It is in the face of these unfavourable trade conditions that your Company achieved, in 1957, a record sales figure of nearly Rs. 10 crores. This result in such difficult circumstances can be regarded as a tribute not only to the sustained high quality of your Company's products and to the Mills' productive efficiency but also to the efficacy of its Sales Policy and market research. Furthermore, your Company by increasing its exports by over Rs. 25 lakhs to Rs. 2.17 crores has made no mean contribution to India's foreign exchange earnings.

Unfortunately, as the Accounts before you show, these achievements have been accompanied by a fall in profits as it has not been possible to increase selling prices to cover the continued rise in costs of production, particularly of raw materials, fuel and wages.

I am pleased to say that relations with labour during the year were harmonious and no serious stoppage occurred as a result of strikes or other avoidable causes. Recently, however, there has been a demand for an increase in the Bonus paid by the Company for each of the years 1954, 1955 and 1956 for each of which years bonus equivalent to 2.25ths month's basic pay has been paid in accordance with the long standing formula. The Company has not been able to agree to this demand and it has been referred to a Conciliation Board for their recommendations.

The bonus paid for the year 1957 was on the same basis and amounted to Rs. 22,11,353—a record bonus payment for this Company, the figure being higher this year because of the terms of the 1957 Arbitration Award.

Neither the Industry nor the Country can afford to pay higher wage bills which are not related directly to higher workloads and improved efficiency and it is to be hoped that this vital point will not be overlooked by the Wage Board now studying conditions in the main Textile Manufacturing Centres throughout India.

At the same time the resistance of labour to the progressive introduction of modernisation and rationalisation measures must be overcome if this major Industry is to play its part in successive five year plans and retain its foreign exchange earning capacity.

Though foreign exchange is of vital importance, too little attention appears to have been given to

the development of internal resources, an equally essential counterpart in all sectors. I wish Government every success in their proposed drive to eliminate unnecessary administrative expenditure. It is only the net revenue from taxation which is of real value to the country and collection costs should therefore be reduced to the minimum. The replacement of Sales Tax by additional Excise Duty is a welcome step to this end which I hope will be extended to as many products as possible, I trust Government will also consider the possibility of replacing Sales Tax on imported stores and industrial raw materials by a surcharge on Import Duty, which could be refunded as a rebate on the basis of export performance.

I now turn to the more domestic affairs.

Considerable progress has been made towards the completion of the second New Weaving Shed, the Northern half of which is now virtually completed and looms are already being installed. It is planned to have this section in production before the end of this year, by which time it is hoped that the flooring and associated works for the Southern half of the Shed, which has already been roofed, will be well under way. The rehabilitation of old looms, is however, handicapped by the difficulty in obtaining licences for the import of such essential precision components as are not yet manufactured in this country.

The scheme under which the Government of India proposed to permit the import by the Industry of additional automatic looms, subject to exacting and penal conditions concerning the export of all cloth produced from these looms, has proved impracticable, and we have not therefore proceeded with the import of the 144 looms allotted to your Company. Reports in the Press indicate that the associated terms and conditions are under review by Government, and your Directors will reconsider their decision should it become possible later on to install additional plant on acceptable terms. Meantime everything possible is being done to complete the renovation of existing machinery.

The Company's building programme this year also includes the construction of some 200 additional houses for their workpeople at an estimated cost of Rs. 7.25,000.

Turning now to the accounts, you will observe that the value of

the stock of finished goods at the close of the year was only fractionally in excess of the previous year's figure. This is contrary to the general experience in the Industry to which I have already referred, and this satisfactory position has been maintained in spite of higher production.

The increase in the Company's Overdraft is accounted for mainly by a rise in the value of raw materials stock.

A sum of Rs. 3½ lakhs has been

transferred to the Provision for Workpeople's Gratuity, which provision was created in accordance with the Award made last year. The other important transfers have, I think, been covered adequately in the Directors' Report.

The liabilities of the Workpeople's and Employees' Provident Funds, the assets of which are invested in Trustee Securities, amounted at 31st December 1957 to Rs. 1,71,04,855 and Rs. 14,65,313 respectively.

Once again I would like, on

your behalf, to record our appreciation of the valuable services rendered by the Managing Agents and of the efforts made by the Mill Manager, the Staff and Employees which have contributed so much to what I can only describe as another satisfactory year's results.

I cannot conclude my review without reference to my friend and colleague Mr. R. E. Castell, who retired from India at the end of March this year, and who has been your Chairman since 1952. Mr. Castell won the affection and

esteem of all those with whom he came in contact and his services as Chairman and Director were invaluable. I am happy to say that Mr. Castell will maintain an association with your Company and during his visits to India in the future we hope to draw on his experience and benefit from his wise counsel.

The Bangalore Woollen, Cotton & Silk Mills Co. Ltd.
*
Reasonably Successful Results Inspite of Adverse Circumstances
*

Most Difficult Year for Cotton Textile Industry
*

Statement of the Chairman, Mr E. J. M. Leigh

Presiding at the Seventy-fifth Annual General Meeting of the Shareholders held at the Registered Office of the Company, Agraharam Road, Bangalore City, on Saturday, 26th April 1958, Mr. E. J. M. Leigh said:

Gentlemen,

The Directors' Report, Balance Sheet and Profit and Loss Account for the year ended 31st December 1957, having been in your hands for some three weeks, I propose with your consent to adopt the usual procedure and to take them as read.

The year 1957 will long be remembered as a most difficult trading year for the Cotton Textile Industry as a whole and I only wish I could see prospects of an early liquidation of the heavy stocks carried forward into the current year.

In my speech yesterday to the members of your Sister Company, I tried to diagnose the causes of the malady and to suggest some remedial measures, but it is a complex problem and there can be no short period of convalescence.

Painful corrective forces are already in operation and Mill output in the first quarter of 1958 fell by 132 million yards compared with the corresponding period last year, but exports also fell by about 90 millions. The Industry can help itself by improved market research and by restricting production of particular types to quantities that the market can be expected to absorb. There has undoubtedly been a shift towards the coarse end of the trade and serious overproduction in certain items, notably coarse dhoties and sarees. According to Press reports the production of these two items rose from 9 and 2 million yards in 1955 and 44 and 27 millions in 1956, to the astonishing figures of 172 and 200 million yards respectively in 1957.

In the Woollen Section the high prices that had to be paid for raw materials during the greater part of the year, coupled with keener competition, prevented this department from maintaining the

The increased consumption of Indian cotton has kept up market prices and affected India's competitive position in Overseas markets.

It is not only the composite Mills which are in difficulty; several have closed down and others have suspended shift working; but the Spinning Section is also hard pressed to finance stocks which the Handloom Industry has been unable to absorb and for which there is little, if any, export outlet.

World trade in Cotton Textiles continues to shrink as one country after another, including cotton producing countries, adds to its own spinning and weaving capacity. In the face of intensifying competition India's export trade must fall unless ways and means can be found substantially to reduce manufacturing costs. The Industry certainly cannot afford any additions to wage bills are unrelated to reasonable workloads and improved efficiency.

In the face of intensifying competition in Overseas markets your Company was unable to do more than retain its previous year's volume of exports at Rs. 19.5 lakhs.

In spite of the generally adverse circumstances, your Company achieved reasonably successful trading results and was not embarrassed by an accumulation of stocks. In the face of very heavy excise duties and sales tax rates which caused considerable sales resistance it was not possible to increase prices to cover the rising costs of raw materials, stores, machinery parts, wages and especially Dearness Allowance. These developments have in no small measure contributed to the lower profits earned in 1957.

In the Woollen Section the high prices that had to be paid for raw materials during the greater part of the year, coupled with keener competition, prevented this department from maintaining the

improvement recorded in 1956 and I regret to report that a loss was incurred in this department. However, with an alteration in your Company's Manufacturing Programme, we hope to improve sales and take full advantage of the recent trend towards better quality purchasing on the part of the public.

The Mill's Silk Section has been seriously handicapped by severe import licence restrictions on Spun Silk. From our point of view, to be deprived of supplies of an essential raw material was a disaster, but it was our duty to produce acceptable substitutes from indigenous material as in times of foreign exchange shortage, the import of luxury raw materials naturally has to be curtailed. We were able to introduce other varieties, but I must make it clear that the consumer is not prepared to buy an expensive product like silk unless the quality is of a high standard. The Government is aware of the necessity to improve the quality of indigenous flature and spun silk and it is not beyond the capacity of local producers to achieve the high standards of quality that are recognised internationally. The Sericulture Industry has therefore an opportunity and it is hoped that it will take advantage of it. In spite of our best efforts, mainly due to the quantity of suitable indigenous spun silk being limited, the Company was compelled to shut down part of its Silk Plant.

During the year, sales of our popular Union fabric, Cotswol, and of the heavier cloth, Angola, were maintained and it is gratifying to note that Angola continues to be supplied to the Armed Forces and that the demand for it by the general public is increasing.

In his speech last year, my predecessor, Mr. Castell, mentioned that your Directors had accepted an allocation of 96 new automatic

looms from Government, 24 of which were to be made in the country. However, the installation of these looms was made subject to such exacting and penal conditions with regard to exports, that the scheme proved impracticable but your Directors will pursue this proposal should it become possible later on to install additional plant on acceptable terms.

Two measures of relief were introduced in December last in the shape of a reduction of 6 pies per square yard in the rate of excise duty applicable to "Medium" cloth, in which category stocks were the highest, and replacement of all Sales Taxes on cloth, Central and State, by additional excise duties. Further concessions were announced in March this year applicable to all categories and advantage was taken at the same time to express the rates in naya paise. Supplies can now reach the consumer at lower prices and some measure of confidence within the trade has been restored, though it is too early yet to determine whether these concessions will prove adequate in the long run and permit a reduction of stocks to normal levels.

Your Company's programme for rehabilitation and replacement of machinery has been retarded by the difficulty in obtaining Import Licences for essential plant and spare parts, not yet manufactured in the country.

Your Directors are fully alive to the vital necessity for improving plant efficiency and installing machinery of the latest type. I am glad to report that new Molten Metal dyeing range went into operation during the year.

The water supply position in Bangalore is giving your Directors some concern particularly so in view of the fact that at times our intake of Corporation water is restricted by the Authorities at very short notice.

Government's difficulties in this matter are understood but, whilst we fully appreciate that the requirements of a growing industrial area must be carefully considered, we are left sometimes with the impression that those in control seek an "easy solution" by curtailing first, their largest consumer, incidentally one of their oldest customers.

In an endeavour to solve this problem, bore wells have been sunk and everything possible will be done to make the Mills as independent as possible. Nevertheless a considerable quantity of water will always be needed from the Corporation Authorities.

Our relations with our labour have not been entirely happy during the year. Much time has been devoted to considering very comprehensive demands from our workers and a great deal of time has been spent arguing issues before the Industrial Tribunal and

other Authorities. At times production has suffered because of indiscipline. However, I am pleased to inform shareholders that wiser counsels in the Association appear now to be prevailing and it is very much to be hoped as a result of current negotiations, which are being conducted in a spirit of give and take, that a compromise agreement will be reached with the Labour Association which will go far towards ensuring industrial peace for some years to come.

Turning to the accounts, you will see that the Balance Sheet reflects the steps which were taken during the year to bring the capital more into line with that employed in the business when Rs. 81,00,000[-] of the General Reserve were capitalized by the issue of Bonus Shares involving a liability to tax amounting to Rs. 24,30,000[-]. Unfortunately the terms of the 1958 Finance Bill offer no relief in respect of this controversial tax. As mentioned

in the Directors' Report this liability has been provided for partly by the transfer of Rs. 20,00,000|from the Reserve for Taxation and the balance from the Rs. 8,00,000|drawn from the General Reserve to meet additional tax burdens.

By the transfer from the reserve for "Reconstruction" to a "Deferred Taxation Reserve" provision has been made against the diminution of the allowances for Depreciation in Income Tax Assessments in future years resulting from the

substantial reduction in the income tax written down value of assets acquired in recent years due to the allowance on initial and extra normal depreciation.

The liability of the Workpeople's and Employees' Provident Funds as at 31st December 1957 amounted to Rs. 74,30,758/- and Rs. 4,70,519/- respectively; corresponding amounts have been invested in Trustee Securities and these are held by the Trustees of the Funds.

I feel you will wish to join me once again in expressing appreciation of the valuable work done by the executive and supervisory staff of the Management and the Mills in a very difficult year.

I cannot conclude my review without reference to my friend and colleague Mr. R. E. Castell, who retired from India at the end of March this year, and who has been your Chairman since 1952. Mr. Castell won the affection and esteem of all those with whom he came in contact and his services as Chairman and Director were invaluable. I am happy to say that Mr. Castell will maintain an association with your Company and during his visits to India in the future we hope to draw on his experience and benefit from his wise counsel.

AUDITORS' REPORT

We have audited the annexed Balance Sheet of United Bank of India Ltd., as at 31st December, 1957 and also the annexed Profit & Loss Account of the Bank for the year ended upon that date in which are incorporated the Returns from the Branches audited by other Auditors.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of section 211 and to sub-section (5) of section 211 and section 227(5) of the Companies Act, 1956, the Balance Sheet and Profit & Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A & B of the Third Schedule to the Banking Companies Act, 1949.

We report that:

- We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory.
- The transactions of the bank which have come to our notice, have been within the powers of the Bank.
- In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the bank.
- The Bank's Balance Sheet and Profit & Loss Account dealt with by this report are in agreement with the books of account and the returns; and in our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for a banking company and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1957, and the Profit & Loss Account gives a true and fair view of the Profit for the year ended upon that date.

Dated, Calcutta,
The 17th March, 1958.

United Bank of India Limited

The Pressure of Ever Increasing Operating Costs

Need for Statutory Control of Interest Paid on Deposits

Dr N. N. Law, the Chairman, Analyses Extensively the Problems of the Banking System

The following is the speech delivered by Dr. N. N. Law, Chairman of United Bank of India Limited, at the Bank's Annual General Meeting held at its Registered Office at 4, Clive Ghat Street, Calcutta on Monday, April 28, 1958:

Gentlemen,

It is my pleasant duty to submit to you the Accounts of the Bank and I take this opportunity to welcome you all to this meeting of the shareholders of the Company. The economy of the country witnessed two contrasting features during the year 1957. Tight money conditions prevailed during the first half of the year and the general price level went up sharply between March and August. Thereafter, the position eased, the general index number of prices recording a fall. Increase in money supply for the year ended December, 1957, was of the order of Rs. 97 crores as compared to Rs. 120 crores in the previous year. Of this, expansion in note circulation accounted for Rs. 41 crores as against Rs. 100 crores in the previous year. Bank deposits as a constituent of the money supply were proportionately much higher during the year under review, and this is a welcome development. A large part of the rise, however, does not represent savings in the economy or a new turn in the flow of money. In this respect our economy has to make further headway and at a quicker pace. The year under review also witnessed so severe a strain on the country's foreign resources that the Second Plan had to be some what rephased. Despite the stresses and strains on the banking system due largely to inadequacy of resources, particularly in the first half of the year, the banks did meet the situation to the best of their ability. In the latter part of the year a considerable accretion to the banking resources reduced the strain, up to a point, and, consequently, Indian Scheduled Banks' borrowings from the Reserve Bank of India and the Deposit-Advance ratio registered a decline.

BANK'S PROGRESS

The Bank's Accounts for the past year, copies of which have been in your hands for some time, reflect the progress achieved. The deposits of the Bank at Rs. 38.36 crores were higher by about Rs. 4.4 crores, i.e., roughly 13% over the previous year's figure. Although the advances were cor-

respondingly higher by about Rs. 3.4 crores the increase in revenue from this source was, as in the previous years, more or less absorbed by increased interest charges and higher salaries and allowances to the staff resulting in a smaller rise in net profits.

OPERATING COST

An expansion of banking business in the country is the *sine qua non* for any increase in economic activity. But that expansion has to be achieved without any substantial addition to the cost of production and distribution of goods and services within the country. In the present context of certain trends in the banking system, a word of caution is necessary in respect of expansion of banking activities. It must be borne in mind that the banking system is generally working under the pressure of ever increasing operating costs. The extent of the pressure of operating cost can be seen from the fact that the overall cost of procurement of resources and utilization thereof for the Indian Scheduled Banks moved from 3.2% in 1950 to 4.2% by the end of 1956. The ratio of 1950 by itself might be considered high. The figure must have gone up still further in 1957. A disproportionately high operating cost causes a disproportionate rise in bank's advances ratio. An expanding economy no doubt requires that banking resources should be put to fuller use; such expansion, however, should be in conformity with the priorities of the Plan. But as banks function under the disadvantage of mounting operating costs they are naturally obliged to seek an increase in their earning assets viz., advances, irrespective of the said consideration. For, to match a rupee of disproportionate rise in the operating cost, a bank may have to increase its advances by hundred rupees. The pressure on the economy implied in this trend can hardly be exaggerated. A high Bank cost ratio reduces bank liquidity substantially, undermines marketability of Government Securities and disturbs greatly the nominal income vis-a-vis the real income.

RATE OF INTEREST ON DEPOSIT

Of the components of banks' costs, two, as is well known, are the most important: (a) Interest on money lodged with banks and (b) Cost of personnel. The rate of interest paid on deposits has

for sometime past been going up steadily and the rate of interest paid for various deposits is by itself well above the yield on medium dated gilt-edged securities and the effective lending rate of the Central Bank of the country. In the context of steady depreciation of securities for some years past, this hardly facilitates marketing of Government Securities, at least to the Banking sector.

In the case of the major banks the ratio that interest bears to deposits varied, in 1957, between .92% and 2.67% from bank to bank as against .65% and 1.68% five years ago. High rates are being offered, it is said, to attract deposits to the banking system as a whole.

In my address to you in the past two years, I pointed out that the rising trend of interest rates on deposits is anything but helpful either to the economy in general or to the banking system in particular, and this bears repetition. On various occasions we have urged that 'the relation between the depositor and the bank is not that of the investor and the enterprise, but of a depositor and a depository. Bank deposit is not the equivalent of investment by the depositor and the interest that bank deposit earns is but a marginal inducement against the retention and use of money away from the banking system.' We have also emphasised that 'a careful analysis will reveal that the formulation of a Deposit-Interest-Plan should proceed on the consideration as to what the economically active producer and distributor can bear without presenting any hazard to the expanding national economy', and not on the basis of the concept of attracting deposits by offering higher return on the money of a depositor. We are of the view that 'deposit money in aggregate is possibly attracted better by adequate spread of banking service than by hawking higher rates of interest to shift or prevent a shift of deposits from one bank to another'. Apart from the steady rise in Time Deposits a good portion of the rise in Demand Deposits consists of money obtained at about the Bank Rate. I wonder whether there is really any convincing argument against the introduction of ceiling rates on bank deposits. In the nature of things, such ceiling cannot be voluntary. I would, therefore, suggest that the introduction of the statutory con-

trol of interest rates on deposits brooks no delay. We now have a situation wherein the producers and distributors not only try to pass on to the consumers the incidence of higher interest charges that they have to pay but become inclined to compete directly for funds by offering prohibitive rates of interest in preference or in addition to Bank credit. Funds so diverted should normally flow to the banking system. I would, therefore, reiterate that the interest rate for a bank's deposits should be statutorily controlled in order that the highest return on deposits does not go beyond, say, two-thirds of the Bank Rate in force for the time being. Of course, there should be a cushion allowed for the smaller regional banks, enabling them to pay a bit more.

Our emphasis on the need for imposition of a statutory ceiling on the rate of interest on Deposit may suggest to some that there should, at the same time, be an examination of the question of similar control being imposed on the rates of interest charged for advances. Such a suggestion could arise from an apprehension that, in the absence of any control on the interest for advances, the banks would be widening their margin of profit which would not be in the wider interest of the national economy. There need be no such fear because of the steadily rising operating cost and because of inter-bank competition exercising necessary moderating influence on the rates of interest on advances.

On the other hand, if a ceiling on the rates of interest on advances is imposed a trend will develop under which banks will tend to neglect the marginal borrowers who, in the present social context, require to be encouraged in their enterprise. When the need is felt that the banks should take wider risks, by stretching the maturity of advances to medium and long term, it would be better to leave the rates of interest on advances to adjust themselves and find their proper levels in the normal process by the pressure of competition. The need for building up of reserves has been emphasised even by the Bank Tribunals. Hence, if any counter step is at all to be considered, it should be enough to ensure only that the small transitory gains, if any, accruing from the control on the interest for deposits is, wherever possible, conserved.

ESTABLISHMENT COST

The other major component of banks' cost structure is the cost of personnel which, over the past few years has been expanding at the expense of users of the banks' resources and of the general run of consumers, the Government, commercial and industrial producers alike. We are never averse to any gain conferred by a rise in cost on those who make, develop, and serve the banking system for the public benefit. But there is cause for anxiety when the increase in monetary benefits does not lead to any improvement in the work-norm, nor checks the slipping back in output, but raises the ratio that such costs bear to deposits. The earning potential **per capita** of the personnel employed in a bank, is the average of deposit per head. If the banks, therefore, have to bear the existing terms of employment, without running into hazards, such earning potential will have to go up substantially.

CHANGE IN OUTLOOK NECESSARY

In the recent years the tendency of seeking sectional advantages, in disregard of the interest of the society, is becoming a matter of great concern. All the more so, when planned efforts are being made to achieve certain physical and social objectives within a given period. The various branches of the economic activity being inter-linked and inter-dependent, any attempt on the part of the organised sectors of the people to secure advantages for themselves without correspondingly raising their output would only go to burden the other spheres and render the planned effort ineffective. The point is better appreciated when it is realised that, a given productive effort does not obtain for the worker in the unorganised agricultural sector the same economic satisfaction, as it does in the organised plantations or the industrial undertakings. Thus an important sector of our economy, i.e., all activities other than the organised agricultural and industrial sectors, continue to remain difficult and unattractive. This is a major factor which causes imbalance in our economy. As long as this situation is not corrected, the economic progress is bound to suffer from a major draw back. If, therefore, the country is to attain the objectives set before it, it is essential that there should be a proper realisation of this fact on the part of every organised sector of the people.

OUR PROGRAMME FOR NEW BRANCHES

In the hope that proper understanding will be reached, we are adhering to our programme of branch expansion and improvement in regard to the places of business of the Bank. I may mention here that during the last year, it was possible for us to open four branches, one in the State of Madras at Coimbatore, and the other three in

West Bengal at Katwa, Santipur and Ranaghat. A branch of the Bank was also shifted from North Calcutta to Tollygunge in the South of the city where previously there was no banking office. A larger number of new branches will be opened under this scheme during the year 1958—one has already been opened at Rourkela. Convenience of transacting business being a factor that helps growth, every attempt is being made to improve the location and the premises of the branches. Wherever this has been done, the consequent rise in business has paid for the extra expenses involved. During the last five years 30 offices have been so improved. In 1958, remodelling of the Delhi office has been taken up. In Bombay, the branch has been shifted to the Bank's own seven-storied fully air-conditioned building on Sir Pherozeshah Mehta Road. The yield from the building is likely to be more than 6½% per annum.

EAST PAKISTAN

The general economy in East Pakistan, where we have 15 branches, suffered during the past year from severe imbalance. A fall in jute prices had its repercussions. Developmental activities were, however, not discontinued and during the latter part of the year the situation was brought under a degree of control. Our branches there continued to make their usual contribution to the economic progress of this region.

PROBLEM OF RESOURCES

To come back to the general economic situation in the country, inadequacy of investible resources both internal and external was felt acutely during the last year and the Plan had to be rephased. An under-developed country cannot leave to chances the issue of economic uplift of the people, and this has to be dealt with on a planned basis. Obviously, such planned efforts will tend to create progressively larger gaps between the resources currently available through limited organisations and mechanisms and the unavoidable minimum social and material targets. As such the question of husbanding the national resources for the purpose of proper utilisation assumes a great magnitude. In these days of rapid technological improvement and increasing social consciousness, internal resources alone do not serve the purpose and external resources in Know-How and equipments are also needed. Thus grows and has grown the problem of external resources.

In the immediate future a great demand for finance for industrial expansion is bound to develop. On the basis of foreign loans secured recently from the Export Import Bank and other sources, some industries will be in a position to go ahead with their plans for expansion, for they are no longer handicapped for foreign exchange. But availing of the external finance to the extent it is

allotted for the private sector will require raising of the rupee counterpart by the industrial enterprise. In addition, probably an equal quantum of funds, if not more, will be necessary to supplement it for the installation of the local components and working capital. In some quarters it is estimated that about a hundred crore of rupees may become necessary to be found by the industrial enterprise in the private sector within a short period, if the foreign assistance is to be fruitfully utilised. In the present economic situation, it will not easily come from the capital market, and the specialised institutions such as the proposed RFC, and IFC, ICICI, NIDC, SFCs, etc. will not be able to cater to these projects except to a limited extent. To the best of its ability the banking system will come forward to render assistance to the extent that five or seven year amortized loan would serve the purpose. But industrial corporations will be able to raise funds from the banks only up to, say, five times of the net savings after paying for the taxes, depreciation, dividend etc. Viewed that way, the ability of the industrial enterprise to raise adequate resources from the banks may also be limited unless there be the prospect that this medium term finance could easily be converted into long term finance or equities within a short period. This points to the necessity of permitting larger individual and corporate savings, and also of activating the market for equities and bonds.

As for the public sector, the Government is rightly anxious to raise the necessary resources through marketing of securities and also to attract small savings direct to the Treasury. Such procurement of resources will have to be fast and economical. Otherwise several essential projects ancillary to the Plan 'core' may have to be elongated for want of resources and the likely impact of this on the community should not be lost sight of. It would, therefore, be worthwhile to make a closer study of this aspect of the collecting resources for the State sector through the marketing of Government loans as well as attracting the small savings. It should be considered whether the purpose would not be better achieved by including the use of the existing banking system in this effort, and if so, whether quicker expansion of commercial banking would not further facilitate the realisation of the targets. It, however, will have to be appreciated that to enable the banking system to be in earnest in this regard, it will be necessary to treat all the banks on the same basis, irrespective of ownership, in-so-far-as they qualify for such trust, so that efforts made by the banks to popularise Government obligations do not mean a corresponding loss of resources to themselves. This is not a new suggestion. There are countries where funds held by the Government in the State owned organisations are

relatively small compared to the funds collected, retained and spent through the commercial banking system.

CONCLUSION

In concluding I thank the Managing Director and my other colleagues on the Board as also the Chairmen and the Members of the Local Advisory Committees for the very valuable assistance I received from them. As you are aware, during the last year we had the pleasure of including in our Board two new Members. Sir Chunilal B. Mehta and Shri Murarji J. Vaidya, both of whom are men of eminence. I also thank the Secretary, the senior Executives of the Bank and other members of the staff who have rendered useful service to this institution throughout the year.

I thank you all for coming here today and I am glad to observe that my hopes expressed at last year's meeting have been borne out by this year's results. It is true, as I have mentioned earlier in the speech, we are still faced with some difficulties but it is inherent in all progress that difficulties will have to be faced and I feel that we shall be able to overcome the difficulties that remain, as we have done so far, and that we can look forward with optimism towards continued advancement in the Bank's progress during the coming year.

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

KYANG TEA SEED COMPANY, LIMITED.

Notice is hereby given that the Thirtieth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Thursday, the 22nd May, 1958 at 3 P.M., for the following purposes:—

- (1) To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1957.
- (2) To declare a Dividend.
- (3) To elect a Director.
- (4) To appoint Auditors and to fix their remuneration.

The Transfer Register will be closed from the 15th May, 1958 to 22nd May, 1958 both days inclusive. N.B. A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By order of the Board.

SHAW WALLACE &
COMPANY LTD.
Managing Agents.

May 3, 1958

The Punjab National Bank Limited

Stride of Progress Maintained

A Complex and Difficult Year

Speech of Mr S. P. Jain, the Chairman

The following is the speech delivered by Shri S. P. Jain, Chairman, The Punjab National Bank Limited at the 111th Ordinary General Meeting held on Friday, the 25th April, 1958:

Gentlemen,

I have pleasure in extending to you all a hearty welcome to the 111th Ordinary General Meeting of the Bank. It is a matter of additional pleasure that we are able to meet today in the Hall in our new building. The Head Office of the Bank will also gradually move into this building and the hopes of our being able to render still better service to our large constituents from this central place will be fully realised.

BALANCE SHEET 1957

Profits:—You will find from the Statement of Accounts already with you that the Bank has maintained its stride of progress. The profit for the year under review has crossed the one crore mark and was Rs. 117.27 lakhs including the Rs. 6.20 lakhs brought forward, against Rs. 90.20 lakhs in 1956. This has been arrived at after a contribution of Rs. 9.32 lakhs to the Gratuity Fund Trust. The Board has proposed after transfers Rs. 50 lakhs to taxation, Rs. 22.5 lakhs to reserves, Rs. 18 lakhs to bonus for staff and Rs. 1 lakh for charity—a final dividend of Rs. 2.8 per share on the increased capital. This raises the dividend to 20% per annum. The bonus to staff has been raised to 3 months basic salary for 1957 against that of 5½ days for 1956.

Deposits:—The Paid up Capital has increased from Rs. 87.5 lakhs in 1956 to Rs. 1.25 crores in 1957. The deposits rose nearly to Rs. 125 crores registering an increase of Rs. 18 crores during the year against Rs. 16 crores in 1956. In the background of stringency of money in the country, your Bank has had throughout surplus funds. Your Bank did not for a certain part of the year compete with other banks for deposits. Your Bank had, however, to yield to the pressure of valued clients and agree to the same rate of interest as offered by others. The Bank's large funds were lent to other banks as short-term deposits. The rise in the cost of money is slower in your Bank as compared to others, but still high. This is a matter that calls for some sort of concerted action by leading banks.

Advances:—Our loans and advances showed only a moderate

increase of Rs. 13.09 crores from Rs. 54.86 crores in 1956 to Rs. 67.96 crores in 1957. In view of the Reserve Bank's policy of credit squeeze on advances against foodgrains and availability of large funds with us, the Bank has to diversify its advance policy and is now looking into the credit-worthiness of different industries that have developed during the last few years and attempting to increase advances in fields not hitherto covered by the Bank.

BRANCH OFFICES

Your Bank's policy of extending its services in areas not being served by banks continues. The number of offices increased from 340 to 353 during the year. One of the handicaps with regard to the opening of new offices in areas with insufficient or no banking facility at present is the difficulty of building up a reasonable advance portfolio. This position was brought to the notice of the Reserve Bank. Certain modifications were made by the Reserve Bank in their policy regarding advances on foodgrains. But they do not meet the situation. If banking has to expand in new areas, the policy needs further revision.

The space problem at the Head Office will be eliminated with the shifting to our new building. The enlarged organisation of the District Managers has now been well consolidated for rendering better and prompt service to our varied clients. The Foreign Exchange Department is also being organised on a regional basis and I hope it will take its proper shape during the present year.

1957: RETROSPECT

The past year has been in a way a complex and difficult one. Viewing the economy of the country, however, as a whole in retrospect, we find that we have fared better than we thought we would. A big storm that appeared to gather force blew over and though there has remained much dust and some dislocation we are still on our feet. We have not only to continue to remain on our feet but also grow up.

HIGHER PRODUCTION TRENDS

At the beginning of last year, there was apprehension of a declining trend in agricultural production and consequent rise in the price level. It was further feared that the stricter import control over general consumer goods would also be an inflationary

factor. There was failure of monsoon and serious drought occurred in many parts of the country. By the middle of 1957, the price of foodgrains had gone up. The Government of India and the Reserve Bank took concerted measures to keep down the level of prices by importing foodgrains and by the policy of credit squeeze and other steps. In line with this policy, your Bank also limited advances on foodgrains. At the end of 1957, the foodgrains prices came down to more or less the level that was prevailing at the end of 1956. The price index for food articles in December 1957 was 102.9, the same as in December 1956. The general price level at the end of 1957 was same as at the end of 1956 in spite of the sharp increase in the excise duties on a number of items in the middle of 1957. The index for all commodities was 106.3 in December 1957 against 106.9 in December 1956. Having regard to the increase in the money supply, excise impositions and import restrictions on consumer goods over a wide front, this trend in the price level affords considerable satisfaction.

Taking the picture of production in the fields of agriculture and industry, we find that there has been during 1957 an increase of 6% in the agricultural production and 11% in industrial production. Leaving the peak production in 1953-54, the production of foodgrains in 1957 showed the highest increase during the last eight years. In wheat, gram, cotton, coffee, rubber and sugarcane, the production in 1957 set new records. The rate of industrial production during the year as a whole was the highest in the past many years. The index rose from 103.6 in 1952 to 133.0 in 1956 and 147.6 in 1957 (11 months). The rate of increase in 1957 over 1956 is 11% against 8.9% in 1956 over the previous year and the highest over the past five years.

The foreign exchange position that was extremely tight and which, it was apprehended, would adversely affect production in the country has since improved though not adequately. Though the problem of non-availability of foreign exchange for development purposes continues, the utilisation of available foreign exchange by providing matching rupee capital is assuming serious importance. It is thus a picture that carries the hope of progress emphasising the need for serious efforts in all directions.

I agree with the analysis of Mr. Iengar, the Reserve Bank Governor, that "there is no reason why we should take a gloomy view of the situation". But the rate of increase in industrial production since the end of the year is falling and is a disturbing factor which must be taken into account for adjustment of policies, fiscal and monetary. We have definite objectives and if they are better secured by adjustment in the fiscal and other Governmental policies, doctrinaire considerations should not stand in the way.

FOREIGN EXCHANGE AND DEVELOPMENT

We have three more years of the Second Plan to go. Our ultimate objectives have to be realised. Also, as the Prime Minister stated in Parliament, our under-developed country has somehow to break the barrier and cross into a dynamic and self-progressing economy. We, have, therefore, to go on with the scale of expenditure proposed if not on a larger scale. We have to realise that the development programme we seek to implement cannot be achieved without a substantial measure of foreign assistance. There is a feeling among certain sections in our country that by embarking upon a heavy development expenditure now with foreign assistance, we shall be mortgaging our Third Plan. It was inherent in the Plan itself that we would take foreign assistance to complete our development programme, but, of course, the size of our requirement compared to estimates has considerably increased. Development is a continuous process. The creation of additional resources and increased credit-worthiness of the economy achieved through such development will enable us to meet our liabilities. There is nothing inherently wrong in going ahead at a faster speed with our development programme with foreign assistance. If the foreign exchange obtained is used for development purposes even with the admixture of created credit of Indian rupee such development would itself be an anti-inflationary measure.

As regards the shape in which the foreign capital should flow into our country, opinion seems to be divided. Some consider that deferred payment system carries with it a heavy liability. This liability is precise and fixed in advance. In the case of equity capital it is not so. The liability

is rather permanent and growing especially with reference to large profit-yielding industries. The choice may be a matter of preference with reference to individual schemes depending upon their profitability. The shipping interests who are willing to borrow money are opposed to foreign ownership through flow of equity capital. In their opinion, the yield on shipping investment is not large by industrial standards.

In whatever shape the foreign capital may come, its utilisation for achieving our development programme is linked up with our ability to find requisite finance from within the country.

FINANCE FOR AGRICULTURE AND INDUSTRY

The crux of the problem is thus internal resources and striking a proper balance between consumption and savings in the increased national income. The Governor of the Reserve Bank explained in his speech at Madras that the essential points of the economic policy in India today were to raise the maximum resources from within the country and to follow a correct monetary policy which would prevent inflation. He went on to say that the monetary policy had to be geared to a rapidly developing economy in which deficit financing necessarily played an important part. He said "the policy had, therefore, to be at the same time expansionary as well as restrictive, the expansion and contraction being operated on different sectors of the economy". It can be agreed that the policy has borne fruit in particular directions and the Reserve Bank must be congratulated on its achievements. The Governor of the Reserve Bank is doubtless aware, of the need of expanding credit to agriculture and industry in the coming years which is vital to achieve a level of production essential for equilibrium and progress in our economy. He has recently held meetings at Calcutta and Bombay to ascertain the nature and extent of the requirements.

The agricultural and industrial production, though higher last year, is showing signs of weakness. A continued accelerated rate of production is a prime necessity whether to feed the people or to give them gainful occupation and improve their standard of living or to check inflationary upheavals from dislocating the economy. The expansion of rural credit is appreciable in recent years but considering the needs of the cultivator for increased production, the efforts in rural credit expansion need to be greatly stepped up. I mentioned last year also, and I again repeat this year, that the services of commercial banks can be profitably employed in this field. This will also help commercial banks to have branch banking in rural areas.

The financial resources accumulated in the past with the industry are now largely exhausted. The

heavy taxes have further affected their capacity to make available enough funds from current profits. For the efficient and effective utilisation of the foreign capital that may be available, requisite Indian Rupee finance has to be raised. The Refinance Corporation that has been organised is likely to commence working within a few months with certain resources. These investment corporations are able to supply credit to industry only to a limited extent, but not to the full extent of the requirement. The monetary authorities must evolve a machinery for meeting the needs of internal resources for development. The services of commercial banks individually or through a consortium of banks may be utilised to meet this situation. We have a heavy task. With his thorough grasp of the fundamental aspects of our monetary problems and broad vision, I am sure Mr. Lengar will contribute to the initiation of a policy that will vitalise our economy.

PLAN EFFORT & FISCAL POLICY

Shri Nehru in his Budget Speech stated: "The crisis through which we are passing is a crisis of development, a crisis of resources. We must try to produce more, export more, and save more to find the resources for implementing the Plan." The public also in all walks of life are deeply concerned about the implementation of the Plan. The success of the Plan naturally depends on the creation of conducive conditions for development and the avoidance of policies and forces that debilitate the efforts towards the achievement of our objectives. It is by this standard that we have to assess the merit or otherwise of the fiscal and related policies of the Government. Are the efforts of the Government in accord with what has been laid down in the Plan? To what extent have the fiscal policies pursued militated against the cherished objectives?

The Second Plan estimated the total receipts of the Central and State Governments over the five year period at Rs. 5000 crores at the rate of taxation prevailing in 1955-56. It also estimated that non-development and maintenance expenditure under development heads would take up Rs. 4650 crores leaving for Plan expenditure the sum of Rs. 350 crores. To be able to obtain this, it was stressed that a careful watch would be necessary on non-development expenditure. On this assumption, they calculated further resources of Rs. 450 crores by way of additional taxation to make up Rs. 800 crores for development expenditure under the Plan. These estimates do not seem to have been followed by Government in implementation. Against the estimated annual average expenditure of Rs. 930 crores plus Rs. 200 crores on account of current developmental plan expenditure making a total of Rs. 1130 crores, the estimated expenditure during 1956-57, 1957-58 and 1958-59 is of the order of

Rs. 1126 crores, Rs. 1390 crores and Rs. 1500 crores respectively. The estimated revenue during these years has gone up to Rs. 1167 crores, Rs. 1356 crores and Rs. 1500 crores as compared to an average income of Rs. 1090 crores including the revenue through additional taxation estimated in the Plan. Obviously, the calculation of resources for development under the Plan has been upset by the non-development and non-plan expenditure in both the Centre and the States having gone very high. The States have continued to show budgetary deficits. The Centre in their hunt for funds embarked upon the policy of a series of new taxes which, without helping to stimulate and aid Plan efforts, were effective in undermining the capacity and stifling the initiative of the investor. This created many problems affecting more particularly the value of savings and in consequence the psychology of the people to save which is of cardinal importance for the successful implementation of the Plan. The value of the Government securities fell to the lowest level in the past many years. The prices of Preference Shares and Ordinary Shares were subject to sharp falls.

The drop in the price of Government and Trustee Securities, Preference Shares and Equity Shares was to the extent of 2%, 9% and 16% respectively. The level of prices in 1957 was substantially lower than that in 1951. The average price index of Government and Trustee securities, Preference shares and Equity shares in 1957 was 89.4, 76.7 and 104.5 against 96.2, 98.6 and 112.9 in 1951 respectively. It is relevant to note here that during the First Plan and the first two years of the Second Plan, very heavy industrial expansion has been achieved and most of the companies ploughed back their profits increasing the production and earning capacity of the units. This should have been represented in the appreciation of the value of the investments. Only this would have given the encouragement to ploughing back and created the confidence as regards the benefit of such ploughing back to the investor and to the development of the country. As things are at present, the depreciation in equity share values as a direct consequence of Government's fiscal policy has wiped out the savings of the investors and has given a shock to the confidence of the investor and the industrial management in the policies of the Government. The Government's policy has not been such as to keep the value of the people's savings intact. Obviously, the people can be induced to save only if they are assured that the value of their savings will appreciate and not depreciate. What confronts the economy today in this respect is really a serious situation.

The Government and the Planning Commission should make an urgent study of the effect of last year's fiscal policy on the imple-

mentation of the Plan. They should see how far the policy has been helpful towards the achievement of our objectives. Saving is the fulcrum of the Plan or for any development and if the psychology to save is affected as has been done by the last year's fiscal policy of the Government, it is essential in national interests to adjust the policy or even to reverse it. The withdrawal of the compulsory Deposits Scheme, the reduction in the excise duties on cotton textiles and the new variations regarding development rebate are indicative of an awareness on the part of the Government of the serious repercussions of their policy and I hope this flexibility will be extended further to smoothen the path towards the successful implementation of the Plan and rousing the enthusiasm of the people in maximising savings for the fulfilment of our objectives regarding greater employment and improved living standards. To this task, the new Finance Minister, Shri Morarji Desai brings his mature experience and sober analysis of the country's economic and financial problems. I have every hope that under his able stewardship of the portfolio of Finance we shall progress without setback.

NOTE:—This does not purport to be a record of the proceedings of the annual general meeting.

S. E. RLY CANCELLATION OF TENDER NOTICE

Tender Notices SICAL/STV/CL/58, SICAL Boating/58, SICAL TRNS/58 and SICAL Handling/58 inviting tenders for stevedoring and clearing, boating, transporting and handling wooden sleepers and timber arriving at Calcutta Port as published in this paper recently are hereby cancelled.

S9 GENERAL MANAGER

SHREE KRISHNA GYANODAY SUGAR LTD.

The Board of Directors of Shree Krishna Gyanoday Sugar Ltd. in their meeting held on the 26th April, 1958 have recommended to the forthcoming Annual General Meeting of the Company payment of dividends of Rs. 6/- per share on 'A' Preference Shares, Rs. 5/- per share on 'B' Preference Shares and Re. 1/- i.e., 10% per Ordinary Share, without deduction of Income tax, for the year ended 31st July, 1957.

By Order of the Board,
For Shree Krishna Gyanoday
Sugar Ltd.,
J. P. Saxena,
Secretary.

Calcutta,
26th April, 1958.

Indian Aluminium Company, Limited

Chairman's Speech

The Annual General Meeting of Indian Aluminium Company, Limited was held in Calcutta on April 28th, 1958. The following is an abbreviated version of the Speech made at the meeting by the Chairman, Mr. K. C. Mahindra.

Your Company has completed two decades and we are holding our 20th Annual Meeting today. Over the past year sales and gross profits have continued to grow as anticipated and the Company's functional organization has kept pace with the demands made by the widening market. We have exceeded the Rs. 5 crore mark in the sales turnover this year, and profits before provision for income and wealth taxes is over Rs. 65 lacs or 12% of sales, as against Rs. 45 lacs or 10% of sales in 1956. But new patterns of taxation were being experimented with in 1957 and the impact of tax burden has meant a heavy impost on corporate earnings.

You will recall that in 1956, only Rs. 7 lacs was provided for income tax owing to the carry forward of development rebate and accelerated depreciation on new plant and machinery allowed for tax purposes. The Finance Act of 1957 increased the rate of corporate income tax from 43.4% to 51.5%, and in addition a wealth tax imposing a one-half percent levy on the net assets of the Company was introduced with retrospective effect from 1956. The Accounts accordingly make a provision of Rs. 37 lacs for current income tax and Rs. 4.5 lacs for wealth tax for two years, which together amount to nearly six times the sum provided in 1956.

While the amount available for distribution to shareholders had thus been reduced, the ordinary share capital of the Company has increased from Rs. 201 lacs at the end of 1956 to Rs. 385 lacs by December 31st 1957, following the conversion of the major part of the Convertible Loan Stock issue into ordinary shares. Some further conversion has taken place during the current year, and the dividends which you will declare at this meeting are payable on the capital outstanding on this day.

Shareholders will recollect that early last year additional finance was secured for the purpose of implementing the Hirakud smelted project. It inevitably takes a few years before new production facilities can get under way. In the meanwhile, there is a heavy pressure on the ways and means position of the Company, and your Directors would have been well-advised in recommending patience to shareholders and withholding disbursement on dividend payments. Conservation of cash resources is a sound practice during an expansion phase. The Board, however, took into consideration

the general stresses in the Indian economy today and have recommended for your approval a dividend of 6% on the enlarged capital. Your staff is well on the top of the Hirakud job and I am glad to report that time schedules of construction have been closely maintained to date, with the hope that the new smelter will go on stream as planned, early in 1959.

In my address last year, I referred to the new pattern emerging in sales of the Company's products, which was reflected in a lower offtake of circles with a more than corresponding increase in sales of sheet and plate products. This trend continued in 1957, and we find that whereas circle sales declined by 430 tons, the sales of flat and corrugated sheet and plate increased by 991 tons as compared with 1956. The strength of the trend is more clearly apparent from the fact that sheet products, which amounted to only 39% of the total rolled product sales in 1955, increased to almost two-thirds of the total in 1957.

Simultaneous, and perhaps even more striking, has been the growth in demand for extrusions from early 1955, when we installed a press at Alupuram. Extrusion sales have increased from 119 tons in 1955, to 342 tons in 1956 and 673 tons in 1957.

These are only some of the more vivid examples of the increasing acceptance of aluminium in the country, particularly in the transportation field, and which is mainly the result of patient and persistent development efforts of the Company's sales and production personnel.

You will, I am sure, have derived satisfaction from the plans mentioned in the Directors' Report for further expansion of the Company's production facilities, beyond the programme now under way. The demand for aluminium in the country is anticipated to increase to 35,000-40,000 tons per annum by 1961, and from the start, plans were established to double the Hirakud production as soon as practicable. Large financial resources are required and your Directors have had this problem continuously under study.

After the successful issue of Convertible Loan Stock last year, the Board felt a bit hopeful, but the subsequent tax enactments and disincentive measures brought about a chill in the investment climate and prospects of raising any further substantial funds on the Indian market, whether by the issue of shares or debentures, did not look too good. Your Directors nevertheless pursued their objective and succeeded in persuading Aluminium Limited, our Canadian associates, to the view that early completion of the original plan would be most desirable, and the

offer of a loan up to 5 million dollars from Canada, just sufficient to cover our foreign exchange requirements for this purpose, is indeed to be most heartily welcomed, as also the Government announcement that the second stage of development at Hirakud including additional generators comes within the "core" of the Plan. It is hoped that the Government will facilitate early completion of the arrangements with Aluminium Limited and accord their approval of the Company's expansion plans.

At a time when numerous development projects in the country are held up for want of foreign exchange or technical know-how or non-availability of suitable raw materials upon which they are based, it is encouraging to find your Company well placed. A claim can be made with pride that the contribution that your Company has made, and is making, towards the growth of the aluminium industry in India is an exemplary illustration of the part foreign investment and technique in collaboration with private Indian capital can play in the rapid development of the country's resources, and we may justly look forward to a future where your Company's efforts for the further progress of the industry will receive support and encouragement.

Over the last twelve months the strains on Indian economy have been severe and unprecedented. Foundation was boldly laid in the First Plan period for a prosperous future, but at the very commencement of the Second Plan wide cracks have appeared in these foundations. There has been rapid depletion of sterling balances; exports have barely maintained their level and savings have dried up. Import restrictions became inevitable; even the supply of key industrial raw materials has been affected. All these total up to a severe lack in available resources. Such a situation under any circumstances would have led to rigidity of administrative thinking. It is our good fortune that, by design or accident, the Government has been able to loosen their previous rigorous approach and through swift adaptation of realistic measures and policies, coupled with generous help from the United States, Canada, Germany, Britain and Japan, they have been able to avoid a collapse of the Plan.

Many learned discourses have appeared on the overbounding ambitions which governed the formulation of the Second Plan—its lack of realities, its over-emphasis on heavy industries, insufficient care for agricultural advancement, haphazard and expensive social theories and a general poverty of resources.

I do not propose to enter into a detailed argument on the merits or otherwise of planning. The past is a bucket of ashes. What should be recognised is that to stand still will be to stagnate. It is also to be recognised that the most prominent feature of Indian economy in

the last 12 months has been the pulling up of socks in the most classic orthodox manner—inflationary prices, particularly in food-grains, have been halted, bank advances and credits controlled and directed into worthier channels, and even tax adjustments, although minor, admitted into the new pattern. Despite the pedestrian budget, the keel of the ship of the realm has been righted and set on a straight, although austere course. I do not decry controversy and argument over past mistakes, but, quoting the British Prime Minister, why look up a train in last year's Bradshaw? The need of the moment is to find equilibrium in motion. "History does not linger long in the 20th Century; the world alters as we walk in it." (Oppenheimer).

We are all aware of the severe deficiencies in planning which have shown up; we are only too aware of the injustice and the disincentive impact of the new pattern of taxation. It is also recognised, I hope, that labour legislation and labour awards have made confusion worse confounded. The difficulties in which some of the textile units in the industry find themselves are perhaps indicative of serious imbalances in our economic arrangements. We are in the midst of a deep crisis of confidence as well as of physical limitations. Solutions would require faith and effort. That government is aware of the implications of the crisis economy is evident from their latest Economic Survey, presented with the Budget.

Mr. S. K. Patil, now the Minister of Transport and Communications, described the other day, in his characteristic style, the interdepartmental labyrinths which a file on food has to traverse, and if by luck it strikes the open, the file becomes a problem! All of us recognise now that food and soil productivity is our problem Number One, and that increasing returns per man-hour in the field and per acre of the arable soil are the only stable bases for advancement of the economy in India. It is to be regretted therefore that policies bearing on agriculture do not show any significant appreciation of the issues involved. It is to be hoped that Mr. Patil's plea will lead to better co-ordination at official levels, but means must be found to enlist the co-operation and the enthusiasm of the non-agricultural sector. It has to be both an individual and State effort. At Government levels general policies and plans will continue to be evolved; I suggest that at the local and regional level individuals should get mixed up actively in this programme. This is easier said than done. It is perhaps a most difficult thing for a lawyer, an accountant, an industrial executive or a shop assistant to become enthused over how better food can be grown, what helps soil conservation, why water is needed in regulated measures and when. Yet in my opinion, it is most important that at this stage of our fight for

economic survival the ordinary non-farming citizen from the city, the town or the village should not only know these things, but know how to help advance knowledge and modern practice in these matters.

I make an unusual suggestion: There are a little over half-a-million people in the country who pay income tax. Over 80% of them are undoubtedly of the small-tax-class—only a small percentage bear the bulk of the burden. My suggestion is that each taxpayer should be permitted to "invest" 10% of his tax amounts in soil improvement and soil productivity in the locality of his choice and in the manner he wishes, save that the contributions cannot be used for lending purposes. Bulk of the small tax-payers may be given the option to contribute their tithe to the local co-operative of their choice, as long as the co-operative does not engage in purely credit operations. Those who pay a significant amount in taxes, individuals and corporations, may choose to select a village area or a block of villages for such "investment". The main thought behind the suggestion is that the non-agricultural sector in responsible positions

should develop knowledge and interest and enthusiasm for land improvements. Government assistance at State and local levels should be willingly forthcoming for any measure or programme so suggested by the individual tax-payers for the selected area. Questions of control and of possible abuses in the spending of this ten per cent of tax-money are no doubt vital to the success of the scheme. The Central Board of Revenue have enough ingenuity of mind to devise checks and cross-checks for the purpose. The Community Development projects have developed a basic cadre of trained workers and evolved an organization which can be utilised for checking on the veracity of individual expenditures. The Central Government will lose 10% of the income-tax collections, but the positive gain in the enlistment of individual zeal for matters agricultural will be immense. The ten per cent reduction in tax collections is not lost; it is being diverted to a sector of the economy where responsibility has to become collectively universal; "invested" in what may be called unit programmes of enthusiasm, leading to fruitful abundance of the soil—every new blade of corn will amply

repay the tax money spent on growing it.

But no one can doubt, nor would it be proper to deny, that high vision and endeavour has been behind these planned efforts and that the various disquieting features which have emerged have really been thrown up by the hurry and the flurry to get somewhere fastest so that the average citizen can feed a little more, clothe a little better and have a roof over his shack. These are the tribulations of economic growth, exceedingly painful but nevertheless necessary and therefore inevitable. If, therefore, there has been a fault, it is one of overzeal, of failure to recognise or appraise correctly the inexorable law of economic growth in a democratic set up and in its consequences, the very rigidities of processes involved. These are grave problems worthy of serious, prolonged and continuous study by the administrators, the learned hierarchy of economists and the industrialists. There should be no quarrel with the ultimate of true socialism. To the humanity that inhabits India, socialism should have the meaning that none shall starve and none

shall beg; in the meaning that human dignity shall remain and human rights shall prevail; and, finally, in the meaning that to the riches of the earth, whether of human endeavour or of economic growth, all shall inherit.

I should also like to welcome, on your behalf and mine, Mr. H. Vance Echols, who assumed charge as Managing Director of the Company in January 1958, in place of Mr. E. S. Greenwood, who, during his stay in India worked industriously for the growth and development of your Company. Mr. Echols has been connected with the aluminium industry in Canada and British Guiana for many years, and I am sure the Company will benefit from his wide experience and continue to prosper under his management.

Finally, an expression of our appreciation is due to the employees of the Company for the diligence and loyalty with which they have continued to serve the Company during the past year.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

Selective Buying in Equities

Watch-Dog Writes:

EXCEPT for some keen selective buying in the Miscellaneous counter, activity in stock markets has generally been dull during the week under review. Operators are rather cautious in extending their commitments; but there is not much of selling pressure. This indicates that they do not expect any immediate major recession in stock markets.

Apart from a slight setback in the speculative issues due to profit-taking on lower Bombay advices, the Calcutta Stock Exchange displayed a steady trend with the Miscellaneous section providing many firm spots on investment account.

Price movements on the Bombay Stock Exchange were rather irregular due to alternate buying and selling.

Fairly steady conditions were witnessed on the Madras Stock Exchange.

Wall Street closed firm with a fairly good distribution of gains ranging mostly to a dollar or more.

Calcutta

Calcutta, Friday Evening.

CONDITIONS on the local Stock Exchange ruled generally dull in the absence of fresh incentives. Anxiety to await developments regarding the threatened strike and the reports of the Prime Minister's desire to retire caused some selling pressure early in the week, resulting in a setback in prices. Thanks to the news of the strike at the Burnpur Works being averted, prices staged a marked recovery towards the close due to some bear-covering at lower levels. Hopes were also entertained that the Government would announce their decision on

the Tariff Commission's recommendations on the question of steel and cement prices very soon.

The outstanding feature of the week was the strong enquiry for Gilt-edged securities. State Loans were also in request and the rise in prices was much more marked in the nearer maturities. Meanwhile, 3 per cent 1986 Conversion Loan opened steady at Rs 71.12 and, after improving to Rs 71.75, receded at the close to Rs 71.35.

In the Banking section, Hind as the terms of the merger with the Bank of Baroda were considered to be favourable to Hind Bank shareholders. Punjab National changed hands on the ex-dividend basis at Rs 51.87 to Rs 52, while United Commercial remained almost unchanged at Rs 59.50.

Jute shares, where changed, were slightly better on firmer advices from the gunny market following the receipt of orders both from the India and Egyptian Governments. However, trading continued to be restricted on fears that the margin of profit for mills, at the present level of prices of finished products and the raw material, would be narrow. Howrah were enquired upto Rs 15.31 from Rs 14.25; Birlas upto Rs 15.12 from Rs 14.94 and Nuddea upto Rs 37.50 from Rs 36.50. National touched a high of Rs 24.10 and a low of Rs 23.75, to finish at Rs 23.87. Among higher-priced scrips, Lawrence improved to Rs 73.75 from Rs 70.50 on reports that, despite the closing down of the mill, the loom-hours would be transferred to other mills in the same managing agency group. Ganges were, however, lower at Rs 44.50 against Rs 46.50; Anglo-India at Rs 143.50 against Rs 150 and India at Rs 112 against Rs 114.

Although operators were worried over the delay in the announcement of the revision of selling prices for the commodity, Coal shares remained fairly steady; but buying was selective. Central India were enquired upto Rs 7.90 from Rs 7.62 New Beerbhoom upto Rs 15.06 from Rs 14.21 and Western Bengal upto Rs 5.94 from Rs 5.81. Burrakur were, however, marked back to Rs 22 from Rs 22.37 on speculative selling. Amalgamated were a steady feature at Rs 17.

Tea shares were generally quiet in restricted trading as operators

were reluctant to enter the market till the position of the commodity in the current season was crystallized. Even Mr Kanungo's hint that a decision with regard to tax relief and the announcement of an interim release of export quota for the 1958-59 season to tea estates to the extent of 50 per cent of their crop had no effect on market sentiment. There was a general fear that, in the absence of any scheme to regulate output, an imbalance between supply and demand was probable during the coming months. Birpara were on offer at Rs 113 against Rs 115; Bishnauth at Rs 18.56 to Rs 18.62 against Rs 18.87; Dhekhakhat at Rs 21.50 against Rs 22.12; Rydak at Rs 26.25 against Rs 27.25 and Tezpor at Rs 15.00 against Rs 15.19. Brooke Bond closed, however, better at Rs 16.06 against Rs 15.87; Grob "A" at Rs 23.24 against Rs 23.12 and Patrakola at Rs 127 against Rs 124. Hatikhira were a steady feature at Rs 9.87.

Sugar shares came in for selective support, thanks to higher prices obtained for the commodity. Hopes were also held that there would be no substantial margin of production over consumption and that an early scheme for exports might be implemented. Belsund were taken upto Rs 11.25 from Rs 11.06; Darbhanga upto Rs 22.50 from Rs 21.81 and S.K.G. upto Rs 10.06 from Rs 9.81.

Textile scrips were quiet. There was a general disposition to await a definite improvement in the conditions of the cloth market. Elgin changed hands at Rs 13.00 to Rs 13.12 c.d. and Kesoram at Rs 11.37 to Rs 11.53. New Victoria were a steady feature at Rs 1.37.

In the Engineering section, price movements were rather irregular, being influenced by the speculative activity in Indian Irons. Against week-end closing of Rs 21.95, Indian Irons opened steady at Rs 21.97 and, after touching a high of Rs 22.04 and a low of Rs 21.63, finished the week better at Rs 21.68. However, TEXMACO had buyers at Rs 18.10 to Rs 18.35, while G.K. Williams finished better at Rs 30.87 after touching a low of Rs 30.75 from Rs 31.12. Burn were taken upto Rs 335 from Rs 328, while Indian Standard Wagon were enquired at Rs 98 to Rs 99 following the settlement of the strike at Burnpur. Britannia were a shade lower at Rs

11.25 against Rs 11.44, while Indian Galvanizing changed hands at Rs 13.75 to Rs 14.12; Kumardhubi at Rs 8.62 to Rs 9.06 and Jessop at Rs 20.25 to Rs 20.50.

In the week's dealings, attention was mostly directed towards Miscellaneous issues, although higher levels in a few cases could not be retained till the close due to profit-taking. Most prominent were Dunlop changing hands at Rs 24.75 to Rs 25.31 (Rs 25.12); Aluminium Corporation at Rs 10.94 to Rs 11.25 (Rs 11.06); Indian Aluminium at Rs 13.00 to Rs 13.19 x.d. (Rs 13.19); Indian Cable at Rs 29.90 to Rs 30.87 (Rs 29.90); Indian Steamship at Rs 11.06 to Rs 11.25 (Rs 11.19); Indian Oxygen at Rs 17.87 to Rs 18.37; National Carbon at Rs 24.75 to Rs 25.06 (Rs 25.06) and NICCO at Rs 23.94 to Rs 24.75 (Rs 24.69). Figures shown within brackets were the closing rates for the week. Indian Copper were neglected around Rs 3.13 on rumours of the possibility of passing over the interim dividend for last year. In the Paper section, Orient touched a high of Rs 30.25, to finish at Rs 29.90 on profit-taking. Titagur moved between Rs 36.06 and Rs 36.12; Shree Gopal between Rs 15.12 and Rs 15.25 and India Pulp between Rs 18.57 and Rs 19.25.

Bombay

THE stock exchange had ruled quiet during the past week following a number of adverse reports. In the first place, there was less of optimism about an amicable settlement of the labour dispute in the two mills. It was indicated that in one of the works a section of the workers might go on strike on May 12 if there was no response from the employers to the worker's demands. Secondly, there were rumours that Government might not accord sanction to Bombay Burmah for the issue of bonus shares. That report along with disappointing corporate news depressed sentiment. Once again Tata Locomotive had come in for adverse criticism at the hands of the Public Accounts Committee of the Lok Sabha. Another important factor that had retarded the uptrend had been the possibility of Mr Nehru's retirement. It would appear that operators considered that in the event of the appointment of a new Prime Minister there would be need for reconsi-

deration of the prospects of equities. The announcement of the Rs 135 crore Central loan had naturally occasioned caution among marketmen because the loan would mean lesser availability of funds for investment in equities atleast for the time being.

STEELS:

Tata Steel ruled quiet throughout the week on renewed apprehensions about labour strike in the company's works. As against last Thursday's closing rate of Rs 184, the scrip declined by close on Friday to Rs 182.75. After having been maintained around this level in the next two days, it once again met with selling and recorded a steady decline during the past three days to be finally placed at Rs 181.25. Indian Iron also declined from Rs 21.92 to Rs 21.84.

TEXTILES:

Conditions in the textile section continued to be quiet following disappointing advices from the cloth market where offtake had not shown much improvement. Bombay Dyeing was marked down from Rs 56 to Rs 55.30. Central India after earlier steadiness developed an irregular trend to close quiet at Rs 83.50. Century encountered selling in later dealings to close lower on balance at Rs 431.50. Standard was however a bright spot improving to Rs 478.50 from Rs 468.

BASANTI COTTON MILLS LTD.

Notice is hereby given in continuation of the notice dated 19th April, 1958 of the Annual General Meeting of the Company above-named to be held on the 31st May 1958 at 11.30 A.M. that a Special Notice dated 28th April, 1958 had been received from a shareholder of the Company of the following resolution which he intends to move at the above meeting:—

RESOLVED that Right Hon'ble Lord Sinha of Raipur who has attained the age of seventy years on 22.8.1957 be and is hereby re-elected a Director of the Company and that the age limit prescribed under section 280 of the Companies Act 1956 shall not apply to him.

EXPLANATORY STATEMENT

Although in the Twenty-third Annual General Meeting of the Company held on 28th September, 1956 the Company resolved that the age limit under section 280 would not apply to the Right Hon'ble Lord Sinha of Raipur it is thought fit to pass again the resolution mentioned above to put matters beyond doubts.

This is supplementary to the agenda No. 4 "To elect Directors" of the Notice dated 19th April, 1958.

By order of the Board,
The Calcutta Agency Private Ltd.
Managing Agents.

24, Netaji Subhas Road,
Calcutta-1
The 29th April, 1958.

MISCELLANEOUS:

In the miscellaneous section, Tata Chemical was an active counter but closed rather subdued at Rs 15.08. National Rayon was rather quiet at the beginning but toward close recovered lost ground on renewed enquiries to close steady at Rs 224.75. Tata Loco was also steadier at close at Rs 167. Bombay Burmah on adverse rumour about bonus issue, reacted to close at Rs 554 from Rs 575. Alcock declined sharply to Rs 250 from Rs 290 on reduction in dividend.

Among Cement shares, ACC was rather quiet at Rs 153 with Digvijay placed at Rs 146. In the sugar section, Belapur eased to Rs 245 but Phaltan was steadier at close at Rs 140.50. Elsewhere steamship shares were a steady market on ideas of good prospects for shipping companies. India Steam and Scindia were finally placed at Rs 11.24 and Rs 17.52 respectively. Shivrampur Syndicate was steady at Rs 93. The Chairman of the company has expressed the hope that the working of the company for the current year "will not be too unsatisfactory."

Madras

THE overall trend of prices on the Madras Stock Exchange disclosed no perceptible change from the last week's levels.

TEXTILES Trading in this section was dull and featureless and mild selling pressure was seen in a few scrips. Maduras were easy at Rs 33.25, while selling enquiries were noted for Coimbatore Cottons, Coimbatore Spinnings, Coimbatore Pioneers and Kotharis. Virudhunagar, however, improved to Rs 32.25 on some buying enquiry. Metturs were quoted lower at 345, while Travancore Rayons were done at Rs 13 c.d.

PLANTINGS This section ruled comparatively steady, thanks to new investors taking interest in the market. Coffee shares were highlighted. Consolidated Coffees and Coffee Lands were taken up to Rs 24.75 and Rs 34.90 respectively. Business in Cowoodys were done upto Rs 9.50 c.d. following the announcement of an interim dividend and the issue of bonus shares. Shevroys had buyers at Rs 2.13 and Outchertons at Rs 4.87 to Rs 4.92 x.d.

In the Tea section, Periakaramalais moved between Rs 4.14 and Rs 4.20 with, Devasholas quoting Rs 18.40; Twyford at Rs 13.25 and Kallasas Rs 15.50.

Among Rubber shares, there was some demand for Kalpettas at the market rate, while Rajagiris improved to Rs 15 on better enquiry. Thamarapallis gained a rupee at Rs 25 with buyers at this level. Cochin Malabar changed hands at Rs 4.97 to Rs 5.02.

MISCELLANEOUS In this section, Cement shares were an active counter following reports that cement prices were likely to be increased shortly. Travancore were bid upto Rs 8.90 and Indias upto Rs 27.40. Sugar shares came in for selective support. Deccans were taken upto Rs 8.30 c.d. following the

interim dividend news, while EIDs were done at Rs 27.30. Among other scrips, FACTs remained unchanged at Rs 5.30 and Aluminium Industries at Rs 9.55. Metturr Chemicals were quoted at Rs 9.55; Ashok Leylands at Rs 4.25 and Parry's Confectionary at Rs 3.90 c.r.

New York

THE main feature of trading on Wall Street was the re-investment demand for some heavy industry shares. Gains of mostly fractions were spread over a fairly broad front with a few international Oils, notably Gulf Oil and Royal Dutch showing improvement exceeding a dollar.

While reporting declines in income as compared with a year ago, both General Motors Corporation and US Steel Corporation were able to cover dividends in the first quarter of the year, the issues responded to this with fractional improvements. On the other hand, Whelting Steel reported earnings of only 3 cents per share as against 2.12 and the issue declined by well over a dollar.

S. E. RLY. TENDERS

Sealed tenders are invited for tender No. CON/GM/10/GB5.58 for supply of 1000 Imp. Galls. paint red lead non-setting ready mixed to specification I.S. 102.50. Tender will be opened at 12 noon on 29.5.58.

Tender forms (not transferable) are obtainable from the office of the Controller of Stores (Construction Section) Garden Reach, Calcutta-23 at Rs. 5/- (not refundable) per set by money order to him direct in the case of outside firms and on production of Cash receipt from this Rly's Chief Cashier by local firms.

Tender forms should accompany the receipt for depositing earnest money of Rs. 1000/- from this Railway's Chief Cashier together with a valid Income Tax Clearance Certificate without which the tender is liable to be rejected. Contractors having permanent deposit of Rs. 1000/- with the undermentioned are exempted.

Trees of steel

When a well strikes oil, the first consideration is to stop it gushing. Such an occurrence, though spectacular and common in the early days of drilling, is wasteful. To counteract the pressure, therefore, the mud used during drilling is pumped into the well. The drill is then replaced by narrow tubing which stretches from the bottom of the newly discovered deposits to the 'Christmas Tree' on the surface. The latter is a system of valves which control the flow of oil.

Crude oil, by itself, cannot move. It usually lies between natural gas (on top) and water, so that when the oil trap is pierced by the well, any gas present seeks to expand and pushes down on the oil, driving it upwards. Or gas may be dissolved in the oil itself, and as it expands it pushes the oil to the surface. If, however, a large quantity of water lies below the oil, it forces the oil out of the porous rock

and into the well. Sometimes a combination of gas and water pressure drives the oil to the surface.

Normally this pressure is sufficient to keep a well flowing for some time. But as the porous rocks are drained, the pressure declines. Then one of several artificial methods can be used to keep the oil flowing. The 'Christmas Tree' can be replaced by a mechanical suction pump which draws the oil up to the surface. Or gas can be fed into the deposits (between the casing and the tubing) to mix with the oil and bring it to the surface. Or, as a last resort, gas or water can be pumped down a neighbouring well to recreate the original pressure.

Thirty or forty years ago, only a quarter of the oil discovered could be recovered. With today's production techniques a much larger recovery percentage is possible.

Indian Finance

INVESTOR'S SUPPLEMENT

Irregular Trend During April

Conditions in the Calcutta Stock Exchange have been somewhat irregular during April. The beginning was quite cheerful but by the end of the first week, sentiment turned rather subdued due to profit-taking. Though the sagging tendency persisted during the early part of the second week, equities staged a recovery in later dealings with the market ending the week on a steady note. There was again a brief recession during the third week but the close was on a firm note. Conditions turned somewhat dull toward the close of the month though the undertone continued to be steady.

The improvement in sentiment in the early part of the month has primarily stemmed from the growing confidence that Government's policies are becoming more sympathetic towards private enterprise. Since Budget Day, some important concessions and reliefs have been announced. The cotton textile industry has been granted a reduction in the excise duty on all varieties of mill made cloth. The repeal of the compulsory deposit of the reserves has given a welcome relief to companies. These have been followed by the relaxation of the provisions concerning the development rebate and the gifts tax.

The effect of the amendment to the Finance Bill in regard to the development Rebate will be as follows: In the first place, if the total income for any year before allowing development rebate falls short of the full amount of the rebate, the rebate to be allowed for that year will be limited to such total income. The balance of the rebate will be allowed to be carried forward for being claimed in the succeeding year or years. The number of years for which it can be so carried forward will be restricted to eight which is the number of years for which unabsorbed losses can be carried forward under the present law.

Secondly, the amount to be taken to reserve need not exceed 75 per cent of the development rebate claimed. The reserves so created will remain with the company and can be used for legitimate purposes as long as it is not used for the distribution of dividends.

The amendments thus first remove the restriction that the development rebate is to be debited to the profit and loss account of concerned "previous year". It is now open to the companies whose profits are inadequate to complete the allocation in the course of eight years. Moreover the funds in the development reserve account can now be utilised for all legitimate purposes by the company, the only restriction being that they should not be utilised for payment of dividends. Originally, it has been stipulated that the funds should be

used for the acquisition of assets for the undertaking or for investment in the undertaking.

The concessions have demonstrated that Government are now prepared to view every issue having a bearing on the working of the private sector from angles other than that of raising revenue for the Plan. In this regard it is to be noted that 1958-59 Budget has first of all shown that no fresh tax will be levied during the remaining part of the Second Plan period. In the past six, seven weeks there has been ample evidence that Government have realised that some of the restrictions and new imposts placed on private enterprise are retarding its orderly growth. There is a section who think that Authority will, in coming months, find it not very difficult to give more reliefs because even in regard to finding the required internal resources for the Plan, Government are already well on the way to attaining the target. The uncertainty regarding foreign exchange has yielded place to the optimism that assistance from foreign countries will help reduce the gap to manageable proportions.

Apart from these developments, there are other favourable indications. Firstly there is the confident expectation that the tea industry will be given some relief in the shape of a reduction in export duty. It is pointed out that the delay in announcing the relief is due to the practical difficulty in separating common tea for purpose of levying export duty. Steel shares are generally considered to be quite attractive because of the commendable progress made by the two steel companies in their expansion programme. Further there is the anticipation of an increase in the retention price of steel. As regards Indian Irons there is the expectation that the company will be allowed to issue bonus shares. The issue of a higher selling price for cement and coal is also expected to be settled favourably. The announcement by the Finance Minister that the level of deficit financing will be kept at the original estimate of Rs 1,200 crores has been a contributory factor for the steady undertone.

The irregular tendency that has characterised trading toward the close of the month has been largely brought about by reports of labour unrest in the two steel works.

Sectionwise, Jute shares were a generally steady market. In earlier dealings the undertone was steady following reports of good working by mills in the last accounting period. Sentiment was also helped by optimistic appraisal of the prospects of the industry consequent on the good progress of modernisation of mills and the

current satisfactory statistical position. With the rise in raw jute prices about the middle of the month, operators were reluctant to extend commitments in this section on the calculation that the rise in goods prices had been more than offset by the rise in price of the raw material. Toward the close of the month the undertone became somewhat steadier as the jute goods market showed signs of revival on reports of the receipt of foreign orders from a number of foreign countries. National which was quoting at Rs 22 ex-dividend in earlier dealings closed at Rs 23.87.

Though generally steady, coal shares were only selectively better. It would appear that the inordinate delay in the announcement of the revision in the selling price of coal is mainly responsible for the listlessness in this section. However, it is generally believed that the Government's decision when it comes will be favourable to the industry. Moreover there is the confident hope that private collieries will be given a larger share in the target for coal production under the Second Plan. But in the absence of any definite indications on this point and in view of the delay in the announcement of the selling price for coal, this section has not witnessed any expansion in activity though the undertone continues to be steady.

The tea section which displayed a steady trend most of the time developed a sagging tendency toward close. The cautious approach of marketmen was due to the conflicting rumours about the expected relief to the tea industry. Earlier in the month it was rumoured that Government would shortly announce a reduction in the export duty on common tea. About the middle of the month rumour had it that the delay was due to the fact that Government were contemplating an overall reduction in tea export duty. Towards close it was, however, reported that Government after all had decided to restrict the relief to common teas only. That operators were worried about factors other than the export duty became evident when they failed to show much enthusiasm even after the hint given by Mr Kanungo that an announcement regarding export duty reduction was not far off. It would appear that apprehensions about overproduction and the consequent lower level of prices were having a restraining influence on market sentiment.

Sugar shares were a steady market both on account of the satisfactory statistical position of the industry and in view of the possibility of exports. It is generally believed that there would be no over-production which may lead to

lower prices for the commodity. Moreover it is confidently expected that a scheme for the export of the commodity would be announced shortly.

Engineering shares were in good request under the leadership of Indian Irons, though toward the close sentiment was somewhat cautious. The support for Indian Irons had primarily stemmed from hopes of better prospects for the company. In the first place the company's expansion programmes are progressing according to plan. Secondly it is confidently expected that Government would allow the company to issue bonus shares. Yet another favourable factor is the report about the increase in steel retention price. Up to the middle of the month the scrip was in good request and at one time it was done above the Rs 22 mark. The slight recession in the price level toward close is to be attributed to the apprehensions about labour unrest in the company's works.

Miscellaneous shares were a steady market throughout the month, with selected scrips gaining ground on sustained investment support.

Textile shares were rather subdued in view of the uncertain outlook for the industry. It would appear that the recent reduction in the export duty on all varieties of cloth has failed to bring the expected expansion in offtake in the cloth market. Indications are that investors may not extend their commitments till definite improvement is seen in the offtake.

(Includes stock on hand.

(a) After transferring Rs 4,45,718 from Depreciation, Renewal and Extension Fund and Rs 2,19,000 from Dividend Fund.

(b) After transferring Rs 2,49,897 from General Reserve.

(c) After transferring Rs 525,000 from General Reserve and Rs 500,000 from Dividend Equalisation Reserve.

(d) After transferring Rs 50,000 from General Reserve.

(e) After transferring Rs 120,000 from Reserve Fund Rs 258,000 from Reserve for Taxation and Rs 23,888 from excess provision not required.

(f) After transferring Rs 730,179 from Reserve for Taxation.

(g) After transferring Rs 24,07,416 from dividend Equalisation Reserve.

(h) After transferring Rs 3,37,000 from Dividend Fund.

(i) After transferring Rs 8,00,000 from Machinery Replacement Reserve and Rs 18,400 from Reserve Fund.

(j) After transferring Rs 842,193 from General Reserve.

(k) After transferring Rs 70,000 from General Reserve and Rs 37,500 from Dividend Equalisation Reserve.

(l) After transferring Rs 205,000 from Dividend Fund.

(m) After writing back Rs 2,89,446 being excess provision not required.

(n) After transferring Rs 8,02,125 from General Reserve.

(o) Includes Rs 250,000 being adjustment on account of changes in stock valuation.

Restraining Influences

Investment Gossip:

FROM the behaviour of the stock markets during the past week, it is evident that operators are somewhat undecided about their future course of action. Even so, there is every indication that they are in no hurry to liquidate their holdings. In other words, they seem to think that, while certain recent developments have necessitated a cautious approach, there is no justification as yet to feel unduly depressed about the outlook for equities.

Among the factors which are now militating against an expansion of activity, the Central Loans are to be reckoned first. The fact that the loans are to a large extent for cash subscriptions has a direct bearing on the business in the stock markets as there will be a diminution in funds available for investment in equities in the immediate future.

The second restraining influence is the rather disturbing news about labour relations in the two steel works. Though earlier it has been thought that an amicable settlement will be reached, subsequent reports are not so encouraging. At the time of writing there are indications that the strike at IISCO works may be deferred. It is, however, still uncertain if the strike notice will be withdrawn.

The Planning Commission's suggestion that the gap in the internal resources of the Plan should be filled by taxation has revived the apprehension about fresh imposts. It may be recalled that the assumption that the worst in taxation during the Second Plan period has already been witnessed is one of the main factors influencing the revival of confidence in the Stock markets during the past few weeks. If fresh levies are going to be imposed, this is a matter that requires some thinking.

Reports that Government will make an announcement as regards the investment policy of LIC in the course of the next fortnight have also contributed toward the cautious mood of marketmen. For, the investment policy of LIC is a matter which is of vital import to stock markets; because this institution is now the largest single investor in equities and as such its investment policy is of considerable interest to operators.

Investment Notes:

INDIAN Cables have scored more than a point at Rs 30.75. There are strong rumours that the company has received Government sanction for the issue of new equity shares in the proportion of one share for every two shares held, at par.

Aluminium shares have been a firm feature during the past few weeks. Indian Aluminium are persistently enquired upto Rs 13.25 from Rs 13.00 and Aluminium Corporation upto Rs 10.94 from Rs 10.75. Prospects for the aluminium industry seem abundant and there is need to increase production. Three new plants are likely to come into existence soon.

Details of allotment against the recent equity issue of 35,000 shares by the Greaves Cotton Company are now available. It appears that a total of 64,000 applications have been received. Of this total, 50 per cent are said to be for 5 and 10 shares each. With the approval of the Bombay Stock Exchange authorities, the company has decided in favour of a proportional scale of allotment. Applicants for 5 shares will get 4 shares, while those for 10 shares will get 6 shares. It is understood that the posting of allotment letters will be completed by the end of the month.

The response from the public to the issue of shares by CEAT Tyres of India Limited is reported to be encouraging. The subscription list, which opened on Monday, will close on May 18. The list is kept open for a longer duration with a view to enabling a wider section of the public to participate in the issue.

The authorities of the Bombay Stock Exchange have decided to remove the "B" Ordinary shares of the Andhra Cement Company Limited from the cleared securities with effect from the 16th May on account of the failure of the company to comply with the prescribed listing requirements.

Midland Rubber & Produce Company has proposed to convene a meeting on the 30th May to consider the increase of the authorised capital from Rs 75 lakhs to Rs 1 crore, made up of 6,25,000 equity shares of Rs 10 each and 3,75,000—6 per cent Cumulative Preference shares of Rs 10 each by the creation of 2,50,000 equity shares of Rs 10 each. It is proposed to issue, as bonus, 1,35,000 equity shares of Rs 10 each in the proportion of one bonus share for every two existing equity shares, to holders as on the 15th July 1958, by capitalising a sum of Rs 13.50 lakhs from the Share Premium account and General Reserves.

Travancore Rayons Maintain Dividend

Balance-Sheet Reviews:

THE year 1957 was a year of profitless prosperity for the Travancore Rayons Limited as described by the Chairman in a circular letter to the shareholders. There has been a progressive rise in sales from Rs 1.94 crores to Rs 2.56 crores despite the labour strike, which affected production for about a month.

The net profit, before providing for Depreciation and Taxation, is lower at Rs 57.25 lakhs as against as much as Rs 66.78 lakhs in the previous year. The amount set aside to Depreciation is Rs 34.55 lakhs (Rs 34.29 lakhs). Depreciation has been reckoned for the purpose of accounts as a fixed percentage of the original cost. A clearer picture can, however, be had if the advantage accruing on account of the Development Rebate had been indicated. The transfer to General Reserve is lower at Rs 10 lakhs (Rs 20 lakhs). After maintaining the Ordinary dividend at 10 per cent, the amount carried forward is lower at Rs 1.78 lakhs as against Rs 2.64 lakhs brought in from previous year.

The third stage in the expansion programme for enhanced production of rayon by about 1.8 tons per day has been completed. A sulphuric

plant having a capacity of about 50 tons per day is to be installed, while proposals are under consideration for stepping up further production of transparent cellulose film. Licence for substantial expansion has been obtained and the schemes will be taken up as soon as acceptable terms regarding finance, credit facilities for deferred payments, etc, are finalised.

₹ ₹

Shree Sitaram Sugar

Shree Sitaram Sugar Company Limited has halved the dividend to 50 p per share for the year ended 31st August 1957 following a substantial decline in earnings. Although sales have risen to Rs 83.27 lakhs from Rs 83.19 lakhs, the net profit, after providing for Depreciation and Taxation, amounts to only Rs 72,884 as against much as Rs 3.24 lakhs in the previous year. The directors have set apart Rs 1.36 lakhs (Rs 1.32 lakhs) for Depreciation; Rs 48,000 (Rs 2.25 lakhs) for Taxation and Rs 41,529 (Rs 27,423) for Development Rebate Reserve. No provision is made for General Reserve as against Rs 1 lakh previously. The quantity of cane crushed is higher at Rs 26.18 lakh maunds against 26.10 lakh maunds; but the recovery percentage is lower at 9.6 against 10.57.

₹ ₹

Modern Mills

The Modern Mills Limited has earned a lower profit of Rs 3.20 lakhs for the year ended 31st October, 1957 as against Rs 5.77 lakhs in the previous year after providing

London and Overseas Representatives: Baptist Smith, Keith & Slater Ltd, Napier House, 24/7 High Holborn, London W.C. 1. Telephone: Holborn 5022.

Rs 3.37 lakhs for Depreciation against Rs 4.75 lakhs. Sales of yarn, cloth and waste have dropped from Rs 1.86 crores to Rs 1.62 crores, while closing stocks have gone up from Rs 52.36 lakhs to Rs 65.28 lakhs. The directors have proposed a dividend of Rs 5 per share on the increased capital against Rs 8 on the original capital.

The directors state that the company which, from its inception, was a subsidiary of the Mysore Spinning and Manufacturing Company, ceased to be a subsidiary on March 29, 1957 as the Mysore Spinning and Manufacturing Company reduced its holding of the Company's shares to below 50 per cent of the capital of the company by selling some of its right share in the market.

£ R S

Peermade Tea

Even with a record crop of 22,54,940 pounds for the year ended 31st December 1957 as against 18,87,956 pounds in 1956, it has not been possible for the Peermade Tea Company Limited to prevent a decline in earnings. Apart from an increase in working expenses, average prices realised were also lower. With the result, the profit per pound of tea worked out to only 9.13 cents in 1957 as against 30.96 cents. The Ordinary dividend has, therefore, been reduced.

The net profit, before providing for Depreciation and Taxation for the year, amounts to only Rs 7.26 lakhs as against as much as Rs 11.76 lakhs in the previous year. The amount set aside to Depreciation is Rs 1.19 lakhs (Rs 1.01 lakhs) and Taxation Rs 4.01 lakhs (Rs 4.91 lakhs). The Ordinary dividend has been reduced to 25 from 37½ per cent. The amount carried forward is lower at Rs 1.03 lakhs as against Rs 1.55 lakhs brought in. The estimates for 1958 provide for a crop of 19 lakhs pounds.

£ R S

Cambodia Mills

Despite a rise in sales from Rs 91.22 lakhs to Rs 1.26 crores, Cambodia Mills Limited has reported a loss, after providing for Depreciation, of Rs 3.89 lakhs for 1957 as against a net profit of Rs 92,303 in the previous year, mainly due to a decline in the profit margin on yarn sales. Moreover, the disparity between cotton and yarn prices made trading conditions extremely difficult and contri-

buted towards the heavy yarn accumulations within the industry. The Depreciation amount is raised from Rs 2.41 lakhs from Rs 2.18 lakhs. After transferring a sum of Rs 1.00 lakh from General Reserve, the directors have been able to provide Rs 16,983 for Wealth Tax and recommend a dividend of 5 per cent on the Ordinary shares, same as in the previous year.

£ R S

Rohit Mills

The Rohit Mills Limited of Ahmedabad has reported disappointing results for 1957. After providing Rs 10.21 lakhs (Rs 8.48 lakhs) for Depreciation; Rs 50,000 (Rs 3.12 lakhs) for managing agents' commission and Rs 50,000 (Rs 10.90 lakhs) for tax, the net profit is lower by Rs 10 lakhs at Rs 1.63 lakhs. A sum of Rs 1.60 lakhs has been transferred to Contingency Taxation Fund. The directors have, however, maintained the dividend at Rs 7 and bonus at Re 1 after transfer from reserves. Sales are slightly better at Rs 2.21 crores against Rs 2.10 crores.

£ R S

National Pipes

National Pipes and Tubes Company Limited has made a net profit of Rs 6.09 lakhs for the year ended 30th September 1957 as against Rs 7.05 lakhs in the previous year. This, according to directors' report, is due to higher provision of Rs 7.17 lakhs for taxation as against Rs 5.05 lakhs. A sum of Rs 1.52 lakhs (Rs 1.65 lakhs) has been provided for Depreciation, while a sum of Rs 77,000 has been provided for taxation (being short provision in the previous year) and Rs 1.00 lakh to General Reserve. A dividend of Rs 2 per share has been recommended on the Ordinary shares.

According to the directors' report, the demand for the company's product continues to be good. The company's programme of increasing the installed capacity for the manufacture of non-ferrous products is being pursued in right earnest; unfortunately due to foreign exchange difficulties, it has not been possible to import additional plant so far. Steps have taken to increase the activities of the company by the manufacture of such additional articles which are likely to augment the income of the company. The prospects for the current year may be considered satisfactory.

Scheduled Banks: The Problem of Interest Paid

HOW good a year was 1957 for the banking system? The question does not permit of a clear-cut answer, because the trends obtaining during the twelve month period have been partly heartening and partly otherwise. The major development of favourable import is the rise in Deposit resources which, during 1957, has been of remarkable proportions. But the price that has had literally to be paid—rather, the price that has been paid and which could have been avoided—has been onerous. On the one hand, the accretions to resources have rescued the banking system from the over-extended position in which they had lately found themselves. On the other hand, however, the higher money rates obtaining have caused a disquietingly steep increase in the operating costs under the head of interest paid. Thus, while the general outlook for the banking system must be deemed to be encouraging, it would be folly to ignore the impact already discernible of high money rates, and of the repercussions that these might have on the future of banking earnings. It is in this light that we may study the performance of the Big Nine among the Indian Scheduled Banks.

The Deposits of the Big Nine have risen from Rs 654.97 crores in 1954 to Rs 956.84 crores in 1957. With 1954 as base, the index for Deposits of the Big Nine has risen to Rs 146.1 in 1957, this contrasting with the figure of 115.5 for 1956. Of course, the bank that shows the largest absolute increase is the State Bank of India, whose Deposits during 1957 alone rose by Rs 124.40 crores. Every single one of the Big Nine has reported an increase in Deposits. The largest increases for 1957, both proportionately and in absolute figures, go to the credit of the Bank of India (up by Rs 13.05 crores to Rs 82.60 crores), the Central Bank (up by Rs 16.14 crores to Rs 154.87 crores), the Punjab National (up by Rs 18.22 crores to Rs 124.61 crores) and the United Commercial (up by Rs 8.93 crores to Rs 61.07 crores). If the period from 1954 were taken into account, the greatest improvement as such has been recorded by the Punjab National Bank, whose Deposits in the period show a rise of nearly Rs 49 crores. Whereas in 1954, the Punjab National figured as trailing the Central Bank by Rs 48 crores, the differential in 1957 has been reduced to Rs 30.26 crores.

Another portfolio that shows a smart rise is Advances. Loans, Cash Credit and Overdrafts of the Big Nine have risen from Rs 283.24 crores in 1954 to Rs 460.16 crores in the latest year; the 1957 figure works out to 162.5 per cent of the 1954 base. The other head, Bills Purchased and Discounted, shows a slightly larger proportionate rise from Rs 45.81 crores to Rs 81.49 crores; the index for 1957, with 1954 as base, is 177.9. Here, too, the largest absolute increase in Loans, Cash Credit and Overdrafts is registered by the State Bank, the relevant figure having risen from Rs 94.65 crores in 1954 to Rs 154.61 crores in 1957. The largest proportional increase is registered by the Punjab National, with Loans, Cash Credits and overdrafts rising over the period from Rs 27.69 crores to Rs 59.71 crores. The two other steep rises in the portfolio belong to the Bank of India (up by Rs 16.31 crores at

Rs 49.63 crores) and the Central Bank (up from Rs 51.34 crores to Rs 84.49 crores). As far as Bills Discounted are concerned, the predominant user of central bank credit against usance bills, the State Bank, reports a prominent increase from Rs 6.17 crores in 1954 to Rs 18.87 crores in the latest year.

It is interesting to note that, in spite of the sharp accretion to Deposit resources, the 1957 level of borrowings is more than double the figure for 1954, although the latest figure shows a very substantial drop from 1956. During 1957, as compared to 1956, borrowings have declined by nearly Rs 32 crores. Here, every bank has shared in the reduction in the indebtedness to other banking companies.

Cash Balances rose particularly sharply during 1957 by Rs 46.87 crores over the 1956 figure to Rs 138.04 crores. Here, too, the rise is general among the Big Nine.

In regard to investments in gilt-edged, it is rather interesting to note that a mixed trend obtains. Only four of the Big Nine have added to their gilt-edged portfolio during 1957. The steepest disinvestment is reported by the Punjab National, with the portfolio declining by Rs 9.33 crores. Of the four banks which have purchased gilt-edged during 1957, the rise is negligible except in the case of one. Thus, it may be said that the rise in the gilt-edged holdings of the Big Nine of Rs 57.63 crores to Rs 320.51 crores, is owing mainly to the State Bank, whose portfolio marked an increase during the year of Rs 77.59 crores.

Turning to the profit and loss account, we find that the income by interest and discount rose substantially during the year by Rs 6.74 crores to Rs 32.76 crores. The figure for 1957 works out to 158.8 per cent of the 1954 level. Notable increases have been registered by the Bank of India, the Central Bank, the Bank of Baroda, Punjab National and the United Commercial, not to speak of the State Bank. On the other hand, in respect of the income from Commission, Exchange and Brokerage, the rise during 1957 is a small one of Rs 1.21 crores to Rs 9.41 crores. Only four of the Big Nine reported an increase under this head. The largest absolute increase is recorded by the State Bank, while the largest proportionate increase is claimed by the Bank of Baroda. The index of the income by Commission, Exchange and Brokerage, with 1954 as base, was placed at Rs 172.7 in 1957.

The total income, of course, marks a rise, and again all nine banks report an improvement.

The ominous development to which we have referred is in regard to interest paid. This charge has risen by nearly 50 per cent in a single year to Rs 16.25 crores from Rs 11.01 crores. If the State Bank has benefited by the accretion of a larger quantum of Deposits than any other bank, it has paid dearly; interest paid is more than doubled from Rs 1.59 crores in 1956 to Rs 3.40 crores in 1957. Of all the banks, the Indian Bank reports the smallest increase in interest paid, the figure rising only by Rs 6.61 lakhs to Rs 83.81 lakhs.

Similarly, the balance of profit, which had shown a steep increase in 1956, shows a much more moderate rise of Rs 0.52 crores to Rs 6.66 crores. Two of the banks actually report a

Indian Finance

Established 1928

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

decline in the profit, and large increases have been reported only by two others. The State Bank's balance of profit rose from Rs 1.56 crores in 1956 to Rs 1.87 crores; and the Punjab National registers a smart rise from Rs 0.88 crores to Rs 1.11 crores.

Two of the Big Nine do not disclose the provision made for taxes. They are Allahabad Bank and the State Bank. But the published provision of the other seven rose by Rs 0.19 crores to Rs 1.52 crores in 1957, and the figure for 1957, expressed as a percentage of the 1954 level, works out to 191.8 per cent. The transfer to Reserve is also somewhat higher, but this is entirely due to the stepping up of the provision by the State Bank. From 1957 profits, only four of the banks have made transfers to Reserve whereas, in 1956, as many as seven of the banks had done so.

On the basis of an approximation for the Staff Bonus payable by the Allahabad Bank during 1958 and in respect of 1957 profits, this head for the Big Nine absorbs Rs 1.52 crores against Rs 1.41 crores in 1956. Staff Bonus and Funds have risen almost exactly by 50 per cent since 1954.

Finally, in the matter of dividends, there is again a rise of Rs 0.18 crores to Rs 2.56 crores. However, the rise since 1954 in the amount disbursed by the Big Nine works out to rather less than 20 per cent.

Of the major changes that have occurred in the Appropriation Account, mention may be made of the very sharp rise from Rs 16 lakhs in 1954 to Rs 50 lakhs in 1957 in the provision made for taxes by the Punjab National. It is also worth remarking that the United Commercial has transferred Rs 54 lakhs to Reserve in the course of the last four years. The Punjab National has, during the same period, provided Rs 94 lakhs for Reserve and Contingencies. These two banks, again, share the limelight in regard to the Staff Bonus and Funds. While Punjab National has stepped up the appropriation from Rs 10 lakhs in 1954 to Rs 18 lakhs in 1957, the United Commercial has nearly tripled the provision from Rs 2.50 lakhs in 1954 to Rs 7.00 lakhs in the latest year. Only three banks among the Big Nine have not raised their dividends during this period. Of the banks that have increased their dividend distribution, the most notable increases in the amount disbursed are registered by the Punjab National (up from Rs 10.50 lakhs to Rs 21.25 lakhs) and the United Commercial (up from Rs 7 lakhs to Rs 15 lakhs).

For the Big Nine, the ratio of gross income to Deposits works out to 4.5 per cent in 1957, against 4.6 per cent in 1956. With the sole exception of the State Bank, the other eight banks have experienced a rather better ratio than this. The State Bank's ratio of gross income to Deposits fell from 3.6 per cent in 1956 to 3.2 per cent in 1957. United Commercial and Indian Bank both shared the honours for the highest ratio in this regard at 6.0 per cent.

As for the ratio of balance of profits to deposits, the Bank of India has the distinction of being the only one among the Big Nine to have reported a return of slightly more than one per cent. The Bank of India's ratio of balance of profits to deposits works out to 1.3 per cent, as against 0.70 per cent for the Big

Nine. United Commercial is placed next at 0.98 per cent, and the Indian Bank is third at 0.91 per cent.

We should like again to draw attention to the fact that, whereas, as between 1954 and 1957, the total income of the Big Nine rose by Rs 16.16 crores, the rise in the two major heads of expenditure has almost kept pace.

During the period, interest paid has risen sharply by Rs 8.74 crores, and, in 1957 alone, the charge under this head increased by Rs 5.26 crores. Salaries and Allowances also showed a rise, but the increase is very much smaller at Rs 3.96 crores. In broad terms, the higher charge of interest paid and Salaries and Allowances has worked out to Rs 12.70

crores; and, as against this, the gross income rose by Rs 16.16 crores, resulting in the balance of profit rising by Rs 2.18 crores.

Unless action is taken to halt the dangerously rising trend in the interest paid on Deposits, we fear that the banking system may soon experience a reduction in its earnings because of the squeeze effect by rising operating costs.

Heads of expenditure			has almost		kept pace.		and Allowances has		worked out to		(In Lakhs of Rupees)

Litigation Ad Nauseam

M. SUR

OF litigation on labour matters there is no end. In addition to the hierarchy of industrial courts, with possible appeals to High Courts and the Supreme Court, on wages questions there is also the Payment of Wages authority and appeal, but reference to a civil court on a question of overtime is an unpleasant novelty. A case in the City Civil Court of Calcutta has opened up this possibility of further complications. The case concerned a steamer company and has a curious history. In 1949 an Industrial Tribunal award

laid down rates of overtime for clerical staff in the steamer company's Calcutta offices, both for weekdays and Sundays and holidays. There was no appeal against the award and for 8 years the ruling laid down by the tribunal had been followed without any objection from the staff, although there was a recognised union which had discussed with the management many other points arising out of the award.

In 1957, due to an error, it was discovered that weekly overtime in one department had

for a period of nearly 4 years been paid at single time instead of 1.25 times the normal rate. The company therefore advised the head of the department to arrange to calculate and pay the difference between the amount actually paid to the staff for overtime and their correct dues. This mistake only concerned weekly overtime, but in making the calculation the establishment section included an amount said to represent arrears on Sunday and holiday overtime, calculated at the rate of two extra days' wages for each Sunday and holiday worked. The bill was passed and the payment was made without the authorities discovering the unauthorised inclusion of overtime for Sundays and holidays.

May 10, 1958

The 1949 award had ruled that "those who are employed on Sundays and holidays very frequently, shall get double of their normal pay (i.e. one extra) for Sundays and holidays worked without any substitute holidays" and added that "those who are employed on 3 Sundays and holidays or more in a month shall be deemed to have been employed frequently during Sundays and holidays." Since monthly paid staff are by convention understood to be 'paid' for Sundays and holidays in the sense that their daily rate of pay is arrived at by dividing the monthly rate by the total number of days in the month rather than by the number of working days in the month, this award was interpreted by the company (and apparently by the union also until 1957) to mean that anyone working on 3 Sundays or holidays or more in a month was to be paid one extra day's salary for each day so worked, and this was the practice that had been followed in all the departments. Owing to the nature of the steamer company's work and the necessity not to hold up vessels, work on Sundays and holidays for some sections of the staff was fairly common.

Payment of the arrears due in the one department led, not unnaturally, to a demand from the clerks of the other departments for payment for frequent Sunday and holiday work at double rates, which in effect meant payment at treble rates because the staff were already 'paid' for Sundays and holidays and were asking for double time on top of that.

When the company realised the error made in the payment of arrears, orders were issued to recover in one lump sum the excess amount paid to the staff. When the staff represented that this would be a hardship, the company suggested quite reasonably that the excess should be set off against overtime and Sunday or holiday work done in future. This the staff refused to accept and reference was made to the conciliation officer and after discussions with the parties the Labour Commissioner wrote to the union that: "The matter was referred to Government and this Directorate has been advised that in the case of monthly rated workers whose normal monthly salary covers Sundays and holidays, they would be entitled to receive an additional day pay (i.e. one extra day's pay) for each Sunday or holiday for which they have worked and not additional two days' pay." This seemed clear enough, but the employees were not satisfied. They could not have the matter referred to adjudication, so they cast about for some other form of litigation. They might, presumably, have gone to the Payment of Wages authority with a complaint about deduction from pay, but they decided to raise their case before the City Civil Court, claiming that the award should be interpreted as double of their daily wages for working on Sundays and holidays, exclusive of their monthly salaries.

The amount which had been paid in excess and which the company sought to recover was approximately Rs 19,000. The Civil Court's jurisdiction does not extend to recovery of such a large sum, but the plaintiffs by valuing their suit at the nominal amount of Rs 100, persuaded the court that it had jurisdiction, since the central relief asked for was the interpretation of the tribunal award and not any objective valuation.

The court held that under Section 72 of the Indian Contract Act if the company's interpretation was correct, they were entitled to correct a mistake and could legally recover the sum paid in error. On the interpretation of the award, however, the court held that "the workers constituting the plaintiff union are entitled to double of their daily wages for working frequently on Sundays and holidays without any substitute holidays in addition to their monthly salaries", and explained the parenthesis in the award, "i.e. 1 extra" as

pointing to the fact that "out of the double wages one is to be extra."

The judgment is curious, to say the least, when compared with the ruling of the Labour Commissioner, and doubtless the case will go to appeal, but what is of vital importance is that if it is open to civil courts to interpret awards—and awards which have run without challenge for 8 years—then industry is faced with a chaotic situation, and industrial relations will suffer.

TRANSFER

The average human being, whatever his politics, is incurably conservative over changes, particularly changes in his normal routine. So transfer from one job to another, or from one place to another is usually viewed with disfavour unless coupled with promotion or increase in pay. To the civil servant transfer is a normal incident of his employment, however much he may grumble about it in private, but in industry there is constant trouble over transfer so that employers begin to wonder what, under the 'new deal' for labour, their rights are. Even, it seems, agitation in private industry has spread to the public sector and Government, for they too are not without their troubles when it comes to shifting a whole department or section from one place to another.

This uncertainty can be largely dispelled by a study of cases in recent years, for transfer is a subject on which the industrial courts have been definite and unanimous. Two awards by the Labour Appellate Tribunal in 1954 cover most of the ground, and they have not been challenged. In the case of Diwan Sugar & General Mills Ltd. (LLJ '54 I 36) the appellate court held that refusal to comply with an order of transfer was misconduct, and, following an earlier

Test of the Plan

In his address to the Associated Chambers of Commerce in Calcutta last December, the Prime Minister recalled a significant observation of Mahatma Gandhi. The Mahatma, Mr Nehru said, used to say that, whenever a problem arose, efforts should be made to judge the effect of it on the poorest people. This he added was the criterion which India had placed before it in formulating its social objectives. The Prime Minister has returned to the same point in his inaugural address to the annual meeting of the All India Manufacturers' Organisation held in Delhi last week. The speech which covered a broad compass is of considerable importance, because it was made on the same day that, yielding to the importunities of his colleagues and the Congress Party, the Prime Minister gave up the idea of temporary withdrawal from office. The observations he has made may also provide a clue to why he is feeling ill at ease and out of tune with the way things are shaping in the country as a whole. He is evidently distressed by the lack of understanding or deliberate misunderstanding of the basic objectives of India's plan for economic development. Those who ostentatiously accept all the objectives, do not hesitate the next moment to advocate policies which would lead in the contrary direc-

tion. The Prime Minister has emphasised that the country could develop only when the quality of the people at the base of the social structure, and not merely at the top, were raised. The Prime Minister is determined that they shall no longer remain the forgotten men whose woes and worries are nobody's concern. Every programme whether in the field of taxation imports or investment, must be judged by its impact on the lowest strata, the poorest of society. The test of the success of planning, as the Prime Minister said, would be the number of slums in the country. If the spokesmen of private sector would adopt this as their yardstick, they may be able to make out a better case, even if it is a case for reduction of taxes. Instead of constantly harping on the difficulties of industrialists caused by Government's economic policies, they might for a change attempt an objective study of the effects of Government's taxation measures and import restrictions on the employment situation in the country, especially of people low in the social strata.

Plea for Development

What the textile industry and the trade needs today is not so much regulation and control, as promotion and development. This point was effectively made in discussions between the Textile Commissioner and the Bharat Chamber last week. The change that has taken place in the pattern of production and consumption of cotton textiles will reinforce this conclusion. While production of mill cloth has increased from 5094 million yards in 1955 to 5317 million yards in 1957, the domestic offtake has declined from 4645 million yards in 1955 to 4265 million yards in 1957, according to the figures furnished by the Chamber president. The sharp increase in excise duties last year, which imposed an additional burden of nearly Rs 45 crores, may provide part of the explanation for the fall in demand. Now the excise duties have been reduced; but the tax burden continues to weigh as heavily as in the past, on certain lines of textiles, because of sales tax levied by the States on products made out of cotton cloth. The merger of sales tax with the Central Excise has not brought any relief to this category of cotton goods, which includes ready made garments and waterproofed canvas. On the contrary, the State Governments apparently argue that the reduction of Central excise duty justifies the continued imposition of sales tax on these products. Dress habits and consumption patterns are changing rapidly and a substantial proportion of cotton textiles are marketed in the form of ready-made garments. Retention of sales tax on these items at previous levels will defeat the purpose of the reduction of the Central excise duty, and the case for reduction, if not abolition, of the sales tax

deserves sympathetic consideration. Such action will be in line with the needs of promotion and development of the market for cotton textiles. In this connection it may be added that the ready-made garment industry provides employment to a large number of skilled workers.

Broadside on Chaprasis

Pedantic critics may profess to see a contradiction between the Prime Minister's concern for the welfare of human beings at the base of the social structure, which he put forward as the test of planning at the AIMO meeting, and the broadside he delivered on the institution of Chaprasis on the same occasion. They will be aided and abetted in this view by those of the official hierarchy who are unable to get on without the ministrations of a horde of chaprasis. They will be able to argue that the disbandment of the army of chaprasis will aggravate the problem of unemployment. But both will miss the essential point of the Prime Minister's criticism. The existence of a large number of able-bodied adults who are willing to spend their lives strutting about the corridors of Government offices, arrayed in gorgeous livery, is a pointer to the chronic malaise in our society. It only confirms the conclusion that the condition of the poorer classes of society is so bad that even a menial job in a Government or commercial office has come to be regarded as a position of dignity and privilege. It cannot be seriously maintained that chaprasis aid in the expeditious dispatch of work. There are American offices which are able to get on very well without the assistance of chaprasis. The set up in Government and commercial offices, under which every officer regards at least a couple of chaprasis as the minimum required to maintain his dignity and status, is a survival of the feudal tradition. Overpopulation and unemployment provide the shadow of justification for the continuance of the institution under a democratic regime. But an administration which rests on a solid base of chaprasis is disabled by its very nature from effecting the social and technical changes necessary to provide full employment. A Government which claims to serve the people cannot ignore the fact that the chaprasis act as effective buffers between the officers and the public they are supposed to serve. The mental isolation of the Administration from the general public will last so long as the institution of chaprasis continues in its present form. The intelligence and talents of the individuals who work as chaprasis could surely be used to greater national benefit. Failure to do so may divert these very talents along undesirable channels. After all it was some chaprasi of the Government of India secretariat in New Delhi who coined the eloquent expression, "Deshmukh Saheb-kachiti". That was in the days when Sir Chintaman Deshmukh was the

Indian Finance

Governor of the Reserve Bank of India and his signature appeared on currency notes.

Import Quotas for Photo Goods

Photographers, along with the cinema industry, have been hard hit by the restrictive import policy. The cut in import of raw film threatens wide-spread unemployment in the cinema industry. Considering that the foreign exchange involved is not more than Rs 2 crores, the cut in the quota of raw film does not appear to be reasonable, especially when the foreign exchange spent could be recouped by exports of films to South East Asia. Because of restricted quota of imports, professional photographers experience considerable difficulty in carrying on their avocation. Apart from the curtailment in the total volume of imports, the impact of the restrictions on different products, and the firms dealing in them, has not been even, so that there are invidious distinctions between firm and firm. While the imports of products handled by a few firms are likely to increase, others have to face the prospect of closing down on account of drastic cuts. The long term solution of the problem is the indigenous manufacture of raw film and photo goods. Government, it is reported, have some proposals under consideration. In the meantime, action is necessary to relieve the immediate difficulties of the trade and consumers. While the need for conserving foreign exchange will be readily conceded, the Government should also be alert to cases of undue hardship which may result in slowing down of economic activity and consequent unemployment.

May 10, 1958

Good Omens on New Loan's Eve

THE list for the New Loan opens on May 12 and it is scheduled to close on May 14, with the right to the authorities to close the list earlier as and when it appears that subscriptions have been received for the full amount. The amount on offer is Rs 135 crores; but, in terms of the convention now well understood, applications for 10 per cent of the amount on offer can be accepted in excess of the target if there should be over-subscription. All present indications are that the response will be superlatively good. This means, that the total proceeds from this programme may turn out to be very nearly Rs 150 crores.

Enquiries in banking circles go to show that preparations are being made for investing in the New Loan on as substantial a scale as possible. This welcome change on the part of the money market interests toward the New Loan is inspired not only by the earlier advent of the slack season, but by expectations that the 1958 slack season will be particularly slack. The latest money market returns provide the heartening assurance that the slack season, just begun earlier than usual, is getting into stride in more convincing style than we had known for some years. As on May 2, the reserve balances of the banks show a significant increase contrary to the trend associated with the beginning of the month. Active note circulation, in spite of month-early disbursement, shows a rise of less than Rs 0.50 crores. It is not unlikely that, on the actual eve of the New Loan, reserve balances will surpass Rs 100 crore mark; and the gross cash balances of banks exceed Rs 200 crores. It is equally pertinent to remember that, for a number of weeks, central bank credit extended to Scheduled Banks has been only around about Rs 20 crores. There are reasons to think that almost the entire quantum of advances thus taken by banks from the Central Banking Institution is accounted for by Exchange Banks. In spite of the recent reduction in the Bank of England rate to 6 per cent from 7 per cent, it is hardly worthwhile for Exchange Banks to bring in funds from London. Thus, for quite a considerable time, Exchange Banks have been financing their Indian operations with resources raised in India. It is, therefore, obvious that the State Bank of India and the Indian Scheduled Banks taken together are, at the

moment, more or less entirely free from indebtedness to the Reserve Bank. The banks have a comfortable cash position. Their deposits are persistently on the rise. Their advances are equally persistently on the decline. The ratio of advances to deposits is well in sight of 50 per cent. If the present trends continue, a ratio of 50 per cent in respect of bank advances to bank deposits may become a reality in the course of June.

The attainment of such a position may be expected to make the banks sit up. For, over the past 2½ years, bankers have allowed themselves to be obsessed with a sense of monetary stringency. This predilection for dear money rates has been persistent in spite of the banking system benefiting to the extent of over Rs 500 crores from additional deposits since the Second Plan began its course. How is it that such a flood tide of deposits made, in effect, no difference to the sentiment of dear money in banking circles? For our part, we have been drawing repeated attention to this important development of Government disbursements returning to the banking system in speedy style and substantial volume. But, banks have clung to the notion of dear money and continue the practice of high deposit rates. This is, we believe, entirely because bankers have had their gaze fixed exclusively on the ratio of advances to deposits. This ratio in the case of Exchange Banks has been nearly 100 per cent. In the case of Indian Scheduled Banks, the ratio has been steadily falling in recent months; and, as we have said, a level of 50 per cent of this ratio seems to be in sight. Once banks see that their advances are falling below 50 per cent of their deposits, the psychological effect will be something of a shock. With startling suddenness, bankers will realise that they are paying nearly 4½ per cent for deposits, which they cannot use remuneratively in business loans. They will realise that they have been turning away clients without pausing to think that the borrower too will have his day. We believe that, once the market recovers from the disturbances caused by the Centre's New Loan and by the State loans, conditions in the money market will compel banks to revise their ideas about the rates that they can offer for deposits and to readjust their attitude toward good borrowers. In a word, we anticipate that natural forces will bring about a normalcy in money market sentiment and in money rates; and that these anticipations may be expected to be realised in 1958 slack season.

Just as the sheer weight of new funds seeking asylum with banks as deposits may be expected to restore order and decorum to the structure of interest rates, so may a like change for the better occur in the structure of gilt-edged yields as a result of the pressure of funds seeking investment in gilt-edged securities. In the course of the last four or five months, the Re-

serve Bank is reported to have sold considerable parcels of securities through the tap. Most of these sales have been required to meet the demand set up by the snow-balling funds of provident fund institutions. Anything like Rs 100 crores would appear to have been thus disposed of by the Reserve Bank. No confirmation of this estimate is available; but there is no gainsaying the fact that, all through the so-called busy season, demand for Government securities has been persistent. In the face of sales of securities on so big a scale, the tap rates for open market operations should reveal more strident advances. It is now being realised that provident fund institutions have emerged as a continuing and powerful bullish influence in the gilt-edged situation. The recognition of this development should release natural forces that will restore orderliness to the structure of gilt-edged yields.

Swelling Reserve Balances

THE returns of the Reserve Bank for the week ended May 2 disclose trends contrary to what may be expected at the beginning of the month. Total notes register a decline of Rs 11.29 crores to Rs 1640.78 crores. Active note circulation shows a nominal rise of Rs 0.49 crores to Rs 1619.62 crores. Foreign securities for Rs 24.09 crores have been transferred from the Issue to the Banking Department. This contraction is partly offset by an addition of Rs 14.09 crores to rupee securities. Deficit financing is thus Rs 14 crores, mostly incurred for the purpose of beginning-of-the-month payments

of the Centre. Rupee coin has gone out into circulation to the extent of Rs 1.28 crores. In the Banking Department, the Centre's deposits, in spite of created money for Rs 14 crores, are down by Rs 3.40 crores to Rs 49.65 crores. The deposits of the State Governments show a rise of Rs 0.48 crores to Rs 16.12 crores. The States have improved their position in spite of reducing indebtedness to the Reserve Bank on Ways and Means account to the extent of Rs 1.61 crores. The reserve balances of member banks have increased by Rs 4.35 crores to Rs 49.49 crores. On the assets side, foreign balances show a rise of Rs 19.02 crores to Rs 58.03 crores. As the transfer to this Department from the Issue Department is Rs 24 crores, it may be assumed that the net decline in the Reserve Bank's sterling assets, during the week, is of the order of Rs 5 crores. Investments are down by Rs 2.69 crores to Rs 224.58 crores. There is heartening evidence herein of the continued demand for securities through the tap. With the announcement of the terms and conditions of the New Loan, however, all sales through the tap may be presumed to have been stopped. "Other Loans and Advances" show a rise of Rs 2.33 crores to Rs 57.02 crores.

The returns of the Reserve Bank for the next week may, therefore, be expected to bear the full impress of the advancing slack season.

The returns of the State Bank of India for the week ended May 2 reveal a slight rise in deposits to Rs 422.20 crores from Rs 422.12 crores in the previous week. Borrowings from other banks have continued to be nil, while other liabilities are shown at Rs 3.84 crores against Rs 3.41 crores. On

the assets side, cash balances have declined by Rs 3.01 crores to Rs 40.38 crores. Investments are higher at Rs 190.97 crores against Rs 190.79 crores.

According to the consolidated statement of the Scheduled Banks for the week ended April 25, both demand and time liabilities have risen, the former by Rs 1.91 crores to Rs 774.79 crores and the latter by Rs 5.39 crores to Rs 768.70 crores. Borrowings from the State Bank are lower by Rs 1.05 crores at Rs 6.55 crores against Rs 7.60 crores, while those from the Reserve Bank are higher by Rs 0.10 crores at Rs 19.85 crores. Cash balances have risen by as much as Rs 6.14 crores to Rs 200.62 crores, and Investments by Rs 1.74 crores to Rs 445.01 crores. Advances in India are shown at Rs 797.15 crores against Rs 800.26 crores; Inland Bills at Rs 118.14 crores against Rs 116.66 crores and Foreign Bills at Rs 40.97 crores against Rs 40.52 crores.

Wage Disputes and Sterling

Paul Einzig

ALTHOUGH the long and exceptionally severe winter weather gave at last to smiling cloudless spring, the horizon of industrial relations remaining as cloudy as ever. At the time of writing a transport strike appears to be practically certain. The Amalgamated Engineering Union put forward a demand for a 10 per cent increase of wages and for a reduction of the working week. Other important trade unions have decided to follow the example. And since employers both in the nationalised industries and in the private sector seem to be determined this time not to yield, it is difficult to see how a

series of major strikes could be avoided.

Should we witness a number of strikes it would be in keeping with past experience. There is always an epidemic of wage conflicts at the beginning and at the end of a boom. At the beginning employers refuse wage demands because they do not yet realise that they could add the wage increases to their prices. At the end of a boom trade unions insist on wage demands because they do not yet realise that it is no longer possible to add increases to the prices. So it seems history will repeat itself.

Sterling remained quite firm in spite of the aggravation of the labour situation. Nor did the Stock Exchange respond to the prospects of trouble. The explanation lies in the favourable impression caused at home and abroad by the firmness of employers and of the Government in face of unwarranted wage demands. Until quite recently it was widely assumed that appeasement would prevail, and that the inflationary wage spiral would resume its course. Even now it is not absolutely certain that the Government will not give way at the last moment, though at the time of writing it does not look like it.

Admittedly, the immediate effect of this firm attitude will be a crop of strikes, causing a sharp fall in the output and in exports, and a decline in the gold reserve. But, taking a long view a firm attitude is bound to bear its fruits. It is hoped that it would check inflation, in which case the losses suffered during the next few weeks or months would soon be regained in the sphere of output and exports.

In any case the reserve position is in reality much stronger than is generally realised. According to an official statement, the total of dollar securities held by British residents, which have been declared to the Bank of England and which could,

be commandeered if necessary for the support of sterling is about \$3,000 million. This more than doubles the visible gold and dollar reserve, so that Britain would be well in a position to face a deterioration of the balance of payments as a result of strikes. It also enables the Treasury to meet pressure that is liable to arise through the deterioration of the balance of payments of raw material producing countries of the sterling area.

This being so it is difficult to see why the Government should be so anxious to secure large dollar facilities to reinforce the reserve. The latest reports suggest that the raising of dollar capital for the financing of atomic power development is under consideration. The idea is not altogether new. Years ago it arose in conjunction with the financing of British hydro-electric power development. That project was not proceeded with, however, and it is by no means certain that it has now been adopted by the Government in a modified form.

It would be utterly pointless to raise capital for that purpose from the World Bank or from other dollar sources. The equipment would be produced in Britain, so that the project can well be financed with the aid of sterling, and there should be any amount of sterling available for that purpose. The transaction would simply amount to raising dollars for the reinforcement of the gold reserve.

Those in favour of a big dollar loan argue that Britain would pass to the Commonwealth raw material producing countries the bulk of the proceeds of the transaction. The idea is not very attractive, however. The larger countries of the Commonwealth have direct access to the dollar resources of the World Bank. There would be no object in straining Britain's credit to the utmost to achieve that end.

Indian Finance

If the outcome of the present labour troubles should be satisfactory Britain would need no support for sterling. The abandonment of excessive wage demands, or the defeat of the strikes, would be followed by an improvement of the British balance of payments and a strengthening of confidence in sterling. Britain would soon be in a position to be able to export capital without endangering the stability of sterling. On the other hand the success of the wage demands would change the situation so much for the worse that even the largest dollar loan imaginable would be unable to protect sterling. In any case, should inflation be resumed there would be no justification for lending to Britain.

There is indeed a growing feeling in London that the Government, instead of thinking in terms of borrowing more dollars, should take the earliest opportunity for repaying what it owes. Once the danger of major strikes has passed there will be no justification for holding on to the dollar facilities arranged under totally different conditions.

The fact that the reduction of the Bank rate to 6 per cent on March 19 was not followed up by further reductions is taken as an indication of the Government's intention to fight it out on this occasion. Further Bank rate reduction at the present juncture would be interpreted as a sign of weakening. The Prime Minister and other senior members of the Government repeatedly declared their firm determination not to relax resistance to inflation prematurely. If they mean what they say and there is now good reason for hoping that they do the outlook is bound to undergo considerable improvement in the not too distant future.

as one rupee. Whole Leaf grades met with good competition and were stronger and dearer. Following rates were quoted: Plain Broken Pekoe Rs 1.45; Low Medium Rs 1.55 to Rs 1.75; Medium Rs 1.75 to Rs 2.00; Good Medium Rs 1.95 to Rs 2.40 and quality Rs 2.40 to Rs 4.40.

In the Internal Sale held in Calcutta this week, offerings were 19,318 packages of Dusts. There was a strong general demand with orthodox as well as CTC teas. CTC teas were a strong feature, particularly the grainy types, and prices were firm and generally dearer especially at the close. The derer fully firm, while the remainder in this category opened from 4 proved as the sale progressed. Commons were about firm, while Mediums were firm and sometimes dearer. Following rates were quoted: Medium Doopas Dust Rs 1.68; Medium Assam Grainy Dust Rs 1.70 to Rs 1.74; Medium Assam CTC Dust Rs 2.10 to Rs 2.30 and Best Assam CTC Dust Rs 2.80 to Rs 3.00.

Low Medium and Medium Broken opened dearer and closed about steady. Good Mediums met with good support at easier rates and were quoting 50 nP per pound easier. High-grown teas met with an irregular demand and prices occasionally declined by as much

Outlook for Hessian

The jute goods market has ruled quiet during the past week. The reactionary tendency seems to have stemmed mainly from the report that the Argentine has cancelled import licences. It is appalled that as a consequence hessian shipments from India to that country will be adversely affected. It may be recalled that the steadiness noticeable in the goods section in recent weeks was partly due to the buying interest in hessian following enquiries from Argentine for hessian. The ban on imports by the Argentine will result in a decline in the off-take of hessian. Apart from its immediate impact on market sentiment, the Argentine action make it necessary to reassess prospects of hessian as this country is one of the main consumers of this category of goods.

From reports available so far it would appear that the Argentine has cancelled all import licences due to its difficult foreign exchange position. The fact that a ship scheduled to take hessian for this country from Calcutta has omitted this item subsequently indicates that the import ban has taken immediate effect. Marketmen, however, believe that the cancellation will not affect contracts already concluded and that an announcement to this effect may soon be made. Even so the prospects for hessian cannot be said to have improved. For, there will still remain the question whether fresh imports of hessian into the Argentine will be allowed. In this regard also there is reason to hope that no total ban of hessian imports will be decided upon by the Argentine because this is a commodity that is essential for its own export drive. At the same time it is to be noted that in the event of a prolonged ban by the Argentine, the prospects of hessian in the North American market will also be adversely affected as buyers there will postpone their purchases in anticipation of a decline in prices in view of the withdrawal of Argentine.

A contributory factor for the quiet trend in the goods section has been the news that stocks at the end of April have recorded a rise over that of the previous month. A redeeming feature has been the sizable decline in the stocks of hessian by 4,100 tons to 20,400 tons. Thus hessian stocks are now lowest since December 1956. This feature, however, has gone unnoticed because of the anxiety over the Argentine ban on imports.

Stocks of sackings have increased by 5,200 tons to stand at 60,000 tons. It would appear that in view of the recent order for a substantial quantity of heavy goods from both the Government of India and Egypt, the news of the heavy accumulation of stocks of sackings has not caused much concern. Even so, the position as regards this category of goods cannot be said to be quite satisfactory. With an increase of 1800 tons in other varieties, total stocks of jute goods at the end of April have been placed at 97,200 tons—2,900 tons higher than at the end of March. At the corresponding date of the previous year, total stocks were placed at 104,200 tons comprising 35,100 tons hessian, 58,300 tons sacking and 10,800 tons other varieties.

The jute goods market opened the week on a steady note but in later dealings sentiment turned quiet on selling pressure following reports of cancellation of import licences by the Argentine. Hessian 40"×10 oz Ready closed on Friday last at Rs 41.30 while B Twills was done at Rs 103.00. Elsewhere July-Sept Hessian 40"×10 oz was placed at Rs 41.50 and B Twills at Rs 104.10.

Prices all along the line declined sharply on Saturday due to selling pressure in Fatka and the market closed easy as follows: Hessian 40"×10 oz Ready Rs 40.65 and B Twills Rs 101.40. In forward deliveries, Hessian 40"×10 oz July-Sept. was finally placed at Rs 40.85 and B Twills at Rs 102.85.

After a quiet opening on Monday prices declined further on continued selling pressure on the Argentine news. Hessian 40"×10 oz Ready was marked down to Rs 40.10 and B Twills lost another 40 nP to be placed at Rs 101.00. July-Sept Hessian 40"×10 oz was done at Rs 40.30 with B Twills at Rs 102.30.

The undertone continued to be quiet on Tuesday following reports that a ship scheduled to take hessian for the Argentine had cancelled the item. Toward close, however, prices slightly recovered on some covering. The market closed as follows: Hessian 40"×10 oz Ready Rs 40.20 and B Twills Rs 100.90. Elsewhere Hessian 40"×10 oz July-Sept was done at Rs 40.50 and B Twills at Rs 102.60.

Though the undertone was weak when the market opened on Wednesday, prices displayed some steadiness in later dealings on announcement of stock figures as at the end of April. The sizable decline in hessian stocks helped arrest the downtrend in hessian while B Twills also recovered in sympathy. The market closed as follows: Hessian 40"×10 oz Ready Rs 40.35 and B Twills Rs 101.00. July Sept Hessian 40"×10 oz Rs 40.70 and B Twills Rs 102.50.

The raw jute market also ruled quiet and Assam Bottoms declined to Rs 25.50 from Rs 26.35. It would appear the weakness of the raw jute section is also partly due to the favourable reports from the jute growing areas.

Aluminium Makes the Grade

Mr K. C. Mahindra's stimulating address to the 20th Annual Meeting of the Indian Aluminium Co Ltd presents an encouraging account of the progress and prospects of the Aluminium Industry in the country. At a time when the implementation of several plan projects is in doubt, because of the shortage of resources, it is satisfactory to find that the growth of the Aluminium Industry is not likely to be held up for these reasons. The industry itself is a successful and striking example of fruitful collaboration between foreign capital and technique with indigenous enterprise. Together, they have set a high standard in the rapid development of the country's resources. The demand for aluminium by 1960-61 is estimated at about 35,000 to 40,000 tons. The Second Five Year Plan has provided for increasing the capacity for production of aluminium to 30,000 tons. In attaining that target the Indian Aluminium has been playing a very important role; and it is encouraging to find that satisfactory arrangements have been completed with the parent company for the provision of additional capital required for the programme of expansion. The Company has secured a loan of upto 5 million dollars from Canada, which will be sufficient to cover the foreign exchange requirements of the expansion scheme.

The Company has also been adopting a policy of conservation of resources during its phase of expansion. Mr Mahindra told the annual meeting that the work at Hirakud is progressing well and that the time schedules of construction has been closely maintained so that the new smelter will go on stream, as planned, early in 1959. The ordinary share capital of the company has been increased from Rs 201 lakhs at the end of 1956 to Rs 385 lakhs at the end of 1957, following the conversion of the major part of the convertible loan into ordinary shares. The Directors have recommended a dividend of 6 per cent on the enlarged capital.

The Chairman's speech has drawn attention to change in the pattern of sales of the company's products. The plate and sheet products are now in increased demand whereas circle sales have declined. The sale of sheet products which was 39 per cent of the total sales of rolled products in 1955 has increased to nearly two-

thirds of the total in 1957. At the same time there was a growing demand for extrusions which have increased from 119 tons in 1955 to 673 tons in 1957. Mr Mahindra has drawn attention to these changes in the sales patterns as examples of the increasing acceptance of aluminium particularly in the field of transportation, which is the result to a large extent of the Company's development efforts.

Mr Mahindra has some interesting observations on the general economic situation in the context of planning. He has emphasised that the important thing is to maintain the tempo of development and recognised that measures taken last year to relieve the strain on the economy through the policy of selective credit control and tax adjustments have been on the whole successful. In relation to the food problem which he described as the Problem Number One, Mr Mahindra has made an interesting suggestion that the income-tax payer should be permitted to invest 10 per cent of the tax amount in soil improvement and soil productivity in the locality of his choice. While the Central Government will lose 10 per cent of income tax collections, the positive gain in the enlistment of individual zeal in matters of agriculture will be immense. Small tax payers, he suggested, may be given the option to contribute their tithe to the local co-operative of their choice, so long as the co-operative does not engage in purely credit operations. Those who pay a significant amount in taxes, individuals and corporations, may choose to select a village area or a block of villages for such investment. If the Government is able to evolve a method of keeping track of these investments and see that they are utilised for the purpose intended, the unusual suggestion made by Mr Mahindra will enable the tax system to be utilised for diverting industrial initiative, enterprise and resources for the urgent tasks of agricultural development.

★

Aid for Exports

Three points made by Mr Kanungo, Union Minister for Commerce, in his address to the Indian Council of Foreign Trade deserve special mention. The first was about the need to curtail domestic consumption in order to make more goods available for export. Secondly he urged the trade to show better salesmanship in order to retain their place in the highly competitive markets abroad. And finally, he stressed the point, which is sometimes overlooked in our enthusiasm for new export lines, that, for some considerable time, India's foreign exchange earnings would have to come from traditional exports, tea, jute and cotton textiles.

As regards reduction of domestic consumption, offtake of cotton textiles last year was well below the output. Here was an opportunity for exporters. But it does not

Prospects for 1958-59 Season

THE dominant trend in the Tea markets, during the past few weeks, has been a general fall in prices and weaker demand. That it is more than a month since the Commerce Minister promised relief to the Common tea producer through some revision in tea duties, is a known fact. The delay in the announcement of the nature of the relief indicates that the Government of India are still to decide how it should be readjusted. Probably, an ad valorem duty will be resented, because high-grown teas will thus

be handicapped towards subsidizing low-grades.

The industry is reported to have made certain proposals designed to assist the industry. These include a flat reduction of the export duty on all teas by two annas per pound and suspension of the tea cess of Rs 4 per 100 pounds. Another proposal is the calculation of export duty on the weighted average price of tea sold in Cochin, Calcutta and London instead of on the London price only.

In the absence of any agreement to regulate, not only exports, but also plucking and extension of planting, the existence of the Common tea producer in India is becoming more problematical now. India may be better placed because of a potential and increasing domestic demand and because tastes all the world over and in Britain still favour better teas produced here. But, the export demand cannot be viewed with complacency in the face of growing competition. However, it is generally felt that an early announcement of the revised duties will remove the uncertainty in the market and ensure a better market

appear that any special enterprise was shown in pushing sales abroad. Instead, we have the sorry spectacles of the Mills complaining of accumulation of cloth stocks. The reasons for the failure to increase exports last year deserve careful investigation by the Export Promotion Council. Last year's experience in respect of cotton textiles would suggest that curtailment of domestic demand would not by itself increase the volume of exports. This is a point which may be kept in view when considering the schemes for increasing sugar exports which involve increase in the internal prices of sugar.

It will also be useful to bear in mind that salesmanship is not merely a matter of display and patter. These may help to catch the attention of foreign consumers, but once that is done, the interest aroused must be retained by quality and competitive prices. It has been suggested that concessional rates railway freight on export consignments will be helpful. The Government is at present allowing rebate of excise and customs duties on a wide range of products. A simplification of the procedure will also be of great assistance. In this connexion the President of the Indian Council of Foreign Trade has suggested replacement of rebate by a regular subsidy of exports of specialised, non-traditional items. This may encourage many young industries to try their luck in foreign markets. He has also returned to the suggestion he made last year, for the establishment of free trade Zones at the Main Ports, where goods for export could be manufactured or processed in bonded areas, without paying duties or undergoing the complicated procedure for rebate.

Crisis Conference

The crisis in the Cotton Textile Industry will be discussed when the representatives of the Mill Owners meet the Union Minister of Commerce and Industry on May 15. The majority of the mills in all the textile centres are reported to be affected by the crisis. The conditions in Kanpur and Calcutta are far worse than in Western India. The boom in Cotton Textiles has burst, catching the authorities unawares. Among the remedies suggested by the spokesmen of the industry are a further drastic reduction of the excise duty if not its complete abolition; freedom to the mills to rationalise without obligation to provide for the surplus personnel; larger supplies of imported cotton to enable the mills to produce the more profitable, fine grades of cloth; and fixing the age of retirement of male workers at 55 and female workers at 50. There is a general feeling that the reduction in excise duties announced last March has come too late to be really effective. The progress of rationalization is held up by the obligation imposed on management to absorb the personnel rendered surplus as a result of the adoption of modern machinery.

US Notes

One of the evidences of economic health in the United States is the emphasis being placed on long-term expansion in the midst of the current business adjustment. This stress on continued growth reflects not merely the hope nor even the confidence, but rather the underlying conviction that the American economy has before it a future of undimmed promise, even brighter perhaps than its brilliant past.

These bold words are promoted by the tale of many reports stressing this propensity for economic growth. It was released recently by the Rockefeller Brothers Fund, a non-profit organization that has sponsored a number of public studies in political, social and economic fields.

Contributors to this carefully documented economic reports include prominence in the fields of business, education and economics. The 30-man advisory panel was headed by Thomas B. McCabe, former Chairman of the US Federal Reserve Board, and included such men as Dr Arthur F. Burns, who for four years headed President Eisenhower's Council of Economic Advisors.

It is unfortunate, in a way, that so much of the publicity given this report has centered on its short-term analysis of economic trends and policies. As a matter of fact, the report was in preparation for many months, and was designed primarily as basic document on long-range US economic trends and requirements.

Only the intrusion of the present business declined turned some of its attention to the more controversial suggestions for stimulating short-term recovery. On some of these there is little argument: acceleration of public works, easing of money and credit, emergency federal aid to supplement state unemployment benefits to persons temporarily out of work.

In one important respect, the report goes farther than the Eisenhower Administration has been willing to venture thus far. That is in its espousal of a tax cut, which the administration at this moment still is inclined to forego unless the business adjustment proves so bulky as to justify it.

But it is in its appraisal of the long-term sweep of the US economy's potential that the report's full impact emerges. This appraisal's basic postulate is growth. And it does more than project the admittedly high standards of past performance; it looks to an even more scintillating performance in the future, using the next 10 years as a base.

The Rockefeller study notes that since 1950 the US gross national product—the total output of goods and services—has increased at an annual average rate of 3 per cent. In the past decade, the rate has been closer to 4 per cent—a notable achievement for an economy that has grown so large.

If the 4 per cent rate were to continue over the next decade, the gross national product would reach \$642,000 million, compared with 1957's \$434,000 million. But the Rockefeller panel has set its sights even higher than that; it holds out the possibility of a 5 per cent annual growth rate—a rate it believes to be within the economic capabilities of the United States. With this kind of growth, the panel points out, will come tremendous increases in real income and greater advances in human welfare than anything yet known.

This kind of unparalleled expansion will not come easily, of course. But the report's analysis indicates that it can be done within the framework of the free American society.

It is this emphasis on the feasibility as well as the desirability of continued healthy growth that helps make the Rockefeller report not just a collection of economic theories, but an important economic document.

The American public has changed its mind in recent years about Big Business—and looks at giant U.S. corporations with less disfavor than it used to.

This is the conclusion of a special National Planning Association study "The Economy of the American People—Progress, Problems, Prospects" by the economic staff of this private research group. The NPA is supported by US business, labor, farm and professional organizations.

A number of factors have gone into this change of American public opinion with respect to bigness in corporations, the study said:

1. There is "increasing recognition that competition among the few can be as keen as competition among the many and awareness of the importance of interindustry competition."

2. "The belief that size alone may lead to consumer exploitation has been diminished because of the realisation that large enterprises mean mass production for mass consumption with large unit volumes and, usually, with relatively small unit profits."

3. Corporate owners and managers can no longer build up fabulous personal fortunes.

4. "The more equitable distribution of income and wealth among Americans of virtually all social groups has been concurrent with the growth of large corporations."

5. "The notion that concentration of production must be accompanied by concentration of wealth in fewer and fewer private hands has been disproved by the fact that corporate ownership, especially of the large corporations, is widely dispersed among a great many stockholders."

6. "Today, labor's ability to obtain a fair wage and favourable working conditions does not depend upon the uncertain benevolence of humanitarian employers. It is much more solidly based on the bargaining power of strong trade unions, the socially responsible labor relations policies of most business management, and the minimum standards enforced by government regulations."

The study forecasts that the growing public conviction that bigness, by itself, is not necessarily bad will lead increasingly to an antitrust enforcement policy based on the performance of the big companies and not just their size.

"The performance criterion," the study said, "that is, the test of whether economic power is actually used constructively or harmfully... is likely to be increasingly emphasized."

While the NPA economists accept concentration of economic power as a potentially serious problem, they report that there has been no "substantial" increase in economic concentration in recent years in America.

They say that a conclusion as to whether economic concentration has been growing slightly or is remaining unchanged appears to depend in part on the method of measurement.

Britain

INDIA, followed by Canada, South Africa, Australia, and the Federal Republic of Germany, was the best customer of the British aircraft industry in the first quarter of this year, when exports exceeded £36,000,000. The quarterly figure for exports was the second-highest on record, touching an annual rate 25 per cent higher than last year's record total of £116,000,000.

The Society of British Aircraft Constructors reports that the industry has earned over £668,000,000 in overseas markets since the war. It now exports more in 12 weeks than it did in as many months a few years ago.

The industry has received a further fillip from the Argentine Government's decree authorizing the airline Aerolineas Argentinas to buy six of the New Comet 4s, the world's first fully developed jet airliners, from the de Havilland Co. of Hatfield, England.

De Havillands now have orders for 31 aircraft of this new type, which is at present undergoing gruelling flight tests for three different operational roles. There will be a long-range inter-continental Comet 4 to carry 56 to 76 passengers on stages of up to 3,000 miles; a medium-range continental Comet 4-B for 100 passengers to be carried on 300- to 1,500-mile routes; and an intermediate Comet 4-C, combining the fuselage capacity of the 4-B with a range nearly equal to that of the Comet 4.

The Comet 4, with a speed of 510 mph, is twice as powerful, and can carry twice as many passengers twice as far, as the early Comet 1.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

POTENTIALLY the most lucrative avenue of internal resources is also, unfortunately, a source the efforts in respect of which have so far been chicken-hearted and weak-kneed. I refer to the target for borrowings under the Second Plan; and, last week's announcement of the Centre's New Loan programme for 1958, offers fresh proof of an unimaginative approach. It is, however, not too late to address ourselves to a study of borrowing techniques and, therefore, of borrowing prospects, since I shall show presently, that we still have the opportunity to transform the basic picture in respect of resources for the Plan by the institution of a policy of borrowing from strength. I am afraid, I may be going over ground that is already partly familiar to readers, that is inevitable since Authority, which alone can initiate such a policy is showing itself as strangely obtuse in the matter. A further attempt at elucidation is, therefore, necessary. But I assure you, my arguments are not going to be entirely repetitive. Indeed, later in the gossip, I shall share with you an idea of revolutionary significance that I have conceived for attaining, without difficulty and much strain, a considerably higher target for borrowings under the Plan.

But, first about familiar ground and the ABC of borrowing. It seems to me, as I have often said before, that Government are yet to understand what I may call the rationale of a successful borrowing policy. Of fundamental importance, in this context, is one fact that the monetary authorities of this country, at least since Independence, seem incapable of understanding. It is this: Provided that the investor has available resources for putting into gilt-edged—or, for that matter, in any shares—his inclination to make fresh purchases will depend on whether or not his existing holdings have, in the interim or the recent past, suffered depreciation. If share prices have generally declined, or if the effect of a New Loan is to cause a downward adjustment in the quotations of the existing loans, he will be reluctant to subscribe to the New Loan since he will not be desirous of courting fresh capital depreciation—a prospect most dreaded by an investor. There is no more erroneous notion than that which

holds that the primary interest of the investor lies in the return that his investment offers and, therefore, the offer of a higher rate of interest on successive New Loans, is the surest way to ensure the success of fresh issues. The fact, on the other hand, is that the effect of such a series of loans is to depress the prices of the existing stocks so as to bring the yield thereon into conformity with the terms and conditions of the New Loan. What happens in such a case is that the "gain" accruing from a higher interest payment on the New Loan is much more than cancelled out by the depreciation in the existing issues. Consider, on the other hand, what happens when the terms on successive loans are made progressively more favourable to Government. As in the earlier case, the existing loans undergo an adjustment in their quotations so as to fit them into the new pattern set by the New Loan. Since such improvingly favourable terms will consist either of a reduction in the interest coupon or a drawing out of the maturity or a combination of both, the yield offered on the New Loan will be less than the yields obtaining on the existing loans. In this case, the lower interest coupon is a loss which is much more than offset by the capital appreciation that benefits the investor on his existing holdings. Let me give a graphic, though imaginary, example. Let us say, last year's issue was a 3½ per cent 1966 at par; and let us say that the new loan this year is a 4 per cent 1965 at par. The gain to the investor is half a per cent in the interest on the new loan; but, if the running yield on the 3½ per cent 1966 is "adjusted" to go up to the new interest rate of 4 per cent, the stock will decline by Rs 12.50! Of course, this is an exaggeration. But it works just the same in the favourable direction. If the loan issued last year was a 4 per cent 1965 at par, and this year's new loan is a 3½ per cent 1966, as against the "loss" in interest of half a per cent, the 4 per cent 1965 would be "lifted up" in adjustment to a quotation of Rs 114!

I admit you can't just push through a programme like this, and sit back for the "favourable terms" to work inexorably in your favour. For, the improvement in

the terms has to be almost imperceptibly carried through, and the terms of the new loan have first to be in conformity with the general structure of interest rates. And here, Government can hardly expect to borrow successfully at, say, 3½ per cent at a time when banks are prepared to pay well over 4 per cent on the Deposits they attract. And the trouble is that, in this country, the structure is woefully awry. So, as a prerequisite to instituting their "inspired" borrowing policy, Government will have to set right the disequilibrium in the structure of interest rates. The starting point must be in respect of the interest paid by the banking system on its Deposits. It is bad enough, in all conscience, that the banks should be engaged in such competition for Deposits as to offer rates of interest which exert upward pressure on the Government's own borrowing rate. It is a scandal, when such inducement need not, in the first instance, have been offered. Look, for example, at the following table, which shows the trend in bank Deposits since the beginning of the First Plan:

Last Friday of	Total Deposits	Of which Time Liabilities	Ratio of 2 to 1 %age
1	2	3	4
1951-52	848.34	281.05	33.1
1952-53	843.93	311.11	36.9
1953-54	855.77	327.01	38.2
1954-55	951.14	376.88	39.6
1955-56	1051.02	415.35	39.5
1956-57	1185.54	473.66	40.0
1957-58	1479.75	734.50	49.6

It is scarcely likely that Rs 630 crores of new Deposits have been attracted to the banking system either solely or even mainly as a result of the higher interest rates hawked. The planned disbursements had inevitably, by osmotic process, to percolate into the monetised sector. This has happened. What was not expected, but should have been, and is rather unpleasant, is the sharp rise in Time Liabilities. Almost in every year since the beginning of the First Plan, Time Liabilities as a percentage of total Deposits have shown a rise. So, the higher interest rates have succeeded—succeeded, that is, in increasing the volume of higher interest bearing Deposits.

The banks are beginning to feel the hurt, and hence the focal attention paid, in the current crop of bankers' speeches, to the need for restraint in the offering of interest on Deposits. But it needs to be acknowledged that Government and the monetary authorities must accept the part they have played in giving an impetus to the trend of higher interest rates. The borrowing programme of this country since the First Plan has been an unending series of New Loans which successively have caused depreciation in the existing loans. The higher interest paid by Government has in turn impelled the banks to pay more for their Deposits; but it has altogether failed in eliciting a greater response to the New Loans. It is no excuse to say that Government's borrowing rate has moved up, because the other money market rates were headed upward. In this enlightened era of borrowing since the First Plan, let us see how the Indian scheduled banks have reacted to the new loans. The following table sets out the Deposits and Investments of Scheduled Banks, and the ratio of the latter to the former:

Last Friday of	Total Deposits	Gilt-edged Investments	Ratio of 2 to 1 %age
1	2	3	4
1951-52	848.34	296.05	34.9
1952-53	843.93	303.31	35.9
1953-54	855.77	318.88	37.3
1954-55	951.14	344.15	36.2
1955-56	1051.02	359.90	34.2
1956-57	1185.54	347.18	29.3
1957-58	1479.75	440.36	29.8

During a period when Deposits rose by over Rs 630 crores, gilt-edged holdings of Scheduled Banks went up by scarcely Rs 145 crores. This clearly shows the antipathy of the banking system to gilt-edged. And why? Firstly because they were paying more than the interest they received on the Deposits they "bought", and secondly and more importantly because they have continually been experiencing a depreciation in their holdings. First things first, and so Government must consider their inescapable and immediate duty to lie in a statutory control of rates paid on Deposits, so that the way may be cleared for their being able to

come out with New Loans on a more favourable term basis, and so that, ultimately, their borrowing programme is thunderously successful. The Reserve Bank is already possessed of the powers to act in this behalf, and this is a weapon which need not lie unused in the armoury.

Then again, why rebel against the world wide trend of lower interest rates that obtains today? The complaint these last few years has been that interest rates in India were not going up in parity with rates elsewhere. The same argument can now be used to suggest that a downward correction is now desirable. And how desirable it is, will only be known when the new evolved borrowing policy begins to produce results.

Let me now recast the resources that Government should count on from market borrowings. According to the Planning Commission, market loans were to fetch Rs 700 crores net, or Rs 1100 crores

gross; and the contribution from small savings was put down at Rs 500 crores. In the light of the experience of the last two years, it seems unlikely that small savings will yield more than Rs 400 crores. This means that, to fulfil the Plan target, market loans must realise Rs 1,200 crores gross. Here, too, the experience of the last two years has been anything but encouraging. Nor does the target for the third year, just announced, begin to approach the objective. If the target is to be achieved, and if, besides, we are to hope to secure something more, so that we can reduce deficit financing, gross realisations from market loans in the three remaining years of the Plan will have to touch what seems a fantastic figure of Rs 1,200 crores. I shall show why such an objective need not merely be a dream, and how we may set about attaining the target.

Take first, the State Government loans. They realised over Rs 68 crores in 1956-57, and a Rs 70 crore

average will be assured of success by subscriptions from Provident Funds and generally this class of institutional investor. So, for the remainder of the Plan period, we can take credit for, in round figures, Rs 200 crores. The question is, can the Central Government hope to secure nearly Rs 350 crores a year for the last three years of the Plan?

Hopeless as this target looks at first sight, it is still capable of realisation, if government would display both imagination and energy. Have those in authority given any thought to the possibilities opened up by what by common consent is the most important development in money market in the last few years? I am referring to the colossal increase in the deposits in scheduled banks. As the table earlier in the gossip shows, the total of deposits has increased by over Rs 630 crores in six years. In 1957, the accretion to deposit figures was of the order of Rs 300 crores. The first sixteen

Quick and easy communications are essential for the fulfilment of India's targets for steel. The Indian Railways are accordingly devoting their allotment under the Second Five Year Plan to develop and improve their capacity

GATEWAY GOSSIP

AFTER the last parliamentary debate on the affairs of TELCO, it would have been thought that the issue had passed into the non-controversial realm, to the satisfaction of all. But after the lapse of six months, since the last parliamentary debate, TELCO has again been brought into the public focus, though not in as sensational a way, as on the previous occasion. The closeted study by the Public Accounts Committee of the Lok Sabha, unlike the open parliamentary debate, as on the previous time, explains this difference. But in content, there is practically little difference between the charges in the parliamentary debate and the present study by the Public Accounts Committee, since what the Committee has done has been to repeat all the previous charges against the TELCO.

Criticism at the last time, when the affairs of TELCO was debated by the Parliament, was directed against the favoured treatment enjoyed by the Company at the hands of the Government by way of double depreciation allowances, investment by the Government in the preference shares of the Company of the nominal value of Rs 2 crores, payment for the prices of locomotives ordered by the Government ahead of delivery and the exorbitant price paid for the locomotives produced at TELCO relatively to that of the Chittaranjan Locomotive Works.

Before going into the report of the Public Accounts Committee, it has to be pointed out that some of the charges were basically misconceived. As readers of this column might remember, in a previous article, some six months back, it has been made clear that no charge of financing the Company could be legitimately made in view of the fact that TELCO is a public limited company with a total paid-up capital of Rs 7 crores. Similarly the effect of the higher depreciation allowed to the company on future prices is too obvious to be overlooked, while lower rate of depreciation would only add to the production cost of a later period. It is indeed regrettable that the Public Accounts Committee should have chosen to repeat these charges.

The chief criticism of the Public Accounts Committee concerns the high price paid to the locomotives manufactured by the TELCO which the Committee considers as unjustified since according to it the cost of producing locomotives in some of the foreign countries such as Japan are lower than that of the TELCO. In this connection it points out that the landed cost of a locomotive imported from Germany was Rs 3,40,150 while the landed cost of a locomotive imported from Japan and England were Rs 3,18,334 and Rs 4,97,733 respectively. Since according to the agreement bet-

Price of Locomotives

ween the TELCO and the Government, the price paid to the TELCO were to be determined on the basis of the British figure it is made out that the prices paid to the TELCO by the Government are on the high side.

This argument ignores the differences in the conditions of production in various countries. To lump such advanced countries as Japan and Germany with India which is still in the rear of industrial development for purposes of cost comparison and for prescription of standards would, far from helping reduce cost of development, only have adverse reactions on the pace of progress. The observations of the Tariff Commission on this point of comparative cost of production are pertinent. The Commission dismissed the comparability of figures for different countries on the ground of divergence in working conditions of manufacturing units in different countries. The specific factors that tend to inflate cost of production in India according to the Tariff Commission are the early stage of development and lack of ancillary units for manufacture of essential components. Nothing has happened since the Tariff Commission reported, to alter the adverse conditions under which the Indian manufactures had to operate. The assistance given to foreign manufacturers by their Governments in the form of direct and indirect subsidies is another factor which precludes a comparison between the cost of production in India and elsewhere.

The report would seem to err on the same side of neglect of peculiar conditions associated with particular locations when it has demanded that the price paid for the YP locomotive manufactured by the TELCO should be 75 per cent of the cost of production of a WG locomotive manufactured at the Chittaranjan Locomotive Works. The Committee has based its view in this matter on the finding of a British firm as disclosed in the Tariff Commission's report that the total ex-works cost of a YP machine was normally 76 per cent of a WG locomotive. The following quotation from the report of the Tariff Commission in regard to difference in conditions of manufacture between the Chittaranjan Locomotive Works and the TELCO should be relevant. ".....most of the disparity in cost between TELCO and Chittaranjan can be explained either in terms of certain special advantages or in terms of certain special difficulties which Telco has suffered from, in comparison with Chittaranjan. Briefly Chittaranjan has been able to make liberal and continued use of imported balance 'components' to augment its production, whereas Telco was bound by the condition that at least 75 per cent of its planned indigenous production must be estab-

lished at its works by the time "first lot" of its planned locomotives was completed; secondly Chittaranjan was able to conclude the necessary arrangement for technical aid far more speedily than Telco; thirdly Chittaranjan could start with a nucleus of experienced locomotive workers from the railway workshop whereas Telco's men had little or no previous experience in locomotive manufacture.Telco is situated in an expensive labour area whereas Chittaranjan is more favourably placed in this respect.Chittaranjan had the advantage of being able to concentrate on only one type of locomotives whereas Telco had had to divide its energies between two types of locomotives and nine types of spare boilers". In the light of the differences in working conditions between the two manufacturing units, as brought out in the quotation given above with Chittaranjan commanding an advantage over Telco in almost all respects, the consequences of fixing the price for Telco locomotive on the basis of the cost of production of the WG locomotive at Chittaranjan could be damaging to the efficiency of Telco unless allowance is made in such price fixation for the disadvantages suffered by the Telco in comparison with Chittaranjan. The fact that even in foreign countries which are well advanced in locomotive manufacture established firms had to close down, because of uneconomic prices is sufficient warning against, any price fixation scheme which leaves little incentive for the manufacturing unit to expand production.

