FACTS BEHIND FIGURES

To and fro fly the shuttles in the 70,000 looms of India's 105 jute mills. Each travelling at a speed of 9,000 picks an hour (the length of a pick averages two yards), these shuttles together cover a distance equivalent to about 70,000 trips round the world, weaving 1,000,000 tons of jute cloth each year. The jute industry is India's most important foreign exchange earner; jute products form over 60% of India's dollar exports. Texmaco, pioneer manufacturer of cotton textile machinery in India, also supplies this important industry with the complete range of jute mill machinery, designed and built to established international standards, in technical collaboration with the world renowned British company, Fairbairn Lawson Combe Barbour Ltd.

For the Investor

Confidence Rudely Shaken

Investment Gossip:

IT is customary at this time of the year to assess how we, as a nation and as different groups of individuals, have fared during the year that is just past. In this column, I have necessarily to confine my attention to the performance of the stock markets during 1957 and its repercussions on the investor.

Readers may recall that, in my review for 1956, it was my endeavour to show that, despite evil portents, that year had not been after all a bad period for the investor, and that, at the end of the year, he was more inclined to extend his commitments by purchases of blue chips rather than to sell his holdings in a hurry.

The events of the past year have made my present task of review somewhat simple because there is no doubt whatsoever as to how the investor has fared. The wounds sustained by him in his encounter with the fiscal measures enacted by Parliament last year are too deep and still too sore to admit any mincing of words to describe his present condition. In other words, 1957 has been a disastrous year for him as evidenced by the fact that, as compared with a year ago, the value of his investments today, is nearly 25 per cent lower.

It may be argued that, in so far as fluctuations—wide as well as narrow—in price levels are an integral part of stock markets, it would amount to being unrealistic to mope over the losses in one particular year. Such moods of depression are especially unjustifiable at this juncture, because we are in the process of taking long strides toward industrialisation.

This argument is perfectly valid and, had it not been for the somewhat inexplicable behaviour of authority, I would have myself posed a similar question. As it is, the fact of the matter is that the shocks that he has received during the past year have made the investor an extremely cautious person, who is only too ready to put his money in investments other than equities, if only he can do so without sustaining further serious losses in the bargain.

What is the cause of this drastic change in the attitude of the investor toward equities, which have been quite a favourite with him for

so long? The answer to this question also supplies the key to the present puzzling investment situation in India today. If the investor is now chary of extending his commitments in the stock markets, it is only because his confidence in the future of equities has been rudely shaken. The events of the past year have undermined his basic belief that equity values can improve in step with industrialisation. The May Budget has to take the full blame for this.

For the investor who was already groaning under the heavy burden imposed by Authority in the shape of a high excise duty on cloth and restrictions like the profits deposit scheme for joint stock companies, the May Budget brought new-fangled imposts like wealth tax and expenditure tax. These revolutionary methods of taxation proved to be the last straw on the camel's back and, in the post-budget session of the stock markets, equity values crashed to the lowest levels recorded during the whole of the year. Though second thoughts on the Budget proposals, coupled with the prompt emergent measures taken by the Committee of the Calcutta Stock Exchange, helped halt the avalanche of selling orders, the stock markets have yet to recover completely from the devastating effect of the successive blows aimed at it by the Finance Minister. More than seven months have passed by since the last Budget, but the investor is still unable to believe that authority will not clamp down more taxes on the people. True, the Finance Minister has categorically stated that the taxation proposals embodied in the May Budget represent the main pattern of taxation for the rest of the Second Plan period. The investor has also noted that Mr T. T. Krishnamachari has reiterated this point quite often in his speeches as also in his discussions with the leading industrialists in the country. But confidence, once destroyed, takes a long time to be rebuilt.

The emergence of several adverse factors in the second half of the year rendered the already slow recovery movement slower. The acute congestion in the Calcutta Port resulting in serious delay in the unloading of capital goods required by industries; the bankmen's strike in October; and the ever widening

foreign exchange gap threatening the implementation of Second Plan projects both in the private and public sectors, compelled attention and serious thought.

Government's attempt to tackle the foreign exchange shortage was first revealed in a drastic cut of imports and in their intimation to the private sector that it should negotiate with suppliers abroad for procuring its capital goods on deferred payment terms. It was apprehended that the cumulative effects of these measures would retard the progress of the expansion of industries in the private sector.

HIGHLIGHTS

Ring out the old, and there is no doubt that the majority of Indians, especially the small minority constituting the tax payers, will be thankful to breathe a sigh of relief at the passing into history of the year 1957.

For, there can be no doubt that, except for the bullion market, and except for the upward pressure on prices as a result of inflationary

tendencies, markets generally have been displaying a depressed front.

In a special section in this issue, a review of 1957 and the various facets of the Indian economy is given.

While some of these reviews have been specially prepared for this issue of Indian Finance, there are others which have been

adapted from articles in the just published Indian Finance Annual and Year Book 1957.

Lest it should be thought that the tale we have to tell is one of unvarnished woe, it also needs to be recorded that in the closing weeks of the year, the general sentiment shows some signs of improvement, and there is, therefore, the prospect that, in every way, 1958 will prove to be, if not a much more cheerful, at least a much less unhappy year.

Investment Notes:

The Indian Bank Limited, Madras, has decided to issue bonus shares on the occasion of the Golden Jubilee celebration of the bank, subject to the sanction of the Controller of Capital Issues. It is proposed to capitalise Rs 15.50 lakhs from Reserves and issue bonus shares in the ratio of one share of Rs 100 for every four shares of Rs 100 each and one share of Rs 100 for every five shares of Rs 80 each.

The Associated Cement Companies Limited has proposed to issue Debentures to the extent of Rs 5 crores, partly for investment in the heavy engineering project which the company may undertake in

collaboration with Vickers Limited and Bobcock & Wilcox Limited and partly for the company's immediate needs in relation to the expansion plans and for its eventual need for substantially increased working capital.

In an otherwise dull Jute section on the Calcutta Stock Exchange, New Central has been ruling very firm at Rs 12.00. The main contributory factor is the report that the company has embarked on an expansion scheme and is setting up a chemical factory near Banaras for the manufacture of Soda Ash-cum-ammonium chloride. The Uttar Pradesh Government have. It is understood, granted a loan of Rs 1.45 crores to the company.

£ R \$

Sugar Results

Balance-Sheet Reviews:

THE Oudh Sugar Mills Limited has reported excellent working results for the year ended 31st July, 1957. After providing Rs 5.56 lakhs for managing agents' remuneration as against Rs 6.85 lakhs, the gross profit for the year amounts to as much as Rs 58.08 lakhs as against only Rs 30.95 lakhs in the previous year. The bulk of the increase in profit has been absorbed by higher provision for taxation. A sum of Rs 12.75 lakhs (Rs 10.50 lakhs) has been provided for Depreciation; Rs 25.58 lakhs (Rs 8.45 lakhs) for Taxation and Rs 9.52 lakhs (Rs 2.50 lakhs) for Reserves. Even after these increased allocations, the directors have found it possible to raise the dividend to Rs 12.50 from Rs 11.00 per share. Sales have fetched Rs 6.88 crores against Rs 5.82 crores.

The company's mill had a record cane crushing during the season. Cane crushed amounted to 12.49 million maunds as against 10.53 million maunds. Power alcohol, and spirit produced come to 959,000 gallons and vanaspathi to 14,700 tons. According to the directors' report, out of Rs 9.02 lakhs in 1st Preference shares, half the amount was redeemed during the year; and the remaining will be paid off.

The New Swadeshi Sugar Mills Limited has fared slightly better during the accounting year 30th June, 1957. After providing Rs 1.25 lakhs for managing agents' remuneration as against Rs 2.44 lakhs, the

gross profit comes to Rs 10.26 as against Rs 8.44 lakhs. Depreciation provision is made at Rs 2.39 lakhs against Rs 2.50 lakhs and Taxation Rs 5.81 lakhs against Rs 3.02 lakhs. Dividends, both on the Rs 100 paid-up and Rs 25 paid-up shares, are maintained at Rs 20 and Rs 5 per share respectively.

Sales are higher at Rs 1.34 crores against Rs 76.90 lakhs. The company had a record cane-crushing of 4,054,600 maunds. The recovery was, however, less at 9.2 per cent against 9.9 per cent.

£ R \$

Associated Cement Companies Ltd.

The working results of the Associated Cement Companies Ltd. for the year ended 31st July 1957 have been rather disappointing despite the fact that offtake of cement is higher at 32.05 lakh tons as against 29.62 lakh tons in the previous year. After raising the Depreciation amount from Rs 1.33 crores to Rs 1.56 crores and Taxation provision from Rs 1.16 crores to Rs 1.17 crores, the net profit for the year is lower by Rs 63 lakhs at Rs 1.90 crores. This decline in profit is largely attributed to rising costs and increasing burden of taxation, notwithstanding the high cost of expansion reflected in the higher charge of depreciation.

The directors have, in their report, stated that, in view of the serious decline in profits, they have decided to make no other appropriations except only by way of

1957-1958

THE year 1957, seen in retrospect, has been full of excitement and anxiety, but devoid of any major calamity from the standpoint of either India or the world as a whole. In India, the second general election took place with results not altogether similar to those of the earlier one. In this first election after the inauguration of the new States, the Congress was again returned with an overwhelming majority to Parliament. The Party succeeded in securing a substantial majority in all the States except two, Orissa and Kerala. In Orissa, after some re-shuffling of loyalties, a Congress Government is now again in power. In Kerala, the Communist party was able to instal itself as the Government, with a narrow majority secured through the co-operation of five independent members.

The advent of a Communist Government in Kerala is of extraordinary significance for various reasons. It is the first instance of the Communists securing governmental authority through the democratic process of peaceful and properly conducted elections. For the first time, too, the event augured the co-existence of a Communist State Government and a democratic Central Government. For nine months, this unique and delicate experiment has been running fairly smoothly, which speaks highly of the restraint and imagination on the part of both the State Government and the Union Government. There is scarcely another constitutional setup which seems to attract so much of critical world interest as this experiment and the problems it has created in mutual relations between two opposing ideologies. It can cautiously be stated that the inherent problem of a democracy to accept the challenge of communism without sacrificing its own basic principles of existence is being met in India in the form of this admittedly difficult co-existence.

Even the general elections which, comparatively speaking are colossal in their character, were not permitted to interfere with the nation's interest in the progress of the Second Plan. In fact, any chronicle of events during the year will naturally be drawn to emphasise more than anything else the Plan, its problems and progress and the activities of the Prime Minister and his colleagues in the Union Cabinet to promote every conceivable force capable of restraining the world or any part of it from succumbing to the temptations of a war. The Prime Minister visited the UK, the Scandinavian countries and the US late in 1956. These visits served to a great extent to remove the misunderstandings and misapprehensions held in some of these foreign countries on India's policies and attitudes on various questions of wide international interest. His visit to Japan in the middle of 1957, culminated in an agreement on mutual economic cooperation, the first fruits of which are seen in the undertaking given by Japan to develop rail and oceanic transport for the export of Indian iron ore. Involved in this scheme is also the gradual expansion from year to year of exports of the ore to Japan from its present level of about 1½ million tons to about 6 million tons by the end of the Second Plan period. This scheme offers considerable succour to the Second Plan itself.

The Plan, according to a recent statement of the Union Finance Minister, is expected to show a fairly satisfactory annual record of

progress. Against the estimated expenditure of Rs 920 crores during the current year by the Central and State Governments together, a sum of Rs 860 crores is expected to be actually spent. As far as physical targets are concerned, the short-fall may be slightly more, in view of increased costs. But, even after making allowance for that shortfall, the progress should be deemed meritorious, especially in the light of the difficulties which the authorities had to contend with for want of adequate technical personnel, of funds and of essential supplies. The performance of the private sector has, in respect of many industries, surpassed expectations and schedules.

During the year, there was almost continuous anxiety over the fortunes of the Plan as a whole; an anxiety stemming from the steep fall in foreign exchange resources and the inadequacy of foreign assistance to compensate the fall and to create an assurance for the future. It had to be assumed that political inhibitions in a large measure stood in the way of the flow of foreign finances. The Union Finance Minister undertook a trip to some of the important financial centres of the world with a view to exploring the possibilities of securing sufficient external assistance for the Plan. Almost simultaneously, an influential delegation of Indian industrialists headed by Mr G. D. Birla also undertook an international tour for the same purpose. Even before these visits, the interest in India's economic development had permeated a wide range of countries in Europe and America and quite a few of them had undertaken or had started exploring the scope for cooperation on varying scales and in different forms. These visits stimulated such interest further. It might be hoped that the needed response would be forthcoming. A US loan to the extent of \$300 million is already in prospect.

Turning to the actual implementation of the Plan, the steel projects are making headway. The heavy electrical and machinery equipment plant has crossed its pre-natal troubles. The Neyveli Lignite project was inaugurated. The allocation to Railways was revised from Rs 1125 crores to Rs 1400 crores. A hefty Shipping Fund has been decided to be set up. Labour and handling problems in the Ports have been tamed and new experiments in internal transport have been taken on hand, as for example, the bulk movement of iron ore in Orissa and Mysore. There is a new realisation of the shortcomings of the Community Projects, and the tasks involved are being viewed in a more realistic, though not yet sufficiently promising, light.

Training the Worker for his new Place in the National Economy

By M. SUR

HOW often does the exasperated manager say: "We give the workers this and that, but they are never satisfied. What do they really want?" Take the case of the Travancore Planters' Association when they tried to implement the Plantations Labour Act and issue two cumblies (blankets) a year to their labourers. They were met on many

The extensive failure of crops, accentuating the need for considerably larger imports of foodgrains, is the principal debit point in the economic balance sheet for the year. A Foodgrains Price Enquiry Committee, which investigated problems of production, distribution and State control, has reported pessimistically on the possibility of achieving even a 27 per cent increase in output over the Second Plan period. The crop situation, the uncomfortable rise in food prices in many States during the year and the Report of this Committee have impelled the Government to restore agricultural production to the status of first priority which, at the commencement of the Second Plan, was thought not indispensable.

A comparatively peaceful run of domestic politics has, since the Report of the Language Commission, taken a livelier turn; many national leaders and several State Governments are now actively involved in the controversy over the official language of the Union Government.

The Resolutions passed at the year-end Conference of Afro-Asian countries point to the persistence of most of the problems which survived into 1957. The advent of political freedom in Malaya was perhaps the only development devoid of turmoil or fearful potentialities; the Indian Union has heartily welcomed Malaya into the fraternity of the world's new democracies. In Indonesia, Dutch interests were taken over by the Government in retaliation for the Dutch Government's refusal to discuss the question of the future of West Irian. In Burma, Singapore, Indonesia and Malaya, armed conflicts between political parties have continued off and on.

Pakistan had two changes of the Central Ministry in quick succession. Skirmishes between Turkey and Syria brought to the fore the incipient threat of a large-scale recourse to arms in the Middle East, but, fortunately, did not proceed further. In the United States, President Eisenhower's health was again the cause of great anxiety. Happily he survived another troublesome phase.

All these events were eclipsed in importance by the marvellous scientific feat performed by Russia through the release of two Sputniks, an event which imparted a radically new complexion to the armaments race between the two international power blocs and led to a hurried reassessment of strength on the part of the Western Powers. The question of rearmament was discussed again; but survives unrelieved to the slightest degree into the New Year.

estates by a refusal to take the cumblies, followed in some cases by strikes on the ground that the labourers could not work in the rain without cumblies! What did the workers want? Well, in the past they had been in the habit of receiving cash to purchase cumblies and they wanted the cash and not the cumblies.

Indian Finance

Established 1928

January 4, 1958

"The Wise Man in His Attitude, towards the World has neither Prejudices nor Prejudices. He is on the side of what is Right."—The Analysts of Commerce.

In a recent tribunal case the workers put forward a demand to increase hours of work, which had only a year before been reduced from 48 to 44 without any reduction in pay. Why? Because they said that with reduced hours of work they earned overtime at only $1\frac{1}{2}$ times the basic rate between the current 44 hours and the statutory 48 hours per week, and only became entitled to full overtime rates after 48 hours. So they wanted a return to 48 hours with an increase of 4 hours' pay so that any overtime they might earn would be at the full rate!

In our present problems in industry do we consider sufficiently the various factors influencing the workers' outlook and the effect of their social background and customs? How are we going to interest the workers in the problem of productivity? What do the workers really want? What can we do to influence their outlook? Do we need industrial sociologists as well as industrial psychologists to advise us?

Despite all that is written in the West about non-financial incentives and job satisfaction, there is no doubt that the main incentive in Indian industry at present is cash—not cash tomorrow, but cash today. This is what the vast majority of workers want, and certainly as a part of organised labour this is their principal concern. After all it is not very surprising when one thinks how pitifully small the worker's pay packet is in this country compared with that of workers in most other industrialised countries, and when one considers the ever rising cost of living. We must add a rider, however, that the financial incentive may not operate if it means putting in more work, for "no increase in workload" is now one of the slogans of the labour movement and is very attractive, at least on the surface.

Why should the American worker be prepared to work harder if he sees benefit to himself therefrom while the Indian worker usually declines to work harder whether he will benefit or not? Perhaps it is his agricultural background, for in agriculture it is largely the chance of the season's weather if there is a good crop and not the amount of work put in by the farmer. Perhaps it is lethargy induced by the climate or apathy induced by under-nourishment. There are parts of Assam where the local people cannot be bothered to sow more than one crop of rice, though the country is fertile enough to carry two crops a year and so double their income. The same sort of attitude prevails quite often in industry. Can the sociologist tell us how to tackle it?

After the demand for more money the other collective demands of the workers seem to be mainly for more security, less work and as little change as possible. Security has become important with the increase in unemployment in parts of the country, and because 'no retrenchment' is now one of the planks of the labour platform. Originally the semi-agricultural worker did not look for security. He preferred to drift back to the country at intervals and to come into the town when he had need of further money or when things were not going well in the village. He still goes back to the village quite often and when there is a long strike the village is his means of support. Provident Funds have had some influence in stabilising the labour force and though labour turnover is still high in some industries, it is clear that security in the job has now assumed considerable importance for the average worker and is something for which he will fight with all his might.

When we say that the workers want less work we do not mean only shorter working hours. The idea of 'workload' referred to above has caught the fancy of trade unions and workers, though there is no clear under-

standing of what the word means. If a new type of loom is introduced so that one operator can work three or four looms at once with the same or even less effort, there will still be resistance from the workers on the ground of "increase in workload". The idea is obviously bound up with the 'no retrenchment' campaign, and here the connection is clear enough. If one man takes over the work formerly done by two, then one man less will be employed. The two ideas have to be separated, otherwise resistance to efforts to increase productivity will be inevitable, even though there is no question of reduction in employment. This is the danger of a slogan which can be interpreted in more than one way. It happened with the word rationalisation, which now is firmly wedded in the minds of the workers with the idea of retrenchment.

As for resistance to change, this is not something peculiar to the workers. It is the normal human reaction to resist change which is going to upset the daily routine of the individual, for after all man is a creature of habit.

Now it is obvious to anyone concerned with India's industrial and economic development that, while it may eventually be possible to improve the standard of living of the worker and reduce his hours of work, and while Government is doing what it can to ensure his security by deterrent legislation on retrenchment, all these things really hinge on an increase in productivity and this can only be achieved if the worker is prepared to accept changes and to give up his cherished notion of 'no increase in workload'. That the trade unions show no sign of doing so is clear from the fact that they have got the phrase incorporated in the draft Code for Discipline in Industry as recently amended by the Standing Labour Committee.

Despite the insistence of Ministers in their public speeches on the need for increased output if wages are to be raised, there is at present no connection in the minds of the workers between their output and their demands. In their eyes industry is a kind of enormous machine minting money, and if they press hard enough they may get a further share of its output. That something has to be put into the machine before anything can come out is an idea entirely foreign to their thought. They see only the end process. If the employer asks for more production, they think he is trying to get something out of them for nothing, or that he is trying to offset increases which he has granted in their pay. They do not see that increased output will lower prices and eventually benefit them as consumers as well as producers. Who can make them see? Government can try, but against Government utterances they are inoculated by long years of national resistance to authority. Even of their own trade union leadership they are often suspicious.

The idea of workers' participation in management may be sound enough in theory, but it is based on Western not Eastern psychology. Communist States see that their workers are well aware of the connection between productivity and wages. At the Eighth Plenum of the Central Committee of the Polish Unified Workers' Party in 1956 the following resolution was adopted on the subject of workers' councils:

"In co-operating in the administration of the undertakings the workers' management boards should make it their primary objective to achieve greater, better and cheaper production, this being the only road to an improvement in the standard of living of the working class and of the nation as a whole."

It may be argued that the profit motive being absent in a Communist State, it is possible to achieve this outlook, but in the U.S.A., the

citadel of private enterprise, the workers have a similar appreciation of the connection between productivity and wages. In India there is no such realisation, except among some of the top line trade union leaders, and they seem unable to educate their rank and file. Yet without this realisation Joint Management Councils are bound to fail in their true objective; they will merely become additional works committees engaged in a perpetual tussle to control certain management functions, without knowing anything of the problems of administration. The most striking thing about the Yugoslav experiment in workers' participation in management is the tremendous effort that is being made to educate the worker for his new responsibility. A chain of workers' universities has been set up with the purpose of training workers in administration and management as well as economics and social science. What are we doing about workers' education?

The Government of India's plans for educating workers have so far led to a proliferation of committees—the latest on vocational training consists of 54 members. There is now a Team of Experts set up to formulate a scheme for workers' education in co-operation with the Ford Foundation. All these bodies will doubtless lay down what is to be done and recommend the setting up of further local bodies, but the real problem is not what is to be done—we know that—but how to do it. We need people with a knowledge of industry and an understanding of the social background of the industrial worker to show us the right method of approach. And it is the same with the problem of productivity. The blunt, direct approach of "You must work harder", "You must produce more or perish," simply will not do. In Russia after the Revolution the Government brutally told the workers that they must tighten their belts and go short of everything until the country had built up its industry; in Britain during the war Churchill could tell the workers bluntly that he could offer them nothing but toil and sweat; but in both these cases the struggle for survival was obvious. India is not in a mood to accept such an approach. The people do not see the position as a struggle for survival. It might have been possible immediately after independence, but ten years later when hopes have been raised of a better life, we cannot expect the workers—or anyone else—to respond to the appeal to tighten belts. The approach must be more subtle. It must appeal through those things which impinge directly on the worker's mind, his home, his family and his immediate needs, and not to some vague sense of patriotism.

Trade union leaders argue that payment of a living wage will itself be sufficient inducement to increased output, but that seems rather a pious hope, and in any case payment of a living wage in the full sense is not within the bounds of possibility at present. It would see that carefully planned incentive schemes is one of the answers to our problem. Government have declared themselves in favour and some at least of the national trade union leaders have recognised the value of payment by results, but the idea has still to be sold to the average worker, and any scheme introduced must be of such simplicity that everyone can understand it as easily as 2+2. The expert's jargon must be avoided as it is regarded as just another management device to cheat the workers. Companies which have introduced incentive schemes have all had the same experience. Any elaborate scheme has to be pruned and pruned until it is reduced to stark simplicity before it will be accepted without constant trouble and disputes.

The Agricultural Worker

Inaugurating the Annual Agricultural Economic Conference, Dr Punjab Rao Dethmukh, Union Minister for Co-operation, pointed to the obstinate differences in earnings between agricultural labour and labour in other sectors of the economy. Efforts are now being made to raise the income of the agricultural worker; but such efforts do not promise results beyond a limited extent, for the outstanding reason of the comparatively poor return from Indian agriculture generally.

Comparisons of workers' earnings in agriculture and in industry, however, can only be too general to point to any definite conclusion about how particular groups fare in either sector. There are mainly two points of confusion. The bulk of the tenants for whom proprietary rights are now being given are really only agricultural labourers and once the theory, "of land only to the tiller" is accepted, the number of labourers as such in agriculture is bound to dwindle further. There are two processes in this change. One is the transformation of the working tenant into a land owner and the other the transformation of the land owner into a regular worker.

In future discussions, a correct perspective of the problem cannot be secured, if these two processes were left out of account. The term 'agricultural worker' may more often than not indicate a land owner rather than a worker on another man's property. In industry this phenomenon of a working class with ownership has yet to emerge; in India, we are only on the threshold of workers' participation in industrial management, which is a step behind their participation in ownership.

Another point of confusion arises from the difficulty in discovering

Editorial Notes

what might be called the average earnings of the industrial worker. Even between two different units of the same industry workers' emoluments differ widely. In the same industrial area, the emoluments differ between one industry and another and between differing sizes of units in the same industry. The small owner worker in industry represents another obscure section. For instance, the independent handloom worker makes not more than Re 1 per day while an employee of a textile mill in the same neighbourhood may receive as much as Rs 3 per day. The actual physical work load may well be against the handloom worker. Amidst these disparate levels of emoluments, a general comparison may be even misleading.

Except under conditions of fairly uniform levels of emoluments at least for large sectors of production, no sure perspective could be had of how the different sectors compare mutually. Generally speaking, of course, the agricultural labourer fares worse. It is yet uncertain whether as a class his material status is improving, in spite of increasing levels of wages enforced for individual workers in particular areas. The class of agricultural workers will be eventually benefited only through a drastic reduction in the population depending on agriculture and a drastic improvement in the yields of crops. Neither is in sight.

A Confusing Phrase

A Memorandum presented to him by the Madras-Ramnad Chamber of Commerce has evoked from Mr Morarji Desai the comment that Madras State had got more than its proper share both under the First and the Second Plan. The Union Minister of Commerce and Industry further mentioned the Nellore Project and pointed out how it would give Madras a lot of resources in fuel. It appears that in the Memorandum there is a criticism that the Second Plan is too ambitious and at the same time a demand that more industries should be established in Madras State. The inconsistency between these two positions was exposed by Mr Desai.

Apart from what this particular Memorandum says, the question does arise as to how the proper share of a State in point of financial allocations for the Plan is determined. The manner in which the Planning Commission have been trying to do this does not indicate any precise criterion. Each State asks for a certain allocation and after some higgling and bargaining, a lower amount is finally accepted. In this process, considerations such as the financial capacity of the State and its physical resources would certainly have remained dominant. But what weightage each one of the relevant factors is allotted is not known.

The deviations between the First and the Second Plan do not help in the attempt to discover how the proper share of each State could be determined. In fact, if as in the case of the allocation of divisible sources of revenue between the Union and the State Governments, some well-understood principles are accepted there will be little scope for claims and counter claims or the sense of grievance with which many States have accepted the allocations.

Until the broad principles are made known, it looks rather baffling to claim that a particular State has got more than it deserves. Incidentally, the bulk of the shortfall in the Second Plan expenditure by the State sector during the current financial year is accounted for by the States. It might well be that the Planning Commission had been needlessly liberal with some States, where neither the schemes nor the finances could be made ready.

Workers and the Plan

It is undoubtedly pleasing to note the high degree of similarity in the outlook of the All India Trade Union Congress and the Indian National Trade Union Congress as evident from their respective discussions at Ernakulam and Madurai. Both are keen on seeing the Second Plan through. The INTUC has expressed some concern over the difficulties experienced; while the AITUC has included in its programme the development of the national economy and the fulfilment of the core of the Second Plan.

Mr S. A. Dange also took care to explain how the education of the workers on the essence of the Second Plan could advance the cause of State Socialism, which in turn would lead to the ultimate establishment of Socialism in reality. Whatever be the motive, the Communist leader is willing to lead his flock through the path of 'demonstration, protest, negotiation and settlement' as far as possible and to restrict resort to strikes to the minimum. It is pardonable to read in this rather friendly attitude to industry in general, and to the State Sector in particular, the impact of the governmental responsibility the Party has assumed in Kerala.

Mr Dange's claim that the AITUC is the strongest organisation in the trade union field, "morally, politically and otherwise," will not be readily conceded. Tactically, the assertion of moral superiority is useful to cover comparative numerical weakness. It is but natural that the appreciation of what the Government have already done for workers is more grudging in the AITUC list. The bid for a larger following is seen in the plea for an average increase of wages to the extent of 25 per cent and the

reduction of hours of work, in some occupations.

The logic of a higher wages demand does not cohere with the sister plea for reduction in prices. On most occasions, a higher wage has been claimed on the basis of higher prices. The relation is also reciprocal. Barring these inconsistencies, the programme outlined by the AITUC shows a far greater accord with current official policies than could possibly be expected.

The Indian Standards Institution

The Indian Standards Institution is one of those institutions, the extent and value of whose work is seldom appreciated beyond an infinitesimal section of the population. The Annual Convention of the Institution held at Madras has served to spotlight its work, to a wider audience. From food products to steel, the standards prescribed by the Institution have facilitated the manufacture and distribution of easily identifiable quality goods on which the consumers can rely.

The Institution is engaged in not merely setting standards of quality, but in prescribing them in such a way as to enable substantial economy in effort and materials. There is a steel economy programme before the Institution and the leaders of the steel industry have testified to the excellent work already done in that sphere. Standards are being revised from time to time to cope up with new requirements.

It is common knowledge that insufficient attention to quality frequently damages export prospects for Indian goods. The guidance and the compulsion involved in the ISI standards have to be accepted universally and with scrupulous reverence in the interests of the producer and the consumer alike.

1957: Spectacular Increase in Deposits

THE customary review of the money market for 1957 cannot be undertaken until the next week, because the returns of Scheduled Banks for December 27 are not at the moment available. Nevertheless, without entering into a detailed discussion of figures as such, it should be possible for us to attempt here a general review of monetary trends during the year that has just ended. In such a review, the most significant fact to emerge concerns the phenomenal increase that has been recorded in the Deposit resources of the Scheduled Banks. While this trend had already begun to be noticed during 1955 and 1956, the tempo of such augmentation to Deposits rose to a crescendo in the last 12 months, though, lately, it would appear that there is a slackening off in the pace of new Deposits. While it is not necessary at the moment to enquire into the why's and wherefore's of such slackening, it is important to recognise that the 1957 phenomenon of increase in Deposits has solved what appeared to be almost an insuperable problem at the eve of the 1956-57 busy season. For, at that time, the member banks were already in an over-extended position, with the ratio of their Advances to Deposits at an already forbidding level. It consequently appeared that the banking system would be found unable to cope with the demands that would be made upon it by the current plans of industrial development. As a short term measure, it may be recalled, the Reserve Bank was compelled, in November 1956, greatly to liberalise its advances under the Bill Market scheme. Today, thanks to the improvement in Deposits that we have referred to, there is no such problem of an insufficiency of resources with Scheduled Banks. Instead, there is even the prospect that, with the curtailment of the Second Plan, there may be the evolution of certain circumstances in which banking resources may be in excess of likely demand. That, however, is an extreme view, and while it is possible, does not seem likely.

However, the fact that we can even consider such a possibility points to the emergence of a set of circumstances which should benefit the Indian economy as a whole.

We here refer to the structure of interest rates. In this context, we may recall that, during 1956 and the early part of 1957, interest rates showed a gradual and uninterrupted upturn. But the Scheduled Banks were not unduly

alarmed at the higher interest rate that they incurred on their Deposits for the simple reason that, with the slack season virtually non-existent during 1955 and 1956, the bulk of their Deposits was even more gainfully employed in Advances. But, during 1957, the money market was imbued with attributes of normalcy by the recurrence of a slack season of proper proportions. In the result, the ratio of Advances to Deposits very steadily inched downward. This was both because of an increase in Deposits and a decline in Advances. What is more, the greater part of the increase in Deposits was under the head of Time Liabilities. So, while the earnings of the Scheduled Banks were affected to the extent of not so full utilisation of resources, the interest paid on Deposits has been creeping up because of the larger quantum of Deposits as a whole and of Time Liabilities in particular. While this twofold trend has not been so pronounced during 1957 as to have affected adversely bank profits, it is undoubtedly true that, in the future, unless there is either a reduction in the rate of interest paid on Deposits or a sharp increase in Advances, Scheduled Banks' profits may be squeezed between a higher charge of interest and lower earnings on Advances. Such a consummation is devoutly to be wished for, since the member banks themselves are responsible for the upturn in rates paid on Deposits and, consequently, for creating chaotic conditions in the structure of interest rates. So long as the Scheduled Banks were not anxious about their ability to recoup the higher charge of interest by a larger quantum of Advances, there was little prospect of a corrective being effected at this fundamental level of interest rates. We now foresee the prospect, because we anticipate Deposits to continue to rise, of action being taken by the Scheduled Banks themselves to bring down the interest rates to a more normal level, to a level in consonance with the greatly improved resources of the banking system. Indeed, this is to some extent already indicated by the short term money rates which, however, we will not discuss this week, but leave for consideration to the next week's article.

The importance of the prospect of a reduction in the interest paid on Deposits by the Scheduled Banks lies in the fact that, as we have remarked it will enable the creation of an orderly structure of interest rates. It would follow that, such a structure existing,

Government will be in a better position to evolve a policy of borrowing from strength, in which they could, with some confidence, expect realisations to New Loans to be satisfactorily larger. This, in turn, is a prospect that should be heartening, because it would mean that, with larger resources from market borrowings, the reliance on both deficit financing and taxes for internal resources should be reduced.

Thus, from the money market point of view, 1957 may prove to have been the turning point in the Indian economy.

✱

The returns of the Reserve Bank for week ended December 27, disclose a small rise of Rs 2.19 crores in active notes. This, however, has been accompanied by a return of rupee coin from circulation for Rs 0.13 crores. There has been expansion of currency against rupee securities for Rs 5 crores, presumably representing deficit financing. And there has been a countervailing transfer from foreign securities in the Issue Department to balances held abroad in the Banking Department. In the result, the Reserve Bank's cash is lower by Rs 2.06 crores at Rs 16.52 crores.

Central Government's disbursements have been heavy, because in spite of sales of ad hoc for Rs 5 crores, the Centre's balance has been reduced by Rs 11.33 crores to Rs 53.54 crores. There would appear to be some element of inter-governmental transactions since balances of State Bank have improved by Rs 4.85 crores at Rs 13.01 crores, while their borrowings from the Reserve Bank are also lower by Rs 1.37 crores at Rs 35.03 crores.

The busy season trends are re-valued in a further decline of Rs 3.75 crores to Rs 70.69 crores in the reserve balances of Scheduled Banks. Moreover, Reserve Bank's "Other Loans and Advances" are again higher, with an increase, for the third successive week, by Rs 1.28 crores at Rs 60.04 crores. Advances against Usance Bills have been marked up by Rs 1.26 crores at Rs 21.07 crores. There is a decline of roughly Rs 5 crores in foreign balances.

✱

The statement of State Bank of India for the same week reveals a slight increase in deposits from Rs 364.76 crores to Rs 364.98 crores. Borrowings from other banks are shown at Rs 1.49 crores against Rs 1.03 crores, while other liabilities have risen by Rs 1.27 crores to Rs 12.85 crores.

On the assets side, cash balances have declined by Rs 2.86 crores to Rs 27.12 crores, while investments remain almost unchanged at Rs 183.67 crores. Advances have risen by Rs 4.97 crores to Rs 170.92 crores—Loans, Cash Credits and Overdrafts accounting for a rise of Rs 4.84 crores and "Bills Discounted and Purchased" for Rs 0.13 crores.

Deposits of Scheduled Banks show a slight drop in the week ended December 20 to Rs 1,398.54 crores from Rs 1,402.89 crores. Secondly, borrowings from the Reserve Bank have also gone up from Rs 15.61 crores to Rs 22.67 crores. Cash balances have also been drawn upon, with a decline registered from Rs 174.79 crores to Rs 170.53 crores.

Lastly, the total of Advances marks a rise of Rs 6.20 crores to Rs 847.67 crores. Thus, the Scheduled Bank's figures point categorically to the onset of the 1957-58 busy season.

✱

FOR THE INVESTOR

(Continued from page 3)

The tone and tenor of the stock markets have been governed to a certain extent by the disappointing performance of some of our major industries. The cotton textile industry, the plantations industry and the jute industry have been far from prosperous. The heavy excise duty imposed on cloth in September, 1956 has reduced the cotton textile industry to an unenviable state. Despite repeated appeals, Government have kept mum for over a year. Only lately was granted a small reduction in excise duty, and it is said that this concession will be insufficient to lift the industry from its present predicament. The plantation industry has been plagued by labour unrest, fresh taxation and the threat of nationalisation. The jute industry, once the main section of the Calcutta Stock Exchange, though in a better position than in the previous year, is yet to show the kind of improvement which can attract the attention of investors. The fact that many a jute company which published its balance sheet recently has passed over dividend indicates that the industry is not yet out of the woods. The steel industry is no doubt taking rapid strides, as evidenced by the commendable progress made by TISCO and IISCO in their expansion programmes. But Government's refusal to allow the directors of IISCO to raise the dividend has dampened enthusiasm for the company's scrip.

From the above chronicle of economic events and developments, it will be clear that the investor cannot be blamed for his lack of enthusiasm for equities. It is, however, improbable that he is unmindful of the various silver linings in the dark clouds of control, taxation, monetary stringency and foreign exchange shortage. He could not have failed to take note of the upsurge of industrial activity with its attendant upturn in industrial production. Though temporarily under discount, most of his earlier purchases are steadily gaining in their growth value. These and other salient features of equities are bound to come up to the surface in a more opportune moment. I have a hunch that such an opportune moment will come when the next Central Budget, about which apprehensions have already come to be expressed, discloses no new taxes in consonance with the Finance Minister's assurance in his last Budget speech.

READERS may recall my exploring in these columns some three years ago some of the unwavering and perhaps unconscious motivation behind the "Language Controversy". The embers of debate have once again been vigorously stoked by the publication of the Official Languages Commission and the subsequent articulate protests from parts of India where Hindi is not being spoken as a mother tongue. There is some recent evidence to prove that my claim then that the clashes operated at levels far below the one on which decorous debates in the liberal tradition are held. Indeed, more recently, the veneer of decorum is wearing off formal debates, though, the unconscious motivations have not made themselves manifest. Mr. Nehru, usually an understanding and detached controversialist, has allowed himself to be irritated into some angry comments. Mr. Morarji Desai again has merely succeeded in being rude without adding a jot to anyone's understanding of the problem. On the other hand, at least part of the opposition to Hindi stems from motives similar to the ones that inspire the enthusiasts of Hindi. It is necessary, therefore, to examine the subject dispassionately once again.

✱

As I said on the last occasion, the language controversy operates on two unwavering levels. The one takes us into the jungles of the unconscious, where myth, fantasy, dream, desire and dim racial memories lie entangled in the stuff of which articulate speech is finally made. How these elements of the collective life interpenetrate with other elements of group sense is something on which we can only guess. But it is beyond doubt that people born to the same tongue have a primitive sense of apartness from others. This linguistic apartheid can take the most politically valuable forms and by the same token can also take the most undesirable forms too. It will be a priceless adjunct to consolidation of national sense if all that compose the nation speak it. If, on the other hand, there are other accidents of geography and history that throw a people together and they speak different tongues, then the situation is somewhat different. Even here, any one particular language can evolve into an instrument of

Clive Street

Withal, as large a charter as the wind
To blow on whom I please".
—As You Like It

Gossip

national solidarity if the other languages have no particular vitality of their own. The judging of the vigour of a particular language is always a matter of some difficulty, but, by and large, English (despite claims of Welsh nationalists) is an example of an instrument of national unity as far as Great Britain is concerned. If, on the other hand, there are other languages in the country whose robustness is at least as unquestionable as the others, then any attempt at national consolidation by linguistic means is not only futile but is self defeating. This is no academic theorising, but a cruel lesson of recent Indian history.

✱

But I am anticipating. As far as Hindi is concerned, an examination of the various strands of its present claim for a special status shows up the somewhat disreputable unconscious sources. For instance, apart from linguistic aggrandisement of the more obvious sort, there is the deep rooted xenophobia of the dwellers of the Indo-Gangetic plains that was noted even by Alberuni. This takes various forms, like the pathological attitude to English, the almost perverse identification of the international form of the Indian numerals as something foreign and the persistent efforts to relate Urdu too exclusively with the Muslims and Persians, though Urdu was in fact a military pidgin of Hindi born in the camps of the Deccan. Indeed, Gandhiji sensed these unconscious political assumptions behind these stances, and clung tenaciously to the description of the language that he wanted as lingua franca of India as "Hindustani". But the moment Gandhiji was not on the scene, the term was dropped in favour of Hindi, whose political and even communal overtones were persistently fought by Gandhiji.

✱

There is yet another aspect of the unconscious motivation of the enthusiasm for Hindi as what is called the "national language of India". It is the unconscious assumption by the people of the Indo-Gangetic plain of a kind of reversionary right to the exclusive ownership of the riches of Arya varta. Otherwise, it is difficult to explain the flatly contradictory attitudes involved in a satyagraha

for insisting on Hindi's claims even in areas where the predominance of Punjabi is clear. There, the claim is being fought on the footing that a subregional language is being jeopardised, whereas it is conveniently forgotten that, in the all India context, the imposition of Hindi would do precisely that to non-Hindi speaking people.

✱

The truth is that, consciously or unconsciously, the idea that Hindi is to be our national language has grown among the Hindi speaking people throughout the period of the national struggle. For this, many in the Congress, even from non-Hindi speaking areas, are responsible. Indeed, Mr. Rajagopalachari used in the thirties many of the arguments now seized upon by Hindi enthusiasts for claiming that Hindi should be our national language. But the claim is entirely specious, however, sedulously it might have been fostered in the past. The simple truth is that language as an instrument of national unity is entirely absent in India. As demonstrated by riots in Orissa and Bombay and elsewhere last year, language is a potent force for creating sub-national tendencies. We would have learnt nothing from last year's history if we still persist in the notion that any language, however, widely spoken, would at any time act as a force that will unite us.

✱

The first thing in any discussion of a lingua franca for India is to strip the question of all the irrelevancies that have accreted themselves to it. It is sometimes forgotten that the word lingua franca merely means a mixed jargon (originally a mixture of Italian, French, Greek and Spanish) by which people of different languages communicate with one another. If we could devise a workable language of this kind composed of words of all the languages in India, it would be admirable. But such a conscious effort at creating a new language is not very likely to succeed, certainly not in a short period. In any case, once the idea that there should be a national language for our country is given up, then the problem reduces itself to reasonable proportions. No one need be afraid for the unity of India for being asked to give up an instrument for forging national

unity. For one thing, language is definitely not such an instrument as far as we are concerned. Secondly, we are not entirely resourceless in the matter of other instruments for the purpose. After all, language is not the only source of a national sense. As far as we are concerned, our sense of unity has operated for ages at the deepest levels of our collective imaginative and psychic life, and the identity of fundamental philosophic ideas and the dominance over the minds of the people from Cape Comorin to the Himalayas by a way of life, code and tenets are referred to as Dharma. Then, there is the common meaning of the national struggle under Gandhiji's leadership. More recently, secular instruments like the constitution and common judiciary and administrative apparatus have had the effect of consolidating the gains from natural affinity. And, lastly, the exigencies of central planning have made the unity of India an indispensable element of the merest survival.

✱

I am not, therefore, one of those who is desperate about our surviving as a united nation. On the contrary, each of the aids to the consolidation of national sense I have listed is in some danger of disruption by a premature switch over to Hindi. For, the unified judiciary and administrative system is sure to be disrupted by a process of imperfectly understood and therefore imperfectly administered justice and practical help. Therefore, the result of insisting on Hindi's supremacy is the steady corrosion of such props to unity as we now have.

✱

Once the argument of Hindi as a consolidator of national sense is out of the way, the question becomes the simpler one having a language for the more workaday and pedestrian purpose of merely being understood by one another. This means in practice the language of administration. The one is an educational problem and the other is an administrative problem. As for its educational aspect, I think it is sensible to leave it to educationalists to decide the point on purely pedagogic grounds. And as for administrative aspect of the matter, the Constitution itself has advisedly referred to Hindi as the "official language" of the Union.

This very definition of the role of Hindi indicates the nature of the problem we are up against and the nature of the arguments for and against the time limit of fifteen years for the switch over from English to Hindi.

On the one hand, there are people like the majority members of the Official Language Commission, who feel that ultimate switch over to Hindi is feasible but who feel that they cannot at this stage make any recommendation about the fifteen year time limit. On the other hand, there are people who feel that Hindi can never in the foreseeable future displace English, and since we have made to do with English so long, we may as well continue to do so. This view is gaining strong ground in all non-Hindi speaking areas, and representative opinion in Bengal and Madras has declared itself firmly on this. There are, of course, those who feel that it can and must take its place as the official language on the 26th April 1965. The views of these people, we shall leave out of discussion as beyond the pale of conversion by reasonable arguments.

I said in the beginning that there were two levels at which the clash between Hindi and the other languages operated. One was the unconscious clinging to one's language. And the other, which I shall discuss now, is simply a question of

bread and butter. As I said, this is something that is not mentioned often in debates on the question. At any rate, it was not until recently, but now that the danger is real, the question has really come into the open. In my view, the principal fear of the people of the South and the East is that the switch over to Hindi would place them at a disadvantage in the matter of obtaining a fair share in the administration of the country. It may take all kinds of forms. It may, at the highest level, prevent an MP from the South from putting forth his best in parliamentary discussion. It may, at the least, affect the chance of the bright boy from getting into the IAS. In between, you have a whole range of objections, objections about the quality of education and so forth which impinge with greater or lesser intensity on one's self interest. The present dispensation places all at an equal advantage or disadvantage, from this point of view.

Of course, there are a number of other weighty reasons for allowing the present state of affairs to continue, many of which were canvassed with great cogency at a convention in Madras recently. But basically this problem is of the nature I have described here. It seems to me that we need not tie ourselves irrevocably and inconveniently to the slogan of "English Ever, Hindi Never". For one thing, a permanent solution for

any problem is something I do not believe in. In any case, I do not presume to bind posterity to my commitments. It seems to be that, if the question of switch over to Hindi is postponed to some reasonable time, and allowing the present state of affairs to continue, we have a sensible solution for the present. If the question is left open for some thirty years from now and, in the meantime, enthusiasts of Hindi with active assistance from all concerned are allowed to make Hindi popular all over the country, and if the necessary climate for switch over is then present, there should be no objection to such procedure. As it is, a too hasty transition has insuperable practical objections. And what is more, it distracts attention from problems of a more pressing sort and divides the country at a time when it ought to be united. That alone is sufficient reason for wishing this problem put in cold storage.

I confess that, ever since my boyhood days, when I burnt the midnight oil to pore over American success stories, I have often wanted to be a millionaire. I am now greying, and—need I say?—am still no nearer to my millions than I was in those enchanted days. Instead, I eavesdrop around Clive Street in search of a stray personage whose bank balance may show six or more zeros on the right side of a positive digit. And why? In the hope that he may provide good

copy for Eavesdropper. My success in this chase, I regret, has not lately been very rewarding, for, I find, our millionaires are both few and reticent. The taxes have put a lock on their lips, and my copy suffers. Hence, for once, I turn to the American tycoons who have been on parade—76 of the richest in America—in a recent issue of Fortune. The heftiest of them all is the oft-married and oft-divorced Jean Paul Getty, the Oxford educated Minnesotan, who is a partner in oil with King Saud of Saudi Arabia. He is no paltry millionaire, but counts his bucks—if anybody can count such sums—in billions. In the 400 million to 700 million bracket there are two Mellons from Pittsburgh, H. L. Hunt and John D. Rockefeller, Jr. The next bracket, 200 million to 400 million, encloses two Duponts, Sid Richardson, Alfred Sloan, Howard Hughes, Daniel Ludwig and Joseph P. Kennedy. Among the owners of 100 million to 200 million dollars, figure Doris Duke, Mrs. Edsel Ford, Vincent Astor, many more Duponts and half a dozen more Rockefellers. Below them stands the group whose individual fortunes run to anything between 75 million and 100 million, and it includes three Fords, Robert Kleberg, Henry Kaiser and Averell Harriman, Governor of New York. Fortune does not waste space on listing those twopenny-half-penny millionaires who fall below the 75 million dollar mark. Nor does it mention those others

Calcutta Stock Exchange

Investors Lose Confidence

WERE it not for the remarkable change in sentiment that occurred toward the end of June, the year 1957 would have presented, from the point of view of investors, a picture of almost unrelieved gloom. During the greater part of the year, price movements were downward and, at times, the momentum increased almost to the proportions of a collapse. This was particularly evident thrice in the year. Once in February when the market was engulfed in the crisis of confidence due to the prevailing uncertainties on the economic and political fronts. Bears were aggressive, taking advantage of the helplessness of the bulls. Investors, too, were frightened as they were worried over the continuous depreciation in the values of their investments.

Again, in May, the market suffered a severe setback due to non-stop selling following the announcement of the Budget proposals, resulting in the prices of almost all scrips touching the lowest levels for the year. The steady and sharp decline in prices would have continued further, but for the emergency measures taken by the Calcutta Stock Exchange Committee by imposing a ban on blank sales in Indian Irons.

Again, in December, a certain amount of nervousness developed following the grave allegations against the investment operations of the LIC and more particularly with regard to a particular deal in the shares belonging to the Mundhra group of companies. It was felt that, as a result, the LIC would not enter the market for some time to come, even to seek investment in some of the blue chips. Another bearish factor was the announcement of additional excise duties on cloth and sugar in lieu of sales tax and the relief given in regard to excise duty on cloth fell below market expectations. Toward the close of the year, however, there was a partial recovery, which was made possible by rumours that the LIC made some selective buying. Had it not been for this recovery, there would have been a major debacle in the market.

In general, the year started very quietly with the market still under the influence of the Finance Minister's Supplementary Budget of November 1956, with its heavy taxes and his assumption of powers to change excise duties without consulting Parliament. There were further shocks in the shape of a threat of still higher taxation and plans for labour participation in industrial management. A further element of uncertainty was provided by the approach of the country's second general election. The announcement of the terms of the Indian Iron & Steel Company's right issue, fears of taxation of bonus issues in view of the continued delay in giving permission to

applications from companies, the disappointment over the absence of any relief in the excise duty on cloth in the Special Budget presented in March, hints about heavier taxation in the May Budget and the growing stringency in the money market—all these factors also contributed to a depressed sentiment in the market till the end of the first quarter.

In April, the market developed fresh weakness. When the Budget proposals were announced simultaneously with an increase in the Bank Rate, there was a landslide in values due to persistent selling pressure. This would not have been halted, but for the emergency measures taken by the Stock Exchange Committee to impose a ban on black sales in Indian Irons, the decision to fix a deposit of Rs 3 per share for selling the shares and the arrangement for an interim clearing in the forward scrips. Thus, a recovery movement started at May-end and prices staged a gradual recovery, under the lead of speculative scrips, to the end of June.

Although the improvement in sentiment was well maintained till mid-July, conditions were on the quiet side during the remaining period of the third quarter, being influenced by some adverse factors. Mainly amongst these were, the anxiety shown over the delay in shipments following the 'go-slow' policy adopted by the dock-workers, the turning down of the Indian Iron & Steel Company's representation for raising the dividend, the disappointment over the Select Committee's report on the Wealth Tax Bill, and the strike by the local bank employees. The market, however, exhibited a cheerful sentiment after the Pujah holidays. Apart from technical factors, which were in favour of a rise, expectation of a large US loan; the announcement of the new import policy and the Government announcement granting recognition to the Stock Exchange Association as the only legal unit under the Securities Contracts Regulation Act, imparted a bullish tendency.

During the last quarter of the year, the recovery in prices was more pronounced in October and November than in the closing month of the year. The news of TISCO getting another loan from the world bank, the granting of Tariff protection for 10 years to the automobile industry and the expectation of the good news with the return of the industrialists' delegation led by Mr G. D. Birla—all these factors enthused the operators, who were active in their dealings. But the listlessness, noticed towards the end of the year, was mainly due to the uncertainty about the outlook for the Second Plan, the difficult situation created by the foreign exchange shortage, conflicting reports about the next Budget and the announcement of additional excise duties on cloth and sugar. But for some bear-covering being influenced by the news that the LIC had made some

selective buying, prices would not have staged even a moderate recovery at the fag-end of the year.

Section-wise, Jute shares remained depressed during the major part of the year, reflecting the uneconomic working conditions generally experienced by the industry. During the first half of the year, scattered interest was shown on considerations of break-up values. The continued fall in raw jute prices was taken as an encouraging sign that the industry might not be heading into a raw material squeeze toward the end of the 1956-57 season. But, all shares relapsed into dullness during the latter half of the year. The uninspiring trend of the jute goods market, caused by the developments at the Calcutta Port in July, the firmness of raw jute prices in September, anxiety shown in November with regard to the prospects of the coming jute crop following the reports of drought conditions prevailing in certain areas of both India and Pakistan and the announcement, made in November, of the passing over of dividends by most of the mills—all these factors had an adverse effect on sentiment.

Trading in the Coal section was generally dull, although a few selected scrips managed to remain steady on sustained support. It was thought that the increased labour charges as a result of the Appellate Tribunal Award were not covered by the increase sanctioned in the price of coal. The uncertainty about the proposed legislation concerning mining concession rules was also a contributory factor. With the result, operators found little prospect of any improvement in view of the difficulties facing the industry. There was a general disposition to await the Price Revision Committee's recommendations.

Tea shares presented a sorry spectacle and turnover was restricted during the major part of the year. There was a general feeling that the output might exceed demand and, as a result, that Medium and Common teas could be sold only at unremunerative levels. Anxiety was also shown with regard to the profitability of the gardens. It was also felt that the proposal by the West Bengal Government to adjust Agricultural Income-Tax in such a manner as would compel the tea estates to pay taxes at enhanced levels would make the industry suffer a loss, especially when the demand for the commodity was falling short of production. But for the release of encouraging working results and the higher dividends recommended for 1956 by most companies, the decline in prices would have been sharper.

Sugar shares remained neglected with prices generally developing an easier tendency. Quieter advices from the commodity market in view of the comfortable supply position and a record production in the 1956-57 season, bleak prospects for the export of Indian sugar following a steep fall

Annual Reviews

in world prices, the announcement of an additional excise duty in lieu of sales tax and the doubts expressed in certain quarters with regard to the size of profits for companies—all these factors contributed to a subdued sentiment in the section.

Textile shares lacked any buying interest. The main anxiety was the persistent stalemate in the cloth and piecegoods markets. Another bearish factor was the Government decision to merge the sales tax with the excise duty on cloth; and the relief in regard to excise duty on medium cloth fell below market expectations. It was, therefore, felt that the industry, which had been doing very well in 1956, was now passing through an anxious time.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons. Although prices staged a marked recovery from the lowest levels touched in May, a certain amount of nervousness was noticed toward the closing months of the year when the Mundhra group of shares—reputed for some months to have been favoured orphans of the LIC—got into an unexpected nose-dive.

The Miscellaneous section provided several bright features on dividend, investment and other considerations, although price movements were rather irregular on alternate buying and selling.

Thanks to the continued support from the Reserve Bank, the Gilt-edged section ruled steady till the end of May after which conditions ruled generally quieter following the stringency in the money market. In the year's trading, the change in the pattern of investments from longer to short-dated issues was, however, emphasised and this was amply illustrated in the price movements.

Bank shares were generally steady throughout the year, thanks to the Government decision to exempt banking companies from payment of the Wealth Tax and the good working results of most banks.

On the whole, the market has experienced the worst and is still unable to derive any inspiration from the things which have been shaping during the past few months. It is no surprise that even some of the selected scrips have failed to benefit due to general apathetic sentiment. In normal conditions, the market would have recorded a good recovery since most of the industries have been able to make definite progress during the last six months. As a matter of fact, the position of the principal industries, viz., Engineering, Coal, Jute, Tea, etc., is much better now than it has been a few months ago.

While most of the operators are now realising that the present

rates of select shares are attractive for genuine investment, the return of confidence is retarded by the absence of a firm belief that it is time to buy shares. Confidence is infectious and this infection can spread easily only

in a rising market. A rising market and active conditions, which are necessary to set confidence in motion, require greater return and scope for capital appreciation in shares. These two basic wings are now temporarily clipped by the higher corporate taxation. But, it is clear that any stable rise in the share values will not be likely until the Budget proposals are announced in February next.

Bombay Stock Exchange:

Dalal Street's Disastrous Year

THE stock markets in India have passed through a most disastrous year. While commenting on the outlook in last year's year book, we observed that it mainly depended on Government's monetary and fiscal policies. Apprehension of further heavier taxation by way of annual wealth tax, expenditure tax and other measures have turned out to be true, with the result that the year under review has proved more racking. Except for small rallies, it was all a one way traffic with the result that there has been heavy erosion of capital. Investors have burnt their fingers and, as compared to prices prevailing a year ago, the general depreciation in industrial counters amounts to about 20 per cent. The economic and financial policies pressed by the Government, which aims to mould the economic life of the country to suit the establishment of socialistic pattern of society,

have more than anything else induced reassessment of the prospects of the investment market. The Government, in its zeal to raise revenue for financing the Second Five-Year Plan and by resorting to measures to reduce the inequalities in income and wealth, have attempted taxation for the maximum extent. There has been an ever increasing degree of reliance on taxation of various kinds not only for finding adequate resources for the Second Plan but also in implementing the economic objective of a Socialistic State.

Mr E. D. Sheppard, Chairman of Killick Industries Ltd., has summed up the situation rightly when he said: 'Around us we see growing deterioration of business confidence and the onset of apathy amongst those whose function is to promote and develop industry. If this sapping of morale and of faith in the

future was confined only to large business houses, it would not be so dangerous, but unfortunately it is reflected at every point of the Industrial Society. The producer, the consumer and the investor, whether big or small, is today lacking the virile faith needed to face the challenge of the future. The sum effect of increase in corporate taxation from 43.4 per cent to 51 per cent, special taxes on dividends, bonus shares, non distribution of profits, capital gains, net assets and the compulsory deposit scheme is virtually to eliminate the possibility of raising equity capital in the investment market for new ventures because of the levels to which even the soundest shares have declined. It would be worth like repeating what we said in our last year book, that depressed conditions are not conducive for encouraging progress in the private sector. Healthy conditions in the investment market can assure free flow of capital, once confidence is impaired. It is difficult to restore it with the best of intentions. After his return from foreign tour, the Finance Minister, might have realised very well that things have gone wrong. But the question that might be confronting him and the Government is how to rally from the awkward situation. Suffice it to say that so long as the private sector exists, conditions on the stock market will have a large say in making or marring the prospects of development in the sector.

During the last sixteen months, the stock markets have become the victim of the Government's fiscal and monetary measures which came in quick succession. It may be recollected that excise duty on cotton cloth was raised up from September 1, 1956 so as to yield an annual Rs 75 crores from this source of tax. With the recent amalgamation of sales tax with the excise duty by way of additional duties, it is expected that the overall duty on cotton textiles might reach about Rs 120 crores, which indeed is a heavy burden considering the fact that the annual output would be around Rs 450 crores. On 30th November 1956, the interim proposals of taxation which comprised capital gains tax, increase in super tax a dividend and the scheme for compulsory deposits come as a rude jerk and gave an idea about the shape of things to come. On May 15, 1957, the market was stunned by the most drastic shock ever to be recorded. At one stroke hitting almost all classes, these taxation proposals included new levies on wealth, expenditure, railway travel, increase in corporation tax and in case of super tax on companies, increase in bonus tax, increase in excise and import duties on several items, postal rates and the introduction of changes in the income-tax structure. The revolutionary changes in taxation and especially the wealth tax on individuals and companies have proved to be the greatest disincentives for financing the industrial growth in the private sector. It is no wonder that the stock market, which acts as a barometer to record the readings of the economic climate, finds itself in

Over and above the fiscal measures, the policy of dearer money and credit restrictions and the severe strain on the economy of the country had their impact on the market. The bearish tendency noticed since the end of August 1956 persisted till the announcement of the Budget proposals on the 15th May 1957, which again gave a severe jolt. Prices more or less collapsed. The Bank rate was raised to 4 per cent as from 16th May. Steel shares brought forth some support from the Life Insurance Corporation, but this induced the bears to press sales in textiles in view of the discouraging outlook. However, during the second half of June, prices recovered sizably on active buying in selected counters by LIC. The tendency remained better for some time, but, in view of the disappointment over the amendments in the Wealth Tax Bill, the market resumed the downward trend and prices during the close of September and early October reached new low levels. Thereafter, a small recovery materialised, but prices relapsed as the market lacked confidence in the outlook. Investors have lost their nerve while the Stock Exchange fraternity is in jitters as business has dried up with receding prices. The question that confronts is as to whether the Stock Exchange will present a healthy state in the near future or not. The only consolation is that prices in terms of industrial prospects have reached a level from where the scope of any further decline appears to be limited. The damage which has been done during the past sixteen months is so heavy that, even if further moderate recovery is to materialise, the process will be a painful one. The recent debate in the Lok Sabha over the Life Insurance Corporation's investment in Mundhra group of shares had led to a feeling that support from these quarters will not be forthcoming for some time. Anyway, the trend till next Budget might remain irregular but a moderate recovery may be expected after Budget when some incentives may be looked for.

The Security Contracts (Regulation) Act 1956 has been implemented. In terms of the Act, the Government have recognised only one Stock Exchange at the five centres of India, viz., Bombay, Calcutta, Madras, Delhi and Ahmedabad. The main provisions of the Act are intended to safeguard the interests of the investing public.

With the revision of yield ideas in the light of higher interest rates, the gilt-edged market remained depressed throughout the year. The Central Government borrowed Rs 100 crores from the market, while recently a new issue of 34 per cent 1962 Bonds was put on tap for Rs 30 crores in view of the demand for short dated loans. Prices of debentures and preference shares have also receded appreciably. Bank shares lost small ground but selective support was discernible. Insurance shares remained generally easy, but New India has recovered in view of the bonus announcement. Electric shares have lost ground as the benefit of 6 per cent return will accrue to

January 4, 1958]

the industry only as from 1st April 1958.

The cotton textile industry has passed through a state of crisis during the year. Stocks accumulated following slow offtake, while prices realised by marginal units were uneconomic. This situation has been fully reflected in the shares which have suffered the most. It is to be seen as to how far the reduction in excise duty by 3 nP per yard in the case of medium varieties up to 31st March 1958 and the integration of the sales tax will help the industry to clear its stocks.

Government's refusal to Indian Iron and Steel Company for payment of dividend in excess of Re 1 as well as the premium imposed on the new right issue has adversely affected the shares. Tata Steel shares also suffered badly though, in comparison with Indian Iron, the fall is relatively small. The

expansion programme of both the companies is making satisfactory progress. Engineering shares have also yielded ground despite increased turnover. Cement shares have recorded sharp losses on account of higher cost of production and the resultant cut in profits. Sugar shares in tune with the rest of the market yielded ground but have mostly recovered over higher profits. Shipping shares have remained fully steady after early slump on encouraging results and higher dividends. Tata Chemicals have reacted bearishly on the issue of additional capital. Bombay Burmah has slumped badly after early steadiness. WIMCO has kept quiet. BIC has crashed. Tata Locomotive as well as other automobile shares have declined sharply. National Rayons are no better, while the Company's project for tyre and plant may have to be shelved for the time being due to the foreign exchange crisis.

Madras Stock Exchange

Landslide in Equity Values

LIKE other stock markets, the Madras Stock Exchange witnessed a landslide in values in 1957. Although a few shares improved against the trend, the year was marked by a sharp fall in prices. Investors did well so far as Coffee and Sugar shares were concerned; but the holders of Textile shares had done badly as in Bombay. Apart from the fall in Mettur due to dividend being cut 20 per cent, there was a textile crisis due to increase in yarn stocks and poor offtake of cloth. Expectations regarding 1957 dividends were not optimistic as shown by a fall in the scrip of Madura Mills to Rs 34 from Rs 46.62 quoted at the beginning of the year.

Three major shocks came after the recovery started by the settlement of the plantation dispute. The first was the advent of the Kerala Ministry which soon raised the tax

on plantations. Madras and Mysore State Governments also raised taxes; but the talk of labour trouble had a major effect in pulling down all shares of companies established in Kerala.

The compulsory deposit scheme caused a jolt. More serious was the Union Budget. The poor dividend prospects hit Mill shares. Buckingham & Carnatic have fallen, over the year, from Rs 175.50 to Rs 155, while Loyal was quoted at Rs 37.50 against Rs 50. Bangalore had not, however, shown much change, thanks to the bonus issue. Lakshmi slid down to Rs 100 from Rs 250 within a year following the increase in capital.

Bank shares, however, fared well on hopes of stable dividends. Indian Bank were quoted at Rs 210 against Rs 199 at the start of the year, thanks to the announcement

of a bonus issue on the occasion of the Jubilee celebration of the bank. Bank of Mysore, however, remained unchanged at Rs 250.

Even higher yields did not tempt investors to go in for Industrials. Despite a eight per cent yield, India Cement was quoted at Rs 23.25, the opening rate for the year. This was due, not to State trading in cement, but to the investors' present idea about the risks of the future.

Coffee shares fared well, while Tea shares were neglected. Political

Jute

Weakness in Sackings: Hessians Comparatively Steady

PRICE movements in the Jute Goods market were rather irregular and mostly influenced by the speculative activity in Phatka during the year just ended. Conditions in the Hessian section remained comparatively steady, while the weakness in Sackings was more pronounced in the closing months of the year. Except for some firmness in prices noticed towards the end of the 1956-57 season, the Raw Jute section ruled generally quiet.

The Jute Goods market opened the year on a steady note, partly due to firmer advices from the raw jute section and partly due to a good deal of covering business from shippers on the belief that the outlook for the industry would be better in view of the healthy stock position. But, enquiries from overseas buyers had been few and far between as consumers seemed to feel that there was more likelihood of prices going down than up in view of the easing of the international tension and the prospect of opening the Suez Canal. With the result, price movements were mainly of a speculative character throughout the first quarter of the year.

But, the main incentive for the renewed speculative activity and the resultant buoyancy in the market, during the second quarter, came from the raw jute section where wheather played an active part in pushing up prices to fresh higher levels. The reports of the delay in sowings led to a feeling that there would be tightness in supplies of the raw material and consequently there would be a scramble for obtaining the available stock, not only of the raw material, but also of the manufactured goods. Also, mills were reluctant to offer goods at lower levels in the context of the firmness of raw jute prices. Enquiries from new countries like Sudan and Ghana and the news of the Dundee and the Continental mills experiencing difficulties in their home markets to dispose of their products at competitive rates in view of the high prices prevailed for Pakistani jute, were also factors imparting further strength to the market.

However, at the beginning of July, the market turned quieter with prices developing a reactionary tendency due to various adverse factors. First, the steady rise in

risks were assigned greater weight in the liquidation of Rubber and Tea shares.

Sugar shares were well supported, although FACT had been very vulnerable as proved by the fall from Rs 6.37 to Rs 3.87 within a year, where as Mettur Chemicals at Rs 9.75 had been consistent.

Annual Reviews

genuine business done. Whatever price movements there were, were mainly influenced by the speculative activity in Phatka.

RAW JUTE

The firmness in Raw Jute prices, at the beginning of the year, was mainly attributed to the reserved attitude of sellers who held bullish ideas about high prices to be obtained later in the season. When arrivals in February were more than usual, sellers were getting nervous and inclined to reduce their rates in order to attract buying interest. Moreover, overseas buyers of Pakistani jute curtailed their buying in view of the easiness of the shipping position and were bidding time to resume their buying after prices moved down. Also, revised crop estimates suggested that the yield would be sufficient to meet the requirements of the Indian Jute mills. Taking advantage of the situation, mills showed only limited interest on the feeling that there was sufficient raw material available within the country.

Except for a short-lived recovery in prices in May due to reports of dry conditions and the delay in showings, the market continued to rule quiet during the second quarter. The onset of the monsoon, the reports of the progress in sowings and the availability of the old crop in plenty were the main factors contributing to a distinctly easier trend in prices. The downward movement in prices gathered momentum during the third quarter. Arrivals of the new crop in small quantities raised the hope that the mills would get sufficient jute to tide over in the lean months.

Although mills did not show much interest, sellers become reserved again in the beginning of the last quarter, being influenced by the reports that the quantity of raw jute coming forward from the growing areas was inadequate in relation to demand. This, however, did not create any panic among mills, which were under the belief that the new crop could not be kept off the market indefinitely and that prices might fall appreciably when once the pressure to sell increased. It was also felt that, as arrivals during the previous months had not been as good as those in the corresponding months of last year, jute would be arriving in large quantities in the near future. Also, poor demand for finished products, even at falling prices, made the mills reluctant to purchase for forward delivery. Again, the fall in prices in Pakistan due to lack of overseas demand and the steady increase in arrivals during October and November gave sufficient ground for the belief that arrivals would increase in the coming months, resulting in an easier tendency in prices towards the close of the year.

No, doubt, the recent trend in jute goods prices has provided considerable concern. Two factors have,

in the main, been responsible for the sharp fall in prices. One is that, at a time when burlap consumption in the USA should normally be at a high level, reports to the contrary are coming in. Another damper to the market has been provided by the reports of Burmese efforts for self-sufficiency in jute goods requirements.

While the long-term outlook for Indian jute goods thus depends on the building up of the industry's competitive capacity, the immediate prospects are clouded by market manipulations. Overseas buyers are now reluctant to enter the market, possibly due to holidays. A change in the sentiment for the better is, however, expected after the holidays. There are also hopes that the US buying will increase in the near future. This hope is based on the fact that the decline in US burlap stocks, during the first eleven months, has been larger

Tea

Anxious Period

THE Indian Tea Industry had to pass through an anxious period throughout the year under review. The anxiety centred mainly on the slowness of buying from the UK—the main customer of North Indian tea. The steady decline in stocks did not appear to have given any impetus to her purchases; and the indications were that the UK could afford to take her requirements slowly. Buying by other out-markets was also restricted. Although the Middle East buyers were short of their requirements, buying from there was upset by a number of political and economic uncertainties. Russia, which had making substantial purchases, also withdrew from the market. Thus, from the beginning of the year to the end of April, the market moved sharply in buyer's favour and, except any teas with bright liquors which were well competed for and sold at dearer rates, the bulk of the Common and Medium teas, on offer, declined each week and were offered at 25 to 37 nP per pound below the levels touched at the close of 1956.

Even the first sale of the New Season's teas, started in June, met

than in consumption. Above all, the present low prices are sufficiently attractive and it is naturally considered likely that the USA, with her shrinking stocks, will have to enter the market for substantial quantities, once the year-end inventories are completed.

with restricted export enquiry, as the bulk of the first flush teas was generally below the 1956 standard due to the abnormal drought conditions, which persisted up to the end of May. The same general pattern of the market continued till the end of September as there was a general decline in the quality of the offerings.

Although the overall sale average remained fully compensatory, the price differential for quality and non-quality teas was very wide. It was, therefore, feared that even the producers of best quality teas were not likely to show, this year, results which were so profitable as those of 1956.

The market, however, took a turn for the better in October when buying was more general and there was improved enquiry, especially after the "Puja" break. Even the Commonest teas, which remained neglected, were well supported. Also, Fannings, which were considerably discounted, met with an increasing demand. This improvement in the market sentiment was influenced, partly by the uptrend at the London sales and partly by

the financial facilities available following the end of the strike by the local bank employees. In London, prices improved for two reasons. First, there was a dispute among the Tally clerks which, it was felt, would affect the arrivals there. Secondly, Colombo auctions were postponed due to a hold-up in the docks.

Again, the report, that Ceylon had postponed, until next year, her decision on the Russian offer to buy 40 million pounds, caused a speculation in the market whether Russia would buy such a large quantity in the open market. It was felt that, if she did buy, would help reduce the surplus to a considerable extent. There was also a report that Egypt had agreed to buy an additional quantity of 2,000 tons for immediate delivery in order to relieve the shortage in that country. Trade circles were also inclined to believe that the winter might set in earlier than usual and that the current season's surplus might be lower than was anticipated earlier.

In spite of the improvement, prices were still far from remunerative for producers and the average price was well below that a year ago, mainly due to the fact that Assam teas fetched substantial lower prices on account of the fall in demand for poorer CTC Assams which were available in large quantity. In this connection, it may be added that many of the gardens had, in recent years, switched over their output to CTC teas, attracted by the very high prices fetched by these teas till recently. With the result, there was no scarcity of these teas, except for high quality sorts, and the expansion in their output was not accompanied by the improvement in their quality.

Again, in spite of fairly satisfactory sales, the average price realised for export teas was only Rs 2.31 per pound in the current season for the period ending 17th December 1957 as compared with 2.55 in the corresponding period of the previous season. Although lower than last year, Darjeeling and several Assam estates' averages were not, however, unremunerative. Prices for Dooars, Cachar and the rest were between 40 nP and 50 nP per pound lower than last year and, in many cases, barely over the cost of production. The Dust sale had also been consistently running at much lower levels than last year and the sale average, to the end of 17th December, was Rs 1.91 per pound as against Rs 2.24 for the corresponding period of the previous season.

The only relieving feature of trading during the year was the improvement in demand from abroad, noticed towards the end of the year. It appeared that the buying policy abroad was influenced by the developments in Indonesia. Although the supply would be adequate in spite of the threat to Indonesia's production, some in the trade attached importance to the possibility of a fall in output. It was felt that, with this factor combined with increased buying, could reduce the surplus substantially. It was also felt that the labour troubles at the docks in Colombo

January 4, 1958]

would cause a diversion of demand from the UK buyers to alternative markets. These expectations were strengthened by the fact that the total output in North India, to the end of November, was only 509.5

	Up to November	1957	1956	1955
North India ...	...	509.5	538.6	525.8
South India ...	...	133.0	116.3	121.3
Pakistan ...	...	42.3	51.7	48.9

Indonesia ...	...	73.5	67.3	70.9
Total ...	...	1,091.8	1,075.0	1,085.5

It remains to be seen whether the slight improvement in prices, noticed towards the year-end, will be sustained in the opening sales of the New Year. It also remains to be seen whether the expected decline in output will be so large as to result in a drop in world production as a whole. Even if there is a shortfall in output, it is doubtful whether prices will recover to such an extent as to make good the fall earlier in the season in view of the generally poor quality of the teas.

Sugar

Output—A New Record

THE 1956-57 season (which started on the 1st November 1956 and ended on the 31st October 1957) will go down in the history of the Sugar industry as the most eventful, in that it has witnessed an all-time peak level of output. Total production amounted to as much as 20.26 lakh tons as against only 18.62 lakh tons in the previous season and a bare 10 lakh tons in 1948-49, and thus represents a rise of more than 100 per cent. One of the most important factors responsible for such a high level of production, during the season under review, was the large supply of cane supplies made available to the mills, thanks to a bumper sugarcane crop.

Along with production, the consumption of sugar in India has also been increasing, not only on account of the growth of population, but also on account of an improvement in the standard and taste of the people. It is only in the last four years that consumption has tended to increase sharply from around 10 lakh tons to over 18 lakh tons. The removal of control over sugar was, no doubt, a helpful factor, and the industry was thus enabled to increase its production.

In spite, however, of the increase in consumption, there has accumulated in the country a surplus of stocks. Considering the steps the Government of India are taking to step up production of sugar in the country, there is every reason to believe that the position of stocks will continue to improve. Again,

million pounds as compared to as much as 538.6 million pounds in the corresponding period of 1953. The following table gives the latest crop position as compared with the previous two years (figures in million pounds):—

	Up to November	1957	1956	1955
North India ...	...	509.5	538.6	525.8
South India ...	...	133.0	116.3	121.3
Pakistan ...	...	42.3	51.7	48.9
Ceylon ...	...	333.5	301.1	318.6
Indonesia ...	...	73.5	67.3	70.9
Total ...	...	1,091.8	1,075.0	1,085.5

It is, however, clear that there is a distinct possibility of stronger African competition. Also, Egypt is reported to be making a desperate bid to grow tea within her boundaries; that the experimental planting has given satisfactory results and, if this is stepped up, will give results almost double to those obtained in Ceylon.

The following table shows the opening, highest, lowest and the closing rates for the year:—

Dust Sale:				
Medium Dooars ...	2.00	2.12	1.40	1.62
Medium Assam Grassy ...	2.06	2.12	1.45	1.66
Medium Assam CTC ...	2.31	2.90	1.50	1.90
Best Assam CTC ...	2.56	3.20	2.60	2.70

With the availability of Brazilian sugar at prices as low as £33 per ton c.i.f. the UK, British-refined sugar was being freely offered, in August, at £54 per ton in Middle East coun-

in the season, 2 lakh tons of sugar for export.

The Government's policy is to permit export as much surplus sugar as is possible, taking into account the production during a year and the demand for domestic consumption. The Indian Sugar Mills Association, which acted as the sale exporting agency for the 1956-57 season was able to sell about 1.53 lakh tons, out of which 1.46 lakh tons have already been shipped. It is expected that, during the current season (1957-58) will amount to 21.5 lakh tons, while domestic consumption is unlikely to exceed 19 lakh tons in view of the high price prevailing now. It is, therefore, estimated that there can be an exportable surplus of 4 lakh tons, without creating any difficulty for consumers here.

It need not be emphasised again that, during the year under review, that India was helped to export sugar by fortuitous circumstances, temporary scarcity in the world markets caused mainly by international political complications. But, for some months now, world prices have been falling. They are standing at levels which are much lower than the cost of production of the vast majority of sugar factories in this country. All available indications so far are, that world prices are likely to remain in favour of buyers in the new season. The supply is clearly tending to exceed the demand.

With the availability of Brazilian sugar at prices as low as £33 per ton c.i.f. the UK, British-refined sugar was being freely offered, in August, at £54 per ton in Middle East coun-

Annual Reviews

tries—the important outlet for Indian sugar. The present prices are still below those ruling a month ago. While it is not possible to offer at these prices, British-refined sugar enjoys a preference in the Persian Gulf, Africa, Malaya and Ceylon. Under these circumstances, it is feared whether any further exports from India can be made on competitive terms. Considering that the European beet crop has been good and Brazilian supplies are again coming forward, it is possible that there will be an adequate supply and, as such, an improved trend in the price is not foreseen.

Let us now revert to the price trends. In the expectation that sugar exports would continue to be made in large quantities, prices had been showing a steady rise from the beginning of the year to the end of August, as mills adopted a reserved attitude in their selling policy. The upward trend was aided by intermittent rumours that the Government would allow one lakh tons more for export in view of the encouraging response from overseas buyers. But, it was felt that the policy of permitting exports at the cost of domestic consumers would serve no useful purpose and that, unless the export policy was reviewed by the Government in the light of the domestic developments, the sugar situation was bound to deteriorate.

The chances of a decline in exports had, however, a salutary,

Annual Reviews

effect on prices towards the closing months of the year. The report, that the Government of India had not yet fixed any particular target for the export of the sugar from production during the 1957-58 season, was also a contributory factor. The Government felt that the commodity could not be exported except at a loss and that the domestic consumers could not be asked to bear a portion of such a loss. Also, there was a general feeling that a bigger export target would help keep domestic prices on an unduly higher level which, in turn, would act as a disincentive to manufacturers wanting to export.

It is but clear that the prospects for the current season are not very promising. The price factor will have to be considered seriously if India is to continue export of sugar. Unless an all-round economy in the cost structure is effected, it will not be possible to export sugar except at a loss. The biggest item in the cost structure is cane, which accounts for 60 per cent of the price of sugar. This percentage is much higher than in the other important sugar-producing countries of the world.

Cotton

Tight Supply Position

THE year 1956-57 has proved somewhat difficult for cotton supply as the eventual crop turned out around 4.8 million bales as against earlier expectations of about 5.3 million to 5.5 million bales. Even though no efforts were spared by official agencies to produce more crop by increased use of fertilisers, wider distribution of improved seeds, etc., nature unfortunately remained unfavourable. As against the crop position as above, domestic mill consumption in 1956-57 reached a record level of 5.23 million bales, comprising 4.66 million bales of Indian varieties and 0.62 million bales of foreign varieties. In the previous season, consumption amounted to 4.97 million bales, out of which Indian cotton accounted for 4.36 million bales and foreign, 0.62 million bales. This clearly means that we have now reached a stage when our annual production, instead of outstripping consumption, is only just adequate.

The remedy, therefore, lies in augmenting domestic cotton production with the utmost speed, with all the resources at our command. In this respect, it is very gratifying to note that the Indian Central Cotton Committee is well seized of

the urgency, and no efforts are being spared to reach the increased target of 6.5 million bales fixed under the Second Five-Year Plan. Moreover, by proper distribution of seeds, we are trying to grow as much of long staple cotton as possible, so that foreign exchange can be saved. However, the most important problem is to raise the yield per acre by intensive cultivation. The country cannot afford to spare any more land when there is so much scarcity of foodgrains, while it is also imperative to retain our traditional export markets, so that they might stand us in good stead whenever our surpluses reach a level burdensome to the country's overall economy.

Meanwhile, production of indigenous sugar in November this year was higher at 104,000 tons as against 97,500 tons in the corresponding month of last year. Taking into account 31,000 tons produced prior to November, the total output, up to the end of November, amounts to 135,000 tons against 116,000 tons in the corresponding period of last year. In respect of sugarcane, the all-India second estimate for 1957-58 puts the current year's production at 63.50 million tons as against only 58.99 million tons in 1956-57, showing an increase of 4.52 million tons. Expressed in terms of gur, current year's production is placed at 6.40 million tons as against 5.95 million tons for 1956-57.

The following table shows the price trends (mill-delivery) that prevailed in the Hapur market during the year (rates per maund):—

	Year	Opening	Highest	Lowest	Year
		Rs nP	Rs nP	Rs nP	Closing
MIL-delivery:					Rs nP
Jaswant	...	28.50	35.50	28.12	35.50

the urgency, and no efforts are being spared to reach the increased target of 6.5 million bales fixed under the Second Five-Year Plan. Moreover, by proper distribution of seeds, we are trying to grow as much of long staple cotton as possible, so that foreign exchange can be saved. However, the most important problem is to raise the yield per acre by intensive cultivation. The country cannot afford to spare any more land when there is so much scarcity of foodgrains, while it is also imperative to retain our traditional export markets, so that they might stand us in good stead whenever our surpluses reach a level burdensome to the country's overall economy.

We have as yet not reached a stage when we can do without our imports of foreign cotton altogether. These will undoubtedly be needed for some more years to come, at any rate, until such time that our country grows sufficient quantities of superior long staple cotton varieties. Following the exchange difficulties, a special payments agreement has been concluded by our Government with the Government of Egypt, whereby we are getting about 40,000 bales of

Egyptian cotton against payment in rupees. Thus, India's superfine spinners are assured of supplies of desirable qualities. Though prospects of entering into a similar payments arrangement with Sudan were explored, that has not borne any results. Following the recent visit of the Sudan Trade Delegation, moves were made, but, as Sudan is also meeting with exchange difficulties, the results were not favourable. However, an import quota of 3,000 bales of wider stapling—1-3/16" and above from soft currency areas, viz. Sudan, Egypt, Peru and East Africa has been announced over and above the quota earlier declared. Some imports of US cotton are arranged under aid programmes.

Imports of foreign cotton during the past four years were as follows:

	1956-57	1955-56	1954-55	1953-54
(In bales of 392 lbs net)				
Egyptian	56,374	219,273	123,964	279,381
East African	135,070	223,037	257,809	162,337
Sudan	67,621	132,798	66,713	31,435
Peru and others	4,996	8,139	5,382	19
American	343,451	14,783	75,911	(85,574)
Total	607,512	598,030	529,579	658,645

Exports of Indian cotton, including zoda and yellow pickings, during the past four years were as follows:

	1956-57	1955-56	1954-55	1953-54
Japan	180,540	340,000	135,000	73,000
Continent	23,620	108,000	77,000	30,000
United Kingdom	23,810	65,000	46,000	18,000
China and Hongkong	37,130	97,000	40,000	...
USA	2,700	4,000	18,000	12,000
Others	1,000	3,000	3,000	1,000
Total	248,800	612,000	319,000	134,000

The new season 1957-58, has started with a carryover of 1.73 million bales of Indian cotton and 0.29 million bales of foreign cotton.

The cotton market has passed through a chequered career during the year under review in view of the fact that the earlier optimistic forecast of the crop did not turn out to be correct on account of late rains and frosts. With the downward revision of the crop estimate, the market displayed a market firmness during the first quarter of the year. With a view to checking the price rise, stringent margins on futures contracts were imposed as from February 11, 1957, but this along with the powers given to the Textile Commissioner for requisitioning of cotton on March 29, 1957 and export curbs proved to be of no avail. As prices in spot showed a tendency to reach ceiling levels, various measures were taken by the Forward Markets Commission, but they proved ineffective.

After reviewing the working of the two contract system, which was an experimental measure in 1956-57, reverted to the single hedge contract covering practically all varieties of Indian cotton, with certain changes necessary. These have been introduced to make the present contract based on Muglai Jarilla 25/32" a more realistic one. Business in this contract was started on June 23 at Rs 690. After moving down to Rs 687.50 on June 27, prices firmed up to Rs 722 on July 3 to drop down to Rs 664 by the third week of September. The announcement by the Government on July 19 of their decision to allow imports of 50,000 bales of raw cotton stapling 1-1/16" from soft currency areas had a bearish effect. Moreover, reports of growing accumulation of stocks with mills and slackness in spot demand and fears of tightening up of credit restrictions and the increase in the UK Bank Rate from 5 per cent to 7 per cent and expect-

tations of tighter conditions in the money market adversely affected business sentiment. Prices recovered to Rs 681.50 per candy by September 30 on continued reports of lack of rains in the cotton growing areas and renewed hopes of an extra quota for export of Bengal

INDIA EXCHANGE

INDIA EXCHANGE PLACE

201, MAHARSHI DEBENDRA ROAD,
&
218, CROSS STREET, HARRISON ROAD

CURRENT DEPOSIT ACCOUNTS.—Interest on daily balances from Rs. 500 to Rs. 1,00,000 will be allowed at quarter per cent per annum and on sums over Rs. 1,00,000 by special arrangements. No interest which does not come to Rs. 5 per half year will be allowed.

LOANS, OVERDRAFTS AND CASH CREDITS.—The Bank grants accommodation and undertakes on behalf of its constituents the safe custody of shares and securities and the collection of dividends and interest thereon.

It also undertakes the sale and purchase of Government Paper and all description of Stock at moderate charges. Terms on application.

Sterling and Dollar credits arranged and foreign bill negotiated for approved customers.

The Bank acts as EXECUTOR AND TRUSTEE UNDER WILL AND SETTLEMENTS and undertakes TRUSTEE work generally.

N. M. CHOKSHI, General Manager.
K. M. KRISHNAMURTHI, Manager, Calcutta.

deshi. During the month of October, the contract firmed up further to Rs 713.50 on October 31. Later on, the market once again turned easier on disappointing reports from the textile front, and with irregular movements, a new low of Rs 668.50 was recorded on December 9. Thereafter, the market once again rallied to Rs 685 on expectations that the integration of sales tax with excise duty and the reduction of excise duty of half an anna per square yard in medium counts up to March 31, 1958 might help clearance of goods. The market, however, relapsed to a new low of Rs 663.50 on December 19 to stage a modest recovery on short covering. In view of the heavy accumulation of stocks of mill made cloth, the textile industry is facing a difficult situation and, unless the stocks are

reduced, the position will continue to be disquieting.

There have been conflicting estimates about the probable output of the 1957-58 crop. Gujarat and Saurashtra crops have been adversely affected by the drought conditions while, on the other hand, crops in Mysore and Andhra States, which were last year a failure, have fared well. Hence, it is likely that the deficiency of the former may be made up to some extent by the better yield of the Southern crops. At the moment, the overall production estimate for 1957-58 varies from 4.8 million bales to 5.0 million bales.

The official first estimate for the 1956-57 crop was 4,723,000 bales with an acreage of 19,843,000 against the crop of 4,001,000 bales in 1955-56 with an acreage of 19,976,000.

Bullion

Higher Price Trends

PRICES of bullion at the year end have ruled higher as compared to a year ago. Whether one likes it or not, it is a fact that the Indian masses have still a fancy for the precious metals and, despite prohibition of imports and the overall need for raising resources for productive purposes, the country continues to absorb these metals on a very large scale. In this connection, it is significant to note that, during the past one year and a half, India has absorbed more than 35,000 bars of Tibetan silver. Gold production in the country is not adequate enough to meet the annual requirements and, in view of the high disparity in prices, smuggling activity continued to flourish. But, during the past five months, the activities of the international racket were effectively checked due to strict vigilance. During the year under review, following the foreign exchange crisis, measures for requisitioning gold and jewellery were discussed, but due to their impractical nature, nothing could materialise. There are inherent difficulties in the scheme as most of the gold bullion in the country is in the form of ornaments and hence it could be difficult to commandeer such stocks in small dribbles. Otherwise, these stocks would to some extent meet our needs of foreign exchange. As compared to the international price of gold around Rs 65, the market price is higher by about Rs 43 and hence the question of compensation regarding the price even in the form of Government bonds assumes several complications.

Operations on the bullion market during the year under review were mainly dominated by the prospects of imports of Tibetan silver coins from time to time as well as the demand position. On balance over the year, gold has gained about Rs 4 per tola while silver has closed with a gain of about Rs 9 per 100 tolas. The price range in gold during the year was confined to about Rs 8 per tola—the highest

being Rs 112.12 and lowest being Rs 103.84, while, in silver, the price range was about Rs 16, the highest level being Rs 190.75 and the lowest being Rs 174.44. The highest levels were recorded in the third week of May 1957, just after the Budget proposals, while the lowest levels were noted in the beginning of January.

During the season, there was good offtake both in silver and gold. It may be noted that, since imports of Tibetan silver coins were allowed from the month of May 1956 the country is estimated to have absorbed about 35,000 bars of silver. The imports of these coins still continue, but it is considered likely that, for the next two months, imports will be on a smaller scale on account of the cold season. It is difficult to visualise as to what would have been the price position of silver if these imports were not arranged by way of promotion of Indo-Tibet trade. An event during the year was the announcement on April 22, by the Union Government, of the decision to return Lend Lease silver to the United States of the 172 million ozs. 50 million ozs were to be shipped in the form of silver bars, and the balance in the form of quaternary coins. Some shipments have already been effected.

On 31st December 1956, spot gold stood at Rs 124.62 and silver at Rs 173.69. The market ruled very firm during January and the greater part of February. In silver, the emergence of firm trends during January and the first half of February was attributed to increased spot demand with the progress of the busy season, expectation of smaller inflow of Tibetan coins and the development in the Kashmir situation. In the gold section, the easy trend noticed during December persisted till about the first week of January owing to fears of a likely fall in the world price of gold due to Russian sales. Subsequently, however, the firmness in silver and

Annual Reviews

ties in preventing the inflow of smuggled gold. During the month of September, price movements in both gold and silver were irregular. Except for occasional spells of recovery on the expectations of the pre-Puja demand and reports of seizure of large amounts of contraband gold, the gold section was generally inclined to be quietly steady but, with the approach of Diwali, there was a substantial broadening of spot demand. Silver prices also improved moderately and, during the past two months, movements have continued to be irregular. The customs authorities have been very vigilant and large quantities of smuggled gold have been seized during the past few months. Minor ports in Saurashtra have been closed to check smuggling activity.

There have been of late recurrent rumours that Government might not allow forward bullion markets to continue. It is now more than a year and a half that the forward markets commission took up the question, but nothing officially is known about the inquiry.

Monthly price range for spot gold and silver during 1957 was as follows:—

		High	Low
January	...	106.91	103.84
February	...	109.62	105.31
March	...	106.62	104.37

Oilseeds

Mixed Developments

THE year 1957 has been notable for record export of Castor Oil from India. This has amounted to approximately 42,000 tons as against 35,000 tons in 1956. Consumption of castor oil in the country is also expanding in view of the growing industrialisation. Though export figures are not available, estimates vary between 40,000 to 45,000 tons. During the year under review, though demand from US was relatively smaller, purchases by USSR and the Continent were larger. Thus, the carry-over from

the 1956-57 season is relatively smaller, while the crop during 1957-58 season is expected to be lower around 125,000 tons as against 135,000 tons in 1956-57 due to deficiency of rains during the latter part of the monsoon. However, it is significant to note that prices have been ruling easier in the face of small carry-over as well as smaller crop this year. This is mainly because of the somewhat obscure outlook with regard to export during the New Year.

[January 4, 1958]

Annual Reviews

Brazil has remained an effective competitor in US market, while the present export duty of Rs 175 per ton on castor oil provides an handicap to the Indian shippers. The Government of India have extended the free export policy for castor oil up to the end of September 1958; but, as the duty has remained unchanged, this has, no doubt, provided the greatest hurdle for fresh export business. It is certain that the Government will have to reduce the duty sooner or later as part of the export promotion programme. Trade quarters are inclined to feel that, if it is reduced at the earliest, it would facilitate business. The producers are bound to be adversely affected if prices go down and they are likely to go down further if the export duty is not suitably amended in the light of the present set-up of international markets.

Keeping in view the interests of millions of domestic consumers, the Government of India have not allowed exports of either groundnuts or groundnut oil during the year. This was mainly because of the tighter supply position. Even during the new year, there are no prospects for giving permission of exports. It has already been made clear that the Government have no intention of giving any export quota of HPS groundnuts despite the urgency of earning foreign exchange. The groundnut crop in

1956-57 turned to be 21.5 lakh tons in terms of kernels as against earlier expectation of 24 lakhs. The Government's estimate of the crop, in terms of shells, which was placed at 40.8 lakh tons, was rather exaggerated. There had been very little carry-over in the new season, while the crop during the new season is unofficially estimated around 22 lakh tons. Consumption trend in the country has remained upward and there is more demand for vegetable product.

In view of the supply prospects, however, not being encouraging, the Forward Markets Commission has been obliged to impose heavy margins in case prices of groundnuts moved over Rs 165 per candy. This action has been mainly taken with a view to discourage speculative buying. The effect of this action will be evident so long as the crop movement is there, but it would be difficult to check the upward trend once the crop is marketed. Artificial measures cannot work for long. Credit curbs are already there. The abolition of export duty on groundnut oil cake and meals some time back had helped export trade in these items during the months of November and December 1957.

Linseed Oil exports, during the year, were just moderate. But, in view of the high prices of mustard and rapeseeds, consumption of linseed oil in the country had gone up. This has mainly sustained the prices. The export outlook, however, has recently improved in view of the smaller foreign crops this year as well as the relief in export

duty. The crop outlook for the new year is little less satisfactory.

The Castorseed crushing industry has been developing steadily in the country, though the pace of progress is rather slow. Export business is also looking up, while cottonseed oil is now being used in the manufacture of vegetable product to a certain degree. The outlook for this new industry appears to be bright in view of the large-scale production of cottonseeds.

The acreage and production of oilseeds in India during the past ten years, as estimated by the Government, were as follows:

	(Area in acres)	1956-57	1955-56
Groundnut	13,101,000	12,692,000	
Sesamum	5,433,000	5,653,000	
Rape & Mustard	6,211,000	6,317,000	
Linseed	3,758,000	3,781,000	
Castorseed	1,403,000	1,495,000	

	(Production in Tons)	1956-57	1955-56
Groundnut*	4,086,000	3,861,000	
Sesamum	451,000	457,000	
Rape & Mustard	1,017,000	848,000	
Linseed	349,000	414,000	
Castorseed	129,000	124,000	

* This is in term of shells.

The value of the oilseeds production in the country is estimated around Rs 350 crores. The average of the five major oilseed crops in India, during 1956-57, came to 29,706,000 as against 26,500,000 in 1950-51, while the aggregate production in 1956-57 was 6,032,000 tons as against 5,076,000 tons in 1950-51. The target to be achieved by the end of the Second Plan is 7.6 million tons. Looking to the rapid pace of the population growth at the rate of 5 millions annually, it is imperative that the production is stepped up. The Indian Central Oilseeds Committee, in conjunction with the Council of Scientific and Industrial Research, has been tackling the problem. A Joint Committee of these bodies, which has been recently constituted to promote research and development of vegetable oilseeds, oils and the allied products had its first meeting during the year. Much, however, remains to be done to increase the yield per acre of these oilseeds crops which cover about 9 per cent of the total area now under agriculture.

The Oilseeds market, during the year under review, pursued irregular movements. The upward tendency, which was in evidence during the months of November and December 1956, gathered further momentum during January 1957. Castorseed May 1957, which were quoting at Rs 138 during the beginning of November 1956, moved up to Rs 175.75 by the end of January 1957. Likewise, Groundnuts February 1957 delivery rose to Rs 173.50 from Rs 137. Linseed to Rs 31.89 from Rs 26.34 and Cottonseed May to Rs 109 from Rs 84. In view of the highly bullish trend of the market, the Board of the Bombay Oilseeds Exchange decided, on January 18, 1957, to levy a stiffer margin of Rs 15 per candy from January 22 on net outstanding position of purchases if the forward quantities of groundnuts and castorseed, at the close of any day, rose to Rs 165

per candy. This decision induced a bearish feeling and prices reacted sizably. In the third week of February, castor May came down to as low as Rs 150.25; groundnuts February to Rs 164 and May to Rs 158.75; cottonseeds May to Rs 95.25 and linseed May to Rs 27.19.

Prices, however, once again, turned higher on buying induced by smaller arrivals of groundnuts and active export demand in castor oil. By the third week of May, castor May delivery touched as high as Rs 195.75 and September Rs 200.25; groundnuts May Rs 179.50 and August delivery Rs 184.50, cottonseed May Rs 114.75 and September Rs 118.25, while linseed May delivery moved up to Rs 31.44 and September to Rs 32.44. By the time, castor oil, commercial quality, was quoted as high as Rs 21.44, groundnut oil Rs 20.75 and linseed oil Rs 16.12. Thereafter, a downward tendency set in and prices received modest setback.

The withdrawal of special margin of Rs 15 in groundnuts and castorseed, as from June 21, 1957 gave some lull to the market. But, in view of the reports of favourable monsoon and expectations of larger tenders, the tendency again turned bearish.

Trading in new crop hedge contracts was permitted as from 18th July. In the last week of August, castor September dropped down to Rs 154.37 and new crop May to Rs 138.25, groundnuts August to Rs 156 and February to Rs 138.37, linseed September to Rs 27.19 and May to Rs 27.81, cottonseed September to Rs 96.50 and February to Rs 87.50. Castor Oil, commercial, was then placed at Rs 17.62, groundnut oil at Rs 17.81 and linseed oil at Rs 14.62.

From the month of September, the trend again remained upward. Lack of rains in some of the producing areas induced once again a bullish feeling and, with heavy covering movement, prices once again hardened. Castor September expired at Rs 175.50, linseed September at Rs 28.87 and cottonseeds at Rs 111. Castor May delivery moved up to Rs 161; groundnuts February to Rs 160.75; linseed to Rs 30.37 and cottonseeds February to Rs 105.

The Chairman of the Forward Markets Commission issued a warning, on October 12, against the rising trend of groundnuts prices. But, this had very little effect on account of the abolition of export duty of Rs 230 per ton on groundnut oilcake and Rs 200 per ton each on nigerseed oil and kardsseed oil from 26th October. During October, groundnut February fluctuated between Rs 155 to Rs 162.62 and castorseed between Rs 150.50 to Rs 159.75 before closing at Rs 162.62 and Rs 157 on 31st October.

During the first half of November, the market ruled steadier and, since then, the tendency has remained somewhat downward on discouraging export prospects of castor oil and special margin on groundnut futures from 14th November, 1957. Castorseed May came down to Rs 139.50 and groundnuts to Rs 156 before quoting at Rs 141.50 and Rs 158.50 respectively at the year-end. Linseed May, which had gone up to

January 4, 1958]

Annual Reviews

Marketing Society. Thanks to reports that the Government was in a position to meet the food situation, prices developed a reactionary trend towards the closing months of the year.

In the Coarse grains section, price trends were rather irregular. During the first quarter of the year, there was an easier tendency in prices as prospects of the coming crops were considered to be bright, especially in Uttar Pradesh and the Punjab. The market, however, ruled better during the second quarter, thanks to brisk buying from Assam and Bihar and the heavy purchases of gram made by the Uttar Pradesh Government. But, the Government order, issued in July that stockists might be required to sell stocks at the average price for the last three months, had a dampening effect on the market. Harvesting of the maize crop, arrivals of the new crop, better stock position and the bright prospects for Urad and Moong crops—all these factors caused a general fall in prices during the remaining months of the year.

Pulses moved in sympathy with the general trend of other foodgrains. The fall in prices in this section was more pronounced from October onward when the new crop began to arrive in the market.

Heavy stocks in the face of slack outside buying enquiry also accounted for a sagging tendency in prices towards the close of the year.

A redeeming feature of trading, during the year, was that the year 1957 closed with a balance of about 2 lakh tons of rice. This means that, while imports in 1958 will be only 5 lakhs tons against 7 lakhs tons in 1957, it will still be possible to maintain distribution of this commodity on the same scale as in 1957.

So far as Wheat is concerned, the entire quantity from the USA is reported to have arrived, except for about 4.6 lakh tons, which is expected in the first few months of 1958.

The position regarding imports in 1958 is roughly as follows:—Balance under P. L. 480 from the USA (450 to 500 thousand tons); aid under Colombo Plan from Canada (about 110,000 tons), and normal marketing imports as required by P. L. 480 agreement (400,000 tons).

The following table shows the trends of foodgrains prices (per maund), that prevailed in the Hapur market during the year:—

Wheat:	Year Opening Rs nP	Highest Rs nP	Lowest Rs nP	Year Closing Rs nP
Average quality	14.37	17.00	14.25	15.87
Farm quality	16.00	18.25	15.00	17.37
Rice	22.00	31.00	22.00	29.00
Gram	12.50	14.37	11.12	11.37
Barley	13.00	14.12	9.50	9.75
Maize	12.37	14.12	11.62	11.62
Bajra	18.00	14.25	12.19	12.81
Jowar	12.50	15.25	8.50	11.00
Arhar	12.87	13.25	10.12	10.12
Urad	17.50	22.00	15.50	15.50
Moong	15.75	18.00	15.00	15.75
Masoor	18.75	18.75	13.00	15.00

Gateway

Needed: A Message of Hope

THE New Year has been ushered in in the Gateway City by the usual exchange of good wishes among the commercial circles. At least for this year, such exchanges have more than the traditional ceremonial value, and have a depth of feeling that proceeds from the bitter experience of the last year in which they have all shared.

The investment market throughout the last year had displayed anaemic symptoms, its vitality having been sapped by the fiscal blows dealt by new taxes. The stock market has been particularly hit hard by the series of tax measures such as wealth and expenditure taxes increase in corporation tax and super tax, increase in bonus tax and excise and import duties on several items, introduction of changes in the income tax structure, etc. The index number of security prices bears ample testimony to the crisis into which the stock market has been precipitated by the fiscal adventures of the Government. The index number for Government securities dropped from 90.7 on

September 1, 1956 to 89.1 on December 7, 1957. Industrial debentures dropped from 100.3 on September 1, 1956 to 97.7 on December 7, 1957. Variable dividend industrial fell from 128.6 to 98.1.

On top of such fiscal measures, the monetary policy of the Government also had adverse repercussions on the state of the investment market. The bearish tendency induced by the dear money policy is yet to wear away. The Government have so far done nothing to mitigate the severity of the effects. The faint signs of support from the Life Insurance Corporation, which were in evidence for some time during the year, have now receded with the withdrawal of its investment activities.

The gilded market has also been feeling the pinch and it had remained throughout depressed. Almost all kinds of shares have lost some ground. Tata steel shares and Indian Iron have been severely mauled, the reason for the latter being the refusal of the

[January 4, 1958]

Annual Review

Government to allow Indian Iron and Steel company to pay dividend in excess of Re 1, as well as the premium imposed on the new right issue. Cement shares have suffered heavily on account of the higher cost of production.

On the bullion front, the prices at the end of the year have ruled higher as compared to the previous year. The foreign exchange difficulties have underlined the necessity for gearing the legal machinery to the problem of preventing the smuggling of bullion in and out of the country. A sense of urgency has also been imparted to the question of requisitioning the gold and silver ornaments in which the savings of the people are locked up and which are a drain on the foreign exchange resources of the country. Imports of silver from Tibet were countenanced with a view to promoting the economic contacts with that area. Over the year, gold has gained about Rs 4 per tola while silver had gained about Rs 8 per 100 tolas. The price in January 1957 for gold was Rs 103.84 per tola while at the end of the year it has reached Rs 107.66 per tola. Similarly, for silver, the price in January was Rs 174.44 per 100 tolas while, at the end of the year, it had touched a high of Rs 182.44 per 100 tolas. The severe curb put on smuggling activities by a vigilant administration partly enabled the two to record higher prices. The important events to produce their impact on the prices of bullion through the year were the inflow of Tibetan silver, shipments to the USA of large quanti-

ties of silver being the return of Lend Lease silver, the uncertain situation in regard to Kashmir, etc. The price range in regard to gold was confined to Rs 8 per tola while, in regard to silver it was Rs 16. While, in the latter part of the year, the prices of the two moved in unison, in the earlier part, the trend in the prices of silver was marked by greater disturbance.

Equally embarrassing as the condition of the investment market is that of the cotton textile industry, which is largely concentrated around the Gateway City. The year witnessed a crisis the remotest symptoms of which were not visible at the outset of the year. The crisis came as a multiplier effect to the increase in the excise duty on cloth announced by the Union Finance Minister in September 1956. The blow was too severe for the marginal units, which ultimately succumbed to it. The trail of suffering it had left in the shape of unemployment among the mill workers has been aggravated by the increase in the cost of living which has followed a failure of food crops in almost all parts of the country. The production of cloth by the mills, which had reached a record level in 1956, is also expected to register a fall. The impact on the price levels that this had produced had naturally had a depressing effect on the stocks with the traders and no signs of relief from the present overstocked position are as yet discernible. In this circumstance, how the authorities expect to increase the consumption of cloth from the present level of 16.5 yards a year to 18.5 yards at the end of the Second Plan is not clear. Cloth consumption has not shown any encouraging signs during the last year. The authorities do not seem to realise that such heavy taxation might also tell upon the

total proceeds to the exchequer. It has been estimated in this connection that the increase in excise duty, which is expected to fetch in an additional revenue of Rs 31 crores, would, in view of the heavy imports it had made into the profits of the industry, result in a loss of revenue from the taxes on the profits by at least 50 per cent. Though the excise duty on medium varieties has been reduced by half an anna, it is not a permanent concession and is only meant to help clear the excess stocks. The prospects before the industry are still uncertain.

The position in regard to cotton in the country is also far from

bright and offers no hope of relief to the textile industry. A reported crop failure has stressed the necessity to import greater quantities of cotton, if the mills in the country are not to remain idle. Prospects of a reduction in the price of cloth to the consumer as indicated by lower prices of cotton have been belied by the fall in the production of cotton.

The investment atmosphere is still overcast with clouds of uncertainty about the future. At the dawn of the New Year, they are busy scanning the political horizon for a ray of light. A crisis of confidence is what they are faced with. A message of hope is what they need.

Olympian

Gramdan and Community Development

CEASELESS preoccupation with sensational newsmongering has perhaps dulled the edge of perception of professional newsgatherers. Otherwise, it is difficult to understand the scant publicity given to an important recent series of discussions in New Delhi between representatives of Government and of Sarva Seva Sangh. Much detailed thinking preceded this far-reaching conclusions affecting the future of the community development projects have been reached. These conclusions and the philosophy behind the urges that inform these conclusions need the closest attention.

Briefly put, there has been a growing recognition of the fact that there are areas in which the sponsors of the idea of Gramdan and the practitioners of the community development experiment can work together, much to the benefit of all. Even higher claims about the identity in the inspiration of the two movements have been made, but such claims are of doubtful validity. The idea behind community development, sponsored and partly financed by Government and carried out under official auspices, has a far more restricted inspiration than that which informs Acharya Vinobha Bhave's integrated movement that finds the springs of social action in non-attached service to one's fellowmen. But it cannot be denied that the best practical results from the altruistic and co-operative impulses behind the Gramdan can be obtained by first co-ordinating and later integrating the agencies of Gramdan movement and the community projects administration.

The recognition of this fact led to the now famous conference at Yalwal in Mysore last September. In many respects, it was an unusual and even unique affair. Practically all shades of opinion were represented at the conference. There were the representatives of the Sarvodaya ideals, and Acharya

Vinobha himself was present. (Indeed, the conference was arranged in Mysore to suit the Acharya's convenience). The representatives of Government were no less than the President and the Prime Minister. Other political parties were also represented, including most interestingly, the Communist party. As a result of the conference, it was decided that there were significant and strategic points at which the two agencies of social action could be integrated and, since that memorable conference, discussion has been going on between community projects administration and representatives of the Sarvodaya ideals. Jayaprakash Narain and Mr S. K. Dey, Minister for Community Development, have been in correspondence with each other exchanging views on the subject. This correspondence culminated in a meeting between them in November last and it was then agreed that there was need for a fuller mutual understanding of the philosophy, objectives and methods of the two movements. An informal meeting was, therefore, arranged in New Delhi recently between representatives of the Sarva Seva Sangh and of the Ministry of Community Development. In addition to the Minister and officials of the Central Ministry of Community Development, many State development commissioners were present at the discussion. On behalf of the Sarva Seva Sangh, Jayaprakash Narain, Sri Dharendra Majumdar, Nabkrushna Chaudury, and other well known Sarvodaya workers took part in the discussion. As a result of discussion, a draft paper indicating the procedure for co-ordinating the efforts of the two agencies of rural reconstruction was prepared. This paper was considered at a meeting presided over by the Prime Minister. At this meeting, besides those mentioned, the Prime Minister and Mr Gulzarilal Nanda and Sir V. T. Krishnamachari (representing presumably the Planning Commission) were present.

January 4, 1958]

Annual Reviews

of increased food production, it goes without saying, will also be met by the use of farm machinery suitable for a fairly large holding.

Apart from agricultural production, the Gramdan village offers other opportunities for co-operative endeavour. Once the common destiny of the village is realised, then the organising of village industries and subsidiary occupations becomes simpler. A multi-purpose and multi-lateral co-operative becomes a feasible idea. Co-operative marketing, co-operative provision of raw materials and even consumer co-operatives, becomes possible. But here, again, the possibilities of success depend upon the ability of the community projects officials to provide the necessary larger institutional servicing, and the smooth and expeditious flow of the kind of assistance that the villager needs most. Here, the personality of the man on the spot will count for a great deal, but even the most enterprising local idealism can be frustrated by a lack of timely help from Government.

Among other matters that came up for discussion at the meeting referred to earlier was the quality of workers to be assigned to Gramdan villages and the precise shape of the organisation that should be entrusted with their management. It was decided that carefully selected officers of the community development administration should be given special orientation for their tasks. The Gramdan village administrative set up is generally to be an extended organisation of the present community project agency. This will be assisted by Sarvodaya workers. In certain selected areas, the opposite experiment is to be tried. This means that the principal task of development will be left to Sarvodaya workers with the extension agency providing whatever assistance they need. This is an interesting experiment which is sure to throw up a number of useful pointers. For one thing, the robustness of the villagers' faith in themselves will be tested by the comparative success or unsuccess of the villages in which the primary agency of development is unofficial. On the other hand, the official agency will be put on its mettle and will have to demonstrate that the dead hand of bureaucracy does not blast its efforts. There may be a kind of friendly rivalry between two agencies.

The second virtue of the Gramdan movement is that it offers opportunities for the greatest progressiveness in agricultural practices and production. In fact, one of its greatest practical values is its reversal of one of the inevitable but undesirable effects of present ideas of land reforms. The slogans of "land for the tiller" and a "ceiling for landholding" (which ceiling is at a comparatively low height) make for fragmentation and microscopic holdings. This result of land reform movement aggravates what has historically been one of the banes of Indian agriculture—uneconomic holdings. The crippling effect of this state of affairs on any effort at increasing production is so notorious that it need not be discussed in detail here. Now, the Gramdan villages are progressive not only because of the generosity and sense of social responsibility displayed by its inhabitants: it is progressive also because of their realisation of the economic advantages of comparatively large holdings. By abolishing the frontiers of petty holdings, the Gramdan village makes possible experiments in communal farming. From the experience gained from such experiments, it should be possible to evolve a suitable policy for the rest of the country. The more immediate need

such should be the sole concern of Gramdan workers, and their primary task. The project staff will at best assist them in the matter of distribution and allotment of lands obtained under bio-dan and gram-dan.

It was also agreed that certain pilot schemes along the lines indicated will have to be undertaken. The emphasis, it was agreed, should be for special assistance to backward families. While not wishing to minimise the importance of such assistance, I would like to offer a suggestion. Besides pilot schemes of this sort, it is necessary to have pilot schemes for comparatively advanced Gramdan villages. The idea is to have one model village where the ideas of community development and harmonious co-operative rural endeavour are worked out with spectacular success. Such a success will be a source of inspiration for the rest of the country. In choosing a village for this purpose, it is necessary to take into account the comparative progressiveness in outlook and agricultural and allied rural practices of the villagers in question. It may even

be an advantage to have natural aids to quick results. Cynics may say that this is to do things the easy way. But the idea of co-operative living requires a degree of sophistication in the art of living together that is hardly suspected by the mere enthusiasts. Compared to the demands such living makes, the seeming complexities of a straightforward city life are nothing. So, it is necessary not to mix ideas of amelioration of the backward sections of the people with an experiment in co-operative living, which is something that even the comparatively forward sections of our people have not yet achieved. Gramdan, let it be clearly understood, symbolises the highest degree of social and communal responsibility that the world has seen. Therefore, it deserves the most resounding success. That is why I suggest that we should not scorn such adventitious aids to its success as we may find.

Peninsular

Ring out the Old, Ring in the New

AS the New Year sets in, the first task that compels attention is a retrospect of the year that has just faded out. For, the message of the New Year can be gleaned only from the events of the past. Though the old year has been filled with so many developments which, in their cumulative effect on the fortunes and prospects of the Peninsular area, have a timeless significance, it would be essaying the impossible

to recount them all one by one. Therefore, I shall attempt to pick out the most important of them for purposes of a detailed analysis here.

Certainly the most outstanding event has been the installation of the Communist Government in Kerala. Perhaps no other event in recent memory has been greeted with the fanfare of publicity that has attended the ushering of the

S. E. RLY TENDERS

Sealed tenders are invited for discharge of Pig Iron, Rails and any other steel or other materials from chartered vessels arriving at Vizagapatam Port on Railway Account. Tenders will be opened at 12 noon on 28-1-58 in the office of the General Manager.

Tender forms are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23, on remittance of Rs 5/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S.E.Rly., Garden Reach by local firms.

Tender forms should accompany the receipt for earnest money of Rs 1000/- from the Chief Cashier together with a valid Income Tax Clearance Certificate without which the tender is liable to be rejected. Contractors having permanent deposit of Rs 1000/- with the Controller of Stores are exempted.

communist Ministry or has produced a greater impact on political speculation. For, this is the first time that a totalitarian creed has been put into power by democratic means. Naturally, to many, the event is pregnant with a new meaning that has not been discernible in the practices and professions of international communism.

The internal reaction to it, in its extremes, has been a mixture of hopes and fears. The many partisans in communist faith and ideology have seen in it the first ray of the dawn of the millennium, while the political sceptics have seen in it the first signs of the democratic twilight in India. But to the politically detached and the ideological moderates, it is a development to be watched with interest. This interest was reinforced by the promises of the victorious communist spokesmen that they would confine themselves to the operational grounds, as marked out by the Constitution of the country.

Now, after six months of communist rule in the State, nothing much has happened to deaden the new interest. Some of the political acts of the new government have a distinct propagandist ring about them. The reduction of the State Ministers' salary to about Rs 500 per mensem was meant to serve as an emotional sop to the economically stricken conscience of the people of the State. Similarly, the communist ideology has been, temporarily at least, trimmed to suit the democratic frame work of the country. A sense of moderation that is strikingly alien to communist con-

S103 GENERAL MANAGER

cepts and practices is also discernible in some of the programmes of the Government. Again, some of the policies of the Government do not chime in with the notes that came from the communist election drum. The nationalisation of foreign plantations, which was one of the first items in the election manifesto of the party, has been, so far, kept in cold storage. Similarly, the Bhoodan movement started by Acharya Vinobha Bhave, to which the communists have all along been vehemently opposed, has now evoked at least the loyalty of their lips. When one views all these together with those of the neighbouring congress governments, one is apt to become politically colour blind.

But one need not rub one's eyes to see the real colours that have been betrayed by the communist Government in some of their other political acts. The new role that has been allotted to the police force of the State in dealing with popular movements has led many to doubt the genuineness of the alleged communist offer to private enterprise to start new industries in the State. It is the authentic voice of communism which speaks through the instructions issued to the State police not to interfere in any case unless in the event of actual loss of life or property. Similarly the Education Bill that has been passed by the State Assembly and which is awaiting presidential sanction has been the object of the opposition's attack. A bill which authorises the State Government to take over privately managed schools on the ground of mismanagement is capable of the widest abuse. Though the communists might point to the similarity of the present bill with that of the one earlier attempted by the previous congress ministry, it is the totalitarian character of the bill which matches perfectly with the totalitarianism of the communist creed that makes many wonder whether this is the thin end of the communist wedge. By passing these two measures, the State Government have injected an element of tension and militancy into the political atmosphere of the State.

If one were to judge by the actual events that have been recounted here, one would be perfectly confounded by what are really contradictory symptoms. Of course, they have not succeeded in any tangible measure in alleviating the economic discontent in the State and have only added to the political speculation in the country. Negatively, the communist success in the elections has caused quite a flutter among the congress circles and the behaviour of the opposition in the State has betrayed a fear complex, which is hardly conducive to stability of political life in the State. They have elicited approval from the highest dignitaries of the State including the President and the Prime Minister, for having displayed a democratic temper in their approach to the problems which were viewed in an ideological light in the manifesto issued on the eve

of elections. Whether democracy would be kept as only a convenient facade behind which to erect the communist pantheon is something about which it is hazardous to make

UPPER JUMNA VALLEY
ELECTRICITY SUPPLY CO., LTD.

NOTICE

Notice is hereby given that the Annual General Meeting (being the Fifty-fourth Ordinary General Meeting) of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Wednesday, the 29th January, 1958, at 11-0 a.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the year ended 31st March, 1957, and the Reports of the Directors and the Auditors thereon.

2. To declare a Dividend.

3. To appoint Directors in place of those retiring.

4. To appoint Auditors and fix their remuneration.

5. As special business to consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:—

(a) That the requirements of Articles 82, 83, 87, 121, 176, 180 and 181 of the Articles of Association of the Company be not complied with in respect of the half-year ended the 30th September, 1957.

(b) That the Articles of Association of the Company be altered in manner following:—

(i) Articles 82 and 83 shall be deleted and the following new Articles substituted therefor:

"82. In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that Act, at such times and places as may be determined by the Directors".

"83. The General Meetings referred to in the last preceding Article shall be called Annual General Meetings; all other meetings of the Company shall be called Extraordinary General Meetings".

(ii) Article 87 shall be deleted and the following new Article substituted therefor:

"87. The business of an Annual General Meeting shall be to receive, consider and adopt the Profit and Loss Account,

the Balance Sheet and the Reports of the Directors and of the Auditors, and to elect Directors in the place of those retiring, to appoint Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special".

(iii) In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor.

(iv) Article 176 shall be deleted and the following new Article substituted therefor:

"176. At every Annual General Meeting the Directors shall lay before the Company a Profit & Loss Account made up to and a Balance Sheet as at the 31st day of March immediately preceding the date of the meeting and such Profit & Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the Company".

(v) In Article 180, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor.

(vi) In Article 181, lines 1, 2 and 3, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing shall be deleted and the words "Annual General" substituted therefor.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 23rd January, 1958, to the 29th January, 1958, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy who need not be a member, to attend and vote instead of himself.

By Order of the Board,
MARTIN BURN LIMITED,
S. GUPTA,

Director,
Managing Agents,
12, Mission Row,
Calcutta-1.
The 3rd January, 1958.

a pronouncement. Only one thing is clear: the constitutional die is heavily loaded against a violent break with the democratic tradition.

From communism to communalism is a far cry. But the placid political waters of the neighbouring State of Madras were disturbed by a mild communal storm that blew over the State for some time in the recent past. But for the suddenness with which it came over the State, causing quite a stir in the minds of the people of the State, it would not have claimed any attention.

If this is ignored, the other outstanding event is the opening of the lignite mines in the South Arcot district of the Madras State. This has filled up a vital gap in the industrial resources not alone of the Madras State but also of the Peninsular region as a whole. The one single factor that has held up the industrial march of the South has been the lack of sufficient deposits of coal in the region. The opening of the lignite mines now

should provide the nucleus around which a net work of industries can grow. The cost of industrial development, which would have been prohibitive if the region were to depend on the supplies of coal from the deposits of Bengal and Bihar, is also rendered light. Further, the region is also rich in mineral resources such as mica, manganese and bauxite ores. Thus, while the discovery and opening of the mines should easily enable the Peninsular region to catch up with the North in industrial stature, how soon this is done would depend on the enterprise shown by the industrialists of the State and the attitude of the Government. The opening of the mines has had one wholesome benefit: it had removed the popular feelings of discrimination against the south in the matter of economic development, which has been nourished and fed by interested political parties in the State. The old year has set a splendid seal on the future of the State. The vista that the New Year opens is certainly alluring.

Business

A Bird's Eye View of Business
Conditions in 1957

THE year 1957 is, in popular estimation, regarded as inflationary in India. The All India Consumer Price Index (Working Class) calculated with 1949 as the base year, has been fluctuating between 107 and 110 till the end of May against the 1956-57 average of 107. Since then, it has risen up to 113 in August; subsequently there was a decline. Regional variations have been sharper.

