from Rs 24.47 lakhs.

Apart from providing a sum of Rs 37,324 for Wealth Tax, the Depreciation amount is raised to Rs 5.94 lakhs from Rs 5.13 lakhs and Taxation provision to Rs 5.41 lakhs from Rs 4.81 lakhs. According to the directors' report, one Electric Furnace of 6.5 tons capacity was installed during the year under review; and considerable improvement is effected in the Steel Foundry section of the company.

Budge-Budge Jute Mills

The Budge-Budge Jute Mills Company Limited has reported a slight decline in sales from Rs 1.73 crores to Rs 1.66 crores for the year ended 31st October, 1957, while the accounts, after providing for Depreciation, reveal a loss of Rs 81,355 as against a loss of as much as Rs 5.36 lakhs in the previous year. The Depreciation amount is raised to Rs 2.44 lakhs from Rs 1.80 lakhs. After transferring a sum of Rs 1.73 lakhs from various Reserves, the directors have found it possible to

set aside a sum of Rs 30,000 for Wealth Tax and recommend the dividend only on the Preference shares.

The Board of directors of this company together with the Boards of other jute mills in the same managing agency group have resolved to form a company under the style of Budge-Budge & Allied Jute Mills Exports (Private) Limited with a view to having direct contacts with overseas markets. Each of the participating jute mill companies has subscribed equally to the capital of the new company.

Coonor Tea

The Coonor Tea Estate Company Limited has been able to report a much higher level of earnings for the year ended 30th September 1957, thanks to the satisfactory prices obtained for the company's high-class teas. The net profit, before providing for Depreciation and Taxation, amounts to as much as Rs 2.48 lakhs as against only Rs 1.37 lakhs in the previous year. The provision for Depreciation is raised to Rs 24,390 lakhs from Rs 21,383 and for Taxation to Rs 1.03 lakhs from Rs 35,000. A sum of Rs 1,618 is transferred to Development Reserve, while Rs 15,000 is additionally provided for taxation in respect of previous years. The directors have recommended a total distribution of 20 per cent as against 17½ per cent.

The crop turned out has constituted a record, its actual weight being 364,942 pounds. The average price fetched is higher at 248.57 cents per pound as against 223.31 cents.

Lucky Valley Tea

The Lucky Valley (Nilgiri Hills) Tea Estates Limited has, however, not done equally well. Although a record crop of 245,839 pounds is secured, the average price realised is only 206.84 cents per pound as against 262.33 cents.

The net profit for the year ended 31st December 1957 is slightly lower at Rs 82,939 as against Rs 1.57 lakhs in the previous year. After setting aside a sum of Rs 12,801 (Rs 11,246) for Depreciation the Taxation provision is reduced to Rs 35,500 from Rs 60,000. The dividend on the Ordinary shares is, however, maintained at 10 per cent. The amount carried forward is lower at Rs 5,851 as against Rs 25,439 brought in.

"Retreat"

OUR first reaction to Mr Nehru's request to his colleagues in the Congress Parliamentary Party, asking them to allow him a short holiday, is one of warm personal sympathy. Like most lucky people, we have been rather taking for granted our good fortune. Since Mr Nehru himself did not seem to mind, we were only too willing to overwork him shamelessly and did not think of the deprivations that his chosen vocation of serving his country involved. From his own point of view, the most important of such self-denials has been the abdication by him of his right to a personal life of his own, the voluntary surrender by him of the quieter felicities that it is the avowed purpose of Government to provide: the opportunity for a full inner life, enriched by warm personal relationships, and the good things of life—leisure, books, poetry and the passion of thought. Mr Nehru's sense of what might have been makes its fugitive appearance every now and then, but is almost at once suppressed by him as though such nostalgia constituted some kind of disloyalty to his central vocation. Behind the carefully worded desire to "free himself from the daily burden and to think as an individual citizen of India" is a bitter clash of loyalties, a hopeless longing for a life that will never be his, and a sense of irony that he should be denied the graces of the kind of life that he passionately cherishes and made it his vocation to provide for his countrymen. Indeed, such irony is the essence of the human predicament. The very act of acquiring for yourself or for others the wherewithal for the good things of life deprives you of them. And the crowning irony may well be that those for whom you have made them available do not set as large a store by them as you yourself do.

But there are aspects of Mr Nehru's desire to have a short respite from the daily tasks. It is, though he himself does not mention it, that he has been most appallingly overworked in the last ten years, and needs some rest. Mr Nehru himself says that he feels quite fit physically and is still full of the sense of adventure and exhilaration that his chosen tasks have given him. His sense of flatness, he attributes to having fallen into set grooves of thinking from which he wants to free himself. But inexhaustible as Mr Nehru's reserves of energy are, it is plain that he does need complete cessation from activity. Indeed, we should like him to take more frequent short holidays from his work, even if they were only for short weekends. We do hope that at least part of the holiday he will be taking now will consist of plain rest during which even the different kind of thinking that he has promised himself would be absent.

But the principal reason for Mr Nehru's desire to be away from the "centre of activity and responsibility" is the same as that behind the situation familiar to all religious discipline, described by Christians as "Retreat". It means a temporary retirement for religious exercises, introspection and reflection. The primary purpose of "retreat" is doubtless spiritual, but the psychological, intellectual and even physical advantages that will accrue from such periodical absence from daily routine are easily recognised. It is designed to build up reserves upon which one can draw when one

gets back to one's workaday world. In the old days, opportunities for such withdrawal from the world were automatically provided for Mr Nehru by his periodical imprisonments. Indeed, one could attribute his latter day recklessness in using himself up without any apparent ill effect to the store he had gathered during his long spells of enforced retreat. Mercifully, we do not have to throw Mr Nehru into gaol to give him time to replenish his creative reserves. A short holiday of the kind he has asked for, completely free from the cares of office, will be sufficient for a man of his capacity for quick absorption of creative impulses.

We regret to say that Mr Nehru's colleagues in Parliament do not appear to have any notion of the promptings behind Mr Nehru's

"Anxious to Play their Proper Role"

SIR Bejoy Prasad Singh Roy ended his tenure as the President of the Indian Chamber of Commerce with an eminently level-headed address that is, as it were, proof of his possession of the capacity for business statesmanship, which he will need in his new responsibilities as the President of the Federation of Indian Chambers of Commerce and Industry. After touching briefly on the international economic conditions, Sir Bejoy Prasad has shown himself to have enlightened knowledge of what the Second Plan stands for and of the role that the Indian business community has in carrying it through. Of course, the opportunity for Sir Bejoy Prasad to voice his views in this regard was provided by Mr Nehru when, at the last annual meeting of the FICC, the Prime Minister spoke of the goal before the country of prosperity and welfare of the Indian people. Mr Nehru went on to add that, in such a context, it would be debilitating to dissipate our energies in a controversy over the relative roles of the so-called private and public sectors, and, indeed, there was only one sector. The Indian Chamber President welcomed these remarks, and pointed out that the business community looks upon "economic problems of the country in a dynamic way and expects Government policies to be adjusted to the needs of an expanding economy". Fortunately, there is a recent instance of Government flexibility in their approach as was disclosed by the lowering of the excise duty on cotton textiles and the dropping of the compulsory deposit scheme. Sir Bejoy Prasad hopes "that the problems of the industry will continue to be considered by Government in a spirit of helpful understanding". But then, the Indian Chamber President recognises that, consequent to a helpful approach by Government, the business community is offered a challenge whereunder it has necessarily to be more and more constructive in its approach.

That Sir Bejoy Prasad meant what he said can be seen from his remarks on the prospects for exports. 1957 has not been an entirely happy experience in regard to exports, the basic weakness arising from increasing foreign competition. So, he has called for "improvement in our marketing techniques, maintenance of a high standard of quality and a more

Indian Finance

Established 1928

May 3, 1958

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

request. At the moment of writing, they are reported to be contemplating a resolution opposing his suggestion. This is presumably intended to demonstrate their great faith in his leadership and their feeling of his indispensability. None of these was in question, nor was Mr Nehru suggesting that he was abandoning politics for good. A request of the sort Mr Nehru made, in which all aspects of the question were only too painfully made clear, must have been the result of long heart-searching, and deserved better consideration than effusive and unthinking idolatry. It is to be hoped that they will change their mind and allow Mr Nehru to have a short period of complete withdrawal from familiar activity, so that he may come back, renewed and refreshed, for carrying on his great tasks.

competitive price", as the "effective solution to the problem."

Then, in regard to production trends Sir Bejoy Prasad has added his voice to that of Indian Finance in the view that sectors of the economy may be by way of being transformed into soft spots. A matter for anxiety is that the slackening in the rate of production might have stemmed partly from a fall in the offtake of industrial output. The Indian Chamber President asserts that "the resources for the people for greater economic activity have not increased because of the higher cost of living and a high level of taxation". It is no doubt true that the level of taxation in India has reached a stage where it might impinge adversely on the broadening of economic activity. But, surely, the concessions announced during the current year are such as to suggest that, since their approach is not dogmatic or inflexible, Government would grant the reliefs where they become necessary.

But the most hopeful thing that Sir Bejoy Prasad Singh Roy said relates to his comments on the Second Plan; its implementation is the main objective before the country. He says "The business and the industrial community is no less enthused with the ideals and objectives of the Plan. They are anxious to play their proper role effectively to the best of their ability. They have been given a great responsibility in the Plan."

While it is gratifying to note that Sir Bejoy Prasad Singh Roy will have the opportunity for effecting goodwill and cooperation between Government and the private sector in his new assignment as the President of the FICC, it is also pleasant to be able to welcome Mr D. N. Jalan as the new President of the Indian Chamber of Commerce. Mr Jalan has the distinction of having been elected to this high office within three years of his election to the Committee, a unique achievement. Mr Jalan is in sight of completing his twenty-fifth year in active business, and he brings to his new office the experience that he has garnered besides as President of the Engineering Association of India in 1952, Chairman of the Engineering Export Promotion Council in 1955-56, and various other Chamber responsibilities.

Staff Relations in Hospitals

By M. SUR

"HOSPITAL workers on Hunger Strike"; "Students and Nurses Cook Food for Patients"—these were headlines in Calcutta newspapers last week. Unfortunately, there is nothing new about strikes by domestic staff in hospitals. Recently, it was reported that, in one hospital, without any warning whatever, dinner was not served to patients of one ward. The doctor doing his rounds at night discovered this, called together a few helpers, cooked and fed the famished patients and washed up before going home after mid-night.

It is horrifying to think that these things can happen in a front-line social service like a hospital. Here is a problem which should be receiving the close attention of all connected with the healing profession, but there is an alarmingly apathetic attitude to the problem. We hear a great deal these days about human relations in industry: we have trained labour and welfare officers to handle management/labour relations; but, in a hospital, which is a more complex organisation than a factory, nothing is being done either to study or improve relationships. Discussion of this matter with the medical superintendent of a hospital recently elicited the astonishing response that there is no need for a staff officer, that the superintendent's door is always open and that anyone with a grievance can bring it direct to the superintendent. This is exactly the sort of reply that one used to receive from the old-fashioned manager in industry, but it has been proved wrong again and again. Government have insisted on the appointment of properly trained officers to deal with labour relations in industry; they have appointed welfare officers in the main Government Departments; but nothing is being done either in the Government or in the private hospitals to apply to them the experience gained in industry and the civil service.

Is it reasonable to suppose that the domestic servants in a hospital will take all their minor grievances to the medical superintendent, or that such a busy man (who generally has medical and surgical as well as administrative duties) will have time to listen to and look into all complaints? It is not even in the interests of efficiency that he should do so. No—if there are minor grievances, they will remain unsettled, and may grow into major causes of discontent. It seems, from the recent Calcutta hunger strike, that even major and wholly reasonable demands such as a weekly day off, uniforms, and special leave for workers contracting such diseases as tuberculosis and leprosy, had not been dealt with in Government hospitals in West Bengal. There is probably a similar situation in many private hospitals.

Should such demands be left for the Chief Minister to settle personally, after a hunger strike and token strike in many hospitals at a time of appalling heat and when cholera has just been declared epidemic? Should patients suffer, nurses be forced to cook food, and the sanitary arrangements of the hospital be allowed to become unhygienic, just because there is no one to deal with complaints at the hospital level and to make recommendations to authority? Is it the job of the Chief Minister to see that sweepers in a hospital have their hours re-arranged so that they can have a weekly day off? What is the effect on morale and discipline of the now common knowledge that, if the domestic staff want anything, they must go and squat in Subodh Mullick Square? The whole situation is fantastic, but it is also tragic. The principles that have been tried out in staff relations elsewhere should be

applied to hospitals. The old idea of taking the staff for granted in a hospital must be replaced by a proper approach to the very real human problems in hospital organisation.

We have said that the hospital is a more complex organisation than industry. This is because there is not the direct line of authority in a hospital that there is in a factory. There are the administrative staff; there are the visiting medical and surgical staff as well as the resident doctors and surgeons; and there are the nursing staff and the domestic staff. Each category has duties which run parallel with another, authority may be divided and there is no obvious grouping of the workers under a supervisor who is the only person who gives them orders. Domestic staff, for instance, are directly under the administrative staff, but they have also to take orders from doctors and nurses. There are rarely any avenues for promotion for domestic staff. There are hard and fast social divisions between the various grades of hospital workers. To build up a spirit of cooperation which will serve the best interest of the patients is a full-time job. Then, beyond the criss-crossing of interests in the human relations of the hospital staff, one has to remember the importance of the right relationship between patient and staff, which is essential if the right atmosphere for curative work is to be created. Imagine how the condition of the sick patient is adversely affected by the breakdown of the cooking or the sanitary arrangements!

The suggestion that hospital staff or welfare officers should be appointed will at once be met with the cry that workers only want more pay and that hospitals cannot afford to pay more or to appoint any new officers. But can

Changes in the Ownership of Plantation Companies—II

By Dr R. M. AGARWAL

An analysing of the Balance Sheets of the 247 companies shows that, between 1946 and 1953, there was an increase of Rs 32.56 crores

Types of Ownership/Management.	No. of Companies	Increase in Assets Com- in 1953 over 1946 Amount (Rs. Crores)
Sterling Companies: (Controlled by Managing Agents/Secretaries, etc.)	95	23.62
Rupee Companies:		
1. Non-Indian Managing Agents Control		
(a) Non-Indian	25	1.20
(b) Partly Indian and Non-Indian	51	3.41
2. Indian Managing Agents Control		
(a) Indian	19	1.13
(b) Partly Non-Indian and Indian	11	0.57
3. Outside Managing Agents Control		
(a) Public Ltd. Indian	43	2.58
(b) Private Ltd. Indian	3	0.04
Total	247	32.56

Even though the increase in the assets of the Sterling and the non-Indian Rupee Companies has been greater, or at least as much as in Indian Rupee Companies, the amount ploughed back into fixed assets in the case of these Companies has not been of the same order. On the contrary, the working funds per acre available with Indian Rupee Companies have been much more as compared with

they afford not to, in the present stage of deteriorating morale? Has anyone ever analysed the various jobs in a hospital, and found out what training is necessary for them?—(apart from the professional training of medical and nursing staff). How is recruitment carried out in a hospital? How is the new worker introduced to his job? What is done to make him appreciate that he is working in a great social service? What instructions are given in the maintenance of valuable equipment? What investigations have been made into the physical and mental strains of hospital work? The replies to all these questions are distressingly negative, and the result is that people regard hospitals with horror, and that many patients are too frightened and miserable to make normal progress toward recovery.

As to the demand for higher pay, which is naturally foremost in the minds of the workers, it may be true that many hospitals can ill afford to increase wages, but then they can less afford deteriorating morale and complete breakdowns in service.

In the West, the personnel function has been recognised as essential in hospital administration. In fact, the high cost of health services there has made it necessary to see that each person in the health service is employed to the greatest advantage. To quote from the report of a UK conference on personnel work in hospitals:

"It is obvious that the well-being of the patient, his care and treatment is the primary concern of a hospital. The patient will react as much to environment as to medicine: they are inseparable and together form the patient's treatment. Environment is not dependent only upon bricks and mortar. Staff relationships are of such vital importance in its development that they must be preserved and improved in every possible way."

in the fixed as well as the floating assets of these companies, showing thereby an increase of 58.05 per cent over 1946.

Amount Ploughed Back Into Fixed Assets. Total (Rs. Crores)	Working Fund Per Acre. (Rs.)
Sterling Companies: (Controlled by Managing Agents/Secretaries, etc.)	117.90
Rupee Companies:	706.15
1. Non-Indian Managing Agents Control	
(a) Non-Indian	332.87
(b) Partly Indian and Non-Indian	378.51
2. Indian Managing Agents Control	712.76
(a) Indian	1175.83
(b) Partly Non-Indian and Indian	516.58
3. Outside Managing Agents Control	
(a) Public Ltd. Indian	855.11
(b) Private Ltd. Indian	561.90
Total	706.18

the working funds available with the Sterling and the non-Indian Rupee Companies.

This is because the Indian Companies, despite larger profits, have been distributing lesser amounts by way of dividends and utilising a major portion on development and expansion programmes which is so very vital for the future of this industry.

Types of Ownership/Management.	No. of Companies. (No.)	Gross Profit			Net Profit		Dividend		Retained Profit as % of Net Profit.

In order to ensure the steady progress of the tea industry, tea crops have got to be replanted regularly. The table given below shows the area planted and abandoned during 1953 by companies under different managements.

Types of Ownership/Management.	New Planting.					Area abandoned as % of total acreage.				
	Total Acreage (Acres)	Virgin (Acres)	Reclaimed land (Acres)	Re-Planting (Acres)	Total (Acres)	New Plantings as % of total Acreage.	Area Abandoned (Acres)	Area abandoned as % of total Acreage.	% of net decrease planted to total acreage.	% of net decrease planted to total acreage.
Sterling Companies	2,71,776	7,685	597	17,864	26,146	9.6	8,492	3.1	6.5	6.5
Non-Indian Rupee Cos.	92,648	2,543	764	2,317	5,624	6.1	1,944	2.1	4.0	4.0
Indian Rupee Cos.	62,786	2,495	1,537	1,126	5,159	8.2	1,722	2.7	5.5	5.5
Total	4,27,210	12,724	2,898	21,307	36,929	8.6	12,158	2.8	5.8	5.8

Here, the performance of the Indian Rupee Companies, though not as good as that of Sterling Companies, has been better than that of the non-Indian Rupee Companies.