The Committee in its report had observed that it would be unfortunate if the interest of the railways is subordinated to the interest of a factory (TELCO) which has repeatedly failed to keep to the agreements entered into between itself and the Government. Such a heavy indictment which this statement implies of the functioning of the company could be supported only by more convincing reasons than what the Committee has given in its report. It is not to be denied that the cost of production of Telco locomotives is not on a par with cost of production in other parts of the world and admits of scope for reduction a great deal. TELCO has again been slow in starting production, slower than would have been warranted by the terms of the agreement. But the Committee should have taken into account the initial difficulties that an infant industry has to face before rushing to conclusions and framing charges. In its excessive pre-occupation with the terms of the agreement the Committee seems to have completely ignored the dynamics of development. Even the terms of the agreement on which the Committee has based its charges

do not appear to have been one-sidedly favourable to the TELCO.

While the Public Account Committee is extremely critical about the failures of the TELCO in regard to cost of production, it has nothing to say about the progress the company has made in the last few years, and the advantages it had conferred on the country which is handicapped in taking larger strides in industrial development by the absence of well developed heavy industries. The record of the Company in recent years in the field of production, it has to be admitted, has been remarkable. Up to this time it has manufactured more than 270 complete locomotives, 345 spare boilers, 1,857 underframes, 950 road rollers and over 14,000 diesel trucks valued at over Rs 55 crores in all. In terms of savings in foreign exchange, the benefits are even more obvious. The future production potential of TELCO is also of no mean order. Already production in the Locomotive Division has reached a figure of 100 locomotives a year, while in the Automobile division production is well above the 6,000 mark. The effect on the employment situation has been no less advantageous to the country at large. From a little over 1,000 at the time the company was started the labour strength had increased to about 7,500.

WORLD OF COTTON

EICA's Suggestions: Cautious Trading

AT an informal meeting of cotton interests in Bombay held on Friday last, the prevailing unsatisfactory position, both in the cloth and cotton markets, was understood to have been discussed. Several suggestions were reported to have been mooted at the meeting, although no final decision seemed to have been arrived at. But, the adjourned meeting, held on Monday this week, concluded its deliberations. Following these deliberations, the Vice-Chairman of the East India Cotton Association has sent a telegram to the Union Minister for Commerce and Industry, urging immediate action in the form of (1) an export quota of 50,000 bales of 3/4 cotton as recommended by the Cotton Advisory Board and (2) permission to export 25,000 bales of old cop 25/32 and below. The telegram has also sought some immediate relief and incentive, especially to mills producing coarse and medium varieties, with a view to enabling them to dispose of their cloth stocks. The EICA is convinced that immediate action only on these lines will avert a crisis.

Although there has been some controversy about the manner in

which cotton export licences are issued, i.e. on the basis of "past performance" vis-a-vis the recent departure in the policy of "first-come-first-served" basis, the latter method has undoubtedly yielded good results. Judging from the fact that, between March 17 and May 1, as many as 38,042 bales were passed for shipment. Thus, it will be seen that, in about six weeks, a major portion of Bengal Deshi quota has been exported. It, therefore, seems reasonable to expect the entire quota to be absorbed in another fortnight or so.

Again, the statement by the Commerce and Industry Minister emphasising Government's awareness of the crisis facing the textile industry failed to impress the market. It was also pointed out that the Government would soon take up the question of mismanagement of textile mills leading to their closure. Traders, however, have felt that nothing tangible will come out of the assurance given by him. Another depressing factor is the Sudan Government's decision to remove the OGL for imports of cotton piecegoods. As Sudan is an

important buyer of Indian textiles, trade quarters fear that this step will tell adversely on cloth exports from India.

Meanwhile, it is expected that the Government of India will soon announce a fresh import quota of 30,000 bales of cotton stapling 1 13/16" and above from soft currency areas. The earlier release of an equal quantity, announced on April 8, came at an opportune time and mills utilised it for importing more 20,000 bales of Sudanese cotton. It is felt that purchases will, in future, be more from Egypt in view of the discount of 20.95 per cent offered by that country to India.

It is also expected that the three-week old dead-lock in regard to import of Egyptian cotton will be resolved soon. The new exchange rate, it is felt, will be favourable to India as it will take into account the discount of 21 per cent offered by Egypt to Indian mills for the purchase of cotton. The State Bank India will have a large credit account with the National Bank of Egypt and will operate both import bills for cotton and export bills for jute and tea.

Speculation is also rife about the import of US cotton for the current season. India has still unused cotton funds under PL 480 which can finance about 60,000 bales of Good Middling US growths stapling 1 1/16" and above. Reports from New Delhi suggest that the Government of India are eager to bring that cotton, while the authorities in the USA are not inclined to issue the authorisation orders on account of the shortage of good grade cottons in that country. Rumours are current that Indian mills will be offered varieties of stapling one inch and lower, which are not generally used in this country.

The Government of India have also decided to permit the import of Pakistani cotton against the quota of East African cotton, announced on February 28. The Government of India had released an import quota of 70,000 bales of East African cotton. The cotton should be of staple length of 1 1/16" and above and should be comparable to the East African cotton in quality and fineness.

COTTON FUTURES:

After ruling quiet during the most part of the week, cotton futures advanced moderately towards the close, thanks to buying by a prominent spot house. ICC Jharilla May delivery moved between Rs 641.50 and 646 and August Rs 655 and Rs 660.25.

SPOT MARKET:

The Spot market was devoid of any noteworthy activity. Mill demand was restricted to the bare requirements.

BOMBAY REVIEW

On the export front, Bengal Deshi evoked some enquiries from the local buyers. Turnover approximated 1,500 bales.

KARACHI COTTON MARKET:

The Karachi cotton market ruled quiet in the absence of fresh developments. The failure of foreign demand to revive to the desired extent, the continued delay in the reduction of export duty on cotton and the slackness in domestic mill demand led to fresh selling, especially in the distant July delivery. Consequently, values suffered a break. Sind Deshi was quoted at Rs 64; Punjab Deshi, at Rs 62-8; 4F Roller at Rs 69-14 and Saw Gin at Rs 80-10.

NEW YORK COTTON MARKET:

Following an early decline led by the spot May position, cotton futures on the New York market rallied on renewed demand, prompted by the continued unfavourable weather in sections of the belt. Helping the market was an indication of an improvement in textile business on the Worth Street market where it was reported that several million yards of premium quality eight-square print cloths were sold for third delivery. Middling Spot was quoted at 36.05 cents per pound.

LIVERPOOL COTTON MARKET

Values on the Liverpool cotton futures market showed little variation except for some easing in the distant deliveries on small American selling. The near-month of both contracts had further support from mill fixations and the market closed quiet at five points down with the mixed contract five points up to unchanged. The Sudan contract close quiet.

CLOTH AND PIECEGOODS

Although there was moderate demand for some varieties, there was no appreciable change in values on the Bombay Piecegoods market. In superfine cloth, there was satisfactory enquiry, while medium varieties met with increased demand. Traders, in general, are concerned with two developments. Talks are reported to have commenced in the UK between representatives of the Indian textile industry and their counterparts there on the reduction of exports of Indian cloth to that country. The other development related to the Sudan, one of India's important customers. The loss of this market, following the cancellation of the OGL, will, it is felt, adversely affect India's textile exports, resulting in the loss of the much-needed foreign exchange.

Conditions were dull on the export front. Burma is quiet in the absence of any clarification regarding the issue of fresh import licences. Indonesia has booked business only for negligible quantities.

GATEWAY NOTES

English in Schools

The members of the Bombay Municipal Corporation took a step of great significance for the future of education in the country, by extending their support to a resolution urging the Government of Bombay to reconsider its policy regarding teaching of English in schools. The resolution, which requested the Government to introduce the teaching of English from the V Standard instead of from the VIII Standard, had the support of all the parties. The willingness of the Congress party to support the resolution is regarded as an indication that the Corporation's request will be favourably considered by the Government. Speeches made on the resolution drew attention to deterioration in standards of education subsequent to the adoption of a policy under which English was introduced only at the VIII Standard. Some of the speakers suggested that the relegation of English to a later stage in the Secondary School course was one of the principal reasons for the deterioration in standards. One result of the reduced importance accorded to English was the rush for admission to the few schools where the medium of instruction was English leading to what is described as a racket in admissions. An important speech in support of the resolution was made by a Congress Muslim member, who said that the Congress party in the Corporation had, by supporting the resolution, taken a stand which should be an eye-opener to the Government. Referring to the language controversy in South India, he observed that self-complacency in such matters will result in great harm and, so long as things were what they were, every effort should be made to see that there is no deterioration in the standard of English. The resolution of the Bombay Corporation should inject a dose of realism among those who are in a hurry to banish English from the educational system.

Atomic Power

The revolutionary significance of atomic power for industry was emphasised in the presidential address of Mr. Vasant Seth, Director of Great Eastern Shipping Co. Ltd., to the Institution of Marine Technology. Before the discovery of atomic energy, the rapid depletion of the traditional sources of power was regarded as a threat to the survival of the industrial civilization. It is estimated that known reserves of Coal would not last beyond 2050, while the reserves of oil would be exhausted in 40 years. On the other hand deposit of Uranium and Thorium are sufficient to maintain the power supplies for at least 1000 years to come. Mr Seth also drew the attention to the fact that

the cost of atomic power compared favourably with power from Thermal stations. The capital cost of a reactor of 250 Mega Watts would be Rs 22 crores which works out to Rs 1470 per Kilo Watt. Dr Bhabha had indicated the possibility of erecting an atomic reactor at a cost only slightly greater than the cost of a thermal station. The power from such a reactor could be supplied to consumers at a cheap rate of about 0.7 annas Mr Seth looked forward to the day, which was not far off, when atomic energy would be applied for propulsion of ships, submarines, locomotives and aeroplanes. Mr Seth was not looking too far ahead when he spoke of atomic power for ship propulsion. Atomic powered ships are now within the range of practical possibility. British ship-builders have drawn up plans to construct a 65,000 ton nuclear-powered tanker which is estimated to cost about £11,500,000. Japan has also planned to build two atom-powered ships in the next five years and it is reported that Japanese scientists have already completed designs for three 40,000 ton tankers and one 30,000 ton tanker. They work on the principle of installing reactors in the existing type of service vessels. The fact that shipping has already entered the nuclear age is confirmed by the fact that the International Marine conference devoted its last session to discussion of problems of insurance of nuclear-powered ships.

Shipowners' Protest

The opposition of Indian shipowners to the definition of Indian shipping adopted in the Marine Shipping Bill, now before the Lok Sabha, was reiterated by Mrs. Sumati Morarji, President of the Indian National Steamship Owners' Association. The progress of Indian shipping during the pre-plan period, when Indian shipowners increased the tonnage from 42 vessels of 98,286 tons GRT in January 1946 to 97 vessels of 3,86,295 tons GRT in 1951, by investing over 22 crores from their own internal resources, showed that there was no need to invite foreign capital to participate in the shipping industry. Indian shipowners view with great concern the change which will open the door to foreign penetration in a field of vital importance to the nation's security. Mrs. Morarji emphasised that the shipping is a floating asset which has to stand the international competition and has to serve the country's security and strategic position. Shipping is also an efficient earner of foreign exchange. In view of these facts it is not advisable to change the existing policy regarding Indian shipping. The Indian National Steamship Owners' Association, a representative body of all the shipowners, had come to the unanimous conclusion that it would not be in the national interest if foreigners were allowed to participate or form a combine for the development of Indian shipping.

GATEWAY MARKETS

Recovery in Oilseeds

TRADING on the Bombay Oilseeds Exchange was highlighted by a modest improvement in Castorseed and Groundnut. The tendency in Linseed and Cottonseed was a shade steadier although price movements were confined to a narrow range.

With the commencement of the month of maturity of the current contracts in major oilseeds, interest in the market shifted to the possibility of spot offerings against forward sales. The offerings against castor futures, amounting to 1,100 candelis, have been generally in line with trade expectations. Tenders in groundnut have been understandably small at only 500 candelis, while there have been no deliveries against cottonseed contract. The volume of offerings against the linseed has tended to confirm earlier expectations that the sellers might prefer to unload spot supplies held by them in view of the current uninspiring situation facing the trade.

The slight recovery in Castor futures was attributed mainly to unconfirmed reports that Brazil had increased its prices of castor oil from 12 1/2 to 14 cents per pound on account of the damage to the crop resulting from adverse weather in growing areas. Strong rumours of a further relief in export duty also added the sentiment. Ready was placed at Rs 29.75 and Castor Oil, commercial quality, at Rs 15.31.

Encouraged by the strength of the spot section, bull operators continued to dominate trading in Groundnut. Bold quality ready was quoted at Rs 34.37 and Groundnut Oil at Rs 18.37.

Trading in the Linseed section was dull in the absence of fresh developments. However, price variations generally followed the pattern established by castorseed and groundnut. Ready position was quoted at Rs 29.25 and Linseed Oil at Rs 15.56.

Activity in Cottonseed futures was confined to end-of-account adjustment of outstanding business.

Gold & Silver

The bullion market was in the grip of bulls who manipulated prices to their advantage. Demand for spot continued to be brisk. Arrivals and offtake were balanced at 3,000 tolas, while unrefined metal receipts totalled 1,500 tolas. Forward rates moved between Rs 110.44 and Rs 110.56 and spot rates between Rs 113.62 and Rs 113.69. Sovereign ruled firm at Rs 73.00.

Although activity in Silver was not brisk, prices were well held as the market continued to be in the grip of bulls. Spot demand also remained encouraging. Arrivals and offtake were estimated at 17 and 15 bars respectively. Forward rates

moved between Rs 193.31 and Rs 193.47 and spot rates between Rs 197.06 and Rs 197.19.

Yarn

Conditions in the Bombay Yarn market presented a mixed pattern. While the Rayon section ruled firm despite reports of Continental manufacturers having cut their prices to some extent, Staple-Fibre and Cotton sections remained easy.

The firm trend in Rayon yarn was largely attributed to the scarcity of ready stocks, especially in the imported varieties. Even in the indigenous variety, the feeling was that actual users were put to a considerable hardship as they were not in a position to avail of the facility offered in the marketing of the 70 per cent of the indigenous production.

As a result of the continued ban on the import of Art Silk yarn through established importers and the artificial rise in prices in the absence of adequate supplies, the Bombay Yarn Merchants' Association has preferred not to allow trading in the June delivery. Efforts are, however, being made in the meanwhile by certain trade interests to persuade the Government to allow a small quota to established importers.

There is also no likelihood of futures trading in the indigenous yarn as a result of the restrictions placed on the margin of profit of trade under the new distribution scheme. Reports are, that some of the traders have approached the Government of India to permit an ad hoc import quota to help relieve the scarcity.

The market for Cotton yarns continued to remain depressed due to lack of demand from handloom weavers, which is attributed to accumulation of stocks, lack of demand for cloth and tight money conditions.

Tin

The decision of the International Tin Council to maintain the status quo with regard to the buffer stock prices has not surprised traders in Non-Ferrous Metals. In view of the increased production and encouraging demand, it is suggested in some quarters that the support price should be reduced.

Consumer countries like India would have benefitted if this suggestion had been accepted; but the producer members have a stronger voice in the Council. The reduction in support price would have presumably affected the members of the Council adversely, because they would have to face a loss on the stocks already held. The Council has, therefore, decided in favour of status quo. According to the current scheme, the manager of the Council is bound to support the price between the range of £70 and £780 per ton. As regards the export quota, the Council has decided to maintain the overall figure at 23,000 tons for the next period. Some alterations have been made in country-wise allocations.

CONSIDERING its early promise of high drama, the episode of Mr Nehru's unsuccessful request for permission to retire temporarily from office ended on a note of anticlimax. For nearly a week, it pushed out of notice every other important event. But when he announced on Saturday that in all humility and with his deep feelings for what was being said, he shall not proceed to take this step; it was a tame end to an exciting 'story'.

Consider the sequence of events. On the day he arrived back from his tour of the South, and almost immediately, Mr Nehru sprung on his colleagues in the Parliamentary party the carefully prepared statement he had dictated on his journey back. He also met the President and acquainted him with his desire to relinquish office for a while, subject to his party's approval. As Mr Nehru explained subsequently, the timing of the announcement had been carefully considered by him beforehand. His idea was, to ask for his party's leave to go into temporary retirement on his return from the tour of Kerala. Since the present session of Parliament had still days to last, the request would give his colleagues in the party some time to think over the matter and make consequential arrangements. Thirdly, Mr Nehru wanted to take advantage of the presence of the Chief Ministers of the States in Delhi in connection with the meeting of the National Development Council.

Despite the fact that the public at large had some inkling that Mr Nehru was contemplating some step along the lines he announced, the effect of his announcement was electric. At the meeting of the Parliamentary party at which Mr Nehru read his prepared speech, the reaction was spontaneous and against the idea. Indeed, so automatic was the reaction that Mr Nehru had to chide them mildly the next day telling them that they should think about the question and make up their minds instead of instinctively reacting to it. In the country at large too, the reaction was immediate and by and large, against it. And after two or three days of deliberations, at which public reaction at home and abroad was given due weight, the party requested Mr Nehru to withdraw his request to relinquish, even for a temporary period, his present responsibilities. Mr Nehru has agreed to this unanimous request.

But, though the chapter is now closed, at least for the present, the ambiguities of the situation are yet to be wholly cleared up. One thing alone seems certain; that the party is not willing to deprive itself, even temporarily, of the ad-

Mr Nehru Agrees to Stay in Office

vantages of Mr Nehru's leadership. That is why, the cartoon in a Tamil weekly, (usually very shrewd in its political comments) missed the point by miles when it presented a Nehru surrounded by a number of colleagues pressing him to go on a holiday and offering a variety of blandishments to persuade him to do so. Of course, the reasons, for the party's anxiety for Mr Nehru's continuance in office, are not entirely clear, despite the resolution passed by the Congress Parliamentary party. In any case, one cannot escape the feeling that the real reasons have not been fully elucidated in the published versions of the deliberations. Mr Nehru's speech bowing to the party's wishes refers rather obscurely to considerations that he had not taken into account when he first asked to be allowed to go away temporarily but which the party, had brought home to him. What those considerations were, in precise terms, are yet to be elucidated. Can it be that the Congress party means that it just cannot carry on even for a day if Mr Nehru is not there to tell it what to do? Or would it be that the party fears that there is no acceptable alternative leader? Of course, considering how powerful centrifugal forces are in the country, there is a case for saying that it will be dangerous to experiment with alternative leadership even as a temporary measure. The question of official language, for instance, is something that is dividing the country deeply and it is only the possibility that Mr Nehru will reconcile the different points of view that is holding the hand of people who feel differently from the official Congress view. Likewise, the bilingual Bombay issue is still one on which public opinion is unsettled. And, at a still lower level, the fortunes of the Congress party at the moment are such as to make it impossible for it to do without Mr Nehru's immediate presence, guidance and at the very least, continued association. That this last consideration weighed to some extent with Mr Nehru is evident from the fact that in his third speech he was at great pains to explain his rather sharp comments about his party in his earlier speech. And, finally, Mr Nehru seems to have been also influenced by the possible effect of his decision on the international scene. It is now known for certain that Mr Nehru received a communication from President Eisenhower just before he went in to attend the party meeting on Thursday. It is believed that this letter requested Mr Nehru not to withdraw his influence and guidance at a time of delicate international situation. How far decisive this evidence of his indispensability in the international scene was in Mr Nehru's

changing his mind, it is difficult to say. But it is clear that it must have had something to do with it.

If there were certain unexplained features about the final decision of Mr Nehru, the perplexities about why, in the first instance, Mr Nehru wanted to go away for a while, are equally unresolved. Mr Nehru's successive elucidations have not entirely cleared up matters. As originally formulated at a press conference some time ago and later in his letters to his colleagues, it looked as though it was merely a personal predicament. He had grown stale and flat, he said, and he had fallen into set ways of thinking. In other words, Mr Nehru seemed to be revolting against the familiar compulsions of living against which poets who have always revolted, the steady accumulation of dust on even the freshest of things, the corrosion of the liveliest of moral idealism by routine, even when that routine is imposed in order to realise the ends of that idealism. The drying up of the sources of original thinking that a too unrelaxed and too insistent preoccupations with affairs was what we thought was the problem that bothered Mr Nehru.

But in his own painfully honest way, he has pointed out that there were other strands in his desire to quit office. It was his feeling that the atmosphere of public life was getting more and more stifling, that idealism had fled the regions of public life and that the quality of public life had become coarser and more vulgar. There were also other manifestations in public life which he disliked immensely. Among these was what he called a certain revivalism, a certain primitive fall-back on a narrower intolerance, as against the more liberal and humane tolerance of the days before independence.

Now these reasons are substantially different from the first. And whereas on the first ground, Mr Nehru's request for a short spell of holiday was perfectly justified, it is somewhat difficult to see how a general disenchantment with political life as such (to which, after all, his other reasons boil down) can justify a temporary respite from work. On the other hand, the ills afflicting political life in our country which Mr Nehru listed—and he is substantially right in his diagnosis—needs his presence rather than his absence. But, perhaps, I am being too literal. In the first place, as Mr Nehru himself stated, these various reasons are rationalisations of a mood and may or may not be correct. The fact, perhaps, is that Mr Nehru thought—or rather felt—that he would like to get away from it all for a while and these were some of the reasons that occurred to

him when he tried to find a rational basis for his feeling. Secondly, after all, Mr Nehru may be able to think better about how to deal with these problems in his enforced leisure than if he lived in the very atmosphere he deplors. In any case, he now seems to think that other considerations which his colleagues canvassed outweigh these rationalisations of his own and he has decided to stay.

There can be no doubt that decision has been received with relief by all concerned. But one cannot escape the uneasy feeling that the problem has once again been evaded rather than solved. While no one is to blame for the way things took shape—indeed, everyone is relieved at Mr Nehru's decision to stay—it seems that this way of demonstrating Mr Nehru's indispensability has its dangers. It is not, of course, that Mr Nehru has allowed himself to be easily persuaded—indeed, quite the contrary. At one stage, it looked as though, his mind was quite made up. But it looks strange that the Congress party should feel so completely lost even at the merest possibility of Mr Nehru's absence even for a temporary period. The bearing of this episode on the question of 'After Nehru—What' is only too clear.

In any case, one or two things can and should be done. One is, to allow Mr Nehru, a temporary holiday, even if he is to continue to be the Prime Minister. He needs rest badly and should be given it. Secondly, he should conserve himself more carefully and take more frequent holidays, even if they were only for week ends respite from work—as do the British Prime Ministers. And this also implies that he should shed a lot of work which others can do just as well. A good deal of routine work which he is taking on himself should be delegated to others. He can, even while in office, devote more time to the kind of fundamental thinking that he wanted to do by going away from Delhi.

And, finally, this episode will have served no purpose if the Congress does not set its house in order. Some Congressmen referred to Mr Nehru's announcement as an atom bomb thrown among them. It is very much to be hoped that they do not lapse into complacency because they have converted it into something not unlike a damp squib. If they do not restore to public life some of the original idealism that Mr Nehru misses now, they would have reduced to a farce what must have been two painful decisions: the first one to leave public life for a while, and second and even more painful decision to revoke the first.

May 10, 1958

University Education

The Estimates Committee of the Lok Sabha can congratulate itself on the recommendations it has made for improving University education in the country. The Committee's chief concern was with overcrowding in Universities in the country and with improving the scope for scientific studies in the University curriculum. The recommendation of the Committee that higher mathematics should be specially encouraged and that every University should specialise in one or two scientific subjects for intensive advanced studies for scientific and technical education is intended to promote scientific education in Universities.

The limitation of admission in the arts courses to those who have special aptitude for literary and academic studies as recommended by the Committee is aimed at reducing the pressure of students in the arts courses. The suggestion in regard to the abolition of the degree qualification for recruitment to lower and middle level public services follows the recognition of the adverse effects on employment which limitation of admission in the arts courses would have. Further this would also greatly conduce to improvement in the standards of education by reducing the teacher pupil ratio.

The Committee does not seem to be unduly perturbed by the student indiscipline and is hopeful that the problem is capable of being solved by leaving the students a large measure of freedom to manage their own affairs especially in regard to extra-curricular activities. "A measure of self-government" is therefore what the Committee prescribes for preserving discipline among the students.

Reform of the present examination system is another aspect of education to which the Committee has applied its mind. But the Committee has not suggested any new system to replace the old one. This has been left to be decided by a small expert body, on the basis of statistical methods available to standardise the results of examinations and thus evolve a uniform standard of marking in the different universities. To improve efficiency of teaching and learning, emphasis is laid on the students' record of the class work. The Committee has therefore endorsed the recommendation of the University Education Commission that one-third of marks allotted to each subject be reserved for work done during the course of instruction and this be adopted forthwith in the B.Sc. M.A. and M.Sc. Examinations.

The Committee is also against the Education Ministry taking upon itself administrative and executive responsibility and wants

the Ministry to confine itself to functions of supervision and policy making. The other recommendations of the Committee include exchange of teachers of outstanding merit, provision of liberal scholarship to intelligent women students to enable them to prosecute higher studies and starting of evening classes in big cities.

Cotton Textile Industry

Though the excise duties on mill-made cloth have been reduced following the grave crisis in the industry as reflected in huge accumulation of stocks, whether the measure would by itself, enable the industry and the various mills to stabilise the working conditions is open to doubt. The committee of the Bengal Millowners' Association seem to be of the view that without further reductions in the excise duty it would be impossible to clear the entire stocks that have accumulated with the mills. A readjustment of production between the various sectors is also indicated as a possible source of relief for the industry since it had been found that overproduction of coarse varieties was at the root of the troubles suffered by the industry last year. But if the mills are to effect their salvation themselves in this way, a change in policy in regard to the allocation of quotas for imported cotton would seem to be warranted. Restriction on the production of printed cloth is another anomaly in the textile policy of the Government which needs revision if production by mills is to be brought into line with consumer requirements. These points were raised at the meeting of the committee of the Bengal Millowners' Association which was attended by Mr D. S. Joshi, Textile Commissioner, Union Government.

For the industry in West Bengal, the beneficial effects of the reduction in central excise duties on mill-made cloth seem to have been negated by the continuance of sales tax by the State Government on the products of cotton cloth. The Bharat Chamber of Commerce has therefore suggested the total abolition of the licensing and sales tax on such products of cotton cloth as readymade cotton garments and waterproof cotton canvas. There is a certain element of inconsistency in the continuance of such taxes especially after the centralisation of excise duties on mill-made cloth.

In the course of the discussion between the representatives of the Bharat Chamber of Commerce and Mr Joshi, Textile Commissioner, Mr K. L. Dhandhan, President of the Chamber, pointed out that the imbalance between production and internal absorption has to be correlated with the increase in the overall burden of excise duty on mill-made cloth. Difficulties of the hosiery industry and the cotton textile trade to which Mr Dhandhan drew attention, are the symptoms of the persisting crisis at the coarse sector of the industry and therefore call for more liberal measures than have so far been conceded.

Fall in Shellac Prices

THE Shellac market in Calcutta has continued to rule weak with Pure TN quality quoting around Rs 64 per maund. Shipments during May, until the 3rd, were 6,882 packages comprising 1,313 packages of shellac; 5,143 packages of seedlac; 110 packages of button-lac and 316 packages of other varieties.

The steady decline in prices is attributed to growing arrivals of lac from the Bysakhi crop. In spite of continued American purchases of seedlac and moderate interest from Europe and other areas, the spot price was pushed down at one time to Rs 60.

In this connection, Mr Lall, Joint Secretary, Ministry of Commerce and Industry, has stated that the Government have noted with concern the steady and unhealthy fall in the price of the commodity and added that, one of the reasons why shellac is giving way to synthetics is, the prices of the latter have been more stable than the prices of shellac.

A suggestion is made that the State Trading Corporation should immediately enter the market and purchase shellac for building up a buffer stock. Mr Lall, however, feels that it is the Government's policy to use the Corporation only to solve the problems which the traders are unable to solve by themselves. He is not sure that the problems of shellac are in this category.

It is also suggested that, by an adjustment of the cess leviable under the Indian Lac Cess Act, it will be possible to achieve stability in shellac prices. A scheme for the levy of such cess is placed before the meeting by the Shellac Traders' Association to consider the scheme. It is agreed that the Chairman of the Export Promotion Council should immediately convene a meeting of shellac exporters with a view to organising an association for regulating prices and trade.

The shellac market in London also rules quiet. TN quality is quoted at 161sh 6d per cwt for June delivery and 164sh for August.

Sugar

Sugar markets, which had been ruling steady till the end of last week, have turned quiet following the release of a further quantity of 1.66 lakh tons for free sale. Following mill-delivery rates (per maund) are quoted in the Hapur market:—Khatauli (B. 29) Rs 38.25; Iqbalpore (C. 29) Rs 37.00; Mansoorpur (C. 29) Rs 37.25; Rohana (B. 29) Rs 38; Daurala (B. 29) Rs 37.50; Mowana (C. 29) Rs 37; Shamli

(C. 29) Rs 37; Amroha (D. 29) Rs 35.12; Binore (E. 29) Rs 35.56 and Modinagar (C. 29) Rs 36.87.

The Khandsari market, however, continues to rule steady, thanks to good demand from the consuming areas. Production is gradually coming to a close. Rates are moving between Rs 30 and Rs 34 per maund, according to quality.

Gur

Gur season has almost come to a close; and daily arrivals in the Hapur market are only 200 maunds per day. Bears and bulls, in a tussle to give a favourable turn in their favour, are purchasing the commodity at rates varying from Rs 14 to Rs 15.50 per maund. Outside demand is, however, slack, while stocks are estimated around 1.47 lakh maunds.

Arrivals in the Muzaffarnagar market have also gone down to an average of 1,000 maunds and prices are almost stagnant. Chakku quality is quoted at Rs 16 to Rs 17.25 and Shakkar Masala at Rs 21 to Rs 23.

Foodgrains

Quietly steady conditions are noticed in the Hapur Foodgrains market. Wheat prices have recorded a fall of about 75 nP per maund. The market for Rice continues to rule steady, while that for Gram remains unchanged. Bejhar arrivals are small and this accounts for the steady conditions in the prices of this grain. Arrivals of Peas and Arhar have continued to be heavy and stocks are reported to have swelled. Peas arrivals average 1,500 maunds and those of arhar about 1,000 maunds daily. Urad and Moong remain unchanged.

In the Delhi grains market, Rice has shown a rally of about a rupee per maund despite better arrivals amounting to 10,000 bags following the imposition of restrictions on the movement of the commodity by the Punjab Government. Gram rules quiet, while Barja has eased by 50 nP. The market for Maize rules slightly steadier, while other grains are quiet.

The all-India final estimate of Maize for 1957-58 puts the current year's area and production of the crop at 9,762,000 acres and 3,064,000 tons respectively as against the partially-revised estimate of 9,197,000 acres and 3,009,000 tons for 1956-57. This shows an increase of 565,000 acres in area and 55,000 tons in production during the current year as compared to last year.

The All-India final estimate of Jowar for the season 1957-58, places the current year's area and production of the crop at 41,411,000 acres and 8,056,000 tons respectively, as against the partially revised estimate of 40,367,000 acres and 7,249,000 tons for 1956-57.

This shows an increase of 1,044,000 acres or 2.6 per cent in area and 807,000 tons or 11.1 per cent in production of Jowar during the current year as compared to the previous year.

MADRAS REVIEW

CONFIDENCE seems to be the first casualty in the fight against difficulties which the Second Plan had to encounter in the course of its working in the last two years. It has become the fashion for the critics of the Plan to predict the inevitability of the Plan's failure. In fairness, it is to be pointed out that the Plan has reached a critical stage where it stands face to face with really formidable obstacles and the reported downward revision of the Plan to a total outlay of Rs 4,500 crores, is an official admission of the difficulties inherent in the task of carrying the Plan through in its original size. But the chief fault with the critics is their tendency to magnify the difficulties which gives an impression of rigidity of outlook on the part of the Government. The latest revision of the Plan target in regard to total outlay, should serve to silence these critics in regard to the attitude of the Government to the Second Plan.

Such criticism has not been confined to Central Plan but has also been equally evident in regard to State Plans. Almost in every State the failure of the Plan in a few sectors has become the stock argument of the opposition parties against the Congress Governments. In the recent session of the Mysore Legislature such criticisms were heard from spokesmen of all the opposition parties. The main point in the criticism made against the Plan was the non-utilisation of the money allotted for expenditure for the first two years of the Plan and the resulting carry-over of expenditure from which it was an easy step to predict the impossibility of utilising the total expenditure envisaged for the Plan period.

But the optimist that he is, Mr Nijalingappa, Chief Minister of the State, could not be forced to yield to the view points of the critics in regard to the State's Second Plan. It was the very mark of his leadership that far from being worried about any shortfall in expenditure Mr Nijalingappa was even confident that the State would be able to secure further Central assistance on the basis of proper performance especially in regard to timely utilisation of the outlay allocated to the State. The task that awaits him, in this connection is by no means either easy or small considering that out of a total outlay of Rs 145 crores for the whole of the Plan period, about Rs 87 crores have been reserved for the last two years of the Plan.

Part of the shortfall in expenditure in the first two years of the Plan is made up of the carry-over of expenditure from the First Plan, such amount being estimated at Rs 15 crores. Naturally as pointed out by one member in the legislative Council this underlines the need for proper coordination bet-

ween the activities of the spending departments and also for a definite expenditure Plan as well as for constant scrutiny of the progress made by various development schemes. How in the face of such marked lag in expenditure an increase in outlay as demanded by some members could be profitably absorbed is difficult to understand? It is an example of confused thinking that the very critics who criticised the working of the State's Second Plan on the score of the shortfall in expenditure should make such demands for increase in outlay.

When Mr Nijalingappa spoke of the ability of the State Government to carry through the Plan in its original size of Rs 145 crores he was basing himself on the improved performance in the last six months as also on the organisational changes that have been introduced to expedite progress. He has in this connection drawn attention to the setting up of an efficient machinery to push through the schemes. He was also aware of the importance of public cooperation in successfully implementing the Plan and did not fail to stress it. He attributed the retarded progress of the Plan to the effects of the States Reorganisation scheme. It was but natural that with five different areas to be integrated to form the enlarged Mysore State and with resultant dislocation of the administrative machinery, the pace of progress should refuse to be kept up. Since normalcy has been restored in administrative functioning Mr Nijalingappa is right in expecting improved performance in all fields.

Against the arguments of those who are prone to belittle the achievements of the Plan so far, Mr Nijalingappa has pointed to some tangible achievements. While in the food front, today, people are getting 14.6 oz per head against 12.3 oz ten years ago progress was more remarkable in lengthening the span of human life in the country, from 26 to 32. These point to nothing if not a definite improvement in the standard of living in the country. The criticism against the Plan is true only in so far as it indicates the leeway to be made up in improving the standard of living.

Apart from this, progress in Mysore itself has been of no mean order in almost all the spheres, and particularly notable in regard to industrialisation and irrigation and power schemes. Thungabhadra, Laccavalli and Sharavathi are the three multi-purpose projects which stand as the symbols of the coming era of prosperity for the agriculturists in the State. Already 900 families have been settled in the Thungabhadra area while about 95,000 acres of land have been brought under irrigation. The Ghataprabha scheme is credited

Development of Mysore

with an irrigation potential of nearly five lakh acres but is reported to have been held back because of the unsettled issue of boundaries on the border of the Maharashtra area. With the improvements that these promise in the agricultural situation food production should not take long to be increased so as to make the State self-sufficient in food supplies. The irrigation potential would further be increased with completion of the many minor irrigation schemes that have been envisaged. In this connection Mr Nijalingappa pointed out that the Government wanted to spend during the next year Rs 100 to 120 lakhs on new minor irrigation schemes and for repairing the existing minor irrigation sources like tanks. The chief defect in regard to irrigation planning has not been lack of facilities but unwillingness on the part of the cultivators to avail of the facilities already created. Mr Nijalingappa could not help regretting that only a small extent under the Thungabhadra ayacut had been brought under irrigation. He has attributed this to the fact that people in that area were new to wet cultivation. The need for a proper and efficient machinery to educate the cultivators in the scientific methods of cultivation and in the benefits of wet cultivation is therefore urgent.

Industrialisation is a field in which the Mysore State has left some of its neighbours in the Peninsular region far behind. Though much of the progress it has made in this sphere, it owes to the existence of rich minerals, without an enterprising policy progress would have been as little as in some of the backward States of the country. The present Government was in this respect fortunate in inheriting such an enterprising policy from the previous regime of the Maharaj. While in all the other States industrial progress has been of recent birth, the Mysore State is able to lay claim to a long tradition of enlightened policy in regard to industrialisation. Progress in the last decade has been even more remarkable. The Hindustan Aircraft, the Indian Telephone Industries etc are some of the new industries that were set up in the post-independence era but which however the State owes more to Central initiative. In the Mysore Iron and Steel works the State has a heavy industry which is conspicuously absent in the other States in the South. With the inauguration of the new spun pipe plant, at the Mysore Iron and Steel Works last month by Sardar Swaran Singh, Union Minister for Steel Mines and Fuel a new milestone has been passed on the road to further industrialisation. The new plant is credited with the capacity to meet besides the increased demand for steel in the

country, the increased demands of ferro-silicon, steel and other schemes for ancillary services. Production of stainless steel and special types of steel are mentioned as additional possibilities. Industrialisation is therefore a field in which Mr Nijalingappa has the least misgivings. While there are physical resources in abundance he is also sure of extra-assistance from the Centre and he is refreshingly free from having any grouse against the Centre on the score of unsympathetic attitude. In this connection he felt compelled to refer to the charges of discrimination made against the Centre in the matter of industrial development of the South. On the basis of the recent experience in connection with the opening of the new spun pipe plant at Bhadravathi which was made possible entirely by Central assistance he had little difficulty in dismissing such charges as frivolous. As he rightly pointed out such criticisms essentially spring from a refusal to view the Plan on an all India basis.

Power production is another field in which the State has made rapid strides. The Government have shown equal concern in developing the power potential and Mr Nijalingappa has stated that the Government would be spending Rs 2½ crores this year on the Sharavathi project, while another sum of Rs 3½ crores has been indicated for the next year. He has also given an assurance that though not in the core of the Plan, the Sharavathi project would be completed in the scheduled time without much delay.

Improvement of the forests and the fishing industry is also envisaged under the Second Plan. The development of the fishing industry which is a good dollar earner has been taken care of by a provision of Rs 1 crore. The policy towards the forests is aimed at raising the return from them to the maximum. With the steps that are contemplated for the improvement of the forest wealth, the total income from them is expected to go up from the present level of Rs 4½ crores to Rs 6 crores in about two years.

While Mr Nijalingappa is satisfied with progress in all these different spheres, he has expressed doubts about the adequacy of the present system of transport and communications, and has referred to the fact that the Capital of the State is still unconnected with important towns in the integrated areas by means of railways. The smallness of the railway mileage is the sign of the undeveloped transport system of the State. The adverse effects on industrial progress, of an insufficient transport system is too obvious to be overlooked. Development of transport is therefore a matter which assumes overwhelming importance.

THE PENINSULA

SOUTH INDIAN NOTES

Rural Development

The administrative report of the Rural Development Projects Department in Madras, reveals real progress in rural welfare activities initiated by the Government in the form of Community Development projects and also points to increasing enthusiasm among the rural people for schemes connected with rural development. The report in this connection shows the people's contribution to the implementation of the Community Development programme during the year 1956-57, at Rs 28 lakhs by way of cash and Rs 27 lakhs by way of contribution of labour.

Agricultural development seems to have bulked large in the activities of the Community Development blocks and this is only as it should be, since progress in agriculture has so far been tardy. The report in this connection shows that during 1956-57 17.36 lakhs maunds of fertilisers and 106,130 maunds of improved seeds were distributed. Progress is also reported in the use and cultivation of green manure, the area that has been brought under green manure being put at 1.79 lakhs acres. Among the other achievements in the agricultural sphere were the growing popularity of the Japanese method of rice cultivation, and the attempt to bring an area of 1.37 lakhs acres under improved method of cultivation.

In the non-agricultural field progress was most noteworthy in regard to rural electrification. The specific achievements in this field were the completion of schemes costing Rs 166.5 lakhs as a result of which 428 villages are reported to have benefited. Schemes which are in progress are estimated to cost Rs 151 lakhs. Under the highways programme, the year witnessed the completion of 15 miles of national highways.

Progress, in social welfare was marked by the growing tempo of activities in connection with the construction of two hospital buildings, and 13 community halls etc. In the educational field 435 new schools were started and 272 ordinary schools were converted into basic schools. In addition, the report points out that more than a thousand adult education centres were opened bringing the benefit of literacy to nearly 45,000 adults.

The number of co-operatives functioning in the Community Development areas has been placed at 4,226 the share capital and membership of these societies being estimated at Rs 4.465 lakhs and Rs 2.94 lakhs respectively. The non-credit societies numbered 243 of which 92 were co-operative stores 22 sales societies and 129 weavers' societies.

Bangalore Corporation Budget

The new budget of the Bangalore city Corporation reflects the increasing responsibilities that have accrued to it consequent on the rapid expansion of the city. This has set the Corporation authorities looking about for more revenue to meet the growing expenditure. This has been met by incorporating increases in tax rates in regard to a few items, in the budget.

The lighting tax has been raised by 1 per cent and this is credited with an increase to the tune of Rs 2.72 lakhs which according to the Mr Jinabhai Davidoss, Chairman of the Taxation Finance Commission of the City Corporation, would work out at 10 nP per month on buildings with monthly rental value of Rs 10. Mr Jinabhai also justified the tax on property at 18½ per cent on the rental value for 10 months, which according to him was the lowest in the whole country.

Though the outmoded nature of the octroi is recognised the abolition of such a tax is explained as inconsistent with the present level of finances of the Corporation since by abolishing this tax the Corporation would be faced with a loss of revenue to the tune of Rs 40 to Rs 50 lakhs. On the contrary possibilities of extending this tax to Government departments including the Electricity Board are being explored.

Scope for increasing the revenue resources of the Corporation is indicated by the current evasion of the profession tax. This is sought to be plugged by the creation of a separate department for profession tax. The suggestion to give up levying cycle tax has also been turned down in view of the present stringent financial position.

Increase in the share of the entertainment tax levied by the Government is a possible field for augmenting the revenue of the corporation. In this connection it has been explained by Mr Jinabhai that the Corporation should make further efforts to make the Government agree to raising the Corporation's share of that tax from 18½ per cent to 25 per cent and also to vest control of the collection of the tax in the Corporation. The non-allocation of a share from the vehicles tax in spite of the fact that the vehicles were plying on the roads maintained by the Corporation was listed as an anomaly which could be rectified to the advantage of the Corporation. Mr Jinabhai has in this connection expressed the view that the Corporation should make efforts to secure from the Government a lump sum grant of Rs 5 lakhs per year for the maintenance of the roads in the Corporation areas.

The other methods of augmenting the finances of the Corporation suggested by Mr Jinabhai were the levy of water charges on all Government buildings for water consumed thereon, and rationalising the street lighting and securing a lower rate for the water supplied by the Government to the Corporation for distribution to the people.

SOUTH INDIAN MARKETS

Pepper Gives Way

PEPPER markets have been ruling weak. In the Alleppey market, the rates are quoted at Rs 593.75 for superior Palai variety and Rs 587.50 for inferior Thekkan variety. In the Calicut market, Wynaad quality is quoted at Rs 660 and the Country variety at Rs 630 to Rs 650 per candy.

Weakness in the commodity has been attributed to heavy selling in old crop by Singapore where the new crop is due by the middle of this month. It is reported that the USA has bought large quantities from Singapore. As the new crop is expected soon, Singapore appears to be keen on clearing old stocks and it is now offering at 24 cents per pound instead of about 26 cents at which it sold earlier.

The future of the market, at the moment, appears uncertain. Everybody in the trade is looking forward to the first official estimate of Sarawak pepper and the attitude of growers there. The exportable surplus of Malabar Black pepper, as on the 1st May, is estimated at 8,000 tons after deducting the normal carryover of about 3,000 tons year to year. The political situation in Indonesia, the size of the new production of Sarawak pepper and the demand from New York and Europe are some of the major factors that will shape the price of the commodity in the future. Fear of a recession in the USA developing into world recession in the near future seems to be responsible for the present strike-like attitude of buyers in New York.

In the New York market, Malabar and Lampung spot are quoted at 26 cents per pound. But as Singapore is offering at 24 cents per pound, the immediate prospects of business with the USA are reduced. Notwithstanding the present developments, prices are not, however, expected to decline appreciably as some Communist countries are continuing as buyers at lower levels.

*

Coffee

As mentioned in these columns earlier, the year 1957-58 was proved to be a vital year for the Coffee industry throughout the world. It was that year which witnessed the end of the seller's market for the commodity and also large accumulation of unsaleable coffee, especially in the coffee-producing centres of South America. Thus, the Coffee Board achieved a record export of over 15,000 tons in that year. The growers drew high dividends at Rs 2.65. But, at all this was posable, because of the highest recorded coffee crop of over 41,600 tons grown in the preceding year 1956-57. The 1957-58 crop is, however, expected to be substantially lower, although it may not be as low as 35,000 tons as some apprehended, or 37,000 tons as the Board had first estimated.

The latest official estimates indicate a crop of 39,920 tons. Even this represents a considerable decline as against the previous year's crop, and this is mainly attributable to the poor crop in Coorg, which is estimated to account for only 11,900 tons as against 15,000 tons for the previous year.

The prospects for coffee exports do not seem to be very encouraging; and some fear that they may not reach even the 10,000 tons suggested by the Export Promotion Committee.

*

Groundnut

The Madras Groundnut market exhibited a steadier tendency although the volume of business continued to be small. Arrivals averaged 40 to 50 tons per day. Business was reported done in summer crop at Rs 150 per candy and in Coromandel variety at Rs 151.

New crop peanut has begun to move into the market and the major portion of the arrivals constitute this variety. Better arrivals are reported in summer crop in South Arcot and Tanjore districts.

In the Groundnut Oil section, activity was subdued. Calcutta interests did not show much interest and they were buying only small quantities in order to test the market. The rate for the ready position was quoted slightly lower at Rs 312 per candy.

*

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow Hides showed no change and the market for these ruled quiet. Arrivals of Buff, Buff Calf and Cow Calf were about the same as in the previous week and there was no change in prices.

In the export section, satisfactory business was reported done. In general, Madras sellers were not willing to reduce prices, while buyers were bidding progressively lower prices which were about 4d every alternative day. Buyers' ideas in the UK were reported to be 51/46/41d for 5/5½ lbs and 33½/3d for fifths alone in 8/8½ lbs. In the Calf section, one or two marks of prime Buff Calf in run selections were in request at 66/67d. Inferior selections were wanted at cheap prices; but supplies were small.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were restricted which was explained as due to accumulation of stocks in Madras. Consequently, commission merchants were unwilling to enter into fresh commitments. Clearings were small as normal buyers were not showing any interest.

On the export front, trading in Goat skins was slow. The Continent was interested only in skins suitable for special purposes. There was some business in light weight skins on French account. In the Sheep skins section, conditions may be described as stagnant. It is difficult to forecast the price levels and everything seems to depend on the public auction in London, to be held on the 5th May.

Unsettled Conditions

Watch-Dog Writes:

CONDITIONS in stock markets have generally remained unsettled during the week under review. Although attempts at rally are being made, there is a tendency to book profits at bulges in the absence of any incentive.

The Calcutta Stock Exchange displayed a very steady undertone with selected Miscellaneous scrips making further headway on investment demand.

The Bombay Stock Exchange ruled dull and featureless in the absence of sustained support.

Quietly steady conditions were witnessed on the Madras Stock Exchange.

Wall Street closed with an irregular higher tendency, ranging mostly to a dollar or so.

Calcutta

Calcutta, Friday Evening.

ACTIVITY on the local Stock Exchange, during the week under review, was mainly confined to the Miscellaneous section, which provided many firm features, thanks to renewed investment demand. Speculative issues recovered from the initial low levels, whilst other scrips ruled quiet.

In general, trading was dull and dealings were thin as operators were reluctant to extend their commitments.

JENSON AND NICHOLSON (INDIA) LIMITED

NOTICE

NOTICE is hereby given that the Annual General Meeting of Members of the Company will be held at the Registered Office of the Company, No. 2, Fairlie Place, Calcutta, on Tuesday, 27th May, 1958 at 11 A.M. for the following Purposes:—

1. To receive and consider the Directors' and Auditors' Reports and the Profit & Loss Account for the year ended 31st December, 1957 and the Balance Sheet as at that date.
2. To declare Dividends.
3. To elect a Director.
4. To appoint Auditors and fix their remuneration.

The Share Transfer Books of the Company will be closed from the 20th to 27th May, 1958, both days inclusive.

By Order of the Board,
H. S. CHALLIS
Secretary.

2, Fairlie Place,
Calcutta,
22nd April, 1958.

NOTE: A member entitled to attend and vote at the above Meeting may appoint a proxy to attend and vote instead of him. A proxy need not also be a Member of the Company.

Fears of additional taxation this year, the delay in the announcement of retention prices of steel and cement, the proposed strike in the two leading steel units, uncertain outlook for the textile industry, rumours of the possibility of a strike in the Raneeungee coal area and the absence of any relief in respect of export duty on tea—all these factors contributed to the depressed sentiment in the market.

Despite the announcement of the three new plans, the Giltedged market was well maintained. 3 per cent 1986 Conversion Loan opened at Rs. 71.15 and, after improving at one time to Rs 71.40, receded at the close to Rs 71.25.

Bank shares remained practically unchanged.

The weakness of the jute goods market following the reports of an increase in stocks with the mills and the withdrawal of purchases by the Argentine due to exchange difficulties, had an adverse effect on sentiment in the Jute section. National were on offer at as low as Rs 22.25 against Rs 24; New Central at Rs 13.62 against Rs 13.81 and Barnagore at Rs 82.00 against Rs 83.50. Howrah changed hands at Rs 15.00 to Rs 15.37, while Anglo-India were marked back to Rs 141.50 from Rs 144, the opening rate. Coal shares were dull and featureless following the uncertainty about selling prices for the commodity. Rumours of the possibility of a strike in the Raneeungee coal area were also a contributory factor. Bengal and Burrakur ruled practically unchanged at Rs 230 and Rs 22 respectively, while central India changed hands at Rs 7.56 to Rs 7.69 and Western Bengal at Rs 5.75 to Rs 5.81.

Trading in the Tea section continued to be restricted in view of the uncertain outlook for the commodity in the coming season. Batel were offered at Rs 18.62 against Rs 19, while Gungaram were maintained at Rs 118. Brooke Bond met with some business at Rs 16.05 to Rs 16.35; Grob 'A' at Rs 23.44 to Rs 23.50; Jayshree at Rs 10.00 to Rs 10.18; Patrakola at Rs 128 to Rs 131 and New Doonars at Rs 264 to Rs 267.

Sugar shares came in for restricted enquiry as operators were inclined to await the Government announcement with regard to the export policy. S.K.G. remained very steady at Rs 10.00 following the publication of encouraging results, while Carew turned a shade quieter at Rs 7.12 against Rs 7.19 and U. P. at Rs 14.00 against Rs 14.25.

Little or no interest was shown in the Textiles section where Elgins changed hands on the ex-dividend basis at Rs 11.69 to Rs 11.75. New Victoria finished better at Rs 1.37 after touching a low of Rs 1.34 from Rs 1.41. Price movements in the Engineering section were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to settlement considerations till mid-week. Against the week-end closing of Rs 21.67, Indian Irons opened lower at Rs 21.63 and receded further to Rs 21.45 at which level some replacement coupled with short-covering pushed up the rate again to Rs 21.75, to finish the week at Rs 21.43. TEXMACO touched a high of Rs 18.25 and a low of Rs 18.10, to finish the week at Rs 18.10. Jessop, after being offered at as low as Rs 18.50 from Rs 20.12, improved at the close to Rs 19.50. Braithwaite turned quiet at Rs 26 against Rs 26.31 with Marshalls nearly maintained at Rs 5.56 and Britannia at Rs 11.37.

The Miscellaneous section continued to provide many firm spots, thanks to sustained investment support. Most prominent were Dunlop having buyers at Rs 25.18 to Rs 25.81; Indian Cable at Rs 29.69 to Rs 30.75; Indian Aluminium at Rs 13.06 to Rs 13.25; Aluminium Corporation at Rs 10.75 to Rs 10.94; Aikali Chemicals at Rs 14.50 to Rs 14.69; Indian Oxygen at Rs 17.94 to Rs 18.37; NICO at Rs 86.00 to Rs 27.06 and India Steamship at Rs 11.06 to Rs 11.19. Indian Copper were neglected, hovering idly around Rs 3.13. In the Paper section, Orient moved rather erratically between Rs 29.15 and Rs 29.60 on alternate buying and selling to finish at Rs 29.25. Tita-gur remained almost firm at Rs 26.62 with India Pulp being enquired at Rs 19.08 to Rs 19.37 and Sirpur at Rs 9.87 to Rs 10.00.

Bombay

AFTER a quiet opening the Bombay Stock exchange staged a moderate rally under the leadership of Textiles, in the absence of fresh interest, the market again developed a sagging tendency towards close. Though steel shares showed some improvement around midweek mainly in sympathy with textiles, the gains could not be retained for long due to the continued uncertainty about the labour situation in both the steel works. Tata Steel closed quietly steady at Rs 181.50 on Thursday while Indian Irons was finally placed at Rs 21.72.

In the textile section, Bombay Dyeling turned ex-dividend and was quoted at Rs 53.10 on Monday. In later dealings the scrip met with buying interest and closed at Rs 54.20. Elsewhere, National Rayon steadied up to close at Rs 234.25. Bombay Burmah after closing at Rs 559 on Wednesday was subdued at close at Rs 556. ACC was a steady feature on renewed hopes of increase in selling price of cement and closed at Rs 154.

Madras

QUIETLY steady conditions prevailed on the Madras Stock Exchange. Turnover continued to be small.

Plantings: The fact, that dividend announcements were not quite up to expectations, continued to dampen sentiment in this section, resulting in shares being subjected to selling pressure. This was especially so in Rubber and Tea shares. Coffee shares were, however, very active. Cowcoody was bid higher at Rs 10 against Rs 9.54. Rajendras were taken up to Rs 10.25, Mysore upto Rs 3.15 and Consolidated upto Rs 24.80. Oucherlony remained very steady at Rs 4.78.

Rubber shares were weak. Cochin Malabars were marked down to Rs 4.90, while Midlands were neglected around Rs 16.25. Thirumbadis were done at Rs 1.60 and T.R.Ts. at Rs 7.05. Rajagiris, however, met with some enquiry at the market rate.

The unusual delay in the announcement of relief in respect of export duty had an adverse effect on Tea shares. Nonsuch changed hands at Rs 21.30 to Rs 21.50 and Chembra Peaks at Rs 3.65 to Rs 3.70. Peermades were, however, on offer at Rs 22.10 and Periakaramalais at Rs 4.20 and Twyfrids at Rs 13.30.

Textiles: This section ruled weak with sellers predominating for most of the shares. Metturs dropped further to Rs 343, while Cambodias, Rajalakshmis, Vijaykumars and Kotharis attracted sellers at the market rates. Travancore Rayons, however, improved to Rs 12.90 buyers. Maduras were quoted at Rs 33, while Coimbatore Spinnings eased off to Rs 54.50 from Rs 56.

Miscellaneous: In an otherwise dull session, this section provided a few bright features. Cement shares were an active counter. Travancore were enquired upto Rs 9 and Andhras upto Rs 11.25. In the Chemicals section, Metturs were supported upto Rs 9.50. Among others, T. Stanes were done at Rs 20.75; Textools at Rs 176.50; Aluminium Industries at Rs 13.37; Ashok Leylands at Rs 4.31 c.d.; Spencer at Rs 17.12 and Mysore Tobaccoes at Rs 12.55. Mysore Paper and Parry's Confectionery noted sellers at the market rates.

New York

ALTHOUGH corrective profit-taking remained a limiting factor, prices on Wall Street managed to register a new 1958 high. Covering and investment demand enabled the list to develop a fairly representation of mostly fractional advances. Demand could be traced mainly to continued hopes of a business upturn developing in the next few months.

The hardening tendency in values was led by heavy industry shares, notably Steels, Aircrafts, Tobaccos, Cameras, Chemicals and Rails. United Aircrafts provided some feature running ahead of the main body of stocks with a rise of more than two dollars, reflecting expectations of good first quarter results. Leading Motors were mostly lower with April car production at the lowest level for the month since 1948.

THE INDO-BURMA PETROLEUM COMPANY LIMITED

NOTICE IS HEREBY GIVEN that the FIFTIETH ANNUAL GENERAL MEETING of the members will be held at the Registered Office of the Company at Gillander House, Netaji Subhas Road, Calcutta, on Friday the 30th May 1958, at 10 a.m. to transact the following business:—

1. To receive and adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1957.
2. To sanction the declaration of a dividend.
3. To consider and, if thought fit, to pass the following Resolution of which a Notice as required by Section 257 of the Companies Act, 1956, has been received by the Company.

As an Ordinary Resolution:

That H. H. Maharaja Sir Pratap Chandra Bhanj Deo, K.C.I.E., LL.D., of Mayurbhanj be appointed a Director in place of Mr. M. I. Kee Kee Bhai who retires by rotation but does not seek re-election.

4. To consider and, if thought fit, to pass the following resolution of which Special Notice as required by Section 261 (2) of the Companies Act, 1956, has been received by the Company.

As a Special Resolution:

That Mr. J. N. C. Killick, who is an employee of Messrs. Steel Brothers and Company Ltd., the Managing Agents, be and is hereby appointed a Director of the Company in place of Mr. W. Hutchinson who retires by rotation but does not seek re-election.

5. To appoint Auditors for the year ending 31st December 1958 and to fix their remuneration.

Notice is further given that the Ordinary Register of Members will be closed from the 20th May 1958, to 29th May 1958, both days inclusive.

By Order of the Board,
STEEL BROTHERS AND COMPANY LTD.,
Managing Agents.

Gillander House,
Netaji Subhas Road,
Calcutta.
25th April, 1958.

N.B.

- (1) A member entitled to attend and vote at the above-mentioned Meeting may appoint a proxy who need not be a member to attend and, on a poll, to vote on his behalf.
- (2) An explanatory statement concerning item 4 as required by Section 173(2) of the Companies Act, 1956, has been posted to the shareholders.

AN ENCYCLOPAEDIA OF INVESTMENT CALCUTTA STOCK EXCHANGE OFFICIAL YEAR BOOK 1958

MORE COMPREHENSIVE THAN OTHERS

The Press and the Public alike endorse the Calcutta Stock Exchange Official Year Book as the most indispensable work of reference on investment. The very fact that the Central and State Governments, the Reserve Bank of India, all Exchange and Scheduled Banks, Insurance and other financial institutions, and leading business houses use it is a proof positive of its superiority over any other publications of a similar nature.

Contains full particulars relating to the stocks, shares and debentures of all companies and Government Securities and Public Bodies' Loans quoted on the Stock Exchange. Also contains information of general interest to investors including rates of income and Super-taxes, Wealth and Expenditure Taxes, Capital Gains Tax, Bonus Share Tax, Gift Tax and Estate Duty. Price Rs. 12.50 nP. Postage Rs. 1.87 nP. Add 50 Naye Paise to outstation cheques. Available from the Calcutta Stock Exchange Association Ltd., 7, Lyons Range, Calcutta.

Price: Rs 1.50

All schools of economic thought are agreed that savings are disinflationary.

Mr Paul Einzig, however, has reason to question the validity of this economic axiom in the light of changed conditions and circumstances.

Read his article in the World of Finance Section to discover how one aspect of savings could actually contribute to aggravation of inflationary tendencies.

Fluctuations—But Prices Unaltered

Investment Gossip:

IT was not a week without fluctuations; but the net result of the two-way movements that we have witnessed is largely to leave the prices unaltered. This apparently would suggest that factors influencing stock exchange activity have been both-sided. However, the fact is that there has been very little by way of specific development, and all that has happened is the narrow vicissitudes which would characterise a stock exchange that is not altogether moribund.

I really don't know what it is by way of positively favourable development that the market today expects. For, there can be no doubt that such an expectancy is in the air. This alone would explain the market's steadiness during a period when the news was anything but cheerful. My broker friends tell me that their view of prospects is based upon the anticipation of the imminent announcement of satisfactory increases in the steel retention prices.

As far as I personally am concerned, I like to believe—and I hope I am not deluding myself—that it is the fact that the market is intrinsically strong which is responsible for the steadiness in share prices. The worst, I should say, is behind us, and even the Reserve Bank of India Bulletin mentions, though guardedly, that "the eighteen-month old bear phase seemed to have ended, yielding place to a general uptrend, reflecting mainly a revival of confidence."

So, I wouldn't set too much store by wishful hopes of favourable Government announcements. Instead, the investor should take note of the emergence of a set of conditions in which the professional operator finds it hard to depress prices. In recent weeks, indeed, many such opportunities were offering; and some of these were seized, but the reaction in prices has been nominal.

In this line of reasoning, it would be difficult for the merely speculative factors solely to influence trends; and it may then be that, in view of the slowly reviving confidence, prices will be steadily upward.

There is, however, one occurrence in the corporate field that

needs to be remarked. Invoking I do not quite know what power, the Government have announced that the management of Jessops has been taken over, in the sense that a new Board has been appointed. The new Chairman is Sir B. P. Singh Roy. Dr B. D. Kalelkar and Mr S. D. Srinivasan join the Board as Directors. The four technical directors—Mr Sitwell, Mr Graham, Mr Cargin and Mr Mitchell—continue in office. Thus, with a minimum of officious intervention, and with private sector interests in, as it were, full charge, the running of Jessops has been entrusted to a respected management for a period of three years.

The market greeted this news with a spurt in Jessops.

£ R S

Investment Notes:

JESSOPS have recovered to Rs 19.25 from a low of Rs 18.34 touched early in the week. This is in response to the report that the Government of India have decided to take control of the company by appointing its own directors on the Board. It needs to be explained that what is being taken over is not the ownership of the company, but its management. It remains to be seen whether the above step will enable the directors to consider paying a dividend for last year.

The directors of the Andhra Cement Company Limited have decided to give up the establishment of a cement factory at Nadikuda, Guntur district, sanctioned by the Government of India. Consequently, the proposal for the issue of 2,50,000 Cumulative tax-free second Preference shares of Rs 10 each has been dropped.

Kalasa Tea & Produce Company has proposed to raise the authorised capital from Rs 5 lakhs to Rs 9 lakhs by the creation of 40,000 new shares of Rs 9 each. These new shares and each of the 60,000 issued Ordinary shares of Rs 9 each will be sub-divided into shares of Re 1 each by the capitalisation of Rs 60,000 out of the General Reserve for the issue of 60,000 ordinary shares in the proportion of one share for every 9 shares held. Thereafter, these shares of Re 1 each will be consolidated into shares of Rs 2 each. The new shares will rank for dividend paripassu with the existing shares.

£ R S

Investment Briefs:

BHARAT Line, Bombay has recommended a dividend of Rs 6 and a bonus of Rs 6 per share for 1957 as against only a dividend of Rs 6 in the previous year.

Spencer & Company, Madras, has declared an interim dividend of 5 per cent for the year ended 30th June, 1958.

Sri Balasubramania Mills have halved the dividend to 7½ per cent for 1957.

Satisfactory Sugar Results

Balance-Sheet Reviews:

FOUR Sugar mills—SKG Sugar, Darbhanga, Maharashtra and Mysore—have presented their reports and accounts for last year. All of them have produced satisfactory results.

SKG Sugar

Despite increased earnings, the Shree Krishna Gyanodaya Sugar Limited has maintained the dividend on the ordinary shares at Re 1 per share for the year ended 31st July, 1957. Factories at Hathwa and Lauriya have crushed 34.89 and 42.27 lakh maunds of sugarcane and produced 3.49 and 4.10 lakh maunds respectively of sugar. The cane crushed at Lauriya is the highest recorded so far in the factory. Sales have risen to Rs 2.85 crores from 2.38 crores, while the net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 5.28 lakhs as against Rs 4.75 lakhs in the previous year. In respect of allocations to funds, the Depreciation amount is reduced to Rs 4.93 lakhs from Rs 5.83 lakhs, while Taxation provision is raised to Rs 5.60 lakhs from Rs 4.10 lakhs.

According to the directors' report, the crush during the current year is likely to be slightly less due to continued drought conditions, which have had an adverse effect on the sugarcane crop.

£ R S

Darbhanga Sugar

The accounts of the Darbhanga Sugar Company, for 1957, show that sales at the company's two factories (Lohar and Sakri) are considerably higher at Rs 125.43 lakhs and Rs 88.66 lakhs as against Rs 73.62 lakhs and Rs 57.72 lakhs respectively in the previous year. After providing Rs 10.10 lakhs for taxes, the amount available for distribution is Rs 6.42 lakhs. Dividend is maintained at 20 per cent and the balance is carried forward.

Total cane crushed, during the year, is 73.19 lakh maunds and sugar produced 6.86 lakh maunds as against 64.56 and 6.40 lakh maunds respectively in the previous year. The recovery percentage has dropped from 9.31 to 9.37.

£ R S

Maharashtra Sugar

The Maharashtra Sugar Mills Limited has made a gross profit of Rs 53.82 lakhs for the year ended 30th September 1957 as against Rs 43.75 lakhs in the previous year. The results have been an all-time record with the marked improvement in the yield of sugarcane. The directors have recommended a dividend of Rs 75 plus a bonus of Rs 25 per share on the increased capital as against Rs 250.

It will be recalled that, during the year, equity capital was increased to Rs 67.50 lakhs from Rs 45 lakhs by the issue of one bonus share of Rs 250 each for every two shares. With the result, the number of Ordinary shares has increased

to 27,000 from 18,000 on which the dividend is being paid.

In respect of allocations to Funds, the Depreciation amount is reduced to Rs 3.84 lakhs from Rs 4.06 lakhs, while taxation provision is raised to Rs 28 lakhs from Rs 22 lakhs and General Reserve to Rs 4 lakhs from Rs 2 lakhs.

£ R S

Mysore Sugar

Despite a decline in earnings, the Mysore Sugar Company Limited has maintained the dividend at 20 per cent for the year ended 30th June 1957. The decline in earnings is mainly due to lower production on account of inadequate supply of cane and a drop in production and sale of spirits. Sales are shown at only Rs 2.35 crores against Rs 2.82 crores, while the net profit, after providing for Depreciation and Wealth Tax, amounts only 3.83 lakhs as against Rs 4.09 lakhs in the previous year. The Depreciation amount is raised to Rs 6.63 lakhs from Rs 5.29 lakhs, while no provision is made for taxation as the amount at credit of taxation reserve is estimated to be adequate to meet the year's liability. The total quantity of cane crushed is 2.24 lakh tons and the quantity of sugar production is 21,631 tons.

£ R S

Indo-Burma Petroleum

Despite a rise in earnings, the Indo-Burma Petroleum Company Limited has maintained the ordinary dividend at Rs 2 per share for the year ended 31st December, 1957. The net profit, after Depreciation and Taxation, amounts to as much as Rs 23,96,477 as against only Rs 17,48,635 in the previous year. Apart from providing a sum of Rs 1.09 lakhs for Development Rebate, the Depreciation amount is raised to Rs 4.09 lakhs from Rs 3.90 lakhs and Taxation provision to Rs 30.43 lakhs from Rs 28.93 lakhs.

The main refinery erected near Rangoon by BOC (1954) Limited, in which the company is interested, came on to full production from indigenous crude oil in 1957; and Burma is now virtually self-sufficient in the major petroleum products.

£ R S

Guest, Keen, Williams

Sales by Guest, Keen, Williams Limited have increased to Rs 9.07 crores in 1957 from Rs 7.94 crores in the previous year. The level of company's production is generally higher than during 1956 and this, together with two statutory rises in steel prices, has resulted in an increase in sales. Rising costs of production have, however, affected profit margins. Operating costs have amounted to Rs 7.54 crores against Rs 6.28 crores. Depreciation provided amounts to Rs 20.34 lakhs against Rs 18.11 lakhs and Taxation provision to Rs 77.76 lakhs against Rs 84 lakhs. The final dividend has been reduced to 12 from 15 per cent, thus making a total of 20 against 23 per cent. A sum of Rs 25.90 lakhs (Rs 38 lakhs) is transferred to General Reserve.

The paid-up capital is Rs 2 crores in 20 lakhs shares of Rs 10

sphere of foodgrain production. Secondly, progress in the industrial sphere is fairly satisfactory.

We would now refer to the question of resources. The Planning Commission have largely confirmed the indication given in the columns of Indian Finance by assessing the additional taxation so far instituted by the Central Government at Rs 725 crores; and this compares with the figure of Rs 703 crores suggested by Indian Finance. Then, the State Governments have promulgated measures which, over the five year period, are expected to yield Rs 173 crores. Unfortunately, tax effort of this magnitude, far in excess of what had been postulated by the Plan, has "not provided resources for the Plan". Defence, non-development expenditure and development expenditure outside the Plan have eaten into the revenues contributed by additional taxes which, strictly speaking, should have been available for the Plan as such. Then, in regard to loans and small savings, the Planning Commission now expect Rs 1044 crores as against Rs 1200 crores in the original estimates. The figure given by Indian Finance in this regard was Rs 825 crores. But, as we shall show later, this is a head under which we should anticipate a much larger contribution. The contribution of the Railways is now put down at Rs 250 crores and conforms to the figure given by Indian Finance, being Rs 100 crores higher than the original estimates. In spite of additional taxation, the balance from current revenues is now envisaged to be Rs 899 crores against Rs 1200 crores in the Plan. Deficit financing is unchanged, but anticipation of external assistance is placed at 1038 crores against Rs 800 crores. In sum, the resources are placed at Rs 4500 crores as against Rs 4800 crores.

Does all this mean that the Second Plan is in train of being cut a second time? For, the original Plan of Rs 4800 crores, it was obvious, would cost between Rs 5200 crores and Rs 5400 crores to implement. The decision then was taken not to change the targeted expenditure from the previous figure of Rs 4800 crores. This meant, automatically, the giving up of certain physical targets. Now, we are to learn that the resources being planned and outlay allocated are on the basis of a total of Rs 4500 crores. But then, this relates merely to Part A of the Plan, and Part B with an outlay of Rs 300 crores contains projects which, the Planning Commission say, "could be undertaken to the extent to which additional resources become available". In other words, Part B projects are to receive a lower priority, but have not altogether been given up.

Our own view, as the series by Eavesdropper in Clive Street Gossip have stressed, is that the Second Plan is unlikely to present any difficulty in the matter of resources. Particularly is this so, since conditions in the money market and the gilt-edged market are so developing as to ensure that the resources raised by Government borrowings could be very much higher than even the Planning Commission's original estimates. In this regard, 1958-59 will be a significant year. The Centre has already come out with a loan which may raise anything like Rs 130 crores in new cash. The State Governments will certainly be on the market for anything like Rs 50 crores to Rs 70 crores. Then, in the course of the last three or four months, the Reserve Bank is understood to have sold through the tap securities for a sum aggregating Rs 100 crores. Finally, the trends in the money market being what they are, we envisage a further famine of gilt-edged around August/September this year, which could be satisfied only by a second Government loan. For all these reasons, the realisations from market borrowing in 1958-59 may in the event prove surprisingly pleasant. Thus, we would

say that the picture of resources for the Second Plan is in the process of being miraculously transformed, not by any action taken by Government, but by compelling developments in the money market. Government will find that they will be raising more from new loans, not because they hoped to do so, but because there had developed a practically insatiable demand for gilt-edged. In a word, we would say, as far as it goes, the Planning Commission's

Monetary Policy for an Expanding Economy

By P. C. JAIN

IN AN expanding economy, especially in the case of an underdeveloped country like India, the monetary authority faces the difficult task of striking a balance between currency and credit expansion to meet the greater needs of trade and industry due to more rapid growth and credit squeeze to curb inflationary pressures which might arise because of the money supply increasing faster than the supply of goods. No special problem of this nature was created by the first five-year Plan but it was expected that India's second Plan, with the increased rate of investment and a larger amount of deficit financing, would create difficulties for the monetary authority. To forestall this it was decided to give the Reserve Bank of India more powers and to make its policy more flexible by amending the Reserve Bank of India Act and the Banking Companies Act, soon after the second Plan came into operation. Under these amendments (i) the Reserve Bank was allowed to revalue its reserves of gold coin and bullion at Rs 62.50 per tola instead of Rs 21.24 per tola and (ii) the 'proportional reserve system' was changed to the 'minimum reserve system' and it was provided that, instead of holding two-thirds of the assets of the Issue Department in gold coin and bullion and foreign securities of which gold coin and bullion should not be less than Rs 40 crores, the Reserve Bank would hold a minimum currency reserve of Rs 515 crores out of which foreign securities would be of Rs 400 crores and gold coin and bullion of Rs 115 crores. It was further provided that in an emergency, with the Government's permission, the minimum currency reserve could be reduced to Rs 415 crores of which foreign securities would be Rs 300 crores. The object of these amendments was to enable the Reserve Bank to expand currency and credit without hindrance in order to give monetary support to the expanded programmes under the second Plan. An ordinance issued on October 31, 1957, which was later replaced by an amendment to the Act, changed the minimum reserve requirements from Rs 515 crores to Rs 200 crores, of which gold coin and bullion should not be less than Rs 115 crores. The object of this amendment was not to enable the Reserve Bank to expand currency and credit but to release foreign assets to fill part of the foreign exchange gap.

Among other powers, the Reserve Bank was authorised to vary the reserve requirements of banks from 2 per cent to 8 per cent in respect of time liabilities and from 5 per cent to 20 per cent in respect of demand liabilities. Under Section 35A and 35B of the Banking Companies (Amendment) Act, 1956 the Reserve Bank was given power to issue directives to any banking company in regard to matters of policy or administration in the national interest or in the interests of the banking company itself. The Reserve Bank had not had occasion to use its power to vary the reserve requirements of banks but it has used its power to issue directives.

reappraisal of the Plan is cheerful enough and realistic enough. Indeed, even in these two regards it errs on the conservative side because the Planning Commission have failed to take note of this important phenomenon in the money market. For the success of the Second Plan, and for the successful raising of the resources for implementing it, we, for one, pin our faith upon a complete transformation of the gilt-edged market and outlook.

It was expected that armed with these powers the monetary authority would be able to fulfil the needs of trade and industry for credit while at the same time preventing an inflationary rise in the price level. It must be said to the credit of the Reserve Bank that it has increased the accommodation available to banks through its bill market scheme and otherwise. Without this accommodation the Indian money market would have been paralysed. But the Reserve Bank authorities have failed to remove the acute stringency of credit which Indian trade and industry have experienced ever since the commencement of the second five-year Plan.

Indian industry would have faced still greater difficulties if the commercial banks had not come to its aid to the full extent of their limited resources. As a result, bank credit in India increased by Rs 153 crores in 1956 as against only Rs 97 crores in 1955 and Rs 77 crores in 1954. It would have increased to a higher level in 1957 but it actually declined to Rs 82 crores because the monetary authority imposed all kinds of restrictions on it. The fact that the ratio of advances to deposits in the case of scheduled banks in India was at an unduly high level of 76 per cent in May 1957 and above 65 per cent in March 1958 gives some idea of the stringency of bank credit. Indian businessmen have not been getting adequate credit facilities for trading operations and for industrial expansion and they have to pay more for whatever facilities they are able to get than they should in order to sustain the increased rate of economic growth.

Why did the monetary authority in India not increase the credit base of commercial banks to enable them to increase the supply of credit to businessmen? One solution to this mystery is provided by the observation in the Report of the Central Board of Directors of the Reserve Bank of India for 1956-57 that "the current phase of financial stringency does not reflect absolute shortage of money but expanded demand for it. A basic solution to the problem of stringency is to be sought in an increase in savings so as to effect a better balance between the demand for funds (for investment) and their supply (through savings)". According to the theory of economic growth it is necessary to make investments in the economy in excess of the available savings so that employment, output and incomes might rise and increase the sum total of savings available in the system. In this way, when the adjustment is complete savings become equal to investments. But in the process the banks have to supply credit to fill the gap between the amount of investments and savings. The monetary authority in India has failed to do so. If the argument were to be accepted that to effect a balance between the demand for funds and their supply people's savings should first be increased it would amount to arguing that the banks have no part to play in this dynamic process of economic growth when investments increase in-

come and that in its turn increases savings to the level of investment. If banks refuse to supply credit to fill the gap between savings and investment, as would appear to be the intention of the monetary authority in India, increased investment and through that increased employment, outputs and incomes would become impossible. Whatever progress has been made by the private sector of the Indian economy in the first two years of the second Plan has largely been due to the limited help which the commercial banks have been able to give, the funds which the businessmen have been able to raise from outside the organised money market and from their own resources. The private sector in India would have faced less difficulties and would have made greater progress if the monetary authority had not followed a policy of credit squeeze.

The other reason which appears to have prevented the monetary authority in India from expanding bank credit, as is evident from the observations of Mr H. V. R. Iengar, Governor of the Reserve Bank of India, at the joint informal discussions on "Current Problems of Credit and Fiscal Policy" at the 12th meeting of the Board of Governors in Washington in September 1957 and some speeches which he made in India, is the fear that such a course would add to the inflationary pressures and would thus still further increase the price level. The mistake of the monetary authority lies in misjudging the connection between expansion of credit and inflationary pressures in India. It is true that in the case of a highly developed economy which has reached conditions of full employment or near full employment any expansion of bank credit would necessarily be inflationary and in order to prevent a rise in the price level the volume of bank credit should be reduced. For one thing the Indian economy has not yet reached a condition of full employment or near full employment in any sense of the term and what employment in the more advanced countries is not true of the more advanced countries is not necessarily true of India so far as the connection between bank credit and inflation is concerned. Moreover, there are a number of peculiar features of the Indian economy, which are well known to the monetary authority and some of which will be indicated later in this article, which make it quite clear that increased supply of credit by the commercial banks would not have added to inflationary pressures. The monetary authority adopted the policy of credit squeeze because it ignored these basic facts about the Indian economy.

In any case, the monetary authority was expected to strike a balance between credit expansion and credit squeeze. It did not expand the credit base of commercial banks but instead applied the brakes in the shape of selective credit control. The result has been the very opposite of a balanced monetary policy.

The policy of selective credit control was enforced through directives issued to the scheduled banks under the Banking Companies (Amendment) Act 1956. The first such directive was issued on May 17, 1956 to all the scheduled banks not to increase any credit limits against rice and not to issue any fresh credit limits against rice and paddy in excess of Rs 50,000 to any party. A number of other directives were subsequently issued, withdrawn and re-issued for such commodities as foodgrains, sugar and cotton textiles. According to the monetary authority the justification for the policy of selective credit control was that (i) bank credit had increased by a 'high' level of Rs 153 crores in 1956 and this was increasing the inflationary pressure in India, (ii) in the slack season (May to October) of 1955, instead of the usual decline, there was an increase in bank credit, and (iii) in June 1957 the bank credit had increased to a peak level of Rs 934 crores as against the earlier peak of only Rs 613

crores in June 1955. The monetary authority considered a level of Rs 800 crores as the maximum limit of bank credit in the slack season and desired the scheduled banks to bring it to that level. It must be said to the credit of the scheduled banks that, although many of them were not convinced of the wisdom of the Reserve Bank's action, they tried hard to reduce bank credit in conformity with its directives with the consequence that bank credit by the third week of September 1957 came down to the level of Rs 845 crores. With the onset of the busy season (November to April) bank credit increased but rather slowly to Rs 910 crores by the end of January 1958, Rs 932 crores by the end of February 1958 and possibly a little less than Rs 950 crores by the end of March 1958.

The policy of selective credit control has not produced the desired result of reducing inflationary pressures because of the failure of the monetary authority (i) to realise the fact that with expanded industrial and economic activity, brought about by the second Plan, the demand for bank credit was bound to increase. There was nothing abnormal if bank credit in 1956 increased by Rs 153 crores. It should have increased by a still higher level in 1957 to sustain the increased tempo of economic development; (ii) to appreciate the fact that credit against foodgrains, sugar and cotton textiles was not sought necessarily for speculative purpose but for financing the movement of crops in the case of foodgrains and for financing unsold stocks of goods in the case of sugar and cotton textiles, for which the mills could not find buyers. The result of imposing restrictions on credit was to hinder the movement of crops thereby making the supply condition in the consuming centres worse and to force the mills to use funds, which they would normally have used for expanding the output, for carrying heavy stocks thereby preventing as much increase in production as should otherwise have been possible. The Reserve Bank authorities appear to have realised their mistake and have now come to the conclusion that the policy of credit control should be announced in advance and should not be changed during the season for harvesting and moving the crop. So far as industry is concerned, it was emphasised by the Reserve Bank in its directives to the scheduled banks that credit needs of industry for productive purposes should be met while credit for speculative purpose should be discouraged. But the banks were not told how to distinguish between the two. Industry raises credit from banks on the basis of its stocks of raw materials and finished commodities and it is not always possible to control the real 'motives' for seeking such accommodation. Restrictions on credit for speculative purposes are bound to reduce credit for productive purposes. The distinction between 'general' credit squeeze and 'selective' credit control in the Indian context is artificial and unreal.

But even if it is granted that credit is sought mostly for speculative purposes the policy of selective credit control is not the correct approach because (i) bank credit supplies only 5 to 7 per cent and in some extreme cases not more than 10 per cent of the total amount of money invested in such hoarding and even the complete denial of bank credit could not possibly make a vital difference so far as hoarding is concerned; (ii) in India there is a big non-monetised sector and control over bank credit could only influence hoarding in the monetised sector while most of the hoarding in the case of foodgrains is done in the non-monetised sector by cultivators who do not sell their surplus stocks; and (iii) the basic assumption underlying the policy of selective credit control that inflation in India is due to an excessive supply of money is wrong and the policy based on it was bound to fail.

It is a matter of coincidence that the price level in India has begun to decline. It is not possible to establish any co-relation between the policy of selective credit control enforced since the middle of 1956 and a mild decline in prices since the middle of 1957. The decline in the price level, which has been due mostly to the falling prices of foodgrains, is accounted for by the fact that (i) the total output of foodgrains in 1956-57 was higher than in 1955-56, (ii) the output in 1957-58 is expected to be still higher, and (iii) the imports of foodgrains have increased substantially. All these favourable conditions naturally began to assert themselves in the second half of 1957 and the price level registered a fall.

If the policy of selective credit control is not the correct policy for controlling inflation in India, what is the correct policy? The answer to this question would depend on the view we take of the basic cause of inflation in India. Is inflation due to an excessive supply of currency and credit or is it due to the policy of deficit financing which has increased the purchasing power in the hands of consumers without a corresponding increase in the supply of goods on which this increased purchasing power could be spent? The main emphasis of India's second Plan is on long-period projects and it has not been possible to increase the supply of goods as fast as the purchasing power in the hands of consumers. During the past two years our foreign exchange resources were used for importing consumer and other goods which to some extent counter-balanced the increased purchasing power in the hands of the consumers, but the depletion of our foreign exchange reserves and the necessity of reducing imports has removed this cushion against inflation. If we take the view that the basic cause of inflation in India is not an excessive supply of money but an excessive supply of purchasing power in the hands of consumers any reduction in the money supply by selective credit control or otherwise would not reduce the purchasing power in the hands of consumers and would thus be ineffective in reducing the inflationary pressure. The only result of credit squeeze in India would be to create difficulties for businessmen and to prevent an increase in production thereby making the inflationary conditions worse. An effective method of controlling inflation in India would be (i) to reduce the amount of deficit financing and the rate of investment under the second Plan and (ii) to make more concerted efforts to increase the production of foodgrains, manufactured goods and services on which people might spend their increased purchasing power. The policy of credit squeeze might have shown some good result if it were combined with the policy of reducing deficit financing and curtailing the rate of investment in the economy but by itself, and so long as the volcanic forces of deficit financing are constantly throwing the economic system out of gear, it cannot possibly keep the inflationary forces under control.

An important fact which the Government of India appear to have ignored is that the success of any monetary policy depends on the confidence which people have in the impartiality and wisdom of the monetary authority. There is an impression in India, as was also emphasised by Mr C. H. Bhabha, Chairman of the Indian Banks' Association at the annual general meeting of the Association on 24th March 1958, that the Reserve Bank of India is subservient to the Finance Ministry and does not take independent decisions although in theory it is an autonomous institution and frequent official assurances are given about non-interference by Government. In a speech at the Madras Chamber of Commerce, Mr Iengar denied that the Finance Ministry has been interfering with the Reserve Bank of India. He went further and observed that although the Government have the power to issue directives

to the Reserve Bank that power has not hitherto been exercised. The question is not about written directives. If the Government were to issue written directives for the guidance of the Reserve Bank it would not constitute interference. The Government have been given power to do so by Parliament and the Reserve Bank, like every other institution in the country, has to fall in line with the policy of the Government. Interference in the real sense arises when the Finance Ministry or some other official of the Government begins to give unwritten 'advice' to the Reserve Bank authorities for which the former are not prepared to take responsibility but the latter are obliged to accept it or when the Reserve Bank authorities allow themselves to be 'cowed down' by the Ministers and secretaries to the Government. The public got the first indication of such interference when Sir B. Rama Rau resigned from the office of Governor of the Reserve Bank on 14th January 1957 much before the expiry of his term. Apparently he did not see eye-to-eye with the Finance Ministry. Another instance was in connection with the reduction of the minimum currency reserve from Rs 515 crores to Rs 200 crores. There is no doubt that it had become necessary to release the sterling and other securities in the currency reserve for meeting part of the foreign exchange gap. But when the Finance Ministry proposed it the Reserve Bank authorities instead of taking a balanced view tried

to outdo the Finance Ministry by observing that the currency reserve was in fact a 'relic of the past' and should not be retained. The public is bound to get the impression that the Reserve Bank authorities are not independent when they are always found dittoing what the Finance Ministry says and advancing arguments in support of the latter's announcements. Such impressions would be prevented if the Reserve Bank authorities took a more independent attitude. In most cases it would serve the interests of the country better if the Reserve Bank authorities made their advice public. This would prevent the Finance Ministry from taking an unreasonable attitude and would free the monetary authority from any suspicion of surveillance. Not all will agree with Mr Iengar that the Reserve Bank "can carry out its functions very much better now if its views on controversial fiscal problems were communicated to Government in confidence". The implication of Mr Iengar's remark is that now after nationalisation it would be better if the Reserve Bank tendered its advice to the Government confidentially. But the fact of nationalisation should make no difference and in a democracy in vital matters a more correct decision is likely to be taken by the Government if it has before it not only the views of the Reserve Bank but public reactions to the Reserve Bank's views, which is exactly what was happening before nationalisation of the Reserve Bank.

Economics of Automation—I

By NITISH R. DE

ALTHOUGH growth of substantially automatic processes in a number of scattered fields, such as electricity generation, chemical industry, blowing of electric lamp bulbs, etc., can be traced back to inter-war periods, automation as a revolutionising industrial technique is a post-war development. Automation, as it is understood now, largely eliminates human labour and detailed human control. In mechanisation, the work is performed by the machine itself but remains under the operational control of human agency, whereas, in automation, human operative control is done away with as the machine itself controls its own action. The impact of this innovation in engineering mass production and in routine office work has been outstanding. The electronic computer installed by J. Lyons & Co Ltd in its London office can do the work of 600 office workers. A computer by doing such work as stock control, mill order records, accounting, etc., can, it is estimated, become so economical as to be used in offices employing even fifteen clerks.

In engineering industries, the impact is phenomenal. In the Ford Factory at Cleveland, 531 operations in machining six-cylinder blocks for cars are all automatic with the result that 154 blocks are turned out each hour by a complement of 41 workers as against 117 under the replaced system. Automatic machines introduced at the Longbridge Works of Austin Motor Co, while increasing output by 20 per cent, reduced labour costs by 80 per cent. In the USA, 14 glass-blowing machines, each operated by only one worker, are sufficient to produce nine tenths of the country's requirements in electric bulbs and all glass tubes used in radio and television sets. In the same country, two workers in an automated wireless factory can produce 1,000 sets a day. In the ESSO Petroleum Co's oil refinery at Fawley, Great Britain, six workers on a shift produce one third of the whole country's oil products. There are instances of a fully automatic concrete mixing station in the USA with no manual labour on its pay-roll and of a British biscuit company which claims to have increased output ten-fold with one-third

less labour. Replacement of transfer machine type with linking processes by the programme-controlled machine has further augmented the efficacy of automation. In such a modern piston-making plant in the USSR aluminium ingots fed into the machine are melted in shape, receive heat treatment and finally emerge out of the machine in neatly packed boxes. With nine men per shift turning out 3,500 pistons in a day, this machine cuts production costs to a half, total staff to one-quarter and manual labour to one-sixteenth. It is reported that an automatic ball-bearing factory at Moscow can produce 900,000 ball-bearings and 600,000 roller-bearings a year with a total staff of 160.

These illustrations chosen at random are sufficient to prove that automation as a technique has come to stay in the industrial world. It is equally clear that its effects on the pace and character of industrialisation and industrial relations are likely to be varied and complex to such an extent that, with our present knowledge, it is not easy to undertake an accurate assessment.

Certain advantages and benefits of automation are obvious. The output per man-hour, i.e., productivity, will increase many-fold. Services of a large number of operators, manual and technical, are dispensed with, and yet output records an increase as in the case of A40 cars at the Austin Factory at Longbridge. Although sufficient data are not available, it is presumed that the capital and overhead costs of automated equipment are either very little more than those of the equipment they replace or may be even less. As a result, automation brings about very substantial savings in production costs.

Automation also raises the average level of skill of the workers. Repetitive processes and at times highly skilled jobs are taken over by automated equipment with the result that only high grade maintenance and production technicians will be required to attend on machines. There will be hardly any room for unskilled or semi-skilled workers in the system. But the trend raises the intricate

problem of re-training the redundant workers to make them suitable for the new jobs. The pattern of technical education will have to be recast, keeping in view the requirements of the automatic age.

Reduction of production costs under the automated system is not, however, a simplified affair. There are several determinants on which depends the extent to which automated equipment will replace labour. In a large degree, it depends on the relative costs of the two elements. When the depreciation costs of automatic machines are more than the depreciation costs of old machines plus the cost of labour replaced by automation, then, introduction of automation is uneconomic, and vice versa. Here, the prime varying factor is the wage-cost. Thus, we face a piquant situation in that organised and determined labour fighting for higher wages and shorter working hours may justify the need to automate industries in a free-enterprise economy. The same may be the case where there is a perennial shortage of skilled labour in an expanding economy. Judged from this angle, an underdeveloped, overpopulated country with comparative lower wage-cost would justify the retention or introduction of obsolete techniques of production. But, then, there are too many variable cost factors in the issue to support this tentative conclusion. The need for re-training in new skills will require the employer to spend not only money but to lose on the time-lag factor. Besides, the fear of saturation of markets resulting in over-production may recurrently bring in the problem of recession when idle automated machines will be a mere liability. They cannot be retrenched like surplus labour. In addition, if the automatic technique brought about by heavy capital expenditure, is not found easily adaptable to new designs of product, then, the expenditure will have to be written off quickly to enable modified plant to be installed to suit the craze for new products. Moreover, introduction of automation will result in scrapping of existing non-automatic equipment and it will lead to considerable depreciation of existing investment and a reduction in the rate of profit.

The prospect of unemployment looms large in the perspective of automation. It is often argued that, in the long run, the boons of automation will create sufficient incentives for industrial expansion which will absorb redundant labour. In a free enterprise economy, however, various psychological propensities may very often offset the logic of economic development. It is also suggested that, with proper planning, natural wastage such as death, retirement, resignation, etc., will make up for the redundancy. This is possible, but in conditions other than the "boon" the problem of surplus labour will recur. As a matter of fact, it is found from experience that, along with higher productivity, automation also brings about shrinkage of employment potential. In the USA industrial production has gone up by 45 per cent since 1947 while the number of industrial workers has increased by only 3 per cent in the same period. Chemical production in the USA has increased by 50 per cent since 1947, but the number of production and maintenance workers has gone up by 1 per cent only.

Because of unemployment prospects, trade unions are generally opposed to automation unless, of course, their programme of mitigating the evils of unemployment are accepted. This programme includes shortening of working hours; introduction of multiple shifts; higher wages following higher productivity; guaranteed re-training of displaced workers; lowering of the retiring age; increase of unemployment benefits and so on. It is needless to point out that costing of automation requires re-assessment in the light of this charter of demands.

Dr Khan Saheb

The tragic death of Dr Khan Saheb is a mournful event for the common people of India and Pakistan to whose service he had dedicated his life. He was among the foremost in the fight for national freedom. Together with his brother, Dr Khan Saheb brought greater amplitude to the Gandhian movement by bringing in the Frontier Pathans within its ambit. In those days the organisation of the Pathans under the banner of non-violence was regarded as a miracle, which gave a great impetus to the nationalist movement in the country. The British Government who were always sensitive to developments in the Frontier, unleashed a policy of unmitigated repression. The Red Shirts and their heroic leaders were made to pay a heavy price for their patriotism, but they remained staunch to the last. Apart from his part in the movements of direct action, Dr Khan Saheb also gave his people leadership as administrator and legislator. An uncompromising opponent of British rule, yet he earned and retained the respect of the British officers.

Though Independence came to Pakistan along with India as a result of the sacrifices made by Dr Khan Saheb and his colleagues, he was one of the stalwarts whose trials did not end with the advent of freedom. For nearly seven years, he and his illustrious brother were

kept imprisoned by the Muslim League Government of Pakistan. His release in 1954 followed by that of his brother appeared to the beginning of a better deal for that country. But the hopes were short-lived. Though he was inducted in the Government, first as a member of the Central Government and later as Chief Minister of the one-unit West Pakistan, he could not remain long in office in the murky political atmosphere. He was preparing to participate in the elections when his life was struck down by the hand of an assassin. From first reports it appeared that it was the act of an individual with a grievance. Later developments, however, suggest that there may be more to it than the chagrin of a disappointed supplicant for favour.

Ferment in Orissa

Since the unusual incidents of April 27 which gave it a Ruritanian flavour, politics in Orissa had assumed a puzzling pattern, in which it became increasingly difficult to indicate the correct course of action. Even after the submission of the resignation of his Ministry by Dr Mahatab, the tangle is far from being resolved. After the general election, Dr Mahatab had taken on the difficult task of providing the State with a stable and progressive administration on an insecure base of legislative support. The Congress party did not command a majority in the legislature. But with the help of members who had crossed the floor, and the support of the Jharkhand party, Dr Mahatab was able to maintain the Ministry in office and to initiate far-reaching schemes of land reform. The problem he had to face was not made easier by an Opposition consisting of ex-rulers who regarded themselves as the natural leaders of the people. But in the face of all difficulties, the Congress Ministry was able to command a working majority. In spite of defections from party ranks, the Ministry was able to command a majority of two votes on the crucial voting of the Appropriation Bill. Its position was further strengthened in the recent bye-election and it hopes to win the other two pending elections. Its prospects were definitely improving. Judged by conventional standards there was no reason why the Ministry should resign when there was little to show that it had forfeited the confidence of the people. But it has been made clear that the Congress has set up a very high standard for itself and is anxious that there should not be the slightest breath of suspicion regarding its adherence to democratic principles. As the party responsible for the Government at the Centre and in all States except one, it has taken on itself the responsibility for setting up healthy standards and conventions. As the statement issued by the Congress General Secretary observes: "The Congress has a responsibility to give a Government to the people of Orissa. But the Congress can do so only in an atmosphere of dignity and con-

fidence. Somehow or other misgivings have been created that the Congress wants to stick to power and the arrest and custody of two of the M.L.A.'s on the 27th have been utilised to support this argument."

The resignation of Dr Mahatab's Ministry has not solved the problem in Orissa. We have the strange spectacle of a Parishad-P.S.P combination seeking to form a Government with the support of the Communists. Even another election, according to competent observers, may not return any single party in a majority. While the principle of the action taken by the Congress High Command will be widely acclaimed, there is room for doubt whether they have not been less than just to the local Congress party and especially its leader, Dr Mahatab, who will continue to remain the leader despite his resignation. It is not clear that the High Command in seeking to establish democratic conventions, was duly mindful of democratic procedures in handling the issue of the Ministry's resignation.

Slow Slum Clearance

The slow progress of the programme of slum clearance is one of the most disappointing features in the implementation of Plan projects. An official team led by Mr S. K. Patil, Minister of Transport, which investigated these programmes has found that achievements in this field, during the first two years of the Plan, were negligible both in physical and financial terms. Though the Second Plan has provided Rs 20 crores for slum clearance, detailed programmes for the utilisation of the allotment have yet to be drawn up. Activity so far has been confined to preliminaries. The State Governments apparently were caught unprepared and hastily improvised schemes are generally held up as a result of detailed scrutiny of their financial aspects. The main difficulty in initiating schemes of slum clearance is not in drawing up a programme for construction of new dwellings, or in finding money for the purpose, but in providing large numbers of slum dwellers with alternative accommodation and in ensuring that the new buildings that will replace the slums will be utilised by the people for whom they are intended.

The provision of alternative accommodation is the crux of the matter and until it is satisfactorily dealt with, it is not possible to expect any noticeable improvement in the pace of slum clearance. As soon as one slum is cleared, a number of new ones will grow up in the neighbourhood. The difficulty is aggravated by the fact that accommodation has to be provided within easy reach of the places where the people who dwell in slums earn their livelihood. Otherwise the impressive multistoreyed structures put up for their use will remain unutilised by those for whom they are intended.

In this connection the suggestion put forward by Mr S. C. Roy, She-

riff of Calcutta, for the dispersal of Government Offices and other big establishments deserves careful consideration. In his brochure "Welfare State in Our Time", Mr Roy has observed that the dispersal of offices will make it practicable to resettle the present occupants of the slums in outlying areas of the city where land may be available at cheaper rates. He has also stressed that a piecemeal attack on the problem, instead of improving matters will only aggravate the position.

The Party Line

The Prime Minister, perhaps, was not on strong ground when he twitted the CPI with wobbling over the Yugoslav Communist party. Apparently the Communists have some sort of answer. The Secretary of the Indian Communist Party has stated that the formal message of goodwill was later revoked in the light of fuller knowledge about the Yugoslav thesis, and that their views in this matter were not influenced by the views of the Communist parties of other countries of which they were unaware when they put forward their own criticism. We do not feel called upon to express any opinion on whether the Indian Communists are capable of thinking for themselves. But the controversy over the draft programme of the Yugoslav Communist party draws attention to the inner contradictions of the Communist world.

Apart from its reactions on Indian Communists, the Prime Minister's remarks are significant for this is the first occasion when he has commented on the ideological controversies in the Communist World while advising Congressmen to keep clear of the dangers of "ideological rigidity and intolerance".

The "Successful" Loan Programme

AS expected, the Centre's New Loan programme for 1958 has proved successful, though the extent of over-subscription barely exceeds 5 per cent and though the lists could be closed only on the day appointed for the purpose. Also, as expected, the short term loan has proved to be the most popular, the long term loan is only slightly less so, but the medium term loan in any manner of reckoning is a bit of a failure. The reception accorded to the 3½ per cent 1963, to which subscriptions aggregated Rs 58.06 crores, is indicative of the fairly substantial support that was forthcoming for the New Loan programme from the Scheduled Banks. For, it is generally believed that the short term loan has been taken up largely by the Scheduled Banks. In the second place, the success of the 4 per cent 1973, which brought in Rs 49.47 crores, is an index of the subscriptions from Provident Funds, Life Insurance Corporation and other similar institutional investors. The 3½ per cent 1968 fetched Rs 34.34 crores—and it did not have the particular support, we are to presume, of either the Scheduled Banks or the other institutional investors. However, the 3½

per cent 1968 must be deemed to have served its purpose in that, had such a loan not been offered, the subscriptions thereagainst might have opted for the short term rather than the long term. Since 1968 is a free year, and 1963 is not, we might say that, in spite of its relative "failure", the 3½ per cent 1968 has proved useful.

As against the amount on offer of Rs 135 crores, subscriptions have totalled Rs 141.87 crores; and all subscriptions are to be allotted in full. The subscriptions by conversion of the two maturing loans were for an amount of Rs 9.47 crores; and cash subscriptions, therefore, have totalled Rs 132.40 crores. However, net new cash accruing to the Central Government from the loan programme for 1958 will be less than this figure of Rs 132.40 crores, since holders of the 4½ per cent 1958-68 and the 3 per cent 1958 who did not choose to convert will have to be paid in cash in June and August; and this will absorb Rs 12.62 crores. Thus, the net new cash brought in by the new loan programme will be in the environs of Rs 120 crores.

The impact of the New Loan, as discernible in the returns of the Reserve Bank for May 16, is likely to be reflected in the Central Government's Deposits, the Rupee Securities of the Reserve Bank and the Reserve Balances of member banks. Since the bulk of the New Loan subscriptions is in cash, the Centre's Balances would be replenished by a very large amount. The Central Government might utilise this opportunity to make some payments to the State Governments. On the other hand, it is much more likely that the Central Government would institute reverse ad hocs for anything like Rs 100 crores. The cancella-

tion is likely to be reflected in the Banking Department rather than the Issue Department, because such large scale contraction against Rupee Securities in the Issue Department could not be offset by a countervailing transfer from Balances Held Abroad to Foreign Securities. Presumably, thus, after contraction against Rupee Securities, a transfer would be effected from Investments in the Banking Department. Then, as far as the Reserve Balances of member banks are concerned, they should be affected by the considerable subscriptions of the Scheduled Banks. Thus, it is to be anticipated that a fairly sharp decline might occur in the Reserve Balances of member banks.

By next week, we would also know the size of the State Bank's subscriptions to the New Loan programme. However, we should have to wait a week more to learn the size of the subscriptions of other Scheduled Banks to the New Loan programme.

While the subscriptions of the Scheduled Banks will have no repercussions on their Deposits, they will be reflected in a decline in cash balances, including the Reserve Balances. The fall in Cash Balances could be quite substantial, if the present judgment, that Scheduled Banks' subscriptions have been heavy, is proved true. But the subscriptions from other entities, and in respect of the 3½ per cent 1968 and 4 per cent 1973 Loans, will make their impact felt upon Deposits. A substantial decline in Deposits is on the cards, and this is likely to occur under the head of Time Liabilities rather than Demand Liabilities.

It is not enough that the Central Government have successfully borrowed in the market. Credit has to be kept up and for this reason giltedged prices must not be allowed to show any signs of a declining trend. The money market has taken the New Loan programme well in its stride, and there is no reason why the borrowing effort of the State Governments, and also a second New Loan later in the current year by the Central Government, should in any way be found too much for the money market to bear.

The "Unusual" Busy Season: 1957-58

OUR anticipation that the 1957-58 busy season would not present insuperable difficulties for the banking system has, as evidenced by the figures made available last week, more than materialised. It may be recalled that, in November last year, we had, in summing up the prospects for the ensuing busy season, suggested to the monetary authorities "that there is no need to be unduly apprehensive of intolerable strains cropping up during the 1957-58 busy season". This was the conclusion that we reached after allowing for an expansion in monetary demand on a liberal scale. We may note that the actual expansion in Advances recorded during the busy season has been much lower than we had thought at first. But we find that two of our estimates, in regard to the Deposits of Scheduled Banks, were astonishingly accurate. We had stated, in Indian Finance of November 23, 1957 that, "at the peak of the 1957-58 busy season, the State Bank's Deposits might be placed at Rs 425 crores". As the table published on this page shows, Deposits of the State Bank at the end of April 1958 were, in fact, at a level of Rs 422.12 crores. Then, in respect of the Deposits of other Scheduled Banks, at a time when there was as yet no confidence in the trend of a quickening tempo in the accrual of funds with the banking system, we had suggested that the Deposits of member banks other than the State Bank "would be placed at Rs 1100 crores at the peak of the 1957-58 busy season". In fact, the Deposits of the other Scheduled Banks, at the end of April 1958, were even higher at Rs 1121.37 crores.

In many ways, the 1957-58 busy season will go on record as having witnessed changes unusual to a period of the year when, normally, the demand for funds is almost aggressive. Active Note circulation rose by Rs 132.92 crores, and the expansion is a smaller one for the second consecutive year. Indeed, the rise in Active Notes is the

smallest to have occurred during a busy season since the 1952-53 busy season. The Reserve Balances of member banks, it is true, declined by Rs 12.77 crores; and this compares with a rise of Rs 16.21 crores in the 1956-57 busy season. However, it is noteworthy that, simultaneously, there is apparently a reduction in the indebtedness of Scheduled Banks to the Reserve Bank. The Other Loans and Advances of the Reserve Bank have, for the first time since the beginning of planned endeavours, shown a decline instead of a rise during the busy season. The decline in the Other Loans and Advances of the Reserve Bank is slightly larger than the size of the fall in the Reserve Balances of member banks. So, if these two heads are taken together, it is noteworthy that, during the busy season, the Scheduled Banks improved their position vis-a-vis the Reserve Bank during the busy season—a phenomenon that does not find a precedent since the beginning of the First Plan. Again, the Reserve Bank's advances against usance bills have consistently expanded during a busy season ever since the inauguration of the scheme; but, in the 1957-58 busy season such Advances have recorded a decline of Rs 9.91 crores.

Turning to the figures of the State Bank, it is to be noticed that Deposits have risen by a somewhat smaller amount during the 1957-58 busy season than in the previous busy season. But the total of Advances has also risen by a smaller amount, so that the State Bank was able to meet the increase in Advances from its accruing Deposits. At the busy season peak, the Advances/Deposits ratio of the State Bank was placed at 48.9 per cent as against 61.3 per cent at the peak of the last busy season. The latest ratio is lower than the level obtaining on the eve of the 1956-57 busy season. In every busy season since the beginning of the First Plan, except during 1954-55, the giltedged portfolio of the State Bank showed a decline. In 1954-55, there was a small rise of Rs 2.79 crores. However, in the 1957-58 busy season, during a time when banks figure as sellers of giltedged, the State Bank added to its portfolio by Rs 36.53 crores.

The most fantastic changes relate to the figures of the other Scheduled Banks. The increase in the Deposits of this category of banks during 1957-58 busy season amounted to Rs 92.43 crores—a rise that has not even been approached in any of the previous busy seasons and was bettered only by the improvement that took place during the 1957 slack season. As we have already seen, the other Scheduled Banks reduced their borrowings from the Reserve Bank during the season—a unique occurrence. Again an unusual happening is the rise of Rs 14.53 crores in the giltedged portfolio. In each of the previous busy seasons since the beginning of the First Plan, a decline has occurred. Lastly, the Advances of the other Scheduled Banks rose

only by Rs 47.58 crores, or slightly more than half of the expansion during the previous busy season. The expansion during the 1957-58 busy season is the smallest since the 1951-52 busy season. The rise in Advances was more than covered by the increase in Deposits, so that we have had the strange spectacle of the Advances/Deposits ratio declining during the busy season. At the eve of the 1957-58 busy season, this ratio for the other Scheduled Banks was 68.3 per cent; at the end of April 1958, the ratio had gone down to 66.9 per cent.

There can, thus, be no doubt whatever that the impact of Plan disbursements on a gigantic scale upon the Deposit resources of Scheduled Banks, on the one hand, and the slowing down in the demand for funds as a result of selective monetary control, on the other, have combined to lessen the severity of the busy season—a severity that threatened to disturb the equilibrium of the banking system during the 1956-57 busy season.

Steep Switch to Time Liabilities

Month early disbursements, which caused barely a ripple in the returns of the Reserve Bank for the week ended May 2, have apparently spilled over and have made a more deeply felt impress in the statement for May 9. Active Notes, which had staged a nominal rise in the earlier week, have expanded by Rs 10.34 crores to Rs 1629.96 crores. On top of the decline of Rs 1.28 crores in Rupee Coin last week, the latest returns indicate a further outflow of Rs 1.47 crores. In the result, the Reserve Bank's cash in the till has been drained to the tune of Rs 11.81 crores and is placed at Rs 9.36 crores.

Currency has been expanded for Rs 19.88 crores against Rupee Securities, and this apparently is indicative of deficit financing. This, however, is offset by a countervailing transfer from Foreign Securities to Balances Held Abroad in the statement of the Banking Department.

At this stage, we have also to remark that Investments in the Banking Department have been marked up by Rs 20.38 crores. The apparent conclusion is that this rise is also suggestive of deficit financing, and that ad hocs sold in favour of the Reserve Bank have been for roughly Rs 40 crores during the week. But such a conclusion would be erroneous, and the rise under Investments can be explained by reference to the return of the State Bank for the week under review. For the present, we are to assume that deficit financing as can be traced out in the Reserve Bank returns is for, roughly, Rs 20 crores.

The Centre's balances would have been replenished, thus, with Rs 20 crores representing sales of ad hocs. But its Deposits have

risen only by Rs 3.64 crores. This would suggest that the Central Government's net disbursements have been fairly heavy. One reason why the Centre might have had fairly onerous commitments to meet may lie in the fact that the Reserve Bank's holdings of Treasury Bills in the Banking Department are sharply lower by Rs 10.17 crores. We may recall that this portfolio went up rather unusually some weeks ago, and presumably related to purchases of ad hocs from the State Governments. The ad hocs have now matured, and, during the week, the Central Government were compelled to meet the liability; hence, the sizeable dose of deficit financing.

Balances of State Governments are slightly lower at Rs 15.73 crores, against Rs 16.12 crores last week; and their indebtedness to the Reserve Bank has mounted to Rs 57.53 crores from Rs 53.11 crores.

The increasingly comfortable position of scheduled banks is indicated by the substantial rise of Rs 13.50 crores to Rs 111.99 crores in their Reserve Balances. At the same time, the Other Loans and Advances of the Reserve Bank are marked down at Rs 55.95 crores against Rs 57.02 crores. However, it may be noted that the rise under Reserve Balances is, as we shall see, mainly due to the State Bank.

After transfer of Rs 19.88 crores from the Issue Department, the portfolio, Balances Held Abroad, shows a rise of Rs 15.60 crores; and the drain of Rs 4.28 crores reflects the continuing import surplus.

The intriguing fact is revealed in the return of the State Bank for May 9 that disinvestment has occurred in giltedged for Rs 20 crores, in round figures. This can be linked up to the rise in the Investments of the Reserve Bank, suggesting purchase by the latter from the State Bank. Also, the State Bank's cash in hand and with Reserve Bank is higher by Rs 13.54 crores, which would account for the rise in the Reserve Balances of member banks with the Reserve Bank. But the question that we have to answer is: Why has the State Bank figured as a seller of giltedged? (The decline cannot relate to maturing securities being paid off in cash, since the two loans come up for maturity later in the year). One possible explanation, that is hardly flattering to the monetary authorities, is that the State Bank has in this wise got ready larger resources for subscribing to the New Loan. For the rest, Deposits show a small drop to Rs 418.28 crores from Rs 422.20 crores; and Advances have declined by Rs 1 crore odd.

The return of Scheduled Banks for May 2 hardly bears the impress of month early disbursements. Deposits are higher by Rs 1.07 crores at Rs 1543.56 crores; the total of Advances has declined by nearly Rs 1 crore to Rs 955.39

crores; and cash balances have improved by over Rs 6 crores to Rs 206.69 crores. But the significant development is that, with an apparent switch from Demand Liabilities, Time Liabilities have drawn sharply ahead of Demand Liabilities. The present position is that Time Liabilities are nearly Rs 40 crores higher at Rs 791.06 crores against a figure of Rs 752.50 crores for Demand Liabilities. This is the price that Scheduled Banks pay for offering such suicidally high interest rates on Deposits. However, in New Loan week, draws from Deposits in respect of public subscriptions may be expected to occur mainly under Time Liabilities.

Inflation Through Saving

By Paul Einzig

IN given circumstances saving is liable to produce inflationary effects. This may appear at first sight the height of absurdity. For all economists, whether classical, Keynesian, or Socialist, agree that saving, by reducing spending, tends to be disinflationary. There can of course be no doubt about it that if a higher proportion of a given amount of national income is saved it must necessarily mean that both the proportion and the absolute volume of spending becomes reduced to a corresponding extent. Under static theory the disinflationary character of saving is, therefore axiomatic. For this reason it has been taken for granted until now that any increase in saving tends to reduce inflation.

There is room for a closer investigation of this allegedly disinflationary character of every form of saving. It is based on the assumption that an increase in the proportion of the national income that is saved necessarily means a reduction in the absolute amount spent. This is doubtless true if the national income remains static, but it is not true if the national income is increasing. In that case a smaller percentage of spending resulting from an increase in saving may mean a larger absolute amount of spending. In other words, under conditions of rising national income—such as most countries have witnessed since the war—an increased proportion of saving is liable to be accompanied by an inflationary increase in the aggregate demand.

This means that during a period of expansion even a substantial increase in the proportion of saving need not necessarily prevent inflation, even though it may mitigate its extent. What is much more important and interesting is that increased saving itself is liable to become the cause of an expansion of the national income, thereby becoming the cause of inflation. This result may arise if the increase in saving assumes the form of superannuation schemes arranged by business firms for their em-

employees. During recent years there has been a considerable increase in the number of such schemes operating in Britain and other industrial countries, and the total of annual premiums paid under them has come to represent a very considerable proportion of personal saving. Indeed in Britain during

1957 other types of personal savings—holdings of Savings Certificates, Defence Bonds, savings bank deposits &c.—stagnated, while savings in the form of contributions to private superannuation schemes increased considerably.

Official publications and comments on them by economists

presented the facts and figures relating to the expansion of this type of personal saving as indicating an increase of a disinflationary influence. Yet the undeniable fact remains that in 1957 inflation continued in Britain. This may of course be explained on the ground that wage increases making for

inflation heavily outweighed the increase in premiums paid under superannuation schemes. But it is my contention that these schemes, so far from tending to offset inflation, actually stimulated it.

In a period of rising prices business firms are not likely to meet out of their profit margins their contributions to the premium under superannuation schemes. They are in a position to add this extra expense to their prices. As far as the employers' contributions are concerned, the increase in the total of premium under superannuation schemes does not in such circumstances constitute a saving in any conceivable sense. It simply means a further increase in prices which, in prevailing conditions, tends to stimulate wage demands, leading to an increase in the total of national income and in the monetary aggregate of consumer demand.

As for the employees' contributions to the premium, during periods of rising prices and wages they are liable to lead to additional wage demands. If the weekly wage payments are reduced by the amount of these contributions, pressure for compensating wage increases is liable to develop. It is a popular fallacy that employees accept superannuation schemes in the place of wage increases. While workers over fifty years of age, who are nearing retirement, may welcome such schemes, younger workers are only remotely interested in the receipt of annuities in twenty, thirty, forty years' time. So far from appreciating the employers' contributions to the schemes, they resent the immediate burden represented by their share of the contributions. As a result, the chances are that the consumer is made to pay for the employees' contributions as well as for the employers' contributions, in the form of higher prices.

Thus the net result of the adoption of superannuation schemes is an addition to the national income corresponding to the total of premiums paid by both employers and employees towards the schemes. There is virtually no saving in the sense of abstention from spending. What happens is that the amount of accumulated savings increases. In other words, there is no reduction of present demand but there is increase of potential future demand.

Of course it may be arguable that amidst conditions of scarcity of labour there is bound to be pressure for higher wages and employers are bound to yield to the pressure, regardless to whether part of the wages is detached in the form of contributions to superannuation schemes, and even regardless to whether the employers' contributions to the schemes has caused an increase in prices. But even if we were to accept this view for the sake of argument, the fact remains that the addition of, say, £100 million to the amount of the national income simultaneously with the

addition of, say, £50 million to "savings" represented by employees' contributions to superannuation schemes increases the absolute amount of spending.

Yet another point is well worth some attention. The adoption of superannuation schemes tends to reduce considerably other form of personal saving. Employees who are assured a reasonable retirement benefit through these superannuation schemes may no longer consider it necessary to save part of their earnings for their old age. In so far as they are compensated

for their contributions to the premium by corresponding wage increases, the chances are that they will spend more and not less than before the arrangement of the superannuation schemes. Possibly the decline in direct personal saving in Britain during 1957 was to a large extent the consequence of the increase in the proportion of employees covered by superannuation schemes.

Other aspects of savings statistics, too, deserve closer attention than they have been given by the authorities or by economists com-

menting on them. From the point of view of its effect on consumer demand it makes considerable difference whether the increase in total saving is due to increased middle class saving or increased working class saving. For middle class spending is largely on goods which are not primary necessities and demand for which does not affect the cost of living to the same extent as working class spending. Admittedly, the money spent by owners of middle incomes is liable to be re-spent by its recipients who may belong to the lower

income groups. Even so, the disinflationary effect of genuine saving by owners of middle and higher incomes is bound to be less than the disinflationary effect of genuine saving by owners of lower incomes.

These observations merely aim at indicating the directions in which research could and should be pursued. What is important from the point of view of economic policy is to avoid any unwarranted optimism about the disinflationary effect of saving before that effect is subject to much closer analysis.

FOOD FOR THOUGHT

A handful of Rice

FOR THE RURAL CHEMICALS...BURMAH-SHELL

India has more acreage under rice than any other country in the world. Yet production is not large enough to meet the demand. During 1957 it was found necessary to import 7,00,000 tons of rice at an estimated cost of Rs. 30 crores.

The country has been making steady progress in increasing production by improved methods of cultivation. Among these, control of the paddy stem borer is of special importance as it has been estimated that this deadly insect pest costs the country over Rs. 30 crores a year. The States worst affected are those of

Andhra, Kerala, Madras, Mysore and Orissa.

Shell endrin provides effective, persistent control of the paddy stem borer and can thus increase rice yields on affected fields by up to 50%.

True—Shell endrin has to be imported because it is not manufactured in India: indigenous materials are however used in its formulations. And for every rupee spent on importing Shell endrin, as much as ten rupees worth of rice can be protected—which is a sensible way of saving foreign exchange whichever way you look at it.

SHELL Chemicals can save crops

and Foreign Exchange too!

I A C DELIVERS THE GOODS

A welcome sight indeed to its young is the eagle winging home over the inaccessible mountains with the much awaited morsel.

IAC planes have become an even more welcome and common part of Indian skies. To the needy and the stranded they bring food, medicine and clothing; to the tourist and the busy executive they signify comfortable and speedy travel. The manufacturer and the merchant know that when IAC delivers the goods, they can always make the market.

As a vital link in India's economy IAC is proud of its effort in quickening the country's pace of progress.

In 1956-57 IAC recorded:

19,201,903 miles by air

571,106 passengers

50,194 tons of cargo

5,221 tons of mail

INDIAN AIRLINES CORPORATION

Steady undertone in Hessian

THE jute goods market has ruled steadier during the past week with prices in both the hessian and sacking sections higher on balance. Rumours that the Argentine has lifted the ban on imports of hessian has been largely responsible for the improvement in sentiment in the hessian section in earlier dealings. The latest reports, however, would appear to indicate that the relaxation of the import ban is confined to hessian shipments which were due in April. This will render the outlook for future hessian exports to the Argentine rather uncertain. The steadiness of sacking has stemmed from reports of enquiries from Russia.

Production of jute goods during April has recorded an increase of 2,700 tons over that of the previous month at 88,000 tons against 85,300 tons. Mills have worked 200.5 hours as compared with 197.5 hours in March. Of the total output during April, hessian has accounted for 30,900 tons, Sackings for 50,600 tons and other varieties for 6,500 tons. All the three varieties have contributed to the increase, hessian 500 tons, sacking 1100 tons and other varieties 1100 tons. It is evident that the pattern of production has not undergone any change during the month as the emphasis continues to be placed on the production of heavy goods. During the corresponding month of the previous year, production amounted to 86,800 tons comprising 36,200 tons hessian, 44,800 tons sacking and 5,800 tons other varieties. It is significant to note that during April 1957 mills working 209 hours produced only 86,800 tons of goods while during April 1958 they have produced 88,000 tons working only 200.5 hours.

The jute goods market opened the week on a quiet note with selling pressure particularly heavy in the sacking section. Business passing was, however, on a meagre level. The market closed the day quiet as follows: Hessian 40"x10 oz Ready Rs 40.50 and B Twills Rs 100.80. July-Sept. Hessian 40"x10 oz was done at Rs 40.70 and B Twills at Rs 101.80.

Sentiment somewhat improved in later dealings on Saturday following speculative support for hessian presumably on expectation of favourable news about import of hessian into the Argentine. Sackings also recovered in sympathy. Hessian 40"x10 oz Ready gained 30 nP to be placed at Rs 40.80 while B Twills was, however, listless at Rs 100.70. Elsewhere, Hessian 40"x10 oz July-Sept moved up to Rs 41

and B Twills was fractionally better at Rs 101.85.

In earlier dealings on Monday the market was active with prices in both the hessian and sacking sections recording sizable improvement. Renewed interest had resulted from persistent rumours that Argentine would be lifting the earlier ban on the import of hessian. As is to be expected, hessian was in the lead and later on the improvement spread to the sacking section also. But in the absence of genuine business, prices developed a sagging tendency and the market closed as follows: Hessian 40"x10 oz Ready 41.30 and B Twills Rs 101.05. July-Sept. Hessian 40"x10 oz was done at Rs 41.45 and B Twills at Rs 102.15.

In the absence of confirmation of the rumour about the lifting of the Argentine import ban, bears were enabled to exert pressure on Tuesday and prices once again declined. Toward close, however, there was some covering at the lower levels and the market closed quietly steady as follows: Hessian 40"x10 oz Ready Rs 41.25 and B Twills Rs 101.05. July-Sept. Hessian 40"x10 oz 41.40 and B Twills Rs 102.10.

The market closed the week on Wednesday on a steadier note following reports of issue of import licences by the Argentine covering April due shipments. Hessian 40"x10 oz Ready was finally placed at Rs 41.50 and B Twills at Rs 101.10. Elsewhere Hessian July-Sept. was done at Rs 41.65 and B Twills Rs 102.20.

The raw jute market has been displaying a steady undertone though business passing has been at a low ebb most of the time. Sellers who were keen for business in earlier sessions became somewhat reserved later on. Toward close mills evinced fair interest in both the old and new crops. Old crop Assam Bottoms May-June delivery was done at Rs 25.75 and New crop at Rs 26.00 per maund.

The prospects for the new crop seem to be good. It would appear that if no serious upsetting factor intervenes, jute supply in the coming season will be plentiful. Reports from growing areas are very encouraging as so far the weather conditions have been quite conducive to the healthy growth of the plants. As has been already noted in this column the steadiness of the raw jute market now is largely due to marketmen's idea of a tight supply position till the new crop begins to move into the markets in quantity. They have evidently based their calculation on the Government estimates as regards the production of jute and mesta during the current season.

Prospects for Common Grades

A NOTABLE feature is that the 1957-58 season for the North Indian crop seems to have ended with a sound statistical position. Also, the world statistical position has become healthier. The evidence suggests that a large portion of the past year's crop has been sold and there is a near balance between supply and demand. However, the supply of Common tea is excessive, while the output of quality grades is not adequate.

The apprehension is, that producers of Common teas in this country cannot compete with producers elsewhere in world markets, because of the rise in the former's production costs. It is, therefore, hoped that the Government of India will soon formulate a scheme which will make the marketing of Common grades remunerative by giving fiscal reliefs.

Latest crop figures reveal that the output of Northern India crop has declined to 16.31 million pounds in April from 19.56 million pounds in the corresponding month of last year, the average for the last three years being 19.51 million pounds. Ceylon has harvested a crop of 37.9 million pounds in March last year. Total production, for the first quarter of the year, amounts to 102.6 million pounds as against 105.9 million pounds in the corresponding period of last year. The Pakistani crop is placed at 2.59 million pounds in April as compared to 1.53 million pounds in the corresponding of last year.

Meanwhile, in the Export Sale No "A", held in Calcutta this week, offerings were 6,636 packages of New Season's Darjeeling teas. There was a strong and active demand and some high prices were realised for the finest of the offerings. As the sale progressed, there was a slightly easier tendency and some irregularity. A number of teas failed to realise valuations and sold up to 50 nP per pound below and there were a few withdrawals.

In the Internal Sale, offerings were 20,150 packages of Dusts. There was a good general demand. When the sale opened, orthodox styles were 4 to 6 nP per pound easier; but this strengthened as the sale progressed and, towards the close, were only 2 nP easier. The black leafy descriptions were again in demand for the best liquoring CTC types and prices tended easier, especially towards the close when these were selling upto 20 nP below valuations. The medium CTC types

with bright liquors were, however, a strong feature and often sold at dearer rates.

The Darjeeling teas, on offer, were of ordinary quality and sold at about valuations. Following rates were quoted:—Medium Doars Dust Rs 1.68; Medium Assam Gralmy Dust Rs 1.70 to Rs 1.72; Medium Assam CTC Dust Rs 2.15 to Rs 2.35 and Best Assam CTC Dust Rs 2.80 to Rs 3.00. Also, 557 packages of Leaf grades were offered for internal consumption.

In the Export Quota section, the rate for Special Export Licence, after touching a high of 3½ nP, weakened gradually towards the close to 1½ nP. At the close, buyers did not show interest above 1 nP per pound. For the greater part of the week, non-transferable Shipping Licence was disposed of 2½ nP. Towards the end, the price declined to 1 nP. Small quantities of 1958-59 Export Quota changed hands at 17 nP and a negligible quantity at 16 nP per pound.

For the first time, Argentina's teas were offered in Mining Lane. Offerings consisted of 137 half-chests of all grades. Experts have stated that the Argentine tea is "quite a useful green-leaf tea of promising quality". This country is said to have an exportable surplus of about 1,000 tons of tea this year. Two shipments of 11,000 pounds each have so far been despatched to London and the 8,000 tea planters in the Argentine are anxiously awaiting the prices which the first consignment will fetch at plantation house.

According to reports from Chittagong, there were no shipments of Pakistani teas to overseas countries in March, whereas 93,800 pounds were exported in the corresponding month of last year. During the first quarter of 1958, total shipments amounted to 10.4 million pounds of which exports accounted for 1.3 million pounds and shipments to Karachi for 9.1 million pounds. The corresponding figures for the first quarter of last year were 16.8 million; 5.9 million pounds and 10.9 million pounds. Out of the total exports during the quarter under review, the UK accounted for 1.6 million pounds and other countries for 122,400 pounds against 5.2 million pounds and 459,500 pounds respectively in January/March, 1957.

The returns from the Board of Trade, London, reveal that tea imports into the UK, during the quarter ended March 1958, were lower at 130.98 million pounds as against 209.66 million pounds in the corresponding quarter of last year. During March alone, imports were only 55.85 million pounds as against 67.64 million pounds in the corresponding month of last year. The decline in imports was shared by almost all countries with arrivals of Indian tea falling from 37.39 million pounds in March 1957 to 35.23 million pounds during the month under review. Supplies from Indonesia were, however, maintained at 968,100 pounds.

Programme for Paints

A comprehensive programme for the development of the paint industry was outlined by Mr Manubhai Shah, Union Minister of Industry, in his inaugural address to the annual meeting of the Indian Paints Manufacturers' Association, held in Calcutta last week. The programme has been drawn up for the attainment of the following objectives which between them cover the major requirements of the industry and the consumers: (1) increased production of synthetic finishes, nitrocellulose lacquers and specialised surface coatings for specific industrial applications; (2) maximum self-sufficiency of raw materials; (3) fullest possible use of indigenous raw materials; (4) local fabrication of machinery; (5) improvement in the technical efficiency of the whole industry; (6) elimination of the inferior grades of products in the market and maintenance and enforcement of quality standards; (7) utilisation of idle capacity by development of export markets; and (8) reduction in the cost of manufacture.

This is no doubt a big programme of development, but not too big to be achieved. The industry has already set up a satisfactory record of progress. The output of the organised sector of the industry alone has increased from 27,950 tons in 1950 to nearly 42,000 tons in 1957. Over the same period the value of the total production in the paint industries had risen from Rs 5.5 crores to Rs 13 crores in 1957. Manufacture of new items shows satisfactory progress. The production of structural coatings and industrial finishes has registered a greater rate of increase. On the basis of the past record, the industry should be able to achieve the Second Plan target of 60,000 tons by the end of 1960-61. Success in this respect, however, will depend on the regular and adequate supply of raw materials. This point has been emphasised in the presidential address of Mr C. L. Jhunjhunwala. He has pointed out that as the prospect of establishment of a Research and Development Laboratory for the Paint industry is brighter than ever before, there is every reason to hope that the expansion of the industry will be on progressive lines.

Some progress has already been made in the manufacture of materials required by the paint industry. There are now units in operation producing alkylid resins, ana-

tase titanium dioxide and aluminium paste pigment. But the supply of materials, especially of anatase titanium dioxide, is inadequate as the indigenous unit is not able to meet the growing demand. The attainment of self-sufficiency in raw materials is a matter of time. In the meantime there is need to adjust import policy to the requirements of the industry. The Development Wing of the Ministry of Commerce and Industry has been helpful in this respect and has issued licences for import of the material to actual users.

The production of quality paints is also important from the point of view of development of export markets. Indian paints have to meet severe competition in neighbouring countries from the products of UK and USA. However, it is satisfactory to note that the value of paints and varnishes exported from India has risen from Rs 24 lakhs in 1954-55 to Rs 35 lakhs in 1956-57. The President of the Association is confident that it will be possible to step up the earnings of foreign exchange through paint exports, if the necessary facilities are provided.

Manufacture of industrial finishes is an intricate process calling for a high level of technical and scientific knowledge. Success in the maintenance of standards of quality depend on the rapidity with which the results of research, regarding the materials and the formulations, are adopted by the manufacturing units. Both the Minister and the President of the Association have agreed on the need for establishment of a Central Paint Research laboratory. Mr Jhunjhunwala has stated that the prospects of its coming into existence "are now brighter than ever before." He has also suggested that, if voluntary contributions by the industry prove inadequate, a levy on production subject to a

ceiling may be imposed. And, on behalf of the Indian manufacturers, he has assured the Government "that they will fully cooperate in such a constructive action and will accept this imposition on them as a national necessity." Another levy on the top of the excise duty will be an onerous burden, and the readiness of the manufacturers to bear it is heartening evidence of the progressive outlook of Indian industrialists which deserves recognition.

An adjustment of the present system of levying excise duties, as the President has suggested, will relieve the hardships experi-

enced by the paint manufacturers. At present, if the production in any year exceeded the specified limit, duty was levied at the higher rate on the entire output, with retrospective effect. Mr Jhunjhunwala has reiterated the plea for introduction of the slab system for the levy of excise duty. If Government are unable to agree to this course, he has suggested that the higher rate of excise duty should be imposed from the date on which production exceeds the lower limit and only on the quantity produced since then, instead of with retrospective effect on the entire production from the beginning of the year.

the point—the comparative futility of conventional arming in these days, and at variance with our professions and so forth. It seems that the old sneering alternative between guns and butter, which we used righteously in other contexts, should be remembered in our own. And a third source of drain is non-developmental expenditure outside the Plan. Normally, there should be no exception to this. But it seems to be rather odd that there should at all be any developmental expenditure outside the Plan. I dare say some accounting or procedural principle is involved in this distinction, but it seems to be a distinction without a difference. After all, there is no reason why the Plan should not contain within itself the details of such non-Plan development expenditure, so that

the public might know what other beneficent activities other than those contained in the Plan are being pursued. There is no reason for the authorities to hide their lamps under an accounting bushel. In these days of total planning, there seems to be scarcely any reason for making provision for development that does not form part of the Plan. Such arrangements merely tend to confuse things.

The other thing that has gone awry is the expectation from borrowing. I have dealt with this subject often enough and have done so as recently as last week. There is scarcely any doubt that the receipts from market borrowings have been disappointing because of the lack of well articulated borrowing policy. Imagina-

tive ideas like gold bearer bonds which will bring into the open a good deal of hoarded gold are given the most perfunctory attention. As I have always said, it is better to borrow than to tax, just as it is better to tax than to beg and better to beg than to steal (which deficit financing can, in certain circumstances, become by depreciating real values.)

★
The moral? People are willing enough to make the effort and sacrifice needed to finance the Plan and these efforts and sacrifices are those that hurt them most. This is evident from the success achieved in realising the targets. Friendly foreign countries are only too willing to help. What is needed is, more prudent spending and more single mindedness in

pursuing the aims of the Plan rather than running after the frills of a modern state. Finding the money is not the problem. Spending it wisely is.

★
A report on security precautions in America is, unintentionally of course, hilariously funny. The funniest bit (according to the Miscellany column of The Manchester Guardian) concerns a scientist employed by the US Air Force. The security people refuse to give him clearance but he stubbornly goes on producing brilliant ideas which the generals find irresistible. The established procedure for dealing with this man is to adopt his plans, classify them as "top secret" and thereby deny him any further access to them!

EAVESDROPPER

Indian Finance

May 17, 1958

THE fact that nearly 29 per cent of the total outlay under the Second Five Year Plan has been allotted to the development of transport and communications shows the importance attached to this sector of the national economy by our planners. The task of expansion of transport facilities has become doubly difficult because it is not merely a question of addition to or modernisation of existing facilities but has involved the orientation of a transport system which has been built up to serve trade and administration, to the needs of industrial development. The Planning Commission have also pointed out that when an economy develops rapidly, the pressure on transport increases to an even greater extent. The vital role of an adequate transport system in a growing economy is well brought out in the following observation of the Commission: "During a period of rapid development an efficient system of transport can yield high dividends if it is coordinated effectively with programmes for increased production."

While it has been accepted that all forms of transport have to be expanded, it has rightly been considered inevitable that a major portion of the burden in the shape of an increase in the volume of goods traffic has to be borne by the Railways which with a total mileage of about 35,000 are the largest among the organised modes of transport in the country. Moreover, by ably fulfilling the targets set for them under the First Five Year Plan, the Railways have qualified for top priority under the Second Plan's transport programme.

Considerable importance has also been given to the development of road transport. Apart from its position as a complementary system to the railways, road transport plays a vital role in the economy of the rural areas. The Nagpur Plan has drawn pointed attention to the need for the rapid expansion of this system and has formulated a plan according to which no village in a developed agricultural area will be more than five miles from a main road when the programme is completed. It has been estimated that at the end of the Second Plan about two-thirds of the target set in the Nagpur plan will be realised.

Spokesmen of industry and trade in the country have been sceptical about the adequacy of the transport programme to meet the anticipated increase in the demand for transport during the plan period. While they have been in full agreement with the decision to allot the principal role to the railways, they have been advocating a bolder programme for the development of road transport. For, in the first place, there is a limit to the capacity of the railways even if their entire expansion plan is imple-

Development of Road Transport

mented as scheduled. Secondly, the balance of goods traffic that will be left over after the railways' capacity has been utilised in full will be still too much for the other systems of transport to cope with.

The urgent need for taking steps to augment transport facilities is indicated by the growing difficulty felt in the country in the quick movement of goods. It is, however, generally felt that by bestowing on road transport the attention it deserves, a sizable improvement in the transport situation can be effected. Speaking at the Annual General Meeting of Mahindra & Mahindra Limited, Mr K. C. Mahindra, the Chairman, has pointed out that a satisfactory solution to the transport problem lies in finding "a medium with greater flexibility and accessibility (than the Railways)". The obvious first choice is road transport with the emphasis on the use of trucks, truck-trailers and tractor-trailers. Mr Mahindra arrives at this conclusion because the capacity of the railways even after the completion of their Rs 1000 crore development programme will be inadequate to meet the entire demand for transport in the country. For it is estimated that the Railways will be able to carry an additional load of 47 million tons by 1960-61. But the

increase in goods traffic will be much larger than this figure as will be seen from the fact that the additional load in respect of the steel industry alone during the current plan period will be about 36 million tons a year. Mr Mahindra has also given another compelling reason for the urgent improvement of road transport. According to him the high food grains prices in the country is "principally due to maldistribution and to the failure to reach food-grains to the hotspots within time."

Referring to the problem of supply of trucks, Mr Mahindra has suggested that a plan for the supply of a minimum of 50,000 trucks a year and 5000 tractor trailer combinations must be drawn up. As the producers of trucks, tractors and trailers in the country are not equipped to produce this quantity, a concerted and co-ordinated programme to attain the target will become necessary. In this regard he has pointed out that the proposed Refinance Corporation for Industry should meet the requirements of capital finance of the manufacturers for their expansion plans. He has estimated that the money required will be about Rs 10 crores. It is not enough if the installed capacity

for truck production in the country is increased because there is the problem of ensuring a corresponding increase in the offtake. For under present conditions it is idle to expect operators to come forward in large numbers to engage themselves in road transport. The main deterrent is the high level of taxation applicable to transport. The irrational methods adopted by some State Governments to control inter-State movement of goods by road are another discouraging factor. Yet another deterrent is the frequent threat of nationalisation of goods transport. Though it has been made clear that goods transport by road will not be nationalised till the end of the Third Five Year Plan, it is generally felt that the period is too short to engender much enthusiasm. A major problem would, however, appear to be the finding of the necessary funds for the purchase of trucks by the private operators. Mr Mahindra's suggestion is that a Truck Finance & Development Corporation with a capital fund of Rs 50 crores should be constituted. The proposed corporation will guarantee manufacturers the purchase of all the vehicles they can produce and will simultaneously offer the operators easy payment terms on an instalment basis.

The salt of the earth...

...looks grey and impure. Yet, mined and refined, it is a source of wealth; a commodity man has needed through the ages.

Oil, too, needs expert processing and grading before it becomes useful to man. And MOBIL Industrial Lubricants are the result of 92 years' research and experience in the field of industrial lubrication.

Correct Lubrication is a regular programme. It means the right Mobil product for the right part at the right time! Such a programme will cut maintenance costs and boost production in your plant. Ask our Technical Department for their FREE advice, today!

BOMBAY
REVIEW

Irrigation in Bombay

If the country should still be dogged by scarcity of foodgrains and persisting low levels of agricultural productivity, in spite of the numerous schemes of development initiated under the two five Year Plans, this only points to the lack of resources needed for the various development schemes and not to the exhaustion of the potentialities of development. In the field of agricultural production, irrigation remains the single factor which could make the biggest difference to the existing state of stagnancy in productivity, but which is hampered by lack of finance. It has in this connection

been estimated that the utilisation of the irrigation potential of the rivers all over the country is only about 5 to 6 per cent. Even after the inauguration of the many major irrigation schemes under the First Plan, the area irrigated in the country does not amount to more than 20 per cent of the total area. In the face of such glaring under-exploitation of irrigation potentials it would be unfair to make too much of what is called the backward methods adopted by the agriculturists in the country. For it has to be recognised that the agriculturists have to carry on their operations in an environment

which permits little scope for the introduction of improved methods. Even the very incentive and inducement to adopt the improved methods would be reduced in the absence of the vitally required irrigation facilities.

The low average of irrigated area for India cancels wide difference between States. For example, Bombay State which is noted for high level of progress in almost all respects, and especially in the field of industrialisation has an irrigated area of a bare 5 per cent. Thus the description of Indian agriculture being a gamble in the monsoon would seem to fit the conditions in Bombay State better than elsewhere. This low acreage of irrigated land would seem to have been at the root of the chronic deficits in the food resources of the State. It was only with the inauguration of the South Food Zone and the consequent cutting of the traditional sources of food supplies in Andhra Pradesh and Madhya Pradesh that the real pinch came to be felt. The scope for extending irrigation in the interest of increasing the food resources of the State and making it self-sufficient in food supplies would therefore appear to be great.

It is not as if the State Government are not aware of the need for initiating bigger schemes and of the scope for it. The Government can take credit for seeing the problem in its proper perspective, and taking the necessary steps consistent with the financial position of the State. Irrigation in the Second Plan has been assigned a major role with a total outlay of Rs 88.12 crores. As against this the provision under the First Plan was only about Rs 22 crores while the total expenditure incurred in all irrigation works during the British period was only Rs 10.71 crores.

Further a State Irrigation Board has been recently created to take care of the schemes under irrigation. Inaugurating the Board Mr Y. B. Chavan, Chief Minister of the State, pointed out that the creation of the Board was one of the most of important measures taken by the Government during the last 12 months and that it represented an important milestone in the irrigation development of the State. Though he admitted the great scope for extension of irrigation facilities in the Bombay State Mr Chavan also pleaded that the problems of water resources should be tackled from a broad and patriotic point of view and not from the parochial point of view of a particular region or a district or a tract.

Manufacture of Drugs

Speaking at the annual conference of the Gujarat, Saurashtra and Cutch Medical Association in

Ahmedabad last week, Dr Ramanlal Desai, has urged the Government to take over the existing capacity of pharmaceuticals in the country and make available to the people cheap and good drugs. While it is true that there is need for stepping up indigenous production of drugs Dr Desai's allegation that no Indian pharmaceutical firm is genuinely engaged in drug production does not seem to accord with facts. Moreover, production of drugs is an extremely complicated matter depending on a number of factors. The difficulties confronting a rapid expansion of the drug industry in the country have been clearly stated by the Planning Commission.

Before taking steps to expand the capacity of the industry, it is to be found out whether the products which are proposed to be manufactured will have an adequate demand. This is particularly true in a country like India. Though it will appear that the requirements of drugs will be large, the effective demand may actually be much smaller. For, the demand for drugs depends on the extent of medical facilities available in the country. The establishment of new lines of manufacture as far as this industry is concerned is to be embarked upon with caution because this is an industry in which rapid changes are taking place. It is also wrong to say that self sufficiency in raw materials for the industry has not been attained due to lack of attention on this aspect. For, most of the new drugs involve complex processes of manufacture and require a variety of raw materials. We have first to acquire the necessary technical know-how. It is also to be remembered that in the advanced countries the progress of the Drug and Pharmaceutical industry is closely linked with the development of the chemical industry which has to provide the raw material. Unless there is an adequate expansion of other industries like plastics which can absorb the products of the chemical industries along with the drugs industry, the production of basic chemicals, an essential requisite of the drugs industry, will not be economical. These are some of the important points that have to be considered before embarking upon any ambitious expansion programme for the development of the Drugs industry.

Even so, considerable progress has been made in the manufacture of indigenous drugs during the past decade. Government have taken upon themselves the task of manufacturing antibiotics while the private sector has been given considerable encouragement to take up new lines of production either independently or with foreign collaboration.

GATEWAY
NOTESWORLD OF
COTTON

QUIET conditions have continued to prevail in the domestic sector of the Bombay Cloth market. While demand is moderate, prices are not satisfactory. With the approach of the end of the hot season, enquiry for superfine goods is tapering off, while the demand for medium varieties is negligible with prices moving down from the last week's levels.

On the other hand, the outlook for exports is discouraging. Trading has been dull as traders are upset by the decision of the Government of Uganda to impose heavy duties on cloth imports from India and other Eastern countries. In this connection, it may be stated that Uganda has been an important customer of the Indian textile industry, buying to the extent of 75 million yards of cloth every year. Although other suppliers like Japan and Hong Kong will also be adversely affected, it is pointed out that India will be the worst hit as she has specialised in the export of grey goods and ready-made garments.

The Government of Uganda has suddenly raised the import duty on cloth to meet partially its foreign exchange deficit. The duty on grey piecegoods has been raised from 22 to 30 per cent or 50 cents per square yard, whichever is higher, and that on blankets, ready-made garments and hosiery to 15 per cent or 30 per cent of the value.

It appears that the Uganda Government has taken the above step with a view to protecting its own nationalised textile industry. Rumour are also current that that country is inclined to enter into a barter trade agreement with cloth producers against the supply of cotton. India was, till last year, an important buyer of East African cotton; but, this year, she has bought only 70,000 bales from that country. Although Uganda has sold most of its cotton crop this season, the problem of the disposal of the commodity may loom large next year on account of the recession in the American market.

For obvious reasons, all the shipments to Uganda have been suspended for the present, pending a clear picture of the situation. It is stated that the new move will place the British textiles in a better position in the East African market. There were some shipments to Iraq last week; but other foreign markets were again quiet with regard to the cotton piecegoods from India.

Meanwhile, British cotton interests are drawing some consolation from the fact that the London talks between India, Pakistan and Britain on voluntary limitation of cotton textiles imports into Britain have produced at least one thing—acceptance of the principle of limitation of such imports into Britain. The failure of the London talks,

despite the cautious wording of the British Cotton Board's announcement, has been due to differences about the ceiling for imports into Britain.

FUTURES MARKET:

Opening with a quietly steady tone, prices in the cotton futures market fluctuated within a narrow range of 4 points. At lower levels, there was heavy speculative support following revived rumours that the authorities would soon announce an export quota. Sentiment was also aided by better spot advices.

SPOT MARKET:

The Spot market ruled very steady with active demand noted for Jaydhar, CO/2 and other staple varieties. A local group of mills was reported to have purchased fairly good quantities of Kalyan and Broach.

On the export front, shippers bought good quality lots of Bengals for their immediate requirements although they did not show much interest in other varieties. Pakistan's decision not to reduce the export duty on her Deshi short-staple cotton provided a welcome relief to shippers.

In the foreign section, enquiries were few and mainly confined to small quantities of Egyptians and Sudans. It was felt that the revised procedure for the payment of Egyptian cotton would now help remove the suspense which had hitherto been hanging over this issue and that it would facilitate resumption of purchases of Egyptian cotton by India. The official rate of exchange has been fixed at 7.3131 piastres for one rupee on the basis of which the equivalent of £(E)1 works out to Rs 13.6740917.

Cloth Market Quietly Steady

BOMBAY
REVIEW

KARACHI COTTON MARKET:

Despite the announcement by the Government of Pakistan that the export duty on Deshi cotton would not be reduced, the Karachi cotton futures market ruled firm last week. This was due to emergence of fresh speculative support induced by expectations that large purchases would be made by China and Russia. There were reports that Pakistan would enter into barater trade agreements with these two countries and sell its cotton in exchange for capital goods. The Government of India's notification permitting import of Pakistan cotton against the quota for East African cotton, also imparted some strength to the market. Sind Deshi was quoted at Rs 63-8; Punjab Deshi at Rs 62-8; 4F Roller at Rs 71-15 and 4F Saw Gin at Rs 80-7.

LIVERPOOL COTTON MARKET:

In the absence of any finalised details for the operation of the American export subsidy, the Liverpool cotton futures market was still without any definite lead. Trading was, therefore, restricted. Whatever activity there was, was mainly confined to the transferring of long positions in the May/June contract into later deliveries.

NEW YORK COTTON MARKET:

Prices on the New York cotton futures market showed a further advance of reports of fairly heavy rains over a large portion of the United States cotton belt causing delay in the normal crop development. Near positions moved rather irregularly on sporadic trade buying and intermittent liquidation by longs; but new crops continued to show strength. Middling Spot was quoted at 38.10 cents per pound.

J. W. YOUNG, MANAGER

Yarn Market Depressed

SENTIMENT on the Bombay Yarn market continued to remain depressed in the absence of any support. Rayon and staple-fibre yarns declined further to the extent of 4 to 9 nP per pound in many varieties, while cotton yarn was steady except for a small break in coarse counts. The daily turnover was negligible as most of the upcountry weavers preferred to defer their purchases.

Nylon and perlon yarns also declined due to consumer resistance at higher levels. Acetate yarn, however, remained unchanged with bright 150 variety having

good buyers at Rs 6.37 and 120 variety at Rs 7.12 per pound.

Heavy arrivals, tight money conditions and the end of the pre-monsoon purchase of raw material by weavers told adversely on the prices of staple-fibre yarns. The cotton yarn section ruled steady; but many coarse counts gave way to selling pressure at upcountry centres, resulting in a loss of about 5 nP per pound. Easy conditions in raw cotton also compelled buyers to be away from the market for some time.

Meanwhile, it is understood that the Government of India will

shortly modify their policy regarding the distribution of imported raw silk with a view to accommodating the traditional dealers in the commodity. This assumes significance in view of the ban on imports of raw silk by established importers during the last three years and the consequent loss of trade suffered by the business community.

Imports of raw silk are handled, at present, exclusively by the State Trading Corporation and the supplies are distributed to indigenous weavers throughout the country by the Central Silk Board. The Gov-

Oils and Oilseeds

Prices on the Bombay Oilseeds Exchange showed a mixed trend. Castorseed suffered a further sharp drop with buyers sidelined. Groundnuts were more or less maintained with early attempts at improvements marred by profit-taking. Linseed and Cottonseed fluctuated in sympathy.

Trading in the Castorseed section was dull in the absence of fresh developments and the decline in prices was attributed to discouraging overseas advices for castor oil. Shippers reported only stray deals for small quantities with the UK at about £111 for the commercial quality in bulk and £119 for the BSS quality. Although the US prices for castor oil were stated to have advanced to 13½ cents per pound, there was hardly any business with that country. Castor September delivery closed at Rs 149.12 after touching a high of Rs 153. Ready was quoted at Rs 15.25.

Although the Groundnut section remained steady during the major portion of the week due to smaller arrivals, prices succumbed to liquidation at the close. August delivery closed at Rs 165.75 after touching a high of Rs 167. Ready Bold was quoted at Rs 34 and Groundnut oil at Rs 16.25.

Trading in Linseed was highlighted by sustained speculative interest with upcountry bulls providing the lead. Although fresh business in linseed oil continued to be difficult with the UK quoting £102, traders were hopeful that the disparity in prices would disappear in the near future. September delivery closed at Rs 30.87 after touching a high of Rs 31.12. Ready was done at Rs 29.75 and Linseed Oil at Rs 15.75.

Gold & Silver

Prices on the Bombay Bullion Exchange developed an easier tendency. The spot sections were more vulnerable, reflecting waning spot demand for both the metals. Arrivals and offtake were estimated at 4,000 and 2,000 tolas respectively. Unrefined metal receipts amounted to 4,000 tolas. The rate for ready gold opened at Rs 112.84 and, after touching a high of Rs 112.97 and a low of Rs 112.81, finished at Rs 112.94. Sovereign ruled firm at Rs 72.37.

Arrivals and offtake of Silver were estimated at 12 and 10 bars respectively. Unrefined metal receipts amounted to 21 bars. Ready rate opened at Rs 193.81 and, after touching a high of Rs 193.87 and a low of Rs 193.44, closed at Rs 193.56.

Budget Session—A Retrospect

THE Budget session of Parliament that has just ended was a memorable one for a variety of reasons, but none of them the usual one. Normally, as the name indicates, it is the financial proposals for the coming year that provide the greatest interest. This year, the impact of the Budget was negligible. It is true, a new tax, the Gifts Tax, was debated and passed. But it was done without much fuss and with a rather weary acceptance of its inevitability. So, when this session is recalled, it will, paradoxically, be not in strictly parliamentary context. For, the real preoccupations of the legislators were, especially at the beginning and at the end of the session, other than making laws.

The beginning of the session was dominated by l'affaire Mundhra. Though overshadowed by the tragic death of Maulana Azad, shortly thereafter, the extraordinary public interest in the episode was at one time all absorbing. The episode itself had too many loose ends and too many unexplained features, even at the end of the probe. But, from the point of view of Parliament, it was undoubtedly a landmark. As Parliamentarians were not slow to point out, it was Parliamentary vigilance and persistence that brought matters to a head. The Inquiry Commission was appointed only when it became clear that Parliament would be satisfied with nothing less. And the upshot of it all was that an able Finance Minister had to quit office at a time when the Plan's fortunes practically required his presence. That the country and Parliament should accept this fact with equanimity showed that both were willing to pay the price for high standards of public life. The constitutional issues connected with this resignation are still a matter of controversy. The resigning Minister himself did not admit any vicarious responsibility for the acts of officials under him, in the circumstances of this case. His own reason for resigning was the strategic requirement of a position of strength for a Finance Minister at times like the present. Persistent efforts made by Parliamentarians to obtain clarification of the precise degree of the Finance Minister's actual and constitutional responsibility were largely unsuccessful.