But on the whole, in comparison with 1956, the rise has not been so disturbing as the public impression goes. In September, the index stood at 112, against an average of 109 for the last four months of 1956. The Index Numbers of Wholesale Prices (Revised Series—1952-53 Base Year) show that over the year, 'food articles' registered a decline from 105.1 for the week ended December 15, 1956 to 104.3 for the week ended December 14, 1957.

While Cereals were keeping a range of 101 to 105 between April and October 1957, as against 103 to 104 in September-October 1956, 'Fruits and Vegetables' were definitely on a downward trend barring a bulge in June, July and August, 1957; 'Fish, Eggs and Meat' registered considerably lower levels as compared to the last quarter of 1956, and in October, the index was one point below that of the corresponding month in the previous year. Compared to the closing months of 1956, Pulses also have not recorded any marked difference. Edible oils have been almost consistently keeping a lower level than what obtained in November and December 1956, nor does the residual group classified as 'Others' show any radically higher trend.

These figures, read side by side with the Consumer Price Index figures support the view that the real mischief, wherever, it lies, in the area of transactions between the wholesale and retail deals. There is, of course, the criticism that the compilation of the Index Numbers leaves a great deal to be desired.

Turning to the Wholesale Price Index again, it will be seen that the sharpest increases over the year have occurred for 'Liquor and Tobacco'; this item has gone up from 87.4 in the week-ended December 1956 to 98.1 in the week ended December 14, 1957. 'Fuel, Light, Power and Lubricants' show an increase from 106.7 to 115.0 between the two weeks; 'Industrial Raw Materials' have actually come down from 120.0 to 115.5 and Manufacturers' show a comparatively slight fall from 108.8 and 107.6.

INDEX NUMBERS OF WHOLESALE PRICES.

	Dec. 15 1956.	Dec. 14 1957.
Food Articles	105.1	104.3
Liquor and Tobacco	87.4	98.1
Fuel, Power, Light and Lubricants	106.7	115.0
Industrial Raw Materials	120.0	115.5
Manufactures	108.8	107.6
A. Intermediate Products	114.0	105.9
B. Finished Products	107.9	107.9
All Commodities	108.2	107.2

It is noteworthy that while intermediate products recorded a fairly steep decline from 114.0 to 105.9, finished products stood where they were at 107.9; the latter two sets of figures might provide a clue to the comparative trends of profits between the processing industries and manufacturers of finished

Annual Reviews

products. It is also noteworthy that for all commodities together, the Index Number registered a decline of 1 point from 108.2 in the week ended December 1956 to 107.2 in the week ended December 14, 1957.

If the monthly fluctuations are kept out of account, it would scarcely be maintained on the basis of these figures that it was on the whole an inflationary year for India. That the working classes fared worse than others, has to be conceded, surely an important national problem which was also reflected in the innumerable demands for increase in pay and to some extent in the number of industrial disputes in the country.

INDUSTRIAL DISPUTES.
(Monthly Average or Actuals).

	No. of stop-pages.	Workers Involved (Nos.)	Man-days Lost (Nos.)
1951	89	57,610	318,244
1952	80	67,437	278,080
1953	64	39,717	281,884
1954	70	39,762	281,063
1955	97	43,981	474,821
1956	103	61,181	594,700
January 1957	154	126,995	395,419

1956-July	724
1957-July	809

An increasingly rigorous policy of import control larger expenditure involved in the Plan Projects and several export promotion measures combined to provide the stimulus for domestic industrial production. For a number of manufactured items there is scarcely any import permitted after June 1957. Plant and machinery and industrial raw materials are now receiving overwhelming importance in import policy.

The setting up of a Directorate of Export Promotion, the liberalisation of rebates and adjustments of customs duties effected during the year have given Indian manufac-

27,277,000 metric tons and wheat output amounted to 9,214,000 metric tons against 8,707,000 metric tons. In spite of these rich harvests, acute shortages were felt in a few States and some emergency measures had to be taken. The problem, however, did not assume national dimensions.

That in spite of peak levels of production in rice and wheat maize ragi and pulses, local food shortages did occur will have to be accounted for by two reasons—defective distributive machinery and the growth of population which neutralised the increase in food output. The latter is a problem by no means confined to India. It is somewhat comforting to note that in 1956-57, world agricultural production has again increased at a little over 1 per cent faster than the growth of world population.

In cotton, jute and mesta too, the 1956-57 output was higher than that of the previous year. Against 4,001,000 bales in 1955-56, cotton output was 4,723,000 bales in 1956-57; in jute, against 4,197,000 bales, it was 4,221,000 bales; in mesta, against 1,159,000 bales it was 1,474,000 bales; production of oil seeds increased from 5,705,000 tons to 6,032,000 tons.

Industrial production for the first nine months of the year was also at a higher level, the average general index standing at 148.3 against 144.3 for the corresponding period in 1956. The table below gives a rough indication of the trend.

turers the opportunity to look for bigger markets abroad and to function on a more confident outlook in respect of the domestic market as well. The consequences of the above mentioned steps would be fully realised only in due course. The beginnings are already in evidence in the accelerated tempo of production, particularly in industrial consumer goods.

In this respect, the prospect for the Indian economy might be said to differ materially from what many experts foresee for some of the leading economies of the West. In both UK and US, significant declines in industrial production have been noticed in the last few months of 1957 and these declines are interpreted as the commencement of a trend which would become characteristic of the next year. In Britain, intensified credit restrictions and limited investment programmes have been a conspicuous feature and doubts are entertained as to how far these would help in imparting

Annual Reviews

to the economy stability at the proper level. A section of economic opinion does feel that there might be a further decline in activity though the word slump is cautiously kept out; in Britain's case, there seems to be little ground for using it either. In the US: on the contrary, the past year for the most part, was by any token as good a boom year as 1956; but towards the end, industrial production dipped to such an extent as to deserve the description of 'planned recession'. Leading manufacturers like Ford and Chrysler either suspended work for a number of days together or laid off a considerable proportion of the employees. Unemployment in 1957 in US reached 2.5 million. In terms of capacity, US industry is admittedly in a position to proceed ahead to new peaks of production. Restraint has come in the shape of lower domestic demand. Opinions do differ as to what would happen in 1958, but more businessmen and economists seem to think that at least during the second half of 1958 demand and output would recede. Whatever be the future turn awaiting the US economy, just now all that can be said with assurance is that there is a wide-spread sense of having produced more than could be digested

An Eventful Year for the British Economy

By JOHN KINGSLEY

NINETEEN fiftyseven has been an eventful year for the British economy. In the first months, although the exchange difficulties caused by the Suez Canal crisis had almost passed, the economic bill had still to be paid. The canal was blocked and the Iraq oil pipeline was cut. Oil had to be imported extensively from the United States, and industry's supplies had to be restricted. Shipping had to adjust itself to the new conditions; freight rates and raw-material prices had risen sharply. The outlook for the balance-of-payments position seemed gloomy.

In fact, the payments balance weathered the crisis remarkably well, and on the home front production was scarcely affected, thanks to the tremendous organizational effort made both by the oil companies and by industry as a whole. The balance of payments well exceeded expectations, with a current-account surplus of £125,000,000 for the first half of the year.

Exports ran, over the year, at well above the 1956 level, rising in November to approximately £287,000,000 the trade figures for that month being the best for seven years. Exports over the first 11 months also did very well in important North American markets, running at eight per cent more in value than in 1956

and the falling levels of production in the last quarter of 1957 might be more than temporary.

In India, there is hardly any room for doubts or misgivings of this kind. Within the framework of the Second Plan, which in spite of some adjustments here and there, is scheduled to be implemented in full, both agricultural and industrial production will have to seek new higher levels and the year 1958, which is now being described as a hump year from the standpoint of expenditure, is also bound to record increased levels of output allround. Here we have no problem of a satiated or whimsical domestic demand. On the contrary, the domestic demand is still hungry, for basic goods and services. On the agricultural side, extensive failure of rains might indicate some disappointment. That these would not affect all commodities is already evident from the crop estimates available for a few and given in the following table:

ALL-INDIA CROP ESTIMATES, (Area in 1000 acres).				
	1956-57	1957-58		
	Adjusted first estimates	First estimates	Difference	
Groundnut	9,044	9,895	+851	
Sesamum	3,854	3,669	-185	
Cotton	14,559	14,616	+ 57	
Jute	1,634	1,473	+161	
Mesta	194	225	+ 31	

There is every reason to look forward hopefully to the new year.

of exchange between sterling and other currencies, and this in turn led to speculative capital movements on a large scale.

The Federal Republic of Germany's persistent surplus had grown by the summer to a point where it seemed likely to strain the machinery of the European Payments Union. The story spread that the Deutsche Mark would be revalued, and that this revaluation would involve a general overhaul of the European exchange-rate structure.

There began a massive international movement of short-term capital out of other currencies into D-Marks and dollars. France was the first to be affected, and revaluation of the franc increased the general fear that there might be a currency reshuffle at the September meeting of the International Monetary Fund in Washington. All this had an inevitable effect on sterling, and the gold reserve fell heavily in August and in the first half of September.

The British Government responded to the situation with some far-reaching, constructive decisions. In September, the Chancellor of the Exchequer raised the Bank Rate to seven per cent and announced a number of new measures designed to protect the external and internal value of the pound sterling. This action, together with the firm statements made by both Britain and Germany that no exchange-rate adjustments were contemplated, was successful in halting, and to some extent reversing, speculative pressure against the pound.

But the intention was not merely to achieve this short-term objective. The Government had clearly decided that if Britain was to play her traditional part in world trade and finance, confidence in the currency must be increased to the point where speculative pressure of this kind could not recur. The pound could only be defended successfully abroad if inflationary tendencies were stamped out at home.

It was to achieve this aim—to put a stop to the rise in wages, profits, and prices—that the Chancellor

intensified his squeeze on credit, and limited the investment programmes of the nationalized industries to their existing high levels.

TEST OF POLICY

One can fairly say that 1957 has ended on a far calmer, more confident note than that of the early months of the year. For the first time since the war, the maintenance of stable prices has been made the prime aim of economic policy in Britain.

In some quarters fears have been expressed that emphasis on price stability might lead to a decline in activity. The Government is, however, confident that stable prices are compatible with full employment and industrial expansion resulting from a high level of investment. The policy will be put to the test in the coming year.

On the international front it is similarly impossible to forecast economic developments with any degree of exactitude. Much will depend on the level of economic activity in the United States. International trade may slacken further before it begins to rise again, and such slackening could create difficulties for some members of the Sterling Area.

But a short pause may do no greater harm. Indeed, it may well make future growth more assured. So far as Britain is concerned, the Chancellor's measures are designed to make the economy fit for any rough weather that may be encountered and prepared for the decisions which have to be taken during 1958.

Two of these are of major importance. In the middle of 1958, Commonwealth Ministers are due to meet for economic discussions which may lead to still closer co-operation between members of the Sterling Area. An at the beginning of 1958 the European common market comes into existence. By the end of the year, 11 West European countries, including Britain, should be associated with the common market in a European free-trade area.

These are challenging developments. Britain will be ready to play her full part in them.

Britain's Prospects in 1958

By PAUL EINZIG

AT the turn of the year Britain's economic prospects appear to be rather more favourable than could reasonably be hoped for a few months ago. A major crisis through an accentuation of the flight from the pound no longer seems to be imminent. The flight from Government loans has become reversed. The more responsible Trade Union leaders show at least some signs of hesitation whether to press forward ruthlessly with their unreasonable wage demands. And the Government shows at last some signs of determination to resist the wage inflation. The fall in the prices of imported raw materials provides an opportunity for check-

ing the rise in prices. And notwithstanding the chorus of pessimism, very few people really believe in the likelihood of a major economic depression in 1958.

Sterling's prospects have improved since the increase of the Bank rate to 7 per cent. But the Bank rate cannot be kept at such high level forever. The question is, will it be possible during the next twelve months to defend sterling without having to keep interest rates at crisis-level, or without having to restore them to such an abnormal level in the autumn after a temporary reduction early in the New Year? The answer depends on the Government's suc-

cess in arresting domestic inflation. Once the wage spiral is broken it will be possible to defend sterling with a Bank rate of 5 per cent or lower.

The major wage disputes arising from the resistance to inflation have not so far materialised. There is bound to be at least one major strike, however, early in the New Year, and its outcome will go a long way towards indicating the prospects. Should the strikers have their way to a noteworthy extent, the outlook for sterling would be far from reassuring. In that case even a 7 per cent Bank rate would be no guarantee against a major sterling crisis in the autumn.

There is now some slight hope, however, that in face of the changed situation and prospects there will be increased resistance to wage inflation by employers, and trade unions may come to their senses before it is too late. Once the employers realise that the Government means business, they will no longer grant wage increases light-heartedly after a bare token resistance, on the assumption that they would be able to add the increased costs to their prices. The deterioration of the international economic outlook as a result of the fall in commodity prices is another reason for employers to resist wage demands. Above all, fears of a slump in the United States, however ill-founded, are infectious, and should go some way towards damping down the optimism in which the wage-price spiral has been proceeding unabated since the war.

Another encouraging sign is that British public opinion is at long last beginning to awaken to the obvious fact that inflation has been due to three causes—wages, more wages, and still more wages. Until recently hardly anybody dared to whisper about the extent of the responsibility of the trade unions for the rise in the cost of living. Most economists, instead of enlightening the public, were engaged in an effort to outsmart each other in inventing tortuous "original" explanations for the rise. But gradually common sense appears to have come to prevail, and there is more and more public condemnation of the short-sighted selfishness of organised labour. Trade unionist Fools' Paradise Economics has come to be condemned, and there is now hope that before long the masses of consumers will know where the blame lies for the rising cost of living. Pressure of public opinion may then go a long way towards influencing the attitude of the Trade Unions.

It is possible, therefore, to view the prospects of checking inflation in 1958 with some guarded optimism. The next question is whether the pendulum will not swing into the opposite direction, and whether uncontrollable deflation will not take the place of uncontrollable inflation. To a large ex-

tent the answer to this question lies outside the United Kingdom. Should a major slump develop in the United States, or should the decline in commodity prices become accentuated, Britain would be unable to isolate itself from such a major trend.

To the extent to which the trend depends on domestic developments, however, there is no cause for pessimism. It seems that the major danger is still inflation and not deflation. The official monetary policy does not aim at a contraction of business activity through credit squeeze, it merely aims at preventing an expansion in so far as this could only be achieved at the cost of a further rise in prices. There are bound to be pockets of unemployment in connection with the changes in defence expenditure and also in connection with cuts in public and private capital expenditure. In particular the building of houses is bound to slow down as a result of the increase in decontrolled rents which will curtail demand for housing accommodation. The unemployed in the building industry, the aircraft industry and possibly in a few industries affected by a decline in exports to raw material producing countries is likely to be easily absorbed, however, even if this will necessitate the transfer of many workers to lower-paid occupations.

If, contrary to expectations, the deflationary trend should proceed too far, the Government is well in a position to reverse it. Mr Macmillan is known to be longing for such opportunity that would enable him to increase his Government's popularity by embarking on a policy of tax reductions and increased public spending in an effort to check the slump. When he was Chancellor of the Exchequer he elaborated detailed plans for such reflationary deficit-financing, and he is only too keen on putting them into practice if and when economic conditions will warrant a change from anti-inflationary to anti-deflationary policy. Unfortunately there seems to be very little hope that 1958 will bring that opportunity. The pathological fears of a number of economists that the very moderate credit squeeze might drive the country into deflation have no foundation whatever in the facts of the present situation or in the prospects as they can be judged at the turn of the year.

The coming year is expected to witness a marked recovery in the Gilt-edged market, as and when inflation will come to a halt and as a result of the reduction of the Bank rate. On the other hand the outlook for equities is far from satisfactory. The resistance to inflation is bound to entail declines in profits and cuts in dividends, and this will induce many investors to switch back into Government loans. There is no cause for fearing, however, a major slump on the Stock Exchange.

Calcutta

Calcutta, Friday Evening.

Operators were generally disinclined to enter into fresh commitments. Some of them thought that investment prospects would have to be improved in order to attract foreign capital, while others felt that, since Government expenditure remained at a high level, no substantial relief in taxation was likely. Thus, with interest at bare minimum, price movements were insignificant in a restricted turnover.

Business in the Gilt-edged section was restricted, mainly due to the fact

Stock Exchanges

NEW YEAR COMMENCES ON A CAUTIOUS NOTE

Watch-Dog Writes:

WITH the dawn of the New Year, operators in stock markets have become cautious as evidenced by the pattern of trading on Thursday and Friday. With activity further restricted due to clearing adjustments, price movements have been confined to a narrow range.

In general, the tendency of the market continues to be jittery in view of lack of incentives as well as the uncertain policy of the Life Insurance Corporation for fresh investments following the recent muddle in the commitments of the Mundhra group of shares.

As was generally expected, the New Year has not brought forth any basic change in the conditions that prevailed before the end of 1957. It is, therefore, clear that any stable rise in share values will not be likely until the Budget proposals are announced in the next month. However, some circles entertain the hope that the Budget may not contain any major taxation proposals, while others lieve that it may contain nasty surprises. Unless, therefore, the Budget is out of the way, the outlook for the market may not get clearer.

The New Year began on a rather tame note on the Bombay Stock Exchange. The entire list closed quietly steady with a mixture of modest gains and losses.

The last day of 1957, on the London Stock Exchange, proved uneventful and the market closed with an irregular appearance.

Wall Street finished the year with a broad front of gains, mostly ranging to one dollar or so. Attracting attention but not influencing the market was the disclosure that President Eisenhower expects to submit a balanced budget for fiscal 1959, which will call for the maintenance of taxes at current levels.

*

Calcutta

Calcutta, Friday Evening.

APART from a slight recovery in a few selected scrips, conditions on the local Stock Exchange remained practically unchanged during the short week under review. Operators were generally disinclined to enter into fresh commitments. Some of them thought that investment prospects would have to be improved in order to attract foreign capital, while others felt that, since Government expenditure remained at a high level, no substantial relief in taxation was likely. Thus, with interest at bare minimum, price movements were insignificant in a restricted turnover.

Business in the Gilt-edged section was restricted, mainly due to the fact

that the banks were pre-occupied with the yearly closing of accounts. Medium and long-dated loans remained neglected, while State Loans ruled dull in the absence of sellers.

Bank shares were fairly steady on reports of good working. Jute shares continued to remain depressed on quieter advices from the jute goods market. The only two bright spots were National which touched a fresh higher level due to renewed cornering activity and New Central which were taken upto Rs 12.00 from Rs 11.37 on reports that the company had a proposal to start a chemical factory at Banaras and the Uttar Pradesh Government had sanctioned a loan in this respect.

Coal shares were listless as operators were awaiting the Price Revision Committee's recommendations, which are expected to be announced during the course of the month.

Tea shares were subdued. There was a general disposition to await further developments on the tea front. There was an anxiety to know whether the recent troubles in Indonesia would reduce the output there sufficiently to bring a better statistical balance for the Common grades.

Sugar shares were practically neglected in view of the bleak prospects for exports.

Miscellaneous issues came in for selective enquiry. Most prominent were India Steamship, Indian Cable, Dunlop, Phillips India, NCCO, Aluminium Corporation, Rohtas and Hindustan Lever.

The following table shows the price trends of a few selected scrips during the week under review:

	Year Closing	Jan. 2nd	Jan. 3rd

what a map, Bhai Sahib!

A map of India, of course, but the dots and stars tell a *special* story—our story. They represent the 2,242 depots and five factories of our production and distribution network.

One salesman, Bhai Sahib, is in charge of each depot and he supplies factory-fresh tea to your grocer.

This direct system of distribution is organised solely to protect *your*

interests, Bhai Sahib. There are no middlemen, no delays, and we are certain of giving you really fresh tea at fair prices.

The quality of your Brooke Bond packet is thus guaranteed. All this costs nothing *extra*, Bhai Sahib. On the contrary, this is the only way in which it is possible for us to assure you full value for your money.

HERE ARE SOME FACTS ABOUT BROOKE BOND DISTRIBUTION, BHAI SAHIB:

Number of Brooke Bond Depots and Sub-Depots	2,242
Number of Brooke Bond Sales Staff	2,276
Number of Distributing Godowns	165
Number of Branch Offices	28
Number of Factories	5

Issued by
Brooke Bond India Private Limited

Indian Finance

Investor's Supplement

Year ends on a dull note

1 & 2

The Stock markets opened the month in a listless mood as both operators and investors were reluctant to extend their commitments in the absence of fresh incentives. The fact that advices from the cloth market continued to be of a disappointing nature contributed in a large measure to the absence of buying interest in Bombay. Calcutta was no better and values drifted idly around previous levels. Steel shares were a neglected market. Tata Irons shaded to close at Rs 166.00 while in Calcutta Indian Irons after opening at Rs 19.58 eased to close at Rs 19.44. In Dalal Street Textiles encountered selling pressure with Bombay Dyeing receding to Rs 50.60.

3

The Government announcement that private entrepreneurs would be allowed to establish fertilizer plants hitherto reserved for the public sector was perhaps responsible for the slight recovery noticeable in the price levels of speculative shares. The knowledge that food imports during the current financial year would amount to about Rs 90 crores dampened earlier enthusiasm. As a matter of fact the anxiety about the food position (estimated shortage 4 million tons) was having considerable influence on sentiment in the stock markets. In Dalal Street, Steels were supported on rumours of higher production with Tata Irons marked up to Rs 166.75. Textile, however, continued depressed with Bombay Dyeing declining to Rs 50.30. In Calcutta Indian Irons after opening quietly steady at Rs 19.42 closed slightly better at Rs 19.47.

4

The day's trading clearly indicated that marketmen found little in the investment situation to cheer them. Settlement considerations restricted business in Calcutta where Indian Irons after opening at Rs 19.52 lost ground to close at Rs 19.44. In Dalal Street Tata Irons shaded to Rs 166.50 but among Textiles Bombay Dyeing was better at Rs 50.50 due to short covering.

5

Though business passing continued to be at a low ebb, sentiment in the Calcutta Stock Exchange showed some improvement as prices of selective scrips moved up on buying support. Indian Irons gained 10 nP to be finally placed at Rs 19.52. Dalal Street however continued to rule dull presumably due to settlement considerations. Tata Irons shaded to

Rs 166.00 with Bombay Dyeing also showing a similar trend at Rs 50.40.

6

Both Calcutta and Bombay ruled steady in earlier dealings but towards close developed a sagging tendency in the absence of follow-through support. Adverse rumours were also responsible for reversing the trend. Tata Irons after opening higher at Rs 166.25 eased to close at Rs 165.75. Indian Irons opened higher at Rs 19.60 but sagged to close at Rs 19.57. Bombay Dyeing was quiet at Rs 50.30.

7

The suggestion contained in the report of the Industrialists Delegation that American entrepreneurs were interested in making new investments in India seemed to have had an encouraging effect on Stock Markets. The day's trading in both Calcutta and Bombay resulted in moderate gains in the more speculative issues. Indian Irons opened at Rs 19.48 and after dipping to Rs 19.41 moved up to touch Rs 19.57 before finally closing at Rs 19.54. In Bombay Tata Irons opened at Rs 165.50 and closed better at Rs 165.75. Bombay Dyeing was however lower on balance at Rs 50.20.

8, 9 & 10

Hopes of tax relief in view of the recommendations of the National Council of Applied Economic Research engendered speculative buying in the stock markets. Dalal Street displayed a bullish undertone with most pivotal scrips forging ahead an active trading. Tata Irons advanced partly to Rs 167.00 while Century gained more than 7 points to Rs 399.55. In Calcutta Indian Irons after opening at Rs 19.68 was finally done up to Rs 19.72.

11

There was no trace of the previous day's enthusiasm but instead the undertone was quiet. While bulls withheld their support bears exerted pressure with the result prices sagged. Tata Irons in Dalal Street shaded to Rs 166.75 but Bombay Dyeing in textiles continued to forge ahead to Rs 51.10 on interested buying. In Calcutta Indian Irons after opening at Rs 19.55 advanced further to Rs 19.61 but fell back to Rs 19.56 by close.

12 & 13

Dull but steady conditions prevailed with a scrip here and there attracting considerable investment support on corporate news. The pivotal scrips, however, moved within narrow limits. Tata Irons

was fractionally better at Rs 167.00 while Indian Irons opened and closed at Rs 19.56. Textiles in Bombay were subdued with Bombay Dyeing at Rs 50.80.

14, 15 & 16

The increase in excise duties on some commodities in lieu of sales tax coupled with the small reductions in excise duty on cloth were not upto market expectations and hence trading was on a quiet undertone. Tata Irons opened nearly one point lower at Rs 166.25 and after an abortive attempt at rally closed quiet at Rs 166. Bombay Dyeing closed at Rs 50.90. Indian Irons opened quiet at Rs 19.26 and further eased to close at Rs 19.10.

17

The strong criticism voiced in the Lok Sabha against the investment policy of the Life Insurance Corporation had a depressing effect on market sentiment. Apart from the rather sharp decline in a particular group of shares, the market as a whole displayed lack of enthusiasm because of the certain implications of the Lok Sabha discussion of the working of the Life Insurance Corporation.

In Dalal Street Tata Irons eased to Rs 164.50 with Bombay Dyeing marked down to Rs 50.60. Indian Irons after a quiet opening at Rs 18.91 closed better at Rs 19 on replacement buying.

18

While Calcutta ruled subdued on settlement considerations, Dalal Street was plagued by some heavy sales in certain pivotal scrips. Tata Irons, National Rayon and Century were particularly under pressure. In Steels, Tata Irons dropped one and half point to Rs 163.00 while Indian Irons after opening at Rs 19.04 lost ground to close at Rs 18.80. Among Textiles Bombay Dyeing eased to Rs 50.10.

19

After a steady opening stock markets developed an easier undertone under the cumulative pressure of successive adverse factors. Rumour had it that Mr Morarji Desai had made it clear to his partymen that the textile industry could expect no further concession from Government. There were also suggestions that in view of the strong attack on it in the Lok Sabha, the LIC might not enter the stock market for some considerable time to come. As the LIC is now by far the biggest single investor in equities, the

prospect of the withdrawal of its support engendered some nervousness among operators. Consequently pivotal scrips encountered realising pressure. Tata Irons lost four points to come back to Rs 159.00. Indian Irons reacted from Rs 18.92 to Rs 18.39. Among textiles, Bombay Dyeing declined to Rs 49.70.

20

In marked contrast to the previous day's easier trend, the markets ruled steadier with most scrips regaining part of their lost ground. The main incentive seemed to have been supplied by the rumour that contrary to earlier belief the LIC had started taking interest again in equities. Tata Irons in Dalal Street made a smart rally to Rs 161.25 while Indian Irons in Calcutta improved on short covering to Rs 18.58. Among textiles Bombay Dyeing advanced to Rs 50.00.

21, 22 & 23

The undertone in the stock markets was quiet presumably in view of the forthcoming Christmas holidays. Indian Irons after a steady opening at Rs 18.70 met with realising pressure and closed easier at Rs 18.47. Tata Irons in Bombay was likewise under pressure and dropped more than one point to come back to Rs 160.00. Textiles were also easier with Bombay Dyeing at Rs 49.80.

24

The Calcutta Stock Exchange remained closed for the Christmas holidays (24, 25 and 26). In a short session Dalal Street displayed a steadier trend after initial setback. Tata Irons opened at Rs 159.29 and after shading further to Rs 159.00 recovered on bear covering to close at Rs 160.50. Indian Irons moved in a similar fashion to close steady at Rs 18.56. Textiles were slightly better with Bombay Dyeing well maintained around Rs 49.80.

25

The Bombay Stock Exchange remained closed from 25th December to the end of the month for Christmas and Bank holidays.

26

Reopening after the holidays, the Calcutta Stock Exchange showed no improvement. In the absence of buying support prices were lower where marked. Business passing was at a low ebb. Indian Irons opened at Rs 18.42 and after touching a low of Rs 18.37 closed quiet at Rs 18.38.

"Dear Sirs ..."

This is an important letter for it may close a big deal, or open a new account. More letters, estimates, indents, ledgers, bills, cheques and receipts—all these add up to prosperity provided the essential raw materials are available. In business there is no more essential raw material than paper.

For 75 years The Titaghur Paper Mills Co. Ltd. have been among the largest producers of fine quality papers. The makers of Elephant Brand Papers remain as pioneers in the forefront of the Industry.

TITAGHUR PAPER

The Titaghur Paper Mills Company Limited, Calcutta-1

For the Investor

Bull Phase—or Fizzle Out?

Investment Gossip:

WHEN the stock markets entered on the New Year ten days ago, few believed that they would so soon witness activity of a variety that would reflect a return of confidence among marketmen. Nevertheless, indications were not wanting that, given the right kind of incentives, a revival of buying interest could be expected. I had pointed out in my last two articles that the investment situation in the country was not one continuous blanket of dark clouds but was interspersed with many a silver lining which showed a tendency to brighten and broaden rather than to darken and disappear.

There are two ways of looking at a thing: one way is to strain one's faculties to pick out the flaws and the other is to take an overall view with the bad and good points together. It scarcely needs pointing out that the second method is the proper and right method even while dealing with matters pertaining to the stock market. My friend Phatkaram may well laugh at my naivete but I am firmly convinced that, so long as operators do not abandon their habit of acting only on flash news in utter disregard of the overall economic position in the country, they will be not only exposing themselves to heavy losses but will also drag down with them investors who are the backbone of the stock markets. I have often averred that Phatkaram and his tribe are directly responsible for a considerable part of the investor's loss during the past year.

It would appear that the lessons of last year have, however, engendered a healthy outlook in market-men in general. Even so, the bears seem to think that their supremacy cannot be easily disputed. They probably think that they can safely depend upon the financial difficulties of a Government wedded to the huge Second Plan, coupled with the food shortage and the persistent demands for wage increase and labour participation in industry and the like, to keep the market in their grip.

With the coming Central Budget yet to fulfil the hopes kindled by

the Finance Minister regarding a holiday from fresh taxes for the rest of the Plan period, the bulls seem to lack the requisite energy to strike an aggressive attitude. But they are not blind to the fact that the balance is getting tilted steadily in their favour, especially after the Finance Minister's visit to the US and other Western countries in his quest for loan assistance. Mr. T. T. Krishnamachari's assurance to foreign investors, coupled with the Indian Industrialist Delegation's avowal that an essential prerequisite to a free flow of foreign capital into India is the willingness of domestic capital to participate actively in new enterprises, has revived hopes of the re-establishment of conditions conducive to an unimpeded growth of the private sector. Authority's decision to allow private enterprise to set up fertilizer plants, which have hitherto been reserved for the public sector, and the recent reduction in excise duty on mill cloth seem to confirm the belief that a welcome change is already taking shape.

Speaking in Hyderabad early this week at the Andhra Pradesh Gramdan Seminar, Sir Chintaman Deshmukh felt that, of late, India had been beating a retreat from the goal of socialistic pattern of society. This might be due, he said, to the fear that the present incentives would be destroyed by increased taxation or due to the belief that foreign nations would give them more help.

The publication of the figures of production, for the month of December in the case of TISCO and for the last quarter of 1957 in the case of IISCO, by the two steel companies also served to remind investors of a development which is steadily gathering strength in our economy. The TISCO figures indicate that Tata Steel's Two Million Ton Programme is progressing satisfactorily. The expansion programme is scheduled for completion by mid-1958. A blast furnace which will produce 1650 tons of pig iron is also reported to be nearing completion.

The IISCO figures show that pig iron production in the last quarter has increased by 19,087 tons and steel ingots by 6,022 tons as compared with the previous quarter.

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policy-holders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.

Head Office: Oriental Buildings, BOMBAY-1

pared with the previous quarter. It is evident that the increased production is due to the rapid progress of the expansion programme of the company. It is learnt that the company's blast furnace with an output capacity of 1,200 tons of pig iron a day will shortly be put into commission. The rapid increase in the production of steel ingots and pig iron already recorded, the further increase confidently anticipated in the near future and the progress of the steel plants in the public sector, have given rise to the hope that, before the current year is out, India's steel production will make a sizable contribution toward arresting the flow of foreign exchange out of the country as well as earn a substantial amount of foreign exchange. Investors in Indian Iron shares are naturally reminded of Government's assurance that they will consider the question of increasing the dividend when the present phase of expansion is completed.

News from the cloth markets has been encouraging for the first time in many months, and there is renewed hope in Calcutta that

Indian tea may not after all fare badly in the current year. There are also people who discern good cheer for Indian industry in the recession in US. These and other salient features in the investment situation seem to have come to the notice of bull operators, who have been busy during the past few days in registering in a tangible form their satisfaction. Both the steel scrips have recorded sizable gains over the week. It is too early to say whether the current enthusiasm will result in a decidedly bull phase or fizzle out. But it is to be admitted that factors favourable to an upsurge in equity values now far outweigh those which make investment in equities less attractive than most other forms of investments.

With reference to the advertisement of the Associated British Machine Tool Makers (India) Ltd., published in the Indian Finance Annual & Yearbook 1957, attention may be drawn to the fact that the company is incorporated in England, and not, as printed, in India.

The scribe in Olympus has also spotlighted the disturbing developments that threaten the unity of this country.

In this context, he has come to the vehement defence of Rajaji, whom he calls the paradoxical saviour of the country's unity.

Read Olympus.

HIGHLIGHTS

The last of the annual reviews for 1957 is published in this issue.

Of the money market trends during the year past, it is fair to state that we have had an eminently satisfactory year.

Such a heartening assessment was of course in the main enabled by the spectacular increase in the Deposit resources of the banking system.

In the World of Finance section, an attempt is made to discover the significance of such developments. Also, the impact of these figures on bank profits is analysed.

Another subject to which we would draw attention is the Language Controversy. The Peninsula covers extensively the memorandum submitted by the Madras Government on the question.

INDIAN FINANCE

January 11, 1958

Investment Notes:

THE Indian Oxygen & Acetylene Company Limited is shortly to become a public company and raise its share capital to Rs 2 crores from Rs 1.32 crores at present. The new issue will be of Rs 68 lakhs out of which Rs 62 lakhs is likely to be issued abroad with a view to cover the foreign exchange requirements of the company for purchasing plant and equipment in order to enable it to step up its production by about 50 per cent. The rest of the shares worth Rs 6 lakhs is likely to be offered to the Indian public. The new shares are to be issued at a premium of Rs 3.50, i.e. at Rs 13.50 per share.

Vaikundam Rubber, Madras, has obtained the permission from the Controller of Capital Issues for the issue of 25,143 bonus shares of Rs 10 each.

The figures, released this week, with regard to the output of the Tata Iron Steel Company and the Indian Iron & Steel Company, are encouraging. Following are the comparative figures (in tons):—

	December, 1957.	November, 1957.
TISCO:		
Pig Iron	95,100	94,900
Steel Ingots	100,500	95,100
Semi-Steel	19,600	13,900
Finished Steel	54,600	52,100
IISCO:		
Pig Iron	190,484	171,397
Steel Ingots	125,194	119,172
Semi-Steel	19,210	13,837
Finished Steel	82,936	82,976

Rajbhat Tea has maintained the dividend at 12½ per cent for 1956.

Kailas Rubber, Madras, has recommended an interim dividend of 10 per cent for the year ended 28th February, 1958.

Electric Company Results

Balance-Sheet Reviews:

THE results of the Hindustan Electric, for the year ended 30th April, 1957, make an impressive reading. The profit has doubled from Rs 5.23 to Rs 10.55 lakhs after providing Rs 10.57 lakhs for Depreciation against Rs 5.81 lakhs in the previous year. The dividend is proposed to be maintained at 6 per cent.

Of the profit, a sum of Rs 2.4 lakhs has been used to write off Goodwill and Rights at cost against Rs 1.22 lakhs. Taxation, including Wealth Tax, claims Rs 4 lakhs, while the transfer to General Reserve, which amounted to Rs 2 lakhs in the preceding year, has been skipped.

The directors have, in their report, stated that, for the first time in India, production of large capacity transformers with 66,000 volts has commenced at the company's Howrah works. Work also started early in April 1956 regarding construction of buildings for high-tension switch-gear division and for switch-gear designs at Howrah works.

Production at Faridabad works No 1 was stabilised and the quality of the productions has improved. In Faridabad Works No 2, construction has been completed and production of electric motors has already commenced and increased considerably. The directors conclude by saying that all the works of the company

are having orders extending over six months, these mainly from the Central and State Governments.

Kirloskar Electric

The expansion programme of the Kirloskar Electric Company Limited, which has completed ten years of its working, has made satisfactory progress during the year ended 30th June, 1957. Besides normal expansion in existing lines, the company has, on hand, schemes for new lines of manufacture. The directors have, therefore, proposed to issue additional capital to the tune of Rs 5 lakhs. Details of this fresh issue are not yet available.

Meanwhile, the working of the company, during the year under review, has resulted in a higher profit which, after making normal provision for Depreciation and Taxation, amounts to Rs 5.42 lakhs as compared with Rs 4.36 lakhs in the previous year. Allocations to Depreciation, Taxation and Development Reserve are higher at Rs 5.50 lakhs; Rs 8.75 lakhs and Rs 1.52 lakhs as against Rs 4.37 lakhs; Rs 4.30 lakhs and Rs 1.46 lakhs respectively. Other appropriations are: Rs 1.2 lakhs against Rs 1.7 lakhs for General Reserve; Rs 80,000 against the same for IFC Loan Redemption Fund; Rs 75,000 against nil for Rehabilitation Reserve and Rs 15,000 against Rs 25,000 for Dividend Equalisation.

Science and the Cold War

SCIENTIFIC research in the modern age has become increasingly esoteric. The lay man often reaps the fruits, good or bad, without caring to understand the ultimate springs of activity. Between the highly specialised research scientist working in an almost incomprehensible world of his own and the man in the street functioning either as a purchaser of some consumer product or as a victim of some destructive instrument bearing the results of the scientist's work, there is a vast, nearly untrodden no man's land of knowledge. When therefore Professor M. S. Thacker, in his Presidential address to the Indian Science Congress holding its forty-fifth session in Madras this week, invites mass participation in scientific work and invitingly says that "science has room for everyone for all time", the initial response from the public would naturally be tinged with surprise.

This surprise may not completely fade even when the Professor explains that science is a very human enterprise, is basically a methodological approach to understanding and that what he wants from the people and the amateur scientists in particular is no more than the appreciation of the scientific method and a general interest in enquiry among them.

In the latter sense, the appeal is most welcome. If every student imbibes a really rationalistic and methodical approach to the problems that face the individual and the nation, there would surely be more orderly existence, for which this country is now anxiously craving.

But if it is a matter of a substantially wider interest, necessarily critical, in the higher reaches of scientific investigations, then there seems to be scarcely any meeting point between the expert and the lay man. One of the distinguished visitors to this year's annual session is Professor Bardin, a Soviet academician connected with Sputniks. Professor Bardin is associated with an achievement which can evoke only astonishment and very little understanding even among the amateur scientists of Professor Thacker's conception.

Actually, the tracks of material science pursued nowadays are getting more and more removed from nature. This is a phenomenon admittedly unacceptable to humane leaders, whether they be in the realm of science or in politics. But, is a less forbidding alternative in sight? The intense desire for some alteration is beautifully expressed by Professor Thacker in the following words: "The newer knowledge gained, have extended the glory of man, but they have inculcated, at the same time, a fear of knowledge which has potentialities for more harm than good. In this situation of uncertainty and doubt, safety lies in the collective social wisdom, for it alone can determine the direction of technological applications and can hinder or nullify injurious experimental ventures." There is also reference to the exercise of the intellect for the emancipation of man.

Once ideas such as collective social wisdom and the emancipation of man are brought into discussion, we unwittingly stray into the most tempting domain of social conflicts. Collective

social wisdom is now expressed through the State as its most effective agency. And whether it is a matter of picking men of ability, backing them heavily, or giving them freedom to pursue whatever path appears to be most promising, the State is the final deciding authority. The Session President has accepted the brutal fact that not only does the improvement of the material welfare of the people but the advancement of science and technology is conditioned by social purposes and social support.

The overwhelming tragedy of the postwar era is that powerful nations have not chosen to agree on what the proper social purposes are and springing from this basic disagreement are the dangerous developments which are summarised in the two freezing words "cold war". Mr Jawaharlal Nehru describes scientists as neutral agents and demands that they should develop the quality of compassion of saints and all that it implies. He wants them to keep science apart from politics and the cold war. These are extremely lovable thoughts but almost impossible to translate into the realities of social and political life. Mr Nehru, of course, is a sincere advocate of the nonviolent way of settling differences, of a positive form of world peace and of happy co-existence of ideologies.

Unfortunately, in the rest of the world these utterly humane principles knock against closed minds and deaf ears. While there is a general realisation all over the world that international relations as obtaining today are far from satisfactory, the efforts toward a change are for many reasons meagre and half hearted and consequently ineffective. The Prime Minister of India himself accepts that it is the function of the State to encourage science and scientists. The next step is inexorably to tell them what to do as indicated by what a particular State feels are the requirements of its security and material progress. Nothing less or more is being done in every State.

And scientists are as much human as any one else, susceptible to all the prejudices and frequently even to the ferocious animosities which afflict their respective peoples in general. During the last war and the twelve years subsequent to it, new military techniques have been evolved largely from patriotic motives, in every country where the most destructive weapons have been brought to light. There is no use blaming the scientists for this development. The scientists are not responsible for the cold war. Nor can they run away from the implications of it or from being an instrument of it. There may be a few rebels here and there but eventually they do not count. The wedding of science to national interests has brought forth the most horrible progenies. A divorce can be achieved only if a new conception of national interests comes into being. In the majority of countries, now holding the supreme physical power ever attained, the scientist is undoubtedly the weaker partner, often utterly helpless against the State which commands him as to what he should do and should not.

Of the more constructive side of scientific research, we have already some conspicuous

beginnings, in the utilisation of atomic energy, of radar and other instruments and innumerable new devices for the discovery of hidden resources in the world and for the prevention of danger to life through ailments, accidents in transport and through insidious forms of infection.

In India, as Professor Thacker complains, the progress of science from the research laboratory to the field and factory is unjustifiably slow. There is ample need and scope for expediting this progress. From the strictly national point of view, this is a direction of work in which attention could most profitably be concentrated. For the rest, we are inclined to think that it is the politicians rather than the scientists who are capable of taking suitable initiative for minimising the harmful repercussions of the advancement of knowledge.

In Defence of the Weather

Calcutta's cold weather, which we by courtesy call so, is a notorious procrastinator. It behaves much like the naughty boy in the story who leaves home for school and then wastes all his time on the way, playing marbles. It is always supposed to be coming, but never really comes. Or if it does, like the naughty boy again, it plays truant after putting in a dubious appearance. Nevertheless, it causes certain unmistakable changes in the human situation. For instance, it gets our woollens out of naphthalene—under false pretences though—and gives a very special lift to our culture, the season being more full of concerts, cabarets and conferences than even the hardest of culture-addicts can comfortably cope with. It is precisely because of this that we cannot afford to deprecate it, call it a mere thin partition between the moist heat of October and the dry heat of February or decry it as being as unsubstantial as "soup boiled with the shadow of a pigeon that has died from starvation".

Moreover, if the manufacturers of air-conditioning units can tirelessly blazon across acres of newspaper space that the coolth provided by these machines increases efficiency, it should be possible to argue that our cold weather, although far from a cold fact, does the same for a while on a much wider scale and at no cost. An American magazine recently made an editorial announcement saying, "It always takes us a bit of time in the fall to work up steam for the winter, but now that the overcoats are out of mothballs, The New Leader and its authors are once again rapping with space problems. We are just loaded with material, that is, . . ."

In this city, we may not have a winter properly so-called, yet it can be reasonably said that our perpetually incipient cold weather brings us much-needed relief, provided one does not decide to perspire in wool. With the first strains of the cuckoo in February, we had better remind ourselves, it will again be possible for us to sweat in our bath-tubs and fail to quench our parched throats with cold water which, the Psalmist said, was drink for "wild asses" and Dean Inge thought "a poor beverage to offer to a human being".

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

Three Distinguished Guests

The new year has brought three distinguished foreign visitors to India in quick succession. First came the Premier of Czechoslovakian Republic. Then came the President of Indonesian Republic. The last to arrive was the Prime Minister of Great Britain. The frontiers of economic relations between India and Czechoslovakia have been widening in recent years. Almost simultaneously with the visit of the Czechoslovakian Premier came the news of the finalisation of the conditions of Czechoslovakian participation in a foundry forge project to be erected as part of India's Second Plan. The Czechoslovakian Premier, in a joint declaration with the Indian Prime Minister, has also endorsed the principles of Panch shila.

The Indonesian President's visit, coinciding as it does with that of the British Premier, has given rise to some speculation about its purpose. A somewhat harassed person, Dr Soekarno does need some rest, especially when political conditions in his own country do not seem to give him the opportunity for it. In India he may be trying to combine rest with business. The Indian Union is in profound sympathy with Indonesia's claims to West Irian but differences exist as to the manner in which the claims could be pressed home on the Dutch. If some mutually agreeable formula could be discovered with or without the assistance of the British Premier who is also luckily on the spot, it will be a very desirable outcome of the present visits.

The British Premier has come with the declared purpose of seeing and studying conditions in India, with a view to promote Commonwealth and international goodwill. His call for a non-aggression pact

Editorial Notes

between the Western countries and Russia has been warmly received in India and may provide a most helpful background for his mission. It is pleasing to note that Her Majesty the Queen is also likely to visit India within a few months. Even if such visits are mere courtesy calls, they are bound to have an ineffable effect on the emotions and attitudes of the peoples, which will be all for the good.

Pressing Reassessments

In another few days, the annual session of the Congress Party will meet in Assam. The domestic and international situation would provide as usual a good bunch of important themes of discussion. This time, however, the Party can fulfil its purpose only if it is able to give an imaginative and far sighted new lead on questions which were once thought to have been settled beyond the possibility of controversy. The official language of the Union, co-operative farming and the mutual aloofness displayed by State Congress organisations should surely be among them.

The formation of a ginger group led by a couple of Union Ministers is a significant pointer. Notwithstanding the sarcastic comment which this group has evoked from the Prime Minister and one of the Congress Secretaries, it would be foolish to dismiss as trivial the lively disappointment which leaders in the lower ranks feel over the weaknesses and shortcomings of the party, both on the organisational and on the Governmental side. At least, Mr Nehru knows that the Party ranks do not think as one man on the language issue. It is doubtful if the organisation as a whole will display the catholicity and tolerance of Mr Nehru in reassessing this particular issue.

Co-operative farming is another of those economic idols before which much incense has been burnt in the past and very little done in the practical sphere. It is necessary to reconstruct the Party's recommendations in a manner suited to potentialities as reflected in the attitude of the average Indian peasant.

There is another question in respect of which a wrong step can well turn out to be disastrous. The manner in which the Communist Government came to be set up in Kerala, its record, its contribution to the strengthening of genuinely democratic forces in the country, all these will have to be examined in a dispassionate and long-term spirit.

There are reports from Kerala that some parties now in the Opposition are trying to manoeuvre the Communist Government out, through undignified means. It is difficult to imagine that the Con-

gress would be a party to such tactics. As long as the present Kerala Government conforms to the proprieties and limits set by the Constitution and the conventions which have been evolved in the course of the last ten years, the Congress may find it ultimately advantageous to foster the present co-existence further.

Retrenchment in Industries

Talking to Pressmen in Coimbatore, the Union Minister for Planning and Labour disclosed that a working group would shortly take up the study of the unemployment problem in the cotton and jute industries. The purpose of the study, according to Mr Gulzarilal Nanda, would be not only a full examination of the existing troubles but an equally thorough assessment of possibilities in the same direction with a view to avert them.

That for two of the major industries difficulties of a not unforeseeable kind have developed does not speak highly of the state of official machinery for co-ordination. The accumulation of stocks in cloth mills was warned against in proper time. Nor is similar unemployment confined to the textile industry. Import restrictions introduced in the course of the last year have strangled innumerable small firms and deprived several hundreds of unorganised manual and office workers of their means of livelihood.

A report from Bombay draws a sharp contrast between the congested Port conditions obtaining six months ago and the present when as many as ten berths are lying vacant. Over 4500 casual labourers are reported to have been retrenched, to which has to be added a like prospect before a considerable percentage of the employees in many shipping and clearing agency firms. The extension of the activities of the State Trading Corporation is pointed to be another source of unemployment for those engaged in the mining industry.

The new employment created by the State ventures is likely to be ignored by those who happen to be the victims and it might often be against facts to say that nationalisation reduces opportunities for work. At any rate, the private distributive trade with its ancillary services is no longer the milch cow which it used to be. On the contrary it is shrinking as a field for employment. Among the various considerations which go into the formulation of official policies, that of employment opportunities does not seem to hold any high priority. It is debatable how far this position is economically or politically wise.

Even the conquest of disease seems sometimes to aggravate this particular problem. The success of the National Malaria Control Programme has led to a steep fall in the demand for quinine and consequently has thrown a disheartening question mark over the future of the cinchona industry. The existence of malarial areas in other countries offers some hope but not enough.

The study proposed for the textile industry might as well be extended into a general one comprehending the entire national problem in which all the relevant industries could be examined from the angle of employment.

Reducing Railway Accidents

A major railway disaster near Ambala on the New Year day has come as another tragic reminder of the needs for a better understanding of the possibilities of technological improvements designed to minimise if not, completely avert accidents. The mere fact of the Railway Board or the person at the head of the Ministry, accepting responsibility for these accidents does not improve matters in any way.

The remedy has to be sought elsewhere. It has become customary to institute an enquiry over every mishap with the findings frequently remaining no more than a matter of academic interest. That there is considerable scope for human misjudgment and error is a point which even without expert enquiries could be generally assumed

World of Finance

Money Market's Good Showing in 1957

IN the 12 months since the end of 1956, the Deposit resources of Scheduled Banks have risen by the spectacular amount of Rs 292.95 crores to be placed at a new peak of Rs 1,405.55 crores. This, as we reported last week, is the most notable development in the World of Finance during 1957. As we have often urged in this section, it needs moreover to be pointed out that such improvement in Deposit resources is by no means derived solely or even mainly from the windfall accretions in respect of Counterpart Funds accruing to the credit of the US Embassy with the State Bank of India. In this context, it may be noted that the increase in Deposits of the State Bank, over the period, has worked out to Rs 122.95 crores. It is generally assumed that the accrual of windfall Deposits began only during the past year, and we have suggested that there was reason to believe that the special Deposits were possibly being largely made in the last week of each month. In the last two months of the year, the State Bank Deposits do not appear to reflect any receipts under this head; and, in the first ten months of the year, it is possible to suggest that Counterpart Funds may have been for a total amount of roughly Rs 78 crores. Thus, the balance of Rs 45 crores would presumably represent the normal accretions to Deposits experienced by the State Bank. Such a reading would appear to be correct, in the light of the following observations:

- (1) The increase in the Deposits of the Other Scheduled Banks is Rs 170 crores from a level of Rs 870.58 crores.
- (2) This increase of Rs 170 crores works out to an improvement of 19.5 per cent in the case of the Other Scheduled Banks.
- (3) In the case of the State Bank, the increase in the non windfall Deposits is likely, as we have suggested, to be around Rs 45 crores; and the State Bank's Deposits at the end of 1956 were placed at Rs 242.02 crores.

- (4) Thus, the increase recorded in the non windfall Deposits works out to 18.6 per cent.
- (5) The improvement of 19.5 per cent in the case of the Other Scheduled Banks compares with 18.6 per cent in respect of the State Bank.

It is possible, in this light, to put down such improvement in the Deposit resources of Scheduled Banks, as was derived directly

from the heightened tempo of industrial activity, at something like 18.6 per cent—and this leaves out of consideration the so-called windfall Deposits. While this differentiation between normal accretions and windfall Deposits has been necessary to prove that the phenomenon of large scale augmentation was in evidence during 1957, for the rest of the article such distinction is no longer useful.

The additional resources thus secured by Scheduled Banks were put to use under four specific heads. Firstly, borrowings from the Reserve Bank were reduced by Rs 55.43 crores from Rs 79.06 crores to Rs 23.63 crores. During 1956, on the other hand, Scheduled Banks increased their borrowings by Rs 49.04 crores, in spite of an improvement in Deposits of Rs 80.71 crores. Secondly, during 1957, Scheduled Banks added to their Cash Balances, including money at call, by Rs 53.20 crores. In the previous year, Cash Balances actually declined by Rs 8.48 crores. Thirdly, the Investment Portfolio of the Scheduled Banks expanded by Rs 68.52 crores in 1957; during 1956, they had declined by Rs 20.30 crores. Lastly, Advances have shown a rise over the year of Rs 69.60 crores; and this contrasts with a rise, during 1956, of Rs 157.01 crores.

It will be seen that the Scheduled Banks were faced with a shortfall in resources, during 1956, in the sense that the improvement in Deposits was far from adequate to cover the expansion in Advances. It follows that recourse had to be had from the Reserve Bank for additional borrowings, that Cash Balances were somewhat run down and that there was some disinvestment in gilt-edged. On the other hand, during 1957, there has been a plethoric improvement in Deposits, coupled with a much smaller expansion in Advances, which together have enabled the banking system to attain an extremely comfortable position as at the end of 1957.

At this stage, we need, however, to assess the impact of such changes on bank profits. During 1956, with Deposit resources consistently in optimum use, profits of Scheduled Banks registered a very sharp increase. The earnings from Advances during 1956 showed an improvement in consonance with the expansion of Rs 157.01 crores in the total of Advances. As we have seen, during 1957, Advances have risen by a much smaller volume. This will necessarily mean that the income from

interest will not show as large a rise during 1957 as was the case in 1956. In the second place, during 1956, Time Liabilities rose only by Rs 41.10 crores; and, to this, perhaps, we should add also the increase of Rs 49.04 crores in borrowings from the Reserve Bank. These are two heads under which, apart from the other operating expenses, the Scheduled Banks were obliged to meet a higher charge. In 1957, while it is true that borrowings from the Reserve Bank have been reduced by Rs 55.43 crores, regard must be had for the fact that Time Liabilities have shot up sharply by Rs 229.04 crores. Thus, even after allowing for reduction in borrowings from the Reserve Bank, the Scheduled Banks had to pay higher rates for a larger quantum of their resources. However, the average rate of interest paid on Time Liabilities would be somewhat less than the interest payable on borrowings from the Reserve Bank. So, it appears likely that interest paid will register some increase during 1957. Moreover, Bank Rate was raised early in 1957 to 4 per cent, and this should also inflate the expenditure incurred on interest paid. However, this will be correspondingly offset by improvement on interest earned.

There is one element in the earnings of the Scheduled Banks about which it is not possible to make any estimate. This concerns the earnings on foreign exchange business. Here, however, we may be permitted to point out that the import surplus during 1957 has been much steeper, if we make allowance for the fact that there was purchase of currency from the International Monetary Fund for \$200 million. That is to say, the import surplus during 1957 was around Rs 325 crores against Rs 205 crores in the previous year. This will necessarily have meant that Scheduled Banks would have had a larger quantum of foreign exchange business, and if, in this context, we have regard for the fact that the Indian Scheduled Banks have lately been successful in making headway in this sphere, it stands to reason that the earnings of Indian Scheduled Banks from foreign exchange business should be showing a worthwhile rise during 1957.

In a word, the developments in the World of Finance, during 1957, have enabled the Scheduled Banks to achieve a more secure and comfortable position, without, however, affecting their earnings. For reasons already enumerated, we expect such earnings to improve.

We may now turn to a study of the Reserve Bank figures. During 1957, Notes in Circulation rose by only Rs 40.72 crores. This was in spite of deficit financing during the year amounting to Rs 381.66 crores. We are to presume that the contractionist effect of the import surplus mitigated to a corresponding extent the tendency to a rise in active note circulation. In other words, the import surplus must have helped substantially to

Annual Reviews

act as a disinflationary instrument. The import surplus, as we have seen, was around Rs 325 crores; and so, the "uncovered" quantum of deficit financing was, in effect, Rs 56 crores, which led to an expansion in note circulation of Rs 40 crores. During 1956, on the other hand, as against an import surplus of Rs 205 crores, deficit financing amounted to Rs 207 crores. Largely speaking, it may be said that deficit financing was fully covered by the import surplus. Nevertheless, during 1956, active note circulation rose by a much higher amount. During 1956, the increase worked out to Rs 105 crores. The apparent conclusion is that the inflationary pressures were greater during 1956 than they have been during 1957. This is indeed borne out by the decline that has taken place in the index numbers of wholesale prices, whereas, during 1956, they had shown a rise.

At this stage, we would draw attention once again to the evidence of an increase in Deposit resources of Scheduled Banks much more than proportionately to expansion in active note circulation. We drew pointed attention to this phenomenon in the annual review for 1956, early in 1957. The table published below illustrates the pace at which Scheduled Banks are registering an improvement in their Deposit resources.

	Net Rise in Active Notes (1) crores.	Rise in Banks' Deposits (2) crores.	Ratio of (2) to (1) percentage.
1957 ...	37.46	292.95	782.08
1956 ...	92.73	80.81	87.15
1955 ...	182.54	90.81	55.87
1954 ...	64.17	93.14	145.15
1953 ...	26.12	3.74	14.32

To complete this assessment of the money market during 1957, we may briefly touch upon the short term money rates. At the end of 1955, the call money rate in Bombay was 3 per cent; and in Calcutta, 3 3/8 per cent; and in Madras, 3 1/2 per cent. At the end of 1956, the call money rate in Bombay ranged between 3 1/2 per cent and 4 1/16 per cent; in Calcutta, between 3 3/8 per cent and 4 7/8 per cent; and in Madras, between 3 1/2 per cent and 3 5/8 per cent. While these relate to call money from banks, other interest rates also showed similar rise. On the other hand, short term money rates at the end of December 1957 are shown to be lower than those prevailing at the end of December 1956. This is in spite of the fact that, in between, Bank Rate rose by 1/2 per cent to 4 per cent. The relative easiness in money rates, of course, is evidence of the removal of the atmosphere of stringency as a result directly of the phenomenal increase in the Deposit resources of Scheduled Banks. In the present context, we

merely wish to point out that short term money rates are at healthy levels and lend themselves to being brought into an orderly structure of interest rates for the money market and the economy as a whole.

All in all, 1957 has been an extremely satisfactory year from the money market point of view, and the monetary authorities will have only themselves to blame if they do not seize the initiative offered by such conditions to evolve a policy that suitably strengthens the money market and enables the money market to be of optimum use to the economy.

Brisker Signs of Busy Season

BRISKER signs of the busy season are available in the latest bank returns. Active note circulation has, according to the statement of the Reserve Bank for January 3, risen by Rs 16.36 crores to Rs 1523.06 crores. There has been expansion of currency for Rs 10 crores against Rupee Securities, this expansion being in respect of sales of ad hocs in favour of the Reserve Bank. For the first time, Rupee Securities have crossed the Rs 1000 crore mark to be placed

at Rs 1007.20 crores. Rupee coin has also gone out into circulation for Rs 1.06 crores and the Reserve Bank's cash in the till has been depleted by Rs 7.39 crores to Rs 9.13 crores. Foreign Securities in the Issue Department are unchanged.

Notwithstanding the proceeds from deficit financing for Rs 5 crores, the Centre's balances are lower by Rs 1.04 crores at Rs 52.50 crores. Other Governments have also presumably felt the strain of

month early disbursements, with their balances declining by Rs 5 crores to Rs 8.10 crores from Rs 13.01 crores. Their borrowings from the Reserve Bank, however, are lower by Rs 0.43 crores at Rs 34.60 crores. Other Deposits are marked up by just under Rs 2 crores to Rs 115.70 crores.

The Reserve Balances of member banks have again recorded a decline—for the fifth consecutive week—of Rs 4.31 crores to Rs 66.37 crores. At the same time, they would appear to have had larger recourse to central bank credit, since the Reserve Bank's Other Loans and Advances have risen, for the fourth successive week, by Rs 7.37 crores to Rs 67.41 crores. The advances against usance bills have been marked up from Rs 21.07 crores to Rs 24.92 crores.

Investments are lower by Rs 1.38 crores at Rs 243.74 crores. Balances Held Abroad have been depleted to the tune of Rs 4.46 crores to Rs 17.90 crores.

The State Bank's return for January 3 discloses a rise of Rs 1.49 crores to Rs 366.47 crores in Deposits. Other Liabilities are sharply lower by Rs 7.68 crores at Rs 5.18 crores. Advances, reflecting both the busy season progress and month early disbursements, have been marked up from Rs 170.92 crores to Rs 174.93 crores. As a result, Cash Balances stand reduced at Rs 24.68 crores from Rs 30.72 crores.

The return of Scheduled Banks for the last week of 1957 shows a rise of Rs 7.02 crores in Deposits to Rs 1,405.55 crores. But this has been insufficient to cover the expansion in Advances, which have risen by Rs 10.36 crores to Rs 858.02 crores. Consequently, borrowings from the Reserve Bank have been marked higher by nearly Rs 1 crore at Rs 23.67 crores. Moreover, Cash Balances have been run down by Rs 1.50 crores to Rs 169.03 crores.

BANK PROFITS

Bank profits appear to be slow in being released this year, although two Banks have already made public a summary of their performance in 1957. To Dena Bank once again belongs the credit for being the first to announce preliminary figures in respect of the year past. The other Bank to have vouchsafed some information is the Bank of Jaipur. Both these announcements have been published in the Company Reports page of this issue of Indian Finance. However, they do not offer any clues as to the general performance of banks in 1957. Nevertheless, it is possible to suggest that, generally, most banks would be experiencing an improvement in the balance of profit; and such banks as have a substantial quantum of foreign exchange business may be expected in particular to record praiseworthy performances. By the next week, it is to be anticipated that the first crop of profits of the bigger banks will be available.

Trends of British Stock Market

By PAUL EINZIG

IN recent weeks there were two opposite tendencies running concurrently on the Stock Exchange. On the one hand, equities were inclined to continue to drift downward, even if the movement was moderate and hesitant. On the other hand, Government loans have been quietly firm. It seems reasonable to expect that these conflicting tendencies will continue for some time to come and may even develop into major trends. For, while the prospects of equities are far from encouraging, those of Government securities justify a fair degree of optimism.

The firm tone of the Gilt-edged market is largely explained by the pessimistic outlook about equities. For years there was until September 1957 a growing trend towards switching investments from Government loans into equities. This was due in part to the growing realisation that the real purchasing power of the interest and principal of fixed interest bearing securities was depreciating fast as a result of the relentless rise in prices, and in part to the assumption that the expansion of production, prices and profits would ensure steadily rising dividends on industrial equities. Moreover, Government stocks fluctuated rather widely in recent years, so that they came to be regarded as being practically as speculative as equities. Indeed while the range of their fluctuations was not so wide as that of equities, their long-range trend pointed distinctly downward, so that their holding appeared to entail speculative risk without compensating advantages.

In the circumstances first-rate industrial equities came to be looked upon as much safer investments than Government loans. More and more investors of a highly conservative type switched over to equities, and there was a real danger of a general flight from the Gilt-edged market. There can be little doubt that, had it not been for the increase in the Bank rate to 7 per cent, such a flight would in fact have taken place in the autumn.

The increase in the Bank rate and the other disinflationary measures affected Government issues in two ways. They gave rise to hopes that, after all the inflationary spiral might be brought to a halt, so that the depreciation of the real purchasing power of money invested in Gilt-edged securities would be interrupted. It was the continuous character of the rise in prices which was mainly responsible for the demoralisation of the Gilt-edged market. More and more people felt impelled to abandon hope that this process would ever be halted let alone reversed. With a cautious revival of such hopes the prospects of Gilt-edged securities have improved.

The disinflationary measures gave rise to growing doubts and

the Bank rate the Government clearly indicated its determination to resist wage demands in the public sector of the economy. Its example is expected to be followed to a large degree in the private sector. A wage freeze would effectively halt the rising trend of prices, especially as the cost of raw material has been falling, and there is growing pressure by the Government on manufacturers to lower their prices.

Admittedly, there was an orgy of spending just before Christmas. Most people were holding back their purchases till the last week, as they wanted to see "which way the cat jumped." In the absence of any clear indication whether there would be inflation or deflation in 1958, millions of consumers

who usually spread their Christmas shopping over several weeks rushed to buy during the last few days. There was a record expenditure and the note circulation rose to a new record figure. But this outward evidence of inflationary boom failed to bring about a noteworthy recovery in equities.

There is a feeling that consumer demand will be lower in 1958 than in 1957. There are indications that capital expenditure is already declining. In the absence of substantial wage increases there would not be sufficient consumer purchasing power available to maintain the demand at higher prices. A factor of some importance is the removal of rent control. The resulting increase of rents will trans-

high-quality

ACC FIREBRICKS

for Cement Kilns • Foundries
Smelting Furnaces • Boilers

FROM the ACC's Firebricks Factory at Katni, now expanded and modernised, come high quality refractories with medium, high and super alumina content to meet all your requirements.

Because of their great resistance to spalling and abrasion, these refractories ensure long and trouble-free service and low maintenance cost. Complying fully with the I.S. Specifications 6-1953 and 8-1953, ACC refractories are made to the shape, size and quality you require. They are far more economical than ordinary firebricks. And the ACC hallmark on them is your guarantee of high quality and dependability.

World of Jute

Good Start for New Year

The figures for stocks of jute goods at the end of December 1957, released this week, show that the jute industry has begun the New Year well as far as opening stocks are concerned. The fact that total stocks at 75,600 tons are only 4,600 tons higher than at the end of the previous month has come as an agreeable surprise because the trade anticipated a far bigger increase. An additional favourable indication is the decline, though small, in the stocks of hessian.

Compared with the corresponding period of last year, the industry's statistical position now is decidedly better. For, stocks are comfortably below one month's

production. As against total opening stocks of 95,700 tons in 1957, the opening stocks in the current year are more than 20,000 tons lower at 75,000 tons. The good demand for sacking goods during the past year is reflected in the greatly reduced stocks of this category of goods which now stand at 39,200 tons as against 64,700 tons at the beginning of the previous year. A year ago hessian stocks at 19,700 tons were the lowest since 1950; but during the second half of 1957 hessians sales lagged behind. Mills were, however, able to keep hessian stocks at manageable levels by switching over a steadily increasing proportion of their hessian looms to the production of

sackings which were in good demand.

*

The jute goods market opened the year on a quiet note in the absence of foreign enquiries. Prices, however, moved both ways due to purely speculative activity. Hessian 40" x 10 oz Ready was finally placed at Rs 39.40 with the Jan-March and April-June positions at Rs 39.70 and Rs 39.90 respectively. In the Sacking section B Twills Ready was done at Rs 106.30 with Jan-March at Rs 106.90. April-June position was very steady at Rs 107.30.

An easier tendency prevailed on Friday though at one time prices showed some improvement on bear covering. Toward close sentiment again turned quiet. Hessian 40" x 10 oz Ready shaded to Rs 39.30. In the forward positions, while Jan-March was slightly lower on balance, April-June was well maintained at Rs 39.90. Elsewhere, B Twills Ready reacted to Rs 105.85 with Jan-/

March and April-June at Rs 106.50 and Rs 106.75 respectively.

Speculative activity was particularly noticeable in hessian on Tuesday while the rest of the market also recovered on bear covering. Hessian 40" x 10 oz Ready closed 40 nP higher on balance at Rs 39.40 while Jan-March and April-June positions were higher by 25 nP and 15 nP at Rs 39.65 and Rs 39.90. B Twills Ready gained 25 nP to Rs 104.00. The Jan-March and April-June positions were also higher at Rs 104.40 and Rs 104.70 respectively.

The undertone was weak on Monday when bears, encouraged by the absence of fresh business, hammered down prices. Hessian 40" x 10 oz Ready dropped 30 nP with similar falls in the forward positions. Jan-March eased to Rs 39.40 and April-June to Rs 39.75. In the Sacking section B Twills Ready declined by nearly two points to Rs 103.75 while Jan-March reacted to Rs 104.10 and April-June to Rs 104.50.

With the release of December-end stock figures, the upward trend in prices continued in earlier dealings on Wednesday. In later dealings there was selling pressure from speculators and prices began to display a sagging tendency. Towards close there was some bear covering due to settlement considerations. Hessian 40" x 10 oz Ready closed with a small gain on balance at Rs 39.45. In the forward positions, while January-March was slightly better at Rs 39.70, April-June remained unchanged at Rs 39.90. Sacking prices were also a shade better with B Twills Ready at Rs 104.10. January-March at Rs 104.40 was unchanged but April-June at Rs 104.80 was 10 nP higher.

The raw jute market opened steady on the strength of some business done during the holidays. Sellers were also reserved in view of the poor arrivals in upcountry centres. As the week progressed, however, sentiment turned quiet partly in sympathy with the goods section and partly on account of the continued absence of mill interest. Assam Bottoms, which opened at Rs 27.00 per maund, after maintaining a steady front for a time, began to develop a sagging tendency and by close stood half a point lower on balance at Rs 26.50. Northern Bottoms declined from Rs 27 to Rs 26.25 per maund while Dalsee Bottoms moved down to Rs 29.75 from Rs 30.50 per maund. At these lower levels some sizable mill business had been reported done.

The following table shows the price trend during the week:

Hessian:	Opening Rs nP	Closing Rs nP
40" x 10 oz.		
Ready	39.50	39.45
Jan-March	39.80	39.55
April-June	39.80	39.55

Sackings:

B Twills:	Opening Rs nP	Closing Rs nP
Ready	106.75	104.40
Jan-March	106.70	104.65
April-June	107.15	104.90
Heavy Coes Green	106.50	104.00
Cornsacks	107.50	105.35
Cubans	132.00	130.50
A Twills	129.00	126.50
L Twills	129.00	126.50
D. W. Flours	127.50	125.00
Sugar Bags	122.00	119.50

EFFICIENT INSULATION

part of the pattern
of India's
industrial progress

In every industrial undertaking, efficient insulation is vitally important. Good insulation is not just a question of using high quality materials...it's a science that calls for experience and skill.

We offer the services of a highly specialised contracting organisation, with the resources to undertake heat, cold and sound insulation contracts of any magnitude anywhere in India. Whether you are faced with a minor problem or a major project in insulation, we shall be glad to serve you.

World of Tea

Cheerful Opening for New Year

AFTER the holidays, the Calcutta Tea market reopened on a decidedly stronger note and there was a good demand at generally dearer rates. The stronger tone was ascribed largely to floods in Ceylon and fears of a fall in Indonesian output. There is a general feeling that, if the output in Indonesia is affected, its buyers—USA and Holland—might turn their attention to Indian tea. A great deal will, however, depend on Russian buying, which is unpredictable.

In Mincing Lane, the rise in values appears to have been prompted more by prospects that the floods in Ceylon would interfere with the movement of tea from the island to the consuming countries. Demand was also felt to have been boosted following accumulation of orders over Xmas-break.

In the Export Sale held in Calcutta this week, offerings were 61,988 packages. Black Fannings, especially those with a clean black leaf appearance were the strongest feature of the sale. "Teas for price" were sold well and were dearer by 6 to 10 nP per pound. There was good demand for Common and Medium Broken which were 8 to 10 nP dearer, the Fannings grades in these categories being 10 to 14 nP dearer and sometimes more.

Medium BOPs with any quality were sold well; but others in this category were irregular and were a weak feature. Medium Orange Fannings met with more demand and often sold well above valuations. CTC Assams were fairly well supported and generally sold well, particularly the Fannings grades which were often dearer. Non-wither Dooars met with keen competition and were irregularly 10 to 20 nP dearer.

Well-made Whole Leaf grades and stylish BPSs met with a good enquiry at generally dearer rates. The few Darjeelings, on offer, were also sold well. Following rates were quoted, the figures shown within brackets being the closing rates for 1957: Clean Black Pekoe Rs 2.30 to Rs 2.35 (Rs 2.30); Plain BP Rs 1.58 to Rs 1.62 (Rs 1.52); Plain Fannings Rs 1.68 to Rs 1.72 (Rs 1.60); Medium BP Rs 1.64 to Rs 1.68 (Rs 1.58); Medium Fannings Rs 1.78 to Rs 1.82 (Rs 1.68); Best Assam CTC BP Rs 2.60 to Rs 2.80 (Rs 2.80) and Best Assam CTC Fannings Rs 2.50 to Rs 2.60 (Rs 2.60).

In the Internal Sale, offerings were 19,789 packages of Dusts. There was a good general demand for all descriptions with the exception of the fibrous and plain liquoring CTC Assam. Bright liquoring medium and best liquor-

consumption. There was greatly improved demand and prices were dearer. The Green teas, on offer, were sold well with prices generally above valuations.

In the Export Quota section, rates developed a hardening tendency and moved up to 18½ nP from 16½ nP quoted in the previous week. Business was reported done at rates varying from 17 nP to 18½ nP per pound.

About 1,700,000 pounds of Leaf tea were offered for exports in the first auction of the New Year held in Cochin this week. Improved quality teas attracted good general demand and were considerably dearer. Other types were irregularly 10 to 15 nP per pound dearer. Plain types were about steady.

After a lapse of three weeks, auctions were resumed in Colombo last week, when offerings were 6,774,680 pounds. Buyers had successfully exported a fair weight of tea during the interval and there was an active demand. There was a fair selection of Nuwara Eliya teas with quality showing a de-

cline and prices were irregular, resulting in some withdrawals. All grades of high-grown teas met, however, with keen competition at advancing prices.

Among Medium-grown teas, most Broken from Western districts registered an advance of 10 to 20 cents per pound. There was a fair weight of unattractive off-season Uvas, which were sold below last prices following quality.

In Mincing Lane, about 46,600 packages were offered. There was a very strong demand. Prices for good liquoring and flavoury kinds showed advances of 1d to 3d per pound. Plain Fannings were quoted at 3 sh 6d as against 3 sh 5d in the previous week.

Tea stocks in London, as on the 27th December 1957, were 124.12 million pounds as compared to 121.12 million pounds in the previous week and 62.45 million pounds a year ago. Landed between 21st and 27th December were 7.69 million pounds, while deliveries were 4.69 million pounds.

In Education **PHILIPS** help to teach the modern way

INDIA'S teachers today need the most modern methods of mass education to cope with the fast-growing number of students in schools and colleges. Philips are proud to be helping our teachers by supplying the equipment they require—backed by many years of Philips research and experience. Whether in a city classroom or out under a village tree...whether it's a community listening radio set to bring entertainment and knowledge to the people, or audio-visual equipment to demonstrate the modern way of life, Philips help to teach our millions everything from basic hygiene to the ways of our democracy.

PHILIPS INDIA LIMITED

Contributing today to India's future

EDITORIAL NOTES

(Continued from page 82)

The question is how to reduce this scope through the application of mechanical devices, of which several have been put into the field by engineers and scientists all over the world. Special visual aids to the drivers, especially during foggy weather, more powerful lighting or other indications of signals and above all radar, could easily be thought of as some of the means to minimise the number of accidents on the Railways.

At the Transport Users' Conference at Patna, the Railway Minister claimed that the incidence of accidents in India was definitely on the decrease and compared favourably with the most up-to-date railways of the world. On the lay man, who does not have the data to verify the statement, the gruesome character of the accidents may leave a more violent impression. Even if the accidents are less than before, more effective preventives are called for.

TRENDS OF BRITISH STOCK MARKET

(Continued from page 85)

fer some £100 million or more from many millions of tenants to a few hundreds of thousands of landlords. This will mean that, while tenants will continue to pay the same amount in taxation, the amount transferred to landlords will be subject to Income Tax and Surtax which will wipe out more than half of the amount. A high proportion of what remains will be saved by the recipients who being members of higher income groups, save a larger proportion of their income. And a high proportion of what is spent will be spent on luxuries which do not affect the cost of living to anything like the same extent as spending on necessities does. On balance, there will be a marked decline in consumer demand owing to the operation of this factor.

Uneasiness reveals among investors about the prospects of the markets in equities also owing to the decline in raw material prices

and more especially owing to the prospects of a business recession in the United States. It is true, very few people in Britain expect an aggravation of the downward trend in American business. But it is felt that even a moderate recession is liable to have marked repercussions on British business conditions. Few people believe that the "miracle" of 1954, when Britain was able to maintain an inflationary economy in face of a business recession in the United States, without any adverse effect on the balance of payments, would repeat itself in our lifetime. The reason why Britain got away with it last time was that the American recession was operating in 1954 against a background of an expanding world economy. At present the trend of world economy is contracting. Already several raw material producing countries have decided to curtail their imports.

In the circumstances many investors feel that the right course is to switch back into the Gilt-edged market. So the strength of Government stocks is largely due to the weakness of industrial securities. For each investor who believes that Government loans are inherently strong there must be several who prefer them because they are relatively stronger than equities. But whatever be the reason, the outlook for Gilts is good.—(Copyright).

TEA BOARD

EXPORT QUOTA 1958-59

TEA PRODUCERS IN INDIA ARE HEREBY reminded that in terms of Rule 23(1) of the Tea Rules 1954, Tea Estates desiring to be allotted an export quota for the year 1st April 1958 to 31st March 1959 are required to submit an application therefor, which must be filed with the Tea Board not later than the 1st February 1958. No export quota will be allotted unless an application under this rule is duly filed. Application forms have already been issued to all registered estates, but the tea Board will not hold themselves responsible for any omission in this respect, and Proprietors, Agents, Managing Agents or Secretaries who have not received the application forms are requested to apply for these, in the case of estates situated in North India, to the Controller of Licensing, Tea Board, 1-A, Vansittart Row, Calcutta-1, and in the case of estates situated in South India, to the Joint Controller of Licensing, Tea Board, Church Road, Fort Cochin, Cochin-1, South India.

P. V. Govindan,
Controller of Licensing.

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. P.A.G.M.I. (B-5) for supply of 1140 Imp. Gallons of paint Red Lead Ready Mixed non-setting and 465 Imp. Gallons of Paint Red Oxide Ready Mixed. Tenders will be accepted upto 12 noon on 27-1-58.

Tender forms (not transferable) are obtainable from the Controller of Stores on remittance of Rs 5/- (not refundable) per copy by Money Order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Rly., Garden Reach, Calcutta-23 by local firms.

Tender forms should accompany the receipt for earnest money of Rs 920/- from the Chief Cashier together with a valid Income Tax Clearance Certificate without which the tender is liable to be rejected. Contractors having permanent deposit of Rs 1000/- with the Controller of Stores are exempted.

S114 GENERAL MANAGER

From a Neighbour

If there is a lot of comings and goings between Jamshedpur and Rourkela, that is only as it should be. Of all the steel plants, the one coming up at Rourkela is closest to Jamshedpur, India's first steel city.

If these comings and goings lead to an useful exchange of experience and ideas, that is again as it should be for Jamshedpur has been making steel these 50 years. And it is very happy to lend a hand with the training of engineers

Good Wishes
to Rourkela

and technicians for Rourkela. There are nearly 150 of them at Jamshedpur—from key personnel to artisans.

Strengthening these ties of friendship are the surprisingly large number of old Jamshedpur faces that one sees at Rourkela. To them and their colleagues, Jamshedpur sends neighbourly greetings and good wishes.

EDWARD Hilton-Young once likened an organised state to a great factory, and the next step for him was to assert that the Finance Department or the Treasury is, as it were, the engine-house which keeps the machines of government humming with activity. The central importance of the Finance Department is, of course, undeniable; but, for this very reason, it is subject to great strains and stresses, and breakdowns when they occur are all the more dangerous and, therefore, to be avoided. So, paradoxically, the Treasury is both a reservoir of great power and a department of extreme vulnerability. I am not concerned with the strength that flows from the Treasury, but with its vulnerability. I have in mind two Chancellors who have, in recent times, for different reasons, been having a rough time of it.

One is Mr Peter Thorneycroft. Circumstances have compelled him to resign, although the ostensible provocation for such an extreme step appears to be unimportant. In the 12 months that he has been Chancellor, Mr Thorneycroft has had thrown on him a number of problems none of which was of his own making. It was, as it were, his heritage from the Conservative Government of the earlier several years, and events conspired to demand from him a set of measures that could not do otherwise than alienate popular support. The wages costs spiral inflation had gathered terrifying momentum, and during the past financial year the Conservative Government had perforce to adopt stern measures to arrest this alarming trend. I am, as readers know, no friend of a dear money policy. But I am not sure whether Mr Thorneycroft's decision to raise Bank Rate to 7 per cent in September last year was evidence merely of a die-hard adoption of classical policy. For, it was clear in 1957 autumn beyond all shadow of doubt that dear money as such was a futile weapon in the anti-inflationary arsenal. If, then, in spite of such available knowledge, the British Chancellor raised the Bank Rate to 7 per cent, it could only have been if his purpose was something more than merely to continue to fight against inflation with a classical armoury. I should say that the real objective, the underlying aim, must have been to shock the country into an

awareness of the urgency for sacrifice, if necessary, to halt the inflationary pressures. Mr Thorneycroft can at least have this satisfaction that, during his tenure in office, he was able to strengthen sterling in the world's money markets to an extent that has not been, I think, witnessed since the end of the Second World War. But let us make no mistake about it, Bank Rate at 7 per cent and all the attendant concomitant restrictions on credit did not reflect Mr Thorneycroft's capacity for winning friends and influencing people. It is no good wondering how a Labour Government would have acted if it had had to contend with the problems that confronted Mr Thorneycroft. Perhaps, any British Government in the autumn of 1957 would have found inescapable a recourse to unpopular measures. Mr Thorneycroft was all but crucified by one section of the British press. But he stuck to his post; he saw an appreciation in the strength of the pound, he could point to an improvement in the gold and dollar reserves.

But now, Mr Thorneycroft has, if anything, made his exit in a more unpopular way and at an unfortunate and inopportune time. Ostensibly, the reason for Mr Thorneycroft's inability to continue in office is because his colleagues in the Cabinet and he are unable to see eye to eye on the need for cutting down Government expenditures. The amount involved is in itself a drop in the ocean—Mr Thorneycroft has taken umbrage at an estimated increase of £50 million in the expenditure on social services, but £50 million is less than 1 per cent of governmental expenditure. But, if this indeed is the case—that is, if, in principle, Mr Thorneycroft is opposed to any increase in governmental disbursements—then, we have to revise our picture of the outgoing Chancellor, and to label him as the one who has full trust in the classic weapons against inflation. For, while it is undoubtedly true that inflation anywhere, and particularly in the UK, derives part of its momentum from a larger volume of governmental disbursements, the fact is that, in the world as it is today, it is neither practicable nor possible for Government to effect any reduction in social services. Moreover, I may even go to the extent of saying

that, in the perspective of cold war, a reduction in any governmental expenditure is difficult. In the case of the UK, it is particularly hard for defence costs to be scaled down—at least, under the present Conservative Government and in the light of the present attitudes and postures in the cold war of the UK Government. So, where do we go from there? You might say that one answer is to adopt a tougher attitude in regard to labour, that the UK Government should resist any further spiral in the form of acquiescence in any further labour demand for increase in wages. You could say that, in the final analysis, the salvation for Britain from its present inflationary predicament can lie only in higher output as a result of improvement in productivity. That is, in British circumstances, new investment for adding to capacity cannot lightly be permitted, since this in itself releases fresh inflationary pressures. But, on the other hand, higher productivity would, quite definitely, be one answer to inflation. What the new Chancellor, Mr D. Heathcoat-Amory, will do remains to be seen. It is, however, significant that a statement should have been forthcoming to the effect that he would continue to fight against inflation. But, by implication, this is not to include any further strenuous paring of Government expenditure. Does this mean that a new look will be given to the British onslaught against inflation? I hope so, because I personally believe that the time has long passed when classic measures can succeed against inflation. Selective monetary control can alone be effective, unless the country in question is prepared to brave the other economic extreme of deflation or depression. But, here, again, I think there are few governments who can afford to risk large scale unemployment; in these days, no people will countenance such regression in economic policy. Did Mr Thorneycroft believe that the battle against inflation could be vouchsafed only by "correcting" the state of overfull employment by inducing depression? I will not attempt an answer, but I will say this, that Mr Thorneycroft's exit is more likely to be due to the realisation on his part that it would be impossible for him to continue his classic fight against inflation. So, it may be fair, and

not merely charitable, to read in Mr Thorneycroft's decision his anxiety to step aside so that another man could wage another battle with another set of weapons.

Will we be given a preview of what may perhaps be a new economic policy when the Budget for 1958-59 is presented three months from now? I think it is entirely possible that the Government will indeed choose to set at rest the furore that has been aroused by the surprise resignation; and, to this end, the evolution and announcement of economic policy on lines reorientated to the new economics of today would undoubtedly help. Far be it from me to presume to prescribe remedies for Britain's ills. What is more, such prescription would require specialised knowledge of the unique aspects of the British economy, and while I am generally familiar with the problems confronting Britain, I could not go so far as to suggest specifics. There is, however, the duty that I have to draw lessons from international events for the benefit of this country. It is from this point of view that I may now briefly touch upon British inflation, the battle against it, and the significance to India. There was at one time the danger that the Indian monetary authorities might choose blindly to follow whatever the British monetary authorities did. Fortunately for us, it is some years since such "dependence" has been brought to an end. The last occasion when India was more or less aligned monetarily to Britain was in November 1951, when the central banking institution in both countries announced an increase in Bank Rate. Since then, there have been a number of changes in the UK Bank Rate, but there has been only one increase in the Indian Bank Rate. So, I am not worried that, when inflationary pressures make themselves felt in this country, we might adopt tough money policies which, as Britain has discovered, are of no use at all. The one important lesson that Britain offers is that a tough money policy or a dear money policy has been sapped of its strength. The second observation is that, with inflation in Britain, and with the price situation more stable in this country, the rupee price of imports from the UK tends to go up. I may state here that Britain is possibly

more worried in this matter than India. For, unabating inflation can destroy the competitiveness of British goods in export markets. So far, internal inflation in Britain has not greatly adversely affected British exports, because prices continue to be competitive. So, although the rupee cost of our

imports has been going up, the prices have not been unreasonable. If Mr Thorneycroft's exit is, as I have thought it might be, a harbinger of a new economic policy which is more successful in combating inflation, then we have reason to anticipate an improvement in our favour now, since

imports from Britain might cost less.

I would add a last word, and that is that, in Indian circumstances, even the experience of industrialised countries which have been hard hit by inflation does not offer useful lessons. So, I put it to the

reader that we have come to a stage when it would be folly to place undue emphasis on anti-inflationary measures implemented in other parts of the world. The second Chancellor that I am under commitment to discuss is, of course, Mr T. T. Krishnamachari; I will leave him over for the next week.

★

The New Year has brought special rejoicing to Clive Street and very rightly. One of the most important members of the British business community, Mr O. T. Jenkins, senior Managing Director, Balmer Lawrie & Co. Ltd., who has spent long years in India has had his services suitably recognised, with a knighthood conferred on him in the Honours List. Other recipients of honours include Mr J. R. Wilson, Deputy Chairman and Secretary of the Assam Branch of the Indian Tea Association, who receives an OBE; Mr T. King, Manager for India, Linotype and Machinery Ltd., and Mrs Z. M. Powell, wife of Mr R. L. Powell, Director of Begg, Sutherland & Co., Ltd., Kanpur. (I might add here that newspapers will feel grateful that Mr King's services have thus won recognition). The New Year honours seem to have missed Bombay's British businessmen this year, but I wish them better luck next time, on the Queen's birthday. Talking of titles, honours and decorations, I do not think they are "birdlime for fools", as a cynic said. I rather think they serve a very useful purpose in marking out people who have achieved distinction in their own fields of work. In India, one notices with regret, authority is somewhat allergic to businessmen and industrialists, especially where official honours are concerned. Mr J. R. D. Tata, it will be recalled, received recognition from the French Government for his pioneering work in the aviation industry and from a private body in the USA for his leadership in business management long before he qualified for a "title" at home. Mr G. D. Birla, if I am not wrong, has been fortunate in obtaining a Padma Vibhushan, but there are several other distinguished names in Indian industry which would seem to deserve recognition. One readily springs to mind, and that one is associated with the great enterprise at Burnpur. There are many examples of the title 'Sir' being levelled down to plain 'Sri', but to let the affected go without some sort of compensation looks less than charitable, especially when many Indians are even now allowed to be decorated by foreign governments.

Gateway Gossip

Foreign Investment Balance-sheet

THE Reserve Bank of India has again made an assessment of India's liabilities and assets, and with the latest study, which was released in the Gateway City over the last week end, a picture is available of the Indian foreign exchange balance sheet as at the end of 1955. This, I may remind the reader, is the third Survey that has been made by the Reserve Bank. The first one undertook assessment as at 30th June 1948; the second analysed the period up to December 1953; and the latest reviews developments in this sphere during 1954 and 1955. The Survey is already more than two years old, and to that extent, I am afraid, its usefulness becomes reduced. This limitation is recognised by the Survey, which asserts that it is very likely that, by the end of 1957, India has already become a net debtor country as a result of a sizable decline in the sterling assets and large additions to its liabilities particularly to the USA, the IMF and the IBRD. But while it is true that there has been a revolutionary change in India's international monetary balance sheet, we must bear in mind the fact that the substantial increase in foreign exchange liabilities, which have thus transformed India into a net debtor country, has been derived from the Second Plan efforts at increasing industrialisation. Moreover, the prospect almost certainly is that India will continue to be a debtor country in this wise at least till the end of the Third Plan. It is only then, only by that time, that the new industry set up in this country will have started to contribute to foreign exchange earnings and thus help to reduce, by repayment, foreign exchange liabilities. Where the Survey assumes an important and instructive significance lies in the attitude of the foreign investor as far as this can be discerned in reading between the lines of the Survey. In this light, and looking in particular for implicit rather than explicit evidences, I may now proceed to examine what the Survey has to offer.

As at the end of 1955, India's net international investment position showed a balance in our favour of Rs 961 crores; and this represents the official sector. In the non-official sector, the net position was an excess of liability to the extent of Rs 475 crores. Taking both into account, India's net credit position is to the tune of Rs 485 crores. We figure as a creditor in respect of two countries: the UK, to the tune of Rs 408 crores, and Pakistan, for an amount of Rs 269 crores. But this in itself shows a substantial fall from our net position of credit of Rs 557 crores at the end of 1953, and of Rs 1504 crores at the end of

June 1948. The decline of over a thousand crores in our net credit position is almost wholly derived from our running down of sterling balances, since our UK assets have fallen from Rs 1591 crores in June 1948 to Rs 852 crores in December 1955. Since, subsequently, in 1956 and 1957, there has been a further decline in India's sterling balances to the extent of Rs 400 crores odd, it is clear that, and in view of the purchase of currencies from the IMF as well as the further loans obtained from the World Bank, India will figure as a net debtor country as at the end of 1957.

There is little that needs to be noted in regard to the long-term foreign liabilities and assets in the official sector. The liabilities are largely made up of loans from the USA, from the UK, from IBRD and dollar purchases from the IMF. The total liabilities in the official sector are placed at Rs 173 crores at the end of 1955, and they show a fairly sharp drop from Rs 213 crores at the end of 1953. The decline is largely owing to the repurchase of currency from the IMF, which reduced liabilities by Rs 41.6 crores. Also, on the assets side, the foreign assets of the official sector are found to have gone down by Rs 58 crores to Rs 420 crores. This is due to the settlement of the Inter-Government debt of Rs 48.2 crores due from Burma. Of the foreign assets, the bulk is comprised by Britain, the figure against which is Rs 393 crores.

Next, in respect of the long-term foreign liabilities and assets of business enterprises in India, the total business liabilities at the end of 1955 were placed at Rs 532 crores. Of this, direct investments account for the major share at Rs 411 crores. Of portfolio investments, equity capital is placed at Rs 55 crores, of which investment in manufacturing is shown to be Rs 24 crores. The total foreign capital in manufacturing activities is Rs 178 crores. Among the creditor countries, Britain continues to be predominant with a figure of Rs 402 crores, accounting for 77 per cent of the total business liabilities. The US is a creditor to the tune of Rs 45 crores, and the other countries make up the balance. Against such liabilities under business enterprises in India, the long-term assets of Indian joint stock companies make poor showing. These assets amount only to Rs 54 crores. Of this amount, Rs 20 crores are represented by the UK and Rs 17.6 crores by Pakistan.

Foreign business investments as at the end of 1955 show an improvement of Rs 61 crores over 1953, to be placed at Rs 480.6 crores. However, part of this increase is accounted for by revaluation of assets

by tea companies, and the Survey notes that 'foreign investments in this sector were written up by as much as Rs 20 crores'. So, the net change in foreign investments is thought to be around Rs 39 crores. The cash transfer on account of repatriation of foreign business investments is put down at Rs 10 crores, while inward remittances for investment amounted to around Rs 3 crores. A second way in which the increase in foreign investment was enabled was by addition to reserves. The gross addition to reserves of foreign-controlled companies is put down at Rs 45 crores; but withdrawals for transfer abroad amounted to Rs 22 crores. Thus, the net inflow, in the sense of additions to reserves, was in the vicinity of Rs 23 crores; but the Survey makes it a particular point to note that this estimate refers only to retained earnings held in India—that, earnings transferred abroad may still be retained as reserves by the parent companies concerned. The average annual rate of capital inflow is thought to have declined from Rs 24-25 crores to Rs 17-18 crores.

At this stage, there is the hint that foreign companies are not ploughing back into reserves as much as do the Indian companies, the Survey making a reference to the much higher volume of business savings of the mainly Indian owned companies. In the breakdown of non-banking business investments, attention has been drawn to the plantations industry, wherein apparently there was an increase in investments for Rs 15.7 crores. But this is to overlook the fact that there was revaluation of assets for around Rs 20 crores. Consequently, the Survey says that it appears that 'the plantations industry has repatriated assets to the extent of Rs 4 crores'. Also, of course, there was the fairly substantial element of transfer of ownership of foreign tea gardens into Indian hands.

Significantly, foreign investment in the so-called new companies has been at a faster pace than in companies established prior to July 1948. The new companies received a total net investment of Rs 24 crores as against Rs 11 crores in the case of old companies.

Lastly, a country-wise break-down of changes in business investment indicates that four industrial countries—the UK, the USA, West Germany and Switzerland—increased their investments by Rs 175 crores in the period between July 1948 and December 1955. Although the UK continues to figure as the leading investor of capital, its investment during 1954 and 1955 was much smaller than during the earlier period. On the other hand, investment by the US in India is tending to improve substantially—but such

improvement as has been recently registered was due primarily to the inflow of capital on account of the petroleum industry.

In conclusion, I am afraid that the lesson that 1954 and 1955 have to offer for us is that the scope is extremely limited either for an increase in the foreign assets of the non-official sector or in the flow of new capital investment in the non-official sector. Such, in any case, will be found to be the position as at the end of 1957. Fortunately, there is now the hope that, with the deliberate attempt by Government to make the investment climate more favourable, we may be able to attract a larger quantum of foreign capital in the future.

★

BALANCE-SHEET REVIEWS

(Continued from page 80)

Fund. The directors have recommended a dividend of 7½ per cent.

₹ ₹

Calcutta Hydraulic Press

The Calcutta Hydraulic Press Company Limited has recommended a dividend of Rs 3 per share for the year ended 30th June 1957, the last dividend being paid for the year ended 30th June, 1954, at Rs 4 per share. The accounts reveal, before providing for Depreciation, a net profit of Rs 46,784 as against a loss of Rs 22,375 in the previous year. The sum set aside for Depreciation is reduced to Rs 1,946 from Rs 3,244, while a sum of Rs 13,500 (Rs 9,500) has been provided for Taxation.

It may be added here that, in the case of the previous year, the directors had transferred as much as Rs 2.93 lakhs to Block Realisation Account and Rs 94,207 for Reserve for Depreciation on Investments; and this was possible only after transferring a sum of Rs 3.85 lakhs from Reserve; Rs 46,805 being profit on sale of stores; Rs 96,486 being profit on investments and Rs 5,000 for excess tax provisions, no longer required.

₹ ₹

Singareni Collieries

The Singareni Collieries Company Limited has reported satisfactory working results for the year ended 31st December, 1956. Both production and despatches are higher at 1,681,577 tons and 1,566,529 tons as against 1,526,570 tons and 1,462,112 tons respectively in the previous year. The net profit, after providing for Depreciation and Taxation, amounts to Rs 8,20,392 as against Rs 7,56,418 in the previous year.

In respect of allocations to Funds, the directors have provided Rs 35.94 lakhs (Rs 32.12 lakhs) for Depreciation; Rs 6.75 lakhs (Rs 7.50 lakhs) for Taxation; Rs 1.00 lakh (nil) for Wealth Tax and Rs 75,000 (Rs 1.75 lakhs) for Dividend Equalisation Fund. The dividend is, however, passed over.

Bombay Review

The Oil Industry

If the oil industry in our country has taken rapid strides in recent years, it is largely because of the realistic policy adopted by the Government of India. Whereas a few years ago we were importing the bulk of our oil products, today we have three big refineries manufacturing these products from crude oil. Considering the fact that the oil industry from the location of oil upto the stage of its actual use in the multifarious walks of modern life is a complicated and expensive process, the progress achieved by the industry in India is no mean achievement. Our Government have, however, to share the credit with the foreign oil companies who have so magnificently responded to the trust reposed in them by the Indian people.

The vital place of oil in a modern economy is clearly brought out by the fact that in the past 40 years industry has come to depend more and more on oil. As against its share of 20 per cent in 1925, oil has accounted for 49 per cent of effectively utilised commercial energy in 1955. During this period world production of oil has increased from 100 million tons to 800 million tons. The increasing demand for oil in India has become apparent in the course of the past seven or eight years. From a consumption of about 2½ million tons in 1948, it has increased to about 5 million tons per annum at the present juncture. It is calculated that such consumption will double itself in another ten years or so. It is further estimated that with the series of Plans in coming years, India's requirements of oil may touch the 50 million ton mark by 1975. Therefore, it has been the endeavour of Government not only to foster the setting up of oil refineries but to take energetic steps to conduct a systematic and thorough search for oil in the country. It is gratifying to note that the foreign oil companies who have set up their refineries here are also participating in the prospecting for oil.

The rapid growth of the oil industry in India gives the lie direct to the erroneous impression held by some that investments in this country are neither safe nor profitable. An effective answer to these doubting Thomases is found in the progress report issued recently by the Standard-Vacuum Oil Company itself. "The latter factor not only encouraged the investment of private capital in many industries including the oil industry, but demonstrated that

92

INDIAN FINANCE

[January 11, 1958]

Gateway Notes

private companies and the Government could establish mutually beneficial relationship in the development of India's resources." The factor referred to is "the favourable political and economic climate in the country".

It will not be out of place here to note a few facts about Standard Vacuum which meets about a fourth of our requirements of petroleum products. In 1956 the company sold 96 lakhs barrels of oil as against 46 lakhs barrels in 1947. The number of employees has increased from 4300 to 6294. The company's contribution to the Indian Exchequer has more than doubled during the past six years to nearly Rs 166 millions. The total assets of the company in India were approximately Rs 117 million in 1949. They are now valued at Rs 415.5 million. An important aspect of Stanvac's operations in India is its planned personnel policy of increasing participation of Indians in positions of higher responsibility.

In their beautifully got up publication "Survey of Activities 1956", Burmah-Shell, who can justifiably lay claim to their status as expressed in their slogan "Burmah-Shell in India's life and part of it", have shown the important place occupied by them in India's oil industry and trade.

The Burmah-Shell booklet give some interesting sidelights on the oil trade and industry in India. Total consumption of petroleum products in 1956 increased by approx-

imately 8 per cent. This rise was largely reflected in two products, kerosene and high speed diesel oil. The pattern of demand in 1948 as compared with that in 1956 reflects in some measure the new emphasis in Indian affairs. Kerosene which constituted only 25.32 per cent of the total demand now accounts for 31.39 per cent. The rapid strides taken by the country in industrialisation and the increased use of diesel transport are brought out clearly by the big increase in the consumption of high speed diesel oil which constitutes 11.14 per cent of the total demand as against 2.92 per cent in 1948. A highly significant fact is that prices of petroleum products have remained steady during the past year in sharp contrast to other commodities.

A glimpse of the future that is in store for us in this country can be had from one of the many charts found in the booklet. One learns from it that in the USA per capita energy consumption expressed in metric tons of coal equivalent is very high. Italy, France and UK have a per capita consumption ranging from 2 to 5 tons. The chart shows that per capita income and energy consumption go hand in hand and concludes that energy consumption per head of population is a reliable indicator of living standards. The inference for India is that with the improvement in the standard of living the per capita energy consumption will go up. As a major supplier of petroleum products (the company already supplies more than half of our requirements of petroleum products) Burmah-Shell has a busy time ahead.

the closing quotation being more than Rs 7 from the starting rate for the Posh contract, the Bullion Association called on the bulls to deposit a margin at the rate of Rs 500 per bar of silver on their net outstanding purchases. Maha delivery closed at a discount of Rs 2 from the Posh contract, reflecting thereby the backwation charge of Rs 2 in favour of the bulls. Spot silver was quoted at Rs 189.56 to Rs 189.69.

The trend of prices in the Gold section was largely in sympathy with silver with Maha delivery advancing to Rs 108.44. Spot gold commanded a premium of Rs 25 nP at Rs 108.59. Sovereign was, however, quiet at Rs 69.87.

Oils and Oilseeds

Sentiment in the Oils and Oilseeds markets remained generally depressed. The continued absence of overseas demand for castor oil mainly demoralised the sentiment. Groundnuts and other seeds moved in sympathy.

In the Castorseed section, conditions remained subdued due to a weakening spot position. Although arrivals were comparatively small, prices tended to decline for want of support. Meanwhile, Castor May delivery touched a high of Rs 139.25, to recede towards the close to Rs 136.50.

Activity in the Groundnut section was at a low ebb. The Government continued their silence regarding export quotas for groundnut oil and HPS groundnut. With the result, sentiment softened noticeably. February delivery opened at Rs 155.62 and, after improving to Rs 155.75, receded at the close to Rs 154.87.

Trading in the Linseed section was dull; and the lack of overseas demand for linseed oil depressed general sentiment. Linseed May delivery started at Rs 31.31 and finished at Rs 31.06.

In the Cottonseed section, February delivery began at Rs 95.50, and, after touching a low of Rs 94.75, finished better at Rs 95.

Yarn

The Bombay Yarn market displayed fresh strength with both Art Silk and Staple-Fibre yarns touching new higher levels on speculative support, although the actual business put through in the ready market was negligible.

The scarcity of imported foreign yarns became more acute. With the result, prices of indigenous yarns also firmed up.

The Rayon section showed signs of slight improvement, thanks to the settlement of the question of Sales Tax on old stocks of rayon cloth.

Bombay Review

World of Cotton

Cloth Market in Doldrums

ACTIVITY in the Bombay Cloth and Piecegoods markets continued to be at a low ebb despite the enactment of the long-awaited legislation to merge Sales-tax with the excise duty and a reduction in the excise duty on medium variety. In general, the market is still groping in the dark, being unable to find a way out, although the legislation is meant to provide some relief to the industry and also to help the clearance of accumulated stocks of cloth. Dealers are of the opinion that the turnover will improve only after the Sales-tax issue on old stocks is resolved.

Perhaps, with the official announcement by the Bombay Government to compound the Sales-tax on textiles, it is just possible that the Central Government may as well induce the various State Governments to exempt from Sales Tax all such goods lying with the trade before December 13, 1957. The expectations are that, as soon as this hurdle is crossed, there will be

substantial enquiries from up-country dealers whose present stocks are reported to be meagre.

Only scattered enquiries are reported from foreign countries. Slack overseas demand is to be attributed to the intervention of the New Year holidays. Hopes are, however, entertained that foreign demand will improve in the near future. Some business is reported done with Burma; but the prospects will improve further when import licences are issued to the Joint Venture Corporations. No fresh business is possible with Indonesia due to the political trouble. There are stray enquiries from Hongkong, while Singapore has booked small quantities of bleached longcloth.

COTTON FUTURES

Although hopes of an export quota and a reduction in the export duty on Bengal Deshi helped forward rates to forge ahead early in the week, prices developed a reactionary tendency towards the close due to profit-taking. Unusually rains in Gujarat and Saurashtra also aided the bearish sentiment and speculators tried to rig up the market by lending fresh support. Turnover was 10,000 bales. ICC Moglai Jharilla started at Rs 670.50 and, after touching a high of Rs 677.75, receded at the close to Rs 674.75.

It is understood that forward trading in cotton will be started simultaneously in Akola and Ahmedabad this month. All the preliminary arrangements have been completed; but the official sanction from the Government of India is awaited. Trading was to have started around January 15; but this has been postponed by about a week.

The market at Akola will be mainly for Vidharbha, Khandesh and Gaorani areas in Andhra which produce about 10 lakh bales, while that in Ahmedabad will enable the local textile industry to hedge about 8 lakh bales grown in Gujarat and Saurashtra. The basis for trading at Akola will be Berar cotton contract of 24-32" and for Ahmedabad MG Kalyan 25-32". Akola will have March, May and July contracts, while Ahmedabad will have April, June and August as delivery months.

Meanwhile, the Forward Markets Commission has been trying to put, on a sound footing, the business at Ujjain and Indore, started last year. Forward business at both the centres has not proved popular. Ujjain has, however, shown good interest in forward business in cottonseed.

SPOT MARKET

The Spot section, however, ruled steady with prices of Vijay cotton advancing on reports that the quality of the new crop was better than expected. Mill demand continued for Berar and Khandesh varieties.

In the export section, attention continued to be centred around the forthcoming meeting of the Cotton Advisory Board. The meeting will be held on the 10th January when shippers are expected to stress the need for a reduction in the export duty on Bengal Deshi variety. A higher export quota will also be demanded by them. The question of importing higher growths of East African cotton is also likely to come up before the meeting.

On the import front, there were no new developments. Spot lots of Americans and East Africans continued to be in good demand.

CROP REPORT

According to the latest reports, the crop in Berar and Khandesh has been marketed to the extent of 65 per cent, and 50 per cent in Moglai areas. About 60 per cent of the crop in the Punjab has also been marketed, while the season has commenced in Karnataka.

NEW YORK COTTON MARKET

Prices on the New York Cotton futures market firmed up last week and the list closed 50 cents to 2 dollars per bale higher. Buying was credited mostly to commission house buying and New Orleans interests. New crop months, which made seasonal highs, led the advance on renewed sentiment among traders that major changes in cotton legislation in time to affect the 1958 crop was unlikely.

Under the present programme, traders looked for a somewhat higher loan on the 1958 crop, because of the prospective further reduction in surplus stocks this season. The shortage of desirable cotton from the present crop and the lack of aggressive hedge selling by dealers also stimulated a good deal of short-covering by professional traders. Middling Spot was quoted at 36.45 cents per pound.

LIVERPOOL COTTON MARKET

In a dull trading on the Liverpool cotton futures market, the near positions tended to be firmer, reflecting the transfer of hedges into later deliveries. Fresh mill hedging in more distant positions also reduced the inter-month discount.

S. E. RLY TENDERS

Sealed tenders are invited for (a) tender No. CS/PC. 1144/B/26 for supply of 2 pumping sets, electrically driven vertical spindle, deep well turbine, capable of pumping 10,000 gallons of clear water per hour against a total head of 150 ft. from all causes complete with motor suitable for 400 volts, 3 phase, 50 cycles supply etc. as per specification for 20' dia. well at Waltair; (b) for tender No. CS/PC/1145/B/27 for supply of 2 pumping sets, electrically driven vertical spindle, deep well turbine, capable of pumping 10,000 gallons of clear water per hour against a total head of 120 ft. from all causes complete with motor suitable for 400 volts; 3 Phase, 50 cycles supply etc. as per specification for 30' dia. well at Waltair. Both the tenders will be accepted upto 12 noon on 27-1-58.

Tender forms (not transferable) are obtainable from the office (P.C. Section) of the under-mentioned on remittance of Rs 2/- (not refundable) per copy of form for each tender by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, S. E. Railway, Garden Reach, Calcutta-23 by local firms.

Firms not on the Railway's approved list of contractors must obtain a cash receipt for earnest money of Rs 250/- for each tender from this Rly.'s Chief Cashier and enclose a valid Income Tax Clearance Certificate with each tender without which tender is liable to be rejected.

Silver Scales New Peak

THE Bombay Bullion Exchange was spotlighted by a spectacular advance in Silver. This metal scaled a new peak after a long time on very strong support from powerful bull magnates whose financial capacity helped them to extract from bears heavy penalties of backwation charges amounting to Rs 2. The strength of the 'longs' was evident from the fact that the backwation rates, which had shrunk from Rs 1.25 on Saturday to almost nothing due to the receipt of about 200 bars in delivery, rebounded to Rs 2 as a result of the reports that the bulls had already made arrangements to take delivery of as many as 1,000 bars. This led to frenzied covering by 'shorts' who were threatened by a paucity of

stocks. The prices, consequently, soared to higher levels.

Despite low upcountry demand, bulls in the Bombay market succeeded in rigging up the maturing Posh contract to Rs 190, a rise of about Rs 5 per 100 tolas within two weeks. Bulls have been lending support to the market on rumours that import of silver coins from Tibet would considerably decline in the coming three months due to winter.

The trend of forward prices in silver has, however, no relation to demand for the metal in the spot as will be seen from the discount at which it is quoted, being as much as 62 nP over the current settlement rate. The backwation charge having widened to Rs 2 and

In Defence of Rajaji

AT his monthly press conference last week, Mr Nehru dealt with a number of topics of current interest, but the spotlight was centred mainly round a matter of considerable internal topicality—the question of official language for the purposes of the Union Government. In recent weeks, this issue has been loom'ng large in public discussion and it will be idle to deny that the country is seriously divided over the issue. What is even more disturbing is the fact that this division is not dispersed but has polarised itself in terms that offer the most serious threat to our unity. The issue itself is bound up with the most primitive instincts of group sense and more obviously with bread and butter. In such a situation, it is hardly surprising that it should take on ugly overtones of a political sort, and expressions like Hindi Imperialism and the domination by the North of the South and so forth should be freely used. There is evidence that the sinister possibilities of the situation are being under-estimated by those in authority. It is, therefore, necessary to give the more than immediate background of the problem.

It is well known that, in the South, well defined and well organised political groups with unashamed communal orientations have for a long time been making the issue of North versus South the principal instrument of rabble-rousing and channelling hatred against the minority but comparatively well-off brahmin community. The politics of these groups has at all times hovered dangerously between legitimate, though somewhat hysterical, self-pity at one end and anti-national separatist claims, at the other. In their psychological motivation as also in their consciously adopted attitudes and formal insignia, these parties have all the classic symptoms of incipient fascism. A burning sense of grievance on account of social inferiority vis-a-vis a minority community is being manipulated consciously for the avowed political aim of having a separate Dravidastan alike in all respects with Pakistan. The idea of a homeland overrun by 'foreigners' from the North who rule the roost is sedulously propagated; not even parliamentary legitimacy, achieved by the DMK, one of these parties getting into the legislatures, has made any difference to this final aim. This last statement is not a matter of inference from conduct, but is based on the solemn avowal of the leadership of the party. The dubious politics involved in this attitude is buttressed by a lot of bogus racial hocus pocus (exactly in the manner of the Nazis) and an

almost continuous campaign of baiting the minority by a species of persecution that is not important enough to be considered as anything more than a minor nuisance. Thus, walls are scribbled with insults and thugs in groups prowl about hurling obscenities at passerby with impunity. Every now and then, the papers report acts of hooliganism deliberately fostered by one of these two groups; but the comedy involved in these extravagances (like the solemn burning of classics and deities—another Nazi symptom) blunts somewhat the edge of the morals of these events. More recently, however, acts of violence against the minority community have been increasing in number and daring. Mr Nehru's vigorous, but somewhat general, condemnation of these acts has not helped to bring about any change in the situation. Indeed, a fresh wave of unrest has once again broken in Madras, because of the alleged 'insult' to some leaders of the South by Mr Nehru.

The activities of these people, I am afraid, are for some reason being underplayed. It is true that Drivida Khazakam with Ramaswami Naicker as its leader is less influential than it used to be before the splinter group led by the younger sections of proteges broke away to form a party of their own to be called the Dravida Munnetra Khazakam. It is also true that Mr Ramaswami Naicker is all the time warning his followers against the wiles of his erstwhile colleagues and, indeed, actively worked against them during the last elections. He even went so far as to ask his followers to vote Congress, because Mr Kamaraja Nadar was in the Congress. But the younger party all the time pays its customary homage to the 'Periyar' (as Mr Ramaswami Naicker is called reverently by them) and disapproves of him, if at all, more in sorrow than in anger. As recently as a month ago, there were rumours of a reunion. In any event, the large mass of grievance-ridden following of the two parties has no clear ideas about their mutual differences and, in the common demand for a homeland for themselves in which the brahmin will have no place and which will not take its orders from Delhi, they are united.

The strategy of the Congress in dealing with this menace has at its best been muddled, and at its worst equivocal. Periodical lectures on 'casteism' from the higher ups have meant different things to different people. So much so, a non-brahmin Congressman and indeed any non-brahmin interprets Mr Nehru's frequent references to this topic as a direct admonition of the brah-

min who still puts on his caste mark and has not shaved off his tuft. The brahmin, who has given up long ago all the duties enjoined upon him by the code that had governed the conduct of his forefathers, imagines that Mr Nehru is denouncing the rabid communalism of the Dravida Munnetra Khazakam. In the result, the stark political fact of a communally oriented politics is missed by all. There is also evidence that the central authorities of both the Congress and the Government are not aware of the extent to which political health has been infected in the South and politics in the South has been brought into complete disrepute by these undercurrents, and whoever is the beneficiary of this state of affairs, it cannot be democracy.

All this may seem a far cry from the language question, but it is not. Indeed, a wise decision taken at this juncture may yet turn the tide of southern politics. There is considerable impatience, even among those who ought to know better, at Mr Rajagopalachari's associating himself actively with this issue. Often in the past, Mr Rajagopalachari's cannyness penetrated farther and deeper than what is visible on the surface. In the present context, it is Rajaji's insight into the political consequences of any kind of imposition from above that has made him rush into the arena. Fancy what would have happened if Rajaji had not stepped into the fray and dragged along with him sober and even staid liberal opinion. The Government of Madras have quite naturally their inhibitions in the matter. If Rajaji had not got into the controversy, it would have meant that the championship of the rights of the Tamils would have slipped into the hands of a group of people who are sure to work up the Hindi question into one that would have led to secession of the South from the Indian Union. If anyone thinks that is mere scare-mongering, he may be safely put down as a man who does not know the first thing about the politics of Tamil Nad. Of course, it will be argued that, if any such separatist claim is seriously put forward, it will be firmly resisted with all the powers of the Union. It is true that that is how the demand should be dealt with. But how long can you keep within your fold by force a people who want to clear out? And even if you succeed, does it make for healthy democratic politics?

The only thing to be done was, therefore, to steal the Dravida Munnetra Khazakam's thunder from it and that is precisely what Rajaji has done. Mr Nehru said a number of wise things about the language question at the press conference. As far as he is personally

concerned, he has always held an open mind on the question, and, as he put it, 'he possesses no views that he is not prepared to change in order to have general acceptance'. But he expressed himself pained at the manner in which Rajaji has chosen to act on this question. Here, I am afraid, Mr Nehru does less than justice to Rajaji's finesse and well-known political acumen. As I said, what Rajaji has done is to take in advance the wind out of the sails of any Dravida Khazakam claim that the henchmen of the North in the South have tamely acquiesced in an imposition which every one feels to be an imposition. He has also scotched the possible pretence that the only friend of the people in the South is the Dravida Khazakam or the Dravida Munnetra Khazakam. And, in doing this, he has not played a lone hand, leaving room for all manner of interpretations. (Of Course, as Rajaji must be often feeling ruefully, there is hardly anything that he does that is not subject to this kind of inquisition!) By associating other elder statesmen of equal unimpeachable intellectual integrity patriotism and claim to be listened to with respect, he has in the first place saved the Congress a possible embarrassment. Rajaji's lone voice against Hindi would divide Congress opinion, but an opinion shared by all shades of political thought has no such embarrassment to the Congress. Moreover, it is not now open to DMK and DK to say that it is only Rajaji and not the official Congress who is the friend of the Tamil and they still are the only champions of the people. The language question has now been lifted clean out of the party political sphere and, whatever happens, the DK and DMK can get no political result out of it. This, I submit, is a service to the country of incalculable value, and we have every reason to be grateful to Rajaji for it. It is characteristic of him that he should have sensed the national implications of the whole question and set about doing something about it. It is also characteristic of him that he should have done it in this controversial way! There has never been a solution that he has thought up (and he has thought up dozens of them) that has not always bewildered less astute men and he, for some reason, does not explain all the implications for his action. It is a nice point in psychology worth exploring. In this case, for instance, he has not dealt with the aspect of the question I am discussing. And, surely this must have weighed with him, but why does he do things in this way? Is it unconscious modesty? I, for one, will not rule out the possibility. Some of the greatest men of the

(Continued on page 97)

North Indian Notes

Foreign Aid

THE total amount of foreign exchange that is likely to be spent on various projects in the current financial year has been estimated at about Rs 182.5 crores. This includes a sum of Rs 50 crores on account of assistance under the US PL 480 programme of supply of foodgrains and other agricultural products and Rs 39 crores being the Soviet assistance for the Bhilai steel project. But these exclude the credits of Rs 60 crores to be made available by the USSR from 1959 onwards for heavy machine building works, mining machinery plant, power station at Neiveli, optical glass factory and development of Korba coalfields. Additional aid expected from the USA, West Germany, Japan, Canada, the World Bank and other agencies have not been taken into account in these estimates.

The authorization made up to July last year totalled Rs 783 crores and was made up of Rs 581 crores by way of loans and Rs 202 crores as grants. The amount that had been spent in the course of the First Plan amounted to Rs 212.74 crores while the amount used in the First year of the Second Plan was about Rs 45 crores. The balance that remains to be spent during the remaining years of the Second Plan is Rs 342.52 crores.

Countrywise, the contribution from USA accounts for the major part of the total being about Rs 400 crores made up of Rs 262.65 crores as loans and Rs 136.35 crores as grants. The USSR comes second with a total allocation of Rs 198 crores. Among the agencies, the International Bank of Reconstruction and Development has made a substantial contribution by granting loans totalling Rs 77.57 crores to the public sector and Rs 76.69 crores to the private sector, of which Rs 48.57 crores and Rs 71.83 crores respectively were still available at the beginning of the current Plan period.

Out of a total sum of Rs 212.7 crores which was utilised by the end of the First Plan period a sum of Rs 20.5 crores of IBRD loans was utilised before the commencement of the Plan period and a sum of Rs 4.8 crores was on account of the utilisation of IBRD loans in the private sector. The total spent in the public sector during the First Plan period was Rs 188 crores. About Rs 497 crores is now available for utilisation during the current Plan period for Governmental projects.

Road Development

The financial strains that are being felt by every development project in the country at present

to create a statutory non-lapsing fund for financing the development and maintenance of roads. He made the suggestion for the creation of a road development fund in each State for the State works to which the budgeted amounts passed by the Legislature each year may be credited. According to him this would enable the road engineers to plan their projects on a more rational and scientific basis.

The Indian Roads Congress has been reported to be thinking in terms of a road development plan for the 20 years after the Second Plan. The salient features of the Plan are: no village should be more than 3 miles from a metalled road; no village should be more than one-and-a-half mile from an unmetalled road; every town with a population of 2000 in the plains, 1000 in the semi-hilly areas and 500 in hilly areas should be connected by a metalled road; all industrial and development centres, places of pilgrimage, places of historical importance, places of tourist importance and health resorts should be connected by metalled roads, and finally all administrative units of a district should be interconnected and connected to district headquarters which in turn should be connected to adjacent district headquarters.

Mr Bisht in his presidential address said that it was essential

NORTH INDIAN MARKETS

Rally in Shellac

THANKS to improved buying by the Continent and Britain and some interest in Seedlac on the part of American traders, the Calcutta Shellac market has staged a rally this week with the Pure T.N. quality quoting Rs 82 per maund as against Rs 77.50 quoted at the end of 1957. It is understood that most of this buying comes from the gramophone record industry—the main consumer of shellac.

In London, only eight lots are reported to have been sold due to the interruption of the holidays; but the better tone is still being observed there. Prices are a few shillings higher. February delivery is quoted at 176 sh for buyers and 178sh for sellers.

Meanwhile, export of shellac, during December 1957, have dropped sharply to 24,705 packages from 48,906 packages. This decline is attributed to poor overseas demand last month as ample supplies were available in Calcutta. Out of the total shipments, shellac accounts for 11,882 packages; sticklac for 10,774 packages; but-

tonlac for 666 packages and other grades for 1,383 packages. The corresponding figures for November were 26,142 packages; 19,301 packages; 1,192 packages and 2,271 packages respectively.

Sugar

Sugar markets have remained depressed due to poor buying interest and heavy stocks lying unsold in the markets. Crushing for the new season is now in full swing. The production of indigenous sugar, which has improved to 2.89 lakh tons by the middle of December in the current season as against the corresponding figure last year of 2.65 lakh tons, is also a contributory factor. Stocks with the factories, as on the 15th December, stood at 4.92 lakh tons.

Mill-delivery prices, in the Kanpur market, have recorded a fall of about 50 nP per maund; but spot prices have moved up due to revival of buying enquiry for immediate loading for Saurashtra. The Mazaffarnagar market has, however, continued to remain ac-

tive, thanks to good demand from the consuming centres at unchanged price levels.

The problem of increase in export of sugar has been engaging the attention of both the Government and the industry for some time past; but, as there is disparity in prices here and abroad, export is not all remunerative. India is expected to have a surplus of one lakh tons of sugar out of her last year's production of an estimated total of 21 lakh tons. The Union Government have, it is understood, asked the industry to submit a scheme for the export of the surplus and have agreed to consider definite proposals for the disposal of the surplus. The main question before the Committee, it is stated, is how to meet the loss involved in export.