By now, it must have been noticed that the Indian Companies, even though smaller in size, meagre in resources and less experienced, have worked better than non-Indian companies in certain respects. Even in those fields where they have not shown better progress, at least they have not been any worse than the non-Indian companies. This is no doubt creditable, but the Indian companies cannot afford to suffer from a feeling of complacency and will always have to keep an alert eye on increasing their working efficiency. It must not be for-

gotten that tea is primarily an item of export, and the Second Five Year Plan has fixed an annual export target of Rs 133 crores or 21.6 per cent of total exports. On the basis of the report of the Export Promotion Committee, which suggests an annual export target of Rs 750 crores as against Rs 615 crores fixed by 1960-61, the share of tea exports comes to Rs 162 crores annually. This, in the face of acute competition from alternate sources of supply and substitutes like coffee and cocoa, calls for a combined effort on the part of all of us, irrespective of the type of ownership and/or management of these companies. In this joint ventures, the importance of Government assistance can never be over-emphasised.

Communist Bloc's Trade Offensive Poses Questions

By HENRY V. BURKE

THE Soviet Union's new emphasis on "trade and aid" offers in areas considered important to future Communist plans occurs at a time when the USSR's internal economy is admittedly still beset by many problems.

Notable among these are a serious housing shortage and a pressing public demand for more and better consumer goods.

This seemingly paradoxical situation has prompted questions as to the Soviet bloc's actual ability to deliver good quality trade goods in the amounts promised.

Doubts arising from a study of these questions, it must be admitted, were strengthened by two frequently-quoted statements by Soviet Communist Party Chief Nikita S. Khrushchev.

In September of 1955, Khrushchev disclosed that "we (the communist bloc) value trade least for economic reasons and most for political purposes." Three months later Khrushchev made an even more significant remark: "We still produce less of certain goods than is necessary to satisfy the growing needs of our country."

Khrushchev's second statement, if anything, seems conservative when compared with these more recent complaints published by the Soviet press:

"Moscow industry and cooperatives... frequently release goods which are outdated in style and of poor quality... which are then sent to other cities where there is a great demand for them because the local production there is either nonexistent or insufficient.... Due to such manoeuvrability... the industry manufactures low quality goods with impunity.

"The trade network is clogged with unwanted and low-quality goods. The production of 69 industrial enterprises was rejected last year because of its low quality."—Soviet Trade.

"The Office of the Latvian State Fisheries bought 20 new chairs... Within a week only six chairs remained intact. The rest fell apart."—Sovetskaya Latvija.

"It is impossible to find children's chairs, beds, and tables in the stores. The situation with children's clothing and shoes is exceptionally bad."—Turkmenkaya Iskra.

"In the town of Kemi, it is impossible to buy tooth paste, tooth brushes, needles, pins, buttons and gasoline."—Leningradskaya Pravda.

"Spare parts for radio receivers fed by electricity or by batteries are quite frequently unobtainable."—Pravda Ukraini.

"Garment Factory No. 2... was to deliver 553,000 rubles' worth of men's trousers... but

only 20,000 rubles' worth have been delivered. The same factory was to deliver 412,000 rubles' worth of boys' costumes... only 25,000 rubles' worth have been delivered."—Kommunist (Armenia.)

"The Shvernik kolkhoz (collective farm) of the village of Sakire was organized in 1931 but its farm work is only 10 per cent mechanized... Unfortunately there are not enough plows and those that are on hand are worn out. The last plow was bought in 1934. Kolkhozniks repeatedly asked for new plows, but each time the answer was that plows were unobtainable."—Zarya Vostoka.

While there is no question of Soviet bloc production achievements in certain fields, such as heavy industry, failures in the key areas of consumer goods and housing have a definite bearing in any overall assessment of the USSR's capabilities in foreign commerce.

A growing awareness of Soviet internal deficiencies was apparent in several of Moscow's 1957 economic decrees promising improvements in housing and consumer goods. It is regarded as significant, however, that these pledges of improvement were couched in carefully worded phrases. Of particular interest is the fact that solutions are not foreseen by Moscow for another "five to 12 years."

Soviet efforts to improve production methods—such as the complete 1957 reorganization of the USSR's industrial apparatus and repeated admissions that traditional Communist business methods are too much hampered by party bureaucracy—have been undertaken too recently for any sound assessment of results.

The question of spare parts, however, which could be a vital factor in the success of future trade deals with countries importing machinery, has a definite bearing on any study of Soviet economic potentials.

It is significant, therefore, that the authoritative Soviet journal, Party Life, raised this same question in its first 1958 issue. In an extended comment on the Soviet Union's internal problems, Party Life revealed that public demand in the USSR for spare parts for motorcycles and refrigerators alone is twice the available supply.

This shortage of spare parts, although undoubtedly influenced by faulty delivery methods, has been related also to Communist bloc industrial "speed-up" techniques.

Joseph S. Berliner's recent book, "Factory and Manager in the USSR," for example, points out how premiums or bonuses for factory managers exceeding their production norms has become an integral part of the Soviet industrial system. Curiously, however, bonuses are figured only on the number of machines produced, with no attention given to volume of accompanying spare parts. A Soviet factory manager earns no bonus if he meets his goal of, say, 100 machines, including the proper number of replacement parts. If, however, the manager produces 102 machines and no spare parts, he is in line for an award. Under this incentive policy, it is only natural that spare parts are neglected.

The former Czech industrialist, Dr. Ctirad Sarka, drew on his extensive experience with Soviet production methods to formulate a more basic explanation.

After turning from Communism in 1956, Dr. Sarka revealed how the Prague export office was swamped by demands from customers in India and other countries for spare parts—along with complaints that machinery only two years old already was wearing out.

Dr. Sarka's explanation was simple. Communist bloc industrial products are poor in quality because of a serious shortage of vital raw materials affecting the use of proper alloys. "Use over a very few years shows up the weak spots in Communist-made machinery," he said.

Estate Duty

The slight hitch in the progress of the Estate Duty Amendment Bill, as the result of an interesting point of order raised by a Congress backbencher, is a reminder of how easy it is for the Ministries of the Union Government to ignore the existence of the States and their rights under the Constitution. Mr G. Periaswami Gounder's intervention is, however, a timely reminder that, so long as we have a federal constitution, it will be wise to respect the rights of the federating units even if they are no more than nominal.

The delay in passing the amending Bill is not likely to be of more than formal significance. The Bill has been referred to the Select Committee and, by the time the Committee reports to the next session, it should not be difficult to get the essential authorisation from two State Legislatures. Instead of being passed into law in the current session, the Amending Bill will become an Act in the next. The delay will not make any difference to the revenue estimates of the Budget, and those who are likely to be affected by the amendments proposed have no cause for jubilation.

These amendments make the provisions of the Estate Duty Law more stringent and restrict some of the concessions allowed at present. During the four years since the Estate Duty legislation was en-

acted, actual collections have fallen far short of expectations. The amendments are designed to make it more difficult to avoid the tax by gifting away of property. Gifts made within five years preceding death will attract duty instead of within two years as at present. The Bill also renews the attack on the joint family. The rate applicable to coparcenary property passing on death will be not the rate for the deceased's share alone, but the one applicable to the figure arrived at by adding to the deceased's share the shares of the lineal descendants of the deceased. The exemption limit for joint families is, however, left unaltered, while for others it is brought down to Rs 50,000 from Rs 1,00,000. The rates for lower slabs are also to be stepped up. The lowering of the exemption of limit, it is anticipated, will bring another ten thousand estates within the scope of estate duty. It is also certain that it will affect a much larger number of middle class families.

Troubles for Export

Some recent statements made by persons in authority, or holding representative positions in Pakistan, draw attention to the internal troubles of that country which have some bearing on its external policies. The kaleidoscopic changes in the Eastern Wing, dismissals of ministries and governor following each other in rapid succession, reflect the instability consequent on deep-seated antagonisms. More recently, pointed attention has been drawn to the economic troubles and defects in the utilisation of external aid, and Mr Casey had to disavow the criticism made by the Australian administrator of the Colombo Plan programme. This has been followed by a statement issued by the Secretary of the West Pakistan Muslim League, which declares that all British and American aid to Pakistan "has so far been devoted to crippling our capacity for progress and destroying our sense of self-reliance". And, finally, the Pakistan Prime Minister himself has made a forthright criticism of the neglect by Government of the country's five year plan. With so much trouble at home, the rulers of Pakistan may be tempted to resort to external adventures in a bid to divert popular attention. There are indications that Pakistan may be preparing for a two-pronged attack on India. A top level military mission has left for Washington seeking additional military aid. Against this background cannot be dismissed as an isolated event. There are reports of Pakistani agents and fifth columnists on the Indian side of the border and among the Nagas. The district is cut off from the rest of Assam by Naga territory and is ill served by communications.

Railways and Coal

Though the coal industry last year put up an impressive performance, the authoritative spokesmen

of the private sector have been at pains to emphasise that the rate of increase of output is of a short term nature and that urgent administrative action is necessary to eliminate the difficulties which complicate the problem of long-term planning for the industry. The total raisings last year amounted to 43.5 million tons of which 5.3 million tons were produced in the public sector and 38.2 million in the private sector. In order to reach the Second Plan target, both the public and private sectors will have to increase annual output by nearly seven million tons. The chairmen of the different organisations of the coal industry have referred in detail to the difficulties that hamper efforts to step up output. The public has not been informed of the difficulties of the public sector. Since the performance is not impressive, the public are left to their own inferences. A shortfall in the production of coal as compared with the targeted figures will have very serious repercussions on manufacturing industry and, especially, on the steel plants which will between them require up to 12 million tons of high grade coal. Side by side with measures to increase output, it will also be necessary to explore ways of economising the use of coal especially of the higher grades which should be reserved for the metallurgical industry. Just as Railways can make the most substantial contribution toward increasing output by providing adequate transport, Railways as the largest consumers have also an important part to play in fuel economy. The Railways' consumption of coal is nearly one-third of the total annual output. Out of the total production of 40.31 million tons in 1956-57, the Railways consumed 13.2 million tons. Attempts that have been made in the past to persuade the Railways to desist from burning high grade coal in their locomotives have not been very successful. The obvious way to reduce the Railways' demand for coal is electrification. It is a matter for satisfaction, and not merely for Calcutta's suburban passengers, that the electrification of the Sealdah section will be taken up during the Second Plan instead of being postponed as was at one time apprehended. Electrification of the Gaya section is also expected to be completed by 1959 and the six crore scheme has been very properly included in the core of the Plan.

In this connection, we may, however, point out that, two years ago or so, the question of utilisation by the Railways of high grade coal was discussed. At that meeting, the conclusion was clear that an attempt should be made to bring down gradually the proportion of high grade coal being utilised by the Railways.

Demand for Oil

While exploration for oil so far has not been attended with success either in the public or private sectors, a marked increase in the consumption of oil, especially of kerosine and diesel oil, is antici-

ated by the end of the Second Plan. The Minister for Natural Resources recently told the Lok Sabha that production of oil must be stepped up to seven to eight million tons by the end of the Third Plan if the growing demand was to be met. He added that, in order to cope with the increasing demand, the decision has been taken to have kerosine and diesel base for the two refineries in the public sector. But he was not sure whether indigenous production would ever be able to meet the demand. And he suggested that it may be necessary to discourage the people from using kerosine. The price policy pursued by the oil companies, regarding which Government have not yet been able to arrive at a satisfactory arrangement, is itself an incentive to explore every means of reducing the demand for kerosine and other petroleum products. The Minister himself confessed to a "deep sense of frustration and disappointment at the failure to persuade the companies of the justice of the case for reducing prices." Kerosine has for years been a necessity of life even in the remotest parts of the country. Economy in its use will not be practicable unless the masses are provided with a cheap and efficient substitute. Extension of rural electrification is the most effective means of displacing the use of kerosine as illuminant. But schemes for this purpose have unfortunately been held up by shortage of foreign exchange. As regards substitutes for mineral oils in industry and in transport, it will be necessary to pursue with greater vigour measures for the utilisation of power alcohol. In this connexion, it may also be mentioned that, during the last War, it was found practicable to use some vegetable oils not only for lubrication but also as substitute for diesel oils.

May 3, 1958

The Slack Season and the New Loan Make their Debut

THE April end announcement of the New Loan proposals for 1958 may be said to be the response to a money market situation which provides convincing indicators that this year's slack season has made its debut much earlier than usual. It is also not unlikely that the slack season in the coming years will likewise dawn earlier. A change of this nature is definitely one of the repercussions of the Second Plan. We are now spending anything like Rs 1000 crores every year on the Plan. Of this outlay, disbursements in respect of 15 to 20 per cent of the sanctioned grants get to be made in the last fortnight of the financial year. A good part of such disbursements is now of a character that accounts for the virtual elimination of the time-lag between the payments by the Governments to suppliers, contractors, etc., and the return of such funds to the banking system. This time-lag was conspicuous throughout the First Plan quinquennium. In the first year of the Second Plan, this lag had greatly narrowed. So far as the second year is concerned, such a lag is conspicuous by its absence. In the latter half of April, Active Note circulation has recorded recurrent contraction. Bank Deposits have expanded recurrently. In the result, there has been recurrent liquidation of the advances taken from the Reserve Bank by the member banks; and Reserve Balances of the latter have risen week by week. Call money is quoting 3 per cent lenders. Not for a long time has the money market known so early an onset of the slack season with such conclusive evidence.

We believe that the disbursements by the Centre and the States in the closing weeks of March 1959 will be even more substantial, which means the earlier advent of the 1959 slack season with even more pronounced slack season attributes.

A development on these lines is greatly to be welcomed. For, it allows plenty of elbow-room for New Loan manoeuvring. The main effort of the Centre's borrowing can thus be got out of the way by the middle of May. This leaves June free for the States to enter the market. Allowing a two months' period for the market to digest these loan issues, the Centre may find it possible to initiate a

supplementary programme in the autumn.

A much less severe busy season and the continuance of very large accretions to the Deposit resources of Scheduled Banks have, thus, combined to create a set of money market conditions in which the Central Government have been able to float their New Loan much earlier than is the norm. The 1958 New Loan programme represents a departure from the norm only in this restricted sense. For, we must confess that there is scarcely any evidence in the terms of the New Loan to suggest that, in recognition of the greatly improved monetary conditions, the Government have made a beginning in the matter of borrowing from strength. The only redeeming feature is that the terms of the New Loan do not constitute another surrender to the so-called realistic borrowing policy, and therefore the pitfall of still more allegedly favourable—that is unfavourable to Government—terms has been avoided. In this sense, while there will not take place, as would happen in response to a New Loan based on borrowing from strength, an appreciation in the values of the existing loans, we can have this small satisfaction that the New Loan will not, on the other hand, cause a disturbance in the existing issues.

The total amount sought is Rs 135 crores, and is thus Rs 10 crores short of the target suggested in the Budget for 1958-59. Conversion facilities are to be offered in respect of the two maturing loans, the 4½ per cent 1958-68 with its outstandings of Rs 5.86 crores and the 3 per cent 1958 with its outstandings of Rs 15.23 crores. Thus, new money that is being sought is in the environs of Rs 114 crores.

To the extent that this will represent the highest target for cash subscriptions in recent years, it must be welcomed. But then, even on the basis of such enlarged target for cash subscriptions, the current tranche of 1958 New Loan programme will still fail to measure up to the annual target postulated in this behalf by the Second Plan at Rs 140 crores net.

With conversion facilities offered for the two maturing loans, the commitment that Government will have to meet during the remainder of the Plan-period will be as follows:

		Rs Crores
3 per cent 1958-61	...	113.66
4 ½ " 1960-70	...	63.30
2½ " 1960	...	45.63
Total	...	222.59

This figure of Rs 222 crores compares with a total of Rs 430 crores of maturities during the Second Plan-period. Thus, slightly more than half of the liability on maturing loans during the Second Plan is still to be met. We shall presently, in the context of the liability against the maturing loans, have a suggestion to offer. At the present stage, we may

note that the New Loan programme comprises a three-tier issue: 3½ per cent 1963 Loan issued at Rs 98.75 and offering a redemption yield of 3.80 per cent; 3½ per cent 1968 Loan issued at Rs 99.50 and offering a redemption yield of 3.82 per cent; and a 4 per cent 1973 Loan issued at par. In the following table, the three new loans have been included in their appropriate place, and an indication is available of the manner in which they fit into the existing pattern of gilt-edged prices and yields:

Central Loans	Market Price Rs	Redemption Yield Per Cent (earlier)
3½ 1958	99.75	3.82
4½ 1958-68	100.10	3.51
3½ 1959-61	99.15	3.71
2½ 1960	97.95	3.72
4½ 1960-70	100.50	3.77
2½ 1961	95.20	4.08
3½ 1961	98.65	3.62
2½ 1962	95.20	3.93
3½ 1962	97.90	3.79
3½ 1963-65	95.05	4.08
3½ 1963	98.75	3.80
3½ 1964	95.05	3.91
3½ 1964	98.20	3.84
3½ 1965	97.80	3.85
3½ 1966-68	92.60	4.05
3½ 1967	97.65	3.81
3½ 1967	99.75	3.78
3½ 1968	99.50	3.82
3½ 1970-75	86.40	4.43
4½ 1972	100.50	3.99
4½ 1973	100.00	4.00
3½ 1974	98.20	3.90
2½ 1976	83.05	4.06
3½ Conversion	71.20	4.21
3½ Non-terminable	71.20	4.21

It is to be anticipated that the new loans will be accorded a "popular" reception. The 5-year Loan will, of course, attract the Scheduled Banks. At the other end, the Provident Fund institutions should be concentrating upon the 15-year Loan. The 10-year Loan is presumably directed at the other remnant institutional investors. In this context, we may remember that the three-tier loan was first tried out in 1956. The issues in that year were the 3½ per cent 1962, the 3½ per cent 1967 and the 3½ per cent 1974. The results of these loans were extremely edifying. The most popular of the three, in the sense that the largest receipts were directed to it, was the 3½ per cent 1974. Subscriptions to this loan amounted to Rs 66.64 crores; next in popularity was the 3½ per cent 1962, which realised Rs 57.27 crores. The least successful of these issues was the 3½ per cent 1967, which collected Rs 33.82 crores.

In 1957, although the New Loan programme as such was a two-tier loan, in effect it was transformed into a three-tier year by virtue of the created issue in November 1957. The New Loan programme proper was composed of a 3½ per cent 1967 which fetched Rs 56.92 crores and a 4 per cent 1972 that realised Rs 49.05 crores. The created issue, being a special issue of Rs 30 crores, was in the form of the already existing 3½ per cent 1962. It will be seen that, in 1957, the order has changed with the medium term loan being the most

popular, the long term being second and the created issue being last. But this is to overlook the fact that the short term issue was not made available at the time of the New Loan; hence, it stands to reason that, if the Scheduled Banks had had this choice offered at the time of the New Loan, they would possibly have preferred the short term one.