All exclusive as was the interest roused by the Mundhra affair, it was completely put out of shade by the unexpected death of Maulana Azad. Parliament never quite recovered from the shock of his passing away: the Prime Minister, in particular, appears to continue to be still under its shadow. Usually a resilient person, he appears to be still unsettled by the emotional stress of the Maulana's passing away. His increasingly articulate dissatisfaction with the state

of public life, more particularly his complaints about lack of consideration to minority communities, seems to be directly related to his state of mind following the Maulana's death. There can be no doubt that Maulana Azad was a universally respected leader of exceptional maturity and poise whose very presence was a silent admonition of any kind of pettiness. It is now plain how dependent Mr Nehru was, even emotionally, on Maulana Azad. His death brings to a close a chapter of Indian life, and things would never be the same without him.

Like the earlier part of the session, the latter half was characterised by preoccupations not strictly legislative. This time, it was Mr Nehru's request to be relieved of his office of Prime Ministership. This created consternation among Congressmen and there was hectic activity among them to persuade Mr Nehru to withdraw his request. As I said earlier, ever since Maulana Azad died, Mr Nehru seems to have become increasingly dissatisfied with the quality of public life in the country. It is not that the death of the Maulana suddenly let loose more than the usual amount of political delinquency, or that Mr Nehru was not aware before of what he called the progressive coarsening of our public life. It is only that, in the state of mind that followed Maulana Azad's death, Mr Nehru was even more sensitive to a quality in the country's political life which was the reverse of all that the departed leader symbolised in his life and outlook. Mr Nehru did not open out his heart or mind completely from the beginning: at first, he talked of his personal feeling of flatness and staleness, which seemed to imply nothing worse than a weariness with doing the same thing. Later, however, he referred to his dissatisfaction with his own party and the way in which its original inspiration was being distorted in practice. Later still, he generalised this indictment to a wider complaint about the state of public life in this country. But, despite all his dissatisfaction, he has allowed himself to be persuaded to stay in office. From subsequent clarifications, it would appear that the chief reason that weighed with him was the effect his quitting office is likely to have on the international situation. It is doubtless an important consideration and, in any case, there seems to be general relief at his decision to stay in office. It is rare tribute to a man to be so universally desired as a leader, for, it would appear that even the Communists wanted Mr Nehru to continue in office!

One consequence of Mr Nehru's wanting to quit office temporarily has been the intensification of heart searching among Congressmen. The last week has been an

"introspection session" for the AICC. A determined effort appears to have been made to evolve methods by which the organisation may be made worthy of Mr Nehru's leadership. (This way of putting the matter is not mine, but Mr Dhebar's). Mr Nehru's speeches at these sessions were remarkable in that he spoke out his mind about specific maladies in the country and in his party that upset him. He elaborated his earlier complaints of a revivalist spirit, by referring to his feeling that the minorities were not getting a fair deal in the matter of employment opportunities. Here, there are ambiguities in basic attitudes whose full extent Mr Nehru does not seem to realise. It is always a vexed question to answer—how to reconcile faith in equality of opportunity with the economic needs of a comparatively backward group. In so far as the disabilities of any minority flow strictly from insistence on equal opportunity and the acceptance of only the best, it is difficult to object—at least theoretically. For, it is legitimate democratic theory that the majority should not be penalised merely because it is the majority. But, in so far as the disability of the minorities flowed from special requirements which palpably weighted the scales against them, Mr Nehru's complaint is justified. Mr Nehru himself referred to the requirements of passing Hindi before one is eligible for appointment and he was understandably warm on the subject. On the whole, it is the spirit of narrowness, rather than any specific acts of ungenerousness, that Mr Nehru deplores. It is mental reservations, as revealed, for instance, in antipathy to Urdu and so forth that infuriates Mr Nehru. Mr Nehru pleads not only for giving the minorities what one might consider their legitimate due, but for being generous to them.

For the rest, Mr Nehru lashed against what he called "bossism" at the States' level. A point is lent to Mr Nehru's criticism by the convincing defeat of the UP Congress boss in the Mahuhu bye-election—his second defeat within a year, and that, at what was considered a safe seat. At first sight, it would appear that the party choice of candidates has no relation to popular wishes. Of course, election results are not always a true guide to the quality of the candidate or even the precise degree of his acceptability to the people. But, when a man who has once been defeated in what was considered a crucial election, is again set up as a candidate only to be defeated again, and that man also happens to be a controversial figure in the context of "bossism", doubts about the considerations that weighed in his choice as a

candidate are legitimate.

But bossism is not a simple problem for which there is a simple answer. In a relatively unself-conscious but virile democracy, there are natural checks on bossism. But it is always difficult to say when leadership degenerates into bossism and when discipline is reduced into abject servility. The Working Committee itself was accused by some members of being out of touch with the people and that because of its being a nominated body. Though the comparison is misleading, it shows that, in these matters, it is not the machinery but the quality of the individual that counts.

But evidence of firmness in dealing with local Congress delinquency was to be had here even during the last few days. It certainly would appear that Congress leadership is less willing to temporise with dubious acts at the State Government level. The direction to the Orissa Congress Ministry to resign—despite its winning a crucial vote—is considered to be significant in this context. In this, as in certain other matters like sending Mr Patil to campaign in Devicolum, Mr Nehru's intervention was apparently decisive—a fact that is not altogether comforting, for two reasons. Firstly, it seems that, but for Mr Nehru, the party might have taken a different decision. This shows that the much advertised purification of the party is in danger of dying even before it has started. Secondly, and what is even more disturbing, there is the seemingly complete dependence of the party on him. It cannot be a good thing for a party to be so ill-provided with alternative resources of wisdom.

The reader will have perceived how my account of the Budget session has mostly recorded non-parliamentary activity. This indicates the pattern of the preoccupation of Parliamentarians themselves. But there is one interesting development, strictly parliamentary, that deserves mention. It is the possibility of the emergence of a united non-Communist opposition group in Parliament. Of course, the PSP, the United Progressive group and Ganatantra Parishad constitute a somewhat motley crowd. It is especially difficult to conceive of the last as anything but a strange bedfellow of socialism. But, in politics, policy is often a follower of necessity and it may well be that Ganatantra Parishad may suffer a sea-change by an act that has begun as a mere expedient. If that happens, it would be good thing, especially for Orissa, where the Ganatantra Parishad has still to prove its mettle. As the germ of a political opposition other than Communism, this merger is to be welcomed.

that's why people look for the label 'SANFORIZED.'

ALL over the world, people choose fabrics trade marked 'Sanforized'—because they know the label 'Sanforized' means: *this garment will never shrink out of fit...even after many, many washings!*

The name 'Sanforized' means extra value and prestige for your label—it assures your customers that you take trouble to give them the best value for their money.

People rely on you to serve them well—so serve them cloth labelled 'Sanforized'.

DELHI REVIEW

Results of the prison reforms introduced in the Uttar Pradesh, should be an eye-opener to the rest of India in regard to the treatment of prisoners in jails. The approach to the problem posed by prisoners has, so far, been punitive in character instead of being corrective. U.P. was the first State to launch an experiment based on psychological approach which aimed at the moral and mental rehabilitation of the convicts.

Of the various schemes introduced by the U.P. Government which included opening up of vocational centres, the most spectacular one was the starting of open-air camps at dam sites where the inmates were allowed to work without any surveillance. The efficiency of the prisoners is said to be greater than that of free labour.

The total wages earned by the inmates of the two camps during 1957 have been estimated at about Rs 3,22,162.18 out of which they paid Rs 4,67,441.92 towards the cost of their maintenance to the Government, the balance being sent to their dependents. The experience of the Government have even encouraged them to increase the pocket money from 12 nP to 25 nP per day. Even people convicted for heinous crimes are reported to have responded favourably to the new schemes started by the Government.

Certain new schemes for the gainful occupation of the convicts have been suggested by the Jail Reform Committee and these include the starting of brick kiln and jail press, opening of farms for intensive cultivation, installation of dehydration plants in Central prisons and co-operative farming at district jails. Introduction of Ambar charkhas in the prisons is also envisaged in four jails, the prisoners working on these charkhas being entitled to daily wages.

As the sole man behind the new scheme Dr Sampurnanand, the Chief Minister of the State, could rightly claim the entire credit for the success of the bold experiment. The encouraging results have falsified the general assumption that the criminals are beyond mental and moral redemption. That convicts are not convicts by either temperament or nature but are the products of extraneous factors including mal-adjustments in society and with a change in environment and proper treatment could be moulded in the proper way, having thus been demonstrated, the need for a new approach which takes into account the effects of such factors and which provides for their mental rehabilitation is only obvious. Now that the U.P. Government have shown the way it is for the other State Governments to follow the example.

Prison Reforms

Slum Clearance

Slum clearance has figured in the report of the official team which investigated into Government's slum clearance programme as the most neglected field of social activity in point of implementation. The report has disclosed that achievements in the last two years were negligible both in physical and financial terms. The Second Plan in regard to slum clearance schemes does not seem to have got beyond the stage of marking out of total outlay for the schemes. For according to the report the major part of the Government's efforts till now in respect of the programme of slum clearance for which a sum of Rs 20 crores has been made in the Plan, has been confined to working out basic preliminaries. Progress on projected schemes in Mysore, U.P. and West Bengal is noted to be nil, while in Bombay work on only one out of the four schemes is shown to have begun. This does little credit to the efficiency of the administrative agencies responsible for executing the programmes for slum clearance. By way of explanation for this meagre progress the report has stated that the Plan provision on slum clearance took many implementing agencies unprepared.

Far from there being any progress, the trend, it is evident from the report of the team, seems to have been in the reverse direction towards creation of new slums. The team has in this connection drawn attention to the tendency to permit establishment of new industries in the already overcrowded and congested parts of cities without any regard as to whether adequate provision exists there, for water supply electricity, drainage and other facilities. The danger of new colonies relapsing into slums has also been noted in the report. In the opinion of the team the tendency to sublet or let out completely by self-denial of the new accommodation, in order to make additional income in view of the high rents that could be obtained thereby, is responsible for this. Therefore slum clearance schemes which do not take into account the new developments which go to aggravate the conditions in existing slum areas have little prospects of achieving any substantial progress in the field. The team has also emphasised the need for the slum dwellers to imbibe some of the Japanese habits of creating cleanliness and spaciousness out of shortage of accommodation.

Shifting of industries to villages and improvement of living conditions there by providing most of the amenities obtaining in the cities is the remedy which the team has prescribed for eradicating slums. How far shifting of existing established industries

could be profitable could only be ascertained by balancing the benefits of such shifting against the cost involved. At least in the case of industries using heavy machinery and depending on skilled labour obtainable only in particular locations such shifting could safely be ruled out. The team's proposal for the creation of a statutory corporation in all the states for implementing programmes in connection with slum clearance is to be welcomed since what is sought to be achieved by the setting up of such corporations is rapid progress in slum clearance schemes.

Social Welfare

Non-utilisation of funds has become such a recurrent feature of many fields of activity that they have come to represent a clear danger to progress in those fields. In such circumstances instead of insufficiency of outlay being the limiting factor of progress, full utilisation of funds becomes the criterion of progress. Such shortfalls in expenditure could be most disconcerting if they occur in fields where rapid progress is desired. Social welfare is a sphere of activity where the leeway to be made up is still great and as such call for sustained efforts, to expedite progress. The first step in this, naturally, is the utilisation of funds since it has been revealed by the Estimates Committee of the Lok Sabha, that in the First Plan utilisation was short of total outlay originally allotted by more than 50 per cent.

Avoidance of wastage in expenditure is another important norm to be kept in view by the agencies of social welfare work. The Committee has pointed to the existence of such wasteful expenditure and has also suggested action to be taken to put an end to this. In this connection it has stated that the feasibility of pooling jeeps, in the use of which extravagance has been discerned by the Committee, amongst the workers of the community development organisation and the workers of the State Social Welfare Boards might be examined with a view to reducing the expenditure under this head. Utilisation of alternative modes of transport is another fruitful line of action to conserve scarce finance.

Public co-operation is a vital factor in the progress of the Social Welfare Programmes. The lack of such co-operation has been a limiting factor in the progress of the Social Welfare schemes in many States. With a view to enlist such co-operation it has been suggested by the Committee that before starting rural welfare projects public co-operation should be enlisted to a reasonable extent, since the ultimate aim was to hand over those activities to the people themselves.

NORTH INDIAN NOTES

The Committee has also suggested the linking up of rural welfare projects with the Ministry of Community Development. At State levels the Committee is in favour of the State Governments entrusting all social welfare work to State social welfare boards which would be assisted by welfare departments. Shortage of trained personnel has been noted as another defect militating against progress and therefore the utilisation to the full capacity of the Gram Sevika Training Centres of the Kasturba Gandhi Trust, has been suggested.

The West Bengal Guest Control Order

Those who remember the working of Guest Control Orders during the war and the immediate post-war years may be pardoned if they are sceptical about the results likely to be achieved by the reported decision of the West Bengal Government to promulgate a Guest Control Order, prohibiting the service of rice and wheat to more than 100 guests at weddings and to more than 50 guests at other functions. Under similar orders in the war years, there were remarkably few prosecutions although they were being almost daily infringed or got round, in the big cities.

This time it is to be hoped, there will be a stricter enforcement. But even then the liberal list of exemptions as reported is likely to limit scope and utility of the order in alleviating food scarcity in the State greatly.

The promulgation of the order will, however, serve the purpose of underlining the gravity of the food situation in West Bengal. Tales of distress and high prices of food grains in West Dinajpur, Jalpaiguri and Murshidabad continue to pour in. The fact that the Government have started fairly extensive test relief work is indicative of the scarcity conditions in these districts.

On the last day of the session of Parliament just concluded, Mr A. P. Jain, the Union Minister for Food and Agriculture admitted that the food situation in West Bengal was causing the Union Government great concern. He stated, however, that the situation was under control and informed the House that the Centre has argued to advance Rs 1.5 crores to the West Bengal Government for granting loans to the farmers. The Centre has also agreed to supply about 6,00,000 tons of wheat and 175,000 tons of rice to meet the overall shortage of 8,00,000 tons of foodgrains.

The coming months will show whether this help from the Centre will be sufficient to bring food prices down and beat back the spectre of famine.

NORTH INDIAN MARKETS

ALTHOUGH the Government of India have been actively considering the question of Sugar exports for a considerable time now, no concrete scheme appears to have been evolved yet for this purpose. As the State Trading Corporation will be out of the picture, it is feared that the onus of exporting the commodity will fall on the industry. Some reports have suggested that every sugar factory will be compelled, by legislation, to export 10 per cent of its output, even at a loss.

On the basis of an export of 2 lakh tons, it looks as if the loss may amount to Rs 6.34 crores at the present level of world prices. If to this are added the fiscal losses, such as remission of excise duty and cesses, the total loss can amount to Rs 13.18 crores. A section of the trade thinks that sugar must be exported; but the resulting loss should be passed on to the consumers in India by increasing the domestic prices of the commodity. While consumers are already paying dearly for sugar, it is feared that there will be consumer resistance to higher prices. Rumours are, therefore, current that the excise duty on sugar will be increased to compensate the loss in respect of exports by mills.

Sugar Export Prospects

Meanwhile, the Government of India have made a special release of a further quantity of one lakh tons of sugar for free sale from the 1957-58 season's production. Production and despatches of indigenous sugar, during the current season, amounted to 19.11 lakh tons and 9.91 lakh tons upto April 30, 1958 as against 18.22 lakh tons and 10.35 lakh tons respectively in the corresponding period of last year. Stocks with the factories, as on the 30th April 1958, were 13.49 lakh tons as compared to 13.14 lakh tons on the corresponding date of last year.

Prices have recorded further gains during the week due to pre-monsoon buying by South Indian traders and poor stock position at the important consuming centres. Following rates (per maund) are quoted in the Hapur market:—Meerut (D.28) Rs 37.06; Simbhuli (E.29) 37.00; Mansoorpur (C.29) Rs 38; Daurala (B.29) Rs 38.10; Mowana (B.29) Rs 38.06; Amroha (D.29) Rs 36.12; Bijnore (E.29) Rs 36 and Seohara (D.28) Rs 36.34.

The Khandsari market has continued to rule steady due to good demand and in line with prices of crystal sugar. Production is gradually declining. Rates are moving between Rs 30 to Rs 34 per maund, according to quality.

In the Muzaffarnagar market, steady to firm conditions have prevailed and ex-mill delivery prices have advanced by 31 nP to 62 nP per maund. Substantial business is reported to have been done for the Punjab and Delhi.

Gur

The Gur season has come to a close; but arrivals, in the Hapur market, from the producers' stocks average 200 maunds daily, which are lifted upto Rs 15.50 per maund. Demand from the consuming centres has improved due to pre-monsoon buying. Stocks are estimated around 1.42 lakh maunds as against 96,000 maunds at this time last year.

Foodgrains

Steady to firm conditions are noticed in the Hapur Foodgrains market. Wheat crop all over Uttar Pradesh is now admitted, in official circles, to be below than last year. Producers are reported to be retaining their stocks, expecting better prices later. With the result, prices have recorded an improvement of about Re 1 per maund, to be quoted at Rs 15.75 for the average quality and Rs 17.25 for the farm variety. Rice prices have also recorded gains in line

with the prices of other foodgrains and reports of overall shortage in the country. Paucity of stocks and scanty arrivals of the new crop have accounted for a further gain of 25 nP per maund in Barley. Bejher has also improved slightly in sympathy. Arhar prices have, however, sagged slightly.

In the Delhi grains market, Wheat has improved by about 50 nP per maund due to slackened supply, while Rice has improved further by about a rupee following decreased arrivals. Barley rates have risen by 75 nP on higher advices from the producing centres. Among Coarse grains, Bajra is in good enquiry, which has resulted in a small rise in rates.

The Bombay grains market has presented a steady appearance. Rice prices have declined by about Rs 10 per candy following strong rumours that Madhya Pradesh is about to lift its ban on exports. Trading in indigenous Wheat has reflected a steady undertone. In the Coarse grains section, prices of Bajra have improved by Rs 4 per candy. Although the demand for this commodity continues to be subdued, the market is helped by smaller arrivals and comparatively higher prices ruling at the terminal centres. Jowar rules steady.

Institute of Science

SCIENCE in independent India has been accorded a top place in the educational policy of the Government. This follows the recognition of the importance of scientific studies for technological and industrial progress and of the need to meet the growing needs of industries for trained technical men. In furtherance of this aim, many new scientific institutions have been set up for the promotion of scientific studies, typical of which is the Institute of Science at Bangalore. The Institute was intended to be developed as a higher technological institute principally occupied with post-graduate teaching and research, and represents a unique institution of its kind for the wide variety of subjects included in its studies and for the large floor space which it provides for the students.

It is the progress made by these institutions together with the efforts of the Government at expanding facilities for further scientific studies which determines the pace of progress in the scientific field and therefore in an indirect way the country's progress towards increased levels of production. Whether the record of some of these institutes has corresponded to expectations is to be doubted in the light of the findings of the Reviewing Committee, on the working of the Institute of Science at Bangalore.

The Committee which was headed by Dr J. C. Ghosh Member, Planning Commission, has in its report revealed the existence of grave defects in the working of the Institute, chief of which being the thin strength of student population in various departments of the Institute. Under-utilisation of facilities provided, represents a kind of extravagance which militates against consolidation of efforts so far made, for the promotion of science. This is indeed deplorable considering that the need of the country for scientists and technicians for the immediate task of implementing the Second Plan is far in excess of the existing supply.

The Committee has attributed the low student population in the Institute to two factors, namely low value of the scholarship offered by the Institute to the students and the nature of the conferments of the Institute, which, because it is unconventional is not properly appreciated by the prospective students. As the Committee points out the advantage of increasing the number of students are not confined to the fact that the expensive technical facilities would thereby be more fully utilised but also that the very tone of the Institute would be improved with favourable effects on the quality of work when there are more number of students working in close collaboration on the many subjects for which the Institute at present provides facilities.

With this object of increasing the number of students, the Committee has recommended substantial increases in the number of students in most departments and has made the necessary provisions for making this effective. Scholarship tenable for three years of the value of Rs 150 per mensem in the first year, Rs 175 in the second year and Rs 200 in the third year has been suggested, for research students in the Science faculty. In the engineering division the value of the scholarship has been increased to Rs 200 per mensem though the tenure has been reduced to two years. A sum of Rs 50,000 has also been recommended to improve the present hostel amenities. The need to change the nature of the conferments of the Institute has also been recognised and provided for in the report of the Committee.

The tendency of several departments of the Institute to burden themselves with too many subjects for investigation and study has been noted to be another weakness of the Institute and has been recognised by the Committee as inconsistent with the need for specialisation of studies. This is out of line with the practice in institutions of similar type in the foreign countries where the general rule is specialisation to be followed by collaboration between allied departments of studies. The Committee has therefore suggested that there should be some changes towards concentration of efforts on smaller number of subjects. This method, the Committee considers has better chances of making substantial contribution towards scientific advancement. To rectify lack of cooperation between different departments a number of projects has been suggested by the Senate of the Institute. Proposals for work on atomic reactors, on gas turbines power production and on electronic computation illustrate the projects which involve collaboration between different departments. The provision of certain amenities to enable the members of the different departments to work in close collaboration has also been suggested.

The Plan for increasing the number of students in different departments to be realistic has to be related to the needs of the country for technicians of various types. The strength of various departments has therefore to be brought in line with the trend in present and future demands. The Committee has not failed to stress this aspect of divergent demands for particular types of skill. The Committee has for example observed that in such a department as physics where there is no shortage at present the demand in the future is bound to increase and has therefore underlined the need to make provisions in anticipation of future requirements.

While the Committee is in favour of concentration on certain narrow and restricted fields of study it is also aware of the dangers of making experiments with ambitious projects which are not supported with practical experience of the subject, since according to the Committee more often than not, such projects turn out to be sterile and profitless. A modest approach to problems is therefore a safeguard against the waste in expenditure and efforts involved in risky and ambitious projects. But the rigidity is relaxed to take account of new developments and the provision of a large grant to be placed at the disposal of the director to be used to support such studies has been recommended. The emphasis laid on group research is evidently meant to obtain quick results.

One of the recommendations of the Committee has to do with the need for the Institute to develop and prepare their own instruments and equipments necessary for research and not to depend on imported articles. With his view it has suggested that special facilities might be provided for instrument design and construction. Particular stress has been laid on the need for establishing a section for glass-blowing since it is considered vitally important for a wide range of modern researches and especially for promotion and development of wireless industry. Equipments related to electron microscopy, photomicroscopy, infra-red spectrometre, tracer technique equipment, X-ray power analysis and electron defraction have been listed as indispensable in the laboratory which the Committee envisages for the Institute.

The most important part of the recommendations of the Committee relates to the need for mutual collaboration between scientists at the Institute and scientists working on particular industries. The efforts of the Institute to contribute to the industrial development of the country which is its aim would remain infructuous if men of the Institutes keep themselves from the main currents in industry. Coordination of efforts would also enable as the Committee has pointed out, pooling of common resources of knowledge and saving of time and money. Without a conscious attempt to promote such collaboration, the relations between the Institute and industry have little chance of becoming closer. The best way for ensuring such mutual contacts would be to introduce subjects having a practical bearing on industries for study and investigation in the Institute, and for arranging mutual discussion on such problems with representatives of industry. By way of making a beginning in such relations it has been suggested by the Committee that a number of symposia and residential study courses should be held at Bangalore on carefully chosen subjects on the model of those

held in Kharagpur and elsewhere. To enable the organisation of such courses the Committee has made proposals to improve amenities. Since the object of the Institute is to promote the industrialisation of the country and help solve the particular problems faced by industries, the Committee expects the latter to support the Institute in various ways. This is only as it should be since the industries are ultimately reaping the benefits of the training which the Institute provides to technicians, in different fields.

The organisational and administrative changes suggested by the Committee are meant to increase efficiency of working of the Institute. As the Committee points out such changes are designed to improve the relations of the Institute with the Universities, industry, central research institutes, and departments of Government. The important recommendations of the Committee in this field, centre around the responsibilities of the Director, and would have the effect of lightening his responsibilities, which the Committee recognises, has increased in recent times. With this view it has been proposed that the Director should be relieved of all responsibilities of a department of the Institute so as to enable him to spend more time on general duties. As for the qualifications of a Director the Committee expects him to be "a man of established scientific reputation, and wide scientific interests, no longer seriously concerned with his career as a scientist but deeply interested in the progress of science and in industry within India".

Administrative flexibility, was one important objective in the administrative field which has been kept in view by the Committee in its recommendations. The Committee has made a number of proposals towards simplifying rules and procedures, operating within the Institute. The unsuitability of the system of rules and procedures obtaining in Government departments and industrial undertakings for the purpose of the Institute in such matters relating to financial control, recruitment and promotion has also been recognised and the need to evolve its own appropriate system has been stressed.

The Committee can congratulate itself on the report which it had brought forth on the working of the Bangalore Institute. Though the report is critical of the functioning of the Institute it is only mildly so, and the Committee has not overlooked some of the limiting factors under which the Institute had to function. The recommendations of the Committee are all aimed at improving the atmosphere as well as the general tone of the work carried on in the Institute. With the implementation of the suggestions of the Committee, there can be no doubt, that the Bangalore Institute would emerge as a model one of its kind in the country.

One of the industries to be brought to a parlous light consequent on the drastic cuts in imports is the film industry. With the cut in imports of cinematographic raw film, and with the depletion of stock of 40 million feet of raw film which it had with it at the time when the cut came into force, the industry in the South has almost been brought to a standstill. The plight of the industry in the South would be evident from the fact that at present there are more than 200 pictures in all the five languages under production involving a minimum capital outlay of about Rs 6 crores. With about 165 applicants who are awaiting allotment of film quota, the theatres which had announced release dates are in a dilemma.

Speaking to pressmen at Madras, Mr B. Nagi Reddi, member of the Madras Raw Film Committee, appealed to the Government to come to the help of the industry by restoring the cut of 40 per cent in the import of raw film. In the alternative it has been suggested that the supply of raw film should be arranged from the rupee area through the State Trading Corporation. In support of his argument for restoring the cut in imports it has been pointed out by Mr Nagi Reddi that the amount involved was only about Rs 2 crores which was only a quarter per cent of the value of total imports.

The case for sympathetic consideration of the plea for ensuring adequate supply of raw film rests on the advantages that the industry in its present size, bestows on the country. For example the industry earned Rs 2 to 3 crores for the Central Government by way of Income-tax and large amounts by way of entertainment tax for the State Governments. Possibilities of the industry earning foreign exchange which has been vindicated by the success abroad of some of the films produced in the country strengthen the case for giving a fair deal to the industry in regard to its foreign exchange requirements.

The size of the industry in the South that would be adversely affected is another argument that has to be given due weight in the Government's attitude towards the industry. With the increase in exhibition centres from 1,504 to 2,285 during the past two years and of studios from 28 to 72 floors with a capital investment of more than Rs 10 crores and employing more than 9,000 persons the impact of the cut in imports on the industry could not be anything but adverse.

A Pioneer Industry

Mr P. P. Cherian, of Kerala is to be congratulated for his discovery of a process for the manufacture of bricks from lime and

Plight of Film Industry

sand. In a land where pioneering inventions are conspicuously few, Mr Cherian's invention would stand out as one of the most outstanding. As a result of his labours the establishment of a pioneer industry of the heavy variety has become a distinct possibility.

The product discovered by Mr Cherian is credited with many advantages which only go to enhance the value of his invention. The marble-like white colour with polished surface, the weather resistant quality which is reported to be greater than that of the wire-cut bricks of the best quality, low requirements of mortar in building construction, low water absorption and the consequent fitness for underwater construction are some of the distinct merits claimed for the sand and lime bricks. It is also reported, that the use of these bricks would enable the thickness of the walls being reduced in any kind of construction thereby effecting economy. After due examination by the Planning Commission, the Government of India have sanctioned the starting of the factory based on Mr Cherian's invention in Kerala State.

The factory is proposed to be opened at Shertallai and would be registered as a public limited company with an authorised capital of Rs 11 lakhs. The Kerala Government are reported to have decided to take up 51 per cent of the share capital the balance being thrown open to public subscription for a specific period to be filled up later by the State Government in the event of under-subscription, by the public.

The estimated capacity of production of the factory is about 40,000 bricks a day on the basis of two shifts of eight hours a day. The factory is expected to go into production within one year. The raw materials required such as white sands, lime shells etc are also reported to be available in abundance in Shertallai and the adjoining areas between the Arabian Sea and Vembanad Lake.

The advantages to Kerala where the industry would be located spring from the employment potential thrown open by the factory. In the initial stages the industry is expected to give employment to about 200 workers. But when sand-lime bricks are in the market the resultant activity in the building industry is expected to provide avenues of employment for many more hundreds of workers in ancillary industries. On the basis of the result of working of the first factory, a string of other factories are also proposed to be set up.

Ayurvedic Medicine

Though Ayurveda as a system of medicine is of well-proven merits and has time-old experience and research to back its claims it has

in recent times been in general neglect, perhaps because of the tendency of the moderns to look down on it in favour of allopathic system. A revival of the system and its popularisation in the country at large is desirable at least in the interest of expansion of medical facilities especially in the villages.

Inaugurating the first Andhra Pradesh Ayurveda Mahamandali Conference last week, Mr M. Ananthasayanam Iyengar, Speaker, Lok Sabha, stressed the importance of the Ayurvedic system of medicine and explained the steps that are needed to popularise it. Establishment of research institutes in different regions, as also of a Central Board to set up standards, minimum qualifications and codes for the Ayurvedic doctors, reservation of a certain part of forests by the Forest Department for planting medicinal herbs and organisation of pharmaceutical druggists, are the measures that Mr Ananthasayanam Iyengar has emphasised as needed for putting the Ayurvedic system of medicine on a popular and stable footing. The need for proper diagnosis is also of great significance if the system is to attract popular attention and patronage. The suggestion made by him that the candi-

dates undergoing training in Allopathy should have a knowledge of Ayurveda is also of value since this would enable the combination of the best in the two systems of medicine.

A proper system of training in the Ayurvedic medicine and adequate recognition by the Government for those engaged in its practice are of particular importance if any measure of success is to be attained in popularising Ayurveda. Though as early as 1946, a suggestion has been made for the training of village vaids through the Village Vaids Training Scheme which was first mooted then, the programme does not seem to have made any headway. The failure of the scheme highlights the lack of support from the State Governments to the promotion of the Ayurvedic system. The absence of a proper system of training for the practitioners of Ayurveda would only bring the system into disrepute since the field would remain wide open for quacks to flourish. Therefore the suggestion made by Mr A. Kaleswara Rao, Speaker of Andhra Pradesh Legislative Assembly that the Government should start Ayurvedic and Unani colleges and hospitals side by side with Allopathic ones deserves consideration.

actively yours

Cash in hand is idle money, and idle money is the devil in the price spiral. Money put in a banking account, like energy harnessed, is actively helping the National Plan, yet all the time remaining yours.

Natural Rubber Prospects Good

ACCORDING to the Chairman of the Rubber Growers' Association, London, long-term prospects for natural Rubber are good although it is imperative for estates to be efficient enough to produce at substantially less than the cost of synthetic. He adds that this is within the competence of efficiently-run estates and that no artificial tinkering with the law of supply and demand is likely to afford an effective substitute.

The Chairman denies that the Association is opposed to research; but has stated that it is not in favour of the industry's money being wasted upon research based on an outmoded mandate. All sections of the industry are agreed that the object of research should be to lower production costs. It should also aim at improving the technical properties of natural rubber. He concludes by saying that any increased prosperity for companies with estates outside Indonesia, in the next twelve months, must depend upon good labour relations, a recovery in business in

America and the demand for natural rubber by Communist countries not drying up.

Meanwhile, production as well as consumption of natural rubber in India have shown a rise in March as compared to the previous month. Production has risen to 1,366 tons from 951 tons and consumption to 2,922 tons from 2,747 tons. Stocks with the estates and dealers have gone down to 3,100 tons from 4,201 tons, while those with the manufacturers have risen to 6,049 tons from 5,309 tons. Imports are shown at 1,195 tons and stocks of synthetic rubber at 847 tons. Thus, there is a total available supply of 9,996 tons.

Pepper

Pepper markets have continued to remain inactive with the rates quoted at Rs 600 for superior Palai quality and Rs 587.50 per candy for inferior Thekkam variety in the Alleppey market. Singapore, after the rise of nearly Str \$4 in black and Str \$6 in white, has remained steady with the undertone healthy.

Nothing is so far definitely known regarding the possible size of the new crop Sarawak pepper as no official estimate is available. Arrivals of the crop are reported to be very poor. Most of the stock of Lampong have remained in strong hands. Small replacement demand from New York and Europe is likely to push up the prices, as Sarawak sellers are likely to remain reserved as long as there is tension in Indonesia. Indian growers are sure to exploit the situation by raising their asking price at every small sale. It appears that there is trial of strength between the growers at origin and the buyers overseas. It remains to be seen who wins.

Cashew

The Government of Mysore have a programme to bring, under Cashew, 1,38 lakh acres and have assigned waste lands on longer leases for the purpose. The West Coast in general and the coastal regions of Mysore in particular, are well suited for cashew cultivation. There is also scope for its cultivation in old Mysore and Coorg. It is hoped to bring the additional area under cultivation by the end of 1960/61 with an additional yield of one lakh tons of raw nuts annually.

Groundnut

The Groundnut market in Madras continued to rule quiet with prices developing an easier tendency due to selling pressure. Arrivals averaged 60 to 65 tons per candy. Local small crushers took up summer crop peanuts around Rs 149 per candy. In winter crop, there were no eager buyers, the rate being quoted around Rs 150 per candy.

Fairly good showers are reported from most of the southern districts. It is stated that the rains will be helpful to the late-sown summer crop.

In the Groundnut Oil section, the rate for the ready position declined to Rs 307 from Rs 312 per candy. Calcutta interests bought only small quantities, while business in the forward section was restricted on lower Bombay advices.

Hides and Skins

In the Madras Tanned Hides market, arrivals of hides showed no change, while clearances were fair.

On the export front, business did not show any improvement and, excepting for 5/5½ lbs and 8/8½ lbs, enquiries were patchy. Inferior Cow hides continued to be difficult to sell on account of higher prices ruling.

In the Tanned Skins section, arrivals of both Goat and Sheep skins were restricted and there was only a small clearance. There were plentiful stocks of Sheep skins in the market.

In the export section, business was quiet on account of the London auctions. Some sales were reported in light weight goat fifties and inferior fifties at lower prices.

In London auction, prices of Goat skins were 3d to 9d lower on the first day. On the second and third day, the market was on the

RAJNAGAR TEA COMPANY, LIMITED.

Notice is hereby given that the Sixty-fifth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Bankshall Street, Calcutta, on Monday the 9th June, 1958 at 3 P.M. for the following purposes:

- (1) To receive the Directors' Report and the Audited Accounts for the year ended 31st December, 1957.
- (2) To declare a Dividend.
- (3) To elect a Director.
- (4) To appoint Auditors and to fix their Remuneration.

The Transfer Register will be closed from the 3rd June, 1958 to 9th June, 1958, both days inclusive.

N.B. A Member entitled to attend and vote at the Meeting is entitled to appoint a Proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,
SHAW WALLACE & COMPANY
LTD.,
Managing Agents.
Calcutta, 9th May, 1958.

same level. On the fourth day, the very best examples were fully upto March levels, while other qualities showed no change as compared to the first three days. On comparison with the actual sales, Madras shippers find that everything realised is 1sh less, while some parcels have fetched as much as 1sh 6d lower than March averages.

THE INDIAN CABLE COMPANY LIMITED

Issue of 8,28,848 Ordinary Shares of Rs. 10/- Each at Par.

(THIS IS NOT AN OFFER)

Notice is hereby given that the Board of Directors have determined to issue 8,28,848 new Ordinary Shares of Rs. 10/- each at par. The new Ordinary shares will be offered for subscription at par for cash to members whose names are registered in the Register of Members of the Company on 11th June 1958 in the proportion of one new Ordinary share for every two shares, Ordinary and/or Preference held by the member on that date (no fractional entitlement being given) with the right to renounce all or any of the shares so offered in favour of third parties.

The aforementioned members will also be entitled to apply for additional shares at par for cash, to be allotted to them subject to the conditions laid down by the Controller of Capital Issues and the Reserve Bank of India in the event of any Rights Shares not being taken up as aforesaid.

The Register of Members of the Company will remain closed from 28th May 1958 to 11th June 1958 (both days inclusive).

Persons holding shares on blank transfer deeds are advised in their own interests to lodge properly completed transfer deeds with the relative share certificates at the Company's Registered Office, 9, Hare Street, Calcutta, for registration of the shares in their names before 28th May 1958 in default of which no claims by such persons shall lie against the Company.

Circular Letters setting out the terms of the offer and detailing the procedure to be followed and Letters of Rights with forms of Renunciation, Acceptance and Request for additional shares will be issued to the aforementioned members on 11th June 1958 or as soon as practicable thereafter.

By Order of the Board,
THE INDIAN CABLE COMPANY
LIMITED
B. J. WOODLEY,
CHAIRMAN.

Calcutta, 8th May 1958.

Mahindra & Mahindra Limited

Satisfactory Operations, Bigger Turnover, Higher Earnings

Plan Approved for Doubling Jeep Production Capacity

The Problem of Raw Materials for Indian Industry

Speech of Mr K. C. Mahindra, the Chairman

The following is an abbreviated version of the speech made by the Chairman, Mr. K. C. Mahindra, at the Annual General Meeting of Mahindra & Mahindra Limited, held in Bombay on May 12th, 1958.

It is my privilege to welcome you to the 12th Annual General Meeting of your Company today. The Report that has been presented to the shareholders shows a year of very satisfactory operations with a bigger turnover and higher earnings.

The Company is fortunate in having two new Directors on your Board. Sardar H. S. Malik has a long and meritorious record in the Government, serving the country as her representative overseas for many years, and finally retiring from service as our Ambassador, to France. His varied experience and mature judgment will be available for directing the policies of your Company. At the last Annual General Meeting I expressed our appreciation of the assistance received from our American associates, the Willys Overland Export Corporation, who helped the Company to overcome the difficulties caused by shortage of foreign exchange. As a measure of further confidence in the future of your Company, and in their earnest desire to assist in its operational activity as an automobile manufacturer, their President has accepted the invitation extended by your Directors to join the Board. Mr. Stephen A. Girard is our new Director and his rich experience in the automotive field will assist the Company in the many intricate problems which arise day to day in processing the progressive manufacture of a complex and high precision engineering product.

The turnover in Jeeps and allied vehicles was about 33% higher than in the previous year. The Company's dealers and distributors have added additional facilities in order to meet the growing demand for after-sales service. Their co-operation has been forthcoming very readily in spite of reduction in their gross remuneration made last year by the Tariff Commission.

Tractor sales show a heavy decline due principally to the severe restrictions imposed by Government on import quotas. Unfortunately for your Company, Government chose to base the licence

quota on the imports for the year 1954-55 which was the first full year of our handling the David Brown franchise, and when our sales were comparatively small. Repeated representations to Government for additional ad hoc licences have not borne any fruit. To me it is surprising indeed that with the continuous threat of food-grains deficiency and the urgent need for substantial increase year by year in the quantum of our agricultural products, the very highest priority is not being given to such instruments of higher productivity as tractors and implements. Even our programme for the progressive manufacture of Tractors in India prepared in collaboration with David Brown, and submitted in November 1956 to Government, is still awaiting decision.

The Trailer Division shows a turnover of about 35% over last year's figures. In order to meet the expanding need for Trailers in the country, your Directors have decided to separate this activity in a new subsidiary company. Import licences have not been readily forthcoming for essential components which are not available locally. Arrangements have therefore been concluded with the well-known British firm of Rubery Owen & Co. Ltd., to provide the Plant, Tooling and Designs required to commence the manufacture of these components. In return for the supply of these equipments Rubery Owen will be allotted equivalent shares in the company up to 49% of the total capital. The balance 51% will be held by your Company. This arrangement will not only ensure the production of complete Trailers in the country, but will enable the new company to enlarge the range, size and scope of Trailers. The excellent research facilities and design improvements available with Rubery Owen in Britain will be at the disposal of the Indian Company.

The turnover of the Steel Division shows a phenomenal increase. As I reported to you last year, the margin of profit on this type of business is small, and large volume is necessary to show appreciable earnings. It has been possible to reach these high figures of sales as the Division maintained an active and detailed up-to-date study of the varying conditions effecting the world prices of steel and its availability. Your Company has been

vigilant in keeping abreast of the changing circumstances and were able to negotiate successfully for large contracts. With the completion of Tata and Indian Iron and Steel expansions this year and the nearing completion of the three new steel works in 1959-61, the business in import of steel must decline. Currently, and the next two years, shortage of foreign exchange will restrict severely the steel incomes from abroad. The future of your Company's Steel Division would appear gloomy but for the fact that as approved controlled stockists, your Company hopes to participate in the internal distribution of the increasing amount of steel that would become available as expansions and new plants get into production. The volume passing through the stockists will perhaps decline as compared to the imports, but it is hoped that the margins per ton of steel so processed will increase as compared to the very low present margin in the import business. The large business in steel has led to the development of a very efficient and technically well equipped steel division in the Company, and new avenues for utilisation of this skill are being investigated.

In accordance with the findings of the Tariff Commission that the demand in the country for Jeeps would progressively increase to 5,000 units by 1961, a phased programme for increasing the production capacity of your Company was submitted to the Government. The progressive schedule to double the rate of production in order to cater for this growth in demand has now received approval. The details of the foreign exchange required for additional plant, machinery and tooling are with the Government and receiving their consideration. Indications are that sanction for this purpose will be forthcoming soon, particularly as plans relate to the manufacture of special utility vehicles.

In planning manufacturing facilities to produce automotive vehicles in volumes of 5,000 units or more, the basic requirements for an economic operation change. On a small volume production even scattered facilities might suffice, but for larger volumes the economics of the scheme dictate the need for consolidated and integrated facilities. Systematic storekeeping and straight line flow of production, efficient handling of compon-

ent manufactures and good house-keeping both in the factory and the warehouses become an economic essential. Need for flexibility for further expansions calls for meticulous planning in great detail. With this in view, the engineers of your Company have been making elaborate studies and although a year or two ago it was not possible to contemplate a large building programme, the easing of construction materials in the market makes it now a practical proposition. Your Company already owns over 100 acres of land at Pimpri near Poona, and provided further facilities like water, power and railheads can be arranged, plans to build in that area may materialise. For the purpose of doubling our present targets for production of Jeeps and for integrated development, substantial finance will be required. Recognising such a need, your Directors recommend as a first step that the authorised capital of the Company be increased and certain resolutions have been placed before you for consideration at today's meeting. The Company's application for issue of additional capital is under discussion with the Controller of Capital Issues and as soon as the details are finalised the shareholders will receive prompt intimation.

In concluding this survey of Company's operations and hopes for the future, may I say that despite stringent conditions of operations in an economy presaging a world wide recession amidst inflationary potential, the results of the current half year indicate that your Company's executives have been adapting themselves to meet these new and diverse circumstances and have maintained a high level of management efficiency. These are relative terms. In the ultimate analysis volume of sales, quality production, development outlook and profits are the criteria of your judgment. Of sales and profit, the balance sheet is a good testimony; of the quality of the product made in India, Willys engineers have spoken highly. The design and development section of your Company is today in an embryonic stage, but a sound beginning has been made and the basic thinking behind these developments is under proper guidance. I place considerable emphasis on this aspect, as in my opinion with our present knowledge of automobile designs and

with the scanty manufacturing facilities in the country, lot of useful effort is being wasted in attempting to do too much.

Government deserves praise for initiating an aggressive programme for increasing industrial production, and a considerable measure of success has attended these efforts, but to sustain the increase and keep on a progressive rate of growth two essential conditions must be satisfied, namely, demand to keep pace with supply and raw materials to be made available in abundance and in time. To create temporary employment is not the answer to the four hundred million problem. A modern socialist planner asks us never to forget that the "end of a rational economic activity is to make possible more production and more consumption and that expansion of employment has to allow the maximum expansion of production, but should not be made in a way as to be detrimental to the latter". Yet, today industries in India face serious dislocation. In the engineering field non-availability of even the essential raw materials like pig iron and coke dictates a position of almost complete helplessness and warrants a justifiable criticism of inadequate instruments of Government planning. Planning postulates that correct emphasis is placed on the right industries and once included within the Plan no effort is spared to provide the means for that industry to reach maximum production desired and to ensure consumption of the products of industry.

Take the problem of food which would need first attention of planners in India for many decades to come. It is becoming apparent that the luxury of fractioning the land-holding may have to be abandoned in favour of a policy which will produce more food immediately; acreages need to be worked out to permit economic mechanical cultivation and steps taken to provide the cultivators with the means by which they can increase production per acre. As the food situation is tackled, serious examination is needed of the methods of transporting what the soil produces from the areas of cultivation to the regions of consumption. In an economy like ours the need to develop artefacts against the overpowering pressure of population is urgent, and it is slowly being recognised that a more than cursory study is required of the problems of distribution, which in simple words means distribution to the consumers at the right time, at the right price and in the cheapest manner.

Transportation has been sometimes defined as the conveyor belt of industry. India has a widespread and complicated railway system originally established to cater for activities in port towns in so far as industrial economy was concerned. The overhaul and rehabilitation of the system has consumed vast sums of money. With the increased demands placed on this system by the contemplated

growth in the economy it was correctly recognised that a major effort would be required in expanding the system and almost 25% of the Second Plan outlay was devoted for this purpose. With the expenditure of over Rs. 1,000 crores on the system the railways are expected to be able to haul 162 million tons by 1960/61, an increase of about 47 million tons over 1955/56. When we consider that the steel industry expansion alone will require a movement of 36 million tons a year, the added increase in the carrying capacity of the railway system appears much too inadequate for the rest of the economy in India. When we consider that the eruption of high food-grain prices in various corners of the country is principally due to mal-distribution and to the failure to reach the food-grains to the hot-spots within time the matter becomes extremely urgent for an exhaustive re-examination of the transport position. It would appear that despite the best efforts to rehabilitate track and extend rolling stock it will still not be possible for the railways to service the distribution needs. A medium with greater flexibility and accessibility must be found. In considering the various alternatives there is but little choice. It is the use of trucks, truck-trailers and tractor-trailers alone which would ease the burden on the overloaded railways and on our meagre coastal services.

There are a number of factors which act today as deterrent to the development of an extensive Truck Haulage Service. The recent announcement of an Inter State Transport Commission with comprehensive powers over development, co-ordination and regulation and of Transport Development Council at the ministerial level and of Road and Inland Water Transport Advisory Committee composed of official and non-official members is a welcome recognition of the importance of the distribution problem. It is acknowledged that the level of taxation in India so far as transport is concerned is perhaps the highest in the world; that Inter State controls on movement from one State to another are irrational and obstructive without yielding a single tangible benefit to any party; that threat of nationalisation of Goods Haulage Services in various States is a positive disincentive to development. There are not sufficient trucks coming off the manufacturers' lines, nor are operators coming forward in sufficient numbers to take up the service. The Minister of Transport and Communication stated the other day that the Plan provides for the production of 136,000 vehicles between the years 1957 and 1961. This volume, even if achieved, plus the existing fleet computed to be about 130,000 vehicles less obsolescence is hardly adequate for what is estimated as the minimum requirement for moving the products of the Second Plan economy. Some special effort would be necessary as much for

supply of more vehicles as for improving the road system, including the bridging of important rivers and provision of feeder roads from and to centres of production and consumption. We have the triple problem in road transport which must find a solution if the planned economy is to achieve even a modicum of success in operation. There is first the problem of building the balance of 114 bridges as planned; of extending the mileage of national highways to a minimum of 15,000 miles; of a concerted and intelligent development of feeder roads and bye-ways. This problem, we are assured, is being energetically tackled by the Transport Ministry. The second problem is the quick supply within the next few years of an adequate number of trucks with pay-loads ranging from one-ton to ten-tons and of truck-trailer and tractor-trailer combinations for service on the main routes. I reckon that from now provision of a minimum of 50,000 trucks a year and say 5,000 tractor trailer combinations should be made. The producers of trucks, tractors, trailers in India are not equipped today to furnish this quantity of vehicles. A concerted and co-ordinated programme as between the various manufacturers, a decision to speed up local manufactures and a direction to get the results at any cost is the desideratum of planning in this context. Finance is the mobilizer and I suggest that while the Ministry and the Planning Commission engage themselves in devising methods of co-ordination and direction, the proposed Refinance Corporation for Industry Private Limited should take up, as a matter of priority, the requirements for capital finance of the various manufacturers for the speedup. I reckon that a matter of Rs. 10 crores will be needed and this is not a large amount for insuring the production of 50,000 trucks and 5,000 tractor trailer combinations a year in the country.

Alongside such production there will be the question of off-take—who will buy these vehicles and who will operate? This is problem number three. The decision that the moratorium on the nationalisation of goods transport has been extended till the end of the Third Five Year Plan period is good as far as it goes, but it is not enough. Apart from long-term inducements for people to engage themselves in this service with its high obsolescence mark, there is the vital question of finance. Money for financing the purchase every year of 50,000 truck services and for finding operating costs thereof is simply not there in the country. I suggest a Truck Finance and Development Corporation which would guarantee the manufacturers the purchase of all the vehicles they can produce and which would simultaneously offer the operators easy payment terms on an instalment basis. The Hire Purchase System has become a normal and essential part of the automotive trade in America and in Europe.

Private agencies no doubt have flourished in India too, but their scale of operations is too small and their finances insufficient. The Truck Finance and Development Corporation which I am asking the State to sponsor should be able to meet the demands of the problem as posed by me with capital fund of say Rs. 50 crores—a small sum as compared to the huge outlay on the railways system. If the charter of the Refinance Corporation cannot be specially amended to render assistance in full scale to the present manufacturers for they may not come in the category of "medium industries", their capital finance will need to be provided by the Truck Finance and Development Corporation which I have proposed.

Railway transport in India quite correctly received priority, but there are physical limitations to its quick growth. For a Road Haulage Service the limitations are minor and of not such colossal magnitude in capital expenditure as in the railways. Rupee for Rupee, investment in a properly co-ordinated Road Transport organisation will yield much richer dividends than in the railways. I am convinced that what I have suggested in the matter of transport organisation will not only provide prominent additional employment, but also lay securely the foundations of a modern transport system as has been the experience in other countries.

With the result of operations over last year as presented to you today, you will join me. I am sure, in expressing our appreciation as shareholders of the Company of the very fine effort made by the staff and the workers, and I hope that they will continue to work with equal zeal and enthusiasm over the coming years.

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

S. E. RLY. TENDERS

Sealed tenders are invited for supply of the following items:—
Tender No. PA/COS/5422/WS/MED/494-B/GB-10 for supply of D.D.T. Wettable powder 50% for 78 Cwts.

Tender forms are obtainable from the Controller of Stores, Garden Reach, South Eastern Railway, Calcutta—23 P.A. Sec. on remittance of Rs. 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, South Eastern Rly., Garden Reach, Calcutta—23 by local firms. Earnest Money is Rs. 200/- (closing date of the tender is 10-6-58 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid income-tax clearance certificate along with the Earnest Money receipt with the Tender.

Narrow Fluctuations

Watch-Dog Writes:

NARROW fluctuations, in the absence of any fresh influence, have characterised trading in stock markets during the week under review. Transactions are few and far between, and the slight improvement in the middle of the week is attributed more to scattered bear-covering than to fresh bull support.

The Calcutta Stock Exchange displayed a steady trend and activity was confined to a few selected scrips.

Cheerless conditions continued on the Bombay Stock Exchange where prices generally drifted lower after a brief spell of steadiness.

With only few transactions, the Madras Stock Exchange presented a cheerless look.

On the London Stock Exchange, there was a general disposition to await the outcome of the new railway peace-plan talks.

Calcutta

Calcutta, Friday Evening.

DEALINGS on the local Stock Exchange were characterised by a state of uncertainty during the week under review. Due to lack of incentives, there was no fresh

S. E. RLY. TENDERS

Sealed tenders are invited for Tender No. CON/COS/8/F2/194/58 for supply of 50 Nos. standard T. W. battery cup Board as per drawing No. SE/T/106. Tender will be opened on 20-6-58 at 12 noon.

Tender forms (not transferable) are obtainable from the office of the undermentioned (Construction Section), Garden Reach, Calcutta-23 at Rs. 2/- (not refundable) per copy by M.O. to him direct in the case of outside firms and on production of cash receipt from this Railway's Chief Cashier by local firms.

Tender forms should accompany the receipt for depositing earnest money of Rs. 260/- from this Rly's Chief Cashier together with a valid Income Tax Clearance Certificate without which the tender is liable to be rejected. Contractors having permanent deposit of Rs. 1000/- with the undermentioned are exempted.

CONTROLLER OF STORES
S12

support; and the news of the postponement of the threatened token strike at the TISCO Works had no effect on sentiment. Amongst the factors, which acted against the expansion of activity, were the possibility of a return of stringent conditions in the money market following the subscription to the new loans, the delay in the announcement of steel and cement retention prices, of the selling price of coal and of the reduction in the export duty on tea; uncertain outlook for the textile industry, the threatened strike by coal-miners in West Bengal and Bihar and fears of a slow-down in the engineering industry on account of raw material difficulties. Thus, the general feeling in the market was to take quick turns, resulting in the higher levels having continued to attract offerings. The market did not, however, manifest any sign of nervousness due to selective support, being influenced by the news that the LIC might, in future, place direct orders with the brokers instead of buying by means of offers.

The recent firmness was less evident in the Gilt-edged market. Following the announcement of the new loans, institutional investors were inclined to sell existing loans to invest the proceeds in the new loans. Since the opening of the lists, however, the selling pressure abated and there was a slight recovery in all dated issues. 3 per cent 1986 Conversion Loan, after opening at Rs. 71.17 and improving at one time to Rs. 71.75, receded at the close to Rs. 71.15.

Bank shares were quiet and fractional losses were common. The only firm feature was Punjab National, being taken upto Rs. 52.50. United Commercial, after touching a low of Rs. 58.50 from Rs. 60.00, closed better at Rs. 59.50.

Jute shares ruled fairly steady in view of the sound statistical position. There was a feeling that the present easiness in raw jute prices coupled with the advantages of modernized mills would help the mills to make better profits during the current year. Nuddea had buyers at Rs. 36.50 to Rs. 37.50; New Central at Rs. 13.75 to Rs. 14.94; Megna at Rs. 99 to Rs. 101; Birlas at Rs. 15.00 to Rs. 15.25 and Howrah at Rs. 14.94 to Rs. 15.37. India closed better at Rs. 113 against Rs. 111; Alliance at Rs. 75 against Rs. 70 and Anglo-India at Rs. 142 against Rs. 141.50.

Despite the threatened strike by miners in West Bengal and Bihar, Coal shares ruled reasonably steady. Bengal were the only bright feature, having improved to Rs. 242 from Rs. 230. Burrakur turned a shade quieter at Rs. 21.75 against Rs. 22.00, while Western Bengal remained at Rs. 5.75 and so also South Karanpura at Rs. 9.56. Central India had buyers at Rs. 7.62 to Rs. 7.81.

Expectations of some relief in excise duty were responsible for inducing a better tendency in the Textile section early in the week. Higher levels could not, however, be maintained till the end as ope-

rators were inclined to restrict commitments until such time they knew positively about the immediate prospects for the industry. Jayshree were at one time taken upto Rs. 6.56 from Rs. 6.37 and Elgins upto Rs. 12.37 from Rs. 12.19, and Rs. 12.31 respectively. Bowreah, after a long time, came in for business at Rs. 103.50 against Rs. 106, while New Victoria remained quiet at Rs. 1.34.

Trading in the Tea section continued to be restricted as operators took a cautious view of the 1957-59 season. Apart from the inordinate delay in the announcement of relief to the industry, fears were entertained that the working results of companies for last year would be poor in view of the unremunerative prices obtained for Common teas the supply of which continued to be excessive. The only redeeming feature of trading was the support still being lent to a few selected scrips. Most prominent amongst these were Bagmati changing hands at Rs. 19.25 to Rs. 19.62; Brahmapootra at Rs. 2.35 to Rs. 3.06; Brooke Bond at Rs. 16.81 to Rs. 17.25; Bishnauth at Rs. 18.87 to Rs. 19.25; Dhekhakhat at Rs. 21.19 to Rs. 22.50; Hattikhtra at Rs. 10.00 to Rs. 10.50; Jayshree at Rs. 10.06 to Rs. 10.31; Methoni at Rs. 16.62 to Rs. 17.81; Raungamattee at Rs. 63.50 to Rs. 67.00 and Patrakola at Rs. 132 to Rs. 135.50.

Sugar shares came in for selective enquiry as there was a general disposition to await the announcement of the Government's export policy. Raza/Baland had buyers at Rs. 13.87 to Rs. 14.06; Balram-pore at Rs. 6.25 to Rs. 6.50; S.K.G. at Rs. 9.94 to Rs. 10.18 and Dyer Meakin at Rs. 9.87 to Rs. 9.94.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons. Against the week-end closing of Rs. 21.43, Indian Irons opened better at Rs. 21.55 and, after advancing at one time to Rs. 21.75, receded again at the close to Rs. 21.59 on profit-taking. In sympathy, TEXMACO were taken upto Rs. 18.25 from Rs. 18.15, to finish at Rs. 18.00. The news, that the Government would be taking over control of the management of the company, caused a recovery in Jessop to Rs. 19.25 from a low of Rs. 18.94 touched early in the week. Marshalls changed hands at Rs. 5.37 to Rs. 5.53; Kumardhubi at Rs. 9.00 to Rs. 9.12; Britannia at Rs. 11.00 to Rs. 11.19 and Burn at Rs. 330 to Rs. 339.

A refreshing feature of trading during the past many weeks was the large support coming in for the investment scrips in the Miscellaneous section. Although there was intermittent profit-taking, selected scrips continued to maintain a firmer tendency. Among such scrips were Dunlop Rubber having sustained buyers upto Rs. 26.19 from Rs. 25.50; Rohtas upto Rs. 18.06 from Rs. 17.00; NICCO at Rs. 26.50 to Rs. 27.12; Aluminium Corporation upto Rs. 11.06 from Rs. 10.87; Indian Aluminium upto Rs.

13.81 from Rs. 13.12; Indian Cable upto Rs. 30.87 from Rs. 30.31; India Steamship upto Rs. 11.19 from Rs. 11.00 and Alkali Chemicals upto Rs. 15.00 from Rs. 14.69. Paper shares were in good demand, mainly due to the expectation of larger profits in consequence of import restrictions and a sharp rise in the price of the indigenous variety. Orient touched a high of Rs. 29.80 from a low of Rs. 29.35; Shree Gopal Rs. 15.31 from Rs. 15.06 and India Pulp Rs. 20.62 from Rs. 19.69, to finish the week at Rs. 29.60; Rs. 15.19 and Rs. 20.62 respectively. Titagur remained firm at Rs. 36.50. Among other scrips, Phillips were a steady feature at Rs. 14.00, while Indian Oxygen improved to Rs. 18.25 from Rs. 18.06 and Hindustan Lever to Rs. 21.37 from Rs. 21.06. Indian Copper were a narrow market, moving between Rs. 3.11 and Rs. 3.14. B.I.C., after being offered at as low as Rs. 3.40, improved to Rs. 25.19 from Rs. 24.12 and Hindustan Motors to Rs. 7.00 from Rs. 6.81.

★

Bombay

THE Stock market has ruled steadier during the past week though the volume of business passing has not recorded any sizable improvement. It would appear that while both operators and investors are in no hurry to liquidate their holdings, they are also reluctant to extend commitments. The recommendation of the Planning Commission that the shortfall in the internal resources of the Plan should be made up from fresh taxation has naturally engendered a cautious approach to equities. For in the event of a decision in favour of fresh levies the outlook for equities would have to be again marked as gloomy. The continued labour unrest in the two steel works

S. E. RLY. TENDERS

Sealed tenders are invited for supply of the following items:—

Tender No. PA/COS/4/464/IP/GB10 for supply of 99 Cwts. Cane China best picked (1st quality) in lengths of not less than 15 to 16 ft. each with Knots not less than 9" distance apart the thickness of the cane should not be less than 3/8" or more than 1/2".

Tender forms (not transferable) are obtainable from the undermentioned at Garden Reach, South Eastern Railway, Calcutta-23 (P.A. Section) on remittance of Rs. 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier, by local firms. Earnest Money against the tender is Rs. 1,500/-. Closing date of the tender is 19-6-58 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid income-tax clearance certificate along with the Earnest Money receipt with the Tender.

CONTROLLER OF STORES
S13

is another restraining influence. Though the token strike in TISCO has not adversely affected production, there is still the anxiety regarding labour unrest. The textile section which has been somewhat cheerful last week on expectation of some further relief in view of the continued lower offtake of cloth is rather depressed though now and then revived hopes of fresh relief have imparted some steadiness to the section.

Steels: Steel shares opened the week on a quiet note following adverse rumours about the labour situation in the works. Tata Iron opened on Friday at Rs 179.75 and after touching a high of Rs 180 and a low of Rs 179 closed unchanged on balance at Rs 179.75. The rates were generally unchanged during the next two sessions but on Tuesday sentiment was steadier and at one time the scrip was done up to Rs 181. Following reports that the token strike has not interfered with the day's output at the works, sentiment rallied and at one time on Wednesday the scrip was done up to Rs 183. The closing was steady at Rs 182.25. Indian Irons was also higher on balance at Rs 21.68.

Textiles: Textile shares showed some improvement toward mid-week but in the absence of follow-through support the higher levels could not be maintained till

the last. Bombay Dyeing which opened the week at Rs 53.70 was wanted up to Rs 54.30 in earlier dealings on Wednesday but toward close again reacted to close at Rs 53.90. Century was lower on balance at Rs 42.9. Kohinoor was quiet at Rs 266.

Miscellaneous: In the miscellaneous section, National Rayon opened at Rs 232 but improved to Rs 236 on Saturday. By close on Tuesday it was again back at Rs 235 with the reactionary tendency becoming more pronounced on Wednesday when the day's closing quotation was placed at Rs 233.25. Telco was a steady spot at Rs 166.50. Bombay Burmah was wanted up to Rs 554.50 on favourable reports.

Madras

WITH fewer transactions, the Madras Stock Exchange presented a cheerless look during the week under review. In the absence of any stimulating development, fresh buying was absent and price fluctuations were negligible.

Textiles: The downward tendency in this section continued and several scrips lost further ground. The news,

that handloom textiles had been moving more briskly, and the improvement in the yarn market, failed to cheer up the market. Radhakrishnas had sellers at as low as Rs 122, while Lakshmi declined to Rs 99 from Rs 104.50. Coimbatore Spinnings, Rajapalayams, Kotharis and Maduras attracted sellers at the market rates. The only steady feature was Travancore Rayon, which remained steady at Rs. 13.05

Plantings: This section ruled comparatively steady. Coffee shares accounted for good business. Coffee Lands were a little higher at Rs 35.12, while Consolidated Coffees gained fractionally at Rs 25.10. There were some enquiries for Mysore Coffees and Rajandras at the quoted rates.

Among Tea shares, there was buying support for Chennabas and Norsuch at the market rates. United Nilgiris attracted some selling at Rs 15.40, while Coorgs dropped down to Rs 10.75 on lack of support.

In the Rubber section, there were buyers of Malankaras, Valkundams and Rajagiris. Travancore declined to Rs 6.60 on receipt of four per cent dividend.

Miscellaneous: In this section, there was large absorption of Aluminium In-

dustries upto Rs 13.30. Cement and Chemical shares accounted for the usual volume of business, although some selling was noticed in Travancore Cements at the market rate. FACT's were done at Rs 5.18. Mettur Chemicals at Rs 5.66 and Parry's Confectionery at Rs 3.19. Ashok Leylands changed hands upto Rs 4.15 c.d.

London

CONDITIONS on the London Stock Exchange ruled generally quiet as there was a general disposition to await the outcome of the new railway peace-plan talks. End of account considerations were also a restraining influence and small selling produced a slight preponderance of small losses in most sections.

Industrials were uncertain with price movements mainly influenced by company news. Rolls Royce shares were firm following the results. Textiles were generally lower under the influence of some disappointing dividends. Oil shares were particularly depressed by events in Lebanon with the cutting of the Iraq petroleum pipeline. Glitged securities, after ruling quiet early in the week, developed a steadier tendency towards the close.

The Story of Oil—8

Trees of steel

When a well strikes oil, the first consideration is to stop it gushing. Such an occurrence, though spectacular and common in the early days of drilling, is wasteful. To counteract the pressure, therefore, the mud used during drilling is pumped into the well. The drill is then replaced by narrow tubing which stretches from the bottom of the newly discovered deposits to the 'Christmas Tree' on the surface. The latter is a system of valves which control the flow of oil.

Crude oil, by itself, cannot move. It usually lies between natural gas (on top) and water, so that when the oil trap is pierced by the well, any gas present seeks to expand and pushes down on the oil, driving it upwards. Or gas may be dissolved in the oil itself, and as it expands it pushes the oil to the surface. If, however, a large quantity of water lies below the oil, it forces the oil out of the porous rock

and into the well. Sometimes a combination of gas and water pressure drives the oil to the surface.

Normally this pressure is sufficient to keep a well flowing for some time. But as the porous rocks are drained, the pressure declines. Then one of several artificial methods can be used to keep the oil flowing. The 'Christmas Tree' can be replaced by a mechanical suction pump which draws the oil up to the surface. Or gas can be fed into the deposits (between the casing and the tubing) to mix with the oil and bring it to the surface. Or, as a last resort, gas or water can be pumped down a neighbouring well to recreate the original pressure.

Thirty or forty years ago, only a quarter of the oil discovered could be recovered. With today's production techniques a much larger recovery percentage is possible.

Price: Rs 1.50

The Case of the Missing Millions could well be a title of a mystery by that gifted writer, Erle Stanley Gardner.

What we are concerned with is the Mystery of the Missing Crores; the amount involved is large, Rs 65 crores.

Some detection was called for; and the result of such sleuthing is to be seen in this week's World of Finance.

Prices: the Status is no More Quo

Investment Gossip:

THE steel strike struck terror into the hearts of bull operators on the Stock Exchanges and, during the early part of the week, there was a fairly sizeable erosion of values, particularly in the steel section. Nor were developments other than the steel strike such as to afford the market some grounds for a more cheerful outlook.

The port situation was threatening. Nothing further came to be known of the anticipated increase in steel retention prices. The status was still quo in the matter of retention prices in cement. In this background, what is surprising is that the loss in values was not larger than it actually was. This, of course, I take to mean the intrinsic strength of the markets generally; and thus I am hopeful of a quick recovery in prices, perhaps as early as the next week.

Thus, the weakness of the steels was partly obscured by firmness in all other sections. On Lyons Range, even Jutes put on a show of strength, in the expectation that working for the last year will be found to prove satisfactory.

A scarcity obtains in the paper market, and this heralded a general rise, that was highlighted by a quite sharp marking up of Orient Paper.

Among the Miscellaneous scrip, there was particular reason for prices being headed upward. The decision to include Indian Cable and Indian Aluminium in the forward list was greeted with pleasure and sustained trading at higher levels.

The Calcutta Stock Exchange now offers four scrip on the forward list whereby the shareholder can buy Indian: Indian Iron, Indian Copper, Indian Cables and Indian Aluminium.

In this context, may I repeat what I suggested some years ago? I had then said that all trends pointed to the desirability of the investor buying Indian. The present circumstances justify the iteration of that suggestion.

Even Madras has got into the act. The forward list bug has bitten the Madras Stock Exchange authorities, and information is that it is proposed to have eleven scrip in which forward trading would be permitted.

All this improvement, let it be noted, has been in response to atmosphere, or to the view of op-

erators that the conditions favour a more prosperous future generally.

So, by midweek, these influences, such as I have thus listed, were helping to keep the market quite steady, the while that the steel scrip were losing ground.

Then, as the week ended, even the steels began to recover.

This was because the steel strike, though there were some unseemly scenes, was quite clearly a failure. Mr Chokshi vouchsafed the information that production might be affected till the middle of June, or may be even the third week. But the market was not disheartened by this, being instead gratified that the storm had been, as it were, confined to a tea-cup.

Now, then, is the juncture at which all pessimism may be discarded. The New Loan, involving Rs 132 crores of cash subscriptions, has not (as I had fully anticipated) adversely affected the stock exchanges. The British Bank Rate cut is thought a favourable factor, and there is here the general anticipation that, even if the Indian Bank Rate as such is not reduced, the trends in interest rates are bound to be downward; and this, of course, is of bull connotation to markets.

ER\$

Investment Notes:

FOR the first time since they were listed ex-right in February this year, the shares of New India Assurance have touched a new high level of Rs 50, to be presently quoted at Rs 48.50. The firmness in price is attributed to renewed hopes that the directors, who are to meet after a few days, may decide to raise the dividend from Rs 3.00 to Rs 3.50 per share for 1957. The company is said to have done exceedingly well.

Premier Automobiles have decided to offer 1,60,000-6½ per cent Convertible Debentures of Rs 100 each, at par, out of an issue of 2,00,000-6½ per cent Convertible Debentures of Rs 100 each. The Debentures, now offered to the shareholders, will require payment of Rs 50 on application and Rs 50 on allotment. The permission of the Controller of Capital Issues has been obtained. The company has made arrangements with the Industrial Finance Corporation, the Industrial Credit and Investment Corporation of India Limited and the LIC for the underwriting of the issue.

It is learnt that the issue of shares by the CEAT Tyres of India has been over-subscribed. More details about the subscription are expected to be made available in the next few days.

ER\$

Investment Briefs:

IN Andrew Yule Jute group, Cheviot, Delta and Orient have passed over the Ordinary dividends for the year ended 30th November, 1957 as against Rs 2; Rs 5 and Rs 5 per

share respectively paid in the previous year.

Ramnugger Cane has reduced the dividend from Rs 2 to Rs 1.50 per share for last year, while the bonus scheme has been shelved due to high incidence of bonus tax.

Kyang Tea Seed Company has reduced the dividend from 7½ to 5 per cent for 1957.

Kil Kotagiri, Madras, has reduced the dividend from 20 to 15 per cent for the year ended 31st October, 1957.

ER\$

Trend of Textile Profits

Balance-Sheet Reviews:

SEVEN more textile mills—Commercial, Modern, Gopal, New Commercial, Jupiter, Adoni Spinning and Trichinopoly—have presented their reports and accounts for 1957. The working results are rather discouraging, reflecting the difficult trading conditions generally experienced by the industry during the year under review.

ER\$

Commercial Mills

The gross profit of the Commercial Ahmedabad Mills Company Limited for 1957 has decreased to Rs 10.06 lakhs from Rs 21.53 lakhs, while sales are lower by Rs 12 lakhs at Rs 1.41 crores. The dividend is, however, maintained at Rs 35 per share, including a bonus of Rs 5 per share. This dividend is paid only after transferring the necessary amount from Reserve. Following appropriations are made:—Depreciation Rs 5.49 lakhs (Rs 4.49 lakhs); Taxation Rs 2.00 lakhs (Rs 5.00 lakhs) and Development Rs 1.50 lakhs (Rs 2.30 lakhs).

ER\$

Modern Mills

The Modern Mills Limited has made a profit of Rs 9.35 lakhs for the year ended 31st October, 1957. Out of this, a provision of Rs 2.39 lakhs has been made for bonus to the employees; Rs 3.31 lakhs for Depreciation and Rs 44.145 for Wealth Tax. The directors have transferred Rs 1 lakh from Taxation Reserve which they have allocated to General Reserve. A dividend of Rs 5 per share has been recommended. Sales are lower at Rs 1.62 crores against Rs 1.86 crores.

During the year, the capital was increased by way of new issue of 22,130 shares at a premium of Rs 10 per share.

ER\$

Gopal Mills

The Gopal Mills of Broach, which had changed hands some time ago, have not resumed operations. The accounts for the year 1956 show a loss of Rs 10 lakhs which, with the carry-forward debit amount of Rs 1.36 lakhs, makes a total of Rs 12.10 lakhs. The directors have transferred Rs 5 lakhs from General Reserve. With the result, the loss of Rs 7 lakhs is carried forward. Sales

have fetched Rs 96.47 lakhs as against Rs 1.09 crores.

ER\$

New Commercial Mills

The New Commercial Mills Company Limited has earned a gross profit of Rs 16.18 lakhs for 1957 as against Rs 31.04 lakhs in the previous year. The dividend on the Ordinary shares is maintained at Rs 25, including a bonus of Rs 5 per share. The directors have transferred Rs 7.72 lakhs from General Reserve and Rs 78,483 from Development Rebate Reserve being excess provided in the previous year. Sales are lower at Rs 2.16 crores against Rs 2.24 crores. A sum of Rs 7.66 lakhs (Rs 7.18 lakhs) is provided for Depreciation; Rs 2.60 lakhs (Rs 9.65 lakhs) for Taxation; Rs 2.00 lakhs (Rs 1.47 lakhs) for shortfall of taxation and Rs 4.59 lakhs (Rs 1.45 lakhs) for Development Rebate.

ER\$

Adoni Spinning

The anticipated improvement in the working results of the Adoni Spinning & Weaving Company Limited in the year 1957 has not materialised on account of the depressed conditions in the yarn market. The net profit, before providing for Depreciation, is, however, Rs 2.69 lakhs as against Rs 1.880 in the previous year, thanks to a substantial rise in sales from Rs 7.39 lakhs to as much as Rs 34.88 lakhs.

According to the directors' report, building for the installation of the balance of 12,000 spindles is nearing completion. Erection of the machinery is expected to commence about July next and production sometime in October. In order to finance the expansion programme, debenture capital for Rs 17 lakhs has been raised between the State Bank of India and the Life Insurance Corporation of India.

ER\$

Trichinopoly Mills

A sharp decline in the earnings of the Trichinopoly Mills Limited for 1957 has been reported. The net profit is only Rs 2.99 lakhs as against as much as Rs 5.88 lakhs in the previous year. The amount set aside to Depreciation is Rs 1.18 lakhs (Rs 1.20 lakhs); Taxation Rs 1.2 lakhs (Rs 1.75 lakhs) and Development Rebate Rs 50,940 (nil). The dividend on the Ordinary shares is reduced to 9 per cent from 11½ per cent.

ER\$

Jupiter Mills

The Ahmedabad Jupiter Spinning, Weaving & Manufacturing Company Limited has maintained the dividend at Rs 15 per Ordinary share for 1957. The gross profit amounts to only Rs 16.25 lakhs as against as much as Rs 21.68 lakhs in the previous year. The directors have, however, transferred Rs 4.50 lakhs from General Reserve. Sales have gone up from Rs 1.38 crores to Rs 1.69 crores. Following appropriations are made:—Depreciation Rs 8.42 lakhs (Rs 8.00 lakhs); Taxation Rs 2.25 lakhs (Rs 5.26 lakhs); Rs 1.47 lakhs (nil) for ad-

ditional taxation ann Rs 3.76 lakhs (Rs 1.02 lakhs) for Development Rebate.

₹ ₹

Anil Starch Products

Sales of the Anil Starch Products Limited, for 1957, have increased by Rs 46 lakhs to Rs 1.91 crores. The gross profit amounts to Rs 17.08 lakhs against Rs 13.35 lakhs. The directors have transferred Rs 6.05 lakhs from General Reserve and recommended a dividend of Rs 20 (including a bonus of Rs 10) on the Ordinary shares. After setting aside a sum of Rs 5 lakhs for Taxation, the Depreciation amount is raised to Rs 8.68 lakhs from Rs 4.32 lakhs and Development Rebate to Rs 7.89 lakhs from Rs 4.77 lakhs.

₹ ₹

Atul Products

Atul Products Limited has reported an increase in sales from Rs 1.83 crores to Rs 2.71 crores for 1957. The gross profit amounts to Rs 51.27 lakhs as against Rs 31.95 lakhs in the previous year. The directors have, after providing Rs 16.76 lakhs (Rs 12.68 lakhs) for Depreciation; Rs 5.89 lakhs (Rs 6.91 lakhs) for arrears of depreciation; Rs 1.50 lakhs (nil) for Wealth Tax; Rs 3.50 lakhs (nil) for Development Rebate and Rs 7.50 lakhs (nil) for Depreciation Reserve, have raised the dividend from Rs 6 to Rs 8 per share.

₹ ₹

Bharat Line

Bharat Line Limited has produced excellent results for 1957. Freight income has increased to as much as 2.52 crores from Rs 2.20 crores and the gross profit to Rs 66.40 lakhs from Rs 38.81 lakhs. Out of the gross profit, the directors have provided Rs 27.59 lakhs (Rs 27.66 lakhs) for Depreciation and Rs 21.36 lakhs (nil) for deferred revenue expenditure. There is no transfer to General Reserve against Rs 4.75 lakhs. Taxation has been provided at Rs 80,000 as against nil. The directors have recommended a dividend of Rs 6 plus a bonus of Rs 6 per share as against Rs 6 in the previous year.

₹ ₹

Assam Match

The Assam Match Company Limited, on a gross sale of Rs 1.41 crores, has paid excise duty of Rs 74.49 lakhs in 1957 as against Rs 66.40 lakhs on sale of Rs 1.35

crores. After providing Rs 1.91 lakhs (Rs 1.36 lakhs) for Depreciation; Rs 5.70 lakhs (Rs 4.80 lakhs) for Taxation, the net profit comes to Rs 4.63 lakhs against Rs 5.44 lakhs in the previous year. The directors have transferred Rs 50,000 to Reserves as against Rs 1.15 lakhs. The dividend is maintained at Rs 1.25 (including a bonus of 25 np).

₹ ₹

Aspinwall & Company

The net profit of Aspinwall & Company Limited, before providing for Depreciation and Taxation, amounts to Rs 6.83 lakhs for 1957 as against Rs 8.29 lakhs in the previous year. The charge on account of Depreciation is Rs 1 lakh (Rs 92,551) and Taxation Rs 3.36 lakhs (Rs 3.42 lakhs). After transferring to Development Rebate Reserve Rs 9,959 (nil), the Ordinary dividend has been reduced to 6 from 10 per cent.

₹ ₹

Canara Banking Corporation

The Canara Banking Corporation Limited, Udipi, has reported a slight increase in the net profit to Rs 3,74,673 for 1957 from Rs 3,54,778 in the previous year. The directors have, after transferring Rs 80,000 to Statutory Reserve Fund and Rs 1.60 lakhs to Taxation, recommended a dividend of 8 per cent and a bonus of 2 per cent, i.e. Rs 5.00 per share on the Ordinary shares. There has been an around improvement in the business of the bank as is evident from the fact that Deposits, Advances, Reserves, Profits and total working capital have all moved up. The liquid resources by way of cash on hand and with bankers in current and other deposits and call loans together with investments work out at 52.5 per cent of the total deposits and borrowings. 78.5 per cent of the total advances outstanding are fully secured.

₹ ₹

Canara Bank

The directors of the Canara Bank have announced that they have invested a sum of Rs 110 lakhs in the new Central Loans. Further, as a gesture of the bank's traditionally hearty co-operation with the Mysore Government, they have also decided to earmark a very substantial sum for investment in the Mysore State Development Loan whenever it will be announced.

Full Personal and Social Life

THAT the greatest shortfall in Plan achievements so far lies in the field of agriculture, is a commonly held view, and if there is any uncertainty about India's ability to put the Second Plan through, it is because of the apprehension that the requisite national effort, as measured by an increase in the agricultural production, may not be forthcoming. And yet, paradoxically, it is the scope before agriculture and the promise of achievement which may be said to offer significant hope that the endeavours now being undertaken will not be doomed to failure. At the present stage, there are signs that the Planners are in the process of pointedly focussing attention upon what they have to do in the agricultural sector, and early this week, Sir V. T. Krishnamachari, Deputy Chairman of the Planning Commission, addressed himself to a masterly assessment of the position in this regard. He is, of course, fully aware of the magnitude of the task ahead and the difficulties that lie in the way; but he has not allowed himself to surrender meekly to the notion that the outlook is bleak. On the contrary, he says that his view is "that there is no need for defeatism." Sir V. T. has added: "There are indications which afford grounds for believing that this social change can be brought about on the scale that we desire and that leadership will emerge in the villages and at district and State levels to direct the movement."

The social change that the Deputy Chairman of the Planning Commission referred to was the bringing into being of a change in the outlook and desire for new knowledge and ways of life among the 300 million people, who eke out their living in rural India. Necessarily, effort is called for if this revolution is to occur, a revolution that would enable rural families to share fully in the increase in the standards of living which accrue under the successive Five Year Plans. And it is here that we have to break through the manner and pace of development work in agriculture. Sir V. T. revealed that, in the past, between the creation of irrigational facilities and their full utilisation, there generally occurred a time lag of ten to fifteen years. This is a time lag which India cannot, for a number of reasons, afford. From the financial point of view, in the light of over Rs 1300 crores estimated to be spent, during the first two Plans, on irrigational facilities, this time lag of ten to fifteen years will mean that, by way of interest alone, the loss to the nation would work out to between Rs 30 crores and Rs 40 crores a year; and, in terms of output, the loss would be three to four times such an amount. So, in order to draw out the maximum benefit from the irrigational schemes, it would be necessary, in order to minimise the time lag, to synchronise and coordinate the following four processes:

- construction of the dam or barrage for storing water;
- construction of the canal and distributary system by the Government agency ending at definite and convenient points in every village;
- construction according to a time schedule fitting into item (ii) by the beneficiaries of field channels in every village

so as to irrigate every acre that could be served by the project as soon as water is available in the canals; and

- improvement of agricultural techniques so that by their adoption the maximum agricultural output can be secured.

Sir V. T. then peered into the future, utilising his great powers of vision and knowledge. At time of partition, irrigable area was placed at 26.5 million acres. The First and Second Plans would enhance this figure by another 37.5 million acres. The possible limit for expansion, in respect of large and medium irrigation, would be 40 to 45 million acres. Thus, from these sources, the irrigable area potential would exceed slightly the 100 million acre mark. Sir V. T. expects that, by 1976, the area actually irrigated by multipurpose, large and medium irrigation projects would be about 90 million acres; and another 90 million acres to 100 million acres would also be under irrigation from minor irrigation works including tanks, wells and tube-wells.

An indication of the task before us is available in the fact that, for full utilisation of such irrigation facilities, some 30,000 to 40,000 miles of field channels would have to be constructed annually for the next two decades.

But, as Sir V. T. has done well to reiterate, all families united in the village institutions will "have to undertake through self-help and in cooperation with their neighbours the responsibility of carrying out" the programmes for achieving "the long term objective of improving the standards of life which has been placed before the country." There is a nice reference to the fact that the aim of this movement is to imbue men and women "with a sense of both individual and joint responsibility, so that they may rise individually to a full personal life and collectively to a full social life." This, Sir V. T. remarks, is the way in which the rural life can become characterised by a "social and moral cohesion which is the only basis for national unity." But all this means that the task for tomorrow is one which "calls for a much greater sense of urgency than now exists."

Two Financial Hoaxes

By S. KESAVA IYENGAR

THE Balwant Rai Committee Report on the working of Community Development Projects, the plain talk by Sir Malcolm Darling on the new co-operative programme on the basis of the Reserve Bank Rural Credit Survey, and the Prime Minister's exposition of co-operative principles at the recent Co-operative Congress, have all come none too soon. Very recently, Dr. P. S. Deshmukh said that a revision of the co-operative programme was possible, but there is the danger of the possibility evaporating into thin air, thus leaving the way open for a total collapse by three or four years.

So far as the Community Development projects are concerned, the targets with regard to the area covered and the number of units are higher than any other—even food targets. On a temporary basis, different kinds of short

courses have been organised for Block Development Officers, Social Education Organisers, Village Level Workers, Co-operative personnel, etc., the curricula and syllabuses flying far above the heads of the trainees, given time from a few weeks to a few months. To any dispassionate observer, the Community Development Schemes are too extensive with little chance of leaving even five per cent permanent results on the area covered. Why not hasten slowly? An intensive programme might cover a smaller area, but with lasting benefits.

In addition to the well-known defects of the Co-operative Movement in India, namely, no independent evaluation, boosted figures, book adjustments, overdues, etc., crop value and prospective value of land as the basis for credit under the new dispensation, although very encouraging, do not fit into the framework of the banker. "Co-operatives to order" are growing more fashionable. Rs 270 crores for cottage industries, 3000 co-operative farms, 10,400 large-sized credit co-operatives, 5,850 warehouses, 1,800 primary marketing co-operatives, 35 co-operative sugar factories, 48 co-operative cotton gins, 188 other processing co-operatives—although optimistic and high-sounding, are illusory because co-operation presupposes popular response. It may not be known to many that except, for Mr V. L. Mehta, the new protagonists of the co-operative drama have had little field experience. Co-operative education and training has been monopolised by the Reserve Bank of India, but its programme is much too insufficient for equipping the rank and file of co-operative workers. The co-operative colleges run by the Reserve Bank of India are somewhat like the few Universities in this country in the 1900s. The new gospel of state participation has made the Co-operative Movement much more official than before, and this should not be. Like Industrial estates in the field of small and medium industries, why not co-operative and proprietary effort be facilitated by the Government directly providing necessary conditions in the shape of more agricultural regulated markets and warehouses? As in the case of smallscale industries, why not give proprietary peasants loans upto Rs 10,000 on approved security?

Under the universal tenant purchase system, who is to provide the credit necessary for development? In the duration of instalments payable to the retiring landholders, the tenant purchaser is not the owner. Even after that, his rights of alienation are closely restricted. Co-operative farms have been decided upon, but peasant proprietorship was the goal of land reforms. With millions of acres getting perennial water for irrigation, with state farms not contemplated, with capitalist farms unauthorised, with rural credit becoming dry to the bone, the prospect of co-operation serving agriculture has indeed become much duller than before.

If urban co-operation had been better studied and attended to, we should have developed models by now for the rural areas to emulate. But unfortunately and mysteriously, the Reserve Bank of India has construed urban co-operation as "non-co-operative". Even present figures show how the bulk of funds in

urban co-operatives are drawn from private deposits, mostly from non-members.

Do we want co-operation as such or co-operation as a tool for heading towards communism, as in the case of Russia and China? The financial implications exceed a thousand crores during the rest of the Second Plan, and the sooner matters are frankly and fundamentally reviewed, the better.

Economics of Automation—II

By NITISH R. DE

HAVING taken into account the various factors which are inextricably linked up with the issue of automation, it is useful to undertake a review of India's plan for industrialisation in the context of the progress of the automatic technique.

Full scale automation of productive processes demands as its pre-condition a certain level of technical development, particularly in the machine building, electronics and instrument industries. It also presupposes mass-scale production. These pre-conditions are now existent, to some measure or other, in the USA, the UK, the USSR, West Germany, Czechoslovakia, Canada, Japan and some other industrially advanced countries. In the industrialised West, great progress has so far been made in applying techniques of automation in such industries as automobile, electricity generation, oil refining, branches of the chemical industry, breweries, food processing, rayon, cement, communications, plastics, etc. The Soviet Union in its Sixth Five-Year plan (1956-60) has undertaken schemes to automate factories. According to Mr Isaac Deutscher (The Times, 3 February, 1956), "The plan appears to foreshadow automation on a scale larger than that attempted in the West so far. This has now been emphasised by the setting up of a special Ministry for Automation. Soviet trade unions . . . will certainly be eager to cooperate in speeding up automation." Because of all round planning, the spectre of unemployment has been kept away. According to the ILO, "Despite the scope of automatic production in the USSR, the number of workers and employers has increased by 9½ millions between the years of 1951 and 1955". It is also planned to reduce the maximum working week by 1960 to 41 hours in all factories and offices, and to 36 hours for miners and young workers.

This short account indicates as to what extent progress in automation has been possible in these countries. In India, in spite of programmes of planned development, current levels of living are still low, production is insufficient even for satisfying the minimum essential needs of the population and technical development is still at a nascent stage. Apart from the backlog of unemployment totalling over 5 million, during the second plan period new entrants to labour force will number 10 million and even the planners did not undertake the ambitious task of providing them all with gainful employment during the plan period.

In view of this, it is easy to conclude that India is not ripe for automatic technique and that the objectives of the Second Plan would be realised with obsolete techniques of production. This tentative conclusion, however, does not take into account the fact that automation will tend to exaggerate the already existing uneven development between the industrially progressive countries and the under-developed countries. Countries of the West by automating mills and factories will increase produc-

tivity many-fold and lower the cost of production and will succeed in widening still further the gap of uneven economic growth. One result of such a development will be that India will fail substantially to improve its balance of payments position. Its items of exports will remain the traditional ones, namely, tea, jute goods, iron and other mineral ores, hides and skins, vegetable oils, etc. Diversification of exports by extending markets for cotton textiles, silk and rayon textiles, plastic goods and engineering goods to South East Asia, Middle East and Africa will indeed become difficult because countries with vastly improved techniques will enter into competition in these areas.

The primary objectives of India's Second Plan are to increase national income so as to raise the level of living in the country and rapid industrialisation with particular emphasis on development of basic and heavy industries. Two other objectives, namely, expansion of employment opportunities and reduction of inequalities of income and wealth are dependent on the success of the first two objectives. These objectives, within the framework of the socialist pattern of society, are likely to guide the Third Plan also, because the success of the Second Plan itself will not raise the standard of living to such a plane as to place India on a par with other progressive countries. Foreign exchange difficulties and other impediments have already shaken the complete success of the plan. On the other hand, the progressive West would accelerate its industrial pace by utilising innovations offered by automation and atomic power.

India will, therefore, in tune with the world development, have to make sufficient room in its future planning programmes for introduction of automatic technique to effect rapid industrialisation. In the Second Plan itself, the need for such an eventuality was indeed visualised. While discussing the key factors in development, the planners expressed the opinion that "it is no exaggeration to say that the most important single factor in promoting economic development is the community's readiness to develop and apply modern technology to processes of production. . . . Countries which start late on their industrial career have some advantage in that they have, in the main, to take over and apply techniques that have been worked successfully in more advanced countries. But, there is need simultaneously for keeping abreast of the latest developments in science and technology, if the time lag in economic advance is to be progressively narrowed" (Second Plan page 6). Although the soundness of this logic of economic advancement was admitted in principle in the plan, in actual implementation hardly any serious attention was paid to the need for adoption of the fruits of science and technology. With sufficient foresight, the Government should have realised much earlier the need for setting up heavy machinery building industries as well as machine tools industries along with the much publicised steel projects. Now that the central heavy machinery building plant is being set up at Ranchi with Russian collaboration, a foundry forge plant at the same place with Czech assistance and a heavy electrical plant at Bhopal with the cooperation of a British firm, every care should be taken to ensure that these projects become most up-to-date in technique so that they, along with other similar projects, can form the nucleus of advancement toward realisation of automatic technique in our country.

Efforts are being made to seek help from West Germany to set up a heavy machine tool plant in India. As a matter of fact, very little progress has so far been made in this key industry. At the present value of goods, production in this industry will have to be raised three times by the end of the plan period on

the basis of production in 1957. There is a good deal of scope for automatic technique in this field, and unless proper steps are taken in time while the industry is still in a developing stage, India may face the same sort of crisis as the UK. Although the British machine tool industry is the oldest in the world, Sir Leonard Lord, Chairman of the British Motor Corporation Ltd, in a speech at the annual dinner of the Institution of Production Engineers in London in 1955, said that "the advanced machine tools of to-day could not be obtained from the British machine-tool trade. They liked to make old fashioned drilling machines and milling machines. Some people in this country who wanted advanced machines had to go to Germany. . . ." To guard against this eventuality resulting in scrapping of machines which we are going to install at a great cost, we should plan our production designs and methods in a careful manner so that the machine tool industry can be made standardised and automatic in the foreseeable future. While seeking German collaboration in this field, it should be remembered that the German machine tool industry has far advanced in transfer variety and other automatic machines and is among the world leaders. Oil refining is another industry in which automatic technique has made great strides. We have already cited the instance of Esso's Petroleum refinery at Fawley where six workers on a shift produce a third of the UK's oil products. India has already set up four oil refineries and the fifth one, the first in the public sector, will be erected at Gauhati with Rumanian collaboration. The scope of introducing automatic technique in this field should not be lost sight of. India is making satisfactory progress in the light electrical industries such as electric fans and radio sets and in the light mechanical industries such as ball bearings; and, in these industries, western countries have successfully introduced automatic techniques. We should, therefore, instead of gloating over our modest success, strive hard to improve on the technique so that, in course of time, we can hold our own.

In the spirit of perspective planning, India should make provision in its future planning programmes for automatising its industries to get higher productivity at lesser costs. In this regard, emphasis should not be so much on importing automatic machines as on setting up industries to build automatic machines. Secondly, the employment aspects of planning should be re-assessed in view of the labour saving machines coming so much in the picture. Harmony of the application of technological development in industrialisation at considerable capital investment with the rapid elimination of unemployment will be the supreme challenge to the future planners. Thirdly, as an essential pre-condition to automatization of industries, a sufficient number of qualified technicians are required. It is reported that, for increasing the availability of technical manpower for the Third Plan, Government have prepared a scheme for a target of 15,000 engineering graduates during each year of the plan. While this foresight on the part of the Government is welcome, we should not forget that automation demands an altogether different type of training. The production and maintenance engineers of automatic factories should have a grasp of all facets of modern industry. As Mr L. L. Goodman puts it, "Automation cuts across the normal boundaries of professional training. A comprehensive knowledge of, and training in, industrial engineering, production and product design, human relations, and management. . . . will be imperative. . . ." (Man and Automation, page 214). Thus, revision of curricula as also the provision of adequate opportunities to receive practical training in foreign countries are indicated for the automation engineers.

Crisis in France

The crisis precipitated by the Army coup in Algiers on May 14 continues, and, with it, the threat to the Fourth Republic. The possibility of a civil war which appeared very imminent has receded with the disclaimer by General De Gaulle of any intention of violating the Constitution. But as he himself has observed, "what is now happening in Algeria in relation to Metropolitan France and in Metropolitan France in relation to Algeria can lead to an extremely grave national crisis." The statement came after the assumption of special powers by the French Government, and was made to the accompaniment of a strike of Communist workers in Paris which brought transport to a standstill. And, by a singular coincidence, US papers on the previous day had published special reports suggesting that Vice President Nixon, just back from a tour of South America, had decided that the USA must adopt a stronger policy towards South American dictatorships. His formula, according to the New York Times, was that "for dictators the USA should have only a handshake, while for free Governments it should have a warm embrace."

The immediate question for France is whether the civil government is strong enough to control the army revolt without giving up the effort to reach a solution of

the colonial problem which will not be repugnant to the enlightened conscience of the world. France today is paying the price for trying to prolong 19th century colonialism into the nuclear age. The war against the insurgents has been fought with a savage ferocity which has left its mark on the national psyche and brought France very low in the esteem of the civilised world. French policy in Algeria is also seen as a source of weakness to the entire western alliance. Re-emergence of De Gaulle is calculated to make matters worse.

France's allies, for understandable reasons, are maintaining an impressive silence which is more eloquent than words. Journals which offer an unending stream of advice on Kashmir or the Middle East prefer to keep mum. The position, as Mr Eisenhower described the situation in Lebanon, is very delicate. Suspicion that M. Pflimlin's Government may be susceptible to external influence was the immediate cause of the flare-up. The coup was preceded by demonstrations by De Gaulle's admirers in which the American cultural centre in Algiers was attacked.

General De Gaulle's statement, that he would take no steps to assume power in response to the call from Algiers, is at the same time an invitation to the National Assembly to invest him with supreme authority. Such action would virtually amount to the suspension of the constitution. While the National Assembly may not be eager to commit hara kiri, the pressure on the Government to stick to a reactionary policy in Algeria is likely to grow stronger. And France's allies will have to consider whether Soviet Russia should be left as the sole champion of the rights of subject peoples in the colonial territories still struggling for freedom from Western European Imperialism.

For National Integration

While the Congress Working Committee has drawn up a programme of national integration, a conference held in Calcutta has put forward a suggestion whose adoption would speed up the process and make it painless. The All India Sanskrit Rashtrabhasa Conference has adopted a resolution proposing that Sanskrit be adopted in place of Hindi as the official language of the Indian Union. Speakers at the conference advanced many cogent arguments in support of this minority view. The difficulty, however, is not in building up a case which will appeal to the intellect, but in putting it across to those who count in the political life of the country. So far none of the political parties in the country has chosen to support Sanskrit. And Sanskrit scholars are too few in numbers and, in many cases, too much out of touch with the spirit of the times to make an impression in a democracy. The price has to be paid for the mistake of making Sanskrit

the language of the elite. But there is no gainsaying the merits of the proposal.

Adoption of Sanskrit as the official language will act as a solvent of many of the problems which stand in the way of national integration and hamper the growth of a feeling of common national consciousness. It will exorcise the fear of Hindi domination which is widespread in most non-Hindi speaking areas and is found in its most extreme forms in Madras. Sanskrit as official language will not place any linguistic area or religious group at a disadvantage, and no one will have any unfair advantage in politics or administration. The adoption of Sanskrit will also make it possible to introduce a rational pattern of instruction in languages in the schools, which will provide for a classical language, the regional language or mother tongue as well as English. On the other hand, with Hindi as official language, students in non-Hindi areas will in practice have to give up Sanskrit which will be a greater deprivation than the disadvantage in politics and administration.

The objectives of all the parties to the linguistic controversy—those who are apprehensive of Hindi as official language, those who do not like to have English as official language for all time for sentimental reasons, those who wish to retain English as official language for practical considerations and even those who wish to see Hindi develop into the national language of India—will be served by formal recognition of Sanskrit as the official language of the country. The non-Hindi areas will have no reason to nurse a grievance. Until Sanskrit knowledge is sufficiently widespread, there will be no hurry in any quarter to replace English, nor will there be any interested pressure for its elimination from the school curriculum. In the meantime Sanskrit will be taught in schools and the generation of pupils which has learned Sanskrit at school will find it easier to learn Hindi. It is common knowledge that persons with a sound knowledge of Sanskrit are able to pick up a competent knowledge of Hindi with greater facility than those without that advantage. Moreover, whatever language is recognised for official purposes, it will be an advantage in the day-to-day affairs of life for the people of Hindi speaking regions to learn the language of the largest, compact, linguistic group in the country. With the fear of domination eliminated, the psychological resistance to Hindi will also disappear. The recognition of Sanskrit as official language may well prepare the ground for the emergence of Hindi as the de facto national language.

Law of the Sea

Though the conference on the law of the sea which concluded in Geneva on April 28 did not reach agreement on the contentious issue

of the limit of territorial waters, it was nevertheless able to register substantial progress in certain other directions. The adoption of four conventions which now await ratification is a matter of satisfaction. One of these, which relates to the question of access of landlocked States to the sea through the territories of neighbouring countries, is of particular interest to India in view of the dispute with Portugal. The conference has laid down that the right of access to the sea across the territory of a neighbouring country is not a fundamental principle of law, but was a matter of agreement between the countries concerned.

The Indian Delegation led by Mr A. K. Sen, Minister for Law, played a leading part in seeking a revision of the present convention which fixes the limit of territorial waters at three miles. While the Western Powers generally, as well as Japan, supported the three-mile limit, other nations preferred a wider area. The Indian initiative was able to persuade the great maritime powers to give up their insistence on the three-mile limit. India had proposed that the breadth of the territorial sea be extended to 12 miles and that each coastal State shall be allowed to set its own distance within that limit. In the Indian view a six-mile limit would be reasonable. While this proposal was not accepted, the suggestion of a six-mile limit found support in the compromise resolutions introduced by Britain, the USA and Canada. Though none of the compromise proposals secured the requisite two-thirds majority, the voting made it clear that the majority of the 86 nations participating in the conference was in favour of revising the existing convention.

Reverse Ad Hoc for Rs 95 Crores?

THE impact of the New Loan is duly discernible in the returns of the Reserve Bank and the State Bank for the week ended May 16. The pattern of changes in figures generally conforms to our assessment of last week, but there appears to be irrefutable evidence that, while there has been institution of reverse ad hocs, the amount involved is far from the Rs 100 crores that, last week, we had thought possible. We shall endeavour to read between the lines of the latest banking returns with a view to discovering, if possible, more about the New Loan.

The cash subscriptions to the New Loan amounted, we may recall, to Rs 132 crores. According to the return of the State Bank, there is an indication that the subscriptions of this institution were for roughly Rs 35 crores. For, although investments as such show no change, there is a steep rise of this size in Other Assets. This presumably relates to subscriptions to the New Loan, against which kutch receipts have been obtained from the Reserve Bank, pending the completion of the formalities in regard to the New Loan. The Reserve Balances were drawn upon by the State Bank for Rs 26 crores,

and, moreover, Rs 6 crores had to be borrowed from the Reserve Bank. Looking at it in another way, the State Bank found Rs 6 crores for the New Loan through borrowings from the Reserve Bank; an additional Rs 20 crores was vouchsafed by the sale, just prior to the New Loan, of securities to the Reserve Bank; and, consequently, New Loan subscriptions which were, as it were, financed directly by the State Bank amounted to Rs 9 crores. The other aspects are relatively unimportant, since accruing deposits, in due course, will enable the State Bank to repay its borrowings and to repurchase giltedged which it had sold to the Reserve Bank, but the main point is that the subscriptions to the New Loan as such of the State Bank amounted to Rs 35 crores.

It is possible to formulate for ourselves, even before the receipt of the return of Scheduled Banks for May 16, an idea of the subscriptions of the other Scheduled Banks. The process of detection involved is as follows:

- (i) The decline in the Reserve Balances of member banks with the Reserve Bank amounted to Rs 38 crores during the week; and, of this, as we have already seen, Rs 26 crores are accounted for by the State Bank. Thus, the decline in the Reserve Balances of other Scheduled Banks may be put at Rs 12 crores.
- (ii) The increase in the Other Loans and Advances of the Reserve Bank during the week was placed at Rs 13 crores. Of this, the State Bank was responsible for Rs 6 crores, and it would appear, consequently, that the other Scheduled Banks borrowed from the Reserve Bank to the tune of Rs 7 crores.

(iii) It would not be altogether wrong to assume that the decline in Reserve Balances and rise in Other Loans and Advances are both due to subscriptions to the New Loan programme. So, in broad terms, it may be stated that the subscriptions of the other Scheduled Banks to the New Loan would have been at a minimum of Rs 19 crores.

(iv) Thus, the Scheduled Banks put together may be seen, in the returns of the Reserve Bank and of the State Bank, to have subscribed Rs 54 crores toward the Loan programme. The subscriptions to the 3½ per cent 1963 Loan were placed at Rs 58 crores; and since it is generally believed that the Scheduled Banks concentrated their subscriptions to the short term five year loan, it would appear that the reconciliation thus attempted here is more or less correct.

Harking back to cash subscriptions, as against a total of Rs 132 crores, the following figures are made evident in the Reserve Bank returns:

- (a) The Balances of the Central Government improved by Rs 22 crores.
- (b) Rupee Securities in the Issue Department have declined by Rs 25 crores.
- (c) Investments in the Banking Department are marked lower by Rs 18 crores.
- (d) The decline under Rupee Securities and Investments is surely indicative of reverse ad hocs, or the cancellation of Treasury Bills before their maturity; and reverse ad hocs thus appear to be in the environs of Rs 45 crores.
- (e) But the improvement in the Centre's Balances and traceable reverse ad hocs total only Rs 67 crores. The question we have to answer is: What has happened to the missing Rs 65 crores of cash subscriptions?

Our view is that, over and above the subscriptions from the Scheduled Banks, other institutional investors put in roughly Rs 27 crores. The balance of Rs 50 crores was, we believe, subscribed by the Reserve Bank. But, in that case, Investments of the Reserve Bank would have correspondingly risen; and so, too, the balances of the Central Government. Our hypothesis is that, after purchase by the Reserve Bank of Rs 50 crores of New Loan, reverse ad hocs there-against had been instituted. Thus, reverse ad hocs during New Loan week may be, we are led to think, in the environs of Rs 95 crores.

As we have seen, the Centre's Balances improved by Rs 22 crores; and reverse ad hocs may have been instituted for Rs 95 crores. There remains Rs 15 crores to be accounted for, but this could easily represent the net disbursements during the week of the Central Government.

From the hypothesis we have thus presented, it would follow that new loan subscriptions which would make an impact upon the Deposits of Scheduled Banks would have amounted only to Rs 27

crores. All these are matters which could be confirmed next week. At the present stage, we are confining our comment to this brief assessment that we have undertaken. But the conclusion should not be that the fact of the Reserve Bank having subscribed Rs 50 crores in any way detracts from the success of the borrowing programme; and, of this, we shall have more to say next week.

State Bank: Rs 35 Crores for New Loan?

There are not many points to note, over and above the impress of new loan subscriptions, in the returns of the Reserve Bank for the week ended May 16. Slack season influences are responsible for and reflected in a decline of Rs 15.13 crores to Rs 1614.83 crores in note circulation; and Rupee Coin has returned from circulation for Rs 0.17 crores. The reverse ad hocs instituted in the Issue Department, to which reference has already been made, has been offset by a countervailing transfer to Foreign Securities from Balances Held Abroad in the Banking Department; the amount involved is Rs 24.85 crores. In the result, the Reserve Bank's cash in the till has improved by Rs 15.29 crores to Rs 24.65 crores.

In the Banking Department, as already noted, the Centre's balances have improved by Rs 21.78 crores to Rs 75.07 crores; and Investments have declined by Rs 17.92 crores to Rs 227.04 crores. The latter change presumably relates to reverse ad hocs, while the former reflects the cash receipts of the Central Government. Balances of State Governments are lower by Rs 2.04 crores at Rs 13.69 crores, and their indebtedness to the Reserve Bank on account of ways and means advances has risen by Rs 2.27 crores to Rs 59.80 crores. Obviously, the Central Government have made no payments as yet from their new loan receipts.

The member banks have drawn upon their Reserve Balances to the tune of Rs 38.11 crores, and these are now placed at Rs 73.88 crores. Also, they would appear to have had resort to the Reserve Bank for borrowings, since the Other Loans and Advances of the central banking institution are marked up by Rs 13.38 crores at Rs 69.33 crores. Both these changes reflect subscriptions of Scheduled Banks to the new loan programme.

Balances Held Abroad are steeply lower by Rs 30.79 crores at Rs 42.84 crores; a transfer was effected to the Issue Department for Rs 24.85 crores; but the net drain during the week was fairly high at nearly Rs 6 crores.

The State Bank return for May 16 reveals the consequential changes arising from its subscriptions to the new loan programme. Cash in hand and with Reserve

May 24, 1958

Bank is sharply lower by Rs 26.71 crores at Rs 25.01 crores. The State Bank figures as borrowing Rs 6 crores from the Reserve Bank. Deposits have declined by Rs 0.61 crores to Rs 417.66 crores; but Advances fell by Rs 3.50 crores. And so the size of the State Bank's subscriptions appears to be measurable in the rise that has occurred in Other Assets, which are higher by Rs 35.17 crores.

Slack season influences are strongly indicated in the return of Scheduled Banks for May 9. Deposits show a small drop of Rs 1.19 crores to Rs 1542.37 crores, but, since the State Bank in the relevant week lost deposits for nearly Rs 4 crores, it is clear that the other Scheduled Banks experienced an improvement in theirs. The total of Advances is lower by Rs 6.75 crores at Rs 948.64 crores, and this, too, is largely on account of the other Scheduled Banks. Investments have fallen steeply by Rs 18.60 crores to Rs 425.46 crores; and this was, as we saw last week, due to the sale of securities by the State Bank. Borrowings from the State Bank are nominally lower, while indebtedness to the Reserve Bank declined by Rs 2.29 crores to Rs 18.64 crores. In the result, cash balances improved by the considerable amount of Rs 12.06 crores to a new high of Rs 218.75 crores. But, of course, the cash balances would have been drawn upon during the week ended May 16 in order to subscribe to the New Loan.

Britain's Bid for Dollar Loan

Paul Einzig

ONCE more, for the second time within three months, two senior Treasury officials, Sir Leslie Rowan and Sir Robert Hall, are crossing the Atlantic in an attempt to sound official circles in Washington about the possibility of securing substantial dollar facilities. In February their visit was meant to be a closely-guarded secret, but after their return to London their mission was apparently allowed to transpire—presumably in order to ascertain the attitude of the Press about the dollar loan scheme.

This time there is no secrecy about their visit. According to the "Times" the two officials were invited to Washington by the United States authorities. The official explanation is that it is just a routine visit. But it is unofficially suggested that the main object of the visit is to ascertain whether the business recession in the United States is expected to become aggravated, and if so whether the United States Government would be interested in a scheme by which the capacity of the Sterling Area to buy dollar goods would be maintained with the aid of dollar facilities to be placed at Britain's disposal.

Various versions of the idea have been canvassed lately. According to one version a Commonwealth Bank would be established and it

would be financed with the aid of a dollar loan. According to another version all member Governments of the International Monetary Fund would double or treble their contributions to the Fund. The United States, having the largest quota, would make the biggest contribution in dollars.

According to yet another version, Britain is on the verge of restoring the convertibility of sterling for current transactions by unifying the transferable sterling rate with the official rate. To be able to do so the authorities would like to obtain substantial dollar facilities, in addition to the amounts already borrowed last year to support sterling. A fourth version was suggested a few weeks ago, accord-

ing to which Britain would borrow dollars to finance the nuclear development programme.

What actual form the transaction is meant to assume is a matter of detail. What is essential is that the Government has now come out into the open with its intention of securing a substantial dollar reserve by means of borrowing in some form in the United States. The argument in support of the idea is that, while the United Kingdom could now hold sterling quite well out of her own resources, the raw material producing countries of the Sterling Area are certain to need assistance. The Treasury is anxious that some means should be found to meet the pressure on sterling that is liable

to arise if Australia, New Zealand and other Sterling Area countries should feel compelled to draw very heavily on their sterling balances in order to meet their balance of payments deficits.

This suggestion implies that, were it not for the difficulties of the Sterling Area countries, Britain would be able to relax the drastic measures adopted last year. In view of the 3 per cent wage increase granted to the employees of British Railways, however, it seems that the credit squeeze has not yet been sufficient to halt the inflationary rise in wages. Compared with last year's 5 per cent increase granted to the railway employees, this year's increase may appear relatively moderate. Having re-

Super quality ACC alumina REFRACTORIES

- ... are available with medium, high and super alumina content, to meet all your requirements
 - ... are made to the shape, size and quality you require
 - ... are far more economical than ordinary fire-bricks

Jute Markets Depressed

After a promising start following news of a substantial order from Russia for both hessian and sacking, the jute goods market developed a reactionary tendency in later dealings last week. From Monday onwards sentiment was depressed and prices especially in the heavy goods section were easier with B Twills pushed down to a level below that of IJMA minimum price. It would appear that the strike threat by dockers has been mainly responsible for the present reactionary trend.

A contributory factor for the easier trend has been the fact that hessian consumption in US during April has been two million yards lower than in the previous month at 69 million yards. Stocks are unchanged at 242 million yards comprising 138 million yards spot and 104 millions afloat. At the end of March spot were placed at 131 million yards and afloat at 111 million yards thus making a total stock of 242 million yards. The trend of burlap consumption in US during the first four months of the current year is however encouraging as the total works out to 281 million yards as against 278 million yards during the corresponding period of the previous year. But taking the period July-April 1958 it will be found that the trend is disappointing. For during the 10 month period ending April 1958 the total US burlap consumption has amounted to 691 million yards as against 741 million yards during the corresponding period of the previous season.

The position as regards despatches of jute goods makes a mixed showing. During the past month, total despatches have been a little over 2000 tons lower at 83,874 tons as compared with March when despatches totalled 86,000 tons. Exports have however, been higher at 65,907 tons as against 65,335 tons. The higher figure is due to the larger hessian exports which have totalled 32,363 tons as against 31,267 tons and higher offtake of other varieties which amounted to 1,992 tons against 1,511 tons. Sacking exports are lower at 31,552 tons as such exports in March were placed at 32,757 tons. The decline in the grand total has been brought about by the lower offtake at 17,967 tons against 20,465 tons of goods for internal consumption.

In the first four months of the current year, total despatches have amounted to 331,200 tons as against 327,800 tons during the corresponding period of the pre-

vious year. Exports, however, are lower at 254,400 tons as against 265,100 tons. The higher total offtake is accounted for by an increase in local consumption. Taking the ten month period ending April 1958, the position is quite encouraging. For total despatches have amounted to 891,300 tons as against 876,000 tons during the corresponding period of last season. Here again the increase is almost solely due to a sizeable improvement in internal consumption which is placed at 166,400 tons as against 152,000 tons. Exports have been maintained at 724,900 tons.

Arrivals of raw jute into Calcutta and Mill stations during last month were placed at 414,600 bales as compared with 495,000 bales during March. But compared with the corresponding month of the previous year, they were higher by 38,300 bales. Of the April 1958 total, arrivals from India were of the order of 376,100 bales against 476,000 bales in March. During April 1957 such arrivals were only 340,840 bales. Imports from Pakistan last month were substantially higher than during the previous month at 38,500 bales. They were also 3000 bales higher when compared with the corresponding month of the previous year.

Total arrivals of raw jute during the ten months ending April amounted to 5,412,700 bales and compared with 5,486,100 bales during the corresponding period of the previous year. Arrivals of jute of Indian origin were placed at 4,852,500 bales against 4,925,400 bales while those from Pakistan were 500 bales lower at 560,200 bales.

Prices on Thursday were fully steady all along the line as there were reports of a fresh Egyptian tender for heavy goods. Sentiment was also helped by the speculative buying in the futures market. Hessian 40" x 10 oz Ready was done at Rs 41.50 and B Twills at Rs 101.75. On Friday there were rumours of purchase of a substantial quantity of hessian by Russia. The news imparted some steadiness to the hessian section and the market closed steady as follows: Hessian 40" x 10 oz Ready Rs 41.50 and B Twills Rs 101.35. From Saturday onwards prices developed a sagging tendency due to selling pressure. At close on Saturday Hessian 40" x 10 oz Ready was placed at Rs 41.35 while B Twills lost 45 nP to be quoted at Rs 101.05. Prices declined sharply in both the sections on Monday due to speculative selling in the futures market. B Twills Ready eased to Rs 99.85 while Hessian 40" x 10 oz also declined in sympathy to be done at Rs 41. Selling pressure continued unabated on Tuesday and prices were further marked down as follows: Hessian 40" x 10 oz Ready Rs 40.60 and B Twills Rs 99.30. Wednesday found the market in a depressed condition with prices recording further losses. Hessian 40" x 10 oz Ready was finally placed at Rs 40.55 while B Twills lost another 30 nP to be marked down to Rs 99.

Buyers Follow Quality

ALTHOUGH the year 1957 closed with a closer balance between production and demand, the outlook for 1958 tea appears very uncertain. From the active demand manifested at the special Export Sale held in Calcutta last week, one should not predict an improved state of things for the industry. For the Calcutta sales summary, for the period ended 30th April 1958, reveal that the average export price obtained was only Rs 2.10 against Rs 2.37 per pound last year. Again, the price for internal Leaf was Rs 1.37 against Rs 1.46 and for Dusts Rs 1.87 against Rs 2.09 per pound.

It is true that, at the last sale, some of the finest varieties of Darjeeling tea fetched higher prices. But, generally speaking, Darjeeling teas were priced at the sale 50 nP per pound below valuations. Again, the strong and active demand for quality teas, manifested at the sale, might be due to the current labour unrest in Ceylon which compelled Russia and the UK to divert their demand to Calcutta. But, this is a temporary factor and it remains to be seen what happens when this factor disappears.

Common teas, which form 60 per cent of the Indian output, show signs of over-production. These categories will have to face greater difficulties unless home market expands to such an extent as to absorb any surplus that may be produced, especially when it is known for a certainty that the world production of tea will be up by over 9 million pounds.

No doubt, buyers have been active during the past few weeks to cover their requirements until such time as 1958 teas from North-East India will be available. Blenders in London will have to rely on their stocks till the arrivals of the new crop, while their other sources of supply are South India and Ceylon.

Unlike in North India, weather in South India is very favourable. The yield is expected to be higher by 50 per cent than that of the previous corresponding period. The rush period has begun. If weather continues to be favourable, there will be a record yield in South India. According to planters, there is the possibility of a larger incidence of pest attack.

South India, which harvested a record crop of 144.7 million pounds in 1957, is expected to produce an even bigger crop during the current year. Although the crop of last year was absorbed, prices were well below the 1956 level. The average

price in Cochin auction was Rs 1.93 per pound as compared to Rs 2.23 in 1956. Buyers clearly indicated their desire for better quality teas and consistently paid a premium for them.

Some quarters feel that prices are unlikely to go lower, while the labour unrest in Ceylon continues. Moreover, reports from there say that floods have damaged roads and some difficulty is likely to be encountered in moving tea off the gardens. The labour troubles at Colombo have resulted in a big hold-up in the movement of tea, both internally and for export. Trade quarters, in London, think that as much as 80 million pounds of tea may be immobilised. London buyers have, therefore, been following quality closely, this being particularly noticeable among the Ceylon teas where some improved quality invoices from the south-west side of the island have registered advances of upto 4d per pound.

In the Internal Sale held in Calcutta this week, offerings were 19,513 packages of Dusts. There was a fair general demand, but the tone of the market was easier. Orthodox descriptions declined by 6 nP and sometimes by 8 nP per pound. Black leafy teas, suitable for export, were the strongest feature of the sale and declined by 2 to 4 nP. "Teas for price" met with competition and were generally steady.

CTC Assams were easier. The best often selling at 20 to 25 nP below valuations and were the weakest feature of the sale. Following rates were quoted:—Medium Dooars Dust Rs 1.64 to Rs 1.66; Medium Assam Grainy Dust Rs 1.70; Medium Assam CTC Dust Rs 2.00 to Rs 2.10 and Best Assam CTC Dust Rs 2.65 to Rs 2.85. There was a total of 551 packages of Leaf grades on offer.

In the Export Quota section, business was done in Special Licence at 1 nP. Non-transferable Shipping Licence was done at 1½ nP and, at the close, there were sellers at only 2 nP. In New Season's teas, there were buyers at 16 with sellers at 16½ nP per pound; but no business was transacted.

In the Cochin market, offerings were about 1.2 million pounds. Quality from all districts showed a further decline. The market opened to a strong general demand. The better liquoring Nilgiri Broken met with less enquiry, selling at irregularly lower prices, while similar Fannings found ready buyers at a drop of up to 20 nP per pound. Useful support was seen for Good Mediums teas, but prices were generally slightly lower than last. Medium, Low Medium and low-grown Broken were the strongest features of the sale.

Black Leaf Broken and Fannings came to a strong market and were generally a little dearer. Whole Leaf grades met with less demand and were irregularly easier. Following rates were quoted:—Plain BP Rs 1.48 (nominal); Low Mediums Rs 1.70 to Rs 1.85; Mediums Rs 1.85 to Rs 2.15; Good Mediums Rs 2.10 to Rs 2.45 and Quality Rs 2.40 to Rs 3.60.

A RATHER truant disposition takes me away from my desk once in a while and, when I return guilt-ridden and shame-faced, I dread the moment of first encounter with my desk. Piled with tell tale evidence of my delinquency, its more-in-sorrow-than-in-anger air of mute reproach would drive a less hardened man crazy. This week, in particular, my misdemeanours have been more than usually grave. I have not even looked at the papers and history has not apparently been standing still in the meantime. One would not, for example, have thought it possible for France to be in a greater mess than it was about ten days ago. And yet, when my back was, so to speak, turned, it has got into its worst crisis since 1848. And nearer home, Devikolam has voted Communist, and if one were to believe all one reads on the event, something fatefully decisive has taken place. Though Dr Johnson may be right when he says that no one sleeps an hour less or eats an ounce less because public affairs go awry, there is a sense in which events "bother" you. But of these I shall not speak today. These shall catch me up soon enough; and, continuing my runaway mood, I shall instead talk of other things.

A self-imposed discipline of a paper-less week was an interesting experience. As far back as I care to remember, my first conscious act on waking has been to grope for the paper, which is kindly put there by folks that have been indulgent to my whims. This week's experiment in self-denial was revealing. In its early stages, the symptoms of frustration were not unlike those that, we are told, follow a drug addict undergoing a cure. It was sheer will power that kept me away from the seductive headlines. Of course, I had taken the precaution of providing myself with other printed matter, yet it was tough going.

The most important thing I learnt from this experiment was how, deep down, we were all sensationalists and how much of vicious drama the daily press brought into our lives. It is not that the papers I usually read are purveyors of sex and violence. Indeed, my preferences are for the staid sort and, in any case, Indian newspapers do not peddle that kind of

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

cheap thrills. But even The Times satisfies not so much a thirst for information, as a hunger for vicarious life. It may be Tensing on the top of Everest or Dr Fuchs at the South Pole, or it may be Mr Peter Townsend at Clarence House or Haridas Mundhra at the Bank-shall Court. It is involvement, however remote, that makes you lap it all up. And this sneaking thrill by proxy is present even in the absorption of the dreariest of news. The complaint against the "popular press", as it obtains in Britain, is not that it manufactures thrills; it is that it deliberately enlarges the area of this emotional participation involving a corresponding cutting down of the area where the mind is engaged. But that such satisfaction is to be had even when no attempt is made deliberately to present in gaudily seductive forms can be denied only with hypocrisy. Otherwise, it is difficult to explain the frustration that follows the absence of the paper.

And when I realised that the majority of my countrymen do not read any newspaper at all. I was somewhat taken aback. Apparently, this particular deprivation is not as distracting to them as it was to me, at least in the first two days. In Great Britain, the situation is entirely different. As Mr Francis Williams puts it in an extremely readable book called *Dangerous Estate—The Anatomy of Newspapers*, "No other people on earth are such avid readers of newspapers as the British". Nine out of ten inhabitants of the British Isles begin their day by reading morning papers. I do not readily have the corresponding figures for India. But it can be nowhere near that percentage. Could this, saving the presence of Newspaper Proprietors, be a blessing? I would hesitate to say yes on some grounds, but on others, I am not so sure. My paperless week has also been coincidentally one in which I have been reading quantities of literature on "Mass Culture". Incidentally, this slavery to the printed word is a phenomenon that is worth a probe. Even when I denied myself the thrills of the daily press, I had around handy other reading matter. It is quite possible that my modes of amusing myself are rather limited. But I am not sure that some of the "Depth Boys" or motivation researchers that American adver-

tising employs at fabulous fees will not find in this a devious satisfaction of dark and largely unfulfilled passions or a rather paltry compensation for a deep seated sense of personal inadequacy. It is no use explaining that it is only a furniture catalogue I was reading. I suppose they will call it the book-worm complex or something worse.

To get back to mass culture and the steady erosion of sensibility of a large number of people by the impact of mass media of instruction and entertainment. These include, besides the "popular" paper, the film, the television (particularly commercial), and even Canasta and Bridge parties on a mass scale. ("It is our contention that, in fact, widespread participation in card playing is an index of the extent to which the forms of small-group living have been conditioned by the impact of mass society.... Card playing mitigates boredom through structured group action. The game also functions to create and discharge feelings of group obligation."—Irving Crespi in *Mass Culture: The Popular Arts in America*. Of course, there is a point of sorts made in this pendant breaking of the butterfly on the wheel, but none need take it too somberly. Incidentally, it is the humourless labouring of a half-obvious point that makes much American sociological writing so heavy-going.) It cannot, however, be denied that the masses have by and large lost their defences against boredom ever since communal living had ceased to impose its traditional obligations. Consequently, they are wide open to the most blatant assaults on their sensibility which those merchandising pleasure have not been slow to exploit. The consequence has been the "Admass" on the one hand and its obverse, the self-conscious, snobbish minority culture. The admass, deprived of traditional mystiques, creates its ritualism—the "bridge party" or the football match; denied its familiar pieties, creates new ones like antisemitism and Ku Klux Klan; not finding familiar objects of worship, puts up cheesecake instead to the contemplation of which it brings only an exhausted adoration.

We have, to be sure, one crushing load of problems, but in any grateful counting of our blessings,

we should perhaps include the absence of this predicament in India. Or have I been a little quick in my complacency? What about our own admass? Our city pavements would seem to testify to the fact that our cities at least are more or less assimilated to the admass-minority culture pattern that obtains elsewhere. (Only the minority is even more microscopic here than elsewhere, which is hardly any comfort). Elsewhere, too, we have the most incongruous betwixt and between situation: I have seen village homes, where the walls were impartially pasted with Ravi Varma prints of familiar deities and pictures of film stars and other examples of our versions of cheese cake (which, by the way, are excessively clothed as concession to modesty—this has always struck me as more obscene than its Western counterpart). I shall be told that this steady infiltration into traditional mores of elements foreign to it is inevitable. I am afraid that it is so, though not for the reason usually given—you cannot make an omelette without breaking the egg. It is possible, of course, so to order our way of life without destroying its mores, but it will involve a degree of regimentation and imposition that will be self destructive. After all, if reports are to be credited, the Soviet Union does not have the kind of cultural problem implied by the word Admass.

Perhaps it is wrong to find scapegoats elsewhere, but it cannot be denied that our task today has been made infinitely more difficult by the kind of pattern for journalism and entertainment fit for mass consumption that has already been set. And Gresham's law has a universal validity. But one need not yield too easily to despair. According to Francis Williams, the present situation in Britain is due to failure on two fronts in the years following the creation of a new reading public by the Act of 1870. The "quality papers" failed to respond to the challenge of the new readership. "They gathered skirts and fled to the ivory towers. They cannot but have been aware of the immense opportunity and responsibility presented to journalism by this new reading public. It was their professional business to understand it. But they did nothing about it." On the other

hand, the popular press symbolised and in fact partly created by Northcliffe failed by quietly pandering to the lowest common denominator and flattering its most ignorant prejudices. We, with our substantial readership still to come, can avoid this error. It is by no means

easy, especially when there are so many around wanting to take the easier (and infinitely more profitable) line of Northcliffe. By and large, our press has been irresponsible. But has it been interesting? I know the difficulties, for example, in the way of making deficit financ-

ing interesting. Nor do I underestimate the monumental dullness of much that passes for public life in our country. But there are exciting things happening in this world which can and should be put across to the people. Take a thing like the Zeta or our own first ato-

mic reactor at Trombay. I agree that, to explain these things properly and interestingly, we need journalists of the calibre of Ritchie Calder and Arthur Koestler. But they must be found if our newspapers are to discharge their true duties to our new and eager readers that are coming in the world in increasing numbers every year.

"A fool, A fool! I met a fool in the forest." Yes, I did, only the one I met did not even have the excuse he was wearing motley. The fool I met was well-dressed and looked also well-fed. And it is not often that you come across such an authentic moron. At any rate, this is only the second time I have run into stupidity of this vintage. The first time, if I remember right, was early 1950. It was at the club where he was waxing indignant to the accompaniment of clucking noises from a small circle of sympathisers. Hot and perspiring, he was repeating indignantly, "Why don't these chaps stay and put up a fight? Cowardly, I call it. Running away at the first wheeze of trouble and dislocating traffic in Calcutta!" He was apparently referring to those unfortunates who were obliged to leave East Pakistan because of a fresh wave of communal violence and whose unscheduled arrival had upset his own plans for the evening. It was obvious that he was deeply moved and none present was inclined to quarrel with what appeared a genuine, though somewhat shallow, grievance. But when carried away by the very fervour of his words, he added, "If I were there, I would have showed them!"

It was too much even for the complaisant crowd. Some one said, "You!" with such withering contempt that the man visibly shrivelled up into the pitiful fool he obviously was. The man I met the other day must be his blood brother. Again, it was at the club I met him. (Any inference you draw about my club and the company I apparently keep from what I have just said will, let me warn you at once, be non-sequitur, and probably libellous. My club sues and is sued in its name). "What does he want a holiday for?" I heard him saying as I was entering the room, and it was obvious that he was referring to Mr Nehru. And when no one bothered to enlighten him, he added, by a process of reasoning that was not very clear to me, "As though the whole ruddy outfit will collapse if he goes." Some one was moved to remonstrate at this stage and said, "Well, if it won't why are you beefing about his giving himself a short holiday?" "But why should he? I am objecting to the principle of the thing. There are millions in this country who cannot afford a holiday in the Kulu Valley. And here he is taking an IAF plane too, while we poor devils will be sweating our guts out here in this heat." I should like to think that it was the heat that was responsible for his outburst, but I very much fear it is not so.

THE failure of the recent reduction in the excise duty on all varieties of millmade cloth to bring about the desired improvement in the condition of the cotton textile industry shows that the illness that is currently afflicting the industry is much more serious than earlier thought to be. The spokesmen of the industry nevertheless think that a stronger dose of the medicine will lead to a quick recovery. But Government seem to think that further treatment should await the result of fresh diagnosis. The re-examination is to be conducted by an expert committee which will include representatives of the industry, labour, consumers and Government. The announcement in this regard has been made by Mr Lal Bahadur Shastri, Union Minister for Commerce and Industry last week in Bombay on the course of his discussion on the present crisis in the industry with the delegation of the Indian Cotton Mills Federation. In view of this announcement, Mr Shastri's statement that no further reduction in the excise duty is under consideration by Government cannot be taken to mean that such a possibility is entirely ruled out.

This committee which will be a small expert body, is expected to complete its task within a short period of time. The decision to appoint an expert committee is a clear indication of Government's anxiety to put the industry on an even keel. As Mr Shastri has pointed out that the findings of the expert committee will make it easy for Government to arrive at quick decisions, it is not surprising that no steps are contemplated before the report of the committee is available.

The plea for a further reduction in the excise duty is based on the assumption that the continued low offtake of cloth is due to the fact that cloth prices are found to be still too high. It is said that Government are not likely to make any further reduction in the excise duty for the simple reason that they are not convinced that there has been a decline in demand. Moreover, since the accumulation is heavier in regard to coarse cloth than in regard to other varieties, further reduction in excise duty will not be of much benefit to the industry as a whole.

Opinion in the country is by no means unanimous on the question of the demand for cloth. There is a school of thought which believes that the heavy accumulation of stocks with mills is largely due to the change that has taken place during the past year in the pattern of production of mills. Due to the higher incidence of the excise duty on finer qualities, there has been a general swing toward production of coarse cloth thereby increasing the supply of this category of cloth

to an enormous extent. The potential consumers of this variety of cloth, unfortunately, have not been in a position to buy even their normal requirements because of the increase in the price of food-grains during the period. The correct remedy, therefore, would appear to lie in an improvement in the food position in the country and in the swing back to their original pattern of production by mills.

Some aver that the present troubles of the industry have their origin in overproduction. This argument is buttressed by the fact that the organised sector has already attained the target of production set for it under the Second Five Year Plan. This view is based on the assumption that cloth consumption in the country has not recorded the anticipated rate of expansion. Thus, while consumption has remained more or less static production has proceeded on a quicker than scheduled pace. The result is a glut in the market. In this view the obvious remedy would be a curtailment of production. It may be recalled that such a course has been advocated by some spokesmen of the handloom industry. While it is true that internal consumption of cloth during the past year has declined by over 500 million yards it is still rather difficult to reconcile the statement that this points to the absence of an increase in demand with the fact that there has been a steady rise in cloth consumption in the country in the eight nine years prior to 1957. As has been noted above it is yet to be proved conclusively that there has been a fall in cloth consumption as such in the country during the past year. The facts that there has been a sizable increase in the production of medium and coarse cloth and that a major portion of the stocks with mills is accounted for by both these categories should not be lightly brushed aside.

A lasting solution of the problems of the industry will obtain only when energetic steps are taken to bring down the cost of production. This matter has gained added urgency because of the growing competition for Indian textiles in foreign markets. For success in their export promotion programme, the industry's products should satisfy two essential requirements. In the first place the quality of the cloth should be high and secondly prices should be competitive. It is said that our products now are lacking in both requirements. Indian mills are not in a position to lower the prices of their finished products because they are utterly helpless as the trend in cost of production is upward due to a variety of factors. By far the most powerful militating influence is the backwardness of the Indian industry so far as production and

marketing techniques are concerned. India's competitors in world markets on the other hand have already access to the latest machinery and techniques. For instance the great majority of the equipment now in place in Japan is said to be of the latest type machinery of very high efficiency. The comparative productivity of the Indian and Japanese textile industry will be evident from the fact that whereas in India the number of spindles handled by one operative is only 380, in Japan it is as high as 1,600 to 2,000. Again the number of automatic looms handled by a Japanese textile worker is between 60 and 100, while in India it is somewhere near the half way mark. It is no doubt true that a provision has been made in the current five year plan for a steady modernisation of the industry by the sanction of the installation of 18,000 additional automatic looms. But very little progress seems to have been made by mills in this regard. It is said that the exacting and penal conditions attached to the installation of automatic looms coupled with the paucity of funds with the industry due to high taxation and rising spiral of production costs, have rendered it impossible for the industry to embark on a programme of modernisation. But the problem of rehabilitation and modernisation is an urgent one for the Indian industry because its productive equipment is not only antiquated but is in a run-down condition.

There are indications that Authority may be thinking in terms of suitable relaxations of the conditions governing the installation of automatic looms with a view to improve the competitiveness of Indian mills in world markets. But it is idle to expect any hurried revision of Government policy in view of the resistance of labour to the progressive introduction of modernisation and rationalisation measures. It is also incumbent on Government to ensure that there is no serious dislocation in the handloom sector. The present crisis in the industry which has already resulted in large scale unemployment may serve to impress on labour the need for taking a realistic view of the situation. For if the obsolete equipment of mills is not replaced by more efficient modern machinery, Indian textile goods will steadily lose their hold in foreign

markets and the consequence will be disastrous for the industry as a whole. It is inconceivable that in such a situation labour can hope to remain unaffected. But if labour agrees to cooperate with the industry in its urgent task of rationalisation without further loss of time, there is every possibility of averting large scale unemployment. Moreover, in a phased programme of modernisation the chances of dislocation are negligible. By the same token Government have perforce to consider sooner or later the advisability of arriving at a workable formula for the modernisation of mills. Apart from the aspect of labour resistance there is the question of obtaining the necessary modern machinery. Though considerable progress has been made in the country in recent years toward indigenous manufacture of textile machinery and stores, the industry has still to rely largely on imports for its requirements.

S. E. RLY TENDERS

Sealed tenders are invited for tender No. CON/GM/12/F2/453/58 for supply of the following items:—

(1) Post signal (Lattice), (2) Ladders complete (Lattice) of various sizes and (3) Bracing, guard, hand rail, top platform (ladder).

Tender will be opened at 12 noon on 27-6-58.

Tender forms (not transferable) with full particulars are obtainable from the office of the Controller of Stores (Construction Section), Garden Reach, Calcutta-23 at Rs 5/- (not refundable) per set by money order to him direct in the case of outside firms and on production of cash receipt from this Rly's Chief Cashier by local firms.

Tender forms should accompany the receipt for depositing earnest money of Rs 1,000/- with this Rly's Chief Cashier without which the tender is liable to be rejected. Contractors having permanent deposit of Rs 1,000/- with the Controller of Stores are exempted. Firms not on this Rly's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

S16 GENERAL MANAGER.

JESSOP & CO LTD — ENGINEERS —

63, NETAJI SUBHAS ROAD, CALCUTTA.

Structural and Mechanical Engineers : Builders of all types of Railway Rolling Stock : Importers of Electrical and Mechanical Plant and General Industrial Requirements.

SPEAKING at the first meeting of the Central Advisory Council of the Exports Risk Insurance Corporation, Mr Lal Bahadur Shastri, Union Minister for Commerce and Industry has said that if a lasting solution to the present problem of shortage of foreign exchange is to be found, there is no alternative but to step up exports. With its emphasis on the development of basic industries and transport, the Second Five Year Plan involves a heavy strain on foreign exchange resources. Even after taking into account the possible receipts from external assistance, the Planning Commission have estimated that there will be an uncovered gap in the financial resources of the Plan. While indicating the possibility of external assistance being available on a larger scale than anticipated, the Commission have made it clear that the "accent of policy has necessarily to be on maximising export earnings and on economising to the utmost on imports". In the last two years the strain on foreign exchange resources has become heavier than anticipated due to a variety of reasons such as large imports of foodgrains, decline in export earnings, a sizeable increase in import costs, etc. In their recent memorandum to Parliament, the Planning Commission have pointed out that the shortfall in foreign exchange resources is not likely to be made up by further foreign assistance. The utmost economy in the spending of foreign exchange has already been effected by means of the new import policy which now allows only the imports of the most essential articles. Even so, there is urgent need for augmenting foreign exchange resources and this can be done only by concerted efforts toward export promotion.

But the fact that earnings from traditional exports such as tea and jute have shown a declining trend in the past two, three years indicates the need for adding more and more items to our export list while taking active steps to expand the market for the established items. Referring to the present difficult situation in the cotton textile industry, Mr Shastri has pointed out that there is urgent need for increasing exports. But this has proved to be a complex problem requiring the close cooperation of the industry and Government. Export promotion in textiles should first of all ensure that there is no undue rise in internal prices. It is also to be noted that "exports can be built up sometimes only at considerable sacrifice". The sugar industry for instance is now confronted with a similar problem.

One of the important steps taken by Government toward promotion of exports is the establishment of the Export Risk Insurance Corporation which is a business concern in the public sector. It is wholly

owned by Government and is worked on a no profit—no loss basis. The Corporation covers those risks which are not normally insured with commercial insurers in the private sector. The Central Advisory Council serves as a link between the Corporation and the export trade by advising the Corporation regarding the insurance needs of the export trade, the changes taking place in the export trade and the steps to be taken to provide for new conditions.

Explaining the working of the Corporation, Mr Shastri has pointed out that though it works within the scope prescribed by the Government Resolution, in the matter of risks covered and procedure to be adopted it has to work on the basis of the Export Credit Guarantee Committee's report. The Advisory Council is free to recommend any change in the practice of the Corporation if it thinks that such a measure will help promote exports. Mr Shastri, however, has cautioned against making any change which will have the potentialities of deteriorating the standard export practices.

★

Calcite Deposits

Once in a state of flourishing growth when the wartime scarcity of certain mineral powders gave it an immense boost, the calcite industry of Saurashtra, has, in recent times, been languishing for want of proper encouragement, the products of the industry having been ousted from their traditional markets by cheap fine mineral powders. In the competition between the calcite products and mineral powders, the higher mining and production costs of the former are a distinct disadvantage which prevents it from standing on its own legs.

The survival of the industry in such circumstances is only possible if the necessary steps to develop it are taken by the Government. The case for the revival of the industry rests on the wide variety of uses to which the calcite can be put as well as on the wide distribution of calcite in the region of Saurashtra.

Manufacture of calcium carbide, bleaching powder, its usefulness as a flux in metallurgical operations, for making glaze in pottery and in making industrial lime for a variety of purposes are the important outlets for the calcite. Suitability for use as a whitening in rubber, textiles, paper mills, glass works, tanneries, sugar factories etc. should further enhance its utility. Manufacture of chemicals is yet another important line which however needs more of exploratory work for being finally established. Further though the excessive opaqueness of calcite crystals renders them unfit for optical purposes, in

the preparation of nicols prisms the transparent crystals of calcite should prove an invaluable ingredient. On the basis of the immense potentialities of calcite the geologists who had carried on investigations into the calcite deposits in Saurashtra and who had studied the economics of its mining and utilisation in industry, had advanced the case of the industry for consideration by the Government so that it could be reestablished in all its diverse lines.

The richness of the present deposits in Saurashtra should facilitate quick development of the industry. The deposits in Saurashtra are considered to be not only the best in the country but also unique ones of their kind in the whole world, for the reason that they run over long distances in different directions and besides persist upto 30 to 50 feet or more in depth. Nawanagar, Porbandar, Junagadh, Bhavanagar, Gondal, Morvi, Palitana, and Wadhawan are all noted for their calcite deposits. However it is Amreli which with a deposit of 28,000 tons within a depth of 15 feet alone, takes the credit for the most important and the richest deposit. The new mineral concession rules of the Government of Saurashtra is another favourable factor in the conservation of the calcite deposits of the region since the previous system of monopoly rights had led to considerable waste.

★

Cooperative Movement

Bombay is foremost among the few States where the cooperative movement has been able to achieve considerable progress. That the movement continues to be popular in this region is evident from the annual report on the working of the cooperative societies during the year 1955-56 in the former Bombay State. Total number of cooperative societies which stood at 18,847 at the end of 1954-55 increased to 19,447—an increase of 600 societies. Of the total, agricultural credit including multi-purpose societies were 11,598, agricultural non-credit societies 1,812 and non-agricultural non-credit societies 3,933. Membership of societies had increased from 29.66 lakhs to 31.54 lakhs.

Total working capital of the societies also show a substantial rise of Rs 18.39 crores at Rs 139.92 crores. Owned funds at Rs 47.89 crores show an increase of 26 per cent over those of the previous year. The popularity of the movement is well brought out by the fact that the percentage of population served by all types of societies which admit of duplication of membership is placed at 43.9. Nearly 30 per cent of the cultivating population is actively participating in the movement.

Export Outlook for Castor Oil

UNCERTAINTY still persists about the outlook for Indian Castor Oil. Pessimism stems essentially from the continued absence of the US buyers from the Indian market. Against its annual consumption of about 55,000 tons of castor oil, the US imported nearly 22,000 tons last year from India. This year, it is not known to have bought anything so far; but its implications can be easily exaggerated.

During the period January/March 1958, America has taken 12,700 tons of castor oil from Brazil. Imports, during the same period last year, totalled 15,060 tons, comprising 5,884 tons from Brazil, 8,167 tons from India, 587 tons from Argentina and 422 tons from Africa. Reduced imports by the US reflect partly some decline in actual consumption caused by the slackness in industrial activity and partly due to the trade's desire to reduce inventories of all raw materials.

Consumption in March is put at around 3,800 tons against 4,900 tons in March 1957. On the basis of consumption during the first quarter, the total figure this year may be down by 10,000 to 12,000 tons over the year. Total stocks of castor oil with the American trade, at the end of March 1958, are mentioned at around 14,530 tons as compared with 11,520 tons at the end of March last year.

Reliable reports are, that the US buyers have recently paid 13½ cents per pound for Brazilian castor oil. This indicates that the demand persists and that Brazil is no longer an eager seller. Indian commercial oil often commands a premium of about half a cent per pound over Brazil's grade III.

In spite of adverse developments, a section of the trade is still disinclined to take an alarming view of the situation from the long-term angle. It is pointed out that, while limited re-sales by Rumania and vague reports of competition by China may have an immediate adverse effect on overseas markets, the potential US demand will continue to hold out hopes for the country. The general feeling is, that the demand will pick up once the picture of the Brazilian crop is clear.

From the domestic angle, too, the position is not totally bad. Hyderabad—the major producer of castor seed—has already marketed the bulk of its output and stocks with the growers are reported to be very small in Bihar. Gujarat has yet to market the bulk of its crop; but this is not expected to cause anything worse than spells of temporary weakness.

On the other hand, the total supplies of castor oil, including the carryover, are estimated at about

35,000 tons. Of this quantity, nearly 5,000 tons have already been shipped abroad and commitments have been outstanding for nearly 3,000 tons. Domestic consumption is expected to be higher this year. The net exportable surplus is, thus, estimated at about 15,000 tons; and there are at least six months more to ship this quantity.

Meanwhile, in the futures section, September delivery touched a high of Rs 151.50 and a low of Rs 150.50, to finish at Rs 151.37. In the ready section, the rate was quoted at Rs 29.50 and Castor Oil, Commercial quality, at Rs 15.12.

In the Groundnut section, price movements were rather irregular. August delivery moved between Rs 168 and Rs 169, to finish at Rs 168.50. Ready Bold quality was done at Rs 34.62 and Groundnut Oil at Rs 18.31.

Trading in the Linseed section was dull and featureless. September touched a high of Rs 31.37 and a low of Rs 31.19 to close at Rs 31.37.

Sentiment in the Cottonseed section remained rather depressed with September delivery moving between Rs 107.25 and Rs 108.

★

Gold & Silver

Conditions on the Bombay Bullion Exchange remained quiet and prices continued to ease under discouraging advices from the spot section, while lower upcountry markets and tapering off demand held buyers in check.

In Silver, the buying season appears to be drawing to an end with offtake shrinking not only in Bombay, but also at other upcountry centres. Arrivals and offtake were estimated at 30 and 17 bars respectively. Unrefined metal receipts were heavy at 36 bars. Spot changed hands at Rs 189.69 to Rs 190.62.

In the Gold section, arrivals and offtake were balanced at 6,000 tolas. Unrefined metal receipts totalled 4,500 tolas. Spot changed hands at Rs 111.16 to Rs 111.59, while Sovereign was quoted around Rs 72.00.

★

Yarn

Art Silk Yarn prices have eased considerably during the last few days. It appears that the new scheme of distribution, which seeks to restrict the profit, is having its effects on the prices of indigenous material. The easiness in prices is welcome from the point of view of the industries using art silk yarn as raw material. It is widely complained, however, that the distribution scheme is still not working to full satisfaction. It has been difficult for the small-scale manufacturers to secure their full requirements at reasonable prices. It is, therefore, obvious that the scheme will succeed in achieving

its aims only if the malpractices are effectively checked.

In distinct contrast to the depressing trend of cotton textile exports, shipment of Rayon fabrics is steadily rising. Apart from this, an equally big, if not a bigger quantity, has been sent abroad through post parcels. It should be said that the efforts of the Silk Rayon Textiles Export Promotion Council have started paying dividends.

As regards Staple-Fibre yarns, prices have remained very steady in ready deliveries and, in some

cases, there has been moderate improvement in prices. There is a good demand, both for hanks and cones; and the demand is likely to show improvement in the next few weeks. In case of dull cones, a large amount of business has been transacted, mainly in the Punjab centres for forward delivery. On the whole, situation in staple in yarns continues more or less satisfactory as compared with the situation in art silk yarns.

There is, however, absolutely no change in the case of Cotton yarns.

Reports from almost all important consuming centres go to show that, in spite of all the efforts taken by Government, there has been no material improvement in the prices of handloom cloth.

As regards export markets in the last few months, the demand has considerably fallen off. In spite of some of the mills having recently lowered the prices for export, actual business resulting has been very small. The future tendency remains uncertain.

EUCLID

3-12 SCRAPER

800 009-1000
 167529

Euclid has incorporated many 'years-ahead' features into its line of overhanging engine scrapers.

Here are some cost-trimming factors:

- Easy, fast, independent hydraulic control of all scraper functions...steps up the production cycle...eliminates cable worries.
- Easy accessibility to all major working parts...cuts service and maintenance time greatly
- Wide, shallow bowl with variable "job-matched" positioning of cutting edges...digs in fast...provides excellent boiling action...speeds up loading...means more pounds of payload.
- Large, wide-base tyres...provide unequalled flotation...unusual ability to pull through soft materials...carry big loads at high speeds...work where and when other scrapers are "grounded."

Auditors' Report to the Shareholders

We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purposes of our audit and have found them to be satisfactory. In our opinion proper books of account have been kept by the Bank as required by law so far as appears from our examination of those books, and proper returns adequate for the purposes of our audit have been received from the Branches, which have not been visited by us.

We have examined the Balance Sheet of the United Industrial Bank Ltd., as at 31st December, 1957, and the annexed Profit and Loss Account for the year ended on that date, which are in agreement with the books of account and returns.

The transactions of the Bank which have come to our notice have been within the powers of the Bank.

In our opinion and to the best of our information and according to the explanations given to us, the accounts of the Bank are properly drawn up so as to disclose, in the case of Balance Sheet, the state of the Bank's affairs as at 31st December, 1957, and in the case of Profit and Loss Account, a true balance of Profit for the year ended on that date, so far as is required by the provisions of the Companies Act, 1956, and the Banking Companies Act, 1949.

BOMBAY
REVIEW

ACCORDING to official figures, total shipments of cotton piecegoods from the Bombay Port, during the first quarter of 1958, at 165.42 million yards, have shown a decline of nearly 30 per cent as compared to the figures for the corresponding of last year. Excepting the American zone, shipments to all other zones have shown a decline. The most disquieting feature is the steep fall in exports to the Asian zone.

Oftake by countries in the Asian zone, during the period under review, totalled 39.44 million yards as against 86.97 million yards in the first quarter of 1957. The only consolation, however, is that export to the American zone have improved slightly to 7.48 million yards from 6.5 million yards.

Goods passed for shipment, during April, were 50.35 million yards as against 53.95 million yards during the previous month and 81.97 million yards in the corresponding month of last year. At this rate of dwindling exports, it is doubtful if exports, during the current calendar year, will exceed 650 million yards although India had exported about 850 million yards during last year.

There is a general opinion that, in spite of the recent cut in the excise duty, the offtake of cloth has not improved much. Although the quantity of unsold stocks with the mills has tended to decline in recent weeks, it is significant that the output of cloth has also been lower. According to some reports, some 26 mills have ceased working completely and about 37 units have closed down partially.

For obvious reasons, the Bombay cloth market has exhibited a subdued tone and the offtake may be said to be comparatively on a reduced scale. The recent withdrawal of the OGL in Sudan and reports from East Africa of the imposition of heavy import duties have also caused serious disappointments, as these two destinations have been consuming substantial quantity of Indian textiles. Export business is, therefore, likely to dwindle further for some time to come. It is high time that exporters should explore new avenues as well as consolidate the traditional markets with the help of the Government and co-operation of the industry.

Enquiries from the UK do not still seem to gather momentum. Meanwhile, the tripartite discussions between the representatives of the trade and industry in the UK, India and Pakistan do not seem to have met with success in the absence of any agreement on the import of grey goods from India and Pakistan. The Lancashire interests do not seem to have yet lost hopes as the Indian and Pakistani delegations have accepted in principle to limit exports.

The disheartening news of a sudden heavy increase in the scale of import duty on all categories of

cloth by the East African authorities has had an adverse effect on the export market. This sudden heavy increase in the customs tariff has put a temporary halt to the brisk activity for this destination. But, exporters hope that this destination will yet resume activity for some of the qualities after a week or so.

Again, the present structure of the railway freight has increased the incidence of cost which ultimately affects our competitive character in the foreign markets. It is, therefore, urged that the Government should immediately announce some rational basis of railway freight for the purpose of exports of cloth and other items, which may go a long way in reducing the price of our cloth exports.

Yarn production has also been steadily declining. This has acted adversely on the consumption of indigenous cotton which, since February, has been showing a progressive decline. It may be noted, in this connection, that, of late, there has been a shift in the consumer preference from coarse and medium to fine and superfine goods. This change in the consumer preference will, it is stated, worsen the prevailing situation in lower varieties of cotton.

FUTURES MARKET:

After an early spell of dullness, cotton futures soared on heavy buying by leading spot house and bulls. Informed circles stated that the Government would soon allow export of 25,000 bales of 25/32" stapling cotton to China as urged by the Chinese Government. This changed the entire sentiment. ICC Moglaj Jharilla closed at Rs 671.50 after touching a high of Rs 673.23 and a low of Rs 670.25.