It is calculated that the sale of Indian sugar in the highly competitive foreign markets will entail a loss of over Rs 20 per bag. To cover the expected loss on exports, it is suggested that there should be a levy on the quantity consumed in the country. Discussions on this and several other suggestions are inconclusive.

★

Foodgrains

Quietly steady conditions are noticed in the Foodgrains markets. In the Hapur market, Rice prices have recorded an improvement of about Re 1 per maund due to reports of overall shortage of the commodity in the country. Wheat is quoted at Rs 15.87 per maund for the average quality and Rs 17.36 for the farm quality. The market for Coarse grains rules quiet. Demand for Bajra and Maize is fairly good due to seasonal consumption, while arrivals are supplemented from east Uttar Pradesh and the Punjab. Gram prices remain unchanged. Prices of Pulses have recorded an easy trend as demand for peas, arhar and dals is dormant. Condition of the standing crops of peas and arhar is reported to be satisfactory.

In the Bombay grains market, the Rice section has displayed an easy tendency with the old crop prices registering a decline of about Rs 5 per candy. The weakness is attributed to lack of support, induced by the retailers' desire to await details of the household foodgrain card system of distribution. Prices of new Bajra have improved by about Rs 5 per candy as offerings from the Deccan are smaller in view of the paucity of stocks. Pulses have shown a mixed trend.

Mixed conditions have been noticed in the Delhi grains market.

Madras Review

The Peninsula

Memorandum on Official Language

THE Official Language Convention held in Madras in December enlivened a controversy which was having a more or less fugitive course till then. The first echo of the Convention came in the form of a statement by the Prime Minister, embodied in language which was far from complimentary to the leaders who participated in the Convention and registered a forthright and emphatic protest against the replacement of English by Hindi as the official language of the Union. Counter-statements followed and the public found an amusing diversion not unmixed with an element of sorrow, over some of the most revered men in the country trying to ridicule each other.

This diversion was short lived. Events of a serious character quickly intervened. The three Chief Ministers of Andhra, Madras and Mysore met and jointly declared that it would be impossible to show the door to the English language in 1965. The Chief Minister of Kerala was not available at the time of the joint meeting and for a little while the impression gained ground that the Kerala Government took a thoroughly different stand.

Subsequently the Kerala Chief Minister, pressed to clarify the attitude of his Ministry, said that the general policy of the Ministry regarding the language controversy was in favour of as speedy a transition as possible from English to Malayalam at the State level and to Hindi at the Union level. He added, as his own reaction, that by 1965 it would be rather difficult to change over to Hindi, conceding that under present circumstances in India, English had to be learnt in higher and technical education and as the easiest of international languages.

The Madras Government sent a Memorandum to the Union Government examining the recommendations of the Official Language Commission in detail and expressing their own views on these recommendations. It is not known if the Prime Minister had gone through this Memorandum before he made his second statement on the subject on January 2. This statement was different from what he said at Calcutta, in answer to the Madras Convention's proceedings. The New Delhi statement reveals complete freedom from any rigidity in outlook and a willingness to accommodate diverse views as far as possible.

Above all there was an emphasis on the importance of general

acceptance even at the cost of logic. The Prime Minister put it this way:

"I possess no views even on this important subject which I am not prepared to change in order to have general acceptance. I attach far more importance to co-operation and unity than the following of any rigid pattern simply because it is logically correct in my mind. It is of far greater importance that we should come to an agreement than have anything imposed."

But when it came to the operative part, he just left it to the Parliamentary Committee dealing with the matter, expressing faith in the competence of the Home Minister to deal with these matters in his capacity as Chairman of the Committee.

While the Prime Minister's personal opinion and outlook is of vast significance in the shaping of official policy, the sharp differences in opinion among other responsible leaders cannot be overlooked. For instance, at Madurai, Mr Abid Ali, the Union Deputy Minister for Labour, maintained that English should be driven out of the country after the departure of the British; Mr R. Venkatraman, the Madras Labour Minister, pointed out that English was one of the benefits left behind by the British and it was serving the country well. One prominent MP recently announced his intention to start an agitation against the retention of English for any official purpose. It is no use being blind to the existence of conflicts in the emotional approach to this problem.

In this context, it is worthwhile to examine the Memorandum presented by the Madras Government with a view to see how far it could provide the basis for a compromise agreement. This Memorandum, one feels, is an extremely sober document and as the Madras Finance Minister explained at a Press Conference on January 3, it does not claim any finality in regard to the suggestions made.

The first point made out in the Memorandum was that as a result of the publication of the Report of the Official Language Commission, public opinion in Madras has been disturbed about the language problem. The Memorandum explains:

"The stage is being reached when decisions must be taken by the Government of India which are bound to have a major impact on public opinion in this State as well as other non-Hindi States. The object of this Memorandum is to invite the attention of the Government of India and the Parliamentary Committee specifically to those issues on

which the conclusions and recommendations of the Official Language Commission are unacceptable to the Government of Madras and to explain clearly why they are unacceptable. This Memorandum has been prepared after discussion with leaders of all the parties in the State Legislature and in general agreement with them."

The Memorandum which is a critical review of the Language Commission Report has a large area of agreement with the Report as far as the language for Offices and Institutions under the control of the State Governments goes, the Report and the Memorandum see eye to eye. The Commission's views are accepted on the question of the language in Parliament, with the additional suggestion that simultaneous translation from Hindi to English and vice versa should be arranged for.

Likewise there is no difference of opinion on the question of the language of inter-Governmental communications. There is a limited agreement over the language to be employed in the Union Public Services Examinations and Departmental Examinations; the only alteration the Memorandum seeks is to give the Hindi Paper no more than a qualifying status; it should not at any time be converted into an element of competition among candidates. Eventually, the Memorandum also envisages a position in which not only Hindi and English, but every regional language is admitted as alternative media for examination in the All-India Services and the higher Central Services.

But the points of difference are more numerous. When one says this, it has to be recognised that on the fundamental question of bilingualism for the Union Government, the Memorandum differs from the Language Commission Report only to the extent of asking for a prolonged period. In this respect, the Memorandum does not go all out for English as the Madras Convention did.

It is also useful to speculate that if the Language Commission had not found it difficult to perform its appointed task of preparing a time schedule according to which Hindi might gradually replace English as the Official Language of the Union Government as a whole, the whole complexion of the language problem might well have been different.

The Memorandum makes an unassailable case for the principal stand it has taken i.e. the extension of the bilingual period beyond 1965. The facts mentioned amply prove that the Union Government themselves have not done anything by way of preparatory

work involved for the transition to complete Hindi. For this very reason, the Language Commission felt impelled to throw back on the Government the task of actually drawing up a plan of action and the setting up of a time schedule for it.

The Memorandum makes the position clear. As envisaged by the Constitution, the transition from English to Hindi at the Union level was to have been carried out over the fifteen year period between 1950-65 in two phases; the first phase to be devoted to the progressive use of Hindi in addition to English, in order to prepare for the second phase of progressive elimination of English. Before the first phase was completed, a plan of action for the second phase was also to have been drawn up. Between the Union Government and the Official Language Commission, there has been a default of both these tasks. The Memorandum rightly argues that when the preliminary steps were not taken and no plan of action made ready, there was no point in discussing the second phase.

In this condition, the Madras Government have no doubt that "the total supersession of English by Hindi as the sole official language of the Union Government will not be achieved before 1965. The attempt to eliminate English from official use by the target year 1965 would be to attempt the impossible". This view was communicated to the Language Commission by the Madras Government at the time of the Commission's enquiry.

Objections on the State level are more severe. The Commission have recommended a tri-lingual formula for Secondary Schools in non-Hindi regions, without recommending the same for Hindi regions. The Government of Madras have also decided on a tri-lingual formula but one which is quite different from what the Commission has suggested. According to the Commission, Hindi should be explicitly specified as one of the languages which every pupil must be required to study compulsorily. In Madras, a Committee of the State Legislature had also gone into the question and in accordance with the recommendations of that Committee, the Government have decided to make Hindi an optional third language, while English is to be compulsorily taught, up to a time when all subjects would shift to the regional language.

The Commission's treatment of the question of the medium of instruction in colleges is described in the Memorandum as very unsatisfactory. Actually on this point, beyond suggesting that the regional language, English or Hindi may

(Continued on page 98)

South Indian Notes

Manimuthar Project

THE New Year has begun on a happy note for the State of Madras for it witnessed the opening of the Manimuthar project in the Tirunelveli district of the State. The project is a reservoir capable of impounding 5,500 m.c. ft. of water and has a main canal 28 miles long to supply water to existing rainfed tanks. The dam is 9,600 feet long of which the masonry section is 1,230 ft. long at the river portion.

The chief object of the project was the conservation of the water resources of the Tambaraparani river. Though already the river has nearly eight anicuts capable of irrigating an area of about 83,000 acres of land, irrigation of the area has been found to be far from satisfactory in view of the shortage of supplies in certain parts of the seasons. This was rather inexplicable in view of the large amount of surplus water which a heavy rainy season would always bring in its water. This called for the construction of some reservoirs to store up the surplus water caused in the rainy seasons.

Such a gap was sought to be filled by the construction of the Papanasam reservoir. But it had not helped in improving the position to the extent anticipated and shortage conditions had not disappeared even after the commissioning of this reservoir. The necessity for the construction of another reservoir to supplement the capa-

city of that of the Papanasam was indicated in this position. The Manimuthar project was conceived and undertaken with the object of utilising the surplus water left unimpounded even after the construction of the Papanasam project.

Speaking on the occasion of the inauguration of the project, Mr U. Ananda Rao, the Chief Engineer pointed out that the object of the project was primarily to stabilise supplies to the existing anicuts of the Tambaraparani system and also to supplement supplies to about 320 precariously rain-fed tanks in some of the taluks of the district. He

also refuted allegations of slowness of work on the project and said that they were caused by factors beyond the control of the authorities.

The project has also certain peculiar features. First of all the dam is aligned along a number of hillocks seven in number. The gaps between the hillocks have been closed by earthen dams. Secondly as the bulk of the water-spread of the project lies in a forest area it had involved little hardship to the people and had not given rise to the problem of rehabilitation of the displaced people. Mr Ananda Rao also commended the high enthusiasm shown by the local ryots and landowners towards the project.

Local small crushers were taking up these quantities. The rate for the new crop fluctuated between Rs 145 and Rs 148 per candy.

In the Groundnut Oil section, however, rates developed an easier tendency due to some selling pressure. The ready position was quoted at Rs 297 against Rs 307 per candy in the previous week.

Reports indicate that, as most of the stocks in the hands of medium and small-scale ryots had been marketed, arrivals will hereafter depend on the price factor as stocks have passed on to the intermediate dealers and the bigger ryots who are capable of holding.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides continued to be restricted. Arrivals of Buff hides were also restricted; but there was fair buying for internal consumption. There was no change to report in the Cow Calf and Buff Calf sections.

On the export front, trading was rather quiet. A few sales were reported in selected marks at prices which were about a penny higher as compared to the previous week. The market ruled firm in single tannages. There was very little change in inferior fifties; but North Indian buyers were active, offering good prices.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were not large; but there was a good clearance.

In the export section, trading had not come to the normal. A small volume of business was reported in Goat skins at 3d per pound higher than the pre-Christmas levels. In Sheep skins, there was very little change to report.

The market for Raw Hides continued to rule firm due to small arrivals. In Calcutta, a scramble for the available supplies has been reported.

OLYMPUS

(Continued from page 94)

world have an unselfconscious assumption that things that are plain to them must be equally plain to others. Or is it a kind of intellectual arrogance that does not deign to explain what is clear to it, but what the others have not wits to see? Frankly, I do not know; perhaps, it is a bit of both. And that is what makes Rajaji one of the most intensely interesting persons. At all events, whatever decision is finally taken, whether Hindi is imposed or not imposed, it cannot be said that the Tamils had no

friends except the DMK. If there is no imposition, the problem solves itself. If there is, the danger of Tamils working themselves into a mood to cede is completely eliminated. After all, Rajaji was also the father of the Dakshina Pradesh idea, and whatever else he is, he is not a man who wants a Tamil country unaffiliated with the rest of Bharata Varsha. Once again, the cause of Indian unity has had a paradoxical saviour in Rajaji, who now seems to many in the North to be a hopeless provincial.

SOUTH INDIAN MARKETS

Rise in Rubber Production

WITH growing production and increased imports, stocks of natural Rubber in the country have risen to 10,082 tons at the end of November 1957 from 8,865 tons at the end of the previous month and 7,895 tons at the end of September.

Out of the total stocks, at the end of November last year, 5,838 tons were with estates and dealers and 4,244 tons with the manufacturers as against 5,619 tons and 3,246 tons respectively at the end of October.

While production of natural rubber has improved from 2,788 tons to 2,855 tons, imports have increased from 522 tons to 1,064 tons. Consumption by manufacturers has also risen from 2,320 tons to 2,702 tons.

Stocks of Synthetic Rubber have, however, declined from 1,565 tons at the end of October to 1,496 tons at the end of the month under review.

The manufacturing industry will require something like 35,000 tons of natural and synthetic rubber this year, in the estimate of the Rubber Manufacturers' Association of India. This will be an increase of 11 per cent over 1956. They do not expect that indigenous production of natural rubber will exceed 27,000 tons. This will necessitate an import of over 13,000 tons.

In general, India will continue to have a deficit in rubber for a few years to come, although the implementation of plans for increasing the rubber acreage in South India has been started. Trees that are planted now, will

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED.

(Incorporated in England)

Notice is hereby given that the Board of Directors of this Company have declared payment of an Interim Dividend on the Company's Ordinary Stock at the rate of £34 per cent net (tax applicable at 8s. 6d. in the £) for the year ended 31st March, 1958. Payment will be made on 15th February, 1958, to those stock-holders whose names are registered in the Company's Stock Register on 27th January, 1958.

Applications for transfers received in this Office before 12 O'Clock noon on Monday, the 27th January, 1958, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above Dividend.

By Order of the Board,

I. A. MACPHERSON,
Agent.

Victoria House,
Calcutta, 9th January, 1958.

Stock Exchanges

CHEERFUL TRADING

Watch-Dog Writes:

TRADING in stock markets has been on a more cheerful note with prices staging an all-round recovery during the week under review. Sentiment is influenced by the encouraging production figures released by the TISCO and the IISCO. The prospects of early foreign assistance have also provided a cushion for the market.

Under the influence of the speculative issues, the Calcutta Stock Exchange witnessed a slight all-round improvement in prices.

There was a revival of activity on the Bombay Stock Exchange where equities advanced under the lead of Textiles.

Though activity on the Madras Stock Exchange did not expand, a steady tone was visible and selected Plantings recorded fractional improvements over the year-end levels.

The London Stock Exchange regained its poise after last week's unsettled conditions. Sentiment was helped by the upward movement on Wall Street.

Wall Street staged a rally under the lead of Aircrafts, which gained one to three dollars at the close.

★

Calcutta

Calcutta, January 10.

PAST week's session on the local Stock Exchange witnessed cheerful conditions, due largely to selective bull support and bear-covering. Sentiment was influenced by the encouraging production figures released by the TISCO and the IISCO. Encouraging corporate news and the prospects of getting foreign assistance in the immediate future were also contributory factors. Towards the close of the week, however, prices shed part of the gains on profit-taking. The closing tone was steady.

The Glitged market was in good form although business was restricted by the shortage of scrip. Short-dated issues were in active demand, while long and medium-dated loans showed no worthwhile changes. 3 per cent 1986 Conversion Loan opened better at Rs 71.17 and, after improving further to Rs 71.25, finished the week lower at Rs 71.02 on profit-taking.

Bank shares ruled fully steady in anticipation of higher profits for 1957. Punjab National changed hands at Rs 46.50 to Rs 47.25 and United Commercial at Rs 58.75 to Rs 59.00.

Except National which forged ahead to Rs 24.55 from Rs 22.65 on renewed cornering by an interested party, jute shares remained generally depressed in the absence of any definite improvement in the conditions of the jute goods market. Anglo-India were offered at as low as Rs 136 against Rs 146; Barnagore at Rs 80 against Rs 86; Birlas at Rs 14.19 against Rs 14.50; Dalhousie at Rs 67 against Rs 72 and Howrah at Rs 13.25 against Rs 13.44. Champdany were better at Rs 103 against Rs 99 with Delta nearly maintained at Rs 89.

Coal shares were dull and listless as operators were generally inclined to await the Price Revision Commission's recommendations which are expected to be announced shortly. Bengal were nearly maintained at Rs 227, while Barrakur were sticky at Rs 22.00. Central India changed hands at Rs 5.87 to Rs 6.19 and Western Bengal at Rs 4.94 to Rs 5.00.

Trading in the Tea section continued to be restricted in view of the uncertain outlook for the industry. However, selected

scrips continued to get good support at steady levels on the feeling that there was a possibility of the surplus Common tea being reduced. It was felt that, if the output in Indonesia was affected, its buyers—USA and Holland—might turn their attention on Indian tea. Brahmaputra changed hands at Rs 2.81 to Rs 3.06; Bishnauth at Rs 18.12 to Rs 18.25; Dufflaghur at Rs 27.62 to Rs 27.87; Gungaram at Rs 101 to Rs 105; Hantapara at Rs 107 to Rs 112; Hatikhira at Rs 8.75 to Rs 9.12; Methoni at Rs 16.25 to Rs 16.37 and Sapoi at Rs 23.75 to Rs 24.00. Brooke Bond were enquired upto Rs 14.75 from Rs 14.00.

Fears that the recent imposition of additional excise duty on the commodity would affect the profit-margins and the bleak prospects for exports caused Sugar shares to turn quiet with prices developing an easier tendency. Cown-pore were on offer at as low as Rs 12.06 against Rs 14.06 and Darbhanga at Rs 17.69 against Rs 19.25.

Textile scrips ruled quietly steady with enquiry confined to a few selected scrips. Kesoram hardened further to Rs 10.25 from Rs 10.12 on reports of the settlement of the labour dispute. Elgins were on offer at Rs 13.00, while New Victoria, after touching a low of Rs 1.21 from Rs 1.37, recovered at the close to the latter level.

Price movements in the Engineering section were mostly influenced by the speculative activity in Indian Irons. Against the week-end closing of Rs 18.51, Indian Irons opened higher at Rs 18.86 at which level renewed bull support coupled with bear-covering pushed up the rate

further to Rs 19.20, to finish the week at Rs 19.16 on modest profit-taking. In sympathy, TEXMACO were taken upto Rs 15.45 from Rs 15.60. Richardson, after touching a high of Rs 9.00 and a low of Rs 8.37, improved to Rs 8.75 at the close. Indian Standard Wagon changed hands at Rs 96 to Rs 100; Marshalls at Rs 4.53 to Rs 4.62 and Burn at Rs 307.50 to Rs 309. Britannia were rather quiet at Rs 12.06 against Rs 12.25.

The setback in Jessop was more pronounced on Thursday. At the annual general meeting held by the company, the majority of the shareholders turned down the directors' recommendation of a dividend of Rs 1.25 per share for the year ended 31st October, 1956. It is understood that, with the result, the dividend was passed over in order to conserve the resources of the company. For obvious reasons, the scrip was pushed down at one time to as low as Rs 19.81 from a high of Rs 21.75, to recover partially towards the close to Rs 20.87 on some replacement buying.

The trend of prices in the Miscellaneous section was rather mixed. Speculative support pushed up Orient Paper to Rs 23.60 from a low of Rs 22.85, while slight profit-taking caused Titagarh to slide down to Rs 31.81 from a high of Rs 32.12. India Pulp and Shree Gopal were quiet at Rs 18.75 and Rs 14.50 respectively. National Carbon met with good demand at Rs 23.87 to Rs 24.19; NICO at Rs 23.00 to Rs 23.50; Indian Aluminium at Rs 12.75 to Rs 13.12; Aluminium Corporation at Rs 9.78 to Rs 9.87; Dunlop Rubber at Rs 20.06 to Rs 20.37 and India Steamship at Rs 10.75 to Rs 10.94. Indian Copper, after being marked down to Rs 2.74 from Rs 2.83 on reports of the strike at the company's mines, closed better at Rs 2.77. BIC were a shade better at Rs 4.11 against Rs 4.06; Osler at Rs 1.93 against Rs 1.81 and Rohtas at Rs 15.56 against Rs 15.25. Martin Burns were enquired upto Rs 25.00 from Rs 24.12 and Metal Box upto Rs 27.25 from Rs 27.19. Phillips India turned rather quiet at Rs 13.94 against Rs 14.19 on lack of fresh support and so also Hindustan Lever at Rs 19.94 against Rs 20.00.

THE PENINSULA

(Continued from page 96)

be totally or partially used according to the discretion of the particular University, the Commission did not put forward any conclusive recommendations. But there is a dubious addendum to the recommendations in the Report, which says that the autonomy of the Universities can have only a qualified bearing and the national language policy must ultimately prevail. It is quite logical to read into this qualifying clause the intention to institute Hindi. The Government of Madras, to favour an increasing number of students taking up Hindi as an optional language in the University course, but they have no doubt that the language which should replace English in Madras is only Tamil and none else.

Equally vital is the question of the language of the State legislature and the language of the Statute Book. Here, the Madras Government's Memorandum is fully opposed to the Language Commission Report. The latter would have the entire Statute Book in Hindi. The Madras Memorandum claims that there is no point in asking a State to make laws in a language different from its own official language. The Memorandum suggests that the Government of India and Parliament should accept this view as an integral part of the Official Language Policy.

Identical is the stand taken by the Government of Madras on the question of the language in High Courts. The Commission consider it necessary that judgments, decrees and orders of the High Court should in due course be in Hindi. The wording of the Memorandum is not quite clear as to whether it asks for a change from the present as far as the language of the High Courts is concerned. What it does ask for is that if and when the language is changed, the successor language should be none else than the official language of the State concerned.

It is, of course, arguable how far it would be helpful to the cause of national integration to allow the language of the Universities and High Courts to differ between every State. Having accepted the desirability of the regional language for collegiate education, there is an inevitability with regard to its extension to all official and public purposes; and in a democratic State functioning on adult suffrage, the claim for the regional language for all public purposes is also overwhelming. All that could be said is that the rigours of State exclusiveness will have to be tempered by deeper inter-regional association in other spheres and by a general hardening of the veneer of national consciousness and obligations.

Even on this point, whatever adverse criticism could be raised against the Memorandum can only go to the extent of saying that it has not chosen to tackle a basic dilemma in the national situation. That by itself is not a serious lapse. The Memorandum has painted a true picture of the repercussions of the Official Language Commission's Report on public opinion in the State and has pointed out where the State Government agree and to what extent with the Report and where and to what extent they differ. On the basis of well argued differences, the Memorandum closes with an appeal to the Union Government to declare in unequivocal terms their language policy, quite properly explaining that it should be the aim of such a declaration firmly to discountenance impracticable and unreasonable expectations in the Hindi region and to provide the re-assurance which public opinion in the non Hindi region needs and expects to secure from the Government of India and Parliament.

In taking a final decision, the Government of India will naturally have to await the recommendations of the Parliamentary Committee which is now reviewing the Language Commission Report. Meanwhile, besides the Prime Minister, several other distinguished leaders from North India have also offered their views on this developing controversy. Mr K. M. Munshi and many others with him look upon Sanskrit as the future saviour and the only language which can provide a genuinely unifying force.

President Rajendra Prasad, though not in the role of a partisan supporter of any cause, has not concealed his personal preference for Hindi, mainly on the ground that it is the language of the largest section of the population in the country. For Union purposes a kind of not very unequal co-existence has already developed between Hindi and English. MPs coming from non-Hindi areas are aggrieved that those hailing from Hindi region, Ministers and other alike, are by every possible means seeking to secure a surreptitious status for Hindi in the proceedings of the two Houses. The All India Radio is another target of similar criticism.

It is unfortunate that two rival crusades have been launched on the language front, with the Prime Minister compelled to take the role of an agonised neutral. He, more than any one else, must have realised the tragic implications of bringing this issue to a nation wide battle front, but till now he has not found it possible either to restrain the extremists in favour of Hindi or to reassure the opposite camp.

When the question is being discussed as also involving the livelihood of persons hailing from particular areas, its potentialities for deeper rifts are easily discernible. A prolongation of the bilingual phase, as suggested in the Madras Government's Memorandum, seems to be the least that could be done to avert the controversy degenerating into a settled conflict.

a pilfer-proof package for every product!

Metal Box pilfer-proof containers and closures, individually designed for each product, are precision engineered and superbly printed. This ensures product safety, purity, and powerful sales appeal. Reputable manufacturers use them to pack:

Ghee	Breakfast foods	Vanaspati and other food oils
Butter	Cocoa	Baking powder
Evaporated and Condensed milk	Coffee	Tea
Barley	Biscuits	Honey
Glucose	Confectionery	Processed fruits and vegetables
	Cashews	

A METAL BOX PILFER-PROOF CONTAINER

OPEN
TOP
CAN

Complete pilfer-proof protection is guaranteed by double seaming both top and bottom to the can body.

This cross-section of a precision engineered double seam shows how the rubber-like compound lining ensures air-tightness.

Only a can opener, destroying the top of the can, will open it. It cannot be reused by unscrupulous dealers to repack with spurious products.

For the Investor

"Building up Internal Resources"

Investment Gossip:

THE past week has brought the long awaited answer to the poser whether financial aid for us from the US will be forthcoming and if so, what will be the quantum of such assistance. Speaking at a press conference in Washington last Friday, Mr Dulles said that the USA proposed to help India's Second Five Year Plan, but the amount of assistance probably would not be as much as India would like. He, however, expressed the hope that India would receive enough foreign exchange support so that it could carry its Plan in adequate form, if not in the full form that India would like. It has been announced on Thursday evening that a \$ 225 million loan has been sanctioned.

President Eisenhower in his budget recommendations has laid special emphasis on the importance of economic assistance by the US to underdeveloped countries. Pointing out that the Soviet Russia has already begun to make a serious bid in this direction also, he has sought to impress on Congress that any lukewarmness on the part of the American people now may well result in another defeat for them—a defeat which will be much more disastrous than in the matter of the launching of earth satellites.

The two statements read together are of special significance for us in this country. According to Mr Dulles, a major portion of the foreign exchange requirements of the Second Plan will be available to us. It is quite on the cards that, in view of President Eisenhower's appeal, the US Congress may change its opinion on foreign assistance to such an extent as to grant the full amount of the loan asked for. Now that we have it on the authority of Mr Dulles that a major portion of the foreign exchange requirements of the Second Plan will become available to us, it may be presumed that the uncertainty prevailing hitherto in this regard will be greatly reduced if not altogether banished.

The investor may also derive considerable solace from the speech of Mr Morarji Desai at the annual meeting of the Engineering Export Promotion Council in Cal-

cutta early this week. Mr Desai has confirmed the conjecture that India's pig iron production will increase to such an extent as to leave a balance for export. Answering complaints about scarcity of pig iron by the engineering industry he says that we do not have to wait for long for an improvement in the situation. The present shortage will cease by the end of the current year and he has asked manufacturers to get prepared to utilise the large quantities of pig iron that will soon be available within the country. He has also pointed out that, since the cost of production of pig iron in India is the lowest in the world, the engineering industry has great possibilities in the export field.

With the Congress Party at present deliberating on current problems at its annual session in Assam, the investor may naturally be inclined to await the official resolutions before entering into fresh commitments. But from the draft resolutions, it would appear that he may not find himself obliged to change his assessment of the investment situation when the session concludes. For, the draft resolution on economic policy, inter alia, stresses the high importance of "the building up of the internal resources."

Jessops

Investment Special:

THE denouement is the Mundhra affair has not exactly been pleasant, and developments over the last six weeks particularly have been far from settling. There has been some element of litigation, receivers and administrators have been appointed and a Commission of Enquiry is to begin its work. In the midst of all this, one of the companies, which was by way of being the most important of the Mundhra group, has lately received unfavorable—I may add, undeservedly—notice. The unfavourable notice is all too easy to understand; and I will presently explain why it is undeserved.

As the latest published accounts of Jessop & Co Ltd show, there was an instance of an investment of its funds, which although in a good

The profit of the Bank of India Limited for the year ended 31st December 1957, subject to audit, amounts to Rs 93.47 lakhs as compared with Rs 92.03 lakhs in 1956. The provision for taxation has been raised by 2 lakhs to Rs 30 lakhs; the rate of dividend is maintained at 16 per cent, but is payable on the increased capital; and the carried forward subject to Bonus to staff is Rs 31.02 lakhs, against the brought forward of Rs 15.55 lakhs.

The net profit of Andhra Bank Limited for the year ended 31st December 1957, after payment of one month's substantive salary bonus to staff and after effecting revision in the pay scale from 1st May 1957 amounts to Rs 7.23 lakhs, as against Rs 9.43 lakhs in 1956. The ad-interim dividend is 8 per cent compared with 7½ per cent in the previous year. From profits a transfer to statutory reserve amounting to Rs 1.08 lakhs, has been made, against Rs 1.03 lakhs. The net profit available for final appropriations toward taxes, further statutory Reserve, Final dividend etc., is Rs 4.80 lakhs against Rs 7.23 lakhs last year.

The Bank of Baroda Limited has improved its profit by nearly Rs 4 lakhs for the year 1957, subject to audit. The ad-interim dividend which was paid for the half year ended 30th June 1957 at the rate of 12 per cent per annum, free of income-tax absorbed, as in the previous year Rs 6 lakhs. The provision for taxation has been increased to Rs 21 lakhs from Rs 15.75 lakhs. Bonus to staff absorbs Rs 9.50 lakhs against Rs 8.75 lakhs in the previous year. With the final dividend of Rs 4 per share free of Income tax the distribution for the year is

14 per cent, same as last year. Carry Forward is slightly lower at Rs 4.11 lakhs than the Rs 4.76 lakhs brought in.

The profit of The Hongkong and Shanghai Banking Corporation for the year ended 31st December 1957, subject to audit, after providing for taxation etc. amounts to HK\$ 21,035,543.21 against HK\$ 20,635,421 in 1956. The Directors propose to write off HK\$ 4,000,000 off Bank Premises and to pay a final dividend of £1/12/6 per share on the enlarged Capital (working out to £3/5/- on the old Capital) against £3 per share in the previous year, leaving a balance to be carried forward of HK\$ 2,062,463 against HK\$ 11,039,578 brought in.

The earnings of the Central Bank of India Limited continue to be on a high level. Though there is no sharp upsurge this year as in the previous year (profits in 1956 were of the order of Rs 104.37 lakhs as compared with Rs 77.76 lakhs in 1955) the net profit for the year ended 31st December 1957, subject to audit, is sizably higher at Rs 108.75 lakhs. The final Dividend for 1957 is maintained and absorbs a sum of Rs 25.16 lakhs. Total distribution is at the rate of 14 per cent, same as last year. The allocation to Investments account is the same as in the previous year at Rs 15 lakhs; so also the provision for taxation which is placed at Rs 13 lakhs. The staff gratuity fund receives Rs 1.50 lakhs more to be placed at Rs 6.50 lakhs. The head under provision for Bonus to staff is also higher by Rs 2.50 lakhs at Rs 30.00 lakhs. As in the previous year, the carry forward at Rs 18.44 lakhs shows little change from the brought forward of Rs 18.23 lakhs.

scrip—is controversial. The consequence has been that there are many who have apprehended that, in the interim between October 1956—when the accounts of the last year were closed—and the time when Mr Mundhra's influence from Jessop was removed, there might have been other similar instances. I am in a position to state categorically that these apprehensions are all false.

Indeed, Mr S. S. H. Sitwell, Managing Director of Jessops, has taken the proper course to explain all these developments in some detail in his speech to the shareholders of the company held in Calcutta last week. In the first place, Mr Sitwell makes it clear that there was never any question of the appointment of an administrator or special officer to Jessops.

If there has been such an impression, it was because, in recent weeks, we have had the spectacle of other ex-Mundhra companies having the benefit of a receiver to look after their affairs. This impression, erroneous though it is, was further fostered by the fact that Mr S. D. Srinivasan, representing the Life Insurance Corporation, was coopted as a director of the Company. The fact is that the company, in recognising that the Life Insurance Corporation was a very substantial shareholder, had invited the LIC to be represented on the Board of Directors. The nomination made by the Corporation, pending the holding of the annual general meeting, was Mr Srinivasan.

Then, Mr Sitwell has been at some pains to assure the shareholders that, after the one incident

HIGHLIGHTS

Next Monday, the Chagla Commission will get down to its work.

Justice Chagla will be called upon to "enquire" into LIC investments, particularly in the Mundhra group.

We would stress that it would be desirable to conduct the inquiry on a fundamental basis.

That is to say, the rationale of LIC investment policy must be gone into.

Why this is necessary is touched upon by Eavesdropper in Clive Street Gossip.

Also, Gateway Gossip applies itself to the terms of reference as well as to the tasks of the Commission.

The important consideration in this matter is that the LIC must be free to safeguard its investments.

For this purpose, as both the articles point out, it will be necessary for the LIC to conduct open market operations.

For rational views on the controversy of the hour, read Clive Street and Gateway Gossip.

which has been referred to in the accounts, the utmost care was exercised to ensure that there could be no recurrence. And, in fact, there has been no recurrence.

Next, we come to the matter of the present financial position of Jessops. With the late publication of the accounts for 1955-56, another financial year has elapsed. So, Mr Sitwell seized the opportunity afforded him of giving a few figures for the latest accounting year. These figures show that the margin of profit of the company continues to be as satisfactory as ever; and that work done by the company is setting up new records. As Mr

Sitwell points out, the order book of Jessops is now placed at a remarkable figure of Rs 20 crores.

Nevertheless, we cannot gloss over the fact that, stray or single incident though it was, Jessops have been somewhat weakened financially. Consequently, consolidation is in order. For this purpose, the LIC made it known through its representative that it would be desirable for the company to pass over the dividend for 1955-56. In agreeing with the suggestion, Jessops have taken the eminently correct step of passing over the dividend, so that, in short shrift, the company could

be as financially strong as it used to be.

In every way, it can be stated that Jessop has taken every correct step to minimise the adverse effects that the company might have suffered in its encounter with Mr Mundhra.

END

Investment Notes:

Jessops have staged a smart recovery to Rs 21.25 from the recent low level of Rs 19.87. The emergence of confidence in the scrip is due to expectations of satisfactory results for 1957. In this respect, the

BRAITHWAITE & CO (INDIA), LIMITED.

It is hereby notified that as from 15th January, 1958, the Registered Office of the Company will be transferred from Clive Works, Hide Road, Kidderpore, Calcutta, to No. 4, Clive Row, Calcutta.

Y. S. TAYAL,
Secretary.

Dated:
Calcutta, 13th January, 1958.

GONE are the spacious days of the palki, the horse, the camel and the elephant. Today, for speed and comfort, the way to travel is by air—and wherever possible—by Viscount.

The Viscount represents a revolutionary advance in air travel—bringing the jet age to India. Cruising above the weather and eliminating vibration and noise, it ensures fatigueless flight at high speed. For this the credit goes to its four powerful 'turbo-prop' engines which employ the same gas turbine principle as jets.

the Viscount way

To add further to the comfort of passengers the cabin of the Viscount is fully pressurised, air-conditioned and sound-proofed and provided with huge picture windows which give an incomparable view of the scene below.

A pleasure beyond measure, flying by Viscount is something more than just getting from one place to the other in the shortest possible time.

You can now enjoy this new winged experience on the services between Delhi—Calcutta, Calcutta—Rangoon, Delhi—Bombay, Bombay—Karachi and Bombay—Madras—Colombo.

Very shortly Viscount services will be extended to all the other I.A.C. trunk routes.

INDIAN AIRLINES CORPORATION

Chairman's speech is reassuring, not to speak of the fact that the company's order book stands now at the remarkable figure of over Rs 20 crores and the company has been relieved from Mundhra's management.

It is understood that the Committee of the Calcutta Stock Exchange has suspended dealings in the shares of Richardson & Crundas for three days with effect from Friday, the 17th December, as a mark of resentment against the company's refusal to accept shares for transfer.

In Bombay, Scindia Steams have been ruling very firm at Rs 17.16. Thanks to excellent results, the company has raised the dividend by 25 p to Rs 1.25 per share on the increased capital for the year ended 30th June, 1957. The question of the future managing agency of the company is now in the final stage of discussion, which will be placed before the shareholders very soon for their approval.

END

Investment Briefs:

Cherra-Chhatak Ropeway has announced a dividend of 10 per cent for the year ended 31-3-1957 as against nil in the previous year.

In Bombay, Bombay Burma Trading has decided to maintain the total distribution at Rs 40 per share on the fully paid-up and Rs 16 on the partly-paid-up shares, for the year ended 31-5-1957.

END

Share Offer by Jaipur Udyog

Balance-Sheet Reviews:

THE directors of the Jaipur Udyog Limited have announced that they have not recommended any cash dividend for the year ended 31st March, 1957, with a view to conserving the resources of the company. The profit for the year has declined from Rs 45.45 lakhs to Rs 40.80 lakhs, subject to Depreciation. The provision for Depreciation has amounted to Rs 20 lakhs against Rs 20.21 lakhs. The directors have not made any appropriation of the profit, pending requisite consent from the Controller of Capital Issues for capitalisation of a portion of the profits.

An application has already been made to the Controller of Capital Issues for sanction of the issue of 3 lakhs Ordinary shares of Rs 10 each, at par out of the issue of Rs 1 crore already sanctioned by the Controller. In view of the present state of the capital market, the directors do not propose to raise fresh capital, but issue bonus shares in the ratio of one share for every five shares held by capitalising a sum of Rs 18.75 lakhs, representing 12½ per cent of the equity capital, from current profits, and Rs 11.25 lakhs, representing 7½ per cent of the Ordinary capital, being the interim for the current year. Instead of giving dividend, the direc-

tors have preferred to pay in the form of bonus.

The company's second and third cement plants have been installed without raising any share capital, but largely depending on borrowings besides its own working surplus. The capacity of the second plant is being fully utilised with the coming into operation of the new power plant in August 1957. The third cement plant of 600 tons per day

rated capacity has been switched into production in November, raising the annual installed capacity of the works to 6 lakhs tons. The company has since purchased a fourth cement plant with a daily rated capacity of 750 tons. Most of the machinery has already arrived at the Bombay Port and some at site. It is hoped that this plant should be in operation by the end of 1958.

Premier Construction

It is understood that the scheme of capital reconstruction of the Premier Construction Company Limited has been provided by the Government. According to the scheme, 35,000 Promoters' shares of Rs 3.75 each will be consolidated into 11,666 Promoters' shares of Rs 11.25 each. After consolidation, 11,666 Promoters' shares of Rs 11.25

HIGH VOLTAGE SWITCHGEAR

High rupturing capacity high-voltage fuses.

High-voltage circuit breakers in a large variety of voltage ratings and designs, all with high breaking-capacities.

Lightning arresters.

Current and voltage transformers in a variety of designs.

INDIAN FINANCE

January 18, 1958

each will be converted into Ordinary shares of Rs 11.25 each.

Then, it is proposed to capitalise a sum of Rs 2,18,730 at the rate of Rs 18.75 each and thereby bringing up the share-value to Rs 30 each. The total Ordinary share capital of the company comes to 75,000 original shares plus 11,666 new ordinary shares, making a total of 86,666 ordinary shares. Thereafter, it is proposed to increase the value of 86,666 ordinary shares to Rs 50 each by capitalising Rs 20 for each ordinary share, amounting to Rs 17,33,320.

It is also proposed to issue bonus shares of Rs 50 each in the proportion of one Ordinary share to each ordinary share held by capitalising Rs 43,33,000. The total number of ordinary shares will be 1,73,332, involving a capital outlay of Rs 86,66,800. After capitalisation, the capital structure of the company will consist of 1,73,332 ordinary shares of Rs 50 each equal to Rs 86,66,800; 10,000 Preference shares of Rs 100 each equal to Rs 10 lakhs; 15,000 Second Preference shares of Rs 100 each equal to Rs 15 lakhs and 5,62,500 Third Preference shares of Rs 10 each equal to Rs 56,25,000.

Thus, the overall capital will be Rs 1,67,91,600. According to the management, the question of issuing bonus shares will largely depend on the result, if any, in the bonus tax, which is 30 per cent now. If the forthcoming Budget should provide for a reduction in this tax, chances of a bonus issue are considered bright.

224

New Kaiser-i-Hind Mills:

The results of the New Kaiser-i-Hind Spinning & Weaving Company Limited, for the year ended 31st March 1957, have proved very discouraging, mainly because of the adverse repercussions of the sharp increase in excise duty as from 1st September, 1956. The gross profit for the year has come down to Rs 6.55 lakhs from Rs 29.57 lakhs in the previous year.

The directors have transferred Rs 47,500 from Dividend Reserve to the Profit & Loss Account. Out of this, Taxation has been provided at Rs 1.55 lakhs against Rs 9 lakhs. No provision is made for Depreciation against Rs 3.98 lakhs. The directors have set aside Rs 2.00 lakhs for General Reserve against Rs 1.50

lakhs. The dividend on the Ordinary shares is reduced to Rs 6 from Rs 8.50 per share. Sales, during the year, went down to Rs 2.53 crores from Rs 2.79 crores.

224

Chundeecherra Tea

The Chundeecherra Tea Company Limited has reported a slight increase in the crop outturn at 8,623 maunds for 1956 as against 8,251 maunds; but the average price realised is lower at Rs 2.00 against Rs 2.06 per pound. The net profit, after Depreciation, amounts to only Rs 2.26 lakhs against 2.78 lakhs in the previous year. The Depreciation amount is raised to Rs 49,904 from Rs 34,102, while Building & Machinery Reserve is maintained at Rs 1.5 lakh.

The directors have, in their report, stated that, owing to lack of funds in India, they are unable to recommend the payment of any dividend at this stage; and, as and when they are able to have profits remitted from Pakistan to India, a dividend will be declared. Meanwhile, the dividend paid in 1955 was 30 per cent.

224

TISCO Bonus

The directors of the Tata Iron & Steel Company Limited have decided, subject to the Government approval, to issue bonus shares in the ratio of one share for every five shares held to mark the Golden Jubilee of the company. The bonus issue is to be made by utilising the premium received on new Ordinary shares issued last year and a small amount out of the Reserves. As these shares are to be issued out of the Share Premium Account, this issue is not subject to the Bonus tax of 30 per cent. The company will, no doubt, have to pay bonus tax on the amount of shortfall, to be met by a withdrawal from the General Reserve.

The bonus issue will entail capitalisation to the tune of Rs 3.85 crores. The Share Premium Account will provide the bulk of the amount. There will be a nominal shortfall in the funds required, as the money in respect of the final call has not yet been fully received. The shortfall is expected to be of the order of only Rs 3 lakhs and this amount will be taken out of the Reserves.

Second Plan: Exit Defeatism

THE long awaited announcement about the US aid to India has finally been made. We may state at the outset that this evidence anew of American generosity must be deemed fully up to the expectations that this country might have had. And yet, we are afraid that the superficial student of the Indian economy is likely to rush headlong to the conclusion that the aid that we have been promised falls short of India's needs, and that, consequently, the uncertainty about securing the foreign exchange for the hard core of the Plan continues. We should like to dispel, once and for all, all such doubt or diffidence about our capacity or resources for seeing through this hard core of the Plan.

It is important to recognise that the US aid announcement is both a culmination and a beginning—the culmination of efforts instituted by Mr T. T. Krishnamachari, the Finance Minister, when he was in Washington last year and the beginning of a suitably enlightened and altogether generous foreign aid programme by America. Thus has been laid to rest any apprehension that Mr Krishnamachari's mission was a failure. Indeed, all developments go to show that the efforts of Mr Krishnamachari and the Industrial Delegation, on the one hand, and of the visit of Mr Nehru to Japan, on the other, are just in the process of bearing fruit. Let us list these developments. The assistance vouchsafed by America in the next 12 to 15 months is \$225 million; and, moreover, fresh negotiations on a supplementary aid under Public Law 480, in respect of surplus commodities, are in train. Also, this excludes the loans that we might obtain from the World Bank, and the present indications are that we can be more or less certain of an annual allotment of \$100 million for specific projects, and particularly in respect of the Railway Plan.

Next, we have the fact that deferred payment terms have been secured from West Germany and from Russia in regard to the two steel plants. To this, we have to add the prospect of Yen credit from Japan for the supply of textile machinery. Lastly, there also seems to be hopeful prospect of France being in a position to extend credit for a sum around \$50 million. All these add up to an aggregate amount of \$700 million; and the bulk of it will be, as it were, utilisable in the period before June 1959. It is, we may point out at this juncture, this period till June 1959 which constitutes the hump period of the Plan. So, we may say, generally speaking, that the foreign exchange gap in respect of the hump period has now been covered.

Let us have no more defeatism in this matter of foreign exchange. There is fresh evidence to show that India's Second Plan has evoked not only sympathy but also a keen desire to help in the countries of the industrialised West, who are in a position to extend such assistance. Of course, we have not received a blank cheque to cover the foreign exchange gap for the Second Plan as a whole. But, surely, we had no right to anticipate that we would receive such a cheque. It is only against particular projects or for specific short periods that assistance in adequate quantity can be forthcoming. Not only can it be forth-

coming; the events of the last week show that they also will be forthcoming.

In this matter of foreign exchange prospects, we would like to add a few postscripts. In the first place, India needs to recognise the timeliness and generosity that America has displayed in its offer of assistance. The measure of the American anxiety to help India is shown in the fact that America has offered to advance over \$150 million from the Export-Import Bank; normally, the credit facilities available from the Export-Import Bank are extended only to the private sector, and this is the first major help being given at a governmental level.

The second postscript relates to the heartening signs of the inflow of private foreign investment. Sir Alexander Fleck, Chairman of ICI, has revealed that new investment by the company in India in the next 12 months is likely to be for an amount around Rs 15 crores. Again, the formation of Oil India Private Limited signifies fresh capital investment in this country by the Assam Oil Company: the foreign exchange expenditure involved has been agreed to be met by the foreign associates of Government—the Assam Oil Company and the Burmah Oil Company—in this enterprise.

Thirdly, there is the clearest indication that, except in the contingency of total failure of crops in this country, we need not apprehend any serious or untoward food situation.

Indo-British Example

MR HAROLD MACMILLAN'S short but strenuously happy visit to New Delhi last week must have been one of the most memorable experiences of his life. From the moment he landed at Palam, he was left in no doubt about the warmth and friendliness of the Indian people and the special sense of intimacy which Indians impart to their affection for the British. Mr Macmillan himself sensed this mood almost immediately on his arrival and fell into it with admirable ease. After a tentative attempt at investing his visit with a formal significance as the first by a British Prime Minister in office, he quickly acquiesced in the mood of informal intimacy. And this mood prevailed despite protocol, banquets and public receptions.

There are, of course, historical reasons for the special sense of closeness. Indeed, there could hardly be a greater force for bringing people together than the memory of a common past of some bitterness—memory that is green enough to give point to present harmony and the past clear enough to look back without rancour. Mr Nehru spoke at some length about the special links we have with Britain and about the significance of the way in which the two countries brought to an end an association of over two centuries. Without seeking to invest the Commonwealth with any "mystique", we may see in the continued association of India and Great Britain in the Commonwealth the inevitable destiny of their common history. Indeed, some may even assert that the Commonwealth idea was not born in 1948 or 1931, but when Britain started

Indian Finance

Established 1928

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

Arrangements are already afoot for assistance from America for \$ 65 million of wheat. Moreover, Mr Ellsworth Bunker, has strongly hinted that, in the next fiscal year, further agreements under Public Law 480 might be possible. Again, Canada would appear to have decided to supply us with 700,000 tons of wheat in addition to supplies recently arranged for from that country under the Colombo Plan. In this situation, the Government of India will be able to avoid dissipating their energies or foreign exchange on the import of food-grains.

Lastly, many of the arrangements for foreign assistance, particularly those with the USA and Canada, afford considerable relief in the matter of internal resources. For, not only are some of the loans returnable in rupees, there is also the stipulation, in some cases, that the counterpart funds could be utilised by India in its development works.

In a word, we would urge that the time has come when we should shrug off all feeling of despondency, doubt or defeatism about the Second Plan. For, it is now abundantly clear that the industrialised world evinces a keen interest in the Indian experiment in planning, and that it is willing to give the assistance that we may stand in need of. Furthermore, whether it is food or internal resources, the situation has been rid of its erstwhile vagueness and uncertainty. Exit, in short, defeatism.

on its colonial adventures. However that may be, India's decision to stay in the Commonwealth after its colonial status was definitely ended, was implied in the very nature of the struggle that it waged against its former bondage. There were, of course, uniquely Indian elements in the Gandhian struggle, but in so far as any external inspiration motivated it, it has to be sought in British constitutional sources rather than in the French or even Russian revolutionary sources. The principal feeders of the central revolutionary urges in India were Burke, Mill and Montesquieu rather than Rousseau or Marx. And so, when Britain acted on the prophetic wisdom of its greatest political philosopher, Burke, and did confer on a former colony the status of an equal, the consequence he predicted of the continued existence of the Commonwealth followed inevitably.

There is thus so much in the common history of these two peoples that has gone to their continued association as members of the Commonwealth. That is why we wonder whether the example of the happy consummation of Indo-British relations which Mr Nehru held up to the rest of the world to solve its other difficulties has anything more than hortatory relevance. There was much in the ways of lives of the two people, in the inspirations that shaped their deadly struggle, in the idealism of the men that controlled the destinies of the two peoples at crucial moments, in the mutual influence that the two peoples had on one another that made both the end of the

old untenable relationship and the beginning of the new relationship not only possible but inevitable. No similar compulsive nexus exists between, say, Russia and the US. Therefore, the value of the Commonwealth in such context has about as much relevance as the example of a perfect marriage. As Tolstoy said, all happy households are alike but each unhappy household is unhappy in its own way.

But we should not be misunderstood. We are not being cynical about the possibility of the present miasma of mutual suspicion and mistrust lifting and of the chances of all of us living together in reasonable harmony,

No Clear Lead

THE annual stock-taking by India's ruling party, meeting at Pragjyothishpur in Assam, has to reckon with more numerous developments of an unfriendly character than most politically-conscious Indians would like to have. The last annual session of the Congress met at a time when the sense of fulfilment and relief over States' Reorganisation was fresh and warm. The first year of the Second Plan provided another source of national self-assurance. There was scarcely any political problem which gave room for serious concern. Whatever shortcomings were felt in the party organisation were sought to be met by prompt measures of reform. The national situation, taken as a whole, was such as to inspire plenty of confidence and single-minded endeavour toward economic development.

Since then, some very uncomfortable deficit items have appeared in the balance sheet. We have never succumbed to the temptation of a pessimistic assessment of the economic developments. Some passing difficulties have only hardened the determination of the Government of India to go ahead with the Plan, seeking economies, with greater earnestness and care. As far as the Plan is concerned, there is scarcely any ground for seeing either the past accomplishments or the prospect ahead in a gloomy light. The firm recognition that the Second Plan is the least that could be achieved in relation to the requirements of the people and the refusal to be cowed down by the emergence of bottlenecks in finance, transport or resources of personnel, speak highly of the calibre of those who have undertaken to steer it through.

Only in one respect have calculations gone dishearteningly astray. The progress in food production has been disappointing. But that is again a case for more vigorous domestic effort rather than for any kind of despair.

It is on the political side that developments have been less agreeable. In the South, the Communist Government in Kerala which could get along well with the Union Government for several months have started murmuring about the President's reference of the Education Bill to the Supreme Court for opinion. The state of public affairs in Kerala under Communist rule is being described variously by different party leaders. What appears to be nearest the facts is a recent indication given by Mr K. K. Menon, Joint Secretary Praja Socialist Party; Mr Menon points out that the ruling party in Kerala has acquired a grip on the people of the State and he warns against any interference by the Centre in Kerala affairs.

In Kashmir, the release of Sheikh Abdullah has introduced into the open a force which fearlessly challenges the status quo. At Thantnag the Ex-Premier of Kashmir spoke for 80 minutes explaining his difficulties in calling upon the Muslims of Kashmir to go to India. He asks, "what justification can I have to advise the Muslims to go to India. No

much as Great Britain and India do. But these are consummations that can be brought about only by dealing specifically with problems that divide mankind. Indeed, such attempts are constantly being made, not least by Mr Nehru and Mr Macmillan. Mr Macmillan's broadcast suggestion of a non-aggression pact on the eve of his departure to India is an instance in point. By patient and persevering efforts, it should be possible to solve many of the problems that bedevil the world today. And in this, the endeavours of India and Britain and other members of the Commonwealth have an important role to play.

amount of repression, intimidation or temptation can influence me to sacrifice the inherent right of my people."

In Maharashtra, a fairly formidable body of opinion has emerged which insists on the revocation of the set up which came into existence in October 1956 and on carving out two linguistic units out of the present Bombay State. In South India, and Bengal the issue of official language has ranged powerful groups and individuals against the policy associated with the Union Government. The failure of the Second Plan targets to make any considerable contribution to the solution of middle class unemployment has created a certain lack of faith in the intelligentsia and made the general social temper more easily excitable.

The Resolutions drafted by the Steering Committee of the Congress reflect a clear awareness of some of these developments; while in respect of others the Congress leaders might justifiably think that silence and secret handling of the problems would yield better results than any formal discussion in the open session. As neither the Subjects Committee nor the full Session is likely to introduce radical changes in the Resolutions put forward by the Steering Committee, these Resolutions may be deemed to embody overwhelming party acceptance.

It is but natural that the Steering Committee should give pride of place to the questions of food production and of the official language.

The Resolution on food mentions the possibility of a 300 per cent increase in agricultural output in India. The average yield of clean rice in India is now less than 800 lbs per acre as compared with more than 3000 lbs in Spain and Italy and about 2300 lbs in Japan. In some of the richest producing areas in India, the annual yield is as high as the average of Japan. But that should not obscure the fact that India is one of the most ancient rice producing countries and that the marginal lands which are now being brought under cultivation offer comparatively very poor yields. The Congress Party is justified in insisting that a 30 per cent increase in food production must be attained during the Second Plan and the indication of possibilities as high as 300 per cent increase is psychologically stimulating. Because, what is sought to be attempted is only a fraction of the potential increase indicated.

The twelve point programme for securing this target consists of all the planks which are familiar. There are two considerations which have to be borne in mind in holding out targets for food production. During the last two years this target has been fluctuating between 15 per cent and 40 per cent. At one time the Planning Commission suggested 40 per cent. A Food Ministers' Conference got it reduced to 27 per cent. The Ashok Mehta Committee thought that even that might turn out to be too ambitious, and now the Congress Party Steering Committee puts it at 30 per cent for a minimum. These ever changing target

figures can well arouse the suspicion that no one in authority has cared to assess the real potentialities for any specific period and there is a measure of speculation and guess work, more than what is warranted by the difficulties in calculating food yields. The mere fiat of Government or of the Congress Party is no equivalent to evaluation based on objective circumstances. It is necessary to convince the public that the targets of production have close affinity to possibilities.

It is undeniable that yields could be improved. That in many areas cultivation does not receive the earnestness and attention, called for particularly at a time of heavy national food shortage is also a fact, the main reason being the wide spread uncertainty resulting from land reforms in varying stages of progress and the organisational vacuum created by the abolition of some of the old systems of tenure.

What the country suffers from is not so much confusion in thinking as the tardiness in the implementation of ideas, in respect of raising agricultural production. The first also is there to some extent. Where ideas sponsored by the Congress Party do not gain sufficient practical response, two courses are open. One is to examine the causes of resistance and to overcome them. If on the other hand, resistance is really rational, the party and the authorities must give in and change their own ideas. In respect of cooperative farming, neither seems to have been done, with the result that there is a general doubt and dilemma in the minds of the peasants. Of a relatively minor character is the question of cutting down water rates. State Governments are often thrown between considerations of finance and food production; they themselves have to decide promptly how the conflict should be resolved. Once food production is given unquestionable priority, the course of action becomes clear. The Congress Resolution will have to be interpreted as giving it that status.

The Resolution on official language, is on the face of it, provokingly non-committal. The only concession given to the opponents of 1965 as the dead line for a complete change over is the inclusion of the condition that the change should be effected only through a general consensus of opinion. In the Subjects Committee, Mr Nehru made a very persuasive speech which must have touched the hearts of delegates from the non-Hindi speaking areas. Whether that speech created intellectual conviction is a different matter.

Giani Gurmukh Singh Musafir, who seconded the Resolution spoke in an altogether different tone and the Congress President, Mr Dhebar was content to dismiss the whole issue with the observation that the provisions in the Constitution would have to be implemented. The Resolution on language, it has to be admitted, only registers the controversy without pointing to any clear cut solution; each section can interpret it as it likes. The least that could have been done was to declare in favour of unequivocally postponing the dead line. As it is, those who want the complete replacement of English by 1965 will start frantically to prove that Hindi language is fit enough by that date; and the others will either stiffen the resistance or imbibe a thoroughly cynical attitude to the whole issue.

The endorsement of non-alignment in a test free world, which the Resolution on foreign policy embodies, is inexorable in the light of the principles and circumstances which have shaped this country's relations with the outside world. The rumblings of a move for an East West Non Aggression Pact and the gestures for peace which have been coming out from Russia, now in a position of superior military strength, can surely be interpreted hopefully.

The New Foods

Professor M. S. Thacker, this year's President of the Indian Science Congress, has made a public appeal to small industrialists to come forward and undertake the manufacture of a multi-purpose food, now being produced on a small scale in the Food Research Institute at Bangalore. This product is credited with high nutritional value.

The Kerala Government have a scheme for the manufacture of a synthetic cereal fashioned in the Institute. Whether the multi-purpose food referred to by Professor Thacker is the same is not known. If the two are different, there is a third one described as mango cereal flakes, into which mango, wheat flour and sugar enter as ingredients. This product also is attributed high nutritional properties besides an appealing taste. Professor Thacker maintains that the multi-purpose food, when manufactured on a wide scale, would help to relieve the country's food deficit.

Any product which holds the promise of relieving the food shortage has to be seized with both hands and zealously propagated. Apparently these valuable new foods, which the Research Institute has been able to discover, have lacked the publicity they deserve. Once in a way, they come in for proud mention on occasions like the Science Congress Session. What is wanted is to keep them constantly before the public eye and to encourage mass production through agencies where the profit motive is combined with an equally dominant concern for national welfare.

If the description of the synthetic and other foods made available by the Bangalore Institute does not exaggerate, it is a pity that they are not enabled to reach the market where the hunger for quality food products is almost insatiable.

Editorial Notes

Where considerations of nutrition are also applicable, the impact of last year's changes in import control policy may also be examined.

An Uncertain Force

The release of Sheikh Abdullah after about four years of detention is an event which is being interpreted differently in different places. The Premier of Pakistan flatters himself by arguing that the decision to release the Sheikh is the outcome of the pressure of international opinion, to which Pakistan's own efforts have mostly contributed. In India, the end of his detention has been received with guarded approval by some leaders and with naked misgivings by some other. Within Kashmir also it seems to have created the same split response.

The first few statements coming from Sheikh Abdullah after his release are of a kind to dispel the impression that he would not be a thorn on the side of the State Government. The shrewd politician as he is, he has not minced words in giving expression to views directly antagonistic to the declared policy of the Government of India and of the Government of Kashmir. The arrival of Mr Graham, for a second lap of political exploration on the initiative of the United Nations soon after Sheikh Abdullah's release, gives the ex-Premier a special opportunity to marshal public opinion both in Kashmir and abroad in support of whatever stand he wishes to take.

Over the four years during which he has been kept in gaol, there have been some developments, though none of a radical complexion, which call for a reappraisal of the political situation in Kashmir. All these developments have not been in favour of India. Now, there are at least two well organised political groups in the State who can lend considerable backing to a leader of Abdullah's stature, if he is really keen on organising an opposition to the Government. The probabilities are that he will do it and even go to the extent of challenging the fundamentals of the State's present status.

In New Delhi and in Srinagar, these risks could not have been overlooked when the decision to release him was taken. The political gains of the release may be more obscure, a circumstance which naturally compels the authorities in India to keep a vigilant eye on the consequences of the re-entry of a powerful and uncertain force in the politics of Kashmir. That the world would also be watching with equal alertness makes the call on the Indian Union, more taxing.

Railways & Road Transport

A bifurcation which took place as a result of constitutional changes in the process of the integration of princely States has been to some ex-

tent revoked by the decision of the Railway Ministry to invest Rs 1 crore in the Andhra Pradesh State Road Transport Corporation. Till the financial integration in 1951 when the Nizam's State Railway was in existence, State road transport in Hyderabad was part of the Railway. Since then the two got separated and the State Government took over the road transport.

Now that an independent State Road Transport Corporation has been set up in Andhra Pradesh, the substantial association of the Railways must turn out to be beneficial to both railway and road transport. Besides the financial interest the Railway Ministry will have two of its representative on the Corporation, with the Union Transport Ministry putting in a third. The result should be the maximum coordination at all levels, a feature which we are sorry to say, does not obtain in every State.

The possible criticism that some concrete forms of invisible assistance from the Railways may distort the picture of the operational efficiency of the Corporation can easily be dismissed on the score of inherent improvement in coordination in many aspects of the Corporation's work. From the transport users' standpoint bottlenecks between the railways and road transport could be expected to be less than where the two do not meet financially or administratively.

Industrial Labour

The ninth annual conference of the INTUC which was held in Madurai had served to air the views of labour in regard to the Second Plan. And one of the resolutions passed at the conference had stressed the need for re-modelling the Plan in the light of the experience that had been gained during the last ten years.

The textile crisis as a result of which a number of mills had closed down causing unemployment to workers has been viewed with serious concern by the conference. In this connection Mr Khandubhai Desai, former Union Labour Minister pointed out that if the curtailment in production was due to the imposition of additional duties, they must be looked into properly and promptly. It is only natural that labour should be interested not in mere compensation but in increase in production and employment.

The tendency of the employers to rush to the supreme court to evade commitments under labour legislation passed by the Government also came in for criticism at the conference and Mr Desai said that such practices hardly conformed to the spirit of the socialist pattern of society.

The necessity to assure the workers a gradual increase in the share of the national income was

also emphasised. And in this connection Mr Desai pointed out that the justification of the wage boards about which the employers seem to have much misgivings lay in the fact that such boards could keep track of the correlation between wages on the one hand and profits, tax and interest on the other.

The World's End

Hardly a week passes now-a-days without the scientists giving us a jolt, and the latest is from Dr Louis Essen of the National Physical Laboratory at Teddington. The world's end has often been predicted since the days of the Old Testament, but this British Jeremiah gives us a target date accurately worked out with the aid of an atomic clock. He is reported to have found that days are at present one-thousandth part of a second longer than two years ago, a process which should normally have taken a century. The earth's rotation is slowing down fifty times faster than previously anticipated and hence it will come to a dead stop a lot sooner when, moon-like, it will stand still with one half perpetually facing the sun and the other perpetually bound in an ice-cap. Consequently, we are told, there will be a complete break-down in the earth's tidal system, with the sunny part a torrid terror and the dark part a frigid and no human being anywhere to disturb the eternal peace. The only consolation, if we need any, seems to be that the final is still some little way off—16,078 million years. Little does Dame Nature know that the end she proposes for us is being rapidly advanced by our own efforts. A few hydrogen bombs in a few minutes will do the trick much better than she will do it over her millions of years.

World of Finance

Interest Rates in India

THE delay in the start of the 1957-58 busy season has been, as it were, compensated by the emergence of demand in a rush for funds in the first two weeks of January. Money rates have perceptibly hardened, although, again, from the point of view of resources, there still appears to be the confidence amongst banking circles that the banking system is not likely to be unduly strained. But, with the hardening of money rates, a very interesting phenomenon is taking place in the Indian World of Finance. That is, while short-term money rates have tended to go up, the gilt-edged market continues to be paradoxically firm. Indeed, the Reserve Bank has lately raised its selling rates on a number of loans. The 2½ per cent 1962 is now quoting at Rs 94.70 as against Rs 94.65; and the 3½ per cent 1962 is quoted at Rs 97.86 against Rs 97.80. This appreciation in gilt-edged values, of course, means that gilt-edged yields are declining slightly. How is this decline in gilt-edged yields to be reconciled with the increase in the short-term money rates? It is from this point of view that we may briefly address ourselves to the question of interest rates in India.

There can be no doubt that the Scheduled Banks generally and the Exchange Banks in particular have been keen bidders for Deposits. In fact, it seems certain that, ever since the start of the 1956-57 busy season, the money market in this country has been experiencing a Deposits war. Consequently, short-term money rates in the banking sector have tended to be artificially high, that is, the short-term money rates are higher than they should be if regard is had for the quite comfortable position of member banks. We presume that the Deposits war has flourished for two important reasons. In the first place, the Exchange Banks, in the light of 7 per cent Bank Rate in London, are not reluctant to bid strongly for Indian Deposits. In the second place, the Indian Scheduled Banks are perhaps eager to prove that they each individually are participating fully in the remarkable accretions by way of Deposits to the banking system. This, then, explains the consistently and relatively higher levels of term money rates. At the same time, however, since the start of the 1957 slack season, the augmentation to Deposits has been so spectacular as largely to eliminate the need for inter-bank money. During the 1956-57 busy season, with an ever present need to secure additional resources, the inter-bank call money rate was maintained at a very high level.

However, during the course of the 1957 slack season, the inter-bank call money rate gradually declined. Even today, the interest rates in this sector have not yet become unduly high. The substantial rise in Deposits would explain the more restrained behaviour of the inter-bank call money rate.

As the Deposits of Scheduled Banks rose sharply, simultaneously the member banks found that a smaller proportion of resources was being profitably utilised. This was due to a number of reasons, the two important ones being the Reserve Bank's directive to Scheduled Banks that there should be general restraint in the extension of Scheduled Bank credit and, secondly, the slight falling off in the demand for funds to finance foreign trade, with the restrictions imposed upon imports. In the result, the Scheduled Banks found that, while their resources were steadily getting larger, and while the interest that they paid on such Deposits was becoming bigger, a greater proportion of their resources was idling in the form of cash. Automatically, such a state of affairs induced a demand for gilt-edged securities. The virtual abstention in 1957 of State Governments from the New Loan market, and the relative smallness of the Centre's New Loan effort, further reduced the availability of gilt-edged for investment. Inevitably, this unsatiated demand for gilt-edged on the part not only of Scheduled Banks but other institutional investors improved the tone and tenor of the gilt-edged market. Thus, it is in this wise and for such reasons as we have given that the contrary trends have obtained in the short-term money rates and in the gilt-edged market.

It is, of course, clear that, with gilt-edged behaving so satisfactorily, a rise in Bank Rate is to be ruled out. It is also clear that the short-term money rates are not an index of the interest that Government will have to pay for their borrowings. Lastly, we may even say that the higher level of interest rates in the short-term money market does not necessarily mean that it is impossible for Government to reduce Bank Rate. For, as we have tried to show, the short-term money rates are linked up more with the need for resources on the part of the Exchange Banks, and linked up, therefore, to a corresponding extent with the Bank of England rate. Bank Rate in this country, on the other hand, should be considered to be related more to the funds seeking investment in gilt-edged rather than to the level of short-term money rates. Leaving apart, for the moment, our thesis that the reali-

sations to Government loans improve with a reduction in the yield obtainable, we urge at this present juncture that the quantum of funds seeking gilt-edged should by itself be exerting a downward pressure on gilt-edged yields and should, therefore, enable a reduction in Indian Bank Rate. We may add here that we are leaving out of the discussion our suggestion that the distorting effect had by the short-term money rates on the overall structure of interest rates needs to be corrected by Government fiat. The one thing that we should like to stress here is that, in respect of the fundamental interest rate, the Bank Rate, the influences at work in the Indian economy point to a downward, and not upward, trend.

Interest Rates in the UK

The rebellion against Bank Rate at 7 per cent is, by implication, gathering momentum, strength and power in the UK. One of the London City Editors, who has consistently crusaded against the 7 per cent Bank Rate imposed by the ex-Chancellor, Mr Peter Thorneycroft, is Nicholas Davenport of The Spectator. In a recent article, Mr Davenport again had a blistering attack on the former Chancellor for believing in the efficacy of high Bank Rate. Not only was such a high Bank Rate futile within Britain, it also had an unfortunate chain reaction. This is what Mr Davenport says on the subject:

"The 7 per cent Bank Rate squeeze is also having unfortu-

nate consequences in the sterling area overseas. Who will want to finance India's growth if 12½ per cent to 15 per cent can be obtained in London? Who will want to finance Australian development if industrialists in Britain are willing to pay more than double the 5½ per cent rate which is all that bank advances in Australia can command? If this situation is allowed to persist, money rates throughout the sterling area will inevitably rise through the attraction of the London magnet, the fall in commodity prices will quicken, the raw material producing countries will cut their imports, overseas trade will contract, our invisible earnings will diminish and before long a deflationary spiral will be set up and gold will again be flowing out of the reserves to meet a dollar deficit. This will be the economic consequence of Mr Thorneycroft's 7 per cent that is, if the game is played much longer."

The general opinion seems to be that Mr Thorneycroft's resignation implies and involves a change in monetary policy on the part of the UK Government. In other words, there is reasonable evidence that, at long last, the UK is beginning to have second thoughts on the deterrent potentiality of high Bank Rate. It is, of course, too early to speculate on how soon or whether the Bank of England Rate will be reduced. But there are at least two reasons to believe that

(Continued on page 128)

Consequences of Mr Thorneycroft's Resignation

By PAUL EINZIG

MR THORNEYCROFT's resignation, and that of the two junior Ministers of the Treasury, came as a bolt from the blue. It has caused grave concern throughout the country and the Prime Minister's efforts to minimise the importance of the event has failed to reassure public opinion. Government spokesmen were at pains to emphasise that the three Treasury Ministers resigned over a "mere" £50 million which they insisted on cutting off the Estimates for 1958-59, in order to carry out the Government's pledge not to increase expenditure above the total for 1957-58. Even if this interpretation were correct, the importance of the principle involved was far in excess of the extent indicated by the figure of £50 million. What really matters is that evidently the Government is weakening in its determination to keep spending down at its level of 1957.

In reality the amount involved is uncertain, because there are bound to be Supplementary Estimates, and their total may well exceed that of the Supplementary Estimates introduced during 1957-58. More important than the actual amount of the difference between Mr Thorneycroft and the

rest of the Cabinet is that the Treasury seems to have received scant support from the spending Departments in its economy drive, and that the Cabinet refused to back up its demand for more drastic cuts.

An additional expenditure of £50 million would not in itself have produced unduly pronounced inflationary effects. But there is good reason to fear that departure from the principle laid down in September last will encourage pressure for further departures. All trade unions are likely to argue that if, on the Prime Minister's own admission, an addition of £50 million is such a trifling matter, then their respective claims, each one of which are well within that figure, could be conceded without disastrous effect. It seems probable that the trade unions, which have been marking time since September, will now press forward with their claim with the utmost vigour.

In such circumstances it is not sufficient for the Government to declare that it is determined to pursue Mr. Thorneycroft's disinflationary policy. That policy is now likely to encounter much

stronger opposition, because the departure from its rigid principle has given much encouragement to its opponents. There is a widespread feeling that the Government, while paying lip service to its disinflationary policy, is in fact much less firm than it was four months ago when the imminence of a grave crisis induced it to adopt strong measures. It is far from certain whether even Mr. Thorneycroft's policy, applied in full, would have been sufficient to arrest the wage spiral. And it is now felt that, since a collapse of sterling is no longer imminent and since the average politician is incapable of seeing ahead till the next crisis in the autumn, the Government is having second thoughts about carrying out in full the disinflationary policy decided upon under the influence of the acute run on the pound in September.

Such criticisms do less than justice to Mr Macmillan and his Government. Most Ministers are probable as keen as ever on disinflation, but they would like others to swallow the bitter medicine that has to be taken. They combined in an effort to frustrate Mr Thorneycroft's economy drive, but they are likely to back up his successor, Mr Heathcoat-Amory in his effort to keep down the volume of credit. Moreover, those who imagine that the change at the Exchequer would be followed by an all-round softening of monetary policy are reckoning without Mr Amory. The new Chancellor of the Exchequer is a man of character and a strong man. He has no political ambitions and is not afraid of applying the Gladstonian principle that the Chancellor of the Exchequer must be willing to sacrifice his popularity to the requirements of his guardianship of the public purse.

Above all, Mr Amory is in a very strong position in relation to the Cabinet. Should he fail to get the support which he demands, he would be in a position to force the Cabinet to back him up. For the resignation of another Chancellor of the Exchequer would be more than Mr Macmillan's Government could survive. Moreover, his disinflationary policy is bound to receive full support from Mr Thorneycroft from outside the Government, and from a large section of the rank and file of the Conservative Party both in Parliament and in the country. The Government's attitude towards inflation will be followed with the utmost attention from now on, and any marked departure from its declared disinflationary policy will encounter strong opposition on the part of Conservatives. So it is considered possible that the Government may feel impelled to implement the policy in defence of which Mr Thorneycroft has resigned.

Mr Thorneycroft should have taken a strong line six months earlier when the Cabinet decided to do nothing in face of the gathering storm. And it is a great pity

that the maximum of his demand was to prevent an increase of the expenditure. He ought to have insisted on substantial reductions below the 1957 level, in which case he could have resigned on a clear-cut issue. As it is, it is arguable that the difference between his policy and that of the Cabinet was merely one of degree.

It was not certain that the Government's policy would have achieved the end of checking inflation, and the change at the Exchequer has made it even less certain. One thing is certain. If the reconstructed Government's disinflationary policy should fail, the last hope of the Conservative Party to win the next general

election would disappear. Mr Macmillan does not appear to have realised the extent to which his supporters are in favour of economy in public expenditure. Unless he comes to realise it before it is too late the return of a Labour Government not later than 1960 must be considered a certainty.

World of Jute

Changing Pattern in Goods Production

WITH the release of the figures of production of jute goods in December 1957, the conditions obtaining in the Indian jute industry and trade in the past year, have become apparent. It would appear that despatches have slightly lagged behind those in the previous year. Output of jute goods has declined by 62,900 tons to 1,029,900 tons in 1957 from 1,092,800 tons recorded in 1956. A redeeming feature, however, is that the industry has started 1958 well as will be evident from the fact that the opening stocks are only 75,600 tons whereas at the beginning of last year stocks stood at 95,700 tons.

The drop in output is explained by the fact that for nearly 7 months in 1956 mills had worked with a larger complement of looms. An analysis of the figures will show that the decline is largely accounted for by sackings which in 1957 totalled 548,700 tons as against 615,500 tons in the previous year. Output of hessian is only 900 tons lower at 414,300 tons. Other manufactures have increased by 4,800 tons.

The pattern of production in the past 12 months shows that mills have made from time to time certain adjustments as regards their looms. In the first half of the year the emphasis has been on the production of hessians. For, during this period hessian production has been kept at a high level with the result that the resealing of the looms from the middle of last year is reflected only in the reduction of sacking output. In the second half of the year the emphasis has shifted to the production of sackings. With a substantial decline in sacking stocks at the end of August, there has been a marked change. As against a production of 43,100 tons in August, production of sacking in September, October, November and December has been 47,300 tons, 47,100 tons, 53,200 tons, and 54,700 tons respectively. It will be interesting to note that the year's highest figures of production for hessian and sackings are found in the first and last month respectively. A significant point that emerges from the trend of production this year—this trend is particularly noticeable in the past two months—is that productivity has increased. For, while mills, working for 206 hours in December 1956 produced 84,900 tons, working for the same number of hours in November 1957, they have produced 91,900 tons. It is evident that the modernisation programme which is being implemented, has already begun to bear beneficial results.

Though total despatches during the past year at 1,043,659 tons are lower by 11,268 tons as compared with the previous year, exports have been higher by 2,832 tons at 864,273 tons. The lower total off-take is solely due to the decline in internal consumption which has amounted to 179,386 tons as compared with 193,436 tons in 1956.

The announcement that burlap consumption in US during December has increased by 8 million yards over November to 71 million yards has not affected market sentiment either way. For, as expected earlier, US burlap consumption last year has been at a disappointing level. The total consumption in 1957 has amounted to only 833 million yards as against 878 million yards. Stocks at the end of the year are also substantially lower at 225 million yards as against 267 million yards at the end of 1956.

It would appear that the jute industry is destined to have one anxiety substituted by another. While sackings have been faring well, hessian have started lagging behind. The steep decline in the burlap consumption in US in the closing months of last year together with the increase in stocks in that country has engendered some anxiety regarding the off-take of hessian. Though it is believed that some improvement in the situation will ensue, the industry does not seem to be very hopeful. It seems to take the view that it will be prudent to keep hessian stocks at a low level. The continued upswing in the production of sackings indicates that the industry is hopeful of receiving good demand for this category of jute goods.

Conditions in the jute goods market during the past week were steadier and prices all along the list showed some fractional improvement. Sentiment was aided by reports of fresh business in cornsacks with Australia and scattered bear covering in both hessian and sackings. Hessian 40"x10 oz Ready opened steady at Rs 39.65 and at one time was done up to Rs 40.06 before closing at Rs 39.95. B Twills Ready also opened steady at Rs 105.10 and after making further small headway to Rs 105.50 closed quietly steady at Rs 105.12.

Prices showed substantial improvement over previous levels when the market opened last Thursday mainly in view of the approach of due date in Fatka. Hessian 40"x10 oz Ready closed the day 20 nP higher on balance at Rs 39.65 with the April-June position placed at Rs 39.10. In the

World of Tea

Prices in Sellers' Favour

AUCTION prices, both at Calcutta and Mincing Lane, have recorded further gains during the week under review. Competition is sustained and well-distributed. The floods in Ceylon and the continued labour unrest in the Colombo Port are undoubtedly contributing towards higher values at the auctions. Some concern as to whether Indonesia can maintain normal shipments of tea, as well as adverse weather in Pakistan and East Africa, are also said to be playing their part in firming the market.

On the question of the floods in Ceylon, it is understood that the tea gardens were unaffected, because of their elevation. But the movement of tea, over the next few weeks, is expected to be stepped up somewhat to compensate for hold-up in Ceylon teas. Although the Ceylon gardens were not damaged by the floods, heavy rains there recently have curtailed the December crop. According to certain trade sources, outturn in December is estimated at around 27 million pounds or some 9 million pounds below 1956 December total.

Meanwhile, shipments of North Indian tea, during 1957, dropped sharply to 359,900,000 pounds from 436,100,000 pounds in the previous year. Even allowing for the carry-over of 50 million pounds of 1955 tea shipped in 1956, exports last year disclosed a fall of more than 26 million pounds.

The serious decline in tea exports at a time when the country is faced with an acute shortage of foreign exchange is attributed to keen competition from Ceylon and Africa who were able to offer tea to the world market at rates which were lower than those of India. Competition was particularly keen in Common teas, which formed the bulk of the North Indian production. The reluctance of the Government of India to provide any relief to the tea industry by way of a reduction in, or abolition of, export duties also hampered tea exports. The change in the rate of duty every month on the basis of prices obtained in London auction also retarded exports of tea, as overseas buyers were unwilling to face this uncertainty.

In this connection, the latest monthly bulletin, issued by Messrs J. Thomas & Company, states:

"Common teas were quoted appreciably lower, both in London and Colombo, throughout the 1957 season; and it was indeed fortunate that the absorption by the internal market was sustained, thus preventing a further fall in values on the Calcutta market. From all indications the dependence of the tea industry on the internal market will be even greater in future years. It is, therefore, of ever-increasing importance that the

Indian campaign of propaganda be further intensified if the vast potential demand from within this country is to be exploited to the full.

The cost of production has risen substantially in the last three years and little, if any, relief can be expected in this direction in the coming year. On the other hand, world production is on the increase and competition to Indian teas is likely to become more serious in the future. The current sales have doubtless caused anxiety to the majority of producers in this area and a bright future is hard to forecast.

The political unrest in Indonesia and the recent Port strike and general dislocation in communications owing to rain and floods in Ceylon may provide a temporary stimulus to the Calcutta market. But, the problem of Common teas is deep-rooted. Unless positive steps are taken at once to provide relief in the form of reduced taxation, improvement in transport, warehousing and financial facilities, a lowering in the standards of production and efficiency is inevitable, causing lasting damage to the industry whose large foreign exchange earnings are vital to India's progress and well-being."

In the Export Sale, held in Calcutta this week, offerings were 55,372 packages. There was again a strong and general demand, most sorts selling at dearer rates. Clean well-made teas and those with bright liquors were the strongest feature, especially the Orange Fannings in this category which appreciated by about 10 nP per pound and sometimes more. The BOPs of this description were frequently sold above valuations. The remaining BOPs, however, tended easier and were the weakest feature of the sale.

"Teas for price" were 2 to 4 nP dearer, while plain and medium BPs and Fannings were well supported at 2 to 4 nP above last rates. Non-wither Doors were irregularly 6 to 8 nP dearer, especially those with bright liquors. There was fair demand for CTC teas at about last rates, some of the bright liquoring types selling at a premium. There was fair competition for Whole Leaf grades and BPSs and prices for these were irregularly dearer.

Darjeeling teas met with much better demand and were sold well. Following rates were quoted:—Clean Black Pekoe Rs 2.30 to Rs 2.40; Plain Broken Pekoe Rs 1.60 to Rs 1.64; Plain Fannings Rs 1.70 to Rs 1.74; Medium BP Rs 1.68 to Rs 1.72; Medium Fannings Rs 1.80 to Rs 1.84; Best Assam CTC BP Rs 2.60 to Rs 2.80 (nominal) and Best Assam CTC Fannings Rs 2.50 to Rs 2.60 (nominal).

In the Internal Sale, offerings were 18,083 packages of Dusts. There was very good general demand and the better liquoring Mediums and the best liquoring CTC Assams were, once again, the

strongest feature of the sale, selling at appreciably dearer rates. The fibrous descriptions with ordinary liquors were also in great demand and were firm to dearer.

All descriptions of orthodox manufacture were firm and occasionally dearer, while there was continued support for clean black leafy types from the exporters. Following rates were quoted:—Medium Doors Dust Rs 1.62 to Rs 1.64; Medium Assam Grainy Dust Rs 1.64 to Rs 1.66; Medium Assam CTC Dust Rs 2.00 to Rs 2.20 and Best Assam CTC Dust Rs 2.80 to 3.05.

Also, 1,890 packages of Leaf grades were offered for internal consumption. There was a good general demand and prices were firm and often dearer.

In the Export Quota section, business was reported done at 17, 17½ and 18 nP per pound.

Crop outturn in Northern India has shown a substantial rise of 10.4 million pounds in December 1957 as compared to the corresponding month of the previous year. Total production, to the end of December 1957, is, however, lower at 521.37 million pounds as compared to 540.05 million pounds in the corresponding period of 1956, showing a decline of as much 18.7 million pounds. As compared to the average of 530.89 million pounds for the last three years, there is a decline of 9.5 million pounds.

At the sale held in Chittagong, Dust offerings amounted to 5,439

chests and Leaf 12,486 chests. There was a strong demand for all kinds of Dusts and prices were generally one to two annas per pound dearer. Plain Sylhet Dust was quoted at Rs 2-5-6 per pound.

There was a useful general demand for Leaf grades except for Whole Leaf grades which were a dull market. Brokers, however, competed for at As 2 to As 2½ over valuations, while "teas for price" were a bright feature, selling at from As 2 to As 5 above previous rates. Fannings grades were well supported and generally advanced by about one to two annas per pound. Sale No. 16 will be held on the 29th January, 1958.

At the auction held at Colombo, offerings were 6,386,557 pounds. There was active demand. There was a wide selection of Nuwara Eliya teas; but quality was rather plain and prices were generally below valuation. There was, however, a very strong demand for high-grown teas. Prices of best quality Broken were maintained with some irregularity. For varieties below best, there was an advance of 15 to 20 cents per pound.

Among medium-grown teas, there was an advance of 5 to 10 cents per pound for useful liquoring Broken. Among low-grown teas, Middle Eastern types were again strong with leafy BOPs advancing by 5 to 10 cents per pound. There was more enquiry for all qualities of Fannings which were sold at dearer rates.

[January 18, 1958]

World Overseas

Britain

THE resignation of Mr Peter Thorneycroft from the Chancellorship of the British Exchequer has naturally provoked a good deal of discussion, both in London and abroad. The full background to the Cabinet dispute will not become clear until both sides have had an opportunity to present their case in Parliament. The general impression in London at present is that it arose out of disagreement about means

rather than ends—that it was, in fact, the result of disagreement about the most effective method of combating inflation inside Britain.

But questions, of course, arose at once. The most obvious, and the most important, was whether Mr Thorneycroft's resignation foreshadowed major changes in the economic policies of the Government, particularly in relation to the fight against internal inflation and the defence of the pound sterling. On this point, however, Government spokesmen have been emphatic and unequivocal. In his letter to Mr

Thorneycroft, Prime Minister Harold Macmillan pointed out that "the policy upon which we are all resolutely determined is to check inflation and maintain the stability of sterling", and added that "the economic and financial measures which we adopted during the past year are, I believe, beginning to bear fruit."

The new Chancellor, Mr Derick Heathcoat Amory, made the same point in even stronger terms. In a statement issued on the evening of the announcement, he declared, first, that "the change of Chancellor means no change in the Government's economic or financial policy"; second, that "the measures which have been successful over recent months in improving our economic position will be maintained,

as long as is necessary, without relaxation"; and third, that the "strengthening of sterling and a stable internal price level are the dominating aims of the Government's economic policies, and nothing whatever will take precedence over them; there have been no divisions between us in the Government at any time on these objectives".

Since then, the new Chancellor has been seeing a number of leading representatives of British industry, and he will no doubt have made it absolutely clear to each of them that the Government intends to maintain existing policies in full rigour.

The firm attitude towards wage increases in the public sector, which could lead to greater Government expenditure, has been generally regarded as a vital part of the new economic policy, and on the day following the change of Chancellor there were indications that the position in this respect had in no way changed.

The London Transport Executive, a branch of the nationalized British Transport Commission, rejected for the second time a claim for increased wages put forward on behalf of London busmen; and the new Minister of Agriculture refused to allow an appeal against the dismissal of a number of temporary civil servants which followed the recent award of a wage increase in their department.

Both words and action had their effect in London and abroad. In the London money market there was no sign of the softening in interest rates which might have been expected if the change of Chancellor had been understood to indicate the possibility of an early relaxation of the Government's stringent monetary policy.

Security markets—particularly the market in Government securities—brushed the news off lightly. Gilt-edged stocks were marked down slightly at first, but soon recovered lost ground and became noticeably firm. Foreign exchange markets behaved in a very similar fashion. Sterling fluctuated violently at first, as it would on the announcement of any important Government reshuffle, but became steady again on the day following. The dollar rate, to take an example, was by the end of the week only a fraction of a cent lower than when the news of Mr Thorneycroft's resignation was announced.

It seems clear, then—whatever the detailed reasons for the change of Chancellor turn out to be—that it will not be allowed to have any effect on the direction or vigour of the Government's economic measures. The behaviour of the markets suggests that this fact, so strongly stressed by all Government spokesmen, has been grasped both in London and abroad.

The position has been summed up very fairly by the chairman of the Deutsche Bundesbank. "I cannot imagine", he said, "in view of the world position of sterling, that a change at the United Kingdom Treasury will also mean a change in British monetary policy".

"Communications" and Executive Training

THE laughable and pathetic sides of US business life have inspired innumerable newspaper articles and quite a few outstanding books. "Executive Suite" by Cameron Hawley leads the reader to the remote recesses and nuances of the instincts and conduct of top employees in US business, their secret agonies and frustrations, invariably shared by their spouses. A recent issue of the Management Review carries an article on "human relations techniques" as they are understood and practised in the US. The Time treats us to a lively discourse on schools for Executives. The second title of the article is more instructive: how helpful is industry's new fad?

Lawrence Stessin of the Graduate School of Business, New York University, who contributes the article in the Management Review, points to 'Communications' as paramount among the host of human relations techniques which "in this brave new world, the modern man in management aided and abetted by social scientists, has embraced" and around it "swirls a new kind of interaction between employer and employee designed to bring about understanding, cooperation, and integration of an enterprise. However, communications, ostensibly an antidote to the slide-rule approach to human relations, has itself become a victim of stereotypes, clichés, fables, and fallacies. It has been turned into a gimmick and a gadget. Communications has become an end in itself".

The rest of his narrative is an elaboration of how it has come to be so. The frantic search for new ideas, for the discovery of standardised attitudes and dealings with employees with a view to secure ideal personal relations and eventually the maximum output, especially when backed with colossal expenditure of money and effort, would not all have gone in vain. But the results are not always as friendly or as universally successful as the executives at the top think or perhaps pretend to think. Professor Stessin mentions some amusing situations in which the grandiose ideas of the ruling class in industry have been exposed as fatuous illusions.

Often the top executives have no means of verifying the results of these inescapable methods. Frequently, they are not even enabled to secure the real facts through the organised cunning or stratagem of the employees. Sometimes contacts and morale-lifting techniques which are conceived in a genuinely human spirit are attributed just the contrary motives and arouse resentment rather than affection from the workers. On the whole, the worker's response is vague, incalculable and

not always even sympathetic. Prof. Stessin asks, with his readers, "Does all this mean that communications is a waste of time and money?" "Of course, it does not. But it does indicate that too many executives are emphasizing 'Com-

munications' at the expense of communication, paying too much attention to the gadgets and gimmicks and too little to content and purpose".

The Time article is even less charitable over the training courses for executives in US industry. There is an illuminating para on the results being obtained from these courses.

"Perhaps the biggest objection to the whole idea of executive training courses is that US industry, which spends millions checking on the efficiency of every thing else it does, has no check on the results of executive training. More important, it has not even been able to figure out a way to do so effectively. The biggest reason for this failure is that, as Ralph M.

Besse, executive vice president of Cleveland Electric Illuminating Co., put it 'Those picked to attend classes have already demonstrated ability to move, so you cannot say their class work was the specific cause of my advancement'. When asked point-blank what they got out of such courses, the executive students themselves seem surprised by the question and are often at a loss for an answer. They mumble such replies as, 'Well, it was not a waste of time' or 'I guess it did some good'. Even those who are most enthusiastic about the courses describe the benefits they got as 'intangible' rather than anything that could specifically help them in business. Says a Jones and Laughlin Steel Corp. Official: 'You have to have faith that they do some good, that is all—absolute faith.'"

Mapping buried rocks

Geophysics, which is the science of the earth's physical structure, aids the search for petroleum by making it possible to study the characteristics of rock layers buried deep in the earth's crust.

The geophysicist's main "tools" for this job are the gravity meter, the magnetometer, and the seismograph. The gravity meter and the magnetometer, as their names imply, measure the pull of gravity and the magnetic force of the earth. For the sedimentary rocks which may contain oil are lighter than others, and they are less "magnetic" than the harder rocks which never contain oil.

With the seismograph, the geophysicist can measure the intensity and timing of earth tremors. The men of a seismic crew bore a shallow hole in the ground, lower a charge of dynamite into it and set it off. The

shock waves produced by this miniature earthquake travel down, hit the layers of rocks beneath and bounce back to the surface where they are recorded by the seismograph. The waves are reflected strongly from hard rock and less strongly from soft rock. The length of time they take to reach a particular layer and to return indicates the depth of the rock.

All this information is recorded in the form of wavy lines on a chart. By setting off explosions at a number of points it is possible to map the various buried rock formations with a fair degree of accuracy.

When all the results of a geophysical survey have been compared, it may be possible to locate a rock formation that might prove to be oil-bearing. But even if such a trap is found, the only way of proving whether or not it contains oil is by drilling a test well.

IN the less than 17 months that he has held office as India's Finance Minister, Mr. T. T. Krishnamachari has consistently been dominating the Indian economic scene. Perhaps domination is not quite the word that I have in mind, and it may be more correct to say that the spotlight has centred round him—favourably or unfavourably. He has been embroiled in not a few controversies, and there has been an ever present atmosphere of tension. Not that Mr. Krishnamachari has been consciously at fault. Nor, again, am I inclined to say that nothing can be chalked up against him, but then, the Indian experiment at industrialisation is such that mistakes are possible even with the best intentioned of ideas and by the most moral of our Ministers; so, while it is not my purpose to extenuate the liabilities that figure on the 17 months' balance sheet of the Finance Minister, I wish to take this opportunity of studying the balance sheet as it should be studied, that is, in its totality, and necessarily taking cognisance of the assets side as well. I have hesitated to put my pen to paper in an assessment of this sort of TTK; and the reason, of course, is that I did not wish to provide fresh fuel for the fires of controversy over one who has proved to be a man of controversy. But, when I saw that Mr. Peter Thorneycroft seized what was a fragile pretext for getting out from under his difficulties, I was apprehensive that the criticism, voiced and unvoiced, of the Finance Minister, might certainly be working upon TTK's attitude to his holding office. This apprehension impels me to take stock of the whole performance of TTK as Finance Minister since he took up the portfolio 17 months ago.

There are, in the main, and I am at the outset drawing up the liabilities side of the balance sheet, five distinct and separate controversies which have centred round the Finance Minister. There was, first, TTK's very first decision as Finance Minister to increase the excise duty on cotton textiles. By that one act, he alienated the affections of what, I am afraid, counts as a powerful section of the national economy. Mind you, this is not the context in which I am seeking to find out whether

the raising of the excise duty was in itself bad or good, justified or not, on the part of the Finance Minister. I am afraid that actions and words are less important than attitudes and postures. So, for no fault of his own, TTK started life as Finance Minister by evoking resentment from vested interests and, therefore, unpopularity as far as their attitudes and postures were concerned. Then, there came the interregnum, where the running of Government yielded place to the impending elections. Call it, if you will, the platform speeches that were part of a candidate to office, but the unfortunate fact remains that those seeking election further alienated the so-called vested interests. Since the Congress platform had as its main plank the implementation of the Second Plan and the objective of a socialist pattern of society, the election speeches inevitably funnelled resentment on to the steward of the Finance portfolio, TTK. Thirdly, by the very reason of the election to Government of the Congress Party, the Budget for 1957-58 could not but be one in which an all out effort had to be made to complete the securing of additional revenues from new taxes. While the Budget could be held to have been framed by the Cabinet as a whole—at least as far as the additional revenues sought are concerned—once again the public resentment was directed at the person of the Finance Minister alone. The fourth controversy, though not serious in itself, has had too much public attention to be omitted from this list that we are drawing up, and relates to the interview given by the Finance Minister to the New Delhi Correspondent of The New York Times. The fifth is the one which has raised the greatest amount of furore and relates to the investments made by the Life Insurance Corporation in what are popularly called the Mundhra group of shares. I shall now, if I may, try to distinguish between where Mr. Krishnamachari could be held responsible for an error of judgment and where the outcry against him is completely unjustified.

Let me first clear the air by giving my views on the liabilities side of the ledger. I am afraid that Mr. Krishnamachari has only him-

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow up whom I please!"
—As You Like It.

self to blame for some of the unpopularity that he has earned. He has a fondness for extemporaneous statements, but he has not been as careful as he could be in what he has on occasions said. So, the unguarded statements that now and then issued from him produced such uncertainty, generally that Mr. Krishnamachari perhaps figured at one time as the most feared man in India. To the extent that an iteration of Congress objective was necessary at election time, I can appreciate the need that Mr. Krishnamachari might have had to mince no words. But there was no need, as he has on occasions done, to rub it in. Every politician needs to be careful about his words. More so, the Finance Minister. And the first debit to be chalked up against Mr. Krishnamachari is that he was somewhat less than careful in his public utterances. Secondly, as the amendments to the Budget proposals of 1957-58 show, Mr. Krishnamachari might perhaps have polished his Budget a little more carefully than he did. The revisions that have been entailed by the Select Committee are such that they can only be construed as a reflection on the care with which the Budget proposals were drawn up. Thirdly and lastly, the LIC affair in the form in which it is presently agitating the public mind is again a reflection on the Finance Minister. While the first two debits do not allow of any qualification, I must at this stage hasten to point out that the third debit, if properly viewed, is no debit at all.

Before I go into this last point, about the Life Insurance Corporation, let me add up the credits that Mr. Krishnamachari has earned for himself. It will not be gainsaid that the various tax proposals that he has made are measures which would have been implemented, whomsoever the Indian Finance Minister. No, I must modify this last statement. It is doubtful whether any other Finance Minister would have been stout enough of heart to brave the flood of public criticism in announcing such revolutionary tax measures. So, we may say at best that any Indian Finance Minister would have been required to make a tax effort of the size that we have had in 1957-58; and TTK's credit lies in exhibiting a courage in the face

of the criticism that he must have known would be evoked by his Budget. Thus, in the first place, it is to Mr. Krishnamachari's credit that he unflinchingly set about achieving the tax target that was postulated for him as Finance Minister of India during a time when the Second Plan has been an overriding factor. We come, next, to the manner in which the tax effort has been completed. True, as I have already said, any Finance Minister would have been called upon to raise taxes for completing the Second Plan tax effort. The easy way out would have been to raise the rates of taxes all along the line. But Mr. Krishnamachari has had the vision to foresee the need for and desirability of evolving what, in his words, is an integrated structure of taxes. Call the Wealth Tax and the Expenditure Tax new fangled innovations, if you will. But in India's circumstances, this is exactly what the country needed. Let there be no mistake about it. The most important fact is that, with the new structure of taxes, a start has been made in the closing of loopholes for tax evasion. Ever since the halcyon days of the Second World War, ever since the time when blackmarketing and profiteering were rife, there has been mounting demoralisation of national character, because of the unlimited and apparently uncheckable scope for tax evasion. Furthermore, the tax evasion started a vicious circle that we have just succeeded in getting out of. That vicious circle lay in the fact that, so long as tax evasion lasted, additional tax revenues could be secured only by increasing the rates of taxes; but, with each increase in the rates of taxation, tax evasion became more fruitful and profitable and lucrative. There appeared to be no end to this vicious circle, in which each successive rise in the tax rates merely made this country a laughing stock, because the taxes could not be enforced and because the evaders, like the green bay tree, flourished as before. It stands to Mr. Krishnamachari's credit that he has put the country on the way to getting out of this vicious circle. This, then, is the second asset that he possesses on the balance sheet, and one that is of inestimable value. In the third place, none will begrudge or gainsay Mr. Krishnamachari his ability to act decisively and promptly. Indeed,

the imposition of higher excise duties on cotton textiles in September 1956 was calculated in the long run to benefit the consumer. The immediate aim was to inhibit consumption and to channel part of the larger margin of mills' profits to the national exchequer. Both the immediate objectives were quickly attained; and, at the present day, the longer term aim to lower prices for the consumer has also been achieved. Similarly, the promptness with which Mr Krishnamachari attended to the extremely difficult banking situation that obtained on the eve of the 1956-57 busy season bespeaks the thoroughness with which he examined the problems as well as the celerity with which he prescribed the remedy. If the 1956-57 busy season did not witness a startling disruption of banking services to industry, a moiety of the credit in all fairness belongs to Mr Krishnamachari for taking the correct steps promptly. Again, it tends to be forgotten that, in more ways than one, Mr Krishnamachari has proved himself an extremely efficient Finance Minister. For example, TTK became Finance Minister at a time when inflationary influences were already on the prowl, and when these pressures had already started distorting the price situation. In recognition of the need to tackle the inflationary problem with all the powers at his behest, Mr Krishnamachari appointed Mr H.V.R. Iengar to the Governorship of the Reserve Bank. With a full understanding between the Finance Minister and the Reserve Bank Governor, monetary policy has been laid down in such manner as to repel the inflationary pressures and indeed to overcome them. In order to appreciate properly the measure of the Finance Minister's achievements, we need only to recall that the so-called industrially advanced countries with well established money markets had waged what was largely a futile battle against inflation. Classically, inflation and fresh investment for new production go ill together. Mr Krishnamachari has proved that inflation and new investment are not necessarily mutually antagonistic, especially in a country which, like India, is in the throes of industrialisation. So, the third asset in Mr Krishnamachari's balance sheet is the perfecting of selective monetary control and the winning battle against inflation.

This brings me, finally, to a consideration of what I might call the crescendo controversy. The investment by the Life Insurance Corporation in the Mundhra group of shares has been made out in some circles to take on the proportions and attributes of a scandal. Questions have been asked in Parliament, the debate has been like so much washing of dirty linen in public, a Commission of Enquiry has been appointed. The issue here is whether, in purchasing shares in the Mundhra group, there has been an error of

judgment or an abuse or misuse in the utilisation of public funds. The Commission of Enquiry, comprised by Justice M. C. Chagla, are to determine this matter. If regard is had only for the fact that, since the purchase of these shares, their prices have come down, you could say that it was a poorly judged investment. If regard is had for the fact that some of the companies whose scrip were purchased have not issued balance sheets for some years, you could say that those who decided upon the investment had not looked too closely into the suitability of particular scrip for purchase by the Life Insurance Corporation. But these are two factors which are, to my way of thinking, the less important determinants in assessing whether or not there has been misuse of public funds. I agree that it was a mistake not to have checked beforehand whether particular companies had defaulted in the publication of balance sheets. But, surely, the LIC or those who made the investment cannot now be arraigned in the dock because prices of particular shares have come down. After all, no purchaser of shares can be 100 per cent sure that the scrip that he buys will not depreciate. Even gilt-edged is not, in the interim between its issue and its maturity date, immune from capital depreciation. But then, the question is whether these particular scrip, in fact, were worthy at all of investment. It is not, I am afraid, a simple matter of coming to a conclusion on Mr Mundhra's reputation or stature in the corporate sector. For the ordinary investor, the person behind the company is undoubtedly of importance. But, for an institutional investor like the Life Insurance Corporation, much more is involved. I submit that the Life Insurance Corporation is charged with the duty not only of investing safely its accruing funds, but also with the responsibility for ensuring that the scope for depreciation in the already existing investments is minimised. And the two of these are undoubtedly interconnected and interrelated. In this context, we need to apprise ourselves of the situation in which the LIC made the purchases that it did. The stock exchanges had plummeted to new depths, thanks to the 1957-58 Budget. The stock exchanges found themselves unable to recover, for a unique reason. That reason lay in the fact that there was a very large quantity of Mundhra scrip floating unabsorbed in the market. How they came to be floating stocks happened in this way. As I hear it, Mr Mundhra, for securing fresh finance, had obtained loans against shares held by him from stock broking interests. These were in the nature of badla transactions, that is, simultaneous with the execution of a sale order, Mr Mundhra also executed a purchase order for a forward delivery date; it was just around Budget time that the time came for Mr Mundhra to take delivery of such scrip. He found himself unable to

do so, but the burden was not so much on him as on the stock brokers, and so long as the stock brokers were weighed down by the need for financing such shares, price movements could not but be lethargic. I submit that, in such a situation, the LIC had its duty clear to disembarass the market, so that prices could be freed from shackles and so that the value of the LIC's investments could also improve. If we call such purchases by the Life Insurance Corporation as open market operations, there is a storm of protest, because the LIC is supposedly disbarred from such activity in the stock exchanges. But I put it to the reader that the LIC's primary purpose was to pave the way for a general improvement in the stock exchange prices, the primary intention not by any means being any desire to help Mr Mundhra. All that happened, as far as Mr Mundhra was concerned, was that he had no longer the commitment to take delivery of these shares. Supposing the LIC had not made such purchases of Mundhra shares: as today, Mr Mundhra would be a broken man. So, the LIC purchases have not in any way changed the situation as far as Mr Mundhra is concerned. What change there has been has been in the sphere of stock exchange prices generally. Let us concede that there has been some element of depreciation in the Mundhra scrip. But what of the appreciation in other share values that has taken place since Budget time? This appreciation could never have taken place so long as the Mundhra scrip were continuing to float around. So, in a sense, the LIC must be held to have acted in a manner to safeguard its total portfolio of investments. It is not taking a look at the whole balance sheet if the depreciation on the Mundhra scrip is alone taken into account, and if the consequential improvement that the LIC purchase facilitated in other equity shares is overlooked. Again, in respect of the question of alleged bogus or duplicated share scrip, the LIC apparently is insured against any loss, since the brokers who sold the shares to the LIC will be held accountable. If you consider the LIC affair in its totality, you will find that we are tending to make mountains out of molehills. The last word I have to say about all this is that it needs to be borne uppermost in our mind that an important and even imperative duty on the part of the LIC is to safeguard its investments by supporting the stock markets in particular sections or even in particular scrip.

This, then, is all that I have to say about Mr Krishnamachari. He may have made some mistakes, but all this is far outweighed by his real achievements as Finance Minister. It would be a pity if precipitate decisions were to be taken resulting in our deprivation of TTK as Finance Minister for the rest of the Second Plan period.

The reception given by Delhi and the surrounding areas to Mr Macmillan, the British Prime Minister, must have opened many eyes in Clive Street which had remained either fully or partly shut since the visit to this country of Messrs Khrushchev and Bulganin. Doubtless, this is one of the good things Mr Macmillan's visit has done. Sections in Clive Street, I am afraid, have never adequately appreciated a cardinal fact of the Indian character, and that is its attitude to the foreigner, be he from America, England, Egypt, Indonesia or Russia. The average Indian is a very hospitable being and that is why he likes to make much of a foreign visitor even to the point of exuberance. If a foreigner goes into the Indian countryside, he invariably finds whole villages turning out to see him, even if from a distance, and the race complex never works in their minds. The old Sino-Japanese type of xenophobia is absent from Indian history. Another point. The east is very festival-minded, and if an occasion is provided by the visit of a foreigner for a big tamasha, it is seized with alacrity without any thought of east being east and west being west. The village women who unveiled their faces to have a look at Mr Macmillan are the same who had run across furrowed fields, children in arms, to greet the Russians when they were here. His visit has cleared the air a lot and, so far as this country is concerned, three things contributed to the success of his visit. The first is doubtless the constructive proposal he had bade on the eve of his departure from London to reduce the cold war temperature. The second is his assurance that the UK is impartial over Kashmir and the third, his frank and friendly attitude to our Second Plan.

What I have just said about the average Indian being basically a hospitable animal will find added confirmation from the welcome given earlier this week by Calcutta to the Czech Premier, Mr Viliam Siroky. Having travelled a good deal in his trail, I found him greatly interested in Indian affairs and conditions. He was apparently so fascinated by the handloom products manufactured by the cottage industry unit of the Indian Statistical Institute that Mrs Mahalanobis, wife of the Director, whose special pigeon it is, happily thought of presenting Mr Siroky with a couple of beautiful scarves. Mr Siroky went over all the departments of the Institute as well as the Cancer Institute which he visited earlier, and was treated to a cultural show at the New Empire. If, later on, he made a good impression on India by his statement that Kashmir is part of this country, I am sure that the people in general realised why he could go that far and why Mr Macmillan could not.

Gateway Gossip

The Chagla Commission

MR Justice M. C. Chagla, as a one-man Commission, begins, on January 20, his enquiry into the facts connected with the investment of LIC's funds in shares of companies belonging to what has come to be described as the Mundhra group. The enquiry will be public in the sense that the proceedings are open to the public and may, therefore, be expected to be reported in some detail in the daily press. The deliberations are likely to take five to six weeks; and the report is to be presented to the Government by March 8. The terms of reference to the Commission, which has been set up under the Enquiry Commission Act of 1952 and in pursuance of the undertaking given in Parliament by the Finance Minister, are to inquire into (i) whether the purchases (of Mr Mundhra's shares), were in accordance with normal business or practice; (ii) the propriety of the purchases; (iii) the person or persons responsible for the purchases; and (iv) any other circumstances which to the Commission may appear relevant.

The Commission's task is, thus, restricted to the Mundhra affair; and the first impression created in one's mind is that the purpose of the enquiry is to find out if there was any malafide in the investment; and, if so, who is the person or persons guilty of such malafide. Such an impression is further strengthened by the tenor of the debate in the Lok Sabha. In knowledgeable circles, however, it is believed that, with his sure eye for whatever is essential and with his unerring instinct for principles, Mr Chagla will link this particular transaction with the "relevant circumstances"; and this link means that the Mundhra affair is to be viewed as part of an investment pattern that the LIC, in obedience to policies and directives decided at Government level, has been evolving over the past few months.

The starting point for this policy is the assurance given by the Finance Minister, at the time the LIC Bill was being piloted through the Parliament, to the effect that the proportion of the LIC's new investments in the private sector would continue to be maintained. This policy, coupled with the snowballing portfolio in gilt-edged, makes the LIC the largest single holder of Government Securities as well as of industrial shares. The LIC has, thus, a vital stake in a healthy market for gilt-edged, and also for equity shares. Price recessions in the one or the other have a direct adverse effect on the over-all value of the LIC's total funds. With the life funds of over a hundred companies

getting consolidated and unified, the LIC's stake in the Stock Exchange behaviour has not only increased many-fold, but has become a continuing responsibility demanding vigilant watching and alert initiative. In simple terms, the LIC has had to evolve a kind of open market strategy in defence of existing values.

If the LIC's purchases of stocks and shares over the past twelve months were carefully studied, it will be clearly realised that a moiety of such transactions were in the nature of open market strategy. When the State Loans were sinking to new depths, and the concerned Governments stood piteously helpless, it was the LIC that emerged as a large scale buyer of all the state scrip that were on offer, and that, by this means, arrested the rot. The Reserve Bank does not engage its own funds to any great extent in open market purchases pertaining to State Loans. So, the LIC's intervention was opportune and effective; and the State Governments were truly grateful to the LIC declared categorically and unequivocally that the purpose and intentions behind such operations were, in effect, open market strategy.

When driven to a corner, official spokesmen may even disdain all intention of open market strategy and stoutly assert that the sole concern of the LIC authorities is bonafide investment—just investment and nothing more. But, let the record of the LIC's purchases be examined in relation to the vicissitudes of Stock Exchange behaviour; and any impartial student will come to the conclusion that a good proportion of recent purchases has all the attributes and purposes of open market operations; and that the policy underlying such purchases is what is undeniably in the interest of the LIC with its extensive and enormous stake in stock exchange securities.

To most people in India, open market operations, in particular reference to the LIC, may appear high-sounding and farfetched. That the accumulating funds at the disposal of the Treasury in respect of insurance schemes controlled or directed by Government

No one in authority has so far been truly grateful to the LIC declared categorically and unequivocally that the purpose and intentions behind such operations were, in effect, open market strategy.

When driven to a corner, official spokesmen may even disdain all intention of open market strategy and stoutly assert that the sole concern of the LIC authorities is bonafide investment—just investment and nothing more. Central Provinces

Railways Company

The annual report of the Central Provinces Railways Company made up to 30th September 1957 reveals an improvement in the financial resources of the Company. A favourable cotton and grain crop last year resulted in increased passenger traffic as well as goods traffic and thus created conditions for an increase in its receipts.

Notwithstanding such a favourable position, it has not been possible for the Directors of the Company to declare a final dividend. This was because there has been a corresponding increase in the commitment of the Company, called for by increase in the combined rate of income-tax and super-tax payable by companies as well as the introduction of new taxes as the Wealth tax. The provision for taxation had increased by about Rs 1,14,134, the provision for Wealth tax alone being about Rs 91,000 for the two years ended 30th September 1957.

While presenting the annual report Mr A. N. Haksar the Chairman of the Company removed the wrong notions that the members might have about the steps that had been taken by the Directors in improving the prospects of the Company and stated that the Government had not been sympathetically inclined in the matter of the fluctuating fortunes of the shareholders. He also pointed out how the suggestions for improving the revenue of the Company and for expanding the line of the Company had been coldshouldered by the Government. The Government had similarly turned down a proposal by the Directors of the Company for the purchase of the Railways at a price which would be agreeable both to the Government and the Shareholders. An alternative suggestion to guarantee shares and profits of the Company so that the shares might become eligible as trustee securities fared no better at the hands of the Government.

Mr Haksar did not raise high hopes about the prospects of the Company for the coming year. The expected fall in cotton crop will surely have adverse impact on the earnings of the Company. The reorganisation of the Bombay State has also revived the competition from motor transport. But the Chairman did not foresee any change in regard to the other items of transport. Thus unless the expected reduction, on account of the diversion of cotton crop is offset by increase in other items it would be difficult to maintain

the returns to the Company at the old levels.

Small Savings

Speaking to pressmen in Bombay Mr N. V. Naidu, National Savings Commissioner, stressed the need for carrying the small savings movement into the rural areas in view of the fact that it had become the main plank of internal resources. So long the movement had been confined to urban areas and this had largely militated against spectacular results.

The need for stepping up the movement and for carrying it into the countryside has been underlined by the prohibition of State Governments from entering into the market for raising loans. Naturally they would be left with the only alternative of going to the common man for his savings. This would call for some real effort from the State Governments who were all along in the happy position of being able to meet their revenue needs by approaching some wealthy individuals. The disinflationary potentialities of the thrift habit are another reason for stimulating efforts at intensifying the campaign in the rural areas. How such participation by the people could contribute to the success of the various

projects is indicated by the fact that out of a total outlay of Rs 3.5 crores, incurred in connection with the implementation of the Manimathar Project in Madras State, an amount of nearly Rs 1 crore had been collected by way of contribution in kind and labour from the local people.

Mr Naidu also explained the cumulative time deposit scheme under which villagers could pay Rs 5 a month for five or ten years at the nearest post office, the amount being returned after the period in a lump sum. Under the scheme every village would have a post office to handle the work. Mobile vans to go to the interior and collect at fairs and conferences were also being thought of. Besides post offices, such organisations as scheduled banks, State Bank branches, cooperative societies and the Life Insurance Corporation would also be entrusted with the task of stocking and selling such certificates.

The publicity work in connection with the popularisation of the scheme would be shared between the Central and State Governments. For this purpose small savings information and sales centres at important places would be set up. This attempt at broadbasing the small savings movement, if it succeeds, would considerably strengthen the financial resources of the Government and also instil in the village folk a sense of participation in the nation's endeavours towards better standards of living.

GATEWAY MARKETS

Oils and Oilseeds Firm

THE markets for Oils and Oilseeds took a definite turn for the better, mainly reflecting short-covering attracted by the recent downward trend in prices. Rumours of reduction in export duty on Castor Oil and unfavourable weather reports mainly evoked buying interest, while Groundnuts were supported by millers by encouraging upcountry advices. Other oils and oilseeds moved up in sympathy.

Castorseed May delivery opened quiet at Rs 134.75 and, after improving to Rs 139.50, finished the week at Rs 138.00. Ready was done at Rs 27.25 and Castor Oil, commercial, at Rs 14.62.

In the Groundnut section, February opened at Rs 155.25 and, after touching a high of Rs 158.87, finished at Rs 158.50. Ready bold quality was done at Rs 31.50 and Groundnut Oil at Rs 17.31.

The Linseed section ruled steady despite the Government's permission to export freely linseed oil upto September. This was because ship-

pers pointed out that Indian prices were about £6 per ton above world parity and export business was not possible in competition with Argentina, which supplied oil at £110 per ton. May delivery was done at Rs 30.31. Ready was done at Rs 30.50 and Linseed Oil at Rs 16.69.

In the Cottonseed section, May delivery changed hands at Rs 97.75 to Rs 100.25. Business to the extent of 1,000 tons was reported to have been put through in cottonseed oil on hopes of the Government announcing new export quotas. The UK had been the main buyer; but a good quantity was taken by Rumania and other Communist countries.

Gold & Silver

The Bombay Bullion Exchange buoyed up further on extensive speculative support following the firm trend in the ready section and higher advices from the upcountry centres.

Gold made a spectacular advance with values establishing new highs for several years. Rumours of possible legislation by the Pakistani Government providing stringent punishment for smugglers acted as an additional influence. Arrivals amounted 2,000 tolas as against an offtake of 2,500 tolas. Unrefined metal receipts totalled 3,500 tolas. Maha delivery changed hands upto Rs 110.47 from Rs 109.72, to finish the week at Rs 109.75. Ready was done at Rs 109.94 to Rs 110.12, while Sovereign remained almost steady at Rs 70.25.

Similarly, in the Silver section the rate for Maha delivery shot up at one time to Rs 183.31 from Rs 188.56, to finish at Rs 188.56. Ready was done at Rs 187.50 to Rs 187.69.

Non-Ferrous Metals

The Non-Ferrous Metal market ruled generally steady with price movements confined to a narrow range. Copper ready was firm at Rs 170 per cwt as against Rs 168, mainly due to a squeeze by Actual Users trying to cover up whatever material was available in the ready market. Zinc remained quiet at Rs 55 per cwt in the absence of fresh influence. Lead was quoted at Rs 66 per cwt, the demand and imports appearing to be well-balanced. Tin was steady at Rs 127 per quarter; and there was fairly good demand as Calcutta prices were much higher than in Bombay.

On the London Metal Exchange, Copper was quoted steady at £176 per ton, mainly influenced by the belief that the reported decision by the Chilean Government to cut production by ten per cent would halt a further fall in prices and stabilise the market. Zinc moved upto £63½ from £62½ per ton on reports of some demand from consumers. Lead was quiet at £72½ per ton in the absence of consumer interest. Tin remained unchanged at £730 per ton. There was a belief that the Indonesian unrest might hold up supplies of tin ore from that country.

Yarn

Firm conditions continued to prevail in the Yarn market, Art Silk and Staple-Fibre yarns having risen to fresh higher levels. Actual business put through in the ready section was, however, small. The outlook for staple-fibre yarn was considered to be bright on account of increasing demand.

The shortage of foreign yarns pushed up the prices of indigenous yarns also. The scarcity was attributed to the Government's policy of not granting important licences to established importers.

Trading in cotton yarn continued to be listless. However, there was a belief that conditions would improve following a rising trend in cotton and textile markets.

World of Cotton

Bombay Review

Cheerful Conditions

CHEERFUL conditions were noticed in the Bombay Cotton futures market during the week under review, thanks to higher spot advices and encouraging news from the cloth market. The Cotton Advisory Board, which met after a lapse of several months, recommended an export quota of 50,000 bales in respect of Bengal Deshi, but without a reduction in the export duty. In addition, the Board recommended export of 25,000 bales of old crop 3/4" cotton.

As regards imports of foreign cotton, the Board seemed to have left the position rather vague in view of the difficult foreign exchange situation; but, at the same time, assured cotton mills that it would consider allowing imports, depending on their requirements and the availability of foreign exchange.

Thus, the market seemed to have completely recovered from the bad effect of the recommendations made by the Board. Mill enquiry broadened considerably in the ready market, with the result spot rates of most varieties hardened by about 15 points. The cloth market also displayed strength following the growing consumption of cotton by mills and renewed enquiries for export. All these factors helped futures rates to soar. Turnover was 10,000 bales. ICC Jharilla March, after opening at Rs 684, steadily advanced to Rs 691.50, to recede again to Rs 689 on profit-taking, finally closing at Rs 691.25.

The Spot section ruled firm. Demand continued for Khandesh and Berar Jharilla varieties, while local mills were free buyers of Broach Vijay, Surti and other varieties.

In the export section, scattered transactions were reported to have taken place in Zoda and Yellow pickings.

In the foreign section, a local group of mills was reported to have purchased a sizable quantity of American cotton for Feb/March shipment. With the talk of further damage to East African varieties, demand was inclined to broaden in this section.

Meanwhile, the quantity of cotton stapling 1 3/16" and above, permitted for import from sterling areas, has now been raised from 30,000 to 40,000 bales. Mills, which have already applied in terms of the Government's announcement on December 16, 1957, will now be allotted quotas on this basis. Mill interest in the US growths continued to be at a low ebb.

STATISTICS:

According to official statistics, Indian mills have consumed, during November 1957, 390,784 bales of domestic cotton and 51,031 bales of foreign growths as compared to 369,505 bales of Indian and 48,413 bales of foreign growths in the same month of 1956. Total consumption, in the first three months of this season (September to November 1957) is now placed at 1,162,699 bales of domestic and 148,756 bales of foreign cotton as against 1,117,406 bales of Indian and 151,639 bales of foreign cotton consumed in the corresponding period of the previous season.

NEW YORK COTTON MARKET:

Prices on the New York cotton futures market, after being marked down early in the week, recovered partially towards the close on trade buying. Some selling was attributed to hedging against latest purchases of cotton from the CCC by dealers for unrestricted use. Middling Spot closed at 36.45 cents per pound.

LIVERPOOL COTTON MARKET:

Price trends on the Liverpool cotton futures market were rather irregular. The initial easiness was attributed to hedge selling and some liquidation on local account. New York advices were discouraging and the offtake was confined to some American buying in the distant deliveries.

CLOTH AND PIECEGOODS:

The Cloth market, which had been experiencing sluggish conditions for well over a year, hummed with activity during the week. With the Sales Tax tangle in the Bombay State having been solved in a way, the cloth trade has witnessed better conditions, resulting in an improved offtake. According to one estimate, sales to the tune of one lakh bales had been effected during the past one week. Reports from Ahmedabad also indicated that the turnover had been excellent, with goods sold being placed around 60,000 bales.

Because of huge accumulation of stocks with the mills, the improvement in offtake was not,

STEEL AND YOU

Day and night you are using steel. Steel builds your houses, roads and bridges, spins your thread and weaves your garments. Steel tames the raging rivers to bring water to your fields, power to industry and light to your homes. Steel carries you and even your words across vast distances. But India needs more of these modern amenities—her per capita consumption of steel is amongst the lowest in the world.

Night and day The Indian Iron & Steel Company Limited is working to help India fulfil her target for steel—your target for a prosperous tomorrow.

STEEL IS THE STARTING POINT

Use steel only when
you must today,
there will be more tomorrow.