On this reasoning, it is to be expected that the most popular of the three issues in respect of the 1958 New Loan programme will be the 3½ per cent 1963; this is because the Scheduled Banks are in a position this year to subscribe to the New Loan in a big way. Secondly, the long term issue should also elicit substantial subscriptions. Recent trends in the gilt-edged market have indicated that Provident Fund institutions have found it hard to invest their accruing funds due to scarcity of floating stock; and this class of investors, considering as it does the yield to be most important, is likely to prefer the long term stock. How much of a relative failure the medium term loan turns out to be, remains to be seen.

We may also mention here that the short term loan will add to the maturities in 1963, in which year the 3 per cent 1963-65, with outstandings of Rs 116.17 crores, may be repaid. The 1968 and 1973 Loans will not raise a similar problem, since the years in question are "free". Then, we have to remember that the short term issue will add to the maturing liabilities that Government will be called upon to meet during the currency of the Third Plan. Already, the maturing loans during the Third Plan amount to Rs 703.80 crores. So, it is proper that, at this juncture, we utter a word of warning against this practice of issuing short term loans; as the experience during 1957 shows, in the absence of a short term new loan, the subscriptions will be diverted to the medium term loan. In the remaining years of the Plan, we should avoid any further addition to the maturing liability in the Third Plan quinquennium and instead restrict new loans to a medium term or longer basis.

We come, next, to the matter of the loans maturing during the rest of the current Plan-period. The maturities in each of the years 1959 and 1960 are fairly heavy. Secondly, the New Loan effort at Rs 135 crores is still short of the Second Plan target. Consequently, we would suggest that the Government should issue, later in the current year, a loan to which subscriptions would be accepted only in the form of conversions. A precedent exists in this matter, when, in the year 1932-33, a second tranche of 4 per cent 1960-70 was issued, and subscriptions accepted only by conversion. In that year, conversion facilities were offered in respect of three outstanding loans—the 5 per cent 1929-47, 5 per cent 1933 and 6 per cent 1933-36. It is in this wise that we wish to

suggest that Government could, perhaps, in August/September this year, announce a further issue of the 3½ per cent 1968 (we may point out that this loan's receipts may not be too heavy) subscriptions for which would be receivable in the form of the 3 per cent 1959-61, the 4 per cent 1960-70 and the 2½ per cent 1960. If Government adopted such procedure, they would lighten the load at new loan time.

We have had hardly a word to say so far about the success of the new loans. This, it seems to us, can be taken for granted. For, in the present money market conditions, the Scheduled Banks may be anxious to reduce the volume of their idle funds, since, as the 1957 experience has shown, their earnings have been affected by a much slower expansion in Advances relative to the increase in interest bearing Deposits.

One other comment that we wish to make is that we welcome the fact that the subscription lists are to be kept open only between May 12 and May 14, with Government reserving the right to close the lists at any earlier time. This alone is a sign of strength in an otherwise weak-keeled New Loan borrowing programme for 1958.

Discussion About Deposit Rates

DR. N. N. LAW has, at the annual general meeting of the United Bank of India, come out with a reasoned and powerful argument against the continuance of the payment by banks of a high rate of interest on Deposits. He thus adds his voice to the chorus that we have had this year from Bank Chairmen on this aspect of the banking situation. There can thus be no doubt that there is a near unanimity among Indian bankers as regards the debilitating, if not disastrous, influence of a high interest rate for Deposits on not merely the earnings of the banking system but also the national economy as such. An intriguing point is that this question of interest rates has been approached from quite different viewpoints.

For example, Mr V. P. Varde, of the Bank of Maharashtra Limited, questions Government justification "in entering into a direct competition with banks by offering higher rates of interest". His plea is, apparently, that, in trying to imbue the Small Savings campaign with greater attraction, Government themselves are guilty of exerting an upward pressure on the interest paid on Deposits by banks.

Similarly, Sir Homi Mody, as Chairman of the Central Bank, observed that the "higher rates for Deposits are also due to Governments, both Central and States, coming into the market for large borrowing at 4 to 4½ per cent and for small savings on still more attractive terms". Sir Homi added that "this helped to accentuate the

shift from Demand to Time Deposits, that is, from low interest to high interest bearing Deposits", resulting in reduction of the margin of profits of banks.

A dissident note in this regard was struck by Sir Cowasjee Jehangir, Chairman of the Bank of India, who has allowed himself to be influenced solely by his reading of the economic situation as comprising "a persistent tightness of money"; as a result, says Sir Cowasjee, the competition for deposits increases, and he concludes that "higher rates of interest must be offered and paid". Sir Cowasjee himself has confessed that, in the case of the Bank of India, the additional income from higher money rates "tends to be cancelled out by the increased interest paid to our depositor-customers". It is, therefore, strange that Sir Cowasjee has not come out with a denunciation of the interest war and that he instead should have fatalistically averred that the offering of higher interest rates is inevitable.

Mr G. D. Birla of the United Commercial Bank can claim to have been the first Indian banker to have recognised the threat to the earnings of the banking system comprised in such a deposits war. At the annual general meeting of the United Commercial Bank, he reminded shareholders that, some years ago, he had "deprecated the alarming tendency to try to attract fresh Deposits by means of higher interest rates". Mr Birla reiterated his plea for restraint in this matter, and pointed that "the attraction of higher interest rates is unnecessary in order to induce deposits".

Mr Shanti Prasad Jain of the Punjab National Bank had a brief but pointed reference in his speech, when he said that the rise in the cost of money "is a matter that calls for some sort of concerted action by leading banks".

It was left to Dr Law to argue out in detail the harmful impact of high interest rates upon the banking system and the national economy as such. In pointing out that the rate of interest paid on Deposits has recently been "well above the yield on medium-dated gilt-edged securities and the effective lending rate of the Central Bank of the country", Dr Law states that "this hardly facilitates marketing of Government securities, at least to the banking sector".

The United Bank Chairman has quoted from a speech recently made by Mr B. K. Dutt, Managing Director of the Bank, in which the suggestion was made that "the relation between the depositor and the bank is not that of the investor and the enterprise, but of a depositor and a depository". Mr Dutt is also on record as having suggested that "deposit money in aggregate is possibly attracted better by adequate spread of banking service than by hawking higher rates of interest to shift or prevent a shift of deposits from one bank to another". Dr Law suggests that "the introduction of the

statutory control of interest rates on deposits brooks no delay".

It is thus clear that the Central Government are to be held as having contributed partly to the upward spiral in interest rates. If a downward movement is now to be encouraged, we would suggest that, in addition to statutory control of interest rates, Government could also consider a reduction in the Bank Rate. If, for any reason and in the present circumstances, such reduction is thought unfeasible, we would suggest that Government could reduce the rate at which advances are obtainable from the Reserve Bank against usance bills. It is scarcely likely that, by the mere fact of the rates being lower, the banks will consequently borrow more; and the check in this regard lies in the limits sanctioned by the Reserve Bank. Lastly, with borrowings against usance bills in the environs of Rs 17 crores, banks are well placed with resources. So, it need not be expected that the consequence of a lowering in the rate at which the Reserve Bank will lend against usance bills will be an increase in borrowings under this head. On the contrary, what should be expected is an altogether salutary downward influence on interest rates generally as a result of a "slack season" lowering of the Reserve Bank rate for advances against usance bills.

All these arguments in this context will not be new to readers of Indian Finance. This journal has, for some many months, as flowing from our study of the internal monetary and economic conditions, noted with apprehension the many doleful consequences of high rates ruling on Deposits. The very structure of interest rates is rendered topsy turvy and, apart from the fact that the banking system will be weakened by this unnecessary and avoidable additional expenditure incurred, the most disastrous effect of such monetary conditions is that the Central Government's borrowing programme for the Second Plan is jeopardised. It is indeed in this light that, last week, the Leading Article urged the Reserve Bank to take action in the matter of Deposit rates by invoking Section 35(1) or Section 36(1) of the Banking Companies Act. The unanimity of opinion in this regard among Indian bankers, we suggest, should offer further strong inducement for the Reserve Bank to take action on the lines we have suggested.

+

Note Circulation Declines Again

According to the returns of the Reserve Bank for April 25, Active Notes have declined by Rs 8.65 crores to Rs 1619.12 crores. Rupee Coin has returned from circulation for Rs 0.32 crores. The Reserve Bank's Cash in the till goes up by Rs 9.07 crores to Rs 32.94 crores. There is a small rise of Rs 1.41

crores to Rs 228.80 crores in Foreign Securities, and a counter-vailing contraction of Rs 1.41 crores to Rs 1173.50 crores in Rupee Securities. These are adjustments which presumably relate to crediting of interest received against Foreign Securities.

In the Banking Department, it is to be noted that the Centre's Balances are higher by Rs 0.60 crores at Rs 53.05 crores. This is in spite of having to meet a commitment against Treasury Bills held in the Banking Department and which matured during the week for Rs 3 crores odd. Nor does there appear to be any deficit financing. On the contrary, Investments in the Banking Department are placed lower by Rs 2.87 crores at Rs 227.27 crores. Thus, the net decline in the Rupee Securities held by the Reserve Bank in the two departments is of the order of Rs 4.28 crores. While reverse adjustments are not to be ruled out, this decline may no more than reflect sales of securities by the Reserve Bank. For, the Reserve Bank ceased to be a seller of securities only after the date to which the latest returns relate.

Balances of State Governments have improved by Rs 2.55 crores to Rs 15.64 crores. But then, their Ways and Means Advances from the Reserve Bank have also risen by Rs 3.55 crores to Rs 54.72 crores.

The Reserve Balances of member banks are marked up by Rs 3.14 crores at Rs 94.14 crores. There is no material change in their indebtedness to the Reserve Bank, since the Other Loans and Advances of the central banking institution are higher only by Rs 0.32 crores at Rs 54.69 crores. The Reserve Bank's Advances against usance bills are marked up by Rs 0.39 crores at Rs 17.72 crores.

There is a decline of Rs 4.41 crores to Rs 112.33 crores in Other Deposits. Coincidentally, this decline is of a size with the fall in the Rupee Securities held by the Reserve Bank. But it is not possible to assert that there is a connection between the two.

Finally, Balances Held Abroad are lower by Rs 3.47 crores at Rs 39.01 crores. But, since Foreign Securities in the Issue Department are higher by Rs 1.41 crores, it is clear that the net drain on Foreign Exchange reserves has amounted only to Rs 2 crores odd.

+

According to the return of the State Bank for April 25, Deposits are fractionally higher by Rs 0.57 crores at Rs 422.12 crores. Advances have shrunk by Rs 1.62 crores to Rs 206.40 crores. In the result, Cash Balances have improved by Rs 3.84 crores to Rs 39.57 crores. Thus, the rise recorded in the Reserve Balances of member banks in the Reserve Bank's return is ascribable to the State Bank.

+

According to the return of Scheduled Banks for April 18, Deposits show a further rise of Rs 4.13 crores to Rs 1536.20 crores. Since

the State Bank, in the relevant week, reported a decline in Deposits of Rs 5.80 crores, it is clear that the other Scheduled Banks have added to theirs by something like Rs 10 crores. Borrowings from the State Bank are Rs 1.17 crores lower at Rs 7.60 crores. So, too, has indebtedness to the Reserve Bank been reduced by Rs 2.37 crores to Rs 19.79 crores. Advances show a drop of Rs 4.64 crores to Rs 957.44 crores. There is a small addition to the gilt-edged portfolio which is marked up by Rs 1.83 crores at Rs 443.27 crores. In the result, Cash Balances have moved up by Rs 9.46 crores to Rs 194.48 crores—this is directly traceable to the other Scheduled Banks, since the State Bank, in the week under review, had not revealed any increase in its own Cash Balances.

United Bank

The United Bank of India is one of the few banks which have experienced the bulk of their accretions to Deposits during 1957 in the form of Current and Contingency Accounts. It may be recalled that, while Scheduled Banks generally benefited by large scale accruals to their Deposit resources, these were mainly in the form of Fixed Deposits or Savings Bank Deposits. In the case of the United Bank, of the increase of Rs 4.45 crores to Rs 38.36 crores in Deposits, the bulk is to the credit of Current Accounts which have been marked up by Rs 3.06 crores at Rs 17.35 crores. On the other side of the ledger, gilt-edged investments have been marked down by Rs 1.61 crores at Rs 8.61 crores. The resources thus gained, on the one hand, and freed, on the other, have been utilised partly in an expansion of the Advances portfolio and partly in adding to Cash Balances. Advances have risen by Rs 3.38 crores to Rs 23.56 crores. Cash Balances have moved up from Rs 4.26 crores to Rs 5.87 crores.

The higher level of Advances is reflected in a substantial increase in the income by interest and discount from Rs 1.19 crores to Rs 1.45 crores. Commission, Exchange and Brokerage, however, have fetched slightly less at Rs 31.75 lakhs against Rs 32.51 lakhs. Expenses have also risen. As a result of the higher money rates ruling during 1957, interest paid is marked up to Rs 52.05 lakhs from Rs 41.35 lakhs. If this rise compares favourably with the experience of other banks, it is because the United Bank secured the bulk of its additional Deposits in the form of Current Accounts. Salaries and Allowances also absorbed more at Rs 89.02 lakhs against Rs 78.55 lakhs. In the result, the balance of profit shows a small rise from Rs 15.58 lakhs to Rs 16.21 lakhs.

The provision for taxation is raised from Rs 4.40 lakhs to Rs 4.92 lakhs. The transfer to Reserve is also higher at Rs 3.25 lakhs against Rs 3.15 lakhs. The dividend distribution is maintained, and absorbs a shade under Rs 8 lakhs. The

carry forward of Rs 1.77 lakhs compares with the amount brought in of Rs 1.73 lakhs.

Bank of Rajasthan

The Bank of Rajasthan shows an increase in Deposits from Rs 3.40 crores to Rs 3.81 crores in its balance sheet for 1957. Cash Balances are slightly lower at Rs 1.35 crores against Rs 1.42 crores. Investments in gilt-edged are marked down slightly at Rs 96.17 lakhs. Advances have staged a rise from Rs 1.23 crores to Rs 1.81 crores.

The income of the Bank of Rajasthan has risen quite substantially. Interest and Discount have fetched Rs 14.27 lakhs against Rs 10.95 lakhs, and Commission, Exchange and Brokerage have risen sharply from Rs 3.62 lakhs to Rs 5.33 lakhs. Interest paid is higher by a little over Rs 1½ lakhs at Rs 8.29 lakhs. Salaries and Allowances have also risen by Rs 1.18 lakhs to Rs 5.48 lakhs. In the result, the balance of profit has more than doubled to Rs 2.75 lakhs from Rs 1.22 lakhs.

The highest earnings in the Bank of Rajasthan's history have enabled the dividend distribution to be raised for the third successive year; the dividend absorbed Rs 32,299 in respect of 1955; the amount rose to Rs 41,463 in respect of 1956; and the latest dividend at 6 per cent absorbs Rs 55,529.

The Bank of Rajasthan can take justifiable pride in a fine year of achievement.

Mr Jain's Views on Fiscal Policy

With commendable modesty, Mr Shanti Prasad Jain had no more to say, at the annual meeting of the Punjab National Bank, of which he is the Chairman, than that the bank "has maintained its strident progress" in a year in which, by common consent, it has produced remarkable results. Indeed, his remarks on the Bank's balance sheet for 1957 are on the prosaic side, and Mr Jain's real interest seems to have been the detailed review that he has made of the Indian economy. 1957 is described as having been a complex and difficult year, but if the economy of the country were viewed in retrospect as a whole, "we find that we have fared better than we thought we would". A metaphorical storm that hit the country blew over before it gathered force, and though it has left behind some dust and dislocation, "we are still on our feet".

Firstly, when a declining trend in agricultural production set off fears of an undue rise in the price level, firm measures were instituted by the authorities—and, in line with this policy, Punjab National also limited advances on foodgrains—and the result is that the reversal of the upward trend in prices is a matter that "affords considerable satisfaction". As for production, industrial output rose by 11 per

cent during 1957; and, even in the sphere of agricultural production, the outturn, in improving by 6 per cent, "showed the highest increase during the last eight years", although the foreign exchange position was "extremely tight", the position has since improved, "though not adequately". Mr Jain refuses to be daunted by the foreign exchange situation, and instead describes it as "a picture that carries the hope of progress emphasising the need for serious efforts in all directions". It is in this light, that the Punjab National Chairman quotes the Reserve Bank Governor as having said that "there is no reason why we should take a gloomy view of the situation". But this does not mean that we need not or should not be realistic.

Mr Jain points out that there are certain objectives before the country, and that, if these "are better served by adjustment in the fiscal and other governmental policies, doctrinaire considerations should not stand in the way".

Mr Jain is not one of those who believes in playing with the idea of cutting down expenditure. We have, he says, "in order to break the barrier and cross into a dynamic and self-progressing economy", to go on the scale of expenditure proposed, if not on a larger scale. Development, he remarks, is a continuous process, and he does not think there is anything inherently wrong in going ahead at a faster speed with our development programme with foreign assistance. The only qualification he makes is that, whatever shape foreign capital may assume, "its utilisation for achieving our development programme is linked up with our ability to find requisite finance within the country."

The crux of the problem is, thus, internal resources. Also, a balance is required to be struck between consumption and savings in the increased national income. In this context, Mr Jain finds unavoidably that heavy taxes have exhausted the capacity to secure sufficient funds from current profits. So, he suggests that "the monetary authorities must evolve a machinery for meeting the needs of internal resources for development". Mr Jain pays a personal tribute to Mr Iengar, who, with his thorough grasp of the fundamental aspects of our monetary problems and broad vision, is expected by Mr Jain to "contribute to the initiation of a policy that will vitalise our economy".

However, Mr Jain is not quite sure whether the fiscal policy pursued by Government has militated against the attainment of the objectives. In respect of taxation, Mr Jain says, the Centre has embarked upon new taxes which, "without helping to stimulate and aid planned efforts were effective in undermining the capacity" and initiative of the investor. Similarly, the taxation policy has adversely affected the stock exchanges, and the result is that the investor's confidence has been rudely shaken. So he calls upon the authorities to

"make an urgent study of the effect of last year's fiscal policy on the implementation of the Plan". In a word, Mr Jain hopes that a flexible Government attitude, as recently made evident by the withdrawal of the compulsory deposit scheme, reduction in excise duties and concessions regarding Development Rebate, will be extended further so as "to smoothen the path towards the successful implementation of the Plan".