SPOT MARKET:

The Spot section ruled steady in rather restricted activity. There was sustained demand for staple varieties, the qualities sought after being CO/2, Lakshmi, Jaydhar and 0394, etc.

Meanwhile, the Government of India have decided that "floor" and ceiling prices of Indian cotton for 1958-59 season should be maintained at the same level as for the 1957-58 season. The price schedule, with the necessary amendments, will be issued in due course.

In the export section, enquiry for Bengal Deshi has been steadily receding with the absorption of first-come-first-served quota. Shippers are anxiously awaiting the new quota.

In the foreign section, spinners were forced to buy at advancing rates following the scarcity of foreign varieties.

Textile interests seem to be deeply concerned over the delay in the

Piecegoods Exports

WORLD OF
COTTON

announcement of the allocation of American cotton. It appears that the negotiations, which the Government of India have been carrying on with the US Government in this respect, will involve a considerable time to take a concrete shape. In fact, some people are of the opinion that the announcement cannot be expected, at any rate, till the first week of August when the US Bureau's new crop report will be released.

This means, that no foreign cotton will be available to Indian mills till the end of the current year, if the Government are to count on American cotton only. As the position now stands, mills are already working on a hand-to-mouth basis so far as foreign cotton is concerned. Mill interests have, therefore, suggested to the Government that, in order to enable them to plan their production programme in advance, import of an additional quantity of one lakh bales of East African cotton should be urgently allowed. The ruling prices of East African cotton are relatively much cheaper than those of American growths.

STATISTICS:

Exports by rail, from 1st September 1957 to the 15th May 1958, were 206,696 bales. Estimated mill consumption in Bombay, during the same period, was 908,915 bales as against 948,288 bales in the corresponding period of last year. Estimated stock of raw cotton, held by exporters, dealers and mills in Bombay on the 15th May, was 720,006 bales as compared to 35,535 bales on the corresponding date of last year.

According to official statistics, Indian mills consumed, during March, 354,288 bales of domestic and 47,643 bales of foreign growths. In the same month last year, consumption was 399,609 bales of Indian cotton and 46,428 bales of foreign. Consumption, since the commencement of this season on 1st September 1957 upto March 1958, totalled 2,650,949 bales of Indian and 340,929 bales of foreign cotton against 2,724,023 bales of Indian and 338,725 bales of foreign cotton in the corresponding period of the previous season.

The decline in domestic cotton consumption reflects the cut in production due to the closure of some mills and the stoppage of additional shifts by some others. The improvement in foreign cotton consumption underlines the increased consumer interest in finer fabrics at the expense of coarse and medium cloth varieties.

NEW YORK COTTON MARKET:

Following an irregular opening, prices on the New York cotton futures market extended their

recent downward movement under hedging and commission house liquidation along with uncovering of some stoploss orders. The market's action reflected improved weather in the south. Selling eventually tapered off and the market developed rallying tendencies on trade buying against textile operations and short-covering. Middling Spot was quoted at 36.40 cents per pound.

The Agriculture Department, New Orleans, has announced the export sale of 60,787 bales of United States Government-owned cotton at 28.63 cents per pound basis middling inch cotton. At the previous sale of this cotton on May 1, the Department sold 73,139 bales at 28.44 cents per pound. Net sales of this short-staple cotton, from the time the 1957-58 disposal programme started in March 1957, totalled 5,705,601 bales.

Textiles and Technology

In the context of the current controversy over rationalisation in the Cotton Textile Industry, and especially the opposition of Labour Unions, the findings of the Textile Committee of the I.L.O. are of considerable interest. The committee consisting of delegates representing Governments, employees and workers of 20 member countries examined the effects of technological developments and the level of employment in the textile industry, and the working conditions in that industry. The resolution adopted by the committee on the effects of technical developments states that "these lead to lower production costs, higher consumption of textile goods, thus creating a situation, leading to social progress, whereby a steadier and higher level of employment can be maintained, fair wages can be paid and good working conditions and amenities of labour provided, together with a higher level of real earnings".

This conclusion of the I.L.O. committee should persuade Trade Unions to take a more helpful attitude on the question of rationalisation. They may, however, point to the inevitable time lag between introduction of technological developments which will throw men out of their jobs immediately and the higher level of employment possible in the future as a result of social progress. In the absence of provision for unemployment relief, the transition can cause real and widespread hardship. But the difficulties can be minimised by close cooperation between representatives of management and workers and the Government to deal with effects of redundancy. And a fair distribution of the benefits arising from technological developments will create the conditions in which such co-operation can be effective.

PREScription

A week's hard thinking, first by the AICC and later by the Working Committee, has resulted in the enunciation of certain basic principles that should govern the conduct of Congressmen. The formulation of this code has been the result of a session of heart searching, goaded on by Mr Nehru's public dissatisfaction with the state of the party's health. As I reported last week, the Congress President had prepared a note for the AICC in which he indicated what in his opinion needed to be done in order that, as he put it, they might deserve Mr Nehru's continued association with the Congress. This note was debated and elucidated, among others by Mr Nehru himself. The sum of the wisdom garnished after much discussion has now been embodied in the form of a code. There is every indication that top leadership is determined to see that this code is strictly honoured in observance.

It is a fourteen-point programme dealing with all aspects of Congressmen's public conduct. But its principal presumptions are broadly four. The first is what has come to be called the problem of communalism and casteism. The second is group rivalries and factional bickering in the party set-up. The third is the education of Congressmen in the fundamentals of its ideology and the administrative and social instruments of such ideology. The fourth is the all important subject of winning back the confidence of the public where it has been lost and of improving the efficiency of the administration.

On the subject of casteism and communalism, the Congress has so far been talking in unexceptionable but general terms. During the current series of introspection, however, aspects of the problem that were formerly obscured by vague generalisations were brought into sharp focus. Mr Nehru himself took the lead in the matter and indicated his misgiving that minorities have not had a square deal in matters like employment opportunities. He also referred to onerous conditions like Hindi tests for appointments, and the unconscious resistance to giving Urdu its due place as the language of the country. That is one aspect of the problem. The other is the communally oriented politics at the State level. The Working Committee's suggestion in this regard is that "casteism both in its social and political aspects should be faced boldly and systematically" and put an end to. The emphasis is both on courage and continuous effort. If action matches this profession and every time an act inspired by communal consideration is sternly suppressed, even if such sternness meant the losing of an election, it would indeed have a tonic effect on the organisation. If,

on the other hand, the present tendency to temporise and compound with misconduct continues, then no amount of exhortation can help. The test is whether or not the High Command is willing to examine every case where there is an allegation of communal consideration at work. It might be that such allegations themselves are 'inspired'. But they should be investigated instead of being shelved because of the possibility that they might hurt Congress 'prestige', or offend principal interests. There is evidence that a basic departure from the former attitude is in the offing and that the High Command proposes to act in the spirit of its recent decisions. The investigation of and the final findings on the affairs of the Punjab Congress, especially on the conduct of Sirdar Pratap Singh Kiron, by the Congress President are an instance in point.

On the question of casteism in the context of bread and butter, the code prescribes that, except for scheduled castes and tribes, the criterion of assistance and award of scholarship, etc., should be based on economic and not caste considerations. Here again, the test would come only when actual occasions for distribution of largesse arise. One extreme test of this code would be whether a member of nominally progressive community, say, the South Indian Brahmin, would qualify, on grounds of economic disability to financial assistance in one form or another. It seems exceedingly unlikely that such assistance would be automatic. The fact is, casteism, in one form or other, has entrenched itself in all forms of economic vested interests and dislodging it is possible only when it is a conscious and continuous act of faith. Every time a blow is struck on behalf of the principle enunciated in the code brings us nearer the objective of a casteless society. And every time an act offending the principle is allowed to go unchallenged, either by apathy or by ulterior motives, the evil is allowed to gather further strength—the strength of inertia of the status quo. The Congress will still face its severest test in this aspect of its new code. The only consolation for the Congress, from the point of view of party political fortunes, would be that other parties, too, will have to reckon with the same problems, unless they are, like the DK and DMK in Madras, frankly communal in their ideology.

As regards factional and group rivalry, its commonest form, other than that of barely disguised communal affiliations, as in Mysore, is friction between those that run the Government and those that run the party. Often it is the case of the party man being jealous of the

power of his colleague who has the resources of Government under him. This rivalry takes all kinds of ugly shapes: the party boss tries to interfere in Government, and this often leads to needless straining of loyalty of the officials at all levels. The Minister, on the other hand, may behave in utter disregard of party feelings, because of his notion that he is the man who dispenses the real favours. Another aspect of the problem is the rivalry between the Parliamentary and non-Parliamentary wing of the party: the constructive worker often feels, not without justification, that despite lip-service paid to his central importance, he is treated as a nobody by the Parliamentarians. Not often, the scramble to get a ticket for election is nothing more than the compelling desire to get on to the right racket. All the familiar ills that follow a situation in which too many contend for few prizes—nepotism, sycophancy and jockeying for position—are there. And above all, petty intrigue, the most demoralising influence in Congress politics at the State level, is at work all the time.

The prescription for these ills cannot, by its nature, be specific. Some that were canvassed during the AICC session were abandoned. One was that top leaders should resign from Government and take charge of the party affairs. This desperate remedy was rightly rejected, for the reason that derives its justification from Goldsmith's famous cautionary moral from Burke's life: one should not give to the party what belongs to the nation. Mr Nehru more practically suggested that the Chief Minister of a State should be the party boss of the area. This might solve personal rivalry at that level, but it is doubtful if the party will be properly looked after. Here as elsewhere, there is no substitute for character. No doubt, organisational streamlining will help, though its ultimate efficacy must be a matter of either self-discipline or party-discipline. The code prescribes, among others, a strengthening of the Mandal Congress Committee with a minimum programme of palpable achievement. This will include increase in agricultural production, mobilising small savings and participation in community development work. Targets have been fixed for the next six months. Each mandal committee, each MLA and each member of Parliament should collect by way of small savings Rs 1000, Rs 1000 and Rs 2000 respectively. This is certainly a sensible way of combining a test for the mettle of partymen with an important national endeavour. The idea is a variation of Gandhian insistence on compulsory spinning, and an evaluation of the success of the experi-

ment in concrete terms of increased figures of small savings will be awaited with interest.

It is possible to think up many such ideas that will at once serve as an item of immediate national service and a test of the Congressman's determination to purify himself and his party. Of course, it is possible that one can carry these ideas to absurd lengths, but with some sense of proportion, it should serve the primary purpose for which it is devised.

For the rest, the code contains specific recommendations for co-ordination between party and Government. A sub-committee of the Pradesh Congress Committee should meet periodically, the State Cabinet to discuss problems of development and also to redress popular grievances. This is designed to minimise and to assuage the party feeling that its wishes are not respected.

All this is to go with an effort at giving the rank and file of the party a good grounding in the ideology of the party. It is proposed to produce suitable literature for the purpose and to have it distributed. Discussion groups, seminars and study circles are also contemplated. The ideology sought to be propagated is designed in the code itself as broadly the fundamentals of socialism and democracy. The ideals of a secular state are also part of this ideology. One need not seriously quarrel with this aspect of the programme, except for giving the warning that rigidity is a danger that is to be avoided in any effort to work up an ideological enthusiasm. For, as Communist history demonstrates, ideological enthusiasm is often in direct proportion to the rigidity of the central faith. Such enthusiasm might well be bought at too high a price.

A rather odd omission in the educational programme outlined by the Working Committee is detailed instruction in the aims, methods and tasks of the Plan. One hopes that the proposed study circles will discuss these rather than doctrinaire points of ideology. Another item in the Congress programme for the immediate future is the training of a cadre of workers for implementing and participating in the Plan. This certainly is a very vital undertaking and one which is likely to help both the party and the country.

It is indeed in this manner that attention must be focused on the constructive activities that can and should be undertaken as part of their tasks by the rank and file of the party. And there is no getting away from the feeling that such endeavours would importantly contribute to the achievement of targets under the Second plan.

DELHI
REVIEW

Following the wave of closures of mills which swept many sectors of industrial activity and particularly the cotton textile industry, the employment situation for industrial labour in the country has shown a marked deterioration. This is a development which could not but be viewed with concern and as such it was only natural that this should have figured prominently in the Indian Labour Conference which was held at Nainital.

The discussion of the causes for such closures and the remedy suggested for them revealed wide differences in the viewpoints of different members, with the Communist leader Mr S. A. Dange going to the extreme extent of equating such closures by employers to pure fraud. A dose of preventive detention would according to him once for all, forestall such closures in future.

Even the leaders of the INTUC were tempted to read more into it than would have been warranted by actual facts. Mr Somnath Dave of the Indian National Trade Union Congress stated that it was incompetence that was responsible for the closures, and on this basis, took his stand against any cutting down of wages so as to keep the mills going. Bombay's Labour Minister, Mr Shantilal Shah, while he justified the action of the workers of the Sholapur Mills in accepting lesser pay as being meant to absorb shock, was however not inclined to give in to the demand for the extension of cut in wages to other mills.

There was thus little inclination on the part of the labour leaders to understand the difficulties of the mills which were neither the result of incompetence as made out by the INTUC leader nor of pure fraud as the AITUC leader Mr Dange would have it. As it had turned out, it was overproduction of coarse cloth that formed the real core of the difficulties in the textile industry. The authenticity of this analysis is confirmed by the very recommendation made at the Conference to the effect that Government should give grant or loan assistance to the industry for rehabilitation and modernisation of machinery as also for provision of long staple cotton so that production of finer cloth which is more easily saleable would be facilitated.

The conference also made a number of recommendations to prevent closure of mills in other sectors of industrial activity. For the jute industry outside West Bengal transfer of looms from one unit to another without prior permission of the State Government is sought to be banned by a recommendation. In regard to closure of tea plantations in Assam the conference has recommended to the Government of India to take suitable steps to

avoid closures after examining the recommendations of the Plantation Enquiry Commission and the Industrial Committee on Plantation.

So far as the engineering industry was concerned how the closures in this sector could be eliminated without assuring sufficient supply of steel was something for which the conference could not suggest anything. The conference had but to recognise the difficulties experienced by the engineering industry in regard to steel and had in this connection drawn the attention of the Government to the need for ensuring better supplies of steel to the engineering units. Appreciation of this difficulty resulted in the liberalisation of the standing order which requires mills to give two months prior notice in case of closure, to one month for individual units in real difficulties.

The difficulty faced by the engineering industry in regard to its steel requirements highlights the general shortage of imported equipments consequent on which many industries had to restrict production with adverse effects on employment prospects. Though Mr G. L. Nanda, Union Labour Minister referred to this and even hinted at worse effects in the future he could not suggest any remedy to counter their effects on employment. Since the Central Government have set up a working group to study and review periodically the question of closures it might be hoped that untoward developments affecting employment position and prospects for the workers would be properly dealt with.

★

Threatened Port Strike

The failure of the talks between the Central Government and the Working Committee of the All-India Port and Dock Workers' Federation is to be regretted. As a result the shadow of strike in the major ports of the country has again loomed up. At a time when the country is struggling with a bewildering variety of problems to implement the Second Plan, it can ill stand the jolt of the type which it would receive from the stoppage of the flow of materials in and out of the country which would result when the strike materialises. It is indeed a sad irony that the decision should have been taken at a time when the Indian Labour Conference was meeting at Nainital to discuss the question of evolving a satisfactory machinery for settling industrial disputes in both the private and public sectors.

According to Mr S. C. C. Anthony Pillai, M.P., Vice-President of the All-India Port and Dock Workers' Federation, the decision was precipitated by the intransigence of the Government in not meeting the demands of the Federation. The main points in the dispute between

the Central Government and Federation relate to the unwillingness of the Government to accept the recommendations of the Chaudhury report regarding gratuity benefit to the port workers, lack of provident fund benefits to the port workers on the lines of such benefits to other Government employees, and the demand of the port workers for treatment on a basis of equality with other Government employees. While the Federation has taken its stand on the report of Mr Chaudhury, the Central Government seem to have preferred to await the report of the Second Pay Commission before making any commitments in regard to provident fund benefits and gratuity scheme.

Rationalisation of the pay scales of the port workers to bring uniformity in the major ports which is an important head of recommendation in the Chaudhury report is yet another item in regard to which the two parties could not come to an agreement for negotiations.

But in spite of what Mr Anthony Pillai has alleged about the long-standing nature of the dispute and the Government's refusal to give a fair deal to the port workers the decision to strike would be premature since the Central Government have only asked for some more time to study the report of Mr Chaudhury. In view of this, the claim made by Mr Anthony Pillai that they had explored all other possible avenues of settlement without any success is rather untenable. Considering the grave consequences to the economy that would follow the strike, it may be hoped that the strike may yet be averted.

★

Small Scale Industries

The difficulties of the small scale industries in implementing the targets, seem only to have been aggravated by the foreign exchange shortage which evidently seems to be having widespread repercussions on the pace of progress of the economy. While it has been estimated that the annual requirements of foreign exchange for the small scale sector are of the order of Rs 1.3 crores, the allocations for the current licensing period are far short of the requirements of the industry. Against the pending demand for imported machinery of the value of Rs 70 lakhs the allocation, for the licensing period of April-September is only for about Rs 15 lakhs. This has been viewed with great concern at the eleventh session of the All-India Small-scale Industries Board which met at Mussoorie last week. Since it is certain that in the absence of adequate foreign exchange the pace of progress in the small-scale sector would be retarded, whether it would be

possible to meet the needs of the sector by making minor adjustments under various heads of foreign exchange has to be looked into by the Government.

Assistance by the Government by way of Government contracts is another factor which governs the progress of the small-scale industries. The volume of such assistance has in recent times shown a sizable increase, the value of contracts having gone up from Rs 4.68 lakhs in 1955-56 to Rs 62.15 lakhs in 1957-58. But the organisational side of this activity has been found to be deficient on the side of proper coordination. Mr Kennard Weddell, Chief of the small Business Programme in the U.S. Air Purchase Organisation who recently visited India and made a special study of the assistance rendered by the Government to the industry has in this connection stated that the activities of the State Directorates of Industry, the Service Institutes of Industry, and the National Small Industries Corporation should be properly coordinated to prevent duplication and mutual encroachment in functions. If such coordination is to be achieved the tendency of the Institute Directors to set up their own individual lobbies to contact purchasing officers and of the State Directors to bypass the liaison officers and to set up their own direct contacts with purchasing officers needs to be curbed.

Price differential in favour of the products of the small-scale sector is another important plank in the Government's policy towards the small-scale industry. The danger in this policy lies in the temptation which it might give to the Institute Directors to perpetuate such price differentials as a permanent measure of help. Mr Weddell is critical of such a policy being pursued on a permanent basis. He has therefore recommended that in every case of a price differential being paid to a small concern, the Institute Director should be notified the amount of the price differential as well as the percentage involved and that the Director should make a definite point of having his staff follow up with the concern giving it all proper assistance in getting its cost more in line, so that on future procurements it could be truly competitive.

SOUTH EASTERN RAILWAY

CANCELLATION OF TENDER

NOTICE

The tender Notice (Tender No. CON/GM/9/HD/58) for supply of 850000 ft. Capping T. W. 1 1/2" x 1/4" as per CME's Drg. No 3358A which was published in this paper recently, is hereby cancelled.

Indian Finance

NORTH INDIAN MARKETS

SUGAR markets, which had been ruling firm during the past many weeks, have turned a shade quieter with prices developing a slightly easier tendency, thanks to a special release of one lakh tons for free sale besides the monthly quota of 1.66 lakh tons issued only a fortnight ago. In the Hapur market, following mill-delivery rates (per maund) are quoted:—Meerut (D.28) Rs 36.69; Daurala (B.29) Rs 37.87; Mowana (C.29) Rs 37.25; Bijnore (E.29) Rs 35.56; Amroha (D.29) Rs 35.75; Mansoorpur (B.29) Rs 38.31 and Modinagar (D.29) Rs 36.60. In the Bombay market, too, prices suffered a slight setback with "D" quality declining by about Rs 1.50 to Rs 109 per bag.

On the whole, considerable speculative activity is still reported in the market in anticipation of the levy of a cess on domestic sales in order to meet the loss on exports. Trade circles are rather apprehensive whether the supplementary quota will help to bring down prices to normal levels. The previous quota, it is pointed out, has not yet been exported and there will be difficulty in getting sufficient railway wagons for the movement of the new release.

That the supplementary quota will have a psychological effect on the price trend, is conceded. But, this may prove to be only temporary. Any further delay in clearing the mist about export cess will not only mean a heavier burden on the consumer for the remaining period of the current season—nearly half of the output has already been marketed—but may hamper export programme as well.

The Khandasari market continues to rule steady due to good demand and in line with steady conditions in the crystal section. Rates are moving between Rs 30 and Rs 34 per maund, according to quality.

Crushing for sugar is finished in West Uttar Pradesh.

★

Gur

Poor arrivals due to off season and better outside demand before rains set in accounted for the slight advance in ready Gur prices in the Hapur market. Arrivals averaged 100 maunds per day, while local stocks are estimated around 1.40 lakh maunds. The rate is quoted at Rs 15.75 per maund.

In the Muzaffarnagar market, prices have also improved fractionally due to better outside demand and good loading facilities. Daily arrivals are lower. Gur Chakku Minja is quoted at Rs 17 to Rs 17.62 and Khurpa Rusket at Rs 10 to Rs 11 per maund.

★

Shellac

Quiet conditions are witnessed in the Calcutta Shellac market

Sugar Markets Quiet

where Pure TN quality is quoted at Rs 66 per maund. Slackness of demand from overseas buyers and growing competition from Thailand are the contributory factors. Shipments, during the current month up to the 14th, were 19,364 packages, comprising 6,900 packages of shellac; 11,038 packages of seedlac; 310 packages of buttonlac and 1,026 packages of other varieties.

Export earnings from lac have dropped sharply to Rs 5.97 crores in the first ten months of 1957 from Rs 7.72 crores in the corresponding period of the previous year. The decline in earnings is entirely due

to the fall in the price of the commodity as the quantum of exports at 450,1000 cwts, during the period under review, have shown a rise of 32,700 cwts. In addition to growing competition from Thailand, the decline in prices is attributed to the availability of substitutes at cheaper rates.

Foodgrains

Steady conditions are witnessed in the Hapur Foodgrains market. Daily arrivals here and in other centres of Uttar Pradesh are reported to be less. Wheat prices

hovered around Rs 15.75 for the average quality and around Rs 17 for the farm quality. The market for Rice remains steady, while Barley and Bejher have registered fresh gains following poor arrivals. Peas and Arhar are still reaching the market in sufficient quantity at an average of 1,000 maunds each daily. While Arhar prices have improved slightly, peas prices continue to be steady. Total arrivals of peas in the Hapur market, from the beginning of the current season, are about one lakh maunds and that of Arhar about 30,000 maunds.

International Panorama of Progress

New caravans in old settings

Ancient and modern transportation, travelling along the same road, present a vivid and, at the same time, curiously appropriate contrast. This meeting of the past and present symbolizes the rapid advance in many parts of the world from slow, laborious methods of hauling goods and equipment to swift, up-to-date means of transport. Power once supplied by beasts of burden is steadily being supplanted by the more efficient power of petroleum. Caltex quality fuels, oils, and lubricants keep cars, trucks and tractors operating smoothly, speeding production, transportation, distribution—and bringing to the peoples of many nations a new prosperity, a new era of comfort and convenience. Caltex is participating in the present and planning for the future in over 70 countries—partner in progress in Europe, Africa, Asia, Australia and New Zealand.

A COMPARATIVELY new item to figure prominently in newspapers and public discussions alike, in recent times, was the question of public schools and their place in the educational system of the country. It was the 20th annual conference of the heads of Indian Public Schools which took place at New Delhi in the third week of April which first brought the issue of public schools before the public eye. The issue of public schools again filled a few pages in the ninth report of the Ministry of Education and Scientific Research of the Estimates Committee of the Lok Sabha. Now for the third time, at the centenary celebrations of the Lawrence School, Lovedale, in South India, the future of public schools became the subject of the speech of Mr K. G. Saiyidain, Educational Advisor to the Government of India who delivered the commemoration address.

It is the particular way, in which the subject of public schools was made news of, on all these occasions, that elicited wide public interest. At the New Delhi conference Dr K. D. Shrimali, dwelt on the defects of the system, as it presently operates and stressed the need for the public schools to fit themselves into the general framework of national education, while in the report of the Ministry of Education and Scientific Research, public schools were treated to a further dose of criticism for what the report alleges to be the exclusive character of such institutions and the extraneous source of their inspiration.

As it had evolved, the system was the product of British rule in the country, being copied from the original types of public schools of England. The system in the way in which it had developed and grown in the country of its origin, has come to mean an educational institution (originally only for boys, but nowadays for girls also or for girls separately) mainly, though not necessarily, residential and better housed, better equipped and generally better-staffed than the ordinary State or grant-in-aid schools. But the most important feature of such institutions is the almost complete freedom from State control which they enjoy. The schools in England are directly controlled by their own Boards of Governors which are entirely independent of the Government and the County Council Education authorities.

But more than all these things, it is for their exclusive character and the limited scope which they offer for boys of poor parents that these schools have now come to be known. And the very name public school, in such circumstances sounds a complete misnomer, having lost the literal content of its meaning in the course of its deve-

Future of Public Schools

lopment as citadels of the privileged classes.

In India, the public schools have in their functioning kept up the pattern of their British model and had catered generally to the needs of the wealthier classes, the cost of education in the public schools being prohibitive enough to preclude admission to poor students. Though few in number some of these schools have a long record of service in the cause of education, the notable of which being the Lawrence School at Lovedale in South India which only last week celebrated its centenary.

The problem before these schools is to adjust themselves to the democratic temperament of the age. Mr Saiyidain, speaking at the centenary celebrations of the Lawrence School described the basic problem as being one of being in tune with the social ideology and needs of the times, and training the children in such a way that they might be able to take their place in the new context of a democratic citizenship. Luxurious and ostentatious living which public school symbolises is repugnant to the ideal of socialistic pattern of society which has been accepted as the goal of our country, while the idea of public schools as preserves of only the wealthier classes runs against the very spirit of the constitution which guarantees equality of opportunity to all. The objective according to Mr Saiyidain should be for each school to become "an idealised epitome of the larger community around reflecting suitably and in a simplified and idealised form the best elements of its life and activities." Such an ideal according to him would cut across the very roots of narrow group loyalties which the present day public schools tend to foster in their students.

In support of the need for a change in the outlook of the public schools in the country, Mr Saiyidain has quoted the statement of Sir John Sargent, a former Education Commissioner with the Government of India, about the limited intellectual range of the studies in the public schools in England, their tendency to breed narrow sympathies and social arrogance in their students. Against these he has held the ideal of training in democratic leadership and social sensitiveness.

While in the light of their limitations the need to change the outlook of the public schools would not be denied how to bring them to subserv the new needs of the country has not been sufficiently explained by anybody. Reduction in the cost of maintenance of these public schools has found favour with some as the important element in the changes required to reform them. At the New Delhi conference Dr K. L. Shrimall laid

particular stress on this. How far this could be effected without affecting the standard of education maintained by public schools in the country remains yet to be clarified. One of the chief merits of public schools has been the high standard of education which they had kept up in their institutions relatively to other schools, and the major factor in this high standard has been the quality of the teaching staff as well as the quality of the equipment. Salaries of teachers and cost of equipment being the major heads of expenses for the schools, scope for economies would seem to be limited and attempt to force economies in these two heads would only have adverse effects on the quality of education imparted in these schools. If instead of reducing the salary of teachers, attempts were made to reduce the number of teachers, the effect would be no better, in view of the fact that this would affect the teacher pupil ratio, and consequently the individual attention which is such an important element in the quality of education. Even Mr Saiyidain could not but admit the limited scope for effecting economies especially in the salary of teachers which he further accepted as the main factor, in the expensiveness of education in the public schools.

One basic truth about public schools which the controversy has brought to light, is that public schools are expensive because education which aims at high standards has, of necessity, to be costly. But between high standards with expensiveness and cheapness with low standards, the former is to be preferred in view of the fact that a country aspiring to take its place among the advanced nations of the present day, would be left far behind, if the education which it provides falls below recognised standards. In the ordinary mass schools of the present day the low teacher pupil ratio and their inability to attract qualified teachers are clear disadvantages which preclude high standard. The fact that even middle class families prefer to send their children to public schools in disregard of the heavy inroads such an education makes into their limited incomes is witness to the low quality of education imparted in the ordinary schools and by reverse reasoning to the high standards maintained by public schools. In fact together with the need for spreading mass literacy by making primary and secondary education compulsory, the problem of raising standards of education has assumed great significance.

The problem is thus one of combining higher standards with provision for promising students with limited means to avail of them. There would seem to be some incompatibility between these two aims. But the conflict is more apparent than real and could be met

by financial assistance from the Government meant to benefit poor students. In this connection a suggestion has been made at the New Delhi conference of the heads of the Indian public schools that Government should give merit scholarship to students for whom such education would otherwise remain inaccessible. Even in England there has in recent times been a marked trend towards increase in the number of Government scholarship holders in the public schools. The acceptance of this policy by the Government which was indicated by Dr Shrimall is therefore gratifying.

An alternative suggestion has been made by an important personage connected with public schools in India to the effect that each of the State Governments should establish on the lines of the Netarhat Vidhyalaya started by the Government of Bihar one or more residential schools of the highest quality in the healthiest region admission in which would be regulated on the basis of merit, students of poor means being subsidised by the Government according to their income. This offers an ideal and democratic solution, since under this system standards will not only be maintained but schools of such types would also be shorn of their exclusive character.

Inextricably bound up with the question of maintaining standards is the issue of medium of instruction in the public schools. While English is now holding the ground, the language controversy that has been raging in the country has threatened its place, in the public schools as the medium of instruction. Dr Shrimall has in this connection asked the public schools to switch over to Hindi, though the question of the official language of the country is yet to be settled to the satisfaction of all. At least so far as the public schools are concerned a change in the medium in favour of Hindi could only do more harm than good in view of the fact that there are few good prescribed text-books of recognised standards in that language.

The continued existence of public schools with their present high standards is largely a matter of the Government's attitude and policy towards these institutions. As an expression of disapproval of the exclusive character of these institutions, the Government have withdrawn the grants originally to them. The criticisms levelled against them have further created apprehensions about the place of public schools in the future educational set up of the country. In this context, the statement of Mr Saiyidain that the Government would not put education in a straight laced jacket and that they would welcome the existence of schools which set higher standards is reassuring.

The Kerala Government must be finding itself in a quandary in regard to the problem of handloom weavers. The Government have accepted loan assistance from the Centre to the tune of Rs 64 lakhs for the introduction of powerlooms in the State. How the programme could be successfully implemented without entailing rise in unemployment especially in the rural areas, it is difficult to foresee. The problem of unemployment that introduction of powerlooms would result in, would be of a serious nature considering that one powerloom alone is capable of displacing about 10 handlooms.

Mr M. Somappa, Chairman of the All-India Handloom Society has urged the Kerala Government to utilise the loan assistance of the Centre to improve the conditions of the weavers instead of in the installation of powerlooms. This is an argument which ignores the more important question of the capacity of the handlooms to progress in a state of competition with the modernised mill sector. The high cost of production is a disadvantage with the handloom industry which has to be taken into account in any policy meant to benefit the handloom weavers. The case for the installation of powerlooms rests on this very consideration of reduced cost of production compared with the handlooms, the cost of production in the powerlooms being estimated at a level 15 to 20 per cent lower than in the handloom industry.

Subsidisation of handlooms thus involves the sacrifice of the distinct benefits in terms of quality, efficiency and economy, credited to powerlooms. The Textile Enquiry Commission had in its report made out a case for the conversion of handlooms into powerlooms as the only possible solution to the frequent crises which the handloom industry had been experiencing at regular intervals. Arguments about the unemployment advanced against the introduction of powerlooms is valid only in the case of wholesale displacement of handlooms which certainly could be averted by a phased programme for the installation of powerlooms, and provision of alternative occupations to those thrown out of their jobs.

The attempt of the Kerala Government in thus solving the problems of handloom weavers by the introduction of powerlooms would be watched with interest since the feasibility of further conversion in other States would depend essentially on the success of the Kerala Government's programme.

★

Spices and Foreign Exchange

Though spices and cashew are important foreign exchange earners, attempts to exploit their potentialities for earning more foreign exchange have not been as vigorous as could have been wished in the

Handloom Vs Powerloom

present context of foreign exchange shortage. Cultivation in this sphere is still marked by unscientific methods and therefore has to go a long way to reach the standards of cultivators in foreign countries. In cashew cultivation while there are stray cases of individual trees yielding as much as 100 lbs, the average yield in the country does not amount to more than 10 lbs. What the industry thus earns by way of foreign exchange is more or less neutralised by the foreign exchange expended upon the imports which in view of the insufficiency of internal production have become necessary to feed the cashew industry in the country. A further source of drain lies in the absence of cultivation of particular types, for which however the demand in the country is of a sizable order. For example, on the imports of cloves alone, it has been estimated that a sum of Rs 1.6 crores have been incurred on an average during the last three years. Development of spice and cashew cultivation with particular reference to possibilities of extending their acreage and raising the yield per acre is of overwhelming importance.

The need to start development schemes was first underlined by the Spices Enquiry Committee. The committee in its report outlined a number of measures for introduction as part of the development schemes. The establishment of a number of research stations for the development of spices followed the recommendations of the Committee. The Government of India also sanctioned a dozen schemes additional to those recommended by the Committee. As an outcome of this new drive towards improvement of yields in cashew cultivation Brazilian trees have been introduced in the country. Though the suitability of the Brazilian varieties has been proved beyond doubt the area covered by those exotic varieties forms a small part of the total area. In the absence of rapid improvement in the yield per acre the targets fixed under the Second Plan would be difficult to achieve.

One of the problems faced by spices is erratic fluctuations in the prices of these articles. In conditions of such movements in prices one of the main incentives for increase in production would be ineffective. The unfavourable effects of such behaviour of prices on incentive and consequently on production and the need to overcome them was stressed by Mr C. M. Poonacha the Minister for Industry and Commerce in the Mysore Government in the course of his address to the Seminar on spices and cashewnut held at Mercara last week. Mr Poonacha has suggested the setting up of market boards for spices as a first step in assuring adequate return to the producers.

The waste involved in the non-utilisation of about 2 lakh tons of

cashew apples was also brought to light at the seminar. Research into the food value of cashew apples should point to useful outlets for the utilisation of cashew apple.

★

Allwyn Metal Works

The production of the thousandth bus body by the Allwyn Metal Works Limited was celebrated at a function at the premises of the factory at Hyderabad last week. This is an achievement of no mean order considering that the production of bus bodies represents a highly specialised job requiring great capital and other resources. The fact that the Company is now in a position to plan for large-scale exports of its products in the immediate future is a measure of the progress the Company had made since its start in 1946. The Company has the additional distinction of being the first successful manufacturers in the country of half lift-type windows.

In the chequered progress of the company which is owned by the Andhra Pradesh Government it was the help given by the Birlas which put it on the road to stability and efficiency. More than the achievements in the sphere of production it is the co-operation between the public and private sector in industrial development which is illustrated in the Company's working, which is important. Mr N. Sanjiva Reddi, Chief Minister, Andhra Pradesh who was the chief guest on the occasion, referred to this as one of the most pleasing aspects of the working of the company. On the basis of this happy co-operation between the private and public sector in the case of Allwyn Metal Works he dismissed the controversy between the relative merits of the two sectors as totally irrelevant and frivolous. By taking up the management of the company at a critical stage of its working the private sector has demonstrated its capacity to respond to appeals for cooperation.

Production of refrigerators is an additional line of activity of the company, though progress seems to have been hampered by foreign exchange difficulties. Speaking in this connection Mr G. S. Nevatia, the representative of the Birlas in the Company, stated that while the installed capacity was about 10,000 refrigerators, foreign exchange difficulties limited production possibilities to 1,500 to 2,000 a year. The adverse effects of restricted allotment of steel on the production of steel office and household furniture by the company was also referred to by Mr Nevatia in his speech.

With possibilities of entering into new lines such as manufacture of integral bodies, trolley bus bodies and diesel rail coaches for the railways, the company is assured of a bright future.

Illegal Trading in Spices

THE recent spurt in the prices of Spices such as pepper, cinnamon and cloves, and reported illegal forward trading in these commodities have been causing a serious concern to the Forward Markets Commission for some time past. In fact, the Commission has asked the Associations concerned to take immediate steps to stop illegal trading.

Acting on the Commission's directive, all the Associations concerned have warned their members against entering into any types of contracts which contravene the rules of non-transferable specific delivery contracts and have advised them to abstain from entering into option deals. The Commission has also pointed out that it may take drastic measures, including legal action against dealers indulging in such transactions. In such an event, the dealers will themselves be responsible for their action.

Feeling has been growing in the Bombay Pepper market that the City should be recognised for conducting futures trading in the commodity. At present, futures trading is being conducted only at Cochin. It is pointed out, in this connection, that Bombay's case has become stronger in certain respects in the light of developments in the past fifteen months. Nearly 25 per cent of the country's production comes to Bombay, which also handles an estimated 75 per cent of India's export trade. In these conditions, the need for hedging facilities has increased.

Meanwhile, the Chairman of the Indian Pepper and Spice Trade Association has stressed the need for a reduction in freight rates for shipping pepper to America on account of a precipitate fall in the price of the commodity. He feels that the weighing and unloading charges as well as re-cleaning and warehousing expenses in the USA have been disproportionately high.

Black pepper exports are slowly, but steadily making up the leeway. For the month of March, exports from India improved to 39,614 cwts though, as compared to a year ago, they were lower by about 6,000 cwts. For the five months ended 31st March 1958, total exports came to 151,501 cwts as against 176,263 cwts for the corresponding period of last year.

Exports of Ginger, during the current season, have remained very poor and, for the five months ended 31st March 1958, they have totalled 62,466 cwts as against 133,729 cwts, thus showing a decline of 71,263 cwts.

In the Alleppey market, rates are quoted at Rs 600 per candy for superior Palai variety and Rs 12.50

per candy lower for the interior Thekkan variety. Ginger is neglected around Rs 212.50 per candy. In the Calicut market, Wynaad pepper is quoted at Rs 650 and the Country variety at Rs 625. Ginger best quality is quoted at Rs 235 per candy.

Coffee

Applications from nearly 120 small Coffee planters for assistance for extending and improving cultivation have so far been sanctioned by the Indian Coffee Board. This assistance is being provided under the Five-Year Plan for increasing the production of coffee which was launched in October, 1956. The total amount sanctioned up to the end of February was about Rs 5.4 lakhs. A number of applications.

registered during 1957-58 for grant of loans, are also being considered. Bigger growers are being helped by higher advances against the value of the crop.

Groundnut

Conditions in the Madras Groundnut market developed a firmer tendency, thanks to a steady buying enquiry. Arrivals averaged 60 to 65 tons per candy, local crushers taking up these quantities. Business was done in summer crop peanut at Rs 149 to Rs 151 per candy. In winter crop, business was reported around Rs 154 per candy.

Arrivals of the summer crop in the South Arcot district centres are estimated at about 175 tons a day, Villupuram alone reporting

arrivals of about 100 tons a day. Arrivals are stated to be small in the Tanjore district centres.

In the Groundnut Oil section, the ready rate was quoted at Rs 315 as against Rs 308 per candy in the previous week. Calcutta interests took up sizable quantities and they were the main supporters of the market.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were on the same level as previously and clearances were good with prices ruling unchanged. In the export section, demand was good. Arrivals of Buff hides were small and prices remained firm. Arrivals and clearances of Cow Calf were better with prices having advanced

by about 4 nP per pound. UK buyers continued to be interested in light weight fourths. Arrivals of Buff Calf were on the same level as in the previous week with prices ruling firm.

In the Tanned Skins section, market quality Goat skins showed no change in prices. Sheep skins of the heavily-adulterated type showed a reduction of 6 nP per pound, while the lesser-adulterated types remained unchanged.

In the Raw Skins section, Bangalore Goat skins were reported Rs 10 to Rs 15 higher per 100 skins and Sheep skins Rs 10 to Rs 20 higher. However, in Bez-wada, goat skins were reported Rs 5 easier with sheep skins ruling unchanged.

THE BENGAL FLOUR MILLS CO. LTD.

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting (being the One Hundred and Twenty-fourth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Friday, the 20th June 1958, at 12 noon to consider

the Profit and Loss Account for the year ended 31st December 1957 and the Balance as at that date, the Report of the Auditors thereon, the Report of the Board of Directors, to declare a dividend, to transact other ordinary general business of the Company and the under-mentioned special business.

SPECIAL BUSINESS.

NOTICE is also hereby given of the following Resolution which will be proposed as an Ordinary Resolution, of which special notice dated 8th May 1958, as required by Section 281 of the Companies Act 1956, has been received:—

"That pursuant to the provisions of Section 281 of the Companies Act 1956, it is hereby declared that the age limit imposed by Section 280 of that Act shall not apply to Mr. S. C. Law, a director of the Company, who has attained the age of 65 years on 14th January 1958 and that the said Mr. S. C. Law be and is hereby re-appointed a Director of the Company."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 6th June 1958 to 20th June 1958 both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.
D. MANSON,
Secretary,
Managing Agents.

21, Netaji Subhas Road,
Calcutta, 9th May 1958.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

Indian Finance

May 24, 1958

Indecisive and Lethargic

Watch-Dog Writes:

IN the absence of any helpful developments, stock markets have been indecisive and lethargic during the week under review. Reports regarding the labour situation in Jamshedpur have a depressing effect on sentiment. Operators are reluctant to enter into commitments owing to various other uncertainties. Although a slight recovery in prices is noticed, the undertone remains hesitant.

Except for a sharp setback in the speculative issues, conditions in other sections on the Calcutta Stock Exchange ruled generally steady.

Sentiment on the Bombay Stock Exchange was dominated by the reports of the labour situation in Jamshedpur.

On the Madras Stock Exchange, price movements were uninteresting.

Business on the London Stock Exchange did not show any marked expansion.

Wall Street closed barely steady.

Calcutta

Calcutta, Friday Evening.

SENTIMENT on the local Stock Exchange remained generally depressed last week when there was little incentive to boost up the feeling of operators. Main factors, affecting the market sentiment, were the strike situation in Jamshedpur, the threatened all-India strike by port and dock-workers, the difficult conditions experienced by textile industry, anxiety to know the quantum of increase in the retention price of steel and the delay in the announcement of an increase in cement prices. Above all, there was a feeling that fresh investible funds might not be available in view of the possibility of a return to stringent conditions in the money market owing to the subscriptions to the new loans, which would be followed soon by the issue of State Loans. Thus, the week's dealings were characterised by a state of uncertainty.

The Glitgedged market ruled steady. The success of the new loans was the main reason for the improvement in sentiment, and the absorption of funds hardly provided any tightness in the money market owing to the comfortable supply position. There were some stray buyers in some of the dated securities, which recorded fractional gains. 3 per cent 1986 Conversion Loan opened at Rs 71.08

and, after improving at one time to Rs 71.55, receded at the close to Rs 71.30.

Bank shares were generally quiet due to some selling pressure. Hind were marked down to Rs 51.37 from Rs 52.25, while Punjab National were better at Rs 52.75 against Rs 52.50. United Commercial were a steady feature at Rs 59.25.

With a broadening of enquiries, Jute shares emerged steadier on selective support. The news of the Argentine Government reinstating import licences for Indian Jute goods concerning April shipments led to a feeling that a similar action might be taken in respect of the current month's shipments. Above all, mills were expected to make better profits at current prices for the raw commodity. Howrah were taken up to Rs 16.56 from Rs 15.25; New Central up to Rs 14.81 from Rs 14.37; Union up to Rs 122 from Rs 118; Kamarhaty up to Rs 93 from Rs 87.50; Megna up to Rs 105 from Rs 102; Anglo-India up to Rs 149 from Rs 142 and Alliance up to Rs 81 from Rs 79. Fort Gloster remained very firm at Rs 320 with Gourepore hardening to Rs 255 from Rs 252.

Coal shares ruled steady. The general reaction to the announcement of an increase in the selling prices of coal and coke was one of quiet satisfaction. Operators felt that this would enable well-run companies to earn reasonable profits. Another contributory factor was the withdrawal of strike by coal-miners in West Bengal and Bihar following the settlement between the labour and management. Amalgamated had buyers at Rs 17.37 to Rs 17.50; Central India at Rs 7.53 to Rs 7.75; Western Bengal at Rs 5.78 to Rs 5.87 and Bengal at Rs 240 to Rs 242. Burra-kur, after touching a low of Rs 21.37 from Rs 21.75, recovered towards the close at Rs 21.87.

The Tea section recorded a fair turnover at improved levels, although buying was selective. The main impetus to investors to take a cautious re-entry was provided by the good start by the new season's Darjeeling teas. Latest indications, that the Centre was expected to give relief soon to the industry in regard to export and excise duties, were also a contributory factor. Most prominent were Bishnauth changing hands at Rs 18.87 to Rs 19.50; Gohpur at Rs 21.62 to Rs 21.87; Jayshree at Rs 10.12 to Rs 10.37 and Patrakola at Rs 134 to Rs 136. Hantapara were a steady feature at Rs 115.

In the Sugar section there was a general disposition to await the Government's export policy on the sweet commodity. Carew were enquired up to Rs 7.19 from Rs 7.12, while SKG moved narrowly between Rs 9.87 and Rs 10 and Dyer Meakin between Rs 9.87 and Rs 10.

Textile scrips were generally neglected in the absence of any relief in excise duty. Discouraging annual results for some mills and lower cloth exports during the first four months of this year were also contributory factors. The only bright spot was Kesoram, which were enquired up to Rs 11 from Rs 10.25. Jayshree remained almost

unchanged at Rs 6.44 with New Victoria hovering idly around Rs 1.28

In the week's dealings, Engineering issues were the worst hit under the influence of selling pressure in Indian Irons following weaker Bombay advices. Against the week-end closing of Rs 21.58, Indian Irons opened lower at Rs 21.38 and, after receding further to Rs 20.94, improved towards the close to Rs 21.35. The settlement rate was fixed at Rs 21.06 as against last settlement of Rs 21.68. TEXMACO, were marked down at one time to Rs 17.50 from Rs 17.85 and G. K. Williams to Rs 31.12 from Rs 31.37, to recover at the close to Rs 17.90 and Rs 31.56 respectively. Jessop were, however, enquired up to Rs 20.12 from Rs 19.56. Britannia changed hands at Rs 10.44 to Rs 10.50; Kumardhubi at Rs 9.12 to Rs 9.62 and Marshalls at Rs 5.25 to Rs 5.50. Burn firmed up to Rs 342 from Rs 339 on good investment demand.

As usual, the Miscellaneous section continued to provide several bright features although a few were subjected to slight profit-taking at higher levels. Dealings in Indian Cable and Indian Aluminium were very prominent, thanks to the inclusion of these scrips on the forward list. The scrips were taken up to Rs 35.00 and Rs 14.69 from Rs 31.87 and Rs 14.31, to finish at Rs 34.50 and Rs 14.69 respectively. Dunlop had buyers at Rs 25.56 to Rs 26.00 (Rs 25.81); Aluminium Corporation at Rs 10.87 to Rs 11.06 (Rs 11.06); Indian Oxygen at Rs 18.12 to Rs 18.37 (Rs 18.00); NICCO at Rs 26.00 to Rs 26.50 (Rs 26.50); Rohtas at Rs 17.43 to Rs 18.31 (Rs 18.31); Alkali Chemicals at Rs 14.50 to Rs 14.69 (Rs 14.62); Orient Paper at Rs 29.15 to Rs 30.60 (Rs 30.60); Titagur at Rs 37.12 to Rs 38.12 (Rs 38.00); Sirpur Paper at Rs 10.19 to Rs 10.53 (Rs 10.53); Shree Gopal at Rs 15.30 to Rs 16.25 (Rs 15.81) and India Steamship at Rs 10.84 to Rs 10.94 (Rs 10.91). Figures shown within brackets were the week's closing rates. Indian Copper, after touching a few low of Rs 3.05 from Rs 3.12, finished better at Rs 3.10. BIC moved narrowly between Rs 3.62 and Rs 3.84 with Some Valley hovering narrowly around Rs 4.87.

Bombay

Disturbing reports about the labour situation at Jamshedpur dominated proceedings on the stock exchange throughout the past week. Steel shares recorded a sharp decline on the opening day on adverse news and the downward trend was further accentuated in the subsequent two sessions. Though textiles ruled comparatively steady the depression in steels rendered the recovery ineffective. Toward close, however, a steadier undertone was noticeable on hopes of an early improvement in the labour situation at Jamshedpur.

STEELS:

Tata Steel closed on Monday three points lower on balance at Rs 178.00. Though sentiment continued to be depressed, the closing level on Tuesday was unchanged

at Rs 178.00. Wednesday found the scrip again moving down to close at Rs 177.00. The scrip opened steady on Thursday and by close gained 1½ points to be finally placed at Rs 178.50. After a two-way movement, Indian Irons closed steady at Rs 21.32.

TEXTILES:

Textiles were a steady market. Bombay Dyeing after ruling steady during most part of the week improved to close one point higher on balance at Rs 53.70. Kohinoor was quiet in earlier dealings but recovered to close at Rs 263.50. Central was easier at Rs 81.00. Century after initial setback moved up to finish better at Rs 426.00.

MISCELLANEOUS:

Miscellaneous scrips were generally steadier at close. Bombay Burmah was three points higher on balance at Rs 547.00 Tata Loco was in request at Rs 168.25. National Rayon after initial setback recovered to close at Rs 232.50.

Madras

TRADING on the Madras Stock Exchange was generally dull and featureless. Due to lack of support, Plantation shares drifted further lower, while Textile scrips ruled quiet. Activity in other counters was much restricted.

Textiles: Activity in this section was poor and sellers predominated in several scrips in the absence of relief in excise duty. The only steady feature was Metturs, which improved to Rs 347 on buying support. Lakshmi dropped to Rs 94, while 'A' shares were offered lower at Rs 45. Selling enquiries continued for Coimbatore Pioneers and Coimbatore Spinnings. Travancore Rayons maintained interest at Rs 1332 cd. Buckinghams were quoted at Rs 125 and Bangalore Woollens at Rs 111.

Plantings: Prices of Plantation shares drifted further lower and the result of the bye-election in Devicoolam had not been quite anticipated and sentiment was generally depressed. Tea shares ruled dull. Peermades declined to Rs 20.25, while Twyford were offered at the market rate. Periakaramalams were done at Rs 4.07 and United Nilgiris at Rs 15.30.

Rubber shares were rather sticky with several scrips on offer at slightly below the market rates. Cochim Malabars changed hands at Rs 4.40 to Rs 4.45, while Midlands dropped to Rs 16.10 after being done at Rs 16.20. T.R.Ts. were marked at Rs 6.60 cd.

Coffee shares met with slight profit-taking at the recent high levels. Consolidated Coffees and Coffee Lands were easier at Rs 24.55 and Rs 34.85 respectively. Cowcoody, however, dropped to Rs 10.40 on some selling pressure, while Savamalais were done at Rs 4.20 and Shevroys at Rs 2.10.

Miscellaneous: This section accounted for a good turnover. Mysore Stonewares were bid at Rs 12, while buying enquiries were seen for Radio Electricals at the market rate. FACTS were done at Rs 5.05 in the absence of buying support. Spencer Ordinaries were, however, on good favour up to Rs 17.35. Aluminium Industries had buyers up to Rs 13.32 and Railis up to Rs 33.37. Parry's Confectionery were slightly lower at Rs 1 with Ashok Leylands quoting around Rs 4.15 cd.

London

THE big event on the London Stock Exchange was the announcement of a cut in the Bank Rate from 6 to 5½ per cent. The news took the market by surprise. Business, however, failed to show any marked expansion except in the Glitgedged section, where prices steadily improved on an increased demand. Rubber shares were quietly steady, but Tea shares improved.

"...and a bonus of goodwill to the management—
for installing the
'Tushar' WATER COOLER!"

QUICK DIVIDENDS in improved staff relations—and greater efficiency! That's what investment in a TUSHAR Water Cooler brings you.

The TUSHAR provides a constant supply of cool, hygienic drinking water for your staff and clients. It's easy to operate and most economical to run. Why not get in touch with Voltas Limited, and order a TUSHAR now?

'Tushar'
WATER COOLERS

A modern must for factories, offices, schools, hotels, hospitals and colleges.

Available ex-stock from:

VOLTAS

VOLTAS LIMITED

Head Office: Bombay 1,
8, Netaji Subhas Road, Calcutta 1.

11, Mahatma Gandhi Marg, Hazratganj, Lucknow.

MADRAS—NEW DELHI—BANGALORE—COCHIN—AHMEDABAD—
SECUNDERABAD—NAGPUR—JAIPUR—COIMBATORE

With the TUSHAR you get

- A continuous supply of instantly-cooled water at the touch of a button—no unhygienic refilling or storing.
- A choice of two handsome models.
- Ease of installation.
- Economical to run.

Indian Finance

HIGHLIGHTS OF THIS ISSUE

The Sherlock Holmes who is our World of Finance scribe detected that the Reserve Bank had subscribed Rs 50 crores to the 1958 New Loan programme. The net cash subscriptions to the New Loan amounted roughly to Rs 132 crores.

Does the fact that the Reserve Bank had to take so large a chunk of it, mean that the 1958 New Loan programme is a failure?

Read World of Finance to find the proper perspective in which the New Loan programme just ended must be studied.

"I'll tell you something else about cotton"

Talking about cotton...very few people know that the country spends something like Rs. 50 crores a year importing superior cotton—from Egypt, U.S.A. and East Africa. This is indeed a serious drain on the country's foreign exchange resources, but a genuine effort is being made to increase indigenous production of superior cotton primarily by increasing the yield per acre. How is this being done?

Improved seed and fertilizers, wider irrigation and the control of cotton pests and diseases—these are the main lines of attack. By far the most serious pest is the cotton bollworm, which causes a tremendous amount of damage each year. Control can be effectively achieved by using Shell endrin—a Shell petroleum chemical which, as field tests have shown, can increase cotton production by up to 40%.

And for every rupee spent on importing Shell endrin, as much as five rupees of foreign exchange can be saved through increased production of superior cotton. So it's money well spent—from everybody's point of view.

SHELL Chemicals
can save crops

and Foreign Exchange too!

Anticipation of Cheerful Mood

Investment Gossip :

THERE has been a practically im-
perceptible improvement in the
tone and tenor of the Stock Ex-
changes. Jamshedpur has returned
to near normalcy, and steel quo-
tations have consequently shrugged
off their erstwhile lassitude.

Sentiment is also aided by the
fact that the New Loan has hardly
affected the money market. The
Deposits of Scheduled Banks fell
by a scant Rs 12 crores in the re-
levant period, and so it is reasoned
that there has been no considerable
"diversion" of funds from equity
to gilt-edged.

Of course, the State Government
loans are in the offing; and it may
be that these will make a greater
call upon the Deposits of the bank-
ing system. But, even then, it is
by now clear that the additional
resources accruing to banks are of
such dimensions as to ensure that
there is, in the immediate future,
no threat of monetary stringency.

But turnover was reported to be
at a somewhat less brisk pace,
though activity in miscellaneous
industrials has consistently been at
a rising tempo. Papers in parti-
cular are popular. Even Jutes, in
spite of some poor results, are hold-
ing fairly firm.

I again suggest that the cause of
all this steadiness should justly be
attributed to that subtlest of all
influences—the hawa. You hear the
same thing these days, that, on the
present reckoning, the long-term
outlook is undoubtedly good.

Then, the difficulties that the
country appears to have run into,
in respect of foreign exchange,
have pointed to the possibility of
Government taking suitable steps
to provide a fillip to exports.

Talked about in the market place
is an imminent reduction in the
export duty on common teas. Any
time, you hear, any time.

Similarly, it is taken for granted
that Government will perforce
come up with a scheme for export
of sugar: some sort of subsidy is
expected.

It is, therefore, not altogether
wrong to suggest that the market
is in a mood of anticipatory cheer.
Thus far, a general upward move-
ment has been circumscribed by a
particular weakness in speculatives.
Once the cause of this peculiarly
debilitating influence on specu-

tives is removed, it seems certain
that a swifter improvement will be
discernible in stock exchange prices.

It would be foolhardy on my
part to predict when exactly this
strident upward trend is likely to
commence. But one thing is sure.
That is, that we can assert, with
some degree of confidence, that we
have possibly left behind us any
chance of a general fall in stock
exchange quotations.

In this light, I would like to re-
iterate that it is time for the Inves-
tor, out of his accrued funds, to
make some shrewd purchases of
blue-chips.

£ R \$

Investment Notes :

JAYSHREE Textiles Limited has
announced the issue of 2,500 Se-
cond Mortgage Debentures of Rs
1,000 each of the face value of Rs
25 lakhs, bearing an interest of 7
per cent per annum, taxable. The
proceeds of the proposed issue are
to be utilised as follows:—(a) the
sum of Rs 13.71 lakhs for repay-
ment of the principal money se-
cured by the First Mortgage De-
bentures and (b) the remaining
amount of Rs 11.29 lakhs for cap-
ital expenditure towards expan-
sion. The company may redeem
the whole or any part of the De-
bentures on or at any time after
1st January 1963, at par, plus ac-
crued interest on giving not less
than 6 months' notice.

Killick Industries, Bombay, have
proposed to issue 25,000 new Ordi-
nary shares of Rs 100 each at a
premium of Rs 20 per share in the
proportion of one share for every
5 shares held. The sanction of the
Controller of Capital Issues has
been obtained in this connection.
The new shares will rank for divi-
dend with the existing shares on
the amounts paid-up from the date
of allotment.

The Madras Stock Exchange
Association, which is conducting
cash business for the last several
years, is contemplating to intro-
duce forward trading in eleven
popular scrips, with effect from
July 4. It is understood that the
Bank of India will act as the clear-
ing house; and settlement will be
effected on a fortnightly basis. The
scrips, that are placed in the for-
ward list, are Blue Mountains,
Periakaramalai, Cochin Malabar,
Consolidated Coffee, Ouchterlony
Valley, Madura Mills, Lakshmi
Mills (both shares), Travancore
Rayons, Deccan Sugar and Alumi-
nium Industries.

Investment Briefs :

Kanknarrah and Kamarhatty, in
Jardine Henderson Jute group, have
passed over the dividends, both on
the Ordinary and Preference
shares, again for the year ended
31st December, 1957.

Marshall Sons have maintained
the dividend at 20 per cent for the
year ended 30th June, 1957.

India Sugars & Refineries have
reduced the dividend from 11½ to 10

per cent for the year ended 30th
September, 1957.

Bangalore Printing & Publishing
Company has maintained the divi-
dend at 10 per cent for 1957.

£ R \$

Disappointing Jute Results

Balance-Sheet Reviews :

THAT the jute industry has conti-
nued to experience difficult trading
conditions is a known fact. Three
mills—Cheviot, Delta and Orient—
in Andrew Yule group, which have
just issued reports, show continued
working losses despite the fact that,
last year, India exported a record
quantity of jute goods. Though
these mills have paid dividends on
the Preference shares after trans-
ferring from Reserves, the payment
of any dividend on the Ordinary
shares, especially by Kanknarrah
and Kamarhatty, in Jardine Hen-
derson group, now appears to be a
far cry.

Judged by the present situation
in the jute mill industry, it seems
that the debit balances will con-
tinue for some time to come and
it will, indeed, be a far off day
when they may possibly resume
to pay any dividend at all on the
Ordinary shares, especially when
trading conditions have turned out
to be adverse in the absence of any
demand for jute goods from over-
seas buyers. To make matters
worse, the situation in Argentina
is too bad to hope for any substan-
tial orders from that quarter. The
only hope for the industry, there-
fore, lies in the expansion of the
internal market.

£ R \$

Cheviot Jute

Despite an increase in sales from
Rs 91.86 lakhs to Rs 94.79 lakhs,
the Cheviot Jute Mill has reported
a loss, after providing for Depre-
ciation, of Rs 82,708 for the year
ended 30th November 1957 as
against a loss of as much as Rs
3.97 lakhs in the previous year. A
sum of Rs 1.08 lakhs has been
provided for Depreciation against
Rs 1.1 lakhs. After transferring
Rs 1.73 lakhs from General Reserve,
the directors have transferred Rs
23,000 to Wealth Tax and recom-
mended the dividend only on the
Preference shares. Last year, an
Ordinary dividend of Rs 2 per
share was paid.

£ R \$

Delta Jute

This mill has also reported a loss
of Rs 2.7 lakhs for the same year
as against a loss of Rs 2.69 lakhs
in the previous year. Sales are
slightly lower at Rs 1.02 crores
against Rs 1.3 crores. Depreciation
has been raised to Rs 1.25 lakhs
from Rs 66,000. After making a
transfer of Rs 3.3 lakhs from
various Reserves, the directors
have allocated Rs 34,500 to Wealth

Tax and recommended the divi-
dend on the Preference shares
only. A dividend of Rs 5 per
share was paid on the Ordinary
shares in the previous year.

£ R \$

Orient Jute

The Orient Jute Mills Company
Limited has incurred a loss of Rs
55,117 as against a loss of Rs 2.25
lakhs in the previous year, while
sales are lower at Rs 94.39 lakhs
against Rs 97.60 lakhs. The De-
preciation amount is reduced to Rs
1.00 lakh from Rs 1.10 lakhs. After
transferring a sum of Rs 72,000
from General Reserve, the directors
have set apart Rs 22,000 for Wealth
Tax. The Ordinary dividend is
passed over against Rs 5 per share.

With a view to having direct
contacts with overseas markets,
the above three mills, together
with other jute mills in the same
managing group, have formed a
new company under the style
"Budge-Budge & Allied Jute Mills
Exports (Private) Limited". All
the Jute mills have subscribed equ-
ally to the capital of the newly-
formed company.

£ R \$

Podar Mills

In the context of extremely dif-
ficult trading conditions through-
out the cotton textile industry
had to pass last year, the results
of the Podar Mills Limited, for the
year 1957, should be considered
satisfactory. Reviewing the work-
ing of the year, the directors have
stated that the margin between the
raw material and yarn and cloth
prices considerably narrowed down
last year.

Despite a rise in sales, the pro-
fit for the year is considerably
lower at Rs 1.31 lakhs as against
Rs 10 lakhs in the previous year.
The provision for Depreciation is
slightly higher at Rs 1.34 lakhs
against Rs 1.25 lakhs. No provision
has been made for Taxation and
Wealth Tax as the same is covered
by the provision for taxation made
in the previous years.

In view of the decline in the
profits, the directors have lowered
the dividend from 12 to 10 per
cent, which includes Rs 2 by way
of bonus for the previous year.
The company is carrying huge
stocks of the finished products of
the value of Rs 47.46 lakhs, which
are more than 2½ times as com-
pared to the previous year's stocks
amounting to Rs 18.76 lakhs. As a
consequence, the third shift of the
spinning department, started by the
mills in February 1957, was closed
by the end of the year.

£ R \$

Svadeshi Mills

The results of the Svadeshi Mills
Company Limited are in line with
the trend of textile profits released
so far. The net profit, after provid-
ing Rs 13.68 lakhs for Deprecia-
tion (Rs 14.39 lakhs) and Rs 2.50
lakhs for Wealth Tax (nil), shows
a substantial reduction to Rs 6.78
lakhs from Rs 31.76 lakhs in the
previous year. After transferring

London and Overseas Representatives: Baptist Smith, Keith & Slater Ltd, Napier House, 24/7 High Holborn, London W.C. 1. Telephone: Holborn 5022.

Rs 9.75 lakhs from General Reserve No 1, the directors have allocated a sum of Rs 6.78 lakhs to General Reserve No 2. A dividend of Rs 9 per share is recommended on the equity capital. Sales total Rs 3.72 crores.

The directors have transferred a sum of Rs 43.86 lakhs from General Reserve to General Reserve No 1 and the balance of Rs 54.13 lakhs to General Reserve No 2. This splitting of the General Reserve into two parts has been done with the object of segregating in the general Reserve No 1 profits which have already been taxed and which are available (if required) for payment of non-taxable dividends.

The General Reserve No 2 consists of other profits, i.e. profits which have either not been taxed or which, for income-tax purposes, have been deemed to have been utilised for payment of non-taxable dividends in the past.

£ R S

Tata Mills

The Tata Mills Limited has reported disappointing results for the past year. After providing Rs 50,000 for managing agents' commission (Rs 1.68 lakhs); Rs 10.25 lakhs for Depreciation (Rs 11.87 lakhs) and Rs 50,000 for Wealth Tax (nil), the net profit is Rs 1.70 lakhs as against Rs 18.27 lakhs in the previous year. With Rs 17,925 brought in from the previous year, and transferring a sum of Rs 5.24 lakhs from General Reserve for the payment of dividend, the amount available for distribution is Rs 7.13 lakhs. A sum of Rs 1.70 lakh has been allocated to General Reserve No 2. The Ordinary dividend is Rs 2 per share.

Sales of cloth, yarn and waste total Rs 3.34 crores against Rs 3.08 crores. Stocks are higher around Rs 79.04 lakhs as against Rs 66.95 lakhs.

£ R S

Ahmedabad New Cotton

The Ahmedabad New Cotton Mills Company Limited has reported a loss of Rs 5.56 lakhs as against a profit of Rs 3.45 lakhs in the previous year. Sales are lower by Rs 10 lakhs at Rs 1.11 crores, while stocks have gone up to Rs 22.38 lakhs from Rs 17.42 lakhs. The directors have, however, maintained the distribution at Rs 20 per share by transferring a sum of Rs 2.55 lakhs from Dividend Equali-

sation Reserve and Rs 79,609 from the Congingency Fund.

£ R S

Victoria Mills

The Victoria Mills of Bombay has earned a lower gross profit of Rs 10.68 lakhs as against Rs 21.11 lakhs in the previous year. The Directors have provided a sum of Rs 7.29 lakhs (Rs 7.07 lakhs) for Depreciation; Rs 1.73 lakhs (Rs 3.24 lakhs) for Development Reserve and Rs 45,000 (Rs 2.50 lakhs) for Taxation. The dividend on the Ordinary shares has been maintained at Rs 20, including a bonus of Rs 5 per share. Sales have fetched Rs 2.02 crores against Rs 2.03 crores.

£ R S

Tarun Commercial Mills

The Tarun Commercial Mills Limited has reported a gross profit of only Rs 3.57 lakhs as against as much as Rs 8.22 lakhs in the previous year. The directors have transferred a sum of Rs 1.50 lakhs from General Reserve. The Depreciation amount is reduced to Rs 1.30 lakhs from Rs 3.88 lakhs and Taxation provision to Rs 84,000 from Rs 1.30 lakhs. The dividend is reduced from Rs 11 to Rs 10 per share. Sales are lower at Rs 1.27 crores against Rs 1.48 crores.

£ R S

Bengal Flour Mills

Thanks to the installation of a new milling plant, the Bengal Flour Mills Company Limited has been able to report an increase in earnings for the year ended 31st December, 1957. Despite a decline in sales from Rs 2.18 crores to Rs 2.14 crores, the net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 9.11 lakhs as against only Rs 5.14 lakhs in the previous year. In respect of allocations to Funds, the Depreciation amount is raised to Rs 1.79 lakhs from Rs 1.66 lakhs and Taxation to Rs 10.88 lakhs from Rs 4.52 lakhs. The dividend is, however, maintained at 25 per cent.

The directors have planned a further extensive programme of modernisation and improvement. This is at present held up owing to the difficulty in obtaining foreign exchange; but it is necessary to build up funds against the time when it will be possible to purchase imported plant. They have, therefore, transferred a sum of Rs 5.00 lakhs (Rs 2.00 lakhs) to General Reserve with this idea in view.

Employment and Labour Policy

CAN there be a firm basis for any programme for improvement of emoluments and amenities enjoyed by industrial labour without a simultaneous effort to tackle the problem of unemployment? Though this question is neither asked nor answered at Labour Conferences, it casts its shadow over their proceedings and it endows them with an air of unreality. Recently, industrial relations and labour legislation in the country were comprehensively surveyed at two high level conferences held in Nainital. From the Labour Ministers' Conference emerged the important recommendation for integration of security services on the lines suggested by the Menon Committee. Other recommendations of the conference relate to extension of the Provident Fund Act to small establishments employing twenty persons or more, increase in the contribution from 6 1/4 per cent to 8 1/3 per cent both for employers and workers, and raising the employers' contribution under the State Insurance Scheme to 4 1/2 per cent. While the recommendations considered by themselves appear not only unexceptionable, but also urgently necessary, it is not clear whether the impact of the additional burdens on industry and the consequent repercussions on employment have been fully taken into account. The adverse effect on unemployment is likely to be particularly pronounced at a time when shortage of materials and rigours of import control have created serious difficulties for trade and industry in day to day working. This raises the further question whether the purpose of the Labour Conference is confined to a discussion of the measures to promote the welfare of the existing body of industrial labour and their inter-caste squabbles, and whether a conference at which the employers, workers and Government are represented has no responsibility to consider all measures against the background of the overall employment situation in the country.

In his address to the Indian Labour Conference, which was held immediately after the conference of Labour Ministers, Mr G. L. Nanda, the Union Minister for Labour and Employment, did make a reference to the shrinkage of employment in establishments, and said he could not understand the phenomenon in the context of a developing economy. But there is no evidence in the discussions that followed of any awareness of the gravity of the problem, or of the bearing of the decisions taken at this conference and the preceding one, on the volume of employment in the country. Mr Nanda had pointed out that, if the total outlay on the Plan had to be limited to Rs 4,500 crores, the employment content of the Plan would shrink from eight million jobs envisaged in the original Plan to 6.5 million. The result will be that the total volume of unemployment in the country at the end of the Plan period will be nearly double that at the beginning. The results of the failure of the Plan to achieve even its modest employment targets can be catastrophic. The decline in employment opportunities resulting from the curtailment of outlay in the public sector must be compensated by the adoption of realistic policies which will encourage expansion of employment in the private sector, and especially in small industries. For the worker, a job today is

more important than the receipt of a pension at the end of thirty years' service; and the majority of them would prefer the former. In view of the expectation of life in this country, and the hazards that beset the possibility of surviving to the age of retirement, they cannot be blamed for taking a shortsighted view. The problem of unemployment in India is too large to be amenable to any practicable scheme of relief. Mr Nanda dropped a suggestion of an unemployment levy which, if implemented, may benefit employees of concerns which are obliged to close down. But it does not hold even the distant promise of relief to the vast army of the unemployed.

The problem of unemployment has to be tackled at the highest level as it involves questions of industrial policy rather than industrial welfare. The welfare measures in fact will have no adequate basis and there will be no assurance of social stability until it is possible to break the hard core of unemployment. Labour leaders should be wise enough to recognise that unemployment sets a severe limit to the improvements that they can hope to extract by exerting pressure, which is not always legitimate, on employers. But from the reports appearing in the press, none of the three parties to the labour conference showed any awareness of this ominous challenge. While intrusion of politics in trade union activity was rightly disapproved, nobody seems to have thought of the political significance of the existence of a vast army of the unemployed or of how continuous frustration breeds a dangerous mood of receptivity to desperate remedies. The leftists may be taking too much for granted, if they think that the unemployed are always on their side. In the eyes of the unemployed, those who have managed to secure a job, especially in organised industry with its statutory benefits, belong to the privileged classes, pampered alike by the Government and labour leaders. They will be prepared to follow any demagogue who promises them jobs, to break up any Workers' Union irrespective of its party affiliation. It will be tempting fate to bank on the fact that no such demagogue has yet put in an appearance.

The two important topics which engaged the attention of the conference were the closure of industrial undertakings, especially in the cotton textile industry, and the problem of industrial relations. The reports of the conference proceedings indicate the apparently unbridgeable gulf between the respective standpoints of employers and of organised labour. The employers consider that lack of purchasing power among the masses, the decline in demand and consequent accumulation of stocks, shortage of working capital, heavy taxation and difficulties in getting essential materials are responsible for the closures. Mr G. D. Somani, representing the employers, told the conference that, in the period of the last 20 months, even efficient units in the textile industry had been forced to draw on their reserves. According to figures published by Government, twenty-six mills have closed down and another 36 mills have been forced to curtail operations. The workers' delegates, on the other hand, appear to be convinced that there is nothing more to it than incompetence, if not worse. Mr S. A. Dange went so far as

to declare that the closures arose from "pure fraud" and suggested a "dose of preventive detention" as the remedy. As Mr Dange pointed out, it may be that this weapon has been employed in the past against labour leaders. But apart from making scores even, it is not clear how its application to recalcitrant managements will enable mills which are working at a loss to continue operations. The provisions of existing legislation regarding closures are sufficiently onerous to deter managements who wish to close down their concerns for other than inescapable, economic reasons. They may prefer incarceration to incurring further financial loss, for that will at least endow them with the essential qualification for political leadership, which they can use with great effect in organising a party of conservative elements in the country whose strength is not negligible. It is, however, a matter for gratification that the Labour Minister has taken a balanced view of the situation. In his address, he had referred to all the relevant factors which had led to the present impasse.

The Conference has endorsed the suggestion for the appointment of an expert committee to examine individual units and for a system of advance intelligence to enable action to be taken at the first symptom of trouble. The Conference has also recommended grant of development loans to the textile industry to enable the mills to modernise their equipment. The accumulation of stocks, in most cases, is in respect of coarse and medium varieties of cloth. In his presidential address to the first quarterly meeting of the Bengal Mill Owners' Association, Mr B. K. Birla had referred to this problem and suggested that the quotas of imported long staple cotton should be increased so that mills could manufacture fine grades which are in demand. It is satisfactory to note this suggestion has been endorsed by the Conference, which has recommended a liberal supply of imported cotton. The conference has also recommended a reduction in the margin on loans granted by the State Bank to the cotton textile industry.

One of the controversial recommendations relates to the amendment of standing orders, so that two months' notice will be required before any shift was closed, and three months' notice before total closure. The engineering industry, which lives from hand to mouth, will find it particularly difficult to give extended notice before closure. The question of reducing the period of notice in individual cases, where it will cause hardship, has been left to the discretion of State Governments.

The most notable achievement of the conference was the agreement reached among the four representative workers' organisations on a code of conduct governing inter-union relations. On the question of compulsory adjudication, the consensus of opinion at the two Conferences appears to be against its hasty abolition. This does not mean that the system has been working to the satisfaction of either workers or employers.

The judicial procedure with its inevitable delays is calculated to maximise dissatisfaction on either side. By the time one set of grievances has been disposed of, sufficient time has elapsed for new ones to develop. Having set

Indian Finance

Established 1928

"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

"Our philosophy is based not only on a fair deal for labour but is also entrenched in a genuine conviction that in organised modern industry, a fair deal for labour can work smoothly only if it is made through a representative Union of the workpeople. We further believe that it is better to deal with a representative Union rather than with an unorganised mass. It is our experience that even in a country where trade unionism is in its formative stage, a genuine belief in dealing with labour through trade unions stabilises unionism and strengthens it. This in turn will, to a great extent, instill in trade unions a sense of responsibility and a realisation on their part of the obligations of workers to the industry."

It is along the lines of the Indian Aluminium Co's policy of collective bargaining that one can see real progress towards sound industrial relations. Workers, through the various joint committees, are associated with the management in any major changes that take place in

"Really speaking, if one wants an agreement desperately enough, one gets it, and if one acted as if one wanted it, he would get it. There will inevitably be some difficulties, perhaps even a breakdown of the talks. The important thing is to keep on talking. If one gets stuck on one point, move to something else. In other words, narrow down the area of discussion. Success in one aspect will make for success in other aspects also. Another point to note is to keep temper down although, naturally, very often you come to the point of losing it.' and 'It is true the saying that the management gets the union it deserves!'"

Income should mean world income, or it should mean nothing. A hypothetical case is of a rich mill-owner having lands cultivated by tenants (who signed nowkarnamas) yielding Rs 5,400 net per annum, and a bona fide cultivating big family with an income of Rs 6,000 net per annum (all agricultural). To axe the latter and let alone the former would amount to rubbing Communism against the grain.

Is the game worth the candle? Partitions, sales, sub-marginal lands, scattered plots, immobility of tenants and agricultural labourers, and above all, the absence of an effective administrative machinery—all these must contribute to a sorry tale of high-sounding promises from house tops followed by the emergence of a rat out of a mountain.

So far the pattern of events was not uncommon. The company had not been reactionary. They had recognised and negotiated with the union, had introduced a bonus scheme by agreement, and improved wages, but they had not been able to establish sound relations or convince the union of their good intentions. There were the usual complaints of victimization from the union, and the usual

All this would seem to suggest that Belur has been unusually fortunate, but it must be remembered that without constructive leader-

A Case Study in Industrial Relations

By M. SUR

The Land Reforms Bogey: Latest Phase in Andhra Pradesh

By S. KESAVA IYENGAR

THE proposed upgrading of the ceiling of landholdings in Andhra Pradesh State from Rs 3,600 net per annum to Rs 5,400 net per annum is a welcome change, but even this figure is quite niggardly compared to temporary costs of living and avowed aspirations of the Indian Welfare State. Rs 5,400 net per annum works at Rs 90 per capita per month (assuming that the average family consists of five persons), and in so far as the bulk of cultivators depend entirely on agriculture, this figure must result in the total disappearance of all agricultural enterprise in the State at a time when big and small irrigation works are fast increasing perennial irrigation facilities. Distress cultivation can never make India self-sufficient in food grains, and enable the country to earn sufficient foreign exchange for meeting developmental investment costs.

It is common knowledge that among the

Vacuum Fillers

Coyly, and with many gyrations, the PSP has cast itself for the role of successor to the Indian National Congress. The chairman's address, as well as the resolutions, at the party's annual conference held in Poona have drawn a lurid picture of the disintegration of the Congress which, they fear, would leave a political vacuum and have affirmed the party's heroic resolve to fill it. There must be some strange influence in the atmosphere of Poona, shades of Peshwas or spooks of red-faced colonels, which encourage illusions of grandeur. Anticipating the disappearance of the Congress, the PSP asks "Koi Hai", and itself answers, "Huzoor." The PSP proposes; and the people will dispose.

It is surprising that a party which regards itself as an instrument of "democratic socialism", should see its opportunity in the disintegration, real or fancied, of the Indian National Congress. Parliamentary democracy, as every tyro knows, requires two, strong, well-organised parties for its proper functioning. The disintegration of one cannot in any circumstances be source of strength to the other. In India, the disintegration of the Congress will result, not in the installation of PSP in power in New Delhi and in the State capitals, but in utter chaos. And it is difficult to visualise the PSP

leaders in the role of furies riding the storm.

It is a pity that the party should be so much preoccupied with the imminent collapse of the Congress, that it has not apparently devoted sufficient attentions to its own weaknesses and contradictions. The Prime Minister, during the last session, raised a laugh in Lok Sabha by referring to the PSP 'which was led in such a distinguished manner by Acharya Kripalani'. He was referring to the obvious contradictions between the leader of the party and Mr Asoka Mehta, the Finance Minister in the shadow cabinet, over questions of economic policy. While the Acharya is an unrelenting critic of the Second Plan, and is for a decentralised economy and village industries as opposed to heavy industry, his distinguished lieutenant is even more enthusiastic about the Plan than the Planning Commission, and would be prepared to impose heavier burdens on the people for its implementation than the Planning Commission would dare to propose. And while the party has voted for Hindi as official language and against any change in the Constitutional provision, the leader of the party in West Bengal, speaking on the language resolution which was unanimously passed by the legislature, attacked Hindi in language which might have been less offensive to Hindi-speaking people. The State PSP parties have been following each its own line, guided solely by the opportunities of the moment.

Many theories have been advanced about the weaknesses of the Congress about which that party periodically indulges in an orgy of introspection. Perhaps, the real reason for the failings of the Congress administration may be the failure of the PSP, so far, to function as an effective, democratic opposition in the Central and State legislatures. A party must cut a convincing figure as an opposition, before its claims to be regarded as an alternative Government could be taken seriously. An opportunist combination of motley elements, each pulling in a different direction, will not do duty for a genuine opposition. A party in opposition should be more concerned with the logical coherence of the principles for which it stands, than in the number of votes which it can muster in divisions, which in any case are bound to go in favour of the party in power.

Code for Trade Unions

Against the background of the unfortunate developments in Jamshedpur, and the overhanging threat of country-wide strike of dock workers, it is difficult to consider the proceedings of the Labour Conference at Nainital with the seriousness they deserve. The discussion on closure of textile mills provided an opportunity for political posturing. The communist leader even proposed application of Preventive Detention to those who were unable to keep their concerns running on account of recurring

losses. The references made to the wartime profits of the textile industry in the present context remind one of the fable of the lamb and the wolf. Despite the verbal warfare, the conference was able to reach agreement on a code of conduct for maintaining harmonious relations between different trade unions. All the four trade union organisations are reported to have agreed to this code. How far its provisions, which look admirable in print, will be observed by unions contending for supremacy, remains to be seen. The trouble in Jamshedpur started with inter-union rivalry for recognition. It also seems rather strange how the representatives of labour, employers and Government, who could readily agree on a code of conduct, at Nainital, could not avert the trouble at Jamshedpur.

Labour intransigence and failure to take preventive action in time has forced the biggest steel works in Asia to stop production for a month. It is not easy to estimate who has gained by this unwarranted strike; certainly not the workers of the company who were hitherto regarded as the most privileged section of industrial workers in the country. The company and the nation have lost one month's production of steel. The strike and its sequel will have an immediate effect on the employment situation in West Bengal, where the engineering industries are facing prospects of closure as a result of shortage of raw material. As it is, the shortage has been so severe for some months that anything made of iron fetched a good price; and anti-social elements had a strong incentive to steal railway material in bulk, as well as corporation man-hole covers.

Fortunately violence and destruction of property took place away from the steel works. The Plant and vital communications have been preserved intact. But in view of what has happened the management of TISCO cannot be blamed if they have to adopt a procedure of strict screening before issuing permits to willing workers to enter the Plant. The Communists are said to be responsible for the strike which led to the trouble. If that is the case, all the prestige they had gained in Devicolam they have lost in Jamshedpur.

Cheaper Oil

It is only a few weeks since the Minister for Natural Resources confessed in the Lok Sabha to a feeling of frustration regarding the slow progress of the negotiations with oil companies regarding prices. The agreement now announced will, therefore, be greeted with satisfaction, even though the public are not to benefit from the interim reduction in prices to which the companies have agreed. The total saving to the country is estimated at Rs 10 crores a year and this sum will be used to augment resources for the Plan. Even more important is the fact that agreement has been reached on a method of evolving a new price formula to replace

the present complicated procedure. The new formula will be based on the results of an investigation by the Government Cost Accountant of the cost structure of the oil companies. That the companies have agreed to this examination is itself a great step forward in the effort to reach a satisfactory basis of oil prices. The agreement is particularly gratifying as it will help to dispel popular misconceptions and clear the obstacles in the way of mutually satisfactory relations with an industry responsible for an investment of Rs 100 crores in the country.

Chaprasis

According to a "Hindustan Times" columnist, an experiment is being carried out in Udyog Bhavan on the effect on chaprasis of low-ceilinged, fanless corridors. We have written earlier in these columns heartily endorsing the Prime Minister's suggestion for the abolition of the institution of chaprasis. But it is one thing to advocate that the whole lot of chaprasis be sacked, so that they may have a chance to become useful workers, and quite another to treat them as guinea pigs for a singularly point less experiment.

The House Committee of the Udyog Bhavan could have got all the relevant information they wanted by spending a few minutes in the location instead of wasting their time, for which they are presumably highly paid, in watching chaprasis behaviour under sweltering conditions. The very idea of the experiment is born of the mental attitude which regards the chaprasis as a different and inferior category of human being. The efficiency of the chaprasis is presumably to be tested by the speed of his responses to the calls on his services.

Significance of 1958 New Loan

HAS the 1958 New Loan programme been a success? If regard is had for the fact that there was over-subscription, and that the loan has the bulk of it been on a cash basis, the answer to the question that we have raised cannot be but in the affirmative. On the other hand, if it is borne in mind that subscriptions emanating from the Reserve Bank, and now traceable to the Reserve Bank, were for as large an amount as Rs 50 crores, the answer could conceivably be in the negative. But either answer, on the basis merely of the two considerations that we have postulated, would not be quite correct. There are many other factors which we have to take into account in assessing what we shall show to be the significance of the 1958 New Loan programme.

It is true that the New Loan was over-subscribed only because the Reserve Bank put in Rs 50 crores. It is also undeniable that the State Bank subscribed Rs 35 crores. This would mean that cash subscriptions from all other entities were placed somewhat below Rs 50 crores. Thus, on the face of it, the market was able to absorb only Rs 50 crores of the New Loan. But, then, this is to overlook the fact that, since the commencement of the 1957-58 busy season, and up to the eve of the New Loan, the Scheduled Banks had absorbed Rs 50 crores of securities. And it is also more or less common knowledge that the Reserve Bank has, during the period, sold Rs 100 crores of securities through the tap. In other words, the absorption of new loan to the tune of Rs 50 crores is on top of purchases from the Reserve Bank, during the recent past, of securities adding up to another Rs 100 crores. Thus, if the Reserve Bank figures as a purchaser of gilt-edged, it is because the central banking institution was replacing partly its denuded portfolio. So, the Reserve Bank must be said to have subscribed, because it became necessary to acquire marketable securities which, in order to satisfy anticipated demand during the rest of the 1958 slack season, it could sell through the tap. Again, if the "outside" entities have, at new loan time, taken up only Rs 50 crores, it is because they have already invested Rs 100 crores of their funds. If the Reserve Bank had not steadily made available securities through the tap, it would not have been necessary for the Reserve Bank to subscribe to the New Loan; nor

could the outside entities have restricted their subscriptions to Rs 50 crores.

We trust that it is clear that the steady, continuing and substantial sale of securities through the tap in the past few months is responsible for so distorting the pattern of subscriptions to the New Loan programme as to have raised the doubt whether it is a success or not.

We need, however, to note that, of Scheduled Banks' absorption of securities during the current busy season, an amount which we have seen to be in the environs of Rs 50 crores, much the bulk of it, Rs 36 crores, is traceable to the State Bank. Again, for the 1958 New Loan programme, the State Bank has subscribed another Rs 35 crores. We have now to examine the position of the State Bank in regard to its investment portfolio. The latest return of the State Bank shows that, against Deposits of Rs 416 crores, Advances are placed at Rs 198 crores; and Investments, if we include the Rs 35 crores subscribed to the New Loan, would be at Rs 195 crores. This leaves rather a slender margin for cash which, in the case of the State Bank, works out to scarcely 7 per cent of Deposits. Undoubtedly, the Deposits accruing to the State Bank in regard to US Counterpart Funds enabled the State Bank to step up considerably its investment in gilt-edged. We have to be prepared for the contingency of these wind-fall Deposits being taken out of the State Bank. If these Deposits were to be withdrawn all of a sudden and in their totality, the State Bank would be compelled to sell securities to the Reserve Bank. But this is hardly likely to happen. On the other hand, it is to be expected that the drawal on these balances will be gradual. Again, if, for example, Rs 26 crores are to be handed over to the Refinance Corporation when it is instituted, it may prove only to be a book-keeping entry, since the Refinance Corporation might possibly keep its account with the State Bank. So, no loss in Deposits in this regard may occur. What we should like to stress is that we can brush aside as being but remotely possible any necessity arising for the State Bank to dispose of any considerable part of its investments in the near or foreseeable future. Meantime, in common with the banking system generally, the State Bank will without doubt experience fresh accretions to its Deposits. So, far from the State Bank figuring as a seller of gilt-edged, we are likely to witness conditions in which the State Bank will have more and accruing resources during the current slack season for fresh investment in gilt-edged.

The "outside" entities that we have spoken of may be sub-divided into the Scheduled Banks other than State Bank, on the one hand, and such institutions as the Life Insurance Corporation, Provident Funds and the like, on the other. As far as the latter is concerned, we have seen last week that the subscrip-

tions to New Loan of this category of investor amounted, roughly, to Rs 30 crores. On the face of it, this is a very feeble effort. But we are disposed to think that there has been deliberate under-subscription to the Central Government Loans, because of the decision already taken to concentrate investment in the State Government Loans which will soon be available. We fancy that the States may be able to obtain anything like Rs 50 crores to Rs 60 crores from this class of investor in their 1958 loan programme. Then, as far as the other Scheduled Banks are concerned, if their subscriptions to the Central Government's programme were a meagre Rs 20 crores, we may be sure that, as the slack season progresses, and as the banking system continues to experience a decline in Advances coupled with an increase in Deposits, they will be compelled to seek new investment in gilt-edged. We would not be surprised if slack season sales of the Reserve Bank through the tap should amount to Rs 50 crores; and we moreover anticipate, as we have often remarked in the past, that the Central Government will be able to issue a second tranche of the New Loan in September-October this year. The amount that could be realised by the Central Government at that time, including subscriptions by way of conversion,—we believe that conversion in advance should be offered in respect of the 3 per cent 1959-61—may be anywhere in the neighbourhood of Rs 100 crores.

Thus, the Central Government's effort in the middle of May should not be considered in its isolation and not, therefore, be thought as constituting the sum of the 1958 New Loan programme. Govern-

ment borrowings, from the beginning of 1957-58 busy season to the end of 1958 slack season, must be said to be roughly somewhat as follows: (a) Sales of securities through the Reserve Bank tap for Rs 100 crores (This apparently including the created issue of Rs 30 crores in 34 per cent 1962); (b) net New Loan borrowing in May 1958 amounting to Rs 132 crores; (c) further sales through the tap during 1958 slack season for roughly Rs 50 crores; (d) State Governments' borrowing for a net amount of Rs 50 crores; and (e) a second tranche of New Loan to be issued in September-October for Rs 100 crores, which, however, would bring in new cash for Rs 50 crores, it being anticipated that subscription by conversion would be for Rs 50 crores.

It will be seen that the figures that we have suggested add up to a total of Rs 382 crores. This is the borrowing effort which we expect can and will be put through successfully by the Central Government and the State Governments during the current year. And the New Loan programme of May 1958 must be deemed to be eminently successful, as forming a part of this larger borrowing effort that we have envisaged for 1958.

Loan's Impact on Banking Figures

CONFIRMATION is available in the latest banking returns of the hypothesis that was advanced in this column last week as to the composition of the subscriptions to the New Loan. The statement relating to Government of India Treasury Bills discloses that the total amount outstanding dec-

lined by Rs 102 crores to Rs 1221 crores in the week ended May 16. This confirms that reverse ad hocs were instituted for Rs 102 crores during New Loan week. Our view last week was, we may recall, that there had occurred reverse ad hocs for Rs 95 crores. The very fact that reverse ad hocs were for such a large amount, as against only Rs 45 crores traceable in the returns of the Reserve Bank for May 16, is again confirmation of our view that the balance of reverse ad hocs, for nearly Rs 60 crores, was indicative of large scale Reserve Bank subscriptions to the New Loan programme. Our view continues to be that the Reserve Bank has subscribed Rs 50 crores. Then, the State Bank, it is a fact, subscribed Rs 35 crores and this was made known in the return of the bank for May 16. But, as we saw last week, the State Bank shows its subscriptions to New Loan under Other Assets, and the Investment Portfolio is yet to reflect these subscriptions. So, the increase of Rs 15 crores in the Investment portfolio of the Scheduled Banks in the return for May 16 can relate only to the New Loan subscriptions of the other Scheduled Banks. We should expect the return of the Scheduled Banks for May 23 to reflect the balance of subscriptions of the other Scheduled Banks; and we again continue to hold the view that the subscriptions of the Scheduled Banks, including the State Bank, would have aggregated roughly Rs 55 crores. Lastly, the subscriptions of other entities would necessarily have amounted to Rs 27 crores. It is the subscription of this class of investor which has made its impact felt on the Deposits of the Scheduled Banks. But the decline in Deposits during the relevant week is for less than half of this amount, the accruing deposits of the banking system presumably offsetting a moiety of the drain on Deposits occasioned by the subscriptions.

The return of the Reserve Bank for May 23 reveals a further drop in Active Note circulation; Active Notes have fallen by Rs 16.15 crores to Rs 1598.69 crores. Rupee Coin has returned from circulation for Rs 0.69 crores. Currency has been contracted against Rupee Securities for Rs 15 crores by transfer to Investments in the Banking Department. In the result, the Reserve Bank's cash in the till is marked slightly higher by Rs 1.83 crores at Rs 26.48 crores.

The balances of the Central Government are higher by exactly Rs 1 crore at Rs 76.06 crores. The State Governments experienced an improvement of Rs 2.81 crores to Rs 16.49 crores in their Deposits; but their indebtedness is also higher at Rs 60.83 crores against Rs 59.80 crores. The Reserve Balances of member banks are practically unchanged at Rs 73.14 crores against Rs 73.88 crores. However, they would appear to have reduced sharply the fresh indebtedness to the Reserve Bank that they had incurred during New Loan week. The Other Loans and

Advances of the Reserve Bank, which rose by Rs 13.37 crores in New Loan week, have declined, in the period under review, by Rs 9.81 crores to Rs 59.52 crores. As we shall see, the State Bank is responsible for Rs 2 crores of the decline in the indebtedness of member banks. The Reserve Bank's Advances against usance bills are lower by Rs 6.28 crores at Rs 20.03 crores. Investments, by dint of the transfer from the Issue Department, are higher by Rs 14.60 crores at Rs 240.64 crores. Lastly, the import surplus is again reflected in a decline of Rs 4.40 crores to Rs 38.40 crores in Balances Held Abroad.

The return of the State Bank for May 12 is largely featureless. Deposits are lower by Rs 1.46 crores at Rs 416.21 crores. A decline of Rs 2.50 crores to Rs 198.67 crores in Advances has enabled a reduction in borrowings from Rs 6 crores to Rs 4 crores. Cash Balances are lower by roughly Rs 1 crore. The Investment portfolio is unchanged, and the State Bank's subscription to the New Loan continues to be shown under Other Assets.

The New Loan subscriptions of "outside" entities has caused a decline in the Deposits of Scheduled Banks during the week ended May 16. As against estimated subscriptions from such sources amounting to Rs 27 crores, the decline in Deposits is much lower at Rs 11.86 crores to Rs 1530.51 crores. The Investments of Scheduled Banks have been marked up by Rs 14.85 crores to Rs 440.31 crores. This relates to the subscriptions of the other Scheduled Banks. Cash Balances have been drawn on steeply for the subscriptions of Scheduled Banks to the New Loan, the decline amounting to Rs 48.12 crores. At the same time, borrowings from the Reserve Bank also rose by Rs 13.22 crores to Rs 31.86 crores. Lastly, as an index of the slack season getting into stride, the total of Advances has declined for the sixth consecutive week. During the week ended May 16, the fall is as large as Rs 8.75 crores to Rs 939.89 crores.

A New Method of Disinflation

Paul Einzig

THE much-awaited reduction of the Bank rate from 6 to 5½ per cent on May 22 appears to indicate that the Government is not unduly worried about the prospects of another round of wage increases initiated by granting the employees of British Railways an increase of 3 per cent. The Bank rate decision was made on the very day when an increase in the cost of living index by 2 points in April was announced, and when it was also announced that the terms of trade have moved against Britain. Wage demands by trade unions representing 8½ million workers are under consideration, and their outcome may decisively influence the trend of prices and exports. Yet the authorities decided to relax the

disinflationary drive by further lowering the Bank rate from its crisis-level.

This official optimism is based on the development of a new formula which, the Government hopes, would be able to neutralise inflation created by wage increases. This formula was actually applied in the terms of the railway wage settlement. The 3 per cent increase was granted on the understanding that the additional £10 million a year for wages would be found by cutting down services to a corresponding degree. A number of branch lines which have been run at a loss will be closed down, even though this will be gravely detrimental to the interests of the districts they serve. The number of passenger trains will be reduced, even though this is bound to cause considerable inconvenience to the travelling public. As a result, many thousands of employees will become redundant, and through their dismissal the total wages paid by British Railways is hoped to be kept down at its present figure in spite of the 3 per cent increase in wages.

There are distinct indications that the Government will make an effort to ensure the application of this formula to other wage settlements. This is feasible in the case of nationalised industries. The National Coal Board intends to close down a number of uneconomical coalfields, in order to be able to concede part of the wage increases demanded by the National Mineworkers Union.

When it comes to privately owned industries, however, the matter is not so simple. The public services may save money by producing less, but if private firms should do the same the decline in their output would wipe out the benefit of the reduction in their staffs. It would be a totally different matter if the trade unions were to agree that a smaller number of men would maintain the same output, and if such agreements were to be honoured by the men. But judging by past experience it would be foolish to grant wage increases on the strength of such agreements.

The Government's new formula would not even pretend to provide a remedy against cost inflation. Its declared aim is to keep down demand by preventing an increase in the total of consumer purchasing power resulting from the higher wages. But higher wages mean higher costs per unit of output, and this must mean a further increase in prices. It is true, in the absence of a corresponding expansion of purchasing power, consumers would not be able to maintain the volume of purchases on the basis of the higher prices. In theory, therefore, this should prevent an increase in the price level, or it would tend to bring down the increased prices to their previous level. But in practice the higher prices would result in additional wage claims which, if satisfied to any considerable extent, would provide the purchasing

power to maintain the demand in spite of the higher prices.

Even in the public services the Government's formula could not be continued to be applied indefinitely. There is a limit beyond which these services could not be reduced. As for private firms, any attempt to maintain a limit to total wage payments in face of the rising wage rates would necessarily lead to a curtailment of the output which again would reinforce the rising trend of prices.

It seems that the Government's enthusiasm for its newly-invented formula of disinflation through redundancy is misplaced. Perhaps the Government is well aware of this. But the alternative to putting forward this formula would be either to stand firm against wage demands at the risk of major strikes or to admit candidly that the disinflationary drive has failed. So the new formula is as good a face-saving device as any that could be devised at short notice.

Nothing can stem the tide of inflationary wage increases so long as the conception that organised labour is entitled to be compensated for any increase in the cost of living, even if it is caused by the previous wage increases, continues to prevail. There are no indications of any possibility of inducing the trade unions to abandon that conception. Indeed, the latest Socialist formula is that workers are entitled to annual wage increases corresponding to the increase in the cost of living plus the increase in the output. If such a super-inflationary formula should be widely accepted Britain's economy would be doomed to runaway inflation. (Copyright)

S. E. RLY TENDERS

Sealed tenders are invited for tender No. CON/GM/13.F2/58 for supply of (1) 2500 Nos Cross arm 3" deep 4 way for rail post and (2) 4060 Nos. Cross arm 3" deep 6 way for rail post as per Drg. No. 24322/1/SE. (Material:—I.R.S. M 5, class II to be hot galvanized after manufacture). Tender will be opened at 12 noon on 4.7.58.

Tender forms (not transferable) with full particulars are obtainable from the office of the Controller of Stores (Construction Section), Garden Reach, Cal 23 at Rs. 5/- (not refundable) per set by money order to him direct in the case of outside firms and on production of cash receipt from this Railway's Chief Cashier by local firms.

Tender forms should accompany the receipt for depositing earnest money of Rs. 1000/- with this Railway's Chief Cashier without which the tender is liable to be rejected. Contractors having permanent deposit of Rs. 1000/- with the Controller of Stores are exempted. Firms not on this Railway's list of approved contractors must enclose a valid income Tax Clearance Certificate with the tender.

US Notes

THE Eisenhower Administration sent to Congress this past week (May 22) its formal legislative proposal for a five-year domestic minerals stabilization programme.

In general, the proposed legislation follows closely the programme that was first outlined on April 28 to the minerals subcommittee of the Senate Interior Committee by Secretary of the Interior Fred A. Seaton. However, it incorporates operating details and modifications that would add to its effectiveness in helping American minerals industries and in safeguarding the interests of other producing countries.

As in the plan described by Mr Seaton a month ago, the recommended legislation provides for government "stabilization" payments to domestic producers of newly mined ores or concentrates of copper, lead, zinc, acidgrade fluorspar, and tungsten trioxide.

This means that a producer of these ores or concentrates would be paid an amount not to exceed the difference between what he actually receives from their sale, and what he would have received if the market price, at the time of the sale, had been equal to a specified stabilization price.

As in the original proposal, the stabilization prices would be 27.5 cents a pound for copper, 14.75 cents a pound for lead, 12.75 cents a pound for zinc, \$48 a short ton for fluorspar, and \$36 a short ton unit for tungsten. (A short ton is about 0.91 metric tons.) Where a producer further processes these ores or concentrates without selling them, their equivalent market value at the time of processing would be used in computing the stabilization payments.

Also, as in the earlier proposal, there would be annual limitations on the quantities eligible for stabilization payments. The maximum annual tonnage would be one million short tons of copper, 350,000 short tons of lead, 550,000 short tons of zinc, 180,000 short tons of fluorspar, and 375,000 short ton units of tungsten trioxide.

However, under the Administration's legislative proposal, the Secretary of the Interior would divide the programme into quarterly allotments subject to certain limitations. Within these limitations, a domestic producer would, in effect, be guaranteed support payments in each quarter at least 2,500 short tons of copper, 1,250 short tons of fluorspar, and 3,000 short ton units of tungsten. Individual amounts above these limits would be subject to adjustment in payment when it appeared that the quarterly totals were exceeding schedules.

This provision would help distribute the producer's benefits to the producers in an equitable manner. One important effect would be to help protect the position of the smaller producers.

There is a special provision regarding tungsten. In this case, stabilization payments on the sales of any one producer would be limited to 15,000 short ton units per quarter from output originating in any one mining district.

The Administration bill goes beyond the original proposal in another important way by specifying maximum stabilization payments to domestic producers. These would be 3.50 cents a pound on copper, 3.375 cents a pound on lead, 2.50 cents a pound on zinc, \$8.00 a short ton on fluorspar, and \$18 short ton unit on tungsten.

These limits, it is believed, would tend to prevent any manipulation of market levels as a result of the stabilization programme. More particularly, they would help safeguard the competitive position of foreign producers by deterring domestic producers from cutting their prices sharply and then relying on government payments to cover any possible losses.

They also might have the effect of reducing the estimated initial annual cost of the programme.

The cost is expected to decline still further in ensuing years as the US economy recovers from its current adjustment and market demand for the five affected materials shows the anticipated increase.

Moreover, the bill as sent to Congress would provide for the suspension of stabilization payments when total quarterly production under programme outran

the quarterly limitations by more than certain specified amounts in each of two successive quarters. The specified amounts are 30,000 tons of copper, 9,000 tons of lead, 15,000 tons of zinc, 5,000 tons of fluorspar, and 55,000 short ton units of tungsten. Stabilization payments would be resumed when the Interior Secretary was satisfied that the production rate was approximating the quarterly schedules.

These in the main, are the features of the Administration's proposed minerals stabilization legislation. It would become effective in the first quarter following its final approval by Congress and the President, and would terminate automatically on June 30, 1963. Whether it meets with the approval of Congress remains to be seen, of course, also there is possibility that Congress will make some changes.

The programme's purpose is clear. It is designed to help certain hard-hit US minerals industries maintain staple production rates without damaging the economies of other nations.

Britain

The Bank Rate—determinant of interest rates throughout Britain—has been reduced by 1½ per cent to 5½ per cent. The reduction was announced by the Bank of England on May 22 in London.

This is the second reduction in nine weeks, and comes just over five weeks after the Budget. On

March 20 the rate was cut 1 per cent to 6 per cent, after having been 7 per cent for six months.

Official sources in London point out that the adjustment in the rate is based on the same general considerations which governed the reduction to 6 per cent in March. As on previous occasions, lowering of the rate does not imply any general relaxation of monetary policy. The exchange reserves have continued to gain ground steadily since the last reduction and, as on that occasion, the present reduction could have been justified on market grounds some time earlier. It has, however, seemed wiser to proceed slowly and cautiously.

Speaking in London on May 22, Prime Minister Harold Macmillan said Britain's financial restrictions aimed at halting inflation and putting a brake on rising prices were working. What the Government was aiming at now was a short pause before Britain took a forward step again.

He recalled that the gold and dollar reserves had risen since the September troubles—apart from borrowing from international institutions—by £291,000,000, which was more by £102,000,000 than the United Kingdom's losses in the summer of last year.

He said there was a special Commonwealth interest in the welfare of sterling—"all these matters are going to be explored round the conference table in Montreal at the end of this summer at what will be the most ambitious effort at Commonwealth economic co-operation for a quarter of a century".

Minimum Prices to be Maintained

PRICES in the jute goods market have continued to move downward during most part of the past week. While the absence of fresh enquiries has been responsible to a certain extent for the sagging tendency, it would appear that the speculative elements are taking advantage of the threatened port workers' strike to depress price levels unduly. With the announcement of the IJMA decision to maintain minimum prices on Tuesday evening, there has been some improvement in the undertone.

In a press note, the IJMA have said that it has been unanimously decided at a meeting of the Committee that the minimum selling prices for gunnies fixed by the Committee last February should be maintained by mills. The Committee has further pointed out that the reasons for fixing the minimum prices are still valid and that the statistical position does not warrant the downward pressure on prices brought about in the past few days by the manipulations of bear operators.

The statistical position of the industry is quite satisfactory. For stocks as at the end of April totalled 97,200 tons comprising 20,400 tons hessian, 60,000 tons sacking and 16,800 tons other varieties. Output during the month had been placed at 88,000 tons comprising 30,900 tons hessian, 50,600 tons sacking and 6,500 tons other varieties. Total despatches during the month were placed at 83,874 tons. From the above figures it will be evident that stocks in the case of hessian are lower than one month's production while they are somewhat higher than one month's output in the case of sacking. Despatches of jute goods during the first four months of the current year have been higher than during the corresponding period of the previous year. It is also to be noted that shipments so far during May have been at a fair level. In view of the low stock position in the US and in view of the steady improvement in business conditions in that country, it is expected that coming weeks will witness expansion in offtake from that direction. As it is believed that there would be further relaxation in Argentina as regards import licences, it is expected that hessian shipments to that country may become easier. As for heavy goods, it is said that there will at least be a sizable increase in internal offtake.

The jute goods market opened the week last Thursday in a listless mood with prices in the sacking section showing a weakening tendency. Hessians, however, were generally unchanged. Hessian 40" x 10 oz Ready was finally placed at Rs 40.70 while B Twills was marked at Rs 98.30. Prices declined further on Friday in the absence of fresh foreign interest. Hessian 40" x 10 oz eased to Rs 40.37 while B Twills was pushed down by 10 nP to be placed at Rs 98.20.

An irregular tendency prevailed on Monday due to some bear covering in hessian and continued selling pressure in heavy goods. Business however was mostly of a speculative type with mills keeping out of the market. Hessian 40" x 10 oz Ready recovered to Rs 40.70 but B Twills reacted to close easier at Rs 97.25. Conditions were practically unchanged on Tuesday and the day's closing prices were as follows: Hessian 40" x 10 oz Ready Rs 40.69 and B Twills Rs 97.75. Following the announcement of the decision of the IJMA mills to maintain the minimum prices fixed in last February, sentiment in the jute goods market improved on Wednesday. Hessian 40" x 10 oz Ready was however lower at Rs 40.56 B Twills Ready recorded a marked improvement to be finally placed at Rs 98.00.

The raw jute market began the week on a quiet note with mills showing no interest at prevailing levels. Assam Bottoms May/June shipment was quoted at Rs 24.75. Though business passing continued to be at a low ebb on Friday also, the undertone appeared to be steadier as Assam Bottoms was done up to Rs 25.00. Conditions on Monday were again listless with no mill business and Assam Bottoms receded to Rs 24.75. In the continued absence of mill business the market ruled weaker on Tuesday with Assam Bottoms further marked down to Rs 24.50. Wednesday found the market in a steadier condition following fair mill business at the lower levels. The market closed on a steady note with Assam Bottoms done up to Rs 24.75.

From indications so far available, it would appear that the new jute crop will become available not only in time but it will be plentiful also. According to the latest weather report from the growing areas, the weather is quite favourable in Assam and Northern districts but hot and dry in all other jute growing areas. In most of the areas sowing has been to the full extent.

Production Expanding

THE world Tea crop, which has expanded steadily over the past few years, shows signs of increasing further during the current year. Though the outturn of tea in North-East India was lower at 16.3 million pounds in April as against 19.6 million pounds in the corresponding month of last year due to adverse weather conditions, the shortfall is expected to be made good in the current month.

South India has harvested a record crop of 50.63 million pounds in the first four months of 1958 as compared to only 40.73 million pounds in the corresponding period of 1957. Pakistan has also expanded her production by a million pounds to 2.6 millions in April. Ceylon has, however, reported a nominal fall of 3.3 million pounds in March this year as compared to the corresponding month of last year. Output in Indonesia and British East Africa, in the first two months of 1958, were also well maintained at 16.4 million pounds and 13.2 million pounds respectively. In addition to these main producing countries, China, Japan and Formosa have launched programmes for expanding production, while teas from the new producing countries, such as Iran, Argentina and Brazil, are regularly flowing to the world markets.

Commenting on this continuous increase in the world tea crop, a leading firm of tea brokers has observed that, although consumption is also increasing particularly in India itself, the ratio of increase is undoubtedly disproportionate. Stocks in the major consuming countries are high and a tight financial position has discouraged speculation. The brokers conclude by stating that it will not be in the interest of India to curtail the annual crop by drastic artificial measures so long as neighbouring countries continue to make up such deficits.

In a bid to relieve congestion in the estates resulting from nearly a month-old strike in agency houses, traders in Colombo have even begun private daily auctions. In this connection, it will be recalled that, so far, four weekly auctions have been put off as a result of the strike. Average offtake at each auction had been over 7 million pounds.

At the first auction held in Colombo towards the end of last week, a million pounds of mixed offerings were disposed of. Traders expect to ship the teas, now auctioned, from the Port of Trincomli

on the East Coast and Galle in the South, as movement through Colombo has been rendered difficult by the strike.

In the Export Sale "B" held in Calcutta this week, offerings were 7,113 packages. There was a fairly general decline in quality as compared to the previous sale, but was preferable to Sale "B" of last year and there were a number of useful First Flush teas with attractive flavour. There was good general demand and most of the offerings were sold readily at satisfactory prices, especially the more flavoury kinds which were keenly competed for and realised useful prices well above valuations. No rates were quoted.

Meanwhile, it appears that a portion of the tea crop of 1957-58 is available for export. To facilitate the export of such teas, it has been decided that the period of validity of special tea export licences should be extended till June 30.

In the Internal Sale, offerings were 20,424 packages of Dusts. Prices generally fell heavily for all descriptions. When the market opened, prices were easier and, as the sale progressed, there was a further decline. Orthodox descriptions were from 12 to 16 nP per pound easier, while CTC Assams were occasionally as much as 30 nP easier and sometimes more. Following rates were quoted:—Medium Doonars Dust Rs 1.52; Medium Assam Grainy Dust Rs 1.56; Medium Assam CTC Dust Rs 1.80 to Rs 2.00 and Best Assam CTC Dust Rs 2.40 to Rs 2.60 (nominal). Also, 544 packages of Leaf grades for internal consumption.

In the Export Quota section, business was done in Special Export Licence at 9 nP. Non-transferable Shipping Licence, after opening at 2 nP, steadily improved at the close to 7½ nP. In New Season's teas, the rate developed a hardening tendency to 15 nP from 13 nP per pound.

In the Sale No. "K" held in Cochin, offerings comprised nearly 1,150,000 pounds of Dusts. There was a strong general demand from the outset. High-grown Dusts came to a selective market and were irregular, but generally upto 30 nP per pound easier. Good Mediums were well supported, but at a drop of up to 10 nP. Mediums from Travancore and the Wynaad met with keen competition, but were only barely steady on last prices. Milled and Residual kinds were again strong features and were quoted dearer. Black Leaf Dusts found buyers only at lower levels.

Tea stocks in the UK, as at 16th May 1958, were lower at 116.83 million pounds as compared to 118.56 million pounds in the previous week. Total amount to be landed, on the same date, was 11.68 million pounds. Total afloat was 22.85 million pounds, including 12.67 million pounds from Cochin; 3.34 million pounds from Colombo and 3.06 million pounds from other Ports.

ONE of the fascinating things about democracy as we know and practise it is its multitudinous agencies. These constantly define and redefine the nature of our liberties and social policy. Parliament, of course, is supreme, being the final source and fountain of our public life. But even Parliament has to function according to rules made for its own functioning. Many an ardent spirit has learnt, in its time, that, irksome and obstructive of progress as these rules may seem, they are adversely there to regulate the fervour of one's own enthusiasm. Then, there is the executive, whose devious encroachments on our rights is a matter of constant lament, but its inexorability is accepted with greater or less protest. Then there is the judiciary, whose nominal purpose is to interpret the law of the land. This function carries with it an implied and often unnoticed power to "make the law".

The interesting thing about these agencies is the simultaneous presence of two apparently contradictory attitudes toward each other. On the one hand, Parliament resents the supererogation of the executive in taking on itself powers that seem to be dangerously uncircumscribed. (Of course, these are powers that have been delegated by Parliament itself, which fact, interestingly, makes it seem all the more unfortunate!) On the other hand, there seems to be also a secret relief that a good deal of its own work is taken out of its hand. In such a mood, it would appear that the fact of its having delegated the power is remembered, not fretfully but as a kind of salve to its own conscience. After all, it has not abdicated its functions! Indeed, people like Belloc who talk of the servile state would appear to invest this ambivalence with the attributes of a conspiracy against the people by the "power elite".

Again, take the relationship between Parliament and executive, on the one hand, and the judiciary, on the other: we have seen often enough the spectacle of the impotent rage of a thwarted administration when the constitutional infirmities of its acts are exposed. And we have also witnessed scarcely concealed annoyance at the crop of writ petitions that swell the volume of litigation at courts. But, deep down, Parlia-

ment is really relieved that its own fallibility—also, alas, only too real—has no irrevocable finality. The courts, on the other hand, have their peculiar weapons. (Indeed, each one of these agencies has its own, which they use with much zest in their internecine warfare!) In the language of the Statutes, in the canons of interpretations, in the constitutional provisions, in the wily resourcefulness of their mature wisdom, they find the resources they need, in combating the executive and Parliament, on behalf of the people, whose servants are also their masters at times. Of course, much depends on the quality of the judge and the traditions that have shaped the judiciary. Otherwise, in the words of Belloc again, the courts will become an agency of the society for the prevention of annoyance to the rich. Ironically, such vexation will often be prevented through the invocation, of all things, of ancient liberties! But, as Justice Holmes, Justice Brandies and more recently Justice Earl Warren have shown, the courts can, without exceeding their powers, enlarge the area of human liberties, give substance to social justice and exercise their authority to make human conduct more humane and compassionate.

As I said, democracy recognises, formally and informally, and even with some element of a secret conspiracy, the limitations that its own agencies impose on each other, and on themselves. And the consequence has been nothing but good. Impatient idealists may chafe at the frustrations this brings about, at the hypocrisies this brings into existence. But scrapping these would lead us in to an uncharted wilderness.

Take the Supreme Court's findings on the constitutional propriety of some of the provisions of the Kerala Education Bill. To the Communist Government of Kerala, this has been a valuable lesson in self-discipline. It has also been a test of their recent professions about acceptance without reservations of the conventions of democracy. On the whole, they have come out of it very well. Though the reported comment of the Kerala Education Minister that they have "won the case on the whole" is somewhat naive (even engagingly so!) and

factually somewhat wrong, the readiness to submit to the finding of the courts is surely something to be put in their favour. Indeed, from the beginning, they have behaved quite correctly on the matter. What makes one hopeful about the final transformation of Communists into a reasonable political group is this compulsion to behave reasonably that a profession of democracy imposes. People who profess to be cynical about Communist professions of a conversion to legitimate democracy do not understand La Rochefoucauld's maxim on hypocrisy: it is the homage paid by vice to virtue. The point about hypocrisy is that it expresses not vice's duplicity but its secret shame. A time may come when the Communists will find the pretence either unnecessary or unbearable, but then it may be too late for them to drop the mask. Or, at least, let us hope so.

In any case, the fate of the Kerala Education Bill shows how democracy deals with an apparently recalcitrant problem. It is not unlike the ways of highly conventional society, whose very basis is a wholesome respect for hypocrisy. There is well recognised and unquestioningly accepted "code" and, to that, the experienced "hostess" brings a fine social tact and savoir faire. What would, for instance, Elsa Maxwell have done, if a brilliant and awkward guest arrived rather drunk at one of her parties? She will perhaps introduce him to a fussy precise but equally brilliant professor of philosophy, one of the logical positivists from Oxford—perhaps her latest "lion". The young man will have flamboyant witticisms put through their most exasperating analysis—pace: before the evening is out, he will be astonished at the number of unverifiable propositions he is making in a minute and how deplorably coloured by value judgments his whole outlook is.

The Central Government have been the perfect hostess. "Kerala Government? How do you do? By the way, have you met the Supreme Court? Oh! A most wise owl! Here it is. Supreme Court, Kerala Government. Hope you will have a wonderful time." Not that, having done the honours, they disappear from the scene. They did join in the conversation,

putting in a word here and a word there. The evening has, in the event, certainly been most fruitful.

From the beginning, it was clear that the Kerala Education Bill contained in its features which were unexceptionable side by side with features that were of dubious propriety. But what created the furore was, apart from party political considerations, a two-fold suspicion. One was that the measure was aimed at elimination of the hold on education that a religious group, whom the Communists considered their enemy, had. And the other and even graver fear was that the "nationalisation" of Schools was the thin end of the wedge of Communist indoctrination. "Snatching them young" was alleged to be the motto of the Communists. Of course, the opponents seized upon the very provisions that seemed to be unexceptionable on general grounds as indications of an ulterior diabolism. Naturally, that is the way the Communists will present it. They will say that asking schools to appoint teachers from a panel selected by the Public Service Commission is to ensure impartiality and standards. Asking the schools to surrender the fees to Government so that the disbursing of salaries may be done by the Government will be justified on the ground that private management often paid less than the stipulated sums to their teachers. But these are but the camouflage behind which every school will get manned with a party member and paid by the public. So ran the argument.

In an argument that runs at two levels neither touching the other—a situation only too familiar when Communist theory or practice is involved—there is no logical way of either proving or refuting one or the other. This, depending upon your emotional attitude to Communism, proves its innocence or its utter diabolism. But both the Communists and the non-Communists were not content with arguments. They used all their wiles to set at naught the other's purpose. Rousing public opinion in one's favour was a somewhat frustrating endeavour, for these efforts cancelled each other out. And except for loyalists on either side, the situation was something

Dassanagar, Howrah.

of a stalemate. Uncommitted public opinion outside the State was largely ambivalent, because of the obvious good points in the Bill. And the first round was won by the Kerala Government because of their majority in the State Assembly. And then the second round was the assent by the President. It was here that the Central Government played their role of honest broker with an admirable sense of constitutional tact. They had their obligations to the minorities and there were obviously features of the Bill that did seem to offend them. On the other hand, the State Government should not feel that extra constitutional considerations have influenced the President in coming to any decision against them. Hence the invoking of the constitutional provision for obtaining advice from the Supreme Court.

As the Supreme Court itself has pointed out, this advisory jurisdiction is something rather special to the Indian Constitution. It is

always to be sparingly used. There can be no doubt that, in this instant case, it has been quite rightly invoked. Put shortly, the Supreme Court has held that some among the provisions of the Bill, on which the President sought advice, offend Article 30(i) of the Constitution which gives minorities the right to establish and administer educational institutions of their own choice. In addition, some of them offend the provisions of Article 337 of the Constitution that guaranteed the continuance of financial assistance to Anglo-Indian schools for a stated period.

I shall not go into the question of what precisely the Supreme Court considers unconstitutional in the Bill, for that would not be conclusive of the matter. For the President referred only certain provisions of the Bill to the Supreme Court for its opinion; though an attempt was made to enlarge the scope of the reference and though the Supreme Court itself travelled a little beyond the

actual reference (but not to the extent prayed for by Counsels), it is clear that it would be wrong to imagine, as the Kerala Education Minister seems to do, that a mere tinkering with the impugned provisions will cure the constitutional infirmities of the Bill. There are, for instance, a number of questions raised but not answered by the Supreme Court, which may yet be answered on a future occasion against the Kerala Government if they still arose out of the rectified bill. Secondly, the whole tenor of the judgment would imply some very important principles which have been explicitly expressed in connection with the actual provision held to be unconstitutional. The Supreme Court says: "There can be no manner of doubt that our Constitution has guaranteed certain cherished rights to the minorities concerning their language, culture and religion. These concessions must have been made to them for good and valid reasons. Article 45 no doubt requires the State to provide for free and com-

pulsory education for all children but there is nothing to prevent the State from discharging that solemn obligation through Government and aided schools and Article 45 does not require that obligation to be discharged at the expense of the minority communities. So long as the Constitution stands as it is, and is not altered, it is, we conceive, the duty of this Court to uphold the fundamental rights and thereby honour our sacred obligations to the minority communities who are of our own." And again, they say, "Surrender of fundamental rights cannot be exacted as a price of aid doled by the State." To the argument that all that the Constitution guarantees to the minorities is the right to run their own schools and not to a right to their recognition or aid to them by Government, the Supreme Court has an admirable answer: "There is, no doubt, no such thing as a fundamental right to recognition by the State, but to deny recognition to educational institutions except on terms tantamount to the surrender of constitutional rights of administration of educational institutions of their choice is in truth and in effect to deprive them of their rights under Article 30(i). We repeat that the legislative power is subject to fundamental rights and the legislature could not indirectly take away or abridge the fundamental rights it could not do directly".

As I said, there may be other provisions in the Bill that were not argued on before the Supreme Court which may be guilty of precisely this kind of indirect abridgement of rights. The Kerala Government would, therefore, be well advised to seek to redraft the whole bill so that it may not run on the rock of constitutional impropriety once again. After all, there is much that is admirable in the bill and which is worth saving.

I have been a more than usually avid student of the Weather Reports during the past week; for one thing, weather in Calcutta has been making the front page; for another, it has been so deucedly hot that I have been every morning expecting some sort of unenviable record being attained. I have had no difficulty in following the weather reports in the Calcutta, Bombay and Delhi press where the local conditions are very conveniently given both in Fahrenheit and Centigrade. The Hindu of Madras, however, offers no such easy way out for the reader. For the curious who will be unable to assess the weather unless the temperature is known in terms of Fahrenheit. The Hindu, almost contemptuously, explains, in a sort of footnote, how the Centigrade temperature can be "converted". Is The Hindu trying in this manner to draw attention to the head for figures (of the arithmetical variety, of course) that the South Indian is supposed to be famous for?

GATEWAY GOSSIP

THE alarming trend in the interest paid by banks, which was thrust into the forefront of attention by Indian Finance, appears at long last to have aroused in the banking system a sense of urgency. I understand that, toward the end of the week, the Indian Banks Association is to consider this question and to draw up, if possible, some manner of scheme for arresting this ominous tendency. But I am afraid that, as far as I can gather, there is still no determination to act. Why is it that I apprehend that the deliberations will come to nought, may suitably be the subject of this week's despatch.

Leaving apart the outcry against high operating costs that we heard from the banking system in 1952-53, when Deposits tended to be stagnant and when the Reserve Bank was understood to have made some overtures or suggestions as regards the feasibility of a voluntary agreement among the banks to desist from a Deposits war, the question of interest rate began to assume an overshadowing importance from, say, the beginning of 1957. By this time, Deposits had already begun

Or Else . . . A Veiled Threat

to accrue to the banking system in a handsome manner. I am sorry to say that the banks themselves did not appear to recognise at the time the inevitability of planned disbursements thus finding their way into the resources of the banking system. Moreover, the position was somewhat obscured by the fact that the 1956-57 busy season imposed a substantial strain upon the monetary sector. Thus, both because of the monetary stringency and because of competition for Deposits, the matter further complicated by the fact that the Exchange Banks, finding it uneconomic to transfer funds from London, were active bidders in the Indian money market, there was a situation in which all pressures upon the interest rates were upward. I should think that the banks counted upon a continuation of the accentuated demand for funds, and, therefore, reasoned that, although they were paying more for their Deposits, the higher level of their Advances would earn more than enough to offset the increase in the interest paid and, perhaps, even to result in a larger balance of profit. The 1957 slack season was a sad disillusionment since, with the Reserve Bank rightly instituting a policy of selective monetary control, the Advances of member banks, instead of mounting or even being stagnant, perceptibly began to decline. The 1957-58 busy season was another eye-opener. The tempo of accretions to Deposits was found to be further accelerated, but the expansion in Advances was at a much slower rate. Thus, while interest paid went up sharply, there was not a corresponding improvement in the earnings from Advances. So much so, bank chairmen in their speeches relating to 1957 accounts chose for their emphatic consideration the question of interest paid. Unfortunately, except perhaps for a concrete suggestion from Dr N. N. Law, who called for drastic action being taken by the Reserve Bank, the bank chairmen were content to pose the issue, hoping perhaps to arrive at a solution by consultative deliberations. At the beginning of April, in this city, the Reserve Bank Governor did indeed refer to this matter in a talk with the representatives of the banking system. No official communique, if I remember right, was issued on these talks. Hearsay is that the bankers themselves were reported to have denounced the upward trend in interest paid; and, for his part, the Reserve Bank Governor, is said to have hinted that the banks should set about correcting the situation or else.. a veiled threat.

Undoubtedly, there must have been some manner of approach to the monetary authorities for statutory action being taken by the Reserve Bank to regulate the inter-

est paid on Deposits. Unfortunately, the monetary authorities have, quite correctly to my mind, chosen to disregard such entreaties as were made to them. I surmise that they are not prepared to exercise their statutory power in respect only of the interest paid; it may be that they would desire such control to be accompanied by similar restrictions on the rate charged on Advances. I am not saying that this is logically correct. On the other hand, this would cause too much rigidity in the banking system and there would be no scope for healthy competition among banks. Moreover, if the maximum for Advances were fixed, the marginal borrowers, who may be considered more risky by bankers, would be unable to get anything at all. But we have to appreciate that it may be embarrassing for Government to prescribe ceilings on Deposit rates, without restriction on Advances, since this would apparently—though only apparently—enable banks to keep down their expenditure, while in no way limiting their ability to increase their earnings by higher interest charged on Advances.

In any case, the monetary authorities may also think that it is not necessary for them to take any drastic action, for the simple reason that the banks, for their own survival, have perforce to come up with a solution. For, with a general policy of credit restraint, and with Deposits rising much more than proportionately to the expansion in Advances, the banks cannot afford to continue to pay high rates

of interest on Deposits. So, the view of the central bank authority may be that banks will be compelled of their own volition to put their house in order.

That indeed would appear to be what is happening, if we may be sure that the forthcoming meeting of the Indian Banks Association will strive to find an amicable settlement. But, as I said, the general sentiment seems to be that no voluntary agreements can work. For example, in the contingency that one of the parties to the voluntary agreement contravenes it, the Association would have no power to inspect such books as to confirm the infringement or take such measures to penalise the offender. So, for their part, the banks may be shirking any such voluntary agreement, and would much prefer statutory action; but, of course, they would not like any maxima to be fixed for their Advances.

In the final analysis, I expect the force of circumstance to compel action. May be, the present meeting will be infructuous. But I cannot envisage such conditions to continue for long. Certainly, well before the current slack season draws to its close, the banks will have to do something, anything. May be, there will be no voluntary agreement. But it is inescapable that some at least of the banks will, simply because they cannot afford it, cry halt to the high rates of interest paid.

It is in this wise that we may expect the structure of interest rates to be set right in the ensuing months.

BOMBAY REVIEW

THIS BOY HAS

A LOVING MOTHER

Mother knows that children's dresses are more than mere clothing; they are a measure of a mother's care. She takes no chances—they have got to be lovely, comfy and durable. Dressing a child well is a family tradition.

When BINNY'S started manufacturing their quality cloth nearly eighty years ago, young mothers in India discovered a new standard in textiles for their sons, for here was variety in colour, design and texture undreamt of before. As the years passed, BINNY'S continued to pioneer new materials, including anticrease suitings and union fabrics. Soon BINNY became a household word and buying BINNY'S a family tradition.

Today, more people are able to buy more cloth, but discerning people look for the reassuring BINNY'S trade marks on the cloth they buy.

Speaking at Surat early this week, Mr Morarji Desai, Union Finance Minister, has pointed out that it is undeniable that the recent reduction in the excise duty on cloth has had the effect of lessening the accumulation of stocks with mills. The fact that there has been no change in the position of stocks of medium and coarse varieties would seem to indicate that the demand for these varieties is less than has been expected. A probable reason, according to him, for the decline in offtake in this regard is the changed tastes of consumers. With the increase in the prosperity of the country consumption of finer varieties of cloth has also increased. The solution to the problem of continued accumulation of coarse cloth is that "producers should produce what the people want".

Opinion in the country is by no means unanimous that a further reduction in the excise duty will be able to bring about the desired improvement in the condition of the industry. In a memorandum submitted to Mr Lal Bahadur Shastri during his recent visit to Bombay, the Bombay Piece-goods Merchants Mahajan has pointed out that the present deterioration in the working of some mills is largely due to their short-sighted policy as regards distribution of their products. Considerable dislocation to the cloth trade has been caused by certain mills which have begun to deal directly with buyers who have little or no experience in the trade, thus the smooth and cordial relations that were obtaining between the established trade channel of distribution and the industry have been disturbed. The memorandum has drawn pointed attention to the fact that the close cooperation between the wholesalers and the industry has been largely responsible for the smooth working of the industry and trade.

Despite frequent assurances by Government spokesmen that the private sector is considered as important as the public sector, the business community generally is inclined to believe that the latter is getting a preferential treatment at the cost of the former. The heavy tax burden and the restrictions imposed on private enterprise during the past one, two years seem to have strengthened such a view. It is argued that if Government are really mindful of the interests of the private sector, they would not have clamped the heavy imposts which have resulted in slowing down the tempo of industrial activity in the country.

Speaking in Poona, Mr Manubhai Shah, Union Minister for Industry,

has again assured the business community that the policy of Government is to accord equal treatment to both the public and private sectors. For, both the sectors belong to the country and as such should be utilised for the good of the nation as a whole. It is the aim of Government to evolve an integrated pattern of the whole economy and to strike a social balance. That it is their intention to give private enterprise an important role in the development of the country is evidenced by the large share allotted to it under the Second Plan. The fact that Government have no "dogmatic or doctrinaire approach" to the problem of nationalisation of industries is added proof of the importance attached to the role of private sector by Authority.

The public sector is mainly concerned with supplying the missing links in the national economy. It has been found necessary that production of steel in the country should be stepped up expeditiously. But it has been realised at the same time that private enterprise will not be in a position to raise the enormous resources necessary to build the steel plants. That is why the three new steel plants have become the responsibility of the public sector.

The Bombay Government are taking active steps to eradicate illiteracy in the State. A liberal provision of Rs 23.06 crores has been made in the Budget and out of this amount as much as Rs 13.67 crores are to be spent on primary education. It is the Government's intention to introduce compulsory primary education for children of the age group 7-11 throughout the State and it is estimated that this will involve an additional annual expenditure of Rs 4 crores.

The State Government have also been evincing keen interest in improving the working conditions of teachers. It may be noted in this regard that the pay-scales of primary teachers in the State are higher than in most States in the country. Speaking at the annual meeting of the Bombay State Primary Teachers' Association in Dhulia last week, Mr Hitenra K. Desai, State Minister for Education, has assured the primary teachers that Government attach great importance to the role of primary teachers. They want the teachers to win an honoured position among the people. On their part Government are anxious to give the teachers a better deal and secure for them the status and prestige that should properly belong to those who are given the task of moulding the character of the younger generation. This is also the aim of the Government of India's scheme under which certificates and awards will be given to the teachers doing outstanding work. Mr Desai has rightly pointed out that a proper understanding of society and honest and sincere service on the part of the teachers are also necessary if the desired result is to be attained.

THE bullion market in Bombay has taken a bearish turn in the past few days with prices of both Gold and Silver receding to lower levels, the decline being more pronounced in the latter. The main reasons for the steady fall in silver prices included poor offtake, increased arrivals of unrefined metal in all centres, talks about the likely arrivals of Tibetan coins in larger quantities hereafter and lower advices from other centres. Thus, with the loosened bull grip over the market, the premium commanded by the spot metal over the futures has not only disappeared, but ready prices have come to be indicated at a discount. Arrivals amounted to 25 bars as against an offtake of 21 bars, while unrefined metal receipts totalled 28 bars. From the opening rate of Rs 118.75 the rate for the spot position receded gradually to Rs 185.44.

The Gold section also showed marked irregularity and the trend was unmistakably downward. Apart from the weakness of silver, factors responsible for the fall in price were reduced spot demand, reports of increased arrivals, resumption of Kolar Gold offerings and fears that the High Court ruling, on the gold seized under the Sea Customs Act, might give a fillip to smuggling activity. Bulls, therefore, liquidated their holdings and prices gradually came down. From the opening rate of Rs 111.44, the rate receded gradually to Rs 109.69. In sympathy, Sovereign turned quiet at Rs 71.50 against Rs 71.75.

Prices on the Bombay Oilseed Exchange showed a mixed trend. Groundnuts continued to be depressed under liquidation and on the issuance of higher tenders in the maturing delivery, while Castorseed maintained a steady undertone. Trading in Linseed and cottonseed remained dull.

Easier advice from the read-
section, issuance of more tenders
selling pressure from Hyderabad
and lack of speculative support
caused weakness in the futures sec-
tion. However, mills have been
evincing a consistent interest in the
available supplies of groundnut
although the behaviour of the
groundnut oil has been compara-
tively less encouraging. Advice
from the main growing areas has
also underlined the tight supply
position with the stockholders being
inclined to part with the goods
only at higher prices. It is genera-
lly believed that the supply posi-
tion will continue to remain difficult
for at least another fortnight.

The summer crop in South India is expected to be available in the beginning of June on a sizable

scale; but how far this will aid the situation in Bombay remains to be seen. Meanwhile, Groundnut Bold quality was quoted at Rs 34.25 and Groundnut Oil at Rs 18.50.

Trading in the Castorseed section was mainly of a squaring up nature; but sentiment remained bullish as prospects of castor oil exports appear to have brightened up now. Market circles believe that good demand is likely to emerge from the USA shortly. Also, reports suggest that enquiries are likely to emerge from the UK and the Continent as well. The rate for commercial oil is placed around £112 per ton. Business to the tune of 300 to 400 tons is already reported done at £110 per ton. Ready Castor seed was quoted at Rs 29.62 and Castor Oil, commercial quality, at Rs 15.12.

Trading in Linseed was dull although the undertone remained steady. Ready was quoted at Rs 30.37 and Linseed Oil at Rs 15.87.

Trading in cottonseed was listless with prices moving within a narrow range.

Conditions on the Bombay Yarn market continued to remain dull in the absence of any support. Daily activity was at a low ebb and prices moved in an irregular way, depicting no definite trend. Operators preferred to be cautious, pending a clearer picture of the supply of staple-fibre yarn in the coming months.

The imminent approach of the monsoon has told adversely on the turnover, while reports from up-country centres have indicated consumer resistance at higher prices in staple-fibre as well as rayon yarns. Weavers are reluctant to augment their stocks of raw material as they find prices very high.

In the Cotton yarn section, conditions have continued to remain depressed. In spite of the upward trend in the cotton market, prices have not improved. As for the export of Indian cotton yarn, there too, is no improvement due to keen competition from China, Italy and Pakistan, who are selling at lower rates than those offered by India.

Thanks to the issue of permits and the arrivals under the Colombo Aid Plan, the Copper supply situation is reported to have improved to some extent. It is stated that actual users are now in a position to obtain their requirements, although the non-ferrous metals market has not returned to normal.

It is learnt that manufacturers of copper and brass sheets contemplate to make their products cheaper next month. The availability of raw material at only 34 per cent above the imported cost has enabled them to reduce the prices. This will be a major adjustment in prices after a lapse of about six months. Sheet-rollers are presently selling copper sheets at Rs 210 per cwt and brass sheets at Rs 162

THE Cotton market in Bombay has received, with great relief, the eagerly-awaited announcement of a further export quota for 50,000 bales, consisting of 35,000 bales of all varieties of cotton not above 23/32 staple and 15,000 bales of 3rd staple and below. The export release has come at an opportune time and enabled the traders to wipe out practically all the earlier losses incurred by them.

There is a general satisfaction at the policy of distributing the quota on a "first-come-first-served" basis. Reports are current that half the quota for $\frac{1}{2}$ staple cotton has already been exhausted by shippers who had put through business with foreign buyers, subject to licences. Not more than 10 per cent of the quantity will be allowed for shipment by a single exporter from all Ports. As licensing will be stopped as soon as the ceiling is reached, shippers have rushed to secure export licences for $\frac{1}{2}$ staple cotton. Many of them have already put through business with buyers in Japan and the UK to the extent of 10,000 bales, subject to export permits. Meanwhile rumours are current that the Government will announce an additional export quota for $\frac{1}{2}$ cotton.

Total exports allowed this season have so far, amounted to 2.5 lakh bales of which 1.5 lakh bales are earmarked for Bengals; 85,000 bales for 23/32" staple and the balance is staple cotton. There has not been appreciable demand for 23/32" staple growths and a large part of the previous quota has still remained unutilised. Shippers feel that no more export of cotton will be permitted in the rest of the season.

With regard to imports, the Government of India have decided to release, for import, a further quantity of 30,000 bales of cotton staple 13/16 and above from the so-called currency areas. The import will be permitted against quota letters which will be issued to mills on application. Details regarding the procedure for imports will be issued in due course by the Joint Chief Controller of Imports, Bombay.

Meanwhile, it is learnt that the Government of India are negotiating the import of 80,000 bales of US cotton in Washington. It appears that the USA is not in a position to offer the quantity of cotton needed in this country owing to shortage at home. In these negotiations for the required quality of cotton fail, India will be obliged to try alternate sources of supply, say, East Africa. Whether further imports of East African cotton will be made in the normal manner or through a barter deal on lines similar to those with Egypt remains to be seen.

East Africa accounts for 10 per cent of India's annual exports of cotton piecegoods. On the other hand, India has been forced to curtail her imports of East African cotton goods.

tem of sales on competitive basis, also affected sentiment. Trading, therefore, was at a low ebb, because of the delay in the announcement by the USA Government giving the initial cotton export subsidy rate for the coming season. Most likely the subsidy will be a permanently-fixed rate; but will be flexible in order to keep the USA exportable surplus at competitive levels with cotton from other producing countries.

Listless conditions prevailed on the Bombay Cotton Piecegoods market. While there was moderate activity in the domestic sector, the demand from overseas buyers was very poor. Hopes are still entertained that, despite the categorical statement by the Union Commerce Minister that there was no immediate chance of any reduction in the excise duty, some relief would be announced by the authorities before long. There are also expectations that demand for cloth will pick up before long in view of the festival season ahead.

On the export front, trading conditions continued to be unsatisfactory although there were a few stray enquiries from the UK and there was a revival of demand from the East African countries. The demand from the Persian Gulf area is reported to be tapering off.

DELHI
REVIEW

A TEAM of senior officials of the Finance Ministry is leaving India shortly for a six-week tour of Europe. The principal purpose of the tour is to negotiate with various governments agreements for relief on incomes taxed both in India and the respective countries. The team is headed by Mr A. K. Roy, Chairman, Central Board of Revenue and includes Mr V. K. Chari, Member of CBR, and is to visit Great Britain, West Germany, Switzerland, Sweden and France. It is also likely that the itinerary will include Denmark and Italy also.

Double taxation is a vexatious business that international commerce has brought in its wake. It is also a problem that bristles with difficulties on detail, since tax laws differ from country to country and the policy and philosophy behind taxation are so widely different. Moreover, financial loss or gain on balance to governments on agreeing to some form of relief to the assessee is a factor that influences readiness to conclude such agreements. On the other hand, considerations like the need for stepping up foreign investments in one's country, may be decisive with countries which are capital hungry. They may be willing to put up with some loss in revenue in return for productive investment in the country by foreigners. But, even here, the need for hard bargaining can hardly be overlooked.

India has by now a rich and varied experience in the matter of agreements for mitigating or avoiding altogether the hardship that is likely to arise from subjecting the same income to tax at two places. Such experience has been the result of a number of fortuitous circumstances. Besides agreement with a number of foreign countries, the Government of India had in the old days to make special

S. E. RLY TENDERS

Sealed tenders are invited for Tender No. GM10/PD/49/CS/GB8 for supply of 1809 Nos. T. W. Tables for clerks and 1198 Nos. T. W. Tables for Supervisors.

Tender forms are obtainable from the Controller of Stores, Garden Reach, South Eastern Railway, Calcutta-23 (PD Section) on remittance of Rs 5/- (not refundable) per copy per tender by Money Order to him direct in the case of outside firms and on production of cash receipt from this Railway's Chief Cashier by local firms. Earnest money against the tender is Rs 2,000/-. Closing date of the tender is 23.6.58 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid income tax clearance certificate along with the Earnest Money receipt with the tender.

GENERAL MANAGER

Avoidance of Double Taxation

arrangements regarding relief in respect of income taxed by it and by the former Indian States, where income-tax was then being levied. Then when Burma separated from India, there was need for similar arrangements with that country. There were the Commonwealth countries with whom we had special ties and, nearer home, Ceylon was a country in which Indians had extensive business connections. In all these cases, India had agreements of relief for double taxation.

Such arrangements were complicated in detail, but the principle involved was simple enough. The covenanting governments agree to forego part of the taxes on the double taxed income in stated proportions (mostly a moiety each) so that the tax payer is obliged to pay to either or both only at the higher of the two rates. Simple as this seems, it involves a good deal of rule making and detailed scrutiny of the claims. There was also a certain amount of running from pillar to post, getting a clearance from one country and then presenting it to the other and so forth. Meantime, the tax paid in both countries lay locked up with governments. There was also the complication of triple taxation, especially in the case of banks, and financial houses. And sometimes (though very rarely) legitimate relief slipped through the fingers by failure to put in one's claim in time by oversight or by ignorance.

Partly because of these drawbacks in a system involving refund on admission of double taxation claims, the mechanism of double taxation avoidance has come increasingly into use. As far as India was concerned, its first agreement of this sort was with Pakistan immediately after partition. Historical reasons and near identity of the tax laws of the two countries, not to mention the common traditions of both countries, made it an agreement easy to negotiate. It is an admirable document, hardly four pages in length, and covers every conceivable situation. Though, in actual application, these provisions may sometimes give rise to difficult decisions—for the resolution of which the two governments have an informal machinery consisting of representatives of both governments—the agreement has put an end to the vexation involved in double taxation relief arrangements. The chief virtue of this "avoidance arrangement" is, of course, that there is no double taxation at all to begin with, each government agreeing not to tax certain categories of income that it would normally be entitled to tax under its own laws, provided that category is taxed by the other country also under its laws. The principles that govern this renunciation are eminently sensible. They are mostly based on the "situs" of the source

of income, and where the income has more than one situs, certain ad-hoc percentages have been agreed upon. These are in accordance with the trend of judicial decisions which had had to consider, in other contexts, the chargeability of income with multiple seats. Each country makes its computation under its own laws and in respect of income from stated categories, keeps the tax due in "abeyance" unilaterally for a year before which a certificate of taxation on those categories from the other dominion is to be produced. When that is done, the tax kept in abeyance is foregone.

This arrangement has, according to official sources, worked very well. (Perhaps, this is the only arrangement with Pakistan that has worked well!) Encouraged by the success of the agreement, Government have concluded a similar agreement with Ceylon and it appeared at one time that such agreements would set the model for others when they are concluded. But the extension of the area of such agreements, has not met with much success. India has been negotiating with Great Britain for a double taxation avoidance agreement for some years with no apparent success. (An agreement of avoidance of double taxation in respect of Estate Duty has, however, been concluded.) One reason for this difficulty is obvious. Such agreements for avoidance of taxation are normally easy between countries of more or less equal economic stature. In other words, such arrangements would, on balance, hurt, in terms of tax loss, the country that has lesser stakes in the other country than the other country has in it. Indian commercial interests in Britain are far less extensive than British commercial interests in India and our present policies are oriented toward increasing them, if possible. Our bargaining position in this matter is, therefore, somewhat weak. It may be that, in these cases, double taxation relief arrangements would be more advantageous to us rather than avoidance agreements. And since, in absolute terms, the loss in revenue to developed countries by the former arrangement may not be significantly more than under the latter, they may agree to a form of arrangement that does not cut in too deeply into India's tax receipts. Such willingness would also be in accordance with expressed sympathies for India's development.

But there are certain other things on which foreign governments, not to mention foreign commercial and financial interests, would need reassurance and clarification. And these may well turn out to be more important than arrangements to mitigate hardships arising out of double taxation. One of them is the vagaries

attendant on taxation which is extra-territorial in varying degrees, and the invention by revenue of whole series of "notional" incomes where none exists. Take Section 42 of the Indian Income Tax Act. Similar provisions exist in taxing statutes of other countries and so they are, it is true, in no position to throw the first stone. Moreover, extra-territorial tax legislation has become fiscally respectable because of judicial blessing. Section 42 provides that income arising out of what is called "business connection" with India is deemed to arise in India. The consequence is a foreigner who (for instance) gets royalties on his patents that are used in India will have to pay tax thereon, though he gets paid elsewhere. And, according to some decisions, even purchase operations by foreigners in India would bring about a "business connection" with India and the profit "attributable" to such operations must be deemed to have accrued in India. To a layman, it is not readily apparent how any man can make a profit out of purchases, but apparently the law thinks that it can be done. But, whatever may be the legal position, there is a case, especially in our present context, to mitigate the rigours of these provisions. At any rate, the vagueness and sometimes misunderstanding, of the precise scope of these provisions need not be removed. One of the functions of the official team may well be this.

There is one other matter to which the official team may have to give special attention and this is, unlike what I said in the earlier paragraph, something in which we are at the disadvantageous end. I am referring to the unfortunate fact that some of the incentives for foreign investment which we have provided in our tax laws at considerable deprivation to ourselves are being unwittingly thwarted by taxation laws of other countries. Dr Lokanathan had referred to them in his book on Taxation and Foreign Investment. Take, for instance, a concession like Development Rebate, a massive inducement in any manner of reckoning. But since income doubly taxed alone qualifies for exemption from taxation for capital exporters in their home-countries, no exemption from taxation is available to them in their own countries in respect of the amount of Development Rebate allowed in India. The edge of the incentive is, therefore, blunted as the capital exporter will have to pay tax on that in any case in his own country. The result is that India is needlessly losing revenue to another country and the assessee himself is unable to use the funds spared by India for the purpose it was spared for and is obliged to divert it to pay the taxes in his home country! This is a highly unsatisfactory state of affairs which requires immediate remedy.

NORTH INDIAN
NOTES

Chambal Project

Whether it is because of the impossibility of correctly assessing the benefits of schemes at the time of their planning some of the development schemes, have in the course of their implementation, demonstrated that there has been inadequate appreciation of the real benefits that would accrue from them. The Chambal Project is an instance where because of inadequate appreciation of benefits, utilisation of the project has been delayed.

The Irrigation and Power team of the Committee on Plan Projects which carried on an investigation into the working of the Chambal Projects has in its report come to the conclusion that the period of ten years for realising the benefits of irrigation can be reduced to half and had made a number of suggestions to give effect to this. The team considers the levelling of land in many places indispensable for maximising the benefits from the irrigation project at Chambal, the total area of land needing such levelling in the two States of Rajasthan and Madhya Pradesh being estimated by the team at about 14 lakh acres. The outlay that would be required for carrying out such operations has been estimated at about Rs 30 lakhs and Rs 46 lakhs for Rajasthan and Madhya Pradesh respectively. Possibilities for further extending the benefits of irrigation has been suggested in the scheme for the removal of wild, ber bush infesting the land in most areas coming under the Chambal Project in both States.

It is the increased potentialities for extending agriculture that provide the justification for the additional schemes suggested in the report of the team. The team has in this connection stated that the new schemes could bring about revolutionary changes in the agricultural economy of the States, and has pointed to the great potentialities for the horticultural industry which however are contingent on the implementation of the schemes recommended by the team. Development of the sugar industry for which the climate and soil have been found suitable is indicated as another possible field for profitably utilising the irrigation potential of the Chambal Project. These benefits should far outweigh considerations of increased cost that has to be incurred in implementing the recommendations of the team.

*

Debate on Air Corporations

Those in charge of running the two Air Corporations must have been pleasantly surprised by the tone of the discussion raised in the Lok Sabha (a couple of days before the House was adjourned sine die) by the PSP member Mr Rajendra

Singh on the annual reports of the Indian Airlines Corporation and the Air India International. For, in the past, criticisms of the working of the Corporations—of the domestic one, in particular—has usually been adverse and unflattering. On this occasion, by contrast, the members who participated in the discussion were unstinted in their praise for the Air India International and though these were criticisms about the continuing loss in the running of the IAC, the general opinion of the speakers belonging to all sections of the House was appreciative of the efforts now being made to improve its working.

The IAC deserves the appreciation. At last it looks as if the teething troubles of the infant Corporation are disappearing and a new vigour and freshness is discernible in the way in which the innumerable organizational problems are being tackled.

But, notwithstanding the improvement which has been real and striking, it will be premature to expect the IAC to show a working profit in the near future. Mr S. K. Patil, the Minister for Communications, in his reply to the discussion was careful to point this out while praising the IAC in generous terms and describing it as "among the most progressive and efficient airlines in the world", he said that although air travel had increased manifold in recent years and it had become a necessity and not a luxury, it would take many more years before civil aviation became a commercial proposition in India.

The apparent contradiction and anomaly in the statement will be partly resolved when it is remembered that fares charged for air travel in India are amongst the lowest in the world and that the IAC has to pay more for aviation fuel than operators in other countries.

These are, however, not the only uneconomic factors. The wages bill of the IAC is exceptionally high as is the evergrowing cost of administration. There is also, after nearly five years of rationalisation, a lack of coordination in operation—a hangover from the pre 1953 days of private operators.

It is unfair, perhaps, to blame the corporation either about its failure to lower the wage structure or about its inability to alter the fare rates or to effect economies in fuel costs. For, these are matters not wholly within its control. But there is no reason why substantial economies cannot be made in administrative cost and uncoordinated operations checked. If the improvement in operational standards which has taken place in recent months is symptomatic of a general all round improvement, then it may be hoped, that before long better results in terms of financial return will obtain. If that happens early then the IAC will have justified the encomia the Union Minister and the members of Parliament bestowed on it.

NORTH INDIAN
MARKETS

Rice and Wheat Firm

RECENT trends in Rice and Wheat markets in North India, make an interesting study. The strength in Rice has been attributed mainly to the receding hopes, which were widely shared, some time ago, that Madhya Pradesh would shortly relax its ban on exports. This belief was so strong that the market had registered a substantial setback; but the growing disappointment on the issue has resulted in a rally to the former levels. The rise in prices has been aided also by the recent sharp decline in arrivals.

The advance in Wheat prices has been helped by higher advices from Rajasthan and Madhya Pradesh. While prices have been depressed in the Punjab zone, the undertone in Uttar Pradesh centres has been fairly steady. The crop in the Punjab, this year, has been fairly good and arrivals, too, have been satisfactory. Stockists have, therefore, been hesitant about building up holdings for fear of losses at a later stage should the Government invoke the provisions of the Essential Commodities Act.