Mr Macmillan in Delhi

WITNESSING the way in which Delhi showed its warmth and affection for the Prime Minister of Britain last week, I could not help recalling the very different kind of welcome accorded to Mr Khrushchev and Marshal Bulganin when they visited this country two years ago. The representatives of both these two countries went through more or less the same kind of schedule: indeed, New Delhi has put through this kind of routine so often for so many visiting dignitaries, that the whole thing goes off with the smooth efficiency of a turn that has been done a hundred times over: the reception at Palam, the ceremonial parade, then the drive, the formal banquets, the visit to Rajghat and a community development project and then a civic reception at Red Fort or Ram Lila Grounds. If there is time, a visit to Bhakra Nangal is thrown in. In between, there is a press conference and there is also a broadcast over All India Radio.

But despite the same kind of routine through which the British representatives and the Russian representatives went, there were significant differences in the reaction of the people to them as well as their own reaction to the atmosphere in which they found themselves. The difference in the quality of the welcome and the reaction to the welcome tells us a good deal about the personalities concerned, about the countries they represent and the nature of our relationship with them. Thus, there was a certain flamboyancy and extroverted and almost contrived jollity about the "wild" enthusiasm for the Russian leaders. This accorded with the somewhat loud, strenuous and insistent good fellowship of Mr Khrushchev. It was as though he was all the

time telling us that he was no stuck-up big stiff like some other friends of ours he could name, and that Russia was a jolly fine country to know and if we knew the truth, the only friend we had. On our part, the selfconscious welcome we gave the Russian leaders was due at least partly to a sense of oddity, of an anticipatory thrill when we meet some object which is at once mysterious and phenomenal. Our attitude to Russia, like that of many besides us, has been one of reluctant admiration for its great achievements combined with a vague sense of mystery. Part at least of the wild cheers that greeted the Russians was due to the first spectacle of an exotic object—a wild orchid, or a particularly cute performing animal at a circus.

The atmosphere during the visit of the British Prime Minister was entirely different. It had something to do with the personal charm of the British Prime Minister, the informal poise of the British ruling class. If Mr Khrushchev was unmistakably and even arrogantly Non-U, Mr Macmillan was unselfconsciously and even bashfully U. Secondly, an Englishman, unless he is a hopeless cockney, is perfectly at home in India. This is due, of course, to the intimate association of over two hundred years. There are indeed many Englishmen from Kipling to John Masters to whom India is a spiritual prop, in a rather unusual sense. There is pathos as well as humour in that stock character of British comic mythology, the retired colonel in Bermondsley recalling his palmy days in Poona. And then there are, of course, distinguished Britons, who have given as much to India as to Britain, Britons who should find a place in any Indian

Roll Call of Honour. And more than all this, two centuries of being thrown together, with all its concomitants, anger, frustration, heartbreak and above all the final kissing and making up (rather in the manner of Drayton: "Since there is no help, come let us kiss and part") have contributed to a peculiar intimacy between the two nations. If I may vary the metaphor, it is like a couple who have been married for longer than they can remember and have been quarreling all the time and finally, in a rare moment of reasonableness, decided that the racket was more than either of them could bear and decided to live apart. Then, miraculously, every subsequent meeting of theirs has been gracious, intimate and even touched with a little humour and pathos. Not that there is not a revival of the old days. The tiffs over Suez and Kashmir are instances. But, on the whole, they live in reasonable harmony without losing any of the former intimacy.

It is this quality of intimacy which was completely absent in our welcome to the Russians and which was present in every nuance of the emotion that was stirred by the presence of Mr Macmillan here last week. Mr Macmillan made the point that he was the first Prime Minister of Britain to visit India. And he attributed the real warmth of friendliness shown to him as really something intended for the country he represents. Without taking anything away from the genuine modesty of this avowal, we can say that this is true. After all, we in India have traditionally been more at home with the Labour Party than with the Conservatives. And some of Mr Macmillan's past political stances have not been of a sort that would have put us in instinctive sympathy with him. And yet there was nothing but the most affectionate friendliness for him. This can be only understood in the rather mystical terms in which Burke, with his magnificent clairvoyance, described the relationship between members of a Commonwealth bound together by nothing more than respect for the liberty of the others. These bonds are, as Burke put it, light as air, but strong as hoops of iron. It is one of the ironies of Indo-British history that successive Conservative governments did not learn this most important lesson of the most brilliant Conservative in history and the spiritual father of conservatism in England. Happily, however, thanks to a Labour Government acting on a Conservative tenet, a Conservative Prime Minister is able today to visit India and be treated as an intimate friend.

Mr Nehru, being the indefatigable political moralist that he is, drew a slightly different lesson from the friendliness of our people to the British Prime Minister. While I was struck by the historical and the human aspects of the matter, his passion for world peace made him see in the phenomenon a lesson for the whole world in the art of living together and solving mutual problems. This point, of course, has been made by others and in other contexts, but in the present context, the moral is telling. Indo-British relations even in the worst days of mutual hatred had the good fortune, at least on the Indian side, of being in the hands of men with the rarest idealism. There never was a man who was a more discerning admirer of Britain than Gandhiji. And at all times, we were taught by him not to confuse the issues involved in the fight with the British. The consequence was that not only did the parting of the ways take on an aspect of "miracle" (as Mr Nehru described it), but also it made possible the subsequent participation of India in the Commonwealth. The lessons of this event for the solution of world problems are obvious enough and, if better international behaviour could be secured by good examples and pious exhortations, we could have had a better world long ago.

Two circumstances made popular admiration for Mr Macmillan even greater than it would have been otherwise. The first had nothing to do with either our mutual relations or world peace. It was the serenity with which he dealt with the domestic Cabinet crisis that blew up on the eve of his departure for the Commonwealth tour, and the assurance with which he did not allow it to interfere with his plans. On the merits of the dispute in the Cabinet, too, he had popular approbation on his side. For, however vigorous may be the shaking of heads of economic pundits, the slash of Government expenditure, presumably in items relating to social service, is not likely to commend itself to popular imagination. This is particularly so, when the defence expenditure is at the level at which it is now. With the futility of an arms race in which you want to match hydrogen bomb for hydrogen bomb being increasingly realised, there is less patience with a defence expenditure that necessitates cuts in welfare items. And, lastly, though the British colonial problems today are not in as bad a shape as the French, still the Middle East involvement and troops in Cyprus would seem

North Indian Notes

Planning in Uttar Pradesh

The total outlay that would be spent for implementing the various projects during the third year of the Second Plan, in Uttar Pradesh, has been, with the concurrence of the Planning Commission, finalised at a figure of Rs 48 crores. With the Centre having agreed to meet nearly Rs 28 crores, the State's share would come to Rs 22 crores. The official reaction to this allotment by the Planning Commission, is one of satisfaction.

The most important of the schemes that has found acceptance at the hands of the Planning Commission is the multi-purpose project of Rihand Dam which is expected to cost nearly Rs 48 crores. The State has been assured of all the foreign exchange requirements in respect of this project. The State has also succeeded in negotiating a working arrangement with the Centre about several major industrial projects outside the official plan. The aluminium factory to be located near the Rihand Dam site, a heavy electrical machinery plant at Allahabad and a heavy chemical (soda ash) factory at Banaras are the three schemes which fall under this arrangement.

The aluminium factory would be a joint undertaking of the Birlas and some foreign firms and work on this is scheduled to begin shortly. The heavy machinery manufacturing project, work on which is due to begin next month, is being taken up singly by the G. E. C. The heavy chemical factory which is an undertaking of the Dalmias is already in process of being set up. All these three, being situated in the excessively populated eastern districts of the State, should go a long way in improving the economic situation of the area.

Apart from these, two medium sized schemes, namely, the cement factory at Churk and precision instruments factory at Lucknow have also been assured of the necessary foreign exchange for their expansion. These two are in the official plan. Further several medium irrigation projects with an irrigation potential of nearly eight lakh acres of agricultural land are also awaiting completion during the coming financial year.

Thus nearly all the major official schemes relating to medium size industries, power projects, irrigation and food production seem to have been approved by the Planning Commission without any major cuts. In addition to these, there are also certain Centrally-sponsored schemes such as flood control, promotion of tourism, urban water supply, slum clearance, rural housing etc which are expected to cost nearly Rs 6.5 crores.

The Union Government is understood to have agreed to meet a major part of the expenses in respect of these schemes.

National Productivity Council

One of the latest moves of the Central Government to increase national wealth, per capita income, and production per unit of capital invested, is the setting up of an autonomous National Productivity Council. The decision of the Government to set up such a council comes as a sequel to the recommendations of the Productivity Seminar held in New Delhi in November 1957, regarding the general principles on which the productivity drive in the country should be based.

In an underdeveloped country where labour is the abundant factor such increases in per capita productivity would have a profound impact on the standard of living of the country. But such productivity drives involve the introduction of modern techniques both social and technical, and this calls for a climate of cooperation from all the interests concerned such as labour, employers and the Government.

The main principle behind this productivity drive is that by the increase in production and improvement in quality, which this necessarily involves, the standard of living as well as the working conditions and welfare of labour could be substantially improved. Increased

productivity would also have a stimulating effect on employment, and employers and Government have been asked to take specific measures against the possibility of unemployment. In the distribution of the benefits of such productivity as been labour, capital and consumers, the principle of equity has been held as inviolable.

The productivity drive is to be launched in all spheres of the nation's economy since integrated improvement is considered all important. In the field of industries it would cover the large-scale industries, as well as the medium, small-scale and light industries in the public and private sectors. The creation of the necessary climate involves encouragement of joint consultation, participation of labour in management and promotion of mutual understanding between management and labour in each industry and in each individual enterprise. The National Productivity Council is expected to stimulate and facilitate the establishment of productivity councils through which productivity services would be made available.

The Council would be composed of representatives of national organisations and confederations of employers and labour, Government and other interests, such as consumers, technicians, consultant, small industries and scholars. The total membership of the Council is expected to be about 60. The representatives of Government employers and labour on the Council would be equal.

NORTH INDIAN MARKETS

Sugar Markets Depressed

SUGAR markets have continued to remain depressed on account of poor buying interest and easy supply position. Crushing at all centres is also in full swing, while cane supplies to the factories are reported to be satisfactory. Following rates (per maund) are quoted in the Muzaffarnagar market:— Meerut (D-28) Rs35.37; Rohana (B-29) Rs 37.37; Mansoorpur (B-29) Rs 37.62; Shamli (B-29) Rs 37.44; Daurala (B-29) Rs 37.00; Amroha (D-28) Rs 34.50; Bijnore (E-29) Rs 34.69 and Mowana (B-29) Rs 37.25.

The question how to increase export of sugar has not yet been solved by the trade and the Government, as there is disparity of prices here and abroad. Our sugar prices are about £50 to £51 per ton at the moment, while foreign quotation is around £41. In view of this discrepancy in rates, the In-

dian Sugar Mills Association had suggested to the Government to have a special levy or indigenous production, so that exports can be feasible through the levy which might be used by way of subsidy. The proposal for this levy is to the tune of about Rs 5 per bag.

The Deccan mills are, however, strongly opposed to the move of subsidy from the start. Even the Government have turned down this proposal as it will mean additional burden on consumers as the excise duty was already doubled up last year in May.

The ISMA, at its meeting during the year-end, considered the overall position; but could not come to any decision. A meeting has, once again, been convened on the 17th January to review the difficult situation.

The main hurdle is how to encourage exports when foreign prices are considerably lower. Without some export outlet, the industry will find it difficult to market the increased production smoothly this year as domestic consumption is not likely to move up materially in view of high prices as well as rise in the cost of living. On the whole, export prospects, during the current season, are gloomy.

Gur

The Gur market also rules quiet with prices developing an easier tendency. At Hapur, prices have recorded a fall of 37 nP per maund, to be quoted at Rs 11.25. Arrivals were small; and total arrivals, from the beginning of the season, were put at about 260,000 maunds as against 292,000 maunds in the corresponding period of last year. Outside demand is being diverted to the Punjab side where prices are lower. Stocks of new gur are estimated at 8,000 maunds.

In the Muzaffarnagar market, prices have also eased slightly. Laddu is quoted at Rs 12.50; Pansera at Rs 12.50 and Chakku at Rs 13.25 to Rs 13.75 per maund.

Foodgrains

Easy conditions are noticed in the Hapur Foodgrains market. Wheat has recorded a fall of about 37 nP, to be quoted at Rs 15.50 for the average quality and Rs 17 for the farm quality. Crop prospects, however, continue to be not very bright for want of winter rains. Rice prices rule quiet in sympathy with other grains. Coarse grains have recorded an easy trend despite good seasonal demand on easy Punjab advices. Peas and Arhar have also declined sharply as demand is poor.

Barring Wheat and Rice, conditions in other sections of the Delhi grains market ruled quiet. Demand for wheat was strong from the flour mills, while Rice hadened by about Rs 3 per maund as a result of restricted arrivals. Following reports of better prospects of the new Gram crop, traders began to sell their old stocks due to which the rates for this commodity eased from Rs 11.75 to Rs 11.35 per maund. The market for Coarse grains also ruled quiet.

The downward tendency in Rice prices was distinctly marked in the Bombay grains market, as traders anticipated arrivals of 30 wagon loads of bold rice from the purchases made at auction held in Burma. There was a slight decline in the prices of new crop Jowar. New Bajra declined following the news that the Uttar Pradesh Government had stopped their purchases. Pulses remained steady.

Indian Science

AT the recent session of the Indian Science Congress at Madras, Mr Nehru was rather facetious about his now traditional association with the annual sessions of this body. The jokes were well received, but Mr Nehru is doing himself and the Science Congress authorities less than justice if he seriously believes that he is asked and he accepts because he is the Prime Minister. In sober fact, both the invitation and the acceptance of it are symbolic of an unavowed secret compact between him and these men interested in the discipline of free inquiry. It is not just that Mr Nehru is "interested" in science as a man is interested in, say, photography. It is not even that he feels it his duty to evince some interest in whatever goes on in the country and therefore looks benignly on. It is that, deep down in him, he feels that, at several levels, science and scientific temper are the only hopes for mankind and India. In the simplest and most immediate terms, he sees in science the chance of ushering in the industrial and technological revolution in India which alone will bring better material standards for our people. At a different level, he feels that, by giving scientific knowledge a humane and unutilitarian orientation, there will be plenty for all the peoples of the world and we can all live in comparative harmony with one another. Lastly, as a humanist with a passionate love of free inquiry, he feels perfectly at home in an atmosphere in which thought is unbounded by convention or dogma. His association with the deliberations of Indian scientists is, quite simply, a symbolic act of fellowship.

On this, as on all such occasions, Mr Nehru had a number of wise things to say. Talking about what he called the "temper of science", he made the extremely interesting point that India has been having the spirit of free inquiry far longer than the traditionally scientific West. The unthinking clichemongers of both the East and the West who talk of the "scientific West"

and the "spiritual East" had short shrift at Mr Nehru's hands. He was withering about the supererogatory Indian claim to spirituality (whatever that may mean). The true contrast, he rightly pointed out, was between those in both the East and the West who will pursue inquiry to the "edge of thought" and those who won't. In this context, he brought up the idea of the "Pagan", which at one time included only folks of the non-Christian part of the globe. Of course, the word pagan means different things to different people. But the Greek, to whom western science pays its homage as its own fore-father, was first cousin to the Vedic Aryan and there was hardly any difference in the inspiration of their respective thoughts. In any event, in talking of the pagan ideal, Mr Nehru is not so interested in its "historical aspects" as in its ideological (in its literal sense) content. "Where the mind is without fear", there is science. It does not matter whether you call it a pagan attitude, or a modern attitude.

Mr Nehru dealt at some length upon the various other problems that face science and the practice of science. Professor M. S. Thacker, the President of this session of the Science Congress, had also a number of interesting and important things to say on the subject. Listening to them, it occurred to me that a discussion of the place of science in the scheme of things in an Indian context has certain odd features. For one thing, many of the things that would be bothering a similar gathering in the West do not bother us except as a matter of academic interest. Similarly, problems that are peculiar to Indian science are either completely absent or do not have the same teasing and exasperating urgency in other contexts. Thus, a scientist in Europe or the US and even the USSR has agonising problems of moral choice. Should he, should he not, assist at the manufacture of deadly weapons? What is the true nature of loyalty? Loyalty to the nation, or to the

universe, or to science? Should he or should he not spy on his friend who is suspected of being a secret Communist, though he is a first rate scientist. And should he submit himself to absurd rules about secrecy for reasons of security? What are the limits of the demands of the state to your allegiance? Such questionings could be both obstinate and unanswerable. These are not trivial or finicky, go to the root of the moral issues involved in the practice of science. Such problems, however, do not exist for the Indian scientist.

Again, the impact of science on society, the rights and wrongs of a society that merely multiplies wants, the corrosion of the roots of a stable society by technological restlessness, the sociological problems of the lonely crowd and so forth are as yet comparatively remote subjects for us. It is true that this very Science Congress session discussed the impact of industrialisation on caste and other traditional props of a stable society; to the extent that these problems have arisen, our technological situation is assimilated to the world pattern. But, even so, it is true that the issue of man versus machine has not yet reached the point of no return in our country and, therefore, it is still possible for us to phase our progress so as to avoid the sociological malaises of lopsided technocracies.

Another familiar problem in the context of western science concerns the relative virtues of specialisation and a broad pattern of general humanistic discipline. Over-specialisation is a bugbear that may yet catch us up, but, at the moment, it is true to say that our education is simply not sufficiently scientifically oriented.

Many of these problems have been mercifully spared us. God be thanked, Sir C. V. Raman does not have to face the kind of choice that Oppenheimer had to make, nor does he have to put up with the kind of indignity that Oppenheimer had to put up with. But, on the other hand, the kind of problems that we have is of a complexity and immediate intractability that makes the problems of western science comparatively simple. Our problems are the more prosaic one of resources and availability, while those of the West are moral and sociological. In other words, we do not have the kind of problems that the West has, for the simple reason that we do not yet have the kind of science they have. We have not yet started on the journey at all, really speaking. We have largely avoided the problems created by technology by the simple expedient of not having

technology worth speaking of. In that sense, we are still in the pre-science and pre-technology era. This, of course, is an advantage, but since we have decided to have technology, the problem is really one of resources in skills and techniques.

And here, we are faced with many paradoxical difficulties. First of all, there is the extreme dearth of trained manpower. Yet, there is side by side technological unemployment. There is apparently a great need for expanding our known potential wealth of resources, and the only way to do it is to have an intensive programme of research and training in modes of research. Yet, as Mr Thacker and Dr Mahalonobis pointed out, we are not spending even one per cent of our low national income on research, whereas the West is expending a very much greater percentage of its enormously great national income on science. The West, which is already comparatively well provided in technical manpower, is hungry for more scientists, and full page advertisements asking for keen young men to join scientific endeavours are an every day occurrence. In India, it is not unknown for a bio-chemist to be minding foundries.

There is no room for controversies in our country as to whether research should be fundamental or practically oriented, since we

South Indian Notes

Planning in Andhra

As a result of a reduction of Central assistance, the total outlay for the third year of the Second Plan in Andhra Pradesh has had to be scaled down from Rs 42 crores as originally envisaged to Rs 30 crores. Out of this the Centre is expected to provide a sum of Rs 18 crores leaving the balance to be found by the State Government. Notwithstanding this pruning of the Plan as such, is not expected to receive a set-back. The cut which is mostly confined to large-scale industries would not also affect the other sectors such as agriculture, animal husbandry and education. The impact that this would have on the Plan for the State is, that the pace of industrial development would be slowed down.

One of the important schemes to suffer as a result of the reduced allocations is the Nagarjunasagar project. Against a claim made by the State Government to the tune of Rs 11.5 crores for the implementation of this project, during the third year of the Plan, the Centre has granted only a sum of Rs 7 crores. But the Government of India have agreed to include the Tungabhadra High-level Canal Project in the second Plan and a provision of Rs 4 million has been made for it to be spent during 1958-59.

The Centre's inability to meet the State Government's request for a provision of Rs 2 crores in respect of electricity and medium irrigation in the 1958-59 programme has meant that the ceiling of Rs 175 crores for the full five years would have to be revised. The State Government seem to be thinking in terms of revising the targets for electricity and medium irrigation and also rephrasing the programmes in respect of these. The foreign exchange shortage is expected to affect the industrial programmes to a certain extent.

Apart from the sum of Rs 30 crores which has been finalised for being spent during the third year of the Plan, another Rs 2 to 3 crores is also expected to be made available by the Centre in respect of centrally-sponsored schemes such as urban water supply schemes, flood control schemes, loans, handloom development, and khadi and village industries.

The proposal of the State Government to start a fertiliser factory in the State has also not made any appeal to the Central Government though the latter has indicated that they would extend their co-operation by the provision of the necessary foreign exchange for any private enterprise in that direction.

Export of Ores

The visit of Mr K. Ranagaswami, Joint Chief Controller of imports

and exports Madras to the Visakhapatnam city provided an occasion for the commercial interests of the region especially those interested in the export of mineral ores to bring to the notice of the Joint Chief Controller the various difficulties experienced by them in carrying on their trade. First of all it was pointed out that stocks of manganese ore which were registered with the export trade authorities for shipment against contracts entered into before 31st March 1957 should be permitted to be shipped subsequent to September, 1957 as shippers have not been able to avail the benefit offered by Government before that date for various reasons beyond their control, the most important being congestion in port and lightning strikes.

The restriction on the free export of low grade ore from districts other than Srikulam had created problems of marketing for low grade ores from such places as Visakhapatnam, Koraput, Cuttack, Bolangir etc. In making a case for relaxing the restrictions on the export of ores from these places, it was pointed out that these districts were relatively underdeveloped and also that there was no fear of mixing. The prohibition of ores moved by lorries in the free zone area for shipment

was also brought to the notice of the Controller.

Another point of grievance with the exporters was that the terms and conditions of the quota slip were unfavourable to them. While the shippers are required to utilise a quantity of at least 40 per cent of the tonnage permitted in the quota for export of manganese ore containing a manganese content of 42 per cent this has been taken to mean that the rules are applicable to the extent of 40 per cent of the quota only and not to the full quantity of 60 per cent. The necessity for simplifying some of the procedural matters in connection with the issue of licences and shipping bills was also emphasised.

It was also strongly urged that there should be definite export policy for a minimum period of 3 years to enable the trade to plan out their sales and shipments.

Mr Rangaswami while assuring sympathetic consideration of the points raised by the members stressed the need for stepping up the exports of the country on new lines such as increasing exports of traditional goods, exporting new commodities to markets which already exist, diversifying exports and finding new sources. He also assured that no preferential treatment would be given to the State Trading Corporation in the matter of exports of minerals.

SOUTH INDIAN MARKETS

Coffee Exports

THE Coffee Board has decided to sell for export 5,294 tons of Plantation variety and 2,609 tons of Arabica Cherry, totalling 7,903 tons from the 1957-58 crop. According to present estimates, there is no surplus Robusta available for export. The Pool receipts of the 1957-58 crop, till the end of December 1957, amounted to 3,849 tons, consisting of 3,666 tons of Plantation variety; 160 tons of Arabica Cherry and 23 tons of Robusta. Of this, 2,524 tons were received from the West Coast.

It was proposed to sell about 508 tons of Plantation variety early in January. But, due to the delay in curing, the first export sale of the season was being postponed to the first week of next month. The total release of coffee in the internal market, during last year, amounted to 26,230 tons, which was 10 per cent above the offtake in 1956 and 17 per cent above that in 1955.

Meanwhile, in the major coffee Pool auction held in Coimbatore last week, offerings totalled 1,125 tons consisting of 400 tons of Plantation variety; 225 tons of Arabica

Cherry and 500 tons of Robusta. Following were the price ranges (per cwt.):—Plantation PB Rs 230 to Rs 232; Plantation "A" Rs 225 to Rs 285; Robusta Rs 165 to 168 and Arabica Cherry Rs 172 to Rs 180. The next Pool auction will be held by the Coffee Board at Mysore on the 22nd January when 875 tons will be offered.

Groundnuts

The Madras Groundnut market continued to rule quiet with prices developing an easier tendency. Arrivals last week averaged 40 to 50 tons a day; and these were taken by local small crushers and, to some extent, by Calcutta interests. The rate for the new crop was quoted at Rs 141 against Rs 146 per candy quoted in the previous week.

In the Groundnut Oil section, the rate for the ready position declined to Rs 290 from Rs 300 per candy. There were similar declines in the forward position. Southern-side mills were reported to be prominent sellers, while there was some nervous selling, too, due to the absence

of sustained buying by Calcutta interests.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were small; and these were taken up by shippers at firm prices. Arrivals of Buff hides were in restricted quantities and, as a result, there was a rise in prices by 3 nP per pound. Although arrivals of Buff Calf and Cow Calf hides were restricted, prices remained practically unchanged.

In the export section, there was a slight improvement in enquiry. Some business was reported done in prime 5/5½ lbs at 44d to 46d. There was a small demand for 10/12 lbs runs at 41d for common tonnages; but it was extremely difficult to sell combined lots of fourths, fifths and runs.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were moderate. Prices of adulterated Sheep skins were marked up by 19 per pound, while those of Goat skins were higher by 6 nP per pound.

On the export front, support was meagre and only odd lots were reported to have been sold at prices in a way acceptable to Madras dealers. Also support from France was slowly receding. In Sheep skins, sellers were asking an advance of 6d in common adulterated qualities; but no business worth mentioning was reported at the higher levels.

WORLD OF TEA

(Continued from page 113)

In Mincing Lane, offerings this week were 19,891 packages, including 17,999 packages from Northern India. A strong market continued to prevail and all offerings were readily absorbed. The strongest feature were the Dooars Fannings. Good Plain Brokeners were well sought after and generally sold in seller's favour. Quotations were unchanged.

Tea stocks in London, as on the 3rd January 1958, were 128.74 million pounds as compared to 124.13 million pounds in the previous week and 67.39 million pounds a year ago. Landed between 28th December 1957 and 3rd January 1958 were 14.90 million pounds while deliveries during the same period were 10.29 million pounds. Total afloat was 43.03 million pounds including from Calcutta 29.92 million pounds; from Chittagong nil; from Colombo 5.73 million pounds; from other Ports 116,000 pounds. The average price realised was 55.95d per pound against 53.74d in the previous week and 72.33d a year ago.

Jessop & Company Limited

Need to Correct Certain Misapprehensions

Order Book at Remarkable Figure of Rs. 20 Crores

Statement by Mr. S. S. H. SITWELL, the Managing Director

THE following is the speech of Mr S. S. H. Sitwell, who Presided over the 25th Annual General Meeting of Jessop & Co. Ltd., held at the registered office of the company on 9th January, 1958:

Gentlemen:

The next item on the Agenda today is to receive and consider the Accounts together with the Reports of the Directors and Auditors for the year ending 31st October 1956. These documents have been in your hands for some time and you have heard the Acting Secretary read the Auditors' Report. With your permission I will not read the Directors' Report which in the main covers the period up to 31st October 1956 though it also reveals certain important happenings after that date. I think, however, that it will be in the general interest to correct certain misapprehensions that have received some currency and to bring you even more up to date before I move the adoption of the Report and Accounts and so give you an opportunity to discuss them.

Early in December 1957 your Board was advised that by reason of certain actions on his part Mr. H. D. Mundhra had vacated his seat on the Board, the Registrar of Companies was advised accordingly, the date being December 5th.

I would now like to draw your attention to some changes that have taken place in the composition of your Board of Directors since the Report was printed.

Firstly, Mr. K. N. Tapuria tendered his resignation as a Director on 2nd January 1958. Your Directors accepted this resignation with regret for they have always found him a useful and likeable fellow worker.

Secondly, Mr. S. D. Srinivasan was co-opted as a Director under Clause 107 of the Company's Articles on December 13th, 1957, and this calls for some explanation.

Some of you will know that the Life Insurance Corporation of India is a large shareholder in your Company. In fact it owns just under 20% of the Ordinary Shares and about 70% of the Preference Shares. In view of this fact your Directors, some months ago, approached the Life Insurance Corporation with the suggestion

that they nominate a Director on your Board. This suggestion culminated early in December by the Corporation nominating Sir Dhiren Mitra before, incidentally, he took up other appointments which have recently been in the public eye. Sir Dhiren is over 65 years of age and therefore under the Companies Act cannot be brought onto the Board except at a General Meeting. You will note that a Proposal to that effect will be moved later today. In the meantime your Directors co-opted Mr. Srinivasan, the Zonal Manager of the Corporation here in Calcutta so that the Life Insurance Corporation should not go unrepresented. Mr. Srinivasan retires at this Meeting and is not standing for re-election.

I would remark at this stage that contrary to impressions in various quarters, no Administrator, Receiver or other Official has been appointed for this Company by the Government or any other party. Your Directors themselves, as I have already said, invited the Life Insurance Corporation to nominate a Director and also took an opportunity to strengthen the Board by co-opting Mr. B. P. Khaitan the well known Calcutta Solicitor and Mr. B. N. Chaturvedi, who is, inter alia, the Chairman of the Calcutta Stock Exchange Association.

Unfortunately the Meeting today is very much overdue. I would remark however that those of you who are Shareholders of long standing will remember that our Annual General Meetings were usually held about July. In 1956, by a very great effort, we held the Meeting in February but experience then gained showed that with the large and varied nature of our business the time between February and the closure of the Company's Accounts at the end of October was too short. It had been our intention to hold this Meeting during June or July 1957 but we delayed in the hope that so doing would aid us in recovering the monies due to the Company.

In view of the fact that another of our financial years ended on 31st October 1957 I can tell you today a little of the more recent working of the Company. I must be brief and you must appreciate that figures must in many cases be approximate.

The Sales this last year increased to over 7½ crores as against 6½

crores for the period we are reviewing today and the margins have remained at a satisfactory level. As forecast in the Report now in your hands the activities of the Import and Trading Departments continued to deteriorate but those of the Works increased by over 40% during 1957 as against 1956.

The increased activity in the Works was of a general nature though one new project, the manufacture of Diesel Road Rollers, got fairly on its way. During the period January to September 1957 the Company completed 100 Rollers but in the Autumn production came to a halt for lack of steel. Production is now continuing but the steel situation is very difficult and it is not easy to see how we can economically produce a standardised article such as a Road Roller unless we can get some real continuity of supplies of raw material.

The new Factory built for the manufacture of Electric and other Railway Coaches is now virtually complete and a small amount of work has already started. This Factory will be in full operation during the second half of this year.

On the end cover of the Report you will see a photograph of Level Luffing Wharf Cranes at Alexandra Dock, Bombay. These form part of a contract for 34 cranes for the Bombay Port Trust the last of which has just completed 12 months service. We have orders in hand for 9 similar cranes for Calcutta and 4 for Madras and we have just received a further contract from Bombay for another 54 cranes. These cranes are entirely designed and manufactured here in India, only some special electrical equipment and such items as ball and roller bearings being imported. The local manufacture content is of the order of 75% so that on the new contract from Bombay, which totals about 164 lakhs, this Company saves India some 120 lakhs in foreign exchange. I think I am right in saying that, apart from Japan, India is the only country outside Europe and North America where such cranes are being designed and manufactured, and in this country your Company is the only one so doing.

It remains to add that the Company's Order Book now stands at the remarkable figure of over 20 crores and that the Works and

their connected staff and employees are in an excellent position to tackle this great volume of business. I am glad to say in this connection that our relations with our employees have been consistently good throughout the year just ended and the satisfactory working results that I have been able to forecast are chiefly due to the sustained efforts of all the Company's employees to whom all thanks are due.

As I have already told you your Company has a very good Order Book on which it is earning satisfactory margins. There is no reason why it should not continue to do so provided that it continues to receive adequate supplies of steel, a commodity which unfortunately is in increasingly short supply with little prospect of easing within the next two years. Fortunately a very large portion of our activities are concentrated on the manufacture of rolling stock for the railways which carries top priority for steel supplies while the remainder of our Order Book covers contracts having a very high degree of priority, thus we can be sure of obtaining our full share of what steel supplies are available.

Turning back to the past I would emphasise that what is now revealed in the Directors' Report in fact happened over a year ago and that as soon as the position was known prompt steps were taken which prevented any further happenings of the same sort. There is no disguising the fact that your Company has suffered severe damage but, to adopt medical terms, the wound is not mortal, bleeding was promptly stopped and the patient is on the road to recovery. However the days of convalescence are frequently difficult ones and there is no exception in the case of your Company. It is now obvious that we were entangled in a mesh of events the full extent is only now becoming apparent. I use the past tense advisedly for I believe that we have succeeded in disentangling ourselves from the net, but it still remains obvious that any measure that can be taken to conserve the Company's resources will materially assist in making its recovery more sure and more swift.

(NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting).

OLYMPUS

(Continued from page 122)

to be a needless extravagance. In any case, Mr Peter Thorneycroft seemed to many in this country and elsewhere to be straining at a gnat after swallowing substantial camels. Therefore, Mr Macmillan had a fortuitous aid to his popularity here. Moreover, his assurance in the face of domestic crisis invited comparisons with the attitude of others, notably that of his predecessor. Such comparisons made him even more of a hero.

The second circumstance that sent up Mr Macmillan's stock was his broadcast suggestion, a couple of days before he left on his tour, that there should be a no war declaration by the big powers. This suggestion was warmly welcomed by many countries and Mr Nehru himself had commended it before Mr Macmillan's arrival. There is evidence that the US is none too pleased with the suggestion, which, oddly enough, makes it in the eyes of some even more of a good suggestion. But, as Mr Nehru pointed out, any step that is taken to rouse the nations from a torpor of arms race, which they are fatalistically accepting as inevitable, is worth taking, if only it helps to break the ice. It is no use saying that we are likely to play into Russian hands by agreeing to talk to them. It may be that the recent intense diplomatic offensive of Soviet Russia is full of traps for the unwary. It may be that Marshal Bulganin's sudden itch for letter writing is nothing more than propagandist ruse. It may be that a summit conference with thirty nations is, as Mr Macmillan suggested, not the way to set about the business. It is true that an eminence that accommodates as many as thirty is not a lonely Everest, where only the very great meet, but a plateau where all and sundry would be holding a party. It may be true that even a summit conference of the big four or five may achieve nothing without a good deal of preliminary work, and the psychological effect of the failure of a summit talk may be disastrous. But, what sort of diplomacy is it that is haunted by snares? As Mr Hugh Gaitskell put it the other day, there are at least three points on which we can agree to talk with the Russians, either at the summit or at a lower level. These are the proposals to suspend nuclear tests, to have an atom free zone in Europe, and to discuss plans for ending tension in the Middle East. Mr Gaitskell quite rightly added that, on each of these issues, we should try to enlarge the scope of the discussion to include more fundamental issues. But Mr Macmillan's own colleague in charge of foreign affairs, Mr Selwyn Lloyd, talks vividly of four things that could be done in 1958: trying to avoid public recriminations, increasing personal contacts between the Soviet Union and Britain, through exchange of students, tourists, etc., attempting to in-

crease mutual trade and, lastly, "seeking an obvious success in the sense of an agreement achieved which is acceptable to both sides upon some issues". These are laudable aims, no doubt, but do they breathe any sense of urgency? Except perhaps for the last item, which, again, is vague enough to mean nothing, there is nothing specific in any of them. And all the time Mr Dulles wants further assurances of good faith from the Soviet Union. What sort of assurances would satisfy Mr Dulles? And what sort of assurances is he willing to give the Soviet Union even for consenting to talk to him? Would he, for instance, give up the recent NATO decisions to have rocket bases in Europe even before he began to talk to the Soviet Union? Does it occur to him that this constant harping on prior proof of good faith even before you open your mouth puts your good faith in some doubt? It can be said that every time the Soviet Union proposes something (with whatever motive), the West rejects it even without discussing it. At any rate, if the Soviet Union wanted to create evidence to this effect, it has succeeded remarkably in the last week.

The fact is, as Mr Macmillan has realised but as Mr Eisenhower and his advisers have not yet realised, the time has come to talk to the Soviet Union instead of talking among your friends. Whether it is at the Foreign Ministers level, or at a higher level, or at a lower level (Earl Russell sensibly suggests a secret negotiation between the US and the Soviet Union in which the give and take of negotiation will be unaccompanied by meticulous press reporting) the time to talk has arrived. It is to be hoped that Mr Macmillan's talks with Mr Nehru have convinced him completely of this stark necessity.

BIRDS INVESTMENTS LIMITED.

NOTICE is hereby given that the Twentyfirst Annual General Meeting of the Shareholders of the Company will be held at the Registered Office, 4, Lyons Range, Calcutta, at 12 noon on Wednesday the 19th day of February, 1958, for the following purposes:—

- (1) To consider and approve the audited accounts of the Company for the year ended 30th September, 1957, and to receive the Directors' and Auditors' Reports thereon.
- (2) To declare the dividends recommended by the Directors.
- (3) To elect a Director in place of Mr. S. B. Bose who retires by rotation and being 69 years of age, is not eligible for re-election unless his appointment is approved by a resolution of the Company in General Meeting specifically declaring that

the age limit shall not apply to him.

And in this connection to consider and, if thought fit, to pass the following resolution of which special notice, as required under Section 281(2) of the Companies Act, 1956, has been received by the Company and the relative explanatory statement concerning which, as required by Section 173 of the said Act, is appended below.

TO BE PROPOSED AS AN ORDINARY RESOLUTION:—

"That the restriction as to age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to Mr. S. B. Bose and that he be and is hereby re-elected as a Director of the Company, whose period of office as such Director will be liable to determination by retirement of Directors by rotation."

- (4) To elect Directors in place of Mr. K. F. L. Harris and Mr. N. D. Bangur who also retire at this Meeting.
- (5) To appoint Auditors and fix their remuneration.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member of the Company.

The Share Transfer Registers of the Company will be closed from 5th February, 1958, to 19th February, 1958, both days inclusive.

By Order of the Directors,
LOVELOCK & LEWES,
Secretaries.

CALCUTTA,
16th January, 1958.

NOTE: Dividends, if declared, will be paid to Registered Shareholders or their mandatees only.

EXPLANATORY STATEMENT.

In the Special Notice given to the Company of the resolution under Item No. 3 of the above Notice, it has been stated that the services of Mr. S. B. Bose have proved most useful to the Company, and as he has considerable experience and personal knowledge of the affairs of the Company, he should continue to remain on the Board of Directors.

TYROON TEA COMPANY, LIMITED.

NOTICE is hereby given that the 67th Annual General Meeting of the Shareholders of Tyroon Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 6th February, 1958, at 3-30 P.M. for the following purposes:—

1. To consider the Profit and Loss Account for the year ended the 31st December,

1956, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.

2. To declare a Dividend.
3. To appoint a Director in place of Mr. G. T. Routledge, the Director retiring by rotation at the Meeting.

And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—

"That Mr. G. T. Routledge be and is hereby re-appointed a Director of the Company."

Special Notice dated 24th December, 1957, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Special Resolution is given to satisfy the requirements of Sections 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. G. T. Routledge is presently a Director of this Company which is a subsidiary of McLeod & Co., Ltd., the Managing Agents to the Company, and that, therefore, he is an associate of the Managing Agents within the definition in Section 2(3) (c)(1) of the Companies Act, 1956, who may only be appointed or re-appointed a Director liable to retirement by rotation by a Special Resolution, of which Special Notice has been given to the Company.

4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 25th January, 1958 to 6th February, 1958 both days inclusive.

By Order of the Board,
MCLEOD & CO., LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3, Netaji Subhas Road, CALCUTTA, 10th January, 1958.

NOTE:—

1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.
2. Payment of the proposed Dividend, if declared, will be made on or after 14th February, 1958, only to those members whose names are registered in the Books of the Company on 6th February, 1958, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

WORLD OF FINANCE

(Continued from page 110)

a change is in the offing. The first concerns the unexpected success of the New Loan issued by the Treasury early this week. Of the offer of £500 million, one of the biggest in recent years, as much as half is thought to have been taken up by banks and other investors. It was nowhere envisaged that new money for such a gigantic amount would be available or choose to invest in gilt-edged. Earlier estimates had been that no more than £100 million would, in the first instance, be taken up by outside investors. If the realisations have exceeded all hopes, there must have been strong provocation to induce the British banks and investors to subscribe to the New Loan in such a heartening way. Our own reading is that the London money market is of the view that a reduction in Bank Rate is imminent; and, in such a contingency, it would follow that gilt-edged prices would improve. So, in anticipation, the British investor has bought hugely. Secondly, in the middle of this year, an even larger loan is due for maturity. Although the bulk of the £600 million loan maturing in June is believed to be held by the departments, the Government would nevertheless seek to refinance as large a part of the maturing loan as possible. Undoubtedly, a reduction in Bank Rate would provide just the necessary fillip to the gilt-edged market to make conditions more propitious for a refinancing loan of this order. It is, therefore, fair to state that the trends of interest rates in the UK are also downward.

Interest Rates in the USA

The realisation came to the American monetary authorities some three months ago that prosperity was not so much to be feared as the already overhanging threat of recession. As a first step, five Federal Reserve Banks reduced the discount rate two months ago from 3½ per cent to 3 per cent. Strangely, however, the action of the Federal Reserve Board merely followed developments that had already taken place in the market. That is to say, for several weeks before the middle of November, with personal incomes falling, production declining and cuts in projected new investment, both interest rates and bank loans had already dropped in America. So much so, it is feared in some quarters that the switch over from the anti-inflationary to an anti-deflationary policy may have come too late. The Times Correspondent in New York says: "It is still by no means certain that the recession will remain within the bounds of an orderly re-adjustment and not grow into something much more serious". While, thus, the first step was taken by reducing the discount rates of the Federal banks, the Government have at last woken up to the fact that they need to do much more if the recession is not to develop into a depression. Defence spending has

been stepped up. The availability of credit for construction work has been liberalised. And Government's spending on public works is to rise substantially.

But, as The Times Correspondent has pointed out, there continues to be the danger that the recession might get out of hand. So, as a further anti-deflationary step, we may count upon a further reduction in interest rates in the US.

In brief, the trend of interest rates in India, the UK and the USA is downward.

The 1957-58 busy season has received a powerful impetus during the course of the first two weeks in January, and while it seemed till recently that the current busy season might not present a demand for funds on the size of last year, it now appears possible that, in the coming weeks, its pace and tempo might be stepped up substantially. In the week ended January 10, Active Note circulation has expanded sharply by Rs 17.67 crores to Rs 1540.72 crores; and Rupee Coin has also gone out into circulation for Rs 1.19 crores. There has been expansion of currency for Rs 25 crores against Rupee Securities, which are now placed at Rs 1032.10 crores. There has been contraction against Foreign Securities, by transfer to the Banking Department, for Rs 5 crores. In the result, the Reserve Bank's cash in the till is marked higher by Rs 1.08 crores at Rs 10.21 crores.

In the Banking Department, Investments are lower by nearly Rs 12 crores at Rs 231.87 crores; and this may be presumed to be transfer to the Issue Department. Since Rupee Securities in the Issue Department have risen by Rs 25 crores, we are to understand that there has been deficit financing for around Rs 13 crores.

In spite of deficit financing for such an amount, the Centre's balances, in declining by Rs 2.81 crores, have gone below the Rs 50 crore mark to be placed at Rs 49.63 crores. While the indebtedness of the State Governments is practically unchanged, their balances have almost doubled to Rs 16.16 crores from Rs 8.10 crores; and this would suggest the possibility of some inter-Governmental transactions.

While some part of the expansion in currency may be said to be due to deficit financing and to Government disbursements, it is clear that the rise in Active Notes is also owing to the generally accelerated tempo of the busy season. In this regard, it may be noted that the Reserve Balances of member banks have again fallen by Rs 6.09 crores to Rs 60.29 crores. At the same time, they would appear to have borrowed more from the central banking institution, as witness the rise of Rs 6.06 crores to Rs 73.47 crores in the Other Loans and Advances of the Reserve Bank. It is significant that the advances

against usance bills have risen by Rs 5.38 crores to Rs 30.29 crores.

Lastly, there has again been depletion of foreign exchange holdings. After transfer of Rs 5 crores from the Issue Department, Balances Held Abroad are higher only by Rs 1.67 crores.

The return of the State Bank for January 10 offers further proof of the busy season gathering sudden and quickening momentum. Deposits are lower by Rs 3.24 crores at Rs 363.23 crores. The total of Advances has been marked up by nearly Rs 6 crores to Rs 180.83 crores. Even after running down Cash Balances by Rs 4.67 crores, the State Bank has had to increase its borrowings from Rs 3.49 crores to Rs 7.83 crores.

Month early disbursements and the gathering momentum of the busy season have made their impress on the return of Scheduled Banks for January 3. Firstly, the total of Advances has risen steeply by Rs 22.61 crores to Rs 880.63 crores. Secondly, Deposits have been marked down by Rs 6.74 crores to Rs 1398.81 crores. Thirdly, borrowings from the State Bank are higher by Rs 1.11 crores at Rs 7.73 crores. Fourthly, borrowings from the Reserve Bank are higher by nearly Rs 7 crores at Rs 30.59 crores. However, Cash Balances are slightly higher at Rs 169.26 crores against Rs 169.03 crores.

WORLD OF JUTE

(Continued from page 112)

heavy goods section, B Twills Ready gained 70 nP to be quoted at Rs 105.10 while the April-June position closed more than a point dearer at Rs 106.00.

Cornsacks in the heavy goods section was in the limelight on Friday when on reports of business from Australia this construction spurred to Rs 107.00. Mills were reported to have sold a substantial quantity of goods at prevailing levels. In the absence of enquiries in other sections, the market closed on a quiet note. Hessian 40"×10 oz Ready declined to Rs 39.34. In the forward position April-June was however firm at Rs 40.10 Elsewhere B Twills Ready came down sharply to Rs 103.70, but April-June position was comparatively steady at Rs 105.50.

The market ruled fully steady on Monday due to scattered covering business by shippers and partly due to speculative interest in Hessians. Hessian 40"×10 oz Ready moved up briskly and crossed the Rs 40 mark to be finally placed at Rs 40.05, with April-June also higher at Rs 40.56. In the heavy goods section B Twills Ready also advanced to Rs 105.50. The April-June position was done at Rs 106.40.

Prices of ready goods suffered a setback on Tuesday in the absence of fresh interest. Rates in the forward positions, however, were well maintained with April-June Hessian 40"×10 oz at Rs 40.40 and B Twills at Rs 106.10.

GATEWAY GOSSIP

(Continued from page 119)

can be legitimately used for open market strategy, is conclusively proved by the oft and frequent use to which the British Treasury puts its large extra-departmental resources, especially on the eve as well as after the flotation of a New Loan. No MP in England has sought to question the wisdom of these operations, the what and how and whether of the transactions therein embraced.

Nor has there been any inquisition into the magnitude or results of open market operations conducted by the Reserve Bank of India from time to time. The Bank has a statutory responsibility for open market operations and statutory power to execute them at its full discretion. This discretion is nowhere questioned; its bona fides are nowhere assailed. It will be news to many that, in its twenty and odd years, the Reserve Bank must have provided Rs 20 and odd crores for depreciation in gilt-edged holdings. It must be news to many that the Bank had to write off nearly Rs 1 crore lent by it to stave off a banking crisis. Such depreciation is incidental to this kind of business; and no one will suggest that the Reserve Bank must cease doing such business.

If it is argued that the LIC's funds belong to the policyholders and, therefore, should not be exposed to the hazards of open market strategy, the answer is that the Reserve Bank's funds belong to the entire public, to you and me and everyone who has a five rupee note or any paper currency.

The Finance Minister's reply to Mr Feroze Gandhi gave the wrong emphasis by dwelling on the investment aspect in the Mundhra affair, and not at all on the open market strategy aspect. The case which should now be placed on behalf of the Government before Mr Chagla should deal with the ethics and economics of open market strategy.

WORLD OF COTTON

(Continued from page 121)

however, accompanied by a rise in prices. But, the revival of demand on a large scale imparted a measure of relief to the trade and industry, which had been nursing huge unsold stocks. What was significant was, that the prices of medium varieties tended to register a modest improvement.

On the export front, trading conditions were also better. Fair business was concluded with Sudan and Ethiopia. East Africa also accounted for some business in the usual lines. Scattered enquiries were reported from Singapore and Hongkong. Shippers were reported to be making purchases for export to Indonesia in anticipation of the issue of import licences by that country in the near future.

Stock Exchanges

BULLISH SENTIMENT

Watch-Dog Writes:

THANKS to the announcement about the offer of the US loan to India, stock markets have been generally in a cheerful mood during the week under review. Sentiment was also aided by the decision made by the TISCO to issue bonus shares.

There was brisk activity on the Calcutta Stock Exchange where prices, under the lead of speculative and Tea shares, marked up.

The decision made by the TISCO to issue bonus shares in the ratio of one share for every five shares held, caused a bullish sentiment on the Bombay Stock Exchange.

There was renewed firmness on the London Stock Exchange, following President Eisenhower's optimistic statement on the United States business outlook and the news of the cut in share purchase margins in America.

Wall Street staged a brisk rally following President Eisenhower's budget message, calling for record peace-time spending, emphasis on missiles and an increase in the debt ceiling.

Calcutta

Calcutta, Friday Evening.

THE local Stock Exchange was in a more cheerful mood last week with signs of broadening interest and, under the lead of speculative and Tea shares, prices in all other sections were marked up, the only exception being Jute. The main factor, contributing to a remarkable improvement in sentiment, was the announcement of the offer of a 25 million-dollar US loan to India to enable her to meet the most crucial and immediate requirements of the Second Five-Year Plan. Higher advices from Bombay, following the TISCO's decision to issue bonus shares, subject to the Government

THE ATTOCK OIL COMPANY LIMITED

(Incorporated in England)

At a Board Meeting held in London on 16th instant, the Directors declared an Interim Dividend for the year 1957 at the rate of 1s-0d free of United Kingdom Income Tax, per £1 unit of Stock payable on 4th March, 1958, to Stockholders on Registers as at 31st January, 1958.

The above payment represents a higher interim payment than was made last year. It is made in order to space payments more evenly over the year and must be looked upon in that light.

The Directors hope to be able to pay dividend for 1957 (interim and final) at a total rate of 2s-8d free of United Kingdom Income Tax per £1 unit of Stock which would be equivalent to that paid for 1956 calculated on the original capital plus that part of the 1957 issue as was paid for in cash.

STEEL BROTHERS AND COMPANY LTD.

approval, were also a contributory factor. Profit-taking, however, erased some of the gains at the close.

Although activity in the Gilt-edged section was somewhat restricted due to the absence of sellers, prices were well maintained. There was more demand for medium and short-dated issues. Banks kept out of the market following signs of emergence of seasonal demand for funds as a result of which their activity slowed down.

Bank shares maintained a steady front on reports of the increase in earnings for 1957. Punjab National were taken up to Rs 50.25 from Rs 49.00; United Commercial up to Rs 59.75 from Rs 59.25 and Hind up to Rs 47.00 from Rs 46.50.

Jute shares fared slightly better in sympathy with the general trend of the market and on firmer advices from the jute goods market following the news of the increase in US burlap consumption. National, after being taken up to Rs 25.85 from Rs 24.65, finished the week at Rs 25.40. Howrah were taken up to Rs 13.75 from Rs 12.75; Kankannarah up to Rs 44 from Rs 41.00; Gouapore

(Continued on page 128).

THE INDO-BURMA PETROLEUM COMPANY LIMITED.

NOTICE is hereby given that a General Meeting of the members of the abovenamed Company will be held at the Registered Office at Gillander House, Netaji Subhas Road, Calcutta, on Monday the 10th day of February, 1958, at 10 o'clock in the forenoon to consider and, if thought fit, to pass, with or without modification, the following Resolution which will be proposed as a SPECIAL RESOLUTION namely:—

"That the Regulations contained in the draft submitted to the meeting and for the purpose of identification subscribed by the Chairman thereof, be and the same are hereby approved and adopted as the Articles of Association of the Company, in substitution for and to the exclusion of, all the existing Articles thereof."

By Order of the Board,
STEEL BROTHERS AND COMPANY LIMITED.
Managing Agents.

Gillander House,
Netaji Subhas Road,
Calcutta, 16th January, 1958.

Notes:—

- (1) A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not be a member of the Company.
- (2) An Explanatory Statement concerning this Resolution as required by Section 173(2) of the Companies Act, 1956, has been posted to the members.

THE UNITED PROVINCES ELECTRIC SUPPLY COMPANY, LIMITED.

NOTICE

Notice is hereby given that the Annual General Meeting (being the Eighty-second Ordinary General Meeting) of the Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Monday, the 10th February, 1958 at 11-0 a.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the year ended 31st March, 1957, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.
5. As special business to consider and, if thought fit, to pass, with or without modification, the following Resolutions which will be proposed as Special Resolutions:—

(a) That the requirements of Articles 82, 83, 87, 121, 176, 180 and 181 of the Articles of Association of the Company be not complied with in respect of the half-year ended the 30th September, 1957.

(b) That the Articles of Association of the Company be altered in manner following:—

(i) Articles 82 and 83 shall be deleted and the following new Articles substituted therefor:

"82. In addition to any other meetings, General Meetings of the Company shall be held within such intervals as are specified in Section 166(1) of the Companies Act, 1956 and, subject to the provisions of Section 166(2) of that act, as such times and places as may be determined by the Directors."

"83. The General Meetings referred to in the last preceding Article shall be called Annual General Meetings; all other meetings of the Company shall be called Extraordinary General Meetings."

(ii) Article 87 shall be deleted and the following new Article substituted therefor:

"87. The business of an Annual General Meeting shall be to receive, consider and adopt the Profit and Loss Account, the Balance Sheet and the Reports of the Directors and of the Auditors, to elect Directors in the place of those retiring, to appoint

Auditors and fix their remuneration and to declare dividends. All other business transacted at an Annual General Meeting and all business transacted at an Extraordinary General Meeting shall be deemed special."

(iii) In Article 121, line 1, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor:

(iv) Article 176 shall be deleted and the following new Article substituted therefor:

"176. At every Annual General Meeting the Directors shall lay before the Company a Profit and Loss Account made up to and a Balance Sheet as at the 31st day of March immediately preceding the date of the meeting and such Profit and Loss Account and Balance Sheet shall comply with the requirements of Sections 210, 211, 212, 215 and 216 and of Schedule VI to the Companies Act, 1956, so far as they are applicable to the Company."

(v) In Article 180, line 1, the word "Twice" shall be deleted and the word "Once" substituted therefor:

(vi) In Article 181, line 1, 2 and 3, the words "first Ordinary" shall be deleted and the words "Annual General" substituted therefor. In sub-para 3, the word "Ordinary" wherever appearing shall be deleted and the words "Annual General" substituted therefor:

(c) That, subject to the approval of the Central Government under Section 268 of the Companies Act, 1956, Article 109 of the Articles of Association of the Company be altered by deleting therefrom the third sentence thereof.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 4th February, 1958 to the 10th February, 1958, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend and vote instead of himself.

By Order of the Board,
MARTIN BURN LIMITED
S. GUPTA
Director,
Managing Agents.

12, Mission Row,

THE PENINSULA

(Continued from page 124)

simply do not have even a fraction of what we need of both.

So, our problems are as workaday and as mundane as money and resources. Of course, I am not suggesting that the Science Congress should concern itself with the finding of these and be diverted from its legitimate task of pursuing such research as it is at the moment able to carry on. But the problem is there, and the Science Congress is certainly entitled to expect the rulers of the country to find the money and resources for carrying on research. It is also entitled to ask that such manpower as is available is put to better use. It is entitled to demand that measures that will expand research facilities quickly should be taken.

On the other side, the scientists themselves have certain obligations. There is a general impression in the country (how far justified, I am not competent to pronounce) that we are not getting the full value for even such funds as we now spend on research. It is said that the various national laboratories and other agencies of research (with the exception of the Atomic research centre) have not yielded results commensurate with the hopes entertained when they were started. There is widespread frustration and cynicism among younger scientists about the opportunities of their usefulness and

the value, in the present set up, of their calling. This is a dangerous mood in which to find the country's best brains. There are also occasional misgivings (again, I am in no position to judge their validity) about the standards of excellence and quality of much of the research that is going on. There is a general complaint that much of the research that is done in our laboratories is imitative and secondhand. I am not listing these deficiencies in a carping spirit. The problems that face Indian scientists deserve the most sympathetic understanding at the hands of the lay public. It is also true that, as compared to what obtains in Soviet Russia and the US, recompense for scientific excellence is woefully inadequate in our country. Indeed, it is inadequate even if such comparisons were unavailable. But, when all the excuses have been made, it will still be true that he will be a poor scientist who wants rewards dangled before him before he starts to wrest the secrets of nature from her. It is also axiomatic that science has no use for the second-rater. A passion for the highest excellence and an undefeatable energy for laying bare the truth are the true hall marks of a scientific temper. It is to be hoped that, in the years to come, we will find our research establishments permeated with this spirit.

WORLD OF BUSINESS

(Continued from page 115)

In a country such as the US, where as some one humorously puts it, the difference between a rich man and a poor man is only that the first employs some one else to wash his Cadillac and the other washes it himself, high levels of wages and of standards of living combined with ample and almost unlimited opportunities for rising in the economic ladder, form the basis of industrial relations.

It is an environment where vast sums of money can be staked in the pursuit of ideas, which promise a little more of industrial peace or a little more of productivity per worker. Even if such ideas turn out to be wholly illusory, the waste involved in terms of social effort or expenditure is negligible. In India, the entire environment in industrial relations is quite different. Here the average worker is still about the bare levels of existence. For him, there can be no substitute or compensation for a bulkier paycheck; and he is quite probably apt to look upon every endeavour of the employer in relation to him primarily on that basis.

For this reason, the highly refined though ill-tested techniques in vogue in the US and other Western countries designed to foster sound management labour relations may fail to create any perceptible result. Particular individuals, however, may respond; but when collective bargaining and extraneous leadership determine not only the broad framework of relations but

often even the minutest details within it, such individual responses are of little use.

This is not to say that some of the methods used in other countries are superfluous or unwanted in this country. Only, what they could do and what they could not, should be clearly kept in view.

Oil India (Private) Limited

The signing of an agreement by the Government of India with the Burmah Oil Company and the Assam Oil Company for the formation of a Rupee Oil Company, marks the culmination of the negotiations which have been going on for three years for the starting up of a rupee Oil Company in the country.

The Company which would be called the Oil India (Private) Limited would be started with an authorised capital of Rs 50 crores which would be divided into five lakh shares of Rs 1000 each. The distribution of the shares as between the contracting parties is in the ratio of 2:1, the Burmah Oil Company holding two-thirds of the shares and the Government of India having one-third them.

The starting of the new company is not the first step in the way of exploration and exploitation of the oil resources in the Nahorkatiya, Hugrijanand Meran areas of Upper Assam. The Assam Oil Company has

already successfully completed a programme of boring nearly 36 deep wells most of them being good producers of oil in these areas. The oil potential of this region is estimated to be rich and therefore this augurs well for the progress of the oil industry in the country. The new Company would now take over the assets of the Assam Oil Company in the newly discovered areas. This integration should considerably help in streamlining the administrative machinery for the speedy implementation of the projects now undertaken.

The activities of the new Company would only be confined to the production of crude oil in these

areas. The process of refining would be done in the two refineries to be set up in the public sector by the Government of India. For the transport of the crude oil which this involves, the Company has undertaken the construction of pipe lines from the oilfields to the refineries in North Bihar in two stages.

The Burmah Oil Company has undertaken to advance a sterling loan to the extent of £10 million to the new Company. This is expected to meet the foreign exchange requirements in respect of the construction of the first stage of the pipeline to an intermediate point between the oilfields and Baruauni in North Bihar.

STOCK EXCHANGES

(Continued from page 129)

upto Rs 215 from Rs 200 and Budget upto Rs 70 from Rs 63. New Central and Neillmaria were quoted around Rs 12.12 and Rs 11.08 respectively.

Coal shares were a steady feature with price movements confined to a narrow range. Operators seemed to be awaiting the announcement of the recommendations of the Price Revision Committee. Bengal were taken upto Rs 231 from Rs 228. Burrakur, after touching a high of Rs 22.32 on settlement considerations, receded at the close to Rs 22.12 on profit-taking. Central India were well maintained at Rs 6.37 with Western Bengal closing better at Rs 5.25 against Rs 5.18.

Tee shares changed hands at considerably higher levels although activity was confined to only a few selected scrips. Apart from the continued better prices obtained at the past few auctions, a section of the operators continued to hold the view that, with supplies from Ceylon and Indonesia being interrupted, foreign buyers were likely to turn their attention increasingly to India in the coming weeks. Most prominent were Brahmaputra taken upto Rs 3.70 from Rs 3.12; Birpara upto Rs 1.05 from Rs 1.01; Bishnauth upto Rs 20.25 from Rs 19.12; Brooke Bond upto Rs 17.63 from Rs 15.50; Bhatkawa upto Rs 20.00 from Rs 18.62; Grob "A" upto Rs 23.25 from Rs 22.50; Sungma upto Rs 10.87 from Rs 9.87 and Methoni upto Rs 17.12 from Rs 16.75. Jayshree moved between Rs 9.19 and Rs 10.12 and Sapal between Rs 25.25 and Rs 25.50.

Fertile scrips staged a recovery from the recent low levels following the improvement in the conditions of the cloth market, although the best levels could not be retained till the close due to profit-taking. Two bright features were Kusoram, which recovered smartly to Rs 10.37 from a low of Rs 9.81. New Victoria, after touching a low of Rs 1.12 from Rs 1.28, improved to Rs 1.25.

Sugar shares were freely offered at lower rates due to fears with regard to the profit margins of the mills following the recent levy of additional excise duty. The only two features were Carew having improved to Rs 5.78 from the recent low of Rs 5.69 and SKG being well maintained at Rs 8.94. Rammugger were better at Rs 18.94 against Rs 17.75.

Price movements in the Engineering section were mainly influenced by the

speculative activity in Indian Irons which, in turn, were subjected to settlement considerations till mid-week. Against the week-end closing of Rs 19.15, the scrip opened lower at Rs 19.08 and receded further to Rs 19.05 at which level renewed bull support and heavy bear-covering caused the scrip to advance steadily towards the close to Rs 19.74—the highest level touched for the week. The settlement rate was Rs 19.28 against last settlement of Rs 18.52. The basis for the next settlement was fixed at 6 np.

Among other engineering, Jossip after touching a low of Rs 30.93, improved steadily to Rs 21.60 following the encouragement derived from the Chairman's speech, to ease off again at the close to Rs 21.06 on profit-taking. Richardson touched a high of Rs 9.17 and a low of Rs 8.19 to close finally at the latter level on Thursday. From Friday, dealings in the scrip were suspended by the Calcutta Stock Exchange Committee's decision for a matter of three days (details given in Investment Notes).

The Miscellaneous section, provided a few firm spots on investment considerations. Prominent were Indian Cable being absorbed upto Rs 29.64 from Rs 25.00; National Carbon upto Rs 24.25 from Rs 24.00; NICCO upto Rs 23.63 from Rs 23.31; Dunlop Rubber upto Rs 21.56 from Rs 20.62; India Steamship upto Rs 12.08 from Rs 11.00; Hindustan Lever upto Rs 20.00 from Rs 19.87 and Philips upto Rs 14 from Rs 13.87. Indian Copper, after improving at one time to Rs 2.87 from Rs 2.77 on reports of the end of the strike at the company's mines, finished the week at Rs 2.85 on slight profit-taking. BIC were on offer at Rs 3.88 to Rs 4.00; Osler at Rs 2.00 to Rs 2.31 and Angelo Brothers at Rs 16.44 to Rs 17.75. Alkali Chemicals were a shade quieter at Rs 12.25 against Rs 13.25, while Hindustan Motor changed hands at Rs 5.58 to Rs 5.75; Shaw Wallace at Rs 10.19 to Rs 10.37; Martin-Burns at Rs 25.22 to Rs 25.62; Metal Box at Rs 27.50; Indian Aluminium at Rs 12.75 to Rs 12.87 and National Rubber at Rs 6.62. In the Paper section, Orient Paper were taken upto Rs 23.55, from Rs 23.35, while Titagur closed better at Rs 32.12 against Rs 31.87. Shree Gopal were quoted around Rs 14.25.

a pilfer-proof package for every product!

Metal Box pilfer-proof containers and closures, individually designed for each product, are precision engineered and superbly printed. This ensures product safety, purity, and powerful sales appeal. Reputable manufacturers use them to pack:

Ghee	Breakfast foods	Vanaspatti and other food oils
Butter	Cocoa	Baking powder
Evaporated and Condensed milk	Coffee	Tea
Barley	Biscuits	Honey
Glucose	Confectionery	Processed fruits and vegetables
	Cashews	

OPEN
TOP
CAN

Complete pilfer-proof protection is guaranteed by double seaming both top and bottom to the can body.

This cross-section of a precision engineered double seam shows how the rubber-like compound lining ensures air-tightness.

Only a can opener, destroying the top of the can, will open it. It cannot be reused by unscrupulous dealers to repack with spurious products.

HIGHLIGHTS OF THIS ISSUE

With this issue, Indian Finance completes its 30th year of publication.

This landmark is being availed of to give a new look to the journal.

But our policy and our interpretation of Indian Finance's role in the national economy remain unchanged.

These are, as before:
To champion the ideal of a

mixed economy as we know it, where full opportunity will be offered to the private sector for development.

To interpret Government policy accurately.

To criticise only when we can offer, at the same time, constructive suggestions.

To provide a bird's eye view and

comprehensive picture at all times of the Indian economy.

To have a vigilant care for the interest of the investor, and to safeguard as best as we can his stake in the national economy.

In a word, Indian Finance reaffirms that, in its attitude toward the world, it has neither predilections nor prejudices: it tries always to be on the side of what is right.

No Damage to Private Sector

Investment Gossip:

THE Gauhati session of the Congress has concluded without bringing anything that has not been already known of the ruling party's attitude toward current problems. With the rest of the population, the stock exchange fraternity has also been awaiting news of the proceedings of this year's annual session with a view to glean from the speeches of the key personalities in the Congress camp and the official resolutions, information as to latest trend in official policy in so far as it affects the world of business.

It is to be admitted that this section has not got much in this regard in the shape of definite indications. But it cannot be denied that it has not at all been disappointed with the session; may be, operators would have been pleased if the Finance Minister had given some sort of indication of a tax cut. But most persons know that even if he has anything like that up his sleeve he is quite unlikely to give any indication of it in a speech which he was making when the Central Budget was only a few weeks away.

Beyond a passing reference to the need for a substantial reduction in the disparities in the social and economic life of the country, and marketmen can find very little to disturb them in Mr Dhebar's address. Though Mr Nehru categorically reaffirmed the Congress's faith in socialism, he has made it abundantly clear that such faith will not find concrete expression in hurried nationalisation of banking and other companies. Mr Krishnamachari has also strongly refuted the allegation that Government are departing from the goal of a socialistic pattern of society. But he has made it clear that the socialism visualised by his party does not concern itself with mere distribution of wealth. It aims also at production of more and more wealth. For this reason, it does not want to do any damage to the private sector. His reference to rates and Indian Iron & Steel Company as concerns contributing to national production and hence deserve to be helped is a pointer toward current official thinking on private enterprise.

It may be permissible to conclude from the trend of the discussion on the resolution on the economic situation that there is a fair consensus of opinion among Congressmen that the private

sector has and will continue to have, an important role in the development of the country. As such it may be presumed that as Mr A. K. Sen, Union Minister for Law has pointed out, the economic policy of the country will be such as would provide incentive for higher production and for further investment which will again increase production.

That the stock exchanges have found nothing disturbing in the speeches at Gauhati can be inferred from the continued upsurge in prices during the past week. The happy precedent of TISCO in announcing a bonus issue, has aroused fond hopes of a similar gift from IISCO as well. Whether such an expectation materialises or not, there seems to be a greater possibility for an increased distribution to shareholders of the company in the not distant future. Apart from the immediate prospect, it is now distinctly clear that IISCO is well on the way to increased prosperity and that such improvement is bound to have a desirable effect on the return on its shares. The scrip has several times during the past few days risen above the Rs 20 mark though at the close of transactions on Wednesday it has come back slightly below that level. It would appear that the fact that the Calcutta Stock Exchange will remain closed from Thursday upto Monday next is perhaps responsible for this slight setback.

£R\$

Indian Oxygen Share Issue

Investment Special:

A forthcoming new issue is in the news.

The announcement has been made that The British Oxygen Co Ltd, London, is offering for sale 600,000 Ordinary shares of Rs 10 each in Indian Oxygen Ltd; the price at which the shares are being offered is Rs 13.50 each.

All the shares on offer have been underwritten by The Industrial Credit and Investment Corporation.

So, it is an understatement to aver that the issue will be a success.

The question For the Investor is: How much of a success will it be?

To answer this question, the investor has to take account of a number of considerations.

Firstly, the Indian Oxygen offer is on the lines of the fairly recent Hindustan Lever placement of shares.

Secondly, the stake offered to the Indian investor is fairly sizable, amounting to 600,000 shares as against the issued and fully paid capital of Rs 2 crores.

Thirdly, the Board of Directors is notable for its distinguished personnel.

Fourthly, the present shares being offered will rank for the dividend for 1957-58.

STATE BANK OF INDIA'S

RUPEE TRAVELLERS

CHEQUES FOR CARE-FREE TRAVEL

You can travel anywhere in India and outside without having to carry a large amount of cash, without being in fear of theft or of running short of money.

The State Bank's travellers cheques, issued in denominations of Rs. 100/- and Rs. 50/-, represent the ideal travel funds. They are as safe as a bank draft and are encashable anywhere, anytime.

This is one more of the services the Bank provides from January 1958. For complete information, please ask for a copy of our illustrated booklet from the branch nearest to you, or consult your travel agent.

SISTA'S-58-15

Fifthly, sales of Indian Oxygen have multiplied nearly four times in the space of a decade.

Sixthly, the company has in hand an expansion programme which is estimated to cost nearly Rs 3½ crores. Expenditure already incurred is a shade under Rs 1 crore.

The programme has been financed mainly by The British Oxygen Co Ltd; and the intention is that the offeror, British Oxygen, will make available to Indian Oxygen the proceeds from the offer as loan for 7 years.

Lastly, in each of the last four financial years, Indian Oxygen has paid a dividend of 10 per cent.

I suggest that these considerations will weigh heavily with the investor, and the result will be that, as in the case of recent issues of

blue-chip companies, there will be substantial over-subscription.

That is to say, the Indian Oxygen offer will prove, again, that the investor has more than sufficient resources to support and make a success of every worth while new issue.

Let us hope that the Indian Oxygen issue will mark the turning point in the fortunes of Indian Stock Exchanges.

annum, subject to tax. The Debentures will be redeemable, at par, at the end of 15 years from the date of allotment, with an option to redeem, at par, at any time after 10 years by giving 6 months' notice. The Debentures will be convertible into "A" Ordinary shares under certain conditions.

The Andhra Cement Company will shortly issue 7 per cent tax-free Second Preference shares to the tune of Rs 25 lakhs. The shares will be offered, in the first instance, to the existing shareholders. The subscription list will open early in February. The amount is raised for financing the expansion programme of the company.

Chandramalai Estates have proposed to issue 68,750-7½ per cent tax-free Cumulative Redeemable Preference shares of Rs 2 each, at par, to the existing shareholders in the ratio of one preference for every four Ordinary shares held. The balance of the unsubscribed preference capital will be offered for public subscription.

Investment Briefs:

G. K. WILLIAMS Limited has declared an interim dividend of 8 per cent for 1957.

In Williamson Magor Tea group, Dufflaghur has recommended an interim dividend of 10 per cent and Soom 15 per cent for 1957, payable on or after the 6th February 1958. Tyroon, in McLeod group, has raised the dividend from 30 to 45 per cent for 1957.

In Bombay, Gannon Dunkerley has proposed to raise the dividend from 4½ to 6 per cent for the year ended 31.3.1957.

Podar Mills have reduced the interim dividend to Rs 4 per share for last year as against Rs 5 paid in 1956.

Bombay Swadeshi Co-operative Stores have maintained the dividend at 50 nP per share for the year ended 30.6.1957.

In Madras, Madura Mills have reduced the dividend from 17½ to 15 per cent for 1957.

Among Banks, Travancore Bank has raised the dividend from 4 to 5 per cent for 1957, while Pandyan Bank has maintained the dividend at 7½ per cent.

2 R S

Scindia Steam
Raises Dividend

Balance-Sheet Reviews:

THE accounts of the Scindia Steam Navigation Company Limited, for the year ended 30th June 1957, make excellent reading. In this connection, it might be recalled that the company issued bonus shares last year in the ratio of one share for every five shares held.

The company has earned a substantially higher net profit of Rs 1.04 crores against only Rs 48.40 lakhs in the previous year after providing Rs 13.66 lakhs (Rs 25.74 lakhs) for managing agents' commission; Rs 1.87 crores for Depre-

cation including the transfer of Rs 72 lakhs to Special Depreciation Reserve (Rs 1.72 crores); Rs 10 lakhs for Debenture Sinking Fund (Rs 10 lakhs); Rs 31 lakhs for Taxation (nil) and Rs 24 lakhs for Deferred Taxation Reserve (nil). The allocation to the Annual and Special Survey Reserve has been pruned from Rs 20 lakhs to Rs 10 lakhs, while the allotment to the Dividend Equalisation Reserve has been raised from Rs 13 lakhs to Rs 24 lakhs. The allocation to General Reserve, which claimed Rs 90.75 lakhs in the preceding year, has been skipped. The directors have recommended a 25 per cent rise in the dividend for the year at Rs 1.25 per share on the increased capital of the company.

Earnings of freight and passage money have recorded an increase from Rs 10.18 crores to Rs 12.46 crores. The cargo arrived improved from Rs 19.14 lakh tons in 1955-56 to 18.66 lakh tons during 1956-57 and the freight earnings have increased from Rs 9.80 crores to Rs 11.93 crores. The directors have, however, pointed out that the year under review included a very abnormal period for the shipping industry arising out of the Suez Canal crisis. It is, therefore, extremely difficult to draw any useful comparison between these earnings and those of the previous year or to base estimates for the future years' trading on them.

The question of the future managing agency of the company is now in the final stage of discussion and the same will be placed before the shareholders very soon for their approval.

Out of the ships ordered from the German builders, four ships were delivered during the year and the remaining two ships are expected to be delivered, one in 1959 and the other in 1960.

As against the subscribed capital of Rs 11.38 crores, Reserves and surplus amount to Rs 9.03 crores (Rs 7.20 crores); secured loans Rs 8.51 crores (Rs 7.48 crores); unsecured loans Rs 7 lakhs (Rs 10.55 lakhs) and current liabilities and provisions Rs 4.45 crores (Rs 2.61 crores).

Fixed assets, less Depreciation, are valued at Rs 21.87 crores (Rs 17.79 crores). Investments aggregate Rs 5.84 crores (Rs 5.73 crores). Current assets total Rs 97.83 lakhs (Rs 79.87 lakhs); Loans and Advances Rs 1.94 crores (Rs 1.92 crores) and cash and bank balances Rs 3.57 crores (Rs 2.13 crores).

The Congress and the Country

BARRING the vague and half-hearted concession made on the issue of official language, to which we have already referred in our earlier comment, this year's annual session of the Congress seems to have done very little by way of indicating new directions for national efforts. The very fact that it has been one of the most poorly attended sessions, with no more than 200 delegates present when discussing the more important Resolutions, may be interpreted as sign of a general weakening of interest in the annual function. The phenomenon can be explained in two different ways. The absentee delegates and with them the bulk of the country's intelligentsia might well feel that the party in charge of the Governments of the Union and nearly all the States, with settled long term programmes of action wedded to well understood social and economic aims, has neither the need nor the justification for thinking of any serious deviation from policies year by year. There was nothing new to be expected from the annual session.

There is a great deal to be said for this explanation. Actually, nearly all the Resolutions were either reaffirmations of those approved by the party in earlier sessions or were calls for better effort toward achieving the aims accepted before. The Avadi Resolution holding out before the nation a socialistic pattern of society to be pursued by peaceful means within its power, was re-emphasised. The Resolution on the economic situation approved of the general approach to the budget proposals of last year, the new direction given to the tax structure with its stress on the fullest incentive to work and earn and on the removal of inequalities and the ill-effects of large concentration of wealth among a few persons. Likewise, the role of small savings in the provision of capital for further development was again pressed into attention.

A call for a more vigorous food drive also is familiar. Only, the setback of the last two years has imparted a fresh sense of urgency to it. The Resolution on land reforms reiterated the party's faith on ceilings for holdings under personal cultivation and in co-operative economy based on village communities. In the field of education, the value of the basic system was again reaffirmed.

Certain new developments and new problems did come up for discussion. The status and emoluments of teachers as those responsible for shaping the rising generation received special attention. As it was found that general and extensive supplies of irrigation water remained unutilised, a categorical lead had to be given in the matter of water rates. The uncertainty over the State's attitude to methods of establishing co-operative farms has found an answer in the unambiguous reference to voluntary association. But these are more or less in the character of details by the side of the general ends and the programmes designed to attain them.

The comparative colourlessness of the session can also be due to a sincere general acceptance of not only the soundness but the success of the party's policies which are now being implemented by the Union and all the

State Governments except one. Domestically, the Second Five-Year Plan has survived most of its impediments, with no more than a few minor scars. It was a hopeful coincidence that just on the eve of the annual session, the US announced a hefty instalment of financial aid for the Second Plan, along with the indication of more to come. Very substantial sums have been offered by several other countries such as Japan, France, Switzerland and Czechoslovakia. When the Congress session met, there was hardly any trace of last year's anxiety over the financial situation as concerning the future of the Plan. In 1958 there will possibly be more opportunities for our leaders to talk of the pleasures rather than of the pangs of development. In another year, the pangs will have been completely left behind.

Far more outstanding is the success of the foreign policy which has received the inspiration and blessings of the Congress Party. The basic principles of India's foreign policy are even now not sufficiently well understood in every important country and both within and without criticism has all along been harsh and even vindictive at times. This criticism which takes its roots from the attitudes and interests of the ruling groups in the country concerned or of the Opposition parties in India, has not had even the barest impact on the Congress or on the Union Government. In a world full of conflict, of astonishing changes in the relative strength and techniques of the power blocs and when India itself was being pressed by various conflicting considerations, the essentials of the foreign policy could be stuck to; this disciplined sustenance is testimony to its inherent invulnerability and positive strength and to the foresight and political acumen of the leaders who are in charge of foreign relations.

When Mr Jawaharlal Nehru repeats time and again that India's neutrality is no matter for compromise and that it is based on certain relentless principles, it is not everyone who is ready to accept it as such. An unprejudiced review of the hazards and temptations which could have shaken this policy would convince even the most unfriendly critic that it has been possible for the Prime Minister to assess national interests rigorously in relation to the basic principles to which the nation was committed. Innumerable instances of a positive contribution to international peace directly resulting from the unique and consistent stand taken by India can be cited. The invisible gains of India's stand can be calculated on the hypothesis of serious deviations in recent years, by swinging to this or that side currently dead-locked in ideological conflict. In a way the country is lucky in having a certain measure of coincidence of principles with material interests. But at no time has the national leadership given in to the weakness of emphasising the interests at the cost of principles. It is primarily for this reason that neutrality combined with active service in removing the threats to world peace has gained wider and wider acceptance among other nations, softening the irritations of powerful nations who would like India to behave differently and securing the applause

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

of the weaker who can see in India's foreign policy an example which can be fearlessly followed.

So much for an agreeable explanation of the causes for the lukewarm interest in the Congress session. An alternative explanation is also possible. At least there were ample clues for it from the Congress President's address and from the very context of the present state of public affairs in India. A special session not open to the public was held on January 20, to discuss matters of organisation and discipline. The proceedings of this session must have been very revealing if all the delegates who had something to say said it frankly and fearlessly and also sought to secure answers to the questions surging up in their minds. Whatever might have happened in that secret session, we are sure that an adequate answer cannot be found for the paradoxical problem of a party full of past achievements failing in its appeal to youth and unable to keep its leadership and ranks wedded to a unified outlook on domestic problems. Presumably, even the best that the Congress Government could achieve has been found to fall short of the material requirements of the people, who incidentally are being bred on dreams of higher and higher standards of comfort.

The experience of the Communist regime in Kerala is ample proof of the fact that there are certain difficulties in the national situation which no party howsoever daring in its ideas and programmes can wipe off overnight. Time and sustained national effort alone can provide the relief and solace which in terms of material welfare the nation is hungry for. But unfortunately, the Congress being the party in power is looked upon as answerable for the obstinate persistence of some of these difficulties. The party does deserve blame to some extent for not putting across a wholly realistic picture of what can be achieved and what cannot. Amidst a growing population, the material progress which is being achieved is largely neutralised and the consequent frustration breeds discontent and antipathy to the Government.

The rival experiment in Kerala has now made it possible for the Congress party to ask the people to assess its performance in a more realistic and matter of fact fashion. Such a call might go some way to rehabilitate the confidence of the youth of the country in the Congress party and to revive its prestige as a dynamic and progressive political organisation. It is not enough if this call is confined to periodical speeches. Field work of a really political character seems to be nowhere accepted as an elementary obligation on the part of Congress leaders. This outlook must go.

The problem of discipline appears more intractable. Because every issue which creates division springs from and thrives on emotional loyalties which are sub-national. This is what happened in the case of the linguistic State agitations and what is happening over the language issue. Appeals for a unified voice from the party have gone unresponded. Whenever such conflicts arise,

the wisest course would be to give up any rigid stand and to seek compromises which are workable and which will not deprive the Congress of the support of large sections or areas. That is how the State reorganisation problem was met. That is how the Prime Minister wishes to find a satisfactory answer to the language issue.

That Mr Nehru functions as an overwhelming unifying force is both an advantage and a drawback for the organisation. His readi-

The Last of the Great

EARLIER this week was held the sixtieth birth anniversary of Netaji Subhas Chandra Bose, and the enthusiasm generated by it is renewed proof that the country will not willingly let his memory die. Since his death or, shall we say, mysterious disappearance in 1945, how often have purely apocryphal stories circulated of his resurrection or re-emergence; and every time people have seized them and made them occasions for jubilation or demanding fresh enquiries to ascertain the truth about his putative end. In the face of the strongest evidence, the people refuse to believe that the great leader is dead, and when the public attitude is as sentimental as this, it is not surprising that every enquiry has so far been regarded as faulty in one respect or another and the finding inconclusive. Even the finding of the last official enquiry has been disputed. Naturally, some political parties have indulged in what may perhaps be called political body-snatching and tried to thrive on stories of the leader's continued existence in disguise, biding, we have been told, his time to reappear on the Indian scene. Call all this naive or pure folly if you like, but it is nevertheless an indication of the affection in which Netaji is held, an affection whose temperature has remained constant through the years. This is certainly an amazing fact of Indian politics.

Why are people so Netaji-mad? Bose had quarrelled with the Father of the Nation and the Congress High Command at a time when to do this was inevitable political suicide. With the rights and wrongs of that quarrel, we are no longer concerned. What is important is to consider how he managed to survive it so triumphantly. The Congress High Command needed then but to stir a finger to quell or kill a contentious spirit. In the fairly long history of the Congress since the rise of Mahatma Gandhi, such had been the prestige of the organisation that no one, however big, could secede and yet remain a political force. Moonje, Nariman, the Ali Brothers—all left the Congress to become wraiths of their former selves. There were only two exceptions—Jinnah and Bose, and how unlike they were to each other. The former was a man of wrath, a divider whose vanity feasted on blood and tears and the latter a patriot in whose incandescent zeal even personal ties dissolved. He lived for the country and for it alone. He was the spiritual heir to Sivaji and Rana Pratap, whose old-time idealism had taken possession of his soul. If any one had told him that the country would gain freedom if he would agree to have himself cut up in pieces, he would have gladly stripped himself and refused ether, too. It was this flaming sincerity of his which preserved him from the consequences of the schism which he had caused in the Congress—a quality not very evident in the country at the present time.

Netaji Subhas was the last of the great sons of modern India, who could match magnificent dreams with magnificent deeds. The stirring tale of the Azad Hind Fauz filled the splendid penultimate chapter of the history of our freedom's battle. It is now generally accepted

ness to accommodate dissent and to give majority opinion on fundamental issues no more than the value it deserves, has unhappily not premeated all his colleagues in the party. If the Congress is keen on laying a sound foundation for a democratic order, it will have to show a livelier appreciation of the peculiar characteristics of Indian national life and adjust its ideas accordingly. Discipline should not be confused with dictatorship or majority rule with tyranny.

that, but for the part played by the Fauz, we might not have reached our goal for quite some time yet. On the chains that held us, it delivered the final disintegrating blow. But if Netaji did this for us, what have we done for him—Practically nothing, beyond naming a few streets after him or putting up a few statues. But, contrary to the popular feeling, we think that this is just as well, for no

The New Law of Master and Servant

Changing Conceptions

By M. SUR

THE old principles of common law which governed the relationship of master and servant are steadily being replaced by the industrial courts. That this is the right line of progress for the Welfare State is endorsed by the highest courts in the land. Two recent cases, one in the Supreme Court and one in the High Court of Bombay, are a good illustration of this trend.

THE WAGE CONTRACT

"The English common law still regards the wage bargain as a contract between an individual employer and an individual worker, and that the general policy of the law has been and is to leave to the two contracting parties a general liberty of bargaining, so long as there are no terms against public policy."

So writes Sir Frank Tillyard in "The Worker and the State". Compare with this the obiter dicta of the Supreme Court in the case of Crown Aluminium Works (LLJ 1958, p.1):

"The old principle of absolute freedom of contract and the doctrine of laissez-faire have yielded place to new principles of social welfare and common good. . . . In deciding industrial disputes in regard to wage structure, one of the primary objectives is and has to be the restoration of peace and goodwill in the industry itself on a fair and just basis to be determined in the light of all relevant considerations. There is, however, one principle which admits of no exceptions. No industry has a right to exist unless it is able to pay its workmen at least a bare minimum wage. . . . If an employer cannot maintain his enterprise without cutting down the wages of his employees below even a bare subsistence or minimum wage, he would have no right to conduct his enterprise on such terms."

One of the grounds for appeal by the company was that the Appellate Tribunal in giving its award against the company had based its decision solely on the convention that wages once fixed by a tribunal could not be reduced. The Supreme Court agreed that the company's argument was theoretically valid. "We do not think it would be correct to say that in no conceivable circumstances can the wage structure be revised to the pre-

earthly monuments that we raise to the great dead can compare with the imperishable halls of fame they build for themselves with their own deathless deeds. Netaji was one of them and he has passed into immortal legend. So long as there is an India, so long will Netaji's towering figure dominate its history, and perhaps some future chronicler will say of him what Hendrik Van Loon says of Napoleon in his Story of Mankind:

"But should I happen to look out of the window, down upon the Seventh Avenue, and should the endless procession of trucks and carts come to a sudden halt, and should I hear the sound of the heavy drums and see the little man on his white horse in his old and much worn green uniform, then I don't know, but I am afraid that I would leave my books and the kitten and my home and everything else to follow him wherever he cared to lead. My own grandfather did this . . . millions of other people's grandfathers did it. . . . they cheerfully gave legs and arms and lives to serve (him)."

judice of workmen", but they hastened to add that "even theoretically no wage structure can or should be revised to the prejudice of workmen if the structure in question falls in the category of the bare subsistence or the minimum wage."

In dealing with a claim for downward revision of wages the Supreme Court said it would be for the industrial tribunal to consider whether the company's financial difficulties could be met in other ways; the duration of the financial difficulties; the discontent which would be caused by reduction and the fact that a wage structure beyond the industry's capacity to pay might jeopardise its existence and so lead to unemployment. There is here a contradiction which seems inevitable once principles of social welfare replace the principles of common law. An industry has no right to exist if it cannot pay a subsistence wage, but its closure may lead to retrenchment, which is equally abhorrent to the social conscience.

CONTINUITY OF SERVICE ON TRANSFER OF BUSINESS

"The doctrine of sanctity of contract. . . governed the relations of employer and employees in the nineteenth century but is now obsolete."

Thus speaks the High Court of Bombay in the case of Chavan N. J. vs. Sawarkar P. D. (LLJ 1958, p.36). The case was one raised by a dispute over continuity of service of certain employees of a cinema which had been mortgaged and put in the hands of a receiver. The cinema was subsequently leased by another man and the receiver before he left discharged all the employees, who were then re-employed by the lessee. The High Court held that:

"An employer cannot deprive his employees of the benefits that have accrued to them by reason of past services merely by transferring his business to another person. . . . By continuity of service it is not meant necessarily legal continuity but only continuity in fact; that is, the employees must continue to serve the business without a substantial break in service. Thus, if the transferor gives notice of termination of service and the transferee makes a fresh appointment, this by itself, although it may

in law amount to a break in continuity, will not affect the continuity of service for the purpose of determining industrial relations. Nor does it constitute a break in service if a short time elapses between such termination of service by the transferor and appointment by the transferee (which are legal forms resorted to by the employer in an attempt to deprive the employees of the rights and privileges they have acquired by reason of past service) so long as the employees continue to serve the business, even after the termination and before the re-employment."

In order that employees should continue to enjoy rights acquired by reason of past service the High Court held that there were three

Recent Production Trends in Western Europe

United Nations Survey of Last Quarter of Last Year

THE United Nations Economic Bulletin for Europe for November, 1957, has pointed to a slackening of production in the industrial sector in the countries of Western Europe during the last quarter of the year as compared to the second quarter. Apart from this, the highlight of the economic situation so far as Western Europe was concerned was the new record levels reached in intra-European trade. In the East European countries, the most notable features were a fairly widespread increase in agricultural production, uninterrupted pace of industrial expansion and greater coordination of their economic plans and policies with those of the Soviet Union.

The trends in industrial production in the Western European countries, far from being uniform, show marked divergences. While in Austria, Greece, Italy and Yugoslavia the production machinery was keyed to the highest pitch, in Belgium and Denmark, the high water mark which industrial production touched in the first quarter could not be maintained, the rising trend having been reversed in the second quarter itself in these two countries. For these countries the index numbers of industrial production which stood at 127 and 119 respectively in the first quarter were driven down to 115 and 112 respectively in the third quarter. Industrial activity in the United Kingdom showed signs of deliverance from the stagnation which had seized it since last year.

The subdued pace of industrial production was reflected in the slower rate of growth in the basic industries particularly coal. Labour absenteeism in England and shorter working hours in Western Germany did not augur well for any increase in the production of coal. Production in the countries of the European Coal and Steel Community is not expected to show any improvement over that of the 1956 level. While ordinarily a reduction in coal output should have led to a slackening in the pace of industrial production, the exceptionally high stocks of coal partly made up of higher imports from the US, averted that possibility.

Production in the metal-using industries also received a setback, the decline being particularly sharp in Belgium and Western Germany. But other basic industries such as shipping, steel and automobile manufacture witnessed new spurts in activity. The relaxation of the restrictions on the imports of motor vehicles into Australia and capture of American market helped the automobile industry of Britain tide over the crisis created by the Suez happenings and the preceding deflationary policies. The more notable feature with regard to steel, however, was not the

conditions; there should be transfer of the business, continuity of service and identity of business. It was explained that by identity of business the Court meant that the same business must be carried on by the transferee, and that it was not sufficient that the business carried on by the transferee was similar or of the same nature as that previously carried on by the transferor. Thus, while the Court has taken away the opportunity of avoiding liability for continuity of service by termination and re-employment, it has still left a loophole to the transferee to avoid responsibility for the employees' past service by altering the nature of the business on transfer sufficiently to be able to claim that it is not the same.

Reference LLJ=Labour Law Journal

rising pattern of production which continued during the year but the pressure on prices which was particularly noticeable in France, Britain and Western Germany.

The employment situation strikingly belied general expectations as to the effects an arrested industrial expansion would have on it. The number of unfilled vacancies has not shown any tangible decline except in those countries where deflationary policies have been in effect for some time.

The price situation has been generally under control. Wholesale prices have tended to level off mainly because of slower stock accumulation, improved supplies and larger imports. Retail prices have risen appreciably only in France, Finland, Netherlands and Ireland, being mainly the result of certain specific policy measures such as the abolition of subsidies on butter and bread.

In regard to trade, the third quarter witnessed record levels in intra-European trade, while trade with overseas also continued to be high. With the cessation of extraordinary imports from US, which was necessitated by the Suez crisis, the balance of payments position of Western Europe vis-a-vis the US also improved considerably. The adverse balance of payments with the US which was as much as 458 million dollars in the first quarter of 1957 was in the second quarter brought down to below 73 million dollars. Nearly half the countries of Western Europe showed a rise of exports of more than 10 per cent and though imports also increased, this was necessitated by the increase in industrial demand.

As between countries, there have been marked differences in the movement of trade and in the balance of payments position. While in the United Kingdom, the dollar and gold reserves declined by more than half a million dollars, in Western Germany, the foreign exchange reserves increased by 17 per cent during the third quarter. The continued drain by India and the customary seasonal payments for wheat and tobacco seemed to have been the chief elements of strain on the balance of payments position of the UK. Further, the British exports have not followed the general pattern and defying even the restrictions on internal demand, exports have shown signs of slowing down.

Thus while as at present the general economic situation in the Western European countries does not show any sign of weakness, the prospects before it as indicated by the trend in the commodity markets and the outlook of US economy are by no means reassuring.

Prices of nearly all major commodities entering into international trade have been declining in recent months. The recession of economic activity in the US, as evidenced by a falling off in manufacturing employment is also fraught with adverse consequences for the countries of Western Europe, such effects could be particularly severe now, in view of the less favourable distribution of the reserves which could have provided a cushioning influence. In such a situation, the economic policies of some of the countries seem hardly conducive to the maintenance of a high level of economic activity. Especially in the United Kingdom, whose balance of payments problem is supposed to be amenable only to a continuing high rate of investment, steps toward the stabilisation of public investment expenditure in the next two years, the limitation of bank advances to the private sector to the average level of the preceding twelve months, stricter control of capital issues etc, had the reverse effect of putting a brake on investment activity.

Though the US holds the key to the expansion of economic activity in the Western European countries, Western Germany, with its high level of foreign exchange reserves and of investment activity is also believed to offer immediate possibilities of providing the necessary stimulus to economic growth in the region as a whole.

The economy of the Eastern European countries have shown a rising tempo of activity. Agricultural production has been uniformly good with the exception of Czechoslovakia the combined grain harvests being estimated to be at least 6 million tons better than last year's. Industrial production is also estimated to have progressed according to schedules, actual performances in Bulgaria and the Soviet Union having exceeded planned levels. The rate of expansion in Poland during the current year was 8 per cent while in Eastern Germany the rise was 7½ per cent. In the Soviet Union the annual rate of 11 per cent rise in industrial output was maintained.

Notwithstanding such high rates of growth, the economies of some of these countries have developed serious bottlenecks in transport and power supplies. Restricted power supply was particularly noticeable in Poland, Czechoslovakia and Eastern Germany and had been a great restraint on the rate of growth of industrial output. Transport difficulties were severe in Eastern Germany and have affected constructional activities. Moreover industrial production in some of these countries has not been geared to the public requirements and has also not satisfied calculations of costs.

So far as Hungary is concerned, the effect of the uprising of last year has been practically wiped out and the economy has shown ample signs of resilience. A favourable weather has combined with other factors such as changes in land tenure and agricultural marketing to produce a good harvest. Industrial output which had suffered heavily consequent on the political troubles has also been restored to the old levels. But the recovery seemed to have been achieved at the cost of low home investment and large foreign disinvestment and was based on a policy of financing by credits and a balance-of-payments deficit that had added about 8 per cent to total disposable national income.

Finally, the Eastern European countries are also being brought closer together by a process of coordination in respect of economic policies and plans. This has so far mainly taken the form of agreements in respect to the supply of credit and long term trade agreements. A multilateral payments scheme between the member countries is also projected to take shape next year.

Call for Investment

There is a traditional reluctance to take the protestations of Communist leaders at their face value. When the Chief Minister of Kerala sent a message to the Congress President on the eve of the Party's annual session, seeking an increasing area of cooperation between all the political parties in India, he could not have been completely confident of the response it would receive from the Congress leadership. Already some uncomplimentary cartoons have appeared in newspapers, warning the Congress against the real intentions behind the offer.

Mr Nambudiripad, however, seems to have approached the Congress Chief with not much of political design. Economic conditions in Kerala have failed to respond graciously to the somewhat feeble efforts of the Communist Ministry toward improvement; the result is that the immediate problems of the State present themselves in a manner as to repel any undue emphasis on purely political considerations.

The Prime Minister's appeal for avoidance of strikes and other dislocations of work, is now finding an ampler echo in Kerala, where the Government are anxious to evolve a basis for a long term industrial truce; which, in more precise terms, is described as an industrial agreement between employers and employees all over the State for at

least three to five years on all basic issues.

The recent closing down of three plantations and the sporadic clashes between rival trade union groups have awakened the Ministry to the grim realisation that it was not enough to give the police a non-interfering role. Talking to the members of the All India Manufacturers' Organisation at Bombay, Mr Nambudiripad expressed himself in favour of attracting foreign capital on terms more agreeable to the investors than what they could secure in their own countries; nationalisation, he assured, would be resorted to only when the country decided on it and after payment of full compensation. These statements related to Kerala. By implication, they relate to the whole of India as well.

If in the international sphere, the professions of Communist countries can be relied on as practicable basis for cooperation, there is no reason why the Kerala Chief Minister's appeals for and assurance behind requests for investment of private capital in the State should go unheeded, simply for lack of faith. The entire situation becomes clearer, when it is also taken into account that Soviet Russia and other Communist countries are also substantially participating in India's Development Projects.

“Socialistic” Reserve Bank ?

Presiding over the Annual Conference of the All India Reserve Bank Employees' Association, Dr Gyan Chand pleaded for a complete change in the functional and organisational aspects of the Reserve Bank of India; the change he had in mind was to conform to the objective of establishing a socialist society in the country. Dr Gyan Chand is the President of the Association and is naturally prone to views which would be pleasing to his colleagues and followers.

The representation of employees on the management of the Bank for which he has put in a special plea is not an innovation for India. It would only be carrying a principle already applied in several industrial units in the private and public sectors. A front rank economist like Dr Gyan Chand knows to what extent this principle could be applied to the Reserve Bank. A limited association of the employees, as is being done in a few industrial units, may be conducive to happier internal relations. But, even as it is, the scales of pay in the Reserve Bank compare exceptionally well with those obtained in other similar institutions, though there may be room for sectional discontent.

How exactly the Reserve Bank can promote socialist aims is rather obscure. The Reserve Bank's functions have only a remote bearing on social changes as conceived by Dr Gyan Chand. Nor can it hope to usurp functions which are aimed at bringing about such changes. Within its sphere, the Reserve Bank as it now operates, does provide substantial stimulus to the econo-

mic uplift of the weaker sections, besides exercising some check on the unsocial use of public funds.

Shipping Tonnage

From the approximate figures available, world merchant fleet should have stood around 120 million tons at the end of 1957, the US leading with about 26 million tons and UK coming next with over 20 million tons. Over the previous year the latest annual increase may be put at more than 15 million tons. For India, which has not yet found a place among the leading maritime countries of the world, the year recorded the highest addition to shipping tonnage since 1948; 12 vessels totalling 78,800 tons were acquired during the year, increasing thereby the total tonnage available to 597,800 tons. After allowing for certain alterations in the tonnage of some vessels and sale of three vessels, totalling 11,300 tons, the strength of Indian shipping stood at about 586,500 tons at the end of 1957.

During the current year the total tonnage is expected to go up by about 140,000 tons, through 23 vessels, 9 from the Hindustan Shipbuilding yard and 14 from foreign yards.

Ethos Behind Languages

In the battle of languages which has been convulsing India, the zealots of Hindi seem at long last very near throwing in the towel. They fought obstinately, irrationally and in unholy alliance with men in high places. But the champions of sanity are now on top. The most important single symptom is the abandonment of the Hindi Raksha Samiti's campaign in the Punjab, but West Bengal and Madras also provide strong evidence. In these latter States, especially, the anti-Hindi protests have generally been expressed through conferences, symposia, magazine articles and private discussions, and hardly has anybody spoken in hot blood. But the effect seems to have been a steady and growing stiffening of the opposition to the militancy of the Hindi fanatics. Their main argument—consolidation of the unity of India through one national language—has been carefully investigated and torn to tatters, its hollowness being proved with the aid of examples from Switzerland, Russia and other countries where several languages co-exist without any detriment to their political unity.

If we had a language as advanced as English, there would certainly have been no difficulty in installing it as the national language. Unfortunately, we do not have such a one, and must retain English as our lingua franca, even if it is foreign. It has been the language of administration for nearly two centuries, and the country's most advanced elements, the economically and culturally most viable units, have used it as their medium of inter-communication.

One other point that does not appear to have received much

attention in the controversial heat is that we badly need the continuance of English in our period of national reconstruction for a very special reason. Every language has an ethos behind it. Sanskrit, for example, is a language of subtle beauty, but associated with it are ideas of leisurely ease and slow movement, quite out of character with the modern concept of progress. As for Hindi, it has a crude vigour of its own, but scarcely anything else. English is modern, and breeds efficiency, punctuality, speed and other virtues without which progress will remain a mirage for us.

More Roads Than One

In his Presidential address at the eleventh All-India Commerce Conference held at Nagpur, Mr L. N. Birla took for one of his themes the fiscal and financial policy of the Government and its impact on the capital market. He drew a comparison with Germany where the task of rehabilitation within a brief period made more strenuous calls on the economy than perhaps the requirements of economic development in India. The outstanding feature of German fiscal policy has been gradual reduction of taxation since 1950 which also had the effect of bringing in more revenue to the State.

How far the German example is useful to India however will have to be determined in relation also to the difference in contemporary social aims, in the structure of economic development and in the volume of foreign aid made available. In India, the State had to step in and give a direction to the whole economy. There is indeed a case for other methods than what India has chosen. Mr Birla's address effectively drew attention to one such.

January 25, 1958

No Selling Pressure in Giltedged

THE onset of the busy season, later though than the norm as it has been, has nevertheless begun to alter somewhat conditions in the giltedged market. Activity has petered out. But the interesting point is that there is no evidence of any selling pressure. So, even though there has been no new demand for giltedged, prices have kept fully steady. In the case of the State loans, demand is good, but there are no sellers. In the course of the past few months, consequently, a discernible improvement has been registered in the State Government Loans. For example, between the beginning of September and the middle of January, the 4 per cent Madras 1968 has improved from Rs 96.30 to Rs 97.20. The 4 per cent Andhra 1968 has fared even better by moving, over the period, from Rs 95.60 to Rs 97.10. Another representative scrip, the 4 per cent UP 1968, has put on exactly one rupee to be placed at Rs 97.20. Similar gains have been recorded in all other representative State Government Loans. We shall give one more instance, that of the 4 per cent Mysore 1968, which has moved up to Rs 97.20 from Rs 96.00. During the same period, the Central Government Loans, issued in recent years, and of a longer term nature, have not fared as well. Thus, 4 per cent 1972 is higher only by 3 nP at par; and the 3½ per cent 1974 has actually shed 5 nP at Rs 98.25. The apparent conclusion is that, although the yields available on the State and longer dated Central Government Loans do not vary too substantially, we have still to witness an emergence of any sizeable market for longer dateds. Again, if the comparable medium dated scrip are taken into account, it will be seen that the 3½ per cent 1967 has lost 10 nP to be placed at Rs 97.60. Does this mean that the giltedged market is interested only in short dated Central Government Securities and medium dated State Government Securities?

That, again, would seem to be the apparent conclusion. It is undoubtedly true that the institutional investors, who have a penchant for medium dated, have so far preferred State Government Loans. But we would suggest that we have now reached the stage where, inevitably, the funds of such institutional investors will need necessarily to be diverted to

Central Government Loans. This diversion is likely to take place because of the “famine” conditions which are developing in respect of the State Government Loans. The accruing funds of such organisations as Provident Fund societies cannot long lie idle. With the State Government Loans unavailable, there will be an inescapable need for investment in Central Government Securities.

We have now to consider whether this diversion will be to the medium dateds or longer dateds. At this stage, we may remark that the institutional investor may consider the longer dated Central Government Loans more closely to resemble the State Government Loans than the medium dated issues. For one thing, the interest payable on the 1972 and 1974 issues are 4 per cent and 3½ per cent respectively, whereas the interest on the medium dated Central Government Loan which offers comparable interest is 3½ per cent 1967. The outstandings of this issue amount only to Rs 56.92 crores. On the other hand, the two longer dateds that we have mentioned have outstandings aggregating more than Rs 115 crores. For this reason, we anticipate that, even in the midst of the busy season, we may conceivably witness an appreciation in the prices of 4 per cent 1972 and 3½ per cent 1974. If the Reserve Bank's holdings in these two scrip are not very large, it may even become necessary for the Central Government to create a special longer dated issue for such of those institutional investors who are presently unable to lay their hands on State Government Loans.

Very Substantial Deficit Financing

There would appear to have been very substantial deficit financing during the week ended December 17. On the one hand, Rupee Securities in the Issue Department have risen by Rs 24.72 crores to Rs 1056.82 crores. On the other hand, Investments in the Banking Department are marked up by Rs 23.55 crores at Rs 255.43 crores. Unless the Reserve Bank has effected large scale purchases of giltedged in the open market—but this is extremely doubtful—the increases in the two departments would in the aggregate constitute the quantum of deficit financing during the week. We may assume that such deficit financing was for Rs 50 crores. The question that we need to answer is why deficit financing on such a large scale was necessitated. Firstly, we may state that the Central Government needed to replenish their resources for effecting some payments to the State Governments. This would be indicated by the fact that the balances of State Governments have nearly doubled, in rising by Rs 15.19 crores to Rs 31.35 crores. Secondly, deficit financing may

have been considered necessary, because, in the previous week, the Centre's balances had fallen below the so-called “minimum” of Rs 50 crores. In the current week, they have improved by Rs 2.42 crores to Rs 52.11 crores. In the third place, there would appear to have been some special transactions, the nature of which we cannot at the present moment divine. For, in the Banking Department, Bills Payable are shown as having increased steeply by Rs 20.82 crores to Rs 36.04 crores. While, normally, this would represent liabilities of the Reserve Bank, it may be that this liability is payable by the Reserve Bank in behalf of the Central Government. We must look to future changes in the Banking Department for a clue as to the disposition of this Rs 20 crores odd. Nevertheless, it can be seen, under these three heads, the extra resources that the Central Government had to find were in the vicinity of Rs 38 crores. The surplus of expenditure over income, or the net expenditure, during the week on the part of the Central Government would account for the balance of the deficit financing of Rs 12 crores.

According to the returns of the Reserve Bank for January 17, there has been a fractional decline of Rs 0.47 crores to Rs 1540.25 crores in Active Note circulation. Rupee Coin has returned from circulation for Rs 0.08 crores. The expansion of currency against Rupee Securities was offset by a countervailing transfer from Foreign Securities to Balances Held Abroad in the Banking Department. In the result, the Reserve Bank's Cash Balances are placed higher by Rs 0.56 crores at Rs 10.76 crores.

In the Banking Department, there has been some little improvement in the position of the member banks. The Reserve Balances of Scheduled Banks are higher by Rs 4.91 crores at Rs 65.20 crores. The Other Loans and Advances of the Reserve Bank have declined by Rs 1.11 crores to Rs 72.36 crores. The Advances against Usance Bills are practically unchanged at Rs 30.65 crores. Finally, after transfer from the Issue Department, Balances Held Abroad show a rise of Rs 22.56 crores, indicating that the foreign exchange depletion during the week has amounted to a little more than Rs 2 crores.

According to the return of the State Bank for January 17, a rise in Deposits of fairly substantial nature has occurred after an interval of several weeks. Deposits have improved by Rs 7.82 crores to Rs 371.05 crores. Nevertheless, borrowings have been marked up by Rs 0.32 crores to Rs 8.15 crores. Investments continue to be unchanged, but Advances have registered a further rise of Rs 3.13 crores to Rs 183.96 crores. So, the bulk of the resources derived from the increase in Deposits has gone to augment Cash Balances, which

Bank Profits

The net profit of the Punjab National Bank Limited for the year 1957, subject to audit, amounts to Rs 111.11 lakhs and compares with the net profit of Rs 87.85 lakhs recorded in the previous year. The directors have recommended a final dividend of Rs 2.50 per share. This will make the total distribution—an ad interim dividend of Rs 2.50 has already been paid—for the year 20 per cent on the increased capital as against 16 per cent paid last year. Provision for taxation is Rs 50 lakhs. Transfers to Reserve Fund, Bonus to staff and charity get Rs 22.50 lakhs, Rs 18 lakhs and Rs 1 lakh respectively. The proposed carry forward of Rs 4.56 lakhs is against Rs 2.35 lakhs brought forward.

The Indian Overseas Bank Limited has earned a net profit, subject to audit, of Rs 32.50 lakhs for the year ended 31st December 1957 as against Rs 28.65 lakhs in 1956. Provision for taxation is higher by Rs 2 lakhs at Rs 16 lakhs. Transfer to Reserve Fund gets Rs 7.32 lakhs against Rs 6 lakhs, while provision for bonus to staff is Rs 25,000 higher at Rs 3.75 lakhs. The Directors propose to recommend to the shareholders at the next general meeting payment of dividend of 10 per cent, which is the same as last year. There is a carry forward of Rs 2.32 lakhs against a sum of Rs 2.52 lakhs brought in.

The audited net profit of the Canara Bank Limited for the year 1957 amounts to Rs 11.28 lakhs against Rs 8.21 lakhs in 1956. Provision for income tax is increased to Rs 7.30 lakhs from Rs 4.60 lakhs; Bonus to Staff is higher at Rs 1.90 lakhs against Rs 1.40 lakhs; Dividend is maintained at 10 per cent. The carry forward at Rs 44,767 is against the Rs 38,502 brought in.

are higher by Rs 5.36 crores at Rs 24.77 crores. Also, this would mean that the increase in the Reserve Balances of member banks, as shown in the Reserve Bank's return for January 17, have been on account of the State Bank.

The Deposits of Scheduled Banks have, according to the return for January 10, again declined, with a fall of Rs 8.52 crores to Rs 1390.29 crores. This decline, we may put down to the needs of constituents in respect of month early disbursements. However, the total of Advances is lower by Rs 3.47 crores at Rs 877.16 crores. But, in order to replenish their resources, the Scheduled Banks had to increase their borrowings from the State Bank from Rs 7.73 crores to Rs 8.65 crores; and, moreover, borrowings from the Reserve Bank have risen by Rs 4.67 crores to Rs 35.26 crores. In spite of the higher level of borrowings and the decline in Advances, as a result of the drain on Deposits, Cash Balances stand reduced by Rs 15.50 crores at Rs 153.76 crores.

British Resistance to Inflation

By
Paul Einzig

THE confusion around the circumstances and consequences of the resignation of the three Treasury Ministers is gradually abating. Mr Thorneycroft and his two colleagues explained their decision in public speeches, in so far as this

was possible without betraying Cabinet secrets or disclosing unpublished details of Estimates. It is now fairly clear that there was no clear-cut difference of £50 million or any other definite figure between Mr Thorneycroft's figure, but that of the Cabinet, and that the main reason for his resignation and that of his two colleagues was the feeling that the Cabinet was lacking determination to resist the rising trend of expenditure.

History repeated itself to a remarkable degree. In December

1886 Lord Randolph Churchill resigned his office as Chancellor of the Exchequer, in circumstances that bore striking similarity to those of Mr Thorneycroft's resignation. It may not be without interest to quote the relevant passages from Lord Randolph Churchill's resignation speech delivered on January 27, 1887 in the House of Commons:—"I resigned because I could not become responsible for the Estimates. I was deeply and repeatedly pledged by many speeches I had made in

Indian Finance

various parts of the country to a policy of retrenchment and economy, because I was convinced by what I had learnt at the Treasury that such a policy was not only necessary but perfectly feasible, and because, viewing these pledges, it was impossible for me usefully to retain office as Chancellor of the Exchequer in a Government in whose policy effective retrenchment finds no prominent place.

"The only request I made to my colleagues was that they should make a sensible and appreciable effort to return to a more normal expenditure. I named no figure. In my own mind—and I may have mentioned it casually in conversation without insisting upon it—I thought that a reduction of £1 million in time of peace on the military and naval expenditure would have been an adequate reduction. It was only when I found from the view they held that they were absolutely unable to make even the commencement of an effort to return to a more normal rate of expenditure that I was forced to send my resignation.

When it is suggested that a difference of £50 million is not sufficient reason for a Chancellor to resign it is interesting to recall that seventy years ago a Chancellor resigned on account of a difference of a mere £1 million. In both instances it was the Cabinet's general attitude rather than the actual amount of the difference that induced the Chancellor to resign.

Mr. Thorneycroft was right in making firm stand. If Britain wants to defend sterling a line must be drawn somewhere. Even a minor retreat from that line is liable to open the floodgates to costly concessions, and the line is liable to become untenable. Possibly the shock of the resignation of the Treasury Ministers may prove to have produced a beneficial effect. Had Mr. Thorneycroft and his colleagues attempted to continue to fight the battle of retrenchment from within the Government, it is certain that they would have been overruled, because their resistance would have received no publicity. As it is, the Government's unwillingness to cut some expenditure in order to keep the grand

Announcement

Indian Finance will publish next week a Special Supplement on the Report of the Revising Committee on Company Law.

The Supplement will be issued free to subscribers.

Advance reservations are necessary for extra copies, which will be priced at Rs 2.00 each.

January 25, 1958

total unchanged has received a great deal of hostile criticism in the Press. The searchlights of publicity are now focussed on Mr. Thorneycroft's successor. And public opinion has been thoroughly aroused. The fact that three prominent politicians are prepared to risk their political future in the cause of expenditure cuts has made millions of people realise the importance of budgetary economies.

This means that Ministers are expected to feel impelled to make a supreme effort to cut expenditure, far beyond the extent to which Mr. Thorneycroft would

have been able to induce them to cut it if he had remained in the Government instead of resigning. There is no doubt about it that a supreme effort will be made to defend the internal and international value of sterling. The setback in sterling that followed Mr. Thorneycroft's resignation, and again his speech explaining the circumstances of his resignation, provided a useful reminder to the Government that the battle of the pound is yet to be won.

It is true, the political crisis that threatened to arise from the resignations seems to have blown

over. Mr. Thorneycroft promised his support to the Government, and the large number of Conservative Members of Parliament who share his views will not do anything to embarrass the Government. It would be indeed suicidal to take action that might lead to the resignation of the Government or the dissolution of Parliament. In existing circumstances a general election would result in a large Socialist majority, and this would mean the advent of a spend thrift Government with highly inflationary policies. For this reason, Mr. Thorneycroft and his sup-

porters can have no choice but to support Mr. Macmillan.

The new Chancellor of the Exchequer shares Mr. Thorneycroft's determination to defend sterling at its present parities. At the moment the undertone of sterling is firm, largely owing to the seasonal improvement of the balance of payments. But there is no place for easy optimism. The Sterling Area is bound to be affected by the fall in raw material prices, and the recession in the United States is also a potential adverse factor.

A PROFIT MAKER!

The Euclid S-7 is a versatile machine on all work for small scrapers. It is a cost-cutting supplementary tool to the larger equipment on big projects.

The Euclid S-7 outperforms all other scrapers of comparable size and reduces maintenance costs. All major components are readily accessible

for easy servicing—keeps down-time to a minimum.

Simple hydraulic system and lever action of bowl, apron and ejector eliminate cable troubles and relative expense. The Euclid S-7 has all the profit-making features you want in a scraper—fast, easy loading... excellent traction and manoeuvrability... high travel speed... quick, clean dumping... easy servicing and low maintenance cost. It gets more work done at lower cost.

Homage to the new lord of the skies

An unusual painting by the poet Rabindranath Tagore—which has inspired this design—paid subtle tribute to the modern aircraft: birds bowing to the man-made 'bird'. Nor were birds slow to recognize the new lord of the skies as the first I.A.C. Viscount touched down majestically at Delhi's Palam airport.

The Viscount represents a revolutionary advance in air travel—bringing the jet age to India. Cruising at 325 m.p.h. above the weather and eliminating vibration and noise, it ensures fatigueless flight at high speed. For this the credit goes to its four powerful 'turbo-prop' engines which employ the same gas turbine principle as jets. To add further to the comfort of passengers the cabin of the Viscount is fully pressurised, air-conditioned and sound-proofed and provided with huge picture windows which give an incomparable view of the scene below. A pleasure beyond measure, flying by Viscount is something more than just getting from one place to the other in the shortest possible time.

You can now enjoy this new winged experience while saving nearly a third of your flying time on the services between Delhi—Calcutta, Calcutta—Rangoon, Delhi—Bombay, Bombay—Karachi and Bombay—Madras—Colombo.

Very shortly Viscount services will be extended to all the other I.A.C. trunk routes.

INDIAN AIRLINES CORPORATION

The Foundry Industry

With domestic production of iron and steel far below our requirements, large imports have become necessary to feed indigenous industries like the foundry industry. Even so the supply position has never been brought to a satisfactory level as will be evident from the wide gap between demand and supply in pig iron, which is the principal raw material of the foundry industry. During the last year the allocation of pig iron was only 230,000 tons against 392,618

tons in 1956. It is estimated that present demand is of the order of 700,000 tons. It would appear that this reduced availability is due to the cumulative effect of the drastic cuts in imports and the fact that steel works carried heavy outstanding.

It is, however, gratifying to note that the biggest handicap of the industry will soon disappear, thanks to the increasing tempo of production in the steel works. It is expected that supplies will increase to about 500,000 tons in the current year as three new blast furnaces come into commission one each at Burnpur, Bhilai and Rourekala. It may be recalled that in his recent address at the Engineering Export Promotion Council, Mr. Morarji Desai, Union Minister for Commerce and Industry, asked the engineering industry to get prepared from now on to use the largely increased quantity of iron that would be available. According to him it is quite probable that a quantity of pig iron will be left over after meeting domestic demand in full, for export even as early as next

year. Sardar Swaran Singh, Union Minister for Steel Fuel and Mines who inaugurated the annual meeting in Calcutta last week of the Indian Foundry Association, assured his audience that the current year would be last year of shortages and that there "will be enough to go round in 1959". The supply position can be expected to show improvement even during the current year because the railways, which have been taking their share from the common pool hitherto, have now arranged for their own imports.

In the course of his presidential address Mr. K. L. Jalan complained that in the past two years or so the foundry industry did not get any scrap from the railways whereas till then a good quantity had been available from that source. As a consequence the price of scrap more than doubled during the period. In reply Sardar Swaran Singh explained that the railway scrap continued to be made available to the industry as a whole though it went perhaps only to such of those units as supplied the

requirements of the railways. Moreover, exports of all types of scrap that could be used in the country had been banned and a control on prices of scrap had been imposed. It would, however, appear that there is still room for further improvement as in the case of the supply of skull scrap. The suggestion that a systematic arrangement should be made for the allocation of skull scrap from the main producers to different units in different regions deserves active consideration. In this regard the industry would also do well to take note of the suggestion that industries should themselves co-operate and evolve a mechanism for scrap collection.

Another handicap to which attention of Government was drawn by Mr. Jalan is the supply of hard coke which is as essential a raw material to the foundry industry as pig iron. The supply of hard coke is "inadequate irregular and hectic", sometimes resulting in the closure of some units. The scarcity of the two vital raw materials combined with the inadequate transport facilities has retarded the growth of foundry industry, the demand for whose products is daily increasing as will be evident from the recent figures of production of some of the important engineering industries where castings play an important part.

In common with other industries, the foundry industry is also adversely affected by the inadequacy of transport facilities. It is said that this has further aggravated the difficulties because the industry has had to grapple with three important problems all at the same time. Sardar Swaran Singh has also admitted that there is shortage of wagons with railways but has assured the industry that Government are reviewing the position. It is also gratifying to note that Authority realises that the complaint that wagons are not allotted when available should be investigated. It is to be hoped that Government will bestow their attention on this aspect of the transport problem because even when adequate supplies of wagons become available such avoidable drawbacks as idle wagons may yet make the progress achieved in a vital sector unavailing.

PRINCIPLES OF BUSINESS FINANCE by A. K. Sur, published by Research & Publications Division, All-India Institute of Social Welfare & Business Management, College Square West, Calcutta. Price Rs 4/- only.

Mr. A. K. Sur who can claim a long and intimate experience of the working of Corporate institutions, the stock market and financial institutions in general, has given a detailed account of the manner in which business finance is raised, the problems involved and in India the methods by which these can be better managed. As Mr. G. Basu in his Foreword rightly recommends, chapter XI of financial planning and budgeting is of special value, especially in countries where this aspect of company promotion and management is not properly emphasised.

Jute Production in 1957-58

THE all-India final estimate of jute for 1957-58 season released on Tuesday by the Ministry of Food and Agriculture puts production at 4,088,000 bales of 400 lbs each and area at 1,754,000 acres. Compared with the final estimate figures for the previous season, production has declined by 200,000 bales while the area is also smaller by 154,000 acres. Thus production and acreage during the year have declined by 4.7 per cent and 8.1 per cent respectively. A redeeming feature, however, is that most of the jute growing areas have recorded increased yield thereby pushing up the all-India average yield from 899 lbs per acre in 1956-57 to 932 lbs in the current season. The highest average yield of 1,254 lbs per acre has been recorded by Assam whose average yield was 1,182 lbs in the previous season. The Union Territory of Tripura, West Bengal and Orissa also showed increased yields per acre. In Tripura the yield increased to 1,158 lbs from 1,086 lbs, in West Bengal to 964 lbs from 812 lbs and in Orissa to 865 lbs from 805 lbs.