The Future of Sterling

STERLING's firmness during the greater part of April has been due not so much to the immediate position as to the revival of optimism about its prospects. For the first time since 1955 it is no longer considered to be safe to take it for granted that there would be yet another sterling crisis in the autumn. The increase in the gold reserve is the direct cause of this optimism, even though that reserve is still very far from sufficient to remove the risk of a crisis as a result of even relatively moderate adverse influences. Indeed Government spokesmen seek to stimulate unwarranted optimism in this respect, by their failure to make it plain that part of the increase in the gold reserve is represented by borrowed dollars which will have to be repaid next year. Even though experts are well aware of this fact, the general public is apt to overlook it, and official figures and statements do not go out of their way to enlighten the man in the street in this respect.

There is cause for optimism, not on account of the immediate technical position which is not nearly as strong as it appears on the face of it, but because of the improvement of the fundamental position. There has been practically no increase in the cost of living since November last, and pressure for wage increase appears to have abated to some degree. Even though the outcome of the wage dispute in nationalised transport organisations is still uncertain, at the time of writing it does look somewhat more hopeful.

Moreover, the stability of British prices is in sharp contrast with the continued rising trend in the United States, Germany and other western industrial countries. Should this contrast become accentuated it would affect favourably the British balance of payments. What is perhaps even more important from the point of view of sterling's prospects in the near future, there now seems to be a possibility of a flight to the pound. Not only will the much-delayed covering of the short positions in sterling be hastened but "hot-money" is likely to flow to London.

It is true, sterling has been for weeks in the close vicinity of its upper limit of \$2.82 above which the authorities do not allow it to rise. But there have been persis-

How do you like your coffee?

FOOD FOR THOUGHT

Black or white? . . . Hot and strong? The coffee stem borer likes his neat, preferably when the young shoots of the coffee bush are juicy and tender. He eats his way through the stem, destroying new growth before the valuable beans are formed.

India grows some of the finest coffee in the world—a fact which overseas buyers are not slow to recognise. At the moment, they are willing to pay Rs. 5,000 a ton, which means that even a small increase in annual production could bring in many lakhs of valuable foreign exchange every year.

Here are some interesting facts. Dieldrin—a Shell Chemical—is remarkably effective in controlling the coffee stem borer and can increase coffee production by up to fifteen pounds per acre.

True—dieldrin has to be imported because it is not manufactured in India. Indigenous materials are however used in its formulations, and for every rupee spent on importing dieldrin, enough extra coffee can be produced to earn as much as seven rupees of foreign exchange. This is a sensible expenditure whichever way you look at it: food for thought in fact.

SHELL Chemicals can save crops and Foreign Exchange too!

tent rumours that, should the firm trend continue, the Government might allow it to produce its natural effect on sterling, if only to teach speculators in sterling a much-needed lesson. The argument in favour of such a policy stresses the fact that there is now an opportunity for playing this game from strength. A restoration of the flexibility of sterling at a time when it is weak would gravely accentuate selling pressure. On the other hand, it is argued, the removal of upper limit at a time when sterling is inherently strong would greatly accentuate the buying pressure.

The Government is not likely to allow itself to be convinced by such arguments. For one thing, speculative buying of sterling would only increase the volume of "hot money" in London which would be withdrawn at a most inconvenient moment. Nor are the authorities keen on allowing wide fluctuations. The only argument which might conceivably carry weight would be that an appreciation of sterling would further accentuate the decline in the prices of imported goods in terms of sterling, which would make it easier to resist the pressure for higher wages. Even so, on balance it seems unlikely that the Government would yield to the temptation of following the advice. Apart from any other considerations, it is feared that the removal of the upper limit of \$2.82 would materially weaken confidence in the Government's determination to hold the lower limit of \$2.78 during a period of selling pressure.

What is more important, it seems to be well on the cards that the Government will take advantage of the prevailing firmness of sterling for restoring its full convertibility for current transactions. Now that the rate of transferable sterling has been above the lower limit of \$2.78 for some time, the unification of that rate, and even of the rate for security sterling, with the official rate is considered to be feasible. For the first time a return to convertibility appears to be practicable.

For political considerations the Government is strongly tempted to take the remaining steps needed for achieving convertibility. It would be consistent with the officially announced policy of removing the remaining controls. And it would greatly increase the difficulties of a Socialist Government after the next general elections. It is the declared intention of the Labour Party to restore many of the controls which the Conservative Government has removed or is removing. Much of it would require legislation. This means that for some time after its advent the Labour Government would be kept busy with restoring controls, so that it will not have so much Parliamentary time for initiating its programme of nationalisation and other Socialist policies. Moreover, the freer sterling is, the more it is likely to be exposed to the fears of a Socialist victory at the general election.

Gunny Prices Improve

THE jute markets have firmed up during the past week. Sentiment in the goods section has been aided by reports of enquiries from a number of foreign countries as well as a substantial order for sacking from the Government of India. It has been reported that both the important hessian consuming countries, Argentina and USA, have indicated their interest in this category of jute goods. As far as Sacking is concerned, enquiries are reported from Russia and Egypt.

It would appear that circumstances are turning in favour of an increased offtake of jute manufactures from India. In the first place, thanks to the substantial progress made by Indian mills in the direction of modernisation and the near self-sufficiency achieved in jute production, the Indian industry is today in a better position to withstand competition in overseas markets. In this connection it is to be noted that due to the high price they have been forced to pay for their raw material requirements, continental mills are no longer in a position to offer effective competition to Indian jute goods. The only serious competitor to India now is Pakistan. But even in the case of Pakistan there are indications that India may not encounter much competition as regards quantity. This is evident from the fact that in recent months the output of Pakistani mills has declined sharply due to labour trouble and inefficient working. Other favourable factors are the demand by UK bag and carpet manufacturers for cheaper and better hessian cloth and yarn and the recent reduction in freight rates on gunny shipments to US Atlantic ports.

Despite continued reports of favourable weather conditions in the jute growing areas, the raw jute market has also firmed up. Though part of the rise in prices is to be attributed to the strength of the goods section, the improvement has been largely due to ideas about scarcity of supplies during the next few months. It is, however, to be noted that there is no undue anxiety in jute circles about the supply of the raw material during the next season. In the first place reports from jute growing areas are quite favourable. So far there has been no setback to the normal progress of jute cultivation due to adverse weather conditions. It may be recalled that Government have increased the target for jute production during the coming season. Moreover, energetic measures have been taken to supply fertilizers to

cultivators in time and for the adoption of improved methods of cultivation with a view to increase the yield.

The jute goods market opened the week last Friday on a quiet note in the absence of foreign inquiries. As the session progressed, however, sentiment improved on speculative interest but by close profit taking erased gains. Hessian 40" x 10 oz Ready closed at Rs 41.25 with B Twills done at Rs 100.65. Prices made some headway on Saturday on reports of enquiries from Argentina and the market closed steady as follows: Hessian 40" x 10 oz Ready Rs 41.45 and B Twills Rs 101.25.

A firm undertone prevailed on Monday as speculators evinced keen interest both in hessian and sacking. The heavy goods section was aided by reports of business in cotton packs with Egypt. Toward close there was some covering business. Mills however did not show much interest at prevailing levels. Hessian 40" x 10oz Ready advanced to Rs 41.55 while B Twills was placed at Rs 101.20.

The trend continued to be upward when the market opened on Tuesday with further covering by shippers, especially in sackings. With mills coming out as sellers at the higher levels, prices were somewhat marked down at one time during the day. Toward close sentiment again improved on reports of a Government order for sacking. Hessian 40" x 10 oz was steadier at Rs 41.60 but the improvement in B Twills was more marked as the closing rate was placed at Rs 102.56. With the confirmation of the Government order for a substantial quantity of B Twills on Wednesday, prices in the sacking section further firmed up while Hessian also ruled fully steady in sympathy. The closing prices were as follows: Hessian 40" x 10oz Ready 41.68 and B Twills Rs 103.25.

The raw jute market opened quietly steady with mills showing interest at rates somewhat lower than prevailing ones. In earlier dealings sellers were also inclined to discount rates. As the week progressed, however, sentiment improved in sympathy with the goods section. In the meantime holders seemed to have derived considerable encouragement from the fact that arrivals in upcountry centres were meagre. It would appear that following the release of the final estimate for mesta production in the country, operators had arrived at the conclusion that the supply position in raw jute in the coming two months would be rather tight. Assam Bottoms which was quoting at Rs 25.50 for April-May delivery at the beginning of the week was done at Rs 26 on Wednesday.

Plea for Relief

The indication given by Mr Nitayanand Kanungo that the export duty on tea might be revised shortly, will be welcomed by the industry which has been agitating for a long time for rationalisation of the tax burden. There is a strong case for the revision of the export duties on tea as was recognised by the Minister who addressed the annual meeting of the Tea Association of India last week. The need to augment foreign exchange resources should make the authorities more receptive than in the past to the suggestions made by the industry. Over two-thirds of the total tea crop is exported every year, so that the level of exports determines the fortunes of the industry and its ability to give a fair deal to its workers and shareholders. The trends as revealed by the export figures for 1957 do not leave any room for complacency.

Some time ago, the Minister for Commerce, answering questions in Parliament, quoted figures to show that exports last year were not below the average of the previous years. But, when the country is engaged in a vigorous export drive, it is not possible to derive satisfaction from the fact that exports are being maintained at the average for the last five years. More significant is the steep fall in the exports last year from 523.6 million tons in 1956 to 447.0 million tons in 1957. The drop in exports must be considered along with the fact of increased competition which Indian teas now encounter in overseas markets, not only from old producers like Ceylon, but also new entrants like East Africa. East Africa, with the advantage of low taxation and low cost of production, is forging ahead at a rapid rate.

Government as well as the tea industry have a common interest in maintaining exports at a satisfactory level and this will be practicable only by strengthening the competitive capacity of Indian teas in foreign markets. While propaganda is necessary and must be intensified as the President of the Association has acknowledged, the vital factor is the price level which is pushed up by the variety of taxes imposed on tea. Mr D. C. Ghose, in his presidential address, has also pointed out that, apart from revision of export duties, there is also need for changing the prevailing system of calculating the duty on the basis of monthly average prices in London Auctions. The uncertainty inherent in the present system is said to be one of the reasons why foreign importers especially in the USA and Australia, prefer Ceylon to Indian tea.

Apart from taxation, the industry has also to bear a heavy finan-

cial burden in providing amenities for labour. Mr Ghose regretted that, in spite of the amenities provided, there was no reciprocity on the part of Labour; smooth working had been rendered difficult by outbreaks of strikes followed by lawlessness. Mr Ghose suggested that, as the industry was finding it difficult to obtain funds for implementing the Plantation Labour Scheme, Government should favourably consider extension of the Industrial Housing Scheme to plantations also. The implementation of the Plantation Enquiry Commission's recommendation regarding creation of a Replanting Fund, the President pointed out, would further aggravate the financial burden on the industry.

Mr Ghose also entered a strong plea for special consideration of the difficulties experienced by growers of common teas which account for 60 per cent of the total production.

Declaration of Dividends

By K. V. IYER

The practice of the Board of Directors of a company to declare an interim dividend and to notify the shareholders at the same time that such dividend is final for the accounting year concerned is getting into greater vogue: whether such action of the Board is in conformity with the Companies' Act and does not stultify one of its important provisions merits consideration.

Under Section 217, it is the duty of the Board to recommend the amount which should be paid as dividend for consideration at the Annual General Meeting and for the shareholders assembled at such meeting to declare the dividend (vide Reg 85 in Schedule I). The Regulation further provides that no dividend shall exceed the amount recommended by the Board. Thus, the right vested in the shareholder is to vote in favour of a dividend less than that recommended by the Board, a right perhaps rarely exercised. All the same, this is a right which the Board is not competent to deny to the shareholders by acting in the manner referred to.

For what may be considered a mere formality, i.e., extension for the holding of the Annual General Meeting, Section 166 provides that the sanction of the Registrar should be obtained. The sanction to the payment of the final dividend is a vital matter. It is, therefore, essential that the management should arrange to hold the Annual General Meeting at the earliest possible date, and, if there should be any insuperable delay in this regard, and the Board consider that the payment of the dividend should not be unreasonably delayed, a mere decision of the Board should not be considered sufficient. The sanction of a higher authority, say, that of the Central Government, should be required to be obtained.

Markets Sluggish

THE recent improvement in prices at the Calcutta and Cochin auctions and in London has been offset by the disappointment over the delay in the announcement of relief in export duty. In this connection, the outgoing President of the Indian Tea Association has pointed out that the industry needs immediate relief in the matter of Common teas, which are 60 per cent of India's total production and much of which are for export. As competition from countries like East Africa is severe, he adds, that Assam Carriage Tax and West Bengal Octroi or Entry of Goods Tax should be abandoned; that export duty should be abolished in respect of teas sold at or below Rs 1.75 per pound at export auctions or those directly exported at Rs 1.75 or less a pound; that export duty should be refunded in respect of Indian tea sold in London at a price equivalent to Rs 1.75 or less a pound ex-Calcutta auctions and that the cost of production of Darjeeling teas is high and its case for relief should be suitably considered.

It cannot be denied that the uneasiness over the delay in the announcement of relief in export duty is particularly marked in view of the outlook for the new crop. It appears that, in the absence of any remedial measures, world Common tea supply may exceed demand. Total output, up to February, has increased to 104.7 million pounds as against 97.7 million pounds in the corresponding period of 1957. South Indian production has risen to 8.3 million pounds from 7.6 million pounds and that of Ceylon from 29.9 million pounds to 35.9 million pounds. Indonesia has increased her production from 8.6 million pounds to 9.00 million pounds in January. The output in British East Africa has fallen from 6.5 million pounds to 5.8 million pounds in February, although total output, in the first two months of the current year, is well maintained at 13.2 million pounds—the same as in the corresponding period of last year.

Trade circles think that, in the absence of any scheme to regulate output, an imbalance between supply and demand is probable during the coming months. North Indian producers are, it is stated, worried that a good deal of Common teas will be unremunerative as costs of production are statutorily fixed at a high level. Hence, an immediate relief in the export duty is called for in order to make a number of gardens economic in respect of their operations. It is feared that, in spite of sufficient care taken to concentrate on quality plucking, areas such as Dooars and Cachar

will suffer as a larger proportion of their output comes under the category of Common teas.

Meanwhile, the last Export Sale for the current season was held in Calcutta this week when offerings amounted to 38,800 packages. There was a strong and fairly general demand which, however, became irregular and easier as the sale progressed. "Teas for price" opened strong; but the demand weakened except for the Fannings which were appreciably dearer. Plain Black Broken were from 4 to 6 nP per pound dearer. Although Fannings in this category were keenly sought after, there was little quotable change in prices except for the best which were frequently sold well above brokers' valuations.

A strong feature of the sale were the bright liquoring Mediums which showed irregular advances, while the lower Mediums, opening steady, were sometimes easier at the close. The amount of CTC teas, on offer, were readily taken up at about last rates; but non-with Dooars teas declined by 4 to 6 nP per pound. Clean and well-made Whole Leaf grades were fully firm to dearer; but the inferior stalky kinds realised lower prices and were difficult of sale. Following rates were quoted:—Clean Black Pekoe Rs 2.25 to Rs 2.30; Plain BP Rs 1.58 to Rs 1.62; Plain Fannings Rs 1.68 to Rs 1.72; Medium BP Rs 1.64 to Rs 1.68; Medium Fannings Rs 1.84 to Rs 1.88; Best CTC Assam BP Rs 2.60 to Rs 2.80 (nominal) and Best CTC Assam Fannings Rs 2.80 to Rs 3.00 (nominal).

In the Internal Sale, offerings were 19,594 packages of Dusts for which there was very strong and general demand. Prices were firm to dearer. Commons, Dooars and Assams of orthodox manufacture were a strong feature, particularly the clear leafy types and all descriptions were generally 4 to 8 nP per pound dearer. CTC Assams were generally irregular, the best liquoring kinds being barely firm. The brighter liquoring Mediums were often considerably dearer. The poorer descriptions, on offer, were generally sold at about valuations. Following rates were quoted:—Medium Dooars Dust Rs 1.68 to Rs 1.70; Medium Assam Grainy Dust Rs 1.70 to Rs 1.74; Medium Assam CTC Dust Rs 2.00 to Rs 2.20 and Best Assam CTC Dust Rs 2.80 to Rs 3.00.

Also, 1,434 packages of Leaf grades were offered for internal consumption. These met with a fair general demand at irregular rates.

In the Export Quota section, business was done in Special Export Licence at 3 nP. At the close, there were sellers at 3 nP with buyers at 2 nP. The rate for non-transferable quota was quoted at 2½ nP per pound.

In the Cochin market, offerings were 885,000 pounds of Dusts. A useful demand was maintained throughout the auction at lower rates. Brown-milled Dusts, Low Mediums and Mediums declined by

Indian Finance

10 to 15 nP per pound. Good Medium types received better support and were only 5 to 10 nP lower on last week's rates. The best liquoring descriptions were possibly the weakest feature of the sale and these declined by 20 to 30 nP per pound.

Shipments of South Indian tea, from the Cochin Port in March 1958, totalled 6.55 million pounds as compared to 4.31 million pounds in the corresponding month of last year. Total exports, during the first quarter of the year, amounted to 19.42 million pounds as compared to 16.78 million pounds in the corresponding period of 1957. An encouraging feature is, that the rise in exports is shared by almost all countries.

In the Colombo market, offerings were 4,906,700 pounds. There was a strong and general demand for all useful liquoring teas. Among high-grown teas, best Broken were sometimes lower following quality; but there was an active demand for those below the best at dearer rates. There was a strong demand for medium grown teas. Demand for low-grown teas was, however, quiet with Middle-Eastern types declining by 10 cents per pound. Fannings met with good demand and prices were substantially higher except where quality showed a sharp decline. There was an active demand for off-grades and all useful liquoring sorts advanced by 20 to 30 cents.

In London auction, offerings were 24,164 packages, including 15,177 packages of North Indian and 1,070 packages of Pakistani teas. There is still no halt in the recent rise in prices. All kinds were again strongly competed for at decidedly dearer rates. Teas from the Dooars did not show quite so marked an advance; but most gardens are very near the end of their season and quality is falling away. The best attention throughout the sale was focussed on good liquoring Fannings grades.

S. E. RLY TENDERS

Sealed tenders are invited for tender No. CON/COS/6/GB1/229/P/58 for supply of 100 cwt. bolt hex head M. S. Black ¾"x1" with nuts to specification B.S.S. 916. Tender will be opened on 3-6-58 at 12 noon.

Tender forms (not transferable) are obtainable from the office of the undermentioned, Garden Reach, Calcutta-23 at Rs 2½ (not refundable) per copy by M.O. to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tender forms should accompany the receipt for depositing earnest money of Rs 320/- from this Rly's Chief Cashier together with a valid Income Tax Clearance Certificate without which the tender is liable to be rejected. Contractors having permanent deposit of Rs 1000/- with the undermentioned are exempted.