In Uttar Pradesh, however, the crop is lower than last year's. Arrivals have also been restricted and only sufficient to meet the day-to-day requirements of consumers. Imports from outside the zone are not allowed. Agriculturists have been hesitant to part with the produce in anticipation of higher prices in the coming months.

Production figures (in thousand tons) of individual crops for 1957-58 as compared with the revised estimate for 1956-57 are as follows:—Rice 24,821 (28,282); Jowar 8,056 (7,249); Bajra 3,565 (2,885); Maize 3,064 (3,009) and Ragi 1,716 (1,715). The rice crop accounts for decrease of 3.5 million tons and is almost equal to the average for the first Five-Year Plan period; but the shortfall has been made up partially by the increase in production of other "khariff" cereals, especially of the two major millets, jowar and bajra. These two millets account for an increase of 1.5 million tons during the current year as compared with the previous year. The all-India final estimate of small millets for 1957-58 is still not available but that for the previous season 1956-57 puts the area and production at 12.21 million acres and 2.01 million tons respectively.

It is understood that the Government of India are arranging more of imports in order to build up sizable reserves. Negotiations are already in progress with the USA for the import of 3.5 million tons of wheat and a half million tons of rice. Burma's willingness to supply 2.7 lakh tons as against

her original commitment of 5 lakh tons during the year is stated to be an additional reason for increasing imports.

Meanwhile, conditions in the Hapur market have continued to remain quiet with the average quality wheat quoting around Rs 15.50 per maund and the farm quality at Rs 16.50. The markets for Rice and Gram have also been ruling steady. Barley and Bejher prices have, however, eased slightly, thanks to increased arrivals in the market. Arhar has recorded a further rise of about 75 nP on firmer Bombay, Madhya Pradesh and Mysore advices.

Sugar

Sugar prices have developed an easier tendency in the absence of any concrete scheme for exports. The supply position is also reported to be comfortable following the release off a special quota. The inordinary delay in the announcement of the export policy for sugar during the current season has even led to some rumours that the Government may given up the export plan. It is stated that the Government are now having second thoughts over the issue.

While it may be necessary to export sugar from the point of view of earning more foreign exchange, it is felt that the total loss involved in the export of, say, two lakh tons will exceed the corresponding foreign exchange earnings. The reported opposition by some State Governments to sacrifice the cane cess for export purposes is also said to have created a fresh problem.

According to the Indian Sugar Mills Association, production and despatches of indigenous sugar amounted to 19.47 lakh tons and 10.82 lakh tons respectively upto May 15, 1958 in the current season as against 19.13 lakh tons and 11.70 lakh tons in the corresponding period of the previous year. Stocks with the factories, as on the 15th May, were 12.90 lakh tons as compared to 12.70 lakh tons on the corresponding date of last year.

Following mill-delivery prices (per maund) are quoted in the Hapur market:—Rampur (B. 29) Rs 37.50; Buland (C. 29) Rs 37; Iqbalpore (C. 29) Rs 36.81; Mansoorpur (C. 29) Rs 37.25; Daurala (B. 29) Rs 37.50; Mowana (C. 29) Rs 36.87; Shamli (B. 29) Rs 37.75; Amroha (D. 29) Rs 35.50; Bijnore (C. 29) Rs 35.37; Meerut (D. 29) Rs 36.37 and Simbhauli (E. 29) Rs 36.62.

Sentiment in the Khandasari market also remained depressed due to fall in ready demand and in line with bearish conditions in the crystal section. Rates moved between Rs 30.50 and Rs 33.50 per maund, according to quality.

*

Gur

Poor arrivals due to off season with better pre-monsoon demand have accounted for an improvement of about 75 nP per maund in the prices of dry quality Gur, which is quoted upto Rs 16.75.

MADRAS
REVIEW

THE critics of the Second Plan have been put on their feet by the many difficulties and bottlenecks that have emerged in the course of the last two years in the working of the Plan and might see in them the confirmation of their prognostications regarding the weakness of the Second Plan. Certainly the difficulties that have been experienced in the implementation of the Plan have directed attention to the question whether the Plan could be carried through successfully with the hard core in tact. No doubt the revision of the total outlay by the National Development Council has set at rest doubts about the unrealistic attitude of the Government, and has raised hopes that the hard core of the Plan, would be shielded from damage. But more importantly they have underlined the need on the part of the Government to keep abreast of developments so that contingencies as and when they arise in any sector of the National economy could be met with properly without risk to the execution of the Plan.

It is in this context that the question of export promotion assumes significance. The foreign exchange difficulties that the country experienced in recent times are a grim reminder of the lack of balance in the structure of the economy. The Government had reacted quickly by imposing drastic restrictions on imports of a large number of articles so as to arrest the drain on foreign exchange re-

THE CALCUTTA ELECTRIC
SUPPLY CORPORATION LIMITED
(Incorporated in England)5% RUPEE DEBENTURE STOCK
1970INTEREST FOR THE HALF-YEAR
ENDED 30TH JUNE, 1958.

Notice is hereby given that interest at the rate of Rs. 25/- (less Indian Income Tax) per Rs. 1,000/- of Stock will be paid on 1st July, 1958 to Debenture Stockholders registered in the books of the Company on 23rd June, 1958. Applications for transfers received at the Company's Office at Victoria House, Post Box 304, Chowringhee Sq., Calcutta, upto 23rd June, 1958 will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above interest.

Debenture Stock Transfer Books will be closed from 24th June, 1958 to 30th June, 1958 both dates inclusive.

Export Promotion

serves. While the drain had been arrested by the impositions of severe cuts in imports, the needs of a developing economy which is short of the vitally needed capital goods and which has therefore perforce to import them preclude the pursuit of such a policy on a long-term basis. This leaves increasing internal production and vigorous export drive as the only alternatives in stabilising the economy.

The announcement of Mr Lal Bahadur Shastri Union Minister for Commerce and Industry, in the course of his inaugural address to the annual general meeting of the Hindustan Chamber of Commerce in Madras that he would be drawing up an export promotion scheme soon and take a final decision on this matter after holding consultations with other Ministries defines the Government's attitude to the problem of foreign exchange.

The ground that has to be covered in the export front is indicated by the fact that, at present, the exports add up to a bare 6 per cent of the total national income of the country. This brings to light the comparative neglect in which the problem has been treated so far. While between 1950 and 1957 world trade had increased by 85 per cent the exports of India increased only by 14 per cent. The problem of development of the country is in this sense one of bringing the trade of the country more in harmony with world trends.

Such export promotion drives involve exploration of new markets for old goods and of finding markets for new goods. The success of such experiments, while it depends on the enterprise and interest evinced by the industrialists is also vitally linked with the encouragement that the Government could give. Revision of long distance rates and local taxes levied at originating States and in the places through which the goods pass have been indicated by Mr Shastri as the chief elements in the orientation of the Government's attitude in the export drive. Provision of long-term and short-term loans and priority in the allocations of raw materials are other important considerations involved in the policy meant to promote exports.

As Mr Shastri has pointed out export promotion by its very nature could not be expected to yield tangible results in the short-run the scope for activities in the short-run, being limited to doing some spade work. This leaves the question of meeting the immediate requirements for foreign exchange unanswered. Foreign aid or loan might point the way out of such difficulties. Though Mr Shastri referred to the importance of such foreign aid in meeting immediate requirements he could not indicate whether any such aid would be forthcoming.

In such a situation relaxation of restrictions on imports would only aggravate the balance of payments position of the country. Such a policy is therefore out of the question especially in view of the fact referred to by Mr Shastri in his speech, that the country, in spite of the stringent restrictions already imposed, had not turned the corner in regard to the foreign exchange problem. Mr Shastri himself ruled out any hope of liberalisation and further pointed out that the hardships which the present restrictions imposed were only sectional affecting mainly specialised sections of trade and industry.

In regard to the problem of conserving the limited foreign exchange Mr Shastri has made some proposals. Diversion of the interests by the commercial and industrial community from imports of consumer goods to the imports of the more vitally needed goods is one of them. Mr Shastri has also stressed for the people in general to use indigenous goods in place of foreign imported ones.

The time-consuming nature of export promotion is perhaps more applicable to new goods than to those which had been figuring prominently in the exports of the country. In view of the quick results that might be expected of such export promotion drives in regard to established items of export, there is need for early and effective measures. In fact in regard to such items there is a clear danger of decline in their exports unless measures are taken to avert such an eventuality in time. With all the countries in the world being inspired by the same objectives and aspirations as India, in regard to economic matters there is possibility of a clash of interests especially in the international markets for exports. So unless there is a correspondence in the policy of the Government to suit the actions of the foreign governments, the country would be ill-equipped to stand the competition of foreign goods in foreign markets. This is true of many of the traditional goods which have bulked large in the exports of the country particularly cotton textiles, sugar, and tea. In all these cases the specific disadvantage of the Indian goods is their high prices. While the country for the first time was able to export sugar at a profit to neighbouring countries during the last year prospects for repeating the performance have faded with the decline in the international price of sugar. The difficulties experienced by these goods thus underline the need for concrete measures to boost exports.

Export promotion to succeed in any substantial way has to be built on the foundations of increasing industrial production. This is dependent on the effective functioning of the public and private sectors in an atmosphere of mutual cooperation and goodwill. There has been much misgivings on the

part of the business community in regard to the attitude of the Government towards it. Even at the meeting of the Chamber Mr C. A. Chettiar referred to the adverse effects on industrial production of the various tax measures imposed by the Government on the private sector. In view of the need to step up production the scope for giving some incentives to the private sector has therefore to be examined.

Foreign exchange shortage, though typical of the difficulties, the country has to face in the implementation of the Plan, is only one of them. There are also other questions relating to food production tapping internal resources and the need to keep an effective watch on the price level. Though these problems would seem to be formidable, to fight shy of them would be an act of despair. The statement of Mr Shastri that the Government would tackle the problems with determination is therefore reassuring. But the cooperation of the people is also a vital factor in the success of the Government's efforts.

MINERVA MILLS, LIMITED.

NOTICE TO SHAREHOLDERS.

NOTICE is hereby given that the Thirty-eighth Annual General Meeting of the above Company will be held at the Registered Office of the Company, Temple Bar Building, 70, Forbes Street, Fort, Bombay, on Tuesday the 15th day of July 1958 at 4.30 P.M. to transact the following business:—

1. To receive and adopt the Directors' Report and Audited Statements of Accounts for the year ended 31st December 1957.
2. To appoint Directors in place of those who retire but are eligible for re-appointment.
3. To appoint Auditors for the current year and to fix their remuneration.

The Transfer Books of the Company will be closed from the 20th day of June 1958 to the 12th day of July 1958, both days inclusive.

A MEMBER ENTITLED TO ATTEND AND VOTE AT THE MEETING IS ENTITLED TO APPOINT A PROXY TO ATTEND AND VOTE INSTEAD OF HIMSELF AND A PROXY NEED NOT BE A MEMBER.

Detailed Notice of the above Meeting is being published in the Press and is also being posted to the Shareholders individually.

By Order of the Board,

Managing Agents,
V. N. CHANDAVARKAR
Managing Director.
Bombay, 21st May, 1958.

THE
PENINSULASOUTH INDIAN
NOTES

With emphasis being laid on industrialisation in the economic development of the country under the Second Plan the exploitation of mineral wealth of the country assumes great importance. The region that could yield the most fruitful results in these efforts towards development of mineral resources is the State of Andhra Pradesh. The State is credited with a variety of minerals which however have remained largely unexplored. Iron deposits at Nellore and Guntur districts, diamonds deposits in the Ananthapur district, coal deposits in the Godavari valley and other places are but a few of the minerals for which the State is famous.

Efforts to exploit the mineral potentialities in the State have so far not been on a scale so as to get the maximum benefits out of them for industrial development. The only fields in which efforts have so far been directed have been in respect of the development of coal and monazite. Besides the Singareni Collieries, coal at present is mined also in the Kothagudam collieries. For the exploitation of the monazite deposits the services and cooperation of the private

KAMARHATTY COMPANY,
LIMITED

NOTICE is hereby given that the One Hundred and Fifty-ninth Annual General Meeting of Members will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, at 3.00 P.M. on Friday, the 20th June, 1958, for the following purposes:—

- (1) To receive and consider the Audited Accounts for the year ended 31st December, 1957, and the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
- (2) To appoint a Director in place of one retiring.
- (3) To appoint Auditors and to fix their remuneration.

The Share Transfer Books of the Company will be closed from 18th June to 20th June, 1958, both days inclusive.

25th April, 1958.

NOTE: A member entitled to attend and vote at the meeting may appoint a proxy to attend and vote on his behalf. A proxy need not also be a member of the Company.

Development of Minerals

sector have been enlisted and a ferro-manganese plant has also been set up. In the existence of zinc, copper and graphite deposits possibilities for the atomic industry are also indicated.

At the sixth meeting of the Mineral Advisory Board of the Ministry of Steel, Fuel and Mines, Government of India which was held at Hyderabad the need for paying proper attention to the exploitation of the mineral wealth of Andhra Pradesh was stressed by Mr Kala Venkata Rao, Minister for Revenue in the Andhra Pradesh Government. He requested the Government of India to undertake a geological survey of the Godavari Valley and map it in detail with particular reference to the availability of coal in that area. Development of mineral resources also holds forth great possibilities in overcoming the foreign exchange shortage.

Of more immediate importance is the need for strengthening the structure of the present export trade in minerals. This is a matter which has to be looked into by the State Trading Corporation since trade in minerals comes under the direct care and responsibility of the State Trading Corporation. The Mineral Advisory Board has in this connection made a suggestion for giving special consideration to small mine-owners in respect of export trade in minerals by the State Trading Corporation. The Board has also made other recommendation for stepping up production, and improving prospects of trade in them.

Briquetting Experiment at
Neyveli

The experiment in the pilot briquetting and carbonising plant erected at Neyveli was inaugurated last week by Mr Howard Houston Head of the United States Technical Cooperation Mission in India. The experiment is mainly intended to determine the capacity of the lignites in Neyveli to yield smokeless fuel of approved quality and on its success hinges the prospects for the starting of several new industries of the heavy variety as well as other types and especially the fertiliser plant. The pilot experiment is considered of great importance in finalising the specifications of the plant and machinery for commercial purposes, and represents a major step in the fuller exploitation, of the lignite resources of Neyveli.

It was the interest evinced by the Technical Cooperation Mission of the United States which made possible the erection of the briquetting and carbonising equipment. The fact that the plant was erected in a record time of six weeks is a tribute to Mr Prendargust, Deputy of the TCM who supervised its erection and further bears out

the unsolicited generosity which America is bringing to bear on the development of the underdeveloped countries of Asia, particularly India. In a reference to the help that America has extended to the Neyveli lignite project, Mr T. M. S. Mani Managing Director of the Neyveli Corporation expressed the hope that the Neyveli Corporation would be the precursor of similar close cooperation between all concerned in the development and implementation of the project, particularly in fertilizer, briquetting and carbonising schemes. Mr C. Subramaniam, Finance Minister of Madras also paid a tribute to the magnanimous role played by America in the development of the undeveloped areas of the world and dismissed misgivings about strings being attached to the American aid.

The industrial development of Madras is vitally linked with the development and exploitation of the fuel resources of the region. Considering that sources of thermal power are limited and few in the South the role of Neyveli in the industrial development of the State is only obvious. With industries in the State having, at present, to do with greatly restricted supplies of power the question of power development assumes great importance. In such circumstances it is only natural that great importance should be attached to the Neyveli project.

Panchayat Revenue

The Local Finance Sub-Committee of the Legislative Committee on Local Administration of Madras State had in its report on "Perspective Budget of Panchayat Administration" made important suggestions for augmenting the finances of the local bodies. The most important of the suggestions is the one relating to the levy of local cess to replace the present local taxes such as land cess, education cess, and land revenue surcharge. By way of a statutory definition, it has been mentioned in the report that the cess should ensure that the rate of local cess levied on any land does not fall short of 45 naye paise in the rupee of land revenue and that it should leave the maximum rate to be specified by statutory rules.

The sub-Committee is in favour of vesting the power to levy the rate within the minimum specified by law and the maximum specified by statutory rules to the Panchayat Union. But at the same time, the crediting of a part of the local cess collected by the Panchayat Union equivalent to about 20 naye paise per head of the village population to the Village Panchayat Fund is also considered desirable. The increase in revenue that will accrue to the Panchayat Union as a result of the replacement of the present system of taxes by the local cess is further expected to help the Panchayat

Union in meeting its share of Second Slab expenditure on education as well as the increased cost of local works and local services falling within its sphere of responsibility.

With increase in the rate of Stamp Duty Surcharge from 4 per cent to 5 per cent which the Committee has recommended, the revenue of the local bodies is further expected to rise. The yield of the tax after the increase in the rate is estimated to be 35 naye paise per capita on the average.

Though the Committee has suggested that nearly Rs 3½ crores would have to be provided by the State Government towards the Panchayat Development Expenditure it does not envisage any increase in State Taxation. But it holds Central Government Grant to the State Government as essential for the implementation of the Financial scheme recommended in its report. Under the division of burdens in respect of raising new resources for Panchayat Administration, which the Committee has suggested, the Central Government, the State Government and the Panchayat Administration would be responsible for one third each of the total revenue.

KANKNARRAH COMPANY,
LIMITED

NOTICE is hereby given that the One Hundred and Forty-ninth Annual General Meeting of Members will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta, at 4.00 P.M. on Friday, the 20th June, 1958, for the following purposes:—

- (1) To receive and consider the Audited Accounts for the year ended 31st December, 1957, and the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
- (2) To appoint a Director in place of one retiring.
- (3) To appoint Auditors and to fix their remuneration.

Russian Demand for Cashewnut

THERE has been a brisk demand for Indian Cashewnut from Russia during the past few days and the price of the exportable quality has risen from Rs 215 to Rs 250 per cwt on f.o.b. basis. In the New York market, prices have also risen from 44 to 50 cents per pound. In line with the upward trend, rates for African raw nuts have advanced, in India, from Rs 565 to Rs 675 per ton.

Purchases by Russia have assumed significance in that they have tended to reduce, to some extent, India's dependence on America. The USA has been a major buyer of Indian cashewnuts for the last several years, its share in exports, in 1957, amounting to about 9½ lakh cases out of the total exports of 12 lakh cases. On the other hand, Russia has shown a progressively increasing interest in the commodity since June 1956 when India sent its first shipment of about 18,400 cases to that country. In that year, Russia was reported to have bought an estimated quantity of 54,000 cases.

Thus, Russia has figured as a major buyer in India during the past two months with the exporters estimating its purchases at about 160,000 cases of 50 pounds each. The bulk of this business is reported to have been put through at Rs 214 to Rs 218 per cwt f.o.b. The first consignment of about 37,000 cases against the contracted business was made towards the end of last month and the balance will be sent by shipments extended to October.

THE MODERN MILLS, LIMITED.

Notice of 17th Dividend.

NOTICE IS HEREBY GIVEN THAT a Dividend of Rs. 5/- per share of Rs. 50/- for the year ended 31st October 1957, sanctioned by the Shareholders at the Twenty-fourth Annual General Meeting held on the 21st May 1958, is made payable at the State Bank of India, Bombay, on and after Monday the 26th May 1958 to those shareholders whose names stood on the Register of Members on the 25th April 1958, but only in respect of their holdings of shares allotted prior to 31st October 1957, i.e., shares bearing Nos. 1 to 66376. The dividend warrants are made negotiable at par at the State Bank of India, Bangalore.

The outlook for exports to the USA is, however, good with the period of peak off-take ahead. The Continent is also likely to buy more this year, because of higher almond prices there.

Coffee

The Coffee Board has released, for export, 1,147 tons of coffee out of the 1958-59 crop. The quantity released consists of 805 tons of Plantation A; 138 tons of Plantation B; 157 tons of Plantation Triage and 47 tons of Arabica Cherry Flats. Tenders are due on June 12.

According to a newsletter issued by the Board, the prospects for the ensuing year have brightened up considerably since the beginning of last month. The estimate now made will be about 45,000 tons. As for the current crop of 1957-58, a further revision to the estimate has taken place, according to which the 1957-58 crop will be 41,687 tons of Plantation; 7,179 tons of Arabica Cherry and 13,685 tons of Robusta.

Receipt of coffee from the 1957-58 crop, in the Pool, up to the end of April, was 41,477 tons—about 2,000 tons more than what was received during the same period last year. This year's crop may equal, if not exceed last year's.

Out of the 11,684 tons earmarked for export, 5,499 tons have so far been sold till May 10, 1958 out of the current crop. Prices have been ruling steady since mid-April though they are low. There have been a sharp drop in internal releases during April; but this is expected to be made good in subsequent sales.

At the Pool auction held in Mysore, the quantity exposed for sale was 1,032 tons. Following were the range of prices (per cwt):—Plantation Peaberry Rs 237 to Rs 242.95; Plantation "A" Rs 208 to Rs 225; Arabica Cherry Flats Rs 191.65 to Rs 198; Arabica Cherry Peaberry Rs 195.10 to Rs 200.10; Robusta Cherry Flats Rs 156.65 to Rs 163.70 and Robusta Cherry Peaberry Rs 160.15 to Rs 162.10.

Pepper

The Indian Pepper and Spice Trade Association has announced that a quantity of 215,300 cwt of pepper was transacted in hedge contracts, while 1,500 cwt were transacted in transferable specific delivery contract in 1957. There was only one basic quality and all the deliveries were effected at Cochin. The total quantity delivered, during the year, was 5,350 cwt including 1,500 cwt against transferable specific delivery contract.

According to a prominent planter in Wynad, the coffee crop in Wynad is expected to be 25 per cent higher this year than last year, thanks to blossom showers

and sufficient rains. He adds that production is expected to reach 5,000 tons during 1958-59.

Meanwhile, pepper prices have been on a downward trend due to heavy selling pressure. The turnover in forward deliveries has been fairly large, while there is no report of any ready sale.

In the New York market, prices are held steady. Malabar spot is quoted at 25½ cents per pound.

Groundnut

Steady conditions prevailed in the Madras Groundnut market. Daily arrivals averaged 50 tons, which were mostly of the summer crop. Calcutta interests and local crushers gave good support to the market. Business was reported done at Rs 152 per candy for the summer crop.

In the Groundnut Oil section, both buyers and sellers remained reserved and the ready rates fluctuated between Rs 311 and Rs 314 per candy.

According to the third and final forecast report issued by the Madras State Government, the area, shown with groundnut in the State during 1957-58, is estimated at 1,794,000 acres as compared with the provisional area of 1,799,200 acres for the previous year. Harvest of the winter main crop is reported to be in progress. The yield is expected to be 860,000 tons of shelled nuts as against 854,300 tons for the previous year and 772,600 tons—the average for the five years ending 1956-57.

Hides and Skins

In the Madras Tanned Hides market, arrivals of Cow hides were on the same level as in the previous week and there was no change in prices. There was little change to report in Buff hides and Calf hides.

On the export front, business was poor as Madras sellers were asking higher prices. In several cases, offers were being made for combined runs, fourths and fifths, which were, however, not creating any interest on the buying side.

In the Tanned Skins section, arrivals of both Goat and Sheep skins showed no change and there was brisk clearance of market quality sheep skins, both adulterated and better class, at steady prices.

In the export section, trading in Goat skins was sporadic, the main demand being for light weight fifths and inferior fifths. In Sheep skins, overseas business was very quiet. There was practically little support from the UK and Continent, excepting for small enquiries for fifths and inferior fifths in middle class sheep skins.

Prices of Raw Hides remained practically unchanged. In Raw Skins section, all centres were reported to be unchanged to about Rs 15 per 100 skins lower as compared to the previous week.

As the present system of London public auctions is injurious to the E.I. Tanned Goat and Sheep tanning industry and trade, the Committee of the Southern India Skin and Hide Merchants' Association, Madras, has resolved to take steps to stop consignments to the London auctions and to request the Government of India to allow only exports on c.i.f. basis and exports of consignments for sale by private treaty and to ban all consignment exports for the London auctions.

THE INDIAN STANDARD WAGON COMPANY LTD.

NOTICE.

Notice is hereby given that the Annual General Meeting (being the thirty-ninth Ordinary General Meeting) of the Company will be held at the Registered Office, 12, Mission Row, Calcutta, at 11 a.m. on Thursday the 26th June, 1958, for the following purposes:

- To receive and adopt the Audited Accounts for the year ended 31st March, 1958, and the Directors' and Auditors' Reports thereon.
- To declare Dividends. The dividends if declared, will be paid to the shareholders whose names appear in the Company's books on the 26th June, 1958, or to their mandatees.
- To appoint Directors in place of those retiring. In this connection notice is hereby given that a Special Notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Section 281 of that Act to move the following Resolution at the meeting: "That Sir Josna Ghosal be and is hereby appointed a Director of the Company and that it is hereby declared that the age limit laid down in Section 280 of the Companies Act, 1956, shall not apply to him."
- To appoint Auditors and fix their remuneration.

The Share Registers and the Transfer Books of the Company will be closed from the 18th June, 1958, to the 26th June, 1958, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED,
F. G. LIVERSEDGE,
Managing Director,
Managing Agents.

Calcutta,
30th May, 1958.

Better Sentiment

Watch-Dog Writes:

STOCK markets have ruled generally better during the week under review and prices have improved modestly in almost all the sections due to scattered bear-covering and the absence of fresh selling pressure. Sentiment is mainly aided by the reports of resumption of operations at the TISCO Works following the withdrawal of strike by the members of the Mazdoor Union.

The Calcutta Stock Exchange displayed a steady trend, activity being mostly confined to the Jute and Miscellaneous sections.

Reports, that the TISCO strike was called off, caused a firmer tendency in prices on the Bombay Stock Exchange, although higher levels could not be retained till the close due to lack of follow-up.

The Madras Stock Exchange ruled fairly active and buying enquiry was noted in selected scrips. Quiet and uninteresting conditions were witnessed on the London Stock Exchange.

Wall Street closed barely steady.

Calcutta

Calcutta, Friday Evening.

AFTER a fairly steady opening, equities on the local Stock Exchange showed a gradual improvement in prices during the week under review although higher levels could not be retained till the close due to profit-taking and lack of follow-up. Reports with regard to the resumption of operations at the TISCO Works following the withdrawal of the strike by the members of the Mazdoor Union induced fair short-covering. Moreover, there were few signs of willingness on the part of operators to lend support to selected good dividend-payers at the present bargaining prices. The revival of buying interest on the part of investors also reflected their confidence over the long-term outlook despite temporary and superficial lowering of prices due to other factors. However, the main factor, presenting the present recovery from gathering momentum, was the threatened strike by the dock labour with effect from the 16th June.

The Gilt-edged market presented dull conditions as activity was at a low ebb. Institutional investors were inclined to wait the announcement of the new State Loans, which were expected to be issued shortly. 3 per cent 1986 Conversion Loan opened quiet at Rs 71 and, after improving at the close to Rs 71.12, receded again at the close to Rs 71.12. Interest in Bank shares was limited with prices moving within a narrow range. Punjab National changed hands at Rs 53.12 to Rs 53.25; Hindustan

Commercial at Rs 10.12 and United Bank of India at Rs 4.12 to Rs 4.15.

Despite the weakness of the jute goods market and the disappointing results released by some of the important jute mills for last year, jute shares continued to attract buying interest. Operators were inclined to believe that the decline in jute goods prices were brought about, not by a fall in overseas demand, but by the improved outlook for the raw material. There were also indications that the raw jute crop would be better, both in quality and quantity. Anglo-India had buyers at Rs 149 to Rs 154; Barnagore at Rs 87 to Rs 90; India at Rs 128 to Rs 130; Birlas at Rs 15.37 to Rs 15.75; Howrah at Rs 16.25 to Rs 16.50; Nuddea at Rs 38.25 to Rs 39.00 and New Central at Rs 15.19 to Rs 16.00. National moved rather irregularly between Rs 22.12 and Rs 22.81, to close finally at Rs 22.50. Kinnison, after being taken up to Rs 111 from Rs 102, receded again at the close to Rs 108 on profit-taking.

Coal shares recorded only little change in values. Operators were hesitant to extend their commitments as they felt that the recent announcement with regard to the increase in selling prices of coal and coke would hardly benefit the companies. There was also disappointment over the delay of the publication of the Price Revision Committee's report. Bengal were nearly maintained at Rs 241, while East Indian turned quiet at Rs 19.87 against Rs 20.31 and Central India at Rs 7.56 against Rs 7.62. Western Bengal changed hands at Rs 5.87 to Rs 5.96 with Burrakur rather sticky at Rs 21.87.

Trading in the Tea section was restricted, although prices were more or less maintained. Operators were still awaiting the Government decision with regard to the relief to be granted to the industry. The fear of competition in inferior quality teas proved to be a deterrent to investment. Amongst the few transactions recorded were Brahmaputra changing hands at Rs 2.94 to Rs 3.00; Bhatkawa at Rs 23.12; Dheakhat at Rs 22.37; Methoni at Rs 16.62; Rydak at Rs 25.62 to Rs 25.87 and Patrakola at Rs 136.

Sugar shares were inactive on rumours that the Government might even give up the export plan due to the reported opposition by some State Governments to sacrifice cane cess. Baisampore changed hands at Rs 6.25 to Rs 7.06, while S. K. G. and Dyer Meakin were nearly maintained at Rs 10 each.

The obscure outlook for the industry had an adverse effect on the Textiles section, which was practically neglected. The only bright spot was Kesoram, which met with sustained enquiry up to Rs 10.75 from Rs 10.43. Jaysree moved between Rs 6.44 and Rs 6.56, while New Victoria eased off further to Rs 1.25 from Rs 1.28.

Price movements in the Engineering section were mainly influenced by the speculative activity in Indian Irons. Against the week-end closing of Rs 21.35, Indian Irons opened better at Rs 21.48 and, after improving further to Rs 21.58 on better Bombay advices, receded moderately at the close to Rs 21.51 on profit-taking. Similarly, TEXMACO were taken at one time up to Rs 18.08 and Burn up to Rs 34.4 from Rs 34.1, to finish at Rs 17.95 and Rs 34.2 respectively. Britannia changed hands at Rs 10.81 to Rs 10.87; Braithwaite at Rs 26.00 to Rs 26.31; Jessop at Rs 20.12 to Rs 20.25 and Marshalls at Rs 5.41 to Rs 5.50.

In the Miscellaneous section, dealings in Paper shares were more prominent and prices registered fresh higher levels on sustained demand, being influenced by the reports of production being doubled last year and the increasing demand for indigenous paper. Orient were keenly sought after up to Rs 32.25 from Rs 31.00; Titaghur up to Rs 21.00 from Rs 37.50; India Pulp up to Rs 21.00 from Rs 20.75; Sirpur up to Rs 16.00 from Rs 11.19 and Shree Gopal up to Rs 15.00 from Rs 15.81. There was investment demand for Indian Cable up to Rs 34.56 from Rs 34.25; Dunlop up to Rs 26.31 from Rs 25.56; Indian Oxygen up to Rs 18.56 from Rs 18.25; Indian Aluminium up to Rs 15.12 from Rs 14.62; Alkali up to Rs 15.12 from Rs 15.44 from Rs 15.12; Chemicals up to Rs 15.44 from Rs 15.12; Aluminium Corporation up to Rs 11.12 from Rs 10.87 and Rontas up to Rs 18.37

from Rs 17.87. Hindustan Lever were a firm feature at Rs 22.12 and so also Hindustan Motor at Rs 7.00. India Steamship fluctuated narrowly between Rs 10.87 and Rs 11.00 and Osler between Rs 1.75 and Rs 1.81. NICO were enquired up to Rs 27.37 from Rs 26.50 with National Carbon changing hands on the ex-dividend basis at Rs 24.75. Indian Copper idled around Rs 3.10.

PRESIDENCY JUTE MILLS COMPANY, LIMITED

NOTICE is hereby given that the Seventy-third Annual General Meeting of the Members of PRESIDENCY JUTE MILLS COMPANY, LIMITED, will be held at McLeod House, No. 3, Netaji Subhas Road, Calcutta, the Registered Office of the Company, on Friday, the 27th day of June, 1958, at 3 O'clock in the afternoon, for the following purposes:

- To receive and consider the Profit and Loss Account for the thirteen months ended 31st July, 1957, the Balance Sheet as at that date and Reports of the Directors and Auditors.
- To declare a Dividend.
- To appoint Directors in place of Mr. Alec. A. Leslie and Mr. B. L. Bajoria, the Directors retiring by rotation at the Meeting.

And in this connection to consider, and if thought fit, to pass the following resolution which will be proposed as a Special Resolution in conformity with the provisions of Section 261 of the Companies Act, 1956.

"That Mr. B. L. Bajoria be and is hereby re-appointed a Director of the Company liable to retirement by rotation."

Special Notice of the intention to propose the foregoing resolution as a Special Resolution in conformity with the provisions of Sections 190 and 261 of the Companies Act, 1956, has been received by the Company wherein it is stated that Mr. B. L. Bajoria is an "associate" of the Managing Agents within the meaning of the Act, and that therefore, he can only be re-appointed by a special resolution as a Director of the Company liable to retirement by rotation.

- To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

- To consider, and if thought fit, to pass the following resolution:

"That Dr. S. C. Law, who attained the age of sixty-five years in July, 1957, and who was, at a General Meeting held on the 21st May, 1957, appointed a Director of the Company whose period of office is liable to determination by retirement of directors by rotation be and is hereby permitted to continue in office as such Director, and it is hereby declared

Madras

THE Madras Stock Exchange ruled fairly active last week when buying enquiry was noticed in a few selective scrips.

Textiles: Although conditions in this section remained generally quiet, there was some revival of support for selected scrips. Coimbatore Pioneers improved by Rs 7 to Rs 227 in the absence of sellers,

in conformity with the provisions of Section 281 of the Companies Act, 1956, that the age limit prescribed by Section 280 of the Act shall not apply to him".

Special Notice of intention to propose the foregoing resolution has been received by the Company.

The Share Transfer Books of the Company will be closed from 13th to 27th June, 1958, both days inclusive.

A member entitled to attend and vote at the Meeting is entitled to appoint a proxy and vote in his stead. A proxy need not be a member of the Company.

By Order of the Board,
MCLEOD & CO. LTD.,
C. HOCKLEY,
Secretary,
Managing Agents.

3, Netaji Subhas Road,
Calcutta. 28th May, 1958.

Note:—Payment of the proposed dividend, if declared, will be made on or after 15th July, 1958, only to those members whose names are registered in the Books of the Company on 27th June, 1958, or to their Mandatees. Applications for warrants will not be necessary. Claims from or on behalf of holders of shares on blank transfer will not be entertained.

EXPLANATORY STATEMENT

Dr. S. C. Law, who has been a Director of the Company since 19th April, 1945, attained the age of sixty-five years in July, 1957. Unless, therefore, as provided by Section 281 of the Companies Act, 1956, a resolution is passed by the Company in general meeting approving his appointment and specifically declaring that the age limit prescribed in Section 280 shall not apply to him, he will be required to vacate his office at the conclusion of the forthcoming Annual General Meeting in terms of the provisions of the proviso to sub-section 2 of Section 280 of the Companies Act, 1956.

The resolution in item 5 of the above Notice, of which special notice of the intention to propose it has been received by the Company, is intended to satisfy the statutory requirements and will enable Dr. S. C. Law to continue in office as a Director of the Company after the conclusion of the forthcoming Annual General Meeting and to be reappointed as a Director of the Company at all material times in the future.

while Buckingham were enquired upto Rs 166. Camobidas were wanted at the slightly higher level of Rs 8.37. However, Sri Krishna Rajendras and Maduras attracted some selling enquiries. Travancore Rayons were absorbed upto Rs 13.40 c.d.

Plantations: Some of the shares met with renewed buying and showed fractional improvements in prices. Travancore Rubbers improved to Rs 15.25 with buyers at this level, while Cochin Malabar moved upto Rs 4.60. Rajagiris and Kalpettas continued to be offered at the market rates.

Among Tea shares, Peermades were quoted higher at Rs 20.25, while Peria-

karamalais closed fractionally higher at Rs 4.10 due to steady absorption. Devasholas, however, met with some sellers at the market rate.

In the Coffee section, Coffee Lands moved up to Rs 35.25 on consistent buying, while Consolidated Coffees were better at Rs 25. Ochterlony's moved narrowly between Rs 4.76 and Rs 4.79 with Blue Mountains hovering around Rs 2.95.

Miscellaneous: In this section, Aluminium Industries moved rather erratically on alternate bouts of buying and selling and closed substantially higher at Rs 14. Ashok Leylands met with good support upto Rs 4.50, while Radio Elec-

trics, Orissa Cements and Railis were offered at the market rates. Parrys Confectionery changed hands at Rs 3.18; India Cements at Rs 27.50 and Mysore Paper at Rs 16.25. Textiles were quoted at Rs 17.7.

London

VERY quiet and uninteresting conditions continued to prevail on the London Stock Exchange under the influence of political crisis in France and the UK labour situation. These two factors brought business almost to a standstill and, in many instances, prices were not tested.

New York

A somewhat brighter appearance developed on Wall Street as buying showed a temporary revival, aided by expectations of increased defence appropriations. However, sufficient caution was generated by prevailing uncertainties to limit gains.

CHANGING OVER TO THE METRIC SYSTEM

India has at present no common system of weights and measures. There are not less than 143 systems in use. This multiplicity gives room for malpractices. The introduction of a uniform system throughout the country based on Metric Weights and Measures will be very convenient and make calculations extremely easy, especially because the country has already adopted the decimal coinage. The Standards of Weights and Measures Act, 1956 has laid down the basic units under the metric system. The reform will be gradual so as to cause minimum inconvenience to the people.

Even after its introduction in an area or a trade, the traditional weights and measures will be permitted to be used for a period of three years.

**THE CHANGE-OVER TO THE
METRIC SYSTEM OF WEIGHTS
AND MEASURES BEGINS
FROM OCTOBER, 1958**

**KNOW
THE
METRIC
WEIGHTS**

The basic unit of weight is the
KILOGRAM— 1 seer 6 tolas (or
84 tolas.)
or 2 lb. 3 ozs.

SUB-UNITS

10 milligrams = 1 centigram
10 centigrams = 1 decigram
10 decigrams = 1 gram
10 grams = 1 decagram
10 decagrams = 1 hectogram
10 hectograms = 1 kilogram

MULTIPLES

100 kilograms = 1 quintal
10 quintals or
1000 kilograms = 1 metric tonne

ISSUED BY THE GOVERNMENT OF INDIA

The Calcutta Stock Exchange has ruled irregular during May but the undertone has been steady. To the renewed apprehensions caused by the Planning Commission's recommendation that the shortfall in internal resources should be made up by fresh taxation amongst other measures, have been added the anxiety about the labour situation in the steel works and the possibility of slowing down of investments in equities consequent on the opening of the Central Loans. Caution has also been engendered by the reported proximity of the announcement of the investment policy of the LIC and expectations of Government decisions on the selling price of coal, cement and the retention price for steel. The absence of aggressive buying in equities has been due to a large extent to the prevailing uncertainty about the future of cotton textile industry. People also anticipate that Authority will be taking early steps to afford some relief to the tea industry possibly in the shape of a reduction in the export duty.

Though the Planning Commission's recommendation has initially caused a reactionary tendency it has not seriously interfered with the activity on the stock exchange. For it is generally believed that fresh taxation affecting the corporate sector is a remote possibility because Government themselves know full well that the activity in the private sector has already been slowed down as a result of the prevailing rate of high taxation which has left little excess money with the private sector for expansion and rehabilitation.

The Central Loans have also not made much difference to the availability of funds for investment in equities. For it has been found that the Loans have hardly affected the money market. The anxiety about the labour situation in the steel works has however persisted over a considerable period as the situation has taken a turn for the worse in Jamshedpur. With the calling off of the strike and the consequent recommencement of normal activity in the steel works the more speculative counters which have lost ground earlier have regained most of the losses.

The month has witnessed the appointment of an expert committee by the Government to study the problems facing the cotton textile industry. The indication by Mr Lal Bahadur Shastri that the question of a further reduction in the excise duty on mill made cloth is not under consideration by Government has somewhat depressed sentiment. The outlook for textile shares is considered not quite bright as matters stand at present. The reduction in excise duty announced in March, has, contrary to expectations, not resulted in marked improvement in the offtake of cloth. Hence the main problem of the cotton textile industry has re-

mained unsolved. The appointment of the expert committee is the outcome of the recognition by Government of the fact that the industry's problems are deeprooted requiring detailed examination.

A significant development during the month on the Calcutta stock exchange is the renewed interest evinced by investors in jute shares. Selected jute shares have been in request at advancing prices. It would appear that investors are hopeful of the outlook for the jute goods industry. It is now gene-

ments will enable mills to reduce their cost of production.

A development of some importance in the Calcutta stock exchange during the month is the inclusion of Indian Aluminium and Indian Cable in the forward list. Thus there are now eight shares in the clearing and they are as follows: Indian Iron, Texmaco, Orient Paper, Indian Copper, Indian Aluminium, Indian Cable, Burrakur and National.

Sectionwise, Coal shares were dull but prices where marked dis-

rally believed that jute companies will be able to record satisfactory results in the current year as they are in a better position to compete with jute manufacturers in other countries in world markets. Such optimism has stemmed from the satisfactory progress made by mills in their modernisation programme and the good prospects for the next jute crop. These two develop-

played a steady trend. Though the announcement of an increase in the selling prices of coal and coke had engendered quiet satisfaction, operators were inclined to await the report of the coal prices enquiry committee. The withdrawal of the strike notice by mineworkers in West Bengal and Bihar, however, was a helpful influence toward the close of the month. Bengal which

began the month at Rs 230 steadily improved to close at Rs 241. Burrakur moved narrowly to be finally placed at Rs 21.87. Central India was an active counter and closed higher on balance. Western Bengal was initially steady but was rather subdued at close.

Despite publication of disappointing result by some jute companies during the month, selected jute shares were in request throughout the month at advancing rates. Alliance closed at Rs 81 as against its opening rate of Rs 66. Anglo India was done upto Rs 154 from Rs 143.05 Birla was taken up to Rs 16 from Rs 15. Ganges moved up to Rs 51.50 from Rs 44.50. Nuddea closed higher on balance at Rs 38.75.

Business passing in the tea section was at a low ebb. It would appear that operators believed that so long as some relief is not forthcoming for common teas, the outlook for the commodity in the coming season could not be deemed satisfactory. However, a few selected shares met with some demand at improved levels. Bhatkawas gained more than two points to be finally placed at Rs 33.19. Hattikhira was a steady counter at Rs 10.75. Rungamatee was wanted up to Rs 67 from Rs 59.50.

Sugar shares were a listless market due to the continued uncertainty regarding export policy. It was believed that in view of the urgent need for earning foreign exchange Government would expeditiously devise a scheme for the export of the commodity. But as the Indian price is higher than world prices export prospects are not rated high. Balrampore was however a steady spot and improved to Rs 7.00. SKG was well maintained at Rs 10.06.

In the Engineering section, Indian Irons opened at Rs 21.87 and improved further on the beginning day itself to Rs 21.97. By Settlement Day (7th June) sentiment became somewhat subdued and the settlement rate was placed at Rs 21.68. This compared with the previous settlement rate of Rs 21.64. Throughout the next week the undertone was steady with fluctuations within a narrow groove. By the time of the Settlement on the 21st, sentiment was depressed with the rate at Rs 21.06. The reactionary trend was brought about largely by the deterioration in the labour situation at Jamshedpur. Following resumption of work at the Tata steel works steadier conditions were noticeable and the month's closing was on a steady note with the quotation at Rs 21.57.

With the taking over of the management by Government, Jessop recovered to close steady at Rs 20.25. Due to sustained investor interest, the miscellaneous section witnessed good activity with several shares making sizable gains. Following their inclusion in the clearing list Indian Cable and Indian Aluminium met with good request.

HIGHLIGHTS OF THIS ISSUE

This titillating thought could occur only to an American Public Relations man:

"I dreamed, I stopped traffic in my maiden-form bra".

Interested? See the special section this week entitled
of Books".

HINDUSTHAN GENERAL INSURANCE SOCIETY LIMITED

For Service and Security

Chairman
Dr. N. N. LAW, M.A., Ph.D.

Managing Director
Mr. P. N. TALUKDAR, M.A. (Cantab),

Not Stalemate, But Cautious Hope

Investment Gossip:

THE last week's settlement on the Calcutta Stock Exchange brought about a momentary quietness, especially in the speculative scrip. But, bad as the mood of the market is one in which the imperceptible pressure upon prices is upward.

So, there has occurred no spectacular rise: but then, nor has there been any element of a slipping back. Contentment seems to come from a gentle, and by no means considerable, marking up.

The reason, of course, is that there have been no "positive" developments. What now sustains is the fact that general confidence abounds; and, perhaps, the lack of any disincentive factors as such was also contributory.

You could almost call the present condition a stalemate; but not quite. For, in a stalemate, interest slackens and, resultantly, an erosion in values would ensue.

If not a stalemate, are we witnessing some sort of marking time? I am tempted to say, yes, there is indeed something akin to a sense of waiting. However, "idling" of this nature also has a resultant depressing effect on prices; and such a phenomenon has not obtained.

So, for description of the present state of affairs in Stock Exchanges, we have to hunt for some other definition. The stalemate and idling would both have caused a downward movement; what we have seen, on the contrary, is a slight improvement.

I would like to believe the apt description for today's Stock Exchanges would be, say, cautious hope. The hope lies in the anticipation of such favourable factors as an increase in steel retention prices, a rise in cement prices, measures to foster exports, et cetera et cetera.

The caution would stem from the fact that, as yet, there has been little by way of "positive" good news.

This cautious hope, let me add, characterises the attitude of the professional operators; and it is this which has moderated any rising tendency in the speculative.

But the approach of the investor is quite different. His hope is more deeply founded. This explains why miscellaneous scrip and selected shares in other sections have

been making steady headway. Even jutes, as I had occasion to remark some weeks ago, are better.

Another influence on prices should now be taken note of. I refer to the money market wherein, in spite of the considerable subscriptions realised by the new loan programme, conditions are easy. Consequently, interest rates are unable to hold to the high levels that have been ruling since practically the beginning of the 1956-57 busy season. Furthermore, the new loans have also appreciated.

If, in the past two years, the high interest rates in the money market could be held responsible for depressing share prices, the present tendency toward a decline should ensure that, correspondingly, there is a rise in quotations so as to reduce the yields available on shares into conformity with the decline in yields available on gilt-edged.

I repeat: cautious hope.

ER

Investment Notes:

THE shares of Great Eastern Shipping have been a firm feature around Rs 20. Latest reports indicate that the company has fared better during 1957-58 and has plans for strengthening its fleet. During 1958-59, the tonnage is expected to move up by about 50 per cent.

The Alembic Chemical Works have announced the issue of 23,000 new Ordinary shares of Rs 100 each out of the unissued capital. The new shares will be offered to the shareholders in the ratio of 2:5. The company has obtained the sanction from the Controller of Capital Issues.

Walchandnagar Industries have proposed to raise their equity and Preference capitals. The authorised capital is to be increased from Rs 1.04 crores to Rs 3.00 crores by the creation of 99,000 equity shares and 99,500 Preference shares, both of Rs 100 each. The company will be making an application to the Controller of Capital Issues for the purpose, after taking the general approval of the shareholders. The object of the issue is the company's expansion programme.

The Indian Rayon Corporation is likely to enter the market for raising capital some time next month. The proposed issue will be for Rs 1.50 crores, comprising 85,000 Ordinary shares and 65,000-7 per cent Cumulative Preference shares, both of Rs 100 each. The offer of shares to the public will amount to about Rs 45 lakhs as the promoters, managing agents and their friends are expected to subscribe to the extent of Rs 1.05 crores. The issue to the public will comprise 25,000 Ordinary and 20,000 Preference shares.

In Madras, Travancore Rayons have continued to meet with good buyers up to Rs 14.10. There are hopes that, with the expanded capacity of the plant in full utilisation, the company will be able to achieve better results during the current year.

The total approximate production of iron and steel at the steel works of Tata Iron & Steel Co. Ltd., at Jamshedpur during the month of May 1958 was: Pig Iron 57,400 tons, Steel Ingots 52,900, Semis 7,600 tons, Finished 20,900 tons.

ER

Investment Briefs:

In McLeod Jute group, Empire has announced a dividend of 75 pP; Chitavalasah Rs 1.10 and Presidency 30 pP per share, all for thirteen months ended 31st July, 1957.

Indore Malwa Mills have reduced the dividend from Rs 11 to Rs 6 per share for 1957.

ER

Coal Results

Balance-Sheet Reviews:

FOUR Coal companies—Dhemo Main, Equitable, Hurraladih and West Jamuria—in Macneill & Barry group; Bengal in Andrew Yule group and Rewa in Shaw Wallace group have presented their reports and accounts for 1957. Except Equitable and Bengal having maintained the dividends at 15 per cent and 17 1/2 per cent respectively and Rewa reducing the dividend from 15 per cent to 10 per cent, all the other companies have passed over their dividends following disappointing results. Full particulars are given below:

ER

Dhemo Main

Although sales have risen to Rs 53.51 lakhs from Rs 36.48 lakhs, the accounts of this company reveal a loss, after providing for Depreciation, of Rs 2.69 lakhs as against a loss of Rs 2.16 lakhs in the previous year. After setting aside a sum of Rs 5,500 for Wealth Tax, the Depreciation amount is reduced to Rs 90,238 from Rs 1.14 lakhs. Raising are shown at 274,146 tons against 212,536 tons and despatches at 270,876 tons against 210,779 tons. The debit balance is considerably reduced to Rs 67,535 from as much as Rs 2.87 lakhs brought in.

ER

Equitable

Despite a slight decline in earnings, the Equitable Coal Company Limited has maintained the dividend as stated earlier. Raising are higher at 18.01 lakh tons against 16.85 lakh tons and sales at Rs 3.46 crores against Rs 2.84 crores. The net profit, after providing for Depreciation and Taxation, amounts to only Rs 10.87 lakhs as against Rs 12.18 lakhs in the previous year. The directors have provided Rs 11.34 lakhs (Rs 11.50 lakhs) for Depreciation; Rs 1.13 lakhs (nil) for Wealth Tax; Rs 4.00 lakhs (Rs 5.00 lakhs) for Development Rebate Reserve Rs 1.00 lakh (Rs 2.00 lakhs) for Debentures Redemption Reserve and

Rs 1.00 lakh (nil) for Investment Depreciation Reserve.

ER

Hurraladih

The results of the Hurraladih Coal Company are disappointing, mainly due to the increased raising costs during development. In addition, there were no raisings for a period of two months and heavy expenditure was incurred on the consequential retrenchment and lay-off compensation to labour. With the result, accounts reveal a loss of Rs 86,184 as against a net profit of Rs 2.75 lakhs in the previous year. The Depreciation amount is raised to Rs 44,879 from Rs 32,554. After transferring a sum of Rs 4 lakhs from General Reserve, the directors have provided Rs 5,320 for Wealth Tax and Rs 36,000 for taxation for previous year. The dividend is passed over against 15 per cent. There is now a credit balance of Rs 163 to be

carried forward as against a debit balance of Rs 2.10 lakhs brought in.

₹ Rs

West Jamuria

The working results of the West Jamuria Coal Company show a slight improvement over 1956. Raisings have risen to 244,471 tons from 167,373 tons and despatches to 248,214 tons from 180,640 tons. Sales are also higher at Rs 47.01 lakhs against Rs 28.84 lakhs. The accounts reveal a loss of only Rs 29,045 as against a loss of as much as Rs 2.33 lakhs. A sum of Rs 1.79 lakhs (Rs 1.97 lakhs) is set aside for Depreciation. There is still a debit balance of Rs 3.49 lakhs, which is carried forward.

₹ Rs

Bengal Coal

In common with other companies, the Bengal Coal Company Limited has reported a decline in earnings from Rs 69.78 lakhs to Rs 48.30 lakhs for the year ended 31st October, 1957. The directors have, after providing Rs 24.00 lakhs (Rs 25.00 lakhs) for Depreciation; Rs 42.65 lakhs (Rs 18.00 lakhs) for Taxation; Rs 3.25 lakhs (nil) for Wealth Tax and Rs 7.00 lakhs (Rs 2.00 lakhs) for General Reserve, maintained the Ordinary dividend at 17½ per cent. Raisings at 28.01 lakh tons against 23.20 lakh tons constitute a record in the history of the company, thanks to planned expansion to meet the requirements of the Second Five-Year Plan. Despatches have risen to 31.01 lakh tons from 25.59 lakh tons.

₹ Rs

Rewa Coalfields

Rewa Coalfields Limited has reported satisfactory results for the year ended 31st December, 1957. Sales are shown higher at Rs 64.82 lakhs against Rs 60.70 lakhs, while the net profit, after providing for Depreciation and Taxation, amounts to Rs 3.42 lakhs against Rs 3.69 lakhs in the previous year. The Depreciation amount is slightly lower at Rs 1.83 lakhs against Rs 1.86 lakhs. After transferring a sum of Rs 1.00 from General Reserve, the directors have allocated Rs 1.60 lakhs (Rs 2.18 lakhs) to Taxation; Rs 1.87 lakhs (Rs 2.24 lakhs) to provision for Appellate Tribunal Labour Award; Rs 17.796 (Rs 15.474) to Investment Depreciation Reserve and Rs 1.00 lakh

(Rs 1.20 lakhs) to Contingency Reserve. The dividend is reduced to 10 from 15 per cent.

₹ Rs

Marshall, Sons & Co.

In spite of the very competitive market conditions, Marshall, Sons & Company (India) Limited has reported an increase in earnings for the year ended 30th June, 1957. Sales have risen to Rs 2.68 crores from Rs 2.56 crores, while the net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 2.44,685 as against only Rs 1,38,471 in the previous year. The Depreciation amount is reduced to Rs 86,393 from Rs 1.17 lakhs, while Taxation provision is raised to Rs 3.50 lakhs from Rs 1.90 lakhs. The dividend is, however, maintained at 20 per cent.

According to the directors' report, there is satisfactory co-operation with the Britannia Engineering Company in regard to the manufacture and supply of tea machinery. As a result of the co-operation between Marshall, Sons & Company Limited, Gainsborough, and the Britannia Engineering Company in the production of Daisel Road Rollers in this country, this company, as the selling agent, will shortly feel the benefits. Another indigenous production from which the company is receiving material benefit is the range of Marshall Electric Motors produced by the Motor and Machinery Manufacturing Company.

₹ Rs

Cawnpore Sugar

The heavy losses incurred by the Pandrauna and Kathkulyan factories are fully reflected in the working results of the Cawnpore Sugar Works Limited for the year ended 31st October, 1957. Although sales are substantially higher at Rs 2.89 crores against Rs 1.65 crores, the accounts reveal a loss of as much as Rs 9.28 lakhs as against a net profit of Rs 6.65 lakhs in the previous year. The directors have, after raising the Depreciation amount from Rs 2.50 lakhs to Rs 8.00 lakhs, passed over the dividends, both on the Ordinary and Preference shares. No provisions are possible for Taxation and Rehabilitation Reserve against Rs 4.00 lakhs and Rs 3.50 lakhs respectively made in the previous year. The dividend paid on the Ordinary shares in 1956 was 7½ per cent.

Why this Scare-Mongering?

WHAT is the reason for the sudden crop of alarming reports about foreign exchange which are displayed under scaring headlines in the daily papers? The reports suggest that the country is fast drifting toward bankruptcy which would be unavoidable unless something drastic were done. And the blame is thrown on what it has become fashionable in some quarters to describe as the "ambitious" Plan which is held responsible for all the troubles facing the country. Leaving aside the special pleadings of the partisans of a plan-less economy, is there any justification in the facts of the situation for the gloomy reports sent out by special correspondents in New Delhi? Or, are they just registering their individual reactions to the weather in Delhi, which at this time of the year makes one inclined, not only to believe that the end of the world is at hand, but also to welcome it as a happy deliverance? It was only in February that the country was told that, after declining steadily for a year, sterling balances had recorded a small increase. And every day there were reports of massive foreign assistance. What has happened in the meantime to alter the outlook?

For an answer, we must look at the facts, and take a long look backwards and also forwards. As a matter of fact there was a sharp dip in the sterling securities of the Reserve Bank of India towards the end of March when they fell from about Rs 245 crores in the previous month to Rs 171 crores. But the bulk of the decline represented a "book-entry" transfer to Balances Held Abroad, as shown in the Banking Department of the Reserve Bank. The weekly rate of depletion of foreign exchange resources was no more than Rs 5.5 crores. On the other hand, the country's efforts to step up exports has to contend against the world-wide effects of the US recession which has adversely affected the demand for India's exports, especially textiles, tea and ores. The result is continuing strain on foreign reserves.

The total foreign reserves may soon touch the statutory minimum. The Act, however, provides that, in an emergency, the entire holding of foreign securities could be drawn upon. Is such an eventuality likely to arise, and will the consequent lack of foreign resources hold up implementation of the plan projects at a crucial stage?

The position no doubt calls for strenuous efforts to conserve foreign exchange and strict control over expenditure, but our assessment is that the outlook this year is definitely not so bad as it was at about this time last year, in respect of current and prospective demands and the resources in sight. At that time, we were running into adverse trade balances at the rate of one crore a day which continued for the year. Till January this year, when there was welcome announcement of the new American Loan, followed by conclusion of agreements with Germany for deferred payment for the Rourkela Steel Plant, prospects of substantial foreign payments appeared very problematical. From April 1957, Government introduced drastic restrictions on imports which have been tightened with every subsequent licensing period. Imports of consumer goods have been

pared to the bone, and even imports of capital equipment and industrial raw materials are very carefully screened. The import cuts have been so drastic in their impact, that they have brought up the problem of unemployment in the import trades and in industries dependent on imported materials. It will be some time before these restrictions are reflected in a reduced import bill. At the same time, Government have been following an active policy of export promotion through the grant of rebate of excise/customs duties paid on materials used in the manufacture of articles which are subsequently exported. Ten Export Promotion Councils have been functioning to develop markets abroad for cotton textiles, silk and rayon textiles, engineering goods, plastics, tobacco, cashew and pepper, mica, leather, shellac and sports goods. The number of the Councils has been increased to eleven with the recent establishment of the Export Promotion Council for chemicals and allied products. The cess on export duties levied on tea has been recently reduced. This is expected to relieve the difficulties experienced by exporters of common teas, and clear the way for larger exports.

While all efforts are being made from both ends to narrow the gap between imports and exports, the needs of particular projects in both the public and the private sectors are covered through special arrangements for foreign assistance through provision of loan capital, participation in the equity capital or deferred payments for supply of equipment. The imports which will have to be paid for out of current earnings are not likely to continue at the same level as in the recent past, if we confine our attention to the requirements of economic development under the scheme of plan priorities.

A statement showing the foreign exchange requirements of the "core" projects was laid on the table of the Lok Sabha by the Finance Minister on April 15. Out of the total revised foreign exchange cost of Rs 972 crores for these projects, payments made up to the end of March, 1958 were Rs 382.41 crores. Payments yet to be made amount to Rs 589.58 crores, of which Rs 552.81 crores are in the public sector and Rs 36.77 crores are in the private sector. Out of this total, Rs 247.71 crores are covered by foreign loans, credits, etc., so far negotiated (Rs 219.12 in public sector and Rs 28.59 crores in private sector). This leaves a balance of foreign exchange requirements yet to be met of Rs 341.87 crores, of which the public sector has to find Rs 333.69 crores and the private sector Rs 8.18 crores. Is it too much to expect that it will be possible to find this amount in the next two years, if advantage is taken of the improved climate of foreign assistance, of which there are several welcome indications, to utilise the resources of the various agencies operating in the international field?

A timely brochure on Foreign Credit and Exchange brought out by the Federation of Indian Chambers of Commerce and Industry, with special reference to the needs of the private sector, has presented the relevant details of the procedures and operations of these agencies. There are at present six agencies

Indian Finance
Established 1928
June 7, 1958
"The Wise Man in His Attitude towards the World has neither Predilections nor Prejudices. He is on the side of what is Right"—The Analects of Confucius.

which provide aid for economic development, either with or without government guarantee. These are the International Bank for Reconstruction and Development, the International Finance Corporation, the Export-Import Bank of USA, the US Development Loan Fund, the Commonwealth Development Finance Co Ltd, and the Export-Import Bank of Japan. In addition, there are arrangements entered into by the Government of India which facilitate conclusion of deferred payment agreements and foreign collaboration in individual enterprises. At present, there is exemption from income-tax on interest earned by a foreign lender on loans granted by him for purchase of equipment abroad.

The visit of the Delegation of Indian Industrialists sponsored by the FICC which toured the US last year has done valuable work in improving the climate for foreign investment and enlarging the scope for collaboration in individual enterprises.

So far, India has made use of most of the agencies mentioned herein. The spirit behind the amendment proposed by Senators Kennedy and Cooper to the Foreign Aid Bill brightens the prospects of increased assistance from the US Development Loan Fund. The amendment seeks to express the sense of the Congress that the United States should join with other countries in helping India to complete its Five-Year Plan. Congressional approval of the amendment will definitely strengthen the hands of the Administration if it decides to increase assistance to India. The proposal put forward by Senator Monroney for an International Development Association, affiliated to the World Bank, which would give long term loans at low rates of interest partly repayable in local currencies, is now reported to be receiving the favourable attention of the Administration.

In view of the expanding scope of foreign assistance, and the strenuous measures that are being taken to close the trade gap, there is no need to apprehend that the Plan will be stalled for lack of foreign exchange, provided that non-development expenditures are not allowed to get out of hand. In this connection, the weakness on the agricultural front is a matter of anxiety. It is true that part of food requirements can be met without expenditure of foreign exchange by imports under Public Law 480. But improvement in agricultural output is necessary, not merely to save on imports of food grains, but to help the export drive. On account of limited supplies, tight control has to be exercised on exports of sure earners of foreign exchange like oils and oil seeds.

The other main item of non-development expenditure is Defence. In recent years, Defence has been claiming substantial amounts of foreign exchange. The aggressive postures adopted by our next door neighbour have determined the level of expenditure on the acquisition of costly defence equipment. While we do not wish to be categorical on this subject, it is possible that a realistic assessment of the risk in regard to national security will enable the Defence Ministry to frame a budget within the country's resources.

Tea Consumption on the Increase

By DEBES C. GHOSE

THE Food and Agricultural Organisation, in its monthly statistical bulletin, has uttered a word of hope when it says that the tea producing nations of Asia are drinking more and more of their own product. In other words, the tea producing countries are now consuming more teas. The bulletin states that between 30 and 35 per cent of world output (excluding that of the Soviet Union and China) is taken up by domestic requirements as compared with about 20 per cent before the war. The conclusion is very valuable to the tea producing countries in that it will give a spur to them to raise their output to keep pace with the growing demands of the consuming people. Almost within a pace of 25 years, tea consumption stands doubled.

India now absorbs approximately one third of its total output, says the FAO bulletin, and this comes to nearly 100,000 tons. Since partition, domestic offtake has increased by about 40 per cent in India and 130 per cent in Pakistan. The figure for Indian consumption seems to be, however, a low estimate because it now stands in the neighbourhood of 230 million pounds. Therefore it comes to more than one-third, the total output being 664 million pounds in 1957. In 1956, tea consumption in India, according to the Tea Board, was nearly 220 million lb. The domestic consumption in this country rises by 10 million lb a year and on that basis the internal consumption must have exceeded the figure of 230 million lb a year.

The FAO bulletin states that, in 1957, there was a record world tea production of about 700,000 metric tons. Tea consumption is on the increase in almost all the countries of the world. The per capita consumption of tea in Japan has increased by about 60 per cent during the last seven years and as a result there is little surplus left for export. Tea consumption has risen in recent years in some continental European countries, which traditionally preferred coffee, and it continues to make steady progress in the Union of South Africa, the Arab countries of the Near East and North Africa. Tea imports in the Near East have increased by 70 per cent over the past six or seven years and have almost trebled in comparison to pre-war level. These are just indications that, if the world consumption continues to rise at this pace, soon there will come a time when consumption will far outpace production. This tendency is already appreciable if we take into account the volume of world consumption of tea during the last few years. The surplus in the world tea production is progressively diminishing and, with a continuous rise in the standard of living, people will consume more and more tea. Britain is by far the biggest consumer of tea, the per capita annual rate of consumption being 10 lb. Ireland ranks second in the volume of per capita tea consumption. A picture that emerges from this statistical study is that the world tea market is changing from the hitherto buyer's market to a seller's one. The production being almost matched against the growing consumption, sellers of tea will ultimately dictate the terms of the market.

The consumer's growing preference for tea should not, however, be interpreted to mean that any and every quality of tea will always command a clean market. That cannot be. The consumer's preference will be determined by certain factors, the important among them being quality and cheaper prices. Apart from the fact that tea has a great competitor in

coffee, teas of different producing countries also compete with each other. The buyer's preference is not, therefore, something fixed; it is liable to change with changing conditions. If tea prices are exorbitantly high or if the quality deteriorates, consumer's rigidity will at once develop. It will switch on from low to high quality or from tea to coffee. Complacency is a dangerous thing in the trade of a commodity which has close rivals, and the tea trade which constantly has to face keen competition must cherish no complacency in that the consumers will always like it, no matter what may be the price or the quality.

India holds the key to balance the world tea trade. A spurt in production may lead to surplus, unless the quality is also simultaneously improved. The FAO bulletin states that India being the largest producer of common tea will suffer from increasing competition in world markets from African tea, owing to improvements in quality and to the fact that costs there are lower. Cost rose further in India during 1957 owing to the shortage and higher prices of foodgrains, higher bonus payments to labour, and higher cost of living. While quality teas will always find ready markets, the producers of common teas will continue to get low prices.

Herein lies the crux of the problem. More than 50 per cent of India's tea output belongs to the category of common teas, and to raise the productivity will also mean increasing the production of common teas to a considerable extent. The market being limited for the common teas and the buyers being selective, common teas have no future unless prices are sufficiently low to provide incentive to the buyers. In India the cost structure has become so rigid on account of the various legislative measures for the welfare of the labour that it is quite impossible to reduce the cost without impairing labour amenities. Ceylon has already given relief to the common teas by reducing the export duty. The Government of India have now decided to grant relief to the common teas by reducing the export duty; but unfortunately a long time is being taken to take final steps in the matter. The delay in devising measures will meanwhile affect the competitive strength of the Indian common teas in the world market.

The re-entry of China, Formosa and Japan in world tea trade is becoming a growing menace to the common teas of India. The competition in the world tea trade is already very acute and this will further be intensified by the re-entry of these countries in the world market on a large scale. So long, these countries were producers of green teas which had little demand in overseas markets. But these countries are now producing black teas on a considerable scale, and black teas from China, Formosa and Japan are now being freely exported to the overseas markets. The production costs in these countries are very low, particularly in Communist China, and to that extent the teas of these countries are favourably placed to compete with Indian teas, particularly the common varieties. The output of tea in China is rising quickly. In 1956, the output of tea in Communist China was 253 million lb and it rose to 340 million lb in 1957. China has launched a nationwide drive to become the largest producer of tea in the world.

In recent years, the United Kingdom has been importing more teas from China. In 1956, tea output in Formosa was 26 million lb and in 1957 it went up to nearly 30 million lb. Nearly half of the output is black tea and is

exported to the USA, Thailand, South Africa and Hong Kong. Japan's tea output in 1956 was 156 million lb and it is taking all possible steps to step up its tea export. Further, teas from new producing countries such as Iran, the Argentine and Brazil are regularly flowing to the world markets. The world production of tea is thus progressively on the increase. Consumption is also rising, although not to that extent. Consumption is rising on a larger scale in India than anywhere else in the world.

Since 1956, India has been pursuing a policy of voluntary reduction in tea output. In 1956, two per cent of the stalky teas in Northern India was destroyed and plucking was stopped earlier. In 1957 also, tea output in Northern India was less by about 30 million lb. But is that the remedy in the face of rising world production? This unilateral action on the part of India will be suicidal unless it is stopped immediately. While all the tea producing countries of the world are deliberately increasing their tea output, what purpose would be served by India in reducing its output? The result will be that, in the near future, India will be forced out of the world tea market. In other words, to resort to voluntary reduction in tea output by India will mean a gift of its existing overseas markets to its competitors. Indian tea output is already deficit in the context of its present export level and internal consumption. India normally exports 500 million lb and its internal consumption stands at nearly 230 million lb and therefore India must produce at present 730 million lb. But its tea production has almost become static at about 666 million lb for the last three years. The internal market for Indian tea constitutes a potential absorber and the internal consumption is rising at a rate of 10 million lb a year. India thus is required to step up its production by that quantity annually, even if its export does not increase in the near future.

The reduction in tea output will therefore be against the interest of India. Any drastic step taken to reduce its output must be discouraged by the authorities. Even the target laid down by the Second Plan at 710 million lb a year still lags far behind the actual volume of output. One thing that strikes me most in this connection is this: Why, of all the countries producing tea in the world, does India alone bother about overproduction and, in consequence, take upon itself the task of maintaining balance by voluntarily reducing its tea output? Are the other tea producing countries blind about the consequence of increasing production progressively? This is not for one year or for one country alone. Almost all the major tea producing countries of the world, except India, have been progressively producing more teas for the last few years. Certainly, there must have been no surplus, otherwise these countries would have followed a policy of reducing output. It may also be reasonably assumed that these countries are not compelled to make any carry-overs. Had that been the case, the plain fact would have been a falling production. All the countries cannot go on producing at a loss on account of carry-overs for the last few years.

The bogey of over-production in the world tea output is therefore false. There must be some serious mistakes in making a real computation as to the production and consumption of tea. As production is rising, consumption is also rising at a faster rate and that is the inevitable conclusion from the recent trends in world production. But that does not allow any complacency to the producing countries. Competition is there, and he who will offer better quality teas at a comparatively cheaper price will win the race. Increased competition offers facility for selective buying and a low price is a great consideration in this connection.

June 7, 1958

Reciprocal Trade and World Prosperity

By WILLIAM F. BRAMSTEDT
Chairman of the Board, Caltex, New York.

INTERNATIONAL trade is a subject of deep general concern that often seems too complex to grasp. Yet the basic principles are quite simple.

The United States, for example, is a great trading nation. Last year it sold about \$21 billion worth of goods abroad.... sales that made jobs for approximately 4½ million American workers.

In the same period, the USA bought about \$13 billion in goods from overseas sources. Products shipped abroad by the US thus were largely paid for in dollars earned by foreign customers when they traded with the United States. This makes good business sense on an international scale, for if these customers hadn't been able to find markets in the United States, they would not have been able to become a market for American products.

This premise was made abundantly clear recently by President Eisenhower and other American leaders at a meeting of the National Conference on International Trade Policy in Washington, DC, which I attended along with a number of Caltex officials.

The President, in support of continued two-way foreign trade, pointed out that "if other nations are to buy our exports to them, they must get dollars earned by their exports to us."

Adlai E. Stevenson, who twice opposed Mr Eisenhower for the presidency, joined the President in an appeal for extension of the US Reciprocal Trade Agreements Act, which is scheduled to expire June 30 unless favourably acted upon by the US Congress.

The act, passed in 1934, empowers the American President to enter into agreements

with other countries for mutual reductions in tariffs. With the United States playing such a key role in world business, extension of the act is vital if international trade is to continue unhindered.

President Eisenhower, Mr Stevenson and other leaders representing labour, industry, agriculture and all facets of American life said that if the United States maintains tariff barriers against its world neighbours, other countries would have no choice but to retaliate by raising even more formidable ones of their own, with the result that the free flow of trade, so vital to the economy of many nations, would slowly be choked off.

Aware of the importance of reciprocal trade, I recently wrote The Honorable Wilbur D. Mills, Chairman of the Ways and Means Committee of the US House of Representatives. In my letter I said:

"From our observations and experience in international trade, we have no hesitation in supporting in the strongest terms the renewal and strengthening of the Reciprocal Trade Agreements Act by the Congress in a form that will permit it effectively to achieve its objectives. We feel sure that without such action the role of the United States in the promotion of freedom through the removal of restrictions on international trade would be greatly handicapped."

This is a view shared by the companies throughout the Eastern Hemisphere that, together, make up the Caltex Group. They and we know that through freedom of trade we can enjoy world progress, world peace and world prosperity.

Is Commerce the sole purpose of Communist Foreign Trade?

By HENRY V. BURKE

ONE of the most fascinating—and difficult to assess—aspects of the Soviet bloc's international trade programme concerns Communist use of non-commercial methods in what are supposed to be purely business operations. The question is not whether this is done, but to what extent and why it is done.

Much has been written and said about extensive Communist employment of technicians and administrative experts to supervise "aid and trade" activities, particularly in countries now engaged in modernising their economies. That the Communist bloc has a fetish for this kind of operation is open knowledge.

Less clear, however, are the answers to these questions: What is the exact nature of the assignments Moscow gives its foreign trade representatives? How much of their activities are political and how much can be called legitimate business enterprise?

It certainly is no secret that Moscow's agents show a keen interest in the resources of the countries to which they are assigned. Their work includes assembling data about bridges, railroads, highways, dams, irrigation projects, manufacturing plants, mineral and oil deposits. Along this same line, it has been argued that

acute Soviet bloc interest in the affairs of economic "partner" countries reflects an attitude common to all nations engaged in interstate trade. What is more natural, it has been asked in quarters sympathetic to Soviet interests, than for an exporting country to use every available device to assure that its products are properly presented and maintained.

This view applies particularly to exports of bloc machinery, and Soviet undertakings to install manufacturing equipment.

There is no doubt but what the more open activities of authentic Soviet technicians conform to this broad objective. At the same time, it must be admitted, there is more than a suspicion that the full explanation of Moscow's political motives, if obtainable, would be disturbing to all trading countries.

Because of Moscow's apparent determination to mask the degree with which its international strategy combines politics and economics, it is doubtful if reliable information concerning long-range Communist objectives is given to more than a comparatively small circle of Soviet officials. These officials, by necessity, would include representatives of the Soviet secret police, the agency through which Moscow obtains most of its foreign intelligence.

We are indebted, to former Soviet secret police official Yuriy Rastvorov, for providing an authoritative insight into how Moscow goes about collecting its economic-political data. His detailed description, inevitably, includes more than a few strong hints that economic espionage is designed to serve other than purely commercial ends.

Rastvorov, after spending some 15 years in responsible secret police assignments, rejected Communism while attached to the Soviet Embassy in Tokyo in 1954 and found political asylum in the free world.

This is what he says about standard Soviet operating methods in non-Communist countries:

"The KGB (that part of the Soviet secret police apparatus assigned to foreign activities) is a vast organisation—it has been called the 'net that covers the world.' This is quite true. No Soviet citizen ever leaves the borders of the Soviet Union in a private capacity—there are no Soviet 'tourists.' And whenever you find Russians, you find the KGB. In embassies, in consulates, in trade delegations, and in 'cultural' delegations—even in sports teams—you will find the KGB. Always. No group of Soviets ever leaves the Soviet Union without at least one member of the group being a member of KGB. Frequently more than one is, and in many cases almost the entire group is.

"In addition to the KGB, a second organisation exists which is concerned with foreign espionage. This is the GRU, which is responsible for military espionage, and is in fact a part of the Soviet Ministry of Defense. But since modern warfare embraces so many political and economic aspects, the hand of the GRU is frequently found in non-military fields.

"Every government in the world publishes detailed figures about its economy and industrial achievements. It is usually proud of what it has accomplished, and although it may keep secret certain figures about its military strength, a vast amount of information can be had simply by asking for it. The Soviet Union, however, for all its trumpet-blaring announcements about 'progress,' publishes almost nothing. Most of what it does publish is in terms of 'percentage increases,' which cannot be checked, and are meaningless unless the base figure is published. The Soviet Union not only does not publish anything; it never trusts what other countries publish. The Japanese government may publish a report about last year's rice harvest, but the Soviet Union won't believe the figures in it until they have gotten the same information from an espionage agent in the Ministry of Agriculture."

As to the most common Soviet methods of collecting information, Rastvorov continues, "the KGB can send its representatives overseas masquerading as diplomatic personnel, as attaches, or as delegates to international fairs, trade exhibitions or even sporting events. But these Soviets, of course, cannot walk into the official government buildings of their host countries and inspect the files. This can only be done by bona fide natives of those countries."

How, then, does the Soviet bloc approach the problem of getting local agents to obtain the desired under-cover data? The answer, according to Rastvorov, is simple.

"Potential agents," he says, "can be found in many places, and the professional KGB man knows from long experience where to look for them and how to appeal to them."

If they cannot find individuals who are sympathetic to Communist aims (difficult nowadays "when more and more people are becoming aware of the true nature of Communism and the duplicity of the Soviet Union"), Rastvorov says the "KGB resorts to other appeals, of which the desire for personal gain is the most common. A surprisingly high percentage of KGB agents (locally recruited, that is) work for money, and for money alone. And the greater the economic distress is in a country, the easier such people are to find."

Blackmail is another favourite Soviet pressure device, Rastvorov adds. "The KGB is forever searching for material in a man's past that can be used to bend him to their will. If such material cannot be found, a man can frequently be provoked into providing it, and such results are ruthlessly used. A man who is working for the KGB because he is being blackmailed makes an excellent agent, because to the fear of exposure of his previous misstep is soon added the far greater fear of exposure as a spy."

Call to Service

The crisis in France, which was set off by the Army coup in Algiers on May, has moved to its inevitable denouement. The General who had been holding himself ready to save his country has been installed in office with the formal approval of the National Assembly, which has agreed to take a holiday to allow him to clear the mess. But it is yet too early to write the epitaph of democracy in France. Those who deplore its eclipse may draw comfort from the fact that things could have turned out worse. The most encouraging feature is the apparent anxiety of all parties, who do not belong either to the extreme right or the left, not to prejudice an early return to normal representative government. As it is, the Constitution has only been suspended, instead of being totally abrogated as might well have happened, if the defenders of the republic had been less flexible. General de Gaulle's insistence that he should have the unqualified support of the majority of members of the National Assembly, leaving Communists out of account, before he would assume responsibility, may be regarded as an indication that he would not be anxious to prolong the period of suspension beyond the stipulated period of six months. And further, the action he has taken after investiture, in forming a representa-

tive cabinet, does not suggest dictatorial ambitions, though some of his supporters have different views on the question. Members of the Committee of Public Safety of Algiers, described as 'moderate' regard the formation of a cabinet including M. Phlmin and Socialists as the first step towards more radical changes.

The unusual step by which the crisis had to be got over is the result of defects in the Constitution of which General De Gaulle has been a consistent critic. Suspension of the Constitution in an emergency is an eventuality for which most democratic Constitutions make provision so as to maintain continuity of administration. The call to the man who organised the Free French Movement in the darkest hour of the War would not have been objectionable if it had not been so obviously engineered by Army intervention.

The National Assembly has agreed to his terms and given him the powers he had asked for. It is now for the General to deliver the goods by preserving the integrity of the nation and its democratic traditions.

General de Gaulle has got the 'Call to Service' for which he had been waiting all through the years of his self-imposed retirement at Colombey. History will judge him by his success or failure in resisting the strong and insistent pressures to which he will be subjected from those desiring to seize the opportunity to install a fascist dictatorship. The fundamental issue is whether French democracy, or colonialism and all it implies in the degradation of the human spirit, is to determine the future of the country. Democrats all over the world will pray with M. Mendes France that it may be possible one day to say that General de Gaulle has eliminated the fascist peril and has been able to consolidate and renovate the republic.

★

Emergency in Ceylon

The unhappy events in Ceylon underline the threat to national integrity posed by existence of language rivalries. The issue is not peculiar to Ceylon, though it has assumed its most acute form in that island. It is found in most of the countries that have attained freedom in the wake of the World War II. The danger in Ceylon has been aggravated by unwise handling. The Government, eager to satisfy the ambitions of the Sinhalese who constitute the dominant majority, has been following a shift policy which was less than fair to the Ceylon Tamils. The agitation for securing equal status for Tamil which was pursued by the Federal Party, perhaps with more zeal than discretion, was made the excuse by the Premier for abrogating the agreement on the basis of which the controversy was temporarily held in abeyance. Since the two language groups occupy distinct regions of the country, the result is a situation which, if the population were better armed,

could only be described as a state of civil war. The country has been divided into two hostile camps, and to judge from reports the writ of the Government does not run in the Northern and Eastern districts. In the South and the Centre, where the Sinhalese form the majority, there is apparently a reign of terror directed against Tamils, whether Ceylonese or Indians.

The Island has a population of about eight lakhs of Tamils of Indian origin whose position is most precarious, in the context of the fraternal strife between the Ceylon Tamils and Sinhalese. The Ceylon Government has been doing everything possible to deny citizenship rights to these settlers, even under the very illiberal terms of the Citizenship law. The lengths to which the Government of Ceylon is prepared to go in harassing these people is shown by the two appeals taken by the Government to the Privy Council against the verdict of the Supreme Court of Ceylon. The Ceylon Government took the position that if a person had made any remittance to India declaring himself "temporary resident" for the purpose of Exchange control regulation, that constituted a disqualification for registration as a citizen. Thousands of applications for citizenship were summarily rejected on this ground. In a test case, the Supreme Court of Ceylon rejected this contention and held that a person's decision to seek registration, knowing all consequences of such registration itself satisfied the requirement of the Act. Against this decision the Government of Ceylon appealed to the Privy Council. The appeals were dismissed on May 19.

As a result of the Government's hostile policy, about 500,000 persons of Indian origin are Stateless and voteless and without effective protection in the present state of turmoil, where the fact that they speak the language of one of the parties to the dispute exposes them to attack by the other, though linguistic affinity was of no avail to them in the past in getting the support of Ceylon Tamils in their struggle for citizenship and elementary human rights. The Government of India has refused to accept them as Indians, and perhaps is embarrassed to display any interest in their welfare. But considerations of humanity require that there should be some guarantee of security to these hapless people. The UNO may be approached to take up the question of their safety, unless the Government of Ceylon, in the meantime, are able to give satisfactory guarantees for their present safety and eventual conferment of citizenship rights.

★

Export of Chemicals

The establishment of an Export Promotion Council for Chemicals and allied products claims more attention than similar councils set up in the past. These were intended to develop markets for the country's staple exports and for

new lines of manufacture which from the beginning had a market in overseas countries. But this is the first time that an industry which has yet to meet the needs of the domestic market has been selected for export promotion. The need to increase foreign exchange earnings, though it is now very acute, is not the complete explanation. This step follows the realisation that, in an industry which thrives on its by-products, self-sufficiency in one basic chemical is not economically feasible without arrangements for economic disposal of the surplus of by-products. That is the reason for the inherent urge of the chemical industry all over the world to expand and organise itself into gigantic combines.

In his inaugural address to the Indian Chemical Manufacturer's Association, last February, Mr Manubhai Shah, Minister for Industry, had given a comprehensive survey of Government's efforts to attain self-sufficiency in basic chemicals at the end of the Second Plan and, at the same time, had indicated that we may also have exportable surplus in some cases. Mr Charat Ram in his presidential address had also drawn attention to the scope for exports and suggested that Government should keep this in mind when concluding trade agreements with other countries. He has reason for satisfaction that his suggestion that planning for self-sufficiency must give place to planning for exports has produced the desired results and without delay.

And very appropriately, Mr Charat Ram has been appointed Chairman of the Council which is the eleventh in the chain of Export Promotion Councils set up by the Government of India for the promotion of the country's exports.

Tap Sales: Open Market Strategy

IT is understood that the Reserve Bank, through whose tap the three new loans have for some time been available, has stepped up its selling rate on two of them. The 3½ per cent 1963 commands a premium of 3 to 5 nP over the issue price, and the 4 per cent 1973 is quoting 5 nP above par. The third new issue, 3½ per cent 1968, continues to be sold at issue price.

We commend this strategy. It is by this means that firmness in the gilt-edged market can be so consolidated as to ensure the success, firstly, of the State Loans which will soon be on the market and, secondly, of the probable second tranche of new loan in September/October this year.

It is significant that the 3½ per cent 1968 is saleable at no more than the issue price. The subscriptions to this loan show that it was the least popular of the three. The fact that the Reserve Bank is now selling at issue price would seem to confirm our hypothesis that the bulk of the 1968 Loan was taken up by the Reserve Bank.

Nevertheless, this should not deter the Reserve Bank from planning the second tranche of the new loan in the form of a medium term rather than a short term or long term. In any case, we would like to emphasise that it would be neither courageous nor strategic for the Reserve Bank even to consider the idea of a short term for the second tranche. For, the fact is that, already, maturities during the Third Plan-period are sufficiently onerous. There would be little point in ensuring the success of the borrowing programme for the Second Plan-period at the cost of market loans during the Third Plan.

We may remark once more that the position of Scheduled Banks is evolving in such manner as to make inevitable an upward movement in gilt-edged prices. With the commencement of the 1958 slack season, the Advances of Scheduled Banks are steadily and week by week declining. It would not in the least be surprising if the total of Advances were to go down to so low a level as Rs 850 crores by the end of the slack season; and, meantime, the accretions to Deposits continue. The resources thus freed and the resources newly gained will necessarily seek gilt-edged for sanctuary.

We now look forward to gradual and week-by-week stepping up of tap rates by the Reserve Bank.

+

Slack Season: Note Circulation Declines Again

THE latest banking returns continue to bear testimony to the gathering momentum of the 1958 slack season. For the third successive week, Active Note circulation has registered a decline. According to the returns of the Reserve Bank for May 30, Notes in Circulation are lower by Rs 10.90 crores at Rs 1587.78 crores. Rupee Coin has returned from circulation for nearly half a crore of rupees. Currency has been contracted against Rupee Securities by transfer of Rs 10 crores to Investments in the Banking Department. As a result, Reserve Bank's Cash in the till is higher only by Rs 1.39 crores at Rs 27.87 crores.

In the Banking Department, Investments are higher by Rs 8.73 crores at Rs 250.37 crores. The rise, of course, reflects the transfer from the Issue Department, but it is also clear that, during the week, the Reserve Bank has been able to sell some securities through the tap.

The Centre's balances are substantially lower by nearly Rs 17 crores at Rs 59.12 crores against Rs 76.06 crores. Partly, this relates to the net disbursements of Government in a week in which there was no recourse to deficit financing. Partly also, it would appear that the decline in the Centre's balances is accounted for by payments to the State Governments. For, the balances of State Governments have improved by Rs 3.49 crores to Rs 19.98 crores; and, at the same time, the indebtedness of State Governments to the Reserve Bank is marked lower by Rs 6.76 crores at Rs 54.07 crores. Thus, the position of the State Governments vis-a-vis the Reserve Bank has improved by more than Rs 10 crores; and this would scarcely have been possible without some element of receipts from the Central Government.

The Reserve Balances of member banks, which had been drawn upon considerably for subscriptions to the new loan programme, are again in process of being built up. In the week under review, they have been augmented by Rs 4.66 crores to Rs 77.80 crores; and such an improvement has occurred in spite of a reduction in the borrowings from the Reserve Bank. The Other Loans and Advances of the Reserve Bank are shown to be Rs 2.73 crores lower at Rs 56.79 crores; and that the member banks are wholly responsible for this decline, is indicated by the fact that the Reserve Bank's advances against usance bills are sharply lower by

Rs 5.08 crores at Rs 14.95 crores; and this is a level of advances against usance bills which is, it is noteworthy, the lowest for some many months.

+

Lastly, Foreign Balances have again reflected the continuing import surplus, with Balances Held Abroad declining by Rs 5.65 crores to Rs 32.75 crores.

+

The subscription of the State Bank to the new loan programme has finally been incorporated in the return of the institution for May 30. Other Assets, which had remained unusually high during the two earlier weeks, are sharply lower by Rs 33.22 crores at Rs 10.46 crores. Investments in gilt-edged are marked steeply higher by Rs 35.63 crores at Rs 196.28 crores. Deposits have increased by Rs 4.31 crores to Rs 420.52 crores. This, coupled with the contraction of Rs 3.90 crores to Rs 194.77 crores in Advances, has enabled the State Bank to liquidate its borrowings of Rs 4 crores from the Reserve Bank. Moreover, it was found possible to improve Cash Balances to Rs 30.30 crores from Rs 28.32 crores.

+

The return of Scheduled Banks for May 23 reveals yet another decline in Advances, which are marked down by Rs 5.74 crores at Rs 934.15 crores. Deposits are higher by Rs 3.16 crores at Rs 1533.67 crores. The opportunity has been taken to reduce the indebtedness to the Reserve Bank by Rs 10.69 crores to Rs 21.16 crores. In spite of this, Cash Balances, which were steeply drawn upon during the new loan week, are marked higher by Rs 5.29 crores at Rs 175.92 crores.

D. P. PARTHASARATHY, Secretary

Most trade union officials are of course not communists. Indeed many of them are only moderate Socialists. But if they tried to resist rigidly the Communists' influence in their trade unions they would not remain trade union officials for very long. For it is very tempting for the rank and file to listen to the Communist shop stewards who seek to induce them to demand excessive wage increases and shorter working hours. Even

though responsible trade union officials are aware that the demands are excessive, they are not in a position to resist popular pressure in favour of these demands. If the men have to choose between those who say that they could and should have a 10 per cent wage increase and those who say that in existing conditions they can't have it, most of them are tempted to cast their votes for the former.

The immediate advantage of

these tactics for the Communists is obvious. During recent years most strikes have been more or less successful. Amidst full employment and rising prices employers were always tempted to give way, and the excessive wage demands were mostly conceded before it came to a strike, or they were conceded after a relatively short strike. So the trade unionist workers have come to the conclusion that it pays to strike. Their attitude

recalls that of Germany after the war of 1870-71, when they succeeded in securing from France a big war indemnity after a brief war, so that they found that war could be made a paying proposition. Hence the war of 1914-18.

The easy and profitable victories of trade unions since the end of the second World War have greatly strengthened the "war party" headed by the Communists whose influence has increased well beyond

Coke for Steel

India's new steelworks and steelworks extensions require the building of great new coke oven plants—plants demanding an immense variety of specialised skills in civil mechanical, chemical and electrical engineering and in well-planned and efficient contracting.

Simon-Carves have built coke ovens in India for fifty years. Simon-Carves coking plants ordered for Indian steelworks in the past twelve years alone represent nearly 700 ovens with a carbonising capacity of over 5½ million tons of coal a year. Simon-Carves coke ovens are at work and under construction at the great Jamshedpur and Hirapur steelworks, and in due course they will be at work at the new Durgapur steelworks too—where Simon-Carves are also building the coal washing and blending plant, sulphuric acid plant and power station.

their numerical proportion in the unions. The number of days lost through strikes have been so far relatively small, precisely because the unions usually succeeded in obtaining most of what they asked for either without a strike or after a short strike. Even so, such strikes as have occurred have been handicapping the expansion of the output, which is obviously to the advantage of the USSR.

What is less obvious but none the less true is that Communist-generated wage-price inflation has been largely responsible for the disinflationary measures the Government has been impelled to adopt, leading to an interruption of the expansion of the output. It is mainly in this respect that Communist influence in the trade unions has served the interests of the USSR.

The failure of a major strike would have very far-reaching effect on the British industrial situation. It would greatly reduce the trigger-happiness of trade unionists who are only too eager to start a strike on the slightest excuse. It would go a long way towards discrediting the "war party" in general and the Communist infiltrators in particular. It would enable moderate trade union leaders to regain the control of the policy of their unions. In the absence of excessive wage demands the Government would be able to remove its disinflationary measures and the expansion of the output could be removed. This would make it possible to grant wage increases without causing any inflationary effects. There would be less discontent among the working classes and less class-hatred, which would of course be bad from the point of view of the Communists in Britain and their Russian masters.

This explains the determination of Communists and militant trade union leaders to avoid at all costs the failure of the strike of London autobus workers. They are doing their utmost to secure support to their strikers by other trade unions. Although the position is obscure at the time of writing, there appears to be a real danger that, as a result of sympathetic action by other unions, the trouble might assume quite considerable dimensions. Even so, the Government is for once determined to stand firm, though after its act of appeasement with which it prevented a railway strike it may take some time before the strikers will come to realise that on this occasion they have encountered firm resistance.

The labour situation in the United States is very depressing. Although there the recession has proceeded much further than in Britain, there is no sign that under the effect of growing unemployment the trade unions have come to their senses. They still insist on increased share in dwindling profits. Obviously it takes a long time for trade unions to adapt their attitude to changed conditions. And meanwhile valuable output is lost through their selfish short-sightedness.

—(Copyright).

US Notes

This past week, another and a most significant landmark was established in the development of peaceful atomic power in the nation's capital. President Eisenhower formally dedicated America's first full-scale atomic power plant devoted exclusively to civilian uses.

Using a beam of neutrons released by radioactivity, the President sent an electronic impulse that set in motion the main turbine of the nuclear power station at Shippingport, Pennsylvania. Thus, automatically generated electricity began to flow into homes, stores and factories of the Pittsburgh area, one of the nation's leading industrial centres.

The Shippingport plant, financed jointly by the US Atomic Energy Commission (AEC) and two private companies—the Duquesne Light Company and the Westinghouse Electric Corporation—has several other distinctions, as well. It is the largest plant to be put into operation under AEC's civilian reactor programme, meaning that it is the largest plant of its kind in the United States.

Beyond that, it is not only America's but also the world's largest nuclear power plant devoted entirely to electricity production. This distinguishes it from other large installations, such as Britain's Calder Hall, which produces both electricity and plutonium for weapons.

But Shippingport's unique position promises to end in the near future. It will soon be joined by four other civilian power plants in the US, all expected to have even larger generating capacity than Shippingport's 60,000 kilowatts. All four are now under construction and are scheduled for completion in 1960.

They are the plants of the Yankee Atomic Electric Company, at Rowe, Massachusetts, with a capacity of 134,000 kilowatts; the Consolidated Edison Company of New York, 275,000 kilowatts; Commonwealth Edison Company, near Joliet, Illinois, 180,000 kilowatts; and the Power Reactor Development Company, at Monroe, Michigan, 100,000 kilowatts. This means a total of more than 700,000 kilowatts of atomic electricity generating capacity in the United States within two years.

Of the four plants, the first two will be of the same "pressurized water" reactor type as Shippingport. The Illinois plant will be of a "boiling water" type, and the Michigan plant of a so-called "fast breeder" type.

No one suggests—at least of all the Atomic Energy Commission—that

the Shippingport operation will be competitive with plants using coal or other conventional fuel. Shippingport's initial operating cost, in fact, will be astronomically high—an estimated 64.4 mills per kilowatt-hour, compared with a range of from 4 to 9 mills at modern US coal-fired stations.

Offsetting this cost discrepancy, however, are two important considerations. For one, the pressurized water reactor is an established and successful model. It has proved its worth not only in experimental power plants but also in US atomic submarines, which have helped open a revolutionary chapter in maritime construction.

For another, the operating experience at Shippingport will help reduce atomic generating costs. It is highly unlikely that Shippingport's costs will ever reach a competitive level. But the experience gained is expected to prove of great value in designing and building more efficient and more economical nuclear power stations of various types.

In this connection, W. Kenneth Davis, former Director of AEC's Reactor Development Division, has estimated that by the mid-1960's nuclear power plants going into service in the United States will achieve costs in the range of 9 to 11 mills per kilowatt hour, and that later plants will better that mark.

It is to help accomplish this result that AEC is not insisting on just one proven type of reactor, but is encouraging the construction of many different types. Right now, in addition to Shippingport and the four plants under construction, eight experimental power reactors, representing six different reactor types, are in actual operation in the United States. This gives the United States the most comprehensive civilian nuclear power development programme known.

Britain

THE provisional index of United Kingdom industrial production for April shows no marked alteration of the trend in industrial production. The index, unadjusted seasonally, reflects a shorter working month compared with March; when seasonally adjusted, it suggests a very slight dip in output, but the level is still a shade higher than a year ago (although output then was affected by strikes in the shipbuilding and engineering industries).

No breakdown is available for particular industries in April, but it is a safe assumption that the engineering industries—and especially motor vehicles—are maintaining a high level of output.

The general picture so far this year is that industrial production in the United Kingdom is running at or very near to, the 1957 volume, and that while no expansion is yet taking place, equally there is no sign of a recession, looking at the economy as a whole.

As for the figures themselves, a Treasury statement says that the production index for April, on the basis of information so far received, is expected to be 134-135 (1948=100).

In the first four months of this year the index averaged 140, the same as in the corresponding period of 1957.

For March the index is estimated provisionally at 144, the same as in February. Figures for the corresponding months a year ago were 145 for March and 143 for February.

These figures are unadjusted for seasonal variations. The adjusted series, which makes the trend of production more readily discernible, shows April at 137-138, March at 138, and April 1957 at 137.

Nearly 10,000 more applications for British patents were received in 1957 than in the previous year, the United Kingdom Comptroller-General of Patents. Designs & Trade Marks said in his annual report, just published in London.

The report observed that nuclear radiation was becoming widely used in a variety of testing apparatus, and supersonic waves were being used in geological research, particularly in oil prospecting.

Greatest number of overseas applications for patents received during the year came from the United States, with 7,142 (compared with 7,865 the previous year).

Next highest was Germany, with 4,076 (compared with 3,863 in 1956). Among other countries from which applications for UK patents were received were France (1,646), Switzerland, Canada, Australia, Japan, New Zealand, India, South Africa, and the West Indies.

An order for these aircraft announced in London on May 30 brings the total number of Vickers Viscount turboprop airliners bought this week to 10. These include seven of the latest 810 series, and make the week's orders worth about £5,000,000.

Easier Trend

THERE has been a slight improvement in the undertone of the jute goods market during the past week. The steadier tendency has stemmed mainly from the higher advices from the raw jute section where sellers have become reserved. While the decision of the IJMA mills to maintain the minimum prices fixed in last February has been generally welcomed, the announcement has had little effect on sentiment in the sacking section where prices continue to be quoted much below the minimum. The fact that on Thursday rates have declined again on indications of favourable weather conditions shows that buyers in the goods market anticipate that the new jute crop will be quite satisfactory. Till last week there has been no doubt as to the continued good progress of the crop. With the receipt of reports about hot weather conditions in some of the growing areas there has been talk of delay in the harvesting of the crop with the possibility of a reduction in the supply. Sellers in the raw jute market have been further encouraged to adopt a reserved attitude by the small arrivals in upcountry markets. As against the revised ideas about the next jute crop, there is the fact that the crop in Assam and Northern districts has not been adversely affected by the hot weather. According to latest information harvesting of the crop has commenced in the low lying areas in Assam. This will indicate that the crop has not been delayed.

The jute goods market opened the week on a quietly steady note with sentiment aided by the decision of the IJMA mills to maintain the minimum prices. In the absence of fresh business prices developed a sagging tendency in later dealings and the market closed on an easier note. Hessian 40" x 10 oz Ready was almost unchanged at Rs 40.50 but B Twills ready declined slightly to close at Rs 97.87.

In the next two days the market continued to rule quiet with business passing at a low ebb. Hessian 40" x 10 oz Ready closed on Saturday at Rs 40.30 with B Twills placed at Rs 97.35. The undertone continued to be weak on Monday and no business was reported done. There was some selling pressure in the Fatka and mills showed no interest at the prevailing levels. Hessian 40" x 10 oz Ready was 5 nP lower on balance at Rs 40.25 but B Twills was slightly better at Rs 97.50. Conditions remained unchanged on Tuesday.

The market opened steady on Wednesday and in earlier dealings prices especially in the heavy goods section recorded a smart recovery. Sentiment had been mainly helped by reports of poor rainfall in the growing regions. It would appear that operators had been encouraged by the anticipation that prices of raw jute would improve if the new crop was delayed. The unfavourable weather conditions were also expected to reduce the size of the crop. Under sustained support from speculators B Twills moved up to close at Rs 98.35. In forward deliveries B Twills were done up to Rs 100.05 for July-September and up to Rs 100 for Oct-December. At the higher levels mills came out as sellers and a sizable business in forward deliveries was reported done.

After a firm opening prices declined again on Thursday following reports of improvement in weather conditions in the growing areas. It was also reported that harvesting of the new crop had commenced in some of the low lying areas. Hessian 40" x 10 oz Ready was finally placed at Rs 40.30. B Twills Ready declined rather sharply to be finally placed at Rs 97.75. In forward deliveries July-Sept B Twills eased by 55 nP to Rs 99.50 while Oct-Dec was marked down by 40 nP to Rs 99.60.

In the raw jute section conditions were steady at the beginning with Assam Bottom quoted at Rs 25 per maund. A quiet tendency prevailed on Saturday with the price marked down to Rs 24.75 but again the undertone became steadier in later dealings as sellers became reserved. The rate again recovered to Rs 25 and remained at that level for the rest of the week. As sellers continued to be reserved business passing was at a meagre level.

In the Futures market, Hessian 40" x 10 oz August 1958 opened on Friday at Rs 40.8. During the course of the week under review the highest rate touched was Rs 40.38 and the lowest was Rs 40. The closing quotation on Thursday was placed at Rs 40.16.

B Twills August opened the week at Rs 99.00 and after touching a high of Rs 100.10 and a low of Rs 98.90 closed at Rs 99.30.

Upper Assam Bottom June opened the week at Rs 24.60 touched a high of Rs 25.36 and a low of Rs 24.60 to close at Rs 24.80. September position opened at Rs 25.26 touched a high of Rs 26.02 and a low of Rs 25.26 to close at Rs 25.60.

Interim Relief for Tea

WITH effect from June 1, the Government of India have reduced the excise duty on teas which are not used in the manufacture of packaged tea to half anna a lb. It has been further decided that the cess of Rs 4 per 100 lbs of tea exported outside India, under the provisions of Section 25(1) of the Tea Act, 1953 would be halved. The Commerce and Industry Ministry in a Press Note points out that the question of affording some relief to the tea industry has been engaging the attention of the Government. But it has not, however, been possible yet to devise a scheme by which a greater quantum of relief is secured by the producers of the common teas as distinct from the superior categories. Hence it has been decided to provide immediate relief in the shape of reductions in excise duty and the cess pending a further study of the problems which will take sometime.

The concessions have been welcomed in tea circles because they will go some way in minimising the difficulties that tea exports are encountering at the present juncture. The fact that the question of affording relief to producers of common teas is still under consideration indicates that Government recognise the need for further aid to this category of tea.

In the Internal Sale held this week, despite a fair general demand, price levels displayed a sagging tendency. A total of 21,214 chests was on offer. Demand for black leafy grades and selected types was fair and consequently these categories sold higher on balance. Other grades were generally easier. CTC Assam after moving both ways closed easier. Best liquoring kinds were at times 20 nP cheaper. The decline was less marked in the case of medium and plainer kinds. The grainy kinds met with fair demand at slightly higher rates.

Medium Doars Dust Rs 1.48 to Rs 1.50; Medium Assam Grainy Dust Rs 1.52; Medium Assam CTC Dust Rs 1.70 to Rs 1.90; Best Assam CTC Dust Rs 2.40 (nominal). The Colombo weekly tea auctions which have been suspended for the past five weeks owing to strike in Colombo's agency houses have been resumed with effect from May 30.

An official spokesman has estimated that about seven million pounds of tea have been offered.

Demand has been good. Shippers from all parts of the world have evinced interest in the proceedings, prominent among them being shippers from United Kingdom, Australia, South Africa, North America and the Soviet Union. Prices realised have been generally equal to those prevailing before the strike.

The sale, storage and shipping of tea, rubber and coconut produce have been declared essential services under the Emergency Regulation.

It is learnt that auction of 7 million pounds will be held on June 16. Sales to full capacity will continue on Monday of every week. According to the Minister of Commerce and Trade, Ceylon, the Government hope to hold public auctions at regular interval of tea to be offered from estates for delivery at Trincomalee or Galle harbour. From these ports shipping interest working in collaboration with the Ceylon Tea Traders Association will arrange for vessels to collect cargo for world wide destinations. These auctions have been proposed with a view to relieve the pressure on the Colombo port.

Referring to the prospects of Ceylon tea exports to Egypt, a Government spokesman said that shipments of Ceylon tea to Egypt suspended last month, because Egyptian credit to Ceylon had been exhausted, would be resumed towards the middle of June. The resumption has been rendered possible because credit to the tune of four million rupees in favour of Egypt has now been received in Ceylon. The credit will enable Ceylon to continue normal tea shipments until about the end of July.

In the tea sales held at Cochin on May 26, a total of 12,43,495 lb of leaf tea were offered for export. There has been a further seasonal decline in the quality which has, however, been exceptionally satisfactory during the first five months of the season. The appearance of most teas was satisfactory for the time of the year although some low-grown showed signs of stalk and fibre. Quotations: Plain BP Rs 1.50; Low Medium Rs 1.65 to Rs 1.80; Medium Rs 1.80 to Rs 2.10; Good Medium Rs 2.10 to Rs 2.45; Quality Rs 2.30 to Rs 3.30.

In this week's tea auctions in London there was a good demand but prices moved both ways over a fairly wide margin. Poor plain liquoring teas were generally in poor request with consequent lower levels. Other types were steady to firm and were generally done higher than last levels. A total of 39,722 packages from North India, Pakistan, Nayasaland, Kenya, Portuguese East Africa, Uganda, Belgian Congo, Malaya, Indonesia and Formosa were catalogued, of which only 22,352 packages were offered. As 7,477 packages were withdrawn due to difficulties arising out of dock strike, were only 14,925 packages on offer finally.

DO you remember the Napoleon of Notting Hill? (If you have not read Chesterton's novel of that name, at once hilariously funny and deeply serious, you must do so immediately). It is a story that explores with great acuteness the patriotic impulse in man. Adam Wayne, the hero, is a humourless young man of an almost literal turn of mind. While yet a child, a chance remark from his Sovereign, King Auberon, has implanted in him a passionate love for his native suburb of Notting Hill. King Auberon, who represents the pure spirit of humour, has meantime been indulging his anarchic sense of fun. One of the forms it takes is the combating of two of the most deadly developments of modern life: a centralised despotism and a deadly uniformity in social life. Much to the helpless annoyance of his staid subjects, he devises forms of self government for the various suburbs of London, for which he elaborates the most complicated ceremonial and formal trappings. Each suburb is to have its own flag, its own army, and its own ceremonial uniforms (which the King spends the better part of a day designing.) None in the country, the King least of all, takes these antics seriously, except Adam Wayne. But the royal whims are acquiesced in with greater or less grace. Matters come to a head, however, when certain civic improvements desired by the other suburbs of the city are obstructed by Wayne's invocation of his prerogatives as the chief of Notting Hill. The contending sheriffs meet the king (in their several uniforms, and all, except Wayne, acutely self-conscious and uncomfortable in them) in an effort to make Wayne give in to the inexorable demands of progress. The king, somewhat ashamed that his joke had gone a little too far, is willing to reason with Wayne. But he does not know his subject. At first he imagines that Wayne is a kindred spirit playing the joke for all it is worth, but is shocked to find that the young man has taken him at his word in dead earnest. Notting Hill was, in sober truth, the apotheosis of Wayne's intense but limited imagination. For once, humour was defeated convincingly by humourlessness. (Or is it happening all the time?)

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

The madly precise working of Wayne's imagination frustrates the machinations of his fellow sheriffs: and how they try to meet him on his own ground (since he would meet them on none other) and how the enterprise ends by their being infected with precisely the same kind of parochialism they despised in Wayne are matters I shall leave you to find for yourself (if indeed you have not already done so). I was reminded of Wayne because of General de Gaulle, who is very much in the news now. There are, of course, differences between the two. But there is in him a similar element of mad knight-errantry, and an almost mystical passion for France—a passion not unlike that of Wayne for Notting Hill. Those who have read his memoirs will know how this passion, the one genuine thing in the man, has illumined all that he has said and done. A good many unprepossessing qualities in him (his notorious vanity, for instance) seem strangely unimportant in such contexts. France is always to him "Notre Dame La France", a sentiment not unlike our own "Bharat Mata". (The nearest Indian equivalent I can think of for de Gaulle is Tilak.) The very opening words of his memoirs explain his attitude to France: "All my life I have thought of France in a certain way. This is inspired by sentiment as much as by reason. The emotional side of me tends to imagine France, like the princess in the fairy stories or the Madonna in the frescoes, as dedicated to an exalted and exceptional destiny. Instinctively, I have the feeling that Providence has created her either for complete success or for exemplary misfortunes. If, in spite of this, mediocrity shows in her acts and deeds, it strikes me as an absurd anomaly, to be imputed to the faults of Frenchmen, not to the genius of the land."

Most often, his love of France takes the most egocentric forms, which, however ludicrous from the point of view of common sense, have a certain momentary grandeur. Such attitudes have precedents in French history. His calm assumption of the role of a man of destiny, of being the chosen instrument of restoring France to its ancient glory (which to de Gaulle is probably exemplified by Charlesmagne rather than

by Louis XIV) has its historical parallel in Jeanne D'Arc's similar sense of destiny. When Robert de Baudricourt asks her ironically, "So God says you should raise the siege of Orleans?", she replies with calm authority, "And to crown the Dauphin in the Rheims Cathedral." In a hundred different contexts during the last war, the somewhat prosaic Anglo-Saxon temperament was to be exasperated by de Gaulle's assumption that he was France. The story is told of how, during one of his interviews with Eden, Eden told him, "Do you know you have caused us more difficulties than all our European allies put together?" De Gaulle's answer was: "Undoubtedly. France is a great power." Throughout his memoirs he uses the words, Free France, France and de Gaulle as interchangeable. And some of the bitterest moments of his life have been those when such a "self evident" truth of the identity of the two could not have been recognised by others as such. In the heart-breaking days following France's collapse early in the last war, and indeed throughout the war, de Gaulle did the most exasperating things to establish this identity. Immediately after Pearl Harbour, he engineered a coup in the little islands of St Pierre and Miquelon off the American coast in order to forestall an agreement between the Americans and the Vichy for neutralisation of French possessions in the Western Hemisphere. The idea behind it was the absurd desire that, in everything relating to France, every one should deal only with him. The Americans were not unnaturally upset at what they considered as frivolous attitude to a deadly struggle and a perverse provocation of friends. This incident set the tone to the entire course of relationship between the US and the Free French for the rest of the war. It was also responsible for the extreme reluctance of the former to concede the exclusive inheritance by de Gaulle of the sovereignty of France. The exclusion of the Free French from the counsels and participation of the North American campaign, and the "compounding" with Darlan, subsequent squabbles about who should exclusively represent France, de Gaulle's sulks before the Casablanca meeting are only a few instances of the difficulties

that arose from de Gaulle's assumption that he alone was France.

Clearly, there was more than vanity involved in this. De Gaulle's self-identification was not only an emotional attitude, but also a narrow legal fiction. There is something canny in the way in which highly mystical attitudes are given sharpness and palpability by a kind of legalistic fiction. It would seem that de Gaulle was really all the time seriously maintaining that the sovereignty of the French nation had passed to him on the 19th June 1940, when he broadcast from London. He said then: "Before the confusion in French souls, before the disintegration of a government which has fallen into the power of the enemy... I, General de Gaulle, French soldier and leader, have the consciousness that I am speaking in the name of France..." It certainly was his finest hour and it marked the beginning of that remarkable redemption of the French spirit later to be known as "the Resistance". But, apparently to de Gaulle, the broadcast was not merely a rallying war cry, but an assumption of French sovereignty in a literal sense. He himself describes it as "a call from the depth of history", and says that it was "the instinct of the country which led him to take charge of the heirless treasure—to assume French sovereignty." As far as de Gaulle was concerned, this was not a figure of speech or a mystical avowal, but a political declaration.

Much of the tragi-comedy of the relationship between the Free French and the Allies is to be explained by the fact that the Allies did not grasp this simple assumption of de Gaulle. In one of his famous clashes with Churchill, Churchill is reported to have said: "You say you are France! You are not France! I do not recognise you as France..." De Gaulle's retort to this was: "If, in your eyes, I am not the representative of France, why and by what right do you deal with me concerning her world interests?" This is a lawyer's argument and was rather unfair to Churchill, since he was the most loyal friend he had. Churchill's memoirs (which I "index-

read" for the purpose of this gossip!) shows what a strenuous battle he had to fight all the time to have the claims of de Gaulle to be heard as France's representative. Churchill had a genuine admiration for de Gaulle. There was something of de Gaulle in Churchill himself: his medieval politics (especially in colonial contexts), his flamboyancy and his grand manner were not unlike de Gaulle. There was also an element of mysticism in his love of England, which was somewhat old fashioned. But not old fashioned in the sense in which Wayne's was, for, Wayne was anything but imperialist. But, in this contrast to Wayne, he is in the company of de Gaulle, since, to the General, love of France includes a zealous concern about what he calls its "world interests". Indeed, some of our misgivings about de Gaulle's assumption of power in France flow directly from de Gaulle's background. The actions of Free French authorities in Syria in 1942 (when the Syrian President was kidnapped by them) and later in 1945 are anything but reassuring.

But even Churchill did not understand how literal de Gaulle's

assumption of French sovereignty was. Churchill does indeed show some inkling of the somewhat narrow legalistic bent of French temperament in certain other contexts. Thus, there is a perspicacious passage in a speech in the House of Commons in December 1942, quoted in Volume IV of his memoirs, in which he explains why it became necessary to recognise Darlan in French North Africa. He explains it on the ground that the French have instinctively evolved (owing to the instability of their political life) a principle called "droit administratif." This flows from a highly legalistic habit of mind, "...which makes a Frenchman feel that one who obeys his lawful superior is absolutely immune from punishment." The authority of the immediate superior is supposedly transmitted in an unbroken chain from the head of the state. So, Darlan is obeyed by the French soldier in North Africa. The interesting thing is that, to the local chief, this "droit administratif" allows considerable room for sophistry or even self-delusion in times of stress. "All this is done in the sacred name of Marshall Petain and when the Marshall bleats over the telephone orders to the contrary

and deprives Darlan of his nationality, the Admiral rests comfortably upon the fact or fiction—it does not matter which—that the Marshall is acting under duress. ... and he, the Admiral, is carrying out his true wishes. In fact, if Admiral Darlan had to shoot Marshall Petain, he would no doubt do it in Marshall Petain's name."

Here, you have the crux of the problem. From the point of view of the French legalistic logic, there was a legal Government in unoccupied France, which went out of the war on the conclusion of the armistice. This was de Gaulle's chief difficulty. It would have been better if France had been overrun and formally annexed by the enemy. As it turned out, America's dealing with Vichy was, even in French eyes, not such a horrible act of faithlessness to democracy. But, of course, de Gaulle did not see it that way.

What might have been galling to the General was that it was not only the Americans and the British that failed to see in him the embodiment of France. The rather unceremonious way in which French politicians put him aside after the Fourth Republic was formed must have hurt him deeply. And, as usual, he retired and, in this case, sulked for years. Once again, "the call" has come, at least to his own satisfaction. If one is to talk the language of de Gaulle, the hour has found him and all that has happened before has but led to this moment. This is to him another "call from the depths of history" when, because of "confusion of souls", he is asked by history to speak "in the name of France". The "regime"—a word which his followers in Algeria have invested with odious overtones—has failed. That, alas, is only too true. But translating a personal myth into practical terms is a hazardous proposition. There is, it is true, nothing of the tinpot dictator, as yet, about de Gaulle. But Fascism and Nazism, it is better to remind ourselves, were a kind of metaphysical theory of state gone rotten. A disdain for the essential frivolity of the political life of the French Republic—a disdain, moreover, that flows, as de Gaulle claims, from a communion with the "soul of France", whatever that may mean, can easily degenerate into a disdain for the forms of democracy itself. In the circumstances, with the best will in the world, one cannot but share M. Mendes-France's deepest misgivings about the "formidable pressure on the General from those who intend to instal a Fascist dictatorship." Little is known of the General's practical political ability. Both the enthusiasm of his Algerian supporters and his own declared policy of "integration of Algeria" with France—to take a specific example—give room for

the most gloomy forebodings. Again, the General knows practically nothing about economics. One does not know what he proposes to do to put France on its economic feet. Complete freedom to act for six months and a somewhat mystical love of France: can these two achieve the miracle of restoring France to its pristine glory? It will be comforting if one said confidently, "Yes", but scarcely honest.

Fishing in the Id

Americans are great "worriers". It is not only that they are "problem-minded" and reduce everything to one which they cheerfully proceed to solve with the aid of muscles, red corpuscles and sound business methods. It is that they are constantly worried about the sociological manifestations of their dearest possession, the American way of life. The almost clinical terms in which conclusions are set down and the somewhat jargon-ridden pedantry that afflict much American sociological writing may be due to nothing worse than—another famous American trait—thoroughness. But we who take our misfortunes more philosophically and deal with them, even in professional contexts, with a self-conscious amateurishness, find the American exploration of such varied themes as the American Male or the American Female somewhat overwhelming and slightly pompous. When an Indian discusses the caste system or when an Englishman writes about such things as U and Non-U, there is a certain, ironic tentativeness about what he does. After all, he seems to imply, all this is not really very important. It may be that the Americans' is the really more mature attitude, and if there is a problem, it is best to deal with it in all seriousness.

The provocation for these reflections is Mr Packard's book on Motivation Research. Mr Packard explores in this book the goings on in the backrooms of Madison Avenue, in which "psychologists" are tabulating the results of their angling in the collective psyche. The idea is to use these "insights" (a word, by the way, of which they are rather fond) into the darker regions of our psyche for sales promotion. "Motivation Research is the type of research that seeks to learn what motivates people in making choices." This motivation is to be found not at conscious levels but deeper down. Our hidden yearnings are to be discovered and pandered to. Our hidden aversions are to be laid bare and broken. Our hidden fears are to be brought up to the surface and played upon. And finally, where no desires, hidden or overt exist, to create them. (After all, as the mad hatter said, it is always easy "to take more than nothing"). Motivation research differs from the old fashioned market research or "nose counting" in that it is concerned, by definition, with our hidden motives, of which we are not aware. It is quite simply the extension of psycho-analytical postulate of our conscious acts being the rationalisation of self-interest to the problems of mass selling. The basic assumptions of "depth-probers" or "symbol manipulators"

*The Hidden Persuaders—Vance Packard. Longman Green & Co. 18 Sh.

—as Mr Packard scarifyingly calls them—are that people do not know what they want, and even if they know, they will not tell. It is no use asking them. The problem is therefore to find out what they want and give it to them. Secondly, since people who do not know what they want can presumably be made also to want things that they don't want, make them want them. And, in all this bounty, nothing real is involved, for, what people want is, by definition, nothing but psychological satisfaction. So, in selling a cake of soap, what is being sold is not lanolin but a promise: "You are not selling oranges but vitality, not an automobile but prestige—You don't sell shoes, but lovely feet."

There is practically nothing that cannot apparently be sold on these premises: lipstick, cars, politics, presidential candidates and even religion and, of course, motivation research itself. Deep down in the buyers of these "insights" are perhaps dim racial memories of the tribal witch-doctor who will resolve all your difficulties by the incantation of the appropriate mantra. (Some of the technical terms that these researchers use are words like "Autism", "catharsis", "compensation" et al, and these are both strange and emotionally and symbolically loaded—two essentials of any magical formula. Mr Packard assures us that there exists a dictionary of this esoteric lore entitled the Language of Dynamic Psychology as related to MR, which is often consulted by the MR Priesthood). And some of the rituals attendant on this research—Rorschach's Ink Blot Test, Thematic Apperception test, Rosenzweig's picture frustration test, and above all the Szondi's test (which involves your expressing unknowingly which among the several psychopaths you find yourself most sympathetic to yourself) must have, on the researchers' own premises, satisfied some hidden desire or assuaged some secret inadequacy in their clients. In any case, it would appear that, whether MR will help sell goods or not, it certainly has sold itself. According to Mr Packard, it was

estimated in 1955 that 12 million dollars were budgeted to be spent by marketers on motivation research. And Fortune estimated that, in 1955, out of the 260 billion dollars spent on consumer products, "a full half probably went to industries in which one or more major manufacturers had tried MR."

In a sense, this further extension of the areas on which funds are to be expended by sellers is a uniquely American phenomenon. Advertising in America is, as Professor Galbraith explained in his refreshing book on "American Capitalism", though socially wasteful, still the product of relative well being. "It may be a waste, but it is a waste that exists because the community is too well off to care." Where the whole economy is consumer-orientated, and where differentiation between rival products is becoming less and less real, it is inevitable that the rivals should try to sell you competing unreal satisfactions. In the topsyturvydom of the need for consuming more and more in order not to collapse, it is inevitable that the complaint should take the form: "It is not that too much cheese is being produced, but that too little is being consumed." It is also inevitable that a lipstick manufacturer should say, "I am not selling lipstick, I am buying customers." (Lipstick manufacturers are stated to spend a quarter of all their income on advertisement). The creation of "psychological obsolescence" is of the essence of survival, and it is where the psychologists come in handy.

How much of all this research is genuine and how much of it is hocus pocus? It is difficult to say precisely, though, to judge by some of the "insights" peddled by these folks, they must belong to the lunatic fringe of psychological research. Some of them even fall for their own mumbo jumbo. One of them is quoted as stating that, "with a pink shirt he was trying to say about himself." Unless this was being said with tongue in cheek, it shows how one can be an easy dupe of one's own profession. But one comment should be made.

Unless Mr Packard had been unduly coy in producing all the evidence gathered up by these researchers, it would appear that these researchers into depths do not go deep enough. Some of the logical conclusions about the impulses behind cigar smoking or cake making or gum chewing may have been omitted because they may have been thought unprintable. But one imagines that they were at the back of the minds of those who planned the campaigns.

The whole trouble about dealing with insights about what by definition is something all of us hide, is the inability to affirm or deny. When William Archer dreamed that Shaw had his beard shaved off and was inarticulate in public, he was told by the analyst that he was secretly jealous of Shaw and wanted him humiliated. When Archer denied it vehemently, he was told, much to his disconcertion, that the very vehemence of his denial showed how deep seated his feelings were. If he had confirmed it, then also the analyst would have been right. Thus, if I am told that my preference of a convertible to a Sedan is due to my preference for my mistress to my wife, I am in an unenviable position of not being able to deny it and certainly not (with the wife about) to affirm it. Again, many of these "insights" cancel each other out. (This, of course, proves nothing). If nakedness or near nakedness is a good selling point in one advertisement, why should it be not so in another? If stirring up our libido is good in one case, why is it not in another? If "I dreamed I stopped traffic, in my maiden-form bra" is a good ad, why is it that, in a perfume ad, incorporating Gauguin's paintings of South Sea belles was vetoed? After all, the buyers of bras are also buyers of perfume and therefore the argument of the two ads being directed to different audiences cannot hold water.

But apparently there is one test whether or not MR is leading sellers anywhere. It is the sales figures. The proof of the pudding is in the eating. (Will depth probers agree?) Here again, one cannot be too sure whether or not it was a piece of luck. Even depth probers agree that many of their

WORLD OF BOOKS

INDIAN FACTORIES AND LABOUR MANUAL (Third Edition)

By R. MATHRUBUTHAM and R. SRINIVASAN, Advocates, Madras.

Foreword by Hon'ble R. VENKATRAMAN (Minister for Industries and Labour, Madras)

This well-known and useful book on an ever growing and complex subject, contains all the Central Labour Acts with Rules. Exhaustive Notes and copious case-law make this book indispensable. Every industrial organisation should be equipped with a copy of this book.

Indispensable to Lawyers, Labour Organisations, Labour Officers, Courts and Factories.

Contains over 40 Acts with Rules and Regulations. The only up-to-date and exhaustive book on a most important branch of law. Price Rs. 25/- (Pre-publication price Rs. 22-8-0 open till 30th June, 1958).

M.L.J. Office, B. P. 604, Madras 4.

insights have no universal validity. There is a lot of unconscious humour in many of their findings, which, of course, does not preclude their correctness. A good deal of this is due to the slightly pompous jargon employed. "Candy is a reward symbol", "you must sell people a sense of roots." (One wonders whether the irony of the thing struck them at all!) "Have you considered the 'symbolism of soup'?" ("Its deepest roots lie in prenatal sensations of being surrounded by the anniotic fluid to our mother's womb.") And "Prunes!" The incredible Dr Dichter (this man's dicta strewn profusely throughout this book are the collector's dream come true!) has actually made them attractive. Among the Prune's other virtues is its being a "gentle aid to regularity." (Dr Dichter found on probing that prunes had an unfortunate association with constipation). And Banks! Did you know that you did not borrow from the bank because of the high moral tone they take? The Kabuliwalla, despite his usurious rates, treats you as an erring mortal like himself. Banks are therefore presumably to drop all reference to the little matter of security for the overdraft, or, if the subject must be mentioned at all, it should be done with a suitable sense of their appalling priggishness.

Not all of Mr Packard's findings are capable of being taken in this light-hearted spirit. I shall not go into the ethics of making me buy what you know I do not need at all. A line has to be drawn at some point beyond which it may be considered wrong to "influence" me against my will. Where that line is to be drawn is a matter for debate. After all, there are a number of ads which are immensely enjoyable as ads, and I should therefore not grudge the little sacrifice it demands in return. In any case, this question leads one on to the ethics of mass production and mass consumption, to the nature of an industrial society, to the subject of the "Lonely Crowd" and Admass all of which I have no space to discuss in detail here. But one development in American political life this research into human motives has introduced is portentous: The conscious application of these techniques to political persuasion. Of course, symbol manipulation is not new to politics. What is a flag but a symbol? Granted that a great deal of our motivation is unconscious and scarcely mentionable, do democratic modes of persuasion include conscious manipulation of precisely these elements? Democracy is founded not on the fact of human conduct being based on rational considerations, but on the categorical imperative that it should be. Rational behaviour is not a fact of observation but a moral postulate. Which means that the process of persuasion in a democracy respects certain restraints. Mr Packard shows in a well documented chapter how these restraints were not respected in the

last Presidential elections. One need not invoke in an alarmist fashion the lengthening shadows of 1984 and so on. But Adlai Stevenson's acid comment that the idea that "you can merchandise candidates for high office like breakfast cereal... is the ultimate indignity of the democratic process" is absolutely correct.

The Dangers of Ambitious Planning

How far economic development of the underdeveloped areas of Asia and the Far East could be pushed through, without generating forces of instability, is a problem which has lately loomed large in almost all the countries of the region. The apparent dangers of ambitious planning unrelated to the structure of the economy and its limitations are dramatically brought out in the current shortages and bottlenecks which threaten the smooth execution of the Second Five Year Plan of India. But the problem is by no means so restricted in its impact. The incompatibility of progress and stability has a wider application in this region, being present in lesser or greater degree throughout the area.

The major source of instability in these areas arising from economic development is perhaps the need to import capital goods, and the dimensions of the problem would therefore be properly reflected in the payments position of these countries. The almost universal trend in recent years in the payments position in the countries of Asia and the Far East has been toward deterioration. From a level of 750 million dollars in 1955, the payments deficit widened to 1,969 million dollars in 1956 and is expected to be of a still bigger order for 1957. The United Nations Economic Survey for Asia and the Far East for 1957* has characterised the developments in the payments position of these countries as alarmist.

The aggravation of the balance of payments position only underlines the limited success that has so far been achieved in the efforts toward development in the agricultural and industrial fields. Notwithstanding the increased levels of agricultural production attained in this region in 1957, the Survey notes the inadequacy of this output on a per capita basis. While production of cereals reached an all-time record of 126.6 million tons in the crop year 1956-57, imports of foodgrains actually rose by more than 2 million tons to 12.1 million tons in 1957. The fact that it was the net imports of cereals from outside the region that was responsible for the net rise in imports indicates the magnitude of the task of making the region independent

of outside supplies for its requirements of foodgrains.

The food problem varies in its intensity between countries in the region. In the food exporting countries, such as Burma, Thailand, Taiwan and Cambodia, though the food problem ceases to exist, decline in production would have adverse repercussions on their balance of payments prospect. Since, in all these countries, production increased in 1957, it was the decline in the production in the food importing countries that was responsible for the increased imports of foodgrains from outside the region. In Ceylon, rice production in 1956-57 suffered a decline by about 24 per cent from the previous year's level due to draught which overtook many areas of the country. In India, in spite of increase in the production of cereals, demand far outstripped supplies so as to cause shortages in many parts of the country. Increased demand for foodgrains following the improvement in the purchasing power of the people in general together with a switch to finer grains as against coarser grains which the increased levels of incomes permitted, seem to have been responsible for the shortages in foodgrains. This is a feature of food consumption which has to be taken into account in the programmes for food production.

A more rapid rate of increase and efficiency in production should therefore be the primary objectives in the policy for food in the food importing countries. With the solitary exception of Japan trends in production in other countries have not been satisfactory. In Japan, with the increased production of rice in 1957, imports were reduced from 697,000 tons during the first ten months of 1956 to 317,000 tons in the corresponding period for 1957.

The predominance of primary goods in the export trade of many of these countries is another factor which renders them vulnerable to forces over which they have little control. Many countries of the region have been hit hard by the fluctuations in the prices of the primary commodities. The price of rice, which item figures prominently in the export trade of Burma and Thailand, has declined sharply in 1956, the fall continuing in the first half of 1957. The foreign exchange earnings of India and Ceylon have also been adversely affected by the fall in the price of tea, while the decline in the price of rubber has similarly affected the foreign exchange earnings of Malaya and Indonesia.

Diversification of exports offers the solution to the threat that predominance of primary commodities in the export trade constitutes to stability in the payments position of these countries. Success in this is linked with the efforts towards industrialisation. The general trend in this direction has been satisfactory and the Survey points to the upward trend in industrial

production in this region as a whole. While manufacturing and mining production in the whole world increased only by about 3.5 per cent and by 1.9 per cent in North America, in Asia, the increase was as much as 11.4 per cent. Corresponding to this increase in manufacturing and mining production, the output of basic metals and metal products was also 20.7 per cent and 14.1 per cent higher in the first three quarters of 1957 than in the corresponding period of 1956.

But the disappointing feature in this progress toward industrialisation is its relative concentration in a few countries such as Japan, India, and China while in most other countries industrialisation has made but little headway. This is borne out by the fact that, in the latter group of countries, the contribution of the industrial production to the net domestic product is an insignificant part of the total net domestic product, being less than 20 per cent.

In the former group of countries, the Survey points to a relative slackening of progress in the first half of 1957. In Japan, it was the restrictive monetary policy that was adopted in the wake of the deteriorating balance of payments of the country that put the brake on industrial progress in the first half of 1957. Balance of payments difficulties and the diversion of foreign exchange to meet the deficit in food requirements were the factors involved in the retardation of the industrial growth in India in the same period. The index of industrial production with 1953 as the base, after increasing by 17 per cent to 135 in 1956, because of adverse factors in the supply position in raw materials and equipment, declined to 133 in the first quarter of 1957. In China, the increase of 7 per cent in industrial production in 1957 compares adversely with the 31 per cent increase for 1956 over 1955. The slowing down of growth in 1957 in China is attributed to the reduction in State investment in capital construction from 14 to 11.89 billion yuan, reduced imports of capital goods and raw materials and shortfalls in certain crops such as raw cotton and oilseeds.

The behaviour of prices in these countries in recent years bears out the inflationary potentials of a developing economy which, in the initial stages, is unable to match the increasing expenditure which it incurs for development purposes by an equal flow of consumer goods. Persistence of inflationary tendencies in these regions, referred to in the Survey, appears baffling in the face of increase in the per capita availability of food-stuffs and important gains in industrial production. The Survey traces such inflationary symptoms to Government deficit financing and expansion of bank credit to the private sector, on the one hand, and the cost inflation in several industrialised countries outside the region which exerted its influence

on the price level of the countries of Asia and the Far East through the imports of manufactured goods into these countries, on the other. The existence of inflationary symptoms is one of the important elements in the instability which the economies of the underdeveloped countries have to face in their progress toward higher levels of productivity.

The problem of combining progress with stability thus involves the determination of a satisfactory rate of growth consistent with the resources the countries could muster for development. This is essentially a function of the rate of capital formation in these countries. Though the general poverty of this region would seem to point to limited possibilities in raising the rate of capital formation, the Survey, on the basis of the experience of Japan, has pointed to the possibility of capital formation being stepped up to a rate high enough to sustain vigorous growth after a certain stage in development has been reached. Scope for stepping up capital formation before that stage is reached lies in securing foreign capital. International cooperation, thus, is essential.

*

Labour in India by K. M. Saran, M.Com. D. Phil. Published by Vora & Co, Publishers Private Ltd, 3, Round Building, Kalbadevi Road, Bombay—2. Rs 5/-.

The author has broken new ground in this treatise dealing with a fascinating aspect of life in Ancient India. Indological researches so far have not strayed beyond the realms of religion, philosophy, art and literature. In this painstaking study, the author has brought together the relevant information culled from ancient works, both sacred and secular, in Sanskrit and in Pali, which have a bearing on employment and wages and conditions of the workers in general. The most interesting part of the book is the chapter wherein he has marshalled evidence to show that the distinctive features associated with the Welfare State were familiar to the people of Ancient India as far back as the third century B.C. The author has done well to go to the original sources, instead of being content with quoting second hand testimony of Western Scholars. He apparently believes that the readers of his treatise will be sufficiently familiar with Sanskrit to follow the quotations of ancient texts without the help of translations.

*

India and the I.L.O. By N. N. Kaul. Published by the Metropolitan Book Co. Private Ltd. 1. Faiz Bazar, Delhi. Rs 5/-.

The International Labour Organisation is one of the offshoots of the League of Nations which has survived the parent organisation. India has been a member of the

ILO from its very inception and it has participated in all its deliberations and activities. The influence of the ILO can be traced in every aspect of labour legislation in this country, which of late has been increasing both in volume and in importance. The author, one of Indian Officials on the staff of the ILO from its earliest days, has in this volume given a comprehensive record of India's relations with the international organization. The ILO has played an important role in promoting progressive labour legislation and welfare movements throughout the world. The story of its impact on India, which began when the country was struggling for freedom, is of more than ordinary interest at the present time when independent India has taken the road to the Welfare State. The information brought together in this book shows India as an active member of this world organization. Mr Gulzarilal Nanda, Union Minister of Planning says in a Foreword: "I commend this book to all who are interested in labour problems. In its pages will be found much valuable material which has hitherto remained scattered over many volumes. The author...deserves to be congratulated on this useful enterprise."

*

Social Legislation issued on behalf of the Planning Commission, Govt. of India, Delhi—Rs 6/-.

The volume under review, which deals with the role of social legislation in promoting social welfare, presents a concise and systematic account of Indian legislation enacted in this field in the light of the principles embodied in the constitution. The material has been analysed and classified under a few selected headings. These are women, children, handicapped groups and social defence.

The pace of social legislation has been accelerated since the attainment of independence. The new enactments have brought about a revolutionary change in the legal status of women which has not yet been fully reflected in social life and practice. Likewise, in many branches of social welfare, enforcement lags very far behind the enactment. As Shrimati Durgabhai Deshmukh points out in the preface, there are 23 legislatures in the country engaged in making new laws and their output is colossal. This publication brings together the provisions of the existing laws in the fields selected for the purchase of this study and will be of invaluable assistance to social workers and in fact to every citizen interested in the promotion of social welfare.

Commending the initiative of the Planning Commission in bringing out this useful publication, Mr C. C. Biswas, former Union Law Minister observes that it "not only gives full information about social welfare activities in the country, but it is also a thoughtful appreciation of the problems of social welfare."

Place and Problem of Small Industries: S. K. Basu, A Mukherjee & Co. Private Ltd—Rs 4/-.

The title of Dr Basu's book is slightly misleading in so far as it suggests that he has dealt with the "Place and Problems of Small Industries" in general and in all their aspects. In fact, however, he has restricted the scope of his study to only the financial problems of one particular sector of small industries. It is, perhaps, just as well that he has done so. For, in a book of this size (97 pages), he could hardly have done justice to a subject which is both important and controversial if he had attempted to deal with it in its entirety.

The problems of small industries in India today are indeed many and complicated, which the lack of a proper and generally accepted definition and categorisation of what constitutes a small scale industry has done nothing to simplify. Those who plead the cause of small scale industries in the background and context of the Second Plan with its emphasis on heavy industries and its simultaneous bias in favour of village and cottage industries, often complain that small industries—the urban type—have had a raw deal at the hands of the planners.

The complaint is not without some justification. The Second Plan, while leaning heavily on the public sector and heavy industries, relies, at the same time, to a great extent, upon the cottage industries to meet the increasing demand for consumer goods, which is bound to occur as the Plan gets going and starts increasing the national income. The role which small scale industry is expected to play in this situation has not been made out in clear and well defined terms. The result is that there has been a wide divergence of opinion about the problems and function of small scale industries amongst the committees and bodies, set up by the Planning Commission or the Government, to study them. Nearly all of them, such as the Panel of Economists or the Karve Committee, have, moreover, ignored the role of the small scale mechanised industry. Dr Basu's study, dealing as it does with the financial problems of this particular type of industry only, thus has the merit of drawing attention to an aspect of the problem which has not been discussed widely.

Dr Basu loses no time in disagreeing with the assessment which the Planning Commission make of the employment potential of small scale village and non-mechanised industries. It is his case, which he argues forcefully, that, as a means of providing additional employment and producing additional consumer goods, the main reliance should be placed not on the hand made and the household industries but on that sector of small mechanised industries which are to be encouraged in urban and semi-urban centres.

Despite the author's arguments, however, it is doubtful whether such a reliance by the Planners would have been economically sound. Dr Basu himself says that there is no inherent virtue in small industries from the point of capital intensity and so long as capital is scarce, as it is in our present undeveloped stage, industries which are both efficient and labour intensive will have to be chosen whether they are large or small. If that is so, then, small mechanised industries have nothing very much to speak in their favour. Unable to secure modern equipment or effect technological rationalisation, they have, by and large, no sales or marketing organization, nor do they have the benefit of technical advisers or research. The problem of small industries would, therefore, appear to be mainly a problem of technical and commercial efficiency.

But even if it is not the primary problem, the difficulty of securing finance is acute enough for the small scale mechanised industry. For various reasons, banking facilities available to it are severely restricted. There is, moreover, no chance of an extension of such facilities in the near future. The main source, thus, to which small industries in our country will have to turn to, is firstly their own earnings, and secondly the State Financial Corporations. In an informative chapter, the author examines the function of the latter.

Dr Basu's book is a useful study, and limited though its scope is, it draws attention to a particular sector of small industries which, the author moans, has not been given the importance it deserves by the architects of the Second Plan.

*

The Indian Financial System: O. K. Ghosh, Kitab Mahal, Allahabad—Rs 5/-.

As a fairly senior member of the Indian Audit and Accounts Service who has worked not only as an Accountant General in several provinces but also in a variety of executive and planning jobs, Mr Ghosh is well equipped to think and write about the Indian financial system. Drawing upon his experience and his studies, both here and abroad, he discusses such problems of financial administration in India as the relation between the Centre and the States, budgetary methods, audit and planning, and suggests remedies and solutions which do not always accord with what may, somewhat loosely, be called the official point of view.

In fact, one suspects that Mr Ghosh is rather fond of controversy, who likes best to deal with his subjects in the manner of a debater. Thus, whether he is dealing with Budgetary classification or the Estimates Committee, he poses a problem first and then, treating the problem as economists

*Economic Survey of Asia and the Far East, 1957: United Nations. \$2-50.

treat models, arrives at a conclusion which is meant to answer not only the practical needs of actual financial administration in India but also theoretical questions of State and budgetary control over finance. The author is a believer in the necessity of separating accounts from audit, a reform

which has had strong advocates in several Comptroller and Auditors General. Viewed solely as a procedural method of financial control, the problem of separation has lost a great deal of topicality, since even those who are against any change from the present system no longer seriously doubt its ultimate

adoption. But, as Mr Ghosh points out, the problem of separation is wider than a purely bureaucratic one and is bound up with the problem of the overall administrative set up which India will have to evolve to cope with the growth and the increasing complexity of a modern Welfare State.

At the time when the book was written, the author could not have foreseen that, soon after its publication, the question of control and audit of public corporations would become the subject matter of a widespread discussion. Even so, with a rare coincidental premonition, he has discussed the subject in a very thorough manner. This should prove very useful to those who wish to have their say about what should be done to prevent another l'affaire Mundhra.

The financial system which obtains in India presents many features which have frankly become anachronistic. Those who are interested, either as Government officials or as students of public administration, in improving and streamlining the financial administration of the country, will find Mr Ghosh's book useful and informative.

*

Taxation of Industry in India: G. N. Arora, Vora & Co. Publishers (Private) Ltd.—Rs 7/8/-.

Dr G. N. Arora had begun and nearly completed his study of the Taxation of Industry in India, when the Taxation Enquiry Commission was appointed to enquire exhaustively into the problem. By the time the book was first published, the Commission's report had also come out. As a result, Dr Arora could neither utilise the materials collected by the Commission, nor claim the public's attention, which his study deserved.

It speaks much of his power of assimilating a large amount of material and making the correct interpretation of statistical data, that, in the limited field of his study, his conclusion did not materially differ from the conclusion which the Commission with their vastly superior resources arrived at.

After giving the history and background of taxation of industry in India in general, Dr Arora examines the incidence of taxation on the textile, jute, sugar, iron and steel and the paper industries. The broad generalisation which he arrives at is that taxation of industry in India in the post independence period has not affected adversely industrial production, profits and capital formation, nor has the capacity of industry to save and re-invest been crippled.

After Dr Arora's book was published, there has been a fresh lot of taxes, and complaints from industry have been frequent and vehement that the disincentive effects of taxation are becoming major factors in hampering the expansion and consolidation of industry.

How far, if at all, the complaints have justification can very well form the subject matter of a further study. It is to be hoped that Dr Arora will make it and incorporate the results in a revised edition of his book.

GATEWAY GOSSIP

The fact, that even in the most advanced countries of the West, power consumption continues to record an upward trend, indicates that underdeveloped countries like India have to plan for a progressive growth of power consumption. The need for stepping up power production in our country has been well recognised by the Planning Commission who have planned for an increase of more than 100 per cent in the installed capacity of generating plant during the Second Five Year Plan period. It is anticipated that demand will double itself in every five years at least for another three five year plan periods. The target of power production during the current five year plan is 6.9 million kW as against 3.4 million kW at the end of the First Five Year Plan.

An idea of the progress of power generation in India can be had from the fact that per capita power generation which stood at 17 kW before the First Five Year Plan has risen to 22 kW by the end of it. When the target under the Second Plan is attained per capita generation will reach 56 kW. The tremendous leeway to be made up in power generation in India will become evident if we note the trend of power production in some of the Western countries. For instance per capita power generation in Norway is 6610 kW, with Canada showing 4880 kW, Sweden 3470 kW and the US 3320 kW.

As the Second Five Year Plan places equal emphasis on the development of heavy and small scale industries, power generation plans should include a well-chalked out programme for the distribution of electricity to the rural areas. This aspect has also received due attention. Before the First Five Year Plan the number of villages having the benefits of electricity was only 3000 out of a total of 560,000. The number went up to 6500 by the end of the First Plan. This is sought to be further raised to 16,000 by the end of the current Plan. It has been estimated that the capital outlay involved in laying the distribution lines to serve all the villages in the country will exceed Rs 3000 crores. The Second Plan visualises an outlay of Rs 75 crores on the electrification of small towns and villages. With a view to implementing the rural electrification programme the Central Government have urged the State Governments to help the licensed commercial undertakings in their expansion plans.

It is obvious that the Public Utility Electric Supply Undertakings operated by Licensees have to shoulder the task of purveying power. But the taxation policy of Government has left the Undertakings with little funds either to expand their capacity or to embark upon new ventures. Apart from the financial stringency, the electricity industry has also been handi-

capped by the need to supply electricity at an extremely low level to consumers. It has been represented to Government that the increase in the price of electricity since the Second World War has been disproportionately, lower than the increase in the prices of commodities in general.

The Federation of Electricity Undertakings of India in a memorandum submitted last week have urged the Government of India to take practical steps without delay to restore the confidence of investors in Electric shares. For only by attracting investors' money that the electric supply industry can hope to obtain the requisite funds. It is to be noted that the Public Utility Electric Supply Undertakings have large schemes for expansion requiring considerable finance. Contrary to expectations the industry has not been quite successful in obtaining loans from institutions such as the Industrial Finance Corporation of India and the State Finance Corporations because of the restrictive provisions of the Indian Electricity Act, 1910 read with the Electricity (Supply) Act. Though the framers of the Electricity (Supply) Act had visualised the possibility of loans to undertakings by State Electricity Boards, in actual practice there has been no help from them. With no hope of getting loans and with investors chary of investing their money in electric shares, the industry has been put in the unenviable position of finding itself unable to go ahead with expansion schemes.

It has been found that the overall impact of the amendments to the Electricity Supply Act has not had the desired effect of improving the investment attracting capacity

of the industry. For as a result of the Electricity (Supply) Amendment Act, 1956, electric shares have become less attractive than most shares as regards prospects of capital appreciation or yields.

The memorandum, therefore, points out that it is of utmost importance that immediate steps are taken to make investment in electric shares sufficiently attractive. "The basic remedy is of course to revise the permissible 'standard Rate' so as to fix the limit at a rate which compares more favourably with the actual cost of attracting money". The Federation had sought a differential over the Bank Rate of 2½ per cent in its memorandum on the Electricity (Supply) Amendment Bill 1956.

The memorandum has also urged Government to take suitable steps to enable the electricity supply undertakings to raise development monies in the market. A form of assistance suggested is the tendering of advice to State Governments by the Central Government not to exercise options of purchase of undertakings which may arise before the end of the Third Five Year Plan period at the earliest so that such undertakings could consider long range plans which they would otherwise not be in a position to contemplate. The memorandum has however pointed out that if the "grossing up" of dividends in the hands of shareholders of companies which secure tax relief because of accelerated depreciation allowances under the Income Tax Act is allowed, shares of expanding companies will be able to attract investors' attention thereby rendering it easier for these companies to obtain the necessary capital from the public. In conclusion the

BOMBAY REVIEW

Problems of Electricity Industry

memorandum says that "if all else fails, and pending in any case suitable amendments in the Electricity (Supply) Act, this Federation would earnestly plead with Government to advise all State Governments that they may exercise individual discretion to allow special appropriations under Paragraph XVII (2) (C) (vi) of the Electricity (Supply) Act in such a way as they may think desirable to ensure that undertakings can earn sufficient to attract new capital, whether loan or equity."

The Electric Supply industry has a vital role in the economic growth of the country and as such it deserves special attention at the hands of Government. At the present juncture it is finding itself in a difficult position as regards finance which is urgently required even for its normal expansion programme. It is incumbent on Government to take suitable steps to enable the industry to discharge its obligations efficiently.

Have a potato crisp!

There are few foods which combine the down-to-earth simplicity and haute-cuisine elegance found in the potato. Whether it is mashed, baked, chipped or french fried, the potato occupies a prominent and useful place... from a formal marriage banquet to a handful of crisps.

All this is very well provided of course white grubs or cutworms haven't got there first. The white grub eats away all the flesh of a growing potato and causes considerable damage particularly in hill areas. The cutworm is a night bird: as soon as the sun goes down, he moves in the field to eat the tender young potato plants under cover of darkness.

These potato loving pests can destroy as much as one-third of an entire potato crop.

Shell aldrin provides effective control of white grubs and cutworms and can increase production by as much as 50% on effective fields. And when you consider that India produces nearly two million tons of potatoes a year from 6,00,000 acres, you will realise how important it is to get these insect pests very firmly under control. For every rupee spent on importing aldrin as much as twenty rupees worth of potatoes could be saved. This is a sensible expenditure whichever way you look at it; food for thought in fact.

SHELL Chemicals can save crops

and Foreign Exchange too!

GATEWAY NOTES

Shanti Sena

Speaking at the All India Sarvodaya Sammelan early this week, President Rajendra Prasad has drawn pointed attention to the fact that happiness cannot be attained through material prosperity alone. This is evident from the present predicament of the advanced nations of the world. These countries have taken tremendous strides in technological development with a consequent sizable improvement in the standard of living for their people, but the phenomenal progress has raised new problems which they are unable to solve. Such developments are of special importance to our country because India in the past few years has embarked upon big projects with a view to provide material prosperity to its people. Dr Rajendra Prasad has emphasised the need for striking a mean between material prosperity and the retention of the Indians' traditional spirit of contentment and sacrifice. In this regard he has pointed out that the Sarvodaya movement will go a long way in reviving the spirit of sacrifice and service.

According to a review prepared by the Sarva Sena Sangh which has organised the current Sammelan, conditions in India and in the world are now propitious for a non-violent transformation of society. It is, however, pointed out that the desired results will be achieved only if the people accepted the positive values of non-violence. The Shanti Sena which must grow in every village is to be a service corps engaged in dedicated service of the downtrodden and the exploited in the villages. The main objective of the Sangh is to lay the foundation of a society of the free and equal.

The need for a non-political organisation of social workers in the country has been accepted on all hands and Government have also found it useful to obtain the co-operation of sarvodaya workers in their Community Development programme. The concept of Shanti Sena can be applied to the conditions in the Western countries and the world over. The horror of the nuclear weapons has brought into clear focus the value of non-violence as a means of re-establishing peace in the world. The Shanti Sena must, therefore, grow into a world movement.

New Varieties of Cotton

Though considerable progress has already been made toward self-sufficiency in raw cotton, Indian mills still depend on foreign countries for their requirements of superior varieties. It is, therefore, gratifying to note that the Cotton

Research Centre at Surat has successfully attempted for the first time in the country the hybridisation of the Asiatic varieties of cotton with American types. The new breeding technique adopted by the Centre has resulted in combining the hardness of Asiatic cotton with the superior economic characteristics of the American variety.

It would appear that the two Indo-American strains, which, while combining the good qualities of the American and Asiatic varieties, are also highly resistant to pests and plant diseases. It is, however, pointed out that their spinning capacity is not, very high. In this regard it is said that the Research Centre is making concerted efforts to isolate types with necessary fibre strength coupled with the required staple length. Already some selections answering to these requirements have been isolated and are under intensive examination. The Indian Central Cotton Committee hope that before long it will be possible to replace the existing Indo-American types by better strains. When these efforts bear fruit it will enable India to reduce sizably its import of superior varieties of cotton from abroad and thus save valuable foreign exchange.

Coir Industry

The development of the coir industry has been receiving considerable attention in the country because this is an industry which makes valuable contribution toward the main objectives of the national economic policy. The coir industry earns about Rs 10 crores worth of foreign exchange and provides employment for nearly 5 lakhs of people.

There is ample scope for the development of the industry on a large scale in many parts of the country. In the Bombay State the industry has made some progress and there are now five societies engaged in the coir trade. The State Government have plans to develop the industry in Kolaba and Ratnagiri districts under the Second Plan.

Speaking in Bombay Mr S. K. Wankhede, State Minister for Industries and Planning, has pointed out the need for bestowing concerted attention on the development of the coir industry in the country because of its potentialities for providing employment to a large number of people. The fact that it is a good foreign exchange earner must also be taken into consideration. In this regard Mr Wankhede has given a valuable suggestion. He has emphasised the need for a proper exploitation of the home market simultaneously with export promotion efforts. This is essential because in times of slack overseas demand the industry can rely on the home market for the offtake of its products.