The fall in production despite higher yield in most jute growing areas is explained by the fact that jute cultivation in Bihar and Uttar Pradesh has been adversely affected by drought conditions during the sowing and growing periods. As a result, both acreage and yield have declined. In Bihar the average yield has declined from 830 lbs per acre in 1956-57 to 652 lbs in 1957-58 while in Uttar Pradesh yield has declined from 1,121 lbs to 879 lbs.

It may be recalled that there had been some apprehension about the prospects of this year's crop because of the delayed onset of the monsoon. But when crop reports were available, it was generally believed that, beyond being somewhat delayed, the new crop had not suffered any adverse trend. The apprehensions regarding a smaller crop were revived later on when there were reports that most growing areas were experiencing drought conditions. Even so, it was expected that the final size would not record any sizable decline in view of the energetic efforts put forth in the direction of intensive cultivation. The figures now made available generally confirm these surmises.

Conditions in the jute markets during the past week were easier, with the general trend influenced by the continued absence of foreign

enquiries and the Calcutta dock strike. In the hessian section prices were moving within a narrow margin with the undertone rather quiet. In the Sacking section the undertone was easier with B Twills encountering pressure most of the time.

The raw jute section was generally unchanged with prices maintained at around previous levels. In earlier sessions the undertone was steady consequent on some mill interest. A contributory factor had been the information that raw jute arrivals during December were lower in comparison with the previous month. Last Friday it was announced that arrivals of raw jute into Calcutta and Mill Stations during December 1957 were 7,88,000 bales comprising 6,83,000 bales of Indian origin jute and 1,05,000 bales of Pakistani. Thus, arrivals in the past six months amount to 32,68,000 bales made up of 28,56,000 bales of Indian origin jute and 414,000 bales of Pakistani. Compared with the corresponding period of last year (July-Dec. 1956) total arrivals are lower by 59,000 bales with arrivals of Indian jute showing a larger reduction of 81,000 bales. But this year arrivals from Pakistan are ahead of those for the corresponding period of last year. For, during the last six months 414,000 bales of jute have been received whereas the relevant figure for the previous year is only 390,000 bales. The increase is accounted for largely by the exceptionally large arrivals during December when 1,05,000 bales have been received as against 81,000 bales in the previous month and 69,000 bales during the corresponding month of 1956. Compared with the figures for December 1956, arrivals during December 1957 are slightly higher as the total for the former is 7,61,000 bales.

The jute goods market ruled easier in the absence of genuine business. B Twills were particularly subject to speculative manipulations. Sentiment in this section, was aided for some time by announcement of a Government of India tender for 13,000 bales. Hessian ruled comparatively steady with the opening and closing quotations for Hessian 40"x10 oz Ready placed at Rs 39.80 and Rs 39.65 respectively. In forward delivery Hessian 40"x10 oz April-June moved within a narrow margin opening at Rs 40.30 and closing at Rs 40.25. In the sacking section B Twills Ready opened steady at Rs 105.00 but closed easier at Rs 104.45, while B Twills April-June declined from Rs 106.29 to Rs 106.00.

The market opened on Friday on an easier undertone induced by selling pressure in Fatka. Buyers showed little interest in ready delivery. Hessian 40"x10 oz Ready closed 5 nP lower on balance at Rs 39.75 while B Twills ready was down by 50 nP at Rs 104.50. In forward delivery, Hessian 40"x10 oz April was also 5 nP lower at Rs 40.25 while B Twills for the same position was 60 nP lower at Rs 105.60.

The strike in Calcutta port had an adverse effect on sentiment on the market on Monday. There was selling pressure in the Fatka as shipping orders so far in the month were disappointing. Rates were, however, generally unchanged. Hessian 40"x10 oz Ready was slightly better at Rs 39.80 at the close of the day but B Twills Ready recorded a small decline of 5 nP at Rs 104.45. Elsewhere Hessian 40"x10 oz April-June was also slightly higher at Rs 40.30 as also B Twills April-June at Rs 105.75.

The news of a Government of India tender for 13,000 bales of sacking for January-February delivery imparted some steadiness to the sacking section in earlier dealings on Tuesday but with the keen interest noticeable for selling prices could not make much headway and the market closed with only fractional gains. Hessian 40"x10 oz Ready was unchanged at Rs 39.80 while the April-June position was better at Rs 40.35. In the Sacking section B Twills Ready improved to Rs 104.65 with the April-June position placed at Rs 106.00.

In the absence of foreign enquiries and in view of the continued strike in the Calcutta port, the market ruled easier on Wednesday and prices all along the line were marked down. Hessian 40"x10 oz Ready eased to Rs 39.65 with B Twills Ready done at Rs 104.45. In forward delivery, Hessian 40"x10 oz April-June lost 10 nP to be finally placed at Rs 40.25 and B

Twills April-June was unchanged at Rs 106.00.

The following table shows price trends during the week.

Hessians:	Opening	Closing
40' x 10 oz Ready	39.75	39.65
40' x 10 oz April-June	40.25	40.25
Sackings:		
B Twills Ready	104.50	104.45

The raw jute market opened the week on an easier undertone but with sellers reserved probably due to smaller arrivals of raw jute into Calcutta and mill stations during December 1957, prices were well maintained in later dealings. Small business was reported done in Assam Bottoms at Rs 26.25, Assam Tossa Bottoms at Rs 29.50 and Dalsee Mesta Bottoms at Rs 24.25 all per maund for January-February shipment. There was no change in rates on Monday and Tuesday. While prices continued to remain unchanged on Wednesday also, small mill business was reported done in Dalsee Mesta at Rs 24 and Jungli Mesta at Rs 22 both per maund basis Bottoms for January-February Shipment.

NON-FERROUS CASTINGS

BEARINGS FOR STEEL ROLLING MILLS

For all sizes of Roughing & Finishing Mills, Bearings are manufactured in our Mechanised Non-Ferrous Foundry to tested specifications.

Now is the time to trade with South East Asia

Rising standards of living open new markets for Indian goods

In South East Asia, as elsewhere, what you can sell depends on what the people need—their ability to buy. The Indian Overseas Bank with branches in several strategic centres has made a special study of this important growing market and can help you solve your trading problems.

The INDIAN OVERSEAS BANK Limited, MADRAS

Branches at: Bombay, Calcutta, Madras, New Delhi, Hyderabad and throughout South India. Overseas Branches: Rangoon, Colombo, Ipoh, Kuala Lumpur, Penang, Singapore, Malacca, Bangkok, Hong Kong.

Agents and Correspondents all over the world

M. G. MUTHIAH Chairman C. P. DORAICANNU General Manager

Trend of Production

INDIA'S Tea crop in 1957 was maintained at the record level of the preceding year despite unfavourable weather conditions in Northern India, which accounts for the bulk of production. The total Indian tea crop, last year, was placed at 666.3 million pounds as against 667 million pounds in 1956. Though the crop in North India declined from 540.1 million pounds in 1956 to 521.4 million pounds last year, production of tea in South India recorded a spectacular increase of 18 million pounds from 126.9 million pounds to 144.9 million pounds. This clearly indicates that the Indian tea industry is capable of even exceeding the Second Plan target of 700 million pounds without any expansion of the area under tea, provided climate conditions are favourable and tea prices are remunerative to producers.

In London, blenders are beginning to alter their views about the surplus of tea owing to the upheavals in Indonesia, the strikes and floods in Ceylon which are expected to reduce December output in the island and the speeding up of Indian shipments. The North Indian crop may be exhausted by June, which will leave a gap of a month or so before the new crop arrives in quantity. Blenders are not, of course, concerned about a shortage of Plain teas, which seems most unlikely. But, in certain qualities, supplies are already low. This is specially true of Assams owing to the unfavourable

weather in North India over the past nine months.

Meanwhile, following production figures are released from London:—crop in Pakistan in December 2,600,000 pounds, making a total of 45 million pounds for 1957 as against 54.6 million pounds in 1956 and Ceylon November crop 36,200,000 pounds, making a total of 83.3 million pounds as against 76.9 million pounds. Thus, the latest crop returns from North India, Pakistan, Ceylon and Indonesia reveal that output is about 1,153.3 million pounds as compared with 1,127.5 million pounds in 1956, which puts the 1957 total, so far, some 25.8 million pounds ahead of the 1956 figure.

In the Export Sale held in Calcutta this week, offerings were 58,041 packages. Although there was a good general demand, prices, in contrast to the last few weeks, developed a slightly easier tendency. Medium and Common Broken grades declined by about 2 to 4 nP per pound, while the Fannings grades were about 4 nP lower except those with clean black appearance which were firm and occasionally dearer. "Teas for price" were a little irregular.

Bright liquoring Assam BOPs were steady, while the Orange Fannings of the same sort were frequently dearer. The ordinary BOPs were 5 to 10 nP easier and sometimes more; but the Orange Fannings did not decline to the same extent and were only upto 5 nP below last rates.

CTC teas were in good demand, the best being fully firm and occasionally dearer. The lower qualities however, tended to be easier and frequently sold 10 nP below valuations. Legg-cut teas were generally 4 to 6 nP easier; but those, which had bright liquors were sold well, sometimes above valuations.

Whole Leaf grades met with a good demand and these were the strongest features of the sale. Dargeling teas were sold well, especially those which had stylish leaf

appearance of flavoury liquors. Following rates were quoted:—Clean Black Pekoe Rs 2.35 to Rs 2.40; Plain BP Rs 1.58 to Rs 1.62; Plain Fannings Rs 1.66 to Rs 1.70; Medium BP Rs 1.66 to Rs 1.70; Medium Fannings Rs 1.76 to Rs 1.80; Best Assam CTC BP Rs 2.60 to Rs 2.80 and Best Assam CTC Fannings Rs 2.50 to Rs 2.60.

In the Internal Sale, offerings amounted to 19,781 chests of Dusts. There was fair demand at generally easier rates. All orthodox descriptions were from 2 to 4nP per pound easier, while non-wither Dusts were in less demand and shared in the general decline of the market.

The better Mediums and the best liquoring CTC sorts were the strongest features of the sale and were fully firm; but the more Ordinary kinds were sometimes up to 10 nP easier. Following rates were quoted:—Medium Doars Dust Rs 1.60 to Rs 1.62; Medium Assam Grainy Dust Rs 1.62 to Rs 1.64; Medium Assam CTC Dust Rs 2.00 to Rs 2.20 and Best Assam CTC Dust Rs 2.85 to Rs 3.05.

Also, 2,603 packages of Leaf grades were offered for internal consumption. There was a fair demand; but prices were irregularly easier.

In the Export Quota section, the rate, after opening steady at 17 nP, declined steadily to 13 nP, to finish the week better at 14 nP per pound. Business was reported done at all the levels.

In the Cochin market, a little over six lakh pounds of Dusts were offered for internal consumption at the auction held towards the end of last week. The sale opened with a very strong general demand and prices were irregularly 10 to 15 nP per pound dearer for all types. Fine Dusts were the strongest feature of the sale and occasionally advanced more. High-grown Dusts were well supported at dearer rates.

The Ceylon Government will shortly launch a seven-year scheme

to rehabilitate and develop the tea industry. The scheme, estimated to cost 100 million rupees, will be financed by a four-cent cess on every pound of tea exported from Ceylon. A Bill seeking levy of the cess will be presented to Parliament before the end of the month. The proposed scheme will free small-holders from dependence on advances from shippers for production and marketing of Green Leaf teas by enabling them to set up factories for processing their leaf and to compete in the market with the finished product.

Again, the Ceylon Ministry of Trade and Commerce has decided to release mid-country teas for London auctions without any limitations for short period. This step is taken due to congestion in the Port of Colombo and the consequent cancellation of local tea auctions. This decision means the suspension of restrictions on the export of mid-country teas for London auctions. All sales of such teas for London auctions from January 15, until restrictions are re-imposed, will be outside the quota. But, the quota of 32½ million pounds weight for high-grown teas will continue unchanged.

There are some eighteen million pounds of tea awaiting auction in Colombo at the moment, which should ease the immediate situation. Shipments from Colombo have been started again although the labour troubles there are not over.

Ceylon was mainly responsible for the increase in tea imports into the USA in November 1957. Imports went up from 1.53 million pounds in November 1956 to 3.4 million pounds during the month under review.

In the Colombo market, offerings were 4,559,704 pounds. There were no Russian buyers in the market and all other centres operated cautiously. Best high-grown fell by 50 cents to Re 1 per pound, while low best were 20 cents a pound easier. Medium Broken were generally dearer; but low-grown teas declined by 5 to 8 cents a pound. Coloury medium-grown were occasionally dearer. As the sale progressed, Persian Gulf types met with an easier demand. Fannings were the best feature of the sale with all other Fannings grades dearer. Commons were comparatively steady at the close of the sale.

In Mining Lane, offerings were 51,870 packages. There was a rather quiet tone and prices showed considerable irregularity. Medium qualities were steady at last rates. Plain liquoring sorts were often easier. Plain Fannings were quoted at 3sh 7½d per pound.

Tea stocks in London, as on the 10th January, were 127.16 million pounds as against 128.24 million pounds in the previous week and 69.85 million pounds a year ago. Landed between 4th and 10th January were 9.44 million pounds, while deliveries during the same period were 11.02 million pounds.

The New Motor Rates

THE Tariff Committee of the General Insurance Council, Insurance Association of India—a statutory body constituted under the Insurance Act 1938 as amended in 1950—have announced modifications in rates for private car insurance of all descriptions and in the rates for insurance of vehicles of other types. It has been stated, on behalf of the Tariff Committee that the Miscellaneous Sectional Committees in India have carefully analysed the All India experience of the Motor Insurance business during the past years and are convinced that reduction in the liabilities to the Public Risks and "Act Only" Rates—meaning the rates for insurance of minimum liability under the Motor Vehicles Act 1939—are fully warranted. The Tariff Committee have therefore reduced the existing liability to the Public Risks and "Act Only" Rates by 20 per cent under all sections of the new Tariffs except in those cases where the current rates do not exceed Rs 15.

The Tariff Committees have, however, a different story to say with regard to comprehensive insurance, particularly of private cars. Although it has been stated, on behalf of the Committee, that suitable increases or reductions as indicated by past experience have been made for different categories of vehicles in the country, in actual practice comprehensive insurance rates for private cars in Bombay City will go up by 40 per cent over the existing rates. The rates go up by 40 per cent in Delhi and about 20 per cent on the average in Calcutta.

All the new rates are effective from 1st January 1958.

Another innovation that will take effect from 1st of January 1958 will be the alteration in the basis of rating of private cars. The present Horse Power basis of rating will be replaced by rating calculated on Cubic Capacity. According to the findings of the Tariff Committee, Cubic Capacity basis of rating is considered to be more scientific in view of the changes in engine design in recent years.

To offset the resultant increased premiums to some extent, "No Claim" Bonus rates have been liberalised so that the careful motorist gets a discount in premium from 10 per cent at present to 15 per cent in the first year, 25 per cent in the event of no claim in consecutive two years, going up to 33.1/3 per cent in the event of no claim in three consecutive years as against the current rate of 10 per cent in the first year 15 per cent in two 20

per cent in three years, 25 per cent in four years and finally to 33.1/3 per cent in five years.

The Tariff Committee have reduced by 20 per cent public liability premiums. The Committee have not overlooked the incidence of accidents for they have generally enhanced comprehensive rates. There is, in general, a co-relation between accidents and liabilities to the public, although not necessarily mathematical. In India, due to widespread ignorance of the public about rights guaranteed by law, a large number of payable claims on insurers are not pursued. This has drawn attention of the Government of India and, therefore, Regional Claims Panels have been envisaged in the amendments to the Motor Vehicles Act. When the proposed amendments came into force, the Regional Claims Panels will, in fact, be the arbiters of payable claims. A large number of claims, otherwise payable, in the experience of insurers are not pursued. Insurers themselves in one pretext or the other, taking advantage of the ignorance of the public, are able to dodge many claims, which it is believed will be payable when Regional Claims Panels come to be established. Traffic Committee in reducing liability premiums have gone by the statistics they could collate. They could not for obvious reasons probe into the large reservoir of claims with insurers, which but for the apathy and ignorance of the public, would have been largely payable and in any event would have been payable had there been Regional Claims Panels as proposed in the recent amendments. From this point of view, third party rates already reduced in 1953 do not merit a reduction at this stage. The reductions, made by the Tariff Committee on and from 1st January 1958 will thus appear premature and quite correctly should have been deferred. The build up of a premium is composed of many factors, not necessarily of experience alone for the experience itself may be unreal. Correct prognoses of the future should have entered into the calculations of the Tariff Committee. Experienced insurance men should not be guilty of amateurish handling.

The Tariff Committee again consider cubic capacity basis more scientific as against the current basis of Horse Power in view of the changes in engine design in recent years. The point at issue is the fixation of correct premium resulting from adequate compilation of statistics. The basis of charging premium is ultimately intimately associated with the administrative convenience of the insurers and the convenience of the public. The basis is only a measuring rod, there is nothing sacred or inviolate about it. Whatever may be the engine design, the ultimate issue is collection of correct premiums. This could have been easily devised on the basis of Horse Power, easily understood and to which the public has been adapted by long usage. The so called Blue Books (now white in Calcutta) do not contain the cubic capacity although Horse Power

forms an integral part. All sale and purchase are influenced by Horse Power not cubic capacity, and the design and the year of manufacture. This academic innovation, therefore, is bound to cause widespread confusion and bewilderment in the minds of the public. Very few of the motor using public are aware of intricate issues of engine design and the mechanism thereof, although all of them are familiar with Horse Power. To thrust on them, without due notice, a new so called scientific contraption with which they are completely unfamiliar, is likely to be resented. The harassed insurance office staff must, perforce, make themselves familiar with the new basis, but the time and energy which they have to devote in mastering the new conception and to explain to every motor owner the need and necessity of charging the basis cannot but be considerable; not to speak of the inadequacy, on the part of the insurance assistance or the official, of correct knowledge of the 'why and how' of the new change. In large part, they will be speaking without confidence taking refuge under dispensation from above, thus saving themselves from considerable embarrassment.

Comprehensive premium rates have gone up steeply by about 40 per cent in Bombay and Delhi and by about 20 per cent in Calcutta. The only area where the rates appear to have gone down is Madras. The names of cities are, however, misleading. What they are really meant to convey is the regions controlled by the Regional Councils located in these places. Thus, Calcutta Region comprises of West Bengal, Assam, Orissa, Bihar and some other specified areas. The Tariff Committee must have the advantage of studying statistics of these regions collated from the returns of insurers in deciding the enhancements. Since rates have been regionalised, there is no reason why they should not be more regionalised. Thus if claims ratio in Assam is lower and much higher in Calcutta city, there is no reason why Assam motorists should subsidise their Calcutta counterparts by paying premiums higher than is warranted by experience in Assam. And since such claims for regional treatment could have been devised by fixing one rate for the length and breadth of India by collating and averaging all India statistics. This would have nipped in the bud all claims for regional treatment and would have exonerated the Tariff Committee from all charges of selection and discrimination. Indeed, that would have been more appropriate to the character of the title of the boon of the Tariff Committee called "All India Motor Tariff".

From the point of view of the motorist, he can quite legitimately moan that he is being made a helpless victim to many factors, quite outside his control, which result in accidents—mainly traffic problems—not to speak of exceeding high repairing charges—again outside his control. The problem of accidents is intimately asso-

ciated with traffic conditions. A city like Calcutta has grown up enormously in recent years. Its streets and roads, which grew up without planning barring a few made by Calcutta Improvement Trust, were not designed for the heavy traffic of postwar years. Calcutta's growing political and commercial importance particularly after partition make it one of the most congested cities in the world. Its roads are thus much less than what the traffic can bear. Most of the other cities in India are substantially of the same pattern. The careless pedestrian, the overloaded lorries and vehicles, the enormous buses plying in narrow roads utterly unsuited and never designed for such traffic, rickshaws and the 'thelas' not to speak of the roaming bulls and insufficient lighting of most streets, all contribute to their quota of accidents. Many cities of India including Calcutta and notorious Howrah are thus nightmare for the motorists and it is a marvel that accidents are not many times as high as it is today. For a large part of the accidents, the State Governments and local bodies are thus directly responsible. To saddle the motor owners with levies which directly or indirectly should be shared by other bodies seem, on the whole, inequitable. The Tariff Committee quite naturally have no purview over these matters, but it seems only fair that the Committee should take up these issues with the appropriate authorities.

Nevertheless, the motorist must pay enhanced premiums if the compilation of statistics of the Tariff Committee is adequate. They should have taken, in all fairness, a larger period to base their calculations and whether they have, in fact, taken pre 1953 figures in their calculations can only be answered by the Tariff Committee. The careless motorist would do well to bear in mind the new rates of 'No Claim Bonus' which, as stated earlier, have been liberalised. The traffic jungle does pose a problem and the motorist can as well start an agitation. In actual fact, there is nothing in the world of motorists that can be called a pure accident. It arises from the fault or negligence of the one or the other. Since, therefore, the word accident can be expunged from the books of the motorists, it behoves the public and the traffic to be careful and not negligent in all matters within their control. In that state, there will be no claims to worry the insured and the insurer. That is, by and large, a vast issue and not the subject of this note. While, therefore, the motorists on and from 1st January 1958 will grudgingly pay largely enhanced premiums for comprehensive insurance, he will undoubtedly hope that the public, state governments and local bodies will cooperate with him in minimising so called accidents appropriately to be called price of fault and negligence of the one or the other. Its equitable distribution, in the present state of things, is incapable of solution with the result that it is shared by the motorist and the insurers themselves.

US Notes

FLEXIBILITY has been the key word for the United States government's monetary and credit policies throughout the post-war period. These policies have been adapted to the needs of the time, and have changed as conditions in the money markets have changed. This week has seen yet another example of this type of flexibility, generally acknowledged to have played an important role in maintaining economic growth and stability.

The US Federal Reserve Board (FRB), in effect the nation's central bank and credit manager, announced a significant reduction in stock market margin requirements—from 70 to 50 per cent. This means that a buyer of corporate stock now has to put up only half the purchase price, and can use credit to finance the \$2,000 worth of securities today has to pay out only \$1,000 in cash, compared with a required \$1,400 yesterday.

In explaining this credit easing move, FRB spokesmen point to the recent slackening of speculative credit pressures. They emphasize that the margin reduction is not an attempt to bolster stock prices. The Board, they observe, 'does not regulate the prices of securities.'

Customer credit for buying or carrying stocks, they note, has fallen to about \$3,600 million from a total of more than \$4,000 million at the end of 1955. And broker and dealer credit has declined over the same period from \$2,600 million. How far these levels are from being excessive may be seen in the fact that in 1929 brokers' loans alone hit a peak of \$8,500 million. The 70 per cent margin requirement—an increase from the earlier 60 per cent—had been in effect since April 1955. At that time, the American economy was in the early stages of a strong upsurge and the FRB was beginning to tighten anti-inflationary credit policies.

The post-war margin requirements rose to a high of 100 per cent in later 1946 and early in 1947. FRB authority to regulate stock market credit goes back to the Securities and Exchange Act 1934. This Act was passed to prevent the excessive use of speculative credit, which, it is generally conceded, helped bring on the stock market collapse of 1929. Financial circles welcome the latest FRB action, which caught them pretty much by surprise. Some conflicting views have been expressed as to the effect it may have on stock market prices, but there is a general agreement that the margin cut is entirely in keeping with credit trends.

New York Stock Exchange President Keith Funston, who had been

advocating a cut in the margin requirements for some months, is quoted as saying that the Board's action will "facilitate industry's job of raising new money." Funston and other financial leaders have consistently called attention to the need for increased investment if American industry is to keep on meeting the expanding demands of a growing population.

The cut in stock margin requirements follows other credit-easing actions by the FRB in recent months. Last November, it lowered its discount rate—the interest it charges

on loans to commercial banks—from 3.5 to 3 per cent. And lately, it has been channelling a large supply of loan funds into the money market. Some experts anticipate still another cut in the discount rate, noting that interest charges on short-term commercial loans have dipped below the present per cent of discount rate. But whatever future actions the board may take, it has by now given unmistakable evidence of its intention to ease credit policies whenever it deems such a move desirable and in keeping with national interest.

President Eisenhower's budget for fiscal year 1959, on the basis of present U.S. population estimates, comes to \$427.86 per head.

The U.S. missile programme averages a small percentage of this figure, \$30.67 for each person.

The figures are based on the official January 1 population estimate of 172,800,000. Because there will be about 1.5 million more Americans by next July 1, when the new fiscal year starts, the individual share then will be lowered slightly, if the budget stays at the figure Mr Eisenhower has proposed.

Four hundred young engineers who will man the three new State steel plants will spend six weeks at Jamshedpur before they go abroad for training.

Here at the steel city, an orientation course will acquaint them with the first essentials of steelmaking in India. And they will undoubtedly get a friendly tip or two from Tata Steel veterans.

Jamshedpur is proud to welcome these steelmakers of tomorrow.

TATA STEEL
ON TO TWO MILLION TONS

SLIGHTLY over two years ago, Mr Rajagopalachari made his now famous appeal to the United States to renounce unilaterally the use of nuclear weapons. Almost exactly two years ago, I wrote in these columns commending the idea and explaining not only the moral but practical implications behind such advice. Since then, the world has muddled along in an atmosphere dark and murky with the imminence of nuclear extinction, with no one having the courage to act on the suggestion of Mr Rajagopalachari. Indeed, in a wholly hypnotised way, Great Britain—from whom many of us have been expecting greater political maturity—has opted for the futile and empty honour of being the third and latest nuclear power. If other powers do not follow this path of sterile, self-defeating, and for their people, intolerably burdensome glory, it is largely because there is a natural limit to the taxability of people, even when they can be easily seduced by the prospect of nuclear frills. The obsessive compulsions of cold war paranoia have merely made great powers, especially the USA and the USSR, go on further multiplying, refining and perfecting the possibilities of self-annihilation. At the time I wrote about Rajaji's articles, "rocketry" and ballistic missiles were only in the experimental stage. Today, they are grim and efficient realities. And, with the launching of the Sputniks by the Soviet Union, the possibilities of war become not only intercontinental but inter-planetary.

Does this unprotesting and fatalistic acquiescence to the relentlessly self-destructive propensities of a few maniacs mean that mankind has lost its self-preservative instinct? How is it that the agonisingly urgent appeals from passionate idealists, to the political and moral good sense of the rulers of the world, do not evoke any kind of response from these self-absorbed men of power? There must be something profoundly opposed to clear thinking in the atmosphere in which those who take political decisions function. Otherwise, it is difficult to understand the sudden and breath-taking volte face of a clear and hard-headed thinker like Mr Bevan. Not that these people—who go on working on the details of a policy based on the great deterrent, mas-

sive retaliation and so forth—are morons. Indeed, if you dodge, as they do, the first few premises that ought to govern any discussion of this subject, their arguments have the same degree of mad and precise logic that obtained in Alice's Wonderland. But, since their premises are all wrong, these people are enmeshed in the toils of their subsequent fallacies, and are impatient with those who tell them that they are leading us all, unwittingly but inevitably, toward the brink of destruction.

It is, therefore, no wonder that Rajaji's recent letter to Mr Khrushchev, making an appeal similar to the one he made to Americans two years ago, should get the kind of reply it did. The full text of the correspondence, consisting of two letters from either side, has recently been published. It certainly makes depressing reading. For, even on a first reading, it is clear that the two persons are not speaking the same language. By this, I do not mean that Mr Khrushchev was writing in Russian and Rajaji in English though, of course, it is possible that the sense of urgency behind Rajaji's appeal may not have got across to a man who is not as at home in English as Rajaji (which Mr Khrushchev is not). I mean that the words do not seem to evoke the same kind of "memory pictures" or the same kind of other responses in the two. Though Mr Khrushchev professes not only to have given thought to Rajaji's letter, but also to have taken counsel with his friends and comrades, his reply contains nothing but stock responses. I will not do him the injustice of thinking that his words are merely propagandist claptrap, concealing a more sinister and cynical disregard of the values that Rajaji holds dear. To my way of thinking, it would be better if the words were consciously hypocritical and if the thoughts, however cynical, were real. That at least would imply the existence of positive evil, with which we can deal. But the tragic thing is precisely that Mr Khrushchev's thinking is as banal and as cliché-ridden as his words, and he means only too dimly what he says. There apparently is no way of weaning Mr Khrushchev from not reacting in the familiar way, the moment the word "USA" is mentioned. In one sense, of course, this is a phenomenon familiar to

those who have given some thought to the involutions of a mind sucked on Communism. The Soviet Communist, who is clear-headed on, say, the way in which a satellite is to be launched, believes without any sense of incongruity the naivest and the most palpable falsehoods about the kind of world that does not accept his ideology. In his Reith Lectures over the BBC, Mr George Kennan has explored this aspect of the matter with great astuteness, and I recommend them to the reader for further elucidation of the question. (The Reith Lectures have been published in *The Listener*, November and December 1957).

But it is only in one sense that Mr Khrushchev's reply is in the nature of a conditioned reflex. Ironically, the substance, as opposed to the manner, of his rejection of Rajaji's plea is almost identical with that of similar rejections by the West. I do not know whether a rather odd thing has struck you: The number of things on which the USSR and the USA think alike is remarkable. On all questions of security and possible threat to their respective sovereignties, the mental processes are identical, with this difference, that the names of the two countries are reversed by each in the appropriate places. Professions to the contrary, the Soviet Union believes with the same fervour as that of the US in the theory of the great deterrent and its concomitants (including the errors in thinking it involves). Of course, in the matter of diplomatic, political and propagandist initiative and in the striking of appropriate postures, the Soviet Union is far and away the more successful. (But this last is perhaps the accident of the personalities involved. For, Mr Dulles would succeed in putting his foot in his mouth, however far from each other removed these two parts of his body are kept). But, in the need for achieving first equality with, then the edge over, the other fellow in number, variety and deadliness of ultimate weapons, the two nations think alike. It is no use telling the Soviet Union, as it is not any use telling the USA, that the saturation point in nuclear supremacy has been reached long ago, and that further doses of strength on either side are literally unusable. The destruction that one side with

a lesser strength can inflict will be as near as makes no difference as the destruction that the other side with the greater strength inflicts. It is no use telling them that they are putting their people to intolerable strain—and, in the case of the Soviet Union, needless deprivation of the essential needs of its people—because of their obsession with armaments which are of absolutely no use. It is apparently no use telling the Soviet Union that you would be able to make your people accept Communism with greater spontaneity if you divert the funds expended on armaments for other productive purposes. It is no use telling the Soviets that the intolerable spiritual strain of the deprivation of individual liberty and the free ways of life can be lightened, if only the bogey of fear of the insatiable enemies of the Soviet Union is lifted. By the same token, it is no use telling the US that the grass roots of the idealism of its founders are being steadily corroded by the concomitants of a nuclear age. It is no use telling the Americans that the quintessence of unAmericanism, namely, McCarthyism, was the illegitimate child of fear and blackmail. The midwife who assisted at its lying-in was none other than the mystery surrounding these death-dealing experiments. It is no use telling either the Soviet Union or the USA that there are large areas of the world, hungry for capital for development which could readily be spared them, if only they would desist from what is essentially and demonstrably a senseless activity even from the limited viewpoint of strategy.

It is this identity in error that makes the whole business an absurdity of the surrealistic kind. No wonder Rajaji gets the same kind of reply from both. If all this is so obvious, why did Rajaji bother to write this letter? Was he being naive in thinking that he could make Mr Khrushchev do what others, including Bertrand Russell, have not succeeded in persuading him to do? Or was he merely calling a bluff, by proving that the Russians, for all their fine words, are just as bad as the others? Or was he reacting, rather belatedly, to the taunt that it was only the West which Rajaji can lecture, since the other fellow will just laugh him away? (At least, in the

DEVELOPMENTS in regard to the reopening of the Sholapur mills by Government are, to say the least, intriguing. The latest information reaching here is that Government are likely to obtain high court permission to "take over" the mills in the sense that they would be allowed to run it by payment of a nominal rent for a prescribed period.

There are some Gateway citizens who wonder whether this will not constitute "backdoor" nationalisation since if the experimental efforts prove successful, there appears to be a Government intention to continue as a manufacturer.

However, it is hardly likely that Government will secure "nominal rent" facilities for a longer period. The present scheme, it needs to be remarked, is in the nature of emergent help to the nearly 5,000 strong labour force which is now idle. The terms and conditions for labour reflect the make-shift and stop-gap character of the step now proposed to be taken.

For, the wages payable to labour will be two-thirds of normal wages; and, if the worker so desires, the remaining third will be met from provident fund accumulations in his credit.

PST 182

Make-shift Help

A rider to the scheme is that, if the mills work at a profit, the surplus will be distributable among the workers. If the current predicament of the textile industry is taken into account, it seems scarcely likely that any surplus will be earned. We may add that the continuance of Government in management of Sholapur mills is partly contingent upon such profits being earned.

Two further points may be mentioned. Firstly, we suppose that this represents a perfect example of workers' participation in management, even going so far as to reserve for them the profits (if any) from the enterprise. Secondly, however, importance is being attached in Gateway circles to the fact that the experiment could, in a manner of speaking, hardly have been conducted in an industry with more straitened prospects than the cotton textile industry; and so, the apparent conclusion is that the scheme will not long endure.

Secondary Education

The low standards of education at all levels in the country is no new complaint and dissatisfaction with it had been expressed at frequent intervals of time by eminent educationists of the country. But much confused thinking had gone into the analysis of the causes that have led to such deterioration. In this connection a plea has often been made in certain quarters to reduce the number of subjects which the students have at present to study. But the achievements of Soviet Russia where a ten-year course of universal education which included many as 12 subjects including literature, science, physics, polytechnics and draftsmanship, would not lend plausibility to the view that Indian students lagged behind because they had to study too many subjects.

Addressing the 13th session of the Bombay State Head-masters' conference in Poona Mr C. D. Deshmukh, Chairman of the University Grants Commission urged the members to give serious attention to the question of improving the standards of education in secondary schools, and expressed the opinion that it should be possible for secondary schools in India to devise a broadbased educational pattern so that the educational system could produce fully educated and active youths.

Mr Deshmukh also expressed doubts on the wisdom of the Bombay Government's policy of teaching English in the secondary stage for only four years instead of six years as in other States. This would only have the effect of placing the students of the State at a disadvantage as compared to students from other States, and

already complaints about such disadvantages suffered by the students of the State had been made. Mr Deshmukh therefore urged the State Government to give up their exceptionable stand on the pattern of teaching English, in the secondary stage.

Mr Deshmukh visualised a stage when students of secondary schools would have to be split into two categories—those aspiring for higher education and those who would seek employment. This would necessarily involve the re-organisation of education on the basis of utility and academic content.

Mr L. N. Chhapekar who presided, strongly urged the need for reorganising the whole pattern of educational system. He suggested a course of language study which involves the compulsory study of the mother tongue or the regional language at the secondary school stage, compulsory study of a foreign language from the fifth standard and compulsory study of Hindi for at least four or five years.

Rural Development

Speaking on the problems of developed and underdeveloped countries in Bombay, Professor Alvin Hansen, noted American Economist warned of the dangers inherent in any kind of economic planning which does not take into account the sociological problems that crop up in the process of economic change. In this connection he expressed the view that the emphasis given to industrialisation in the Second Plan at the expense of rural development which had been treated with relative neglect was a wrong approach which would not help solve the social problems created by the peculiar economic conditions of underdeveloped countries, like India. The problem before such countries was one of removing the disparity between the vast undeveloped rural sector and the developing but limited urbanised industrial sector. In his view neglect of rural development might spell a serious setback to the country's overall development.

In the advanced countries such as America, the problem according to Professor Hansen was one of keeping a balance between expenditure in various directions so that it might conduce to a healthy social life. In America for instance the expenditure on automobiles was twice that on schools. The radio and television had polluted public taste and was a corroding influence on home, religion and education. In such conditions of materialistic attitude towards life, other vital aspects of human culture such as mental and spiritual development had received scant attention. Mr Hansen was highly

Indian Finance

sceptical about the educational prospects in the United States where economic development was based on the multiplication of mechanical gadgets.

Referring to underdeveloped countries Prof Hansen said that these countries suffered from vast populations, lack of resources, poor technical know-how and a large unemployed rural sector. The social problem in these countries is one of educating the illiterate masses a majority of whom were uneducated even in regard to their own problems. He stressed the need for removing the disparity between the rich and poor countries, which stood in the way of a harmonious sociological growth of both the categories of nations.

Prof Hansen also stressed the indispensability of steps towards some kind of welfare state since according to him accumulation of wealth through "brute capitalism" was impossible, under conditions of the present century.

Principal T. M. Advani, Vice-Chancellor of Bombay University who presided, regretted that the services of economists and engineers were not being properly utilised in the country, and said that unless this was done the progress of the Second Plan would be seriously hampered.

SOUTH EASTERN RAILWAY

TENDER NO.
GTIC/FD/32-US/968/F1 OF 57.

Tenders are invited for supply of Foot over bridges Broad Gauge complete with fittings.

(a) For three B. G. Tracks—
4 Sets as per I.R.S. Drg: No. BA—1668 Alt. 1. 2 Sets as per I.R.S. Drg: No. BA—1668 Alt. 1 modified to CE, S. E. Rly: GRC's Drg: No. 16898. 1 Set as per I.R.S. Drg: No. BA—1668 Alt. 1 modified to CE/GRC's Drg: No. 16897.

(b) For two B.G. Tracks—
1 Set as per I.R.S. Drg: No. BA—1661 Alt. 2. 1 Set as per I.R.S. Drg: No. BA—1661 Alt. 2 modified to CE/GRC's Drg: No. 16898.

Tender Forms (not transferable) are obtainable from the Controller of Stores Office (P.D. Sec) at Rs. 5/- (not refundable). Firms not on the Railways approved list of contractors must obtain a Cash Receipt for earnest money of Rs. 1,800/- from the Railway's Chief Cashier and enclose a valid Income Tax clearance Certificate without which the tender is liable to be rejected. Tender will be accepted upto 12 noon on 11.2.1958.

GENERAL MANAGER

S116

January 25, 1958

THE International Cotton Advisory Council, in its latest monthly bulletin, has estimated this season's total world production of Cotton at slightly under 39 million bales as compared with 41 million bales in 1956-57. World consumption is presently expected to be roughly equal to last season's 42 million bales. The aggregate free world production outside the United States is estimated at 16.3 million bales in 1957-58 as against 15.9 million bales in the previous season. The Council predicts a "further marked contraction" in the carry-over of cotton in the USA this season, and stocks will fall to about 85 million bales.

The Council states that the production of cotton in the People's Republic of China, during the last few years, has been much larger than what it had been previously. The production in China for 1956-57 is estimated at about 6 million bales. It adds that the gap between production and consumption of cotton in the Communist world might go up in 1957-58 and amount to about one million bales, which will probably cause the Communist countries to increase their imports of cotton from the West.

Meanwhile, the Government of India seem to be confident that no problem of insufficiency of foreign cotton is likely to arise during the current cotton season. They have assured that adequate supplies of foreign cotton will be made available to the textile industry within the allowable limits of foreign exchange. Normal mill consumption of foreign cotton has been officially estimated around 600,000 bales annually. At the end of the last season, there was a carry-over of 264,000 bales of foreign cotton and, taking into account the cotton which will arrive against licences issued in the previous season, the available supply is placed around 349,000 bales. Hence, the Government will have to import about 251,000 bales of foreign cotton for the current season.

Trade circles are looking forward for an announcement of an import quota of about 70,000 bales of East African cotton. There has been a good demand for this type of cotton in view of its relative cheapness as compared to American cotton. It remains to be seen as to how the allocation of the quotas will be made.

Several leading cotton textile mills have been dissatisfied over the contemplated change in the allocation of Sudanese cotton for which the import quota was recently raised by 10,000 bales to 40,000 bales. According to the original arrangement, these quotas were to be determined on the basis of consumption; but the proposal seems to have been changed. Certain leading mills, which have got

a record of consumption, have now been told that they cannot get the quota on this standard as they have got fair stocks. To this, the mills are understood to have protested. Their plea is, that they should be allowed to arrange their purchases in view of the fall in values in terms of their consumption and that it will be unfair to pass on the benefit of lower prices to those mills, who had desisted from making purchases earlier on account of their financial or other circumstances.

The quantity of cotton licensed for import, during the first four months of the current season, has amounted to 85,549 bales, while actual arrivals, including cotton licensed in the previous season, have amounted to 1.09 lakh bales. Egypt has been a supplier to the extent of 31,997 bales, while the USA comes next with 30,213 bales and East Africa third with 24,793 bales.

Trade circles entertain hopes that the Government of India will permit a further export quota of 50,000 bales of Bengal Deshi cotton. These hopes are based on the assumption that the total available supply of this type of cotton will be of the order of 382,000 bales as against an estimated consumption of 250,00 bales, leaving an export surplus of 132,000 bales. The Government have already allowed exports of 50,000 bales and, during the first four months of the current season, India exported about 18,301 bales against 57,771 bales during the corresponding period last season. Currently, there seems to be keen enquiry for Bengal Deshi from the USA, Japan and France.

The peculiar feature of this season has been the early arrivals of the new crop in many cotton tracts and a burdening sense of accumulation is likely to be felt temporarily with the accelerated arrivals of Vijay, Surti and other Gujerat and Saurashtra crops, although the overall statistical position remains unaltered. It is the increase in the pace of arrivals that are now acting as a check on the bullish fervour of the market.

STATISTICS:

Exports by rail from 1st September 1957 to 16th January 1958 were 99,875 bales. Estimated mill consumption in Bombay, during the same period, were 500,377 bales as against 487,972 bales in the corresponding period of the previous season. Estimated stock of raw cotton, held by exporters, dealers and mills, in Bombay on the 16th January 1958 were 455,696 bales as against 447,487 bales on the corresponding date of last year.

COTTON FUTURES:

Early in the week, cotton futures advanced in rates under heavy

Prospects

bear-covering and sellers' reserve. Sentiment was aided by higher spot and upcountry advices. However, there was a slightly reactionary tendency towards the close as buyers turned rather cautious. ICC Moglai Jharilla March opened at Rs 691.50 and, after touching a high of Rs 697, receded to Rs 691 at the close. Turnover was 15,000 bales.

SPOT MARKET:

The Spot section ruled steady with prices of Vijay spurting following trade ideas of restricted supply in this quality. Good business was also reported done in Berar, Khandesh and Madhya Bharat Jharilla varieties.

In the Export section, enquiry for superfine Bengal Deshi was reported from Japan and the United States.

In the foreign section, Ahmedabad mills bought sizable quantities of American cotton, while the local and southern mills bought East Africans.

NEW YORK COTTON MARKET:

Although prices on the New York Cotton futures market were generally marked down early in the week, a mild rally developed towards the close under the leadership of nearby deliveries where improved trade demands and short-covering was attracted by the recent declines. Some support in the new crop months was prompted by the opposition of some leading agricultural spokesmen of Congress to the administration's farm proposals. Many traders were, however, inclined to await further Washington developments. Middling Spot was quoted at 36.35 cents per pound.

LIVERPOOL COTTON MARKET:

Values on the Liverpool cotton futures market tended to ease further under continued hedge pressure. Sellers, however, were not

pressing and a steadier tone developed later with some trade and local support.

Trading in Sudan contract remained inactive. Little attempt was made to open fresh accounts and, with reports of disappointing outturns from recent shipments, buyers were disposed to stand aside. The market closed quiet.

CLOTH AND PIECEGOODS:

The Bombay Piecegoods market continued to rule better with prices showing a further improvement over last levels. There was good demand for super-fine varieties. Among medium varieties, there was better demand for grey and bleached dhoties and sarees and prices for these showed a marked improvement.

On the whole, there are clear indications that the market has turned the corner. In Bombay alone, business for about a lakh of bales is reported to have been concluded and about 40,000 bales are expected to be sold during this week. Advices from Ahmedabad are also encouraging.

Dealers are hopeful that the Sales Tax on old stocks will be compounded in other States also as has been done in Bombay. Moreover, stocks in upcountry centres are not adequate. With the result, the demand from the consuming areas is expected to be better for some more weeks to come. Although the demand is still selective, the improvement in the off-take has provided a measure of relief to the industry.

On the export front, too, slightly better conditions were witnessed. Satisfactory business is reported to have been concluded with Sudan, while moderate business has been booked with Ethiopia. The anticipated bulk business with Burma has not yet materialised. There have been enquiries from Persian Gulf Ports. Shippers are still hopeful that exports to Burma will improve in the near future.

General Manager.

AFTER a lapse of several months, the demand for Cotton Yarn has broadened in the principal markets of the country, thanks to the offtake by weavers and stockists. Consequently, prices, which were subdued for a long time, have tended to harden. The rise in prices is more pronounced in respect of 26s and the increase has ranged between As 4 and Re 1 per bundle of 10 lbs. Trade circles have the feeling that the market will continue to be active in the following weeks as the demand for cotton piecegoods has tended to broaden in the past few days.

Meanwhile, the Government of India have announced that they will continue to grant quotas for cotton yarn for export during the January-June 1958 period. Export licences will be issued against the allotment

memos issued to mills. The mills may either directly effect exports against their quota or through nominated exports. Applications against the allotment of each mills should be made separately.

Both Rayon yarn and Staple-Fibre yarns have touched new high levels on fresh speculative support. The rayon mill industry has made rapid progress in regaining export markets and shipments are reported to have gone up by Rs 20 lakhs to Rs 1 crore in 1957, thanks to the improvement in quality, introduction of new attractive designs at competitive prices and efforts at standardisation.

Staple-Fibre yarns met with excellent support on reports that prices of indigenous fibre were raised by As 2 per pound. Buyers were mainly from Surat and Banaras.

Yarn Markets Active

The scarcity of Art Silk yarns has become more acute and prices have shot up further in Bombay and Calcutta.

★ Oils and Oilseeds

The markets for Oils and Oilseeds, after ruling firm early in the week, turned a shade quieter towards the close on lack of overseas demand. A section of the trade started quoting lower rates to overseas buyers for castor oil and business to the extent of 300 tons was reported to have been put through with the UK. However, higher levels could not be retained till the close due to profit-taking. Castor May delivery opened at Rs 136.25 and, after touching a high of Rs 138.50, finished the week at Rs 136.75.

Prices in the Groundnut section yielded, ground on lower spot advices. February delivery opened at Rs 157.25 and, after touching a high of Rs 159, finished at Rs 157.00.

Conditions in the Linseed section were rather dull. May delivery, after opening at Rs 30.50 and touching a high of Rs 30.56, closed at the lower level of Rs 30.12.

In the Cottonseeds section, February began at Rs 99 and concluded at the same level after touching a high of Rs 100.

★ Gold & Silver

Prices on the Bombay Bullion Exchange, after touching fresh higher levels, developed a slightly reactionary tendency towards the close on profit-taking.

Paucity of Kolar gold supply and improved spot demand mainly stimulated the sentiment in the Gold section. Arrivals and offtake were balanced at 2,000 tolas. Gold Maha delivery changed hands at Rs 110.31 to Rs 110.87 and Fagan delivery at Rs 110.31 to Rs 110.89. Sovereign remained very steady at Rs 70.25. Spot gold was done at Rs 110.50 to Rs 111.06.

It appears that the bull group has been gradually switching over from silver to gold in the past few days in view of regular arrivals of silver coins from Tibet. As a result, gold prices have gone up in Calcutta and other upcountry centres. All releases by indigenous producers have, therefore, been easily absorbed and an atmosphere of shortage has been created. Sustained demand, paucity of stocks and reports regarding increasing vigilance on the part of customs authorities to check smuggling have aided bull operators, who have been absorbing a large volume of arrivals from upcountry centres.

Although prices in the Silver section advanced on encouraging offtake, they failed to retain their highest levels till the close. Arrivals and offtake were estimated at 10 and 17 bars respectively. Maha delivery changed hands at Rs 188.19 to Rs 189.12 and Fagan delivery at Rs 188.81 to Rs 189.69. Spot was done at Rs 187.50 to Rs 188.50.

Although the bull group has succeeded in cornering a large part of silver stocks, some of them have started liquidating on account of financial difficulties. Upcountry markets are still below Bombay parity by a rupee.

★ Non-Ferrous Metals

The Non-Ferrous Metal market ruled generally quiet. Copper Ready was quoted steady at Rs 172 per cwt. A good quantity of metal, both electrolytic and blister, is expected to arrive by January shipment; and the supply position is likely to ease somewhat. Zinc, after touching a new low level of Rs 51.50, finished better at Rs 52.50 per cwt. The stock position is reported to be satisfactory. Lead also showed a declining tendency with the rate hovering idly around Rs 66 per cwt. With firm advices from Singapore, Tin remained firm at Rs 127 per quarter.

On the London Metal Exchange, Copper was quoted lower at £169½ per ton. There was a feeling that even the expected 10 per cent cut in Chilean production would not balance the statistical position, but would only reduce the surplus. Zinc, however, ruled steady at £61 per ton, thanks to some improvement in the basic position of this metal. The market for Lead remained dull at £71 5/8 per ton. Market circles seemed to be awaiting the American tariff situation to be clarified. Tin was unchanged at £730 per ton and the demand was reported to be rather slack.

TITAGHUR PAPER

The Titaghur Paper Mills Company Limited, Calcutta-1

The American Loan

LAST week's announcement of the details of the final shape of the US assistance to India is the first fruit of a series of patient endeavours of a countless number of people who have tirelessly worked for Indo-American understanding. More particularly, it constitutes the first concrete result of those who have tried to indicate to the US the importance of the success of Indian planning as a test case of democracy in action and the importance of US assistance in the success of such planning. The most persevering of such interpreters, let it be said with gratitude and admiration, have been American themselves, more particularly, the successive US ambassadors to India. The total US aid from 1950 to June 1957 has amounted to 965 million dollars. This truly magnificent record gives a measure of the US interest in Indian development. Not a little of the assistance in such generous measure has been the direct result of the labours of the representatives of the US administration in India. Mr Chester Bowles has evolved in successive books the outline of a policy that should govern US relationship with India in the context of our new status as a most important world power. And the relationship he outlined involves a direct stake in the complete success of the Indian effort of self-amelioration by planned development. It was he who started the series of particular agreements of assistance to India for specific projects. His successors have continued the good work. Mr John Sherman Cooper, the first representative of a Republican President, has shown remarkable ingenuity and idealism in devising modes of assistance which will be of help to India and the US at the same time. The agreement of commodity exchange under Public Law 480 by which the US will let us have its surplus grain is an ingenious device to help the two countries at two of the most vulnerable points of their respective economies. The spectre of famine and possible shortage of grains has been a nightmare of Indian planning. The consequential inflationary pressures have more recently taken on the proportions of an obsession. Thirdly, the cost of imports of foodgrains is depressing both because of its involving diversion of funds from tasks of a more permanent kind and because of its draught on scarce foreign exchange resources. On the other hand, excessive agricultural production and consequent embarrassments of plenty that bedevil American agriculture have been a chronic political migraine for American political parties. To the Republicans especially, a device that will win them the farm vote will be particularly welcome. In such a circumstance, the devising of an

agreement that will be mutually advantageous and will solve their respective problems is something of an answer to a prayer. That is precisely what the agreement under Public Law 480 has done. India is relieved greatly from its fear of famine and inflation since it has a buffer stock of grain which it can deploy at times of stress. Since it does not have to pay for it immediately, it relieves the pressure on resources. And most important of all, the repayment is to be in rupees, which means that our scarce foreign exchange resources, especially of dollars, are conserved. Finally, the rupee counterpart of this assistance is to be spent in India by the US in a large measure. The devising of a mode of help that will serve such a multiplicity of purposes is an act of ingenuity which it is hard to overpraise. And it is to Mr Cooper's wily idealism we owe this agreement.

Continuing the good work of his predecessor, Mr Ellsworth Bunker, the present Ambassador, has been most active in making possible the present series of loan programmes. I shall have to say more about the details of the latest instalment of American aid, but let me first indicate the somewhat unsympathetic political climate in which these phenomenal results have been achieved. Indo-American political relations have all along been a victim of the exigencies of the cold war and significant differences in emphasis on particular aspects of the present world situation. There is no use denying the fact that, on the current problems that confront the world today, we have a basic difference in approach.

The next person to be congratulated on last week's announcement is Mr T. T. Krishnamachari. There can hardly be any doubt that, but for his visit to the US last autumn and his indefatigable exposition of the Indian situation, the assistance we have now been vouchsafed would not have been forthcoming. Wherever he went, he has had to encounter a lot of misunderstanding about India's economy and its creditworthiness, and it was his persuasive presentation of the Indian case to the American authorities that has made possible this expeditious help. And, in this task, the quiet but never failing assistance of Mr G. L. Mehta, our Ambassador at Washington, has been of crucial importance.

The actual details of the proposed assistance must be familiar to readers from the daily press. The most important to note about the matter is that it takes the form of a loan, and no grant. This is a most welcome feature, since what we need from abroad is no charity but loans which we have always had a record of honouring on the dot. The US is, therefore,

taking a good investment risk in putting at the disposal of India some of its funds. Secondly, the interesting point about this present programme is that a major portion of it, about 70 per cent, comes from the Export-Import Bank, which has so far been normally doing business only with private parties. This is a significant shift in the emphasis in the US programme of assistance of particular value to underdeveloped countries. As Mr Gunnar Myrdal and other experts on the development of underdeveloped economies have often pointed out, the basic tasks of development in the underdeveloped regions have to be undertaken only by government agencies. Therefore, a prejudice against assisting governments born of one's own economic climate—the extreme form of which we saw in the announcement some time ago by the Economic Cooperation Administration of the US to the effect that it will concern itself only with the private sector—is to defeat the very economic philosophy behind assistance to underdeveloped countries. The present loan by Export-Import Bank is the first heartening indication of the definite giving up on the part of the US of this particular economic superstition.

The second feature of the loan proposal is that the total of expected assistance has been announced in advance and the projects that are to be the beneficiaries are to be discussed after the announcement of the loan amount. From the point of view of the recipient, this has obvious advantages over the other method usually followed by the World Bank, whose detailed scrutiny of particular projects before it lends you the money may be psychologically somewhat irksome. Even in practical terms, a system that gives us the room to work out our own order of priorities and affords opportunity and room for manoeuvre is preferable.

The third important aspect of the present loan programme is that it is by no means the whole of the possible US assistance available for the Plan period. The amount of 225 million dollars has come from the Export Import Bank and the President's Development Loan Fund—these two being most immediate and expeditious sources from which the US can give us funds we need immediately. These loans are expected to be utilised in the next fifteen months, which means that this is by way of helping us meet the immediate foreign exchange crisis, which is expected to be at its worst during the next fifteen months. Moreover, any other form of assistance from government sources would have involved Congressional intervention, which would have meant delay and other possible obstacles. A moment in which you ask for approval of a record defence budget from a Congress that is panicky about the

Russian military and technological superiority is not exactly propitious for asking for sizable diversion of tax payer's funds elsewhere. (This is also the Congressional election year). A year from now, the elections will be over and a new balance of power would have been achieved. And let us hope, a more sensible attitude toward the intolerable burden of heavy armaments expenditure will emerge, the consequence of which may well be to make the Congress more amenable to releasing funds to underdeveloped countries. The compulsive logic of the need for negotiation with Russia and the evolving of a *modus vivendi* brings the prospect of such a hope within the realm of practicability. Therefore, there is really no need to imagine that the US assistance for the Plan period is over.

This hope makes the prospects of the Plan, about which we have been having such gloomy prognostications in the recent past, very bright. In the last few months, undaunted by gloomy cassandras of doom, Government have steadily worked out methods of meeting the difficulties arising out of the present foreign exchange difficulties. The various steps taken add up to a considerable achievement. The deferred payments arrangements for the West German and Russian steel plants, the prospects of a yen credit from Japan, the conclusion of agreement with British oil interests for new investment the foreign exchange counterpart of which will be taken care of by the oil interests concerned, and, finally, the present US loan, all these have made comfortable a situation which was considered desperate a few months ago. Moreover, Mr Bunker has also stated that, in view of the present food shortage in the country, there will be negotiations between the US and India to replace cotton by wheat in the Public Law 480 agreement. Moreover, further agreements under Public Law 480 are also likely with the US, while similar agreements are in prospect with Canada. These, besides saving foreign exchange on food imports, make our domestic situation easier. Another interesting point is that such food imports are to be set off by export by us of manganese and other ores. In this context, the possibility of stepping up export of iron ore should also be considered so that export promotion is effectively dovetailed into programmes of foreign assistance.

On the whole, the announcement of the US programme of loans has not only made a difference to the practical tasks before us, it has been of immense psychological value. The time has now come to give up defeatism about the Plan. The tasks before us are certainly exacting. But they are not of a sort that are beyond us, if we bring to bear the necessary resources in courage and ingenuity.

India's engineering industries are one of the major hopes for both domestic consumption and export trade. The nourishment of these industries, is therefore, among the first calls on the nation. Just now along with others, the engineering industries have not escaped completely the problems resulting from the difficult foreign exchange position. There is a shortage of pig iron, steel and even essential capital goods. The scheme of deferred payment was considerably tightened last year.

In his welcome address at the conference of Engineering Industries and trade held at Calcutta on 21st and 22nd January, Mr B. M. Chinal, President of the Federation of Indian Chambers of Commerce & Industry, referred to some of

A Hopeful Note

these problems. He is, however, hopeful that inspite of these problems which may linger on for little time more, the engineering industries will rise up to expectations and make a suitable contribution to total industrial production and export trade. Lately, a number of expert committees have investigated the special problems of different sectors of the engineering industry and we have now a more precise understanding of capacities, requirements and prospects.

Progress of production in recent years has been quite satisfactory. Production of industrial machinery alone rose to Rs 35 crores in value in 1957 from less than Rs 10 crores in 1951. In 1947, India produced nearly nothing by way of industrial machinery. By the end of the Second Plan, the production is expected to go beyond Rs 100 crores in value, though even on that figure it will be no more than one-third of the total estimated national requirements.

At present, engineering goods earn Rs 4 crores a year through exports and are confined to a few items like iron and steel trunks, G. I. buckets, electric fans, sewing machines and parts, pipes and fittings. Recent investigations conducted by three delegations and the number of market surveys have indicated a scope by no means small. As production expands, export trade in these goods may also be expected to go up accordingly.

Mr Chinal complains of pilfering of personnel between one sector and another. This problem, of which we have been hearing for sometime, is likely to persist so long as there is a heavy shortage of technically trained personnel suitable for the varied requirements of engineering industries. If even now, when the national demand is not more than 72,000 engineers there is a severe shortage, any substantial relief seems impossible, when the demand at the Second Plan is estimated to be three to four times the present figure.

Low Cost Roads

Of late there has been increasing realisation on the part of the Government authorities about the necessity to increase the tempo of road development. The pace of economic development is itself vitally linked with progress in the construction of roads in the country. But in a country of India's dimensions quick results are possible only on the basis of a scheme of low-cost construction. A seminar was organised under the auspices of the ECAFE at the invitation of the Government of India to make some practical suggestions on the subject of road development.

The seminar has recommended the establishment of a separate Road Fund out of the revenues derived directly from tax on petrol, diesel and other fuel oils, lubricants tax on motor vehicle registration,

licence fees, tolls on roads and bridges etc, and other taxes such as surcharge on transport fares and freights. The other sources suggested are a certain percentage of the total income derived from the import duty on petrol, diesel oil and spare parts as well as sales-tax on all these items. These various sources are expected to meet the requirements of road development in the country adequately. That allotment of funds for road works should be non-lapsable is considered important and a recommendation has been made to this effect.

The seminar laid down some standards for the construction of low-cost roads such as land width required, gradients etc. It has also made some suggestions on the technique of design and construction calculated to withstand the disintegrating effects of traffic. The construction of roads on the lines made by the seminar is held to reduce the cost of construction. The preparation of cheap type designs for the construction of culverts and bridges on roads taking into account the conditions peculiar to the region, is another important contribution the seminar has made to the problem of low-cost roads. Besides such practical suggestions, it has also stimulated new interest on the question of road development.

The ECAFE Secretariat is expected to help in arranging for the training of engineers in the technique of low-cost road construction. Possibilities of procuring scholarships for trainees under various aid programmes such as the Colombo Plan, the UN Technical Aid Administration and the International Cooperation Administration are also being explored.

Small Scale Industries

The urgent need for increasing employment opportunities is one of the cardinal issues in our development plans. This has necessitated the placing of equal emphasis on the building of large scale industries and on the development of small scale enterprises. Such simultaneous endeavour in seemingly opposite directions alone can ensure the solution to the twin problem of rapid industrial development and widespread unemployment.

The concentration of national effort on the establishment of large scale industries in an under developed country with a large population will no doubt, yield rich dividends but it cannot bring gainful employment for all the people. Moreover in the present state of our economy it is not practicable to set up the requisite number of large scale industrial units which can utilise all the available manpower. The answer, therefore, is to be sought in small scale industries which by virtue of their considerably low outlay and flexibility as to location, have immense potentialities for affording employment.

Indian Finance

In this regard the experience of countries like Japan affords us a valuable guide. In Japan, for instance, paper production is of the order of 228 million tons per annum and most of this comes from small units operated by small groups of workers. But it is essential that there is an integration of the large and small scale industries. That there is vast scope in our country for the side by side development of both the sections, there is no doubt; but mutual confidence is yet to be established.

The development of small scale industries is rightly receiving sustained attention of Government. Sizeable amounts are being set apart in the budget year after year for the specific purpose of giving aid to the small units. In his address to the tenth meeting of the Small Scale Industries Board in Calcutta early this week Mr Manubhai Shah, Union Minister for Industry, disclosed that the assistance in the last two years had been higher than the plan allocation.

The terms and conditions of the loans to small entrepreneurs have been considerably liberalised. For, small industrialists can now get a loan of upto Rs 1000 on a personal bond and upto Rs 5000 against one or two sureties. The rates of interest are low and the loan can be repaid in easy instalments spread over ten years.

Government's programme for setting up a large number of industrial estates both in the urban and rural areas is making good progress. There are now about 51 estates in working or under construction. The programme under the Second Five Year Plan envisages the setting up of another 150 industrial estates.

The programme can achieve the desired result only when the facilities offered are easily available to operators of small scale units. It is gratifying to note, therefore, that this aspect has been fully recognised by Authority for Mr Shah has pointed out that the assistance to be effective, same amount of risk is necessary.

January 25, 1958

FOLLOWING disquieting reports about the sugarcane crop, ready Gur prices have tended to rise during the past few days. The firmness in prices has been aided by keen buying interest evinced by the consuming centres. Arrivals in the main producing centres in Northern India—Muzaffarnagar, Meerut and Hapur—have been, from the beginning of the season, small when compared to previous years. Trade circles feel that the production of gur, during the current season may not touch the previous season's level. Consequently, ready gur prices have risen to Rs 11.56 per maund in Uttar Pradesh and to Rs 11.75 in the Punjab.

Daily arrivals of gur, last year, at Muzaffarnagar, were placed at around 30,000 maunds as against the current level of 13,000 maunds. Daily arrivals at Meerut and Sonapat amount to 8,000 maunds against 14,000 maunds last year. At Hapur, arrivals average three to four thousand maunds daily as against seven to eight thousand maunds last year. Total arrivals, from the beginning of the season, were put at 270,000 maunds, the corresponding figure for last year being 300,000 maunds.

Sugar

Quiet conditions have continued to prevail in the Sugar markets at all centres, as demand from consumers has been slack. Following mill-delivery rates (per maund) are quoted in the Hapur market: Meerut (D-28) Rs 35.31; Amroha (D-29) Rs 34.25; Simbhauli (E-29) Rs 34.87; Mansoorpur (E-29) Rs 37.35; Shamli (B-29) Rs 37.44 and Bijore (E-29) Rs 34.50.

According to the Indian Sugar Mills Association, production, during December 1957, was 357,000 tons, bringing the total production, upto 31st December 1957, to 493,000 tons as against 336,000 tons in the corresponding period of the previous season. Offtake from factories (including despatches for exports), during December, was 141,000 tons as against 166,000 tons. This brings the total despatches from factories, upto 31st December 1957, to 295,000 tons as against 318,000 tons in the corresponding period of last year. Closing stock, as on the 31st December, was 627,000 tons as against 660,000 tons on the corresponding date of last season.

Meanwhile, the outlook for sugar exports does not appear to be too encouraging for this year. Although the Government decision to abolish Sales Tax by raising the excise duty on the commodity has enabled the industry to offer lower prices to overseas buyers, exports are considered difficult since Indian rates are still about £12 per ton above the world parity.

Rise in Gur Prices

The industry appears to be keen on exports. With a carry-over of about 4.5 lakh tons for the current season and an expected production of upto 20 lakh tons, sugar mills fear that they will be compelled to reduce internal prices in the coming months. Exports of up to 2 lakh tons will help in stabilising domestic prices. A section of the trade, therefore, suggests that exports should be made by the industry even at a loss.

Foodgrains

The Foodgrains market continues to rule quiet. In order to supplement their stocks which are fast depleting, the Government of India are arranging more of imports; and a total of 4 lakh tons is to be shipped from Canada during this winter and early spring.

At Hapur, Wheat prices are mostly unchanged, average quality being quoted at Rs 15.50 per maund and the farm variety at Rs 17. The market for Rice also rules quiet. Gram prices have registered a slight fall, while Maize and Bajra remain almost unchanged. Prices of Peas have, however, registered some gains, thanks to outside demand.

The US loan offer to meet food shortage has caused a subdued sentiment in the Delhi grains market. Wheat prices have shown losses of 25 to 50 nP per maund, while Rice rates have moved down by about Rs 2 per maund. Barley has eased in sympathy with the recession in wheat prices. The market for Coarse grains rules quiet in the absence of buyers.

Prices in the Bombay grains market have also displayed an

easy trend with a fresh fall in cereals and pulses. The Rice section has shown a mixed pattern of trading. There is a good demand for the Old crop Burma quality, while the new crop has eased by Rs 5 to Rs 7 per candy. Trading in Jowar is marked with a further break in prices of the new crop. With increased arrivals in the face of a subdued demand and larger stock position, the Madhya Pradesh and Uttar Pradesh qualities are quoted lower at Rs 100 and Rs 108 per candy respectively. A fresh fall in the prices of new crop has characterised trading in Bajra, following a higher receipt of about 8 wagon-loads per day from the upcountry centres. The market for Pulses ruled quiet despite the announcement regarding the release of a special quota for export to Ceylon.

In Health PHILIPS aid the science of healing

INDIA's doctors need the most modern medical aids in tackling their tremendous problems. They are aided in this noble task by organisations like Philips who are proud to place their many years of research and experience at their disposal. Whether it's the highly intricate X-Ray unit, which is one of modern science's contributions to accurate diagnosis; or the super-sensitive cardiograph which registers every tremor of the heart; or whether it's the assured supply of flawless lighting or a whole range of tested pharmaceuticals, Philips aid in many ways the noble science of healing and point the way to recovery.

THE Forum of Free Enterprise has in its top ranks some of the ablest men in Indian business. In the eyes of the Government, the Forum may appear outmoded in its approach to current economic problems in India and consequently just a pompous nuisance. How the Forum appeals to the Leftist parties in India needs not be mentioned. The Forum does represent orthodox private business and it does not seek to conceal the fact. The term 'orthodox private business' may also call for a little explanation.

In my view, it is just a group of people who wish to apply strict business principles in the evaluation of situations or problems and understand them in that light. Without being unduly charitable to the Forum, one can say that orthodoxy in business so described does

When Advice Should Stick

not imply any regressive social outlook. With restraint on its side and unprejudiced understanding on that of others, the Forum can function as a constructive force for economic thinking in India. The pity is that sometimes the temptation to strike too hard on the Government becomes irresistible for the spokesman of the Forum and, from the Government side, the temptation to dismiss even the soundest views offered from the Forum merely on the feeling that it is purely factious seems equally irresistible.

Last week two distinguished businessmen, Mr A. D. Shroff and Mr M. A. Sreenivasan, both prominently associated with the Forum, addressed a public meeting at the Bangalore Town Hall. Both the speeches were replete with unassailable and wise observations but in the company of statements less so.

Mr Sreenivasan endeavoured to explain that the Forum of Free Enterprise was an educational platform and not a political one. Therefore, he wanted those who were in sympathy with the Forum and its cause but reluctant or shy to participate actively, to shed their hesitation to join the Forum. Had he stopped with this appeal, one would not have found fault with his speech at all. When Mr Sreenivasan started accusing the country's leading politicians as having given themselves enormous status, power and authority, "which even the Maharajas" did not enjoy, he was overlooking some of the basic facts behind this power. The Maharajas in India were virtually a feudal aristocracy submitting to the overlordship of the Viceroy.

The Nizam, who at one time wanted to put his illusion of sovereignty to the test and demanded from Lord Reading a definition of paramountcy, Lord Reading's brusque reply was that paramountcy was paramount. Even Mysore which was among the most advanced of the Princely States, had its own tales of oppression, intrigues and petty tyranny. The fact that these features survive in a fugitive manner in the new democratic set up in India is no reason to decry the set up itself. It is inevitable that in a sovereign State the ruling politicians exercise more authority and power than the Maharajas who occupied a subordinate status in the country and it is equally inevitable that to a larger extent, economy, administration, education, industry and agriculture are dominated by politics. Current social aims are determined by the will of the people as expressed in the legislatures which in turn are the politicians' preserve. There is no use quarrelling over the logic of facts, however disagreeable they are.

But all this does not mean that the politicians should be insensitive to the counsel of expertness and experience which the businessman has often within his power to give. When Mr Sreenivasan pleads for an unbiased hearing for such counsel, he is only asking for something which can do the nation a great deal of good.

It is also slightly unfair to describe the Government as giving a deaf ear to criticism of its economic activities by responsible leaders outside. The rephrasing of the Plan, more rigorous import controls, severe economies in the administration, all these are the result of internal reassessment and external criticism; no democratic government can afford to be indifferent to sound and constructive criticism.

Mr A. D. Shroff regretted that after ten years of independence, with unfettered freedom for the Government to shape their policies, the country should still experience

continued food shortage. His explanation was that there was "something wrong in the State of Denmark".

That is certainly too harsh a judgement of the Government. It is true that certain miscalculations have been made but in the matter of planning for expansion of food production it is unfair to take the authorities to task for any serious lapse or shortcoming as far as the broad frame work of policy is concerned. The last two years witnessed setbacks primarily due to insufficient monsoons and drought. There is only one way in which the dependence on monsoons can be reduced. That is by extending irrigation facilities, what the Governments are anxiously trying to do.

As for the import of fertilisers, to which Mr Shroff has referred as a drain on foreign exchange, it is surely preferable to the import of food, which will cost much heavier amounts. Again, Mr Shroff wants that the country must be taught to appreciate that the food problem was not a passing difficulty. If Government's targets for food production and the methods suggested for achieving them are borne in mind, this criticism will appear without foundation. The food problem is undoubtedly understood as a long term one especially in the light of the growing population of India. At the Congress session, the Prime Minister mentioned expert opinion that India can produce yields from 200 per cent to 300 per cent higher than the present. For the next three years he suggested only 30 to 40 per cent more.

Mr Shroff wanted to have an enquiry into what he described as "the thoughtless and indiscriminate issue of import licences in 1956" which, according to him, had contributed heavily to the deterioration in foreign exchange resources. Even if unduly heavy imports were permitted through licences given in that year, Mr Shroff himself has given a justification for it; the Government wanted to push the tempo of development. That is a field where over-enthusiasm especially for an under-developed country is not only excusable but laudable. That even now some silver-coated ware or crockery is coming in is no ground for condemning a policy dictated by the desire to make India self-sufficient in industrial production as quickly and in as many spheres as possible.

When it was found that drastic cuts could be made, they were made relentlessly. The import cuts announced last year have evoked wide spread protests from another section of India's businessmen and even from among the consumers of certain products. Once the complexities of the Indian economic situation are conceded, there should also be corresponding appreciation of the dilemmas which policy makers had to face.

Diwan Chaman Lal, the head of the Hotel Committee is hopeful of earning Rs 100 crores annually through tourist industry, in a few years and Rs 200 crores later on. If the rate of increase between 1951, when earnings of foreign exchange from this source stood at Rs 2½ crores, and 1956 when it reached Rs 16 crores is to be kept up, Diwan Chaman Lal's hopes err only on the side of modesty. Much would surely depend on his Committee's efforts and consequent State and public action.

In India, as in all other Eastern countries, certain basic adjustments have been made to meet the requirements of foreign tourists as distinct from those of inland tourists. On the whole, the hotel facilities existing at least in bigger cities which invariably attract foreign tourists do not appear to fall short of requirements. In Delhi, one of the head-cooks in a hotel is reported to draw emoluments comparable to High Court Judges.

Such expenditure will not be a waste if it meets a well understood purpose. Visitors coming from the wealthier countries will also make very little call on food stuffs in short supply. Seldom are they rice eaters. All the same, it might be unduly costly to envisage expenditure on hotels and other establishments intended to stimulate foreign tourism on the assumption that the annual income would be of the order of at least more than Rs 100 crores. The domestic expenditure on tourism will have to proceed roughly in accord with immediate prospects.

As for inland tourism, the scope is unlimited. How far it needs to be encouraged through positive

Spending on Tourists

measures on Government initiative is another matter. The Railways, suffering from acute pressure of passenger traffic, if permitted to have a say on the subject may advise restraint.

Atomic Energy for Power

It is generally believed that reserves of coal together with hydro electric potential in the country will be enough to meet our energy requirements for a considerable time to come. But it would appear that if we have to make rapid economic progress we should have much larger energy potential than is available in the shape of conventional fuel resources. The tremendous development of atomic science has opened up new vistas which can lead us to the desired objective.

Speaking in Bangalore last week Dr H. J. Bhabha, Chairman of the Atomic Energy Commission disclosed that if we were to have a per capita consumption of energy comparable with that in the more advanced countries we would exhaust our coal reserves in about 12 years. Our hydro electric potential and oil reserves which were also not plentiful, would also not be of much help. The answer, therefore, lay in the harnessing of atomic power for peaceful uses.

The moment production of atomic power is mentioned one is apt to think automatically of US, UK, or the USSR because of the high cost involved in putting up such plants. But Dr Bhabha pointed out that due to the peculiar conditions obtaining in our country, nuclear power could be economical even in our present stage of economic development. Three main considerations favouring the setting up of atomic plants in India were the geographical distribution of coal, the shortage of transport and the acute shortage of power in certain parts of the country. Calculations showed that the transport of coal which had to be often carried over thousands of miles increased production costs of industries. Moreover, for want of power new industries could not be put up in places where other raw materials were available. For such regions it would be economical to have nuclear power plants. Other points in favour of an early setting up of atomic plants were the increasing cost of coal and the distinct possibility that atomic power would become progressively cheaper as a result of technical advances.

The facts that there is already large known reserves of uranium and thorium and that commendable progress has already been made in our country in atomic research favour an early quickening of endeavours in the new field. If as Dr Bhabha's calculations show nuclear power is not going to cost

us more than other conventional types of fuel in the long run, there is every reason to hope that nuclear power plants will soon be in operation in many parts of our country.

Industrial Research

Addressing the Madras Institute of Management, Sir Harold Hartley, British scientist and industrialist, and President of the World Power Conference, stressed the need for industrial concerns to undertake research work themselves. Much of the progress achieved by the countries of the West, in the field of industrial production, could be attributed to the application of science to problems of industrial production. The discovery and successful use of synthetic materials is an outstanding example of what scientific techniques and processes could do in improving industrial production. The prominence given to research work by the industrial concerns in such countries as England is evident from the example given by Sir Hartley as to how industrialists in his own country had quickly raised a fund with which they had started about 200 schools for such studies. But in India scientific research has found only a small place in the activities of the industrial concerns.

Sir Hartley also stressed the need to exercise control in the use of raw materials and in the processes of manufacture and said that this required a great deal of mathematical analysis. He attributed the great scientific achievements of Soviet Russia to the attention paid in that country to such studies.

Referring to the prospects for industrial development in the country Sir Hartley pointed to the hindering influences which absence of oil and natural gas in the country are likely to exert on development. This could only be made up by the optimum use of the alternative sources of power such as uranium and thorium the reserves of which are estimated to be abundant in the country. He envisaged a future for India on the basis of small atomic units to generate the power needed by industries.

The human element is an important factor to be reckoned with in the organisation of production, and this raises problems of labour management relationship which have to be tackled successfully in the interest of greater production. In England it is a practice with labour-management teams to go round the factories making a productivity count. This according to Sir Hartley had an important influence in improving industrial relationship. Personal contacts between the manager and those working under him could also

contribute much to promote mutual goodwill and remove bitterness, and this has been recognised at the Duke of Edinburgh's Study Conference at Oxford on the human problems of industrial communities within the Commonwealth.

As regards the capital needed for industrial development it was pointed out that it was a matter for the legislators of each individual country to decide how much of the national income was to be spent on present enjoyment and how much for production.

BLACKWOODS INDIA LIMITED

Notice is hereby given that the Annual General Meeting of the Company will be held at the Company's Registered Office at 2, Mangoe Lane, Calcutta, on Tuesday, the 11th February, 1958, at 4 P.M., for the following purposes:—

- (1) To receive and adopt the Directors' Report and Audited Accounts for the year ended 31st March, 1956.
- (2) To elect Directors.
- (3) To appoint Auditors and to fix their remuneration.

AS SPECIAL BUSINESS:

To consider and if thought fit to pass with or without modifications, the following resolutions as Ordinary Resolutions.

- (4) Resolved that Shri A. P. Bhargava, who has completed 65 years of age, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed under Section 280 of the Companies Act, 1956, shall not apply to him.
- (5) Resolved that the Board of Directors be and is hereby permitted to borrow monies from time to time for carrying on the business of the Company, notwithstanding that the monies to be borrowed together with monies already borrowed by the Company apart from temporary loans obtained from the Company's Bankers in the ordinary course of business will exceed the aggregate of the paid-up Capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purpose.

The Share Transfer Registers will remain closed from 1st February to 11th February, 1958, both days inclusive.

By Order of the Board,
G. V. RAMAN,
Managing Director.

MADRAS REVIEW

PEPPER prices have, of late, been showing a tendency towards a steady decline in prices. For the first time since 1947, rates have gone below Rs 465 per candy in the Alleppey market and Rs 550 in the Kozhikode market. The price crash is attributed to lack of demand from the USA—the main buyer of this spice—and reported existence of a world over-production.

Producers are upset by this sudden and swift turn in the market tendency of the commodity and are not sure whether there will be a further

Taking advantage of the reported prevalence of over-production in the world, US buyers are reported to be busy making deals at lower price-levels in Indonesia, Sarawak and Singapore. As a result, the usual big turnover, during the year-end, had not materialised during the current season. Against the normal transaction between 1,500 and 2,000 tons of pepper, which used to change hands between the Indian exporter and the US importer during this season every year, only about 200 tons were contracted for in the 1957 season.

The new crop is being harvested and a good lot of it is now coming into the market. Trade sources stick on to their previous estimate that the 1957-58 crop will amount to 24,000 tons. There will not be much difference from the previous season's crop. A noteworthy feature of the new season is that the buyers have become more price-conscious; and business takes place only at lower prices.

With the steep decline in the price, however, consumption has been increasing substantially in India. It is estimated that as much as 45 to 50 per cent of the production in this country is being con-

price recession or whether they can hold on to the current price level. At the same time, their holding capacity is stated to be so low that they are forced to sell at the best available terms under the prevailing circumstances.

Another factor, which makes a further fall in the price of pepper, is stated to be heavy selling pressure from Bombay dealers in the forward position. The following table gives the trend of prices since the beginning of 1957 (rates per candy):—

	Alleppey		Wynaad		Country	
	High	Low	High	Low	High	Low
1957:						
January	587.50	450.00	700.00	630.00	650.00	600.00

sumed locally. Still, there is no doubt that much in excess of demand is produced. This is the principal factor responsible for the steady fall in the price of this commodity, which was selling at prices nine to ten times higher than the present prices some seven to eight years ago.

There is even a suggestion that the principal producers of this spice get together like the producers of tea and coffee have done and take jointly certain measures to arrest the fall in prices. Regulation of export as well as sales promotional activities are necessary; and these should be done with the co-operation of all the principal producers to make them effective.

Groundnuts

Prices in the Madras Groundnut market firmed up last week when arrivals averaged only about 40 tons a day. Local small crushers were the main buyers and business was reported done at Rs 148 per candy.

In the Groundnut Oil section, there was fair turnover and the rate for the ready position improved to Rs 300 from Rs 292 per candy.

Landslide in Pepper Values

Calcutta interests took up small quantities.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were restricted and prices remained firm. Arrivals of Buff hides were, however, fair, while those of Cow Calf and Buff Calf were extremely poor.

On the export front, business was mostly confined to light weights. There was a good enquiry for fifts and business was reported done in single tannage prime marks upto 68/58/48d for runs, fourths and fifts respectively. There was some enquiry for 10-12 lbs runs at 41d.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were on the same level as in the previous week and prices were steady.

On the export front, trading was restricted. Madras sellers were re-

ported to be quoting 3d lower all-round for prime goat skins; but no business materialised. There was no change in Sheep skins, as buyers were unwilling to pay increased prices.

The markets for Raw Hides and Skins ruled firm.

Lemongrass Oil

Russia is now showing some interest in the purchase of Lemongrass Oil. It is reported that, in December last, 50 tons were shipped, while another 50 tons are expected to be shipped during the current month. But, the price of the commodity has fallen to such a low level that growers may well put their land under Tapioca which, with the rice shortage and higher grain prices, may be more paying. At any rate, it is expected that the crop in the next season may not be as large as in the previous two years.

ROOPACHERRA TEA COMPANY, LIMITED

NOTICE is hereby given that the 49th Annual General Meeting of the Shareholders of Roopacherra Tea Company, Limited, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Thursday, the 20th February, 1958, at 3-30 P.M. for the following purposes:—

- To consider the Profit and Loss Account for the year ended the 31st December, 1956, and the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
- To declare a Dividend.
- To appoint a Director in place of Mr. D. N. Mukerji, the Director retiring by rotation at the Meeting.

And, in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956:—
“That Mr. D. N. Mukerji be and is hereby re-appointed a Director of the Company.”

Special Notice dated 10th January, 1958, of intention to propose the foregoing resolution as a Special Resolution has been received by the Company wherein it is stated that a Special Notice of the Resolution is given to satisfy the requirements of Sections 190 and 261(1)(f), (2) and (3) of the Companies Act, 1956, for the reason that Mr. D. N. Mukerji is presently a

Director of Tyroon Tea Co. Ltd., which is a subsidiary of McLeod & Co. Ltd., the Managing Agents to the Company, and that, therefore, he is an associate of the Managing Agents within the definition in Section 2(3)(c)(1) of the Companies Act, 1956, who may only be appointed or re-appointed a Director liable to retirement by rotation by a Special Resolution, of which Special Notice has been given to the Company.

4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from 8th February, 1958 to 20th February, 1958 both days inclusive.

By Order of the Board,
MCLEOD & CO. LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.
3, Netaji Subhas Road,
Calcutta, 20th January, 1958.

NOTE:—

1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

2. Payment of the proposed Dividend, if declared, will be made on or after 27th February, 1958, only to those members whose names are registered in the Books of the Company on 20th February, 1958, or to their Mandatees.

No application for Warrants will be necessary. Claims on behalf of holders of Shares on blank transfer will not be entertained.

Profit-Taking at Higher Levels

Watch-Dog Writes:

STOCK markets have shown further evidence of returning confidence, although activity is still restricted. Sentiment is distinctly cheerful and prices, under the lead of Steels, have displayed a rising tendency. However, buyers seem to be cautious to follow the rise in prices, being inclined to book profits at bulges.

Dull but quietly steady conditions prevailed on the Calcutta Stock Exchange where most of the shares came in for slight profit-taking at the close due to intervening holidays.

Equities on the Bombay Stock Exchange, after making a further advance early in the week, turned a shade quieter towards the close on lack of fresh support.

On the Madras Stock Exchange, the general trend of prices was inclined to be steadier.

A cautious trading was noticed on the London Stock Exchange. Wall Street closed irregular with the list showing a small on-balance gain for the week.

Calcutta

Calcutta, Friday Evening.

THE local Stock Exchange remained closed from Thursday due to holidays. During the period the market remained open, conditions remained steady, but quiet. Although attempts were made to push up rates from the week-end levels, they proved futile as operators were hesitant to enter into fresh commitments in view of the approaching holidays. Moreover, with the news of the labour strike at the docks and only a few weeks left for the Central Budget, they were inclined to be cautious and to book profits at the recent high levels. However, the confidence of the market was reflected by the resistance shown to profit-taking. The market finished at slightly below the best levels for the week.

Although the volume of business in the Gilt-edged section was much restricted, a fairly steady tone was maintained. With the growing demand for short-term funds, banks showed hardly any interest. Consequently, medium and long-dated Loans presented a neglected appearance. 3 per cent 1986 Conversion Loan opened at Rs 70.95 and, after improving at one time to Rs 71.30, finished the week at Rs 71.15.

The Banking section evoked fairly good enquiry and changes in prices were in favour of buyers. Punjab National were taken upto

Rs 52.25 from Rs 50.75 and United Commercial upto Rs 61.00 from Rs 60.50.

Except for selective enquiry, Jute shares ruled generally quiet, partly due to the news of the strike at the docks and partly to lower advices from the jute goods market. The only bright spots were Anglo-India having improved to Rs 136 from the recent low level of Rs 131; Bevedere to Rs 69 from Rs 64; Howrah to Rs 13.81 from Rs 13.75; India to Rs 99 from Rs 95.50 and Reliance to Rs 5.69 from Rs 5.50; Kinnison were marked lower at Rs 115 against Rs 127, while National receded further to Rs 24.00 from Rs 25.40, to finish the week better at Rs 24.15.

Coal shares came in for selective support on the view that production was increasing and in response to the hope that the selling price for the commodity might soon be raised. Bengal were taken upto Rs 236 from Rs 230; Central upto Rs 6.44 from Rs 6.34 and Amalgamated upto Rs 15.19 from Rs 14.94. Burrakur were, however, sticky at Rs 22.12 with Western Bengal maintained around Rs 5.25.

Tea shares, which were the most active counter and recorded substantial gains last week, turned a shade quieter due to some profit-taking, being influenced by the news of the labour strike at the docks and the slightly lower prices obtained at this week's auction. Brahmapootra changed hands at Rs 3.56 to Rs 3.69; Bishnauth at Rs 18.62 to Rs 18.75; Grob "A" at Rs 23.00 to Rs 23.12; Hasimara at Rs 22.87 to 23.00; Jayshree at Rs 9.69 to Rs 9.87; Methoni at Rs 16.96 to Rs 17.25; Rajabhat at Rs 15.62 to Rs 15.81 and Tezapore at Rs 17.31 to Rs 17.50. Brooke Bond were cheaper at Rs 17.50 against Rs 17.62.

Sugar shares were practically neglected due to lower advices from the commodity market. The only two bright spots were Carew and S.K.G., having support upto Rs 6.19 and Rs 9.00 from Rs 5.78 and Rs 8.94 respectively. Balrampore were, however, on offer at Rs 5.44 against Rs 5.50.

Thanks to better advices from the cloth market, Textile scrips staged a moderate recovery from the recent low levels. Kesoram had buyers upto Rs 10.37 from Rs 10.12 and Jayshree upto Rs 6.12 from Rs 6.06. Cawnpore and New Victoria were nearly maintained at Rs 5.28 and Rs 1.25 respectively.

Price movements in the Engineering section were mostly influenced by the speculative activity in Indian Irons. Against the week-end closing of Rs 19.74, Indian Irons opened slightly lower at Rs 19.68 at which level renewed bull support caused the scrip to touch a fresh higher level of Rs 20.13 (highest touched since July), to recede again towards the close to Rs 19.90 on profit-taking of lower Bombay advices. In "kerb" trading on Wednesday, there were even sellers at Rs 19.85.

In sympathy, TEXMACO were at one time taken upto Rs 16.50 from Rs 16.45; Jessop upto Rs 21.12 and Marshalls upto Rs 5.12, to finish the week at Rs 16.40; Rs 20.19 and Rs 5.06 respectively. Thanks to the

announcement of an interim dividend of 8 per cent for 1957, G. K. Williams met with good demand at Rs 28.75 to Rs 28.94. Burn scored another Rs 2 at Rs 312 with Britannia better at Rs 12.44 against Rs 12.00.

Miscellaneous issues were selectively supported on good corporate news. Most prominent were Indian Cable having buyers upto Rs 26.37 from Rs 25.44; Dunlop Rubber upto Rs 22.25 from Rs 21.56; NICCO upto Rs 23.87 from Rs 23.56; Indian Aluminium upto Rs 12.03 from Rs 12.59; National Carbon upto Rs 24.50 from Rs 24.25 and Martin Burns upto Rs 25.25 from Rs 25.00. Sustained speculative buying caused Orient Paper to touch a fresh higher level of Rs 23.86 from Rs 23.70, to finish at Rs 23.80. Titagurh changed hands at Rs 32.00 to Rs 32.12 and Shree Gopal at Rs 13.25 from Rs 14.44. Indian Copper, after being taken upto Rs 2.90 from Rs 2.81 on reports of encouraging production during the quarter ended December, eased off at the close to Rs 2.87 on profit-taking. India Steamship had buyers at Rs 11.69 to Rs 11.87; Aluminium Corporation at Rs 9.44 to Rs 9.62; Phillips India at Rs 13.81 to Rs 13.94; Hindustan Motor at Rs 5.84 to Rs 6.25; Hindustan Lever at Rs 19.75 to Rs 19.94 and Rohtas at Rs 16.12 to Rs 16.25. In the Mundhra group, BIC and Osler were offered at Rs 3.77 and Rs 2.56 respectively.

Madras

A smart recovery in the Textile scrips was the main feature of trading on the Madras Stock Exchange. Plantings met with selective support, while Bank shares remained firm.

TEXTILES Despite a lower dividend for 1957, Madras improved to Rs 35.25. Buckingham, Bangalores and Travancore Rayons met with good demand at quoted rates. Metturs were taken upto Rs 862.50; Coimbatore Cottons upto Rs 170 and Lakshmis upto Rs 112.

MISCELLANEOUS Shares in this section came in for selective support. Aluminium Industries were taken upto Rs 14, while FACTS improved to Rs 5.35 on better support. Railis had, however, some sellers at Rs 28.50. Central Scientifics met with some enquiry at Rs 5.50, while Spencer continued to be in good demand at the market rate. Among Cement shares, India Cements rose to Rs 26, while Andhra "B" moved up to Rs 11.25.

Bombay

SENTIMENT in the stock exchange showed a marked improvement during the past week though the week's highest levels could not be maintained till the last. The incentive to the upward trend was provided first by the decision of the directors of the Tata Iron and Steel Company Limited to issue, subject to Government approval, ordinary shares as fully paid bonus shares in the ratio of one share for every five shares held by utilising the premiums received on new ordinary shares issues last year and a small amount out of the reserves.

The announcement that the US has decided to grant a loan of \$225 million to India also gave a powerful fillip to market sentiment. For, although the amount granted certainly fell far short of our requirements, the consensus of opinion was that more would be forthcoming from that source and in any event, a major portion of the foreign exchange needs of the Second Plan would be available as help from other countries was also strongly indicated.

With the Calcutta market remaining closed upto Monday next from Thursday due to the intervention of holidays there, marketmen on Dalal Street seemed to have considered it prudent to adopt a cautious attitude. Moreover, the sharp rise in the early part of the week had also attracted some profit-taking. The undertone at close was steady.

In the steel section, Tata Iron began the week on a buoyant note on announcement of a jubilee bonus share in the proportion of one share for five held, and advanced rapidly in the subsequent two sessions to be placed on Monday at Rs 173.50 as against its opening quotation of Rs 165.25. In the last three days the scrip steadily lost ground on lack of follow-through support coupled with profit-taking at higher levels to close on Wednesday at Rs 171.75. Partly in sympathy with TISCO and partly due to good Calcutta buying, Indian Irons also improved from Rs 19.28 to Rs 20.08 to close at Rs 19.84.

Textile shares were generally steady. In earlier dealings Bombay Dyeing received speculative support to be done upto Rs 52 from Rs 50.70 and but finally quoted at Rs 51.50. Century encountered profit taking in the beginning but rallied in midweek to be done upto Rs 398.50 only to be pushed back to its starting point of the week of Rs 392. Kohinoor was a bright spot having been done upto Rs 292.50 from Rs 268.50. The scrip closed somewhat lower at Rs 268.50. Swadeshi at Rs 170.50, Central India at Rs 86.50, Simplex at Rs 160.00, Finlay at Rs 264.00 and Phoenix at Rs 126.25 were all higher on balance.

London

CONDITIONS on the London Stock Exchange remained generally quiet and there was very little to assist sentiment. Various adverse factors, including the further rise in the American unemployment figures and the Chancellor of the Exchequer's warning that deflationary measures were to continue, created a note of caution among the operators.

CUSTOMS AND EXCISE REVENUE COLLECTED IN THE INDIAN UNION STATEMENT FOR THE MONTH OF SEPTEMBER 1957

According to the returns received in the Department of Commercial Intelligence and Statistics, the total gross sea, land and air customs revenue collected in the Indian Union during the month of September, 1957, amounted to Rs 15.95 lakhs as compared with Rs 15.17 lakhs in the corresponding month of the previous year.

The comparison in the subsequent paras should be taken to refer to that of the current figures with those of the corresponding period of the preceding year, except in the case of air customs for which the previous year's figures are not separately available.

Of the total customs revenue collections, import duties accounted for Rs 13.06 lakhs as against Rs 12.17 lakhs, export duties for Rs 2.31 lakhs as against Rs 2.60 lakhs, land customs and miscellaneous for Rs 44 lakhs as against Rs 40 lakhs, and air customs for Rs 14 lakhs.

The total gross collection of Union excise duties amounted to Rs 22.16 lakhs as compared with Rs 15.42 lakhs.

During the six months, April to September, 1957 the grand total of gross customs and Union excise revenue realised was Rs 218.44 lakhs as compared with Rs 166.47 lakhs during the corresponding period of the preceding year. Of this amount, import duties accounted for Rs 81.85 lakhs as against Rs 66.45 lakhs, export duties for Rs 10.43 lakhs as against Rs 12.11 lakhs, land customs and miscellaneous for Rs 2.12 lakhs as against Rs 1.64 lakhs, air customs for Rs 20 lakhs, and Union excise duties for Rs 123.84 lakhs as against Rs 86.27 lakhs.

INDUSTRIAL RELATIONS IN NOVEMBER 1957

Time-loss due to industrial disputes during November 1957 decreased by 242,321 man-days. The average duration of disputes current at any time during the month was 5.5 days as against 5.1 days in October.

There were 121 fresh disputes in November, bringing the total number of disputes current at any time during the month to 156 including 19 lock-outs. The corresponding figures for October were 170 fresh disputes in 219 disputes current.

One hundred and twentytwo disputes terminated during November. Of these, 86 lasted not more than 5 days each and only 5 lasted more than 30 days each.

During the month, time-loss increased in 'construction' to 14,456,

in 'services' to 11,795 and in 'miscellaneous' group to 15,801, and decreased in the remaining groups. West Bengal recorded the highest time-loss (54,305), followed by Madhya Pradesh (36,191), Bihar (33,656) and Bombay (33,603). Compared to the previous month, time-loss increased in Madhya Pradesh, Andhra and Rajasthan, and decreased in all other States.

Industrial relations, according to reports received from the States, were almost normal everywhere excepting Madhya Pradesh where there was some unrest due to closure of bidi establishments at Jabalpur and Durg.

For the manufacturing industry group, the index of industrial unrest (base 1951=100) for November was 56. The index of industrial relations (base 1939=100) for the month was 347.

CONSUMER PRICE INDEX NUMBERS FOR WORKING CLASS INCREASE AT 9 CENTRES DURING NOVEMBER 1957

The consumer price index numbers for working class (base shifted to 1949=100 except where otherwise indicated) increased at 9 centres, decreased at 5 and remained stationary at one during November 1957.

According to the Labour Bureau, Government of India, the maximum rise of 3 points was recorded by the index number for Ajmer, which stood at 102. The index numbers for Berhampur, Jabalpur and the plantation centres (base January to June 1949=100) appreciated by 2 points each to 113, 109 and 112 respectively, and for Jharia, Gauhati, Ludhiana, Kharagpur and Beawer (base August 1951 to July 1952=100) by one point each to 108, 106, 95, 111 and 94 respectively.

In this group of centres, the food group index appreciated at 8 centres, the clothing index at 4 centres and the miscellaneous group index at 4 centres.

FALL IN 5 CENTRES

The maximum fall of 4 points was recorded by the index number for Silchar, which stood at 104. The index number for Bhopal (base 1951=100) receded by 2 points to 99, and for Delhi, Dehri-on Sone and Tinsukia by one point each to 112, 108 and 120 respectively.

In this group of centres, the food group index declined at 4 centres, the fuel and lighting index at 2 centres and the miscellaneous group index at 2 centres.

The index number for Akola showed only a fractional rise and stood at 98.

The provisional index numbers for Jamshedpur, Monghyr, Cuttack, Mercara (base 1953=100) and Satna (base 1953=100) stood at 122, 107, 110, 118 and 100 respectively.

The provisional all-India index number showed only a fractional rise and stood at 113 during November.

SUGAR PRODUCTION AND STOCKS

According to the Indian Sugar Mills Association, the sugar production during the month of December,

1957, was 3,57,000 tons bringing the total production upto 31st December, 1957 to 4,93,000 lakh tons. The corresponding figures for the 1956-57 seasons were 3,36,000 and 4,52,000 tons respectively.

The off-take of sugar from factories (including despatches for exports) during the month of December, 1957, was 1,41,000 tons as against 1,66,000 tons during the corresponding period last season. This brings the total despatches from factories upto 31st December, 1957, including despatches for exports, to 2,95,000 tons as against 3,18,000 tons on the same date last season.

The total closing stock of sugar with factories on the 31st December, 1957, was 6,27,000 tons as against 6,60,000 tons on the same date last season.

EXPORT NEWS

The office of the Joint Chief Controller of Imports and Exports, Government of India, Calcutta announces:

A limited quota of Nigerseed oil cake for export to all permissible destination excluding the Portuguese Possessions in India during the period January-September 1958, will be allowed.

The shipment period of the unutilised quota of linseed oil cake released in April 1957 has been further extended up to the end of March 1958 or till the ceiling is reached, whichever is earlier.

A limited quota of rice products, viz. parched rice (murmura), ground parched rice (Sattu), parched paddy or puffed rice (kheer) and beaten rice (chura) for export from Calcutta will be allowed during the period January-September 1958 or till the ceiling is reached, whichever is earlier.

EXPORT OF CHEMICALS

The office of the Joint Chief Controller of Imports and Exports, Government of India, Calcutta, announces:

Acetone, Aluminium Oxide, Arsenic Sulphide, Calcium Carbide, Caustic Potash, Dibutyl Phthalate and Dimethyl Phthalate, Hydrogen Peroxide, Phosphorous and Sodium Hydrosulphite will continue to be licensed freely on shipping bills as hitherto, for export to all permissible destinations until further orders.

Established shippers and crushers who were given quotas during the period July-December 1957 will be granted repeat allotments for the period January-September 1958. Supplementary allotments made during July-December 1957 will not be repeated. This is in respect of the export of crushed bones and bone grist.

PAY COMMISSION: ANNEXURES TO THE QUESTIONNAIRE

The following is an extract from the main conclusions—recommendations of the 15th session of the

Indian Labour Conference held in July last year. Reference to this is made in point 14 of the Questionnaire under section "Minimum Remuneration":—

"(1) While accepting that minimum wage was 'need-based' and should ensure the minimum human needs of the industrial worker, the following norms were accepted as a guide for all wage fixing authorities including minimum wage committees, wage boards, adjudicators, etc.:

(i) In calculating the minimum wage the standard working class family should be taken to comprise three consumption units for one earner, the earning of women, children and adolescents being disregarded.

(ii) Minimum food requirements should be calculated on the basis of a net intake of calories as recommended by Dr Akroyd for an average Indian adult of moderate activity.

(iii) Clothing requirement should be estimated on the basis of a per capita consumption of 18 yds. per annum, which would give for the average worker's family of four a total of 72 yds.

(iv) In respect of housing, the rent corresponding to the minimum area provided for under Government's Industrial Housing Schemes should be taken into consideration in fixing the minimum wage.

(v) Fuel, lighting and other miscellaneous items of expenditure should constitute 20 per cent of the total minimum wage.

(2) Wherever the minimum wage below the norms recommended above, it would be incumbent on the authorities concerned to justify the circumstances which prevented them from adherence to the afore-said norms."

There are four classes of Central Government servants. In Class I Service, there are 25 scales of pay and two of the scales are also applicable to the Indian Administrative and Police Services. There are 10 scales in Class II Service while in Class III, there are 51 scales; in class IV, 10 scales.

The following are the estimated figures of employees:—

Classification	No. of employees (in lakhs)
Central Government employees	18.00
Employees of the State Governments	21.00
(a) Employees of Local Bodies (excluding school teachers)	12.00
(b) Teachers under Local Bodies	4.70
*Employees of Government aided educational institutions	4.15
Total	59.85

*Estimates are only in respect of employees drawing pay not exceeding Rs 250/- p.m.

HIGHLIGHTS OF THIS ISSUE

The time has come to think of interest rates and such.
Inflation's not the thing to worry us so much.
A slump instead it is that we must apprehend.
Or else the Plan is doomed to die an abrupt end.

Metamorphosis

Investment Gossip:

IT is already the end of January, but the apprehensions of what the next Budget may offer have by no means weighed down the Stock Exchanges. On the other hand, in the course of the recent past, a metamorphosis has taken place in the Stock Exchange outlook, and sizeable gains have been recorded. In the case of Tata Ordinaries, the upward pressure exerted on the market quotation was, of course, derived from the company's decision to apply to Government for permission to capitalise from the share premium account and distribute bonus shares. While such application is not tantamount to a bonus issue, the reasoning in market circles is that the company has a Government director on its board, and the fact that it now formally approaches Government can only mean that, tacitly, the Government director has, shall we say, "no objection".

Strangely, the first reaction in Calcutta was not of a similar windfall for Indian Iron shareholders. But, gradually, the feeling has seeped through that what is sauce for Tata Ordinaries can be pudding for Indian Iron. Like TISCO, IISCO also has a share premium account; so, why not a like application for a bonus issue? In talking over such prospects with a friend, I was gratified to find that his outlook has changed completely. He now states confidently that steel shares have "a wonderful future" before them. Firstly, he is sure that Government will so far unbend as not only to approve the two bonus issues, but also to permit a higher distribution in the form of dividend. Secondly, he thinks that the two private sector steel producers will always compare advantageously with the Government steel plants, and from this viewpoint, he has higher expectations of profits. Thirdly, he cannot envisage a time when there would not be a ready market—either internal or external—for steel. In short, he says, the steel shares have never had so good a future ahead of them.

Other than this expectation of good news for the steel section, there has scarcely been anything to excite the volte face of the erstwhile bears in the market. Of course, the American promise of substantial aid has meant that the tempo of economic activity will not unduly suffers as a result of any drastic pruning of the Plan; and, to that extent, it has been welcome news for the market.

I should say that the brightness that is now discernible is owing to something more fundamental—a change that has already set in in the market hawa. This is because, at long last, the market has come to realise that the private sector is certainly going to be accorded an even more fruitful role in the Second Plan. Then, again, the Congress Party's economic resolution appears studiously to have avoided any sentiment that might be construed unfavourably. As a result, there is now the confidence that, whatever may be the extent of re-phasing in the Plan, the targets for the private sector will be unaffected; if anything, they might be revised upward.

So, we come to the Budget; which is exactly four weeks away. How are we to explain the fact that we are having precious little of speculation as to the contents of the Finance Minister's briefcase, come February 28? I should think that the conspicuous absence of conjecture is indicative of the stock market's belief that, definitely, no new imports are on the cards. The exception may be a Gifts Tax; and there may be readjustments in excises. But these apart, no new taxation is likely, and instead there is the prospect of marginal relief. To what extent these concessions will be forthcoming, is anybody's guess. But, even in the contingency that there are no concessions, the market should not fall prey to a fresh bout of bear fever. For, since the May 1957 Budget, there has been so much correction of prices, that share quotations are lower than they should be. Indeed, overcorrection may be said to have taken place. Thus, so long as there are no new taxes, even the absence of concessions should not prevent a much more cheerful stock exchange atmosphere.

ER3

Indian Oxygen

Investment Special:

Indian Oxygen Limited is the new name after its conversion into a public company on the 15th January 1958 of the well-known Indian Oxygen and Acetylene Company which is carrying on business in India for the past 28 years. As its name denotes, the company is engaged in the supply of industrial and medical gases and it may be noted that it is now the main supplier of India's requirements in these gases and equipment for welding and various other processes involving the use of industrial gases.

A glance at the figures showing the total sales turnover during the last ten years will show the growing demand for the company's products. From Rs 1.33 crores in 1950, sales have gone up to Rs 4.18 crores in 1957.

The industrialisation in our country has by no means reached its optimum. On the contrary, it

will be correct to say that it has only just begun. The Second Five Year Plan with its huge schemes and emphasis on the establishment of heavy industries both in the public and private sectors will bring about a big increase in the demand for industrial gases and equipment. The expansion programme of the two steel plants in the private sector and the three steel plants in the public sector are already making a large demand on the products manufactured by Indian Oxygen. To meet the increased demand, Indian Oxygen has already embarked upon a huge expansion programme of its own costing about Rs 3.20 crores. The company has already incurred an expenditure of nearly a crore of rupees. The expansion and modernisation programme of the company is expected to be completed by 1960.

The company's previous status as a wholly owned subsidiary of the British Oxygen Company Limited has conferred on it many advantages as to technical and other know-how connected with the manufacture and distribution of industrial and medical gases and equipment. The same facilities and guidance are to be attained by Indian Oxygen Limited by means of an agreement. British Oxygen is also extending substantial financial and other help to the new company. Indian Oxygen is hopeful of securing the necessary foreign exchange for implementing its expansion and replacement programme.

The Indian Oxygen and Acetylene Co., Private Limited which is the former name of Indian Oxygen Limited has been paying consistently good dividends in the past. In the last three years it has paid a dividend of 10 per cent per annum. It is to be noted that the shares now being offered will confer the right to any dividend in respect of the company's financial year ending 30th September 1958 for which no dividend has yet been declared.

Considering the growing demand for the products of the company in our country and its financial background, there is every reason to hope that shareholders of this company will get an attractive return for their investment. The dividend history fully justifies the premium asked.

STATE BANK OF INDIA

The following is a note of the net profits of the State Bank of India for the year ended the 31st December 1957 and their distribution:—

Net profits for the year	Rs.	187,45,400
Brought forward from last year	Rs.	41,91,300
	Rs.	229,36,700

The Directors have declared a dividend of Rs. 16/-

per share, absorbing	Rs.	90,00,000
Transferred to Reserve Fund	Rs.	25,00,000
Transferred to Pension Funds	Rs.	6,37,500
Bonus to Staff	Rs.	32,00,000
Transferred to Staff Welfare Fund	Rs.	10,00,000
Transferred to Staff Co-operative Housing Fund	Rs.	10,00,000
Carried forward	Rs.	55,99,200
	Rs.	229,36,700

Bank Profits

The net profit of the State Bank of India for the year ended 31st December 1957 has amounted to Rs 187.45 lakhs against Rs 156.18 lakhs in the previous year. The dividend is maintained at Rs 16 per share. Bonus to staff absorbs Rs 8 lakhs less at Rs 32 lakhs. Transfer to Reserve Fund is sharply higher at Rs 25 lakhs against Rs 2.5 lakhs. Transfer to pension fund is at Rs 6.38 lakhs against Rs 6.14 lakhs while transfer to Staff welfare fund is unchanged at Rs 10 lakhs. A new item is the staff co-operative housing fund which is credited with Rs 10 lakhs. Carryforward is higher at Rs 55.99 lakhs against Rs 41.91 lakhs brought in.

The United Commercial Bank Limited has reported a net profit, subject to audit, of Rs 59.70 lakhs for the year ended 31st December 1957 as against Rs 56.52 lakhs in the previous year. The directors propose to recommend payment of a dividend of 7½ per cent as against 7 per cent paid last year. Transfer to the Reserve Fund is Rs 1 lakh lower at Rs 19 lakhs. Taxation Reserve is Rs 2.50 lakhs higher at Rs 18.50 lakhs. Provision for bonus to staff is Rs 50,000 higher at Rs 7 lakhs. The carry forward at Rs 49,432 is against the Rs 29,420 brought in.

The Indian Bank Limited has made a net profit, subject to audit, for the year ended 31st December 1957, of Rs 40.15 lakhs, including the amount brought forward from the previous year's account and after providing for contingencies and paying bonus to staff and meeting other Golden Jubilee expenses totalling nearly Rs 12 lakhs. The total dividend for the year is 15 per cent as against 13 per cent paid last year. The dividend for 1957 includes a Golden Jubilee dividend of 2 per cent.

ER3

Investment Briefs:

Balmer Lawrie & Company has announced an interim dividend of 5 per cent for 1957, payable on or after 28th February, 1958.

Bisra Stone Lime has maintained the dividend at Rs 1.75 per share for the year ended 31-3-1957.

In Bombay, Central India Spinning has passed over the dividend even on the Preference shares for the year ended 30-6-1957.

London and Overseas Representatives: Baptist Smith, Keith & Slater Ltd, Napier House, 24/7 High Holborn, London W.C. 1. Telephone: Holborn 5022.

Investment Notes:

On the Calcutta Stock Exchange, enquiry for Coal shares has broadened considerably during the past few days. This is mainly due to good working reports from most of the collieries following the increase in raisings and despatches last year.

In the Jute section, New Central has firmed up to Rs 13.69 from Rs 12.00 on renewed buying support. The main inspiration is derived from the company's proposal to apply to the Controller of Capital issues for permission to issue bonus shares in the proportion of one share for every two shares, by capitalising Reserves.

In the Miscellaneous section, Indian Cables have strong buyers upto Rs 27.12 from Rs 26.37. The directors have proposed to make a supplementary distribution of 4 per cent on the Ordinary shares for the year ended 31st March 1956, making a total of 19 per cent for that year. There is, therefore, a possibility of making a similar distribution for the year ended 31st March, 1957 when the dividend was 15 per cent.

Martin-Burns have announced a dividend of Rs 1.50 and a Cash Bonus of .62 nP per share, making a total of Rs 2.12 for the year ended 30th September 1957, same as in the previous year. The shares are quoted around Rs 25.37.

In Bombay, Phalton Sugars, after being taken up to Rs 154.50 from Rs 148, are now quoted around Rs 152. The directors have announced a total distribution of Rs 12 (including a bonus of Rs 3) for the year ended 30-9-1957 as against Rs 9 in the previous year.

The directors of the New India Assurance Company Limited have passed a resolution to increase the authorised capital from Rs 6 crores to Rs 10.5 crores by the creation of an additional 4 lakhs shares of the face value of Rs 75 each and 10 lakhs new "A" shares of the face value of Rs 15 each. It is also proposed to issue bonus shares in the ratio of one new "A" share for every three shares held.

Lower Dividend by Madura Mills

Balance-Sheet Reviews:

IT was generally anticipated that the earnings of the spinning mills particularly, would be adversely affected on account of the slump in yarn prices in the latter half of 1957 and the heavy accumulation of stocks. The announcement of a lower dividend by the Madura Mills Company Limited, for 1957, has not, therefore, come as a surprise. The dividend is reduced to 15 from 17½ per cent paid in 1956. The dividend is payable with a transfer from Reserves to the extent of Rs 25 lakhs.

The net profit for the year, after providing for Depreciation and Taxation, amounts to only Rs 73.610 as against much as Rs 44.2 lakhs in

the previous year. A sum of Rs 42.15 lakhs (Rs 51.50 lakhs) is provided for Taxation. In the face of lower earnings, the taxation provision appears to be on the high side. It may be, that additional provision has to be made in respect of the earlier year consequent on the increase in Corporate Taxation in May last.

Changdeo Sugar

The Changdeo Sugar Mills Limited has presented encouraging working results for the year ended 30th September, 1957. The company has earned a higher gross profit of Rs 25 lakhs as against only Rs 14 lakhs in the previous year. The directors have recommended a dividend of Rs 2.25 per share on the increased capital as against Rs 5 per share in the preceding year.

In respect of allocations to Funds, the Development Rebate and Depreciation amount to Rs 8.50 lakhs against Rs 12.50 lakhs. The provision for Taxation totals Rs 10 lakhs on account of the liability on the issue of bonus shares of the value of Rs 22.50 lakhs and excess dividends distributed during the year. During the previous year, there was no liability on account of taxation.

Sugar produced amounts to 117,021 bags against 73,389 bags in the previous year. The company hopes to maintain the production at the same level during the current season 1957-58.

Tyroon Tea

Thanks to a substantial rise in profits, the Tyroon Tea Company Limited has raised the dividend from 30 per cent to 45 per cent for 1956. The net profit for the year, after Taxation and Depreciation, amounts to as much as Rs 7,22,567 as against only Rs 2,45,327 in the previous year. The directors have provided Rs 80,928 (Rs 1,11,891) for Depreciation; Rs 4,35,424 (Rs 2,96,200) for Taxation and Rs 5 lakhs (nil) for Building and Machinery Reserve.

Crop outturn is lower at 15,188 maunds against 15,693 maunds; but the average price realised is higher at Rs 2/14 5 against Rs 2/6 3 per pound. The smaller crop made was due to earlier cessation of plucking under the ITA Voluntary Restriction Scheme. The final crop of the 1957 season is expected to amount to 16,366 maunds.

Engineering and Small Scale Industries

ANY one called upon to review the engineering industries in India can fall back on a solid measure of achievement in the last one decade and feel stimulated by the unambiguous prospects held out for the future. At the Engineering Conference at Calcutta, Mr the Engineering Union Minister of Industry, Manubhai Shah, Union Minister of Industry, could give a heartening picture of the growth of this basic sector of economy in all its major departments. The latest annual increase in the output of light electrical industries has been most satisfactory. Storage batteries show a 46 per cent increase, house service meters 43 per cent, copper wire conductors 16 per cent, winding wires 45 per cent, radio receivers 20 per cent, and electrical fans 51 per cent. In less than a decade production in this department of engineering industries rose from Rs 50 millions in value to Rs 250 millions per annum. Encouraged by this proud measure of progress and considering the growing demand in the country, the Government seem to be now thinking of raising the targets by about 50 per cent over what is envisaged in the Second Plan. There are a few big gaps between current production and targets. It is hoped that most of these will be covered before 1961.

The progress of the light mechanical industry has in respect of a few items, even surtripped the light electrical industries. The output of ball bearings in 1957 is 60 per cent over that of 1956 and of water meters 90 per cent more. Bicycle parts have recorded an increase of 50 per cent and razor blades of 37 per cent. Against Rs 20 millions worth of goods in 1948, the production in 1957 was valued at Rs 350 millions.

For heavy electrical industries the annual increase of production during 1957 has averaged 35 per cent and the total production is valued at Rs 285 millions against Rs 48 millions in 1948. Here the gap between the latest annual figure and the target set for the Plan is unduly heavy and is of the order of Rs 320 millions.

The performance of the heavy engineering industries is much more impressive. In 1957, the production touched Rs 500 millions in value against Rs 60 millions in 1948. Indigenous production of components for trucks, jeeps and cars averaged 50 per cent and in particular cases, it has gone up to 60 per cent to 65 per cent.

The two spheres in which India has to travel almost the whole distance yet are machine tools and machinery building industries. For the first, the record is not completely blank. In 1957 Rs 35 millions worth of goods were produced. In another three years the annual production is scheduled to reach at least Rs 100 millions in value. The public sector is very much in the picture and Mr Manubhai Shah hopes that production in this sector, which last year was about Rs 20 millions in value, could be raised to Rs 60 millions in value by the end of the Plan period. With the establishment of the machinery building industry, the manufacture of structural like travelling cranes, mobile cranes, under frames and heavy bridge sections will have to be taken up.

The country's need for heavy machinery and capital goods is indicated by the import figure of Rs 1,500 millions in 1957. A part of the requirements of textile, sugar, jute, cement and various other types of machinery is now being produced indigenously but being a comparatively new development, the entire value of production has not extended beyond Rs 35 millions. The heavy machinery projects sponsored by the Central Government and enlisting the collaboration of foreign finance and technical skill on a very large scale will be the foundation of the entire engineering industry for the future. It is noteworthy that Britain, Russia, Germany and Czechoslovakia are participating in this field. From the point of view of industrial production, generally, these heavy machinery plants would mark a vital turning point.

While the huge steel and machinery plants and the industries generated and fed by them impart a new tempo and tone to the development of the economy, the growth of the small scale industries will have to be regarded as of even greater significance, in view of the relatively larger employment potential they hold. In the Second Plan Rs 2,000 millions has been set apart for the development of these industries. Hitherto, mostly in a neglected state, these industries have now been provided with a general climate in which it is easy for them to pick up and thrive even in open competition with the large scale producing units.

At the Central and State levels a vast net work of new establishments has come into being, each with its own specifically allotted range of functions and responsibilities and all linked together in terms of the common purposes of solving every detailed problem of these small scale industries and rehabilitating and expanding them on a firm and secure foundation.

Mainly the concern of the State Governments, these industries are being helped by the Centre through innumerable ways. The Union Government have undertaken to provide direct financial, technical and marketing assistance through independent organisations, boards and corporations, in addition to taking a hand in the execution of schemes of development. That in this particular field, the cooperative set up is making satisfactory headway is evidenced by the fact that over the last ten years, industrial cooperatives have increased more than fivefold. It is not alone the industrial units as such which are being helped by the new organisations. The traditional artisans and individuals who came forward either as trainees or as small entrepreneurs are also offered opportunities for rehabilitation, a new start or a place in the schemes which are being projected or executed all over the country.

It needs scarcely to be emphasised that the economic aspirations of the newly awakened masses of India could be fulfilled adequately only through the development of small scale industries and by proper rehabilitation and expansion of agriculture. In the Community Development Projects and Extension Block areas, both are being striven for on a coordinated basis. Mr Manubhai Shah, in his address

Indian Finance

Established 1928

February 1, 1958

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

to the Small Scale Industries Board held at Calcutta, pointed out how the stage has now been completely ready for intense efforts on the part of the State Governments.

During the last three years, the State Governments on the whole have displayed an awareness and enthusiasm. But all the impediments have not been got over. There are still procedural delays in the grant of funds; there is still fear in the minds of both the independent artisan and the small industrial owners that they are being led into uncertain channels. Above all, the problem of marketing has not yet been fully met.

At present for the engineering and the small scale industries alike, there are two main problems on hand. One is the shortage of raw materials and the other the need to develop a steady and stable foreign market. To the extent that the small scale industrial units are also being integrally associated with the bigger engineering enterprises, both these problems may be said to be mutual.

There are also two ways of looking at the problem of foreign market. From the Government's side, the emphasis lately has been toward even overlooking the pressure of domestic demand and cultivating the markets abroad. For the manufacturers, the policy might involve some amount of self-denial. As long as these industries have virtually to depend on a balanced offtake between the domestic and foreign buyers, the present requirements of foreign exchange will have to be understood as a variant of a long-term consideration as well. For engineering goods, international competition will be much severer than for almost every other item of exports from India. For small scale industries, which have special artistic or cultural appeal, there will be no such handicap.

Insufficiency of pig iron and steel, which holds up the pace of expansion in engineering output, is expected to continue at least for another year. It is generally hoped that in 1959 domestic production and imports, the latter necessarily at a declining rate, would together be sufficient to feed all the industries in full.

Eavesdropper adds:

It did one's heart good to hear Mr Manubhai Shah, Union Minister for Finance, giving, at the conference of the Engineering Industries convened early last week by the Federation of Indian Chamber of Commerce and Industries in Calcutta, an impressive list of their performance as well as their plans for further progress with the Government playing the role of a sympathetic pater familias. First of all, he referred to the need for caution in the use of steel which is in short supply and likely to remain so for some time more. The engineering industries, he said, had progressed in this country at a faster pace than any other.

As for machinery to manufacture machinery, he said that remarkable strides had been made in the local manufacture of textiles, jute, sugar and various other machinery, the value of it all being at present about Rs 350 millions. But, as against this, the 1957 imports cost in

foreign exchange about Rs 1,500 millions. In Ranchi, he announced, the central heavy machinery building plant had been established with Russian collaboration. A foundry forge plant at the same place would be shortly established with Czech assistance. At Durgapur, a heavy mining equipment plant would be set up with Russian aid with a cost of Rs 300 millions to produce about 30,000 tons of mining equipment a year. British collabora-

ECAFE: Problems of Agricultural Development

THE economic development of the underdeveloped countries of Asia and the Far East is to all intents and purposes a question of lifting the present depressed nature of agricultural production in these countries. Development in other sectors itself is dependent on the stimulus imparted to them by the increasing quantities of food and raw materials which an expanding agricultural production makes possible. In the present day advanced countries of the West, the industrial revolution had in almost all cases been preceded and its pace had been determined by the revolutionary changes introduced in the techniques and methods of cultivation. In the countries of Asia and the Far East, the need for particular attention being given to agricultural development rests on the lopsided orientation of their economies. Apart from the preponderant role of agriculture as the major source of income and livelihood to the people of the region and the need to ensure sufficient supplies of foodgrains for the growing population, which in themselves are overriding considerations, calling for planning of agriculture, the problem of balance of payments, with which development is intimately linked in these countries, is amenable to solution only on the basis of increased agricultural production since the export trade of many of the countries is still dominated by agricultural products.