S8 CONTROLLER OF STORES

US Notes

The Soviet Union and the Federal Republic of Germany have completed a new trade agreement calling for a sharp increase in Soviet shipments of cotton to West Germany—40,000 bales this year, 56,000 in 1959, and 60,000 in 1960.

The accord marks a most interesting step in the USSR's emergence as a cotton producer and exporter.

The unusual characteristic of the agreement is that it contrasts with the Soviet trade position in the Middle East.

In 1955, when Egypt was having difficulty in disposing of its important cotton crop at advantageous prices, the USSR appeared on the scene as a purchaser of cotton. In return, Egypt received Soviet military equipment. This economic relationship has been intensified to the point where nations of the Soviet bloc, as of last year, were taking 40 per cent—two fifths of all of Egypt's exports.

Another interesting aspect is that the Soviet bloc buys more from Egypt than it delivers, thus running up trade debts with Egypt, a country which needs to borrow rather than to lend, if it is to speed its economic growth.

While selling cotton to their new customers, Egyptians had hoped to retain their traditional outlets, particularly in Western Europe, and thus expand their overall trade. Soviet representatives, in fact, agreed not to re-export Egyptian cotton. But there have been reports—reports quoted in the economic bulletin of the Bank of Egypt—that Egyptian cotton sold to the Soviets is afterward resold by them in Western Europe—and at lower prices.

In other words, the communist countries buy in Egypt to make political headway in the Middle East, then covertly resell in a way that damages Egypt's normal markets.

True, the cotton which the Soviet Union has now contracted to sell to Germany may well be cotton actually grown in the USSR. Premier Nikita Khrushchev has been calling for larger and larger cotton crops, especially in Uzbekistan. But whether the cotton sold by the Soviets to Germany is from Egypt or Uzbekistan, in either case it shifts world market conditions. For the more cotton Germany receives from the Soviet Union, the less it is likely to buy directly from the Middle East.

Other countries have hardly fared better with Soviet trade. In speeches designed for foreign audi-

ences, Khrushchev often talks in glowing terms about the Soviet market and its thirst for goods of all kinds. And it is true that the USSR foreign trade has expanded. But it is also true that Soviet performance frequently fails to live up to advance billing.

Not too long ago, Khrushchev, accompanied by the then Premier Nikolai Bulganin, went to the United Kingdom with a widely publicized shopping list said to amount to 1,000 million pounds sterling (\$2,800 million). Most of the goods listed were not subject to the strategic controls which Britain, with other countries, maintains over exports to the Soviet bloc. But even though the USSR was free to make the most of its purchases, it has in fact bought little. British sales, according to the Financial Times, of London, have amounted to only a trickle.

Burma sold rice to the Soviet bloc—then found the same rice resold to Burma's traditional customers, India and Ceylon.

The reasons for such extraordinary trade practices lie in the basic nature of Soviet foreign trade and the motivations—by no means purely economic—behind it. Unlike most other countries, the Soviet Government exercise complete control over all trade transactions. Political motivations—that is, the world aims of Soviet leaders—by their own admission often enter into commercial deals. They may make political sense to Moscow but they defy economic common sense and often seriously damage the interests of other nations.

★

It is axiomatic that monetary and fiscal policy should help create financial conditions appropriate to the needs of the economy. In line with this view, the Federal Reserve Board (FRB) has just announced a new and double-barrelled step to further increase the supply and ease the terms of credit in the United States.

Involved is a reduction from 2.25 per cent to 1.75 per cent in the discount rate, the free charged commercial banks on loans from the Federal Reserve system. This reduction applies at present to five of the twelve Federal Reserve District Banks. But past practice has been for the other districts to follow suit eventually. The new rate, the lowest in effect since August, 1955, will make credit less expensive.

Furthermore the Reserve Board cut the reserve requirements by a full percentage for major banks in New York and Chicago, and by a half of one per cent for banks in other large cities. This reduces by these percentages the financial reserves these banks must hold against their demand deposits. The move makes more money available for lending or investing, and this serves to expand the supply of credit.

As a result of this latest reduction, some \$450 million in bank reserves would be freed. The "multiplying" effect of these funds, as they work their way through the bank-

ing system, could mean a potential increase in bank credit of some \$2,700 million.

The two-pronged action is the most ambitious the Board has yet taken to ease credit during the current business let down. The easing actually began some six months ago, when it became apparent that an economic adjustment was in the making.

The discount rate has been reduced four times since last November. Its present 1.75 per cent compares to the 3.5 per cent rate set by the Reserve Board in the summer of 1957, when strong loan demands constituted inflationary pressures in a thriving U.S. economy.

Reserve requirements have been reduced three times. The reductions have released to federal reserve member banks total reserves of about \$1,500 million, with a "multiplying" effect some six times that amount.

The creation of this pool of lendable funds at lower interest rates is regarded by FRB officials as a necessary preliminary for a sound business recovery. It has been accomplished in moderate, successive doses so as to avoid widespread monetary disturbances.

When other countries purchase gold from the U.S. treasury, they do so with dollars they have on deposit with U.S. banks. If the Reserve Board had not acted to increase commercial bank reserves, this kind of outflow could have shrunk the funds available for lending and thus led to a tightening of credit at a time when the Board was trying to ease it.

What has been the impact so far of the relaxation in FRB policy? Figures since last November show that most of the money released by FRB action has been put to good use. Even though business activity has been slipping, bank credit has been expanding, and borrowing in the capital markets by business concerns, state and local governments, and U.S. Government agencies have increased.

Of course, monetary and fiscal policy—as FRB officials admit—cannot by itself curb the excesses of boom or turn recession into recovery. But it can encourage business, individual and governmental units to make the kind of spending decisions which economic conditions call for.

★

Notice is being taken these days of a heretofore little-publicized but rather successful technique used by American companies to reach markets abroad.

This is the licensing of foreign operators, which is taking its place alongside expanded trade and direct investment in productive facilities as a means of spurring economic advancement around the world.

In fact, in many countries U.S. Embassies are reported to be hard put to cope with the swelling flood of requests from foreign companies for licenses to make U.S. products and for the technical know-how,

the skills and patented processes that accompany them.

A timely and comprehensive study—the first ever made—of foreign licensing has just been completed by the National Industrial Conference Board (NICB), a leading private research organization in the United States.

Based on reports from 240 American companies, the study—titled "Foreign Licensing Agreements"—finds a substantial increase in U.S. overseas licensing in the past dozen years or so. The increase seems to have been greatest in Western Europe, but countries in Asia, Africa and Latin America also have been taking advantage of the opportunity to obtain some of America's technological and managerial know-how.

Experience shows that these licensing agreements enable foreign companies to expand and diversify their production at relatively little cost. In addition, the agreements can be made flexible enough to suit the particular business problems of almost any company, and they can be used profitably by small as well as large concerns.

They have the added advantage, moreover of being relatively affected by trade, exchange, or investment restrictions. Thus, while licensing cannot and should not take the place of direct capital investment and trade, it can be an important supplement to these basic types of international commercial exchange.

In general, licensing agreements tend to run for 10 to 15 years. They usually involve such arrangements as cash and royalty payments by the foreign company to the American licensor in return for production and patent rights and technical, research and managerial assistance.

One example is an agreement concluded recently between a Japanese manufacturer and an American builder of industrial and construction machinery. The Japanese company obtained the rights to build the American company's line of products, and in return the American company received an interest in the Japanese firm plus an option to broaden its holdings if the arrangement works to the satisfaction of both parties.

Before entering on transactions like these, American licensors look for two basic prerequisites. For one, they must have confidence in the reliability of the foreign licensee, who are to a certain extent their partners in overseas dealings. For another, they must be reasonably certain that the foreign market involved offers room for long-term development. In most cases, these prerequisites can be met through careful negotiation and market analysis.

More difficult to arrange, perhaps, is the transfer of specific production know-how through a licensing agreement. But American licensors have co-operated with the licensees in applying their know-how in a foreign environment, where conditions may be somewhat different from those of the United States.

On the whole, licensing arrangements have worked out well. The NICB study found that 60 per cent of the American companies surveyed are quite satisfied with their licensing experience, while another 30 per cent give qualified approval. This leaves only 10 per cent opposed. Despite some of the reservations expressed, most of the companies surveyed are interested in increasing their licensing operations.

Economists have noted some striking similarities between the current economic adjustment in the United States and the other relatively brief and mild postwar adjustments of 1949 and 1954. But one, in particular, stands out. It is that personal incomes have held up remarkably well—much better, in fact, than has national production.

Aside from the evidence this pattern offers of the limited nature of the present US business dip, economists see in it the effects of two special factors. For one, the flow of incomes to individuals has been supplemented to a notable extent by government transfer payments—mainly by unemployment compensation to persons temporarily out of work. This rise in government benefits has offset about one-third of the dip in other forms of personal income.

The second special factor is the relatively stability of corporate dividend payments to stockholders. This reflects both the usual lag in such payments and the fact that the proportion of corporate earnings paid out as dividends last year, as in most postwar years, was relatively low. Hence, companies have something of a "cushion" for the maintenance of dividend payments now.

Since the middle of last year, total personal income of all types has fallen at an annual rate of less than \$6,000 million, or only 1.5 per cent. The drop has been concentrated, however, mainly in durable goods industries. In other sectors of the economy, such as the distribution and service fields, payroll changes have hardly been evident.

While personal income has dipped only 1.5 per cent, total output of goods and services has declined about 3.5 per cent. And indicative of the more sharply defined drop in durable goods industries, industrial production has fallen more than 10 per cent.

Consumer buying also has been well-maintained, over-all, despite the noticeable decline in demand for such durable goods as automobiles and appliances. Total consumer spending today is only about one per cent below the record rate of the third quarter of last year. This reflects not only the high level of income in the face of the current recession, but also the general liquidity of consumer finances; figures show that total personal savings stand at an all-time high.

Consumer spending in the opening quarter of this year for non-durable goods—such things as food, shoes, and motor fuels—was very little below the peak reached in the third quarter of 1957, and was actu-

ally a little higher than in the last quarter of 1957. Meanwhile, expenditures for service—such items as education, medical care, recreation and home maintenance—continued to rise to new highs throughout the latter part of 1957 and the early months of 1958.

This kind of consumer behaviour is in line with discernible long-term trends. Economists have observed that shifts in the use of the consumer dollar trend to develop slowly in the United States. But durable goods expenditure are much more sensitive than other consumer outlays to short-run business changes, and this influence is usually felt rather promptly and sharply, the "postponability" of many durable goods purchases is reflected in reduced consumer buying for this type of product during periods of economic adjustment, and "catching up"—a renewed burst of buying—during ensuing periods of recovery.

Outlays for non-durable goods and for services, on the other hand, are strongly influenced by population and other growth factors. And hence are less sensitive to general economic conditions. In fact, spending on services has shown a virtually continuous increase throughout the past two decades, regardless of the economic climate.

These long-term influences, combined with the well-sustained level of total consumer income, have resulted in a healthy retailing situation in the United States. Merchants report that the economic dip has had only a small impact on retail business. In fact, when this year's rather poor automotive record is eliminated as a sales element, total retail sales have actually been higher in the past few months than in the corresponding—and highly prosperous—period of last year.

Britain

WHILE Britain's exports remained steady in the first quarter of this year, her total bill for imports was considerably reduced. This is confirmed by the Board of Trade on the strength of the full trade figures for March, when exports, at £278, 100,000, showed an increase of £13,000,000 and re-exports rose sharply to £16,100,000.

The first quarter thus sustained the United Kingdom in the substantial improvement of its trading position which developed in the final quarter of 1957. Although the long upward rise in exports then levelled off, they have run fairly steady since, with only a slight trace of a downward trend.

The volume of imports also has been steady, but their total, expressed in value, is well below the figure for the first quarter of last year because of the fall in world commodity prices and tramp and freight charges. Import prices are, at the moment, the most dynamic element in the situation, but it is gratifying for the United Kingdom that exports have been maintained so well in the current period of recession in world trade.

Indian Finance

A striking feature of the "area pattern" of United Kingdom trade in the first quarter was a rise of 9 per cent or £3,500,000 a month in exports to the dollar area. Total exports to the United States were up by 13 per cent, and to Canada by 5 per cent. Quarterly shipments to the Sterling Area were up by 4 per cent on a year ago, thanks particularly to purchase by South Africa, Australia, and New Zealand.

BOOM IN MOTOR EXPORTS

The "commodity pattern" of trade shows engineering products to be up by 8½ per cent on the first quarter of last year: at £355,000,000 they broke their quarterly record.

The outstanding feature was the boom in the export of cars to dollar markets. The Society of Motor Manufacturers and Traders reports that of the 132,323 British cars exported during the quarter—its record figure no fewer than 37,000 were sold to the United States alone. There was also a record number of commercial vehicles exported—39,000 in the three months.

The total value of all exported motor products was £130,000,000, the Society adds. The increase in sales to the United States and Canada was, respectively, 83 per cent and 72 per cent over the figures for the same months of last year.

Aircraft and machinery made other large contributions to Britain's export trade in the quarter.

STEEL INDUSTRY RECORD

The annual report on the British iron and steel industry, just published, shows that throughout 1957 Britain's steel production was consistently higher than the previous year's and her total exports of steel in the year were the best since the war.

Though production suffered in the closing months from the tighter credit "squeeze", it reached a record total of 21,700,000 tons; and exports, at nearly 4,000,000 ingot tons, reached a high level. Exports to Western Europe were up by some 40 per cent on the 1956 figure.

These improvements accompanied a sharp fall in imports of steel.

A huge mechanical monster—the largest crane of its kind in the world—will be on show at the Mechanical Handling Exhibition in London next month, on its way from its "birthplace" in the North of England to its job at the Durgapur steelworks in West Bengal.

The monster is a Diesel-electric self-propelled rail crane, and is likely to be one of the biggest and most impressive exhibits at the show.

It weighs 85 tons; can lift more than 40 tons; and its jib reaches to a height of 125 ft. Though designed to run on rails under its own power, it is at present making the 270-mile journey from Darlington to London by road, on a 70ft low load-lifter. At the Mechanical Handling Exhibition, which opens on May 7, it will be displayed in the open forecourt of Earls Court.

ON NO aspect of the question of internal resources for the financing of the Second Plan is there such confusion of thought as on the tax effort involved in it. Part of the reason for this confusion is that people react emotionally rather than think rationally when the question comes up for discussion. Such conditioned reflexes are, let it be said in fairness, as much of those in authority as of the tax payer. There is perhaps nothing surprising in this since taxes hurt people at places where they are most sensitive, since they involve an involuntary and perhaps unwilling parting with money. As for authority, one would imagine, to judge by some of its acts, that this very reluctance puts its back up and so it thinks up new levies that do not necessarily have anything to do with declared purposes. It is, therefore, necessary to examine, firstly, the necessity of the various new taxes proposed in the last two years; secondly, to attempt to indicate the point beyond which it ceases to be a necessary burden and becomes a sadistic imposition; and, thirdly, to see how administrative endeavour can, in diverse ways, reduce the quantity and change the quality of the heart-ache involved in tax paying and tax gathering.

Let us first take up the question of the necessity of the new tax proposals. These proposals have, as often professed by those in authority, a three-fold purpose. They are, in the order of importance, to collect more revenues needed for financing the Plan, to make the tax structure more broad-based, and lastly to make the structure, especially that of direct taxation, an integrated one. I do not think that any one can seriously quarrel with the first of these justifications. The Plan's needs are paramount, and we can and should make our best efforts to obtain the resources needed. Neither the counsel of despair of abandoning or jettisoning the Plan nor the easy way of obtaining money from abroad can be accepted with self-respect. But, what are the needs of the Plan? If I can show that the needs of the finances for the Second Plan have already been more than provided for, then, it will be a moral duty on the part of authority to give relief in taxation to the extent the anticipated

Clive Street Gossip

Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

receipts are in excess of the needs. (Of course, the nature of such relief will have to be such as not to defeat the other purposes of the new tax proposals). Let us now consider the figures.

Last week, I had indicated how the tax efforts so far put forth by the Centre will account for the bulk of the targeted additional tax yield. Let me recall the figures. The Planning Commission's estimate of the finances from tax for the Plan was Rs 800 crores. Of this, only Rs 450 crores were to be had from additional taxes. As I showed last week, the Centre's efforts alone have accounted for Rs 703 crores from new taxes. This amount of Rs 703 crores is made up as follows:

	Rs. crores
1. Yield from new taxes of the 1956-57 Budget, estimated at Rs 34 crores annually; so, for the Plan period ..	170
2. TTK's 1956 mid-year excise levies and customs duties (after adjustment of current reliefs) ..	195
3. New taxes of the 1957-58 Budget estimated at Rs 80 crores annually; so, for the Plan period ..	320
4. 1958-59 Budget estimate for new taxes at Rs 6 crores annually; so, for the Plan period ..	18
Total ..	703

This does not include the tax effort by the States, which the Planning Commission put down at Rs 225 crores for the Plan period. The position that emerges from the figures is, therefore, such as to confound both the Government and the critics of Government: the Government, because of the impression that they give all the time that the screw has to be tightened, since they are starved of funds; and the critics, because they keep on saying that a tax effort of this magnitude is incapable of realisation. What ought to be said, of course, is that you have all you need, and, therefore, go easy.

So far, about the financial needs of the Plan. But the second justification of the new taxes is that it is necessary to broaden the

base of the tax structure. This argument, conceded to be sound by the Taxation Enquiry Commission, involves a variety of indirect levies which will seep down to the entire economy. It is no doubt true that the levies are likely to increase the burden on the poor man, but that is inescapable in any development effort of an underdeveloped economy. By and large, the importance of the excise levy is on the increase, and, in the years to come, its more burdensome impact will be less keenly felt because of the increase in general prosperity. So, the new taxes pass the test in this particular regard.