GATEWAY MARKETS

Unsettled Conditions in Bullion

UNSETTLED conditions prevailed in the bullion market during the past week consequent on the approval of the changes in the bye-laws of the Bullion Association. It would appear that bears were encouraged by the possibility of a heavy accumulation of supplies. The heavy bear selling coupled with nervous liquidation resulted in a sharp decline in rates and conditions in the market were akin to panic. As offtake had also dwindled due to end of the busy season, the bear pressure continued unchecked. On Friday, however, a margin of Rs 7 per tola became operative in gold Jeth delivery according to the bye-laws while in Silver Jeth delivery a special clearing was announced following a fall of more than Rs 5 in the price level. In later sessions, gold staged a moderate recovery on reemergence of buying support on the expectation that arrivals would not be as heavy as expected earlier. The bear pressure in Silver continued unabated on rumours of heavy arrivals of the metal in the shape of Tibetan coins.

Spot Gold declined sharply from Rs 109.69 to Rs 106.60 to recover to Rs 107.18. Sovereign was finally placed at Rs 70.25.

Spot Silver reacted to Rs 183.12 from last closing of Rs 185.44 to be finally placed at Rs 182.60.

Oils and Oilseeds

The oilseeds market ruled steady on expectation of favourable news as regards groundnut oil and castor oil. As pointed out last week, the prospects for castor oil were generally believed to have become rather gloomy in view of the disappointing offtake by US. In this view it has been argued that the abolition of export duty will go a long way toward extricating the trade from its present sorry predicament. Consequently trade circles believe that Government will make a favourable announcement shortly. Another rumour that has been circulating in the market place is that Authority may decide to allow a special export quota for the export of 20,000 tons of groundnut oil to Burma.

It was announced on Tuesday that Government had released 20,000 tons of groundnut oil and 10,000 tons of hand picked selected groundnuts for export. Announcing this a Press Note issued by the Joint Chief Controller of Exports said export of groundnut oil would be allowed by those exporters who exported it outside India during any one of the three years ending 1955-56. While export of HPS

groundnut would be allowed by those exporters who have exported HPS or ordinary groundnuts in any of the years 1949 to 1955.

Contrary to expectations the announcement did not engender much enthusiasm in the oilseeds market. It would appear that buyers are not very hopeful about an immediate expansion in foreign business in groundnut oil on account of the comparatively higher Indian prices.

After initial narrow and irregular movements, prices in the oilseeds market steadied up with sellers reserved on expectation of favourable developments. Castorseed has derived strength from the speculation about abolition of export duty with a view to give a fillip to its export. In the case of groundnut it is the expectation of a special export quota. In this regard it is, however, noted that this news cannot be said to bring much cheer because Indian prices are higher than overseas prices.

Groundnut Bold has been well maintained at Rs 33.12. Groundnut August closed higher at Rs 185.25. Groundnut Oil was done at Rs 18.12.

Castorseed Ready was slightly higher at Rs 30.25. Castoroll Commercial was steady at Rs 15.30. Castorseed September firmed upto Rs 155.12.

Linseed was well maintained. Linseed Bold Ready was fractionally better at Rs 30.72. Linseed Oil ready was done at Rs 15.90. Linseed September improved to Rs 31.25.

Steady condition prevailed in the cottonseeds section following demand from crushers. Cottonseed September moved up to Rs 110.25.

Yarn

After initial listlessness, staple fibre futures gained some ground on speculative support. Though at the higher levels there was some profit taking, the under tone remained steady at close. Staple fibre 2x40 June delivery moved between Rs 610 and Rs 624. The indigenous viscose yarn continued to rule firm on good demand. According to the Silk and Art Silk Mills' Association the continuation of difficult supply position in regard to indigenous and imported rayon yarn to the weaving industry will inevitably result in the closure of many units. It is pointed out that the minimum requirement of the industry is four lbs of yarn per loom per shift. The association in a resolution passed at an extraordinary general meeting early this week has requested the Government to take into consideration the present difficult supply position as regards rayon yarn when fixing the ceiling for imported yarn. The association has also recommended that the distribution of indigenous yarn should be on the same basis as the imported yarn.

In the cotton yarn section sentiment continued depressed and prices were marked down. The lack of demand is attributed to the obscure outlook for export of yarn and lower offtake by upcountry weavers.

WORLD OF COTTON

An easier tendency has developed in the cotton futures market due to selling pressure. Factors inducing the reactionary trend are the announcement of subsidy for cotton exports from US and the reaching of the ceiling of cotton exports of 3" staple length. The US Department of Agriculture has announced the starting of cotton export subsidy of six and half cents a lb for cotton exported after August 1. This rate however is subject to change without notice. The subsidy will be paid in kind instead of cash. Payments will make up the difference between the higher United States price paid by exporters for cotton to be shipped overseas and the lower world price for which the cotton is sold abroad. In this connection it may be interesting to note that the United States Government are selling cotton overseas at rates much below prevailing rates in the country. The Agricultural Department announced on May 28 the export sale of 54,003 bales of Government owned cotton at 28.56 cents per lb. At the previous sale on May 15, the department sold 60,787 bales at 28.63 cents per lb. Net sales of short staple cotton from the time the 1957-58 disposal programme started in March 1957 totalled 5,759,608 bales. Next bids for sale of cotton will be received by the department on June 9.

The slowing down in buying in the local market is also partly due to the fact that the ceiling in export quota of 3" stapling has already been reached. The Joint Controller of Export announced last Thursday that the ceiling of 15,000 bales, fixed for the export of cotton staple length not above 3" has been reached and no further application for the export of this variety of cotton would be entertained with immediate effect. It may be recalled that the Government of India had released on May 20 an export quota of 50,000 bales of Indian cotton comprising 35,000 bales of all varieties not above 23/32" in staple and 15,000 bales of all varieties not above 3" in staple.

World consumption prospects for cotton do not seem to be quite bright. For, according to the secretariat of the International Cotton Advisory Committee the trend in the first half of the 1958-59 season is not as favourable as in 1957-58. In a statement issued on Monday the Committee says that though the world carryover on August 1 this year will be the smallest for several years, the outlook cannot be deemed bright because of the declining trend in consumption and the continued competition from substitutes. The fact that in some producing countries revenues have been badly affected by the reduction in both the volume and value of cotton

World Consumption Prospects

exports has also to be taken note of when assessing the prospects for cotton consumption in the next season.

World production in the 1957-58 season is now estimated at 39.3 million bales or roughly 2 million bales less than in 1956-57 and the smallest world crop since 1951-52. Consumption during the season will decline probably by half a million bales or more from last season's record 42 million bales. The statement points out that the next season world production will be influenced to a large extent by what happens in the US where with nearly 5 million acres in the Soil Bank, production will again decline unless there is an offsetting improvement in yield. With a much smaller carryover, supply will almost certainly show a marked reduction next season.

The main reason for the irregular tendency in the Bombay cotton market is the prevailing uncertainty as regards consumption of the commodity in the coming season. It is generally felt that a further export quota is in the offing and this factor has been responsible for the slightly improved tone noticeable intermittently in the market. Restricting influences are the poor offtake by mills, the possibility of increasing competition in overseas markets, larger estimates of domestic crop and the prevailing financial stringency. It would appear that a large number of mills are reluctant to carry even moderate stocks in view of the gloomy outlook for export and domestic consumption. The fact that no marked improvement has taken place in the stock position of mills has resulted in the adoption of a hand-to-mouth raw material purchasing policy by the industry in general. Marketmen are disappointed that the industry's suggestion that a further reduction in the excise duty on cloth should be made has not been accepted by Authority. Though the appointment of an expert committee to enquire into the problems facing the industry has been generally welcomed, it is felt that urgent action on the part of Government is the need of the hour.

Trade circles feel that permission to export cotton will be a steady influence in the market. In this regard it is anticipated that an announcement of an additional export quota of 25,000 bales of 3" staple will soon be made. There is satisfaction in the market over the import quota of 30,000 bales for soft currency area cotton as it is timely. It is expected that a further quota of 50,000 bales for East African Cotton will be announced in view of the delay in import of American cotton.

FUTURES MARKET:

After a two way movement, values in the futures market

closed easier on selling pressure. Earlier steadiness was due to hopes of early relief to the cotton textile industry and prospects of a further export quota for 3" staple. Toward close operators became nervous on rumours that chances of a fresh export quota were bleak and on reports that closure of more mills was imminent. ICC August delivery closed easier at Rs 688-12.

SPOT MARKET:

In the spot market there was fair demand from mills for long staple domestic styles. There was continued interest from shippers for Bengalis, Kala, Wagad, C. P. Deshi, Moglai and Morbi. Fair buying was also reported in foreign cotton such as Egyptian Karnak and Menoufi. Some business was also done in A.R. Uganda qualities.

LIVERPOOL:

Conditions in the Liverpool cotton market were quiet as operators were reluctant to extend commitments pending details of US subsidy. The intervention of holidays and the developments in France were other contributory factors. During the early part of the week, a small business has been reported done in US, East African and Nicaraguan cottons. Arrivals of foreign cotton at UK ports during the week ended May 29 totalled 12,200 bales and cotton afloat 57,600 bales.

NEW YORK:

Prices in the New York cotton market were irregular but the close was steady. The earlier sagging tendency was due to reports of favourable weather conditions in the cotton belt. According to latest weather reports the new crop is progressing satisfactorily. But it is to be noted that the crop is still late due to earlier unfavourable weather conditions. Toward the close of the week offerings dried up on increased interest.

The US Department of Agriculture has announced that on the first of August the stocks of cotton in the 1957-58 loan will be taken over by it. Farmers have been asked to liquidate their loans to take advantage of the better prices now prevailing. Repossessions from the loan during the week ended the 16th May were

57,149 bales, the largest weekly withdrawal this season. The net stock in the loan as on that day was 3,094,817 bales.

PIECEGOODS:

Dull conditions prevailed in the Bombay piecegoods market in the absence of fresh enquiries both from the domestic and export fronts. On the domestic section seasonal factors were responsible for the decline in demand for superfine goods. It would appear that buyers restricted offtake as the general belief seemed to be that mills godowns were still overflowing with unsold stocks. Demand for seasonal goods was also at a low ebb but there were some indications that the business might broaden in course of time. In view of the various suggestions made both by Government and the Industry's spokesmen for the quick movement of stocks, the trade was reluctant to extend commitments in a hurry. Trade circles were also anxious to know the findings of the expert committee before taking any long decision.

On the export front inquiries from overseas consumers were few and far between. While Hongkong continued to be inactive, Singapore and Ceylon had evinced some interest. There were also indications that business with Burma would improve in coming weeks. Business has been reported with Australia, United Kingdom and East Africa but except in the case of Australia the quantities involved were quite small.

DELHI
REVIEW

THE foreign exchange "crisis" of last year induced an intensive search for locating and utilising sources of credit abroad for our development plans. As far as the Government were concerned, Mr T. T. Krishnamachari's mission to Western countries produced modest immediate results with promises of more to come. As for the private sector, the Birla delegation, which also visited foreign countries about the time TTK was there, met a number of foreign interests and established contacts with likely sources of aid, both technical and financial. On its return, the delegation published a report of its impressions which was widely commented upon at the time.

Though information about the various sources of credit abroad has been given to the public from time to time in various contexts, such information is scattered and somewhat scrappy. A prospective seeker of assistance from any one of these agencies would perhaps find it necessary to make rather an extensive search before he obtains guidance on how to set about it. A compendious account of all known facts about these agencies was a long felt want. This desideratum has now been admirably filled by a brochure brought out here by the Federation of Indian Chambers of Commerce and Industry early this week.

The survey is entitled "Foreign Credit and Exchange for the Private Sector" and gives details about six foreign institutions and two national institutions to any one of which a member of the private sector can usefully apply, depending upon his particular needs. It also collates information about various concessions given by the Government of India, concessions designed to facilitate a more ready flow of credit from abroad. For instance, under certain conditions, interest paid by an Indian enterprise to a foreign lender for purchase of plant and machinery has been exempted from income tax. The conditions on which this con-

Agencies for Foreign Credit

cession is available (together with a pro forma for application to Government for the purpose) are listed. The relevant documents in which Government have announced some of their policy decisions in this regard are also collected here for ready reference. All this will doubtless be found useful.

But the most important part of the publication is that dealing with the various agencies of credit and the special features of each. The six foreign agencies from which credit can be obtained are:

1. International Bank For Reconstruction and Development, Washington.
2. International Finance Corporation, Washington.
3. Export/Import Bank of USA, Washington.
4. Development Loan Fund, Washington.
5. Commonwealth Development Finance Co Ltd, London.
6. Export/Import Bank of Japan, Tokyo.

The first, popularly known as the World Bank, is perhaps the most important agency for development devised in the post-war era. It lends both to governments and private interests and is one of our major sources of credit. Both the Government and private parties have had loans sanctioned to them by the Bank. Indeed, India is the largest debtor in Asia to the World Bank. Up to the end of 1957, India has secured a total of 356.34 million dollars from this source of which 193.52 million dollars have been for the private sector. In April 1958, the World Bank announced two further loans amounting to 43 million dollars for the improvement of Calcutta and Bombay ports. India's credit with this Bank is very high and, where a project is basically sound, credit is easily forthcoming from this source.

The International Finance Corporation is a comparative newcomer in the field of international credit and finance. It was formed in 1956 and has a capital of 92 million dollars subscribed by 51 member governments. This is more an investing than a lending institution and its investments are not like the conventional fixed interest loans. They will be loans carrying interest and some right to participate in the growth of business. Unlike World Bank loans, no sponsorship by governments is necessary and it deals only with private enterprise. Interest rates have to be negotiated in each case and the usual range of maturity is 5 to 15 years. So far, its activities (as evidenced by its annual report for 1956-57) have been modest and mainly centred in Latin America and Australia. Indian entrepreneurs should make much

better use of this source than appears to be the case so far.

The Export/Import Bank of USA has recently emerged as a very important source of credit from abroad and, therefore, detailed information has been given by the brochure on this source. This institution, a part of the US Treasury, has immense resources, but so far it has not been popular though its effective interest rates were lower than those of other agencies. The reason was that the credit obtained has to be utilised in purchasing only American goods, which were often dearer than similar goods elsewhere. In January 1958, the Bank announced a credit of 150 million dollars to be utilised for obtaining capital equipment from America for use in the programmes of both private and public sectors in the coming twelve months. The objects for which the loans are available include irrigation, power, transport, mining, textiles, chemicals, fabrication of structural, electrical equipment and machine tools. The payment of principal will start in 1964 and the rate of interest is 5½ per cent. Private parties are not precluded from obtaining other assistance from Export/Import Bank, in regard to fields other than those mentioned above. The mechanics of utilisation of this credit is described in detail in the brochure and will be found useful by prospective parties.

The US Development Loan Fund is yet another source of finance that has come into being very recently. The US Congress authorised in 1957 the appropriation of up to 500 million dollars for the first year and of additional funds not exceeding 625 million dollars for the second year. Financing is available only for underdeveloped countries with preference given to private enterprise and to projects that are not able to obtain funds on reasonable terms from other sources. No Government sponsorship or guarantee is necessary, but no assistance will be extended if such assistance is unacceptable to the government of the country. Government have already entered into agreement with this source for obtaining assistance to the tune of 75 million dollars. This credit is available for purchase of components for the manufacture of trucks, buses and jeeps, for structural steel and for machinery for jute and cement industries.

The Commonwealth Development Finance Co Ltd was incorporated in 1953 for providing finance for development in any part of the Commonwealth. The form in which this assistance can take is not fixed and depends upon each case. Loans given are not tied to expenditure in sterling area. Normally, the company would not wish to deal with amounts less than £ 250,000.

The Export/Import Bank of Japan is the most recent addition to the sources of foreign credit for us. In February 1958, it agreed to make available credit to us to the extent of 13 billion yen (Rs 24 crores) for a period of three years. This will be available for purchase of goods from Japan for Railway equipment, hydro and thermal power generation, dam construction equipment, coal mining and processing equipment, ore mining and processing equipment, ships, port equipment, industrial machinery (including equipment for Rayon pulp, fertilisers, etc.) machine tools and any other items that might be agreed upon. The loan is repayable within a period of ten years and the interest rate is to be decided on the basis of that charged by the World Bank.

Apart from these agencies, the State Trading Corporation has signed agreements with some countries for special payment arrangements. By these, textile machinery on deferred payment terms can be obtained from East Germany and Japan through the State Trading Corporation. Besides, parties wishing to import machinery from Poland, Czechoslovakia, Hungary, Rumania and Yugoslavia can approach the State Trading Corporation for arranging payments to these countries in their own currencies. (Government of India have agreements with these countries for utilising their own export earnings against these).

Besides the above, an agreement between India and France has been concluded in January 1958 by which the Government of France have agreed to facilitate the financing, the manufacture and delivery by French suppliers up to 25 billion francs (Rs 28 crores) worth of capital goods in the next twelve months. The types of goods have also been agreed upon.

And, finally, there is the possibility of arranging deferred suppliers' credit from private parties. And then certain significant amendments to Public Law 480 help private sector's finance in a limited way. For instance, 25 per cent of foreign currencies accruing under the agreements entered into in future will be available for loans to assist development and expansion of private business in the countries with which agreements are made under PL 480.

The two national agencies for helping the private sector in its search for foreign credit are the Industrial Finance Corporation of India and the Industrial Credit and Investment Corporation of India Ltd. These two are comparatively well known. Useful data about the activities of these two institutions are also given in the brochure. On the whole, it is a valuable guide book.

NORTH INDIAN
NOTES

The physical unattainability of absolute or permanent immunity from floods referred to by the High Level Committee on Floods in its interim report may not be disheartening and therefore the fact that the national income of the country could go up by Rs 100 crores if there were no floods may have but hypothetical significance. All the same it indicates the extent of the loss which lack of protection against floods causes to national wealth and thereby underlines the urgency for taking measures, to reduce such loss to practicable limits.

The peculiar feature of the problem which varies in its impact and incidence, with Assam accounting for the highest annual per capita damage and per acre loss of net area sown, is its, differing aspects in different areas. But whether it is lack of sufficient channel capacity as in the case of Jhelum in Kashmir, or inadequate drainage as in Punjab, or even inundation of the delta in the Peninsular area it is the agricultural crops that always record the severest damage from floods though loss to urban and rural property and public utilities is not inconsiderable.

With such divergent conditions, the problem calls for a variety of measures to tackle it effectively. This has been recognised by the Committee which has indicated several measures under both physical control scheme and redistribution. While storage reservoirs, detention basins, channel improvements, diversion, raising habitations above flood levels and water-

shed improvements are associated with physical control the latter includes such measures as evacuation, zoning, changes in buildings and flood warning and flood insurance. In regard to the suitability of embankments which seems to be the subject of controversy, the Committee while it has stressed its importance has, however, to enhance its effects, favoured its adoption in combination with other measures such as storage dams and detention basins.

In view of the great harm that frequent floods cause to the soil's fertility, the need for measures against soil erosion is great. The Committee has in this connection, laid great stress on soil conservation measures designed to lessen the adverse effects on soil fertility.

The differing incidence and impact of the problem and its varying nature call for a system of priorities in tackling it. As laid down by the Committee the order is: (1) emergent schemes (2) continuing schemes (3) schemes for the protection of important urban and industrial communities (4) scheme for augmenting food production and (5) schemes combining other beneficial utilisation of waters.

The Committee's report marks the beginning in the organised and large-scale efforts which the Government of India contemplate in the field of flood control. While the problem does not offer any solution except on a long term basis, the report represents the indispensable first step in charting out the important lines, towards which efforts have to be directed for achieving a tangible measure of success.

Flood Control

ted for achieving a tangible measure of success.

Industrial Training

The National Council for Training in Vocational Trades, is reported to have decided on enactment of legislation to compel industrial establishments to take apprentices for practical in-plant training. This seems to have followed the failure of the scheme for voluntary training by industrial establishments to apprentices sent by the State Governments.

The State to suffer most from this lack of training facilities has been West Bengal where 60 per cent of the reputed engineering establishments are located. West Bengal has therefore been the first to press for the enactment of legislation for compulsory introduction of training programmes in the private industrial establishments. In the Bombay State the story does not appear to be different since out of nearly 150 establishments whom the Bombay Government contacted in this connection, favourable response seems to have been received from none.

One of the important factors in this failure of the in-plant training scheme seems to be the pressure from the steel industry to train personnel. This is shown in the case of the Indian Engineering Association which, though it promised to take 500 apprentices for in-plant training was, in view of the need to meet the more pressing requirements of the three new steel plants, unable to carry out the

scheme of in-plant training. The facilities provided by some individual units such as the Jay Engineering Works, India Electric Works, India Paper Machinery Manufacturing Co are found to fall far short of the target to be achieved.

Under such conditions of limited facilities in private establishments for in-plant training, the prospects for reaching the target in respect of industrial training do not appear very bright. Compulsory legislation has its justification in this overwhelming need to reduce delay in the industrial training scheme. But whether this could be done even by compulsory legislation without causing too much inconvenience and trouble to private establishments and without arousing bitter opposition to it from the latter is doubtful. The failure of the voluntary scheme was not so much due to any unwillingness of the private establishments as such, as to real difficulties experienced by them which limit their capacity to meet their obligations in the matter of industrial training. For example in the engineering industry lack of space for additional buildings and for plant has been a real limitation precluding the success of the scheme, which the Government's attitude of providing only stipend to the trainees has not helped to overcome. Similarly discipline of the trainees sent by the State Governments has been a point which has hampered negotiations between private establishments and the Government in regard to industrial training.

DELHI
REVIEW

THE foodgrains markets ruled steady due largely to smaller arrivals. The reduced supply in its turn is due to the fact that the rabi crop in UP has been lower this year as compared with last year. A contributory factor is the increased holding power of farmers who have shown no hurry to dispose of their stocks. It is to be surmised that they have retained a part of their produce for their use in the rainy season. It is also quite likely that they have retained even a larger portion with a view to get higher prices later in the year. There is, however, the possibility that if it is known that the kharif crop sowing which is due to begin from the middle of this month will be good, rabi arrivals will improve in coming weeks. The other alternative is for Government to step in with some sort of check. The wheat crop in Punjab has been fairly good and consequently prices in the markets there have declined sharply. The downward trend in prices has been accelerated by the credit squeeze against grain stocks.

Wheat prices at Hapur have advanced by about 75 NP per maund during the past week to be finally placed at Rs 16.12 per maund for average quality and upto Rs 17.25 for farm produce. Daily arrivals average about 500 to

Steady Trend in Foodgrains

750 maunds and local stocks are put at 5 Khatties only as against 28 at the corresponding period of last year and 45 at the corresponding period of 1956. Daily arrivals averaged about 1,500 to 2,000 maunds. Total arrivals of wheat at Hapur from the beginning of the current season were about 45,000 maunds as against 7,500 maunds in the corresponding period of last year. Rice prices continued steady due to shortage of supplies. The following are the prices for the various qualities of rice: Basmati sela Rs 34 to Rs 36.50, Manipuri Rs 26.50 coarse quality Rs. 23 per maund.

Gram prices continued to show an uptrend though the gains were only fractional. The steadiness is due to the firm advices from the Punjab. Barley and bejhar prices were also steadier due to poor stocks in the face of sustained demand from consumers. Jowar and guwar also met with good demand. The following are prices of the various grains: Gram Rs 11.87 to Rs 12.12; Barley Rs 11.12 Bejhar Rs 10.75; Jowar Rs 14 to Rs 15, guwar Rs 15.75.

Shellac

The Shellac market ruled steady. Pure TN quality after earlier easiness steadied up to be done up to Rs 66.50. Shipments during

May until 30th were 37,664 packages comprising shellac 13,867 packages, seedlac 20,442 packages, buttonlac 1,131 packages and others 2,044 packages.

Sugar

A slight improvement in the undertone was noticeable in the sugar markets toward the close on hopes of an early announcement by Government of a workable export policy for sugar. It would appear that in view of the disparity between the Indian and world prices (world prices are lower) Government have got to devise a scheme of subsidy. It is said that the Central Government's suggestion that the State Governments should forego the cess on cane in order to facilitate the Centre's scheme has not met with satisfactory response.

Production and despatches of sugar upto May 15 in the current season were 19.47 lakh tons and 10.82 lakh tons respectively as against 19.13 lakh tons and 11.70 lakh tons in the corresponding period of last season and stocks with the factories on this date stood at 12.90 lakh tons, compared with 12.70 lakh tons at this time last year. As some units are still working in the South, it is expected that the total output will go up to 20 lakh tons.

NORTH INDIAN
MARKETS

Conditions in the Muzaffarnagar market were steady mainly on export prospects. Latest ex-mill delivery prices were: Meerut (D28) Rs 36.25, Simbhauli (E29) Rs 36.50, Iqbalpur (29) Rs 37, Mansurpur (B29) Rs 38.25, Shamli (B29) Rs 37.75, Daurala (B29) Rs 37.50, Mawana (C29) Rs 36.87, Modinagar (C29) Rs 36.62, Amroha (D29) Rs 35.50, Bijnore (E29) Rs 35.27. In the Kanpur Market also buyers were active in anticipation of early announcement of export policy.

Khandasari prices were steady on good marriage season demand. Production is continued in some centres. Following are the latest prices: Rs 30.50 to Rs 33.50 per maund according to quality.

Like the other sections, the gur market was steady due to poor arrivals coupled with good demand. Local stocks have further dwindled and are now put at 1.30 lakh maunds. The reports about the next cane crop are quite encouraging both as regards progress of the crop and acreage. It is, however, too early to form any definite opinion about future outlook as much will depend on weather conditions in the rest of the growing period and the monsoon. Prices are as follows: Dry quality upto Rs 16.75, kotha mixed dry-wet Rs 15 to Rs 16.25 per maund.

THE
PENINSULA

PROGRESS with industrial undertakings generally tend to remain at stationary levels when the general economic conditions predispose them to such a fate. During the last year the general conditions governing industrial growth were far from being conducive to the progress of industries in the country. With shortages in many fields especially in respect of raw materials, capital, and foreign exchange needed to import capital not locally available, industrial production generally revealed signs of decline. In such a situation the success of some of the firms in the relatively undeveloped sectors of the national economy in maintaining their record of steady progress should be a matter for satisfaction. Ashok Leyland Limited, the premier automobile manufacturing company in the South has entitled itself to praise on account of its impressive performance in the last year.

Sir A. Ramaswami Mudaliar, the Chairman of the Company in the course of his speech to the ninth Annual General Meeting of the Company detailed the achievements of the Company and referred particularly to the efforts made by the Company to expand its base of production by additions to its buildings and installation of new plants and equipments, at a cost of Rs 16.75 lakhs and Rs 34.5 lakhs respectively. Corresponding to this expansion in the buildings and plants of the Company the capital

Ashok Leyland

of the Company was also increased by offering for subscription 20,34,522 shares of Rs 5 each. The financial stability the Company has been able to achieve is reflected in the fact that it was, during the last year able to declare dividend at that rate of 6 per cent per annum free of income tax.

The most pleasing aspect of the working of the Company has been the imaginative enterprise that is being brought to bear on its future plans and programmes. In this connection Sir Ramaswami Mudaliar referred to the programme which the Company has undertaken to manufacture Leyland 'Tiger' and 'Titan' chassis in its factory at Ennore. This represents a new line in the activities of the Company since they belong to the category of heavy vehicles while the Company has so far been mainly engaged in the production of light types of vehicles. Considering that the demand for heavy types of vehicles in the country is at present very limited the attempt of the Company to launch into production of heavier types might seem rather risky and uneconomic but seem to have been done in anticipation of the course of demand in the future. In this connection Sir Ramaswami Mudaliar has stated that the trend towards the use of heavier types of vehicles is inevitable in the future. The plans and programmes for road development and improvement in the country would seem to point to the same conclusion.

Apart from this Sir Ramaswami Mudaliar is also able to point to progress in the Company's traditional lines of production and has referred to the plan for increasing the production of 'Comet' chassis to the level of 3,000 per annum as well as to the additional capital that had been incurred for this purpose.

The special cause for satisfaction in the Company's uninterrupted progress lies in the fact that it represents success in an important field which has remained neglected for long time in the past. Automobile manufacture is a late comer in the industrial field having been started only in the post-war era, and this fact accounts for much of the undeveloped character of the motor transport system of the country. Together with five other firms, engaged in the manufacture of components Ashok Leyland forms of the nucleus of the automobile industry of the country. Though yet in an undeveloped stage in view of their inability to manufacture the complete parts of automobiles, considering the disadvantages, the automobile industry suffers, because of lack of essential raw materials, absence of ancillary industries, and lack of demand for automobiles in the country, the progress made by them is really remarkable. In this race towards

progress Ashok Leyland does not seem to have let itself be surpassed by others. In this connection Sir Ramaswami Mudaliar has drawn pointed attention to the progress made by the Company in regard to the manufacture of components. While by the end of 1957, the Company was producing nearly 36 per cent of the value of chassis, this is expected to be stepped to a higher proportion of nearly 55 per cent by the end of 1958. The importance of this achievement lies not only in broadening of the basis of production of the indigenous industry, but as pointed out by Sir Ramaswami Mudaliar also in the net savings in foreign exchange which this would make possible.

In this fine record of Ashok Leyland, the main factor has been the growing demand for the comet chassis manufactured by the Company, and Sir Ramaswami Mudaliar, has in his speech referred to the patronage extended by the State and Municipal Transport organisations as also to the increasing volume of sales to the private operators. While thus he has no misgivings about the future demand for the products of the Company, he has expressed doubts because of the present foreign exchange difficulties about the capacity of the Company to match its efforts at increasing its production with imports of those portions of the chassis which have not yet begun to figure in the Company's list of manufacture and which therefore it has perforce to import. This according to him limits planning far ahead to ensure proper coordination between the activities of Leyland Motors which now supplies the unmanufactured items and Ashok Leyland. In view of the unsettling effects this would have on the working of the Company the suggestion made by Sir Ramaswami Mudaliar for issuing licences at least six months in advance deserves the consideration of the Government.

Progress of the automobile industry though predominantly a question of increasing the indigenous production of vehicles also raises issues about the type of vehicles to be manufactured to make the motor transport system sufficient and efficient. The policy in the past has been to encourage only

light vehicles with a maximum laden weight of 12 tons. But whether such low limits in the laden weight answer to the changed needs of the country to transport an ever increasing volume of goods and persons is open to question. Expert opinion has generally tended to take the view that low limits place unnecessary restriction on the progress of motor transport in the country and that it represents underutilisation of the existing road transport system. Sir Ramaswami Mudaliar has in a reference to this question taken the view that 25 tons instead of 12 tons should be the ultimate target for commercial vehicles. The need for reorientation of thinking on this problem is therefore clear.

Productivity Movement

The constitution of the National Productivity Council was the first step in the drive for productivity in industry and other national economic sectors. Since the inauguration of the National Productivity Council the productivity drive has also spread to other States, and the productivity Centre of the Government of India had organised two productivity projects in the Madras State, one at Coimbatore, and another at Madras.

The importance of productivity projects lies in the need to accelerate the pace of development by optimum utilisation of the country's resources. The scope for this is indicated by the haphazard way in which industries in the country have been functioning without any realisation of the need for improvement. In a country where capital for industrial development is limited, rise in productivity of the factors of production should go some way in making up for this scarcity.

While, thus the need for making productivity centres popular and for introducing such schemes in all sectors of national economic activity is obvious, the success of the scheme would depend largely on the attitude and co-operation of the participants in industrial production. In the popularisation of the scheme the opposition of labour has to be reckoned with. Education of the workers in the benefits of productivity alone can meet this.

Inaugurating a meeting of employees and others interested in productivity, at Madras, Mr R. Venkataraman, Minister for Industries in the Madras Government stressed the importance of productivity in the effective utilisation of materials, machines, and plant capacity and explained the object of the productivity projects as being aimed at creating among labour, management, and the general public a receptive attitude to the idea of higher productivity. He described the problem of introducing high productivity techniques in industries as involving delicate aspects of human relations and therefore impressed on the need to dispel the fear of workers regarding unduly high level of expected work performance and of possible adverse effects on employment opportunity.

Improvement of productivity in industry involves research in productivity subjects and education in improved techniques of production. With the present lack of sufficient men trained in the techniques and methods of raising productivity, the movement will be handicapped unless steps are taken early to fill up the present vacuum.

Soil Conservation

Soil conservation is a late field of activity of the Government, the first step in the organised attempt to tackle the problem of erosion of soil, being taken only in 1953 when a Central Soil Conservation Board was set up. But as a result of long years of neglect the problem has assumed almost serious proportion and vast stretches of land in many parts of the country have been laid waste. With about 100 million acres of land being affected by soil erosion, agricultural production is estimated to have suffered by about 6.7 million tons. There are also nearly 50 million acres of non-cultivable land and an equal area of desert lands needing protection by soil conservation measures.

In the background of past neglect efforts to tackle it have necessarily to be on a big scale and therefore long drawn out. A small beginning was made only under the First Five Year Plan to introduce soil conservation measures over nearly 0.7 million acres of land. This is sought to be extended to an area of 3 million acres under the Second Plan. This is evidence of the growing realisation of the importance of soil conservation in stepping up agricultural production in the country.

The difficulties experienced by the Madras Government in extending schemes of soil conservation in the State typifies the handicaps which the movement in general has to overcome. Mr M. Bahaktvasalam, Madras Agricultural Minister, described these difficulties, in the course of his address, to the Soil Conservation Seminar at Ootacamund as lack of funds, cumbersome procedure in the execution of conservation measures on private lands, and lack of trained personnel.

The Centre's efforts have so far been mainly directed to the preparation of a comprehensive survey of the soil with the States. But the most serious limitation of the movement towards soil conservation is the lack of trained soil conservationists who could educate the agriculturists in the methods and benefits of soil conservation. While it has been estimated that about 5,000 trained personnel of different categories would be needed to implement the soil conservation schemes under the Second Plan, the existing ten centres do not seem to hold possibilities to supply this number. Therefore opening of more centres for giving training in the techniques and methods of soil conservation is necessary in the interest of giving wider coverage for the movement.

Work in connection with soil conservation would seem to need stepping up in almost all the States, Bombay being the only State where progress in work has been commendable. The number of demonstration centres and demonstration plots maintained by the Bombay Government as well as the special staff it has created for the maintenance of bunds reflect the keen interest evinced by the State Government in this work.

Outlook for Pepper

THE Pepper market has run somewhat steady during the past week and a large turnover in forward deliveries has been reported. The improvement has stemmed from the fact that buyers have been attracted by the lower prices. Some business has also been reported done in the ready position toward the close. The outlook for Indian pepper in the US market seems to be not quite bright. According to latest official estimates, in the first eleven months of 1957, India supplied to the US only 12.57 million lbs. of pepper valued at 2.97 million dollars compared to 15.99 million lbs valued at 4.75 million dollars in the corresponding period of the previous year. In marked contrast to India's performance, Indonesia has almost doubled its exports during the same period from 6.84 million lbs. in January-November 1956 to 12.12 million lbs during the eleven months ending November 1957. Total imports of black pepper into the US during the period are also lower at 30.22 million lbs. against 34.45 million lbs in January-November 1956.

According to information available in trade circles, there has been no improvement in the first two months of the current year. For it is estimated that during this period exports of black pepper from India have declined from 4,242 tons in the corresponding period of the previous year to 3,810 tons. The offtake by US has declined to 792 tons from 1,999 tons. Other important countries which have also reduced their offtake are France, Poland and Canada. A significant feature is the sizable increase in the offtake of Russia which has taken 1,894 tons against 1,100 tons. This experience is however not shared by Indonesia which has considerably increased its exports of black pepper by 1,354 tons to 3,521 tons.

Cashewnut

India has exported in the first ten months of last year, 565,200 cwt. of cashewnuts compared with 544,000 cwt. in the corresponding period the previous year. The United States is first in the list of customers, accounting for nearly 75 per cent with its offtake placed at 404,200 cwt. The second place goes to UK with an offtake of 49,400 cwt. Russia is the third largest buyers of Indian cashewnuts and its offtake amounted to 39,900 cwt.

Groundnut

Steady conditions continued to prevail in the Groundnut markets. Daily arrivals during the past

Indian Finance

week varied from 25 to 50 tons. Activity has been only on a moderate level as the oil market has been listless. Business has been done in the Summer crop between Rs 149 to Rs 150.

With little fresh enquiries the oil section has ruled rather dull. There has however been some small business from Calcutta interest. The season for the steadier undertone is the reluctance of sellers to discount rates. At the same time buyers are keeping on the sidelines in the anticipation of lower price levels which they expect will prevail when arrivals increase. A contributory factor for the unwillingness of sellers to mark down rates is the expectation that a fresh export quota for export of oil will be allowed. Groundnut oil ready has been done at Rs 306 while June and July have been placed at Rs 308 and Rs 312 respectively.

Hides and Skins

Generally steady conditions prevailed in the Madras hides and skins market in the tanned hides section arrivals were again unchanged from the previous week's level. All types of skins were in demand with tanned buff hides in good request. The market for tanned cow calf and buff calf was unchanged with arrivals at a moderate level. UK buyers evinced interest only in fifties and the position of sellers in this category seemed to be quite satisfactory. The price of inferior fifties cow hides moved slightly higher and consequently some difficulty was experienced in concluding business with UK. Prices in the tanned goat and sheep section were rather irregular. While common quality goat skins and very heavy weight sheep skins were lower, a slightly higher trend was noticeable in adulterated sheep skins. Both arrivals and clearances were on a steady level. In the raw hides section conditions were unchanged. Raw skins were however firm with buyers offering slightly higher prices for goat skins.

Coffee

Addressing the seventh half-yearly meeting of the Coffee Board, Mr K Srinivasan, Chairman, warned against indiscriminate expansion of coffee production. He pointed out that internal consumption of coffee might be lower than expected and export prices might be even more disappointing than last year. It is estimated that after current sales and exports, there will still be 3,321 tons plantation and 1,988 tons Arabica cherry coffee to be disposed off this year.

The 1957-58 coffee crop is now estimated at 45,000 tons as against the preliminary estimate of 32,000 tons. During the past three years acreage has increased from 180,000 to 260,000 and the output from 20,000 tons to 45,000 tons. It is estimated that about 15,000 tons of coffee will be available for export.

June 7, 1958

COMPANY MEETING

ASHOK LEYLAND LIMITED

Sir A. RAMASWAMI MUDALIAR'S REVIEW

Speech delivered by Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), Chairman, Ashok Leyland Ltd., to the shareholders at the ninth Annual General Meeting of the Company held on May 26, 1958 at 11 a.m. at the Company's registered Office at Ennore.

Ladies & Gentlemen,

I have pleasure to extend to you a cordial welcome to the ninth Annual General Meeting of your Company.

The Directors' Report, Audited Balance Sheet and Profit and Loss Account for the year ended 31st December, 1957 have been in your hands for some time and with your permission I shall take them as read.

Last year I expressed the hope that in spite of many difficulties in our path which had to be overcome, we should be able to make steady progress towards the full manufacture of heavy duty commercial vehicles while at the same time being able to make modest dividend payments to those whose investment enable us to provide capital equipment. It is, therefore, gratifying to your Directors to find the Company is in a position to justify their recommending the payment of a dividend at the rate of 6 per cent per annum free of Income Tax.

During the year 1957 very considerable progress was made in the expansion of your Company's buildings and in the installation in them of plant and equipment required for the further implementation of our Phased Manufacturing Programme. The total expenditure during the year on buildings amounted to Rs. 16.75 lakhs; and the total expenditure on plant and equipment Rs. 34.5 lakhs. This by no means represents the end of our expansion.

Early in 1957 it became obvious that in order to meet the heavy expenditure on buildings and equipment additional capital would be required. In the month of August, therefore, 20,34,522 shares of Rs. 5 each were offered for subscription of which 10,45,834 shares were, in terms of a resolution passed by you offered to Messrs. Leyland Motors Ltd. The whole of this issue was taken up and the financial difficulty of managing with too little capital in relation to the magnitude of our manufacturing project was thereby removed.

Your Company's objective is the establishment of the production at its Ennore Factory of the complete range of Leyland heavy duty commercial vehicles, as the development of roads and consequently of road transport in India progressively increases the demand for such vehicles. In accordance with this policy a proposal for the expansion

of our project to include the manufacture of Leyland 'Tiger' and 'Titan' chassis in our Programme was submitted to the Government of India at the end of 1956. This new Phased Manufacturing Programme has now been accepted. Planning is already in progress and physical implementation will commence towards the end of 1958.

This first step in the extension of our activities to include the manufacture of commercial vehicles with heavier load capacities than the "Comet" is of very great importance to us for two reasons. The trend towards heavier vehicles as India's roads continuously improve and bridges and culverts are strengthened or rebuilt is inevitable. While, therefore, it may appear uneconomic from the point of view of the existing sales potential to engage in the production of vehicles with gross loading capacities exceeding 12 tons, there is no doubt that by the time manufacture is fully established the demand will justify the new project. The second reason, and initially the more important, is that the new programme provides in the first phase for the manufacture of the Leyland '600' and '680' diesel engines which are alternative fittings in the heavier chassis. These engines are suitable for most heavy transport requirements and they are the standard power units in Leyland trucks upto the 'Octopus' which is designed for 54,000 lbs. gross loads.

To enable the production of 'Comet' chassis to be increased without delay to 3,000 chassis per annum and to provide for the addition of the Tiger/Titan Programme, your Company's authorised capital has been increased to Rs. 3.25 Crores, of which Rs. Two Crores only will be fully paid up until such time as a new capital issue may prove expedient.

In my address last year I referred to difficulties we experienced due to certain anomalies in regard to gross vehicle weight restrictions. This question has continued to engage the attention of the Central and State Governments and of manufacturers and operators. Happily, it now appears not only that a serious attempt will be made to increase permissible gross laden weights on all roads which will bear them but also that steps will be taken to limit registered laden weights in all cases to a figure not exceeding, in any circumstances, the Manufacturers' specified gross vehicle weights. This is a most important step and in the right direction and all those responsible for it are to be congratulated. There is, however, still scope for a great deal of progress in the development of a road system which will enable heavier, and therefore more economic, load units to be

carried over our highways. Gross vehicle weights have been restricted to such a low level in the past that the present tendency to consider 12 tons the ultimate limit is understandable. 12 tons may very well be an immediately desirable target, but it is quite inadequate as an ultimate one. If India's roads are to play their part in solving the tremendous problem of transporting goods and persons as industrial and agricultural production continue to develop, then 25 tons and not 12 must be the ultimate target for commercial vehicles. It is only by such a re-orientation of thinking on this question that full use will be made of the ability of heavy road transport vehicles to solve the country's transport problem.

The sales of 'Comet' chassis have increased steadily since the Manufacturing Programme was inaugurated and there is every indication that this trend will continue. We are fortunate to enjoy the confidence of State and Municipal Transport organisations and repeat orders from these important operators continue to encourage us. More recently, private operators have been purchasing our vehicles in a continuously increasing volume and sales to the latter now exceed those to the former. We can without doubt look forward to 1958 being an outstanding year in your Company's history both with regard to sales and to progress with the Manufacturing Programme. At some point towards the end of this year we shall pass the half-way mark in manufacture. That is, more than half the value of a "Comet" chassis will become made in India. At the end of 1957, 36% of the value of the chassis was produced at your Factory; and at the end of 1958 the percentage will become 55. In this connection, I would like to draw your attention to the fact that these percentages indicate net savings in foreign exchange. To arrive at these figures, the value of materials which are still imported for fabrication in your Factory is deducted from the gross saving represented by the deletion of units and components from C. K. D. packs imported from Leyland.

Unfortunately, just when we have surmounted all our initial difficulties, are well ahead with our production programme and are beginning to enjoy a sales demand which will ensure our efforts shall be financially sound, a shortage of foreign exchange has intervened. We are, therefore, continuously in the position of not knowing whether our own efforts to increase our local production to meet the sales demand will be matched by our ability to import from Leyland Motors those portions of the chassis still manufactured by them. This is a most unsatisfactory state of affairs because it obviates planning sufficiently far ahead to ensure complete co-ordination of our own and of Leyland Motors' effort to keep strictly to our programme. It is suggested that Government might relieve manufacturers of this anxiety by issuing licences for

import at least six months in advance of the beginning of the period in which import will take place. Such an arrangement would enable manufacturers in India still dependent on the import of some parts of their products, to order imported material in time to ensure its delivery at the right time.

Leyland Motors have continued to assist us in every way possible and we owe them a debt of gratitude. In this connection, I am sure you will wish that I shall convey to Sir Henry Spurrier and Mr. D. G. Stokes our special thanks for their personal help and guidance, which has proved so valuable in assisting us to deal with the problems incidental to the establishment of a modern commercial vehicle factory. I should like also to pay a special compliment to the Executives and staff and all the employees of the Company who have done commendable work and who deserve recognition for their loyal service throughout the year.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

THE EQUITABLE COAL CO., LTD.

NOTICE

Notice is hereby given that the share Transfer Books of this Company will remain closed from the 20th June to 3rd July, 1958, both days inclusive.

By Order of the Board,
MACNEILL & BARRY, LIMITED,
J. H. G. WHITFIELD,
Secretary,
Managing Agents.
2, Fairlie Place,
Calcutta-1, 21st May, 1958.

S. E. RLY TENDERS

Sealed tenders are invited for supply of the following items:—
(1) Tender No. PA/594/WS/694B/GB10 for supply of 7,77,000 Nos. Seals Lead complete with wire 15" long for meters and Rly. wagons.

Tender forms are obtainable from the Controller of Stores, Garden Reach, South Eastern Railway, Calcutta-23 (PA Section) on remittance of Rs 2/- (not refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from the Chief Cashier, South Eastern Rly., Garden Reach., Calcutta-23 by local firms. Earnest money against the tender is Rs. 500/-. Closing date of the tender is 16.6.58 at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid income tax clearance certificate along with the earnest money receipt with the tender.

Markets in Low Spirits

Watch-Dog Writes:

STOCK markets have continued to remain in low spirit. In the absence of any stimulating news, trading has been very quiet with equities moving within a narrow range. What is particularly perturbing the operators are deterring them from doing business on a large scale is the uncertain outlook of the country's economy. The closing tone is, however, better.

Conditions on the Calcutta Stock Exchange remained generally dull and whatever little activity there was, was confined to the Jute and Miscellaneous sections.

With the majority of operators showing little disposition to extend commitments, price changes on the Bombay Stock Exchange were again insignificant.

There was, however, moderate activity on the Madras Stock Exchange with selected scrips ruling firm, thanks to steady enquiries.

On the London Stock Exchange, conditions were somewhat brighter.

Wall Street closed barley steady.

Calcutta

Calcutta, Friday Evening.

PAST week's session on the local Stock Exchange disclosed no particular feature. In the absence of any incentive, operators were reluctant to extend commitments, resulting in the price movements being confined to a narrow range. The main contributory factors for the depressed sentiment in the market were the threatened strike by dock-workers from the 16th June, the deterioration in the foreign exchange position and the continued decline in world commodity prices. It was, however, satisfactory to note that there was no particular pressure to sell and the slight falls noted were caused usually by lack of buying and precautionary marking down of prices. The closing tone was firm, being influenced by the hopes of some purchases by the LIC.

Although business in the gilt-edged section remained on a limited scale, the tone remained good throughout the week. Following the Reserve Bank's decision to raise the selling rate of 3½ per cent 1965 Loan by 10 n.p., a sizable lot was reported to have been absorbed by institutional investors. There was fair enquiry for State Loans. Meanwhile, 3 per cent 1966 Conversion Loan opened at Rs 71 and improved gradually to Rs 71.25, to finish at Rs 71.15.

In sympathy with the gilt-edged section, Bank shares improved

slightly. Punjab National were enquired at Rs 53.75 to Rs 54 against Rs 53.25 and United Commercial at Rs 60 to Rs 60.25 against Rs 59.25. Hind were, however, slightly lower at Rs 51.50 against Rs 51.87.

Despite the quiet tone prevailing in the jute goods market and the disappointing results released by some of the important mills, jute shares were fairly maintained around last levels. Operators had the feeling that the new jute crop would be better, both in quality and quantity, and that the industry might fare better during the current year. Howrah changed hands at Rs 15.25 to Rs 15.37. Chitavalsah at Rs 13.94 to Rs 14.12; Ganges at Rs 50 to Rs 55.50; Megna at Rs 107 to Rs 113; National at Rs 21.00 to Rs 21.75 and New Central at Rs 15.44 to Rs 15.81. Union were, however, slightly lower at Rs 119 against Rs 122.

Coal shares ruled fairly steady. Turnover, however, remained restricted as operators feared that the recent increase in the selling price would be more than offset by rises in labour emoluments. Following the maintenance of the dividend, Bengal were supported upto Rs 244 from Rs 241. Central India were nearly maintained at Rs 7.56. Western Bengal at Rs 5.87. Burraker, after touching a low of Rs 21.12 from Rs 22.00, recovered fully at the close.

Tea shares presented a steady front as a sequel to the recent announcement about the relief to the industry. Although the quantum of relief resulting from the cuts in excise duty and tea cess was considered meagre, operators took it in a cheerful mood. However, they were found to be cautious in their commitments, being inclined to see whether the cut in the excise duty would help stimulate internal consumption. Dealings were prominent in Baghmari which changed hands at Rs 20.12 to Rs 20.75; Betjan at Rs 22.87 to Rs 23.12; Brooke Bond at Rs 17.37 to Rs 17.50; Grob 'A' at Rs 24.50 to Rs 25.12; Hasimara at Rs 22.75 to Rs 22.81; Hattikhira at Rs 11.12 to Rs 11.50; Methoni at Rs 17.12 to Rs 17.75; Rydak at Rs 26.00 to Rs 26.12 and Kilkott at Rs 15.00 to Rs 15.12.

Textile scrips were practically neglected and almost all the scrips were freely offered in view of the uncertain outlook for the industry. The only exception to the general trend were Jayshree, which met with sustained enquiry from special quarters upto Rs 6.09 from Rs 6.87. Kesoram were, however, quiet at Rs 10.69 against Rs 11.00; Elgins at Rs 12.25 against Rs 12.50 and Dumar at Rs 113.50 against Rs 116. New Victoria remained unchanged at Rs 1.25.

Sugar shares were inactive in the absence of any concrete scheme as yet finalised for exports. Lower advices from the commodity were also a contributory factor. Balmore were on offer at Rs 6.75 against Rs 7.00; Carew at Rs 6.94 against Rs 7.06 and Dyer Meakin at Rs 9.75 against Rs 10.12. Cawnpore had sellers at as low as Rs 10.56 following the passing over of the dividend for last year. S. K. G. changed hands on the x-dividend basis at Rs 8.94 to Rs 9.06.

In the Engineering section, price movements were mostly confined to a narrow range in the absence of any speculative activity in Indian Irons which, in turn, were subjected to settlement adjustments till mid-week. Against the week-end closing of Rs 21.51, Indian Irons opened better at Rs 21.56 and, after improving further to Rs 21.69, finished at Rs 21.67. The settlement rate was fixed at Rs 21.42 as against last settlement of Rs 21.06. TEXMACO, after improving to Rs 18.65 from Rs 17.60, closed a shade easier at Rs 18.60. G. K. Williams

changed hands at Rs 31.19 to Rs 31.50; Jessop at Rs 20.12 to Rs 20.19. Braithwaite at Rs 26.31 to Rs 26.44; Kumardubi at Rs 9.06 to Rs 9.12 and Marshalls at Rs 5.81 to Rs 5.87. Burn were quoted lower at Rs 333 against Rs 341.

In the Miscellaneous section, trading continued to be prominent in Paper shares on the feeling that the producing companies would reap good benefit, particularly as most of them had expansion schemes. However, higher levels could not be retained till the close due to profit-taking. Orient were taken upto Rs 32.25 (Rs 31.70); Titaghar upto Rs 38.81 (Rs 38.56); Sirpur upto Rs 12.12 (Rs 11.31); Shree Gopal upto Rs 15.94 (Rs 15.84) and India Pulp upto Rs 12.12 (Rs 12.06). There was good investment demand for Dunlop which changed hands upto Rs 26.37 from Rs 26.12; Indian Aluminium upto Rs 15.75 from Rs 15.12; Aluminium Corporation upto Rs 11.44 from Rs 11.12; Indian Cable upto Rs 35.87 from Rs 34.75; Alkali Chemicals upon Rs 15.31 from Rs 15.06; National Carbon upto Rs 25.81 from Rs 25.25 and NICCO upto Rs 27.27 from Rs 27.06. Indian Oxygen were rather quiet at Rs 18.12 against Rs 18.37, while Phillips India were enquired upto Rs 14.44 from Rs 13.94. Indian Copper were a narrow market around Rs 3.10. India Steamship were on offer at Rs 10.87 against Rs 11.00. Rohtas forged ahead Rs 19.44 from Rs 18.75 on investment account.

SHREE GOPAL PAPER MILLS LIMITED

NOTICE:

NOTICE is hereby given that the next Annual General Meeting of the shareholders of the Company will be held at its registered Office at 12, India Exchange Place, Calcutta, on 27th June, 1958, at 10.30 A.M. to transact the following business. Your presence in the meeting is requested.

AGENDA

1. To receive the Directors' Report and to pass the audited accounts of the Company for the year ended 31st December, 1957.
2. To declare dividends.
3. To elect Directors in place of these who retire:

Seth B. P. Poddar and Seth R. K. Jaidka, Directors of the Company being longest in office retire by rotation and being eligible offer themselves for re-election.

Dewan Anand Kumar who was co-opted on the Board of Directors of the Company on 30.5.58, also retires and is eligible for election.

4. To appoint Auditors and to fix their remuneration.

The present Auditors, M/s. Price, Waterhouse, Peat & Co. retire and are eligible for re-appointment.
5. Special Business:—

To consider and if thought fit to pass the following resolution with or without modification as Special Resolution: "That in connection with the arrangements for supply of coal to the Company by M/s. Karam Chand Thapar & Bros. (Coal Sales) Ltd., commission payable to M/s. Karam Chand Thapar & Bros. (Coal Sales) Ltd. for

Bombay

After earlier hesitancy the Bombay Stock Exchange displayed a steadier undertone toward close. Initial sluggishness was due to anxiety as regards future prospects of cotton mill shares. In later dealings sentiment was aided by reports that Authority would take early steps to bring much needed relief to the cotton textile industry. There were also rumours that concerted action would ensue toward promotion of exports in order to meet the foreign exchange crisis. Operators were also encouraged by indication that the LIC was taking interest in equities.

In the Steel section Tata Iron steadied up to close at Rs 182.50 with Indian Irons improving to be finally placed at Rs 21.84.

In the Textile section Bombay Dyeing moved up in later dealings to close at Rs 53.80. Central was almost unchanged at Rs 81.50. Century after declining to Rs 421.75 recovered to close at Rs 426.00.

services, being arrangement for priority and allotment of wagons and supervision of loading and despatches be and is hereby increased from As. [4] to As. [8] per ton from 1st July '58.

6. To transact any other business that under the Articles may be transacted at the General Meeting.

NOTE:

(i) The Share Transfer Books of the Company will be closed from the 17th June to 27th June, 1958 both days inclusive.

(ii) A member entitled to attend and vote at the meeting is entitled to appoint a proxy, who need not be a member, to attend and vote instead of himself.

By Order of the Board
KARAM CHAND THAPAR & BROS. PRIVATE LTD.
Managing Agents.
Calcutta, 2nd June, 1958

Explanatory Note:

Resolution No. 5:—
The arrangement for supply of coal by Karam Chand Thapar & Brothers (Coal Sales) Ltd. for a period of 5 years from 1st April 1956 was approved by a Special Resolution of the Company at the Meeting held on 20th August, 1956. As. [4] per ton is payable to Karam Chand Thapar & Bros. (Coal Sales) Ltd. as remuneration for services being arrangement of priorities and allotment of wagons and supervision of loading and despatches of coal. In view of increase in the volume of work and servicing expenses they have approached for increase of commission from As. [4] to As. [8] per ton. Your approval to this increase from 1st July '58 is sought.

Madras

FAIRLY steady conditions prevailed on the Madras Stock Exchange. Select Planting shares were in favour with good investment buying, while conditions in other counters remained generally steady.

TEXTILES: Barring a few exceptions, the Textile section was devoid of interest. Travancore Rayons were the most active, the rate having improved to Rs 14.10 from Rs 13.25 c.d. Thanks to better support, Lakshmi's big improved to Rs 93 and the small to Rs 46. However, there were sellers of Maduras, Loyals, Coimbatore Spinnings and Rajalakshmi at the market rates.

PLANTINGS: There was buying support for a wide range of shares in this section. Smaller-priced ones were particularly favoured and a good turnover was possible on speculative support. The interim relief to the industry had a stimulating effect on the Tea section where Peermades were enquired at the market rate, while Periakaramalais improved to Rs 4.16. Chembra Peaks were done at Rs 3.73.

Among Rubber shares, Cochin Malabars improved to Rs 4.70 due to better support, while Valikundams were better at Rs 20.43. There were good buyers of Malankaras, Mercaras and Travancores.

In the Coffee section, Consolidated Coffees moved up to Rs 25.45 although Coffee Lands were a shade lower at Rs 35.30. Oucherionys were fractionally higher at Rs 4.84 with buyers at this level. Savamalais were enquired upto Rs 4.55 c.d.

MISCELLANEOUS: In this section, Aluminium Industries were in the limelight. There was a large turnover, resulting in the rate improving to Rs 14.30 on sustained support. Ashok Leylands also improved to Rs 4.80, while FACTS met with support upto Rs 5.33. Textols met with business upto Rs 180, while Parry's Confectionery were quoted at Rs 1.05. Andhra Cements at Rs 11.50 and Indian Steel Rolling Mills at Rs 11.

London

CONDITIONS on the London Stock Exchange were somewhat brighter, but business remained small and selective. Sentiment was assisted by the fresh advance on Wall Street, the highly satisfactory gold reserve figures and the more settled political situation in France. Buyers were, however, still reluctant to extend commitments in view of the domestic labour trouble.

The gilt-edged market was quiet. Oils steadily improved and showed numerous gains over the week. Rubber shares were irregular, while Tea shares were subdued.

New York

WALL STREET closed very steady with a majority of mostly fractional gains. Although lacking special feature, the market continued to edge higher, and leading composite averages were again at new highs for 1958.

Short-covering and investment buying again found their best reflection in heavy industry shares, notably assorted Steels, Non-Ferrous Metals, Oils and Chemicals. Motors attracted fair support, especially American Motors. This producer expects to add significantly to its first half profits during the second half of the fiscal year ending September 30.

BENGAL JUTE MILL COMPANY LIMITED

NOTICE

NOTICE is hereby given that the 27th Annual General Meeting of the Members of the Company will be held at the Registered office of the Company at 8, Dalhousie Square East, Calcutta on Friday the 27th June 1958 at 4.30 P.M. for the purpose of receiving the Directors' Report, passing the Audited Accounts, electing Directors in place of the retiring Directors, appointing Auditors and for transacting any other business of the Company that may be transacted thereat.

1. To elect a Director in place of a Director retiring under Section 280(2) of the Companies Act, 1956, for which purpose notice is hereby given of the intention to move the following resolution as Ordinary Resolution:

"Resolved and it is hereby declared that the age limit specified

in Section 280 of the Companies Act 1956 shall not apply to Sri D. N. Sen who has attained the age of 65 years and who retires under Section 280(2) of the Companies Act, 1956 and that he be and is hereby re-appointed a Director of the Company".

Special notice pursuant to Section 190(1) and 281(2) of the foregoing resolution has been received by the Company.

2. To pass with or without modification the following resolution as an Ordinary Resolution:

"That the appointment of Messrs. International Agencies Corporation of 116/196 Gandhi Nagar, Kanpur as Selling Agents for the following areas be continued for a period of 1 year with effect from the 1st June 1957 with an option to renew the same".

Particulars of Areas.

Madhya Pradesh.

Terms and conditions.

As set out in the draft Agreement.

3. To consider and if thought fit to pass with or without modification the following resolutions:—

AS A SPECIAL RESOLUTION:

That the Company do hereby approve the agreement a draft of which marked "A" is placed before the Meeting being entered into between the Company and Messrs. Mill Products who for the purpose of the Companies Act 1956 are deemed to be associates of the Mg. Agents of the Company for the sale of Mill Stores by the Company to Messrs. Mill Products for a period of 5 years from the 1st July 1957 at market rate provided that stores to the value of not less than Rs. 5/- shall be sold by the Company in each year of the Agreement. Payment in respect of such supply shall be made by Messrs. Mill Products within one month of the supply. The Directors are hereby authorised to carry out such Agreement into effect.

AS A SPECIAL RESOLUTION:

"That the Company do hereby approve the Agreement a Draft of which marked "B" is placed before the Meeting being entered into between the Company and Messrs.

Soorajmull Nagarmull who are the Managing Agents of the Company for clearing the Import Consignment of the Company and rendering all such services in connection therewith for a period of five years from the 1st July 1957 at the usual market rate and provided that the Company shall be bound to require services amounting to not less than Rs. 5/- in each year of the Agreement. The Directors are hereby authorised to carry such Agreement into effect.

EXPLANATORY NOTE

(1) Sri D. N. Sen who is proposed to be appointed a Director of the Company has attained the age of 65 years and under Section 280(2) of the Companies Act, 1956, retires at the conclusion of this meeting which is the 27th Annual General Meeting since the commencement of the Act. The resolution includes a declaration that the age limit of 65 years prescribed by Section 280 of the Act shall not apply to him as provided in Section 281 of the Act.

During his long association with the Company Sri D. N. Sen has rendered very valuable services and his guidance and advice have been of considerable benefit to the

Company. As it is in the interest of its members that the Company should continue to receive the benefit of his advice as a member of the Board, it is desirable that he be re-appointed a Director.

(2) The approval sought under item No. 2 is necessary under Section 294 of the Companies Act 1956 which requires such appointment to be approved by the Shareholders. The appointment of Messrs. International Agencies Corporation, as Sole Selling Agent has been found necessary by the Board with a view to expansion of market and to facilitate distribution of Companies product in the said area.

(3) Under the provisions of the Companies Act 1956 Contracts of the nature mentioned in Item No. 3 can only be entered into between the Managing Agents or Associates of the Managing Agents provided that Special Resolutions approving of the contracts are passed by the General Meeting of the Company. The parties to the transactions are traditional Buyers and Customers of the Company and your Board considers that it is in interest of the Company that the Contracts should be entered into. It is for this reason that you are asked to approve the resolution. It is emphasized that in giving consent to the resolutions no change in the existing method of doing business is contemplated.

The Share Transfer Registers of the Company will remain closed from the 18th June 1958 to the 27th June 1958 both days inclusive.

By Order of the Board,

For and on behalf of

Bengal Jute Mill Co. Ltd.

Soorajmull Nagarmull,

Managing Agents.

8, Dalhousie Square East, Calcutta.

Dated 2nd June, 1958.

N.B. You are entitled to attend and vote at the Meeting by a Proxy who need not be a shareholder of the Company. If it is desired to use the proxy the same should be completed in manner prescribed by Section 176(5) of the Companies Act, 1956 and delivered at the Registered Office of the Company at least 48 hours before the time fixed for the Meeting.

The several draft Agreements referred to in Resolutions are open to inspection by the Members of the Company at the registered office of the Company No. 8, Dalhousie Square East, Calcutta, at any time during office hours.

The Story of Oil—9

How much oil?

One oil well does not make an oilfield. As soon as the first well in a new area gives proof of steady production the next step is to establish the extent of the oil accumulation in its underground trap. This is done by drilling further wells, the programme for which is based on the results of scientific surveys and tests carried out during the drilling of the discovery well.

Surveys for such "down-the-hole" information are commonly made by recording instruments lowered into the well on a cable. One instrument produces a record in the form of wavy lines on a chart which, when interpreted, confirms the nature of the rocks penetrated by the drill and shows exactly where the oil zone lies. Another instrument gives records from which the amount and

direction of the slope or dip of the rock layers can be calculated. Tests carried out in oilfield laboratories include analyses of samples of rocks and oil recovered from the well. From rock samples it is possible to calculate how much room there is for the oil in the spaces between the grains of sand in a sandstone rock, and the amount of water associated with the oil. An analysis of a sample of crude oil gives data about its gas content and other characteristics. With all this information to hand the development of the oil find can proceed on a planned basis, and decisions can be made on how far apart the wells should be drilled, how deep they should go, how many drilling outfits will be kept in operation, and what size of refinery will be required.

Assam Oil

A full-scale petroleum industry

This is one of a series of informative advertisements about the petroleum industry.

The pace at which the banking system is experiencing an accretion to Deposits may slow down.

Advances, which have latterly been sluggish, may during the current year involve a strain for banks.

These are two statements contained in the Reserve Bank's Trend and Progress of Banking 1957.

Has the Reserve Bank done right in donning the mantle of soothsayer, and attempting prophesy?

Read the Leading Article to learn of the third factor that should have been taken into account.

Initiative Passes to Bull Operators

Investment Gossip:

MARKETS are really booming, and the return of Dock labour to work is the least of the influences which weighed with operators.

Much more enthusiasm is being generated, paradoxically, by the difficult foreign exchange situation. Normally, one would expect that a problem of this nature would be of bear connotation.

But, no. The reasoning is that Government will be compelled to act to foster exports; and how can they do this better, otherwise than by offering suitable tax and excise reliefs?

As a sign of things to come, the decision of the Reserve Bank to permit banks to advance up to 90 per cent against cotton textiles is welcomed as constituting the anxiety of Government to help in every way possible.

The bulls have the initiative; and I doubt it exceedingly that they will lose it.

So, my opinion continues to be that, in the foreseeable future, the markets are in for a sustained rise in values.

Real impetus to the uptrend would be given, if the much rumoured bonus issue by Indian Irons should materialise.

Summer's heat has come to an end, with the break of the monsoons. But now we have a speculative fervour which may even threaten to break out into fever.

This is surely the juncture at which the investor should make his judicious purchases; and the time is not come when he should be tempted to book any profits. The Buy Indian motto that I offered a few weeks ago continues to hold particularly good for the investor.

£ 24

Investment Notes:

Braithwaites are keenly sought after upto Rs 27.62 from Rs 26.81. The company has announced additional dividends of 40 p and 60 p per share for 1954 and 1955 respectively.

In Bombay, Voltas have touched a new high of Rs 137. The shares have been included in the Clearing List of the Bombay Stock Exchange. Forward business is allowed in lots of five shares.

The Bharat Line Limited has announced a move to split its equity share of Rs 100 each into shares

of Rs 10 each as a sequel to the representations made to the company by the small investors.

The Century Weaving, Spinning & Manufacturing Company has decided to defer the fresh issue until August or September, although permission has been obtained from the Controller of Capital Issues. The above decision is made to suit the convenience of the closure of Transfer Books simultaneously for both the announcement of an interim dividend and the new issue.

£ 24

Mettur Industries Results

Balance-Sheet Reviews:

METTUR INDUSTRIES LIMITED has reported satisfactory working results for the year ended 31st March, 1958. The mill was virtually unaffected by power-cuts during the year. Despite the fact that seven working days were lost through two illegal strikes, mills' sales are maintained at Rs 1.51 crores, while the net profit, after providing for Depreciation and Taxation, amounts to Rs 11,81,719 as against Rs 11,59,322 in the previous year. In respect of allocation to Funds, the Depreciation amount is maintained at Rs 1.91 lakhs, while the provision for Taxation is reduced to Rs 18.30 lakhs from Rs 20.50 lakhs.

According to the directors' report, the mills' products have continued to be popular and the organisation for distribution is maintaining the usual efficiency.

£ 24

Metal Box

The Metal Box Company of India Limited has produced excellent results for the year ended 31st March, 1958. Once again, the company has reported record sales, having risen to Rs 6.12 crores from Rs 5.67 crores. The net profit, after providing for Depreciation and Taxation, amounts to as much as Rs 34,11,768 as against only Rs 28,04,570 in the previous year. Apart from providing a sum of Rs 2.00 lakhs for Development Rebate Reserve, the Depreciation amount is raised to Rs 13.04 lakhs from Rs 12.47 lakhs; taxation provision to Rs 30 lakhs from Rs 38 lakhs and General Reserve to Rs 10 lakhs from Rs 6.50 lakhs. Even after these increased allocations, the dividend on the Ordinary shares is maintained at 17½ per cent.

£ 24

According to the directors' report, the new office block at Kidderpore, Calcutta, has been completed and occupied. The new Calcutta factory has been completed and the transfer of plant and machinery is in progress.

£ 24

Caledonian Jute

The Caledonian Jute Mills Company Limited, in Andrew Yule group, has reported a loss, after providing for Depreciation, of Rs 50,051 for the year ended 30th

4½ PER CENT STATE GOVERNMENTS LOANS

Name of State	Amount	Maturity	Rate of Interest
(1) Andhra Pradesh	Rs. 500 lakhs	1970	Rs. 99.50
(2) Bombay	Rs. 1,000 lakhs	1970	Rs. 100.00
(3) Kerala	Rs. 300 lakhs	1970	Rs. 99.75
(4) Madhya Pradesh	Rs. 200 lakhs	1970	Rs. 99.00
(5) Madras	Rs. 500 lakhs	1970	Rs. 99.50

(7) Orissa	Rs. 300 lakhs	1970	Rs. 99.00
(8) Rajasthan	Rs. 250 lakhs	1970	Rs. 99.50
(9) Uttar Pradesh	Rs. 700 lakhs	1970	Rs. 99.50
(10) West Bengal	Rs. 500 lakhs	1970	Rs. 99.50

All the State Governments reserve the right to retain subscriptions up to ten per cent in excess of the notified amount.

All the above loans will be repaid at par on 15th July, 1970 except the 4½% 1971 loan of the Government of Bombay which will be repaid at par on 15th July, 1971.

THE LOANS WILL OPEN FOR SUBSCRIPTION ON 15TH JULY, 1958 AND CLOSE ON 19TH JULY, 1958 OR EARLIER WITHOUT NOTICE AS SOON AS SUBSCRIPTIONS APPROXIMATE TO THE AMOUNT OF EACH ISSUE.

All the loans will bear interest from 15th July, 1958.

Subscriptions may be in the form of CASH/CHEQUE in respect of all the loans.

3% BOMBAY GOVERNMENT LOAN 1958, 3% COCHIN LOAN 1955-58, 3% MADHYA PRADESH LOAN 1958, 3% MADRAS GOVERNMENT LOAN 1958 and 3% UTTAR PRADESH LOAN 1958 will be accepted AT PAR for conversion into the new loan/s of the Government concerned; interest on the securities of the respective loans tendered for conversion will be paid up to and including 14th July, 1958.

APPLICATIONS FOR ALL THE LOANS WILL BE RECEIVED AT THE OFFICES OF THE RESERVE BANK OF INDIA AT BANGALORE, BOMBAY, CALCUTTA, MADRAS AND NEW DELHI.

APPLICATIONS will also be received at PLACES WITHIN THE RESPECTIVE STATES as follows:—

(i) At the office of the Reserve Bank of India at Nagpur in the case of the Bombay loans.

(ii) At the branches of the State Bank of India and at Treasuries and Sub-Treasuries in the case of Andhra Pradesh, Bombay, Kerala, Madhya Pradesh, Madras, Orissa, Rajasthan and Uttar Pradesh loans.

(iii) At the branches of the State Bank of India in the case of West Bengal loan.

(iv) At the branches and treasury pay offices of the State Bank of Hyderabad in the case of Andhra Pradesh and Bombay loans.

(v) At the branches of the Bank of Mysore Ltd. except at Bangalore, the State Bank of India, the State Bank of Hyderabad and at Government Taluk treasuries in the case of Mysore loan.

Copies of Notifications and Application Forms may be obtained at any Receiving Office.

November 1957 as against a loss of as much as Rs 4.35 lakhs in the previous year. Sales are lower at Rs 1.04 crores against Rs 1.11 crores. The Depreciation amount is reduced to Rs 3.12 lakhs from Rs 3.6 lakhs. The directors have, after transferring Rs 1.25 lakhs from various reserves, provided Rs 25,000 for Wealth Tax and recommended a dividend only on the Preference shares. The Ordinary dividend has been passed over again.

With a view to having direct contacts with overseas markets, this company along with other jute mills in the same managing agency has resolved to form a new company called Budge-Budge & Allied Jute Mills Exports Private Limited. Each of the participating mills have subscribed equally to the capital of the newly-formed company.

£ 24

Minerva Mills

The working of the Minerva Mills Limited, during the year ended

31st December 1957, has resulted in a loss of Rs 7.46 lakhs without even providing for normal depreciation on buildings and machinery. After adjusting a sum of Rs 19,662 brought in and Rs 76,804 being excess provision for taxation for previous years written back, the net loss comes to Rs 6.50 lakhs. To meet this debit balance, the directors have decided to transfer from General Reserve a sum of Rs 6.70 lakhs. This leaves a credit balance of Rs 19,733, which is being carried forward to next year. The dividend has been passed over.

If the company were to declare a dividend, however small, the company would become liable to Wealth Tax, which works out to Rs 22,000. The loss, during the year, is attributed to the very difficult trading conditions with the raw materials ruling at high prices on the one hand and the very poor demand for yarn and cloth on the other. Sales had to be made at heavily losing prices just to reduce the accumulating stocks.

The directors feel that the working can be made economical only by complete rationalisation, requiring of co-operation of workers and by launching on a programme of renovation and modernisation, which involves a huge capital expenditure. To meet a part of this and to replenish the working capital which has been locked up in the fixed assets of the company, it has been decided to float, subject to the permission of the Controller of Capital Issues, 6½ per cent first Mortgage Debentures for Rs 18 lakhs. Sales of cloth, yarn and waste amount to Rs 1.30 crores against Rs 1.39 crores.

₹ ₹

Bihari Mills

The Bihari Mills of Ahmedabad has made a profit of Rs 6.25 lakhs out of which managing agents' commission has been provided at Rs 40,000 and Depreciation at Rs 2.58 lakhs. The directors have transferred Rs 1.00 lakh to General Reserve and Rs 50,000 to Dividend Equalisation Fund. The dividend on the Ordinary shares has been maintained at Rs 21 per share, including a bonus of Rs 5.

₹ ₹

Jehangir Vakil Mills

The Jehangir Vakil Mills Company Limited of Ahmedabad has reported a gross profit of Rs 7.75 lakhs. Out of this, managing agents' commission has been provided at Rs 40,000 and Depreciation at Rs 4.16 lakhs. Wealth Tax, for two years, amount to Rs 39,286. The directors have transferred Rs 2.50 lakhs to General Reserve. They have brought in Rs 1.59 lakhs out of the Reserve Fund created in 1948 for dividend distribution. A dividend of Rs 10 on the Ordinary shares has been recommended.

₹ ₹

Runglee Rungliot Tea

Of the four tea companies, in the Duncan Brothers group, of which working results have now been released—Kunchunpore, Phaskowa, Poobong and Runglee Rungliot—the last-named company is the only one to recommend a dividend, while the other three have passed over dividends for 1957.

Drought conditions coupled with damage by pests and blights account for lower crop outturn of Runglee Rungliot Tea company at 159,960 pounds against 210,320

pounds, while the average selling price has risen to Rs 3.49 from Rs 3.06 per pound. The net profit amounts to only Rs 26,007 as against as much as Rs 80,438 in the previous year. After providing Rs 1,000 for Development Reserve, Depreciation has been raised to Rs 7,924 from Rs 7,247. The dividend has been reduced to 25 from 35 per cent.

₹ ₹

Kunchunpore Tea

In common with other Cachar estates, Kunchunpore Tea Company Limited has obtained a considerably low price of Rs 1.68 against Rs 2.05 per pound. The crop outturn is also lower at 288,137 pounds against 304,771 pounds. The accounts reveal a loss of Rs 1.56 lakhs against a profit of Rs 1,429 in the previous year. The Depreciation amount is raised to Rs 10,339 from Rs 9,654. After transferring Rs 1.54 lakhs from various Reserves, there is a credit balance of Rs 1,081, which is carried over to next year.

₹ ₹

Phaskowa Tea

The Phaskowa Tea Company Limited has also reported disappointing results and shows a loss of Rs 27,149 as compared with a net profit of Rs 48,811. A sum of Rs 13,386 (Rs 14,190) is provided for Depreciation. After transferring Rs 15,000 from Reserve, the directors have provided Rs 5,000 for Development Reserve, leaving a credit balance of Rs 1,220 to be carried forward. The dividend has been passed over against 7½ per cent. The crop outturn is slightly higher at 250,404 against 241,653 pounds, while the average selling price is lower at Rs 1.75 against Rs 2.23 per pound.

₹ ₹

Poobong Tea

The Poobong Tea Company Limited has passed over the dividend again for 1957 due to a loss of Rs 1.85 lakhs as against a net profit of Rs 1.48 lakhs in the previous year. A sum of Rs 10,608 (Rs 14,246) is provided for Depreciation. After transferring Rs 1.75 lakhs from various reserves, there is a credit balance of Rs 3,694 to be carried forward. The crop outturn is lower at 113,533 against 155,846; but the average selling price is higher at Rs 2.86 against Rs 2.35 per pound.

Bank Deposits and Advances

THE threshold of 1958-59 is hardly the appropriate time for any banking prophets to make a forecast on the immediate or distant future. The task of prophecy is a hazardous one, particularly for those who, in the last three years, did not, with any confidence, anticipate the amazing rise in bank Deposits. Nor, we may add, is it meet and proper for the central banking authority to do the mantle of a soothsayer. But this is exactly what the Reserve Bank has done, in its publication on the Trends and Progress of Banking in 1957, and we must with some regret suggest that what has occurred is at best an error of judgment.

The publication asserts that the phenomenon of spectacular rise in Deposits, which has been witnessed for some eighteen months now, is ascribable to, firstly, the accrual of counter part funds consequent to the Public Law 480 agreement with America and, secondly, 480 agreement with America and, secondly, the drastic import restrictions which have inevitably added to the resources of industrial units, but which the latter are unable to utilise in the purchase of plant and machinery. That these two are factors which have contributed to the upsurge in Deposits, none will deny. But we will seriously question any statement that purports to suggest that they are the sole factors. For, this would mean that the third—and most important—cause of the strident accretion to banks' resources has been lost sight of. We refer here to the impact upon the monetised sector of the very substantial planned disbursements of the Central and State Governments.

The increase in Deposits is of such significant magnitude, particularly from the commencement of the Second Plan, that money market students have asserted with steadily growing confidence that, whereas the disbursement by Governments in respect of the First Plan have mostly been assimilated and remain assimilated in the countryside, the expenditure now being incurred in respect of the Second Plan is of a character to overcome the time-lag between disbursement at the Government Treasury and absorption in the banking system. That is to say, whatever the Centre and the State Governments are spending on the Second Plan is having an immediate, direct and more or less corresponding effect on bank Deposits. One of the heartening developments in this regard is the rapidly narrowing margin between Notes in Circulation and bank Deposits. Never has this margin been reduced to such a small disparity as in recent weeks. The full significance of this development is still to be appreciated. But if it is admitted that there is a direct relationship between planned disbursement and increase in bank Deposits, it should then be clear that the upward trend in Deposits is a phenomenon that will continue to be experienced so long as planned development takes place.

As long as we can now find it worthwhile to look ahead, bank Deposits may continue to rise at a rate exceeding Rs 400 crores a year. This is a development which is more or less independent of such transient factors as adverse international payments position. The country is resolved, determined and committed that there shall be planned expansion; that the country could afford planned expansion of

something like Rs 1000 crores a year for the next generation or two; that this means that the national economy will be subjected to the expansionary influences connected with planned and continuous disbursements; and that, among the many manifestations of this expansion, not the least important will be an annual pace of progress in bank Deposits at the rate of Rs 400 crores at a minimum. The writers responsible for "Trends and Progress of Banking 1957", published by the Reserve Bank in the current week, seem to have but a hazy idea of the factors that should be taken into account in estimating the causes of bank Deposits in this country, not only from the point of view of the banking system but from the point of view of the entire national economy. The changes that are now taking place have naturally the highest importance. What significance attaches to the varied aspects of the changes, is a study that calls for detailed examination. For our part, we believe that such a study will yield results most rewarding to the functioning and progress of planning which is now synonymous with the functioning and progress of the national economy. It is clear that the Plan has now reached a stage when further progress is achieved by the simple law of past achievements. Disbursements made by the Governments on account of the Plan are now assured of boomerang effect. These are reflected in higher revenue receipts and larger bank Deposits and keen bidding for Government's new loans, etc. These repercussions of planned disbursements have at no time received a detailed analysis at the hands of authorities. In the light of what we have been able to point out, on the magnitude of the boomerang effects of the disbursements made by Governments on account of the Plan, no time should now be lost in undertaking and urging a detailed examination of the extent to which the resources of the Plan in the coming years will be helped as a result of the boomerang effects. When the results of such a study are placed before the public, there will be widespread relief and rejoicing that planning under Government auspices, if rightly done, carries with it a 50 per cent guarantee for success. That is a new moral and lesson that is to be learnt.

Let us revert to the money market—particularly to the banking system as we can visualise it for the remaining years of the Second Plan Period. The pedestrian writers in the Reserve Bank publication say that there is a possibility of a slackening in the pace of progress in bank Deposits. They examine this question from the point of view of many minor relevant standpoints; but they have not grasped the reasons of it. Of all the major developments that account for this vastly significant development, the major factor is connected with the boomerang effect of Government disbursements on a considerable scale and at an increasing pace. Given this national commitment and given the further assurance that the Government are in a position to meet the commitments described, then, it is easy to visualise that the country in the present position is exposed to the favourable expansionary and boomerang effects of planning.

While, on the one hand, the impression of the Reserve Bank seems to be that banks are likely to gain fresh resources at a slower pace in the coming months, it is also sought to impress that, if investment in the private sector shows a marked increase, bank credits will again have to be on an overextended basis. It has been observed that the 1957-58 busy season was notably less conspicuous as a busy season than its immediate predecessors; that the banking system was able to a large extent to comply with the directives to bring the over-all figure of loans and advances to a figure, which, though not quite near the level insisted upon by the Governor of the Reserve Bank, provided abundant testimony to the all round desire of bankers to carry out the directives and behests of the Reserve Bank loyally and faithfully. The result is that the slack season of 1958 started earlier than usual and more impressively than in recent years. There are good reasons to think that the 1958 slack season will be the pattern to which there will be conformity in the future. For nearly four years, the dividing line between the traditional slack season and the busy season has been more and more difficult to locate and distinguish. What is happening in the current year is that the seasonal personality, with the attributes of the busy season and those of the slack season quite marked, seems to be in the process of re-emergence. It is true that the money market aspect of seasonal transactions is being more and more influenced by the fact that industrial production is a more considerable proportion of the total national product than in recent years.

There is one more point that we should like to make. The publication anticipates that, with an increase in private investment and in industrial production, there might in the rest of the year be a more pronounced rise in Advances. But this is to overlook the significance of two important influences on the trend in Advances. Firstly, with the severe import restrictions, there is an automatic obstacle in the way of any large scale establishment of new plant and machinery; and, moreover, since the import of consumer goods is minimised, finance required for trade and commerce in this behalf will also be less. So, the extent of increase in private investment may not amount to much; and, meantime, bank credit for financing imports and imported commodities should presumably decline. Secondly, with the virtual embargo on imports, there will be a greater demand for indigenous products. It is entirely conceivable that stocks of indigenous products should decline. In that case, finance required in respect of stocks will be correspondingly reduced.

Our view, then, is that the increase in Deposits will continue to be experienced. At the same time, the rise in Advances is likely to be moderated. Of course, once indigenous production of capital machinery improves, an expansion in Advances would occur because of the consequent private investment enabled. But, for the immediate future, and certainly until the end of the Second Plan, we do not foresee any element of strain upon the banking system either as a result of inadequate resources or as consequent upon any untoward expansion in the demand for advances.

Is The Communist Economic Viewpoint Suited to World Trade?

By HENRY V. BURKE

FORMER Yugoslav vice president Milovan Djilas has pointed out that Communist bloc economic planners virtually ignore "the needs of world markets" although they are engaged in an extensive ideological-trade offensive in many countries.

This single-minded approach to foreign commerce implies either an unwillingness to consider world economic problems as a matter of mutual international interest, or a basic Communist inability to profit from past mistakes.

The second alternative hardly stands up, because already there are indications that Communist officials have recognized at least some of their errors and are taking remedial steps. These include reported efforts to improve packing methods and to prevent recurrences of other business practices so obviously suspect that they might jeopardize the entire Soviet bloc foreign trade program.

Corrective measures noted so far, it must be admitted, appear to be on a surface level and apparently do not involve basic changes in the Communist bloc's long-range attitude. Recent reports, too, indicate that any improvements already made still leave much to be desired.

A survey of complaints from countries experienced in trade deals with the Soviet bloc show concern over Communist business habits ranging all the way from administrative confusion to erratic import and export policies. Serious doubts also are expressed as to the quality of Soviet bloc merchandise.

The Brazilian newspaper, *Diario Carioca*, for example, has concluded that whereas trade arrangements with Soviet bloc countries give a first impression of simplicity, they are in reality cumbersome and complicated.

Here is a brief list of frequently-cited diffi-

culties and inconveniences resulting from Communist bloc export practices:

1. Uncertainty of delivery dates. Even goods labeled for "prompt delivery" often go through so many time-consuming processes that delays of from two to three months between receipt of necessary import licenses and shipment are not unusual.

2. The bloc custom of shipping merchandise in several lots, causing complexities in custom and tax matters.

3. Frequent arrival of shipments in improperly labeled crates. Communist failure to provide packing lists, for instance, sometimes makes it necessary to open each crate to verify its contents. Even more confusing, several crates have been known to bear the same identifying number. These errors, of course, are more than annoying; they result in serious handling delays for the importing country.

These objections involve receipt of Soviet bloc goods. A more serious charge has been made relative to bloc import practices. Communist countries, according to this accusation, tend to do their buying on an "in and out basis." They place, or show a willingness to place, orders so large as to call for an expansion of certain industries within the non-Communist "selling" country. These large orders, at the very least, make a real impact on production plans. However, after creating what appears to be a promising market outlet, Communist bloc countries may fail, without warning, to repeat their orders.

It might be added that the same practice has figured in Communist bloc export dealings. After creating a market with foreign importers and users, the export of certain Soviet bloc goods may suddenly be stopped.

more and more complex. The Indian Productivity Delegation sent to Japan in 1956 returned with the view that the growth of professional management in Japan divorced from ownership has rendered private industrial organizations more efficient. Viewed in this light it is evident that one Administrative Staff College at Hyderabad is inadequate for India's requirement. As a matter of fact, management studies should not be divorced from the technical courses and they should be integrated in such a way in the technological institutions that engineers turn out as fully capable of shouldering the responsibilities coming their way. At present, only inadequate knowledge of social sciences is imparted to technical graduates and diploma holders which does not at all assist them in the satisfactory handling of management techniques. Early this year, while delivering the Convocation Address at the Indian Institute of Technology at Kharagpur Dr John Matthai rightly laid stress on the teaching of "humanities" studies to the engineers. It is thus important that a balanced course on social sciences and management studies should be drawn up and uniformly prescribed for all technological institutions. A separate but equally balanced course is indicated for the diploma holders. It is, indeed, no wonder that Indian engineers, so long victims of a narrow, specialised education unrelated to the major issues of social purpose and aims, were in the beginning, unwilling to work at such out of the way places as Rourkela and Bhilai.

An urge for constant improvement in the industrial techniques should be one of the primary objectives of the countries aiming at rapid industrialisation. This urge is given concrete shape in elaborate provisions for research and training. It is, no doubt, true that programmes for specialised training for fresh engineers, refresher courses for serving engineers and for operatives and mechanics were undertaken at various project sites during the first plan and more elaborately provided for in the second plan but sufficient care and attention were not paid to the character of training and research facilities. Preparatory work in regard to the development of atomic energy has, however, received a greater share of attention partly because of the personal interest evinced by the Prime Minister. Facilities offered by the Tata Institute of Fundamental Research for work on nuclear physics and the associated experimental techniques, activities of the Atomic Energy Establishment in connection with research on physics, chemistry and engineering as also of such other research organizations as the Institute of Nuclear Physics are, at least, likely to fulfil the initial requirement of personnel needed for bringing about the establishment of an atomic power station by 1962 within the range of a possibility.

Research and training requirements of an automation era have not, however, received the same degree of attention. Scope for research and advanced training in electronics and mechanical engineering has not been sufficiently explored. The Central Electronic Engineering Institute at Pilani should be given all facilities so that it can develop into a centre for research on automation techniques. The Board of Engineering Research set up in 1950 has not done any tangible pioneering work in this regard. The proposed Mechanical Engineering Research Institute at Calcutta should be accorded priority and an all-out effort should be made to ensure higher research work on technological innovations. In this connection development of advanced techniques in machine tool industry is of primary importance and while undertaking projects with foreign assistance every care should be taken to ensure adequate research and training facilities in these plants.

Who Takes Tea?

The Indian Tea Industry has been advised from time to time to stabilise its position, against fluctuations in the value of its exports, by developing the home market. At present India exports over two-thirds of its total output of tea, so that the industry is particularly vulnerable to any adverse trend in foreign markets. A larger home market would enable it to withstand the shock of fluctuations in the volume and value of exports. Two main factors which determine the level of home consumption are quality and price. As regards quality, it is several years since good tea has been available for domestic consumption at reasonable prices. And prices, as the spokesmen of the industry have pointed out at every opportunity, are a function of taxes. Perhaps the Tea Board can do something more to extend the hold of this popular beverage. But before they can take effective steps in this direction, it will be necessary to have an idea of the general consumption pattern. What percentage of the population consume tea the proportion of non-tea-drinkers and the reasons for their abstention. Partial answers for these questions are given by the results of the Sample Surveys undertaken by the Statistical Branch of the Tea Board, which also provide other sociological data of interest. Reports to

hand deal with three medium sized cities, Gauhati in the North East, Surat in the West and Kanchipuram in the South. The regional variations in tea drinking habits are interesting. As may be expected the highest per capita consumption of tea is in Gauhati, 4.53 pounds, and least in Kanchipuram 0.24 pounds. The Surveys also give a measure of the preference for coffee in the South. The proportions of tea-drinking families out of the total number of families surveyed, is 99.4 per cent in Gauhati, 93.8 per cent in Surat and 29.4 per cent in Kanchipuram. Of the four families which did not take tea in Gauhati, three abstained for reasons of health and one on account of economic reasons. In Surat 60.8 per cent of families not taking tea avoid it because of lack of means while 12.2 per cent preferred milk. In Kanchipuram, 19.7 per cent of the abstaining families gave poverty as the reason. On the other hand, 48.2 per cent of the 446 families not habituated to tea preferred coffee. The Survey of Kanchipuram also shows that, except for the lowest income groups, the proportion of individuals and families drinking tea declines with rising income. The information provided by these surveys, though they relate to widely separated regions, is too limited to serve as a basis for valid conclusions. Investigations in North India and Central India may indicate larger scope for increase in tea consumption with rise in incomes and standards of living. It will also be necessary to supplement the data for South India with a survey in Kerala where, as in the North, tea is the preferred beverage.

★

Free Trade Zone

There is an interesting report that Government is seriously considering a proposal to constitute a free trade zone in and around Kandla port. Recently it was reported from Karachi that Indonesia proposes to open a free port as a rival to Singapore. The constitution of a free trade zone round Kandla will not put it in the same class as Singapore and Hongkong which are not only free ports but are also States. But the free trade zone will help Kandla to build up an entrepot trade as well as an export trade based on processing industries.

The proposal has been put forward as a measure to help the development of the Kandla port and so speed up rehabilitation of Sindhi refugees in Gandhidham. The Sindhi merchants with their world wide connections may be expected to make good use of the opportunity provided to them. And in the context of the foreign exchange shortage, the proposal is also of wider significance. It will give a fillip to exports which are now hampered by drastic import restrictions and so help the country to earn foreign exchange.

At present the industries manufacturing for export are handicapped by shortage of imported materials. On account of shortage of foreign exchange it is not possible for the Government to issue licenses for imports of the required quantities without imposing irksome restrictions. Though rules have been framed for drawback of customs duty on a variety of items, the complicated procedure is an inhibiting factor.

A free trade zone on the other hand will be free from these troubles and exporters can concentrate their sales abroad instead of having to waste their time in filling forms and waiting for Government's sanction at every stage. The free port will be able to import whatever goods or materials it needs duty free and re-export them after processing. The customs cordon will be set up round the port instead of at its entrance on the water front.

The suggestion for the establishment of free trade zones at important ports in the country, as a measure to boost exports, was put forward last year at the annual meeting of the Indian Council of Foreign Trade. And the president of the organisation has been hammering the idea at every opportunity. But the measure that is now under consideration is different from that suggested by the Indian Council of Foreign Trade.

The repercussions on other ports of constituting one of them as a free trade zone will have to be carefully considered. The processing industries and other industries manufacturing for export which are already established near the old ports will be at a considerable disadvantage as compared with the new ones likely to spring up in the free trade zone. The possibility of constituting free trade zones in every major port, as suggested by the Indian Council of Foreign Trade, deserves detailed examination by the authorities.

★

Risk of Intervention

In spite of alarming reports of preparations for Western intervention in Lebanon, it now seems likely that the people of Lebanon and their leaders may be left free to resolve the crisis themselves. The wording of the UN resolution appointing the Watch-Dog Commission has created some confusion on account of different versions in translation. President Chamoun and his Government apparently consider that the Commission is not a mere observation group and that it should prevent infiltration across the border and he has been insisting that the UN should send adequate forces for the purpose. Russia is sure to veto any proposal for sending a UN police force and this, it is feared, may lead to a situation in which intervention by the US and UK may be a possibility.

The build up in Nicosia may be intended to do more than launch the "adventure in partnership" between Cypriot Greeks and Turks. And US Marines have been reinforced in the Eastern Mediterranean. The UN Secretary General has been against asking for British and American intervention and before he left he is reported to have advised the Lebanese Government to solve the crisis internally without recourse to foreign interference.

The Lebanese Parliament is due to meet on July 24 to elect a successor to President Chamoun whose term ends in September. The election of a President who is not unacceptable to the rebels will clear the way for a settlement. The solution of the crisis may be hastened if President Chamoun accepts the advice to step down from office without waiting for the end of his six year term. On the other hand intervention by the West in support of a Government which obviously does not command the support of more than half the population will be regarded in the Middle East as an attack on Arab independence and will lead to repercussions beyond the United Arab Republic.

In this situation, it is extremely unfortunate that the US Secretary for Defence, Mr McElroy should have gone on record with the remark that he would be prepared to authorise the use of nuclear weapons in the conflict, if the US decides to intervene in the Lebanese conflict. It should not be surprising if the population off the Middle East and countries further afield are more sensitive to the American threat of nuclear bombing than to the murder of Imre Nagy.

Some Aspects of Technical Education—II

NITISH R. DE

IT is of some importance to realise that the challenge of atomic era and the advent of automation will act as catalysts to hasten a neo-revolution in industrialisation and that the countries eager to derive full benefit from these developments must, to start with, remodel the character of technical education. It is not enough to turn out adequate number of technicians. They should also be professionally and mentally so equipped as to assist in heralding the millennium. The first point of departure will be the recasting of curricula and syllabuses which at present, appear to be somewhat narrow and barrenly theoretical. Mr Goodman, himself an engineer comments that a production engineer, with a narrow comprehension and outlook, specializing in, say, assembly and machining, is not likely to go far in automation technique. Neither is one who cannot or will not comprehend electronic techniques. In the same way the product designer should have the opportunity to realise the problems facing the production engineers. Then only he will know that designs befitting production by normal methods will not suit production in automated plants. Technical matters connected with automation, such as, greater technical complexity of production, integration of processes, assistance of new tools in decision-making (computer control), planning of research and development etc., thus call for new types of engineers with broader view of industry. (Man and Automation). Industrial Engineering as a discipline concerning the application of scientific and technolo-

gical principles to all branches and departments of industry should receive greater emphasis in technical courses.

But it is not enough to have only a broad-based and integrated technical course for engineers of automation age. The management technique in the new era will become infinitely more complex. Human and social factors will assume greater significance and very often they will have to be balanced against technical factors. Conventional notions about wage-cost, depreciation cost and comparative cost structure will not be sufficient data for a manager to decide on the introduction of an innovation. Social cost in the nature of hardship to the working people because of change and redundancy may at times be an off-setting factor. An awareness of the responsibility towards the consumers and the nation should also guide the managers in making vital decisions. To quote Mr Goodman once again, "New qualifications will be needed; and personal qualities such as adaptability and versatility, will be important. . . . As the important problems of automation are social, economic and organizational, it will be necessary for management to spend a large portion of its time in dealing with these matters." (Man and Automation). These qualities are not inherited and can be acquired through appropriate training.

Management subjects should thus be incorporated in the curricula for technologists. In the new era, technologists and scientists will gradually enter the management field as the industrial pattern becomes technologically

State Loans: No Risk of Failure

THE State Government Loans have been announced; and the one faintly pleasing feature is the decision of the Bombay Government to issue a 1971 Loan as well. Otherwise, there are no surprising elements, with 10 State Governments coming out with a 1970 series of loans and an interest coupon of 4½ per cent.

Bombay is to be congratulated on issuing its 4½ per cent 1970 at par, and its 4½ per cent 1971 at Rs 99.75 nP. All the other States have their issue prices at a discount of 50 nP or Re 1. The total amount sought by the 10 States is Rs 47.50 crores. This falls short of the expectation of Rs 50 crores to Rs 60 crores, but, then, four of the State Governments have not issued a new loan.

Four of the State Governments have loans maturing this year for a total amount of Rs 8.13 crores; and maturing loans will be accepted at par. Thus, the 10 States may be said to aim at securing net subscriptions of Rs 39.37 crores. However, it can be taken as certain that the loans will be over-subscribed, and since the States are retaining the right to accept over-subscriptions to the

extent of 10 per cent, new cash obtained from the State Government Loans may be in the environs of Rs 44 crores.

The success of the issues is not at all in question. The money market is well equipped to vouchsafe this Rs 44 crores without strain or trouble. Thus, although the lists, which open on July 15, have July 19, as their closing date, we anticipate that the lists for some of the loans may be closed on the very first day. We would not be surprised if over-subscription is of quite significant proportion. For, the capacity of investors to subscribe to the State Loans far exceeds the amount on offer. In the first place, the Life Insurance Corporation, which did not give much support to the Central Government Loan, may have anything like Rs 20 crores set apart for subscription to the State Government Loans. Secondly, the Scheduled Banks can muster—indeed, will be compelled to subscribe—something like another Rs 20 crores. Thirdly, there are the other institutional investors, in particular the Provident Fund societies, which were starved of scrip during 1957 when only two of the States entered the market for an aggregate of Rs 9 crores. The demand from this last source cannot be ascertained. But our view is that total subscriptions may exceed Rs 60 crores.

While there is scarcely any doubt that the conditions in the money market will necessitate a second tranche of the Central Government Loan, there must now be conjecture whether the States also may not be tempted to emulate the Central Government and issue a second tranche. While fully in

support of the idea that the Central Government should issue a new loan for Rs 100 crores in September/October, we would resist any attempt by the States at entering the market for a second time in the current year. For, the gilt-edged market is greatly helped when supply falls short of demand; but, if there is a plethora of floating stock, the obverse is true. At this stage, we may remark that, in a very real sense, 1956 and 1958 offer a study in contrast. In 1956, the States were able to garner Rs 68 crores from the market; but some of the subscriptions were the result of persuasive tactics employed. Thus, such Scheduled Banks as had put in for the State Government Loans in 1956, very quickly got rid of their purchases. This acted to depress the gilt-edged market, particularly since the Scheduled Banks faced a problem of an inadequacy of resources for meeting the ensuing busy season. Today, on the other hand, money market conditions are such that no pressure tactics need be employed. Moreover, with the banks experiencing remarkable accretions to Deposits, particularly under Time Liabilities, with no corresponding improvement in their earnings from Advances, the Scheduled Banks are attracted by the lure of the 4½ per cent interest coupon that the State Government Loans bear. As such, it is extremely unlikely that the State Government securities to be purchased by Scheduled Banks will have merely a temporary sanctuary; on the other hand, banks will be eager to hold on to such purchases as they make.

We are gratified, we repeat, that the Bombay Government have seen the wisdom of borrowing from strength; and we are hopeful of the money market and the gilt-edged market achieving a situation in which the borrowing programme of the Central and State Governments for the Second Plan is assured of success.

Active Notes and Bank Credit Lower

A decline in Active Note circulation of true slack season proportions is to be discerned in the returns of the Reserve Bank for June 20. Active Notes are sharply lower by Rs 18.07 crores at Rs 1586.91 crores. Rupee Coin has returned from circulation for Rs 1.43 crores. As a result, the Reserve Bank's cash in the till is more than doubled to Rs 38.51 crores from Rs 19.01 crores.

In the Banking Department, the most significant changes relate to member banks. The Reserve Balances of Scheduled Banks are steeply higher by Rs 12.50 crores at Rs 93.68 crores. At the same time, they would appear to have reduced their indebtedness to the central banking institution, with the Reserve Bank's Other Loans and Advances shown lower by Rs 1.67 crores at Rs 55.13 crores. The Reserve Bank's ad-

vances against usance bills are at their lowest level in many months, in falling by Rs 2.70 crores to Rs 11.78 crores.

A rise of Rs 4.70 crores to Rs 267.16 crores in Investments is suggestive of deficit financing, though, with the likelihood of sales of securities through the tap, the extent of deficit financing may be even larger. In this regard, we may note that, while, apparently, deficit financing during the week ended June 13 amounted to Rs 10 crores, we suggested last week that, with sales of securities through the tap, the figure may be higher at Rs 15 crores; and, in fact, it is now known that deficit financing during the relevant week was of the order of Rs 17 crores.

In spite of replenishment of their balances by deficit financing, the Central Government have experienced a small drain on their deposits such as to take the figure below the Rs 50 crore mark to Rs 49.90 crores. There might be some element of inter-government transactions. Thus, the Balances of State Governments have improved by Rs 1.89 crores to Rs 15.25 crores; and, at the same time, their borrowings from the Reserve Bank are marked lower by Rs 3.70 crores at Rs 46.63 crores.

Lastly, Foreign Balances have again suffered a drain of Rs 6.20 crores to Rs 17.42 crores.

According to the return of State Bank for June 20, Deposits have been marked down by nearly Rs 3 crores to Rs 417.81 crores from Rs 420.74 crores. However, Other Assets, which had been unduly high at Rs 18.03 crores, have fallen back to Rs 10.61 crores; nor is there any addition to the gilt-edged portfolio as we had surmised. This fact, coupled with a decline of Rs 3.43 crores to Rs 186.57 crores in Advances, has enabled the State Bank, in spite of lower Deposits, to liquidate its borrowings of Rs 2 crores. Furthermore, Cash Balances are considerably higher at Rs 35.27 crores against Rs 29.58 crores.

It was not so long ago that the banking system felt a pressure upon its funds. Today, as the return of Scheduled Banks for June 13 amply shows, the pressure is one of funds. Deposits have been marked up substantially, but Advances do not show any considerable change. Furthermore, the rise in Deposits has mostly occurred under the head of Time Liabilities. The result is that, while borrowings from the Reserve Bank are practically at a nominal figure, the Scheduled Banks, nevertheless, have a plethora of cash balances. In the week ended June 13, for example, Deposits have risen further by Rs 3.99 crores to Rs 1545.65 crores. On the other side of the ledger, Advances show a sharp slack season decline of Rs 7.62 crores to Rs 912.82 crores. Borrowings from the Reserve Bank stand reduced by Rs 1.85 crores at Rs 15.44 crores. Investments have been marked up by Rs 1.07 crores at Rs 484.85 crores. Cash Balances have risen by Rs 4.84 crores to Rs 184.30 crores.

British Bank Rate at 5 per cent

By Paul Einzig

ON June 19, exactly nine months after the increase of the Bank rate to 7 per cent, the Bank of England reduced it to its pre-crisis figure of 5 per cent. When it was raised it was expected that the authorities would be able to return to the pre-crisis Bank rate soon after the turn of the year. In fact they were unable to begin its gradual reduction until March and it took three months to complete the operation. The main reason for the delay was the attitude of trade unions. In spite of the increase in unemployment, the declining trend of profit margins, and the lessening of price increases, the trade unions have been pressing relentlessly for higher wages. And since the main object of the increase in the Bank rate to 7 per cent as to check wage inflation it was not justifiable to reduce the Bank rate unless and until the change in the economic atmosphere has induced the unions to adopt a more reasonable attitude.

Beyond doubt, to some degree the unions have moderated their demands compared with 1957 and earlier years. Even so, it seems that they have emerged victorious from the test of endurance. The Government seems to have given up hope of checking altogether wage demands beyond the extent of an increase in productivity. Although productivity is still static and is even inclined to decline, a round of increase of wages by 3 per cent seems to have been accepted as permissible. A 3 per cent inflation is undoubtedly an improvement on a 5 per cent inflation. But it is open to doubt whether the improvement is sufficient to justify a reversal of the restrictive monetary policy. And if the credit squeeze should be further relaxed it is doubtful whether wage increases would remain within the limit of 3 per cent per annum.

Relaxation of resistance to inflation is due in part to deflation fears. There is much talk about the belated action effect of recessions abroad on the British economy, and the Government seriously expects an increase in unemployment in the autumn. Even better advices from the United States during recent weeks have failed to prevent the development of this wave of pessimism. Hence the reduction of the Bank rate and the tax concession made by the Chancellor of the Exchequer to encourage capital expenditure. There is even some talk about a major tax concession in an autumn Budget to stimulate a revival of demand.

The Government's bid for popularity in preparation for the general election is another explanation of the change of policy. It is true, there is no need for dissolving Parliament until May 1960. But it

is inexpedient to leave the election to the very last moment, because it might have to take place in circumstances none too favourable to the Government. Political tacticians prefer to be able to fix the date sometime during the fifth-year of the five-year period, so as to be able to choose a favourable moment. In order to improve the Government's chances it would be necessary to make a beginning with the improvement of business conditions without much delay. For the electorate is not likely to be influenced by the evidence of last-minute changes in the trend.

In order that prosperity should yield results in the form of increased support for the Government it has to proceed for at least twelve months before the general election. This means that the recovery would have to begin fairly soon if it is to help the Government to win the election. The Government undoubtedly realises that economic recovery would not help unless it is accompanied by a reasonable degree of stability of

the cost of living, to allay discontent among the middle classes. On the other hand, it found that the period of relative stability of prices that has been experienced since last autumn has not restored its popularity amidst stagnating business conditions. So it is now trying to strike a compromise in the form of moderate prosperity accompanied by a moderate rise in prices.

It remains to be seen whether, in trying to get the best of both worlds, the Government will not end by getting the worst of both worlds. For the middle classes are likely to remain resentful if their position should continue to deteriorate as a result of the Government's inability to check excessive wage demands. The reduction of the rate of inflation from 5 to 3 per cent a year would not in itself restore the Government's popularity, unless it is accompanied by a really substantial expansion of trade and really substantial reduction of taxes. But a spectacular boom would step up the rise in wages and prices. And drastic

cuts in taxes are impossible in the absence of drastic economies which would check the boom. In order to be able to reduce taxation the Government would have to increase the Budgetary deficit, which again would accentuate the rise in prices.

No conceivable solution would be an unqualified blessing. The arrangement of dollar facilities which are under negotiation would further reduce the Government's determination to resist inflation. The conclusion of an agreement with de Gaulle to disarm French resistance to the European Common Market would be popular for a time, but the inevitable disadvantages of any such arrangement to British agriculture and to a number of British Industries would produce in the long run the opposite effect. Nevertheless, optimism about the Government's political prospects has increased lately, not because of any increase in its popularity but because of the increase in the Labour Party's unpopularity. —Copyright.

Recovery in Hessian

CONDITIONS in the jute goods market have been steady during the past week with prices especially in the hessian section staging a smart recovery. The main reason for the renewed interest evinced by operators in hessian would appear to be rumours that the Argentinian Government had lifted its earlier ban on the import of hessian. It may be recalled that the Argentine had suspended the issue of all import permits early in May pending a reappraisal of the country's economic situation. Later in the month it was announced that April shipments to that country would be allowed to go forward. This resulted in a slight recovery in hessian prices but in view of the continued uncertainty as regards firm sales due for shipment from May onward, prices could not make much headway. The news of lifting of the ban, therefore, has been greeted with a sizable improvement in hessian prices. There are also reports that some fresh business has been concluded on behalf of the Argentine for near shipments. Hessian 40" x 10 oz Ready closed on Friday last at Rs 40.30 as against previous closing of Rs 39.90. In subsequent sessions the rate further improved but toward close of the week it has developed a sagging tendency largely because of mills coming out as sellers at the higher levels. B Twills have also staged a moderate recovery in sympathy with hessians.

Though it is generally believed that coming weeks may witness a broadening of interest especially in the hessian section in view of the low burlap stock position in the US, operators are chary of extending commitments in the absence of fresh foreign enquiries. The dock strike is another restraining influence. The general tendency in the market is to stay action till the strike is called off. For a prolonged strike will have serious repercussions on shipments. Moreover, the week has brought the news that bulk handling has made further headway in many of the sugar supplying areas. It is reported that in Cuba shipment of raw sugar in jute bags is fast becoming obsolete, for, in the first half of the current year nearly one quarter of the exports has been in bulk. The report further has said that bulk handling has advanced much further in other sugar producing countries.

The jute goods market opened the week on a steady note on

reports of lifting of ban on imports by the Argentine and of fresh enquiries. Speculative buying in the fatka pushed up prices all along the line with hessian in the lead. Though mills came out as sellers at higher levels the undertone at close was fully steady. Hessian 40" x 10 oz Ready moved up briskly and was once again quoting above the Rs 40 mark to close at Rs 40.30, with July-September & Oct-Dec. done at Rs 40.30 and Rs 40.25 respectively. Rates in the heavy goods section also steadied up in sympathy with hessian. B Twills Ready was placed at Rs 97.45 with July-Sept at Rs 98.80 and Oct-Dec. at Rs 99.25.

With continued speculative support in the fatka, prices made further headway on Saturday. Hessian 40" x 10 oz Ready was finally placed at Rs 40.35 with July-Sept. at Rs 40.30. In the sacking section B Twills Ready was done at Rs 97.60, July-Sept. at Rs 98.95 and Oct-Dec. at Rs 100.00. Closing prices on Monday were higher on balance as follows: Hessian 40" x 10 oz Ready Rs 40.80, July-Sept. Rs 40.80, Oct-Dec. Rs 40.75; B Twills Ready Rs 98.15, July-Sept. Rs 99.50, Oct-Dec. Rs 100.50. The undertone was rather quiet on Wednesday due to selling pressure in the fatka. With mills coming out as sellers in forward positions prices declined all along the line. Hessian 40" x 10 oz Ready dropped 15 nP to close at Rs 40.65. July-Sept. was placed at Rs 40.70 while Oct-Dec. came back to Rs 40.60. In the sacking section B Twills Ready lost 40 nP to be finally placed at Rs 97.75 with July-Sept. at Rs 99.10 and Oct-Dec. at Rs 100.

The raw jute market, has ruled firm throughout the week. Assam Bottoms which was quoting at Rs 24.50 per maund at the beginning was placed at close on Wednesday at Rs 25.50 per maund.

Arrivals of raw jute into Calcutta and mill stations during May were put at 431,000 bales made up of 373,800 bales of Indian and 52,200 bales of Pakistani origin. Compared with the previous month total arrivals show an increase. The rise is largely brought about by the larger arrivals from Pakistan. Compared with the corresponding month of the previous year also, last month's arrivals are higher and here again the increase is due to the higher figure for Pakistan which accounted for only 36,000 bales during May 1957.

Total arrivals for the 11 months ending May 1958 when compared with the figures for the corresponding period last year show that arrivals of Indian origin jute during July-May 1958 are lower at 5,226,000 bales as compared with those during July-May 1957, the total for which period is 5,311,000 bales. Arrivals from Pakistan on the contrary are higher at 616,000 bales as against 597,000 bales in the corresponding period of the previous year.

Dock Strike and Export Sales

THE Tea Export Sale in Calcutta has been postponed for the second week in succession due to the continuation of the dock strike. It is generally feared that, if the strike is not called off soon, there will be congestion of stocks at the warehouse which, it is felt, may make a great deal of difference to the marketing prospect when normal shipments are again resumed. Overseas buyers are, therefore, inclined to buy cautiously and live on stocks on hand in the expectation that prices are unlikely to rise and supplies begin to press on the market.

It is significant from the angle of India's export trade that the disorganisation of normal operations in Indian ports has coincided with an identical situation in London docks. As the UK is the largest buyer of numerous Indian products, notably tea, it is felt that exports to that country will suffer in particular. To this extent, the competitive capacity of the Indian tea industry, which has been somewhat strengthened by the recent cut in excise duty and cess, will be affected.

Reports from the UK indicate that stocks there are low and that shortage of good tea is likely to persist, at least for another year. Dealers are wondering if shipment of North Indian new crop is to be held up for any length of time. Already quality teas will get a warm reception when they eventually reach London and get good prices. A long delay may well increase the competition in view of the general scarcity of good teas there at present.

As a matter of fact, the trade in London has endured another week of completely dislocated supplies, because of the strikes in the London docks. Since they started, the quantity of tea put up for auction each week has progressively fallen. For the current week, offerings were cut so severely—by about two-thirds to 21,646 packages—that it was insufficient to hold more than a one-day sale on Tuesday. The reduced quantity was generally well competed for at fully steady to dearer prices. The indifferent invoices were only easier.

As at the previous week's auction, buyers showed considerable restraint in the face of the depleted offerings. In large measure, this was because they were said to hold sufficient stocks of the plainer

types to carry them over the period of dislocation, providing, of course, it was not of long duration. Moreover, there did not appear to have been any great change in the rate of consumer buying. Had there been a change, it would have meant replenishment, buying on a greater scale by the blenders. Next week, the trade is faced with a complete stoppage of sales, the quantity advertised being postponed until the week beginning June 30.

The experience of the current London dock strike, however, suggests that buyers are not much concerned about any temporary interruption of supplies. In spite of the strike, prices at the auctions there are maintained and buying is selective. In general, the trend in buying, as set last season, is likely to continue this year. Of late, certain countries have been enquiring for particular grades. Russia's operation last year in Calcutta helped to absorb large quantities of Assam Broken Orange Pekoes and Darjeeling Leaf grades and is expected to extend support for these types this season also. Turkey and Iran may again be expected to buy Whole Leaf and Tip-ty teas, while the West Asian countries may go in for Black Fannings.

Meanwhile, in the Coch'n market, offerings were 1.51 million pounds. Quality from all districts again showed a general decline. Demand was limited and prices were lower. Withdrawals were again heavy. Nilgiri teas came to a weak market following a further falling away in quality and prices were generally 20 to 30 nP per pound lower. Good Medium teas met with fair enquiry; but it was at a drop of 15 to 20 nP and their Fannings often proved difficult of sale.

Medium, Low Medium and Low-grown Broken teas eased by 10 to 20 nP per pound; but were generally sold. Similar Fannings were, however, the weakest feature of the sale and generally withdrawn without bid. Plain stalky kinds declined by 10 nP. Black Leaf Broken and Fannings were sold readily at a drop of 10 to 15 nP. Whole Leaf grades followed the downward trend of the market and were up to 20 nP easier. Following rates were quoted:—Plain BP Rs 1.45; Low Medium Rs 1.50 to Rs 1.60; Medium Rs 1.60 to Rs 1.80; Good Medium Rs 1.90 to Rs 2.20 and Quality Rs 2.50 to Rs 2.80.

With all centres operating including Russian buyers, an active general demand prevailed at the auction held in Colombo where offerings consisted of 6,488,723 packages. With the exception of lighter-liquoring sorts, higher-grown teas were appreciably dearer. Plain and Medium teas fetched steady prices. As the sale progressed, bright liquoring sorts and Uva teas advanced by 2 to 5 cents per pound. Small Leaf low-grown Broken teas advanced by 5 to 10 cents, while Persian Gulf types advanced considerably. At the close of the sale, other teas fetched firm to dearer prices.

June 28, 1958

US Notes

TWO related actions last week offer further evidence of the Eisenhower administration's efforts to advance a liberal trade programme by aiding the American mining industry without damaging the economies of other countries.

On Thursday last, Secretary of the Interior Fred A. Seaton laid before the minerals subcommittee of the Senate another modification of the administration's domestic minerals stabilization programme, first outlined on April 28. This would provide additional government aid for small producers of lead and zinc, and would incorporate in the programme "bonus" payments for several minor materials.

Just a few hours later, on that same day, President Eisenhower notified Congress that he was taking no action at this time on the Tariff Commission recommendations to set up restrictions against lead and zinc imports, which the commission found to be threatening the hard-hit domestic industry.

The relationship between this Presidential decision and the minerals stabilization programme is evident from Mr Eisenhower's statement to Congress that the programme offers "a more effective approach" to lead-zinc problems than do higher tariffs or import quotas. He went on to say that he would take appropriate action on the Tariff Commission recommendations "after Congress completed its consideration" of the minerals stabilization plan. This has been taken as another indication of the administration's desire to avoid, if at all possible, serious restrictions against imported lead and zinc.

Under the original and basic 5-year stabilization proposal offered by Secretary Seaton, a producer of lead would receive at least 14.75 cents a pound for his output, and a producer of zinc would receive 12.75 cents, with the government making up the difference, if necessary, between those prices and the market prices.

Under the modification suggested by Secretary Seaton last week, the support price would be 17 cents a pound for lead and 14.50 cents a pound for zinc on the first 500 short tons of new output in each quarter of the year. Thus, a smaller producer turning out this amount or less would receive the higher payment for all his output, while a larger producer would receive it for only the first 500 tons. To safeguard the interests of foreign producers and prevent market manipulations as a result of

the stabilization payments, the plan also calls for limitations on both the quantities to be supported and the support prices to be paid. The limitation on lead would be 3.375 cents a pound, with the payments to stop if total national production exceeded 350,000 tons a year. On zinc, the support ceiling would be 2.50 cents a pound, on a limit of 550,000 tons a year. Prices and production rates of both lead and zinc are now somewhat below the specified limitations.

Mr Seaton also urged congressional approval of an earlier modification of the stabilization programme. This was the removal of copper from the supports payment plan, and the substitution of a one-year stockpiling programme that would see the government purchase up to 150,000 short tons of copper, at a price not to exceed 27.5 cents a pound. This would still leave in the stabilization programme four materials—lead, zinc, tungsten and acid-grade fluorspar.

The belief is that short-term support government purchases would be more effective than long-term support payments in aiding the copper industry, which now is burdened by surpluses. The price of copper on American markets now is being quoted at between 25 and 26.5 cents a pound.

In addition, Mr Seaton revived a recommendation made last year that "production bonuses" be paid on domestic output of beryl, chromite and tantalum-columbium. This proposal is designed to encourage domestic development of these minerals, which are highly strategic and for which the U.S. is heavily dependent on overseas supplies.

With the modification of its minerals stabilization programme, the administration may well be bringing it closer to approval by Congress, particularly by lawmakers from mining states. There are, for instance, some 500 small lead-zinc mines in the country which would benefit from the latest revision—and political as well as economic factor of considerable significance. The influential Senator Michael (Mike) Ansfield, of Montana has observed that the programme would "help stabilize the industry and keep the objectives of reciprocal trade."

It is noteworthy in this regard, that a five-year extension of the liberal US Reciprocal Trade Agreements programme, in a form acceptable to President Eisenhower, already has been approved by the House of Representatives and now is up for Senate consideration. An effective domestic minerals stabilization programme not only might obviate the need for steep tariff increases or import quotas against supplies from abroad, but also might win additional Senate support for the House-approved trade agreements bill.

The Senate minerals subcommittee, meanwhile, is losing no time in getting to work on the administration's minerals programme. Its chairman, Senator James Murray of Montana, hopes to have a recommended bill on the

Senate floor before the July 4 holiday week-end. This certainly is in line with President Eisenhower's request that Congress act "expeditiously" on the programme.

There still is no guarantee, of course, that the full Senate will approve a minerals stabilization measure. There is bound to be some opposition, particularly from lawmakers who oppose government subsidies in general. But it can fairly be said that the chances of approval appear brighter now than at any time since the programme was first presented to Congress last April 28.

★

THE US Department of Commerce has revised and brought up to date its estimates of consumer income distribution in the United States—with the results that are auspicious but hardly surprising. For they confirm, and support with detailed facts and figures, a basic economic trend, one that has become especially evident in the post-war period: the pronounced upward movement of US family income.

The estimates show that the flow of personal income to American families, including unattached individuals, reached a new high of \$328,000 million in 1957. This was 5 per cent above 1956, some 12 per cent above 1955, and about 20 per cent above 1953 and 1954. It was, moreover, more than 70 per cent above 1947—marking a notable decade of income growth.

Of course, the number of families, or consumer units, has increa-

sed steadily, from 44.5 million a decade ago to 53.5 million today. This means that the rise in income per family has been somewhat smaller than the over-all increase.

Nevertheless, average family income in 1957 amounted to \$6,130, compared with \$5,390 in 1953 and \$4,130 in 1947. This represents a rise of 14 per cent in the 1953-57 period, and of nearly 50 per cent in the 1947-57 decade.

Allowing for the rise in prices, the advance in real income—that is, actual family purchasing power—was 7 per cent from 1953 to 1957, and about 20 per cent from 1947 to 1957.

As the number of families rose, so did of course, their tax liabilities, particularly since the steeply graduated US income tax rates tended to move them into higher tax brackets. The 1947-57 rise in after-tax incomes, therefore, was somewhat less than the before-tax average.

But, even so, real income after taxes rose from \$4,610 in 1947 to \$5,480 in 1957, representing an average annual decrease of 1.75 per cent over the decade. Indicative of the rapid postwar growth rate, is the fact that the average annual after-tax rise in family incomes was 1.25 per cent when figures for the 1929-1957 period.

The rise in average family income during the 1947-57 decade was reflected in a marked upward shift on the national income scale. The number of families with annual incomes of \$4,000 more than doubled between 1947 and 1957,

Precision at every stage of production lies behind the symbol of the

less web" and the planner worked in cooperation with the natural unities. The TVA is not a la mode these days, being subject to the same kind of jealousies and pressures to which the DVC has succumbed even before it began functioning according to its original ideals. But the lessons of the TVA and the DVC have their relevance in framing our ideas about an intelligent agricultural policy.

★

If we are agreed that it would be expedient to develop the spirit of the river as part of our agricultural policy, then the principle of delegation of power inevitably comes up for discussion. On the TVA model, this will have to be an independent authority outside both the Central and State Governments. The moment is not perhaps propitious for discussing

the merits of autonomous corporations in India. People are out of love with them at present, largely because of the recent LIC episode. It is not generally realised that, in a sense, the moral of the episode was the need for real autonomy for these independent bodies. In any case, I suspect our people as a whole are not too favourably disposed to any endeavour other than that of Government. It may be due to centuries of dependence on authorities for everything. Part of the reason for the steady attrition of the original impulses behind the DVC was no doubt inter-provincial jealousies and so forth and reluctance of various repositories of power to part with it. But another reason for its developing cold feet was the constant swiping at it by people both inside and outside Parliament, who did not realise that autonomy meant also the right to make mistakes. The Indian public seems to

have a morbid suspicion of financial skulduggery in public life. A man has to be all the time wary that some over-zealous effort of his—possibly an error of judgment by objective standards—is not worked up into a plausible impropriety.

★

Mr Krishnaswamy suggests the formation of river boards, not so much for individual rivers as for certain well-defined river systems. For instance, he suggests three boards—first, the Western Ganga Board for the Bhakra Nangal, Jamuna and the Ganges up to the Sone confluence; second, the Eastern Ganga Board for the rest of the Ganges, Kosi, Damodar; and third, for the rivers of the south and Mayurakshi. He wants the administration taken more or less clearly away from government departments to avoid what he calls the Balkanisation of the river valleys. And since he wants an integrated development, which includes such diverse things as afforestation and education and possibly family planning, the present governments on linguistic or near linguistic basis will have no functions left except to collect taxes and vote grants for these corporations.

★

It is here that the comment I made last week regarding the limitation of the usefulness of Mr Krishnaswamy's book becomes relevant. Many people will agree with him that the logic of his arguments is fairly irresistible. But does he seriously believe that those who have their interests firmly vested in the present arrangements will allow them to be uprooted? Here and there, you may find a politician who will gladly make the sacrifice involved in the process, especially if it is made clear to him that, in his capacity other than that of a politician, he may entrench himself in the new seats of power. And unless it finds universal acceptance, the idea is doomed to failure, for, the dissident politician can work up irrational feelings against it. The acquiescent politician will then find that he has made his sacrifice in vain.

★

It is true that present arrangements make nonsense of natural unities. It is true, political boundaries are absurd. But then there is, I suppose, a completely logical case for a World State, but that has not brought any nearer the practical realisation of the idea. The best thing that can then be done, in the circumstances, is to try to get the substance of the idea by developing a whole series of conventions about how the affected States should behave in a given context. I agree, the present arrangements are too legalistic. It seems to me that the party whip could be used with advantage in

non-parliamentary and non-political contexts. We all know how, in matters like party discipline, the big club is wielded to quell local intransigence. Why should it not be made use of for enforcing the development of the healthy conventions in regard to disputes over river waters and so on? I can't think of a more legitimate use of the bludgeon.

★

Apart from these, Mr Krishnaswamy has some interesting suggestions regarding the linking up of the river systems of the country. The idea is not new, but he has given concrete suggestions which make it seem, at least to one non-expert, entirely practicable. It is the sort of idea that would at once fire the imagination of the people and bring abundance to them. Not the least important aspect of the idea is its ability to foster the unity of the country, both by the economic advantages generated by it and by its acting as the concrete symbol of the mystique of Bharat Varsha. I think the Government of India should give the idea greater attention than they have done so far.

★

Not setting out to write a review of Mr Krishnaswamy's book, I have not given you any indication of the fact that he deals with other aspects of sound agricultural policy—like land reforms, for instance. I would recommend a careful study of the book to anyone who wants to get a clear grasp of the issues involved in thinking out a sound agricultural policy for the country. The volume is published by Bhamati Books, 3 East Circular Road, Madras 23.

★

A grand old man passed away last week. I refer to Mr Ramdev Chokhany, the privilege of knowing whom I had for more than forty years. He was in a sense the first of a breed—a Marwari whose English was impeccable, whose culture included much more than mere toleration of what the West had to offer. Mr Chokhany was a founder member of the Calcutta Stock Exchange, and his vivid personality enlivened any discussion in which he participated. Another distinction to which he could claim should, strictly speaking, be recorded in the columns of our esteemed contemporary issuing from Mission Row; it is that he was—if my memory serves me right—the first Marwari to get a frequent mention from old Pat Lovett in his Ditcher's Diary. Mr Chokhany was never in sympathy with Cassandra-like shrills of gloom; and, to the extent that the Stock Exchanges have lately been much more cheerful, a sense of peace and fulfilment could very well have been the atmosphere in which he breathed his last.

GATEWAY GOSSIP

It is perhaps an exaggeration to say that it is the Government who are primarily responsible for the present deterioration in the labour situation in the country. But it would appear that they have to share the blame for the sorry state of affairs on the labour front to a larger extent than the other parties concerned. For the privileged treatment that is being meted out to the comparatively small number of organised workers ever since the Congress party came to power has given rise to the impression among labour that its needs should have the topmost priority at all times. The fact that organised labour has the power to compel attention of the people at large in the most telling fashion has earned for it a high place in the programme of the various political parties, who vie with one another in promising it anything and everything. It is no wonder that in this unhealthy competition among the political parties, labour has lost sight of all relevant factors except its immediate gains. With the rapid progress of the public sector, Government have now become themselves employers. From the frequent unrest in public sector enterprises it would appear that their special interest in labour welfare has placed them in no better predicament than employers in the private sector.

The cumulative effect of the acts of omission and commission on the part of Government, the growing tendency on the part of organised workers to place their narrow self-interest above everything else and the inability of private employers to do anything effective toward improving labour relations is the

S. E. RLY TENDER

Sealed tenders are invited for tender No. PC/COS/1434/WP/1075/GB4/58 for supply of Netting Steel weld mesh 60" x 60" each sheet, with rectangular mesh 3/4" x 3/16" x 10. G black wire mild steel for smoke box=6300 Sft.

Tender forms are obtainable from the Office of the undermentioned, South Eastern Railway, Garden Reach Calcutta-23, (P. C Section) on remittance of Rs 2/- (not on refundable) per copy per tender by money order to him direct in the case of outside firms and on production of cash receipt from local firms. Earnest money against the tender is Rs. 315/-. Closing date of the tender is 25.7.58, at 12 noon. Firms not on the Railway's list of approved contractors must enclose a valid income-tax clearance certificate along with the Earnest money receipt with the Tender.

Industrial Relations

slowing down of the tempo of activity in the country. It requires no long winded argument to prove that work stoppages of any kind will have serious repercussions on the national economy in the present context of planned endeavour as envisaged in the five year plans. The main objectives that the nation has addressed itself to achieve are directly related to its performance in the various spheres of production. It is, therefore, incumbent on everyone in the country to do one's best toward reaching the production targets at the scheduled time. But it is too much to expect that such a concerted effort. For in the first place this calls for a general realisation that a sizable improvement in the standard of the people cannot be brought about without the successful implementation of the Second Plan. Government should put forth special efforts to convince labour that its interests are safe in their hands. Labour on its part should realise that it is part and parcel of the nation and as such its primary duty is to do nothing that will retard the development of the country which alone is capable of ameliorating the condition of the millions of unemployed and under-employed people who do not belong to its ranks. In this regard it may be noted that the chances of labour realising its responsibilities to the community will become better if it is saved from the attention of political parties.

The recent unhappy occurrence in Jamshedpur resulting in the loss of production of steel, one of the most essential requirements for the implementation of the development programmes under the Second Plan and the All India dock strike which has disrupted traffic in the country's major ports for nearly two weeks now are rude reminders that all is not well with the labour situation in the country. While it is true that there are various reasons, some requiring simultaneous effort in diverse directions, for the present epidemic of discord between management and labour, it is to be admitted that the situation calls for speedy remedy because the consequences of not attending to this matter will be disastrous for the nation as a whole.

A direct consequence of the unsatisfactory labour situation is the low productivity in organised industries. This is an issue that a country which is planning to make rapid progress in industrialisation can ill afford to neglect. It is a matter for deep regret that this is not given the attention it deserves by labour. The fact that labour does not show much enthusiasm in considering the problem of productivity need not, however, discourage employers from doing what they can to im-

prove matters in this regard. It would appear that managements can do quite a lot themselves before asking labour to do its part. Speaking at the Institute of Industrial Engineers recently Mr K. T. Chandy, director of Hindustan Lever Ltd., has pointed out that prior to demanding a higher productivity from labour, management should do everything possible to improve the efficiency of the factors within its control. When labour finds that management is going about its job in a systematic fashion, checking constantly items of expenditure and drawing up plans for further development on data obtained from market research, it will also imbibe a sense of alertness and will be in a better frame of mind to do its part in increasing productivity than if it is under a less careful management.

Management can also play an important part in minimising the effects of rationalisation. Mr Chandy has emphasised the need for drawing up plans well in advance with a view to finding alternate employment for redundant labour. This is very important because there is bound to be some retrenchment in particular industrial undertakings as a result

of higher productivity of labour. Here again Mr Chandy has made it clear that whenever labour is asked to accept retrenchment as a result of an increase in productivity, it has every right to ask management to prove to its satisfaction that steps have been taken to increase the efficiency of all factors of production which are within its (management) control prior to proceeding to retrenchment. The aim should be to convince labour that a reduction of the labour force will be considered only as a last resort. Mr Chandy has further suggested that all schemes for increasing labour productivity should be drawn up sufficiently in advance so that managements will have ample time to make preparations for providing redundant labour with alternate employment.

But it would appear that the problem of drawing off redundant labour can be effectively tackled if industrial undertakings in a region act together. This will necessitate "an integrated regional effort to see that disposition of labour is so planned that existing undertakings are made more healthy and new undertakings are started which will draw away the uneconomic surplus."

MORE FOREIGN EXCHANGE FOR THE NATIONAL PLAN...

Extensive international trade is essential for the development of national economy. A country's foreign trade largely depends on efficient banking service. With a network of correspondents at all important trade centres of the world the United Bank is equipped to render adequate service and give expert guidance in matters of foreign trade.

Artificial Silk Industry

The Art Silk Fabrics industry has made commendable progress during the past few years. According to an estimate prepared by the Textile Commissioner, production of art silk fabrics in 1957 has been of the order of 279 million yards, as against 179.98 million yards in 1954. The progress of the industry has been greatly aided by the protection enjoyed by it since 1934. As a result of the Tariff Commission's enquiry into the industry in 1955, protection was accorded to the industry upto 31st December, 1958. The industry has prayed for continuance of protection for a period of five to ten years at increased rates of protective duty. It has been represented to the Commission on behalf of the industry that it has not consolidated itself, that raw material supplies are inadequate and that there is still keen foreign competition in prices, especially from Japan.

In the course of his speech at the public enquiry into the question of continuance of protection to the artificial silk and cotton and artificial silk mixed fabrics industry held on 17th June in Bombay, Mr C. Ramasubban, Chairman, Tariff Commission, has pointed out that one of the tasks of the Commission is to establish a reasonable basis for estimating the current and future demands for art silk fabrics in the country. For during the course of the present enquiry the Commission have received varying estimates of demand ranging from 300 to 450 million yards a year. The Commission are also confronted with the problem of assessing the weaving capacity of the powerloom and handloom sectors of the industry.

The question of an adequate supply of raw materials for the industry has gained special importance in view of the present stringency of foreign exchange. As against an estimated demand of about 80 to 85 million lbs of art silk yarn, current domestic production is about 43 million lbs. It would appear that the industry is now dependent on imports for nearly 50 per cent of its requirements. As a result of the expansion programme of the various art silk producers in the country, it is expected that production will go up to about 100 million lbs by 1960-61. According to the Development Wing, the demand for art silk yarn is estimated to reach the level of 100 million lbs by 1960-61.

It would appear that the industry is experiencing considerable difficulty in obtaining yarn of good quality. According to the Development Wing the abrasion and dimensional stability of the various types of rayon yarn manufactured

in the country do not compare favourably with those of imported rayon yarn. As regards the question of supply of yarn in adequate quantities it is to be noted that shortages may be due to faulty distribution.

Exports of artificial silk fabrics were fairly steady upto 1956. But during the first eleven months of 1957 only 2.64 million yards valued at Rs 46.45 lakhs have been exported as against 3.59 million yards valued at Rs 64.16 during 1956. The downward trend in exports has occurred in spite of the various forms of assistance given by Government. Some of the steps taken by Government to promote exports are drawback of import duty and refund of excise duty on yarn used in fabrics subsequently exported grant of special import licences for yarn and fabrics against exports of fabrics and the setting up of the Silk and Rayon Textiles Export Promotion Council.

★

Bombay State Financial Corporation

The working of the Bombay State Financial Corporation for the year ended March 1958 has resulted in a profit of Rs 8.23 lakhs before appropriations as against Rs 7.38 lakhs in the previous year. Despite the increased earnings the Corporation had to obtain a subvention from the State Government to the tune of Rs 4 lakhs so that it could pay the shareholders the guaranteed minimum dividend of 3½ per cent. A subvention of Rs 3.41 lakhs had been received last year also for the same purpose. The increase in the subvention is mainly due to the higher provision for taxation and an expenditure of Rs 20,000 incurred in connection with the issue of Bonds during the current year. After making provision for reserves of Rs 88,000 and setting apart a sum of Rs 4,40,000 for taxation, there remained a balance of Rs 3 lakhs to be appropriated toward distribution of dividends, thereby necessitating the application to the State Government for the subvention.

During the past year the Corporation had received 84 applications for a total amount of Rs 2,67,74,000. Of these 17 were carried forward from last year. Twenty-five applications for Rs 1,805,000 were sanctioned during the year. Four applications were rejected 16 were otherwise disposed of and 30 applications for Rs 13,058,000 were pending at the close of the year.

In sanctioning loans the Corporation has not set out any priorities for considering applications and it offers assistance for the establishment of new concerns as well as for implementing the expansion programme of existing concerns, keeping in view the development programme of the Second Five Year Plan and the industrial policy of the Government of Bombay. The corporation mainly caters to the financial needs of small and medium scale industries.

Dearth of Staple Fibre Yarn

THERE is presently a great dearth of Staple Fibre Yarn in the Bombay market and prices have risen by some six to seven annas per pound. Although the Board of the Bombay Yarn Merchants' Association has fixed ceilings for June and August deliveries at Rs 715 and Rs 730 respectively, market circles apprehend a further rise in prices if the supply position does now show an improvement soon.

It is reported that the Nagda factory of Gwalior is not able to make sufficient supplies due to lack of requisite raw materials—chemical and other pulp—which are imported from abroad. The staple-fibre is extensively used by the handloom and powerloom weavers and has been proving a good substitute for imported cotton varieties. It is, therefore, felt that the requirements of such industries need to be covered by giving them the highest priority.

Art Silk doubling mills are reported to have been considerably perturbed over the absence of any provision for their share of indigenous rayon yarn in the proposed scheme of distribution. According to the revised scheme, doublers and twisters will not be treated as consumers of yarn, but as processors, and hence they will not be allotted indigenous yarn in future. They will, however, be given supplies equal to their quota for 1½ months as an interim measure.

The mills falling in this category have, therefore, urged the Textile Commissioners to make provision in the new scheme for supplies of yarn. In the absence of such a provision, it is pointed out that nearly 16 units, operating in Bombay, will be placed in a precarious position compelling them to close down their factories.

★

Oils & Oilseeds

The markets for Oils and Oilseeds suffered small losses on balance due to scattered selling on reports of beneficial rains in some producing areas. Spot Groundnuts were well maintained, while distant contracts drifted lower. August delivery changed hands at Rs 168.82 to Rs 169, to finish at Rs 167.85. Ready bold quality was quoted at Rs 35.12 and Groundnut Oil at Rs 18.50.

Exporters of groundnut oil and HPS groundnut have been considerably perturbed by the recent directive of the export authorities to the effect that they should submit applications for export quotas for these commodities at the same ports from which they effected shipments in the past. Shippers have pointed out that, while they are willing to stand by the official decision, their delayed announcement will cause much hardship.

In the Castor seeds section, September delivery moved between Rs 155.12 and Rs 155.50, to finish at Rs 155.25. Ready was quoted at Rs 30.06 and Castor Oil, commercial quality, at Rs 15.25. The clash of a dock strike in London with strikes in India has, however, caused considerable anxiety on the London market about supplies of castor oil and it has brought out a demand for spot and nearby, sufficient to produce a fair premium over the more distant positions.

The Linseed section ruled steady. September delivery changed hands at Rs 32.06 to Rs 32.19. Bold ready was quoted at Rs 31.75 and Linseed Oil at Rs 16.19. Reports from London have indicated that the new Canadian crop has not improved much and total plantings have not been as high as farmers originally intended. But, consumers have not been inclined to step up purchases and are taking the view that supplies are adequate for consumption at the current level.

In the Cottonseed section, September delivery moved between Rs 112.00 and Rs 112.75.

★

Gold & Silver

Bull operators on the Bombay Bullion Exchange preferred to book their profits. Easy advices from Calcutta where bull operators had to pay heavy carryover charges caused a bearish feeling on the local market. The Gold section suffered a setback with Ashad delivery marked down to Rs 107.12 from Rs 107.56. Spot changed hands at Rs 107.87 to Rs 108.19, to finish at the former level. Arrivals were nil, while offtake was 3,000 tolas.

In the Silver section, arrivals were 11 bars, while offtake was 10 bars. Kutcha receipts were 7 bars. Ashad delivery moved between Rs 184.25 and Rs 184.94, to finish at the former level. Similarly, spot closed at Rs 183.87 after touching a high of Rs 184.56.

★

Non-Ferrous Metals

In the Bombay Non-Ferrous Metal market, Zinc prices have forged ahead to Rs 71 from Rs 62 per cwt due to fears of scarcity conditions as a result of the dock strike. Traders and speculators appear to have cornered their stocks and are anxious to obtain as much stock as possible, while the stockists are reluctant to part with their own prices. Tin and Lead prices have also strengthened. Lead is quoted at Rs 67 per cwt and Tin Rs 132 per quarter.

On the London Metal Exchange, Copper, after initial firmness, turned a shade quieter on rumours of possible imposition of 1.7 cents of import duty on the metal by the USA. The prospects of resumption of stock-piling has helped to better the sentiment in the Zinc section. Subsidy rumours are a dominant factor for the bullish tendency also in Lead. In Tin, there is no appreciable change and the rate is moving around £730 per ton.

THE production of Cloth and Yarn has shown a slight improvement in May as compared with the past three months of the current year. The improvement has been of the order of 13 million yards of cloth and 5 million yards of yarn at 420 million yards and 140 million yards respectively. However, when compared with the corresponding period of last year, the figure is lower by 33 million yards and 10 million yards respectively. It is difficult to say at this stage whether the improvement, noticed during the month under review, has arrested the rot that had earlier set in and has reversed the previous declining trend. Perhaps, this will be known only when the production figures for the current and the subsequent months are released. The Millowners' Association is, in this connection, says that the increase is not due to any improvement in the present condition of the industry and, it is pointed out that it is due to there being 27 working days in May as against 26 working days in April.

Meanwhile, the All-India Exporters' Association has drawn up a 17-point formula to step up India's textile exports and submitted a memorandum to a special Committee appointed by the Government. The Association has suggested that all efforts should be taken to bring down the cost of production of mill cloth, including the revision of taxes and increasing the efficiency of labour and management. The Association has also suggested that, with a view to increase the exports of fine, superfine and printed cloth, impetus should be given to those who export a greater quantity of these varieties, while mills which manufacture such goods should be permitted to import foreign cotton equivalent to its content in the cloth which is manufactured for export. Finally, the Association has suggested the convening of a tripartite conference of the Government, the cotton textile manufacturers and the cotton textile exporters to discuss the difficulties confronting the industry and trade. Such a conference, it is said, will help co-ordinate the efforts of all the parties to boost up exports of Indian textiles.

According to the reports from the Bombay piecegoods market, there has been no improvement in the domestic offtake of cloth. It is stated that the present state of affairs will continue for another six weeks or so. The consumer preference for finished goods is, however, more in evidence and, as a result, it is learnt, a number of mills are installing finishing and dyeing plants. Meanwhile, the Textile Inquiry Committee has begun to function in right earnest and the outcome of this enquiry is eagerly awaited by the trade and the industry alike.

Improvement in Output: Formula to Step up Exports

On the export front, trading conditions continued without any appreciable change. This is largely due to the fact that India's traditional buyers are faced with serious economic or political problems as a result of which there is no bulk buying orders from them. In view of the present dockworkers' strike, the next fortnight or so is not expected to fare well. In fact, from the trend of bookings, trade circles feel that the performance for another two months may not be worthwhile. At this rate, fears are expressed that the overall position will suffer considerably during the current year.

×

COTTON MARKET:

Whether because of the dockworkers' strike or by reason of the Government's inability to make up their mind, the interest in a further export quota for cotton has temporarily subsided. This has given rise to speculation in cotton circles that the Government are likely to announce a further export quota only after the monsoon. There is, however, a school which welcomes such a postponement, if only because that will any day be better than the present uncertainty. The interest in the probable ad hoc export quota to China also seems to have cooled off. Apart from the fact that the terms offered by the Chinese are not sufficiently attractive, cotton interests have not been able to assess the probable requirements of that country.

Some of the established cotton exporters, new comers as well as the displaced cotton traders, in a representation to the Government, have pointed out that the change in export policy on the basis of "first-come-first-served" is not in the best interests of the country, as such a policy induces the foreign buyers to mark down the prices and as such the country cannot hope to earn foreign exchange as it should in normal course of business.

There is a force in the above argument though it is realised that the Government want to earn foreign exchange in the shortest possible time. This can be done in shortening the period instead of "first-come-first-served". So long as the quota system operates, it should be the duty of the Government to see that all those, who are entitled to such quotas, get fair chance of business. The policy of "first-come-first-served" serves naturally a few vested interests to combine and exploit the position for their own means. Hence, it is suggested that it will be in the fitness of things that the policy of "first-come-first-served" is given up when fresh export quota of cotton is decided upon.

As regards imports, there are indications that the balance of trade between India and Egypt

will turn in favour of the former this year on account of lower purchases of Egyptian cotton by Indian mills. Of the first import quota of 30,000 bales for sterling area cotton, more than 24,000 bales are stated to have come from Sudan. Egypt is reported to have raised doubts about the successful implementation of the recent Indo-Egyptian payments agreement for cotton against jute goods and tea from India. Egypt's complaint has been that, while she has promptly lifted jute goods and tea from India, the latter has been hesitant in buying Egyptian cotton. On balance, it is stated that her cotton stocks continue to remain at a high level. Egypt is reported to have appealed to the Government of India to expedite the import of cotton. It remains to be seen what steps the Government will take as imports of cotton from Sudan cannot be cut in view of the fact that Sudan has been a prominent buyer of Indian textiles.

×

STATISTICS:

Export of cotton by rail, from 1st September, 1957 to the 19th June, 1958, were 262,632 bales. Estimated mill consumption in Bombay, during the same period, was 1,023,183 bales as compared to 1,076,666 bales in the corresponding period of last year. Estimated stock of raw cotton, held by exporters, dealers and mills in Bombay, on the 19th June, 1953, was 798,084 bales as against 646,158 bales on the corresponding date of last year.

×

KARACHI COTTON MARKET

Prices in the Karachi cotton futures market continued to rule firm, being aided by better enquiries from overseas buyers. There was keen local and upcountry buying. Consequently, prices moved up, Punjab Dehi being quoted at Rs 57; 4F Roller at Rs 70-14; 289F Roller at Rs 77-6; 4F Saw Gin at Rs 78-6 and 289F NT Sindh Saw Gin at Rs 91-14.

×

ALEXANDRIA COTTON MARKET

The Alexandria cotton futures market ruled steady. There were fairly good export enquiries and sizable domestic mill support. A marked rise in prices was, however, prevented by the reports of favourable weather and satisfactory crop progress.

×

LIVERPOOL COTTON MARKET

Conditions in the Liverpool cotton market ruled better and the offtake in the ready and shipment sections continued to reflect the recent small improvement. The demand was mainly for USA styles with the medium and lower grades covering a wide staple range constituting the major portion of the turnover.

NEW YORK COTTON

In the New York cotton futures market, prices drifted slightly lower due to hedge selling and liquidation on American account. Operators were generally disinclined to commit themselves to either the long or short side.

S. E. RLY. TENDERS

Sealed tenders are invited for tender No. Con[1]GM[15]HD[58-59 for supply of Block Teak Wood and Board double panel Teak Wood of different sizes. Tenders will be opened at 12 noon on 30-7-58. Tender forms with full particulars are obtainable from the office of the Controller of Stores (Construction section) Garden Reach, Calcutta-23 at Rs. 5/- (not refundable) per copy by money order to him direct in the case of outside firms and on production of cash receipt from this Railway's Chief Cashier by local firms.

Tenders should accompany the receipt for depositing earnest money of Rs. 1000/- with this Railway's Chief Cashier without which the tender is liable to be rejected. Approved contractors having permanent deposit of Rs. 1000/- with the Controller of Stores are exempted. Firms not on this Railway's list of approved contractors must enclose a valid Income Tax Clearance Certificate with the tender.

DELHI REVIEW

AFTER completing his interrupted holiday, the Prime Minister is back at his desk with a large number of problems awaiting his consideration. There is no doubt that a fortnight or so away from the capital and work has done Mr Nehru an immense amount of good. He looks more relaxed and refreshed than he did for weeks or months before he left for Manali. It is not only cessation from work that holiday afforded him: it has restored him his former insouciance, and the gracious beauty of the Kulu Valley has undoubtedly employed its healing power on his confessedly bruised soul. It would be an excellent idea, if he could give himself such holidays more frequently than has been the case for the last ten years. His visits abroad, which he used to pretend were some form of holiday, were nothing of the sort since he had as gruelling a schedule as at home to keep. What he needs is short spells—even week ends, if they are all that he can give himself—of complete rest and being left to himself. The consequences to him and to the nation of such holidays outweigh any likely disadvantages from the absence of his guiding hand for a short while.

Back to the Grind

From another point of view also, his absence from work has been worth while. During his absence, work has gone on smoothly and major decisions have been taken by his colleagues. The all India Dock strike has been handled both with tact and firmness and though its final settlement has been effected only after his arrival, it was clear that Government had the situation well in hand. Likewise, renewed panic about foreign exchange shortage has not scared authorities in Delhi, who know exactly what can and should be done. There can be little doubt that the question "After Nehru, what?" need not evoke a despondent reply, if all that was involved in the succession was ability. For there are undoubtedly quite a number of people who can run this country with reasonable efficiency. But then there is much also needed for political leadership besides ability in the abstract.

Back from Manali, Mr Nehru was asked the inevitable questions. He was asked about the execution of Imre Nagy and his colleagues. Mr Nehru replied cautiously, "It was most distressing both in itself and because of its possible consequences." This is a reply wholly welcomed in different quarters for different and even opposite reasons. The Russians may feel that Indian "neutrality" which enables us to judge each issue on its own merits, and which they have praised in other contexts, has its inconvenient aspects. Readers may recall reports about Mr Khrushchev's sulking at Mr Nehru's comments on the ideological bullying of Yugoslavia. Indian communists are as usual in a muddle about the right attitude to take over the issue, since their spontaneous reaction to the event is so different from what it "ought to be." Unfortunately for them, this is a more serious matter than sending fraternal greetings to Yugoslavia and later calling it names.

Moreover, their more important leaders are away from Delhi, happily fishing in the troubled waters of the ports. And Messrs Gopalan and Ghosh are away from the country itself, being now in Eastern Europe, apparently for reasons of "health". Only P C Joshi is in Delhi, and if he obeyed his impulses, he would probably embarrass Russia, and it is only recently that he has been restored to favour in the party and it is unlikely that he will take a decision that accords with his probable real feelings. But dilemmas arising out of the conflicts in the breasts of the leaders themselves are not their only problem. They are reportedly faced with the demand by a section of the rank and file of the party that the CPI should not only not associate itself with the Russian view of the Hungarian

executions, but actively condemn it. How the leaders will meet this demand remains to be seen; on the basis of past conduct, it is legitimate to infer that the Russian attitude will find public endorsement, with private attempts at squaring the circle which, apparently, are successful with the rank and file. But then, the communist party cannot be too happy about the way in which Russia is thoughtless of the Indian party's fortunes. For, it took the Indian Communists a long time and a lot of equivocation to live down the Hungarian revolt of 1956. In some sense, the execution of Nagy has created an even more horrified revulsion among the peoples of the world. Having to combat renewed hostility to Communist methods and renewed suspicion about their good faith—a thing they were at such pains to establish at Amritsar—is a distinctly unwelcome task. And Mr Nehru's apparent disapproval of the executions is not going to make things easier.

On the other hand, there are people who feel that Mr Nehru's condemnation should have been more explicit. They seem to feel that "distress" is hardly an adequate reaction to the moral and political turpitude involved in the executions. Moreover, they feel that the second reason he gave for his "distress"—the possible consequences of the execution—somehow weakens the impact of the first. These people, who are mostly in PSP circles, say that there is in this, as in Mr Nehru's attitude to the revolt itself, an element of equivocation. All this seems to be unnecessary hair splitting. And Mr Nehru is certainly right in referring to the consequences of the event in the larger international context as "distressing". For, in many Western reactions to the event, there is a gratuitous linking of this to the "summit conference" and efforts at bringing about agreement on disarmament and control of nuclear explosions. A whole series of assumptions are brought into play.