The need for keeping in view considerations of balanced growth in the various sectors of the economies of these countries is the subject of a special study in the November issue of the United Nations Economic Bulletin for Asia and the Far East. The chief elements of an expanding agriculture are increasing internal demand, an urban population, improved communications, and agricultural raw materials, all of which are linked up with the pace of development in the non-agricultural sector. Thus, considerations of balanced growth demand a proper dovetailing of the programmes for development in the agricultural and the non-agricultural—especially industrial—sectors in such a way as to promote mutual growth and subserve the overall interests of the national economies. The dangers of development which proceeds in mutual isolation are either inflation and an adverse balance of payments on the one hand or stationary and even reduced levels of income to the farmers on the other.

So, various considerations such as that of ensuring adequate supplies of food for the underfed population of the region, producing more raw materials for domestic industry, and making the maximum contribution to export earnings highlight the necessity for immediate improvements in agriculture. If these conditions are to be created, evidently agricultural development has to be pushed to that point where the peasant would be left with a surplus to be sold in the market after his own needs for food have been satisfied. This

ration, he disclosed, was being sought in erecting a heavy plate and vessels works as also German help in erecting a heavy machine tool plant. The establishment, at Bhopal, of a heavy electrical plant was already under way with the assistance of the Associated Electricals, he said. All this certainly provided a much-needed boost to our industrial morale, but the thing to keep in the forefront of our minds is the little done and the undone vast.

would considerably help swell the transactions in both the industrial and agricultural sectors and the volume of exchange between the two. The essence of economic development in these countries lies in giving stimulus to such mutual contacts between agriculture and industry.

The Bulletin has distinguished between four categories of measures in a scheme of improved production. The first one is aimed at directly increasing production and includes measures such as irrigation, land development and reclamation, use of fertilisers, and eradication or control of pests and disease. The second category of measures embracing extension, community development, basic surveys and research is intended to provide services as aids to production or to future planning. The third has to do with incentive measures such as price policies, subsidies and tax concessions while, fourthly, institutional changes such as agrarian reform, and credit and marketing facilities are also considered important.

The technical means for increasing agricultural production referred to in the Bulletin are the familiar ones of extensive and intensive cultivation. Though the limited scope for extending cultivation by means of reclamation, irrigation and drainage has been recognised, the longterm significance of such schemes has been emphasised. Intensive cultivation offers immediate possibilities for raising agricultural production per acre and also entails less of expenditure on investments and research. The Bulletin has pointed to the complicated nature of a choice between the various technical means, an optimum combination of which could only be found out on the basis of detailed studies of natural conditions and thorough research.

The Bulletin has also called for the need to adopt the cost and benefit analysis in the appraisal of various projects. The financial analysis, which has so far held the field, has been found to be inadequate for the purpose of evaluating between various projects since it gives only part of the story and has only limited scope. The cost and benefit method is held to be of great help in giving a clearer understanding of the economic implications of various alternatives.

In respect of incentives, the main recommendation is in regard to price policies with a view to guaranteeing adequate price levels, and offering special incentives to the producer to increase the output of certain products on which special emphasis is placed in the developmental plan. The case for a guaranteed price level rests on the low elasticity of demand for food products. Under such conditions of demand, even a small excess of supply of food crops over effective demand is likely to cause a disproportionate fall in prices. Such an incentive price level, if it is to have the desired effect on production, should be fixed at a level which, in the judgment of the

Indian Finance

cultivators, is sufficiently high in relation both to the prices of goods bought by them and to the prices of other agricultural products that compete with the desired product for the use of land, labour, and production requisites. At the same time, the agriculturists should also be assured of access to improved methods of cultivation such as improved seeds, fertilisers, etc, in the absence of which even an incentive price level would be unable to bring about increased production. The stagnant position of rice production in Ceylon, even in the face of an incentive level of price, is a warning against complacency in such matters.

A scheme of financial subsidy offers an alternative to a system of incentive prices for agricultural products. This has been a normal feature of agricultural planning in many of the countries of this region. Such subsidies could be given both for extending cultivation and for increasing yield per acre. In the former case, an acreage subsidy may be given in order to increase the area sown to a particular crop while, in the latter case, the subsidy may take the form of below-cost sales by Government of the ingredients of an improved system of cultivation and which substantially contribute to a rise in productivity. The main attraction of a subsidy to a government which administers it is that it obviates the increase in the price of the product, which is not the case in a scheme of guaranteed price level. But a system of subsidies is not without its crop of problems, the main objection to it being that it inevitably begets resistance on the part of the cultivators to its ultimate abolition when such a course is warranted by the increased productivity. Another important problem which presents itself in the initial stages is that of determining the most effective level of subsidy consistent with a reasonable level of costs to public exchequer. There is also the problem of maintaining a sound administrative machinery and the need to work out appropriate procedures to ensure timely and fair distribution of subsidies and for ensuring that the benefits are received by the cultivator himself and also that effective use is made of the assistance.

The institutional changes that are considered as having a bearing on increase in production have mainly to do with the question of giving protection to the tenants. Drastic land reforms are indicated by the obsolete and unjust forms of tenancy prevailing in most of these countries. Fixation of ceilings on holdings of lands by owners, sufficiently long periods of lease, rights to compensation for improvement, restriction of grounds for eviction and fixation of rents at reasonable levels are the various measures which a scheme of land reform, if it is to contribute to increased agricultural production, should include. The abolition of landlordism in China is credited with having contributed considerably to the increase in production and to the improvement in farmers' living standards. But such land reform measures enhance the responsibility of the State in the matter of capital formation, since the abolition of landlordism entails the suppression of a class with a surplus of funds which would otherwise have found an outlet in agricultural improvement.

The system of agricultural taxation in most of the countries is also in need of a thorough change on the basis of equity and yield. The present systems of taxation have impinged heavily on the meagre resources of the small cultivators while the bigger landlords have been much less severely affected. In this connection, the Bulletin has pointed out that in any system of planned development, the incentive effects of a tax should be evaluated against the increased earning power and real income which may be derived from Govern-

February 1, 1958

ment expenditure not only by way of direct grants, price supports and subsidies to agriculture but also from various essential economic and social overheads. The role of an improved system of marketing and a reorganised source of credit to agriculture in contributing to a high level of production is also prominently mentioned.

As regards allocation of resources between various projects, apart from policy considerations which broadly determine such allocations the use of technical criteria is held to add precision to calculation in respect of such allocations. A series of such criteria such as cost and benefit analysis, capital output ratio, method of resources budgeting and commodity balance, the principle of "accounting prices" are indicated. The Working Party on Eco-

nomic Development and Planning in Asia and the Far East is of the view that such tools and techniques of analysis might prove highly useful for some particular purpose and that it would, therefore, be best to combine them when applying them in practice.

The Bulletin has also pointed to the tendency for implementation of programmes to lag behind and has attributed this to the shortage of trained technical personnel. The degree of success in implementation is also dependent on the care which has gone into the timely preparation of detailed programmes and the extent to which the development activities of various departments have been coordinated. Procedural delays in the matter of granting financial approval are also a limiting factor.

The Role of Small Business in the American Economy

By ROBERT B. ANDERSON

SMALL and independently owned and managed businesses are fundamental to the American economy. Our great economic growth and our high standard of living have been based upon new production processes and improvements in efficiency, as well as on the availability of capital to provide machinery and equipment. We need to have as many centres of economic initiative as possible to give the greatest opportunity for new ideas and new techniques to be developed.

Each separate business in the country provides one more element in our system of competition. Fair competition—and the avoidance of any semblance of cartel or trust arrangements—have been important features in our economic development. We must continue to expand our competitive economic system. The ready opportunity for new businesses to be formed and to grow is a major element in a competitive system.

A soundly growing economy provides abundant opportunities not only for established firms to expand and prosper, but also for new businesses to be safely started.

In this respect, Federal Government policies that promote confidence on the part of investors, businessmen, and consumers, and that encourage the spirit of free enterprise by preserving and strengthening competition, constitute in a broad sense the most powerful aid that can be given small business.

This Administration's recognition of the importance of maintaining a healthy and progressive business population has been evidenced in many ways.

In 1953 legislation was enacted establishing the Small Business Administration, the first Government agency in our history devoted exclusively to financial assistance and many other forms of aid to small business. This agency now has about 50 regional, branch and sub offices in the continental United States, Alaska, Hawaii, and Puerto Rico.

The extent of its financial assistance to thousands of small businesses is indicated by the fact that through October 31, 1957, it has approved more than 8,000 businesses loans aggregating more than \$374,000,000.

In addition, this agency conducts technical assistance programmes covering a broad range of small business problems. It provides counseling services on financial and general management matters, on the development of new products and markets, and on Government procurement contracts.

The Small Business Administration prepares and distributes publications dealing with the management problems of small firms. It issues other publications dealing with Government purchases and specifications. It consults and cooperates with other Government departments and agencies to make sure that small business receives a fair proportion of Government purchases and contracts for supplies and services.

These activities in the field of technical assistance are probably of at least as much value to small business as the loans granted.

In addition to the Small Business Administration, various services of the Department of Commerce, the Atomic Energy Commission, the Department of Labour, and the Government Services Administration (a purchasing agency) actively assist small business. Special small business programmes have been set up in these agencies and also in the Department of Defence, the International Cooperation Administration, the Federal Trade Commission, and the Anti-trust Division of the Department of Justice.

To maintain a continuing study of small business problems, to develop new programmes

and to coordinate the activities of departments and agencies in this field, the President on May 31, 1956, appointed a special Cabinet Committee on Small Business.

This Committee after careful study made a report to the President listing fourteen recommendations.

Some of these recommendations have already been carried out, specifically:

(1) A thorough review of Government procurement policies and practices for the primary purpose of assisting small business, resulting in a comprehensive recommendation for amendments to the procurement laws which is expected to be followed by a legislative proposal in the near future.

(2) The issuance of a Government-wide regulation prescribing policies and procedures with respect to advance or progress payments to small suppliers.

(3) A Conference on Technical and Distribution Research for the benefit of small business which was held in Washington in September, 1957.

(4) A study by the Bureau of the Budget for the purpose of simplifying the reports and statistics required of small business.

Legislative proposals with respect to other recommendations are now before the Congress.

In considering the question of adequate financing for small business, I am impressed with the fact that there appears to be a number of channels through which credit is now available.

These include the private banking system, insurance companies, factors and other finance companies, suppliers, state and local development credit corporations, and other government agencies. In addition, the Federal Reserve Banks have authority to make loans. Finally, the Small Business Administration exists for the purpose of providing financial assistance which is not otherwise available on reasonable terms.

The Federal Reserve Board is undertaking a study of the whole problem of financing small business for the purpose of determining where the gaps are, if any, and how those gaps can best be filled. The study they are undertaking will be extremely thorough and will develop not only the facts as to the actual use of credit facilities but also the attitudes and experience of both lending institutions and small business recipients of or candidates for financial assistance.

Pests, rat and other

RATS are a universal pest. If Aesop cuts them out of his fables—which we suppose is the fact—there is no reason to conclude that they were not there in ancient Greece. One tends to think rather that the old fabulist was so pestered by them that he decided in a mood of vengeance to maintain a one-man conspiracy of silence over them. But his Indian counterpart, Vishnusarma, author of the East's greatest bestiary, the Hitopadesha, seems to have held very different views, for, he gives us many rats. One group, as many will recall, wreaks such havoc on a hermitage that its owner is compelled to employ a cat to get rid of the trouble-makers. Poor thing! It makes such quick short work of them that the hermit, no longer in need of its services, sacks it—an example of the ingratitude of employers. Elsewhere—and this shows how generous the Indian was by comparison with the Greek—Vishnusarma gives us an honest rat which repays a good turn by nipping the cords of a net in which a lion, an erstwhile benefactor, finds itself enmeshed. Since those days, the doings of rats have been depicted in many places, including the Pied Piper of Hamelin and the Walt Disney cartoon strips, and almost

invariably in an unfavourable light. Quite naturally, they are such a nuisance. Not too long ago, there was a newspaper report that they had raided a government excise godown and consumed two hundred bottles of country liquor: but, on the consequences, it did not proceed to say anything, leaving us to guess what awful things they must have done, thus primed, to the poor cats in the neighbourhood. And at this moment these tiny rodents are causing a crisis for the Calcutta Corporation which, we are told, cannot find enough rat-catchers, ostensibly because the rate offered by it comes short of the "cost of production". If they go unmolested, then, one fears, with the mosquitoes multiplying thick and fast and the flies vying with them while the small-pox and the cholera are on the way, Calcutta will be able to make a bold bid for the title of the world's least habitable city. Nobody can pretend, especially after the recent mayoral admission as to the prevalence of corruption in the Corporation, that it has much reputation to lose. But it seems that this venerable body will have to work harder at doing less, before what little remains of it becomes nought.

Holidays and Productivity

One of the incidental conclusions which the U.N. Sub-Commission Report on the protection of minorities has arrived at is that too many religious holidays have affected efficiency and productivity in India and Egypt. Dr A. Krishnaswami, M.P. who submitted the Report in his capacity as Rapporteur to the Sub-Commission feels obliged to make another observation, that because a State did not give religious holidays or cut down a few, it could not be considered discriminative, thereby indicating the nature of the compulsions behind such holidays.

The conclusion on productivity is, apparently, not the result of any detailed study of that particular problem as such, but more or less a general inference drawn from the fact that there are too many holidays in some countries compared to many others. In India, it is, of course, true that there is scope for curtailment on the worker's holidays, if public sentiment can be made reconciled to it.

The direct linking of the number of holidays and productivity, however, bears the risk of overlooking several other factors, such as comparative hours of work, differences in climate, the extent of mechanization as an aid to human labour and the enforced leisure which the worker has to undergo in many

occupations, particularly in agriculture. The factory worker in India has a longer working day than his counterpart in most Western countries and yet per capita productivity is often not even half of what obtains in those countries.

The occurrence of holidays is no answer for this phenomenon. In the United States and in many countries in Europe, Saturday is a holiday for most industries. In India, Saturday is a full working day for factories and thus has less number of total holidays. The impact of holidays on productivity and efficiency will therefore, have to be regarded as somewhat obscure. At any rate, there does not appear to be any clear pointer to the conclusion presented in the U. N. Sub-Commission Report.

★

Holidays or Hollow Days

India and Egypt have much that is common. Both have ancient civilisations, a strong Prohibitionist slant, a shared faith in Panch Sheel and, it now appears, too many religious holidays. This last every employer in India has felt to be a positive hindrance to efficiency and production. Dr Arcot Krishnaswami of India recently submitted a report to the UN Sub-Commission on the protection of minorities and prevention of discrimination, and in the course of the discussion that followed Mr Mohammed Awad of Egypt, Chairman of the Sub-Commission pointed out that too many religious holidays are a common bane of Egypt as well as India. Indeed, it is scarcely possible to look at our calendar without being shudderingly aware of the tyranny of the "red figures", and this must be Egypt's experience, too. Religion, when it was at full tide, was a strong productive force. The Egypt of the pyramids, Renaissance Europe and the India of the Ajanta caves produced miracles not only in architecture and painting, but in every sphere of art and thought and religion was then a strong spiritual yeast. But in its present-day decline it has become a sterilizing factor and a disincentive to work much as we may regret this. Just think of the large number of man-days lost to our mills, factories, offices, law courts and educational institutions through holidays and what it means in terms of loss in national product. In India the situation is complicated by the existence of a large number of religions, each of which has its own quota of holidays. With the result that quite unnecessary overheads are incurred on work on such days, courses remain incomplete in schools and colleges and unwieldy arrears accumulate in courts. The worst of it is perhaps the encouragement of a habit of indolence in a country not remarkable for its industriousness, and too many holidays are in any case inconsistent with planning for progress.

★

Science of Weather

With the development of air travel all over the world, the importance of meteorology as an aid to human

welfare has gone up. That the traditional uses of the science are still intact, particularly in countries where agriculture continues to be largely dependent on the weather. It is also conducive to restoration of man's faith in nature to be told by authoritative experts that the energy needed to create a small quake is equivalent to thousands of atomic explosions.

At the same time, it is somewhat disturbing to hear from Dr W. Bleeker, the President of the Commission for Synoptic Meteorology saying that for correct forecasts, the knowledge of the science must be combined with instinct. Possibly, the function of instinct will become less and less conspicuous in future. The instruments for conveying weather news have become more numerous and more efficient in recent years. It is now easy to reach these news even to the remotest villages through the radio, with the help of which the pilot and the farmer alike are able to anticipate changes in the weather and take whatever precautions possible.

★

Aid Developments

Last week's discussion in New Delhi between Finance Minister Mr T. T. Krishnamachari and Mr J. Burke Knapp, Vice President of the World Bank raised hopes of a further loan to India from that body. The immediate subject of discussion between the two was a loan of about Rs 50 crores for major port development works and power and other projects against the background of the country's general economic situation. Up to July last year the Bank had advanced to India loans totalling about Rs 160 crores for the benefit of various power projects and the railways. Mr Burke Knapp also met the Union Ministers for Commerce and Industry and Irrigation and Power. Mr S. K. Patil, Minister for Irrigation and Power, is reported to have stressed the need, in his discussion, for a further loan of Rs 15 crores towards the development of the Damodar Valley activities and the Koyna Project in Bombay. Mr Burke Knapp is accompanied on his present tour by Mr J. R. Goodman of the Bank's Operation Department for South and West Asia.

The Government of India are reported to have approved last week a comprehensive Rs 51 crore programme for the manufacture of drugs, chemicals and pharmaceuticals subject to the availability of foreign collaboration and deferred payment terms. In this programme U. K. assistance is conspicuous by its absence, while Soviet and West German aid figures prominently with US aid trailing as a not inconsiderable third factor. It includes the establishment of an anti-biotics plant and a synthetic drugs plant with Soviet collaboration and a plant for the manufacture of intermediaries of drugs, dyes and plastics with West German. US aid is expected to contribute towards a substantial extension of the Pimpri penicillin factory so as to enable it to produce streptomycin and some other anti-biotics. The Soviet-assisted plants constitute the back-

bone of the programme, and it is expected that the Union Government will shortly make a formal request to the Soviet Government—the preliminary informal discussions have already been completed for the necessary financial assistance amounting to Rs 12 crores. The West German assistance in the intermediaries plant will be of the order of Rs 5 crores and that of the American firm of Pfizers and Mercks, of Rs 2 crores. All these plants will be in the public sector and go into production in the current plan period, though they will assume full capacity in the first year of the Third Plan. In full production they will ensure an annual saving of nearly Rs 35 crores in foreign exchange.

★

Crying Wolf at the UN

Mr Aglia Shahi, Pakistan's Acting Permanent Representative to the United Nations, drew the attention of the Security Council Members through his letter addressed to Mr Gunnar Jarring, the President, to the fact that Mr Arthur Lal's latest communication in connection with the construction of Mangla Dam is a repetition of his earlier letter. He further pointed out that, India has not only occupied Kashmir illegally but fortified the area by constructing the Banihal Pass tunnel on the pretext of exporting fruits, etc. He added that the tunnel was constructed so that India could move in its tanks and troops at any time it liked. Mr Shahi alleges also that some six prominent members of the "Azad Kashmir" are in favour of constructing the dam and condemn India as trying to starve the Pakistanis through the "water cut". He then said that a few of those who decried the project were doing so for personal differences with the President of "Azad Kashmir".

Contra-Seasonal Trends

THE returns of the Reserve Bank for January 24 again disclose a decline in Active Note circulation. Occurring as this does in the midst of what should be busy season in full stride, the question must arise as to whether, following upon the re-establishment of a slack season during 1957, there now takes place an abatement or mitigation of busy season rigours as we have experienced them in recent years. That the trends are abnormal is a circumstance which has given rise to conjecture in certain quarters as to whether the national economy is in itself in the midst of, perhaps, sweeping readjustment. In muted whispers, there is talk of the prospect and possibility of recession. Mounting stocks with various industries and the overtaking of supply by demand in other fields where, until lately, shortages had persisted are taken to be ominous straws in the wind.

This feeling of uncertainty has been aggravated by the appearance of soft spots in the American economy and the decline in the interest rates that have taken place in America and West Germany. It is argued that, against the background of recessionary pressures in the countries of the industrialised West, it will prove a more difficult task for the Indian authorities to prevent a downward turn in economic activity. While such a down trend in economic activity will accord with the pruning of the Plan as already been decided upon, we have nevertheless to face up to the paradoxical possibility of recession in the midst of planned development.

It is time that we began to pay serious thought to an analysis of the reasons underlying the fact of a much lower volume of expansion in bank credit as compared to last year. This, of course, is tied in with changes in the other economic indicators. It is the trends that are important and not the specific figures and, therefore, a broad assessment of the position will suffice, obviating the necessity for any detailed analysis of these figures at this stage. That broad analysis will show that Active Note circulation has not risen as sharply as last year, that Scheduled Bank credit has not expanded as substantially, that Bank Deposits are almost static, that borrowings from the Reserve Bank are much lower and that Cash Balances continue to be fairly substantial. These are all, especially as compared to last year, contra-seasonal.

It is all the more difficult to understand why Active Note circulation is not rising as sharply, if regard is had for the fact that, in recent weeks, the pace of import surplus has slackened; for, this means that an import surplus does not now exert, as it did last year, a contractionist pressure upon Active Note circulation. If, therefore, without the benefit of such extraneous contractionist influence, the level of Active Notes has tended to be relatively stable, it could only be because the demand generated in the internal economy has been much less severe and onerous. Again, if this last hypothesis is correct, apparently the only conclusion to be drawn is that there is a slower tempo in economic activity.

However, it would not do to rush headlong to such a conclusion. For, besides the pruning of the Plan, which might account for some element of down swing in the economy, there have obtained during the current busy season two specific factors which are likely to have contributed to a reduction in the demand for funds. Firstly, the drastic import restrictions that have been effective for more than a year began to make their impress felt on the balance of payments only as from, say, October 1957. But, as far as their impact upon trade accommodation is concerned, it is fair to state that a diminution in the stocks of imported goods and, therefore, a reduction in the cost of financing trade began to be evidenced from, say, May 1957. The Reserve Bank breakdown of figures relating to advances to trade, commerce and industry is not at the moment available. It is possible that, when these figures are ready, they will show some element of decrease in the advances to trade and commerce, and by implication we are to understand this as relating to the diminished stocks of imported goods requiring bank accommodation. Secondly, it is generally known in banking circles that the financing of crops has this year got off to a somewhat late start. It is too early to say whether this presages another year of crop failures. Here, again, evidence as to whether crop financing has thus far tended to be on a smaller scale should become available only after some time. Moreover, with the continuance of restrictions on advances against foodgrains, it may be that the demand for funds upon the organised monetary sector has tended to be artificially reduced. Be that as it may, it can be assumed with some confidence that these two factors together would have accounted for some lessening in the demand for funds, which is evidenced in the figures relating to the Advances of Scheduled Banks.

So, judging solely from the point of view of Bank Advances, it would be hasty to imagine that the failure of bank credit to rise proportionately to last year's expansion is a harbinger or index of business retrogression.

However, when we come to the matter of Active Note circulation, and of accretions to Scheduled Bank Deposits, such an argument is not tenable. The fact is, a mitigation of the import surplus notwithstanding, Bank Deposits have proved to be static, whereas they rose considerably last year, and Active Note circulation has been merely creeping up, as against a sharp up trend last year. As far as Bank Deposits are concerned, one possible explanation is that, following the spectacular increase that was registered during 1957, there is now a lull in the accretion of new Deposits. But then, the pace of Government spending has not slowed down. So, the only possible explanation is that the extra purchasing power generated by such Government disbursements is not being dissipated in the purchase of consumer goods. That is to say, in the hands of the non-banking classes, the additional purchasing power, instead of being expended on consumer goods, is being partly diverted to savings. This explanation would also satisfy the present phenomenon of a static condition in the demand for or sale of some consumer goods. Whether it is cotton textiles or sugar, the fact that stocks have been mounting can be interpreted as displaying a disinclination on the part of the non-banking classes to fritter away their newly earned purchasing power on consumer goods. Secondly, in the matter of Active Note circulation, the slower pace of Government disbursements combined with a probable generation of savings in the non-banking classes might possibly account for reducing the rate at which Active Note circulation has expanded during the current busy season.

We have been at some pains to show that the money market indicators lend themselves to a suggestion of a down trend in the economy. But we have also taken the precaution of stating some of the reasons which, while not recessionary, might have caused such changes in the money market figures. What we have now to see is whether, in a developing economy, the danger of recession really exists. That threat is not quite consistent with a state of affairs in which enormous Government disbursements are adding to basic purchasing power. On the other hand, in an era of planning such as we in India are living, as we have pointed out on earlier occasions, inflation is not the only threat—there is also the recurrent likelihood of production in some fields, and for temporary periods, overtaking demand. We are of the view that we are fast approaching that stage, when the supply of quite a number of commodities is in sight of exceeding indigenous demand. Besides the two commodities that we have mentioned in the course of this article, it may at this stage draw the attention of readers to the fact that Government consider the position in cement to be so comfortable now as to remove the system of licens-

ing for many categories of construction. It is not improbable that, in the future, we shall have a similar temporary excess production in such commodities as paper and steel—yes, even steel. In the not so long run, demand for such commodities temporarily in excess supply is bound to pick up. But it is for the monetary authorities of this country to take the appropriate steps to ensure that the temporary surpluses in availability are not permitted to sow the seeds of recession. To put it briefly, the problem before the Indian monetary authorities will be to differentiate and distinguish between temporary overproduction and recession; and they will also have to arrange for helping industry over the interim period during which there might be overproduction. This, of course, must be done by liberalising advances to the industries concerned.

★

Sharp Rise in State.

Bank's Deposits

THE returns of the Reserve Bank for the week ended January 24 disclose a decline of Rs 6.62 crores to Rs 1533.63 crores in Active Note circulation. Rupee Coin also returned from circulation for Rs 0.66 crores. In the result, the Reserve Bank's cash in the till has improved by Rs 7.28 crores to Rs 18.04 crores.

There is no evidence of deficit financing, but the Central Government's balances have been marked up by Rs 10.32 crores to Rs 62.43 crores. This is presumably to some extent linked with the sharp decline in Bills Payable, which are lower by Rs 15.71 crores at Rs 20.33 crores. It may be recalled that, in the last week, a rise has occurred under Bills Payable, necessitating deficit financing by Central Government. So, it is possible that certain transactions have taken place during the week to restore Bills Payable to their erstwhile figure by the payment to the Central Government of some amount. On the other hand, State Governments are more unfavourably placed vis-a-vis their balances with the Reserve Bank to the extent of Rs 8.50 crores, of which

Rs 7.50 crores is accounted for by a decline in Deposits of State Governments and Rs 1 crore by increase in their indebtedness.

The Scheduled Banks have appreciably improved their position vis-a-vis the Reserve Bank. Their Reserve Balances have been marked up by Rs 8.64 crores at Rs 73.84 crores; but this is in large part due to the State Bank, whose cash on hand and with the Reserve Bank rose in the relevant week by Rs 7 crores. Similarly, the Other Loans and Advances of the Reserve Bank have declined sharply by Rs 10.72 crores to Rs 61.64 crores. Of this, nearly Rs 7 crores is attributable to the State Bank. Lastly in this context, the Reserve Bank's advances against usance bills stand reduced by Rs 9.28 crores at Rs 21.37 crores.

Investments are more or less unchanged at Rs 255.07 crores. Depletion in Foreign Balances has worked out to Rs 2.31 crores during the week, with Balances Held

Abroad now placed at Rs 39.89 crores.

The return of the State Bank for January 24 incorporates the transfer to Reserves from the profits for 1957. This and other adjustments relating to profits of the last year have reduced Other Liabilities from Rs 5.02 crores to Rs 0.98 crores. For the second successive week, the State Bank has had a steep increase in Deposits, the latest rise being one of Rs 20.53 crores to Rs 391.58 crores. These accruals have enabled a reduction in borrowings from Rs 8.15 crores to Rs 1.35 crores. In spite of such reduction in indebtedness, Cash Balances have improved by nearly Rs 7 crores to Rs 31.62 crores. Investments are largely unchanged. Advances show a rise of Rs 3.20 crores to Rs 187.16 crores.

According to the return of Scheduled Banks for January 17, Deposits have risen by Rs 12.72 crores to Rs 1403.01 crores. This, of course, was largely due to the State Bank, which in the relevant week had shown a rise in Deposits of nearly Rs 8 crores. But the total of Advances has risen by Rs 9 crores to Rs 890.17 crores. A little over Rs 3 crores of this is traceable to the State Bank. While borrowings from the State Bank have been marked up slightly, indebtedness to the Reserve Bank is lower by Rs 1.84 crores at Rs 33.42 crores. Cash Balances are practically unchanged at Rs 153.92 crores.

Disinflationary Policy Reaffirmed

By Paul Einzig

THERE is a distinct revival of strength in sterling and in the gilt-edged market. It is largely attributable to the simultaneous termination of political uncertainties arising from the Bank Rate Leak allegations and from the resignation of Mr Thorneycroft. The former cause for uneasiness came to an end on January 21st with the publication of the Tribunal's Report which emphatically stated that there was no improper disclosure of confidential information and rejected all allegations to the contrary directed against Members of the Government and bankers. Even though the Opposition has every intention of misinterpreting the Report and the evidence in a way as to provide material for an attack against bankers and speculators, there is nothing in the findings which would weaken the Government's position in the country. Hence the relief that found expression in the firmer tone of sterling and of Government securities.

What is much more important is that the danger of a split in the Conservative Party resulting from Mr Thorneycroft's resignation, is now definitely past. It is true, Mr Thorneycroft and the two junior Treasury Ministers who resigned with him feel very bitter and criti-

cal towards the Cabinet for its failure to back up their economy drive. They have a very considerable following both in Parliament and in the country. But Mr Thorneycroft's resignation speech on January 23 made it absolutely clear that he intends to remain a wholehearted supporter of the Government. Indeed, largely as a result of his speech the Motion of Confidence was passed by an unusually large majority.

Mr Thorneycroft and those who share his views will of course criticise the new Chancellor of the Exchequer if he does not display sufficient zeal in keeping down expenditure. Judging by the statesmanlike tone of Mr Thorneycroft's resignation speech it is safe to take it for granted, however, that there can be no question of any "revolt" similar to the one staged by seven Conservative Members of Parliament who had expressed their disapproval of the withdrawal from Suez by resigning from the Conservative Party and by occasionally abstaining from supporting the Government with their votes. No matter how critical Mr Thorneycroft and his supporters will be of the inadequacy of the economic drive, they are certain to give the Government their full support on every occasion when such support is essential. This means that even if the Government should lose a few by-elections it would retain a safe and dependable majority.

The attitude of Mr Thorneycroft and his supporters in voting for a Government whose financial policy they consider inadequate is perfectly reasonable and understandable. For in his speech during the debate on January 23 the Leader of the Opposition Mr Gaitskell made it quite clear that on assuming power a Labour Government would embark on a policy of economic expansion regardless of costs. Such a policy superimposed as it would be on the existing inflationary background, would greatly accelerate the pace of inflation. This means that even though Mr Macmillan's Government does not go as far towards Budgetary economy as Mr Thorneycroft would like them to go, the alternative resulting from a defeat of the present Government, would be the complete abandonment of any effort to resist inflation.

The declared policy of the Socialists to disguise growing inflation behind a screen of physical controls. Both Mr Gaitskell and the prospective Chancellor of the Exchequer in the next Labour Government Mr Harold Wilson, reaffirmed their intention to do away with the credit squeeze and replace it by import restrictions to prevent domestic inflation from affecting the balance of payments. They refuse to see that such a policy is bound to prove to be futile under the Labour Government from 1945 to 1951.

Inflation would be inevitably detrimental to exports not only because prices of many goods would cease to be competitive abroad but also because inflated domestic demand would divert goods from export to the domestic markets. This

means that in spite of import controls the balance of payments would be gravely affected, especially as this is a limit beyond which the import of food and raw materials could not be curtailed. Before very long too much money would be chasing too few goods and in order to ensure a fair allocation of the inadequate supplies domestic controls over raw material allocation and rationing of food stuffs would have to be re-introduced.

If the policy of disinflation pursued by the Government is open to criticism, it is on the ground that it does not go far enough. It has actually produced some impression on wage claims which are no longer pressed with the same vigour as before. There has been no supreme test case so far as the trade unions do not appear to be keen on bringing matters to a head. They show an unusual degree of willingness to submit their claims to arbitration or conciliation. Provided that the new Chancellor of the Exchequer Mr Amory, succeeds in convincing them that he would be no less tough than his predecessor had been there is some hope that excessive demand would not be pressed unduly.

On that ground alone there is now justification for some degree of guarded optimism. An additional ground is the growing evidence of a return to cheap money in other countries. During the past week there were bank rate reductions in the United States, Germany and Holland. A contrast between the inflationary policies indicated by these changes and the continued disinflationary policy in Britain justifies some optimism regarding the prospects of sterling. Needless to say depression in the commodity producing countries of the Sterling Area, combined with business recession in the United States, is liable to affect unfavourably the Sterling Area gold and dollar reserve. Provided, however, that domestic inflation is handled effectively Britain has no cause to be unduly pessimistic about the outlook.

Unfortunately temptation to take the line of least resistance remains as strong as ever. Addressing the shareholders of Lloyds Bank Sir Oliver Franks put forward the proposal of a large international loan for the purpose of reinforcing the gold reserve. Such a solution would mean the end of the disinflationary efforts. Whereas it is not for the fear that the sterling crisis would return next Autumn the Government would have relaxed its disinflationary drive as soon as sterling rose above parity and as soon as the outflow of gold became reversed. Such disinflationary efforts as it would maintain would encounter increased resistance by those who being incapable of seeing beyond their nose would prefer to enjoy the fruits of the false security conveyed by the appearance of thousands of millions of borrowed dollars. Given also the insatiable appetite for dollars of the Sterling Area countries it would not take long before the easily acquired dollars would become easily depleted. —(Copyright).

Inland Water Transport in Bihar

The interim report of the Bihar Inland Water Transport Services Inquiry Committee, known as the Mitra Committee, has just been published—rather, belatedly, since the Ganges Service of the Joint Steamer Companies has already closed down at the beginning of this month and there are now no steamers plying in Bihar. The Committee state that they are convinced that genuine hardship will be experienced by skeletal form. They point out that the only railway bridge across the Ganga in Bihar is still under construction at Mokameh Ghat and will not be ready until the end of 1959, though there are railway ferries at Patna and certain points further down the river. In the absence of steamers movement from one bank to the other above Patna is entirely dependent on country boats, which are not very safe, particularly in the monsoon.

The Committee recommend a traffic survey and in the meantime that the Ganga-Brahmaputra Water Transport Board should endeavour to maintain the steamer services, including the triangular service between Calcutta, Bihar and Assam, through a private agency with assistance if necessary, that suitable craft should be obtained from the Joint Steamer Companies, selected with the help of experts, and that the Companies' floating workshop at Patna should be handed over to the Government.

Inland water transport, in North East India has been reviewed a number of times in recent years. There was the Otto Popper mission under ECAFE in 1950, and a further international survey in 1951. More recently the Ganga-Brahmaputra Water Transport Board was established with the object of developing and co-ordinating transport on these two rivers. Various plans have been mooted for improving wharfage facilities, widening channels, river control and deepening of waterways to make the Ganga navigable, as it used to be, up to Benares and even beyond. Then there is the plan to make the Bhagirathi permanently navigable, instead of for 5 or 6 weeks only at the height of the monsoon, and thus provide a direct route from Bengal to Bihar and avoid the complications of border control, customs, passports, etc. on the West Bengal-East Pakistan border. And as recently as December the Union Minister for Transport and Communications announced a new advisory body to co-ordinate road and inland water transport in the Transport Development Council.

With all this expert investigation, the problems of river transport in Bihar and possible solutions should by now be fully known, and it seems rather strange that the Inquiry Committee should at this late stage be recommending a traffic survey. It has been known for a long time that the services of the Joint Steamer Companies in Bihar were uneconomic, and talk of closure has been raised at various times for the last six or seven years. The Companies point out that there is no regular traffic for their services in Bihar and that between Bihar and Calcutta the traffic was almost entirely one-way, there being little to offer on the upward journey. The regular traffic with Assam and East Bengal at no time had its counterpart in Bihar, where the people were served by railways on both sides of the river and were not in such need of river transport as the less accessible districts of Assam and East Bengal. The Biharis maintain that, had the Steamer Companies offered a more frequent and regular service, better use would have been made of it and it could have been made a paying proposition. There was, however, no chance of testing this argument, for in recent years the Steamer Companies have never had enough vessels to increase their service. The steamers plying in Bihar were mostly old vessels, but the Companies lacked the finance to purchase new vessels and Government, it seems, have not been willing to assist with a loan. Modern vessels run on diesel oil are much more economical than the old steam vessels, the efficiency of which decreased as their upkeep becomes more expensive. Whatever the possibilities for development of river traffic in Bihar, it is clear that without new vessels the problem of river services cannot be tackled properly.

The Inquiry Committee recommend obtaining suitable craft from the Steamer Companies and operating them through a private agency under the Ganga-Brahmaputra Water Transport Board. The Union Minister for Transport and Communications said in December that he had every hope that some enterprising industrialist would come forward and take up the operation, but so far no one sufficiently enterprising has been found. Probably a small entrepreneur with less overheads than the Joint Steamer Companies could run such a service, even with the old vessels, but how much longer will they last and how are they to be replaced? It could only be a stopgap arrangement unless new vessels are built or purchased. There is no reason why suitable vessels should not be built in Indian shipyards, if only the finance is forthcoming.

The other serious problem raised by the withdrawal of the Joint Steamer Companies from Bihar is that of river conservancy. The Companies, with only a small subsidy from the Bihar Government, have for years undertaken all the river conservancy work in Bihar. A river such as the Ganga requires constant control of

channels, surveys, pilotage and maintenance of lights. The Steamer Companies employed quite an army of bandallers who year by year trained the channels, and lightmen who tended the lights, in addition to expert river surveyors and pilotage staff. This organisation is also dispersed with the closure of the Ganges Service, and unless the Government steps in to maintain river conservancy—which no small entrepreneur could afford to do—the river will quickly get out of control, and instead of plans for making it navigable in its higher reaches, we shall be faced with the prospect of it becoming unnavigable even in the stretches operated hitherto, so that it will be only fit for country craft and dangerous even for them.

Tobacco Production and Trade

Though a newcomer to our country, tobacco has found the soil and climate in fairly extensive areas quite congenial to its growth. As an important source of revenue, it has also qualified for special attention by Government. The Indian Central Tobacco Committee has been established with a view to make available to tobacco growers in the country the benefit of research and generally to help them tackle problems connected with the raising of the crop. Quite recently, a tobacco export promotion council has been set up to take care of the needs of the commodity in the export field.

Some idea of the importance of tobacco to the national economy can be had from the fact that in 1955-56, the excise revenue from tobacco has been to the tune of Rs 35.64 crores out of a net Union excise revenue of Rs 144.75 crores. In the same period, it has earned foreign exchange to the value of Rs 13.83 crores through exports.

Production of tobacco has considerably increased in the past year. Whereas in 1955-56 area and production were 921,000 acres and 580 million lbs, in 1956-57 they have both increased to 1,022,000 acres and 685 million lbs respectively. Out of the total production, Virginia tobacco, the variety that is in demand in overseas markets, accounted for 132 million lbs against 128 million lbs in the previous year. Virginia tobacco is grown in Andhra Pradesh. About 30 million lbs of Virginia tobacco are consumed internally leaving about 100 million lbs for export. During 1956-57 about 99.27 million lbs of this variety were exported, showing an increase of 6.92 million lbs over the exports of 1955-56.

Virginia tobacco from India is imported by a number of countries. The most important markets during last year were the UK, China, Hong Kong, Japan, Indonesia, Aden and Dependencies, Belgium, Egypt and Ceylon. UK is by far the largest single importer with its offtake aggregating 33.52 million lbs as against 29.57 million lbs in the previous year. China has also taken a larger

quantity as its share increased from 21.3 million lbs to 28 million lbs. Aden and dependencies have imported 6.5 million lbs against 5.9 million lbs. There has been a marked fall in the offtake by Indonesia which has taken only 4.5 million lbs against 11 million lbs. It is pointed out that this sharp decline has been due to Indonesia entering into a long-term agreement with the US for the purchase of American Virginia tobacco.

Speaking at the recent annual meeting of the Indian Central Tobacco Committee, Mr B. N. Uppal, pointed out that though the position as regards production and exports had been satisfactory in the past year, there was need for utmost vigilance. For, Indian tobacco was encountering very keen competition in the international markets both from America and Rhodesia. A disappointing feature of the current year's export trade is that there has been no demand from China so far. This is, however, offset to some extent by the fact that USSR has entered into an agreement with the State Trading Corporation for the purchase of sizable quantities of Indian tobacco.

Drugs Industry

Amidst the preoccupations of the Second Plan, the Government of India have been trying to look much further ahead, and make preparations for the succeeding Plan, which in certain respects, may even be more arduous. It is now reported that substantial beginnings for the development of manufacture of drugs, chemicals and pharmaceuticals are already under way. A programme of production which may cost well over Rs 500 millions has been outlined to cover antibiotics, streptomycin drugs and intermediaries plants. The expansion of the Pimpri Penicillin factory will also belong to this programme.

US, Soviet and German participation in one or other of these plants is envisaged; negotiations are in progress. Though the finalisation of all these schemes and advent of some of them could be within Second Plan period, a little more time might be required for their attaining full capacity and production. According to current estimates, when these new schemes are implemented fully, the total value of the output of the industry would be around Rs 350 millions annually.

Steel Files Industry

The engineers' Steel Files Industry has made rapid strides in the past two years. Whereas in 1955 there were only two units, there are at present five manufacturing units. The total rated capacity on single shift basis has consequently increased to 455,000 dozens per annum from 55,000 dozens in 1955. Production of steel files has increased from 44,219 dozens in 1955 to 154,629 dozens in 1956 and 160,127 dozens during the first ten months of 1957.

Problems of Jute Industry

ONE of the factors responsible for the quiet trend in the jute goods market since the turn of the year is the decline in the burlap consumption in the US last year. The decline is generally attributed to the slight recession in the country's economy in the second half of the year and the smaller crop in some regions. As a major supplier of hessian to the US, India is naturally worried about the lower off-take.

But when one studies the figures of import of burlap into USA, the position does not seem to be very discouraging. During the first nine months of 1957 total imports at 168,900 tons were only slightly lower than the total of 169,800 tons for the corresponding period of 1956. Of the nine month total, imports from India were 145,100 tons. The relevant figure for the previous year is 142,400 tons. This works out to 86 per cent of total imports in January-September 1957 against 83.6 per cent in January-September 1956. Among the remaining countries, Japan has recorded a sharp decline from 5200 tons to 1400 tons; UK's share has been reduced from 4300 tons to 3500 tons. Belgium, West Germany and Netherlands have recorded slightly higher imports. Pakistan's share has increased to 10,800 tons from 8,800 tons.

From the trend in the first nine months it may be permissible to draw some broad conclusions. Indian hessian has been able to underquote most of its competitors in the US market. Japan which was making rapid headway till the previous year has now come to occupy an almost insignificant

place. Most of the continental manufacturers except Belgium, West Germany and Netherlands are losing ground. The only serious competitor left in the field is Pakistan. It may be recalled here that imports of hessian from Pakistan have considerably increased in the past three years. From 1900 tons in 1954, Pakistan's share has gone up to 2,700 tons in 1955. In 1956 it has shot up to 13,700 tons and indications are that the figures for 1957 may better those for the previous year. It is to be expected that the competition from Pakistan will progressively increase as the Pakistani industry is more advantageously placed both in regard to raw material supply and efficiency of its mills.

Apart from the growing competition from Pakistan, the Indian industry has to take urgent note of the declining demand for jute goods. Many of the erstwhile importing countries in the Middle East and South East Asia are putting up their own manufacturing industries in a bid to attain self-sufficiency in jute manufactures. This new development has already somewhat slowed down the off-take from India. The most serious threat is still from substitute packaging materials and bulk handling methods. It is common knowledge that jute goods have already irretrievably yielded ground to paper in some lines of trade in the US. It has been pointed out in some quarters that last year's decline in burlap consumption in US has been partly brought about by increase in bulk handling. It is, therefore, clear that if jute goods are to maintain an important place in the export field, the jute industry has to ensure that its products are available in plenty and at attractive prices. At the same time it has to be constantly devising new uses for jute as well as carry out necessary changes in the pattern of manufacture to suit the changing needs of its overseas customers.

After a steady opening the jute goods market closed the week on Wednesday on an easier undertone. Hessian 40" x 10 oz Ready declined over the week from Rs 40.50 to Rs 39.60 while B Twills Ready reacted from Rs 107 to Rs 104.20.

It would appear the sharp fluctuations have been brought about mainly by speculative buying and selling. Following the settlement of the dock dispute, speculative interest pushed up prices but in the continued absence of foreign enquiries in subsequent days there was selling pressure in the Fatka and prices receded. Sentiment in the sacking section was aided in earlier dealings by rumours of a fresh Government order for B Twills but there was no confirmation till now.

It would appear that odds are against bullish interpretation of the near term outlook. In the first place the first three months of the year are usually lower burlap consumption months. Moreover, there has been no indication that US consumers are anxious to increase their off-take in the current month; and reports from that country seem to show that buyers may be expecting a substantial drop in prices of jute manufactures. The trend of shipments so far in the current month has given rise to the expectation that mill stocks at the end of the month may show a larger than expected increase. A contributory factor for the reactionary tendency toward close has been the rumour that Pakistan has reissued licences for the export of cuttings to India. It would appear that contradictory rumours about these licences have been utilised effectively by speculators to manipulate prices. Evidently part of the rise in sacking prices has been due to the expectation that these licences will not be reissued, for in that event the raw material supply position as far as sackings are concerned will become somewhat difficult.

The jute goods market opened the week on Saturday on a very steady note with prices showing substantial increase over previous closing rates. The rise in rates was mainly due to speculative interest. Hessian 40" x 10 oz Ready advanced to Rs 40.20 from Rs 39.45 while B Twills moved up to Rs 107 from Rs 106.25. In forward delivery April-June Hessian 40" x 10 oz was placed at Rs 40.80 with B Twills marked up to Rs 108.25.

Indian Finance

The undertone on Monday was rather quiet as speculators were inclined to book profits at the higher levels. Hessian 40" x 10 oz closed 10 nP lower at Rs 40.10 but B Twills remained unchanged. April-June Hessian 40" x 10 oz was lower by 30 nP at Rs 40.50 while B Twills for the same delivery recorded a decline of 25 nP at Rs 108.00.

Selling pressure in the Fatka increased on Tuesday and with mills coming out as sellers in both ready and April-June positions the market closed quiet. Hessian 40" x 10 oz Ready came back to Rs 39.95 and B Twills reacted to Rs 106.50. In forward delivery Hessian 40" x 10 oz was placed at Rs 40.20 with B Twills at Rs 107.37.

Prices in the sacking section recorded a sharp decline on Wednesday presumably due to the rumours regarding reissue of licences for the import of Pakistan cuttings. B Twills Ready was pushed down to Rs 104.20 with the April-June position marked down to Rs 105.10. In the hessian section Hessian 40" x 10 oz Ready dropped another 30 nP to come back to Rs 39.60 while the April-June delivery was also easier at Rs 40.05.

The raw jute market opened steadier in sympathy with the goods section but toward close turned quiet in keeping with the trend in the finished goods section. The rumours about the issue of licences for Pakistani cuttings had also some reactionary influence. In earlier dealings with sellers rather reserved mills showed little interest and most of the time the quotations were only nominal. Toward close sellers were keen for business but mills in their turn became reserved with the result business passing continued to be at a low ebb.

Price trends during the week:

	Week's Opening Rs.	Week's Closing Rs.
Hessian:		
40" x 10 Oz.

L. Twills	120.75	118.80

February 1, 1958

A Further Fall in Prices

THE rising trend, noticed in Tea prices till the second week of January following political unrest in Indonesia and floods in Ceylon, appears to have been checked as evidenced by the declining trend in the past two week's auctions. This is mainly due to the fact that a gloomy outlook for North Indian Common tea is visualized by the Chairman of the Dooars branch of the Indian Tea Association. He says that there is clear sign of over-production of tea in the world and, in the wake of the same, North Indian tea has suffered heavily in its export markets.

But, it is not in export demand alone that North Indian tea has found itself in the lurch. Export prices are also on the downgrade. Thus, the highest and lowest prices of Plain Broken Pekoe ranged, during the past year, between Rs 1.98 and Rs 1.48 as compared with Rs 2.37 and Rs 1.44 per pound in the previous year. Common tea was quoted appreciably lower, both in London and Colombo throughout the season. It is, however, fortunate that the absorption by the internal market was sustained, thus preventing a further fall in values on the Calcutta market.

In this connection, the Chairman of the Dooars branch of the Indian Tea Association points out that the bulk of the tea produced in the Dooars and Assam is Common tea and the crops in the Dooars are on the upgrade. He adds that, "from all indications, it will appear that the dependence of the tea industry on the internal market will be even greater in future years. It is, therefore, of over-increasing importance that the Indian tea campaign of propaganda be further intensified if the vast demand from within the country is to be exploited to the full."

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 63,782 packages. There was a fair general demand. The strongest feature of the sale were Medium OFs. Although a few lines of these were sold slightly below valuations, most were considerably dearer, especially those which were bright in cup. A weak feature were Medium BOPs which were 10 to 20 nP easier except where quality showed improvement.

Plain and Medium BPs declined by 4 to 6 nP, while Fannings were from 6 to 8 nP easier except where they had a clean leaf appearance or bright liquors when they were about steady. There was only fair demand for CTC types which irregularly declined by upto 20 nP

per pound, Fannings grades generally receiving more support than Broken. A few best liquoring invoices, on offer, were sold well at about valuations. There was fair demand for brown Dooars teas although these were sold generally 6 to 8 nP below last rates. The few best liquoring invoices in this category were, however, well supported at about valuations.

Darjeeling teas were sold well and, where quality showed improvement, prices were generally above valuations. Who's Leaf grades came in for fair competition although prices tended to be a little irregular.

In the Internal Sale, offerings were 20,285 packages of Dusts. Demand continued to be fairly general, but prices showed a further decline. Buyers for the Middle East showed certain interest although at lower rates. Commons, Dooars and Assams of orthodox manufacture were generally upto 6 nP per pound easier and occasionally more.

Export Sale:—	14.1.58 Rs.	21.1.58 Rs.	28.1.58 Rs.
Plain BP	2.40	2.40	2.35
Plain Fannings	1.64	1.62	1.56
Medium BP	1.72	1.70	1.64
Medium Fannings	1.84	1.80	1.72
Best Assam CTC BP	2.80	2.80	2.70
Best Assam CTC Fannings	2.60	2.60	2.50
Internal Sale:—			
Medium Dooars Dust	1.84	1.82	1.58
Medium Assam Grainy Dust	1.66	1.64	1.60
Medium Assam CTC Dust	2.20	2.20	2.00
Best Assam CTC Dust	3.05	3.05	2.90

In the Cochín market, offerings were about 900,000 pounds of Leaf teas. Quality continued to show improvement, particularly among the low Medium and Medium teas. A rather better selection of high-grown teas was also on offer. There was a strong and general demand for all types, with prices following quality. Low Medium and Medium teas were 15 to 20 nP per pound dearer. Good Mediums also advanced by a narrower margin. High-grown teas were well supported at dearer rates, while high-grown Fannings were again a weak feature.

Whole Leaf grades met with keen competition, particularly flowery Pekoes and Pekoes. Following rates were quoted:—Plain BP Rs 1.45; Low Medium Rs 1.70 to Rs 1.80; Medium Rs 1.85 to Rs 2.20; Good Medium Rs 2.35 to Rs 2.55 and quality Rs 2.75 to Rs 4.80. The next Export Sale will be held on February 4.

In the Colombo market, offerings were 4,559,704 packages. Quality showed generally a slight improvement, but demand was quieter. There were no offerings of Nuwara Eliya teas. Among high-grown teas, South African demand was more limited and prices of the best Dim-bua/Dickoya BOPs fell sharply by 50 to 70 cents per pound. The quality of medium-grown teas showed some improvement, particularly from Uva districts. There was strong demand at dearer rates for all colour Broken. The market for low-grown teas fell by about 10 cents per pound, while Middle-Eastern types were rather irregular. There was, however, much better demand for useful liquoring Fann-

generally upto 6 nP per pound easier and occasionally more.

CTC Assams were the weakest feature of the sale and, with the exception of a few bright liquoring invoices, prices were often upto 20 nP lower and sometimes more. The few Darjeeling invoices with attractive flavour were sold well. Following rates were quoted:—Medium Dooars Dust Rs 1.56 to Rs 1.58; Medium Assam Grainy Dust Rs 1.58 to Rs 1.60; Medium Assam CTC Dust Rs 1.80 to Rs 2.00 and Best Assam CTC Dust Rs 2.70 to Rs 2.90 (nominal).

Also, 2,427 packages of Leaf grades were offered for internal consumption. There was again a fairly good general demand, but prices were irregularly easier.

In the Export Quota section, business was reported done at 13, 13½, 14 and 14½ nP per pound. At the close, the rate was quoted at 14 nP. Following were the price trends (per pound):—

Export Sale:—	14.1.58 Rs.	21.1.58 Rs.	28.1.58 Rs.
Plain BP	2.40	2.40	2.35
Plain Fannings	1.64	1.62	1.56
Medium BP	1.72	1.70	1.64
Medium Fannings	1.84	1.80	1.72
Best Assam CTC BP	2.80	2.80	2.70
Best Assam CTC Fannings	2.60	2.60	2.50
Internal Sale:—			
Medium Dooars Dust	1.84	1.82	1.58
Medium Assam Grainy Dust	1.66	1.64	1.60
Medium Assam CTC Dust	2.20	2.20	2.00
Best Assam CTC Dust	3.05	3.05	2.90

ings grades, which were generally dearer.

Tea production in Ceylon has reached an all-time record of 397.70 million pounds in 1957 as against

only 376.70 million pounds in 1956. The previous record was 380 million pounds in 1955. Output in December last amounted to 28.1 million pounds as compared with 36 millions produced, both in November and the previous December.

With an outturn of only 2.6 million pounds in December 1957, the total Pakistani crop last year amounted to 44.9 million pounds as compared with 54.6 million pounds in 1956 and 52.5 million pounds in 1955. The marked decline of nearly 10 million pounds in production is attributed to adverse weather conditions at the beginning of the season as also to early onset of the cold weather.

In London auction, offerings were 33,251 packages including 28,763 packages of Northern India teas and 1,590 packages of Pakistani. There was a good demand for most teas for a sale which showed a falling away in quality. Low colour types were the strongest feature; but thin Medium kinds between 4sh and 4sh 6d were generally easier to buy at slightly reduced rates. Good Assam CTC teas were a little irregular and the browner Leaf Fannings met with little demand and often fell by as much as 4d to 6d per pound. Rates remained unchanged at the close.

Tea stocks in London, as on the 17th January, were 121.72 million pounds as compared with 127.16 million pounds in the previous week and 68.48 million pounds a year ago. Landed between 11th and the 17th January were 6.66 million pounds, while deliveries were 2.13 million pounds.

US Notes

TO the ordinary citizen—the theoretical 'man-on-the street'—it usually comes as a surprise and shock when he learns of an obvious wrong that apparently has not been anticipated and prevented through proper legislation.

Such reasoning overlooks the fact that much of a nation's legislation is the result of disclosures of abuses.

Now Congressional investigations of various areas of national scene serve to unearth practices or potential situations that are obviously undesirable, and how they encourage consideration of specific legislation to deal with such matters in the future, is dramatically revealed in the special message on labour law sent to the Congress today by President Eisenhower.

With the sometimes startling revelations of the Senate Committee investigating labour and management still making headlines, Mr Eisenhower's recommendations for corrective legislation, through amendments to the nation's basic labour law (the Taft-Hartley Act), are, in effect, the Administration's attempt to establish the safeguards demanded by the general public.

President Eisenhower's recommendations are directly related to the testimony received by the Senate Investigating Committee. 'No labour-management relations legislative programme today can ignore the disclosures of corruption, racketeering and abuse of trust and power in the labour management field,' Mr Eisenhower said.

While noting that states and local governments are taking actions, and union officials are 'doing much to eliminate the few in the ranks of organised labour who are corrupt,' President Eisenhower nevertheless feels that federal legislative action is needed 'in order to protect the basic rights of individual worker and to maintain the integrity of trade unionism itself.'

The President's recommendations deal with control of union funds (unions handle millions of dollars annually in connection with health, welfare, and pension plans, in addition to dues), election of union officials, financial dealings between employees and labour organisations, and secondary boycotts in strike situation, among other problems that have arisen during the past 75 years.

As is to be expected of proposals dealing with so vital a subject as the day-to-day relationship between workers and employers and details of union administration, the President's recommendations will receive intensive analysis. The se-

condary boycott proposal that would require reporting and public disclosure of the operations of all health, welfare, and pension plans, whether union, employer, or jointly managed. Labour favours this, but management is not entirely convinced of the need.

Another illustration of the comprehensive nature of President Eisenhower's proposals is his recommendation that, in view of specific legislation in recent years barring members of communist organizations from holding union office or employment, the non-communist affidavit requirement of the existing law should be eliminated. Labour strongly favours this action, contending that the basic law discriminates by requiring affidavits only from labour members.

Awaited as they were—and exemplifying as they do the close relationship between Congressional investigation and legislation—the President's recommendations are only some of the proposals for labour law amendments the Congress will have before it this year. The Investigating Committee itself, of course, is expected to produce proposals.

Meanwhile, the American Federation of Labour and Congress of Industrial Organizations continues to tighten its influence of national and local labour unions, under its own powers. And there is no doubt of the AFL-CIO determination for a "house-cleaning." Proof enough was its ouster last month of the powerful 1,330,000-member teamsters' union because of its failure to take action in the light of the Investigating Committee's disclosures of malpractice on the part of some officials.

The free labour movement of the United States undoubtedly will derive even greater strength from the combination of labour union action and labour law amendments designed, as Mr Eisenhower has said "to benefit and protect the welfare of American workers and the general public, to curb abuses, and to provide greater harmony and stability in labour-management relations."

Britain

"TWO aims will be paramount with me—maintaining the strength of the pound and internal price stability," said the Chancellor of the Exchequer, Mr Derick Heathcoat Amory, in a speech at Shaldon, Devonshire, on January 17.

"The tough, drastic deflationary policies that the Government adopted last September will be continued without relaxation until success has been achieved," the Chancellor declared. "They were undertaken with the entire approval of us all. We have supported them wholeheartedly since. They have already had some success. It would, indeed, be folly to lay them aside or weaken them, and I have not the smallest intention of doing so.

"There is no soft way through our inflationary difficulties," Mr Heathcoat Amory went on. "Whatever steps we take, if they are to be

effective, are bound to hurt. So 'no change' is the order of the day there.

"There will be no economic appeasement. The decision to hold total capital expenditure in the public sector at this year's money total stands, and so do the tighter restrictions on lending. For the present, the right policy must be to keep money scarce and expensive.

"I want to make it clear that there is no main sector of national expenditure which will be sacrosanct against cuts. When it comes to social services, we have got to cut our coat according to our cloth there too. But the selection of precise cuts must be a matter of judgment—and very difficult judgment, too. Economy is not an end in itself, but a means to an end. In the present circumstances, the end is the beating of inflation. In going for cuts, therefore, the chief test must be whether a particular action will help or damage the anti-inflationary effort."

Mr Heathcoat Amory repeated his predecessor's warning that in the present circumstances the Government would not make extra money available for further inflationary wage increases.

Three Indian graduates now training with the world famous British steel firm of Dorman, Long at Tees-side, in north-east England, said in an interview that they were learning much that would help them when they took over appointments at the Durgapur (West Bengal) steel plant on their return to India. They are all training under the Technical Co-operation Scheme of the Colombo Plan, and are among the 300 graduates selected by the Indian Government for training in the United Kingdom as future engineering officers with the Durgapur project.

The three Indians are Messrs. B. N. De, of Calcutta; S. C. Basu, of Meerut, U. P.; and A. K. Mustafa, of Asansol, West Bengal—all graduates of Calcutta University. They are engaged at present at Dorman, Long's coke-oven plant at South Bank, near Middlesbrough, Yorkshire—one of the most rapidly expanding industrial areas in Britain.

Mr De went to the United Kingdom in 1944 to join the research department of the English Steel Corp., at Sheffield. Later he worked with Colvilles, steel and iron manufacturers; with Carbometals; and at the Vauxhall car factory. Mr De was awarded a Colombo Plan scholarship last November, and has since been with Dorman, Long studying blastfurnace operation—a new side of the steel industry to him, he said.

Mr Basu went to Dorman, Long direct from India with the first batch of Durgapur trainees. In India he had taught at Agra Engineering College and worked with Hollerith; the D.C.M. Chemical Works; and Hindustan Steel. Mr Basu, who arrived in Britain last November, moves to Stockport, Cheshire, next month to work for about nine months with Simon-Carves.

Mr Mustafa went to the United Kingdom in 1953 under a private

training scheme, and joined the Davy & United Engineering Co. of Sheffield. Later he worked at a Middlesbrough foundry; with the South Durham Steel & Iron Co.; and, since last November, with Dorman, Long, where he began a year's training under the Colombo Plan for an appointment at Durgapur. Before going to Britain he was a graduate trainee with the Indian Iron & Steel Co. for two years.

The substantial improvement in the United Kingdom trade position in November was maintained in December, the trade gap being cut by a further £3,000,000 to only £19,000,000, according to provisional trade figures for the month released by the Board of Trade in London on January 13.

The value of United Kingdom exports in December was £282,400,000—£4,500,000 less than in November, but 2 per cent above the rate for the first 11 months of the year.

Imports amounted to £313,700,000—£6,000,000 less than in November and 8.5 per cent below the rate for the first 11 months of the year.

Re-exports, £12,200,000, were over £1,000,000 more than in November. The trade gap was thus reduced to £19,000,000, the lowest figure (apart from two previous occasions when the figures were distorted by the Suez crisis) since November 1950.

Exports to North America in December amounted to £34,000,000 (£4,000,000 less than in November). Exports to the United States totalled £20,100,000 (£1,000,000 less than in November) and to Canada £13,900,000 (£3,000,000 less than in November). For the year 1957, exports to North America amounted to £432,000,000, 8.5 per cent more than in the previous year.

PROVISIONAL TOTALS FOR 1957: The provisional total of United Kingdom exports to all destinations for the year 1957 is £1,326 million, an increase of £154,000,000 or nearly 5 per cent in value over the previous year of 1956. The provisional total of imports is £4,079 million, an increase of £133,000,000 or 3 per cent in value over the previous year. Re-exports totalled £133,000,000, a reduction of 9 per cent on the previous year. The visible trade deficit in 1957 was £2,620,000,000—£52,000,000 more than in the previous year.

Silver bullion repayments and the carry-over of imports from 1956 into 1957 following on the Suez crisis more than account for the increase in the trade gap in 1957, it is pointed out in London. The monthly trade gap was substantially narrowed in the fourth quarter of the year, and the volume increase in exports was rather more than 2 per cent for the whole year. The volume increase in imports was also about 2 per cent.

In assessing these figures, it should be remembered that they cover only part of current overseas transactions, describing only visible trade and not containing the outcome of invisible transactions such as shipping, insurance, and so on. The United Kingdom has a substantial favourable balance in these items, amounting in the first half of 1957 to £150,000,000, and probably still growing.

Indian Finance

February 1, 1958

ANOTHER Republic Day has come and gone. All over the country, the occasion was celebrated with a mixture of formal decorum and spontaneous gaiety that is just right. In New Delhi, some conscious and even conscientious direction is given to the kind of spectacle that should be put on on such occasions. Besides the usual parade of armed forces (which was climaxed this year by the flying formation of 74 jet aircraft of the Indian Air Force, two of which dived headlong to crash through the sound barrier), there was the pageantry in the form of successive tableaux giving a glimpse of the rich variety of our regional cultures. And then there are other functions connected with the day's rejoicings, including, this year, the festival of folk dances from various parts of the country. The rest of the country follows this pattern, and State capitals and district headquarters endeavour to bring a little colour and animation in an otherwise drab existence. Newspapers bring out supplements on the occasion and leader writers turn out their formal salutes to the Republic with the right degree of condescension that has come of years of practice at this sort of thing. The other pages are filled with ads by folks who offer their congratulations (muted respectfully or brashly loud, as the case may be) to the Republic. My somewhat desultory study of these ads has indicated two species: one that links their prosperity with that of the nation and the other that implies that the prosperity of the nation depends upon their own prosperity! As for the articles in these supplements, well, I hope I am not letting out a professional secret when I say that, for the most part, these consist of hand-outs supplied by hard working information departments.

How much of all this demonstrative and self-conscious patriotism is real, and how much of it synthetic and hypocritical? Would the cynic regard the whole thing as a mere thamasa put up by bored officials whose sole concern is to put it over and be done with it? How much of justice is there in the notion that newspapers view the occasion as Royalty is said to be viewed in England, as an adjunct to their advertising department? And is that austere and conscientious accountant right, who thinks

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

that the Republic Day is yet another example of the national habit of shirking work at the slightest pretext? He would point, with at least some show of justice, to the fact that we have at least three national holidays, one in August, one in October (Mahatma Gandhi's birthday) and one in January. His criticism will have particular point this year since we have had two holidays for the Republic Day on the rather tenuous ground that the actual Republic Day fell on a Sunday! (Indeed, Calcutta had this year a rare stroke of luck in that last week end they had five days off in a row, if you don't count Saturday, on which no one does any work any way!) Some time ago, a German friend of mine told me in tones of shocked incredulity that we had a scandalous number of holidays in this country.

Let me straightaway say that I consider the cynic entirely in the wrong, though I have important reservations about the criticism of the cost accountant and the German friend. Despite all the organisation and conscious direction involved in these celebrations, there can be no question about the spontaneity and basic sincerity of the demonstrations of patriotism and dedicated purpose on the Republic Day functions. In my view, it is not as though the world, and more specially India, is so surfeit with gaiety that we should deny our people a little of enjoyment on a national day. The sneer, that there is nothing an Indian likes so much as a fair—in which he goes about accoutred in the most outlandish garb, running through his meagre capital in buying gewgaws—is among the cheapest in my experience. Whoever has seen such sights and has failed to be thrilled and touched at the same time, has lost some of his feeling for life. Is Indian life so replete with colour and gaiety that we should frown on a little of it? As for the formal nature of these enjoyments, well, every one knows that there is nothing like a spectacle to stir one to one's depth. And when such spectacle is given direction and purpose as emphasising the rich variety of our country and the unity that binds them all together, there is an unconscious emotional integration which is the most important need of our people at the moment.

There is a curious point worth noting in this connection. It seems to me rather odd that it is countries which are formally republic and not those that are monarchies that show a certain self-consciousness in celebrating their national day. Great Britain, for example, has no formal national day. They have, of course, the Queen's birthday, and the Coronation Day, but except on the occasion of the actual coronation, when the event and the person of the ruler is ritualistically invested with a certain mystique, Britons take their national days in their stride. On the other hand, Americans, Frenchmen and Russians, to quote but a few examples, paradoxically take their national day rejoicing with a certain amount of seriousness. The 4th of July, the anniversary of the October revolution and the Fall of the Bastille are special occasions in the national calendars; and though the celebrations on these occasions take on the hues of the respective national characters, the fact remains that the celebrations themselves are central to the collective psyche of the respective peoples.

Why is this so? I can think of one reason. Republics, especially Republics that have been born out of a revolution, have apparently a certain sense of insecurity. How much of such sense of insecurity is conscious and how much it is unconscious is something that is difficult to assess. But, by and large, there is a larger element of conscious insecurity in dictatorships where present needs no less than unconscious compulsions make an effort at emotional cohesion of the people an absolute necessity. But the rather demonstrative celebration of most Republics would seem to arise from unconscious conditioning by the original chaos out of which these Republics were born. Moreover, as a focus of loyalty, a constitution (where it does exist) is not as emotionally satisfactory as a sovereign. The Queen is a living person, and even if the Press did not serve up absurd tittle tattle about Royalty's domesticity, she is still very much present in the minds and hearts of the British. But no such aid is available for a Republic unless, of course, you have a father-substitute in Papa Stalin. The absence of an automatic and palpable rallying point like the King or Queen is a genuine dis-

Dasmagar, Howrah.

advantage to a Republic. Ersatz products for replacing it are not very successful. For instance, the efforts of American public relations experts to make of like a similar archetypal image have not succeeded particularly. And, in France, of course, no such attempt is ever likely to succeed, for the simple reason that the French have too lucid an apprehension of the nuances of affection. No sales promotion campaign can ever sell, for instance, Mendes-France or even General de Gaulle to them, which fact perhaps explains why July the fourteenth sees the French almost hysterically enjoying themselves.

Well, there may be nothing in all this. As far as India is concerned, I should not be averse to a certain conscious purpose in the impression on the popular mind and imagination of the idea of the Republic. The reason for wanting this is of course obvious. There is yet insufficient emotional integration of our people as a whole and the slightest encouragement loosens bonds laboriously built over years and even centuries. Languages and religions and even sects divide us. The most powerful force that has held us together, the cementing force of fundamental philosophical and cultural values, has steadily lost its potency. The anti-Brahmin riots in the South are a clear indication that to look for a cohesive force in religious unity is to look in vain. Administrative and economic compulsions do play their part. But they are easily blasted by communal and linguistic and other separatist factiousness. So it is of the highest national importance that opportunities for generating a common nationhood like the celebrations on Republic Days should not be curtailed. The few man hours lost for other purposes should not be considered too high a price for this recompense.

There is another anniversary and one with which I am personally associated that I should like to refer to on this occasion. I mean the completion of thirty years of continuous service to the nation by Indian Finance. During all these years, and indeed from the very first issue, I have been gathering impressions and reflections that the environs of Clive Street have given birth to. I should have very much liked to look on all these years and

set down by impressions about the vast and tremendous changes that have come over the beloved haunt of mine. But that must await a future occasion. One change is obvious enough. Clive Street is no longer Clive Street even in name, and the name it yielded place to significant enough. But there is one comment I would like to make. Behind all that has been written in this journal over all these years and in all the celebrations, grave and gay, in these columns, the impulse has been an unclouded patriotism, an ever present sense of this country's great past, a painstaking desire to understand its present as it has unfolded itself from time to time and an unwavering vision of its great future. On the larger horizon has always been the faith in values that are

affirmative of life. This has implied a definite preference of the individual to the crowd, both organised and unorganised, the championship of the little man against the big bully, whether he be organised bureaucracy, corporation or trade union. It has also implied—and I hope that the writings have shown them—an absence of priggishness and an aversion for pomposity and above all an ability to laugh. These are certainly virtues I should like to think I have brought to my weekly gossip with you, and these are certainly virtues that I would strive to bring to it in the future.

It gives me great pleasure to record that so soon after my plaint that India's official honours have a habit of missing industrialists and

businessmen, Sir Jehangir Ghandy of Tatas has been the recipient of a Padma Bhushan in this year's Republic Day honours list. But when I notice that, out of a liberal shower of "lotuses", only one has hit an industrialist, I feel in no mood to change my opinion. I most certainly do not grudge the motley crowd which has pushed its way into the list its good luck in having done so. Nevertheless, I do feel that honours, to have meaning, must not look like being thrown about with reckless facility, or having a suspicion of partiality. The list of the holders of the British Order of Merit or of the Royal Society members is never long, and there are only Forty Immortals in the French Academy. As it is, there are too many film people jostling with too

Indian Finance

many sportsmen in the present honours list, while there is a palpable omission or, at any rate, a very niggardly inclusion of notable scholars and men of letters. I do not recollect that Sir Jadu Nath Sarkar or Sri Tarasankar Banerjee has so far qualified for any Government award. Though the precincts of the Home Ministry may be thick with hunters after titles and decorations, "to the seekers alone shall be given" should not be a principle or excuse for their distribution.

It is unfortunate to have to write two obituaries in two successive weeks. Last week I mentioned the death of Mr K. L. Jatia, and this week it is my unwelcome task to record that of Mr N. C. Ghosh, Commercial Editor of the *Amrita Bazar Patrika*. He was a much bigger man than his official designation seems to indicate, having risen to be the President of the Indian and Eastern Newspaper Society and being connected with quite a few business enterprises.

An interesting point was raised in the Bombay High Court recently when Mr Justice N. A. Mody dismissed a suit filed by Major General Shanta Shamsher Jung Bahadur Rana against Kamani Brothers Private Ltd., holding that a managing director could have no legal right as such. The case was raised under Section 42 of the Specific Relief Act, which lays down that any person entitled to any legal character may institute a suit against any person denying his title to such character. His Lordship said that the term "legal character" in the Act had not been judicially defined so far and there appeared to be no general principles for determining it. The personality of a managing director had no peculiarity unconnected with or independent of his right or power as the managing director, and there could be no legal right which a managing director could have as such. He was a creature of a contract between him and the company and he was a mere agent by reason of delegation of powers. Therefore, he could not raise a suit under Section 42 of the Specific Relief Act. The plaintiff's case was that the company had appointed him in its whole-time service in March, 1956, and as joint managing director in June, 1957, but that in September, 1957, the Board had passed a resolution removing him from his office as managing director. It was argued that this resolution was invalid because it was the company alone which could pass such a resolution in general meeting. This was not accepted by His Lordship, who observed that if it had been necessary to go into this point he would have held that the Board had the power to revoke the plaintiff's appointment as managing director, and that as the plaintiff was not a shareholder of the company he was not entitled to rely upon its Articles of Association.

LEAVESDROPPER

February 1, 1958

THE past few days have been quite a busy period for the entire nation and particularly for the citizens of the Gateway city. As the seat of the Chagla Commission enquiry, all eyes and ears have been turned to Bombay. In the city itself, large crowds, on some days running to several thousands, gathered in front of the Council Hall, where the enquiry is being held, to hear the proceedings firsthand. The millions, however, preferred to wait impatiently for their morning or evening papers and it will be no exaggeration to say that in the past few days the daily routine of many people has been badly upset. I have no doubt that similar should have been the case all over the country. It is undeniable that the material contained in page after page of the daily papers provided very interesting reading material; and, by the same token, I think, if it is published in book form, it will prove to be the best seller of the year. I don't think I will be involving myself in any contraventions whatsoever when I say that the prestige of India has gone up quite a good deal in the past few days. Democracy is being redefined for the benefit of those who may not know it both here and abroad.

Meantime, the Republic Day celebrations have served as a timely reminder of our achievements and ambitions. Freedom has come to us after a long, painful, and arduous national struggle, the like of which the world had never seen. The emphasis in our country, at least since the advent of Mahatma Gandhi, has been on non-violence and truth. The superiority of the weapon of Satyagraha forged from these two concepts has been demonstrated beyond doubt. The purity of the means has been the sustenance of the end when it has been attained. If, today, India is holding a high place in the comity of nations, it is largely because of its adherence, by and large, to the ideals postulated by Mahatma Gandhi.

But we cannot rest content with ruminating on visions of the past or conjuring up dreams of our future position in the international field. Our achievements no doubt are great. The two general elections have proved to the world that our vast population, the majority of whom are illiterate, are in no way behind other peoples in assimilating the fundamentals of a democratic way of life. But all these achievements will be of no avail if there is no economic improvement in the country.

The past ten years have witnessed a serious attempt at planned development. The First Five Year Plan has achieved its main objective. The Second Five Year

Straws in the Wind

Plan has been drawn up and it is already reaching the end of its second year. Unlike the First Five Year Plan, the Second has come up against heavy odds soon after it has got under way. Various theories have been advanced to explain the difficulties facing the Government in this regard. But it has been generally accepted that, without a large dose of foreign aid, the implementation of the Plan is impracticable. Official circles, however, do not concede this position. While the value of foreign assistance is recognised, there is no attempt to lessen the emphasis on the need for intensifying national effort.

The main problems have, however, remained almost unchanged. This is because, in the first place, they are too overwhelming to be effectively tackled in a short time. Moreover, it is not as though we have been left completely undisturbed to concentrate on the tasks on hand. New problems have arisen and sometimes they have assumed such huge proportions that the tackling of them has become an urgent necessity. Nevertheless, significant progress has been achieved in many fields while the new problems have been solved in a more or less satisfactory manner.

One of the problems that have seriously unsettled calculations is the recurrent food shortage. A few years ago, it appeared as if we had found the solution. But it has again reared its ugly head, and today we are keeping famine in the country at bay only by the import of millions of tons of foodgrains from foreign countries. In the context of the large foreign exchange requirements under the Second Plan, such large scale food imports cannot be viewed with comfort. Quite apart from the cost of the foodgrains, we need a large amount of foreign exchange to pay as freight to foreign ships to carry the food imports to our shores as we do not have enough ships on the overseas trade.

Speaking in the city on the Republic Day, Mr K. M. Munshi gave two slogans to the people and asked them to put their best efforts to achieve them. These two slogans are: "National Unity" and "Freedom from Foreign Food". Every one will agree that the two represent our most immediate problems. Despite the emphasis on agriculture, food production has not kept pace with demand. It is quite true that, during the First Five Year Plan, significant advances have been made in this direction, but the fact remains that we are far from self sufficiency. The alarming rise in the rate of population growth has underlined the need for a substantial increase in food production.

In his Republic Day message, Mr Sri Prakasa has suggested a new approach to our problems. He has pointed out that since a nation is only a cluster of homes, our efforts should be primarily directed

But improvement in this direction seems to depend not on increased irrigation facilities and fertilizers alone. This is a matter that is inextricably connected with the actual tiller of the soil. If mere decisions to increase food production by such and such a percentage over a certain period can work the miracle, we will be having no trouble at all on the food front. Government efforts have been successful only to the extent of proving that, by improved methods of cultivation and by using adequate quantities of fertilizers, yields in our country can also be sizably improved as in other countries. But the result is yet to be attained on a wide scale: In other words, the problem is still one of arousing the interest of the tiller of the soil in the national importance of increasing food production. It is doubtful if this can be achieved so long as Government do not show, by action and deed, that they recognise the important role of the farmer to the nation as a whole. It is idle to expect improvements on the food front as a result of domestic production until the cultivator finds that he gets equitable return for his labours Mr Munshi's slogan will, therefore, serve to remind the population at large that the tiller of the soil is a person who deserves their respect and utmost consideration. As the provider of one of the most essential things for our sustenance, his reasonable wants must be satisfied and the State should see to it that he and his family are given all facilities to develop their mental and moral faculties.

The second slogan, National Unity, is in some respects more important than the first. For, all our plans will lose their meaning and significance if there are powerful discordant voices. The establishment of a Communist government in Kerala is a potential threat to the oneness of India. The recent and prevailing controversy over the Union language is another indication that great care is needed in keeping the diverse sections constituting the country in one national whole. There are strong local factors which, if neglected or glossed over by policy makers, may assume unmanageable proportions and strange forms. The responsibility of the Central Government in this regard is indeed great. And unless they bring to bear on each and every matter affecting the lives of the people their most careful attention, they will be running the risk of antagonising whole sections of people.

toward strengthening the home. Many of the difficulties that confront us will automatically disappear once the emphasis is laid on the improvement of the home. "If there is anything wrong in our home, then there can be nothing right in the world for us. If everything is right in the home, then everything is right everywhere also." Therefore it is of utmost importance that the home is made a real home. Once this is achieved, the younger generation can be expected to grow into true citizens of the country.

The emphasis on the home will help strengthen the very foundations of our society. The task of making the home a real home in our country is, however, no easy matter. It involves simultaneous action on many fronts. The first prerequisite in this regard is the provision of clean and healthy abodes for the people at large. This itself is a huge task. Despite strenuous effort no workable plan has so far been devised. Then there is the unemployment problem which has also been defying solution. The liquidation of illiteracy, improvement in public health and rural communications are some other urgent prerequisites to a strengthening of the home. It is these objectives that have shaped our programme of development as embodied in the First and the Second Five Year Plans.

S. E. RLY TENDERS

Sealed tenders are invited for supply of the following materials:

Tender No. CON/GM/1P&M/B/58 for supply of 8 Diesel driven Pumping sets capacity 35,000 G.P.H. at 250 ft. head H. P. of Engine not less than 82 H. P. at speed not exceeding 1600 H.P.M. The Pump sets should be delivered before 15.4.1958. Offers subject to recommendation for import license will not be considered but firms may quote for supply from their own import quota. Tender will be opened at 12 noon on 4.3.58.

Tender forms (not transferable) are obtainable from the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 at Rs 5/- (not refundable) per copy of form.

Tender forms should accompany the receipt for earnest money of Rs 1000/- from this Railway's Chief Cashier together with a valid Income Tax Clearance Certificate without which the tender is liable to be rejected. Contractors having permanent deposit of Rs 1000/- with the Controller of Stores are exempted.

S119 GENERAL MANAGER

International Panorama of Progress

A wider world for fabrics

In many countries, the subtle influences of past traditions and customs have been combined with modern materials and design to create new trends in fashion. This resurgence in textiles on the part of European and other nations has broadened their panorama of progress, created a wider world for fabrics through expanded production, employment and opportunity. The textile industry is just one of many nourished by Caltex quality fuels and lubricants. Through the power of petroleum, Caltex keeps industry and every segment of society expanding, aiding the prosperity of today and holding forth the promise of an even brighter tomorrow to over 70 countries—partner in progress in Europe, Africa, Asia, Australia and New Zealand.

BOMBAY REVIEW

The budget of the Bombay Municipal Corporation for the year 1958-59 had been variously described as progressive, satisfactory, colourless and disappointing by the members who participated in the discussions on the budget estimates of the Corporation. The general reactions of the members to the budget were more or less in line with their party alignments.

The notable features of the budget apart from the deficits which it discloses, are the provision which it makes for free and universal primary education with the help of a new cess and the increase in the wage scales of the Municipal staff. In fact it is the increase in the wage bill of the workers which primarily accounts for the deficit of the budget.

The views of the members on the budget were naturally coloured by their attitude to these two measures. The Congress members generally seemed to bemoan the loss of nearly Rs 6 lakhs entailed by the abolition of fees in upper primary classes consequent for the introduction of free and universal primary education. One of the Congress members suggested the setting up of a committee for giving advice on the expenditure on establishment. But the most unexpected criticism came from one of the members belonging to the Samiti Bloc. His complaint with the budget was that it visualised neither the expansion of the existing services nor the undertaking of new ones. While he associated himself with the action taken by the Corporation in having granted the demands of the workers, he insisted that it must be related to ability to pay as well as to the effect on the efficiency and quality of the workers who had benefited thereby. The same member also made some suggestions for augmenting the resources of the Corporation such as the setting up of a municipal bank, amalgamation of the various budgets, and economic intelligence bureau to make surveys, examine the allocative efficiency of spending departments and to present to the Corporation a Work Budget which he called Performance Budget.

Mr S. S. Gaikwad Chairman of the Education Committee, proudly claimed the new provision made in regard to primary education as the unique feature of the budget, but deplored the State Government's indifference in the matter of giving more grants to the Municipality. He suggested that the State Government should come forward to share at least 50 per cent of the expenditure incurred by the Corporation on primary education.

One of the members of the Samiti found the justification for the educational cess, inspite of his personal opposition to it, in what he described as the "escapist" methods of the Congress party and

Bombay's Civic Budget

the new burden thrown on the Corporation by the extension of the city limits.

*

Asian Economic Ties

At a public meeting at Surat recently, Mr Asoka Mehta pleaded for greater emphasis by India on the economic and cultural aspects of its foreign policy so that it might facilitate the evolution of a confederal unity of under-developed nations of Asia, for their mutual benefit. To start with, Mr Mehta wants India try for greater cultural and economic relations between India and Pakistan. If Pakistan is equally keen on such contacts, there would scarcely be any problem. The whole of Indo-Pak relations has got dead-locked through un-reciprocated goodwill and self-denial.

In the sphere of commerce, there is already a growing realisation, to some extent expressed in concrete trends, that countries of Asia should develop more and more mutual dependence to the elimination of dependence on other countries. But the sway of political considerations is to be reckoned with. Pakistan and a few other Middle East countries have found it more profitable to like and trade with non-Asian countries. India, just now, has neither the capacity nor justification for competing with these powerful nations. Those Middle East countries look up to for preferential trade and assistance in various forms.

Between India and Burma, there is a certain measure of reciprocity in trade relations but Burma has difficulties no less formidable than those of India. The last bulk contract for the import of rice had to be on the basis of India writing off a good part of the debt due from Burma. Such deals involve self-denial and emphasis on non-material considerations for which India is somewhat disabled at present.

As for cultural relations, no one seems to have yet found a way of securing greater mutual respect and understanding between India and some of the Asian countries. In many places, both the masses and leaders of thought are inclined to exaggerate differences and anxious to perpetuate them rather than try to understand a "culture" different from their own.

Cultural contacts are being suspected as a cloak for surreptitious aggression, and when commercial motives are also present, evoking open hostility.

*

Eradication of Untouchability

One of the biggest changes which a countryman of ours who happens to come back to his motherland now for the first time since its

attainment of independence will expect to witness is the eradication of untouchability and all its attendant ugly manifestations. This expectation is based on the knowledge that since the welfare of the backward people and especially Harijans was a matter that had been nearest to the heart of the Father of the Nation, the Government of the day who claim to follow the path fashioned by Mahatma Gandhi will have considered the rehabilitation of these unfortunate citizens as a task requiring their urgent attention. But the newcomer will soon enough find that the ten years of freedom and Congress rule have done little to improve the social status of the people belonging to the so-called depressed classes.

What then is the reason for this flagrant neglect of a matter which has loomed large in the affairs of the national organisation not infrequently. Is it because there is no longer any powerful champion of the cause or is it because Authority thinks that a nation which is taking big strides in many fields can ill afford to be bothered by smaller problems. The answer, it would appear, has to be sought from both.

It is undeniable that ameliorative measures have been formulated; but these have not been always followed by the right kind of approach in their implementation. The result is that the disabilities of the affected section have, by and large, continued undiminished.

That the lot of the so-called depressed classes has not improved much in the past ten years is not mere conjecture but the naked truth has been revealed the other day in Ahmedabad by no less a person than Mr L. M. Shrikant, Commissioner for Scheduled Castes and Scheduled Tribes, Government of India. While inaugurating a 10 day camp of social workers, Mr Shrikant has narrated a tale that does little credit to the Congress Governments both at the Centre and the States. The Centre has displayed little enthusiasm and it would appear that this indifference has percolated to the State Governments. While the Centre seems to be oblivious to the existence of the Commission, the States seem to think that the time devoted to the study of the Commission's reports and the collection of statistics requested by them, as time wasted. With such indifference all round him it is not surprising that Mr Shrikant finds himself often wondering why he is continuing in office.

This attitude of the Congress Governments toward a matter which is a blot on our national character especially in the context of our country's growing prestige in the comity of nations only seems

to prove that since its assumption of power Congress Party has forgotten some of its original ideals which played a large part in making it into a great national organisation.

*

Food Imports and Shipping

If the present foreign exchange shortage in our country has posed many difficult problems it has also brought fresh opportunities for intensifying national effort in a number of directions. For instance, the heavy import of foodgrains involving large expenditure of foreign exchange, has, among other things, focussed attention on our shipping industry. Mr M. A. Master pointed out in Bombay last week that by quickening the tempo of acquisition of ships, we could effect a considerable saving in foreign exchange. During the past five years the country had paid Rs 157 crores of foreign exchange as freight in respect of food imports. Last year freight paid to foreign ships amounted to Rs 32 crores, a sum which is only Rs 5 crores less than the entire allotment for shipping under the Second Plan. In view of the general estimate that we have to import an additional 6 million tons of foodgrains, we may require about Rs 80 crores foreign exchange for payment as freight.

Apart from the foreign exchange aspect, investment in shipping seems to be quite desirable even from the point of view of return. It has been calculated that a ship costing about Rs 120 lakhs can earn from Rs 25 to Rs 80 lakhs a year as freight for nearly 20 years. The entire capital can be taken back in about five years and sizable profits are assured for a considerable period thereafter.

The present position is that the allotment of Rs 37 crores under the Second Plan has already been spent; but due to high cost of ships, there will be still a gap of 210,000 GRT between attainment and target at the end of the current plan period if no further action is taken. In this regard it may be noted that Government have indicated that a sum of Rs 50 crores will be available from the Shipping Development Fund.

Even when the target of 900,000 GRT is reached, the share of our shipping in the overseas trade will not be more than 15 per cent as against the present 6 per cent. Our aim must be to achieve a target of 50 per cent of the total overseas trade if the saving in foreign exchange is to be sizable. Mr Master's plea that concerted effort should be made to acquire more ships to carry foodgrains imports, therefore, deserves the most urgent consideration of Government.

WHILE arrivals of the new crop from Gujerat and Saurashtra have been fast increasing, many mills in Bombay have bought sufficiently for their immediate requirements and have deferred their further purchases, pending a clearer picture of the Government's policy in regard to import and export of the commodity.

The Government of India have now decided that import of American cotton under P.L. 480, which was suspended on November 30 last, will be resumed with immediate effect for the balance quantity. On June 21 last, the Government announced that 60,000 bales of cotton with stapling 1 1/16" and above would be permitted to be imported from the USA under the P.L. 480 aid programme. Till November 30 last, the authorities had issued licences for the import of 48,000 bales of American cotton. Thus, the balance quantity amounted to 12,000 bales for which licences will be issued till the ceiling is reached. In this connection, it is also announced that the ceiling, fixed for the import of American cotton under P.L. 665, has been reached and hence no further application will be entertained with immediate effect.

Since the Government of India are inclined to bring food instead of cotton from the USA, it is believed that the future requirements of the textile industry will be met mostly from the sterling area countries. India requires about 5 lakh bales of foreign cotton every year. It appears that the authorities have already licenced imports of about 2.25 lakh bales so far and arrangements for the balance will be made soon. Fortunately, the carryover of foreign cottons is higher at 2.65 lakh bales this season and the industry has been switching over from imported to indigenous varieties. Traders have suggested that the import policy should be announced as early as possible with a view to taking advantage of the current low rates of cotton. Attempts should also be made to procure good varieties and to arrange payment in Indian rupees.

Meanwhile, reports from Sudan indicate that this country has agreed to pass on the benefit of a 50 per cent reduction in the export duty in November last to overseas buyers. Indian Importers, who had put in a business of 15,000 bales with that country just before the duty was reduced, hope to get the duty refunded.

With regard to exports, the Government's decision to extend the shipment period of export licences for Bengal Deshi by three months to April 30 has been welcomed by shippers. It appears that shippers could not put through sizable business with overseas buyers as many of them were unable to buy from India on account of the sterling shortage. A large part of the ex-

Imports and Exports

port quota, therefore, remained unutilised. It is believed that the extension will help towards more exports in the coming months.

Indian short-staple cotton enjoys good demand from all over the world. The world's shortest and coarsest cotton—Comilla—is in keen demand in foreign countries. Because of extreme harshness of staple and springy and resilient nature of the fibre, these short-staples can be mixed well with wool in the manufacture of blankets and other woollen goods. The major buyers of these varieties at present are the USA and Japan. Because of the good demand from these countries, attempts are being made to increase production in India.

The total annual production of Bengal Deshi and Comilla in India averages about 337,000 bales, of which about 105,000 bales are exported. While Comilla is produced in the hills of Assams, Bengal Deshi is produced in the Punjab, Rajasthan and Uttar Pradesh. The Indian Central Cotton Committee is now encouraging the cultivation of these cottons in exclusive areas where there is no risk of their being mixed with long-staple cottons. It is estimated that the acreage under these cottons can be increased by 3 lakhs bales. The prospective States, which can begin production of these cottons, are Rajasthan, Madras, Andhra, Uttar Pradesh, Madhya Pradesh and Assam.

x

COTTON FUTURES:

Prices in the futures market moved either way, but displayed a steady undertone. Early in the week, operators were reluctant to extend their commitments, being unnerved by rumours of Government intervention in the market in the event of a further rise in prices. While the direct intervention in the market by the Government was ruled out, certain trade circles believed that the price level for introducing "margins" would be lowered by Rs 50 to Rs 700 per candy. It appeared that the authorities were not inclined to allow forward prices to go far above Rs 700 per candy on account of a difference of Rs 50 per candy in spot and ready prices.

Values, however, staged a marked recovery towards the close of the week following increased buying by option dealers, strong upcountry advices and export quota announcement. Encouraging reports from the cloth market and the consequent prospects of greater demand for cotton also aided sentiment. ICC Moglal Jharilla March opened at Rs 690 and, after touching a high of Rs 696.50, finished the week at Rs 694.25.

x

SPOT MARKET:

The Spot market was steady with good demand reported in Khandesh, Berar Jharilla, Vijay and Surti varieties.

In the export section, shippers' interest to be limited.

In the foreign cotton section, good business was reported done in East African and American varieties at unchanged prices. Buyers were principally Ahmedabad mills. Small fresh business also took place in Sudans and these purchases were made against the previous quotas. Most mills are reported to have submitted their applications for licences against their quotas and it is hoped that licences will be made available to them without delay.

x

STATISTICS:

Exports by rail, from 1st September 1957 to 23rd January, amounted to 102,442 bales. Estimated mill consumption in Bombay, during the same period, was 525,437 bales as against 518,232 bales in the corresponding period of the previous year. Estimated stock of raw cotton, held by exporters, dealers and mills in Bombay, on the 23rd January was 482,194 bales as compared to 501,178 bales on the corresponding date of last year.

x

NEW YORK COTTON MARKET:

Price movements on the New York cotton futures market were rather erratic. Trade buying on the scale-down offered the main support. Some of the selling was traced to the continued slow conditions in the cotton textile market and the uncertainty about farm legislation. The Census Bureau's spinning report was somewhat below trade ideas; but had little influenced on the market. Middling spot was quoted at 34.25 cents per pound.

Hopes for a fundamental change in United States cotton policy, at any rate by 1959, are expressed by the President of the Liverpool Cotton Association. He has given three reasons for his optimism. The heavy export movement over the past two years coupled with the heavy deterioration suffered by the 1958 United States crop has brought about a reduction in the Commodity Credit Corporation's controlled surplus stocks from the peak of 14.4 million bales to around 4.5 million bales and most of the remaining cotton is comprised of undesirable lower grade. Secondly, opinions are being expressed in all segments of the American cotton industry favouring a return to freer production and marketing on the grounds that a continuation of the present policy of drastic acreage curtailment and high loan supports would not only create a deficiency of desirable cotton for both domestic consumption and export; but would also encourage the use of rayon and other man-made fibres by American mills to the detriment of cotton. Thirdly, there is no doubt that the United States Department of Agriculture is seriously concerned over the disruptive effects of the two-price system on the traditional methods

x

LIVERPOOL COTTON MARKET:

Prices on the Liverpool cotton futures market ruled generally easier under mill hedging which found the offtake limited. Demand for actual cotton continued to lag for this period of the season. The relatively small enquiry was mainly for USA cotton of medium and lower grades for shipment during February. In the higher grades, demand was filled from outside growths, including Mexican, Iranian and Nigerian. The Sudan contract closed quiet.

x

ALEXANDRIA COTTON MARKET:

Prices on the Alexandria cotton market developed a downward trend, reflecting the lack of demand from abroad. The long-staple positions registered larger losses than the medium-staple contracts.

In the Spot section, quiet conditions prevailed; but the premiums remained firm and unchanged except for medium grade Karnaks which were easier. Export sales, during the second half of December 1957, were 32,156 bales. Following were the quality-wise exports (figures in bales):—

	Season 1957-58	Season 1956-57
Karnak	105,615	110,119
Menoufi	128,348	56,399
Giza-30	35,872	58,526
Ashmouni	114,502	40,127
Others	8,574	2,145
Total	392,911	267,316

x

CLOTH AND PIECEGOODS:

Conditions in the Bombay Piecegoods ruled steadier last week, enquiries continuing to be better and maintained at a higher level. Merchants from Andhra are said to have now entered the market to book business and they seem to be interested in both old and new stocks. It is felt that business with this State will improve further in the near future. It is also stated that a solution has been found to the Sales Tax Issues in West Bengal. It is, therefore, felt that business with dealers in this State will also broaden considerably. Again, there are reports that there is a move to find a solution to the Sales Tax problem in Madras. As soon as this issue is solved, demand from this State will also improve. Thanks to the general improvement in the trading activity, stocks with the mills and the trade are gradually declining.

On the export front, too, conditions are reported to be better. Shippers have reported better enquiries from Sudan in the usual lines. Fair business is concluded with East Africa, while enquiries from Indonesia are likely to broaden in the near future.

Shortage of Copper

COPPER prices have staged a further rise following scarcity of the spot metal. The rate is quoted upto Rs 170 per cwt in the Bombay market and Rs 169 in the Calcutta market. Though, on the London Metal Exchange, the rate has receded further to £163½ from £168 per ton, it has no effect on the markets in India.

The present firmness in contrast with the world downward trend has occurred mainly due to shortage of domestic supplies in the face of a good demand. Sheet rollers have made a complaint with regard to the acute shortage of the metal, while importers seem to be reluctant to part with their stocks except at their prices. Actual users have been told by the Government to buy their requirements from importers since they will not get import quotas for the current licensing period. Moreover, the inflow of supplies from abroad has fallen short of expectations, as a number of possible importers have not established their quotas on the basis of past imports.

Anyhow, the shortage of copper in Bombay and Calcutta has caused concern to the Government of India. The Controller of Import and Export has, therefore, called a meeting of prominent metal importers and smelters on February 3 to discuss the supply position of the metal and the import policy for the current half-year.

Zinc prices are moving within a narrow range around Rs 53.75 per cwt, specially in view of the steady-

ness in London prices. Lead is quoted at Rs 65 per cwt. The stock position is reported to have become healthy due to sizable quantities being lifted by the Government against tender enquiries. A consignment of 350 tons of the metal is expected shortly. There has been fairly good demand for Tin, which is quoted at Rs 128.50 per quarter.

Meanwhile, the international outlook for Copper is considered to be obscure in view of the pressure of supplies. Cutbacks in production, planned for the Belgian Congo and Chile, have failed to support the price of the metal, which has lately reached new "lows" for post-war free trading in the London market.

The healthier tone in Zinc, despite a setback in copper prices, has indicated that zinc has almost stabilised around £63 per ton. The market for Lead continues to rule quiet with the rate hovering idly around £72 per ton. Tin remains very steady at £730 per ton.

Oils and Oilseeds

The markets for both Oils and Oilseeds have continued to rule quiet although Castor is an exception. The recent announcement of a 26 sh cut in freight rates for bulk shipment of oil between Indian and UK/Continental Ports has no effect on the market, because the gap between Indian and overseas prices is greater than the reduction in freight. While Brazil has been supplying castor oil to London around £108 per ton, Indian ship-

pers have found it difficult to prune the rate below £114 per ton for commercial quality. Shippers have pointed out that fresh business will not be possible unless the export duty is reduced from Rs 175 to Rs 100 per ton.

Meanwhile, Castor May delivery opened at Rs 136.25 and, after touching a fresh lower level of Rs 135.75, improved at one time to Rs 137.87 on short-covering on prospects of business with Russia, to finish the week at Rs 137.00. In the ready section, the rate is quoted at Rs 27.25 and Castor Oil, commercial quality, at Rs 14.06.

With buyers generally reserved, Groundnut prices have fallen under liquidation prompted by discouraging advices from upcountry centres and disappointing performance of spots. Vanaspathi interests have also not shown any interest in their purchases. With the result, February delivery started on a disappointing note at Rs 153.87 and finished further lower at Rs 153.25. In the ready section, Bold quality is quoted at Rs 31.25 and Groundnut Oil at Rs 17.25.

Prices in the Linseed section moved in sympathy. May delivery opened at Rs 29.62 and, after touching a high of Rs 30.00, finished at Rs 29.75. Ready is quoted at Rs 29.25 and Linseed oil at Rs 16.31.

Trading in the Cottonseed Oil section remains subdued. Although good business was put through with Rumania and other Communist countries after the Government permitted free exports upto Septem-

ber, the progress could not be maintained as world buyers had preferred to wait for some time, pending clearer indications of a regular flow of cheap cottonseed oil from the USA. Meanwhile, May delivery moved between Rs 95.00 and Rs 96.50, to close finally at Rs 95.25.

Gold & Silver

Prices on the Bombay Bullion Exchange, after suffering a setback in mid-week, improved slightly towards the close on encouraging spot demand and technical considerations.

Following trade reports of a price decline in Tibetan coins, bulls in Silver preferred to liquidate holdings. However, at the close, there was a modest rally. Arrivals and offtake amounted to 8 and 45 bars respectively. Unrefined metal receipts totalled 9 bars. Maha delivery moved between Rs 186.94 and Rs 188.50 and Fagun delivery between Rs 187.75 and Rs 189.37. Ready changed hands at Rs 187.37 to Rs 188.06.

In sympathy, prices in the Gold section, after showing an easier tendency, tended to improve at the close. Arrivals and offtake were estimated at 2,000 and 5,000 tolas respectively. Unrefined metal receipts totalled 3,000 tolas. Maha delivery moved between Rs 110.56 and 110.95 and Fagun delivery between Rs 110.25 and Rs 110.62. Ready changed hands at Rs 110.75 to Rs 110.94, while Sovereign remained firm at Rs 70.37.

Economists Endorse Plan Targets

THE Panel of Economists advising the Planning Commission held a three day session here last week to review the progress of the Second Plan and to advise Government on the lines along which the future course of action should be charted. Readers will recall that these experts have been associated with the Plan ever since its germinal ideas were formulated by Professor Mahalanobis, and that his tentative "Plan-Frame" was approved in general terms by them. Now that Government are actively engaged in the task of reappraising targets in the light of recent developments with a view to announcing the final shape of the Plan during the Budget session, it is to be presumed that they are taking counsel with this expert body before they finally make up their minds on the subject.

From the communique issued at the end of their deliberations, it is clear that the conclusions of the experts on rephrasing of the Plan accord more or less with the Government's views already indicated in broad terms. In view of immediate difficulties, especially in regard to balance of payments, the pruning of the Plan to the core is thought to be inescapable. Secondly, in view of the rise in cost owing to inflationary conditions, both within and without the country, the physical returns for the financial outlay originally outlined have unfortunately but inevitably to be much less than originally hoped for. Thirdly, disappointing performance on the agricultural front has made extensive drafts on funds, both internal and external, a necessity, and to that extent the original estimates of the Plan have gone awry. In the circumstances, the only course open to Government was to put up reluctantly with lesser returns on an original outlay from which more was hoped for. The other alternative of seizing this opportunity of relaxing efforts to achieve at least the financial targets originally planned for is firmly ruled out. As the Panel of Economists puts it, "Considering that the rate of domestic savings implied in an investment target of this order is by no means high, it should be possible to devise ways and means of raising the resources required without causing serious strains in the process". This is worth saying, because people who originally considered the Plan targets ambitious have now been going about saying that they have been proved right and, therefore, the rigours of development should be relaxed. They go further and point to the admittedly lower expectations in physical performance as the last straw that will break the back of the camel. Such counsellors of despair should be firmly resisted since, in terms of the real needs of the country,

what was originally aimed at was woefully inadequate, and what we are now going to achieve is even smaller. This circumstance should make us more and not less determined. It is, therefore, a matter for gratification that the panel of experts as a whole approves of the scale of effort required for the tasks ahead.

Of course, this does not mean that the experts promise automatic success. The conditions for achieving even the limited ambition of achieving the core of the Plan are listed by the panel as follows: These are, principally, the availability of external assistance to the tune of Rs 700 crores and the achievement of targets of domestic savings of all forms. A further condition of success is the maximum utilisation of facilities already available. In this context, economists are unhappy at the failure to utilise fully the irrigation facilities already provided and the time lag in the provision of transmission facilities in certain power projects where power itself is ready. It is this kind of waste of the fruits of the Plan rather than the effort involved in raising the necessary wherewithal that makes one disheartened.

Yet another condition for the success of the Plan is the control of the domestic inflationary situation. On this, the economists have some sensible things to say. The extent of inflationary pressure on the economy at the present moment is to some extent misleading in that its full impact is somewhat counter-acted by a balance of payments situation in which there is an import surplus. On the other hand, there is no need to run into a state of despair about the intractability of inflation generated, among others, by a shortfall between savings and investment of the order envisaged in the Plan. On this question, the experts are hearteningly reassuring. They are "definitely of the view that the inflationary pressure has not been in the past nor is it likely to be in the future such that (sic) it cannot be held in check by an appropriate policy, including direct controls at particular points". Indeed, the relative success achieved by selective credit control shows that ingenuity in devising instruments of dealing with inflation is sure to help us tide over any difficulty that is likely to arise.

As regards the possibility of additional external assistance of the order of Rs 700 crores, the panel of experts is rather doubtful. I have not the relevant figures with me at the moment, and the economists do not give any detailed data on the subject. However, in the light of recent developments, there is no reason why at least a substantial portion of this expecta-

tion should not be fulfilled. The recent American announcement of the loan of the order of nearly Rs 150 crores with indications of more to come is one hopeful feature. Thereafter, in quick succession we have had the announcement of the Yen credit and the near certainty of deferred payment credits from West Germany. Talks with France for similar assistance are on their way. There is also the recently concluded agreement with British oil interests which relieves Government of external financial commitments on that particular enterprise. There is then the World Bank loan of 100 million dollars which has recently been announced. On the whole, the prospect for obtaining the requisite quantum of external finance would appear to be brighter than indicated by the panel.

For obvious reasons, the panel has not indicated what particular projects should in its view be included in the "core" of the Plan. But the experts have some interesting suggestions to make about certain aspects of rephrasing that are worth thinking about, in spite of the fact that they are in rather general terms. The panel would seem to imply that the marked success in industrial production achieved in the last few years may be somewhat illusory and conceal the fact of the continuance of a basic weakness in the country. In other words, according to it, though there has been a marked increase in assembling capacity in various lines, the manufacturing activity is being confined to the fewest and simplest final operations. This would be a disadvantage in the long run, if it means a perpetual dependence on essential manufacturing ability elsewhere. Of course, since we are only starting, it is possible we are concentrating on a large measure of assembling work and it would not have been possible to start from scratch all at once. For one thing, we do not have the technical equipment; and, in any case, ability and resources for the manufacture of the machinery needed for manufacturing the components do not as yet exist in the country. It is, of course, the ancient dilemma of retarded development, the horns of which we are trying to catch without hurting ourselves one way or the other. Indeed, it is the central feature of the Indian plans. It is a question of phasing, and there is no general answer to the question of how best to phase it. In many cases, foreign cooperation—without which we may not even be able to get started—may not be forthcoming if our plans are such as not to offer foreign interests a fairly long stake in the Indian counterpart. This might conceivably involve a certain unwilling postponement of complete independence on foreign

manufacturing skills. Even if we assume that foreign interests are unselfish enough actively to assist us in our endeavour to stand on our own technological legs, there is the question of the import bill for the necessary machinery or sometimes even raw material for increasing the manufacture-content of our industrial undertakings.

The question is, therefore, one that can never be answered in general terms, and each industry has to be judged by its own particular needs and possibilities. The only thing that can be ensured is that the pattern of investment in block and other fixed assets is not such as to make difficult any switchover from mere assemblage to full fledged manufacture. No one should be in a position to say that it would be too expensive for him to change over from mere assemblage to manufacture. Normally, this is not likely to arise in any serious shape, since in these days of standardised components produced on a mass scale, a manufacturing complex is horizontal rather than vertical.

But the Panel of Economists seems to imply that the present pattern of industrial investment is such as to make the final emergence of the country as a self-sufficient manufacturer somewhat difficult. I have no idea of the nature of evidence on which this misgiving is entertained. I do not know whether full data on the subject are available. I doubt it. It would be an excellent thing if some enterprising research body gathered all the relevant material and framed broad conclusions on the appropriate industrial structure for various industries vis-à-vis our over all aim of achieving industrial self-sufficiency in the shortest possible time. But this is a comparatively long-term idea. Basic changes in the structure of manufacturing units can hardly be considered in the context of rephrasing the Plan at short notice.

Other suggestions of the experts include a warning about the deferred-payment arrangements by means of which we are trying to get over the temporary embarrassments of the Second Plan's external finances. It is hardly necessary to say that such drafts on the future prosperity should be limited to the minimum, not because the future is bleak, but because it is neither expedient nor proper to pledge the future in advance except for the most essential requirements of the Plan. So, schemes of deferred payment, especially for investments in the private sector and for consumer goods industries, should be carefully scrutinised. Otherwise, we may find ourselves in the unenviable position of making the Second Plan a success but at the cost of the third.

THE decision of the Eastern Zonal Council at its latest meeting in Patna to form a common police reserve, to develop jointly electric power and to plan manpower resources for the entire region is a happy augury for continued fruitful discussion of common problems by a group of contiguous States. As has been pointed out at the meeting, under common police reserve scheme, there will be increased scope for the officers and men of the police force in the various States to have some idea of people and terrain in the neighbouring States. Planning for power development on a zonal basis will secure optimum utilisation of the reserves of the region as a whole.

Presiding over the meeting of the Council, Mr Govind Ballabh Pant said that although the region had a setback in food production, it was heartening to find that it continued to take great strides in industrialisation. This zone accounts for nearly 60 per cent of the value of the total production of minerals in the country. Besides, it is the home of one of the principal export industries, namely, jute. In West Bengal there are a number of important industries. Assam has oil and tea while Bihar has coal in plenty. The two iron and steel works in the private sector and two of the three in the public sector are situated in this region.

With its life dominated by industry and trade and commerce, this region is much more concerned with the problem of transport than other parts of the country. It is, therefore, no surprise that Mr Pant has laid special emphasis on the need to tackle the problem of communications. Action in this regard from the States constituting the Eastern Zone is to issue in the shape of encouragement to road transport. Mr Pant has indicated that a major liberalisation of the State Governments' policies in respect of road transport will go a long way in filling the transport gap in this region. Such liberalisation will help road transport to lift the excess load thereby relieving the strain on the railways. In the context of the present heavy demand on the railways in the Eastern Zone, it is to be hoped that the State Governments concerned will give their urgent attention to the removal of such of the impediments to free interstate transport as are still left.

Plan and People

Speaking in Allahabad last week Dr. V. K. R. V. Rao, member of the Advisory Board of the Planning Commission, has entered a fervent appeal for saving the core of the Second Plan. The present crisis which has been brought about by the increased imports during the first year of the Cur-

Eastern Zonal Council

rent plan, failure of the savings side, taxation and loans, is a challenge to our ability to persevere at our chosen task until it is accomplished. As against an anticipated expenditure of Rs 783 crores, imports in 1956-57 have increased to Rs 1077 crores, an increase of 50 per cent. The main factors responsible for the increase of Rs 184 crores in the public sector imports are higher food imports, increased imports of defence equipment and a rise in freight due to Suez Canal crisis. The increased cost of freight and capital equipment which has been ordered quite in advance have resulted in pushing up the cost of imports in the private sector by Rs 142 crores.

Dr Rao is rightly of the view that the present difficulties should not be allowed to interfere with the implementation of the Plan because the consequences of its failure will be disastrous for the nation as a whole. Moreover, the position is not as hopeless as it is made out to be in some quarters. For, there are quite a number of schemes involving considerable expenditure included in the Second Plan which can be dropped without in any way mitigating the main objectives of the Plan.

But when Dr Rao advocates public reexamination of each and every item in the Plan with a view to redetermine its priority he does not sound quite convincing. For, it must have been obvious to him what reexamination of all the items at this juncture by what he calls peoples' councils will entail. The Second Plan is already nearing the end of its Second year and to submit the schemes anew for public discussion at this stage will inevitably result in delaying the entire programme. If the aim is to arouse popular enthusiasm and consequent effort which is no doubt essential for the success of the plan, other methods should have to be devised. In this regard, it is interesting to note that the panel of economists of the Planning Commission has recently pointed out that the main reason for the present difficulties is the inadequacy of organisational effort.

Farmers and Food Production

While there is a plethora of arguments why a sizable increase in food production is vital to the success of the planned endeavours in the country, one will look in vain for any workable plan in the innumerable speeches that are daily made on the subject. Theoretical discussions about this method or that and the low yield in India rarely pay heed to the problems which the actual producer of foodgrains has to grapple with day in and day out. Therefore, so long as the plans for increasing food production are not accompanied by the recognition of the

needs of the farmer, the result is bound to continue to be disappointing.

Dr Panjab Rao Deshmukh, Union Minister for Agriculture, drew pointed attention to this fundamental defect in the approach to the problem of food production the other day in Bhopal. He complained that there was a general lack of attention to the farmer's problems. While leaders and also the press lost no time in conjuring up bizarre pictures of the consequences of a continued food shortage in the country, they seemed to take no notice at all of the fact that food production in the country had almost been doubled during the First Five-Year Plan.

It would appear that if there is to be any real improvement on the food front as a result of an increase in domestic production, much more than increased irrigation facilities and larger availability of fertilizers, is needed. In the very first place the agriculturist should be made to feel confident that he will get a return commensurate with his effort. Dr Deshmukh has no doubt that such an assurance is of paramount importance for the success of the agricultural programme. The people at large should also be enabled to appreciate the vital role played by the farmer. Once these have been ensured, a proper atmosphere will have been created for the other measures to become effective.

Fighting Corruption

One of the latest directives to be issued by the UP Government is aimed at preventing the employment of relations of Ministers and high officials as a form of indirect bribe. Since the advent of freedom, the Union Government and many State Governments seem to have become highly corruption conscious. Government officers particularly have to declare their immovable and movable properties at intervals, gifts received for marriages etc. and in some States even ordinary purchases above a minimum amount.

How far these steps have discouraged officers taking illicit advantage of their position is a matter for some imaginative and trained investigating body to undertake. In a democracy where power in different forms are being shared by various groups and individuals holding appointed or elective posts, the temptations and opportunities for misuse of public funds and of personal authority and influence are numerous.

To track and to prove corruption of every sort to its source will often be beyond human ingenuity and perseverance, especially when the evil is fairly wide spread. Frequently, the permanent officer in Government, however highly placed, cannot avoid being the

helpless tool of a politically powerful Minister or his associates who are interested in some indefensible conduct or action.

The UP directive has not spared the Ministers from its scope and is an improvement on the face of it on similar regulations obtained elsewhere. But even with this widening of the net, is it actually possible to catch ingenious favour-monger or those whose goodwill he seeks to secure through a good turn done to their kith and kin? Sophisticated men can always think of easy ways of avoiding these rather simple snares.

There is also a point of equity to be thought of. Is it fair to disable in any way and discriminate against, under the eyes of the law a person merely because he happens to be connected by blood nearly or remotely to a Minister or officer in the Government?

Republic Day

This year's Republic Day celebrations seemed to have been marked by a remarkable lessening of popular enthusiasm. Thus, in Calcutta, although Raj Bhavan was aglow with garlands of lights and there was an impressive gathering on the Parade Grounds as well as at the Raj Bhavan reception, the whole affair, with too few flags on private residences and too few tamashas put up by the people, had a strongly official flavour. Some of the Leftist parties celebrated the occasion by holding an Anti-Commonwealth Day while the Communist Party and the PSP sulked in their own different ways. The Congress, it is obvious, is not living upto its brave resolutions on reviving mass contact. Its diagnosis of the malaise that has been afflicting it is undisputedly correct, but the treatment remains lackadaisical as before; and if some Congressmen find fault with the people for not responding to their treatment as they seem to, it only reminds one of the none-too-wise doctor who blames the patient instead of administering vigorous remedies. Too many identical old heads have ruled the Congress roost for too long. Equally, the younger generation of Congress workers is apparently lacking in ambition.

Lac Cultivation

Speaking in Calcutta last week Dr B. N. Uppal, Agricultural Commissioner of the Government of India, expressed concern over the fact that for the last three years the general level of prices of lac had been falling. Export of lac had been at a satisfactory level last year. During the period January to September 1957, exports amounted to 5,56,000 maunds compared to 5,31,000 maunds during the first nine months of 1956.

THANKS to active buying by Britain and the sustained interest in seed-lac on the part of the USA, the Shellac market in Calcutta has maintained a firmer tendency during the past few days. From Rs 77.50 per maund quoted at the beginning of the year, the rate for Pure TN quality has now firmed up to Rs 86. Although the firmer tone brought out some selling and the rate eased to Rs 84 at the close of the week, the basic situation had been given strength by the news that both the Katki and the Kusmi crops would be well below normal.

According to the final report issued by the Indian Lac Cess Committee, the total production of the Katki crop in 1957 is lower at 193,000 maunds as against as much as 201,000 maunds in the previous year. The lower production is due mainly to the poor crop in West Bengal and Behar.

On the London market, a far bigger business is reported to have been done at unchanged prices. The home trade seems to have been anxious to rebuild stocks after the active trade done over the Christmas holidays and as many as 38 lots are sold—the largest quantity for many months. February delivery shellac is quoted at 180sh per cwt with sellers at 182sh.

Shellac Firms Up

The following table will give an idea of the trend of prices for Pure TN shellac quality during the past year (rates per maund):

	High Rs	Low Rs
1957:		
January	105.00	95.00
February	94.50	80.00
March	87.00	82.00
April	90.00	85.00
May	86.00	80.00
June	79.00	72.50
July	82.00	72.00
August	88.00	78.00
September	87.00	80.00
October	91.00	83.00
November	87.00	76.50
December	80.00	74.00

1958:
Upto 23rd January 86.00 77.50

Number of packages shipped, during the current month till the 20th, were 22,274 packages comprising 10,119 packages of shellac; 10,157 packages of seedlac; 421 packages of buttonlac and 1,577 packages of other varieties. The following were the shipments made during last year (in packages):—

January	37,980
February	29,027
March	26,601
April	22,220
May	35,364
June	33,013
July	25,576
August	32,478
September	22,901
October	23,958
November	48,906
December	24,705

Sugar

Sugar markets have continued to rule quiet and, in the absence of any buying interest, prices have developed an easier tendency. In the Calcutta market, rates are moving between Rs 36.62 and Rs 38.62 per maund, according to quality. Following mill-delivery rates (per maund) are quoted in the Hapur market:— Meerut (D-29) Rs 35.25; Rampur (A-29) Rs 37.75; Shamli (B-29) Rs 37; Amroha (B-29) Rs 34.25; Bijnore (E-29) Rs 37.62; Daurala (B-29) Rs 36.87 and Mowana (B-29) Rs 37.06.

Khandsari

Rates for Khandsari sugar are moving between Rs 22 and Rs 32 per maund, according to quality. Production is increasing daily and new plants are being installed in Hapur as it is found profitable to manufacture khandsari. Some sugar circles are, therefore, expressing concern that this year's production of khandsari may reach as much as 3 lakh tons.

There are certain reasons for the rise in khandsari production. Khandsari producers do not have to pay either excise duty or cane cess. This makes it possible for them to

compete with sugar factories despite their very low sucrose recovery. Inasmuch as the khandsari interests use up cane, which they are able to get at a lower price than sugar prices, supply of cane available to sugar factories is adversely affected and and this, in turn, will mean lower sugar production.

Gur

Due to heavy diversion of cane to khandsari production, ready Gur arrivals, in the Hapur market, have declined to an average of 2,500 maunds daily. Prices, however, have recorded an easy trend in line with the fall in mofussil centres. Gur Panvera quality is quoted at Rs 11.50 to Rs 11.75 per maund and Balti at Rs 12.50.

Arrivals at Muzaffarnagar are estimated around 6,000 maunds. Panvera is quoted at Rs 12.50 to Rs 12.75 and Chakku at Rs 14.25 to Rs 14.62.

Foodgrains

Mixed conditions are witnessed in the Hapur Foodgrains market. Wheat has advanced by 12 nP per maund, to be quoted at Rs 15.62 for average quality and Rs 17.25 for the

farm variety. Rice has also recorded fractional gains on reports of overall shortage of the commodity in the country and that sufficient quantity is not available for imports on easy terms. Maize and Bajra have, however, lost 50 nP due to better supply position in the face of falling demand. Prices of other grains have declined in sympathy.

Conditions in the Delhi grains market remained generally quiet. Wheat prices are unchanged as arrivals and offtake are equally balanced. Rice has shown a slight rise due to better demand. Demand for Gram is lacking. Discouraging advices from the producing centres have an adverse effect on Maize and Bajra.

Prices in the Bombay grains market have displayed an easy trend, the downward trend is prices being marked in Jowar and Bajra. A fresh fall of Rs 10 per candy is recorded in the Rice section due to higher arrivals in the face of lower demand. The demand for Jowar is poor following higher crop expectations in the Sholapur region. The market for Pulses has witnessed a break in prices in almost all varieties. Urad has declined by Rs 5 per candy on higher stock position.

Language and Administration

TWO Chief Ministers of The Peninsula have been prominently in the news during the course of the last week. I suppose I should be more careful in my choice of words: they have been making news. In a sense, each is joining issue on a controversial matter; and it needs hardly to be said that in neither case have we seen the end of the affair. On the surface of it, the two subject matters are innocuous enough. All that has exercised Mr Kamaraj's cerebrum is the Hindi question; and, surely, after the splendid lead given by Rajaji, it behoved the Madras Chief Minister to come out with his own views. But the manner in which he has done so will far from win friends and influence people. Of this, more later. We shall first see what it is that has been troubling another troubled Chief Minister: I refer to the redoubtable Mr Nambudiripad, toiling away as best he can in Kerala. EMS (if we may call him so) has also done nothing more than to get a few things off his chest about administration; or rather, one aspect of it. How this, too, is grist for controversial mill, we shall presently see.