The third justification for the new taxes, especially of the direct kind, is that, in their totality, they provide a close-circuit tab on the economic activity of any particular money making and wealth producing apparatus. The chief virtue of the integrated tax structure, at least theoretically, is that it makes tax evasion difficult, if not impossible, because of the self-checking mechanism provided by the data supplied for the different, but complementary taxes. Thus, a man attempting to evade income tax will be caught out—on the assumption that all the data are available to the tax gatherer—in either expenditure tax or wealth tax, since he will be hard put to it to explain his excessive expenditure or excessive net wealth relative to his declared income. Likewise, gifts tax helps us in dealing with evasion of estate duty, and an understatement in the Wealth Tax return takes its perhaps delayed revenge in capital gains tax. It is needless to labour the theoretical point. The only question is whether the concept of close circuit is as complete in practice as it is in theory. Partly because of the endless resourcefulness and resources of wile of the Indian tax payer (!), and partly because of lack of uniformity in the range of the various levies, there is still room for dodging the various theoretical check points. In other words, it is not that the net of taxation is not wide, or that it has too many holes in it; my complaint rather is that there is not one net, but different nets of various sizes. The whole idea behind the integrated tax structure was that it must be

a single net with no rents in it. As it is, evasion in the middle regions cannot be effectively checked, for, as the law stands at the moment, it is possible for many people on whom it is worth while having a tab (from the tax point of view) would not be assesses for all the taxes and so no such tab can be had. Secondly, the rates of taxes being of varying onerousness, the evader would still get away with it by so presenting his affairs as to attract the lesser among the several "evils".

But these are all matters of detail, of which the taxing authorities are doubtless keenly aware. And, over a period of years, experience will suggest its own remedies. But the principal merit of the integrated tax scheme is to be able to obtain as much data as possible from the tax payer from his own mouth. And if he tries to lie, he will be caught in his own meshes. So, the somewhat paradoxical purpose of the new taxes is to bring in more revenue from the old taxes. There is every reason to hope that this expectation will not be belied, and, to the extent this happens, the justification of the new taxes from the point of view of the need for additional revenue is reduced.

If this hope of additional revenue from old taxes is not realised, then, it can be due to one of three reasons. First, there is no present tax evasion worth the name. Second, the integrated tax structure still leaves room for evasion. And third, the apparatus for collection is either inadequate or inefficient or both. The second of the alternatives, I have already considered at some length in the earlier paragraphs: as I said, while there is certainly room for streamlining the new measures, it is beyond doubt that its usefulness, even in its present form, is considerable. As for the first possibility of the reports of current evasion being exaggerated, it has merely to be stated to be laughed away. No one with the barest acquaintance with the facts of the situation can accept the proposition. Successive Finance Ministers, not to mention impartial observers like Professor Kaldor, have gone on record that tax evasion is rampant, though, of course, there is considerable variation in the esti-

mate of its extent. Indeed, the principal justification of the new taxes was that it helps the tax gatherer to detect such evasion.

We are, therefore, left with the third of the three alternatives, that the administrative machinery engaged in tax gathering needs to be strengthened. On the question of inadequacy, I have written often enough. Considering the amount and quality of the work of this department, it is perhaps the most lamentably served even in the matter of simple facilities like space and equipment. A visit to any income tax office will make you wonder how in heaven's name do these people manage to do even as well as they are now doing. Several officers sharing the same

MORE FOREIGN EXCHANGE FOR THE NATIONAL PLAN . . .

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service. With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

United Bank of India Ltd.

Indian Finance

munerated commensurate with his responsibilities?

I have never been able to understand this parsimony in the matter of expenditure for tax collection. After all, the more efficient you make the machinery by streamlining it, the more taxes you collect. It is notorious that the percentage collection cost to total revenue collected in India is among the lowest in the world. It would be foolish to consider this as a matter for gratification in the context of admitted tax evasion. There is real need to increase the number of the personnel and provide them with reasonable conditions of work.

And lastly, it follows from the logic of the overfulfilment of the targets of yield from taxes indicated in the earlier paragraphs, that the question of incentives for more production by appropriate tax reliefs should be given serious thought by Government. It cannot be denied that Indian taxation has encroached on incentives to an extent that makes it self-defeating. So, if the tax reliefs urged do not interfere with the other justifications, the case for them becomes irresistible. I do not want here to go into the question of what would constitute such reliefs. But, in any such list of desirable reliefs that do not interfere with the central purposes of recent taxation would be, firstly, the tax on excess dividends; secondly, the tax on bonus shares (which really has no

case whatever); and thirdly, wealth tax on companies (which is inequitable in that it constitutes double taxation, once on the shareholder and again on the company in respect of the same item of wealth).

Let me, in the manner of the Hitopadesa, draw the moral of it all. (I do this with no sense of incongruity since the whole purpose of this series is didactic and homilistic). Indefatigable energy has been shown in levying new taxes. Equal energy is necessary in making the tax collecting machinery more adequate to its tasks, and in the restoration of incentives by intelligent repeal of taxes not forming part of the integrated tax structure.

GATEWAY GOSSIP

THOUGH we are still a long way from exploiting all the mineral wealth in our country, what has been already located is by means of meagre proportions. For instance, the known iron ore deposits in the country are vast enough to feed quite a large number of indigenous iron and steel factories and still leave a very large quantity for exports. As our iron ore is of very high quality, it is in great demand from overseas consuming countries. In the present context of stringency of foreign exchange, iron ore exports have gained special importance. Knowledgeable circles believe that by sizably increasing our exports of iron ore the nation can successfully solve the urgent problem of shortage of foreign exchange.

Another kind of ore that is found in abundance in our country is manganese. Deposits of manganese occur in many parts of India and such deposits are particularly noteworthy in Madhya Pradesh, Orissa, Bombay, Madras, Andhra and Mysore. This ore is largely used by the steel industry and in the absence of a large iron and steel industry in the country, manganese ore has been figuring as an important item in our exports. Being of a high quality, manganese ore from India is in great demand from the world steel industry. Even today our country ranks among the largest producers of manganese ore and continues to export the bulk of its production. Export of this ore is today placed at about one million tons valued at Rs 10 crores. But in recent years the question of manganese ore exports has come to be viewed in the context of the industrialisation of the country. In the first place, as we ourselves are fast expanding our iron and steel industry, manganese will be required in increasing quantities for our own use. Secondly, it is much more advantageous to export ferro-manganese for the production of which the manganese ore is imported by the steel industry of the world. With the large availability of electric energy in our country, the establishment of ferro-manganese plants has become feasible. The first ferro-manganese factory under the aegis of the Tata Iron and Steel Company has come into commission a few days ago at a place called Joda in the State of Orissa where the company has its own manganese mines. Government have also granted licence to another firm for starting a similar factory in Central India.

In view of these developments, it has become incumbent on Government to pay more attention to the conservation of manganese ore. Exports of manganese ore can only be considered as a waste of a valuable national asset. Moreover, it has been found that though

Problems of Manganese Ore Trade

our manganese ore deposits are quite considerable, not all of them are high grade. As a matter of fact more than half of them have a manganese content of 30 per cent or less. As low grade ore is not suitable for the manufacture of ferro-manganese overseas consumers are generally interested in our high grade ore. Now that we have our own ferro-manganese plant and as this new industry is growing, it is necessary to conserve high grade ore. Under the Second Plan, it is proposed to attain a target of 160,000 tons of ferro-manganese. Of this about 60,000 tons will be consumed internally leaving 100,000 tons for export. It has been estimated that the export of ferro-manganese instead of ore will triple our foreign exchange earnings. Presently, however, we are not yet in a position to export any quantity of standard grade ferro-manganese and even at the end of the Second Plan the quantity that will be available for export will come to only 10 per cent of the quantity of ore that is being exported now. Hence manganese ore exports have to be continued after taking necessary safeguards to conserve high grade ore for domestic utilisation at a steadily increasing level. It would appear that until effective steps are taken for the upgrading of the low quality ores through beneficiation, great care must be taken in the matter of exports of high grade ore.

As has been pointed out earlier, by virtue of its position as a large producer of good quality manganese ore, India has long obtained an important position in world markets. India is supplying manganese ore to the world steel industry for the past 60 years or so. Consequently the trade in this commodity is also well developed in the country. In the past one decade tremendous changes have taken place and the considerations which govern matters have consequently also changed radically. The export of manganese ore is a matter that has required special attention because of the importance of the ore to the national economy.

Speaking at the Annual General Meeting of the shareholders of the Shivrajpur Syndicate Limited, the Chairman, Mr A. N. Haksar has pointed out that the Manganese ore export trade in the country is currently meeting with various difficulties some internal and some external. In the first place Indian manganese ore is meeting with stiff competition in overseas markets. This is due to the fact that new deposits are being opened in other countries. Competition from Brazil has increased sizably in recent years. Whereas this country before 1954 was a small producer of ore, has today become India's

most serious competitor. This is evident from the fact that of the total import of ore containing 35 per cent or more manganese imported by the USA in November last, Brazil has supplied 29 per cent, India 23 per cent, Ghana 11 per cent while other countries such as the Union of South Africa, Belgian Congo, Turkey, Cuba, Portuguese Africa, Morocco, Chile etc accounted for the remainder. Another important reason for the slackening of demand for the ore in Overseas countries is the decline in offtake of medium and low grade ores from the USA. The lower offtake is attributed to the recession which is evident from the fall in steel production in the country. This country which is the world's largest steel producer is producing steel at the rate of only 53 per cent of its installed capacity. It is said that even if the production increases immediately the stocks of manganese ore held in the country will be sufficient to meet the steel industry's requirements for the next five or six months. Mr Haksar has drawn pointed attention to the fact that the "fortunes of the Indian manganese ore Export Trade is largely dependent upon foreign buyers whose activities, in turn, are dictated solely by the demand of the steel industry, especially in the USA." While the immediate prospects do not seem to be quite bright, there are indications that the demand will improve toward the end of the year. In this regard it is to be remembered that the Government of India are also taking steps to promote manganese ore exports. The Indian manganese ore industry is keenly awaiting the outcome of the negotiations of the Government of India with the Government of USA for the sale of low and middle grade manganese ore in exchange of wheat. Though this move has imparted some steadiness to the trade, the position is rendered somewhat un-

certain by the conflicting reports about the successful conclusion of the Barter deal.

Among the internal inhibitory factors Mr Haksar lists first the activities of the State Trading Corporation. There has been noticeable a distinct tendency on the part of the country's traditional buyers in foreign countries in recent years to procure their requirements from sources other than India. Mr Haksar attributes this to the introduction of State Trading in Manganese ore. Foreign buyers do not seem to like the idea of trading with a State owned body. Further the STC, it is alleged, instead of exploring new avenues for export has in fact merely displaced existing interests. Another reason why foreign buyers prefer to deal with private interests is these interests are directly connected with the actual mining operations and have besides long experience in the trade. While it is to be admitted that there is room for modification of the activities of the STC in the light of the experience of its working in the past two years, it may be difficult for one to agree with Mr Haksar when he says that Export restrictions on manganese ore should be abolished. The Movement Quota restrictions may perhaps have no justification on the Western Railway where it is said the wagon position is very much easier than in other sectors. As regards the abolition of the restrictions on exports it has been noted earlier in this article that the matter of exports is to be considered in the context of the larger national interest. In this regard it may be interesting to note that Sir Jehangir Ghandy has recently pointed out that active steps should be taken to conserve high grade manganese ore in view of the growing demand for such ore in our country itself and the rather limited supply of high grade ore.

Every Description of Banking Business Undertaken.
T. R. LAIWANI,
General Manager.

THE State Trading Corporation has been started with the twin objective of safeguarding the interests of the consumer and enabling the nation to engage in trade with countries where the trade is the preserve of Governments. But in actual practice the Corporation has simply expanded its activities without paying much heed to the convenience of the consumer. Businessmen complain that the present position is that it is functioning as a powerful competitor to private trade. While the benefits that have been expected to accrue to the general public have yet to be seen, there is a growing feeling in the country that its activities have brought some important sectors of business in the country into grave jeopardy. In this connection it is pointed out that part of the present troubles of the cement industry has been brought about by the Corporation's interference in the working of the industry. The selling price of cement was increased to bring it on a par with the landed price of imported cement but the Indian producer was not allowed any portion of the enhanced rate. The higher selling price has continued even after imports have been stopped.

Those who are well-conversant with the ore export trade say that after the advent of the State Trading Corporation India's exports of certain kinds of ore have declined. It is said that the main reason for this is the reluctance of many of the foreign importers to deal direct with a Government body. They seem to prefer to do their business with exporters and mine owners who have been in the line for a long time and as a consequence will know their exact requirements. Speaking at a city convention on State Trading Mr S. C. Bose, President of the Utkal Mining and Industrial Association, said that nearly 30 per cent of the iron ore mines had stopped production owing to the entry of the State Trading Corporation into the ore trade. He also complained that the Corporation was taking undue advantage of its position as a Government sponsored organisation to get special facilities in railway transport. It would appear that the STC deals in steel have also been not quite to the advantage of our country. Moreover, it is said that in its barter deal with Russia in pepper it has imported a lot of machinery which is practically useless.

Whatever may be the justification for the State participation in trade, there can be no two opinions on the need for entrusting the trade both internal and external to persons and organisations which are well versed in each and every line of trade. It is also incumbent on Government to withdraw from those lines in which foreign consumers show a marked preference to private traders. In any event, as Mr N. Dandekar has pointed out, there

State Trading Corporation

should be "demonstrable justifications" of any trade taken over by the State as being in the best interests of the country at large.

★

Cooperative Movement

Speaking at a meeting of the Maharashtra Divisional Cooperative Board, Ahmednagar, Dr Panjabrao Deshmukh, Union Minister for Cooperation has said that State participation in the Cooperative movement will not result in Government domination. This assurance will be welcomed by the generality of people in the country: for, the cooperative movement is considered to be the best method to achieve the goal of a socialistic pattern of society in a democratic way. A restatement of the role of the State in the growth of cooperation has become necessary because there is some apprehension that by virtue of their active participation in it, Government will steadily come to exercise control over its day to day working. While inaugurating the third All India Cooperative Congress in New Delhi early this month, Prime Minister Nehru has opined that State-sponsored cooperatives have done infinite harm as they do not allow people to develop the spirit of self-reliance and self-dependence. He has also admitted that by accepting and implementing some of the recommendations of the Rural Credit Survey Committee, Government have only helped to push the movement in the wrong direction.

Mr K. D. Malaviya President of the All India Cooperative Union has also viewed with concern the growing official influence and domination over the movement. Apart from Government control, the movement has been weakened by the lack of attention on organisational matters. While the removal of official interference is bound to go a long way in aiding the natural growth of the movement, it is to be noted that the main responsibility for fostering its expansion should be borne by the movement itself.

It is, therefore, gratifying to note that Dr Deshmukh is "determined to see that State participation or assistance does not mean unnecessary and illegitimate State domination". The cooperative movement must remain as a "people's movement, meant for the people and run by the people". The fact that assistance from Government is taken should not be allowed to jeopardise the autonomy of the movement. There is, however, urgent need for realising that the movement can make good progress only when people participate in it with enthusiasm.

Maharashtra is one of the regions in the country where a proper atmosphere for the growth of cooperation seems to have been created already. The movement has made rapid strides here and cooperatives are

playing a vital role in meeting the credit needs of cultivators. The truth of this statement is borne out by the fact that a large number of sugar factories on a cooperative basis have been established in this region. Of the 50 cooperative sugar factories proposed to be set up in the country, 14 will be in Maharashtra. Dr Deshmukh has pointed out that there is immense scope for expanding cooperation in the industrial field. In this connection he has suggested the establishment of a paper mill utilising bagasse from the sugar factories and a jute mill on a cooperative basis.

★

Bharat Sevak Samaj

When it is said that the success of the Second Five Year Plan depends on our ability to find the necessary resource, it is generally taken for granted that the people at large will extend their fullest cooperation for the various development works. The Planning Commission have, however, been quite precise on this point as they have recognised that adequate resources alone without the people's initiative and cooperation will not ensure the success of the Plan. In this regard they have pointed out that concerted efforts should be made to inculcate among the people a spirit of social service. It has been found that this great task can best be accomplished by non-political and non-official organisations such as the Bharat Sevak Samaj.

The urgent need for arousing popular initiative for the Plan has been emphasised by Mr Morarji Desai in his inaugural address to the first conference of the Gujarat Bharat Sevak Samaj early this week at Ahmedabad. He has pointed out that the success of the Second Plan depends largely on the active participation of the people in the development works. In this view it would appear that the problem of canalising the energies of the people in cooperative effort is even more important than the problem of resources.

It is, therefore, gratifying to hear that the Planning Commission have approved a scheme for effecting a reorientation in the structure and method of working of the Bharat Sevak Samaj. According to Mr Gulzarilal Nanda, Chairman of the Samaj, this organisation proposes to set up village units which will work in perfect coordination with official institutions like the panchayats and share the responsibilities of development tasks in a mutually accepted programme. One of the main objectives of the Samaj is the maximum utilisation of all the available resources. In ensuring this it will work hand in hand with local institutions taking care that there is no overlapping or duplication of activities. Its primary task, however, will continue to be the

creation of a proper atmosphere for the functioning of the official agencies.

★

Development of Vidarbha

The Government of Bombay are taking energetic steps to promote industrialisation of the State as a whole. Various facilities are already available from state sponsored institutions for private enterprise to embark on new projects. In their endeavour to quicken the pace of development the Bombay Government have taken special care to see that all regions get equal and adequate facilities. Government have now opened a branch of the State Financial Corporation in Nagpur with a view to assist effectively in the industrial development of Vidarbha. Dr Jivraj Mehta State Finance Minister. In the course of his speech at the opening ceremony of the branch has disclosed that branches of the Corporation will soon be opened in Kolhapur in Maharashtra and Ahmedabad in Gujarat. Referring to the prospects of industrialisation in Vidarbha, Dr Mehta has pointed out that there is vast scope for starting new industries in the region because of its abundant natural wealth. The Government have already issued licences for the starting of a ferro manganese plant, a cement plant and a plant for the production of cotton oil. It is to be noted that Vidarbha is the only region in the State which has iron ore and coal.

Allaying apprehensions about the decline in importance of Nagpur as a result of States Reorganisation, Dr Mehta has cited facts and figures to show that actually the city has continued to record progress. Far from jeopardising the growth of the region, integration has improved the chances of its rapid development as it has now the advantage of coming into close touch with contiguous areas as also obtain the great facilities available in the city of Bombay. Referring to the facilities available for the different kinds of entrepreneurs for starting new projects, Dr Mehta has made particular mention of the working of the State Financial Corporation. In this regard it is to be noted that the Corporation mainly caters to the needs of small scale industries for the simple reason that these industries offer great scope for enlarging employment opportunities. Moreover, the development of small scale industries has attained special significance in our country after the adoption by the nation a socialistic pattern of society as its objective. Dr Mehta has drawn attention to the fact that the Bombay State Financial Corporation is the first of its kind to raise more than Rs 116 lakhs by issuing bonds, besides having a paid-up capital of Rs 2 crores. Its financial transactions now aggregate Rs 321 lakhs in loans.