The logic is as follows: The execution signals a return to the old Stalinist terror, and so the intensification of the cold war, and therefore it is useless to talk. Unless there is a conscious desire to mislead the public, it is difficult to see how the fallacies involved in this sequence of reasoning could have escaped those who employed it. Assuming as a fact that the execution is the result of Mr Khrushchev's blossoming into another Stalin, why should it lead to suspension of negotiation? Just because some of the attributes of Stalin are now found in Mr Khrushchev, does it mean he has become a complete reincarnation of Stalin? Is it not possible that Khrushchev may retain, in his international dealings, his earlier flexi-

bility? In any case the compulsions of coming to terms with Russia on disarmament have nothing to do with the character of the man, who is the nominal ruler there at the moment. If every international settlement is to be preceded by advance testimonials about the excellence of the character of the heads of governments, no negotiation will ever be possible. Even if the worst were to be assumed and it is to be taken that the ghost of Stalin has at last lodged itself in Khrushchev and has "possessed" him, the necessity to talk with him will remain. No one is asking the West to yield anything, but to refuse to talk merely because you don't like certain things Russia does is like objecting to have your hair cut by the only barber in the village, because you suspect he beats his wife. The circumstance that your suspicion is only too well founded does not improve matters.

Misunderstanding of his comments on Nagy's executions is perhaps the least of Mr Nehru's worries. Soon after his return, representatives of Dock Labour Unions sought his good offices to resolve their disputes with Government. Mr Nehru had to get down to it almost at once and, after two interviews with him, the dockers have called off their strike. This is a strike that should not have taken place at all, and its calling off will be welcomed by all who found that the stoppage of work at the ports was doing immense harm to the country's economy.

Another problem that is awaiting consideration by the Cabinet is the foreign exchange situation. As I said in the beginning, it is not so much the actual difficulties as panicky and thoughtless comment floating around that poses the most serious problem. Loose talk about devaluation as a remedy for the situation is an instance in point. This scatter-brained idea will solve none of our problems but will create a hundred new ones, like putting up the prices of our essential imports. What is not realised is that repairing the disequilibrium in balance of payments is a continuous process and is the result of innumerable decisions acting cumulatively. Cutting imports, increasing exports, securing foreign aid and deferred credits and so on involve in each case literally hundreds of decisions at varying levels. Take, for instance, the success of the State Trading Corporation in negotiating the export of Rs 3 million worth of sewing machines. Similar efforts in other directions will help ease the situation. While there is every need for asking Government to coordinate their efforts and to keep a careful watch over the situation, the public should help it by refraining from scaring comments about the desperateness of the situation.

NORTH INDIAN NOTES

Machine Tools Production

BY a record production of machines during 1957-58 the Hindustan Machine Tools Ltd, a State-sponsored enterprise, has exceeded the target fixed for it for 1957-58. While the target for 1957-58 fixed at the beginning of the Second Plan was 131 machinery, actual production amounted to about 402 machines, and thus represented an increase of about 300 per cent against the target originally fixed. In terms of the figures for production in the previous year also, the achievement appears no less outstanding since production during the last year was 135 machines. Considering the importance of machine tools production for a country wishing to restore balance to its economy by means of industrialisation, the success of the Hindustan Tools Ltd, in increasing its production three fold in the course of a single year, should be a matter for satisfaction.

The annual report of the Company for 1957-58 which record the achievements of the company during the year, points to the salutary effect which this increase in production had, on the price of the machines produced by the company. For example the sale price of 1,000 mm lathe was brought down from Rs 39,000 to Rs 29,500 with effect from June 1 1958 as against the landed cost of Rs 40,500 for imported machines of equivalent quality. The effect on the financial position of the company was to increase the net profits to Rs 30 lakhs which according to the report represents a fivefold increase over the previous year, the return on share capital being calculated at 54 per cent.

Equally remarkable was the success of the company at diversifying production by the addition of 10 types of radial drills to the existing range of six types of mill machines and two types of lathes. The value of this scheme lies in the fact that besides improving flexibility to the production programmes of the company, it has also made it possible to save foreign exchange to the tune of Rs 2 crores per year.

The company has entitled itself to public praise in other ways also. In this connection the report draws attention to the schemes introduced to improve labour welfare such as incentive bonus, enhanced wages and dearness allowance, construction of new houses as well as hospitals and dispensaries etc. This is a tribute to the progressive outlook that is being brought to bear on the working of the company by the management personnel.

The introduction of workers' participation in the management of

the company was a significant step in the progress of the company. To the Hindustan Machine Tools Ltd, went the honour of being the first unit in the public sector to be chosen for the new experiment of associating labour in the management of industrial concerns in the country. While at present this co-management has taken the shape of a works committee of 10 members with equal representatives from either side, the conversion of this works committee into a Joint Council of Management consisting of equal number of members from both sides is indicated in the report as being programmed for implementation in the near future.

The company has, in collaboration with the National Small Industries Corporation, initiated a scheme for establishing ancillary units in the areas adjacent to the factory.

Madhya Pradesh Financial Corporation

The year ended March 1958 has been a busy period for the Madhya Pradesh Financial Corporation. For, out of the total loan of Rs 71,90,000 so far sanctioned, Rs 53,40,000 were sanctioned during the past year. This sharp increase in the amount of advances has resulted in improved earnings which are again reflected in the sharp decline in the proportion of subvention payable by the State Government toward the guaranteed dividend. Whereas in 1955-56 the percentage of subvention to total dividend stood at 100 such percentage declined to 69.8 in 1956-57. In 1957-58 it has further declined to 54.3. The working of the Corporation during the past year has resulted in a profit of Rs 4,01,228.88 after payment of the expenses of administration and other charges. Out of this, a sum of Rs 18,186.80 has been provided toward payment of taxes for the assessment year 1957-58 in excess of the provision made out of the previous years' profits, leaving a balance of Rs 3,83,042.08. After providing Rs 10,000 to Statutory Reserve Fund, Rs 5,500 to Investment reserve, and Rs 2,07,542.08 toward taxation, there is only a sum of Rs 1,60,000 for meeting the guaranteed Dividend at 34 per cent. As the amount required for distribution of dividend is Rs 3,50,000, the shortfall is to be obtained from the State Government as subvention.

The Corporation has disbursed a total amount of loans of Rs 40,86,000 upto 31st March 1958. As a sum of Rs 25,000 has been received back from a borrowing concern as instalment toward the payment of principal, the amount of loans outstanding as on 31st March 1958 is Rs 40,61,000. The report of the directors note with satisfaction that during the year 1957-58, there has been no default on the part of any borrowing concerns in the repayment of the instalment of principal or the payment of interest.

NORTH INDIAN MARKETS

Foodgrains Markets Quiet

AFTER two weeks of bullish activity, conditions in the Hapur Foodgrains markets have turned quiet, thanks to the State Food Minister's warning to traders that the Government would seize grain stocks under the Essential Commodities Act, the opening of more fair-price shops and the possibility of stopping bulk purchases by flour mills. Wheat eased by 50 nP to Rs 17.50 per maund for the average quality and Rs 19 for the farm variety.

Latest Government estimate puts the total production of wheat, Bareilly and Gram. in the State, at 53.69 lakh tons as against 62.18 lakh tons last year. Apart from the fact that "rabi" crop yield, this year, has been poor, cultivators are also retaining part of their produce due to uncertainties about the next "kharif" crop, the sowings of which have commenced in some areas. Large-scale sowings will, however, begin after the rains.

Rice prices have registered fractional gains due to shortage of supplies. Firm Punjab advices accounted for slight gains in the price of Gram. Barley and Bejher prices have continued to rule steady, while Jowar scored some gains due to good demand for seeds in the face of poor local stocks. The markets for Peas and Arhar ruled quiet.

The Bombay grains market present a mixed appearance in the midst of moderate activity. Seasoned and superior varieties of Rice advanced by nearly Rs 5 per candy, mainly due to the growing shortage in the face of a fair demand. Despite this, traders were not very keen on selling in view of the reported shortage of supplies in Andhra and Madhya Pradesh.

The wheat section revealed a quietly steady undertone with dealers anxious to do business at the market rates. The Pissli quality from Rajasthan was done at Rs 165 to Rs 185, while superior lots from Madhya Pradesh were indicated at Rs 180 to Rs 205 per candy.

In the Coarse grains section, prices of Jowar and Bajra remained steady. Jowar from Sholapur was placed at Rs 115 to Rs 125 per candy and that from Madhya Pradesh at Rs 112 to Rs 115. Although prices in Madhya Pradesh were reported to be higher, traders were willing to unload supplies, because of financial stringency.

Sugar

Sugar markets ruled steady on expectation of an announcement with regard to the export policy for the sweet commodity. Demand from the consuming centres had been fairly heavy.

In the Muzaffarnagar market, prices of different varieties improved by 6 nP to 19 nP per pound for ex-mill delivery. Demand from Delhi, the Punjab, Gujarat and Saurashtra was fairly good. Following mill-delivery prices per maund were quoted:—Meerut Rs 35.56; Simbhauli Rs 36.50; Daurala Rs 37.56; Mowana Rs 37.50; Bij-nore Rs 36.50; Shamli Rs 37.25; Amroha Rs 36.06 and Modinagar Rs 37.12.

Khandari prices also recorded gains on good outside support. Rates moved between Rs 32 and Rs 34 per maund, according to quality. Production in some centres continues from wet gur.

Gur

The Gur market at Hapur continued to rule steady. Good demand from the consuming centres, before the advent of monsoon, accounted for fairly heavy offtake, reducing the stock to 75,000 maunds. Dry quality gur was quoted at Rs 13 to Rs 20 per maund and Kotha dry-wet at Rs 18 to Rs 19.

The condition of the standing cane crop is satisfactory, but the crop is now reported to be in need of rains. In the Muzaffarnagar market, prices displayed a firmer tendency thanks to good support from the Punjab and Gujarat, having advanced by about Re 1 per maund.

Shellac

Conditions in the Calcutta Shellac market have continued to rule quiet with prices moving within a narrow range as overseas buyers seem to be still marking time, awaiting the price stabilisation scheme. No one is reported to have made any suitable purchases for several months. Imports of shellac into London have been small; stocks are few and there is a lot of room for improvement in conditions are suitable.

Meanwhile, Pure TN quality shellac is quoted at Rs 67 per maund. Total shipments, during the month up to the 21st June, amounted to only 21,082 packages as compared to as much as 27,389 packages in the corresponding period of May. Out of these shipments, shellac accounted for 7,680 packages (9,815 packages in the previous period): Seedlac 11,810 (15,196); Buttonlac 310 (854) and other varieties 1,282 (1524).

THE PENINSULA

SOUTH INDIAN NOTES

In such a setting of political opinion, even the suggestion made by him that landholders should of their own accord come forward with a scheme of redistribution on the basis of an economic holding as defined by him has little chance of finding popular favour. While informed opinion may rally in support of such a scheme what is necessary to its success is the support of agricultural workers and tenants. Such support is most unlikely to come especially because the scheme leaves the door wide open for political exploitation of the situation by interested parties. While cooperative farming might offer a way out of the existing anarchy of extremely small holdings, the meagre success that has attended the few experiments in this direction gives no basis for hopes in the short run. This leaves the alternative in increasing agricultural production in the short run, to the other methods usually associated with intensive cultivation.

Every Description of Banking Business Undertaken.
T. R. LALWANI,
 General Manager.

Mr Dey has referred to village industries as the field where special attention and efforts are needed for tangible progress. As he has pointed out, for the village industries to make any headway, they have to be related to the local needs since otherwise subject as they are to the competition of factory products they are under danger of being swamped out by competitive products produced on a mass scale by the modern factories.

A potential threat to the financial sufficiency so vital to the

The fact that there is already great resentment at the high taxation that exists in the country points to limited possibilities in the way of new taxes to add to the resources of the Government. In this connection Mr Gopala Reddi referred to the increases already achieved in respect of various tax measures. While the yield from Central Excise Duty has been increased from Rs 96 crores four years ago to Rs 306 crores now, income tax, yielding about Rs 217 crores would also seem to have reached the ceiling. This would seem to leave no alternative to the Government to implement the plan but to do its best to prevent expenditure which contributes little to productive enterprise.

In the Madras Tanned Hide market, arrivals of Cow hides were less, while clearances were good.

The area sown with Paddy is estimated at 5,605,000 acres as compared to 5,538,000 acres. The total yield, in terms of Rice, is estimated at 3,134,000 tons as compared with 3,103,000 tons for 1956-57.

Bengal Coal Company, Limited

Coal Exports — A Certain Foreign Exchange Earner

Dividend Maintained Inspite of New Taxes

Speech of the Chairman, Mr D. F. Macmillan

Addressing the Annual General Meeting of the Bengal Coal Company, Ltd., held in Calcutta on 26th June, 1958, Mr. D. F. Macmillan, the Chairman of the Company, said:—

Gentlemen,

The Accounts for the year ended 31st October, 1957, which have been in your hands for the statutory period, reflect another year of successful operation. Raisings were 2,801,164 tons and compared with 2,509,787 tons in the year 1955 which was the last year of the First Five Year Plan. The raisings of this Company in the first two years of the Second Five Year Plan have increased by 11.6% in spite of the serious handicaps imposed by the delays by Government in defining their policy towards the private sector in the coal industry, to which have been added more recently the restrictions on the imports of essential equipment. Your Company is therefore making its full contribution to the economic planning of the country, and this has been made possible by its own farsighted development plan which started as early as 1945.

Leaving aside the capital levy of Rs. 3½ lacs called Wealth Tax, which has absorbed the Company's small Capital Reserve and the surplus built up in past years on realisation of investments, as well as digging into the Company's taxation reserve, the profit for the year after all charges including depreciation and ordinary forms of taxation, is in fact lower than the previous year. But your Directors are able to recommend a final dividend which will maintain the annual distribution on the ordinary nominal capital of the Company at Rs. 17.50 per share, which is the equivalent of 5.96% on the capital employed in the undertaking. Against the drain of Rs. 3½ lacs on the equity of the Company by payment of Wealth Tax, the Board have been able to place Rs. 7 lacs to General Reserve out of taxed profits.

Before dealing more generally with the affairs of the Company and of the coal mining industry during 1957, I wish to refer to the disaster and tragedy which overtook Chinakuri Colliery on 19th February last, when an underground explosion followed by fire resulted in the loss of 176 lives. As soon as it was possible—in fact within three days of this disaster—I issued a statement to all shareholders on the occurrence and there

is little more that I can add today. After the evidence of underground rescue parties made it clear that there was no possibility of further survivors, it was decided, in view of the rapidly worsening conditions underground, to seal and subsequently to flood the workings in order to bring the fire under control as quickly as possible. De-watering was begun on 7th March and is still continuing. A Court of Enquiry has now finished taking evidence from the Company's officials and workers and all other parties who wished to appear before it, and has adjourned until dewatering is completed and detailed examination can be made underground. I would remind you that the Company worked ten years to sink over 2,000 feet to the Dishergarh seam at this colliery, that all the knowledge and experience gained in working this seam had been applied to the planning and equipment of the colliery with a view to maximum safety and efficiency in working, and that it started raising coal only three years ago. It will be the hope of all of us and of the whole of the mining industry that the evidence as finally accumulated by the Court of Enquiry will enable the actual cause of the explosion to be definitely determined. I would now ask the meeting to stand in silence in sympathy and respect for those who lost their lives and for the distress of the wives and families they left behind. . . .

On behalf of the bereaved families, I must thank the Governor of West Bengal, Miss Padmaja Naidu, for opening a fund through which the general public could express their sympathy in a practical way. A total of just over Rs. 1 lakh was contributed to this fund and the first distribution was made by the Governor during a personal visit to the colliery on 26th March. The balance of the fund is to be made over to the families concerned in the form of National Savings Certificates. The generous response of the public has thus materially supplemented the compensation and other measures of relief provided by the Company. A very practical way of helping the families has also been the arrangement sponsored through the Indian Mining Association for the employment in the industry of an adult member of each family.

I have already mentioned the Company's contribution in increasing raisings of coal so urgently required for the Second Plan. Whilst the private sector of the industry

is more than keeping pace with the rate of increased output required to achieve its target of 45 million tons annually by 1961, one sees reports from time to time which give the impression that there may have to be a further downward revision of the public sector's target. It is in the best interests of all that some definite decision should be reached as soon as possible since, if the privately owned collieries are going to be asked to raise their target further, they should be given as much time as possible to prepare for the further task which, by the results already achieved, they have shown their ability to attain.

Some encouragement has been given to the private sector by excluding coal from the harmful provisions of the Mines & Minerals (Regulation & Development) Act, 1957, which would have had far-reaching effects on existing leases and royalties. Even though this may only be a temporary relief, it is nevertheless appreciated, and the industry is now endeavouring to obtain from Government fair and reasonable amendments of the proposed Mineral Concession Rules, 1958.

I have stated above that the private sector is doing everything possible to attain the targets set for it by Government, but here I must sound a note of warning as regards the limiting factors of imported materials and transport.

IMPORTED MATERIALS

We fully realise the serious foreign exchange position and it is apparent that for some time to come licences will only be given for the very highest priority of imports. In view of this, we must adapt ourselves, if necessary, to doing without certain items of stores, plant and machinery required for the progressive mechanisation and expansion of your collieries. However, there are some items, the most important of which is Steel Wire Ropes, without which coal cannot be raised.

TRANSPORT

As regards transport, although during 1957 the railways were able to make greatly increased wagon offerings for coal movement, the position has deteriorated since the beginning of the current year and pithead stocks are now higher than they have been for some considerable time. The performance of the South Eastern Railway has been particularly disappointing: against a guaranteed minimum of

950 wagons daily for coal movement, during the past month daily offerings have been as low as 412 wagons. It is perhaps superfluous to comment that the best laid plans to meet the country's coal requirements are vitally dependent on the performance of the railways, and the railways' task will be greatly increased when the requirements of the expanded Steel industry have to be moved.

EXPORTS

It has always been a surprise to me and to other speakers from this chair in the past that our Government attaches so little importance to coal as an earner of foreign exchange. In the early 1920's steps were taken to ensure a good reputation amongst overseas customers for Indian coal by the setting up of the Coal Grading Board, whose inspection staff and certificates of quality ensured that the overseas customer got the quality which he had contracted for. Encouragement was also given to the export of Indian coal by allowing a rebate on rail freight on coal shipped to foreign markets. With these encouragements to the overseas customers and to the coal exporter, a good connection with the Far Eastern markets was built up and exports reached a figure of 1,413,000 tons in 1938. The Second World War intervened and when India emerged from it, official policy became obsessed with the need to conserve India's resources, particularly of the higher grades of coal, for future internal requirements. Assistance by way of rail freight rebates disappeared and there was an insistence that exports must mainly comprise the lower qualities of coal. As a result the reputation of Indian coal in these export markets has been severely prejudiced and China has recently been gaining a foothold in India's closest coal markets of Ceylon and Pakistan. In 1957 less than ½ million tons were exported—apart from just under 1 million tons supplied to Pakistan—and this earned about Rs. 2½ crores worth of foreign exchange. The coal exports of 1938 at today's values would have earned Rs. 5½ crores. Today with India's capacity to earn greater foreign exchange having assumed topmost priority, coal could be making a very useful contribution if a policy of encouragement of exports had been maintained and there is undoubtedly a case for renewed encouragement being given in the present

June 28, 1958

economic difficulties. But unfortunately even if the greatest encouragement were to be extended to coal exports today, it would be sometime before the old markets and the old reputation could be regained.

SANDSTOWING

We hope shortly to receive the report of the Price Revision Committee constituted by Government to assess a fair price structure for the Coal Industry. One matter which is, however, outside the purview of this investigation is the burden of sandstowing. You will notice from the Accounts that the Company has had to bear a sum of almost Rs. 9 lacs, being the difference between the cost of sandstowing at our collieries and the quantum of assistance received from the Coal Board. This is the equivalent of about Rs. 1.50 per ton of coal raised from our sandstowed collieries. At a time when Government are making every effort to encourage additional collieries to instal arrangements for sandstowing, in the interests of both safety and conservation, it seems wrong that collieries which do undertake stowing should be placed at such a disadvantage by reason of this financial burden.

LABOUR

As a result of a Tripartite meeting held in New Delhi, the Appel-

late Tribunal Award, to which I referred in my speech last year, was implemented in July 1957 and labour have received the benefit of this Award made retrospective to 26th May, 1956. Since the end of the period under review, in fact with effect from 1st January, 1958, workers throughout the coal industry have been granted an increased D.A. of Rs. 4.87 per month. There is no doubt that workers in the industry have benefited very considerably as a result of these Awards and one still looks to labour to give greater productivity in return. Relations between the Company and its employees have generally been satisfactory throughout the year, but it is to be earnestly hoped that the miner will not fall prey to inter-Union rivalry and that he will realise that a full shift's work is his best personal contribution to the national interests.

I have had an interesting analysis made of what has happened to each rupee received by the Company during the year under review from its customers in return for coal supplied. I will not weary you with the complete breakdown, but you will be interested to know that 42 nP of every rupee earned goes to the labour, 9 nP goes to Government in taxes and cesses, 5 nP is applied to meet depreciation of the Company's buildings and machinery,

while you shareholders get 3 nP, and 2 nP have been retained in the business for future development. If anyone suggests to you that you do not deserve your 3 nP, just remind him that without the capital provided by the shareholders through joint stock enterprise, there would be no undertaking to give employment to twenty-four thousand labourers, each of whom gets 42 nP out of every gross rupee earned by the undertaking.

WELFARE

It has been the Company's policy progressively to provide amenities for employees at collieries, and, in addition to the statutory requirements of pithead baths, creches and canteens, we have a programme for the provision of co-operative stores, playing fields and many other amenities. In addition to the considerable capital cost incurred in providing for the welfare of our employees, the maintenance of these facilities, including the expert medical attention provided, is costing us about Rs. 7 lacs per annum.

The provision of housing is one for which we were carrying out a planned programme until two and a half years ago when a new scheme was instituted under the auspices of the Coal Mines Welfare Fund whose resources come from a cess on coal; briefly, this

scheme provides for the capital of labour quarters to be borne by the Welfare Fund, and thereafter the maintenance charges and a rental of Rs. 2/- per month are to be paid by the Company, whilst the Company provides the land together with water supply, lighting connection and approach roads. Although we are very keen indeed to construct the 848 quarters sanctioned at our collieries for 1958-59, it has been impossible to achieve anything as yet owing to various procedural delays on the part of the authorities concerned. This matter is being followed up and it is our desire to give the fullest possible encouragement for the provision of increased accommodation for our miners.

STAFF

Before concluding, I would like to pay a well merited tribute to Mr. Rosser, your Chief Mining Engineer, and his staff who have worked so magnificently through another year which has produced many and varied problems such as must always be attendant in the technical control of your 17 collieries.

NOTE:—This does not purport to be a report of the proceedings of the Annual General Meeting.

On the London Stock Exchange, there was selective demand for industrial equities.

Wall Street closed barely steady showing a majority of fractional declines.

Calcutta

Calcutta, Thursday Evening.

THE local stock market put up a remarkable performance during the week under review. The turnover was impressive and spells of profit-taking brought in new buyers. The main contributory factor to the buoyancy in sentiment was the news of the dock strike being called off. Moreover, hopes were entertained that the Government would go all out to take export promotion measures in view of the acute foreign exchange crisis. It was also felt that the severe import cuts would help the indigenous industries to make further headway. Good corporate news and expectations of reliefs for the tea and textile industries and the possibility of an imminent rise in the retention prices of steel and cement—all these factors also imparted further strength to the market.

Business was restricted in the Gifted section, but the underlying tendency was well maintained. Enquiry for the State Loans dried up owing to the new State loans. Meanwhile, 3 per cent 1986 Conversion Loan changed hands at Rs 71 to Rs 71.50, to finish at Rs 71.10.

Bank shares came in for selective enquiry. The only bright spot was Punjab National which improved to Rs 59 from Rs 60.75.

Equities Display Marked Strength

Watch-Dog Writes:

EXCEPT for a slight setback in mid-week due to profit-taking, equities have displayed marked strength under the lead of Steel shares, which have touched fresh higher levels for the week. Sentiment is assisted by the news of the dock strike being called off, the possibility of an imminent rise in the retention prices of steel and cement and the expectation of reliefs for the tea and textile industries.

Cheerful conditions were noticed on the Calcutta Stock Exchange where selected scrips made further headway under the lead of Indian Irons.

On the Bombay Stock Exchange, Steel shares were buoyant and touched new high levels, while Textiles were aided by expectation of an immediate relief to the industry.

Prices on the Madras Stock Exchange displayed a firmer tendency with broad-based activity in all sections.

Barring isolated scrips like Megna and Union which forged ahead to Rs 128 and Rs 126 from Rs 120 and Rs 123 respectively, other Jute shares were well maintained on the belief that the prospects for Jute goods, especially for hessians, might be fair in view of the removal of restrictions on imports into Argentina and the possibility of the USA entering the market shortly due to her depleting stocks. National changed hands at Rs 22.37 to Rs 22.62; New Central at Rs 15.37 to Rs 15.81; Ganges at Rs 53 to Rs 55.00 and Howrah at Rs 15.75 to Rs 16.00. Among higher-priced scrips, Anglo-India improved further to Rs 161 from Rs 152; Bally to Rs 162 from Rs 151 and Barragore to Rs 91 from Rs 88.

Coal shares turned a shade quieter as operators were inclined to await the Price Revision Committee's report. There were, therefore, only sporadic enquiries from the professional operators. Bengal were done at Rs 244 to Rs 245; Central India at Rs 7.62 to Rs 7.75 and Western Bengal at Rs 6.10 to Rs 6.25. Burrakur closed better at Rs 21.25 after touching a low of Rs 21.19 from Rs 21.37.

The Tea section was practically neglected and only a few dealings were recorded. Apart from the anxiety caused by the delay in the announcement of relief for Common tea producers, the disappointing results of the Duncan Brothers group of companies caused a general impression that the working results of other companies might also be poor. Above all, anxiety was shown that, even if the dock strike had been called off, there would be a congestion of stocks at warehouses with the consequent difficulties in marketing on the resumption of export sale in the coming week. Amongst the few transactions recorded were Brooke Bond changing hands at Rs 17.69 to Rs 17.94; Hantapara at Rs 109 to Rs 112 and Methoni at Rs 17.06 to Rs 17.50.

Despite the confusion still prevailing in the market over the protracted delay in the announcement of the export policy, Sugar shares came in for selective support on the hope that the results for the current year would be better than those of last year. The brightest spot was Carew which, after recording a new of Rs 8.50 from Rs 8.25 on rumours of the possibility of a divi-

BRITISH INDIA ELECTRIC CONSTRUCTION COMPANY LIMITED.

The Board of Directors has decided to recommend to the forthcoming Annual General Meeting of the Company a dividend of 20 per cent for the year ended 31st December 1957.

By Order of the Board,
BALMER LAWRIE & CO., LTD.
D. MANSON,
Secretary,
Managing Agents.

Calcutta.
25th June, 1958.

BRIDGE AND ROOF COMPANY (INDIA) LIMITED.

The Board of Directors has decided to recommend to the forthcoming Annual General Meeting of the Company a dividend of 20 per cent for the year ended 31st December 1957.

By Order of the Board,
BALMER LAWRIE & CO., LTD.
D. MANSON,
Secretary,
Managing Agents.
21, Netaji Subhas Road,
Calcutta.
25th June, 1958.

dend for the current year as against nil in the previous two years, finished the week at Rs 8.31. Balarampore were nearly maintained at Rs 6.85, while Dyer Meakin were marked back to Rs 10.12 from Rs 10.56. Ramnugger changed hands at Rs 18.44 to Rs 18.75 and SKG at Rs 9.37 to Rs 9.50.

Textile scrips ruled steady in anticipation of favourable developments following the measures taken by the Government to improve the situation in the industry. Jayshree improved to Rs 7.00 from Rs 6.75 and Kesoram to Rs 11.25 from Rs 10.62.

In the week's dealings, the pride of place went to the Engineering section, where Indian Irons touched a fresh higher level on encouraging Bombay advices. Against the week-end closing of Rs 21.92, Indian Irons opened firm at Rs 22.26 and after advancing further to Rs 22.40, receded in mid-week to Rs 22.30 on rumours that the meeting of the Board of Directors for the declaration of dividend had been postponed by another month. However, towards the close, fresh rumours with regard to the possibility of a bonus issue and of an imminent rise in steel retention price and the news of the dock strike being called off caused a revival of speculative activity, resulting in the scrip making a sharp recovery to Rs 22.60 at the close. In sympathy, **TEKMACO** improved to Rs 19.20 from Rs 18.90. Burn to Rs 340

from Rs 335.50 and Kumardhubi to Rs 9.87 from Rs 9.50. Braithwaite were in good demand upto Rs 27.62 from Rs 27.37 following the announcement of additional dividends for 1954 an 1955.

The Miscellaneous section, provided several firm spots on various considerations. Alkali Chemicals were keenly sought after upto Rs 15.25 from Rs 15.00 following the restriction on imports of certain chemicals. Sone Valley met with consistent enquiry upto Rs 5.50 from Rs 5.37 on the possibility of an imminent rise in the retention price of cement. India Steamship had buyers at Rs 11.37 to Rs 11.56 following the withdrawal of the dock strike. Indian Copper, after being marked down to Rs 3.34 from Rs 3.39 due to conflicting rumours with regard to dividend for last year, firmed up at the close to Rs 3.40. National Carbon changed hands at Rs 25.89 to Rs 25.87; NICO at Rs 27.25; Indian Aluminium at Rs 14.69 to Rs 15.00; Indian Cable at Rs 27.00 to Rs 27.75; Aluminium Corporation at Rs 11.69 to Rs 12.00; Philips India at Rs 15.19 to Rs 15.37 and Dunlop at Rs 26.19 to Rs 26.50. Lack of fresh support caused Paper shares to rule rather quiet although Titagarh were the only exception, having forged ahead to Rs 39 from Rs 38.37 on sustained demand. Orient were cheaper at Rs 31.40 against Rs 31.70, while India Pulp closed better at Rs 20.62 against Rs 20.56 and Sirpur at Rs 11.44 against Rs 11.37.

Bombay

THE Bombay stock exchange ruled steady throughout last week with prices toward close tending to be firm. The relief over the end of the dock strike has largely been responsible for the buoyant trend in later dealings. But there is an undercurrent of optimism regarding prospects of equities. While the possibility of further import restrictions in view of the continued stringency of foreign exchange may be said to be having a restraining influence, the fact that the drastic import policy has assured ready demand for the products of domestic industries has resulted in a broadening of interest in particular scrips. Moreover, marketmen are confident that announcements as regards retention price of steel, and selling price of cement will not be long delayed. The textile section is steady on the expectation that an interim relief will be announced. In this connection it may be noted that early in the week there were rumours that Government were considering further reduction in excise duty on the recommendation of the expert committee which is presently engaged in studying the problems affecting the cotton textile industry. The reports that Government may be giving some special concessions to industries with a view to boost exports are also having a steadying influence on sentiment. The terms of the State Loans are in accordance with market expectations and it is generally expected that they will meet with success in view of the easier conditions in the money market.

STEEL:—Steel shares were a firm market right from the beginning. On Monday, Tata Iron closed at Rs 186.25 as against previous closing of Rs 184.25. The scrip after a two way movement in later dealings closed at Rs 187.50. Indian Irons closed at Rs 22.60 as against previous week's closing of Rs 22.08.

TEXTILES:—Textile shares were generally a steady market with selected scrips recording sizable gains. Sentiment in the section had been aided by

hopes of early relief to the cotton textile industry. Bombay Dyeing advanced from Rs 55.40 to be finally placed at Rs 55.70. Kohinoors were a bright spot improving to Rs 275.60 from Rs 258.75. Swadeshi moved up on buying interest to Rs 193.75 from Rs 185.25. Simplex gained 8 points to be quoted at close at Rs 179. Century advanced to Rs 449 from Rs 441.25.

MISCELLANEOUS:—In the miscellaneous section, **ACQ** was wanted upto Rs 158 from Rs 156.50. National Rayon was rather quiet at Rs 232.25. Belapur Sugar was a steady feature at Rs 259. Scindia Steam was in request upto Rs 18.52, while India Steam was almost unchanged at Rs 11.60.

Madras

A notable feature of trading on the Madras Stock Exchange was the strength displayed by Textile scrips due to good enquiries. Plantings remained firm, while buying support was continuous for select shares in other sections.

TEXTILES:—Expectations, that relief to the industry by alteration in the excise duty would be announced shortly, caused a revival of activity in this section. In the absence of offerings, Janardhanas improved by Rs 2 to Rs 75; Combatore Spinnings by Rs 2.50 to Rs 50 and Maduras by Rs 2 to Rs 34. Radhakrishnas were bid higher at Rs 130 and Lakshmis at Rs 98.

PLANTINGS:—In this section, Tea shares came in for better activity and those, listed for forward trading, were particularly strong. Devons met with good buying at the improved level of Rs 18.10. Buying enquiries were noted for United Nilgiris, Highlands and Non-such.

Among Coffee shares, there was the usual interest in Consolidated Coffee and Coffee Land; being done at Rs 26.35 and Rs 36.10 or, respectively. Cowoodys were another active scrip, being marked upto Rs 7.20 xd. Oucherionys were marked at Rs 4.91.

In the Rubber section, Cochin Malabars fluctuated narrowly around Rs 4.75, while Kallias met with business at Rs 4.70 and TRTs at Rs 6.55 xd.

MISCELLANEOUS:—Aluminium Industries were again in limelight. There was large buying interest from North Indian operators, having forged ahead to Rs 16 from Rs 15.90. Ashok Leylands were taken upto Rs 4.96 cd.; Mettur Chemicals upto Rs 11.10; Indian Steel Rolling Mills upto Rs 11.15 and FACTS upto Rs 6.46. Forest Industries were quoted at Rs 2.35 and Radio Electricals at Rs 5.06. Among Cement shares, Indias met with good support upto Rs 27.75.

London

ON the London Stock Exchange, buyers adopted a cautious attitude despite the favourable effects of the improved domestic labour situation. Nevertheless, there was a selective demand for industrial equities, which showed signs of expanding towards the close.

A feature in the industrial market was the firmness of Steel shares, while Textiles showed an around improvement. Rubber shares were selectively better. Among Tea scrips, Ceylon issues were depressed by the uncertain political situation in Ceylon. Gilt-edged issues were easier due to the appearance of a new £6 million Co-operative issue and prospects of more issues to follow.

New York

WALL STREET, after ruling initially weak, developed a slightly steadier tendency towards the close. The initial weakness of the market was mainly due to some uncertainties evident in the business scene. Moreover, some quarters pointed out that the market faced the prospect of second quarter earnings, which were not expected to make any better reading than those of the first quarter.

However, a selective rally developed towards the close. This was especially apparent in some oils, being influenced by the report that the Richfield Oil Company would exploit oil in British Columbia. A few Tobacco issues continued to move higher on good earnings prospects.

RATIONALISATION IN THE JUTE INDUSTRY

The following is the text of the Press statement issued last week by the Indian Jute Mills Association:

"During the last few months occasional reports have appeared in the Press about the closure of jute mills. The Indian Jute Mills Association considers that these reports, generally, have created a wrong impression and have tended to obscure the circumstances attending the mill closures.

The paramount importance of the rationalisation of the industry has been repeatedly stressed by the IJMA and has been officially acknowledged by the Government of India. The workers' unions themselves have recognised that there is no alternative course of the jute industry in this country is to survive. The unrelenting competition from jute substitutes, the gradual introduction of new marketing methods such as bulk handling, the steady growth of jute manufacturing industries overseas—all these are indisputable facts, requiring no substantiation, and it is these factors which have dictated the policy of rationalisation and modernisation of the Indian Jute Industry. The market conditions prevailing to-day are a stern reminder of the fact that the jute industry is predominantly an export industry and serve to underline the pressing need for the adoption of modern production techniques to enable the Indian mills to maintain the competitive position of their products in the world markets. The recessionary trend in the USA has been reflected in a weakening economy in the jute industry's markets generally, and the mills are at present faced with rapidly accumulating stocks of finished goods. It would be folly on the part of the Government, the manufacturers or the workers to shut their eyes to this situation.

The mill closures that have taken place must be seen against this essential background. At the same time, it must be made clear that these closures have not resulted in a curtailment of the industry's total output and that the impact on labour has been reduced to the minimum. The production of the closed mills has been transferred to other modernised units, giving a closer and more economic concentration of the manufacturing potential. All permanent workers affected by the closures have been offered alternative employment, with continuity of service and no loss of pay, in the concerns to which the production has been transferred. In most cases, the workers have also been given living accommodation in the vicinity of their new place of work.

The Government of West Bengal has appointed a Tripartite Ad Hoc Committee to go into the question of rationalisation in the jute mills and it is hoped that with the co-operation of all the interests represented on the Committee a realistic solution of the various aspects of the problem will be evolved."

B.O.A.C. streaks ahead in jetliner travel!

Proof? Yes, indeed. B.O.A.C. Britannias, first jet-age
airliners to fly the Atlantic, are proudly serving you
today...and new Comet jetliners are already breaking
records on transatlantic training flights in preparation
for their introduction on the Atlantic later this year.
Delivery of a fleet of magnificent B.O.A.C. 707 jetliners
is expected next year...and already earmarked for
B.O.A.C. early in the 1960's is a fleet of revolutionary
new VC-10 jetliners—fastest, most powerful on the
drawing board today. This is how B.O.A.C. is thinking
and planning and acting...determined as always to lead
the world in air travel—today and all the tomorrows
to come.

B.O.A.C. WORLD LEADER IN JET TRAVEL

London and Overseas Representatives: Baptist Smith, Keith & Slater Ltd, Napier House, 24/7 High Holborn, London W.C. 1. Telephone: Holborn 5022.

THE verdict on Mr Nehru's Budget for 1958-59 would depend upon whether it is studied as an entity by itself or whether it is considered in the larger context of the Second Plan budgetary programme as a whole. In one instance, the reaction will be one of disappointment, while, in the latter case, there is no ground for complaint. Yet, in the ultimate analysis, and in our judgment, we are left with the inescapable impression that, while the Second Plan budgets so far cannot be held guilty of any sins of commission, the current one has to do some penance for some sins of omission. In such a reading, moreover, it does not matter whether the approach is from the more or less general standpoint. If, therefore, we have any worthwhile comment to make on 1958-59 Budget, it will not be in respect of any modifications or amendments that may be necessary to the Finance or Gifts Tax Bills, which, being a matter of detail, we have analysed elsewhere in this study; rather, we should like to make good use of the lesson available in the current budget in order that we may formulate a policy in one more important sphere.

Policy already exists for such things as taxation, imports, exports and development. As far as taxation is concerned, and by taxation we have in view the fiscal measures which are intended either to raise the revenues or to imbue the system with much more elasticity than it has till lately possessed, we have no quarrel at all with either Mr Nehru's Budget of this year or Mr T. T. Krishnamachari's Budget of May last. For, the simple fact of the matter is that the system of taxation such as we had until the last budget was neither more nor less than a farce. High rates of income tax and high rates of super tax did not result in any considerable augmentation of revenues, but merely succeeded in eliciting a larger measure of tax evasion.

What the country needed was a revolutionary change in the structure, and, in the long run, not merely the Government but the tax payers as well will be grateful to Dr Kaldor for his report on which mainly the new tax structure of India has been evolved. The Wealth and Expenditure Taxes of last year and the Gifts Tax introduced in the Budget are intended not so much to contribute sizeably to revenues but to provide check points so that the room for tax evasion will be minimised. In this sense, we repeat, we do not have any sympathy for the criticism that the Wealth Tax or the Expenditure Tax or the Gifts Tax are unnecessary embarrassments which will corrode into personal incentive. Indeed, as Eavesdropper remarks in his article, the implementation of the present tax measures may well pave the way for the objective ultimately to be achieved of a reduction in the maximum rate of income tax to the level suggested by Dr Kaldor at 45 per cent. It is in this sense that we have stated that tax payers, too, may be expected in the long run to welcome the Kaldor proposals.

In the matter of imports, the policy appears to be simple. But it is not. At one stage, particularly during the closing months of 1956, the drain on our foreign exchange reserves had reached so sharp a weekly pitch that drastic action was called for, and a wholesale or practically wholesale ban on imports appeared to be the only possible remedy. For the future, import of consumer goods, as in recent months, has to be kept at a minimum. Even in respect of capital goods, licences will be given only in instances where, against specific projects, some sort of deferred payment arrangement is concluded. But then, ultimately, the credit obtained by way of deferred payments is a commitment

Mr. Nehru's Budget

that this country will have to meet. As it is, in the period between 1960 and 1963, the foreign exchange liabilities that have to be satisfied are quite considerable. While it is true that, meantime, the import of capital goods will have enabled fresh indigenous production, to that extent obviating the need for import of manufactured goods, we are afraid that the unpalatable fact will remain that in the quinquennium representing the Third Plan, no amount of import restriction will by itself enable balance of trade to be achieved. The answer, of course, lies in exports, but there is one other matter in regard to imports that we should like to make. One fact which seems to have been overlooked is that, as the indigenous manufacturing capacity rises, so, too, will be the demand for and consumption of the necessary raw material. In estimating imports, no sufficient regard has been had for this contingency of an increasing import bill for industrial raw materials. It is true that two of the major manufacturing industries, jute goods and cotton textiles, could conceivably have their requirements filled by indigenous production of the raw materials. The extent of our dependence in the case of these two industries would be confined to the small quantities necessary of quality raw jute, on the one hand, and longer staple cotton, on the other. Neither of these is likely to involve any undue increase in the import bill. But where, we fear, there may conceivably be a fairly steep mounting of import costs is in respect of other industrial raw materials, notably non-ferrous metals. To our knowledge, except for the Agreement under Public Law 480 with America, whereby one of the raw materials, cotton, is being obtained on the basis of foreign credits, this country has so far not instituted any negotiations for credits against raw materials. Our impression is that there are commercial banks in America which may be prepared to consider transactions involving, say, 12 to 15 months credit against raw materials. But, again, such imports would have to be under the aegis of private importers. There may be instances where our requirements of particular raw materials would involve so large a sum as to be beyond the ability of private entrepreneurs to manage. It is this latter category that has been engaging our attention, and we would like to utilise this opportunity to make the suggestion that, in the negotiations for further aid from America, we could request consideration being given to the possibility of arranging for credits in this regard from the Export Import Bank. Our information is that, while generally the Export Import Bank is not too enthusiastic about any activity which might be taken to be competition with the Commercial Banks, there have, nevertheless, been instances where the Export Import Bank has indeed extended credit against industrial raw materials. Consequently, we are hopeful that negotiations in this behalf with the US Government, in the first instance, and, thereafter, with the Export Import Bank, could conceivably lead to fruitful results.

Thirdly, we come to exports. We regret that we are unable to say that the effort in this regard has been constructive or beneficial. Stray export promotion councils, for tea or jute goods, are not likely to yield any considerably larger exchange earnings. We may go so far as to say that there is a limit beyond which we cannot expect the three traditional earners of foreign exchange, jute goods, tea and cotton textiles, to contribute to further earnings. In the very nature of an underdeveloped economy in the throes of industrialisation, we could perhaps anticipate a diversification in the list of manufactured goods in which we might have small surpluses for export. But, even here, the many a little from hundreds of different manufactured goods would not make up a mickle. We have to go into certain fundamentals, and the basic fact continues to be that an underdeveloped economy has to depend for the bulk of its exchange earnings on raw materials. As we have seen, there is a limit to what we can expect from three traditional sources. There is, however, no limit to what we can reasonably anticipate from export of a fourth basic material, for the simple reason that the demand for this material is vast and immense. We are referring to iron ore and, while there have been half hearted efforts at increasing the quantity of iron ore sold to Japan, we consider that all these attempts have been chicken hearted. The aim should be to multiply four and five fold our exports of and, therefore, exchange earnings from iron ore. We shall not be satisfied that this country is strenuously and constructively setting about increasing its exchange earnings, until we see clear evidence of an attempt to maximise exports of iron ore. This is a point that we do not wish to labour, since we have reiterated insisted that the salvation for the Plan could very

well be considered to lie in iron ore. But, for the sake of emphasis, we do not mind reiterating: To save the Plan, concentrate on Iron Ore Exports.

Finally, there is the matter of development. The expansion in production to be achieved and the new lines of manufacture to be taken up have both received their due share of attention in the Second Plan, and it is largely speaking true to say that the targets envisaged have been correctly framed. Moreover, Government do not suffer from a doctrinaire approach in the attainment of targets. In this context, it has to be borne in mind that, some time after the restatement of industrial policy, Government have indicated their willingness to permit the private sector to develop industries which, under that policy, had been reserved to the State. Furthermore, it now appears fairly certain that, in one of the key industries, the target for the private sector will be raised; we refer to coal, where, as in other fields of endeavour, the private sector has been ahead of schedule. The programme of industrialisation that has been charted out is by no means spectacular, but, as a foundation for further efforts during the Third and subsequent Plans, it must be considered adequate.

But, in one sphere in which we are likely to witness what in the event may turn out to be chaotic conditions, we are afraid the very possibility of such circumstances arising has tended to be overlooked. We refer to the uneasy balance between supply and demand, and heretofore thinking on the subject has been on the basis that, at every stage of development, production will fall short of total demand, that is, both internal and external. However, this will not quite be the case. If it is conceded that, in the process of industrialisation, there will be a time lag between the attainment of production sufficient to satisfy demand, it should be obvious that there is also the possibility of production temporarily overtaking demand. Two industries in which this has already occurred are cotton textiles and tea. Also, in the case of cement, the sense of scarcity has disappeared. Sugar production is quite consistent with the internal demand and, unless the world market price sufficiently improves so as to enable some exports, we may experience some surplus in sugar supplies. Steel today is a commodity that we need to import, but it is entirely conceivable that, may be as early as the middle of next year, output might outstrip demand. Let us make it clear that we are not advocating a watch and ward department in Government which would promptly decelerate programmes for expansion for such fields of endeavour. Rather, we have in mind the need for vigilance to ensure that, just as measures intended to evoke consumer resistance are set in train during shortages, so, too, must be instituted suitable measures which will induce consumption where the necessity arises. The problem of temporary overproduction has to be tackled on two fronts; and, for this purpose, we here make bold to suggest the need for the formation of a Production Advisory Council on the lines of the Import and Export Advisory Councils. The intention should be that this Council, whose personnel should be drawn mainly from Chambers of Commerce, should recommend from time to time reliefs in excise duties on or the provision of bank credit to particular industries to tide over temporary surpluses. We have had the recent instance where a delay in the recognition of such a situation has led, in the cotton textile industry, to the closure of some units and to a decline in output. We cannot afford either of such occurrences, since the former creates some unemployment and since the latter is antipathic to the progress the Second Plan sets out to achieve.

If the post-Budget decisions by Government may be taken to offer evidence of a pragmatic approach on their part, then, we can be reasonably hopeful that a Production Advisory Council such as we have asked for will be set up. For, Mr Nehru has announced post-Budget concessions, the repeal of the compulsory deposit scheme for 1958-59 and a reduction in the excise duty on cotton, both of which were reliefs that had been expected at Budget time but which did not then materialise. So, in one sense, Mr Nehru may be said to have made amends, already, for the omissions in this regard in the Budget, to which we referred at the beginning. But, whether in the fields of exports or imports, taxation or development, production or excise duties, the most important attribute that will be necessary in Government is an ever vigilant watchfulness combined with pragmatic flexibility as to the revision of policy and expeditious swiftness in carrying it out.

I cannot agree with Mr Nehru in his description of the 1958-59 Budget statement as being pedestrian; and I take even greater exception to his assertion—or is it apprehension?—that he is unfit for the task that has been thrust upon him. It is true, Mr Nehru said in the Rajya Sabha that he did not “suffer from any over much modesty”, but there is still a very real sense of humility to be discerned in the approach of Mr Nehru to that most important function of any Finance Minister, the Budget. While it is a pity that an unfortunate twist of fate prevented Mr T. T. Krishnamachari from presenting the Budget for 1958-59, it is proper for us to recognise that Mr Nehru has all the attributes necessary in a Finance Minister: moreover possessing one which his predecessor in office had strangely liked: humility. I shall presently show why we must not allow ourselves superciliously or condescendingly to judge Mr Nehru's statement—an attitude of mind which perhaps would be evoked from his assertion that he felt somewhat inadequate—but, first, I should like to pass a few general remarks about the Budget.

The criticism this year—after all, like the Budget, criticism of it is a hardy annual—has tended to be altogether half hearted. It is as if Mr Nehru has been so adroit in the presentation of his Budget that he has not given anything tangible on which those who oppose Government could vent their spleen. And yet, it would be no budget if there were not, after the new proposals, a storm of protest. For his part, the Finance Minister makes his proposals; and, for their part, various spokesmen, some of them self-appointed for I do not know what cause, deem it their bounden duty to rile against the taxation policy generally and the new proposals in particular. But, as I said, Mr Nehru's perspicacity was instrumental in the framing of a budget which is largely unobjectionable. True, there is one major impost, but, if there was one thing that was not at all in doubt prior to Budget, it was that a Gifts Tax would be introduced. Consequently, such outcry as we have had has almost seemed to lack any sincere sense of grievance: the grouse only is that certain concessions which had been hoped for did not materialise. Since it would be infra dig if the challenge postulated by the Budget were not met by an answer in the form of criticism, there has been criticism—but the criticism has been, as I said, of taxation policy generally.

Mr Nehru attested to the futility of such arguments and also exposed what are vital flaws in it. You can no more dissociate taxation policy from the Second Plan than you can separate chalk from cheese. In speaking about Indian planning, budgeting and taxation, Mr Nehru observed that there is an inter-connection and that “they are not isolated happenings”. A particular tax might arouse opposition, another strident criticism,

Seeing the Budget in its Proper Perspective

By EAVESDROPPER

but the point, as Mr Nehru said, is whether the people who criticise the taxes are “looking at this picture in perspective, the whole of the picture or just a tiny part of it?”. He brushes aside as being of not great value criticism from people who “only look at a small part of it and forget the rest”. This is precisely the fundamental consideration that we need to bear in mind, when we judge any budget. It is all very well to talk of cutting the coat according to the cloth, no doubt it is ambitious to set Plan targets and then to draw up a scheme for securing the necessary resources. But the starting point for all fiscal and monetary measures of Government is the Second Plan. There are certain targets that had been laid down, on the one hand, in respect of production to be attained; on the other hand, relating to the resources that must be raised. If you do not accept the Second Plan, then, I say, you have every right to blast your scorn or your ire upon Mr Krishnamachari's Budget of last year. Mind you, if you thus question the necessity for a Second Plan of the size that we have drawn up, I shall gravely doubt your so called hard headed realism. For, your realism had not enabled you to see beyond the tip of your nose, you are straining at the discomfort and burden of higher taxes at the present day, because you do not recognise that, if the Second Plan does not go through, a disaster is in store—a sorry defeat of all, including the liberty of the individual, that is comprised by democracy. So, if you do not accept the Second Plan, nothing will convince you, and I am not attempting here to justify the Second Plan or its size. As far as I am concerned, it is already justified, and, in my attitude to Mr Nehru's Budget or Mr Krishnamachari's Budget of last year, I am guided by this overall determinant of the Second Plan and the duties and responsibilities which lie heavily upon all of us, the citizens of a free and democratic India.

Take last year's Budget. A very considerable sum of money was proposed to be raised by new taxes, two of the measures were innovations, but the yield therefrom was not large and, for this reason, there were some who said that Government need not have, for such paltry revenue, antagonised the tax paying public. But it is

forgotten that present revenue was not the sole factor that persuaded Government to introduce the Wealth and Expenditure Taxes last year, and the Gifts Tax this year. At this stage, it might be argued that it is a perfectly justified and valid complaint that the rates of taxes in this country are unconscionably high. It is, may I suggest, precisely because the rates are too high that Government have introduced the new fangled taxes. For, if the rates are high, the one thing that is certain is that evasion of the tax is no less gargantuan. A reduction in the tax rates will not of itself ensure that the tax evader of 1957 will, merely because rates have been reduced, become an honest man. He will, it is true, be profiting less by his evasion—after all, the extent of his profit is limited to the rate of the tax. So, there is, on the one hand, an outcry because the rates are high; and, on the other, Government cannot think of any reduction in rates because, frankly, of the need for revenue for putting through the Second Plan. Why should we not think that our Government will be as anxious about the demoralising effect that high taxes have on personal incentive? In other words, why should we not credit Government with the desire, consistent with safeguarding sufficient resources for the Plan, to restore tax rates to levels at which, to the honest tax payer, sufficient incentive would be available? To say, in this connection, that it is highly improper for a Government to have acted only upon the tax measures of Dr Kaldor, without also accepting his recommendation of a reduction in the income tax rate to a maximum of 45 per cent, is to overlook the fact that, I repeat, a reduction in tax rates is no guarantee of a higher level of honesty and integrity in tax payment. So the first thing that Government had to do was to evolve a tax system in which the room for evasion, the loopholes for evasion, the opportunities for evasion would be minimised. In due course, this minimisation of evasion opportunities would make for an expansion in tax revenues. Then, and only then, would we have reached the stage when Dr Kaldor's recommendation of a 45 per cent maximum could be entertained or implemented.

I have tried to show that those who criticise the tax—and most of this breed fall into the category of

non-tax paying people—really have no case for asking for lower rates at the present time. Perhaps, their apprehension is that the tax system being created by Government will succeed in eliminating opportunities for tax evasion, and hence their attempt to sabotage the whole thing.

Now, to see to what extent and in what sense Mr Nehru may be said to have been eminently fitted to present the Budget for 1958-59. Here, just as Mr Nehru has asked us not to judge the Plan or budgeting or taxes in isolation, we have similarly to look at the whole picture comprised by Mr Nehru. The Second Plan can more or less be directly attributed to Mr Nehru, since, as the Chairman of the Planning Commission, he has not only been familiar with the raison d'être of the Second Plan, but has also been responsible for the framing of targets; and so, to him also can be ascribed the general responsibility for drawing up the plan for resources. In that sense, the Budget presented by Mr Krishnamachari last year was not of the making of the Finance Minister alone, but of the Cabinet as a whole. Indeed, Mr Nehru iterated this point when he intervened in the debate last year. It may be recalled that he quite pointedly asserted that he did not look upon his remarks on the Budget at that time to be an usurpation of the role of Finance Minister or an encroachment into his domain. It is now generally known that the Budget for 1957-58 was as much Mr Nehru's as it was Mr Krishnamachari's. Thus, by virtue both of his chairmanship of the Planning Commission and the keen interest that he has taken in the Budget, Mr Nehru must be deemed to possess both the knowledge and attributes necessary in a Finance Minister. Again, though it is true, as Mr Krishnamachari remarked, at the time of his resignation, that he had largely finished framing the Budget for 1958-59, it is easy to recognise that the Budget bears Mr Nehru's impress. The turn of phrase that he employs—the feeling of desolation that he described, in referring to Maulana Azad—is typical of Mr Nehru.

By now, of course, the successor to Mr Nehru as Finance Minister, has been appointed, and he has an enviable reputation for both high integrity and efficient administration. But Mr Morarji Desai will need, as Mr Krishnamachari did, to work in close collaboration with Mr Nehru. So, whoever the Finance Minister, in trying to have for ourselves a complete picture of the Indian economy, not only must we look at the whole comprised by the Second Plan, budgeting and taxation, to this we must add the personality of Mr Nehru and the plans that he has for this country. If, then, we are to look forward to an India in which standards of living will improve, our prayer had best be: More power to Mr Nehru.

Prospects For the Investor

By WATCH DOG

THE two things that I deplore most are the changes that have taken place in the aspect of two special sessions that the stock exchanges hold every year. The first is the Diwali, and many a time, in Dalal Street, I have joined in the festivity and partaken in the celebrations that attend this auspicious day. Lately, with prohibition perhaps a contributory factor, much of the zest has disappeared.

Secondly, I am afraid I must complain that Budget sessions are not what they used to be. Where are they today, those stalwarts of yester years, who could correctly assess the significance of the new proposals in the twinkling of an eye? They have instead yielded place to a new breed, whose eyes are glued to the teleprinters and whose views are based upon such flash news as the news agency gives out. By the time the Budget session drags to its close, not much activity has passed, and the feeling at the end of it is undecided and uncertain. On such a vague note, the Budget session dissolves.

1958-59 is in this regard no exception. Nor did the stock exchanges either believe or disbelieve Mr Nehru's description of the Budget as being pedestrian. If there was a relief or two, this was overlooked and obscured by the disappointment that concessions that had been hoped for did not materialise. So, as a scribe who must attempt an assessment of the Budget from the view point of the investor, the first fact that I must record is that the primary reaction to the Budget was one of disappointment.

The sentiment in the stock exchanges has since improved, but although there are some very pertinent reasons why such a rise in prices should have occurred, it is necessary to point out that the amelioration in the conditions is at least in part derived from what may be called budgetary resources.

In the first place, stock exchanges, which are usually slow to sight silver linings, have at long last woken up today to the munificence of the concession granted to Section 23A companies. It may be recalled that the dividend tax for this category of companies has been revised, so that the rate applicable will be 20 per cent on dividends exceeding 10 per cent, as against the rate of 30 per cent on dividends exceeding 18 per cent in the case of other categories. Many of our so called public limited companies, mainly in Madras and Ahmedabad, attract Section 23A, and these, consequently, will be the beneficiaries. I know the dividend tax remains in force; but it has to be conceded that the reduction of the maximum from 30 per cent to 20 per cent will constitute a very real gain to Section 23A companies. This, then, is the most cheerful of reliefs or conces-

sions which Mr Nehru's Budget contains.

Then, for the shipping companies, it was no surprise, but nevertheless welcome news, to learn that the development rebate had been raised to 40 per cent. But this particular concession is by way of being a double edged sword, and the tightening up of the conditions under which development rebate would be allowable in terms of income tax has caused fairly widespread dismay. For, the postulation that development rebate is to be debited to the profit and loss account of the year in question will mean that the quantum of distributable profit will correspondingly decline. Situations are quite possible in which, in the initial stages of development, a company will experience a fairly drastic reduction in the distributable profits; nor is it impossible that a company might even be compelled, by virtue of the duty laid on it of debiting development rebate, to convert what is actually a profit into a loss; in the former case, there is a distinct prospect of a reduction in the dividend while, in the latter, there is even a threat of the distribution being passed over. So, the question arises as to whether, in the light of such menaces to the dividend, any body of shareholders will willingly approve of a development programme which is almost certain to result, although temporarily, nevertheless in a reduction in the dividend.

I suppose the only alternative would be for the companies concerned to effect a transfer from reserves to the profit and loss appropriation account to offset reduction in the distributable profits. There is nothing to prevent a company from doing this except that, under the present requirement for the deposit of reserves, the problem will remain for the company as to liquid resources necessary for distribution of dividend. I have in this regard one suggestion to make, and that is, that the provisions for the development rebate should be suitably amended so that, in cases where the debiting of development rebate to the profit and loss account seriously affects the distributable profit, discretionary power should be vested in the Commissioner of Income Tax to permit a staggering of the debit in question over a short period of years. For example, if TISCO and IISCO will be experiencing the bulk of their additions to block in the balance sheets for 1957-58 and 1958-59, the two companies should be permitted to equalise the debit of development rebate in the accounting years, say, till 1962-63. While I entirely agree that the concession of development rebate is meant not only as an inducement to further expansion, but also that it is meant to be set apart specifically to reserve in order to strengthen a company's

balance sheet position, I need to point out at this stage that the latest provisions in regard to development rebate are likely to nullify the incentive aspect of the concession.

The second point about development rebate that I should like to pass a few remarks on is the requirement that the reserves so set apart shall be utilisable only for further expansion works or "for investment in the undertaking". The intention clearly is that the reserves "freed" by development rebate should not be available for distribution of dividend. But, if it is permitted for a company to utilise the reserve account for "investment in the undertaking", it would appear that there is nothing to prevent a company from utilising such reserves either in reduction of loan or in repayment of liabilities incurred in the execution of the development programme or yet in the financing of stocks of finished goods or raw material.

In this context, I should also mention that there is apparently a direction to the company to keep apart a sum equivalent to the transfer to development rebate reserve, for, only then would it be possible to ensure that the funds in behalf of such reserves are being utilised only for approved purposes. Now, this is an extremely difficult thing for any company to do, since reserves as they figure on the liabilities side of the ledger or depreciation as noted down in the assets side are never normally represented by assets in the form of hard cash or liquid investments for corresponding sum. For one thing, the financing of a company's activities is so diverse and complex that it will be impossible to keep account, under separate cash heads, of such things as reserves and depreciation. And yet, this is what seems to be enjoined in the regulations of the development rebate. I hope my interpretation is wrong, but if

1958-59 Budget: A Study

it is not incorrect, I must urge strongly that the clause in question should be amended, so as to do away with such an impossible requirement.

I shall not speak here of the Gifts Tax, or the changes in the Estate Duty, or of the other minor concessions that have been given. For, the Gifts Tax was expected, and the changes in the Estate Duty are consequential changes. As for the reliefs, they are minor in character, but the most important thing about the Budget is that, ever since the last day of February, in all his utterances connected with the Budget, Mr Nehru appears to have been trying studiously to create an improvement in the atmosphere. While he has made no bones of his intention to countenance no change in the integrated structure of taxation, he has quite freely been stating that revisions here and there are possible. So, Mr Nehru has contributed to an improvement in the atmosphere or hawa of the stock exchanges. This explains the much more hopeful aspect that the stock exchanges wear at the present time. As the table on this page shows, almost every representative share has improved in value from its pre-budget quotation. The market has been helped not least by hints given by Mr Nehru that such things as an export duty on common teas and excise duty on certain varieties of cotton textiles may both be reduced.

Last year, it would have been a foolhardy optimist who would have suggested, at the time of Mr T. T. Krishnamachari's budget, that stock exchange prices were likely to improve. But, today, I am in a position with a fair degree of confidence to assert that stock exchanges are destined upwards. Mr Nehru's 1958-59 Budget may mark the end of the bear era and the beginning of a bull phase.

1958-59 Budget: A Study

Foreign Investment in India

By MANUBHAI SHAH

Foreign capital, technical know-how and enterprise make a three-fold contribution to the industrial progress of an under-developed country. Such capital provides (i) the savings necessary for the large investments required for industrialisation making good in some measure the inadequacy of domestic savings to finance the necessary investments; (ii) by bringing in technical expertise and technical know-how, foreign capital also bridges the gap in the supply of technical knowledge, as well as in the supply of trained personnel needed to carry through the vast programme of industrialisation; and (iii) an under-developed country seeking to rapidly industrialise itself has necessarily to import most of the machinery, capital goods and equipment, as well as many semi-processed or processed raw-materials not required hitherto.

Pending the development of domestic heavy machine building industry to supply all these products, a country with a large programme of development must run into balance of payments difficulties which reflect against a shortage of domestic savings. Foreign capital here helps to improve the ways and means position in regard to external payments and thus, quite apart from the direct impetus to industrialisation imparted by foreign investment, it makes possible a larger programme of development than would be feasible in the absence of foreign capital.

India has a long history of foreign capital inflow, but not until recent years has the role of foreign capital in this country been so dynamic and of such vital importance. Indeed, the tremendous upsurge in industrial expansion that is now to be seen, and the solid foundations that have been laid for the future industrial expansion of this country, are due in no small measure to the interest evinced and the assistance rendered by friendly Governments and by private foreign enterprise both through technical and financial collaborations.

Although in the early years after Independence there was some hesitation on the part of foreign capital to freely come into this country, more recently there has been a significant inflow of foreign capital and foreign business enterprise, especially in new fields of development. Foreign business investment, the value of which stood at some Rs 288 crores in the middle of 1948, had increased to Rs 420 crores by the end of 1953, that is, an increase of some Rs 132 crores in 4½ years. In the next two years, there was a further increase of Rs 61 crores in the value of foreign business investment in India, and as at the end of December, 1955, the value of foreign business investment has been estimated at Rs 481 crores. Although the above

figures would incorporate some increase owing to valuation changes, especially in the plantations industries, by and large, the increase in the value of foreign business investment in India over the 6½ years under reference was the net result of an inflow of fresh foreign capital, as well as of re-investment of profits earned by foreign companies in India. Thus, allowing for changes in valuation—estimated at some Rs 35 crores over the 6½ years—and after allowing for some repatriation of foreign capital which has taken place, there has been a net inflow of foreign capital (including profits ploughed back by foreign enterprise) to the extent of some Rs 23 crores annually. On the whole the disinvestment has been negligible.

We can see the pattern of foreign business investment in India as in June 1948, December 1953 and December, 1955:—

Valuation of foreign business investment in India

	(Rs. crores).		
	June 1948	Dec. 1953	Dec. 1955
Manufacturing	72.0	135.7	163.3
Trading	64.4	94.8	102.3
Utilities and Transport	31.2	50.5	53.1
Mining	11.5	8.4	9.6
Financial:			
(a) Banking	31.7	16.2	20.2
(b) Others	6.9	14.7	19.1
Plantations	52.3	71.5	87.2
Miscellaneous	17.7	27.7	25.9
Total	287.7	419.5	480.7

Of the above, the investment in entirely new companies—i.e. in companies formed after June, 1948 was some Rs 36 crores. It is significant to add that over the period from June, 1948 to December 1955, retained and ploughed back profits of foreign undertakings in India contributed some Rs 93 crores to the increase in the value of foreign business investments in India. The value of investments received in kind—through import of plant and machinery, etc. against foreign investment—has been estimated at Rs 104 crores over this period, which is also very significant.

Thus even allowing for valuation changes, the net increase in foreign private investment in India since 1948 has been of the order of Rs 23 crores annually. Small though the amount, it has over the years meant a sizeable increase in the savings available for investment. Secondly, the value of this investment to the country is far greater than the value of external financial assistance of this magnitude. Quite apart from direct foreign investment in a number of new directions, over the years since 1948, there has been more than 300 cases of foreign technical collaboration with Indian enterprise, in setting up new units or in organising the production of new products and new lines. Thus, foreign technical

know-how and technical assistance have made possible the starting of a large number of new industries which it would otherwise have been difficult to establish expeditiously.

Indeed, it can be stated that the rapid expansion of the engineering and of the chemicals industries since Independence has to no small extent been due to foreign collaboration with Indian industry and to the availability of foreign technical know-how. Such assistance has been available to Government projects and to private industry. By way of illustration, mention may be made of the generous assistance received by the Union Government from Germany, the UK and the USSR—both in terms of finance and in way of technical help—for the three new steel plants in the public sector. A French firm has assisted in setting up of the electronics factory at Bangalore, while the Hindustan Machine Tools at Bangalore has been helped by the Swiss and the Germans. The fertilisers plant at Nangal and the expansion of the plant at Sindri are both being assisted by the Italians. The Heavy Electricals Project at Bhopal is being undertaken with the help of the British. Technical investigation has already been completed with the help of Soviet Union and UK on the establishment of a series of heavy engineering plants, for which the stage is now set for a Central Heavy Machine Building plant with the collaboration of USSR and the heavy

Foundry-Forge Plant in collaboration with Czechoslovakia.

Negotiations are also being conducted for the establishment of some important items of basic drugs and intermediates with Russian, German and American assistance. Russian assistance has also enabled work to be commenced on the manufacture of heavy mining machinery and of ophthalmic and optical glass. A number of Eastern European countries have also assisted in the preparation of technical reports on important industries like raw films, castings and forgings.

India has also been receiving assistance for the implementation of her development programmes under various other schemes such as the Colombo Plan, the IndoUS Technical Cooperation Programme and PL 480 Arrangements and from International Institutions like the International Bank for Reconstruction and Development, the International Monetary Fund as well as Organisations like the Ford Foundation. Economic assistance received under these schemes is in the form of equipment, commodities and in the shape of services of experts and training facilities. The total assistance available for the Second Plan period received from the International Institutions as well as under the special schemes and arrangements such as Colombo Plan, PL 480 Arrangements and Technical Cooperation Mission amounts to about Rs 610 crores. Major portion of this

NICCO WIRES & CABLES

NICCO is India's finest development in electrical wiring and there is hardly any electrified place in the country where NICCO wires and cables are not playing a conspicuous part. Nicco produces Bare Copper Conductors—solid and stranded, Aluminium Conductors, V. I. R. Insulated Cables & Flexibles, Aerial Cables, Telephone Wires, Enamelled Copper Wires etc

INDIA'S OWN
INDIA'S BEST

THE NATIONAL INSULATED CABLE CO., OF INDIA LTD.
STEPHEN HOUSE, DALHOUSIE SQUARE, CALCUTTA-1

assistance was received under TCM Programme and PL 480 Arrangements. The assistance received under TCM amounted to Rs 112 crores and that under PL 480 arrangements Rs 137 crores. The loans sanctioned by the World Bank amounted to Rs. 170 crores of which loans of Rs 136 crores were sanctioned after the commencement of the Second Five Year Plan. Of this sum, Rs 49 crores were for the Public Sector and Rs. 87 crores for the Private Sector. The loans for the Public Sector are mostly for the development of Indian railways and those in the private sector cover the expansion of the steel plants of the Tata Iron and Steel Co. and Indian Iron & Steel Co. The assistance received from the Ford Foundation is about Rs 7 crores and is mainly being utilised for rural development, industrial and business development, education and public administration and other projects. Finally, mention may be made of the timely and generous loans received from IMF which totalled Rs 95 crores during 1957 and were very valuable in tiding over some of our foreign exchange difficulties.

The contribution of foreign capital and technical collaboration and participation to the growth of private industry—though not as spectacular—is perhaps even more significant. There are financial or technical cooperation arrangements between firms in different foreign countries and all automobile manu-

facturers in India; while the same is true of a number of the newer engineering and chemicals industries. While oil refining has so far been based on direct foreign investment by USA and UK firms, firms from a large number of countries, especially from Europe, America as well as from Japan have assisted, through technical as well as financial collaboration, in the manufacture of such vitally important new industries as electrical equipment, a variety of chemicals and dyestuffs, drugs and medicines, plastics, industrial gases, aluminium, machine tools, industrial machinery such as textile and cement machinery, sugar mill machinery, paper mill machinery and a wide range of other products. The stage has also been set for making necessary arrangements for the establishment of two new aluminium plants and a few big fertiliser plants in the private sector by foreign financial and technical participation.

The above would serve to demonstrate that contrary to some misconceptions, India has over the past few years, attracted foreign capital and foreign investment over a wide field of industry. With some 400 million potential buyers and the great consumption propensity of a vast population on the road to economic and industrial development and expansion of the general levels of income, and with the availability of both tapped and untapped resources of raw materials and of cheap and ready-to-

learn labour, India undoubtedly offers excellent opportunities for industrial investment.

It is for these reasons that the policy of the Government is to encourage foreign capital investment in all desirable fields of new development. As early as 1949, the Prime Minister stated in the Parliament:

"Indian capital needs to be supplemented by foreign capital not only because our national savings will not be enough for the rapid development of the country on the scale we wish but also because in many cases scientific, technical and industrial knowledge and capital equipment can best be secured along with foreign capital".

Even in the most difficult hour of the foreign exchange situation, India has freely permitted not only the transfer of profits and income on foreign capital but also capital repatriation facilities within the framework of existing rules and regulations.

The need for foreign capital and for the inflow of technical expertise in a developing country is not temporary; it is a continuous and long term need, and indeed, increases as the industrial and economic base of the country expands. Correspondingly, with the growing tempo of industrialisation, there is need for an increasing variety of processed and semi-processed raw materials, for which internal production becomes both necessary and profitable. Foreign investment can not only bring in

1958-59 Budget: A Study

the necessary technical expertise and technical know-how, but can also bridge the gap between the investment needs of a growing economy and the supply of domestic savings.

The needs of India for such foreign capital are large, and in comparison, the inflow of foreign capital hitherto, valuable as it has been, has been rather small. The Planning Commission had envisaged a new inflow of Rs 100 crores of foreign capital during the Second Plan period, to cover a part of the foreign exchange gap during the Plan period. This gap, as is generally known, has now widened and of all sources of foreign exchange to meet this increased gap, the inflow of foreign capital is at once the most unobstructive and at the same time the most useful source, bringing as it does not only the requisite supply of foreign exchange but also savings, and the technical expertise required in the country. Such capital is, not only welcome to the country and the Government but also welcome to private industry insofar as foreign capital enters into collaboration or participation arrangements with indigenous industry, thus serving the three-fold requirements of the economy outlined at the outset, namely, the supply of savings, of foreign exchange and of technical know-how. Our policy is to make foreign capital advantageous and profitable both to the investing and collaborating countries and to India.

1958-59 Budget: A Study

BEFORE proceeding to deal with the various provisions of the Finance Bill, 1958, we would like to make a few preliminary observations. The Central Budget presented on the 28th February 1958 is, to use the Prime Minister's own words, "a pedestrian budget statement, which, in the main, is a continuance of things as they are with relatively minor changes". The Budget, in fact, is more conspicuous by what it has omitted to do, rather than for what it has done. It may be recalled that in November 1956 and May 1957, on the basis of the recommendations made by Professor Kaldor, the Capital Gains Tax was re-introduced, and some new taxes like the Wealth Tax and Expenditure Tax were adopted as part of our taxation system. Only the Gifts Tax remained, and that too has been introduced this year. Thus a radical change has been made in the tax structure of our country. As a result of all these measures, direct taxation has become very heavy. To add to this, a disability was placed on the Corporate Sector by requiring companies to deposit with Government a part of the depreciation funds. This particular measure, as also the wealth tax on companies, had caused some apprehension in the minds of American investors, as pointed out by the Indian Industrial Delegation which toured America, Canada, Britain, France and West Germany last winter. At that time, Mr T. T. Krishnamachari, the late Finance Minister became alive to these misapprehensions of foreign capital, and on one occasion he indicated that this scheme of deposit of depreciation funds with Government would be withdrawn after some time. We had hoped that the 1958 Budget would have done so: but this has been a vain expectation. This is the most significant omission in the present budget proposals.

Under the 1958 Budget, Expenditure is estimated at Rs 796 crores. Under the estimates for 1957, it was Rs 672 crores. In 1956, it was Rs 534 crores; and in 1955, it was Rs 464 crores. Thus, within a four year period, the increase in expenditure is Rs 333 crores. In the face of this, we may be pardoned if we observe that public expenditure has been mounting up. Would it not be legitimate to expect that some effort should have been made to check this growing expenditure? Both when Sir Chintaman Deshmukh was Finance Minister, as also during the period when Mr Krishnamachari held that portfolio, there had been occasional official statements to the effect that the scope for economy in public expenditure would be examined and the needful done. The present Budget is a sad commentary on the significant omission in this regard.

The Income Tax Act contains a provision to the effect that if companies distribute more than six per cent by way of dividend, they shall pay an additional tax. Almost in the same breath, the

Commentary on the Finance

Bill 1958

Act says, in Section 23-A, that private companies and public companies controlled by five or less persons, shall distribute by way of dividends between 45 and 90 per cent of their profits (the effect of which will almost certainly be that the rate of dividend will be much more than six per cent). It is as if the Act is saying to companies, "Look here, if you distribute more than 6 per cent dividend I shall punish you with a penal tax: but you must distribute 20 to 30 per cent"! This is anomalous, but nothing has been done to remove it.

But our Prime Minister can hardly be blamed for these omissions. Fate and circumstances had thrust upon him, almost at the last moment, the duty of presenting the Budget, and it is farthest from our intent to lay at his door the responsibility for its omissions and commissions. If our above comments lead to an examination of the question whether these omissions should not be repaired, we would be more than satisfied.

We may now deal with the more important Clauses of the Finance Bill, 1958.

Of the various changes made by Clause 3 of the Bill, there are four which have to be taken note of. These are as follows:—

(i) At present, an assessee who is resident in India is entitled to exemption (under the Third Proviso to sub-section (1) of Section 4 of the Act) from Indian income-tax on his foreign income retained or spent abroad up to a maximum of Rs 4,500. The change now proposed is that where such assessee is a Government servant (or employee of a local authority or statutory corporation) the quantum of such exemption shall be an amount calculated at the rate of Rs 1,000 for each month of service in respect of which the salary is received abroad. So far so good: but, why should this concession—that this is a concession, there can be no doubt—not be extended to employees in private service? Why should it be confined only to Government servants? The failure to extend this concession to employees in private service also, is another omission in the Bill.

(ii) At present, the value of free or concessional passages received by a non-Indian national from his Indian employer in connection with his proceeding on home leave out of India is exempt from tax subject to certain conditions which it is unnecessary to mention in this

article. The Bill proposes that travel concessions received by any citizen of India from his Indian employer, for himself, his wife and children, in connection with his proceeding on leave to his home-town or village in India, shall also be exempt. This is a gesture which must be appreciated. But here again there is a lacuna. There are many Indian nationals in the service of foreign companies operating in India, to whom their employers are extending the concession of free passage to Europe and back (both for the employee and his family). Recently, this concession has become taxable: it would have been better, if they were placed on a par with non-Indian national in regard to this concession. We believe many of them do feel that the Bill has omitted to do this.

(iii) Under the Act, the income of foreign technicians is exempt to a certain extent. This was done with a view to encourage "know-how" coming to India. "Technician" has been defined as "a person having specialised knowledge in industrial arts and sciences and having experience in industrial practice". Under the Bill it is proposed to redefine it as "a person having specialised knowledge and experience in constructional or manufacturing operations or in mining or in the generation or distribution of electricity or any other form of power". The definition of "technician" is thus sought to be made more restricted in its operation. In engineering enterprises, administrative skill is itself a specialised technique in these days. The new definition, it is feared, will not be conducive to the import of "know how" in administration.

(iv) Incomes derived by registered Trade Unions from investment of their surplus funds are proposed to be exempted. Another concession is that the income of scheduled tribes residing in Manipur will be exempt from Income-tax.

Section 4A of the Income Tax Act defines as to when a person will be deemed to be resident in India. So far as companies are concerned, the provision is that it will be deemed to be resident in India if (a) the control and management of its affairs is situated wholly in India during the year in question; or (b) the company's Indian income during the year exceeds its foreign income. This latter criterion has led to the anomaly

that a company which was deemed to be resident in one year may become non-resident in another year simply because of a fall in its Indian income. And a non-resident company may become resident, by reason of having a larger income from India. To remedy this, Clause 4 of the Bill proposes that all companies incorporated in India will be treated as resident companies, irrespective of where the seat of their management is located, or the size of their Indian and foreign incomes. At the same time, where a company is registered outside India, if the control and management of its affairs is situated in India during the year, it will be deemed to be resident. We believe this is a change in the right direction.

A change in regard to the taxation of entertainment allowances is made by Clause 5 of the Bill. At present, entertainment allowances received by any employee (whether in Government employ or private service) are exempt from tax up to one-ninth of the salary or Rs 7,500, whichever is less, provided the employee concerned was in receipt of the allowance before 1st April 1955. The change now proposed by the Bill is that, so far as Government servants are concerned entertainment allowance will be exempt even where the employee concerned is receiving it only after 1st April 1955. At the same time, the limit of exemption will be reduced from Rs 7,500 to Rs 5,000, and this reduction affects also those who have been receiving the allowance before 1st April 1955. We would suggest the following changes in order that there may be no discrimination between (a) Government servants and those in private service; and (b) those who were receiving entertainment allowances before 1st April 1955, and those who have been receiving such allowances after that date. In the case of all these categories of employees, entertainment allowances may be exempted up to one-fifth of the salary or Rs 7,500 whichever is lower. Under the present conditions, entertainment allowances are a necessary element in the emoluments of senior officers, and it is but reasonable that these allowances should be exempt. There is no need to be too strict in regard to this matter, and we do not feel there would be much loss of revenue by extending the concession in the manner we have indicated. It has the twin advantages of equitability and non-discrimination.

Property owners, assessed under Section 9 of the Act, will not be happy with the amendment proposed by Clause 6 of the Bill. At present, one half of the total amount of municipal taxes levied on house properties is deductible in determining the taxable property income. Water tax, conservancy tax, etc., levied by certain municipalities, have been held to be "service taxes" and not "municipal taxes", with the result that these "service taxes" can be lawfully deducted wholly in arriving

at the taxable property income. The effect of the amendment now proposed by the Bill is that "service taxes" will not be deemed to be "annual charge", and cannot therefore be deducted; but, in determining the annual value of property with reference to the rent payable by a tenant, a deduction may be made of one half of the service tax, where the same is wholly borne by the owner. This tightening up of the permissible deductions under Section 9 is not a welcome feature; for, as things are at present, the deductions now permitted under the Section have become wholly unrealistic due to the changed conditions. The section allows one-sixth of the annual value as repairs allowance, but, both cost of building materials and cost of labour have gone up by many times since this allowance was fixed many years ago. The Rules prescribe an allowance up to six per cent of the annual value, as collection charges; but everyone knows that under present day condition this is wholly inadequate. Again, in Calcutta, the corporation takes away almost a quarter of the annual value by way of taxes. Thus, it has become unremunerative to own properties. One has only to walk along Chowringhee to see many old and stately buildings which are badly in need of plastering and whitewashing, and whose woodwork is hungry for paint. Owners would not normally like their buildings to decay; it is the unremunerative nature of the repair work that has caused neglect of the buildings. Hence, far from any tightening up, what Section 9 needs is some amount of liberalisation. When the Second Plan lays so much store by housing, it is incomprehensible why such a liberalisation has not been forthcoming. We consider this another prominent omission in the budget proposals.

We now come to the most important provision in the Finance Bill, i.e., Clause 7. This clause makes some radical changes in regard to the "Development Rebate". The changes are:

(a) In the case of ships launched on or after 1st January 1958 the quantum of the development rebate will be forty per cent.

(b) In all other cases, the quantum of the development rebate will be twenty-five per cent.

(c) In the case of ships launched, or machinery or plant installed, on or after 1st January 1958, development rebate will be allowed only if—

(i) an amount equal to the development rebate is debited to the Profit and Loss Account of the concerned "previous year";

(ii) the said amount is credited to a special "reserve account";

(iii) the funds in the said reserve account are utilised only

for the acquisition of assets for the undertaking or for investment in the undertaking;

(iv) such utilisation, as stated above is made within the ten years following the concerned "previous year"; and,

(v) during the period of ten years mentioned above, the ship, machinery or plant, is not sold or otherwise transferred by the assessee to any person other than Government.

(d) In the case of ships launched or machinery or plant installed, on or before 31st December, 1957, conditions (i) to (iv) mentioned above will not apply, but condition (v) alone will apply. (This is the effect of Clause 10 of the Bill).

(e) If the ship, machinery or plant is sold or transferred to any person other than Government, or if the funds in the special reserve mentioned above are utilised for any purpose other than what has been specified in condition (iii) above, then, at any time within four years from the date of the sale, transfer, or mis-utilisation of the funds, the Income Tax Officer will re-open the assessment of the year in which the development rebate was allowed, disallow that rebate, and make a re-assessment.

The above are, in brief, the regulations proposed in regard to the development rebate. Now, we may proceed to attempt an assessment of the probable effects thereof. Firstly, the increase of fifteen per cent in the development rebate for ships is a change that had been urged by the shipping industry, and they would therefore welcome it. Secondly, the condition that the development rebate should be debited to the Profit and Loss Account will result in erosion into the normal profits, thus diminishing the dividends to the shareholders. And, in the case of new companies, it will only lengthen the period during which the company is not in a position to yield a return to its shareholders. For instance, for the year ended March 1957, the development rebate for the Tata Iron & Steel Co., was about rupees one crore, so that it will have to debit rupees twenty-five lakhs to its Profit & Loss Account. Such a procedure is bound to reduce the rate of dividend to the shareholders in the case of any company. Thirdly, the condition that the funds in the special reserve should be utilised only for the purchase of new assets does not take into account cases where new assets are no longer required; the money will remain blocked in such cases, and eventually the rebate will be added back! Lastly, as regards the condition that the machinery or equipment should not be "sold" or "transferred", what will happen if an imported machine is subsequently found defective? Will Government buy it? Then again,

what will happen if a company finds it necessary to close down due to labour troubles, or otherwise, and a receiver or other person appointed to take custody finds it of advantage to lease out the factory? These are all complications which do not seem to have been envisaged by the framers of the proposed amendments. No one can call in question the basic principle behind these amendments that the development rebate must be put to proper use; but the trouble is, that the safeguards now proposed to achieve these objects, will result either in the discouragement of further investment by reason of the diminution of dividends, or in the disallowance of the development rebate by reason of undertakings finding it difficult in practice to conform to the proposed conditions. We would say that the remedy is worse than the evil.

Another change proposed by Clause 7 of the Bill is in regard to depreciation allowance other than the development rebate. The Bill provides that no depreciation allowance shall be granted on buildings, plant, machinery, etc., in the year in which such assets are sold. This is on the ground that in such cases, a balancing allowance is already available under clause (vii) of sub-section (2) of Section 10 of the Act. Under the said clause (vii), if the written-down value of an asset is higher than the "sale" value, the difference can be written off and is deductible. There can be no objection to the proposed change.

Clause 8 of the Bill merely clarifies that the rates of tax to be applied for purposes of deduction of tax at source under Section 18(2) of the Act, on salary incomes, are the rates in force for the financial year in which the employer is required to deduct the tax.

A slight relaxation in the rigour of Section 23A is proposed by Clause 9 of the Bill. At present, when a company has failed to make the statutory distribution, the Income Tax Officer will proceed to apply Section 23A, unless he is satisfied that "having regard to the losses incurred by the company in earlier years or to the smallness of the profits made in the previous year, the payment of a dividend or a larger dividend than that declared would be unreasonable". The Bill proposes an additional ground on which also the Income Tax Officer may refrain from applying Section 23A, and that is "that the payment of a dividend or a larger dividend than that declared would not have resulted in a benefit to the revenue". If a substantial part of the shares in a company to which Section 23A is applicable are held by persons who are exempt from Income Tax, e.g., by charitable institutions, then, even if the company has failed to distribute the statutory minimum, no additional income-tax revenue will be realised by applying Section 23A to the com-

pany; if anything, it would only be negligible. This relaxation has therefore been considered desirable; but not many are likely to benefit from it. Even so, the amendment should be welcomed.

Here, we may take note of a further relaxation proposed by the Bill in respect of the excess dividends tax payable by companies to which Section 23A is applicable. At present, all companies, including those to which Section 23A is applicable, are subject to a graduated rate of super-tax on all dividends declared in excess of six per cent of the paid-up capital. The present rates are: (i) on that part of the dividends which exceeds six per cent but does not exceed ten per cent of the paid-up capital, the tax is at the rate of ten per cent; (ii) on that part of the dividends which exceeds ten per cent but does not exceed eighteen per cent of the paid-up capital, the tax is at the rate of twenty per cent; and (iii) on that part of the dividends which exceeds eighteen per cent of the paid-up capital, the tax is at the rate of thirty per cent. The Bill proposes that so far as companies to which Section 23A is applicable are concerned, the rates of the excess dividends tax shall be as follows:—(i) on that part of the dividends which exceeds six per cent but does not exceed ten per cent of the paid-up capital, the tax will be at the rate of ten per cent (as at present); and (ii) on dividends exceeding ten per cent of the paid-up capital the rate of tax will be twenty per cent. In regard to this amendment, the Prime Minister said in his speech: "This change is desirable as under the Act these companies are required to distribute the whole or a large proportion of their profits to the shareholders. It is not possible to estimate the loss of revenue in this proposal, but it is likely to be very small". We have already mentioned in the opening paragraphs of this article, the anomaly in applying the excess dividends tax to companies falling within Section 23A.

The other changes proposed under the Finance Bill are minor amendments. A brief mention of some of them may be made here. In regard to Wealth Tax, it is proposed to exempt a foreign citizen from payment of the tax on his foreign wealth, even though he may be resident or ordinarily resident in India. In regard to Customs Duties, an alternative ad valorem rate of duty in respect of expensive varieties of artificial silk yarn like nylon, perlon, etc., is proposed. Finally, the Excise Duty on cement is proposed to be increased from Rs 20 per ton to Rs 24 per ton, but it has been stated in the Prime Minister's speech that this increase will not raise the issue price of cement as it is proposed simultaneously to withdraw the surcharge levied by the State Trading Corporation. Instead, if the price to the consumer had been reduced, it would have been much more welcome.

1958-59 Budget: A Study

Commentary on the Gifts Tax Bill

THE Gifts Tax Bill, introduced in Parliament on the 28th February 1958 as part of the 1958-59 budget proposals, consists of forty-seven sections in addition to one rates schedule. The Bill is modelled on the lines of the Wealth Tax Act and the Expenditure Tax Act, and closely follow the provisions of the Income Tax Act. In the "Statement of Objects and Reasons" of the Bill, it is claimed that gifts from one person to another provide a convenient means of avoiding or reducing liability to Estate Duty, Income Tax, Wealth Tax and Expenditure Tax, that the only effective method of checking such attempts at evasion or reduction of tax liability is by levying a tax on gifts, and that with the introduction of this tax, the integrated tax structure which the Government have been aiming at will be complete. Though no reference is made here to Dr Kaldor, it cannot be denied that these new tax measures of the recent past have been based on his recommendations. These new tax measures are of advantage to Government as they bring in more revenue. At the same time, Dr Kaldor had recommended that the present income tax rates are too high, are therefore deleterious to the economy and should be reduced so as not to exceed about 45 per cent. We feel Government ought to have accepted this recommendation also—or at least gone part of the way in that direction—in the larger interests of the country. By doing so, savings and capital formation within the country would have been encouraged to some extent, and this would have greatly helped the further industrialisation of the country.

Furthermore, a tax on gifts is peculiarly unsuited to our country. There are large numbers of poor people whose fate would be starvation if the choultries and dhar-masalas were not there. Who would give gifts for the maintenance of these charitable institutions if the giver is going to be taxed for it? Similarly, there are numerous temples all over the land, which are maintained by the donations of devotees. The Gifts Tax means that such devotion will be taxed! This tax is against the traditions of our country, and one cannot help wishing that this tax were not there. However, the tax has been introduced, and—like the unwelcome guest who has come knock of not leaving—it has come to stay. The least that could be done under the circumstances is to mitigate its bad effects by modifying its provisions somewhat. With that in view, and also with a view to drawing attention to some significant provisions of the Bill, we have ventured to make the following comments, on some clauses of the Bill.

In Clause 2 (xii), "gift" is defined as the transfer of any "existing" movable or immovable property made voluntarily without consideration. Suppose you order your jeweller to make a necklace

and deliver it to a friend to whom you are intending it as a gift, the gift is not of an "existing" movable property, and so, would apparently be outside the purview of the tax! Clause 4 of the Bill refers to certain kinds of transfers which will be deemed to be gifts, but it is doubtful whether this will be covered even by that clause. On a careful perusal of sub-clause (c) of Clause 4, we feel a transaction of the above nature will be outside the purview of this Bill.

Clause 5 specifies what are the gifts that will not be chargeable to tax under this Bill. We would like to refer to some of the items therein. Under the Clause, gifts for a charitable purpose will be exempt only if the gift is to an institution or fund approved under Section 15-B of the Income Tax Act, or if the amount of the gift does not exceed one hundred rupees in any one case. Choultries, dhar-masalas, temples—these are not recognised under Section 15-B. Again, donations for poor feeding—there is no exemption in the Bill for such donations! It is hard to believe that Mr Nehru doesn't want our starving millions to be fed by the charitably-minded few. We suggest that donations for religious and charitable purposes be completely exempted from this tax.

Another exemption under Clause 5 is in respect of gifts to female relatives on the occasion of their marriage. The clause imposes a limit of rupees ten thousand in respect of the marriage of each such relative. This limit would appear to be as arbitrary as the clause in the Expenditure Tax Act which gives an exemption from that tax to the extent of rupees five thousand only in respect of marriages. The Bill says in the next sub-clause that tax-free gifts will be permitted up to one lakh of rupees where the gift is to the wife. It appears to us that it would be logical to fix at least half that sum in respect of tax-free gifts to daughters on the occasion of their marriage. The limit of ten thousand rupees is definitely too low.

Sub-clause (2) of Clause 5 says that the first ten thousand rupees of gift in any one year will be tax-free. The sub-clause further goes on to say that if the value of the gifts to any single donee exceeds rupees three thousand, then the tax will be attracted if the total of all gifts in the year exceeds rupees five thousand. This also appears to be an arbitrary provision. One fails to understand what difference it makes to the Revenue whether the exemption limit of rupees ten thousand is availed of by giving five separate gifts of two thousand rupees each or a single gift of rupees ten thousand. This provision that a single gift should not exceed rupees three thousand could as well have been omitted. According to Clause 7, the rate of the gifts tax will be determined, not by the total value of the gifts made during the particular year

alone, but by the total value of the gifts made during the particular year and the four years preceding it (i.e., a total of five years). This appears to have been done out of revenue considerations, for, the greater the number of years taken into account the larger will be the total value taxable and therefore the higher the tax-rate applicable. In the United States, gifts made during all the years since 1932 are taken into account for determining the rate. Compared to that, we appear to have been lightly let off, seeing that only five years will be taken into account. All the same, this condition of aggregating five years' gifts for determining the rate cannot be supported as being based on any logical grounds.

The administrative set-up for the Gifts Tax will be the Income Tax Department; Clause 8 of the Bill provides that the Income Tax Officer will be the Gifts Tax Officer also. The Income Tax Officer has thus to administer the Income Tax, Wealth Tax, Expenditure Tax, Estate Duty and the Gifts Tax—quite a formidable assignment, we would say. These officers, who are already over-burdened with work, ought not to have been saddled with additional responsibilities. But seeing that this whole sheaf of new taxes is part of an "integrated scheme" of tax structure, in which there is little room for tax avoidance or evasion, it appears to be but proper that all these new taxes should be administered by the same officer in respect of any one assessee.

In passing, we may refer to Clause 14. Gifts Tax returns have to be submitted to the Department by the 30th June of each year, similarly as in the case of the Wealth Tax and the Expenditure Tax. The return is to be made by "persons" who have made taxable gifts during the previous year. "Person" is defined in Clause 3 (xviii) as including a Hindu undivided family. In the "Notes on Clauses" (Notes to Clause 3), it is clearly stated that the tax is to be levied on all gifts made during the previous year by "individuals, Hindu undivided families, companies, firms and associations of persons". One could not help wishing that this could have been stated in the Clause itself rather than in the Notes on Clauses, since these latter will not be a part of the Statute.

The procedure relating to assessment, appeals, revisions and references in respect of the Gifts Tax is the same as in the case of the Wealth Tax, Expenditure Tax and Income Tax. There is, however, one significant innovation. We refer to Clause 19 under which, if, within fifteen days of making a taxable gift, an assessee makes an advance payment of the amount of tax specified in the Clause, he will be given credit in addition to the amount so paid, for an amount equal to ten per cent of the amount so paid. This will certainly act as an inducement to the honest tax-payer, who would in

any event be paying the tax, be there inducement or no inducement. But so far as the dishonest ones are concerned, this provision is not going to make the slightest difference, for, by making the advance payment, they gain only ten per cent, whereas by not making any payment, they gain cent per cent!

The tax is certainly illogical in that it calls upon the person who has already parted with something by way of a gift, to part with something more by way of a tax on it; indeed, it would have been much more logical if the tax had been levied on the donee instead of the donor; for, the donee is getting something for nothing when he receives the gift, and, so, is psychologically better placed to bear the tax. In that case, the recipient's total property will determine the tax rate, as it properly ought to. This was also what Professor Kaldor had recommended in his carefully thought out scheme. We suppose it is too much to expect such a radical change in this Bill now. Government have chosen to place the incidence of the tax on the donor, clearly out of revenue considerations; there is no other justification for it. Will our Legislators raise this issue when discussing Clause 30 in Parliament?

Clause 31 says that gifts tax payable in respect of any gift of immovable property shall be a first charge on that property, but any such charge shall not affect the title of a bona fide purchaser for valuable consideration without notice of the charge. Transfers of immovable property can be made only by registered instruments. So, a purchaser will know whether the property has been the subject of a gift, and is therefore put on inquiry as to whether the relative gifts tax has been paid. It is difficult to conceive of a case where a purchaser has no notice of the charge. However, there is no harm in placing the matter beyond doubt. Hence, what might otherwise have been deemed to be redundant, may be allowed to remain in Clause 31.

Clause 38 empowers the Gifts Tax Officer to call for information from any person. The only exception is in favour of legal practitioners, professional communications to whom are exempted from this compulsory disclosure. We notice a significant omission in this Clause. We feel that banking companies could have been exempted.

Clause 46 provides that the Act shall not apply to the persons listed in the Clause. These are:—Government companies; statutory corporations; public limited liability companies and their subsidiaries; and institutions to which Section 15-B of the Income Tax Act applies. (It may be mentioned incidentally, that institutions and funds to which Section 15-B of the Income Tax Act applies—gifts to them and gifts by them, are all exempt). The Clause provides, however, that public companies to which Section 23-A of the Income Tax Act applies will not be exempted from the Gifts Tax.

Commentary on the Estate Duty Amendment Bill

A proposal to effect certain amendments to the Estate Duty Act is part of the budget proposals for 1958-59. Estate Duty was introduced in India in 1953 and has been in force since 15th October of that year, that is, duty is payable on the principal value of all property which passes or is deemed to pass on the death of any person dying on or after 15th October 1953. Since that date several ostensibly rich persons have died in India, but Government have been able to collect little by way of Estate Duty. The obvious conclusion from this fact should be that there are very few rich persons in India in the sense in which one understands the term "rich" in the United States or the United Kingdom. This conclusion is also consistent with the undisputed fact that 99 per cent of our people are poverty-stricken. Out of a population of about 375 millions, just about a million are income-tax assesses, which works out to less than one-third of one per cent. For 1954, Government estimated that they might be able to collect Rs 25 lakhs by way of Estate Duty: the actual collections were Rs 8 lakhs. The estimate for 1955 was Rs 21 lakhs, and the actual collections Rs 13 lakhs. For 1956-57, the estimate was Rs 18 lakhs while the actual collection was Rs 11 lakhs. For 1957-58, the revised estimate is Rs 9 lakhs. This progressive decline in the revenue from the Estate Duty has clearly demonstrated that, so far as our country is concerned, Estate Duty as a source of revenue is of little practical utility. But our Government do not appear to be inclined to accept this logical conclusion warranted by the facts of the situation. Instead, it is being put forth, for the consumption of the general public, that the smallness of the revenue from this duty is due to large-scale evasion. The long-suffering taxpayer is thus being made a scapegoat for Government's fault in over-estimating this source of revenue. As a result we have now the Estate Duty Amendment Bill, intended to plug loopholes and otherwise tighten up the Act in certain directions. In the Statement of Objects and Reasons at the end of the Bill, it is said that the "main amendments are intended to restrict some of the concessions which in the light of subsequent experience do not appear to be justified". And, in his budget speech, the Finance Minister said: "The actual collections of Estate Duty have fallen short of even the modest expectations we had at the time of passing that measure. This is partly due to the practice of making large gifts inter vivos which will, hereafter, be checked by the levy of the Gift Tax. It is also partly due to the numerous concessions provided in the Act itself, and I pro-

pose to reduce some of them". We may now proceed to examine what are the changes proposed, and what might be their repercussions.

Clauses 3 and 24 of the Bill relate to the change proposed in the appellate procedure in respect of Estate Duty. Under the Estate Duty Act as it stands now, the first appeal lies to the Central Board of Revenue. Thereafter, there is the usual provision for a statement of case to the High Court and appeal to the Supreme Court. Under the Income Tax Act (as also the Wealth and Expenditure Tax Acts) the first appeal is to the Appellate Assistant Commissioner, and the second appeal to the Appellate Tribunal with a reference to the High Court on points of law at the third stage and finally an appeal to the Supreme Court on points of law. What is now proposed under the Estate Duty Amendment Bill is to bring the appellate procedure in Estate Duty in line with the provisions in the Income Tax, Wealth Tax and Expenditure Tax Acts. Clause 3 and a major portion of Clause 24 of the Bill seek to make the necessary changes, in this connection.

Very substantial changes are proposed by Clause 4 of the Bill. At present, gifts for any purposes other than public charitable purposes, if made at any time within two years immediately preceding the occurrence of death, are subjected to Estate Duty; but if made at any time which is more than two years before death, such gifts are exempt from Estate Duty. This period of two years is being extended to five years under the proposed amendment. That is to say, gifts for other than public charitable purposes, made at any time within five years immediately preceding death, will, with effect from 1st April 1958, be subjected to Estate Duty. This is also the position under the English Law. The Revenue claims that, by the device of making gifts, Estate Duty is now being avoided, and that by extending the taxable period to five years from the present two years, this loophole is plugged. In support of this change, it is stated in the Notes on Clauses attached to the Bill that this was recommended by the Taxation Enquiry Commission. True enough: but whether the period be two years or five years, it is nevertheless arbitrary, for, it makes the taxability of gifts entirely dependent on the fortuitous circumstance of the donor surviving or not surviving the prescribed period. In his Report on Indian Tax Reform, Professor Kaldor observed: "If the principle that gifts made in contemplation of death (and/or with a view of avoiding death duties) should be brought within the tax net, while other gifts should be exempt, were correct, the proper method to give effect to

it would be to compound the potential death duty liability in respect of chargeable gifts on an actuarial basis, rather than rely on some purely arbitrary rule by which gifts made at a particular date prior to death or earlier are entirely exempt and gifts made after that date are fully taxable." We suppose the complexities involved in making such an actuarial computation is the justification for Government's decision to fix the datum line at five years. The change, however, may bring in a little more revenue to Government as a greater number of bequests will thereby fall within the purview of the Estate Duty. It is not possible to gauge whether this will bring in any substantial revenue.

Under sub-section (2) of Section 9 of the Estate Duty Act as it stands now, estate duty is not payable in respect of gifts made "in consideration of marriage or which are proved to the satisfaction of the Controller to have been part of the normal expenditure of the deceased, but not exceeding rupees five thousand in the aggregate". In regard to this, a slight concession is proposed by Clause 4 of the Bill. In future, the limit for such gifts is to be rupees ten thousand for gifts in consideration of marriage, and rupees ten thousand for gifts proved to the satisfaction of the Controller to have been part of the normal expenditure of the deceased. While these concessions are to be welcomed, the figure of ten thousand is again arbitrary and is not founded upon any logical basis, particularly in respect of marriage gifts. When a daughter or other near female dependent is given away in marriage, she goes out of her parents' family for ever. It would, therefore, be appropriate if, on that occasion, she is given gifts of an amount suited to the status of the family from which she is departing. Marriage gifts should, therefore, be related to the net wealth of the family of the girl's parents. Now that we have the net wealth tax, this should not be too difficult, i.e., the fixation of a proportion of the net wealth to which marriage gifts may be related. Such a procedure would be more logical than the fixation of an arbitrary exemption limit of rupees ten thousand. We accordingly make the suggestion for consideration by our Legislators.

Clause 12 of the Bill has made a significant change from the present law. This clause introduces a new Section 20-A, which incorporates sub-section (1) of the present Section 84. This relates to companies incorporated outside India which carry on business in India, and casts upon them the duty to furnish to the Controller the prescribed particulars in respect of the shares of any deceased member of the company and to pay the Estate Duty thereon. The reference in the Section, as it stands at present, is only to the shares held by the deceased member in such company. The change proposed under the

1958-59 Budget: A Study

new Section 20-A is to extend the liability for estate duty also to debentures held by a deceased member in such companies.

Clause 17 of the Bill makes another significant change. Under the Act as it stands now, if a member of a Hindu family governed by the Mitakshara, Marumakkattayam, or Aliyasantana law dies, his share in the coparcenary property is subjected to estate duty only at the rate applicable to that share. Under the proposed amendment, while this share alone will be subject to duty, the rate applicable will be the rate applicable to the value arrived at by adding to the share of the deceased the shares of the lineal descendants of the deceased in the joint family properties.

Clause 21 of the Bill reduces by one half a concession which has been obtaining heretofore. Under Section 50 of the Act as it stands at present, where court-fees have been paid for obtaining representation to the estate of a deceased, the amount of the estate duty payable will be reduced by an amount equal to the full court-fees paid. The change proposed is that the reduction of estate duty in such cases will be only to the extent of half the court-fees paid. A slight increase in revenue is sought to be obtained thereby.

Under the Gifts Tax Act, a tax is imposed on property transferred by way of gift. Under the Estate Duty Act, gifts made by a person during his lifetime will, under certain circumstances, be deemed to be property that has passed on his death and therefore subjected to estate duty: these are, gifts to public charitable purposes made within a period of six months immediately before the death, occurred, and gifts for other purposes made within two years (now proposed to be changed to five years) before death. As a result, the same gift is liable to be taxed twice, once by way of gifts tax, and a second time by way of estate duty. To avoid such double taxation, Clause 22 of the Bill provides that no estate duty shall be payable in respect of property on which gifts tax has been levied. The proposed section, however, is not happily worded. Suppose estate duty assessment is made first, and gift tax assessment is made later, then it cannot be said that gift tax "has been paid". Therefore, the Estate Duty Officer will levy the duty. At the same time, the Gifts Tax Officer also will proceed to collect the gifts tax. This is not a needless apprehension. It is well-known, how, in Income Tax assessments, Officers have been prone to make assessments on very technical grounds without going into the merits. The double taxation which the proposed Section 50-A seeks to avoid will thus be defeated. What the section should provide is that no estate duty shall be payable "where tax has been paid, or is payable, under the Gifts Tax Act", etc. We look to our Legislators to repair this omission.

1958-59 Budget: A Study

Under the Income Tax law, returns are submitted by assessee after receipt of a notice from the Income Tax Officer. No such notice is required to be issued by the Controller under the Estate Duty Act. The accountable persons are to deliver the accounts voluntarily within six months from the death of the deceased, but it is permissible for the Controller to allow a longer period for filing such account. Clause 23 of the Bill proposes that in granting such extension it shall be permissible for the Controller to impose a condition for payment of interest as may be prescribed by Rules to be made.

Clause 26 of the Bill reads as follows: "In Section 70 of the Act, in sub-section (2), for the words 'eight' and 'sixteen', the words 'three' and 'six' shall respectively be substituted." This seemingly innocent alteration makes an extremely significant change from the present law. What the present sub-section permits is that, at the option of the person accountable, estate duty in respect of immovable property may be paid in eight equal yearly instalments or sixteen equal half-yearly instalments, subject to payment of interest. The number of permissible instalments for payment of estate duty in respect of immovable property is now sought to be reduced to three yearly or six half-yearly

instalments. This is sure to be a great hardship, particularly when it is remembered that, under another amendment, estates of over fifty thousand rupees will become subject to duty. A middle class house in Calcutta, for instance, will be worth several thousands more than this low exemption limit of Rs 50,000, and if the heirs are not of sufficient means they cannot pay the estate duty within three years, and so may be forced to sell the family residence! We feel that the proposed change, motivated by a desire for quick realisation of revenue, will cause much suffering and should be dropped.

A modest concession is sought to be given by the new Section 73-A proposed under Clause 27 of the Bill. Section 59 of the Act, as it stands at present, provides that no proceeding for the levy of any estate duty shall be commenced after the expiration of twelve years from the date of death of the deceased. There is also no separate provision for any re-assessment. What the new Section 73-A proposes is that a first assessment shall not be commenced after the expiration of five years from the date of death of the deceased, and a re-assessment shall not be commenced after the expiration of three years from the date of the first assessment. (If the first assessment takes five years to

be completed—no one need be surprised if it does—then it would be legal to commence re-assessment proceedings in the thirteenth year! In normal cases however, the proposed change is really a small concession.

Finally, we come to the rate schedule. At present, the first slab of Rs. 50,000 of property consisting of a coparcenary interest in Hindu joint families governed by the Mitakshara, Marumakkattayam or Aliyasantana law, and the first Rs 100,000 of property in other cases is exempt from estate duty. On the balance of the estate, duty has to be paid at progressive rates under a slab system which range from five per cent to forty per cent. What the Bill proposes is to fix the exemption limit at Rs 50,000 whether the estate consists of coparcenary property or any other property. Secondly, the rate of duty for the first taxable slab of Rs 50,000 will be six per cent. Thirdly, the rate of duty on the next taxable slab of Rs 50,000 is changed from 7½ per cent to 8 per cent. Lastly, where the value of the estate exceeds rupees two lakhs but does not exceed rupees three lakhs the rate at present is 12½ per cent; this is proposed to be rounded off to 12 per cent. In regard to these changes, there is one observation we would like to make. The lowering of the exemption

limit from Rs 100,000 to Rs 50,000 will not affect the rich very much: to them it merely means an additional duty of three thousand rupees. But, it will bring into the tax net a large number of middle class people. For instance, in the city of Calcutta, a modest middle class residence costs about sixty to seventy-five thousand rupees, and a family which has nothing else will still come within the scope of the Estate Duty. In the Financial Memorandum attached to the Bill, it is estimated that, by the reduction of the exemption limit to rupees fifty thousand, there will roughly be another ten thousand estates in a year which would become liable to duty. The Finance Minister has estimated that the changes in the Estate Duty may increase the revenue by about half a crore of rupees; but, as we have seen in the course of this article, the burden of this will fall mostly on middle class people, several of whom may find themselves constrained to sell their family properties in order to be able to pay the tax. Is it politic to cause so much suffering to the middle-class people? They are already under a severe strain, what with the high excise duties and the high level of prices. If, they are further burdened by measures of this kind, the political and economic consequences may be anything but desirable.

The Gifts Tax

The levy of a tax on gifts is one of the proposals in the Central Budget for 1958-59. In introducing this measure, our Prime Minister observed that the tax on gifts will fill a gap in the scheme of direct taxation and would not only make evasion or avoidance difficult but also spread the tax burden more equitably. The Prime Minister observed further: "The transfer of properties through gifts to one's near relations or associates is one of the commonest forms of avoidance of not only the Estate Duty but also of Income Tax, Wealth Tax, and even the Expenditure Tax. The only way of effectively checking this practice is to levy a tax on gifts. Such a tax is already being levied in other countries, for example the USA, Canada, Japan and Australia. The Taxation Enquiry Commission also had accepted the Gift Tax as theoretically an attractive proposition." The Gifts Tax as obtaining in other countries of the world is examined later in the course of this article.

The idea of a gift tax is not new. But a proposal in this direction was given concrete shape in India for the first time by Professor Kaldor in his Report on Indian Tax reform. Professor Kaldor's suggestion was that a single integrated tax should be levied on gifts of all kinds (including under this term accession to property through bequest and inheritance) and that this tax should replace the present Estate Duty. (It may be mentioned incidentally that the Gifts Tax now introduced by our Prime Minister is supplementary to and not in replacement of the Estate Duty. Under Professor Kaldor's scheme, the tax was to be uniform on all gratuitous transfers, irrespective of whether the transfers were made inter vivos or by way of legacy or bequest. The legal liability for the tax was to be placed on the donee (and not on the donor) on whom the ultimate incidence of the tax must fall. The rate of progression of the tax was not to be dependent on the size of any particular gift or legacy, as otherwise the taxation could be defeated by a fragmentation of gifts. The rate of taxation was to be dependent neither on the size of the gift nor on the wealth of the donor but on the total wealth of the recipient, i.e., his net worth including the gifts received in any one year were to be taxed according to the additions they made to the recipient's net wealth. There should be an exemption limit of Rs 10,000 for any single recipient, and gifts over and above this were to be taxed: this exemption limit was to apply only to the initial gift received by a particular donee. The tax was to be at the rate of 10 per cent where the net worth of the recipient was below rupees one lakh, and at double the corresponding estate duty rates for correspondingly higher amounts of net worth. Thus, where the net wealth of the recipient, after receiving the gifts, amounted to between Rs 1

and 1½ lakhs, the rate of the tax was to be 15 per cent; between Rs 1½ and Rs 2 lakhs, 20 per cent; between Rs 2 and Rs 3 lakhs, 25 per cent; between Rs 3 lakhs and Rs 5 lakhs 30 per cent; between Rs 5 and Rs 10 lakhs 40 per cent; between Rs 10 and Rs 20 lakhs, 50 per cent; between Rs 20 and Rs 30 lakhs, 60 per cent; between Rs 30 and Rs 50 lakhs, 70 per cent; and over Rs 50 lakhs, 80 per cent. Professor Kaldor had further suggested that, in order to prevent small and regular allowances from becoming subject to an excessive duty, the tax-payer should be given the option to have the gifts of any one year treated as ordinary income for tax purposes, i.e. aggregated with his other income and subjected to income-tax, if applicable.

The above was Professor Kaldor's scheme. Before proceeding to examine the scheme now proposed under our 1958-59 Budget, we may take note of the salient features of the Gifts Tax in other countries. In the United States, the tax is imposed on the donor, on all gifts made by him during any calendar year. The tax is payable even where the transfer is in trust, and also whatever be the nature of the property. When property is transferred for less than an adequate consideration, the difference will be treated as a gift for purposes of this tax. The tax is levied on the value of the gift as on the date of the gift. The tax is computed as follows: first, all gifts made by the assessee since 1932 up to and inclusive of the year to which the assessment relates are added together and the tax thereon is calculated: (the actual tax being on a slab system at rates ranging from 2½ per cent on the first five thousand dollars to almost sixty per cent on the excess over ten million dollars). Then, the tax is similarly computed on all gifts made by the assessee since 1932 but exclusive of the year to which the assessment relates. The difference is the gift tax payable for the particular year of assessment. The first three thousand dollars of gifts during each calendar year are excluded in computing the total amount of gifts made during the year. Gifts to Government for public purposes, and gifts for religious, charitable, scientific, literary or educational purposes are exempt from tax. One half of gifts as between husband and wife is also exempt.

The Gifts Tax in Canada is modelled on the US system, but with some variations. The tax is levied on the aggregate value of all gifts made during the calendar year: gifts made during previous years do not come into the picture for purposes of computing the rate. Where the value of any gift does not exceed a thousand dollars, it is excluded. Again, half the income of the donor or four thousand dollars, whichever is lower, will also be excluded. Donatio mortis causa are com-

pletely exempt. Similarly also, gifts to Government for public purposes and gifts for purposes of charity. The rate of the tax is based on a slab system ranging from 10 per cent on the first five thousand dollars to nearly thirty per cent on the excess over a million dollars.

A Gifts Tax has been in force in Australia since 1941, based on a slab system, the rate varying from 3 per cent to 30 per cent. Sweden, the Netherlands, Turkey, Israel, Japan—these are some of the other countries where a Gifts Tax is in force.

The main features of the Gifts Tax proposed by our Prime Minister may now be mentioned. The tax is proposed to be levied on the donor. It will be on gifts made by individuals, Hindu undivided families, companies, firms and associations of persons. The tax will be levied on the donor, on the value of all gifts made by him during the assessment year (which will be same as the income tax year), but for purposes of determining the rate of tax applicable, gifts made during the five "previous years" preceding the assessment year will be aggregated and the rate applicable therefore will be the rate for the assessment year. The rates are:—

Total value of gifts made during 'previous year' Rs	Rate of Gifts Tax
On the first 50,000	4 per cent
On the next 50,000	6 "
" 50,000	8 "
" 50,000	10 "
" 100,000	12 "
" 200,000	15 "
" 500,000	20 "
" 1,000,000	25 "
" 1,000,000	30 "
" 2,000,000	35 "
On the excess over fifty lakhs	40 "

An important point to note is that gifts made prior to 1st April 1957 will not be included for purposes of the tax, even for determining the rate applicable. That is to say, in the assessment year 1959-60, gifts made during 1st April 1957 to 31st March 1959 will alone be taken into account for determining the rate (assuming that the assessee's "previous year" is the financial year). It is only in the assessment year 1962-63 that gifts made during the preceding five years will be taken into account.

Gifts up to a total value of rupees ten thousand in any one year will be exempt, and if the value of gifts made during any year exceeds this sum, only the excess will be subject to tax. But if a gift to any one donee exceeds rupees three thousand, then, the exemption limit will be rupees five thousand (instead of Rs 10,000).

In addition to the above exemption, there are several other exemptions, important among which are: (1) Gifts to Central and State Governments, local authorities and charitable institutions; (2) Gifts to female dependents on the occasion of marriage up to Rs 10,000 in each case; (3) Gifts to one's wife up to a total limit of Rs 100,000; and (4) Gifts to depen-

1958-59 Budget: A Study

dents, of policies of insurance, up to Rs 10,000 for each. Gifts of immovable property situated outside India will be excluded from the tax, whoever may be the donor. As regards movable properties situated outside India, they will not be taxable if made by a person who is not a citizen of India, or by nonresident companies. Gifts under a will, and gifts in contemplation of death (donatio mortis causa) are exempt irrespective of the amount of the gift.

As in the United States, the scheme now proposed in India provides also that where property is transferred for less than the full consideration therefor, the difference between the market value (as on the date of the gift) and the consideration actually received will be treated as a gift. In respect of all gifts the value of the gift will be its market value as on the date of the gift. The market value will be as estimated by the Gifts Tax Officer.

The following are exempt from the Gifts Tax that is to say, where the donor is any of the following, gifts tax is not attracted:—Government companies as defined in the Companies Act; corporations established by Central, State, or Provincial Acts, public limited companies whose affairs are controlled by not less than six persons, this computation being on a basis similar to that in Section 23-A of the Income Tax Act; any subsidiary of such public limited companies; and charitable institutions and funds to which Section 15-B of the Income Tax Act applies.

In regard to method of assessment, appeal, revision, etc., the procedure in respect of Gifts Tax will be the same as for Income Tax. In respect of the assessment year 1958-59, all persons who have made 'taxable gifts' during their respective 'previous years' are expected to file a return with the Gifts Tax Officer (who will be the Income Tax Officer concerned) in a form which is to be prescribed.

A novel feature in the proposed Gifts Tax is the inducement given by way of a rebate of tax, where the assessee pays the tax voluntarily within fifteen days of making a taxable gift, the value of which is not less than rupees ten thousand. He is not expected to pay the full tax in order to be eligible for the rebate: it is sufficient if he pays four per cent of the value of the gift where the value of the gift does not exceed fifty thousand rupees; eight per cent where the value of the gift exceeds Rs two lakhs. In addition to the amount so paid, he will be deemed to have paid an additional ten per cent of the amount so paid.

While the Gifts Tax is the final phase of the integrated scheme of taxation which our Government have been aiming at, there is a psychological objection to it, particularly in our country, where gifts are enjoined by the scriptures. Administrative inexperience of the tax is another objection. This is a particularly serious objection at this juncture when the same tax officers have been called upon to administer a number of new taxes.

1958-59 Budget: A Study

AN annual tax on net wealth was introduced in our country last year as part of a reformed and integrated pattern of taxation. At the time when it was introduced, opinion among the general public was divided as to the merits of this tax. Several of our leaders had pointed out that this tax would prove to be a great hardship to many assesses. In the course of a series of articles on the 1957-58 budget, we had also observed that, in regard to this tax, the valuation of assets will present a great problem, that differences of opinion will frequently arise between assesses and taxing officers in regard to valuation and that this may result in perpetual wrangling between the Department and the assesses. These observations, made many months ago, have been more than justified by some recent happenings in regard to wealth tax assessments.

The Act provides that the tax shall be levied on net wealth, and that "net wealth" shall mean the amount by which the aggregate value of all the assets belonging to the assessee on the valuation date exceeds the aggregate value of all the debts owed by the assessee (except for debts relating to exempt items of property, and certain other debts specified in Section 6 of the Act).

The above proposition for the ascertainment of "net wealth" appears logical and simple. Its practical application has, however, revealed a remarkable divergence of opinion between the assesses and the wealth tax officers. In his report on Indian Tax Reform, Professor Kaldor had referred to the problems of valuation that the wealth tax will give rise to, and had suggested that, initially, the taxpayer's valuation might be accepted. This was a wholesome suggestion, and if it had been followed in spirit (and not merely in letter) many difficulties would have been avoided. As a matter of fact, in the wealth tax assessments made in the last quarter of 1957, there have been quite a number of them made on the basis of the assessee's own returns. But, latterly, many disputes have arisen on account of certain claims for liabilities not being allowed by Officers. In their Circular No. 3 W.T. of 1957 issued on 28th September 1957, the Central Board of Revenue have no doubt said that provisions made by assesses for liabilities should particularly be scrutinised with a view to excluding therefrom items which ought not properly to be treated as liabilities. But that does not mean that even legitimate provisions for liabilities should be disallowed.

An instance in point is the provision usually made by assesses for meeting their income-tax liabilities. Amounts set apart to meet the income tax payable by the assessee can hardly be treated as part of his wealth, at any rate where such provision is not in excess of the tax actually payable by him, which, at any point of time, could clearly be computed. One would have thought

that on this matter there could not be any differences of opinion. But strangely enough, wealth tax officers have been prone to take a contrary view during recent months. First under this category, we may mention the advance payments made under Section 18-A of the Income Tax Act. It is understood that the Central Board of Revenue have instructed wealth tax officers to exclude advance tax paid under this Section from net wealth. Despite this, there have been instances where these advance taxes have been included in the net wealth on the ground that, until an income tax demand notice is issued by the Department, the advance tax paid under Section 18-A is part of the assessee's property. What the Department forgets is that once an assessee has had income or made profits, he becomes, ipso facto, liable to income tax: whether he has paid advance tax under Section 18-A or not is entirely beside the point. An assessee may, for reasons of his own convenience, choose not to pay the advance tax, and be willing to submit to the consequential penal tax: but nevertheless, his liability to the income tax is still there, and in ascertaining his net wealth, due allowance must perforce be made for this liability. When Departmental Officers fail to do so, they are clearly ignoring the express provision in the statute that what is taxable is, not wealth, but "net wealth". Our point is that not only should Section 18-A payments be allowed in full, but also it is the duty of the taxing officers (where the assessee has failed to do it) to ascertain the assessee's income tax liability and make due allowance for it in computing his net wealth. If officers fail to do this, they will be acting contrary to the law.

It is well known that, in the income tax department, there are many old assessments which have been pending for several years. Amounts set apart by the assesses to meet such liability are not being excluded from net wealth. This also is not in conformity with the provisions of the Wealth Tax Act.

Wealth Tax Problems

It is not the fault of the assessee that the assessments have been pending: everyone knows the dilatory procedure in the Income Tax Department, where "loss" cases are usually relegated to the back shelves, and where, with a view to completing their monthly quota of assessments, the more complicated cases are not generally taken up until they are about to become time-barred! Such being the case, when an assessee in respect of whom old assessments are pending, makes a provision to meet the consequential tax, there is little justification for disallowing it. On the other hand, even if the assessee has made no such provision, it is the duty of the Department to repair the omission, before proceeding to determine the wealth tax. This procedure should be followed not only in regard to past years in respect of which assessments had not been completed, but also in regard to any current year: for, the income tax payable for the year is a definite liability, and should therefore be ascertained and deducted in computing the net wealth of the year. Not unoften it happens that, after the income tax demand notice has been received, the assessee goes up in appeal and has the demand stayed. In such cases also, the Department, it appears, is not allowing the tax amount to be deducted in computing the net wealth. But, as has been explained earlier, such a deduction ought, properly, to be made. In fact, not only income tax, but all other taxes payable, should be allowed on the liabilities side.

Another bone of contention between the Department and the assesses is the disallowance of provision made for payment of dividends. The Department it would appear, is taking the view that, until the dividend is actually declared in a general meeting, the provision therefor usually made on the recommendation of the Board of Directors is not to be treated as a liability. Perhaps, on a very strict construction as to what may be regarded as liabilities, there may be something to be said

in favour of the Department's above interpretation. But, even so, this cannot be true of all cases. In the case of ordinary shares, it might be true to say the dividend has first to be declared by the general body. But the case of preference shares stands on a different footing, especially where such shares carry the right to accumulate the unpaid dividends and have a preferential right to the payment thereof in the event of a winding up. Here, the preferential dividend is a liability continuing from year to year until it is paid, and hence the unpaid dividend amounts should be ascertained and due allowance should be made therefor in computing net wealth. Even in other cases, when the Board recommends a certain rate of dividend and sets apart the requisite amount for that purpose, it is not as if the general body of shareholders is going to step in and say "no, no, we don't want the dividend; don't pay it!" Such an event would be unprecedented. Therefore, when the Board recommends a certain rate of dividend, the requisite amount must be set apart, and it would be unrealistic to treat it as not a liability of the company. We, therefore, suggest that, without being too legalistic, the Central Board of Revenue should direct that, in the case of ordinary shares, dividend amounts sanctioned by the Board of Directors should be excluded when ascertaining net wealth. The case of preference capital has already been set out earlier, and where it is cumulative, even sanction by the Board of Directors is not essential for treating them as due.

The inclusion of gratuity funds in net wealth is another grievance of wealth tax assesses which are companies. In the case of provident funds, the moneys are usually made over to a Trust, so that they are no longer the property of the company, and thus the question of inclusion of provident fund moneys in net wealth does not arise. But, in the case of gratuity funds, a Trust is not usually a part of the scheme. The moneys of the gratuity funds continue with the company, and on this ground the Departmental officers are including these moneys in the net wealth. Even if this were justifiable, which we say it is not, the proper procedure would be to ascertain in respect of every employee as to what is the amount of gratuity to which he is entitled as on the valuation date. The total amount so ascertained, should be deducted from the gratuity fund, and the surplus, if any, may alone be treated as part of the company's net wealth. This is not being done by the Department, perhaps in a haste to complete the assessments before the close of the financial year: if so, it is no excuse for failing to do what ought to be done. If the Department persists in including gratuity funds in net wealth, one way of avoiding it would be for all companies concerned to create a Trust for gratuity funds also, similarly as in the case of provident funds.

The Finance Bill, 1958

(As Introduced in Lok Sabha)

A BILL

to give effect to the financial proposals of the Central Government for the financial year 1958-59.

BE it enacted by Parliament in the Ninth Year of the Republic of India as follows:—

SHORT TITLE.

1. This Act may be called the Finance Act, 1958.

INCOME-TAX AND SUPER-TAX.

2. (1) Subject to the provisions of sub-sections (2) and (3), for the year beginning on the 1st day of April, 1958,—

(a) income-tax shall be charged at the rates specified in Part I of the First Schedule, and, in the cases to which Paragraphs A, B and C of that Part apply, shall be increased by a surcharge for purposes of the Union and a special surcharge on unearned income, calculated in either case in the manner provided therein; and

(b) super-tax shall, for the purposes of section 55 of the Indian Income-tax Act, 1922 (hereinafter referred to as the Income-tax Act), be charged at the rates specified in Part II of the First Schedule, and, in the cases to which Paragraphs A, B and C of that Part apply, shall be increased by a surcharge for purposes of the Union and a special surcharge on unearned income, calculated in either case in the manner provided therein.

(2) In making any assessment for the year ending on the 31st day of March, 1959,—

(a) where the total income of an assessee, not being a company, includes any income chargeable under the head "Salaries" or any income chargeable under the head "Interest on Securities" or any income from dividends in respect of which by virtue of section 49B of the Income-tax Act he is deemed himself to have paid the income-tax imposed under that Act, the income-tax payable by the assessee on that part of his total income which consists of such inclusions shall be an amount bearing to the total amount of income-tax payable according to the rates applicable under the operation of the Finance (No. 2) Act, 1957, on his total income the same proportion as the amount of such inclusions bears to his total income;

(b) where the total income of an assessee, not being a company, includes any income chargeable under the head "Salaries" on which super-tax has been or might have been deducted under the provisions of sub-section (2) of section 18 of the Income-tax Act, the super-tax payable by the assessee on that portion

of his total income which consists of such inclusion shall be an amount bearing to the total amount of super-tax payable according to the rates applicable under the operation of the Finance (No. 2) Act, 1957, on his total income the same proportion as the amount of such inclusion bears to his total income.

(3) In cases to which section 17 of the Income-tax Act applies, the tax chargeable shall be determined as provided in that section, and with reference to the rates imposed by sub-section (1).

(4) For the purposes of this section, and of the rates of tax imposed thereby, the expression "total income" means total income as determined for the purposes of income-tax or super-tax, as the case may be, in accordance with the provisions of the Income-tax Act, and the expression "earned income" has the meaning assigned to it in clause (6AA) of section 2 of that Act.

AMENDMENT OF SECTION 4.

3. In section 4 of the Income-tax Act,—

(i) in sub-section (1), for the third proviso, the following proviso shall be substituted, namely:

"Provided further that if in any year the amount of income accruing or arising without the taxable territories exceeds the amount brought into the taxable territories in that year, there shall not be included in the assessment of the income of that year so much of such excess as does not exceed four thousand five hundred rupees, and where any part of such excess consists of salaries paid by the Government, a local authority or a corporation established by a Central, State or Provincial Act, the amount of such salaries not to be included as aforesaid shall be further limited to a sum calculated at the rate of one thousand rupees for each month of service in respect of which the salaries are received abroad";

(ii) in sub-section (3),—

(i) for clause (vii), the following clause shall be substituted, namely:—

"(vii) subject to such conditions as the Central Government may prescribe,—

(a) passage moneys or the value of any free or concessional passage received by or due to any person, not being a citizen of India, from his employer for himself, his wife and children, in connection with his proceeding on home leave out of India; and

(b) the value of any travel concession or assistance received by or due to any person, being a citizen of India, from his employer for himself, his wife and children, in connection with his proceeding on leave to his home-town or village in India;"

(2) after clause (xi), the following clause shall be inserted, namely:—

"(xii) any income chargeable under the heads "Interest on Securities", "Income from Property" and "Income from other sources" of a registered Trade Union within the meaning of the Indian Trade Unions Act, 1926, formed primarily for the purpose of regulating the relations between workmen and employers or between workmen and workmen";

(3) for the Explanation to clause (xiva), the following Explanation shall be substituted, namely:—

"Explanation. — 'Technician' means a person having specialised knowledge and experience in constructional or manufacturing operations, or in mining or in the generation or distribution of electricity or any other form of power, who is employed in India in a capacity in which such specialised knowledge and experience are actually utilised;"

(4) in clause (xxi), after the words "Sixth Schedule to the Constitution", the words "or in the Union territory of Manipur" shall be inserted, and shall be deemed always to have been inserted:

AMENDMENT OF SECTION 4A.

4. In section 4A of the Income-tax Act, for clause (c), the following clause shall be substituted, namely:—

(c) A company is resident in the taxable territories in any year, if—

(i) it is an Indian company; or

(ii) during that year the control and management of its affairs is situated wholly in the taxable territories."

AMENDMENT OF SECTION 7.

5. In section 7 of the Income-tax Act,—

(i) in sub-section (1), in the proviso to Explanation 2, for the words "State Government", the words "State Government, a local authority or a corporation established by a Central, State or Provincial Act" shall be substituted and shall be deemed always to have been substituted;

(2) in sub-section (2), for clause (ii), the following clause shall be substituted, namely:—

"(ii) in respect of any allowance in the nature of an entertainment allowance specifically granted to the assessee by his employer—

(a) in the case of an assessee who is in receipt of a salary from the Government, a sum equal to one-fifth of his salary (exclusive of any special allowance, benefit or other perquisites) or five thousand rupees, whichever is less; and

(b) in the case of any other assessee, a sum equal to one-fifth of the salary (exclusive of any special allowance, benefit or other perquisites) or seven thousand and five hundred rupees, whichever is less, except in any case where the assessee was not in receipt of such entertainment allowance regularly from his present employer before

1958-59 Budget: A Study

the year beginning on the first day of April, 1955."

AMENDMENT OF SECTION 9.

6. In section 9 of the Income-tax Act, after clause (b) of sub-section (4), the following clause shall be inserted and shall be deemed always to have been inserted, namely:—

"(c) taxes levied by a local authority in respect of any property shall be deemed to include service taxes levied by the local authority in respect of any property."

AMENDMENT OF SECTION 10.

7. In section 10 of the Income-tax Act,—

(i) for clause (vii) of sub-section (2), the following clause shall be substituted, namely:—

"(vii) in respect of a new ship launched or new machinery or plant installed after the 31st day of March, 1954, which is wholly used for the purposes of the business carried on by the assessee, a sum by way of development rebate in respect of the year of launching of the ship or of the installation of the machinery or plant, equivalent to—

(i) in the case of a ship launched after the 31st day of December, 1957, forty per cent of the actual cost of the ship to the assessee;

(ii) in the case of a ship launched before the 1st day of January, 1958, and in the case of any machinery or plant, twenty-five per cent of the actual cost of the ship or plant to the assessee;

Provided that no allowance under this clause shall be made unless—

(a) the particulars prescribed for the purpose of clause (vi) have been furnished by the assessee in respect of the ship or machinery or plant; and

(b) except where the assessee is a company, being a licensee within the meaning of the Electricity (Supply) Act, 1948, or where the ship has been launched or the machinery or plant has been installed before the 1st day of January, 1958, an amount equal to the allowance due is debited to the profit and loss account of the relevant previous year and credited to a reserve account to be utilised by him during a period of ten years next following only for the acquisition of assets for the purposes of the undertaking or for investment in the undertaking;

Provided further that, in the case of a ship launched or machinery or plant installed after 31st day of December, 1957, the allowance of development rebate under this clause shall be subject to the condition that the ship or machinery or plant is not sold or otherwise transferred by the assessee to any person other than the Government at any time before the expiry of ten years from the end of the year in which the ship was launched or the machinery or plant was installed.

(2) after sub-section (4A), the following sub-section shall be inserted and shall be deemed

1958-59 Budget: A Study

always to have been inserted, namely:—

"(4B) Nothing in clause (vi) or clause (vii) of sub-section (2) shall be deemed to authorise the allowance for any previous year of any sum in respect of any building, machinery, plant or furniture sold, discarded, demolished or destroyed in that year"

AMENDMENT OF SECTION 18.

8. In sub-section (2) of section 18 of the Income-tax Act, for the words "at a rate representing the average of the rates applicable to the estimated total income of the assessee under this head", the words "at a rate representing the average of the rates in force for financial year in which he is required to deduct the tax which are applicable to the estimated total income of the assessee under this head" shall be substituted, and shall be deemed always to have been substituted.

AMENDMENT OF SECTION 23A.

9. In section 23A of Income-tax Act, in sub-section (1), for the words "unless he is satisfied that, having regard to the losses incurred by the company in earlier years or to the smallness of the profits made in the previous year, the payment of a dividend or a larger dividend than that declared would be unreasonable", the following shall be substituted, namely:—

"unless he is satisfied—

(i) that, having regard to the losses incurred by the company in earlier years or to smallness of the profits made in the previous year, the payment of a dividend or a larger dividend than that declared would be unreasonable; or

(ii) that the payment of a dividend or a larger dividend than that declared would not have resulted in a benefit to the revenue;"

AMENDMENT OF SECTION 35.

10. In section 35 of the Income-tax Act, after sub-section (10), the following sub-section shall be inserted, namely:—

"(11) Where an allowance by way of development rebate has been made to an assessee in respect of a ship, machinery or plant in any year of assessment under clause (vii) of sub-section (2) of section 10 and subsequently at any time before the expiry of ten years from the end of the year in which the ship was launched or the machinery or plant was installed—

(i) the ship, machinery or plant is sold or otherwise transferred by the assessee to any person other than the Government; or

(ii) the assessee utilises the amount credited to the reserve account under that clause for any purpose other than the acquisition of assets for the purposes of the undertaking or for investment in the undertaking;

the development rebate originally

allowed shall be deemed to have been wrongly allowed, and the Income-tax Officer may, notwithstanding anything contained in this Act, proceed to re-compute the total income of the assessee for the relevant year as if the re-computation is a rectification of a mistake apparent from the record within the meaning of this section, and the provisions of sub-section (1) shall apply accordingly, the period of four years specified therein being reckoned from the end of the year in which the transfer takes place or the money is so utilised."

SUBSTITUTION OF NEW SECTION FOR SECTION 44.

11. For section 44 of the Income-tax Act, the following section shall be substituted, namely:—

LIABILITY IN CASE OF FIRM OR ASSOCIATION DISCONTINUED OR DISSOLVED.

"44. (1) Where any business, profession or vocation carried on by a firm or other association of persons has been discontinued or where a firm or other association of persons is dissolved, the Income-tax Officer shall make an assessment of the total income of the firm or other association of persons as such as if no such discontinuance or dissolution had taken place.

(2) If the Income-tax Officer, the Appellate Assistant Commissioner or the Appellate Tribunal in the course of any proceedings under this Act in respect of any such firm or other association of persons as is referred to in sub-section (1) is satisfied that the firm or other association is guilty of any of the acts specified in clause (a) or clause (b) or clause (c) of sub-section (1) of section 28, he or it may impose or direct the imposition of a penalty in accordance with the provisions of that section.

(3) Every person who was at the time of such discontinuance or dissolution a partner of the firm or a member of the association, as the case may be, shall be jointly and severally liable for the amount of tax or penalty payable, and all the provisions of Chapter IV so far as may be, shall apply to any such assessment or imposition of penalty."

AMENDMENT OF SECTION 59.

12. In section 59 of the Income-tax Act, after clause (a) of sub-section (2), the following clause shall be inserted, namely:—

"(aa) provide for the determination of the value of any perquisite chargeable to tax under this Act in such manner and on such basis as appears to the Central Board of Revenue to be proper and reasonable:

Provided that the rules made in respect of the matters specified in this clause on the first occasion they are made shall not be subject to the condition of previous publication and may be given retrospective effect from such date as the Central Board of Revenue thinks fit."

COMMENCEMENT OF AMENDMENTS TO ACT 11 OF 1922.

13. (1) The amendment to the Income-tax Act made by sub-clause (3) of clause (ii) of section 3 shall not apply—

(a) to a person to whom the second proviso to clause (xiva) of sub-section (3) of section 4 of the Income-tax Act applies if his contract of service has been approved by the Central Government before the 1st day of March, 1958; or

(b) to any other person who arrives in India before the 1st day of April, 1958.

(2) Save as otherwise provided in sub-section (1) or elsewhere in this Act, the amendments to the Income-tax Act made by this Act shall have effect on and from the 1st day of April, 1958.

AMENDMENT OF ACT 27 OF 1957.

14. In the Wealth-tax Act, 1957, the following amendments shall be made and shall be deemed always to have been made, namely:—

(a) for clause (h) of section 2, the following clause shall be substituted, namely:—

(h) "company means a company as defined in section 3 of the Companies Act, 1956, and includes—

(i) a company within the meaning of any law in force in the State of Jammu and Kashmir relating to companies; and

(ii) a company incorporated outside India which has a place of business in India;"

(b) in clause (xvi) of sub-section (1), for the words "and post office national savings certificates", the words "post office national savings certificates and post office national plan certificates" shall be substituted;

(c) in section 6, for the words "In computing the net wealth of an individual", the words "In computing the net wealth of an individual who is not a citizen of India or of an individual" shall be substituted.

AMENDMENT OF ACT 32 OF 1934.

15. The Indian Tariff Act, 1934 (hereinafter referred to as the

Tariff Act), shall be amended in the manner specified in Parts I, II and III of the Second Schedule.

AMENDMENT OF ACT 1 OF 1949.

16. (1) In the Indian Tariff (Amendment) Act, 1949, in sections 4 and 5, for the figures "1958", the figures "1959" shall be substituted.

(2) For the removal of doubts it is hereby declared that the continuance by sub-section (1) of the amendments referred to in section 4 of the Indian Tariff (Amendment) Act, 1949, shall be subject to the amendments made in the Tariff Act by this Act, and, further, be deemed always to have been subject to the amendments, if any, made in the Tariff Act by any Act of Parliament passed after the commencement of the Indian Tariff (Amendment) Act, 1949.

AMENDMENT OF ACT 1 OF 1944.

17. In the First Schedule to the Central Excises and Salt Act, 1944,—

(a) in Item No. 9,—

(i) for sub-item I(5)(iii), the following shall be substituted, namely:—

"(iii) granule ('rawa') of tobacco capable of passing through a sieve having 16 uniform circular or square apertures per linear inch";

(ii) the Explanation to sub-item I(5) shall be omitted;

(b) in Item No. 15, for the entry in the third column, the entry "Twenty-four rupees per ton" shall be substituted.

DISCONTINUANCE OF SALT DUTY.

18. For the year beginning on the 1st day of April, 1958, no duty under the Central Excises and Salt Act, 1944, or the Tariff Act shall be levied in respect of salt manufactured in, or imported into, India.

Declaration under the Provisional Collection of Taxes Act, 1931 (16 of 1931)

It is hereby declared that it is expedient in the public interest that the provisions of clauses 15, 16 and 17 of this Bill shall have immediate effect under the Provisional Collection of Taxes Act, 1931.

THE FIRST SCHEDULE

(See section 2)

PART I Income-tax and surcharge on income-tax Paragraph A

(1) In the case of every individual who is married and every Hindu undivided family whose total income does not exceed Rs. 20,000 in either case.

Rates of Income-tax.

Where the individual has no child wholly or mainly dependent on him or where the Hindu undivided family has no minor co-parcener.	Where the individual has one child wholly or mainly dependent on him or where the Hindu undivided family has one minor co-parcener.	Where the individual has more than one child wholly or mainly dependent on him or where the Hindu undivided family has more than one minor co-parcener.
Rs.	Rs.	Rs.
(1) On the first ... 3,000 of total income	3,300 of total income	3,600 of total income
(2) On the next ... 2,000 "	1,700 "	1,400 "
(3) On the next ... 2,500 "	2,500 "	2,500 "
(4) On the next ... 2,500 "	2,500 "	2,500 "
(5) On the next ... 2,500 "	2,500 "	2,500 "
(6) On the next ... 2,500 "	2,500 "	2,500 "
(7) On the next ... 5,000 "	5,000 "	5,000 "
		Nil
		8%
		6%
		9%
		11%
		14%
		18%

(ii) in the case of every individual who is not married and every individual or Hindu undivided family whose total income in either case exceeds Rs. 20,000 and in the case of every unregistered firm or other association of persons, not being a case to which Paragraph B or Paragraph C or Paragraph D of this Part applies:—

	Rs.	1,000 of total income	Nil
(1) On the first	4,000	...	...
(2) On the next	2,500	...	...
(3) On the next	2,500	...	...
(4) On the next	2,500	...	...
(5) On the next	2,500	...	...
(6) On the next	2,500	...	...
(7) On the next	5,000	...	...
(8) On the balance of total income	...	...	...

Provided that for the purposes of this Paragraph—

(i) no income-tax shall be payable on a total income which does not exceed the limit specified below;

(ii) the income-tax payable shall in no case exceed half the amount by which the total income exceeds the said limit;

(iii) the income-tax payable by an individual who is married or a Hindu undivided family whose total income exceeds in either case Rs. 20,000 shall not exceed the aggregate of—

(a) the income-tax which would have been payable if the total income had been Rs. 20,000;

(b) half the amount by which the total income exceeds Rs. 20,000;

The limit aforesaid shall be—
(i) Rs. 6,000 in the case of every Hindu undivided family which as at the end of the previous year satisfies either of the following conditions, namely:—

(a) that it has at least two members entitled to claim partition who are not less than eighteen years of age; or

(b) that it has at least two members entitled to claim partition who are not lineally descended one from the other and who are not lineally descended one from any other living member of the family;

(ii) Rs. 3,000 in every other case.

Surcharge on Income-tax
The amount of income-tax computed at the rates hereinbefore specified shall be increased by the aggregate of the surcharges calculated as under:—

(a) A surcharge for purposes of the Union equal to the sum of—

(i) five per cent. of the amount of income-tax; and

(ii) where the earned income included in the total income exceeds Rs. 1,00,000, five per cent. of the difference between the amount of income-tax which would have been payable on the whole of the earned income included in the total income if such earned income had been the total income and the amount of income-tax payable on a total income of Rs. 1,00,000;

(b) A special surcharge on unearned income at fifteen per cent. of the difference between the amount of income-tax on the total income and the amount of income-tax on the whole of the earned income, if any, included in the total income if such earned income had been the total income;

Provided that—

(i) no surcharge for purposes of the Union shall be payable where the total income does not exceed the limit specified below;

(ii) no special surcharge on unearned income shall be payable in the case of an assessee whose total income does not include any income from dividend on ordinary shares, if his total income does not exceed the limit specified below, and where the total income includes any dividends on ordinary shares, such limit shall be increased by Rs. 1,500 or the amount of the said dividends, which is less:

(a) where the total income includes any dividends on ordinary shares, the surcharge for purposes of the Union and the special surcharge on unearned income shall not in each case exceed half the amount by which the total income exceeds the respective limits applicable in either case;

(b) the surcharge for purposes of the Union and the special surcharge on unearned income, both together, shall not exceed half the amount by which the total income exceeds the limit specified below:
The limit aforesaid shall be—

(i) Rs. 15,000 in the case of every Hindu undivided family which satisfies as at the end of the previous year either of the following conditions, namely:—

(a) that it has at least two members entitled to claim partition who are not less than eighteen years of age; or

(b) that it has at least two members entitled to claim partition who are not lineally descended one from the other and who are not lineally descended from any other living member of the family;

(ii) Rs. 7,500 in every other case.

Explanation.—For the purposes of this Paragraph, in the case of every Hindu undivided family governed by the Mitakshara law, a son shall be deemed to be entitled to claim partition of the coparcenary property against his father, or grand-father notwithstanding any custom to the contrary.

Paragraph B

In the case of every company and local authority,—

Rates of income-tax

On the whole of the total income 30 per cent.

Surcharge in income-tax

The amount of income-tax computed at the rate hereinbefore specified shall be increased by a surcharge of 5 per cent. thereon.

Paragraph C

In every case in which under the provisions of the Income-tax Act, income-tax is to be charged at the maximum rate,—

Rates of income-tax

On the whole of the total income 25 per cent.

Surcharge on income-tax

In the case of every company 30%

In any other case 25%

Paragraph D

In the case of every registered firm,—

Rates of Income-tax

(1) On the first Rs. 40,000 of total income Nil

(2) On the next Rs. 35,000 of total income 5 per cent

(3) On the next Rs. 75,000 of total income 6 per cent

(4) On the balance of total income 9 per cent.

Part II

Super-tax and surcharge on super-tax

Paragraph A

In the case of every individual, Hindu undivided family, unregistered firm and other association of persons, not being a case to which any other Paragraph of this Part applies,—

Rates of super-tax

(1) On the first Rs. 20,000 of total income Nil

(2) On the next Rs. 5,000 of total income 5 per cent

(3) On the next Rs. 5,000 of total income 15 per cent

(4) On the next Rs. 10,000 of total income 20 per cent

(5) On the next Rs. 10,000 of total income 30 per cent

(6) On the next Rs. 10,000 of total income 35 per cent

(7) On the next Rs. 10,000 of total income 40 per cent

(8) On the balance of total income 45 per cent.

Surcharge on super-tax

The amount of super-tax computed at the rates hereinbefore specified shall be increased by the aggregate of the surcharges calculated as under:

(a) A surcharge for purposes of the Union equal to the sum of—

(i) five per cent. of the amount of super-tax; and

(ii) where the earned income included in the total income exceeds Rs. 1,00,000, five per cent. of the difference between the amount of super-tax which would have been payable on the whole of the earned income included in the total income, if such earned income had been the total income and the amount of super-tax payable on a total income of Rs. 1,00,000;

(b) A special surcharge on unearned income at fifteen per cent. of the difference between the amount of super-tax on the total income and the amount of

super-tax on the whole of the earned income, if any, included in the total income, if such earned income had been the total income;

(c) In the case of a company referred to in sub-section (9) of section 23A of the Income-tax Act,—

at the rate of 10 per cent

On that part of the said dividends which exceeds 6 per cent but does not exceed 10 per cent of the paid-up capital;

at the rate of 30 per cent

On that part of the said dividends which exceeds 18 per cent of the paid-up capital;

(ii) where the sum arrived at in accordance with clause (i) of this proviso exceeds the amount of the rebate arrived at in accordance with clause (i) or clause (ii), as the case may be, of the preceding proviso, only so much of the amounts of reduction mentioned in sub-clauses (a), (b) and (c) of clause (i) of this proviso as is sufficient, in that order, to reduce the rebate to nil shall be deemed to have been taken into account for the purpose;

Provided further that the super-tax payable by a company, the total income of which exceeds rupees twenty-five thousand and shall not exceed the aggregate of—

(a) the super-tax which would have been payable by the company if its total income had been rupees twenty-five thousand, and

(b) half the amount by which its total income exceeds rupees twenty-five thousand.

Explanation.—For the purposes of this Paragraph—

(i) the expression "paid-up capital", means the paid-up capital (other than capital entitled to a dividend at a fixed rate) of the company as on the first day of the previous year relevant to the assessment for the year ending on the 31st day of March, 1959, increased by any premiums received in cash by the company on the issue of its shares, standing to the credit of the share premium account as on the first day of the previous year aforesaid;

(ii) the expression, "dividend" shall be deemed to include any distribution included in the expression "dividend" as defined in clause (6A) of section 2 of the Income-tax Act;

(iii) where any portion of the profits and gains of the company is not included in its total income by reason of such portion being exempt from tax under any provision of the Income-tax Act, the "paid-up capital" of the company, the amount distributed as dividends (not being dividends payable at a fixed rate), the amount representing the face value of any bonus shares and the amount of any bonus issued to the share-holders shall each be deemed to be such proportion thereof as the total income of the company for the previous year bears to its total profits and gains for that year other than capital receipts, reduced by such allowances as may be admissible under the Income-tax Act which have not been taken into account by the company in its profit and loss account for that year

THE SECOND SCHEDULE

(See section 15)

Part I

In the First Schedule of the Tariff Act,—

(1) in Item No. 47 (2), for the existing entry in the fourth

1958-59 Budget: A Study

The amount of income-tax computed at the rate hereinbefore specified shall be increased by a surcharge of 20 per cent. thereon.

(2) In every case in which under the provisions of the Income-tax Act, income-tax is to be deducted at the maximum rate, deduction shall be made from the whole income which is to be subjected to such deduction at the following rates, namely:—

Rates of income-tax

On the whole of the total income 25 per cent.

Surcharge on income-tax

In the case of every company 30%

In any other case 25%

Paragraph D

In the case of every registered firm,—

Rates of Income-tax

(1) On the first Rs. 40,000 of total income Nil

(2) On the next Rs. 35,000 of total income 5 per cent

(3) On the next Rs. 75,000 of total income 6 per cent

(4) On the balance of total income 9 per cent.

Paragraph B

In the case of every local authority,—

Rates of super-tax

On the whole of the total income 16 per cent.

Surcharge on super-tax

The amount of super-tax computed at the rates hereinbefore specified shall be increased by a surcharge of 12½ per cent. thereon.

Paragraph C

In the case of every association of persons being a co-operative society as defined in clause (5B) of section 2 of the Income-tax Act,—

Rates of super-tax

(1) On the first Rs. 25,000 of total income Nil

(2) On the balance of total income 16 per cent.

Surcharge on super-tax

The amount of super-tax computed at the rates hereinbefore specified shall be increased by a surcharge of 12½ per cent. thereon.

Paragraph D

In the case of the Life Insurance Corporation of India established under the Life Insurance Corporation Act, 1956,—

Rates of super-tax

On the whole of its profits and gains from life insurance business 11 per cent.