I don't suppose I should confess it, but this scribe has, while studiously and even excitedly following the tenor of Rajaji's arguments, been paying scant attention to what other worthies in the State have been saying on the place of Hindi. In extenuation, I might plead that we have had more than a bellyful of a topic in the discussion of which not a few speakers have had some nauseating things to say. That, however, does not excuse any remissness that I might have been guilty of.

Pithily, Mr Kamaraj states that English is on its way out, "and no one can hope to retain it indefinitely in India". This, let us recognise, is an opinion, a subjective proffering of one's view. For, who can tell how long English will continue to be useful—provided,

S. E. RLY TENDERS

Sealed tenders are invited for tender No. PA/COS/3/GB1(58) for supply of 110 Nos. mobile cylindrical Reservoir mounted on Trolleys. Tender will be accepted upto 12 noon on 21.2.58.

Tender forms (not transferrable) are obtainable from the undermentioned, Garden Reach, Calcutta-23 at Rs 2/- (not refundable) per copy of form.

Firms not on the railway's approved list of contractors must submit tender from together with a receipt for earnest money of Rs 550/- from this railway's Chief Cashier and a valid Income Tax Clearance Certificate without which the tender is liable to be rejected. \$120 CONTROLLER OF STORES

in the first instance, that it is not peremptorily exorcised from the educational syllabi? Again, the debate is not whether, if untampered with, English will endure or not. What is worrying not a few in this country, and among them the educationalists, is the prospect of an emotional discarding of English and a parochial thrusting or imposition of Hindi. To say, as Mr Kamaraj has done, that the acceptance of the principle that Tamil could be the language of State administration also involves a rejection of English in the national sphere, is surely sophistic argument. It does not at all follow logically. The necessity for Tamil—or for that matter, Bengali—as a medium at the State Government level flows, not from the impracticality of having English, but from the inability of Hindi to perform this function. So, the acceptance of Tamil amounts to a rejection, not of English, but of Hindi.

Mr Kamaraj sees all this in a different light. The fate of English, he said, was sealed on the day when Tamil was decided upon as the State medium. Then he asked what I presume he meant as a rhetorical question. "Where is the place for English?" I shall, if I may, submit an answer, although the question did not imply one. But first, let us see why the Chief Minister could so glibly wonder where English could fit in. At the Republic Day meeting at which he spoke, Mr Kamaraj added that, unless English was at least the medium for University education, there could be no hope for it. Apparently, the negation of English at the University stage also impels Mr Kamaraj to pooh-pooh the idea of any place at all for English.

It seems to me that one overriding factor tends to be overlooked altogether. That is, that nothing that India does will by one whit reduce the importance of English in international communications. All that we would be succeeding in doing, by a churlish abjuration of English, would be to cut off ourselves completely from the technological and cultural advance that the industrialised West (mainly speaking English) would be achieving. I am afraid that all this smacks too much of the man who cut off his nose to spite his face. It is high time that we proceeded rationally on this matter of supreme importance to India's future. The attitude of those who want to retain English does not include an animus against Hindi or Tamil or any of the dozen other Indian languages. Their only desire is that we do not do perfunctorily away with English. They do not even say that English should be the medium of instruction in schools; they would favour English at the University stage, but their insistence would only be on the necessity for English prominently

to be included in the curriculum. In brief, they are not anti-anything. They are merely being pro-English.

And this, for quite obvious reasons. It is not for Mr Kamaraj, or on the other hand even for a Rajaji, to determine English's place in India. What that place will be, can be known only by its usefulness in the future. The only thing that is certain is that it is palpably wrong to conclude, a la Mr Kamaraj, that English's fate has been sealed.

A footnote to the language discussion in the South is provided by yet another statement, emanating from Bangalore, from persons of high authority and eminent status, urging the retention of English as the official language and the medium of higher administration and education. For this purpose, the thirteen signatories (among them are Mr N. Madhava Rao, Sir Samuel Runganadhan and Mr V. P. Menon) have asked for suitable amendment of the Constitution, failing which, they state, "non-Hindi India cannot feel that its vital interests are secure". Let us realise that Hindi, instead of being a uniting force, is all too clearly in danger of being a disuniting force—especially if it is sought to be imposed in indecent haste.

Mr Nambudiripad got carried away, presumably by the size of the crowd that attended the public meeting at Palghat, and was provoked into—shall we say—rather "warm" sentiments. EMS, who happened to be in Palghat by reason of the evidence being recorded by the Kerala Administrative Reform Committee (of which he is a member), was—believe it or not—in the process of "defending" the decision of his Government to set up the Committee. Obviously, the best form of defence is the offensive.

The trouble arises because Committees in session cost money; and a Communist Government does not escape answerability for its expenditures. Then, there has been criticism that a Committee for this purpose should at all have been set up. For, if there is one thing that India has had no famine in, it is Committee reports on administrative reform. So, EMS has been drawing fire as having incurred wasteful expenditure on an inquiry which need never have been instituted.

The Kerala Chief Minister has not exactly been successful in proving a case for the setting up of the Committee. He could, in justice, point out that, at the very first meeting of the State Assembly, the idea of a Reform Committee had been mooted. But then, the objections, too, were immediately forthcoming. EMS now says that the Committee came into

being, because the Communists strongly felt that there were many things wrong with the present administrative system. Will one be pardoned for suggesting that one of the things that the Communists would find wrong is the democratic system? But I am quibbling, and perhaps I do EMS an injustice. For, there is always scope for improvement in administration; and there is always some red tape that, on scrutiny, could be eliminated.

I am afraid, however, that EMS, too, is being less than fair, when he finds serious quarrel to pick with the present secretariat system. In a democratic government, there is inevitably some element of delay—which may perhaps be avoidable in a totalitarian regime. But that is no reason for this floccinaucinihilipilification of the present secretariat system. The Indian administrative system has served the country well, and even the graphic examples that Mr Nambudiripad has sought to give cannot justify the Kerala Chief Minister's bitter criticism.

Thus, while EMS cited an experience that Mr Nehru is reported to have had, in respect of administrative delay, did it lie in his mouth to charge that departmental officials preferred to put obstacles in the way, rather than to get things done? An emergency did not help, he said, to rid the system of its lethargy: before relief could be given to victims of one flood, another had taken place. Not content with this, Mr Nambudiripad hinted that he would have been more outspoken, were he not a minister!

The audience was provoked to laughter by the Chief Minister's suggestion that the status of an officer was these days being measured by the yardstick of the number of prods that were allotted to him. Well, I suppose in a country we know, the might of a dictator is proven by the number of satellites that encircle him—and I am not thinking of Sputniks.

It is all very well to make a slashing attack on the legacy that India has received of the British administrative system. To quote Gandhiji, and assert that freedom did not consist in the replacement of the British bureaucrat by the Indian bureaucrat, is also nothing wrong. But to allege that Mr Paul Appabey and Sir N. Gopalaswamy Ayyangar had offered reports on administration that were unsuited from the Indian objective of a socialist society is surely to belittle the worth of excellent jobs of work done by these two men.

Lastly, Mr Nambudiripad's opinion that the administrative machine must be "metamorphosed lock, stock and barrel" is, may I suggest, typical of an ideological penchant for change by revolution.

The least that a State aspiring for industrialisation and having a big programme for the starting of new industries could do, to assist that process, is to ensure proper management of the industries already existing in the State. The record of many of the industries in Andhra Pradesh in this respect is one of sad failure in meeting even the minimum standards of a well-run enterprise. A few months back the mismanagement of some of the enterprises was the subject of a heated debate in the legislature of the State.

But it would seem that it was only the beginning of a continuing story. Complaints about the continuing standards of fall in management have since then never ceased. Addressing the Hyderabad Chamber of Commerce, last week, Mr Sanjiva Reddi, Chief Minister of Andhra Pradesh, made a shocking disclosure that crores of rupees which had been invested in several industries in what was formerly known as the Hyderabad State has been wasted. It is but natural that in such circumstances one should be reminded of the displaced outlets which could have profitably absorbed such funds.

The area of co-operation between the private sector and the State Government in the matter of industrial development, in the absence of vigorous efforts to improve the tone of industrial management, is certain to get narrowed. Mr Sanjiva Reddi himself has declared that it would not be possible for them to invest more in the existing industries or start new industries if they knew that they would not function efficiently. But he could not resist a feeling of "agony to see the condition of some of the lingering industries."

The magnitude of the problem of bringing the State on a level of industrial strength comparable with that of its neighbour in the South such as Madras and Mysore is indicated by the wide disparity in the per capita consumption of power in the Andhra Pradesh as compared to the other States. As against a per capita consumption of 20 and 40 units respectively in the two former States, the figure for Andhra Pradesh is only 12 units. Industrialisation of the State is therefore bound up with production of more power. In this connection, Mr Sanjiva Reddi stated that the power supply position in the Telengana State was particularly bad.

Mr Sanjiva Reddi also dismissed the complaints about high prices of food as rather unfounded and as based on a narrow outlook to the problems of the farmer. The question of food prices on which the feelings of the consumer are early aroused is also a matter with which the happiness of those who grow the food grains is tied up. At a time when the country is

experiencing an unexpected shortage of food grains any attempt at fixing the price for food grains at a level which contains no incentive element to the grower would spell certain disaster to the Second Plan.

*

Non-Gazetted Officers

One of the problems which had been persistently brought before the Madras Government's attention has been that of improving the lot of that class of Government servants generally known as Non-gazetted Officers. It is known that the NGOs of the State had held an inferior status in the matter of pay scales and dearness allowances as compared to Central Government servants and had therefore never ceased clamouring for bringing their pay scales on a parity with that of the Central Government employees. The attitude of the State Government to this question had left much to be desired in point of firmness and clarity.

It was therefore gratifying to hear Mr C. Subramaniam the State finance minister, explain to the members of the NGOs Federation the implications to the State Government and to the country as a whole of the demands raised by them for increase in their salaries and allowances. Mr Subramaniam pointed out that the distress with which the NGOs are faced with and on which they have based their demands for better treatment is soluble only on the basis of a correct and effective approach to the price level which was at the root of the troubles confronting them. As such the problem is not one peculiar to the NGOs alone but is one which has a larger incidence and affects the whole of the middle class. Mr Subramaniam stated that they themselves could do much to improve their lot by not creating difficulties which would interfere with the successful implementation of the Second Plan.

How the demands of the NGOs would impinge on the financial resources of the State Government is evident from the figures given by Mr Subramaniam of the commitment already incurred by the State Government in increasing their emoluments by Rs 12 per individual which was done last year. This added up to an annual figure of Rs 4½ crores and over the Plan period to a sum of Rs 22½ crores. Considering that the State's total outlay for the Second Plan itself is only Rs 150 crores, it looks rather unfair that the NGOs should choose to make more demands which it is not within the capacity of the State Government to meet. Already Central assistance to the tune of Rs 2 crores which was anticipated at the time of granting the increase last year, had since been withdrawn by the Centre at the suggestion of the Finance Commission.

Having a wider impact and significance, the question of bringing the pay scales of the State NGOs to the level of Central Government employees is a matter for mutual discussion and co-operation between the Central and the State Governments. In this connection, Mr Subramaniam was at great pains to explain to them how he had been consistently trying to bring home to the Central authorities the justice of their demands. All the same he ruled out any immediate prospects for the complete removal of the disparity in their pay scales even in the event of Central assistance and could only envisage a slow process by which this could be done.

*

A Slogan to Save

The student community has been called upon to make the small savings scheme a success. Mr C. Subramaniam, the Madras Finance Minister, who inaugurated the scheme, stressed that the loans which the Government used to obtain from the zamindars and other business magnates were no longer available. Therefore, he said, it has become inevitable for the Government to take the loans from all sources. He also pointed out that, if the student community could, by this scheme, collect a substantial amount, it could usefully serve the purpose.

The drive is a part of the activities of the Planning Forums which will operate in the city colleges. Four prizes have been offered to make the students more thrifty so that they may refrain from spending unnecessarily. The estimated target of Rs 6,000 millions during the Second Plan period may increase to Rs 9,000 millions in the Third Plan if there was good response in this direction. Of Rs 6,000 millions, as much as Rs 5,000 millions will be mobilised from the small savings so as to play an important role in the implementation of the Second Plan. It may be recalled, in this connection, that, receipts under this scheme rose from Rs 330 millions in 1950-51 to Rs 650 millions in 1955-56.

The small savings play a vital role in the economy of a country. This scheme provides an opportunity for rich and poor, young and old, to contribute their mite to the development of their country and infuses a spirit of national responsibility.

There has been insufficient publicity and inability of the organisers who have failed to create the sense of national responsibility among the public. Still, if the attention of the public is drawn to the scheme and its advantages publicised extensively there is no doubt that this will prove to be a great success.

Wanted : More Propaganda

The decision taken by the Coffee Board to close down the Coffee Houses is most welcome, especially when the indigenous consumption will be lessened so as to permit larger exports, with the result that there will be some amount of foreign exchange earned to meet the deficit.

It may be recalled that our internal markets consumed 25,249 tons in 1956-57 and as much as 12,249 tons was exported. This shows a marked improvement compared to the internal offtake of 23,900 tons in 1955-56 and the exports amounting to 7,475 tons in the same year. It is also heartening to note that a few thousand acres more will be brought under coffee cultivation, in addition to the existing 200,000 acres in South India.

It is necessary that we expand our programmes for export. Foreign exchange is a vital necessity without which the implementation of the Second Plan would be very difficult. It has been estimated that there will be stiffer competition from Brazil this season in view of its excessive production. In the Middle East, Indian coffee has very little or no demand; therefore, organised penetration of markets seems essential. But, in recent years, the Communist bloc has showed a rising trend in the consumption of coffee: hence, this is a market for us to exploit.

*

Madras Port Trade

During 1956-57

The administrative report of the port of Madras for 1956-57 shows that the revenue receipts of the Port Trust for the year were Rs 234.09 lakhs as against Rs 168.63 lakhs in the previous year. The net expenditure for the year excluding the amount held under suspense and the amounts paid as contributions to renewals and replacement fund, general insurance fund and capital account aggregating Rs 139.68 lakhs amounted to Rs 111.41 lakhs as against Rs 97.84 lakhs in the previous year.

The number of vessels excluding sailing vessels that entered the harbour during the year was 873 as against 926 in the previous year. An interesting point that emerges is that tonnage of foodgrains imported through the port during the year was 149,963 as against only 42,240 during the previous year.

The total tonnage which passed through the port during the year was 2,665,828 as against 2,461,611 during the previous year. The trade as a whole was appreciable more than that of the previous twelve months and compulsory third shift working in the docks was introduced with effect from June 1, 1956, to cope with the increased tempo of traffic.

IN the Madras market, Groundnut Oil prices have suffered a landslide during the week under review. The ready rate, which was ruling at Rs 300 per candy last week, has now declined to Rs 287. Increased arrivals of kernels in North Arcot and lack of interest by Calcutta dealers are stated to be responsible for this sharp setback in prices.

It may be mentioned that vanaspati factories had so long been giving support to the market and buying oil from the big mills. But, with the accumulation of vanaspati stocks at Calcutta and restricted intake on account of customers, Calcutta interests have not evinced any keen interest in the market. Again, the mustard crop in Bengal is reported to be fairly good, and the difference in prices between mustard oil and groundnut oil is also narrowing down. Thus, big mills are now started to be in difficulty; and nervous unloading by a few is taking place.

In the kernel section, the rate is quoted at Rs 145 per candy. Arrivals averaged 40 to 50 tons a day, while those in South Arcot and North Arcot centres are reported to be good. Small crushers are the main buyers, while big crushers are unable to do business owing to the fall in the price of oil and the difficulty in selling their production in competition with the duty-free oil of small producers.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides have continued to be small and these are cleared promptly. In the export section, UK buyers are more interested in 5½ lbs and business is reported done in ordinary marks at 44d and, in some cases, even at 46d. Shippers are now quoting 70d for Runs without any response from London. Inferior fifts have shown no change in prices and the local demand has continued to take up all supplies at very much higher prices than the UK buyers can afford to pay.

Arrivals of Buff hides are slightly higher and fair quantities are reported to have been cleared at 2 to 3 nP per pound higher than last week. Arrivals of Cow Calf and Buff Calf have, however, continued to be small and of a poor selection.

In the Tanned Skins section, market quality Goat skins have remained unchanged, while heavily-adulterated Sheep skins have advanced by about 6 to 12 nP per pound. On the export front, the market is a little quieter as both buyers and sellers appear to be awaiting the result of the next London Public auction.

Pepper

The Pepper market continues to remain depressed due to paucity of foreign as well as inland demand and reports of increased arrivals at

Setback in Groundnut Oil Prices

the terminal centres. Advices from New York are also quiet as dealers and grinders there are inclined to hold off in anticipation of further declines. In the Alleppey market, the rate is quoted around Rs 462 per candy. In the Kozhikode market, Wynaad new is quoted at Rs 500 and the Country variety new at Rs 475 to Rs 490 per candy.

Business between India and the USA, during the 1957 season, is estimated to have been reduced drastically to about one-tenth of the preceding year. As against the normal transactions between 1,500 and 2,000 tons every year, only about 200 tons have changed hands this season.

In the New York market, Malabar and Lampong spot are quoted lower at 23½ cents per pound and Sarawak spot at 22½ cents. Big offers of 100 to 200 tons of smuggled Lampong from Singapore are reported to have scared away prospective buyers. In the Singapore market, Sarawak is ruling steady; but Lampong has weakened under fear of heavy arrivals of smuggled pepper from Sumatra.

Coffee

It is understood that the Coffee Board has a plan to introduce open export auctions. Leading planters have felt that this is certainly a step in the right direction, although its early effects may not be quite encouraging. In their opinion, the industry can, however, hardly feel secure until it has an established exchange for marketing its produce on lines similar to the tea markets in Cochin and Calcutta. It is generally felt that the present system of auctions by sealed tenders, while adequate for the needs of the internal market, is not popular among foreign buyers.

Meanwhile, internal offtake has risen to a new record level of 26,230 tons in 1957. This is more than 10 per cent above that in 1956 and 17 per cent above that of 1955. The internal consumption, during the current year, is likely to increase further.

It is felt that, as the outlook for coffee in the world market is uncertain, an expanding home market is a very valuable asset for the coffee industry in India. Nevertheless, with the large rise in output, the industry will have to rely on foreign markets to dispose of its surplus. The crop last year was 42,000 tons and the estimate for the current season is placed at 30,000 tons; but again a large crop is more than likely for the next season.

On account of the delay in curing, the first Export Sale of the new season, scheduled to take place in January, has to be postponed to the first week of February.

Bangalore Silk

The Bangalore Silk market rules generally firm with the prices of

Filature and Charka varieties maintaining the same levels that prevailed in the previous week. In respect of third quality silk, there is only a nominal increase of 50 nP.

Prices of Reeling Cocoons have tended to decline with the first quality quoting from Rs 1.95 to Rs 2.31 as against Rs 2.12 to Rs 2.37.

MARTIN BURN LIMITED

NOTICE

The Annual General Meeting (being the twelfth Ordinary General Meeting) of the Shareholders of Martin Burn Ltd. will be held on Thursday, 27th February, 1958, at 12 noon at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:

1. To receive and adopt the Audited Accounts for the year ended 30th September, 1957, and the Directors' and Auditors' Reports thereon.
2. To declare a Dividend and Cash Bonus.
3. To appoint Directors in place of those retiring. In this connection notice is hereby given that a special notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Section 281 of the Companies Act, 1956, to move the following resolution at the meeting:—
"That Mr. T. Leslie Martin be and is hereby appointed a Director of the Company and that it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to him."
4. To appoint Auditors and to fix their remuneration.

The Ordinary Share Registers of the Company will be closed from 20th to 27th February, 1958, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,
A. G. Gidley
Secretary.
Calcutta,
1st February, 1958.

NOTE:—The Dividend and Cash Bonus, if sanctioned, will be paid on or after 1st April, 1958, to those Shareholders so entitled whose names appear in the Company's books on the 27th February, 1958, or to their mandatees. No application for dividend warrants will be necessary.

Second quality rules between Rs 1.62 and Rs 2.00 against Rs 1.87 to Rs 2.06.

Foreign-seed cocoons have registered an improvement of six points over the week, while Mysore continues to be quoted at the same rate as in the previous week. The rates for Silk-waste remain unchanged.

MARTIN BURN LIMITED

NOTICE

At a meeting of the Board of Directors of Martin Burn Ltd. held on the 22nd January, 1958, the Directors have recommended the payment of a dividend at the rate of Rs. 1.50 nP and a cash bonus of 62 nP per share both without deduction of Income Tax on the Ordinary Shares of the Company ranking for dividend for the year ended 30th September, 1957. These recommendations await sanction by the Shareholders at the Annual General Meeting of the Company to be held on Thursday, the 27th February, 1958.

The Ordinary Share Register of the Company will be closed from the 20th to 27th February, 1958, both days inclusive, and the dividend and cash bonus, if sanctioned, will be paid on or after the 1st April, 1958.

By Order of the Board,
MARTIN BURN LIMITED,
A. G. Gidley,
Secretary.
12, Mission Row,
Calcutta, The 22nd January, 1958.

BALMER LAWRIE & COMPANY LIMITED

NOTICE is hereby given that an Interim Dividend on the shares of the above Company of 5%, free of Income Tax, for the year ended 31st December, 1957, was declared by the Board of Directors on 27th January, 1958, payable on or after 28th February, 1958, to those Members whose names are registered in the Register of Members of the Company on the 28th February, 1958. Dividend Warrants will be despatched to Members and no application to the Company is necessary.

Notice is also hereby given that the Transfer Books and the Register of Members of the Company will be closed from 14th February, 1958 to 28th February, 1958, both days inclusive.

By Order of the Board,
BALMER LAWRIE & COMPANY LIMITED,
D. MANSON
Secretary.
21, Netaji Subhas Road,
Calcutta. 27th January, 1958.

February 1, 1958

203

Consent of the Central Government has been obtained to this Offer for Sale by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

Licences have been obtained from the Central Government for effecting a substantial expansion to an existing industrial undertaking and for the establishment of a new industrial undertaking. Copies of these Licences are open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting these Licences the Government of India do not take any responsibility for the financial soundness of these undertakings or for the correctness of any of the statements made or opinions expressed in regard to them.

A copy of this Offer for Sale, having attached thereto the documents specified below, has been delivered to the Registrar of Companies, West Bengal, for registration as required by Section 60 of the Companies Act, 1956.

Application is being made to the Calcutta Stock Exchange for permission to deal in and for an official quotation for the whole of the issued share capital of the Company.

The Application Lists will open at 10 a.m. on Tuesday, the 4th day of February, 1958 and will close at 10 a.m. on Friday, the 7th day of February, 1958 or later at the discretion of the Offeror.

INDIAN OXYGEN LIMITED.

(Incorporated under the Indian Companies Act, 1913)

CAPITAL

Authorized Rs.	Ordinary Shares of	Issued and Fully Paid Rs.
4,00,00,000	Rs. 10/- each	2,00,00,000

The Company has no debentures, debenture stock or other loan capital outstanding but is indebted to The British Oxygen Company Limited in the sum of Rs. 16,91,743 on Special Loan Account and Rs. 1,13,16,165 on Current Account as at the 31st December, 1957. These amounts are unsecured.

The Company at present has overdraft facilities with its Bankers up to a maximum of Rs. 20,00,000 outstanding at any one time. As at the 31st December, 1957, no amount was outstanding on this account.

DIRECTORS:

A. D. Vickers.	29, Netaji Subhas Road, Calcutta.	Chairman, Solicitor.
J. S. Hutchison.	Bridgewater House, Cleveland Row, London, S.W.1.	Chairman of The British Oxygen Company Limited.

A. K. BASAK, Chartered Accountant (England), 48/1, Diamond Harbour Road, Calcutta-27.

REGISTRARS:

JARDINE HENDERSON LTD., 4, Clive Row, Calcutta-1.

OFFER FOR SALE

by The British Oxygen Company Limited of Bridgewater House, Cleveland Row, St. James's, London, S.W.1.

OF
600,000 Ordinary Shares of Rs. 10/- each fully paid IN

INDIAN OXYGEN LIMITED

at Rs. 13.50 per share payable in full on application

All the shares now being offered for sale are being underwritten by The Industrial Credit and Investment Corporation of India Limited of Union Bank Building, Apollo Street, Fort, Bombay-1, for a commission of 2% on the sale price of the shares, making a total commission of Rs. 1,62,000. In the opinion of the Directors the resources of the underwriters are sufficient to discharge their obligations. All the shares now being offered for sale are equity shares within the meaning of Section 85 (2) of the Companies Act, 1956.

The Offeror will receive through the Company's Bankers. The Chartered Bank, applications for the above Ordinary Shares payable in full (i.e. Rs. 13.50 per share) on application.

It is intended to reserve a maximum of 30,000 (i.e. 5%) of the above 600,000 shares for offer in the first instance to employees of the Company. To the extent to which these shares are not taken up by employees they will be available to meet applications from the public.

Applications which, unless made by employees of the Company, must be for 50 shares or multiples thereof, must be made on the accompanying form and lodged, together with the full amount payable, before the close of the application lists, with any branch in India of The Chartered Bank. Employees of the Company may apply for 25 shares or multiples thereof and a special form of application, coloured blue, is provided for this purpose with copies of this Offer for Sale issued to employees.

Further instructions regarding application for shares appear later in this Offer for Sale and also on the Application Forms.

All expenses of the offer, including stamp duty payable on the first transfer of shares (from the Offeror to the applicant), will be paid by the Offeror.

The shares now being offered will confer the right to any dividend declared in respect of the Company's financial year ending 30th September, 1958. No dividend has yet been declared in respect of such financial year.

PARTICULARS.

History and Business: Indian Oxygen Ltd. was incorporated and registered in West Bengal on the 24th January, 1935, as a private company limited by shares under the name of "The Indian Oxygen & Acetylene Co., Limited." On the introduction of the Companies Act, 1956, the name of the Company was changed to "The Indian Oxygen & Acetylene Co., Private Limited." The Company was converted into a public company on the 15th day of January, 1958 and at the same time its name was altered to "Indian Oxygen Limited".

The Company was originally formed for the purpose of taking over (and after incorporation, did take over) as going concerns the businesses then carried on:—

Firstly: By The Lightfoot Refrigeration Company, Limited at Calcutta, Bombay, Lahore, Jamshedpur, Giridih and Kargali and at Colomobo in connection with the manufacture and sale of Oxygen Gas and Liquid Oxygen Explosives and appliances therefor.

Secondly: By The Gas Accumulator Co. (India) Limited at Calcutta in connection with the

manufacture and sale of Oxygen, and Acetylene Gases and appliances therefor.

Thirdly: By Allen Liversidge (India) Limited at Bombay in connection with the manufacture and sale of Acetylene Gas and appliances therefor.

The Company is a subsidiary of The British Oxygen Company Limited and, as such, is a unit of an organisation having subsidiary and associated companies in Africa, Australia, Burma, Canada, Ceylon, Eire, Hongkong, Malaya, New Zealand, Norway, Pakistan and the United Kingdom.

New companies were formed in Pakistan, Burma and Ceylon, as subsidiaries of The British Oxygen Company Limited, to commence operations as from the 1st August, 1949, after taking over the capital assets, stocks and certain other assets, together with certain liabilities of The Indian Oxygen & Acetylene Co., Limited in those territories. The Indian Oxygen & Acetylene Co., Limited ceased trading in those territories as from the 1st August, 1949, consequent upon the formation of the new companies.

The Company's present business consists of the manufacture and sale of Industrial and Medical

1948 Rs.	1949 Rs.	1950 Rs.	1951 Rs.	1952 Rs.
1,08,52,445	1,36,59,064	1,33,03,772	1,53,97,836	1,69,25,955
1953 Rs.	1954 Rs.	1955 Rs.	1956 Rs.	1957 Rs.
1,97,39,770	2,34,03,420	2,87,99,882	3,45,59,726	4,17,74,429

NOTE:—Sales in Pakistan, Burma and Ceylon upto 31st July, 1949, have been included in the above figures. After that date separate companies were, as mentioned above, incorporated in these countries to take over the business previously carried on there by this Company.

In order to meet the increasing demand for its products the Company has throughout adopted a progressive policy both as regards expansion of its factories and facilities and as regards replacement of old plant and machinery by modern equipment.

The industrial development plans initiated by the Government of India, and in particular the expansion in steel production envisaged by the Second Five Years Plan, are expected to give rise to a further very substantial increase in the demand for the Company's products. With this in mind the Directors have therefore drawn up a replacement and expansion programme. This programme involves the setting up of new factories and expansion and modernisation of existing factories and includes provision for the progressive manufacture in this country of certain equipment and accessories used in the process of Welding and Cutting which presently have to be imported from abroad. As indicated by the headnote on the first page of this Offer for Sale, Licences under the Industries (Development and Regulation) Act, 1951, have been obtained for the establishment of a new industrial undertaking for the manufacture of Gas Welding and Cutting Equipment and for effecting a substantial expansion to the Company's existing industrial undertaking for electrode manufacture. In the light of a recent Government Notification the Company has been advised by the

Gases (including Oxygen, Acetylene, Nitrous Oxide and Dry Breathing Oxygen) and Electrodes and of the assembly manufacture and sale of Welding and Cutting Apparatus and Equipment, and other similar articles.

The business is carried on in India at the Company's Head Office and factories in Calcutta and at branch factories and offices at Ahmedabad, Bangalore, Bombay, Burnpur, Delhi, Jamshedpur, Kanpur, Madras, Tiruchirappalli and Visakhapatnam and through depots at Bombay City, Baroda, Cochin, Delhi, Gauhati, Howrah, Hubli, Hyderabad, Jaipur, Jullundur, Kolhapur, Ludhiana, Madurai, Nagpur, Patna, Poona and Vijayawada.

Development: Since its incorporation the Company has progressively expanded both its volume of production and its range of products and it is now the main supplier of India's requirements of Industrial and Medical Gases and Equipment for Welding and various other processes involving the use of Industrial Gases.

An indication of this progressive expansion is given by the following figures showing the total sales turnover during the last ten years:—

Ministry of Commerce and Industry that Government now considers that Industrial Gases, Oxygen and Dissolved Acetylene, and also Fluxes of all types, are covered by the Act. This will necessitate the obtaining of certain further Licences under the Act and the necessary applications have been submitted.

The Replacement and Expansion programme which is already in hand, is planned to be completed by approximately 1960 at an estimated cost of Rs. 3,20,86,423. Of this sum expenditure of Rs. 99,59,423 had already been incurred up to the 30th September, 1957, leaving a balance of Rs. 2,21,27,000 to be expended during the three years to the 30th September, 1960. The expenditure incurred to date has been financed, on a temporary basis, by The British Oxygen Company Limited partly by means of the Special Loan Account referred to on the first page of this Offer for Sale and partly by allowing the Company to withhold payment of amounts due to The British Oxygen Company Limited on Current Account.

Shortly before this Offer for Sale 680,000 Ordinary Shares of Rs. 10 each were issued to The British Oxygen Company Limited at par. Out of the total issue price (Rs. 68,00,000) Rs. 29,23,333 was paid by liquidation of a loan from The British Oxygen Company Limited then outstanding. The balance of Rs. 38,76,667 was remitted to the Company in cash.

The Offeror (The British Oxygen Company Limited) has agreed to leave the net proceeds of sale of the present Offer for Sale, less Capital Gains Tax, if any, payable by the Offeror in respect thereof, on loan to the Company for a period of seven years at the rate of interest from time to time applicable to loans from The British Oxygen Company Limited to the Company. Such rate of interest is subject to adjustment in the light of prevailing conditions but at present stands at 6 per cent per annum.

In planning the financing of the Replacement and Expansion Programme the Directors have had due regard to the necessity of providing for adequate foreign exchange for the import of capital goods. In this connection the subscription by The British Oxygen Company Limited of the sterling equivalent of Rs. 68,00,000 (partly by liquidation of an outstanding loan to the Company and partly by remittance in cash) will be of great assistance but it is estimated that further foreign exchange to the extent of approximately Rs. 75,00,000 will be required for the Replacement and Expansion Programme. The Company is therefore engaged in negotiation with The Industrial Credit and Investment Corporation of India Limited and intends to open negotiation with the Commonwealth Development Finance Company Limited of London and it is hoped that these two Companies between them will lend to the Company a total of Rs. 75,00,000 available as foreign exchange. Should these negotiations for any reason prove unsuccessful it will be necessary to explore other possible means of raising the required amount of foreign exchange.

The balance in the hands of the Company resulting from the recent issue of 680,000 shares to The British Oxygen Company Limited: the net proceeds of this Offer for Sale (less Capital Gains Tax, if any) to be lent to the Company by the Offeror; the foreign exchange loans referred to above; (assuming the negotiations are successful) and the amount that is estimated to be available from the Company's internal resources (after making due allowance for the working capital which will be required during the three years to the 30th September, 1960) will be used to finance the Replacement and Expansion Programme including expenditure already incurred. It is proposed in the first instance to pay off the amount due to The British Oxygen Company Limited on the Special Loan Account and also at the earliest opportunity to pay off the sum presently due to that Company on Current Account.

Management, Staff and Technical Facilities: The Company has an experienced technical and executive staff, a large proportion of whom have been trained by the Offeror in the United Kingdom and provides work for over 2,000 employees.

Indian Finance

As a wholly owned subsidiary of The British Oxygen Company Limited the Company has had the benefit of the wide technical experience and "know how" of that Company. Consequent upon the conversion of the Company into a public company with a view to the present Offer for Sale by the Offeror to the Indian public of a substantial part of the Offeror's shareholding, it is proposed to enter into an Agreement with the Offeror for a period of 5 years for the undertaking of joint research in the Offeror's research establishments in the United Kingdom, each party to pay an appropriate proportion of the cost of such research, subject to a maximum annual payment by the Indian Company of £30,000, and for the continuance of the various training and technical assistance facilities heretofore provided by the Offeror. The Agreement will also make provision for the continued use by the Company of registered designs, trade marks, patents, processes and inventions of the Offeror and for reciprocal facilities to be given by the Company to the Offeror. Application has been made to the Reserve Bank of India for its consent to the proposed Agreement.

Working Capital: Taking into account bank facilities the Directors consider that the Company has adequate working capital for its present requirements and the financial arrangements referred to above provide for working capital during the period of the Replacement and Expansion Programme.

Future Prospects: The growth of the Company's sales is reflected in the profit figures over the past five years. Whilst no assurance can be given as to future profits or prospects, it is considered that with the planned rise in steel production in this country there should be a ready absorption of the Company's present and proposed increased production.

The Directors anticipate that, in the absence of circumstances beyond their control, the profits of the current financial year should be sufficient to justify recommending a dividend for the year of 10% free of income tax.

Auditors' Report: The following is a copy of a Report which has been received from Messrs. Price, Waterhouse & Co.:—

B4, Gilander House,
Calcutta
8th January, 1958.

The Directors,
The Indian Oxygen & Acetylene Co. Private Limited,
48/1, Diamond Harbour Road,
Calcutta-27.

Dear Sirs,

We have examined the books and accounts of The Indian Oxygen & Acetylene Co. Private Ltd., which are kept in Calcutta and in which are incorporated the audited returns from the Branches, for the five years ended 30th September, 1957, and report that the profits of the Company are as set out below. These profits have been arrived at

February 1, 1958

after charging all expenses of working and management including provision for normal depreciation as allowable for taxation and after making such adjustments as are, in our opinion, appropriate:—

INCOME.							Year ended 30th September, 1953.	Year ended 30th September, 1954.	Year ended 30th September, 1955.	Year ended 30th September, 1956.	Year ended 30th September, 1957.

In respect of the year ended 30th September, 1957	10% per annum	13,20,000

Yours faithfully,
Sd. Price, Waterhouse, & Co.

Statutory and General Information: The shares now being offered for sale were acquired by the Offeror prior to 1947. No part of the proceeds of this Offer for Sale is payable directly to the Company but, as mentioned above the entire net proceeds less Capital Gains Tax, if any, payable by the Offeror in respect thereof will be

loaned to the Company by the Offeror. The expenses of this Offer for Sale, which are payable by the Offeror, inclusive of underwriting commission, brokerage, stamp duty, printing charges, Registrars' fees and legal and other charges are estimated at Rs. 5,20,000. This does not take into account Capital Gains Tax, if any, payable by the Offeror.

No share or loan capital is under option or agreed to be put under option.

The main objects specified in the Company's Memorandum, apart from the taking over of the businesses of The Lightfoot Refrigeration Co. Ltd. The Gas Accumulator Co. (India) Ltd. and Alien Liversidge (India) Ltd. referred to above, are:—

"To carry on the business of manufacturing and compressing oxygen, hydrogen, nitrogen, carbonic acid, acetylene and other gases or kindred substances or any compounds thereof by any process, and of selling or applying such gases, substances and compounds or any of them to such purposes as the Company may from time to time think desirable, and to manufacture, buy, sell, let on hire, and deal in engines, cylinders, compressors, machines and other apparatus and conveniences which may seem calculated to promote (directly or indirectly) the consumption of gases.

To manufacture and deal in metals, substances and materials of all kinds (including glass) which may be usefully or conveniently employed in the manufacture of receivers for compressed or liquefied or other gases, and all machinery, appliances, tools, articles and things used or capable of being used for closing or in the manufacture of appliances for closing such receivers or for closing or stoppering bottles or for liberating the gases or other contents of

any such receivers or the tools required for or used in the manufacture of any such articles or things or for any of the purposes aforesaid.

To carry on the business of manufacturing, buying and selling dissolved acetylene, acetylene lamps, generators and plants, acetylene apparatus and accessories and other apparatus, appliances, articles and things which may seem calculated to promote or to be capable of being used in connection with the consumption of dissolved acetylene.

To carry on the businesses of chemists, druggists, importers and manufacturers of and dealers in carbide of calcium and other pharmaceutical, medicinal, chemical, industrial and other preparations and articles, compounds, cements, oils, paints, pigments and varnishes, makers of and dealers in proprietary articles of all kinds, and electrical, chemical, photographic, surgical and scientific apparatus and materials."

No shares or debentures have been issued or agreed to be issued within the two years preceding the date of this Offer for Sale as fully or partly paid up otherwise than in cash and no shares have been issued at a premium within the said two years, nor are any shares presently intended to be issued at a premium.

The Company has not issued any redeemable preference shares and does not at the present time intend to do so.

No amount or benefit has been paid or given within the two years preceding the date of this Offer for Sale or is intended to be paid or given to any promoter or officer of the Company save as remuneration for services as a director, managing director or employee of the Company.

On a show of hands every member present in person has one vote and every person present as a General Proxy (i.e. any Proxy

other than a Proxy appointed for a specified meeting only) or as a representative for a body corporate, if he is not entitled to a vote in his own right, has one vote. On a poll the voting rights of members are as specified in Section 87 of the Companies Act, that is to say, every Ordinary shareholder has a right to vote on every Resolution in proportion to his share of the paid up equity capital of the Company.

No member may exercise any voting rights either personally or by Proxy at any meeting of the Company in respect of any shares registered in his name on which any calls or other sums presently payable by him have not been paid or in regard to which the Company has or has exercised any right of lien.

The Board are authorised to borrow and secure the payment of any sums of money for the purposes of the Company but they may not, without the sanction of a General Meeting, so borrow any

Bonus Issue of	24,111 fully paid Ordinary shares of Rs. 10/- each in March 1940

During the two years preceding the date of this Offer for Sale no commissions, discounts, brokerage or other such terms, except as herein mentioned, have been granted to any person in connection with the issue or sale of any stock, shares or securities of the Company.

Contracts: The following contracts, not being contracts in the ordinary course of business, have been entered into by the Company with the parties mentioned during the two years preceding the date hereof and are or may be material:—

(1) Dated 20th January, 1958 with Jardine Henderson Limited whereby the latter were appointed Registrars and Share Transfer Agents to the Company at a fee of Rs. 30,000/- per annum and also undertook to perform various services for The British Oxygen Company Limited in connection with this Offer for Sale for a fee of Rs. 50,000/-. (2) Dated 10th July, 1956, with The British Oxygen Company Limited being an order placed by the Company for a Liquid Oxygen Plant for Bombay Branch for Rs. 7,66,670/-. (3) Dated 29th April, 1957, with The British Oxygen Company Limited being an order placed by the Company for a Liquid Oxygen Plant for Burnpur Branch for Rs. 8,76,820/-. (4) Dated the 29th April, 1957, with The British Oxygen Company Limited being an order placed by the Company for a 1,000 cubic feet Mobile Oxygen Plant for Rs. 2,88,000/-. (5) Dated on various dates between 10th February, 1956 and 27th September, 1957 with The British Oxygen Company Limited being orders

sum of money which will make the amount borrowed by the Company (exclusive of temporary loans obtained from the Company's bankers in the ordinary course of business) and then outstanding exceed the aggregate for the time being of the paid up capital of the Company and its free reserves, that is to say, reserves not set aside for any specific purpose.

The general powers of management of the Company are vested in the Board subject to the provisions of the Companies Act or any other statute, to the provisions of the Memorandum and Articles of the Company and to any regulations not inconsistent therewith duly made thereunder, including regulations made by the Company in General Meeting.

There has been no revaluation of the assets of the Company during the two years preceding the date of this Offer for Sale.

The following capitalisations of reserves or profits of the Company have taken place:—

Bonus Issue of	24,111 fully paid Ordinary shares of Rs. 10/- each in March 1940			
do	24,111	do	April	1941
do	24,112	do	April	1942

placed by the Company for plant and machinery comprising cylinders, evaporators, oxygen compressors, liquid oxygen transport tanks, portable equipment for steel process work, water receivers, conversion units, filter units, alumina driers, pipeline supply components, machinery for manufacture of welding fluxes and nozzles for a total sum of Rs. 76,42,058/-. (6) Dated on various dates between 17th January, 1956 and 2nd December, 1957 with Dalbhum Trades & Industries Ltd., Aluminium Manufacturing Co. Ltd., G. C. M. Burman, Indian Galvanizing Co. (1926) Ltd., Parry & Co. Ltd., General Electric Company of India Private Ltd., Cumberland & Martin Ltd., Process Plant Engineers, A. Reyrolle & Co. Ltd., (Indian Agency), Braithwaite & Co. (India) Ltd., C. A. Parson & Co. Ltd., (Indian Agency), Alfred Herbert (India) Private Ltd., H. G. Fewkes & Co. Private Ltd., Avery Co. of India Private Ltd., Martin Burn Ltd., Garden Reach Workshops Ltd., William Jacks & Co. Ltd., Batliboi & Co., Bivani & Sons (Private) Ltd., Bombay Company Private Limited, Madras, Nigam Brothers, Crompton Engineering Co., Parkeon Brothers, W. H. Brady & Co. Ltd., and Quasi-Arc Co. Ltd., being orders placed by the Company for miscellaneous items of plant and machinery for a total sum of Rs. 5,69,559/-. (7) Dated 18th October, 1956, with Bosana & Co. being an order placed by the Company for site preparation at Khardah for an Electrode Factory for Rs. 2,05,000/-. (8) Dated 4th March, 1957, with Bridge & Roof Co. (India) Ltd. for the construction of factory buildings for the new Electrode Factory at

Khardah at an estimated cost of Rs. 15,30,000/-. (9) Dated 11th September, 1957, with the General Electric Company of India Private Limited being an order placed by the Company for electric installations at the new Electric Factory at Khardah at an estimated cost of Rs. 78,000/-. (10) Dated 1st November, 1957, with H. G. Fewkes & Company Private Limited being an order placed by the Company for sanitary installation at the new Electrode Factory at Khardah at an estimated cost of Rs. 35,000/-. (11) Dated 5th August, 1957, with Mr. N. Guha for the construction of factory and office building at a new site at Burnpur at an estimated cost of Rs. 11,50,000/-. (12) Dated 14th October, 1957, with the General Electric Company of India Private Limited being an order placed by the Company for electric installations at the factory and office buildings at the new site at Burnpur at an estimated cost of Rs. 1,15,000/-. (13) Dated 5th August, 1957, with Mr. N. Guha for the construction of staff quarters at Jamshedpur at an estimated cost of Rs. 4,40,000/-. (14) Dated 5th July, 1956, with the Governor of the State of West Bengal regarding acquisition on behalf of the Company, at an approximate cost of Rs. 1,50,000/- of an area of approximately 17.76 acres of land in Burnpur for an oxygen and acetylene factory and other buildings. (15) Dated 11th February, 1956, with the Gas Accumulator Company (India) Limited for assignment to the Company of quota rights held by that Company. (16) Dated 11th February, 1956, with the Gas Accumulator Company (India) Limited for the transfer of quota rights by the Company to that Company. (17) Dated 7th May, 1957, with Deloro Stellite Limited whereby the latter granted exclusive resale rights to the Company in India in respect of hard facing rods and electrodes as from the 1st April, 1957. (18) Dated 27th December, 1957, between the Company and Mr. R. G. C. Stephenson whereby Mr. Stephenson was re-appointed Managing Director of the Company from the 1st January, 1958, for a period of five years at a salary of Rs. 4,150/- per month from the 1st January, 1958 to the 30th June, 1960, and Rs. 4,500/- per month from the 1st July, 1960 to the 31st December, 1962, together with such allowances, appropriate to his appointment, as are determined by the Board.

If any director, being willing, shall be called upon to perform extra services or to make any special exertions in going or residing away from Calcutta for any of the purposes of the Company or in giving special attention to the business of the Company or as a member of a committee of the Board, then, subject to Sections 198, 309 and 310 of the Companies Act, the Board may remunerate the Director so doing either by a fixed sum or by a percentage of profits or otherwise and such remuneration may be either in addition to or in substitution for any other remuneration to which he may be entitled.

Subject to the provisions of Section 297 of the Companies Act a director shall not be disqualified from contracting with the Company either as vendor, purchaser or otherwise for goods, materials, or services or for underwriting the subscription of any shares in or debentures of the Company nor shall any such contract or arrangement entered into by or on behalf of the Company with a relative of such director, or a firm in which such director or relative is a partner or with any other partner in any such firm, or a private company of which such director is a member or director, be

avoided nor shall any director so contracting or being a member or so interested be liable to account to the Company for any profit realised by any such contract or arrangement by reason of such director holding office or of the fiduciary relation thereby established.

Subject to the provisions of Sections 267, 268, 269, 316 and 317 of the Act, the Board may, from time to time, appoint one or more directors to be managing director or managing directors of the Company.

Subject to the provisions of Sections 309, 310 and 311 of the Act, a managing director shall, in addition to the remuneration payable to him as a director of the Company under the Articles, receive such additional remuneration as may from time to time be sanctioned by the Company.

Every director, manager, secretary or officer of the Company or any person (whether an officer of the Company or not) employed by the Company as auditor shall be indemnified out of the funds of the Company against all liability incurred by him as such director, manager, secretary, officer or auditor in defending any proceedings, whether civil or criminal, in which judgement is given in his favour, or in which he is acquitted or in connection with any application under section 663 of the Companies Act in relief is granted to him by the Court.

Application for Shares: Applications by persons other than employees of the Company must be for 50 shares or multiples of

50 shares and must be made on the white form accompanying this Offer for Sale. Employees of the Company may apply for 25 shares or multiples of 25 shares in which case they must do so on the blue form accompanying the copies of this Offer for Sale issued to them. All application forms, properly completed, must be lodged, together with the full amount (Rs. 13.50 per share) payable on application, with any Branch in India of The Chartered Bank, viz. at Amritsar, Bombay, Calcutta, Chowringhee (Calcutta), Cochin, Delhi, Kanpur, Kozhikode, Madras and New Delhi. Payment should be made by cheque or draft in favour of "The Chartered Bank A/c. British Oxygen" and should, for the applicant's protection, be crossed "A/c payee only". A separate cheque or draft must accompany each application. Cheques or drafts drawn on The Chartered Bank, or drawn on any bank in the same town as that in which the branch of The Chartered Bank with which the application is lodged is situated, need include no allowance for collection charges. All other cheques or drafts must include bank charges at the rate of 25 nP. per Re. 100/-.

Applications from persons resident outside India will not be considered.

Acceptance will be notified by the despatch of an Acceptance Letter but the Offeror reserves the full and uncontrolled right of accepting or rejecting any application in whole or in part. Where an application is rejected or not accepted in full, the whole or the balance, as the case may be, of

the application money received will be refunded to the applicant by post at his risk and any bank charges will be payable by the applicant. The Company has agreed to waive the first payment of transfer registration fees in respect of the transfer of shares from the Offeror to applicants whose applications are accepted and for which Letters of Acceptance are issued. Share certificates will be available for issue in exchange for Letters of Acceptance on or after the 25th April, 1958.

Brokerage at the rate of 12 nP per share will be paid by the Offeror on acceptances made in respect of applications bearing the stamp of a recognised stock broker or banker. Brokerage on the same basis will be payable to The Industrial Credit and Investment Corporation of India Limited, in addition to the underwriting commission, on acceptances made in respect of applications made or procured by them provided that the relative forms of application bear their stamp.

Messrs. Price, Waterhouse & Co. have given and have not withdrawn their written consent to the issue of this Offer for Sale with a copy of their Report included therein in the form and context in which it is included. A copy of such consent, together with a statement of the adjustments made by that firm in arriving at the profits and assets and liabilities shown in the Report and giving the reasons therefor, copies of the consents of the auditors, solicitors, bankers and brokers to the Company to act in those capacities and

copies of the material contracts specified above have been attached to the copy of this Offer for Sale which has been delivered to the Registrar of Companies for registration.

A print of the Memorandum and Articles of Association of the Company, copies of the material contracts and of the agreement proposed to be entered into between the Company and the Offeror referred to above, the Report of the Auditors and their Statement of Adjustments and the Audited Accounts of the Company for the last five financial years may be inspected at the registered office of the Company during usual business hours (Saturdays excepted) for a period of fourteen days from the date of publication of this Offer for Sale or until the closing of the application list, whichever is earlier.

Copies of this Offer for Sale and forms of application can be obtained from any branch in India of The Chartered Bank and from any of the Brokers specified above. Dated the 21st day of January, 1958.

Calcutta

Calcutta, Friday Evening.

STEADY and active conditions continued to prevail on the local Stock Exchange during the past week when the speculative issues made further headway, while other scrips moved up in sympathy. Thanks to a favourable view of the outlook and the hopes entertained by the operators with regard to the prospects of getting further foreign assistance in the future, the market started the week on a steady note. Rumours that export duties on certain goods might be reduced and the improvement in the cloth market provided additional stimulus, resulting in a more cheerful atmosphere. The strong position of the market was also partly due to covering purchases against a substantial bear account that had been built up earlier. However, activity was confined to only a few selected scrips as operators were rather cautious in their commitments with the approach of the Central Budget. There was thus a general disposition to book profits at bulges.

On the Bombay Stock Exchange, speculative activity was concentrated in a few selected scrips and the market closed around the week's best levels.

Though the overall trend of the Madras Stock Exchange continued

to be steady, business was meagre. Planting issues showed a mixed trend.

A cautious trading was noticed on the London Stock Exchange.

Price movements on Wall Street were rather irregular.

Calcutta

Calcutta, Friday Evening.

STEADY and active conditions continued to prevail on the local Stock Exchange during the past week when the speculative issues made further headway, while other scrips moved up in sympathy. Thanks to a favourable view of the outlook and the hopes entertained by the operators with regard to the prospects of getting further foreign assistance in the future, the market started the week on a steady note. Rumours that export duties on certain goods might be reduced and the improvement in the cloth market provided additional stimulus, resulting in a more cheerful atmosphere. The strong position of the market was also partly due to covering purchases against a substantial bear account that had been built up earlier. However, activity was confined to only a few selected scrips as operators were rather cautious in their commitments with the approach of the Central Budget. There was thus a general disposition to book profits at bulges.

The Giltedged market was somewhat dull with business on a restricted scale. In anticipation of seasonal demand for funds, banks showed little interest. Enquiry was, therefore, confined to a select few short-dated issues. 3 per cent 1986 Conversion Loan opened at Rs 70.95 and, after improving at one time to Rs 71.50, receded again towards the close to Rs 71.10.

Bank shares evoked fairly good enquiry and were marked up slightly. Hind were taken up to Rs 48.40 from Rs 47.12 and United Commercial up to Rs 62.25 from Rs 61.00. Punjab National were, however, rather quiet at Rs 51.00 against Rs 52.25.

Sentiment in the Jute section continued to remain depressed due to weaker advices from the jute goods market. The only bright spot was New Central which forged ahead to Rs 13.81 from Rs 12.00 following the company's proposal to apply to the Controller of Capital Issues for permission to issue bonus shares in the ratio of one share for every two shares held. Nuddea were taken up to Rs 34.25 from Rs 29.00, while National receded further to Rs 23.85 from Rs 24.15 on renewed offerings. Gourapore changed hands at Rs 21.2 to Rs 21.5; Kinnison at Rs 11.2 to Rs 11.4; India at Rs 9.6 to Rs 9.9; Champdany at Rs 9.5 to Rs 9.75 and Belvedere at Rs 7.1 to Rs 7.4. Budgete

Budgete were maintained at Rs 70 and so also Anglo-India at Rs 134.

After a long period, there was a broadening of enquiry for Coal shares on reports of the increase in raisings and despatches at various collieries last year. Bengal were pushed up at one time to Rs 25.1 from Rs 23.8; Burrakur up to Rs 22.32 from Rs 22.12 and Central India up to Rs 7.25 from Rs 6.31, to finish slightly easier at Rs 24.4; Rs 22.25 and Rs 6.37 respectively on profit-taking. Amalgamated, however, firmed up to Rs 17.25 from Rs 15.37; New Beerbhoom to Rs 14.75 from Rs 13.75; Western Bengal to Rs 5.62 from Rs 5.22.

The steady improvement in the conditions of the cloth market had little effect on the pattern of trading in the Textiles section. Price movements were mostly confined to a narrow range on lack of sustained support. The only steady feature was Jaysree which had buyers up to Rs 6.31 against Rs 6.10. Kesoram were at one time marked up to Rs 10.25 from Rs 10.12 and New Victoria up to Rs 1.41 from Rs 1.25, to finish the week at Rs 10.00 and Rs 1.37 respectively. Cawnpore, however, receded further to Rs 4.44 from Rs 5.28. Elgins closed better at Rs 13.13 against Rs 13.00.

Trading in the Tea section continued to be restricted in view of the lower prices obtained at the auction for the second week in succession. A few selected scrips, however, con-

tinued to be supported on the hope that some measure of tax relief in the shape of a reduction on Common teas would be provided. Hopes were also held that the Government might sanction the release of a further quota for export as suggested by the Central Board at this week's meeting. Most prominent scrips were Banarhat having improved to Rs 316 from Rs 306; Bishnauth to Rs 19.06 from Rs 18.62; Bhatkawa to Rs 20.81 from Rs 20.00; Gohpur to Rs 20.90 from Rs 20.50; Jayshree to Rs 10.12 from Rs 9.87 and New Doorgs to Rs 258 from Rs 250. Grob "A" were a shade quieter at Rs 22.87 against Rs 23.12 and Kilcott at Rs 14.87 against Rs 15.00.

Although a few selected Sugar shares came in for some attention from interested quarters, turnover was restricted on reports that the prospects for exports were not very bright. The only bright spots were Carew having buyers upto Rs 6.52 from Rs 6.19 and S.K.G. upto Rs 9.06 from Rs 8.87. Belsund were, however, quiet at Rs 10 against Rs 10.19, while Balramore improved to Rs 5.75 from Rs 5.44.

Engineering shares were in limelight and prices made further headway under the lead of Indian Irons although higher levels could not be retained till the close due to profit taking. Against the week-end closing of Rs 19.90, Indian Irons opened higher at Rs 20.10 and, despite settlement considerations, advanced further to Rs 20.62 on renewed support, being influenced by the reports that one of the two new blast furnaces at the company's Works was put into operation on Thursday. Some selling pressure, however, caused the rate to slip down at the close to Rs 20.48. The settlement rate was fixed at Rs 20.36 as against last settlement of Rs 19.28 and the Satta was 7 nP. In "kerb" trading on Friday, there were buyers at only Rs 20.41 with sellers at Rs 20.43.

In sympathy, TEXMACO were pushed up to Rs 18.00 from Rs 16.40, to close finally at Rs 17.85. Jessops showed a further recovery to Rs 22.25 from Rs 20.37; Kumardhubi to Rs 7.90 from Rs 7.81; Marshalls to Rs 5.25 from Rs 5.06 and G.K. Williams to Rs 29.12 from Rs 28.81. Dealings in Richardson continued to be prohibited by the decision of the Stock Exchange Committee.

The Miscellaneous section provided several firm features on dividend and investment considerations. Most prominent were Inian Cable, being keenly sought after upto Rs 27.12 from Rs 26.37 following the announcement of a supplementary distribution of 4 per cent for the year ended 31-3-1956. Martin Burns had buyers upto Rs 25.37 from Rs 25.12 following the dividend being maintained for last year. Speculative buying pushed up Orient Paper at one to Rs 25.50 from Rs 23.80, to finish the week at Rs 25.30 on profit-taking. Titagur improved to Rs 33.75 from Rs 32.12, while Bengal, after a long time, came in for business at Rs 58 against Rs 80.25.

Indian Copper, after touching a high of Rs 2.94 from Rs 2.86, eased off at the close to Rs 2.91 on lack of

fresh support. Investment demand caused Dunlop Rubber to harden to Rs 22.50 from Rs 22.25; Aluminium Corporation to Rs 10.00 from Rs 9.62; National Carbon to Rs 24.50 from Rs 23.87 and NICCO to Rs 24.00 from Rs 23.81. Hindustan Motor were enquired upto Rs 6.31 from Rs 6.06 and Rohtas upto Rs 17.00 from Rs 16.06. India Steamship, Indian Aluminium, Hindustan Lever and Phillips were all nearly maintained at Rs 11.75; Rs 12.69; Rs 19.87 and Rs 14.00 respectively. BIC recovered to Rs 3.85 from the recent low of Rs 3.76, while Osier were on offer at Rs 2.37 against Rs 2.62. BBP were a steady feature at Rs 1.91 with Alkali Chemical changing hands at Rs 12.06 to Rs 12.25 and Sone Valley at Rs 4.75 to Rs 5.15.

Bombay

THE Stock market opened the week on a firm note but as the week progressed, there was a slackness of interest. The market, however, closed on a steady undertone. It would appear that there were three main factors which were working against any further firmness in price levels. The proximity of the Central Budget was one of them. Though it is generally believed that there will be no shocks, operators are chary of extending commitments to any large extent till the Budget is out of the way. Secondly, the news about TISCO during the week has not been quite encouraging. It is believed that output during January may show a decline. Further there are reports that the 2 million ton programme may take a few months more than originally estimated. Thirdly the absence of investment by the LIC is also discouraging bullish ideas.

Steel shares were buoyant in earlier dealings with the quotation for Tata Iron taken up to Rs 175.50 by close on Monday. In later dealings the scrip encountered selling pressure on rumours of lower January output and on Tuesday it was Rs 2.50 lower at Rs 173.00. Toward the close it staged a moderate rally to close on Thursday at Rs 173.75. Indian Irons was higher on balance at Rs 20.52.

Textiles were quite steady. Bombay Dyeing after receding slightly recovered to close at Rs 51.60. Century attracted some support in later dealings and was finally placed at Rs 397.25 as against its earlier quotation of Rs 394.25. Kohinoor was fractionally better at Rs 269.50. Most of the other shares were slightly easier where marked.

In the Miscellaneous section Phalton Sugar spurted to Rs 154.50 from Rs 148.00 on Monday on rumours of higher dividend. It was later confirmed that the company would pay a dividend of Rs 12 against Rs 9 paid in the previous accounting period. Toward close the scrip however lost ground to close at Rs 151.00. ACC firmed up on bear covering on Thursday on reports of good working. The

scrip closed the week at Rs 156.00 as against Rs 153 last Friday. Shivrappur Syndicate was another bright spot advancing from Rs 91.50 to Rs 94.50 to close at Rs 94.00.

Madras

LITTLE variations in prices were noticed on the Madras Stock Exchange during the past week. The volume of business was restricted in the absence of fresh buying at higher levels.

Textiles: Textile shares came in for selective support on the feeling that profits earned by other mills may not be as disappointing as Madras Mills. Bangalore Woollens and Pankajas met with good demand at market rates. Travancore Rayons had buyers upto Rs 12.10. Maduras met with some sellers at Rs 35 to Rs 35.60. Buckingham had also sellers at the market rate. Janardhanas were done at Rs 79 and Loyal at Rs 38.75.

Plantings: In this section, there was only moderate support for Tea shares. There was some enquiry for Devasholas at the market rate, while Periakaramalals had buyers at Rs 4.03 to Rs 4.10; Chembra at Rs 2.80 to Rs 2.90 and United Nilgiris at Rs 15.40. Sellers were, however, seen in Peermades. Coorgs met with some enquiry at the quoted rate.

Among Rubber shares, Cochin Malabars closed at Rs 4.18 against Rs 4.25. Thirumbadly were done at Rs 1.30; Kil Kotagiris at Rs 4.72 to Rs 4.78 and Rajagiris at Rs 14.20.

In the Coffee section, Puthuthotams met with some business at Rs 2.57 to Rs 2.60 and Coffee Lands at Rs 27.90. Ouchterlony and Consolidated Coffees met with some sellers at the market rates.

Sugars: Sugar shares ruled generally quiet. The only bright spot was India, which were wanted at Rs 12.37. Deccans were quoted at Rs 7.85 and Travancore at Rs 9.76

Miscellaneous: In this section, there was good buying of Aluminium Industries upto Rs 14 FACTS were a steady feature at Rs 5.47. Cement shares continued to be an active counter, Travancore being done at Rs 8; Indias at Rs 27.60 and Dalmias at Rs 10.25. Among others, Central Scientifics were quoted at Rs 5.55; Ashok Leylands at Rs 4.40 and Mettur Chemicals at Rs 9.20.

London

OPERATORS on the London Stock Exchanges showed very little inclination to enter into fresh commitments on fears that Britain might be facing a number of labour troubles in the next couple of months. With the exception of Giltedged which were firm, the market presented a dull appearance.

Losses predominated in the Industrial market. The feature

was the further all-round setback in multiple Stores shares on fears of a possible broadening of the price reduction move announced by Marks & Spencer. Oils were quoted lower. Among Minings, Copper shares were selectively better.

Giltedged securities, however, improved on renewed investment buying, stimulated by talk of lower interest rates in the not too distant future.

New York

WALL STREET closed barely steady with an irregular lower tendency in prices. Most changes were narrow with plus and minus signs ranging from fractions to around two dollars.

News were mixed in character; but favoured the discouraging side with caution created by a number of important company dividend meetings.

Following were the closing rates of a few selected stocks:—Anaconda Copper \$42½; General Motors \$34½; International Nickel \$73; Texas Corporation \$82½ and US Steel Comons \$55½.

McLEOD & COMPANY, LIMITED

NOTICE is hereby given that the 34th Annual General Meeting of the Members of McLEOD & CO. LTD., will be held at "McLeod House", No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Friday, the 28th day of February, 1958, at 4 P.M., for the following purposes:—

- To receive and consider the Profit and Loss Account for the year ended 31st December, 1956, the Balance Sheet as at that date, and the Reports of the Directors and the Auditors.
- To appoint Directors in place of Lord Sinha of Raipur and Mr. J. L. Esplen who retire by rotation and who, being eligible, offer themselves for re-appointment.
- To appoint Auditors for the year ending 31st December, 1957, and to fix their remuneration.

The Share Transfer Books of the Company will be closed from the 21st February, 1958 to 28th February, 1958, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member.

By Order of the Board,
McLEOD & CO. LTD.
C. HOCKLEY
Secretary.

The Story of Oil—3

Mapping buried rocks

Geophysics, which is the science of the earth's physical structure, aids the search for petroleum by making it possible to study the characteristics of rock layers buried deep in the earth's crust.

The geophysicist's main "tools" for this job are the gravity meter, the magnetometer, and the seismograph. The gravity meter and the magnetometer, as their names imply, measure the pull of gravity and the magnetic force of the earth. For the sedimentary rocks which may contain oil are lighter than others, and they are less "magnetic" than the harder rocks which never contain oil.

With the seismograph, the geophysicist can measure the intensity and timing of earth tremors. The men of a seismic crew bore a shallow hole in the ground, lower a charge of dynamite into it and set it off. The

shock waves produced by this miniature earthquake travel down, hit the layers of rocks beneath and bounce back to the surface where they are recorded by the seismograph. The waves are reflected strongly from hard rock and less strongly from soft rock. The length of time they take to reach a particular layer and to return indicates the depth of the rock.

All this information is recorded in the form of wavy lines on a chart. By setting off explosions at a number of points it is possible to map the various buried rock formations with a fair degree of accuracy.

When all the results of a geophysical survey have been compared, it may be possible to locate a rock formation that might prove to be oil-bearing. But even if such a trap is found, the only way of proving whether or not it contains oil is by drilling a test well.

Assam Oil

A full-scale petroleum industry

This is one of a series of informative advertisements about the petroleum industry.

Indian Finance

INVESTOR'S SUPPLEMENT

Stock Markets Fare well in January

Conditions in the stock markets were steadier during January with equity prices recording sizable gains over the month. Though the improvement was particularly noticeable in the more speculative counters, firm spots appeared all along the line. It would appear that the broadening of activity had been brought about by the growing belief among marketmen as well as investors that the developments since the turn of the year rendered the outlook for equities brighter than for some considerable time past. Toward the close of the month, sentiment was somewhat subdued because of the proximity of the Central Budget. Even so the closing quotations for the month are generally higher than those at the beginning as will be seen from the table given in this page.

The month has witnessed the answer being given to the most important question that had been looming large in discussions in our country. On January 17, it was announced that the American Government would give a loan of \$225 million as assistance toward the implementation of the Second Five Year Plan. The immediate reaction to the news was one of disappointment because our requirements to fill the foreign exchange gap in the plan was much bigger. When it was, however, indicated that the figure mentioned in the announcement did not necessarily preclude further loan assistance from the US, the initial disappointment yielded place to optimism.

Meantime, indications were available that definite changes for the better were happening on the industrial front within the country. Speaking at the Engineering Export Promotion Council meeting in Calcutta, Mr. Morarji Desai disclosed that pig iron production in India was improving and that by the end of 1959 there would be an exportable surplus. Sardar Swaran Singh, Union Minister for Works, Fuel and Mines, who spoke at the annual meeting of the Foundry Association a few days later gave a more detailed account in this regard. He disclosed that three new blast furnaces would go into production before the end of the current year bringing an additional 50,000 tons of pig iron. The Minister pointed out that the increased production meant that 1958 would be the last year of shortage for those industries depending on pig iron.

The publication of the figures of production for the month of December 1957 in the case of TISCO production in the two steel works reflected the rapid progress of the expansion programmes. Toward the end of the month, TISCO's new blast furnace with a daily production capacity of 1200 tons of pig iron, the biggest of its kind so far in the country, was put into commission. The rapid increase in the production of steel ingots and pig iron already recorded and the progress of the steel plants in the

public sector gave rise to the hope that, before the current year was out, India's steel production would make a sizable contribution toward arresting the flow of foreign exchange out of the country as well and for the last quarter of 1957 in the case of IISCO, by the steel companies had also considerably aided sentiment in earlier dealings. TISCO's production of steel ingots increased from 95,100 tons in November to 100,500 tons during December. Pig iron output increased from 94,900 tons to 95,100 tons; finished steel from 52,100 tons to 54,600 tons and semi-finished steel from 13,900 tons to 19,600 tons. In

the case of IISCO, production of pig iron increased to 190,484 tons from 171,397 tons; steel ingots to 125,194 tons from 119,172 tons; and semi-finished steel to 19,210 tons from 13,837 tons. Finished steel, however, showed a slight decline to 82,936 tons from 82,378 tons. It was evident that the increased as earn a substantial amount of foreign exchange.

Stock market sentiment was aided by the announcement on January 16 from the Tata Iron and Steel Company Limited to the effect that the directors of the company had decided, subject to the Government's approval, to issue ordi-

as well as the distribution of wealth.

Sectionwise, Engineerings were an active market. Encouraged by the increase in production recorded by the company in the last quarter of 1957, operators took an active interest in Indian Iron. With the announcement of a Golden Jubilee Bonus issue by TISCO, the upward movement of the scrip gained further momentum on hopes of a bonus issue. Indian Irons opened the month at Rs 18.54 and at one time was done upto Rs 20.62, a new high in several months. The closing was fully steady at Rs 20.48. Other engineerings were also steady.

Jute shares were a neglected market because of the continued uncertainty of the near-term prospects of the industry. Though there is some ground for optimism in the fact that the industry has started the year on a satisfactory statistical position, there are no indications even at the end of the month that foreign enquiry will show the expected upsurge.

The tea section attracted some support round about the middle of the month following the good prices obtained in the auctions. But in later dealings the enthusiasm diminished as it became clear that the prospects for common tea were not bright.

A broadening of activity with selected scrips changing hands at improved levels was noticeable toward the close of the month in the Coal section. In the beginning the section showed no special features. But when reports of a rising trend of production began to appear in the press, both operators and investors started taking interest in the section. It was reported that coal production in the country had totalled 42 million tons during 1957 as compared with 39 million tons in the previous year. It was pointed out that the figure was indicative of the capacity of the industry to attain the target set for it under the Second Plan. It was also expected that in view of the vital position of coal in the nation's economy, Government would announce favourable decisions on some of the outstanding questions awaiting disposal. A restraining factor is the report that the findings of coal prices committee will not be submitted to Government before the end of March.

Selected scrips in the miscellaneous section were also in good request. Orient Paper which opened the month at Rs 22.75 xd spurted to Rs 25.50 before closing steady at Rs 25.30. Indian Cable met with sustained buying support in later dealings to be done upto Rs 27.50. Dunlop Rubber was a bright spot having been done upto Rs 22.62 to close at Rs 22.37.

Bank shares were an active market, on reports of good working by most banks. Punjab National Bank recorded an advance of Rs 6.75 from its opening rate of Rs 46.50. The scrip closed at Rs 51.00.

nary shares as fully paid bonus shares in the ratio of one share for every five shares held, by utilizing the premium received on new ordinary shares issued last year and a small sum out of the reserves. The decision was a sequel to the request of the shareholders to issue a Golden Jubilee bonus share in view of the growing prosperity of the company. The happy precedent of IISCO in announcing the bonus issue aroused fond hopes of a similar gift from IISCO as well. Whether such an expectation would materialise or not, there seemed a greater possibility for an increased distribution to shareholders of the company in the not distant future. Operators derived considerable satisfaction from the outcome of

the Gauhati session of the Congress. Though nobody expected that the session would bring any new shocks, the general tendency at the time the deliberations were taking place was to await the resolutions. Mr Dhebar's address contained little that could disturb the market. Though Mr Nehru categorically affirmed the Congress's faith in socialism, he had made it clear that such faith would not find expression in hurried nationalisation. Mr Krishnamachari also, while strongly refuting the suggestion that Government were departing from the goal of socialist pattern of society, pointed out that the main feature of socialism as visualised by Congress was the simultaneous emphasis on the production

Relapse Again in Stock Exchanges

Investment Gossip:

After a week in which the encouraging developments in respect of foreign assistance considerably toned up sentiment in the Stock Exchanges, there has again been a relapse, and Mr Nehru must be charged with the blame for this retrogression.

For, stock exchange circles have interpreted his speech at the Indian Merchants Chamber, on the occasion of that organisation's golden jubilee, as connoting his full support for India's present policy of stringent taxation.

Put simply, the market men say that the Prime Minister's support for last year's Budget is an indication that, in the next Budget, there is no prospect of reliefs or concessions.

I am afraid that this is again one of those "flash" reactions that I have had incessantly to draw attention to. It is difficult to see the logic in the line of argument that justifies such a bearish conclusion.

Let us remember that it is no new thing that Mr Nehru has done in thus acclaiming the May 1957 Budget. Let us remember that, in the Budget debate last year, Mr Nehru made it a particular point to intervene and say that, in thus saying some things about the new taxes, he was not poaching upon the preserves of the Finance Minister, since the taxes represented the taxes approved by the Cabinet.

On that occasion, I presume that Mr Nehru did what he did to take the heat off Mr Krishnamachari, upon whom all criticism was being directed.

Similarly, on the present occasion, Mr Nehru has merely repeated what he had earlier said; and his motive might have been the same, since he has made it a particular point to pay a high encomium to TTK.

So, it would be foolish to conclude that the Indian taxpayer will be denied relief in any form. Personally, I think that it will be possible for the Finance Minister to allow some concessions.

Eavesdropper, who shares this feeling, has analysed the sort of Budget that the Finance Minister will present at the end of the month; and I commend it to the investor.

It may prove foolhardy to say this at the present juncture, but I have a feeling that the pause we are now witnessing in stock exchange activity will prove temporary.

Investment Notes:

It is understood that the response to the offer of 6 lakhs Ordinary shares in Indian Oxygen Limited at a premium of Rs 3.50 per share has been very good and the list was closed on Friday at 10 A.M., being over-subscribed by three times. Allotment letters are expected to be issued shortly. Shares are unofficially quoted at Rs 16.25 with buyers at this level.

Sugar companies have, in general, produced excellent working results for the past year. It, however, appears that they will not be able to show such good results during the current year. In the Cotton Agents sugar group, Upper Ganges have raised the dividend from Rs 3 to Rs 5 per share, while Bharat and New India have maintained the dividends at Rs 1.50 and Rs 2.50 per share respectively, all for the year ended 30th June, 1957.

Wachandnagar Industries are now done at a high level of Rs 276 due to proximity of dividend. The dividend is expected to be around Rs 24 per share for the year ended 30th September 1957. A dividend of Rs 21 was paid in the previous year.

The shares of the Associated Cement Companies Limited are ruling quiet at Rs 153. The Chairman has stated that the heavy engineering project, which the company was to set up in collaboration with Messrs Vickers Limited and Babcock & Wilcox Limited, has been going through many ups and downs. The scheme has, therefore, been shelved for the time being.

McLeod & Company has not recommended the final dividends for 1956. With the result, the interim dividends of 8 per cent and 3 per cent declared earlier on the Ordinary and Deferred shares compare unfavourably with the total distribution of 22½ per cent and 17½ per cent respectively paid in 1955.

In Madras, Spencer & Company has maintained the dividend at 15 per cent on the Ordinary shares for the year ended 30th June, 1957. Arthala Estates have passed over the dividend for the year ended 31-3-1957.

Canara Industrial & Banking Syndicate has maintained the dividend at 15 per cent on 'A' and 'C' Ordinary shares for 1957.

£ R S

Martin Burn Keep Dividend at Rs 2.12

Balance-Sheet Reviews:

DESPITE a decline in the net profit, Martin Burn Limited has maintained the total distribution (including a Cash Bonus of 62 nP) at Rs 2.12 nP per share for the year ended 30th September, 1957. Sales are slightly lower at Rs 7.67 crores against Rs 8.23 crores, while the net profit, after providing for Depreciation and Taxation, amounts to only Rs 38.44 lakhs against Rs 42.26 lakhs in the previous year. In respect of allocations to Funds,

RECORD OF ACHIEVEMENT

Sound underwriting and outstanding service to Policyholders are reflected in the rapid progress made by the ORIENTAL FIRE. Transacting Fire, Marine, Motor, Accident and all other classes of non-life business ORIENTAL FIRE also offers specialized cover against Machinery Erection and Breakdown and Boiler Explosion risks.

ORIENTAL FIRE AND GENERAL INSURANCE CO., LTD.

Head Office: Oriental Buildings, BOMBAY-1

the Depreciation amount is reduced to Rs 2.05 lakhs from Rs 2.33 lakhs; Taxation provision to Rs 50.50 lakhs from Rs 51.50 lakhs; Contingency Reserve to Rs 1.00 lakh from Rs 3.00 lakhs and General Reserve to Rs 3.00 lakhs from Rs 7.50 lakhs. Capital Redemption Fund is, however, maintained at Rs 2.00 lakhs.

During the year ended 30th September 1956, holders of Rs 2.54 lakhs Convertible Notes exercised their option to convert their holdings into Ordinary shares, resulting in an increase in the Ordinary share capital of the company by 12,700 shares and a reduction of Rs 2.54 lakhs in the Convertible Notes. Thus, the total Ordinary capital, subscribed as at 1st October 1956, was Rs 14,52,350 and the amount of Convertible Notes outstanding was Rs 9.53 lakhs, the total Reserve arising from surplus on conversion being Rs 15,23,500.

The subscribed Preference share capital of the company, as on the 31st October 1956, was Rs 60.00 lakhs.

£ R S

Angelo Brothers

The steady decline in Shellac prices, noticed during last year, is fully reflected in the working results of Angelo Brothers Limited. Sales of shellac and other products, for the year ended 31st August 1957, are lower at Rs 2.48 crores against Rs 2.85 crores, while the net profit, after providing for Depreciation and Taxation, amounts to only Rs 5.65 lakhs against Rs 7.42 lakhs in the previous year. The amount

set aside for Taxation is raised to Rs 10.25 lakhs from Rs 7.73 lakhs, while the Depreciation amount is well maintained at Rs 1.09 lakhs. No provision is, however, made for General Reserve as against Rs 1.50 lakhs previously. The dividend is reduced to 18 per cent (including a Bonus of 5½ per cent) from 20 per cent.

According to the directors' report, the factory plant has been maintained at a high level of efficiency and economy.

£ R S

Roopacherra Tea

The Roopacherra Tea Company Limited, in McLeod group, has reduced the dividend from 15 to 5 per cent for 1956 due to a fall in the net profit, after depreciation and Taxation, to Rs 52,255 from Rs 71,022. The amount set aside to Building and Machinery Reserve is maintained at Rs 40,000, while the Depreciation amount is reduced to Rs 25,337 from Rs 33,001 and the Taxation provision to Rs 10,700 from Rs 45,968.

Crop outturn is shown at 7,105 maunds against 8,453 maunds in 1955, mainly due to adverse weather conditions and earlier cessation of plucking under the voluntary restriction scheme. The average price realised is, however, higher at Rs 1.15.0 against Rs 1.10.0 per pound.

£ R S

Raneegunge Coal

Despite a substantial rise in the net profit from Rs 5.51 lakhs to Rs 9.10 lakhs, the Raneegunge Coal Association Limited has maintained

the dividend at 75 nP per share for the year ended 31st March 1957. The directors have provided Rs 1.60 lakhs (Rs 2.31 lakhs) for Taxation and Rs 5.50 lakhs (Rs 1.50 lakhs) for Machinery Replacement and Development Rebate Reserve.

Raisings are higher at 431,402 tons against 349,756 tons and despatches at 409,316 tons against 381,924 tons.

224

Bombay Burmah Trading

The gross profit of the Bombay Burmah Trading Corporation, for the year ended 31st May, 1957, amounts to as much as 151.71 lakhs as against only Rs 125.93 lakhs in the previous year. The directors have set apart a sum of Rs 30.35 lakhs (Rs 28.44 lakhs) for Depreciation; Rs 68.87 lakhs (Rs 48.40 lakhs) for Taxation; Rs 4.73 lakhs (Rs 0.21 lakhs) for Fixed Property Reserve; Rs 8.25 lakhs (Rs 5.88 lakhs) for General Reserve and Rs 3.50 lakhs (Rs 2.50 lakhs) for Investment Reserve. The total dividend distribution for the year amounts to 30 per cent.

The directors have pointed out that the company's authorised capital has increased to Rs 3 crores as a result of the resolution on the 3rd January, 1957. The scheme of arrangement for the extinguishment of the special rights attached to 100 shares of Rs 2,500, which was accepted unanimously by the company in the general meeting on the 25th February last, has since received the necessary sanctions of the High Court, the Controller of Capital Issues and the Reserve Bank.

The subscribed capital of the company, as on the 31st May 1957, was Rs 1.16 crores which, however, with the subsequent changes in the capital structure, will amount to Rs 1.26 crores. Reserves and surplus amount to Rs 3.55 crores. Gross fixed expenditure has increased to Rs 4.60 crores from Rs 3.98 crores. With depreciation of Rs 1.88 lakhs provided so far, the net block amounts to Rs 2.72 crores. Cash and bank balances have increased to Rs 2.31 crores from Rs 1.58 crores.

224

Kesar Sugar

The Kesar Sugar Works Limited has produced excellent working results for the year ended 31st July, 1957. Sales have risen to Rs 2 crores from Rs 1.58 crores, while the gross profit has amounted to as much as Rs 19.91 lakhs as against only Rs 12.38 lakhs in the previous year. The directors have, after providing Rs 2.46 lakhs (Rs 5.19 lakhs) for Depreciation; Rs 9.00 lakhs (Rs 5.00 lakhs) for Taxation and Rs 3.00 lakhs (nil) for General Reserve, raised the dividend from Rs 4 to Rs 7 per share.

The quantity of cane crushed amounts to 64.15 lakh maunds as against 56.84 lakh maunds while sugar produced totals 617,238 maunds as against 544,492 maunds. The recovery is slightly better at 9.62 per cent against 9.58 per cent.

The company has paid excise duty to the tune of Rs 48.99 lakhs as against 29.88 lakhs, while cane

cess comes to 12.02 lakhs against Rs 10.66 lakhs.

The directors have, in their report, pointed out that the current year is not as satisfactory as during the year under review due to somewhat unfavourable crop conditions. It is also pointed out that the output in the distillery section has suffered on account of the closure of the plant due to coal shortage. The working of the power alcohol plant is satisfactory. In the Chemical factory, production is maintained and a new electroplating chemical in chronic acid is added among the products.

224

Bisra Stone Lime

Despite a substantial decline in profits, the Bisra Stone Lime Company Limited has maintained the dividend at Rs 1.75 per share for the year ended 31st March, 1957. Sales have risen to Rs 76.60 lakhs from Rs 71.06 lakhs, while the net profit, after Taxation and Depreciation, amounts to only Rs 3.32 lakhs against Rs 6.78 lakhs. The directors have allocated Rs 1.36 lakhs (Rs 85,260) to Depreciation; Rs 5.15 lakhs (Rs 6.07 lakhs) to Taxation; Rs 9.575 (Rs 3,200) to Development Rebate Reserve; Rs 8,000 (Rs 39,000) to Taxation Contingency Reserve; Rs 15,977 (nil) to General Reserve and Rs 1.25 lakhs (Rs 3.50 lakhs) to Mechanisation Reserve.

Raising of Limestone have increased slightly to 819,208 tons from 804,487 tons in the previous year. Production of Dolomite has again increased to 49,795 tons from 36,950 tons, while sales have risen from 39,901 tons to 61,656 tons. Output of Lime has shown a slight improvement, the total quantity produced being 12,73,549 maunds. Sales have, however, increased considerably by 120,465 maunds to 12,65,697 tons.

224

Hall and Anderson

The accounts of Hall & Anderson Limited for the fifteen months ended 30th June 1957, have revealed a credit of Rs 13.88 lakhs. Against this, the debit balance of Rs 26.12 lakhs brought forward from the previous year, has been adjusted, leaving a debit balance of Rs 12.24 lakhs to be carried forward. Naturally, the dividend is passed over.

Sales have, during the year, increased by Rs 8.16 lakhs and the sales, for the last 15 months, have been Rs 15.28 lakhs.

The Indian Merchants Chamber

THE Golden Jubilee of the Indian Merchants Chamber

Chamber recalls a period in the relatively recent history of India when the business community was looked upon and functioned within limits as an integrated element in the national struggle for independence. When Sir Purshotamdas Thakurdas greeted Mr Jawaharlal Nehru on his arrival for the inauguration of the function, even the younger members of the group present should have carried their mind over this period with a kind of nostalgic pleasure. Sir Purshotamdas is one of the founders of the Chamber.

When the Chamber came into being, the Swadeshi movement had yet to get into stride. The Indian textile industry had shed all its quondam glories and was bearing the burden of discriminating taxation. An Indian banking system of a modern type had not yet developed in strength. The entire agricultural, industrial and commercial outlook of the Government was dictated primarily by the interests of the British business classes. There was an Imperial Legislative Council in Calcutta but as one of its Indian members sarcastically put it, with reference to the excise duty on Indian mill cloth, "As long as Lancashire sent sixty members to Westminster, the British Government will always have sixty good reasons to maintain the duty" which, incidentally, was in force till 1926.

It was the misty dawn of Indian industrial development. To assemble and organise diverse business houses from far and near, in a body which from the outset had to be directly or indirectly antipathetic to the foreign interests entrenched in India, called for fortitude, courage and determination. The growth of this Chamber and of the innumerable other leading business organisations which came into existence about that time or subsequently is marked by a consistent liaison of work in the economic and political spheres. That the partition of Bengal took place only two years before the inauguration of the Indian Merchants Chamber is another significant circumstance. There is a well-known statement from a British administrator in India, in which he has described Bombay as a friend of Britain. The description is true only to the extent that Bombay took the path of least resistance in its assertion of economic freedom.

As Mr Naval H. Tata, the present President of the Chamber, pointed out in his welcome speech, the Chamber has been fortunate in having a galaxy of leaders "who have nursed it with a sense of devotion and purpose." In the list of its annual Presidents, we can see a large number of names which the nation can always cherish with pride and gratitude, as pioneers in one branch of economic activity or another, and as men who have always put up a sturdy and consistent fight for upholding the country's prestige and material interests.

At present there is no dearth of economic talent in the country and any issue howsoever complicated receives the most thorough and expert public scrutiny. That was not the case thirty or forty years ago. The stalwarts whose names are associated with the Indian Merchants Chamber were conspicuous among the rare lights shining in the Indian economic firmament.

Lately, a certain gulf has emerged between the emotional attitudes of the Indian business community in general and the State representing the will of the masses. This gulf, though sometimes highlighted by misdeeds of particular individuals or groups or casual misunderstandings over particular issues, is really not as wide as generally taken to be. Mr Tata has to be congratulated for having reaffirmed the common objective of securing the economic and social progress of the country which the Chamber shares with every other interest.

Mr Tata drew a distinction between the identity of interests and the differences in outlook and approach to problems. In a democratic country, these differences, as the Prime Minister himself pointed out, are not only necessary but salutary. There is no need to be apologetic about them. It is very significant that in his inaugural speech the Prime Minister spoke of the United States, Canada, Western Europe, Australia, New Zealand and Japan as examples of a welfare State which had solved its problems. He also pointed out how in the circumstances obtaining in India, State direction has become indispensable to generate and strengthen forces which would lead to a welfare State without the high cost in human suffering, as has happened in Russia.

If in the past Indian industry had to depend on the State for protection and other forms of assistance, today the State, more agreeably constituted, is unwilling to give up a similar role, though the aims and functions involved may be somewhat different.

As the Prime Minister and President of the Indian Merchants Chamber seem to agree on the identity of interest and aims, there is no

Indian Finance

Established 1928

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

reason why there should not be a little more of frank understanding where differences are felt. On the part of the business community, there should be a firmer and more fearless recognition of the inevitability of what the State now anxiously, it may even be said frantically, is trying to achieve. On the part of the State there is a firm attachment to the principle of the gradualness of inevitability. When the Prime Minister time and again lays emphasis on the democratic methods of planned development and points for inspiration to countries where these methods have succeeded amply, the implied negation and warning should not be missed.

That in the sphere of taxation there is scope for genuine grievances for the business community may not be challenged even by those who are obliged to put additional burdens on them. But the alternative of taxing the poor has to be considered both by the prospects of yield and by the political consequences likely to emerge. Addressing the Merchants Chamber, the Prime Minister felt sure that he could not prefer a fiscal policy which could accumulate capital only at the expense of the people and their suffering. He also drew a comparison between urban and rural areas. He has by no means said the final word on this highly intricate and controversial subject. Apart from the fact that no rigid compartmentalisation of rural and urban economies is possible, the impact of the development of one on that of the other should also not be lost sight of. The Government, however, cannot afford to deviate from methods which have scarcely an alternative, as instruments for the creation of a new and more equitable social order.

British Bank Chairmen on UK Economy

DEVELOPMENTS in the British economy during the last year have demonstrated the extreme vulnerability of its position in the world economy. The problem of balance of payments, which first made its appearance in 1947, has shown a baffling regularity in recurring, and has again turned out to be the most elusive factor of the economy. The crisis in the payments position that was witnessed in September last was one against which there was no adequate forewarning and, therefore, could not have been anticipated from the preceding events. Naturally, this has set the influential sections of the people clamouring for a firm and definite policy on the part of the Government to solve the problem on a permanent basis. The atmosphere of growing and persistent demand for measures for preventing future recurrence of this unwelcome phenomenon has stimulated widespread discussions, especially among the banking circles, on the real nature of the problem.

It is widely accepted that remedial action which ignores the relevancy of stability in internal price level, would only offer a short-lived and limited measure of success in meeting the situation. Therefore, great stress has

been laid on the necessity for immediate measures against inflationary pressures. Sir Thomas Barlow, Chairman of the District Bank Limited, has underlined this need forcefully, by saying that "living beyond our means or in other words, spending too much and saving too little has been the cause of our exchange crisis". This view has been echoed by almost all other important personages in the banking sphere. But others are sceptical about the extent to which even a curb on inflation would succeed in preventing recurrence of balance of payments difficulties. Sir Oliver Franks, Chairman of Lloyds Bank Limited, has thus pointed out that, "even if we have no further inflation the future can still hold dangers for us because of the low level of the gold and dollar reserves in relation to our total obligations". Sir Oliver added that "the course of events is bound to depend not only upon our own policies but also in some considerable degree upon those followed by other countries, above all by the United States and our fellow members in the Sterling area". In this background, he has analysed the likely impact on Britain's payments position, of policies of the countries of the sterling area and also the significance of international

cooperation in preventing balance of payments difficulties in any part of the world.

In regard to the sterling area, the usefulness of an arrangement which results in economy in the limited reserves of gold and which lessens competition between countries of the area for gold has been granted by Sir Oliver. But he still sees the conflict between sectional and collective interests, about which there has been abundant evidence, as a major source of strain for the balance of payments position of England. Only coordination of investment plans and general policies offers, for him, a way out of such conflict of interest.

Though Sir Oliver recognises the need for restraint on expenditure by a country which seeks to restore balance to its payments position, he warns against the possible adverse consequences to such efforts of an unsympathetic monetary policy pursued by a neighbouring country. For example, in the present position of extreme disproportion in the distribution of international reserves and gold, the addition to the foreign exchange reserves of any country, which only accentuates such imbalance in distribution, would defeat even the most strenuous efforts of another country in achieving balance of payments stability. This could only be obviated if the country receiving such reserves immediately sets in motion the process which would facilitate other countries to share in such reserves proportionately. This might conflict with national interest of the particular countries and necessarily involves the recognition of wider international interests, for which there is no automatic assumption from the experience of countries at present. Britain's difficulties have been held as having been caused, to some extent, by the restrictive monetary and credit policies of Germany for which, in view of the position which Germany occupies as a creditor country with sizable reserves, there is no sufficient warrant.

The nature of the balance of payments crisis which overtook England would seem to lend some support to Sir Oliver's thesis. For, the pressure on sterling, rather unexceptionally, was not the product of any deterioration in the internal economic situation. In fact, the exports and balance on trade account were actually on the upgrade in the earlier half of the year. The real difficulties came from extraneous sources and were largely made up of speculative pressure on sterling. The Government sharply reacted by raising the Bank Rate from 5 per cent to 7 per cent.

The accentuation of speculative pressures has been attributed by some to the limited foreign exchange reserves of the country and to the apprehension of its getting still further depleted, while others have read in it lack of confidence in sterling which they mainly ascribe to the Government's limited campaign against inflation. The need for steps against inflation was met by the Government issuing a directive to banks to limit their advances in the succeeding twelve months within the level for the twelve months past. The Government have also put a freeze on investment in the public sector. The capital expenditure of central and local governments and of the nationalised industries has been sought to be limited to the level obtaining in 1957. These measures have confirmed the prognostications of the private sector about the futility of a fight against inflation which involved the exemption of Government from the rigours of the economy drive.

But opinion even among influential circles is divided about the adequacy of the cut in expenditure imposed by the Government. Lord Aldenham, the Chairman of the Westminster Bank, is one who entertains such doubts. He is puzzled as to how even £1500 million per annum, which is the limit fixed for public expenditure, is to be financed with-

out further inflation. Mr A. W. Tuke of Barclays Bank shares this pessimism about the success of the measures and has pointed out that the cut in Government expenditure is a mere holding operation and could hardly be regarded as a positive contribution toward solving the problem.

About the sufficiency of the measures to keep inflation at bay, also, there is no general agreement, and more emphasis has been laid on the positive aspects of the problem. Mr Tuke has spoken of the need for some positive incentives to savings by the Government giving exemption from incometax, while Siri Harold Bibby of Martins has underlined the necessity for balancing the budget in such a way as to give the industrialists relief from what he considers to be the crushing burden of existing taxation. Mr Tuke has gone to the extent of questioning the propriety of an annual capital levy on a part of the population in the form of death duties which, according to him, results in enormous dis-saving. He is not highly hopeful of success in fighting inflation unless it is conducted also in the realm of tax reliefs. In his own words, "till our penal rates of taxation are reduced a strong inflationary influence will remain;

The Future of US Collective Bargaining

By JAMES P. MITCHELL

THE kind of industrial relations we will have in the future depends, I believe, upon four things:

- (1) The economic setting in which such relationships are developed.
- (2) The nature of collective bargaining.
- (3) The composition of the work force and the nature of production itself.
- (4) The destiny of the struggle between totalitarian communism and free industrial democracy for the moral allegiance of the world's resurgent people.

First then, let us consider the economic setting in which free enterprise relationships are developed.

The prospect is one continued growth. We have been watching for three years now an economic rise remarkable in its uniformity and more than impressive in its size. It has been unique for more than those reasons, however. For the first time, we have seen an American economy responding to the incentives of peace and the possibilities of domestic progress in the same spirit and with the same vigor as were formerly evident only in periods of huge national effort, like war. The result has been a wider distribution of more wealth than ever before possible in our history.

This general movement toward new dimensions of productive accomplishment will continue throughout the foreseeable future but with some short-term changes in the uniformity of growth. For it is not to be expected that any economy will continue a general and spectacular rise without some stages of adjustment—and no one, of course, has ever expected that of ours. What we do expect from our economy, however, is long-term growth commensurate with the needs of an expanding population with no loss in the standard of living. And we will have that.

A prophet, then, even a temporary prophet for the space of an hour or so, can make up two sets of prognostications, one for the long view and one for the short. I am taking the

(This article comprises excerpts from an address before the Industrial Relation Section, Department of Economics and Social Science, of the Massachusetts Institute of Technology at Cambridge, Massachusetts. Mr Mitchell is the US Secretary of Labour)

Indian Finance

there will be less inducement to save and less than adequate savings".

Mr Tuke is also reserved in regard to the efficacy of the higher Bank Rate. He points out that one of the conditions for its success in the external aspect, namely, that it should encourage lending by foreigners to the country, does not hold good. Though he concedes some success, the results are not, to him, spectacular.

The present situation offers a serious challenge to the competitive position of Britain in the world market. Therefore, apart from the need for a lower level of expenditure, increase in labour productivity is also of great importance. The past trend in this respect has not been encouraging. Increase in productivity anticipated at the time of granting wage increases at the pressure of trade union action has failed to materialise. The result of such discrepant movements in wages and productivity is summarised in the Bulletin for Industry as follows:

Money incomes rose so much faster than the output of goods and services in 1956 that cost per unit of output increased by 6½ per cent and even in the first half of 1957 there was increase of 3 per cent.

short view—a good, hard look at the immediate future.

I think we can expect in the next year that some industries will not duplicate the extremely rapid rate of growth that has been characteristic of the past few years. We are already seeing evidence of this fact. There will be, in other words, a change in the rate of growth in some sections of the economy.

The point here is that the collective bargaining sessions of the immediate future will not be played against a background of uniform growth, as has been the case in the past few years.

This means that pattern-setting will not be as prevalent, and it also means that each collective bargaining session will take place in a different economic atmosphere, according to the present state of the particular industry. I would expect, then, that some collective bargaining will be a little stiffer than it has been, depending on the industry and the geographical area.

As the economy thus has an influence upon collective bargaining, so do other things—and this leads to the second major consideration.

The strongest influence on collective bargaining in the immediate future will be, I believe, increasing public insistence that labor and management conduct their affairs always with the general public good in mind.

This insistence derives from two sources. The first is public awareness of the cost-price relationship and public demand that labor and management exercise restraint in their bargaining. The second is public awareness that the great institutions of free enterprise may be endangered by corrupt persons in positions of power. From this springs the demand for protection for the rank-and-file members of organized labor and the general public.

In the first area, the American people have added to every collective bargaining table a third party—their own, unseen image. They sit in judgment on the agreements reached there and say, in effect: this may be good for labor and good for management, but is it good for America?

This sharply increased attention of the general public to industrial negotiations will have, I feel, a tempering effect. President Eisenhower, giving voice to the public attitude, has suggested that labor and management

February 8, 1958

exercise self-discipline in the determination of their economic policies. This is the proper and just course in an industrial democracy, for the alternative to self-control is public control of some kind—and abhorrent idea to our nation.

With both management and labor thus placed in the public spotlight, we can expect that their actions will reflect some change.

The public is demanding legislative protection against corrupt influences in institutions so basic to our way of life. This legislation will operate, most probably, against corrupt union officials and against the causes of corruption to prevent its occurring in the future.

There is a danger that this legislation will go too far, and the attempt to cut away from unions both the infected parts and parts susceptible to infection will result in serious harm to the main body.

Against such an eventuality, the respected men of organized labor are doing every thing in their power to find their own cures. They should be given every support. At the same time, the legislation that is proposed should be carefully developed so it does not constitute a danger to the destiny of the entire labor movement.

In order to protect the individual worker and legitimate trade unionism this Administration has proposed and will propose specific remedial measures.

Two such pieces of legislation are now before the Congress, and I hope for their early enactment because they are basic bills that provide basic safeguards.

One of these legislative proposals would require the registration, detailed reporting and public disclosure of the financial operation of employee pension and welfare funds. When you realize that American workers have some-what in excess of \$30 billion in equity in these funds, it is easy to see how important it is to make sure that these funds are handled properly.

The other legislative item now before the Congress is a joint resolution, which has passed the Senate, which would permit the Secretary of Labor to make public the union financial reports now made to the Labor Department.

There are several other areas in which I believe Federal legislation is necessary.

One of these areas has to do with union elections.

I believe that legislation must be passed that guarantees a free, secret election of union officers no less than once every 4 years. The secret ballot is the strongest weapon against the tyranny of corrupt officials, whether they be in public or union office.

I also believe that there must be legislative restrictions placed on what I consider "blackmail" picketing. Now while the right of legitimate picketing by unions must be preserved, the use of the picket line to force an employer and his employees to have a union against their will must be curbed. This type of picketing is not part of legitimate trade unionism, but is in fact the tool of the racketeer and hoodlum. It must be stopped.

Other legislative measures affecting both unions and employers may be necessary. President Eisenhower has suggested this course of action. "Each situation," he said, "must be studied carefully to determine what remedies are necessary and whether they best lie in voluntary action, better law enforcement, administrative action, or appropriate Federal or State legislation, or in a combination of these means".

Now all of this may seem like a digression from my main topic but, in reality it is not. For both labor and management here have an example that public interest cannot and will

not be denied, that it moves with strength to correct abuses. Labor and management also have a pressing mutual interest in so conducting their affairs as to win the approbation and not the censure of the Nation. These things will, I feel, have an effect upon the collective bargaining of the immediate future.

The third thing that the industrial relations of the future will depend upon will be the composition of the work force and the nature of work itself.

Our need for trained and ingenious workers, each with his gifts at their fullest development, has increased in direct proportion to the ingenuity and complexity of our machines. Technology has not replaced people. It has placed an exclamation mark upon their individuality.

No employer needs to be reminded that the demand for skilled workers has been out-running the supply in recent years. Our industry is short of engineers, short of clerical help, short of craftsmen, short of semi-skilled workers. The pinch gets tighter as the economy grows and as our national appetite for goods and services grows in billion-dollar gulps.

We cannot expect that workers whose skills are inadequate or out-dated today will be in any better condition in the future if they are not given some help in their quest for self-improvement now. In the natural course of events, the nature of the work that many are now doing will change in coming years. Many of them will change from one job to another between now and then. Others will be doing essentially the same job—but using different skills and techniques in order to keep pace with changes in the machines around which their jobs are centered.

If he wants to keep his business healthy—and make that much of a contribution to the total health of the American economy—the American employer is going to have to step up his on-the-job training, step up his apprenticeship, step up his efforts to fit the right worker into the right job and to give that worker the means to grow with his job. He is going to have to find and train his own workers.

The pressure of the skilled worker shortage, and the need for meeting it, will enter into employer and employee negotiations in many ways. I feel that both union and management will have to undertake more in the way of cooperative efforts to develop the skilled workers we need, taking into consideration, among other things, the need for upgrading and advancement as workers acquire skill.

In this respect, then, the future of industrial relations is also the future of the skill shortage, for from negotiation between employer and worker can come the ways and means to meet this shortage on the individual plant level.

And finally, tonight, the last major area for consideration—the destiny of the struggle between totalitarian communism and industrial democracy.

What has the future of industrial relations to do with this?

Just this—what we do here at home in the development of labor-management relations has a key effect upon the success of our efforts to convince the peoples of the world that democracy is a more rewarding way of life than communism. That may sound like a naturally easy task, but the fact is this: that by concentrating upon narrow but deep lines of industrial and scientific endeavour, the Communist world can and does make an impressive display of progress that beclouds the really massive accomplishments of the free world in bringing to its citizens more fruitful and rewarding lives.

But the truth will out. And our truth in this conflict is intimately connected with the progress of labor-management relations. For while Russia may score some impressive industrial and scientific victories, they do it at the expense of the welfare of their own suppressed millions. We do it for the sake of the welfare of our free millions.

Industrial relations enters the international field in two major ways. First it provides an abiding example of the concrete results that the processes of freedom can achieve. And secondly, both labor and management are engaged in overseas activity that represents America in a real way to millions of people.

American investment in foreign countries is enormous; no other nation can match it. The scope and variety of our overseas enterprises gives us a signal opportunity. Where we invest our money, we must also invest our good will and share our knowledge. We must apply the resources of private capital toward the assistance of the countries in which we invest. We must share our techniques with them; we must help them to train their people to new skills; we must help them to establish industry and a sound economy.

American unionism has long recognized this principle. Its work abroad in helping to develop trade union movements in young countries has done more than a little to lift the social and economic condition of workers the world over. And the simple example of our free and vigorous labor movement here in the United States has been a great source of inspiration to all the peoples of the world—no less than has the example of our commercial success.

I would like to suggest here tonight a fuller collaboration of these two great influential forces in their international activities, based upon the kind of agreements reached within our own borders.

The future of industrial relations cannot fail to be affected by the ringing responsibility that free enterprise carries to help fulfill the hopes of the many millions of people in the new and under-developed nations of the world.

The collaboration I think is possible in the future will take this form. Just as American management, through its overseas operations, brings to its foreign employees experience in free enterprise, and just as unions, through supplying technical personnel and ideas, brings to overseas workers experience in free labor, so together they can help create a true image of the free way of life as pursued in an industrial democracy such as America. From this image people in other lands can gain a deeper insight into our free enterprise system and its advantages over the Communist way.

It is to the advantage of American employers to support democratic union movements in every country and in every place they are able. For in the long run this kind of freedom-in-action will preserve for them a world of growing markets and rising standards in which their own growth will be a part.

There is a tide of aspiration running in the world today. We see it here at home in our crowded colleges, our busy factories, our lively collective bargaining sessions. We see it abroad in the determination of new nations to lift the burdens of poverty, disease, and illiteracy from their people. Each of us sees it in himself, in his work toward a better and more prosperous society. Now, for the first time in history, man has the material means to satisfy his aspirations. We know how to build the production devices, how to train men to operate them efficiently, how to create mass markets, how to maintain an economy in which there is both movement and stability.

And I believe that we in this country will turn those means to the right uses. In that effort lies the future of American collective bargaining.

Cement Production

For one of the basic industries in India, cement, the prospect of the Second Plan seems rather unsatisfactory. Against the target of 13 million tons, production in 1957 was of the order of 5.6 million tons. The gap looks forbiddingly big. What is worse, for some reason or other, expansion plans and projects are not being pursued on a scale envisaged necessary for the fulfilment of the Plan target. Mr Dharamsey M. Khatau mentioned this point at the Annual General meeting of the Associated Cement Companies.

The relaxation in controls announced early in January was not the result of a surfeit in the commodity but a prospect opened up by the partial failure of State house building schemes. Mr Khatau has sought to explain how between the producer's price for cement and the consumer's price an extensive margin is being eaten up by a hefty excise duty on the commodity and a nearly equally hefty profit going to the State Trading Corporation. He hopes that the Finance Commission would recommend a higher producer's price in view of the rise in manufacturing costs but at the same time thinks that the consumer may not have to pay more.

Official policy is torn between the conflicting considerations of shortage in cement and of the need to stimulate construction works, particularly housing on a colossal scale. It seems unlikely that the increase

in cement prices for the producer will not be accompanied by at least a fractional increase in the consumer's prices. It remains to be seen how far the partial open market sales of cement would turn out to be less burdensome to the consumer.

In the course of the Parliamentary debate on the State Trading Corporation's balance sheet, Mr Morarji Desai indicated that profits earned by the Corporation on cement would go toward building houses for workers. That is obviously an objectionable way of utilizing the amount. But it is open to ask whether less inflated prices will not secure better results. On this question the Government will have to bestow thought.

United Arab Republic

In the post-war world, the splitting up of countries has been a distressingly conspicuous phenomenon. India got bifurcated into two. Korea was divided. Likewise Viet-nam. The Dutch Empire in the Far East is now a divided entity. Palestine was divided. Turning to Africa, Sudan broke from Egypt.

To this trend, the unification of Syria with Egypt offers a pleasing contrast. The new State which, in all likelihood, will be blessed and confirmed by a plebiscite of the peoples will be known as the United Arab Republic with one flag, one army and one President. The title is expressive of the hope that other States in the Middle East will also join the new unit. Already, Yemen is reported to have offered to merge in federal union with the new State.

The existence of two other States, Israel and Jordan, between Syria and Egypt may create compulsions unlike the one behind the offer made by Yemen, for future accretion of territory to the Arab Republic. That further consolidation would not be a mere dream is already indicated by the statement attributed to an undisclosed source: "Our unity is the first step toward Arab revolution. I hope this will bind all Arab nations together".

The birth of the new State is not looked upon as a happy augury in every other part of the Middle East. Jordan, Iraq and Saudi Arabia have initiated talks of a counter move in the form of a similar union. While the latter three countries are clearly on one side of the two international power blocs, Egypt and Syria have managed to maintain a show of neutrality with an unconcealed bias against the Western nations. Too much, however, should not be made of the fact that Syria and Egypt have been recipients of fairly substantial doses of financial help from the Soviets. While bigger States would certainly aid greater independence for Middle East, the problems the new setup can generate are most unpredictable.

A Still-born Proposal

The difficulties in the way of joint regional action in the economic sphere in Asia are again underlined by India's reported refusal to endorse a proposal put forward

by Japan for the creation of a common market. Last year another proposal for the establishment of an Asian Economic Development Fund sponsored by Japan met with the same fate. The present one is obviously inspired by the presence of a European common market. The mere difference between Europe and Asia, as far as the aptitude for an organisation of this kind goes, is that while in Europe all the economies are more or less in the same state of industrial development. In Asia, this is not the case.

Japan and India form the industrialised section and China is fast building up. If the proposal was intended to cover China, there is likely to be impediments of a non-economic character. As it is, inter-regional trade in the countries of Asia and Far East is slowly tending to develop, to some extent at the cost of the region's trade with the rest of the world.

A formal common market at this stage is not likely to assist that trend. The first impulse among the industrially backward countries will be to suspect the organisation as an instrument of domination by the more advanced units. That would defeat the very purpose for which the common market is sought to be established. A more vital reason is to be found in the circumstance that both as agricultural producers and as manufacturing nations, there is sharp inter-regional competition.

Even for the European common market, Britain's reluctance to join and the misgivings entertained by Italy and France are pointers which the less developed and less coordinated economies of the East cannot ignore. Moreover, the European common market is a super structure built on foundations of experiments such as the European Steel and Coal Community. In Asia, similar foundations are lacking.

The Price Incentive

In our last issue, we commented editorially on the problems of agricultural development in the ECAFE region. One of the points stressed was that price as an incentive to the producer has not had uniform results. Rice production in Ceylon is an outstanding example of the comparative fertility of price as stimulant for higher production.

The ECAFE report has given figures on the basis of which the conclusion has been drawn of the absence of clear evidence of a close relation between the price of paddy and the development of rice acreage or output. Among the possible reasons mentioned for this unhelpful conclusion are the existence of subsistence farms with limited opportunities for bringing more land on paddy, the absence of physical facilities for increasing yields, the competition of other crops and inadequate marketing facilities. It is even suggested that the incentive price may have no other role than just keeping output at a certain level and seeing that it does not recede. This discussion is important in view of the value attached to price incentive as a factor for increasing pro-

Indian Finance

duction of food crops in India. In determining the price level, innumerable considerations have to be taken into account, the weight and efficacy of each of which will depend on widely differing circumstances between one area and another. In an economy, where a very large percentage of the food grains does not come out for sale at all, the introduction of a price incentive raises the additional complexity of assessing where and to what extent it can be of effective significance.

Robots at Mischief

We live in the age of autos, automation, automatization and automata. These last, it appears, may occasionally get out of hand and, like Frankenstein's monster, do things far outside the schedule, a fact lately revealed by the Bristol Aircraft Company, makers of the turbo-jet Britannia airliner. It will be recalled that a long-range Britannia crashed in the course of a test flight in November last near Bristol. The accident is now under enquiry and an aviation writer has meanwhile suggested that, an unruly robot may well have been responsible. In this connection, a Bristol Aircraft spokesman said that, on another recent test flight, the automatic pilot of a Britannia had tried to take over control from the human pilots. They fought back and the flight engineer, seeing what was happening, cut off the electric power supply to the mischievous-maker, and everything came right afterwards. Bristol Aircraft is reported to have taken measures to obviate such misconduct on the part of its automatic pilots in future. Scientists may take comfort from this, but laymen will perhaps begin to wonder whether the former may not have succeeded in a fit of absent-mindedness in endowing robots with volition.

Sharp Rise Staged In Bank Deposits

AFTER a pause of several weeks, the Deposits of Scheduled Banks have, in the week ended January 24, shown a steep increase. For, although, in the week ended January 17, Deposits of Scheduled Banks rose by Rs 12.72 crores, this was almost wholly accounted for by the State Bank. In the latest return, the Scheduled Banks report a rise of Rs 29.47 crores to Rs 1432.48 crores in Deposits. Of this, Rs 20.53 crores could be attributed to the State Bank. Secondly, however, we may note that there has again been a rise of Rs 6.32 crores in Time Liabilities. Meantime the total of Advances has crossed the Rs 900 crore mark with a rise of Rs 11.68 crores to Rs 901.85 crores. Even then, the expansion in Advances since the beginning of 1957-58 busy season works out only to Rs 33.92 crores as compared with an increase of Rs 65.82 crores in the corresponding period of 1956-57 busy season. Again, the rise in Deposits during the current busy season has worked out to Rs 36.54 crores as against Rs 28.58 crores in the corresponding period of the 1956-57 busy season. Thus, it can be seen that, while Deposit resources have been accruing at a more rapid pace in the current busy season, Advances have tended to expand by a smaller margin. In 1956-57, the increase in Deposit resources was insufficient to cover the expansion in Advances. In the current year, the increase in Deposit resources exceeds the rise in Advances. For this reason, it may be said that the banking system is undergoing much less strain in the current busy season; and some of the reasons therefore were given in the last week's article in this section. Another point that we need to take account of is the fact that, although the pace of the 1957 slack season accretions to Deposits has not been maintained, nevertheless, the rate at which new Deposits are accruing to the banking system in 1957-58 busy season is much more substantial than in any previous busy season. Since the financing of crops had a late start, it is not possible at the moment to state that, ultimately, the 1957-58 busy season will have generated a smaller demand for funds. However, it may be asserted with some confidence that the augmentation to Deposits of Scheduled Banks is likely to prove of sufficient dimensions to enable the banking system to tide over comfortably the current busy season.

If the preceding comments on the position of Scheduled Banks indicate obliquely the possibility of a much less strenuous busy season, the trend in Active Notes is also suggestive of a less severe busy season. Thus, since October 25, 1957, Active Note circulation has risen by only Rs 45 crores; in 1956-57 busy season, Active Note circulation had expanded by Rs 75.13 crores. While, as we pointed out last week, it is still premature to conclude that these trends are an unambiguous index of a retrogression in the economy, prudence requires that the monetary authorities should follow the situation closely, carefully and studiously.

According to the return of the Reserve Bank for January 31, Active Note circulation has declined by Rs 2.43 crores to Rs 1531.20 crores. Rupee Coin has returned from circulation for Rs 0.25 crores; Reserve Bank's cash in the till has gone up by Rs 2.69 crores to Rs 20.72 crores.

In the Banking Department, the Centre's balances are marked down by Rs 4.30 crores at Rs 58.13 crores. The State Governments may have received some payment from the Centre, since their balances have risen by Rs 3.49 crores to Rs 27.34 crores in spite of a decline in their indebtedness to the Reserve Bank by Rs 0.33 crores. Other Deposits are practically unchanged, being higher by Rs 0.54 crores at Rs 113.21 crores.

The Reserve Balances of member banks have improved by Rs 1.88 crores to Rs 75.73 crores. Again, however, this is wholly ascribable to the State Bank. At the same time, the Scheduled Banks appear to have increased their borrowings from the Reserve Bank, since the central banking institution's Other Loans and Advances are marked up by Rs 3.63 crores at Rs 65.27 crores. The advances against usance bills are placed higher by Rs 2.84 crores at Rs 24.21 crores, suggesting that the rise in Other Loans and Advances is almost wholly due to increased borrowings by the Scheduled Banks. Lastly, Balances Held Abroad show a drop of Rs 2.14 crores to Rs 37.75 crores. The decline in Foreign Balances during January is at the hearteningly low figure of Rs 14.36 crores. Since January was a five-week month, this would indicate that the weekly depletion during the month has averaged less than Rs 3 crores.

According to the return of the State Bank for January 31, a further rise of Rs 3.07 crores to Rs 394.65 crores has been recorded in Deposits. Nevertheless, with a rise of Rs 5.21 crores to Rs 192.37 crores in Advances, there is a small rise in borrowings from Rs 1.35 crores to Rs 2.18 crores. Cash Balances are higher by Rs 2.22 crores at Rs 33.84 crores.

The return of Scheduled Banks for January 24 discloses, as we have seen, a rise of Rs 29.47 crores to Rs 1432.48 crores in Deposits. Since the expansion in Advances

during the week amounted to only Rs 11.68 crores, it was possible for the Scheduled Banks to reduce borrowings from the Reserve Bank by Rs 10 crores to Rs 23.43 crores. Also, Cash Balances have improved sharply by Rs 15.61 crores to Rs 169.53 crores.

Government Promissory Notes of the following loans (Central and State Governments) interest on which falls due for payment during the months of March and April 1958 will be accepted by the Public Debt Office, Reserve Bank of India, Calcutta for preparation of interest warrants from the 14th February and 14th March 1958 respectively.

Interest falling due in March 1958:
2 per cent 1978, 3 per cent Con 1946, 4 per cent 1960-70, 2½ per cent Madras 1961, 2½ per cent UP 1961, 3 per cent Madras 1960, 3 per cent MP 1954, 3 per cent UP 1961-66, 3½ per cent Bombay State Dev. 1962, 3½ per cent Madras 1962, 3½ per cent MP 1962, 3½ per cent PU 1962, 3½ per cent West Bengal 1962, 4 per cent Andhra 1967, 4 per cent Bihar 1967, 4 per cent Bombay 1967, 4 per cent Hyderabad 1967, 4 per cent Madras 1967, 4 per cent MP 1967, 4 per cent Mysore 1967, 4 per cent Saurashtra 1967, 4 per cent UP 1967, 4 per cent West Bengal 1967, 4 per cent Andhra 1968, 4 per cent Bihar 1968, 4 per cent Hyderabad 1968, 4 per cent Madras 1968, 4 per cent MB 1968, 4 per cent MP 1968, 4 per cent Mysore 1968, 4 per cent Orissa 1968, 4 per cent Punjab 1968, 4 per cent Rajasthan 1968, 4 per cent Saurashtra 1968, 4 per cent Trav-Cochin 1968, 4 per cent UP 1968, 4 per cent West Bengal 1968, 4 per cent Bombay 1970, Interest falling due in April 1958: 3 per cent 1966-68, 3 per cent 1970-75, 3 per cent Mysore 1956-61, 3½ per cent NP Loan 1965, 4 per cent Hyderabad State Dev. 1968.

Holders of the loans are advised to lodge their securities well in advance of the due dates to facilitate delivery of the securities and interest warrants on the due dates. In view of the heavy work involved, the period for delivering securities tendered for payment of interest on the above loans may be extended to five clear working days.

Early Lowering of British Bank Rate?

By Paul Einzig

THERE is a widespread expectation of an early lowering of the Bank Rate. It has now been at 7 per cent for more than four months which is well in excess of anticipations. When it was decided to raise the Bank Rate to such an abnormal level everybody assumed that its early reduction would become possible. There was a widespread belief that such a high Bank Rate would surely break the inflationary spiral. On past occasions when the Bank Rate was raised to comparable levels it usually produced dramatic effect that enabled the authorities to reduce the Bank Rate before very long.

On the present occasion the effect of the high Bank Rate was far from dramatic. Even speculators in sterling hesitated for months before deciding to cover their short position. Indeed, the reversal of the trend of gold movements can be accounted for to a large degree

by the improvement of the balance of payments which is not attributable to the high Bank Rate. It is true, the disinflationary measures, amongst which the 7 per cent Bank Rate is of outstanding importance, inspired confidence abroad and may account for a large part of the rise in sterling. But that rise could not be described as having been dramatic.

It was not unreasonable to hope that in September the seasonal improvement in sterling after the turn of the year would make it possible for the authorities to begin the gradual reduction of the Bank Rate. It seems however, that the buying pressure on sterling has not been on a sufficiently substantial scale to enable the authorities to replenish their gold reserve to a sufficient extent to face the autumn pressure with equanimity.

When it comes to the domestic effects of the Bank Rate they have been anything but spectacular. It is true, a number of debtors repaid their debts rather than pay prohibitive interest rates. But the extent to which such repayments lead to a decline in the volume of credit is negligible. The repayments merely enabled the Banks to satisfy part of the demand for credit by firms able and willing to pay the high rates. Had it not been for the official limitation in the volume of credit imposed on the banks, there would have been a further expansion of credit since September in spite of the high Bank Rate. On the other hand, but for the increase of the Bank Rate, pressure on banks by would-be borrowers would have been even stronger than it has actually been. All that the high Bank Rate has done is to mitigate that pressure.

Nevertheless, banks have to refuse many applications, especially by small firms. The extent to which this is done is not so large as to give rise to unemployment so that scarcity of labour is almost as acute as it was before the increase of the Bank Rate. There is growing dissatisfaction both among business firms whose credit requirements are not fully satisfied and among bankers who have to disappoint many customers.

The banks find the position all the more difficult as the credit squeeze is purely voluntary. Although the Government has the legal powers to instruct the banks to abstain from increasing the volume of credit beyond its level of 1957, so far the Chancellor of the Exchequer has not made use of that power. He has merely requested the banks to comply with the official policy of credit ceiling. The fact that the imposition of the credit ceiling is voluntary makes it all the more difficult for bank managers to deal with indignant customers.

The Government is generally blamed for not doing its own share towards the credit squeeze through a curtailment of expenditure. Although the current Budget has a surplus there is an overall deficit allowing for capital expenditure items. Advances to nationalised industries by the Treas-

sury figure prominently among the causes of the high volume of Treasury Bills. Owing to the high volume the liquidity ratio of the banks is high enough to enable them to say "no" to their customers.

The obvious solution of this problem would be the adoption of the American system under which the authorities have the power to alter the reserve requirements of the banks. Under that system it would be possible to limit the capacity of the banks to expand credit without having to resort to unduly high Bank Rate or to the imposition of

a credit ceiling. An increase of reserve requirements would compel the banks to refuse applications of credit in order to keep their reserve ratios under the officially fixed limit. They would be in a position to put the blame for their refusals of applications fairly and squarely on the Government's shoulders. As it is, dissatisfied customers reproach them for having voluntarily undertaken to abstain from granting more credit.

But the chances of the adoption of the American system are negligible. It will be done no doubt under the next Socialist Govern-

ment but it would run against the Liberal dogmatism of the Conservative Government. Yet in adopting the American system the Treasury could save very substantial amounts of interest on public debt through a stroke of the pen.

In the absence of any marked decline in business activity and owing to the uncertainty of the position regarding wage demands, the authorities were unwilling during January to lower the Bank Rate. They refused to allow themselves to be influenced by alarmist view about the prospects of a world-wide economic recession.

Possibly any clear indications of a willingness of trade unionists to submit to the official policy of wage restraint would induce the authorities to lower the Bank Rate. But so long as there are no clear indications in this respect the prospects of further wage increase discourage them from doing so. Perhaps a timid beginning of the reduction may be made in the not too distant future. Before the process is carried very far, however, the Government will have to be reasonably certain that the wage spiral has come to a halt.