THE Cotton market in Bombay is still in a state of panic due to accumulation of heavy stocks of raw cotton with the trade as spinners have continued to follow a policy of hand-to-mouth. Crisis of confidence has been created in the trade as demand for ready cotton is at an extremely low level. Even low prices have failed to attract demand from the mills and in view of the restrictive policy of advances by the banks against commodities, trade has been finding increasingly difficult to finance the accumulated stocks. Reports from Gujarat indicate that, unless stocks start moving, distress selling on a large-scale may develop in the near future.

Cotton varieties worst hit were mostly from Gujarat and Saurashtra and rumours are current that a delegation on behalf of growers will soon wait on the Government to ask for an export quota of Kala Gin and Wagad through Saurashtra Ports. Again, reports from Ahmedabad indicate that there is a heavy accumulation of Kalyan cotton with the mills and growers, and prices have declined by about Rs 30 per candy. Bengals have, however, remained unchanged on account of good enquiries from shippers for immediate shipment.

Shippers are, however, disappointed to see that the Government of India have not yet announced an export quota for staple cotton. The extension by a month in the shipment period allowed in respect of export of 50,000 bales of Bengal Deshi, released in October last, went unnoticed in view of the fact that more than 44,000 bales had already been passed for shipment. The quantity passed for shipment in respect of a similar quota, announced in February, was, however, only 7,440 bales although more than 48,000 bales had been licensed for export till April 24. On the other hand, many mills have preferred to defer their purchases of the raw material, being unnerved by the obscure textile outlook for the current year as reflected by growing accumulation of cloth stocks and a fall in output in the first quarter of the year.

While mills are eagerly awaiting the Government's permission to import US cotton, efforts are being made to evolve a simpler method for the payments procedure for Egyptian cotton. It is learnt that the payment procedure will now be repaced by an easier method. It is also understood that 13,60,000 Egyptian pounds have been credited to the State Bank of India in advance by the National Bank of Egypt and will be made available to Indian importers to enable them to import Egyptian cotton. The amount thus credited will be adjusted later by the National Bank of Egypt against the earnings from exports of tea and jute goods from India. The National Bank of Egypt will, it is reported,

shortly, notify the exchange rate between the Egyptian pounds and Indian rupees to the State Bank of India. It is not, however, known whether such a rate will be a fixed one or subject to daily fluctuations.

Meanwhile, private cable advices from Alexandria suggest that the Alexandria Cotton Exporters' Association has issued somewhat non-committal instructions to their members, stating that the offers for Egyptian cotton will be made by shippers in Egypt after deducting a discount of 20.95 per cent. The circular further states that Indian buyers have been provided with an option either to remit to exporters Egyptian pounds or pay in rupees to the State Bank of India which, in turn, will direct the National Bank of Egypt to pay exporters the counter value in Egyptian pounds plus 26.5 per cent premium.

Although the cotton market turned panicky, there was a partial recovery towards the close. The recovery movement was initiated by the nearby delivery where short-covering was induced by proximity of the delivery period. A part of the buying was also attributed to the Union Transport and Communication Minister's assurance in Parliament that the Government would have to think of other steps if the recent excise duty relief did not bring about the clearance of accumulated stocks. Turnover was 20,000 bales. ICC Jharilla May delivery, after dipping to Rs 640.50, recovered to Rs 647.75 at the close. August delivery, after touching a high of Rs 660 and a low of Rs 653.50, finished at Rs 659.75.

In the Spot market, demand was generally poor although some mills showed interest in Laxmi, Vijaya, Surti and Kalyan styles towards the close of the week.

On the Export front, modest demand was noted in Bengal Deshi and prices remained unchanged. In the foreign cotton section, a very small business was reported done in AR/BP/52 and AR/Jinja for May/June delivery. There was small buying of spot lots of Californians, while other growths did not attract any enquiries.

×

CROP ESTIMATES:

The Indian cotton crop estimate for the current season 1957-58 has now been revised to 49.45 lakh bales. This estimate had been placed before the Cotton Advisory Board which met last week. The variety-wise break-up of this estimate is as follows (in lakhs bales of 400 pounds each):—Madhya Bharat 4.25; Madhya Pradesh 10.00; Moglai 2.00; Khandesh 2.50; Pandharpur 0.35; Punjab 9.50; Rajasthan 1.75; Uttar Pradesh 0.40; Vijay 4.65; Surti 1.25; Kalyan 1.75; Wagad (Saurashtra) 1.40; Wagad (Kutch) 0.15; Kala 0.55;

Mathia 0.40; CO/2 (Kutch) 0.10; CO/2 (Saurashtra) 0.45; Andhra, Western, Laxmi and Jaydhar 2.80 and Madras and Mysore 3.70. Total 49.45.

According to the International Cotton advisory Board, significant progress has been made in correcting the imbalance between the supply and demand position for world cotton in the 1957-58 season. World production and consumption are estimated at 39.4 million bales and 41.8 million bales as compared to 41.2 million bales and 42.1 million bales respectively in the 1956-57 season. With the production of cotton lagging behind consumption by 2.4 million bales, stocks are expected to decline to their lowest level of five years. World stocks of cotton, at the end of the 1957-58 season, are estimated at 20.5 million bales as compared to 23.1 million bales at the end of the previous season. Expressed in terms of consumption, stocks will represent less than six months' supply, which is considered close to normal stocks.

In the view of the Committee, there is no longer any surplus of good grades; and the surplus situation in the extra long-staples has been relieved somewhat by the abnormally small crop in Sudan. As regards production prospects for the next season, it appears that there can be a further reduction in planted acreage under cotton in the USA in the next season, though pressure is being brought on the Government from producers and consumers to allow some increase. Marked expansion in cotton acreage is, however, expected in Mexico.

CLOTH AND PIECEGOODS:

Steady conditions prevailed in the Bombay Piecegoods market. Although the consuming centres have continued to evince interest, turnover is reported to be a little lower. Prices have, however, remained unchanged. The demand has been more pronounced in respect of fine and superfine goods, thanks to the seasonal factor. Dealers are of the opinion that the offtake will improve before the monsoon sets in. Popular mills have continued to book business for delivery of goods up to July. The forward business is said to be done at the current level of prices. However, general opinion is that trading conditions are quite satisfactory.

On the export front, conditions have not yet improved. Shippers have pointed out that foreign enquiries are very much subdued. In view of the unsatisfactory trend of cloth shipments, it is feared that the overall performance for the year will be discouraging. Only scattered enquiry is reported from abroad. It is believed that some more time will elapse before the Burmese authorities issue licences for the import of textiles.

With exports of 52 million yards of cloth valued at Rs 3.37 crores in March 1958, total shipments of cotton textiles from the Bombay Port, in the first quarter of the year, have declined sharply to 165.42 million yards valued at Rs 10.82 crores from 239.25 million yards worth Rs 16.45 crores in the corresponding quarter of last year. The decline in exports is shared by all grades of piecegoods; but it is marked in the case of greys.

Subdued Sentiment in Oilseeds

SENTIMENT on the Bombay Oilseeds Exchange remained subdued following the continued easy conditions in the ready section. With the approach of the maturity of the current contracts, interest has generally shifted to the possibility of spot offerings against forward sales. A substantial portion of the outstanding business in various oilseeds has either been squared up or carried forward to distant contracts after their start a few days ago, while the settlement of the balance will depend on the future behaviour of the market.

With most of the short position covered and no fresh buying coming forth, Groundnut declined further after higher opening. Initial firmness attributed to heavy short-covering, induced by fears that bulls were steady to weigh over at the maturity of the contract, proved abortive. A sharp decline in cotton, heavy arrivals of groundnut kernels in the Madras State and the break in rapeseed prices in North India continued to act as deterrents. May delivery closed at Rs 168.25, the highest and the lowest levels touched being Rs 168.75 and Rs 167 respectively. In the ready section, Bold quality was quoted at Rs 34 and Groundnut Oil at Rs 18.37.

The slackness in exports of castor oil imparted a bearish undertone to the Castor futures market. Some of the mills holding limited supply of castorseed, were stated to be potential tenders in view of the fact that it was becoming increasingly unremunerative to produce oil. Moreover, the USA showed little interest, while the UK was reported to have bought only a small quantity of commercial oil at £116 per ton c.i.f. in bulk. On the whole, traders were inclined to be cautious. May delivery closed at Rs 147.25, the highest and the lowest levels touched being Rs 147.25 and Rs 146.75 respectively. The ready rate was quoted at Rs 29 and Castor Oil, commercial quality, at Rs 15.12.

In the Linseed section, Bombay had been nursing a substantial quantity which might be offered on account of the depressing outlook for linseed oil exports. Australia was reported to have bought 240 tons of linseed oil from Calcutta at £113 per ton c.i.f. in bulk. But, the small quantity covered up by the deal failed to cheer up traders. May, after touching a high of Rs 29.81 and a low of Rs 29.62, finished at the latter level.

Gold & Silver

On the Bombay Bullion Exchange, the spot section remained generally depressed, while forwards were more or less maintained. Trade ideas of increasing influx of Tibetan coins and slow demand in gold were the main influencing factors.

Arrivals and offtake in Silver were estimated around 16 and 8 bars respectively. Forward silver opened

steadily at Rs 195.69 and reacted to 195.44 at the close due to profit-taking. The highest and the lowest levels touched were Rs 195.81 and Rs 195.25 respectively. Valshak and Ashad deliveries were placed at Rs 197.81 and Rs 194.12 respectively. Spot rate was quoted around Rs 198.69.

Arrivals and offtake in Gold were estimated at 4,000 and 3,000 tolas respectively. Forward rate opened at Rs 111.50 and, after touching a high of Rs 111.53 and a low of Rs 111.31, finished at Rs 111.37. Valshak and Ashad deliveries were placed at Rs 112.81 and Rs 110.75 respectively. Spot changed hands at Rs 114.12 to Rs 114.50, while Sovereign remained very steady at Rs 72.50.

Yarn

Prices in the Yarn market have generally developed an easier tendency, mainly due to consumer resistance at higher levels and to reports from abroad that prominent rayon yarn manufacturers have reduced their prices. It is stated that several Continental manufacturers have slashed prices by 3 to 4d per pound for popular deniers following the recent bulk deal entered into jointly by several mills in Bombay. Holland is reported to have figured in this deal for goods worth about Rs 25 lakhs at 39d per pound for 120 denier and 43d for 100 denier. Some of the Italian producers have indicated 38d per pound for 120 denier and this has inspired the French and

Swiss manufacturers to quote 37d and 36d per pound respectively. The tendency in Belgian and English yarn has also been generally quiet.

The demand from India has shrunk quite sharply, because of the progressive reduction in import quotas and the ban on imports by established importers. The recent tendency in the country to import more yarn than viscose yarn has also aided the downward tendency. It is, however, generally agreed that prices will stabilise at the current levels, partly because of the recent restrictions on imports of nylon yarn.

The market for Cotton yarn continues to remain dull with no change in prices.

Dalmia Products

for modern homes and offices

QUALITY STONEWARE AND PORCELAIN PRODUCTS

STONEWARE PIPES (for underground drainage) ①
salt glazed, acid-resistant and tested to standard specifications.

NO. 1

Mr Nehru in Kerala

EVER since the idea of Mr Nehru's official visit to Kerala was bruited, observers here had been looking forward to watching the piquancies of the situation at the time of actual visit. Since he is the de facto Chief of a party which is avowedly opposed to Communism and which is fighting a bitter local battle against the present regime in Kerala, scope for moments of embarrassment for all concerned was unlimited. Indeed, even when the President was in Kerala last year, there was a certain amount of controversy, especially about his version of the success attending the Communist attempt at government. Mr Nehru's position is, of course, slightly different. He is at once more and less constrained than the President. The President being above parties, can say things that party politician cannot say. But then, by the same token, the President should be wary in treading controversial grounds in which the Prime Minister, as a member of a political party, can, if he so chose, play about happily. Of course, in the constitutional set-up we have, the relationship between the State and the Centre is such as to make the Prime Minister at the Centre a less free man than he would otherwise have been. But, even so, considerations that might inhibit him are far less absolute than those that restrict the President.

So, if Mr Nehru had chosen, he could have created a number of awkward moments for his nominal hosts. This was particularly so, since the occasion was chosen by the Kerala Congress to have a political Congress of their own in Cannanore, which was attended by Mr Nehru. But, characteristically, Mr Nehru averted all the embarrassment likely to arise from the situation. In the first place, with his particular courtesy and sense of proprieties in these matters, he informed his host Government of his intention of attending the party political conference and obtained their "permission". Secondly, throughout his tour of Kerala in the last few days, he scrupulously avoided what might be called scoring party political points. To be sure, he criticised certain aspects of Communist ideology, but he kept clear of particular acts of the present regime, about which there is such a lot of controversy. Even at the party platform, he did not say anything that might be taken exception to by the present Government in Kerala.

What, if any, would be the permanent effect of Mr Nehru's visit to the State? On the one hand, some people fear that it would confer further respectability to Communism and thus strengthen it in that part of the country. And since, according to these people, Communists are shameless oppor-

tunists, they will thus consolidate their position and, finally, reveal their true nature when they are safely entrenched in power and when it will be too late to do anything about it. On the other hand, Congressmen in Kerala believe that the Cannanore conference marks a turning point in their fortunes: certainly, the jolt the Congress received in the general elections has had a shattering effect on their morale. And, according to reports, it was only after the Cannanore conference that they have recovered their former confidence. Mr Nehru himself seems to have been impressed by the effect of this conference on the people.

It would be difficult to predict precisely about party political fortunes as a result of Mr Nehru's visit. For, it is notorious that popular feeling is an evanescent thing, and any upsurge of feeling, one way or the other, may quite conceivably spend itself if it is not kept alive by particular acts of the parties concerned. For instance, if the Communist Government are to cash in on the visit (though it would be a difficult thing, since Mr Nehru hardly did a thing that could be construed as approval or disapproval of particular policies of the present Kerala Government), they will have to put through such policies as will find favour with the people there. On the other hand, if the Congress is to keep alive the enthusiasm released by the Cannanore conference, it will have to follow it up by concrete acts that will show that it is interested in the welfare of the people. There is evidence that Congressmen in Kerala, unlike Congressmen elsewhere, have realised that they ought to get down to their tasks of winning popular confidence by showing that they place the commonwealth above their own personal and factional advancement. The need for strengthening the organisation by providing disinterested leadership at all levels has been felt by them more acutely than by Congressmen elsewhere, because of the fact that the Communists have a similar hierarchy of leadership. It is true that allegations of intimidation and coercion are made against these persons, but the Congress can hope to wrest the initiative from these persons (and, incidentally, stop the alleged terror) only if it opposes to it a similar set-up, virile, disinterested and firmly rooted in popular faith.

But, quite apart from party political fortunes, the Kerala visit is chiefly interesting as a continuation of the process of "killing Communism with kindness". As is only too well-known, the Communist regime in Kerala is unique from one point of view. It is the first Communist Government brought into being by wholly demo-

cratic means. And what is even more of a curiosity, it is working under all the limitations arising out of the fact that it has to work in co-operation with a Government at the Centre formed by a different party. This requirement, forced as much by the constitution as by the needs of the situation, is something that has been accepted with grace by all concerned. For the smooth working of this somewhat anomalous situation, credit is due as much to the Centre as to the communists in Kerala. But the interesting fact is that this compulsion and the responsibilities of office have made the Communists entertain second thoughts about their own fundamentals. For the first time, they have started talking about Indian conditions and the need for adapting their methods and doctrines to suit them. One need not take their Amritsar professions too seriously. They may or may not be meant in good faith. But the fact they have been scrupulous in respecting constitutional proprieties and have been co-operating with the Centre (which has been equally responsive) cannot be denied. One may question the ultimate motivation of this sweet reasonableness, but one cannot get away from the fact of present responsible behaviour by the Communist regime in Kerala. In the process, a good many sacred cows of orthodox Communist doctrine have been quietly slaughtered. Either hypocrisy or hard reality has forced this on the Communists, and they are acting, at least for the moment, reasonably. Jibes about their entering into agreements with the Birlas and so forth are therefore entirely misplaced.

The fact is, in the complicated situation in India and in Kerala, there are not very many alternative policies for any responsible Government to adopt. So, party political postures notwithstanding, everyone is obliged to come to terms with economic reality more or less in the same way. In any case, in the anxiety shown by the Communists to obtain some kind of an indirect approbation from Mr Nehru of their regime in Kerala and also in the Amritsar resolutions, may be seen the pressures of economic and political reality on Communist doctrines. I, for one, do not believe that these pressures will leave the doctrines themselves unchanged.

As I said earlier, Mr Nehru scrupulously avoided in all his utterances during his four day visit anything that might be considered as controversial. But that did not mean that his utterances were colourless. Indeed, as he himself repeatedly remarked, he was addressing his audience at a level which was far above that at which he addressed public meetings. As usual, he covered a wide range of subjects, but his main accent was

on Gandhiji's teachings. He commended—and, in this, he specifically referred to professing Communists—Gandhiji's habit of trying to find roots for one's philosophy in the experience of one's own country. He also referred to Gandhiji's insistence on the purity of the means—again, a lesson particularly relevant for communists. And, lastly, he referred, both in the internal and external contexts, to the need for a non-violent approach based on fearlessness. Gandhiji's lessons were no longer a matter for pious exhortations, but a compelling practical necessity.

On the subject of Kerala's special problems, he had the familiar solutions. Indeed, in their broad outlines, they are as simple as a sum in arithmetic. Chronic food shortage and notorious over-population which shows no signs of abating can have only two solutions, both simultaneously attempted: increasing food production and stopping the increase in population. On top of these two basic problems, you have a high degree of unemployment, especially of the educated. You cannot have another situation which will readily fit the bill as having prescriptions for instability. Here again, solutions can only be on a long term basis, and Mr Nehru had no ready made solution either. The fact is whether, under a Communist regime or Congress regime, these chronic problems, which are but a microcosm of the problems facing the rest of India, cannot be solved, unless people gave unstintedly of their co-operative effort.

S. E. RLY TENDERS

Sealed tenders are invited for tender No. CON/COS/7/WP/GB10] 58 for supply of 120 pieces Tar-paulin size 30'x15' specification basic cloth and proofing as laid down under specification No. IND/TC/O127 and make up as per specification No. G/TEX/T46G material to be inspected and passed by the Director of Inspection before despatch. Tender will be opened on 30.5.58 at 12 noon.

Tender forms (not transferable) are obtainable from the office of the undermentioned at Garden Reach, Calcutta-23 at Rs 2/- (not refundable) per copy by M.O. to him direct in case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tender forms should accompany the receipt for depositing earnest money of Rs 500/- from this Rly's Chief Cashier together with a valid Income Tax Clearance Certificate without which the tender is liable to be rejected. Contractors having permanent deposit of Rs 1000/- with the undermentioned are exempted.