In the case of every other company,—

Rates of super-tax

On the whole of the total income 50 per cent.

Provided that,—

(i) a rebate at the rate of 40 per cent on so much of the total income as consists of dividends from a subsidiary Indian company and a rebate at the rate of 35 per cent on the balance of the total income shall be allowed in the case of any company which—

(a) in respect of its profits liable to tax under the Income-tax Act for the year ending on the 31st day of March, 1959, has made the prescribed arrangements for the declaration and payment within India of the dividends payable out of such profits and for the deduction of super-tax from dividends in accordance with the provisions of sub-section (3D) of section 18 of that Act; and

(b) is such a company as is referred to in sub-section (9) of section 23A of the Income-tax Act with a total income not exceeding Rs. 25,000;

(ii) a rebate at the rate of 40 per cent on so much of the total income as consists of dividends from a subsidiary Indian company and a rebate at the rate of 30 per cent on the balance of the total income shall be allowed in the case of any company which satisfies condition (a) but not condition (b) of the preceding clause;

(iii) a rebate at the rate of 40 per cent on so much of the total income as consists of dividends from a subsidiary Indian company and a rebate at the rate of 20 per cent on the balance of the total income shall be allowed in the case of any company not entitled to a rebate under either of the preceding clauses:

Provided further that,—

(i) the amount of the rebate under clause (i) or clause (ii) shall be reduced by the sum, if any, equal to the amount or the aggregate of the amounts, as the case may be, computed as hereunder:—

The whole amount of such part.

(a) on that part of the aggregate of the sums arrived at in accordance with clause (i) of the second proviso to Paragraph D of Part II of the First Schedule to the Finance (No. 2) Act, 1957, as has not been deemed to have been taken into account, in accordance with clause (i) of the said proviso, for the purpose of reducing the rebate mentioned in clause (i) of the said proviso to nil;

(b) on the amount representing the face value of any bonus shares or the amount of any bonus issued to its shareholders during the previous year with a view to increasing the paid-up capital except to the extent to which such bonus shares or bonus have been issued out of premiums received in cash on the issue of its shares; and

(c) in addition, in the case of a company referred to in clause (ii) of the preceding proviso which has distributed to its shareholders during the previous year dividends in excess of six per cent of its paid-up capital, not being dividends payable at a fixed rate—

(A) in the case of a company which is not such as is referred to in sub-section (9) of section 23A of the Income-tax Act,—

at the rate of 10 per cent

On that part of the said dividends which exceeds 6 per cent but does not exceed 10 per cent of the paid-up capital;

at the rate of 20 per cent

On that part of the said dividends which exceeds 10 per cent of the paid-up capital; and

(B) in the case of any other company—

On that part of the said dividends which exceeds 6 per cent but does not exceed 10 per cent of the paid-up capital; at the rate of 20 per cent

On that part of the said dividends which exceeds 10 per cent of the paid-up capital; and

(ii) where the sum arrived at in accordance with clause (i) of this proviso exceeds the amount of the rebate arrived at in accordance with clause (i) or clause (ii), as the case may be, of the preceding proviso, only so much of the amounts of reduction mentioned in sub-clauses (a), (b) and (c) of clause (i) of this proviso as is sufficient, in that order, to reduce the rebate to nil shall be deemed to have been taken into account for the purpose;

Provided further that the super-tax payable by a company, the total income of which exceeds rupees twenty-five thousand and shall not exceed the aggregate of—

(a) the super-tax which would have been payable by the company if its total income had been rupees twenty-five thousand, and

(b) half the amount by which its total income exceeds rupees twenty-five thousand.

1958-59 Budget: A Study

(b) is such a company as is referred to in sub-section (9) of section 23A of the Income-tax Act with a total income not exceeding Rs. 25,000;

(ii) a rebate at the rate of 40 per cent on so much of the total income as consists of dividends from a subsidiary Indian company and a rebate at the rate of 30 per cent on the balance of the total income shall be allowed in the case of any company which satisfies condition (a) but not condition (b) of the preceding clause;

(iii) a rebate at the rate of 40 per cent on so much of the total income as consists of dividends from a subsidiary Indian company and a rebate at the rate of 20 per cent on the balance of the total income shall be allowed in the case of any company not entitled to a rebate under either of the preceding clauses:

Provided further that,—

(i) the amount of the rebate under clause (i) or clause (ii) shall be reduced by the sum, if any, equal to the amount or the aggregate of the amounts, as the case may be, computed as hereunder:—

The whole amount of such part.

(a) on that part of the aggregate of the sums arrived at in accordance with clause (i) of the second proviso to Paragraph D of Part II of the First Schedule to the Finance (No. 2) Act, 1957, as has not been deemed to have been taken into account, in accordance with clause (i) of the said proviso, for the purpose of reducing the rebate mentioned in clause (i) of the said proviso to nil;

(b) on the amount representing the face value of any bonus shares or the amount of any bonus issued to its shareholders during the previous year with a view to increasing the paid-up capital except to the extent to which such bonus shares or bonus have been issued out of premiums received in cash on the issue of its shares; and

(c) in addition, in the case of a company referred to in clause (ii) of the preceding proviso which has distributed to its shareholders during the previous year dividends in excess of six per cent of its paid-up capital, not being dividends payable at a fixed rate—

(A) in the case of a company which is not such as is referred to in sub-section (9) of section 23A of the Income-tax Act,—

at the rate of 10 per cent

On that part of the said dividends which exceeds 6 per cent but does not exceed 10 per cent of the paid-up capital;

at the rate of 20 per cent

On that part of the said dividends which exceeds 10 per cent of the paid-up capital; and

(B) in the case of any other company—

On that part of the said dividends which exceeds 6 per cent but does not exceed 10 per cent of the paid-up capital; at the rate of 20 per cent

On that part of the said dividends which exceeds 10 per cent of the paid-up capital; and

(ii) where the sum arrived at in accordance with clause (i) of this proviso exceeds the amount of the rebate arrived at in accordance with clause (i) or clause (ii), as the case may be, of the preceding proviso, only so much of the amounts of reduction mentioned in sub-clauses (a), (b) and (c) of clause (i) of this proviso as is sufficient, in that order, to reduce the rebate to nil shall be deemed to have been taken into account for the purpose;

Provided further that the super-tax payable by a company, the total income of which exceeds rupees twenty-five thousand and shall not exceed the aggregate of—

(a) the super-tax which would have been payable by the company if its total income had been rupees twenty-five thousand, and

(b) half the amount by which its total income exceeds rupees twenty-five thousand.

Explanation.—For the purposes of this Paragraph—

(i) the expression "paid-up capital", means the paid-up capital (other than capital entitled to a dividend at a fixed rate) of the company as on the first day of the previous year relevant to the assessment for the year ending on the 31st day of March, 1959, increased by any premiums received in cash by the company on the issue of its shares, standing to the credit of the share premium account as on the first day of the previous year aforesaid;

(ii) the expression, "dividend" shall be deemed to include any distribution included in the expression "dividend" as defined in clause (6A) of section 2 of the Income-tax Act;

(iii) where any portion of the profits and gains of the company is not included in its total income by reason of such portion being exempt from tax under any provision of the Income-tax Act, the "paid-up capital" of the company, the amount distributed as dividends (not being dividends payable at a fixed rate), the amount representing the face value of any bonus shares and the amount of any bonus issued to the share-holders shall each be deemed to be such proportion thereof as the total income of the company for the previous year bears to its total profits and gains for that year other than capital receipts, reduced by such allowances as may be admissible under the Income-tax Act which have not been taken into account by the company in its profit and loss account for that year

THE SECOND SCHEDULE

(See section 15)

Part I

In the First Schedule of the Tariff Act,—

(1) in Item No. 47 (2), for the existing entry in the fourth

Part II

In the First Schedule to the Tariff Act, for Items Nos. 28 (27), 28 (28) and 71 (13), the following items shall respectively be substituted, namely:—

Item No.

Name of article

Nature of duty

Standard rate of duty

Preferential rate of duty if the article is the produce or manufacture of

Duration of protective rates of duty

The United Kingdom

A British Colony

column, the entry "Rs 3 per pound or 50 per cent ad valorem, whichever is higher, plus the excise duty for the time being leviable on like articles if produced or manufactured in India, and where such duty is leviable at different rates, the highest duty" shall be substituted;

(ii) in Item No 63 (24), for the existing entries in the fourth and fifth columns, the entries "50 per cent ad valorem" and "40 per cent ad valorem" shall respectively be substituted;

(iii) in Item No 63 (33), for sub-item (b) in the second column, the following sub-item shall be substituted, namely:—

"(b) machine screws, including the following types the shank of which has been threaded to within two pitches from the head, namely:—

(i) mushroom head roofing bolts, all types;

(ii) hexagonal head bolts, all types;

(iii) mudguard cycles bolts (with threading other than British Standard cycle threading)".

Part III

In the Second Schedule to the Tariff Act, in Item No 9, for the existing entry in the second column, the entry "Mustard oil (including rapeseed oil, jamba oil and radish seed oil)" shall be substituted.

Statement of Objects and reasons

The object of this Bill is give effect to the financial proposals of the Central Government for the next financial year and to provide for certain connected matters. The notes on clauses explain the various provisions contained in the Bill.

J. NEHRU.

New Delhi;

The 28th February, 1958.

Notes on clauses

Clause 2 continues for the current financial year the rates of income-tax and super-tax prescribed by the Finance (No 2) Act, 1957 subject to one minor modification, namely, abolition of the top-most slab of 30 per cent in the rate of super-tax payable with reference to excess dividends, in the case of companies which fall within the scope of section 23A of the Income-tax Act.

Clause 3 makes the following amendments in section 4:—

(i) Sub-clause (i) provides that the exemption up to Rs 4,500 allowable to a person resident in India in respect of his unremitted foreign income shall be further limited in the case of employees of Government, local authority or a statutory corporation, so as not to exceed a sum calculated at the rate of Rs 1,000 for each month of service in

respect of which the salary is drawn abroad.

(ii) Sub-clause (ii) (1) extends the exemption at present available to persons who are not citizens of India in respect of the value of any free or concessional passages on home leave outside India received by them from their employers in India, to similar travel concessions received by citizens of India for going on leave to their home towns or villages in India.

(iii) Sub-clause (ii) (2) seeks to exempt investment income of trade unions.

(iv) Sub-clause (ii) (3) amends the definition of "technician" so as to make it clear that only industrial personnel, in the strict sense of the term, are covered thereby.

(v) Sub-clause (ii) (4) is intended to extend the exemption now enjoyed by members of Scheduled Tribes residing in the tribal areas of Assam to members of the said tribes who may be residing in the Union territory of Manipur.

Clause 4 makes an amendment to clause (c) of section 4A with a view to removing one of the tests laid down therein for determining the residence of a company in the taxable territories, namely, the test of income arising in India exceeding the income arising outside India.

Clause 5 makes the following amendments in section 7:—

(i) Sub-clause (i) extends the exemption at present allowed in respect of death-cum-retirement gratuity benefits received from Government to similar gratuities received from local authorities or corporation established by Central, State or Provincial Acts.

(ii) At present entertainment allowance received by an employee in a case where he has been in receipt of such allowance regularly from his employer before 1st April, 1955, is exempt up to a limit of one-fifth of his salary or Rs 7,500 whichever is less. Sub-clause (ii) seeks to remove this restriction of receipt of such allowances before 1st April, 1955, in the case of persons in receipt of salaries from the Government, but reduces the limit in their cases to one-fifth of the salary or Rs 5,000 whichever is less.

Clause 6 amends sub-section (4) of section 9 to make it clear that taxes in respect of property include service taxes

Clause 7 makes the following amendments:—

(i) Sub-clause (i) increases the development rebate admissible in the case of ships launched after 31st December, 1957, from 25 per cent to 40 per cent. Further, in the case of ships launched or machinery and plant installed after 31st December, 1957, the

grant of the development rebate is made subject to the conditions (i) that the allowance is not utilised by assessee for distribution of dividends for a period of ten years and (ii) that the asset is also not sold during the said period.

(ii) Sub-clause (ii) seeks to make it clear that the depreciation or additional depreciation allowances admissible under clauses (vi) and (vii) of sub-section 10 shall not be allowed for the year in which the relevant assets are sold or otherwise disposed of because in those circumstances the necessary relief is secured by the provisions of clause (vii) of sub-section (2) of section 10.

Clause 8 makes a verbal change in sub-section (2) of section 18 in order to make it clear that the rates for deduction of taxes at source from salaries are the rates in force for the financial year in which the deduction of the tax is to be made.

Clause 9 amends section 23A to provide for the non-application of that section to cases where the payment of a dividend or a larger dividend than that declared by a company would not have resulted in a benefit to the revenue.

Clause 10 amends section 35 as a consequence of the amendments proposed in clause 7. This amendment will enable assessments being revised wherever the development rebate becomes inadmissible by reason of the contravention by the assessee of any of the conditions imposed for the purpose of getting the rebate.

Clause 11 recasts section 44 so as to provide a complete machinery for the assessment (including the levy of penalty) of, and the collection of the tax from, firms or other association of persons which have been discontinued or dissolved.

Clause 12 gives power to the Central Board of Revenue to frame rules for determining the value of any perquisite chargeable to tax under the head "salaries".

Clause 13 contains a formal provision with respect to the commencement of the various provisions in this Bill.

Clause 14 makes the following amendments in the Wealth-tax Act, 1957:—

(i) Sub-clause (a) amends the definition of "company" in section 2 to make it clear that companies incorporated in the State of Jammu and Kashmir under the State law are also within the scope of the Act.

(ii) Sub-clause (b) amends section 5 to include post office national plan certificates within the list of exemptions.

(iii) Sub-clause (c) amends section 6 in order to make it clear

that in the case of an individual who is not a citizen of India his foreign assets and debts are to be excluded in the computation of his net wealth.

Clause 15, read with the Second Schedule, proposes certain changes in the import and export Tariffs,—

(a) The present statutory rate of import duty of Rs. 3 per pound on art silk yarn and thread is proposed to be changed to Rs 3 per pound or 50 per cent. ad valorem whichever is higher plus the excise duty. This is because the specific rate of duty has been found to be inadequate in the case of costlier varieties of art silk yarn such as nylon and perlon. The proposed change in the pattern of duty will, besides bringing in additional revenue, also act as an incentive for larger imports of cheaper yarn for the same foreign exchange outlay.

(b) The rates of duty of 25 per cent. ad valorem (Standard) and 15 per cent. ad valorem (Preferential) on iron or steel barbed or stranded wire and wire rope falling under Item 63(24) of the Import Tariff, are proposed to be raised to 50 per cent. ad valorem (Standard) and 40 per cent. ad valorem (Preferential) in order that these finished products may bear a higher duty than the raw material, steel wire.

(c) Changes, mainly verbal, proposed in the other items are not of much revenue significance.

Clause 16 seeks to maintain for another year the status quo in regard to commitments under the General Agreement on Tariffs and Trade.

Clause 17.—Sub-clause (a) seeks to make a clarificatory amendment in sub-item 1(5) of Item No. 9 relating to unmanufactured tobacco, other than flue cured.

Sub-clause (b) proposes an increase in excise duty on cement from Rs 20 to Rs 24 per ton.

Clause 18, like section 6 of the Finance Act, 1957, provides that salt shall be duty-free for another year.

LOK SABHA

A

BILL

to give effect to the financial proposals of the Central Government for the financial year 1958-59.

The President has, in pursuance of clauses (1) and (3) of article 117 and clause (1) of article 274 of the Constitution of India, recommended to the Lok Sabha, the introduction and consideration of the Bill.

M. N. KAUL,

Secretary.

(J. Nehru,
Minister for Finance.)

The Gift-Tax Bill, 1958

(As Introduced in Lok Sabha)

A

BILL

to provide for the levy of gift-tax
Be it enacted by Parliament in the Ninth Year of the Republic of India as follows:—

CHAPTER I

Preliminary

SHORT TITLE, EXTENT AND COMMENCEMENT.

1. (1) This Act may be called the Gift-tax Act, 1958.
- (2) It extends to the whole of India except the State of Jammu and Kashmir.
- (3) It shall come into force on the 1st day of April, 1959.

DEFINITIONS.

2. In this Act, unless the context otherwise requires,—

- (i) "Appellate Assistant Commissioner" means a person empowered to exercise the powers of the Appellate Assistant Commissioner of Gift-tax under section 9;
- (ii) "Appellate Tribunal" means the Appellate Tribunal appointed under section 5A of the Income-tax Act;
- (iii) "assessee" means a person by whom gift-tax or any other sum of money is payable under this Act;
- (iv) "assessment year" means the year for which tax is chargeable under section 3;
- (v) "Board" means the Central Board of Revenue constituted under the Central Board of Revenue Act, 1924;
- (vi) "Commissioner" means a person empowered to exercise the powers of a Commissioner of Gift-tax under section 10;
- (vii) "company" means a company as defined in section 3 of the Companies Act, 1956, and includes a foreign company within the meaning of section 591 of that Act;
- (viii) "donee" means any person who acquires any property under a gift, and, where a gift is made to a trustee for the benefit of another person, includes both the trustee and the beneficiary;
- (ix) "donor" means any person who makes a gift;
- (x) "executor" means an executor or administrator of the estate of a deceased person;
- (xi) "firm" has the meaning assigned to it in the Indian Partnership Act, 1932;
- (xii) "gift" means the transfer by one person to another of any existing movable or immovable property made voluntarily and without consideration, and includes the transfer of any property deemed to be a gift under section 4;
- (xiii) "Gift-tax Officer" means the Income-tax Officer authorised to perform the functions of a Gift-tax Officer under section 8;

(xiv) "Income-tax Act" means the Indian Income-tax Act, 1922;

(xv) "Income-tax Officer" means a person appointed to be an Income-tax Officer under the Income-tax Act;

(xvi) "Inspecting Assistant Commissioner of Gift-tax" means a person empowered to exercise the functions of an Inspecting Assistant Commissioner of Gift-tax under section 11;

(xvii) "partner" has the meaning assigned to it in the Indian Partnership Act, 1932, and includes a person who being a minor has been admitted to the benefits of partnership;

(xviii) "person" includes a Hindu undivided family;

(xix) "prescribed" means prescribed by rules made under this Act;

(xx) "previous year", in relation to any assessment year, means the previous year as defined in clause (11) of section 2 of the Income-tax Act if an assessment were to be made under that Act for that year.

Provided that where in the case of an assessee there are different previous years under the Income-tax Act for different sources of income, the previous year for the purposes of this Act shall be that previous year which expired last;

(xxi) "principal officer", used with reference to a company or any association of persons, means—

(a) the secretary, treasurer, manager, managing agent, managing director or agent of the company or association; or

(b) any person connected with the management of the affairs of the company or association upon whom the Gift-tax Officer has served a notice of his intention of treating him as the principal officer thereof;

(xxii) "property" includes any interest in property, movable or immovable;

(xxiii) "taxable gifts" means gifts chargeable to Gift-tax under this Act;

(xxiv) "transfer of property" means any disposition, conveyance, assignment, settlement, delivery, payment or other alienation of property and, without limiting the generality of the foregoing, includes—

(a) the creation of a trust in property;

(b) the grant or creation of any lease, mortgage, charge, easement, licence, power, partnership or interest in property;

(c) the exercise of a power of appointment of property vested in any person, not the owner of the property, to determine its disposition in favour of any person other than the donee of the power; and

(d) any transaction entered into by any person with intent thereby to diminish directly or indirectly the value of his own property and to increase the value of the property of any other person;

(xxv) "valuer" means a valuer appointed under section 4 of the Estate Duty Act, 1953.

CHAPTER II

Charge of Gift-Tax and Gifts

Subject to such Charge

CHARGE OF GIFT-TAX.

3. Subject to the other provisions contained in this Act, there shall be charged in the manner provided in section 7 for every financial year commencing on and from the 1st day of April, 1958, a tax (hereinafter referred to as gift-tax) in respect of the gifts, if any, made by a person during the previous year.

Explanation.—For the purposes of this section, gifts made by the wife of any person out of any gifts made to her by her husband shall be deemed to be gifts made by the husband.

GIFTS TO INCLUDE CERTAIN TRANSFERS.

4. For the purposes of this Act,—

(a) where property is transferred for less than the full consideration therefor, the amount by which the market value of the property at the date of the transfer exceeds the value of the consideration shall be deemed to be a gift made by the transferor;

(b) where property is transferred for a consideration which in the opinion of the Gift-tax Officer, having regard to the circumstances of the case, has not passed or is not likely to pass either in full or in part from the transferee to the transferor, the amount of the consideration which has not passed or is not likely to pass shall be deemed to be a gift made by the transferor;

(c) where there is a release, discharge, surrender, forfeiture or abandonment of any debt, contract or other actionable claim or of any interest in property by any person in favour of another, the value of the release, discharge, surrender, forfeiture or abandonment shall be deemed to be a gift made by the person responsible for the release, discharge, surrender, forfeiture or abandonment;

Provided that nothing in this clause shall apply in respect of any debt which is proved to the satisfaction of the Gift-tax Officer to have become irrecoverable;

(d) where a person absolutely entitled to property causes or has caused the same to be vested in whatever manner in himself and any other person jointly and such other person makes an appropriation from or out of the said property, the amount of the appropriation used for the benefit of the person making the appropriation shall be deemed to be a gift made in his favour by the person who causes or has caused the property to be so vested.

EXEMPTION IN RESPECT OF CERTAIN GIFTS.

5. (1) Gift-tax shall not be charged under this Act in respect of gifts made by any person—

(i) of immovable property situate outside the territories to which this Act extends;

(ii) of movable property situate outside the said territories unless the person—

(a) being an individual, is a citizen of India; or

(b) not being an individual, is resident in the said territories during the previous year in which the gift is made;

(iii) of property in the form of savings certificates issued by the Central Government, which that Government, by notification in the Official Gazette, exempts from gift-tax;

(iv) to the Government or any local authority;

(v) to any institution or fund established for a charitable purpose to which the provisions of section 15B of the Income-tax Act apply;

(vi) for any charitable purpose not falling within clause (v), subject to a maximum of rupees one hundred in respect of each such gift;

(vii) (a) being an individual, to any female relative dependent upon him for the necessities of life on the occasion of her marriage;

(b) being a Hindu undivided family, to any female member of the family who under any law, order or decree of a court is entitled to maintenance from the joint family property, on the occasion of her marriage; subject in either case to a maximum of rupees ten thousand in respect of the marriage of each such relative;

(viii) to his wife, subject to a maximum of rupees one lakh in the aggregate in one or more previous years;

(ix) of policies of insurance or annuities to his wife or children or to any other person dependent upon him for the necessities of life, subject to a maximum of rupees ten thousand in value in the aggregate in one or more previous years of the benefits in respect of each such donee;

(x) under a will;

(xi) in contemplation of death.

(2) Without prejudice to the provisions contained in sub-section (1), gift-tax shall not be charged under this Act in respect of gifts made by any person during the

previous year, subject to a maximum of rupees ten thousand; but such maximum shall have effect as if it had been reduced to rupees five thousand if the value of the taxable gifts to any one donee during the previous year exceeds rupees three thousand.

Explanation.—For the purposes of this section,—

(a) a Hindu undivided family, firm or other association of persons shall be deemed to be resident in the territories to which this Act extends during any previous year unless, during that year, the control and management of its affairs was situated wholly outside the said territories;

(b) a company shall be deemed to be resident in the territories to which this Act extends during the previous year, if—

(i) it is a company formed and registered under the Companies Act, 1956, or is an existing company within the meaning of that Act; or

(ii) during that year, the control and management of that company was situated wholly in the said territories;

(c) "gifts made in contemplation of death" has the same meaning as in section 191 of the Indian Succession Act, 1925.

VALUE OF GIFTS, HOW DETERMINED.

6. (1) The value of any property other than cash transferred by way of gift shall, subject to the provisions of sub-sections (2) and (3), be estimated to be the price which in the opinion of the Gift-tax Officer it would fetch if sold in the open market on the date on which the gift was made.

(2) Where a person makes a revocable gift, the value of the property gifted shall be the capitalised value of the income from the property gifted during the period for which the gift is not revocable.

(3) Where the value of any property cannot be estimated under sub-section (1) because it is not saleable in the open market, the value shall be determined in the prescribed manner.

AMOUNT OF GIFT-TAX, HOW DETERMINED.

7. For the purpose of determining the gift-tax payable by any person for any financial year under this Act—

(a) there shall first be ascertained, the value of all taxable gifts made by the donor during the five previous years immediately preceding the financial year (other than gifts made before the 1st day of April, 1957) and the gift-tax that would have been payable on the total value of all such gifts in accordance with the rates specified in the Schedule if all such gifts had been made during the previous year;

(b) the gift-tax payable for any financial year in respect of the gifts made during the previous year shall be that amount which bears to the amount of

the gift-tax ascertained under clause (a) the same proportion as the total value of the taxable gifts made during the previous year bears to the total value of all the taxable gifts made during the five previous years immediately preceding the financial year.

CHAPTER III Gift-tax Authorities GIFT-TAX OFFICERS.

8. Every Income-tax Officer having jurisdiction or exercising powers as such under the Income-tax Act in respect of any person shall perform the functions of a Gift-tax Officer under this Act in respect of that person.

Explanation.—For the purposes of this section, the Income-tax Officer having jurisdiction in relation to a person who has no income assessable to income-tax under the Income-tax Act, means the Income-tax Officer of the area in which that person resides.

APPELLATE ASSISTANT COMMISSIONERS OF GIFT-TAX.

9. The Board may empower as many persons as it thinks fit to exercise under this Act the functions of an Appellate Assistant Commissioner of Gift-tax, and on being so empowered the Appellate Assistant Commissioners shall perform their functions in respect of such areas or such persons or such classes of persons as the Board may direct, and where such directions have assigned to two or more Appellate Assistant Commissioners the same areas or the same persons or the same classes of persons they shall perform their functions in accordance with such orders as the Board may make for the distribution and allocation of the work to be performed.

COMMISSIONERS OF GIFT-TAX.

10. The Board may empower as many persons as it thinks fit to exercise under this Act the functions of a Commissioner of Gift-tax, and on being so empowered the Commissioners of Gift-tax shall perform their functions in respect of such areas or such persons or such classes of persons as the Board may direct, and where such directions have assigned to two or more Commissioners the same area, or the same persons or the same classes of persons they shall have concurrent jurisdiction subject to such orders, if any, as the Board may make for the distribution and allocation of the work to be performed.

INSPECTING ASSISTANT COMMISSIONERS OF GIFT-TAX.

11. The Commissioner of Gift-tax may empower as many persons as he thinks fit to exercise under this Act the functions of an Inspecting Assistant Commissioner of Gift-tax, and on being so empowered the Inspecting Assistant Commissioners of Gift-tax shall perform their functions in respect of such areas or such persons or such classes of persons as the Commissioner may direct, and

where such directions have assigned to two or more Inspecting Assistant Commissioners the same area or the same persons or the same classes of persons they shall perform their functions in accordance with such orders as the Commissioner may make for the distribution and allocation of the work to be performed.

GIFT-TAX OFFICERS TO BE SUBORDINATE TO THE COMMISSIONER OF GIFT-TAX AND THE INSPECTING ASSISTANT COMMISSIONER OF GIFT-TAX.

12. The Gift-tax Officers shall be subordinate to the Commissioner of Gift-tax and the Inspecting Assistant Commissioner of Gift-tax within whose jurisdiction they perform their functions.

GIFT-TAX AUTHORITIES TO FOLLOW ORDERS, ETC., OF THE BOARD.

13. All officers and other persons employed in the execution of this Act shall observe and follow the orders, instructions and directions of the Board.

Provided that no orders, instructions or directions shall be given by the Board so as to interfere with the discretion of the Appellate Assistant Commissioner of Gift-tax in the exercise of his appellate functions.

CHAPTER IV Assessment RETURN OF GIFTS.

14. (1) Every person who during a previous year has made any taxable gifts shall, before the thirtieth day of June of the corresponding assessment year, furnish to the Gift-tax Officer a return in the prescribed form and verified in the prescribed manner.

(2) If the Gift-tax Officer is of opinion that in respect of the gifts made by a person during any previous year he is liable to gift-tax under this Act, then notwithstanding anything contained in sub-section (1), he may serve a notice upon such person requiring him to furnish within such period, not being less than thirty days, as may be specified in the notice, a return in the prescribed form and verified in the prescribed manner.

(3) The Gift-tax Officer may in his discretion extend the date for the delivery of the return under this section.

RETURN AFTER DUE DATE AND AMENDMENT OF RETURN.

15. If any person has not furnished a return within the time allowed under section 14, or having furnished a return under that section, discovers any omission or a wrong statement therein, he may furnish a return or a revised return as the case may be, at any time before the assessment is made.

ASSESSMENT.

16. (1) If the Gift-tax Officer is satisfied without requiring the presence of the assessee or the production by him of any evidence that a return made under section 14 or section 15 is complete, he shall assess the value of the taxable gifts made by the assessee and

1958-59 Budget: A Study

determine the amount payable by him as gift-tax.

(2) If the Gift-tax Officer is not so satisfied, he shall serve a notice on the assessee either to attend in person at his office on a date to be specified in the notice or to produce or cause to be produced on that date any evidence on which the assessee may rely in support of his return.

(3) The Gift-tax Officer, after hearing such evidence as the person may produce and such other evidence as he may require on any specified points shall, by order in writing, assess the value of taxable gifts made by the assessee and determine the amount payable by him as gift-tax.

(4) For the purpose of making an assessment under this Act, the Gift-tax Officer may serve on any person who has made a return under sub-section (1) of section 14 or section 15, or upon whom a notice has been served under sub-section (2) of section 14, a notice requiring him to produce or cause to be produced on a date specified in the notice such accounts, records or other documents as the Gift-tax Officer may require.

(5) If any person fails to make a return in response to any notice under sub-section (2) of section 14 or fails to comply with the terms of any notice issued under sub-section (2) or sub-section (4), the Gift-tax Officer shall estimate the value of taxable gifts to the best of his judgment and determine the amount payable by the person as gift-tax.

GIFT ESCAPING ASSESSMENT.

17. (1) If the Gift-tax Officer—

(a) has reason to believe that by reason of omission or failure on the part of an assessee to make a return under section 14 for any assessment year or to disclose fully and truly all material facts necessary for his assessment for that year, any taxable gift has escaped assessment for that year, whether by reason of under-assessment or assessment at too low a rate or otherwise; or

(b) has, in consequence of any information in his possession, reason to believe, notwithstanding that there has been no such omission or failure as is referred to in clause (a), that any taxable gift has escaped assessment for any year, whether by reason of under-assessment or assessment at too low a rate or otherwise;

he may, in cases falling under clause (a) at any time within eight years and in cases falling under clause (b) at any time within four years of the end of that assessment year, serve on the assessee a notice containing all or any of the requirements which may be included in a notice under sub-section (2) of section 14, and may proceed to assess or re-assess any taxable gift which has escaped assessment, and the provisions of this Act shall, so far as may be, apply as if the notice had issued under that sub-section.

1958-59 Budget: A Study

(2) Nothing contained in this section limiting the time within which any assessment or re-assessment may be made shall apply to an assessment or re-assessment made on the assessee or any person in consequence of or to give effect to any finding or direction contained in an order under section 23, section 24, section 25, section 27 or section 29.

PENALTY FOR CONCEALMENT.

18. (1) If the Gift-tax Officer, Appellate Assistant Commissioner, Commissioner or Appellate Tribunal, in the course of any proceedings under this Act, is satisfied that any person—

(a) has without reasonable cause failed to furnish the return which he is required to furnish under sub-section (1) or sub-section (2) of section 14 or section 17 or has without reasonable cause failed to furnish it within the time allowed and in the manner required; or

(b) has without reasonable cause failed to comply with a notice under sub-section (2) or sub-section (4) of section 16; or

(c) has concealed the particulars of any gift or deliberately furnished inaccurate particulars thereof;

he or it may, by order in writing, direct that such person shall pay by way of penalty—

(i) in the case referred to in clause (a), in addition to the amount of gift-tax payable by him, a sum not exceeding one and a half times the amount of such tax, and

(ii) in the case referred to in clause (b) or clause (c), in addition to the amount of gift-tax payable by him, a sum not exceeding one and a half times the amount of the tax, if any, which would have been avoided if the return made by such person under section 14, section 15 or section 17, as the case may be, had been accepted as correct.

(2) No order shall be made under sub-section (1) unless the person concerned has been given a reasonable opportunity of being heard.

(3) No prosecution of an offence under this Act shall be instituted in respect of the same facts in relation to which a penalty has been imposed under this section.

(4) The Gift-tax Officer shall not impose any penalty under this section without the previous approval of the Inspecting Assistant Commissioner of Gift-tax.

REBATE ON ADVANCE PAYMENTS.

19. (1) If a person making a taxable gift of the value of not less than rupees ten thousand pays into the treasury within fifteen days of his making the gift, an amount calculated in the manner specified in sub-section (2), he shall, at the time of assessment under section 16, be given credit in addition to the amount so paid, for an amount equal to ten per cent of the amount so paid.

(2) The amount to be paid into the treasury under sub-section (1) shall be—

(a) where the value of the gift does not exceed rupees fifty thousand, four per cent of the value;

(b) where the value of the gift exceeds rupees fifty thousand but does not exceed rupees two hundred thousand, eight per cent of the value; and

(c) in any other case, fifteen per cent of the value.

CHAPTER V

Liability to Assessment in Special Cases

TAX OF DECEASED PERSON PAYABLE BY LEGAL REPRESENTATIVE.

20. (1) Where a person dies, his executor, administrator, or other legal representative shall be liable to pay out of the estate of the deceased person, to the extent to which the estate is capable of meeting the charge, the gift-tax determined as payable by such person, or any sum which would have been payable by him under this Act if he had not died.

(2) Where a person dies without having furnished a return under section 14, or after having furnished a return which the Gift-tax Officer has reason to believe to be incorrect or incomplete, the Gift-tax Officer may make an assessment of the value of the taxable gifts made by such person and determine the gift-tax payable by him, and for this purpose may, by the issue of the appropriate notice which would have had to be served upon the deceased person if he had survived, require from the executor, administrator or other legal representative of the deceased person any accounts, documents or other evidence which might, under the provisions of section 16, have been required from the deceased person.

(3) The provisions of section 14, 15 and 17 shall apply to an executor, administrator or other legal representative as they apply to any person referred to in that section.

ASSESSMENT AFTER PARTITION OF A HINDU UNDIVIDED FAMILY.

21. (1) Where, at the time of making an assessment, it is brought to the notice of the Gift-tax Officer that a partition has taken place among the members of a Hindu undivided family, and the Gift-tax Officer, after enquiry, is satisfied that the joint family property has been partitioned among the various members or groups of members in definite portions, he shall record an order to that effect and he shall make assessments on the amount of taxable gifts made by the family as such as if no partition had taken place and each member or group of members shall be liable jointly and severally for the tax assessed on the value of the taxable gifts made by the joint family as such.

(2) Where the Gift-tax Officer is not so satisfied, he may, by order, declare that such family shall be deemed for the purposes of this Act to continue to be a Hindu undivided family.

LIABILITY IN CASE OF DISCONTINUED FIRM OR ASSOCIATION OF PERSONS.

22. Where a firm or association of persons liable to pay gift-tax under this Act has been discontinued or dissolved, every person who was at the time of such discontinuance or dissolution a partner of such firm or a member of such association shall, in respect of the taxable gifts made by the firm or association, be jointly and severally liable to assessment and for the amount of tax payable by such firm or association under this Act and the provisions of this Act shall, so far as may be, apply to any such assessment.

CHAPTER VI

Appeals, Revisions and References APPEAL TO THE APPELLATE ASSISTANT COMMISSIONER FROM ORDERS OF GIFT-TAX OFFICERS.

23. (1) Any person,—

(a) objecting to the value of his taxable gifts determined under this Act; or

(b) objecting to the amount of gift-tax determined as payable by him under this Act; or

(c) denying his liability to be assessed under this Act; or

(d) objecting to any penalty imposed by the Gift-tax Officer under section 18; or

(e) objecting to any order of the Gift-tax Officer under sub-section (2) of section 21; or

(f) objecting to any penalty imposed by the Gift-tax Officer under sub-section (1) of section 46 of the Income-tax Act as applied under section 34 for the purposes of gift-tax;

may appeal to the Appellate Assistant Commissioner against the assessment or order, as the case may be, in the prescribed form and verified in the prescribed manner: Provided that no appeal shall lie under clause (f) unless the tax has been paid before the appeal is filed.

(2) An appeal shall be presented within thirty days of the receipt of the notice of demand relating to the assessment or penalty objected to, or the date on which any order objected to, is communicated to him, but the Appellate Assistant Commissioner may admit an appeal after the expiration of the period aforesaid if he is satisfied that the appellant had sufficient cause for not presenting the appeal within that period.

(3) The Appellate Assistant Commissioner shall fix a day and place for the hearing of the appeal and may from time to time adjourn the hearing.

(4) The Appellate Assistant Commissioner may,—

(a) at the hearing of an appeal allow an appellant to go into any ground of appeal not specified in the grounds of appeal;

(b) before disposing of an appeal, make such further inquiry as he thinks fit or cause further inquiry to be made by the Gift-tax Officer.

(5) In disposing of an appeal, the Appellate Assistant Commissioner may pass such orders as he thinks fit which may include an

order enhancing the amount of gift-tax determined or penalty imposed:

Provided that no order enhancing the amount of gift-tax determined or penalty imposed shall be made unless the person affected hereby has been given a reasonable opportunity of showing cause against such enhancement.

(6) A copy of every order passed by the Appellate Assistant Commissioner under this section shall be forwarded to the appellant and the Commissioner.

APPEAL TO THE APPELLATE TRIBUNAL FROM ORDERS OF THE APPELLATE ASSISTANT COMMISSIONER.

24. (1) Any assessee objecting to an order passed by the Appellate Assistant Commissioner under section 23 may appeal to the Appellate Tribunal within sixty days of the date on which he is served with notice of such order.

(2) The Commissioner may, if he is not satisfied as to the correctness of any order passed by an Appellate Assistant Commissioner under section 23, direct the Gift-tax Officer to appeal to the Appellate Tribunal against such order, and such appeal may be made at any time before the expiry of sixty days of the date on which the order is communicated to the Commissioner.

(3) The Appellate Tribunal may admit an appeal after the expiry of sixty days referred to in sub-sections (1) and (2) if it is satisfied that there was sufficient cause for not presenting it within that period.

(4) An appeal to the Appellate Tribunal shall be in the prescribed form and shall be verified in the prescribed manner and shall, except in the case of an appeal referred to in sub-section (2), be accompanied by a fee of rupees one hundred.

(5) The Appellate Tribunal may, after giving the parties to the appeal an opportunity of being heard, pass such orders thereon as it thinks fit, and any such orders may include an order enhancing the amount of gift-tax determined or penalty imposed.

Provided that no order enhancing the amount of gift-tax determined or penalty imposed shall be made unless the person affected thereby has been given a reasonable opportunity of showing cause against such enhancement.

(6) Where the appellant objects to the valuation of any gift, the Appellate Tribunal may, and if the appellant so requires, shall, refer the question of disputed value to the arbitration of two valuers, one of whom shall be nominated by the appellant and the other by the respondent, and the Appellate Tribunal shall, so far as that question is concerned, pass its order under sub-section (5) conformably to the decision of the valuers:

Provided that if there is a difference of opinion between the two valuers, the matter shall be referred to a third valuer nominated by agreement, or failing agreement, by the Appellate Tribunal, and the

decision of that valuer on the question of valuation shall be final.

(7) The costs of any arbitration proceeding under sub-section (6) shall be borne by the Central Government or the assessee, as the case may be, at whose instance the question was referred to the valuers:

Provided that where the assessee has been wholly or partially successful in any reference made at his instance, the extent to which the costs shall be borne by the assessee shall be at the discretion of the Appellate Tribunal.

(8) The valuers may, in disposing of any matter referred to them for arbitration under sub-section (6), hold or cause to be held such inquiry as they think fit, and after giving the appellant and the respondent an opportunity of being heard, pass such orders thereon as they think fit and shall send a copy of such order to the Appellate Tribunal.

(9) A copy of every order passed by the Appellate Tribunal under this section shall be forwarded to the assessee and the Commissioner.

(10) Save as provided in section 27, any order passed by the Appellate Tribunal on appeal shall be final.

(11) The provisions of sub-sections (5), (7) and (8) of section 5A of the Income-tax Act shall apply to the Appellate Tribunal in the discharge of its functions under this Act as they apply to it in the discharge of its functions under the Income-tax Act.

POWER OF COMMISSIONER TO REVERSE ORDERS OF SUBORDINATE AUTHORITIES.

25. (1) The Commissioner may, either on his own motion or on application made by an assessee in this behalf, call for the record of any proceeding under this Act in which an order has been passed by any authority subordinate to him, and may make such inquiry or cause such inquiry to be made, and, subject to the provisions of this Act, pass such order thereon not being an order prejudicial to the assessee, as the Commissioner thinks fit:

Provided that the Commissioner shall not revise any order under this sub-section in any case—

(a) where an appeal against the order lies to the Appellate Assistant Commissioner or to the Appellate Tribunal and the time within which such appeal can be made has not expired or, in the case of the Appellate Tribunal, the assessee has not waived his right of appeal;

(b) where the order is pending in appeal before the Appellate Assistant Commissioner or has been the subject of an appeal to the Appellate Tribunal;

(c) where the application is made by the assessee for such revision unless—

(i) the application is accompanied by a fee of rupees twenty-five; and

(ii) the application is made within one year from the date of the order sought to be revised or within such further

period as the Commissioner may think fit to allow on being satisfied that the assessee was prevented by sufficient cause from making the application within that period; and

(d) where the order is sought to be revised by the Commissioner on his own motion if such order is made more than one year previously.

Explanation.—For the purposes of this sub-section,—

(a) the Appellate Assistant Commissioner shall be deemed to be an authority subordinate to the Commissioner, and

(b) an order by the Commissioner declining to interfere shall be deemed not to be an order prejudicial to the assessee.

(2) Without prejudice to the provisions contained in sub-section (1), the Commissioner may call for and examine the record of any proceeding under this Act, and, if he considers that any order passed therein by a Gift-tax Officer is erroneous in so far as it is prejudicial to the interests of revenue, he may, after giving the assessee an opportunity of being heard, and after making or causing to be made such inquiry as he deems necessary, pass such order thereon as the circumstances of the case justify, including an order enhancing or modifying the assessment or cancelling it and directing a fresh assessment.

(3) No order shall be made under sub-section (2) after the expiry of two years from the date of the order sought to be revised.

APPEAL TO THE APPELLATE TRIBUNAL FROM ORDERS OF ENHANCEMENT BY COMMISSIONER.

26. (1) Any assessee objecting to an order of enhancement made by the Commissioner under section 25 may appeal to the Appellate Tribunal within sixty days of the date on which the order is communicated to him.

(2) An appeal to the Appellate Tribunal under sub-section (1) shall be in the prescribed form and shall be verified in the prescribed manner and shall be accompanied by a fee of rupees one hundred.

(3) The provisions of sub-sections (3) and (5) to (10) inclusive of section 24 shall apply in relation to any appeal under this section as they apply in relation to any appeal under that section.

REFERENCE TO HIGH COURT.

27. (1) Within ninety days of the date upon which he is served with an order under section 24 or section 26, the assessee or the Commissioner may present an application in the prescribed form and where the application is by the assessee, accompanied by a fee of rupees one hundred, to the Appellate Tribunal requiring the Appellate Tribunal to refer to the High Court any question of law arising out of such order, and the Appellate Tribunal shall, if in its opinion, a question of law arises out of such order, state the case for the opinion of the High Court.

(2) An application under sub-section (1) may be admitted after the expiry of the period of ninety days aforesaid if the Appellate Tribunal is satisfied that there was sufficient cause for not presenting it within the said period.

(3) If, on an application made under sub-section (1), the Appellate Tribunal,—

(a) refuses to state a case on the ground that no question of law arises, or

(b) rejects it on the ground that it is time-barred, the applicant may, within ninety days from the date on which he is served with a notice of refusal or rejection, as the case may be, apply to the High Court, and the High Court may, if it is not satisfied with the correctness of the decision of the Appellate Tribunal, require the Appellate Tribunal to state the case to the High Court, and on receipt of such requisition the Appellate Tribunal shall state the case:

Provided that, if in any case where the Appellate Tribunal has been required by an assessee to state a case the Appellate Tribunal refuses to do so on the ground that no question of law arises, the assessee may, within thirty days from the date on which he receives notice of refusal to state the case, withdraw his application, and if he does so, the fee paid by him under sub-section (1) shall be refunded to him.

(4) The statement to the High Court shall set forth the facts, the determination of the Appellate Tribunal and the question of law which arises out of the case.

(5) If the High Court is not satisfied that the case as stated is sufficient to enable it to determine the question of law raised thereby, it may require the Appellate Tribunal to make such modification therein as it may direct.

(6) The High Court, upon hearing any such case, shall decide the question of law raised therein, and in doing so, may, if it thinks fit, alter the form of the question of law and shall deliver judgment thereon containing the grounds on which such decision is founded and shall send a copy of the judgment under the seal of the Court and the signature of the Registrar to the Appellate Tribunal and the Appellate Tribunal shall pass such orders as are necessary to dispose of the case conformably to such judgment.

(7) Where the amount of any assessment is reduced as a result of any reference to the High Court, the amount, if any, overpaid as gift-tax shall be refunded with such interest as the Commissioner may allow, unless the High Court, on intimation given by the Commissioner within thirty days of the receipt of the result of such reference that he intends to ask for leave to appeal to the Supreme Court, makes an order authorising the Commissioner to post-one payment of such refund until the disposal of the appeal in the Supreme Court.

1958-59 Budget: A Study

(8) The costs of any reference to the High Court shall be in the discretion of the Court.

(9) Section 5 of the Indian Limitation Act, 1908, shall apply to an application to the High Court under this section.

HEARING BY HIGH COURT.

28. When a case has been stated to the High Court under section 27, it shall be heard by a Bench of not less than two Judges of the High Court and shall be decided in accordance with the opinion of such Judges or of the majority of such Judges, if any:

Provided that where there is no such majority, the Judges shall state the point of law upon which they differ and the case shall then be heard upon that point only by one or more of the Judges of the High Court, and such point shall be decided according to the opinion of the majority of the Judges who have heard the case, including those who first heard it.

APPEAL TO SUPREME COURT.

29. (1) An appeal shall lie to the Supreme Court from any judgment of the High Court delivered on a case stated under section 27 in any case which the High Court certifies as a fit case for appeal to the Supreme Court.

(2) Where the judgment of the High Court is varied or reversed on appeal under this section, effect shall be given to the order of the Supreme Court in the manner provided in sub-section (6) of section 27.

(3) The High Court may, on application made to it for the execution of any order of the Supreme Court in respect of any costs awarded by it, transmit the order for execution to any Court subordinate to the High Court.

CHAPTER VII

Payment and Recovery of Gift-tax GIFT-TAX BY WHOM PAYABLE.

30. Gift-tax shall be payable by the donor but where in the opinion of the Gift-tax Officer the tax cannot be recovered from the donor, it may be recovered from the donee:

Provided that the amount of the tax which may be recovered from the donee shall not exceed that portion of the gift-tax which is attributable to the value of the gift made to the donee by the donor as at the date of the gift.

GIFT-TAX TO BE CHARGED ON PROPERTY GIFTED.

31. Gift-tax payable in respect of any gift comprising immovable property shall be a first charge on that property but any such charge shall not affect the title of a bona fide purchaser for valuable consideration without notice of the charge.

NOTICE OF DEMAND.

32. When any tax or penalty is due in consequence of any order passed under this Act, the Gift-tax Officer shall serve upon the assessee or other person liable to

1958-59 Budget: A Study

pay such tax or penalty a notice of demand in the prescribed form specifying the sum so payable and the time within which it shall be payable.

RECOVERY OF TAX AND PENALTIES

33. (1) Any amount specified as payable in a notice of demand issued under section 32 shall be paid within the time, at the place, and to the person mentioned in the notice, or if no time is so mentioned, then on or before the first day of the second month following the date of service of the notice, and any assessee or other person liable to pay the amount failing so to pay shall be deemed to be in default.

(2) Notwithstanding anything contained in this section, where an assessee has presented an appeal under section 23, the Gift-tax Officer may, in his discretion treat the assessee as not being in default as long as such appeal is undisposed of.

MODE OF RECOVERY.

34. The provisions of sub-sections (1), (1A), (2), (3), (4), (5), (5A), (6) and (7) of section 46 and section 47 of the Income-tax Act shall apply as if the said provisions were provisions of this Act, and referred to gift-tax and sums imposed by way of penalty under this Act instead of to income-tax and sums imposed by way of penalty, under that Act, and to Gift-tax Officer and Commissioner of Gift-tax instead of to Income-tax Officer and Commissioner of Income-tax.

CHAPTER VIII

Miscellaneous

RECTIFICATION OF MISTAKES.

35. At any time within four years from the date of any order passed by him, or it, the Gift-tax Officer, the Appellate Assistant Commissioner, the Commissioner and the Appellate Tribunal may, on his, or its, own motion rectify any mistake apparent from the record and shall, within a like period rectify any such mistake which has been brought to the notice of the Gift-tax Officer, the Appellate Assistant Commissioner, the Commissioner or the Appellate Tribunal, as the case may be, by an assessee:

Provided that no such rectification shall be made which has the effect of enhancing the amount of gift-tax determined unless the assessee has been given a reasonable opportunity of being heard in the matter.

PROSECUTION.

36. (1) If any person fails without reasonable cause,—

(a) to furnish in due time any return of gifts under this Act;

(b) to produce, or cause to be produced, on or before the date mentioned in any notice under sub-section (2) or sub-section (4) of section 16, such accounts, records and documents as are referred to in the notice;

(c) to furnish within the time specified any statement or information which such person is

bound to furnish to the Gift-tax Officer under section 38; he shall, on conviction before a magistrate, be punishable with fine which may extend to rupees ten for every day during which the default continues.

(2) If a person makes a statement in a verification in any return of gifts furnished under this Act or in a verification mentioned in section 23, 24 or 26 which is false, and which he either knows or believes to be false, or does not believe to be true, he shall be punishable with simple imprisonment which may extend to one year, or with fine which may extend to rupees one thousand, or with both.

(3) A person shall not be proceeded against for an offence under this section except at the instance of the Commissioner.

(4) The Commissioner may either before or after the institution of proceedings compound any such offence.

Explanation.—For the purposes of this section "magistrate" means a presidency magistrate, a magistrate of the first class or a magistrate of the second class specially empowered by the Central Government to try offences under this Act.

POWER TO TAKE EVIDENCE ON OATH, ETC.

37. The Gift-tax Officer, the Appellate Assistant Commissioner, the Commissioner and the Appellate Tribunal shall, for the purposes of this Act, have the same powers as are vested in a court under the Code of Civil Procedure, 1908, when trying a suit in respect of the following matters, namely:—

(a) enforcing the attendance of any person and examining him on oath;

(b) requiring the discovery and production of documents;

(c) receiving evidence on affidavit;

(d) issuing commissions for the examination of witnesses; and any proceeding before the Gift-tax Officer, the Appellate Assistant Commissioner, the Commissioner or the Appellate Tribunal shall be deemed to be a judicial proceeding within the meaning of sections 193 and 228 of the Indian Penal Code.

POWER TO CALL FOR INFORMATION.

38. Where, for the purposes of determining the gift-tax payable by any person, it appears necessary for the Gift-tax Officer to obtain any statement or information from any person, the Gift-tax Officer may serve a notice requiring such person, on or before a date to be therein specified, to furnish such statement or information on the points specified in the notice, and that person shall, notwithstanding anything in any law to the contrary, be bound to furnish such statement or information to the Gift-tax Officer:

Provided that no legal practitioner shall be bound to furnish any statement or information under this section based on any professional communications made to

him otherwise than as permitted by section 126 of the Indian Evidence Act, 1972.

EFFECT OF TRANSFER OF AUTHORITIES ON PENDING PROCEEDINGS.

39. Whenever in respect of any proceeding under this Act any Gift-tax authority ceases to exercise jurisdiction and is succeeded by another who has and exercises such jurisdiction, the authority so succeeding may continue the proceeding from the stage at which the proceeding was left by his predecessor.

COMPUTATION OF PERIOD OF LIMITATION.

40. In computing the period of limitation, prescribed for an appeal under this Act or for an application under section 27, the day on which the order complained of was made and the time requisite for obtaining a copy of such order shall be excluded.

SERVICE OF NOTICE.

41. (1) A notice or a requisition under this Act may be served on the person therein named either by post or as if it were summons issued by a court under the Code of Civil Procedure, 1908.

(2) Any such notice or requisition may, in the case of a firm or a Hindu undivided family be addressed to any member of the firm or to the manager or any adult male member of the family, and in the case of a company or association of persons be addressed to the principal officer thereof.

PROHIBITION OF DISCLOSURE OF INFORMATION.

42. (1) Subject to the provisions contained in sub-section (2), the provisions of section 54 of the Income-tax Act shall apply to all accounts or in relation to statements, documents, evidence or affidavits given, produced or obtained in connection with or in the course of any proceeding under this Act as they apply to or in relation to similar particulars under that Act subject to the modification that the reference to any "Income-tax authority" in clause (d) of sub-section (2) and to the "Commissioner" in sub-section (5) of that Act shall be construed as a reference to any "Gift-tax authority" and to the "Commissioner of Gift-tax", respectively.

(2) Nothing contained in section 54 of the Income-tax Act shall apply to the disclosure of any such particulars as are referred to in sub-section (1) to any person acting in the execution of this Act or the Income-tax Act, or the Estate Duty Act, 1953, or the Wealth-tax Act, 1957, or the Expenditure-tax Act, 1957, where it is necessary or desirable to disclose the same to him for the purposes of this Act or any of the other Acts aforesaid.

BAR OF SUITS IN CIVIL COURT.

43. No suit shall lie in any civil court to set aside or modify any assessment made under this Act, and no prosecution, suit or other legal proceeding shall lie against any officer of the Government for anything in good faith done or intended to be done under this Act.

APPEARANCE BEFORE GIFT-TAX AUTHORITIES BY AUTHORISED REPRESENTATIVES.

44. Any assessee who is entitled to or required to attend before any Gift-tax authority or the Appellate Tribunal in connection with any proceeding or inquiry under this Act, except where he is required under this Act, to attend in person, may attend by a person authorised by him in writing in this behalf, being a relative of, or a person regularly employed by, the assessee or a legal practitioner or a chartered accountant or any other person having such qualifications as may be prescribed.

Explanation.—For the purposes of this section,—

(a) the expression "a person regularly employed by the assessee" includes any officer of a scheduled bank with which the assessee maintain a current account or has other regular dealings;

(b) "chartered accountant" means a chartered accountant as defined in the Chartered Accountants Act, 1949.

AGREEMENT FOR AVOIDANCE OR RELIEF OF DOUBLE TAXATION WITH RESPECT TO GIFT-TAX.

45. The Central Government may enter into any agreement with the Government of any reciprocating country for the avoidance or relief of double taxation with respect to gift-tax payable under this Act and under the corresponding law in force in the reciprocating country and may, by notification in the Official Gazette, make such provision as may be necessary for implementing the agreement.

Explanation.—The expression "reciprocating country" for the purposes of this Act means any country which the Central Government may, by notification in the Official Gazette, declare to be a reciprocating country.

ACT NOT TO APPLY IN CERTAIN CASES.

46. The provisions of this Act shall not apply to gifts made by—

(a) a Government company as defined in section 617 of the Companies Act, 1956;

(b) a corporation established by a Central, State or Provincial Act;

(c) any company (other than a private company as defined in section 3 of the Companies Act, 1956):

Provided that the affairs of the company or the shares in the company carrying more than fifty per cent of the total voting power were at no time during the previous year controlled or held by less than six persons:

(d) a company which is a subsidiary of and in which more than half the nominal value of equity share capital is held by a company referred to in clause (c);

(e) any institution or fund to which the provisions of section 15B of the Income-tax Act apply:

Explanation.—For the purpose of computing the number of six persons referred to in the proviso to clause (c), persons who are related to one another as husband and wife, brother and sister, bro-

thers, sisters or who are lineal descendants or ascendants of one another and persons who are nominees of any other person together with that other person shall be treated as a single person.

POWER TO MAKE RULES.

47. (1) The Board may, by notification in the Official Gazette, make rules for carrying out the purposes of this Act.

(2) In particular, and without prejudice to the generality of the foregoing power, rules made under this section may provide for—

(a) the manner in which the market value of any property may be determined;

(b) the form in which returns under this Act shall be made and the manner in which they shall be verified;

(c) the form in which appeals and applications under this Act may be made, and the manner in which they shall be verified;

THE SCHEDULE

(See section 7)
RATES OF GIFT-TAX

		Rate of gift-tax
(1) On the first Rs. 50,000 of the value of all taxable gifts	...	4%
(2) On the next Rs. 50,000 of the value of all taxable gifts	...	6%
(3) On the next Rs. 50,000 of the value of all taxable gifts	...	8%
(4) On the next Rs. 50,000 of the value of all taxable gifts	...	10%
(5) On the next Rs. 1,00,000 of the value of all taxable gifts	...	12%
(6) On the next Rs. 2,00,000 of the value of all taxable gifts	...	15%
(7) On the next Rs. 5,00,000 of the value of all taxable gifts	...	20%
(8) On the next Rs. 10,00,000 of the value of all taxable gifts	...	25%
(9) On the next Rs. 10,00,000 of the value of all taxable gifts	...	30%
(10) On the next Rs. 20,00,000 of the value of all taxable gifts	...	35%
(11) On the balance of the value of all taxable gifts	...	40%

STATEMENT OF OBJECTS AND REASONS

The object of this Bill is to levy a tax on gifts made by individuals, Hindu undivided families, companies, firms and associations of persons. Gifts from one person to another provide a convenient means of avoiding or reducing liability to Estate Duty, Income-tax, Wealth-tax, and Expenditure-tax. The only effective method of checking such attempts at evasion or reduction of tax liability is by levying a tax on gifts. With the introduction of this tax, the integrated tax structure which the Government have been aiming at will be complete.

The notes on clauses explain the various provisions contained in the Bill.

New Delhi,
The 28th February, 1958.

Notes on clauses

Clause 2 defines, inter alia, "gift", "previous year" and "transfer of property". All voluntary transfers of property without consideration and transfers deemed to be gifts under clause 4 of the Bill are covered by the definition of "gift". The definition of "previous year" secures that all gifts made during the period between the valuation dates determined for two consecutive wealth-tax assessments are charged to gift-tax in one year. The definition of "transfer of property" is designed to cover all possible transfers of property.

Clause 3 is the charging clause which provides that the tax is to be levied on all gifts made during the previous year by individuals,

(d) the form of any notice of demand under this Act;

(e) the refunds which may be made under this Act;

(f) the areas for which lists of valuers may be drawn up;

(g) any other matter which has to be, or may be, prescribed for the purposes of this Act.

(3) The power to make rules conferred by this section shall on the first occasion of the exercise thereof include the power to give retrospective effect to the rules or any of them from a date not earlier than the date of commencement of this Act.

(4) All rules made under this Act shall be laid before each House of Parliament as soon as may be after they are made and shall be subject to such modifications as Parliament may make during the session in which they are so laid or the session immediately following.

value of the gifts made during the five previous years preceding the assessment year. Gifts made before the 1st day of April, 1957 though within the five year period, will not be taken into account for aggregation.

Clauses 8 to 13 deal with the administrative machinery. The intention is to entrust the administration of this Act to the officers of the Income-tax Department under a procedure which follows broadly the procedure in the Income-tax Act.

Clauses 14 to 18 are assessment provisions which follow similar provisions in the Income-tax, Wealth-tax and Expenditure-tax Acts.

Clause 19 provides for a rebate of 10 per cent on advance payments towards tax liability made within fifteen days of making a gift. The amount to be paid is calculated at specified percentages on the value of the gift. This provision is meant to encourage prompt payments.

Clauses 20 to 29 relate to assessment in special cases, appeals, revisions and references and are similar to those in the Income-tax, Wealth-tax and Expenditure-tax Acts.

Clause 30 provides that the tax is primarily the liability of the donor, but in the interests of revenue it also provides that the donee will be jointly and severally liable for the tax. The donee's liability is, however, restricted to the tax attributable to the gift received by him.

Clause 31 makes the gift-tax a first charge on the immovable property comprised in the gift.

Clauses 32 to 45 provide for payment and recovery of the tax and other connected matters. They follow similar provisions in the Income-tax, Wealth-tax and Expenditure-tax Acts.

Clause 46 exempts Government companies, corporations established by Central, State or Provincial Act, public limited companies whose affairs are controlled by not less than six persons and charitable institutions or funds from the application of the Act.

Clause 47 makes the usual provision authorising the Central Board of Revenue to make rules for carrying out the purposes of the Act.

Clause 5 provides for the exemption of various types of gifts. Besides the gifts of property enumerated in sub-clauses (i) to (xi) which are exempt from charge to the extent indicated therein, there is a basic exemption of Rs 10,000 which will be reduced to Rs 5,000 if the taxable gift to an individual donee exceeds Rs 3,000. This reduction of basic exemption is meant to discourage large gifts being made to the same individual.

Clause 6 provides for the manner in which the values of gifts may be determined. Ordinarily the market value of the property gifted would be the value of the gift.

Clause 7 while providing that the tax is charged on the value of gifts made during the previous year, lays down that the rate of tax shall be determined by the

FINANCIAL MEMORANDUM

The Bill proposes to levy a tax on gifts made by individuals, Hindu undivided families, companies, firms and associations of persons. Although this is a new tax, the procedure for assessment, appeal and collection follows the same pattern as in Income-tax, Wealth-tax and Expenditure-tax Acts. It is, therefore, proposed to administer the tax through the Income-tax Department which is administering the Wealth-tax and Expenditure-tax Acts as well. The pressure of work on the Income-tax Department has even otherwise considerably increased since last year consequent on the reduction of minimum taxable limit to Rs 3,000. The Department cannot therefore, take on the responsibility of administering this new tax without some expansion of staff at the various levels of the departmental cadres.

2. The increase of personnel, along with incidental expenses of administration, including payment of remuneration to valuers is estimated to cost Rs 8 lakhs. Actual recruitment of staff will, however, be made as and when it is found really necessary.

I. VOLUME OF WORK

As we have no reliable data regarding the number of gifts made in a year, the extent and value, it is very difficult to make even a rough estimate of the number of persons who would be called upon to pay gift-tax if the Bill is enacted as proposed. It would, however, be safe to assume that normally only the very well to do persons would be in a position to make substantial gifts which attract liability to this tax. As a rough guess the number of such assesses may be taken as 10,000 in any one year.

MEMORANDUM REGARDING DELEGATED LEGISLATION

Clause 47 of the Bill authorises the Central Board of Revenue to make rules with respect to matters like the manner in which market value of property gifted may be determined in cases where they are not easily determinable, the form in which returns may be made under the Act, the form in which appeals should be filed or notices of demand issued and the manner in which refunds may be made. The rule making power is of a normal character.

II. REQUIREMENT OF PERSONNEL AND FINANCE.

Budget, 1958-59

Finance Minister's Speech

28th February, 1958

Part A

According to custom, the Budget statement for the coming year has to be presented today. By an unexpected and unhappy chain of circumstances, the Finance Minister, who would normally have made this statement this afternoon, is no longer with us. This heavy duty has fallen upon me almost at the last moment.

2. The times are not propitious in many ways and within the last few days all of us here and the entire nation has suffered a grievous loss by the passing away of a leader of our people who had been a tower of strength to all of us both in the days when we were in the wilderness and when a measure of fulfilment came with its new problems and burdens. So I stand before this House today with a sense of desolation and a feeling of unfitness for the task that fate and circumstance have thrust upon me. I seek the indulgence of this House.

3. Last year, my distinguished predecessor in this office presented a Budget statement which, in some respects, was unusual and which involved substantial additions to taxation. Some novel taxes were introduced and an attempt was made to bring about gradually a reorientation of the tax structure of the country. I believed then, and I believe now, that this was right direction for us to travel and that we should continue to pursue this path. With experience we may no doubt make changes here and there and advance further in that direction, but I think that the major steps that we had taken last year have to continue. The times we live in and the problems that our country has to face do not permit a static or complacent approach or any avoidance of the burdens which inevitably accompany an attempt to advance with some speed. Our objective of striving peacefully and co-operatively towards the realisation of a socialist pattern of society also prevents us from thinking or acting along the old grooves, or seeking some present respite by slowing down or halting development. While we should always be prepared to reconsider the methods we adopt, should this become necessary, we have to strive with all our strength for our planned development by conserving all our resources, increasing production and trying to ensure progressively a more equitable distribution, and thus to raise the standards of the great mass of our people.

4. In the circumstances that we face today, I can only present before this House what might be called a pedestrian Budget statement, which is in the main a continuance of things as they are,

with relatively minor changes, or such changes as naturally flow from what we did last year. This statement relates to the estimated receipts and expenditure of the Government of India for 1958-59.

REVIEW OF ECONOMIC CONDITIONS

5. Following the usual practice I propose to review briefly the economic conditions in the country during the current year against the background of which the budget has to be considered. An economic survey, covering the major developments in the economy during 1957-58 and explaining the impact of the various measures adopted, is being circulated to Honourable Members along with the Budget papers. I propose, therefore, to review only briefly the main trends in the economy.

6. There has been some improvement in the economic situation in recent months. Prices have tended to come down and the decline in foreign exchange reserves has slowed down markedly. The money market is easier and expansion of money supply and bank credit have been brought under control. The measures adopted to check inflationary pressures and correct the strain on the balance of payments are proving effective.

PRICES

7. Wholesale prices were comparatively stable in the early months of the year, but there was a sharp rise between May and August when the index went up from 107 to 112. After August, prices have tended to fall. In recent weeks, the index has been around 105, which is slightly lower than the level about a year ago. The index for cereals which had gone up from 97 in December 1956 to 106 in March 1957 was again at 98 in December 1957. The improvement has been due to the various measures taken to hold the price level, including controls at particular points and restraints on bank credit; it is also a reflection of the improved supplies position. This latter is, however, due to large imports which the country can hardly afford.

PRODUCTION

8. Agricultural production in 1956-57 recorded a rise of some 6 per cent over the previous year's level, the improvement being shared by both foodgrains and other crops. The output of foodgrains in 1956-57 was 3.4 million tons more than in 1955-56. This year, however, there have been droughts over considerable areas in the country, and the supply position is difficult.

9. Industrial production has continued to expand, but the rate of expansion this year has been much

more modest than in the last few years. There have, nevertheless, been significant increases in certain lines, both in the capital goods as well as in the consumer goods categories, and further additions to production capacity are being made.

MONETARY SITUATION

10. In the stock market, there was a declining trend in both prices and turnover. The prolonged period of boom which started in 1953 ended in 1956. The decline in equity prices, as measured by the Reserve Bank's index of variable dividend industrial securities was 16 per cent in 1957—and 25 per cent as compared to August, 1956.

11. The gilt-edged market was weak in the early part of the year. There has, however, been a revival, in recent months, in the demand for investment, especially in short-dated securities. Since September last, the stringency in the money market has been less acute, and investments of scheduled banks in Government securities increased by Rs 67 crores between September and December. State loans have also improved slightly and there has been sustained buying in some of them. The net decline in the prices of Government securities in 1957 has been 0.7 per cent.

12. A noticeable feature in the monetary situation in 1957 has been the smaller expansion in money supply and in bank credit in 1957 as compared to the previous year. Money supply with the public increased by Rs. 97 crores in 1957 as compared to Rs. 132 crores in 1956 and Rs. 215 crores in 1955. The expansion of bank credit was Rs. 80 crores i.e., less than half the expansion in the previous year. The time deposits with the banks increased by Rs. 201 crores during the year. This has eased the strain on the banks' resources.

BALANCE OF PAYMENTS

13. Honourable Members are aware of the continuous strain on our balance of payments since the beginning of the Second Plan. The Reserve Bank's foreign assets which, at the end of 1956, stood at Rs 530 crores dropped to Rs 453 crores at the end of June 1957 despite the drawal of Rs 95 crores from the International Monetary Fund during that period. Between July and December 1957 the foreign assets declined by a further Rs 155 crores to Rs 298 crores. As a result of the remedial steps taken by Government, the rate of net withdrawal has perceptibly fallen in recent months. The monthly average rate of withdrawal came down from Rs 36 crores in the second quarter of 1957 to Rs 18 crores in the last quarter of that year. In recent weeks, it has been below Rs 3 crores a week.

14. The House will recall that the last year of the First Plan closed with a balance of payments surplus on current account of Rs 17 crores, including credits totalling

to Rs 42 crores on account foreign assistance. During 1956-57 the position was reversed and a current account deficit of about Rs 292 crores emerged, after taking credit of Rs 40 crores of foreign assistance. The payments deficit during each of the quarters of that year was Rs 44.5 crores, Rs 81.4 crores, Rs 84.8 crores and Rs 81.8 crores respectively. For the quarter ending June 1957, the deficit was Rs 149.7 crores and it was also about the same—Rs 148 crores—for the quarter July-September. These large deficits in the balance of payments have been due to a substantial increase in imports and a slight decline in exports, and the bulk of the increase in imports has been in respect of capital goods and industrial raw materials required for development.

15. The improvement in the balance of payments, to which I referred earlier, thus relates to the period after September, satisfactory as this latest trend is, it will be necessary to continue and accelerate the effort we are making, both in the matter of keeping down imports and of increasing exports, in order to bring the balance of payments position to a satisfactory state. The problem is no longer one of reducing payments in terms of a particular currency or group of currencies, but of securing an all round improvement.

16. The House is aware of the steps that have been taken to meet the difficult balance of payments position. Drastic cuts have been made in the imports of consumer goods, and strict vigilance is being exercised in respect of the licensing of imports including imports of capital goods. Efforts are being made simultaneously to secure external assistance and deferred payment terms for projects in both the public and private sectors having high priority and likely to save foreign exchange.

FOREIGN ASSISTANCE

17. In the current year the International Bank for Reconstruction and Development assisted in financing the country's development projects by sanctioning loans of Rs 43 crores for railway development, Rs 15 crores for the expansion of the Tata Iron & Steel Works and Rs 5 crores for the construction of the Trombay Thermal Station in Bombay. Negotiations are under way for obtaining loans from the Bank for the development of ports, the Koyana Hydro Electric Project and the Damodar Valley Corporation. In the last two or three months there have been various offers of assistance from friendly foreign countries for the economic development of this country. Last month the Government of the United States offered a loan of approximately \$ 225 million (about Rs 107 crores) from out of the currently available resources of the United States Export Import Bank and the President's Development Loan Fund. An official mission from this country is now negotiating details

of the utilisation of this offer. The United States Government are also considering as a matter of high priority, further measures to assist us in getting over the present shortage of foodgrains. The measure of assistance promised by the United States is expected to help us significantly in financing our imports of essential capital goods over the next fifteen months.

18. The question of obtaining a postponement of certain payments which will fall due in the next three years or so in respect of the Rourkela Steel Plant has been under discussion with the West German Government. The deferring of these payments has been agreed to in principle by that Government and the details are now the subject of negotiation with the authorities in that country.

19. On the 4th February 1958, an agreement was signed with Japan under which Japan would make available to India a sum of 18 billion yen (roughly Rs 24 crores) through the Export Import Bank of Japan to enable Government or parties recommended by Government to make purchases from Japan. This line of credit will be used for the purchase of Japanese goods including mostly industrial plant, machinery and equipment. The loans will be repaid within a period of ten years and the rate of interest will be decided on the basis of rate charged by the International Bank for Reconstruction and Development.

20. The Government of the USSR also offered us a credit of 500 million roubles (about Rs 60 crores) to be used in the form of technical assistance and equipment. This will be used for the setting up of a heavy machine building plant, a plant for the manufacture of coal mining machinery, an optical glass factory and a thermal power station and for the development of the Korba Coal-fields. This credit, like the one given by them for the Bhilai Steel Plant, carries interest at the rate of 2.5 per cent per annum and is repayable in 12 equal annual instalments.

21. The United Kingdom Government have also offered to assist us by paying in advance, on the 1st April 1958, three annual instalments of £4 million each due from them under the arrangements made in 1955 for the transfer of sterling pensions.

22. We have recently signed an agreement with the Government of France for economic and technical cooperation between the two countries. Under it the French Government will facilitate the financing of the manufacture and supply of capital goods for which orders are placed by Indian purchasers with French suppliers in the twelve months following the date of signing of the agreement, up to a total amount of 25 billion francs (about Rs 28 crores). The terms of each contract would be settled separately with the approval of both the Governments.

23. The total economic assistance made available to this country by friendly foreign countries up to the end of March 1957 amounted to Rs 463 crores, out of which Rs 219 crores had been utilised by that date. The balance of about Rs 244 crores has mostly been committed for the supply of equipment and commodities. During 1957-58, Canada has authorised 21 million dollars as assistance to this country under the Colombo Plan. In addition, Canada has made a special grant of 7 million dollars for the purchase of wheat. She has also agreed to supply an additional quantity of 400,000 tons of wheat on reasonable terms of credit to meet the food shortage. The Ford Foundation has continued its assistance by a further allocation of 6.2 million dollars.

24. Under the various programmes of assistance already in operation or in sight, the total foreign assistance to this country in the coming year is estimated at Rs 325 crores for which credit has been taken in the budget. This assistance would materially help in the implementation of the Second Five Year Plan and I am sure the House would join me in expressing our appreciation to our friends who have come to our assistance.

25. India, on her part, has continued to provide economic and technical assistance to neighbouring countries particularly under the Colombo Plan. In Nepal, where we have undertaken to provide aid upto Rs 10 crores, the expenditure in the coming year has been estimated to be Rs 2.2 crores. We also promised to give a loan of Rs 20 crores to Burma, of which Rs 15 crores will be paid this year and the balance next year.

FINANCIAL YEAR 1957-58

26. The Budget for the current year, as finally approved by Parliament, placed the revenue at Rs 708.03 crores and expenditure at Rs 672.29 crores, leaving a surplus on revenue account, of Rs 35.74 crores. On present estimates, revenue is now likely to amount to Rs 724.63 crores and expenditure to Rs 719.58 crores resulting in a small surplus of Rs 5.05 crores. The drop of Rs 30.69 crores in the surplus is largely the result of the additional transfer of Rs 34-1/2 crores to the States as a result of the Finance Commission's recommendations which have been accepted by Government.

27. I shall first briefly mention the important variations in the revenue estimate. The revenue from Customs is now expected to be Rs 183 crores against the budget estimate of Rs 167.6 crores. Excluding the additional duties levied on sugar, cloth and tobacco, which accrue to the States, Union Excise Duties are now expected to yield Rs 252.45 crores against the budget estimate of Rs 259.57 crores. The decrease of Rs 7.12 crores is mainly due to a fall in the revenue from cloth and motor spirit. This is

partly counter-balanced by increased revenue from cement and diesel oils. No change is anticipated in the budgeted figure of Rs 206.40 crores for Corporation Tax and Income Tax, but the share of the States will increase from Rs 65.98 crores to Rs 73.43 crores, as a result of the Finance Commission's Award. The revenue from Wealth Tax this year is now put at Rs 9 crores, a drop of Rs 3.5 crores in the original estimate due to the time taken in obtaining necessary statements from assesses. The tax on Railway fares is now expected to yield Rs 4.84 crores against the original budget of Rs 7 crores. The revenue from Posts and Telegraphs is likely to drop by Rs 2.72 crores to Rs 1.23 crores, due partly to a fall in traffic and partly to the interim relief to low paid employees granted recently. The dividend from Railways is now estimated at Rs 44.24 crores against the budget figure of Rs 43.79 crores. Of this sum, Rs 37.91 crores, representing the interest element, is taken in reduction of interest payments on the expenditure side and the balance credited as contribution to revenue. The variations under other heads do not call for any special mention.

28. The expenditure this year is now estimated at Rs 719.58 crores—Rs 263.05 crores on Defence Services and Rs 453.53 crores under Civil heads.

29. The revised estimate of the net Defence expenditure is placed at Rs 266.05 crores against the budget estimate of Rs 252.71 crores. The increase is largely accounted for by an additional provision of Rs 6.86 crores for the Army and Rs 6.80 crores for the Air Force. The increase in the Army estimate is due mainly to the purchase of additional stores, rise in prices, grant of additional dearness allowance and certain other concessions allowed to personnel; and that in the Air Force Estimate, almost entirely to the purchase of aircraft and equipment, mostly for replacement.

30. Civil expenditure shows an increase of Rs 33.95 crores over the budget estimate of Rs 419.58 crores. Payments to States on account of their share of Union Excise Duties and of grants under the substantive provision of Article 275(1) of the Constitution have increased by Rs 39.90 crores as a result of the Finance Commission's award and the levy of certain additional duties in replacement of sales tax. There is an increase of Rs 1 crore on account of additional dearness allowance granted during the course of the year and an increase of Rs 2½ crores in interest charges, due to larger expansion of Treasury Bills than anticipated in the Budget. A provision of Rs 3 crores has also been made for write-back to revenue of losses on the Food Trading Account. It will be recalled that a Food Subsidy Fund of Rs 25 crores was intended to be built up from the additional taxation levied this year, which if unspent, would have been available

1958-59 Budget: A Study

for the current and future years. But since the revenue surplus this year has been more or less absorbed by the transfer of additional resources to the States under the Finance Commission's award, it has not been possible to meet the entire subsidy from revenue. The amount of this subsidy this year will be Rs 30 crores and next year Rs 20 crores and it is proposed to write this back to revenue over a period of 10 years. The increases I have mentioned amount in all to Rs 46½ crores roundly but they have been offset by savings under other heads of Rs 12½ crores. Thus there is a saving of Rs 5 crores under Education; Rs 1 crore under Community Development; Rs 2 crores under Scientific Departments; Rs 1 crore in the grant to States for development of backward classes and Rs 2 crores in respect of grants to States towards expenditure necessitated by natural calamities. The balance of the savings is spread over a number of heads.

FINANCIAL YEAR 1958-59

31. For the next year, on the basis of existing taxation, the revenue is estimated at Rs 763.10 crores and expenditure at Rs 796.01 crores, leaving a deficit of Rs 32.85 crores on revenue account.

32. The revenue from Customs has been placed at Rs 176 crores, the decrease of Rs 13 crores as compared with this year's Revised estimates reflecting the effect of the restrictions on imports. Excise duties are expected to yield Rs 260.45 crores, excluding Rs 41.48 crores from additional duties on sugar, cloth and tobacco which accrue in almost their entirety to the States. This is an improvement of Rs 8 crores over the current year's Revised estimate. Under Income tax the revenue is placed at Rs 217 crores, allowing for a normal expansion in revenue of Rs 10-1/2 crores over the current year's revised estimate. The Wealth Tax is expected to yield Rs 12.5 crores, the tax on Railway fares Rs 9.22 crores and the Expenditure Tax Rs 3 crores. The revenue from Posts and Telegraphs is estimated at Rs 2.34 crores against Rs 1.23 crores this year. The dividend payable by Railways next year is estimated at Rs 49.58 crores of which Rs 7.04 crores will be taken as contribution to revenue and the balance of Rs 42.54 crores in reduction of interest payments on the expenditure side. The surplus profits of the Reserve Bank next year have been placed at Rs 30 crores, the same as in the current year. A credit of Rs 7.34 crores has also been taken on account of the surplus of the cement account of the State Trading Corporation to be transferred to Government. This amount will be utilised on the development of national highways. The share of income tax payable to States next year will be Rs 76.97 crores against the current year's Revised estimate of Rs 73.43 crores.

33. Expenditure next year is estimated at Rs 796.01 crores of which Rs 278.14 crores will be on Defence Services and Rs 517.87 crores under the Civil heads.

1958-59 Budget: A Study

which Rs 278.14 crores will be on Defence Services and Rs 517.87 crores under the Civil heads.

34. Estimates for Defence Services show an increase of Rs 12.09 crores over the Revised estimate for the current year. The increase is wholly in the Air Force estimates mostly for the purchase of stores for replacement. The Navy estimates show an increase of Rs 1.46 crores but this is offset by a reduction in the provision for the Army.

35. Civil Expenditure next year shows an increase of Rs 64.34 crores over the Revised estimate. Of this increase, payments to States of the proceeds of the additional excise duties on sugar, cloth and tobacco account for Rs 27.96 crores. The greater part of the balance is due to larger provision for nation-building, development and social services. A detailed account of individual items is, as usual, given in the Explanatory Memorandum and only the more important items need be mentioned here.

36. The provision for expenditure on nation-building and development services under Civil Administration amounts to Rs 130.09 crores as compared with Rs 109.62 crores during the current year. The provision for Education at Rs 29.63 crores is higher by Rs 5.48 crores and includes Rs 11.97 crores for grants to States, Rs 2.51 crores for scholarships and Rs 4.32 crores for grants to the University Grants Commission. For expenditure on Medical and Public Health, the provision has been increased from Rs 10.43 crores this year to Rs 16.03 crores next year and for agriculture and allied services, the provision made next year is Rs 17.64 crores against the current year's Revised estimate of Rs 16.85 crores. The provision for Scientific Research has also been stepped up by Rs 3.7 crores and that for Industries and Supplies by Rs 1.62 crores.

37. Larger provision is also being made for Community Development and National Extension Service and for welfare of Scheduled Tribes and development of Backward Areas and for Employment Exchanges, the increase next year over the current year's Revised estimate being Rs 3.86 crores.

38. The estimates also include a provision of Rs 6 crores for grants to States to help them to raise the emoluments of their low-paid employees, the corresponding provision for 1957-58 being Rs 5 crores. The newly constituted Naga Hills and Tuensang District will cost about Rs 3.64 crores next year. Gross interest charges will increase by Rs 17.60 crores of which Rs 15.04 crores will be recovered from the commercial departments and the State Governments.

39. The rest of the increase in Civil Expenditure is spread over a number of heads.

CAPITAL EXPENDITURE

40. The current year's budget provided for a capital outlay of

Rs 455 crores, excluding an adjusting item of Rs 95 crores in respect of loan assistance from the USA Government, which is transferred to the Special Development Fund by debit to capital. The Revised estimates provide for an outlay of Rs 427 crores, a reduction of Rs 28 crores. Owing to better availability of materials, particularly steel and track materials, following the special arrangements made for the procurement abroad and the extension of the scheme of electrification to certain sections, Railways are expected to spend Rs 14 crores more than estimated. Against this increase under Railways, a saving of Rs 29 crores is expected in the provision of Rs 157 crores for steel projects, Rs 11 crores on food purchases and Rs 2 crores under other heads, leaving a net saving on capital account of Rs 28 crores.

41. Capital expenditure in the coming year is estimated at Rs 412 crores excluding a formal adjusting debit of Rs 78 crores in respect of loan assistance from the United States Government mentioned earlier. The drop of Rs 15 crores over the Revised estimate is due to a reduction of Rs 38 crores in the net outlay on food purchases and the special receipt of Rs 16 crores from the United Kingdom as advance payments on account of sterling pensions which is taken in reduction of expenditure, partly offset by increases under other heads. An increased provision of Rs 31 crores has been made for the steel plants and Rs 10 crores for industrial development. Details of the provision under the various heads are given in the Explanatory Memorandum.

42. In addition to the provision for direct capital outlay by the Centre just mentioned, the estimates include Rs 288 crores for loans to State Governments and Rs 71 crores for loans to Port Trusts, Statutory Corporations, foreign Governments etc. in the current year against an original provision of Rs 238 crores and Rs 86 crores respectively. The increase in the loans to State Governments is largely due to ways and means advances and payments on account of their share of the net collections from small savings. In recent years the State Governments have been receiving a portion of these collections in their States as loans from the Centre. This share was raised during the current year from about 1/4th of the net collections to 2/3rds. Some arrears were also due to the States in respect of the previous year which have been paid to them. Savings of Rs 15 crores are, however, expected in the provision for other loans despite the fact that the Government of Burma are drawing an additional sum of Rs 5 crores against the loan assistance of Rs 20 crores promised to them some time back and an increase of Rs 5 crores is also expected in the loans to the Industrial Finance Corporation. The provision of Rs 15 crores made in the budget for loans to the Refinance Corpo-

ration is not likely to be required this year. For the next year a total provision of Rs 362 crores has been made for loans, of which Rs 284 crores will be for State Governments and Rs 78 crores for others. Broad details of these loans are given in the Explanatory Memorandum.

43. Before passing on to a consideration of the ways and means position, an account may be given of the total provision included in the estimates of the coming year for the execution of the Five Year Plan and the magnitude of the total Plan outlay in the coming year. The Budget now presented to the House includes a total provision of Rs 743 crores for the implementation of the Plan—Rs 122 crores in the revenue budget and Rs 621 crores in the capital budget. Out of this provision, Rs 53 crores will be provided from the revenue budget and Rs 178 crores from the capital budget for assistance to the States. In addition to this, the Railways will be spending Rs 93 crores from their own resources on the Plan and the States Rs 181 crores. The total plan outlay in 1958-59, including interest on loans on river valley projects treated as capital outlay and short term loans, will amount to Rs 1017 crores.

WAYS AND MEANS

44. The current year's budget provided for an overall deficit of Rs 284 crores, of which Rs 275 crores were expected to be covered by the issue of Treasury Bills and the balance by drawing down the cash balances. The Revised estimates place the overall deficit at Rs 380 crores which will be met entirely by the expansion of Treasury bills. This deterioration in the ways and means position is due mainly to three factors. First, the anticipated revenue surplus of Rs 36 crores has, as explained earlier, been mostly absorbed by the additional payments to the States as a result of the recommendations of the Finance Commission. Secondly, the net yield from small savings has been below estimate, and a drop of Rs 20 crores is now expected in the budgeted receipt of Rs 80 crores. Thirdly, external assistance, for which a credit of Rs 150 crores was taken in the budget, is now expected to amount to only Rs 105 crores, the balance being carried over to the coming year. Part of the short fall will, however, be met by savings in the capital outlay under a number of heads so that the net deterioration in the position is not likely to be more than about Rs 95 crores.

45. In the current year Government floated two new loans, the 3½ Per Cent National Plan Bonds 1967 at an issue price of Rs 99.5 and the 4 Per Cent Loan 1972 at par. Conversion facilities were offered for the 3 Per Cent Victory Loan 1957 and the 3 Per Cent Loan 1958 which was due for repayment in the following year. Subscriptions to the new loans amounted to Rs 106 crores, of which Rs 45

crores came by way of conversion. Later in the year, when a demand for more investment developed in the market, a re-issue of the 3½ Per Cent Loan 1962 was made through the Reserve Bank. The entire sum of Rs 30 crores of this re-issue has been absorbed by the market. The outstanding balance of the 3 Per Cent Victory Loan 1957, which was not converted into the new loans, was repaid in cash. The net market borrowings this year have thus amounted to Rs 68 crores, the sum for which credit was taken in the budget.

46. Mention was made earlier of the decline in the receipts from small savings. For some months the net receipts have been much smaller than in the past particularly under Postal Savings Banks. In the first ten months of the current year the net receipts amounted to Rs 37.6 crores against a sum of Rs 44.8 crores in the corresponding period of last year. The deterioration is wholly due to a drop in the receipts from Savings Banks which are Rs 14 crores less than in the previous year. In recent weeks there has been a slight improvement and it is hoped that collections will increase steadily in the future.

47. The intensification and development of the Small Savings movement have been under the constant consideration of Government in consultation with the State Governments who have now a predominant interest in the net proceeds from this source. The House will remember that as part of the programme for attracting larger investments the rate of interest on Postal Savings Banks was raised by ½ per cent and the yield on the 12 Year National Plan Savings Certificates and Treasury Saving Certificates was increased with effect from the 1st June 1957. Since then, the yield on the 15 year annuities has also been raised to the same level as the yield on the 12 Year National Plan Certificates. The increase in the yield has had a good effect on the sale of Certificates but the heavy withdrawals from Postal Savings Banks are somewhat disquieting. The introduction of a scheme of recurring monthly deposits which will assist persons with small regular incomes to accumulate savings for meeting expenditure such as on the marriage and education of children is under consideration and it is hoped to introduce this shortly.

48. The National Savings Organisation, in cooperation with State Governments, has been making continuous efforts to improve collections of small savings. Internal agents are being appointed in both Government and non-Government institutions for securing regular investments from their fellow employees through organised saving groups. The recent amendment of the Payment of Wages Act permitting voluntary deductions at source for purposes of investments in small savings is likely to assist in the mobilisation of savings in industrial establishments. State

Governments are undertaking intensive campaigns in the rural areas and special attention is being given to the Community Project areas and National Extension Service blocks. The procedure at Post Offices, through which the bulk of the small savings is collected, is also being simplified wherever possible and a special Small Savings Board consisting of representatives of the Posts and Telegraphs Departments, the Accountant General, Posts and Telegraphs, the Finance Ministry and the Reserve Bank of India has been constituted for this purpose.

49. In the budget for the coming year credit has been taken for a net receipt of Rs 125 crores from market borrowing and Rs 100 crores from small savings. Market conditions in the last two or three months have been easier and if these continue, as may be reasonably expected, the target of Rs 125 crores is likely to be reached. For small savings although the net receipts this year have been disappointing, it may be hoped that, with the more intensive development of the movement with the cooperation of the States, the net collections next year will show a substantial improvement. As mentioned earlier, foreign assistance next year is likely to amount to Rs 325 crores of which Rs 40 crores will be by way of grants and the balance by way of loans.

50. The overall budgetary position next year may now be summarised. At the existing level of taxation and expenditure there will be a revenue deficit of Rs 33 crores. Capital outlay will amount to Rs 412 crores, loans to State Governments and others to Rs 362 crores, and debt repayments to Rs 28 crores. This total disbursement of Rs 835 crores will be met to the extent of Rs 75 crores from repayments of loans by State Governments and others, Rs 145 crores from market borrowings in India, Rs 100 crores by Small Savings, Rs 285 crores from foreign loans and Rs 25 crores from miscellaneous receipts under debt and deposit heads, leaving a deficit of Rs 205 crores which will be met by the issue of Treasury Bills.

51. On the basis of the above estimates the total amount of outstanding Treasury Bills at the end of 1958-59 will be a little over Rs 1400 crores, the bulk of which will be held by the Reserve Bank. The expansion of Treasury Bills has been not merely to meet the internal requirements but also for the replacement of the external assets held by the Reserve Bank, which have been drawn down mostly for development purposes in the last two or three years. The Treasury Bills represent something more than mere floating short terms debt and will gradually be funded into loans of appropriate maturity.

52. I now turn to the proposals for dealing with the anticipated revenue deficit of Rs 32.85 crores in the coming year.

Part B

53. Less than ten months ago Parliament approved proposals involving very substantial additions to taxation of a magnitude rarely equalled in peace time. These covered not merely the extension of existing taxes but the levy of new taxes such as the tax on wealth and the tax on expenditure. All these measures resulted in a major reorientation of the tax structure of the country. I do not propose to make any major modification in it but to confine myself to making such improvements as are necessary to make the present pattern of taxation an integrated one, and to plug any loopholes in taxation.

DIRECT TAXATION

54. I shall first deal with direct taxation. My first proposal is to introduce a tax on gifts which will fill a gap in the scheme of direct taxation and would not only make evasion or avoidance difficult but also spread the tax burden more equitably.

55. The idea of a Gift Tax is not new. Many Honourable Members have stressed both in this House and the other House the need for introducing such a measure at an early date. The transfer of properties through gifts to one's near relations or associates is one of the commonest forms of avoidance of not only the Estate Duty but also of Income-Tax, Wealth Tax and even the Expenditure Tax. The only way of effectively checking this practice is to levy a tax on gifts. Such a tax is already being levied in other countries, for example, USA, Canada, Japan and Australia. The Taxation Enquiry Commission also had accepted the Gift Tax as theoretically an attractive proposition.

56. It is proposed to levy a tax on gifts by whomsoever made, the only exceptions being charitable institutions, government companies, corporations established by Central or State Acts and public companies whose affairs are controlled by six persons or more. The tax will be levied on the donor on the value of all gifts made by him during a year but for the purpose of determining the rate of duty, the gifts made during the four years preceding the year will be aggregated. Such aggregation will, of course, be made only in respect of gifts made after the date this tax comes into force. Gifts upto a total value of Rs 10,000 in any one year will be exempt and if the value of gifts made during any year exceeds this sum, only the excess will be subjected to tax. This basic exemption of Rs 10,000 will be reduced to Rs 5,000 if gifts to any one individual donee during a year exceeds Rs 3,000. In addition to this basic exemption, there are other exemptions, important among which are:—

- gifts to Central and State Governments, Local Authorities and charitable institutions;
- gifts to female dependants on the occasion of marriage upto Rs 10,000 in each case;

- gifts to one's wife upto a total limit of Rs 1 lakh;
- gifts to dependants of policies of insurance upto Rs 10,000 for each.

The rates of tax will be the same as for the Estate Duty, the only difference being that the first slab of Rs 50,000 will not be exempted from the tax. The rates of tax range from 4 per cent of the first slab to 40 per cent on gifts over Rs 50 lakhs. The administrative set up and the procedure for assessment, appeal and collection of tax will be the same as for Income Tax, Wealth Tax and Expenditure Tax.

57. The main object of this tax is to plug a loophole in the other tax statutes. Its importance cannot, therefore, be adequately measured in terms of the amount of revenue it brings directly. We have no reliable data for making an estimate of the yield, and on a rough guess the yield from the Gift Tax has been placed at Rs 3 crores. A bill for the levy of this tax is being introduced separately.

58. My second proposal is to make certain amendments in the Estate Duty Act. The actual collections of Estate Duty have fallen short of even the modest expectation we had at the time of passing that measure. This is partly due to the practice of making large gifts inter vivos which will hereafter be checked by the levy of the Gift Tax. It is also partly due to the numerous concessions provided in the Act itself, and I propose to reduce some of them. The important changes are:—

- The exemption limit be reduced from Rs 1,00,000 to Rs 50,000.
- Only one-half of the probate duty or court fees paid on succession certificates will be allowed as a deduction from estate duty instead of the full amount as at present.
- Gifts to other than those for charitable purposes made within a period of two years prior to death are now subjected to estate duty. It is proposed to increase this period to five years, as recommended by the Taxation Enquiry Commission. Gifts on which gift tax has been paid will not be taken into account.

- The value of coparcenary in Hindu Undivided Families will be taxed at the rate applicable to the value of the estate of the branch of the family concerned.

The effect of these changes will be to increase the revenue by Rs 50 lakhs which will accrue wholly to the States.

59. Honourable Members are aware that the Estate Duty Act has departed from the other fiscal statutes in vesting the appellate powers with the Central Board of Revenue. Now that we have gained some experience in the working of this Act, it is proposed to bring the appellate procedure in line with the provisions in the Income

1958-59 Budget: A Study

Tax, Wealth Tax and Expenditure Tax Acts. A bill amending the Estate Duty Act is being introduced separately.

60. So far as Income Tax is concerned, no major change in the rate structure is proposed to be made. For the next financial year the basic rates of tax, together with the special surcharges in operation for the current financial year, will continue. The only change which I propose to make is in regard to the excess dividend super-tax payable by Section 23A companies. At present, the excess dividend tax rates for all companies are 10 per cent, 20 per cent and 30 per cent on the slabs of dividends over 6 per cent, 10 per cent and 18 per cent, respectively, of capital. For the financial year 1958-59, I propose to fix the excess dividend tax rates for Section 23A companies only in two slabs, 10 per cent on the slab of dividends over 6 per cent of capital and 20 per cent on the slab over 10 per cent of capital. This change is desirable as under the Act these companies are required to distribute the whole or a large proportion of their profits to the shareholders. It is not possible to estimate the loss of revenue in this proposal, but it is likely to be very small.

61. I also propose to make a change in the substantive income-tax law in regard to "Development Rebate". At present, this rebate is allowed uniformly at 25 per cent of the cost of the new machinery or plant and is available for ships as well. While this rate of 25 per cent is adequate for new plant and machinery in general, I think some further concession is necessary for the shipping industry. I propose, therefore, to increase the rate of development rebate for ships to 40 per cent. Simultaneously, the conditions for the grant of development rebate will be tightened as some instances of abuse of this concession have come to notice.

62. In addition to these, the Finance Bill contains some amendments relating to Income-tax law, some of which are intended to check evasion while some others are only of a clarificatory nature. To mention the more important of them, the definition of 'technician' is proposed to be made stricter to ensure that the exemption is not secured to a person who is not legitimately entitled to it. It is also proposed to confer on the Central Board of Revenue the power to make rules laying down the basis for valuing perquisites in kind, like rent-free quarters, free use of conveyance, etc., so that some uniformity is secured in the basis of assessment.

63. Before leaving the subject of Income-tax, I should like to mention a change in regard to the exemption from tax of payments made to employees for leave passages. Such exemption is now granted only if the payments are made under certain rules framed by Government. This leads to a large volume of administrative work

1958-59 Budget: A Study

not commensurate with the results and these rules are proposed to be withdrawn.

64. In regard to the Wealth Tax, the only change proposed is to exempt a foreign citizen from payment of the tax on his foreign wealth, even though he may be resident or ordinarily resident in India. This was the intention of the Select Committee when the provisions of the Bill were discussed by them but the intention has not been secured by the language of the provision as it now stands.

INDIRECT TAXATION

65. I now turn to the field of indirect taxation. In regard to Union Excise Duties the only major change I propose is the increase in the rate of duty on Cement from Rs 20 per ton to Rs 24 per ton. This increase will not, however, raise the issue price of cement as it is proposed simultaneously to withdraw the surcharge at present levied by the State Trading Corporation. The additional revenue of Rs 2.24 crores will be utilised for road development.

66. Certain minor amendments, mainly of a clarificatory nature, are also being made and I need not dilate on them here. I should, however, refer to two changes which are being made immediately by notification. Firstly, for powerlooms producing cotton textiles it is proposed that the concession of paying duty at the compounded rates should no longer be available to establishments having more than 100 looms. Simultaneously, the compounded rates applicable to units having 25 to 100 powerlooms are being suitably enhanced in two stages. This would bring in an additional revenue of Rs 83 lakhs. Secondly, the rate of duty on vegetable products is being lowered for the first 3000 tons cleared by each factory. This would give substantial relief to the smaller producers and will cost the Exchequer Rs 24 lakhs per annum.

67. Coming to Customs Duties, only a few minor adjustments and verbal changes are being made in the Tariff Schedule to remove some anomalies or doubts. The only change of any significance is the introduction of the alternative ad valorem rate of duty in respect of expensive varieties of artificial silk yarn, like nylon, perlon, etc.; so far as the other yarns, such as viscose, are concerned, the rate of duty is being left unchanged. The financial effect of these changes will be negligible.

NET EFFECT OF PROPOSALS

68. The net effect of the taxation proposals may now be summarised. The tax on gifts will bring in Rs 3 crores, the changes in the Estate Duty Rs 50 lakhs, the increased duty on cement Rs 2.24 crores and the adjustments in the excise duty on cloth Rs 83 lakhs, a total sum of Rs 6.57 crores, of

which Rs 50 lakhs will accrue to the State. The reduction in the excise duty on vegetable products will involve a loss of Rs 24 lakhs leaving the net additional revenue at Rs 5.83 crores. This will leave a final deficit of Rs 27.02 crores which I propose to leave uncovered.

CONCLUSION

69. The coming year, which will be the third year of the Plan, is bound to be one of difficulty calling for a considerable measure of sacrifice on the part of everyone. It is unnecessary to reiterate that the plan of development the country has set before itself has to be implemented whatever the sacrifice that may be called for because without economic development we cannot bring relief and prosperity to the millions of our countrymen who have suffered for so long from the curse of poverty. The crisis through which we are passing is a crisis of development, a crisis of resources. We must try to produce more, export more and save more to find the resources for implementing the Plan. In the budget for the coming year we have set ourselves high targets for both taxation and borrowing. I have no doubt in my mind that these targets are not beyond our capacity provided there is a sense of discipline and a sense of urgency in the country. I am sure the effort to realise the resources planned for the coming year will be forthcoming.

70. We live in an age of revolutionary changes when the development of science and technology has opened out vast avenues of human progress. We live also at a time when a great part of the resources of the world are being directed to preparations for war and the production of terrible weapons of mass destruction. While space travel beckons to us and the vast expanses of the universe almost appear to be in our reach, the horizon of our minds is limited by fear and the shadow of terrible disaster hangs over us. How can we and others raise ourselves above fear and hatred and the petty conflicts that are so out of place in the new world that is taking shape? How can we in India function with courage and unity and grasp with strong hands and stout hearts at this future? It has been given to us of this generation to face mighty problems and to achieve great results. We can only serve our own people or the world if we hold to our ideals and live up to them.

71. This budget statement is a minor event in our march forward. We have to look at it in the perspective of what we have to do and what we have to achieve. Above all, we have to realise that our success depends on ourselves and not on others, on our own strength and wisdom, on our unity and co-operation and on the spirit of our people whom we are privileged to serve.

Company Law Revision Supplement

February, 1958

Price Rs. 2

Background to the Report

WHEN one seeks to regulate anything, the most logical way to do it, if one wants to avoid friction, is to consult the affected parties first, and then proceed to do the regulation. Not so our Government. In 1955, they proceeded with the enactment of the very stringent provisions of the Companies Act, riding rough-shod as it were, over the many serious objections that had been voiced by the victims of that enactment—the corporate sector. However, before very long, it became apparent that what had been done was not right, that the new legislation suffered from many defects, and that something had to be done immediately to remedy the situation. Government realised that the new Company Law, while it had failed to prevent the bad ones from continuing their malpractices, it was at the same

time subjecting the honest company managements to numerous practical difficulties. In fact, most companies found that they could not carry on their day to day business without infringing some one or other of the many restrictive provisions of the Act. To mention only two instances, the investment of employees' provident fund moneys in Post Office Savings Banks was found to be simply impracticable. So also the requirement of Section 292 that borrowing powers may be exercised only by the Board or a Committee of Directors (and not, for example, by the principal officer in a branch office.) So, in May 1957, the Government of India constituted an ad hoc committee to examine the Act and recommend such amendments as the Committee may consider necessary to overcome prac-

tical difficulties revealed by its working, to remove drafting defects and obscurities, and to plug loop-holes. A distinguished judge of the Madras High Court, and one noted for his legal acumen, Shri A. V. Visvanatha Sastri, was appointed as the Committee's Chairman. A solicitor, a distinguished auditor, a director of a well-known business house, and the Joint Secretary of the Department of Company Law Administration, were the other members of the Committee. The Committee received memoranda from many public bodies, orally examined several of them, and eventually submitted their report to Government in November of the same year. It has to be said to the credit of the Committee that in reporting to Government within six months, the Committee have

completed their work with commendable speed, considering the stupendous task assigned to them. There are no doubt some shortcomings in their report: some amendments which one would have thought they should have recommended they have not recommended; and, several of the amendments they have recommended do not go far enough. All the same, the Committee deserve to be congratulated on a good job well done, and we take pleasure in doing so. In this series of articles, we have reviewed the various amendments suggested by the Committee, and we venture to express the hope that in implementing the Committee's recommendations the observations of Indian Finance herein may be found to be of some assistance.

What have minerals to do with their happiness ?

This is not a wealthy family, yet it is happy and contented. Father has a good job, mother has time to relax and entertain friends, and the children are getting a good education. Their comfortable home has amenities which, a generation ago, were privileges of only the rich.

Industrial Progress has brought about this change. Opportunities of employment have increased with the country's expanding economy. People earn more... spend more. Motor cars, radios, electric fans, refrigerators, sewing machines, etc.—luxuries once—are things many can afford. Still better days are ahead.

In this dynamic development, the House of BIRD and HEILGERS plays a significant part. Their collieries and mines provide power and raw materials for our industries. Their prestressed concrete and structural, pumps and tubewells, tea chests, refractory bricks, etc. help to place the country on the road to self-sufficiency.

The House of BIRD and HEILGERS are proud in having served the industries which contribute towards the happiness in such homes.

Nature's Weavers ... I

The Yellow Warbler builds in 1955

It appears strange that a bird should build a nest upon its own nest. But the bright little yellow Warbler does exactly so!

Stranger still is the reason why it does this. The Cowbird often lays its eggs in the nest of the Warbler. The Warbler covers them up by building another nest on top of them! The nest itself is a delicate structure of neatly entwined grass and rootlets lined with feathers and hair.

However skilful a weaver might be, the success of his handiwork depends upon the quality, strength and durability of the yarn he uses. That is why N.R.C. rayon yarn is equal to the world's best—is preferred by the makers of India's finer rayon fabrics, glamorous, yet low priced fabrics with the finish, texture and softness of expensive silk. N.R.C. rayon yarn is now made in 100, 120 and 150 deniers, both bright and dull.

Associates of Managing Agents

TO PREVENT managing agents from securing unfair advantages for themselves from the managed companies indirectly through their close relatives and business connections, the concept of 'associates of managing agents' was introduced in the Companies Act of 1956. Certain persons were defined as such associates, and certain disabilities were placed on them. Generally speaking, the persons deemed to be such associates were: partners of the managing agent, firms in which the managing agent or his partners are members, private companies under the management of the managing agent or his partners, other companies in which one-third of the voting power is controlled by the managing agent directly or in conjunction with certain others, and relatives of the managing agent. Two main objections had been voiced against this definition of 'associates'—firstly, that the definition was too wide, seeing that the expression 'relatives' alone, as defined in the Act included no less than eighty-one categories of persons, most of them remote; and secondly, that the definition is vague inasmuch as it would not be possible to predicate with absolute certainty whether the voting power in any given case was being 'controlled', and if so to what extent. The Companies Act Amendment Committee have re-defined the expression 'relative' so that it now covers a comparatively smaller category of persons than originally. But, while recognising that it would be difficult to ascertain the precise voting strength in specific cases they have not recommended the abrogation of this part of the definition. On the other hand the Committee have somewhat worsened matters by suggesting (a) that where the managing agent is a body corporate any relative of the principal officer of such body corporate should also be deemed to be an associate; and (b) that where control is exercised by the managing agent of a holding company through the subsidiaries of the latter such companies should also be deemed to be associates i.e. companies in which control is exercised through the subsidiary. In the net result, barring the fact that the expression 'relative' would apply to a lesser number of persons, it may be stated that in regard to the concept of 'associates' there is no improvement from the old position.

Relatives

Section 6 of the Act contains a definition of the expression 'relative'. Section 295 prohibits loans to, among others, relatives of directors. Section 297 requires

Board's consent to contracts in which relatives of directors, or firms in which such relatives are partners, are interested. Section 297 provides that a director shall vacate office if his relative or a firm in which any such relative is a partner holds an office of profit under the company or its subsidiary. Under Schedule VII, relatives cannot be appointed by a managing agent to posts in the managed company. We have already seen earlier that the expression 'relative' is widely used in connection with the definition of 'associates of managing agents'. 'Relative' as defined in Section 6 includes no less than eighty-one categories of persons. The Companies Act Amendment Committee have recognised that "it is highly inconvenient and in many cases, impracticable, for the director of a company to ascertain the different firms or companies in which any of the enumerated relatives is a partner, managing agent, or director." Having given their consideration to the many objections that had been put forward against the existing definition of 'relative', the Companies Act Amendment Committee have recommended that a simpler and narrower definition should be substituted for the existing one. The new definition suggested by the Committee reads as follows:

"Two persons shall be deemed to be 'relatives' if and only if:—

- they are members of a Hindu Joint Family; or
- they are husband and wife; or
- the one or the spouse of the one is related to the other or spouse of the other as parent and child, grandparent and grand-child, or brother and sister; or
- the one is related to the other directly (and not by marriage only) as uncle or aunt, nephew or niece."

The Committee claims that the revised definition suggested above would cut down the number of 'relatives' by more than half.

The matter deserves some further examination.

In the new definition the main departures from the existing definition are:—(i) relationship by illegitimate descent, by adoption, and by half-blood are omitted; and (ii) being a nephew or niece by a marriage connection is left out of account. The result is that the following persons who come under the category of 'relatives' under the existing definition, will not be so under the new definition:—

1. Wife's brothers son.
2. Wife's brother's daughter.
3. Wife's sister's son.
4. Wife's sister's daughter.

Some Concepts

- | | |

Clubs and Trade Associations

Associations formed for promoting commerce, art, science or religion, or which run schools, art galleries or sports clubs, may be registered as companies with limited liability. Such associations, if licensed by the Central Government under Section 25 of the Act, may omit the word 'Limited' from their name, and further enjoy certain privileges. But all the same they are subject to most of the restrictive provisions of the Act. This has resulted in numerous difficulties, particularly to trade associations. The Act requires the annual general meeting to be held at the registered office: but the associations have for practical reasons found it necessary to hold such meetings in different centres of the country in different years. The Act requires twenty-one days' notice for general meetings; but the associations have found this impracticable as the date of the meeting has to be suited to the convenience of the public men invited to preside over the general meetings. The Act requires that the annual general meeting shall not be held on a public holiday, nor outside business hours; but these are the most convenient for club meetings. Further, in clubs and trade associations alike, the entire executive committee usually retires every year, and a

fresh committee is elected by a system of ballot papers sent by post; but the several provisions in the Act in regard to election of directors have been found to be very irksome. To crown it all, Clubs and trade associations in general have senior men on their executive committees, but the restrictive provisions in the Act specifying an age limit for directors have been rendering this difficult.

The Companies Act Amendment Committee have recognised these valid objections, and have made commendable suggestions for improving the position. Observing that in their opinion it is unnecessary to require non-profit making associations like chambers of commerce, trade associations, hospital committees, school boards, clubs and other associations of the same nature to conform to the provisions of some of the sections of the Act to which they are now subject, the Committee have recommended that associations or bodies to which a licence is granted under Section 25, should, in addition to the already existing exemption of Section 303, be exempted also from certain other sections of the Act. The following are the sections mentioned by the Committee in this connection:

(a) Under Section 190, the Act has introduced new category of

resolutions called 'resolutions requiring special notice'. What is required in the case of such resolutions is that notice of the intention to move the resolution should be given to the company twenty-eight days before the meeting at which it is to be moved, and the company should give to its members notice of such resolution along with the meeting notice. The matters in regard to which this category of resolutions is required relate to appointment of auditors and directors and removal of directors. The Committee have recommended that this category of resolutions is unnecessary for companies registered under Section 25.

(b) Under Sections 255 and 256 of the Act, in the case of public companies and their subsidiaries, at least two-thirds of the total number of directors should be subject to retirement by rotation; and further, at every annual general meeting, one-third of the directors liable to retire by rotation should retire, but will be eligible for re-election, and will be deemed to be re-elected under certain circumstances. The Committee have recommended that companies licensed under Section 25 may be exempted from the above sections. This means that such companies can continue the existing practice of the entire executive committee retiring at each annual general meeting, and a fresh committee elected in their place.

(c) Section 263 requires that for the election of directors there should be a separate resolution for each director. Licensed companies are to be exempted from this provision also, that is to say, in the case of such companies, the entire executive committee can be elected under a single resolution.

(d) Section 280 provides that in the case of public companies and their subsidiaries, a person who has attained the age of 65 shall not be appointed as a director. Companies licensed under Section 25 are to be exempt from this provision also. That is to say, there is to be no age restriction in regard to membership of executive committee of such companies.

(e) As a corollary to the above, licensed companies are to be exempt also from the provisions of Section 282 which requires directors to disclose their age to the companies concerned.

(f) According to Section 285, there should be a Board meeting at least once in every three calendar months. The Committee have recommended that companies licensed under Section 25 may be exempted from this also. The result is that such companies may have their executive committee meet-

ings as often or as infrequently as suits their convenience.

(g) The Committee have recommended that companies licensed under Section 25 may be exempted from the provisions of Section 166 of the Act. This section relates to annual general meetings. A similar exemption is recommended also in respect of Sections 171, 176, 177 and 188, all of which relate to general meetings. The net effect of these exemptions may be briefly stated as follows. It is not necessary for such companies to hold their annual general meetings within nine months after the expiry of their financial year. It is not necessary that more than fifteen months should not elapse between one annual general meeting and another. The annual general meeting may be held at any place, anywhere in the world, on any day, and at any hour. It is not necessary to give twenty-one days' notice of general meetings: any convenient notice may be given. There are no restrictions in regard to proxies. It is not necessary that the voting at these meetings should in the first instance be by show of hands. Finally, it is not necessary for these companies to circulate member's resolutions in advance or at any time.

(h) Section 147 requires the publication of their names by companies. This also is not to apply to licensed companies.

The Department had suggested that if a body to which a licence has been granted alters any of its objects in the Memorandum, it should be permitted to do so only after obtaining the previous approval of the Central Government to the alteration. The Committee have recommended that all that is necessary is that notice of the proposed alteration of the company's objects should be given to the Central Government, and the Central Government may revoke the licence if no such notice is given or if it does not approve of the alteration, or it may vary the terms of the licence.

An inadvertent error that appears to have crept into the Report may be mentioned here. At page 28 of the Report the Committee have specifically stated that companies registered under Section 25 may be exempted from the operation of "other sections in addition to Section 303". But at page 29, in actually listing the sections from the operation of which exemption is to be granted, Section 303 is not included. It does not appear to be the intention that exemption is not to be granted from the operation of Section 303. This should be rectified. We have taken the liberty to mention this as we find that even in the Errata Slip circulated with the Report there is no reference to this error.

Amendments Relating to Directors

IN the Companies Act no less than seventy-two sections deal with Directors. Some of these, notably Sections 292 and 314 had proved particularly irksome in actual practice. No wonder then that a large number of amendments have been recommended by the Companies Act Amendment Committee in respect of the provisions relating to directors. These are reviewed below, but it may be stated in a general way that most of the amendments suggested by the Committee may be found acceptable to the corporate sector inasmuch as they seek to remove practical difficulties. At the same time there are also one or two recommendations which may not be so welcome; these are noted below in the appropriate places.

Number of directors: Section 252 requires that public companies and their subsidiaries should have at least three directors. But as a private company can be formed with only two members, how can it have three directors? The Committee have accordingly recommended that private companies which are subsidiaries of public companies need have only two directors.

Retirement of directors: Under Section 255 of the Act, in the case of public companies and their subsidiaries, at least two-thirds of the total number of directors should be subject to retirement by rotation. This had given rise to doubts whether it would be permissible for the Articles to provide for the retirement of all the directors at every annual general meeting. The question is of particular interest to clubs and trade associations. The Committee have clarified that it shall be permissible for any company to provide for the retirement of all the directors at every annual general meeting.

The Committee have also clarified that the expression 'retiring director' does not refer to additional directors, alternate directors, and Directors appointed by debenture-holders or financiers pursuant to the Articles.

Special Resolution for appointment of certain persons as directors: Section 261 provides that in the case of public companies and their subsidiaries a person other than a retiring director cannot be appointed as a director unless his consent has first been filed with the Registrar. Some of the candidates may not be elected at all, in which case the filing of their consent becomes a meaningless formality. The Companies Act Amendment Committee have rightly said that there is no necessity at all for

the managing agencies, and persons sharing in the managing agency remuneration. There is however no bar in the Act for such persons being appointed as additional or alternate directors. The Companies Act Amendment Committee have considered this a lacuna, and have recommended that if such persons are to be appointed as additional or alternate directors, the procedure laid down in Section 261 shall be complied with: (i.e. they can be appointed as additional or alternate directors only after the company has passed a special resolution after special notice). This does not appear to be a happy recommendation, seeing that alternate directorships are generally for short periods of three to six months and it would be cumbersome and not worth while to call a general meeting and pass a special resolution. Even if such a restriction were considered necessary, then, if the appointment is in place of a director in respect of whom the necessary resolution pursuant to Section 261 already exists no fresh resolution should be required for the person taking his place.

Voting on appointment of directors: Section 263 requires that in respect of the election of directors there should be a separate resolution for each director. Suppose the Articles of a company provide that the names of all persons validly nominated for election to directorship shall be circulated to the members and the voting shall be conducted by postal ballot: is this not a much more democratic procedure? In such cases, why should separate resolutions be required for the election of each director? This procedure obtains particularly in the election of executive committees of clubs and trade associations. The Companies Act Amendment Committee have accordingly recommended that it shall be permissible for any company to provide in its Articles for the election of all directors by ballot at the time of each annual general meeting.

Filing of consent to act as director: There is an absurd requirement in Section 264. It says that in the case of public companies and their subsidiaries a person other than a retiring director cannot be appointed as a director unless his consent has first been filed with the Registrar. Some of the candidates may not be elected at all, in which case the filing of their consent becomes a meaningless formality. The Companies Act Amendment Committee have rightly said that there is no necessity at all for

all candidates who seek election to file with the Registrar prior to their appointment their consent in writing to act as directors; and the Committee have recommended that it should be sufficient if they file such consent within seven days of their appointment.

Proportional representation: It had been represented to the Committee that oppression of minorities is more widespread in private companies. Accordingly, the Committee have stated that some of their number (but not a majority) are of opinion that proportional representation (in respect of the election of directors) should be made obligatory in the case of private companies.

Share qualification of directors: Section 271 requires that directors should file with their respective companies a declaration specifying the qualification shares held by them. The Companies Act Amendment Committee have rightly pointed out that this is a needless formality. After saying, the Committee have gone on to recommend that such a declaration should be filed with the Registrar, which appears to be strange!

Age limit of directors: The Act requires that in the case of public companies and their subsidiaries a person who has attained the age of sixty-five shall not be appointed as a director unless the Company has first approved of the same by an ordinary resolution passed after special notice. It had been pointed out by the business community that these restrictions are unnecessary and inappropriate in view of the paucity of capable persons for directorships. All that had happened as a result of these restrictions was that irksome procedural formalities had to be complied with for the election of such persons to directorships. There does not appear to be any case where a resolution for the election of such a person as a director was turned down by a general meeting—which goes to show how valid is the objection mentioned above. The Committee have virtually recognised this when they say "The expectations of Parliament that persons above the age of sixty-five should retire to make room for younger people do not appear to have been realised to any appreciable extent." It is not as if such persons are not willing to stand down: the fact is that by reason of their eminence and indispensability their presence is required on the Boards. The Committee could, without any detriment, have recommended the abrogation of

these restrictions. That they have not done so is a matter for regret. The only exception they have made is that this restriction shall not apply in the case of clubs, trade associations and other bodies licensed under Section 25 of the Act.

Vacation of office by director: The Committee have made three recommendations on this subject, all of which need to be mentioned. Firstly, Section 283 makes it the duty of a director to vacate office on the happening of any of the contingencies mentioned in the section, but there is no provision in the section for compelling the vacation of office by the disqualified director. The Company have accordingly recommended that a director shall be deemed to have vacated office on the happening of the contingencies mentioned in the section, and that it would be desirable also to provide a penalty so as to deter a person from continuing to act as director after he becomes disqualified. Secondly, when an officer or workman is appointed a director by reason of the office he holds under the company, then, when he severs his connection with the company or takes office elsewhere, his directorship should cease. Similarly, a nominee of the managing agents should cease to be a director when the managing agency ceases. The Committee have recommended the inclusion of suitable provisions to this effect. Thirdly, referring to the provision in Section 283 (1) (h) that a director shall vacate office when he himself takes a loan from the company, the Committee point out that he might easily evade the provision by obtaining such loan through a near relative such as a son. They have therefore recommended that the condition for vacation of office under Section 283 (1) (h) should be, directly or indirectly accepting a loan from the company. This means that a son or other near relative, even if he is of independent means and requires a loan genuinely for his own purposes, he cannot take it from the particular company concerned. In the zeal to plug loop-holes this appears to be carrying things too far.

Quorum for Board Meetings: Section 287 which specifies what shall be the quorum for Board meetings has no end of trouble. According to the section the quorum for Board meetings will be one-third of the total strength of the Board minus any vacancies, or two directors, whichever is higher. And if the number of interested directors exceeds two-

CALCUTTA-1.

Proprietors:

BORAH TEA ESTATE

thirds of the total strength of the Board, the remaining directors will be the quorum. There have been difficulties of interpretation as to the meaning of the words: "remaining directors." Do they refer to, disinterested directors remaining out of the total strength of the Board, or out of those who are present at the meeting? The Committee have clarified that the expression refers only to those present at the meeting. It would have been well if the Committee had stopped there: but they have somewhat worsened matters by adding a further condition to the effect that there shall be at least two disinterested directors present. It is apprehended that as a result of this new condition, the calling of needless general meetings may become necessary.

The Committee have recognised that the requirement in Section 285 that Board meetings shall be held once at least in every three months has caused hardship and unnecessary expense to small companies, and also those licensed under Section 25. They have therefore recommended that the Central Government should be empowered to exempt by notification any class of companies from the operation of this section.

Powers of Board of Directors: Section 292 of the Act requires that certain powers may be exercised by the Board only, and that too at Board meetings only: that the Board may delegate to certain persons specified in the section the power to borrow, power to invest, and power to make loans, provided the resolution effecting the delegation sets out the limits of such delegation. This section has caused considerable hardship and dislocation of business. That the delegation of power could be only to any of the persons listed in the section has been found to be impossible of compliance. Delegation of such powers to the officer in charge of branches, or to the principal officer at the head office, or to a single director has been found to be very necessary in practice: but the section has needlessly stood in the way. In the case of overdraft and cash credit accounts the opening of the account and the fixing of the limit is usually done by the Board, but the day to day operation of the account has to be done by the person looking after the business in the head office or the branch as the case may be: but here again the section has stood in the way. And in the case of banking companies, the section has rendered it necessary to delegate to branch managers and principal officers detailed and vast powers which otherwise would not have been delegated. Finally, it has been found impracticable to comply with the requirement that the resolution effecting a delegation of power should specify the total amount up to which moneys may be borrowed or invested or lent by the delegate. Recognising all these

valid objections, the Committee have recommended that in any company it shall be permissible for the Board to delegate the power to borrow, to invest or to make loan, to the principal officer at the head office or to the branch officer, or to any such designated officer, and on such conditions as the Board may prescribe. This recommendation, we believe, will be found to be generally acceptable. The Committee have also clarified that the actual day to day operation of overdraft, cash credit and other similar accounts shall not be deemed to be borrowings; that acceptance of deposits by banking companies shall not be deemed to be borrowings; and that the placing of moneys by one banking company with another shall not be deemed to be making of a loan. The Committee have further clarified that the total amount on loan at any one time shall be the total amount outstanding after allowing for loans or drawings thereon previously repaid.

Restrictions on powers of Board: Section 293 provides that in the case of public companies and their subsidiaries, the Board cannot do certain acts without the consent of the company in general meeting. Among the acts mentioned in the section are the giving of time for repayment of a debt due by a director; borrowing beyond the paid-up capital and free reserves of the company, not taking account temporary loans from the company's bankers; and, contributing to charities beyond certain limits. The restriction on giving of time to a director for repayment of a debt due by him has caused difficulty in the case of banking companies. In banking companies, debts due are generally reviewed at the end of each year, and if the position is satisfactory, continuance of the loan for a further period is sanctioned. In the case of debts due by directors this amounts to giving of further time for repayment, and thus requires sanction of a general meeting because of the provisions of Section 293. To avoid this difficulty the Committee have recommended that this section shall not apply in the case of a renewal or continuance of an advance to its director made by a banking company in the ordinary course of its business. In regard to borrowings beyond the paid-up capital plus free reserves of the company, the Committee have given two clarifications and imposed one restriction. The Committee have stated that in regard to borrowings a blanket resolution of a general meeting without setting out any upper limit to the loan should not be permitted, and that the resolution should therefore specify the total amounts up to which moneys may be borrowed by the Board. The Committee have not however said anything as to whether companies which have already passed resolutions authorising their Boards to borrow beyond the paid up capital plus free reserves will have to pass re-

solutions afresh stating the limits up to which such borrowings may be made. The existing section provides that in computing the total borrowings of a company for the purposes of this section, temporary loans from the company's bankers in the ordinary course of business shall be left out of account. What is meant by 'temporary loans'? The Act has not defined the expression. The Committee have clarified that 'temporary loans' means loans repayable on demand, or within six months from the date of the loan, such as short-term cash-credit arrangements, discounting of bills, and issue of other short-term loans of a seasonal character, but not loans raised for the purpose of financing expenditure of a capital nature. They have also clarified that the expression 'free reserves' will not include capital reserves, depreciation reserves, or share premium account. As regards contribution to charities the Committee have clarified that a general resolution authorising the Board to contribute to charitable and other funds in excess of the limits prescribed by the section would be sufficient and a separate resolution is not required in respect of each contribution. In this connection the Committee have also made a reference to the recent High Court judgments regarding contributions to political parties and have recommended that full information relating to such contributions with particulars as regards the parties or organisations to which such contributions are made and the amounts of such contributions should be incorporated in the accounts and circulated to the members before the next annual general meeting.

Sole selling agencies: Not all will agree with the Committee's recommendations regarding sole selling agencies. Section 294 requires that sole selling agents for any area cannot be appointed by the Board of Directors except subject to the condition that the appointment will cease to be valid if not approved by the company in general meeting within six months from the date on which the appointment is made. The Committee have recommended that it shall be permissible to obtain such approval at the next annual general meeting. While this recommendation in regard to sole selling agencies will be frowned upon by many. The Committee have observed that power should be taken by the Central Government to notify industries or commodities like textiles, cement, sugar etc., in which sole selling agencies could be given for any area only on such terms and conditions as the Government might approve. Existing sole selling agencies in the industries or commodities which may be so notified should also obtain the approval of the Government within a period of six to twelve months of the amendment of the Act. Further, managing agents who have resigned their managing

agency should not be allowed to take up or acquire, directly or indirectly, either by themselves or through or in association with others, the sole selling agency of the products of the company of which they were the managing agents, for a period of three years from the date of the resignation. We ask, how is Government suited to decide as to what should be the terms of a sole selling agency? A sole selling agency is a business deal, and admittedly Government is least competent to do business deals. It is submitted that this recommendation should not be implemented.

Contracts in which directors have interest: Section 297 prescribes that except with the consent of the Board given at a Board meeting, directors, their relatives and other persons listed in the section, should not enter into any contract with the company for the sale, purchase, or supply of any goods, materials or services or for underwriting the company's shares or debentures. Such contracts up to not more than Rs 5,000 in the aggregate in any calendar year, are, however, permitted if they are part of the regular trade or business of the director, his relatives or other persons listed in the section. The Board's consent to such contracts has to be obtained prior to the contract or within two months after the contract was entered into. Several objections had been pointed out to the above provisions. Occasions might arise when, in order to avert a stoppage of work or breakdown, it may be necessary to enter into contracts urgently with the persons or companies coming within the restriction of the section: it would be impracticable to obtain the consent of the Board before entering into the contracts. Again, the ceiling of Rs 5,000 mentioned in the section is unreasonably low, and purchases for cash at current market rates may be excluded from this limit of Rs 5,000. Then again, transactions entered into by banking and insurance companies entered into in the normal course of business should be outside the purview of this section. The Committee have agreed that there is force in these objections, and have accordingly recommended suitable amendments to Section 297.

Voting by interested director: Under Section 300 of the Act, an interested director is not to take any part in the discussion of or vote on any contract or arrangement in which he is interested in terms of Section 299. According to that section, the holding of even one share in a public company may be considered as constituting an interest. The Committee have expressed the view that the holding of shares by a director in a public company or a private company which is a subsidiary of a public company, to the extent of not more than two per cent of its paid-up capital, should not disqualify a director from taking part in or

voting upon any contract or arrangement with such a company. The Committee have accordingly recommended suitable amendments to Section 300. The amendment should be generally welcomed, though, it is submitted that no particular sanctity should be attached to this figure of "two per cent". Not much harm would be done if this percentage were raised further.

Register of Contracts in which directors are interested: Section 301 requires companies to maintain a register of contracts in which directors are interested and to enter certain particulars therein from time to time. We believe that most companies would have justifiably violated the provisions of this section, for the simple reason that parts of it are impossible of compliance. When a director has given a general notice under Section 299, no question arises of filling up the particulars required by clauses (d) and (e) of sub-section (1) of Section 301. Nor can there be any question of making the requisite entries in the register 'within three days of the Board meeting at which the contract was approved', as required by sub-section (2) of Section 301. Section 301 ought to have differentiated between contracts falling within Section 297, and those falling within Section 299. The particulars required by clauses (d) and (e) of sub-section (1) of Section 301 are appropriate in the case of contracts falling within Section 297 (which requires Board's sanction), but are inappropriate in the case of contracts falling within Section 299 (which merely calls for a general notice). The Committee have appreciated the practical difficulties and have recommended that in the case of contracts with bodies corporate or firms of which general notice has been given under Section 299(3) the Register of Contracts need specify only the names of the bodies corporate and the firms, of which notice has been given by the director.

Section 301(2) requires entries to be made in the Register of Contracts within three days of the Board meeting at which the contract was approved. The Committee have recommended that in computing this time limit of three days, holidays should be excluded.

Filing of Form 33 with Registrar: The filing of Form 33 has been a perpetual head-ache to most company secretaries. In the case of a director holding directorships in several companies, if he resigns from one company or takes up a new directorship, not only the company from which he becomes a director have to file Form 33, but also every other company which has mentioned his other directorships in column 5 of the Form. The Committee have rightly pointed out that this requirement involves a cycle of form filling and filing of returns with no commensurate benefit or utility. They

have therefore recommended that if a director (or other managerial person) resigns from one company or takes up a position in another company, only these two companies concerned should file Form 33. The rest of the companies with which he is connected need notify the alterations only at the time of filing the annual return under Section 159 or 160. Another recommendation of the Committee (which also dispenses with a wasteful formality) is that when there is any change in the 'other particulars' relating to directorships, such as change of address etc., these may also be intimated only once a year at the time of filing the annual returns mentioned earlier.

Remuneration of Directors, and Government sanction for increase in remuneration of directors: Some of the observations of the Committee in regard to these matters are useful pointers, and hence it is considered desirable to state them:

(a) Sitting fee for directors for attending Board meetings should be reasonable having regard to the position of the company and the status of the directors.

(b) If a person is appointed as a managing director or whole-time director under an agreement for a period of five years on a scale of, say, Rs 750-100-1150, the increase in the monthly remuneration during the second, third, and fourth years of service does not require Central Government's approval under Section 310.

(c) Increase of dearness allowance from time to time according to a scale prescribed in a contract approved by the Government does not require Government's approval for every such increase.

(d) Any appointment or re-appointment of a managing or whole-time director made after the commencement of the Act, which involves no increase, direct or indirect, in the scale of remuneration previously paid for the post, does not require Government's approval.

Holding of office of profit by Directors and their associates: Section 314 provides that directors and their associates shall not hold any office or place of profit under the company or its subsidiaries without the consent of the company by special resolution. If the provisions of this section are contravened, the director concerned automatically vacates office in addition to being liable to account for the remuneration received. This section has been rightly criticised as being unduly drastic. A relative of a director may be appointed to an office of profit without the knowledge of the director or even against his wishes. In big concerns with several branches in different parts of the country, subordinate staff may be appointed by the local manager without any reference to the director concerned

or without knowledge of any relationship. Further it is extremely inconvenient if all the relations of a person employed in the company before he is appointed a director have to be ascertained and special resolutions have to be passed consenting to the appointment of each of them. Again what happens if an employee who is unrelated to the director subsequently becomes related by reason of marriage or adoption? If a relative of a director is appointed even to a petty post such as a chapparsi, company's consent to the appointment is required by special resolution if the director is not to vacate office. The Companies Act Amendment Committee have agreed that these objections are well-founded, and have suggested several amendments to Section 314. The amendments suggested by the Committee may be briefly stated as follows:—

(a) The previous consent of the company by special resolution is necessary if a director is to hold any office or place of profit under the company or its subsidiary.

(b) The previous consent of the company by special resolution is necessary if any associate of the director is to hold any office or place of profit under the company or its subsidiary, carrying a total monthly remuneration of three hundred rupees or above.

(c) Once consent of the company by special resolution has been

obtained for an appointment, a fresh consent is not necessary for subsequent appointments unless it carries a higher remuneration. But if the resolution has approved the appointment on a time-scale a fresh consent is not necessary for the increases pursuant to that scale.

(d) When an associate is appointed without the knowledge of the director, consent of the company may be obtained within three months from the date of the appointment, failing which the person holding the appointment shall cease to hold it and shall be liable to refund all remuneration received. The director concerned shall also be deemed to have vacated office thereafter. (It is not understood why the Committee have recommended this double penalty. Is it not sufficient if the associate vacates office if consent is not forthcoming? It is submitted that the condition that the director also shall vacate office may be omitted).

(e) Every person proposed to be appointed to any office or place of profit to which Section 314 applies shall at or before his appointment declare in writing whether he is an associate of the director as specified in the Section.

Barring the one objection mentioned above, Section 314 as now recommended by the Committee may be generally acceptable to the corporate sector.

ASP/MC.117

Amendments Relating to Managing Agents

SEVERAL amendments have been recommended by the Companies Act Amendment Committee in regard to the sections in the Act dealing with Managing Agents. What they have suggested amounts to a tightening up of the provisions relating to remuneration and advances. Some of the other amendments clarify doubts. Barring these there is not much change of substance from the existing law. Among the various changes suggested by the Committee, those that may be considered as more or less important, are mentioned below.

General policy regarding managing agents: Under Section 324 of the Act, Government have taken power to eliminate managing agencies in notified industries or businesses. The Committee have stated that Government do not appear to have laid down any policy regarding the future of the managing agency system, and that it is now desirable that Government should formulate a definite policy so that by 15th August 1960 action can be taken under Section 324.

Managing Agency of Private Companies: While the appointment of managing agents of private limited companies is subject to the control of Government under Sections 326 and 329, the remuneration payable to them is left uncontrolled by Government by reason of the exemption granted under Section 355. The Committee say that it would be logical to make the ceiling on managerial remuneration provided in Sections 198 and 348 applicable to managing agents of private companies also. The Committee have however stated that it is too soon to recommend any change in the law.

Variation of managing agency agreement: The Committee have clarified that if a variation of the terms of a managing agency agreement is necessary to bring it in conformity with the provisions of the Act, the previous sanction of the Central Government should not be necessary to effect the changes. They have accordingly recommended a suitable amendment of Section 329. This is a healthy recommendation: for, hitherto, the fact that when an application for approval of a change is made to the Central Government, the opportunity might be taken by Government to insist on other changes also, has acted somewhat as a deterrent; but now company managements might go ahead and make the requisite changes so as to bring their managing agency agreements in line with the provisions of the Act.

Resignation of managing agents: When a managing agent resigns, his

resignation cannot absolve him from liability for his acts of omission or commission during the time he was managing agent. The Company may not therefore desire to accept his resignation unconditionally or at all. It may be necessary to require the managing agent who has been in close touch with the affairs of the company, to prepare the statement of affairs and accounts of the company as may be necessary to enable the Board and the company to have a clear picture of the state of the company's affairs at the date of the notice of resignation by the managing agent. The Committee have therefore recommended suitable amendments to Section 342 for this purpose, and have further added that in case of default by the managing agent to comply with the requisition to prepare a statement of affairs, the Board may itself cause such a statement to be prepared together with a report from the auditors.

Transfer of Office by managing agents: The Committee say that it had come to their notice that some managing agents have given an irrevocable power of attorney to third parties to manage the affairs of the company of which they are in charge, reserving to themselves a portion of the profits, that it is not any different from a transfer of office, but that this is not covered by the present provisions of Section 343. The Committee have therefore recommended that any arrangement entered into by a managing agent which has the effect of transferring his right to manage the whole or substantially the whole of the affairs of the company to another person, shall also require approval both by the company in general meeting and by the Central Government.

Changes in managing agency: Section 346 of the Act is designed to ensure that when a change likely to affect the composition of the managing agency as already approved by Government occurs, Government should have an opportunity to reassess the position. The section accordingly provides that where the managing agent of a public company or a private company which is a subsidiary of a public company is a firm or a limited company, then if any change takes place in the constitution of the firm or limited company, the managing agent will cease to act as such on the expiry of six months from the date on which the change takes place unless within that time, or such extended time as may be allowed by the Central Government, the Central Government approves of the change in the constitution. The section further clarifies that the conversion of a private company into a public

company or vice versa, or a change in the directors or managers of a company, or a change in the ownership of the company's shares, will all be deemed to be changes in the constitution of the managing agent. It was pointed out to the Committee that the provisions of the section are somewhat sweeping, as they necessitate applications to Government even where no material change in the managing agency is involved, as for instance, transfer of preference shares carrying no voting rights; change of one of the directors by death, retirement or otherwise where the managing agent is a limited company; death or retirement of a partner and introduction of a new partner where the managing agent is a firm; appointment of alternate directors for short periods; and issue of unissued shares to existing members. The section requires Government's sanction to be obtained after a change takes place: if, for any reason, approval is not granted, the consequence is that the managing agent ceases to act as such. The Committee have expressed the view that the proper thing to provide is that the change shall not be effective until the approval is granted, rather than cessation of managing agency. On the ground that they are informed that applications made to the Central Government for recognition of transfer of shares are usually granted without difficulty, the Committee have said that they do not consider any other changes are necessary to the section.

Remuneration of managing agents: Section 348 provides that managing agents shall not be paid by way of remuneration, whether in respect of their services as managing agents or in any other capacity, any sum in excess of ten per cent of the net profits. Doubts had been expressed as to whether the commission payable to managing agents for buying agencies, selling agencies etc., under Sections 356 to 360, would also come within the overall ceiling of ten per cent of the net profits, as fixed in Section 348. The Committee have pointed out that if these services (i.e. buying agency, selling agency etc.) are rendered by strangers, the Company will have to pay for them separately; accordingly, if these services are rendered by a managing agent, the managing agent may justifiably be paid separately therefor; that the ceiling of ten per cent of the net profits fixed by Section 348 is exclusive of the buying agency commission, selling agency commission etc. The Committee have recommended an amendment of Section 348 so as to clarify this position.

Determination of net profits: The Committee's observations and recommendations in regard to the determination of net profits are all important. We accordingly state them below:—

(a) It was urged before the Committee that interest on borrowings by way of debentures or otherwise should not be deducted in arriving at profits during the period of construction, before the company starts manufacturing, such interest being attributable to capital. The Committee have observed that if this interest is not capitalised, it will be part of the loss, but it can be regarded as loss of a capital nature, and since Section 349 (4) (i) specifically provides that capital losses need not be deducted, there is no need for making any change in the section.

(b) At present there is no obligation cast on a company to write off bad debts. The Committee have expressed the view that every honestly-managed company should make proper provision for writing off bad debts before computing its profits, and that bad debts might properly be included as one of the usual working charges referred to in Section 349 (4) (a). However, in order to compel that bad debts are so written off, the Committee have recommended the addition of a new clause (o) to sub-section (4) of Section 349, to read as follows: "(o) debts considered to be bad or doubtful in the year of account."

(c) The Committee have pointed out that the expression 'usual working charges' in Section 349 (4) (a), means revenue expenditure usually incurred by companies and treated as such.

(d) Some doubts had been expressed as to whether contributions to religious and secular charities, funds of political parties, and associations organised for sport, recreation etc., could be treated as 'usual working charges'. The Committee have expressed the view that they should be treated as 'outgoings' and in order to put the matter beyond doubt, have recommended that Section 349 (4) (j) should read as follows: "(j) all other outgoings inclusive of contributions made under Section 293 (1) (e)."

(e) The Committee have also clarified as to how bonus paid in a subsequent year for work done by workmen in a previous year, should be treated for purpose of Section 349. The Committee have observed that a provision made to meet a bonus which, it is known at the time of closing of the accounts, will have to be paid, is properly to be

included as a working charge. If no appropriation for bonus has been made and the bonus is payable in a subsequent year, say under an award of an Industrial Tribunal, then the bonus should be treated as an outgoing of the subsequent year in which the amount is ascertained or becomes payable.

(f) The Committee have referred to the difficulties which have arisen in giving effect to the provisions of Section 350 regarding deduction of depreciation. The practical difficulty is that at the time when a company's account is made up the amount of the depreciation allowance for income-tax purposes is not known with certainty. Moreover, in subsequent years, after the first year, the written down value on which depreciation is to be calculated will differ from income-tax and account purposes. The Committee observe that the most equitable way of dealing with this matter will be to provide that the amount of depreciation to be deducted should be ascertained by applying the rates prescribed in the Indian Income-tax Rules to the written down values of the assets in respect of which depreciation allowances are admissible for income-tax purposes, such written down values being the values at which these assets stand in the company's books at the end of each financial year after deducting amounts written off as depreciation in earlier years. This means charging against profits each year, for purposes of calculating managerial remuneration, an amount in respect of depreciation which will approximately be the same as the amount which should properly be written off as depreciation in the company's Profit and Loss Account for that year. In view of the importance of the matter, we reproduce below the text of the amendment suggested by the Committee, which clarifies the matter further: "The amount of depreciation shall be the amount calculated with reference to the written down value of the asset as shown by the books of the company, at the end of the financial year, ending 1-4-1956 or immediately thereafter, and at the end of each subsequent financial year, at the rates specified for the asset by the Income Tax Act and the Rules framed thereunder for the time being in force, as normal depreciation, including therein extra and multiple shift allowances, but not any special, initial or other depreciation or any development rebate, whether allowed by that Act or the Rules framed thereunder or otherwise or any arrears of depreciation."

Office Allowance: Referring to Section 354, the Committee say that it is intended to re-imburse the managing agent for actual expenses incurred but not to enable the managing agent to make a profit in doing so. The Committee have therefore recommended that with a view to prevent any possible abuses, the sanction for re-imbursement of expenses should be based on a certificate of the auditor of the company or of the managing agent: (the presumption being the managing

agent is a scoundrel; the auditor is an honest man!)

Buying and Selling Agencies: Under Sections 356 and 358 there is a provision to the effect that a managing agent may be appointed as buying agent or selling agent for places outside India. Provided the managing agent is maintaining an office at such foreign place for his own purpose. The Committee observe that if a managing agent keeps an office outside India only for buying or selling for the several companies of which he is the managing agent, it could not be said that he is keeping an office for his own business or for a business not connected with that of the managed company. Observing that in such a case the managing agent can charge the managed companies pro rata and recover the expenses under Section 354, the Committee have recommended that commission under Sections 356 and 358 should not be allowed in such cases.

Principal to principal contracts: Section 360 deals with principal to principal contracts between the company and its managing agent or his associates. The section requires the previous approval of the company by special resolution to such dealings between the company and its managing agents or his associates. The Committee have recognised that this requirement of 'previous approval' has caused hardship. It makes it difficult for one of a group of companies under a same managing agent to meet temporary shortage of stores, chemicals, machine parts or other materials in an associate company required in order to avert a breakdown in the latter. Further, such temporary arrangements have oftentimes to be made available at very short notice. The Committee have therefore recommended that the approval may be obtained either previously, or within a period of three months from the date of the contract. The Committee have further said that the special resolution need not in all cases set out all the terms and conditions of the contract or the details regarding quantities, rates, times of delivery etc. It shall be a sufficient compliance with the section if the special resolution approves generally of the terms relating to the duration of the contract, the goods or services to be supplied or rendered, the approximate quantities, the rates of payment, and the remuneration payable. Provided full particulars of the transactions are entered in the register to be kept pursuant to the section.

Statement of remuneration to managerial personnel: The Committee have recommended the insertion of a new Section 362-A. This section requires every company to annex to its Profit and Loss Account a statement showing the managerial remuneration paid by the company during the year of account to its managing agents, secretaries and treasurers, managing director, manager, and directors. Where the Company is managed by a managing agent, the state-

ment should show also the amounts paid to the managing agent by way of re-imbursement of expenses under Section 354, and by way of buying agency commission, selling agency commission etc., under Sections 356 to 360. Why should there be this needless publicity? It is submitted that this is a most undesirable provision. All that should have been provided is that if a shareholder required these particulars they should be supplied to him; but to say that this should form part of the published statements of accounts is going too far.

Loans to managing agents and their associates: Section 369 of the Act provides that no company shall make a loan or any financial assistance to its managing agent or his associates. Current accounts between the managed company and the managing agent should not exceed Rs 20,000. And Section 370 provides that loans or financial assistance to companies under the same management cannot be given without the consent of the lending company by special resolution. Referring to these two sections, the Companies Act Amendment Committee have recommended several significant amendments, only two of which are by way of relaxation and the rest are by way of tightening up. The more important among the changes recommended by the Committee are:—

(i) The restriction in Section 369 could be avoided by the company giving a loan to an intermediary who in turn could lend the money to the managing agent or his associate. The Committee have therefore recommended that Section 369 should refer to loans etc., whether made 'directly or indirectly'.

(ii) In order to prevent any abuse of the facility (of current accounts) given by Section 369 (2), the Committee have recommended that the credit referred to in this provision is only the cash advance given by way of a permanent advance or imprest for facilitating the carrying on of the company's business, and that transactions on such advance or imprest accounts should be settled as far as possible on a monthly basis. It is submitted that settlement on a monthly basis would be rather difficult: it would be better if it were 'quarterly basis'. However, as the words employed are 'as far as possible', the hardship is somewhat mitigated.

(iii) Section 295 of the Act provides that in respect of loans to directors outstanding at the commencement of the Act, consent of the Central Government therefor should be obtained within six months. The Committee have recommended that a similar provision should be inserted in respect also of loans etc., to managing agents and their associates, outstanding at the commencement of the Act. They have accordingly suggested a new Section 370A, on the lines of Section 295, and it requires that either the consent of the Central Government should be obtained within six months or such other

time as may be granted by the Central Government, or the loan should be enforced for repayment.

(iv) Referring to Section 370, the Committee have suggested the addition of a sub-section clarifying that Section 370 does not apply to book-debts except where such a debt was from the inception, in the nature of a loan or an advance.

(v) It had been suggested to the Committee that loans by a subsidiary to its holding company or to another subsidiary of the same holding company, should be exempted from the provisions of Section 370. Why should not a wholly-owned subsidiary lend its holding company or to another wholly-owned subsidiary of the same holding company? There is no sufficient reason why such loans should come under the restrictive provisions of Section 370. While they have recognised this the Committee have not recommended the necessary amendment for the purpose. Will our legislators repair the omission?

(vi) Section 370 which contains the restrictions on loans to companies under the same management, specifies under what circumstances two companies will be deemed to be under the same management for the purposes of the section. The Committee have recommended that in the following cases also two companies should be deemed: to be under the same management for the purposes of that section, that is to say: (a) if the ultimate holding in the shares of two bodies is controlled by the same company or individuals holding a controlling share-holding interest therein, despite the interposition of one or more companies in the chain of holding company and subsidiaries; and (b) if two companies are under a same management, their subsidiaries also will be deemed to be under the same management irrespective of the management of the subsidiary being different from that of the other company.

(vii) Banks should be permitted not only to lend to other banks but also, in the usual course of business, to other companies under the same management. The Committee have recommended accordingly that a suitable additional exemption be inserted in Section 370. By recommending this the Committee have really enlarged the scope of Section 370, which they could as well have refrained from doing. For, Section 370 is under the Chapter relating to Managing Agents. Therefore, that section should not apply to any company which is not managed by a managing agent. Under the Banking Companies Act Banks can have no managing agents, and so Section 370 should not apply to loans by banking companies. By recommending the insertion of a new exemption in Section 370 in favour of Banks, the Committee, so to say, are saying that the section applies even to companies which are not managed by managing agents, thus widening the scope of the section, to the detriment of the corporate sector.

Other Recommendations

IN the course of this series of articles, we have taken note of all the important recommendations made by the Companies Act Amendment Committee in regard to certain definitions in the Act, the provisions applicable to clubs and trade associations, those applicable to directors, and those applicable to managing agents. In addition to the above, the Committee have made a number of other recommendations many of which are also of importance, but which, due to considerations of space, it has not been possible to refer to specifically. Quite a number of the suggested amendments seek to remove practical difficulties that had been pointed out to the Committee. Others seek to clarify the position where doubts had existed. And a few are by way of further tightening up of the law with a view to plug loopholes. We do not propose to mention these in this concluding article. But the review will be incomplete unless reference is made to some of them. Accordingly, we set them out in the ensuing paragraphs.

Investments of Companies: Section 49 of the Act contains the restrictions in regard to investments of companies, which are required to be held in the company's name. It had been pointed out to the Committee that in the case of investments of the funds of a company in Government securities or debentures and shares, it should be open to the company to

have them bought in the name of a scheduled bank, the advantage being the easy collection of interest and dividends, and the speedy disposal of the shares and securities at a slightly better price. Till the shares and securities are disposed of, the bankers of the company would be collecting interest and dividends and crediting them to the company's account. The Committee have, with a view to permit the above facilities, suggested that Section 49(5)(a) may be amended by stating that nothing in the section shall be deemed to prevent a company from depositing with or transferring to or holding shares or securities in the name of the State Bank of India, or a scheduled bank, being the bankers of the Company, so as to facilitate the collection of dividends or interest or transfer of the shares or securities.

While on this subject, it may be mentioned incidentally, that a suggestion that the words 'whose principal business' occurring in Section 49(4) should be defined or changed to 'one of the business of which' did not find favour with the Committee.

Investment of Provident Fund moneys: Section 418 of the Act requires provident fund moneys of employees to be deposited in Post Office Savings Banks only. The practical difficulties in doing so were pointed out to the Committee.

Cheques, interest warrants, etc., cannot be credited in the Post Office Savings Bank which receives cash only. The restrictions relating to deposit into and withdrawals from Post Office Savings Banks are such as to render it extremely inconvenient to keep provident fund moneys there. Recognising these difficulties, the Committee have recommended an amendment of Section 418 so as to permit deposit of employees' provident fund moneys either in a Post Office Savings Bank account or in the State Bank of India in an account opened for the purpose. While this amendment does go a long way to mitigate the practical difficulties, one fails to understand why the relaxation should be confined to depositing in the State Bank of India alone. Why should not such deposits be allowed to be made in scheduled banks also? One smells in this an attempt to grab provident fund moneys for Government's exclusive benefit, denying its use for the Private Sector. It is suggested that at least a specified percentage of the provident fund moneys should be allowed to be deposited in scheduled banks.

Managerial remuneration: Last but by no means the least, we may take note of the Committee's recommendations in regard to managerial remuneration. The Act prescribes (under various sections)

that managerial remuneration shall not exceed a certain percentage of the net profits. The Committee have not disturbed these percentages, but have clarified that the ceiling of eleven per cent of the net profits, fixed for overall managerial remuneration by Section 198, applies only to remuneration for managerial services, and not to remuneration for other services that may be rendered by managerial personnel, such as for example, service as a technical adviser.

Another clarification given by the Committee is that where the remuneration of a manager is fixed on the basis of a fixed monthly payment, even then, the total remuneration drawn by him should not exceed five per cent of the net profits as prescribed by Section 387.

The Committee have recommended that the expression 'remuneration' includes also perquisites such as rent-free accommodation, insurance or other benefits, amenities or concessions granted by the employer to managerial personnel. Thus, the ceiling of eleven per cent to overall managerial remuneration fixed by Section 198 is inclusive of the perquisites granted to managerial personnel. Similarly, the ceiling of five per cent fixed for remuneration of managing directors under Section 309, and for managers under Section 387, is inclusive of all perquisites granted to these officers. Similarly also for all other managerial personnel.