Problems of the Chemical Industry

MR DHARAMSEY M. Khatau, Chairman of the Associated Cement Companies, recently said that, caught between mounting costs of production and crippling taxation on the one hand and a fixed selling price on the other, the cement industry had been depleted of all its resources and that, as a consequence, its activities had slowed down. In his presidential address to the Indian Chemical Manufacturers' Association held in Calcutta this week, Mr Charat Ram has disclosed that a similar situation faces the chemical and pharmaceutical industry as well. He points out that the industry's progress last year has been achieved only after withdrawing heavily from its operating margins and reserves and warns that "another year or two of this type of operations, would surely ruin the economic foundations of the industry and enfeeble it to a degree that it may not be able to meet the demands of production expected of it". Mr Charat Ram, however, hopes that it cannot be the intention of Government to cripple the private sector and "what has happened has been somewhat in spite of the Government's wishes". We would very much like to see Mr Charat Ram proved right in this regard.

In his inaugural address, Mr Manubhai Shah, Union Minister of Industry, has not included this most vital problem in his list of the major problems facing the chemical industry. It would, however, appear that his assurance to the industry of the fullest cooperation in furthering the aim and objective of fostering the growth of the chemical industry will be of no avail, if it is not preceded by remedial measures to put the industry on an even keel. For, Mr Charat Ram has made it abundantly clear that talks of further progress will gain relevance only when it is realised by Government that the industry must have sufficient funds to embark upon its expansion programme. The chemical industry being capital-intensive, its working capital requirements are higher than most other industries. In order to attain its Second Plan target, it has to find additional capital to the tune of more than Rs 100 crores. The fact that the chemical industry earns only 3 per cent makes the problem of capital formation an uphill task. It would appear, therefore, that the only possible course open to the industry is auto-financing. But Government's fiscal policies have undermined this also. Mr Charat Ram can by no means be characterised as a businessman

who criticises authority on the mistaken impression that government and private enterprise in our country are mutually exclusive entities. For, he realises that "a vastly changed approach to work and philosophy of business is what is expected from us men of industry today." Words coming from such a person, therefore, deserve the closest attention that a democratic Government, which has accepted the concept of a mixed economy, can bestow on the views of an industrialist on the problems affecting the working of an industry in which he is actively engaged.

The chemical industry has valiantly adjusted itself to the blanket ban on imports imposed on it without prior warning, and Mr Charat Ram takes the most charitable view of the situation, that has been brought about by the rapid depletion of foreign exchange. His only request to the Government is that they should be careful to avoid similar mistakes in the future.

A grave error of judgment seems also to have been committed in the matter of assessing the capacity of indigenous industries to pay heavy taxes, to sell their products at cheap prices and to expand activities, all at the same time. That the fiscal and other policies followed by Government in the past few years, and especially in 1957, have not been conducive to orderly day to day working, let alone capital formation, is becoming increasingly clear from the reports of the working of the various industries in the past year.

A salient feature of Mr Charat Ram's address is its constructiveness. Instead of analysing the causes of the foreign exchange crisis, Mr Charat Ram turns his attention to devising ways and means of augmenting these resources. He points out that it is the primary duty of industrialists to give a new slant to their production plans for specifically augmenting the country's foreign exchange resources by canalising the development of the industries into products which will reduce imports and products which will increase exports. In this regard, he opines that, instead of stopping with planning for self-sufficiency, the chemical industries should plan for surpluses for export.

Among the problems confronting the chemical and pharmaceutical industry in our country, one of the most important is its complete dependence on imports for its sulphur requirements, which have doubled to 80,000 tons in the past few years. Since sulphur requirements are bound to increase sharply during the period of the current plan, the problem of meeting our requirements in this regard becomes very important. In the absence of sulphur deposits in our country, Government have taken some steps to find out whether iron pyrites and gypsum, which are sulphur bearing materials, can be utilised for manufacturing sulphur. Extensive deposits of pyrites running to millions of tons are reported in the State of Bihar and proving operations are in pro-

gress. An analysis of the ore has shown it to be of good quality. It would appear that the consideration of the economic utilisation of the ore is proceeding at a snail's pace. It is to be hoped that active steps will be taken to set up an industry to manufacture sulphur from indigenous raw material resources; for, sulphur imports are now consuming quite a sizable amount of foreign exchange.

★

In An Economic Twilight

FROM the last quarter of 1957, the production and trade trends in the United States and Britain took a turn which has largely baffled policy makers and planners both in Government and in private industry.

In the United States, unemployment seems to have reached the unusual figure of four million, which is also a postwar record. The steel industry is operating at about 60 per cent of capacity since October. The manufacturing and trade stocks have declined considerably in value. There have been a few conspicuous lay-offs in the automobile industry. In sympathy with these trends, there has emerged a wave of worry if not also of actual disturbance for the export trade of countries which look to the United States either as a substantial or as an unavoidable marginal customer.

In Western Europe, industrial investment has largely come to a stand still. Military expenditure has tended to look down; industrial production has definitely lost the upward momentum it secured a couple of years ago. International demand for commodities has fallen. Besides these developments, many Governments are still found to adhere to financial policies associated with inflationary economies.

The U.S. Budget and the Economic Report of the President betrayed none of the pessimism which a nation on the brink of a depression is expected to imbibe. Some of the economic programmes indicated in the Budget will have their start a few years later, but their very presence is significant, especially that of reductions in social welfare expenditure. The Economic Report likewise lays emphasis on the problems of inflation and not on the latest production trends. This paradox between the general economic indications and State financial policy is sought to be explained by the fact that the President and his advisers are not thinking in terms of a likely depression and that they see in several circumstances strong points of resistance to any such eventuality.

Their assessment of prospects takes the line that increased expenditure on defence and by State and local Governments on many items would more than compensate whatever fall has been occurring in business investment. Secondly, the liquidation of stocks which is considered to be the main factor behind the declines

recorded till now would be yielding place, at least sometimes about the third quarter of 1958 to a relay invigoration of alround activity. For the steel industry an operating rate of 75 per cent of capacity would then be assured.

The steady rise in population with all the concomitant expenditure it involves, the relaxation of credit standards for construction purposes and the latest reduction of a quarter per cent in the discount rate, all these would restore to the economy whatever prop it needed against the deflationary trends and impacts which have survived from last year.

Incidentally, the credit relaxation and the turn toward easier money are not on the side of the economic implications of the budget. Rather, they are obviously points which assist the type of general assessment of the economic situation beneath the budget. There is no doubt that there is a certain unacknowledged or partially acknowledged dilemma in the minds of US financial experts, a dilemma created by considerations of checking prices and wage increases on one side and on the other of halting a recession.

In Britain, as in other countries, the state of whose economies are vitally linked with the economic trends in the United States, the situation seems equally baffling. Arguments still hold good in favour of clinging on to the policy of disinflation pursued with probably more than the needed rigidity by the last Chancellor of the Exchequer. In Britain, prospective claims for wage increases are always a bugbear particularly for a Conservative Government. This is not only for the reason of the higher domestic expenditure such increases would involve but for the unfriendly effect they would have on the competitive position of British exports.

Presently a rigid financial and credit policy has the effect of contributing to a certain restraint on wage demands. This position may disappear if the strictly disinflationary attitude of the Government were to admit of compromise. There is the feeling that it would be a net gain to Britain in the sphere of exports and in the matter of attracting funds to London if dear money policy is pursued in isolation, when other countries are trying to relax in response to their local needs.

But against this advantage, there is the higher cost of borrowing and of servicing debts and what might be called the inescapable compulsion of international trends. When world interest rates have started moving decidedly downwards, how far would it be possible for Britain to maintain its lonely stand even if it were to be propped up by short-term benefits?

All that could be said is that Britain has secured some breathing time for considering all pros and cons, before deciding when and to what extent a departure should be made.

Pluto is puzzled

WHEN the wind blew southerly Hamlet could tell a hawk from a handsaw. Pluto, the airport pet, can do better. As a trained plane-spotter, he can tell a Viking from a Dakota, a Skymaster from a Heron. But now he is puzzled. He has never heard before the whistle of the Viscount.

The whistle of the Viscount is a pleasant change from the roar and hum of piston engines so familiar to us. It represents a revolutionary advance in air travel—bringing the jet age to India. Cruising above the weather and eliminating vibration and noise, it ensures fatigueless flight at high speed. For this the credit goes to its four powerful 'turbo-prop' engines which employ the same gas turbine principle as jets. To add further to the comfort of passengers the cabin of the Viscount is fully pressurised, air-conditioned and sound proofed and provided with huge picture windows which give an incomparable view of the scene below.

A pleasure beyond measure, flying by Viscount is something more than just getting from one place to the other in the shortest possible time.

You can now enjoy this new winged experience on the services between **Delhi—Calcutta, Calcutta—Rangoon, Delhi—Bombay, Bombay—Karachi and Bombay—Madras—Colombo.**

Very shortly Viscount services will be extended to all the other I A C trunk routes.

INDIAN AIRLINES CORPORATION

Problems posed by Jute Production

IN his presidential address at the annual general meeting of the Jute Balers' Association held in Calcutta last week, Mr Chhaganmull Chopra has disclosed that the Association has approached the Central Government with a request that, in view of the increased production of jute and mesta in India, exports of raw jute may be allowed as they will go a long way in stabilising prices and that Government have pointed out in reply that the question of allowing exports will arise only when jute production outpaces demand. The request may be justified from the standpoint of dealers in raw jute because, in the absence of any other buyer except our mills, they may not get an equitable price. But from a national standpoint it becomes impracticable.

An examination of the raw jute supply position in our country will disclose that though commendable progress has been achieved in the

past few years, there is still a considerable leeway to be made up. For, as against the Second Plan target of 5.5 million bales, jute production in 1957-58 is estimated at only 4.1 million bales. There has thus been a setback in production as compared with the previous year. It is true that at the current level of mill consumption, the raw material supply position, after taking into account the production of mesta, may be deemed to be quite satisfactory. But the fact remains that so long as complete raw jute self-sufficiency is not attained, the raw material problem of the industry cannot be considered to have been solved.

The problem of increasing jute production is not simply a question of bringing additional acreage under jute cultivation. The jute crop requires plenty of water and certain type of climatic condition. These essential prerequisites are available only in certain parts of the country and even in these regions paddy is a strong competitor with the result jute growing has come to bear a close relation to its relative profitability to the agriculturist. Therefore, the emphasis in jute production is now on intensive cultivation. Experiments have shown that with improved methods of cultivation and by using fertilisers, yield can be considerably increased. Intensive cultivation will at once minimise the increase in acreage and increase the prospects of a better return to the cultivator. An in-

crease in yield will also go a long way in reducing the raw material cost of the jute industry.

Another aspect of jute production that needs stressing is the need for improving quality. It is common knowledge that most of the jute produced in our country is not of good quality. It would appear that a number of factors are responsible for this. But it is generally believed that considerable improvement can be effected in the quality of the fibre if proper attention is paid to the crop at the retting stage.

It is also becoming increasingly evident that the problem of obtaining a satisfactory raw jute supply position to the industry cannot be solved so long as jute production is considered as a matter that concerns only the cultivator. As raw jute holds the key to the solution of the industry's troubles, the entire jute industry and trade has a vital stake in it. It is therefore incumbent on each and everyone who has anything to do with the trade and industry to take an active interest in the problems of the jute cultivator.

The jute goods market continued to rule easy during the past week in the absence of foreign enquiry. Sentiment was depressed by the disappointing trend of shipments and the consequent anticipation of a sizable increase in the stocks of goods with mills at the end of January. The repercussions of speculative manipulations in the Fatka were also largely responsible for the decline in price levels especially in the sacking section. In the depressed state of the market, rumours of a Government tender and purchases of sacking and hessian by Russia failed to have any marked effect on price levels.

The jute market opened last Thursday on a quiet note due to selling pressure in Fatka. The continued absence of buying interest in sacking was mainly responsible for the quiet tendency. Hessian 40" x 10 oz Ready closed the day at Rs 39.65 while B Twills was marked at Rs 103.80. In forward deliveries, April-June Hessian 40" x 10 oz was placed at Rs 40.10 while B Twills was quoted at Rs 105.10.

Heavy selling in sackings on account of due date considerations pushed down prices all along the line on Friday. Hessian 40" x 10 oz Ready dropped 10 nP to come back to Rs 39.55 while B Twills declined sharply to Rs 101.65. Elsewhere April-June Hessian 40" x 10 oz was done at Rs 40.10 and B Twills at Rs 103.90.

Reports of a Government tender for sackings imparted some steadiness to the market on Monday and Hessian 40" x 10 oz Ready recovered to Rs 40.00. B Twills Ready was more than two points higher at Rs 103.90. April-June Hessian 40" x 10 oz was likewise better at Rs 40.30 with B Twills quoting at Rs 104.90.

The previous day's enthusiasm proved shortlived when the market opened on Tuesday. In the

Indian Finance

absence of follow-through support speculators began to unload in the fatka and as a consequence prices were marked down. Hessian 40 x 10 oz receded to Rs 39.60 with B Twills losing Rs 1.90 to come back to Rs 102.00. In the forward positions, April-June Hessian 40 x 10 oz was steady at Rs 40.90 but B Twills declined to Rs 103.63.

The reactionary tendency gained momentum especially in the sacking section on Wednesday due to heavy selling pressure from prominent operators. With mills also coming out as sellers closing prices were considerably lower on balance. B Twills ready declined to Rs 101.50 with the April-June position also lower at Rs 102.60. In the hessian section, Hessian 40" x 10 oz Ready receded to Rs 39.50 and April-June to Rs 39.87.

The raw jute market also ruled easier partly in sympathy with the goods section and partly due to persistent rumours about reissue of licences by Pakistan for export of cuttings, coupled with heavy arrivals in upcountry markets. Mills evinced considerable interest at the lower levels and sizable mill business was reported done during the course of the week. Assam Bottoms which was quoting at Rs 26 was placed at Rs 25.75 per maund at the end of the week.

PRICE TREND DURING THE WEEK.

	Opening	Closing
Hessian:	Rs	Rs
40" x 10 oz. Ready	39.65	39.50

METRIC SYSTEM IN JUTE INDUSTRY: ADOPTION IN JULY

Representatives of the jute trade and industry agreed at a meeting in Calcutta on February 3, 1958 to make a beginning with the adoption of the metric system of weights and measures on an optional basis from July 1, 1958. The meeting was held under the chairmanship of Shri A. P. Mathur, Jute Controller of the Government of India.

The operation of the metric system in the industry would at first be confined to the purchases of raw jute by mills and sale of jute products by them.

The meeting appointed a committee consisting of representatives of the jute trade and industry and officials to deal with problems encountered during the switch over to the new system and ensure its smooth operation.

It was pointed out that most of the major industries in the country had agreed to introduce the metric system in specified fields in the current year.

The Standards of Weights and Measures Bill, which provides for the adoption of the metric system, must be completed by December 1958.

February 8, 1958

Demand Confined to Quality Types

THE tendency on the part of buyers to pause at the auctions, both in Calcutta and London, is still discernible. But, the total weight of demand is still reportedly good although buyers are discriminating where quality is concerned and, where this shows a falling off, prices are easier. Moreover, there is no change in the existing rate of export duty of 38 nP per pound. The Government of India have fixed the price of tea, for the purpose of determining the export duty, at Rs 2.99 per pound as against Rs 3.02 per pound in force from January 1, 1958.

There has been no appreciable increase in overseas demand and the latest figures have disclosed that, apart from the UK which took only 195.2 million pounds of North-East Indian tea so far this season (April 1 to January 25), Russia is not operating on the same scale as last year. Shipments to this country have so far totalled only 10.8 million pounds as against 15.0 million pounds.

Also, exports to Canada have fallen sharply to 19.96 million pounds in 1957 from 21.87 million pounds in the previous year. Commenting on the gradual but progressive decline in India's tea exports to Canada, an official report says that the reasons are not readily apparent. The possibility, however, is the growing competition from other countries, which have started supplying Black tea. The preference by the consumers for Ceylon tea and the heavy competition from coffee as well as the soft drinks—all of which have shown tremendous increases in consumption.

In general, the behaviour of the tea market makes anybody hesitate about taking a dogmatic stand on the market prospects. Although demand has not yet fallen appreciably, the easier tendency in prices indicates the shape of things to come. Producers of plain teas will continue to be hit if the growing African challenge is not met. Africa is unlikely to joint a revived international tea agreement. Without African's participation, such an agreement is not of much value. Apart from East Africa, where production is likely to advance at an accelerated rate as old fields become mature and new fields come into bearing, Argentina is planning to enter the world tea market.

Meanwhile, there is every likelihood of the release of a further quota of tea for export during the

current financial year. The question was discussed at a Tea Board meeting held in Calcutta last week when suggestions for the release of an additional quota of between 35 million to 59 million pounds were made. The Board has already referred the matter to the Union Commerce Ministry for decision. Permission for the export of 397.4 million pounds has so far been given, while India's total production, during the last year, was about 635 million pounds.

In the Export Sale held in Calcutta this week, offerings amounted to 62,709 packages. There was a good general demand and any bright liquoring teas, on offer, met with keen competition at dearer rates. Low Medium Orange Fannings were a strong feature and frequently sold well above valuations; but plain Medium teas were slightly easier, BPs and the Fannings grades being sold at 2 to 4 nP per pound below last rates.

There was good support for CTC teas and the very best were sold at or slightly above valuations. The remainder were, however, about 10 nP below last week's rates. Non-wither leg-cut Fannings were about steady except when they had bright liquors and these were keenly sought after. Whole Leaf grades met with less competition and declined by 5 to 10 nP, while the BPs were comparatively neglected, some lots being withdrawn.

There was less demand for Darjeelings and prices tended easier except for those with stylish appearance or autumnal flavour which were sold well. Following rates were quoted:— Clean Black Pekoe Rs 2.25 to Rs 2.30; Plain BP Rs 1.52 to Rs 1.56; Plain Fannings Rs 1.60 to Rs 1.64; Medium BP Rs 1.58 to Rs 1.62; Medium Fannings Rs 1.66 to Rs 1.70; Best Assam CTC BP Rs 2.40 to Rs 2.60 and Best Assam CTC Fannings Rs 2.30 to Rs 2.40.

In the Internal Sale, offerings amounted to 20,302 packages of Dusts. There was only a fair demand and prices were again easier. Orthodox descriptions from all districts were upto 6 nP per pound lower, the better liquoring kinds usually showing the least decline. CTC Assams were an irregular feature, the best liquoring descriptions being frequently upto 20 nP easier. The brighter Mediums were sometimes only upto 10 nP lower, while the more fibrous plainer kinds were irregular and generally easier. Darjeeling teas were in less demand and generally easier. Following rates were quoted:— Medium Doosars Dust Rs 1.54; Medium Assam Grainy Dust Rs 1.56 to Rs 1.58; Medium Assam CTC Dust Rs 1.70 to Rs 1.90 Best Assam CTC Dust Rs 2.60 to Rs 2.90 (nominal).

In the Export Quota section, rates moved between 14 and 15½ nP per pound. Towards the close of the week, business was reported done at 14 nP per pound.

In the Colombo market, offerings were 6,270,032 pounds. Quality continued to improve and there was a good demand, but at generally lower prices. The small offerings

of Nuwara Eliya teas were absorbed at slightly below valuations. There was again a sharp fall in the prices of high-grown teas, best Broken grades being sold at 50 cents per pound lower. There was, however, a strong demand for medium teas, the best coloury Broken grades being sold at firm to dearer rates.

The offerings of low-grown teas were heavy and prices were 10 to 15 cents per pound lower, both for Middle Eastern types and small Leaf Broken. Orange Pekoes were barely steady; but Pekoes were slightly dearer. The best quality Fannings eased in prices; but for below the best, there was a strong demand at fully firm rates.

Despite a lower outturn of 28.1 million pounds in December, last year's tea crop in Ceylon has reached the new record level of 397.8 million pounds as compared to 375.6 million pounds in 1956. The previous record crop was harvested in 1955 when the outturn totalled 380 million pounds.

In the Dust Sale held at Cochin, offerings consisted of about 500,000 pounds. There was a good general demand, but prices were irregular and generally somewhat easier for all descriptions. Best Nilgiris came up to 15 nP per pound easier except on selected lines. There was fair enquiry for Good Mediums; but these declined by 10 nP. Mediums from Travancore were all supported, but prices were generally 5 nP per pound easier. Those from Wynnaad met with limited interest and prices declined by 10 nP. Milled and residual sorts were irregular, selling at prices which were 5 to 10 nP below last rates. Black and grainy descriptions were a weak feature of the sale and these were often withdrawn.

In the Sale held at Chittagong, offerings were 10,504 packages of Leaf grades and 4,498 packages of Dusts. The offerings of Leaf grades were of a typical end-of-the season appearance. As the sale progressed, prices tended to firm up and, towards the close, the majority of teas were selling at around As 2 per pound below last rates.

The demand for Dusts was very irregular. Popular non-wither varieties were keenly competed for and were often one to two annas per pound dearer. The remainder were readily absorbed at prices up to an anna above valuation. Plain Sylhet Dust was quoted at Rs 2-6-0 per pound.

The market for Green teas was irregular; but there was a fairly good demand and prices averaged at about an anna below valuation. The Sale No. 17 will be held on the 19th February.

At the sale held in Djakarta, offerings were 2,500 packages. The quality of some invoices again showed some falling off. In contract to the weaker markets in Colombo, Calcutta and London, the Djakarta market is fully firm to often dearer, particularly for good liquoring Broken Orange Peko and Pekoe Fannings with black appearance. There was a good demand for all kinds of good medium to best quality Broken and Oranges Pekoes. Less in-

terest was, however, noticeable for the Common and Low Medium classes of tea.

Indonesia harvested 3.6 million pounds of tea in October 1957 as compared to 9.3 million pounds in the corresponding month of 1956. Total outturn, in the first 10 months of 1957, amounted to 83.1 million pounds as compared to 76.6 million pounds in the corresponding period of 1956, showing an increase of 6.5 million pounds.

In London auction, offerings were 23,300 packages including 19,255 packages of Northern India teas. There was a good general demand for all kinds. Poorer sorts were easier, while coloury good quality teas were fully firm to dearer. The average rate for the Northern Indian teas was 53½d per pound. Plain Broken Pekoe was quoted at 3sh 4½d; Medium Assam BP 3sh 5½d and Best CTC 5sh 2d.

In the sale held in the middle of this week offerings were 13,268 packages. Although there was a quiet tone, flavoury invoices were sold well. The balance of Northern India, Pakistan Nayasaland, Kenya, Uganda, Belgian-Congo, Indonesia, Formosa, Malayan, Tangayika teas amounting to 20,923 packages were also offered. There was a quieter tone and good liquoring teas were sold at firm rates. Other descriptions were often one to three cents per pound lower. Plain Fannings were quoted at 3sh 6d as against last Monday's 3sh 6½d.

Tea stocks in London, as on the 24th January, were 119.61 million pounds as compared to 121.72 million pounds in the previous week and 64.65 million pounds a year ago. Landed between 18th and 24th January were 8.93 million pounds, while deliveries were 11.05 million pounds.

Total afloat was 37.87 million pounds including 29.50 million pounds from Calcutta; 193,930 pounds from Chittagong; 4.12 million pounds from Cochin; 3.48 million pounds from Colombo and 577,500 pounds from other Ports. The average price realised at the auction, for the week ended January 24, was 52.49d per pound as against 55.58d realised in the previous week and 68.84d a year ago.

★

In completing its third year of operation, the Tea Council of Canada reports an increase of almost 2 per cent in sales over the previous year, or some 3 per cent higher than in the first year of the Council's working. This is an encouraging sign, since a rise of this order is equivalent roughly to an annual increase of 1.25 million lbs in imports. But, as a warning against complacency, the Council points out that per capital consumption has declined, since the rise in sales of 3.0 per cent is much smaller than the increase in population over the period of 5.1 per cent. So, the Council has asked for 'a continued and concentrated effort' in order 'to consolidate the progress already made'.

Judging by the good work that the Council has already put in, there is fair ground for believing that the required effort will be manifested.

Enquiries to:

Britain

THE United Kingdom's average investment in the Commonwealth over the years 1953-56 was nearly £200,000,000 a year.

This figure was given in the House of Commons on January 28 by the Colonial Secretary, Mr. Alan Lennox-Boyd, moving the second reading of the Overseas Resources Development Bill.

He explained that the purpose of the Bill was, first, to define the extent to which the Colonial Development Corporation might operate in colonial territories after they became independent, and in independent Commonwealth countries generally; and secondly, to increase the amount of capital available to the corporation.

It was valuable for Britons to remember, in a time of financial stringency, something of the massive contribution they had made to the economic development of the Commonwealth.

Average investment, public and private, in the Commonwealth over the years 1953-56, added to the special assistance given to colonial territories, was nearly £200,000,000 a year.

Set against the average of Britain's gross national product in that period, this represented some 1½ per cent. It represented between 7 and 8 per cent of gross fixed investment at home.

Total capital expenditure sanctioned by the Colonial Development Corporation up to January this year was £87,000,000. Further schemes awaiting formal approval totalled £4,000,000. Actual advances outstanding from the Exchequer were £56,000,000.

Suggestions had been made that the Colonial Development Corporation change its name to 'Commonwealth Development Corporation', but Mr. Lennox-Boyd believed the present name most appropriately described its functions—to assist colonial territories in their development.

The question of overseas investment was also discussed by the British Prime Minister, Mr. Harold Macmillan. He said the formation of investment capital was not keeping pace with world demand.

Mr. Macmillan characterized this as 'the problem of the world' when he addressed a press conference in Sydney, Australia, on January 28. 'Capital is not made by somebody writing something on a piece of paper,' he said. 'That is just inflation. Capital is provided by people who do not use all their power to consume—who save some of their wages, salaries, and products.'

'The problem today is, in effect, the same throughout the world. The demand for capital is running at a greater rate than the willingness to provide capital from savings—which is the only proper way capital can be provided'.

Welcoming the overseas investment policies of other countries, including the United States, Mr. Macmillan said: 'The more they lend abroad, the better it will be. It is an illusion to believe that the wealth of one country can be built upon the poverty of the rest. The wealth of any country is built upon the increase in the total prosperity of the whole world'.

Mr. Macmillan said that Britain, in spite of all its troubles and the sacrifices of two World Wars, had maintained its position of being by far the largest contributor of overseas investment in Australia. Since the war, the United Kingdom had provided two-thirds of the total money invested by the whole world—including the United States—in Australia.

Saying that a 'kind of stalemate' had developed between the two ways of life in the world, Mr. Macmillan warned that 'if we were to abandon prematurely our strength, or alter the balance of power', then all the factors contributing to the stalemate might disappear. 'A stalemate has come—and a jolly good thing', he commented. 'A stalemate means you cannot have a war, and I am not for a war'.

Australia

LOW rates of interest on bank loans in Australia continue to have an unfortunate effect on the country's international finances, according to the chairman of Australia and New Zealand Bank Ltd., Sir Geoffrey C. Gibbs, in the bank's annual report.

The banks were being called on to finance exports for periods up to six months, and in some cases, until the exported goods are in process of manufacture abroad. Sir Geoffrey said it seemed illogical that at a time when Australia was borrowing overseas as much long term capital as possible for development projects, she should be extending short-term credits to overseas merchants and manufacturers.

Sir Geoffrey said that he considered the importance of a high level of local savings, to provide resources for Australian development, could not be over-emphasised. This was particularly so in the present circumstances of a related scarcity of capital for overseas investment on the traditional markets for international loans.

Establishment of savings bank subsidiaries by a number of savings banks, including the ANZ Bank, had made an important contribution towards the stimulation of savings.

The Standard Vacuum Refining Company is to erect a new £A500,000 plant to eliminate odours from its £A20,000,000 refinery at Altona, a western suburb of Melbourne.

The installation is established in a closely-settled residential area and residents complain that once the odours enter their houses they stay there for hours.

The company plans to convert hydrogen sulphide into elementary sulphur, and to install a new type ground flare to burn the gases which create the odours.

Australian-made polythene is about to become available for the local plastic industry. A new £A2,250,000 plant established by Imperial Chemical Industries of Australia and New Zealand Ltd. at Botany, New South Wales, has begun manufacture of the material. When fully produced it will enable a saving of over £A2,000,000 on overseas funds.

Polythene is widely used for transparent packaging, as a building material and for utensils, tubing and toys.

Most of the main plastic materials are now being made in Australia. Based on increases in total usage of plastic materials in Australia, the rate of expansion of the consuming industry during recent years has been more than 20 per cent a year.

Two important new industries about to set up in Queensland are the manufacture of anti-biotic products and the assembly of a new German-designed motor car.

A Swedish firm of pharmaceutical chemists has registered a local company, Astra Pharmaceutical Pty. Ltd. for its project, and this year plans production for Australia and New Zealand.

The Lloyd Hartnett Co. will assemble the German vehicle from imported parts at first, but plans to use local sub-contractors as the industry develops. Technical experts from Germany are now supervising the first production. Twenty vehicles a week represent immediate target.

Australian-made Volkswagens are to be produced during the next three years. A new £A10,000,000 company has been formed to develop and consolidate all Volkswagen activities.

This decision was announced in December, 1957, by the managing Director of Volkswagenwerk's Southern Hemisphere Export Division, Baron K. D. von Oertzen.

The new Company will take over the present assembly plant of Martin and King Ltd., at Clayton, Victoria, which turns out 60 cars daily. The parent company will have a 51 per cent interest in Volkswagen (Australia) Pty. Ltd. Other shareholders will be Clyde Industries Ltd., of Sydney, Regent Motors (Holdings) Ltd. of Melbourne, and LNC Industries Ltd. of Sydney.

A recent survey by the University of Melbourne on the incomes earned by its graduates shows that medicine is the most highly paid of the professions in Victoria. More than 46 per cent of the doctors questioned earned above £A3,000 a year.

Indian Finance

Agricultural science contains the highest proportion of professional men, 47 per cent, but they earned less than £A1,500 a year.

Average for Law was £A2,604, for Dentistry £A2,480, for Architecture £A2,211, and for Engineering £A2,159.

The Australian State of Victoria is to spend more than £A300,000,000 over the next nine years to meet the State's power and fuel needs.

The plan provides for doubling the present power station output more than doubling of the brown coal production, more than trebling output of briquettes (compressed brown coal blocks) and extension of complete electricity services for the whole of the State.

In the northern State of Queensland, the Kareeya power station, part of the Tully Falls Hydro-electric project, is to have its present capacity of 36,000 kilowatts doubled during 1958. This will be sufficient to supply power for an area of 47,000 square miles. Inter-connection of the whole of the regional supply systems north of the Burdekin River will enable the benefits of the Tully Falls project to be further extended over areas totalling 75,100 square miles.

There are now 23 companies producing television receivers in Australia, and installed capacity of the industry is estimated at 400,000 sets a year. Current demand is estimated at between 180,000 and 200,000 sets a year, and some sections of the trade believe that the market will become extremely competitive.

Large contracts, through association with American companies, are held by the Sydney engineering company, AE Goodwin Limited, which has just announced a net profit for the year of £A264,533.

Though its link with General American Transportation Corporation contracts for tanks for petroleum storage have been obtained. As a result of arrangements with McNally-Pittsburg Manufacturing Corporation of Kansas, orders for construction of complete coal washing, screening and improvement plants for some of Australia's largest collieries have also been secured.

An unusual factory in Australia is located at Nambour, Queensland, where a modern plant produces industrial wax from the filter press at the sugar cane mill at Moreton, in the same State. In most sugar factories throughout the world, the so-called 'mud' or vacuum filter cake, is usually dumped on to the cane land nearby for use as fertilizer.

Research, however, has shown that in addition to the wax—sometimes up to 30 per cent of its dry weight—the fatty materials, the 'mud', can be made to yield products of use to the pharmaceutical industry. Hydrolysis of the crude materials leads to isolation of sterols, and fatty acids, both of the saturated and unsaturated type, are also present in the waste.

PITY the poor Finance Minister; and I am not merely referring to Mr. Krishnamachari or his present predicament. Here is a man who, and especially in this country, has had inevitably year after year to court increasing unpopularity, because his task was, simply, to increase the revenues, if necessary, with new taxes. As the Budget approaches, in any country, there is no man more greatly feared. Not so long ago, the anticipation was not always composed of fear, but there was room for the expectation that the Budget might have a tax concession or two to offer. Then came the war. But, the high tax rates were not resented at the time, because it was thought that they were an ephemeral price to pay for safeguarding of freedom; the post-war period has offered little or no relief to that most oppressed of men, the tax payer. In some countries, it is post-war reconstruction which was said to justify the continued mulcting—no, I do not think it is too harsh a word—of the tax payer. Then, in the so-called underdeveloped countries, development was the watch word to require even greater burdens being imposed upon the tax payer. As if all this were not enough, the political economists found a fresh pretext for continuing to exact much more than a tithe from the tax payer; this pretext was supplied by the emergence of inflationary conditions, and in the endeavour to 'mop up' the surplus purchasing power, high taxes were again the fashion. In such a background, if the task of Finance Ministers has been a hard one, no less unenviable was my chore at this time of the year. For, it has traditionally been my wont, some weeks before the Finance Minister was to make his proposals, to imagine myself in the shoes of the steward of the India's finances and to consider the sort of Budget which, were I he, I would frame. As I said, this was a job that I did not relish, for, in the last decade, there have been such mounting demands for expenditure by Government that no Finance Minister could avoid the responsibility for securing new revenues and, therefore, evade the duty of raising new imposts. So, what crystal gazing I did, could only be in the form of a comprehensive analysis of what, in the circumstances, could only be a long list of tax proposals waiting to be

thrust on a cowed down tax paying population. However, where I differed from the Finance Minister has been on the relative emphasis to be placed on the various heads of revenues or resources. I could not deem my task to be a facile one of jotting down new excise levies or proposing new taxes which, in spite of the evasion that insufficient enforcement apparatus enabled, were bound to contribute in some little way to an increase in the revenues. I have always thought, I have urged repeatedly, that, of the avenues of revenue available to us, India has tended to neglect that one of the four which is the most, if not only, self-respecting source of revenue. Let me tick off what these four are.

Firstly, we have tax. (Too true, indeed, too much of tax). Is it self-respecting for a government, even though it might have as its objective a socialistic pattern of society, unceasingly to increase the rates of its taxation, for all that each increase in the rates meant an increase in the profitability of and in the zest for tax evasion? Again, is it self-respecting for a Finance Minister to rely mainly on involuntary savings—which taxation is—for the purpose of balancing his Budget? Other than, perhaps, in the knowledge of the commodities which, in respect of their supply demand equation, lend themselves to the imposition of excise duty, there is nothing clever about the Finance Minister who secures an increase in revenue from increases in tax rates or from new imposts. Then, secondly, we have deficit financing. (Too true, I repeat, and indeed, as recent inflationary pressures have suggested, perhaps, too much of it). It cannot be self-respect or the ability to stand on one's own feet or yet a measure of a people's determination to sacrifice for tomorrow, that a Finance Minister should seek to secure the resources for government expenditure by means of an appropriate edict to the Nasik Printing Press. In the ultimate analysis, there is little difference between the counterfeiter and deficit financing; both result in a depreciation of the currency. But then, I should not be taken to mean as condemning deficit financing outright, just as I do not say that I am against taxation. It is

the degree or the extent of reliance that I find fault with. Deficit financing in a developing economy can play a useful role. There is always some margin in an underdeveloped economy, perhaps more than in an industrially advanced economy, for the injection of purchasing power in this wise. Indeed, I think I will go so far as to say that, since one of the objectives that a government of an underdeveloped economy has is for striving to raise the standard of living, some element of deficit financing is not only desirable but even necessary. So, on the second of the four avenues of resources, what must give one pause is the extent of reliance—whether it is too much and to the exclusion of other avenues. Then, thirdly, we have external resources by way of foreign aid. (Unfortunately, the complaint is that we do not, at least that we have not been able to obtain as much of foreign aid as we need). Does it do credit to a country that sallies forth in the world's markets with a begging bowl in hand? No, it is the negation of self-respect. But I cannot bring myself to denounce as wrathfully as I would wish this dependence on foreign aid. For, an underdeveloped country in the throes of industrialisation is so peculiarly circumstanced that, and many eminent economists seem to feel so, its survival is possible and its progress can be enabled only by liberal doses of foreign aid. I have, as readers of this journal are well aware, my reservations in this particular matter. I do not believe, to put it pithily, that India with its potential iron ore exports need ever suffer for lack of foreign exchange. But, while I will go along with the view that, at the present juncture, the task of implementing the Second Plan would be greatly facilitated by foreign aid of sufficient dimensions, I must remark, as Prime Minister Nehru has done, that this reliance on foreign aid must not be such as to make us believe that, without foreign aid, we cannot see the Plan through. So, in the matter of foreign aid, all I need say is that we should not look upon it as the indispensable end all and be all for the success of the Second Plan. Lastly, we have Government borrowings. (My complaint is that we do not have enough of it). This is certainly the most self-respecting way in which a government can

set about laying its hands on the resources needed for putting through a plan of industrial development. It is also, from the point of view of economic justification, the proper thing to do. After all, the Income-Tax Officer makes a careful distinction between revenue expenditure and capital expenditure. Similarly, logic would show us that current revenues must not be applied to capital expenditure. Long-term borrowings, market borrowings, should be the main source for financing long-term capital projects. Then, look at the implications of a successful borrowing programme. If the people at large are persuaded to save and to save in the form of government securities, it is an index of their faith in Government; it is a sign of their confidence in the value of the rupee; it is a symbol of their belief that we are planning today for tomorrow's prosperity. When you do not have such faith, trust and belief, you have the dissipation of current earnings, and you do not generate the required amount of savings. So, if a successful borrowing programme is an index of the people's trust, an unsuccessful one must be said to be one which denotes lack of trust. Clearly, it is in the background of such lack of trust that the other sources are sought to be tapped. I cannot think of any condition that is more harmful to self-respect than this, in which you jettison market borrowings for the facile resources from taxes, for the self-help without effort of deficit financing and for the parasitical expectation of foreign aid.

But I have digressed. This is meant to be a pre-Budget Gossip, and I am under commitment to assess the economic conditions with a view to suggesting the kind of Budget that the Finance Minister may be in a position to present by the end of this month. However, the digression may be said to be germane to the issue to the extent that it will help us to formulate or, at any rate, to think aloud upon the considerations which will weigh with the Finance Minister. It may be remarked at the outset that the Finance Minister will not be under compulsion, as he was in previous years, to impose new taxes. Indeed, it is quite clear that, with the May 1957 Budget,

the tax effort on the part of the Central Government for the Second Plan has been completed. So, for the first time in many years, we need not be unduly apprehensive of an onerous list of new tax proposals. Moreover, if you have regard to the fact that, in inflationary circumstances, higher taxation is justified, the reverse must also be true that, when a down trend in economic activity is discernible, lower rates of taxation are not only desirable but even essential. In the last week's issue, the article in the World of Finance section broadly surveyed the Indian money market, and suggested that the monetary indicators quite possibly reflected a slowing down in the tempo of economic activity. So, in the second place, there would be a justification for tax concessions in the next Budget. Then, there is the fact that a change affecting the anticipated realisations from the other three avenues of resources will automatically cause a revision in the target for the fourth. In this context, we shall work backward, and take up the four avenues of resources once again.

In the first place, with the accelerated pace of negotiations for foreign credits, this source is more or less fully vouchsafed, fully vouchsafed that is, in relation to the estimate under this head in the Second Plan. Credits have been arranged or are being negotiated with the USA, Canada, United Kingdom, West Germany, France, Russia, Czechoslovakia and Japan. While it is not yet possible to cite specific figures, my own impression is that we no longer have a foreign exchange gap for implementing the hard core of the Plan. But, to the extent that implementation of the Plan may be restricted to the hard core, it follows that the requirements of internal resources may also correspondingly decline. In this light, it appears almost certain that we shall succeed in limiting deficit financing to a figure between Rs 800 crores and Rs 900 crores as against the Second Plan estimate of Rs 1200 crores. Furthermore, the Public Law 480 agreements concluded with America and the arrangements of a similar nature negotiated with Canada will both enable an increase in internal resources, because the rupee proceeds against the sale of such commodities are made available to India as a long-term development loan. This is another factor which will reduce

the overall resources to be found against the two remaining heads. In the third place, with the hearteningly improved tone and tenor of the gilt-edged market, we can now be hopeful of Government borrowings during the Second Plan exceeding the target set in the original estimates. For, although, in the first two years of the Plan, the realisations are slightly under the annual average, there now seems to be a hopeful prospect of approaching the market for larger sums. The creation of a special issue of Rs 30 crores in November last year was a significant indication of an unsated demand for gilt-edged. Since Second Plan disbursements can now be seen to be having an altogether wholesome impact on Scheduled Banks' resources, in the form of a spectacular increase in Deposits, it is fair to state that we are now in sight of a situation in which the banking sector will be able to take up much larger parcels of gilt-edged. Lastly, to the extent that the three sources that we have mentioned will exceed the original estimates, it may be that we could do with slightly less by way of taxation.

Let me state categorically, at this stage, that I do not champion the removal of any of the taxes that were introduced last year. The Wealth Tax and the Expenditure Tax are here to remain. What is more, inevitably, the 1958-59 Budget must also produce a Gifts Tax. Nor do I fancy that we should expect or even need a reduction in the rates of the two new fangled imposts. But what I am suggesting is that, with the completion and institution of an integrated structure of taxation, tax evasion will be rendered more difficult. That being so, even at the present levels of taxation, tax revenues might show, if not a substantial, at least a considerable improvement. In such a situation, and that situation obtains at the present moment, I am unambiguously of the view that the "pinprick" taxes must be removed. For one thing, I do not see the necessity for continuing the compulsory deposit of reserves, and, were I the Finance Minister, the first relief that I would offer would be to announce the withdrawal of this levy. Then, in considering further the measures which are not basic to the integrated structure of taxes, I would have second thoughts on the Bonus Tax and the Dividend Tax. My second and third concessions would

be to reduce the rates of taxes in both these respects. Fourthly, I would be having a quick look at the list of commodities in which a revision in the excise duty appears to be called for. I would particularly examine the position of cotton textiles, cement, some varieties of paper and sugar. I would come to the conclusion that a good case exists for some relief to these industries, and I would make some adjustments in the rates of duty. Then, I would apply myself to the problem of improving exchange earnings from exports. This, by the way, would be linked up with areas of, shall I say, over-production in the Indian economy. As such, in particular, I would see whether a fillip could be given to exports of cotton textiles and of sugar by suitable drawbacks of duty and, in the case of sugar, by some element of subsidy, if that were necessary. And finally, I would look more closely into Dr Kaldor's suggestion of lower income tax rates. This means I would read the Kaldor Report, and read it carefully.

This, then, would be my Budget. Certainly, one new impost; but accompanied by some marginal concessions all along the line. After all, I would think that it would be the gesture which would be appreciated, the gesture that would invigorate the economic and investment climate. That is, the loss in revenue to Government from such concessions would be negligible; but the gain in goodwill and confidence would be appreciable.

A postscript: If, as the Finance Minister should, I really cared to bring about a revival in the investment markets, I would utilise the opportunity given to me by the Budget to remark on the very good progress that has been achieved by the two steel plants in the private sector, and to say that, in such circumstances, Government would not object to a nominal increase in the dividends payable on Indian Irons and Tata ordinary.

I have no doubt that a Budget such as this is what the country needs. To me, the tax concessions I have enumerated are the minimum necessary to provide the incentive for the sustained effort at maximising production. Then, as I said, these are reliefs that do not conflict with the fundamentals of Government taxation policy; nor do they involve much of a sacrifice from the standpoint of Government revenues. So, I am presuming that what I have thought aloud on the Budget will not prove to be merely wishful thinking. Is it too much to hope that the Finance Minister may conceivably be thinking on the same lines as I?

Calcutta continues to provide a new lead in many useful directions, and of this the city's businessmen gave fresh proof last

Indian Finance

week, when they formed the Calcutta Management Association with Sir Jettangir Ghandy as Chairman. The object of this body is to promote the development of sound management practices, provide facilities for studies of and exchange information on management problems. It will also cooperate in conducting research with other institutions of a similar nature and have a comprehensive and modern management library. Management, as most people will readily recognise, is fast becoming a specialised study in India, now rapidly progressing in industrialisation. Every day, new labour laws, company laws and amendments to rules are coming into existence, and the field of management is assuming an increasingly complex look. It is equally well known that our standards of efficiency in business and industry have much leeway to make up before we can compete with those prevailing in the more advanced countries. It is against this background that the Government of India are trying to create a Labour Management pool to supply the needs of the industry under the Second Plan. From similar motives, it has established a specialised college at Hyderabad to train managerial personnel. It is, therefore, quite in the fitness of things that Calcutta's businessmen have taken the present step and, I believe, management education under the auspices of the Calcutta Management Association will prove to be a source of strength not only to West Bengal's business and industry, but also to those outside. The Chief Minister of West Bengal has expressed the hope that the Association would be able to provide a good lead to the management movement. Its headquarters is located at the All-India Institute of Social Welfare and Business Management, College Square, West—a fact which makes me suspect that Mr D. K. Sanyal, the Institute's Director, who has already done so much for education in commerce and industry in this State, is actively behind the Association, too.

At a meeting of the West Bengal State Labour Advisory Board in the last week of January, Mr S. M. Bhattacharya, the Labour Commissioner, gave some useful statistics relating to the labour situation. He said that, in 1957, there were 226 work stoppages as against 177 in the previous year. The number of workers involved in 1957 was about 136,000 as against 113,564 in 1956. As for man-days lost, 1957 accounted for 1,070,000 compared with 1956's 1,809,934. Thus, it will be seen, 1957 was a better year than its predecessor. In most cases, 1957 work stoppages, Mr Bhattacharya pointed out, were of a short duration and attempts at conciliation successful and speedy. Of other disputes not involving stoppage, 4,200 were settled.

EAVESDROPPER

February 8, 1958

THE stock answer that Government spokesmen give whenever complaints about discrimination against the private sector are voiced is that it is wrong to consider that the two sectors are two watertight compartments, each functioning without any relation to the other. The correct position is that the two are parts of an integral whole and as such are interconnected and interdependent. It will be preposterous, therefore, to suggest that Government, who are vitally interested in the economic development of the country, will consciously do anything that may have any adverse effect on the private sector.

The explanation usually passes muster with the generality of the public in our country, because it is in conformity with their understanding of Government's industrial policy, the main aim of which is to achieve rapid industrialisation. In this view, so long as the rapid growth of an industry is in the national interest, it automatically becomes eligible for special attention by the State. That is why the public sector has assumed responsibility for setting up new iron and steel works and for opening up new coal mines. The active help that is being rendered to the two iron and steel companies in the private sector by Government is also in furtherance of the basic aim.

Conversely, any Government action that results in retarding the progress of an essential industry cannot be deemed to have been taken in the national interest. While it is generally accepted that heavy taxation is inevitable in a country which is impatient to achieve rapid all round development, it is taken for granted that such taxation will not result in mepping up funds to such an extent as to leave the corporate sector even without adequate working capital. Judged from this standpoint, the taxation policy of Government does not seem to escape wholly the charge of curbing incentive which supplies the driving force to national effort. Ever since the last Budget proposals were announced, the private sector has been asserting that the new imposts and other restrictions will seriously interfere with its programme of expansion. We now know that is what exactly is happening in the case of the cement industry, which is next in importance only to iron and steel and coal.

Speaking at the 21st Annual General Meeting of the Associated Cement Companies, held in Bombay last week, the Chairman, Mr Dharamsey M. Khatau, has disclosed that the ACC is today in an unenviable position of being obliged to go slow with its expansion programme because it is un-

The Obstacles Before the Cement Industry

able to find the requisite funds either from its own resources or from outside sources. Such a state of affairs, he has observed, has been brought about, among other factors, by the taxation policy of Government. Cement being an essential industry in the present context of the enormous demand for this commodity for diverse nation building activities, the public will not find it easy to give their unqualified approval to the Government policy which seems to have been responsible for bringing about this sorry mess.

Mr Khatau attributes some of the present difficulties in the country to Government's approach to deficit financing. It is wrong to continue to believe that deficit financing can be successfully kept at a low level because from present indications it is extremely unlikely that the expected volume of funds will materialise. The only way out would appear to be "a sober and conservative appraisal of external and internal resources, on the one hand, and a grimly realistic re-phasing of Plan expenditure."

The main theme of Mr Khatau's speech is the growing difficulty of the cement companies to meet the cost of the expansion programme already under way and under planning. It may be pointed out here that, since the ACC accounts for nearly 60 per cent of the cement production in the country, what is true of the ACC is also true of the cement industry as a whole. Despite its substantially higher production during the past year, ACC's profits have not shown any improvement. A sharp rise in the manufacturing costs, a higher wage bill, an increased charge for depreciation and, finally, heavy incidence of taxation resulting from the increase in the rates of income-tax, corporation tax, and wealth tax have eaten into the earnings, leaving very little for diversion toward strengthening of the internal resources. Already, the tempo of work on the company's expansion projects has slowed down as a result of uncertainty of financial resources and difficulties in obtaining foreign exchange.

In order to meet the situation arising from the depletion of funds, the Associated Cement Companies has launched an austerity drive. As good deal of capital is locked up in the form of large quantities of equipment and stores including steel, the liquidation of these is receiving priority attention.

Mr Khatau has pointed out that, though the directors of the company have decided to raise Rs 5 crores by issue of debentures during the current year, the company's major expansion effort will still continue to remain ineffective

if there is no help forthcoming soon from Government. He has suggested, therefore, that, in the new price of cement to be fixed in the near future, there should be an adequate expansion allowance in addition to a Rehabilitation allowance. Mr Khatau has made it clear that, in the absence of such an allowance, "we shall be compelled to abandon many of the expansion plans and projects we have in view, for the simple reason that no further funds would be available from internal or external sources to finance them." In announcing that the ACC has shelved the proposed joint project of a heavy engineering unit in Durgapur with Vickers and Babcock-Wilcox, Mr Khatau has also mentioned that one of the reasons for the decision is the doubtful prospect in the country for raising fresh capital.

It is, however, gratifying to note that the various expansion projects that the company have in hand are making satisfactory progress though the tempo has slowed down. The extensions to the Kistna Cement Works have been completed while extensions at Sindri and Chalbasa have made good progress. The new factory at Mancherial is expected to begin production in September this year.

Mr Khatau contends that, in view of the difficult financial position of the cement industry, it is urgently necessary to revise upward the price paid to the industry. Government need not rack their brains unduly to do this. For, there is already an extra amount of Rs 12.50 per ton available with the State Trading Corporation. This is arrived at as follows: As against the Rs 117.50 the consumer is paying for a ton of cement, the producer gets only Rs 54.50 per ton. With the taking over of the distribution of cement by the State Trading Corporation, the entire cement production is sold to the corporation. The corporation pays Rs 20 per ton for Excise Duty and about Rs 15 as railway freight. Packaging charges and selling expenses together absorb another Rs 15, leaving a sum of Rs 12.50 with the Corporation. The main purpose of the corporation in taking over the distribution of cement has been the ensuring of cement supplies for essential purposes. The residue of Rs 12.50 has been utilised for subsidising imports to fill the gap between demand and supply in the country. Now that cement imports have stopped, the residue is retained by the corporation. It is estimated that the corporation has so far netted a sum of Rs 5.5 crores on the score of cement distribution alone. It has been further suggested by Mr Khatau that, apart from the profit with the corporation, Government have the enhanced excise duty that is being collected. The present excise duty of Rs 20 per ton in-

cludes an addition of Rs 15 imposed last May. If Government forego this, the demand of the producers can be met without bringing about any further increase in the price paid by the consumer.

The present sad plight of the cement industry should have occasioned as much anxiety to Government as to the industry itself. For, the consequences of a slowing down of production in this vital sector will be quite detrimental to the cause of national progress. From indications so far available, it would appear that the expansion programme of the industry as a whole has already been adversely affected. The possibility of attaining the target of 16 million tons set for the industry under the Second Plan is discounted. For, with the second year of the current plan reaching its end, the tempo of expansion is not as it should be if the target is to be attained in the scheduled time. The shortage of foreign exchange coupled with the inability of the units to put up the requisite finance from the sources open to them has retarded the placing of orders for new machinery. Neither has the industry been quite successful in obtaining capital goods from abroad on the deferred payment system. It is a debatable point whether Government have done the right thing when they have asked the cement industry to shift for itself. It would appear that, at long last, the wisdom has dawned on Authority that it should lend a helping hand to the industry in fulfilling the target. But the realisation seems to have come a bit too late to make up for lost time.

It is, therefore, incumbent on Government to take energetic steps without delay to remove the obstacles that have gotten into the way of the industry in its implementation of its expansion programme on which it has already embarked upon. The industry has asked for a higher price for cement, and Mr Khatau has shown how this can be done, without increasing the burden on the consumer.

Cement production, unlike coal or iron and steel production, is one hundred per cent the responsibility of private enterprise. Government have no reason to regret their decision to let it continue to be so. From 2.6 million tons in 1950, cement production has increased to 5.6 million tons in 1957. The industry has already made the necessary arrangements for increasing its installed capacity to about 10 million tons in the course of the next two years. But the orderly implementation of the programme seems to depend largely on whether or not Government will realise that the industry should be allowed to retain adequate funds to help itself.

BOMBAY
REVIEW

Administrative Inefficiency

Speaking at the college celebrations of the Elphinstone College, Mr C. D. Deshmukh Chairman of the University Grants Commission expressed dissatisfaction with the present pattern of Government and administration in the country. The grounds for such dissatisfaction are what he alleges to be administrative inefficiency in the field of food and agriculture, recklessness in respect of foreign exchange and lack of ground organisation that is essential for the full execution of the schemes for the development of small-scale industries.

The matter is grave enough to require the Government's serious consideration and prompt attention. For already there are many factors apart from those referred to by Mr Deshmukh which pull the plan back from the goal towards which it is heading. Though some of them are beyond the control of the Government, administrative inefficiency is not one of them and should be amenable to prompt control by the Government if only it takes up seriously. Complacency in this matter would only aggravate the difficulties which are already threatening the smooth execution of the Plan.

The failure of the Plan, so far as the student community is concerned is a prospect which would be viewed with alarm and concern. For the employment opportunities which are already restricted in relation to the number of the educated unemployed would get still further narrowed. As at present the Second Plan is designed only to absorb the additions made to the number of unemployed already existing and does not promise any improvement to the existing position. The number of the educated unemployed at the end of the Second Plan would remain at the old level of 500,000.

The prospects for the other sections of the population especially the village artisan and the cottage and small-scale industrialists also do not appear bright, from what Mr Deshmukh alleges to be the lack of enthusiasm on the part of the authorities in implementing the schemes drawn for them. The Second Plan envisages the development of a very large number of small-scale and village industries in the country for which a provision of Rs 200 crores had been made. Since unemployment is widespread in the countryside any delay in the implementation, not to speak of departure from the declared programmes concerning the development of such industries, would have serious consequences.

Corporate Sector's Problems

While speaking on the resolution on the economic situation at the Gauhati session of the Congress, Government spokesmen have averred that the objective of a socialistic pattern of society does not call for the abolition of private

enterprise. The new economic policy places equal emphasis on the need for increasing production and an equitable distribution of wealth. The private sector, therefore, will continue to be given an important role as it will help attain the national objective of an increase in production. From the trend of working of the private sector industries in the past year it would appear that Authority is not at all anxious to allow it to make its contribution. For, the effect of last year's taxation measures seems to have been disastrous for the corporate sector as a whole. The Chairman of the Associated Cement Companies has pointed out that the cement industry finds itself today without adequate working capital after meeting the increased expenditure of which taxes account for a sizable part. The President of Chemical Manufacturers Association has disclosed that if the chemical industry continues to work under present conditions, it will be so enfeebled that it will not be able to make any further additional contribution to the national production. What is true of the cement and chemical industries must be true also of all the industries in the private sector.

Speaking at the annual meeting of the Indian Merchants Chamber, Mr Naval H. Tata has pointed out that the recent trend in taxation policy in the country has seriously impaired the savings and investment potential of both individuals and corporate enterprises. Rapid industrialisation and economic development of the country require a healthy atmosphere for the formation, growth and retention of productive capital and resources within the economy. The taxation policy now in force has completely lost sight of the tax-bearing capacity of the community. The result of this failure on the part of Government is now reflected in the threatened slowing down of production and expansion. Mr Tata therefore, says that it is of the utmost importance that the existing rates of taxation both on earned and unearned incomes is substantially reduced.

It is to be admitted that the slowing down of production and other activities in the private sector is not a matter that concerns the industries only. As is often pointed out by official spokesmen the two sectors are interdependent and moreover the private sector industries account for a major part of national production. Therefore, any setback in the private sector at this juncture of development of the country should be the concern of the entire nation. It is incumbent on Government to take immediate remedial measures so that national progress is not retarded on any front.

Coastal Traffic

The lack of emphasis on coastal traffic in the programme of expansion

sion of transport facilities under the Second Plan has probably stemmed from a belief that increased expenditure and effort in this sector will not bring the additional capacity required in time. Evidently such a reasoning has been based on the assumption that improvement of coastal traffic inevitably involves the acquisition of large shipping tonnage which, if it is either built in our own shipyards or bought, will, apart from absorbing big sums of money, take time. And time is one thing that we are not prepared to lose. Hence, it is that maximum emphasis has come to be placed on railways with road transport also getting some attention. Inland water transport which is also said to have immense potentialities has like coastal traffic, been somewhat relegated to the background because of the difficulty in making an exact assessment of its position.

It is, however, gratifying to note that at long last authority is seriously applying its mind to the possibility of developing coastal traffic through small vessels. Speaking at the inauguration of a new lighthouse tower near Jamnagar, Mr Raj Bahadur, Union Minister of Shipping, has stressed the urgent need for building small vessels suitable for coastal traffic among the minor ports. The small vessels scheme has a number of advantages. In the first place, it can be taken on hand almost immediately because the outlay will not be large. Secondly, it will help reduce substantially the pressure on the railways by siphoning off part of its load. Thirdly, it will help reduce the congestion in our major ports. And fourthly, it will increase employment opportunities in the field of coastal traffic as well as in the vessel building trade.

In the meantime, the minor ports, most of which are in a bad state should be adequately developed to receive the small vessels. The Second Plan has already formulated a phased and comprehensive scheme for modernisation and development of lighthouses and other aids of navigation on which depends the development of minor ports. Mr Raj Bahadur has disclosed that part of the scheme has already been implemented. Attempts are being made to manufacture the equipment required for the development of lighthouses and other navigational aids within the country itself.

In the context of the growing volume of trade, commerce and other constructional activities, the problem of transport must be given top priority as an inadequate transport system will retard national progress as a whole. In view of its great potentialities, coastal traffic should get the attention it deserves atleast from now

onwards. As Mr Raj Bahadur himself has pointed out, only small mechanised vessels are required to be built, finance cannot constitute a big obstacle. It is to be hoped that early steps will be taken by Government to work out and implement a suitable scheme for the building of small vessels. Private enterprise may also usefully consider this proposition.

Man vs Machine?

The large accumulation of unsold handloom goods has resulted in the precarious position of the dependents on this trade. Many millions depend upon this for their livelihood, and this crisis has brought about a serious change in their day to day life. It is estimated that as much as Rs 25 millions worth of handloom cloth remain unsold with the cooperatives, who act as the media for selling these goods. This position is believed to have been the result of the cut effected last month in the rebate of half-anna granted in the excise duty on medium varieties of mill cloth. Therefore, it is not surprising to note that the sale of handloom cloth should come down to Rs 800,000 in December 1957, compared to sale of goods of the value of Rs 1,572,000 in September in the same year. The Central Cess Fund last month reduced the rebate of 9NP to one anna on handloom cloth, and this seems to be one of the causes for the poorer sale of handloom cloth.

This repercussion is due to the stiff competition from the mill industry, which is in a position to sell cloth at a cheaper price than the handloom cloth weavers. Moreover, while the former is smooth, the latter is rough, and the cost of handloom cloth is almost equivalent to the mill cloth. Naturally people go in to buy the mill cloth instead of the 'rough one', as they put it. The mills have exceeded the plan target of 5000 million yards a year, and since a large quantity could not be exported, brought their stocks to compete with the handloom cloth resulting in glut in the market.

The position has now become serious, and if proper methods are not taken up, many cooperative societies may close down resulting in the unemployment of those who now work in it. Many people are already seeking other occupations, and some societies are on the verge of winding up their business for 'good'. Such cooperatives are in a state of selling the goods at the barest minimum profits, but the buyers are declining the offer. The Government must come to the rescue. Dilly-dallying by the competent authorities is of very little help. And one will feel that the future of this handloom industry is especially bleak if the Government are not in a position to do something concrete at the present juncture.

GATEWAY
NOTESWORLD OF
COTTON

THERE was a further improvement in the domestic cloth offtake during the past week. Although the offtake by some of the consuming centres such as Uttar Pradesh and Bihar was rather restricted, fresh centres entered the market. Demand from West Bengal improved perceptibly as a sequel to the settlement of the Sales Tax issue in that State recently. Demand from Madras was also better; and dealers felt that the offtake by the South Indian centres would improve in the near future.

Mills have continued to receive orders for forward delivery; but the volume of such business is not reported to be as heavy as in the recent past. As they are said to be quoting slightly higher prices, dealers are adopting a cautious attitude in extending commitments, pending the presentation of the budget proposals. The consensus of opinion appears to be, that the consuming centres will be interested in booking business only to meet their immediate requirements and any substantial improvement is, therefore, expected to materialise only after the Budget is presented.

However, market circles feel that the present satisfactory trend may continue for another fortnight. Should there be no change in the tax structure affecting the textile industry and the reduction of half an anna in the excise duty allowed to continue, there is no reason why the trade in cotton textiles should not run on an even keel.

According to the provisional figures, exports of textiles have shown a fall of 173 million yards to 827 million yards during last year from the annual export target of 1,000 million yards. However, taking into account the unusual difficulties which the industry had to pass through, the performance on the export front cannot altogether be considered unimpressive.

While the increase in the quantum of exports is shared almost equally by grey and white piece-goods, shipments of coloured cloth have shown a downward drift. Exports of grey cloth are higher at 448 million yards as compared to

Improvement in Cloth Offtake

401 million yards in 1956 and those of white cloth at 177 million yards against 135 million yards. Exports of coloured cloth have, however, declined by about 5 million yards.

The improvement in the domestic sector has, no doubt, created some confidence in the overseas markets, although the normal level of enquiries has still to gather momentum. There have been continued enquiries from the African markets. Business with Burma is likely to improve as soon as import licences are granted to the Joint Venture Corporations by the Burmese authorities. Ceylon has entered the market after a long time, while Singapore has booked some business.

FORWARD MARKET:

Prices in the forward cotton market developed an easier tendency due to long liquidation and profit-taking. Lower upcountry advices and a slightly reactionary trend of the spot market evoked selling, most of which emanated from Ahmedabad. Moreover, bulls preferred to liquidate their holdings in the March contract. ICC Moglal Jharilla March, after opening at Rs 694, receded gradually to Rs 686. May delivery closed at Rs 681.50 after touching a high of Rs 686.

Meanwhile, the Government of India have granted permission to the Madhya Pradesh Commercial Exchange at Akola and the Western India Cotton Exchange at Ahmedabad to start forward trading in cotton. Both the markets will cater to the needs of the regional interests and will accept delivery of only locally-grown varieties. The market at Akola will be mainly for Vidarbha, Khandesh and Gaorani areas in Andhra which produce about 10 lakh bales per year, while that in Ahmedabad will enable the local textile industry to hedge about 8 lakh bales grown in Gujarat and Saurashtra. Trading will be started sometime this month, possibly between 10th and 20th February. The authorities have pointed out that no more regional markets will now be opened for cotton.

SPOT MARKET:

The Spot market ruled steady. Good business was reported done in Khandesh and Berar Jharilla varieties. A Delhi mill was reported to have bought sizable quantities of Wagadh and Mathia varieties.

On the export front, listless continued to prevail. Shippers showed some interest in Benga's, both old and the current crop. There was also some demand for Yellow Pickings. The volume of business put through was, however, limited in both instances.

In the foreign section, demand was moderate. East Africans and Egyptians changed hands with

trade attention centred around the expected arrivals of the Egyptian delegation, probably during the next week. Prices, however, remained unchanged.

The Government of India have announced that the ceiling, fixed for the import of American cotton under P. L. 480 as well as under P. L. 665 programmes, has been reached. It means, that no more American cotton can be bought unless the Government introduce a new import programme for that cotton. Import licences for sterling areas cotton have also been fully utilised and the new import policy is eagerly awaited.

The US announcement to end the quota system for the import of short harsh cotton and allow unlimited quantity has proved to be of an academic interest to shippers. The annual import quota for rough cotton was fixed by that country at 70 million pounds; but it was never fully utilised in the past ten years. India and Pakistan have been the two major suppliers of rough cotton to America.

CROP REPORT:

The statistical position of cotton continues to be healthy. There are reports that the cotton crop in the Surat-Broach area has been widely affected by a type of pink-ball worm disease and that the yield is expected to be at least one-third less. Opinions regarding the market outlook at the level of Rs 700 appear to be divided.

Arrivals of the new crop Lakshmi have just commenced. Judged from the early arrivals, the quality is considered very satisfactory.

STATISTICS:

Exports by rail from 1st September 1957 to 30th January 1958 were 104,619 bales. Estimated mill consumption in Bombay, during the same period, were 550,497 bales as compared to 543,337 bales in the corresponding period of the previous year. Estimated stock of raw cotton, held by exporters, dealers and mills in Bombay, as on the 30th January 1958, was 515,184 bales as compared to 510,083 bales on the corresponding date of 1957.

KARACHI COTTON MARKET:

The Karachi cotton futures market depleted an easy trend. Demand from overseas interests and domestic spinners continued to be slack in the wake of increasing new crop pressure. Following rates were quoted:— NT Roller ready Rs 80-10; March delivery Rs 74-10 and May delivery Rs 75-2.

NEW YORK COTTON MARKET:

Prices on the New York cotton futures market developed a firmer tendency with the new crop again favoured. Prices rose by as much as 20 points a pound before increased profit-taking and hedge selling

BOMBAY
REVIEW

caused some reaction from the best level.

According to the United States Department of Commerce Cotton Ginning Report, ginnings prior to the 16th January were 10,633,000 bales. Many quarters believe that the final crop may be close to the ginning figure given above as against the December estimate of 11,010,000 bales. During the last season, ginnings prior to the 16th January were 13,098,000 bales and the final ginnings at 13,150,000 running bales.

LIVERPOOL COTTON MARKET:

On the Liverpool cotton market, American futures prices continued the downward drift with only sporadic trade calling to offset liquidation. Intermittent hedge selling on the distant positions helped to absorb the transfers; but the near delivery showed the greater weakness.

Prices have now reached a level of about two cents below their true relation with current prices in the US in respect to offers of CCC stocks against the near positions and against the possible introduction of, say, a 7 per cent export subsidy on new crops.

SUDAN COTTON:

The production of long-staple cotton in Sudan, during the 1956-57 season, was a record high of 675,445 bales. Of that quantity, about 250,000 bales are still unsold. Demand from abroad has continued to be slow.

S. N. K. SUNDARAM, Mg. Director.

SENTIMENT in the Oils and Oilseeds markets remained generally depressed and prices developed an easy trend following the increasing supply at the terminal centres in the face of limited offtake. The weakness in the ready section and heavy speculative selling pressure from Delhi and the Punjab operators were also contributory factors. Trading was quiet in the Castor-seed section. Turnover was only 5,000 candies. May delivery opened at Rs 136.37 and improved to Rs 136.62 at the close. In the ready section, the rate was quoted at Rs 27.50 and Castor Oil, commercial quality, at Rs 14.06.

It was a depressed week for Groundnuts, and prices sagged under selling pressure. February delivery opened at Rs 151.50 and, after receding at one time to Rs 151.25, improved again towards the

Oils and Oilseeds Subdued

close to Rs 151.75. Ready Bold was quoted at Rs 30.62 and Groundnut Oil at Rs 16.69.

Despite fair overseas enquiry, prices in the Linseed section also developed a reactionary tendency. May delivery, after starting at Rs 29.06, receded to Rs 28.69, to finish better at Rs 28.75. Ready was done at Rs 28.62 and Linseed Oil at Rs 15.81.

Cottonseed, Kardiseed and Niger-seed were dull and subdued. Cottonseed February changed hands at Rs 93.25 to Rs 93.50. Kardiseed was quoted at Rs 17.50 and Nigerseed at Rs 26.50.

Gold & Silver

The Bombay Bullion Exchange commenced trading on a buoyant note, reflecting accumulation of buying orders; but most of the

gains were erased under corrective profit-taking.

In the Gold section, arrivals and offtake were estimated at 3,000 and 2,000 tolas respectively. Forward delivery changed hands at Rs 111.09 to Rs 111.62, while spot closed at Rs 112.37 after touching a high of Rs 112.69. Sovereign eased off to Rs 71.12 from Rs 71.50.

Encouraging offtake was the main sustaining factor in Silver. Arrivals and offtake were estimated at 7 and 35 bars respectively. Forward delivery changed hands at Rs 188.94 to Rs 189.37, while spot closed at Rs 188.62 after touching a high of Rs 189.00 and a low of Rs 188.50.

Yarn

A natural reaction has set in in the Yarn market after a smart rise

Indian Finance

in prices during past few weeks. Offtake of Rayon yarn remained poor and prices declined from 3 to 13 nP per pound in various kinds, both indigenous and foreign.

As regards Staple-Fibre yarns, the decline in prices was moderate to the extent of about 6 nP in the ready section.

In the case of Indian cotton yarns, in spite of the low level of prices, there was a further decline in 26s and 32s to the extent of about 13 nP per bundle and in 40s to the extent of 25 nP.

In other yarns, there was a moderate decline and, in some cases, prices remained unchanged, particularly in coarse yarns. On the whole, the market remained very quiet and offtake remained rather poor. The future tendency remains uncertain.

Non-Ferrous Metals

The Non-Ferrous metal market ruled generally quiet with the decline in prices, especially of Copper, being marked. The rate was quoted at Rs 166 per cwt. Interest is focussed on the outcome of the meeting called by the Government to review and discuss the supply of non-ferrous metals in the country. Zinc ruled quiet at Rs 52.50 per cwt, while the Lead market remained steady at Rs 65 per cwt. Firmer overseas advices failed to enthuse the market due to abundant stocks. Tin price being quoted at Rs 127.50 per quarter.

On the London Metal Exchange, Copper is quoted steady at £163½ per ton. Zinc remained firm at £64 per ton, mainly attributed to the pruning down of production. Although there were no new developments in the Lead section, further cutback in production helped the market to depict a firm tone, the rate being quoted at £73 per ton. Strong advices from Singapore caused a firmer tendency in Tin which, after improving at one time to £731½, finished the week at £730 per ton.

Despite curtailment of production by a number of leading producers, output of refined copper in the world has risen to 2,032,554 tons in 1957 from 2,987,160 tons in the previous year. Producers' stocks of refined copper, at the end of the year, totalled 458,340 tons as compared to 354,420 tons at the end of 1956. Out of the stocks at the end of last year, 181,024 tons were held in the USA and 277,336 tons in other countries, the corresponding figures for 1956 being 120,645 tons and 233,775 tons respectively.

Combined deliveries of the US and other countries to fabricators were 2,851,210 tons as against 2,832,978 tons in 1956. Thus, the consumption of copper last year was 181,344 tons behind the production in the world.

February 8, 1958

LIKE the rest of India, New Delhi too is watching in a dazed fashion the proceedings of the Chagla Commission inquiring into the propriety of the investments of the Life Insurance Corporation in the life of the concerns controlled by some of the concerns controlled by the Calcutta financier, Mr Haridas Mundhra. The appearance of hypnotised absorption in the inquiry is underscored by the fact that everyone has perforce to keep his mouth shut (at least officially) till the Commission completes its inquiry and submits its findings. This has, of course, not prevented informal discussions, at all levels, of the evidence tendered and speculation of the possible outcome of it all. There can be no doubt that the inquiry itself has taken on overtones that have nothing to do with the somewhat prosaically worded official purpose of the inquiry. To the public at large poring over the details of the proceedings in the daily papers, (where they have completely overshadowed reports of the Zeta and the American sputnik), the inquiry has assumed the shape of high drama, if not ritualistic catharsis. Indeed, in some of its aspects, the inquiry would seem to fit admirably the Aristotelian definition of high tragedy, at any rate from the spectators' point of view. The "purgation of pity and terror" by the spectacle of the great in travail by some basic flaw in their beings is precisely what is happening to millions of readers who are poring over the details of the proceedings. This would be true even if the final findings of the Commission have not the remotest relation to what each man, reading the evidence, has assumed to be the "facts of the case".

From the point of view of the political moralist, it is of some interest and importance that this phenomenon should be studied. It has implications that have great relevance to rulers of men, especially in a democracy. It is generally agreed that it was only right and proper that the inquiry should have been ordered; and, in thus submitting the public acts of certain public men to the most searching inquiry, we have proved the robustness of our democratic faith. The primary purpose, of course, is the ascertainment of truth, the fixation of responsibility and the maintenance of the highest standards of public conduct and so forth. But there are certain other consequences, largely of the intangible psychological kind, that need consideration. For instance, the thick blanket of insinuation, suspicion and gossip that has been growing around the deal will now be completely lifted and the oppressive atmosphere of an unresolved public mystery will have lifted as a result of this inquiry.

"Purgation of Pity and Terror"

Indeed, it has already lifted, much to the secret chagrin of some people in the Opposition, where political mouths had watered at so juicy a bit of exploitable party-political material. This is a gain of great importance.

But there are consequences, whose wholesomeness is debatable. In a speech in Bombay the other day, Mr Nehru made a pointed reference to this inquiry and said that he was rather distressed by what he characterised as the "morbid interest" that this inquiry has evoked among a section of the public. That is an aspect of the matter that needs thinking about, and Mr Nehru was not a day too soon in drawing our attention to it. The sources of such unhealthy curiosity in the matter are a complex mesh unravelling which is really the task of a professional social psychologist. But certain strands are obvious even to the layman. Indeed, some of them are obscurely related to the perennial question in aesthetics about why we enjoy a tragedy, and why the spectacle of suffering should delight us and so forth. There is a curious and contradictory mixture of impulses behind it, some of them disreputable and some hysterically exalted. Thus, in the unabashedly "gleeful" interest in the distress of the "great", is to be seen the unconscious desire to cock a snook at the nominally great, the accumulated resentment at the fact that he should have "made it" while you were still "nowhere near it". There is also in it, what is surely one of the basest of human instincts, especially when in a herd, the irresistible desire to kick a man when he is down. Of course, to many of the self righteous people who say unctuously, "Let Right Be Done", the suggestion that there are unconscious disreputable motivations behind their professions seems fantastic. But they are there, as any psychologist will tell you. (I have, of course, nothing to say about the man who openly avows to the motives I have mentioned. Such people do exist, as I have found in the conversation of the last few days. We do not speak the same language, that is all).

These are some strands of the morbidity of which Mr Nehru spoke. Since, by definition, these impulses do exist in the best of us, the really unhealthy nature of the interest lies in our not recognising the existence of such impulses and ordering our conduct accordingly. In other words, what is deplorable about the kind of people whom Mr Nehru deplored is that they showed a more than usually avid interest in the matter and that their curiosity was unrelated to any firm notions either about public morals or about the real issues involved. A simple

catechism will show that, of the millions who have followed the proceedings, hardly one per cent had any clear ideas of the issues involved. Thus, the curiosity was nothing more than a thirst for sensationalism at its most obvious, or the subterranean resentment feeding itself at the discomfiture of the prominent.

To the theoretician of democracy, this phenomenon will naturally raise questions about the wisdom of basing Government on the authority of people who react in this fashion. It is perhaps here that Aristotle will restore his faith in democracy. For, if Aristotle is right, then the inquiry will act as a cathartic agent and we shall all be purged of all the undesirable qualities that have accumulated in us. So, the awe of the misfortunes of the "great" will by definition purge the very resentment of the "little man" at the greatness of the "great man". So we shall all be better democrats after it is all over.

The fact that the final findings of the inquiry are still to come has inevitably made me stick to the periphery of the subject. And yet I could not keep away from the subject till after the inquiry was over, for, as one engaged in transmitting to you what New Delhi's predominant preoccupation is week after week, I could not very well have ignored what after all is perhaps the only subject of conversation here these days. Apart from what I have already said, there are two points I should like to make. Whatever the ultimate result of the inquiry from the point of view of democratic health of the nation, and whatever may be one's view of the rights and wrongs of the matter, the immediate result in Delhi has been one of extreme uncertainty and a

gloom. There is hardly any responsible person who is not unhappy at the turn of events or who is not fearful of the consequences. It is an open secret here that Mr Krishnamachari is having his letter of resignation in his pocket and that he is merely waiting for the submission of the Commission's report. Indeed, he would have submitted his resignation even now, but for the fact that the inquiry is still proceeding and he does not want to interfere, even remotely, in its course. But there can hardly be any doubt that TTK's going away at this juncture would perhaps be the most unfortunate thing that could happen to the country. Over a period of nearly two years, he has been labouring at the task of putting the Plan on an even keel, and recent events have shown that he had achieved a remarkable measure of success. Things were getting under control and everything seemed well set for fair if not plain sailing for the Plan. The last fortnight has thrown all this into some disarray and there is hardly anyone who is happy about it.

The second source of gloom is the extreme demoralisation among the services. The inquiry dealing with the acts of some important members of the services has already caused misgiving among officials about the consequences of their acts done in the course of duties. Of course, nothing has yet been given as a finding by the Commission about the particular members of the services connected with this inquiry. But, if one were to judge by the mood here, the fact of the inquiry itself, even before its findings have been given, has made a deep dent in the morale of those who have pleaded for greater initiative at secretarial level. It may be that it is unjustified, but it is there.

part of the pattern
of India's
industrial progress

In every industrial undertaking, efficient insulation is vitally important. Good insulation is not just a question of using high quality materials...it's a science that calls for experience and skill.

We offer the services of a highly specialised contracting organisation, with the resources to undertake heat, cold and sound insulation contracts of any magnitude anywhere in India. Whether you are faced with a minor problem or a major project in Insulation, we shall be glad to serve you.

DELHI
REVIEW

In the latest round of negotiations over the canal waters dispute, a new principle has come up for discussion. Both India and Pakistan have been asked by Mr Iliff, the Vice-President of the World Bank, to draw water from all the rivers instead of each confining to three out of the six rivers. This departure from the basis of negotiations hitherto followed has the net result of enabling India to construct a dam at the upper reaches of the Chenab in Himachal Pradesh. Happily, this principle is reported to have been agreed to by both parties, though, the details have to be settled.

The canal dispute is the second most formidable obstacle in the way of good relations between the two countries. Now that there is a reported agreement at least on the broad frame work of a settlement, it must be possible for India and Pakistan to arrive at satisfactory solutions to the differences on details as well. From the side of India, the supply of waters to Pakistan has always been governed by humanitarian rather than commercial motives.

The principle now being discussed is not related to national rights over international rivers. Perhaps, the question of rights is not being raised at all. What is sought to be offered to each of the parties is only the opportunity to compensate for a specific loss in water supply consequent on the other having to utilize a part from its own resources. If, however, any question of rights is to be involved, the Government of India will have to think in wider terms and of the interest which other neighbouring States might also claim on the waters of the rivers which mainly belong to India.

Basis for Land Ceilings

The inherent complexities of legislation for ceilings on land are reflected in the search for a proper basis now being sought by the Government of Andhra Pradesh. At a Press Conference in Hyderabad, Mr Sanjeeva Reddi, the Chief Minister disclosed that the ceilings are proposed to be made on the basis of income instead of acreage; the number of members in the family will be another main consideration.

For income, a rough and ready estimate is always possible but the number of family members is a highly fluctuating circumstance and any ceiling related to the number obtaining at a particular time is likely to become inequitable when the family gets swollen. Nor can there be any workable scheme of changing ceilings according to the fluctuations. In the interest of maximum production, it would be wiser to place the limit fairly high and conceive of a family of five as the minimum basis. At that limit, the impossibility of adding to the landed property of the family may

Sharing the Waters

work as a direct restraint on the growth of population. A ceiling which does not take into account the possibility of any addition to the family beyond a particular number would be inequitable, especially when the number is just two or three.

It is also necessary that a more or less uniform policy is pursued by all the State Governments in this important respect. In Hyderabad, the ceilings were fixed on a different basis. The proposed legislation for the whole of Andhra will reverse it. If each State were to prescribe its own arbitrary limit, whether it be of income or of acreage, it will result in the emergence of a national setup where the land owners of one area will be richer or poorer than those of another. The basis of income as against acreage can serve for the whole country.

Economics of Bihar

The economic conditions of Bihar present the sad anomaly of a state which remains industrially and economically backward in spite of being rich in mineral and industrial resources. The State raises nearly 46 per cent of the mineral wealth of India representing 36 per cent of its value. South Bihar and the Chhota Nagpur which accounts for the whole of the mineral wealth raised in the State are supposed to form one of the richest zones in the world. Only slow pace of investment could have accounted for the persisting backwardness of the State. This was regretted by Dr S. K. Sinha the State's Chief Minister who is also the Chairman of the State Government's Industrial Development Council.

The slow pace of investment has not only held up the industrial progress of the State but has also adversely affected the State of agriculture by giving rise to an exodus which in view of the limited capacity of the industries in the State had to be absorbed by agriculture. The techno-economic Survey conducted by the American specialists had disclosed that in the last five years employment in industries was on the decline except in some districts.

Success in quickening the pace of industrial development would largely depend on the results of the Government's efforts in bridging the gap in the food resources of the State. The production of food grains in the State is still deficient in relation to the needs of the people and it is estimated that the State's food deficit could only be reduced by vastly increased outlay on irrigation facilities.

Speaking at the second session of the Bihar Government's Industrial Development Council, Mr Jehangir Ghandi of Tisco, urged the State authorities to take up a technological audit of its resources and the possible pattern of industries according to the needs of the community. Such an audit would, in

the opinion of Mr Ghandi, ensure the development of industries in the State along proper and sound lines.

Dr S. K. Sinha, the Chief Minister regretted the relative neglect of the need for more investment in industries but assured that some heavy industries would be established in the State, the crude oil refinery being one of the major schemes. Dr Sinha also disclosed that the Government had decided to undertake a detailed survey of the water resources on the Chhota Nagpur plateau with special reference to the needs of industrial development.

Ambar Charka

The Ambar Charka scheme which at the outset was hailed with great hopes and in a few places with equally strong doubts, is reported to have taken a disappointing turn even at the first year. Against the budget allocation of Rs 100 millions provided for 1957-58, the actual expenditure is not likely to be more than Rs 50 millions. The number of charkas to be distributed will be around 110,000 against the original target of 180,000. For the financial year 1958-59, the number may see a further fall to 100,000.

These drastic cuts are the result of certain features in the working of the scheme which go to make an uninspiring annual record. On the whole, men have not taken enthusiastically to the Ambar Charka as a regular business. Women are attracted to it as a primary means of livelihood. The wages which could be secured have fallen short of expectations; the tenure of work reduced, in view of a high fatigue factor; and the cost of the cloth has turned out to be substantially more than originally envisaged.

In point of quality too, the performance has been discouraging. Generally, the Ambar Charka has had a greater response in South India, but when the handloom cloth has also slumped with the withdrawal of the rebate, interest in Ambar Charka even in that region may be affected.

The drastic cuts in expenditure and production which the Government have promptly decided proceeds from a stern sense of realism. Nor needs this step be a matter for regret or apology. The scheme was taken up as an experiment and annual reviews were in schedule, as the progress of the scheme dictated from time to time.

Diplomatic Dilemma

A New York food broker, Mr Paul W. Sayres, commented on his recent visit to the Indian Republic. He said that the US diplomatic activities were lagging behind the Soviets, who were doing everything in their power to win the friendship of the Indians.

Indian Finance

NORTH INDIAN
MARKETS

Comparing the American diplomats to the Soviets, he said that, while the former were shy to speak Hindusthani, the latter spoke Hindusthani very fluently with the Indians. In the report presented to the Vice-President, Mr Richard M. Nixon, he called for the attention of the State and Agriculture Departments to India's willingness to purchase American surplus food-stuffs at reasonable rates. He further urged the Department to sell surplus wheat, rice and dried milk to India at the requested prices.

It is interesting to note the keen, enthusiastic and friendly feeling of the Soviets, who, amid other preoccupations, have gone to the extent of learning the language so as to make friends and influence people. On the other hand, although the Americans show a considerable amount of sympathetic feeling for India, they have not dared to move so socially as to learn the language and speak it. But, then, we may well ask ourselves if knowledge of Hindi is a prerequisite for achieving cordial relations with India.

Photographers' Plight

The cost of photographic material has been rising steadily and the meagre stocks that were available with the dealers have been kept off the market. Although there has been a constant demand for the goods, the supply has been far from adequate. The ordinary roll film cost Rs 2 in 1955, and the price rose to Rs 2.50 at the time of the Suez Canal crisis. Now that the import of film has been drastically cut, the price of film has soared sky-high. The different brands quote anything between Rs 2.75 and Rs 3.25.

In India, more than 100,000 people are dependent upon this trade. Apparently, in view of the exorbitant prices of these goods, there is no alternative to closing down the institutions. Already, many have a closed down their studios and many more may, if the precarious position remains unchanged. Leaving aside the amateur, the Press photographers are also unable to stand criticism from the public, who decry the poor reproduction of good photographs.

Among the States, Bombay is the hardest hit, since it is one of the most important centres of the motion picture industry. The "big" producers get ample quantities of film to expose; but a large quantity of raw film is wasted in shots and retakes.

The Government should take immediate steps. The supply of film to the producer should be laid down to the bare minimum per picture and more film released to the other consumers. The introduction of State Quotas would be welcome and the revision of the import policy with regard to the material would be appreciated.

NORTH INDIAN
MARKETS

A production target of 22.5 lakh tons has been fixed for the Sugar industry under the Second Plan. To achieve this target, it is considered necessary to have an installed capacity of 25 lakh tons so as to compensate for any shortfall in production in lean years. It will not be out of place to mention here that the balancing of capacity of the uneconomic units and the commencement of production by several new units in the past few years have made it possible the increase in output from 15.90 lakh tons in 1954-55 to 20.21 lakh tons in 1956-57.

Moreover, with the large expenditure on modernisation of plant and machinery and the installation of new capacity, the industry is now confident of its ability to meet the entire needs of the internal market and even build up regular exports for about 2 to 3 lakh tons. In the current season particularly, it is expected that there will be a surplus for export and that, with the low level of prices in the internal market, sales can be made only at a loss. It is likely, however, that internal consumption will record an unexpected increase notwithstanding the heavy excise duty levied from May 16, 1957.

Meanwhile, the Government of India have released a further quantity of 1.55 lakh tons of sugar for free sale from the 1957-58 season's production. Production of indigenous sugar amounted to 7.02 lakh tons upto January 15 in the current season as against only 6.21 lakh tons in the corresponding period of the previous season. Total offtake, including quantities despatched for export, was 3.72 lakh tons. Stocks with the factories, as on the 15th January, were 7.61 lakh tons.

Naturally, conditions in the sugar markets have continued to remain depressed due to slack demand from the consuming centres, and prices of some of the varieties have declined further. Following rates (per maund) are quoted in the Hapur market:—Jaswant Rs 35; Simbhauli Rs 35.37; Daurala Rs 36.25; Mowana Rs 37.12; Amroha Rs 34.25; Bijnore Rs 34.25; Modinagar Rs 36.62 and Shamli Rs 36.19.

The Khandasari market, in contrast, ruled more lively due to increased production. Rates moved between Rs 24 and Rs 32 per maund, according to quality.

Gur

Gur markets have also ruled quiet with prices for the ready position easing off further by about 50 nP per maund. In the Hapur market, Pansera quality is quoted at Rs 11.50 and the Balti quality at Rs 11.87. Outside demand is slack and, despite good loading facilities, despatches to outside centres are small.

Stocks of gur, at the Hapur market, are estimated at 60,000 maunds, the corresponding figure for last year being 6,000 maunds only. Total arrivals from the beginning of the

Sugar Production Target

season, were put at about 3 lakh maunds.

Sentiment in the Muzaffarnagar market also remains depressed and daily arrivals have declined to about 5,000 maunds. Chhakku is quoted at Rs 13.62 to Rs 14.12 and Khurpaper Ruskat at Rs 7.50 to Rs 8.50.

Foodgrains

With the new marketing season now in full swing, the customary fall in Foodgrains prices has been reported from all over the country. Major foodgrains have declined by about 10 per cent on account of the tendency on the part of growers to dispose of their stocks as early as possible. The current easy spell is expected to continue for about a month more.

The fall in prices has been significant in Rice, Bajra and Jowar, while Wheat and Pulses have been

ruling comparatively steady. Daily arrivals into the principal markets have almost doubled in the past few weeks and distress selling has been reported at some centres due to monetary stringency.

In the Hapur market, Wheat average has recorded a fall of 25 nP, while farm quality is unchanged. Gram prices have registered a fall on easy Punjab advices, being influenced by better crop prospects. Maize and Bajra arrivals are reported to be sufficient, while Barley has recorded a sagging tendency. Rice has also registered a slight fall in sympathy with the bearish trend in other foodgrains prices. Peas and Arhar have sought lower levels due to good crop prospects, although stocks are reported to be gradually depleting due to better offtake at lower prices.

In the Delhi grains market, Rice has lost about Rs 5 per maund

DELHI
REVIEW

following news of inclusion of Delhi in the Punjab rice zone. Wheat, Barley and Gram have eased slightly in the absence of marked buying. The market for Pulses rules quiet due to decreased buying activity.

An all-round decline in the prices of Pulses has provided the main feature of trading in the Bombay grains market. This is mainly due to the disinclination on the part of traders to enter into commitments in the face of the imminent arrivals of the new crop. However, the Rice section has been ruling comparatively steady, mainly due to the fact that the receipt of the commodity into the City has tended to decline on account of the stricter watch on the border of Madhya Pradesh. The receipt from Andhra via Hyderabad is also stated to have declined substantially.

In Everyday Life **PHILIPS** help to make happier homes

INDIA'S homes are becoming much brighter and happier places to live in, thanks to modern home lighting and entertainment. And more and more people are coming to rely on Philips for light and music, for by supplying the very best Philips contribute so much to the happiness and comfort of the modern home. Whether it's glare-free lamps and fluorescent tubes, or gaily-coloured decoration lamps for festivals... whether it's the finest radios and record players which give you the music you love... or whether it's the handy 'Infraphil' that banishes your pains and helps your family to enjoy better health, Philips are happy to be part of your happy home.

Contributing today
to India's future

PHILIPS INDIA LIMITED

ADDRESSING the new graduates of the Mysore University at the Convocation ceremony, Mr M. C. Setalvad, Attorney-General of India, called upon the members of the student community to pull their weight on the side of the wider interests of the nation and co-operate with the Government in all manner of ways in the task of building up the country. To dismiss this piece of advice as platitudinous, would be to lay oneself open to the charge of being flippant. A generation which is exposed to the propaganda of scheming politicians and the anarchism of multitudinous parties can afford to neglect this only at the cost of grave peril to the integrity of the country, which emerged as a sovereign nation only a decade ago. The students particularly need such advice when they are stepping into a new world where the forces which had prevented them in their student days from being drawn into the inner fringe of politics do not operate. Mr Setalvad has done well to select his audience, for the members of the student fraternity, who, it can be said, combine in them the idealism of our culture as embodied in and expressed through our Universities and the practical outlook that is the keynote of the new age, are the best fitted to shoulder the responsibilities for the consolidation of our freedom.

Apart from these, the appeal of Mr Setalvad was also well timed. For, the country has in recent times witnessed the manifestation of all kinds of fissiparous and parochial tendencies. The re-organisation of the States on linguistic basis was an issue in which the people betrayed an utter lack of national character. The localised strife that followed it had justified the apprehensions of those who had rejected the demand twice before. It is this again which makes Mr Setalvad question the wisdom of those who instituted the inquiry which ultimately resulted in the new setup. He sees no merit in an arrangement which, though the Congress party was pledged to uphold it, was not justified by the conditions of the country at a time when there were more urgent problems clamouring for a solution. If, even after rejection twice, the people should have persisted, without regard for other problems which should have claimed their first priority and concentrated attention, it only shows the extent to which they have let themselves be swayed by petty considerations and narrow loyalties. It is a sad irony that a slogan which had served as a cohesive factor in the cause of national freedom during foreign domination, should after the attainment of the goal, show disintegrating potentialities. When

The Forces of Centrifugalism

Mr Setalvad doubts the value of the scheme even after it had become a fait accompli, he only means to convey that, even after nearly one year of its inauguration, convincing proofs of its merit are lacking. And, in this, there is overwhelming evidence to support Mr Setalvad's pessimism.

The forces of centrifugalism cannot be effectively countered unless an all out assault is made on them. It is a safe assumption that the real causes of the popular discontent, which seeks outlet on trivial issues, are economic. Therefore, a correct basis for efforts on these lines would be to work wholeheartedly for the economic development of the country and for eradicating the illiteracy in which the mass of the people is steeped. It is to these tasks, that Mr Setalvad urges the students to devote themselves.

The picture which Mr Setalvad has presented of the country at the end of a decade of independence is arresting. The establishment of new industries and laboratories, the prominence given to science in the educational system and the attempts made through the community development and national extension service to breathe a new life into the villages are the beginning of a process which would ultimately take the country to the destination of a social welfare state. But our efforts have to be guided not only by the ideal that we have set before us but also by the great achievement of the advanced countries of the West, some of which have even entered into the Sputnik age. Thus, as pointed out by Mr Setalvad, the achievements of those countries should urge us even more peremptorily to strenuous and unsparing efforts. The vast gaps that divide us in many departments of knowledge and activities from the countries of the West could only be abridged by giving greater momentum to the forces that have been released by the Government, and this calls for unstinted cooperation from every one in the efforts of the Government in that direction. The minimum condition for the progress of the country along the lines indicated by the scientific achievements of the West is the spread of literacy among the people at large. This is the most vital task that has to be taken up for implementation immediately.

Mr Setalvad has noted the influence of provincial feelings that is making itself felt in the field of education, and refers to the attempts that are being made by the various State Governments to displace the English language as the medium of instruction in preference to the mother tongue.

What Mr Setalvad deplores is not the displacement of English but its relegation to secondary importance in the curriculum of the Schools. This, he fears, would only retard the progress of the country in the field of science and deny us the facility for drawing from the stock of world knowledge which finds expression preponderantly in the English language.

BHARAT COLLIERIES LIMITED

NOTICE is hereby given that the 13th Annual General Meeting of the shareholders of the Company will be held at the Registered Office of the Company at Dalmianagar on Saturday, the 8th March, 1958 at 12 Noon to transact the following business:—

- (1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 30th June, 1957.
- (2) To declare dividends on Preference and Ordinary Shares.
- (3) To elect a Director in place of the retiring Director Shri K. Khaitan, who retires by rotation under Article 106 of the Articles of Association. The retiring Director being eligible offers himself for re-election.
- (4) To elect a Director in place of the retiring Director Shri Balabux Poddar, who retires by rotation under Article 106 of the Articles of Association. The retiring Director being eligible offers himself for re-election.
- (5) To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors Messrs. K. N. Gutgutia & Co. being eligible offer themselves for re-appointment.

As Special Business:

(To be proposed as an Ordinary Resolution):

"Resolved that with effect from the commencement of the Companies Act, 1956, consent of the Company be and is hereby given to the Board to contribute and/or subscribe to any national, political, charitable, benevolent, public or general and other object, Fund or Trust (not directly relating to the business of the Company or welfare of its employees) from time to time, such amounts as may be considered proper by them in excess of the limits laid down in Section 293(1)(e) of the Companies Act, 1956.

Further Resolved that the donations already made in excess of the limits prescribed under the

Companies Act in Charity and Donation during the year ending 30th June, 1957, be and are hereby approved and confirmed."

Explanatory Note:

According to the provisions of Section 293(1)(e) of the Companies Act, 1956, the Board of Directors of a company can make contributions to charitable and other funds not directly relating to the business of the Company or the welfare of its employees within the limit of Rs. 25,000/- or 5% of its average net profits, whichever is greater. In some exceptional cases the donations may exceed the limit prescribed. In order that there may not be any contravention of the Act at any time, consent of the shareholders is sought to empower the Board of Directors to make donations as mentioned in the resolution.

During the year ended 30th June, 1957, the Company paid Rs. 37,490/56 nP towards Charity and Donation including Rs. 25,000/- to Indian National Congress. Out of this amount Rs. 12,490/56 nP exceeds the limit of contribution as laid down u/s 293(1)(e) of the Companies Act, 1956, and the consent of the shareholders is, therefore, sought for approval and confirmation of the excess amount paid.

The Share Transfer Books of the Company will remain closed from 1st March, 1958 to 8th March, 1958, both days inclusive.

By Order of the Board of Directors

For SAHU JAIN LTD.

A. K. JAIN

Managing Director,
Managing Agents.

Dalmianagar,
6-2-1958.

N.B. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself. Such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 42 hours before the meeting.

At an interview that by all accounts was pleasant for the city's newspaper corps, Mr Howard E. Houston, who is the Minister-Director of the US Technical Cooperation Mission in India, had some exceedingly kind things to say of India. Nor did Mr Houston allow his ebullient good humour to be marred by the wretchedly insistent questions on US military aid to Pakistan; and we would like to take this opportunity of suggesting that it is high time that we desisted from badgering every American official on this topic. For, whether we like it or not, such aid is there; and the US Administration is well apprised of our views. For that matter, assertions have not been wanting from the American side as to the rationale, as they see it, of extending military assistance to Pakistan. In short, we say: No more inquisitorial questions on the subject.

There has been an altogether unwarranted fear in some Indian circles that the mounting foreign exchange commitments will induce some resistance as far as further foreign loans are concerned; this anxiety has been effectively scotched by Mr Houston. He referred to India's "remarkable" record in the servicing of loans and the meeting of commitments; and he cited the instance of silver loaned to us and duly returned on the promised date. (In this context, we wonder whether he was not mistaken in referring to the loan as having taken place around Partition; surely, it was silver lend-leased to us during the war?)

Then, as Mr Houston rightly says, what is important is the country's unplumbed resources. The potential wealth of this country and the assurance of democratic traditions are the two factors which will weigh greatest with America. The TCM chief is aware of India's "vast and tremendous resources"; of the very sound and stable economic position; and of the established reputation of India in paying debts.

All these factors, said Mr Houston, would go a long way in getting more assistance from America to implement the Second Plan. May we presume that this is a hint, from a knowledgeable quarter, of the prospect of India being more or less assured of continued American assistance in the rest of the Plan period?

State Finances

While until lately it was the foreign exchange difficulties which were supposed to hold a threat to the implementation of the Second Plan according to schedule, the insufficiency of internal resources at least so far as the schemes in the sphere of the various States are concerned seems now to have taken its place. Such a conclusion is rather inescapable from the picture presented by Mr B. Gopala

Praise for India's Creditworthiness

Reddi, the Finance Minister of Andhra Pradesh, of the position of the finances of the State.

Mr Gopala Reddi who was speaking at a function organised by the Andhra Pradesh Secretariat Association at Hyderabad, described the present financial position of the State as "critical", the central factor of the situation, being the over-borrowed situation of the State in relation to the Reserve Bank. The extent of the excess liability has been placed by him at Rs 10 crores, and this represents a limit which has not been touched by any other State. The parlous position of the State's finances is further evident from the huge deficit which has accumulated since the inauguration of the State, to the tune of Rs 15 to 16 crores, the interest on this alone being calculated at Rs 60 lakhs a year.

About the scope for improving the financial position, Mr Gopala Reddi was not hopeful, and indicated that the State has almost reached the limit to its taxable capacity. Even the bunch of taxation measures such as increase in water rates and standardisation of land revenue have proved to be inadequate to the requirements of the State. The target in regard to small savings on which the States Governments have been asked to concentrate has also remained out of reach. According to Mr Gopala Reddi the position would have been rendered worse but for the timely windfall which accrued to the State consequent on the recommendations of the Finance Commission.

In such conditions, the implementation of the schemes coming under the sphere of the State Government, would call for the utmost effort on the part of the State Government and also for more of co-operation between the Centre and the State Government. Already the Planning Commission has fixed the expenditure for the State Government for the third year of the Plan at a figure lower than what the State Government would have it. The difficulties are expected to be accentuated in the fifth year of the Plan when according to Mr Gopala Reddi the revenue position is feared to become particularly difficult. But he assured that the Government are doing their best to wipe out the accumulated arrears of development work.

The need for economy in administration, in the face of financial pressure, has not been lost sight of, and Mr Gopala Reddi in this connection referred to the setting up of the Economy Committee by the Government.

Power Shortage in Mysore

The great strides that the State of Mysore had made in developing its industries in the course of the present century is borne out by the transition which it had made from being surplus in power to a position of acute shortage. To

a certain extent this reflects the additional responsibilities that it had to bear after the acquisition of new territories consequent on States reorganisation. The shortage has reached a point where the Government seem to be thinking in terms of denying new electric connections even for lighting purposes. This augurs ill for the development of industries in the State during the period of the Second Plan. With a view to conserving the existing power supply the Electricity Board has appealed to the industrial consumers to keep off the supply system during the peak hours and to domestic users to minimise consumption. To relieve the pressure the spare generators at Shivsamudram, Shimsha and Mahatma Gandhi hydel stations are being fully utilised.

The inauguration of the Shara-vathi Valley Hydro-electric project is therefore of great importance to the future development of industries in the State. The project is intended to utilise the entire power potential of the river. The 10 generating units which would compose the power house are capable of generating nearly 89,100 kws of power each. This project is the most important one to be undertaken so far and is estimated to take not less than 5 years for completion. Until the completion of the project the power shortage which is being experienced at present in the State is not expected to end.

Talking to pressmen, Mr S. K. Patel, Union Minister for Irrigation and Power gave an assurance that work on the project would go on uninterrupted despite difficulties in the shape of foreign exchange and disclosed that the aim of the Government was to develop the power potential of the project to 9 lakhs kilowatts.

The total requirements of power by the State at the end of the Second Plan is estimated to be about 3,27,000 kw. Of this the old Mysore area would require 266,000 Kw. Bombay Karnatak 28,000 Kw, Hyderabad Karnatak 24,000 Kw Sputh Kanara 7,000 Kw and Coorg 2000 Kw.

The State has also schemes for the development of power from the Tungabhadra Left Bank Project which would have an installed capacity of 9,000 Kw and the Bhadra Hydro-Electric Project with an installed capacity of 33,200 Kw. The State is also interested in the development of the Tungabhadra Right Bank Station from which it would receive a certain percentage of electricity under an agreement with the Andhra Pradesh Government.

Small Scale Industries

It is only in recent times that the general public has come to recognise the potentialities of small industries in the context of prevailing conditions in the country. It

has been rightly recognised by our planners that one of the problems that has to be tackled side by side with the national endeavour toward rapid industrialisation, is unemployment. The development of small scale industries will go a long way in reducing the severity of the problem.

Mr R. Venkataraman, Minister for Industry, Madras State, in a recent speech has pointed out that the best way to cure unemployment is to develop small scale industries in addition to promoting heavy industries. While the heavy industries are necessary to provide capital goods and machinery without which rapid economic progress is impossible, the small scale industries by virtue of their low capital outlay have immense potentialities for increasing employment opportunities. In the Madras State, the industrial estate scheme has made rapid headway. It may be confidently expected that in view of the liberalisation of the provisions in the State Aid to Industries Act coupled with the active help given by the State Government, the development of small industries will show a marked improvement in the near future.

THE HOWRAH-AMTA LIGHT RAILWAY COMPANY LTD.

NOTICE is hereby given that the One hundred and twenty-second Ordinary General Meeting (not being an Annual General Meeting) of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta 1, on Friday, the 7th March, 1958 at 3-40 p.m. for the following purposes.

- (1) To receive and consider the audited Accounts for the half-year ended 30th September, 1956, the Balance Sheet as at that date, and the Reports of the Board of Directors and the Auditors thereon.
- (2) To declare a dividend on the Ordinary Shares.

The Register of Ordinary Shareholders of the Company and the Transfer Books will be closed from the 25th February to the 7th March 1958, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member.

By Order of the Board,

K. CHATTERTON,

Chairman.

Calcutta,
the 8th February, 1958.

NOTE—Transfers to qualify for the dividend must be LODGED at the Registered Office of the Company by 4 p.m. on the 24th February, 1958.

Rubber Production and Consumption

ACCORDING to the figures released by the Rubber Board, production of Rubber in India has shown a slight decline to 2,550 tons in December last year as compared to 2,855 tons in the previous month, while consumption has increased to 2,842 tons from 2,762 tons. But, total production for the full year 1957 is slightly higher at 23,767 tons as against 23,444 tons in 1956. Similarly, total consumption amounts to as much as 31,765 tons as against only 28,996 tons. Stocks with the estates and dealers, at the end of 1957, are lower at 5,341 tons as compared to 5,648 tons at the end of the previous year, while those with the manufacturers are substantially higher at 4,614 tons.

Following is the summary:—

	Tons
Opening stock as on 1-12-57	10,082
Add—Production during Dec.	2,550
Imports during December	165
Total	12,797
Less—Consumption during Dec.	2,842
Stocks with the estates, dealers and manufacturers	9,955
Stock of synthetic rubber as on 31-12-57	1,338
Total	12,293

In this connection, a leading Singapore produce broking firm has stated, in a report, that production of natural rubber is unlikely to increase in the next few years and may decrease in Indonesia. The report states further that the synthetic rubber industry is making progress and new plants are being built in Europe and Japan. But, it seems that all rubber, that can be produced—both natural and synthetic—will be required. However, there will be times of temporary over-production before consumption catches up. The report concludes that Japan has increased its consumption considerably in the past few years and shipments to Japan from Malaya are now nearly 8 per cent of Malaya's rubber exports.

Pepper

Pepper markets have continued to rule quiet on Singapore and New York advices. In the Alleppey market, the rate is quoted around Rs 462.50 per candy for superior Palai variety and Rs 400 to Rs 450 for inferior Thekkan variety. In the Kozhikode market, Wynaad quality is quoted at Rs 500 and the Country variety at Rs 475 to Rs 480 per candy.

The USA is reported to be buying only sparingly. The quantities involved are limited and are hardly above 10 tons at a time. The price paid is not more than 21½ cents per pound. The future of the market, therefore, appears to be uncertain unless Sarawak new crop turns out to be poorer than last year.

Moreover, there are further complications in Sumatra. It is learnt that the Central Government of Indonesia have officially allowed Sumatra to do direct and independent barter with Singapore till the end of February. It is also learnt that the Government have set aside 100 million "rupiahs" to aid national exporters. Dutch exporters having been refused export licences.

Meanwhile, exports of black pepper from India, during December, totalled 25,035 cwt as against 30,348 cwt in the corresponding month of 1956. Arrivals of black pepper in Bombay, during the last two months of 1957, totalled 14,578 cwt.

Ginger

In sympathy, the market for Ginger is also ruling quiet. In the Alleppey market, the inflow and outflow are evenly balanced at 20 candelis. The rate is quoted around Rs 200 per candy. In the Kozhikode market, rates are quoted at Rs 190 for the old quality and Rs 200 to Rs 215 per candy for the new variety.

Exports of ginger from India, during December, amounted to 7,252 cwt out of which Bombay Port accounted for 4,166 cwt; Calcutta 900 cwt and Cochin 2,186 cwt. During December 1956, exports amounted to 19,234 cwt. Total exports, during November and December 1957, totalled only 16,494 cwt as against as much 31,714 cwt in the corresponding period of 1956.

Coffee

The Coffee Board has released, for export, 443 tons of coffee out of the 1957-58 crop. The quantity consists of 381 tons of Plantation 'A'; 21 tons of Plantation 'B' and 41 tons of Plantation Triage. Tenders should be submitted before February 18.

Groundnuts

Conditions in the Madras Groundnut market remained more or less steady last week. Arrivals averaged 40 to 50 tons per day. The rate was quoted around Rs 143 per candy; but the prices quoted by buyers did not seem to be attractive to the sellers.

In the Groundnut Oil section, vanaspati interests took up only small quantities. With the result, the downward trend in prices could not be arrested, the ready rate having declined further to Rs 284 from Rs 288 per candy. It is stated in market circles that, only if export is allowed, there will be vigorous activity in the mill-oil industry.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides showed no change. Prices of medium

and heavy weights were slightly easier, while those of light weights remained unchanged. Arrivals of Buff hides were on the same level as in the previous week and there was fair clearance. There was no change in the Calf section.

On the export front, trading remained restricted. Premium qualities were steady and business was reported done in 10/12 lbs on the basis of 43d and in 8/8½ lbs at 50d. In the Calf section, there were some sales of Buff Calf and Cow Calf. In inferior fifth Cow hides, there was very little scope for export business as prices continued to be considerably higher on account of demand for kavali hides.

In the Tanned Skin section, arrivals of both Goat and Sheep skins were moderate and there was a fair clearance. Prices remained generally unchanged.

In the export section, there was very little business on account of the London Public Sale.

Bangalore Silk

The Bangalore Silk market presented a fairly firm trend last week.

THE ARRAH-SASARAM LIGHT RAILWAY COMPANY, LIMITED.

NOTICE is hereby given that the Ninety-Fourth Ordinary General Meeting (not being an Annual General Meeting) of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta-1, on Friday, the 7th March, 1958 at 3-10 p.m. for the following purposes:

- (1) To receive and consider the audited Accounts for the half-year ended 30th September, 1956, the Balance Sheet as at that date, and the Reports of the Board of Directors and the Auditors thereon.
- (2) To declare a dividend on the Ordinary Shares.

The Register of Ordinary Shareholders of the Company and the Transfer Books will be closed from the 25th February to the 7th March 1958, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and a proxy need not be a member.

By Order of the Board,
K. CHATTERTON,
Chairman.
Calcutta,
the 8th February, 1958.

NOTE—Transfers to qualify for the dividend must be LODGED at the Registered Office of the Company by 4 p.m. on the 24th February, 1958.

As in the previous week, prices of Filature Silk continued to quote around the week's high levels, while Charka Silk maintained the firmness. Kollegal and Kisan remained firm at Rs 38.50, while T. Narsipur, Kanakapura and Channapattana registered a gain of 50 nP each over the week. In the case of Charka silk, rates remained unchanged except for the 2nd quality, which moved up from Rs 25.00 to Rs 25.50.

The rate for Domestic Basin quality went up by one full point to quote Rs 35.50, while Spun Silk Yarn continued to rule at Rs 21.50.

As a rule, the price trends in respect of Reeling cocoons reflected a tendency to decline. On the other hand, Seed Cocoons registered a perceptible rise, especially in the case of foreign variety.

The rates for Silk waste continued to remain at the levels that prevailed in the previous week. Following rates were quoted for foreign silk: Japan 20/22A Rs 19.51 f.o.b. and Rs 31.38 landed cost and Italy 20-22A Rs 23.30 f.o.b. and Rs 43.70 landed cost.

THE FUTWAH-ISLAMPUR LIGHT RAILWAY COMPANY LTD.

NOTICE is hereby given that the Eighty-First Ordinary General Meeting (not being an Annual General Meeting) of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta 1, on Friday, the 7th March, 1958, at 3-20 p.m. for the following purposes:

1. To receive and consider the audited Accounts for the half-year ended 30th September, 1956, the Balance Sheet as at that date, and the Reports of the Board of Directors and the Auditors thereon.
2. To declare a dividend on the Ordinary Shares.

the 8th February, 1958.

NOTE—Transfers to qualify for the dividend must be LODGED at the Registered Office of the Company by 4 p.m. on the 24th February, 1958.

Associated Cement Companies Limited

Distinct Achievement, But Poor Reward

Case for Increase in Price

Statement of the Chairman, Mr Dharamsey M. Khatau

Speaking at the 21st Annual General Meeting of the Associated Cement Companies, Limited the Chairman, Shri Dharamsey M. Khatau, observed that he did not propose to comment upon major developments during the year in the economic and industrial field. There were many subjects demanding urgent attention, he continued: "But the fact is that so much has been said by so many with such little effect upon the course of events, that it seems pointless to take up your time by adding to the impressive volume of constructive criticism on current affairs already available to those who care to listen."

DEFICIT FINANCE

Saying that he would therefore content himself with making one or two observations concerning Deficit Financing, Shri Khatau remarked: "The quality of Deficit Financing, unlike that of Mercy which Shakespeare so lauded, is exceedingly strained, for it blesseth neither him that gives nor him that takes. That is to say, both the public as well as the Government are ultimately the sufferers, because Deficit Finance soon over-reaches itself as has already happened in this country. The most disquieting feature of our approach to Deficit Financing just at present is that while Government appear to have recognised its dangers, judging by the recent speeches of their leading spokesmen, there is still no evidence of the impact of this recognition either upon the assessment of the resources for the Second Five-Year Plan or, consequently, upon the magnitude of the Plan. The estimates of proceeds from taxation, from current surpluses of Central and State Governments, and from net borrowings, whether by the issue of public loans or from small savings, continue to be over-optimistic with the result that (i) the projected Plan Expenditure continues to be maintained at a level unattainable in terms of available resources; and, (ii) the erroneous belief persists that, even at that level of expenditure, Deficit Financing will somehow be successfully kept at a low level. The truth is that the expected volume of funds is quite unlikely to materialise from the sources indicated, with the consequence that, if the Plan Expenditure is maintained so high as is still contemplated, a vast magnitude of Deficit Finance, with all

that it entails in terms of over-investment, run-away inflation, rising prices (especially agricultural and raw materials prices) etc., is inescapable." In these circumstances, the Chairman hoped that in the next budget there would be evidence of sober and conservative appraisal of external and internal resources, on the one hand, and a grimly realistic re-phasing of Plan Expenditure, on the other, such as would minimise our reliance on Deficit Finance.

PRODUCTION AND PROFITS

Turning to the affairs of the Company, Shri Khatau observed that "the year under review had been one of mixed fortune: of distinct achievement, yet of poor reward." Though the Company produced and sold 2.5 lakh tons more cement than in the previous year, paradoxically enough, there had been a slump in the Company's profits, owing to a sharp rise in the manufacturing costs due to factors outside the Company's control such as higher cost of coal, enhanced railway freights and terminal charges, higher cost of stores and spares, etc. Other adverse factors were a higher wage-bill and an increased charge for depreciation. Further, the heavy incidence of taxation resulting from the increase in the rates of Income-Tax and Corporation Tax, and the imposition of the wealth Tax had left very much lower profits to the Company.

TARIFF COMMISSION

Continuing, Shri Khatau said that the Industry could not continue to operate and expand under those conditions and that Government had therefore directed the Tariff Commission to examine the cost of production of cement and determine anew a fair price to be paid to cement manufacturers. The ACC had placed its case fully before the Commission for an increase in price, and hoped that Government would sanction such an enhanced price as would cover the rising costs of production and also enable it both to plough back a reasonable portion of profits for rehabilitation and modernisation and also to finance its expansion programme under the Second Five-Year Plan.

The Chairman pointed out that the increase in price asked for need not necessarily involve any increase in the present price of

cement to the consumer f.o.r. destination. "Indeed, I would go so far as to say that it must not be so, both in the interests of the consumer and of the Industry. As you know, we have to sell our entire output to the State Trading Corporation at Rs. 54.50 per ton f.o.r. Works for neat (unpacked) cement, plus Rs. 1.50 for selling expenses, plus a packing charge which varies every quarter depending on the price of gunny bags and presently stands at Rs. 13.64 per ton. This makes a total of Rs. 69.64 per ton. But the State Trading Corporation sells the cement to the consumer at the controlled price of Rs. 117.50 f.o.r. destination. Allowing for the average incidence of railway freight from Works to destination at a little over Rs. 15/- per ton, and Rs. 20/- per ton for Excise Duty, the State Trading Corporation is left with a net profit of about Rs. 12.50 per ton. As there is likely to be practically no further substantial import of cement which the State Trading Corporation would be required to subsidise so as to sell such imports at an equalised price, and as the losses on such small imports as may still have to come in to fulfil existing commitments will be only a fraction of the enormous profit which the State Trading Corporation has already amassed, there is no reason at all why the State Trading Corporation should any longer make any profit from cement. Furthermore, the present Excise Duty of Rs. 20/- per ton includes the increase of Rs. 15/- per ton imposed in May 1957 with a view to inhibiting the demand for cement. Thus the present price of cement to the consumer includes two inflationary elements: a profit of Rs. 12.50 per ton for the State Trading Corporation and the enhancement in Excise Duty at Rs. 15/- per ton. If now simultaneously with the refixation of the cement price for the producers, this 'loading' of Rs. 27.50 per ton already imposed on the consumer is taken off, there will, I may assure you, be no need to increase any further the present price of cement to the consumer."

FIREBRICKS

Shri Khatau reported that the Katni Firebricks Factory, working at full capacity, not only met all the requirements of the ACC but was in a position to sell some 7,000 tons of refractories to steel plants, other cement concerns and to any industrial undertaking using heat-resistant firebricks.

SILVICRETE

The ACC's white cement—produced at Porbandar and marketed under the trade name of 'Silvicrete'—was becoming increasingly popular.

COLLIERIES

Raisings from the Company's two collieries at Nowrozabad and Kotma had been fairly satisfactory and certain new schemes to increase their output had been sanctioned.

TECHNICAL TRAINING INSTITUTE

The Chairman continued: "The building, equipping and staffing of the Company's Technical Training Institute at Kymore was completed during the year and the first batch of 75 apprentices is now undergoing training. Intended primarily for the sons and relatives of the Company's employees, the Institute offers the best available training in India for our purpose, and most of the trained technicians will, in due course, form part of the specially trained skilled personnel of our cement Works. The curriculum also aims at turn-

EXPANSION

Shri Khatau then reported that the various expansion projects that the ACC had in hand had made satisfactory progress. The extensions planned at the Kistna Cement Works had been completed but the additional capacity could

ing out good citizens and I think the Company may well regard the Institute with justifiable pride."

FINANCE FOR EXPANSION PROJECTS

Speaking about the enormous capital outlay entailed by the Company's various projects of modernisation and expansion, Shri Khatau stated that the Company's requirements of working capital had increased appreciably, and would increase still further in the next few years with the increasing tempo of production. The funds that the Company had already raised, whether from internal resources or by borrowing or by offering large issue of equity capital, were totally inadequate for the purpose.

"Your Board has therefore decided," he said, "subject to the sanction of the Controller of Capital Issue, to make a further issue of Debentures of Rs. 5 crores on suitable terms and at the proper time during the course of this year. The proceeds of this issue will, however, be utilised partly for our investment in the Heavy Engineering Project which we may set up in collaboration with Messrs Vickers Ltd. and Babcock & Wilcox Ltd., to which I made reference last year, and partly for our substantially increased Working Capital requirements in the context of our steadily increasing production. A part of the proceeds may also be used for our immediate needs of the expansion programme.

"Even so, the funds at our disposal including the proceeds of the proposed Debenture Issue and the further internal resources which will accrue over the next few years, will still remain insufficient to meet the heavy capital outlay implicit in our major expansion effort. Your Company has, therefore, represented to the Tariff Commission the urgent need for the grant of an adequate Expansion Allowance in addition to a Rehabilitation Allowance in the new price of cement to be fixed in the near future. I earnestly trust that this request will meet a sympathetic if not a generous response, both from the Tariff Commission and from Government, because it is quite plain that without such an Allowance we shall be compelled to abandon many of the expansion plans and projects we have in view, for the simple reason that no further funds would be available from internal or external sources to finance them."

AUSTERITY

Referring to the slowing down of the tempo of work on the Company's expansion projects as a result of the uncertainty of financial resources and difficulties in obtaining foreign exchange, the Chairman mentioned that a good deal of capital had been locked up in the form of large quantities of equipment and stores including steel. The liquidation of these was receiving priority attention and an 'austerity' drive had been launched

"not only to abandon, postpone or prune the purchase of stores, but also to minimize all other forms of expenditure."

PAKISTAN

The Chairman stated that the Company's two factories in Pakistan were operating satisfactorily, but that the return earned by the Company in Pakistan was very poor. The prices of coal, stores and other materials had sharply risen in that country, and the price increase sanctioned by the Pakistan Government in response to the Company's representation was altogether inadequate. In view of further increases in the cost of coal and other essential materials, the Chairman announced that the Company had again represented its case to the Pakistan Government. Shri Khatau also mentioned that the total incidence of Income-tax, Corporation Tax and Business Profits Tax in that country had risen from 56.25 per cent to 62.50 per cent.

LABOUR-MANAGEMENT RELATIONS

Turning to labour-management relations, the Chairman observed: "You will be glad to know that the improvement in our relations with our employees to which I referred with some satisfaction last year has been maintained during the year under review. Once again there were no strikes or stoppages of work to tarnish our record of round-the-clock production—a matter so vital for keeping down costs and for the fulfilment of the targets set under the Second Five-Year Plan. This is a sure index of growing goodwill and mutual trust, and augurs well for our future. I would like you to join me in according the full share of credit to our employees for their praiseworthy contribution to our joint endeavour.

"It was this atmosphere of harmonious industrial relations that encouraged us to initiate talks with our workers' representatives with a view to reaching, if possible, a longterm agreement on an all-Works basis. In the course of these negotiations it came to be appreciated, however, that one overall agreement, covering the variety of conditions at all our Works, was difficult to achieve and that the purpose in view would perhaps be best served by negotiating individual unit-wise settlements.

"It gives me great pleasure to be able to report that after patient negotiations, we have now reached such three-year agreements with our Workers' Unions at six of our factories.

"The agreements include such important matters as wagegrades, dearness allowance, house-rent allowance and leave facilities. Negotiations at some of the other Works are still in progress, and I hope the day is not too distant when relations between labour and management at all A.C.C.