S7 CONTROLLER OF STORES

THE cotton textile industry is the single instance of an industry to have experienced such frequent shifts in market conditions and fluctuations in fortunes. The crisis through which the industry passed last year has again demonstrated that in spite of the Second Plan, stability is as remote a condition as it had ever been. The crisis was as sudden as it was staggering. From almost scarcity conditions in 1956, there was a sudden shrink in demand following the increase in the excise duty payable by mill goods. In the absence of fiscal concessions accumulation of stocks went to such an extent that cessation of production became the only alternative to avoiding losses for the mills. Further harm has only been avoided by the reduction in the rates of excise duties announced in March last.

In the confusion that followed a clear picture of the nature of the crisis and the causes that led to it has been lacking. Now that the crisis is well past its nadir, an examination of its various phases should yield points for the guidance of future official policy in regard to the cotton textile industry. It is such a post mortem examination that the speech of Mr E. J. M. Leigh at the Annual General Meeting of the Buckingham and Carnatic Co. Ltd. and of the Bangalore Woollen, Cotton and Silk Mills Co. Ltd. of both of which he is the Chairman, furnishes.

Overproduction by the mill sector has been freely talked about as the villain of the piece and data have been added to show that total production by the mills has exceeded the target fixed for the industry under the Second Plan. Though it is true that production of cloth during 1957 amounted to 5,400 million yards against the target of 5,000 million yards at the end of the Second Plan, how there could have been scarcity conditions in the cloth market during 1956 when production was of a similar order goes unexplained. Overproduction therefore is too simple an explanation for the difficulties experienced by the industry.

Evidently there has been a marked decline in consumption of cloth. Considering that stock with mills rose by about 450 million yards and that at the same time exports of cloth increased by about 100 million yards, the fall in consumption was to the tune of about 550 million yards. In this connection attention has been drawn by textile interests to the steep increase in the prices of food articles during the last year and the pressure of inflationary conditions on consumer demand. Food being the first item in the priority list of the lower income groups that outlay on cloth by families

Lessons of the Textile Crisis

belonging to the lower income groups should be adversely affected by a fall in the purchasing power of money looks reasonable. But whether the rise in prices last year was of such order as to cause a decline in consumption of cloth to the tune of 550 million yards is doubtful. This gathers more strength from the fact that stocks with the mills showed no downward trend even after distress sales and drastic reductions in duty paid prices. Thus, though he has referred to the rise in prices of food articles, Mr Leigh is not inclined to go the whole hog in accepting it as the only factor that led to the crisis in the textile industry. And he has further pointed out that actual retail consumption was substantially in excess of clearances from mills.

According to him the real factor that started the difficulties was the excess production of cloth of the coarse variety and the consequent disruption of the traditional balance of production in the industry. As proof of this he has pointed out that production of coarse dhoties and sarees had increased from 9 and 2 million yards respectively in 1955 to 44 and 27 million yards respectively in 1956 and further to 172 and 200 million yards respectively in 1957. The composition of the uncleared stocks with the mills would seem to point to the same conclusion. Out of the total unsold stocks of about 3.45 lakhs bales of cloth at the end of March coarse varieties accounted for about 90,000 bales while medium, fine and superfine varieties accounted for 2,23,000 bales, 17,000 bales and 14,000 bales respectively. The total stock of coarse varieties at 90,000 bales according to expert view represents an excess to the tune of about 60,000 to 70,000 bales. The condition of the cotton textile industry in Kanpur offers further confirmatory evidence. Having specialised in the production of coarse varieties, the distress in Kanpur textile industry was more acute than elsewhere stocks having been left uncleared even after the concessions in excise duty. Thus it is clear that as pointed out by Mr Leigh the crisis was precipitated more by disruption of the balance of production between the various sectors of the textile industry than by overproduction as such.

This finding regarding overproduction in the coarse end is highly significant in that it indicates the lines along which future policy towards the textile industry has to run if the industry is not to be brought to the brink of a similar phenomenon in the future. The lesson of this overproduction in the coarse varieties is that the fiscal machinery with reference to the

textile industry has to be so adjusted as to keep the various sectors within their normal bounds. It is the general opinion of textile interests and one which Mr Leigh also shares, that the excess production in the coarse end of the industry came not as a sequel to any real increase in demand but was stimulated by penal tax measures on finer cloths and the rebate in excise duty offered towards the end of 1956 for increased yardage production for producers of coarse cloth.

Though Mr Leigh has not mentioned it the gradual inroads which the handloom sector had made into the market for cloth was also not without its impact on the conditions in the cloth market especially for the coarse varieties. Since these two types cater to the same kind of buyers, it was in the nature of such infiltration, inevitable that the market for coarse cloth should get reduced. This is a trend which has to be taken into account in the formulation of future policy with reference to the textile industry.

The reduction in the rates of excise duty effected in March has no doubt given a breathing spell to the industry. Already corrective forces are discernible pointing to the reversal of the trend in production and stocks. Output by the mill sector, in the first quarter has fallen by 132 million yards as compared to the corresponding period for the last year. But whether progress towards recovery would be unimpeded would depend, as pointed out by Mr Leigh, on a variety of factors such as the level of food prices and the balance between actual production, quantity and quality and the needs of the consuming public. Though the extent of the accumulation that could be attributed to the rise in price, has only been marginal it needs no stressing that attempts to fix target for cloth consumption without reference to the impact of conditions in the food front would only remain futile.

The Government seem to be satisfied with the fiscal concessions already granted. But the inadequacy of such limited measures is already being brought home by developments in the export front. Mr Leigh has in this connection drawn attention to the steady deterioration in the international market for cotton and the intensification of competition and the effect of the current American recession. With the fall in prices of cotton available to foreign competitors relatively to the price of Indian cotton, and with the Indian mills being put at a disadvantage in regard to access to latest machinery together with the trend to-

wards self-sufficiency in cloth in foreign countries he does not foresee any prospects for increase in the exports of cloth from the country. The experience of the first quarter of this year would seem to confirm his predictions. For during the first quarter exports of Indian cloth have fallen by about 90 million yards. The competitiveness of the Indian cloth, in such circumstances, could only be raised by reduction in the cost of production. The existence of severe restrictions on the import of machinery needed to replace wornout plants is inconsistent with the paramount need to reduce cost of production. Even in the internal market, not to speak of markets abroad, the connection between lower prices for cloth and increase in cloth consumption which the Government are so keen on achieving is too close to be overlooked. Opposition of labour to schemes of rationalisation is another factor to which Mr Leigh has drawn attention as militating against lower cost of production. At the same time he has not failed to stress the need for market research by textile industry itself. The suggestion of Mr Leigh for replacing Sales Tax on imported stores and industrial raw materials by a surcharge on Import Duty which could be refunded as a rebate on the basis of export performance is also worth considering since as he points out, such a step would, besides giving stimulus to exports, would also make for simplification of the tax collection machinery.

One would look in vain for the symptoms of the textile crisis in the fortunes of the Buckingham Carnatic Mills during last year. The Company had the singular distinction of achieving a record sales figure of Rs 10 crores. While, as legitimately claimed by Mr Leigh, this can be regarded as a tribute to the productive efficiency of the Mill and to the efficacy of its sales policy, in a large measure, this was due to the fact that being high quality goods the products of the mill were immune from the ravages of the crisis. But the company could not still escape from the effects of heavy excise duties, sales tax and rising cost of raw materials. As a result profits were driven below the usual levels.

The position of the other unit namely Bangalore Woollen Cotton, and Silk Mills Co. was only slightly worse. While the volume of exports was kept at the previous year's level at about 19.5 lakhs the silk section was seriously handicapped by import licence restriction on spun silk and limited supplies from indigenous sources. In the Woollen section he has reported loss which he attributes to high price for raw materials and keen competition.

Though a less publicised aspect of the Second Plan, than foreign exchange difficulties and inadequacy of internal food production, lack of trained personnel is one of the formidable bottlenecks threatening the smooth execution of the Second Plan. The present day need for engineers, for example, is far in excess of the existing supplies, which is estimated at about 72,000. Development is thus contingent on the ability of the country to provide technical personnel of the right type, in increasing quantities.

A great deal of new thinking and new activity have been, of late, noticeable in this field. The concept of manpower planning was discussed and analysed at the recent conference of State Representatives in Delhi and its importance to the country emphasised. Setting up of new technical institutions to ensure adequate supplies of trained personnel especially in the engineering studies has been proposed by the Planning Commission and a few institutions have already seen the light of day.

The Engineering Institute at Peechi Dam in the Kerala State, for which Pandit Nehru laid the foundation stone last week, is one among the many new institutes that are proposed by the Planning Commission. In the course of his speech Mr Nehru stressed the important role of engineers in the development of the country's economy, but lamented the existing lack of sufficient numbers of them which, however, he attributed to the time length required to turn out an adequate number fully trained to their tasks.

Mr Nehru did not exaggerate when he said that it was more difficult to make a good engineer than to make a building or dam. The fact, referred to, by him that we had to engage a foreign engineer in connection with the construction of the Bhakra Nangal Dam proves this. In a way, this also describes the existing state and quality of engineering education in the country. Little headway could be made unless the suggestion made by him for the provision of specialised training of one year or eighteen months duration in the different branches of engineering is speedily implemented.

The Kerala Institute is estimated to cost about Rs 10 lakhs and is intended to promote experimental and analytical study of engineering problems pertaining to irrigation and power schemes. Special studies of the irrigation problems peculiar to the State and provision for research in collaboration with the engineering colleges of the State are its additional charges.

Singareni Collieries

That the control of the affairs of the Singareni Collieries has be-

come a matter of controversy between the Andhra Pradesh Government and the Centre is indeed deplorable. If the legality of the agreement which the former Hyderabad Government had entered into with the Government of India that the latter could own 66 per cent of the shares of the Collieries is not questioned, the claim of the Centre to control the Singareni Collieries is unassailable. The Andhra Pradesh Government naturally finds it inconvenient to accept the claim of the Centre. Whether the action of the former Hyderabad Government should be binding on the enlarged Andhra Pradesh Government is for the legal experts to decide. But what is more relevant is that public sentiment in Andhra is overwhelmingly in favour of the stand of the State Government.

The denial by the Centre of the request for loan of Rs 6 crores for the development of the collieries has certainly caused disappointment to the Governmental circles in Andhra Pradesh and more had been read into this action of the Centre than would be warranted by actual facts. The speech of Sardar Swaran Singh, Union Minister for Steel, Mines and Fuel, should therefore remove any misapprehensions about the motive of the Centre in having refused grant of loan to the Andhra Pradesh Government for the development of the Singareni Collieries. Sardar Swaran Singh in his speech pointed out that assistance by way of loans was based on fiscal principles and was related to the capital structure of the companies which wanted such assistance. The Centre's refusal to grant the loan to the Andhra Pradesh Government would seem to be based on this consideration. The non-settlement of the claim about the right to controlling interests was, probably, an additional reason for the refusal of the request for loan. Sardar Swaran Singh has in this connection indicated that it was only the company and not the Andhra Pradesh Government which was eligible for receiving any help for the development of the collieries.

That non-settlement of the dispute would affect production and development of the industry will not be doubted. An early solution is therefore indispensable. It is therefore gratifying that to know from Sardar Swaran Singh that these matters are now being discussed.

Power Supply in Madras

Power supply for sometime past has been in such restricted state in the Madras State it had come to be recognised as a clear damper, on industrial progress in the State. This underlines the inability of the Government to cope up with the

demand, which with the increase in the number of consumers from 17,000 in 1947 to 18,000 in 1958, is estimated to have gone up to 51,000 K.W. In such circumstances the Government's policy in the matter of supplies has been explained to be one of a balance between the needs of industries on the one hand and of rural electrification on the other. But an early relaxation of the existing restrictions is foreseen when the Periyar power station would be commissioned within a few months, to be followed by that of the Kundah Station.

Nonetheless the progress of power generation in the State during the past decade has been remarkable. Whereas at the time when the State Government took over the Basin Bridge Station, from the Madras Electricity Corporation, the effective capacity of the station was only 19,000 K. W. this has now been raised to about 90,000 K.W. which is considered to be the maximum level, consistent with the availability of water for cooling purposes. The important developments since the State acquired control of the power station, have been the commissioning of two 2,500 K. W. transportable sets in 1948, a phased expansion of the generating capacity at the power station at an estimated cost of Rs 6.3 crores, and interconnection of the Madras Station with the hydro stations of the Grid etc.

Last week a new 30,000 K.W. Electricity Generator was switched into operation at the Basin Bridge Power Station and was put into the State Electricity Grid. Continuation of existing restrictions in the power supply as announced by Mr V. P. Appadurai Chief Engineer, in the course of his speech at the inauguration of the new set will only cause disappointment especially to industrial consumers. Mr Appadurai also stated that two high pressure boilers had now been installed in addition to the one proposed to be installed to replace some old boilers. This is expected to be commissioned by 1961. The announcement of a five million dollar aid from Canada for the construction of transmission lines to put the power generated in the Kundah project into the State Electricity Grid would be warmly appreciated. This would bring the total Canadian aid for the project, to 25 million dollars.

Notwithstanding all the increase expected from the new hydro-electric stations, the adequacy of the power potential of these stations to the growing needs of industries is to be doubted. The importance of atomic reactor is therefore great. That this matter has reached the stage of negotiation between the Chief Engineer of Madras and the Central Government authorities, is, therefore gratifying.

Mysore Spun Silk Mills

The effect of the Mysore Government's intervention in the affairs of the Spun Silk Mills was the subject of a controversy in the State Legislative Assembly last week. While some of the opposition members pointed to the harmful consequences of such policy and attributed the present weak financial position of the mills to such intervention, the Government spokesmen were emphatic in their view that such intervention had redounded to the benefit of the industry.

In support of their stand the opposition members pointed to the loss that the shareholders had incurred as well as to the decline in employment of the order of about 1,200. But actual trends in production in recent months would seem to support the Government's view of the beneficial effects of its policy towards the mills. Following improvement in the raw material position production during the last three months had been on the upgrade. At the same time prices for the products of the mills had also considerably improved.

Explaining the Government's policy, Mr C. M. Poonacha, Minister for Industries, said that the Spun Silk Mills were conceived by the Government to create facilities for promoting the silk industry by creating a price for the waste product of the silk industry. He traced the unstable condition of the industry to the worn-out plants and machinery which precluded them from operating at a profit. The most effective solution to the difficulties experienced by the mills therefore should be financial aid to enable them to replace the outworn machinery and also to meet part of the capital needed for day-to-day working. Mr Poonacha has estimated the amount of such capital needed to put the industry on a stable financial footing at about Rs 25 lakhs. The immediate possibility of such assistance being available depends on the acceptance by the Central Silk Board of the recommendation of the Government of Mysore to give the Spun Silk Mills loan assistance to the tune of Rs 17 lakhs.

Existence of two rival labour unions is another factor which hampers smooth functioning of the mills. The labour relations in the industry also does not seem to be happy. The Opposition members have charged the Government for this unhappy state of affairs and are inclined to hold the Government responsible for the existence of two rival unions. But in the light of Mr Poonacha's statement that the formation of one labour union had defied the best efforts of the Government the charges made by the opposition members seem to be misconceived.

Mr E.J.M. Leigh, the Chairman, Speaks on a Trouble Filled Chapter in the History of Indian Textiles

Presiding at the Thirty-seventh Annual General Meeting of the Shareholders held at the Company's Office, 7, Armenian Street, Madras, on Friday, 25th April, 1958, Mr. E. J. M. Leigh said:

Gentlemen,
The Report of the Directors and the Audited Accounts for the year ended 31st December 1957 having been in your hands for the prescribed period before this Meeting, I propose, with your permission, to adopt the usual procedure and to take them as read.

The year under review added a trouble filled chapter to the history of the Indian Cotton Textile Industry. From conditions of scarcity in September 1956 when Government imposed penal excise duties, ostensibly to mop up surplus profits and curtail demand, consumption fell to such a degree that some Mills closed down and others had to suspend shifts before any remedial action was taken.

Despite distress sales to find working capital and drastic reductions in duty paid prices, offtake did not improve and stocks with Mills rose by some 450 million yards. As export sales increased by about 100 million and total production was only marginally in excess of that achieved in 1956, it will be seen that home consumption of mill cloth fell by approximately 550 million yards.

This phenomenon has not yet been fully or conclusively explained and we have to look beyond the steep rise in prices of food, such a large element in the family budget and which was undoubtedly a contributory factor. It is easy to jump to the conclusion that there has been a sudden and very marked reduction in consumer demand and that the Industry in achieving and surpassing the target set for it by the planners has sown the seeds of its current distress.

I myself believe that actual retail consumption was substantially in excess of clearances from Mills and that both would have been much higher had there not been a marked swing from the traditional balance of production within the Industry towards the coarse end, and gross over production in particular sorts, such as coarse dhoties and sarees. These two items are understood to form a large part of stocks lying with Mills and their disposal will take time, even if all further production is discontinued for the time being.

This "go coarser" movement has undoubtedly been encouraged by the psychological effects of the disproportionately high rates of excise duty and sales tax levied on finer cloths and the rebate in excise duty offered towards the end of 1956 for increased yardage production.

The Industry's predicament was also aggravated by dealers adopting a hand to mouth purchase policy, having lost confidence and expecting a reduction in Excise Duty rates and a replacement of Sales Taxes by additional Excise duties.

Two measures of relief were introduced in December last in the shape of a reduction of 6 pies per square yard in the rate of excise duty applicable to "Medium" cloth, in which category stocks were the highest, and the replacement of all Sales Taxes on cloth, Central and State, by additional excise duties. Further concessions were announced in March this year applicable to all categories and advantage was taken at the same time to express the rates in naye paise. Supplies can now reach the consumer at lower prices and some measure of confidence within the trade has been restored, though it is too early yet to determine whether these concessions will prove adequate in the long run and permit a reduction of stocks to normal levels. Much will depend on the future level of food prices and the balance between actual production, quantity and quality, and the needs of the consuming public.

On the Export front, the prospects for 1958 look bleak. International trade continues to shrink, competition to intensify and the spreading effects of the current American recession cannot be disregarded.

Prices of many types of cotton available to India's foreign competitors have fallen more than local prices, buttressed by higher Mill offtake, thereby impairing seriously the Industry's main natural advantage. It must not be forgotten also, that India's competitors have ready access to the latest machinery and techniques which they have not hesitated to install and adopt, while in India ever increasing restrictions are imposed on the import of vital plant and essential spares and stores etc.

If India is to maintain, let alone increase her exports of cotton cloth, ways and means must be found to reduce production costs substantially.
